LIFE AND DEATH (Biological).—The characteristic quality, common to plants, animals, and man, which distinguishes them from all other things, is what we call 'life.' It cannot be defined in terms of anything else, but what the concept implies may be illustrated; and that is the aim of this article. The word 'life' is often used to denote the living creature's complete sequence of activities and experiences throughout the period during which it is alive; as when we say that an eagle has a very long, busy, and free life. It is also used as a short word for what is almost always going on in connection with living creatures—their acting upon their environment and reacting to it; and it is, of course, quite clear and useful to say that life consists of action and reaction between organism and environment. We must, indeed, be careful never to lose sight of the fact that life is a relation. But what we wish to discern is the characteristic quality of organisms; one term in the relation. It may also be noted that 'life' is a distinctively biological concept, and that there is always a risk in transferring it to other fields. No harm is done, perhaps, in speaking of mental, moral, social, and spiritual life; but one may beg important questions in speaking of the life of crystals. By death we mean here the cessation of an organism's individual life, a fatal disruption of the unity of the organism. There is no confusion in using the same word for the end of the individual as such, and for the apparently irreversible process which leads to the end.

1. General characteristics of living organisms.

Many biologists have sought to sum up the characteristics of living organisms, but no formulation has won general acceptance. This doubtless means that the immanence of life has not yet been discerned either wholly or in their proper perspective. One of the clearest statements is given by Roux (VII Internat. Zoological Congress Boston, Cambridge, U.S.A., 1915, p. 436), who recognizes five 'elementary functions': (1) self-dissimilation; (2) self-preservation, including assimilation, growth, development, etc.; (3) self-reproduction; (4) self-development; and (5) self-regulation in the exercise of all functions, including self-differentiation, self-adjustment, self-adaptation, and, in many organisms, distinctly recognizable psychological functions.

The persistent use of the prefix self, on the part of the founder of Entwicklungsmechanik, is very interesting. Prichram (Experimentelle Zoologie, i.) arranges 'the criteria of life in three groups—morphological, chemical, and physiological. The morphological characteristic is some measure of differentiation or heterogeneity of structure, which distinguishes even the simplest organism from a crystal. The chemical characteristic is the invariable presence of albuminous substances in a colloidal state. The physiological characteristic is to be found in growth and in the movement of parts. Another way of stating the general characteristics of organisms will now be expounded—under three heads.

(1) Persistence of complex specific metabolism and of specific organization. —We place in the forefront the fact that the organism is typically in continual flux and yet retains its integrity. Chemical change is the rule of the world, but the
peculiarities in the case of organisms are (a) that many of the changes are very complex, having in part to do with proteins; (b) that they are specific for each kind of organism and not for other organisms; and (c) that they are correlated in such a way that they continue and the associated structure persists. Each of these peculiarities requires some explanation. Many chemical changes occur in the living organism, and some of them are of a relatively simple, but the essential changes appear to be concerned with protein or albu'minoid substances, which are always present. These compounds are peculiarly intricate, with a large number of atoms or atom-groups in their molecules; they diffuse very slowly and do not readily pass through membranes; they occur in a colloidal state, and, although some are crystallizable, e.g. hemoglobin, they are not known in a crystalline state in the living organism; they are relatively stable bodies, yet they are continually being broken down and being built up again in the living body, partly under the direct influence of ferments or enzymes. The construction, synthesis, up-building, winding-up processes are summed up in the term 'anabolism'; the disruptive, analytic, down-breaking, running-down processes are summed up in the term 'katabolism', both sets of processes being part of the term 'metabolism', for which we have, unfortunately, no English equivalent like the fine German word Stoffwechsel, 'change of stuff'.

It is a noteworthy fact that each kind of organism, so far as we know, has its specific metabolism, its own chemical individuality. This is often well illustrated by the difference in the analogous chemical products in closely related species. There is a chemical specificity in the milk of nearly related animals and in the grapes of nearly related vines. It has become possible of recent years to make absolutely sure, within given limits, of the kind of animal to which a blood-stain is due—e.g., whether horse or ass. The familiar fact that there are people who cannot eat certain kinds of food—e.g., eggs, milk, oysters, crabs—without more or less serious symptoms is an illustration of specificity which is actually individual. It looks as if a man is individual not only to his finger-prints, but to his chemical molecules. We come back to what was said of old: 'All flesh is not the same flesh; but there is a kind of flesh of men, another flesh of beasts, another of fishes, and another of birds' (I Co 15) 1.

(c) In the ordinary chemical changes of the organism, as in the weathering of rocks in soil, one substance changes into another. The same sort of thing goes on in the living body, but the characteristic feature is a balancing of accounts so that the specific activity continues. We lay emphasis on this characteristic since it seems fundamental—the capacity of continuing in spite of change, of continuing, indeed, through change. An organism was not worthy of the same until it showed, for a short time at least, not merely activity, but persistent activity. The organism is like a clock, inasmuch as it is always running down and always being wound up; but, unlike a clock, it can wind itself up, if it gets the chemical processes are so correlated that up-building makes further down-breaking possible; the pluses balance the minuses; and the creature lives on. We are familiar with the self-preservative activity of an organism, but not less important is the continual maintenance of the specific chemical activity of each cell and of the correlated invisible structure or organization. It is an extraordinary fact that a particular functional activity in a nervous system may be restored after the destruction of the nerve-cells and fibres on which the activity previously depended—a fact all the more remarkable since in higher animals there is no regeneration of nerve-cells. But not less important is the manner in which a unicellular organism can survive a substance and yet, as it were, have it, because of the fundamental capacity for self-renewal.

To what has just been said several saving clauses must be added to prevent misunderstanding. The organism is no exception to the law of conservation of energy. In doing work and even in mere living it expends energy and suffers wear and tear. It cannot continue active unless it captures more energy and has means of repairs. But its chemical activities are so correlated that it remains for a considerable time a going concern. Fatigue, senescence, and death show that its fundamental capacity for self-maintenance is not perfect. (2) A particular chemical reaction that takes place in an organism may sometimes be repeated in artificial isolation, and, when this can be done, it is plain that there is nothing characteristic of life which is not in the same in the eagle as in the test-tube. But in the living organism it is a link in a concatenated series which makes for self-repair and continuance. The riddle of life is that of the burning bush—neither consumption of fuel nor a living cell were to be made up quickly, no change of chemical composition would necessarily occur for some little time. But what exhibition would there be if the alleged fundamental characteristic of self-repair? It may be answered that the minute-up organism would be dead, whereas we are dealing with living organisms. Or it may be more shrewdly pointed out that the living unity of the body are adapted to chemical self-repair in particular conditions—e.g., an environment of other cells, which have been abolished by the mining. But perhaps the most instructive answer is the experimental one, that, if a sponge be mined up and forced through a cloth filter, little drops of the debris, placed in appropriate environment, will at once proceed to build themselves up into new sponges. (3) It has to be admitted that the criterion of life to which we are giving prominence is relative. Some organisms can keep going for a hundred years, and some for only a hundred days, and some for only a hundred hours—the question rises as to the limit. Among the primitive organisms may there not have been some which lived only for a hundred seconds? How would they these hypothetical creatures have differed from the will of petals that flies from itself out, rushing over the surface of the basin of water on which it has been thrown? The answer must be that an organism did not begin to be until alongside of disruptive processes associated with reconstruction processes there were also correlated constructive processes, making for repair and self-maintenance.

(2) Growth, reproduction, and development—When an inorganic thing is affected by an external influence inducing chemical change, the result is apt to be destructive. It changes into something else—the bar of iron into rust, and the barrel of gunpowder mostly into gas. The organism's responses to stimuli in no cases are accurate phrasing than 'reactions to external forces'—also involve disruptions, but these are not destructive. As we have seen, they are correlated with self-maintaining processes. Not less important is an organism which balances its accounts from hour to hour, but never had much margin. There are such organisms which live, to use a homely expression, from hand to mouth. They are the scurvy, going concerns, but they have a very restricted basis of capital. It is plain that organisms could not have gone very far on such dangerous lines. They could not have survived any crisis. There is
obvious advantage, therefore, in storing energy in potential form, and this accumulation of reserves is fundamentally characteristic of organisms—especially of plants. As regards income and output of energy, an organism is far and away more efficient than the engine that man has yet invented. The organism can make its income go farther. It allows a smaller proportion of energy to sink into unavailable form. It can turn potential energy into useful form, it has an engine that can work continuously without enormous waste. More than this, however, there is a power of laying by what can be used later on.

J. D. L. (The Abundance of Life. "Scient. Proc. Rog. Roy. Soc. Dublin," vii. [1891] 55-90) expressed the dynamic contrast long ago when he said that, whereas the transfer of energy into an insatiable material system was attended with effects conducive to dissipation and retaractivity to further transfer, the transfer of energy into an animate material system is attended with effects retarding of dissipation and conducive to further transfer. This seems to lead on to the criterion of growth. A surplus of income over expense is the primal condition of organic growth, and in this respect plants are pre-eminent, since they accumulate such rich reserves (potential energy of chemical substances) and are so very economical in the getting of them. It must not be forgotten that it is the existence of the plant world that has made it possible for animals to dispense, relatively speaking, with inorganic substances.

In the art. Growth it has been pointed out that the growth of living creatures, as contrasted with that of crystals, is at the expense of materials different from those which compose the organism; that it implies active assimilation, not passive accretion, and that it is, in quite a new sense, a regulated process. An organism does now grow like a snowball rolling down a hill. To sum up, the power of sustained metabolism—of balancing accounts with some margin to go on with—makes growth possible.

But growth naturally leads on to multiplication or reproduction. As Haeckel clearly pointed out in his Generelle Morphologie (Berlin, 1866), reproduction is discontinuous growth. It seems impossible to draw any hard-and-fast line between a fragmentation which separates off overgrowths and the mere specialized modes of reproduction, such as budding and so on. Going back to the beginning of organic life when we see the breakage of a protoplasmic mass which has grown too large to be a unity. It was long ago pointed out by Herbert Spencer and others that a living unit would tend to divide when the increase of volume outstrips—as it soon must if it continues—the increase of surface. In a sphere, for instance, the volume must increase as the cube, and the surface only as the square, of the radius. Thus, if it grows beyond a certain size, a spherical organism would get into serious functional difficulties; the volume of material to be kept alive having increased out of proportion to the surface by which it is kept alive. By division into two units, the disproportion is counteracted. It has also been suggested that there is a certain normal proportion between the nucleus and the cell substance or cytoplasm; it is difficult if the cytoplasm increases beyond a certain limit. A non-nucleated piece of cytoplasm cut off from a large protozoan can move about for a time, but it can neither feed nor grow.

Thus, it is obvious that the nucleus is a trophic and respiratory centre of the cell. It may be that the division of the cell is a means of restoring the balance between volume and surface. The division of the cell is a fundamental feature of all cell nuclei.

The balance may also be restored by the emission of processes from the surface of the cell, as in rhizopod protozoa (Amoeba, Foraminifera, Radiolaria, etc.) or by a multiplication of nuclei, as often happens. But what has been suggested is a theory of the advantage of cell-division, not of the immediate physiological function for the cell.

As to this, it has been mooted that a period of growth is followed automatically by a process of 'antokatalysis,' but precise data are wanting. It cannot be gainsaid that the division of a cell remains one of the deep problems of biology. W. Bateson writes:

'I know nothing which a man well trained in scientific knowledge and method brings so vividly to life as the ignorance of the nature of life as the mystery of cell-division.

... The greatest advance I can conceive in biology would be the discovery of the nature of the instability which leads to the continual division of the cell. When I look at a dividing cell I feel as an astronomer might do if he beheld the formation of a double star; that an original act of creation is taking place before me' ([Problems of Genetics, p. 36].

In most cases a cell divides into two precisely similar daughter cells; this is associated with an exceedingly complicated division of the nucleus, which secures that each of the two daughter cells gets a very accurate half of each part of the original nucleus. But the difficulty of the problem is increased by the fact that a cell may also divide into two dissimilar halves, one with and another without one or more of the constituents of the original nucleus. In some cases among higher animals and in many unicellular organisms the cell-division may be apparently less complicated than in the usual 'indirect' method. The cell contracts in a dumb-bell-like fashion, and the nucleus likewise. In some unicellular organisms there is fragmentation of the unit. It is probable that the complicated methods of cell-division which are now the rule are the results of a long period of evolution, and that the fundamental characteristic is simply division. In any case there is no doubt that the power of spontaneous division is one of the most distinctive features of living units.

A consideration of effective activity led us to the idea of self-repair and the accumulation of reserves; this led us to the fact of growth; and this to multiplication, which takes place by division. It is characteristic of organisms to multiply, and, since what is separated off is in many cases a fragment, a group of cells, or a single cell, we are brought face to face with development—the power that has of growing and differentiating until it has literally reproduced the whole. Development is the expression of the latent possibilities of an imperfect organism in an appropriate environment. It is the blending visible of the indistinguishability of some primordium—a bud, a fragment, a sample, or a germ-cell—and, as it appears to us, it should be thought of as a continuation (under special circumstances and with a special result, namely, a new individual) of the restitution and regrowth which goes on always to make good the body's wear and tear.

Every gradation between the two may be illustrated by the phenomena of regeneration, which is exhibited when a lost part is replaced. It is a noteworthy fact that a starfish, which practises autotomy or self-mutilation in the spasm of capture and finds safety in reflex device (for it often escapes and regrows at leisure whatever it has lost), may also (e.g., Linckia videogilii) habitually multiply in this rather expensive fashion.

Bateson quotes Sir Michael Foster's definition: 'A living thing is a vortex or cellular and molecular changes;' and points out that "the living thing differ from all others, this, that it can divide and throw off other 'vortices,' through which it can maintain a connection with other vortices which again matter continually swells. We may perhaps think of the parallel a stage further. A simple protoplasm, if projected in a suitable way will twist and form two rings. If each loop is formed, split, and grows and then twists again to form more loops, we should have a model representing several of the essential features of living things" (op. cit. p. 26). It has to be added, as we have seen, that the living
LIFE AND DEATH (Biological)

'vortex' is the seat of complex and specific chemical changes which are correlated in such a way that the creature lasts. But more has to be added still.

(3) Environmental variability.—The common idea in this grouping is self-expression. (a) Life is a kind of activity, reaching a climax in behaviour, i.e. in an organismically determined, correlated series of acts which leads to a definite result. Behaviour concerns the organism as a whole, as in locomotion, or a considerable part of an organism, and differs from a reflex action in being a concatenation. It has different modes (tropisms, taxisms, insinuative behaviour, intelligent behaviour), but there is the common feature of correlation, of purposiveness (not necessarily purposefulness), and, usually, of individuality. When an amoeba appears to go on the hunt, follows another, catches it, loses it, re-captures it, we must say either 'behaviour' or 'magic.' We need not suppose that the amoeba knows what it is about, but it is very difficult not to say that its awareness is accompanied by some analogue of 'will.' In the case of instinctive behaviour there is often an extraordinary adherence to routine, and this may defeat itself, but in ninety-nine cases the question of what is done is effective, and the individuality probably finds expression in ways that escape us. (b) The effectiveness which characterizes the behaviour of organisms (i.e. of those that show behaviour enough to be studied) in their system of experiments, or the results of successful ancestral experiments, or, usually, on both. It appears to us to be one of the insignia of the organism. The organism forms its experiments or the results of its experiences. We must here include under the term 'organism' the germ-cell, which is an organism implicit or in potentia, and may be said to make experiments in internal organization just as much as, in reality far more than, a protozoan which makes experiments in its skeletal architecture or in its behaviour. As W. K. Clifford said,

"It is the peculiarity of living things not merely that they change under the influence of surrounding circumstances, but that the changes which take place in them is not lost, but retained, and as it were built into the organism to serve as the foundation for future action." (Lectures and Essays, London, 1879, p. 53).

As Bergson puts it,

"Il est la particularité des êtres vivants que, même dans le cas le plus sans influence extérieure, il y a un processus d'adaptation qui ne se perd pas et qui persiste."

As Jennings says, from the physiological point of view, in discussing the behaviour of the starfish.

"The resultant part shall act under the influence of the stimulus must be determined by the past history of that part; by the stimulus which has acted upon it, by the reactions which it has given, by the results which these reactions have produced (as well as by the present relations of this part to other parts, and by the immediate effects of the present action).

We know as solidly we know anything in physiology that the history of an organism does modify it and its actions—so was not yet thoroughly understood, discomfited, and now the less real. (Behavior of the Starfish, University of California Publications in Zoology, iv, 1907, p. 177).

(c) The organism's variability or power of producing some distinctively new character must, in the present state of science, be taken as 'given.' The only capacity like it that we know of is our own power of mental experiment—the secret of the artist, the musician, the thinker, or the inventor. It may be noted that 'modifications' brought on the body by some peculiarity of nurture, environment, or germinal variations. They are important individually, but they are not known to affect the progeny in any representative fashion. We may also distinguish those negative variations which are of an ancestral character, like horns or a tail, for there are various opportunities in the history of the germ-cells for the dropping out of an hereditary item. Similarly, in regard to those variations which are plainly interpretable as new arrangements of previously expressed ancestral characters, there is no theoretical difficulty in seeing what is happening, however, is the origin of something definitely novel, especially when there is reason to believe that it originates brusquely. We can hardly do more at present than assume that the organism is essentially creative. Just as the intact organism, from amoeba to elephant, tries experiments, so the germ-cell, which is no ordinary cell but an implicit organism, a condensed individuality, may perhaps make experiments, which we call variations or mutations. This completes our statement of the general characteristics of organisms.

2. Death.—It is convenient to distinguish, from a biological point of view, three different kinds of death. (1) There is violent death, when some external influence shatters, or dissolves, or swarms the organization. A wound, a sudden change of temperature, or being swallowed by another organism may involve the irrecoverable cessation of bodily life. For many animals in open nature the end seems to be always violent. (2) There is microbe death, when some organism, inactivating itself in the body, multiplies exceedingly and produces fatal effects. The intruders cause lesions, or destroy important elements, or produce fatal toxins, and so on. In wild nature there is little microbe death except when man affects disarrangements in distribution, so that organisms are exposed to the attack of new microbes. (3) There is natural death, which results from breakdowns in the breakdown in the vital processes. Hard-worked organs, such as the heart, may suffer from the imperfect recuperation of their wear and tear. The highly specialized cells of the nervous system tend to lose early in life their power of dividing and therefore of replacement; thus in higher animals there is not after birth any increase in the number of nerve-cells. In various ways there arises within the body an accumulation of physiological areas which eventually implies physiological insolvency. Especially does the process of reproduction attain the resources of the organism.

In spite of criticism, Weismann's doctrine of the immortality of the protozoa remains acceptable. Not that these unicellular organisms live any longer; they are continually being killed by accidents, vicissitudes, and enemies; some of them are occasionally consumed by other protozoa; but it seems to be the case in their normal conditions (when waste-products do not accumulate in the surrounding medium and when there is opportunity for conjugation) many of them at least are not subject to natural death in the same degree as higher animals are. Some of them, indeed, may be exempt from natural death altogether. The reasons for this immunity are to be found in the relative simplicity of structure, for unicellular organisms can continuously and completely make good their wear and tear, and in the relatively simple modes of multiplication, which do not involve the nemesis so frequent in higher organisms.

Though it is not improbable that very simple multicellular organisms, such as the freshwater hydra, may enjoy some measure of immunity from natural death, there is doubtless in the epigamous lines, in the course of evolution, natural death was the price paid for a body. The relative immunity of unicellular organisms strongly suggests that natural death is not to be regarded simply as an intrinsic necessity—the fate of all life.

Life was described by Bichat as 'the sum of the functions which resist death,' but this is one-sided emphasis. For, while it is characteristic of
organisms that they are continually at work in securing the persistence of their specific organization, it is equally characteristic that they spend the energy of the organism in maintaining this persistence. Instead of seeking to avoid death, to speak metaphorically, they often rather invite it, sacrificing themselves to the maintenance of the species. As has been noted in art. 405, there is good reason for regarding the occurrence of death at a particular time as adaptive. Constitutions which lose their correlation at the end of a year have been selected in certain conditions; constitutions which lose their correlation at the end of 10 years have been selected in others. It is certain, as Weismann says, that "worn-out individuals are not only valueless to the species, but that they are often harmful" (Essays upon Heredity, etc. i. 24). As Goethe put it, "Death is Nature's expert contrivance to get plenty of life" ("Aphorisms on Nature," tr. Huxley, in Nature, i. [1869] 1).

3. Organic Mechanism.—The task of mechanics, as G. Kirchhoff said, is "to describe completely and in the simplest manner the motions which take place in nature" (Vorlesungen über mathematische Physik, Leipzig, 1879). A mechanical description is satisfactory as such when it enables us to formulate a process as a continuous series of necessarily concatenated mechanical operations like those of an automatic machine or of a waterwheel. We shall use the term "mechanical" throughout as meaning a matter-and-motion description, and as equivalent to physico-chemical, for chemical and physical descriptions are (ideally at least) reducible to mechanical terms. The question before us is how far mechanical description can be usefully employed in the study of organisms. The question is twofold: (1) how far we can describe characteristically vital events in terms of those concepts and formulæ which certainly serve us well when we study the tides or eclipses, the fashioning of a dewdrop, or the making of a star; and (2) how far a mechanical description answers the distinctively biological questions as to the correlation of an organism's activities, its behaviour, its growth and reproduction, its development and evolution.

There is no doubt that chemical and physical laws describe inorganic creatures—to what has been called their inorganic aspect. Chemically regarded, living involves a complex of reactions in association with the material with which we call "protoplasm," and some of these can be reproduced apart from the organism altogether. Some vital processes illustrate H. van't Hoff's rule of chemical reactions, for they increase in rapidity as the temperature increases. This may serve as an instance of the similarity of the organism's chemical processes with those that occur in things in general, but it must be carefully noticed that we cannot assert that the movements of molecules in a living protoplasm are the same as those in an inorganic system. In his posthumously published Prinzipien der Mechanik (Leipzig, 1894) H. Hertz emphasized the need of caution.

It is certainly a justified caution with which we confine the results of the experiments to inanimate nature and leave the question open how far its laws can be extended beyond. In ultimate analysis, however, we can neither maintain that the internal phenomena of animated beings obey the same laws nor that they follow other laws (quoted by J. E. Mure, History of Darwinian Thought, ii. [Edinburgh and London, 1902] 584).

It is plain that many physical processes occur in the body which are comparable to those observable in the inorganic domain—processes of diffusion, capillarity, surface-tension, and so on. Just as the living body illustrates the law of matter, so is it with the conservation of energy. One mode may change into another mode, but no energy ceases or is lost in the transformation. Careful experiments with a calorimeter show that it is possible to measure the amounts of the energy-income and energy-expenditure of an organism, the slight discrepancy that is sometimes observed being reasonably explained as due to the inevitable imperfections of instruments and methods. It should be noticed, however, that, according to some physicists, the second law of thermodynamics does not apply to living creatures. While no fact is considered in regard to organisms that has been shown to be inconsistent with the generalizations of chemistry and physics, and while many results of importance, both theoretically and practically, have rewarded the application of physico-physical methods to living creatures, we believe it to be quite inaccurate to say that mechanical concepts and formulæ suffice for more than a partial and abstract description of the life of organisms. We shall proceed to show that

(a) Everyday Functions.—As things stand at present, there is no forthcoming any physico-chemical description of any total vital operation, even of everyday functions such as the interchange of gases in the lungs, the digestion of food from the alimentary canal into the blood-vessels, or the filtering processes that go on in the kidneys.

The co-ordination involved in the discharge of a function and the correlation of one function with another are characteristic physiologic facts which are not made clearer when the chemistry or physics of an artificially isolated corner is worked out. Even in such a familiar occurrence as the flow of blood through the brain there is nothing which is either easy to understand or easy to express. The result of physiological stimulus and response no real quantitative relation can be traced between the supposed physical or chemical cause, and its effect. When we attempt to trace a connection we are lost in an infinite mass of complex conditions, out of which the responsible energy (J. S. Haldane, Mechanism, Life, and Personality, p. 34).

A very familiar fact is that the same stimulus applied to two apparently similar animals, or to the same animal at different times, yields different answers. We can indeed give reasons for this, but the reasons are not mechanical reasons.

(b) Behaviour.—When we think of a collie dog controlling a flock of sheep according to instructions, or of a swallow returning to its nest in the South to the place of its birth, or of the spider spinning a typical web without experience or model, or of the larval freshwater mussels fastening themselves to minnows, or of the larval larval larvæ, or of the larval larvæ, or of the larval larvæ responding to the contact of the water-snail by which alone it can successfully continue its life, or of the ameba capturing its prey, losing it, following it, recapturing it, and so on, we are face to face with animal behaviour which transcends mechanical description. The behaviour is made up of a succession of acts which are correlated in a particular sequence. This is true even in instances where we know nothing of animal mentality. It goes without saying that the behaviour implies chemical and physical events, but the bond of union eludes the chemist and physicist. There are elements of spontaneity, plasticity, adaptability, and purposiveness that are foreign to mechanical reasoning. We can make nothing of behaviour without new concepts, notably that of the organism as an historical being that trades with time.

(c) Development.—The condensation of the inheritance into microscopic germ-cells, the combination of two inheritances in fertilization, the subsequent division of the inheritance involved in the
segmentation of the ovum, the process of differential growth takes from the apparently simple the obviously complex emerges, the embryo's power of righting itself when the building materials of its edifice are artificially disarranged, the way in which different parts are correlated and, as it were, concerted towards some future result—these and many other facts lead towards a convincing impression that development far transcends mechanical description.

But if the description of development is beyond mechanics, what, it may be asked, is the role of the young and vigorous science of 'developmental mechanics' ('Entwicklungsmechanik') so well represented by the work of Roux? It may be answered that the embryo, as a material system, does of course exhibit chemical and physical processes which may be analyzed apart and treated singly; that development shows a continuous action and reaction between an implicit organism and the environment; and that developmental mechanics so-called is in great part concerned with discovering the correlation between steps in development and their appropriate external stimulation and nurture. But a further answer is this, that the term 'mechanical' or 'mechanistic' is often, unfortunately, applied to a systematic or connected description which displays a series of events in causal coherence without any intervention of mental facts. Given certain properties of organisms in general and of nerve-cells in particular, we may give a more or less connected and complete account of a reflex action without impressed any psychological agency. But this should not be called mechanical description.

(d) Evolution. — The adequacy of mechanical description may also be tested in reference to evolution. There is apt to be talk in speaking of evolutionary explanation as a continuation of 'evolution' in the inorganic domain. For it is more accurate, probably, to speak of the development than of the evolution of the solar system, since it is the action of one mass into explicit manifoldsness. The material nebula, if such it was, is comparable to a great world-egg which developed into several embryos, as eggs sometimes do, but there were no fluctuations between them and their environmental limitations, no sifting process which eliminated some and left others surviving. There were no alternatives, no trial and error mechanism was not comparable to that skaking of individual lives and losing of them which is so characteristic of that sublime adventure which we call organic evolution. The theory of organic evolution starts with the mystery of variability, which is more like experimenting in self-expression than anything in the inorganic world. Indeed, it is not without its analogies even there. In natural selection the organism is often anything but a passive pawn. It does not simply submit to the apparently inevitable. It often evades its fate by change of habits or of environment; it compromises, it experiments, it is full of device and adventure. It not only adapts itself to its environment, it adapts its environment. The evolving organism is an historical being, a genuine agent which trades with its talents. Such mechanical description as is possible leaves the essential features undescribed.

4. The uniqueness of life. — The negative conclusion was arrived at that mechanical or physical-chemical concepts do not suffice for answering biological questions. This is because organisms show a certain apartness or uniqueness, the various theories of which may be roughly classified as biological. Before considering these, however, we must refer, practically rather than philosophically, to three preliminary points. (a) It is maintained by many that mechanical formulation, legitimate and useful for certain purposes, apparently for things as they are in certain cases, such as some animal movements, is not the ideal formulation even within the domain of the not-living. But, if it is not adequate there, it will be still less adequate within the realm of organisms. Practically, however, it may be answered that this is not a biologist's business. All will admit that chemical formulæ work very usefully within the inorganic domain; but the biologist finds that they do not help him to answer his particular questions. He therefore seeks for formulae of his own. (b) It is often pointed out that, although we cannot at present translate vital happenings, such as growth and division, into terms of any known mechanica, we may be able to do so in the course of time. It may be, for instance, that the concepts of chemistry and physics will undergo profound modification in centuries to come, and no one can say that they have not changed in the past. The practical answer to this question is that we can speak only of the chemistry and physics that we know. (c) It is held by some that it is consciousness, or mind, that gives organisms their apartness or uniqueness. But, without entering into a discussion of this, we may again give a practical answer, that the problem 'vitalism or mechanism' is the same for plants and animals and that we do not know anything about the mind or consciousness of plants.

There are three well-known positions in regard to the apartness of living creatures, which may be roughly described as the three grades of vitalism or mechanism.

(1) The first finds the differentia of organisms in the greater complexity in the configurations of elementary particles; protoplasmic metabolism is extremely intricate—indeed, the activities of organisms cannot be predicted from a formulation of what occurs in the inorganic domain. Biology may be allowed a laboratory of its own, but it should be called chemical. The main objection to this view is simply a matter of fact—that no headway has been made in giving mechanical answers to characteristically biological questions. (2) The second view is that there is a peculiar kind of activity in living creatures and nowhere else. Organisms have a monopoly of some power in the same series as, say, electricity. This theory is a lineal descendant of one form of vital theory brought up to date. It has been suggested that there may be a specific intra-organismal form of energy evolved by and
pertain to the complex nature of the molecule of protoplasm or of protoplasmic, which exhibits an incessant alternation of unipolar and bipolar states, the latter resulting in cell-division.

The current regulation observed between cell and cell are certain of the manifestations of this supposed form of energy—but probably not at all, just as the alternations and regulating mechanisms of electrical energy under certain conditions, but not by any means the only manifest distortion, which we may be experiencing manifestations in another way of the same form of energy which under other conditions produces the alternations and the phenomena of strain in the dividing cells, and the actual cell-division... By this supposed form of energy, I do not mean a new form of the universe, but a new phenomenon of some constellations; it involves only at certain steps, introducing an occasional indeterminism; it is supposed to be a genuine agent, counting for something, 'at work,' as Driesch says. This is a deepening—on a principle—between the flight of a bird and the movement of a comet, and biology is by hypothesis autonomous. We cannot enter into a discussion of Driesch's ingenious and completely worked-out theory of entelechy, or one of the three proofs which he gives of the autonomy of life. The first is based on a study of morphogenesis, i.e., the way in which an organism realizes in development its specific form and structure; the second is based on a study of inheritance; the third is based on a study of the movements of organisms. That they show the impossibility of 'a machine-theory of life' will be admitted by many who are not disposed to postulate an organismal entity. According to Driesch, entelechy is 'an autonomous agent,' of a non-material nature, without a seat of localization. It is immaterial in itself; it is not energy; it is not in communication in its agency with the laws of energy; its function is to suspend and set free, in a regulatory manner, pre-existing faculties of organic interaction. Because of the nature of the organism's behavior—the widest sense of the word—which is opposed to an inorganic reaction, the same, and which shows the living organism is more than a sum or an aggregate of its parts... This something we call entelechy' (op. cit. ii. 285).

In illustration of the criteria of Driesch's position, reference may be made to three points.

(a) It is argued that, if entelechy is effective, it implies a breach in the fundamental law of the conservation of energy. But this is like begging the question to press this difficulty, and Poynting has suggested, in discussing the analogous case of the operation of our will, that a merely deflecting force does not exist, though it changes configuration. The will may introduce a constraint which guides molecules to glide past one another instead of clashing—a slight change of spin which may be compensated for by a slight opposite spin put on the whole entity.

(b) The will may act as a guiding power changing the direction of motion of the atoms and molecules, and this guides molecules to glide past one another instead of clashing—a slight change of spin which may be compensated for by a slight opposite spin put on the whole entity. But this will be found to be merely transferring our problem from the complex that we are actually and in time and space to a sort of manufactured by the law of the organism, presenting the same difficulties, with the additional one that it is inadmissible and cannot be directly dealt with at all. The entelechy simply adds to our difficulties.

(c) Another objection is stated by J. S. Haldane: 'In order to "guide" effectively the exact system of physical and chemical phenomena occurring in living material, and at many different parts of a complex organism, the vital principle would apparently require that the whole system be adjusted and has inside of it, so to speak, a human thought. It is because of these qualities that it is a little like an organism. Practically, however, most of those who have a near acquaintance with living creatures will agree with Driesch that their behavior is not very like the working of machines. For certain purposes it is useful to think of the organism as an engine, but we must recognize that it is a self-maintaining, self-repairing, self-perserving, self-adjusting, self-increasing, self-reproducing engine.'

(d) Another objection is stated by J. S. Haldane; 'In order to "guide" effectively the exact system of physical and chemical phenomena occurring in living material, and at many different parts of a complex organism, the vital principle would apparently require that the whole system be adjusted and has inside of it, so to speak, a human thought. It is because of these qualities that it is a little like an organism. Practically, however, most of those who have a near acquaintance with living creatures will agree with Driesch that their behavior is not very like the working of machines. For certain purposes it is useful to think of the organism as an engine, but we must recognize that it is a self-maintaining, self-repairing, self-perserving, self-adjusting, self-increasing, self-reproducing engine.'

Jennings also points out that, according to Driesch, two living systems absolutely identical, in every physical-chemical respect may be different under absolutely identical conditions, this depending upon whether, and how, the entelechy takes part in the process. This leads to a very serious admission of the kind, which would be enough to condemn the theory. It should be stated that Driesch has replied vigorously to the criticism brought against him, and that he was a moment pretended that we could understand
LIFE AND DEATH (Biological)

‘even in the slightest degree’ how entelechy is able to discharge its function as regulator and guide.

Differing from Driesch’s position, according to which entelechy is not identical with the psychical is the animism so ably expounded by McDougall in his Body and Mind (1911). The panpsychism of the very distinctive position of Bergson should also be considered.

According to McDougall, ‘not only conscious thinking, but also all organismic activity and evolution are psycho-physical processes. All acts are conditioned and governed by psychical dispositions that have been built up in the course of the experience of the race’. (p. 370).

5. Provisional conclusion.—Looking backwards, we cannot admit that the study of animal behaviour, for instance, is no more than the study of very subtle problems in chemistry and physics; we do not find evidence to justify the view that organisms exhibit a new kind of physical energy in a line with electricity and the like; and we do not share the opinion of many recognized authorities that the facts cannot be met except by a theory of entelechy. What then is our position? It is that of ‘descriptive’ or ‘methodological’ vitalism.

Making no pronouncement whatsoever in regard to the essence of the difference between organisms and things in general, we hold to what we believe to be a fact, that mechanical formulae do not give the answer to the biological question. Bio-chemistry and bio-physics added together do not give us one biological answer. We need new concepts, such as that of the organism as an historic being, a genuine agent, a concrete individual, which has traded with time and has enregistered within itself past experiences and experiments, and which has its consensive bow ever bent towards the future. We need new concepts because there are new facts to describe, which we cannot analyze away into simpler processes. In the present state of knowledge we cannot tell in what the newness or apartness essentially consists, and this appears to us to be a quite legitimate, though provisional, stopping place, without pressing on to any positive vitalistic theory, which must be, from the nature of the case, metaphysical.

If we go beyond science in the endeavour to form some connected reconstruction, we should say that those constellations of ‘matter’ and ‘energy’ called organisms afford opportunity for the expression of aspects of reality which are not patent in the larger world. We must not think of ‘matter’ and ‘energy’ as the exclusive stones and mortar of the ever-growing cosmic edifice; they are abstract concepts, defined by certain methods, which serve well in the description of the physical universe. They certainly represent reality, for we safely make prophecies and risk our lives on the strength of this. But it is quite another thing to say that they are exhaustive.

An aspect of reality which may safely be neglected in astronomy and navigation, in chemistry and engineering, becomes patent in the realm of organisms, and we call it ‘life’. It is neither a product of ‘matter’ and ‘energy’, nor an outcome of the interaction of constellations; it is an expression of the reality of which atoms and their movements are also but conceptual aspects. It may be regarded as that aspect of reality which is closest to the ‘philosophical system’ and in normal conditions in all of them. May it not be that the qualities which render the postulation of entelechy or vital impulse necessary to something of this kind is a great factor in the history of the Nature that we know? We say ‘in kind,’ since it is plain that we share in a movement which is not the unrolling of something originally given, but a creative evolution in which time counts. Instead of supposing the intervention of a non-material agency which controls chemical and physical processes in organisms, we suppose that a new aspect of reality is revealed in organisms—that capacity for correlation, persistence, and individuality, for growing, multiplying, and developing, for behavior of the general kind, which we call ‘life’, which can nowise be explained in terms of anything simpler than itself.

To the biologist the actualities are organisms and their doings, and life is a generalized concept denoting their peculiar quality. What life in essence or principle is he does not know. Taking life in the abstract, therefore, as ‘given’, we have to be content in this article with stating the general characteristics of living creatures. It is plain, however, that analytical and formal discussion falls far short of giving any adequate idea of life in its concrete fullness. For that requires a synthesis, and that, again, is impossible without sympathy. We must use our everyday experience of livingness in ourselves and in other organisms, not for knowledge alone, but as a source of sympathy in which to elaborate the data of biology; and we need not be afraid of exaggerating the wonder of life. Sympathetically and imaginatively, therefore, as well as with precision, we must seek to envisage the variety of individuals or species; the abundance of life—as a river always tending to overflow its banks; the diffusion of life—exploring and exploiting every corner of land and sea; the inscrutability of life—self-preserving, persistent, dominant, continually achieving the apparently impossible; the cyclical development of life—ever passing from birth, through love, to death; the intricacy of life—ever setting the acorn; the subtlety of life—ever drop of blood an index of idiosyncrasies; the relatedness of life—with myriad threads woven into a patterned web; the drama of life—plot within plot, age after age, with every conceivable illustration of the twin motives of hunger and love; the flux of life—ever under our short-lived eyes; the progress of life—slowly creeping upwards through the immeasurable time, expressing itself in other forms; the beauty of life—every finished organism an artistic harmony; the morality of life—spending itself to the death for other than individual ends; the mentality of quiet dreaming, sometimes sleep-walking, sometimes wide awake; and the victory of life—subduing material things to its will and in its highest reaches controlling itself towards an increasing purpose.

Sec. further, ABIÓGENESIS, AGE, BIOLOGY, DEVELOPMENT, GROWTH, HEREDITY.

LIFE AND DEATH (Primitive).—In primitive thought, so far as we can analyze it, life and death are not the balanced opposites which civilized contemplation has made them. To early man life is the normal condition, death an abnormal catastrophe, unatural, miraculous, and territorial. It is to be expected when a man kills his quarry or his foe; here the satisfaction of an end achieved inhibits the feelings aroused by the non-violent death of a tribesman. According to Australian philosophy, the living would only live on in the dead man's place for the result of actual physical violence or of sorcery, a refined form of it. This is the usual view of the savage, though it is hardly a refined conclusion. The savage does not ask the major question of civilized men, lives in the present; this fact involves a certain inertia of thought as to the contrast between life and death, and it is true of both stages of culture that 'the fear of death is as nothing.'

The primitive man, when he exercised himself on the subject of life, was concerned with the acquisition of physical strength and moral influence rather than with the problem of the nature of vitality; but the constant rage and terror which characterized its attitude towards death involved a permanent concern with the supposed causes of an event which, though inevitable, remained a mystery and a violation of natural law.

1. The nature of life.—The distinction between life and soul is in some cases confused, and in others not drawn. Again, the latter concept includes several ideas. We have, however, to deal with a 'life-principle' which by itself is not a clear concept and an idea of the soul.

For the earliest stage of thought the chief datum is the difference observed between the dead body and the living and moving body. It is inferred that something has departed from the body when dead; the something is a concrete object or substance, identified vaguely at first, later with some precision, as a special entity, or identified with one or other part of the living organism.

Certain Australians speak of 'something,' a yuva, not described, which never leaves the body of the living man; it grows as he grows, and decays as he decays. This illustrates well the confusion between a concept and a fact of life. Put in another form, the inference is that the soul does not finally leave the body until decomposition is well advanced. Such cases indicate that the inference of life from observed movement is not in itself proof of regard inanimate objects as 'alive,' but the meaning of this is clearly shown by the Tengan and West African notion that these objects die when they are broken or destroyed.

The view that this primitive conception that life is not continuous, but that so vaguely ideated a content is a concrete is supported by the fact that any haphazard identification serves as 'life'; examples will be found below. But the primal conception, as the first Australian instance shows, very nearly to a result in which a man's 'life' is himself in reply.

This perhaps is to be regarded as the second stage of analysis. The Hervey Islanders considered that the soul of a dead man had fat, so that the soul of an animal could be 'fat.' According to the Karera, that which 'personates the varied phenomena of life' is the kohak or lo, which 'is not the soul,' but is distinct from the body and its absence from the body is death. It is also the individuality of the animated being. It merely gives life, and can not be distinguished from the person himself.

The Iroquois conceived of 'an exceedingly subtle and refined image, possessing the form of the body, with a head, teeth, arms, legs, etc.'

The next stage is characteristic of Papuan and Malay belief.

The Dayak idea of life is this, that in mankind there is a living principle called aumangot or aumangu whose existence is caused by the temporary absence and death by the total departure of this principle from the body.

But this principle is a reproduction of the individual, and a miniature replica. This is the tanama, or 'little man,' of the Toraja of Celebes. The aumangot of the wild Malay tribes is a 'shape, exactly like the man himself, but no bigger; and this aumangut of the Malays is a 'thumbing,' and corresponds exactly in shape, proportion, and complexion to its embodiment or casing (asung), i.e. the body. It is the cause of life; it is itself an individual person and is separable from the body in sleep, sickness, and death. A similar conception is found in S. Africa, America, and other localities 

The problem of its origin is not clear. J. G. Frazer thus describes the conception:

As the savage commonly explains the processes of inanimate nature by supposing that they are produced by living beings working in or behind the phenomena, so he explains the phenomena of life itself. If an animal lives and moves, it can only be, he thinks, because there is a little animal inside which moves it: if a man lives and moves, it can only be because he has a little man or animal inside who moves him.

The argument agrees with the fact that the miniature replica is usually supposed to be the cause of life, but it is difficult to understand how the idea of an inner being, whether in inanimate things or in living men, could have arisen in the first instance. Only the contrast between the dead and the living body seems adequate to produce it; later, the idea could be applied to all natural objects. As for the miniature size of the replica, this is probably a refinement of an earlier conception, in which such qualities were distinguished, and it would be naturally deduced from the fact that the man's body is still present, without any reduction; that which has departed, therefore, must be infinitesimally small. The same result is

4. R. M. J. and E. S. (1845), 306ff.
LIFE AND DEATH (Primitif)

necessitated by the idea that the life must take its departure by some one of the orifices of the body, and it is possible also that certain characteristics of the memory-image may have exercised an influence.1

1 In the early stages the life-principle is, though 'refined,' always material; the conception of insubstantiality is quite a late achievement of thought.2 But certain natural confusions occur. Thus, the sëmaingat of the wild Malayas differs from that held by other races in the same regions, for that which gives life is the jieus. The Patani Malay also believe in a 'life breath,' gyana, the sëmaingat, in their view, is not the vital principle, but is possessed by every object in the universe.3

In his study of the animism of the Malayans and their larger district, A. C. Krafft finds a permanent distinction between the soul of a living man and the soul of a dead man. The former he considers to be impersonal, though in many cases it is regarded as a person, and always a miniature replica of the owner; it gives him life. Its material is fine, eternal substance; it has various seats in the body where its action is most conspicuous, such as the pulses. It dies when the man dies. The other soul is a continuation of the individual life and does not die. In the latter conception we seem to have a combined result of the memory-image and the hallucinatory ghost.

The soul, which involves the idea that all things in nature either are animate or possess a soul, is also attached to the theory of the sëmaingat, though it is chiefly a thing concerning our interesting man that possesses the miniature replica.4

The sëmaingat of the Eastern Semang is red like the earth, or in the blood.5 Life is usually regarded as being closely connected with the blood—a natural inference from observation of wounds or of death in the body. Life and blood are identified.6 A vaguer identification is frequently found with parts or parts of the living organism. To some, as the jieus, life is the flesh—a concept which probably originated from experience of nutrition. The heart is a seat of life; in some cases it, like blood, has a soul of its own.7 The Australians regard the kidney-fat as an important seat of life,8 and the brain and fat and omentum are so regarded.9

The absence of breath in the case of the dead is a fact naturally suggesting a belief that the breath is the life, or that the life is in the breath. In the Marquesas, when a man died, it was the custom to hold the nose and lips of the dying persons, in order to prevent death.10 In primitive thought there is no explicit inconsistency in the identification of life with various things; the older books of the OT hold, now the breath, now the blood, now the dead, to be the life. Primitive biology, in its secondary stages, has a larger list.11

In this to be included the shadow of a man, which is (like everything connected with personality) a vital part,12 and a man's reflexion is also closely akin to, if not identified with, his life. In Melanesia a pool into which any one looks he dies; the image is supposed to hold upon his life by means of his reflection on the water.13

The lore of shadow, mirror-image, and portrait becomes prominent, however, only in the third stage of animism—that of the higher barbarism. The Chinese place the dying man's picture upon his body, in the hope of saving his life.14 In Siam, when a copy of the face of a person is made and taken away from him, a portion of his life goes with the picture.15 The comparison of the life-essence with fire is the best known of the material analogies, and occupies a prominent place in myth—e.g., the fire of life infused by Prometheus into the clay figures which became men—and in metaphysical theology.

Until modern times speculation has concerned itself with the source of life rather than with its origin. In early mythology conceptions like that of the makers of the world, who regard a point as the beginning of existence, are rare. Hence, also are such pseudo-anthropological ideas as the Maori concept that the life of a man is contained in the catamenia,16 but the usual conclusion is that the soul is the source of life itself.

The life of nature—Life in the vegetable kingdom has probably always been recognized, and primitive thought doubtless distinguished it as being different in character from that of animals. The same may have been the case with its attitude to inanimate things, unless it merely personalized them.

The view of Tylor, that in primitive animism there is a belief in the animation of all nature, and that man recognizes in every detail of his life the operation of personal life and will,17 can be applied only to certain developments of the higher barbaric stage.

1 It is not likely that at one stage man regarded everything as alive, and at a later stage gradually discriminated between animate and inanimate. The fact is, that he began by regarding everything as neutral, merely as an object over which he never thought about the matter at all, in his act... he distinguished as well as between animal and inanimate. 2 Whatever power and importance the man may have ascribed to inanimate objects, he drew the strongest of lines between such objects and what was endowed with life. 3 An excellent observer remarks of the Kafirs of S. Africa, in regard to the question whether they imagine everything in nature to be alive, that they very rarely think of the matter at all. When questioned on the subject of the animation of stones, they laughed, and said, 'It would never enter a Kafir's head to think stones felt in that sort of way.' 4 Throughout the fluid and ill-defined psychology of primitive man we may distinguish a tendency to mark off the concept of things as living from the concept of them as ideas, whether in life or after death. The latter represents the more nearly the former perceptual. An excellent illustration of the distinction is the Indonesian view, expounded by Krafft, that the life-soul of creatures is never confused or compounded with the after-death soul. In later psychology, on the other hand, Taylor's hypothesis, that the life-soul of a thing and its phantom are combined, holds good. Language has probably had much to do with the combination. The view of Krafft, however, that the Indonesian 'life-soul' is but a part of the world-soul, applies only to the higher developments of animism.5 Here we have a parallel with the pantheistic theories of the world.

5 Regard for life.—Another parallel with these is the regard for life generally, a regard which develops with culture but is more pronounced in Oriental than in Western morality. At first this feeling is a vague animism, but later it is fused

with metaphysical estimates of the intrinsic value of life, as such.

1. 'The Way' Jaimin, and Taedoon the respect for animal life is extreme. 1

'A disciple of Buddha may not knowingly destroy a living organism, be it the intangible, or the visible, lest he inhale a living organism.

He considers that the evening and night are not times for eating, since one might swallow a live thing by mistake.

Thruout Japan, the life of animals has always been held more or less sacred. 2 In China it is regarded as a sin to kill wild animals for food. 3 Even in the misteke, the object is not to be killed by a blow from the plant is explained by Friz: "With the head of a man's life is conceived as embodied in a particular object, the existence of which his own existence is in some way bound up, and the destruction of which involves his own, the object in question may be regarded and spoken of indifferently as his life or his death." Hence if a man's death is in an object, it is perfectly natural that he should be killed by a blow from it. 4

The idea that the misteke itself is the life of the tree on which it grows is of the same order as the Malay and Chinese ideas with regard to the knobs and excresences on tree trunks. 5 Two converse ideas may be noted. A person whose life is magically isolated has a one weak spot, the head of Achilles. Death, no less than life, may be 'deposited,' as in the stories where it is kept in a bottle. See, further, art. LIFE-TOKEN.

5. Life magic—When the concept of life as a magical essence was established, the formula is applied all round the social and religious spheres. The elementary facts of nutrition thus become the basis of an elaborate vitalistic philosophy. More primitive forms of this appear as a practical science of life insurance. Food..., during thousands of years occupied the largest space in man's mental area of vision. 6 This consideration helps to explain the existence of so large a number of superstitions connected with food. And into these enter the magical and, later, the vitalistic theory. Particular creatures are eaten because of their particular vital force. The slayer eats part of his foe in order to assimilate his life and strength (see, further, art. CANNIBALISM, §§ 3-7).

In order to procure longevity the Zuuls ate the flesh of long-lived animals. 7 Medes injected into the veins of animals an infusion of the long-lived deer's blood. 8 In the lower culture special virtue is assigned to human flesh. 9 Besides the eating of flesh and the drinking of blood, there are various methods of acquiring the 'life essence.' The Caribs took the life of an animal following a boy by rubbing its juices into his body. 10 Anointing with amara oil and with gold-in-view are methods of procuring life found in Indian and Chinese folk-lore respectively. The Tibetan Buddhist sects require 'life drinking' from the 'Vase of Life' (see, further, art. FOOD AND EATING THE GOD).

Long life is often the subject of charms. The Chinese wear a longevity garment on birthdays. 11 The Hindus asserted long life to be continent. 12 Most religions include prayers for long life. After

7. E. M. J. VIII, 266.
8. Parker, p. 58.
a death, magic is employed to prolong the life of the survivors.4

Magicians, and later the gods, are regarded as both possessing a richer store of life and being able to impart it to others; the savage medicine-man is able to infuse life into an inanimate fetish. Breathing upon the object gives it the breath of life (as in Ezekiel’s apologue of the dead bones); smearing it with blood gives it the life of the blood.2 According to the Tantras, a king may slay his enemy by infusing life into his foe’s effigy and then destroying it.3 Divine persons naturally tend to become long-lived or immortal.

But, though divine persons throughout bear a more or less ‘charmed life,’ absolute immortality is a late conception. The gods of the Homeric pantheon maintained their life by eating ambrosia, the ‘food of deathlessness,’ and by drinking nectar; and similar ideas were connected with the Persian haoma and the Hindu soma. In Scandinavian and Slavonic folklore, men are eaten by the gods in order to perpetuate their life.3 The Egyptian gods were mortal.8 The tendency to immortality, however, is carried out in the higher religions, probably in connexion with the natural attribution of a general power over life and a control of creation. In the end the gods assume in themselves the ultimate hopes and fears of men, and they become ‘lords and givers of life.’

6. Renewal of life.—A crude form of the ideas connected with a renewed earthly life after death, or resurrection, may be seen among the Australian aborigines, who speak of the ghost returning at times to the grave and contemplating its mortal remains.2 Similarly, on the W. Coast of Africa it is the man himself in a shadowy or ghostly form that continues his existence after death.3 The belief in the revivification of a dead person does not appear until the thauomorphic stages of barbarous religion, when it becomes a favourite miracle, performed by a word of power or by the life-giving touch or contact with the body of the divine person. But the belief in a second life, or, rather, a series of lives, is a remarkable and regular feature of primitive thought. It takes the form of reincarnation; the dead are born again in their descendants, the idea being a natural inference from the resemblance of children to their parents and grandparents.9 The Central Australians have developed it into an elaborate theory of heredity, in which the ‘life’ is a germ-plasm.10 Other Australians believed the notion that while men were blackfellows returned to life; ‘tumble down blackfellow, jump up whitefellow’ is a familiar phrase. The whiteness of the native corpse after cremation has been suggested as the basis of the notion.11

The idea of reincarnation refers also to living parents. Thus an old blackfellow of Australia cries to his son, ‘There you stand with my body.’ Then the actual re-incarnation of the father.12 This frequent belief has been sug-

gested as an explanation of certain customs of which killing the first-born is a culmination—in the child is supposed to have robbed the father of a portion of his life (cf. ERE vi. 359).

7. The nature of death.—Primitive thought has no definition of the nature of death, but the view that life is transferred from one individual to another is superimposed. Grievance is felt among the lowest races, and they develop with culture. Another emotion is fear of the corpse as a mysterious personality; a parallel fear is that of the departed ‘something,’ ghost or spirit. Like other tabu states and social crises, death has not only its rites de passage, such as mourning, but a mysterious power of pollution. This is partly connected with a fear that the survivors may also become victims, a fear which develops into an avoidance of infection.2 These ideas reach their climax in the Zoroastrian conception of the absolute impurity of death, a type of all uncleanness.2 In others of the higher religions, particularly Christianity, the materiality of the state of death give way to spiritual. The departed soul has less connexion with the body, although even here a physiological fact has kept up the idea of ‘the odour of sanctity.’

Fear of dying has no connexion with the primitive fear of death.3 Suicide for trivial reasons is very common among the lower races.4 Many savages meet death with much indifference, or regard it as no great evil, but merely as a change to a life very similar to this. But it is a fact often noticed among ourselves, that a person on the verge of death may recover from the greatest caimens, although he has been afraid to die throughout his life. Moreover, the fear of death may be disguised by thoughtlessness, checked by excitement, or mitigated by dying in company. There are peoples who are conscious for their bravery, and yet have a great dread of death. Nobody is entirely free from this feeling, though it varies greatly in strength among different races and in different individuals. In many savages it is so strongly developed that they cannot bear to hear death mentioned.4 The last objection, however, may often be due to mystical notions.

Christianity estenmes death as the passage to a better life, and the higher religions, generally, mitigate the inevitable lot.

Speculation on the origin of death is considerable in early thought, and myths innumerable have been invented to explain it (cf. art. DEATH AND DISPOSAL OF THE DEAD [Introductory], vol. iv. p. 411 f.). A common motive of these is a misunderstanding or a trick. At a higher stage death is attributed to the malievole of demons, often supposed to eat the life of men and so produce death.6 Otherwise, the separation of the life-spirit from the body as a fact, not as a theory of origin, is usually explained as the result of sorcery, except in cases of obvious violence or accident.8 By various means the human sorcerer, or the supernatural demon, destroys or abstracts the life.

In the higher barbarism death appears as a punishment for breaking tabu or other supernatural injunctions. The greater religions connect its origin with sin, Christianity with the primal sin of disobedience.1 Throughout, humanity is instinctively agreed that death is unnatural, and the conception of a second life is a protest against it.

8. Mythological and ethical applications. Apart from myths in explanation of the origin of death and the less frequent fancies of a mystical or magical life-source, primitive thought makes little use of the concepts of the dead and of death, as motives of lore.1

8 MI i. 24, 25, 26, 553, 651.
Their deification is rarer still. In some stories one or more remarkable personages are brought into close connexion with the facts of life and death. Thus, the Maoris tell how men would have been deathless if Maui, the culture-hero, had succeeded in passing through the body of Night. In other stories, life and 'desiring life' survive the destruction of the world. The usual result is that some great deity possesses control over life, as in Brahminism, Christianity, and Islam. There is a tendency also to connect immortality with the sun-god; the Rigveda speaks of the sun in the character of Savitar, the 'Vivifier'.

In Hindu theology Yama, the first of mortal men, became King of the Dead. In Chinese theology a contrast is drawn between the old Adam, by whom death entered the world, and the new, who re-introduced 'life' on a higher plane. A less refined moral is drawn in the Babylonian epic; the conclusion is that Gilgamesh must die and cannot escape the universal lot.

'Let him hope for and, if possible, provide for proper burial. Even in the tomb, at least, he has the peace of mind that he has not suffered the pang of hunger in the world of spirits.'

The Scismatic figures, Lil and Liliprasir, are among the rare cases where life is frequently desired. Old Slavic myth seems to have had a goddess Sm., but the Baganda are said to have a god of death, Wulumbe. The Etruscan figure of Charun may be similar to the last, the concept being derived from hunting executors, and the god being a slayer rather than a god of death. The Thanatos of Greek poetry, the brother of Sleep, is hardly a religious personification. The Shadow of the Dead, the double of the living, is originally placed which receive the dead. As a rule, the figure later described as Death is either a messenger of the gods or a god whose office is indirectly connected with the death of men. So Yama is his messenger, and the Taoists believe an 'angel' of death. The latter is the type of Christian ideas. The Greeks had both Charon and Hermes Psychopompos, but in modern Greek folk-lore Charon has become a figure of terror, Death Gigamesh must die and cannot escape the universal lot.

'A certain control over life is assumed in primitive ritual dramas, as in the pretended death and resuscitation of youths at initiation, and of candidates for the priesthood. Ideas of a magical vitality grew up out of sacred meals; at the same time there appears the concept of sin and death, and the consequent aspiration towards a purification of sin accompanied by a renewal of life. Out of these elements arises the ethical view of the renewal, but still undivorced from a mystical idea of a spiritual prolongation of existence. Salvation in the life after death was promised by the Greek mysteries. In its lowest terms the salvation resulting from belief in Christ was eternal life. Faith and morality meet when eternal life is the reward for a good life on earth. Life is identified with goodness.

The fear of retribution in a future existence has been impressed by some of the great religions, notably by Christianity. But there is no justification for connecting the origins of religion with either this fear (long posterior to the inception of religious ideas, and a late and special ethical development) or the worship of death or the dead. The dead are more or less feared in early thought; the infection of death is carefully avoided; the ghosts of the dead are intensely dreaded, and many spirits are therefore carefully propitiated. Many ghosts, it is true, have been developed into gods, but there are many keys which fit the doors of religion.

LITERATURE. This is cited in the article, but the whole of E. B. Tylor's exposition of animism in his Primitive Culture, London, 1886, applies to the subject.

A. E. Crawley.

LIFE AND DEATH (American).—The beliefs of the aborigines of America agree in the main with those of other peoples at the same stages of development; but there are a few interesting features of a universal character.

With regard to ideas of the life which informs the organism, the Eskimos identify it with its action with the life-warmth. So the Navahos regarded the warmth of the body as the living soul; the 'shade' or 'double', a distant concept, was supposed to wander anywhere when a man was sick or dying. The Sunk identified the soul with the 'vitality', and supposed it to exist after death. The Toltec explained that it was 'something within' them which made them live and was caused by death when it quitted them. Identifying breath or air with the vital principle, the Aztecs represented them as breathing the atmosphere with a mortiferous quality.

In many American Engages the Great Spirit and the Great Wind are one and the same both in word and signification.

The Aztec word cheechah, c.e., means 'wind, air, life, soul, shadow.' A phrase attributed to an Indian orator is, 'The fire in your heart and the life in your body are one and the same thing. The Spirits and human magicians, such as the shamans, devour men's souls; the result is death. Death is 'infectious'; a dead man's belongings decay quickly. Such is the ancient opinion among the Irish also, who hold that a dead man's clothes wear out more quickly than those of a living man.

The belief in the reincarnation of the dead in children is widely spread and firmly held. The Haida relate upon it by saying that after five such reincarnations the individual 'soul' is annihilated.

A special feature of American religious theory, on which practically the whole ritual of the central nations was founded, was developed from the usual primitive idea that divine persons are subject to senility, death, and decay. Alone among the Mexican gods, Tezcalipoca, is credited with perpetual juvenility. The principle was developed that the gods, in particular the sun, would die if deprived of life. Hence the perpetual round of human sacrifices offered on Maya and Nahua altars. This daily 'feast of flowers', as it was euphemistically termed, kept the gods alive. A serious result was the equally perpetual carrying on of warfare for the sole purpose of obtaining captives to sacrifice to save the victims. The hunt, as the symbol of life, was the choicest portion.
It is natural that an old chronicler should say: "The ancient Chinese were unable to distinguish between death, sleep, and a swoon. They therefore tried to reanimate the dead by calling them by name to return, etc., by providing food for them, by keeping their faces in the dress that they had worn, at first tightly covering the corpse. Many customs now in use in China are due to this belief. Death was a pro-longed sleep (or due to suspended animation); and, as the sleeper will wake if he is called, the Chinese believe that the same, should the soul return to its habitation." Articles which were believed to promote vitality, such as jade, gold, silver, pearls, and cowries, were stuffed into the mouths of the dead. No methods of disposing of the dead were employed which would quickly destroy the body, and coffins were made of such materials as pine and cypress, for they were intended to preserve human bodies from putrefaction and the corruption caused by the decomposition of the body. This prevented the spirit from entering the coffin, for it was thought that the soul would enter the coffin only when the body was in a state of putrefaction.

The ancient Chinese were most scrupulous in washing and dressing the dead, so that the body might be ready at any time for the soul to return to its fleshly dwelling-place.

The strong Chinese reparation of the mutilation of the body had its origin in these ancient ideas, for mutilation prevents the body from being in a fit state for the soul to return to it, or to appear in the next world. Hence criminals were beheaded as a severe punishment, and strangulation was considered a lesser one. The mode since the revolution seems to be that of shooting.

In the belief of the Chinese life "remains after the soul has left the body." There is thus belief in a life in death itself, or, as de Groot graphically describes it, a habitation of the soul and the body after death. In accordance with this idea, there is not a complete separation of soul and body. In the popular ideas of the people, one of the three souls is in the grave. Thus death dominates life, and life lives in death and is not distinguished by it. One of the other souls is believed to inhabit the ancestral tablet, while the third passes to the other world.

3. Classical ideas. If we turn now to the ancient classics, which throw a light on the early life of the Chinese, we find that they already expressed, higher conceptions as well, or, at all events, less gross ones. Amidst all the ceremonial and ritual, the belief in immortality is clearly seen. Confucianism teaches that the existence of the soul after death, but nothing regarding the character of that existence. The knowledge of a future life was hazy and indefinite in the old religion of China.

Thus they looked to heaven (whether the spirit was gone), and buried (the body in the earth). For as soon as the body and animal soul go downward; the intelligent spirit is on high.

LEGGE, RELIGIONS OF CHINA (Chinese).
The attitude of Confucius towards death was that of an agnostic.

He virtually avoided a direct answer to the question asked him by one of his disciples about death, his reply being, 'While we do not know how we live, how can we know about death?' The older commentators say that the master gave 'no answer, because on such subjects we are unable and unworthy to talk about.' Some of the modern Confucian writers agree with this opinion, but the majority say that the answer was probably the same as that given by the sage in the passage, "There is that which even the sage does not know about death." These are the followers of Confucius who have not risen above the agnostic position which he took, and here it was that Buddhism came to satisfy the longings of the ignorant as to the future with its scheme of rewards and punishments, its firm beliefs and precise statements, its apparent knowledge of futurity, and its assurance of lives to come and the influence of the lives then lived.

The duration of life and its early or late ending were very generally believed by most of the Confucian school to be dependent on man's proper use of life, and this is a very general belief among the Chinese.

Length of days, therefore, was regarded by the Chinese as a reward of virtue, and longevity is one of the five blessings earnestly desired. Over many a door is pasted a piece of red paper, renewed at the New Year, bearing the wish, 'May the five blessings descend on this door.'

Though what is stated above is the general opinion, all have not subscribed to it.

The materialistic Wang Ch'ung (c. A.D. 97) says, 'Worthy are those who live in early life and wicked people may be strong and robust and become very old.' 'Human diseases and death are not a retribution for evil doing.' 'When a man expires, his life is lost.' 'After his death he does not live again.' 'Human life and death depend on the length of the span of life, not on good or bad actions.'

The Chinese temperament is one which enjoys life to the full. The people are generally contented and happy, and the deep hidden meanings of life are largely concealed.

4. Taoism. — In the 3rd and 4th centuries B.C., Chinese philosophy was in its golden period. It critically examined life and its connotations, and evolved original conceptions of the nature, motives, and mysteries of existence. This 'pursuit of truth and wisdom' claimed a not a few noted men among its adherents. Later, Confucianism, with its love of rites and ceremonies and its reverence for former sages, had the effect of turning men's minds from the inquiries which a philosophical spirit delights to make, and Taoism, under whose auspices such inquiries had arisen, to a large extent changed to a system of rites and idolatry.

Taoism — that shown to us as developed through the sayings and mind of its founder, Lao-tzü (b. 604 B.C.), and its earlier writers—knew little more than Confucianism as to the great subject of life and death.

Lao-tzü (Læ-tzu, 4th cent. B.C.) says: 'The living and the dead, ... know nothing of each other's state.' 'We all have an end, and at the end ends last is unknown.' Ch'üan-tzu (Ch'uan-tzu, 3rd and 4th cent. B.C.) asks: 'What should the dead know of the living, or the living know of the dead? You and I may be in a dream from which we have not yet waked.' 'To him who can penetrate the mystery of life, all things are revealed.'

The prolongation of life and the cheating of death by its due, or, rather, the raising of mortal life above death by the transforming of life into a higher existence, is the aim of Taoism, to be attained by quietism and dispassionatism, by regulating one's breath and using medicines.

Lao-tzü is stated to have said that, to a perfect man, 'life and death ... are but as night and day, and cannot destroy his peace.' In Licius we find (as in the statement of one almost a sage) that life and death were looked upon in the same light. Licius says that 'the source of life is death.'

'There is no such thing as absolute life or death,' i.e., 'from the standpoint of the Absolute, since there is no such principle as life in itself, it follows there can be no such thing as death.' On the other hand, we have such statements as 'Great indeed is death: ... It gives rest to the noble-hearted and causes the base to sour.' 'The sage looks upon life and death merely as waking and sleeping.'

In the idealistic and mystical writings of Chuang-tzu (Ch'üan-tzu), one of the greatest Taoist philosophers, who lived about two centuries after the founder Lao-tzü, there are some striking statements.

He says that for the sage 'life means death to all that men think life, the life of ignorant or repetition, of doing or action, of being or individual self.' 'He who clearly apprehends the scheme of existence is not afraid of death.' 'He who knows that he is not he knows that he is he.' 'In other words, life and death are but links in an endless chain.' 'Life is inevitable, for it comes and cannot be declined. The quick passage of life is thus expressed: 'Man passes through this empty life as a white horse passes a crack. Here one moment, gone the next.' 'The life of man is but as a stoppage at an inch.' 'The living are men on a journey.' 'Life is a loan.'

Taoism borrowed largely from Buddhism, and developed its scheme of life and death, amplifying its descriptions of renewed lives, which are to succeed death itself.

In the Epicurean Yang Chu's philosophy (c. 300 B.C.) life is to be lived for the possessor's own sake and, to be an expression of his individuality. There is to be a disregard of life and death: life is of importance only to him who lives it, and that is only during his brief existence. The Chinese have not followed this philosophy.

Wang Ch'ung, who holds a mid position between Confucianism and Taoism, was of the opinion that the dead do not become ghosts, and are unconscious, and that 'sleep, a trance, and death are essentially the same.' He also says that 'human death is like the extinction of fire.' 'To assert that a person after death is still conscious is like saying that an extinguished light shines again.' 'The soul of a dead man cannot be recovered.'

5. Buddhism. — For the general attitude of Buddhist as regards life and death see art. DEATH AND DISPOSAL OF THE DEAD (Buddhist) and KARMA.

It is, however, more than questionable whether esoteric Buddhism, with its metaphysical aspect towards the world of senses, has much or any hold on the mass of the people. Accordingly, many of

LIFE AND DEATH (Christian)

its votaries in the Northern branch of that religion believe in the glorious Paradise of the West, to which the souls of the believers in Amitābha (Amitābha Buddha, or the Northern Great Buddha) after the long chain of lives and deaths supposed to be the lot of the aspirant to Nirvāṇa on his weary road thither.

To vie with its sister religion, Taoism evolved in its turn a nine-storied heaven with the Dragon King as ruler to await the arrival of pious souls.

6. Conclusion.—Thus, with the multiplicity of lives to which Buddhism has accustomed the Chinese mind, death looms merely in the purview of life, not only to the Buddhist but also to the Taoist and even the Confucianist; for Buddhism has entered into the religious life of the whole people and tinted their ideas and thoughts. The Chinese is practical in his outlook on life. He finds himself in the midst of it, he has to accept it, and his thoughts turn more naturally to what its outcome is to be than to its source and origin. More fantastic than his visions of his future are these of his past. With no inking, for the most part, as to whence he came, he has given fall play to his fancy to conjure up the origin of the human race. One of the fairy-like tales of his mythology is the story of P'ei, the giant, who used to sit on the peaks of the mountains and who, when he became contrary, would bring order out of chaos, were the progenitors of mankind; while in another account the mountains produced the lowest of the lower creation, and these, in turn, developed higher forms, culminating in man, who was evolved from the ape.

We find higher ideas in the ancient classics; for, though covering but limited ground, the rudimentary knowledge of the Supreme Being possessed by the ancient Chinese embraced the idea that he gave 'birth to the multitudes of the people,' so that in the State worship by the Emperors He has been addressed as the maker of heaven, earth, man, and all animate beings.

LITERATURE.—Authorities are cited in the footnotes.

J. Dyer Ball.

LIFE AND DEATH (Christian).—In passing from the OT view to that of the NT there is no abrupt or startling gap, although a definite tacit in consciousness of a difference of atmosphere, and becomes aware that the elements common to both are not in the same proportion, and appear to have been subjected to some organic change in the later form. In the Odyssey 'life' occur in 155 passages, and words denoting 'death' occur in 354 passages, and in the Apocrypha in 33; on the other hand, in the NT words denoting 'life' occur in 155 passages, and words denoting 'death' in 128. In this quantitative analysis the striking fact is that death occupied the OT mind more predominantly than life. Qualitatively taken, however, a striking difference at once appears. Life in the OT is for the most part refers to existence here in the flesh, and comparatively rarely rises above it, being summed up in the LXX phrase in Sir 37: 2, 'the life of man is in the number of his days.' Instances occur, of course, especially in the later Psalms and Wisdom literature, of life being regarded as independent of bodily conditions, but these are to be treated as indications of a transition in thought to a higher plane of a proportion (Logos) of experience.

The significant feature of the NT allusions to life (and death) is their want of any real interest in mere earthly living, and this feature is plain everywhere the magnitudes of experience compel reference to the fact of physical death. Thus, out of the 135 passages where 'life' (exist) occurs, not more than seven can be referred to physical life, and the life referred to might be heavenly. In Lk 16 the life of Diwies is sharply contrasted with the life of Lazarus. Ac 23 is a quotation from the LXX; Ac 17 is inspired by Stoic thought. In, in Co 2: 3 and Ph 1: 2, where life and death are conjoined as correlative powers, the reference may be to earthly life and death, but the probability is that in each case the meaning is that spiritual life and spiritual death face us. In the first passage it is invisible powers personified that are declared incapable of understanding the Christian from Christ; in the second passage the words are equally patient of either meaning; and in the third, if Theophylic fact may be followed, the spiritual meaning prevails. Besides these seven passages, the word 'life' in the NT does not seem to be used anywhere in the lower sense.

The case is different with the term 'death' (θανατος), for in something less than a score of passages in the Gospels, and in eight passages of Acts, the death of Jesus is referred to; in nine passages of Heb, physical death, either the death of Jesus, is the subject; and in Rev., 'death' is personified in conjunction with Hades, or is described as being followed by a second death, or is regarded as the term of this life. On the other hand, St. Paul and St. John, with hardly an exception, when they refer to death at all, mean spiritual death, not physical. Our task is to examine the passages where the terms ζωή and θανατος, or their cognates, occur in the NT, in order to ascertain their precise meanings.

I. Life.—(a) The first mode of expression for the 'life' which Christ gives is to be found in the use of the definite article. Examples of this are Mt 7: 11, 'straitened is the way that leadeth unto the life'; 18: 36, Mk 9: 46, 'to enter into the life gained,' to enter into the life obtained'; Mt 19: 5, 'thou wouldst enter into the life'; Jn 5: 24, 'hath passed out of the death into the life'; 6: 4, 'the bread of the life'; 8: 32, 'shall have the light of the life'; 11: 25, 'I am the life'; Ac 3: 15, 'the prince of the life'; Ro 8: 4, 'the law of the spirit of the life'; 2 Co 4: 4, 'the life worketh in you'; 5: 8, 'the mortal may be swallowed up by the life'; 1 Tt 6: 12, 'lay hold of the neonian life'; 1 Jn 1: 4, 'the word of the life'; 5: 24, 'he that hath the Son hath the life'; Rev 21: 5, 13: 'the tree,' 'the crown,' the book of the life'; 21: 14, 'the water of the life.'

In all these cases the article is used in what grammarians call the anaphoric sense, by which the substantive is pointed to as referring to an object already definitely known. Thus, in the instances given the implication is that the life mentioned is that with which the readers were already familiar as the subject of Evangelio preaching, and an object of their own religious experience. It is also implicitly contrasted with another and a lower kind of life—that of the natural man, of the man of this world (cf. F. W. Blass, Grammar of NT Greek, London, 1906, p. 146).

(b) Life which is unreal and fleeting is set aside in favour of the life which is real and abiding: 1 Tt 4: 8, 'life that is now and life which is come'; 6: 9, 'the life that really is.'

(c) It is assigned a heavenly nature by a prediactive clause: Ro 5: 1, 'we shall be saved by his [the Son's] life'; 2 Co 4: 4, 'the life of Jesus'; Eph 4: 20, 'the life of God'; 2 Tt 1: 1, 'life that is in Christ Jesus'; 1 Jn 5: 12, 'the life in his love.'

(d) The characteristic NT expression qualifying life, however, is 'souanic,' rendered in AV 'everlasting' 24 times, and 'eternal' 42 times, but both terms are misleading, as giving a quantitative

LIFE AND DEATH (Christian)  

stead of a qualitative category. 'Eonian' as an adjective occurs in all 71 times in the NT, and in 44 LXX passages (in addition to 17 in the Fourth Gospel) are Mt 19:26, Mk 10:23, Lk 18:28, Ac 13:24, Ro 3:22, Gal 4:6, Tit 3:5, 1 Jn 2:25, 3:9, 4:18, 5:16. In Greek science, the idea of duration is that of a qualitative category, in keeping with, but not dependent on, its nature and its source. Hence, though the rendering 'eternal' may be permissible, that of 'everlasting' is erroneous, and even 'eternal' can be misleading where eternity is understood as by Boethius:

'Whosoever, therefore, comprehends and possesses the whole patrimony of an immortal life at once, to nothing of the future is wanting, and from which nothing of the past hath bowed away, this may rightly be termed eternal' (Philos. Conclus., v. prop. 39). "Dea. Patr. Paral. xxii. 61-69."

It is in the prominence given to this view of life that ye are to find the superiority of the NT teaching on it over that of the OT.

The idea of 'soni' in the LXX (where it or its cognates are used about 330 times) to its sense in the NT is of the nature of an evolution. The NT sense of 'spiritual,' or 'divine,' is not wanting at all, it is true, in the LXX, but this possession of an essence superior to the category of time is that of duration. Out of this lower sense there gradually unfolds, at first tentatively, but at length surely and fully, the ground on which duration rests, and this possession of an essence superior to the category of time.

What endures is that of which time is but the changing expression, and the great gift of Christ is to be seen in the power which He confers on man, by a direct exhibition of the bountifulness of the soul of the power of the air' into the higher realm where the 'eon' or the 'sonian' king rules.

The use of the term 'eon' in the NT is important for our present purpose, for in addition to the power granted to the saints above everything, to which the temporal meaning of the term is required, there are a number which are ambiguous, and also a further number where 'eon' is certainly used in a personal sense. Different ages, or different regions of the universe, are placed by God under the control of rulers to whom the name of 'eon' is given. In Ae 18 39 the rendering should in all probability be 'God maketh these things known from on high.' So in Ae 34 and Lk 18 30 the prophets are said to receive their inspiration, 'from on high.' The sense of Jn 9 2 to 30 is best reached by paraphrasing it: 'From the realm of the Son the news has not been heard of anybody opening eyes to men who was not blind.' In Eph 2 3 no question can be raised, for the 'Son of this world' there is clearly a personal being, since he is given as a sub-title 'the prince of the power of the air.' In 1 Th 1 11 God is distinguished as the 'King of the sonians.' In Col 1 18; the revelations given to the saints is exalted above that given to the sons. The latter knew nothing of the mystery of the indwelling Christ, of the knowledge of this was the prerogative of the saints. In 2 P 3 3 the 'day of son' can be nothing but the 'day of the Lord,' and hence the 'Son here is Jesus (cf. also He 1 1, Co 10 28, Gal 1 15, and the appendix to Mk in the life of Freer-Jolig).

When we remember that Christianity grew up in a Gnostic environment, that among the Gnostics the doctrine of personal angels was upheld that (1 Tim 3 16) which declare that a worthy of note and demanding correction, we shall not be surprised if echoes of it are found within the Christian Scriptures. But this idea of 'Son of the man,' as a white to the use of the term outside the Canon attaches to it also within the Canon.

The greatest of all the antitheses is this, it is enough to say that the word 'son' may stand for a superhuman being who is god or

evil, supreme or subordinate. Hippolytus (Ref. iv. 3) mentions speculators who 'speak of a succession of sons and of a revolt of goods of power and evil, and of a council of personal angels, to which the Valentinians taught the existence of a certain perfect, pre-existent son whom they called the Proarche, Propater, and by whom the three persons (Monogones) are not God (bion) but man, and, therefore, moral; and pseudo-

Dionysius (de Diog. Nom. v. 4) says: 'Measure of Eons and Eternity of Times and Eon of things that are ... for He is the son of God, the Son that is before all others.' The Valentinians later taught a threefold Godhead, of whom the supreme Eon emanated eight sons, the ogres, and these nine others, after which twelve more, making thirty in all; they also saw in the vision of the Temple when He was twelve years old, and in His baptism when He was thirty, a cryptic reference in Mt 4:1-11. H. Reitzenstein (Pseudaetra, Leipzig, 1864, p. 270) quotes a Hermetic hymn addressed to Isis as the moon goddess in which it is said: 'Thou art the beginning and the end, and thou rulest over all, for of thee are all things and to thee are do
"include in the Godhead Mind unto Hermes, 2, it is said: 'God makes son, the son makes the world, the world makes time, time the life of the living.'

Hero son is the name of the ideal principle which ultimately takes form in the world of becoming. Similarly, Plato (Tim. 27) says: 'When the father and creator saw the creatures which he had made moving and living, and created the image of the eternal gods (nous kosmotonisios), he rejoiced, and he was about to make the copy still more like the original; and, as this was eternal (allos), he sought to make the universe eternal, but he might be.' In this passage, where Plato wants to express the idea of everlastingness, he has the word allos ready to his hand. But, when he goes on to express a different sense of 'eon' (stac. 44): 'Now the nature of the ideal being was sonian (sonios), but to bestow this attribute on a creature was impossible. When he was resolved to make a moving image of the son (sonios), and, setting in order at the same time the heaven, and all the powers of nature, at once, he saw that this was an image of nature, which in itself was sonian (sonios), to move in accordance with number, and be an image we call time.' In the latter passage, where Plato is dealing with the quality of the archetypal order, and, therefore, he uses the word allos instead of the former 'eon' which was dealing with a quantity of quality, and, accordingly, he employed the word allos, 'eternal,' in the same way. "Athin. (Finites of Plato's) Cambridge, 1911, p. 253) translates allos into Pindar (fr. 131, ed. Bergk) as the 'living man,' and says that it never means 'eternity' in Pindar. The passage is:

Philo, "Jewish Antiquities," 1. 2. 115, 490, who makes the three first days of creation, before sun and moon were created, an image of 'son' and the last three of time, for 'He set the three days before the sun for the son, and the three after the sun for time, which is a copy of son.' Similarly, he says (I. 619): "The days of the visible world is called son, as of the sensible is called time.'

The question whether 'son' and 'sonian' are to be rendered qualitatively or quantitatively is not identical with the question whether a Jewish or Greek conception is the determinant, for the Hellenization of Christianity was not in its acute form, from the earliest NT days.

Greek thought had penetrated Jewish before NT times (W. Bousser, Die Revolution des Judentums im neuesten. Zedelger, Berlin, 1938, p. 492). "The sonian life" in Enoch 10:17; 'judgment of the son of sons,' 10:2; 'the King of the son,' 27:2, and is embedded in the NT itself. Moreover, the Rabbinistical antithesis of 'this world' lies in the NT in the Greek thought, and might pass easily into it. The witness of Philo must be added to that of the Syoptic Gospels (with their many isolated sayings redolent of Greek thought and Greek, and in his tabulating of a mystery-religion), the Fourth Gospel as a whole, Eph. and Col., and the constant tendency of the Greek in St. Paul to burst its Jewish fetters. We conclude, therefore, that 'sonian' life of the NT is life that belongs to a higher order than animal or ordinary human life; it is from above, and the recipient of it is lifted, by possessing it, into a higher state of consciousness; and, present life indefinitely or infinitely prolonged, nor beyond the grave distinguished as such from life on this side of the grave. It is not possible here to do more than allude to the central place which the concept and truth of regeneration (q.v.) occupy in the religion of Jesus Christ. All that is required is a reminder of the close connexion of regeneration with the sonian.
life which forms the theme of the NT. To be born from above (\textit{ag. ep.}, John 3); to be turned and to become as little children (Mt. 18); to come out into the light (John 3); to put on the new self (Gal 2); to be quickened together with Christ (Eph 2); to be in Christ (2 Co 5); to put on the new man (Eph 4); to be a new creature (Gal 6)—these and many similar passages describe the death as the result of a new life, or salvation, or the Kingdom of God, or blessedness.

2. Death.—Christian theology has been at once oppressed and confused by its failure to note that in the NT it is not physical death cleared of its experienced ills that is called life, and that it is not physical death as such that is connected with sin. (1) Reflection would assure us that, when life is used in a super-physical sense, it is at least probable that the death referred to is always something more than the death which dissolves the connexion between the self and its physical vehicle. It is something other. (2) It has never been easy to maintain a causal nexus between sin as a wrong set of will and death as an event of the natural order. Modern science has convinced itself that death has reigned not only over the lower creation, but from the first appearance of life. Death indeed, apart from sin, is a process of nature and not a super-natural punishment for sin. (3) Christianity is admittedly a religion whose home is in the spiritual order, and its interest, therefore, in the physical, though real, is only indirect. From its superior standpoint it may have something to say as to the origin and meaning of physical death, but it does not make death as intimately bound up with its own life, that death will not be of the physical order. (4) The law of analogy points in the same direction. A principle which is operative on one level repeats itself analogously at other levels. Just as gravity may be described without assuming love embryonic in matter, or, conversely, as love in the spiritual world exercises an attraction which binds spiritual beings as surely as gravity binds together atoms, so death as physical is a reflexion of a similar principle in the world where life is life indeed. (5) All philosophy assures us of the existence of an infinite principle or truth in the finite event or fact, of the existence of a universal in the particular. But a physical death is a fact in the world of space and time; hence it conceals what is more than a fact—a truth or idea, or a fragment of a law. And St. Paul will add. If, therefore, a religion which proclaims itself as having the real for its object speaks of death, or attributes to death any place in its world, it cannot be supposed to limit its reference to the death which is merely physical.

It will be found on examination that the conclusion thus reached a priori is confirmed by a careful scrutiny of the evidence. (a) We may compare the expressions and passages in which death is obviously treated as acting in the spiritual sphere. The following passages in the Fourth Gospel may be cited: 'He hath passed out of the death into the light' (John 5); 'If a man keep my word, he shall never see death' (John 8); 'In ch. 11 the difficulty caused by the apparent indiffERENCE of Jesus in the beginning, by the reference to the resurrection of the soul from spiritual death; that is, or to the manner of death in 139 is contained in what is certainly a gloss. In 1 Ja we have similar references to spiritual death: 'He that loveth not abideth in the death' (3:4), where the death is clearly on the same plane of being as love; in 5:26 the sin unto death (or not unto death) is also clearly a sin which is followed by death of the same kind; in 5:10, for it is said in explanation that God will give life for them that sin not unto death—a sentence which is meaningless if physical life is meant, since that is ex hypothesi the ord. Rev, the second death, which is spiritual, is distinguished from the first death, which is physical (21:8–14 21:4).

In the Epp. also many passages occur in which death must be seen spiritual. In Ro 1:3–5 St. Paul, speaking not as a jurist but as a preacher (cf. W. Sanday and A. C. Headlam, \textit{Romans}, Edinburgh, 1903, ad loc.), sets up an ideal standard with ideal consequences for violation of it. Those who outrage the plainly expressed mind of God as to what righteousness is do with the full knowledge that they deserve death ('und meint damit den ewigen Tod') (H. A. W. Meyer, \textit{Das Brief an die B\"{o}mer}, ed. H. Weiss, Gottingen, 1896, ad loc.). In the striking passage Ro 5:1–2, unless St. Paul is guilty of inexcusable logical confusion, the death which in vv. 11–12 is obviously spiritual must be of the same kind in vv. 13–14. This death which assumes such looseness of thought in St. Paul is itself responsible for the confusion. The meaning is simple, plain, and consistent throughout: Adam was guilty of a sin which was spiritual in its character, being a misuse of free will; therefore he brought on himself spiritual death, and this death has afflicted mankind ever since. But now at last the Christ of God, by Himself entering into vital union with a new self, is the ord. man of the higher life, that is, by sharing in some sense their loss, has restored what they had lost: He has, that is, obeyed the law that only through death do we enter into life. The death He has undone is that which consists in the absence of spiritual life; and the death He has borne is that which consists in the process of taming the lower nature, in the process of the mystic crucifixion. The one lost sonian life by self-will; the other gained it by obedience, and gave it through love. Similarly, the linking of baptism with Christ's death and life in Ro 6 is explicable only if it is sonian life and sonian death that are in question, and the best proof of this view is to be found in the difficulties into which this exegesis has long been implicated through its mistaken assumption that the life and death referred to are physical. Hence it has to say sense of the actual death, back and forths from the different senses of "life" and "death" almost imperceptibly (Sanday-Headlam on 6). But, from the facts that Christ's death was transfiguration in the spiritual order, that baptism in its genuine meaning was a moment in a dynamic process, that the life which Christ truly lived was a sonian life, it follows that the life being the same both in the Lord and in His disciples, they both were united in the mystic Vine, since one and the same life was in it and in its branches. Therefore, St. Paul concludes, since it is now sonian life that rules in both Christ and His members, the believer should not die, but he cannot sin; or, if he sins, the sin is proof that the life is not yet dominant. The argument in Ro 7, and by the affirmation that the image of marriage being valid for life, St. Paul says that the natural man has law for a husband and sin for his child, and sin in turn begeteth death, i.e. spiritual death (v. 2). This spiritual death is in turn undone by the spirit of life in Christ Jesus (8). We are given even an exact definition of death as being identical with the mind of the flesh, and of life as being spiritual-mindedness (9).
Even the famous passage in 1 Co 15 is given a coherent meaning only when the thought of spiritual life and spiritual death is kept in the foreground. It is true that here the thought is less pure, and that the physical death of Christ and His resurrection, which are made the proofs of the reality of the heavenly order. But, even so, it is not the physical resurrection that is the vital point, but the spiritual, of which the physical is but an expression. The element that falls in your sight is death; faith, however, when it comes, annuls this (spiritual) death, for it is essentially life. This living faith (the life of God in the soul) is what filled Christ, and constituted His title to the higher state of being, as is proved by the fact that He overcame (spiritual) death; the proof that He did so overcome spiritual death is to be seen in the fact that He could not be held by physical death. Hence death in both senses is abolished, or is in the process of being abolished, but the death which is the enemy is spiritual, and, if physical death comes into question at all, it is incidental only or by way of parenthesis. That this is the true interpretation becomes clear when we observe that the remainder of the chapter (v. 20-28) is concerned only with affirming that this higher spiritual, or risen, life is a necessary part of His spiritual body and that as God gave the life so He will give the suitable body.

(6) There are, however, unquestionably many passages in the NT which seem to the higher state of being as at all events, to refer exclusively to a physical death. They are those in the Gospels (12 times) and the Acts (8 times) deal with the death of Jesus Christ. But even here a sound exegesis will compel us to draw a distinction between what is said and what is signified. What is said is that Jesus suffered physical death at the hands of the civil and ecclesiastical authorities of His day. What is signified is that His suffering as witnessed had a hidden counterpart and a universal validity because He being a heavenly subject, what He experienced in strong crying and tears affects all who are united to Him as a transcendent subject by being made sharers of His life, partakers of His divine nature. What is signified is that His crucifixion is a mystic process before it takes shape in the moment of a physical death, and that this process of crucifixion, therefore, is inscribed in the nature of all who are made one with His life (Gal 5:25, 6:14). What is signified is that the physical death and burial of Christ are a reflection of a spiritual death and burial which He underwent in order that He might be a radiating centre of heavenly life to all men. The real death and burial are to be found in the cosmic world; the death and burial that fall under history are shadows of the real.

The Epistle to the Hebrews also refers explicitly to the physical death and sufferings, but here we must allow for the exigencies of the line of argument adopted. This compelled the author to place the physical death of the man Jesus over against the physical death of the animals slain in O' sacrifices. Yet, even so, the force of the argument depends on the superior worth of the former. His sacrifice was all-compelling, partly because it was voluntary (7:29-10:19), still more because of its transcendent worth, it being the offering of One whose life was divine, and made in accordance with the power of an indissoluble life (7:24) and thought of God (9:4). The life, we need say, that even here is dealt with is essentially spiritual, and is physical only in a secondary and subordinate sense.

Following (A) a third and small class of passages alone remains where death is of an ambiguous appearance. In Rev 1:18, 6:9, 20:2 the word is personified and joined with futilities, and both may attack man on his physical or on his spiritual side. In Mt 4 and Luk 4 the shadow of death falls across the heavenly realm, where spiritual death is nowhere meant. In Mt 16, Luk 9, and Luk 22, and the porpies of Jesus, it is said, should not taste of death till they saw the Kingdom of God. It is impossible to say what was the original context of this tripled passage, but it is improbable that the passage itself is to be regarded as a falsified prophecy of a historical fact. The 'Kingdom of God' and the 'Son of Man' are terms which express inner realities, and it is at least likely, then, that 'death' is also eschatological. In this case the meaning of the passage is that there were some (a 'remnant', the few who were chosen') who would not taste the bitterness of spiritual death, because to them would be vouchsafed the mystic vision of the King in His beauty, of the land that to most men remains far off.

It will be clear, from what has been said, that the NT and Christian antithesis is not that of the OT and Judaism, between this world and the next, but between two kinds of life both here and there. It is a qualitative and not a quantitative difference. On one side is the life of sense, of intellect, of static forms, of fixed perceptions—the life, in short, whose boundaries are set by the practical needs of the empirical Ego. On the other side is the life which creates the very power by which sense and intellect discharge their limited functions, which in itself delires, is only partially grasped by perceptions, and for the most part remains outside conceptions—to give, which is called economic, spiritual, or heavenly, or divine, and is that ever-flowing stream from the life of God of which all expressions of life are at all levels fragmentary fluxes. We pass from the fragment towards the complete and perfect in exact proportion to our surrender of our lower and separated self to the life of the whole, which is God. It is thus added and expanded consciousness that the religion of Jesus Christ and His Church is primarily concerned with. Its interest in eschatology, in theories about resurrection, in hypotheses such as that of universalism, of conditional immortality, of the nature of the ultimate union of soul and body, of reparation, though real, is subordinate only. It is concerned with a higher life experienced here and now, and to grow hereafter more and more towards the perfect day. It is involved in theories about that life, but its interest in them is not vital.

W. F. Conk.

LIFE AND DEATH (Egyptian).—The Egyptian conceptions of life and death seem at first sight to be full of inexplicable contradictions. No wonder is felt when these states are found to be alternately praised and execrated, for in such praise and execration personal preferences are involved, and these may vary. But it is more perplexing to find diametrically opposite views expressed or implied with regard to the fact of belief, as when the same being is described almost in one breath both as alive and as dead, or when men who fear the dead are seen to have used
LIFE AND DEATH (Egyptian)

magical means to kill their enemies, thinking thus to be rid of them. Such inconsistencies arise from the blending of the simple distinction between physical life and death with the extremely ancient and almost universal belief in immortality—a belief that is rooted partly in the pantheistic abhorrence which death inspires as an indignity inflicted upon the living, and partly in the fact that death is known to us only through observation of the external world, and not by conscious inner experience.

Life and death are facts, since they are ever being forced upon our notice; death is a falsehood, however, because we have never known it to be true of ourselves, and, furthermore, because we will not admit that it can be true of ourselves. But, if after the physical death we are not dead, then we must be alive. The words 'life' and ‘death’ thus both acquire a double meaning, and a wide field for speculation opens out; the achievements of the Egyptians within this field have here to be considered.

1. **Philological.**—Whereas the Egyptian word for 'to die,' mstt, Coptic mòt (inative), mòôpt (qualitative), is shared with all the Semitic languages, the verb for 'to live,' nbh, Coptic wnt, wmp, is of doubtful affinities. Several derivatives from the same stem, such as 'sandal-string,' 'sh,' 'goat,' 'anub,' 'ear,' fail to suggest any earlier or more concrete meaning for it, while other words having the same radical letters, such as 'nbh,' mstt' (Coptic mpt), or 'nbh,' mir, 'mirror,' clearly derive their meaning from 'nbh,' 'to live.' Closely related in sense are the verbs 'swn ('to exist,' and hpt (Coptic

belief in immortality; these are mti, 'the justified,' and wnt ('who repeats life,' respectively. The deceased Pharaoh was called 'the great god,' like his great prototype Osiris, while the living king is 'the good god.'

2. **Writing and figured representation.**—(a) The symbol of life, which is also the hieroglyph used for writing the words 'life' and 'live,' is the so-called cruz anasta, popularly known as the 'amkh ('nbh), or 'key of life.' Its origin has been much discussed, most scholars agreeing that the sign represents a tie or knot of some kind, though in V. Loret's opinion (Spina, v. [1902] 138) it depicts a mirror. The true explanation, hinted at but immediately rejected by G. Daressy (RTAP 2)

LIFE AND DEATH (Egyptian) 21

xxvi. [1804] 130], was first enunciated by Battis-

together called Gnu, who proves the symbol to depict the

form of which the accompanying inscriptions describe the pair of objects as "the two 'nā' on the ground under his feet" (cf. Garcia, loc. cit.). The proposition 'under' must not be pressed too closely, but it at least shows that the 'nā' was part of, or belonged in some way to, the sandal. If now we compare the two objects with the representation of the sandals, we shall see that the same elements enter into both—the long loop that passes round the ankle, the straps that serve to bind this loop to the foot, and the two without being fastened together like a buckle. It is difficult to make the representations harmonize in detail, but matching the objects 'nā' is a very old one, that of binding the sandal to the foot very generally, and that possibly the sign depicts the straps not as actually wound but fastened on the foot in such a way to exhibit them to the best advantage, we shall hardly doubt that the objects shown on the above page are an ancient collection of a pair of sandals—strings for use in the event of those attached to the sandals requiring to be replaced. The note on the preceding page gives various examples of the sandal-strings both as an article of use and as a hieroglyph, together with pictures of men for comparison; the hieroglyph is normally painted black.

There being no obvious connexion between the idea of life and that of sandal-strings, it must be supposed that the idea of life, not being itself susceptible of pictorial representation, was symbolized by an object the name of which fortuitously coincided in sound with the word for 'life'; this procedure is merely the procedure called 'phonetic transference,' extremely common in hieroglyphic writing.  It is, of course, possible that 'nā' ("sandāl"): 'sandāl-string,' and 'ā' ("one"), were united in the mind of the voice in both cases is hāyoth, are ultimately connected etymologically, but, as said above, the original meaning of the stem 'ā' is unknown. It would certain- l...

as a symbol the 'ānkh is everywhere to be found on the Egyptian monuments. Gods and goddesses hold it in their hands, or present it to the nose of their favourites. It appears with arms supporting a standard (e.g., E. Naville, The Temple of Deir el- Bahari, v., London, 1906, pl. 149) or as itself representing the legs of a human figure (Lecoue, C. 15) and numerous representations have still to be collected and classified. As a mere ornamental device the 'ānkh-sign is frequently found on furniture, jewellery, etc., often in association with other auspicious symbols, e.g., \[\ldots\] . "life, stability, and prosperity." As an amulet the 'ānkh is fairly common, and is usually made of green or blue faience.

There is no corresponding symbol for 'death.' Though there is a stone plan in the early times followed (or 'determined,' to use the technical expression) by a sign representing a man fallen upon his knees, and bleeding from a wound on the head; later this sign is merged into another of wider application and varying form—the commonest meaning 'prisoner' or 'enemy.' Very often, however, these hieroglyphs are mutilated or suppressed because of their illomened associations (ZD ii. [1914] 19).

3. Literal views of life and death.—How life was envisaged may best be learned from the following wishes on behalf of a dead man:

May there be given to this thy eye to see, thy ear to hear what is spoken; thy mouth to speak, and thy feet to walk. May thy hands and arms move, and thy flesh be firm. May thy members be pleasant, and mayest thou have joy of all thy limbs. Mayest thou know thy flesh (and find it) whole and sound, without any blench upon thee; thy true heart being with thee, even the heart that thou didst have heretofore (K. Seth, Urkunden des altp. Apporten, Leipzig, 1904-06, iv. 114).

Death is the negation of life; in slaying their foes, the Egyptians sought to make them as though they had never been ('Urkunden, iv. 7, and passim), and the custom of cutting off their hands and phalli indicates what activities it was intended to deprive them. Further light is thrown on these materialistic conceptions of life and death in a passage of the 175th chapter of the Book of the Dead, where the state of death is described:

'of a truth it is without life, without air—deep, dark, and void, a place where one sleeps in quietude. Pleasure of life is not there to be had, may, but beauty of water and air and delight of life in life and peace and.'

Inertia is the chief characteristic of the dead, wherefore they were called 'the weary,' the inert (§ 2); elsewhere we find death compared with sleep (e.g., Pyramid Texts, ed. S. Seth, Leipzig, 1908, 721). Life, on the other hand, is full of activity, and chief among its needs the air to breathe ('breath of life' is a common expression) and food and drink for sustenance. Here, again, the wishes for the dead are the best evidence of the things deemed needful for the living; 'bread and beer, oxen and grease, cloth and linen, incense and myrrh, and things good and pure wherein a god lives'—so runs the common formula, which hardly less often mentions 'the sweet breath of the Northwind' as a necessity of life. The place of life was pre-eminently the earth; all who live upon earth, begins a favourite invocation.

Various views were held as to the whereabouts of the dead, but their habitation was not that of the earth; those who are yonder is, as we have seen, a common designation of the dead. That the land of death is a land whence there is no returning was early said; already in the Pyramid Texts (172) we find the warning, 'Go not upon these western ways, for those who have gone yonder come not back again' (the same thought recurs later; cf. Harris 500, recto 7, 2). Reflections as to the duration of life and death are often encountered in the texts. The Egyptian prayed that, like Joseph, he might attain to the age of 110 years (see RTAP xxiv. [1912] 16-18). In comparison with death, the emphasis rests on the renunciation of the ego, the 'city of eternity' for the necropolis, 'the lords of eternity' for the funerary gods; 'the span of things done upon earth is but as a dream' (PSBA xxxv. [1919] 117; cf. Pop. Pachyam 1154, sect 55. Les Papyris hiératiques ... de l'Ermitage, 1913); it should be said parenthetically that this comparison of life with a dream refers only to the dreamlike fugitiveness of its events, not to any speculations concerning its reality. With regard to the extension of the idea of life, it seems to have included man and the animal.

1 Except where the symbol "life" is meant.

1 For this and other valuable references the writer is indebted to Professor Seth of Göttingen.
kingdom only (cf. the words quoted from a Memphite text in § 11); it is doubtful whether an Egyptian would have spoken of plants as living; nor is there any expression found to indicate the neutral animistic state of things not belonging to the animal world.

4. The hatred of death.—The opening words of the graven-formula, 'O ye who love life and hate death' strike at the most profound and deepest feelings of the Egyptians, whose intense love of life and detestation of death made them devote more time and thought to funerary things than has been done by any other people before or since. The best expression of these feelings is on a stele dating only from the year 46 B.C., but wholly Egyptian in feeling; a woman speaks from the tomb to the husband who has survived her:

'O brother, husband, friend, highpriest—thy heart shall not grow weary of drinking and eating, drunkenness and love. Celebrate a happy day; stay thy heart by day and night; put no care in thy heart. What are the years upon the earth, what is the West (i.e., the place of burial) but a land of slumber, dark and heavy, the habitation of those who are yonder, who sleep in their mother-shaped, nor wake to see their brethren, nor regard their fathers and mothers, and their hearts are rent of their will, though for the body. The living water of which all have a share, for me it is thirst, but it comes to him who is upon earth. Thirst have I, though water is within me, and I knew not the place where it was, since I came to this valley. ... Turn my face to the North wind on the bank of the water: perchance so may I be saved and preserved with the benefaction. Nay but Death, his name it is Come! every one to whom he hath called comes to him straightway, their hearts beloved, through fear of him. There is none can him either of gods or of men; great and small alike rest with him, nor can any stay his fingers. He loves all, and robbeth the son from his mother. The old man moves to meet him, and all men fear and make petition before him. Yet he terms not his face towards them, he comes not to him wrappeth him, he hearkeneth not when he is worshipped, he shows himself not, even though any manner of befe is given to him. Amen.' Ausgrabungen Urbenden des Ägypt. Altbabyt. Leipzig, 1865, pl. 16.

This is perhaps the only passage in which death is personified, though the Egyptians were not averse to a sort of fictitious delineation of abstract ideas; Life, e.g., is found beside Health in the outward guise of a Nile-god (J. E. Gauthier and G. Jequier, Mémoires sur les fouilles de Licht, Paris, 1902, p. 23). The funereal 'coronation' or 'happy day' recurs again and again in the songs of the harpers at Egyptian banquetts, together with the reminder that life is short, death inevitable and eternal. Herodotus tells us (ii. 78) that at the end of each song there was 'the image of a dead body in a coffin was borne around and shown to the guests, with the words: 'When thou lookest upon this, drink and be merry, for thou shall be such as this was ere I made to this custom in our texts, but it is thoroughly Egyptian in spirit (see also Plut. de Is. et Ori. xvil.). The old songs collected by W. Max Müller, Die Liebespoesie der alten Ägypter, Leipzig, 1890 (pp. 29—31), recall the wretched fate of the dead:

'The nobles and glorified ones. . . buried in their pyramids, who build no more, nor is there more, what become of them? I have heard the words of inhabitants and Hard faced, told and told again; where is their place? Their walls are written, but their name is no more, as though they had never been. None cometh thence who can relate how they fare. For they came to the inevitable world. Be of good cheer, forget and enjoy thyself. Follow thy heart, so long as thou livest; place myrrh on thy head, clothe thyself with thy garb, sanctify thyself; forget sorrow and remember joy, until arrvies that day of putting to shore in the land that loveth silence."

5. The hope of immortality.—From the same Tebain tomb from which the last words are drawn (tomb of the priest Neferhotpe [56], XIXth dyn.) comes a song expressing widely different sentiments:

'I have heard those songs that are in the ancient tombs, and what they tell extolling life on earth, and belittling the region of the dead. Yet do they say that this is no more, what becomes of them? I am come to the valley, am come to the grave, and here where these tombs are not? Wrangling is in the abode of the dead, nor does any god himself against his fellow.

That land free of foes, all our kinsmen rest within it from the earliest day of the dawn. The children of millions of miles thus inherit, every one. For none may marry in the land of Egypt; none there is that passes not yonder. The span of days is but as the winter is to the summer, a transitory existence. What none awaits him who has reached the West' (P.B.S.A. xxxv. 136).

This pretty poem voices the opinions of those who, holding a firm faith in immortality, rejected the cold comfortless views of death as illustrated. No doubt that faith was born of a revulsion of feeling against the pitiless cruelty of death; and, being the offspring of the will rather than of the reason, it did not supersede nor drive out the opposite belief. The two arguments, controversial note in the state of the old funerary texts, 'Thou hast departed living, thou hast not departed dead' (Papyrus Tezeta, 154; cf. 563); or we may quote the reiterated assurance, 'Thou diest not,' in the same texts (637, 775, 781, 792, 810, 875, 1464, 1477, 1810, 1812, 2391). The multifarious funerary rites, the contracts made with the priests, and the petitions of the old strictly contrasted the tombs all imply that the benefits of immortality were not to be obtained except by elaborate forethought and deliberate effort. It is true that a discontinuance of the funerary ritual must not be identified with the beginning of the suppression; the Egyptians dreaded, for instance, lest the cessation of the offerings made to them might compel them to devour their own excreta (Z.A. xvii. [1910] 109—111). Nevertheless, there was ever lurking in the background the fear that a man might perish altogether, and that his corpse might decay and fall to pieces (Book of the Dead, titles of ch. 45, 163), this fear giving rise to the strange apprehension of a 'second death in the necropolis' (ib. chs. 44, 176, 176).

Similar conclusions might perhaps be drawn from the variety of the theories concerning the fate of the departed, who were alternately (or even simulaneously) believed to be stars in the sky, dwellers in the nether world, incarnations of Osiris, or spirits living in the tomb or revisiting their earthly homes (see art. STATE OF THE DEAD [Egyptian]). It is unthinkable that all these divergent views were accepted and believed with a fervent sincerity; rather they were conjectures sanctioned by ancient tradition, half-believed, half-doubted, and expressed with a native and credulous thoughtlessness, which at the same time failed to silence the haunting suspicion that absolute death, after all, might be a reality.

6. Secondary views of life and death.—Under the influence of the doctrine of immortality the terms 'life' and 'death' became so impregnated each with the meaning of the other that they no longer contradicted and excluded another one as they had originally done; 'life' was not necessarily the short term of existence upon earth, and 'death' was perhaps but another mode of living. Sometimes, of course, by the abstraction which language permits, the words were used in their old strictly contrasted senses, but often there is left only a shadow of the original meaning; 'living' may be any form of existence vaguely analogous to physical, terrestrial existence, and 'death,' 'dise,' 'dead,' are terms that can be applied to various states from which some characteristic feature of living was absent. A few examples, mainly of philological interest, may serve to illustrate this transition of meaning. Not only was prolongation of life the reward of moral conduct (see ETHICS AND MORALITY [Egyptian], § 6), but in a sense the moral life was the only true life; in the Teaching of Ptahhotep we read:

'As for the fool who besmirches not, he achieves not anything, he looks upon him who knows as one who is ignorant, and upon things useless as things harmful.... he lives upon that
LIFE AND DEATH (Egyptian)

wherein man die, . . . his character is told (1) in the opinion of the nobles in that he dies living every day" (Le Papyrus Prisse, ed. G. Guenard. Paris, 1899, pp. 111, 113).

Such was the fear felt by him who was admitted to the Egyptian pharaoh, that he knew not whether he was alive or dead (Sinuhe, 255; Köpel [ed. A. H. Gardiner, Literary Texts of the New Kingdom, Leipzig, 1911], iv. 1). The verb 'to live' was applied to other things besides human beings and animals; thus, whenever a man might die, his name, if properly tended, would continue to live (Pyramid Texts, 764, 899, 1024, and in later texts passionis), 'Living soul' (š-nfr) is a colloca-
tion of words which frequently occurs; yet, from its association with the dead, the word 'soul' is often determined with the hieroglyph that implies death. Pictures, statues, and images of all kinds were inculcated with a sort of life, (by virtue of a principle common to all early superstition; the sculptor was called 'he who makes to live' (š-nfr); hieroglyphs representing animals and human beings were sometimes mutilated or suppressed, obviously because they were considered the same power to injure as living things (ZA ii. 1-64).

7. Death and the gods.—Could the gods be said to live? In a sense, no doubt, they were con-
ceived as nothing more nor less than human beings. The solar deity in particular was of vitality; the Pharaoh is said to be 'granted life like Re'; Re is 'lives upon truth'; the solar hymns, especially those to the Aton (the solar god of the heretic king Akhenaten) represent all life as ema-
nating from the god; and (i) all gods and goddesses were dispensers of life. On a closer view, however, we find that the kind of life that was granted to the gods was more and more the prerogative of the life of the blessed dead than to the life of human beings; to the virtuous dead it is promised, 'he who is yonder shall be a living god' (Erman, Gespräch eines Lebens mit seiner Seele, Berlin, 1896, p. 142; cf. Papyri Petropolitani, 1164, recto 56). That the gods dwelt afar off together with the dead is shown by the following sentence from a sepulchral stele of the Middle Kingdom: 'I have gone down to the city of eternity, to the place where the gods are' (Cairo, 39455). Various dead Pharaohs and cele-
brities were posthumously deified (see art. Heroes and HERO-GODS (Egyptian), and the green or black costume that marked them as different from other beings was regarded as wholly alive. Osiris, as King of Eternity, chief of the Westerners, led but a shadowy existence, and similar conclusions are implied by the fact that certain deities were regarded as living for a time at Medinet Madi. The Pharaoh mired as Horus 'on the throne-of-Horus of the living'; under another aspect he was the 'living sphinximage of Atum' (špy nṯry n-ḥm). Alternately regarded as son of Re and identical with Re, the king did not die, but 'flew to heaven and joined the sun, the flesh of the god becoming merged in its creator' (Sinuhe, 71). The Apis and Mnevis bulls were respectively living emanations of Ptah and Atum, and other sacred animals whose cult was celebrated in late times doubled stood in a similar relation to the gods whom they represented. Lastly, the historical aspect from which the human soul is constructed before God was regarded as mansions of the dead, some and, in consequence, as beings long since dead.

8. The dead as a class of beings.—In the Book of the Dead, the following classification: men, gods, blessed dead (š-nfr, 'bright' ones), and dead (nw-t) (see E. A. W. Budge, Book of the Dead, London, 1898, pp. 113, 293, 298, 308, 366, 389, 477). In this classification there is a kind of chronological hierarchical arrangement; the dead of the most remote times are heller and partake more of divinity, than those recently deceased. So, too, the Pharaoh knew that he was one of the earliest rulers of Egypt to have been the gods of the first aneud; then came the lesser gods, and, lastly, the followers of Horus and earliest historical kings. Manetho records a similar sequence of gods and 'semidivine dead' (viz. of spōtānē). In the Book of the Dead, elsewhere 'the dead' are spoken of in a way that clearly assumes them to enjoy a kind of existence; they 'see', 'hear', and so forth.

9. Relations of the living and the dead.—Some Egyptologists, influenced more by anthropological theories than by the unambiguous evidence of the Egyptian texts, have asserted that the funerary rites and practices of the Egyptians were in the main precautionary measures serving to protect the living against the dead (e.g., J. Capart, in Trans. Third Congr. Hist. Rel., Oxford, 1896, 233). Nothing could be farther from the truth; it is of fundamental importance to realize that the vast stores of wealth and thought expended by the Egyptians on their tombs—that wealth and that thought which created, finally, more truly, that pyramid but also the practice of mumification and a very extensive funereal literature—were due to the anxiety of each member of the community with regard to his own individual future welfare and not to the feelings of respect, or fear, or duty felt towards the other dead. We have only to read the story of the exile Sinuhe to realize the horror felt by an Egyptian at the prospect of dying abroad, and of being thus deprived of the benefits and offices of his dead relatives; it is a feeling akin to that which created the whole system of funereal observances. It does not vitiate the assertion here made that the dead cannot bury themselves, and are to that extent at the mercy of the living. Death does not absolutely snap all relations; and motives of filial piety, the calculation that one's own funeral rites are dependent on others, liberal inducements in the form of legacies, previous contracts with the deceased, and also a certain modicum of fear and hope—all these things afforded a certain guarantee to the dying man that his own wishes with regard to burial and a proper monument would be carried out. But there was no real ancestor-worship or objective cult of the dead in ancient Egypt. The feelings of the living towards the other-dead, if they may be so called, consisted in their not asking a question apart from the question of funerary rites (see art. DEATH AND DISPOSAL OF THE DEAD (Egyptian)). The Egyptians wailed and mourned at the death of relatives, not merely out of grief, but as a matter of propriety, under the new Kingdom, mourning-clothes of a bluish colour were worn by women at the funeral (ZA xiv. 162); we have at least one possible allusion to lasting on the occasion of a death (Pap. Petersburg, 1167B, recto 49); friends as well as relatives attended the funeral. It was thought that after death the deceased might return 'to afford protection to their children upon earth' (Urkunden, iv. 491; Nina de Garis Davies and A. H. Gardiner, Tomb of Amenemhat, London, 1914, pl. 27); and we have a number of pathetic letters to departed relatives craving their intervention and help (Pap. Caire, 25, 257, and Petrie collection, bowls with hieratic inscription, before Middle Kingdom; Pitt-Rivers collection, eur with hieratic inscription, before XVIIIth dyn. In PSBA xiv. [1892] 286). In one of these
bitter reproaches are addressed to a dear woman by her widower, who has fallen ill, blaming her for her neglect of him, and all his kindness towards her while she was alive.

10. The dead as malignant beings.—In the magical and medical papyri incantations are often directed against 'every enemy male or female, every enemy male or female, who shall come to injure N, the son of M. The dead are conceived of as the cause of disease, though perhaps only those dead are meant who still wandered homeless over the whole land. The evidence seems fairly clear that actual 'possession' by the dead, conceived of as haunting spirits, is meant in such cases; for the demon is charged to 'flow forth,' and is said to be a useful medicament which is sweet to men, but bitter to the dead' (Erman, Zaubersprüche für Mutter und Kind, Berlin, 1901, p. 121.). At the same time, the duly-buried dead also had power to take vengeance on those who injured their property (see JAHN, Die Lebendigen in den Papyri des Verh. von der Gesellschaft für orientalische Sprachen, Leipzig, 1889, p. 231.). Evidently in Egypt, as in other lands, there was a danger inherent in death and in the dead, as well in blood, the symbol of death; but it is remembered that 'plague is throughout the land, blood is everywhere, death is not lacking' (Gardiner, The Adorations of an Egyptian Sage, Leipzig, 1906, p. 25); and, perhaps because of its association with blood, religion is in many papyri avoided for writing the names of the gods, except in the case of the evil god Seth.

11. Origin and nature of life and death.—The Pyramid Texts (1466 B.C.) reach a stage in which 'when heaven was not, when earth was not, when mankind was not, before the gods were born, before death had come into existence.' Many cosmogonic legends were told by the Egyptians (see Erman, Ägyptische Religions, Berlin, 1909, pp. 22-26), but in most of these referred the origin of life to some god, but there was a superstition which attributed self-generative powers to various small forms of animal life, such as mice, snakes, or flies. The frog was particularly prominent in this connexion, doubtless owing to the numbers in which tadpoles appear, just as though they had come into existence by themselves out of the water. Hence not only did the frog become a symbol of the resurrection (when 'a, 'living again'), but it was intimately associated with the beginning of things: in the Hermopolitan myth the eight primitive creatures were the first born, and in the Abydene tale the frog-headed goddess Heket was associated with Khnum in the creation (see W. Spiegelberg and A. Jacoby, in Sphinx, v. (1903) 212-228). Life, once being started, was sustained by the physical process of reproduction (see esp. Song of Harper, 1, 1; Adorations, 12, 2-4), but the gods, especially the sun-god, Re, were none the less the cause and mainspring of life (the birth of Osiris in the temples of Luxor and Deir el Bahri are very instructive in this connexion).

A daringly speculative attempt to follow up this train of thought is found in an inscription from Memphis, a late copy of a text of early date (H. Breasted, 'The Philosophy of the Memphite Priest,' in ZET xxix. (1903) 35.), which seeks to explain how the 'soul' (the soul of the united human) is united into 'Heart' (that seat of the imaginative, judging faculty), as inseparable by Horus, and 'Tongue' (the organ of command, i.e. the executive, with the heart or imagination as impersonated by Thoth, here personified as the voice of the individual). All this, through the heart and the tongue, is the heart of man, and it is the heart that causes every recognition (judgment) to go forth; it is the tongue to make the servant of the human mouth; to the heart is given what the heart desires. In this way Prab necessarily appears to be the cause of all things done by living creatures; he is, in other words, the vital principle itself. This philosophical analysis of human, or rather animal, activity is up to the present unique, and perhaps represents the thought of some unusually gifted individual rather than that of the priests and learned men generally.

The medical papyri show that a serious attempt was early made to understand the workings of the body, but no other effort of such scientific views with the current mythology has yet come to light.

12. Magico-medical views.—A certain pre-natal existence is assumed in many hyperbolic expressions, as 'he who is in the womb' (see P. P. Bagh, supra, p. R 33.). The normal view, of course, was that life began with birth; with a writer speaks of 'the children who are broken in the egg, who have seen the face of the crocodile before they ever lived' (Tabnit, iii. 49.). The medical papyri contain prognostications for telling whether a child will live or not; 'if it says Ny [a sound like the word for 'yes'], it will live; if it says emu [a sound like the word for 'no'], it will die' (Pap. Ebers, ed. L. Stem, Leipzig, 1872-76, 97. 13. f.). Spolia were used to prevent women from conceiving, and there are various other ways in which birth is touched upon by the magico-medical Amarna papyri; all sorts of amulets were employed to protect life; and, conversely, magic was secretly employed to bring about an enemy's death (e.g., by means of waxen images (Pap. Lee; see P. E. Newberry, The Ancient Egyptian Papyri, London, 1866). A Turin papirus attempts to cover all contingencies by enumerating all the possible kinds of death that may happen to a man (W. Pleyte and F. Rossi, Pap. de Turin, Leyden, 1860, p. 86). Some kinds of death were considered happier than others; death by drowning, e.g., was a kind of apotheosis, doubtless because Osiris had perished in this way, and those who died thus were called kheru (see JAHN, v. xvi. (1909) 132.). Curses were considered efficient magical means of afflicting life (for a good collection of curses see Sottas, op. cit.). Oaths are conditional curses; it was usual to swear 'by the life of Re,' and so common was this style of oath that the verb 'an, 'to live,' was used transitively in the sense of 'to swear by,' and the Coptic word for an oath is anash. Most contracts and legal deposition during the New Kingdom begin with the words, 'As Amun endures, and as the Sovereign endures.' In the law-courts witnesses often swore oaths affecting their own life and property (conditional self-curses; see Spiegelberg, Studien und Mittheilungen der Pharaonischen, Hanover, 1892, pp. 71-81).

13. Life and the law.—On this subject consult the art. ETHICS AND MORALITY (Egyptian), § 13 (1-8), from which it will be seen that the sanctity of human life was strongly felt, as far at least as Egyptians were concerned. A few details may be added here. Abortion was considered a crime (Pap. Turin, 55, 1), unless the charge made in the passage here quoted was one of brutality leading to a miscarriage. Particularly abhorrent was bloodshed between close relatives, as father and son, or a man and his maternal brothers (see Gardiner, Adorations, p. 10); capital punishment was less favourably considered than punishment by imprisonment and the bastinado (Pap. Ptolemaea, 11164, recto 48 f.), and persons condemned to death were allowed to make away with themselves.

14. Life as a thing undesirable.—The Egyptians' intense love of life and appreciation of its value are reflected in many of the passages that have been quoted. The concept of the mystical literature (see art. ETHICS AND MORALITY [Egyptian], § 6) in which life is regarded as undesirable. This point of view may have been inspired originally by some such anarchical con-
LIFE AND DEATH (Greek and Roman).

The outlook on life of the average Greek of the 5th cent. B.C. may be illustrated by the language which Herodotus, i. 30 f., puts into the mouth of Solon in his interview with Croesus, King of Lydia.

When Solon visited Sardis, after all the grandeur of the royal palace had been exhibited for his admiration, he was asked by Croesus whom he considered the happiest man (Oδηγείτωρ) he had ever seen. To the surprise of Croesus, Solon answered that one hand, 'In a prosperous city, and had sons handsome and good (ευχάριστοι καὶ καλοεύς), and all ascribed to a thrift that carried them all and all, and he was fortunate in his fortune, and in his circumstances, and in his health, and in his leisure, and in his self-control, and in his constitution, and in his family, and in his character, and in his friends. He was the only man who could say that his whole life was happy.'

Croesus then asked whether he considered second in happiness Solon answered, 'Chlos and Bithon.' These were natives of Argos, possessed of sufficient fortune, and, moreover, endowed with physical vigour of body that both were prize-winners in the games. It is further related of them that on one occasion, when the Arigtes were celebrating a festival in honour of Hera, it was customary that their mother, as priestess of Hera, should be conveyed to the temple on an ox-waggons. The oxen not arriving from the field in time, the young men hurried themselves to the waggon and drove it to the temple, a distance of forty-five stades. After they had performed this feat in view of the assembly, there came upon them a most unexpected end of life, wherein God clearly revealed that death is better for a man than all the wealth of Argos. The strength of the young men, and the women of Argos called their mother blessed in that she had such sons. Then their mother rejoiced and said, 'It is her sons' deeds and in the speech of the neighbours, and, standing before the image of the goddess, besought her to give to them what they had done. The goddess called on her such honour, the best thing that man can acquire. After this prayer, whereas her husband had sacrificed and feasted, they fell asleep in the temple and in their sleep they died of natural causes.

For the rich-innumerable, rich in riches, rich in life, rich in property, rich in children, rich in friends. The Argives in commemoration of their piety, caused their statues to be made with the following inscription: 'The one who belongs to Argos.'

Croesus was ignorant that Solon should not assign to him even the second place among happy men. Then Solon said:

"Of necessity I am bringing up many affairs—me who know that the deity (ζήλους) is always jealous and delights in confusion. Yet the length of days men are constrained to see many things they would not willingly see, and to suffer many things they would not willingly suffer, in the term of a man's life at seventy years... Now in all these days of seventy years... no one day brings us at all anything like another. Thus, O Croesus, man is altogether the sport of chance (τίρτης ἐποιηήρει διάμαρτυς). That is why men are told to keep away from the sight of the beautiful; for that is the way to show the secrets of the god—of his mercy. For all the actions of the son of Mars are by nature beautiful. Many who abound in wealth are unhappy in life (εὐδαιμονοὶ), and many who have only a moderate competency are fortunate (εὐτυχεῖς). He that abounds in riches and is yet unhappy (Οὐδένα), excels the other only in two things; but the other surpasses him in many things. The former is indeed, better able to gratify his desires and to bear a great blow of adversity. But the other surpasses him in all other respects: although he is not able to meet the blows of misfortune or the claims of his desires, yet his good fortune (εὐτυχία) wards off these things from him, and he enjoys the full use of his limbs; he is free from disease, unshaken by evil, blessed with a fine form (εὐθαλείον), happy in his children (εὐγενεῖς); and, if all these things come at last to be crowned by a decent end, such a one is the man you seek, and may justly be called happy (εὐδαιμῶν). For until that time we ought to suspend our judgment, and not to pronounce him happy (εὐδαιμῶν), but only fortunate (εὐτυχεῖς). Now because no man can possibly attain to this perfection of happiness; as no one region yields all good things, but produces some and wants others, that country being best which affords the greatest plenty; and, further, because no human body is in all respects self-sufficient, but, possessing some advantages, is destitute of others: he who continues to enjoy the greatest number of these and then ends his life graciously, in my judgment, O Croesus, deserveth the name of happy (εὐδαιμών). For he that is happy (εὐδαιμῶν) is happy (εὐδαιμών) in every way, however the end shall be: for many to whom God has given a glimpse of happiness (εὐθαλείας θηρίος), He has afterwards utterly overthrown.

In reviewing these passages we may begin with the last point: 'Consider the end of everything.' This is a favourite sentiment in Greek poetry, and there seems to be a note of conscious pride in the words with which Herodotus concludes the episode:

"When he made this reply, he found no favour with Croesus, who held of him no account and dismissed him, considering him a very foolish man (μήθης) who, overlooking present blessings, looks men look to the end of every thing. Life is to be viewed as a whole. Already in Homer we find it a mark of the wise man that he 'looks before and after.' It is a favourite notion in Finlar:

'The ring around the minds of men unnumbered errors, and this is the hopeless thing to discover—what is best for a man both now and in the end' (Od. vii. 314). Hence the hopeless distinction here drawn between the 'happy' man (Oδηγείτωρ ὁ Διὸς θείου θεοῦ μεγαρριστὸς [Διῳνισίας] and the merely fortunate (εὐτυχεῖς). A man may be prosperous, but 'the Greek way is not to call him happy, but the 'foolish.' Greek refuses that title till he has seen the end of all:

'Behold, this is Odipus; he is he who solved the famous middle and was a man most mighty. But what avail is what a sea of dire calamity is he taken? Therefore, while a mortal waits to see that final day, call no man happy. For all men who have passed the final bounds of life, having suffered no evil (Sophocles, Oid. 1354 f.; cfr. Trag. 15 f.; Eurip. Androm. 100 f.),

Aristotle discusses the saying of Solon in Eth. Nic. i. 10:

εὐθαλείας έστι εὔδαιμον, δόκει ὧν ἐστιν εὐθαλείας ἐστιν εὔδαιμον, ἐστιν ὧν ἐστιν εὔθαλος καὶ εὐθαλοῦς τες.

He begins by asking what the saying means. Does it mean that a man is happy (εὐθαλεῖα) only when he is dead, as a hereditary end of life, wherein God clearly revealed that death is better for a man than all the wealth of Argos. The strength of the young men, and the women of Argos called their mother blessed in that she had such sons. Then their mother rejoiced and said, 'It is her sons' deeds and in the speech of the neighbours, and, standing before the image of the goddess, besought her to give to them what they had done. The goddess called on her such honour, the best thing that man can acquire. After this prayer, whereas her husband had sacrificed and feasted, they fell asleep in the temple and in their sleep they died of natural causes.

The Arkites in commemoration of their piety, caused their statues to be made with the following inscription: 'The one who belongs to Argos.'
seen, is characterized by self-sufficiency (σέρταρες), it is a self-sufficiency which includes children and other relatives and friends; otherwise it would have to include the relatives of relatives, the friends of friends, and so on indefinitely (Eth. Nic. i. 7). When we are estimating the happiness of a man's life, then, we must take into the balance the fortunes or misfortunes of relatives and friends: but, here again, within limits. A man may have lived happily until old age and have died happily. But after his death (1) his relatives may not have been happy, (2) and these relatives will be of all degrees of nearness and remoteness of relation to the dead man. Now it is equally absurd either (1) to suppose that we must include in our consideration all sorts of degrees of distant relations, which would mean an indefinite postponement of our verdict, or (2) to refuse to take account any posthumous happenings at all. The ground of our refusal to bestow the title of 'happy' on a living man is that we consider happiness as something stable and abiding, whereas life is subject to continual change. Consequently, if we judge a man by his condition at any one given time, we shall have to call him sometimes happy, sometimes unhappy. Is not our true solution that we must neglect accidents in our estimate? Most accidents are not determinative of τὸ διανοητικός. What determines happiness or the reverse is ἡ ὅδε τεκμιρσία or the reverse. This view is supported by our present problem. So long as we judge by accidents, we are not better off when the individual is dead than when he was alive. We can judge by the stable things, i.e., by the ἔργων καὶ μέρισμα, on which the reverse is more abiding, as it is in these chiefly that the happy live out their lives (καὶ ἐργα). Hence these are more stable and abiding even than our knowledge of special sciences, which we are not living in and are therefore liable to forget. Thus the stability and permanence which we desire will belong to the ἔργων, and he will be ὅδε τεκμιρσία all his life. His happiness may be tarnished by untoward accidents, but it will not be extinguished. He will never become ὅδε τεκμιρσία, or truly unhappy, for he will never do things which are ἔργα καὶ μέρισμα. If overwhelming misfortunes come to him, he will cease to be μέρισμα, but he will not become ὅδε τεκμιρσία. Happiness can be affected only by the greatest things, whether for good or evil. Hence we may add the proviso 'if it continues.' If so, we shall say that those who have goods and shall continue to have them are μέρισμα, but μέρισμα ἔργων—always liable to εὐμνησία. We may not defer our judgment, but we may qualify it by saying that they are happy, but with a mortal happiness.

To confine our view to the individual's life, and to neglect all that happens to others that affect his death to those near and dear to him, is to take too un-social a view. On the other hand, we must make some limitation. There are two further considerations: (1) posthumous events must be regarded as neutral in our judgment of a man's life much less than if the same thing happened while he still lived; he, at any rate, was spared the knowledge of them; (2) we do not know whether the death of others in these cases is contrary to our own.
LIFE AND DEATH (Greek and Roman)

This is the point of Clytemnestra's words in Iliad. Agam. 904 f.: "Let there be no jealousy; for many were the evil deeds that we endured abscissina." That is, our present good fortune should not act as a spur to new ambitions, but as a warning against any evil intentions. We have been sufficiently punished.

It is nothing to be jealous of a friend's happiness. "Our calamities are likely to abate; for the enemy have had enough success; and if our expedition prospers, the jealousy of them will be abated."

Sokias in Thucyd. vii. 77. 3: "Our calamities are likely to abate; for the enemy have had enough success; and if our expedition prospers, the jealousy of them will be abated."

2. Miles of Polycrates of Samos (Herod. iii. 48). His continued prosperity (corycæa) excited the anger of Polycrates, who spoke to him in these terms: "It is pleasant to hear of the good fortunes of a friend and ally. But the excess of prosperity does not please me, because I know how jealous the deity is. As for me, I would choose that my affairs and those of my friends should sometimes be fortunes and sometimes stumble, rather than be fortunes or stumble in everything."

Though Polycrates' prosperity surpassed my fortunrear in every way, it is not a cause of envy. "It is well known how Polycrates cast a valuable ring into the sea, but it was never found."

The jealousy of the gods is not the jealousy of men. They do not base their jealousy on caprices, but the little changes in the balance of power. That jealousy is not towards us, but towards those of us who are too powerful. The jealousy of the gods is a balance of power. It is a balance of the undoing of one man, and the doing of another. If the balance is not kept, then the gods will not be at peace. If the balance is kept, the gods will be at peace. The gods are jealous of the balance of power.

The wise and good man is the man who recognizes the chances of mortality. The fools that are happy cannot be happy.

Pindar illustrates the doctrine by the story of Asclepius, whom Zeus slew with the thunderbolt because he tried to bring a man (Hippolytus) back from the dead—an attempt to overstep the limits of mortality, and therefore demanding punishment. The same story is referred to by Aristotle in his "Ethics" (1045 b). This passage excellently illustrates the Greek doctrine:

The doctrine of the jealousy of the gods is re-published as a "poetic falsehood" by Aristotle, Met. 1. 2, 983.

The things which make us happy are, according to Socrates, adequate endowments of worldly goods, health, beauty of person, prosperous children, and a death in accord with these goods.

This enumeration of the elements of happiness is consonant with general Greek views of human happiness. What is distinctive is the interest of the character in asking for a happy life. In contrast to the Greek ideal of the individual, the character is interested in the happiness of the whole community.
Sophocles, frag. 328 (f.). A popular svolon, or drinking-song, says:

"Health is best for a mortal man; second, to be free of body (φυλαται τον ανθρωπον); third, to have wealth without guilt; fourth, to be unknown to your friends." (Pindar, fr. 163, gives (1) health, (2) success (ευτυχεια), (3) joy (χαρα), and (4) to owe no man.

Pindar (Pyth. i. 99 f.) says:

"Health is the first of the first prizes; a fair issue of (κατεχεστικα) is in the second lot; he who has chanced on both and on them has the crowns." (Cl. Isag. i. 17, v. 12, Numa i. 33, i. 40, Pyth. ill. 104; Aristoph. Av. 405; Soph. Est. i. 144; Pindar, Pyth. i. 53; Thucyd, vi. 116; Bacchyl. i. 27 f.)

According to Aristotel. happiness is an ευτυχεια καθ' άρχην. But he admits, in Eth. Nic. i. 8, that "nevertheless it does appear that happiness has need also of the external goods as aforesaid. For it is impossible or not easy for a man unprovided with these to do noble things. For many things are performed by friends, wealth, political power, the instruments, as it were, of action. The lack of many and good happiness—the lack of birth, children, beauty. You could not well apply the term "happy" to a man who was utterly ugly, or lew-born, or solitary and childless. Again, less still, if his children or his friends are altogether bad, or if he had good friends or children who are now dead. As we have said, happiness seems to need such outward prosperity. Hence some identify good fortune (ευτυχεια) with happiness, others identify happiness with virtue (ερημος)." In the Rhetoric (i. 5), where happiness is defined more popularly, such "external" goods as the above are termed "parts of happiness," and the list is ευτυχεια, παλαια, χρυσωπα, δολαι, ευτυχεια, πολιτευεια, ευτυχεια: the physical excellences, as ευτυχεια, εκλογα, ετυχεια, μέγεθος, δομας αγωνιστικης; and δεσμος, τιμη, ευτυχεια, ερημος.

He proceeds to explain what he means by the several terms here employed.

(a) ευτυχεια, good birth, may be predicated of a nation or a State, or of an individual. As applied to a nation or a State, it means that it is autochthonous or at any rate ancient, and had as its earliest leaders distinguished men, and has had many distinguished members in the course of its history. As applied to an individual, it refers to descent on either the male or the female side; it implies legitimacy, i.e. both father and mother must be citizens (δεσμοι, ανθρωπος) in lawful wedlock (Arist. Pol. iii. 1. 4 f.; Dem. adv. Neer. Aristoph. Av. 1600 f.). It implies, further, that the earliest members of the family were famous for virtue or wealth or some such distinction, and that many members of the family, both men and women, have in the course of its history distinguished themselves.

The high importance attached to heredity is evident on every page of Greek literature (see art. PINDAR).

(b) γαλολος and χρυσωρας, the possession of many friends, a friend being defined as 'one who, if he consider anything to be good for another, is ready to do it for the other's sake' (Arist. Rhet., loc. cit.). Friendship takes a prominent place in the Greek ideal of life.

"Of all kinds are the uses of friends; above all is troubish, and joy also seeks to behold its own assurance" (Pindar, Nem. viii. 84 f.). It is a good friend I could not even as that a man should cast away the life in his own bosom, which he loves most" (Soph. Oed. Rex, 611 f.).

We next consider friendship among men—Achilles and Patroclus, Orestes and Pythai, Castor and Pollux. The last is the theme of one of the most beautiful of Pindar's poems, Nem. x.

The former has the life of Homer, and the latter is what is main. Pollux asks to be allowed to die with him: 'Grant me, O Lord, to die with him.'

with him! A man's honour is departed when he is rift of his friends, and few there be that are faithful in the day of trouble to share the travail' (76 f.).

The false friend is the object of bitter scorn (Finn. Isag. ii. 11; Hesych. Aet. 786, et seq.). We hear, of course, of a more cynical sort, and split one should always look upon a friend as a possible enemy (Sop. Af. 677 f.; Eurip. Hipp. 253 f.).

(c) Ανοιχτεια, wealth.

ευτυχεια and ανοιχτεια: these may be predicated either of the community or of the individual. In the case of the community, they mean the possession of a numerous body of splendid youth, splendid physically—in stature, beauty, strength, and athletic prowess—and splendid morally, the moral qualities desirable in a young man being self-restraint and courage. In the case of the individual, they imply that his children, male and female, are many and good. In a woman, the physical excellences are beauty and stature; the moral excellences are 'self-control and industry without illiberality' (πετραγά αμεταναπτατος).

The high standard of female excellence is very important for the state; for when the condition of the woman is vicious, as at Lacedaemon, there is no happiness in half the state.

The importance of having children lies partly in keeping property within the family, since the better thought of the childless is that he is too soon dying is that his wealth will go to an outsider:

'Even as a child by his wife is longed for by his father who has reached the other side of youth, and greatly warms his heart, since wealth that falls to an outsider without expecting is most hateful for a dying man' (Pind. Ol. 4. 154 f.).

partly in that there will be no one to pay the memorial offerings to the dead (ετυμοτωρας). These motives find their frequent occurrence in the frequency of adoption (ευτυχεια),

ευτυχεια, a good old age. This denotes an old age which approaches gradually and without 'pain'; if it comes rapidly, or slowly but accompanied with pain, it is not a good old age. This requires both physical excellences and good fortune. It is incompatible with weakness or disease, and a man must have good fortune to live long and remain ηλικιως. 'It is indeed true that some attain long life without physical excellences.'

(f) The physical excellences: (1) ειρημος, health, i.e. freedom from disease, full possession of bodily faculties. Such a thing as the want of health is entirely outside the circle of Heroidus (Plato, Rep. 3. 406) is not desirable, as it means the denial of all, or nearly all, human pleasures. (2) καλος, beauty. A different kind of beauty is appropriate to different periods of life: the young man must be adapted to exercises of speed and strength, and pleasant and delightful to look upon. Hence pentathlete are most beautiful. The man in the prime of life must be fit for military exercises, combining grace with sternness in his appearance. The old man must be equal to such exertions as are inevitable, and his appearance must not be repulsive, i.e. must be free from the disfigurements of age. (3) εκλογα, strength. (4) μετατον, stature— but not so as to be unwieldy. (5) δομας αγωνιστικης, athletic excellence—size, strength, speed; good running, wrestling, and boxing.

1 Cf. Isaeus ii. 45 f.: 'I have shown you that the laws give power to childless men to adopt sons. It is clear, moreover, that I paid attention to him while he lived and buried him when he died. My opponent wishes to turn me out of my father's estate, he is great or small; wishes to make the dead man childless and nameless, so that there shall be none to honour in his behalf the ancestral holds, none to remember him and bestow upon him (ειρημος καθ' άρχην και εμοιασις ουχωρας), but to rob him of his honours. Providing for this, Meleander, being master of his property, adopted a son, that he might get the good he had previously been entitled to. But he, then, was persuaded by these men to rob me of the title of heroism, which is all that is left, and make me nameless, without his name. But, the matter has come to you and you have power to dispose of it, help us and help him who is now in the house of Hades and do not, if in the name of your own interest, allow him to be insulted by them.' (See further art. Anomoeon [Greek]).
LIFE AND DEATH

(g) ἔσος οίδώτε, i.e. to be regarded as a good man (μεριτός), or as 'the possessor of something which all men or most men or good men or wise men desire.');

(h) τιμή, or honour, i.e. honours paid for benefaction, and the respect in themselves or great in the circumstances (cf. Dem. adv. Lept. § 41). Such honours are sacrifices, memorial stones and verse, privileges, allotments in land, foremost seats on public occasions, tombs, statues, maintenance of the public charges, barbaric compliments—e.g., prostrations and giving place—local compliments.

(ι) τυμός, as being both honourable and valuable intrinsically, appeal equally to the φιλομουσίους and the φιλοποιούς.

(κ) εὐσχία, or good fortune. It is the gift of fate that especially excites envy.

(λ) ἀρετή, virtue. This is discussed in Ethic. ch. ix. Virtue is not merely desirable—as gifts of τούτων—but also τεντάσις. It is 'a faculty of preserving and preserving good things and a faculty of conferring benefits,' and its elements are justice, bravery, self-control, magnanimity (μεγάλωσις), goodness, wisdom, practical (φορέω), and speculative (σοφία).

The four cardinal virtues, according to Plato, are courage, justice, temperance, and wisdom (Rep. 427 E); but the soverign virtues, which involve all the others, are justice, which, as we have seen, Plato defines as τὸ τὰ αὐτὰ πράττει καὶ μὴ πολεμοῦμεν. In the famous passage of Pindar (Nem. iii. 74 ff.), the first three virtues are that of youth, that of men, and that of the old, while the fourth seems to be nothing else than justice, which is the soverign and governing principle of all the rest: ἐλέος καὶ τίμας ἀπερετής οὐ κεραίφοις, ὕπατος δὲ οἰκείον τὸ παρακείμενον τοῖς τὰ αὐτὰ πράττει.

However this may be, justice may be, justly, may be, justice may be, justice the other all the virtues. And the moral conscience of man demands in the name of justice that the just man shall have his reward. So Heesom, Works and Days, 270 ff.

(μ) ἡ δὲ τῆς ἡμέρας ὅταν οὐκ ἢν αὐτοὶ μιαίναι αὖταν ἄνθρωποι! For it is an ill thing to be just, if the unjust shall have the greater justice. Hesiod then proceeds: 'It is not that Zeus will give this man the gift of being provest for a time, but justice is better in the end.' (Od. 217 f.). 'On that which is pleasant but contrary to justice a man never lend ends warrant' (Pind. 1. 71, vi. 94 ff.). 'Thus swift are the minds of men to accept a gilded galls in preference to justice, albeit they travel to a harsh reckoning' (Pind. Pyth. iv. 339 ff.). On the other hand, end and beginning are alike pleasant if God speed.

How, then, and where shall it be better for the just man? The typical answer of the Greek moralist is 'Here and in this life.' Hesiod expresses the prevailing view of the Greek as of the Hebrew wisdom when he says:

'But those who wander to and to townsmen deal straight-judgments, and no whit depart from justice, their city flourishes, and their land is broad; And is their land is peace, the nurse of children, and Zeus does not never decree war for them. Neither does Panthe eunuchs, the man who deals straight-judgments, but with mingling they tend the works that are their care. For them earth breaths much livelihood, and where they are no fear, the oak's task is been; their fleecy sheep are heavy with wool; their wives bear children like unto their fathers; they favor with good things continually, whether it on ships, but bounteous earth with earthy fruit for them' (Works and Days, 289 ff.).

Even so the punishment of the wicked is in this world, whether in their own persons or in the persons of their descendants:

'But those who enmity, enmity, and forward works, for them doth Zeus of the future ages, the son of Cronus, declare justice. Yes, oftentimes a whole city reapeth the recompense of the evil men, who sin and worketh evil to the righteous. On them doth the son of Cronus bring from heaven a grievous visitation, even famine and plague together, and a people perish. Their wives bear not children; their houses decay by derailing of Olympian Zeus; or anon he destroyeth a city by a host of them, within a wall it in it under the city.' (Od. 225 ff.).

In Repub. 363 A ff., Plato discusses this view of justice and its rewards. Goods are classified into these sorts: (1) those desirable for their own sake; (2) those desirable for their own sake and for their consequences, and (3) those desirable for their consequences alone. Whereas Sozocrates would place justice in the second of the three classes, the many would place it in the third. Popular morality says that justice is desirable because it leads to reward in this life—a position which is open to the objection that 'seeming to be just' is preferable to 'being just.' Parents exhort their children to be just for the sake of office and other advancement, and because, according to Hesiod (loc. cit.) and Homer (Od. xix. 109 ff.), the gods prosper the just in this life. Then follows a striking parallelism.

'Still greater are the gifts of heaven which Musaeus and his son (Zonourus) offer to the just: they take them down into this world below, where they rest in a house, in a garden, at a feast, overabstaining, crowned with garlands; their idea seems to be that an immortality of drunkards is the highest reward of virtue. Some extend their rewards yet further; the poesy, as they say, of the faithful and just shall survive to the third and fourth generations, in the style in which they praise justice. But after the wicked there is another strain; they bring them in a sly craft, and make them carry water in a sieve; also while they are yet living they bring them to infamy, and inflict upon them the punishments which Glauce desiring the city, as the portion of the righteous, are reputed to be unjust; nothing else does their invention supply.'

According to Homer's eschatology, there remains for the dead only a shadowy existence in a dim land under, in dark places even the gods abhor. This life after death, if it can be called life, holds nothing like love or desire. (Hesiod, Works and Days, 270 ff.)

There seems to be no distinction of destiny between the good and the wicked, except, indeed, that perjury is said to be punished in the world below (H. ii. 379, xix. 360). We have, it is true, some traces of a brighter fancy.

The poet tells of an 'Elysian plain at the ends of the earth, where fair-haired Rhadamantus reigned; where life is most easy for men; neither snow nor great storm nor rain is there, but ever as the shrill West wind blows, Ocean sends forth breezes to refresh men' (Od. iv. 363); but Homer assigns this fate only to Medusas, (whom it was decreed that he should not die nor meet his fate in Ares, the pastured lands of horses,' because he 'had Helen to wife and was the son-in-law of Zeus.' They tell of certain islands of the Blest far in the Western Ocean where the heroes of the Thesean and Trojan Wars dwell under the kindly rule of Cronus—happy (Eikides) heroes, for whom the bounteous earth bears sweetest fruit, blooming throes a year (Hesiod, Works and Days, 160 ff.; cf. also Hes. Theog. 498; see also the 'Greek and Roman').

But such a lot was apparently reserved for the heroes of old, who, without suffering dissolution of soul and body, were by the favour of the gods transported to a terrestrial paradise.

The introduction to Greece of mystic and mystical worship, and the rise of the Orphic and Pythagorean teaching towards the end of the 6th cent., gave a new and heightened interest in the doctrine of the soul's survival after death. In the mysteries, of which those at Eleusis were the most celebrated, it would seem that a fairer prospect was offered to the initiated—a revelation of immortality in a larger life of perpetual felicity beyond the grave. Hence we find in Pindar, alongside of the language of orthodox Greek belief, glimpses of a larger and brighter hope, expressed in passages.
which are among the most striking in the range of Greek literature:

1. Wealth adored with deeds of process... is a conspicuous instance of the history of mankind, and he who has not felt that which is to come: that the helpless minds of the dead pay straightly here their penance, while the wise done done in the land of the living, must pass through the earth, augmented by the bonds of restraint. But equally evermore by night and day they seek to vilify the gods, excusing a life free from toil, existing near the earth with might of hand, neither the waters of the sea in that ghastly life, but with the honours of the gods they make that their own, and their duties ... live a life of happiness, while others the water feedeth, with wreaths and garlands, and most of them receive their hands from the true conqueror of Shadamanthias, whom the father Croesus hath as his ready assessor, Croesus, husband of Rhod, the wealthiest of all.

Pindar's teaching here appears to be that the soul passes through three successive incarnations, alternating with a disembodied state, and that only after passing through all these harnessed is it finally redeemed. Such souls, according to another passage of Pindar (frag. 133), receive a final embodiment as kings and wise men and athletes, and after death become, not indeed gods, but heroes.

"From whom Persophos in the tenth year scoops the atonement of ancient woe, the soul of him whose heart seeks back to the upspringing paths of the age, who form them springing glorious wings and men and women and strong and mightiest in wisdom; and for the future they are called by men holy heroes."

Again, in frag. 137 Pindar says, in reference to the mysteries:

"Happy is he who beholds these things when he goes beneath the earth; he knows the end of life, he knows the is god-given beginning."

According to this view, the soul lives on after death, alone being of divine origin:

"By happy dispensation (ὁλόκληρος ἀνθρώπος) all travel to an end which was not from man. And the body, indeed, of all goes with mighty Death. But there remaineth alive a phantom of life; for that alone cometh from the gods. It slumbereth when the brain is active, but to men asleep in many a dream it reveals the coming judgment of pleasant things and hard."

For the souls of the good there awaits a paradise which is inscribed in terms of human bliss:

"For them shines the strength of the sun below while here it is night. And in measure of a world. Nor is it the hope of a blessed immortality that is subject to the observation in the world of the gods (frag. 139):

"By happy dispensation": Strange, indeed, would this have sounded to the Homeric hero, and hardly the stranger, it would seem, to the orthodox Greek of the 5th century. It is not easy to estimate how far the ideas to which Pindar here gives expression had affected the general body of his countrymen, but we should not appear that they had done so very deeply. The general attitude to death continues much as in Homer. A state of bliss after death is not held out as an incentive to righteousness in this world. Nor is the hope of a blessed immortality offered to comfort the dying or mitigate the grief of the bereaved.

When death is spoken of as desirable, it is merely as κακοῦ καρασφών, a refuge from evil, a dream of triumph.

"World that some face might come, speedy, not over-painful, nor with lingering bed, bringing to us the everlasting, endless sleep" (R. A. H. Ash, 1442).

It does not seem probable that the conception of the nature of life after death exercised any determining influence on the course of the life of the individual. When one attempts to discuss Roman views of life and death, there occurs at the outset the comparative paucity of genuinely Roman evidence. The general attitude of the age towards life and death presupposes the same general frame of

work as we have outlined in the case of Greece; the same conception of the gods which made up the context of human happiness; the same conception of death as the latter, and the same belief in the duty of paying solemn offerings (patermatia) to the dead. When we advance beyond orthodox opinion to the region of poetic fancy or philosophic speculation, we find that there are merely encountrary Greek ideas in a Roman dress.

Greek and Roman alike believed in gods who had a very real regard for the sins and the virtues of mankind, rewarding the good and punishing the evil, but in this life, in their own persons or in those of their immediate descendants. Greek and Roman alike believed that the dead in some sense survive and that it was the duty of the living to make offerings to the dead. But for Roman as for Greek, the after-world was but a dim shadow of the present. There was no lively conviction that it would be wiser worse in the after-world with the bad than with the good; there was no lively conviction that there was any true after-life at all, certainly no such conviction of an immortal felicity as could prompt to martyrdom or self-sacrifice, or alleviate the lour of bereavement in the world, or heighten a blessed reunion hereafter. When Cicero lost by death his beloved daughter Tullia, in the letter of condolence written to him by his friend Servius Sulpicius (ad Fam., iv. 5) the topic is brought in to draw from practical and secular considerations: that she has been taken away from the evil to come, and that she has but shared the common lot, not of individuals only, but of cities:

"Ex Asia reddita, cum ab Agrippa Magna, caput regionum circumiacens perepsisse; postea ex urbibus Agrippa, ante nos Magna, spectaculum Romanum; caput, quae quadam temporibus Serventium furerum crassum, et trium saevo osculum faciat. Caput est nempe cogitare: "huius, non hominem imaginari, aut quod contra terrarum itinere est, quae inas, quaque tua brevior esse debet, cum sum loco tota epistulae cadaveris praebet lacens?" Vales tu, Servi, cohors!"

"In Cicero's most touching reply is there any hint of other consolation."

"Nothing, perhaps, in the consideration of the conception of life and death is more significant than the attitude which is accepted in the question of suicide. The general feeling both in Greece and in Rome seems to have been one of pity for the suicide rather than condemnation. Thus, e.g., Pindar, who three times refers to the increase in suicide in his age, is appalled by the Thesban points clearly to a different attitude on the part of the Greeks in general. Naturally the Orphic-Phytagorean school, insisting on the reality of a true existence conditioned for recompense or reward by the account of the present life, condemned suicide. In the Phaedo, 61 Cff., Plato says that the good man will desire to be dead in order to free his soul from the ebbing influence of the body, which hinders him in the pursuit of truth: 'only, perhaps, he will not do violence to himself, for this, they say, is not lawful' (έα γενεσται); and he proceeds to refer to a 'secret doctrine' (τὸ ἔρημα θεοφόρον), this man is here 'in a sort of prison' (ἐν τῷ θρόνῳ), from which he has no right to free himself or run away' (cf. Cicero, Cat. Maj. 20; Plato, Phaedr. 250 C, Crat. 400 C, Gorgias, 496 A)."
stances suicide is a duty. Sacrilege, he tells us, is an inherited malady. When a man is tempted to commit such an offence, he should "give himself up to his passions, go as a supplant to the temple of the gods who avert evils, go to the society of those who are called good amongst you; hear them tell, and yourself try to repeat after them, that every man should honor the noble and the just. Fly from the company of the wicked—but and then you would season your disease is lightened by these remedies, well and good; but if not, then acknowledge death to be sober than life, and depart hence."

St. Paul, in his Epistle to the Romans, i. 31, holds that in the same circumstances suicide is for one man a duty, for another a crime. A man must decide in consonance with his character. Thus Cato committed suicide, as did Archilochus and many a Greek.

This question, like the question of the life after death, seems to have been in general considered open. It is always to be remembered that religious formulaire and religious practices lag behind the true and genuine beliefs of those who practise them, and ritual is an unsafe index of the inner meaning of the worshipper. Thus we hear much of oracles in Greek history, and undoubtedly they exercised an enormous influence. Yet even so early as Homer we find it considered an open question whether one should obey an oracle or not:

"If it were some other and a child of earth that had made me this, we should say that he was an oracle from sorcery; then would we declare it false and rather turn our backs upon it." (Hymn. xxv. 825.)

In Horace’s mouth is the famous declaration that ‘One men is best—to fight for one’s country’ (H. i. 235). So in Rome Cesar, while holding the office of Pontifex Maximus, delivered himself in the Senate of the doctrine that after death there was no place either for trouble or for joy:

'In luce autque minoris horrenda summa requies, sem prudens, eam sem non aequa mortales invenire, ultra necus cuneque studio locum esse' (Sall. Catil. ii. 80).

So widely divided, indeed, was outward practice from inward belief that Cicero ‘wondered how, when one soothsayer met another, he could help laughing’ (De Div. ii. 32). But the better minds, persuaded as they were that death meant either extinction or a true after-life in which the good should fare better than the wicked, prepared themselves for the great change much in the spirit of the Platonic Socrates, by setting their house in order. Thus Cicero:

"Hanc res sacra sunt fore. Quamquam tempus est non de perpetuo illa iam, non de hac exigua vita cogitare" (ad Att. ii. 1).

A. W. MAIR.

LIFE AND DEATH (Hebrew).—There are two words which in the English OT are very often translated ‘life’: nepheh and koyym. Nepheh denotes the inner occult cause of life’s activities. A nepheh is a concrete entity, resident in the body, which, if scarcely coming within the range of man’s senses, is at any rate thinkable. It is a psychical something, endowed with many attributes, of which life is the chief, though it may also have others, physical and psychical. Haoyym represents life abstractly, as a state or condition—vitality, mental and moral activity.

1. Nepheh.—OT psychology has always been a crux for Biblical scholars, because they have too often looked for it (as Franz Delitzsch) to form a system of Biblical psychology. They have too often expected to find everywhere the same grade of civilization and the same type of approach and conception. Nepheh, conceived to be another nepheh—the blood-soul, resident in the blood; and, when the blood was shed, the nepheh was released. The shedding of blood received much sanctity, much connexion with sacrifice, and the Hebrew priests were endowed with the efficacy of sacrifice to the blood-soul. This is most accurately expressed in Lv 17. The nepheh of the flesh is the life of the blood. . . . The blood is found in all Semitic languages, in much the same senses as in Hebrew; and therefore we must not be surprised if some extremely primitive beliefs, not taught—perhaps even discouraged—as doctrines by the men who were engaged in religious speculation, have survived in occasional metaphors or modes of speech. There were three ways in which the phenomena of life were regarded by early man, as we may infer at a glance, by external observation, noting the manifestations of life in other men and in animals; (2) subjectively, by self-consciousness, through which man became aware of many different emotions and appetites, thoughts, and activities which were taking place within him; and (3) by the consciousness that he was being acted on by forces or beings extraneous to himself. We can scarcely point to a time when man did not fancy himself an object of interest, often of assault, to spirits good or evil, by whom he was surrounded. When the external influence came gently, the Hebrew called it nevehim, ‘breath’; when violently, it was called it rihim, ‘wind’; and that part of his nature which was accessible to these gentle or violent invasions, by God or by spirits, he called respectively his nevehim and his rihim.

(1) The objective soul.—Life is the antithesis of death; and from the beginning the thoughts of man were directed to the phenomena of life by their startling contrast with death. There were two ways in which death must have impressed the primitive man: as the cessation of breathing, and as being caused by the shedding of blood.

(c) The universal and inevitable accompaniment of death is cessation of breathing, and this, as the force of contrast, would certainly direct the close attention of early man to the phenomena of breathing: the rising and falling of the chest, the varying rapidity of the inhalations, in rest and exercise, and the vapour visible from the mouth and nostrils at every exhalation. How did he account for this? Beyond all doubt, on principles of animism, which ascribed all internal movement, energy, and activity to an indwelling, living entity, Nepheh is often defined as ‘the inner principle of life.’ The vague term ‘principle,’ however, is much too modern. Early man personalized all our abstractions. The cause of breathing to him—and thus the cause of life—was a living spirit or soul, dwelling in man’s chest, the breath-soul, which Semites called the nepheh, i.e. a semi-physical, semi-psychical thing, a potent reality, not to be identified with the breath, but the occult cause of the breathing; and, when it left the body for a considerable time, death was the result. To die, or ‘yield up the ghost,’ is to ‘breath out the nepheh’ (Jer 15, Job 11). When Rachel was dying and gave a name to her infant son, ‘her nepheh was departing’ (Gen 35). When Elijah prayed for the recovery of the Shammah’s son, he stretched himself on the child and the child’s nepheh came into him again (1 K 17). When the Psalmist is sinking in a morass and in danger of drowning, he cries, ‘Save me, for the waters are come in even unto my soul’ (Ps 69).

(b) The second startling phenomenon of life was the pulse, and the beat of the heart, which ceased when the blood was shed, in battle or in any other way. The occult cause of the heartbeat was conceived to be another nepheh—the blood-soul, resident in the blood; and, when the blood was shed, the nepheh was released. The shedding of blood received much sanctity, much connexion with sacrifice, and the Hebrew priests assigned the efficacy of sacrifice to the blood-soul.

This is most accurately expressed in Lv 17.11, ‘The nepheh of the flesh is the life of the blood. . . . The blood
mankind by reason of the nephesh, more laxly in Dt 12:11, 'The blood is the nephesh,' is elucidated in Lv 17:4, where we read, 'The nephesh of all flesh is its blood, by reason of its nephesh' (so Kk, Kjv), i.e. we may say that the blood is the nephesh of the flesh, if we bear in mind that there is a nephesh resident in the blood, which is the cause of the vitality of the blood, and therefore also of the flesh. Hence the repellent feature in eating the flesh of animals whose blood had not been shed before death was that, in eating such flesh, we ate that which the nephesh had not been allowed to escape, one would eat the nephesh, and this is strongly forbidden in the words: 'But flesh with the nephesh shall ye not eat.' (Lv 19:26): cf. Dt 12:16.

Human nature was not at first considered as a unity, but attention was directed to the centres of activity, where a mysterious energy was at work: and, long before man used the word nephesh as we use the word 'soul,' the several organs were considered separately, as so many independent centres of vitality. The heart, the liver, the kidneys, and the eye were regarded as distinct potencies, endowed with life, not interrelated or unified one with another. The word nephesh is not used in the OT of the cause of the vitality residing in each of these organs, but it would be quite analogous to the ideas of one ancient people if they did ascribe to each a nephesh.

It was a very general belief in old times that a nephesh might go out from its abode without corporeal death for some considerable time. What is to us poetry and metaphor was in the hour past often accepted as solid fact, as, for instance, when we read of Jacob in Gn 44:23, 'His life (nephesh) is bound up with the lad's nephesh' and of Jonathan in I S 18:4, 'His nephesh was knit to the nephesh of David.' In the statement that the soul of Shechem clave to Dinah (Gn 34) we have reference to the primitive belief that in love the (or a) nephesh leaves the body and enters into union with the soul of its beloved; and a similar belief underlies the phrase which compares Jacob to 'putting one soul in one's hand' (Job 18:14, Jer 12, 15:19, Ps 119:14, 148:13).

The consequences of the temporary departure of a soul were believed to be gladness, mental distraction, sickness, or death (Ezek 14:4). There may be an allusion to this in the words of Saul in 2 S 1, if, with Grotius, we may alter the difficult, if not impossible, words יִכְבְּרֵשׁ יִכְבְּרֵשׁ into יִכְבּוּר יִכְבּוּר. Saul has been wounded and is bleeding to death, and his words would then be: 'Gladness hath taken hold of me, for my nephesh is no longer in me.' We have a similar underlying belief in the phrase which we use metaphorically: 'I have poured out my soul,' as Hannah said to Eli (1 S 1:13); as Job also says: 'My soul is poured out upon me' (30:26); and as is said of the righteous servant: 'He poured out his soul unto death' (Is 53:12). In the first two cases the result is extreme prostration of mind and body, and in the third case death. It is the voluntary surrender of life. The blood-soul may be 'snitten' when a wound inflicted causes bloodshed, (Gn 37:25, Dt 19:11); or this nephesh may be 'slain' in unintentional homicide (Nu 31:29, 33:29), or in murder (2 S 4:9); while in Dt 27:25 a curse is pronounced on one who should 'snatch away a nephesh of innocent blood.'

The Hebrews were forbidden to make an incision to the nephesh, i.e. to incur the loss of the nephesh by the loss of blood (Lv 19:26).

(3) The subjective-objective method. Man believed himself to be the object of attack or of benign influences from other spirits, or from the one great Spirit, God. When the influence was gentle, he conceived of it as 'breath' (nachamah); and when it was violent he spoke of it as to a 'livespirit' (nachash), partly, no doubt, because it caused him to part with excitement. The stronger emotions of man were traced to the rifle, or spirit of man, while the gentler emotions and the inspirations from the Divine were due to the action of the Divine nachamah or the human nachamah. See SPIRIT.

2. Haṣṣim. — Ḥaṣṣim is a plural form, for which no singular is extant (the root is ḥṣr ḥṣr, 'to live'). It is an intensive plural, denoting diversity in unity. As the plural form Elhālm seems to express the conception of one God with many manifestations, so Ḥaṣṣim expresses life in its many manifestations and modes. G. H. A. Ewald truly says that the word 'life' is 'most expressive and crowded with meaning.' Its various meanings it is now our purpose to deploy.

(1) Physical life. — Ḥaṣṣim is used of physical existence (a) in relation to time only, representing the continuance of the existence of God or man, in possession of their varied activities; thus we read of 'the days of one's life' (De 1, 1 S 2, Jer 50, Ps 90:10); and of 'the days of one's one life' (Gn 29:29, Es 4:9); and of 'the days of the years of one's life' (Gn 23:47); (b) in relation to its antithesis, physical death (Jes 25, Jer 21, Ps 89:4); and (c) in relation to the events

1 H. W. Robinson, Christian Doctrine of Man, p. 221.

2 OT and NT Theology, Eng tr., Edinburgh, 1888, p. 182.
which occur in one's lifetime, or are the outcome of one's energies or labours (Lv 18:19);

decides of valor (Jg 16:26), singing God's praises
(Ps 104:32), sensual enjoyments (Ec 3:14);
'They were lovely and beautiful in their lives (2 S 11:2);
'My soul is weary of my life' (Job 17:14);
'Preserve me, O Lord, from the fear of the enemy' (Ps 42:1).

The remarkable thing as to the Hebrew usage of הָיְבִנָן is the clear conviction that 'life' is
something more than a continuance of physical and
mental functions; it is the dignity of man—that man was not meant to live
the life of an animal or a life of sensuous gratification.
Such a life is unworthy of so dignified a creature as man is.
As man's sense of dignity developed, the word 'life' became filled with
deeper connotation. Roughly speaking, man's view of 'life' passed through the same three
stages as we have found in regard to the word 'salvation': (a) man's life consists in what he has,
the abundance of the good things that he possesses—the objective regard; (b) man's life consists in what he is, his character—the subjective regard. In both of his relations to
God, the influences which come to him from communion with the Divine—the objective-subjective
regard. In passing through this development, Israel was subconsciously passing through the
purpose of the highest benediction—What is man's highest good? Wherein does man's true life
consist? And his three answers were: (a) happiness, (b) goodness of character, and (c) fellowship with God.

(3) Joyous life.—Life, to be worthy of the name, must not be existence merely, but exuberant, joyous life. Life is not the humdrum of physical existence; it is the enjoyment of goods, family, and wealth, which can contribute to man's enjoyment.
It is the exhilaration of the red-letter days, when life is sublimely worth living. A life of joy and felicity is alone worthy to be called 'life.' This was always implied in the Oriental salutation: 'Let the king live' (1 K 12, 2 S 16). It is associated with largesses of the gold of Pharaoh (Ps 72:15), with riches and honour (Pr 22:24), with prosperity and large possessions (Dt 57 [Heb. wā'āl]). In Ec 2:6 the Hebrew reads: 'See life with the wife whom thou lovest,' but AV and RV both correctly interpret: 'Live joyfully with the wife'; and, when a man is honoured with an invitation to the court, that the light of the king's countenance is life (Pr 16:4).

(4) Ethical life.—True life consists in what a man is and not in what he has. The ideal life is a good life, a life of righteousness. 'In the way of righteousness is life' (Pr 10:27); 'Wisdom and discretion are life to the soul' (3:35); 'Keep her [wisdom]; for she is thy life' (4:9); 'The words of wisdom are life to those who find them' (4:20); 'Whose findeth wisdom findeth life' (8:35). There are three things which 'tend to life': righteousness (11:28), the labour of the righteous (10:26), and the fear of the Lord (15:31). In the same pregnant regard of (a) man's life we read of 'the way of life.' 'Torah is light; the reproofs of instruction are the way of life' (6:6); 'He that heeded instruction is in the way of life' (10:9). Similarly, the same speaks of a fountain of life: 'The Torah of the wise is a fountain of life' (13:3); so is the 'fear of the Lord' (14:2) and 'understanding' disciplined by correction (16:2). In Lv 18 in the Code of Holiness there is the 'life' and developed, quoted in

VOL. VIII.—3

Dt 6:4: 'Man doth not live by bread only, but by

lv 6:6: every word that proceedeth out of the mouth of the

Lord doth man live.' Revealed truth is the sus-

tenance of character—if that moral life which is

acceptable to God. Similarly, Hezekiah in his

Psalm, speaking of the promises of God, says: 'By

these things men live, and wholly therein is the

life of my spirit' (Ps 33:18), and in 595 the Lord calls

cam through His prophet, saying: 'Incline your

ear, and come unto me: hear, and your soul shall

live.' A clear recognition of the

(4) Religious life.—The passages hitherto considered refer to the moral life nurtured by the

instruction of the wise and by obedience to the

revealed will of God; but the OT saints rose to a

higher conception of life than even this—the life

which is nourished by fellowship with God, the life

concerning which the Psalmist could say: The

Lord is the strength of my life' (Ps 42:7); 'I love thee, O Lord, my strength' (18:1); 'The Lord is my

strength and my shield' (28); 'My prayer shall be

unto the God of my life' (42:8); 'In God's favour is life' (30); the only life fully worthy of

the name is that wrought in the consciousness by

His favour. Deuteronomy promises repeatedly a

long and prosperous life on earth as the token of

God's approbation, but the mystics soar above and

beyond this present apprehension of life; they

hope in his death,' says one of the sages (Pr 14:32).

Rejoiced that God was their 'portion' (Ps 119:51),

'Vested in the land of the living' (Ps 142:5), that

God was their 'guest-friend' (Ps 51), and therefore

there is an eternal covenant between Him and

them. The high-water mark of a sense of unending

friendship with God is found in Ps 73: 'Whom

have I in heaven but thee? And there is none upon earth that I desire besides thee'; and from

this the inference is drawn: 'I am continually with thee. Thou shalt guide me with thy coun-

sel and afterward receive me to glory.' (73:28). God's friendship is the only true abiding good.

This enables a man to triumph over death. 'Thou wilt show me the path of life: in thy presence

is fulness of joy; in thy right hand there are

pleasures for evermore' (16); 'I shall behold thy face

in righteousness: I shall be satisfied, when I

awake, with thy likeness' (17).

In Psalm 119, the author gives the assurance that Sheol cannot be the end of such a life, but only blessedness with God. But it is always expressed as a personal conviction, and need not wonder that such deep experiences are somewhat rare.

In conclusion, we turn to the significance of the

word 'life' in Ezekiel. The prophet looks forward with

great expectancy to the return from exile, but it is under the glamour of vastly improved

religions conditions. The Kingdom of God is to

be with men. The Lord's servant David shall be

the benign prince and ruler (37:8c-34:5). Jahweh

will take people from among the nations and

sprinkle clean water upon them, give them a new

heart and put a new spirit within them, and cause

them to walk in His statutes and keep His judg-

ments (36:25-27). Ezekiel contemplates a new age—

a Kingdom of God on earth. But, before that is

established, he sees a period of terrible conflict with the powers of evil, in which the

wicked who are unfit to form part of the new

Kingdom shall perish. Those who do wickedly shall not live, they shall surely die (18:3). Those

who 'do that which is lawful and right,' being

endowed with the new heart and the new spirit,

'shall surely live' (18:2). The Kingdom of God

with its great moral and religious privileges

before the prophet, to the rule of evil with the

punishment of the moral life. This appears more strikingly in

1 AT Theologic, p. 400.
and to enter on the new Kingdom, in which God’s presence will be both more real and evident (485); to live without sin in the crisis and to be excluded from the Kingdom.

J. T. MARSHALL.

**LIFE AND DEATH (Indian).**—The earliest Aryans to enter India worshipped a vast number of petty spirits, but they learned, rather later, to reverence a number of the greater phenomena of nature, and also laid much stress on the worship of their ancestors. This ritual formed the foundation on which, in all the institutions of the Aryan family were built; 1 though it may well be that the religious belief had its own ultimate origin in the natural organization of the family. At all events, the belief in the power of ancestors profound; the father was the family priest, and controlled the worship of the ancestors of the family in all details. Centuries after their entry into India, when the Aryans were engaged in the imperial work of bringing all the races of N. India under their political and intellectual domination, the great doctrine of *karma* and rebirth took shape. With Farquhar we may conjecture that "among the many animistic tribes the invaders met on the broad plains of the North, there must have been tribes in whose opinion the souls of men continued to exist after death. A belief of this kind was that the souls of men may become incarnate in animals. There were probably totemistic class who believed that at death a man became, like his totem, a tiger, an ox, a frog, or a snake. 2 Whether the transmigration idea came from this source or not it is impossible to say, and, indeed, it is more probable that it was at first a deduction from the physical resemblances which were observed among kindred.

"But, even if the idea that human souls might undergo animal bodies for a certain time and that these bodies not be the same as those of the original soul, is but one element in the complex doctrine. That gave the belief its power over the people, and also an object for the soul of the body; it was the combination of this fact with the important idea that the body and soul were separate that made the doctrine powerful and eternal. That the soul and body were united in the body, the doctrine first appears in the earliest Upanisads. Thus, while transmigration in a sense has been believed in many lands, the Hindu doctrine of *karma* (q.v.) is, as far as we can yet say, unique. 3 In内地, the moral idea of *retribution* is the more primitive and far more widespread belief that souls are something almost material, although they may not be always palpable or tangible.

**1. Vedas and Brahmanas.**—In the Rigveda the conceptions of death are not entirely consistent, but the principal belief relating to the *ajne bhrigue*, or ‘unborn part,’ was as follows: When the remains of the deceased had been placed on the funeral pile and the process of cremation had begun, Agni, the god of fire, was prayed not to scorch or consume the departed, not to tear asunder his skin or limbs, but, after the flames had done their work, to convey the body to the **2. Upanisads.**—In the pre-Buddhist Upanisads the soul is supposed to exist inside each human body and to be the one consistent explanation of life and motion. In the living body it dwells ordinarily in a cavity in the heart, and is of the size of a grain of rice or barley. In later speculation it grows to the size of a thumb and is, therefore, called ‘the dwarf.’ In shape it is like a man. Beliefs varied as to its appearance and as to its composition. One passage says that it consists of consciousness, mind, breath; eye and ears; earth, water, fire, and other; heat and no heat; desire and no desire; anger and no anger; law and no law—in a word, of all things. 4 Thus the soul was conceived as material, although it also possessed selected mental qualities. It could quit the body in dream sleep or under certain diseases were supposed to take place in the body; it could quit the living body in sleep, and was said to be present in the body of the dead, as is depicted in the Rigveda. 3 In the Rigveda, I, iv. 8, the souls of the departed are said to go to the sun and to Upas, the dawn.
to be due to its having escaped from the body, so that the soul has to be employed to bring it back.

In some passages the soul is supposed to have existed before birth in some other body, and opinions varied as to how it got into its first body. We also find a curious speculation, with three variations. *1 We know that a seed, when planted in the earth, sprouts and grows as the soul passes through the seed. One of these is the theory that certain human souls, on going to the moon, become the food of the gods as a consequence of their good deeds. The next time they descend, after having been devoured, they pass from the gods to the ether, from the ether into the air, from that into the rain, thence to the earth, and from it into plants which become food to males, whence they pass into females. At an ordinary man's death the top part of the heart is lighted up, and the soul, guided by that light, departs from the heart into the eye, and through it into some other body, excided or not according to deeds done in the body which it is leaving. The soul of the man whose cravings have ceased goes to Brahman. The Upāniṣads are almost unanimous that the soul will not return from rebirth either by sacrifice or by penance.

1. It must be by a sort of telescopic or analistic insight, by the process of which, the absolute knowledge and certainty, that one's own soul is identical with the Great Soul, the only permanent reality, the ultimate basis and cause of all phenomena.

2. The Brahma Upanisash, the belief in transmigration is combined with a notion that souls go first to the moon. All who depart from this world go to the moon. In the bright fortnight it is gladdened by their spirits, but in the dark one it is soon from forth the moon and returns to earth in new births. It is the door of heaven. Him who rejects it sends on beyond, and whose rejects it not, him it rains down upon this world; and here he is born as a worm, a grasshopper, a black ant, a bear, an serpent, tiger, or a man or some other creature, according to his deeds or his knowledge.

3. Jainism. The philosophy of Jainism, probably the oldest existing Indian creed, defines the universe as not created and not controlled by any individual god. As substance it is without beginning and without end, but it is not homogeneous, since it consists of substance (dravya), which is either jiva, 'alive', or jīva, which may be translated 'organic.' There are five kinds of substance not alive, viz. matter, space, the two ethers, and (figuratively) time; but living beings are compound of one kind of substance, jiva, soul and body, and the Jain belief is that nearly everything, even plants, particles of earth, fire, and wind, is possessed of life. In other words, the Jain philosophy is pure animism. Jiva is sometimes translated 'living being' and sometimes 'soul,' yet it is not an individual universal soul, but a mass of mutually exclusive, individual souls, and every soul having attained its highest state (mokṣa) is called parinirvāna, or 'great soul,' a term only very roughly translatable by the word 'god.' Jainism thus fails to draw any definable distinction between 'life' and the soul. Dravya may be derived from the Sanskrit roots of 'point' and 'with', and the standpoint of its own existence, it is that which ever exists. For example, the soul now embodied as a cat may in its next life be incarnated as a dog, a man, an insect, or what not, yet remain, in appearance, the identical Brahminal soul, all the time; and thus, while the body is merely a vast multitude of cells which come and go, the soul is a homogeneous substance whose qualities (gat, 'purpose') go with it, and the body is what it always is.

4. Buddhism. Buddhism, as an organized creed, has disappeared from India, but the ideas which it adopted or promulgated are still living and form one of the sources from which the Indian beliefs as to the origin of life are drawn. For instance, the Buddhist teaching that all life is due to a common source appears to be a direct expression of the legend that with Buddha was the horse, as his wife, his companions, and even the Mahabodhi tree and the four treasure-vases. These are the seven that were born simultaneously, but to make up seven, each of the four vases as one. Another legend declares that, with the Buddha, were born 500 Sakyas, 500 maidens, 500 servants, 500 horses, 500 elephants, and as many treasures came to light. A very similar conception has survived in modern India.

Thus is the legend of Gūga, his mother is destined never to bear a son, but Bhāgīvrāma rubs some of the sacred sandalwood (sāla) on his body and gives it to her. She divides it among a Brahman woman, another of the lowest caste, a grey mare, and herself; and all four females, hilti to barren, become fruitful. In another cult-legend a Brahman gives a Bāja three grains of rice, and each of his three queens swallows one and bears a son. A stock incident in folk-tales is the gift of a jar of barleycorn to a barren woman whereby she conceives. For the Buddhist doctrines see art. DRAW AND DECAL Of the PEACOCK (Buddhist).

5. Mediæval. Three or four centuries before the Christian era a religion with Vāsudeva as its central figure and a school of his followers known as Bhaṣavatā was founded in India. According to the Nalandaśāstra, the sun is the gate, and after entrance those who are free from sin, all their material impurities being burnt, remain as atoms in him (lit.); then, released from him, they enter the Aṃshāra (soul) and coming mind, they enter the Pradyumna (mind) form. Leaving this, they enter that of Sankarāṇa, i.e., the form of the individual soul (jiva), and afterwards, freed from the three guṇas, they enter the Āmnāya (world), and finally with Nārāyaṇa; and the Bhākṣika system or Ekāntika Dharma (monothemism) was attached to the Vaśivāda creeds. Its earliest exposition in the Bhaṣavatā-Gita teaches that they who know the inwardness and the deads of Bhaṣavatā are released from the body and born again. The discipline prescribed, however, for the attainment of the Brahman condition is religious, not merely moral, and this differentiates the Brahmans from the Kṣatriyas and Bhārāṇayakas Upaniṣads. Mention is made of two paths, and those who die while the sun is in his northern course (Uttarāyana) do not return, and those who die while it is in his southern course go to the orb of the moon, from which the soul returns. Again, the whole

creation (Sahāra) is compared to a pipal-tree, which is to be cut by the weapon of indifference or detachment. When a soul departs from a body it leaves away the indriyas (senses), of which manas (mind) is the sixth, and brings them in when it assumes another body. The soul itself is a part of Bhagavat and is eternal. By becoming tūma (hemp) at the latter it raises all beings. By becoming fire it aids digestion. There are two souls in the world, one changeable, the other not, and besides these there is another, the highest or Paramātman, who, as the unchangeable, supports all three, without entering into them.

Hence it appears that it is the animal soul that goes out of the body along with the six senses and enters new ones in that condition.

6. Modern Aryan. The multiplicity and, it must be confessed, inconsistencies of the elder doctrines current in India regarding life and death are reflected in the countless beliefs now existing, but through all the bewildering variations which prevail a few dominant conceptions can generally be traced, and a remote and savage tribe will be found professing a creed which is based on the fundamentals of orthodox Hinduism. Even the regressive religions will appear in forms more or less mutilated. So numerous are these beliefs that only a few of them can be given.

The basic idea of life in all India is that it is indestructible. This leads to the readiness to take life which to the European appears callous and brutal indifference to it. Thus in 1841 S. C. Macpherson was deputed to Ganjam in Madras to suppress female infanticides and human sacrifices among the Khonds, a tribe which believed that souls return to human form in the same family, but that they do not so if the naming ceremony on the 7th day after birth has not been performed.

As the Khonds ardently desire sons, they saw in this belief a proper justification for female infanticides as a means of reducing the number of female souls to be re-born in the family. 1 A very similar belief prevails in the Panjab, where for example a girl child is or was killed with rites and an incantation bidding her "send a brother instead." Exchange is not murder.

How far this and similar beliefs account for the reluctance to cremate young children does not appear. But the souls of those dying after infancy or childhood are very widely believed to pass into another world, at least for a term. Thus in the Punjaub, after a cremation make a small foot-bridge over running water in the neighbourhood to help the passing of the soul of the deceased. 2 Yet the same people practise a form of divination, which is very widely spread, to ascertain, immediately after death, what animal the soul will enter or has entered.

This belief is perfectly consistent with a belief in metempsychosis and yet compatible with the worship or propitiation of the dead, who may be benevolent or the reverse. Among the kindly dead may be numbered the spirits of ancestors, of pure ascetics (śāhī), and saints, of dutiful widows who have committed sañ̄hī, and so on. But the propitiation of the malevolent dead is much more necessary, and therefore prevalent. For example, in the Kumaun division of the United Provinces the lowest class, the Doms, and even the lower classes of Brāhmans, the Khas Brāhmans and Rajputs—

in fact, the bulk of the population—believe in the presence of malevolent or vindictive dead. Thus, if a man has two wives and drives one to suicide, any disease afflicting the other wife's children is ascribed to her ghost, which must be propitiated, and gradually comes to be treated as a god. If a man is killed in a quarrel, every misfortune befalling his slave or his children is ascribed to the ghost.

There is reason to believe that the emotion caused by the dread of the effects of karmas is much stronger in the hills than in the plains. In particular dying in debt is dreaded as the worst sin, it is believed that the soul of the debtor will go to his creditor. If a man's son die it is believed that he was his father's creditor in a former life, and he therefore ex-1

The certainty of the operation of karmas is not without considerable effect on practical morality. It is automatic, so that specific condemnation by Parmeswar (God) of any sin is hardly required. Similarly, the idea of forgiveness is absolutely wanting; evil done may be outweighed by meritorious deeds only so far as to ensure a better existence in the future, but it is not effaced, and must be atoned for. As to the theory of transmigration—that it does not follow from it that the soul remembers previous existences—such a consciousness is recognized in the case of great ascetics; and even a person born in a degraded position may know that the present is his wrong-doing in a previous existence. The nature of the next incarnation can also be divined, when a man has died, by placing ashes from a potter's kiln in a shallow vessel and sooning them. Next morning they will be found marked with human foot-prints, claws, wavy lines, and so on, according to the soul is to be re-born as a man, a bird, a tree, etc. To ensure that they shall be married to each other in a future existence, a man and his wife bathe together in the Ganges with their clothes tied together. The important differences in the teachings of theoretical Hinduism and popular religion in regard to heaven and hell is that the former declares that there are transitory stages of existence in the chain of transmigration, while in the latter there is generally an idea that the soul, when sufficiently purified, goes to dwell forever in heaven, which is regarded as a place where the soul will enjoy material comforts. In popular Hinduism there is no idea of absorption in the deity or of recurring cycles of existence and non-existence.

The conception of life as something impalpable, yet apparently material and certainly transferable, is extremely common in India, and may, indeed, be described as the most popular of all the beliefs, who has lost a child will bathe above its grave, pouring water over herself through a sieve, in order to ensure a fresh conception. For the same reason very young children are sometimes buried under the threshold, so that the life may come back again. This idea leads to the popular belief that life may be stolen, and so on the night of the Divālī, or feast of lamps, male children are occasionally stolen and killed so that a barren woman may bathe over the body and conceive a son of her own. As in other ritual murders, it is desirable to kill the child with as much pain as possible. And during the śrāddhas, the ancestral worship, when the sun is in Virgo (Kanyā), occurs the Kāśīgatā larpas, or 'fighting in Kāśīgat,' also termed sañ̄hī pōsa ("sharing with others"). In which women of good Hindu caste, even Ktirias and Brāhmans, of the Central Punjab take part. On the first day of the śrāddhas, the goddess Lakṣmī's image in the house or lane is painted with cow-dung, and the women belonging to it go out early in the day to a bathing-place, relying on the way

 5 No one would think a female soul worth stealing, although a girl's soul is expected to return in a boy.
women who are known to have sons. This leads to tussles in which garments are often rent by parental arms. Not infrequently the belief is entertained that by cursing the sons of others the female attracts the male souls to herself through the intervention of the goddess, whose image is worshipped daily and thrown into the river at the end of the fortnight which is held sacred to the spouse of Siva the destroyer as well as to the dead. Married women are also cursed to become widows, in order to prolong one's own wedlock. On the Ammaeur the women place between large canoes of women on their way to the river, and the affair is treated as a festival.

LIFE AND DEATH (Iranian).—With their marked tendency towards optimism, the Iranians loved life (anghâ, gûya, jûk, jîh, uðhân) and abhorred death (mâhûtka, mûрейyût); the one is the creation of Ahura Mazda, the other of Angra Mainyu (Ys. xxx. 4), who have been at variance since the 'beginning of life' (Ys. xlv. 2). Not only is life first created by Ahura Mazda (Ys. xlv. 8), but the soul (the corporeal soul) asks him how the 'first' [i.e. the earthly] life 'is' to be (Ys. xxviii. 11; cf. xxxxi. 10), but he is 'the seed of the seeds of the dead' (Ys. xxxi. 8), and from him come the joys of life (Ys. xxxix. 10; cf. xxxiv. 14). The Amesha Spentas (g.v.) give aid to the life of man (Ys. xxx. 7), so that Zarathushtra fittingly presents the 'life of his own body' as a 'companion' (gut) to Ahura Mazda and Ashtâ (Ys. xxxii. 14). On the other hand, the demon Wrath (Aûshuma) injures the life of man, and the wicked and unbelievers mar it (Ys. xxx. 6, xxxii. 9. 11).

Life in this world is not all; indeed, though Zoroastrianism teaches that all good things are to be enjoyed in full measure, life here below is but a preparation for the richer life hereafter. For this reason Zarathushtra asks from Vohu Manah and Ashtâ the 'words of life' (uzûva anghûst), while the 'right ways of weal' (ercesî vzavnâmâ pâho) are to be learned from the religious teacher in the present life (Ys. xlv. 8, xxxii. 4). Life is twofold: 'he who is for the corporeal' (lit. 'essorian') and 'the spiritual' (amhrâs ahuô manavatâçic, Ys. xii. 6; urrevâhgu ... ahûgya ... ahôça anghûst yô avestiav yâsa axi manavân, Ys. viii. 28), so that pravet is made to Ahura Mazda to 'live on life and corporeality for both lives' (pâyavan avestanavac ... ubôýa anghov, Ys. xii. 3). The 'best life' (vahista abû, Ys. ix. 10, and often) is actually a life without the 'heavens life' (avôca abû, e.g. Vend. iii. 30) for 'hell', and this concept still survives in the ordinary Persian term for 'heaven', bûlê. The 'best of the best life' is the 'righteousness' of Aâshî (Yv. xlv. 6); and in the time of the final Sásâlyant, Aståvâr-ereta, men will live forever, for there shall be no more death (Ys. xix. 89), even as was the case in the happy days of Yima's reign (Ys. ix. 6; Ys. xix. 36; Vend. ii. 5).

In the Gâthas death is seldom mentioned. The whole stress of Zarathushtra is on life, to be devoted to the war against the powers of evil and to the eternal joys of heaven. Even the wicked do not die; they are damned to the everlasting torments of hell (Ys. xlv. 2, xlv. 11). In the Younger Avestas, on the contrary, death is an important feature. We need not detail the corruption wrought by the 'corpus demon' (Nâsâ; cf. Gr. rhein, 'corse'), which forms the main theme of Vend. y-xii. (see also ART. DEATH AND DISPOSAL OF THE DEAD [Paris]), and we need only mention that a standing epithet of Haoma (g.v.), in diôsêla ('from whom destruction [especially death] remains afar') (Ys. ix. 2, 19, x. 21, xi. 3, 10, xxxi. 14 (on the latter passage see Monllott, 711, 353)), Death is one of the worst of evils (Ys. ii. 7-12; cf. ix. 10), and the first to stay it was Thrita (Vend. xx. 2), while it is the Druj (the Lie, the negation of the truth of Ahura Mazda?) who destroys life (Ys. iv. 16), 'life' and 'the man of piety preserved' (armânagayost, 32 ff.), for it is inevitable (ib. 53 ff.).

According to the Pahlavi Dinê-i Mainog-i Khrât (vii. 20), which is not strictly orthodox, being markedly fatalistic in tone (cf. art. FATE [Iranian]), the seven planets 'rule' in creation, and deliver them up to death and every evil. According to the Bundâdistin (l. 7; cf. xxx. 20 ff.), the creatures of Ahiram will perish at the Last Day, when the heavens and the earth shall be created anew and when the creation of Ahura Mazda shall reign supreme, after wicked men shall have been purified by the flood of molten metal which at that time will cover the world.

Of mythological concepts of life and death there is scant' trace in Zoroastrianism, the sole allusion, evidently borrowed from a Semitic source, being to the tree Gôkar (the Guorêna of Ys. i. 1, Vend. xx. 4, etc.), or white Hûm, which is 'the counteractor of decrepitude, the reviver of the dead, and the immortalizer of the living' (Selec.-tions of Zfit-Sparman, vii. 5), and from which, at the avôcira, the five chief componet of the food which will give undying life to all (Bundâdistin, xxx. 25; cf. ix. 6, xvii. 1, and see F. Windischmann, Zur. Studien, Berlin, 1863, pp. 169, 253, F. Spiegeler, Erdn. Alterthümleunkunde, Leipzig, 1871-78, i. 464 ff.).

LOUIS H. GRAY.

LIFE AND DEATH (Japanese).—As might be expected, the early Japanese conceived of life and death as being entirely dependent on breathing. The word for 'to live,' abû, is associated with ikû, 'breath'; and i-no-chi, the expression for life and vitality, is believed to mean ikû-no-uchi, 'during breathing,' or ikû-nô-miickey, 'the life through inspiration.' Similarly, the word for 'to die,' shûsa, means to mean shi-inu, 'the wind goes' (a derivation of the word from sugi-inu, 'to pass away,' is disputable). These very ancient words are still in use, though the people think little of their etymology.

The mythology opens with the primary power of production. Three divinities are said to have sprung from the first of the primeval triad, the Eternal-Ruling (Ame-no-minaka-nushi), and the
other two are the High-Producing (Taka-mimusubij) and the Divine- (or Mysterious-) Producing (Kami-mimutsu-no-mune-ki) kami, all the last two are identified with the Divinity-Male (Kami-ro-gi) and the Divinity-Female (Kami-ro-mi), the terminations gi and mi representing 'male' and 'female' respectively. It is very possible that the terms of divinity, male and female, have been borrowed from the Chinese ideas of the primal entity and the two principles, positive and negative, flowing out of it; but the Japanese kami, like the Divinity-Female are constantly invoked in the ritual or prayers, some of which are of remote origin. It is undeniable that in the pristine faith of the Japanese the generative powers played a great part, but these divinities themselves were thought to have been generated spontaneously, and the first pair are followed by a series of similar deities. They were all generated independently from one another and in turn disappeared or hid themselves.

The last of these pairs are the Male-Who-Invites (Izana-gi) and the Female-Who-Invites (Izana-mi), who are doubtless counterparts of the first pair. They were united in marriage, by order of the celestial deities, and brought forth the islands which make up the Japanese archipelago, and nearly all sorts of elements and objects (see, further, art. COSMOGONY AND COSMOLOGY [Japanese]). The stories of these births show that many objects of nature were believed to be animated, as was, in fact, whatever manifested any power, good or evil, on men. The female deity becomes ill from bearing the gods as a result of her own sin, and dies. This death, however, is not to be taken as a natural death in our modern sense of the word. After her death the goddess is found in Yomotsu-kuni, i.e. 'the country beneath the earth,' which is thought to be in a subterranean region. The male deity visits her there and, against her will, looks on her body by torchlight. Enraged at his imprudence, she is accompanied by her attendants of the darkness, pursues him, in order to catch him and to make him a member of the realm where death and darkness rule. Their dialogue on the boundary of the world and the dark region tells of the life and death of human beings. The female deity, now the genuine of death, threatens the male that she will take the lives of one thousand men every day, while he expresses his counter-determination that he will give those to the Shoki (the Shoki dies. Thus we see how the pair of generative powers were divided and metamorphosed into the powers of life and death. A similar antithesis is attributed to the Heaven-Shining (Ann-tensu), the goddess of light and culture, and the Swift-Impetuous (Susa-no-wo), the god of darkness and outrage. These two are said to have been born of the Male-Who-Invites, either alone or in union with his consort. These divisions, however, are not thoroughgoing. Usually, in popular belief, life is ascribed to the power of the Producing deity or deities, and death to the power of evil spirits, who are indeinite in their person.

The stories told of the deities, of their generation and death, and of life and death in general, show neither definite sequence nor unity of conception. The stories have undergone much change and are also possibly mingled with foreign elements. Still it is certain that the primitive beliefs contained the ideas of spontaneous generation and generative reproduction, on the one side, and the belief in immediate death and the concept of eternity, on the other. This idea of death as the violent cessation of life survived the belief in spontaneous generation, and still remains in the observances of purity, which are understood also as avoiding the contagion of pollution or to prevent evil influences of all kinds.

Life is conceived as a breath, but vitality endures longer and acts beyond bodily initiation. The source of vitality, is considered to be a thing precious and mysterious like a jewel or ball. It is called tama or tama-thi, 'subtle aerial ball.' But it is not always a unity or a homogeneous whole, for double manifestations of the two principle entities, are spoken of. They are either nigi-tama and arata-tama or suki-mitama and kushi-mitama. The nigi, 'mild,' 'quiet,' 'refined,' is contrasted with the arata, 'vivid,' 'brilliant,' and the suki, 'indifferently, suki means 'happy,' 'galloping,' while kushi means 'wonderful,' 'hidden,' or 'hideous.' The latter set is believed to be the two aspects of the arata-tama, the active side of the soul, but in fact the relation between these two sets is not clearly defined. The existence of these double-souls in every man is also obscure. We know only that in some cases one of them appears, even to the astonishment of the possessor. Whether or not the double souls were borrowed from the Chinese conception of souls, aerial and terrestrial, or of the two principles, positive and negative, is uncertain.

The soul is sometimes called the saka-no-mitama, the spirit of vegetable production, or as Ikikuni-dana, the living-land-soul. In post-Buddhist ages the souls of trees, rocks, springs, etc. are more in vogue. They appear in human form, but they are derived from the souls from trees, from rocks, etc. Being specially named the saci, or 'essence.' The double souls were almost forgotten, having been overshadowed by Buddhist ideas, and they were revived by the Shintoists of the 16th cent., but with little influence upon popular belief. Buddhism teaches that there is only one soul to one living being.

As to future conditions, there is a kind of heavenly world, Takama-no-hara ('Plain of High Heaven'), where celestial deities reign. Yomotsukuni, mentioned above, is the opposite pole. Besides these, there are two worlds beyond this, Hi-no-waka-miya ('Solar Young Palace') and Toko-yo ('Eternal World'). The former is mentioned only as the abode of the Male-Who-Invites, and it is sometimes explained as meaning the shime marking the place of burial. The latter meant any place beyond the sea. Moreover, we are not told whether a deity, when he hides himself, or a human being, when he dies, is destined to be born in one hundred men a day. Thus we see how the pair of generative powers were divided and metamorphosed into the powers of life and death. A similar antithesis is attributed to the Heaven-Shining (Ann-tensu), the goddess of light and culture, and the Swift-Impetuous (Susa-no-wo), the god of darkness and outrage. These two are said to have been born of the Male-Who-Invites, either alone or in union with his consort. These divisions, however, are not thoroughgoing. Usually, in popular belief, life is ascribed to the power of the Producing deity or deities, and death to the power of evil spirits, who are indeinite in their person.

The stories told of the deities, of their generation and death, and of life and death in general, show neither definite sequence nor unity of conception. The stories have undergone much change and are also possibly mingled with foreign elements. Still it is certain that the primitive beliefs contained the ideas of spontaneous generation and generative reproduction, on the one side, and the belief in immediate death and the concept of eternity, on the other. This idea of death as the violent cessation of life survived the belief in spontaneous generation, and still remains in the observances of purity, which are understood also as avoiding the contagion of pollution or to prevent evil influences of all kinds.
ing to the three conditions of existence (bhūmis) which are divided into twenty-five. Beyond these courses and conditions there are the lands of eternal bliss, prepared by various Buddhas to receive believers. Every one may be born in one of these, according to the merits he has acquired.

The Tathāgata heaven of Maitreya and the Sukhavati of Anātītado were the most popular Buddha-lands (kaṭarī) in the Buddhism brought to the East. There the soul, no longer subject to causation and suffering, may enjoy full communion with the saints, and may come back to the earthly worlds in order to save relatives and friends. We can imagine how wonderful and attractive these teachings must have appeared to the people, simple and credulous as they were. Thus, an inscription dated A.D. 622 expresses a belief in kaṭārapa and a devout wish to be taken to the Land of Purity by the grace of Buddha. It is questionable how much impression these ideas left upon the mind of the people at large a hundred years after their introduction; but the change and widening of thought are undeniable.

A progressive Buddhist influence, first among the higher classes and then among the lower, gradually supplanted the old national ideas as well as the Confucianist conceptions of life and death. The romances, stories, and lyrical poems of the 10th and 11th centuries were imbued with ideas of kaṭarī, transmigration, and birth in Buddha-lands. These ideas and beliefs became and remain to-day the most important factors of popular beliefs, in spite of hostile endeavours made by the Confucianists to depose them, ever since the 17th century. They can be detected in many songs sung by street musicians, and the words alluding to them are used in conversation, diffusely.

Nevertheless, the native ideas have never died out, but have remained rather as a kind of matrix into which the adopted conceptions have been laid. The national beliefs, so to speak, look upon the sun as the source of all vitality. But here the sun is not exactly the goddess of light (Ama-terasu) of the mythology. It is sexless and without any other attributes than that of the life-giver. It is invoked as the Great Divinity (Oho-mikami) or the August Heavenly Way (O-tentō-sana), and is worshipped every morning by some, or on New Year’s morning and at sunset on the equinoxes by the majority. In the morning, people breathe deep, breathing facing the sun and making an offering to inhale thereby the vital essence (yōka) emanating from it. At the same time, prayers, either Shintoist or Buddhist, are uttered. The power opposing life is darkness, which, however, means not merely absence of light, but an evil power or pollution (kōgaru or yinkō), the cause of illness and death.

This belief in the sun as the life-giver is certainly a survival of that in the Preaching Divinity, who follows the Heaven-Shining goddess as her nourisher. The ideas and practices have been influenced by the Buddhist cult of Vairocana (the Great Illuminator) and also by the Confucian dualism of the yin and yang, but we can see here a tendency to continue primitive beliefs.

These ideas have been systematized in recent times into a cult by some Shinto reformers. One section of the Buddhists favours this cult, while the other disavows it, though without opposing it. To the former belong the Shingon sect, the most Hindustan form of Buddhism, which has tried to amalgamate the yin and yang, and to the latter category belong the Jodo and the Shin sects, the Buddhist Fists and Puritas, and the Zen sect, the school of meditation and introspection.

On an average, the prevailing conceptions of the modern Japanese are based on the Buddhist Shinto. Kōgaru and fate are still believed in by many, but transmigration is not strictly adhered to in the details of its teaching. The majority, in fact, think little of life and of its origin; but evils and diseases are, in many cases and by many people, ascribed to either or devils indiscriminately. Among the educated classes and educational circles accustomed, so common to the Japanese mind and to Confucianists in this connexion, is a recognized principle. Young Buddhists trained in reconstructing their faith in Buddhism, are not strict in the doctrines of kōgaru and transmigration.

**M. ANESAKI.**

**Life and Death (Jewish).**—Optimism is the keynote of post-Biblical Judaism. Everything that God does is for the best (Berehkheth, 606), and this life is essentially good, to be contemplated with joy and gratitude. For every breath that a man draws, say the Rabbis, let him praise God (Mishnah, *Bab. to Gen* 2:2). Yet life is not an end in itself, for it must be lived under a sense of responsibility to the Giver, and all its worth resides in this aspect of it. At death a man loses all opportunity of obeying the Torah (the Moral Commandments) (Shabbath, 30b). 'Morality,' says M. Lazarus, summing up the teaching of Judaism on this subject, 'is man's vocation' (Ethics of Judaism, § 116), and the Rabbinical legend tells of the Angel of Death at Sinai: 'If Israel accept not the Commandments, it is better that the earth revert to chaos (Shabbath, 88a). 'The world,' says the Rabbis elsewhere, 'stands upon these pillars: the Torah, wisdom, and piety' (Aboda, i. 2); or, according to another maxim, 'upon Justice, Truth, and Peace' (ib. i. 18). 'The Torah is the medicine of life (Yoma, 72b); in other words, life is made safe and efficient by religion. God, according to the Talmudic doctors, says to Israel: 'My light, the Torah, is in thy hands; thy light, the soul, is in Mine. Tend My light, and I will tend thine' (Midr. Rab. to Lc 23:4). The supreme hope of the Jews is to behold the Kingdom of God established on earth, and thus, in a notable passage of the Liturgy for the New Year Festival, he prays:

*But Thy fear, O Lord God, is upon all Thy works, so that all mankind may bow before Thee, and become one band united to do Thy will with a perfect heart; for we know, O Lord, that common is Thine, and that Thine is in Thy right hand. And so give glory, O Lord, to Thy people, to those that fear Thee, and to the opening of the mouth to those that trust in Thee. For then the righteous shall see and be glad, and iniquity shall shut its mouth, and all wickedness shall be wholly consumed like smoke, for the proud rule of sin shall pass away from off the earth. Then every creature shall own Thee as its Creator, and everything that hath breath shall cry, the Lord, the God of Israel, reigneth, and this dominion resteth upon all!' (cf. Sir 30:15).

*But, though the true life in the life of service, it must be glad service, for the view of life taught by Judaism is serious, but cheerful' (Lazarus, § 283). The Shekinah (the Divine Presence), says the Talmud, does not come in response either to grief or to levity, but to glad performances of duty (Shabbath, 236). This is the essence of Jewish doctrine on the subject: neither asceticism nor hedonism, but joy springing from and tempered by the religious idea, is the characteristic Jewish temper.

There should be no unattached laughter in this world' (Jer. 31a). The history of Israel, with all its tragedy, is sufficient to forbid such mirth; and the piouf Jew denies himself most of his memory in desolate Jerusalem. Moreover, unlimited enjoyment is incompatible with a religious outlook on life; the good man will conceive of himself as living under a Divine law, with which
his pleasures must be made contemptible. On the other hand, the ascetic idea is alien to the true Jew. The rabbi, a man of the world, is no ascetic at all, his ethics is no asceticism at all, and its indulgence under right conditions, is commendable. Even the impulses that make for physical pleasure are the Divine handiwork, and to gratify them is a duty; without them life would be a sorry thing. If it were not for desire, the world could not stand; a man would not take a wife, nor build a house, nor plant a vineyard (Midr. Philihim, ed. S. Baier, Wilna, 1891, to Ps. 104). But indulgence of these lower instincts must have as its motive, not the satisfaction which it yields, but the desire to promote the Divine purpose for which they were created. That indulgence is a duty, but a religious duty.

Thus the Biblical law, following the general rule laid down in Lev. 20, prescribes a number of prayers to be recited by the Jew on indulging in various pleasures more or less sensual in character—on parts not to be eaten of various kinds of food, on throwing the scent of a flower, or looking upon the sea, on beholding a rainbow, on taking possession of a new house, and on wearing new clothes for the first time. By such means physical gratification, when sanctioned, is also sanctioned. The tendency to self-indulgence not only is not restrained, but natural desire is tempered, not extinguished or suppressed. 'Material comfort and natural desires are regarded as integral parts of an ethnically sound life' (Lamarrus, § 245). It is a Jewish boast that the willingness to gratify personal, not animal, passions is the source of joy. The Rabbinist counts such synonyms (Aboth v. Rabbi Naathan [ed. S. Schachter, Vienna, 1887, 523]). The Feast of Tabernacles is the signal of the 'season of our gladness' (see Authorized Prayer Book, ed. S. Singer, p. 235); it would seem that of all the festivals the proper purpose of gladness, though as the religions of joy was to be indicated by observing a special celebration in its honor' (On the Jewish Wine as a Meat [常委会 and Life, p. 136]). Joy is in itself a service; but it must be transmitted into service by being purified, that is, not to be indulged by piety and self-restraint. At meals, the rabbinic teach, words of Torah must be spoken; otherwise it is as if the assembled company ate of the sacrifices of Abel and Cain (Gen. 4, 3; 1 Cor. 15, 3). A man should eat only when he is hungry, and drink only when he is thirsty, and always in moderation (Hullin, 66a, 2). The Talmud inveighs against luxury and luxury and luxury (Pessachim, 114a). In fine, Judaism confounds the golden mean between unbridled self-gratification and extreme self-denial. Indulgence and renunciation must be allies, not antagonists; something of both must go to the making of the daily bread, and each must find its justification in the higher utility. 'Here,' says Moses Luzzatto (18th cent.), 'is the true rule on this subject:—The worldly pleasures, which a man need not have it is his duty to shun; but the one, which, for one reason or another, he does need he cannot renounce, they still require a strict rule. But its application to the various circumstances of life must be left to the intelligence and the willpower' (Maimonides, ed. Zerubavel, p. 13). For the elder teacher, Jehuda Halevi, the duty of exclusion is a duty of self-preservation. 'Our law, as a whole, is divided between fear, love, and joy, by equal parts' (Maimonides, ed. Zerubavel, p. 13). We cannot, a man must do nothing to bring thee nearer to God than joy on the Sabbath, even if it is the latter is the outcome of a devout heart' (Ktivah at Kavana, tr. H. Hirschfeld, London, 1865, p. 133).

It is due partly to the difficulty of defining the line media of moderation, and partly to the sorrowful experiences of the Jewish races, that occasionally temperance has overstepped the safe line, and lost itself in austerity. The Talmud tells of a Rabbi (Za'ar) who fasted a hundred days (Baba meqi'ta, 58c), and of another (Mar Ben Benban) who fasted practically all the year round (Peb. 65a). There have been Jewish sects, like the Essenes and the Karesa (Jewish, which have been manifested in modern times, many of the ascetic practices in Judaism, as in other religions, mysticism has had contempt for the world and its joys as its corollary. The disciples of Hillel and Shammuel even went so far as to discuss the questions which never life is worth living (Erubin, 136). This uncertainty is often visible. The devotee who gives himself to fasting is called, now a saint, and now a sinner (Zeb. 22, 5, 29); a man must die for the Torah, and yet he must not (Baba meqi'ta, 60b; Gittin, 80a), to sleep on the earth is commanded in one place (Baraita of R. Meir), and discouraged in another (Ber. 62a). But these contradictions are either explained away, or the essential phases of Jewish thought: a firmer note is the rule, and the ascetic and the

pessimist are only by-products of Judaism. It is a bad sign, say the Rabbis, to despise life (Tan. of the Eliezer), as if the sin-offering brought by the Nazirite (Nu 6) by continuing that his very abstinence from strong drink was a sin (Tan. A. 111). According to our view,' says Johanan ben Hasid (op. cit. p. 198), 'a servant of God is not one who denies himself from the world, or hates life, which is one of God's bounties. On the contrary, he loves the world and a long life. And God affords him the opportunity of deserving the world to come.'

According to a striking Talmudic utterance, in the next world men will be called to account for the lawful pleasures which they have indulged in this life (Jer. Kiddushin, ch. 4). And the real Jew speaks in these maxims. Judaism fixes the thoughts of its adherents upon the future world, but not to the exclusion of this world. 'It has revealed heaven to men, but earth as well' (M. Gudermann, Das Judenthum, Vienna, 1902; p. 56). It has no sympathy with self-mortification for its own sake, no commendation for the temper that voluntarily courts pain and abridges life for the greater glory of God. Suffering has to be patiently endured when it comes; it has even to be welcomed as the seed of moral regeneration. With the very wounds I will heal myself,' according to God's command. (Midr. Rabb. to Lev 16, the reference is to Jer 30, 7), and 'whose God afflicts his name' (Midr. Philihim to Ps 94); 'then thou desirest life, hast found it and Ps 16). Such utterances betoken not a worship of sorrow, but a recognition of its disciplinary power, of its value for the character, its significance for the life. Judaism has been no merit in suffering, but only in the right bearing of it; and in its teachings and the ideas of the self-mortifying Hindu there is an impasseable gulf. Suicide is a crime, and its perpetrator is not to be mourned (Midr. Job, to Gen 3, 5, Mainonides, H. R. B. 3009, xi. 4); but the slow suicide that comes of self-mortification or of the neglect of health is also reprehensible. 'Ye shall keep my statutes, and my judgments; which if a man do, he shall live by them (Lv 18) — live by them,' says the Rabbinist gloss, 'not die by them' (Yoma, 855).

Scattered among the meanderings of the contents of the Talmud are the materials for an entire treatise on modern Judaism. One part of the fact is itself a proof of the importance attached to the physical life by the community, and the earthly life is exalted into a religious duty. Hillel (1st cent. B.C.), on his way to the bath-house, exclaims: 'We are about to perform a sacred rite; it is a religious duty, he explains (Avoda Zara, 20a). The duty of preserving life, it further declares, overrides the religious law (Mena, 55a). It is not only allowable, but a duty, to extingui

A discomforting first on the Sabbath day, and to ask permission of the religious authorities to be in enemy and to be guilty of murder. The heads of the community are to be foremost in the human task (Sh. 545). For the dead, even though he be King David himself, the Sabbath must not be broken; but it may be broken for the living, even for a child a day old. 'Put out,' says the Talmud, 'the light of a lamp on the Sabbath day rather than extinguish God's light of life (Shah, 309). In a well-known passage in 1 Mac (395), the Jewish patriots are described as resolving to defend themselves on the Sabbath instead of self-sacrificing their lives, as their brethren had done hitherto. Self-preservation is a duty. To slay a fellow-creature at the command of another is a crime (Ps. 306); but to slay him in self-defence is justifiable. If we are called upon to choose between saving our own life and that of another, we must save our own lives (Baba meqi'ta, 60b). Self-sacrifice is forbidden (Baba meqi'ta, 60b), as is the counting of grain on the Sabbath, as a sacrilege. The Sabbath must not be broken on the ground, or remaining in a desolated house (Yeb. 20, Ber. 62a). In certain circumstances, usually forbidden to Jews, may be given to the patient (Yoma, 538).

There are limits, however, to this regard for the physical life. A man may break every law to save his life except those which forbid the three cardinal sins, idolatry, incest, and murder (Sanh. 62a). Those who suffer martyrdom for the faith are justly landed by the Talmud (Gittin, 57b). But, with these reservations, the duty of preserving life is paramount. Nothing must be done to abridge
LIFE AND DEATH (Jewish)

had made, and beheld it was very good— it is death that is meant, says a Rabbi (Midr. Rab. to Job 1). The death of the righteous is the act of one who gently draws a hair from the surface of milk (Ber. 8a): this is called 'death by a kiss' (Baba bathra, 17a). The death of the wicked, on the other hand, is like the painful disentangling of a thorn from wool (Ber. 7a). Death is the liberator (Shab. 30a); it is like the entering into port of a well-loaded vessel (Midr. Rab. to Ec 7); hence it is that the Wise Man declares that 'the way of death is better than the way of life' (ib.). It is fulfillment as compared with mere promise. Far from being the primal curse, death is a blessing. The day that Adam died was made a holiday (Tana d'rae Etignah, 16). The death of the righteous, God says, is 'a grief to Me, and never should they die if they did not themselves ask for death; for did not Abraham say, 'I would be dust and ashes,' and Jacob, 'Let me die now!' (Midr. Tehillim to Ps 116:19).

The idea, however, that life is desirable as the opportunity for obedience persistently recurs in the Rabbinical literature. The thought of its cessation, therefore, is filled with despair. Even Abraham, who, as already indicated, prays for death, is represented (in the apocryphal Testament of Abraham) as being averred to it. He refuses to surrender his life, and the archangel Michael claims it; and to win his compliance the angel, at the Divine bidding, puts off his fierce aspect, and appears to the patriarch decked in light. In like manner the Angel of Death, finding David absorbed in religious study and, therefore, invincible, has to be carried away by a draught before he can perform his mission (Shab. 30a).

The Angel of Death is a familiar figure in the Rabbinical literature, and, as in the later Biblical writings (e.g., 1 Ch 21:1), it is styled the 'Angel of Death.' His name, which often occurs in Rabbinical Literature, is Sammael, i.e., 'the drug of God,' a reference to his gall on his sword. Liberal opinion, however, denied the existence of an Angel of Death, just as it scouted the idea of a personal Devil. 'Satan, the Angel of Death, and Evil Desire are one and the same' (Baba bathra, 16). In other words, it is ignoble impulse alone that tempts and destroys. Death, however, is the friend of mankind (Shabbath 11a), and the righteous. Benevolence disarms him (Derekh erez zuta, ch. 8); and he instructs the learned in religious lore (Ber. 51a). He respects the wishes of the just as to when and where he delivers his summons (Mo'ed lebon, 28a).

A Talmudic legend tells how a famous sage, Joshua ben Levi, appointed to die, and persuaded beforehand to see his place in paradise. Since the knife of the death angel, wherewith a heavenly voice rings out the command, 'Give back the knife; the children of men have need of it' (Kebobah, 77b). Long follow has made good use of the story in his Legend of Rabbi ben Levi.

The necessity of death, however, applies only to the existing worldly order. In the Golden Age there will be no death; Messiah Himself will slay it (Peshita Rabbath [ed. M. Friedmann, Vienna, 1889], 161b [the Scripture proof cited is Ps 25]). As to the origin of death, the same texts are expressed. The familiar idea that death was brought into the world by Adam's sin has its place in Rabbinical literature (see Shab. 55b; Baraitha, 16b; Tana d'rae Etignah, 16). But we find it much earlier in Sir 25:1. Closely connected with this idea is the legend, possibly of Persian origin, that the Serpent, when tempting Eve, infected her heart, and, through her, all mankind with his death-dealing
LIFE AND DEATH (Teutonic).—Our knowledge of the conception of life and death among primitive Teutonic peoples can be gleaned from three fields: (1) the fragmentary information on Teutonic beliefs and practices given by classical and early Christian writers; (2) the organized religious belief of the Norsemen, particularly of the cult of the chief gods, which embodies beliefs common to the general Teutonic stock, and reveals traces of earlier ideas; and (3) the great mass of popular tradition, for instance, superstition, and custom, both in early times and in modern survivals. From a study of this material it would appear that the processes of thought on these subjects among the early Teutons were very similar to those now formulated for all primitive peoples. The early Teuton, in dividing all that affected him into animate and inanimate, probably took for his criterion the power of motion; from the confusion of this power with the faculty of volition animistic ideas would arise in connexion with active natural phenomena, and, later, even with inanimate objects, while a still further development would appear in personification, with inevitable sex-distinction, and in symbolistic beliefs. The criteria for the attribution of death would be the loss of the power of motion and the phenomena arising from it; from the observation of sleep, dreams, trance, etc., would spring animistic beliefs. A further stage would appear in the identification of the principle of life with these intangible or tangible manifestations, such as breath, warmth, colour, pulsation, or blood, with whose inactivity the body life is obviously connected; hence the belief in a material form of the soul, leading to the idea of the 'external soul.' Of the later forms of belief Teutonic folklore and myths give ample evidence, allowing one to presuppose the earlier stages.

1. The principle of life in nature.—The four elements are constantly represented as imbued with life, and are associated with life and death. The strength of the belief in running water is shown by the widespread Teutonic worship of streams and springs (cf. Grimm, Teut. Mythol., p. 101), and the practice of bathing testifies to the power of water to give life and health (cf. Frazer, G.B., pt. vii., Bolder the Beautiful, ii. 29). The personification of the living element in water is generally feminine.

The belief in fire, as might be supposed by the general Teutonic myth of Wieland, originally doubles a fire demon, and by the Norse personification of fire as Logi, later confused with, and superseeded by, Loki. The life-transmitting powers of fire appear in the customs still practised throughout Teutonic Europe, at the ceremonial bonfires, especially at Easter and Midsommer (ib. ch. iv., note that Frazer admits the existence and significance of these customs, although he deviates [ch. v.] from Mannhardt’s explanation of fire-festivals). Akin to fire-beliefs is the belief in the quickening power of the sun, shown in the connexion between the two, which is observed in the Midsommer fires, and in the custom of rolling fiery wheels or other sun-symbols. A curious example of belief in the generative power of lightning occurs in the superstition that mistletoe is produced by a lightning-stroke. The connexion between fire and human life appears in the representation of souls as flames or will-o’-the-wisps.

Air has always had an important connexion with the principle of life under two chief aspects: first, breath, the symbol of life (cf. Voluspa, 19); secondly, wind or whirlwind. Wind made known the presence of mysterious beings, and in Ostinn, as god of the wind, the slain, and the ‘Wild Host,’ is the culmination of the connexion of wind with the continuity of the life in the soul.

The primitive conception of the earth as Mother of all appears widely in Teutonic belief (cf. art. EARTH, EARTH-gods, § 61.). Early personifications of her occur (Nerthus, Erce), and her life-giving and restoring power appears in charms in which seeds, turfs, or handfuls of earth figure; many of these, whether in Old English or in modern survivals, are Christianized, but their origin is unmistakable. The earth’s living power is transferred even to inanimate objects resting on or discovering superincumbent, and metals; we find a life-stone that heals wounds (Liudolf Saga, 58 f.). Stones and metals, like plants, fire, and water, were credited with volition, as in the story of Baldur, and the early idea of the conscious power of weapons (cf. the sword that fights of itself) [Skírnismál, 81 f.] long retained in poetry and folk-tales.

The close connexion of trees with the principle of life is proved by the well-studied Teutonic worship of trees, and by the idea of the World-Tree, with its popular parallels in the identification of trees with the guardian-spirits of peoples, tribes, families, or individuals (see HAMMERBRYD Teutonic). The use of plants and fruits to convey life is frequent even in modern superstition, and an early instance occurs in the Voluspa Saga (ch. i.), where the queen becomes pregnant after eating one of Freya’s apples. The tales of the Yule and Midsommer logs were touched and kept for the same purpose (cf. BRANCHES AND TWIGS, § 5).

Certain animals, particularly the boar, had a special connexion with the life-giving idea, and others had an intimate connexion with individual human beings, and from this arose the power of transfusion or of shape-

1 W. Mannhardt, Baukunst der Germanen, Berlin, 1872, p. 242 f.
changing. Another form of this sympathetic conception appears in the ‘external soul’; but totemistic ideas, the logical conclusion of depositing the external soul in animals, seem never to have developed among the Teutons (K. Helm, Allgern. Ethnographieg., s. 123). In hero-worship an infant hero is sometimes suckled by an animal, as were Wölfschild and Sigurör Sven. The serpent, in other cults so important a symbol of life, because of the renewal of its skin, has little or nothing to do with life-conceptions in Teutonic mythology. The tenacity of the belief in individual life in the natural world appears in frequent personification, though it is sometimes difficult to distinguish between nature-personifications and those local deities which abound in Teutonic belief, but which may be a later development.

It is a moot point whether the primitive Teuton believed in a universal life-giving spirit; without going so far as to assume a monothetic origin for Teutonic mythology, we can yet believe that the principle of life was early personified, though whether as earth-spirit or as sky-spirit it is impossible to define. Among the Germans generally it is common to the latter, but the Nertis evidence, the Nertis-Freyr combination, and the Swedish worship of Freyr as a fertility deity all point to the former. All the chief gods have aspects of life, and general permissiveness and traces of phallic worship are not lacking (ib. i. 214-235). The origin of world-life has already been treated (see COESEMOLOGY AND COSMOLOGY [Teutonic]); the revival of world-life and hero-phases were celebrated at the Easter, Midsummer, and Yule festivals.

2. The origin of individual life. — The Teutonic conception was prevented from becoming metaphysical by the ceremonial of marriage, which is illustrated by the ceremonies followed at birth (see BIRTH [Teutonic]); and the lack of individualism in the life-conception is shown by the importance attached to blood-kinship, hero-kingship, and rebirth. Blood-kingship was the closest of ties, and the mingling of blood was the symbolic ceremonial for sworn brotherhood (cf. ART: BROTHERHOOD [Artificial], 1, 7). The power of heredity consisted in the transmission of racial qualities, especially courage and hardihood, as in the case of Sinjól (Volsunga Saga, 9). The idea of re-birth, which still persists, was deeply rooted in Norse belief, and accounts for the conduct of individuals of the upper classes when their ancestors were supposed to have died; the name was of great efficacy in the attraction of ancestral qualities, and even implied the transmission of a personality. The impossibility of re-birth was considered a misfortune (cf. F. Hiromann, Nord. Mythol., p. 35 ff.). Similarly, theaumanna, or geniuses in female form, could transfer itself from the dead to a beloved kinsman (Volsunga Saga, 9). The different stages of human life were little regarded; we know of no initiatory ceremonies at adolescence, although Karl Pearson (Chances of Death, London, 1897, vol. ii. ch. ix.) considers that the licentious character of mediæval Walpurgnusnatt reveals proof of such activities; we have no evidence of them in any case.

3. The conception of death in nature. — The elements have all a death-dealing as well as a life-giving power, especially fire and water; water acquires a malevolent power on Midsummer Day, and demands a human victim; similarly, many vegetable and animal objects had death-dealing powers, inherent or temporarily acquired.

4. The conception of human death. — This arose from the phenomena attending sleep, which foreshadowed the soul’s departure; the soul is still materially represented as issuing from the mouth in the form of a bird or monster which is facilitated in every way. In Norse mythology the death made an actual journey, and needed shoes to travel the Hel road. The idea of cessation of activity after death, if it ever existed, was soon superseded, as is proved by the universal custom of providing the dead with material implements; the earliest tombs contain cups and vessels, not armour and weapons—a sign that at first feasting, not fighting, was to be the chief concern of the hero. Activity after death could be exercised still on earth, but it was then frequently malignant, and could be prevented only by burning the corpse (Landsd. Saga, 17, 54). Spirits could return in animal or in human form (Erlöggis Saga, 51, 53), and hauntings show the power of ghosts to affect the living; fear was probably as great an incentive to ancestor-worship as reverence. Activity after death was conceived as a close parallel to mortal life, as is proved by the nature of the implements provided, and such activity was often localized in sepulchral houses (ib. 11). The Vallensbæck belief is the development of the conception of Öðinan as god of the slain; in a less warlike age a more peaceful prefiguration
arises, the Rosengarten of the later German poets; Saxo Grammaticus's account (Gesta Danorum, i. 31) of Hading's voyage to the under world represents an intermediate stage (see art. BLEST, ABODE OF THE [Teutonic]). The power of death was inexcusable and inevitable, even the gods being doomed to perish at the world-death. Death was personified in many forms: as a messenger, or as a woman. The Norse Helga was certainly at first a Teutonic Prosperine, however shadowy; subsequently, her personality was not distinguished from her abode. Popular and grotesque personification prevailed later, and gave rise to the idea of weakening death's power by insulating or beasting a tangible representation (Grimm, p. 767).

In spite of the undoubted fatalism of Teutonic peoples (see art. DOOM, DOOM MYTH [Teutonic]), the belief, born of instinct and desire, prevailed that magic enabled man to exercise a twofold power over death: first, in retarding or lasting off death; secondly, in controlling and summoning spirits (Erbyggja Saga, 55). Preventive magic against death might include the wide range of charms to preserve health, prevent barrenness, keep away sickness, or extract blood. Coercive magic to compel death was apparently as frequent as preventive, though naturally more secret. It was possible to foresee the doom of death upon others, and also to have the premonition of it in oneself-to be fay. The summoning of spirits (helvina), performed by means of the vaingaldr, became in Norse mythology an important branch of magic art (see MAGIC [Teutonic]).

29. The ethical aspect of life and death.—It is difficult to deduce the ethical outlook of the average Teuton on life and death, because of the extremely objective character of the literature, but the moral aspect of world-life and world-death is proved by the fact that the end of the world comes 'automatically,' involving the gods also. Respect for the principle of life is presupposed by the importance attached to fertility and all that promotes it; but this was instinctive, and originally entirely non-moral. Respect for individual life rarely appears, except in kinship; the slaughter of kin was abhorred as violating the blood-ties (Saxo Grammaticus, Gesta Danorum, ii. 1; Beowulf,2486 ff.); but even this was probably due more to tribal than to moral instinct. Custom rather than morality governed the sacrifice or the retention of life, as in the case of the Gothic widows (Prosopis, de Bello Goth. ii. 14). Chivalrous sparing of life was little known, for Saxo Grammaticus's assertion to the contrary can hardly be substantiated from earlier literature (Gesta Danorum, v. 160). The fatalism so deeply ingrained in the Teutons coloured their whole outlook, but it was untinged by remorse for an ill-spent life or by fear of coming punishment; and the lack of a moral division after death is so general that it is tempting to explain apparent inconsistencies by the theory of Christian influence. Suicide was allowable when due to grief for one's kin or human, and was more honourable than an ignoble death (cf. Saxo Grammaticus, tr. O. Elton, London, 1894, p. xxxvi). The practice of human sacrifice points to little respect for human life in the abstract (see art. HUMAN SACRIFICE [Teutonic]); the fact that such sacrifices were prophylactic or propitiatory was held sufficient justification, if indeed any were necessary, since it seems to have been a strong idea of sacrificing the life and welfare of the one to that of the many. It would add greatly to our knowledge and the interest of the subject if, in the account of prophylactic sacrifices, the least clue were given to the mood and temper of the victim—whether he were merely passive under compulsion or a willing and exalted sufferer.

LIFE-TOKEN.—See STATE OF THE DEAD.

LIFE-TOKEN. — 'Life-token' or 'life-index' is the technical name given to an object the condition of which is in popular belief bound up with that of some person, and indicates his state of health or safety. The object may be an artifact, such as a tool, a weapon, or an ornament; or it may be a tree or plant, an animal, or even a wall, or a vessel of water or some other liquid. The most familiar examples are found in the Arabian Nights. In the story of 'The Two Sisters who envied their Cadette,' with which Galland concluded his version (cf. R. F. Burton, Supplemental Nights, London, 1866–88, iv. 491 ff.), Prince Balsam, on departing in search of the talking bird, the golden water, and the singing tree, leaves with his sister a hunting-knife, the blade of which will remain clean and bright so long as he continues safe and sound, but will be stained with blood if he be slain. His brother, following him, leaves a group of pears, which will run loose upon the string while he is alive, but after his death will be found fixed and adhering together.

The incident is, in fact, common in folk-tales all over the world where the hero goes on a perilous adventure, and his friends require early information, that they may in case of need sally forth to rescue or avenge him. It is necessary here to draw attention only to one wide-spread cycle—that of the modern variants of the ancient Greek story of Persies. In these tales Persies is often represented by three sons, born in consequence of their mother's having partaken of a magical fish. Some portion of the oifal of the fish is buried in the garden; a tree grows on the spot and becomes the life-token of the children. Sometimes a portion of the fish's blood is preserved, by its direction, in a bottle; this is given to each of the children, to boil or become turbid in case of misfortune. In a story from Pers the fish-bone is fastened to a beam in the kitchen, and sweats blood when anything untoward happens to any of the boys.

There is thus an original organic connexion between the life-token and the person whose condition it exhibits. This connexion supplies the interpretation. The life-token is derived from the doctrine of sympathetic magic, according to which any portion of a living being, though severed, remains in mystic union with the bulk, and is affected by whatever may affect the bulk. Sympathetic magic, however, is not confined to folk-tales: it has a practical bearing. It is applied in witchcraft and folk-medicine to the injury or to the benefit of human beings and every object that comes into relation with them. Accordingly, we find the life-token not only in folk-tales, but also in everyday custom and superstition.

A striking and pathetic example of a severed portion of a human being employed as the life-token is recorded in the United States. Early in the last century a boy in Groutford County, New Hampshire, was so badly scalped that a piece of his skin, fully an inch in diameter, sloughed off, and was preserved in a phial ordered by his mother. When he grew up, he left home and was never heard of after; but his mother used time from time to examine the fragment of skin, persuaded that so long as it remained, her son was alive and well, and that it would not begin to decay until his death. For thirty years, until her death about the
Turning now to artificial objects—an illustration may be given from a somewhat unexpected quarter.

Father George Eich, reporting in the Lenten Anzeigen in der Annalen der Missionsgesellschaft in der Farbe (1866) a recent visit to Easter Island, relates that the native converts persistently ignored after certain Roman Catholic doctrine, a fish which had previously visited them. They said that he had caused the great stone cross in the cemetery of the Protestant sect to fall down and told them: "When you see this cross fall, you will say, Father Albert has just died; let us pray for him." Father Eich went to see the cross, and found its birth to be a natural occurrence, and that of Father Albert’s death in Spain, 25th Feb. 1894 (cf.-xl. 1900, 430, quoting the Annalen at length).

This kind of life-token easily lends itself to divination concerning the health or prosperity of absent friends, or even the prospects of life of actual members of the household.

In Turin, when it is desired to know whether absent children or the owner all that is necessary is to stick a loaf of bread with ears of corn before putting it into the oven. Each of the ears is designated by the name of one of the absent persons concerning whom inquiry is made; and, if any of them are scorched in the process, the baking of the bread, the person symbolised is in a healthy state. In Siena, Sitten and Gebirgste de Kirchen, Vienna, 1878, ii. 251; Zolli women, when their husbands are on a journey, put a small sleeping-mat on the wall of their hut. So long as it casts a shadow on the wall, the husband is safe; when it ceases to do so, he is believed to have died (M. Dickie, In the Tyrol, 1878).

In Bavaria, a special kind of life-token is known as the "Baumkunst," (p. 50, citing Rocher). Numerous remains of this practice and belief are found in tradition all over Europe.

The caul with which some children are born also becomes an index of their health and prosperity. For this reason the custom of saving the caul at birth is certain to be encouraged in every family. (For instance, the Letters of Russia to lose its importance is for the child (H. Robert, Hist. Studien aus dem p. 522). In England and Scotland its condition, whether soft and flabby or hard, dry, and stiff, indicates coming misfortune or success.)

In London, Edinburgh, Glasgow, and other cities, London, 1866, p. 120; J. Galley, Darker Superstitions of Scotland, Glasgow, 1888, p. 286.

But, as in the stories, the life-token is not always determined by the person of whose fate is indicated by it. When a child has been passed through a young ash-tree split for the purpose, in order to cure infantile hernia, the tree is bound round and plagia, in the bargain that it may grow together again; and according to the success of the treatment the child is expected to recover or not. More than this, so intimate has the connection between the fate of the child and the fate of the tree become by the operation, that if the child be afterwards killed, the tree will die. Thus the tree is not merely dependent upon the fate of the child; the child is also dependent on the fate of the tree. This mutual dependence is sometimes expressly mentioned in the stories also. It results from the close connection established between the human being and the person constituted as the life-token. In the stories it is often forgotten; generally in practice it is at least implicit.

On the Eastern peninsula of Maryland, opposite Baltimore, it is recorded in the ground to indicate the fortune of the absent one; it will flourish if he succeeds; otherwise it will wither and die (J. Manwaring). At Rome every Emperor solemnly planted on the Capitol a laurel, which was said to wither when he died. In modern times, the custom was borrowed from whom a tree was recorded also planted on the occasion, in the shrubbery set by Livia, a laurel, similarly believed to wither when he was about to fall at the time of his death, when the Plebeian and patrician trees grew before the temple of Quirinus, one called the Patrician tree, the other the Plebeian. So the Roman magistrates maintained its power as the superior authority of the State, the Patrician tree flourished. But it began to fail at the time of the fall of the Roman Empire, when the Plebeian tree died out, sickly and shrivelled, gained the superiority (Tyr. II. 129). A peculiarity still exists in certain occasions to plant a sort of palm, which is regarded, in the fullest sense of the word, as a life-token. If it is green and thriving, it indicates that it fades or dies, the person's health is declining. Meanwhile, mention has been made of the reverses (Wilsum, Fenn, M. Gal.).

The only exception to the superstition of the property of the tree is a matter of the wills; one or the other of the spouses will soon die (Mannhardt, p. 48).
are often vague, and, where they are so, to affix terms to them which convey to us something definite to be darkened

In Nigeria a great tree frequently stands in a village, and is hung with medicine and votive offerings. It is described by the missionaries as a sacred tree. Those who attempt to cut it down are generally killed. A god (C. Partridge, Gnms River Nations, London, 1865, pp. 94, 95) is said to be in it, and the natives who attempt to cut it down are said to have cut down the tree 'and the priest' died at the same time because the tree had died.' (Q. Thomas, On-speaking People, London, 1913, p. 29.) The Mentolos of Northern Nigeria believe that the spirits of the river's inhabitants, male or female, are embodied in a certain species of poisonous insects, while those of the dead are embodied in certain species of poisonous pests.

Further, if my life be united to any external object, whether physically (so to speak), as in the case of an ailing child passed through a split sapling, or by the arbitrary appointment of myself or another, it is obvious that injuries intentionally inflicted on the object in question will react upon me. The felling of the sapling causes the death of the child. In the classic story of Melager the hero's life came to an end with the burning and extinction of the fateful branch. This belief is the foundation of that department of magic which is used for injuring others by damaging or destroying things which have been closely attached to them, or to which identity with them is in some way connected. The protection of the hair, nails, food, or clothing, portions of the blood or saliva, and earth from the footprints of the victim are all imprecatory with his life, are still a portion of himself, the pyrotechnics to the human being, and he may be injured or even done to death by the appropriate treatment of any of these objects. So also to stick pins or daggers into, or to burn, the effigy of a man is to wound the person represented. These are all well-known magical rites. Parallel with them is the treatment of such objects for the purpose of benefiting the person to whom they belong.

The navalising of an infant, taken by a mother to church at her churching, and laid down behind the altar or in some other suitable place, is deemed in Mecklenburg and Thueringia to be effectual both surrounding the child with the influence of ancient holy influences that he will grow up God-fearing and peace (Witschel, ii. 287; Bartels, ii. 45). For some such reason Athenian women who became pregnant for the first time hung up their girldes in the temple of Artemis. Probably for a similar purpose fragments of clothing and other things are hung by votaries on sacred trees, and pins are deposited in sacred wells. To the same order of thought is the custom of going round wounds by means of the instrument inflicting them. This custom, formerly accepted by physicians and Philosophers, is now lost in Europe to the panegyric. It originated in the belief that the Laungs or Songkh of Vancouver Island are very careful to keep concealed any wounds they have in the region of the heart, so as not to bring it near the fire; for he would become very ill if the weapon, while still covered with his blood, was drawn into the lungs (W. Ross, Rep. Brit. Amer., London, 1909, 377). It is said that the Melanesians keep the arrow, when extracted, in a damp place or in cool leaves, believing that the inflammatory properties of the arrow remain slight and will soon subside. But, if the enemy who has shot another can get back his arrow, he puts it into the fire, with intent to irritate the wound and cause fatal results (H. H. Codrington, The Melanesians, Oxford, 1861, p. 315). Similar practices are very widespread among the European nations, and not least in our own island.

By a very natural extension of the idea of the life-token the cognate idea of the faith-token has been evolved. It is not enough for one of a pair of lovers to know that the other is living; there must be constant assurance of the other's fidelity. The token of fidelity is, therefore, a common incident both in tales and in actual life, especially connected with any individual is ill-defined. It is by no means necessary to appoint one's own life-token; the health or prosperity of the absent may be divided by the condition of a life-token arbitrarily appointed; it may be a live chicken or some other living being. There is but a step between this and the drawing of auguries from events and objects not appointed at all. The step is often taken both in tales and in life.

In an Icelandic tale three drops of blood appearing on the knife while eating are a token to one brother of another's peril or death. A woman leaves her hat hanging in a tree to be a friend at home. There is but a step between this and the drawing of auguries from events and objects not appointed at all. The step is often taken both in tales and in life.

LIGHT AND DARKNESS.

Primitive (J. A. MacCallum), p. 47.
Greek and Roman (J. S. Reid), p. 56.

LIGHT AND DARKNESS (Primitive).—
Among the lower races the nature and origin of light and darkness gave rise to many questions, and the answers to these are found in a great variety of myths. Frequently light and darkness are assumed to be substances — e.g., 'a hard darkness,' as in an Australian myth — or the sun, often regarded as the cause of light, is thought of as a fire or fiery substance, larger or smaller. Among the primitive peoples the dualism of light and darkness or of beings representing these — so frequently found at higher stages of civilization — can hardly be said to exist.

1. Primordial darkness. — A wide-spread idea seems to be that night precedes or gives rise to day, darkness precedes or gives rise to light. Light, the light of day, appears to come gradually out of the darkness of night, whereas darkness falls over the light of day and extinguishes it, but does not come from it. Man also, asleep and inert during darkness, rises to activity with the light. A pre-existing state of darkness, out of which light and life have proceeded, is thus usually presupposed. Many Australian tribes believe that long ago darkness or semi-darkness prevailed, until the sun was made or released. An enu's egg was thrown up to the sky, and either itself gave a great light as a bird, or a wood-pile belonged to a sky-being. The latter sees how beautiful earth now is, and therefore he makes a fire every day. There is little warmth in the morning, because it is not fully kindled, and it is cold at night when the fire dies out. The jackass roves men to the light. If he did not, or if children imitated him, there would be nothing but darkness. Or the sun is created as the result of certain obscene rites performed by men who complained of having no heat or light; or there is darkness until the magpie propels up the sky and so sets free the sun. The last-mentioned myth, that heaven and earth are close together, and that, until they are separated, their offspring are in perpetual and universal night, prevails over Oceania. The children, or gods, or a serpent, or trees force them apart and let in light and air.\(^1\)

Maori mythology relates that the Atua a te po, gods of Hades or darkness, existed before heaven was lifted up, and were more ancient than the Atua o te ra, gods of light, because darkness precedes light: Their chief was Hine unui te po, great mother night, or Hades. Light and life are represented by Tama mir te ra, the great son of day. A creation epic describes the cosmo-genic periods, the first of which is that of thought, the second that of night or darkness:

- The word became fruitful;
- It dwelt with the feline shimmering;
- It brought forth night;
- The great night, the long night,
- The lowest night, the lowest night;
- The thick night, to be felt;
- The night to be touched, the night unseen;
- The night following on;
- The night ending in death.\(^2\)

Then follows the third period, that of light, and the fourth, in which sun, moon, and stars are created, 'thrown up as the eyes of Heaven, then the heaven became light.'\(^3\) This idea, that chaos and darkness — the state of Po, Hades, or night — precede all gods and all things is wide-spread in Polynesia. Even a human-god like Taaoro, creator of sun, moon, etc., springs from it; or he springs out of an egg and so brings light to the world.\(^4\)

The Caros say that earth was at first a huge watery plain, and darkness lay over all. Tatar-Rabga created earth through a lesser spirit and, at the latter's request, placed sun and moon in the sky to give light.\(^5\)

The myth of Heaven and Earth asa divine pair is common in W. Africa, but its most significant expression is found among the Yorubas, who say that Obatala and Ootuma, their chief god and goddess, were shut up in darkness in a calabash in the beginning. She blamed him for this, whereupon he blinded her.\(^6\)

Among the Eskimos, a people dwelling for a great part of the year in darkness, many myths deal with this subject. According to one of these, men came out of the earth, lived in perpetual darkness, and knew no death. Then came a flood which destroyed all but two old women, one of whom desired both light and death. Death came, 1. Taylor, p. 109.

and with it sun, moon, and stars. Another widespread myth is that of the brother who, in the time when darkness covered the earth, ravished his sister. In her anger at his brutal conduct, she pursued him to the sky with a brand. He became a sun and she a moon, ever pursuing the sun, except in winter, when she remains in her house and there is darkness. The stars are sparks from the brand.

A Finnish cosmogonic myth relates that in the beginning all was darkness. From a great mound egg, which divided in two, came Poon-Koo Wong, who made the sky out of the upper and earth out of the lower half. He also made sun and moon. Chinese philosophy speaks of T'ai-Khi, the "Most Ultimate," which produced the cosmic souls Yang and Yin, male and female, heaven and earth, warmth and cold, light and darkness. In Japan an old myth in the Kojiki speaks of a time when Heaven and Earth were not separated and the In and Yo (= Yin and Yang) not yet divided. All was chaos and presumably darkness.

4 A Finnish cosmogonic myth in the Kalevala relates that from the upper and lower parts of an egg which fell into the primeval waters were formed heaven and earth, from the sun, from the white the moon, and from the darkness in the deep gray clouds.

Scandinavian mythology contains an elaborate myth of beginnings. There was first a void world of mist, ginnunga-gap. On its southern extremity was the land of Fólkanger, on its northern, nifljógg: from the one proceeded light and warmth, from the other darkness and cold. According to Grimn, ginnunga-gap is the equivalent of the Gr. ýds, meaning both 'above,' 'over,' darkness.48 According to the Edda, Day was the son of Night, each of them having a horse and car, in which they journey round the earth. The primitive method of counting time with Scandinavians, Tentons, and Celts was on the principle that night preceded the day, the moon, which "governs the night," being the measure of time. Tacitus says of the Tentons that they count the number of nights, not of days, for the night seems to precede the day. Caesar writes of the Celts that they define the divisions of seasons not by days but by nights, and observe times in such an order that day follows night.48 A Celtic myth embodying these ideas has not come down to us.

2. Origin of light.—In some of the myths just cited the origin of light from darkness, or from the creation of sun and moon, is already found. As in the Maori myth, light is sometimes prior to the sun (cf. Gn 1:3-5). Some other examples of such myths may be cited. In Bashan belief the sun was a mortal on earth from whose body light radiated for a short distance round his house. Some children were sent to throw him up to the sky as he slept, and now he lightens the earth.

The Barongs think that the reflection of light on the sea after the sun's rising is a kind of source of light whence the sun is renewed daily. It is "cut out from the provision of fire," and dies in the West nightly. Light is also called fire which makes to appear, ever pursuing the moon, except in winter, when she remains in her house and there is darkness. The stars are sparks from the brand.

An E. African myth tells how two men came to a cave, looked in, and saw the sun. One of them removed a stone, and was burned up. Then the sun ascended on high to light the world. According to another, Apothao, father of mankind, appeared from heaven on earth together with the sun, moon, and wind, which fled to the sky when he was angry, and have remained there ever since. The heaven-land has people as bright as fire, and men will go there when they die.

3. Succession of light and darkness, day and night.—In some instances light, not darkness, is primordial; or after creation, while day exists, night is still unknown. Numerous myths relate how darkness is produced and the regular alternation of day and night follows. The Wumbalo, an Australian aboriginal, says that at one time the sun never moved. Nurelli, tired of eternal day, bade it go down by the west.48 In Banks Island, Qat, after making all things, did not know how to make night, and it was always day.48 He heard that there was night at Vava, and went there to get it from I Qong, Night. Returning with it, he bade his brothers prepare for night. The sun now moved westwards; he let go the night, and it was dark. After a time he cut it with a knife, and daylight again shone out. In Lepers Island this is told of Tagaro.48 The Melanesia says that at first there were two sons which rose and set alternately. A slave, tired of getting up, shot one of them. There was now always darkness. The other sun refused to come forth, but at last did so as a result of certain ceremonies.48 The savage Malays of Malaca have a myth of three sons, one of which was always left in the sky. The female sun was induced to swallow her husband and child, and now there was night.48 A native Brazilian myth tells that at first there was no night. Night, a coal who owned night, slept at the bottom of the waters. His daughter would not sleep with her husband till he procured darkness from her father. Servants were sent to bring a fennus fruit from him. In spite of all warnings, they brought it all red fruit. The daughter now separated day from night.48 In Santa Cruz sun and moon are said to have travelled together, but by a trick the sun caused the moon to fall into a sort of slumber on his back. Night is the result of a part of the moon becoming black through this trick.48 A Finnish myth says that in the beginning there was nothing but water and light—an unusual version of the cosmogonic idea.48 In some instances night is formed as the result of a dualism. The Yeisidz say that God made the world beautiful. Then Malik-Tas appeared before Him and said that there could be no light without darkness, no day without night, and accordingly He caused night to follow day.48 In a Wallachian Märchen God sends a bee to inquire of the devil, the master of night,
whether there should be one sun or more. The bee rests on the devil's head and hears his cogitations. Nightly, if the mother and son, set in the sky by All-Father, who gives each a horse and chariot to drive round the earth. The sun also has a chariot. In many of the stories created that sun and moon are not always regarded as causing light and darkness, or rather day and night. These exist apart from them, though the two are associated together. A clear connexion between them, however, is seen in many Polynesian myths — those of the sun-catcher. In some of these the sun is tied down, as in a Toda instance, by a demi-god. There is at once darkness on the earth and in the under world, while the sun goes at night. The people of both implore the demi-god for the sun's release. More usually the sun is captured because his course is far too rapid and darkness comes too soon — found in many Polynesian myths — or too erratic, as in a Uto myth. Sometimes, however, he is captured in order to lengthen the ordinary day, and this group is then connected with magical rites which have also this for their purpose. Again, he is captured by some persons who wish to amuse themselves, but it becomes so hot that the captors run away. The second group of myths is obviously suggested in answer to such a question as was raised by the V. He will find the fire. When he arrives at a hut where light like a tall of fire is burning, it is hidden by a man shovelling snow, which causes obscurity. He steals the light and is pursued. He breaks off pieces, each of which produces light, which is then followed by night. They are of unequal lengths because sometimes he travels a longer time without throwing out light, sometimes a shorter time. This myth also produces the phenomena of the Arctic dark winter, and the phenomena of days and nights of varying lengths.

Day and night, or their rulers or representatives, sun and moon, are often personified as male and female, or as husband and wife, as in the Eskimo myths already cited (§ 1). This is found in American Indian mythology; and in Australian belief, e.g. among the Arunta, sun and moon are male, and among the Papuans female, the moon male. It is also found among the Andaman Islanders (the sun is the wife of the moon), the Indians of Guatemala, in Central Celebes, in Cumbay, among the Yuruma, in Tahiti, among the Plateas, among the Ainus, and among the peasants of Oberpfalz. In another American myth day and night are two wives who produce light and darkness by sitting alternately at the door of their tent.

In New Britain sun and moon, to whom belong respectively day and night, are children of Iiu and Mammao, and, having gone up to the sky, have stayed there ever since.

In a Tongan myth Vatea and Tonga-iti quarrel about the parentage of the first-born of Papa, each claiming it as his own. The child is cut in two. Vatea throws one part up to the sky, where it becomes the sun; Tonga-iti throws the other to the dark sky, whence the moon. This is explained as Day and Night alternately embracing Earth, their joint offspring being sun and moon. In Norse mythology; light and darkness are mother and son, set in the sky by All-Father, who gives each a horse and chariot to drive round the earth. The sun also has a chariot. In many of the stories created that sun and moon are not always regarded as causing light and darkness, or rather day and night. These exist apart from them, though the two are associated together. A clear connexion between them, however, is seen in another group of myths — those of the sun-catcher. In some of these the sun is tied down, as in a Toda instance, by a demi-god. There is at once darkness on the earth and in the under world, while the sun goes at night. The people of both implore the demi-god for the sun's release. More usually the sun is captured because his course is far too rapid and darkness comes too soon — found in many Polynesian myths — or too erratic, as in a Uto myth. Sometimes, however, he is captured in order to lengthen the ordinary day, and this group is then connected with magical rites which have also this for their purpose. Again, he is captured by some persons who wish to amuse themselves, but it becomes so hot that the captors run away. The second group of myths is obviously suggested in answer to such a question as was raised by the V. He will find the fire. When he arrives at a hut where light like a tall of fire is burning, it is hidden by a man shovelling snow, which causes obscurity. He steals the light and is pursued. He breaks off pieces, each of which produces light, which is then followed by night. They are of unequal lengths because sometimes he travels a longer time without throwing out light, sometimes a shorter time. This myth also produces the phenomena of the Arctic dark winter, and the phenomena of days and nights of varying lengths.

Additional text:

5. Light and darkness, day and night, sun, moon, and stars are often personified as gods, or the sun, moon, and stars, as sources of light, are the dwellings of gods. Thus the Ainus believe in a spirit of light who lives in the sun or animates it (EKE i. 262). Many African tribes have a high god, often the sky personified, and many of them worship the heavenly bodies as sources of light. Loba, the high god of the Bakwiri, has a name signifying originally Heaven or Sun, and so in many other instances. Shango of the Yoruba is the sun, dwelling in a flaming house of brass; one of his trains is Biri, the darkness. The Kavirondo worship the moon and the sun, the latter regarded as beneficial, occasionally beneficial, but usually malignant. Among the ancient Egyptians and Celts sun and moon were also divinities to whom a cult was paid. Among the Polynesians Ka-Ne is the sunlight and Taggalo is the lord of light, his brother being Rongo, god of dark and night. The Andaman Islanders connect Pulunga, their high god, with the sky, where he set the sun and moon, who give light by his command and have their meals near his house. Among the Hottentots Tsumi-Coam, the red dawn, is opposed to the dark sky personified as Gaam. With the

[Text continues with references and additional content]
regions of light and darkness.—as in the higher religions the benedictive or lofter gods are connected with light or dwell in the sky. for ti 66, dwelling in the light which no man can approach unto, so it is in savage belief. the australian high gods, bunjil, mangum-nagaur, and baisame, dwell in the sky. the belus, the eternally living light, and the nuraui of the murray river tribes is an embodiment of light. the higher polynesian gods, tangaroa, tangaloa, ti, etc., dwell in the light heavens, seven or ten in number. the khendra reverence bura punn, god of light, or bella poona, the sun-god, whose dwellings are the sun and the place where it rises. palu, the andaman high god, lives in the sky. this is true also of many australian tribes, the zulus hold that the creator lives in heaven, and naami mpangu of the fiort dwells behind the firmament. similarly one of the names of the supreme being of the indians of guiana signifies the "austral" or "skyland." 67 many of the tentonic gods, some of them of gods of light, dwell in the sky, where vallalla was situated. from the sky the gods descend to earth, along the sky they trace their journeys, and through the sky they survey unseen the doings of men. 68

so also elysium, the abode of the blest, whether it is above or on, or below the earth, is always a region of light and brightness. in contradistinction to this, the abode of unhappy spirits in all mythologies is dark and gloomy, in this resembling the abode of the dead, where no distinction had ever been made between good and bad spirits—the bab. arallu, the heb. shir, the greek hades (see the series of art. on "blest, abode of the"). the subterranean puellko or tataros of the caroline islanders is cold and dark. 69 in polynesia, as pe or darkness, was the primal source of light and of the gods of light, so it is also conceived as the subterranean place of night which other departed spirits go. 70 in samoa, the widest of all, there is a place of good and darkness. the japanese ymir, or hades, means "darkness," and it is preceded over by susa no-wo, a personification of the earth, and made god, ruling also the darkness of night. 71 the scandanavian niflhel is a place of darkness surrounded by fogs and gloom (see blest, abode of the tentonic). 6

evil powers and darkness.—evil gods, gods of death, etc., are often associated with darkness, or divinities who are not evil have often acquired a character of evil. such a character is attached with the light or even with the moon, the ruler of the sky. the sakai believe that the lord of hell, a cavern in the interior of the earth, is a friend of darkness and cannot bear the light. 72 in polynesia roomo, brother of tangaroa, is god of darkness and night; hine-nui-te-po, the great mother night, into which all must pass, is a personification of night and light. some australian divinities to whom evil powers are ascribed are connected with darkness and light. 73 the japanese susa no-wo, already referred to, is another instance. much more generally all evil spirits, demons, ghosts, and the like are associated with darkness, which men's fears people them with. 74

in s.e. guinea evil spirits called werewa inhabit dark places and wander about at night; and in new britain, a spirit causing disease, earthquakes, etc., lives in dark places. 75 the tasmanians thought that lower spirits concealed themselves in dark cavities by day and came forth at night to do harm. 76 the australians also peopled the darkness with a variety of horrible beings ready to pounce upon men. innumerable other examples from savages are cited. similarly, among the celts and tentons a variety of demonic and supernatural beings were associated with light and darkness, and in folk-supernatural generally fairies, witches, demons, werewolves, vampires, and ghosts are most powerful in the house of darkness, especially in the evening and in the dead of night they have power. 77 see art. demons and spirits, fairy, lechtherot, vampr, among savages, as among higher races, there is a wide-spread fear of the darkness. many savages will not travel or even leave their huts or camp at night; or, if they do so, they must be armed with firebrands and the like to keep evil spirits at a distance, since these fear the light. thus we find magical rites to overcome the terror of darkness: e.g., in new caledonia the priest, when cutting the umbilical cord of a boy, had a vessel of water before him, dyed black as ink, in order that when the child grew up he might not fear to go anywhere on a dark night. 78 for similar reasons an eclipse of the sun or the moon is universally feared. generally a spirit is supposed to be destroying these bodies, and, since they are so often regarded as the sources of light, it is feared that their destruction would mean a return to the primal or archaic darkness. every precaution is therefore taken to scare off the destroying monster or to bring to an end whatever other mysterious cause is attributed to an eclipse, 79 in connexion with the belief that evil spirits have power in the darkness must be noted the widespread idea that their power ceases at dawn, or that, if they are surprised by daylight, they are destroyed. this applies to all evil beings, demons, witheyes, fairies, etc. see art. fairy.

7. dualism of light and darkness.—the contrary nature of light and darkness, the qualities instinctively associated with each—life with light, 8 death and terror with darkness—might easily suggest to primitive minds a species of natural dualism. the day seems to be swallowed up by night, again to appear and drive it away; at an eclipse sun or moon is wholly or partially concealed by darkness, and a figure as a beast or demon, but again emerges victorious. hence in some instances on the lower levels of culture light, or day, and darkness, or night, may be personified and regarded as such.

that this was in fact conceived of from such a dualistic system as the parsi, which is fundamentally concerned with an older natural dualism of light and darkness, giving rise to a moral dualism of good and evil. the same dualism is found sporadically in other higher religions, and in faiths in which the influence of parsi was felt, 8 also perhaps in such a dualism as exists in the religion of the barbians (p. 237). on the other hand, since light, day, sun, seem to rise out of night, they are perhaps more often regarded as produced by darkness, rather than hostile to it, as in polynesian mythography and elsewhere (p. 237). it is also probable that modern inquirers into savage myths have too readily assumed that mythical personages represented, on the one hand, light, sun, or dawn, and, on the other, darkness and night, and that myths of a contest between a hero and a demon, which is necessarily meant a contest between light and darkness.

LIGHT AND DARKNESS (Chinese)

ness. While it is possible that certain American myths adumbrate such a contest, it is likely that, on arbitrary philological grounds, such an interpretation has been falsely applied to them. The aspect of such a mythic strife may be seen in the beings associated with light and darkness rather than in these themselves personified. Thus the demoniac beings who have dominion in the dark-nest, or semi-powerless and are not feared by day, or those connected with gloom and darkness are most commonly regarded as opposite in nature or opposed to divinities or spirits of light, e.g., as residing in the heavens. In primitive religion decisive examples of a conflict between light and darkness are few in number, but the mythic method is seen in the words of a Basuto who described nature as given up to perpetual strife—the wind chasing the clouds, darkness pursuing, night, winter, summer etc. If, as has been supposed, the Polynesian Maui is the sun (though, as has been seen, Maui captures the sun), then the story of how he intended to pass through the body of Hine-te-po, but was unsuccessful and died, and so brought death into the world, might be a myth of the sun or light being swallowed up by darkness. Japanese mythology preserves a story of the retirement of the sun-goddess to the rock cave of heaven, leaving the world to darkness, because of the misconduct of her brother Susa-no-o, the storm-god and later ruler of Yoni (the lord of Hades). The god dances in front of the cave, and she comes out to see him and is prevented from re-entering. Light is thus restored to the world. This suggests a myth of the strife between light and darkness. Later Shinto theologians allegorize the goddess's retirement as emblematic of the darkness of sin, and the renewal of light as signifying repentance.

Grimm has suggested that many phrases in Tenonese language used of light and darkness, day and night, show the one as a hostile, evil power in contrast to the kindly character of the other, and that there is perennial strife between the two.

LIGHT AND DARKNESS (Chinese).—The Chinese outlook on life and attitude towards religion give more prominence to light than to darkness.

The two principles which pervade all nature and to which everything is assigned—the yin and yang principles, the dualistic elements of Chinese philosophy—are also the two headings into which light and darkness are differentiated. Yin, it may be said, is darkness, and yang light. The latter stands for the upper world of light; the former for the nether world of gloom and semi-darkness.

It is difficult to classify as gods of darkness any of the gods of the Chinese, unless Yama (Yen-ma, Yen-10), the ruler of Hades, with his entourage of officials and demons, be considered as such. The light of the sun is wasting in the Chinese neither.

1 J. A. Macculloch.

The gothic world; it is a land of shades and of the shadow of death, for a twilight gloom prevails. The idea of hell is Taoism was derived from it, but the concept was developed on different lines. Utter darkness reigns in eight hells out of the millions of various abodes of punishment in the future world of Chinese Buddhism.

In the primitive religion of the ancient Chinese nature—worship was prominently apparent, and remnants of this are still found: in the worship of the sun, and in various aspects of religious iconography. The Chinese, the source of all brightness, and the masculine principle in nature is embodied in it, while the moon is considered to be the essence of the female principle. The philosopher Chu Hsi said: "In the beginning heaven and earth were just the light and the dark air... The emble of the air... became heaven and the sun, moon, and stars... Light and darkness have no beginning."

The "visible darkness" that engulfs the sun and moon at an eclipse is supposed popularly to be the effect of a monster swallowing them. Mandarins under the old regime offered worship as an official duty during an eclipse, soldiers fired muskets, and priests clanged cymbals and chanted pious propitiatory prayers to the sun and moon. While all this was going on, the populace fired crackers and clasped pots and pans to frighten the monster away.

There is an altar to the sun to the east of the Tatar City of Peking. That to the moon is outside the west wall. In that ancient Chinese classic, the Yi King, or Book of Changes, one of the trigrams is an emblem of light or brightness, and the trigram of light or brightness is the symbol of, or attributes applied to, goodness and virtue. The rising of the bright object in the sky is suggestive of advancing, and Hsü Ping-wan of the Yuan dynasty (A.D. 1329-1367) thus applies it: "Of bright things there is none so bright as the sun, and after its pattern he the superior man makes himself bright."

These instances show that the Chinese early seized on the striking symbolism of light and darkness to represent a mental or moral condition as well as a physical one; and this expressive language has continued in use. It appears now and again to the Tso Tso Ching:

"We should attempt our brightness, and bring ourselves in agreement with the obscurity of others."

There is the god of lightening, who is worshipped by both Buddhists and Taoists, who, according to the popular mythology, was appointed to accompany the god of thunder on his expeditions to prevent his making a mistake, for on one occasion, finding the white rind of a melon flung away, in the darkness of a smoke-brimmed Chinese kitchen, he mistook it for rice and killed with his chisel and hammer the supposed water of good food. To prevent the recurrence of such an event the god of lightening carries a mirror in each hand, or one in her two hands, and flashes light on objects before the god strikes. This is the explanation of the lightening's fiery wing.

The god of fire is another of the gods connected with light. His name, Hwa Kwang, may be rendered "Beautiful Light." Unlike the majority of the popular gods, he was not originally a human god. V. K. L. End, Handbook of Chinese Buddhism, 1888, p. 103.

being, but a lamp, of which the snuffings of the wick were turned into a man by the recital of a charm. He is the form and soul of fire. Both Buddhists and Taoists claim him.

The Buddhists deify light by personification in the Buddha. The Chinese represent her with eight arms. In two of her hands she holds up emblems of the sun and moon. She is the goddess of light, and protects nations from war. Among her other titles is that of Queen of the Sun. The Taoists also claim her as one of their deities, and fix her residence in a star in the constellation of Sagittarius. The Buddha, after Buddha, commencing with Sakya-muni, Buddha, has light as one of his attributes, or some manifestation of light appears in the course of his life in connexion with him. Five-coloured lights flashed at his birth, and flame burst from his dead body. Every Buddha has, among his characteristics, a circle of hairs between his eyebrows by which he can illuminate the universes. 'Light' and 'Brightness' often appear in the names given to different Buddhas, as well as occasionally to others, and to different objects. Among these names of Buddhas, present or to come, supposed to be real or fictitious, are such as Brightness of the Law, 'One whose feet display myriads of lights', Buddha of Fixed Light, 'Light and Bright,' 'The Bright Effulgence of Sun and Moon,' 'The Clear and Bright Efficacy of Sun and Moon.' The 99th Buddha of the present kula is Buddha of Wonderful Light. Some twenty billions of Buddhas have the title of 'Cloud Sovereign Illuminating King.' Five hundred arakas will reappear as Buddhas with the name of Wide-spreading Brightness. Some of the demons in which Buddhist believes shed a glare of light. A realm mentioned in Buddhist is 'The Realm of Great Light.' One of the sixteen (or eighteen in Northern Buddhism) celestial worlds is that of 'Light and Sound,' and another is that of 'Unlimited Light.' Buddhist has five 'Luminous Treatises.' A fictitious degree of samadhi is also called 'Pure Light and Bright Light.'

In Northern Buddhism the 'Buddha of Boundless Light,' diffusing great light, Amita (Amitibha), originated in the ideal of boundless light, and was thought of as first as impersonal. He is the most prominent Buddha among the Buddhas among the Chinese people. In his heaven, the wonderful and glorious Paradise of the West, two Buddhas radiate light over three thousand great worlds. Amita Buddha himself, in the words of the Chinese poem singing his praises, has a 'halo of light that encircles his head.'

The sun of morn is less glorious than he. As to those who enter that heaven, 'the material body of men while on earth is exchanged for another eternal and bright, that is seen from afar to be glowing with light.'

This new mystical school makes use of the symbolism of light in its description of religious states of its devotees. In some cases light plays an important part in the advent to earth of a god on his incarnation, and even one of the mythical emperors of China, the Yellow Emperor (2698 B.C.), owed his origin from this.

With the Taoist gods, a ray of light shoots down arrow-like from heaven to the future mother shortly to be delivered of a child, and thus the divine is blended with the human. A god, who has sometimes to expiate some sin from which his godlike nature has not saved him, or to cure or to exorcise some infirmity still inherent in his moral nature.

We find a brilliant light in connexion with the preparations for the birth of the Taoist Genecous Sovereign, the Supreme Ruler, and in his later incarnations a golden light or a glimmering light descends. Somewhat similar experiences occurred when the Taoist Aged Sire united with light, and became dust and was born on earth. A Taoist writer of the Yuan dynasty says that light broke forth spontaneously in the primordial void, springing from itself in the heart of the void, and his idea would appear to be that to attain illumination one must empty oneself as the primordial void of which he speaks was empty.

The word 'Light' in many of the Chinese clan-names or surnames, as it is in English, but it also appears sometimes as an individual name bestowed on an infant, and occasionally in union with some other character in a name selected later in life.

LITERATURE.—This is sufficiently cited in the footnotes.

J. DYER BALL.

LIGHT AND DARKNESS (Christian).—The symbolical use of the words 'light' and 'darkness' is very common in early Christian literature, and in the main was derived from the O.T., as will be seen by the reference given below. As time went on, the metaphor of light served as one method of expressing the theological conception of the Persons of the Holy Trinity.

1. The symbolism in the NT.—We may pass by the obvious metaphor by which to speak or act 'in the light' is to do so 'openly,' and to speak or act 'in the darkness' is to do so 'secretly,' as in Mt 1014, Lk 12 (cf. Jn 19, and Eph 5:1, Col 4:2). More to our purpose are the numerous passages where 'light' denotes knowledge, wisdom, and 'darkness' denotes ignorance and sin—ignorance in all its phases being included in the latter simile: absence of knowledge, spiritual blindness, error, and wickedness; for blindness, if wilful, becomes sin. The opposition between light and darkness is expressed in Jn 5:16; men had the opportunity, for light is come into the world, but they loved the darkness rather than the light, for their works were evil—'every one that doeth ill hateth the light.' 'Darkness' expresses the state of the world before the incarnation (Jn 1:5, Lk 1:31); the idea is taken from Is 61, where it is said that 'the people that walked in darkness have seen a great light.' To be in a state of sin and ignorance is to walk, or sit, or be in darkness (1 Jn 1:5, 2 Jn 8, 1 Th 5:11, 2 Th 5, Lk 9:5). In Jn 8:12 'the light of life is the light which both springs from life and issues in life' (B. F. Westcott, Gospel according to St. John, London, 1908, in loc.). The metaphor is very common in the Johannine writings, but it is frequently found elsewhere. In Mt 6:2, 'the body of this life,' in Rom 8:12 'the body full of darkness' (oxyrites) denotes evil; so Lk 11:13 (cf. Pr 14:10).

5. Rh. Ball, p. 176.
In Acts 28:4 the preaching of the gospel is to turn the people from darkness to light and from the power of Satan unto God. St. Paul uses the metaphor freely. The 'works of darkness' are the evil works of unbelievers (2 Cor 11.14), the ungodly, etc. (Eph 4:30). The metaphor of being taken out of darkness into God's marvelous light (2 Pet 2) is most natural and beautiful. The passage in Eph 2:11-21 is a beautiful description of the change wrought by God in the hearts of the Gentiles. The new birth is spoken of as ‘coming out of darkness into the light’ (Jn 18:33, 19:39).

2. The symbol of light and darkness is not so common in Patristic writings as in the NT, but a few examples may be given from the first four or five centuries. At the close of the Apostolic period the symbol of Barnabas (Acts 13:30) describes the religious state of light and darkness, i.e., of good and evil (cf. Did 30:3); over the former are stationed the light-giving (γαρδόνυμος) angels of God, over the latter the angels of Satan. In the Jewish Scriptures of the Old Testament, God is called ‘God of light’ (in His Word and Wisdom) to enlighten the saints. In the last-mentioned work (Eng. tr., J. Cooper and A. J. Macleod, Edinburgh, 1906) the symbolism is very common, both in the apocalyptic and prophetic (where it probably comes from an original apocalyptic, perhaps of the 2nd cent.; see JTAS xiv. [1913] 601-604) and in the Church Order proper. Christians are children of light (1 Pet. 1:12, 18, 27). In the liturgy of this work (I. 23) God is called ‘Father of lights’ (Ja 1:5), ‘King of the treasuries of light’, ‘Illuminator of the perfect’, ‘Giver of light eternal’. Elsewhere in the book He is called ‘Gift’ or ‘Maker of light’ (L. 28, 43), ‘Light of the lights... Whose veil is the light’ (1:7). Our Lord is ‘Begetter of light... Guard of light eternal’, who has shed light on the darkness within us’ (L. 28, 37). The illumination of the heart is frequently referred to (L. 15, 21, 23, 31, 32, 38, 57, 57). Somewhat more sparingly the simile is used in the Apostolic Constitutions. Christians are ‘children of light’ (L. 2, 22, 46, 54), as in the parallel passages of the Older Didascalia (see these, arranged on opposite pages, in F. X. Funk, Didasc. et Const. Apostolorum, Paderborn, 1903). The Father is ‘light inaccessible’ (Acts post. vol. xi, xii, xiv, from 1 Ti 6:9). Jesus is the true light (v. 16), and the bishop must be a student, and enlighten himself with the light of knowledge (v. 5; cf. v. 37). These phrases (except v. 16) are not in the older Didascalia. In Sarapion’s Sacramentary God is called the ‘Fount of light’, and is prayed to give us the (or a) Spirit of light (§ 1; JTAS x. [1896] 105, in Funk [op. cit. ii. 175], numbered § 13). Gregory of Nazianzus (Orat. vol. i [in A. R. 1881]) calls angels and men ‘light’ in an inferior sense, though in the highest sense God alone is light.

3. In the Clementine Recognitions, now thought to be of the 4th century, the author, denouncing that God has a Son, says that there is a power of infinite and ineffable light (i.e., God), of which power even the Demiurge, Moses, and Jesus are ignorant (ii. 49).
3. Light as describing the relation of the Father and the Son.—We may now investigate the use of the phrase 'Light of the Father' ('φως τοῦ Θεοῦ') applied to our Lord. In the NT the Father is Light, and the Son is Light; but the above phrase is not used, though in He 1:3 our Lord is the effulgence ('διαφωτισμὸν') of the Father’s glory and the brightness of his image in man’s substance; the reference seems to be to Wis 2:7, where Wisdom is 'an effulgence from everlasting light . . . and an image of [God’s] goodness.' (For various Patristic comments on He 1:3 see Westcott’s note, Epistle to the Hebrews, London, 1880, p. 11.)

An early approximation to the phrase ‘Light of Light’ is found in Orig (De Prin. 1, 1), who says that God is light, illuminating man, and interprets ‘thy light’ in Ps 20:5 of the Son. In the 2nd cent. Justin had used the illustration of fire kindled from fire with reference to the Son and the Father (Dial, 11, 128); and Tatian (c. Grec. 6) re-echoes his words. So also Tertullian (Apol. 21) says that a ray of the sun is still part of the sun; there is no division of substance, but only an extension; thus Christ is Spirit of Spirit, and God of God, as light of light is kindled. After the great Athenasius there is a danger in the metaphysics of fire. He says (de Decretit. v. 23) that the Son is not as fire kindled from the heat of the sun, which is commonly put out again, but is ‘effulgence’ (διαφωτισμόν), signifying that He is from the essence, not from the metaphor of fire, of the Father, and is one with Him (see A. Robertson’s note on the passage in Nicene and Post-Nicene Fathers, iv. [1892] 168). Arius in his letter to Alexander had quoted Tertullian as saying that the Son was from the Father as a light from a light (βαφήν ἀπὸ βαφῆς), or a lamp divided into two (quoted by Epiphanius, Her. ix. 7). In the small treatise Isocr. c. African. [c. 107], Athenasius says that Christ, the Light, can never be separated from the Father. In Orat. c. Arian. iv. 2 the writer speaks of the Word as ‘Light from Fire,’ and in iv. 10 compares the vision of the Father and the Son to fire and the effulgence from it, ‘which are two in being and in appearance, but one in that its effulgence is from it invisibly’; but it is uncertain if this fourth Oration is by Athenasius. In the 4th cent. (A.D. 381), Ambrose says that ‘the Father is Light, and the Son is Light, and the Holy Ghost is Light, and the Holy Ghost is both Light and Fire,’ referring to Is 60:19 (de Spir. Sanct., ed. E. Delecluse [1800] i). The well-known hymn of Pope Gregory (‘Hail, gladdening Light!’ sung at the Lamp-lighting, calls the Son the ‘gladdening Light of the holy glory of the immortal, heavenly Father;’ it is older than Basil, who apparently quotes it (de Spir. Sanct., xvii. [783], A.D. 374).

The phrase ‘Light of Light’ is found in the creed of Nicea and in the enlarged creed (called the creed of Constantinople) which came into general use. It was derived by the former from the creed of Eusebius of Cesarea, which, as Eusebius told the Nicene Fathers, had been handed down from preceding bishops of that see, and used in the baptismal catechism; this creed had ‘God of God, Light of Light, Life of Life’ (Socrates, HE i. 8). On the other hand, the phrase ‘Light of Light’ is not in the creed of Gregory Thaumaturges (c. A.D. 250) and of the Nicene Creed (p. 372, A.D. 325), ‘God of God’ (it is given in Ante-Nicene Chr. Lib. xx. [1882] 5). In Cyril of Jerusalem (Cot. iv. 7) the Son is called ‘begotten Life of Life, begotten Light of Light, begotten God of God’ (p. 373), and adds ‘Truth of Truth, and Wisdom of Wisdom, and King of King, and God of God, and Power of Power’ (cf. xi. 18). The phrase ‘Light of Light’ occurs in K. St. Pachomius’ creed (4th cent.; JThSt ix. [1998] 290), but not in the creeds of the various Church Orders, though those of the Apost. Const. (vii. 41) and of the Egyptian (Coptic) and Syrian Church Orders are close to the Eastern type (those of the Testament of our Lord, the Canons of Hippolytus, and the Verona Fragments are the Western or Roman creed). It is instructive to note the different views of the Council of Antioch in Eerncins, A.D. 341. The second creed has ‘God of God, Whole of Whole, Sole of Sole, Perfect of Perfect, King of King, Lord of Lord, the living Word, the living Wisdom, the true Light.’ The third creed has merely ‘perfect God of perfect God.’ The fourth creed, drawn up by a continuation of the Synod, has ‘God of God, Light of Light . . . who is the Word and Wisdom and Power and Life, and the true Light’ (these creeds are given in Athanasius, de Synodis, 23, 24, 25, and the second and fourth in Sozomenus, HS ii. 10, 18; see them also in Böckel, Conciles, Eng. tr., Edinburgh, 1876, ii. 72-80). With reference to the phrase in question Basil, when dealing with the relation of the Son to the Father, and speaking of the phrase ‘like in substance’ (ἐναρμονία σωμάτων), says that he will accept the phrase if the word ἀναμορφισθήσεται (‘without any difference’) be added, as equivalent to the Homousion: ‘Being of this mind the Fathers at Nicea spoke of the Only-begotten as “Light of Light.” Very God of Very God. And they consistently added the Homousion. It is impossible for any one to entertain the idea of a nonsubstantial union of the Son to the Father, or of the Holy Ghost to God, but if the phrase “Light of Light” is used (without any difference), it is impossible for any one to entertain the idea of a nonsubstantial union of the Son to the Father, or of the Holy Ghost to God. ’

Passing to later times, we note the curious fact that the phrase does not occur in the present Nicene Creed (F. E. Brightman, Lit. East. and West., Oxford, 1886, p. 270), though it is in that of the 'Apost. Const. in II. 17-18, which is given by W. A. Wigram, The Assyrian Church. London, 1910, p. 291.

Reviewing the evidence, we conclude that the appearance of the phrase in a creed cannot be affirmed before the 3rd cent., though perhaps (in view of Eusebius’s word ‘bishop’ in the plural as above) it was so used early in that century; Cæcarius was perhaps its first home. But before this there is earlier evidence (in the 2nd cent.) of the use of the symbolism of ‘Light of Light,’ though not of the phrase itself. Even after Nicea it was not by any means universally adopted into creeds. It will be remembered that the Nicene Creed was a test of orthodoxy, and was not at first used liturgically: it was not, apparently, for some time used at baptisms, and was not introduced into the Eucharistic service till the end of the 5th cent. It is not surprising therefore that, in none of the great authority of the Council of Nicea, the phrase in question did not at once spread very rapidly.

4. Baptism and light.—In the early Church the symbol of light was closely connected with the sacrament of initiation. Baptism was, especially by the Greeks, called ‘illumination,’ ψαλεύσας or ψαλεύσας, as in Justin (Apol. i. 61), in Gregory of Nazianzus (Apost. Const. xi. 1; cf. ii. 56), once in the Apost. Const. (ii. 32, where it expressly includes the laying on of hands; in vi. 1 and viii. 12 the word is used literally, of the pillar of fire, and in ii. 5, v. 1 metaphorically, of knowledge; cf. 2 Co. 4-5), and in the Older Didascalus (Verona Latin Fragments, ed. Hanler, p. 87; ‘post illuminationem quod dictum Graeco foliatur,’ with reference to He 6 [not in the corresponding passage of Apost. Const.]). Similarly, in Cyril of Jerusalem (Cot. iv. 7), the baptized are called ‘illumined’ (φωσκομένοι), and the baptized were called ‘the illuminated’ (οἱ λαμπήσαντες)—as sensually’s record, “Clement of Alexandria (Paed. i. 6), who quotes Eph 5 of baptism, and wrongly derives φῶς,
in times of persecution, and that, when churches were built above ground in times of peace, the usage was continued and was given a symbolic turn (W. E. Sanday, in DCD ii. 204). It may be partly true, though it does not explain all the circumstances of the case. For we find lights also used as a decoration at festivals, as when Paulinus of Nola (c. d. 407; + 431) describes the innumerable festal lights burning night and day as a sign of rejoicing (Pom. xiv. [de S. Felicis Natalit., carm. iii.] line 99 ff.). 'Etherea,' or 'Silvia' (whose Perigrinatio has usually been dated at the very end of the 4th cent., though many scholars think it is somewhat later), describes the same thing as happening daily at Jerusalem (part of this work is given in App. 5 of L. Duchene, Christian Worship, Eng. ed., London, 1912; see pp. 489, 488). This was also a heathen custom (Juv. xvi. 2). Again, we find lights carried processionally in front of a person, as in the Ordo Romanus Primus (c. d. 779), where seven candles are carried before the pope before masses (ed. E. G. C. F. Atchley, Ordo Rom. Prim. § 7.1, 21). In the Ordo in the MS of St. Amand (Duchesne, p. 457) two candles are lighted when the pope says mass, and are placed behind the throne in candlesticks, right and left. A 5th cent. ivory at Trèves exhibits candles carried in procession (W. C. Bishop, in the Proper Book Dictionary, p. 435). In these cases the custom comes straight from the heathen—in the case of the processionals from the custom of carrying lights before the emperor—and we cannot trace them to the usage in the catacombs.

Three other symbolic usages in connexion with lights may be noticed. (a) Gospel lights, i.e. lights used at the reading of the liturgical Gospel at the Euchist, are mentioned by Jerome (c. Evg. 7.; A.D. 378), and are said by him to have been universal in the East, 'not so as to put darkness to flight, but by way of showing our joy' (he also attests the use of lighted tapers in honour of martyrs). Later on these lights at the Gospel are often mentioned,—e.g. in the Ordo Rom. Prim. § 11. (b) The Paschal candle was blessed on Easter Even ('benedictio cerei'), and is alluded to, perhaps by Augustine (de Civ. Des. xv. 22; A.D. 413-430): in laude cerei.' Certainly by Gregory of Nazianzus (Orat. xiv. 2) and Gregory the Great: 'the prayers ... said over the wax taper, and the exposition of the troparia given by priests about the time of the Paschal solemnity' (Ep. 39). The candle was carried before the competentes to the font (cf. § 4, above), and denoted the rising of the Sun of righteousness. The Liber Pontificalis says that Pope Joaninus (A.D. 417) extended the custom of blessing the Paschal candle to the parish churches of Rome. (c) The office of Tenebrae is found from the 7th or 8th cent. onwards—an extremely symbolic service on the night which takes in Good Friday. After each of the three nocturns one-third of the lights were extinguished, except that seven remained, which were gradually put out during matins, the last when the Gospel was read (DCD ii. 994).

We may ask what is the meaning of this symbolism of lights when transferred to Christianity, and used in its services. Putting aside the lights are, the symbolic use of lights in other Christian services. In the Testament of Oved it is directed that all parts of the church 'be lighted, both for a type, and also for reading.' The derived Arabic Didascalia expands this phrase thus: 'Let them be lighted with many lights as a sign of heavenly things, especially to the reading of the pericope of the sacred books' (§ 35; FMMk, op. cit. ii. 125). It has been suggested that lights had necessarily been in use in the catacombs and in the assemblies before dawn.
LIGHT AND DARKNESS (Greek and Roman)

In the fields of the Hebrides and the Italic civilizations we have in historic times a divinity recognized as supreme, Zeus or Jupiter, who is a personification of the sky and the daylight that kills it. He has counterparts in the religious systems of kindred races. Among Greeks and Romans and peoples subjected to their influence there are two groups of contrasted divinities, those of the upper world (bei oikoums, di' superis) and those of the underworld. The former are the authors of life and increase and prosperity, the latter of death and waning and misery to mortal creatures.

1. Greek mystery varying waves of tendency, changing the behaviour of believers towards these two classes, may be discerned in the history of the Greeks. There was a time when the chief sacred centres had mysterious connexion with the realms of darkness, when the fear of obscurity had more power over the religious consciousness than the delight in heavenly radiance. The spots at which there were reputed entrances to the domain of Hades and darkness were numerous in early Greek days. In many instances, subterranean phenomena, earthquakes, sulphurous or mephitic emanations, disappearing rivers, or medicinal waters had much to do with the rise and round such places. Even in historic Greece practices of a primitive character were maintained in such localities, for in religions the new never entirely drives out the old; there is always some position of strata. At Temenura, a promontory of Laconia, there was a cleft through which Herakles and Orpheus had both passed when they visited the infernal shades. In the Frégis (380), Aristophanes plays a scene at the mouth of Charon, the ferryman of the Styx, ridiculing these popular ideas. Most of the ancient oracles were connected with sites where there was communication with the nether darkness. This is illustrated by the story of the visit of Anaxa to the Cumaean Sibyl, as told by Virgil, and by the behaviour at Delphi of the Pythian priestess, the mouthpiece of the oracular Apollo. The secrets of the future have been asummed in all ages to be in the keeping of spirits below, while in Greek literature the sun has knowledge of all the secrets of the present. The name 'necromancer' indicates the persistence of the belief about the dwellers in the regions of darkness.

As time went on, many of the places which had been principally associated with the powers of darkness were pressed into the possession of divinities who were mostly of the light. This was strikingly the case with Delphi, where, as the later Greeks said, the worship of the chthonian deity Earth (Ga or Gaia) passed into that of Apollo, god of light. As civilization and culture strengthed, the reverence paid to the gods beneath was apt to be left to the uninstructed, and to pass into the backwater of superstition, so that many of the figures were partially transformed into figures of the light. Thus it was with Demeter and Persephone as they appeared in the historic age in the mysteries celebrated at Eleusis. Hades, the consort of Persephone, underwent a like change, indicated by his later name Plouton (Pluto), i.e. god of wealth or prosperity. The change of view was sometimes aided by ephemerism, causing the chthonian deities to be profane and the chthonic powers titled. So the avenging spirits of gloom, the Furies, were venerated as 'Eumenides', 'benevolent ones' (cf. artt. EUMENIDES, ERYNIES: EFHYES).

A profound alteration was wrought in the religious conceptions of the Greeks by the rein given to their myth-making fancy and to their artistic genius, working on things divine. As human traits were inwrought into the texture of dimly apprehended superhuman existences, and were enwrapped by the clouds of poetry and the dreams of art, their original connexion with natural objects became veiled, and in some cases was forgotten. The process had already been carried far when the Homeric poetry arose in its glory. Some figures that did not very readily lend themselves to transformation received little notice in later worship, e.g. Eirene, the_peaceful goddess, is prominent in Homer, but, as she is also too obviously the dawn, she is present but little in later ritual. Ovid remarked that her temples were the rarest in the world (Metem. viii. 384). The being who is wreathed in poetry and art does not generally lose that particular contact with nature which gave him his origin. Zeus remained the actual source of events in the sky. Thus there was no 'it rains' or 'it snows,' the Greek said 'he rains,' or 'he snows,' and sometimes mentioned the name of Zeus. Horace speaks of the hunter camping at night 'under the chilling Jove's wing' (Carm. ii. 29). Apollo was always with the sun, with the sunight, with Artemis with the moon, and so with many others. When the overgrowth of legend became abundant, there was an impulse to return to the veneration of actual heavenly bodies. Thus the worship of Helios, the sun, went on side by side with that of Apollo. Naturally, in historic times the development of mythology produced a mixture of attributes, and the intermixture of many divinities with one and the same function. The appearance and disappearance of the heavenly bodies suggested that the realms of light and darkness had intercommunication. Hermes, in the morning of brightness, becomes a conductor of souls to regions below. Moreover, light was sometimes really baneful and at other times was thought so. Therefore Apollo, the sun-god, has a mission to destroy life, as well as to preserve it by medicine and to enhance its value by poetry and music. Dionysos, whose connexion with the sun is clear, also has to do with the shades; and so with other divinities. The bad effects of heat led to the idea that Pan, the god of the open country, is most to be dreaded at noon-day, for then he can inflict madness. The mild glances of the moon and the divinities who guide them were usually beneficent, but sometimes had the contrary activity. The waxing moon is of good intent, the waning moon brings sickness and death. Hekate, a moon-goddess, kindly and supernal in the earlier age of Greece, became like to the lower, sickly, sickness. It may be remarked that the reverence paid, with clear consciousness, to astral bodies as such was never at any time so marked in historic Hellas as among Babylonians and Egyptians. As a motive it belongs rather to the late Hellenic age, and the age of Greek-Roman civilization, and even then, as we shall see, it affected the outer fringes of Greek civilization of the figures of the light.
from heaven, the lightning. The deities who rule the regular light also send lightning, especially Zeus, one of whose chief emblems is the thunderbolt, and also Athene and Apha. Zeus is sometimes regarded as a god of divine anger, as when Semele died by his stroke, sometimes an indication that the god had raised his will and given a prearranged signal for the future. To interpret the sign is, of course, a matter of legend. But the meaning was thus connected with divination and prophecy, and spots struck by the sacred bolt were revered.

The fire which is of use to men on earth could not but again stir the original divinity and venerable, being a symbol of the eternal. The apparent everlastingness of the fire of which sun, moon, and stars are the manifestations doubtless contributed to the importance of fire in the ritual of worship. A vein of thought which lies deep in the nature of men in the earlier stages of religion, that the gods are envious of human beings and grudge them the things of which they wish to possess themselves, is found in the legend of Prometheus, in which Prometheus was the centre. The gift of fire was one which the gods would fain have withheld, and they punished him who outwitted them. A number of stories of heavenly relations with the earthly fire. Hephastus, the great metalworker, uses the fierce subterranean flames which find vent in the crests of Etna and the Lipari Isles. In Homer and the poets generally he is the maker of all the weapons, emblems, and equipment of the Olympians, of the sceptre of Zeus, of the arrows of Apollo and Artemis. Hestia, goddess of the family hearth, has an especial connexion with earthly fire. She is the only one of the greater divine beings whose name has a transparent significance in life, equivalent to the hearth of the house, always regarded as in some sense an abode of fire. As every house had this altar, so the great State family had its central hearth-altar for all the burgesses. When a city sent out some of its sons to found a colony afar, the central fire of the new community was lighted from the central fire of the old home. When a city was under a monarch or despot, its common hearth was in its dwelling; in a republic a community it was in the town-hall (παρεκκλησία) (see further, art. HEARTH, HEARTH-COST (Greek)).

The instrument of Hestia remained one of the clearest and simplest in the range of Greek religion. Where the name of a divinity retains an obvious meaning, he does not lose his distinctive character by being combined with others; but in the case of fire, divinity in whose ritual fire was conspicuous was Dionysos or Bacchus. The pine-tree and the torches that it provides in the Bacchic revels, as depicted, for instance, by Euripides in his Bacchae. What we call the St. Elmo’s fire was connected with the great twin-gods, the Dioscuri, Castor and Pollux.

The gods of light and darkness must have a potent influence on life, and especially on the beginnings of life. The hearth fire itself was treated as a symbol of the generation of the human being, and a growth of legend and ritual was developed from this idea. The light-bringer and the light-bearer, fire and light, are associated with the idea of the child being born. Zeus himself to the latest age was a god of birth; but the powers that guide the milder radiance of the moon rather than those that wield the fiercer splendour of the sun had to be dealt with by a different rule, and the greatest among them was Artemis.

The mysteries of the darkness beyond the grave, in which departed souls were hidden, gave rise to millenarian practices and beliefs. There were many divine beings who either ruled the dead or guarded souls against the perils of the passage from this world to the next. There is no portion of the field of Greek religious thought that developed more ideas from Homer’s age to the time of the latest Greek philosophic speculation than that. The notion of a possible deliverance from the bonds of death prompted a series of theories and speculations about such things as that of the restoration of Aesop to Admetus, the theme of the fine tragedy of Euripides, the recovery of Eurydice by Orpheus, or of Persephone by Demeter. In this connexion the most interesting evolution, from a religious and social point of view, is to be found in the Greek mysteries. They represent the striving of souls on earth to be assured of safety in the perils of passage from the bed of death to a happy abiding-place in the world beyond. Starting from gross forms, in which enchantment had a great part, the mysteries were refined and moralized so as to satisfy the higher yearnings of the spirit, and to instil that better hope in death which, Cicero says, was given by initiation at Eleusis (de Legibus, ii. 36).

During the great age of Greece there was among the Hellenes no wide-spread conception of such a mysterious influence of the heavenly bodies on human life as was systematized by the Chaldaean astrologers. This lore came from Eastern lands, especially Babylon, and was only in loose contact with religion; it was developed only after the fact, and then more in the sphere of Roman than in that of Greek civilization. The same is true of the real religious veneration of sun, moon, and stars. But mystic ideas concerning these bodies entered into the earliest Greek thought—that of the Orphics and Pythagorean schools. The express attribution, however, of divinity to the heavenly bodies appears comparatively late in the history of Greek philosophy. Plato, in his Timaeus (p. 399), describes the fixed stars as divine existences brought into being by the ‘Worker’ (Demiurge) of the universe at the bidding of the supreme god. In other passages he assigns divine character to the sun, moon, and planets. He was followed, with variations, by later thinkers—Xenocrates, Heraclides of Pontos, and many others. Aristotle described the celestial bodies as containing a great divine element, and pointed out that this belief, now explicitly declared by philosophers, was implicit, in an obscure form, in the popular mythology. Like doctrine was taught by the Stoics and particularly by Cleanthes, who is said to have laid the guiding principle (παντοκρατορία) of the universe. It was common to call the heavenly bodies ‘visible gods’ as opposed to the unseen divine power. These notions were prevalent among the Neo-Platonists. Apollonius of Tyana (q.v.), the seer and wonder-worker of the late 1st cent. A.D., venerated the sun at dawn, like many an Oriental of to-day. That the practice was popular in Greece is shown by the salute which Sokrates offers to the rising luminary, at the end of his great drinking-bout, in the Symposium of Plato. The Neo-Platonists, who powerfully affected the thought and religion of the Romans, were inspired by the above and developed beliefs like those that have been cited. Philo, the great Alexandrian Jewish philosopher, was in this respect fully in accord with the Greeks. An idea that was widely spread in the Hellenistic schools, and especially favoured by the Stoics, was that the contemplation of the heavenly bodies in their purity and in the regularity of their operations had an ethical value for the regulation of human conduct. 2. Roman.—Among the Roman notions concerning the regions of light and darkness were clothed in some distinctive form. The dream of evil that might befall if the inhabitants of the nether world,
the departed spirits of mortals, did not receive their departure from the living; they were much more marked than in Hel lenic communities. In the historic time, till Christianity prevailed, the bodies of the dead were cremated, but some of the attendant ceremonies pointed to a rejection of the idea of a disembodied spirit. 

The dead were laid in a tomb, dug into the ground. As the custom was to place the corpse in a coffin, this was usually buried under the floor of the room. The coffin was then placed in the tomb, which was afterward sealed. The tomb was usually a square or rectangular structure, and was constructed of stone or brick. The roof was often supported by pillars, and the sides were often ornamented with sculptured figures. The tomb was usually decorated with inscriptions, and sometimes with paintings. The tomb was usually surrounded by a wall or fence, and was often visited by the family of the deceased. The tomb was usually visited by the family of the deceased. The tomb was usually visited by the family of the deceased. The tomb was usually visited by the family of the deceased.
another divinity, Vesta, was venerated were remarkably characteristic of the Roman people. Her affinity with fire and her kinship with the Greek Hestia are obvious, but the worship of Vesta among Romans is far more conspicuous than that of Hestia among Greeks, possibly because the structure of the Roman family resisted the assaults of time more stoutly than that of the Greek. A great part of Roman religion is the parallelism in many respects of the religious ceremonial of the family and that of the State. And the private and public worship of Vesta resemble each other not a little. Every Roman had a cult of Vesta, and the name was restricted to the divinity; it had no connotation like the name Hestia, which meant 'hearth' as well as goddess. So thoroughly is Vesta a Latin deity that outside Latium hardly any signs of her existence have been found—a surprising fact when the similarity between Hestia and Vesta is remembered. In the home the cult of the goddess belonged to the mistress and to the children, whose duty it was to see that the fire on the hearth was not extinguished. The centre of worship for the great State family was the ancient shrine of Vesta in the Forum, and no other public temple or altar was devoted to her. Temple existed before the end of the Republican period. The temple of Vesta was of the antique round shape derived from that of the earliest Roman house. Close by were the groves of Vesta, where the vestals, of whose abode important remains have come to light in recent days. The temple never contained an image, for Vesta was the one ancient divinity in Rome who never succumbed to the anthropomorphising impulses of her worshippers. The only symbol of the goddess was the eternal fire, whose extinction imported calamity to the land. Lapse of duty or impurity of life on the part of a Vestal was an omen of disaster, only to be averted by the sacrifice of the sinner. The Vestals were the daughters of the community, regarded as one vast family. Augustus, who loved to present himself as the restorer and maintainer of the most ancient Roman rites, connected Vesta with the dwelling-place of the imperial family on the Palatine. The Pontifex Maximus had a public residence close to the house of the Vestals. Augustus made this house an appanage of the emperor, and made over the official house to the Vestals. He then set aside with proper ceremony a portion of his palace on the Palatine to replace it and establish there a second State temple of the goddess (see, further, art. HEARTH, HEARTY-GODS[Roman]).

We turn now to the later age of Rome. The conscious worship of the sun marked distinctly the dying days of Roman paganism. The oldest shrine dedicated to the sun was on the Quirinal, and seems to belong to the time of the Second Punic War, and to be a result of the mighty tide of religious influence which then invaded Rome from Italy. A desire to venerate the sun was manifested, however, earlier, when he appeared with his attributes on the Roman coinage. Augustus placed in Rome two Egyptian obelisks be the Caryatides of Cesar, and they were supposed to be devoted to the sun. Vespasian transformed into a representation of the sun a great colossal figure erected by Nero in his own honor. Several influences contributed to increase Roman reverence for the sun, the latter, to which inscriptions from the end of the 1st cent. A.D. bear increasing evidence. Some of the most powerful divine invaders who came from the East to conquer the Western solar divinities were Roman. Also, as mentioned above, philosophers and mystics had preached the divine nature of the sun and other celestial bodies. Immigrants from the East, and Romans, especially soldiers, who had resided there, brought the religion of the sun with them. The notable drift of sentiment towards monism aided the movement, for the one god was often, and not unnaturally, identified with the sun. It was not, however, till after Caracalla, by his universal gift of Roman citizenship to the inhabitants of the cities of the empire, had cut away the ground for fencing off the civic gods of Rome from those of other communities that public and formal recognition was given to these Oriental beliefs. A remarkable event in the history of Roman religion was the accession to the throne of Elagabalus, who bore the name of an eastern solar god, whose priest he had been, like his ancestors before him. This was the divinity of the Syrian city of Emesa. The boy-emperor deposed Jupiter from his supremacy amongRomandivinities, and, placing his own god in the vacant seat, brought to Rome the round black stone which was the symbol (rivos) of the god. In his array of titles the emperor made his office as 'priest of the unconquerable sun Elagabalus' (Sacerdos invicti solis Elagabalus) take precedence of the ancient designation of Pontifex Maximus. This was done in spite of the fact that the ruler of Emesa was sometimes correlated with Jupiter, probably because the eagle was an emblem of both. A temple was built contiguous to the Palatine residence of the emperor, and it was removed the fire of Vesta, whose essentially Oriental divinity had been, curiously, recognized four centuries earlier than that of any other immigrant from the East. To give completeness to his innovation, Elagabalus made the foundation-day of the temple the same as the traditional foundation-day of Rome itself, the twenty-first day of April. He also ousted Vesta from the Palatine, where Augustus had planted her, and gave her place to the god Elagabalus. The ritual of the usurping god contained Oriental features revolving to the Roman mind. Among the emperor's pranks was a marriage between his divinity and the goddess of Carthage, sometimes identified with Juno and called 'the heavenly,' sometimes with Venus. It was about this time that 'Juno Celestis' came to be widely venerated in the West, as connected with the moon. The religious revolution of Elagabalus found some favour in the army, always a nursery of Orientalism. But, when his memory was laid under condemnation, the divinity of Emesa suffered with him and was exiled from Rome.

The sun-god was to be glorified again, but in a saner fashion, in a later part of the same century, by Aurelian. He erected a fine temple in honour of 'the unconquerable god of the sun.' His biographer (Hist. Aug. 29) narrates a miracle which occurred when Aurelian defeated Zenobia and her host under the walls of Emesa. At a critical moment he was encouraged by a divine form, which appeared again to him in the temple of Elagabalus within the city and was identified with that divinity. The writer supposed that the god established at Rome by Aurelian was Elagabalus; but the condemnation that this divinity had undergone makes the idea improbable. Some scholars have thought that Aurelian's god was the god of Palmyra, also connected with the sun. But it is most likely that the emperor did not wish to relate him with any particular Oriental divinity. The only indication connected with the East is the epithet 'unconquerable' (invictus). Aurelian specially associated the god with certain Eastern practice by denouncing the College of priests as 'Pontifices.' The sun was selected by
in Greece, but the rules there were never so rigid.

LITERATURE.—All information in matters connected with this article can be found in a few publications, in which the results of research are put together (see, e.g., W. von Leibnitz, "Hinduismus, view of its life and death, freedom and bondage, good and evil, virtue and sin. The great representative of light, life, freedom, and goodness was to the sun, as the goddess of dawn, and her rival Rātri, the night, or, in a sense more averse to human life, tānas, the darkness. The imperishability of light found its expression in the personification of Aditi, which other scholars explain as eternity (cf. Hillebrand, Ved. Myth. iii. 106 ff.).

Uṣas is not only a goddess of the dawn of every day; in many songs that glorify her reappearance at the turn of the year she is addressed, and Uṣas means the first dawn of the New Year (cf. A. Ludwig, Der Bṛhad, Prague, 1876-88, iv. p. xi. vi. 178; Hillebrand, Ved. Myth. ii. 25 ff.). Uṣas is partly the Ostara of the Rigveda poems (F. Kirke, Zeitschrift für indische Sprache, ii. 1901) 439. She brings tuck the sun, the fire, the sacrifice which has been discontinued during the decaying period of the year; sometimes she is also called sīrṣa or īśātikā, and under the name suārābi she became the mother of the two heavenly dogs, ādrameya.

The Indians divide the year into two periods, the Utarāyāna, when the sun proceeds towards the north, and the Daksināyana, when he goes towards the south, the light half of the year being sacred to the gods, the dark half to the dead. Sometimes (e.g., Sānkhya Brāhmaṇa, ii. 1. 3. 1) it is said that spring, summer, and the winter, the personification of which was Vṛtra, not the retainer of the heavenly rain, as has generally been believed, but the demon of winter, who was slain by Indra, and who regain the light and sets free the streams bound by the feters of frost and ice. This idea was inherited from pre-historic times, and formed under the influences of a more northern climate than that of the Indian plains. The farther the Arya tribes advanced towards the north, and more settled under a milder climate, the less that idea harmonized with the surroundings and the actual climate: the notion of tāmas was transferred to the really dark time after the sun had sunk ("Senatus consulta vespertina," Phil. iii. 24). Something of the same usage can be seen

A. HILLEBRANDT.

LIGHT AND DARKNESS (Iranian).—The antithesis between light and darkness among the Iranians was closer to the antithesis between Ahura Mazda and Ahriman. This feature attracted the attention of Phtharch, who says (de Is. et Osir. xlvii.), that Ahura Mazda was purest light and Angra Mainyu the most profound darkness. This view recurs not only in the late 'Semitic and Egyptian section, p. 65, note 3.'

In the Gathas we find the striking statement that Ahura, 'well working, created both light (suxa) and darkness (suxa)' (Ya. xlv. 5). This at once recalls 'I, the Lord, form the light, and create darkness' (Is. 45:7), and it is thus, in a sense, the equivalent of Ya. xlv. 5. But it is also true that the 'protest of Zarathushtra against Magian dualism' (Ya. xlii. 1) is, as Moulton maintains, that it is the protest of Zarathushtra against Magian dualism—light is as is but natural, associated with Ahura Mazda and his supporters, while darkness is connected with Angra Mainyu and his rabble. It was Ahura Mazda who in the beginning filled the blessed realms (revena) with light (Ya. xxxi. 7), and in the realms of light (revena) beatitude will be beheld by him whose thought is right (Ya. xxxi. 1), while the light of the sun is one of the things that glorify Ahura Mazda (Ya. xlii. 11). Apart from the passages already noted, darkness (temauf) is mentioned in Ya. xxxiii. 20, where it refers to the blackness of hell (on the blackness of hell see Moulton, p. 172 f.; F. Spiegel, Brdt. Alterthumskunde, Leipzig, 1871—78, ii. 121).

In the Younger Avesta the dualism between light and darkness appears in full vigour, so that Spiegel is amply justified (ii. 20 ff.) in dividing his discussion of the Iranian theology and demonology into 'the light side' and 'the dark side' respectively. A phrase which constantly recurs in beginning the laudation of all good deities is 'for his magnificence and his glory' (ahra raoyanevakhra); for an admirable discussion of the latter see E. Wilhelm, 'Hvaren,' in Jubilee Vol. of the Sir Jamsheedji Jeejeebhoy Zarathushtri Madras, Bombay, 1914. Light was created by Ahura Mazda (Ya. vi. 1, xxxvii. 11), and of his prerogatives (Ya. xii. 1), hence prayer is made to behold 'the creative light of the creative Creator' (Ya. xlii. 6), and the light of the sun praises him (Ya. lix. 6). Together with Ahura Mazda created 'the shining light and sunny abode' (Ye. iii. 11), so that the abodes of Asha are light (Ye. xix. 7). In these abodes the souls of the righteous dead dwell (Ye. xvi. 7; cf. xlviii. 11; Arminia, i. 18; Vend. xix. 30), for paradise (coshita ahus; see just. LIFE AND DEATH (Iranian)) is light (Ye. xili. 6, xlviii. 11), and, as such, receives worship (Yaz. viii. 22; xlii. 27). Indeed, 'light' (ravasi) is a synonym for 'heaven' (Ye. xix. 9), another synonym being 'the shining house of praise' (ravasi garvsana) (Ye. xi, 124, xiv. 44), for which worship is paid (Sih rava, ii. 30). Still another synonym is 'the light without beginning' (suxa svayasda) (Ye. lixvii. 6; Ye. xiii. 15; Vend. xili. 14, xiii. 35; Parsis'hka, xxxiiii.), which is likewise an object of veneration (Gah, iii. 6, Sih rava, ii. 30; cf. Spiegel, ii. 17 f.). Accordingly, in the Patti Invitatory Texts, London, 1906, p. 145, tr. J. Darmesteter, Zend-Avesta, Paris, 1892—93, ii. 178), the righteous man hopes to attain to 'the place of light' (ronja), not to 'the place of darkness' (dravasda).

The good creation is given the epithet of 'bright'—Asha (Ye. v. 4), the Amuesa Spentas and their paths (Ye. xliii. 82, xiv. 15, 17), Anhi (Ye. xivi. 1, 6), Apam Napat (Ye. xliii. 33, ii. 30), the 'glory' (Ye. xlii. 357), and especially Yima, whose conventional epithet osnate ('shining') is so completely blended with his name that in modern Persian he is known only as Jamshid.

The sun, moon, and stars are said to be given light (Vend. xivi. 9, 19, 13), and the light of the moon is lauded (Nyapih., ii. 7), while so great are the blessings of the light of the sun that, if the sun no longer rose, 'the demons would destroy everything that is in the seven regions of the world,' and the spiritual angels would find no tarrying place and no abiding place in this corporeal existence (Ye. vii. 3). The sun is the abode of the Just Judges, (cf. in general Nyapih., i.—iii.; Ye. vi.—viii.), and, indeed, the fairest of the forms of Ahura Mazda are the earthly and the heavenly light, i.e., the air and the sun (Ye. xxxiiii. 6, livii. 9), so that it is in the form which Ahura Mazda built for Mithra there is neither night nor darkness (Ye. x. 50).

Darkness is a special attribute of hell (Vend. iii. 35; Atenemdrivas, xxvii.), for which 'lightness without beginning' is a synonym (Ye. xxviii. 33; cf. Spiegel, ii. 18 f.). The demons are 'spawn of darkness' (or, perhaps, 'possess the seed of darkness,' tenuastra (Ye. vi. 4; Nyapih., i. 14; Vend. vii. 80)), and seek refuge in darkness (Ye. livii. 18), or hide in the earth (zamor-gaa) (Ye. vii. 15; Ye. xvi. 81; Westergraft Frag. iv. 3) or cavern (Vend. iii. 7, 10)—a phrase which may possibly point to survivals of an old characteristic (cf. Moulton, pp. 57, 128ff., 152, 589). Properly enough, therefore, divine aid is sought to resist 'darkness, woe, and suffering' (Ye. lixlvii. 17; cf. Nyapih., i. 14).

Turning to the Pahlavi texts, we are told that the 'region of light is the place of Ahuramazd, which they call' "endless light" (Bundahish, i. 2), and that the place of the Amuesa Spenta in that least existence of light (Datiistana-Diast., lxxiv. 2), while Arta-ii-Vira, when in the presence of Ahura Mazda, perceived only brilliant light (Arta-ii-Vira Namaq, cl.), and the radiance of
Zarathushtra within his mother, during the three days before his birth, was so great as to illuminate his father's whole village (Dinkar, V. ii. 2, vii. ii. 60-68).

According to the same texts, hell is full of darkness (Daštistān-Dinik, xxvii. 2, 6, xxxii. 2, 4, xxxvii. 28, 45), so intense that it 'is fit to grasp with the fingers' (Daštistān-Dinik, xxvi. 47; cf. Dināš-i-Mainyu, Xrof. vii. 31). This 'endlessly dark' is the abode of Angra Mainyu (Bundahish, i. 3), and when, in his fruitless endeavour to destroy the light of Ahura Mazda, he darkened the world at mid-day as dark as midnight, returning, after his defeat, to the darkness, where he formed many demons (ib. i. 10, iii. 14). In fact, 'the most steadfast quality of the demon himself is darkness, the evil of which is so complete that they shall call the demons also those of a gloomy race' (Daštistān-Dinik, xxxvii. 85). In contrast, although sun, moon, and stars will continue to exist after the renewal of the world, they will no longer be necessary, 'for the world is a dispenser of all light, and all creatures, too, are brilliant' (ib. xxxvii. 136). The power of the demons during the time of darkness has already been noted.

Therefore, 'when in the dark it is not allowable to eat food; for the demons and fiends seize upon one-third of the wisdom and glory of him who eats food in the dark' (Sāyēst-ā-Sāyēst, i. 5; two-thirds if one also eats with unwashed hands); and the eighteenth section of the lost Sezkar Naṣq of the Avesta dealt, among other topics, with 'the husky who spills anything after sunrise, or who swallows a meal of food to the north, at night, without a recital of the Amunāvar' (Dinkar, i. xix. 2). To the same category of concepts belongs a short Parsi poem contained in the second volume of the collection of Rīvāyāt of Daštāb Hormuzdāy (ed. M. R. Unwalla, 207, 19-208. 4; the edition is not yet published, but the writer has a set of the proofs through the courtesy of the editor and J. J. Modr). According to this 'Rīvāyat on the Lighting of a Lamp,' the lamp-light drives away all demons, and it adds:

'From that light of the Fire the world is bright, since it is bright within the very heart of all beings; yet it was not always the light of the Fire, there would not be a single man in the world. This little poem is immediately followed, it may be remarked, by an air of nine machines, recounting the miraculous cure of a dying child by the lighting of a lamp in the roof of the house. The problem of the relation of light and darkness is therefore more vital than the extant Iranian texts would lead one to suppose; for it gave rise to philosophical speculations which materially helped to form the leading Zoroastrian sects.'

Al-Shahrastānī goes so far as to declare (l. 279) that 'all problems of the Magians turn upon two main points: why the light mingled with darkness, and why the light was cleansed itself from darkness; they post the mingling as the beginning, and the cleansing as the aim.'

The Gayōmarist sect maintained, according to al-Shahrastānī, that light had no beginning, but that darkness was created. Whence, was their problem—whether from light, which, however, could not produce anything even partially evil, or from something else, though there was nothing with light the properties of creation and eternity. Their rather lame solution was that Ahura Mazda thought to himself: 'I had an opponent, how would he be formed?' From this thought, which did not harmonize with the goodness of light, Angra Mainyu was produced. The mingling of light and darkness was due to the fact that the light gave men, before they were emplotted to a state of dependence to the realms of Angra Mainyu or battle with them. They chose corporeal existence and battle, on condition that they were aided by the light to eventual victory and to the final resurrection in triumph.

The Zarvansic sect held that the light produced a number of creatures of bright, divine nature, the most important of whom was Zarvan (Time), who, after murmuring prayers for a thousand years, entertained the thought: 'Perchance this world is nothing.' From this evil doubt Angra Mainyu was born, and from Zarvan's wisdom sprung Ahura Mazda. The view of Avesta and Pahlavi texts. Both light and darkness had emerged from the beginning. Good and evil, purity and impurity, etc., had arisen from the mingling of light and darkness; and, had there been no such mingling, the world would not have existed. God was the source of both (cf. Z. xlv. 5, cited above), and in His wisdom had mingled them; but light alone is real, darkness being, in fact, only its necessary antithesis; and, since they are antithetic, they must war against one another until the light shall be victorious over darkness.

Thus in Zoroastrianism the problem of the relation between light and darkness becomes part of the greater question of the origin of the world; and from this point of view the antithesis of light and darkness is found again—whether independent or derived—in several Gnostic systems (cf. ERE, vol. vi. p. 239 f.), as well as in Manichaeanism (A. J. H. Ward, Manichaeism & Religion, Leipzig, 1889. p. 50 ff.) and Manicheism (K. Kössler, Fgg. xii. (1903) 205 ff.). See art. MAZANDAN.

Lammars. In addition to the references given in the art., other citations from the Avesta may be gathered from C. Bartholomæ, Alterth. Wörterb., Sinnaburg, 1904, xvi., "Book.", "Sanzian., " Ramah., " and " Temen., " etc. (coll. 1687, 1692, 648-650). No special treatise on the subject has yet been written.

LOUIS H. GRAY.
fourth millennium B.C., and the lower limit may with propriety be fixed about the time of the Hebrew Exile, before the influence of Persia, followed by Greece, could have been felt. 1 Throughout this period of three millennia, the preponderant role of religion in Babylonia and Egypt is the cult of the sun-god. We should therefore expect to find in the records that have survived much that is cognate to at least the first member of our subject. Owing to the astrological tendencies always present, and the ease with which those ancient peoples tolerated anomalies in belief, no uniform presentation of their views about light and darkness can be given.

2. Various relationships of light and darkness.

While the words 'light' and 'darkness' appear to stand in a coordinate relation, in reality they are contrasted terms, to be compared with 'day' and 'night,' 'life' and 'death,' 'good' and 'evil.' In all these cases the coordinate relation holds good in the sense that light and darkness, etc., can be regarded as complementary terms, conveying the idea of the total of existence, and the ethical contents of life. The exceptional view whereby both light and darkness are traced to the same creative source (as in Is 45) may also be brought into this coordinate relact, however, the relation between light and darkness continues to be regarded in Semitic thought as advective, slighting veiling a dualism which perhaps has been inherited from pre-historic times, and which is not resolved (Jahweism excluded), even theoretically, into a monism until the limit of our period has been passed. 2 We have throughout to reckon with that 'Oriental resignation' which marked all the peoples of the Ancient East, 3 the theory that prevailed might at best be termed 'optimistic dualism.' 4 With special reference to light and darkness there was a context present in the beginning (cosmology), and this is daily and yearly renewed, with every day and night, every spring and autumn (or summer and winter), and it may even extend through the course of the world cycle. 5 While light and darkness have, therefore, each a separate kingdom, the one being for day and for life, the other for night and for death, there is evidence in the development of religious thought in Egypt of an invasion of each upon the other, a dualism in the realm of the unseen. This is concisely summed up by saying that the solar cult was osirianized and the Osiris myth was celestialized. 6 A subtle theory of a similar kind has been formulated for Babylonia, an instance of which we may quote the representation of the sun as under-world divinity, 'because in his light the stars disappear and perish. There is much less warrant for such crossing over of the ideas of light and darkness in Babylonian thought. Regarding the 'Astral Theory' as a whole, it may be remarked that, were it accepted, it would greatly extend the possibilities of our subject. It requires, however, more argument than at present exists as to the date of the origin of scientific astronomy among the Babylonians before its findings can be used with any measure of confidence.

3. No science of light.—Judging from present

certainly did not hold undisputed sway, either at the beginning or afterwards, and the fight between Light and Darkness, typified by Marduk (or Bel) and the Dragon, was continued down the ages. How this should be is perhaps best explained on the theory of Radun, who contends that the Light is a form of light considered not as an illuminative power, but as a life-giving principle, which appears in the warmth of the spring. His light with Tiamat is a fight of the light, i.e. the warmth, against the darkness, i.e. the cold. By this line of argument Marduk comes into relation to the Tammuz-Adonis and (Ishtar) cycles my myths, and is also to be placed in opposition to Nabu, the god of the darkness, a fellow god with a solar deity, then, Marduk stands for the sun-god of spring, who brings 'blessing and favours after the sorrows and tribulations of the stormy season.' Before Marduk was exalted to the chief place, Anu, Nibir, Enlil, and Ea fulfilled a similar role in the myths of creation, and in later times Ashur arose to dispute the glory. The nearest approach to a god of darkness, energizing in the world of nature, is Ea, the god of the deep (Akkad, in West Semitic), 'the thunderer.' The darkness which he causes, (e.g., in the Flood Story, ii. 46 f.) is relieved by the lightning, in virtue of which he has some title to be regarded as the 'god of light.' With him may be classed Girru (Gillu) = Nukku, the god of fire, whose symbol, a lighted lamp, is as old as the 14th cent. B.C.

Of the evil spirits that love the darkness, mention may be made of the seven evil demons who, aided by certain of the great gods, were thought to be responsible for the darkness of the moon by eclipse or storm, and even for the disappearance of the orbs of night at the end of the month.

From city to city darkness work they,
A hurricane, which nightly hunts in the heavens, are they,
Their power to bring darkness in heaven, are they.
Gusts of wind rising, which cast gloom over the bright day, are they.

In the official cults of Egypt sun-worship was all-important. Less is said about the moon, although it finds a place. Within his own domain, which is the upper world, Ra (Anun-Ra), the sun, figures as a life-giving power, a set-off to the equally great power of death and darkness in the under-world, to which so much importance was attached in Egypt. Here, it would seem, light and darkness are concomitants of the fuller notions of life and death. We must include in this even the apparent exception of the 'Aton' cult of the XVIIIth dynasty (in the reign of Ikhnaton). In the 'Sola' universalism of that period, which finds expression in a series of magnificent hymns, while the whole activity and benefit of the sun are rehearsed, its life-giving power is still in the forefront. In Egypt the part of Marduk is taken by Hnwn, the elder enshrined, etc. An equivalent to Ishtar is found in Hathor, who by scholars is called 'the goddess of light.' Specific gods of darkness appear in Set (or Set-Appu), and in one member of the Hermetic group, named Nibir (or Ishtar, Keqet). (For the gods of the underworld see below, § 77.) In Egypt the demons of darkness were, like those of Babylonia, an awful power for evil to the living, and consequently active in the realm of the dead.

The Hebrew conception of God is frequently conveyed by means of language (much of which is metaphorical and poetical) drawn from the realm of light (see Hab. 2.14f.; Ps 60:5). Is 10.19f.; 51:9-16; 30.20, Ezk 12.18, Hos 6.3). But, while light is readily employed as a symbol of Jahweh, from first to last there is no idea of identifying Him with this manifestation of nature (as in the case of Marduk). While God is conceived of as luminous above measure, He is at the same time thought of as hidden, and His ways are reckoned to be mysterious. For this reason darkness, the 'natural antithesis' of light, also enters into the imagery of the OT (Ex 20:22, Dt 4:27, 1 K 8:2, Ps 18:13, 97, Am 5:8, Zeph 1:12).

It is surprising that, though the Hebrews were surrounded by races more or less influenced by those who shared the Babylonian and Egyptian belief in demons and evil spirits, hardly a trace of such powers of darkness is evident in the religious literature of ancient Israel.

5. Light and darkness in cosmology.—According to the main version of the Babylonian Story of Creation, Marduk, the god of light, prevails over Tiamat, the personification of chaos, of which darkness presumably forms part. Sayce finds in Mummu (tablet I. 4) 'the flood,' or chaos, the equivalent of the 'darkness' which in Gn 1:2 is said to have been 'upon the face of the deep.' In both the Hebrew and the Babylonian accounts of what was in the beginning, darkness is reckoned as primeval, i.e. before the cosmos. It is an element not to be reckoned as good. While this may be asserted of darkness as diffused through space, it does not hold true of darkness as a division of time, when darkness means no more than night (Gn 14:23). According to Hebrew cosmology, one function of the heavenly orbs was to divide the light from the darkness; and God saw that it was good (Gn 1:5; cf. Ps 104:22). In the Babylonian account there is no mention of the creation of light, perhaps to be explained by the fact that Marduk is himself the god of light, and consequently its creator—a view which might well have been entertained in spite of the contradiction, as we see it, that the 'son of the sun' is also made the creator of the sun and all the other orbs of light. In the Hebrew account light is given as the first act in the creation of the world, wrought by the word of God. This, Cheyne thinks, formed no part of the traditional Hebrew cosmogony, but is due to the priestly writer's reflective turn of mind. Be that as it may, this light, which is diffused through space, wherever darkness is not present, is evidently of the heavenly orbs was to divide from the 'lights'—sun, moon, and stars—in which light is, as it were, localized (Ga 1:1). In Egypt there is no detailed account of creation. Sayce 14 and

LITHT AND DARKNESS (Semitic and Egyptian)

Jeremiah's remark on sectional parallels to the Babylonian main version. Different conceptions of the origin of light appear. According to one, primeval chaos is an ocean from which the sun-god (Atum) arises, bringing his own light with him. According to another, light is laid up in the world, waiting to be revealed.

The story of a second creation would seem to be found in the narrative of Bereaam, according to whom the animals appeared not to be able to bear the light of the first creation, and a second was rendered necessary of such a kind that they could bear the light. 1

Demeter-Isis's exalted conception (45), whereby the creation of light and darkness is referred to the same divine source, is the logical outcome of monotheism. [p. 69] It has an anthropomorphic parallel in the words ascribed to Ra: 2 "When I open my eyes, there is light; when I close them, there is darkness." 3 This, of course, applies to the daily renewal of light and its withdrawal every night.

A reduction of earth to primeval conditions would involve among other things the extinction of light and by inference the return of the darkness of chaos (Jer 4). An Egyptian myth, found in the Book of the Dead, represents Atum (see above) as defacing what he had made, bringing a return of the water, as it was at the beginning. Over this Osiris (lord of darkness) is to rule. 4

The cosmology, although relating to what is first in the order of things, is itself the product of reflection upon the phenomena of the present. The processes of thought which give origin to the myths connected with the world's beginning, and to mythology in general, may be placed in times antecedent to the Semitic period. The myths, having been invented and reduced to writing, were now exercising a certain counter-influence on current ideas. They were never absent from the background of thought, and in a way hindered development. We may suppose that light and darkness, especially light, would in time have been accepted as in the course of nature, and hence ceased to attract attention. But there came interruptions of the usual order, e.g., in the eclipse of moon or of sun—and en such occasions the mythology was speculatively recalled. The cults also were of such a kind that they kept the mythology alive. The great hymns to Shamash, Sin, Ishtar, etc.; the transcription and frequent recitation of funerary literature in Egypt, much of which had been handed down from very early times; the festivals attending new moon, full moon, and the new year, and every occasion of national or local assembly—all must have exercised much influence towards the preservation of traditional beliefs. There was thus but slight opportunity of escaping from the legacy of the past. When the Egyptians looked upon the fiery clouds that attended the rising sun, their minds reverted to the pits of fire that were supposed to mark the eleventh division of the Tart. The multiform representations on cylinders seals of the orbs of night and day, especially of the figure of the sun-god rising between the mountains of the East, depicted with streams of light flowing from both sides, or with rays of light protruding from his shoulders, 5 give a vivid conception of the ideas constantly at work in the minds of the Semites and their neighbours. In addition to anthropomorphic representations of the sun, its disk, their symbols, especially the sun's disk, winged or unwinged, abounded both in Egypt and in Babylonia. More telling still were the obelisks and pyramids of Egypt, which were symbols of the sun in addition to their other uses. Temples to these deities of light were also present to bear their witness. Very impressive was the thought current so long in Egypt; that the sun died every evening, and every morning was re-created. In the interval he moved with difficulty through the realm of darkness, and, as a passive body, had to be lighted through the underworld by other creatures of light. 6 In Babylonia the phases of the moon seem to have attracted attention even more than the daily course of the sun. As king of the night, Sin (Nunnar), 'the bright one,' may have had an even older sovereignty than Shamash, who was reckoned to be his son. This sequence has been explained in various ways, and would seem that the rejoicing which attended the moon's appearance every month, and the lamentation which accompanied its disappearance, point to the position of this body in the presence and ascendance of light, by night no less than by day, the ancient Babylonians found safety and happiness, whereas in darkness there lurked danger and woe. In this connection it is curious to note that Saturn was regarded as a second sun, to whom (apart from the moon) the illumination of the night was due. 7

In spite of these efforts to extend the sovereignty of light, there remained a sufficiently terrifying residuum of darkness. To overcome this, resort was had to other agencies, viz. magical rites and a due fulfilment of the duties owing to the dead. Darkness both of earth and of the underground being the abode of demons and the spirits of the deceased, contrariwise they could not have their dwelling in the light. Insancho as much natural light was not always available, artificial means had to be adopted to overcome the disabilities attaching to darkness. The energy of fire was here of great significance. It is noteworthy that a certain part of the temple where purification was termed 'the house of light' (Assyr. ili nits). The light is associated with Girra or Nusku, the fire-god, which may be taken to mean that the purification was by fire. 8 The subject of artificial lights is closely related to this branch of our subject. The people of antiquity being obsessed by the terror of darkness, it was natural that they should have safeguarded themselves, so far as they could, by having lights in their dwellings and out-of-doors. From the number of lamps found during excavation, notably in Palestine, many of them belonging to the Semitic period, it has been inferred that these were in general use. Out-of-doors torches served the purpose. The torches of the Annunaki (gods of a lower order) are mentioned in the Babylonian Flood Story (col. ii. 44). A graphic description of the festival 'illumination' of New Year's Eve and days following, given by Breasted, 9 affords an excellent idea of the part played by artificial lights in the ritual of Egypt. One of the duties of the priests and ministrants in the temple was to attend to the fires and lamps (cf. II. 1 K. 79).

8 Breasted, Hist. 107, 174, 201, 204. According to the Babylonian conception of the sun, it seems to have entered on a better fate at nightfall, feasting and resting in the abode of the god (Ring, Bab. Religion and Mythology, p. 30.)
9 Jastrow, p. 63.
day (Ampr. , arru, Heb. dr, "light"); to the morning, or East (Ampr. yit Simari, Heb. miruth, "the rising of the sun"); to the evening, or West (Ampr. tfeth Simari, Heb. morn akhrshemah, "the setting of the sun"); and by certain Babylonian month names (Am. Aflas, the second or 'bright' month; Addar, the dark or 'obscure' month). One series of directions in Hebrew gives north (wdf) as the 'obscure' or 'dark' place, and south (arad) as the 'bright' or 'illuminated' place.

7. Light and darkness in relation to the state after death. — The contrast between light and darkness in the idea of the ancients is most clearly revealed in their views about the state of the living and of the dead. *Darkness without light* is one of the curses invoked by Hammurabi on any one who should venture to deface his stele. This is synonymous with death. The grave to which the dead are consigned is the dark dwelling (Sumerian Unugi), which in its extended meaning is applied to the underworld, the abode of the shades (cf. Ps. 88:12). The departed soul itself is a 'creation of darkness' (Sumerian, gislab, Semitic, cdimum). The darkness attending death was to some extent relieved in the practice of the living by the use of artificial lights in the preliminaries to burial and by placing oil-lamps at the tomb. From Palestinian excavation it has been ascertained that lamps are exceedingly common in graves, where their intention is evidently symbolical. It is probable that the darkness of heaven, as represented by the tomb, is here alluded to, and one and the same interpretation will hardly suit every case. The readiest explanation would place them—at least in the earlier period—on a level with, and in the dark vessels deposited with the dead. Whatever was of service to the living might also serve the dead.

Among the Babylonians the general idea was that it was a misfortune for the dead to again be brought to light of day. To some extent, burial were given, their spirits would return to earth, but only to plague the living. In the under world (or preferably the other world) was their home, and there their spirits found rest. The classic description of this abode of the dead is found in the myth of Ishtar's Descent to Hades, to the land of so-return (cf. Gilgamesh Epic, ii. 460ff.):

To the house of darkness, brahha's dwelling-place,
To the house from which he who enters never returns.
To the road whose path turns not back,
To the house where he who enters is deprived of light,
Where duc is his sustenance, their food day.
He who goes not, to darkness do they sit.

Over this gloomy realm of the Babylonian dead the god Nergal presides, with his consort Ereshkigal, the 'dark' goddess. In Egypt the Osiris was lord of the under world and held his courts there. A world lying in darkness, which was relieved one hour in twenty-four, during the passage of the sun and his train through each section of the Tuat. The entrance to this realm of the dead lay, for both Babylonians and Egyptians, in the west, where the sun goes down. On the other hand, the east, as the point of sunrise, is the abode of life; but this has an interest only for the sun-god and the privileged few who shared his daily recurring glory. Although the point of departure to the other world and the point of return therefrom are clear, there is doubt as to the location of the region of the dead. The Egyptians placed it beyond the circle of mountains guarding the earth, perhaps on the same plane with earth, perhaps at a lower level. In the same conception it seems to have lain beneath earth, even lower than the waters of the abyss (apadu), themselves associated with darkness. This was a region which the sun, living or dead, could not pierce.

A better fate for departed spirits, some if not all, was also conceived of—symbolized, e.g., in the recovery of Tammuz from the Underworld, and the sun-bark with its occupants who returned to the region of day. Light here plays the principal part, although the obstacle of darkness has to be surmounted before eternal light can be reached. One of the charms in the Book of the Dead is for making the transformation into the god that giveth light (in) the darkness, or light for darkness. The 'Island of the blessed,' in the Gilgamesh Epic, is cut off from mortal by many barriers, including twelve double-hours of travelling through thick darkness. The Babylonian heaven was the residence of the gods, save in exceptional cases. In Egypt, at an early date, the king shared in the delights of heaven, and was exalted to life with the gods in the sky. Later this was qualified by the Osiran doctrine, whereby the realm of the blessed could be attained only by redemption from the underworld through faith in Osiris or Amun-Re. This other world is a realm of light for the most part. The blessed this, whose name is equivalent to 'light,' is called, a vessel of the sun, including that of the sun-god. The Khns, or beatified spirits, feed upon the divine grain (i.e. the body of Osiris) in the land of the Light-god. Later, the lower regions of the deceased were sometimes placed in the Boat of Millions of Years, eventually became beings consisting of nothing but light (cf. Is. 60:1).

Hebrew thought about the state of the dead in the under world shows close kinship to the Babylonian, and is less developed than that of Egypt. The utmost allowed, even in the later books of the OT, falling within our period, is that the shades may emerge from Sheol back to the light of the upper world (Is 26:16).

8. Literature. — This is sufficiently given in the footnotes.

WILLIAM CHURCHER.

LIGHTNING. — See PRODIES AND PORTENTS.

LAGUORI. — Saint Alfonso Maria di Liguori was born 27 Sept. 1696 at Maranella, near Naples. He was the eldest son of a rather impoverished noble family, and, according to his biographers, was from earliest youth remarkable for his piety, his charm of manner, and his precocious ability. A strain of Spanish blood seems to have lent him a greater seriousness of mind and tenacity of purpose than are common among natives of Southern Italy. He devoted himself to the law, and took the degree of Doctor of Laws at the age of sixteen, being then so small of stature that, to the amusement of the spectators, his doctor's gown hid him almost completely from view. He afterwards practised in the courts of Naples for nearly eight years with extraordinary success; but it would seem that in 1723, in a case in which large pecuniary interests were at stake, Liguori, in the interpretation of an important document, was guilty of an oversight which, when brought home to him, covered him with confusion, and disgusted him with his career and with all worldly ambition. He had always led a most innocent life, and now, giving himself up to solitude and prayer, he had what he believed to be a...
supernatural intuition to consecrate the rest of his days to God in the ecclesiastical state. He wished to become an Oratorian, but his father, who had already been much distressed on two different occasions by his son's unwillingness to fall in with his wishes, in his day of growing home, but began to study for an ecclesiastical career, and in December 1736 was ordained priest. In the first six years of his ministry Alfonso worked under the direction of an association of missionary priests, and devoted himself at Naples to the care of the lazarettos, among whom his labours bore extraordinary fruit. He converted many hundreds from a life of sin, and formed a sort of confraternity, the 'Association of the Chapels,' for these poor outcasts, to ensure their perseverence in good. In 1739 Liguori was brought into relation with a certain Father Thomas Falco from the 'Piti Operarii,' who conceived a deep respect for him, and, when he himself was shortly afterwards made bishop of Castellamare, he was led to the conviction that Alfonso was an instrument divinely sent him to carry out as bishop a work that had been left unfinished. The founding a preaching Order to evangelize the goatherds and peasants of that part of Italy. The scheme eventually took shape in the little town of San Gennaro, and soon acquired a popular name in Naples, the 'Congregation of the Most Holy Redeemer,' from which the members are most commonly called Redemptorists, was founded in 1762. Bishop Falco was at first supreme superior, and resided at a distance, while Alfonso resided with the community. Hence, on the bishop's death in 1743, Alfonso was formally elected to preside over his brethren. In 1749 the rule was authoritatively approved by Pope Benedict XIV, and the rule of an Order of nuns, which had been closely associated with the Redemptorist congregation from the beginning, was approved in the following year. But this measure of success was not achieved without numerous disappointments, and several of Liguori's first companions broke away from the Institute. A document drawn up in those very early days by the council of the Redemptorists in the vain hope of obtaining the approbation of the king of Naples, Don Carlos (afterwards Charles III. of Spain), supplies a concise account of the special characteristics of the new Order.

The principal aim of the priests so associated is to imitate as closely as possible ... the life and virtues of Our Lord Jesus Christ. In this they set before themselves their own spiritual advantage and that of the people of this kingdom—especially the most forsaken of these, to whom they render spiritual aid. In their houses they lead a perfect community life, under obedience to their superior, and perform the functions of the sacred ministry, such as instructions, confessions, the superintendence of schools, confiteries, and other devot gatherings.

They go about the dioceses in which they are established, giving missions, and, as a means of preserving the good results which they have been enabled by the grace of God to effect, they aim to impart lessons to the districts which have been evangelized, to bear confessions and confirm the people in their good resolutions by another series of instructions and sermons as well as by general advice and so forth. In the monastery as well as abroad they endeavour, with the help of God, to follow in the footsteps of the Most Holy Redeemer, Jesus Crucified, in order to instruct the people by example as well as by precept.

At the end of each month, there are twelve points of rule set forth in their constitutions. The headings of these are: Penance, Obedience to God, Concord and Charity among themselves, Poverty, Purity of Heart, Obedience, Meekness and Humility of Heart, Mortification, Recollection, Prayer, Abnegation, and Love of the Cross. Each of the associates passes one day every week (now one day every two) in retreat, thus treading along with God in the interests of his soul, in order to be able to employ himself afterwards with more ardour in securing the spiritual welfare of his neighbour.

In their houses they consecrate a large part of each day to silence, recollection, the choir, mortification, and meditation, which is practise three times a day. . . . Their houses are to contain but a small number of subjects. As for their subsistence, they endeavour not to be a burden on anybody: they live on the family fortunes which they have handed over to their superiors, and on such offerings as may be made spontaneously for the love of Jesus Christ, by the piety of the faithful! (Berire, Saint Alphonse de Liguori, Eng. tr., ch. 1. p. 196.)

Despite domestic anxieties and contradictions in the government of the new Institute, Liguori, down to about the year 1782, devoted himself indefatigably to the actual work of preaching, while leading at the same time a life of extreme abnegation and austerity. At that period his health began somewhat to fail, and henceforward he devoted more time to literary activities, composing a number of books of piety and instruction, as well as the comprehensive work on moral theology by which he is especially remembered. As early as 1747 the king had wished to make Alfonso archbishop of Palermo, but by earnest representations he had succeeded in evading the proffered honour. The Redemptorists, in point of fact, take a special vow to accept no ecclesiastical dignities, but in 1782 influence was used with the Holy See to dispense the saint from his vow, and, sorely against his will, he was compelled by the pope to accept the bishopric of Sant' Agata dei Goti, a tiny see to the north of Naples, among a peopling population notorious for its barbarism and irreligion. Here he worked wonders for the reform of morals, but after an episcopate of more than thirteen years he pers pressed Pope Pius vi (1775-1782), in order that he might end his days among a community of his own Order. Broken with years, with apostolic labours, and with the incredible austeries which he practised, he retired to Nocera dei Pagani, but twelve years were still to pass before he was called to his reward. In the meantime he was destined to endure trials which probably cost him more severe mental suffering than any of the difficulties which he had previously encountered. For forty years and more, mainly owing to the influence of the anti-clerical but all-powerful minister Bernard Tonnei, who was the virtual ruler of Naples, the effort of the Redemptorists as a religious Order had been withheld by the Government. This had always been an obstacle in the way of its expansion, reducing it, as it did, to the position of an illegal association. At the time of Tonnei's death in 1776, the Order numbered only nine houses—four in Naples, one in Sicily, and four in the States of the Church. In 1779, under a different administration, everything seemed to point to the adoption of a more generous policy. Promises of favour were made on behalf of the Government, and in response the Redemptorist rule was formally submitted for State approval. From the point of view of the aged founder, the result was disastrous. The rule was approved, indeed, but in a fundamentally modified form (known in the controversies which followed as the 'Regolamento')—many of the most essential features of the constitutions as hitherto observed, and which practically reduced it from the status of a religious Order to that of a mere pious association. Liguori, who was now 85, decided, despairing of the matter, was induced to sign the Regolamento, and it was for the time adopted in the Neapolitan dominions, but the Redemptorists belonging to the houses founded within the States of the Church, energetically protested against the acceptance of any such caricature of their rule. The Holy See pronounced in their favour, and the unfortunate schism thus
caused in the Order had not been healed when, on 1 Aug. 1579, the saint died at Noeara del Paganu. His death spread an enthusiastic of popular enthusiasm which it evoked and the marvellous events that followed, brought about a happy state of feeling. The Government of Charles III. in Oct. 1791, after the tragic fall of the Redemptorist rule, and in Aug. 1791, under papal sanction, the different houses of the Order were once more reconciled with each other. From this time forward, and especially after the subsidence of the disturbances caused by the Revolution and the Napoleonic wars, the development of the Order was rapid. In 1786 the first Redemptorist house north of the Alps was founded at Warsaw by Clement Hofbauer, afterwards beatified. From there the Congregation gradually spread to Austria and through Europe, while a beginning was made in the United States in 1832 and in England in 1843. The Redemptorists have since made foundations in Ireland (1831), Kinmon, near Perth, in Scotland (1860), in Brazil, Dutch Guiana, the Congo, Australia, New Zealand, and many other distant countries. At present the Order numbers rather over 9000 members, half of whom are priests, the rest lay-brothers and students preparing for ordination. The strict ultra montane views distinctive of the followers of St. Alfonso do Ligouri have often brought them into disfavour with ecclesiastical officials. In the eyes of the Jesuits, they have several times been banished from different European countries. Still no serious attempt has been made to connect them with any kind of political intrigue. The Redemptorists have remained steadily faithful to their primary work of giving missions and retreats, especially among the poor and un instructed, and the severe rule of the Order suffered no relaxation.

Alfonso di Ligouri was beatified in 1816, canonized in 1839, and declared 'Doctor of the Universal Church' by Pius IX. in 1871. The terms of this last pronouncement, though somewhat vague, may be held to constitute a guarantee of orthodoxy for the saint's writings, at least when taken as a whole. Moreover, it may fairly be inferred from the language used that he is commended for holding a golden mean in his moral teaching between a Jansenistic rigorism on the one hand and dangerous laxity on the other. A full bibliography of Ligouri's writings may be found in Berthe, Eng. t., p. 369. Two volumes especially in this long catalogue have been subjected to much adverse criticism. Against the 'Le GLoria di Maria,' first published at Naples in 1750, and since translated into every European language, many objections have been raised on the ground of its alleged extravagant Mariolatry ('see, e.g., E. B. Pusey, Eirenicon, (Oxford, 1865, passim). But it is to be remembered, as Newman points out, that 'St. Alfonso wrote for Neapolitans, whom he knew, and whom we do not know' (see the whole context in J. H. Newman, Letter to Pusey on the Eirenicon, London, 1866, p. 103). The character and traditions of the people are very different from ours, and he was writing to protest against what he considered a veiled attack on that simple and childlike devotion to the Blessed Virgin which he regarded as the noblest and most important factor in the religion of his countrymen. It is, however, the Theologia Moralis that more than anything else has been made the object of fierce invective. Ligouri originally (i.e. in 1748) published his views on chastity in the form of a Manual for students, on a well-known text-book for students, the Medulla of the Jesuit Hermann Rusehuss. But the second edition in two volumes (Naples, 1753 and 1755) was a full treatise, and the author continued to revise and enlarge it as the successive issues were exhausted. The eighth edition, which was printed in 1779, was the last to receive his personal attention.

Now, like all his fellow-disciples, believed that for those whose duty it was to hear confessions and instruct their flock they that these and other moral questions should be thought out. Moreover, it must be said, in answer to such critics as those of R. Grassmann and those contained in art. CASSIUS (vol. iii. p. 240), that priests administer a code of law in the tribunal of conscience and, like lawyers, doctors, and magistrates, they have to acquaint themselves with technicalities which, in the case of certain offences, often involve unsavoury details quite unfit for public discussion.

One of the special grounds of reproach against Ligouri's moral system is his adoption or defence of probabilism (p. n.). This charge is easily justified and would be repudiated by all his own disciples. The principle which he enunciated, at least in his later years, was that of 'equiprobabilism' (q.v.). The difference between this and probabilism, rightly explained, is not very momentous, and many modern writers on the subject, especially the theologians of the Jesuit school, have maintained that St. Alfonso's views diverged but slightly from those of approved probabilists. According to the probabilist system, starting with the admitted axiom that a doubtful law does not bind (tax dubia non obligat), a man is not held to obey as long as there is a sound probability against the law—as long as, e.g., there is a matter of extrinsic testimony, where doctors dis-agree, one unconscionable authority teaches that a particular precept has no binding force. The probabilists, on the other hand, held that unless the authorities who maintained the binding force of the law or precept were notably less weighty than those who excused from it, such a precept could not be obeyed. Between these rival views comes that of Ligouri, who held that, when the reasons or authorities were
equalley balanced for and against the law, then a man without peril to his soul was free to use his library.

A doubtful law does not bind. But when two opposite opinions are equally probable, you have a strict duty to the existence of the law. Therefore the law, being thus only inconclusively pronounced, has no binding force. Therefore it is true that you can follow an equally probable opinion in either case in such a manner that you are not guilty.

A critical and definitive edition of the Theologia Moralis, equipped with adequate notes, has only recently been brought to completion; Theologia Moralis S. Alphonse Maria de Licinius 2nd. 

The editor in his preface gives a satisfactory explanation of the inaccuracy of so many of the saint's quotations as printed in the current editions.

LITURGIES—The fullest life of St. Alphonse Maria de Licinius is that by A. Berthe; 8 vols. 1895. Eng. tr. H. Castle, 2 vols. Dublin, 1895 (the translation has been subjected to careful revision and in many respects superior to the original). Other noteworthy biographies are those of A. Tannele, Vita et acta del venerabilis Alfonso Maria de Licinius, 2 vols. Naples, 1598-1599 (a valuable source written by a devoted disciple of the saint). See also C. Villenueve, Vie et institut de S. Alphonse Maria de Licinius, 4 vols. Tournai, 1659; P. Diliglione, Leben des heiligen Albertus und des Kirchenlehrers Alphonsus Maria de Licinius, 2 vols. Breslau, 1857; J. Mangiarotti, Vita del S. Alfonso Maria de Licinius, Rome, 1875. A good account of the Orator with full bibliography will be found in M. Hermann, Geschichte der Oratorianer und Kongregations der Katholische Kirche, Paderborn, 1905, iii. 318-338.

On the Problema 22 and the Praeconversio controversy see the anonymous Vindiciae Alphonsianae, Bruxelles, 1784, and Vindiciae Vatinianae, Bruges, 1785; J. de Caugny, Apologia de deque Alphonsianae, no. 163, 1801; and De praecurios Præcurebilo libri, no. 204: J. Arndt, Oratio de præcurnebi, Bruxelles, 1902; J. Westerm, De Maneggii Domini, Paris, 1905; A. Lehmkühl, Præcurnebio Vindicia, Freiburg, 1906. A severe indictment of the moral teaching of St. Alphonse di Licinius was also published in A. Hermann, Leben des heiligen Alphonsus Maria de Licinius, Stuttgart, 1855, which has been widely distributed as a controversial tract. In reply see, inter alia, J. H. Newman, History of my Religious Opinions, London, 1860, pp. 273 ff., and 346 ff. A. Keller, St. Alphonsi s. Licionis operum singularium, 1914, 1 v. Neuwied, 1915; P. Führer, Geschichte der Moralreligion, Munich, 1899, and the pamphlet of R. Grassman, Ansätze aus der Moraltheologie des heil. Alphons des Licionis, Stuttgart, 1905, which is an important element in the population of the north-west corner of the Madras Presidency.1

LINGAYATS.—The Lingayats are a religious community in India, numbering nearly three million at the census of 1901, of whom more than half are found in the southern districts of the Bombay Presidency. In the Bombay districts of Belgaum and Bijapur one-third of the population is Lingayat, and in the adjacent district of Dharwar they constitute nearly 50 per cent of the total. Beyond the limits of the Bombay Presidency, Lingayats are numerous in the Mysore and Hyderabad States. They also form an important element in the population of the north-west corner of the Madras Presidency.1

I. Description.—The Lingayats, who are also known as Lingawatts, Lingangis, Siddhaktas, and Viralavams, derive their name from the Skr. word linga, the phallic emblem, with the suffix aya, and are 'the people who bear the linga' habitually. Their name literally describes them; for the true Lingayat wears on his head a box containing a stone phallos, which is the symbol of his faith, and the loss of which is equivalent to spiritual death. The emblem is worn by both sexes. The men carry the box on a red silk scarf or a thread tied round the neck, while the women wear it inside their costume, on a necklace. When working, the male wearer sometimes shifts it to his left arm.

The Lingayats are Dravidian, that is to say, they belong to a stock that was established in India before the arrival of the so-called Aryans. They are dark in complexion, in common with the races of southern India, and speak Kannarese, a Dravidian language. They have been not inaptly described as a peaceable race of Hindu puritans, though it may be questioned how far their rejection of many of the chief dogmas of Brahmanic Hinduism leaves them the right to be styled Hindus at all. Of the Brahmanic triad—Brahma, Visnu, and Siva—they acknowledge only the god Siva, whose emblem, the linga, they bear on their persons, and reverence the Vedas, but later commentaries on which the Brahmins rely. Originally they seem to have been the product of one of the numerous reformations in India that have been

1. The census of 1901 gives the following figures for Lingayats: Bombay Presidency, 86,437; Belgaum, 34,520; Mysore Presidency, 135,391; Madras Presidency, 126,092; total India, 3,276,368.

R. S. CONWAY.

LIGURIAN RELIGION.—So little is certainly known of the early history and geographical distribution of the Ligurians that any attempt to give a clear description of their religion is impossible. Some of the deities that were worshipped in Roman times in the Ligurian area strictly so called may be mentioned. The most noteworthy are the god named Tabron, and his female counterpart, the goddess Circe, of whose temple at Palmanova in Gallus Transpadana, from whom the modern town of Bornio takes its name, a god of hot springs, and who gave the name to the region known as the Caston Borniani on the coast to the east of (Alburnum, the modern Ventimiglia. Not less local was the worship of Mars Lenticulamans at Pala (ib. 7892), possibly an apple-riping deity, the dedication to whom was made on some festival of the Fastivus, as the most popular Latin inscription. Local, too, was the cult of the Matronae Vedisiatae, where the plural is interesting, also honoured at Cenuinum in the district of the Vedieti. The worship of Matrona with some less local cult was in some obscure form in N. Italy, always combined with Geni, as in an inscription from Trempezzina on Lake Como (ib. 9277), generally with a local epithet, as Derronis (ib. 5771, found at Zona Corbetta, north of Milan). They are often

joined with Jupiter Optimus Maximus, and sometimes themselves called Inunes—a plural form which never appears in pure Latin inscriptions. It would be exceedingly unsafe, without other evidence, to see in this a trace of any polygenetic strain in the Ligurian conception of Olympia, a nearer parallel is the (presumably) generalising plural in such epithets as Feunda, or the 'Clouds' and 'Dawns' of the Tabula Agno-

nensis (see ITALY [ANCIENT]); or the Angitia of the Maritains—not to speak of the Fonc of Gracco-Roman falsa vita (ib. 5584, found at Corbetta, north of Milan). They are often
aimed against the supremacy and doctrines of the Brāhmans, whose selfish exploitation of the lower castes has frequently led to the rise of new sects essentially anti-Brāhmanic in origin. It seems clear that, in its inception, Lingayatism not only rested largely on a denial of the Brāhman claim to supremacy over all other castes, but attempted to abolish all caste distinctions. All wearers of the linga were proclaimed equal in the eyes of God. The traditional Lingayat teacher, Basava, proclaimed all castes proportionate as temples of the great spirit, and thus, in his view, all men are born equal. The denial of the supremacy of the Brāhmans, coupled with the assertion of the essential equality of all men, constituted a vital departure from the doctrines of orthodox Hinduism. Other important innovations were: the prohibition of child-marriage; the removal of all restriction on widows remarrying; the burial, instead of burning, of the dead; and the abolishment of the chief Hindu rites for the removal of ceremonial impurity. The founders of the religion could scarcely have forged more potent weapons for severing the bonds between the castes and the followers of the doctrines preached by contemporary Brāhmanic Hinduism.

The reader must not assume that this brief description of the fundamental doctrines of a religious movement which dates from the 12th cent. A.D. conveys an accurate picture of the prevalent Lingayatism of the present day. In connection with this attitude originally assumed towards caste distinctions, there has been a very noticeable departure from Basava's teaching. The origin of caste in India is as yet a subject requiring much elucidation. In its development no mean influence must be allotted to function, religion, and political boundaries. Nor can differences of race have failed materially to assist the formation of Indian society on its present basis. One of the most interesting phenomena connected with the evolution of modern caste is the working of a religious reformation in which caste finds no place on the previously existing social structure of caste units. Peacock is hereby a manifestation of deep-rooted prejudices tending to raise and preserve barriers between the social intercourse of different sections of the human race, it would seem unnatural to expect that it would tend to the breakdown of an essentially casteless religion so soon as the enthusiasm of the founders had spent itself; and it is not unlikely that the mere fact of converts having joined the movement at an early stage in its history would generate a claim to social precedence over the later converts, and thus in time reconstitute the old caste barrier that the reformers spent themselves in endeavouring to destroy. One of the most interesting pages in the history of caste evolution, therefore, must be that which deals with the evolution of caste inside the fold of a religious community originally formed on a non-caste basis. A remarkable instance of such evolution will be found in the history of Lingayatism. The Lingayats of the present day are divided into three well-defined groups, including numerous true castes, of which a description will be found. In the evolution of Lingayatism, the Lingayats of the present day are divided into three well-defined groups, including numerous true castes, of which a description will be found. In the evolution of Lingayatism, the Lingayat movement is the most important ceremony of all, known as the astavrana, or the eightfold sacredness, should be understood by the reader. It is commonly asserted nowadays by prominent members of the Lingayat community that the true test of a Lingayat is the right to receive the full astavrana, and that the possession of these eight rites only does not entitle the possessor to be styled a member of the community. The contention seems scarcely in harmony with the popular usage of the term ‘Lingayat.’

The astavrana consists of eight rites known as:

1. Guru
2. Linga
3. Vihūlti
4. Rudrākṣa
5. Manta
6. Jāgum
7. Tirth
8. Śrī

On the birth of a Lingayat: the parents send for the guru, or spiritual adviser, of the family, who is the representative of one of the five āchāryas, or holy men, from whom the father claims descent. The guru binds the linga on the child, bestows it with vikāra (ashes), places a garland of rudrākṣa (seeds of the bastard cedar) round its neck, and teaches it the mystic mantra, or prayer, known as Śrīmān Śrīmāna—i.e. ‘Obsequies to the god Śiva.’

The child being incapable of acquiring a knowledge of the sacred text at this early stage of its existence, the prayer is merely recited in its ear by the guru. Occasionally the double characters of guru and jāgum are combined in one person. When the child attains the age of eight or ten, the ceremony is repeated with slight modifications.

It will be seen that this eightfold ceremony forms a very concise test of a Lingayat's religious status, and may be used uniflightly compared to the rites of baptism and confirmation which are outward and visible signs of admission to the Catholic Church. But not all Christians are confirmed, and in the same way not all members of the Lingayat community undergo the full ceremony of initiation. It would be absurd to refer to the term 'Lingayat' to all wearers of the linga, whether they are entitled to the full astavrana on birth or conversion, or to a few only of the eight sacraments. In so doing, the lower social standpoint of the Lingayat community will not be excluded, as they would otherwise be, from the fold.

Lingayats are not permitted to touch meat or to drink any kind of liquor. The greater number of them are either occupied in agriculture or are traders. They are generally reputed to be peaceful and law-abiding; but at times they are capable of dividing into violent factions with such rapacity and hostility that the dispute culminates in riots, and occasionally in murder. Among the educated members of the community there is a strong spirit of rivalry with the Brāhmans, whose intellectual and political capacity have secured them a preponderant share of Government appointments. Except for these defects, the community may be described as steady and industrious, devoted to honest toil, whether in professional employment or occupied in trading or the cultivation of the soil.

2. History.—Until the recent publication of two inscriptions, which have been deciphered and edited by J. F. Fleet, and throw light on the probable origin of the Lingayat religion, the movement in favour of this special form of Śiva-worship was commonly supposed to
have been set on foot by the great Lingayat saint, Basava, in the latter half of the 12th century. The acts and doctrines of Basava and of his nephew Channabasava are set forth in two purānas, or sacred books, named, after them, the Basavapurāṇa (ed. Poona, 1903) and the Channabasavapurāṇa (ed. Mangalkar, 1831). But these works were not written until some centuries had elapsed since the death of the saints; and it seems certain that the substratum of fact which they contain had by that time been overlaid with traditions and miraculous occurrences as to render them of little historical value. The Basavapurāṇa describes Basava as the son of Brahman parents, Madiraja and Madalamba, residents of Bagarevi, usually held to be the town of that name in the Bijapur district of the Bombay Presidency. Basava is the Kannarese name for 'bull,' an animal sacred to Siva, and thus a connexion is traced between Basava and the god Siva. At the age of eight, Basava refused to be invested with the sacred thread of the twice-born caste, to which he belonged by birth, declaring himself a worshipper of Siva, and statistic, that he had come to destroy the distinctions of caste. By his knowledge of the Siva scriptures he attracted the attention of his uncle Baladeva, then prime minister to the king of Kalyan, Bijjala. Baladeva gave Basava his daughter Madimaro in marriage. Basave's wife was a daughter of a Vaishnav. His son was Subhri, who died young.

Subsequently Bijjala, a Kalachurthy by race, who usurped the Chalukyan kingdom of Kalyana in the middle of the 12th cent., installed Basava as his prime minister, and gave him his younger sister Nilalochna to wife. The purāna further recounts the birth of Channabasava from Basava's unmarried sister Nagalamba, by the working of the spirit of the god Siva. The myth, in connexion with this miraculous conception is interesting. Basava, while engaged in prayer, saw an ant emerge from the ground with a small seed in its mouth. He took the seed to his home, where it soon grew and blossomed and was later swallowed and became pregnant. The issue of this unique conception was Channabasava. Uncle and nephew both preached the new doctrines, and so doing encountered the hostility of the Jains, whom they ruthlessly persecuted. A revolution, the outcome of these religious factions, led to the assassination of king Bijjala and to the flight of Basava and his nephew. Basava is said to have been finally absorbed into the designs of Kundal, Son of Subhro, who, finally, in 1100, had lost his life at Uli in North Kanara, a district in the Bombay Presidency. An annual pilgrimage of Lingayats to the shrine of the latter at Uli takes place to this day.

Two important inscriptions bearing on these traditions of the origin of the Lingayata-adorning consideration. The first was discovered at the village of Managoli, a few miles from Bagarevi, the traditional birthplace of Basava. This record (as also many others) shows that king Bijjala gained the kingdom of Kalyan in a.D. 1156. It also states that a certain Basava was the builder of the temple in which the inscription was first put, and that Madiraja was mahādēvabhusa, or head of the village, when the grants in aid of the temple were made. Basava is further described as the grandson of Revadasi and son of Chandrakanta, and as a man of great sanctity and virtue. The second inscription was found at Abhir in the Dhawar district of the Bombay Presidency, and belongs to the year 1190. It relates the fortunes of a certain Eknattda-Ramayya, an ardent worshipper of the god Siva. Ramayya came into conflict with the Jains, and defeated them, both in dispute and, the inscription says, by performing a miracle. We may venture to say, by arranging matters so that he seemed to perform it—which consisted in cutting off his own head and having it restored to him, safe and sound, by the grace of Siva, seven days later. All this came to the notice of King Bijjala, who summoned Ramayya into his presence. And Ramayya, making his cause good before the king, won a present with gifts of lands for the temple founded by him at Abhir in the new faith. The incidents related of Ramayya are placed shortly before a.D. 1202, so that he would have been contemporary of Basava. No mention, however, of the latter or of his nephew is found in this record.

If we accept the contemporary inscriptions as more entitled to credit than the traditions over, and with myth recorded at a later date, it seems clear that both Basava and Eknattda-Ramayya, were reformers who had much to do with the rise of the Lingayat doctrine, and that the event is to be placed in the 12th century. Lingayat scholars of the present day, indeed, claim a far earlier date for the origin of their faith. But their contention that its origin is contemporaneous with that of Brahmanic Hinduism has yet to be established by adequate evidence. The best opinion seems to be that of Flett, who considers that there is no doubt that the present Lingayat sect is more or less a development of the gild (mentioned in many inscriptions) of the 500 Swamis of Aihole, a village in the Bijapur district, the protectors of the Vira-Ranaj religion, who were always more or less strictly Saivites, but, with a free-mindedness which is not now common, gave him his younger sister Nilalochna to wife. The purāna further recounts the birth of Channabasava from Basava’s unmarried sister Nagalamba, by the working of the spirit of the god Siva. The myth, in connexion with this miraculous conception is interesting. Basava, while engaged in prayer, saw an ant emerge from the ground with a small seed in its month. He took the seed to his home, where it soon grew and blossomed and was later swallowed and became pregnant. The issue of this unique conception was Channabasava. Uncle and nephew both preached the new doctrines, and so doing encountered the hostility of the Jains, whom they ruthlessly persecuted. A revolution, the outcome of these religious factions, led to the assassination of king Bijjala and to the flight of Basava and his nephew. Basava is said to have been finally absorbed into the designs of Kundal, Son of Subhro, who, finally, in 1100, had lost his life at Uli in North Kanara, a district in the Bombay Presidency. An annual pilgrimage of Lingayats to the shrine of the latter at Uli takes place to this day.

If we accept the contemporary inscriptions as more entitled to credit than the traditions over-
it. Mr. Karibasavasastri, Professor of Sanskrit and Kanarese in the State College of Mysore, contends that the Sāvia sect of Hindus has always been divided into two groups, one comprising the worshipers of the lingam, and the other who do not worship. The former he designates Vīraśaiva, and declares that the Vīraśaivas consist of Brahmans, Kṣatriyas, Vaisyas, and Śudras, the fourfold castes of ancient India. Quoting from the 17th chapter of the Paramēṣvara āgama, he declares that the Vīraśaiva Brahmans are also known as Sudhā Vīraśaivas, Vīraśaiva kings as Marga Vīraśaivas, Vīraśaivas as Mircra Vīraśaivas, and the Śudras of the community as Anteve Vīraśaivas. In his opinion, the duties and penances imposed on the first of these classes are: (1) the aṣṭaṣvara (see p. 70), (2) penances and bodily emaciation, (3) the worship of Śiva without sacrifice, (4) the recital of the Vedas. He further asserts that the Hindu aṣṭaṣvara, or conditions of life of brahmacārī, grhaṇātha, and sanyāsa, i.e., student, householder, and ascetic, are binding on Vīraśaivas, and quotes, from various Sastraik works, texts in support of this view. He furnishes a mythical account of the origin of Līngayats at the time of creation. The importance of this summary of his views lies in the fact that it is completely typical of the claims that many members of the Līngayat community have recently commenced to make. It is founded, in a sense, within the fold of orthodox Hinduism, with the mistaken notion of thereby improving their social standing. They endeavoured to divide themselves into Mānu's fourfold castes, the Kṣatriyas, Vaisyas, and Śudras, regardless of the fact that theris is in origin a non-caste religion, and that Mānu's scheme, which can only with great inaccuracy be applied to the more orthodox Hindu castes, is totally unrelated to the Līngayats. A sign of this movement towards Brāhmanic Hinduism among Līngayats is to be found in the organized attempt made by certain Līngayats at recent ceremonies to enter themselves as Vīraśaivas, and it seems probable that these claims to a great antiquity for their religion and for a caste scheme based on Mānu's model are chiefly significant as signs of the social ambitions of the educated members, who are jealous of the precedence of the Brāhmans.

3. Social organization.—The results of investigations undertaken in the Bombay Presidency in 1905, by the Hon. Dr. M. N. N. Patil, F. R. S., of the University of London, show that a group of the chief Līngayat castes is called the aṣṭaṣvara. It contains Preston, called the aṣṭaṣvara, the leading trade castes, or banjāra. It is probable that this group is the nearest approximation to the original converts who, it will be remembered, could intermarry and intermix without restriction. The seven subdivisions of this group may still dine together, but for purposes of marriage the subdivisions rank one above the other, and it is permissible for a bride from one subdivision to take a bride only from the divisions below his. The reverse process, namely, a bride marrying a youth of a lower division, is strictly forbidden. The system of this group may rise to the higher by performing certain rites and ceremonies. The marrying of a boy to a girl beneath him in social rank and of a girl to a boy above her is part of a system of incest and hypergamy, and is not as all uncommon in many Indian castes. It is a probable speculation that the early converts in course of time came to rank themselves with the more recent CONVERTS of the community, and the growth of this feeling would lead, in harmony with the ideas that prevail in all societies, to the early converts declining to weld themselves to the newcomers, though they would accept brida from the latter as socially inferior, if only slightly so. The Panchamalsis, as they may be called for lack of a better name, are all entitled to the aṣṭaṣvara rites, and rank socially above the remaining groups. In B. G. xxiii. 218 they are described as 'Pure Līngayats.'

(2) The next group is that of the 'non-Panchamalsis with aṣṭaṣvara rites. They are divided over 76 subdivisions, which are functional groups, such as weavers, oil-pressers, bricklayers, dyers, cultivators, shepherds, and the like. It seems probable that they represent converts of a much later date than those whom we have styled Panchamalsis, and were never permitted to interline or intermarry with the latter. In this group each subdivision is self-contained in regard to marriage; that is to say, a jātār, or weaver, must marry a jātār girl, or a bābā girl, or a carpenter, marry only a bābā girl, and so on, resembling in this respect the ordinary Hindu castes, which are usually endogamous. Members of one subdivision do not pass to another. The names of the subdivisions are commonly indicative of the calling of the members, and it is of special interest to note here how the barriers erected by specialization of function have proved a strong, for the original communal theories of equality which the Līngayats of early days adopted.

It is interesting to observe that considerable diversity of practice exists in connexion with the relations of the subdivisions of this group to the parent Hindu castes from which they separated to become Līngayats. In most cases it is found that, when a portion of an original Hindu caste has been converted to Līngayats, with intermarriage and the unconquered members are finally abandoned, and the caste is broken into two divisions, of which one is to be recognized by the members wearing the bābā, and the other by their wearing the sacred thread of the twice-born. But in some instances—e.g., the Jews of the Bijapur district—the Līngayat members continue to take brida from the non-Līngayat section, though they will not marry their daughters to them: it is usual to invest the bride with the hākakā at the marriage ceremony, thus formally receiving her into the Līngayat community. In other cases the Līngayat and non-Līngayat sections are divided and dine together at caste functions, intermarriage being forbidden. In this case, however, the former call it a jātār to perform their religious ceremonies, and the latter to perform their own. The more typical case seems to be that of a caste subdivision given in the following classification of the Report, 1903, ch. viii. p. 185. In the last century a Līngayat priest of Ujjaini converted a number of weavers in the village of Timnabudi, Bhārāpur district, Bombay, who abandoned all social intercourse with their former caste brethren, and took their place as a new subdivision in the non-Panchamal group under the name of Kurināras.

This second group of subdivisions, therefore, differs essentially from the Panchamalsis, though the members also have the aṣṭaṣvara rites. It is described in B. G. under the name of 'Affiliated Līngayats.'

(3) The third group of subdivisions is the 'non-Panchamalsis without aṣṭaṣvara rites. It contains washermen, tailors, shoemakers, fishermen, etc., which would rank as unclean castes among Brāhmanic Hindus. It is the practice among Līngayats of the present day to deny that the members of this third group are entitled to the aṣṭaṣvara rites of the Līngayats at all. They maintain that, since the possession of the full aṣṭaṣvara rites is the mark of a Līngayat, these lower subdivisions, who at most can claim three or four of the eight sacraments, are only the off-shoots of the lower Līngayat castes. The contention is not unreasonable; yet it seems that these lower orders would be styled Līngayats by the other Hindus of the neighbourhood, and would describe themselves as such. A classification of the Līngayat community would not there-
LINGAYATS

fore be complete unless they were included. On this point the evidence of J. A. Dubois is of interest.

He writes:

"A purush joins the sect he is considered in no way inferior to a Brahmin. Wherever the Nagaram is found, there, they say, is the throne of the deity, and the worship of Divinity is the sum total of what is known as the Hiru Manu, Customs, and Ceremonies," p. 117.

Lingayats of this description marry only within their subdivision. They are described as 'Half-Lingayats' in Bö.

Within the subdivisions just described smaller groups are found, known as exogamous sections, that is to say, groups of which the members are held to be so closely connected that, like blood-relations, they must marry outside their section. Little accurate information is available regarding the nature and origin of these sections; but it appears that in the higher ranks they are named after five Lingayat sages, Nandi, Bhupri, Ver, Vya, and Skanda, and in this respect closely resemble the ordinary Brähmanic gotras (q.v.). The Lingayats do not allow the children of brothers to intermarry, nor may sisters' children marry together. Marriage with the children of a paternal uncle or maternal aunt is similarly forbidden. A man may marry his sister's daughter; but, if the sister be a younger sister, such a marriage is looked on with disfavour. Marriage is forbidden between infant and adult, and the licence is neither recognized nor tolerated, but is punished, if need be, by excommunication. Polygamy is permitted, but is usual only when the first wife fails to bear a son. The disputes that arise on social or religious questions are settled by the panchayat, or committee of five elders, an appeal lying to the head of the math, or religious house. These mathas are scattered over the tract of country in which Lingayats predominate, but there are five of special sanctity and importance, namely, at Ujjiani, Shrídari, Kolhapur, Belchal, and Benares. From these, decisions on vexed questions of doctrine and ritual issue from time to time.

4. Beliefs and customs.—It has been seen that the Lingayats are believers in the god Śiva, the third person of the Hindu triad, signifying the creative and destructive forces in the universe. They derive the phallic, or linga, emblematic of reproduction, and the sacred bull, Nandi or Basava, found in all their temples, and in all probability the emblem of strength. The ceremonies connected with sacrifices, betrothal, marriage, and death have been accurately described by R. C. Carr in his monograph on the Lingayat community (Madras Government Press, 1900), and are given below.

One principal Lingayat ceremony known as the aṣṭavāna, or eightfold sacrament, has been already referred to in some detail (p. 70 above). The essentially Lingayat beliefs and ceremonies, such as the wearing of the linga, the worship of the jaṅga, and the administration of aṣṭavāna rites, are, however, as usual in India, constantly mingled with many commonplace Hindu beliefs and customs. It is a common practice in India for Hindus to worship at the altars of Musallāṁ pīrā, or saints, and in the same way Lingayats will combine the worship of the special objects prescribed by Basava with the worship of purely Hindu deities such as Hanumān, Ganesa, Yellamma, Maruti, and many others. The investigations hitherto conducted do not clearly show how far Lingayat and Hindu ritual are liable to be combined; but it can be confidently asserted that the lower orders of the community—those who still keep in touch with the unconverted section of the caste to which, professionally speaking, they belong, will be found to adhere in many instances to the beliefs and customs of their unconverted fellow castes, despite the teaching and influence of the jaṅga.

The specially Lingayat ceremonies described by Carr are:

(1) Birth.—It is customary for the female relatives attending a confinement to bathe both mother and child. On the second, and third day in the ceremony of the offering of food, sam leaves, and a coconut, is customary for the safe suckling of the child. When the child receives the tirth, or water in which the jaṅga's feet have been washed (see above, p. 70), the mother also partakes of it.

(2) Betrothal.—For a betrothal the bridegroom's family come to the bride's house on an auspicious day in company with a jaṅga. They bring a woman's cloth, a jacket, two coco-nuts, five pieces of turmeric, five lines, and betel-leaf and areca-nut. They also bring flowers for the simalka (a cap of flowers made for the bride), gold and silver ornaments, and sugar and betel-nut for distribution to guests. The bride puts on the new clothes with the ornaments and flowers, and sits on a folded blanket on which fantastic devices have been made with rice. Some married women fill her lap with coco-nuts and other things brought by the bridegroom's party. Music is played, and the women sing. Five of them pick up the rice on the blanket and gently drop it on to the bride's knees, shoulders, and head. They do this three times, with both hands; sugar and betel are then distributed, and one of the bride's family proclaims the fact that the bride has been given to the bridegroom. One of the bridegroom's family then states that the bride is accepted. That night the bride's family feed the visitors on sweet things; dishes made of hot or pungent things are strictly prohibited.

(3) Marriage.—The marriage ceremony occupies from one to four days, according to circumstances. In the case of a four-day marriage, the first day is spent in worshipping ancestors. On the second day rice and oil are sent to the local math, or religious house, and oil alone to the relatives. New pots are brought with much shouting, and deposited in the god's room. A marriage booth is erected, and the bridegroom site under it by side with a married female relative, and goes through a performance which is called sarīgā. An emerger, or young man, is made round them with cotton thread passed ten times round four eartn pitchers placed at the four corners. Five married women come with water and wash off the oil and turn with which the bride and the bridegroom and his companions have been anointed. The matrons then clothe them with the new clothes offered to the ancestors on the first day. After some ceremonial the thread forming the enclosure is removed and given to a jaṅga. The sarīgā being now over, the bridegroom and his relative are taken back to the god's room. The bride and her relative are then taken to the pūndel, and another sarīgā is tied to his forehead, and he returns to the house. In the god's room a pānīkēlād, consisting of five metal vases with betel and ashes, has been arranged, one vase being placed at each corner of a square and one in the middle. By each koḷād is a coconut, a date fruit, a betel-leaf, an areca-nut, and one pice tied in a handkerchief, one passed round the square, and round the centre koḷād another thread, one end of which is held by the family guru and the other by the bridegroom, who sits opposite him. The guru wears a ring
made of kusa grass on the big toe of his right foot. The bride sits on the left-hand side of the bridegroom, and the groom ties their right and left hands respectively with kusa grass. The joined hands of the bride and bridegroom are washed, and bītes (Epiglottis marcello) leaves and flowers are offered. The officiating priest then sanctifies the neck ornaments and the thread, ties the latter on the wrists of the joined hands, and gives the former to the bridegroom, who ties it round the bride’s neck, repeating some words after the priest.

The tying of the tali is the binding portion of the ceremony. Before the tali is given to the bridegroom, it is passed round the assembly to be touched by all and blessed. As soon as the bridegroom ties it on the bride, all those present throw over the pair a shower of rice. The bridegroom places some cummin seed and jādi, or unrefined sugar, on the bride’s head, and the bride does the same to the bridegroom. Small quantities of these articles are tied in a corner of the cloth of each, and the cloths are then knotted together. The bride worships the bridegroom’s feet, and he throws rice on her head. The newly married couple offer fruits to five jāngams, and present them with rice. The bride and bridegroom wash their feet, and offer presents, and the proceedings of the day terminate.

On the third day, friends and relatives are fed. On the fourth day the bride and bridegroom ride in procession through the village on the same bullock, the bride in front. On returning to the house they throw scented powder at each other, and the guests join in the fun. Then follows the wedding breakfast, fast, etc., which the near relatives are admitted to.

The married couple worship jāngams and the elders, and take off the consecration thread from their wrists and tie it at the doorway. The five following days are regarded as childless ancestors, and (c) men who have died a violent death.

Among Lingayats widow remarriage is common, and divorce is permissible. The ordinary law of Hindus is followed in regard to inheritance. Lingayats regard their jāngams, or priests, as incarnations of Śiva, and will bathe their linga in the water in which the jāngam has washed his feet; thus they render holy. They have numerous superstitions regarding good and bad omens. Thus, it is lucky to meet a deer or a dog going from right to left, whereas the same animals passing from left to right will bring ill luck (monograph on Lingayats by B. C. Carr). They do not observe the pollution periods of the Hindus, and their indifference to the ordinary Hindu purification ceremonies is notorious (Dubois, p. 168).

Members of other religious communities who wish to become Lingayats are called on to undergo a three days’ ceremony of purification. On the first day they allow their faces, hands, and feet to be shaved, and bathe in the products of the cow, which alone they may feed on and drink that day. The second day they bathe in water in which the feet of a jāngam have been washed, and which is therefore holy water. They eat sugar and drink milk. On the third day they take a bath described as paniṣhtā, i.e., they apply to the head and body a paste made up of plantains, cow’s milk, clarified butter, cards, and honey, and wash it off with water; they again drink the fīth, or water in which the feet of a jāngam have been washed, and are then invested with the linga, after which they are allowed to dine with Lingayats, and are considered members of the community. Women undergo the same ceremony, except the head-shaving.

5. General remarks.—It will be gathered from the foregoing account of the origin and present-day social organization and customs of the Lingayats that the community is virtually an original casteless section in process of reversion to a congested society holding a common religion. The community has been seen how, in the 12th cent., a movement was set on foot and spread abroad by two Brahmans, Ekanadga-Ramayya and Basava, devotees of Śiva, to abolish the ceremonies and restrictions that fettered the individual. The first result of this was the formation of orthodox Hindu society of the period, and to
establish a community on a basis of the equality of its members, irrespective of sex, by means of the
paritying worship of the one god Siva.

clear that the movement found special favour in
the eyes of the Jain traders of the period, who
would have ranked, as Vaishyas, below both Brahm-
man priest and Kṣatriya warrior under the Hindu
scheme of varna and jāti. The community encountered
the hostility of the Jains, who remained
unconverted, but clung tenaciously to its simple
faith in the worship of Siva, and in his emblem, the
linga. We must assume that the community thus
converted, of whose existence we possess historical evidence, tended by degrees to
assert for themselves social precedence as ayyas or
jaigamis, i.e. the priests of the community, for
which position their knowledge and descent would
give them special fitness. In time, indeed, they
came to be regarded as the very incarnations of the
god Siva, and thus they were holy, imparting holiness in a special degree to the water in which
they had bathed their feet, known as thirth, so that
it plays a prominent part to this day in the Linga-
yat ceremonies. Once the original notion of uni-
versal equality of rank had yielded to the preva-
lence of a system incompatible with such equality, the
way was prepared for the introduction of further
social gradations, and the older members of the
community commenced to claim the non-converts on
the latter part of the line the priests had established against them. In such a
manner the essential doctrine of equality became
completely undermined, and in the end gave place to the system of jātis as the test of Linga-
yat orthodoxy. Thus, when the more recent
cases of caste conversion occurred, a section of a
Hindu caste became Lingayat, not as the founders of the religion were desired, but in order to
secure a footing of equality on the common
ground of the worship of Siva and with the emblem of the
linga, but by investiture through certain rites
and ceremonies with the linga, retaining their dis-
tinctive social status as a functional caste, with
which other Lingayats would neither marry nor
dine. It must be admitted that in the case of the
majority of Lingayats the last class will take
place, but here all traces of the original equality cases; and the Linga-
yats of to-day present the curious and interesting spectacle of a religious sect broken in the course of centuries into social fragmentations, in which the older
sectates remain essentially sectarian, and the more
recent in origin possess the typical attributes of
ordinary Hindu castes. As in the case of Christ-
fandly in some parts of India, the social barriers of
 caste have proved too strong for the communal
basis of the orthodox religion.

R. E. Enthoven.

gLING CHOS.—The gling chos (gling-myst-
ology), or gling glu (gling-song), is the mythology
contained in Tibetan folk-lore, and is probably the
most ancient religion of that country. It is dis-
tinguished from the ancient mythology of India
such as Finland and Russia by the fact that it
has not to be pieced together from fragmentary
allusions. It has spread through the whole range of
Tibeto-Burman folk-lore, but can be gathered from com-

plete hymnals and catechisms, in which the gling
chos has been preserved for us almost untouched.

1. Is the gling chos the ancient religion of West
Tibet only or of the whole of Tibet?

Although the present writer's materials were
collected exclusively in West Tibet, it is probable
that the gling chos was the ancient religion of
the whole country. (1) We are informed by
a lama of Tashilhnbemo (in Central Tibet) that
an endless variety of versions of the Kesar-saga
(not the Kesar-epic, which belongs to the sect of
Lamaism) are known to him, while the gling chos
is the case in Ladakh (Western Tibet), where each
village has one or more versions of its own. (2) In
the legends of Milaresa there are embodied
several gling glu. Milaresa seems to have been
extremely clever in building a bridge from the
linga chos to Lamaism. He was a native of
Eastern Tibet, Kham chen abying lgra (or the
Kanchanjunga) being his native country. But,
even if the gling chos can be proved to be, terri-
ctorially, a real Tibetan religion, the question still
remains whether it is the original property of the
Tibetan (Indo-Chinese) race or belongs to the
Mon and Bedja, the people who are the principal
preservers of it at the present day, and who are
not of Indo-Chinese, but possibly of Aryan and
Mundari, stock.

2. Cosmology of the gling chos.—In all the
sources mentioned below, in the Literature, three
large realms are spoken of:

1. stang lha, heaven (literally 'the upper
gods,' or 'the gods above')—A king named
syang lha called skyer rizong snyamp. He is
also called dbangpo rgya'byin, and dbum kyi
rgyalpo. The name of his wife, the queen of
heaven, is btsur dman rgyalmo Ani btsa'rgyang,
or dbum kyi rgyalmo. They have three sons,
Don yod, Don lida, and Don grub. The youngest
is the most prominent figure. 'Lightning flashes
from his sword out of the middle of black clouds.'
Don grub descends to the earth and becomes
Kesar of gling. According to one theory, thunder
seems to be caused by the walking of the gods,
and, according to another, it is the groaning of the
dragon-shaped drung, dwelling in the dark clouds,
when it is assailed by Kesar with his sword of
lightning. Three daughters of the king of heaven
are also mentioned.

The life of the gods is an idealized form of man's
life. They constitute a State, with king, ministers,
servants, and subjects. They abide in perfect
happiness, and live, free from illness, to a good
old age. They tend, apparently on the earth,
certain goats known as rgya. These they must
defend against the devil bDud. Kesar later on
discovers many of the lha ra in the latter's realm.
The king and the queen often change their shape.
The former becomes a white bird or a yak, and
the latter takes the shape of a woman, a dzo
(hybrid between a cow and a yak), a golden or
turquoise fly, or a dove.

2. Bar blo ma, the earth (literally, 'the firm
place in the middle')—Other names are mi yul.
land of men,' and gling, 'the continent.' The
principal deity of this earth is mother Skyabs
bdu (or Skyabs mdun). It is probable that he
is identical with btags, the god of the earth (H. A. Jäschke, Tibetan-English Dictionary,
London, 1881). She rides a horse called dtsha
rta dmar chung. Of her subjects, the human
race, we do not hear much in the texts.

1 Some of these gling glu will be found in B. Lauter's 'Zwei
Legenden des Milaresa,' in AKW II. (1911) 109-123, ngsi
ngag 'bras dan dbyin, etc.; 133-134, sngag phyag pa rgyalmo
gyer mi shab, etc.; 135, sngag phyag pa rgyalmo tshul khrims,
etc.

2 This is the actual pronunciation. In literature the name is
usually btags bstan phyag (Saktasatra or Indra).
gLING CHOS

18. eighteen agus (see below) take the part of human beings.

(6) YOG klu, the under world (literally, ‘the nêgas below’).—Like sTang lha, YOG klu is also a State. There is a king called Jogsopo (probably Joganpo is meant), with his servants and his subordinates, remarkable for the large number of their children. The klu, or nêgini (female nêgas), are famous for their beauty, and Kesar is warned not to fall in love with them. For this reason, when present at the Ladakh, women still desire to look like klu, and wear the perag or berag, a leather strap set with turquoise. This perag represents a snake growing out of the neck of a human body, which, according to Indian Buddhist art, is the characteristic mark of nêgas.

3. The colours of these realms.—The most original system of colours seems to be contained in the Sheh version of the Kesar-saga. According to it, the colour of sTang lha is white—perhaps the colour of light; Bar bsran is red—perhaps on account of the reddish colour of the ground; and YOG klu is blue—this may be due to the deep blue colour of many Tibetan lakes. The klu generally live in the water.

According to the Lower Ladakhi version of the Kesar-saga, the colour system is as follows: sTang lha is white; Bar bsran is red; and YOG klu is blue. A still more advanced stage is represented in the Mongolian version (which is without doubt based on that of Tibet). Here sTang lha is white; Bar bsran is yellow; and YOG klu is black. The change from red to yellow has probably something to do with Tsong-Kha-pa and his reformation of Lamaism.

4. The devil bDud.—Occasionally, to the three realms of the world a fourth is added, that of the devil bDud, and then all the three realms become united in opposition to this new realm. The colour of the devil and of his realm is black (Sheh version) or violet (Lower Ladakhi version). It is situated in the north. The devil tries to carry away the goats of the gods. He is in possession of a beautiful castle, great treasures, and a girl who is kept in a cage. Not until the castle is the well of milk and nectar. In size, appetite, and stupidity he closely resembles the giants of European mythology and folklore. There seems to be a close connexion between YOG klu and the devil’s realm, as they both appear to go back to similar ideas. But gradually the devil developed into a morally de- testable character, while the klu did not. Other names of the devil bDud are bRag sgra (‘ogre’), and sDrung (‘sinner’).

Of a very similar nature is agu Za. He is probably a mountain- or cloud-giant. He devours not only Kesar, but also sun and moon.

5. The seven and the eighteen agus.—Next to Kesar, the greatest heroes of the Kesar-saga are the eighteen agus. Kesar is their leader, and together with them they form a group of nineteen beings, in whom the present writer is inclined to see personifications of the twelve months plus the seven days of the week. Just as India had a group of seven adityas before there were twelve, we find occasionally a group of seven agus who act by themselves, the others being forgotten. There is a female agu among the group of seven, and there is always a traitor among the agus. They are described as having non-human heads on human bodies, thus belonging among the heroes to the Chinese representations of the zodiac. The list of the eighteen is as follows:

1. Pbaang ladan ru skyes, with a goat’s head.
2. Khraim ngi khoi thun, with a falcon’s head.

The word dargins, ‘red’, is also used for ‘brown’. Cf. the traditional interpretation of the word ‘Adam’.

4. Gna gyan (digion), with a white beard.
5. sKya rgo-pa, with a soup-spoon for a head.
6. sKha, lhanangpo, with a mop for a head.
7. sMi dpon gon-pa, with an arrow-blade for a head.
8. Aka yong go, with the sole of a boot for a head.
9. Aka dge ba lung ba, with a woman’s head.
10. Shesbyi bzhung, with a concave mirror for a head.
11. Sgna gnon-pa, with a colt’s head.
12. Sdu lung ba, with a hand for a head.
13. sRa lung srang, with a foot for a head.
14. sRong sga ldam-po, with a donkey’s head.
15. sKha bzhin ldam-pa, with a man’s head.
16. sDpal rgo-pa, with an old man’s head.
17. sPa yon ma shes, with a turquoise for a head.
18. sKha dgar-pa, with a white shell for a head.

The following is the list of the seven agus:
(1) sDpal, (2) sKyi, (3) Gonpo, lhanpa, (4) Thaba migi rab, (5) sRa yon ma shes, (6) sDpal dpon gon-pa, (7) sDpal moyi.

Both lists are from the Lower Ladakhi version. Certain names will be found to differ in other villages. It looks as if there were not much hope of finding the clue to this ancient zodiac.

6. The Lokapalas.—There is some likelihood that the gLING CHOS has always had duties for each of the four cardinal points. It is quite possible that the Indian Amoghásiddha, Vajrasattva, Ratnasambhava, and Amitābha were deities of the four quarters before they became Dhyānabuddhas. In close correspondence with them we find in the gLING CHOS the following deities of the four quarters: Don yod grub pa, North; sRarje sem sda, East; Rinchen byung Idan, South; sNamzha mtha’ yas, West. It is not necessary to assume that these deities were introduced from India together with Buddhism. It is more likely that the names represent an instance of mutual influence between pre-Buddhist Tibetan and Indian mythology. The name Don grub, which corresponds exactly to the Indian Siddhārtha, was not necessarily introduced with Buddhism. Siddhārtha was a common name in India long before Buddha’s time, and may belong to a deity similar to Don grub and Don yod grub pa of Tibet. There are also four ‘kings’ of the four quarters, who correspond more closely to their Indian equivalents, and may therefore have been received from India; but even these have nothing to do with Buddhism. Like the deities mentioned above, they belong to the four quarters, and to nothing else in the gLING CHOS.

7. The Tree of the World.—It is called the ‘king-willow’, or the ‘far-spreading willow’. It has its roots in YOG klu, its middle part in Bar bsran, and its top in sTang lha. It has sixteen branches, on each branch a bird with a nest and an egg. On the first branch there is the huge bird Khung with a golden egg; on the second, the wild eagle with a turquoise egg; on the third, the bird ‘white-head’ with a pearl-white egg; on the fourth, the eagle ‘white-kidney’ with a silver egg; on the fifth, a snow-pleasant with a coral egg; and, on the sixth, the white falcon with iron egg.

8. Outline of the Kesar-saga.—

(1) Prolegomena to the saga: the creation of the earth. The forefather and his wife now some seed which grows into a huge tree, the fruits of which are gathered into a barn. There the trees become changed into worms, which eat one another until one huge worm is left. This worm becomes the child Don yeum ma, the child of seven miles. The child kills agus with nine heads, and builds the world (gLING CHOS) out of its body in seven days. Don yeum ma is married to eighteen girls, to whom the seven women give birth. The agus, eager to gain riches, start for the castle PaChal dgal dang. Agus dPalle arrives there first of all, receives the riches, and burns the prophecy about what will happen in the course of the Kesar story.

(2) Birth of Kesar.—Agu dPalle rescues the king of heaven in his fight with the devil, in the shape either of yaks or of birds. He is allowed to ask a boon, and asks that the three sons of the king of heaven may be sent to the earth as kings. All the sons are asked, and Don grub, who is the ablest in spite of his youth, decides to go. He dies in heaven, and is reborn on earth to Gog bhang Ihamo. (The name Kesar or Keynes is spelled in full in ege year, and is said to have been given to the province of this story; it means ‘the reborn one’.) The conception arises from Gog bhang Ihamo’s eating a bat, and the child is born
gling chos

through the ribs. It is of a most ugly shape, but at pleasure exchanges this for a beautiful shape, with sun and moon and all kinds of animals.

is a green on a pain where she is gathering roots, not knowing how to teasing. Abhirguanma is to be married to the trader among the agus, but Abhirguanma wins her through his skill in hunting by aMF

then he sees them in his ugly shape, and treat him with contempt, they see him to be a beautiful shape, but at once he throws it off and sends hail and rain. Her parents say that their daughter will be given to the man who brings the black lamb (a yak with a black coat like a cloud), and who will bring a wing of the bird Nyima kyungbye (the black bird like a sea). The agus try to get the man, but only success. Now he is accepted as son-in-law, and the wedding is celebrated. (Here Abhirguanma's victory over the giant of the north.—After religious preparations Abhirguanma decides to start. He first gives a feast to Abhirguanma, and allows her to accompany him, but the queen of heaven sends her back. In the castle of the same name as the agus, he makes the preparations. He has a magnificent time together until the devil returns. Before his arrival has Abhirguanma is digging in a mysterious way. Although the devil smells the presence of a human being, and although his book of names indicates it is a young man, but is sent back with ridicule. She has to submit and become the wife of the king of the agus. Still she is not satisfied with the king of the agus, as she is not satisfied with the king of the sea

ues abhirguanma takes her seat, and the king of the agus does not return, the king of the agus tries to kill the devil with a big spear, but the devil escapes. Abhirguanma slays the devil with her sword. So she becomes the wife of the king of the agus and the king of the sea.

King of the agus.

(1) The journey to China.—The Tibetan word for China—rma'gchi (black expanses).—Kesar practices acc

(2) The story of Kesar's boy.—Kesar's wife, the king of China, decided to go to Kesar's land to heal the king. He sends the trader agus, Kharl (thing, in his place. Then he stands himself. The journey is one of obstacles, with hills, lakes, and mountains, etc.

is one of obstacles. All are overcome, and on Kesar's approach the king of the agus becomes intelligent and says the words, gift. All is given to Kesar's daughter (Yi, to whom he has been engaged in marriage. Then he throws him into a pit with three dragons, which he does not mind much. He escapes in the shape of a yaks, and kills the king of the agus and the king of the sea.

the agus has been gone back to gling chos, and King Kesar is in the castle, and sent the agus. He is punished, and Kesar lives in happiness with his wife and two sons. The leprosy in China is stopped by another mysterious leprosy of the agus.

(3) The story of King Kesar in the gling chos—Kesar and Abhirguanma have a son, born in Kesar, named by Abhirguanma, but the king of China takes him. Then it is out of the agus, and the king of gling chos.

(4) The story of Kesar in the gling chos—Kesar and Abhirguanma have a son, born in Kesar, named by Abhirguanma, but the king of China takes him. Then it is out of the agus, and the king of gling chos.

9. Is the Kesar-saga a myth of the seasons?—This is the present writer's idea from the first. As he was, however, assailed by several critics on account of it, he did his best to abandon it. But, when editing the 'Lower Ladakht version of the Kesar-saga' for the Bibliotheca Indica, he has again, given back to his former position, and he cannot help believing that myths of the seasons (mixed up, perhaps, with other materials) are contained in the Kesar-saga. Only a few instances may be noted: sun and moon are attributes of Kesar's beautiful shape; rain and hail of his ugly shape; he wields the sword of lightning 'in the middle of black clouds'; there is a full description of spring given on the occasion of Kesar's return to gling chos (see above, § 8 (5)); the agus seem to point to an ancient zodiac; winter is apparently compared to leprosy; together with Kesar's departure (probably in winter) the male animals leave the female, to pass the winter in the male, as if they had with the hope of drink of new life; Kesar's enemies are powers of darkness; the giant of the north; the king of Her, also in the north; China is the black expanse.

10. Relationship to other mythologies.—As has become evident, there are great similarities between the gling chos and the mythologies of various Aryan nations. This, however, does not mean that much, for even the mythologies of North and South American tribes have much in common with European mythologies. But we must call attention to one particularly striking incident. The story of the Tibetan herb with the root in the shape of an agus, and the lama, with the root in the shape of a gling chos.

The similarities are the following: both heroes have the vulnerable spot on the shoulder; both wear invisibility capes; both are shot with magic arrows; with both of them the vulnerable spot is pointed out by a woman who belongs to the side of the hero. This is remarkable, because the corresponding Greek story for instance, is greatly at variance with both of them, although there is an ethnic relationship between the Greeks and the Teutons.

11. gling chos and Lamalams.—It is not at all impossible that the gling chos should have exercised an influence on Lamalams. The following are a few instances. (1) With regard to the colours, white, red, and blue, there is a certain correspondence between the realms of heaven, earth, and underworld on one side, and screws, (2) Jam dbyangs, and Phyag rdo on the other. But with regard to their characters it is difficult to see a closer agreement. The three mendok rten of three different colours, white, red, and blue, seems originally to represent the three realms of the gling chos, but are at the present time explained as having been erected in honour of the three Bodhisattvas. If this explanation is really true, it remains a strange fact that the mendok rten in the middle was always painted red, and not yellow; for yellow is the correct colour of Jam dbyangs. Thus the custom of erecting three mendok rten of three different colours seems to have its roots in the gling chos, and in the Kesar-saga we often hear of the existence of three lha tho of the same colours, the presence of these mendok rten of the Kesar-saga is also common. The story of Strong-tsetan Gan-po with his two wives, the green and the white sromlams, may have been influenced by the story of Kesar and Abhirguanma. Thus Abhirguanma is addressed as the bride of the gling chos. Oh, then milk-white fairy ' and Kesar's bride from China is called Yi. (d) the horse of the gling chos, the turquoise goddess. Kesar is
even called, in historical works, a suitor to the white stūriṃkha. (3) There can be hardly any doubt that the system of colours as we find it in the g Ling chos has influenced the pantheon of Lāmāism with its white, red, blue, green, yellow, and golden-faced deities. Such a system is found for all the objects, and is often surrounded by a white beard; in no. 1, ru skyes means ‘horn-producer,’ or goat. As for the group of seven agus, which has much in common with the hero of such folk-lores as, e.g., ‘Seimspennons durch die ganze Welt,’ in the instance of no. 5, the ability to see clearly is indicated; in the name of no. 5, the ability to hear clearly; in no. 6, to shoot well. There are certain names occurring in the g Ling chos which are not of Tibetan origin; thus in the word sgegs in the name sgenge dkarma yu ralcan, ‘white lions’ with the turquoise locks,’ the personification of the glacier has something to do with the Indian word Yumnam, the name of the smith Hemis, who teaches Kesar, the first part hem seems to be the Indian word hima, ‘snow.’

We find the word dem in the sense of ‘snow,’ also in the name Hembas, which means ‘snow-capped’ and such Indian names as ‘Kesamaster,’ Sitāram, Sātā and Rāma, and Indra occur occasionally in the g Ling chos—which shows what an important part India has played in the shaping of certain tales of this ancient religion.

14. Animism in the g Ling chos.—Here we may mention the following personifications: skyes, the wind; dbang chag zilbu, the rain; sngags dbereg ymuk ralcan, the glacier; bya Khyung dbyung nyima, (apparently) the sun; byasa dkarpo, the moon; bya mo mgur dmar, the morning-star; rgyan, spirits living in rocks and trees. It is remarkable that several of these personifications are mentioned in the various generic terms of the animal world. Some of such representatives are: nyama yea mgur, for fishes; bya rgyal rgyopo, for birds; Khyung byang kha dmar, for horses; Brong byang rgyo, for yak.

15. Festivals of the g Ling chos.—(1) The Lo-yar, or New Year’s festival, is the festival of lamps and lights. Pencil-cedars are used for the decoration of houses. There are horse-races, and a goat is offered before a white thu tho (altar of the g Ling chos). The heart is torn out of the living animal and offered to the thu. In the monasteries mask-dances were probably intended, originally to show the victory of the coming spring over the demons of winter. Only at Hemis do the mask-dances take place in June, perhaps as a last remnant of a former festival to celebrate the highest point reached by the sun. (2) Storm phangces. This is the spring festival of driving out winter. At Kalalatse a clay figure of human shape is carried outside the village and destroyed there. At other places the spirits of winter and disease are banished into magic squares of sticks and strings (doame) and destroyed outside the village. (3) The Kesar-festival. The festival is called ‘Kesar-festival’ only in Upper Kanawar. In Ladakh it is called mla phangces, ‘arrow-shooting.’ It is celebrated in spring. The g Ling glu is played and sung; and the boys assume themselves with the goddess. There are processions round the fields to bless them, the thu tho (altars) are decorated with fresh twigs, and pencil-cedars are burnt. (4) The Scrub thu, or harvest festival. In Skyrupchau the boys dance with poles covered with scarlet alpaca. Offerings of grain are carried to the monasteries. The dates of all these festivals are fixed by the lamas, and the lamas take part in them.

16. Meaning of the g Ling chos.—In the course of this article some of the names of the g Ling chos are given with their English translation. The author has not ventured to translate all these names, because scholars are at variance with regard to the meanings of certain of them. In the names of the eighteen agus there is always contained the distinguishing mark of the agu which forms his head; thus in no. 2, rissempopo means ‘lizard’; in no. 4, kha gyem means ‘mountain’ surrounded by a white beard; in no. 1, ru skyes means ‘horn-producer,’ or goat. As for the group of seven, this has much in common with the hero of such folk-lores as, e.g., ‘Seimspennons durch die ganz Welt,’ in the instance of no. 5, the ability to see clearly is indicated; in the name of no. 5, the ability to hear clearly; in no. 6, to shoot well. There are certain names occurring in the g Ling chos which are not of Tibetan origin; thus in the word sgen in the name sgenge dkarma yul ralcan, ‘white lions’ with the turquoise locks,’ the personification of the glacier has something to do with the Indian word Yumnam, the name of the smith Hemis, who teaches Kesar, the first part hem seems to be the Indian word hima, ‘snow.’

We find the word dem in the sense of ‘snow,’ also in the name Hembas, which means ‘snow-capped’ and such Indian names as ‘Kesamaster,’ Sitāram, Sātā and Rāma, and Indra occur occasionally in the g Ling chos—which shows what an important part India has played in the shaping of certain tales of this ancient religion.

17. Literature.—It must be admitted that all the following publications are one man’s work. They have all passed through the present author’s hands. It may, however, be stated that in no case did he write down the texts to the dictation of a native; he always employed natives to record them from the dictation of such other natives as were famous for their knowledge of this ancient literature.

LITANY.—A litany, according to the modern use of the word, may be described as a devotion consisting of a number of short petitions or invocations, to each of which a response is made by the people. It may be either said or sung; it may be either processional or stationary; it may be liturgical, i.e. connected with the celebration of the Holy Eucharist, or independent, and it may be for regular use or used only on special occasions. The processional psalmody which is not of the responsive form is not in fact a liturgical act and is usually a liturgical form of two forms of devotion which were originally distinct, but which have coalesced to form the modern Litany. These are the liturgical responsive prayer and the procession.

1. Earliest use of the word.—The word Ayana is not common in classical Greek, and it seems to be used in the quite general sense of a supplication. The earliest mention of the word in connexion with Christian services appears to be Basil (c. A.D. 375; Ep. civii. ‘ad Cler. Necos.’ [Opera, iii. 311 D]).

2. Objects.—Basil had raised to some innovations which Basil had made. ‘These things were not, the editors of the Greek text, the days of the great Gregory’ (i.e. Gregory Thaumaturgos, c. 354).

3. Neither...Basil’s, were the litanies which you now use. And I do not say this by way of accusing the foe; but I would that you all should live in tears, and in continual repentance.’
These litanies were, therefore, penitential devotions of some kind, but there is nothing to indicate their precise character. The word rogatio was used in a similar general sense in the West.

2. The liturgical litanies of Eastern church worship is that contained in the Apologies of Justin Martyr (A.D. 148). Here common prayers are spoken of for ourselves and for all others in every place, immediately before the blessing of Peace and the Offertory, and after the lessons and homily (Apok. i. 95). Whether these already took the form of the later litany there is nothing to show, and the response ‘Kyrie Eleison’ is not yet mentioned. And there is simply no further detailed information about the form of service until the liturgies which date from about the end of the 4th century. Here, however, the liturgical litany is found in the form in which it has preserved in the Eastern Church ever since. It consists of a number of short petitions offered by the deacon, to each of which the people respond ‘Kyrie Eleison’, and the most usual place for it is after the Gospel, but this is not invariable. Some litany of this kind appears to be almost universal in the Eastern liturgies. Many examples will be found in Brightman (Liturgy of Eastern and Western Masses, p. 471, all belonging to the 4th cent.). The usual name for these devotions in the East is not ἁρακία, but ἱερές (lit. ‘stretched out’, i.e. the earnest prayer), ὑπαγών (continuous). There is nothing to show when Kyrie Eleison was first used in the services of the Church, but as its use is almost universal in the Eastern liturgies it must have been very early, and the expression is so natural and would be so easily suggested by passages of the OT, that no explanation of its introduction is necessary. It was also used among the heathen, as was pointed out by Claude de Vert (Exposition simple, littérature et histoire des cérémonies de l'Eglise, Paris, 1706-13, i. 94; cf. Epitomé, Diss. ab Arriano dispute, ii. 7). The Pericarpion Sileia (ed. G. F. Gamurrini, Rome, 1888, p. 47) mentions the Kyrie as one of the litanies pronounced at Jerusalem the day before the deacon’s name in the litanies mentioned above as belonging to the 4th century.

3. The liturgical litanies in the West.—It is probable that the Western litanies originally contained litanies closely similar to those of the East. This was certainly the case, as far as can be judged from their scanty remains, with the liturgies of the Gallican and Ambrosian type. The extant forms bear the closest resemblance to the Eastern litanies, and may in some cases be translations from the Greek (see some examples in L. Duchesne, Christian Worship, pp. 186-201; F. E. Warren, Liturgy and Ritual of the Celtic Church, p. 229). There is little doubt that there was originally a litany of the same character in the Roman liturgy also, and that the Kyrie at the beginning of Mass was a relic of it. There is also another place in the service which should be noted. After the Gospel the priest says ‘Oremus’, but no prayer or response follows; and this was so at least as long ago as the 6th century, as appears from the Orihales Romani. Some prayers had evidently fallen out of the service even at that early date, and these were undoubtedly the Prayers of the Faithful, which occur in this place in the Eastern liturgies, and which are still preserved in the Roman rite in the prayers used on Good Friday. Probably these prayers dropped out of use because they were transferred, in substance at least, to the litany which came at the beginning of the service. St. Gregory the Great (Ep. ix. 12), when speaking of the use of the Kyrie, mentions other devotions that accompanied it, and which were no doubt a litany. In the present service only the Kyrie remains, and this is curious because the Kyrie was probably an addition made to the original litany from the East, so that it would seem that the original prayers have disappeared, while the litany response has been retained.

There is nothing to show when the Kyrie was first used in Rome. It was not used, as in the East, as the regular response to the petitions, but at the beginning and end of the service, and it was alternated with Christe Eleison, which was never used in the East. Gregory says: ‘We have neither said nor do we say Kyrie Eleison as it is said among the Greeks, because in our countries all say it together, but with us it is said by the deacon and the people respond; and Christe Eleison is said as many times, and this is not said at all among the Greeks’ (Cor. ep. 2).

The Kyrie was, therefore, in use in Rome in Gregory’s time, but for how long before that we do not know. The Council of Vaison (c. iii. A.D. 519), in ordering its use in the province of Arles, implies that it had been introduced into Italy at a not very distant date. The rest of the liturgical liturgy disappeared, as has been said, from the Roman service at some unknown date, but that the Kyrie was still regarded as part of a litany is shown by the fact that in the 8th cent. the Kyrie was omitted when there was a processional litany to the church. This is the conclusion of the introductory litany, whether processional or not, was the prayer in which the Bishop ‘collected’ the petitions of the people, and which was therefore called Collectio or Collecta. But, as the Kyrie was omitted when there was a procession, the collect on those occasions was the first thing that was said after the people reached the church, and hence ritualists consider it the prayer ‘ad Collectam plebis’—when the people are gathered together. Thus there arose a double derivation of the word ‘collect’ (p.v.).

4. Processions in the East.—During the centuries of persecution it was not likely that forms of devotion so conspicuous as processions would be used by Christians. The first historical mention of them appears to be in A.D. 308, in connexion with the Arian controversy. The Arians, not being allowed to hold their assemblies in the city of Constantinople, used to meet in the public squares during the night, and to march out at dawn to their places of worship, singing antiphonally. Fearing lest the orthodox should be attracted by this ceremonial, St. John Chrysostom instituted counter-processions on a more magnificent scale, in which silver crosses and lighted torches were carried. These particular processions were prohibited by the emperor in consequence of the disorders which they caused, but the custom of using processions, especially in times of emergency, continued. Socrates mentions a legend to the effect that the antiphonal singing used at such times had its origin in a vision of Ignatius of Antioch, the third bishop from St. Peter, in which he saw angels singing responsive hymns to the Holy Trinity (HE vi. 3; Soc. HE viii. 8). These occasional processions were, however, quite distinct from the litanies in the Eucharist.

5. Processions in the West.—Processions became common in the Western Church at about the same time as in the East, but their origin appears to have been independent. They were probably at first transformations of pagan processions. The Roman festival of the Rogalliga, intended to secure the crops from blight, was kept on the 25th of April, and the procession called the Litania Major, which took place on the same day, St. Mark’s Day, seems to be a direct survival of it. Even the actual routes of the heathen and the Christian processions were nearly the same. The institution of the Greater Litany of St. Mark’s Day has been generally ascribed to Gregory I, but it was prob-
ably earlier, and perhaps dates from the pontificate of Liberius (352–366). The litany ordered by Gregory I on 17th March, Mark’s Eve, A.D. 490, in order to avert the pestilence, seems to have been distinct from the Litania Major. Another ancient Roman festival, the Ambarruilia, was observed on three successive days in the month of May, and this also had the fertility of fields as its object. There is here a close resemblance to the Rogation processions on the three days before Ascension Day. These are said to have been instituted by Mamertus, bishop of Miletus, on the occasion of various public disasters (Sid. Apoll. Ep. v. 14, vii. 1; Gregory of Tours, Hist. Franc. i. 34); but such processions had probably been practised at an earlier date, and were only revived on this occasion. These rogations or litanies, called Litaniae Minores to distinguish them from those of St. Mark’s Day, spread rapidly through Gaul, and were adopted and reorganised at Rome by Leo III. (796–816). Both the Greater and the Lesser Litanies were ordered to be used in England at the Council of Cloveshoe (A.D. 747 [A. W. Haddan and W. Stubbs, Councils and Ecclesiastical Documents relating to Great Britain and Ireland, Oxford, 1868–71, iii. 368]). It may be noted that in the decree of this council, and elsewhere, rogatio and litania are regarded as equivalent terms (‘litanie, id est, rogationes’), and the whole of the forms seem to include all the devotions connected with those days. There is no allusion to responsive prayer, and the only reference to processions is a mention of reliefs being carried about and the words ‘laus’ and ‘rogation’ were still used in quite a comprehensive sense.

6. Medieval litanies.—Hitherto the liturgical litanies in the Mass and processions have been regarded as distinct. But it is easy to see how they would coalesce. Various kinds of singing have always been used in processions, but that particular form of responsive singing in which the people answer with an unmoving refrain was so naturally adapted for processional use, owing to the ease with which the refrain could be taken up by a moving crowd, that litanies of the type of the Eucharistic ecensae came to be very commonly used in processions not only in the Mass, but on all sorts of occasions. And so the word ‘litany’ came to mean a form of prayer with a response, either processional or stationary, and either regular or occasional. As the processions became more common and popular, the word ‘procession’ came to be used almost as an equivalent term, and the book which contained the medieval litanies was called the Processional. The litanies in most common use also assumed a regular structure. They consisted, as a rule, of the following parts: (1) the Kyrie Eleison, alternated with Christe Eleison; (2) a number of invocations of saints by name, with the response ‘Ora pro nobis’; (3) a series of short prayers against various evils, called Deprecations, with the response ‘Libera nos Domine’; (4) prayers on behalf of various people and for various objects, called the Supplications, with the response ‘Audi nos Domine’; (5) the Agnus and the Kyrie, and a collect. Such litanies became very popular, and Cardinal Baronius estimated in 1601 that a list of 200 litanies in use. The invocations of the saints just mentioned formed a conspicuous part of most of these litanies. It is not clear when these invocations were first introduced; it was once thought that they were derived from the litany of the Blessed Virgin, but it is now generally supposed to be a litany which belongs to the 8th cent. printed in Warren, Lit. Celt. Ch. (p. 179), but they may be much older. Some of the litanies mentioned above were intended for regular use, and was printed in the Prymer of 1545 and in the first English Book of
Common Prayer of 1549. This litany was constructed with great care, and several sources were used. In 1536, a petition was taken from the Sarum Rogationtide litany, and the main structure of this was adhered to, but the invocations of the saints were greatly shortened, being reduced to three clauses, which were them placed in the first two Book. Passages were also introduced from a Sarum litany for the dying, called Commendatio Anima (also omitted in the First Prayer Book), and a considerable part of the Sarum litany was taken from a medieval German litany which was revised by Luther in 1529, and published in German and Latin. This litany was included in the Consultatio of Archbishop Hermann of Cologne, and so came to England, and it was used for the litany in Marshall’s Psalms of 1535. It must be noted that the English litany falls into two main sections: the first ends with the collect that follows the Lord’s Prayer—a collect being the natural ending of a litany. What follows is a translation of suffrages which were added to the Sarum litany in time of war. The reason for their insertion was no doubt that war was going on in France at the time they were written, and that it was used for the litany in Marshall’s Psalter of 1535. Suffrages are preceded by the antiphon and Psalm verse which began the Sarum Procession of Rogation Monday, and it is said that the omission of the Amens at the end of the collect had led to the ridiculous custom of using the antiphon (‘O Lord, arise, help us’) as a sort of response to the collect. Until 1661 the Collects contained suffrages which were not printed in the Book of Common Prayer; in the revision of that year the Amens were printed, but most of the endings were omitted by mistake.

Although in its adaptation of the old litany Cranmer added little or nothing of his own, he made a noticeable change in the rhythm: the old petitions were short and simple; Cranmer, either with a view to compression or, more probably, because he preferred longer periods, grouped several petitions together, and enriched them with epithets and synonyms. For instance, the Preparations of the Sarum litany begin thus:

From the craftes of the devil—deliver us, Lord.
From thy wrath—deliver us, Lord.
From everlasting damnation—deliver us, Lord.

In the new version this becomes:

From all evil and mischief; from sin, from the crafts and snares of the devil, from thy wrath, and from everlasting damnation; deliver us,Lord.

At the time Cranmer intended to translate other processional hymns, such as ‘Salve Festa Dies,’ for he wrote to Henry VIII. in 1545 to say that he had done so. The attempt was probably relinquished because he became aware that he did not write so skillfully in verse as he did in prose.

The English litany has remained substantially unchanged since its first appearance in 1544. In 1549 the invocations of the saints were omitted, and in 1550 a petition about ‘the tyranny of the bishop of Rome.’ ‘The grace of our Lord’ was added at the end in the same year. In 1661 the words ‘and rebellion,’ ‘and schism,’ were added, and ‘Bishops, Priests, and Deacons’ were changed to ‘Bishops, Priests, and Deacons.’ The collection of collects at the end of the litany was altered more than once, and most of them were removed to other places in the Book of Common Prayer.

This litany was intended for use for all the purposes for which the ancient litanies were employed. It was issued for occasional use at a time of distress, and it was sung in procession in the usual manner. Later on royal injunctions ordered it to be sung kneeling before Mass, and this became the usual, but not universal, practice. The present rubric allows either the Stationary or the Processional use. It was also related to the Rogationtide processions, being derived mainly from them, and it took the place of the Eastern octoele as a preparation for Mass. It was ordered from the first to be said on Wednesdays and Fridays, the ancient ‘Station’ days, on which especially Mass was anciently said, and, although its use on Sundays was not specified in the rubrics until 1552, it was probably taken for granted from the first. Unfortunately, this special characteristic of the litany as a preparation for Mass was obscured later on, partly by the placing of the ‘Grace’ at the end, and partly by the rubric of 1661, which directs: ‘at Matins after Morning Prayer.’ This made no practical difference: so long as Matins, Litany, and Mass continued to be said in their natural order, but in recent years it has caused the litany to be regarded as a sort of appendage to Matins, and in many churches has led to its being altogether separated from the Mass.

9. Lutheran litanies.—As has been mentioned above, Luther published a revision of a medieval litany in German and Latin in 1529. The original edition does not appear to be extant, but the litany was printed in the Psalms-books, and it was used in both languages for some time. The use of the Latin form seems to have died out in the 17th cent., and the German form, although it continued to be used on various occasions in North Germany, never became a popular form of devotion. The Calvinistic bodies objected to this form of service altogether, and the litany was one of the parts of the English Book of Common Prayer which were most disliked by the Puritans.

LITERATURE (American).—The literature of the aborigines of America may conveniently be treated under two topics, viz. purely autochthonous

ous literary expression, and works produced under Caucasian influence.

2. Autochthonous literature.—This group in-
In the Iroquoian creation myth, there is a somewhat subtle humour in the account of the fall of Assateague, the demiurge-Thames, from the Sky-world to the chaos beneath. So now, verify, her body continued to fall. Her body was falling some time before it emerged. Now, she was surprised, seemingly, that there was light below, of a blue color. She looked, and there seemed to be a lake at the spot toward which she was falling. There was nowhere any indication of the presence of many ducks on the lake, whereas they, being waterfowl of all their kinds, floated severally about. Without interruption the body of the woman-being continued to fall.

Now, at that time the waterfowl called the Loon shouted, saying: "Do ye look, a woman-being be falling over into the water, her body is floating up hither." They said: "Verily, it is true so." Now, verify, in a short time the waterfowl called the Bittern said. "It is true that ye believe that her body is floating up from the depths of the water. Do ye, however, look upward." All looked upward, and all, moreover, said: "Verily, it is true so" (ST RBBW, p. 179c).

With this may be contained a fragment of the Narrahs myth of the creation of the sun (6 RBBW [1886-87], pp. 276-277), which is not without a touch of grandeur: "The people then said, 'Let us stretch the world'; so the twelve men at each point expanded the world. The sun continued to rise as the world expanded, and began to shine with less heat, but when it reached the meridian the heat became great and the people suffered much. They crawled everywhere to find shade. Then the voice of Darkness went four times around the world telling the men at the cardinal points to go on expanding the world. 'I want all this trouble stopped,' said Darkness; 'the people are suffering and all is burning; you must continue stretching.'"

The more civilized Indian peoples of Mexico, Central America, and Peru show a corresponding advance in formal literary composition. The Aztec rituals recorded by H. Sahagun (Historia general de las cosas de Nueva España, Mexico, 1829) are dignified and ornate, and often imbued with a sombre and haunting beauty. The assembled lore of these more advanced peoples must have comprised a considerable body of legends, chronicles, oracles, and materially spoken customs, laws, etc., judging from the fragments which are preserved, while the existence of a secularistic literature is probable. Britton is of the opinion that the Central American may be regarded as a Thronous dramatic art (see Library of Aboriginal American Literature, no. 3). The Guipique, a Comedy Ballet in the Nahua-Spanish Dialect of Nicaragua, (Philadelphia, 1887, 83), and Clements Markham regards the "Ollanty" as an example of a pre-Spanish dramatic literature (see Markham, The Incas of Peru, London, 1910, which contains a partial translation of this drama). For this literature of the semi-civilized nations see the art. ANDEANS, CHILAN BALAN, DEAMA (American), POPOL VUH.

2. Literature produced under white influence.—This class consists of (1) works in the native languages, and (2) works written by American Indian authors in European languages. (1) Works of the first type include translations of the Bible and other works by white missionaries and teachers, and native records of native ideas made after a system of writing had been acquired. Of the latter, perhaps the most notable instance is the Cherokee literature in the native alphabet invented by Sequoyah. A large number of periodicals have been established under native, some under missionary, editorship, in some of the native tongues exclusively, some part English, some wholly English—have appeared or are now appearing for the expression of American Indian ideas. For the growing body of aboriginal records—chiefly myths, rites, and chronicles—appearing in the Reports of the American Bureau of Ethnology and elsewhere special modifications of the Roman alphabet have been suggested and systematized for the expression of the native tongues.

(2) A certain number of Indians or part-Indians have distinguished themselves in their literary mastery of European tongues. The names of Garcilasso de la Vega, Inca-Spanish in blood, and of Fernando de Alva Ixtlilxochitl, descendant of the caciques of Texcuco, are notable as authorities for the native customs and histories of Peru and
LITERATURE (Babylonian) 83

Mexico respectively. To these might be added the names of Teozozomoc, Chimalpahin Quauhtzatzin, Nakuk Feeth, and Fernando Hernandez Arana Xahila, Mexican and Central American post-conquest chroniclers of native history (see references in C. K. Kingsborough, Antiquities of Mexico, i., "Crónicas Mexicas de Bernal Díaz del Castillo, Annales de San Antón Muñoz Chimalpahin Quauhtzatzin, Paris, 1880; D. G. Brinton, Littérature de l'Ancien Amérique, L., The Maya Chronicles, and The Annals of the Cakchiquels.") In N. America, George Cupway (Kagiregogd, 1815-63) was the author of several books dealing chiefly with his own people, the Ojibwa, while Charles A. Eastman (Chippewa, b. 1858) is the author of essays and stories portraying the native life and ideals of his Siouan kinsfolk.

LITERATURE.—Bibliographical details are given in the Handbook of American Indian, Bull. 20 of the American Museum of Humanology, Washington, 1907-10, under "Books in Indian Languages," "Bible Translations," "Dictionary," Periodicals, etc. See also "Cupway," "Eastman," "McCoy." Scattered throughout the Reports and Bulletins of the Bureau are many texts and translations of myths and legends. Many of the J. F. Alden's "Ten Thousand Mundos" are rich in similar material. Other collections of importance include: A. L. Frothingham, Antiquities of Mexico, 9 vols., London, 1838-48; D. G. Brinton, Library of American Indian Literature, 5 vols., Philadelphia, 1882-90; J. G. Isbell, "Records of ancient documents of the History of Mexico," 5 vols., Mexico, 1888-92; E. Seler, Gesammelte Abhandlungen, etc., 2 vols., Berlin, 1902-08. Yearly increasing material is to be found in the Comptes rendus du Congrès international des Américanistes, etc.; the Memoirs and Papers of the American Museum of Natural History; and the American Journal of Semitic Studies. Many important collections of laws (see LAW [Babylonian and Assyrian]) are comprised in pure Semitic Babylonian. Before entering into a detailed enumeration of the various branches of Semitic literature, attention must also be called to the fact that the difference between the Babylonian and the Assyrian languages consists merely in dialectic varieties, so that Babylonian and Assyrian literature, practically speaking, are to be considered as identical, and are differentiated only by the respective time of their origin during one of the great monarchies of Western Asia—Old Babylon, or Neo-Babylonian Empire. The Neo-Babylonian Empire, the Assyrian Empire, and the Neo-Assyrian Empire. The history of the ancient East can now be authentically reconstructed from the historical inscriptions of the Assyrian-Babylonian literature.

The great kings of those monarchies the seeking of immortality by means of a careful tradition of their exploits, their successful campaigns, and building operations appeared most desirable, and so caused the records of those deeds to be inscribed on a number of clay tablets, and on the animal colossi at the entrances of their palaces. The great extent of such texts is illustrated by a recently discovered tablet, on which the events of a single year (124 days) are recorded so minutely that an English translation of the text fill five volumes of the London Times. Long prayers supplement the historical contents of these inscriptions, interposed with the enumeration of the titles and abilities, virtues and religiousness of the royal personages therein glorified. As a rule, the contents are arranged according to the years of reign or the campaigns, in chronological order, followed by an account of the building operations and, in some cases, of the hunting matches of the respective kings, while, at the end of the inscriptions, the blessing of the great gods is invoked upon a successor preserving the document, and their wrath upon its destroyer. To the historical documents must also be assigned the branch of the epicatory literature dealing with public affairs. It is from an extended correspondence between Hammurabi and one of his highest officials that an exact knowledge of the reign of the first Semitic ruler in the united Babylonian kingdom is gained. Facts of the service of his vast dominion, the building of houses and dykes under his auspices, the regulation of the temple-taxes, and the use of intercalary months, are recorded in a series of documents which are the documents of a correspondence carried on in the middle of the second millennium between

Sumerian territory, and how the process of amalgamation between the two races developed, cannot as yet be ascertained. However, that at the time of the Babylonian king Hammurabi, who replaced the various feuds of the petty states by a vast Babylonian Empire under one sceptre (c. 2000 B.C.), that process had come to a standstill, and what remained the Sumerian literature was gradually superseded by that of the Babylonian-Assyrians. As, however, the religious hymns and psalms composed by the Sumerian writers there were adopted by the Assyrians, forming part of their liturgy and subsequently translated by the priests into their native tongue, Sumerian was studied as a sacred language by the Babylonians and Assyrians, and its literature was carefully preserved and handed down to posterity, just as in medieval and modern times the Latin language was carefully preserved and used as the language of the Church.

Sumerian literature is dealt with in this art, in so far as it forms part of the Babylonian-Assyrian literature. Babylonian literature actually begins in the time of Hammurabi, whose inscriptions (with one exception) show the amalgamation of laws (see LAW [Babylonian and Assyrian]) are comprised in pure Semitic Babylonian. Before entering into a detailed enumeration of the various branches of Semitic literature, attention must also be called to the fact that the difference between the Babylonian and the Assyrian languages consists merely in dialectic varieties, so that Babylonian and Assyrian literature, practically speaking, are to be considered as identical, and are differentiated only by the respective time of their origin during one of the great monarchies of Western Asia—Old Babylon, or Neo-Babylonian Empire. The Neo-Babylonian Empire, the Assyrian Empire, and the Neo-Assyrian Empire. The history of the ancient East can now be authentically reconstructed from the historical inscriptions of the Assyrian-Babylonian literature.

The great kings of those monarchies the seeking of immortality by means of a careful tradition of their exploits, their successful campaigns, and building operations appeared most desirable, and so caused the records of those deeds to be inscribed on a number of clay tablets, and on the animal colossi at the entrances of their palaces. The great extent of such texts is illustrated by a recently discovered tablet, on which the events of a single year (124 days) are recorded so minutely that an English translation of the text fill five volumes of the London Times. Long prayers supplement the historical contents of these inscriptions, interposed with the enumeration of the titles and abilities, virtues and religiousness of the royal personages therein glorified. As a rule, the contents are arranged according to the years of reign or the campaigns, in chronological order, followed by an account of the building operations and, in some cases, of the hunting matches of the respective kings, while, at the end of the inscriptions, the blessing of the great gods is invoked upon a successor preserving the document, and their wrath upon its destroyer. To the historical documents must also be assigned the branch of the epicatory literature dealing with public affairs. It is from an extended correspondence between Hammurabi and one of his highest officials that an exact knowledge of the reign of the first Semitic ruler in the united Babylonian kingdom is gained. Facts of the service of his vast dominion, the building of houses and dykes under his auspices, the regulation of the temple-taxes, and the use of intercalary months, are recorded in a series of documents which are the documents of a correspondence carried on in the middle of the second millennium between
the Pharaohs of Egypt, then rulers of the whole
recorded, and the kings of Western Asia,
including Palestine, the Phoenician ports, and
the island of Cyprus, which have become generally
known as the Tell el-Amarna find. Letters, pro-
cessions, petitions, accounts, and notes accom-
panying requisites for
of Neo-Babylonian Empire, and are of a historical
value similar to that of the royal inscriptions
composed long before and various so-called ‘epigraphs’
which were added to the numerous bas-reliefs on
the walls of the palaces, illustrating the kings’
campaigns and other achievements.

Babylonian-Assyrian literature in the narrower
sense of the word has become chiefly from the
documents preserved in a great Royal Library
held at Nineveh by Ashurbanipal, the last
great king of the Assyrian Empire, who reigned
from 668 to 625 B.C. and was called Sardanapalus
by the Greek writers. This Library, generally
known as the Kuyunjik Collection, the various
portions of which have been secured since the
middle of last century for the Trustees of the
British Museum by Sir Henry Rawlinson and
other English scholars, consists of copies and trans-
lations of ancient Babylonian and Sumerian works, and deals with a variety of subjects and learning
then appreciated by the Assyrian priests, who, by
command of their royal patron, collected and cata-
alogued, revised and re-copied, the various texts
which had been gathered from the oldest cities
and archives of the whole land. Recent
excavations have in some instances also brought
to light a number of hymns and prayers, certain
omen-texts, and a few astrological inscriptions,
which have been ascribed to an earlier period than
that of Ashurbanipal, and apparently belonged
to the mass of original documents from which the
copies in the Library were made; and the same
may be said of certain collections of the Neo-
Babylonian times, in which, again, copies from the
Kuyunjik Collection have been found. An
exact idea of the literary achievements of the
Babylonian-Assyrian, however, can be formed
only by a perusal of the contents of the Library
itself. Such a perusal yields the following results.

Apart from the epistolary literature, a few drafts
for royal inscriptions, and numerous magical
texts, extending from early Babylonian
times down to the beginning of our own era—
 Assyrian literature was devoted chiefly to super-
stitious belief, to religious rites and ceremonies,
inscriptions and prayers, and, in close connexion
with both branches, to medicine, astrology, and
philology.

A large proportion of the documents here
concerned deal with the appearances and actions of
various animals, and it has been justly remarked
that in these inscriptions survivals may be seen
of a very ancient animal-cult—reminding one of
certain parallels in Egypt—which in later times
seems to have been superseded by an exquisitely
astral religion. Closely connected with these ani-
mal omens are the numerous and systematically
arranged texts bearing on menstruations and other
unusual features of births, as well as the large
collections of documents dealing with the inspect-
ion of the liver of an immolated wether. The
movements of various birds, the actions of dogs
and of a snake, and the invasions of locusts were especially observed for the com-
position of such omen-texts. Another means of
divination used by the Babylonians was pure
water, into which a small quantity of the urine of
rats was poured, so as to produce the well-known
interference-voices, re-discovered by Newton, and
certain structures of rings and bubbles, from which
the events of the future were predicted. The
link between these forecasts and the religious
texts must be sought in the medical prescriptions,
which were laid down and reduced into a kind
of pharmacopoeia. Various diseases, arranged
according to the limbs and members attacked, are
enumerated in these collections, and the draughts,
decotions, and other therapeutics are described
in detail. Mental disorder was attributed to the
influence of evil spirits, and evil spirits are found in these medical texts are frequently interspersed with in-
cantation formulae which otherwise constitute a
class of literature by themselves. Three or four
series of tablets containing such incantation-
texts, accompanied by directions for the respective
ceremonies, have become known to us. They are
chiefly directed against the pernicious actions of
witches and sorcerers, supposed to be neutralized
by destroying the images of these witches, mostly
by burning. In the majority of cases the text of
these incantations is in the interlinear bilingual
style, i.e. in Assyrian and Sumerian; and in
several instances it can be proved that the
Sumerian original has been taken over from ancient
sources, portions of which still exist. On the
other hand, it can hardly be denied that many
Semitic Assyrian priests themselves added
such interlinear texts, using the Sumerian lan-
guage, then long extinct, in much the same way as
medieval monks used Latin. Moreover, even pure
Sumerian texts without an interlinear Assyrian
version are preserved in Sumerian's Library—
a fact from which it may be concluded that such
incantations even at his time were recited in the
old sacred language. And the same holds good
of the psalms, litanies, and other forms of prayers
which are written either in Sumerian only or ac-
companied, in Assyrian times, by a Semitic version.

Apart from these texts, however, are mostly
preserved as parts of certain literary compositions
or 'series,' the prayers and similar religious doc-
uments stand for the most part isolated, and only
by their style can they be recognized as belonging
to various classes. Of such, the prayers called
'after the lifting of the land,' the hymns exhibit-
ning a parallelism of members, the litanies addressed
to certain deities, and the compositions showing
acrostics may be mentioned as specimens.

Of special interest among the religious texts are
the legends and myths, of which a number of
'series' have been discovered. A few of them, as,
for instance, the Babylonian Creation Legend and the
Deluge Story, both of which have been pub-
lished and translated, OT, can be proved to reach as far back as the Old
Babylonian period. It cannot be ascertained at
present, however, at what time the account of the
Deluge was incorporated in a great national epic,
the so-called Gilgamesh Epic, which is founded on
astral religion and seems to refer to the life in
the nether world. Similarly the 'Descent of the
goddess Ishtar to Hades,' an isolated poem pres-
served in Assurbanipal's Library only, appears to
depict nature's death in the autumn and its resu-
mination in the spring, and the story of Nergal, the
lord of tombs, and his consort, the goddess Erdas-
kiqal, likewise contained in the Epic and in the mode
of the dead. Immortality was not granted to
mankind, as we learn from another myth, the
story of a fowl man called Adapa, who, being
mixed by chance, refused to partake of the food
of life and the water of life, which were offered to
him in heaven.

As has already been remarked, it may be concluded
from the Gilgamesh Epic and from other
mythological texts that in Babylonia there was at least an astral religion was reigning in the valley of
the Euphrates and Tigris. This appears to be
borne out by another branch of Babylonian-Assyrian
literature, viz. the astrological texts. A large number of these, comprising at least 70 tablets, is devoted to observations of the movements of the celestial bodies, including atmospheric phenomena, such as thunder-storms, hurricanes, and earthquakes. These observations are taken from earlier astronomical texts, dealing with the heliacal risings and the culminations of luminous fixed stars and constellations, while the details of the Babylonian time documents with astronomical observations and calculations have been found which bear witness to the highly developed faculties of the later Babylonians for determining the velocity of the sun and moon, the length of the year, and the revolution of the five planets then known.

An equally high standard was attained by the Babylonian and Assyrian priests in grammar and lexicography. Those sacred Sumerian incantations, hymns, and prayers must have early prompted the protectors of religious traditions to collect helps for studying the extinct sacred tongue, and in course of time such investigations needed an inventory of the Semitic native language of those priests as well. Paradigms of verb-forms, lists of synonymous words, and, above all, large collections of Sumerian ideographs explained according to their pronunciation and meaning have thus been handed down. And the numerous lists of names of animals, stones, plants, and wooden objects, of stars, temples, and deities, afford a clear insight into the wisdom and work of the philologists, by whom the eldest colleges on earth were founded and literary tradition was first carried on.

Babylonian literature was deeply influenced, as has been shown, by its older Sumerian sister, and the Assyrians, in developing it, seem to have played a rôle similar to that played in later centuries by the Syrians who conveyed Greek learning to the nearer East. On the other hand, the cuneiform Babylonian script spread all over Western Asia, and the Hitite and Mitanni nations, the Chaldean tribes, and the Canaanites appear to have adopted it in one or other form, and certainly became familiar with the doings of the Babylonian people. Babylonian legends found their way to the ancestors of the Israelite tribes, and similar Babylonian documents were studied in the middle of the second millennium by the learned priests of the Egyptian Pharaohs.

Finally, the late Assyrian onomastical and astrological texts wandered to the East as far as China, left remarkable traces in the Indian literature, and were transmitted to Greece, where actual translations of such texts have been found. In this way also Babylonian literature has in the last instance influenced Christianity, and has left its marks throughout medieval times down to the present day.

C. BEZOLD.

LITERATURE (Buddhist).—The sacred canons of Buddhism have been handed down in two forms. One, written in Pali and preserved in Ceylon, Burma, and Siam, contains the doctrine of the older school, the Hinayana (Little Vehicle; see art. HINAYANA), the chief aim of which is to attain arhatship or the release of the individual from suffering. It is the canon of one sect only. The other, the Sanskrit canon, was first translated into Sanskrit from the older Buddhist Sanskrit texts, as well as from Chinese and Tibetan translations. The chief texts of the Sanskrit Mahayana-sarvastivadins, who belonged to the older Buddhist, were translated into Chinese in the years A.D. 709-712. This canon agrees largely with the Pali canon both in wording and in arrangement. But there are also various divergences. These are to be explained by the descent of both from a common original in the Magadhi dialect, from which the Pali canon was derived in one part of the country, and the Sanskrit canon, later, in another. While the other sects had no complete canon, such regarded as sacred or more sacred than the texts which were incorporated parts of or replaced a theoretically acknowledged canon. The great bulk of these Sanskrit Buddhists belonged to the new school, known in Pali as the 'Great Vehicle' (see art. MAHAYANA), the chief aim of which was the attainment of the condition of a Bodhisattva, or future Buddha, who brings wisdom within the reach of the entire human race.

The forms of Buddhist literature in Pali and in Sanskrit have been commonly called 'Southern' and 'Northern' respectively because the former prevails in Ceylon, Burma, and Siam, and the latter in Nepal, Tibet, China, and Japan. This division is thus made illusory, since all Buddhist canonical literature is based on the North, and since the term 'Northern' covers a region which is as remote from the South, and the term 'Southern' covers a region which is as remote from the North, and thus the names of the two schools are misleading. The Pali canon, therefore, more properly speaking, is Pali Buddhism and Sanskrit Buddhism.

The language in which the two canons were composed requires to be more precisely defined. Pali is the sacred language common to the Buddhists of Ceylon, Burma, and Cambodia, but Pali MSS are written in four different alphabets of those countries, while it has become the regular practice to print European editions of Pali texts in Roman characters. The Pali language in which the texts have been handed down cannot be identical with the dialect in which the canon of the 3rd cent. B.C. was composed; the latter can only have been the language of Magadha (Bihar), in which Buddha first preached, and which must have been the language of Mahapajapati who put together the canon. traces of such a Magadhi language may, it is true, be found in the Pali language, but it would be a mistake to think that the titles of the canonical texts enumerated in Anuka's Bural inscription appear in a Magadhi form. But Pali differs from the Magadhi language in several respects, for example, in its us from inscriptions, literary works, and grammarian. Nor is it identical with any other dialect. It is a distinct language and has a different tradition, and is therefore a distinct and different culture.

No work of Buddhist literature goes back to Buddha's time. But much contained in the canon may very well hand down the words spoken by the Master, such as the famous sermon of Benares, especially if we consider the tenacity of the verbal memory in Indian oral tradition.

Almost all the whole of the earliest Buddhist literature consists of short collections containing speeches, sayings, poems, tales, or rules of conduct, which are combined into larger collections, or 'books', in a manner somewhat analogous to the formation of the anniktha of the Vedas (cf. HYMNNS [Vedica]). Three such aggregate collections, called the Tipitaka, form the Pali canon.

The canon as constituted in Asoka's reign must have undergone appreciable changes between then and the time when it was fixed in the 1st cent. B.C. in Ceylon. But henceforward it has been handed down with great care. Some modifications, indeed,
must have taken place even after the 1st cent., because it is otherwise difficult to account for the numerous contradictions appearing in the canon. 

Taken as a whole, however, the Pali Tipiṭaka may be regarded as not very different from the Mahānāmapitaka of the 3rd cent. B.C. For the quotations occurring in the Aśoka inscriptions diverge only slightly from the extant text, while the titles of seven texts mentioned in one of these inscriptions are partly identical with, and partly similar to, those which are found in the extant Sutta-piṭaka. Moreover, the sculptures and inscriptions of the monuments at Śārīrakā and Bhāhrutā (c. 200 B.C.) afford corroborative evidence of the existence of a collection not unlike the extant Sutta-piṭaka. But the earliest direct evidence that the Tipiṭaka as a whole had already assumed its present form is furnished by the Mikhāna-piṭaka, which dates from the 1st cent. A.D., and is authentic according to the Pali tradition. It is confirmed by the Sanskrit canon, which, as already stated, is so closely allied to it as necessarily to be derived from the same original.

The texts which the sacred literature comprises will now be summarized in regard to their chief contents.

1. The Pali Canon. — The three main divisions of the canon are the Vinaya-piṭaka, or the Basket of Discipline, which supplies the regulations for the management of the Order (saṅgha), and for the conduct of the daily life of monks and nuns. It includes rules for reception into the Order, for the periodical confession of sins, for the life during the rainy season, for housing, clothing, medical remedies, and legal procedure in cases of theft. Here and there are also to be found stories, some of which contain the oldest parts of the Buddhistic legend, while others are valuable for the light they throw on the daily life of ancient India.

2. The Sutta-piṭaka. — The second "basket" is the Sutta-piṭaka, or our best source for the dhamma, or religion of Buddha and his earliest disciples. It contains, in prose and verse, the most important products of Buddha literature, grouped under the names of collections named nikāyas. The first four of these consist of suttas, or "lectures," being either speeches of Buddha or dialogues in prose occasionally interspersed with verses. These are cognate and homogeneous in character. For a number of suttas reappear in two or more of them; there is no difference in the doctrines that they contain; and they all show a similar mode of discussion, probably preserving a reminiscence of Buddha's actual method as good as that which the Platonic dialogues preserve of Socrates' method. One of the features of the method of argument in these suttas is the very exact use of parables and similes, which, though lacking in cogency, are valuable as throwing much light on the daily life of the artisans, cultivators, and merchants of the day. Since each of these nikāyas contains old and more recent elements of a similar character, there is no reason to doubt that all of them were formed into collections about the same time.

3. The Āggersā-nikāya, or "Collection of long lectures," consists of 34 suttas, each of which deals fully with one or more points of Buddhist doctrine. The very first, entitled Brahmajāla-sutta, or: "Lecture on the Brahmans' net," is of very great importance for the history not only of Buddhism, but of the whole religious life of ancient India.

The Buddha enumerates a large number of the occupations of Brahman and ascetics from which the Buddhist monk should refrain. The second, the Cūḍaṃsā-sutta, or "Lecture on the reward of asceticism," furnishes valuable information about the views of a number of non-Buddhist teachers and founders of sects. The Ambatthu-sutta illustrates the history of caste and Buddha's attitude to that system. The Kālāpatala-sutta, or "Lecture on the sharp tooth of the Brahman," displays the relations between Brahmanism and Buddhism, while the Tavijjū-sutta, or "Lecture on the followers of the three Vedas," contrasts the Brahman cult with Buddhist ideas. The fundamental doctrine of Buddhism is treated in the Mahānāma-sutta, or "Great lecture on causation.

One of the most noteworthy texts of the Pali canon is the Dipavijjā-sutta, or "Admonition of Sīkāla," describing fully the duties of the Buddhist layman. But the most important text in the Dipavijjā-sutta is the Mahāparinibbāna-sutta, or "Great lecture on the complete Nirvāṇa," a continuous account of the last days of Buddha. It is one of the oldest parts of the Tipiṭaka, as supplying the earliest beginnings of a biography of Buddha. It does not, however, all date from the same period, for in some passages Buddha appears entirely as a human being, while in others he is represented as a demi-god or magician. This text resembles the Gospels more than any other in the Tipiṭaka. On the other hand, the account of the miracles (of Buddha) indicates its lateness. It also contains the dogma of six Buddhas as precursors of Gautama, and presupposes the whole Buddha legend.

b. The Majjhima-nikāya, or "Collection of lectures of middle length," consists of 152 sermons and dialogues dealing with almost all points of Buddhist religion. Thus Buddha is represented as admitting that a man may obtain nirvāṇa even without being a monk, or may commit suicide if he acts solely for the purpose of obtaining release; and as refuting the claim of Brahmanism to be the only pure caste and asserting the purity of all castes. These suttas throw light not only on the life of Buddhist monks, but on such matters as Brahman sacrifices, various forms of asceticism, and the relation of Buddha to the Jains, as well as superstitions, social, and legal conditions prevailing at the time.

The difference in the age of the suttas is indicated by the fact that here too Buddhist times sometimes appear as a purely human character and sometimes as a miracle-worker.

c. Of the 56 divisions into which the Sutta-piṭaka is divided, the last is most noteworthy, as containing the famous Dhamma-chakka-pavatattvavatta-sutta, the "Lecture on setting in motion the wheel of the law," usually described as the "Sermon of Benares." The suttas in one of its sections somewhat contain a large admixture of stanzas, while others consist entirely of verse forming short ballads of great poetic merit.

d. Of the Asguttara-nikāya, or "Collection of lectures arranged according to increasing number," consists of over 2300 suttas in 11 sections, so arranged that in the first are treated objects of which there is only one kind, in the second those of which there are two kinds, and so on. Thus, the second deals with the two kinds of Buddhas. In this collection are found a large number of suttas and stanzas which occur in other texts of the canon, and which here, even sometimes appear as quotations. This alone points to a late date.

But internal evidence also shows that it was composed at a time when Buddha was already regarded as an omniscient demi-god, if not an actual deity.

e. Of the Khudda-nikāya, or "Collection of small pieces," is a late compilation added after the previous ones were complete. Its content dates from very different times; for, while the Brahmans' parts belong to the latest strata of the Pali
cana), some go back to the earliest period. It is composed for the best part in verse, and, in fact, contains the most important works of Buddhist Indian poetry. Of the works which it embraces the following may be mentioned. The Khuddaka-pañha, or 'Short reader,' comprises nine brief texts to be recited by novice or as prayers in the Buddhist cult. The first is the Buddhist creed; the second gives the ten commandments enjoined on monks; and the ninth is the famous Metta-sutta, in which kindness towards all creatures is praised as the Buddhist cult. The Dhamma-pada, or 'Words of religion,' the most familiar and longest known work of Buddhist literature, is an anthology of maxims chiefly expressing the ethical doctrines of Buddhism. More than one-half of its 423 stanzas are found in other texts of the Pali canon. The Udāna, or 'Solemn utterances,' consisting of old verses and prose stories, probably later additions, is a glorification of the Buddhist ideal of life and of the endless bliss of nirvāṇa. The Itivuttaka, or 'Sayings of Buddha,' is composed in prose and verse used in such a way that the same idea is expressed in both. Very often the verse simply repeats the statement of the preceding prose. The oldest parts of the work probably date from the time of Buddha himself. The Sutta-piṭaka is a collection of ethical sutta, many of which, as shown by internal evidence, must go back to the beginnings of Buddhism, and have arisen at least among the first disciples of Buddha. They are important as supplying information about the original doctrine of Buddha, besides representing an early, though not the earliest, stage of the Buddhist legend. The Thera-γāthā and Therī-γāthā, or 'Songs of monks and nuns,' are poems of great life, full of spiritual calm as the religious ideal, and describing the value of Buddhist ethical doctrine from personal experience. It is quite possible that here may be included the poems composed by some of the earliest disciples of Buddha, but several are much later, since they represent a Buddha cult like that of the Mahāyāna. The Jātaka is a book consisting of about 550 stories of former births of Buddhas in the character of a Birth of Buddhas, or future Buddha. It consists partly of poetry and partly of prose, but only the verse portions have canonical value. For a discussion of the see art. JĀTAKA.

While the Pali canon (apart from additions) was entirely composed in India, the non-canonical literature was the work of monks in Ceylon. There is only one important exception, the Milinda-pañha, which has just been written in the north-west of India. It represents a dialogue supposed to have taken place between a Buddhist teacher and Menander (Millián), the Great king who from about 120 B.C. ruled over the Indian territory, the Ganges, and the valley of the Ganges. The author, whose name is unknown, must have lived at a time when the memory of this king was still fresh. Though written in the Greek demotic and soon after Menander, he could hardly have been remembered for more than a century. That the original portion of the work, books i. and iii. with parts of i., is thus as old as the beginning of our era is supported by the fact that it bears comparison with the very best dialogues in the Sutta-piṭaka. But besides differing in character from the rest, are containing in the Chinese translation made between A.D. 317 and 420. These and the other spurious parts are the work of learned monks in China.

II. SANSKRIT LITERATURE.—While one sect created the Pali canon, various later sects produced a Buddhist literature in pure or mixed Sanskrit, of which many extensive works have been preserved, though others are known only through Tibetan and Chinese translations. The great bulk of this Buddhist Sanskrit literature belongs to, or has been greatly influenced by, the few only through the life of a monk. In order to bring salvation to all humanity, the Mahāyāna taught that every man could aim at being born as a Bodhisattva (q.v.) and any ordinary man, even a Pariah, could attain salvation by the practice of virtue and by devotion to Buddha. The Buddhists are now regarded as divine beings from the beginning, their earthly life and their nirvāṇa being nothing but an illusion. The Buddhists preceding Gautama, instead of being believed to be thousands or even millions of millions in number and an innumerable host of Bodhisattvas is revered as having for the salvation of mankind refrained from entering nirvāṇa. Under the influence of Hinduism a new mythology grew up in which a number of Hindu deities were added to the Buddhists and Bodhisattvas, and a much stronger devotion to Buddha, analogous to that of the Brahman, Bhagavat-Gītā (q.v.). By the Brahman doctrine influenced the development of Mahāyānaism on the philosophical side also. For, while the old Buddhist denied the existence of the ego only, the also denied the existence of everything (expressed by the formula sarvam anātman, 'everything is void'), either as complete nihilism or as ideal nihilism (anjana-vāda, or 'doctrine' that nothing exists except in consciousness.

1. Hinyāna.—The large realist sect of the Sarvāstivādins ('followers of the doctrine that everything is'), besides having an extensive literature, possessed a Sanskrit canon of which, however, only fragmentary parts of the Udoa-varga, Dhamma-pada, and Ekottaragama (corresponding to the Pali Udāna, Dhammapada, and Aṅguttaramāṅgakesa) have as yet been discovered. The Mahāyāna, or 'Book of great events' is a text of the Lokottaravādins ('followers of the doctrine' that the Buddhists are 'supernatural beings'), a subdivision of the old schismatic sect, the Mahāsutarikas, or 'adherents of the great community.' Its chief content is a miraculous biography of Buddha, written in mixed Sanskrit. It is of great importance as containing many old versions of texts that also occur in the Pali canon, such as the 'Sermon of Benares' and a section of the Dhammapada. About half of it consists of jātakas, many of which do not occur in Pali. This portion has a great deal to the Hinyānists, it contains much that is akin to the Mahāyāna, as that the adoration of Buddha is alone sufficient for the attainment of nirvāṇa. There is, however, only a slight admixture of regular Mahāyāna doctrine, and nothing of Mahāyāna mythology. Some of the elements which it contains point to the 4th cent. A.D., but the nucleus of the book probably dates from the 2nd cent. B.C. (see MAHAVASTU, the Leitā-nītāsara, or 'Detailed account of the play (of Buddha),' though it seems to have origin-
ally been a Buddha biography of the Sarvastivadins, has been extended in the sense of the Mahayana.

It is a continuous narrative in Sanskrit prose, with long metrical pieces in 'mixed Sanskrit.' Containing old and new elements side by side, it is valuable for the development of the Buddhist legend from its earliest beginnings up to the dedication of Buddha as a god above all gods.

The *Buddha-charita,* or 'Life of Buddha,' is an epic composed in pure Sanskrit. It is the work of Apastamba, a contemporary of Kaniska. The 'mixed' poet, however, must have composed it about A.D. 100. Originally a Brahman, he joined the Sarvastivadins, but later wrote on devotion to Buddha. His epic, however, contains no pronounced Mahayana doctrine.

Another work of the same school, dating probably from the 4th cent. A.D., is the *Jatakas-mala,* or 'Garland of birth stories,' by Aryasura. It is composed in a mixture of verse and prose, conforming to the style of classical Sanskrit literature. It contains 31 *jatakas,* illustrating the *parramitas,* or 'perfections,' or a Bodhisattva, and nearly all occurring in the Pali *Jataka* Book.

Cognate with the preceding works are a number of collections of *avatara-s,* or 'stories of great deeds,' and practical treatises in which the hero is a Bodhisattva (but not Buddha). The older ones still belong to the Hinayana, though attaching special importance to the propagation of Buddhism just as in the *Avatara-sutra* or the *Century of great deeds,* which date probably from the 2nd cent. A.D.

*Mahayana.*—The Mahayana, not representing a homogeneous sect, possesses no canon. But there are many dharmas, or 'religious texts,' which, coming from different sources and belonging to different sects, are also called *vijnana-yana.*

The most important and most characteristic work of the Mahayana school is the *Saddharma-pundarika,* or 'Lotus of good religion.' It contains matter of different date represented by Sanskrit prose and by *gathas* in 'mixed Sanskrit.' Its original form dates perhaps from about A.D. 200. Sakyamunih, here no longer a man, the mendicant of the Pali *sutta,* is a god above all gods, who has lived for countless ages and will live for ever. His doctrine is that every one can become a Buddha who has heard the preaching of Buddha, performed meritorious works, and led a moral life. Even those who adhere to this teaching, erect *stupas*, and make Buddha images obtain the highest enlightenment (see LOTUS OF THE TRUE LAW).

The *sutra,* the *Karanavati-syagha,* in language and style to the later Hindu puranas, is devoted to the exaggeration of Avalokitesvara, the 'Lord who looks down' with compassion on all beings. Here the typical Bodhisattva who, in the exercise of infinite pity, refrains from becoming a Buddha till all beings are saved. The yearning for salvation has probably never been more powerfully expressed than in the figure of Avalokitesvara (Maitreya).

The *syagha* is known to have been in existence before A.D. 400. More mythological is the *Sukhavati-syagha* (c. A.D. 100), or 'Detailed account of the Land of Bliss,' which is devoted to the praise of the Buddha Amitabha ('of unmeasured goodness'), the *Gaya-syagha* (a still unpublished dharmap) celebrates the life of Avalokitesvara Mahasuri (q.v.), who occupies a prominent position in Mahayana cult and art.

Other Mahayana *sutra-s* are of a philosophic and dogmatic character. The *Lokavatimsuttra* (the 'Great dharmasutra') describes a visit paid to the demon Ravanaya in Ceylon by Buddha, who answers a number of questions about religion according to the doctrines of the Buddhists (see ASAGA). The tenets of a number of philosophical schools are also discussed here. The *Dakshinavaktra (a dharmasutra)* represents a lecture by Buddha in Indra's heaven, about the ten stages by which Buddhahood is to be reached. It dates from before A.D. 400, when it was translated into Chinese. The *Samadhi-rasa* (a dharmasutra), or 'King of meditations,' is a dialogue in which Buddha shows how a Bodhisattva can attain the highest enlightenment by various stages of contemplation.

The *Sutra-prabhakara* (a dharmasutra), dating from not later than the 6th cent. A.D., is partly philosophic, partly anecdotal; and partly ritualistic in its contents. The Hindu goddesses Sarasvati and Mahadeviare introduced, and magical formulae and Tantric practices are dealt with. The *Rostraval-sutra* (a Boddhisattva, A.D. 550), besides containing Buddha's description of the qualities of a Bodhisattva, introduces a number of *jatakas.* Its main interest lies in its prophecy of the future decay of religion; for its realistic descriptions must largely reflect the lax morality of the Buddhist monks of the 6th century. The most important of all the *sutra-s* of the Mahayana are the *Prajapamma-sutra,* or sutras on the 'perfection of wisdom.' They deal with the six perfections of a Bodhisattva, but especially with the highest, *prajnā, 'wisdom,'* the knowledge of the doctrine of nothingness, which denies not only being, but also not-being. The doctrine of the Mahayana school was unfolded by Nagarjuna, originally a Brahman who flourished about A.D. 200 and founded the Madhyamika school, one of the main branches of the Mahayana. In order to remove the unresolvable contradictions of complete nihilism, he lays down in his *Madhyamika suttas* that the doctrine of Buddha rests on two kinds of truth. The one is the conventional truth of everyday life (in which the higher truth is latent); and the other the ultimate truth, in the highest sense. It is only through the latter that the higher truth can be taught, and it is only through the latter that nirvana can be attained. This distinction resembles that between the lower and the higher knowledge of the Vedanta system of the Brahmanas (see MADHYAMAKA, MADHYAMIKAS).

Nagarjuna cannot be regarded as the originator of the Mahayana doctrine itself. There have been teachers and texts of that doctrine more than a century before his time; for Mahayana texts were translated into Chinese in the 3rd cent. A.D., and the Gandhara type of Buddhist art, which represents the Mahayana doctrine, came into being about the beginning of our era.

Asanga (q.v.), the eldest of the three sons of a Brahman from Peshawar, probably flourished in the first half of the 5th cent. A.D., and was, according to almost all the sources, the main exponent of the Mahayana Yogečara school, which recognizes existence in consciousness (vedâna) only, denying thereby the reality of the phenomenal world. The only absolute entity is truth (buddhi), which is manifested in the Buddhas, and which is attainable solely by those who practise *yoga* in ten stages. *Yoga* (q.v.) was thus brought into systematic connexion with the Mahayana doctrine. Asanga expounds the tenets of this
school in his Mahāyāna-Sūtrakālatātra, a work consisting of memorial verses (kāvika) in various metres and a commentary written by himself. Asanga's brother, Vasu-kirti, also contributed to Buddhist literature, distinguishing for profound learning and great powers of independent philosophical thought, is remarkable as having written authoritative works representing both the greater divisions of Buddhism. His most important work, belonging to his earlier and Hinayāna period, was his Abhidharmakosā-kosā, which deals with ethics, psychology, and metaphysics, but is also a Sanskrit commentary and Chinese and Tibetan translations. In later life he was converted by his brother Asanga to the Mahāyāna doctrine, when he composed a number of commentaries on various Mahāyāna sūtras, which have, however, been preserved in Chinese and Tibetan translations only. The most important of the later Mahayanaists was Sanudita, who probably lived in the 7th cent. and was the author of two works. The first, Sūkyakopanidhyaya, or 'Summary of the Doctrine,' is a manual of the Mahayana teaching, consisting of memorial verses (kāvika) and a commentary. The other is the Bodhisattva Mahāsyānta, or 'Entry into the practice of enlightenment,' a religious poem of great literary merit, incalculating the pursuit of the highest moral perfection. The aim in both works is the attainment of enlightenment in the Bodhisattva by means of infinite compassion and the generation of Buddhas, the highest wisdom being the belief in nothingness (bhūmi). The successive stages of the decay of Buddhism in India is the approximation of its later literature to that of Hinduism. Thus the Mahayana sūtras show striking resemblances to the Brâhmanic purâṇas, containing, like those, mahābīmaśas, or glorifications of particular localities, and stotras, or hymns addressed to various deities. There are also separate stotras, like those addressed to Viṣṇu and Siva; many of them glorify the goddess Tārā, the female counterpart of the Bodhisattva Avalokiteśvara. A further sign of degeneracy is the increasingly important position which the dhārayaśī, or 'spells,' begin to occupy in Mahayanaist literature. They appear to have existed from the 3rd cent. A.D. They were probably in their earliest form intelligible sūtras containing Buddhist doctrine, but unintelligible mystic syllables gradually began to prevail as the 'kernel' of magic powers. Finally, under the influence of the Tântra, they became pure gibberish and entered as essential elements into the Buddhist tântras. The Tântras (g.v.), which probably date from the 9th to the 11th cent., and are composed in barbarous Sanskrit, represent the final stage in the degradation of Indian Buddhism. They are treatises partly concerned with ritual (kriyā-tântra) or rules of conduct (charyā-tântra), partly with the esoteric doctrine of the yogis (yoga-tântra). The former class is a revival of the old Brâhma ritual of the Ghyâsâsâtras, and the mystical syllables contained in them are addressed not only to the god and his attendant, but also to Saivite deities. Most of the tântras, however, are connected with yoga, starting from the mysticism of the Mâdhyamika and the Yogâchâra schools. The yôga here aims at the highest knowledge of nothingness (bhūmāyatâ), not only by asceticism and meditation, but by magical rites, hypnotism, and other expedients. The teaching includes magic, sorcery, and erotics, accompanied by disgusting orgies. Nothing of Buddhism remains in them, for they differ in no respect, except in being described as 'pronounced by Buddha,' from the sūtra-tântras, inculcating as they do the worship of the Íśīva and Saivite gods, and introducing numerous female deities into their cult.

LITERATURE (Chinese).—The vast mass of Chinese literature is divided by Chinese scholars through four classes—classics, histories, writings of philosophers, and belles lettres. The term 'classic,' means originally the warp of a web, and by metaphorical extension comes to mean what is invariable, a rule. The Chinese classics are, therefore, those books which are regarded by the Chinese as canonical. Taoism and Buddhism as well as Confucianism have their classics; but in speaking of the Chinese classics one has in view the books of the Confucian canon only. If we speak of them as 'sacred,' we expose ourselves to misleading associations. We do, indeed, meet with the phrase Sheng King as designating the Confucian canon, where sheng is the word which is used in Christian literature to denote the idea of holiness. Originally, however, it refers to perfection of wisdom ('sage,' 'sagely'), and does not mean of itself suggest any relation to the divine. Of the perfect Sage it is said:

'He is seen, and the people all reverence him; he speaks, and the people all believe him; he acts, and the people all follow him.' (Doct. of the Mean, v. 15.)

The authority of the classics is due not to any special inspiration, but to their connexion with sages or sagely men who possessed this ideal development of human nature. Degrees of authority are recognized; Menistria, a. The term Sheng King pronouncement is held to have fallen short of the perfect balance of Confucius. In so far as education was founded on and almost confined to the Chinese classics, their influence has been enormous. Less legitimately their connexion with the sages has given them a pre-eminent share in that reverence, passing into superstition, with which all written printed paper is regarded. Among the commentators on the classics, Chu Hsi (A.D. 1130-1200) has long been considered to be the standard of orthodoxy. The number of books embraced in the Confucian canon has varied. The imperial edition of the dynasties contained thirteen books. The present canon, taken in the strictest sense, includes the Five Classics and the Four Books. 1. The Five Classics.'—(1) I King, 'The Book of Changes.'—The germ of this is the Eight Trigrams, further elaborated into sixty-four, alleged to have been copied by Fu Hsi, a legendary ruler of early China, from the back of a mysterious creature which appeared from the waters of the Yellow River. The diagrams are combinations of whole and broken lines, and are supposed to correspond to the powers of nature—heaven, earth, fire, water, etc. Wen Wang added to the diagrams his 'Definitions'; Chou Kung supplemented these with his 'Observations'; and, finally, Confucius added 'Ten Chapters of Commentary,' and the classics were complete. By the joint work of these four sages, it enjoys a great reputation. It is a compound of obscure and fanciful speculation and of a system of divination. But with regard to its meaning and its origin, whether it is native to China or may be connected with Babylon or elsewhere, various opinions have been held by scholars.

(2) Shu King, 'The Book of Historical Documents.'—We read of a canon of one hundred
historical documents, ascribed on inadequate evidence to Confucius, with a preface the Confucian authorship of which is even more doubtful. What now exists is this preface and fifty-eight books of documentation, which is traced back to two scholars, Fu Sheng and An Kuo. The twenty-five books which rest on the sole authority of the latter are gravely suspect. The whole collection of documents, which by no means forms a continuous whole, falls into five divisions—the books of T'ang, of Yü, of Hsia, of Shang, and of Chou. The earliest documents refer to a period about 2000 B.C., the latest to 627 or 624 B.C. Whatever be the admixture of legendary matter, the documents are of much historical interest. As a record of early moral and religious ideas their value is also great. The political ideal is a beneficent autocracy, and sovereignty is conferred or withdrawn according to the righteous judgment of God, who raises up the instruments of His providence.

(3) Shi King, 'The Book of Odes.' This comprises three hundred and five odes, with the titles of only sixty more, traditionally said to have been selected by Confucius from the numerous pieces extant in his time. This account greatly exaggerates his share in the making of 'Shi King'; he attached great educational value to the odes. He claims that their design is summed up in this: 'Have no depraved thoughts'; but, while they are free from indecency, a number of them spring from the spirit of the times. The subject-matter of the odes is various—praise of virtuous kings and ministers, and of chaste and submissive wives, longing for absent friends, and the joy of reunion; testimonials of melancholy and personal complaints of injustice, remonstrances with careless or wicked rulers; celebration of State banquets and sacrifices. The odes are not arranged in chronological order, but in four classes: (1) 'Lessons from the States,' 15 books of odes from various feudal States; (2) 'Minor Odes of the Kingdom,' 8 books; (3) 'Greater Odes of the Kingdom,' 3 books; and (4) 'Odes of the Temple and the Altar,' 8 books. The earliest odes date from the Shang dynasty (1700-1200 B.C.), and the latest from the time of King Ting (605-585 B.C.) of the Chou dynasty. Much can be gathered from the odes illustrating early Chinese civilization.

(4) Li Ki, 'Collection of Treatises on the Rules of Propriety or Ceremonial Usages.' Of the 'Three Rituals,' the Li Li, the Chou Li, and the Li Li, the last of all placed among the Five Classics. It is a collection condensed from a large group of documents in the 1st cent. B.C., and augmented and finally fixed in the 2nd cent. A.D. Various treatises, which are not arranged in any logical order, cover a great variety of subjects—birth, marriage, death, religious, sacrifices, and methods and age. There is much wearisome detail, but it is from this classic that we learn the genius of the Chinese race as embodied in religious and social usages.

(5) Ch'un Chi, 'Anatidae.' Ch'un Chi, lit. 'Spring and Autumn,' is the only one of the Five Classics ascribed to Confucius himself; but it falls so far short of Mencius's eloquent of the Ch'un Chi which he knew that they may be said to be contradicted by other evidence—has been expressed as to whether our Ch'un Chi is indeed the Sage's work. It seems to be founded on, and may be merely transcribed from, the annals of Lu, Confucius's native State. It is a bold record of such things as the beginnings of the seasons, State-covenants, wars, deaths of persons in high estate, and extraordinary events. The notices of eclipses are important as affording chronological data. The record runs from 721 B.C. to the 14th year of Duke Ai, when Confucius's work ends, and is supplemented by his discip les up to the time of his death, 10th year of Duke Ai (475 B.C.). Even in this scholarly record the account is not impartial, and is guilty of concealing the truth. An unfortunate cloud thus rests on the character of its author. The best known commentary on the Ch'un Chi is the Tao Ch'ien, which supplements it in a form resembling the record to 467 B.C., with one entry of a slightly later date.

2. The 'Four Books.'—(1) Lun Yu, 'Analects.'—These were probably compiled by Confucian scholars of the second century. Whatever connections with Confucius and disconnections of his, mostly quite brief, form the staple of the work; but bk. 19 contains sayings of disciples only, and these occur also in other books. The main themes are ethics and government. In spite of the general failure even to seek after righteousness, it is maintained that human nature is made for virtue, which is a long life. For the attaining of virtue there is sufficient strength, if only it is exerted. Hence the importance of moral culture, though some may be incapable of it. The ideal man (Chun Tzu) is depicted, and such topics as filial piety, friendship, and righteousness are discussed. Reciprocity—not to do others what one would not have done to oneself—is the highest moral rule. There is intentional renunciation on extraordinary matters. In politics the moral ends of the State are emphasized, as is also the influence of a virtuous ruler over his subjects. Bk. 10 contains many particulars as to Confucius's deportment and habits. More important are the scattered estimates of Confucianism and himself.

(2) Ta-Hsüeh, 'The Great Learning.' is so called with reference either to the importance of its matter or to the mature age of its students. Its text appears to be fragmentary. In one respect it forms a section of the Li Ki; but as usually printed it is arranged by Chu Hsi, though without authority, into text by Confucius and commentary by Tung T'ao. The book professes to trace the development of virtue from investigation of things, through extension of knowledge, sincerity of the thoughts, rectification of the heart, up to the cultivation of the person (which is the general idea); and then on to regulation of the family and tranquilizing of the empire. The work, though not without some excellent moral ideas, falls far short of its promise.

(3) Chung Yung, 'The Doctrine of the Mean' (probably rather 'Equilibrium and Harmony'), is ascribed to K'ung Chi, grandson of Confucius, commonly known as Tzu Sen. This treatise, like the Ta-Hsüeh, forms a section of the Li Ki. Human nature, as given by heaven, is the source of civilization. In its original state it is 'equilibrium'; as developed into right action it is 'harmony.' The beginnings of this development lie at hand in ordinary duties and virtues, particularly in 'reciprocity,' which is here developed positively (the Golden Rule; cf. ERE vi. 311). Such development of nature is exhibited in the sages. When it is so developed that fact and ideal coincide, we have 'sincerity.' Some have this sincerity by innate endowment; some attain to it by moral instruction. It is the sumnum bonum, and has a transforming influence on things and men. Confucius is exalted extravagantly, though perhaps not precisely identified with the ideal man who is the equal of heaven.

(4) Mencius (371-307 B.C.).—Seven books of his teaching remain, which are credibly ascribed to Mencius himself in collaboration with his disciples. The main topics are ethics and politics. The idea of human nature is made for righteousness. This original constitution is the child-heart which good
LITERATURE (Dravidian).

—Dravidian literature is the record of the best of the thought of those peoples of S. India who speak languages designated by Kumārila Bhaṭṭa, in the 7th cent. of our era, as Andhra Drāviḍa. The four principal literary languages are now Telugu, Tamil, Kanarese, and Malayālam. According to the Census Report of 1911, Telugu is spoken by 234 millions of people, Tamil by a little over 19 millions, and Malayalam by 62 millions. That the Sanskrit-speaking Aryans were acquainted with S. India at an early period is evident from the mention of the Andhras by Pāṇini (c. 550 B.C.), but Aryan immigration into the South came at so late a period that the South Dravidian languages retained, with but few exceptions, their own characteristic grammatical structure. Their vocabulary was, however, enlarged by the inclusion of Sanskrit technical terms and words or their corruptions. So widely did this Aryan influence on the literature of the South spread in course of time that J. Vipson says:

"Not one Telugu, Kanarese, or Tamil book now in existence is independent of Sanskrit. . . . Writing was not applied to vernacular languages before the 4th cent. It was the Aryan Brāhmaṇas or Jains or Buddhists who first having learned the vernacular languages passed to Sanskrit and then taught the natives to write and compose works. The preliminary or Jain period must have lasted two or three centuries" (Mahābhārata Dipika, April 1908).

The southern inscriptions of Aśoka show that writing must have been familiar to the people by the 2nd cent. B.C. The earliest southern scriptures are, however, all derived from the Andhra alphabets of about the 4th cent. of our era. Telugu and Kanarese alphabets date from the 5th cent., while the oldest Tamil writing comes from the 7th cent. Previous to any writing or written records the folk-songs of the people, their moral aphorisms as well as their lyric outbursts of love and war, set as they were to music, were handed down by way of oral literature from generation to generation. P. Sundaram Pillai states that more than 19,000 lines of the hymns of the early poet Sambandhar, not later in date than the 7th cent., are still extant:

'Most of them appear to have been uttered impromptu, and all of them being lyrical are not to music. The original tunes are now mostly forgotten. They were once sung, and are now introduced by Aryan musicians of the north' (Some Milestones in the History of Tamil Literature, p. 6).

The invading Aryan influence so blended with the indigenous Dravidian element that the Aryan lute (vina) completely ousted the primitive Dravidian musical instrument (gāl), no reliable description of which remains on record. Similarly, the old grammars and the grammars of the Pāṇiniya and Andhra school of grammarians have been superseded by the now standard authority for all classical compositions, the Nāṉṉāṉ, composed by a southern Jain grammarian, Pavanandi, about the beginning of the 13th century. The Nāṉṉāṉ lays down the rule that 'to reject the old and obsolete usage and to adopt new and modern usage is not an error but a yielding to the necessities of time and circumstance' (G. U. Pope, Third Tamil Grammar, Madras, 1859, Rule 462, 'Nāṉṉāṉ'). Notwithstanding this salutary rule, Dravidian literature and poetry are considered worthy of commendation by the learned only when they are as different from the spoken vernaculars as Anglo-Saxon is from modern English. The more they hold themselves aloof from the colloquial speech of the time and the people, and the more they are wont in arishtav, the more they merit the praise of panditav. The earliest, and therefore the purest, Dravidian literature, as freest from Arvī influences, is embedded in works dating from about the 2nd cent. of our era. Collections known as the Ten Classical Poems are assigned to a very early date; these were succeeded by Eight Compositions of various authors. Eighteen shorter stanzas, including the moral aphorisms of the Kural of Tiruvalluvar, followed, and the four hundred quatrains of the Nāṉāṉāṉ, said to have been composed by a southern Jain poet of about the 8th century. The latter quatrains show strong Aryan influences, dealing as they do with the ordinary topics of Indian metaphysics—the pain of existence, transmigration of the soul, and the like. From them, and from the Arvī, some of the quatrains are mere translations from such Sanskrit epics as the Mahābhārata. Pope, who translated and annotated the Nāṉāṉāṉ in a scholarly edition, described it as 'The Bible of the Cultivators of the Soil.' Its style, however, is so classical that no cultivator of the soil could understand the meaning of the verses unless explained to him in the language that he is accustomed to speak. The moral epigrams of the Kural and Nāṉāṉāṉ, in copious and quatrains, have been acclaimed as the highest achievements of Dravidian literature. Pope (Kural, p. 14) truly says of the Nāṉāṉāṉ (and the same applies to the Nāṉāṉāṉ) that 'a line 'is often little else than a string of crude forms artfully fitted together.' Style such as this, framed on Sanskrit corrupt compounds, can hardly claim the title of literature because of its epigrammatic or moral the underlying and hidden thought may be. The Nāṉāṉāṉ is, nevertheless, well suited to fill its present role as a literary puzzle for Tamil students at the Madras University, or for Honour candidates at other Universities. To the same period, from the 2nd cent. to the 10th cent., are ascribed the chief versions of Tamil romances—the Mani Mekkālai, the Mekkālai, and the most perfectly constructed and the most untranslatable, on account of its open erotic sentiment, of all Tamil romances, the
Jinakuchimunani. These poems, amid a surrounding of love and romance, give a vivid view of early Jain and Buddhist life in S. India and reliable accounts of the doctrines of the Jain and Buddhist faith. They still await translation into English to make them available for historical purposes. No translation could possibly convey the peculiar charm of the stately and leisurely style of the original, the smooth and harmonious sequences of sound, and the subtility of its quaint and involved conceits of metaphor. J. Vinson (Manuel de la langue tamoule, p. xiv) has given a valuable and balanced judgment respecting the comparaative value of the best of Dravidian literature.

' Malgré tout, cependant, la littérature tamoule est secondaire. A part peut-être les recueils de sentences morales, il n'y a pas d'un point de vue technique doute du caractère compartible d'œuvre sans patine par des Européens. Ses descriptions y sont diffuses, monotones, pleines de manques gêts et d'exagérations choquantes, conformes d'ailleurs à un type uniforme donné. Ses poèmes d'amour ne sont pas plus variés, et les poèmes de guerre se ressemblent tous; ce sont proprement des jeux d'esprit, des amplifications de rhétorique sur une formule générale et sur un caractère minutieusement réglé. L'invention et l'imaginaire ne peuvent n'y exercer que sur les détails, sans expressions, sur la mesure, sur la formule extérieure en un mot.'

This Aryan influence on the religions literature (see Dravidians [South India]) and even on the indigenous folk-songs of the people has had the result that, without a previous knowledge of Sanskrit much is almost unintelligible. According to C. E. Gover (Folk-Songs of Southern India, p. 14), who gathered together folk-songs from the varied peoples of S. India, the foreign element progressed till almost the whole written literature of the country became Brahmanic. Indigenous poetry, now that it has, as it were, that and as far as possible, was edited so uncritically that the original was himself a load of corruption. This Aryan influence so permeated the whole spirit and vitality of indigenous literature that Appakavi, a grammarian of the 17th cent., contempontously declared that Telugu adaptations from the Sanskrit were merely the use of women and Nâlakat, the distinguished Dravidian scholar, G. V. Râmârâma, who quotes the above in his Memorandum on Modern Telugu (Madras, 1913, p. 3), farther states that: "If a Brahman read the Râmâyana for religious merit, he reads the Sanskrit original and not a Telugu adaptation. The same writer, an ardent advocate for a reformed pure Dravidian literature, is forced from Sanskrit corruption: only the truth when he says:"

A Sanskrit original, whether it is the Râmâyana or Mahabharata, is the better in style and language than a translation of it" (op. cit. p. 6).

Nevertheless, the simple peasant values these Telugu, Tamil, Kanaresi, or Malayalam imitations of, or adaptations from, the Sanskrit poems, epics, and purânas. Read as they are by professional reciters under the village tree during the long star-lit evenings, they hold the simple folk in spellbound wonder and awe as they listen to a running translation and commentary in the current vernacular. They teach the village folk the simple story of life, of the rewards and joys of those who had faith in the gods and thereby gained salvation through the grace of the deity, of the triumph of good over evil, and, above all, the loved stories of wisely devotion and patient suffering under unmerited calamities.

LITERATURE (Egyptian).—The great bulk of Egyptian sacred literature may be grouped in three divisions: (1) the Pyramid Texts; (2) the Book of the Dead, with its related group of books, the Book of Am Duat (or of knowing that which is in the under-world, the Book of Breathing), the Book of Gates, etc.; and (3) miscellaneous writings, embracing a number of hymns to various gods, Ra, Osiris, Hapé, Amen, such writings as the Lemontiations, and the Songs of Isis and Amon and the Litanies of Seker, and a number of legends concerning the gods and their relations to mankind.

1. The Pyramid Texts.—These constitute by far the most important class of Egyptian sacred writings known to us, not only because they exhibit the religious beliefs of the nation at a very early period in its history, but also because the remains of primitive traditions embedded in them exhibit some of the Egyptian beliefs to be traced back even to pre-historic times, and because the development manifest in the later versions of them shows how gradual but important changes were happening in Egyptian religious belief within a definite period.

The great pyramids of the IVth dyn. kings have no interior inscriptions, and it was supposed that this was true of all other pyramids until in 1880 Mariette's workmen at Saqqarah managed to effect an entrance to the pyramid of Pepy I. of the IVth dyn., and later on to that of Merenre of the same line, and found that both contained lengthy hieroglyphic inscriptions, hewn in the stone and coloured green. Eventually inscriptions were found in five pyramids, of which the oldest is that of Unas of the IVth dyn., and the others are those of Teti, Pepy I., and Pepy II., all of the Vth dynasty. The inscriptions thus cover a period of about 150 years, from 2325 to 2175 B.C., or, on Petrie's Sinal dating, from about 4210 B.C. on wards. Immediately after their discovery the texts were edited by Maspero, and the attention devoted to them has been steadily increasing. The best edition at present available is that of Sethe (Die alt-ägyptischen Pyramidendichten, Leipzig, 1908-10).

These texts are, then, the oldest body of religious literature extant in the world, and a great deal of the material embodied in them carries us back to very much earlier times than their own sufficiently early date, referring to primitive customs and conditions of life which had long been extinct by the time of the Vth and Vth dynasties. The later versions show traces of editing undertaken in order to meet the new developments of religious thought arising in a period of 150 years. Broadly speaking, the object of these writings is to secure blessedness in the after-life to the king on the walls of whose tomb they are inscribed; for there is as yet no trace of any idea that the immortality postulated for the Pharaoh may be also the property of the common people. The whole contents of the texts are directed towards the one purpose of securing entrance to the abodes of bliss for the dead king, and unification with the gods when his entrance is secured. These contents fall under the following heads: (1) funerary rite, and ritual of mortuary offerings, (2) magical charms, (3) ancient ritual of worship, (4) ancient hymns, (5) fragments of ancient myths, and (6) prayers on behalf of the dead king.

The material is arranged in sections, each of which is headed by the words 'Utter (or recite) the words.' Of these sections the pyramid of Unas contains 228, and the other pyramids make up the number to 714. The amount of text is considerable, as may be judged from the fact that in Sethe's edition it fills two quarto volumes with over 1000 pages of text. It is arranged in the most haphazard manner possible, the scenes re-
LITERATURE (Egyptian) 93

sponsible for the different versions having made
(as usual in Egyptian religious writings) not the
slightest attempt to group together or the various
types of literature enumerated above. The hymns
scattered throughout the collection already exhibit a
familiar poetical arrangement, in the form of couplets
showing parallelism in the ordering of words
and thoughts; and the texts are not devoid of a
certain and rude power of imagination which
entitles them to rank as literature. Thus, when
the dead king rises to the vault of the heavens,
"Clouds darken the sky,
The trees swing down,
The Bow [a constellation] staggers,
The bones of the body shudder,
The gatekeepers are silent
When they see king Oses
Dawning as a soul."

And there is some power of fancy in the passage
which pictures the king, after he has passed the
ily-lake and drawn near to the gates of heaven,
being challenged by voices after voices, out of the
world of the dead. "Whence comest thou, son of
my father?" until, at last, when answer has been
duly made to all the challengers, they fall silent,
and the dead Pharaoh enters unopposed upon his
heavenly kingdom.

The life of blessedness which the Pyramid Texts
contemplate has already ceased to be that which
we may take to be the early form of the Egyptian
conception of life after death—that of sojourn
at and about the tomb. The deceased king's realm
is in the sky, and, moreover, in the east of the sky
—this is a contradiction to Later belief,
which always placed the abode of the blessed dead
in the west. In the sky the king may develop either
two of his people; he may become a sun, or he may be associated with Re, the sun-god,
finally becoming identified with him. These two
destinies do not represent two different strata
of earlier belief, which have been slumped to-
gether according to the regular Egyptian custom
of associating incompatibles without attempting to
 reconcile them.

The earliest form of belief represented in the
texts is solar; the deceased is constantly identified
with Re, and the Osirian belief is referred to in
texts which show that it was held to be incompatible
with, or even hostile to, the solar form.

Certain prayers are designed to protect the pyramid
and its temple against the intrusion of Osiris;
and other passages show that the devotions of the
Solar faith, Osiris once represented the realm
and the dominion of death, to which the follower of
Re was not delivered up." (Bredt, "Development
of Religion and Thought in Ancient Egypt," p. 140).

Gradually, however, and, as the texts show, even
within the Pyramid Age, the Osirian faith began
to assert its power and to appropriate part of the
place which the solar religion had formerly occu-
pied. In doing so the Osirian conception of the
life after death, originally one of an under world,
becomes more less solarized, and the two faiths
interpenetrate to some extent; but, on the whole,
the Pyramid Texts present us with the picture of
the gradual transition of superiority on the part of
the Osirian faith over the earlier solar creed. It
would appear that in this transformation we wit-
tness the triumph of popular over State religion,
and, it is evident that, to start with, the solar faith
was the State theology, while the cult of Osiris
was always a popular form of religion.

On the whole, there is no more interesting body
of religious literature in the world than this, the
most amount of all, and its interest is due, not
to its own intrinsic value alone, but also to the fact
that it takes us nearer than any other religious
writing to the primitive ideas of mankind as to the
modes of life in the world after death. Passages
such as these which describe how the dead king in
the other world fashions and discusses with the gods,
cooking them in his kettle, and eating them,
'Their great ones for his morning meal,
Their middle-sized ones for his evening meal,
'Their little ones for his nighttreat'.

so that 'the magic is in his belly,' have their
own value as literature for the wild power and
vigor of imagination which they reveal; but they
are still more valuable as the crude records of the
Egyptian, whom we have never seen save in the
distant, ordered civilization of the dynastic
period, was actually an unregenerate savage, with
beliefs on the same intellectual level as those of
other uncivilized races.

2. The Book of the Dead.—Next in importance
to the Pyramid Texts comes the collection of sacred
writings which has for long been regarded as re-
presentative of Egyptian religious literature, and
is most widely known by the totally erroneous
title of The Book of the Dead. The only justifica-
tion for the use of this title is that the texts more
or less regularly used in the collection were, like
the Pyramid Texts, entirely designed for
the advantage of deceased persons in the other world.
The Egyptians themselves called the collection
heavenly kingdom, 'The Chapters of Pert em Hra', or 'The Opening,
Forth by Day' (or 'Ascending Day'), a title
whose significance is somewhat obscure, though
the contents of the chapters suggest that they may
have something to do with the power which the
knowledge of them conferred upon the deceased to
go in and out from his tomb, and to live an un-
fettered life in the other world. Concerning
the early history of the Book of the Dead we have no
certain information. In fact, there is no literature
text antecedent from the period between the
XVII and the XIXth dynasties, so as to show the
development of religious thought. In the middle kingdom,
however, under the XIXth and XIXth dynasties,
there begins to appear a series of texts which are
gnated by some as an early recession of the Book
of the Dead. These texts are written no longer on the
walls of tombs, but on the inner surface of the
cedar coffins in which the well-to-do people
of the period are buried. They are generally written
in black ink, and are ornamented with coloured
borders representing the usual funereal offerings
to the deceased. About one-half of the material
thus preserved is taken from the Pyramid Texts,
the other half consisting of material which is met
later in the genuine Book of the Dead; so that,
really, the inscriptions of these Middle Kingdom texts by some such title as that of ' Coffin
Texts', which Bredt employs to denote them.
The writing of these texts is marked by the same
carelessness and inaccuracy which characterizes
the later versions of the Book of the Dead. The
scribe's sole object was to cover the prescribed
surfaces as rapidly as possible; it was never ex-
pected that his work would be seen again, and
consequently he took the least possible trouble
with it. In one instance the same chapter is
repeated five times over in a single coffin. Apparently
the thought that by his carelessness he might be
prejudicing the safety of his patron in the other
world did not worry the Egyptian scribe.

The Coffin Texts are intermediate in character,
as in time, between the Pyramid Texts and the
Old Solar version of the Book of the Dead.
The Coffin Texts are still present; but the Osiran-
izing process, already begun, has carried a
stage farther, and now we have indications of the
intrusion of the essentially Osirian idea of an
under world into the old solar idea of a celestial
heaven. Breasted epigrammatically sums up the
dip of the balance in the Coffin Texts towards
the west: 'The life which is at the end that in the
Pyramid Texts Osiris is lifted skyward, while in the
Coffin Texts Ra is dragged earthward (p. 277).
The idea of a Western Elysium, in contradistinction
to the solar idea of an Eastern one, begins to
appear; and the Osiris begins to approximate to
that of the Sechet Aaru, 'Field of Bulrushes,' as found in the
Book of the Dead. Thus one of the chapters of the Coffin Texts is
concerned with 'Building a House for a Man in the Ne ner World, digging a Pool, and planting
fruit trees.' Already the Coffin Texts exhibit
instances of the desire, which reaches full develop-
ment later, of furnishing the deceased with words
of power to enable him to assume various trans-
formations. Various texts enable him to transform
himself into 'the blazing eye of Horus,' into an 'etert-
bird,' or into 'the servant at the table of Hathor'; and along with this development comes
another which reaches an extraordinary pitch in the
Book of the Dead—that of charms to protect the
deceased against the dangers of the under
world. Thus there are charms for preventing
the head of a man from being taken from him,' for
repulsing serpents and crocodiles, for prevent-
ing a man from being obliged to walk head down-
wards, and so forth. This kind of rubbish, towards
which the Egyptian mind had an extraordinary
inclination, increases steadily in amount until the
really valuable morality of the Book of the Dead
is almost choked under its senseless bulk.

The Book of the Dead was already so called, makes
its appearance with the New Empire in the 16th
and following centuries B.C., under the XVIIIth
and XIXth dynasties. The change from inscrip-
tions on tomb-walls to inscriptions on the inner
surfaces of coffins is now followed by a further
change: the texts which form the new compilation for the
use of the dead are now written on rolls of
papyrus, and placed in the coffin. The various
versions extant from the XVIIIth to the XXIInd
dyn, have mainly been derived from tombs near
Thebes, and therefore the Book of the Dead of this
period is known as the Theban Recension; this
cannot be too clearly understood that there never
was a standard text, or anything even remotely
approaching to such a thing. Probably no two
copies bear as to the number of chapters, or the
contents of them, and the divergences are exceed-
ordinarily great. The size and content of the
so-called Book of the Dead which was buried with
any particular man depended entirely upon the
poor man or the will of his friends to purchase a
satisfactory copy for him or the revenue. The poor
man has a meagre roll a few feet in length, con-
taining a pitiful selection of a few of the more
important chapters; the rich man may have a
sumptuous version from 60 to 100 ft. in length and
containing anything up to 129 or 130 chapters.
In the XVIIIth dyn. the scribes began to ornament the
texts by adding, known as vignet-
ettes. Little by little the practice developed, and
in the XIXth dyn. the illustrated papyrus had be-
come the rule. The illustrations are often beautiful
pieces of illumination, and sometimes attention
has been given to them at the expense of the text.

In the most notable papyri of the XXIst dyn.
the development of the artistic work continues at
the expense of the text, which has become very
corrupt. And to this also begins to compare that
pruning which has been carried out in the py-
not found in the earlier versions. This tenacy
is accentuated in the XXIIInd dyn. papyri, which
contain sections that, strictly speaking, have no
connexion with the Book of the Dead. And from
this time onwards there is a falling off in the
versions, until a time is reached when no copies
of the book seem to have been written. This
period coincides with the decline of the power of
the priests of Ammon. As early as the
XXVIIth dyn.

In the XXVIIth dyn., however, the book takes
a new lease of life. It now appears to have been
reduced to some sort of order, to have been, in
fact, edited and systematised. The result of this
editing is the Egyptian Book of the Dead, which
contains four chapters which have no counterparts in the earlier
versions.

In the Ptolemaic period we have a version which is
best represented by the Papyri Papyrus, from
which Lepsius prepared his well-known edition.
It is the longest extant collection of texts, containing
nominally 185 chapters—some of them, however,
are really vignettes, and others duplicates, the
number of actual chapters being 155.

Meanwhile a number of short religious works
had been compiled, containing what at this period
was deemed to be most essential in the old versions of the
book, and these are more commonly found in the end of the Ptolemaic period than the full
version. These are known as the Siwai-Sesenn ('Book of Breathings'); they contain no hymns,
no addresses to the gods, nothing in fact, which
does not directly refer to the life of the deceased in
the world beyond. They may be regarded as an
epitome of all that the Egyptian hoped to obtain
in the spirit world.

In the Roman period there are still found small
rolls of papyrus inscribed with statements referring
to the happiness of the deceased in the next world;
and even in the early centuries of the Christian era
the knowledge and use of the book were not quite
extinct, for selections from it are found on coffins
as late as the 2nd century.

If we take into consideration the fragmentary
versions in use as late as the 2nd cent. A.D., the
actually extant documents of Egyptian religion,
the Pyramid and Coffin Texts, and the Book of
the Dead, cover a period of practically 3000 years
on the most limited system of dating, and, allow-
ing for the fact that even in the earliest texts
theological ideas are to a great extent developed
and stereotyped, we shall probably not exceed
reasonable limits in saying that the documents represent the theological development of at least
5000 years. Petrie's system of dating would, of
course, considerably extend this period.

The object of the Book of the Dead was simply
and solely to secure the deceased one a
secure life and all the advantages which the Egyptian
considered desirable in the world beyond the
grave (cf. art. DEATH AND DISPOSAL OF THE DEAD
(Egyptian)). There are chapters the knowledge
of which was intended to preserve the body from
decay or the ravages of certain animals—e.g., ch.
xxvi, 'Of driving away Apshu' (the beetle
or cockroach), and ch. xlv., 'Of not suffering corrup-
tion in the under world'; chapters providing
charms against the serpent Apepi, the serpent
Rerek, and the crocodile that comes to take away
the charms from the deceased; chapters 'Of not
letting a man be burnt or killed in the
under world,' and 'Of not eating fish or drinking filthy
water in the under world,' and so forth.

Generally speaking, it may be said of these
chapters, and of many others of similar import,
that they are somewhat melancholy reading.
Allowance has, of course, to be made for the fact
that they are full of allusions to a mythology the
knowledge of which had probably perished,
and that these allusions may have been full of
signification to the Egyptian, though they are
meaningless to us. It seems, however, that very
early the sense of a number of the references had
already been lost, as there are several chapters which contain glosses on the various allusions, and these glosses do not always agree. Very often the chapters do not rise above the level of mere vulgar incantation. Sometimes they consist simply of an endless series of names supposed to have magical power; sometimes they are merely ludicrous—e.g., ch. xxxiii., 'Of repulsing serpents in the under world':

'Hail, thou serpent Berek, advance not hither! Behold, she images of fire and flame, and thou shalt eat the tail which is an abominable thing unto Ra, and thou shalt choke the bones of a filthy cat.'

The most important chapter of the book is xxvii., which embodies the Egyptian conception of the Judgment of the dead. It consists of three parts: the introduction, the famous 'Negative Confession,' and a concluding text, and is fully discussed in art. Confession (Egyptian), and ETHICS AND MORALITY (Egyptian).

The fundamental religious idea of the Egyptian mind was that of immortality, and it is to the Pyramid Texts and the Book of the Dead that we owe our knowledge of the extraordinary development which this idea had reached in Egypt at the earliest historical period, of the wonderful persistence with which it was maintained and worked out in the later centuries. Of all the strange resemblances which the Egyptian conception of resurrection and immortal life presents to the Christian conception. The Book of the Dead is taken in any sense a complete statement of Egyptian belief—a thing which as yet is conspicuously lacking. The name sometimes given to it, 'The Egyptian Bible,' is a total misnomer. But in the working out of its central theme it affords unquestionable evidence of the fact that the conception of immortality and resurrection held by the ancient Egyptian was as close to other religious systems of antiquity ever approached.

The Overtaking of Apepi contains fifteen chapters treating of the various methods of destroying this enemy of souls in the under world. Its material is largely borrowed from the Book of the Dead (Papyrus of Nebsaneb, British Museum). The Book of Knowing that which is in the Dust contains a description of the twelve parts of the under world through which the bark of the sun journeyed during the hours of night. It tells the names of these divisions, of the gates and gods belonging to each, and states the advantages to be derived from a knowledge of these names. The Book of Breathings is largely a compilation from the Book of the Dead, and in the later periods was buried with the dead, being placed under the left arm, near the heart.

3. Miscellaneous writings.—Under this heading are to be included numerous hymns of Ra, Osiris, Seth, Ptah, and other gods (cf. art. HYMNS (Egyptian)); the Festival Songs of Isis and Nephthys; the Litany of Serek; the Litanies of Isis and Nephthys, and other similar works. The Festival Songs and Litanies are poems dealing with the Osirian myth, and supposed to be recited by the two goddesses with a view to effecting the resurrection of the dead Osiris. The names of the gods and their relations to mankind are found in inscriptions in several tombs notably in the tomb of Seti I.) and in various papyri, and have been frequently translated.

In addition there are certain books which do not strictly come under the heading of 'sacred,' but have yet a semi-religious character. Among them may be mentioned the Papyrus of Ptah-h tepet, of Gemmiwt, of Ani, and of Kenennu, essentially the same as the Book of Proverbs, while the Lay of the Harper (or Song of King Antef) may be compared with Ecclesiastes, and a remarkable comment on the social and moral condition of the inhabitants of the Middle Kingdom is found in the Admonitions of Ipuwer.

LITERATURE (Indian Vernacular).—The literature of the modern vernaculars of India may be divided into two main classes—that written under Musalman, and that written under Hindu influence. The former dates from the Mughal conquest, and was composed mainly in the Urdu form of Hindostani. Up to the introduction of printing at the beginning of the 19th century, it was nearly all in verse and was confined within the limits of Persian models and in Persian metres. Its earliest work date from the 16th cent. A.D., but the standard of composition was set by Wall of Aurangabad in the Deccan, who flourished at the end of the 17th cent., and who is known as 'the Father of Ikhtel,' Ikhtel being the technical name for the form of Hindostani used by these poets. From the Deccan the taste for this literature spread to Wall found numerous successors, and thence to Lucknow. The most celebrated of the Delhi poets were Rafful's-Aalaul, best known for his satires, and Mir Taqi, famed for the purity of the language in which his Ghazals and Mathnavis were expressed. Both these flourished in the 18th century. Among the Lucknow poets the most celebrated was Mair Hasan (18th cent.). Hindostani prosers have existed as literature till the foundation of the College of Fort William in Calcutta at the commencement of the 19th century. It began with the preparation of text-books for students at the College, and has had a prosperous existence. It has been specially successful in the department of fiction. The novels of such authors as Raitan Nair Sahib and 'Abdu'l Hamid Shams are worthy of a wider circle of readers than to which they are
condemned by the language in which they are written. Although the above literature grew up under Muslim auspices, its language has been successfully adopted by many educated Hindus, some of whom are looked upon at the present day as masters of an exceptionally pure style.

The beginnings of Hindu literature in the modern vernaculars were religious. In the North, up to about the 16th or 17th century, the language of religion was Sanskrit, but, in the South, vernaculars were employed at a much earlier period. There is a great collection of Tamilite texts in Tamil, said to go back to the 2nd or 3rd century. The most important of them are described in the art. DRAVIDIANS (South India). To these can be added a long list of Vaishnava works in the same language dating from before the time of Rāmacandra (12th cent.). The most noteworthy of these are referred to by A. Govindacharya in two papers in the JNAS (1910, p. 565 ff), and 1911, p. 935 ff). The Dravidian doctors employed both Sanskrit and Tamil for their writings. As a rule, it may be said that the Vadagalais, or Northern Tamils, wrote in Sanskrit, while the Teagalis, or Southerners, wrote in Tamil (cf. Govindacharya, in JNAS, 1912, p. 714). In the Southern Indian religious literature, the language is of enormous extent and, considered merely as literature, of great merit. It owes its origin to the spread of the Vaishnava Bhakti-Mārga under Rāmacandra and his followers (see art. BHAKTI MĀRGA, vol. ii. p. 539 ff, esp. 564). All the great writers of this early period belonged to humble ranks of life, and were not Sanskrit scholars. Even before, this literature was vernacular.

"The greatest of all the moderns, Tulsi Dās, although a Brāman by caste, was abandoned by his parents at birth, and was picked up and educated by a wandering ascetic. Kabir was a weaver, and Dādā a humble cobbler-carder. Nandīdev, the most famous ascetic, a tailor, and his most famous successor, Tukārām, a struggling Sūdra shopkeeper. Tīrāmūllār, the brightest star in the South Indian firmament, was a Partab, the lowest of the low; and Vāmāna, the most admired of Telugu writers, was an untouchee peasant."1

In Northern India this bhakti-literature falls into two groups—those devoted to Rāmacandra, and that devoted to Kṛṣṇa (Krishna). In both cases it includes not only devotional works, but also branches of literature ancillary thereto. But, according to Brāhmaṇa (vol. ii., p. 539) it has been pointed out that the foundation of the religion is the belief in the fatherhood of God. This is more especially true as regards that literature in which the Brāhmanas are regarded as the most perfect presentation of the Deity, and on this idea is based some of the most lofty poetry that India, ancient or modern, has produced. In the Ganges valley, Kāhīr (16th cent.) preached the doctrine in wise and pithy sayings that are still household words in Hindostān. An offshoot from his teaching was the Sikh religion, whose sacred book, the Adi Granth, is a collection of hymns by various authors formed by degrees in the course of the 16th century (see art. GRANTH, SIKHS). Both Kabir and Nānak (the founder of Sikhism) were more or less sectarian in their teaching. A greater man than either, but the founder of the famous poet. Tulsi Dās (16th-17th cent.), the author of the religious epic entitled the Rāma-charita-mānas, or "Lace of the Gauses of Rāma," and of at least eleven other important works, was born in the present day where people of Hindostān cannot be overrated. Tulsi Dās was a native of Awadh (Oudh), and this country was the scene of Rāmacandra's earlier years. The poet, therefore, wrote in the Awadh dialect of Eastern Hindi, and this form of speech has ever since, in the Ganges valley, been the only one employed for celebrating the deeds of Rāma-

1 G. A. Grierson, in IGI ii. 415.
or 'Adventures of the Merchant Srimanta,' and the Chandī, a poem in praise of the goddess Durgā. Extracts from the latter have been translated into English verse by E. B. Cowell (JASBE lxxi. (1902), exta no.). There is also a considerable amount of prose literature. This deals not only with Siva, rather than with his shakti, and is more in agreement with the Saivite writings of the South described in the art. Dravīḍiyan (S. India). There is also a considerable amount of prose and romantic literature in the vernacular literature of India. Of great importance are the bardic chronicles of Rājātāna, Gujarāt, and the Marāṭh country. The name of the earliest and best known of these, the Prabhātī Rātrī of Chhatrī Bandār (15th cent.), is familiar to students of J. Ted's Rajasthan (London, 1892-32, frequently reprinted), in which the poem is freely quoted. A semi-historical work, the Padmavat of Malik Muhammad, is an epic poem in Awadhī of considerable merit.

The technical study of poetics gave rise to a large literature, to a certain extent ancillary to the literature of religion. Its most famous writer in Northern India was Kesāv Dās of Bundelkhand (16th cent.), who wrote in Braj Bhākhī.

The introduction of printing into India has given an enormous impetus to the writing of books. It is impossible to deal with the results of this great increase in the mass of reading matter, good and bad; it must suffice to say that, so far as Hindu literature is concerned, it has led to more and more models to follow English models. The only writer in the vernacular who has gained a high reputation in both Europe and Asia on the grounds of originality and imagination is the modern Bengali poet Rabindra Nath Tagore.

Literature.—The only work attempting to deal with the vernacular literature of India as a whole is F. W. Frazer, A Handbook of Indian Literature, London, 1868. G. A. Grierson, in JASBE, vol. ii. (Oxford, 1908), ch. xi., may also be consulted. Brief and incomplete accounts of the literatures of most of the literary languages of S. India have appeared in such periodicals as IL and in prefaces to grammars and dictionaries. For Marāṭh the English student can find the most accessible account in the preface to J. T. Moleworts, Marathi Literature (Calcutta, 1868). For Bengali see Dinsh Chandra Sen, History of Bengali Language and Literature, Calcutta, 1891, the philological parts of which should be used with caution by an English scholar, as their selections from Bengali literature entitled Tung Shishya Parichāya, Calcutta, 1914, Ford, c. F. J. Lyall, in F. R. S. G. A. Grierson, The Modern Vernacular Literature of Hindīstân, Calcutta, 1899; the dates in this work have not always been accurately given and are not always to be relied upon. See also C. F. J. Lyall, art. 'Hindīstānī literature,' Elr. xi. 827 ff., and Ganapati Vibhīra Miśra, History of Bengali Literature, Calcutta, and Sukadeva Vibhīra Miśra, Surendra-bundhu-rādhīka (Hindi), in course of publication, pt. i., Kāpoṣhabhā and Alīkābhā, 1915. G. A. Grierson

LITERATURE (Jewish).—The term 'Jewish literature' is used to cover those writings of the Jewish people which were composed after the completion of the Biblical (OT) canon, and which are devoted to the discussion or exposition of Judaism—its teachings, its history, and its documentary sources—and designed primarily for Jewish readers. This definition excludes all such works of Jewish authors, as though written in Hebrew and meant for Jewish readers, deal with matters of general learning or literature.

I. THE TRANSITION FROM ORAL TRADITION TO WRITTEN RECORDS.—Between the completion of the Hebrew canon and the rise of Jewish literature there is an interval of several hundred years, and the reason why the literary activity of the Jews was so long in abeyance is that they regarded it unlawful to commit their teachings to writing. The Scripture, as the Book par excellence, could supply no other book to approach it; all supplementary documents must be imparted orally (see Lev. 24: 42); 'to set down the oral teaching in writing was regarded asdestroying, ex-
the distinction of having been the first to treat of the most widely varied branches of Jewish theology in special works, and thus to have laboured as a pioneer, so that he has been rightly named 'the chief of the speakers in every place.' From A.D. 600 to 1200 Jewish literature passed through its medieval period of fertility in two ramifications, viz., a Hispano-Arabic, which displays a powerful tendency to scientific thoroughness and systematization, and a Franco-German, which in more chauvinistic fashion further elaborated the traditional materials of knowledge. The period from 1200 to 1600 was one of declines, and from 1500 to 1750 one of profound decadence, during which the literary activity of the Jews was mainly confined to Poland and the East; but, from the advent of Moses Mendelssohn (q.v. 1729-88), Jewish literature, now in contact with the spirit of European culture, experienced a fresh revival which, mainly under the influence of Leopold Zunz (1794-1868), developed into a scientific treatment of Judaism, i.e., a methodical and critical discussion of the thought expressed in the Jewish teachings and evolved from the Jewish mind, and has since found expression in numerous works, not only in Hebrew, but in all the languages of Europe. We cannot here trace Jewish literature throughout its various epochs and in all its phases; it must suffice to examine the chief departments in which it was specially active, to indicate the tendencies that asserted themselves in it, and to search for the reasons that led to their development.

A characteristic feature of Jewish literature, as contrasted with the literatures of other peoples, is that it is not so much the work of individual authors as the cumulative product of the spirit of entire epochs. In many cases, too, it is ill preserved—a result of the fact that it was not studied by the learned only, but spread among all classes and folk. In the Talmud, for instance, is the Psalms, and transmitted by untrained hands, in a form very different from what was originally intended.

III. THE SEVERAL DEPARTMENTS OF JEWISH LITERATURE. Jewish literature in its entire range may be conveniently brought under the following categories, with which we shall deal in order: the Targum and Midrash constitute its earliest forms, and perhaps the two were originally one, for the Targum was of the nature of paraphrase, and thus involved a kind of exegesis. Traces of the old, non-literary rendering of the Scriptures are found in the so-called Palestinian Targums—the Targum of Jonathan and the Fragmentary Targum. For the Pentateuch, however, the rendering to which Aquila and Theodotion, the names of the Targums of Ongoles, and which assumed its definitive form in the Babylonian schools of the 3rd cent. A.D., became the standard of authority; it was recited in the synagogues, and was generally regarded by the Jews as the Targum. For the Prophets, again, the acknowledged standard was the so-called Targum of Jonathan—not much later in date than that of Ongoles; and here, too, the Palestinian Targum fell into the background. For the Hagiographa there was in the period of the Talmud no recognized Targum at all, and the renderings which we now possess were separated from the course of centuries, some of them, indeed, not having been compiled till after A.D. 1000 (cf. JE xii. 57 ff.). ‘Midrash’ (q.v.) denotes an exposition of Scripture, and was at first attached to the particular passages explained; but in the Bible itself we find the word used in the sense of a reproduction of older narratives (2 Ch 24:1; cf. 15:4). The Midrash was of a twofold character: 1000 character—law—the Halakha—or also deduced moral and religious teachings, adding stories and parables—the Hagaddah. The Halakhic Midrash was compiled chiefly in the schools of R. Ishmael ben Eliezer (2nd cent. A.D.) and R. Aqiba (see art. Aqiba ben Joseph), and the latter school continued to be regarded as authoritative; the work of both schools, however, being in the mass subsequently lost, has come down to us in mere fragments, and it is only recently that we have been able, with the help of the Midrash hag-Gadol, a compilation of the 13th cent., written in Yemen, to piece the remains together, and obtain an approximate idea of the form of the ancient Midrashim. The Haggadic Midrash is of vast extent; much of it is included in the Talmud, but it is found also in special collections. Leaving out of account the immense number of smaller Midrashim (JE viii. 737 ff.), we may distinguish the following great compilations: the Midrash Rabbah or Midrash Rabbah to the Pentateuch and the Five Megillot, to Esther, Ruth, Song of Songs, Lamentations, and Ecclesiastes, the Tanhuma to the Pentateuch, and the Midrash to the Psalms, Proverbs, and Samuel; but, while all these continue to follow the order of their respective books, the Peshitta collections deal only with selected portions of the Torah or of the Prophets, for use at festivals or on special Sabbaths. Mention should also be made of the great Midrashim known respectively as the Yalqut Shimoni, which probably took shape in Germany during the 12th cent. A.D., and embraces the entire Bible, and the Midrash hag-Gadol of Yemen, which is confined to the Pentateuch (ib. 657 ff.).

The Haggadah has been brought within the reach of contemporary scholarship by the monumental works of Wilhelm Bacher, Die Agada der babylonischen Amoréer, vols. 1 and 2, 1875, Die Agada der Tannaen, do. 1890, 1905, and Die Agada der paléstinen. Amoréer, do. 1892-99.

The Midrash frequently gives simple explanations of the words and meaning of the text, but this is by no means its primary interest; in the main it is concerned with religious and devotional ends. Jewish scholarship did not evolve a rational exegesis of its own—exegesis in the scientific sense—till the time of Saadya, who was a pioneer and wrote independent commentaries upon, as also a translation of, the whole Bible. In his exegeses he, too, writes with a religious purpose; but, on the whole, his chief concern is the rationalistic, grammatical, and lexical exposition of Scripture. The movement which he initiated owes its further development in the main to European scholars. In Europe there arose two great exegetical schools, one in Spain, the other in Northern France. The Spanish school was largely influenced by Arabic learning, and its most prominent representative was Abraham ibn Ezra (1092-1165), whose works superseded those of all his predecessors (cf. JE vi. 520 ff. and art. IBN EZRA, II). His commentaries had an extraordinary popularity; they have come down to us in various MS copies, and were appended to the first printed editions of the Bible.

The Northern French school, again, while it certainly lacked the scientific bent, the philological foundation, and the general culture of the Spanish school, yet by its devotion to study of the Biblical text and its sympathy with the spirit of the written word
LITERATURE (Jewish) 69
did a large amount of highly meritorious and
exemplary work for the discovery of the verbal
sense. It failed to gain recognition in its ripest
representatives, who—particularly Samuel b. Meir
(c. 1085–c. 1174)—have, in fact, been
buried by the scholarship of the Middle
Ages was the work of Solomon b. Isaac of Troyes,
called Rashi (1040–1105), who combined the old
masters of the Midrash with the effort to ascertain
the plain meaning; and consequently, though he
certainly gives the dry details of exegesis, we also
find in his work passages of an attractive and
effacing character. His commentary eclipsed
all others in general esteem; from the outset
to the present day it has been widely read, and
has formed a subject of study by itself; while
in the course of centuries it has drawn to itself
over a hundred special commentaries, and ranks in
the popular mind as "the commentary" of the
(cf. JE x. 324 f.). A blending of the characteristic
tendencies of the Spanish and Northern French
schools appears among the scholars of Provence
from whose group sprang David Kimhi (1160–1235;
and vii. 494 f.), whose exegetical works on the
Prophets and the Hagiography were especially
popular in the Middle Ages. His predecessors and
successors of the exegetes named, as also the his-
torical evaluation of the entire literature of the
period, has been the work of modern scholarship.
In this we find a new type of exegesis—philosophical,
whom each passed into the mystical.
periods that favoured this type,
those especially which were able to bring their more
stubborn materials into a popular and generally
accessible form attained a great vogue. These
include the long-popular commentaries of Don
Isaac Abravanel (1437–1508; cf. JE i. 126), and
also those of the so-called Haarste (JE iii. 392),
dating from the age immediately after Moses
Mendelssohn.
On the whole field of exegetical
literature cf. JE iii. 162–176.
Closely associated with the exegesis of Scripture
were the works dealing with Hebrew philology.
Linguistic study among the Jews was but rarely
regarded as an end in itself, but, as the science of
the language in which the Scripture was written,
was pursued mainly as an adjunct of other
scholarly interests.
The literary treatment of Hebrew
grammar and lexicography was systematically
presented by the Hispano-Arabic school, the work of
which, however, were composed in Arabic, and
were only translated, even when translated into Hebrew,
but not always;
the philological writings of Judah b. David Hayyuj (b. c. 960; JE vi. 277 f.)
and Aba b. Al-Walid Marwān ibn Jānah (early 11th cent.; ib. vi. 534 ff.), important as they are, were
redescovred only recently.
The works of Abraham ibn Ezra enjoyed an enormous vogue, as did also,
even in a still greater degree, the grammar
and dictionary of David Kimhi, which have in
many quarters retained their pre-eminence until
recent times. From the 15th century, however,
a marked decline in linguistic studies began; in
proportion as mysticism prevailed, interest in
exegesis decreased. The isolation of Hebrew fell away;
the works of Elijah Levi (1483–1549; cf. JE viii.
40) attracted much less notice in Jewish than in
Christian circles. Philology remained in a state
of neglect until it was restored to its rightful
position by the Mendelssohniian group; the manuals
of J. L. Ben-Ze‘eb (1764–1811; JE ii. 681 f.) were
widely studied until they were superseded by more
modern works. The revival of Hebrew philology was due in a very special
degree to the pioneer work of S. D. Luzzatto
(1800–65; cf. JE x. 224 f.). Luzzatto was at the
same time the first Jewish scholar for centuries
who combined the study of the language with the
exegesis of Scripture, and may also be regarded as the
most eminent independent representative of
Biblical literature among the Jews of last century.
With the name of the discoveries of Abraham Geiger
(1810–74) deserves to be specially associated.
Speaking generally, we may say that the Biblical science of the Jews during last century was profoundly
influenced by the contemporary critical works of
Christian scholars in the same field.
2. Works relating to the Talmud.—The Talmud
came to be the most important, the most comprehen-
sive, and the most highly esteemed branch of Jewish
literature; it is a sense bound up with
Biblical study, as its geras are found in the Mid-
rash, and as it purports to be nothing more than an
exposition of and a complement to the Scriptures.
It consists of two parts, the Mishna and its
clarification, the latter being the Talmud in the narrower
sense; the term G'mara, which is usually applied
to the second part, is of relatively late origin, and
was introduced into the text by the clerical censor-
ship. Our use of the expression 'the Talmud'
involves a presumption due to the facts of historical
development; for, although there is but one Mishna,
there are two sets of commentaries upon it, the one
Talmud of Palestine, or Talmud ha-Gezer, the other
Talmud of Babylonia, origin. In the process of historical development, however, the
semunaries of Palestine were early dissolved, while those of Babylonia maintained their position, and
succeeded in establishing a characteristically
whether views and decisions. The result was that,
although in the earlier period the Palestinian scholars
were held in great honour, and their
decisions sought in all important questions, eventually
the scholars of Babylonia came to be the sole
recognized authorities. In the age of the Gaonim
(c. 600–1000) the Babylonian Talmud had secured
so high a place in general esteem that its Pales-
tinian counterpart was virtually forgotten;
and when, about the year 1000, the latter was once
more brought to mind, consultation for its long
neglect was sought in the presenting that the decisions
of the Palestinian scholars had been known to the
Babylonians, and had been duly taken into con-
sideration by them. In consequence, the Pales-
tinian Talmud remained a comparative obscurity;
it was not studied to anything like the same extent
as the Babylonian, nor did it find a single commen-
tator during the entire medieval period; moreover,
its text suffered such gross deterioration that we
can now scarcely hope to see it in a form resembling
its original form. It should be noted,
however, that a few Ḥalkakī collections from
Palestine, the so-called Minor Tractates, were
studied in conjunction with it, thus becoming
a factor in the further development of religious
practice and religious law. The two Talmuds are
not related to the Mishna in the same way; in the
Palestinian Talmud we have the commentary to
forty Mishnaic Tractates, belonging to the first
four Orders; in the Babylonian we have thirty-
six only, principally from the second, third, fourth,
and fifth Orders, while the first and sixth Orders
only one tractate in each is dealt with.
As the Talmud, until the dawn of the modern
eónghe, occupied the central place in Jewish learn-
ing, and formed the supreme standard of religious
thought and practice among the Jews, it became
the nucleus of an enormous literature, which, in
connexion with its more outstanding representa-
tives, may be summarized in the following points.
(a) Expository works.—For so intimate a work as the Talmud, explanation was indispensable; its own expositions were
frequently very brief, and the lack of commentary was
plilled only by those who had been initiated into the peculiar
code of its dialectic; moreover, the language of the Jews, like
their general conditions of life, underwent a process of


and an active correspondence by letter had been carried on between the teachers of the Talmud in Palestine and those in Babylon. The study of the Talmud among the Jews became more and more dispersed, correspondence became more and more necessary, and from the time of the Baraita there was a large increase in the number of such correspondences; from that period itself, indeed, no fewer than fifteen or more voluminous collections of correspondence were preserved. Nor, when the centre of Jewish life was transferred to Europe in the Middle Ages, did the interchange of opinions diminish either in extent or in vigour. Talmudic discussions and legal pronouncements by certain eminent Rabbis of medieval times have been preserved, and were regarded as an important source of information. The number of works embodying such responses is so enormous that we must be content to mention only the more extensive and the most generally consulted: from the Middle Ages we have those of Meir b. Baruch of Rothenburg (1233-90), Nahmanides (1194-1270), and Solomon b. Abraham (1289-1419); and that of Isaac b. Sheeshet (1290-1366), all belonging to Spain; from the centre of the modern period, those of Isaac Luria († 1469) and Joseph Kelon († 1460), as also of David Ibn Abou Simara († 1570), and more recent times include Levi Landau († 1795) and Moses Sofer († 1849).

The literature of the responses cf. also J.E. xvi. 248ff.

(6) Systematic works.—Menorah must be made, Lastly, of that branch of the literature which deals with the problems of the Talmud in a methodical and systematic way—a mode of treatise but little regarded in the earlier periods, and indeed never strenuously applied till modern times. The earliest work aiming at systematic treatment is the Seder Tanachim ve-Emorim, dating from the 4th cent.; the next works of the kind to appear are the Seder hahamot ha-Tebet of Samuel the Samarian (1600), the Seder ha-Mishnah, compiled by J. Isaac of Medina (1439), and that of Judah ha-Levi of Tiberias (1429), the latter has drawn around it numerous commentators, and has often been republished. A new epoch in the history of Talmudic study was ushered in by S. J. Rapoport (1790-1837; cf. J.E. x. 352f.), who, in various Hebrew periodicals, as also in his discourse at the funeral of莹, dealt with the problems of the Talmud in a scientific way, at once systematic and critical. The work most outstanding by Rapoport has been followed by E. Frankel (1815-75; cf. xvi. 48f.), in his Darbey ha-Mishnah and his Sefer ha-Derashot, Abraham Geiger (1810-74; cf. x. 353f.), and H. Weil (1815-1896; cf. xii. 195ff.) in the historical work named below.

3. Historical literature.—The post-Biblical historiography of the Jews took rise as an element in the systematic treatment of the Talmud. The majority of the early works in this field were written chiefly with the object of re-constructing the chain of tradition and of determining as accurately as possible the genealogy of the compilers and the chronicle of learned men. The forms of Jewish historical literature are found in the Talmud itself, and these furnished the pattern for the earliest developments. The chronology of the Talmudic historiography is the Creation to the destruction of the Second Temple is given in the Seder 'Olam, the nucleus of which was the work of Joseph b. Halitsa (c. A.D. 160). An annalistic work, though dealing only with the family of the exilarchs, is found in the Seder 'Olam Zei', a genealogical register, which cannot have been drawn up before the 7th cent. A.D., and which assumes a disparaging attitude towards the exilarchs of the day. The bibliographical annals of scholarship, again, are represented by the Seder Tanachim ve-Emorim (c. 880), and the Epistle of Sherira (857), the latter being our principal source for the period between A.D. 857 and 1300. To the same class belongs also the Seder hahamot ha-Qabbalah, composed in 1161 by Abraham b. David of Toledo, who is chiefly concerned to exhibit the continuity of learned tradition down to his own day, though he gives somewhat more detailed information regarding the Jews in Spain of the two preceding centuries, yet even there his manifest purpose is to trace the development of learning in the community through time. The work of Abraham Zakuto, who was for a time a professor of astronomy and chronology in Samalama, but after the expulsion of the Jews from Spain settled in Italy, contains in similar lines, his Sefer 'Yad Mesha (1504) contains a detailed study of most of the Talmudic authorities, and also a chronology brought down to his own day. For centuries this work was known only in a form containing a series of supplements, and in its original shape in 1857. Jehiel Heilprin, of Minsk, wrote his Seder had-Dorot (c. 1700) solely for the purpose of supplementing the data of Zakuto and bringing the Rabbinical genealogies down to his own times.

A further incentive to the writing of history was provided by the peculiar fortunes of the Jewish people, and in particular by the sufferings and persecutions which they had to endure almost without intermission during the Middle Ages. These oppressions are chronicled in a vast number of fragmentary records, both in prose and in poetry, but there are very few connected and continuous accounts. We shall enumerate here only the more extensive compilations of this type still extant. A narrative of the persecutions which harassed the Jews, chiefly in the Rhine country, in connection with the Crusades is given by A. Neubauer and M. Stern in their "Hebraische Berichte über die Judenverfolgungen während der Kreuzzüge," Berlin, 1892. In those days of incessant persecution it was the practice to record in the synagogues the roll of those who had perished as martyrs; so-called memorial books were drawn up in the various communities, and were constantly added to. The most comprehensive of these books was published by S. Salfeld under the title Das Martyrologium des Nürnbergischen Memorbuches, Berlin, 1898. The earliest connected account of the persecutions was composed by the noted astronomer Judah ha-Levi of Verona († 1455), whose Sefer ha-Yashhāh was supplemented by a younger relative named Solomon and another writer named Joseph, and published in its enlarged form. The best-known work of the Jewish martyrologists in the Middle Ages is from the hand of the physician Joseph hak-Kohen, who lived in the 16th cent., and resided in various Italian cities; his Emun ha-Dekha describes with accuracy and graphic power the persecutions and martyrdoms suffered by the Jews from the destruction of the Second Temple. A strange combination of martyrology and the history of learning is found in Gadalshim ha-Tebet of Nissankauf (c. 1550), which, although much of it was shown at an early date to be untrue and even incredible, enjoyed an extraordinary popularity, and was again and again issued in printed editions.

The Jewish scholars of the Middle Ages had little aptitude for intelligently grasping or portraying their people's history. The Book of Joseph, a reproduction of the Latin Hecogipius (cf. E.Z. vii. 578) in fluent Hebrew, composed in Italy in the 10th cent., stood long alone; by reason of its vivid and interesting style it has always been held in great esteem, and has been not only frequently edited in Hebrew, but also translated into many other languages. Even more rarely, if possible, do we find medieval Jewish writers attempting to write profane history in Hebrew. A work of later date deserving of mention is Joseph hak-Kohen's Chronicles of the Kings of France and Turkey, written in 1558, while, a few decades afterwards, David Gans († 1613, in Prague) published, in his Shoshen ha-Shem (1625), a history of the Jewish, and then of universal, history from their respective beginnings to his own time; this work appeared also in a Latin translation. In general, however, Jewish writers restricted themselves to the composition of popular narratives of particular episodes.

It was not until comparatively recent times, indeed, that Jewish history was treated in a coherent and continuous way. In 1820 I. M. Josè began the publication of a history of the Jews in
LITERATURE (Jewish)

many volumes and in various forms, in which he was primarily concerned to recount the political fortunes of his people, discussing their development in an appendix.Lepold Zunz, while he wrote nothing of the nature of a systematic work on Jewish history, furnished in his Zur Geschichte und Literatur (Berlin, 1845) copious materials on all branches of that history, and suggestions as to the method of treating them. The best-known and most widely circulated work of this class, the Geschichte der Juden by H. Graetz (2nd ed., Leipzig, 1853), is in style at exhibiting the development of the religion and literature of the Jews in relation to their political position and the martyrdoms suffered by them, while A. Geiger's Das Judentum und seine Geschichte (Breslau, 1871) deals solely with their religious development. I. H. Weiss, in his Heb. Dör Dör or-Dorsdhak (Vienna, 1871-91), is likewise concerned only with the development of Judaism on its spiritual side. On the historical literature cf. also M. Steinerschneider, Die Gesch. der Juden, J. Steiner (1905), and art. 'Historiography' in JE vi. 435 ff.

The most important source of information regarding the history of the Jews in the Middle Ages is found in the copious narratives of the numerous Jewish travellers and wayfarers. The most important among these is the mass of the Hasdai ibn Joseph of Tudela, who (c. 1165) made a journey from Spain to the East and back, and noted down in a raucy style 'all that he had seen or heard.' In the edition of the Mass. 11th prepared by A. Andrae (Munich, 1903) has given a detailed account of the geographical literature of the Jews ii. 230 ff.

4. Systematic theology. A great part of the Talmudic period is devoted to the religious and moral teachings of Judaism; the Haggadah in particular is concerned mainly with the problems of theology—doctrinal and ethical. More than the Bible itself, however, does the Talmudic literature give a systematic presentation of theological doctrine. It was, in fact, only under the influence of Muslim theology that the Jews, first convinced, then equipped with the doctrinal fabric of their religion, and to support it by arguments. Their works were, to begin with, written in Arabic, but were soon all translated into Hebrew. The most important of the efforts of the family of Ibn Tibben, in Lune—and in this form given to the Jewish world. The earliest systematic theologian among the Jews was Sa'adya Gaon, who, in his Emunoth ud-Din, written in 433, sought to bring the doctrinal teachings of Judaism into relation with contemporary philosophy. Babyl. in Joseph (first half of 11th cent.; JE ii. 440 ff.) won an extraordinary success with his Dibburot kei-Dibburot, which treat chiefly of the moral teachings of Judaism; the book was read far and wide, and was in its day perhaps the most popular work of general philosophical literature among the Jews. Judah Halevi (JE vi. 436 ff.; see also art. Halevy), in his Kuzari, renowned philosophy altogether, and based theology exclusively upon the revealed faith and the experience of the Jewish people; his work, by reason of its poetical mode of treatment in the style of the Platonic Dialogues, enjoyed a great vogue. By far the most eminent work in this field, however, is the Mitzvah Nokhakhim of Moses Maimonides (1135-1204), the most brilliant of the Mithn Tivkh, mentioned above, is distinguished at once for its rigorously systematic structure and for the keenness and independence of its thought. Although the book, with its large bearing to theology, has an immense latitude on many sides, and was even publicly burned at the instance of Jewish accusers, yet in influence it stands supreme; all later study of Jewish philosophy revolved around the Mitzvah Nokhakhim, and the most outstanding Jewish thinkers, such as Spinoza, Moses Mendelssohn (qq.v.), and Solomon Maimon, found in it the incentive to the construction of their own systems. The Mersch marks the culminating point of Jewish speculative literature in the Middle Ages. Of writers belonging to the time after Maimonides we mention only Levi ben Gershon (qq.v.), c. 1380; JE viii. 36 ff., who, with his Mitzvah Nokhakhim, was able to make a stand against the authority of Aristotle; Hasdai Crescas (c. 1400; ib. iv. 330 ff.), whose Or Aḥadet was drawn upon by Spinoza as an important source; and Joseph Albo (c. 1415; ib. 224 ff.), whose 'Ikarim was an enormously popular book.

The period after Maimonides was, however, on the whole one of profound decadence in philosophical studies, which, in fact, regarded as positively unlawful. The enlightened philosophy of Maimonides brought forth a counterpoise in the composition of the Qabbalah (see KABBALAH), a peculiar medley of speculative ideas and curious fancies which was put forward as an external doctrine of ancient origins, and sought to attack itself to the earliest authorities; its representatives, indeed, did not scruple even to disseminate writings purporting to be the work of the most venerable sages of the Talmud and the Patriarchs. The most notable book of such speculative secret doctrine was the Zohar, which was put into circulation c. 1500 by Moses de Leon, and passed off as the work of Simeon b. Yohanan, a writer of the 2nd cent. A.D. It takes the form of a commentary to the Pentateuch, but is interspersed with many systematic dissertations, bearing special names, and are perhaps later insertions. The name of Isaac Luria (1573-1630) marks a further stage in the development of the mystical literature. While Luria himself wrote nothing, his pupils promulgated his teachings in a vast number of autobiographies of their master, of commentaries to the Bible and the book of prayer, and of legal and ethical works. Likewise Hasdai (c. 1180), last phase of Jewish mysticism, gave birth to countless commentaries to the above; but, as all of them reproduce the ideas of their respective schools in a most unstandard and incoherent way, it is very difficult to describe them in terms of literary science. It was not until comparatively recent times that Jewish theology again assumed a rationalistic character. The turning-point was marked by Mendelssohn's Jerusalem (Berlin, 1783), and thereafter, under the influence of Kant, Hegel, and Schelling, Jewish thought brought forth various systems, not one of which, however, can be said to have come into general favour. The modern Judaism of Western countries, in fact, has been powerfully influenced by the prevailing philosophy of the age. Of the latest works dealing with Jewish theology we would mention only K. Kohler, Grundriss der Judentum, Leipzig, 1910, and S. Schechter, Some Aspects of Rabbinic Theology, London, 1909.

The ideas embodied in the theological literature were given to the wider Jewish public by means of popular writings, including not only the many widely circulated discourses (Dibburot), but also numerous books of morals, which, it is true, laid more emphasis upon ethics than upon the speculative verification of the ethical. The most typical of the books of morals produced in the Middle Ages is the Sefer Haholim of Judah b. Samuel of
LITERATURE (Jewish) 102

Regensburg (1317; JE vii. 356.E.), a work of high ethical value, which, though not free from the superstition of its time, is pervaded by an admirable spirit of piety and an earnest desire to foster the mutual love and understanding of the Christian and Jew. The books of the Talmud, however, were in many cases translated into the languages of the countries in which they arose, and they form a large part of the Judeo-German, Judeo-Spanish, and Judeo-Arabic literature. From the time of their composition they have had an enormous currency, and even at the present day the most widely read and systematic work on Judaism is the Ethik des Jostentum of M. Lazarus (Frankfort, 1886).

The theology of the Jews also involved the work of pointing out the lines of demarcation between their own religion and other creeds. The Jews, who from an early period formed but a sparse minority among the adherents of other faiths, had abundant occasion for such procedure. As might be expected, all their writings which deal with theological matters are concerned also with apologetics and polemics, but the systematic treatment of the questions at issue was a relatively late development. The works in this field which were given to the public and still survive are most notable for the fear of the dominant religion, indeed, they were often suppressed, or at any rate not issued in printed form. Jewish polemical works consist either of explanations of Biblical passages which had been interpreted in a Christological or Muhammadan sense, or of systematic treatises on the cardinal doctrines of Christianity or Islam. Of writings directed against Christianity the Teshubim of R. Isaac ben Joseph ha-Kohen, a resident of Prague (c. 1400), who in that work brought forward three hundred and forty-six passages of the OT as telling against Christianity, and the Rizziyin Emissim, in which Isaac ben Jacob of the Qaranite, made a systematic attack upon Christian doctrine (c. 1390). Both of these works were translated into various languages, and many attempts were made to refute them by Christian theologians.

Of Jewish critical literature cf. further, J.E. x. 102.

A considerable amount of varied polemical activity was likewise directed against the Qaranites and other Jewish sects, but for the most part it finds expression incidentally in more general writings, and we are unable to specify any monograph of importance in this smaller field.

5. Liturgical and secular poetry.—The worship of God supplied the most powerful impulse to the post-Biblical development of Hebrew poetry, which, now termed piyut, was revived with a view to enriching the liturgy. All instruction in and laudation of Jewish history and religion, which in the olden time had been the work of the preacher, fell, from c. A.D. 600, to the function of the psalmist. It was under the influence of the Arabs that Jewish religious poetry sprang into life, and it was from there that it borrowed its artistic forms, but it required first of all to mould the Hebrew language to its designs—a process which, after long-sustained efforts, was at length brought to full realization in Spain. The most distinguished poets of the Middle Ages were Ezekiel ben Jacob ha-Qazari, who lived probably c. A.D. 750 in Palestine; he composed over two hundred well-known poems, which have found a place in the Jewish prayer-books of nearly all countries, though we must note the exception of Spain, which had its own eminent figures in this field, and where medieval Hebrew poetry attained its highest level by the end of the 12th century. The most outstanding names here are those of Solomon ibn Gabirol, Moses and Abraham ibn Ezra, and Judah Halevi (q.v.). Poems by these writers are found in all prayer-books, but such compositions form only a part of their poetic work; they also wrote voluminous 'divans,' which, it is true, soon fell into oblivion, and were rediscovered only in recent times; a number of them still awaits publication. On the piyut cf. J.E. x. 88 E.

While liturgical poetry occupied the place of supreme regard, other branches of the poetic art were by no means neglected. Of these the most widely cultivated was the didactic, which was turned to account in every department of knowledge. The piyut itself sometimes assumed a didactic form; but, in addition, we find disquisitions in verse relating to the calendar, philology, and Biblical study, the Halakah, the laws of religion, Talmudic jurisprudence, philosophy and polemics, history, medicine, astronomy, etc., and poems in all these branches of study are extant in large numbers. The importance, as being more closely in touch with the poetic spirit, is Jewish lyric poetry. The religious poetry, once more, was to a great extent lyrical. But the earliest development of the form in the ordinary sense, i.e. the poetry that finds its themes in love, wine, war, patriotism, etc., took place in Spain, where the supreme master of this form was Moses ibn Ezra, the great poet of Cordova. Of his occasional poems and his poetical descriptions of nature, and where Abraham ibn Ezra and Judah ben-Harizi (early 13th cent.) found recognition as keen satirists. The greatest Jewish secular poet, however, was Samuel ibn Solomon, of Rome—the contemporary, perhaps a personal friend, of Dante—who combined Oriental fantasy with Italian erudition, and gave expression to them in highly polished Hebrew verse, writing, indeed, with such audacious abandon that the Shabbai 'Arakh forbade the reading of the poet's Mahberoth on the Sabbath, while even in our own time Ginzetz has accused him of having profaned the Hebrew tongue. Another lyric writer worthy of mention is Israel Nagara (c. 1750), who, while he sings of God and of Israel, works upon a basis of love-songs and their melodies, and writes with such intense passion and such daring anthropomorphism that he too incurred the censure of the Rabbis. Moses Hayyim Luzzatto (1707-47) deserves mention as a writer of great emotional power, and as the first who composed epic poetry in the Hebrew language.

Jewish poetry, like Jewish literature in general, passed through a long period of barrenness, which lasted, indeed, until it was vitalized by the modern renaissance of intellectual interests. The majority of the more distinguished poets of the present age are of Russian origin, the most eminent of all being Judah Loeb Gordon (1851-92; cf. J.E. vi. 47 E.), whose achievement, however, lies more in the field of satire than in that of the lyric. Of living poets special reference is due to H. N. Bialik, whose lyric poetry has justly met with the highest appreciation, and whose compositions have translated into nearly every European language.

The last few decades have witnessed the rise of a copious Hebrew literature of general interest.

LITERATURE (Pahlavi).—Pahlavi ('Parthian,' i.e. 'heroic, belonging to heroic times'), or Middle Persian, literature dates, so far as its contributions to religion are concerned, from the 8th to the 11th cent. of our era; and its chief value in this regard is the elucidation of Zoroastrianism and Manicheanism (qq.v.), since it explains and supplements the data contained in the Avesta and adds materially to the scanty documents of Manichean literature, besides giving fragmentary renderings of Christian texts. The religious material in Middle Persian falls into three categories: translations of Avesta texts, original compositions on Zoroastrian religious subjects, and Manichean and Christian literature.

1. Translations of Avesta texts.—These translations are combined with running commentaries, sometimes of considerable length; but they are handicapped by failing to understand the original, especially in its grammatical relations, since the inflected type of the Avesta language had yielded, long before the composition of any Middle Persian of which we are aware, to the analytic type present in Pahlavi, whose grammar differs only in unimportant details from that of Modern Persian and other modern Indo-Iranian dialects.

At the same time, the Middle Persian translations of the Avesta possess genuine value and merit consideration in any attempt to decipher the meaning of the Avesta original, particularly in view of the allusions, etc., preserved by Iranian tradition (see, further, "Nisabdah" and "Avesta").

2. Texts on Zoroastrian religious subjects.—Of these the longest and best known is the Dinkart ("Acts of the Religion"), dating from the 9th cent., and forming a large collection of information regarding the doctrines, customs, traditions, history, and literature of the Manichaean religion (E. W. West, GHR ii. 91). The first two books have been lost, and the ninth ends abruptly.

The Dinkart is the chief source for a knowledge of Zoroastrian philosophy in the Sassanid period, and it also contains many apocryphal and legendary materials, of no great value, such as the traditions concerning Zoroaster (tr. West, SBE xxvii. [1897] 3-130), while two books, viii.-ix. (tr. West, SBE xxvii. [1897] 3-397), contain summaries of the Avesta, including accounts of those large portions which are no longer extant.

The text, which is of exceptional difficulty, has been edited by D. M. Madan (Bombay, 1911), and with English and Gujarati paraphrases, by Peshwai Behramji and Darab Peshkani Sanjana (do. 1874 ff.); vol. xiii. carries the work through Dinkart vii. 2). The Bundahišn treats of Zoroastrian cosmogony, cosmology, and eschatology. It is found in two recensions: a shorter (ed. and tr. F. Justi, Leipzig, 1898) and a longer—the so-called Great, or Iranian, Bundahišn (ed. T. D. Ankleasria, Bombay, 1908; summary of contents of any copy in GHR, 257 ff.)—in portions by Darmesteter, Zend-Avesta, i. 297 ff., ii. 302-322, 340-632, by J. J. M. Moder, Asiatic Papers, Bombay, 1905, pp. 223-324; and by E. Blochet, RHR xxxi. [1886] 99 ff., 217 ff.

Eschatological forms and narratives are the subject of the Aštā-vīrāh Nāmuk, which sets forth, in describing the journey of Aštā-vīrāh through heaven and hell, the future life of both righteous and wicked (ed. Hoshangji Jamsāppi Asa and M. M. Gander, de, 1907), which also belong to the Bahman Yatī, which purports to be Ahura Mazda’s revelation to Zoroaster of the future vicissitudes of the Iranian nation and religion (ed. K. A. Noshevn, Fomen, 1899; tr. West, SBE v. 191-235); and the Mamtsā-Šāh Vahrām-ī-Vorjwānd ("Coming of King Vahrām-ī-Vorjwānd"), on the expulsion of the Arabs from Persia (ed. Jamsāppi Asa and R. K. Jamsāppi Asa), Pahlavi Texts contained in the Codices MK, Bombay, 1897-1913, p. 160 ff.)

The principal Pahlavi texts of a purely general religious character are the following: the Haft-Angāmbānd ("Particulars of the seven Amesha Spenta";), Sātīyān-ī Siḥ-Rōkāk ("Praise of the Thirty Days"), which praises and invokes Ahuramazda as the creator of each of the thirty sacred beings whose names are applied to the days of the month, and whose attributes are detailed and blessed in succession (West, GHR. 258); Sātīyān-ī-Drōn, a lamentation of the drōn, or sacred cake; Yaŋqāl-ī-Bēlāsh ("Statement of the Days"), stating what actions are suitable on each of the days of the month; Mātāpśī-ī Māh Farāvšīn Rōy Xūrād, enumerating the marvellous events that have occurred on the sixth day of the first month from the beginning to the end of the world (ed. Jamsāppi, op. cit., pp. 102-108; tr. K. J. Jamsāppi Asa, Cama Memorial Volume, Bombay, 1906, pp. 122-129); Mātāpśī-ī-Sī-Rōy, containing many traditions of the Haqanest, but in fuller detail (tr. D. P. Sanjana, Next-to-Ein Marriages in old Iran, London, 1883, pp. 105-116); Īdrār-ī-Xurāndī, giving the components (comeminent, perseverence, etc.) which are to be brought with the "pers of the sacrament," and taken daily at dawn with the spoon of prayer (ed. Jamsāppi, op. cit., p. 154); Īdrār-ī-Drōn ("Meaning of the Sacred Cake"), dealing with the symbolism and consecration of the sacred cake, and giving the formula for the confession of one’s sins; a number of Afrīn ("Beneficences"); the Aḵāh, or marriage benediction; Nāmāt-ī-Aḥūrāma, a landa-
tion of Ahura Mazda (ed. and tr. E. Sachau, SWAW lvii. [1871] 828-838; also ed. Darmesteter, Une Prêtre judéo-persane, Paris, 1891); and Nāmāstātgāna, a laudation of the name and attributes of Ahura Mazda.

Second only to the Dīnkērt as a source for knowledge of the religious philosophy of the Sassanid Zoroastrians, and, like the larger work, doubtless embodying a large amount of older material, is what may be termed recent Persian literature. This treatise of all sorts of matters on which questions might arise. One of the most important works of this type is the Dīštān-i-Dānīlīk, the Religious Opinions of Manuṣṭhāra, high priest of Pars and Kūrānī, in reply to the questions raised by Mīrūn Xūrūz and others (tr. West, SBE xviii. [1882] 3-276; the first 15 questions ed. D. P. Sanjana, Bombay, 1897); with this is connected a long and important Pahlavi Eshquān (ed. Barnamji Nāsrānī-Dhabhar, Bombay, 1913), while the same Nāmsūšār wrote, in 581, three epistles on ritual problems (ed. Dhabhar, Bombay, 1912, tr. West, SBE xvii. 279-306); his brother, Zād-Sparam, also being the author of a noteworthy religious treatise (tr. West, SBE v. 155-186, xviii. 133-170, xxvii. 401-405). Of equal importance with the Dīštān-i-Dānīlīk is Sāyid-i-Shahādah, Hymns of the Spirit of Wisdom, of which only a portion (ed. E. F. C. Andreas, Kiel, 1882) survives in Pahlavi, though the complete work is found in Pāzand and Sasanian, Stuttgart, 1871; tr. West, SBE xxiv. [1885] 3-113. The Parsīnātā (Questions) are chiefly answered by quotations from Avesta texts (the later ed. and tr. Darmesteter, Zend-Avesta, iii. 1886, SBE, 1894), a noteworthy collection of responsa (as yet unedited) is contained in the Nīwāyāt-i-Hūmān-i-Afshārīstānī, here, too, belongs, roughly speaking, the Sāyid-i-Sāyist ( Proper and Improper), whose contexts are of a very varied character, but sins and good works, precautions to avoid impieties, details of ceremonies and customs, the mystic significance of the Gathas, and praise of the sacred beings are the principal subjects discussed (West, GP i. 107; tr. West, SBE v. 399-406). In this category may also be ranked the Māfigān-i-Yāst-i-Frāzī, narrating how the righteous Yosīt answered the 33 questions of the wizard Axt. Axt was very desirous to have his son who was his precious child, murdered and failed to solve his queries—the Iranian version of the story of the sphinx (ed. and tr. Hoshangji and Hang, in their Ārdhī Vīrūz; also A. A. Suranjavan, Une Légende iranienne, Paris, 1889). Revolutionary literature is represented by the Māfigān-i-guyastāb Abdīš, recounting the dispute between the heretic Abalsī and Aftār-Farnūk (who began the compilation of the Dīnkērt) before the Khalif Al-Mānūn about 825 (ed. and tr. Barthélémy, Paris, 1887).

Yet another important type of Pahlavi literature is that of didactic admonitions. To this class belong the Pandānāmāk-i-Zarrāštī (not the Prophet, but probably the son of Aftār-Māraspand; ed. and tr. B. P. Sanjana, in his Ganjz Shāgān, Bombay, 1885); Andārī-i-Kānīrān, purporting to be the dying counsels of Chosroes to his people (ed. and tr. Sanjana, op. cit. ; also tr. L. C. Casartelli, BOR i. [1987] 97-101, and Salemann, Mīrāngs asatīn: tīrūt du bull. de l'accd. imp. des sciences de St.-Pétersbourg, i. [1887] 240-256); Andārī-i-Aftār-Māraspandān, being the advice of Aftār to his son Zarrāštī (perhaps the person mentioned just above; ed. and tr. Sanjana, op. cit. ; also tr. L. C. Casartelli, BOR iv. [1887] 66-78); Pandānāmāk-i-Yātūr-Mīrāng-i-Būzkāldān (ed. and tr. Sanjana, op. cit. ); Five Disposition of Priests and Ten Admonitions to Laymen (ed. Jamsajj, op. cit. 129-131); Characteristics of a Happy Man (ed. Jamsajj, op. cit. 162-167); Vāhen osemd-i-Aftār-Māraspandān, the dying counsel of Aftār (ed. Jamsajj, op. cit. 144-153); Andārī-i-Aftār-Māraspandān, the dying counsel of Aftār. Aftār-Māraspandān, the dying counsel of Aftār (ed. Jamsajj, op. cit. 144-153). These and other works have been translated by R. A. Farnab and Bux Axir (these as yet unedited).

3. Manichean and Christian literature. Until comparatively recently it was supposed that Pahlavi literature was exclusively Zoroastrian, but the discoveries made in Central Asia by M. A. Stein, A. Grünwedel, A. van Le Coq, and P. Pellicot have revealed a new province of extreme interest and value. The decipherment of the MSS found by these explorers has only begun. Here it may suffice to say that we already possess Pahlavi versions of somewhat extensive portions of Manichean literature—a fact the more important since this religion had hitherto been known only from the writings of its enemies. The most important collection of these texts thus far is that of F. W. K. Müller (with German translation, Handschriften-Reste in Estrangolo-Schrift aus Turfan, ABAW, 1904; revised ed. C. Salmond, Manichaeische Studien, i., Mém. de l'acad. imp. des sciences de St. Pétersbourg, viii. 10 [1908]); Müller, Doppelbündt aus einem maniachen Hymnenbuch, ABAW, 1914. The parallel Kūranī, Pahlavi, and Syriac versions of the Gospels are numerous fragments of a version of the NT, perhaps from the 9th or 10th cent. (Müller, NT Rerum et schol. in s. 2, 1881, pp. 290-297; 'Sogd. Pahl. in SSW, 1912; ed. L. H. Gray, Ev. P. xxv [1913] 59-61).

4. Pāzand and Sanskrit versions. The special problems of the Pahlavi language cannot be discussed here (see P. Robertson, Sprache, Vienna, 1851; B. P. Sanjana, Gram. of the Pahlavi Language, Bombay, 1871; C. de Harlez, Manuel du Pahlavi, Paris, 1880; Darmesteter, Etudes de Pahlavi, ed. 1883; Salemann, GP i. 1 [1901] 249-332; E. Blochet, Études de grammaire pahlavi, Paris, n.d. [1905]; it must suffice to say that, when the Semitic words (or logograms) in Pahlavi are written in Iranian (e.g., Dastān, 'king of kings,' Instead of mālutān malkūt), the language is termed Pāzand (Spiegel, Gram. der Pārzinsprache, Leipzig, 1851). Many Pahlavi texts already listed are found in Pāzand as well. The great majority of the religious writings of this type, except the important Sīkand gīmnīyī Vīhār ('Doubt-dispelling Explanation'), probably dating from the latter part of the 9th cent. (ed. Hoshang W. W. and West, Bombay, 1887, tr. West, SBE v. 117-251), and the Jāmāsp-nāmā (ed. J. J. Modi, Bombay, 1903), have been edited by K. K. Antša (Pāzand Texts, Bombay, 1909). The Sīkand gīmnīyī Vīhār defends the doctrine of dualism, and in this connection polemizes in very interesting fashion against Judaism, Christianity, Manichaeism, and—necessarily quite guardedly—Muhammadanism (ed. art. JESUS CHRIST in Zoroastrianism; the Jāmāsp-nāmā gives a summary of Iranian cosmology, history, and future fortunes of the Iranian religion. Among the texts edited by Antša are ādāt (benefactions recited on various occasions), miramas, charms, often of much ethnographical interest; for examples see Modi, Anthropological Papers, Bombay, 1911, pp. 48, 125-139; K. K. Kangas, in Canad. Mem. Vol., 149-145); and texts of not included in this collection mention may be made of A Father instructing his Son and Andārī-i-guyastāb Abdīš. A number of Pahlavi (and Avesta) treatises are found in Sanskrit as well as in Pahlavi and Pāzand versions. Many of these are given in editions of Pahlavi texts enumerated above, but we must also note the ed. of Nersisjan's version of the Yemia by Spiegel (Leipzig, 1861) and the series of Collected
5. Parsi-Persian literature. — Apart from Persian translations of Avesta and Pahlavi texts, there is a large amount of Zoroastrian literature in Persian, which, for the most part, still awaits study. The Zarathust naman, dating from the 12th century, is now accessible in original and translation by F. Rosen (Petrograd, 1904), gives a legendary biography of Zoroaster. Another work of importance is the Sad dar (‘Hundred Gates’), which discusses a hundred subjects of note in Zoroastrianism. Two of its three recensions have been translated into English (West, SEB xxiv. 255–361) and Latin (T. Hyde, Hist. religionis veterum Persarum, Oxford, 1760, pp. 433–488). A different work, although among the same general lines, is the Sad dar bandi bok (or Sad dar Bundi dini; ed. B. N. Dhabhar, Bombay, 1909). Of worth for a study of the methods of Zoroastrian polemic against Muhammadanism is the Ulat mi-ul-din, which is found in two recensions, the shorter of which has been edited and translated (ed. J. Mohl, Fragments relatifs à la religion de Zoroastre, Paris, 1859; tr. J. Vallias, Uber die Religion der Zoroaster, Bonn, 1851; Blochet, BHR xxvii. (1868) 23–49). A particularly valuable collection of Parsi-Persian literature is contained in the MS 52, belonging to the University of Cambridge, which is a second vol. of which has been edited by M. N. Unvala (not yet published) and analyzed by Rosen (Notices de litt. perse, Petrograd, 1909). It contains a large number of Rituals (religious tradi- tions) and legal texts on the most diverse subjects: — ritual, cosmogony, eschatology, etc. — the longer recension of the Ulat mi-ul-din (pp. 72–80), the Abhak-i-Andap (containing the horoscopes of the zoroastrian priests) and the first part of the Avesta (on the heresarch Mazul, pp. 214–230, six parables connected with the Barlaam cycle (pp. 305–327; cf. art. Josephat, Bablaam and?), and questions asked of Zoroaster by Jamasp (pp. 417–428). Among other Parsi-Persian texts, not yet edited, may be mentioned a Discussion on Dualism between a Zoro- astrian priest and a Muhammadan, and the Sayagat-naman, or ‘Book of Catha’. The combining secular work in Pahlavi, Fzand, and Parsi-Persian, such as geographical matters, social rules, and tales, do not come within the sphere of religion.

Finally, it may be mentioned that translations of the Avesta have been made not only into Persian (for specimens see, in addition to works cited above, Darmesteter, Etudes iran. 202 ff., but also, from the 15th cent., into Gujarati, the vernacular of the Indian Zoroastrians (see the Prolegomena to K. Geldner’s ed. of the Avesta, Stuttgart, 1898, pp. vii–xi; Darmesteter, Zend-Avesta, i. p. xii; and the modern religious literature of the Parsees is chiefly written either in Gujarati or in English.

LITERATURE (Vedic and Classical Sanskrit).

— The language. — The name Sanskrit (mann- skritta, ‘adorned’, perfected, perfect passive participle of the word ‘to adorn’; tattvad and, ‘to make’) is ordinarily applied to the whole ancient and sacred language of India. It belongs more properly to that dialect which may be defined more exactly as Classical Sanskrit, the language which was treasured by the Hindugermans, Panini and his followers. For more than 2000 years, until the present day, this language has led a more or less artificial life. Like the Latin of the Middle Ages, it was, until the present day, to a very marked extent, the means of communication and literary expression of the priestly, learned, and cultivated classes. The more popular speech upon which it was based is known as Bhoja (‘speech from Bhoja’, ‘to speak’, ‘bhoja’); whilst for the present decade is no direct record. Sanskrit is distinguished more obviously from the phonetically later, decayed dialects, Prakrit and Pali, the second of the two being the language of the canonical writings of the Southern Buddhists. The relation of the Prakrit and Pali dialects to Sanskrit is closely analogous to the relation of the Romance languages to Latin. On the other hand, Sanskrit is distinguished, although much less sharply, from the oldest forms of Indian speech, preserved in the canonical and wholly religious literature of the Veda (‘Veda, knowledge, from ved, ‘to know’, connected with Gr. vedeo, ‘I know’, Lat. scientia, ‘knowledge’). These forms of speech are in their turn by no means free from important dialectic and chronological differences; yet they are comprised under the name Vedic (or, less properly, Vedic Sanskrit), which is thus distinguished from the language of Panini and its forerunner, the language of the Epic, whose proper designation is Sanskrit, or Classical Sanskrit.

Vedic differs from Sanskrit about as much as the Greek of Homer does from Attic Greek. The Vedic apparatus of grammatical forms is much richer and less definitely fixed than that of Sanskrit. The latter has lost much of the wealth of form of the earlier language, without, as a rule, supplying the proper substitutes for the lost materials. Many case-forms and verbal forms of Vedic have disappeared in Sanskrit. The subjunctive is lost; a single Sanskrit infinitive takes the place of about a dozen very interesting Vedic infinitives. Sanskrit also gave up the most important heiroon which the Hindu language has handed down from pre-historic times, namely, the Vedic system of accentuation. In the forty years the reconstrued Vedic accents have proved to be of paramount importance in the history of the Indo-European languages. Vedic, however, notwithstanding its somewhat unsettled wealth of form, and its archaic character, is not a strictly popular dialect, but a more or less artificial ‘high speech’, handed down through generations by families of priestly singers. Thus both Vedic and Sanskrit, as is indeed the case more or less wherever a literature has sprung up, were in a sense caste languages, built up upon popular idioms. The grammatical regulation of Sanskrit at the hands of Panini and his followers, however, went beyond any academic attempts to regulate speech recorded elsewhere in the history of civilization.

Older forms lying behind the Vedic language are reconstructed by the aid of Comparative Philology. The Vedic people were immigrants to India; they came from the great Iranian region on the other side of the Himalaya mountains. The comparison of Vedic (and even to a less extent Sanskrit) with the oldest forms of Iranian speech (in the form of the Avesta and the cuneiform inscriptions of the Achemenian Persian kings, yields the rather startling result that these languages are collectively more closely akin to a hypothetical language of the pre-Aryan period. This is known as the Indo-Iranian or Aryan (in the narrower, and proper, sense) language. The reconstructed Aryan language differs...
LITERATURE (Vedic and Classical Sanskrit)

less from the language of the Veda than Classical Sanskrit does from Frnkrit and Pali. The absence of the Aryan Avesta is so much like that of the Veda that entire passages of either literature may be converted into good specimens of the other by merely eliminating the special sound changes which each has acquired with the separate existence. And the literary style, the metre, and above all the mythology of Veda and Avesta are closely enough allied to make the study of either to some extent directly dependent upon the other. In fact the ritual monuments of the Avesta as well as the stone monuments of the Achaemenian kings became intelligible chiefly by the aid of the Vedic language. Since the revival of classical learning there has been no event of such importance in the history of culture as the discovery of Sanskrit in the latter part of the 18th century. There is at present no domain of historical or linguistic science untouched by the influence of Sanskrit studies. The study of this language gave access to the primitive Indo-European period, and originated the science of Comparative Philology in all its bearings. Linguistic Science. Comparative Mythology, Science of Religion, Comparative Jurisprudence, and other important fields of historical and philosophical study either owe their very existence to the discovery of Sanskrit, or were profoundly influenced by its study.

2. The Veda as a whole.—The word 'Veda' is the collective designation of the ancient sacred literature of India, or of individual books belonging to that literature. At an unknown date, which is at the present time conventionally averaged up to 1500 B.C., but which may be considerably earlier, the Aryan tribes, who had already dispersed the later name of the third, or agricultural, caste, Vaiśya, began to migrate from the Iranian highlands on the north of the Hindu Kush mountains into the north-west of India, and the plains of the river Indus and its tributaries. The non-Aryan aborigines, called Daśya, in distinction from Aryan (whence the word 'Aryan'), the name of the conquerors, were easily subdued. The conquest was followed by a gradual amalgamation of the fairer-skinned conquerors with the dark aborigines. The result was a net altogether primitive, semi-pastoral civilization, in which cities, kings, and priests called brahmanas (the term is later used for the learned temple priests) dominated the country and resided in monasteries. The Aryans tended to a more pastoral life, and the brahmanas to a more sedentary and literary life. The Aryans cultivated the ground, and the brahmanas devoted themselves to the study of the sacred books. They were called 'sāṅgha'—a term which is derived from the root 'śā,' and is the Sanskrit form of the root 'śā,' meaning to pursue, to follow. The Veda, which is the foundation of the entire system of Vedic literature, is written in Sanskrit.

3. The Rigveda.—The Rigveda is on the whole the oldest, and as such is the most important, of all the collections. A little over 1000 hymns, equaling in bulk the surviving poems of Homer, are arranged in ten books, called mandalas, or 'cicles.' Six of them (ii.-vii.), the so-called 'family books,' form the nucleus of the collection. Each of these is the work of a disclosing, or of a collection of poets, traditionally descended from such a 'gītiya,' as may be gathered from certain statements in the hymns themselves. The eighth book and the first fifty hymns of the ninth book belong to the family of Kauya, and are often arranged in stanzas of two or three lines. These stanzas are called 'sāṅgās,' or 'sāṃga,' or rather a family of poets, traditionally descended from such a 'gītiya,' as may be gathered from certain statements in the hymns themselves. The eighth book and the first fifty hymns of the ninth book belong to the family of Kauya, and are often arranged in stanzas of two or three lines. The Rigveda, which is the foundation of the entire system of Vedic literature, is written in Sanskrit.

On the whole the Rigveda is a collection of priestly hymns addressed to the gods of the Vedic pantheon (see VEDIC RELIGION) during sacrifice. This sacrifice consisted of the oblation of offerings into a sacred fire. The 'soma' plant, which reappears in the Zoroastrian Avesta under the name haoma (g.v.), and was therefore the sacred sacrificial fluid of the Indo-Iranians, or Aryans. In addition, melted butter (ghṛtā or ghṛṣ) was poured into the fire, personified as the god Agni (Lat. ignis), who performs the function of messenger of the gods (Anūgā). The ritual of the Veda is to a considerable extent pre-Hittite, and advanced in character—by no means as simple as was once supposed. But it is much less elaborately than that of the Yajurveda and the Brāhmaṇas (see below). The chief interest of the Rigveda lies in the gods themselves and in the myths and legends narrated or alluded to in the course of their invocation. The mythology represents an earlier, clearer stage of thought than is found in any other parallel literature. Above all, it is sufficiently primitive in conception to show clearly the processes of personification by which the phenomena of nature developed into gods (omorphosis). The natural and spiritual nature of the Vedic gods, however, is not always clear, not as clear as was once confidently assumed to be the case. The analysis of their character is a part of Vedic
philosophy as difficult as it is important. In any case enough is known to justify the statement that the keynote of Rigvedic thought is the nature myth.

4. The Yajurveda.—The Yajurveda represents the exceeding growth of ritualism or sacerdotalism. Its *gyānīs*, ‘liturgical specialists and formulae,’ are in the main, thought not wholly, of a later time. They are partly metrical and partly prose. The materials of the Rigveda are freely adapted, with secondary changes of expression, and the whole is regulated by original purposes and order of their composition. The main object is no longer devotion to the gods themselves; the sacrifice has become the centre of thought: its mystic power is conceived to be a thing *per se*, and its every detail has swollen into all importances. A crowd of priests (seventeen is the largest number) conduct a vast, complicated, and painstaking ceremonial, full of symbolic meaning even in its smallest minutiae. From the moment when the priests seat themselves on the sacrificial ground, strewn with sacred grass, and proceed to mark out the *altars* (*vedi*) on which the sacred fires are built even the act has its stanza or formula, and every utterance is blessed with its own fitting blessing. Every flaw is elaborately expiated. These formulae are conceived no longer as prayers that may, or may not, succeed, but as inherently consecrated symbols. If the priest chants a formula for rain while pouring some sacrificial fluid, rain shall and must come; if he makes an oblation accompanied by the curse of an enemy, that enemy is satisfied by the name of the enemy, which is in brief, the Yajurveda means the delimitation of the sacrifice in its every detail of act and word.

5. The Sāmaveda.—The Sāmaveda is the least clearest of the four Vedas as regards its purpose and origin. Its stanzas, or rather groups of stanzas, are known as sūkha, ‘melodies.’ The sūkha-stanzas are preserved in three forms: (1) in the Rigveda, as ordinary verses, accentuated in the same way as other Vedic poetry; (2) in the Sāmaveda itself in a form called śākikā, a kind of litreto composed of a special collection of stanzas, most of which, though not all, occur also in the Rigveda (see above); (3) also there is a system of accents, peculiar in its notation, but apparently with reference to the unsung *sāman*—(3) in the third sūkha-version, the gāna, or song-books, we find the stanzas grouped; there are not only the text but the musical notes are given. Still this is not yet a complete sūkha. In the middle of the sung stanzas exclamatory syllables are interspersed—the so-called *stokhas*, such as *ahā, o, am, hī, kō*, or *kū*; and at the end of the stanzas certain concluding syllables—the so-called *nīkhānas*, such as *atha, ö, iva, and athi*. The Sāmaveda is devoted chiefly to the worship of Indra, who is a blustering, bragadocio god and who has beffalad himself with *soma* in order to slay demons. It seems likely, therefore, that the *sāmās* are the civilized version of savage shamanism (the resemblance between the two words, however, is accidental), an attempt to influence the natural order of things by shouts and exhortations. It is well understood that the Brahmins were in the habit of utting these and conceiving them with the practices which they found among the people. The sūkha-melodies and the exclamations interspersed among the words of the text may therefore be the substitute for the old-exciting shouts of the shaman priests of an earlier time.

6. The Atharvaveda.—The oldest name of the Atharvaveda is *atharvalīgīrthā*, a compound formed of the name of two semi-mythical families of priests, the Atharvans and Aīgrases. At a very early time the former term was regarded as synonymous with ‘holy charms,’ or ‘blessings,’ the latter with ‘witchcraft charms,’ or ‘curses.’ In addition to this name, and the more conventional name Atharvaveda, there are two other names, practically restricted to the ritual texts of the Veda: *bhrguvigānas*, that is, ‘Burgus and Aīgrases,’ in which the Burgus, another semi-mythical family of fire priests, take the place of the Atharvans; and *brahmveda*, probably ‘Veda of the Brahma, or holy religion in general.’ As regards the latter name, it must be remembered that the Atharvaveda contains a large number of theosophic hymns which deal with the *brahma* in the sense of the Neo-Platonic *lógos*, as a kind of pantheistic personification of holy thought and its pious utterance. The Atharvaveda is a collection of 750 hymns, containing some 6000 stanzas.

7. The Vedic schools.—The redactions or collections of these four Vedas are known as *Samhitās*; each of them is handed down in various schools, branches, or recensions, called *charayya, sāhkhā, or bheda*, the term *sāhkhā*, or ‘branch,’ being the most familiar of the three. These ‘branches’ represent a given Yajurveda in forms differing not a little from one another. The school differences of the Rigveda are unimportant, except as they extend also to the Brāhmaṇas and Śutras of the Veda (see below). There are two classes of Rigvedic redactions, those of the schools of the Kauṭāyana and the RāmAṇyana. A very persistent tradition ascribes nine schools to the Atharvaveda; the Samhitas of two of these, the Sama and the Pāippaladas, are published, the latter in an interesting chrono-photographic reproduction of the unique manuscript of that text preserved in the library of the University of the White Yajurveda, especially is handed down in recensions that differ from one another very widely. There is in the first place the broad division into White Yajurveda and Black Yajurveda. The most important difference between these two is that the Black Yajurveda schools intermingle their stanzas and formula with the prose exposition of the Brāhmaṇa (see below), whereas the White Yajurveda schools present their Brāhmaṇa in separate works. The White Yajurveda belongs to the school of the Vaiṣṇavas, and is subdivided into the Madhyamadīna and Kāṇva recensions. The important schools of Atharvaveda are the Taittiriyas, Māitrāyaniyās, Kaṭhas, and Kapiṭhālas. Sometimes these schools have definite geographical locations. For example, the Kaṭhas and Kapiṭhālas were located, at the time when the Greeks became acquainted with India, in the Punjab and in Kashmir. The Māitrāyaniyās appear at one time to have occupied the region around the lower course of the river Nar- mada; the Taittiriyas, at least in modern times, are at home in the south of India, the Deccan.

8. The Brāhmaṇas.—The poetic stanzas and the ritualistic formulae of the Vedas collectively go by the name of *maṇtra*, ‘pious utterance,’ or ‘rhythm.’ These were followed at a later period by a very different literary type, namely, the theological treatises called *brāhmaṇa*, the Hindu analogon to the Hebrew *Talmud*, their own hieratic conception and conception of the practices which they found among the people. The sūkha-melodies and the exclamations interspersed among the words of the text may therefore be the substitute for the old-exciting shouts of the shaman priests of an earlier time.
latter by its poetie form. The Brāhmaṇas also were composed in schools, or recensions; the various Brāhmaṇa recensions of one and the same Veda differ at times even more widely than the Sāṁhitās of the mantras. Thus the Rigveda has two Brāhmaṇas, the Ātirṛṣaya and the Kaiṣāṭikī, or the Sāṁghāya. The Brāhmaṇa matter of the Brāhmaṇa of the Ātirṛṣaya is given together with the mantras of that class (see above); on the other hand, the White Yajurveda treats it separately, and with extraordinary fullness, in the famous Satapatha Brāhmaṇa, the Brāhmaṇa of a Hundred Paths, so called because it consists of a hundred lectures. Next to the Rigveda and Atharvaveda, Sāṁhita, this work is the most important production in the whole range of Vedic literature. Two Brāhmaṇas belonging to independent recensions of the Sāṁvada have been preserved entire, that of the Tapliśkas, usually designated as Paśchātvāṇda Brāhmaṇa, and that of the Tālāvākasras or Jaiminīyas. To the Atharvaveda is attached the very late and secondary Gogasūrya Brāhmaṇa; its contents harmonize so little with the spirit of the Atharvavedic hymns that it seems likely to have been produced in imitation of the school conditions in the other Vedas.

9. The Āranyaka and Upaniṣad. — A later development of the Brāhmaṇa is the Āranyaka, or Forest Treatise. Their later character is indicated both by the position which they occupy at the end of the Brāhmaṇa itself, and by their partly poetic, spiritual character. The name Forest Treatise is not altogether clear. Either these works were recited by hermits living in the forest, or, owing to the superior sanctity of these contents, they were taught by teacher to pupil in the solitude of the forest rather than in the profane atmosphere of the town or village. The two important Āranyakas are the Ātirṛṣaya and the Taittirīya, belonging to the two Vedas of that name. The chief interest of the Āranyakas is that they form in content and tone a transition to the Upaniṣad, the elder of which are either embedded in them or form their concluding portions (see arts. Āranyakas, Upaniṣads).

10. The Āraśu-Sūtras, or manuals of the Vedic ritual. — Both mantra and brāhmaṇa are regarded as revealed (brāhman or revelation); the rest of Vedic literature is regarded as tradition (smṛti), derived from holy men of old. This literature has a characteristic style of its own, being handed down in the form of brief rules, or śūtras, whence it is familiarly known as Śūtra literature, or the Śūtras. They are in the main, of three classes, each of which is, again, associated with a particular Vedic school, reaching back, as a rule, to the school distinctions of the Sāṁhita and the Brāhmaṇa. The first class of Śūtras are the Āraśu or Kalpa Sūtras, which may be translated 'Sūtras of the Vedic Ritual.' They are brief mnemonic rule-books compiled, with the help of oral tradition, from the Brāhmaṇas. They are technical guides to the Vedic sacrifice, distinguished from the diffusive Brāhmaṇas, where the ritual acts are interrupted by explanation and illustrative legend. The Rigveda belongs to two Brāhmaṇa schools: the Ātraśu-Bārahjnaṃ, and the Sāṁghāyu or Kaiṣāṭkī to the Brāhmaṇa of the same name. The White Yajurveda belongs to the Sāṁghāyu Sūtras of Kātyāyana, closely adhering to the Satapatha Brāhmaṇa. There are no fewer than six Brāhmaṇa schools belonging to the Black Yajurveda, but only the two Sūtras are published, or known in publication, those of Āraśu and Baudhāyana, belonging to the schools of the Ātraśu and the Manava, belonging to the school of the Maitrāyaniya. The Sāṁvada has two Sūtras, those of Lātāyana and Brāhāyana, belonging respectively to its two schools of the Kauṭāyana and the Kāṇāyana. The Atharvaveda has the late and inferior Vāstuvīna, or the House Books. —

11. The Gṛhya Sūtras, or 'House Books.' — Of decidedly greater, indeed of universal, interest is the second class of Sūtras, the Gṛhya Sūtras, or House Books. These are treatises on which deal systematically and playfully with the events in the everyday existence of the individual and his family. Though composed at a comparatively late Vedic period, they contain practices and prayers of great antiquity, and supplement most effectively the contents of the Atharvaveda. From the moment of birth, indeed from the time of conception, to the time when the body is consigned to the funeral pyre, they exhibit the ordinary plain Hindu in the aspect of a devout and virtuous adherent of the gods. All the important events of life are sacramental, decked out in practices often of great charm and usually full of symbolic meaning. For etymology and the history of human ideas the 'House Books' are of unexcelled importance. These manuals are also distributed among the four Vedas and their schools, each of which is theoretically entitled to one of them. More than a dozen are now known to scholars. The Rigveda has the Gṛhya Sūtras of its two schools, that of Āśvārayana and Śāṅkhyāyana; the White Yajurveda, that of Parāśārayana and Purāṇa Yajurveda a large number, as those of the Āstāvistika, Bādhāyana, Hiranyadeva, Manava, and Kāthaka schools; the Sāṁvada has the Gṛhya Sūtras, the Kāthaka, and the Jaiminīya. To the Atharvaveda belongs the unique Kauśika Sūtra, which, in addition to the domestic ritual, deals with the magical and medicinal practices that specially belong to that Veda.

12. The Dharmasūtras, or 'Law Books.' — The third class of Sūtras are the Dharmasūtras, or 'Law Books.' They also deal to some extent with the customs of everyday life, but are engaged for the most part with secular and religious law. In one department of law, that of expiation, these Sūtras are the Veda themselves. A considerable number of expiatory, hymns and stanzas, clearly of the same stock as the rules of expiation, are found in Vedic texts, especially the Atharvaveda and the Taittirīya Āranyaka. The Law Sūtras, in their turn also, are either directly attached to the body of canonical rules, or expiatory, or to a certain Vedic school or are shown by inner criteria to have originated within such a school. The oldest Law Sūtras are those of the Āstāvistika, and the Bādhāyana, belonging to the Black Yajurveda; the Gautama belonging to the Sāṁvada; the Vīṣṇu belonging to the Kāthaka school of the Black Yajurveda; and the Vāstūga of less certain associations. The earliest metrical law books, the so-called Dharmasūtras, written in Classical Sanskrit, seem also to be based on lost Sūtra collections of definite Vedic schools. The most famous of these are the Māṇḍava Dharmasūtras, or 'Law Book of Manu' (see Law (Hindu)), may be founded upon a lost Dharmasūtra of the Manava or Maitrāyaniya school of the Black Yajurveda, while the briher 'Law Book of Yajnavalkya' is unmistakably connected with some school of the White Yajurveda.

English readers may obtain ready insight into the contents of Vedic literature in all its important respects, a series of translations edited by Max Muller and J. E. B. Mayor, SBE (Oxford, 1879-.) and P. E. Boutrup. Parts of the Rigveda are translated by M. L. M. H. H. G. Allenberg (vol. xii., and xxiv.-xxvi.); the Atharvaveda by J. E. G. H. G. Allenberg (vol. xii., and xxvi.); the Gṛhya Sūtras by H. P. Baldwin (vol. xii., and xxvi.); the older Dharmasūtras by E. H. B. Allenberg (vol. xxvii., and xxviii.); and the law of the Law Book of Manu by J. J. Rolles (vol. xii., and xxiv.).
LITERATURE (Vedic and Classical Sanskrit)

The form and style of Sanskrit literature differ as widely in these as they differ in the Vedas. As regards the language, it is to be noted that prose in Vedic times was developed to a tolerably high pitch in the Yajurvedas, Brahmanas, and Upanisads; in Sanskrit, apart from the strained scientific language (śāstra) of philosophy or grammar, or the diffuse and inorganic style of the commentators, prose is rare. It presents itself in genuine literature only in fables, fairy tales, romances, and parables, in the dramatic style. Not so in Vedic literature, for it has preserved the literary and aesthetic quality, as compared with the earlier variety. On the contrary, it has become more and more clumsy and hollow, full of long awkward compounds, gaudy, ornamental, in the passive voice where the active would do, and other artificialities. As regards the poetic medium of Classical Sanskrit, it also differs from the Veda. The bulk of Sanskrit poetry, especially the Epic, is composed in the śloka metre, a development of the Vedic anuvāda metre of four octosyllable lines of essentially iambic cadence. But numerous other metres, usually built up on Vedic prototypes, have become steadily more elaborate and strict than their original; in the main they have also become more artistic and beautiful.

Notwithstanding the wonderfully unbroken continuity of Hindu writings, the spirit of Sanskrit literature also differs greatly from the Vedic. The chief distinction between the two periods is that while the Vedic literature is essentially religious in character, whereas Sanskrit literature is, with rare exceptions, such as the Bhagavat-Gītā, or the metrical Law Śāstras, prose, in the Veda lyric poetry as well as legendary prose are in the service of prayer and sacrifice; in Sanskrit epic, lyric, didactic, and dramatic forms are all for the purpose of literary delectation and aesthetic or moral instruction.

Moreover, with the exception of the grand compilations of the Mahābhārata and the Pārāṣāras, the authors are generally definite persons, more or less well-known, whereas the Vedic writings go back to families of poets or schools of religious learning, the individual authors being almost invariably submerged.

14. Epic literature.—Sanskrit literature may be divided into epic, lyric, dramatic, didactic, narrative, and scientific. In epic poetry there is the important distinction between the freer, narrative epic called śāhās (q.v.), story, or purāṇa, and the more artificial epic called kāvya, poetic product. The great epic, the Mahābhārata, is by far the most important representative of the former kind. Of somewhat similar free style are the eighteen Purāṇas (see below), of much later date than the Mahābhārata. The beginnings of the artistic style are seen in the other great Hindu epic, the Rāmacāyana. But the finished style of the kāvya is not evolved until the time of Kalidāsa about the 5th cent. A.D.

The Mahābhārata, or 'Great Bhārata Story,' the greatest of Hindu epics, is a huge authorless compilation for which tradition has devised the name Vasantapitaka, or 'collection.' It is written for the most part in the epic metre, the śloka, and contains altogether about 100,000 stanzas of four lines each, about eight times the length of the Ramayana.

The kernel story of the epic, which is interrupted by many episodes, or interwoven narratives, tells how the ancient world was overwhelmed by the plagues of the Punjab and Pāsindh. At a gambling-match depicted in the most vivid language, Durvudha, the king of the Kuru, crossed dice with Vīsuv, the king of the Pāndus, robs them of their kingdom, and exiles them for thirteen years. But this is only the preparation for a long war, and the final conflict between the opposite royal houses and their allies. In this the Kurus are finally overthrown and destroyed.

The heroic story is not onlyinterrupted by episodes, but is in general made the pivot around which philosophical (religious) and ethical discussions of great length revolve. Thus the work has assumed the place in Hindu literature of an encyclopaedia of moral and religious instruction.

A Bhāratā and a Mahābhārata are mentioned as early as the 6th cent. B.C., but the term is applied to the later Vedic literature, but all dates assigned to the original simpler epic which preceded the encyclopedic poems in its finished form are mere guesses, except that it obtained its completely present form in the 4th or 5th cent. of our era.

Among the episodes of the Mahābhārata, the Bhagavat-Gītā, 'The Song of the Divine One,' or 'Song Celestial,' is pre-eminent. It is in some respects the most interesting and important book in post-Vedic literature.

When the rival armies of the Kurus and the Pāṇḍus are drawn up against each other, Arjuna, the leader of the Pāṇḍus, tradition of heroes, hesitates to enter upon the slaughter. Then Krishna, one of the incarnations of Viṣṇu, acting as Arjuna's charioteer, silences his scruples by putting out that action, which is the performance of duty, is the obligation of man in the world. Although, finally, abstracted devotion to the act of battle alone leads to salvation. The poem is conceived in the spirit of didactic Hindu theology or philosophy. At the bottom is the Śākya doctrine of non-action and the Tānta school of mystic Vedanta is prominent (see BHAGAVAT-GĪTĀ).

It is not likely that the poem formed part of the original 'Bhārata's Story,' but the later theological additions are to be reckoned with as to its date and authorship. The Mahābhārata has been translated into English prose at the expense of Pratāpa Chandra Ray (Calcutta, 1885), and by M. N. Dutt (id. 1856).

15. The Rāmacāyana.—The Rāmacāyana, the second of the great epics, is, in the main the work of a single author, Vālmikī. Though all parts are not from the same hand, and though it is not entirely free from digression, it is of great interest in epiciction of the highest order. It is to this day the favourite poem of the Hindus. The central figures are Rāma and his devoted wife Sītā; the main event the conquest of Laṅka (probably Ceylon).

Dāsaratha, the mighty king of Ayodhyā (Ayodhya), having grown old, decided upon Sita, his eldest son, as his successor, but his intriguing second queen, Kaikῆī, succeeding in changing his mind in favour of her son Bharata. Rāma, banished for fourteen years, retires with Sītā to the forest. On the death of Dāsaratha, his son Bharata refuses to usurp Rāma's throne, and seeks him out in the forest in order to take the throne in his capital city. Rāma in turn refuses to cross his father's decision; he offers his gold-embroidered shoes as a token of his submission to the will of the king, and places the shoes upon the throne, and holds them over them the 'golden yoke,' the sign of royalty, before he acts as the king's plenipotentiary. In the meantime Rāma makes it his business to fight the demons who molest the sanctity of the forest in which he is living, places the shoes upon the throne, and holds them over them the 'golden yoke,' the sign of royalty, before he acts as the king's plenipotentiary. In the meantime Rāma makes it his business to fight the demons who molest the sanctity of the forest in which he is living, the sons of the demon, who lives in Laṅka, revengefully kidnaps Sītā. Then Rāma forms an alliance with Hanuman and Sugriva, the kings of the monkeys, who build for him a wonderfull bridge across the mainland to Laṅka. Rāma slays Kaikēē, is reunited with Sītā, returns home, and, conjunctly with Bharata, rules his happy people, so that the golden age has come again upon the earth.

The story, notwithstanding the fact that it presents itself outwardly as a heroic legend, lies under the suspicion of containing one or more mythological roots. Certain details in the personified rafter of the field, the beautiful wife of Indra or Parjanya (see VIDIC RELIGION). Hence Rāma certainly continues the qualities of the Indian slayer of demons. The story also seeks to typify the advance of Brahmanical civilization southwards towards Ceylon.

The Rāmacāyana consists of seven books, in about 23,000 stanzas. It exists in three recensions, the standard one being the other in their readings, the order of the stanzas, and in having each more or less lengthy passages that are wanting in the other. The best known and most commonly used edition has been translated by the Anglo-Indian scholar R. H. Griffith in five volumes (Lectures, 1878-79).
a stanza with its metrical expression. The most elaborate continuous lyrics of India are the Magha-
dīha, or 'Cloud Messenger,' and the Rûmânnârâ, or 'Cycle of Seasons,' both by Kâlîdâsa, matched all along
with the corresponding human moods and emotions.
The bulk of lyrical poetry, however, is in single
miniature stanzas, which suggest strongly the
didactic sentiment of prosaic poetry which the
Hindus also cultivated with great success. In
fact the most famous collection of such stanzas,
that of Bhartârâ, consists of 'lyric, didactic,
and didactic poetry. Even in erotic lyrics the
Hindu's deep-seated inclination towards specu-
lation and reflection is evident. This has not
only been the basis of that which is best and
highest in their religion and philosophy, but it has
assumed shape in another important product of
their literature, the gnomic, didactic, sententious
stanzas, which may be called the 'Proverbbook.'
Bödhisattva Dollhöng (Ind. Sprachleit, Pettinger,
1870-73) collected all Sanskrit literature some 8000
of these stanzas. They begin with the Mahâbhârata,
and are particularly common in the moral essays
of the fable literature. Their keynote is again the
vanity of human life, and the superstitious
happiness that awaits resignation. The mental
calm of the saintly anchorite who lives free from all desires in
the stillness of the forest is the resolving chord
of human unrest. But for him who remains in the
world there is also a kind of salvation, namely,
virtue. When a man dies and leaves all behind
him, his good works alone accompany him on his
journey into the next life (incarnation).
Hence the practical value of virtues almost over-
rides the pessimistic view of the vanity of all
human action. These gnomic stanzas are gathered
up in collections such as the Śrutī-sūtras, or
'Century of Tranquility,' or the Maha-mudrâ,
or 'Hammer of Folly'; but the ethical saw is
really at home in the fables of the Pâñchântana
and Hitopadeśa. These works are paralleled by
Buddhist compositions (see below). In fact, a
Buddhist collection of this sort, the Dhama-
pada, or 'Way of the Law,' contains perhaps the
most beautiful and profound words of wisdom in all
Hindu literature.
20. The drama.—The drama is one of the latest
yet one of the most interesting products of Sanskrit literature. With all the uncertainty of literary dates in India there is no good reason to assume for this class of works a date earlier than the 8th or 9th cent. of our era. Certain Vedic hymns in dialogue are all that the early periods of Hindu literature suggest as a possible partial, yet very doubtful, basis for the drama. The Sanskrit word, kavya, is a verb from the root kavya, 'to dance' (whence 'maudeh girls,' etc.). The word therefore means literally 'ballet.' It is not doubtful that dances contributed something to the development of the drama. In various religious ceremonies of earlier times dancing played a part; at a later time the cult of Siva and Vigna, and especially of Siva's incarnation Karna, was accompanied by pantomimic dances. These pantomimes reproduced the heroic deeds of these gods, and were accompanied by songs. Popular representations of this sort, the so-called yatra, has survived to the present day in Bengal. They are not unlike the mystery-play of the Christian Middle Ages, and their modern continuation, the passion-play. The god Karna and Radha, his love, are the main characters, but there are also friends, relatives, and many episodes of the Indian poet. The yatra, a mixture of music, dancing, song, and improvised dialogue, while unquestionably in some way connected with the origin of the drama, are nevertheless separate from it, a very Indian leap from the finished product of the nārāha as it appears in such works as the Sakuntalā of Kālidāsa, or the Mṛcchhakatikā, 'Clay Cart,' of Śudraka.

A drama of political intrigue, whether Western (Greek) influence, particularly the New Attic Comedy of Menander (as reflected in Plautus and Terence), has not in some measure contributed to the shaping of the Hindu drama. It is known that Greek actors followed Alexander the Great through Asia, and that they celebrated his victories with dramatic performances. After the death of Alexander Greek kings continued to rule in North-West India, and the commerce in Greek and Greek art and Greece and Greek art and Greek astronomy certainly exercised strong influence upon Hindu art and science. The chief points of resemblance between the Hindu drama and the Greek comedy are as follows. The Hindu drama is divided into acts (from one to ten), each of which is no longer than a page, and proper are preceded by a prologue spoken by the stage manager (värikātaka). The stage was a simple rostrum, not shut off from the auditorium by a curtain, but, on the contrary, the curtain was in the background of the stage; it was called yavanikā—that is, 'Greek curtain' (tavos). The characters of the Hindu drama resemble in some respects those of the Attic comedy. There are courtesans and parasites, braggarts and cunning servants. Especially the standard comic figure of the Hindu drama, the vīśāgaka, the unromantic friend of the hero, compares well with the go-between, the nārāha, of the Greek- Roman comedy.

The vīśāgaka is a hunch-backed, bald dwarf of halting gait, the clown of the piece. Though a Brahman by birth, with the (inevitably) coarse manner of society even in a good dinner, to the hero's sentimental flower romanticism. Although it is just possible that one or the other feature of the Hindu drama may be due to outside influence, the inner matter is essentially national. The primitive character, for the most part, these of the heroic legend in the epics, or they move in the sphere of actually existing Hindu courts. The themes, at any rate, are not different from those of other Hindu literature. They show no foreign features. We have forgotten that certain general coincidences between the drama and the theatre of different peoples are due to common psychological traits; hence genuine historical connexion in such matters requires the most exacting proof. The chief dramatic writer is Kālidāsa, the incomparable Hindu poet, master at the same time of epic and lyric poetry (see above). Most of his dramas are ascribed to him: the Sakuntalā, the Uśan, and Mālāvikāgnimitra, or 'Malavika and Agni.

From a time somewhat earlier than Kālidāsa comes the drama Mṛcchhakatikā, the 'Clay Cart,' said to have been composed by king Śudraka, who is praised ecstatically as its author in the prologue of the play. Similarly, during the 7th cent. A.D., a king named Harṣa is said to have composed three existing dramas: the Ratnāloki, or 'String of Pearls'; the Nāgannanda, whose hero is a Buddhist, and whose prologue is in praise of Buddha; and the Priyadarśika. From the 8th cent. A.D., until the plays of Bharavi, a Hindu Indian poet, the yatra, a mixture of music, dancing, song, and improvised dialogue, while unquestionably in some way connected with the origin of the drama, are nevertheless separate from it, a very Indian leap from the finished product of the nārāha as it appears in such works as the Sakuntalā of Kālidāsa, or the Mṛcchhakatikā, 'Clay Cart,' of Śudraka.

LITHUANIANS AND LETTS

Designated as the Jātakas, which seems to mean 'Birth Stories.' Buddha is made to appear in every one of them as the wise or successful person or animal of the fable; he himself points the moral (see JĀTAKA). The two most important Sanskrit collections are the Pāñchakātantra, or 'Five Books,' the most celebrated Sanskrit book of this sort, existed at least as early as the first half of the 6th cent. A.D., since it was translated by order of king Kuśa into the Sāmakaviyā of the Kāśyapa, or Pāñchakātantra, or 'Five Books,' is probably not original, but it took the place of 'Kāraṭaka and Damana,' or some similar title, derived from the names of the two jackals prominent in the first book. This may be surmised, because the title of the Syriac version is 'Kalīgārā and Damna,' of the Arabic version 'Kalīl and Dimnāl.' Both the Pāñchakātantra and the Hitopadesa, or 'Salutary Instruction,' were originally intended as manuals for the instruction of kings in domestic and foreign policy. The Hitopadesa, said to have been composed by Nārāyaṇa, states that it is an excerpt from the Pāñchakātantra, or some other books.

The most famous collection of fairy tales is the very extensive Kathāsāstra, or 'Ocean of Rivers of Stories,' composed by the Kashmirian poet Sunandara in the 1070. This is in verse, three much shorter collections are in prose. The Sambhavati, or 'Seventy Stories of the Parrot,' tells how a wise whose husband is away, and who is inclined to solace herself by treating other men in the same way, is cleverly entertained and deterred by the story-telling parrot, until her husband returns. The Veṣṭāda-pañchakātantra, or 'Twenty-five Tales of the Vampire,' is known as Englishmen under the name of Vikran and the Vampire. The fourth collection is the Sinhāsaṇa-dvāpārīnāśika, or 'Thirty-Two Stories of the Lion-Seat' ( throne ), in which the throne of king Vikramāditya is the subject of the Sanskrit collections of fairy tales, as well as of the fables, is the insertion of a number of different stories within the frame of a single narrative. This style was then adopted by the Persian and Arabic, the last popular version of the Arabian Nights. A few prose romances of more independent character may be mentioned in this connection. The Dālīkanika-chātra, or 'All the Princes,' a story of common life and a very corrupt society, reminds one of the Simplicissimus of Grimmelshausen. Its author is Daṇḍin, and it probably dates from the 6th cent. A.D. The Vīṣṇavapadāth by Subandhu, and the Kādambaṇi by Bāṇa, are highly artificial romances; the latter narrates, in stilted language and long compounds, the sentimental love-story of an ineffably noble prince and the equally ineffably beautiful and virtuous fairy princess Kādambabhi. These works are known as charita, 'narrative'; the same name is also used for chronicles or quasi-historical literature of inferior grade. The nearest approach to history, in our sense of the word, is every article in the Rājasthānīsī, or the Chronicle of Kashmir, by Kalhana, from the middle of the 12th cent. A.D.

22. Scientific literature.—India abounds in all forms of scientific literature, written in tolerably good Sanskrit, even to the present day. One of the characteristics of the Hindu mind is that it never drew the line between literary creation and scientit. knowledge, so that it is not easy to mark off from one another belles lettres and scientific literature. The ancient legal books of the Veda (see above) continue in the more modern poetic Dharmāṣṭras and Sāstras. Of these the Law Books of Manu and Vaiśaṅvalaya (see above) are the most famous examples; Manu especially enjoys great authority to this day. Rooted in the Upaniṣads are the sūtras, or rules, of the six systems of Hindu philosophy and their associated explanations. Grammar, etymology, lexicography, prosody, rhetoric, music, and architecture are all own a technical literature of wide scope and importance, and the treatment of most of these by the Hindus is not without a tendency to assure metrical form. The earliest works of an etymological and phonetic character are the Vedas, the Gītas of Yajna, the so-called Nāgārjūnakas, or the Nirukas, and the Pāṇiṅas, or phonetic treatises pertaining to the treatment of a Vedic text in a given school or śākha (see above). Later, but far more important, is the Grammā of Pāṇinī, one of the greatest grammarians and his commentators Kātyāyana and Patanjali. Mathematics and astronomy were cultivated from very early times; the so-called Arabic numerals came to the Arabs from India, and were designated by them as Hindu numerals. Indian medical science must have begun to develop before the beginning of the Christian era, for one of its chief authors, Charaka, was the head physician of king Kanasi in the 1st cent. A.D. The gīnas of Hindu medical science reach back to the Atharvaveda. The Bower Manuscript, one of the oldest of Sanskrit manuscripts (probably 5th cent. A.D.), contains passages which agree verbally with the works of Suśruta and Anātuka, the leading authorities on this subject.

LITERATURE.—The most convenient sketch for English readers is A. A. Macdonell's thoroughly competent translation of Sanskrit Literature, one of the volumes of 'Short Histories of the Literature of the World,' edited by Edmund Geisse (London, 1900). The Bibliographical notes at the end of the book are a guide to more extensive study. Readable and popular is any edition of Frazer's Literary History of India (London, 1870). Max Müller's History of Ancient Sanskrit Literature (London, 1907) deals only with the Vedic period, and was important in its day, but is now antiquated. A. Weber's History of Indian Literature (from the German by L. Eichhorn, London, 1879) is a scientific and technical work, and is all adapted to the wants of the general reader; it represents the state of knowledge at the beginning of the century ago. The German work of L. v. Schroeder, Indian Literature and Culture (Leipzig, 1887), contains a fuller, very instructive, and readable account of Hindu literature; and the translations and digests of the texts themselves render this work very helpful. The more recent treaties are H. Oldenberg, Die Literatur des alten Indischen Orientes, Berlin, 1909; and Les Littératures de l'Inde (Paris, 1904), both excellent treatises, having in view more particularly modern literature. Still more recently there have appeared three parts of M. Winterbottom's Geschichte der indischen Literatur (Stuttgart, 1909-10), a masterly and informative book. The GLAF, commenced under the editorship of G. Bühler, and continued after his death by F. Kießling, contains, 1891-98, a sworn the entire domain of Indo-Aryan antiquity, and contains authoritative information concerning many points and problems of Sanskrit literature.

MAURICE BLOOMFIELD.

LITHUANIANS AND LETTS.—1. Ethnography.—The Lithuanians and the Letts belong to the Aryan family of peoples, and together with the Borussians or Old Prussians, who became extinct in the 17th cent., form a distinct ethnological group. This group, now generally called the Lithuanian race, had already ramified into its several divisions in its pre-historic period, and its unity is now seen only in certain common elements of popular tradition and in the nomenclature of the family, by which it regards itself. According to the Lithuanians exists a much more archaic type than the Letts. The original home of the Lithuanian or Balte race was probably the basin of the lower Lielupe, and, that district is now more or less determined with the Lithuanians of to-day, while the Letts are found in Courland, the adjacent Russian littoral, the southern half of Livonia, and the Polish province of Vistula, it would appear that the Lithuanian branch had reached its present location.

VOL. VIII.—5
by migrating to the originally Finnish districts of Courland and Livonia, and that, on the other hand, the Lithuanians remained fast upon their ancestral soil.

Numerically, neither member of the group is of great account, nor is it likely that either was ever important. The Lithuanian number some one and a half to two million; of these, 1,200,000 were in Prussia; the Letts less rather than more—the estimates varying from 1,200,000 to 2,000,000. In a physical respect both branches are mixed, though the Letts are less so than the Lithuanians, which gives rise to the belief, and justly founded in them, since many individual Lithuanians and Letts still exhibit all the distinctive marks of pure Aryan descent, while the rest, men and women alike, are generally self-reliant and sympathetic, well-formed, and often even handsome.

2. Political history. — The historical fortunes of the two peoples have run in quite distinct courses.

(a) Lithuanian. — The history of the Lithuanians opens in the 11th century, with prolonged frontier wars with Russia, from which, however, they emerged so successfully, and with their integrity still so far complete, that one of their princes, Mindaugas, was recognized by Pope Innocent IV. as king of Lithuania, actually contemplated the founding of a united Lithuanian State. This design, however, was frustrated by Mindaugas’s death (1253) and by internal disorders. Nevertheless, it was at length brought to realization by the government of the Grand-duke Gediminas (†1341); he then, under the leadership of his son, Olgiard, (whom his brothers recognized as sovereign Grand-duke) and Keistat, the young nation succeeded in extending its sway from the Baltic to the Euxine, and from the Polish Bug to the Ugna and the Oka, though not including the western districts (Nadrum, Schlawangen, and Suadam), which the Teutonic Knights had brought under their control during the years 1274–83.

At the death of Olgiard, in 1377, his place was taken by his favourite son, Jagiello, who, however, soon quarrelled with Keistat (†1389) and with his son Witaut, the outcome of the dissension being that the latter became the real lord of Lithuania, afterwards solemnly the sovereignty of Jagiello was not thereby infringed. Jagiello had shortly before (1386) married Hedwig, queen of Poland, thus opening the way for a political alliance between the Lithuanian and Polish states which seriously threatened the independence of the former. Witaut strained every nerve and took all available measures to avert this danger. Not only did he seek to promote the independence of his country in a political sense, but he also endeavored, by working for a union between the Greek and Roman communions within its borders, to make it ecclesiastically self-dependent. While these endeavours proved to be in vain, they won him the confidence of the Utraquist Hussites in such measure that upon the death of King Wenceslaus they offered him the Bohemian crown, and it was only the unpropitious political conditions of that country which prevented his acceptance of it. He was now all the more ready to assume the crown of Lithuania, which, indeed, the Emperor Sigismund, with a view to the complete severance of that country from Poland, had thrice offered him already. Here, again, however, Witaut was disappointed, as Poland intercepted the passage of the party which was conveying the crown to him, and he died shortly afterwards (1430)—four years before Jagiello, who, as Queen Hedwig’s consort, had at her death (1399) become king of Poland.

In the succeeding period the Lithuanians repeatedly took occasion to assert their independence in relation to Poland, but this did not prevent the principality of Olgiard from gradually becoming a Polish feudatory. Witaut himself had been repeatedly compelled by the necessities of war and by external troubles to make concessions, and his successors, under the increasing pressure of the steadily growing power and capacity of Moscow, were forced in even larger measure to purchase the help of Poland by ever closer union with that State. These rulers, moreover, almost without exception bore the name of Jagiello, and united in their individual persons the Grand-duke of Lithuania and the crown of Poland. The eventual result was the incorporation of the two countries in a single political organism whose fortunes were controlled by a common Diet. The incorporating union was effected at the Diet of Lublin in 1569.

(b) Lettish. — At the very outset of Lettish history we find the merchants of Liebeck taking steps to find an outlet for their commerce in the district of the Lower Divna, and they were followed by German missionaries, who there founded the earliest Christian settlements. While these attempts at colonization were not at once greatly successful, they had, nevertheless, the effect of making Livonia known to the West, and of directing against that heathen land the enthusiasm for war against unbelievers which in that period of the Crusades dominated the thought of Christendom. It was owned in Livonia. Nevertheless, it was all the more successful, as it was managed to subjugate the hitherto unconquered heathen districts, which were as far as the Lettish provinces, Livonia and Courland, were concerned, was virtually completed by 1599. The Order, nevertheless, did not thereby win possession, but had constantly to take the field against unfriendly neighbours, and, as the fortune of war was on the whole unfavourable to it, its powers were sapped by internal dissensions, and the secularization of its Russian territory in 1553 isolated its Livonian domain, its authority in the latter also was at length completely shattered. In 1562 Livonia became a Polish province, while Courland, as a hereditary feudal duchy of Poland, came into the power of the last Master of the Livonian part of the Order, Gotthardt Kettler. Finally, both provinces became subject to Russia.

3. Ecclesiastical history. — Thus, while the Western Lithuanian Church came under German control in the 13th century, the whole of Lithuania—now Russian—Lithuania was brought into close relations with Poland a century later, and, accordingly, as was to be expected, the two divisions came to diverge widely from each other, not only as regards their language, but also in the moral, and most of all in the religious sphere. Eastern Lithuania, which at the time of Keistat’s death was almost entirely pagan, was thrown open to Christianity by Jagiello, who, however, had hitherto maintained the orthodox faith at his marriage with Hedwig,
and strove with all the zeal of a new convert to propagate it among his own people of Lithuania; they became more and more closely bound to Poland, and the Church of the Polish Court and the Polish State soon gained complete spiritual authority among them. In this way Russian Lithuania became a Roman Catholic country, except in the very small extent, it has always remained; its non-Catholic population consists only of a small number of Lutherans, who were won to that communion through efforts directed from Courland. After 40,000 adherents of the Reformed Confession, whose forefathers were induced to renounce Roman Catholicism under the influence of Prince Nicholas Czarny Radziwill. The ecclesiastical history of the Western Lithu-

anians and the Letts took a different course. As in the Prussian territory of the Teutonic Knights, which under the Grand-Master Margrave Albert of Brandenburg became a secular Protestant duchy in 1226, so in Livonia and Courland, the Lutheran teaching was enthusiastically welcomed, and, in fact, won universal acceptance in both provinces. Most of the inhabitants remained faithful to it, so that Protestantism is to-day almost universal among the Letts. The only exceptions are found in localities where Roman Catholicism was able to gain a footing under the protection of Poland, or where proselytes have been won by the Russian State Church.

4. Early religion.—The religion which prevailed among the Lithuanians and Letts prior to the introduction of Christianity was a development of nature-worship. Besides the worship of woods and waters, of trees, stones, and stones, of fire and household snakes, we find a belief in the personality of the heavenly bodies, especially the sun, as also in the evidence of divine beings who control all created things. Pre-eminent among these divine beings was 'God,' designated by the primitive Aryan name Devasus (Lat. deus). He was regarded generally as the highest and commandant power, but sometimes, like Zeus in Homer, he was a distinct mythological figure, and as such probably identical with Perkūnas (Lett. Pērkołne), the thunder-god, who presided over the heavenly bodies, and was regarded as armed. An ancient folk-song tells that, when the moon was unfaithful to his wife, the sun, and became enwrapped of the morning star, Perkūnas cut her loose with a sword. According to Lithuanian belief, Perkūnas's aunt washed the weared and dust-covered son, who was once called the daughter of God, and who herself had sons and daughters; in popular songs those play a great part as mystic powers, but are always represented as human in all respects. We hear frequently also of the 'children of God,' and it would seem that the mythical imagination did not distinguish between the latter and the 'children of the sun.'

The sun, nevertheless, was not regarded as the wife of devasus (or of Perkūnas), as appears not only from what has been said, but also from a Lettish folk-song which tells how, when Perkūnas set out to find a wife beyond the sea, he was attended by the sun, bearing a dowry-chest. The Letts, again, believed that Perkūnas was a polygamist, and in another folk-song he is said to have as many wives 'as the oak has leaves,' though none of them plays an independent part in the mythology.

We need have no hesitation in assuming that the ancient religion of the Lithuanians and of the Letts alike recognized the existence of other divine beings, and the way in which these are associated shows that they entered into the observation of nature in human life. But, with the exception of Laine, the goddess of fortune, none of them come down to us under a common Lithuan-Lettish name, and we must be more cautious in connecting such beings with the ancient religion because many of the names of the Lithuan-Lettish mythology rest upon the misconceptions or fabrications of later times. There is adequate evidence, however, for an early belief in a number of demoniac beings, such as the fertas (Lith. ferteras) and the piekās ('goblin,' 'flying dragon'), and it is equally certain that the Lithuan-Lettish religion was dominated from primitive times by the conception of a devil (Lith. Velnias; Lett. Velniez). While that conception never became perfectly distinct, it nevertheless formed so definite an antithesis to the idea of 'God' that we cannot doubt the presence of a dualistic element in the Baltic cult.

Corresponding to the belief in demonic beings, superstition of a more general kind was, and still is, very prevalent. It manifests itself in a belief in witches (vėduva, 'sorcerer'), in the practice of casting lots (Lith. būris; Lett. burt), in notions regarding countless occurrences of daily life, and not least in the idea that the spirits of the dead (Lith. sedis; Lett. sedes) continue to move about among the living— an idea that is unassailably very ancient, as it is attested not only by direct historical evidence, but also by certain features in folk-song (as, e.g., the notion that disembodied spirits marry), and, above all, by great ages of the heathen times, which often contain the remains of both rider and horse, and are furnished with weapons and implements, thus pointing conclusively to the belief that the dead continue to exist in a condition not unlike that of their earthly life. As the majority of these graves contain skeletons, not ashes, they likewise show that the Lithuan-Lettish peoples believed in the resurrection after the death of the dead, and that they wore their clothes when they were incinerated. Sacrifices were common, and were offered not only by way of petition and thanksgiving, but also as propitiations; to judge from the Lettish designation ('blossoms'), the offerings would seem to have consisted originally of flowers and fruits, but we have historical evidence that there were from the first other kinds of sacrificial gifts, while, if not among the Letts, yet among the Lithuanians and Borussians, we find traces of the practice of human immolation.

5. Sociological features.—Our data regarding the political and social conditions, the prevailing sentiments and morals, of the ancient Lithuanians and Letts are not sufficiently adequate to give a full and clear account of their civilization. With varying degrees of certainty, however, we may make the following statements regarding their mode of life: they were efficient in war, and were divided into numerous clans or cantons governed by chieftains; they lived by tillage, cattle-rearing, and hunting, and practised all manner of handicraft and trading; they lived in separate homesteads, and their family life was of the patriarchal type; marriage was based upon the capture of brides, and, while the wife was subject to the husband, she held a place of high honour among her children; finally, both peoples had a remarkable liking for song, but did not possess the art of writing.

6. Literary development.—One result of the lack of writing is that the Lithuanians and Letts have absolutely no literary remains from healess
LITURGIES.—See Worship.

LOCKE.—

1. Chief dates in his life.—John Locke was born on 29th August 1632 at Wrington, Somersetshire. Brought up at home, he was born at the age of fourteen, he was then sent to Westminster school, from which he passed in 1652 to Christ Church, Oxford. He found little satisfaction in the scholastic kind of training then in vogue at Oxford, and, although, after his election to a scholarship, he passed his time in study, he next turned his studies in Greek and Rhetoric, his interests eventually turned more to the study of sciences. His connexion with a medical practice had happened in 1656 to bring him into contact with Lord Ashley, afterwards Earl of Shaftesbury, who figured as the leading innovator in the political ideas of Charles 1's reign; and this meeting had an important influence on Locke's life. In the following year he was appointed to the small capacity of confidential adviser to Shaftesbury himself and tutor to his son, while he was also engaged in political work and held some appointments. Shaftesbury was in office in 1672, and in 1675 Locke had to go to France for his health. He remained abroad for four years, staying chiefly at Montpellier and Paris, but in 1679 returned to England to assist Shaftesbury once more. The two years that intervened before the statesman's fall and flight were, however, not idle; and, when he was restored, he was to do so in 1688. The two years 1689-90 saw the publication of the great 'Two Treatises of Government,' and in 1690 he visited a sort of literary sojourn in his life. From 1691 onwards he lived more in retirement, and chiefly in the family of Sir Francis Masham, at Oates, in Essex. After the revolution of 1688, he was appointed with the new government, and for four years (1696-1700) held the well-paid appointment of a Commissioner of Trade. Falling sick he resigned his appointment and took up his residence in Essex. In 1706 he died at his house at Oates on 28th October 1704.

2. Characteristics as a thinker and writer.—Perhaps no philosopher since Aristotle has represented the spirit and opinions of an age so completely as Locke represents philosophy and all that depends upon philosophy thought, in the 18th century.—especially in Britain and France (A. C. Fraser, Locke, Preface). Locke's claim to be regarded as thus representative may be based alike on the variety of the subjects on which he wrote, the philosophy, education, politics, and on the aims and qualities of his thinking. In all directions he exhibits the merit and the defects which are attributed to the period. He is impatient of authority and of 'the schools,' seeks to put aside preconceptions and see the truth of things clearly for himself, believes firmly that 'reason must be our last judge and guide in everything,' and desires sincerely to pursue truth only, and for its own sake, but he has no adequate knowledge or appreciation of the heritage of the past, accepts current assumptions, distinctions, and doctrines without seeing any need to test them, and this leads to a certain relative common sense, and is quite ready to acquiesce in a very humble estimate of his reach as a human faculty. Moreover, although Locke was so eminently representative and exercised an immense influence on European thought, he cannot be ranked very high as a philosophical thinker. His thinking, though patient, laborious, and canad, is fatally disordered both in its qualities of thoroughness and system. The deficiencies are partly explained, no doubt, by his occupation with practical affairs, which interfered with continuous philosophical pursuits, and partly, too, by the indirectly practical aims of much of his work; but, it is true, the practicality of his aims is itself characteristic. Locke's "discontinued way of writing" goes also to explain his great fault as a writer—the endless repetitions with which he wears his readers.

In the 'Epistle to the Reader' with which he introduced the Essay, he admits frankly that he has not been at great pains to correct the fault, and at times certainly seems to let his pen run on almost as it pleases. But his faults are not unconnected with real virtues—his intencness upon expressing his whole thought fully and clearly, his desire to drive home his point and to gain the full assent of the reader. When he writes with any care, his plain style is as excellent as it is appropriate, and, when he is moved to earnestness, he writes with force and real impressiveness. His failures are seen at his worst in his controversial writings. Although he professes his eagerness to be shown his errors, he seems in point of fact to have been rather impatient of criticism. He is too much taken up with his own ideas, with his own writings and misrepresentations of which his critics have been guilty to try to penetrate to the real motives of their criticisms. Hence his replies do not carry us much further, while even as polemics they have their day and are purely rhetorical.
he is too apt to weaken his case, not merely by over-elaboration, but also by an insistence on the letter of his own and his critics' statements which the reader feels to be petty and unprofitable.  

3. The 'Essay concerning Human Understanding' is on the title-page of the first edition, in the preface, 'Epistle to the Reader.' Locke tells us how he started upon the line of inquiry which resulted, after some twenty years of interrupted labour, in the publication of the Essay. He was thinking with a few friends on a subject which he does not specify, but which we know from another source to have been 'the principles of morality and revealed religion' (see Fraser's ed. I. p. xvii). The baffling character of the difficulties which arose in the course of the discussion caused Locke to ask himself whether, before entering upon such subjects, it was not rather 'necessary to examine our own abilities, and see what objects our understandings were, or were not, fitted to deal with.' He took up the task of this examination, and found it expand far beyond his first expectations. The aim of his whole inquiry, however, remained the same throughout, viz. that determination of the certainty, extent, and degrees of human knowledge which is the theme of bk. iv. of the Essay, and to which that body of work is subservient.  

But before this theme could be dealt with effectually certain preliminary matters had to be cleared up. To know is to have ideas about things—this at least, whatever else may be. If, then, we are to arrive at right conclusions about the scope of knowledge, we had best begin by examining this medium in which alone it exists; i.e., we had better try to take stock of our knowledge and see how we come by them. To Locke it was plain that we come by them only through experience. To convince the reader that our knowledge and our ideas have no other source, Locke devotes bk. ii. of the Essay to showing that there are no 'innate' principles or ideas, unless we understand the term 'innate' in some sense which makes the assertion of such innate knowledge either insufficient or misleading. If we then look to such innate ideas, we should look to experience and experience only for the origin of all our ideas, and must try to trace them back, one and all, to their source therein. It is easy to understand how important it was for Locke to teach on this point, but it really constitutes one of his claims to be regarded as the founder of modern psychology.  

Yet it was hardly as a psychologist that Locke himself was interested in the source and origin of our ideas; it was rather because he thought that, by seeing how, and at what point, our ideas emerge or are formed in the course of experience, we should be better able to measure the knowledge which we get by means of them. We should know, in short, what the actual experience is from which the ideas are derived, and on which, therefore, the knowledge which we have by means of the ideas is based. The results of Locke's stock-taking of our ideas in bk. ii. can be here only summarised.  

He finds that all our ideas may be traced back to two great sources: sensation, which gives us the ideas involved in our knowledge of the external world, and 'reflection,' which is the perception of the operations of our own mind, and which gives us our ideas of thinking, believing, willing. The ideas derived from (or both of) these sources may be either simple—as such as the ideas of yellow, thinking, pleasure, unity—or complex. The complex ideas are subdivided. The term 'idea' is used by Locke in a very wide sense—for what we shall term the reducer, when a man thinks. The equivalent in modern psychology is a term like J. Ward's 'perception.'
man. The nominal essence, then, is for Locke nothing more than the statement of the meaning in which we intend to use a word, as the view which Locke gives of the idea of the real being or inner constitution of the thing itself. Now in Locke's system the idea is the abstract idea which we ourselves frame or put together at our own discretion. Therefore, so far as they are concerned, nominal and real essence coincide and are indistinguishable, unless the complexity or vagueness of the ideas in question, to prevent us from stating their essence exactly and completely, equals the number of substances or objects in dealing with things which have a real essence, and, since in Locke's view their real essence is not known to us, we have no case so guarantees that the distinctions which we draw by means of our abstract ideas or nominal essence will truly represent the reality behind the things themselves. In fact, by introducing the notion of essence at all we are assuming that the real division of things into species, and this assumption is liable at any point to turn out untrue. The lines of division which we suppose to exist may be found to break down. Hence Locke concludes that in the case of substances our general names express merely the nominal essence. The boundaries of species are made by men, though, of course, we are guided in making them by those superficial resemblances among things which nature presents to our view.

In bk. iv. we come at last to those conclusions regarding the nature and extent of knowledge—or, where knowledge fails, of probability or probable judgment—to which the rest of the work had been subsidiary. Knowledge is defined by Locke as 'the perception of the connexion of and dependence of objects on one another, and repugnancy of any of our ideas'. And of such agreement and disagreement he distinguishes four sorts: (1) identity or diversity (e.g., 'blue is different from yellow'), (2) relation (e.g., 'manifestation of the intellectual ideas is a red division of tangible species'), (3) co-existence (attributes in a subject and substance), and (4) real existence 'agreeing to any idea' (e.g., 'God is'). Further, our knowledge of the agreement and disagreement of our ideas has different degrees of evidence. It may be (a) immediate or intuitive—and all certainty goes back to such intuition—or (b) demonstrative, i.e. reached by a series of steps, and not identical with knowledge, but at the most of probability. From these preliminary determinations Locke proceeds to a series of discussions in which three problems are intertwined in a way that makes the confusion the harder for the reader: (1) the problem how far we can have knowledge which is real in the sense of being authentic or valid, and not a mere imagination, (2) the problem how far this real knowledge is also general or universal, and (3) the problem how far real knowledge which is real in the first sense is also real in the further sense of being a knowledge of real existence, i.e. a knowledge of things which have a substantive existence or reality. The clue to Locke's answer to all three problems lies in the sharp opposition which he makes between our knowledge, e.g., of mixed modes, where we are dealing with (complex) ideas which are 'archetypes of the mind's own making', and our knowledge of substances and of real existence, where our ideas refer to archetypes beyond themselves. In the former case our knowledge of reality among other things is constitutive (in the first sense) and general, because it makes no further claim to be a knowledge of real existence (of things) or co-existence (of attributes in things). In the latter case our knowledge must always be a claim to a real but far more restricted. Our knowledge of the properties of a triangle or of the wrongness of murder is real and general, even though no perfect triangle could be drawn or no murder be committed; but our knowledge of the properties of a triangle or of the wrongness of murder is real and general, even though no perfect triangle could be drawn or no murder be committed; but our knowledge of real existence and co-existence can never be thus general. As regards real existence, we have, according to Locke, an intuitive knowledge of our own existence, a demonstration of God's existence, and a sensitive knowledge of that of external things. But it is to be observed that this knowledge is a knowledge of existence and not of substance, for on Locke's account we do not know the intrinsic nature of spiritual or of material substance. In fact, he offered his orthodox readers by suggesting that, while we may believe, we cannot know, that the soul (of man) is immaterial. The intrinsic nature (or, real essence) of material bodies he assumes to consist in a certain atomic constitution; and, since he regards this as inaccessible to our knowledge, he denies the possibility of physical 'science,' in the strict sense of the term 'science.' Such 'knowledge' as we have of material bodies is only of the co-existence of their superficial properties, and does not go beyond probability, though it may be extended and improved by experiment.

The subsequent development of philosophy and science has made many of Locke's positions seem strange to us. Our confidence in physical science is far greater, our reliance on abstract ideas of 'the existence of a God' far less than his. Above all, we have to be more careful about the relation of 'ideas' to real existence and less ready to separate and unite them alternatively to our convenience. The weaknesses of Locke's compromise between common sense and philosophy have been made so abundantly evident by later criticism that it is hard to see what ground he had for his compromise. And yet it is to the strong resistance of his treatment of the problems of knowledge that later criticism owes the advance that it has made on his positions.

4. Ethics and politics.—Locke's contributions to ethics are scanty and of little value, unless we credit to ethics the discussion of free will contained in the chapter on power (bk. ii. ch. xxxi.). Certainly this discussion, in spite of the perplexities which Locke candidly reveals to the reader, is full of interest and instruction alike for the moralist and for the psychologist. But in ethics proper his notion that morality is no less capable of demonstration than mathematics is an illusion, which can be explained only by his theoretical views about our knowledge of mixed modes. It certainly matches ill with his doctrine of moral obligation, which recognizes no higher motives than those of pleasure and pain, reward and punishment.

Nowhere are the features of Locke's thought displayed more characteristically than in his political doctrine. Published early in 1690, the Two Treatises of Government had a direct reference to current politics. The first was a refutation of Filmer's plea for the unlimited (paternal or hereditary) right of kings, the second a defence of the English Revolution. Concerned only about the right of the people to resist oppressive and arbitrary rule, Locke is more than usually careless about thoroughness and system. He accepts with easy credulity the literal truth of a social compact, with the subsidiary doctrines of a state of nature, natural rights of the individual, and tacit consent of the individual to submit to the established government. In one and the same sentence (bk. ii. ch. xiii. § 146) he tells us that a constitutional monarchy 'there can be but one supreme power, which is the legislative,' yet that 'the legislative being only a fiduciary power to act for certain ends, there remains still in this farthing a power to remove or alter the legislative, when they find the legislative act contrary to the trust reposed in them.' He tells us (xi. § 134) that the legislative is 'sacred and unalterable in the hands whereof the community have it,' yet adds that, as a result of historical changes, the legislative
may cease to be representative and may therefore stand in urgent need of reform (xii. § 157). And then, to complete the reader’s confusion, he assigns the task of reforming the legislative to that royal prerogative whose arbitrary exercise he elsewhere denounces. In view of such incoherences we must be content to take Locke’s treatise primarily as a pamphlet for his own time; it has at all events more historical than theoretical importance.

5. Toleration.—Locke’s writings upon toleration serve as a link between his political and his religious doctrines. In 1689 he published in Holland a Latin Epistola de Tolerantia, which was translated into English in the same year. Criticisms (attributed to one Jonas Provost of Queen’s College, Oxford) drew from Locke A Second Letter concerning Tolerating and A Third Letter for Tolerating in 1690 and 1692 respectively, and twelve years later he had even begun a fourth, of which, however, only a fragment was written. The original letter is a businesslike piece of argument, the second is longer, the third is very long and very tedious. Locke can see nothing at all in all his critic’s arguments, and it must indeed be admitted that the position which the critic had chosen to defend was a strange one—viz. that, in the case of those who will not embrace the true religion, the magistrate ought to employ force, in the shape of moderate penalties, to compel them to consider the error of their ways. Against this position Locke shows again and again that compulsion can produce only outward conformity, not inward conviction, that what was punished was therefore really disobedience and not ‘purification of profession’, that any end which justified moderate penalties would equally justify the severest persecution where moderate penalties failed, that ‘the true religion’ must for practical purposes mean the majority of religious dissent and makes compulsion futile, while the actual division among Christian sects make it presumptuous. Phosphorically these considerations were reinforced and explained by his view that in matters of religion there is no certain (or demonstrative) knowledge, and that we must be content with ‘a persuasion of our own minds, short of knowledge’ (Works, ii. 144). But he had also laid down earlier in the first letter that the religious grounds that it is ‘in the inward and full persuasion of the mind’ that ‘all the life and power of true religion consists’ (p. 11), ‘I cannot be saved by a religion that I distrust, and by a worship that I abhor’ (p. 28).

It can hardly be said, however, that the constructive argument of the original letter is in itself satisfactory. It is based on Locke’s narrow conception of the State as concerned with little but the security of life and property, and as limited in its functions by the supposed consent of the individual. His argument is qualified, too, in ways which make it difficult to see how they can be assimilated to the objections to compilers to themselves to a ‘foreign jurisdiction’ (p. 46). And this refusal does not square very well with that ‘absolute liberty, . . . equal and impartial liberty,’ which, the critic was wont to assert in the outset, ‘is the thing that we stand in need of’.

Thus Locke wants to separate sharply and completely the spheres of the civil power and the Church. As he denies to the magistrate any right to prescribe articles of faith or forms of worship, so he condemns those who ‘upon pretence of religion’ arrogate to themselves any peculiar authority in civil concerns; ‘I say these have no right to be tolerated by the magistrate’ (p. 48). But it seems strange that, with his recent history of his own country in view, he should not have recognized that an assertion of authority in civil concerns was almost certain to be made by the dominant religious sects, however moderate it might be. The magistrate who was not to tolerate such ecclesiastical pretensions would hardly be able to avoid meddling in matters of religion. Nor was it to be expected that any religious sect, whether Catholic or Puritan, which was firmly convinced that it alone taught the true way of life and that its rivals were spreading pernicious errors would quietly acquiesce in its exclusion from the control of the civil power. As in other cases, so here, Locke’s argument makes a great show of robust common sense, but does not go very deep, and involves large tacit assumptions.

6. Religion.—One of these assumptions, no doubt, was that latitudinarianism of his own religious views which found expression later in his Reasons for the Christian Religion (1684). The latitudinarian who seeks to show, by a great array of Scriptural evidence, that the one only gospel-article of faith is this, that Jesus is the Messiah, the promised Saviour. To believe this, to repent of one’s sins, to make this statement is the condition required to make one a Christian; these and these only are the true conditions of the Christian religion, viz. those ‘which are to be found in the preaching of our Saviour and his apostles.’ Locke anticipates the objection that belief, on the strength of repeated and repeated statements that Jesus is the promised Messiah is merely a historical, and not a saving, faith; but it can hardly be said that he sees the real force of the objection. He speaks, it is true, of ‘the oblation of a heart, fixed with dependence on, and affection to God’ as ‘the foundation of true devotion, and life of all religion,’ and describes faith as ‘a steadfast reliance on the goodness and faithfulness of God’ (Works, vii. 150, 151), but he does not seem sufficiently how this religious faith arises out of the historical belief. He insists on the inability of plain people, the day-labourers and tradesmen, the simple and grave, to form the right reasons, and on the consequent necessity for an authoritative religion and morality. ‘The greatest part cannot know, and therefore they must believe’ (p. 146). But whether such an appeal to authority would find its most natural satisfaction in Locke’s simplified Christianity, or is even quite consistent with it, is not so clear. Among other advantages of an authoritative revelation he speaks of the support which it affords to morality, and he leaves us in no doubt as to the kind of support he has in view.

‘The philosophers, indeed, showed the beauty of virtue; they set her off so, as drew men’s eyes and approbation to her; but leaving her unenforced, very few were willing to espouse her. The generally confessed that she would not place it was meant to the interest, or the benefit, or the reputation of mankind; but still left her backs on her, and forsok her, as a match not for their turn. But when she began to take to the scales on her side “an exceding and immortal weight of glory”; interest is come about to her, and virtue is now visibly the most enriching purchase, and by much the best bargain’ (p. 150).

It has to be remembered, however, that appeals to self-interest—the favourite weapon of such as Butler calleth it—were characteristic of the age.

7. Education.—Locke’s views on this subject are contained in his Thoughts concerning Education (1693) and in the Thoughts Concerning the Understanding. The latter connects directly with the Essay, and was originally designed to form a
chapter of it. It has been highly praised, but, like other writings on the general education of the intellect, seems to be elaborating truths of a sort not very obvious. Perhaps its main value, after all, lies in the ample illustration which it affords of Locke’s own intellectual attitude and temper of mind. The other work makes a much more direct contribution to the art of education. The limited and practical aim of the Thoughts is emphasized by Locke himself, viz. to set forth “how a young Gentleman should be brought up from infancy.” As a medical man he does not disdain to give detailed advice as to bodily health and training. The characteristic feature, however—and the conscious merit—of the book is the paramount importance which it gives to the training of character.

“...which every Gentleman ... desires for his Son, besides the Estate he leaves him, is contained [I suppose] in these four Things, Virtue, Wisdom, Breeding, and Learning” (§ 334).

The order expresses Locke’s deliberate estimate of the relative importance of the qualities named, and this estimate governs his treatment of the subject consistently throughout the book. No reader of the Thoughts is likely ever to confuse education with instruction. So, too, in the case of intellectual education itself, Locke insists, in his Conduct of the Understanding, that the business of educating the young in the spirit of knowledge is, not as I think, to perfect a learner in all or any one of the sciences, but to give his mind that freedom, that disposition, and those habits, that may enable him to make of himself a knowledge he shall apply himself to” (§ 12). A writer who goes carefully into details must, of course, expose himself to criticism. Locke’s advice as to bodily training is in some respects such as medical authority would now approve, and some of his views on moral training are at any rate open to question. But there can be little question about this, that Locke is at his best in dealing with such matters. His fresh, independent view of his subject, his steady insistence on character as all-important, his own kindness and affection for young people, and his practical common sense combined to make him an admirable exponent of the spirit in which the educator should go about his work.

LOCKS AND KEYS.—Before the invention of bolts or, later, of locks and keys, a variety of devices were in use to secure safety. Many peoples at a low level of civilization lived in shelters or huts, and one simple measure of which are quite open (Tas- manians, Senemoles, Indians of Guiana, etc.), and others live in a house only for occasional pur- poses—sleeping, birth, sickness, death, etc.—so that there is no particular interest in the matter. But in other instances, even where no doors exist, attempts

LOCKS AND KEYS

(1) 1. Primitive locks and keys.—In some of the instances cited above a bar set against the movable door from within and held in place by various means in Israel and gates swinging on hinges were also held with bars of wood, bronze, or iron, set across from one doorpost to the other, the ends being set in holes in these (De 3 17, Neh 4 7, Is 22 16), or with bars and holds (Neh 3 8, Babylonian, Egypt). In Homer, Ili. xii. 455 ff., there are two bars pulled out from square holes in the doorposts and meet in dovetailed fashion in the centre. A bolt or wedge keeps them in position. They are simple. The bolt, at first of wood, then of metal, slid into a staple on the doorpost. Where folding doors were used, probably a vertical bolt above or below held one leaf, and a horizontal bolt fixed both in the centre. The bolt might be shot backswards or forwards by means of a cord from outside, secured to a catch by a series of knots. Or such a cord might lift a latch, the bar of which turned on a wooden pin.

Before the use of locks and keys a simple method of sliding a bolt was used in Greece as well as in central and northern Europe, in the shape of a bent hook or stick-like rod. This was passed through a hole in the door and caught in a hole in the bolt or on a projecting knob. Such 'keys' have been found in archaeological remains. A similar key about 2 ft. long made of iron with a brass handle would be assumed with ring money, and known as the chief's door-key, in use in N. Nigeria. Another method was to hold the bolt in place by means of a peg also worked from outside by means of a string. A further development implying the use of a key, consisted in using pegs which fell from an upright into corresponding sockets in the bolt. These pegs might be lifted in different ways according to the type of lock. In the Lebanon two pegs fell into notches in the bolt when it was pushed forward and held it in place. To raise these a T-shaped key was used.

The bolt was pushed vertically through a hole in the door, giving a quarter turn, bringing the arms into a horizontal position, and then pulled slightly back so that the returns of the T fitted into holes in the pegs, which could now be raised. The bolt was then pulled back by means of a string. In the second instance, a number of small pegs dropped into holes in the bolt and are then flushed with its lower surface. The key consists of a rod bent at a right angle with teeth fitted variously upon the shorter piece. When held by the bolt, the teeth raise the pegs flush with its upper surface, and the bolt can then be pushed back by the key. Innumerable varieties of this type of lock are known, and the key is probably that known as 'Lacoonian' with three teeth, the invention of which was attributed to the Lacoonians. Locks and keys of this type were used in Egypt, among the Romans (often

an elaborate pattern), Greeks, Scandinavians, and possibly the Celts. Both of these locks are of the 'tumbler' type, as is also the third, the tumbler being a 'bolt of a bolt.' In this the pins drop into the hollow of the bolt and raised the pegs, so that the bolt could be pulled back. In this case the key is sometimes of very large size, was put through a hole in the door large enough to let the hand pass through with it. But in some cases the lock was fixed on the outside. This type of lock was used in Egypt (perhaps not earlier than Roman times), and is still common there, in Oriental countries generally from early times—Syria, Arabia, Palestine—in Scandinavia, in Scotland, where it is still found in remote parts of the W. Highlands, among the Negroes of Jamaica, in British Guiana (where it may have been introduced by settlers), and among the Zulus (perhaps of Moorish origin).

The first of these types is supposed to be the kind of lock which Penelope opens in Odysseus, xxi. 46 ff. Diels, however, regards the strap as fastening the bolt from outside. Penelope unlocks it (probably it was tied by a secret knot) through a hole in the door she inserts a bar of metal bent twice at a right angle and strikes on a knob fixed on the bolt and pushes it out of its staple. If there were two bolts, both, connected together, could be shot at once. A large key of this kind is often found on monuments as a hieratic survival, carried by priests.

It is akin to the stick-like key already described. In Benin a key and bolt working somewhat on this principle are used. The bolt has a knob; the key is a metal rod, to the end of which is attached another piece best twice at a right angle; at the other end is a ring-shaped handle. This key is inserted through the hole, the keyhole being at a height above the bolt corresponding to the size of the key. The end of the key impinges on the knob, and, when a turn is given to it, the bolt is slid along.

The bolts in the king's palace were of carved ivory. Locks and keys more or less of this type, but of wood, are used by the Wamba of British Central Africa. The key has teeth of 2 or 3 inches in length. When it is turned, it is not out of the bolt into place. Possibly these are of Portuguese origin. Original native locks are made by the Hausa, and are traded among other tribes. The Chaulla refers to native locks used for chests and doors in Gomiba, Equatorial Africa, but does not describe them. Among savage tribes generally civilized influences are introducing the use of European or American locks and padlocks—e.g., among the Barongs and elsewhere in Africa.

2. Diels, p. 184 ff.; N. Macbain and A. Macbain, The Encyclopaedia, London, 1903, p. 450; on outside when owner is at work in the shape of a hook; Daremberg-Saglio, s.v. 'Jambas'; col. 657 (ornament, door); Perrot-Chipiez, vol. iii, 188, 187; Her. i. 224, 425, 647, etc.
4. See in the Passages and Notes, a key which fits into a hole set in the wall, which is then slipped in horizontally. The pegs are then raised vertically.
5. A. J. B. Brotton and A. J. B. Brotton, Exploring Greek and Roman Life, London, 1928, p. 165 ff.; H. Diels, Parnassides, Leipzig, 1887, p. 121. A key which fits into a hole in the bolt (which had no pegs), and which can then be pushed is either the same (A. H. L. F. Pfitz-Rivers, On the Development and Distribution of Primitive Locks and Keys, p. 14).
In another type, used mainly in padlocks, the key thrust into the lock compresses springs, thus permitting the shackle to be withdrawn. Such padlocks were used in Egypt, and are still known in Asia Minor (of Persian origin). They were also used by the Romans, and are still extant in China and India (the so-called puzzle padlocks). The Romans had flat keys for locks in doors, as in modern lock-sets, and were in use by 1570. Both the Greeks and Romans knew the lock with wards through which the key passes, thus moving the bolt backwards or forwards. Keys of a simple type to slit locks have been represented on vases. More elaborate keys are often small and form a part of finger-rings, the key lying flat upon the finger. False keys were also used by Roman robbers.

While locks of the primitive types here described were used in different parts of Europe and are indeed still used in remote districts, the ward system, with obstacles to prevent any but the proper key from turning the lock, was much used during the Middle Ages. The principle of the tubular lock was applied to locks during the 15th century. Roman keys terminated in a flat or perforated handle; others were of an open lozenge, oval, or round shape. Until the 15th cent., keys had little ornamentation. In the 13th to 15th centuries they terminated in a lozenge, trefoil. After this, and especially in the 16th cent., they had elaborate decoration and became works of art. The bows terminating the stems were filled with ornament, the stem itself ornamented or took the form of human or animal figures, or a coat of arms. It is probable that the form of a crucifix. Even the webs were sometimes ornamented. The key as symbol—the importance of the key has been emphasized by those guarding treasure, stores, etc., might be opened or closed, was marked in ancient times. This doublet originated in the period when keys and keys of a primitive type were first invented and their value made plain to all.

(a) Frequently the wife as Hausfrau bears the household keys symbolically. She is the key-bearer for her husband. Among the Romans the new married wife was given the keys of the store-rooms. The divorced wife had to surrender the keys; hence the formula in the Twelve Tables signifying divorce—dawar, to quit, exempt. The wife, who separated from her husband sent him back the keys. Among the Teutons and Scandinavians the bride was decked with keys at her girlhood. Hence the phrase that she had to give up the keys, and “taking away” or “giving up the keys” became a formula of divorce. Among the Gauls a widow placed keys and girdle on the corpse of the dead husband as a sign of renunciation in participation of goods—a custom found elsewhere, and also signifying that the widow would have no free obligation. Slaves carried keys of various parts of the house, and the janitor bore the key for the church-treasurer who carried the keys of the treasury as dasierger. In Is 52:21 lying the key of the house of David upon his shoulder signifies the assumption of the supremacy of the kingdom, and the imagery is taken from the large keys opening tubular locks carried on the shoulder in the East. In Equatorial Africa, as chests containing treasure are synonymous for property, and as they are kept locked with either native or American locks, the more keys a man has the richer he is. Hence keys in large numbers are worn as a symbol of wealth.

(b) Since many divinities were key-bearers, their priesthoods (not usually their priests) also bore keys symbolically, signifying that the divine power was theirs, or that they were in charge of their treasures. The Spartan Apollo had the keys of the sanctuary of the gods. Priestsesses are often represented carrying on their shoulder a large key of the rectangular type, already alluded to as an archaic survival; a key represented on a gravestone signifies the burial-place of a priestess. Iphigenia is called κλειστής (‘key-bearer’) of Artemis, and ξέφωρ of Hera. Cassandra bore the keys of the House of Hecate, and in the mysteries of the goddess the priestess was κλειστής, while the priestess of Cerei κατακλείς 5’ γείλοντες.

(c) As has been shown in the art. Door (vol. iv. p. 864), heaven and the underworld were believed to be regions of abodes with doors and gates. These doors and gates had bars and bolts as well as locks. In Babylonian mythology Marduk made gates to the heavens and attached secure bolts to them. Samea is said to have fastened the bolt of the bright heaven, and to Itar’s supremacy is said to belong the opening of the lock of heaven. Hades with its seven gates has also bolts. Over the dust of Hades is scattered, and Itar is said to breach the bolts when she descends there. The gates of Pluto’s realm are closed with iron bars and keys. The Hebrews had similar conceptions. Sheol has bars (Job 17:16, cf. Ps 107:9). Hades and the Abyss have locks and keys (Rev 12:9; 19). These conceptions were still retained in Christian belief, and nothing is more dramatic in the legends or theology of the Descensus than Christ’s breaking the gates and bolts of Hades. Similarly in Manichean mythology the regions of the world have doors with gates and bolts and with locks and keys differing from all other lock and keys. So also in the sea, in heaven, in Hades. They are the keys of hell. Fairiland likewise has its doors with locks and keys, and the key is sometimes given to a favoured mortal in order that he may obtain treasure.

(d) It is not surprising, therefore, that some gods were represented with keys, those of the region which they guarded or which was sacred to them, or that the key became a symbol of the power which was represented in the opening of the gates.
LOCKS AND KEYS

123

Closing the doors of that region to allow or prevent entrance or egress. This was more especially marked in Greek and Roman mythology, in which certain of the divinities bear the title ἀκροβατής, claviator. Janus, as god of doors, is said to have been represented 'cum clavi et virgâ' in left and right hands—the key and the rod of the Roman doorkeeper. He sits guarding the gates of heaven with the Hours. At morning the doors of heaven are opened to let the gods and goddesses in, and they are shut again at night. Even more universally he was ἀκροβατής, since all things—heaven, sea, clouds, and earth—were opened by his hand. 1

Portunus, another god of doors, probably of Etruscan origin, was also called, and perhaps some ritual act was performed with keys on the Portunalia. 2 Divinities of towns carried the keys of the town—e.g., Athene is ἀκροβατής of the town of Athens. 3 According to Parmenides, Diok carries the keys of the doors or the sky at night, i.e., of heaven, and removes the bar from the door when necessary. So Helios, who comes forth from the doors of the sky, is said in the Hymn of Proclus (l. 2) to have keys. The same conceptions are found in Mithraic circles, perhaps partly taken over from these classical models. The Krones of Mithraic belief carries a key, and so does the lotus, a key and a rod. These are the keys of the doors of heaven, by which souls enter or pass out to birth. He was addressed as 'the lord who fastens the keys of heaven.'

Divinities associated with the underworld carry its keys. Hecate usually holds the keys of Hades on monuments or images of the goddess, and is also described as such. She is even called 'the Lady bearing the keys of the Universe.' 4 In Caria every fourth year the procession of the key (ἀκροβατής φοίνικις) was celebrated in her honour—a festival which lasted a day. 5 Pausanias (v. 1) describes Pluto as having keys of Hades, which is closed by him so that none can go out thence. In the magic papyri and elsewhere other divinities bear the keys of Hades—e.g., Hermes, Helios, etc., and here we enter the region of mingled classical, Oriental, and Egyptian beliefs which were popular after the decay of the Greek and Roman State religions.

(c) Generally speaking, possession of the keys signifies power over the regions, the locks, and the keys of these regions. As heaven and Hades were regarded as towns or States with walls and gates, so they were regarded as key-keepers. The keys are entrusted to their respective guardian divinities, who have the power of opening or closing the gates. To those who were worthy of heaven its door was opened; to those who merited hell its door was opened. Once in, there was generally no egress. In Jewish thought Michael is said to hold the keys of the kingdom of heaven (3 Bar 11, cf. 4 Bar 9, 9th. eth. version, where he holds open the gates of righteousness till the righteous enter in).

The power of the keys as associated with St. Peter is treated of in the art. BINDING AND LOOSING. Here it is sufficient to say that the idea of his having the keys, the keys of the kingdom of heaven is sufficiently obvious. The picture is still that of a State or town with gates. St. Peter, as ἀκροβατής, can open to those worthy of the kingdom and its rewards, and keep the door locked against the unworthy. It should be observed, while generally righteousness,

5 W. Köhler, A.W. viii. (1900) 1287f.
saying the prayer, the woman repeating it after her. If a witch was present at a wedding and smashed a padlock to the wedding party, and then locked it into water, the marriage would be unfruitful, until the padlock was recovered. This belief is found in Germany, and in a similar way, in Greece.

In all these we have instances of sympathetic magic—what is done to the lock is done to the living person. They correspond to the world-wide use of knots (g.) and bindings in magic.

(6) In many cases the key itself, probably as a symbol of power, is used as an amulet or has magical virtues. Already among the ancient Greeks and Etruscans this use of a key as an amulet is found (see E.E. vol. ii, pp. 486 ff.). In Italy small keys blessed by the priest are called 'keys of the Holy Spirit,' and are worn by infants as a protection against convulsions. As well as in Greece and the islands, Germany, and other places, the key is a frequent amulet against the evil eye. It may form one of the charms attached to the eleusine, a charm for driving out of a man a spirit of sorcery, or may be a single amulet elaborately worked. Sometimes it is phallic, the handle being so shaped. In Jerusalem necklaces from which charms depend are worn, and among the latter are the key and key. In China a common amulet given to an only son in order 'to look him to life' is a silver lock. The father collects cash from a hundred heads of families and exchanges it for silver; of this a native padlock is made, and is used to fasten a silver chain or ring round the boy's neck. 

In Korea the neck ring lock is also a charm. For a girl it is a real lock of silver with a bar across the top (the bolt), and the key at the side. For a woman it is a mere symbol of the lock. On it is the inscription, 'Longevity, riches, and all you wish.' With these practices may be compared an incident in a Danish Marchese, who got a key as a chrismening gift, and it brings him luck. In Norway a large old iron key is used against dwarf-struck cattle. It is hung over the stall, and is supposed to hold them. In Siberia it is supposed to have been forged by dwarfs (cf. the use of elf-shot, FAIRY, § 6). An ancient method of warding off hail from a field was to hang keys around it—perhaps by way of locking the field in from harm, or merely as charms against the hail. In Transylvania a lock is carried in the seed-bag in order to keep birds from the corn. A key, partly for its own virtues, partly because it is of iron, is commonly placed in a prudence to prevent fairies from changing the baby.  

In the island of Zacynthos a key is placed on the breast of a corpse, because, being of iron, it will square away evil spirits, though the popular explanation is that it will open the gate of paradise. According to a belief in Poitou, when a woman or child sleeps with a key, the demon eats part of the key, and the human form is changed. Another magical use is that of the Bible and key. A large key, sometimes an ancient or hereditary key, is placed flat between the leaves of a Bible, which is then closed and bound with cord. The handle of the key projects and holds itself in the hand or on the fingers of one or two persons, while some formula is being said. At the psychological moment it twists and turns, thus indicating what is desired to be discovered. This has superseded earlier methods—e.g., with a sieve—but Regnold Scott already mentions the use of a psalter and key. (1) They are used as a cure for nose-bleeding. Here the patient turns the Bible and key round, while the wise man repeats a charm. Then the latter removes the key and places it down the patient's back, while the patient holds the Bible. This is supposed to cure the bleeding entirely. The latter part of the charm is often used, but seldom now in a magical way. A similar use of Bible and key is for the purpose of 'anwielding a patient.' (2) It is also used, usually to discover a thief or a witch. The names of the suspected persons are repeated with the formula, 'Turn Bible, turn round the key, turn, turn, turn, and name the name to name.' At the right name the key twists and the Bible drops from the hand. Within recent years such a use is known to have actually led to an arrest. The Bible and key or (key or the key alone) are sometimes associated in England with divination, and also to help a vessel entering or leaving port. To assist it to enter port, the key is turned to oneself, and, to leave port, away from oneself.  

(c) The keyhole, as an opening by which fairies, spirits, and the like enter the house, is often magically protected. Thus in the Sporades it is stopped with a skein of flax to prevent vampires from entering. They would require to count all the threads in the skein before doing so. In Cyprus, on locking up, the cross is signed with the key over the keyhole. In Germany the keyhole is stopped up in order to oust the Mar (the 'tinker') which enters thereby. In Egypt it is customary to say, 'In the name of the God, the Compassionate, the Merciful,' when locking a door, as a protection against genii. The door cannot then be opened by them. In Ande a vase of water was placed before the keyhole to prevent visits from a spirit, and in Savoy a watch-glass. The spirit breaks the latter and then leaves in disgust. Stables, cow-houses, etc., are sometimes protected by tying charms to the key—usually a perforated stone (the key-stone which keeps off the demon Mara) and a horn. In Baby- lonia demons were said to slip into houses through locks, etc., 'gliming like snakes,' and it may have been to prevent this that lattibes were poured over these (§ 1; for other precautions see DOG, vol. iv. p. 849).
LOCUST

2. Introductory.—The Latin word locusta first denoted certain crustaceans—a, the lobster—and the English word ‘lobster’ is itself a corrupt adaptation of the Latin locusta. Dialectically, the English word ‘lobster’ is the offspring of the Dutch dwelling on the coast and the English word ‘lobster’ is itself a corrupt adaptation of the Latin locusta. Dialectically, ‘lobster’ denotes the cocklefish and the

(c) Keys were sometimes thrown into holy wells as a propitiatory offering to the spirit or guardian of the well, as at Crichton on Easter morning.

4. The key-flower.—Medieval legend and later story had much to say regarding certain mysterious

flowers which could either make locks fly open or cause a rock door in a mountain to swing open and so admit the seeker to obtain treasure hidden there. The flower was blue, red, white, and wondrous or ‘key-flower’ (Schlüsselblume); similar properties were also ascribed to the Springwreath, or ‘explosive root,’ usually obtained from a woodpecker whose nest had been closed up with a wooden beam. She flew off to seek the root, returns with it, and applies it to the beam, which is forced out with a loud noise. It is then taken by the treasure-seeker, who uses it as the flower is used in other tales.

The flower is known of this legend, but speak of a plant, and the other elsewhere refers to a herb by which all things closed can be opened. This is the Schlüssel of Rabbinic legend, a kind of wort or a stone in possession of a Moorish. In connexion with these stories of mountain treasures obtained by the wonder-flower, there are usually mysterious white ladies who guard the treasure, like the Hekseria, or the Henesras, who carry a bunch of keys which also give access to the treasure. There is a German belief that where the rainbow touches the earth a golden key falls, which will open the key-flower. In the story of Ali Baba, the rock door opens when the mysterious word Sana is spoken. The word may have stood in an earlier version for the herb saussurea, but in other instances the use of magical words makes locks and bars open—e.g., those of the Egyptian under world—while even in tales of enchantresses in New Guinea the use of the words, ‘Oh, rock be clut, and Oh, rock be open, and the Sana’ causes a rock door to open and shut. In the lives of saints a not uncommon miracle is to unlock a door when the key is lost. They touch the lock with the hand, or their mere presence makes the door to open. In other instances they pass through closed doors, as modern mediums have claimed to do. Probably the point d’appuie of these miracles is in Ac 12.

2. Introductory.—The Latin word locusta first denoted certain crustaceans—e.g., the lobster—and the English word ‘lobster’ is itself a corrupt adaptation of the Latin locusta. Dialectically, ‘lobster’ denotes the cocklefish and the

4. The key-flower.—Medieval legend and later story had much to say regarding certain mysterious flowers which could either make locks fly open or cause a rock door in a mountain to swing open and so admit the seeker to obtain treasure hidden there. The flower was blue, red, white, and wondrous or ‘key-flower’ (Schlüsselblume); similar properties were also ascribed to the Springwreath, or ‘explosive root,’ usually obtained from a woodpecker whose nest had been closed up with a wooden beam. She flew off to seek the root, returns with it, and applies it to the beam, which is forced out with a loud noise. It is then taken by the treasure-seeker, who uses it as the flower is used in other tales.

The flower is known of this legend, but speak of a plant, and the other elsewhere refers to a herb by which all things closed can be opened. This is the Schlüssel of Rabbinic legend, a kind of wort or a stone in possession of a Moorish. In connexion with these stories of mountain treasures obtained by the wonder-flower, there are usually mysterious white ladies who guard the treasure, like the Hekseria, or the Henesras, who carry a bunch of keys which also give access to the treasure. There is a German belief that where the rainbow touches the earth a golden key falls, which will open the key-flower. In the story of Ali Baba, the rock door opens when the mysterious word Sana is spoken. The word may have stood in an earlier version for the herb saussurea, but in other instances the use of magical words makes locks and bars open—e.g., those of the Egyptian underground—while even in tales of enchantresses in New Guinea the use of the words, ‘Oh, rock be clut, and Oh, rock be open, and the Sana’ causes a rock door to open and shut. In the lives of saints a not uncommon miracle is to unlock a door when the key is lost. They touch the lock with the hand, or their mere presence makes the door to open. In other instances they pass through closed doors, as modern mediums have claimed to do. Probably the point d’appuie of these miracles is in Ac 12.

LOCUST

was taken and a girl made its mother. Then they bewailed and buried it. Thereafter they conducted the "mother" to the place where the caterpillars were, consoling her, in order that all the caterpillars might eat of the plant.

It is not unlikely that the "catterpillars" mentioned in this account are the locust larvae. The conciliatory methods of the Egyptians and Pharaoh are adumbrated by Frazer in his explanation of Greek deities as Locust Apollo, Locust Hercules, and Mouse Apollo.

Such worship was originally addressed, not to the gods as the protectors of mankind, but to the harmful things themselves, the mice, locusts, mules, and so forth, with the intention of flattering and soothing them, of disarming their malignity, and of persuading them to spare their worshippers. 1

In Hebrew literature, and thence to a certain extent in Europe, the locust is a symbol of destructive agencies. The OT also employs it to illustrate number and combination.

5. Locusts as food.—Since the time of Herodotus 2 the use of locusts as food has been known. Themson limits it to the Bedawin of the frontier, and observes.

Locusts are always spoken of as a very inferior article of food, and regarded with most disgust—to be eaten only by the very poorest people. 3

They are roasted and eaten with butter, after the head, legs, and wings have been removed. They are also dried and beaten into a powder, as a substitute for flour. 4 According to Burchhardt, they were roasted and eaten "as a matter of course, and no particular care was taken to preserve their appearance. A desire to explore manifests itself, and is a surprising manner. The whole company moves in a body in one particular direction. "They move in a straight line, or less in a straight line, as if by one common instinct, without apparently having any recognised leader or commander. 5

Marching thus over the country, they eat everything that comes in their way, even the bark of trees; they enter houses and "eat the very clothes and cedars of the windows. They even eat the wool off the sheep; and, "last stage of all that ends this strange, eventful history, they will eat one another. When the stoe buổis are on their way, they may be seen and received from the Beers the name of an army on the march. 6

Certificates and metaphor.—Among the Dravidians of Mirzapur, when locusts threaten the gardens, native women, one, decorate her head with red lead (in accordance with ceremonial custom), salama to it, and let it go. The whole swarm is then believed to depart.

When caterpillars invaded a vineyard or field, *the virgins were gathered, and one of the catterpillars was taken and a girl made its mother. Then they bewailed and buried it. Thereafter they conducted the "mother" to the place where the caterpillars were, consoling her, in order that all the caterpillars might eat of the plant.

It is not unlikely that the "catterpillars" mentioned in this account are the locust larvae. 5. Locusts as food.—Since the time of Herodotus the use of locusts as food has been known. Themson limits it to the Bedawin of the frontier, and observes.

Locusts are always spoken of as a very inferior article of food, and regarded with most disgust—to be eaten only by the very poorest people.

They are roasted and eaten with butter, after the head, legs, and wings have been removed. They are also dried and beaten into a powder, as a substitute for flour. According to Burchhardt, they were roasted and eaten "as a matter of course, and no particular care was taken to preserve their appearance. A desire to explore manifests itself, and is a surprising manner. The whole company moves in a body in one particular direction.

They move in a straight line, or less in a straight line, as if by one common instinct, without apparently having any recognised leader or commander.

Marching thus over the country, they eat everything that comes in their way, even the bark of trees; they enter houses and "eat the very clothes and cedars of the windows. They even eat the wool off the sheep; and, "last stage of all that ends this strange, eventful history, they will eat one another. When the stoe buổis are on their way, they may be seen and received from the Beers the name of an army on the march.

It is in this marching stage that the stoe buổis do enormous damage and eat every edible thing in their path, and completely destroy the work of the husbandman. They are unlike the flying company of locusts, which only lower itself here and there, but these, when they pass, leave nothing. "The black larva, says Post, referring to Palestine, "now spread like a pall over the land, eating every green thing, even stripping the bark of the trees.

The Syrians heat pans, shunt, and fire guns to drive them away. When they have settled, they are gathered in sacks. The government enforced a per capita contribution of eggs, or offers a prize for them by weight. When the larvae hatch out, in fifteen or twenty days, trenches are dug in their pathways, or fires are built. The only successful method of exterminating locusts was adopted in Cyprus in 1881. Since 1800 the island had been a wilderness. Matthei, conversant with the habits of the larva, erected an immovable wall of calico and leather round the main road. Unable to pass the smooth leather, the locusts fell into the trench dug beneath. At the same time 1300 tons of eggs were destroyed. The plague has been obsolete ever since.

4. Superstition and metaphor.—Among the Dravidians of Mirzapur, when locusts threaten the gardens, native women, one, decorate her head with red lead (in accordance with ceremonial custom), salama to it, and let it go. The whole swarm is then believed to depart.

When caterpillars invaded a vineyard or field, *the virgins were gathered, and one of the catterpillars was taken and a girl made its mother. Then they bewailed and buried it. Thereafter they conducted the "mother" to the place where the caterpillars were, consoling her, in order that all the caterpillars might eat of the plant. This exception includes the locust. The gospel account of locusts forming part of the diet of John the Baptist is accepted by most writers.

But Cheyne argues in favour of the ancient tradition that the ἄγαδε εἰς τὰς ἑνίοτες, and the latter is even applied to the similar bean of the cassia tree. This in a definite meaning of the words ἄγαδας and 'locusts,' and the latter is even applied to the similar bean of the cassia tree. The resemblance between the insect and the bean is the reason for the identity of name. The corbey beans are the 'husks' referred to as food for swine in the parable of the Prodigal Son, and they are sold still for food in Syria. In medieval literature these beans are St. John's broad. In ancient Palestine there was a proverb, "Israël needs corbie beans to keep repentance. They were a type of the food of the poor, and the connection between poverty and repentance, the white ant can destroy fleets and cities, and the locusts create a province."
LOGIC

I. DEFINITION.—Exceptional difficulties lie in the way of a general description of logic, because the definite increment of knowledge which is undertaken by primary sciences is not claimed here, since the subject is comparatively unimportant. In logic we merely "retrovert familiar ground, and survey it by unfamiliar processes. We do not, except accidentally, so much as widen our mental horizon by new and independent steps. The processes here are those of the common-sense, i.e., of the syllogism (sine domo), and of the same assurance as a knowledge of space, matter, organization, and history, or even beauty or goodness. Some writers have proposed an art of logic, a science of art, and others, a science of a special kind of mental process, or a philosophy reflecting on special relations of our personality to the universe. Manssel combines the fowling varied descriptions of the subject (Intro. to Aldrich, Artis Logicae Compendium, p. Ivii).

Logic is a part of philosophy (the Socratic). It is not a part, but an instrument (Peripatetic). It is both a part and an instrument (Academics). It is both a science and an art (Petrus Hispanus and others). It is neither science nor art, but an instrumental habit (Greek commentators). It is a science and not an art (Albertus Magnus and others). It is an art and not a science (Aramaus and others). It is the science of argumentation (the Arabians), of the operations of the mind so far as they are clear and distinct (Aristotle, of the syllogism (sino domo), of the direction of the cognitive faculty to the knowledge of truth (C. Wolff), of the universal and necessary laws of thought without distinction (Kant), of the laws of the understanding concerning the causation of evidence (J. R. Mill). It is a science of discovery (J. Le Clerc, R. Wattely, and others), of the right use of reason (J. C. Cudbert, Watten), of dissertation (Lamaus), of teaching (Menapou, Cnet, or directing object (George Bailliam), of forming instruments for the direction of the mind (Verhulsh, R. Baudouin, Aldrich).

Underneath such summary phrases as "laws of thought" and "forms of knowledge," which have become common in the more modern definitions, there still lie varied suggestions as to scope and method. The following are influential examples:

'A collection of maxims or rules for thinking, grounded on a scientific investigation of the requisites of valid thought" (Mill, Essays of Sir W. Hamilton's Philosophy, London, 1878, p. 462).

If we apply the mental processes with the view of discovering... the laws by which our faculties are governed, to the end that we may obtain a criterion by which to judge or to explain their procedures and manifestations... we have a science which we may call the Normology of Mind... Pure Logic is a science of the laws of the possible modes in which, when the primary conditions of the possibility of valid thought are applied... the laws of thought as thought (Hamilton, Lectures, Edinburgh and London, 1833-36, 112, 124, 134).

The forms and laws of thought... are those subjective modes of thought... which are necessary to us if we are by thinking to know the objective truth (Lotse, Outlines of Logic, Eng. tr., Boston, 1833, p. 6).

The objects of pure thought... which thought can arrive at propositions which are certain and universally valid... the rules to be observed accordingly (G. van Swigt, Logic, Eng. tr., London, 1896, p. 41).

The doctrine of the negative laws, on whose observance rests the possibility of all theoretical, and the idee de l'existence of the idea of truth in the theoretical activity of man (Ueberweg, System of Logic and Hist. of Logical Doctrices, Eng. tr., London, 1873, p. 133).
other moments of cosmic existence, that 'the
as visible' which is the object of philosophical Logic.
logical reality and fact itself' (E. Croce, 18, p. 203). Logical consciousness reinforces this
finality, though the doctrine is essentially neither
description of the experience nor discrimination of
the faculty nor perspective of the event, but ex-
pression of the aim.

3. Independence.—In analogy with Kant's cele-
brated criticism of knowledge, that it all begins
with experience, but does not all spring from
it, or wait for a licence from it in the same way
that empirical sources of belief exist for its spec-
data. Even the borrowings from psychology and
metaphysics are not for the purpose of conferring
authority on logic, but are methodical devices
for making it precise, for 'unfolding an inward
conviction,' as Butler claimed to do in regard
to conscience. The logical rule is neither more
nor less authoritative than the example, provided
it is understood discriminatively. 'If any man
stumbles at the fact that when we want to think
about thought we must, in so doing, already follow
the norm of right thinking—there is no arguing
with him' (Wendelband, loc. cit. 1. 25). All we
can do is to use the words of Kant, to 'make the rule
followed by the understanding a separate object of
thought' (Logic, Intro. § 1).

4. Theory.—Cognition gives us the control of
nature and the reflective faculty, the control of
self. But logic is the expression of the reflective
faculty so far, and so far only, as the self is
involuntary and there is consciousness in science.
It is the logical manifestation of personality in
feeling or action, and even in so much of cognition
as escape control.

5. Discipline.—Thus the motive of logic is not
furnished by the world, but by the aims of
personality; if an art, it is a cognitive art, if a
science, a disciplinary science; and it is sustained
by our solicitude for intellectual self-government.
The historical beginnings of logical theory are to be
found in those racial dispositions and social
conditions which gave occasion for the deliberate
control of our trains of thought. In India it
appears to have originated with rules in ceremo-
nial and delegation of responsibilities.

- From the Brahmanic decisions on disputed points arising in the
course of sacrifice., . . . collected in exegetical and philo-
sophical fashion, independently, perhaps later than the
5th cent. n.c. evolved a system (Bodas, Taraka-Sangraha of
Annamalaiy, Intro. p. 29).

And with Gotama the invariance of logical concern
has outworn its ceremonial form.

The end proposed is the escaping from liability to trans-
formation, and the attainment of tranquil and eternally un-
interrupted beatitude' (Apologetics, tr. J. E. Ballantyne, Intro.
p. 5).

In Greece it originated with canons of public debate and scientific instruction; the propa-
ganda of plausibility by the Sophists, the challenges to the
complacency of popular beliefs issued by
Socrates, the polemics of Zeno.

Socrates' predecessors, the archaic poets, had given
rhetorical, others interrogative, discourses to learn—since they
imparted to their thought not the logical art, but the effects of art' (Soph. Elekhi, ch. 34).

The art to which this is deeply connected, like Gotama's, is
purely reflexion and self-consciousness, for 'dialectic [the art of
discussion], being investigative, holds the way to the principles of
sodium' (Wendelband, loc. cit. 1. 1).

But in the Greek, unlike the Hindu, logical illu-
mination, reflection fastened upon conviction at the
point where personal intelligence merged in the
interpersonal harmony to establish the good of the individual
merges in that of the State. The Greek forms of proposition and
sylogism seem to symbolize a world of intellects,
where a common record of conviction can be main-
tained amid determinations of experience and fore-
sight varying and changing with the individuals;
the Greek analysis of demonstrative science ideal-
izes the inner coherence of such a record, whereby
it dominates the individual intellect, while the
Greek dialectic is the inner vitality of which
vitality, wending from the latter, streams into
the record.

The motive of logic being disciplinary, its effort
must be adjusted to the intellectual forms which
are permanently constitutive of civilization; and
its general scope cannot change to the extent to
which other sciences change, where any advance
may open up new vistas of inquiry. Kant is able
to say: 'Since Aristotle's time Logic has not gained much in extent,
as indeed in the relative forbids that it should. But it may gain
in respect of accuracy, definiteness and distinctness. . . ,
Alberti has omitted no essential point of the understanding; we
have only to become more accurate, methodical and orderly.'
(Logic, Intro. § 1).

Nevertheless, it must share the vicissitudes in 
fortunes of civilization as a whole. And the more
influential of these, since Aristotle, have been the
limit set on the range of free judgment during
medieval centuries, the value set upon personality
by modern religion and philosophy, and the accel-
 erating progress of physical sciences in the most
recent times—three influences which have some
connection with a certain exaggeration in value
which has fallen upon the three Aristotelian
departments of doctrine successive, and has functioned
in modern, and recent years, and has transformed
at least the dialectic almost beyond recognition.
For the contrats and controversies between the historic
schools are questions of emphasis and form in
what might be called the 'dimensions' of logical
discipline, to borrow a conception from geometry;
or in the fundamental 'ideas' used in forming our
conceptions, to borrow from Whewell's philosophy
of all scientific discovery whatever.

In almost every scientific 'controversy' have 'turned upon
the possible relations of Ideas, much more than upon the actual
relations of Facts' (Philosophy of Discovery, p. 266).

The dimensions or ideas in which the historic
schools have formed conceptions for logical value
may be distinguished as explicitness, consistency,
relevance, and system.

II. PRINCIPLES.—Parallel with what Whewell
says as to the progress of physical science—
'consists in refining the object W limit events of the universe to a conformity with ideas which we have in our own minds
the Ideas, for instance of Space, Freedom, Composition, and the like . . . the Idealisation of Facts' (6, p. 800).

We may expect for logic also that
an exhaustive solution of the great aggregate of logical problems
can only grow up out of the union of all the different
methods of treatment in which Logic has been subjected, in virtue of the inner essential manifolds of its nature.' (Wendel-
band, loc. cit. 1. 10).

But the different 'methods' must be such as are
grounded, if not 'in the systematic continuity of
a philosophical theory of knowledge,' as Wendel-
band requires, still in the unity of dimensions in
consciousness of logical value. The 'principles' of
logic must be these dimensions.

1. Explicitness.—The earliest of such dimensions
to be utilized in the formation of logical concep-
tions was that of explicitness. It is the prin-
cipal feature of the definite germinal organization within
our judgments or inferences, whenever occasion
arises to make them deliberate. Hamilton pro-
poses as 'the only possible state of Logic which requires an articulate announcement . . . to be allowed to state explicitly in language all that is implicitly
contained in thought' (Lectures, III. 114). And
Gotama inaugurated a faculty at large—the
by detailing sixteen conceptions for our guidance in the
analysis of this 'content,' as 'standards of
right notion.'

Footnote: [i.e. the faculty of right notion]; the object of a
right notion; dot; motive; familiar fact; scholastic tenet; syllogism; principle; conclusion; distinction; controversial wrangle; evil; semblance of a reason; perversion; the sense of, from knowing the truth in regard to these thirteen things, there is the attainment of supreme good' (Apologia, tr. Balantine, § 1: 3).

Many of the problems presented by the ethical system represent stages in dialectic or in the process of clearing up knowledge by discussion (Adrianson, History of Logic, p. 196; cf. Saint-Hilaire, p. xxx). But logic in the long course of its development has always been used by all speculative thought, which should not hide from us a more inward motive and significance. While it was as yet only tradition, no other method was practicable; and, even when it became literary, the practical utility of the method preserved it alongside of interpretations that were more spiritual. The alliance of the two methods was assumed in the reforms and elaborations made by Digges about A.D. 600.

Demonstration and refutation together with their fallacies are useful in arguing with others; and Perception and Intuition are useful for self-understanding; seeing this, I compile this Sutra (Nyāya-pravasa, quoted in Vidyābhṣaṇa, Hindi Meditative Logics, p. 69).

The Aristotelian exposition of the sameGalore was turned to forensic uses by Cicero, to academic uses by the scholastics, and to educational uses by the moderns and the new contemporary and it is this that makes the necessity of arguments, as the medium for an implied science of knowledge.

The conceptions of explicitness suggested to a modern mind by Gotama's sixteen standards and the explanations which he and his commentators append to them would be as such. In placing a logical value upon any given judgment, we must bring into consciousness (1) the extent to which our cognition of an object is committed to it, perceptually, intensionally, conceptually, or, for 'that I shall die is inferential, the 'recognition of a sign'; (2) the genus of truth or reality which is thus assumed as accessible to the faculty, or 'fit to supply a right notion'—a topic similar to that of the 'category' in modern logic, or, in Whewell, the 'ide'; (3) the question, or predetermination of a void in the system of our knowledge, which brings faculty and reality into the relation—the problematic phase in the development of a judgment, such as fails us in truisms or is inverted in paradox; (4) the emotive root which makes a thought or concept think or even give science worth 'true' creates in us a reference to purpose as well as to reality' (W. R. Boyce Gibson and A. Klein, Problem of Logic, London, 1908, p. 2); 'that I shall die' is significant only for the businesses of life for, as I shall not altogether die, for the conness of moral perfectness; (5) and (6) the sureness and definiteness which fact and dogmatic or conceptual principle bring with them to their function in inference; (7) the scheme of their co-operation in the inferential synthetics; there must be (a) the proabandum, defined by doubt and motive; (b) the reason, appealing to a sign; (c) the example, verifying a principle of signification; (d) the application, investing the reason with the significance of the example; and (e) the conclusion, establishing the proabandum as a significare.

The Logicians of the ancient Greeks, by the same human, as, my fathers died because they were human! For I am as human as they, and consequently I, too, must die.' It is the transition from the problematic to the Aristotelian, or that underestimation of the application and conclusion from the reason and proabandum—a transition which disappears in all the Western spheres of explicitness, because it distinguishes the application from knowing the truth in regard to these thirteen things, there is the attainment of supreme good' (Apologia, tr. Balantine, § 1: 3).
LOGIC

according to order of terms (Kant); and puerile that inductive conceptions should be referred to their own list of instances (Bacon); and an error that syllogism is an estimate of evidence (Mill); and a surmisation that the formalities of deduction should be limited to syllogistic, and to propositions with two terms only, entailed to terms that are

disparate, and that the logical relations only of inclusion and exclusion (L. Couturat, in Encyc. Philos. Sciences, i. 167-169).

(b) Conceptual. A vision of the creation in which every concept may be sought is the thought of the moment and an identity or permanency of personal knowledge, hardly distinguishable from meaning the same, as described in psychology, but that is not what we are looking for in classical logic. The conception of the logical relation of formal resemblance is the study of the logic of identity of objects. The only connection between the two is the fact that the concept of identity is the basis of logic. This is the study of the logical relation of formal resemblance, and it is the study of the concept of identity of objects.

(4) Conceptual. The idea of the creation in which every concept may be sought is the thought of the moment and an identity or permanency of personal knowledge, hardly distinguishable from meaning the same, as described in psychology, but that is not what we are looking for in classical logic. The conception of the logical relation of formal resemblance is the study of the logic of identity of objects. The only connection between the two is the fact that the concept of identity is the basis of logic. This is the study of the logical relation of formal resemblance, and it is the study of the concept of identity of objects.

3. Relevance. The larger logic was inaugurated by Aristotle through the addition of his Posterior Analytics to the Prior.

The larger logic makes it possible to explain the concept of identity of objects in terms of the concept of identity of concepts. This is the study of the logical relation of formal resemblance, and it is the study of the concept of identity of objects. The only connection between the two is the fact that the concept of identity is the basis of logic. This is the study of the logical relation of formal resemblance, and it is the study of the concept of identity of objects.

From experience, or from the entire universe, which is retained in the soul, the single unit apart from the manifold of sense, which is identical in all particular cases, comes the elementary principle of art and science. . . . Reason would seem to be the faculty which has the primary principles as its objects (Post. Anal. ii. 19).

The universal as a principle assures applications that might escape the 'secondary idea,' Man is mortal, therefore 'I, too, must be mortal,' as though men instinctively may think all men mortal but themselves. The invertibility was not objective, as Plato's metaphysics might imply, but inferential. It does not follow, if demonstration is to exist, that there must be ideas, or a Unity outside the many individual things, but it does follow that some unity must be truly predictable of the many (Post. Anal. i. 11).

The predicative unities appear in judgment as predicates that are 'genera' and 'definitions,' and as subjects that are 'second substances' and in demonstration as the 'essences' of the things which we seek to explain, the 'nature' of the things whose destiny we wish to forecast, the 'reasons' for what we experience, and the 'causes' for what we infer. And, although these conceptions in the dimension of relevance still influence the texts of modern logic, philosophical progress has displaced the static, self-sufficing constitution, which seems to spring arbitrarily from the fiat of reason. The achievements of reason must themselves become conscious under the guidance of valid logical conceptions, and the 'laws of a rule' (Kant), 'laws of connexion' between attributes (Mill), 'coherence' of conceptual 'content' (Lotze), or 'identity of relational system' (Bosanquet). The twin operations of reason must be traced: that which explains the non-associative complexity of universals whose constituents are available at will, and that which explains the selection of constituents from the passive sequences of experience.

(c) Deductive. The definite logic of the first begins with Descartes, and that of the second with Bacon. The interest of modern mathematical
logicians can accept the canons of elimination as yielding expressions of the aspirations of thought, in such an intellectual nature as displays the 'categories of relation,' substantiality, causality, and reciprocity. But the rationalization of any given experiential sequence must be supposed to result, through a further dimension of logical value—that of system. In this we may conceive the 'additional aids' which transform aspiration into accomplished science. Relevance is a selective principle, system is comprehensive.

4. System.—A conviction which cannot be a stable truth through sheer restrictions of internal relevance may have value through its membership of a world of other convictions—other convictions not defined by the same question, as in the Hindu system of standards, but by questions in all degrees of kinship to it.

(a) Diatocical.—Aristotle’s Topics marks out a sphere where such value may be traced by expressly excluding both the harmony of personal investigation with super-personal truth and the open vision of truth through reason.

'The purpose of this treatise is to find a method which will qualify us as disputants in regard to every kind of subject, where the start of the inference is from propositions, and which will instruct us how to avoid stultifying ourselves whenever we converse amongst ourselves or amongst men upon what appears true to all men, or to the major, or to the wise, and, among the wise, to all, to the greater number, or to the most distinguished and authoritative.' (Topics, 1. 13)

The wide ramifications of relationship of any conviction to the remainder of knowledge are suggested by a variety of incidental methods or 'auxiliary aids' to insight.

'the organs by which we find materials for syllogisms and inductions are, collection of opinion from various sources, resolution of ambiguities is meaning, discrimination between species and genera, assimilation of things to each other or in their relation to other things' (Topics, 1. 13).

(b) Methodological.—In the modern era a more systematic study of system was begun by the Novum Organum of Bacon, the methodological reflections of scientists themselves, and the theories of explanation, as distinguished from eliminative induction, and of approximation generally, probability, and operations subsidiary to induction, resumed in detail by Mill. But the methods so formulated seem to be episodes in the consciousness of a more comprehensive development in the organization of our ideas. We continuously reform and refine our tentative concepts to meet the exigence of newly experienced facts (see art. CONCEPT and INFERENCE).

And in this process we both accept limitations from, and contribute pulsations to, a progressive qualitative nature of life.

The logic of system frames conceptions of the limitation and the contribution, such as the colligation of facts by superinduction of conceptual schemata (Whewell), the depth to which concepts interpenetrate judgment or blur the purity of inferential synthesis (Lotze), the inversion of dependence in our thought between principle and application (Jevons), and the relation of approximation between science and final truth (F. Enriquez). In the dimension of system, ‘truth can only be tested by more of itself’ (Bosanquet, Logic, ii. 267).

LITERATURE.—No bibliography of logic with any approach to completeness appears to be in preparation. J. M. Baldwin, D.F.S., vol. iii. pt. 2 (New York, 1963), and the Catalogue of Text Collections, Univ. Lib., Cambridge, 1939, are the most useful. Reference is advisable to the following selection of influential authors, besides such as have been quoted.

2. India.—F. Max Müller, The Systems of Indian Philosophy, London, 1869; S. Sugiya, Hindu Logic as preserved in China and Japan, Philadelphia, 1890; J. R. Ballantyne,
LOGIC (Buddhist)

Buddhists have been called the real founders of the mediaval logic and logical literature of India, a position which they share to a great extent with the Jain. The latter began its own system of logic, long before the rise of Buddhism, having died out or before that time. Ujijaini in Malwa and Vaihali in Gujarat, the land of the Jains, were the principal schools of Jainist logical systems. The Nyāya-vādāra, by Bhaddaśrīnī, was published by the Mahāvīra, the 23rd Tirtha, in the 4th century. On the other hand, the earliest known instances of Buddhist logical systems are to be found in the works of the Mañjuśrī, the chief disciple of the Buddha, and the Sarvāstivāda, the 4th century. The earliest known instance of Buddhist logical systems is to be found in the works of the Mañjuśrī, the chief disciple of the Buddha, and the Sarvāstivāda, the 4th century.

LOGOS

interlocutors is one of gentle 'reasonableness' (to adopt Matthew Arnold’s rendering of cēlebesa). And nyāya (śīyā), 'knowledge', 'science', which is the title-word in the oldest Indian logical works, is used synonymously with nyāya (sākñccha), 'truth', as formy, with dhema (right' or 'norm') and kṣulā ('good'), the threefold foundation on which the perfect man should be established. In the somewhat later collection called Abhidhamma Pitaka, the terms ad hominem in the Suttas, are more abstractly expounded by way of question and answer, logical method is more systematically applied. The import of a great number of terms as paticca, 'dependent', 'sustained', 'causal', 'sequential', are arguments in the distinctly Indian method of presenting the by us so-called Laws of Thought, thus: Is A B? If not, is A not B? If not, is A both B and not B? If not, is A neither B nor not B? (In other words, is A a chimera?) The expositions, again, are sometimes exercises in converted propositions, sometimes arguments in hypothetical propositions. The book entitled Tamaika and Kathādhatvā, respectively, consist entirely of these exercises and arguments. No definite exercise in, or allusion to, syllogism has been found in the Pitakas, although it figures promi-
nantly in the Jaina and Jain treatises on logic. Nor, indeed, do the paired words pamaṇa ('immediate knowledge', 'perception') and annanā ('mediate knowledge', 'inference') appear as independent logical terms which they subsequently became. Nevertheless, the Suttas and the Abhidhamma books taken together, with all the legendary and iconographical illustrations, present so varied an appeal to the intellect of their age that it is not surprising if one result of the paramountcy of Buddhist culture was to yield a harvest, not only of psychological, but also of logical, methods. A still greater field of material for the history of logic will possibly be opened up when (1) the original Jain scriptures are all edited, and (2) the Chinese and Tibetan translations of Buddhist Suttas, which are extant, as well as (3) the orthodox Theravāda philosophical works in Sinhalese and Pālamit MSS. become accessible. A comparison of the conclusions gleaned from these sources, and filling up the gaps in our materials as yet accessible, with the concepts of European logic will prove of deeper philosophical importance than may appear likely to those who see in logic only an academic exercise. Indeed, according to the norms of which logic is the interpreter rather than the distator, the human mind has grasped the most general data of experience inductively and deductively. And that procedure has centered round certain concepts here, round other concepts there. The difference in emphasis thus produced tends to become absolute, hindering both mutual understand-

ing and also thereby a positive, general advance in philosophy. The system, for instance, of definition by genus and species, of division by dichotomy only, of subsuming the particular under the more general, admirable as it has proved in all expository analysis, may prove a hindrance in estimating qualitative values in aesthetic and spiritual inquiry. The Buddhist scriptures did not keep rigidly to those (peculiarly Buddhist) lines in their teaching. The formula of causation is repeatedly called Avyaya (i.e. Buddhist) śīyā.

The formula of causation is repeatedly called Avyaya (i.e. Buddhist) śīyā.

every man." Accordingly, he argues, 1 heathens like Heracleitus and Parmenides, in so far as they lived μετὰ λόγου, may be claimed as Christians, and may be saved. The seminal Logos of the Stoics, when spoken of as a single Power, is God Himself as the organic principle of the universe, which directs to a rational and moral end. This power is not present in all creatures equally; only man participates in it so fully that he may be regarded as a real effulgence of the Deity. Thus the "Word" is personified in this way. Stoicism made it easier for Jewish philosophy to identify the Greek λόγος with the half-personified Word of Jehovah. Words and thoughts, according to the Stoics, were the very same things regarded under different aspects. The same λόγος which is Thought as long as it resides in the breast is Word as soon as it comes forth. The distinction between κόσμος and προφορά, often used by Philo and the Greek Christian Fathers, is really identical with that drawn by Aristotle between τὸ τῶν λόγων and τὸ πρὸς γένος; 2 Christian writers found in the Stoic idea of the Stoic doctrine that, since the one Logos is present in many human souls, men may have communion with each other through their participation in the same Logos. 3

1 In Greek philosophy.—The history of the Logos-ideas begins with Heraclitus of Ephesus (c. 535-475 B.C.), who, as M. F. Comford has rightly maintained, 2 represents a mystical reaction against the materialism of the Ionian philosophers. For him, the visible world is a symbolic system which half conceals and half reveals the reality. This truth or reality is the divine soul of the world, whose life is manifested in the endless cycle of birth, death, and rebirth. This cycle of change, decay, and renewal. There is one Logos, the same throughout the world, which is itself homogeneous and one. This wisdom we may win by searching within in us. We can know them and be wise. The divine soul is 'Nature,' the cosmic process: it is God; it is ψεύδη, the lie-principle; it is Logos, the divine law, or will of God, by which all things are made by the one divine law. It prevails as much as it will, and is sufficient and more than sufficient for all things. This Logos is the immanent reason of the world; it existed without us, and all things are unaware of its power, both before they hear it and while they listen to it. The Logos, like Wordsworth's 'Duty,' keeps the stars in their courses. It is the hidden harmony which mediates the disorders and antagonisms of existence. There is no trace in Heraclitus of a transcendent God, whose reason or will the Logos could be. The system is rather a form of pantheism, with a strong mystical element. In Aristotle, however, the Logos, or ψεύδη (he preferred the latter term), is intermediate between God and the world, being the regulating principle of the universe, the divine intelligence. In Plato, though the Logos was the founder of a philosophy in which the Logos-idea was to find a congenial home, there is but little that bears directly upon our subject. The world, he says in the Timaeus (p. 20 f.), is created by a fusion of mind and necessity; it is itself a living and rational organism, the 'only begotten' of 'God,' itself a God, and the 'express image' of the Highest.

In Stoicism the philosophy of Heraclitus received a new life and fresh developments. Like Heraclitus, the Stoics regarded Fire as the primal substance, the material principle of the divine. Embraced with the more productive activity, it is the 'seminal Reason' (λόγος στερεωτός) of the world, which manifests itself in all the phenomena of nature. These phenomena, or, rather, the animate word has a history both in Greek philosophy and in Jewish Alexandria. From Religion to Philosophy, London, 1912, p. 194. 3

2 From Religion to Philosophy, London, 1912, p. 194. 3

3 For the Logos of the Stoics, when spoken of as a single Power, it is God Himself as the organic principle of the universe, which directs to a rational and moral end. This power is not present in all creatures equally; only man participates in it so fully that he may be regarded as a real effulgence of the Deity. Thus the Word is personified in this way. Stoicism made it easier for Jewish philosophy to identify the Greek λόγος with the half-personified Word of Jehovah. Words and thoughts, according to the Stoics, were the very same things regarded under different aspects. The same λόγος which is Thought as long as it resides in the breast is Word as soon as it comes forth. The distinction between κόσμος and προφορά, often used by Philo and the Greek Christian Fathers, is really identical with that drawn by Aristotle between τὸ τῶν λόγων and τὸ πρὸς γένος; 2 Christian writers found in the Stoic idea of the Stoic doctrine that, since the one Logos is present in many human souls, men may have communion with each other through their participation in the same Logos. 3

1 From Religion to Philosophy, London, 1912, p. 194. 3
The identification of ‘Wisdom’ with the Greek Logos is almost explicitly made, as is the identification of Wisdom with the Holy Spirit of God. This book, in fact, marks a transition from the OT doctrine to that of Philo, and is of much importance in the history of Jewish-Alexandrian theology.

Philo not only blends Greek and Jewish ideas about the Logos; he achieves a syncretism of divergent Greek conceptions. His Logos is a combination of the Platonian ideas and Stoic universal causality. He takes over the main Stoical conception, but detaches it from materialism, and tries to harmonize it with the Platonist theory that invisible things are only different types of realities laid up in the intelligible world. His Logos is much like Plato's idea of the Good, except that it is regarded as actively creative. Philo found this conception useful, because he wished to conceive of the divine activity Hellenically, without ceasing to believe in the OT Jehovah. Jewish thought had been in danger of separating the Creator so completely from His creation as to produce an intolerable dualism. This tendency had been mitigated by poetical personification. Philo fixed these poetical symbols, and turned them from poetry to metaphysics by identifying them with the Logos Platonic. In opposition to the earlier Jewish idea of the Word, Philo's Logos is an intermediate between God and the world; He is the principle of revelation.

Philo is fertile in expression to create the relation of this principle of revelation to the Godhead and to man respectively. In the former aspect, the Logos is declared to be the first-born Son of God, the firstbourne of the Father. He is the Man who is the immediate image of God, the prototypical Man in whose image all other men are created. The Logos dwells with God as His vice-regent; He is the eldest son of God, and Wisdom is His mother. In other places He is identified with Wisdom. Again, He is the Idea of Ideas, the whole mind of God going out in itself creation. He represents the world before God created, as High Priest, Intercessor, Panaelete. He stands at the corners of the streets, and invites men to walk in His ways. God created or prepared her before the world was made; she was foreordained in the scheme of the world-order; she was daily His delight, rejoicing always before Him. Therefore He assures those who listen to her of life, blessedness, and the fear of God. Eclectics and Eclesiastici, Philo and Solomon we find a further development of Jewish thought in the direction of Greek philosophy. Eclectics presents us with a pessimistic philosophy quite alien from Judaism and strongly influenced by Stoaicism, though the trend is masked by numerous interpolations. Eclesiastici is more Jewish in sentiment; ‘Wisdom’ has found her chief expression in the books of the Law. The book called Wisdom of Solomon is the work of an orthodox Jew, who has no sympathy with the views of Eclesiastes, and resents their attribution to Solomon; but his doctrine is strongly coloured by Stoical and Platonic ideas. Wisdom is immanent in God, belonging to the divine essence, and yet existing in quasi-independenee side by side with God. Wisdom was the agent in God's creation of the world, selecting among the divine ideas those which were to be actualized in the created universe. She is an emanation from God, pervading all things, and growing more rapidly than any motion among them, without contracting any insipacy by her contact with matter. In the human spirit she is the teacher not only of every virtue and of all theological knowledge, but of all the human arts and sciences.

It is good, but they must not, neither do they bear, the universal law of God. But O God, giver of all things, who dwell in dark and holiness, rule over the thunder, deliver man from the Creator. Realize it from their souls, and grant them to obtain wisdom, for by wisdom thou dost rule all things; that, being honored, we may enter with honor, with joy, with song. Singing Thy works without ceasing, as we ought to do. For there is no greater thing than this, for all worketh or worketh for God, to honor the praise of universal law."

In fact, this conception of a germinative principle of Reason which manifests itself in the universe, and especially in the minds of human beings as members of a universal community, prepared the soil on which a world-religion might grow. And at the same time the individual was brought into a closer relation with the divine than had been contemplated by the earlier system of Greek philosophy. The earlier books of the OT connect the operations of the Mebure with three ideas—creation, providence, and revelation. God spake the word, and the worlds were made; then at once His spirit, or breath, gives life to what the Word creates, and renews the face of the earth. The protecting care of God for the chosen people is attributed by the OT to the Shekinah, the Glory, and above all, the Wisdom of God. Similar language about the Word is found in the frequent phrase ‘the Word of the Lord came unto me’, and in such passages as Ps. 68:5, ‘It is the Lord’s_pc. Nevertheless, the personification is throughout poetical rather than metaphysical, except in writers completely under Greek influence.

On the whole, in the later books the conception of Wisdom and its adversary that of Word—a change which really brings the Jewish idea nearer to the Greek. ‘Wisdom’ in Job is the hidden purpose which God is working out in man's existence—the grand secret of life known only to God. In Proverbs Wisdom is the cardinal virtue; she stands at the corners of the streets, and invites men to walk in His ways. God created or prepared her before the world was made; she was foreordained in the scheme of the world-order; she was daily His delight, rejoicing always before Him. Therefore He assures those who listen to her of life, blessedness, and the fear of God. Eclectics and Eclesiastici, Philo and Solomon we find a further development of Jewish thought in the direction of Greek philosophy. Eclectics presents us with a pessimistic philosophy quite alien from Judaism and strongly influenced by Stoicism, though the trend is masked by numerous interpolations. The book called Wisdom of Solomon is the work of an orthodox Jew, who has no sympathy with the views of Eclectics, and resents their attribution to Solomon; but his doctrine is strongly coloured by Stoical and Platonic ideas. Wisdom is immanent in God, belonging to the divine essence, and yet existing in quasi-independence side by side with God. Wisdom was the agent in God's creation of the world, selecting among the divine ideas those which were to be actualized in the created universe. She is an emanation from God, pervading all things, and growing more rapidly than any motion among them, without contracting any insipacy by her contact with matter. In the human spirit she is the teacher not only of every virtue and of all theological knowledge, but of all the human arts and sciences.
sacrificing love is an idea not to be found in Philo; it follows that the conception of ἁγιάσμα, which implies growth, change, and development, has an importance for the Evangelist which it could not have for Philo; (4) could Philo have accepted the Incarnation? These questions, which writers here have often been magnified by orthodox critics, Philo believed in theosophies, and could have easily accepted a docetic theory of the Incarnation. The Fourth Evangelist is no docetic; but for him too the Incarnation is a revelation.

The Johannine Christ became flesh that we might 'behold his glory,' and learn what could only thus be taught. But a real Incarnation of the Logos would no doubt have been inconceivable to Philo, for whom no historical event seems to have any importance as such. The Logos doctrine of the Prologue may be briefly summarized as follows. From all eternity, before time began, the Logos was with God. He is supra-temporal, not simply the Spirit of the World. He did not become personal either at the Creation or at the Incarnation. The Logos was 'turned toward' (προστάσεως) God. The proposition indicates the closest union, with a sort of transcendental subordination. The Father alone is the πατὴρ ἀγαθός.

The opening words of the Prologue do not (with Meyer, Weiss, etc.) refer to the Creation, but to His eternal relationship to the Father. Deification was to the Jews blasphemy, to the Greeks a light thing. The Evangelist shows that the transcendence of distinction of persons is in God Himself. 'All things came into being through the Logos, who is the mediator Agent in creation.' Apart from Him nothing came into being. That which has come in His name was, in Bossuet, following Augustine, comments rightly:

'Everything, even inanimate things, were life in the eternal Word, by his idea and eternal thought.'

The Logos is the light of men as ἀγαθόν; that is to say, revelation is vital and dynamic. God reveals Himself as vital law to be obeyed and lived. The cosmic process, including, of course, the spiritual history of mankind and of the individual, is the sole field of revelation. 'The light shineth in the darkness.' As the first step in the first creation was to divide the light from the darkness, so the new creation effects the same division in the moral and spiritual sphere. 'And the darkness arrested (it) not.'

'This is the genuine light, which lighteth every man as it cometh into the world.' He was (always) with the world, and the world knew Him not. He was also (always) 'in the world' and the world knew Him not. Yet the Logos became flesh and tabernacled among us. Here (v. 14) the Evangelist mentions the Incarnation for the first time. The Logos, who from all eternity was fully divine (τὰς υπό τῆς οἰκουμενικῆς ἁγιάσματος), became flesh (assumed visible humanity) at a certain time.

It is not easy to say whether the Evangelist conceived of the Logos existing before the Incarnation as 'true man from all eternity'; but 3:1 and 6:1 (cf. 1 Jn 15) suggest that he did. It is certainly in accordance with Johannine ideas to hold that the Incarnation, and the Passion as the sacrament of the divine self-sacrifice, were part of the counsels of God from all eternity. The Logos is the Incarnation was, according to this thought, Μεταμορφωθησθαι, though not προφυλακτικά. The Prologue thus leads up to the Incarnation of the Logos.

There was nothing strange in this doctrine. The book of Proverbs (29) had asserted the same of Wisdom: 'I was set up from everlasting, from the beginning, or ever the earth was.'

2 This is also Philonic: cf. de Cherub. 39: οὐκ εἶδον γὰρ αὐτὸν μὴν αἰώνιον [καὶ οὐ] τὸν θάνατον, λόγος τε ἄγιος, ἀληθινὸς ἄγιος, ἄγιος δὲ ἀληθινός, διὰ τοῦτο ἀληθινὴ λάθειον, ἄγιος δὲ σωτήρθεν διὰ τῆς ἁγιασμοῦ.

3 The Origin took ζωότης, probably rightly.

4 This is exactly what Basilidians also say about the Logos.
which is the theme of the whole Gospel, though the historical form precedes any further discussion of the subject on its philosophical side. The incidents are selected for their symbolical and illustrative value, and the whole tendency of the treatise is quietly to transmute logos ideas about the incarnation into a more universal and spiritual form. The highest form of faith, he more than hints, is that which can dispense with ecclesiastic evidence. The ascended Christ can be understood more readily than was possible when the Logos had his tabernacle among men.

3. In Christian theology. The doctrine of the Logos has a very important place in the theology of the early centuries. They were the deposit of orthodox Catholicism to various theories of the Person of Christ which at that time seemed plausible—those which made Jesus a phantom, or a demi-god, or an emanation, or a god-man. Historical thought, extension to and including Arianism, tended to rank Christ with the imaginary intermediate Spirit which formed a hierarchy between the supreme God and humanity. The Johannine Logos doctrine was a barrier against all such theories. The Apostolic Fathers do not supply much material. Ignatius calls Christ Logos ζωῆς σειρήνος, which has a Gnostic ring; since Valentinus was sojourning in Rome, Ignatius may have heard things from Valentinian circles. Hermas identifies the Son with the Law of God, just as Philo identifies Law and Logos. In the Acts of John the Logos-conception is separated from the Person of the Son, so that Christ with his Disciples can sing the praises of the Logos and the Son. In ch. 13 the Voice teaches: 'This cross of light is sometimes called by me Logos, sometimes Jesus Christ, sometimes God, etc.' In Montanism (q.e.) this notion of the Logos as θεόπνοος of divine attributes was maintained. The anti-Montanist Athanasius represented a reaction against this tendency. The Logos was the source of the Logos (οῖς αὐτὸς τὸν άφιετον), according to Epiphanius. This was a time of unreasoned theosophical speculation, in which an attempt was made to throw into the Logos-conception a mass of heterogeneous elements—Jewish, Greek, and Oriental. The Fourth Gospel had a very steady effect, when it was accepted as canonical; and so had the writings of the Apologists—Justin, Tatian, Theophilus, and Athenæus. The Apologists were theological conservatives. They wished to preserve traditional Christianity, with its doctrine of revelation and its reverence for the OT. They do not philosophize for their co-religionists; they talk about the Logos to show the pagans that Christianity is in agreement with the 'best thought of our time,' just as our clergy talk about evolution.

The philosophy which the Apologists mainly wished to conciliate was Stoicism, which in the 2nd cent. was much stronger than Platonism. So Justin argues that Christ is the 'Spermatikos Logos,' the Reason of God, at first immaterial in the bosom of his bosom, then sent forth as the spoken word for creation and revelation. All men are made in the image of the Logos; and those who believe in Christ are men in whom the divine seed, which is the Logos, dwells.' 

4. The Stoic-Christian cosmology. The Logos was first ὁ λόγος, ἡ ἐνεργεία, residing in the bosom of the Father. Then, by the will of the Father, He came forth as the image of God (τὸ Λόγος ἐκ τούτου). The Logos is the ψυχή in relation to the creatures. Theophilus employs the Stoic terms ἑκδότης and φύσις, and gives us a Stoic outline of a systematic Logos doctrine.

Theologians maintain that the Logos did not first acquire a personal existence in connexion with creation. Minucius Felix equates the Christian Trinity with Mente, Ratio, Spiritus. This is to be noted, because later, under Platonic influence, a principle above Nous (Mente) was asserted, and that, with Christian speculative mystics, was naturally identified with the Father, with the result that Nous was now equated with the Logos, and Ratio (the will and thought of God transmitted into vital law) had to be awkwardly assigned to the Holy Ghost. This led to confusion. The Alexandrians continued to call the Father Nous, feeling probably that the Neo-Platonic Absolute in no way corresponded to the Christian God the Father. Thus they introduced a distinction resembling that between the Godhead and God in Eckhart; a sublimated conception of Nous was introduced between the Absolute and the Logos.

In Clement of Alexandria the Logos-doctrine is a doctrine of Inmanence. The world is an organic whole, moving on to some exalted destiny in the harmony of the divine order. Humanity has its life and being in Christ. The Incarnation is no abrupt break in the continuity of man's moral history. Christ was in the world before He came in the flesh, and was prepared for His visible advent. Hence the prophecies of the Incarnation enter into the organic process of human history. The history of man's redemption is, for Clement, the development of a human capacity, under its divine 'Instructor.' As Instructor, the Logos has always been present in the world; He spoke through Moses, and through Greek philosophy. He even gave the sun and moon to be worshipped, that men might rise from the lower worship to the higher.

1. He is the Saviour of all, some with the consciousness of what he is to them, others not as yet; some as friends, others as faithful servants, others hardly even as servants (Strom. vi. 7).

Salvation is not a physical process, but a moral growth through union with God; knowledge is not merely speculation, but a growing sympathy and insight into the character of God and His laws. The union of the Logos with God is so intimate that we cannot hold (with the Gnostics and some Platonists) that the Father is possible from the work of redemption. The Incarnation is in itself the Atonement by which God reconciles the world to Himself. For Clement, as for other Greek theologians, there is properly only one dogma—the Incarnation.

For Origen's Logos-doctrine see art. ALLENDRIAN THEOLOGY, vol. 1, p. 318.

There were two schools which opposed the Logos-doctrine—the rationalistic Unitarians, who regarded the 'divinity' of Christ as a mere power bestowed on Him by God, and emphasized the humanitarian aspect of His Person, and the modalistic Monarchians, such as Praxeas, Noetus, and Sabellius. These maintained the old alliance with Stoicism, after the Catholics had adopted Neoplatonism as their mistress in philosophy (see, further, art. MONARCHIANISM). The Monarchian and Sabellian treatises show the line of argument used by the orthodox—a position which was later regarded as not wholly satisfactory. Methodius, a Platonist but not an Origenist, argued that the Incarnation was the necessary complement of the Creation, the perfection of Adam being natural. There is a double development—in the race and in the individual, both due to the immaterial Logos. The σώμα is perpetually re-enacted in spiritual experience. Macarius teaches the same doctrine: in each believer a Christ is born.
The Arian controversy drove orthodoxy into something like a compromise with modalism. The tendency for Arians, as for those who followed the Logos, does not add anything significant to the doctrine. It was, in fact, no longer thoroughly acceptable to the Catholics. The word λόγος was not used so as to mean the necessary symbol; and the Synod of Sirmium (A.D. 431) condemned the doctrine of the λόγος εἰκόνα and προφθαρμήν. Other terminology, and to some extent other ideas, displaced it. It was never acclimatized in the Latin-speaking countries.

The Logos-doctrine has an obvious affinity with mysticism, and with types of religion which emphasize the divine immannence. It was revived by Eckhart in the Middle Ages, and has been a living article of faith with religious idealists, Christian Platonists, and speculative theists. It belongs to a permanent and very important type of religious thought, and can never lose its value, though there are many who (like Max Muller) are ardent supporters of the Logos-idea in religious philosophy, while they cannot accept the Johannine identification of the Logos with a historical individual.

For an evolution in Indian philosophy somewhat similar to the development of the Logos-doctrine see art. VAC/comments.

Lokáyata. — This word, which denotes properly 'belonging to the world of sense,' is the Indian name for the materialistic system whose adherents are termed Lokáyatikas or Lokáyantikas, or more usually Chárvakas, from the name of the founder of their doctrinal system. There are clear indications of the presence in India, as early as pre-Buddhist times, of teachers of a panmaterialism; and undoubted theories have had numerous adherents in India from that period onwards to the present day.

These two authorities bear witness to the former existence of text-books of materialism, viz. the Bhágavat and the Sūtras of Bhāspati, the mythical founder of the system, yet materialistic doctrines have never gained any further place in the literature of India. In order to understand these theories, therefore, we can only have recourse to a few passages of the Mahábháráta, to the polemic which was carried on against materialism in the text-books of the other philosophical schools, and to the doctrines of King Error in the philosophical drama Prabhodhahandodbodhaka. This last was composed in the 11th or 12th cent. A.D., and aims at setting forth in allegorical style the superiority of Brahmanical orthodoxy to all other theories of the universe. The principal source of our knowledge, however, is the first chapter of the Sūtra of the Path of Results, a compendium of all the philosophical systems of India, composed in the 15th cent. of our era by Mahábháráka, the celebrated teacher of the Vaisnavas, in which the doctrines of Indian materialism are set forth in the greatest detail. Mahábháráka begins his exposition with an expression of regret that the majority of the men of his day follow the materialism represented by Chárvaka.

The Lokáyata allows only perception as a means of knowledge, and refuses inference. It recognizes as the sole reality the four elements, i.e. matter, and teaches that, when a body is formed by the combination of the elements, the spirit also comes into existence, just like the intoxicating quality from the mixture of special materials. With the destruction of the body the spirit returns again to nothingness. The soul, therefore, is only the body plus the attribute of intelligence. The existence of a soul distinct from the body cannot be established by perception. Supernatural things are, of course, also wholly denied, and are dismissed at times with a mere jest. Hell is earthly pain, due to earthly causes. The Supreme Being is the king of the country of whose existence the whole world affords tangible proof. Emancipation is the dissolution of the body. The post-operative force of merit and demerit, which, according to the belief of all other Indian schools, determines the lot of each individual down to the smallest details, has no existence for the Lokáyátakas, because this conception is possible only by inference. To the objection of an orthodox philosopher, that these who reject this controlling force in the universe leave the various phenomena of the latter without explanation, the materialist replies that the essential nature of things is the cause from which the phenomena proceed.

On the practical side this system exhibits itself as the crudest Eudemonism; for it represents the gratification of the senses as the sole desirable good. The objection that sensual pleasures cannot be the highest aim for mankind, as these are always mingled with more or less pain, is met by the remark that it is for us to secure by prudent enjoyment as little alloyed as possible with pain, and to shun as far as is in our power the suffering inseparably connected with pleasures. The man who would have fish must take their skin and bones, and he who wants rice cannot exclude the husks from his bargain. Let him not then from fear of the pain renounce the pleasantness, for he will instinctively feel to be congenial to our nature.

The Vedas are declared to be the idle prating of knaves, characterized by the three faults of untruthfulness, internal contradiction, and useless repetition; and the professors of Vedic science deceivers, whose doctrines are mutually destructive. To the Chárvakas the ritual of the Bráhmans is a fraud, and the costly and laborious sacrifices are useless only for providing with a livelihood the cunning followers who carry them out. 'If an animal sacrificed at the Jyotiṣoma (the original form of the soma offering) rises to heaven, why does not the sacrificer prefer to slay his own father?' No wonder that in the view of the orthodox Hindu the doctrine of the Chárvaka is the worst of all heresies.

It is natural to conjecture that the Lokáyata system was based by its founder upon deeper principles, and developed upon more serious philosophical lines than the information which has come to us from their opponents allows us to understand. The conjecture, however, cannot be established.

Lokáyatā. — See Bodhisattva.

Lollards. — See Wycliff.
LONGSUFRERG.—Longsuffering is alike a divine attribute and a human virtue. In both its meaning is well represented by 'long-anxiety,' formerly a word of frequent occurrence, and not altogether obsolete.

The closest parallel of 'long-suffering,' quoted in the GED, (v. 417) is from a 1560 tr. of the DeMittalee, R. XIII, 14: "Thou shalt overcome them [temporal] better bred and blessed by patience and long-suffering; the most recent citation of the word is from the Spectator, 11th Jan. 1698: 'His longsuffering unites him to the pure and graceful.'

The literal meaning of the Greek word (μακροθυμία) of which 'long-suffering' is the translation is 'long-tempered,' the opposite of our familiar expression 'short-tempered' (cf. Germ. Langhausigkeit).

In three OT passages (Ex 34, Nu 14, Ps 86) the RV substitutes a more literal rendering of the Hebrew phrase (פָּסַק וְקֵינָה; length of face) —"slow to anger" —for the AV 'long-suffering.' In many passages (Neh 9, Ps 103, 145, Jer 15, 24, Jon 4) the two translations are interchangeable.

Longsuffering or slowness to anger is the glory of man as it is revealed in the character of Christ (R. C. Trench, Synonyms of the New Testament, London, 1859, p. 349).

That the two expressions are synonymous in many contexts is evident from the translation in the RV of 'long-suffering' in Jer 15:15, 'Avenge me of my persecutors; take me not away in thy longsuffering.' The former sentence seems decisive in favour of the reading of the RV. RV regards the divine longsuffering as displayed towards the persecutors and not towards the prophet.

The difference is in the interpretation of Luke 6:37, 'Love your enemies.' The AV renders 'bear well with them,' but the RV 'and longsuffering over them.' A. Plummer (ICC, Edinburgh, 1895, in loc.) grants that 'έχριστος may refer to the enemies of the elect, but prefers to understand it to apply to the elect. The meaning, then, would be: 'And shall not God deliver His elect who cry day and night to Him, while He is slow to set for them?' But the analogy of Jer 15:15 (cf. Sir 50:37) suggests that the main thought is of God's patient forbearance with those who are at once His enemies and the oppressors of His chosen ones. J. Moffatt renders: 'And will not God see justice done to His elect who cry to Him by day and night? Will He be tolerant to their opponents? I tell you, he will quickly see justice done to his elect!' (The New Testament: A New Translation, London, 1913).

The uncertainty in regard to the interpretation of the above and other passages may serve to emphasize what Plummer rightly insists upon, namely, that, although πασχάζων usually means 'is slow to anger,' yet it sometimes means 'to be slow, be backward, tarry,' and is almost synonymous with βαπτίζω. So also πασχάζων may mean 'slow persistence' as well as 'slowness to anger,' (G. D. F. Macrorius, I.e. (CD, p. 414).

The RV recognizes this wider meaning, and regards 'long-suffering' as equivalent to 'patience' in Heb 6 and 1 Pet 3. The corresponding verb is applied in Ja 5:17 to the husbandman's patient waiting for the harvest. But 'patience' is more frequently the translation of (υπομονή), the temper which does not easily succumb under suffering, which it is the wisest want which does not hastily retaliate a wrong' (J. B. Lightfoot, St. Paul's Epistles to the Colossians and to Philemon, London, 1879, col 11).

Longsuffering of God's reference is made in Lk 18, Ro 2:4, 1 P 3:9, 2 P 3:12, and to the 'long-suffering' of Jesus Christ in 1 Ti 1:17 and probably in Ro 2:4. 'Forbearance' (λατρεύει) is linked with 'long-suffering.'

The distinction between these two words is that 'the λατρεύει is temporary, transient: we may say that, like our word 'trace,' it asserts its own temporary, transient character...: This may be used, it is true, of a πασχάζων so its thought of it does not lie in the word; we may conceive of a πασχάζων, though it would be worthy of little honour, which should never be exhausted; while ὑπομονή implies its own merely provisional character.' (G. Trench, Synonyms of the New Testament, London, 1859, p. 195,

As a moral attribute of God, 'long-suffering' is a manifestation of His grace. In 'the riches of His goodness' He waits long and patiently for the sinner's repentance (Ro 9:22), and in loving 'patience' He tolerates those who deserve His wrath (Ro 9:22).

Yet patience and long-suffering point not merely to the suspension of punishment, but to the profound theology behind it. To the contrast between the apparent impotence of long-suffering, and supreme moral omnipotence, this is an attribute which exercises a special reverence (T. Haring, The Christian Faith, London, 1912, f. 271, r. 3).

'Longsuffering,' as a Christian grace, is a 'fruit of the Spirit' (Gal 5:22). Though a passive virtue, it is the manifestation in human character of spiritual power received in answer to prayer from Him by whom believers are 'strengthened with all power, according to the might of His glory, unto all patience and longsuffering with joy.' (Col 1:11, 12)

In his earnest prayers that Christians may be adorned with this grace, St. Paul asks that they may have the mind of Christ, for he obtained mercy, wherefore he was made meet for that which God intended, to show forth all his longsuffering, for an example of them which should hereafter believe on him unto eternal life' (1 Ti 1:16).

In 1 Co 13:4 'long-suffering' is said to be an attribute of the 'love' which we are made partakers of the divine nature. Tertullian (De Patientia, 19) and other Fathers explain it to mean greatness of soul or magnanimity, but πασχάζων differs from ὑπομονή, the 'height-mindedness' of Aristotle: 'First, it is not a consciousness of greatness, but a largeness of conception. Second, it is not the love which spirit tires but it has exhausted its last resources. Owing to the contrast between the apparent impotence of long-suffering, and supreme moral omnipotence, this is anattribute which exercises a special reverence. Third, it is not a noble pride that stands aloof, but an intelligent patience of long-suffering, though not an active combat in the strife' (T. C. Edwards, A Commentary on the First Epistle to the Corinthians, London, 1859, p. 343).

In the Apocrypha and Pseudepigrapha of the Old Testament (ed. R. H. Charles, Oxford, 1913), interweave the following instructive examples of the use of 'long-suffering' are found:

Test. Dan 3: 'Unless ye keep yourselves from the spirit of lying and of anger, and love truth and longsuffering, ye shall perish.'

Test. Gad 4: 'The spirit of love worketh together with the law of God in longsuffering unto the salvation of men.'

Test. Jas 1:17: 'With longsuffering hides ye one another's faults.'

For further information:

Who is mighty? He who controlleth his evil disposition; as it is said: 'Better is the longsuffering than the mighty, and he that ruleth his spirit than he that taketh a city.'

LITERATURE.—The word 'longsuffering' is best studied with the aid of commentaries on the passages in which it occurs. There is an instructive and comprehensive article in Exeg. Tlp. (1900-01) 250 ff.; the following bibliography is given: H. C. H. Cremer, Bibl. Theol. Lexicon, Edinburg, 1875, p. 268 ff.; J. Taylor, Works, London, 1846, iv. 481 ff.; R. W. Dale, Year-Book Semen, 1885, p. 28 ff.; J. Temple, Syllog Semen, 1881, III. 173 ff.; C. J. Verv劃mann, University and Other Semen, 1897, p. 250 ff.; A. Mazar, Ancient Greek and Other Semen, 1898, p. 217 ff. See also J. Hastings, art. 'Longsuffering' in BDs Ill. 136; H. C. Lees, art. 'Longsuffering.' In DJD Ill. 5 ff.

LORETO.—For many centuries the little town of Loreto, situated some 15 miles from Ancona on a hill commanding a view of the Adriatic, has been a notable place of pilgrimage. No visitant, who visited it in 1560, and who apparently believed
in the miracles of healing supposed to be wrought there, describes the town as "containing few inhabitants except those who serve the needs of the worshipers." (Journal of Travels, Eng. ed., London, 1893, ii. 196-209.) The great basilica, the dome of which is visible from afar, was begun in 1468, completed in 1538, and has since received many additions and modifications. Of its artistic interest an excellent account is given in A. Colasanti (Loreto, Bergamo, 1910). But the basilica was built only to enclose and enshrine a tiny edifice known as 'La Santa Casa,' which is the object of pilgrimage. The Holy House is believed to rest on the surface of the ground without foundations, and this fact seems to be authentic. It measures roughly 31 ft. by 13, and its walls are built of hewn stones, from their shape and colour often mistaken for brick, but externally they are hidden from view by a casing of marble richly adorned with sculptures. An ancient statue of wood, of Byzantine origin, the representation of the Madonna and Child, now voluminously draped and also crowned, occupies a niche inside the little house at some height from the floor, and beneath it is a seat in which Mary sat, said. Countless votive offerings are suspended all around, these probably represent only a small part of the rich gifts which belonged to the shrine before Napoleon riled it in 1798. The statue itself was carried off and taken to Paris, but in 1801 the First Consul returned it to the niche that it had formerly occupied. The words 'Hic Verbum caro factum est' sculptured above it indicate the shrine's traditional claim to the veneration of the faithful, but the story is more fully told in a Latin inscription set up in the basilica by Pope Clement VIII. in 1598, the approved English rendering of which runs as follows:

'Christian Pilgrim, you have before your eyes the Holy House of Loreto, venerable throughout the world on account of the Divine mysteries accomplished in it and the holy miracles herein wrought. It is here that the most holy Mary, Mother of God, was born; here that she was betrothed to the angel; here that the Eternal Word of God was made men. Angels conveyed this house from Palestine to the town of Tarsus in Liura in the year of salvation 1291 in the presence of Nicholas IV. Three years later, in the beginning of the pontificate of Boniface VIII, it was solemnly blessed by the ministry of Renacinata in the Marches of Ancona, where, having changed its station three times in the course of a year, at length, by the will of God, it took up its permanent position on this spot three hundred years ago. Ever since, standing on the site of the event having called forth the admirable wonders of the neighbouring people, and the fame of the miracles which B. John XXII caused to be published, the church having spread far and wide, the Holy House, whose walls do not rest on any foundation and yet remain firm, has been, from the time it was consecrated so many centuries, has been held in reverence by all nations.'

This statement lays little stress upon what is perhaps the most surprising feature of the legend, viz., the triple change of the after the arrival of the Holy House upon the shores of the Adriatic. Pietro di Giorgio Tolomei, best known, from his native town of Teramo, as 'Teramans,' who between 1405 and 1410 published the earliest version of the translation story that has been preserved to us (the document has been discussed with great critical acumen by Huffer in his Loreto, i. 33-66), explains that, because the Santa Casa was not situated at the point of land where it was first deposited, near Fiume in Illyria, it was carried thence by angels across the Adriatic to a wood at Recanati belonging to the Lady Loreto; hence the name 'di Loreto.' The wood was later abandoned, and the church ('inde accepta tunc ista ecclesia nomen 'sancta Maria de Loretha' ab illa domina qua erat illis silve dominis et patronis'). Here, however, there was such a concourse of pilgrims that the wood was infested with robbers and murderers.

For this reason, the 'Relatio Teramans' says, 'the Holy House was once more taken up by the hands of angels, and it was carried to the Mount of the Two Brothers, and on the same mount by the hands of angels it was set down again. The which brothers, on account of the immense revenue and gain of money and other things, fell straightway into great discord and strife. Wherefore the angels, in the same manner as before, carried it away from the said place, and brought it to a spot in the public ground and there they made it fast.'

The legend also relates how the Blessed Virgin in 1296 appeared in a dream to a certain man who was devout to her, and in this way made known the whole story. Thereupon sixteen good men and true journeyed to the Holy Land to measure the foundations of the Holy House at Nazareth. They discovered that these exactly agreed with the dimensions of the Santa Casa, and also that a stone tablet commemorated the disappearance of the little building which had formerly been venerated there. Furthermore, in the time of Teresa, himself two old men came forward and each testified that his grandfather's grandfather had confirmed from personal knowledge the account of the translation.

This was the story which, with further amplifications, added in the 18th cent., was believed from about the year 1740 to the present day. Although such antecedents of the legend are feeble, we must not overrate the importance of the later elaboration of C. G. Vogel of the Missions, Father Miller, and A. G. Vogel; they did not venture to throw doubts upon the substantial truth of the narrative. It was only in 1908 that L. Crespi, in his "La Santa Casa," and A. R. Vogel betrayed their misgivings, that the event was exaggerated and the mission of the Virgin Mary in the events of the 19th century.

It was the mission of the Virgin Mary in the events of the 19th century.

It was the mission of the Virgin Mary in the events of the 19th century.

It was the mission of the Virgin Mary in the events of the 19th century.
other hand, the first papal document which gives any indication of the special sanctity attaching to the shrine of Loreto is the bull of Paul II. in 1470, which speaks thus:

"Desiring to show our veneration for the church of Blessed Mary of Loreto, miraculously founded in honour of the same Most Holy Virgin outside the walls of Roccamonfina, in which, as the said person is worthy of credit and esteem, and as all the faithful may ascertain for themselves, an image of the glorious Virgin, through the wonderful adoption of God, has been deposited, attended by a troop of angels, and to which church by reason of the countless stupendous miracles which the same Virgin has wrought, and the benefactions that our pontifical intercession has worked for all who devoutly have recourse to her and humbly implore her protection," etc.

Here again not the least suggestion is conveyed that the building, which enjoyed but such faint foundations, was the actual house of the Holy Family of Nazareth. On the other hand, the terms of this notice lead great probability to the opinion, supported by Hufner and others, and it was serious and critical antiquity, as we have noticed, Byzantine characteristics, and consequently known to have come from a distance, that was at first supposed to have been brought to Loreto by the hands of angels. Then the fact that the chapel had no proper foundations seems to have given rise to further development that the whole building had been made, partly at least, by people from the East. And, finally, a reason was found for this exceptional providence by assuming that the building was none other than the actual Holy House of Nazareth. Considered in itself, the hypothesis of a gradual evolution of the legend by a curious parallel in the case of a chapel not far from Siena. The story is told first by A. Fortuni in his Cronichetta del Monte Sacro, 1570 (see p. 21), and in the year 1518 Leo X. identifies himself with the whole marvellous story "ut fide dignorum comprobatum est testimonio," and it must have been shortly after this that Thomas Duchate or Duchette of Museburg made his pilgrimage to the Holy Land and brought back that image of the Italian shrine for which he afterwards built a chapel on the land now occupied by Loreto School. Other that the frescos of Sixtus V. and in modern times Pius IX. and Leo XIII., adopted the tradition without any question, and Innocent XII. sanctioned the celebration of a special feast of the translation of the "Holy House" in the "Sacred Treasury". In the latter part of the 18th cent. the story of the miraculous appearance was everywhere accepted, and the local traditions of Nazareth itself were modified to suit it. It should also be remembered that none of these papal bulls or other similar acts of ecclesiastical authority is regarded in the Roman Church as having any dogmatic force, and consequently all Roman Catholics are free to disregard the legend according to their own judgment of the historical evidence. The defenders of the tradition still lay stress upon an alleged scientific examination of the materials, particularly the stone of which the Holy Casa is built, and it is claimed that experts have declared that such materials are not found in Italy, but only in the neighbourhood of Nazareth (see D. Bertini, Suprema et sola sanctissima Casa del Loredo, Rome, 1861). But these experiments were carried out in 1837, and it may be doubted whether their conclusions can be regarded as rigidly scientific. Let us also notice that the Holy House of Gubbio and in one or two other places, said to be of early date and representing angels carrying a house (the date and details are nearly always matters of controversy), cannot afford of necessity to be a part of the Loreto legend. It is clear from the early date of S. Maria de Loretto chronicled above that there was at least one rival tradition of the same kind in circulation. These frescos, then, cannot be appealed to as an argument in favour of the early date of the Loreto story in particular.

LITERATURE.—The vast bibliography of the subject has been very fully, though not quite exhaustively, dealt with by F. Hufner, "Bibliotheca Sacra," vol. xxi. 1918, and also by J. Fauers, "Bibliotheca Sacra," Tournai, 1918, and by F. Hufner, "Loreto" (see below), vol. ii. 5-8, only a selection of the books and articles can be mentioned here. The text of the early writers who elaborated the legend into the form which ultimately prevailed, viz. Terrasinos, Jerome Angeles, Raphia Perins, and Horazio Turselli, will be found printed at length in the voluminous work of P. V. Martorelli, Teatro storico della S. Casa Nazarena, vol. iv., Rome, 1783-85. Besides this, we may note, among other works, the Imperial Frontini of G. A. Vogel, de sancta sanctissima et lustrata arca borei aepignos commentarios, 2 vols., Roccamonfina, published in 1656, though written in 1608, and M. Leopoldi, La Sacra Casa di Loreto, Legnano, 1841. Both these works give proof of much research among municipal archives and other records of the modern controversy, after U. Chevalier, Notre-Dame de Loreto, Paris, 1906, by far the most important contribution to the subject is that of G. Hufner, "Loreto: eine geschichtskritische Untersuchung der Frage des heiligen Hauses, München, 1913," for so far only one book dose a second examination. See also A. Brandt, "La Question de Loreto," Paris, 1910; C. Beaufort, "La Véracité sur le fait de Loreto," de 1919, and the "Millennium," 1919.

LOTUS.—See DIVINATION.

LOTUS (Egyptian).—1. Name.—First we must dismiss entirely the modern botanical name ‘lotus’, for the ancient Egyptian lotus plant resembling a vetch ('Proc. Roy. Soc. Sect. XVII. 1899, p. 235).

As plants more or less confused together, being all water-lilies, and popularly called ‘lotus’, there may be specified (1) rose lotus (Nelumbium speciosum), distinguished by imbricated petals on the bud; (2) white lotus (Nymphea lotus), distinguished by ribbed petals on the bud, rounded when opened; and (3) blue lotus (Nymphea caerulea), distinguished by smooth, pointed petals. The two Nymphea lotuses cross, and any intermediate form may occur naturally.

(1) This is at present an Indian plant unknown in Egypt, but as a cultivated rarity. It was known in Roman times, being found in the cemetery at Hawara (W. M. F. Petrie, Hawara, London, 1890, p. 52), and described by Athenaeus.

'Lotus grows in the marshes... one like that of the rose, and it bears a garland of flowers of this colour which are properly called the garlands of Anubis; but the other kind is called the lotus garland, being of a blue colour' (iv. 23).

It was known earlier to Herodotus:

'There are also other lilies like roses that grow in the river, the fruit of which is contained in a separate pod... in this there is a garland of flowers, which fit to be eaten' (ii. 92).

There does not seem to be any proof that this plant was indigenous, nor that any instance of it was represented in Egypt. It cannot, therefore, be reckoned as of importance in religion or art. Various instances have been alleged, but incorrectly.

Loret states that the lotus-flower supporting Horus is a rose lotus; but the petals are equal-ended and striped as white lotus. He also states it to be on the head of Nefertum; but that flower appears rather to be a Nymphe. He agrees that it is not shown on monuments. The capital foundation at Memphis (Petrie, Palace of Apries, London, 1899, xvii.), like other early capitals, is white lotus, and not rose.

(2) White lotus.—This is characterized by the sepals and petals being ovoid with rounded ends. It is the most usual of the different scenes of the early kingdom; as a capital at Memphis (Petrie, Palace of Apries, xvii.); as figures of capitals (Zowyet el-Meyiyat, IV dyn.; El-Bersheh, XIXth dyn.; see E. Prisse d'Avennes, Hist. de l'art égyptien, Paris, 1857); as a garland (F. E. Newberry and F. Ll. Griffith, El Bersheh, London, 1895) it was placed upon the mummies of Anubis, Amenemhet I., and Khafre II. It is represented as the flower upon which Horus is seated, shown by the strong ribbing of the sepals (R. V. Langoz, Dizionario di scrittori greci, Turin, 1806, cxvii. 1). This figure is entirely of late date, 5th cent. B.C. and onward. Loret attributes this to the rose lotus; but J. G. Wilkinson emphatically states that it is the blue lotus (Manners and Customs of Ancient Egyptians, London, 1832, iii. 132 l.); the ribbing would indicate that it is, as a matter of fact, the white lotus.

(3) Blue lotus.—This is the most usual lotus-flower, for long periods, with straight-edged pointed petals. It is the most common in the tombs, and is the origin of the regular lotus-capitals. The Egyptian names of these flowers are variously equated. Loret puts the nesheb, neshkheb, or neshkheb to the white lotus, and serpet to the blue lotus. But we have seen that probably the rose lotus was a Persian importation, and could not therefore have a usual name dating from the IVth dynasty (Papyrus, l. c. 40). The later Loret gives Arab authority for the neshheb being a blue flower (L. P. g. 116), and the khassam (which in the Scales = neshheb) being also blue. It seems probable that neshheb is the blue lotus, though the seeds of all three lotus-plants were eaten (Herod. II. 92), and neshheb was gathered in the Ind dyn. (see a seal in Petrie, Royal Tombs, London, 1901, pl. xvi. 171). If it is probably the commonest name neshheb is the white lotus, the name serpet is more fully spelled out like a Syrian word, as serpeta. It seems obviously connected with serpat of Is 56, where it stands in antithesis to myrtle, and is therefore probably a bush rather than a herb or water-plant. It does not appear to have any connexion with a lotus.

2. Meaning.—Though the lotus is so abundant naturally in Egypt, and so incessantly represented in decoration, yet it seems to have singularly little contact with the religion or writing. Its use as a vocal sign is rare and of late period, and before that it appears only as a determinative of the names of such plants. It is never associated with any early god. Nefertum, who wears the flower on his head, is a late deity, the figure first occurring in the XIXth dyn. (A. E. Sayce, Abydos, Paris, 1889-90, i. 380), where also it is the principal shrine with the lotus-flower of the god, clearly the blue lotus. Usually he is not represented till the Greek period. Horus, who appears seated on the lotus-flower, is so represented only in the Egyptian and later ages (G. Colinna-Ceccelli, Monuments antiques de Chypre, etc., Paris, 1882, pl. viii.; G. A. Hoskins, Visit to the Great Oasis of the Libyan Desert, London, 1887, pl. vi. base). As Wilkinson says of the lotus, there is no evidence of its having been sacred, much less an object of worship (iii. 133).

3. Literature.—The principal books are V. Loret, La Flora pharaonique, Paris, 1892, for the lotus; G. Fonkam, Histoire de l'art égyptien, 1877, for Egyptian architecture; W. H. Goodyear, Grammar of the Lotus, London, 1911, for general art connections, but over-stated.

W. M. FLINDERS PETER.
LOTUS (Indian) 143

Later, Vejrai, in the former it is alluded to as growing in lakes. Here also the term seems to be applied to the bowl of the sacrificial ladle, presumably on account of resemblance in shape; it is certainly so applied in the Alattaya Brahmanas. The word in Pali also is early used for personal adornment is shown by the fact that the Asvins, the youthful twin gods of the morning, are described (X, cxxxiv. 4) as wearing a garland of blue lotuses (pupakka-purna), and the lotus, in the Samudra, is mentioned, together with its various edible parts, in the Atharvaveda (XV. xxxiv. 3). The flower is doubtless the white edible lotus (Nymphaea esculenta), denoted by this name in later times.

In the Brahmanas the lotus first appears associated with the Creator Prajapati in cosmogonic myths. Thus the Taittirya Brahmana (I. i. 5. 5ff) tells how Prajapati, desiring to evolve the universe, which in the beginning was fluid, saw a lotus leaf (pupakka-purna) standing cleft erect out of the water. Thinking that it must rest on something, he dived in the form of a bear, and, finding the earth below, breaks off a fragment, rose with it to the surface, and spread it out on the leaf. Again, the Taittirya Aranyaka (I. xxii. 1) relates that, when the universe was still fluid, Prajapati was in the lotus a Central Indian lotus-leaf. Later, in the epic poetry of the Mahabharata, the Creator, under the name of Brhami, is described as having sprung from the lotus that grew out of Vigna and the canopy of the archway of Vigna. The lotus is mentioned in contexts of meditation. Hence one of the epithets of Brhami is lotus-born (aja-ja, aja-vams, etc.). The lotus is also connected with Vigna, one of whose names is Madana-Hanu ('lotus-naveled'). It is further associated with Vigna's wife Laksmi, goddess of fortune and beauty, in the Mahabharata, where the myth is related of Vigna's forebear sprang a lotus, out of which came Sri (another name of the goddess), and where one of Laksmi's epithets is padma, 'lotus-necked'. The Mahabharata, in its account of Mount Kailas, the abode of Kailas, the god of wealth, describes his lake Nalini and his river Mandakini as covered with golden lotuses.

2. In art.—As regards its application in religious art, the lotus figures, with the rise of that act in India, in all the great divinities, which came into being in different parts of the country from about 500 B.C. onwards. In its simplest form the expanded lotus is very frequent as a circular crenated motif. It occurs in sculpture, and Laksmi, as well as Agni, god of fire, Pavana, god of wind, Ganesa, god of wisdom, Vigna's incarnation Rama, and the demon Ravana, are all found represented on such sculptures, and the regular holds a lotus in one of his four hands. A lotus pedestal also serves as a standard for the images of the god Indra, of Vigna and nearly all his incarnations, and of the sun-god Surya; in Ceylon also of Siva and Parvati, as well as of Kailas, god of wealth, and in Tibet of Saravasti, goddess of learning.

Similarly, in the ancient Jain sculptures found at Mathurah the lotus constantly occurs as a medalion or in more elaborate floral decoration. It also appears as the symbol of the sixth Jina, or Saint. At the present day it is worshipped generally by the Hindus in India, and even by low caste Mugahari brahmins in some as in a sitting or standing posture.

The oldest and most striking example of this use is exhibited in the figure of the Hindu goddess Laksmi in the Buddhist sculptures at Mathura, and in the sculptures of Sainali, Bhairat, Amaravati, and Bodh Gay, as well as in the rock-cut Buddhist temples of Western India, being introduced as a medallion on pillars, panels, and ceilings. Very elaborately carved half-lotuses sometimes appear thus, or, in Ceylon, as so-called moonstones—semi-circular stone slabs at the foot of staircases. Lotuses growing on stalks also occur in the sculptures of Gandhara and of Mathura, and often figure in elaborate floral designs on the pillars of Sainali or the panels of Amaravati.

The lotus is further found from the earliest times, conventionalized either as a seated or as a pedestal on the divinity or god, seated in a sitting or standing posture. The oldest and most striking example of this use is exhibited in the figure of the Hindu goddess Laksmi in the Buddhist sculptures at Mathura, and in the sculptures of Sainali, Bhairat, Amaravati, and Bodh Gay, as well as in the rock-cut Buddhist temples of Western India, being introduced as a medallion on pillars, panels, and ceilings. Very elaborately carved half-lotuses sometimes appear thus, or, in Ceylon, as so-called moonstones—semi-circular stone slabs at the foot of staircases. Lotuses growing on stalks also occur in the sculptures of Gandhara and of Mathura, and often figure in elaborate floral designs on the pillars of Sainali or the panels of Amaravati.

After Buddha began to be represented in sculpture, from about the beginning of our era, his image constantly appears sitting cross-legged on a lotus seat, occasionally also standing on a lotus pedestal. In this form it occurs, for instance, at Rājār in Behrā, in the Kamheri caves near Bombay, and often in the Gandhāra monuments of the North-West. From the latter region this type spread beyond the confines of India, re-appearing in Nāgar, Turhā, and Ceylon. Even when the seat is not actually the flower itself, two, three, or four lotuses are, in the Gandhāra sculptures, carved on its front. Such lotuses are even found delineated on a footstool on which Gautama rests his feet instead of sitting cross-legged. The number of the petals of such lotuses varies from four to six.

The use of the lotus seat has been extended to images of bodhisattvas not only in India, but in Buddhist countries beyond its borders. Thus Mājūrī is represented sitting in this way not only at Sarnāth, near Benares, but also in Java and Tibet. In a modern Tibetan picture Mahāyāna is depicted on a lotus seat, and the figure of a Persian bodhisattva sitting on a seat adorned with lotuses and painted on a wooden panel was discovered by M. A. Stein during his first expedition in Central Asia (bodhisattva Avalokiteśvara occurs sitting on a lotus seat, and in Nepal also as sitting on a lotus pedestal. The lotus is otherwise intimately connected with this bodhisattva; for it is laid absentmindedly on the lap of a lotus, and he regularly holds a lotus in his hand, whence is derived his epithet of Padmapani, 'lotus-handed'. To him, moreover, refers the Buddhist formula "ôta nasā samadhi ("Vajra" in the lotus! Amen"), which at the present day is the most sacred prayer of the Buddhists in Tibet (see art. JEWEL [Buddhist], § 7). The persistence of this application through the centuries is a remarkable fact that it often appears not only in modern Indian brass images of Hindu gods, but even in seated portraits of Mahāyānas of the 19th century.

The lotus seat and pedestal have a direct universal application in connexion with the figures of Hindu mythology. Thus Brhami appears seated on Vigna's beautiful lotus. The three great gods of the Hindu triad, Brahma, Siva, and Vigna, with their respective consorts, Laksmi, as well as Agni, god of fire, Pavana, god of wind, Ganesa, god of wisdom, Vigna's incarnation Rama, and the demon Ravana, are all found represented on such sculptures, and the regular holds a lotus in one of his four hands. A lotus pedestal also serves as a standard for the images of the god Indra, of Vigna and nearly all his incarnations, and of the sun-god Surya; in Ceylon also of Siva and Parvati, as well as of Kailas, god of wealth, and in Tibet of Saravasti, goddess of learning.

Similarly, in the ancient Jain sculptures found at Mathurah the lotus constantly occurs as a medalion or in more elaborate floral decoration. It also appears as the symbol of the sixth Jina, or Saint. At the present day it is worshipped generally by the Hindus in India, and even by low caste Muhammadan brahmins in some as in a sitting or standing posture. See also art. FLOWERS, vol. vi. p. 54.

3. In Buddhism.—The symbolism of the lotus-flower (padma, pundarika, stupa) was borrowed by the Buddhists directly from the parent religion Brahmanism. Primarily, the lotus-flower appears to have symbolized for the Aryans from very remote times the idea of superhuman or divine birth; and, secondarily, the creative force and immortality. The traditional Indian and Buddhist explanation of it is that the glorious lotus-flower appears to spring not from the sordid earth but from the surface of the water, and is always pure and unsullied, no matter how impure may be the water of the lake. It thus expresses the idea of spontaneous birth, and the emergence of the first created object from the primordial waters of chaos; hence also the flower was regarded as the matrix of the Hindu creator himself, Narayana, and his later form, the god Brahma, who are respectively figured and described as reclining and seated upon a lotus-flower. As an emblem of divine purity, the lotus-flower is instanced in the pre-Buddhist Vedic hymns (e.g., RV. x. 131. 5, s.xxvi. [1894] 180); and this was possibly its significance when it first applied to the historical Buddha, Sakyamuni.

As an emblem of divine birth, the lotus is the commonest of motifs in Buddhist art and literature, as has been noted above (§ 2). In the Buddhist paradise of Sukhavati, the goal of popular Mahāyāna-Buddhists, wherein women exist, every one is born as a god upon a lotus-flower (Saddharma-pundarika [SBE xxii. (1884) 389, xlvi. (1894) pt. ii. pp. x. 62]), and there are lotus-flowers of many-gems (SBE xlvi. p. 87). We have no notion of the beam of lotus-eating, possibly a memory of this old tradition of divine existence.

A form of this myth of divine lotus-birth is probably the myth which invests Buddha with the marvelous power of impressing the image of a lotus-flower on the earth at every step that he took. The references to this are innumerable in the Pāli canon; but in the book which the present writer has shown to be the earliest of all the books of that canon, the Mahāpadāna Sutta (J. R. A. S. 1914, p. 603 f.), the account of the infant Buddha’s first seven steps makes no mention of the lotus-flower imprints which appear in the later versions.

The lotus was especially identified with the sun. This association rested doubtless upon the natural observation that the flower opened when the sun rose and closed at sunset, so as to suggest to the primitive mind the idea that the flower might be the residence of the sun during its nocturnal passage through the underworld, or that it might be the re-victor, reagent of the regenerator of the fresh or refreshed sun of the next day. Its very large multi-rayed flowers would also contribute to this association. It is probably from its association with the sun that the lotus-flower appears on the Gandhāra sculptures, and often subsequently, taking the place on Buddha’s footprints of the wheeled disk of the sun with its thousand spokes. This possibly was the source of the lotus-marked footprints.

The device of a lotus-flower in the hand seems to have symbolized not merely divine birth but the possession of life everlasting, and the preservation and procreation of life. Such was it with the Aryan queen of heaven, the Brahmāni goddess Śrī, and her derivative, the Buddhist Tāra, both of whom have the title ‘Garlanded by Lotus’ (T. Tan. B. 44.4). In the mystical Vedic, pre-Buddhist Satapatha Brahmān the lotus was a symbol of the void (śūnya), and we have seen, it appears to have this sense in the famous Oṁ maṅgaḥ pādaḥ Huṁ formula (see J. B. 4.7). Probably, therefore, such a meaning may be in part involved in the lotus held in the hand of Avalokita, the consort of Tāra, to whom formula is now specially addressed. In the hand of Maitreya, the next coming Buddha, and other divine bodhisattvas of Gandhāra, the lotus in the hand, however, may have had a metaphysical significance and have denoted the preservation of the life of the law and the re-vivifying of the same. It was possibly in this sense as a symbol of the law that we find that a lotus-flower adorns the hands of many of the images of Buddhas and bodhisattvas who do not specially possess the attribute of a lotus held in the hand (see list below).

The gods and goddesses of Buddhism who hold a lotus in their hand are here enumerated; this lotus, with the object which it carries, forms one of the chief conventional attributes of the particular divinity.

The simple lotus, one of the three kinds specified above, is the especial mark of Tāra, Avalokita, Padmapāni, and, occasionally, Maitreya. The lotus surmounted by a sword is an attribute of Anoghamīpa, Khaṭgarīva, Sinhānanda, Tāra, Padmapānapalvotika, and Maitreya; surmounted by a thunderbolt (vajra), it is an attribute of Śānti-prajñā, and mild Vajrānī (Śānta); surmounted by a book, it is an attribute of Mañjuśrī and Prajñā Pūrabhāmitā; surmounted by a jewel, it denotes Kṣitigarbha and Eka-jata; by a sun, Samanta-bhadra. Among Tibetan saints the lotus is the especial emblem of the founder of the Order of Lamas, Padmakara, ‘the Lotus-born’; and Tsongkha-pa, the founder of the Yellow-Hat reformed sect, the Gelug, has two, one of the lotus and one of the seven treasures (see J. B. 7.15). Images of divine symbols, such as the seven treasures, are figured usually upon lotus-flowers.

In Buddhist mythology the lotus’ gives its name to two out of the twenty-four ‘previous’ Buddhas of the Pāli canon, namely Padma (properly Padma) and Puddumțara, and to several nida demigods, Padma, Padmottara, and Padmaraka; also to several of the Buddhist halls, namely Padma, Mahāpadma, and Pupādarika (Sutta Nipāta [SBE x. p. ii. 121]); these appear to be named from the flower-shaped bells which torment the inmates therein. It is also used to denominate the highest number known to Buddhist computators, namely 10,000,000, or 1 followed by 119 eipher, which is called a pāda or, in Pāli, padma, whilst the white lotus represents Śakyamuni as the supreme god of the universe and the possessor of everlasting life. See following article.

Literature.—This is sufficiently quoted throughout.

L. A. WADDELL.
LOTUS OF THE TRUE LAW.

No book gives a more accurate idea of the literature of the Great Vehic le or Mahāyāna (q.v.) than the Sākyamunīvvesāvatara. It is not only a most important pamphlet, nor does it give a better impression of the character of the changes undergone by Buddhists in certain surroundings, from its beginnings down to the earliest age of the Christian era.

7. The Buddha in the Lotus.—In the ancient Pali documents Sākyamuni is a man, a simple mortal, and he moves in a historical background. In the Lotus he is a sublime being, eternal or almost eternal, who utilizes a phantasmagoric setting the divinity, i.e. the divine splendor and the majestic power, which Buddhists now attribute to the Buddha; he is a god as Hindus and Buddhists understand the word—that is, to say, he manifests himself especially by mythological performances, although he is a stranger to all notions of creation or of immortality. Such a being has no history; therefore, as Kern says (SBE xxii. p. ix), the Lotus is a sort of dramatic performance, an undeveloped mystery play... It consists of a series of dialogues, brightened by the magic effects which would be supernatural in scenery.

Among the most characteristic episodes we may mention the silence which Sākyamuni maintains for thousands of centuries, lengthening out his divinity into this vast distance, until the appearance of the stūpa of a deceased Buddha, who had been in Nirvāṇa for a long time, but who wished to hear the Lotus (xi.); the appearance of immemorable saints and Buddhas eager to hear the teaching of the Master, and coming from all the worlds. By means of Kern’s excellent translation (SBE xxii.) we can appreciate the character of the ‘sphinxes’ and the ‘supernatural’ attributed by the authors to the story of the Vehicule to the Buddha.

Although completely divine, Sākyamuni is not God in the Lotus. He is Buddha ‘from the beginning’; he is the father of the worlds, the father of the future Buddhas and saints, the universal providence. In order to save human beings and to lead them to Nirvāna he appears in a human form which is illusory; he is born, teaches, and enters Nirvāna—stages which ordinary men can see; but in reality, while illusory Sākyamunis are appearing in this world, the true Sākyamuni reigns on a ‘Mountain of Vultures,’ surrounded by future Buddhas, and imparting to them the true teachings of the true Buddha.

It is this true Sākyamuni that the Lotus shows.

Nevertheless, as we said, this god is not God. There is not a single word in the Lotus which is not capable of an orthodox, i.e. ‘atheistic,’ interpretation. Sākyamuni may be styled Swayamabhū,5 who is by himself,5 because, like all the Buddhas, he becomes Buddha without receiving the teaching from another. He is Buddha ‘from the beginning’; but, just as the lotus mentions a Buddha who will one day replace Sākyamuni, so we must believe that Sākyamuni is Buddha ‘from the beginning of this cosmic age.’ We know, moreover, that, at the same time, Brahmagupta himself

5. The development of the tongue, capable of covering the whole face, is one of the signs of the ‘great man’ in the ancient sources.

6. Contrary, evidently, to all Buddhist dogmas, the being ‘who has adoration’ (Nirvāṇa) is divisible to gods and men, since he is annihilated or has entered into eternal rest. The appearance of ‘deceased Buddhas’ in the Lotus is probably, therefore, only a case of the magical or deceptive power (māyā) of Sākyamuni.

7. A friend of Sākyamuni, who was turned by the non-Buddhists into a heavenly mountain.

8. See art. BODHISATVA.

10. Of this expression with the one described in art. Māra’s, Makara is the symbol of the beginning, the middle, and the end, and hence the External and also the Absolute—quite different from Sākyamuni in the Lotus.

VOL. VIII.—10

is not, properly speaking, eternal. Besides, Sākyamuni is not the only Buddha; other Buddhas reign and teach at the same time as he, in different countries, in nature, although not necessarily in merit, glory, or activity as a saviour; every Buddha has his own ‘field.’ If he is the father of the world, it is not because he creates human beings; it is because of his teaching era. So much for speculation. In practice, in the religious sentiment that the Lotus assumes, Sākyamuni is really God, providence, and reward of the saints.

2. The doctrine of salvation in the Lotus.—According to the Lotus, the saints of the Little Vehicle (see art. ARAHAT) or, Hsin-hua, in the Chinese, the saint Nirvāṇa; they believe that they will not be re-born, but they are re-born to receive the true doctrine from the heavenly Buddhas. Deliverance cannot be obtained except by this means, and only by faith in Buddha; and for that purpose it is necessary to enter the Vehicle of the future Buddhas (see art. BODHISATVA). This doctrine is set forth in various parables, the most famous of which is that of ‘The Prodigal Child’ (iv.) it is not without a somewhat distant resemblance to the Gospel parable.

It is... as if a certain man went away from his father and beheld himself to some other place. He lives there in foreign parts for many years, twenty or thirty or forty or fifty. In course of time the one (the father) becomes a great man, the other (the son) is poor; in seeking a livelihood he comes to know all directions and goes to some place, where he may come to remove to another country. The father is vexed at having no son; but one day, when, sitting at the gate of his palace, he is dealing with the affairs of millions of Sovereigns (nāraka, etc.), he sees his son, poor and tattered. The son thinks, ‘Unexpectedly have I here fallen in with a son in foreign parts. People like me have nothing to do here; I shall go; in the street of the poor I am likely to find food and clothing without much difficulty. Let me no longer tarry at this place, lest I be taken to do forced labor or incur some other injury.’ The father orders his son to be brought to him; but, before revealing his birth to him, he employs him for some years at all kinds of work, first at the menial kind, and then at the most important. And the father treats his son with paternal kindness, but the son, although he manages all his father’s property, lives in a tattered cottage, and believes himself poor. At last, when his education is completed, he learns the truth. In the same way we are the sons of the Buddha, and the Buddha says to us to-day, ‘You are my sons.’ But, like the poor man, we had no idea of our dignity, of our mission as future Buddhas. The Buddha has made us reflect on inferior doctrines; we have appreciated the value of knowledge and have found that it is a great misfortune not to possess it. And, through the Buddha, we possess knowledge and we are now undertaking to make others possess it. If the Buddha has revealed to us that this knowledge is to be ours, and that we are to become Buddhas like him.

Episodes.—Although the formal part of the book (see below, § 4) is almost entirely devoted to Sākyamuni, chs. xxi.—xxvi. glorify several Bodhisattvas. We may mention the Astapāda of Avalokiteśvara (xxvii.), which is one of the most widely read works in China (see art. AVALOKITESVARA); the myth of the ‘healer king,’ Bhajājasāraja (xxvii.), a Bodhisattva who sets fire to his gigantic body for the salvation of human beings, and who, like one of the gods, is not subject to death. In the Chinese Great Vehicle the practice of burning the skull is connected with this myth. In submitting to this cruel rite, the monk fulfills the duty of self-sacrifice incumbent on future Buddhas (cf. J. M. de Groot, Code du Mahāyāna en Chine, pp. 50, 217, 227). The history of Sadāparamita, ‘the always subdued one,’ ‘the always despised one’ (xxxix.), exemplifies the transcendent purity of the soul; the supreme purity and pure-heartedness to worldly wisdom and scepticism (Kern, in SBE xxii. p. xxxi). We should not have a right idea of the Lotus if we did not mention the glorification of the dharmas, or moral.

1. See art. MĀRA for the plurality of Buddhas and AVARĀMA for the stages in the divinization of the Buddhas.

2. With this idea is one middle and the end. Therefore the External and also the Absolute—quite different from Sākyamuni in the Lotus.
LOTZE.—I. General philosophical position.—
Among German philosophers of the period which opens with the triumphant advance of natural science about the middle of last century, the most eminent name is undoubtedly that of Rudolf Hermann Lotze. learnt a great deal from Hegel, but in his thinking and construction of an all-encompassing theory of the universe which does not fall short of the claims of modern science, and at the same time assigns a real value to the results of the great idealistic movements of German philosophy in the preceding period, Lotze, in fact, who first directed those results to the true path. To him belong, moreover, the distinction of having stated and discussed the problem of thought with such outstanding clearness, force, and thoroughness that even in the most perplexing questions the reader is stimulated to form his own conclusions, or at least enabled to realize the difficulties that stand in the way of a definite result. The several philosophical sciences, accordingly, are indebted to Lotze’s tireless intellectual labor for an effective and permanent furtherance and enrichment in numerous directions; and, indeed, it cannot be said that the results of his work have as yet been exhausted, or have been worked out in due measure by the general mind.

2. Life and works.—Lotze’s early life falls within the period dominated by the thought and sentiment of Romanticism, followed by his entry into the institutional church. In May 1817 at Bautzen in Lusatia, he was grounded in classical study at the gymnasium of Zittau. Even as a boy he displayed that combination of creative talent and great analytical thought which characterized his ripening years, and in a number of poems composed when he was about sixteen, and given to the public among his posthumous works, we see the rudiments of the comprehensive views which he subsequently elaborated; they reveal a maturity which amazes us in one so young. In 1834 he entered upon his academic course at the University of Leipzig, where he devoted himself to the study of medicine, and so came into practical touch with scientific pursuits and with the experimental methods of natural science. Simultaneously, however, he sought to satisfy his philosophical and aesthetic aspirations by the study of German idealism, and to this end attended the lectures of Chr. Weisse. What he won from his University studies was, above all, the conviction that the mechanical mode of interpreting nature must be extended also to the organic, animate sphere, and that the current uncritical doctrine of vitalism must be abandoned, and from the scientific field (cf. his dissertation, De futura biologiae principiis philosophicis, Leipzig, 1838); and this challenge to vitalism continued to be one of the leading features of his critical activity until his view at length won general acceptance.

After practicing for a time as a doctor in Zittau, Lotze qualified as a Doctor both in the medical and in the philosophical faculty of the University of Leipzig (1839), and from that time to his call to Göttingen in 1844 he not only labored successfully as an academic teacher (he had become a Professor Extraordinarius in 1839) and achieved remarkable fertility as an author. In 1841 he published the first of his greater philosophical works, the *Metaphysik*, in which he stood forth as an independent thinker who had struck out upon fresh paths, though at the same time he adhered to the impetus which he had received from Hegel and Herbart is clearly traceable in the work. The distinctive feature of the *Metaphysik* is its constant presentation of the idea of the Good, that is, the ultimate root of reality—it is to be found only in what virtue by its unconditional value deserves to exist in this supreme sense. This line of thought, reminding us of Fichte and the Platonic insistence upon the supremacy of the idea of the Good, finds pointed, if somewhat paradoxical, expression in the concluding statement of the work, viz. that the beginning of metaphysics lies not in itself, but in ethics. In 1849 Lotze issued a second work of importance, his *Allgemeine Pathologie und Therapie als mechanische Naturwissenschaften*. Here he made a frank and bold admission of the mechanical theory of things to the field of organic life, where the scientifically inadequate and, indeed, inadmissible idea of vital force had so long been held. To him belongs, likewise devoted a special article entitled ‘Leben, Lebenskraft,’ in R. Wagner’s *Handwörterbuch der Physiologie* (Göttingen, 1843). In 1848 he also completed his *Logik*, in which he works on independent and often fresh lines, and strenuously emphasizes the ‘spontaneity’ of our thought-processes. His leading psychological views, he brought out at some length in another article in Wagner’s *Handwörterbuch*, viz. ‘Seelen- und Seelendasein’ (1846), the most notable features of which were its doctrine of the substantial unity of the soul as a real entity and its unemotional opposition to the materialistic views then forcing their way into psychology. His opinions in the field of aesthetics he set forth in a treatise entitled *Über den Begriff der Schönheit* (1845), which was soon followed by *Ueber die Begriffe der Kunst- und Schönheit* (1847)—both appearing in the *Göttinger Studien*.

His *Allgemeine Physiologie des körperlichen Lebens* (1851) and *Das Leben* (1852) develop the fundamental ideas of the *Pathologie*, seeking to examine more closely the validity of the procedure by which the mechanical method is extended to the organic sphere, as well as the psychological, and to define the necessary elements of that application. It is worthy of note that here
Lozze, in opposition to the parallelistic theory, quite definitely champions the hypothesis of a causal connexion between the physical organism and the soul, and to this he adhered all his life. As regards the relation between the physical organism and the soul, in fact, he holds that the former is simply a system by which the external stimuli are enabled to make a due impression upon the latter, whereupon, again, the impulses of the soul are brought to bear upon the external world. The life of the soul is thus by no means a mere copy of the bodily life; the latter is merely the vehicle of the former, and makes it subservient to its own higher ends.

From 1856 to 1864 appeared the three volumes of Lozze's great work, *Mikrokosmus* (Eng. tr., 2 vols., Edinburgh, 1888), in which he set forth his philosophical system as a whole. His previous treatises, devoted almost entirely to a consideration of the basis of human life in nature, are here supplemented by a profound treatment of human life as expressed in history and the forms of civilization, and the work culminates in a survey of the universe from the standpoint of the philosophy of religion. The *Mikrokosmus* as a whole is dominated by the purpose in which Lozze's life-work in relation to his age took definite shape—to show how absolutely universal in its application, and at the same time how subordinate in its significance, is the function performed by the metaphysical concepts of the world. It is in reality the philosophical problem of the age that Lozze undertakes to solve; he makes it his task to refute the assumption that the metaphysical concepts of the world depend on any necessary consequence a materialistic conception of the world; and his conclusion is that mechanism is simply the aggregate of the means by which the highest end is realized by itself, and thus must not be allowed to rank as the ultimate reality. Hence, in particular, such mechanism does not conflict with that freedom of individual volition on which the stability of the moral ground, the case is rather that it is to be conceived as simply the necessary condition of the efficient action of the autonomous will—as the mode of its self-realization by a free and independent act. This mechanism implies that the real world is partly automorphic, having its action fixed as by clock-work; on the contrary, the essential ground of the concatenation and process of the world is found in Lozze's Infinite, the world, or as he conceives it, only as a living and all-embracing deity.

Lozze's next work of importance was his *Ge- schichte der Ästhetik in Deutschland* (1886). This work comprises (1) a history of the general points of view, dealing in the main with the aesthetics of Kant and of German idealism, but also treating of Herbart's views, and making reference to the fresh perspectives opened by the experimental method of Fechner; (2) a history of the fundamental aesthetic conceptions—"the agreeable in sensation," "the pleasing element in intuition," and "the beautiful in reflection"; and, finally, (3) a history of the theories of art as developed in the various provinces of aesthetics.

In 1874 and 1879 respectively he published his last philosophical work, *Metaphysik* (Eng. tr., of both, ed. B. Bosanquet, 2 vols., Oxford, 1887; *Metaphysics*, 2 vols., do. 1887, *Logies*, 2 vols., do. 1888) as the first two volumes of the *System der Philosophie with which he hoped to crown his life-work. The third part, which was to be devoted to ethics, aesthetics, and the philosophy of religion, was never completed. Lozze died in July 1881, shortly after taking up work in the University of Berlin, to which he had been called by the veneration shown him by the students of the last year. For the aspects of his final theory of the world, the composition of which in system he could not finish, we are therefore dependent upon his earlier works, especially the *Mikrokosmum*. Much valuable additional material on many points is to be obtained from the dictated portions of his lectures, edited by E. Reichsle (2 vols., Lozzei, 1881 ff., Eng. tr., ed. G. T. Ladd, *Lotze's Outlines of Philosophy*, 6 parts, Boston, 1884-87).

3. Philosophical teaching. — The scientific foundation of Lotze's philosophy is that of an immanent universal law of causation, and the fundamental postulate of all natural science, viz., the assumption of a universal law of causal connexion operative among the elements of reality; or, to speak more precisely, he is concerned with the problem of "transitive action" (transtransition Wirken), i.e., the question how a change that occurs in an object A can be connected by a universal law with a change that takes place in a separately existing object B. In Lotze's view the fact of such connexion leaves us no option but to discard the theory that separate objects have an independent existence, and to regard all elements of reality as comprehended in a unity, in an "infinite" world, in the Infinite, so that what was at first conceived as a "transitive action" between separate substances passes into the conception of an immanent operation within a unitary substance, or world-ground. This Infinite, if it is to supply a real basis for the facts in question, cannot in the last resort be thought of otherwise than as analogous to our own spiritual being, though, of course, as raised to an incomparably higher power and freed from the limitations necessarily inherent in human nature as a finite thing. Ultimately, therefore, the world-ground is dealt with as an infinite spiritual being, or deity, the entire process of things being conceived as immanent in this deity, and as integrated and sustained by the unity of its being.

Lotze then proceeds to deal in a thorough-going way with the idea that this world-ground or deity forms the one ultimate basis of the existence and interpretation of all things. The elements of the real are all merely automorphic, determined from the connexions of the Infinite; at a later period Lozze preferred to call them its "actions." Such actions of the Infinite he divides into two classes: first, the actions which, in its life, produces the parts of the world, or as he conceives it, the world-ground; and, secondly, the actions always maintained in uniformity by it; and, indeed, these two actions are not always (so) maintained, but emerging at distinct points of the world-process, and for a section of that process generating a not previously present centre of "internalization" (*Verinnerlichung*). Outside of and prior to the activity of the Infinite, however, there are no universal laws operative per se, nor any so-called eternal truths; there is no independently valid "law of occurrence" (Recht des Geschehens) or of existence; "law" and "truth," indeed, simply express the mode of realization by which the Infinite chooses to effect its will, and their validity depends absolutely upon the will of the Infinite, and lasts only so long as that will remains one with itself—a self-identity which, however, must be regarded not as a metaphysical necessity, but as a consequence of the ethical nature of the world-ground or deity, in the sense of the latter's "fidelity of existence," as spiritual entities, as of kindred nature with the Leibnizian monads. He was led to take this view mainly by aesthetic motives, as also by the con-
viction that a purely material reality could have no independent existence. But, as he gradually brought out his doctrine of the Infinite, the divine world, his hypothesis of the animistic nature of reality was more and more dispensed with, becoming ever the less necessary as what it had been intended to supply was equally well and, indeed, even better supplied by the fundamental position to which he latterly attained. He came at length to the above-mentioned conception of the material elements of reality as the mere 'actions of the Infinite,' maintained in a condition of equilibrium and thus differentiated in the clearest possible way from souls. Souls themselves, however, were likewise conceived as 'actions of the world-ground,' but as specially distinguished by their admirable and at bottom inexplicable capacity of feeling and knowing themselves as the active centres of an out-flowing life (Met. p. 601 f.). Some writers are of opinion that this view involves a denial of the doctrine of free will—a doctrine which Lotze always distinctly insists upon as an essential element in his theory of the universe, and for the sake of which he rejects, e.g., the pantheism of Spinoza, notwithstanding the superficial resemblance between that theory and his own. Obviously, therefore, Lotze himself did not believe that his conception of souls as actions of the Infinite in any way implied the suspension of personal freedom; but it is nevertheless true that he refers to the subject only in certain religious-philosophical reflections, and never deals adequately with the crux which undoubtedly shows itself at this point, so that in his metaphysical construction he has left here a problem still unsolved.

Taken all in all, however, since the development of Lotze's thought is never guided by a purely systematic interest, but on the contrary, takes the fullest possible account of experience, his philosophy presents a conception of the universe which is distinguished by a marvellous unity and completeness.

LITERATURE.—Of the more important works dealing with the life and philosophy of Lotze, the following may be named: E. Pfeiffer, Lotze's philosophische Weihnachtsrede nach ihren Grundlagen, Berlin, 1884; O. Caspari, Hermann Lotze in seiner Stellung zu der durch Kant begründeten neueren Geschichtsbegriff, Breslau, 1894; E. von Hartmann, Lotze's Philosophie, Leipzig, 1898; E. Rehnisch, Zur Biographie Hermann Lotze's (see in Lotze's Grundlagen des Anschauens, at the beginning), and 'Hermann Lotze' in Neues Lausitzer Magazin, xvii. [1901]; R. Faustenberg, Hermann Lotze (in Biographie Klassiker der Philosophie, vol. xii.), and art. 'Lotze' in Allgemeine deutsches Biographie, vol. viii. [1897]; W. W. M. Westenholz, Hermann Lotze, J. Heidelberg, 1913. For further St. cf. D.A.P. II. [1905] 347-500.

M. WESTENHOLZ.

LOURDES.—Lourdes, a small town in the extreme south of France (diocese of Tarbes, department of Hautes Pyrées), has become known as a place of pilgrimage only since 1858. In view of the insinuation that the development of this shrine represents a conscious design on the part of the Roman Catholic clergy to exploit the credulity of the masses in the interest of the then newly defined dogma of the Immaculate Conception, it is important while to point out that in 1858 and for some years afterwards Lourdes was one of the least accessible spots in the country. The railway which was at Bayonne 80 miles off, and the road through Lourdes led nowhere except to some little-frequented health-resorts in the Pyrenees. If there were any question of an impostor in the fraud to impress the world, the choice of such a site would be inexplicable. Whatever judgment may be formed as to the nature of the phenomena of healing now witnessed at Lourdes, a careful study of the evidence regarding it at first brought that the shrine into notice tends unmistakably to establish the good faith of all the persons primarily concerned. The history of the grotto of Lourdes is briefly this.

About mid-day on Thursday, 11th Feb. 1858, three little girls went to gather wood on the banks of the Gave. One of them, Bernadette Soubirous, a delicate child of 14, who looked much younger and who then could neither read nor write, was left behind by her companions. She wandered far away on a narrow strip of ground between the river and a low cliff known as the Massabielle, in which there was a shallow cave or grotto with a sort of niche in the rock above it. For uniformity of practice, I say until some rustling of the leaves as is caused by a sudden breeze, and, looking in front of her, she saw standing in the niche the figure of a beautiful young lady clothed in white and with a rosary in her hands. The figure made the sign of the cross, and the child, after doing the same, began to say her rosary. When the rosary was finished, the apparition smilingly saluted the child, and disappeared. This was the first of a series of similar apparitions of which a few details are given below. It is to be noted that, contrary to the usual experience of such visionaries, Bernadette had no clear intuition as to the identity of the heavenly visitor. Joan of Arc recognized her 'voices'—St. Michael, St. Catherine, etc.—from the first, but this was not the case here. 'A girl in white no bigger than myself was her first impression; but, on the third apparition (Cros, Notre-Dame de Lourdes, p. 16). The townsfolk, when they heard the tale, conjectured that she might have seen a soul from Purgatory who came to ask for prayers, and accordingly Bernadette went to the grotto a second time three days after, she took holy water with her and threw it at the apparition for fear the figure which she saw might be some delusion of the mind of the lady only smiled. Even after the sixth apparition Bernadette described her mysterious visitant in her patio as aqua, i.e. 'it' [cf. Spanish aquello = cosa alla], and sometimes also as un petit demilune (une petite demilune); cf. Cros, p. 62, 302]. The vision was at all times restricted to Bernadette alone; no one else saw anything or pretended to see anything—a fact which is in marked contrast to such cases as those of Marie Marguerite Bérenger Le Pontin in the Dordogne in 1889 (see L. Marillier, Proc. Soc. for Psychological Research, vii. [1891] 100 ff.) or that of Knock in Ireland in 1879-80 (see M. P. Cusack, The Apparitions of Knock, London, 1880). On the other hand, the child herself usually fell into a state of trance in which her features were completely transfigured, and Dr. Dousans, who went at first out of curiosity as a sceptical scientist in search of experience, testifies that the flame of a candle playing upon her hand for many minutes neither roused her from her trance nor left any trace of burning upon the skin. Bernadette, as early as 21st Feb., was subjected to the severest cross-examination by the commission of police, M. Jacomet, and by the Procureur Impérial, M. Dutour, both of whom threatened her and her parents with punishment if she persisted. Still later, on 28th Feb., she was severely cautioned by M. Hives, the Juge d'Instruction, her proceedings at the grotto were closely watched by gendarmes, and she met with a severe rebuff more than once repeated, from the curé, Abbé Peyramale, to whom the apparition had directed her to address herself. None the less, though timid by nature, she was never in the least shaken in her account of what she had seen, nor was she cowed by threats of punishment. Not one of the many formidable persons who cross-questioned her detected any signs either of unbecoming boldness or eagerness of a hysterical temperament. There is a large amount of contemporary evidence upon the point in the works of Cros, Estrade, and Dousans. As
early as 27th March 1858, three physicians, appointed by the Prefect of the Department, who were present at the manifestations, made a medical examination of Bernadette. In their report, dated 31st March (before the apparitions had come to an end), which is still preserved, the whole story of the eighteen times—the 13th and the 14th of February, each day with two exceptions from Feb. 18th until March 4th, and on March 20th—out of the 18 apparitions of the Blessed Virgin said to the child of Feb. 18th: "Will you do me the favour (me faire la grâce) of coming here daily for a fortnight ?" "I do not promise to make you see me in the next," I want many people to come." The Virgin added to her during the apparition: "If you come, you will kiss the earth for sinners. Penitence, Penitence, Penitence." "Go tell the priests to cleanse a chapel to be built." "I wish to have people come here in procession." "Go and drink of the fountain and wash yourself in it." "Go and eat of that grass which is there." On March 26th the Virgin said: "I am the Immaculate Conception." One point claims to be especially noted. These visions did not come to Bernadette at command. On two important occasions, as the inscription notices, she failed to see the Virgin on the 2nd Feb. and 3rd March, when she herself certainly expected to do so and when a large crowd—in the latter case some 4000 people, many of whom had spent the night upon the spot—had come long distances to assist at the manifestation. But, as sensible critics remarked even then, this arbitrary behaviour of the mysterious lady was a point in favour of the genuineness of the apparition. "If the child had simply invented the apparition," said one of them, "what was there to prevent its happening to-day, just as it happened yesterday?" (Cros, p. 121.)

But what has given permanent significance to these occurrences was the discovery of the spring the healing virtues of which now bring hundreds of thousands of pilgrims to Lourdes. It was in the spring on the 26th March, when the Virgin said that the child should drink three times of the water of the grotto and that if it was pure the spring would become famous. The child obeyed and the spring was found to be rich in healing virtues. It was situated on the site of the apparition, but it was not known to the inhabitants of Lourdes. A rivulet was found to come from the grotto and it was named 'The Virgin's Spring.' This spring became famous and is still used by pilgrims. The discovery of the spring was a major event in the history of Lourdes and it has continued to be a source of healing for many people.
apparitions of the Blessed Virgin have all the characteristics of truth and that the faithful are justified in believing. Since these apparitions were formed and approved by the authority of the Holy See and the approbation of the ecclesiastical establishment of the marvellous cures which take place at Lourdes must raise the whole question of the possibility of miracles. For Roman Catholics both the possibility and the necessity of the phenomenon by which the Divine Omnipotence suspends at times the operation of natural causes are fundamental dogmas of the faith. Given the hypothesis that miracles may occur and do occur, it is difficult to imagine any facts more wonderful, either from the inverterate and organic nature of the diseases healed or from the abundance of the evidence with which the cures are attested, than the miracles worked at Lourdes. For those who wish to examine the subject for themselves no better or more convincing examples offer than the cures with which Emile Zola was brought into contact during his visit to Lourdes, and which he has introduced under fictitious names into his novel which bears that title.

Clemenceau Trouvé (collected in the novel Sophie Couture) was cured instantaneously of a periodic fever which had lasted six months; he felt suddenly well, and such was his state of health at the moment of his balloting in the piscina, was suppurating freely. Marie Lesseure (niece Etienne Rousset) was also instantly healed. This was a most repulsive case of lupus, in which the face had been so eaten away that the semblance of a human countenance was lost. The evidence quoted by Bertrand in his last edition (Histoire, p. 252 f.) shows that seventeen years after the cure Mme. Roussier was a healthy woman with healthy children. Mme. Gerdet (in the novel Mlle. de Guerriole) had been a case of the most desperate of neuralgias, and after a temporary relapse, owing to the excitement of the pilgrimage, relapsed soon after and fell a victim to the old disease which had never really relented. In point of fact, the real Marie Lebrun was in the enjoyment of vigorous health in 1902, fourteen years after the date of her cure, and in a fine figure for these cases, if ever. Zola (who in his last edition has followed these cases up to the latest available date).

But examples of such cures are almost innumerable, and they may perhaps best be illustrated by a very typical one, especially as they were brought, in the case of Grandmaison's Vingt Gourdeurs à Lourdes, who gives an admirable account of specially selected cases. It is not, of course, for one moment denied that nervous states, and from this, most especially suggestion, have accomplished many marvels, but the instantaneousness of the cure, as witnessed more particularly in such cases as that of Pierre de Rudder, Mme. Roussier, Gabriel Gargant, etc., can in no way be paralleled by any of Charcot's experiments at the Salpêtrière or elsewhere. Again, there are the extraordinary cases of the healing of quite young children, as, e.g., the two-year-old infant of Dr. Aumassie de Nantes, born with a club-foot and instantaneously cured at Lourdes, of which a remarkable account is given in her posthumous work (1887, p. 358 f.). It may be confidently affirmed that the more carefully the evidence is studied, the more certain it becomes that the words 'suggestion' and, more particularly, 'hysteria,' are not capable of accounting for the phenomenon witnessed at Lourdes. In the preface to a booklet on Lourdes published by R. H. Benson a few months before his death, the writer describes his meeting with a famous French writer, in which he learnt that he (Benson) was the greatest discoveries of modern times—who has made a special study of Lourdes and its phenomena. The conclusions of this scientist, which, as Benson says, are particularly interesting because he is not himself a present a preachers (Catholic), were formed and approved by the authority of the Holy See, and the approbation of the ecclesiastical establishment of the phenomenon by which the Divine Omnipotence suspends at times the operation of natural causes are fundamental dogmas of the faith. Given the hypothesis that miracles may occur and do occur, it is difficult to imagine any facts more wonderful, either from the inverterate and organic nature of the diseases healed or from the abundance of the evidence with which the cures are attested, than the miracles worked at Lourdes. LOVE (Psychological and Ethical).—1. The psychology of love. — Love, as a complex psychical experience, may be classified as a 'sentiment' or 'passion,' the term 'passion' being here understood not as an explosive emotional outburst, but as a deep and steadfast enthusiasm. Whether we call love a sentiment or a passion will depend on the point of view from which we regard it. 'Sentiment' and 'passion' stand alike for stable and complex organizations of the emotional life, but whereas the term 'sentiment' implies a higher intellectual development and greater refinement and subtlety of emotional feeling, the characteristic feature of a passion as distinct from a sentiment is its forcefulness. A passion is an emotional complex of a predominantly forceful kind.

A passion has been defined by A. F. Shand as an 'organized system of emotions and desires.' 1 When, as in the life of the lower animals, emotional impulses are independently active, they may still exercise some mutual restraint: a dog summoned from the pursuit of a cat by his master's whistle no longer feels the pure joy of the chase, for the fear of his master's displeasure tends to neutralize the joy. But such restraint is external and contingent: it does not suggest self-restraint. Where, however, the various emotions of the soul have found an object on which they can concentrate their desire or their aversion, or have become devoted to an idea about which they cluster and develop, a system of self-restraint grows up within the emotions.

2 In every passion there is a system of self-control regulating more or less efficiently the intensity and behaviour of its emotions.

A mother loves her child. She may tend to be jealous if an aunt or a nurse wins too much of the child's affection. But, if her love for the child is genuine, she is grateful for the kindness shown to the child, and the jealousy is inwardly controlled. Or she may yawn to shield him from every danger, but will surrender him despite her fears to the inevitable perils of harshly growning. Here emotions of anxiety, an inner assurance, like those of jealousy and gratitude on the former supposition, all feel the dominance of the steady, disinhanced...

2 P. 488.
emotions and desires which, by very reason of its systematic character and the principle which unifies it, is stable, regulative, inclusive, and instinct with a profound rationality.

Our normal development of love the fundamental condition is that there shall be joy in the object.1 If there is this, the rest will follow; if there is not this, love is doomed from the outset.

The emotion of joy is characteristically spontaneous, expansive, vital. Its very expression bears witness to this.

'The joy of the beast dieth; the eye of the weary are filled; the heart of the NoSuch is not satisfied.

The joy of the youth is full of gladness; the heart of the elderly is full of sorrow and their respective impulses. It is the inclusive passion and, in this supreme sense, the master-passion.

Love and belief. — Belief, following W. James's famous definition, is the sense of reality; or, if we wish to distinguish belief from faith, the intellectual from the intuitional aspects of spiritual sensibility, we might say that faith is the sense of reality, belief the sense of truth. Peirce, in his Illustrations of the Logic of Science' (Popular Science Monthly, 1, [1877], 95) has expressed this somewhat differently, but with similar purport, as the goal of thought and the starting-point of action. It is essentially the self-confidence that comes from having raced beyond doubt, and, in its place built up settled habits or rules of action, the assurance that one is ready to meet the contingencies of life in any direction. At root this view identifies belief with the sense of power, power being here conceived as the reality with which our life is invested when doubt passes over into belief. To have a sense of power is to believe in oneself, to be ready to set one's own personal mark on whatever one touches; in a word, to hold, in James's phrase, that the fons et origo of all reality is ourselves.

Now, if we turn from belief so understood to love, and ask what is the relationship of the two, we shall find this: that what we mean by love is to believe in the existence of another human being. No doubt there is pleasure in love, for our emotions are toned by pleasure or pain, but such pleasure is but the pleasure of the joy. There is also a self-enlargement in joy, but this is not the same sort of self-enlargement as in love, for in love the self attaches not to the object but to the object, and to have joy in an object is to value it for its own sake. Joy is thus an active disinterestedness, and its impulses are not only to maintain the object, but to surrender itself to it and rest freely in it as something of intrinsic value and promise.

To have joy in an object is to respect its individuality. This is the very idea of delighting in it for its own sake. To have joy in what is real is to subordinate individual opinion wholeheartedly to the truth of the matter; to have joy in what is beautiful is to trust to the inspiration of beauty and not to the contrivance of artificers.

The interests of the object dictate at each step the line of advance. And vice versa: what is essential to joy is its development of love, what is not is the whole of love, for love includes not only joy, but sorrow, and it includes these as co-operative and interpenetrative emotions. The joy of presence is followed by the sorrow of absence, and this sorrow at absence, possessing the imagination, has a selective and idealizing influence. We remember and dwell on those aspects of the object that tend to endear it and make it appear still more worthy of our joy and devotion, so that, when the object is restored, our joy in it is deepened and strengthened by these new insights won through sorrow. Thus sorrow and joy co-operate in the strengthening of the passion of love. But of the two emotions joy is dominant, sorrow recessive.

For sorrow is ever a search for a lost joy, whereas joy is not a search for a lost sorrow. Moreover, whereas joy is joy in retrospect and prospect which is operative in and through sorrow, sorrow would have a contracting and depressing influence over life.

Love, then, is more than our dominant emotion joy; it is more than any mere synthesis of joy and sorrow.
1. The ethics of love.—We have spoken of love as a sentiment or passion. We have spoken of it also as a power. We might go one step further back and speak of it as an instinctive power or an instinct, as a deep-rooted conative tendency shaped and determined in connection with the supreme end of the preservation of life, i.e., of natural or spiritual existence whether in the individual or in the race. There is indeed good ground for claiming love as an instinct, provided we do not forget the fundamentally conative character of instinctive behaviour, or insist that instinct shall from the outset have its disposal some mechanism through which it operates. There is no such mechanism in the passion for the ideal, and yet this passion has the originality and fundamental force of an instinct. But this is not the place to attempt a systematic vindication of the independence of the spiritual life. It will be enough if we assume as the fundamental postulate of ethical science that the love animating by the ideals of truth, beauty, and right is not a mere derivative from the natural life of the body, but, as a poet once said, and not an earthly plant—has independent instincts of its own, instincts of spiritual self-preservation, self-ideal, and self-heroism, and that the instinctive passion por excellente is love.

2. Virtue is love.—When love is conceived in this ultimate way as the love of a new life, it is legitimate to look upon it as the supreme virtue. By virtue we understand the special power (δύναμις) and special excellence (δόξα) which enable us to live the best life. Now the question 'What is virtue?' is the central problem of the postulate and the core of the whole, the fundamental problem of the ethical theory. The three answers, properly interpreted, is not only the maturest, but also the most inclusive answer of the three. Of these three solutions—(1) Virtue is knowledge (Socrates), (2) Virtue is the habit of right willing (Aristotle), (3) Virtue is love (the solution of Christian ethics)—the second superseded and includes the first, and the third succeeds and subordinates the second. Aristotle virtue is primarily a matter of habit and not of mere rational insight; none the less the habit of right choosing, in which virtue essentially consists, is produced by the practical reason; for to choose rightly is in all things to choose the mean, and the practical reason alone can show where the mean lies. Thus with Aristotle we reach a more inclusive conception of virtue than that given by Socrates. The Aristotelian conception is a substitute for the Socratic only in the sense that it is a deepening or transcending of it. The Socratic 'reason' is taken up into the Aristotelian 'will' and made to function in its services. Similarly the definition 'Virtue is love' does not supersede the Aristotelian definition. It simply deepens, and by so doing develops and reorganizes it. To do justice to the value of both we must look deeper than the habit. Moral habits grow organically from the foundations, not automatically, but through the enthusiasm which we put into the task of their formation. Hence, when we say 'Virtue is love,' we mean it. We should not deny that it involves the habits of right willing. We simply emphasize the motive power which is at the root of the formation of all habits of right willing. If enthusiasm for what we love has a right to express itself in decisions and habits, it is no virtue; it is no more than the capacity for virtue. But it is especially in relation to the varied emotions and impulses, to 'whatever stirs this mortal frame,' that love stands out as the great transforming and inclusive agency, and there appear as the ultimate virtue of the spiritual life, of the life which aims at a universal or common good. Working through the emotion of anger, it is the root of moral indignation and of justice; and just as that of fear, it makes the object loved the object whose hurt is feared. It regenerates the self-regarding sentiments, transferring their affection from the atomic, unselfish, to a higher, more inclusive self; the competition of others, directed as it is against the merely individual self, is no longer felt as an injustice to one's true personality and therefore excites neither envy nor ill will. 'There is no remedy but love,' writes Goethe, 'against great superiorities of others.'

3. Nor can the inclusiveness of true love tolerate the exclusive passion of jealousy. Moreover, with the complete passing of exclusiveness not only jealousy, but pride also, is transfigured, for love is not truly inclusive until it shows itself as ready to be grateful as it is to love, generous, as ready to receive as to give. Love again is inseparable from reverence, and as such is the great security of true personal dignity. The negative element is never absent from love's positive aspect, but the inclusiveness does not mean loss of distinction between self and not-self. Intimacy with a friend through love means increased respect for his or her personality. There is 1 all love an element of reverence which guarantees that as we grow more intimate with a person, we also respect more the sense of his own reality, and most intimately associated also with the sense of our own reality. Belief or faith, an emotional belief in the intrinsic value of its object, is therefore essential to love, and this sense of personal reality. Once again—and this is a central point—love is the source and also the very substance of moral vocation. For 'will' we mean the whole harmony of vocation, decision, and resolute conduct. And, when the whole personality is volitionally active in this broader sense of the term, and this activity is motivated by the idea of a common good, then we seem justified in affirming that the love which vitalizes such activity, and the moral excellence which characterizes it—in a word, its virtue—is love. Finally, love is essential to knowledge, so that, if virtue is knowledge, it is for that very reason, and still more fundamentally, love. Love, at the root of our thinking, inspires the tendency to abandon ourselves to our object and identify ourselves with it. This has the effect of facilitating concentration and whole-hearted interest; the power of cleaving to a problem through thick and thin comes with the devotion of love. The best reason is love's reason, the reason born of sympathetic insight.

'Sympathy' is the general principle of moral knowledge, and the reason is that 'it furnishes the most reliable and efficacious intellectual standpoint.' 'Quickened sympathy means liberality of intelligence and enlightened understanding.' Or again, 'genuine moral knowledge involves that love which the result will as well as the intelligence. We cannot know the varied elements of value in the lives of others and in the possess

4 J. Dewey and J. H. Tufts, Ethics, London, 1909, p. 335; cf. also G. Stanley Hall, Adolescence, ii, 190; 'Even knowledge at its best is a form of love. Interest is intellectual love, and one of the best tests of education is the number, intensity, and distribution of interests. Even philosophy is not the possession, but the love and wishing of wisdom.'
5 Dewey-Tufts, p. 388.
L O V E (Primitive)—The passion or emotion of love is as difficult to define as life itself, and probably for the same reasons. The following statements are useful:

1. Simple love is when one has no desire for anything else.

1 Dewey-Tuttta, p. 423.
4 Ibid., p. 2.
5 "ix. moral evil, or sin, not suffering, sorrow, or pain.
more or less permanent unions fixed in social habit, merely by the operation of animal instincts. Similar results of the same causes are sufficient in this case that the animal would to preserve the race and render it efficient.

The accounts available vary from pessimistic denial of anything but reproductive impulse to fulsome praise of the physical attractiveness of the bride. The contrasts illustrate the difficulties of penetrating to the psychical processes or even the social feelings of the lower races. The Australian bride is generally dragged from home to the man to whom she is allotted. But 'love' may come after marriage from kind treatment. It is pointed out that 'love' must be assumed in Australian marriages, and a sentiment, which was a recognized form of marriage.

The Papuan language possesses no word for 'love.' The Hoes have no word for it; but 'they feel it all the same.' The Tahitians are said to form 'romantic' attachments. An observer remarks even of the Arabs that 'the passion of love is, indeed, much talked of by the inhabitants of towns; but I doubt whether anything is meant by them more than the grossest animal desire.'

The statement is probably too sweeping, as also is the statement that the Bible contains no reference to romantic love. Love-songs are rare among the lower races, probably a mere result of the imperfect development of literature. The Polynesian peoples are adept at love-poetry, which may be regarded as proving some degree of an emotional refinement, or rather irritation, of the passion of love. At the other extreme, physical contact, it has been remarked that kissing and caressing are rare among savages, except towards young children. Yet among the Eskimo 'young couples are frequently seen running about together in their favourite mark of affection, with an air of tenderness.'

Suicide, which is fairly frequent among the lower races, is often prompted by unrequited passion. But there are many trivial reasons for suicide which indicate merely a rudimentary development of character, and special conditions of social structure must also be considered. It may be regarded as a general rule that love, of any degree or character, is not an essential basis of marriage. Among the majority of early tribes marriage is a matter of arrangement; spouses are allotted by the relatives, often in infancy. In many cases such 'betrothed' couples are prohibited from all association until marriage takes place. That love, however, may be a basis of permanent marriage arrangement is probable; it is probably as essential as the needs of the offspring. Marriage by arrangement and 'the marriage of convenience' were often contracted among the Greeks and Romans. They were frequent in medieval Europe, and occur in modern civilization. But it is certain that social developments during the last century have involved a general adoption of the principle that marriage should be based on previous mutual attachment.

In the majority of early societies the two sexes are strictly separated, at least after puberty. Such a condition precludes much sympathy between youths and maidens when marriage is to be undertaken. This segregation sometimes extends to married life; in other words, there is a development of sex-separation, due either to natural inclination or to a certain subjection of women. Hence it is not surprising that among peoples like those of Eastern Africa it is regarded as disgraceful in a wife to show affection for her husband. Among most rude races the natural sentiment of affection towards a woman with more or less roughness. This is to some extent the case in barbarian and among the lower classes of civilized society. The ancient Greeks, Chinese, Hindus, and Muslims represent that stage of culture in which woman is a slave, a prisoner, or both. Notions of female inferiority combine with a sense of property and of proprietary jealousy, and polygamy in some cases is a contributory factor.

The conditions indicated above show that love in 'primitive' society had little chance of development except in and after marriage. 'Love comes after marriage' is a proverb used by Plutarch and by the Eskimo savage; it is common all over the world. What is termed 'romantic' love is rare, even in the highest societies, when the marriage state has been established for some time. Conjugal love is more affection than passion, and affection depends on intellectual and moral sympathy; community of interests, habitual association, and mutual care of children constitute the habitual characteristic of the emotion. These factors also are sufficient to produce permanence in marriage and to bind the family together. It is therefore unnecessary to call in the aid of teleology in general, or natural selection in particular, to explain the origin of the family. Nor is it possible to argue that 'love has played little or no part in the institution of the family.' Even in the cannibal Niam-niam are said by a good observer to show an affection for their wives which is 'unparalleled,' and similar statements have been made of many savage peoples.

It is a justifiable conclusion that conjugal love was real, though elementary. Combined with occasional rough treatment, it was still genuine affection, based on sympathy as well as on the sexual impulse. Similarly, in general it may be concluded that it possessed the same elements, in a less developed state and capacity, as modern love in its best manifestations. We need not accept either the frequency or the nature of any form of love or the attribution of 'chivalrous' love to Bushmen and Congo savages. Lastly, in estimating the evidence of observers, it must be remembered that their diagnoses of love are not based on one invariable scientific definition of the emotion.

1. Development of conjugal love.—The extension of the elementary sexual impulse into conjugal affection with its complex associations should be regarded as, sociologically, the most important feature in the natural history of love. This emotion seems to have developed sufficiently in the primitive society to assist in breaking down collective methods of mating, which apparently (as in Central Australia) were often liable to be induced by the hard conditions of savage life. The hypothesis is frequently put forward that conjugal and social organization are essentially antagonistic. But the pacific way in which they work together in existing races, both civilized and barbarous, and
LOVE (Primitive)

also the fact that crude types of social organization have been broken up by the family, strongly oppose this view.

It is right to notice that a time came 
when the conditions of life became favourable to an expansion of the early family, when the chief obstacle to a gregarious life—scarcity of food—was overcome. 

But before that there was a different type of gregariousness, which, so far as it went, did possess elements antagonistic to conjugal affection, at least. 

It is probable that increased security of subsistence assisted the growth of this emotion and strengthened thereby the family bonds. Westermarck has argued:

1 Where the generative power is restricted to a certain season—a peculiarity which primitive man seems to have shared with other mammals—it cannot be the sexual instinct that causes the prolonged union of the sexes, nor can I conceive any other egotistic notion that would account for this habit. Considering that the union lasts till after the birth of the offspring and that it is accompanied with parental care, I conclude that it is for the benefit of the young that male and female continue to live together. The ties which join them seem, therefore, like parental affection, to be an instinct developed through natural selection. The tendency to feel some attachment to a being which has been the cause of pleasure . . . is undoubtedly at the bottom of this instinct. Such a feeling may originally have induced the sexes to remain united and the male to protect the female after the young were born; and perhaps giving great advantage to the species in the struggle for existence, conjugal attachment would naturally have developed into a specific characteristic. 

This is an important statement and calls for consideration. In the first place, the assumption that in the case of these early paleolithic men were capable only of periodic impulse is insecurely based. That a more or less regular capacity did ultimately develop from a periodic is a different matter. Secondly, even admitting the above-mentioned view, no account is taken of the phenomena of habit. Habit is the essential factor to day, and must always have been, in the development of conjugal affection from the primary incidence of the sexual emotion. And here habit is reinforced by many associations, one of which is the care of children. Another, itself a strong emotion, is the proprietary feeling strengthened by habit. Even the rudest savage woman feels a right of property in her man,' however badly he treats her. Again, the invocation of natural selection is, when analyzed, a fallacy. Westermarck admits that the sexual impulse is at the bottom conjugal affection and prolonged union, but he here ignores improved environment. Neither of these factors can, except by a metaphor, be identified with the natural machinery of natural selection. 

The fact is that improvement of conditions and development of nerve and intelligence have been accompanied by an increase both in emotions and in their control; the emotion of love in all its grades has been no exception. To apply the doctrine of the survival of the fittest to such a development within the species is a misappication of Darwinism, or, rather, an unnecessary extension of the doctrine.

2 Development of sexual love. In order to estimate aright not only the course of development, but the character, of modern love in its typical form, it is necessary to note some further elements—
in particular, complementary elements—in the love of man and woman. Male love is active and dominant; female love is passive and submissive. 

It is true to trace a tendency to inflict pain, or the simulacrum of pain, on the women they love; it is still easier to trace in woman a delight in experiencing physical pain when inflicted by a lover, and an eagerness to accept infliction to his will. Such a tendency is certainly normal.

In love various aspects of marriage, life and of courtship:

1 Among the Slavs of the lower class the wives feel hurt if they are not called by their husbands; the peasant women in

1 M r. L. 112. 
2 Fr. l. 111, citing also Hum. Marr. ii, ch. 11. 
3 Ellis, Sexual Impulse, p. 74.

some parts of Hungary do not think they are loved by their husbands until they have received the kiss. 

Among the Indian Camorrista a wife is not beard by her husband regards him as a fool. 

In courtship animal man, the male plays the more active part, the female the more passive part. During the season of love the males even of the most timid animals engage in desperate struggles with each other for the possession of the females, and there can be no doubt that our primate human ancestors lived in the same way, to fight for their wives; even now this kind of courtship is far from being unknown among savages. Moreover, the male purrs and tries to capture the female. She, after some resistance, finally surrenders herself to him. The sexual impulse of the male is one of the most powerful of his tools, the female, and the sexual impulse of the female with a desire to be pursued and won by the male. In the female sex there is consequently an instinctive appreciation of manly strength and courage. 

A connected result of male superiority in strength, activity, and courage is the element of protection in male love, and of trust on the side of the female. The pugnacity observed in the males, both of animals and of wild men, is one aspect of the general increase of capacity exerted by passion.

The intimate psychology of love reveals not only an impulse for union, but an association in the male psychosis with an impulse for destruction, and even for devouring. Love often uses the language of eating. The natural modesty and coyness of the female play an important part both in stimulating the love of the male and in reining it. 'La pudeur', says Guyau, 'a civilised instinct.' 

Connected with these is the diffusion of the male to the relative slowness of the growth of love in woman; it proceeds by long circuiting. In men its growth is relatively rapid, and its duration generally less. Love, again, is 'only an episode in a man's life, whereas for a woman it is the whole of her life.'

Biologically, courtship is a stimulus of love, a means of producing tamescence. Owing to the differences of secondary characters in the love, the love of the male is expressed chiefly in act of courtship, that of the female in receiving them. If the preservation of love in a permanent union is analysed, it will be found that it depends on a more or less continuous process of courtship.

A remarkable development of sexual love was made by the early Christians. This was the practice of close but chaste unions between the virgins and young men (see art. CHASTITY). The锅炉 or romantic exploitation of love to which the custom led (as is shown by the literature) was perhaps the only sociological result. It is possible that this became a tradition and the realisation of the medieval valuation and practice of chivalrous love. 'For a medieval knight the chief object of life was love.' It became a formal cult, and theoretically was defined as the union of two hearts by virtue wrought. 

Dante's love for Beatrice is the highest type of the practice. Its essential condition was that the passion should be hopeless and should not be consummated in marriage. But, as with a similar ideal of love in ancient Greece, so in this case, the reality was generally immoral. The lady as a rule was the wife of another, and adultery was frequent.

In European civilization to-day the factor of intellectual and moral sympathy in love has become more pronounced with the greater freedom and higher education of women. Love strengthens affection and affection strengthens sympathy. The element of equal friendship in love has been greatly increased, and thus, curiously, in spite of the levelling which has taken place somewhere, a certain class-division has been made love between members of different social classes more rare.

A gentleman to-day seldom falls in love with a peasant.
LOVE (Primitive) 157

girl, or an artisan with a "lady." Again, to a cultivated mind youth and beauty are by no means the only attractions of a mate; and civilization has made female beauty more durable. 1

Meanwhile, the importance in marriage of compatibility, physical and physiological, is becoming more and more recognized by the law.

3. Social habits. — (a) Restrictions on love. — The majority of primitive peoples impose restrictions on the physical gratification of love except in the marriage relation. This tendency thus harmonizes with the biological law that mating is the final cause of love. But an errant tendency is inevitable, and many peoples have permitted it, with a peculiar stress on the idea that one should see nothing immoral in free love, provided only that nobody suffers material loss by it. 2 In many of these cases the temporary possession of a lover is regarded as a test of his manliness, and in most of them the practice actually serves as a kind of trial marriage. The case is very different in civilization.

(b) The law of parity. — A social and a biological tendency act as complementary factors, the one discouraging and the other encouraging love between biologically similar. The one tendency is expressed in the remarkable laws of exogamy; the other, which may or may not be connected, is the tendency for those persons to be mutually attracted who are of the same grade of pigmentation. It has long been a geographical law of mankind that persons are attracted by dark, and vice versa; even that short persons are attracted by tall, and vice versa.

A. Bain speaks of the charm of disparity.

Modern investigations have established this conclusion. 3

One of these began from the popular notion that married people are not as exciting as single people. An explanation was that they began by so doing. On the other hand, persons are not attracted to members of the opposite sex 'who are strikingly unlike themselves in pigmentary character.' 4 With this feeling may perhaps be associated the feeling, certainly very widely felt, that one would not like to marry a person of foreign, even though closely allied, race. 5 But the barriers between widely differing races are occasionally broken by love.

4. Seasonal love. — Among primitive peoples there is a constant practice of what may be termed the periodic love-feast. Types of these are to be found among the Central Australians and the Hawaiians of India. Various festivals or classes of marriage are the same category, with little foundation. 6 A prevalent deduction from these 'periods of licence' was that the morals of savages were degraded and licentious. But a closer study of savages makes it certain that their existence is 'just as little a prolonged debauch as a prolonged idyll' (as was the still earlier view, instituted by Rousseau). 7 A more recent deduction was that among the earliest men and the lowest modern savages pairing took place only in spring and at harvest. 8 The festivals in question would be 'survivals' of a primitive pairing-season. Among mammal and other animals (though not domestic), a periodic rut is general, though not universal. A doubtful statement has been made of so relatively a high type of people as the Cambodians that they exhibit a rut twice a year. 9 It is a fact that spring and harvest are among savages, barbarians, and modern peasants regular seasons both for general fertility and development of the sexual feelings. The reason may be partly biological, partly climatic, and partly connected with the food-supply. The probable conclusion is that, under the conditions being favourable for any sort of expansion and perhaps specially so for amorous expression—an increase in the sexual impulse during these periods is established for modern peoples—the opportunity is taken by societies, which express themselves only socially, to stimulate their normally feeble sexuality and to obtain organic relief.

The principle of dramatization, which is at the root of magical ceremony, may be noted in love-verses, of which all folk-custom, from the Australian to the European, has a store, and in a large class of primitive marriage ceremonies, which generally typify union. The latter are organized love-verses. The connexion between love and religion is of the same nature as the connexion between love and art and life generally. 10

The majority of barbarian and civilized peoples have condemned the habit; in medieval Europe it seems to have been regarded as connected with witchcraft and heresy.

II. NON-SEXUAL LOVE. — (a) Parental love. — As in the case of conjugal love, observation of primitive peoples is contradictory; but it is certain that maternal affection is universal, and paternal affection, though less intense, and often defective, is normal in the human race. 11

According to Aristotle, parents love their children as beings portions of themselves. 12 Equus regards this love as a modified love of self or property. 13 A. Bain, however, derived parental love from the 'intense pleasure in the children's affection for the young.' 14 But, as Westermarck notes, 'if the satisfaction in animal contact were at the bottom of the maternal feeling, conjugal affection ought to have been the most intense, but yet, among the lower races at least, the case is exactly the reverse: conjugal affection being usually the least intense degree of mother's love of her child.' 15 He adds: 'It seems much more likely that parents like to touch their children because they love them, than that they love them because they touch them. According to Herbert Spencer, parental love is 'essentially love of the weak or helpless.' 16 Westermarck observes that when the young are born in a state of utter helplessness nobody must take care of them, or the species cannot survive, or, rather, such a species could never have come into existence. The maternal instinct may thus be assumed to owe its origin to the survival of the fittest, to the natural selection of useful spontaneous variations. 17 But, as stated above, it is unnecessary to regard these instincts as cases of natural selection.

5. Filial love. — Children's love of their parents is generally much weaker than the parents' love of their children. 18 No individual is born with filial love. But 'under normal circumstances the infant from an early age displays some attachment to its parents, especially to the mother. It is not affection pure and simple, it is affection mingled with regard for the physical and mental superiority of the parent.' 19

14 Ibid., p. 197, 198, 1001.
Conversely, parental and, still more so, paternal affection includes a regard for weakness and helplessness. Filial love is proved to be normal in primitive races; as with other forms of love, it is both less intense and less complex than in civilization.

3. Fraternal and social love.—All peoples exhibit a development of the fraternal type, binding together children of the same parents, relatives more remotely allied, and, generally, members of the same social unit. In primitive tribes social organization often develops into a real affection and friendly sympathy are proved. As before, Westermarck applies the doctrine of natural selection to this development. With progress in culture social affection becomes a marked feature of religious and ethical practice and theory. Noteworthy examples are the doctrine and duty of charity, in Christianity idealized by the Founder's love for all mankind and by the theory of brotherly love, and the Oriental systems, such as the ahimsa of Hindu religions.

The philosophical literature which exploits the idea of love is enormous. Plato developed the view that beauty was in the creator of beauty, that the beauty must have an objective element. Greek, Christian, and medieval thinkers developed the connexion between love and beauty, love of God, and of human beings. The beauty, though beauty must have an objective element. Greek, Christian, and medieval thinkers developed the connexion between love and beauty, love of God, and of human beings. The beauty, though

The idea of love is enormous. Plato developed the view that beauty was in the creator of beauty, that the beauty must have an objective element. Greek, Christian, and medieval thinkers developed the connexion between love and beauty, love of God, and of human beings. The beauty, though behooved to the origin of love, and demons take the serpent-form in order to prosecute amours, or change from the human to the serpent-form in discovery. The ancient idea of beauty, and poetry, seem to be due to an obvious analogy from the incidence of the emotion. Metaphor, throughout the world, speaks of the effect of love as a wound.

LOVE (American).—The psychology and social habits of the aboriginal American peoples are, on the whole, in line with those of other races at equivalent stages of development. But they do not exhibit one or two distinctive features. As an instance of the usual conflicting results of observations, there is Morgan's statement that the 'refined passion of love is unknown to the North American,' and that of Catlin, that the North American is not 'behind us' in conjugal, filial, and parental affection. An accidental case of difference, not due to observers, is the remarkable fact that the Nahum possessed no word for love, while Quichua, the ancient language of Peru, had six hundred combinations of the word meaning 'to love.' Observation of this fact has led to an interesting analysis by Brinton of the expression of the eidos in N. American dialects. He distinguishes four methods of linguistic reaction to the emotion of love: (1) inarticulate cries, (2) assertions of identity and union, (3) assertions of sympathy, and (4) assertions of a desire. It is noted that the Mayas possessed a radical word for the joy of love, which was purely psychical in significance, while the American affection is predicated, as usual, by certain observers. It is clear that the Americans compared favourably with other races in the combination of love with female chastity, and in the filial and social forms of altruism.

LOVE (Buddhist).

The way in which early Buddhist literature takes account of the emotion of love is many-sided. It cannot adequately be set down, as some have tried to settle it, by a treatment that is too abstract or, again, too specialized. The hunger for unity or simplification leads some historians to design to every departure in religious or philosophical thought one fundamental or leading idea—a view that may be attained by closing the vision to all but a few considerations. No great teacher ever disregarded the land of contemporaneous races. In short, they exhibit a slightly more highly developed stage of the social form of affections. It is worth noting that all observers attribute to the Northern Indians a measure of clavichordous feeling. One abnormality, namely, homosexual love between individuals of the male sex, was curiously prevalent; it is sufficient to refer to the remarkable list of authorities addressed to Western mariners. It is possible that the military tone of N. American life—and the practice was chiefly characteristic of the Northern aborigines—was a predominant factor, as in the cases of the Fijians and ancient Greeks. The personification of love in the figure of a deity and the worship of erotic forces are perhaps less conspicuous, as might be expected, than in other societies. The Nahua peoples celebrated, it is said, 'a month of love,' during which many young girls were sacrificed in honour of the goddesses Xochiquetzal, Xochitlacatl, and Tlazolteotl, who was identified with Aphrodite. But the Central American deities, with the exception of the leading members of the pantheon, were extremely vague personalities; it is generally doubtful whether any deity was ever invoked by the Aztecs, and it is still more problematical what forces or properties the divine names represented. But the name Tlazolteotl seems to have a definite connexion with love, though we cannot, with Camargo, regard her absolutely as the Mexican deity of love.

Her home, he states, 'was in the ninth heaven, in a pleasant garden with innumerable fountains, where she passed her time spinning and weaving rich stuffs, in the midst of delightful songs and dances. . . . She was the sweetest of all women in the world, as equal to her . . . whatever had been touched by one of the flowers that grew in the beautiful garden of Xochiquetzal (she) loved to the end, and should love faithfully.' She not only inspired and provoked acts of love, but was able to hear confessions and to give absolution.

The last detail has been emphasized by Spence, in connexion with the meaning of her name, to reduce the goddess to the status of a Mexican Cleopatra. But, in spite of the priestly rhetoric of her description, there is enough in its latter portion to establish her as a deity of love, though probably illicit. Brasseur de Bourbourg regarded her as a volcanic symbol and Boturini Badenot the high god Tencatilpoca, as deities of love, without any foundation. Equally unfounded, except in the sense of indirect connexion, are the cases of the moon (especially among the most northerly peoples) and of fire. The N. Americans are slightly behind their contemporaries in the development of deities of love.

Literature.—This is given in the article.

A. E. CRAWLEY.

LOVE (Buddhist).—The way in which early Buddhist literature takes account of the emotion of love is many-sided. It cannot adequately be set down, as some have tried to settle it, by a treatment that is too abstract or, again, too specialized. The hunger for unity or simplification leads some historians to design to every departure in religious
to servant and conversely, and that of layman to Brähman and conversely. The practical forms which these several usages of devotion or worship should take are simply and concretely described. For our present purpose it is chiefly interesting to note that they are prescribed not as mere cases or moral rules, but rather as ways of giving expression to a spirit of 'compassion' felt by the agent. Thus not only should parents in five ways take compassion on ('ana-kampanti, lit. 'vibrate towards or after') their children, and teachers in five other ways take compassion on their pupils, but wives, in yet other five ways, should take compassion on their husbands, friends and colleagues, in yet other five ways, should take compassion on their friends; parents in yet other five ways should take compassion on their master, and in yet other six ways should Brähman take compassion on the laity. The corresponding term in the other six cases of reciprocated service—e.g., of children to parents, husbands to wives, etc.—is 'ministering to,' or 'waiting upon.' Thus these two Pāli words, differing as they do from those that we should find in a similar European catalogue, is interesting. The former word is 'kampati'; the latter, 'soman.' 1 While this is here applied, for instance, to the devotion of the good servant, is very often used in the *Sutta* for the supreme instance of the reciprocal devotion—that is, of a slave, who, to wit, the compassion moving a Buddha to spend himself 'for the welfare, the happiness of many folk, for the good . . . of gods and men; 2 and to live perpetually moved to do the welfare of all that lives and breeres. 3 It was this spirit that he prescribed for those whom he sent forth as missionaries. 4 For all these six forms of mutual service or devotion a Christian catalogue would probably use the word 'love,' however much the sources and outlets of the emotion so termed are shown to differ. The fact that the Buddhist catalogue does not bring in its ethics to supplement, or flow from, Singāla's railway beliefs, is exaggerated by the latter by the former, and, again, the fact that it substitutes the 'divine emotion' of compassion and the practical devotion of ministry for our more familiar and present-day 'love,' shows only that there is no caution in making affirmations about love in Buddhism. It may help us further towards some, or away from other, conclusions if we examine in brief detail all of these forms as met with in the five Nikayas.

1. Parental love.—The typical form of intense and self-sacrificing devotion is that of motherlove, just as the type of overwhelming sorrow is that of the bereaved mother. 4 The wise man should cleave to a genuine friend—a watchful, loyal, sagacious, sympathizing friend—as the mother is devoted to her child. 5 And not only to his friends:

- 'Even as a mother watcheth over her child, So let us for all creatures, great or small, Develop such a boundless heart and mind, And let us practice the vows, upward and downward, yea, before, behind, speaks, free from ill-will and annoy.' 6

This simile is quite in keeping with the chosen term 'being moved, or vibrating towards,' or 'compassion,' since mother-love contains so large an element of passionate, protecting pity.

2. Sex love.—No case is found of a woman seeking death or religion through the death not of her child, but of her husband. 7 Sex love does not appear in Buddhist literature. The anthology mentioned above has one case, vouched for by the Commentary, only of a man leaving the world because of his young wife's death from snake-bite. 8 And women are recorded, in text and commentary, as having left the world because their husbands had forsaken it for religion. The power of sex to enthrall is fully acknowledged, 9 as is that of sex-repulsion. 10 But there was no one ancient and moving 'Canticle of sex-love calling for spiritualized annexation to the Buddhist books, such as we possess in the legacy left by Hebrew Scriptures to the Christian apostles. No allegory of the 'compassion' of a Buddha for his adherents is found in the pretty love-song of the *Sutta* called 'The Questions of Sakka.' 11 Conjugal love—a blend of sex-feeling, parent-feeling, and companionship—finds beautiful expression in old Indian literature, but in poems that are younger than early Buddhist books. This is possibly the outcome of a social evolution—an evolution which a century or two of Buddhist ethics as to the right devotion in husband and wife may have done much to bring about. It may be noted in this connection that the Abakāh rock and pillar elicits, alms-passage, 12 while the point of view, so often taken on family relations, are silent as to conjugal life. Again, it is perhaps a pathetic touch in the Anthologies that shows woman at her best ready for the companionship, but not for the sex love of the Kassapa, who led the Order at the Buddha's death, and Bhaddā Kapilāma, famed as a preacher, were, by commentarial tradition, husband and wife, and not in their final birth only. They left the world in the by-laws of natural agreement, having no one ancient and the form of marriage to please their kin. She was, in the poems attributed to her, glories in her husband's gifts and in their 'spiritual friendship' and common vision of the truth. The larger poem reveals him as the only anchorite and the friend of mankind, even of the outcast, but has no word concerning her. 13 It is conceivable that the larger, more heterogeneous group composing the family in ancient India may have hindered the evolution of the conjugal relation. According to the sidelights thrown by the *Sutta* on domestic life, a girl left her home to enter the house not of her husband, but of her father-in-law. 14 She became more or less the servant of him and his wife as well as of her husband. Reference also is occasionally found to a second wife:

'Woeful when sharing house with hostile wife.' 15

3. Love towards the Buddha.—Filial love alone is the form wherein early Buddhist devotees gave expression to their feeling for the founder of their rule and doctrine. They confessed themselves not seldom as the 'own mouth-born' sons and daughters of the Buddha—'a sentiment which, in the later commentarial records, finds an echo in these children being termed severally 'my son,' etc., by the Master. 16 Yet, so far as the present writer knows, none of the usual terms for love or affection is applied to him, and certainly no one is spoken of as loving him as a father or a teacher. 17 Here, as father, teacher, 'recluse,' is ministered to or waited upon; it is he who 'takes compassion' on children, disciples, and laity. Honour, worship, or homage, faith or confidence, even the term *pavanā*, which may be rendered 'resting in,'

LOVE (Buddhist)

'satisfied with'-such are the expressions for the emotion felt, but not 'love.' The Indian words for love were not sufficiently plastic to cover this relation—a relation which was not the less deep and genuine, whether it was expressed in terms of the self-surrendering devotion of a believing and adopting heart, or of the intellectual love of the philosophic mind:

'I see him with my mind as I were mine eyes,
But as an image, waxing ever,
I reverence him while waiting for the morrow.
And thus methinks I'm with him dwelling.'

'Verily, my mind with him is joined, O Brahman.'

The emanipating force of his teaching drew the imagination:

'So I, leaving the men of vision cramped,
Come as the swan flies to the mighty sea.
And the majesty or majesty of his presence drew by way of sense:

'O wondrous fair the All-enlightened ones
Like a great storm-cloud in the summer sky
Then on thy followers pour great rain
Of noble, aspect, whose skin
Resembles gold, say, what is Rāma's life
To them with presence so supremely fair.'

This adoration for his person is usually accepted, but not always:

'Long have I wished, lord,' said the devoted Yakshali on his deathbed, 'to draw near to behold the Exalted One, but now is there no hour for me to breathe, in poverty and homelessness.

'Now have I harboured conscious wish or plan
On Arjuna or linked with anyone

'Have I ever seen the face of the Lord?
Never the least glimpse of the Lord.

'Let us unite our fellow-creatures, let us all,
Let them be brought to pain and misery!'

'Nay, love I do not, even infinite,
Well trained, by ordinary persons grown,
As even as the Buddha l'il learnt.
With all am I a friend, comrade to all,
And to all creatures kind and patient;
A heart of amity I cultivate,
And ever in goodwill is my delight.
A heart that cannot drift or fluctuate
The one that none can make to die.'

If, as certain writers think, we should refrain from applying so warm-blooded a term as 'love' to mettā, 'amity,' this may be justified, perhaps, on etymological grounds, and on the ground that Buddhism sets itself against passionate feeling. But it cannot be justified either by lukewarmness in the exordiums to practise mettā and sympathy with pain or joy or by singleness in the carrying out of these virtues by leading Buddhists.

It would be hard to find in ancient literature any exordium so agreeable to our sense of the word exist for it. All devas are more like our conception of angels, beings differing from man-kind only in degree and in quality of physical and mental endowments, educated in other nether or less adjacent worlds or spheres. On earth they are nature-spirits or fairies, usually termed devatā (lit. 'deity'). All were to be treated with goodwill and friendliness, but nothing more. They were believed to have the power of communicating with man, and are found rebuking and admonishing the lax or lazy recluse. But in the case of the chosen few—a Buddha and his Arhants—it is the deva who render homage and minister to the man, not the reverse.

5. Ideal love.—The emotion of ideal love, though it was not reserved for any personified deity in Buddhism, and though it played largely round the person of the founder, was not otherwise atrophied. It never appears as associated with the whole of that cosmology which, for the more intellectual Buddhist, takes the place of a theology. Devotion bestowed on a 'cosmic mechanism,' not planned by divine wisdom, and involving for each and all so much unspeakable suffering, was not to be ministered unto with honour or to be taken compassion upon in that spirit of grave tenaciousness for the burden of ill on earth—and in the heavens 600—which is Buddhism at its emotional best.

'Conquer the wretched by much goodness in the Naur; as doctrine and a part of that cosmos, in Pali dhāmanas and dhāmanatis, constituted for the intelligent adherent a source of satori affection (raja).

Admiration for dhāmanas is in a refrain in the Dhammapada, and the expression 'love for the Norm' (dharmagga rāta) is met with; e.g. (here called 'the Ideal'):

'In his love set on the Ideal,'

Other loves that love surpasseth.'

The same emotion is aroused by the idea of Nirvāṇa (nibbānābhārati, a stronger form of rāta): 'All my heart's love is to Nirvāṇa given,' and by that of the Sāsana, or 'religion,' 'rule' (adstreamodati).

6. Friendship.—'Goodwill and friendliness' (sukhāpādo, ador, mettā) express, better perhaps than the overburdened word 'love,' that expanded sentiment of amity to all living things which the average man can cherish only for personal friend or comrade. The cultivation of amity (cāti), pity, sympathetic gladness, and equanimity formed a sort of sublimated or higher sīla, or code of morals, the first three of them forming a development of that 'vibrating towards,' or compassion, which is so essential an attitude in Buddhist ethics. It is to these that the Elder Revata refers in defending himself against the charge that he lived in the woods to receive stolen goods:

'Since I went forth from thine holy life,
Never have I harboured conscious wish or plan
To do good or evil, or to be little or great;

Or, again, as that of the emanicipation of mind through 'amity':

'All the means that can be used as basis for right doing,
Are outshine in radiance and glory by this, which takes all those up into itself.'

If this amity only, we can let love stand aside.

There is no specific and positive injunction to 'love your enemies,' but this is only because the true spirit of the Dhamma would label no fellow-creatures as enemies as such. It would be 'ministered unto' with honour or to be taken compassion upon in that spirit of grave tenaciousness for the burden of ill on earth—and in the heavens 600—which is Buddhism at its emotional best.
LOVE (Celtic)

worldly, and the giving of spiritual, goods, Buddhist missionary labour from the earliest days are well known, and, from Asoka's days, are mentioned in the Sutta describing a conversation between the Master and Pātāna of the Sunāparante—a bhikkhu whose labours were crowned with martyrdom—is typical of the incorruptible missionary spirit. 1 Of the other kind of giving, while dāna, 'liberality,' is recommended, especially as a pious and profitable return to the dispensers of spiritual goods, the ideal of 'charity,' or poor relief, is noticeable. There were poor folk and beggars, for the ideal king is described as giving largely to such. 2 But the fact that the religious term, almsdonation (bhikkhātā), and took his place as a beggar among begging (save that he never ' begged,' but only passed by), seems to indicate that the practice of charity at the door and in kind was a matter of common sense calling for special exertion. Royal donors gave their charity in almshalls at each city gate.

A noteworthy feature in the developments of ascetic Buddhism is the expansion, in eschatological hypotheses, of the altruistic spirit so strongly fostered, for life on earth, by the original teaching. In the early Dhamma concentrative self-training, there is a relatively more emphasis than any exercise in the expansion of emotional imagination. But in the altruistic patience and faith of the Bodhisattva ideal we see the mother- term reaching a sublimity unattained in the post-idealism of any other creed.

C. A. F. KIHS DAVIDS.

LOVE (Celtic).—1. Gauls.—The Celts do not appear to have had at any time in their history any special god or goddess of love. In later times the numerous goddesses of fertility often possess the attributes of love-patrons; and it is, therefore, probable that this conception was identified with them, if at any time it formed a special subject of worship among the Celts. We have, for example, among the goddesses of ancient Gaul one who is equated with Diana, but who possesses at the same time some of the characteristics of Venus (G. Grupp, Kultur der alten Kelten und Germanen, Munich, 1905, p. 190). It is possible, then, that there was a goddess among the primitive Celts to assign love-attributes to some of their deities. Thus, we are not yet certain of the form of cult addressed to the Matres, who were the special patrons of women, presiding at child-birth; but it was without doubt a kind of love-worship, especially that of motherhood, since these goddesses are usually represented with a child in their arms. In Christian times these wooden figures, blackened with age, were often mistaken for those of the Virgin, and, under the name of Vierges noires, were given a place of honour in the churches (J. A. MacCulloch, The Bel. of the Anc. Celts, Edinburgh, 1911, p. 45 f.; cf. Alberti, Dianae, but who possesses at the same time some of the characteristics of Venus (G. Grupp, Kultur der alten Kelten und Germanen, Munich, 1905, p. 190). It is possible, then, that there was a goddess among the primitive Celts to assign love-attributes to some of their deities. Thus, we are not yet certain of the form of cult addressed to the Matres, who were the special patrons of women, presiding at child-birth; but it was without doubt a kind of love-worship, especially that of motherhood, since these goddesses are usually represented with a child in their arms. In Christian times these wooden figures, blackened with age, were often mistaken for those of the Virgin, and, under the name of Vierges noires, were given a place of honour in the churches (J. A. MacCulloch, The Bel. of the Anc. Celts, Edinburgh, 1911, p. 45 f.; cf. Alberti, Dianae).

2. Irish.—In his well-known hymn St. Patrick prayed against the ' spells of women, smiths, and druids' (W. O. E. Windisch, Irische Texte, Leipzig, 1880 ff., i. 56). The women to whom the saint refers were probably those of the sib, who rejoiced in eternal youth and beauty, and whose capacity for love was so great that they would go forth themselves to woo and win mortals. Once the spell was cast, not even the greatest hero could resist. The important rôle played by these divine women in Irish society is a striking commentary on the adventures of Conmna, where even the powerful magic of druidism fails to remove the spell.

Conna walking on the hills of Uenach in roes with his father Conn, who was supreme king of Ireland from A.D. 122 to 157, saw a beautiful damsel approaching. The lady was attired in a strange garb; and, when Connas asked her whence she came, she replied: 'We are the great sib, hence we are called the people of the sib, i.e. of the usual or folkless. The father wished to know with whom his son was speaking; so the damsel informed him that she had come to invite Conna, whom she loved, to the Mag Mell, 'Pain of Delight,' where dwelt King Bohud. 'Come with me,' she cried, 'Connas the Red, at the sprinkled neck, flame-red, a yellow crown awaits thee; by figure shall not wither, nor wither nor its beauty till the dreadful judgment.' Conna then had Conna the druid, who, like the others, heard but did not see the damsel, chant a magic song against her. She departed, but not before throwing Connas an apple, which was the sole sustenance for a month, and yet nothing diminished from it. After a while longing seized Conna for the damsel, and this is the end of a north Irish love story (2). When she addressed him thus: 'It is no lofty seat on which Conna sits among the short-lived mortals awaiting fearful death. The everliving beings (bei bhido) invite thee. The sib was a favourite of the men of Tethra, for they see thee every day in the assemblies of thy father's house among the ladies of the sib. Again the king urged the druid to chant against her, but she made answer: 'Oh Connas of the Hundred Battles, druidism is not loved, little has it progressed on the earth. A just man (probably an almsman to St. Patrick; inserted in the saga) will come with a great following; and he will destroy the incantations of druids from passing the lips of black, lying demons.' She then told Conna of another land, in which was no race save only women and maidens. When Conna heard, Conna gave a bound into her ship of glass, and they sailed away. From that day to this they have never been seen again. The following note is added: 'The poets know whether they went (for the text of this saga see Windisch, Irish Grammar, tr. N. Moore, Cambridge, 1882, pp.
In his analysis of the Tain, the great epic of Ireland—which depicts to a great extent the morals of Connacht—Zimmer has pointed out that Medbh, the heroine of the expedition, was the wife of Conchobar, but, having abandoned him, married in succession two chiefs of the same name, Ailill, the second of whom is her husband at the beginning of the account. Her title, 'Maighdeach, Hinderpart' in the Ershlannan of the arla irshin Heldenlege', SBA W, 1911, pp. 174–227).

An idea of the unusual prominence of the love-motive in the early Irish saga can be formed from the list of titles given in d'Arbois de Jubainville's Essai d'un catalog de la littérature épique de l'Irlande (Paris, 1833).

Thus on pp. 34–37 there are twelve stories bearing the title aithed, or 'love-song', among the more important of which are Aithed Blainnaithe, Bláthnaid, mála Thadhgh, na Céithlenn, or 'Love-song of Blainnaithe, daughter of Páil, son of Fíadh, to Céithlenn' (ed. G. Keating, Hist. of Ireland, tr. J. O'Keefe, New York, 1866, pp. 222–254); Aithed Dairinnne na nAinig, or 'Love-song of Dairinnne to the sons of Uisnech', identical with Lompr met n-Ainig, or 'I. Celtic love-song of Dairinnne' (ed. Windisch, l. 67–83); and Aithed Grainne do Diarmait, or 'Love-song of Grainne to Diarmait' (Book of Leinster, l. 281; and tr. M. M. H. Mee, 1905, p. 253). However, to the title aithed it is necessary to add the six sagas bearing the title cromait, or 'conception' (92–94), of which the most famous are Conchait Peadair, or 'Conception of Conchait' (LL 100), and Conchait Céithlenn, or 'Conception of Céithlenn' (Windisch, pp. 134–145, 284 f.).

In the whole of the sagas connected in any way with the Enchanted Palace (d'Arbois de Jubainville, p. 124), there is concern entirely with love, as in so many of the Celtic love-songs, or 'Single Jealousy of Ailill'. There are five stories with the title aithed, of which Sere Fhionn go Ciobróid, or 'Love of Fionn' in Newgrange, is the best known (Boy, tr. A. A., Ossianic MS, 1878–1880). As for those with the title of cromait, or 'conception', there are at least twenty (831–281). Of these, mention may be made of Tenthir Bófin, or 'M. O'Looney, Proceedings of the Royal Irish Academy, l. 20, 1920, p. 49). There are many others of the title cromait, or 'Demand in Marriage by Emer of Céithlenn' (Windisch, p. 224 f.).

3. Welsh.—In Brythonic mythology the naturalism common to the Irish sages has been greatly refined, and magic, especially in the form of the love-potion, assumes a more important part.

The nearest approach to a goddess of love is found in Branwen, 'White Bosom,' daughter of a sea-god, who has been called the 'Venus of the northern sea' (C. L. Elton, H. I. and H. M., London, 1899, p. 291). She was in all probability a goddess of fertility, but reappears as Brânwên in romance, giving a love-potion to Tristran, which in itself is perhaps a reminiscence of the former attributes as a goddess of love. Don, the Welsh equivalent of Danu, was also perhaps a goddess of fertility, and had for her children Gilleveth, Gilleveth, Amestan, Gorrowan, and Arianrhod (MacCulloch, p. 106). All these divinities play a more or less important part in the story of the beautiful love of Gilleveth's illicit love for Goevin, the 'foot-holder' of Math in the Mabinogion.

Regarding to magic, Gwydion succeeded in obtaining from Math the court of Fyrfryr certain swine sent him by Arawn, king of Annwn, for the purpose of siding him in his love affair. The trick was discovered, and a battle ensued, in which Gwydion saw Fyrfryr by enchantment. Having discovered that Gilleveth and seduced Goevin, Math transformed him and Gwydion successively into deer, swine, and wolves. It is also implied that Gwydion was the lover of her own sister Arianrhod, by whom he had two children. MacCulloch suggests (p. 109) that these are mythical reflections of a time when such unions, perhaps even in royal houses, were permissible, but not part, while being the mistress of her brother, pretends to be a virgin and refuses to acknowledge the child born of this union was the 7th cent. King Mongán, of whom the annalist says: 'Every one knows that his royal ancestor Mananann' (Leathar na Uadhro, facsimile reprint, Dublin, 1970, p. 19).

In the Céithlenn cycle the love-motive is usually one of wild lust; and, as these stories tell us little, the condition of society at the beginning of the Christian era, we can form no idea of the status of women at that period.
LOVE (Chinese).—The importance of love as an ethical principle is recognized by Chinese moralists. This can be made sufficiently evident from the classical books.

When asked about benevolence (yu), Confucius replied: "It is to love all men" (Analects, xii. 27). "In is the characteristic element of humanity, and the great exercise of it is to love relatives" (Doctr. of Mean, xx. 9). "The benevolent embrace all in their love; but what they consider of the greatest importance is to be kind to their relatives and domestics" (Mencius, vi. 4.5).

From these passages it appears that the general nature of love is modified in accordance with the claims of kinship and virtue. The ethical nature of true love is further brought out in such sayings as these:

"The Master said: 'It is only the truly virtuous man who can love or who can hate others'" (Analects, iv. 3). "The Master said: 'Can there be love which does not lead to wickedness with its object?'" (O. xiv. 8).

The importance of love as an ethical principle may also be seen in what is said of 'resonspite' (chi). This is 'that which leads to action, to put oneself in another's place.' Primacy is given to it as the rule of life (Analects, xx, 23). It is not merely 'Not to do another what I would not have done to myself,' but, more positively, 'To serve my father as I would require my son to serve me . . . to set the example in behaving to a friend as I would require him to behave to me' (Doctr. of Mean, xiii. 3). In the Confucian ethic, however, the exercises of love is limited by retributive justice.

"Some one said, 'What do you say concerning the principle that injury should be reciprocated with kindness?'" The Master said: 'With what then will you reciprocate kindness? Recompense injury with injury, justice, and recompense kindness with kindness' (Analects, xiv. 36).

Specially interesting in connexion with the place of love in Chinese ethics is the philosopher Micius and his doctrine of a perfect social state. The Confucian ethic has its religious counterpart in the classical representation of Shang-ti as benevolent and righteous (cf. art. GOD [Chinese]).

"Of love in the narrower sense as between the sexes, neither its more romantic aspects nor its deprivations are unaffected in Chinese literature from the Shu King and Shi King down to present-day novels. In view of the evident grossness of thought and life, one is surprised to find the religious sphere so clean. There is, e.g., polytheistic superstitition, but no grossness in the religious worship reflected in the classics, though it is true that regrettable features appear in popular superstition—spiritual beings may be attracted by the fair looks of maidens and call them to the other world to be their wives. Prostitutes may worship a goddess of their own.

According to R. H. Parker (Studies in Chinese Religion, London, 1897, p. 12) there is a considerable amount of disdained links worship, especially in the south of China. He adds, 'In any case prayer of this sort is offered up by women, are common in every province.'

Such prayers are in themselves innocent, but in some cases the accompanying ritual worship of the idol involves, in actuality, the human beings.

Still it is substantially true that there is in China no defilement of vice or any public practice of immoral rites.

LITERATURE.—In the classical religious and ethics, see the relevant vola of SFE; and E. Faber, Mencius, Shanghai, 1897.

F. J. MACLAGAN.

LOVE (Christian and New Testament).—Divine love.—The highest and most satisfying faith which the human mind has attained, or can attain, is formulated in the sublime simply conception, 'God is love' (1 Jn 4th). This is interpreted as meaning not only that God, self-conscious and moral, creates, sustains, and orders all things in love, but that love is His very essence; and the spiritual conflict of the ages has been, and is, waged against the forces opposing this first principle of religion and ethics, the acceptance or rejection of which leads logically to optimism or pessimism. A few expressions of the belief that eternal love subsists at the heart of all things, and manifests itself through them, may be chosen as typical.

'Let me tell you why the Creator made the universe. He was good . . . and desired that all things should be like Himself as possible' (Plato, Legg. 29 B). 'The Lord is good to all; and his tender mercies are over all his works' (Ps 145). 'For thou lovest all things that are; and shunrest not any of the things which thou dost make; for never wouldst thou have formed anything if thou didst hate it.' (Ps 115). 'And we know that to them that love God all things work together for good' (Rom 8). 'O tender God, if Thou art so loving in Thy creatures, how fair and lovely must Thy face be seen!' (Francis Bacon, quoted by W. B. Inge, Christian Mysticism, London, 1913, p. 303.)

For lovers of Nature Wordsworth expresses the conviction that nothing

'Small e'er prevail against us, or disturb
Our cheerful faith, that all which we behold
Is full of blessings' (Tintern Abbey, 132 ff.).

There is no deity in R. C. Trench's large universe:

'... We and all men move
Under a canopy of love, as bread the bees may savour above' (The Kingdom of God, 4-9).

or in Browning's 's o iu, o suer: (The Kingdom of God, 4-9;)

'God! Thou art love! I build my faith on that'

And in Carlyle's words there is at least a wilder longing to believe:

'O Nature! ... Art not thou the 'Living Garment of God? ... Is it, in very deed, He, then, that ever speaks through these; that lives and loves in thee, that lives and loves in me?' (Sartor Resartus, 'The Everlasting Yes').

It is common knowledge, however, that this splendid creed of three syllables is not only severely tested but acrimoniously contested—a contest which love is the ultimate reality of things—that transcendent love is Creator and Lord of the world, and immanent love the life which pulsates through it, the Spirit of all goodness and humanity—is pronounced by many to be a delusion and a snare. One of the champions of popular free-thought thus emphatically expresses himself:

'What God is love is a very lofty, poetical and gratifying conception, but it is open to one fatal objection—it is not true' (E. Blatchford, God and My Neighbour, London, 1897, p. 23).

One of the leaders of philosophic thought confesses that in the loss of this faith 'we are confronted by one of the great tragedies of life' (J. M. E. MacTaggart, Some Dogmas of Religion, London, 1906, p. 297). So manifest and repellent is the blending of good and evil in human lives that Schleiermacher makes the chorus of one of his dramas sing:

'The high gods
Wrought with weeping and laughter.
And fashioned with loathing and love . . .
The holy spirit of man'

(Altitude in Caelum). (London, 1904, p. 289.)

The bitter pagan belief, that the gods take the same pleasure in the sufferings of mankind as cruel children in the torture of flies, still has its adherents, finding expression, for example, in Hardy's pessimistic dictum, 'The President of the Immortals (in Aeschylean phrase) had ended his sport with Tess.' Some critics of the world-order do not hesitate to agree. 'And man, wherewith the Face of Man is blackened!' God needs to take as well as give man's forgiveness (Omar Khayyam, quatrains iv). Worst of all,
LOVE (Christian and New Testament) 165

To the heart of the human, God is love. The belief so dear to the heart of the human, that the phenomenon of nature bear witness to the benevolence of the Creator, is supposed to have received a staggering, if not a fatal, blow from the principle of evolution, so that no comforting red or staff, but only a broken reed, appears to be left in the hand of the man.

*The loved God was love indeed*

Adam's desire for Eve's body

*The* Nature, red in tooth and claw

With ravine, shrub, and hedge in creed.*

(Tennyson, In Memoriam, iv.)

Confident assertions on the one side and the other help at least to make the issue clear, while they may also suggest that strong feeling is apt to be generated in the attempt to solve the problem of problems. Every man admits the one absolute certainty that he is ever in the presence of one Infinite and Eternal Energy, for which all the world go on (H. Spencer, Ethical Inquiries, London, 1888, p. 242). The question is whether that Energy is controlled by love, or, rather, is identical with love—whether the All-Great is the All-Loving.

(a) What answer comes from the heart of Nature? That a struggle for existence, with a resultant survival of the fittest and extinction of the unfit, has characterized the completion of the animal and vegetable kingdoms and is still going on is one of the demonstrated truths which modern science has added to the sum of knowledge. And many evolutionists find it difficult, if not impossible, to believe in love ordaining and witnessing that secular conflict. But do they fairly interpret the struggle? The indictment against Nature which was frequently heard in the early and emotional days of the evolution doctrines is now generally admitted to have been based upon half truths. Unqualified assertions that 'natures are one with rapines,' that 'any little wood is a world of panders' (Tennyson, Maud, iv. iv.), that 'the cosmic process has no sort of relation to moral ends' (T. H. Huxley, Collected Essays, London, 1885, p. 83; cf. 197), that all progress is attained by the methods of the gladiatorial show or the battle-field, are seen to be almost a libel. For the whole range of life upon the earth—vegetal, animal, social—bears witness to something quite different from hatred and strife. The intellectual activities of all living things are nutrition and reproduction, and, while the object of nutrition is to secure the life of the individual, the object of reproduction is to secure the life of the species. The greatest factor of evolution is concerned with self-sacrifice, another is concerned with self-sacrifice, and it is not too much to assert that the world is not only an abode of the strong, but a home of the loving.

*Nature has more to say than* "Every one for himself."

*There has been a selection of the other regarding, of the self-sacrificing, of the rest, of the living."* A. Thompson, The Bible of Nature, Edinburgh, 1908, p. 179.

If Rousseau erred in closing his mind to everything but the love, peace, and harmony of Nature, we are equally at fault if we find in her nothing but discord and cruelty.

"Love is not a late arrival, an after-thought, with Creation. It is the very fabric of a romantic civilization. It is a notion of the universe. Its roots began to grow with the first cell of life that bulged on this earth. It is 'the supreme factor in the Evolution of the world. . . The Struggle for the Life of Others is the physiological name for the greatest and noblest life—love' (H. Spencer, Social, the Evolution of Man, London, 1894, pp. 247-251). 'The principles of morality have their roots in the deepest foundations of the universe, and the cosmic process is ethical in the profoundest sense' (H. Spencer, Social, p. 192)."

If, then, creative evolution is God's theophany—

His method of unfolding His purpose and revealing Himself—the facts of the case, on a wide and impartial survey, go far to prove that His central energy, or ruling motive, and therefore His true Name, is Love. And to Divine overtures of love the human heart cannot fail to respond. Viewing the world as mysteriously 'full of God's reflex,' Charles Kingsley exclaims, 'I feel a gust of enthusiasm towards God' (Charles Kingsley: His Letters and Memories of His Life, London, 1877, p. 70). It must be admitted, however, that there is another side. Nature's physical and vital forces do not all inspire confidence, making us 'very sure of God' and ready to acclaim the sentiments, 'All's right with the world.' There are times when it is not easy to rise from Nature up to Nature's God, or to maintain that He has done all things well. The facts that disturb one's faith in the benevolence of the Creator are too many and too conspicuous to be ignored. The life of the forest and the jungle is not all idyllic. The wolf does not lie down with the lamb, nor the lion eat straw like the ox. The tigresses and the tamarills are no less real than the fawna and the dove. It is impossible to forget Nature's ruthlessness to the unit or her savage outbreeks of fire and flood and tempest. Over against Nature Benjamin we have always to set Nature Maligina, as T. Watts-Dunton does in a group of sonnets (The Coming of Love). And the existence of positive evil in the world has driven not a few observers, especially those who are victims to the conclusion that God, whether personal or impersonal, is no more than an irresistible and inexorable Force, indifferent to pain, regardless of life and therefore not loved, hated, or scorned, rather than trusted and loved. This is the view which lends a tragic pathos to the Prometheus Vinctus, the book of Job, and other literature of religious doubt.

With the best 'will to believe,' many a man cannot wholeheartedly affirm that 'the Variety of Creatures . . . is so many sounds and Voices, Prenches and Cryings, giving Glory and Praise and Thanksgiving to that Deity of Love, which gives Life to all Nature and Creatures' (William Law, The Spirit of Love, Works, London, 1692-93, p. 115). At the best the evidence is conflicting. Nature speaks with two voices. We can never be quite sure whether she is a kind mother or a cruel stepmother. Love is not seen at a glance to be her primal law. The men of science who decipher the testimony of the rocks do not feel constrained to proclaim with one accord that God is good, and though they may comfort themselves with the reflection that in Nature's infinite book of secrecy only a little has been read, and acknowledge that there is no religion without mystery, yet the inquiring spirit of man is troubled. Do not open-eyed spectators of the world-drama are sometimes 'perplexed in the extreme.' They feel as if Nature were betraying the heart that truly loves her.

*God is love, transcendent, all-pervading! We do not get this faith from Nature or the world. If we look at Nature alone, full of perfection and imperfection, we feel that God is distant, murder and rapine' (H. T. Tennyson, Alfred Lord Tennyson: A Memoir, London, 1897, p. 314).

And, if 'to be with thee is love and nothing else work like madness in the brain,' it is the crowning sorrow to doubt the God whose loving-kindness is better than life (Ps 63)."

(b) But the God who speaks ambiguously through Nature reveals Himself also through humanity. He has His dwelling 'in the mind of man' (Wordsworth, Tintern Abbey, 99). Here it must not be forgotten that the isolation of the human heart cannot be said to be indifferent to ethical ends; rather it may be held to exist for the sake of such ends. Why? It is not right enough in maintaining (L. Huxley, Life and Letters of Thomas
LOVE (Christian and New Testament)

Henry Huxley, London, 1900, ii. 298) that moral purpose, in the strict sense, is ‘an article of exclusive human manufacture,’ he is wrong in denying it a place in the cosmic process. Human nature is an integral part of nature. If Nature is personified, human life is her crowning achievement.

The development of the moral sentiments, the moral law, development of the arts of life or real happiness, the rise of the human conscience, these are Nature’s most highly wrought products, later in coming, later in development, later in manifestation, though the earlier prophecy has pointed them out. (P. 130)

Now, these constitutive elements of the moral life are the root and ground of that assurance of Divine and lost which must be regarded in the first instance as an instinct or intuition of loving hearts. ‘The spirit of man is the lamp of the Lord’ (Pr. 20, 27). The prophet had made wise by a patient love outworking the moral sin in his own soul, had the truth flashed upon his mind that a human affection which bears, hopes, believes, endures all things, and never fails, is explicable only as a radiation from the love of God, a revelation of the heart of the Eternal. His own ideal conduct in the supreme moral crisis of his life sensitized his mind to receive a new and true image of the Absolute. His forgiving, pitying, patient love, his confidence in the ultimate triumph of good, gave him an unerring insight into the controlling principle of the Divine character. Love, he sees, is paramount in heaven and earth, and is the key to its instrument. Love is therefore the Leitmotiv of his prophecy, his master-key to the mysteries of religion and history. He dares to make his own confessio amantis the preface to a stupendous tale, of which the scene is the world and the hero is God. He represents Israel’s patient Divine Friend as saying, ‘I delight in love, and not in sacrifice. When Israel was a child, then I loved them with cords of a man, with bands of love’ (6:11-14; cf. 3:14).

Later prophets and lawgivers reiterate Hosea’s teaching in many beautiful forms—‘I have loved them that love me, and they return my love; therefore have I continued loving-kindness unto thee’ (Jer 21).

‘He will rest in his love, he will joy over thee with singing’ (Zeph. 3:17; cf. De 4:7-10; Is. 45:6).

‘But it is not too much to say that the entire faith and theology of later Israel grew out of Hosea, that all its characteristic views and ideas are first to be found in his book’ (C. H. Cornill, The Prophets, Chicago, 1899, p. 59).

(c) Jesus linked His gospel with the prophecy of Hosea by repeatedly quoting the words ‘I will have mercy and not (ritual) sacrifice’ (Mt 9:13). No one was so swift as He to discover the evidences of Divine love in Nature. The beauty of flowers, the ways of birds, the beneficence of the rain, the glory of clouds, and the splendour of the sun in its strength spoke to Him of a goodness that was over all and in all and should be the religious union of all Nature. He assumed that God is omnipresent in the external world. But that was not His whole message. Nature’s goodness was not His evangel. Least of all did He propose to substitute that for the word and work of God. And it is the spirit of the ideal Man—His personal expression in word and deed—that constitutes mankind’s surest evidence of the love of God. In His compassion for the multitudes, His tenderness to sinners, His hope for the vindicated, His yearning to bring back the lost, His forgiveness of those who ‘know not what they do,’ He is the Bearer of God. He changes Israel’s Lord of hosts into mankind’s Father. ‘The Father’ is the title of the Fourth Gospel represents Him as saying, ‘He that hath seen me hath seen the Father’ (Jn 14, ), and the love of God which is in Christ Jesus our Lord in a face which science must reverence and accept. Christ is indeed the crown of evolution, fulfilling not only the spiritual ideals of Israel, but the esonial ethical strivings of Nature.

Our first reason, then, for believing that God is Love, is the authority of Jesus Christ—His declaration and manifestation of the fact as God incarnate. That is to say, all the cumulative and complex proofs of Christianity are proofs to us of this fact, which simply is the kernel of Christianity. If Christianity is true, God is Love (J. H. Hitchens, Christian Character, London, 1904, p. 87).

The apostles always interpret Divine love in the light of Christ’s sacrifice. The love which inspired the early Church was a living, loving, a Father who makes His Son to shine on the evil and on the good. It was that of the Father who withheld not His own Son, but delivered Him up for us all; that of the Son who laid down His life for the sin of the world. In the NT the identification of Divine love with atonement is axiomatic. ‘Herein is love’—in a Divine initiative which provided a propitiation for sin (I Jn 4:8). Personal faith centres in ‘him that loveth us, and loosed us from our sins by his blood’ (Rev 1, in ‘the Son of God, who loved me and gave himself for me’ (Gal 2:9). It was His Spirit of sacrifice that conquered the intellect as well as the heart of the ancient world. His age-long empire is the expression, not of the love of power, but of the power of love. He can never cease to be hailed as ‘Strong Son of God, Immortal Love.’

2. Human love. Great and true conceptions of love have not been confined to any single nation. In the Greek classics love is often something much higher, purer, and nobler than sensual passion or natural desire. This fact appears clearly in the cosmogonic myths. The Eros of Hesiod is not erotic, in the later sense of the word. He is the fairest of the gods, who rules over the minds and councils of gods and men, the great uniting power, who brings order and harmony among the conflicting elements of Chaos. To the mind of Plato love is the sympathy of affinities, the instinctive rushing together of kindred souls, the harmony of spirits, not without such a touch of natural feeling as strengthens without dishonouring the union. And the Stoics laid the foundation of a noble ethic in their conception of the brotherhood of men, regarded as akin to God, or even as children of one great Father.

For we, says the Hymn of Cleante, ‘are Thine offspring, sons of mortal things that live and walk the earth moulded in the image of the All (cf. Ac 17:26).

But Christianity raises love to a higher mood, unites it with a new ardour, purifies it by the touch of God, making the natural love of man and woman sacramentally holy, and changing the lustful lust for into a potential friend as ‘the brother for whom Christ died.’ The very vocabulary of love is changed, Eros, a word too often profaned, giving place to Agape. The natural love, real and impetuous enough, but consecrated now to the highest uses, have superadded to them the intimate communion of heart and soul. The genius of love in so to be sacrificial, which was its source and sanction in God’s eternal self-giving.
Only of such lives can it be safely said that 'love is an unerring light, and joy its own security' (Wordsworth, Ode to Duty, 19.1). The strongest affection is not the same as the purest, the strongest friendship is not the same as the Christian. The house of love cannot be built on the shifting sand of passion. Love faints and fails unless it is traced by the sense of duty. Love's elusive, home, going to the wars, says to Loewes: 'I could not love thee, dear, so much.'

'I loved thee not honour more.'

It is also a higher love—patriotism, the passion for liberty, the enthusiasm of humanity, the zeal for God's Kingdom, any one of which may claim love's final sacrifice—that gives the affections of the home a purity and an intensity never dreamed of in the life of pampered individualism. When Christ says, 'He that loveth father or mother...son or daughter, more than me is not worthy of me,' He is calling men to the ideal life, which includes whatever things are pure and lovely and of good report. 'We need must love the highest which we see it' (Tennyson, Guinevere, ad fin.).

The truth is that the heart's deepest instinct is passionate 'amour desdierum'—cannot be satisfied with an earthly affection. The Hebrew poet speaks for the human race when he says that, as the hart panted for the water brokes, so his soul panteth after God, thirsts for the living God (Ps. 42:1). 'The most philosophical students of love from Plato and Aristotle to Aquinas and Aquinas have felt that it demands in the last resort an infinite object and an infinite response' (Illingworth, p. 88).

Modern science has immeasurably widened man's mental horizon, and the vaster the material world becomes the greater is the spirit's unrest in its cage of sense. It suffers from 'the malady of the ideal,' and the reason is that it still rests in God. The deepest thoughts of a nation are expressed by its artists and poets. Rossetti painted human love languishing for fullness of life, but evermore fearing death. We painted divine love leading life per ad altas, ad astras. Tennyson protests that his love would be half-dead to know that it must die (In Memoriam, xxxvii.), while his faith in immortality stays itself on his deathless love of a friend.

'I loved thee, and love him for ever: the dead are not dead but asleep' (Fortnum, ad fin.).

At the close of life his supreme wish was to 'learn that Love is Like and was My Father, and my Brother, and my God.'

(Demost and Prayor, 71.)

Browning repeats in a hundred forms his reasoned conviction that:

'No: love which is, on earth, amid all the shows of it, has ever been the sole good of life in it. The love, ever growing there, spite of the strife is it. Shall arise, made perfect, from death's repose of it.'

(Christinas nurse, v. 97–100)

If love is thus proved to be the essential character alike of God and of the sons of God, this result profoundly affects all human relationships.

(c) True intercourse with God Himself is a fellowship of love. To be right with Him is to have the heart of a lamb or a child. Though the child is filled with many passionate longings for such an intercourse, the NT alone exemplifies it in its perfection. The bare notion of such a divine fellowship is estrange to the Gentile, whose relation to the object of his worship was always cold and distant. Jesus lived in uninterrupted filial communion with His Father, teaching His followers to do the same. They were to keep themselves in the love of God (Jude 21), and so to have His love shed abroad in their hearts by the Holy Spirit given to them (Ro 5).

The knowledge of God can be attained only through love. In love's lore a 'dry light' helps but little. Theology at its best, like 'divine philosophy,' is always charged with feeling. 'Poets live in islands of solitude, and the saint in the cell, we neither enter the cell, unless it sits snail-like, so neither could the soul behold God if it were not Godlike' (Emed, vi. 9). Not to sympathize is not to understand. Love is the chief hierophant of the mystery of the soul. Jesus that will eth to do the will of God shall not do his highest teaching (Jn 7:19); but that he love not his brother whom he hath seen, and therefore cannot love God whom he hath not seen (Jn 4:10), has lost 'the key of knowledge' (Li 123).

(c) The ideal society consists of persons animated and united by the spirit of love, each seeking the good of all and all of each. The programme of Christianity is the renewal of human life and the reconstruction of human society, on the basis of the faith that 'God is love.' While hatred has a fatal power of division, love is the bond of perfectness (Col 3:14). Human associations, strong and stable in proportion as they are welded together by that brotherly love which is the law of the kingdom of heaven.

'Love rules the court, the camp, the grove. And men below, and saints above; For love is heaven, and heaven loves love.'

(Scott. Lay of the Last Minstrel, m. ii. 5–7.)

(d) As man's chief good, love is a task as well as a gift—an Auspizio as well as a Gaze. It is not a passive sentiment or an involuntary mood. The verb 'to love' has an imperative mood, which the greatest lawyer—Jesus as well as Moses—frequently use. To this extent Christianity as well as Judaism is legalistic. The practice of love is the highest exercise of freedom. 'The love of the will is no less real than that of the heart' (Illingworth, p. 101). Love's rise and progress are dependent on a continuous effort, and the more perfect it becomes the more does it embody the 'inmost desires and strongest impulses of the soul. It is more than good-nature, which is no satisfactory basis for ethics; more than good intentions, which are proverbially deceitful; it is a good-will—what according to Kant, is the one absolutely good thing in the universe.

(e) All duties spring ultimately from the one duty of love. It is more than a poetic fancy; it is a literal fact, that, 'as every lovely hue is light, so every grace is love.' Augustine describes virtue as the unfolding of love—'Virtus est orto amoris—'and in reference to the cardinal virtues he says: I would not hesitate to define these four virtues which make such an impression upon our minds that they are in every man's mouth: temperance is love surrendering itself wholly to Him who is its object; courage is love bearing all things gladly for the sake of Him who is its object; justice is love serving only Him who is its object, and therefore rightly ruling; prudence is love making wise distinctions between what hinders and what helps itself' (De Moribus, i. 15:15).

The law of love is called the royal law (pepos Baralix, Jn 20), because, being supreme in dignity and power among the principles which control human action, it brings all the others into subjectee to itself.

'All thoughts, all passions, all delights, Whatever aims this mortal frame, All are but ministers of Love, And feed his sacred flame' (Cotterige, Eve, 1–4).

(f) And love is perfected when even its most laborious duties are performed with gladness. It is true that 'tasks in hours of insight will be done through hours of gloom' (Mill, Moral sentiments, ch. [Poet. Works, p. 256]). But the moral life needs the heart to aid the will. It never flourishes long if its roots are left dry. Its strength and fruitfulness are always traceable to hidden springs of
affection. Schiller was justified in complaining that Kant made too much of the categorical impera-
tive and too little of the aesthetic side of morality — that both of these is, infinity is not perfect-
done unless a great love makes the yoke easy and
the burden light. Under this potent influence,
each of a thousand thoughtful deeds becomes a
'labour of love' (Agape). St Paul, in the 1st
Thessalonians (II, 8) says that the
'servants of God' must do it in the
Temple' (II. 1). 7) says that the
mistrust whom he serves makes his 'labours
pleasures,' and Jacob's seven years seemed to him
for many days because of his love (Gen. 29:20).
Moral education advances rapidly when a man can
say from the heart, 'To do Thy will, O Lord, I
take delight.' It is not enough that morality be
'touched' by emotion; it needs to be transfigured
with the spirit and transfigured by the glory of love.

'No heart is pure that is not passionate; no virtue is
that is not enthusiastic' (J. R. Seeley,Essai Homo, London,
1864, p. 64).

It thus becomes evident that, before the activities
of love can be spontaneous, a man's very nature
must be changed. Every one that loveth is born
of God (1 Jn 4:7). That which is natural, the self-
life, is first, and afterwards that which is spiritual,
the life of self-renewance. And nothing changes
the natural into the spiritual like the contempla-
tion of the sacrifice of Christ.

'Thou hast no power nor mayst conceive of Mine,
but love I give thee, with Myself to love,'
(Roy, p. 187). To cherish a
love for Him is to love His Kingdom, which ideally
embraces the whole human race. Where the AV
reads 'We love him, because he first loved us,'
the RV has 'We love, because he first loved us' (1 Jn 4:19),
which may be rightly interpreted, 'We love
the Son of Man and, for His sake, every son of man.'
Christ's constraining love is at once the
impulse and standard of all Christian love — that
ye should love one another, as I have loved you'
(Jn 13:34). Judaism supplied the law of love (Lv 19:18);
Christianity supplies the power — the grace
which came by Jesus Christ (Jn 17). It seems
a priori impossible to love the world that hates us,
but it is morally impossible not to love the world
which has so great a Faith works by love
(Gal 5), and works miracles.

'The gospel... desires the best 'Love thy neighbour as
thyself' — a simple sentiment quite literally,
'In, then, this demand reasonable, and is its fulfillment possible? The soully reason-
ing, common-sense intellect answers 'So,' a thousand
times over; and in this Ye with a decided, quiet
Yes' (W. Bouquet, The Faith of a Modern Protestant,
London, 1889, p. 77).

While, however, all finite love flows from God's
infinite love, it is not always conscious of its source.
It may well up pure and strong in a heart which
has never been able by searching to find out God.
And it is none the less acceptable to God though
it is not yet its object. This truth is exquisitely
expressed in Leigh Hunt's poem of 'Abou Ben Adhem,'
who, though not yet one of those who
love the Lord, has it revealed to him that, because
he loves his fellowmen, his name stands first among
those whom love of God has blessed. And it is
explained in another authoritatively in Mt 25, where
our Lord proclaims that deeds done in love to
the least of His brethren are accepted as done to Him-
self. Those who do them are unconscious Christians
but in whose heart there is, real, and their reward, which they never
sought, is sure.

'For they love goodness, and to love goodness is in fact to
be good. And the good is the first of all gods. But the
good lives must always cause regret to the Christian, the good-
ness which he has not himself possessed, as being inexplicable to
the same cause which has for himself become explicit' (Tillingworth, p. 167).
an epitaph of Theocritus (no. 13: cf. U. von Wilamowitz-Möllendorff, Teucrose, der Bauhöcker, Berlin, 1906, p. 118) a woman of Cos thanks her for the freedom her husband gave her. The prayers of widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7). Nor is it without reason that the wedding of the goddess to Zeus is celebrated by marriage. The prayers of the widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7). Nor is it without reason that the wedding of the goddess to Zeus is celebrated by marriage. The prayers of the widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7). Nor is it without reason that the wedding of the goddess to Zeus is celebrated by marriage. The prayers of the widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7). Nor is it without reason that the wedding of the goddess to Zeus is celebrated by marriage. The prayers of the widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7). Nor is it without reason that the wedding of the goddess to Zeus is celebrated by marriage. The prayers of the widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7). Nor is it without reason that the wedding of the goddess to Zeus is celebrated by marriage. The prayers of the widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7). Nor is it without reason that the wedding of the goddess to Zeus is celebrated by marriage. The prayers of the widows for a second husband were directed to her (Nau- pactus [Paus. X. xxxviii. 12]): in Sparta she was entertained to retard the coming of old age (ib. III. 7).
The worship of Aphrodite was also influenced by forebears of other deities; on the Black Sea there was an Olympia of Scythian origin (Herod. iv. 59, 67), the lady of Apaturoon (B. Lattesich, Inscr. Pont. Enz. v. Petrowgrad, 1880-90, ii. 19).

The function of the goddess was in historical times narrowed down to that merely of the protectress of love. It is only as such, with the exception already noticed, that she is recognized in the iconi epic, and it is therefore worthy of remark that her cult was introduced into Smyrna (Tae. Ann. iii. 63) and Ephesus (Michel, Recueil, 389 A 5, B 25) by means of oracles. Even at a later period the stars and the moon were regarded as sacred and profane love—a contrast having no foundation in their essential meaning, but dominating their usage for the future.

4. Later developments. — In the sphere of common life the deities of love declined as the practice of hetairism gained ground. In this period the "Aphrodites" became the characteristic hetairistic festival (Nilsen, p. 374). Besides Eros we now find Iseus and Ilob, "Longing" and "Fullfillment." (Paus. i. xiii. 7; on the meaning of Ilobes cf. Wilamowitz-Möllendorf, Hermes, x. 1905, p. 172, vii. xii. 803 D; Steph. Byz. s.v. Ἀφροδίτη seems to have had to do with νικόλος ἐρως, as is certainly true of the Aphrodite Scorba of Phausis (Ityt. Mag. 643, 49); in Crete she bore the name called eténa (schol. to Paus. iii. 114; v. Eur. Alc. 689). As Aphrodite was brought into relation with the evening star in the myth of Phoin-Phaseus (Wilamowitz-Möllendorf, Hermes, xv., 1883, 410 ff., Sappho and Protagoras, p. 183 ff.; Berliner, 1883), it is easy to see why maidens should murmur their love-pangs to the moon-goddess (schol. to Theoc. ii. 10; Hesych. s.v. ὀλίβας s. g.), just as in the Erotic Fragment (6) the lover invokes the moon and the camera sē.

3. Eros. — Besides Aphrodite the only Greek love-deity of real importance is Eros. He too had a more general function as a deity of procreation, viz. in Thessaly, where he was worshipped as a stone fetish (Paus. ix. xxvii. 1), as also probably in Parion, in Laconian Lektra (ib. iii. xxvii. 5), and in the sea-cult of the Lycomedes (ib. ix. xxvii. 2; cf. Fortwangler, ib. Introduction, p. 126 f., xii. [1892] 116 f.). In Ellis he is represented beside the Charites, and to the right of them (Paus. vi. xxiv. 4), i.e. as their leader, like Hermes. This is the most significant aspect of Eros in general, because he shares the cosmic character which he bears in Hesiod and among the Orphics. In consequence of the obvious derivation of his name, however, he remained a child of Helen, and so the god of cosmic desire. His cult had only a narrow range. In Laconia and Crete sacrifices were offered to him before a battle (Athen. xiii. 561 C), and the connexion between these and predynasty had a myth similar to the Behist (Behist. Mon. xii. [1917] 445). We are told also that in the Academy he had an altar which was supposed to have been erected in the period of the Pissistratis (Athen. xiii. 609 D; Plut. Sol. i), but Pausanias (ib. xii. 390 G) asserts that offerings were never paid to him at all. In literature and art his figure was always a mutable one, and he is the subject of no clear-cut myth (J. Boehlac, Phth. i. 1880, vi. 736; Preller and C. Robert, Griechische Mythologie, Berlin, 1887-94, 1, 94 450, 5, W. H. Roscher, art. "Aphrodite" in Roscher; A. Fortwangler, art. "Eros," in ib.; P. W. Middell, Ditt. "Pâthos," s.v.; K. Tümpel, art. "Aphrodite" in Pauly-Wissowa to be used with caution); O. Wasser, art. "Eros," 40 ff., KURT LATTE.

II. ETHICAL IDEAS. — I. The Homeric age. — It remains to examine what ideas concerning the

LITERATURE. — The more important works have been cited in the course of the article. The reader may also consult: W. H. Engel, Eros, Berlin, 1884, ii. (citations); A. Emmann, "Kyroso und der Ursprung des Aphroditekultes," in Mnesta, de la Mén. d. Acad. fr. de cl. O. Wolfr. (P. v. Wissowa, vi. 487). Alcman (frag. 38 [Bergk]) calls him a boy; Anacreon sometimes obviously regards him as a youth (frags. 2, 47), while in other passages (e.g., frag. 29) one may well doubt whether he thinks of him as a personal deity at all. But this ineffectiveness of outline, which persists throughout the subsequent period, is counterbalanced by the strength of the associated conception. While Sappho (frag. 1) natively prays to Aphrodite, who inflicts and removes the pains of love, Sophocles (frag. 44 [Nauck]) extols the might of that force which pervades all that lives, and depicts the shattering effects of ἀφροδίτης ᾀρων (Sophoc. Ant. 781; Eur. Hippias, 355, 1268, Iph. Aul. 543). Thereafter philo-

sophical speculation seizes upon the conception, and exalts it to heights before unapproached. Plato, (Comme. 187 D), playing upon the etymology of the words, contrasts ὀλίβας and Ἀφροδίτη as sacred and profane love—a contrast having no foundation in their essential meaning, but dominating their usage for the future.
emotion of love and its ethical value were characteristic of the Greeks; and the survey will reveal considerable development in consequence of political and social movements, together with a certain variety and plenitude of contemporary opinions in the most important eras. The charming pictures of domestic affection which are to be found in the Homeric poems, such as the parting of Hector and Andromache (Iliad xvi.), or the meeting of Odysseus and Penelope (Od. xxiii. 85 ff.), and even occasional comments like 'there is nothing mightier and better than when husband and wife keep house with united hearts' (Od. vi. 182 ff.), and the tenderness of the allusion to the soft voices of the youth and maidens while they are courting each other (Il. xxi. 128), reflect the condition of society in which wedded love was highly prized. This was the natural outcome of the respect with which women were treated, and of the comparatively high degree of liberty which they enjoyed.

2. Post-Homeric development. — The causes which led to the disappearance of the Achaean monarchies are imperfectly known to us (see art. KING [Greek and Roman]), and the evidence available does not enable us to trace the course of the changes which lowered women in public estimation by depriving them of their earlier freedom. But signs of their degradation may be observed as early as the time of Herodotus, in his history of Hellenic marriage (Works and Days, 700 ff.), and the same tone pervades the invective of Semonides of Amorgos (frag. 7), whose pattern wife is the offspring of the busy house, 'one with matter to look to in the gathered store of her mate' (line 83 ff.). It is remarkable that the same simile is employed by Ischomachus in describing to his wife the duties which he expects her to perform (Xen. Econ. vii. 59), and the training prescribed in Xenophon's dialogue (op. cit. vii. x.), as well as casual allusions to domestic happiness, shows that the Attic ideal was satisfied by the loyalty of a captivated and thrifty housewife (cf. I. 7). In historical times an ordinary Greek marriage was so entirely prompted by motives of convenience that we read without surprise the typical sentiment of the Athenian orator: "While we keep a mistress to gratify our pleasure and a concubine to minister to our daily needs, we marry a wife to raise, educate, and to have our property carefully preserved" (Dem. loc. 125).

3. Sappho. — It must not be supposed that in the many passionate outpourings of the lover's feelings to fail to make adequate expression in literature. In this respect the poems of Sappho occupy so peculiar a position that an attempt must be made to delineate its background. Sappho, a poetess of such eminence as to have been accounted the rival of Homer and to have earned the title of the tenth Muse (Anth. Pal. vii. xiv. 15; cf. Strabo, p. 617), owed most of her reputation to the fervour of her love-poems. Yet in estimating their tendency we encounter unusual difficulty, partly because, notwithstanding the additions made in recent years, only scanty fragments of her writing have survived, and partly because comic poets and later gossip-mongers have shrudled her name in unmerited scandal. It is generally admitted that the story of her unrequited love for Phaon and of her despairing leap from the Leucadian wall are fictitious (Ep. lxxvii. 37) to the discussion of Diodorus 'an Sappho publicus fuere,' are not to be supported by such doubtful evidence as frag. 32, and are contradicted by the soundest part of the tradition which represents her as a wife and a mother (Suid. s.v. Zarpo; cf. Sappho, frag. 85), than by the sincerity and freedom of her genuine utterances. The psychological problem presented by frags. 1 and 2 and Berlin frags. 2 and 5 is to understand how the yearning of the. man who has lost his love in the sudden departure of one of her girl friends came to be expressed in terms usually reserved for the rapturous emotions of sexual love. The solution, so far as the evidence presents it, is to be sought in the character of a remarkable personality. If Sappho was the inspiring genius of a society of beautiful and high-born maidens, who sought her as a friend and as a confidante, the poet in the poetic art (frag. 136), and with whom she lived on terms of intimate affection, there was no reason why she should not, with a different intention, have anticipated the behaviour of Socrates to his young disciple by giving utterance to her whole-hearted devotion in the language of passionate love. The parallel was drawn in antiquity by Maximus Tyrius (xxiv. 9), who was, doubtless, not the first to suggest it, and the history of the famous love affair of Sappho and Phaon, and the good name of Sappho has been defended by F. G. Welcker (Kleine Schriften, Göttingen, 1816, ii. 80-144) and, more recently, by von Wilanowitz-Möllendorff (op. cit. 1828).

4. Tragic and other poets. — The poetic treatment of love was usually confined, as, e.g., by Minnermus and Anacreon, to its sensual aspect, and it is clear from the history of the lyric art that a serious preoccupation with the causes, symptoms, or effects of love was considered unworthy of a poet who aspired to be true to his calling. Hence Aristophanes, in the Monon, in the Women in Lysistrata, in the Clouds, in the Frogs, in the Wasps, in The Wasps, in Euphorion, in the Birds, in the Knights, in the Haunts of Men, in the Acharnians, in the Ecclesiazusae, in the Bickerings, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasps, in the Haunts of Men, in the Acharnians, in the Clouds, in the Wasps, in the Knights, in the Frogs, in the Wasp...
a famous fragment (frag. 855 N.), characterizes the love-goddess here a personification of the passion itself, in the following words: 

"Love is not a bliss, but is caused by many names; it is Death, it is immortality, it is raging Frenzy, it is vehement Desire, it is Lanenestia; it is love actually, all peace, all satisfied desiring, the silence of violence."

Over and over again stress is laid upon the irresistible power of Love: he is the mightiest of all the gods (Eur. frag. 290, 430). Menand. frag. 299, ii. 67 K., frag. 449, ii. 129 K.); and not one of them (Soph. Trach. 443), not even Zeus himself (Eur. frag. 684; Menand. frag. 209, ii. 60 K.), can withstand his attack. 

"He is not wise," says Desiderius in "Theodosius" (1101). "who seeks to contend with Love, like a boxer at close quarters." It is not difficult to imagine the result of this assumption upon the attitude of the average Athenian citizen. The celebrated idipseis of the Corinthian Aphrodite (cf. Pind. frag. 122 and art. HEBRODPOLIS (Greco-Roman) help to explain the absence of moral reproach directed against the notorious erōtas of Athens. Resistance to the onset of potentio is by no means less imparloraphisable than it is futile (Eur. frag. 340), though excessive indulgence is as much to be deprecated as entire abstemience (Eur. frag. 428). Such self-control as was exhibited by Agamemnon in refraining, despite the violence of his passion, from accepting the kiss offered by a beautiful Persian boy (Eur. Ag. v. 4 f.), was so rare that the historian felt it to be altogether marvellous.

5. Panterasty. — The passage last quoted confronts us with that form of the love-passion, the love of boys, which has come to be known as 'Greek love,' and has tarnished the whole fabric of Panterasty. There is no trace of this custom to be found in the Homeric poems; for the assertion of such relations having existed between Achilles and Patroclus is not, so far as we can tell, earlier than X. Cyl. (frag. 128 [Testamentum Graecorum Fragmenta], Leipzig, 1889, p. 44). But there is no doubt of its antiquity, at any rate, among the Dorian branch of the Greek race. This is established by the evidence of certain Thracian inscriptions (Inscriptiones Graecae incolarum maris Erythraei ed. F. Miller von Gaertening, iii. [1904] 536 ff.); by the relation between the cypipps and doxai in the disciplinary system of Spartan training (Serv. Aen. vi. 307, xi. 14; Athen. Var. Hist. iii. 10, 12); and by the curious custom of the Cretans, according to which the lover carried off his favourite by a show of force, and was more or less seriously punished according to his supposed merits (Strabo, pp. 483, 484). The inveteracy of the habit may be attributed to its long descent from a primitive period when continuous military service involved a scarcity of women (Beith, in Rhein. Mus. xii. 438 ff.). Moreover, it is fair to admit that the results of such companionship were by no means invariably lead. T. Gouper has well remarked that the sentiment in question appeared in as many, if not more, varieties and gradations, than the love of women at the present day. Here, as elsewhere, a noble action was often granted upon a savage stock. Devotion, enthusiastic, intense, ideal, was not infrequently the fruit of these relationships, and of the sensual origin of which was entirely forgotten (Greek Thesigr., Eng. tr., London, 1801-13, ii. 280). Such an elevation of sentiment is the easier to understand if we bear in mind the continually increasing segregation of the sexes to which reference has already been made, and which, owing to the natural craving for sympathy and affection, left a gap to be otherwise filled. It may fairly be supposed that, in the early ages, there were many—probably an increasing number—who were keenly alive to its disgrace. But sentiment varied among different communities, and, as with Athens, so with Thebes and Elis; the two cities were subject to an unequaled notoriety in this respect (Xen. Symp. viii. 34; Plut. Sympos. 182 D).

6. Philosophic love. — Such was the state of society when the teaching of Socrates began to open a new era in the progress of morality. By putting sexual desires more or less on the level of the other bodily wants (Xen. Mem. iv. 10, Symp. iv. 28), Socrates set the seal of prudential standpoint of the ordinary person. But his character, so completely vindicated by Alcibiades in the Symposium (215 A ff.), was free from any suspicion of vice: and though he sometimes ironically pretended to be enamored of beauty (Xen. Mem. VI. i. 2, Symp. iv. 27), and actually described himself as the lover of his younger companions and pupils (Xen. Symp. viii. 39), yet he energetically repressed the erotic tendencies of his associates (Xen. Mem. i. ii. 29, i. iii. 8), and required that a spurious love should be converted into a true friendship, aiming solely at the moral improvement of the beloved object (Xen. Symp. viii. 27). Plato developed his master's teaching on this subject by connecting it with the innermost core of his philosophical system, and, in the dialogue Symposium and Phaedrus) expounded with matchless literary skill his doctrine respecting the true nature and purpose of love. The argument in the Phaedrus (250 A) starts from the hypothesis of the immortality and reminiscence of the soul, which in its ante-natal state was associated with the eternal verities of the ideal world. Now, the ideas of Justice and Temperance are scarcely visible in their earthly condition; their ultimate apprehension is difficult and seldom attained. But Beauty is always so conspicuous that its phenomenal representation attracts at once the admiration even of those who are not initiated into the mysteries of wisdom, and are engrossed in their mortal surroundings. Thus souls from which the glories of the images once beheld have faded into contact with earthly things-so far from being sanctified and inspired by the sight of beautiful forms, are stirred only with fleshly desire. But it is different with the lover who is also a philosopher, and his progress is described in the narrative of Diotima reported by Socrates in the Symposium (pp. 210, 211). The true lover, by contemplating the beauty of the beloved object, is immediately reminded of absolute Beauty itself. With his personal admiration for his Olympian object, he is inspired by the trappings of bodily fashions, he sees even more keenly the beauty of mind and character of which the outward form is only the reflexion. Presently he perceives the common kinship of beauty wherever it is manifested in action or thought, and learns that its complete apprehension is the task of a single science. Lastly, passing entirely from the individual to the universal, his soul is so greatly purified as to become re-united with the idea of Beauty itself, which is the ultimate source of all beautiful persons and things belonging to the phenomenal world. Such is the significance of τὸ ἀιώνιον φανερόν (Sympos. 211 B), or τὸ παθητικὸν μὲν φασιοφασὶν (Phaedr. 249 A). Plato's philosophy left its mark upon subsequent ethical speculation, but was too much exalted to affect the opinion of the ordinary citizen. Aristotle distinguished perfect friendship between good men based upon character from the spurious friendship of lover and beloved aiming at pleasure or utility (Eth. Nic. viii. 4, 1161 a 1 f.). Whereas the Epicureans entirely rejected love as a violent impulse attended by frenzy and distraction (Epic. 1. 58; cf. 1. 59). Bumet has recently undertaken to show that the whole of the doctrines commonly attributed to Plato were originally propagated by Socrates (Greek Philosophy, i. "Thebes to Plato", London, 1914, p. 146). It is obviously impossible to discuss the question here.
frag. 483 [Usener]), the Stoics followed closely in Plato's footsteps by recommending it to the Wise Man as an attempt to promote friendship with youth who displayed in their beauty a capacity for virtue (Diog. Laert. vii. 129; Stob. Ed. ii. p. 115, 1 [Wachsmuth]; Cle. Zac. iv. 70, etc.). Platonists, as might be expected, adopted the rules laid down by Porphyry in his Symposion as a means of approach to the supra-rational and transcendent First Being (Porphyry, Vit. Plotin. xxiii.). On the other hand, Faintarec, whose dialogues entitled epistelai aimed at challenging conflicting views by a return to the commonsense point of view, while he was largely influenced by Platonic imagery, vindicated the claim of woman as the proper object of a divinely inspired passion (21 L 786 E ff.). We even find Plato condemned altogether as unworthy of serious attention by such writers as Dionysios of Halicarnassus (de Administr. ci divinis in Demeat.., p. 1877). Athenaeus (ibid.) and Heracleitus, the author of the Homeric Allegories (76, p. 101, 19).

7. Romantic love. — In the meantime we are able to trace the growth in Greek literature of the romantic love-story in which the hero and heroine, who have fallen in love at first sight, after a series of adventures are at last happily united. The realistic treatment by Euripides of certain themes, such as the subject of one of the causes which contributed to the appearance of the domestic drama known as the New Comedy. Among the stock elements in the plots of Menander and his rivals was the intrigue of the son of a rich citizen with a slave-girl who often proves to have been originally a free-born Athenian exposed by or otherwise lost to her parents; the overracing of an unsympathetic parent or a rashly pander to the excitements of a devoted slave or parasite; and the ultimate reconciliation of all parties, leading to the marriage of the happy lovers. But pathos and sentiment were entirely foreign to the cold artificial mechanism of these plays. A new tone—that of sympathy with the fortunes of the lovers—asserted itself for the first time in some of the masterpieces of Alexandrian literature. Whether this was merely the result of the diffusion of the Hellenic spirit outside the confines of the city-communities through the countries which then constituted the civilized world, or more specifically of closer acquaintance with Eastern tales such as that of Abraptides and Panthea in Xenophon (Oxyrop. v. i. 3, vi. i. 31 ff.; iv. 2-11, vii. i. 29-33, iii. 2-16; see J. P. Mahaffy, Greek Life and Thought, Cambridge, 1886, p. 294), is by Bokode, Der griechische Roman, p. 533 (E.), it is impossible now to determine. The vigour of Alexandrian love-poetry receives its best illustration in the third book of Apollonius's Argonautica, where the growth of Medea's passion for Jason, the conflicting interests prompting her to struggle against it, and her final submission to an irresistible emotion are depicted with poetical power and very high order. There is no doubt that Vergil made Apollonius his chief model when constructing the well-known episode of the loves of Didon and Amor. Another example was the love-story of Aeneas and Cassandra, described as the outcome of a consequence of a digression in the Aeneid, the conclusion of which has recently been discovered in one of the Oxyrhynchos Papyri (no. 1011 [=vii. [1910] 15 ff.]). The various forms of this common theme to the writers of these romantic narratives have been summarized (A. Cout, La Poésie alexandrine sous les trois Ptolémaïes, Paris, 1882, pp. 140-160; J. P. Mahaffy, op. cit., p. 254). The description of the pang of thwarted love; and the importance attached to the preservation of the virgin purity of the heroine amidst all her trials and dangers until her final reunion with the hero. This was visibly mirrored by the art of Callimachus, and Philetas upon Latin poetry, and especially upon the works of Catullus, Propertius, and Ovid; but mention should be made of Theognis of Megara, who had an extensive circulation in the Alexandrian era (Ovid, Trist. ii. 413; Lucian, Am. i.). This was a collection of erotic tales put together in the 2nd cent. B.C., whose general character may be inferred from Petronius, Apuleius's Golden Ass. The work of Parthenius dedicated to Cornilius Gallus was different in both scope and purpose; it consisted of excerpts relating to the misfortunes and disasters of various historians and poets. The characteristic features of the romantic love-story enumerated above were closely followed by the later romance-writers (e.g. cf. art. FICTION, Prima). those who were the direct inheritors of the Alexandrian tradition and became extremely popular in the Middle Ages (Is. Bokker, Anecd. Grec. Berlin, 1814, p. 1082). The best of these novels was the Ethiopic of Heliodorus (Greek, d.), who was preceded by Xenophon, the author of the Ephesiaca, and followed by Achilleas Tatius (Leucippe and Clitophon) and Chariton (Charmides and Callirhoe). The Daphnis and Chloe of Longus was constructed according to the same plan, but under the influence of the pastoral Idyll of Theocritus. To these names should be added the fictitious love-letters of Alciphron and Aristocles, which aimed at restoring the Attic flavour of the New Comedy.

LITERATURE.—Several of the authorities consulted have been mentioned above. Certain portions of the subject-matter are covered by E. Bode, "Die dorische Knabensage," Rhein. Mus. hist. 1907, 438 ff.; E. Robbe, Der griechische Roman, Leipzig, 1890. For the critical development in general, see the author's treatises quoted under ETHICS AND LITERATURE (Greek), and especially L. Schmidt, Die Epik der alten Griechen, Berlin, 1886, 4, 294-298; J. Denis, Histoire des lettres et des arts dans l'Antiquité, Paris, 1879, ii. 122-164.

A. C. PEARSON

LOVE (Jewish).—The dictionaries define love as 'a feeling of strong personal attachment, induced by that which delights or commands admiration.' The subdivisions of this sentiment comprise the impulses of affection, due to sexual instinct, or the mutual affections of man and woman; the impulses which direct the mutual affections of members of one family, parents and children, brothers and other relatives; the attachment that springs from sympathetic sentiments of people with harmonious character, friendship; and, finally, the various metaphorical usages of the word, as the love for moral and intellectual ideals. To the last class belongs the religious concept of God's love for Israel is closely related to the idea of paternal affection.

1. Sexual love. — Love for woman as an irresistible impulse is most strongly represented in Cautesice in the words :

Love is strong as death; jealousy is cruel as the grave: the chains thereof are burnished; a very flame of fire. Many waters cannot quench love, neither can the floods drown it; if a man would give all the substance of his house for love, he would utterly be ashamed. (96)

The passion of sexual instinct which must be elevated by a feeling of love is repeatedly referred to in the same book (28 28, 21 21, 21 21, 21 21), and sensuous life of the low physical type is often mentioned either directly (Mt 28) or as the most natural metaphor for reprehensible inclinations (Hos 3). The Biblical narratives give repeated instances of the power of sexual passion, as in the case of Samson (Jg 14 14 14 14 14, 14), where the
LOVE (Jewish)

demonic power of woman over man leads men to ruin. Similar is the case of Shechem (Gen 34), though in his case the love for Dinah is not of the strictly carnal nature which characterizes the relation between Samson and Delilah. The love of King Solomon for many strange women—a peculiarity of the beneficent influence of the hareem or politics in the Orient—is given in the Bible (1 K 11) as the cause of the downfall of the wisest of kings. The Rabbinic view of the Daughters of Jerusalem (Isa 3:16) is that it is impossible for any man to guard against the influence of woman, and use this fact as support for the theological doctrine that law is unchangeable; for even Solomon, who thought he was wise enough to be safe from having his heart turned away by women (Dt 17:22), fell a victim to their influence (Ex. Rabbin., ch. vii., Tanhâmid., Ex. red. 3).

With equal force sexual passion is described in the case of Amnon, raping his step-sister Tamar (2 S 13), when, after the gratification of the brutal impulse, Amnon's passion turns into hatred and disgust (v.24), a story which has a remarkable parallel in Max Halle's tragedy Jugend (Berlin, 1889). The term 'love' is also used with regard to the physical pleasures, as love for delicacies (Gen 27).

2. Matrimonial and parental love.—The higher conception of matrimonial love as an attachment which sustains personal, social, and moral life, and is the foundation of all stable constitution, is foreign to the Bible. The love of Jacob for his mother, the love of Rachel, and the love of Leah, as such, is unmentioned. If the marrying of Isaac and Rebekah, arranged by their parents, ripens into love (Gen 24), a further stage to the relation of Jacob and Leah is that of Rahabah and Hannnah (1 S 1), where the husband tries to console his wife, longing for the blessing of children, by saying, 'Am I not better to thee than ten sons?' (Gen 39). David is spurred by the love of Michal to do great acts of valor (2 Sam. 10), as he has a conception of life akin to that of troublesome times. Even in the story of Esther the king's love for the queen (Est 2,3), while in many ways showing the cares and dangers of the position of the queen, as the wife of a king, is only used to give half of his kingdom away in order to gratify the whim of an odalisque, is presented as an attachment in which the king with the forces of a sudden passion is referred to the case of a captive of war, and the law requiring that she be allowed time to become assimilated to her environment is dictated by a delicate understanding of womanly feelings (Dt, 21). The placing of duty above personal feeling underlies the law for the conduct of a man who has two wives, one of whom is beloved, and the other hated (v.13,17). It is worthy of note that Rabbinic apologetics explain the love as a tribute of piety and hatred as being 'hated by God' ('Sifre, ed. M. Friedmann, Vienna, 1884, p. 113). At the same time Rabbinic ethics derives from this law a condemnation of polygamy as less than the taboos between descendant and wife (v.9), as a warning against sexual licence the author of Proverbs advises (20,22) devotion to 'the loving kind and the pleasant does', and the author of Ecclesiastes tells a youth that 'were a man to serve the Lord with all his might and love his neighbours', that such advice was put in the mouth of King Solomon. In full harmonious with this conception of domestic felicity, as the highest ideal of life, are many Rabbinical statements.

'Of him who loves his wife like himself and honours her more than himself, Scripture (Job 36) says: 'Thus shall man know that thy tent is in peace' (Y.Vehosheneth, 26).

Closely related to this conception of love is the love of children, so often referred to in the OT, and already implied in the many passages which mention the happiness derived from the possession of children (Ps 127:3-5, 32, Pr 17) and the misfortune of not having children, as in the case of Rachel, who would rather die than live without them (Gen 30), and in the similar case of Hannah (1 S 1). The love of Jacob for Joseph, because 'he was the son of his old age' (Gen 32,5, and the love for Benjamin, who, in addition to being a son of his father's old age, was the only one left of his mother (44), are so naturally presented that they show the psychological continuity of human nature. The same feature of truly human love is seen in the story of Jacob and Esau, where the father loves the daring hunter Esau, while Rebekah feels more affection for Jacob, the young man of domestic habits (26).

Such affection derives from the love in the blood, but is often stronger in persons attracted by congenial feelings. There is hardly in the whole world's literature a nobler expression of devotion than the words spoken by Ruth to Naomi (Ruth 1), and the words of solicitation spoken to Naomi on the birth of Ruth's son, that Ruth's love for her is greater than that of seven sons (4,9), are felt by the reader of to-day as they were at the time when they were written. A similar feeling of affinity is that of the faithful servant, of which the law takes cognizance in the case of a slave who would rather be a free man in the house of his master than go free (De 15,18, Ex 21).

3. Friendship and wider love.—The love of friends is naturally presented in comparison with that arising from sexual and blood relationship. David says of Jonathan: 'Thy love to me be as the love of men to women, in friendship' (2 S 1). A true friend is one 'that sticheth closer than a brother' (Pr 17). In correct interpretation of this expression the Rabbinic speak of the natural friendship of the ostracized for each other, naming the proselytes, slaves, and raveners (Talm. Pass. 115). As specimen of the highest love the Rabbanists give the case of the 1 S 20), and contrast it with that of Amnon and Tamar, showing that the first, because unselfish, lasted, while the second, being based on carnal passion, could not last (Est 7).

Love, as not limited to friends, but extended to all mankind, is a principle the priority of which Jewish and Christian theologians have been contesting with one another. On the Jewish side it is claimed that the command, 'Thou shalt love thy neighbour as thyself' (Lv 19), is universal. As proof for this conception it was adduced that the commandment of love in the same chapter is extended to the stranger, 'for ye were strangers in the land of Egypt' (v.4), and that, therefore, it expresses implicitly the idea of Hillel (g.v.)—a teacher of the 1st cent. R.B. said the teacher of the 2nd cent. said: 'Love others as thyself' is a great principle in the Torah ('Sifre, Qiddushin, ch. 1:2; Pe'sachim Nether, x. 3). Christianity, on the other hand, claims that Jesus, in the parable of the Good Samaritan (Lk 16), was the answer to the question, Who is my neighbour, in

1 See also Dt 10, 2 Or the fundamental principle.
the universalistic sense. One might introduce the argument that the Rabbis interpret the commandment, 'You shall love your neighbour as thyself,' as teaching a specific method of execution, evidently implying that even the criminal remains our neighbour (Talm. Pes. 75a). The Hebrew word 'ahāb is 'loving,' and 'love' is also used in the social sense, as in the case of Hāiram and David (1 K 5:18 [EY 5]).

True love is tested by the sincerity which will not hesitate to rebuke and which will accept rebuke (Ex 28:1), on the other hand, loving friends will overlook faults (1 K 5:18). In the same sense the Talmud reports that Johanan ben Nārī praised his companion Rabbi Ein-dor, 'for loving him among his enemies and his friend's ox as a father's among his burden' (Ex 21:33). The answer is given that he must first help his enemy 'in order that he train himself in subduing passion' (Babēth M.349, 320). Love is also a sign of true greatness, as when it is said that 'breakfast removes jealousy and brings love' (ib. A76). The making of friends is true greatness. He is a strong man who can turn his enemies into a friend (Babēth R. Nāthān, ch. 29).

4. Metaphorical uses. — Love in the metaphorical sense is very frequently in connexion with wisdom, especially in the Proverbs (4:7; 8:1); see also the counterpart of loving folly or hating wisdom (12:18). As true wisdom is identical, will be the love of the Torah (Ps 119:133) and of God's commandments (v. 47; 130), monotheistically repeated in the long Psalm, evidently is the work of an early Pharisee who ascribes the ideal presented in the sayings of the Fathers:

'Turn it [the Torah] over and turn it over, for everything is in it, speculate over it, grow old and grey with it, and never depart from it, for there is no higher conception than this' (Babēth, v. 29).

This conception is repeated innumerable times in theory and story. In commenting on the passage, 'This day thou art become the people of the Lord thy God' (Dt 27:10), the Rabbis say:

'They loved God, because God's people forty years previously, but scripture wishes to say that to one who studies the Torah earnestly, it becomes new every day' (Babēth, 69b). As an example of such devotion Joshua is quoted (Mānāhōth, 96b), to whom God said, not in the sense of a commandment, but in the sense of a law, that the Torah shall not depart out of his mouth (Jos 1:8).

The love of instruction — in Hebrew synonymous with reproof (Ps 127; — wisdom (589) — purity of heart (Mie 69) — kindness (Mie 69) — love, and affliction is not a sign of His hatred, for the Lord often correcteth him that he loveth' (Ps 127; see Job 6:6). Yet prosperity is
LOVE (Muhammadan).

Joshua, whether the piety of Job is to be found in his love or in his fear of God (Sûrah 270). The love of God is characterized in the Talmud by man's conduct, which sheds lustre on his religion (Tûdûb 82a). An Zion stands for Israel's ideal, the pious are those who love Zion (Ps. 122) and the wicked those who love shall be presented by the metaphor of adultery and sinful love (Is. 57, Jer. 2:13, Ezek. 16, Hos. 2:4). From a practical point of view the Talmudists say that one who marries his daughter to the best beloved, God, according to Rabbinic ethics, loves especially the humble and peaceful (Bukhârî, iii. 174), and the best of all is modesty (Bukhârî, iii. 10). Modesty is the best means to gain God's love.

"I love you, says God to Israel, because, when I elevate you, you say to me: 'It is as though we were absolved' (Gn. 18, and Moses said of himself and Aaron: 'What a wondrous, good and gracious God is, and my soul knew Him not' (Ps. 28:4)."

God loves, says the Talmud in a different passage (Psalms 118, 138), him who is calm, temperate, and humble, but hates him who is a hypocrite, who does not offer testimony when he knows something of the case, and who sees his neighbour commit a wrong and testifies, although he is the sole witness (Ps. 118). Most probably in the sense of condemning luxury in the building of synagogues R. Hillel, who lived in Babylonia in the 3rd cent., says, commenting on Ps. 89:

It is consistent with this principle that the true Israelite who is beloved of God is in the sense of St. Paul (Ro. 29) the spiritual Israelite, and therefore the heathen who came to Hillel to be converted, and desired to be assured that he might become a high priest, was satisfied when he heard that ‘the stranger who comes with his staff and walks barefooted is given the same rights as the Israelites who are called God’s children’ (Shabbath, 31b). Israel is beloved by God because he is in his fortunes, not because he is persecuted. Lazarus, The Ethics of Judaism, H. Philadelphia, 1901, S. Schneider, Studies in Judaism, 313, 315, and the Jews and Christians, pp. 139-157, 141, 142, 143, in their Love and Sufferings, pp. 138-150, 141, 142, 143, in their Love and Sufferings, pp. 138-150, 141, 142, 143. The ethics of Judaism is applied to Islam in a new of the most recent periods (lxix, 14) but with this exception, and a few others dating from the period immediately before the Prophet's migration, all the Qu'ranic references to divine love occur in those chapters which were revealed at Medina. It is likely that his settlement in a city where he could not fail to be brought into contact with Carian ideas co-operated with the happy change in his fortune, and caused him to emphasize the milder aspects of Allah in a corresponding degree. Of these references, which are about this number, most are brief statements that God loves various classes of men—e.g., the benefactor, the patient, those who trust in him, fight for him, keep themselves pure, and so on—and that he does not love various other classes, such as the transgressers, the proud, and the unjust. Muhammad denies the claim of the Jews and Christians to be the children of a peculiar sense, the beloved of Allah (v. 21). Man's love of God is mentioned in three passages: one man takes idols which they love as much as they love Allah, but the faithful love Allah more than they love anything else (ii. 169); those who love God must follow His Prophet, then God will love and forgive them (iii. 29); if any of the faithful changes his love to Allah will fill their places with men whom He loves and who love Him (v. 59).

Many traditions ascribed to the Prophet on the subject of divine love go far beyond the more animistic, arid and perfunctory allusions in the Qur'an, but there is no reason to suppose that they are genuine. They belong to the mystical doctrine which developed under Christian influence in the 3rd cent. of Islam, and which in the course of time established itself as a guiding and inspiring principle, at the centre of Muhammadanism. The following examples are often cited by Sufi authors:
When God loves a man, his sins hurt him not; and one who repents of sins is even as one who is without sin. (Qur’an 66:81, B. R. A. H. 50.15).

God said: ‘Falses are they who pretend to love Me, but when they see Me alone, they say: ‘We love God more than they love Me.’ If every lover of Mine were alone, I would love him better than all lovers of Mine. Love to be alone with his beloved!’ (H. 66:82).

God said: ‘My servant draws nigh unto Me by works of devotion, not by hidden deceit (al-sekha), nor by the ear of which he hears and the eye by which he sees and the tongue by which he speaks’ (cf. al-Qunayr, al-Ma’aluma, B. R. A. H. 400, 1128 A.H., 280, 1420 A.H., 120).

It is obvious that the doctrine of divine love will assume different forms according to the relative orthodoxy of its exponents. We often find it linked with mysticism of an ascetic or devotional type, while in other cases it accompanies a thorough-going pantheism, or occupies various points between those extremes. The subject is often wisely treated by Ghazali fa lbk. vi. of his Ihya’ (Bailly, 1899 A.H., iv. 280-349). Only a brief abstract can be given here, but this will suffice to show the scope and development of the doctrine as it is set forth in the most authoritative encyclopaedia of Muhammadan ethics.

Love (rubub) is the natural desire for that which gives pleasure; when that desire grows intense, it is called ilove. Each lover has his own beloved. Similarly, the spiritual sense, whose organ is the heart (qalb), has its special beloved, of whom all other objects are incomparable to the bodily senses. Ghazali enumerates five chief causes of love:

1. Self-interest. Every lover desires to prolong his life or to promote his affairs as much as possible. Therefore men hate death and seek wealth, children, etc.

2. Benevolence. Men love those who benefit them. This is the immediate object of all love.

3. Disinterested love of good. Sometimes a good man is loved for the sake of the lover, not for any advantage that may be derived from him.

4. Love of beauty (moral or spiritual). When the whole pleasure which it gives consists in the perception of (1) beauty, (2) knowledge, (3) love, the lover proceeds to the contemplation of all these motives have their ultimate source in God, who is the sole beloved of all lovers, and whose love, although it need not necessarily include love of the Prophet and the saints. The strongest and rarest motive, he says, is spiritual affinity. Man is called to an infinite Dari. In respect of certain attributes, according to the tradition, ‘Form yourselves on the moral nature of God’ (Fakhraddin bIshqayd Jaddism). He becomes near to God through his acquisition of knowledge, benevolence, compassion, and other virtues. But, underlying this, there exists between God and man a real and intimate relation, of which Ghazali speaks with the utmost caution as an inscrutable mystery which is revealed to those who experience it. It is indicated by the verse of the Qur’an where God says that He breathed His spirit into man, by whose means man is enabled to the angels to worship Adam and by the tradition that God created man in His own image.

Every human sense and faculty seeks a particular end. Thus, the immediate end of spiritual knowledge is to be described by different names, e.g., reason, faith, illumination, insight; each of which symbolizes one or the other of the three elements of all things, the spirit, the object of knowledge; therefore knowledge of God is the highest knowledge. The gnostic (rubub) is he who knows God, his knowledge is complete; and his love increases in the same degree as his knowledge. Both spring up together in his heart when he reaches the end of his desires; of worldly desires and of spiritual desires. What he longs for is perfect contemplation and perfect knowledge, such that he perceives God in His spiritual face.

Having defined love as the soul’s desire for that which gives it pleasure, Ghazali points out that the term is metaphorical in its application to God, who wants nothing and requires nothing except His essence and His essential attributes. When it is said that God loves certain men, the intended meaning may be expressed as follows: God raises up the veil from their hearts in order that they may behold Him spiritually, and enables them to draw nigh unto Him, and has eternally willed that they should not be far from Him by means of His love to them, which are the cause of their becoming pure within, and of the radiating of His Divine Light upon them, which is the source of God’s love to them. All these are acts of favour, involving no change in the divine perfection, but inwardly transforming and perfecting the beloved. How shall we know that God loves him? Ghazali answers this question by enumerating the following signs which are decisive evidence of His love for a man: if the love of Him is the best proof that He loves them. The true lover yearns to meet God and to taste the Divine Love; and he who doubts is also sufficient evidence, for if he does not yearn, he cannot love; and he who doubts that he is not yet ripe for the heavenly vision; he is ambitious in worship and good works, for God loves the one who has the love of God.

Thus the value of religion is not mere compliance with commandments, but the entire life is its own reward. The lover, therefore, who loves God in His own Light, who has the love of God in his heart, who loves Him and loves the Qur’an, which is the Word of God, and the Prophet, and his fellow Muslims and all God’s creatures, yet he has no joy but in solid communion with His beloved, knowing that the move of all mankind in the world of the spirit, the fountain and the spring of all action in the world of the spirit, the fountain and the spring of all action in the world, to a certain extent, has its root in the love of God, which is the foundation of all action, since God is the foundation of all action, since God is the foundation of all action.
his faith, and scorns the demonstrative arguments of the theologian.

REYNOLD A. NICHOLSON.

LOVE (Roman).—Nothing is more significant of the characteristic and the prosaic morality of the early Roman than the attitude towards love. In the earliest known period of Roman religion, the so-called "religion of Numa," we do not find a single trace of any deity connected with love. Now, inasmuch as all phases of life had their representatives in the world of the gods, the conclusion would seem to be inevitable that, while there was, of course, natural affection, there was no pronounced development of sentiment, along either moral or immoral lines. In moral expression was checked by that extraordinary self-restraint which characterized a people who were instinctively conserving all their energies for future conflicts; and expression along moral lines was discouraged by a narrowly practical view of marriage more as an institution for the propagation of the race. So far as we are able to tell, therefore, we have in the case of the early Romans a people without any distinct system of love ethics.

In the development of Numa's priesthood she was destined to receive a goddess who was eventually to represent in her world all that the Greeks included under the concept of Aphrodite. The goddess appeared as Venus, and was, from about the year 390 B.C. onwards, identified with Aphrodite; but she did not exist in Rome before Servius Tullius, for we have absolutely no trace of her in the annals of Numa. On the other hand, the name Venus seems Latin, and it is certainly Italian and not Greek; and the fact that, when the Romans learned of Aphrodite, they called her by this name seems to indicate that she was known to them before Aphrodite was, and that there was sufficient resemblance between her and Aphrodite to make an identification possible. Our first task, therefore, is to find what is known about Venus in the period before Aphrodite comes into the history of Rome.

I. The question of the Italian Venus. — In general, the assertion is made that in very early times there was present throughout Italy the cult of a goddess who was called Venus. But a closer examination shows that many of the facts adduced to prove this statement are of very doubtful value. (1) It has been repeatedly said that this goddess of gardens was especially worshipped in Campania, that, in other words, she is the Venus so famous at Pompeii, the Venus Pompeiana. But this is false, for the Roman Venus was the Venus whom the veterans of Sulla brought to Pompeii when they were establishing their new worship there. We have no evidence of any worship among the Oscans of a goddess akin to Venus, a certain Herakleia (mentioned in three Oscan inscriptions; two from Herculanenum [R. von Plant, Gramm. der osk. sprache, Strassburg, 1829-97, ii. 510], and one from Corton); Moreover, despite the fact that the worship of Aphrodite was introduced into Italy in connection with the conquest of Sicily (Euryx in Sicily). This proves, therefore, that the goddess resembled Aphrodite; it tells nothing of Venus, so far as any early Italic cult is concerned. (2) We are in a similar position regarding Fruttis, for whom we have the evidence of Vitruvius, quoted by Solinus, ii. 14, who tells us that the temple of Venus Fruttis was called Frutial. But these passages show merely that an otherwise unknown goddess Fruttis was identified with Aphrodite, and that nothing is gained for the old Italic Venus. (4) There are, however, traces of a very early Venus cult at Lavinium and Ardea. Strabo (p. 233) tells us that Lavinium had a temple of Venus which was the common property of all the Latin cities (i.e. the Latin league), and that it was in charge of priests from Ardea; further, that near Ardea itself there was a shrine of Venus, which served as a meeting-place for the Latins. These statements must be taken at their full value, in spite of the fact that suspicions readily suggest themselves. It is suspicious, for instance, that Pliny (HN ii. 58) and Pomponius Mela (H 2) refer to a place called Aedus Veneris, as an unfortunate name for an old Latin cult. Following the ordinarly sound principle that on solemn occasions the Romans often made sacrifice at the mother-city of a cult, Pliny (HN i. 91) says that the Romans sacrificed to Venus at Ardea (Livy, xxii. 1. 19). The Roman cult may well have come from Ardea, but this reference scarcely proves it; for, as Shelley has pointed out, even the greeks were used to sacrifice in Rome, and the connexion of Ardea and Rome in the Venus-legend is likely to suggest such an act, merely as one step in the metamorphosis of the Venus-legend into a State dogma, which was taking place during the 3rd cent. B.C.

2. Traces of the Early Worship of Venus. — If a search for early traces of an Italian Venus is not very rewarding, an attempt to discover early traces in Rome itself is still less so. The three old cults of Venus ordinarily quoted are Venus Cloacina, Venus Libitina, and Venus Murcia, all of them old, but not one of them originally or at any time offered to the goddess known as Venus. (1) Venus Cloacina. Cloacina was the goddess of the cloaca, and possessed a shrine on the north side of the Forum, near the Comitium, at a point where the Cloaca Maxima entered the Forum. No ancient writer refers to her as Venus Cloacina until Pliny (HN iv. 119, and, depending on him, Servius, ad Aen. i. 790) makes Cloacina a cognomen of Venus. Starting from this, a passage in Ulpian (8, from the year 175 B.C.), where he speaks of a fire in the Forum as having destroyed the temple of Venus, has been interpreted to mean a temple of Venus Cloacina. On the contrary, the presence of a temple of Venus near this point may have been the origin of the false association of ideas. (2) Venus Libitina. The old Roman goddess Libitina, whose cult was connected with the burial of the dead, 1On the etymology of the name see Walde, p. 259.
2For etymology see Walde, pp. 321, 570.
and whose sacred grove on the Esquiline was the headquarters of the undertaking establishments of Rome, had originally no connexion with Venus. Later she was popularly confused with Venus, forming Venus Lustrina, a combination which never existed in the actual cult. It is easy to see two or three things which led to this: the presence eventually of a temple of Venus not far from the shrine of Litchen; the sanctification of Aphrodite with graves, and her cognomen ērryphaiē; lastly, Venus's own cognomen Lūtēntia, or Litchenia, which was readily confused with Litchenia.1 Venus Muricia. Muricia was an Roman goddess whose nature was entirely forgotten in the closing centuries of the Republic, but whose name was kept alive by association with a shrine (exedīum) in the valley of the Circus Maximus on the Aventine side. The locality was known as ad Muriciae or, later, as Muricia volvis. Subsequent generations, trying to find who Muricia was, connected her with Murcia, Murcia, Myrsinoth, and so thought that they had found in her a cognomen of Venus, the goddess of the myrtle.2

Little thus remains of an old Venus-cult in Rome, except the temple near the shrine of Litchenia. This was in the 226 B.C. We have seen, therefore, that there are very slight traces of earlyItalic Venus-worship, and still slighter ones of specifically Roman worship. The presence of the Italic name Venus, by which Aphrodite was known at her introduction into Rome, compels us to presuppose some sort of an Italic deity with that name, who was known and worshipped before the coming of Aphrodite. There is another possibility, which we venture merely to suggest, namely, that we have in Venus a case which resembles in part the cases of Hercules and Castor-Pollux, and in part that of Mercury. Little has been said of Castor-Pollux, she may have been originally a Greek deity, who moved up from Italy, and became nationalized into a Latin cult at Ardea, just as Hercules was at Tibur and Castor-Pollux at Tarentum. On the other hand, the name may have been derived, like that of Mercury, from the translation into Latin of an explanatory cognomen. But, whether Venus was from the very beginning a Venus of Aphrodite, or an original Italic goddess later identified with Aphrodite, one clue to her character is afforded us in the fact that, when the directly Greek Aphrodite came (and, of course, Aphrodite and Eneas were contemporaneous), Eneas was identified as a goddess of gardens that appealed to the Romans. This function, secondary in Greece, seems to have been primary in Rome.3

The coming of Aphrodite.—We do not know exactly when or how the Aphrodite-cult came into Rome—probably not at first by order of the Sibylline books. She came, however, before the Eneas-legend, though, of course, Aphrodite and Eneas were subsequently inseparably connected. The first datable temple is in 226 B.C., and the first official proclamation of the Eneas-dogma by the State was in the year 222 B.C. Naturally Aphrodite was known before 226 B.C., and the Eneas-legend had been circulated privately before it was publicly proclaimed. The two oldest temples of

GREEK APHRODITE; that even here the Greek ideas of Venus Erycina were offensive to her feelings, so that a corrective was sought and found in Venus Venetia, a late century of her Republic three of her great rulers paid homage to Venus as their especial protectress; and, finally, that the example of Julius Caesar's cult of Venus GENETRIX inspired new Venus into the goddess of the Imperial household, and a large part of the Imperial period which followed.

LITERATURE.—On Venus in general: G. Wissowa, Religions und Mythologien der Antiken, Munich, 1896, pp. 324—326; W. J. Fowler, Roman Festivals, London, 1889, pp. 67, 69, 78, 85; E. Aust, Rev. der Klammer, Münner, 1909, 35, 294—297; C. Preller, Röm. Mythol., ed. H. Jordan, Berlin, 1901, 2, 384—385, 386—387 (good, but out of date). In addition to the special references given above, see, for Herakles, Wissowa, in Reckher, loc. cit. 299; for Dionysus, Wissowa, in Phyl.-Wissowa, iv. 60; H. Steud- ling, in Reckher, i. 915; O. Gilbert, Gesch. und Topog. der Stadt Rom von Albertus, Leipzig, 1883—84, i. 338 (to be used with caution); for Libitina, Wissowa, in Reckher, ii. 130; Gilbert, i. 174; for Mucius, Wissowa, in Reckher, ii. 3521; Gilbert, i. 71.

JESSE BENEDICT CARTER.

LOVE (Semitic and Egyptian).—I. Among the primitive Semites.—No written records or oral traditions have come down to us from that remote time when the several branches of the Semitic race dwelt together in the desert of Central Arabia. Our knowledge of that period is derived solely by the comparative method of research, which is the only means of deducing facts in the life, thought, and language of the later Semites, an inheritance from their early ancestors. The love-songs of the Babylonians, the Egyptians, the Hebrews, all resemble the love songs of the Semites, and we may, therefore, unhesitatingly assume that they have belonged to primitive Semitic thought.

The poems of the pre-Muhammadan Arabs are preserved in the ancient type with remarkable fidelity. For generations this poetry was transmitted by oral tradition, but in the second, or the third, century of Islam the songs were collected and written out by the grammarians. The most important collections are the Ḥamāʿik, which contains 884 songs, or fragments; the Muḥallabāt, or seven most famous poems; the Mayfād al-nayyīf, a collection of thirty odes, the Diwan, or collected poems, of Lāhūd; and the Kitāb al-Aqḥāṣ, which contains the traditions in regard to the lives of the poets and the circumstances of the composition of their songs.

Love-poesy that finds most frequent expression in the old Arab poetry. Every ṣafid, or ode, begins normally with an account of the poet's affection for some woman and his grief at separation from her, and continues with a description of the way in which he solaces himself for her loss by war, or by adventure on his fleet carned or horse. The ḥawā, or fragment, the other main type of Arabic lyric, is often merely a portion of an ode. Where it is an independent composition it usually has love for its theme. The seven Muḥallabāt are all love poems, and the 124 songs of the fourth division of the Ḥamāʿik all treat of this subject.

These poems show that, although Arabic society had already passed into the patriarchal stage in the pre-Muhammadan period, yet many traces of a primitive matriarchial organization still survived (see EEE ii. 116). The greatest liberty existed in the relations between the sexes; and women were free not only to choose their husbands, but even to divorce lovers of other tribes. During the winter the rainfall was sufficient to cover the great steppe of the Nejd with scanty verdure, and to replenish the springs that dried up in summer. Then the tribes forsook their permanently settled empires, and wandered far and wide over the plains. The clans were brought into new temporary relations, and their men and women had the opportunity to become mutually acquainted. The result was a numerous inter-marriage.

The poets relate how they first met their lady-loves, and were captivated by their charms. Inna al-Qaysī hit the clothes of Ummiy while she was bathing, and was beset with love till she would not leave them until she promised to carry him home with her on her camel. Duraic fell in love with al-Jas, herself a poes, while secretly she was giving her sick camel with pitch. Under such circumstances it is not surprising that the words were able to describe the charms of those women who were so well known to the poet as great detail as those of a favourite she-camel. Great parts of the poems are devoted to the depiction of the scenes that are as circumstantial as the praises of the 'fattest amongst women' in the Song of Songs. As among the modern Orientals, odours and heavy perfumes are specially admired in women. When an attachment was established, the poet made secret visits by night to the feet of his immolation. If she were a maid, she went out with him into the solitude of the desert, dragging a heavy garment behind her to obliterate the footprints in the sand. Muḥallabāt of Imra al-Qays are said if she were a mother, she remained in her tent, receiving his caresses with one hand, while she held her baby in the other (q. 15). The poet protested his devotion and fidelity, and besought her to cease coquetry, and give him her love; and, he assures us, his entreaties were not in vain. Often the lady belonged to a hostile tribe, and such visits were accomplished only by stealing past the sentinels at the risk of his life (see EEE 138). The poems are full of accounts of such love-adventures, and Imra al-Qays even boasted to Ummiy of the number of women that he had loved in this manner.

This all came to an end with the cessation of the winter rains and the drying up of the springs and the pasture. Then the tribes moved away to their distant homes, and the lovers were separated for a time. The poets tell us how they visited the spot where the tent of the beloved had stood and found it turned into a graveyard—how they had come back, and how they had rejoiced at the happy hours that they had once spent there, and how bitter tears, and refused to be comforted. All the poems of the Muḥallabāt begin with these themes, and they show how beauty and pathos in its treatment.

Love of family and friends also finds frequent expression in the old Arab poetry, particularly in the lamentations, one of the most numerous and most beautiful products of the lyric art.

This passion, like all strong human emotions, was described to the direct influence of music. Possibly in the earliest times a special damun presented over love in distinction from the powers that presided over reproduction and birth. Traces remain of an old Arab divinity, Tāriq, i.e. 'love' (see J. Wellhausen, Reste arabischen Heidentums, Berlin, 1897, pp. 14—18; EEE i. 882). Little is known about his character, but he may be a personification of love similar to other Semitic gods such as Gil, 'lover,' and Pāḥad, 'beauty.' His erotic character is evident from a verse of Nābiḥa preserved by Ibrāhīm ibn Ḥabīb and cited by Wellhausen (p. 173):

'Fārinlāw dād, for sporting with women is no longer permitted us, since religion is now taken seriously' (i.e. since the introduction of Islam).

However this may be, it is certain that, long before the separation of the Semitic races, the function of inspiring love had been assigned to the great mother-goddess 'Aštār, the giver of springs and the protector of life in all the regions of the organic world. Under the varied forms that this divinity assumed in different Semitic lands she was everywhere the goddess of love. The love that she inspired was not merely a personal attachment of a mother, paternal, maternal, and social. In the ancient Arab poetry she is occasionally mentioned by the titles al-Lāt, 'the goddess,' and al-'Uzza, 'the strong,' and in the latter case by which she appears is almost certainly due to Muḥallabāt of al-Lāt. In other Semitic literatures she is constantly described and invoked as the awakener of love (see ASHART, vol. ii. p. 115 f.; ARABZEH, p. 189; and ISHTA, p. 189 f.).

This goddess was the chief divinity of the Semites in their primitive matriarchial stage of social organization. She was the analogue of the human matriarch, free in her love, fruitful mother of her clan, and its leader in peace and in war in
LOVE (Semitic and Egyptian)

Eng. tr., London, 1894, p. 150), and at this time their marriage was exogamous: but with the adoption of agriculture they passed over to a patriarchal organization, and the Semitic religion was not the delineation of nature, but the delineation of maternal love. In the cult of the mother-goddess there existed in germ the message of the Prophets that God is most truly revealed in the unselfish human love, and the message of the gospel that the supreme revelation of God is the perfect love of Jesus Christ.

2. Among the Hebrew Semites. — When the patriarchal form of society gradually gave place to the patriarchal, it was no longer natural to think of the chief deity of the tribe as a mother, but rather as a father. Two things might then happen to the old mother-goddess Ashater. (1) She might be degraded to the position of consort of one or more male gods. This was the step taken in Babylonia, Syria, Canaan, and most other parts of the Semitic world. It involved a surrender of the incipient monotheism that was characteristic of primitive Semitic religion, and an adoption of polytheism. It also involved an over-emphasis of the sexual element in the worship of deity. (2) Ashater might change her sex and become a father-god. Thus the monotheistic tendency of primitive Semitism would be preserved, and the paternal deity would be held with the maternal in the conception of the tribal god. This was what happened in the branch of the Semitic race to which the Hebrews belonged. In S. Arabia, Abyssinia, and Moab, Ashater changed her sex, became the masculine Amur ("A-shater), who retained feminine characteristics (see ERE II, 115); cf. also VII. 459). In Ammon and Edom also the tribal god was masculine and had apparent masculine traits and was associated with a feminine associate. Jehovah was originally a god of this sort. He was the father of His people, who united maternal characteristics with paternal, and who reigned without a consort. This is a phenomenon of great interest in the development of Hebrew monotheism. By it sexual dualism, the curse of other Semitic religions, was avoided, and at the same time made possible a fundamental interest in the development of Hebrew monotheism. By it sexual dualism, the curse of other Semitic religions, was avoided, and at the same time made possible a fundamental element in the conception of the deity.

3. Among the ancient Egyptians. — Our knowledge of love and gods of love among the Egyptians is derived partly from the pictures and inscriptions of the tombs, and partly from the poems and songs; with occasional references in the elegant literature, but mainly from the collections of popular love-songs. The chief of these are the London MS (Harris 590), which dates from about 1400 B.C.; the Turin MS, which dates from about 1200 B.C.; the Gizeh estracon, from about 1350 B.C.; and the Paris fragment, which may be a copy of an original of the Middle Empire. These were first published by C. W. Goodwin, TSBJ ill. (1874) 380, and G. Maspero, JA, 8th ser., i (1883) 5; and in a much more correct edition and translation by W. M. Müller, Die Liebespoesie der alten Egyptier (1888). They contain true folk-poetry, free from the artificialities and tediumness of the conventional Egyptian classics and of the ordinary Oriental literature, and in their simplicity and directness they make a strong appeal to modern taste and interest. The poems in these MSS show the same loose arrangement that is seen in the Hebrew Song of Songs.

The Egyptians belonged to the Hamitic stock, which is closely related to the Semitic; and from the earliest times they were mixed with infusions of Semitic population. It is not surprising, therefore, that their conceptions of love were similar to those of their Semitic brethren. In the earliest times they seem to have been organized matriarchally (see A. Erna, Life in Anc. Egypt, 181).
In connexion with these poems a number of gods, such as Ptah, Sekhmet, Nefer-Atum, and Amun, are invoked to favour one’s suit; but the love of the god Amun was so great that he was Pet, ‘the sky’, who, under the forms of Nut, Neith, Bast, Hathor, and a variety of other local names, was the chief Egyptian goddess. She was conceived either as a celestial vision, who, by the word of the sky, or as a woman raised up from the embrace of her brother-husband, the earth-god Keb. Under the form of Hathor, ‘abode of the sun,’ at Demetra she is adored as the sun, and became one of the chief divinities of the empire. Here she was depicted as a benevolent-faced woman with the ears of a cow, or with a head-dress consisting of the horns of a cow enclosing the solar disk (see ERE vii. 430). Since she was originally a sky-goddess, her function as love-goddess must be regarded as secondary, and as due to Semitic influence. The Semites who settled in Egypt in the earliest period found in her characteristics as mother and as cow the nearest counterpart to their own mother-goddess Ashatar, and accordingly attributed to her all the erotic qualities of the latter. She is shown in the Egyptian form of Ashar, and the two goddesses were regarded as identical both by the Asiatic Semites and by the Egyptians. The Canaanite Asharati was depicted with the attributes of Hathor and Hathor. The attributes of Ashar. During the XIXth dynasty Asharlet received extensive worship in Egypt under her own name, or under the epithet of Kadesh (see ERE iii. 182, 184).

4. Among the Hebrews. - We know that love-poetry existed among the ancient Hebrews from such incidental allusions as Am 6, Is 5: 23b, but specimens of these compositions have as a rule been lost. The whole of the Song of Songs was probably composed in the Israelitish period, but its individual songs may have a much greater antiquity. Besides these primary sources, we have numerous incidental references to love in the other books of the OT.

The earlier writings of the OT show that women enjoyed much of the freedom that existed among the primitive Semites and the Egyptians. They dared to love even before they had been wooed (Is 1: 18), and they were allowed to express their choice in marriage (Gen 24: 5). In the Song of Songs the woman is fully as ardent as the man. The same passionate intensity that existed among the primitive Semites was found also among the Hebrews. The Song of Songs bears a close resemblance to the love-poetry of the ancient Arabs and of the Egyptians. It describes the physical charms of the beloved with the same sanguine detail (e.g., 4: 10; 7: 2-10), and it praises the joy of love with an ardor that is surpasscd by no other literature ancient or modern (e.g., 1: 4, 5; 2: 8; 3: 5-7, 9, 11). This erotic tendency led the early Israelites into all sorts of sexual excesses. Polygamy, concubinage, and prostitution remained unchecked down to a late time, and brought no disgrace to either man or woman. Married women were required to be chaste, and to take pity on the widow and the poor. Love led often to crimes of violence (Gen 24: 2, 2 S 11: 13); but, on the other hand, it also produced beautiful instances of self-sacrificing devotion (Gen 24: 50, Hos 3: 1) and of purity, though unrequited, love (Gen 29: 22). The OT shows also numerous cases of strong paternal love (Gen 25: 27, 2 S 12: 17, 18), and the love of David and Jonathan stands out conspicuously. The one most perfect friendship in all literature (1 S 18: 29, 2 S 1: 2).

With all these forms of love Jehovah, the God of Israel, was closely connected in the early Hebrew consciousness. Indeed it was held that he was originally the tribal god of the Kenites who dwelt at Mount Sinai, and that He first became the God of Israel through the work of Moses. Among the Kenites the marriage of Moses for his mother had been delayed for some time, and the reason was that he would have been adopted by Israel at the same time when he was accepted; but in the old Hebrew religion we find no trace of any such goddess. Jehovah must, accordingly, have belonged to the class of Semitic gods that have been considered above (2), namely, mother-goddesses that were transformed into father-gods in consequence of the transition from the matriarchal to the patriarchal form of society. As such He united with paternal characteristics all the maternal characteristics of the ancient Semitic chief goddess, Ashtar. (1) He was a god of love, and manifested the love-loos of ERE vii. 235). (2) He was the producer of vegetation, and sacred trees stood in His sanctuaries (ERE vii. 285).

(3) He was the creator of animals; the Passover was celebrated in acknowledgment of His gift of the young of the flock, though these were still known as ashtaroth (Dt 7: 3 24). (4) He presided over sexual love; circumsission, a primitive Semitic rite of preparation for marriage, was the special badge of loyalty (Ex 4: 14, Gn 34). In swearing by Him the hand was placed ‘under the thigh’ (Gn 34: 4, 47). The ahab, the symbol of the mother-goddess, stood originally beside His altar (2 K 19: 17, 21: 12, 22: 18). A plausible etymology of His name is that it means ‘He who causes to live,’ i.e., gives children and the young of the flocks and herds. To Him as the giver of offspring the first-born of animals and the first-born child were originally sacrificed, as to the Egyptian god ‘Ashtar (Ex 22: 19, 19: 19, Ex 20: 23), 14). (5) He showed maternal love in His care of His people (Hos 11: 4, Is 49: 6, 9). (6) He was the moral governor of His people (Ex 21: 20, 24). (7) He gave oracles for the guidance of His people (1 S 14: 26, 22: 28, 2 S 24: 20). (8) He was the creator of the world (Ex 21: 20, 24). (9) Like the old mother-goddess, He was a god of war, who fought for the defence of His children (Ex 15: 12, 19: 19, 2 S 24: 20). (10) By a natural association of thought He was also, like ‘Ashtar, a storm-god, who came in the thunder-cloud to fight for His people (Jos 10: 14, 15: 217, 1 S 15: 9, 13). (11) He was the destroyer as well as the giver of life (Gen 7: 13: 2 S 24: 20). For the analogies of these traits in ‘Ashtar-Ishtar see ERE vii. 115 f., viii. 429-431. These facts seem to show that the Kenite Jehovah was the Semitic goddess of love and fertility who had been transformed into a father. These maternal traits were never wholly lost in the latter development of the religion of Israel.

The message of Moses, that Jehovah, the God of the Kenites, had taken pity on Israel and had determined to rescue it from the bondage in Egypt, laid an altogether new emphasis upon the love of this god. His affection for Israel was not necessary, like that of a parent for a child, but moral, like that of a husband for a wife. Hence-
LOYALTY

forth the redeeming love of Jahweh in the deliverance from Egypt and in the gift of the land of Canaan was the keynote of the religion of Israel. From His people He demanded exclusive worship and a love for Him like His love for them. As early as the Song of Deborah His worshippers are called His 'lovers' (Jg 5:20). It is clear also that from the first Jahweh demanded a kindness to fellow-Israelites similar to that which He had shown when He delivered the nation from bondage. Thus for Israel Jahweh became the God of love in an ethical sense that had not yet appeared in any other Semitic religion.

After the conquest of Canaan Israel was confronted with the problem of the relation of Jahweh to the gods of Canaan. This problem was solved by the identification of Jahweh with the *ba'alim* and other male divinities of the land, so that their sanctuaries and rites became His, and they ceased to exist by being absorbed into Him (ERE ii. 291). With 'Ashterat, 'Anath, and other goddesses the case was different. They could not be identified with Him, and He had no consort with whom they could be combined; consequently they remained His rivals with whom He waged war to the death. In all the pre-Exilic literature Jahweh is never compared to them, though through this was certainly one of His primitive functions, apparently because this was regarded as the work of His rival 'Ashterat. Everything connected with the sexual life of the people with birth rendered one 'unclean', that is, 'tabu' from participating in the worship of Jahweh because of the association with the hated mother-goddess; yet, with curious inconsistency, Jahweh was still regarded as the giver of children.

In the Prophets from Hosea to Zephaniah the moral love of Jahweh that had appeared already in the Mosaic religion received fresh emphasis. In his love for his wife Hosea saw 'the beginning of Jahweh's speaking' unto him (Hos 1). 'But when she forsook him for her lovers and plunged into the depths of degradation, he found that he could not give her up, and, when the opportunity came to buy her as a slave and to take her back to his home, he eagerly embraced it (3:1). Through this experience of unselfish love in himself he received his vision of the love of Jahweh for Israel. Jahweh had taken Israel as His bride at the time of the Exodus and loved her ever since with unfailing fidelity; yet He could not give her up. He must send her into exile to reform her, yet He would not give her up. When she repented, He would restore her. This message of Hosea is echoed by all the other pre-Exilic prophets, and finds its noblest expression in the words of Jer 31:3, 'I have loved thee with an everlasting love.' It is the recognition that in unselfish human love the truest revelation of the character of God is found.

In return for His love Jahweh demanded the undivided love of Israel. This teaching found its classical expression in Dt 6:5, 'Thou shalt love Jahweh thy God with all thy heart, and with all thy soul, and with all thy might.' The recognition of Jahweh's love for Israel carried with it the reason that He showed love in the Israelite's treatment of fellow-Israelites. This thought runs through all the pre-Exilic prophets, and is finally summed up by the Holiness Code (Ex. 19:5). 'And you shall love your fellow-Israelites (i.e. fellow-Israelites) as thyself' (Lv 19:18). Even the alien residing in Israel was to be treated kindly (Dt 10:19, Lv 19:34), but the extension of such treatment was not yet imagined (Dt 14:21, Lv 19:34). The interpretation of Jahweh's love in the terms of wedded love reacted also upon the conception of marriage. In the post-Exilic period monogamy became the rule, prostitution was condemned, and men were urged to cleave in fidelity to the wives of their youth (Pr 5:19, 21, 31:24). This higher ideal of marriage is nobly expressed in Ca 2:8: 'Love is as strong as death, passion as inattainable as Sheol. The flashes thereof are flashes of fire, a very flame of Jahweh. Many waters cannot quench love, neither can the floods drown it. If a man should give all his possessions in exchange for it, would any one despise it? He who wedded love is regarded as more precious than all worldly possessions, and as a flame kindled by Jahweh Himself in the soul. An utterance of such purity and profundity concerning love is not found in the whole range of classical literature.

Jesus took up the prophet's conception of the love of God for Israel, and clarified and intensified it by teaching that love was not merely an attribute, but the very essence of the divine nature. The Prophets said, 'God has love'; Jesus taught, 'God is love' (1 Jn 4:8). He also declared the universality of God's love, which had not yet been grasped by the Prophets (Jn 3:16). He reaffirmed the old commandments, 'Thou shalt love Jahweh thy God with all thy heart,' and 'Thou shalt love thy neighbour as thyself,' and gave them new meaning by His juxtaposition of them, through which love to man expressed the supreme expression of love to God, and by His new interpretation of 'neighbour' as meaning every fellow-man (Mk 12:28, Lk 10:27). He recognized that in Himself God's love to man's love to God and to men was perfectly manifested, and therefore He proclaimed Himself as the sole revealer of God and the reconciler of the world.

LOVE-FEAST.—See Agape.

LOYALTY.—1. Derivation and definition.—The connexion between the common meaning of this word and its derivation is obscure enough to suggest that a more accurate etymology may be gained by considering its probable origin. 'Loyalty' is the Anglicized form of the French *loyauté*; its base is *loi*, and corresponds to the English 'law' and the Latin *lex* (cf. *legi*). French has also *légalité* and English 'legality,' the late Latin abstract term being adopted without change either of meaning or of form.

Now *loi* in French, and more particularly in the derivative *loyal*, means in respect of its denotation much more than 'law' in the limited sense of a definite written code. It is a generic term, and stands for that which ought, or *ought to be obeyed*. Its source may be the will of an acknowledged ruler or ruling class, or it may be popular consent, or it may be personal agreement, whether by contract or by voluntary allegiance. It stands, moreover, for the law of nations and the dictates of reason and conscience, more especially and imperatively if these are conceived in terms of religion as manifestations of the Divine command. Law to the ancient Hebrews was not yet imagined (Dt 14:21, 15:2, Lv 25:44). The interpretation of Jahweh's love in the terms of wedded love reacted also upon the conception of marriage. In the post-Exilic period monogamy became the authority
LOYALTY

whose claim on his allegiance he, as a true man, admits. Furthermore, in the natural exercise of his quality, the loyal man applies it to all persons and groups of persons in whom he recognizes any claim of soundes duty or faithful service.

Yet not only is the range of application wide; the claim for loyal service goes very deep: it is the service of those who desire to serve, and to do so up to the limit of their ability. The law is to be within them, written on their hearts, as the Scripture tells us, and incorporated in their will. The whole of Ps 119:1 is, indeed, an expression of the loyalist spirit in application to the Divine law. The devotion expressed by this loyalist in religion is entire; the Divine law is conceived as not perfectly apprehended by him, but he sets no limit to his desire to fulfill it to the end. It is by this note of unlimited purpose, upheld by faith and chastened by humility, that the loyalty of the Psalmist stands out in contrast to the spirit of precise legality, limited by the letter of the law and its tradition, that marked certain developments of a later era. This distinction between the loyalist and the legalist may be found in all times and all places. It applies to allegiance of every kind, whether it be to the supreme law however conceived, or to human ordinances by ancient tradition, national statute, authority of prophet or king, the word of a leader, the rule of a commander. There is the loyalist who does what he is told, breaks no rules; he keeps faith to the word he has written that he will do. There is the loyalist who does this but can by the very nature of the spirit that is in him be counted on for more, who puts his whole mind into his duty, who carries this spirit in accordance with the spirit of the purpose to be served.

Loyalty, then, may be defined as the quality of character which issues in free devoted service to the appointed person or persons. The perfectly loyal person is certain to obey, to serve, despite all obstacles, at all costs, to the best of his ability; and the best of his ability implies that he uses all means to make himself efficient in knowledge and skill and in understanding the requirements laid upon him. The perfect loyalist of story corresponds to this description. We always find him carrying out his instructions—willing and true—without any effort to undertake more than so that, by fulfilling them in the spirit as well as in the letter, the purpose may be accomplished even should the letter fail. He has to be intelligent, astute, not necessarily clever—but obedient to precise instructions given—and these qualities he needs in the more in proportion to the importance and difficulty of his task. It follows that the development of perfect loyalty throughout a company requires that the duties should be accurately apportioned in accordance with the abilities of each member. It requires also that opportunities for the training and exercise of latent abilities should be given to all. This ideal does, in fact, appear, both in pagan heroic story and in medieval romance, as characterizing bands of pre-Christian heroes and bands of Christian knights. The unwritten law—not more formal, more a pact of comradeship—that bound the Round Table knights to mutual loyalty, and to the king above all, is a notable case in point. The two chief cycles of Irish poetry are not merely orthodox in this connexion. Later comes the age of chivalry with its blossoms of romantic lore. Fealty and loyalty are main dramatic motives in all these.

The word *loyalty*—from Latin *fidelitas*, 'faithfulness,' has an equivalent in all the Romance languages, and so has 'legality.' But

Thomas Malory, *Morte d'Arthur*; see also the Celtic original in the Welsh *Mabinogion*.

Loyalty was neither of these. English adopts the French *loyal* to mean 'law-fulfilling' in the sense of the Sermon on the Mount, and distinguishes it from 'lawful,' or 'legal,' which means allowable, and from 'law-abiding,' which connotes subjection to the law, the passive, obedient orderly citizen. German translates by specialization and slight change of significance, using such words as *Untertanentreue* (fidelity in a subordinate) and *Vaterlandtreue* (fidelity to Fatherland); the quality, of course, exists in many diverse applications, and, though fidelity or fealty is not identical with loyalty, the one characteristic is apt to be accompanied by the other. Loyalty objects of service, and all respect of good faith and faithfulness towards the person, principle, ideal, or covenant in respect of which it is expressed; it lays stress on this obligation of specialized fealty rather than on any wider duty of humane comradeship and general goodwill. Nevertheless, there is close affinity between those qualities, the deeper motives of which so widely overlap. The good comrade who, in time of danger or trouble, takes up his responsibilities with settled mind and faithfully sustains them is apt for loyal service wherever his allegiance is given. This is often understood to be given when it is not as a fact, in which case we have either the sturdy rebel or the disloyal man.

The giving of allegiance is in effect a vow to serve; the standard case of loyalty coincides, therefore, with the vow—be it to God, to a country, to a king, to a pledge. Of these the latter is the more necessary for virtuous character, and so it has been judged by the common sense of mankind, as the testimony of language shows, as long as men were either free or under strict rule, they were simply required either to keep their covenants in the former case or to do what they were told in the latter; faith and obedience were their primal social virtues. The conception of religious faith as the faith ing a covenant with the god, was a distinct advance on its conception as a slave service by which he was to be propitiated. The Bible as a whole contains the story of the rise of the idea of covenant from the slave service of the bondsman, through covenant, to the free man's willing recognition of a law which it is at once his burden and duty to obey, and hence to conformity of mind with the Divine purpose for mankind and thus to the 'glorious liberty of the sons of God.' Here we have the specific evolution of loyalty in its highest application, as at once the supreme duty, the supreme delight, and the social virtue of man. On a much smaller scale of motive and in a murkier atmosphere we might trace it in application to finite secular affairs.

3. Personal honor expressed in devotion to social ends.—The free development of fealty by self-discipline to social ends, and of loyalty as a particular case, may be studied in the literature of chivalry and romance. The practice of knighthood, vows, however, is much older and pre-Christian; so far as records go, it was specially characteristic of the people and the social conditions reflected in Celtic hero lore. The chivalry of the Celtic stories is essentially a free man, free of feudalism —except for the spirit that binds him—free of tribal bonds. Social affection binds him too, but honour is his only law. The young hero from his
LOYALTY

185

childhood is educated carefully in all manly accomplishments, and in all social courtesies, including respect for women, children, and gray hairs. He emerges from his tutelage free, comradelike, and courteous, a strong individual. But this is not all. Not the least important part of his education is the contribution which he makes to the formation of his character by laying bonds or obligations (in the Gaelic geis) on himself that he will or will not do certain things. The obligation never to refuse assistance to a woman from whom he has received a courtesie, and to supply occasion for the turning-point of the story. Others are of the nature of obligations to a king, leader, or comrade, or to all the members of a band. King Arthur and his Round Table come to mind, or, for those who know Gaelic story, Fionn and the band of heroes whose story has been a fund of moral instruction for western Irish children to this day. Some stories turn on a conflict of two loyalties, each claiming dominion over the loyal soul. The discussion of such difficult situations, however, is not in terms of loyalty, but in terms of keeping faith; in a certain typical case where the vows appear to be of equal weight the decision is given on grounds of common sense quite modern in complexion, whether one agrees with them or not.

Incestuous vows in the social interest has, no doubt, been a principal factor of moral education, in its best form of self-discipline for the sake of service, among the peoples of N.W. Europe, where mild forms of government by leasach-truth of free men prevailed. Faith to a self-made vow covers all cases of voluntary allegiance, and so, as the feudal system was established throughout Europe, it availed itself largely in this way. The reason why taking oaths or fealty, however, is not exhausted in the compound. It remains as the quality of faith to the pledge once given, the central virtue of the self-respecting hero who cannot be false to his word. Carried to the point of fulfillment in spirit, rather than merely in letter, this implies not being false to the reasonable expectations involved in mutual understandings between his fellows and himself. The word means more than this; it signifies all this. Such a one is 'loyal,' or 'faithful,' so far as his conduct goes, but in his motive he is primarily faithful. It may be that only he himself is aware of the difference. As a rule, no doubt, the motives are mixed, but it seems probable that in many, or indeed most, cases either one or the other is the backbone of the composite characteristic. If so, it is important in the education of each person sufficient demand should be made on the leading trait to evince it strongly, and sufficient social opportunity given to direct its practical expression in terms of the other—the faithful soul realizing itself in service to others, the loyal spirit fulfilling its service by self-reliant intelligence and steadfast faith.

4. Political loyalty and its object in feudal and modern Europe. Loyalty as attachment to some definite authority which has a right to be served. The growth of the feudal system in Europe was favourable to the special personal turn which its application took. The political problem was the personal one. The motives are mixed, but it seems probable that in many, or indeed most, cases either one or the other is the backbone of the composite characteristic. If so, it is important in the education of each person sufficient demand should be made on the leading trait to evince it strongly, and sufficient social opportunity given to direct its practical expression in terms of the other—the faithful soul realizing itself in service to others, the loyal spirit fulfilling its service by self-reliant intelligence and steadfast faith.

The loyalty of such a national organism consists in the devotion of its citizens from man to master that bound each to his feudal superior, from the lowest vassal upwards to the supreme overlord or king. Each primary group was sufficiently small, and grouped round a leader sufficiently well known, to bring out men's normal instincts to follow their chief, to owe their loyalty to the master who gave him allegiance, acclaim him lord, and be his man. This is loyalty of the most picturesque and primitive type, steeped, moreover, in a high mood to which religious enthusiasm makes to the lord and his oaths of fealty, to the lord, the lord was to his over-lord, and so the national system was linked up by unit into larger units all under the supreme over-lordship of the king. The system of loyalty is thus supplemented in this actual system of political allegiances, would in the perfect State have likewise been linked up, all loyalty centreing in the king. When the kings of France succeeded in making all the under-feudatories take the oath direct to the king, they established themselves as the centre beyond all doubt. Under absolute personal government the king stands for la loi; his will bound more or less by his coronational oath—is the standard and subject-matter of service due; his under-lords are subordinates commissioned to use their subordinates as his servants in so far as he may require.

The reality, to be sure, was never so systematic, and bred many other qualities, bad and good, besides its medium of high-toned loyalty. It is, however, certain that such a system would profit the king by so using it. Thus the situation was favourable to much praise of loyalty as a prime virtue in the mouths of the upper classes and, for this and other better reasons, in the mouths of their dependent vassals and serfs. Not a few letters generally, lawyers and all who had to do with the executive government, whether on the national or on the local seals.

As feudalism declined, or was broken up, the source of authority gradually defined itself anew as duplex in form: (1) the king administering the realm in accordance with the law, and (2) Parliaments, i.e. the free men of the nation, Lords and Commons, wielding sole power by joint action with the king to change the law. The Lords were, in the first instance, the true peers of the king—the displaced feudal lords—and the old sentiment of feudal loyalty continued for long to be expected more or less by them and conceded less or more. As local magnates of one sort or another, they have in this country had a prolonged and honourable reign. In France they disappear and many seats, as the king himself, at the Revolution, and as later did the pseudo-king or emperor in 1870. England is still in process of change as regards the sentiment of the rural masses towards their classes; but certainly it is no longer necessary to consider loyalty as a sentiment greatly affecting the relations between ordinary people and the Parliamentary peers who are lords of the soil. No historic sentiment of the kind attaches personally to the elect of the people in the House of Commons. Each commands the loyalty of his own supporters in his own constituency, so long as he and they are in general agreement on political issues. But he is not in any sense la loi to them, except in so far as he adopts, and with sufficient ability expounds, those principles of national policy which are common to them and him. Political loyalty—not the maximum of fealty—but the minimum of fealty—that of loyalty: they support him so long as he continues to support that policy with which they continue to agree. Personal loyalties, of course, are not in the nature of the case. There is a very real loyalty, however, to 'the party' as a whole—either party—and to the leader of the party, also, more especially when he is a figure satisfactory to the moral sense, arresting to the imagination, strong and of a good courage.

But for the civilized world of Europe in general little importance in the first instance attached to
Loyalty in any form as an object of loyalty. The king and the law emerge from the feudal system as claimants by moral right on the service of men. The sphere of service to which loyalty properly applies lies beyond and includes the sphere of duties and restrictions enforced under a code of punishment. Loyal service to the king included, as of course, loyal obedience to the law; but loyalty, no doubt, was more consciously directed to the king as such, -with a sentiment tending to passional and personal devotion. The Bourbons in France and the Stuarts in England assumed themselves to be kings by Divine right after the manner of the Roman emperors. In effect, claimed all loyalty, and from many obtained it, as due to the king. The revolt in England took their stand on the law as binding on the will of kings, and claimed restitution of the powers of the kings as guaranteed by ancient charter. The English Revolution of the 17th cent. was, in effect, not a revolution but a restoration of the ancient constitution, cleared, however, of feudal complications, the great Whig families standing with the common people, and the Royalists, who more especially esteemed themselves as loyalists, with the defeated dynasty. In due course there emerged from the welter of pitiful plots and gallant enterprises on the one hand, and conflicting interests around the court de facto on the other, the British Constitution—or rather its first edition—with all its 20th cent. characteristics latent, and sure to develop, in it.

Here it is, a sufficiently complex object of loyal regard:

1. The law of the land as the one authority which all must obey; and all commands by persons in office must be in accordance with it.
2. Lords and Commons, making one Parliament; and these three only, and by consent of each, can change that law, order taxation, or decree the appropriation of the revenue to the Executive Government.
3. The King and his ministers, by whose advice all his decrees are made, who are appointed by the established custom of the constitution from the leaders of the political party which commands a majority in the House of Commons; the maintenance of this custom is guaranteed by the Commons’ hold on the Power of the Purse.

So there emerged slowly in England the modern State, which has emerged elsewhere more suddenly and with less of the attractive complexity of detail which links it with its own historic past. This is what stands for la loi to the modern Englishman. As an object of loyalty it has advantages over some. It excites less, and less often, the bickerings of the Mixed State. Not only is the British Constitution built as it is in order to preserve intact the ancient liberties of the people, but it has been built, bit after bit, by the very course of events containing them. It is apt, therefore, to excite a high degree of enthusiasm in the minds of all those who care about history, all those who lay store by the liberties of the people and the powers of the House of Commons. To them the members of that House, and especially the two front benches, whichever party is in power, constitute the political aristocracy, in the fine Platonic sense. If they are loyal citizens, they will be loyal in the full sense to their own front bench, and law-abiding to the other front bench if it happens to be in power. In stormy times, when great principles, on one or other or both sides, are at stake, the adherents of the party likely to be defeated steady their minds to bear the shock by a very real loyalty, pitched finely in the more abstract key of devotion to the Crown and Constitution.

1 Since the battle of the Constitution had been fought to a large extent on the people’s claim to be taxed only by their own consent, the direct majority of the elected representatives in the House of Commons, it was inevitable that the Power of the Purse should be stoutly claimed and rigorously retained by the Commons. From this arose the doctrine that no ministry could remain in power that did not command the confidence of the Lower House.

Loyalty in modern life.—Among persons outside the large circle who take dealing in political problems the sentiment of political loyalty is probably in many cases practically non-existent, or at least very shallow, except, indeed, when roused by some real or imaginary national danger. This, no doubt, is the reason why voluntary workers with intimations of national danger when a general election being at hand, it seems necessary to awaken the latent patriotism of voters. Of the others—the great majority, it may be hoped—there are those to whom the ideal of the nation to be served, in some small way or other as one can, makes a constant appeal as steady as that of his lord to the devoted benchman. For some this social service lies entirely outside the sphere of State control; for others it consists in service under, or cooperation with, the State. In all cases it is better, I think, by those who understand the ways of the public administration as it is really worked, so that they may use it to better effect by working loyally with it. State Insurance, Old Age Pensions, and recent legislation for the benefit of children are cases in point; voluntary workers disposed to loyal co-operation can do much. No form of loyalty is more honourable than this. Quiet, non-political people, whose sphere of work or leisure does not include public affairs, do very often, nevertheless, take a keen interest in the doings of the State and have a certain loyalty for King and Constitution, or King and Country, which, though not always expressed, is quite real in its way. Without party bias for the most part, they are proud of the whole complex system under which they live, with preferences in attachment, it may be, to one or other constituent in it. This class includes all ‘armchair politicians’ except that large section of ‘armchair political critics.’ There is the ‘philosophic radical’ watching for signs of the social millennium in the House of Commons. There is the ‘true believer of the good old school,’ who has not lost faith in the future, and still sees the Constitution as he would wish to see it. There is the genuine Royalist, who anticipates great things from the House of which he seldom speaks, from the character and ability of the Royal family, and believes generally that events are moving steadily in the direction of absolute monarchy, worldwide and British, a century or so hence. Others there are, without any preconceptions as to an absolute best towards which we are tending, who have a comfortable loyalty for things as they are. These, if they have votes, tend to support the ministry of the day. Their existence is one reason why it is better in general, when the sands are running out, for the ministry to dissolve than to resign.

6. Loyalty in the public services.—Persons who are in the service of the State are, of course, the servants of the Executive. Efficient service according to agreement, reticence in confidential matters, and abstinence from public comment on the policy of either of the ministry they serve or of the opposition they may have to serve—these make up the obvious minimum of their bounden duty. To reach the maximum two things are needed: (1) zeal in the service of the State, and (2) self-identification with the instructions under which they work, or loyal adherence to the leader under whom they serve. Under adverse circumstances
those conditions may fail to be possible in whole or part; in that case the loyai temper still shows itself by putting the best face upon the matter and keeping silence.

It is in the military and naval services more particularly that the idea of service, as to the king direct, counts for most. Here we are back to primitive requirements. The soldier is under bond to risk his life at the word of command. Respect for his wants is a higher character—respect without limit—and this, in the last resort, is self-devotion unto death. The good soldier's loyalty, no doubt, is often feebly pure and simple, as e.g. it certainly is when he has naturally no sentiment as to the service in which he finds himself. Normally, however, we may take it to be a compound mixed in various proportions, into which enter loyal attachments to his sovereign, his country, his leader, his comrades, and the flag he follows, the last being a symbol of all these things and of his own self-respect as bound to stand or fall by them.

3. Problems arising from the complexity of the modern State.—Casual reference has been made above to non-political loyalty as between friends, lovers, kindred, and the members of a voluntary or a religious society. Clearly this is not the primary application of the word, but the tendency to use it in this, rather than in the political, sense appears to be on the increase. This is due to the double confusion of idea as to the political object of loyalty consequent on the complexity of the modern State. Angry politicians are apt to use the word 'disloyal' rashly to denote persons who do not conform to their opinion. For example, in the right balance of power in the State and the tactual, consequently, of right loyalty. Thus claims have sometimes been made in the name of loyalty to right of attack on the lawfully constituted executive, as e.g. to the case of constitutional reform to which a minority strongly objects. This implies confusion of ideas between the State in some special sense—e.g. apart from the principle of development which it contains—and the State as it is, including its provision of a sovereign authority empowered by law and precedent to make changes in all things, including itself. A somewhat wifful confusion of ideas, the opposite effect is also possible between hostility to the personnel and policy of the ministry of the day, which is the normal motive-force that sways the political pendulum, and disloyalty of the state object which which we are pledged, or the law—human or divine—by which we ought to regulate our conduct, the loyal man is distinguished from the law-abiding man as heart and mind, making of himself a veritable organ of expression for the purpose, or the master, or the mandate, under which he serves. No voluntary sins of omission, or omission by inaction does he permit himself. We realize him at his time of special effort in a passion of service every faculty awake and urgent to achieve its end. And in this by trails of thought is clear and steady—stayed, as it were, on his whole nature as a rock. Self-training is this effect in any school of wholesome service must work like a leaven on character as a whole. Even under questionable conditions of service as far as all experience of public service shows, to make a man. But it must be remembered that, without either a morally attractive cause or wise and sympathetic leadership, the loyal sentiment which is the motive of self-training is not adequately evoked.

History and literature abound in examples. Three lines of thought, independent of each other and contrasted, may be distinguished in their logical order here.

(a) The heroic romance of Western Europe, descending through the centuries from its original sources in Classic, Celtic, and Norse or Germanic lore, deals largely in loyalties within the smaller social sphere, intimate, personal, and glorified by affection. Patriotistic loyalty in this dawn of the civilized world has monarchs in its venerated place, holding his supreme veto to be used only on the side of the majority in the House of Commons, subject to the delaying powers of the House of Lords. The number of personal effective loyalty centres in attachment to the Crown is probably large; it counts doubtless for much also in the British colonies.

3. The focus of loyalty in republican nations—In republican States this focus is supplied—so far as it is supplied at all—by a more vivid consciousness of the organized nation as a self-governing whole, the arch of whose covenant is the Constitution. The ideal of the republic as the生产基地 of loyal sentiment is highly developed in the French. The French mind has perhaps a natural genius for the concrete ideal, as indeed is perhaps implied by its turn of speech in favour of 'sentiment'—by means of generic terms that fire the imagination. In the United States of America loyalty affection is rather to the composite nation in reference to all its interests, each more or less on its own—"a wonderful 'Union' of diverse elements, run by a carefully planned machine, which would do its work much better if all the citizens in every section were more enthusiastic in serving it according to their lights. The ideal of the Republic as an organization of free citizens for purposes of self-government seems to have lost for a time something of its pristine freshness and attractive force. At any rate, it is of the United States rather than of the United States Republic that many Americans think as the focus of their political loyalty. Much may be said in their defence. The good of the nation, of course, in all cases the ultimate end of the political art, and the final object, therefore, of that sentiment which reveres as its proximate end the national institutions.

3. The ideal of loyalty.—To be loyal is to be much more than law-abiding. Whether the object be a person to whom we owe duty or affection, the community of persons to which we belong, the institutions under whose protection we are, or to which we are pledged, or the law—human or divine—by which we ought to regulate our conduct, the loyal man is distinguished from the law-abiding man as heart and mind, making of himself a veritable organ of expression for the purpose, or the master, or the mandate, under which he serves. No voluntary sins of omission, or omission by inaction does he permit himself. We realize him at his time of special effort in a passion of service every faculty awake and urgent to achieve its end. And in this by trails of thought is clear and steady—stayed, as it were, on his whole nature as a rock. Self-training is this effect in any school of wholesome service must work like a leaven on character as a whole. Even under questionable conditions of service as far as all experience of public service shows, to make a man. But it must be remembered that, without either a morally attractive cause or wise and sympathetic leadership, the loyal sentiment which is the motive of self-training is not adequately evoked.

History and literature abound in examples. Three lines of thought, independent of each other and contrasted, may be distinguished in their logical order here.

(a) The heroic romance of Western Europe, descending through the centuries from its original sources in Classic, Celtic, and Norse or Germanic lore, deals largely in loyalties within the smaller social sphere, intimate, personal, and glorified by affection. Patriotistic loyalty in this dawn of the civilized world has monarchs in its venerated place, holding his supreme veto to be used only on the side of the majority in the House of Commons, subject to the delaying powers of the House of Lords. The number of personal effective loyalty centres in attachment to the Crown is probably large; it counts doubtless for much also in the British colonies.
destiny. This is why the history of any nation true to itself is capable of being treated as the development of an ideal implicit from the first.

(b) For the ideal of personal virtue relative to or through conditions, and on the fundamental theory of the State even as we know it to-day, we go back to the Greeks, and specially to Plato in The Republic and The Laws. It is his conception of the heavenly realm with its relation to the State that concerns us here. The ideal of the State, as he teaches, should be built up within the soul. Thus—wedding his thought to our inquiry—we may say that the education of the loyal citizen is trained, or trains itself, into the idea of the idealized in the constitution of the State. Thus he exceeds the law-abiding, and is the loyal, man. Further, it is implied in Plato’s thought that of those who have political power the loyal ones are they who cultivate their philosophic aptitude to perfect the ideal of the State in the soul, in order that they may labour to develop the organization of the real State and bring it into harmony with the ideal.

This obviously is what the sincere modern statesman does, or thinks he is doing. It is a narrower part of his loyalty that he should spare no pains to do it. Moreover, in the modern self-governing State, every enfranchised citizen shares this duty.

(c) Finally, we find in post-Exile Judaism the same example of a people held together by allegiance to the law—the law embodied in a written code that he who runs may read. The Davidic monarchy had come to an end; the high priestly law-giver was as chief ruler in the little theocratic State. But from the time that Ezra had read in the ears of the people all the words of the book of the law which he had brought from Babylon, in accordance with the idealistic feeling that the law was above the priesthood and that he was to obey it and understand it for himself. Externally the Jewish people had many nationalities—every Jew in his own mind each pious Jew spent all his loyal sentiment on the law of his God. This was no short commandment, but the whole law, dealing with conduct in all social relations and with ceremonial ordinances in considerable detail. The Jew who obeyed the law was, in quiet times—except for taxation—to all intents and purposes a free man.

The ideal of his State in its essentials was built up by him, in the law. He instructed Jew to Jew: if a professing Jew, he obeyed, whether grudgingly, willingly, or loyally, i.e. with his whole heart seeing to understand and to obey more perfectly. In that perfect inward obedience his freedom was realized, though it was not his quest. The Psalms and the Prophets abound in expressions of this loyalist spirit applied to the Supreme Law:

Teach me, O Lord, the way of thy statutes;
And I shall keep it unto the end.
Give me understanding, and I shall keep thy law.
Yes, I shall observe it with my whole heart. (Ps. 119).

So runs the Psalmist’s typical prayer, and it continues in the same strain, asking for help to go in the path, to incline his heart aright, to turn away his heart from vanity, to establish God’s word unto His servant. In NT times, when the elaborated legalism of the last-day Pharisees prevailed, the great Master Teacher set over against it the true doctrine of loyal observance, the fulfillment of the law by being the kind of person who expresses its purpose naturally in all his acts. (Mt 5:37).

A good man out of the good treasure of his heart bringeth forth that which is good (Lk 6:45). And later, St. Paul, following the same line of

1 The law of thy God which is in thine hand: it is called is the decree of the great king Artaxerxes (Est 7:14).

thought, attains to the vision of the liberty of the sons of God (Ro 8:21). Thus the cycle of reason on the highest as on all lower planes is complete, from the free man’s fealty through the loyalty to the high liberty of devoted service to the ideal in his soul.

LOYOLA.—St. Ignatius Loyola, the founder of the Jesuits (q.e.), was the youngest of the eight sons of Don Belirán y de Olóz y Loyola. The name Lopez de Niesers, self-governing State, every enfranchised citizen shares this duty.

(c) Finally, we find in post-Exile Judaism the same example of a people held together by allegiance to the law—the law embodied in a written code that he who runs may read. The Davidic monarchy had come to an end; the high priestly law-giver was as chief ruler in the little theocratic State. But from the time that Ezra had read in the ears of the people all the words of the book of the law which he had brought from Babylon, in accordance with the idealistic feeling that the law was above the priesthood and that he was to obey it and understand it for himself. Externally the Jewish people had many nationalities—every Jew in his own mind each pious Jew spent all his loyal sentiment on the law of his God. This was no short commandment, but the whole law, dealing with conduct in all social relations and with ceremonial ordinances in considerable detail. The Jew who obeyed the law was, in quiet times—except for taxation—to all intents and purposes a free man.

The ideal of his State in its essentials was built up by him, in the law. He instructed Jew to Jew: if a professing Jew, he obeyed, whether grudgingly, willingly, or loyally, i.e. with his whole heart seeking to understand and to obey more perfectly. In that perfect inward obedience his freedom was realized, though it was not his quest. The Psalms and the Prophets abound in expressions of this loyalist spirit applied to the Supreme Law:

Teach me, O Lord, the way of thy statutes;
And I shall keep it unto the end.
Give me understanding, and I shall keep thy law.
Yes, I shall observe it with my whole heart. (Ps 119).

So runs the Psalmist’s typical prayer, and it continues in the same strain, asking for help to go in the path, to incline his heart aright, to turn away his heart from vanity, to establish God’s word unto His servant. In NT times, when the elaborated legalism of the last-day Pharisees prevailed, the great Master Teacher set over against it the true doctrine of loyal observance, the fulfillment of the law by being the kind of person who expresses its purpose naturally in all his acts. (Mt 5:37).

A good man out of the good treasure of his heart bringeth forth that which is good (Lk 6:45). And later, St. Paul, following the same line of

1 The law of thy God which is in thine hand: it is called is the decree of the great king Artaxerxes (Est 7:14).
and bears the imprint of his eminently practical mind.

It must always be remembered that the Spiritual Exercises is not a book intended merely for reading and reflection, but a manual of training to be put into practice. In this it differs toto calo from such a work as A Kempis's Imitation of Christ, and is

would be as vain to expect literary graces in the Exercises as in a proposition of Euclid. After some preliminary considerations on the end of man, the excercitant is directed, during a week or ten days and during the ordination of the spiritual director, to occupy his mind with the recollection of his past sins and of the punishment which they have deserved, and to cultivate a sense of shame and sorrow, bringing external adjuncts to beat to deepen the impression—e.g., by depriving himself of light, warmth, unnecessary food, and all intercourse with his fellows. After this preliminary discipline, he is introduced to the study of the life of Jesus Christ, who is set before him in two powerful and compelling parables as a chieftain appealing for volunteers to aid Him in the task of reconquering the world from the domination of sin and the devil. It is easy to see that Loyola's thought had been powerfully influenced by the still vivid remembrance of the struggle to reconcile the soul of Spain from the yoke of the infidel. The meditations of this second week of the Exercises, therefore, are devoted to one or two days. By this time it is assumed that the well-disposed excercitant will have been brought to the point of resolving to leave all things and follow Christ, and that he will find the way to call him to a life of humiliation and self-sacrifice. A formal election of a state of life is introduced, accordingly, at this stage, and the two remaining weeks of the Exercises are contrived to induce the choice so made. In the third week the excercitant is bidden to use much bodily penance and to meditate upon the Passion of Christ; in the fourth he looks forward to the need of rest and refreshment, while the mind is occupied with consoling thoughts derived from the consideration of the Resurrection of our Saviour and the remembrance of the joys of heaven.

It is a fact that Loyola, who laid so much stress upon the study of our Lord's life upon earth should feel the need of coming as closely as possible into contact with the scenes of those events with which his life and mission were so closely identified, was determined upon the earliest opportunity to visit Palestine. Ignatius set out on a pilgrimage to Jerusalem, living on alms and, to a large extent, travelling on foot. He passed through Rome and Venice, and thence sailed to the Holy Land, so that almost a year elapsed before he found himself back in Barcelona. That he was specially called to labour for the greater glory of God had by this time become a deep conviction, but the precise manner in which he was to further the work of Christ on earth does not seem to have been made clear to him until many years later (see F. Van Ortroy, *Manasse et les origines de la Compagnie de Jésus* in *Anales de la Compañía de Jesús*, xxvii. [1908] 393-418). Still, he seems to have realized, at least vaguely, that to become an efficient instrument for good he required a better education than he then possessed. Thus we find him at the age of 33 learning the rudiments of Latin with the school-children of Barcelona (1524-26), and thence proceeding to the Universities of Alcalá and Salamanca (1526-28). A personality like that of Loyola was bound to impress wherever he went, and it is not altogether surprising that he fell under the suspicion of the Inquisition, on account of the disciples who gathered round him, and who imitated his habits of prayer. He was reluctant to impose the austerity of life. At first he seems to have been careless of what men said of him, conscious of his own integrity; but later he found that these suspicion hampered his influence for good, and he went out of his way to court and even to insist upon an official inquiry. The proceedings before the Inquisition, so far as they have been preserved, are printed in the *Scripta de Sancto Ignatio*, l. 689-689. Partly on account of the hindrances to his work for souls which these suspicions engendered. Partly it would seem, in the hope of finding companions more in harmony with his ideals than any whom he had yet met (see Fouquet, *Histoire*, l. 71), Ignatius, in May, 1528, made his way to the University of Paris. There at the Collège de Montaigu and afterwards at that of Sainte-Barbe he pursued his studies for the priesthood. At Sainte-Barbe he must, at least occasionally, have encountered Calvin, who had studied there himself and still visited it in 1533. For his support Ignatius, owing in part to his unspeakable generosity to his countrymen, had to depend upon alms, and during the legging expeditions made in the vacation season to that end he visited London, Bruges, and Antwerp. Contradictions and persecutions in abundance were also still his portion, but in Paris he found at last what his heart had always craved—a group of companions capable of sympathizing in his high ideals, and of an intellectual force which lent real weight to any cause which they undertook. The story of his journey to France and the constant repetition of the words 'What doth it profit a man if he gain the whole world and suffer the loss of his own soul?' is well known. An even earlier recruit was Peter Le Ferro, whose position in the University that he was a fellow of, and with whom he took up residence, was a foundation of the Society. To them were added James Laynez, Francis Salmeron, Simon Rodríguez, and Nicholas Bobadilla. Laynez and Salmeron were destined to play a great part as theological instructors and to found the first colleges. Laynez was also to be Loyola's successor as second General of the Society. But even in 1534, when on 15th Aug. these friends met together in the chapel of St. Denis and contrived and at the mas of Le Ferro, who was so far the only priest amongst them, took vows of poverty and chastity (Astrain, I. 70), there seems to have been as yet no clear design of founding a religious Order. The third vow, which they added to the other two, pledged them only to make the attempt to undertake apostolic work in the Holy Land; but if, after a year's waiting, it was found impossible to obtain passage tickets for all, they were to place themselves at the disposition of the pope, for any work that he might assign them. This it was that actually happened. In the middle of 1537 war broke out between the Sultan Sulaiman and the Venetian Republic. There was no longer any possibility of obtaining a passage to the Holy Land. The little band of companions waited the prescribed year, and meanwhile Ignatius himself was ordained priest at Venice (24th June 1537), and he and his companions spent the interval in serving in the hospitals and in apostolic work in many different Italian towns. Eventually it was decided that they ought to address themselves to the pope, then Paul III., and, in spite of contradictions, they had a most favourable reception. It was apparently only at this time that the desirability of a confraternity as a formally organized religious society living under obedience seemed to take shape in their minds. It was characteristic of Ignatius that he always attached much more importance to the inward spirit than to the written letter. Even after he had recognized the fact that in order to perpetuate their work they must be bound together in some regular institute, he was reluctant to provide written form to his own apprehensions. But the various stages in the development of the Order new followed rapidly. Already in 1537 the companions had found it necessary to give themselves a collective
name, and they agreed that, if interrogated, they should describe themselves as belonging to the 'Company of Jesus' (Astrain, i. 89). When they had lain four hours with the pope, the scheme of a definite religious institution (formula instaurata) was drafted, and approved in the bull Regni mundi fundamenta ecclesiae, 27th Sept. 1540. On 4th April 1541 Ignatius, in spite of his own reluctance, was elected pope, and, on that date, until 1556 he busied himself at Rome in compiling constitutions for the Society. The spread of the Society was extraordinarily rapid, and, as the twelve volumes of his correspondence attest, the Jesuits were already connected with his office of General steadily increased day by day until his death on 31st July 1556. Ignatius was interested, and he considered it the duty of his subjects to be interested, in every form of religious work which was for the greater glory of God. Although the Society of Jesus was the backbone of the Counter-Reformation movement, it would be a mistake to regard the Order as having been instituted with the conscious design of counteracting the religious teaching of Luther and Calvin. The central idea, which is found alike in the Exercises and in innumerable passages of the Constitutions, and which is to be taken as the dominant conception of the whole Ignatian spirituality, was the desire to assist in and carry on the work of rescue and sanctification for which Jesus Christ had come on earth. Loyola was not in any way a man of brilliant intellectual gifts, but he possessed clear judgment and indomitable energy; and, contrary to the idea so often formed of his religious descendents, he was not actuated by the testimony of all who knew him a man who was absolutely fearless and straightforward in all his relations with others. He was beatified in 1609 and canonized in 1622.

LITERATURE.—The first place among the sources for the life of Ignatius Loyola must always be given to the so-called 'Autobiography,' dictated by the Saint to Luis Gonzales de Chaves. A Latin version is printed in A.S. 31st July, viii., but a more accurate text of the original, partly Spanish and partly Italian, has been provided in the Monumenta Ignatiana, Scripta de S. Ignatio (6, 31-30), which form part of the great collection of Monumenta Historiae Societatis Jesu (Madrid, 1584 ff.), edited by the Spanish Jesuits. In fact, the whole contents of the Monumenta Ignatiana, which includes a critical ed., in 12 vols., of Loyola's own letters and official documents, are of vital service in the study of the life of Loyola (by E. M. Rice), with notes, appeared under the title The Testament of Ignatius Loyola, London, 1909. See also J. Saha, Ignatius von Loyola, Leipzig, 1873; and V. Berghaus, Geschichte des J. Ign. (2nd ed.), Paderborn, 1910. Translations of this life have been published in French and many other languages. The 17th cent. biographies of Loyola are less valuable than that of D. Bartoli, who had important original materials at his command. The best available ed. is in French, with supplementary notes, by L. Michelin (Bartoli, Historie de S. Ignace de Loyola, 2 vols., Lille, 1839). Of other lives the best are C. Gassendi, Dess Les deat. Jnsc. et de Loyola, Innsbruck, 1834, Eng. tr., London, 1831; J. A. Hart, Roem, H. J. M. Hart, and F. Thompson, Life of St. Ignatius, 1301. An excellent short sketch is that of H. Joly (St. Ignace de Loyola, Paris, 1804, Eng. tr., London, 1859). By far the most trustworthy source of information among modern works is to be found in A. C. van der Lende, Jesu, le. Matthiades, 3 vols., 1859, and for those by I. P. Tacchini, Vitae Ordinum, Rome, 1883, also J. Cretzsch, San Ignacio en Barcelona, Barcelona, 1906. Several of the best books have been published in French: L. E. M. Lorette, La Vie de S. Ignace de Loyola et de ses Freres, Paris, 1885; and for those by P. Tacchini, Vite delle Compagnie di Gesù, Rome, 1886. The best English books are: H. M. Muller, The Origins of the Company of Jesus, London, 1907; and J. F. Meyers, The Modern, xlviii. (1909) 503-512. Some valuable materials and documents are, however, contained in the work, very hostile in tone, of the ex-Jesuit M. P. P. Martin, Histoire ecclésiastique de la Compagnie de Jésus (Paris, 1808-1824). Other points of criticism are dealt with by B. Dutho, Jeanne Leclercq, Freiburg i. B., 1804; T. Stoeckel, Forschungen zur Lehre und Geschichte der Gesellschaft Jesu im 16. Jahrhundert, Munich, 1929. The only life of S. Ignatius besides his letters are the Spiritual Exercises and the Constitutions of the Society of Jesus. A number of the 'autobiographies' or lives of the original of the Exercises was published in Rome in 1605, from which several English translations, the most important being that of W. Warburton, La Vie des Exercices Spirituels (Paris, 1717). As to the Constitutions, a facsimile of the original Spanish was published, Constituciones de la Compagnie de Jésus, reproductions fotograficas, Rome, 1889, with valuable illustrative material.

HERBERT THURSTON.

LUCLAN.—See Antiochene Theology.

LUCK.—See Calendar, Charms and Amulets, Divination.

LUCRETIUS.—Titus Lucrètius Carus was a Roman poet (69 [?]-56 B.C.) who, in the last century of the republic, accepted the philosophy of Epicurus, and expounded it to his countrymen in a noble didactic poem, entitled de Rerum Natura.

1. Life and writings.—Little is known of Lucrètius except a notice in Jerome's additions to the Eusebian chronicle, under the year of Abraham 1923 (= 94 B.C.).

Lucrètius poetæ nascenti. Poetae antiquissimi poculo in furorem venus, sum quiulque liber per intervalos insaniae conscriptus, quod poterit Scipio essendi, proposita, ut manu intelectu anno stiant quattuor semesquingem quartum.

This strange story of continuous suicide, which Tennyson has made familiar, is no doubt derived ultimately from Sextus, de Vir. illust., 51 or 50 B.C., which was confirmed by the earliest extant mention of the poem in a letter of Cicero to his brother Quintus (see Quint., fr. H. ix. 4). This letter, written early in 54 B.C., presupposes the publication of the poem and, presumably, the poet's death. In his internal evidence alone scholars agree that de Rerum Natura like Vergil's Aeneid, never received a final revision from the hand of the author; certain passages, especially in the last three books, seem to be afterthoughts or additions imposed on the poem after his death. In the death of external testimony, something may be gleaned from the poem itself. It seems clear that the author was a Roman noble, well acquainted with the luxury of the time (ii. 24-28, iv. 75 ff., 973, 1191) and with the rivalry and ambition of political life (ii. 11 ff., 40 ff., v. 1120 ff.). Strongly impressed by the crime and bloodshed of the civil wars (I. 29 ff., 40-45, iii. 70-94, v. 999 ff.), he deliberately chose, almost alone among the Romans, a contemplative life (ii. 922 ff., i. 11 ff., iii. 13 ff.). Further, we see that he possessed a poet's clear, minute, exact style, familiar even with a poet's love of nature and delight in open-air scenes (i. 305, 338, 404 ff., iii. 144-146, 328-342, 339-349, 361 ff., 374 ff., 761 ff., iv. 220, 575, v. 256, 991 ff., vi. 526-529, 472), that his phraseology is borrowed reverence for Epicurus, both as a scientific diatribe or as a moral reformer (iii. 9-30, v. 11 ff., i. 10 ff.), that Democracy and Empedocles were also objects of respectful admiration (i. 729-733, iii. 571, 1041), and that he never considered the Oracles or the Socratic Schools, although sometimes alluding to their doctrines, 'quod quidam fiant' (i. 571: cf. 609 ff., 1083, ii. 161-176). He dedicated the work
to Memmius, the patron of Catullus, who was prator in 58 B.C., and at that time an opponent of Cæsar. He addresses Memmius as an equal; the Lucretii belong to a genus distinguished in the early annals of Rome, and the cogenmen Carus is said to be attested by an inscription. The author’s purpose in writing a philosophical treatise in verse is clearly stated (I. 54, 336-340; I. 145, 929-936, iv. 1-25). His aim is genuinely scientific—to gain our assent to certain propositions concerning the atomic theory (bk. i. and ii.) and its applications to such subjects as meteorology (bk. iv.), astronomical phenomena or images whence he deduces the popular belief in the future life (bk. iv.), the origin of our world, of civilization, and of language (bk. v.), of the heaven of the gods, such as thunder, tempests, earthquakes, and volcanoes (bk. vi.). He admits that the system which he advocates is unpopular (iv. 14 ff.), and fears that Memmius will some day fall away (I. 102 ff.). He therefore provides an antidote. Poetry is the honey at the edge of the cup which shall make palatable the medicine of truth. It is no less obvious that the effect upon the reader, the effect upon his imagination, is bound up with the philosophic poet’s soaring frenzy (‘fueror aræus’; Statius, Sil. ii. vii. 70). A philosophical argument is ill-adapted for poetry, but the mental power and perseverance displayed in so arduous an undertaking call for unmitigated admiration. The difficulties of his task spur the poet on, and to overcome them so as may be once his merit and his delight. His grasp of his subject with all its perplexities and problems bespeaks a logical mind, and he is eminently successful in discovering and marshalling whole groups of particular facts which lead up to and illustrate a general principle (I. 159-214, 376-382, ii. 333-380, 581-600). in the use of analogies, and in vividly picturing the consequences of hypotheses (I. 216-256, 606 ff., 886-905). It has been conjectured that he followed the larger epitome of Epicurean doctrine mentioned by Diogenes Lucretius (x. 391, 73 [Giussani, i. 101]). Whether this is so or his choice and arrangement of facts its immediate purpose, remains an open question. In any case the idolatry of the disciple and his close study of the master’s writings (iii. 10) afford a reasonable certainty that he introduced no innovations in substance, although the excellence of his flights of imagination, its flashes of feeling, and its insight, is all his own. In what follows attention is directed to those parts of the system only where Lucretius fills a gap in the scanty outline left by Epicurus himself or gives a fuller treatment of particular doctrines (see Epicureans).

2. Atomic theory. Lucretius begins by advancing the two propositions (1) that nothing can arise out of nothing, and (2) that nothing can be annihilated, which he proves separately from the order and regularity of the processes of nature, as especially seen in the generation of the species of organic life. The obvious objection that we cannot see the particles dispersed when a thing is destroyed is met with a series of analogies from the potent invisible agencies which work in the world. The existence of empty space (‘in vacuo’, or ‘mense’), is thus proved from the impossibility of otherwise accounting for motion, which all the facts of experience confirm. The opposite view, that the world is a solid mass, is next considered. The enumeration that condensation and expansion no less than motion imply the existence of a vacuum. Next, the existence of any tertius gradus other than body and empty space is considered, and it is shown that nothing exists which is not susceptible of physical existence, and that only simple body is bodies are atoms (sortes, corpora, genetilia, semina verus, principia, elementa, or simply corpora). To postulate the existence of atoms is to deny the infinite divisibility of matter. And hence again Lucretius employs his favourite negative procedure, following out the consequences of infinite divisibility to absolute annihilation, which he has proved and impossible. Infinite divisibility would be incompatible with the natural laws (factors nature) which regulate the production of things and the permanence of organic species; for, unless the constituent atoms of things are unchangeable, there will be no uniformity of nature, and it will be uncertain what can and what cannot arise.

Summing up these arguments and collecting what is said elsewhere in the poem, we arrive at the following conception: an atom is a little hard kernel of matter, quite solid and therefore immitable and indestructible (since heat, cold, and moisture, the destroyers of the composite things about us, cannot destroy what does not exist. Each atom is a distinct individual (‘solidus per se simplici té’); it is perfectly elastic; it has minimal parts of which, however, it is not compounded, for they have no independent existence; hence it has size, shape, and weight, but no sensible qualities, no colour or temperature, no sound, smell, or touch, the different qualities of composite things being due to the variety of atomic shapes, which, though great, is not infinite. After removing the divergent views of Heraclites, Empedocles, and Anaxagoras (I. 685-690), Lucretius proves by a variety of arguments that both matter and space are infinite. The opposing view that all things tend to the centre of the universe and the assumption of antipodes which it involves. He subsequently deduces from infinite space and infinite matter an infinite number of worlds, which come into being, grow to maturity, and ultimately perish (I. 1029-1174).

3. Cinemen or swerving. Atoms are in constant motion. They move through space (1) by their own inherent motion, and (2) in consequence of collision. Some atoms of intricate shape form after collision a close union, thus giving rise to the things we call hard; others rebound to greater distances and thus form a species of space. In either case, do not unite at all, but wander freely through space. It is next shown how by imperceptible motions (mutus intestinis) atomic groups or molecules increase in complexity and size until they reach the limits of visibility, like motes in the sunbeam (Ii. 129-141). It will help us to understand the relation between these internal atomic movements and the motion of the group of atoms as a whole. If we take Giussani’s admirable illustration (I. 111ff.): as a swarm of insects moves slowly through the air in one direction, the individual insects of which it is composed are executing all manner of far more rapid movements, some of them in divergent or even opposite directions. The first motion of atoms, always through empty space, is incomensively rapid and uniformly in the same downward direction, for the upward motion of some sensible things is shown to be not inconsistent with this. But at quite uncertain times and places atoms, travelling downwards by their own weight, and therefore in a very great variety of ways, surverv a very little from the perpendicular. The least possible change of inclination must be assumed, although it is imperceptible to the senses.

Otherwise atoms violate all the laws of nature and give birth to things, for in empty space, where there is no resisting medium, heavy and
light atoms fall with equal velocity, so that the heavier would not overtake the lighter. There is a further proof of this in the consciousness of spontaneous initiative, the power by which each living creature makes its will, and whether the will leads, or something which struggles and resists when we move involuntarily under compulsion (ii. 218-223).

For our spontaneous movements originate in sole atoms, and their existence at all can be explained only by assuming a certain contingency in the movements of such sole atoms. Thus the mind does not feel an internal necessity in all its actions, nor is all motion linked together in an unending chain of cause and effect (as the Stoics maintained), but atoms initiate motion, breaking through the decrees of fate. It will be seen that the postulate of uniformity—the decrees of nature which govern the birth and growth of organic species—to which appeal is so often made in the poem, is subject to certain limitations of which our information is imperfect. This being the case, it is not altogether strange that, while M. J. Guignard deduces from the climaxes universal contingency in the Epicurean scheme of nature, T. Gomperz and Usener incline to regard it as no more than a consistent determinism in opposition to Cratylus (p. 123-167).

4. Isomony.—The atomic motions which go on now are the same as they have always been and always will be. What they have produced they will again produce; from certain amounts of matter being constant, there can be no complete change of conditions and no change in the order of nature. The main distinction is between motions which tend to foster birth and growth and those which tend to destroy, whether the aggregate formed be inanimate or an organism. The forces of production and destruction alternately prevail (ii. 1108-1149), but are so evenly balanced that, if we look to the whole universe, the result is equilibrium, as in an indecisive battle (ii. 509-539, v. 330-415). This principle of equable distribution is best known from Cuore, De Nat. Deor. i. xii. 36, but undoubtedly it was familiar to Lucretius. Combined with the infinity of atoms of every shape, it guarantees that fixity and perpetuation of species to which he so often appeals as a fact. That in an infinite universe, periods of peace also the real is the premise underlying some of the astronomical portions of the poem (cf. v. 526-533).

5. Psychology.—The poet undertakes to prove that the soul is an actual part of a man, as the head or foot, and has therefore to refute the theory once current and last represented by Aristothenes (iii. 130-132) that it is a harmony or immaterial relation subsisting between corporeal elements or parts of the body. Though a single nature, it consists of two parts, mind (animus, mensa) and vital principle (anima), the seat of feeling, the former lodged in the breast, the latter diffused all over the frame. The single nature which mind and feeling unite to form is, like everything else, material—an atomic aggregate formed of the very finest atoms of (1) wind, (2) heat, (3) earth and (4) ares. The soul is thus six times compounded from atoms. Soul and body, like mind and vital principle, form one whole, so constituted that neither can exist without the other (iii. 94-416), and this is enforced by twenty-eight arguments against the immortal. In particular, (ii. 417-829), whence it follows that man’s fear of death is unreasonable. The impassioned discourse on death in which these conclusions are driven home (iii. 930-1094), while sharing the defect of all attempts to “make fear dig its own false tomb,” is yet by its moral earnestness and depth of feeling one of the most impressive passages in literature.

The atomist theory of perception is developed at great length in bk. iv. Images or films (fœlum) are continually parting from the things and streaming off in all directions, but we see them only when and where we turn our eyes to them. An image passes before it the air between it and the eye. This air simulates the surface of things and thus enables us to judge the distance of the object seen. This takes place almost instantaneously; we do not see the images singly, but there is a continuous stream of them whenever an object is seen (iv. 239-253). The theory of images is applied to those cases where the senses seem to be mistaken. The square tower at a distance looks round, because the images are blunted in their long journey through the air. In this and similar instances the eyes are not deceived. What they see they rightly see; it is the mind that errs in the inference which it draws. The error lies in the opinion which the mind superimposes upon what the senses really perceive. The sceptic contradicts himself. For how does he know that nothing can be known? By what criterion does he distinguish knowing from not knowing? The senses are true, all equally true, for each has a distinct power and faculty of its own which the others cannot challenge or convert into error, nor is a single sense at one time more certain than another. Sensation, since it depends upon the senses, must be false if they are false, and with the overthrow of reason life itself would be impossible (iv. 409-521). The mind, too, receives its inspiration from images; these images are finer than those by which we see, hear, taste, and smell. Moreover, they do not all come directly from the surface of actual objects; sometimes images from several distinct things unite, as a centaur, or they may be spontaneously formed by atoms in the air. In sleep, when senses and memory are inactive, images still find their way to the mind, wraiths or ghosts of the departed being one special kind. Dream images appear to move because some are coming, some going, in continuous succession, so that they appear to be the same in different postures. In the least sensible time many times images change their form. Unless attention is directed to them, they pass unheeded. This explains why we think of what we will, and different men have different thoughts.

6. Cosmogony.—The working of the causes which produce, build up, and ultimately destroy worlds such as ours is described in outline as a corollary to the doctrine of the infinity of matter and space (i. 1029-1174). The details are filled up in bk. v. The world is not eternal, as some philosophers held. Lucretius starts by proving that it is mortal, i.e. had a beginning and will have an end (v. 91-109, 533-415). It must be divisible, for it is neither impenetrable like the atom nor intangible like space, nor, like the sum of reality, can it be said to have nothing outside it into which it could pass and out of which it might appear. Our world began with a chaotic jumble of discordant atoms. By the escape of the lighter atoms from the heavier this mass broke up into horizontal layers, and at the top the elements in animals and men. Soul and body, like mind and vital principle, form one whole, so constituted that neither can exist without the other (iii. 94-416), and this is enforced by twenty-eight arguments against the immortal. In particular, (ii. 417-829), whence it follows that man’s fear of death is unreasonable. The impassioned discourse on death in which these conclusions are driven home (iii. 930-1094), while sharing the defect of all attempts to “make fear dig its own false tomb,” is yet by its moral earnestness and depth of feeling one of the most impressive passages in literature.

In the least sensible time many times images change their form. Unless attention is directed to them, they pass unheeded. This explains why we think of what we will, and different men have different thoughts.

6. Cosmogony.—The working of the causes which produce, build up, and ultimately destroy worlds such as ours is described in outline as a corollary to the doctrine of the infinity of matter and space (i. 1029-1174). The details are filled up in bk. v. The world is not eternal, as some philosophers held. Lucretius starts by proving that it is mortal, i.e. had a beginning and will have an end (v. 91-109, 533-415). It must be divisible, for it is neither impenetrable like the atom nor intangible like space, nor, like the sum of reality, can it be said to have nothing outside it into which it could pass and out of which it might appear. Our world began with a chaotic jumble of discordant atoms. By the escape of the lighter atoms from the heavier this mass broke up into horizontal layers, and at the top the elements in animals and men. Soul and body, like mind and vital principle, form one whole, so constituted that neither can exist without the other (iii. 94-416), and this is enforced by twenty-eight arguments against the immortal. In particular, (ii. 417-829), whence it follows that man’s fear of death is unreasonable. The impassioned discourse on death in which these conclusions are driven home (iii. 930-1094), while sharing the defect of all attempts to “make fear dig its own false tomb,” is yet by its moral earnestness and depth of feeling one of the most impressive passages in literature.
produce. The monstros births perished because they could not grow up and continue their kind. Many species must have died off, because they lacked natural weapons of defence or could not be utilized and protected by man. But the union of two incompatible natures in the fabled creations—out of chimeras, unicorns,—is impossible; no time did they exist (v. 878–924). This account mainly follows Democritus, but in the primeval monsters the influence of Empedocles is discernable.

5. Civilization and Deity. — Civilization is the product of a long course of development. The sketch of man's gradual advance from primitive savagery (v. 925–1457) is not without interest and value even in the present day when so much fresh material has been accumulated and is continually enlarged. Men at first were harder and more like the brutes than now. Knowing nothing of tillage, they lived on acorns or berries, without fire, clothes, or houses, without law, government, or marriage. Their foes were the beasts, from whose fury they suffered. Civilization began with the use of huts and skins and the ties of family life. Then came compacts with neighbours for friendship and alliance; and then speech, a natural impulse quickened by need, not due to any single inventor. The next step was the discovery of fire from lightning or the friction of flint and steel. Further improvements led to the building of cities, the allotment of land, and the discovery of gold. With the origin of political life is linked the origin of religion. Another of the important discoveries was the use of metals, especially iron and copper, which were accidentally discovered when the burning of woods caused the ore to run. Hence came improvements in warfare, the extension of agriculture, and the invention of weaving. Thus were men advanced. When a knowledge of all the useful crafts had thus been attained, progress was complete.

6. Religion. — The popular faith, with its whole apparatus of prayers, vows, offerings, and divination, had been rejected not only by Epicurus, but by almost all philosophers since the feud between poetry and philosophy began with Xenophanes and Heraclitus. Lucretius is bitterly hostile; his indignation at the evil wrought by religious gloom throughout the poem as fiercely as in the famous description of the sacrifice of Iphigenia (l. 80–101). But it is not only popular superstition that he condemn; he is equally angry at the philosophy monotheism or pantheism of Plato and the Stoics, and, in fact, whatever is meant by the term 'natural theology.' The negative propositions which he maintains are all-important. (1) There is no purpose in nature; the argument from design is disallowed in advance; adaptation is the product of experience.

7. The bodily organs were not given in order to be used. On the contrary, the eye preceded seeing, and man had a tongue before he could speak. Thus the activity of the senses is explained on mechanical principles without assuming final causes, and a similar explanation holds for all other activities, men's enjoyment by food, and growth, walking and locomotion, the general, the sleep and dreams. Hence (2) there is no divine providence. The course of nature is not sustained by a divine power working for the good of mankind. The laws in the world (tanta statis in mundo; cf. v. 195–234). Hence, too, (3) the world is not divine. So far as it is from being conscious and intelligent that it is the result of chance, which is impossible to be in sensible and innanimate (v. 110–140).

8. The world was not created by the gods. What could induce them to take such trouble inconsistently with their majesty? Or, supposing them willing to create, whence came their notion or preconception (epocha) before he existed (v. 181–188)? On the contrary, the world and all that is therein is gradually formed by mere natural causes through the fortuitous concourse of some part of an infinity of atoms in some part of infinite space (l. 891 ff., v. 187–194).

But negative criticism is not all. On the positive side the existence of gods is proved by the agreement of all nations, although the fables and legends told of them (v. 650 ff.). The gods are blessed and immortal. They need nothing of mankind, bestow no favours, take no vengeance (l. 646–852). Their abodes, which in fineness of structure correspond to the immeasurable nature of the divine body, too delicate for our sense to perceive, are in the intempetiel (a word not used by the poets), or liquid interspaces between the worlds. They touch nothing that is tangible for us, since that cannot touch which cannot admit of being touched in turn (v. 143–152). There is a significant reference (l. 819–823) to the conditions under which alone immortality is possible, namely the absence of destructive forces or their being kept at bay, or being held in equilibrium by conserving forces (see Giussani, i. 239). Not content with proclaiming the true doctrine, Lucretius goes on to explain how the false current is mauled and broken, and this is the source of the difficulties arising from the images seen by the mind in waking hours and still more in sleep. The shapes thus seen were of more than mortal size, beauty, and strength. As they passed, men dreamt of their present, and as their might appeared so great, men decreed them to be immortal and blessed, and placed their abodes in the heavens because the unexplained wonders of the heavens had already excited awe. Thus all things were handed over to the gods, and the course of nature was supposed to be governed by their nod. This fatal error sprang from the instinctive fear which associates with divine vengeance the calamity and ruin wrought by storms and earthquakes (v. 1161–1240). Lucretius more than once exults at the overthrow of this delusion (l. 92–93, l. 1000–1104, l. 14–30). On the other hand, it is obvious that he would accord to religion some vestiges through the means of poetry. Lucretius' use of the gods can be paralleled in two aspects: the one of the immortals, and the one of the blessed immortals. The superhuman being whom he reverences as gods are simply the Homeric divinities purified, refined, and rationalized.

9. Ethics. — In a poem professedly dealing with physics we hardly expect to find a systematic treatment of ethics, yet there are enough short notices or digressions in which the subject appears (v. 16–61, 172 ff., l. 14–16, 469 E., 978–1023, v. 9–51, l. 9–41) to establish the author's complete agreement with the teaching of Epicurus. The end is pleasure—in other words, to secure that pain hold aloof from the body, and that the mind, exempt from cares and fears, feel its own true joy (v. 16–19). Whoever has been born must want to continue in life so long as food pleasure shall keep him (v. 177 f.). Gratification of desires which, though natural, are not necessary to happiness. The tortures of conscience make a hell upon earth. Tantalus and Siyapus and the like are types of men tortured in this life by various lusts and passions. The pangs of remorse are emphasized as well as the constant apprehensions through which the wrong-doer has hitherto eluded gods and men, he cannot keep his secret for ever (v. 1156 f.). Epicurus is explicit on that point who, seeing the miserable condition of mankind, partly from ignorance, and partly from mistaken fear of the gods and of death, proclaimed those truths which
alone can bring salvation: that death is nothing but the final separation of the soul from the body, which, he thinks, will redeem mankind. But, while he prefers death, he is perfectly agreed in the liberal acceptance of these propositions, there is a marked difference in the spirit of their teaching. Starting with the premise that the world is evil, and the heart of the Christian, he deduced his ideal of a simple, almost ascetic life of intellectual enjoyment, spent in the society of congenial friends. By life thus regulated according to circumstances he sought to attain the maximum of pleasure. Lucretius, too, advocated an austere hedonism; the pleasure which is the universal law and condition of existence is not indulgence, but peace and a pure heart (v. 19). From all who would live worthily he demands fortitude, renunciation, and unserving loyalty to truth. No ancient writer was more profoundly impressed with the mystery of existence, and the idea that death is the end. He tackled the foundations of belief with fanatical zeal which rises, one might almost say, to the intensity of religion. Under this aspect, his earnestness has its counterpart in the spirit of the Christian: "Dieu est aimé, le destin est sauvé.

It may be briefly characterized as a mechanical method by which all possible subjects may be submitted to a process of elimination and by which all questions of, and thus a complete category of statements may be obtained. The apparatus in its original form is a number of concentric circles divided into compartments, the letters of the alphabet. These letters denote in different circles different ideas. By this means, e.g., the word "God, Angel, Heaven, Man, the Imaginative, the Sensitive, the Negative, the Elementary, the Instrumental." In another circle of ideas the phlogiston, the air, the fire, the water, the earth, the light, the darkness, the opposite, the mission. In another we have nine predicates: Goodness, Magnitude, Perfection, Power, Wisdom, Will, Virtue, Truth, Glory.

In another we
have nine questions: What? Why? Whence? How? How much? What? Where? How? One of these questions is fixed, the others rotate, and we thus obtain a constant series of combinations, from one of which the others are formed. The precise form of the mechanism varies; in some works we have triangles of various colours intersecting each other, in others we have a tree with roots, trunk, branches, each labelled with some term contradicting from the universal to the special. Letters may even be intersecting with the apparatus. But in every case the general idea is the codification of every possible statement on all subjects. The method, intended originally as a Christian apologetic, was speedily found to be applicable to other subjects, and among the numerous versions that have been made, there are many in which the art is applied to Medicine, Chemistry, Mathematics, Physics, and Astronomy.

Lull commenced at once to use his new weapon with all the enthusiasm of the direct emissary of God. He gave a series of lectures on its application at the Universities of Montpellier and Paris and in the monasteries of France, Italy, and Spain. The failure of his persuasions to induce monarchs or pontiffs to develop fresh enterprise for the conversion of the Saracen led Lull himself, at the age of fifty-six, to land as a missionary in Tunisia, there confidently expecting to win all to Christianity through his reasoning. Imprisonment and expulsion did not check his zeal; we find him ardently continuing his work wherever there were Muslims or heretics. His own island, Cyprus, and Armenia certainly saw many converts, and the ban of death did not prevent his returning twice to Africa. The assertions of his much wider travel need further proof.

Lull's scheme for colleges for the study of missionary languages bore fruit for a time in a foundation by him in 1276, of a college for Arabic at Miramar in Majorca, but it was not until the Council of Venice, in 1311, that papal authority was given for schools for Hebrew, Greek, and Arabic at the Collège des Jésuites in the Roman Curia, Oxford, Bologna, Salamanca, and Paris. It is interesting to realize that in Lull's enthusiasm we have the germ of the Hebrew professorships at our English universities, as well as the broader ideas of missionary education which he and Roger Bacon alike impressed upon the Church. The same instance which sent Lull to Saracen lands in Arabic led him to overstep the limits of tradition and to write many of his works, both devotional and logical, in his native Catalan. He was a pioneer in that movement which, by entrusting to vernacular languages thoughts hitherto imprisoned in the Latin of the learned, gave new dignity to national speech and a new impulse to the development of the common people: his great religious romance Biancagina was written in Latin, Arabic, and Catalan; his certain hymns entitled Hours of the Virgin, with many others of his works, in Catalan alone.

Round Raymond Lull there has gathered a misty halo of romance and unorthodoxy through his incursions into the world of alchemy. His Franciscan supporters are eager to free him from this charge, which has repeatedly brought him within the danger of the censure of the Church. He is stated to have learnt from Arnald of Villeneuve the secret of the philosopher's stone. There is a tradition, exceedingly doubtful but not entirely discredited, of a visit to England to make gold for Edward I., in return for his help against the unbelievers. Certain it is that a number of works on alchemy are assigned to his name which were obviously not written by him. It is proved that on Lull has been fixed the credit of certain works on magic by another Raymond of Tarrega, a renegade converted Jew, which were condemned by Pope Gregory XI. But we must remember that alchemy was in great favor at the time, and that the early alchemists were religious men who commenced their work in the name of the Trinity, and that the man who believed that he had discovered a universal transmitter of the elements of thought might not unnaturally aim at a universal transmitter of the elements of matter. Lull's dominating idea was that there is one great spirit running through the universe, since it is the expression of one divine mind. Scattered among his acknowledged works are repeated references showing that he thought much on alchemy, though he did not expect impossibilities from it. We may believe that he wrote as well as thought on the subject. Indeed, Roger Bacon (de Officinis Scientiarum, bk. iii.) refers to the fact of such writing, to obtain certificates of his life revealed a faith in the Church against which he fought unceasingly. 

The last period of Lull's life revealed a foe within the Church against which he fought unceasingly: the name of Averroes (Ibn Rushd, † 1198; see AVERROES, AVERROISM), the Arab interpreter of Aristotelianism, had been gathering the thoughts and theories of Muslim, Jewish, and Scholastic successors, diverging gradually into the banishment of the Deity beyond the reach of prayer or care for the individual, the denial of individual immortality, and ultimately even asserting the identity of the soul of all men. Averroism thus, while using the name of a single devout Muslim, really was the composite deposit of a century and more of less sceptical thought; through Maimonides (q. v.), and Michael Scot, it gained the ear of a section of Scholastics, and was well as rotaries many in the University of Paris, the intellectual focus of the world. In attempting to save its purity, Lull asserted that what might be true in faith might be false in philosophy. This was the special heresy against which Lull spent his life; the authorities at Paris eagerly sought a way to put him in the midst of the heresy which threatened to capture the whole University. The contest was so keen that Lull himself was obliged repeatedly to obtain certificates at Paris, and was placed in a sort of custody, with the right of responding to his accusers. At the Council of Vienne Lull worked hard, though apparently without success, to secure an edict forbidding the teaching of Averroes in Christian schools. It lingered for a couple of centuries longer, and more and more tending to materialism and finding its chief sphere in the medical school of Padua. Lullian always provided its strongest foes.

When nearly eighty years of age, Lull set off on another missionary journey to Africa; his fervid exhortation roused the fury of the Muslim mob, and he was stabbed to death at Bugia on June 30, 1315, thus gaining the coveted crown of martyrdom. The body was carried to Palma and was there interred amidst the lamentations of his nation.

The immense mental activity of Lull left a vast number of works, many of which have never been printed. Salzinger in his great (incomplete) edition (1721-48) gives a list of 205 treatises as undoubted, besides 93 others more or less probably assigned to his name. Perrouquet (1687) names 488, and states that several authors of weight assign no fewer than 4000 to his pen. A large number of enthusiastic pupils gathered from the lecture-halls of Paris and of the Franciscan monasteries, continued and applied his methods, and in many places Lullist schools grew up side by side with the older-established Theomists and Socists. The aim of the Lullists was to apply a logical method to the proof of doctrines of the faith, to Averroism, and to fit men for missionary work. Enthusiasm for his methods was the special characteristic of the followers of the great enthusiast. This enthusiasm was specially met by a bitter opposition. It is almost certain that Lull had been a member of the third Order of St. Francis. Rivalry between the great religious Orders, however, belittled his growing fame.

Kynmerie, Inquisitor-General in Aragon (1320-29), initiated the campaign by an accusation of
LUMBINI.—A pleasance, or small wood, mentioned in Pali records as the birthplace of the Buddha. It is now occupied by the shrines of Rama muni, in Nepal, approximately in 85° 20' E. long. 27° 29' N. lat., about four miles north of the frontier between the British possessions and the Nepalese Tarai, and half a mile west of the river Tila.

The references to it so far traced in the N. Indian Pali books are only three. One is in an old ballad, containing the prophecy of the Buddha, which the Buddha himself understands. The other two are in the Katha Vatthu, composed in the middle of the 1st or early part of the 2nd century B.C., and in the Ballad of the Golden Casket (ed. A. C. Taylor for PTS, London, 1894-95, pp. 97 and 59) it states that 'the Exalted One' was born at Lumbini (Lumbissa jata).

Our next information is the inscription found on a pillar in Dec. 1896. The pillar had been known for years to be standing at the foot of the small hill on which the tiny shrine is situated, but the feature of the inscription that first struck the modern excavator was the fact that the graffiti on the exposed part of it were in the Pali language, and that this work (ed. A. C. Taylor for PTS, London, 1894-95, pp. 97 and 59) it states that 'the Exalted One' was born at Lumbini (Lumbissa jata).
the conversation between Aisoka and his guide Atupgutta on the occasion of the visit recorded in the inscription. Perhaps the tradition that Atupgutta, very possibly another name of the author of the Kashi Vatthu, accompanied him is historical. The work is a psalm in Buddhism; Sanskrit; and, though its date is unknown, it must be at least five centuries later than Aisoka, who spoke, of course, the language of his inscription, and would not have understood the words here put into his mouth.

Still later are certain references in the Pali commentaries written at Kesarpuram and Anuradhapura. In order to explain how the birth took place in a grove, they say that the mother, on the way to be delivered among her own people, was taken with the pains of delivery half-way between Kapilavatthu, her husband's home, and Devadala, her father's home. This is quite probable; but, on the other hand, it may have been suggested by the meagre facts recorded in the ancient books. Neither the Buddhist Sanskrit writers nor the Pali commentators could have understood the long period of inscription, even had they known of its existence.

It is very interesting to see that this spot, so deeply revered by all Buddhists, should have retained its traditions through many centuries of neglect and desertion. Watters says that 'according to some accounts' it had been named Lambini after a great Koliyan lady who had dedicated it to Mahabodhi. This is quite probable. There are other instances of a similar kind; but, unfortunately, Watters gives neither name nor date of any of the Chinese books to which he refers. But it is certain that he has not found difficulty in pronouncing the trilled r. Perhaps this was true of all Kosala. The inscription at Lambini, for instance, has lâja for râja; and Lambini has often written in Pali MSS with a dotted L, which may represent an untrilled r. Thus Rummidei stands for Rambini Devi, the goddess of Lambini. But that goddess was not revered by a goddess at all, nor even Lambini, but only the mother of the Buddha. We have no evidence as to when or how the transformation took place.

And in fact the stubborn opposition of the Nepalese Government, and of the Brahman who had taken refuge there, there is very little hope of any further excavation at the site to throw light on this question, or to explain the divergent statements of Chinese writers as to what they saw at the place.

LUNACY.—See INSANITY.

LUSHAI.—The Lushais are a composite community, consisting of tribes which were absorbed and reduced to a more or less complete unity by the skill and sagacity of the Thangur chiefs of the Lushai clan in the last century. They practise jimting, a form of cultivation which involves constant moves from one site to another. In this fact they are found in a tribe through whom the masters of nearly the whole of the area now known as the Lushai Hills. The heads, as they reached maturity, were provided with a wife and followers, and were sent forth to found new villages. The youngest son was the heir general. Elders assist the chief in the village administration, and each village possesses, in addition to the council of elders, officers to settle where the jhuming are to be made, a village crier, a blacksmith, and a wise man, puchikma (lit. "one who knows things"). The population of a Lushai village consists of members of different clans and tribes brought under the unifying influence of their subordinate to the Thangur chief. Their religion, therefore, is of a mixed origin; there are features in it which recall some of the more notable characteristics of the systems of their congeners, east as well as in the more distant north, all of whom speak cognate dialects.

The Creator is a spirit called Pathian, beneficent, but with little concern in the affairs of men. Subordinate to Pathian is a spirit Khuvang, whose appearance to men causes illness. He is also spoken of as a personal genius—an idea which is still further elaborated in the belief in the minungts, the watchers of men. Each man has two souls, thaboro, the one wise and the other foolish. One minungts is good and the other evil. The hua is demons inhabiting water and land, are all bad, and are the causes of all sickness and misfortune; the lushai are spirits inhabiting the wild animals, whom they control; the spirits of the dead need constant propitiation and receive offerings of firstfruits. Each clan has a spirit, or clan deity, sakshu, to whom a special chant is addressed by the puitham (who must be a member of the rite clan), and identity of chants and ritual is a sure proof of membership of the clan.

The rites performed for the purpose of addressing some definite spiritual being are often derived from the rites which seem to be efficacious without the intervention or mediation of any definite spiritual being. The sakshu chants recorded by Shakespeare are accompanied by sacrifices of a sow. The sacrifices to hua, supposed to frequent houses and villages, are various, now a pig, now a cock, and sometimes a goat being offered. Three sacrifices should be performed after illness. Dreams afford an indication of the necessity for the performance of one of those rites. Temporary tabus, closely akin to those so common in the Nagá area, are part of the same ritual for appeasing the hua of the woods and waters, not dissimilar, but some of the most efficacious rites are the patent of certain clans. The villages close their gates on the occasion of an epidemic of cholera, so as to exclude all visitors from the infected area, and frighten away the demon causing the sickness by erecting a rough gate across the road leading to the distressed villages, which they man with straw figures of armed men; they suspend from the gateway the portions of the dog sacrificed in these emergencies, which are reserved for the demon—as a rule, the extremities with the heart, liver, and entrails. Some of the birth-rites are addressed to hua, while others are seemingly of almost automatic efficacy. In the second category of rites are those which are performed to bring back a straying soul (for sometimes one of their souls), to produce children, to afford protection against sickness, to secure good hunting and to ascertain the lack of the intended chase, to benefit the crops, to obtain power over the spirits of animals and men killed in this world, and to secure freedom from the ghost of the slaughtered enemy. The series of five feasts which affect the future life in important ways are religious rites of a specially interesting nature and are accompanied by a regulation requiring that the social group concerned, be it a household or a whole village, shall abstain from all but the most
LUTHER.

Necessary work, and shall not leave the prescribed area. The blacksmith's forge possesses sanctity, and is a place where persons who have accidentally come into contact with any noxious influence may take sanctuary and be purified. The priesthood consists of the patriarch and the members of special clans. Any one can acquire by purchase the hā, songs or charms which form the stock-in-trade of the puṣṭhīmā, whose success must depend largely on luck and on short memories of his failures.

The first man, Pāğuwa, or the ancestor Pawla, possibly in revenge for his death, stands armed with bow and pellets at the entrance to the spirit world. Except the thāngkhāhā, i.e., those who have performed the series of five rites (fasts, as they are sometimes called) in this world, none can escape his aim. Yet he spares still-born children or those who die young, for he heeds their plea that, had they lived, they too might have performed the due ritual and so been free to enter with the thāngkhāhā into Pielrāl, where all is pleasant. Those whom Pawla wounds go to Mittho khā. Their wounds swell painfully for three years, and for a like period the scar remains. Thereafter they die again, are born as butterflies, and when they die again, reappear as dew on the ground; as dew they enter the womb of a man, and are reborn as human children. In addition to the personal advantages of the thāngkhāhā rites, the man may take his wife with him to Pielrāl, whence there is no return, of their children he himself wear certain special clothes, build a verandah at the back of his house, enjoy a window in his house, and put an additional shelf near his bed. The Lushahs are a particularly esoteric people, and believe firmly in witchcraft; not very long ago, to test the efficacy of the belief that the victim of witchcraft would surely recover if he could but taste the liver of the thāngkhāhā, a boy they killed three days after his birth. Whole families who were thought to be bewitching an aged chief's son, cut the livers of the wizards out, and carried them back, only to find that the old man had died in their absence. Naturally irīvin ennene is an expert at the black art, but their neighbours return the compliment to them in full.

Certain persons, especially women, can put themselves into a trance (zend) and communicate with Khauvang, from whom they acquire information as to the particular sacrifice required to cure the sick. The process of divination employed on these occasions is the usual one, the victim being placed in a basket of rice, in which appears the footprint of the animal to be sacrificed. Possession by the spirit of a wild animal (kauring) is contagious and hereditary, and takes the form of passing from the host to another woman, who speaks with the voice of the original hostess. The belief in the power of men to assume the form of a tiger is common.

T. C. HODSON.

LUTRATON.—See PURIFICATION.

LUTHER.—I. Life.—The career of Martin Luther is naturally divided into three periods—the first, of preparation (1483–1517); the second, of protest (1517–21); the third, of construction (1521–46). He was born at Eisleben in Saxony on 10th Nov. 1483. His birthplace was only the temporary home of his parents. They had crouathed from Moëra, the real home of the family, some 80 miles to the south-west. The father, as an older son, had no share in the paternal estate, and was, therefore, in straitened circumstances, until, by his daily labour in the copper mine, and by economy and thrift, he became proprietor of mines and furnaces, and an influential member of the community. Both as a child in his home and in his early school days, Luther knew what the struggle with poverty meant; but his father was at last able to provide him with the means for a liberal education. Both his father, John Luther, and his mother, Margareta Ziegler of Eisenach, were deeply religious, and subjected him to a discipline, continued in the house, in which he was first sent, which was legalistic rather than evangelical. His childhood was spent at Mansfeld. His elementary training was received chiefly at Eisenach, among his mother's relatives, and his University course at Erfurt, an institution which, at his entrance in 1501, was over 100 years old, and the most numerous attended by the German Universities. Intended by his father for the legal profession, he devoted his first years at Erfurt to classical literature and philosophy. While he read with absorbing interest the Latin classics, and derived from them the benefit of a wider horizon, and a deeper acquaintance with human nature, it is a great exaggeration to affirm, as some recent writers have done, that they made him more of a humanist than a theologian; for he read them with the avowed reason against the excessive devotion to the purely formal that dominated the humanistic school. His teachers in philosophy were nominalists, who introduced him to God, Betti, and Gerson, and instilled a critical disposition towards the current scholasticism. Attaining A.B. in 1502, and A.M. in 1505, he reluctantly began the study of Law, for which he had little inclination. His aversion to the calling into which his father was forcing him was intensified by spiritual conflicts, brought to a crisis by the sudden death of a friend by his side—whether by a blow or by a stab. The death of his father was hastened by the assassination of his mother in his father's presence. In obedience to a vow made in the moment of peril, he turned his back upon the world, and entered the cloister of the Augustinian hermits at Erfurt (17th July 1505).

Purity of life, deep moral earnestness, devotion to the study of the Holy Scriptures, and ability as preacher and lecturer, secured the respect of the Scholastics; but it was incorrect to infer from their name any special interest in Augustinian's doctrines of sin and grace. With all the intensity of his nature the young man hung like a shawl over the scrupulous observance of every detail of the requirements of the Order, and rose rapidly in the esteem of his brethren and superiors. He found edifying spiritual advisers in an aged monk whose name has not been preserved, and especially in John Staupitz, his Vicar General. Some of his modern critics accuse him of morbid conscientiousness and needless scrupulosity in his conceptions of truth and duty. The rules of the Order came to him with all the claims of divine commands, which he could not decline to observe in all their strictness without, in his belief, sinning against God. Nor could he be satisfied with anything less than perfect conformity with his own moral and religious standards, and from his relations to God. It matters little that, as has been recently urged, in some of his earlier discourses, composed while he was still a monk, he sought to wear out the thread of the fine needle, and to make his life a perfect model. When, however, he began, in 1515, to publish his views, he especially promised and led his readers to construe all his writing and teaching as evidence of a faith that was at least equal to that of the Ehrhart, and of the erudite theologians. The publication of his Ninety-Five Theses, addressed in 1517 to the Archdeacon of Mainz, with a letter to the Emperor, thus opened a breach which was widened by the so-called Peasants' War, and finally led to Luther's open schism from the Roman Church in 1518. The breach was not a complete one, for Luther never declared his faith to be that of a heretic. His writings and his conduct were alike evidence of deep sincerity. His religious character and his religious work were such that he could not, in the view of his admirers, be charged with any delinquency of conscience or of conduct.
priesthood—and his father, with a large retinue of personal friends, honoured the occasion of his first celebration of the Mass; but that, even then, the breach between father and son was not completely healed appeared at the meal which followed, when the former in his blunt way reminded the clergy that obstinacy in parents is a command from which no dispensation could be given, and that what they esteemed a call from God might be nothing more than a delusion of Satan. Selected by Staupitz in 1511 as one of the ingenuous Philosophy in the University of Wittenberg, founded only six years before, Luther was delighted, when, four months later, as a Bachelor of Theology, it was his privilege to lecture alone on the Didactic and the Psalms. He recalled the succeeding autumn to Erfurt, he was assigned the task of lecturing on the Sentences of Peter Lombard. Two years later (1511) he was sent to Rome to represent Staupitz in regard to certain business affairs of the Order. This visit was of the highest moment to Luther’s subsequent career. His most recent Roman Catholic biographer, Grisar, candidly says that the Rome which he visited was the Rome of the then ruling Julius II. and his predecessor, Alexander VI.—Rome glorified by art, but the deeply degenerate Rome of the popes of the consummation of the Roman Empire. He was grieved by the many abuses forced on his attention; and, notwithstanding the credulity with which, as he afterwards acknowledged, he accepted much of what he there saw and heard, the horror which he had himself excited by the papal name and authority had had upon him was greatly weakened. The story of his experiences on Pilate’s Staircase rests solely on the testimony published after his death. The new letters of Paul, directed to the churches of Rome, had been uttering while at Rome, as a testimonial to the success of his mission. Receiving the degree of Doctor of Theology at the age of twenty-nine (1512), he accepted it as a samplitude of the Scriptures to all the world, and broke the traditional modes of instruction by his method of lecturing. Although he retains the ‘four-fold sense’ of Scripture, he lays the chief stress upon finding allusions to Christ in all the prophecies of the OT, and interprets the Psalter by the gospel of the NT. From the OT books he turned to the NT, treating successively Romans, Galatians, and Hebrews. From the moment he took up Galatians and Genesis, he had turned to Augustine, and from Augustine more and more to Paul. The mystical writer, John Tauler, and the anonymous author of The German Theology had a decided influence on him, which is also apparent in his turn to Paul, and in his absorbing administrative duties. In 1518 he was appointed Vicar, with the oversight of eleven monasteries.

It was in the midst of these duties that he became involved in the controversy concerning indulgences (q.v.). The dogma of indulgences was rooted in the denial of the completeness of the satisfaction for sins made by Christ. This satisfaction, it was taught, had value for original sin, and beyond it, was made for actual sins only by commuting the penalty from one that was infinite, and beyond man’s power to afford, to one that is finite. But in his limitations, either in this world or in that which is to come. Penitence, it was further taught, consisted of contrition, confession, and satisfaction, made by the penitent. Such satisfaction was the most prominent mark for such sins as were recognized by the sinner. But, as in this life the knowledge of many sins escapes the notice of even the most faithful, purgatory was provided, wherein penances were required for sins unrepented of at death. Relief from such satisfactions would be found, however, in the fund of the superfluous merits of the saints acquired by their works of supererogation—a fund upon which the Church, through its head on earth, could draw, so as to grant indulgence by the payment of an equivalent. Heretofore, no more had been claimed for a letter of indulgence than an abbreviation of the pains of purgatory for their posterity, for those who had already departed. As the granting of these letters afforded large revenue, abuses constantly grew. It was the most convenient and effective way of raising funds for Church purposes, with the percentage allotted to the signers of the indulgences. The luxurious habits of Leo x. and especially the completion of St. Peter’s church at Rome rendered this expedient very serviceable at this time. Albrecht of Brandenburg, Archbishop of Magdeburg, was forced to collect fees from this source, with the stipulation that he retain one half. He commissioned as one of his agents John Tetzel, a Dominican monk and emotional preacher, who, by his appeals to the terror of his hearers, created great popular commotion wherever he appeared, and urged them to purchase his wares. It would not be difficult to accumulate from Roman Catholic writers abundant censure of the course of Tetzel. For more than a year Luther, entirely ignorant of the connexion which both Albrecht and the pope himself had with Tetzel’s traffic, had been uttering his censure at a distance; but, as Tetzel drew near Wittenberg, the revelations made to Luther as a spiritual guide in the confessional compelled him first to appeal repeatedly to his ecclesiastical superiors, and, finally, when these appeals were fruitless, to publish his Ninety-five Theses for an academic discussion in the University. The effect which they produced, as well as the pablity which they received, was beyond all estimate. While in these Theses he strikingly and remorselessly at the very roots of the abuse, he is evidently still feeling his way, and has not entirely freed himself from some positions that were afterwards very forcibly repudiated.

There were formal answers the next year by John Eck and Silvester Prierias, which called forth responses, with characteristic vigour, from Luther. There was a barren conference with Cardinal Cajetan at Augsburg (Sept. 1518), and another with Mühlitz at Altenburg (Jan. 1519), followed by the Leipzig Disputation (beginning in which, after Eck and Carlstadt had argued for days, Luther’s debate with Eck began (4th July) on Church authority, significant because of the advance shown by Luther upon anything that he had previously defended in this matter. His time, the medium of the appeal to the Council, and the censure of the Council of Constance for condemning Hus. The aid offered from the camp of humanist Luther not only declined, but repelled, as he wished to make it clear that his protest rested upon entirely different grounds from theirs. The year 1520 is noted for three monumental treatises, two polemical, one ironic and constructive. Of the former, the first was his famous ‘Appeal to the Christian Nobility,’ which might appropriately bear the title, ‘The Responsibility and Duty of the Laity in Spiritual Affairs;’ and the second, The Babylonian Captivity, a scathing criticism of the sacramental system of the Roman Church. The latter, ‘The Liberty of the Christian Man,’ has evoked the following tribute from one of his opponents: ‘One cannot help asking how the same hand which delighted to shaft with a smile, then all the works so cold and sacred, could also touch so tenderly the chords of divine love’ (Janssen, Geschichte des deutschen Volkes, p. 239).

The bull of excommunication promulgated by the pope on 15th June 1520 did not reach Wittenberg until four months later, and was formally burned by Luther before the students of the
University (10th Dec. 1529). On 16th and 17th April 1521 Luther appeared before the Emperor, Charles V., at the Diet of Worms, and declared that he could not recant. There were too many political considerations involved to enable the Emperor to act promptly against him, and before such action could be taken the Elector of Saxony, as a precaution, had Luther arrested, while returning from the Diet, and carried it to the Warburg, overlooking Eisenach, where he remained in retirement until the following spring.

The isolation of those ten months afforded an opportunity to review his work at a distance from the scene, to mature his convictions by the close and uninterrupted study of Scripture, to form some plans for the future, and to begin his most important work, the translation of the Bible into German. The N.T. was translated, from the second edition of the Greek Testament of Erasmus, within three months from the time when it was begun. The translation was brought with him when he returned to Wittenberg from his exile (6th March 1522), and appeared the succeeding September. The translation of the O.T. was a much more difficult undertaking, in which he had the assistance of Melanchthon, Aurogallus, Roerer, Poerster, and others, and was completed in parts, until in 1532 the entire Bible appeared complete, followed by the Aporocrypha two years later.

On his return to Wittenberg the character of his labours was changed. He had at once to meet with decision the radical reaction of the ancient Church, which had hoisted in some cases to revolutionary, and in others to precipitate, measures. Thirty years after his return he began a series of eight sermons, preaching daily, into which he threw all his energy to check their excesses and, against them, to define the principles for which he had been contending. The reformation of the churches in districts no longer under the domination of the old Church now became necessary, to prevent them from being misled by the confusion that had been introduced, and in order, by a re-organization, to build them upon solid evangelical foundations. Henceforth, while the polemic against Rome did not cease, and almost equal energy was directed against the opposite extreme, he was occupied largely with constructive work—the visitation of the churches, the preparation of Church constitutions, the re-organization of schools, the revision of the liturgy, the writing of catechisms, the composition of hymns and the publishing of popular sermons, not only for private edification, but especially as models for the inadequately prepared preachers, besides his lectures to his classes and incessant correspondence and conferences—until, from sheer exhaustion, he fell a victim to disease, while acting as a mediator between the counts of Mansfeld, and died in his native town of Eisleben (16th Feb. 1546). Among the more important events of this later period of his life are his marriage with Catherine von Bora (1525); the Marburg colloquy with Zwinglei (Oct. 1529); his second period of isolation, at the castle of Coburg, during the Diet of Augsburg (1530); his Augustinian conferences in 1533 with representatives of the English Church, which had an important influence on the English Reformation and its liturgical monuments; the Wittenberg Concord of 1536; the progress of the Reformation in France; the Reformation in Scotland; the Reformation in Italy; and the Schmalkald Articles of 1537. Possibly the point that has occasioned most heated discussion was his relation to the legacy of Philip of Hesse in 1540 (see W. W. Rockwell, Die Heppalsche der Landesfreund Philipp von Hessen, Marburg, 1904).

2. Appreciation.—The greatness of Luther lies largely in the versatility of his gifts and the readiness with which he could call them into service.
even a restoration of Scriptural models, but the continuity of whatever in life, worship, and organization was not contrary to Scripture. External union was approved only as it was the expression of a preceding inner unity. Agreement as to the form of the gospel was the condition of all attempts at Church union, he esteemed valuable only as the servant of faith; hence the faith was never to be adjusted to the supposed expediencies of union. And in his chief effort, on the negative side, was to free theology from its bondage to philosophy, and to return to the simplicity of Scripture. He was dissatisfied with traditional theological terms, because of their inadequacy, even when the elements of truth which they contained restrained him from abandoning them. He was not without a historical sense and a reverence for antiquity, provided that it was subjected to the tests of Holy Scripture. Scripture was not to be interpreted by the Fathers, but the Fathers were to be judged by their agreement or disagreement with Scripture. It was his especial privilege to have entered into the spirit of St Paul as none before him, not even Augustine. Luther's theology is Pauline theology, in the language of modern times. It begins and ends with the revelation of God in Jesus Christ, it is the key to all knowledge of the nature and attributes of God and the doctrine of the Trinity. Christ is the interpreter of Scripture. All doctrines are to be consistent with the declaration of Scripture. With Augustine, he taught the organic union of all men in Adam, and the organic union of all sins in original sin. Original sin is emphasized rather as the corrupt elements brought from the Fall, than as the act itself, whence this state proceeds—a state of spiritual death, from which man can neither of himself escape nor contribute towards his deliverance. The human nature became man in order, by His sufferings and death, to provide redemption. In the personal union, as the result of incarnation, the integrity of both nature is preserved, the divine inseparably pervading and energizing the human; the human bringing the possibility of suffering, and the divine sustaining and imparting to the human its infinite efficacy. The humiliation (humilis [g.v.]) is not of the human nature preserved, but of the human person in the human nature. Hence humiliation is not synonymous with humiliation, but is only a determination of the human nature, glorified from the very first moment of its union with the divine. Redemption is made for all men and all sins, although not received and realized by all. The doctrine of predestination, he insists, should always be treated as a supplement to Christology, since what God has pre determined concerning our salvation from eternity. He has revealed in the gospel, and, therefore, the gospel itself exhibits the contents of God's eternal decree concerning salvation. The blessings of salvation, to be realized, must be appropriated by faith; but this faith is God's gift. Man cannot believe in Christ, or come to Him, by his own reason or strength. It is the office of the Holy Spirit alone to bring men to God, and the Church, enlightened, and regenerate. If man is saved, it is entirely by the work of the Holy Spirit in applying redemption through Christ; if he is lost, it is entirely by his own union with the divine. There are no degrees in justification; it is perfect and complete, however weak the faith that apprehends it, since the righteousness of God is imputed to the perfect righteousness of Christ. If regarded as forgiveness, where the least sin is forgiven, all are forgiven, and where the least sin is unforgiven, none are forgiven. But justification is more even than forgiveness. Christ and man have exchanged places; so that, while all the guilt of man is assumed by Christ, all the righteousness of Christ is transferred to man. Hence the confidence of man before God. Faith kindles love. As an active principle, faith not only receives what God offers, but also, through the new powers imparted with justification, exercises itself in obedience towards God, and in efforts for the good of man. It is as impossible to separate works from faith, as it is to separate heat and light from fire. (Luther's Works, Erlangen ed., xxiii. 2344.) This sentence has called forth the unqualified condemnation of the Roman Catholic theologian, J. A. Kocher, although he incorrectly adds that it is "the most absurd contradiction with the Lutheran theory of faith." ("On the Roman Church," Munich, 1872, i. 163, tr. J. B. Robertson, London, 1883, i. 185.)

Furthermore, the Holy Spirit comes to men only in and through the Word and Sacraments, through the words of the Lord, producing new life, and through the gospel, i.e., the promise of the forgiveness of sins producing faith. The office of the Sacraments is to individualize the general promises of the gospel. The chief thing in baptism is not the water, but the Word, which, in and with the water, is applied to the person baptized. The chief thing in the Lord's Supper is not the bodily eating and drinking, but the assurance, "Given and shed for you," which is the Christ's body and blood of the guests, and sealed by the elements and the heavenly mystery that they offer. Since, wherever this Word is preached, whether orally or visibly in the Sacraments, the Holy Spirit comes to Christ and the true candidates become marks, designating where at least some believing children of God are to be found; i.e., they indicate the presence of the Church, which otherwise they do not. The Creed confesses: 'I believe in the Holy Catholic Church, the communion of saints.' The direct relation of each individual to Christ, mediated by any other agency, is already absorbed in the Creed. The Church, the administration of Word and Sacraments, in which administration ministers are only the executives of the congregation, and, through the congregation, of Christ Himself, who has called and ordained them. Distinctions of rank among ministers are not admissible by divine law, but may be very advantageous when agreed upon simply according to human law. Uniformity of Church government is not only advantageous and necessary, but, however desirable it may be as a matter of expediency, the Church has no power but that of the Word. Even in regard to those matters where the Word of God allows no freedom, we have no right to attempt to constrain others by any other means than by the preaching of the Word. I will preach and talk and write against these things, but no one will I attempt to force. ("Luther's Sermons preached at Wittemberg, Lent, 1525," Works, Erlangen ed., xxvii. 218.) 'The Word that has created the heavens and the earth must do this, or it will be left undone' (66.)

The dualism in ethics that pervaded the medieval religionism, according to which there is an inherent antagonism between the spiritual and the material, the heavenly and the earthly, entirely disappears in Luther. The separation caused by sin is removed by redemption and regeneration, and the spiritual now pervades the material, the heavenly the earthly. Hence the believer is not only a spiritual priest, but also a spiritual king, and lord over all things; and his chastened enjoyment of them belongs to that gratitude which he owes the Redeemer who has provided them for him. Nevertheless, while by faith lord over all, by love he is servant of all, and obeys God's law from an inner necessity of his regenerated nature
LUTHERANISM.

Notwithstanding the protests which Luther himself expressed against the term "Lutheranism" was soon applied in the 16th century to the principles of which he was the chief advocate. However necessary plans for Church reunion were when the attempt was made forcibly to suppress his protests, it had never been Luther's aim either to found a new Church or even within the historically existing Church to carry out any elaborately pre-arranged form of re-organization taken by Luther or by those theologians who were most closely associated with him, but either by the radical extremists whom he repudiated or by the Protestant rulers, who justly realized that the churches in their realms could not be left without some form of administration.

Lutheranism starts with the assertion of the responsibility of the individual conscience to God alone in all matters of faith and life. But, in maintaining this position, it does not proclaim pure individualism, since the conscience is always to be interpreted arbitrarily, but by comparing spiritual things with spiritual. Its treatment of the doctrine of the Church, the emphasis rests not so much upon the external institution, with its well-defined organization and code of civil and canonical laws, as upon the association of truly Christian people, maintained by their communion in the one faith of the gospel, through the activity of one and the same Spirit. The appeal, accordingly, is never made to the authority of any outward visible organization, but to the individual conscience. All Church power inheres in the Word of God for such re-organization.

The Church has no sword but that of the Spirit with which to enforce obedience. Nevertheless, as for the administration of Word and Sacraments, external association, as well as the internal communion of believers with each other is necessary; the external Church must always be maintained, but the form of its organization must be determined by the circumstances in which the Church is placed, the presence or absence of the pure Word and Sacraments being the first condition. The preference is always on the side of that which has been historically approved, a break in the existing order being justified only when such order cannot be maintained without impairing fidelity to God's Word. It was not by any concerted action among Lutherans, nor with any thought of a united Lutheran Church, that the Church constitution of the Reformation period were formulated, but they were prepared in various countries and provinces according to the peculiar needs of each. Externally, there were many Lutheran churches, but no one Lutheran Church. The very first word of the first article of the Augsburg Confession ("ecclesia apud nos") declares this. There was, however, an external bond in their common confession. This confession, properly speaking, is no particular historical document, but the bond thus acknowledged among Lutherans, but the declaration of those Scriptural principles for which the Lutheran Church peculiarly stands. Such confession, however, has found its way into various classical historical agreements that have greater or less recognition. It is not the Confession of Faith, it is the Confession of the Faith, that determines the Lutheranism of any individual teacher.

LUTHERANISM

or Church body. Where the doctrines of the Confessions are held and confessed, even though the Confessions themselves be not subscribed; or, even known, the Lutheran character of the teaching is established; while, on the other hand, where the contents of the Confessions are not cordially received, as a matter of faith, i.e., as derived from God's Word, and there is no subscription to such Confessions with qualifications expressed or with mental reservations, the test is not met. A real Confession, as such, and not merely a profession of faith, is a joyous declaration of Christian freemen of the liberty that they have attained in Christ, and of the limits within which this liberty is to be found and exercised (cf. art. CONFESSIONS, vol. iii. p. 845).

What are known historically as the Lutheran Confessions are not attempts to summarize the doctrines of the Holy Scriptures, as are various other Confessions in Christendom that are, in reality, systems of doctrine. The confessional development of Lutheranism has proceeded on the principle that Holy Scripture is its own interpreter, and needs no formal explanation by Church authority, unless the meaning of Scripture be involved in serious controversies that greatly agitate the Church and call for the careful guarding of the purity of doctrine and the governance of the Church. Articles of faith that have not been attacked or misrepresented need no confessional treatment. A Confession, from this view, should never be an exhaustive representation of the Church's faith, but should be a readiness, as new controversies arise, to meet them with the same weapons and in the same spirit with which preceding controverted points have been treated. Hence the Augsburg Confession is short, and became

If anything further be desired, we are ready, God willing, to present amplification information according to the Scriptures.

The Lutheran Confessions have thus been determined by certain practical ends in view at several crises in the experience of the churches that call themselves Lutheran.

Of these Confessions, the two Catechisms (cf. art. CATECHISM), vol. il. p. 293, of which both written by Luther in 1529, are handbooks of elementary religious instruction rather than theological documents. The four theological Confessions are: the unaltered Augsburg Confession, the unaltered Augsburg Confession, the Schmalkald Articles, and the Formula of Concord. The first of these chronologically, as well as by general recognition, the Augsburg Confession, was prepared by Melanchthon for presentation at the Diet of Augsburg in 1530. It is an ironic document, emphasizing the points of agreement with the Roman Church, in the hope that some way might yet be found to avoid a break in the Western Church. The term 'unaltered' is used to distinguish the Confession presented at Augsburg from unauthorized revisions made by Melanchthon personally in 1540 and 1548, in the interest of a nearer approach to the Reformed. The fact that the term 'unaltered' may not strictly belong to even the best text—since the original copies placed in the hands of the emperor Charles V. have both been lost, and Melanchthon was compelled to reproduce the Confession from the very full notes of himself and his colleagues for publication the succeeding spring—does not justify the rejection of the distinction historically recognized between the two types of the Confession. The Apology of the Augsburg Confession (1531) is a full and learned defence, also written by Melanchthon against the criticisms contained in the 'Reformation of the Augsburg Confession by the Roman theologians at Augsburg. The Schmalkald Articles (1557), prepared by Luther, with a long Appendix by Melanchthon, mark a

stage in the controversy with Rome when the differences were no longer reconciliable. The Formula of Concord (1577) gives a decision concerning controversies among Lutherans, as the other Confessions had treated those which had assailed them from without (see, further, art. CONFESSIONS, vol. iii. p. 845).

Differences between Luther and Melanchthon were intensified among their followers. These differences, due primarily to differences of temperament, training, and bias, as well as to personal rivalry between them. Melanchthon, gentle, timid, and sensitive, loved the retirement and occupations of the study, and shrank from conflict. Far more of a humanist than Luther, he was swept by the force of events, and, much to his regret, from classical studies into the current of theological discussions. He had passed through no such inner spiritual conflicts as had Luther. Accordingly, he excelled in the sphere of the formal rather than of the material. No one could give more accurate and graceful literary expression to Luther's thoughts. But, when Luther's influence was removed, he was unable to continue his work, dominated by two principles, viz. a much higher regard than Luther for patristic authority, and a greater concern for the external peace and the impressiveness of the church's public piety, which was frequently involved in negotiations with respect to Church policies, which compromised his position, and brought into prominence his great contrast with Luther in this point. Not understanding his sharp arrangement of scholastic methods in the first edition of his Loca Communis (1621), he soon manifested a bent towards the principles which he had repudiated, placed undue importance upon the philosophy of Aristotle, and became the founder of Lutheran scholasticism. The perpetuation of these two types of thought has caused not only differences in regard to the attitude of their adherents to individual Confessions, but also to a stricter or laxer standard of Confessional subscription. The Formula of Concord is a formal repudiation of Melanchthonianism in its divergence from Luther. Of the two principles of Perspectivism, the formal and the material, it has often been observed that Lutheranism lays greater stress upon the material—Justification by Faith alone—than upon the formal—Authority of the Holy Scriptures. While, in fact, the two are never separated, the Scriptures are regarded as the absolute norm of revealed truth rather than as a magazine of reference in which all knowledge is stored. For it must not be forgotten that the gospel itself was proclaimed orally before it was committed to writing, and was no less the power of God unto salvation through the preaching of the word. Nor can the Scriptures be correctly apprehended except as in regeneration a new spiritual sense is imparted.
the Holy Spirit, as this truth is applied and de
dveloped through the ages in believing personalities. Such believers, according to its teaching, constitute the inner spiritual organism of the Church. In this respect its doctrine is in contrast with that of Rome, on the one hand, which lays so much stress on the manner of the externally organized Church, and that of the Reformed, on the other, which is apt to isolate the individual from his historical relations and the mediation of those things that have always formed part of the sacraments reach him.

The same principle obtains in its conception of the relation of the Holy Spirit to Word and Sacraments, since, besides being a source of revealed truth, it regards the Word as a real means of grace through which alone the Spirit calls, illuminates, regenerates, and sanctifies; and the Sacraments as efficacious instrumentalities by which the promise of the gospel concerning the forgiveness of sins and the grace of God is individualized.

Like all ideals, those of Lutheranism suffer various modifications as embodied in a concrete form in external organizations. The union of Church and State in European lands has not only prevented the principles of Lutheranism from being applied in entire consistency to practice, but has also often interjected adjustments of theory and practice for the furtherance of the spirit and its teaching. As in the time of the Reformation, so at all times since, there have been those whose intense conservatism has shown the presence of a Romanizing influence, with greater freedom that of a Reformed, tendency. Indifferentism, Unionism, Mysticism, and Rationalism have had their learned advocates among those claiming the Lutheran name, and with the organization known as Lutherans, just as the Christian Church has much within it for which Christianity is not responsible.

HENRY E. JACOBS

LUXURY.—I. Historical aspects of luxury.—One of the incentives towards social progress is the desire to procure a surplus after the needs of a mere physical existence have been met. Some where within the limits of this surplus is that portion of which constitutes expenditure upon luxury. The amount of this necessarily is to be termed luxury depends to a large extent on the situation and condition of a community, as well as upon the standard of life.

Once a tribe managed to procure a sufficient food supply it was able to indulge itself, and the possibility of an unproductive consumption of the excess in the form of feasting, and under these circumstances a rude form of luxury would have been evolved. Thus a primitive type of luxury must have come into existence in pre-historic times. In the early civilizations luxury made its appearance in well-defined and striking forms. In Egypt, Nineveh, and Babylon, and at Tyre and Sidon, the primary tendency towards decoration and display appears to have shown itself in relation to external observances, and, closely connected with this, there was the pomp of the royal family, there, as in Egypt, it claimed divine authority. But the example of the sovereigns became manifest later to the governing classes, and in this way luxurious expenditure by individuals manifested itself. The chief gratifications sought were the pleasures of the table in eating and drinking, of personal adornment (both in dress and by use of costly perfumes), of buildings and monuments (such as the Pyramids), or of dwellings and their apparatus (see, for instance, the hanging gardens of Babylon). Among the Greeks there were traces of luxury in the heroic age, such as rich armour and dresses, and artistic ivory work, but it was at Athens after the defeat of the Persians (490-480 B.C.) and in the time of Pericles (449 B.C.) that sumptuous expenditure became a characteristic both of the State and of the individual citizens. Public festivals were conducted on a scale that was almost inconceivable, the erection of public buildings was carried on at an outlay which was very great for the times. What differentiates the luxury of the Greeks from that of the Eastern nations was the artistic aspect of the movement. On the Acropolis at Athens the Pinciothèque was beautified by the frescoes of the painter Polygnotus, near which stood the immense statuary of Athena Parthenos, the work of Phidias, and beyond was the Parthenon, adorned by the sculpture of Phidias. With the rapid increase of wealth private expenditure increased: vases for household use became more decorative, and dress was more ornate. The conquistadores of Alexander the Great (336-323 B.C.) introduced the somewhat crude display of the Eastern nations, and, to a large extent, degraded the externals of social life. In Rome luxury became more important after the Punic Wars. Gladiatorial games had been introduced in 264 B.C., and by 186 B.C. lions and panthers were brought long distances at great cost to stimulate the blood which was being shown by the people. Rich citizens vied with one another to spend profusely on food and table apparel—anchovies were brought from Pontus and wine from Greece. As the power of Rome grew, luxury increased, till it culminated under the Empire. Augustus claimed to have erected 468 marble pillars, and to have provided 8000 gladiators and 3000 wild beasts for the arena. Orestation developed into the excesses of Caligula and Nero, which were copied by private individuals according to their means. In the Byzantine Empire luxury was, if possible, greater than at Rome; it was certainly more decadent. If at Athens art had glorified luxury, at Constantinople luxury debased art; the Byzantine style has almost become synonymous with over-elaboration and tasteless display. Even before the Renaissance luxury had become more evident in Italy, particularly in Florence; afterwards it developed and produced a by-product in the encouragement of art and commerce. The more generous expenditure of the upper classes in France during the reign of Louis XIV. (1643-1715) was met by his attempted sumptuary legislation regulating dress. In England Edward III. considered that extravagance was diminishing the taxable resources of the country, and towards the end of his reign he used his power to prevent the evil. The statute of 1386 was passed by which the number of meals was limited to two, except on the special feast-
LUXURY

data are known; the problem becomes much more difficult in the case of a whole community. Certain forms of expenditure, as a rule, do not aid efficiency, and these can usually be classified under the head of luxurious outlay; certain others, again, are usually incurred with the object of conferring distinction on the spender, and, where such can be isolated, they fall into the same class. For the rest, all that is possible is to note with cars what happens in the majority of cases in order to ascertain whether a certain type of expenditure is necessary or a luxury.

In the case of individual expenditure, luxury can arise only where there is a surplus beyond physical needs. If that expenditure is so directed as to cut into the margin required for efficiency, then inroads are being made into future income-earning power. But, after full provision has been made for efficiency, there is yet another claim on the surplus—namely, that for the accumulation of capital. It is this claim that has led many economists to condemn luxury. Expenditure on luxury repays or restores the capital which was temporarily locked up in the commodities consumed as luxuries. Therefore such expenditure cannot leave production much larger than it had been before the goods were purchased. Wealth which is capital is also consumed, but in such consumption it becomes an instrument for further production. Thus that part of the surplus which is used as capital is more fruitful as regards the other portion which, in the phraseology of J. S. Mill (Principles of Political Economy, London, 1886, bk. 1. ch. iii.), is consumed unproductively.

Consumption of luxuries has other consequences which are partly economic, but which are also of considerable social and ethical importance. Expenditure on superfluities has a tendency towards a relaxation of concentrated effort. In extreme cases it weakens the moral fibre and opens the way to dangerous excesses. It not only tends to injure the person whose life is luxurious, but reacts on others by the force of example. Thus there is a contest in the fixing of the prevailing standard of living between luxury and a wise and discriminat-

The economic questions arising out of the existence of luxury concern societies who approach the problem of luxury from the historical side are inclined to urge against it that it has been the cause of the fall of great empires. Frequently, if not invariably, luxury is the symptom of decadence, but a closer analysis tends to show that the moral weakness had already shown itself, and, as it increased, it manifested itself in public and private extravagance, while extravagance again gave fresh impetus to the forces of political and social disintegration. In these cases it is clear that the evil lay in the abuse of luxury.

Some of the most powerful economic motives are to be found in the desire of men to realize an idea or scheme of life which seems to them an improve-

ment on their present one. Once their mere bodily wants are satisfied, their further desires may be called luxuries. But there is a temptation to exaggerate the degree of support which either class of preciooses attracts that fixes whether a particular age or a particular class can be described as luxurious or not. In the view of luxury that has been adopted the central point is the existing standard of living which is required for full efficiency. As society progresses and as further resources become available, it becomes possible for a community to increase enjoyments which are largely immaterial. The enjoyment of art is a case in point. If progress is conceived in a wide sense, the highest culture becomes an element in national efficiency. Accordingly, in a wealthy nation, where the inequalities of incomes are not too great, a condition is possible where the dividing line between luxuries and the necessities for efficiency is drawn at a much higher point than in another community that is unfortunately situated. And the higher standard of living can become a step towards further advance in civilization. But, at the same time, there is a somewhat sinister danger—namely, that consumption which is beyond the needs of efficiency may be continued much beyond that point. By becoming luxurious, it reacts on efficiency, and in the end results in a check instead of an increase in progress.

1 The matter is stated this way to allow for the possibility that the producer of the luxury may be the one who gains profit which he has reaped from its sale. Such savings would be available for new production.
LYCANTHROPY.

The word 'lycanthropy' is used in two senses. (1) It may indicate merely a form of madness in which the patient imagines that he is an animal, especially a wolf, and acts as such. This disease was common in antiquity, and especially in the Middle Ages, doubtless as a result of the wide-spread belief that transformation into an animal form was possible (§ 3). (2) It indicates the popular belief that on occasion a human being can actually transform himself, or be transformed, into a wolf or some other animal. In this form it is common among men. But, if wounded while in his wolf form, it is generally supposed that a corresponding wound exists on the human body from which the transformation has taken place. When wounded or killed, the werewolf's human form is restored. With the belief in wolf transformation is that which was most common in Europe, it is by no means the only one. For this superstition is practically world-wide, and everywhere it is generally the fear of men of the human animal who is responsible for the harmful actions. The name 'werewolf' is generally derived from the Latin *lupus* = wolf, and *apparere* = to appear, to be manifest. The ancient Greeks knew the beast also as *levius*, which is related to the Latin *leviatus*, meaning 'fear'.

*LYCANTHROPY* is derived from *lyke* = 'wolf', and *deiphos* = man, the Gr. *form being *lykon*-deiphos (cf. *avishpfer*, *dog*). The common English names are 'werewolf', 'lyke-wolf', 'man-wolf', 'A.S. werewolf', O.H.G. *werwolf*, Norman *guerwolf*, *man* (man); cf. O. Ir. fer, Lat. vir, and of *wergild*). The French name for werewolf is *loup-garou*. In this case the term has been thought to be a corruption of *wer* and *gare*, but this is uncertain. The Old French romance contains the forms *unorlou*, *unorlour*, *unorloure*, *unorloure* (Irish: *unorlour*), *unorlour* (Engl. = wolf) occurs in the Latin Mss of France (cf. § 4). The Slavic names are *Cz. *vpolok*, *vpolok*, Slavonic *vopolok*, *vopolok*, *vopolok*, Polish *vpulok*, *vpolok*, Russian *vpolok*, *vpolok*, *vpolok*, *vpolok*, etc. The Sorbian *vpolok*, however, means 'vampire', hence, 'vampire', in modern Gr. *vpolokos*, *sorokos*, 'vampire', though occasionally 'werewolf'. The Slavic form means literally 'fear of the wolf', or 'wounded by the wolf'.

The wolf has long been regarded with superstitious awe. An old belief in Europe is to the effect that, if a wolf sees a man before being wounded, or if he effects a wound which is derived of eight or nine hours, or goes mad or dies (cf. Pliny, *HN* viii. 24; *Verg. Ael. ii. 20; *C. Lorenz*, *Modern Greek Folklore*, Cambridge, 1910, p. 16). J. Claudian (de Sublimitate, Lyric, iv. 13) says that there is something in the eyes of a wolf contrary to man, which is stopped, and consequently the voice. In European folklore the wolf is usually a creature of the devil (cf. the wolf-shape of Ahriman; see § Dühnhardt, *Naturges. eine Sammlung . . . Pauen und Legenden*, Berlin, 1861, p. 146 f.). It is obvious that lycanthropy, in so far as it involves an actual belief in shape-shifting, is connected with the wider belief in transformation into animal form, which is of universal occurrence. Men, especially medicine-men, claim or are believed to possess this power, as well as that of transforming others; it is also ascribed to the gods, spirits, demons, and witches, as well as to animals, which sometimes assume human form, as some of the following paragraphs will show (see *METAMORPHOSIS*). But the actual origins of the belief are probably to be sought elsewhere (see § 3).

1. Extent of the superstition. In one form or another the werewolf superstition is world-wide. It was known to the ancient Greeks. In *Aepo* the chief who pretends to be a wolf says that when he has yawned three times he will become a wolf. Circe changed men to wolves, etc., by means of drugs. The superstition is also found embedded in the myths pertaining to the cult of Zeus Lycaeus, the Wolf Zeus. Lycaon, king of Arcadia, was said to have been changed into a wolf when he sacrificed a child on the altar of Zeus Lycaeus. In *Aesop* (Philippines, 1850) and *E. J. Urquhart*, *Loneliness and the Ways of Life*, London, 1909; *Werner Sombart*, *Leben und Kapitalismus*, Munich, 1918.

zari. The Kallikantzaroi are beings of monstrous form, hurtful and evil, who destroy men and carry off women, and sometimes make a meal of their prey.\(^1\) Lawson considers that the Kallikantzaroi represent the ancient Centaurs, whom he regards as a Pelasgic tribe of Cenusa, credited by the Arabs with the secret of making men into wild beasts, and carry off women, and sometimes make a meal of their prey. Some connection also exists between them and the mummers of the Dionysia, who represented the satyrs and Sileni. They appear and are feared from Christmas to Epiphany.\(^2\) The tribe could change into ravenging werewolves in time of drought, others into vultures or kites.\(^3\) The Arabs also regarded some men as having the nature of a hyena, and said that, if a thousand men were shut up in one of these and a hyena came, it would go at once to him.\(^4\)

The belief among the Celts is illustrated by a story told by Gildas Cambrensis:

An Irish priest was met by a wolf in Meath and desired to come and see his dying wife. They were natives of Ossey, whose people had been cursed by a witch for the wrongs of St. Natalis, and were compelled to take part by two by a wolf-shape for seven years, returning to their own form at the end of that time. The priest was persuaded to give the shool-shape to the sacred, for the other turned her skin down a little, showing that she was an old woman. The priest gave her his advice to give his advice to this case of Meath two years after, and that it was referred to the pope.

A citation in the Book of Fastivalia (1406) says that the 'descendants of the wolf' in Ossey had the power of changing themselves and going forth to devour people. St. Patrick is also said to have cured a certain 'race' in Ireland so that they and their descendants are wolves at a certain time every seventh year, or for seven years on end.\(^5\) These may be explanatory legends about older wolf-totem clans. Later accented form—already an ancient superstition—when totemism was requiring an explanation, as in the case of the wolf-clan in Arendia. To the same category may be referred the statements of early English travellers in Ireland to the effect that the Irish took wolves as godfathers, prayed to them to do them no ill, and used their teeth as amulets. Lyanthropy ran in families, and here also it may point to an older totem clan. Laighnech Field and his family could take a wolf-shape at will and kill the herds, and Laighnech was called Fândal because he was the first of them to go as a wolf.\(^6\) In Irish and Welsh Mârnet translates transformation to wolf-form of children begotten by a stepmother or of a husband by a wife is not uncommon.\(^7\) Gildas already refers to the belief that hags in Wales, Ireland, and Scotland can change to hares and suck cattle's milk, but, with St. Augustine, regards this supposed change as a delusion of the senses.\(^8\) This belief is thus contemporary with that in lyanthropy, but long survived it. Later Celtic witches—Irish, Welsh, Manx, Scots—usually turn into hares or cats, less often into dogs, weasels, ravens, porpoises, whales, etc., for the purpose of doing mischief. In Donegal the change is said to be effected by a hair rope made of a stallion's mane and by the recital of charms. In some cases the transformation is confined to certain families. Such witch animals can be shot only with a silver bullet. When followed up, the woman revealed her true form and is found to have a corresponding wound. A miller in Cork who saw a number of

ears attacking his flour; his knife at them
and cut off the leg of one. Next morning he
found his daughter with her hand cut off, and
concluded that she was a witch. Hares are usually
thought to be bewitched and suspected of being
wolves in disguise. The Ancient Welsh laws already
speak of their magical character, regarding them
as companions of witches, who often assumed
the form of hares. The

The Slavic werewolf belief is referred to under
DEMONS AND SPIRITS (Slavic), vol. IV, p. 624.
Possibly the Nenni, mentioned by Herodotus (iv:105),
were a Slavic people (cf. E. H. Mians,
Svithjold and Selden, Cambridge, 1913, p. 102 ff.).
The Scythians and Greeks said that every year
each Neurian became a wolf for a few days and was
then restored to human shape. Among the Magyars
witches and wizards assume the form of horses,
cats, etc. If the former are caught and shot or
the latter injured, they are found next morning in
human form with iron shoes on hands and feet or
seriously wounded. Herzt notes the sinister charac-
ter of the belief through its connexion with that
in the vampire, the names for both being inter-
changeable.

The Serbians think that the enkolpion has
annual gatherings, when they hang their wolf-skins
on trees. Should such a skin be taken and burnt,
the owner retains human form. A girdle of human
skins crossed a threshold by a witch in a house
where a wedding is taking place will cause all who
step over it to become wolves. In three years' time,
if the witch covers them with skins with the hair
turned outwards, they resume their human form.
This is in accordance with Russian werewolf
worship. A Russian werewolf is sometimes a man transformed by
the devil, and, contrary to the usual belief, he is harm-
less, but is driven to wandering from place to place.
In a Polish story a wolf-skin is placed over a merrymaking cat and carries her off to the forest.
Years after, one of the peasants meets his long-lost brother, who confesses that he was
the wolf changed by sorcery, that he had carried off the girl, who had
died of grief, and that then he was consumed with rage against all men and killed as many as he could.
He had come to see his home once more, but must resume his wolf-form immedi-
ately, which he did. In another case a peasant, released from
his wolf shape, returned home to find his wife murdered.
He cried, 'Why am I no longer a wolf that I might punish this woman?'
Immediately she showed herself transformed, and killed the man and his wife and child. The neighbours came and slew the wolf, when the werewolf-kins collected and crossed a river on which the wolf had crossed.
Thousands of werewolves come to try their skill at
leaping. The unsuccessful one is beaten by one of
the captains or by the devil. The method of the
transformation was to drink to one in a cup of ale
and mumble certain words. Then he could assume
or lay aside the wolf form when he pleased. The
Livenian werewolves collected at Christmas, and
crossed a river which had the power of changing them
to wolves, like the lakes in Arendis. They
resumed their human shape at the end of twelve
days. In Livenia a servant whose power as a
werewolf was disputed went to the cell and soon
after came out as a wolf. The dogs bit out one of its
eyes, and next day the man appeared with one eye.

In Scandinavia and Germany the superstition
was well known, and here the wolf, and in the
former also the bear, were animals into whose form
the transmigration took place. Boniface, Arch-
bishop of Mayence in the 5th cent., mentions the
belief. The change was caused by sorcery—
e.g., by donning a wolf-skin (sjeemar, hence the
term 'skin-changer'; cf. Lat. versatilis), or
a wolf-girdle, or a girdle of human skin; or it might
be forced upon him—e.g., by being driven outside
by a girdle of human skin or girdle at him, or by
shaking a wolf-skin glove at him. The girdle had
sometimes magical signs on it, and was held in
place by a buckle with seven catches. When the
buckle was broken off, the transformation ceased.
In such cases the man was a wolf or bear by night, and a man by day;
or he assumed the animal form for nine days, or
even for three, nine years, the eyes alone
retaining a human appearance. He howled and
devoured like the actual animal. Such persons
were said to be eigi einhamar, 'not of one form,'
or hauarmar, 'changing form.' In some instances
the gift of transformation was imparted
by trolls. Barehead of Worms speaks of certain
Fereczi who at birth can cause that the child may
later transform himself into a wolf or any other
form. In later times Finns, Lapps, and others were thought by Scandinavians to have the power
of changing others to wolves or to bears at will, and
were therefore disliked. The belief was apparently
much mingled with the influence of the
fact that wild warriors and outlaws—e.g., the
beserker—wore wolf-skins or bear-skins over their
armour or clad themselves in these, while they
were often victimized and acted as if they were animals. This is illustrated in the
earliest Scandinavian instance of the werewolf belief—that contained in the
Tobben Saga (chs. 5-9).

Ring Volang had ten sons and a daughter, Siggyr, who was married to Ring Siggeir.
Siggeir later slew Volang and bound his sons in the stocks. There nine of them were devoured by
an evil skid,' who came out of the stock and
began to eat them, one by one, until there remained
only Siggyr, who escaped. Sigurd, son of Siggeir, had taken this
form. Through Siggyr's craft the tenth son, Sigmund, over-
came the werewolf and went into hiding. Siggyr exchanged
form with a sorceress, and had a son by Sigmund, called
Sindri. He and Sigmund took to a wandering life and, on one
occasion, came to a house where there was a
werewolf with wolf-skins hanging above them.
For nine days they were wolves and on the tenth day came out as human beings.
Sigmund and Sindri donned the skins and became wolves, and each
went his way, after agreeing that neither should attack more than seven men without having for the
shame of Sigurd enough. Sigmund slew eleven men without Sigmund's aid. The latter,
hearing of this, flew and warned Sigurd, who then
was besieged and the day had come for deftting their wolfskins.
They agreed to lay them aside for ever, and burned them in the fire.
Of this wild tale Harlng-Gould (op. cit.) says
"is divested of his improbability, if we regard these which are worn
over their armour. While this is true, and while
'sherd,' means also 'courage,' this is an important witness to the
belief itself, as it is seen from the words of Godmund to Sindri,
"Thou hast eaten wolves' meat and murdered thy brother.
Thou hast often sucked wounds with cold mouth, and stunk,
thou comest to all men, into the jaws of wild beasts." (Vigfusson-
Powell, l. 196.)

In another wild tale from the History of Hroth Erlks, Bjorn
was transformed into a bear by his stepmother, who shook
a wolf-skin glove at him. He lived as a bear and killed many of
his father's sheep, and by night he always became a man, until
he was hunted and slain (Sir W. Scott, Minstrels, London,
1839, p. 254).
The post Art has a curious tale of two 'skin-changes,'
Dublin and Strowell. The former took the form of a bull,
the latter of a bear. They traveled through the
field and forest, and every now and then fell
badly bruised.

Modern collections of Scandinavian and German
Marches contain many werewolf stories.

In one Swedish tale a cottage was transformed by a Yamagom
of a Wolf-Done (Troll-wife), because he had not crossed himself
when telling the story. Vonatures went to his house, and
remembered his true form when his wife gave him food.1 In
a Norwegian tale a woman was turned into a wolf, when in her
wife's company, noticed that the time of the accosted
change drew near. He bade his wife strike with her spear
on anything that came to her. Soon after a wolf attacked her;
she struck it in the eye, and the wolf bit at
the piece of the apron and disappeared. Presently the man came,
carrying his spear, and explained that now he was free from the
curse.2 In a German tale a reaper saw his neighbour grind
himself with a strap and become a wolf.3 In another a woman
told her husband to throw his hat at any wild beast
which came. When she appeared as a wolf among the haymakers,
he threw the hat at her with a pitchfork. The wolf changed back
to the woman, who was found to be dead.4 A Dutch story tells
what a man shot with an arrow a wolf which was attacking
the girl, and that the arrow stuck in the wound. Next day he
heard that a strange serving man was dying with an arrow
sitting in his side. He went to see him, and found his own
arrow, whereupon the man confessed that he was a werewolf.
In a Flemish tale a shepherd received a wolf-skin from the devil,
by which he became a wolf at night. If the skin was
burned, he himself would suffer as if its own skin were
being burned, but would be freed from the curse. Is the sequel
his master succeeded in releasing him in this way?5

In many modern tales and also in medieval witchcraft
believed that witches took the form of a wolf,
which was usually then into a cat, dog, hare, or duck (the bird of
Freya, great mother of the witches), and these,
when wounded, became the woman with a similar wound in her body. Spina says that such cat
women ate the brain of a cat and rubbed
themselves with the flesh of a newly-born child which
had been offered to Satan.6

In England and Scotland werewolf stories are
scanty, but there are traces of the superstition
in early literature. The word werewolf in the sense of
'robber' occurs in the Laws of Canute, and it is also found in
later ballads and poems. Gervase of Tilbury refers to the existence of men called
gryfus in Wales, werewolf in England, who change
their form at the change of the moon. William of
Malmesbury, alights to the superstition.

A well-known old English poem, translated from a 12th cent.
French poem, is that of William and the Wervilf,
in which the king changes his form by his stepmother,
rescues the king of Sicily's child, whom his uncle wishes to
murder. The story relates how the wolf cared for the boy, his
furnishments, and the eventual re-formation of the
owl's to his human form.7 Drayton, in his Middle Age (B. 504),
tells how a man who had passed a certain hour at a certain
hour with appropriate spells, and on it he would be
changed into a wolf. Having done this, he committed much
havoc among men, and could not sleep to day the lycanthropy.
If tales of werewolves are scarce, there are
innumerable tales and traditions of witches
changing into hares, cats, dogs, and the like in order to do
harm. No change is more common in the 16th and
17th cent. witchcraft, and yet the belief is found, as in the case of the werewolf, that
such a wer-animal can be hurt only by a silver
bullet. In some instances wounding causes the witch to assume a shape known
when she is found with a corresponding wound.8

In France the earliest literary version of the
belief is found in the Lai du Blaesieret of Marie
de France (c. 1180). A knight went from time to time to the forest, then the
haunt of many werewolves, undressed, and became a wolf. He
told his wife the secret, and she obtained his clothes on one
of these occasions, after which he had to remain in wolf form.
As a wolf he retained human traits, and eventually,
the king's command, his clothes and consequently his own
form were restored to him, but not before he had ravaged himself
on his unfaithful wife.

This story is found in other literary versions—e.g.,
the Roman de Renard of the Clerks of Trevis (14th cent.),
the Laevens (ed. F. Mihel, Paris, 1802),
and in the story of Arthuor and Morganog, both
here. These are all literary versions of a folk-tale.1 The legend of St. Ronan in medieval
Brittany tells how he had taken the form of a
werewolf and ate children.2

Gervase of Tilbury, in his Otia Imperialia, tells of a certain
Pentecost of Capistrano, who, out of despair, became a werewolf in
Auvergne, ate children, and wounded older people. A robber
lacked off one of his feet, and at once he resumed his human
form, and acknowledged that the loss of his foot was his
salvation.

The belief survived in modern times. In
Normandy the werewolf was a godless man or one
under a curse, who for four or seven years must
nightly assume wolf-shape and submit to castigation
by the devil. In Berry those who, by a pact
with the devil, at the cross-roads, at midnight,
became loups-garous can be wounded only by
a ball which has been blessed or has had the Lord's
Prayer or Ave Maria said over it five times. Once
wounded, they take the form of wolves, and the spell
which attached them to Satan is broken.3 In
Brittany, towards the end of the 19th cent.,
sorcerers were supposed to take the form of wolves
or clothe themselves with a wolf's skin when going
to the Sabbath.4 In many parts of France carry
fûter is supposed to lead wolves, himself sometimes
changed into a wolf, whereby he is placed
beyond the power of shot. He directs the wolves
where to go for hunting. In Perigord sons of
priests must rush to a fountain at full moon and
plunge into it. They emerge, clad in a goat-skin,
which the devil has given them, and rush about
on all fours, attacking men and animals. They
resume human form by plunging again into the
fountain at daybreak.5 This recalls the Arcadian
and Livonian beliefs (see above). Numerous
stories relate how the werewolf is transformed into a
wolf, cat, etc., has a paw cut off, and is afterwards
found in bed with one hand lacking.6 In a Breton tale a werewolf hid his wolf-skin in an
oven. The sympathetic magic is clearly a link between
skin and owner, so that whatever was done to the
skin happened to him. A fire was lit in the oven,
and the owner of the skin soon began to leap about,
convulsed, and turned into a wolf.7

In Portugal a seventh son, where there were
no girls, was thought to belong to the devil and
to become a werewolf—a belief found also in
the Azores.8

Cervantes, in his Persiles y Sigismunda (ch. 3), relates how
an enchantress made advances to Rulliel, who repelled her.
She turned into a wolf. She stuck his knife into her breast, and
as she fell he human form came back to her.

Passing now to Asia, clear evidence of the belief is
found in Armenia. Sinful women are sometimes
forced by a spirit to don a wolf-skin and become
wolves for seven years. Soon the wolf nature

1 F. Mihel, Roman de Renard, Paris, 1802, p. 228, ed. F. Mihel, Paris, 1802,
3 F. Mihel, Rome de Renard, Paris, 1802, p. 228, ed. F. Mihel, Paris, 1802,

grows in them. They devour their children, then those of relatives, then children of strangers. Doors and locks fly open before them by night. In the morning the skin is doffed. If the skin is fiend's strength, then the woman suffers fearful agony and vanishes in smoke. In Asia Minor generally werewolves are feared especially at Christmas and in Holy Week.

In India, where the tiger is the fiercest creature known, its form is supposed to be adopted. Already in the Satapatha Brāhmaṇa the monomaniac is said to be consecrated to the man-tiger. In most instances the Hindus attribute the power of shape-shifting to the aboriginal tribes. Numerous stories are current regarding men with the power of becoming werewolves—e.g., among the Khonds (with whom, by the aid of a god, one of a man four souls becomes a mleega tiger), the Lushais, Kukis, etc.

Dallan describes how a Koi, tried for murder, maintained that his victim was a werewolf which he had followed to the man’s house after it had killed his wife. The relatives of the victim, who had expected him of much power and had handed him over to the prisoner, who slew him.

Sometimes the eating of a root is believed to produce the change. Occasionally the witch assumes the form of a badger and carries off children. Witches also ride about on tigers or in the water on crocodiles, dishevelled, with glaring eyes, and heaving a loud roar. Wizards also have tigers as familiars, or, as a Thana belief has it, mediums are possessed by a tiger-spirit. The souls of those slain by tigers are believed to pass into tigers to slay other men in their turn, or to sit on the heads of tigers and direct them to their prey, calling out in a human voice so as to attract the unwary.

In Indocina the wer-tiger is very commonly believed in among the Mala’s, Bajus, etc. Sometimes the power of transformation is thought to be confined to one tribe, as in Sumatra to the Korinchi Malays. There are many tales of men leaving their garments in a thicket, when a tiger has presently emerged, or in human form voicing feathers of owls eaten when in their tiger form. A wer-tiger slain was found to have gold-plating in the mouth, as was the man who assumed tiger form had. The Lavaos of Borneo are also regarded as wer-tigers. While the wer-tiger is generally very dangerous, in Java it is believed to guard plantations against pigs, and the change is effected by spells, charms, fasting, etc. In Malaysia the medicine-man is sometimes possessed by a tiger-spirit, and acts as a tiger when exorcising a spirit from a sick man.

A gruesome Malay story of a Semang who became a tiger (Sy Rilong). His hai (the hairy face—a euphemism), and sucked blood rather than air flesh, is told by H. Clifford. The tiger burst into a hut where several people were collected. One of them was able to reach a shelf near the roof, and from there he saw how the tiger killed them all and drank their blood. One girl he first played with as a cat with a mouse, and all night he tossed the bodies about and tore them, disappearing at dawn.

Another story tells how the transformation was taken publicly. A bride saw her Korinchi husband returning home as a tiger, which thrust its head above the top rung of the entrance. "It palpitated and changed, and the face of the husband came up through the face of the beast." Later the tiger was caught in a trap, but escaped, when it was tracked to the house. There the man was said to be sick, and soon after he and his sons disappeared. The story was reported to the District officer, and such a transformation is 'to the native mind a fact, not a mere belief.'

The tiger familiar spirit is also possessed by certain men, and after their death their spirits appear as tigers, or the medicine-man has a visual tiger which is immortal (Bomet of Johore). The soul of a dead wizard enters the body of a tiger, and the corpse is left in the forest for seven days until the change is effected. A curious Malay belief concerns the fold in which several human souls are penned. Periodical attacks of fierceness come on them, when they break bounds and go after their prey. Passing through one door, they become men, and on returning to another door they become tigers again. Their chief is always in human form, and enters the bodies of sorcerers when they invoke the tiger spirit. The transformation into tiger form is effected in different ways: by sympathetic magic—e.g., donning a strong (yellow with black stripes) and repeating charms—by offerings to evil spirits, by charms, or by the consumption of a poisonous plant which is supposed to affect the soul; or the power is conceived as hereditary. Among the Semang the medicine-man lights incense and invokes a spirit. Presently fur and a tail appear on him as he himself believes, and he goes about for twelve days destroying cattle. Then he returns home and is sick, vomiting bones. During the twelve days his wife must always keep the fire burning and burn incense, else he would disappear. Such a wer-tiger cannot be shot, as it disappears so quickly. Various beliefs are held regarding the transformation among the Malays—the whole body takes part in it, or merely the substance, the body remaining at home.

Among the wild Malays of the Patani States there is a belief in badi, or mischance, which remains by a body after death and devours the semanpur or, sometimes, the liver of passers-by. Birds and beasts also have badi, or, in the case of tigers, leopards, and jungle-cats, purang or beyeg; and, if a man is affected by this, he goes mad, and either imitates the actions of the creature or is subject to an abnormal growth resembling one natural to it.

In Lombok the crocodile form is assumed by certain men in order to destroy their enemies and many strange stories are told of them. This form is also taken among the Kelmants, one group of whom claim the crocodile as a relative. One man found his skin become rough, his feel like a crocodile’s, and a tail forming, until he was completely transformed. He made his relatives swear that they would never kill a crocodile. Many people saw him in his crocodile form.

In China there are various wer-animals—tiger, wolf, dog, fox, etc. The change is usually a bodily one, but an ethereal human double may pass into an animal either before or after death. There are many literary notices of such transformations. An early instance is mentioned in a document of the 3rd cent. B.C., in which, after the death of an illness, a man changed to a tiger and killed animals. Such transformations are often ascribed to delirious patients, and, if the patient does not kill a man, he may return to human form. This suggests a popular confusion between the fancies of insanity.

and actual belief in the power of shape-shifting. Sometimes the transformation is ascribed to a community of aborigines, and is effected by magical means. In other cases the cause may be divine disapproval of the man's neglect of his religious duties. Here the victim goes mad and turns into a tiger. In one such instance he is covered with a spotted skin by the god, as in European cases, where a wolf's skin is used. Stories of transformation by wearing a tiger-skin are said to be abound in China.

A 14th cent. writer tells how he saw a man slowly becoming covered with hair like a tiger, his body adorned with spots and stripes. During the night he ate a hog. 1

Other cases of this kind are of frequent occurrence. Wet-tigers and tigersse are sometimes favourably disposed and give presents. This is especially the case with wer-tigers on behalf of those who excite their love. 2

The wolf transformation is also known. In one case a peasant was turned by a wolf and cut off its paw. By the traces of the blood he followed it to a house, where an old man was found lacking a hand. He was killed, and in dying took the form of a wolf. 3 Before his period of transformation he had been long ill, and, after being healed, had disappeared. In another instance a youth, after an illness acquired the power of sending forth his soul in the form of a wolf, and devoted himself to the task of halting inns and robbing travellers. 

Other tales of this kind are current. A youth was seized with a hair and tail forming, after which she becomes a wolf, and escapes, sometimes she returns to see her family. In another instance a man wards a woman who is really a wolf, as also are her servants, and he is devoured by her. 5 In a 4th cent. work all wer-animals are transformed to men after the five-hundred year of their age. 4

Other wer-animals are also known—e.g., the dog, though here, as in the case of the fox, it is of the form of some animal. In one instance men who are beaten become dogs; and a dog-man who was stabbed changed to a dog when dying.

In China the fox superstition is a kind of invented werewolf belief, especially in China. The wer-foxes dwell in the desolate lands between earth and Hades, and can take human form at will, most frequently that of a young and pretty girl—but they may be detected by the possession of tails. Spirits of the dead may occupy the bodies of such foxes and revenge injuries on the living. Some legends show that the fox lives in graves and becomes a kind of a corpse by insinuating itself into the soul-substance. Wer-foxes can do either good or ill to men, but are gracious to those who are kind to them. Foxes in male form live with men, and are kept by them; in the case of a morsbile exotic state is produced, resembling that caused by the medivial *incubi* and *succubes*. When killed in human form, all that remains is the body of a fox. Their animal form also appears spontaneously in sleep, or when they are overcome by wine, of which they are very fond. Sometimes they enter and occupy a house invisibly, acting exactly like the *Poltergeist*. It is also believed that witches can take the form of the fox, cat, or hare. 7 The tiger-ghost is also believed in. 8

When he wishes to eat people he puts off his clothes and is changed into a striped tiger. He then advances with a great roar, and the traveller is instantly torn to pieces. 9

Tigers are said to make slaves of the souls of men devoured by them. These souls go before them to point out traps or to act as bearers, 10 as in the similar Indian belief. 11

The wer-fox superstition is found in Japan, but was not introduced there until the 11th century. There are different kinds of foxes. The wild fox, *Nogitoune*, can take any form, or become invisible, but its reflection in water is always that of a fox. The Nikko fox can also take various forms, especially that of a pretty girl, in which shape it will even marry a man. 1 These foxes also possess houses, or live in their houses, bringing luck if well treated, but they are dangerous to eat. Some samurai families are believed to own foxes, which steal for them or torment their enemies. Foxes to whom some kindness has been shown, either in their caves or in human form, will reward and doer of it with money, etc., a part of which turns to grass. Often the house in which the fox lives is illusory and cannot be found again (see FAMLY, vol. 1, p. 679). Men possessed by foxes run about, eating and eating only what foxes eat, but the possessing goblin-fox may be exorcised. 2

The same fox-belief exists among the Ainu, and with them the fox has both good and evil powers, and can cause death. Foxes also exhume and eat corpses. But the same powers of transformation to human form are ascribed to the horse, mole, mole, crow, etc. The spirit of the bear, dog, otter, and especially the cat, can enter into the body of a living woman as a punishment; the victim eats as a cat, wastes away, and dies mewing like a cat. This can also occur when a man has killed a cat. To prevent possession by its spirit, he may eat part of it. 3 The Eskimos and some American Indian tribes also possess the fox superstition. 4

The wer-animal superstition is found in Africa in connexion with the belief in *inuo* and *suku*. The belief that a certain animal can take over N. Africa it is believed that the *jinn* can take animal-forms—wolf, jackal, lion, serpent, scorpion. This is also true of the *ghul*, who appear as men or animals, and feed on dead bodies, or kill and eat living men. More akin to the werewolf superstition is the belief that twin children go out at night as cats, their bodies meanwhile remaining at home as if dead. If they are by beaten by any one, they tell this to their parents next day. 5 Among the Beersites witnesses maintain that they have seen girls, when born, change into ogres, who throw themselves on men until they are strangled. Among the Abyssinians there is a wide-spread belief in the *budus*, who change into hyenas and kill and devour. They are distinguished from ordinary hyenas by greater malice. The *budus* are sorcerers; and blackamulks, and are numbered among the Fula and Agos, are supposed to be *budus*. Hyenas have been killed with earrings in their ears, and these are believed to be *budus*, though it has been thought that sorcerers put earrings in the ears of young hyenas to bolster up this superstition. The *budus* have a king in the neighbourhood of Abolo to whom they bring offerings of corpse daily. As blackamulks are a hereditary folk, their sorcery is also hereditary, but a *budu* confers the gift on his children by a mysterious decoction of herbs. Cases of transformation are believed to have been actually witnessed. In one such case

1. Cf. the Bulbulka's belief that the black bear 'takes the form of a beautiful woman at night, and lures men to death if they are not wary' (M. L. Davies, PL. viii [1908] 950).
the buda sprinkled ashes over his shoulders, and the change began. Besides killing men and drinking their blood, the buda takes possession of his victim, entering his body by a look, or when he is eating, or in life, or in death. The victim becomes more and more insane, laughing like a hyena, then falling into a trance, when the buda speaks through him, often telling who he is and why he thus personates the patient. Sometimes the victim tries to get into the forest, where the buda is supposed to devour him. The buda is kept off by the wearing of amulets, by which also he can be exorcised. He can also transform his victims into animals, and sometimes digs up corpses to eat them. This is also done by actual hyenas. The belief in the wer- hyena occurs from the Sudan to Tanganyika, and is perhaps strengthened by the fact that wizards at their meetings howl and caper like hyenas, eat horrid food, and commit excesses the sight of which makes the onlooker mad. Even in the daytime their glance causes a deadly sickness. Certain tribes in the Sudan are supposed to possess this power of transformation, but it is dangerous to shoot them. One of them who was shot was seen to enter the hut of a wizard, who had been seen at a place where the same hunter had followed him to the grave. Generally among the black races the usual animals, besides the hyena, are the lion, leopard, and crocodile. In Nubia old women who are called carabas are believed to enter the bodies of these animals by night. In the Sudan the hyena shape is supposed to be assumed at an ant's nest. The Awendwa wizards receive permission to assume the shapes of spirits called onkara. The Wanyamwezi of E. Africa think that sorcerers can transform themselves into animals in order to injure their enemies. In E. Central Africa the bewitcher (mbidi) can turn himself into a hyena, leopard, crocodile, etc. He then digs up dead bodies and eats them. Sometimes the change takes place after death, and, if the creature kills people, some method of appeasing it is resorted to. The witch is thought by the Makanga to have a wife at night opens the door of the house to admit him and then runs off with him to feast. In one case, when a goal was carried off, tracks of a hyena and of human feet were seen together. Among the Tumbuka of Central Africa certain women about smeared with white clay, and are believed to have the power of changing into lions. In W. Africa the Yoruba think that the wer-hyenas assume their animal shape at night to prey on cattle and sheep, and, if possible, on human beings, who are sometimes compelled to go out to them when they utter certain howls. In Loanda the belief existed that the chief could change himself into a lion, kill some one, and then resume his own form. The boso believe that a man's spirit can leave his body and enter another. The victim becomes more and more insane, laughing like a hyena, then falling into a trance, when the boso speaks through him, often telling who he is and why he thus personates the patient. Sometimes the victim tries to get into the forest, where the boso is supposed to devour him. The boso is kept off by the wearing of amulets, by which also he can be exorcised. He can also transform his victims into animals, and sometimes digs up corpses to eat them. This is also done by actual hyenas.

The belief in the wer-hyena occurs from the Sudan to Tanganyika, and is perhaps strengthened by the fact that wizards at their meetings howl and caper like hyenas, eat horrid food, and commit excesses the sight of which makes the onlooker mad. both living and dead, with power to change to an animal—hyena, lion, serpent, or alligator—and to die to any animal of the wolves, behind, but this is in reality a wild animal with which the person has chosen to identify himself. If this appearance is stabbed, a hyena rushes howling from the hut, and the dead man falls through the roof with a similar wound. Such persons enter huts, take the true self of the occupant, and eat him. Only his shadow is left, and he dies next morning. Some think that such wizards are not aware of their night work. Those who have long practised it, however, are aware. Perhaps the basis of the whole idea is to be found in the dream-conceptions of hysterical subjects. The Basuto also believe in werewolves, men who turn temporarily into animals and kill and eat human beings. They have the tradition of the introduction of sorcery through a queen who could call troops of wolves, monkeys, etc., to her nocturnal gatherings—a belief not unlike that of the wolf-leader in France. The Hotentots believe in the power of changing to lion shape and killing men or animals. This is illustrated by a story bearing some resemblance to European werewolf tales.

A Hotentot and a Bushwoman travelling saw some hordes. The Bushwoman asked a question, "How can I know her to possess this power. Hair appeared on her neck, her nails became sharp, her features altered, and she bounded off as a lion, the man in turn climbing a tree until she re-appeared in her human form.

The Bushmen believed that sorcerers could assume the form of jackals, etc., and, conversely, that the lion could take human form. Similar beliefs exist among the Negroes of America, carried thence by their forefathers from Africa. In Missouri the Negroes think some cats are devils, i.e., witches in disguise. The Voodoo is credited with the power of changing to a black wolf, dog, cat, owl, or bat at night. To stop this the human or the animal skin must be found and salted. This assumes a real change of skin.

With all the N. American Indian tribes it was believed that wizards and witches could take the form of wolves, foxes, bears, owls, bats, or aukels—a belief which was probably strengthened by the wizards wearing skins of animals and imitating their howls, etc.

A turnipskin is a legend of a medicine-man who was seized with a span and went on all fours. His nails grew long and sharp, a tail grew on his hind legs, hair covered his body, and he became a wolf. His transformation lasted until the span passed.

A belief similar to that of the Chinese fox superstition exists, as with the Narraganset, and the Tzaxcalans believed in a wer-dog. The Musiquakes have curious tales about trees which appear as human beings, each bearing the marks of injuries done to the other, and of an old man who, denying that he was a bear, is proved to have taken that form by the fact that his tracks and those of the bear both have traces of grease. He is therefore killed because he has "a devil in his nose." Leflat tells of wizards who, having taken the form of birds and been wounded, are found to have identical wounds, while the birds shot are found in their bodies. The Chippewa sorcerer for a fee will turn into an animal and inflict injuries on the person described to him.

In a Chippewa story a boy left by his father in charge of his elder brother and sister is neglected and eats the leavings of wolves. They pity him, and he follows them. One day he hears a child's voice crying, "I am turning into a wolf," followed by a howl. Then he sees the boy taken half turned into a wolf. As he watched, the change became complete, and with the words, "I am a wolf," the werewolf disappeared.

Among the higher American Indian peoples similar beliefs prevailed. Maya sorcerers could turn into dogs, pigs, etc., and their glance was death to a victim; and in Guatemala the name of the priests was derived from the fact that they could take animal forms. Yucatan sorcerers could turn into wolves, pigs, etc., and their glance was death to a victim; and in Guatemala the name of the priests was derived from the fact that they could take animal forms. Yucatan sorcerers could turn into wolves, pigs, etc., and their glance was death to a victim; and in Guatemala the name of the priests was derived from the fact that they could take animal forms.

Following the belief into S. America, we find that the Achipone heebot, or priest, was believed to turn himself into an invisible tiger which could not be killed. When the priest had transformed himself and began to roar like a tiger, the onlookers fled, believing that the change was actually taking place. The people of Guiana believe in the kenuims, a being who can send forth his spirit to injure or cause wasting disease, or place it in the body of any animal—jaguar, serpent, bird, or insect—which follows up the victim and slays him. His spirit may also enter a man in the form of a caterpillar, and cause disease. Such a caterpillar is often withdrawn from a patient's body by a penaimax, or doctor, and killed, but the spirit escapes, so that the kenuims does not die. The animal in which the kenuims usually places his spirit is the jaguar or tiger—the kenuims—a-kina which it puzzles an Indian to kill. A certain small bird is also much feared as a kenuims-bird; this is shot and eaten, and its soul is destroyed, so that there may be one enemy the less. Certain penaimax are thought to have the power of sending their spirits into an animal. The wer-jaguar is believed in by many of the tribes.

A Tucana story tells how a man saw his brother take three grains of salt, spread a jaguar-skin on the ground, and dance round it, when he became a jaguar. Much horrified, he later obtained the skin and burned it. Returning home, he found his brother dying, but was asked by him to procure a piece of the skin. He did so, and the dying man threw it over his shoulders, and became a jaguar which leapt into the forest. In this case bulls merely abandoned from the wer-animal. In a Paraguay story the man becomes a man-eating jaguar by falling prone, and is re-transformed by revolving the process. Once he was wounded by a youth, who followed him up and killed him in his den, which was filled with human bones. In another tale from the Paraguayan Chaco two men who visited a village when the men were absent decapitated when they heard from the woman that they would see the men returned, they said that the visitors were jaguars, who had come to deceive and destroy them, and they had seen the marks

of their clans near the village. They were then pursued and killed.

Among the Melanesians in Banks Islands the nearest analogy to the werewolf is the tulamoaw, the soul of a person which leaves the body to eat a corpse. A woman threatened to do this. Watch was kept, and, when a noise was heard near the corpse, the watchers threw a stone and hit something. Next day the woman was found to have a bruise on her arm caused by the stone which hit her soul. In Lepers Island wizards transform themselves into blow-flies and cause sickness to their victims, or into a shark and eat enemies. The Auroras magicians take the form of sharks, owls, and eagles. A story from this island illustrates the belief.

Tarkate devoured men by turning into a fish, or entering a fish or a kind of magic image of a fish. His son found this image and got into it, when it went out to sea. Tarkate then went after the toy and punished him.

In the examples quoted it is interesting to note how many ways the change is thought to be brought about. Scandinavian, German, Slavic, French, Chinese, and the Tucuman of S. America— it is by donning an animal skin or girdle (see Gridle), presumably after removing the clothes of the person of whom the soul is supposed to be present in such methods. Eating a dog or root or rubbing the body with a salve or oil is found in ancient Italy, the Netherlands, England, India, Indonesia (where also women infesting the soul is thought to be the cause of the change), and in Africa, and in many cases tried judicially in Europe. Charms, spells, and other magical methods also effected the change in China, Slavic, Chinese, Indian, Cambodian, and other instances, and no doubt the use of spells accompanied the other means referred to. The power might be given by the devil (Kasayan), or by spells or magic (Amah), or the change might be caused in a man by a witch. It might be the effect of a divine or saintly punishment or other curse (ancient Greece, China, Celts of Ireland, Normandy); or it might be the natural gift of a seventh son (Flemish), or a gift of the Virgin Mary (Happy Christmas) (Naples) or between Christmas and Twelfth-night (Greece).

In some cases the power is ascribed to a special tribe or to a people living in a special district—Arcadians, Koori, Malay, aboriginal tribes in China, etc. of Hadramaut. This has perhaps an equivalent in the appearance of epidemics of lycanthropy in certain places, so common in the Middle Ages and later.

Very often it is said that, when the wer-animal is wounded or killed, the human form comes back spontaneously. This is found in many European instances, and also inversely in that of the fox and dog superstition in China.

In general, where the animal skin may be separated from the man, there is still a sympathetic relation between it and him. Thus, if it is burned (Flemish, Breton, American, S. American instances), or rubbed with salt or pepper (Senegamb, Celebes, Negroes of America), he suffers terribly and may die, as in the case of the tanabo in Celebes (below, p. 218 f.). On the other hand, this may release him from being a werewolf, as in the case of the men under enchantment who lose their beast nature when the skin is burned. Conversely, the seal or mermaid wife recovers when she discovers her skin.

While in Europe the man who is a werewolf is known by his eyebrows growing together over his nose, or by a small wolf's tail growing between his shoulder-blades, in Indonesia the man-tiger as a man lacks heels or the furrow of the upper lip, or is marked by twisted feet or by peculiar activities.

There are various methods of curing or ending the transformation. Burning the skin and wounding have already been mentioned. Another method was for the witch to cover the head of the werewolf with a skin with hair turned outwards (Serbia). In the case of wounding, some special methods are referred to—the werewolf had to be scratched above the nose so as to extract three drops of blood (Brittany), and in Germany stabbed on the brow three times with a knife or pickfork. The effusion of blood as a cure here corresponds to the drawing of blood from a witch as a well-known means of destroying her power. Naming the werewolf by his baptismal name and reprimanding him were also effective. In one story cited above the wife makes her apron at her husband and so restores him. In Cambodia the werewolf is deprived of his power if struck with a hook on the shoulder.

2. Lycanthropy as a theological doctrine. Throughout the middle ages and especially from the 16th to the 17th centuries, theologians turned their attention to lycanthropy as a branch of sorcery. The general doctrine was that by the help of Satan sorcerers could transform themselves into noxious animals, particularly wolves, for purposes inimical to others. Immemorial theologians expressed these views, and many treatises were written on the subject, while it was also discussed in general works on the basis of sorcery. Of these theologians J. Bodin is one of the best examples; in his De Magorum Novissimis (Frankfort, 1603) he maintains the reality and certainty of the transfiguration. Theological opinion thus coincided with popular superstition, and many of the instances cited as proofs are little better than the popular tales referred to above.

Thus, where a wolf is wounded and a human being is found with a similar wound soon after. The severest measures were therefore taken against lycanthropes, especially on the part of the Inquisition, and this authoritative announcement of the reality of the transformation added to the popular terrorism. People easily imagined the truth of the charges brought against those charged with them, or came forward as witnesses of them. Indeed, the prisoners themselves often maintained their truth, showing that insincerity and hallucination had much to do with the matter (§ 3). The peculiarly heinous aspect of the case in this: H. Boguet, a judge who tried many cases and who wrote many works against sorcery, drew up a code in 1601 in which he stated that, while sorcerers should be first strangled and then burned, the lycanthropes should be burned alive. The belief in sorcery as well as the theological animus against it often led to epidemics of sorcery; the people in a district, e.g., became terrorized by the idea that all around them were sorcerers, or many persons, half crazy, maintained this regarding themselves. At the beginning of the 16th cent. in Lombardy, during such an epidemic, witches were freely accused of having destroyed infants and enticed to houses to suck the blood of children. Reports of many trials of reputed lycanthropes are still extant, and afford sad evidence of human cruelty.

LYCANTHROPHY

In 1531 Pierre Burgot and Michel Verdun were tried by the prior of the Dominicans of Péligny, in the diocese of Besançon. They were accused of sorcery that year, when their cattle had stayed, a black cavalier had brought them together after he had agreed to give himself to his master, the devil. Later Verdun taught him at the Sabbath how to become a werewolf by rubbing himself with a certain ointment. Then he saw himself with the form of a wolf, his body covered with hair, while he was able to run like the wind. Verdun also transformed himself in the same way; the ointment had been obtained from his demon master. In the same year several children sucked their blood, and ate part of their flesh, finding it excellent. A boy said that he had seen relations with wolves. Both men were burned alive at Besançon. In the same year, before the same court, three sorcerers were executed for the same crime. One of them had been wounded as a wolf by a hunter, who, following the trail, came to a hut, where he found him lying and dressed by his wife. These lived in a way resembling the use of an ointment. He had killed and eaten the children, the woman also sharing in the ghastly meal. He was also burned alive.

In Arras in 1598 the wife of a gentleman was burned alive, for having him and her husband to bring him some game. The hunter was attacked by a wolf, and cut off his head. On his return to the chateau he drew the paw from his bag, when it was seen to be the hand of a woman, which he believed was longer than his. The gentleman recognized as his wife. Suspecting her, he went in search of her, and found that she had lost a hand. On her confession she was beheld to be a woman.

In 1533 Henri Boguet, grand judge of the ecclesiastical court of St. Claude (1569-1615), was most active against sorcerers, and, according to Voltaire, became a great part of having put to death more than 400 lycanthropes. His Discours écrivé des sorcières (Lyons, 1602) contains many instances of alleged lycanthropy, with the confessions of those accused. He claimed to see the transformation, whether by rubbing with an ointment or otherwise, some chapters of his work dealing specially with this subject. It is remarkable, also, as showing the fear of the time, that on 3rd Dec. 1573 the Parlement of Franche-Comté gave a ruling for the pursuit of loups-garous.

Towards the end of the 16th cent. Pierre Stumet was executed at Paris, before the diocesan theologian, on his own confession of having lived with a werewolf, who gave him a gridle by which he could turn himself into a wolf, not only in his own sight, but in that of others. He had killed and eaten fifteen children in his wolf form, and had tried to eat two of his daughter-in-law.

The beginning of the 18th century marked by the new epidemics of lycanthropy, and hundreds of executions took place.

In 1656 Jean Grenier, a boy of 14, alleged before the judges of Besançon that he had seen his demon master as a demonical sign, and that he had eaten some children. He also accused his father of being a werewolf and possessing a woman's body, and another man, Pierre Thielle, of having his skin and ointment. The conduct of the boy in court showed that he was insane, and he was placed in an insane asylum. Nevertheless the charge was continued against the men. The youth was visited by his demon, who had died in 1653, who found that he could run on all fours with ease, and that his method of eating was astonishing. He still persisted in his delusion of being a werewolf.

In 1604 at Lussanne five persons were burned as werewolves. A peasant of Cressy had cured his wolf and, as a result, five sorceresses in the form of wolves had carried him off to the devil, who had sucked his blood. The sorceresses then cut him up, boiled him in a cauldron, and made an ointment of his flesh.

These will suffice as examples of the trials and executions for alleged lycanthropy which were so numerous at this period. Not the least noteworthy fact in the whole world business is that some of the writers on the subject show the most extraordinary credulity regarding the cases. Pierre Marmoria, in De Sortilegiosis, maintained that he had seen the change of men into wolves in Savoy. Bourdin, procurer general of the King, assured Bodin that there had been sent to him from Belgium the proofs, signed by judge and witnesses, regarding a wolf shot in the thigh with an arrow. Soon the town was given in a chide by the arrow in a wound, and, when it was drawn out, it was recognized for his own by the person who had shot the wolf. Other cases are related in which cats attacked a man, who wounded them. Women were then found in bed with similar wounds, and they were at once believed to be the cats in question. While the whole was generally attributed to diabolical influence, there were different ways of accounting for it. Some writers thought that there was a real transformation, or that the devil clothed the men with an actual wolf-skin, or with one condensed out of air.

Others, however, thought that the devil wrought by fantasy or by means of unguents on the man or on the onlookers, so that they imagined that he was a man or woman was an animal, while he or she was similarly deluded. Others, again, suggested that the devil caused the person in sleep to imagine that he was a wolf, and that he actually did the deeds of which he dreamed. This is akin to the theory of St. Augustine, who refuted the King, that the demons could actually change man's corporal substance. In sleep or trance the man's 'fanstasm' went from him and might appear to others in corporal animal form, while in an unconscious man himself might then indeed appear that he was in such a form and acting in accordance. The effect of such drugs as stramonium caused hallucinations of riding through the air in the transformation, such as witches confessed to, and this may have been the food given by women to others in Italy so that they believed themselves to be animals. Such a drug might occasionally be responsible for lycanthropic hallucination. Still others moved, more rational, regarded lycanthropes as lunatics who imagined themselves wolves.

The last is probably the true solution of the whole matter.

3. Lycanthropy as a form of mental aberration. - Both in earlier times and even in the period when severe sentences were being passed against alleged werewolves, the expression of a disordered mental condition in which the patient imagined himself to be an animal—a form of melancholy with delirium—was clearly recognized by some. The popular belief in werewolves was not rejected by scientific writers in antiquity. Herodotus (iv. 104) would not be persuaded of the alleged transformation of the Neurians. Pausanias, admitting the transformation of Lycaon as a divine punishment, refused to believe in the recurrent transformations in Arcadia. Pliny (HN viii. 34) was equally incredulous. Medical writers regarded lycanthropy as a mental derangement.

Marcellus of Sisium wrote a poem in which he treats lycanthropy in this fashion. The poem has survived, but a prose version, abridged, by Ætius exists.

LYCANTHROPY

According to Marcellus, those afflicted by the lupine or canine madness go out at night in February, imitating wolves or dogs, and lurk among tombs. He gives the signs by which they may be known, and was imitated, in a thing or two, etc. He also gives several remedies for this disease, which like wolves and other beasts, the mind changes into a thing or two, and is cured similarly transformed. A boy was burned in Astagumalgand because he confessed that he had changed into a wolf and murdered two men—a case not unlike that of the Spanish werewolf, a century later. Some men of the Gaba hill tribes are afflicted with a temporary delusion, which is said to drive them to imitation of tiger and shun society. This is known among these tribes as transmutation into a tiger, in which they are cured by the application of a medicine to the forehead. Those who thus suffer do not know what has happened when they return to their senses. Certain demotics and those who believe to be possessed by the tiger-spirit, and fall off a tree and believe it alive. In the Malay Peninsula so real is the belief in the wer-tiger that boys play a game based on the belief. In this case boys are hypnotized, and the others run off, imitating cries of feet. Then they rise, pursue, screech, and bite anyone whom they catch, or climb trees in his assumed character. One who finds them in his house makes his way to the window, and calling out his real name (cf. the European werewolf instances parallel to this)—probably because this was pre-suggested to him. He is supposed to be temporarily possessed for the sake of the show, but it is obvious that this is on a par with actual cases of insanity, and that the boy might equally have been himself a tiger. The game is also played in Syria and Jodh, where other animals are also imitated. Among the Dayaks men who eat forbidden flesh are liable to penalties. They will run about the woods naked, imitating a tiger, if they have eaten deer's flesh. In Amman an hind has been seen to ask something from the tiger-god pray is to incarnate itself in him. It falls on all four paws, eats raw meat, and has no teeth the vessel which contains it. When he is calmed down, he is rubbed with alcohol so that he may come to himself.

Most of these cases from low lands are obviously temporary cases of insanity, actual or assumed, explained in terms of current belief regarding shape-shifting, etc. They suggest that, even among savages, with whom the general shape-shifting belief is very strong, insanity may, at least, have suggested actual wer-animal ideas.

In Europe, during the period when the werewolf superstition was most prevalent, the belief in the possibility of transformation and the actual transformation of the devil over men defied by him was generally too strong to allow of the truth of the matter being understood. Nevertheless, some alleged werewolves were clearly seen to be lunatics and treated as such. The case of Jacques Boclet, arrested as a werewolf at Condé in 1586, is an example. Two wolves were seen devouring a child's body, while a third ran out and attacked Jacques. A man of wild appearance was found, who claimed to be the wolf and maintained that the two wolves were his family and cousin, and that they had killed and devoured the child. His answers at his trial were contradictory, but he clearly believed that he sometimes became a wolf. His life was one of great poverty and misery, and it was impossible that he had not been the child and that he had committed the murder. In court, and that his gory meal was interrupted by wolves. He was sentenced to death, but the Parlement of Paris annulled the sentence and sent him home. Jacques, under orders from the demon who had possessed him, obtained his release. In a third case, in Paris in 1541, a man maintained that he was a wolf and had maeve several persons, and that he differed from other wolves merely in the fact that their skin was covered with hair, while his hair was between his skin and his flesh. He was given over to the doctors for treatment, but died soon after. In more modern times such cases are sporadic. Gurney, who conducted an inquiry into cases, found that there is a state of mental disorder that imitated a serpent, and were called "lupus lupus".

6. cf. Sleek, p. 256."

10. A. J. Lenerczyk, Souvenirs de magie, Strasbourg, 1856, p. 120; cf. the case of Barona transformation and flight, § 4. It may be based on dream experiences and hallucinations, as this obviously was.
It is obvious that in facts like these lies one explanation of the origin of the belief in lycan-thropy. For men are naturally prone to believe that they engage in the same actions as animals, especially that of the werewolf. And, where the people believed in the possibility of such transformation, it was easy for them to think that such persons, when acting in imitating the actions of an animal, were really in that animal's shape. Examples of this hallucination have already been given from among the Abipones and the Abisayans. The frightful prevalence of this mania during the later Middle Ages and in the 18th and 19th centuries may be explained by the miserable conditions under which thousands of the peasantry lived, constantly on the verge of starvation, by their pre-conceived ideas, and by the terror to which so many were reduced by the widespread demonology, with its sinister shapes of fear and horror as well as its power to transform itself. Therefore, the raving of the insane was also called lycanthropy due to its sexual sensuality. Nor is it impossible that half-insane persons, suffering constantly from hunger, may have killed and eaten human victims, whether on a belief that the delusion of having been wolves or not. Necrophagy is not uncommon in the annals of mental science, and no crime was more commonly attributed both to werewolves and to witches at the same time. It is also alleged by them, than the eating of human flesh. This crime was doubtless largely hallucinatory, but it may have had a foundation in fact. Such persons may have actually seen persons, with whom a belief in order to terrify their victims more completely. Among savages, sorcerers and medicine-men have traded on the existing delusion of delusion, and have claimed the power to transform, as many of the above instances show. This is the case with Abipone sorcerers, and another instance is found among the Chipewas and other American Indian tribes, with whom sorcerers dress in the skin of some animal, and imitate its howls and gestures, until the spectators believe in the reality of the transformation. Nicaraguan sorcerers were much feared for their supposed power of animating dead and transformed forms. To strengthen this belief they disguised themselves in the skins of animals. In such cases, where an exact imitation of the animal's howls or movements was gone through, credibility would aid the deception, and, as the sorcerer pulled off the skin, he would be thought to have resumed his human form. Medieval and later sorcerers doubtless also exploited the current delusion in these and other ways. This would account for such cases of the change being witnessed as have already been cited.

The constant recurring idea that the animal change is for a certain period, so many days or years, and the statement that the person knows when the change is about to come, are also strongly suggestive of periodical or recurrent attacks of insanity. In several of the above instances, where the change occurs through the dressing of an animal's skin, there may be a trace of the fact that incantations performed with lycanthropy delusions did actually heighten the delusion by wearing a skin, as perhaps in the case of the hougan. In the Irish instance mentioned by Giraldus, the human body is visible underneath the skin. As far as the popular belief is concerned, the leather was never removed: the clothing was first removed. This may point to what actually occurred before the animal skin was put on. But it may be the relic of an older belief that the human skin was first removed; cf. the Voodoo instance (above, § 1, p. 219).

Perhaps the werewolf belief was also added by such phenomena as in the children, brutalized, and having animal appetites. These 'wild boys' were often believed to have been stolen by animals—the bear, the wolf—and to have been brought up and suckled by them. While many stories about such children are not authentic, there are some cases in which boys were actually found in the dens of wolves in India. They could not stand upright, went on all fours, ate raw meat, and tore clothes into shreds. Various theories have been suggested to explain their having been thus brought up, but, if some cases are authentic in wolf-haunted areas, there have been instances from time to time in similar districts in Europe. This would in part explain the numerous folk-stories about children sucked by animals—e.g., that of Romulus and Remus. The cases are of the kind described by Robert. Browning. When, and if such children survived, they would hardly differ from the insane persons who imagined they were wolves, went on all fours, and ate raw flesh.

The case is parallel to that of women carried off by baboons or orang-outangs, which has doubtless some foundation in fact (see C.F. p. 277).

4. Werewolf and vampire.—While both werewolf and vampire have a liking for human flesh and blood, there is a marked difference between them. The werewolf is a living person assuming animal form for the sake of gratifying his desire. The vampire, on the other hand, is a reanimated corpse, which rises from the grave to prey on the living, the reason for the reanimation being of various kinds (see VAMPIRE). But here and there links of connexion exist. Thus in Germany, Serbia, and modern Greece it is thought that the man who was a werewolf in life becomes a vampire after death. Hence the werewolf was burned, not buried, lest he should do mischief. Again, the dead sometimes appear as werewolves. Klaig John I, who was called the werewolf, was said to have been burnt after his death, on the evidence of a monk of Worcester. 4 In Normandy within the last century priests watched at the grave to be sure of the good conduct of the deceased. If they saw that some lost person was about to become a werewolf, they cut off his head and threw it into the river. 5 A ghost may also appear as a wolf, like the wolf of Anspach in 1684, which was the ghost of a dead Burgundian. 6 This corresponds to the Malay belief that ghosts of dead wizards enter the bodies of tigers, unless the son of the wizard by certain rites attracts his father's spirit to himself. 7 Similar beliefs have already been noted among the Slavs, Benua, Chinese, natives of British Central Africa, Rhodesians, etc. (§ 1). In New Zealand lizards were feared because of the souls whose death—rites had been incompletely performed and enter such creatures. They then gnawed the entrails of living men. 8

LYCANTHROPHY

spirits of all kinds frequently take animal forms and act as the werewolf or vampire. Thus the French lubin was a spirit in the form of a wolf, which haunted churchyards to prey on the dead, like the Arabian ghul, which takes the form of mankind; or the entomah in Ethiopia, the lives of the king of the devils rides on a fire-breathing wolf and is followed by fiends in the form of wolves, while in Meroe the wicked are thought to be visited by evil spirits as wolves, jackals, etc.5

5. The 'sending':—A phenomenon analogous to that of the werewolf is that of the 'sending'—a thing or animal, sometimes animated or even created by the sorcerer, or some part of the sorcerer himself (his soul, etc.) and sent out by him to annoy or injure people. Examples occur over a wide-spread area and at various levels of civilization. The 'sending' is a kind of familiar of the wizard. In S.E. Australia the lizard is such a wizard familiar and is sent out to do injury.6 Among the Bororo-speaking tribes of Brazil, New Guinean snakes, and crocodiles are sent by sorcerers to kill. A fragment of the victim's garment is put beside the snake in a pot; then heat is applied to the pot, and the snake absorbs the heat and part of the fragment. The idea is that where the victim passes, and attacks him because it recognizes the smell of the fragment on him. More magical is the method of the Barujsi Bay sends a 'sending' to another whose body causes death. It leads a separate life from her after her death, or may pass to her daughter. At Gelaria this 'sending' is called labumi, and resembles a baby that leaves the mother's body when she is asleep, and causes disease by inserting bone or stone in the victim. Should any one see it, it turns into an animal, and then again takes its human form. At Collingwood Bay the 'sending' is called furum, and is like a limbless old woman. It turns to a mosquito and sucks the victim's blood, resuming human form at dawn.7 In Banks Island, if any one eats a piece of a corpse, its ghost will go forth to harm a victim at the will of the eater. Here also and in the New Hebrides the mok, or sea-snake, acts as the familiar spirit of those who profess to have had intercourse with it. Among the Malays and in Java, New Guinea, etc., and even hares and deer are used as 'sendings.' Among the Yoruba sorcerers use the owl as a 'sending,' and, should it be caught by the person whom it is intended to deceive, it will rattle its claws and wings broken, a similar injury is done to the sorcerer's limbs. In the Cameroons a man selects a hippopotamus, leopard, elephant, gorilla, etc., as a friend, and the animal is then supposed to harm his enemies by stealth. But, if the animal dies or is slain, the man dies. Hence such animals are usually not hunted by fellow-tribesmen. Matabele wizards dig up corpses, transform them into hyenas, and use them as messengers or steeds. A wounded hyena escaping into a kraal is thought to show that this is the dwelling of a wizard.8 Baronga wizards send forth spears to kill or wound.9 In Calabar each wizard has two owl messengers, or sends forth insects—singing ants, beetles, etc.—into the house where he is to find his victim. Then he sends his ikim—a gourd—to examine the house. Insects and ikim report whether there is any dangerous juju, or medicine, in it.10

Bavili sorcerers will leopards and crocodiles to go and destroy, having obtained this power through a medicine rubbed into their eyes. Then the animal becomes visible to them, and they know that it is at their service.11 In British Central Africa wizards can create lions, or sometimes inspire existing lions, to go forth and destroy.12 Among the Bondi 'dols' of Indian corn are animated by the sorcerer, and go forth to seek the blood of a victim, who turns sick and dies.13 Zulu wizards send out owls and other animals, and beasts and crocodiles, to injure their victims. These are called their amanuus, 'attendants.'14 The Eskimo angakok sends a tulukal—a seal made by him. Should the victim kill it, he loses all strength and becomes a cripple. This seal is made of bones of various animals, covered with turf and blood, and charmed into life by a magic song.15 A Siberian shaman will send out a ye-keela, or witch-animal, to fight that of another shaman. The shaman whose ye-keela is worsted shares its fate. Lapland wizards send flies and darts against their enemies, and also a kind of fish, which, if it is let loose near the victim, will attack him as well as to any one who came in its way.16 Witch-doctors among the Paraguay Indians send forth witch-beetles to enter their victims, and these beetles cause a local swelling.7 Among the Tarahumara Indians sorcerers cause snakes, scorpions, toads, and centipedes to eat a man's heart so that he dies.17 The Tawan explain sickness and evil as the work of a witch-doctor by a sorcerer to eat away the patient's life.18 In ancient Scandinavia it was believed that sorcerers could raise up a ghost or a corpse by their magic power and send it to do harm to an enemy.19 The Indian, Bengali, and Japanese examples of the animal familiar, cited above (§ 1), should also be noted.

Danish witches were believed to make a hole out of some wooden pegs and an old stocking, and send it to steal milk from cattle.20 The Estonians believed in magic packets made by wizards and sent forth to do all kinds of mischief—e.g., to transform the victim.21 All sorts of animals had the power, by singing spells over a wisps of straw and singing in the victim's face, to cause him to become mad, and all madness was attributed to such songs.22 Not dissimilar to this conception of the 'sending' is the belief entertained in Celebes regarding the wer-man. The Torajas believe that a man's spirit or inside, lambuyo, can go forth from him as a deer, pig, cat, ape, etc., while he is asleep at home. The lambuyo then assumes human form (this resembles the New Guinea labuums). Its victim is first made unconscious; then in animal form the lambuyo cuts him up, eats the liver, and joins the body together again. Soon after the victim wakes,

he dies. Elsewhere in Celebes a man is thought to have three souls. One of these, the lonoana, leaves him in the death-bed. The desire for death, but, if it is long away or is fatally hurt, the owner dies.

A wer-man in human shape arranged for a sacrifice with a woman. Her husband overheard, and followed the wer-man, who was more than usually at work. He struck the lamboyo gorbomma, which turned to a leaf. This he thrust into his own breast, then into a box. Then, calling it to the place where the man was at work, he placed it on the fire. The owner beggim him not to do this. But he still kept it in the fire, where it instantly fell dead.

In some cases this power of sending forth the soul is a natural gift, in others it is the result of contagion from another wer-man, or from anything with which he has been in contact. This contagion can be made to leave such a person in the form of snakes or worms by means of severe medical treatment. The wer-man is known by his long tongue, the nasty eyes, which are of a green colour. A wer-man, when discovered, is punished by death. In these instances the spirit is but little different from the 'sending' or familiar spirit. In some cases, however, it is thought that there is an actual bodily transformation, and here, if the animal is wounded, the man who has thus changed his form is similarly hurt when discovered, or when the owner of the animal, the wolf, sends out her soul as a cat, herself remaining insensible. Should it be injured in any way, she bears a similar wound. This likeness may be further extended to the kindred phenomena of the bush-soul and the nagual, both of which bear some resemblance to the 'sending' and to the lamboyo or tonoono. In Calabar the bush-soul is one of four souls possessed by every man. It lives in a pig, leopard, etc., unseen by its owner, but it must not be neglected by him, else the owner turns sick. Then the witch-doctor advises that an offering be made to it. If this appeases it, all is well. If not, the man dies. The witch-doctor can tell the man what sort of animal encloses his bush-soul. He then takes care that neither he nor any one else harms it, for, if it is shot or trapped, the man dies; vice versa, when the man dies, the bush-soul also dies. Another observer, J. K. Maegregor, writes that the death of the bush-soul merely causes weakness to its owner. But it is possible for a man to purchase an extra bush-soul from a witch-doctor who is stronger than the other, and can be used for purposes of offence. He may command it to go and kill goats, if he surrounds it with a fang-faira, if it is the hoppopotamus. If this soul dies, the owner also dies. The owner of a bush-soul can transform himself into the animal in which his bush-soul is held to have a koruus which enters him at birth, and another, its counterpart, which enters an animal. The desire for death, but, if it is long away or is fatally hurt, the owner dies.

LYING

again before becoming a member of the wool-society, he has exchanged souls with a wolf, so that both man and wolf are werewolves, or that there is anything here akin to the bush-soul.1 Nor again is it clear, as N. W. Thomas maintains,2 that lycanthropy is conceived as a mixture rather than with transformation, that the wer-animal was originally the familiar of the medicine-man. The comparatively few instances of the spirit going forth to the wolf suggest that we are here on the track of a different if analogous superstition to that of lycanthropy with its supposed bodily transformation. Again, the familiar is hardly a form of the man himself, as the werewolf is, but rather sometimes of part of the man, or if it is his messenger, which the werewolf does not seem to be.

There may, however, be a connecting link if we regard the phenomena of lycanthropy as based on the hallucinatory dreams of insane persons, preoccupied with ideas of transformation. Where an animal-sent is supposed to send forth his spirit either in its own shape or in that of an animal, while he remains quiet in the room, this may also be suggested by a hallucinatory dream. It seems better, therefore, to regard lycanthropy with its bodily transformation as distinct from the transformation of the outgoing spirit, and also from the ‘sending,’ messenger, or familiar. They are analogous beliefs, to which similar concepts—such as lycanthropy—have attached themselves. But they are in origin different. In the same way, though there is much in the fairy, demon, or witch superstitions which is common to all these, that which is really distinct in origin.

6. Conclusion.—The wide diffusion of the werewolf superstition forms an excellent example of a universal belief being worked up into a superstition by bearing a different likeness in different regions. Without the belief in shape-shifting the werewolf superstition could not have existed. But this being granted, persons of diseased mind in all stages of civilization easily conceived themselves to be ferocious animals preying upon other human beings. The belief itself was easily exploited by interested persons—medicine-men, sorcerers, etc.—or some of these might themselves be half-crazed, as medicine-men often are through their austerities (see AUSTRITIES). In certain cases—for example, that of the Norse bererks—the insane fit was heightened by the wearing of animal skins; or, in others, totally different, in later stages, may have helped the form of the superstition, as in the Arcadian and some Irish Celtic examples.

LYING.—The English word ‘lie’ with its congeners and derivatives represents a concept which, if hard to define, is yet unique and irreplaceable into any other. While it cannot be claimed either (cf. LIEU) by those agreed as to what precisely constitutes a lie orlying, it is obvious that anything like the same ethical significance has at all times and in all communities been attached to the practice generally understood to be denoted by the Teutonic word. Lying was commonly regarded as ‘falsehood’ in other languages, yet in English at any rate this term, and in a somewhat less degree any word or phrase which is thought to be merely a covert alternative for it, is viewed as, by those to whom it is applied, as conveying a reproach, or at least an opinion, generically different from the idea of mere untruth. It would probably be conceded that nowhere has the antithesis to lying and sensitiveness to the imputation of it reached a higher intensity than among ourselves; and a study of the import of the term in our own language may therefore be taken as in a manner typical and representative.

1. Sources of modern conception.—Historically the English lie has, if we may so speak, a fourfold pedigree—Saxon, Jewish, Greco-Latin, and Christian. It signifies, that is, a vice or vicious act, which derives its peculiar reputation partly from the language and sentiment of our pagan forefathers, partly from the specific teachings of Christianity. If it be alleged against this analysis that our sensitive regard for veracity is rather of feudal origin, the objection, even if well-founded, is of no moment, that feature of feudal ethics being itself derived from some or all of the four sources enumerated.

(1) Saxon.—The presence in all the Teutonic languages of a substantially identical word of like meaning attests the perennial importance of the thing meant. To lie is to say that which is not true. And we cannot doubt that the tribesman who had the skill, and the heart, on occasion to do this undetected was held in different esteem from the man who could not, or would not, as he had, in higher or in lower esteem, we cannot in the absence of adequate evidence be sure; that might perhaps depend on, and change with, the varying circumstances of the community.

(2) Jewish.—When at length on British soil the Anglo-Saxon invaders were gradually led to profess the Christian faith, that faith brought with it a moral code derived in unequal degrees from the three other sources named above, of which the most ancient and explicit was the Hebrew. Although the Decalogue contains no precept, Thou shalt not lie, the prohibition of false witness reproduces the most frequent and injurious form of lying. Prophets and moralists enlarged the prohibition. The足以 of the Lord crieth unto the city; says Mirra (60), 'a righteous man hateth lying.' (13); "Especially guilty are 'false prophets' who in the name of the Lord 'prophecy lies . . . a lying vision . . . a thing of nought, and the deceit of their heart. (Jer 14:14; cf. Zec 13:14)

(3) Graeco-Latin.—Meanwhile early Hellenic sentiment viewed lying without horror; virtually, as craft, it had in Hermes a patron-god. Persuery, however, was deemed pernicious, incurring the wrath of Zeus. Subsequently, as witness the gnomic poets, civic morality coupled veracity with justice as laudable (cf. Plato, Rep. i, 351 B); and Sophocles proclaimed the ugliness of falsehood:

Honestos (εισήγαγω) ῥαβδόν τήν ζωήν, ταύτην τον παύσαν, τον ἐν κεφαλήν αὖτις, ἀλλὰ τον ἀπόθεμαν, τὸν μὲν οὖν τάμετα μετέχειν, τὸ δὲ παράκρημα μετετέσσαραν. Τάναξτον τοῖς ἔνδυε. (Rep. i, 352 B)
of the commonwealth,' and in his latest work (Laws, 720 H.) he talks truth as 'foremost of all good things'; for the truthful man is 'trustworthy, whereas he who loves wily falsehood is untrustworthy,' he who loves involuntary falsehood is foolish;' Aristotle (Eth. N. iv. 7. 6) seems 'lying' (πρακτική) essentially 'mena (πρακτική) and banefulness.' The 'truth-lover' (πρακτικής) stands in notable contrast with him who rejoices in the wily (πρακτικής) a type of character distinct from him who lies for the sake of gain or glory (ib. § 12). In Stocicism the viciousness of falsehood, although not expressly affirmed, is tacitly assumed exactly as ideal good is in effect defined by Seneca (Ep. lxvi. 6) as 'a mind set on truth.' To the constant Stoic acceptance of unverified opinion as a substitute for truth or real knowledge would be equivalent to inextremity. Moreover, Greek philosophy had energetically disencumbered the art of lying, and, when Latinized, had found an ally in old-fashioned Roman prejudice against wilful untruth.

(4) Doctrine of the NT endorsed and deepened the injunctions of Jewish theology and Gentile ethics. 'Lie not one to another,' writes St. Paul to the Colossians (Col. 3:9). To the Jew a lie is a sin; hence the need for the new and characteristically Christian reason that 'we are members one of another' (Eph. 4:25). And with this Pauline notion the warnings of the Apocalypse are in accord. Into the latter any 'false sayings' may enter (Rev. 2:10); not to mention there's 'every one that loveth and maketh a lie' (2 Thess. 2:11), where nothing is lost to the ethics of truth if by 'lie' be meant idol or concern, to say that falsely, or the typical lie—idolatrous falsifying man's conception of the divine attributes and therewith the standard of truth. In the Synoptic Gospels 'hypocrisy' (Mt 23:24, Lk 12:57) is the lie, simply 'lying' (πρακτικής), of which 'the devil' (John 8:44) is first cause. Thus for Christianity the spirit of lying is opposed to the spirit of truth as darkness is to light. It is antithetical to God and incompatible with fellowship in the Church of Christ. AND this abhorrence of lying as deadly sin, though too often grievously violated in nominal Christianity, has endured throughout the centuries, permeating our finest literature, and is reflected in the life and conduct of many a plain, honest man.

2. Philosophical theories.—Theology and custom, moral philosophy, different schools condemn lying on different grounds; the intuitionist as intrinsically repugnant to 'right reason' or 'moral sense' or 'conscience'; the empiricist or positivist because it impairs well-being and self-development, the utilitarian because on the whole, if not in every instance, it would tend to the diminution of the sum-total of pleasure experienced. Whether the utilitarian sanction is well-founded in fact may be questioned. It is arguable that the wide acceptance of utilitarian ethics has been attended by an increased indifference to truth. Whereas lying is demonstrably contrary to other ideals—universal benevolence, perfection, or the beautiful—there is no guarantee that truth-seeking will bring either to the individual or to the community a surplus of pleasure, or that moral pleasure may not be secured by an admixture of well-timed falsehood. But, even if utilitarian theory could demonstrate the all but universal inexpediency of lying, such calculation is not the ground of approval of it; an hypothesis of it is not the same thing as having a lie for its own sake. It is this that would seem to be ethically the point of main consequence, distinguishing from man—the presence or absence of a deep aversion to lying as such. Of less real importance is the much debated question, too complex to summarize here, of exceptional contingencies in which, notwithstanding that aversion, it may be better to speak falsely, just as killing is sometimes right. But we may consider whether lies can be classified, and attempt a more exact determination of the essential constitutions of lying.

3. Analysis and classification of lying.—The aim of a lie is to misrepresent facts, or purpose, or feeling. To be a liar is to do this habitually and wilfully. The ideal good in this effect defined by Seneca (Ep. lxvi. 6) as 'a mind set on truth.' To the constant Stoic acceptance of unverified opinion as a substitute for truth or real knowledge would be equivalent to infameity.

Moreover, Greek philosophy had energetically disencumbered the art of lying, and, when Latinized, had found an ally in old-fashioned Roman prejudice against wilful untruth.

.......

viected of error, take no shame to themselves. They 'thought' it was so. To Plato such untruth 'thought', or 'lie in the soul', appeared more manifestly evil than any spoken lie; and, though Christianity, supposing, emphasized the distinction between wilful sin and involuntary error, there is nothing in the NT to justify, and the Johannine writings abundantly disown, the 'modern' view of this, which indeed rests upon nothing better than the assumption that the reader is entitled to ignore truth, if not to pervert it. In practice the former habit leads on to the latter. Having once entertained and echoed some untruthful allegation, a man will often shut his ears to all disproof and pervert other facts in support of it. Again, if 'lying' proper implies some kind of utterance, the wilder concept of 'falsehood' includes (a) self-deception, and (b) the muttered lie cherished in the heart and potent to vitiate judgments whether of fact or of value. The dishonest-minded man frequently propagates untruth without any formal or positive lying. If he thus at technical grounds escapes being designated a liar, he yet comes within Aristotle's description of the 'man who delights in falsehood as such.' Doublesense this permanent disposition is required only through repeated indulgence in lying for the sake of particular gain. If it is seldom attained, an intermediate stage is very frequent. Many men and women rarely tell the truth, regarding it as something too precious to give away.'

The relation of inveracity to 'that most excellent of all virtuous principles, the active principle of benevolence,' emerges in Butler's 'Dissertation of the Nature of Virtue.' Linking falsehood and violence, Butler holds that 'veracity, as well as justice is to be our rule of life'; by these our benevolence must be conditioned.

Of the view which condemns lying as violation of a man's duty to himself, the typical exponent is Kant, who stigmatizes a lie as 'an annihilation of the dignity of man,' and deplores argument from the injury done by the liar to others as confounding 'the duty of truth with the duty of beneficence' (Culd., ii. 284). On the other hand, the best English moralists of the past century, notably Sidgwick and Martineau, take a wider view at the same time a more discriminating view of the nature and harmfulness of falsehood.

M

MA'ARRI—

1. Life.—Abūl' Alah Ahmad Ibn 'Abdallah Ibn Sulaiman al-Ma'arrī, the celebrated Moses of Moslem and man of letters, was born in A.D. 973 at Ma'arrū (Ma'arrū al-Nasir), a prosperous town about 20 miles south of Aleppo. At an early age he became almost completely blind in consequence of an attack of smallpox, but so extraordinary was his memory that this misfortune did not seriously interfere with the literary studies to which he afterwards devoted himself. He would write at first that he intended to make poetry his profession. The poems, written while blind or by dictation, were often immense, and may well have tempted an amateur prodigy; the masterpieces in the art of writing verse were often limited, and may well have tempted an amateur to copy them. The copies of the first Ma'arrū, the 'Poems of the Poets,' were not written for hire. Probably this is true in the sense that he soon abandoned a career which, lucrative as it might be, was entailed dependence on the proceeds of a small factory of scrivener, and was destructive of every feeling of self-respect. From the age of 20 to 35 he remained at Ma'arrū, a poor and comparatively unknown scholar, supported by small annual pensions paid from a trust fund. During this time he composed the greater part of the collection of poems entitled 'The Assemblies of the Prophets' (Sawā'ir from the Prophet), in which the influence of Mutanabbi is apparent. With the object of seeking a wider field for his talents, he left Ma'arrū in A.D. 1083 and journeyed to Baghdad. There he was well received by the learned men; but, instead of settling there, he went to Syria and took the pilgrimage to Mecca. He died in or about 1095, and was buried at Damascus.
MA'ARRI

believed, but were designed to mask his real convictions and to serve as a defence against any dangerous attack, are attributing to him a course of action that he himself openly professes.

'Society compels me to play the hypocrite' (i. 120. 4), 'I raise my voice to pronounce absurdities, but I only do so for the sake of the Devil' (i. 20. 19). One can't help thinking often from the friend at thy side' (i. 272. 1).

His opinions were of a sort that could not be communicated without risk, and this fact, together with his caution and necessity, which he disliked (cf. i. 34. 2), is the source of many superficial contradictions in his writings. The suggestion that his ideas were dictated and controlled by the complex form of rhyme which he uses throughout the Lusummiyyat is inadequate as a general explanation of the facts, although it may cover part of them. Something also should be allowed for the influence of an Islamic atmosphere and tradition upon the language of the poems, an influence to which, perhaps, their author at times consciously surrendered himself.

While Ma'arrī adopted certain ascetic practices and held certain religious and moral beliefs, his genius was essentially critical, sceptical, more apt to destroy than to construct. He could think for himself, but lacked the common sense to combine his speculations. Unable to find rest in any religious or philosophical system, he fell into a fatalistic pessimism tempered, as not seldom happens in such cases, by a mellowing of benevolence. He claims to unfold to his readers the secret thoughts of mankind (i. 260. 15), and it is true that his poems reveal the innermost spirit of contemporary Muslim culture in its many-sided aspects. We are here concerned only with his main points of view and with the opinions and beliefs to which he was led by reflecting on the problems of life. For the sake of convenience the subject may be classified under a few general heads.

(a) Scepticism. — In several passages of the Lusummiyyat Ma'arrī discusses the origin and nature of religion. He ignores, although he does not formally deny, the theory of divine revelation. Religion, as he sees it, is a matter of inheritance and habit.

'They live as their fathers lived before them, and bequeath their religion mechanically, just as they found it' (i. 268. 13).

'In all thy affairs thou art satisfied with blind conformity, even when thou sayest, “God is One”' (i. 292. 2).

He disapproves of conformity (taqallud), not because it is opposed to genuine faith, but on the ground that it is irrational.

'It is not reason that makes men religious: they are taught religion by their next of kin’ (i. 403. 15); cf. the celebrated verse (i. 263. 7 ff.): The Muslims are mistaken and the Christians are on the wrong road. And the Jews are all astray and the Moslems are in error. I mankind fall into two classes — the intelligent [without religion], and the religious without intelligence.'

The whole fabric of popular religion is raised on fear, fraud, and greed (i. 251. last line, 65. 9, i. 195. 5). The poet characterizes the great world-systems as a mass of forged traditions and doctrines which not only are repugnant to reason but have undergone vital alteration at the hands of their own adherents (ii. 20. 15, 195. 3, 404. 2, 409. 9). All of them are tainted with falsehood; no community possesses the truth (Ass. iv. 177. 10). Ma'arrī does not shrink from applying this principle to Islam, though here, as has been remarked above, he speaks with two voices and there are positive statements of disbelief. In the case of other religions bias is restrained; thus, referring to the Crucifixion, he says (i. 409. 7 ff.):

'If what they [the Christians] say concerning Jesus is true, where was his Father? How did He abandon His Son to His enemies? Or do they suppose that they defeated Him? He disbelieves in miracles (i. 252. 11), anguish
While castigating his neighbours and contemporaries, Ma'arri does not spare himself (i. 48. 7). Hatred intensifies to the future:

If this age is bad, the next will be worse yet (i. 171. 17).

(c) Asceticism. He earnestly desired to withdraw from a society of knaves and hypocrites and a world of bitter envy. "Our evil deed does not know what gave it its bitterness, nor honey why it is sweet. Ye ask me, and I have no power to show you: say any one who pretends to know is a liar" (i. 103. 6).

All his metaphysical speculations close on the note of asceticism:

"Some men assert that nothing really exists, but have they proved that there is neither misery nor happiness? We oppose them in this controversy, and God knows which of us is nearer to the truth" (ii. 381. i).

As regards the question of a future life, he admits that the soul may perhaps be immortal (ii. 171. 7). No one can tell whether it goes (i. 220. 7, 248. 6). It is a subtle thing, and, although it is confined in the body, the intellect cannot perceive it: "Will I be conscious of what befalls it hereafter?" (i. 211. 6). If mind accompanies it, it may have memory of its life in this world (i. 140. 6). The doctrine of metempsychosis is not corroborated by reason (ii. 99. 9 ff.). In other passages, however, he alludes to an infinite cycle of dissolution and re-composition, of death and re-birth, as the destiny of all living beings (i. 169. 13 ff.).

(d) Religion and ethics. Though Ma'arri believed the whole conception of religion as a supernatural revelation to be false, he was nevertheless a firm monotheist (i. 47. 12, 279. 12, 281. 4 ff.). Reason, he says, assures him of the existence of an eternal Creator (i. 249. 9), whom he seems to have identified with an omnipotent, all-encompassing Fate. Whether his idea of God is truly expressed by the orthodox phrase, which it employs may be left an open question. At all events, his religious beliefs were based on intellectual conviction, not on traditional authority (i. 128. 8, 129. last line, 338. 15).

Ma'arri depicts the universal misery and wretchedness of mankind in terms that no satirist has surpassed. The world is a sea of raging passions which drive us to and fro until we are engulfed (i. 49. 6); it is like a caress, and we are the dogs barking around it (i. 224. 9).

"If you wish to be kind to your sons, leave them in your love" (i. 297. last line).

Children are burdens (i. 286. 12), and a man's son is his worst foe (i. 409. 2; cf. i. 43. 3 ff.). Fathers abuse and provide burdens for their daughters, but should warn their sons not to marry (i. 216. 10). Ma'arri describes the universal misery and wretchedness of mankind in terms that no satirist has surpassed. The world is a sea of raging passions which drive us to and fro until we are engulfed (i. 49. 6); it is like a caress, and we are the dogs barking around it (i. 224. 9).

"When you come back to realities, every human being is wretched" (i. 20. 7).

He repeats again and again that human nature is radically evil (i. 50. 8, 94. 3, 333. 11, 403. 5).

"Better is the best of them as a rock which commits no wrong and tells no lies" (i. 280. 13).

"He is come hither not, but evil and weaknesses for a long time (i. 270. 11 ff.). The proportion of good in the world is exceedingly small (i. 315. 3). Fate, not free will, is the cause of man's wickedness, and the crown cannot change its colour (i. 311. 6 ff.).

Do not seek to reform a world whose righteousness God never made and which is not, but the next will be yet worse. It follows that no human actions incur blame or deserve praise, and the poet says in one place (i. 79. 19 ff.) that only religious scruples prevented him from accepting this doctrine. Elsewhere he denies that men sin under compulsion (i. 324. 8, ii. 254. 3).

They are unjust to each other, but the Creator of injustice is certainly just" (i. 256. 6).
MACEDONIANISM. — I. Introduction. — In the closing years of the 5th and the first half of the 6th cent. the Arians, Eunomians, and Macedonians were regarded as the most important heretical groups deriving from the Arius controversy. Three laws of Theodotius, dating from A.D. 383 and 384 (Cod. Theod. Xvi. 11-13), are in the main directed against them, and the latest of these three laws contain the following objections: 'inter sacra religionis officia su proribus et suorum famosis nomina.' About three years afterwards Jerome (in Ep. 253) said: 'Dum quidem Gregorius, ille arius, in libro De Christiano, deus est, sum, sum et non sum, iterum et iterum, et non iterum.' As far down as 460, Nestorius (Liber Heracleidus, Tr. P. Nau, Paris, 1910, p. 145) linked together the names of Arius, Macedonians, and Eunomians in a similar way. Didymus of Alexandria, in his De Trinitate — a work which is not distinctly named in Jerome's Catalogue of Authors (ch. 109), and which, therefore, cannot have been written long before A.D. 392, and may even be of later date — regards the Arians, Eunomians, and Macedonians, and sometimes conjoins (II. 11 [PG xxxix. 661 B], ii. 12 [687 B and 688 B], as the most outstanding adversaries of orthodoxy. Augustine (c. 423) brings them before us as the non-Christs of the East (De Unit. cc. i. 6 [PL xxii. 395]; in 415 Jerome describes them in similar terms (Ep. cxxxvii., 'ad Constanctianum'). In 371 [Vall. i. 2, p. 1040 B = PL xxxii. 1159]) and Socrates places them in the heretical sects of his time (HE I. vi. 41, 15, 1, 1). As regards the heresy του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, του Εσκαρχον, το The formation of the Macedonians, however, the position is less favourable. It will therefore be advisable, first of all, to determine the characteristic standpoint of the Macedonians, who, towards the close of the 4th and in the first half of the 5th cent., formed a definite sect distinct from the orthodox Church.

2. Sources for the history of the Macedonians from c. 383 to 439. — As sources for inquiry we have, besides the historians of the 5th cent., the following works: (a) the De Trinitate of Didymus mentioned above (PG xxxix. 260-292); (b) the third of the five pseudo-Albanian dialogues, De Trinitate (ib. xxviii. 1201-1239: Αποκλιμήνας τεν ετος των αδρανοντων του Περιπαθητων Μακεδόνων διπλροτικά τεν Αρβανίτου); (c) the two pseudo-Albanian Dialogi contra Macedonians (PG xxviii. 1281-1300, and 1330-1338); and (d) the fragmentarily preserved Sermone Anarianum, printed in Migne (PL xiii. 593-630) from A. Mai's edicto princeps (Veterum scriptorum monasticarum collection, Romae 1825-28, ii. 206 ff.). Of these four sources, the Sermone Anarianum, which seem to have been composed c. 400, or some years later, in the Latin-speaking portion of the Balkan Peninsula, are of little service to us; they are, however, the only source for the life of Didymus, and the two sets of dialogues enumerated above, the present writer, in a recent paper (Zwei macedonische Dialoge, in Stiirzhebergher's Abstract der Rhenischen Gesellschaft der Wissenschaften, 1897, 40-43, xxl. 1897 471-485, xxviii. 1898 489-492), D. S. Margoliouth, 'The C's Correspondence on Vegetarianism,' J.R.A.S. 1895, pp. 228-232; R. A. Nicholson, J. Liberty of the Arabs, London, 1867, pp. 315-316, H. Baerstein, Thesaurus Abii-I Professor, 1870, i. 4. The work of Abi-I, the Syrian, do. 1914; C. Brockelmann, Geschichte der arabischen Literatur, Weimar and Berlin, 1895-1903, i. 541.

REYNOLDS A. NICHOLSON.
Macedonianism and His prophecy show (frag. 32, 12. 12-33, Dial. c. Maced. i. 4 [p. 1239 C, D]; frag. 12, Dial. de Trin. ii. vi. 18 [p. 545 B, C]; frag. 22, ib. ii. x. [p. 641 B]).

In the interpretation of the late Macedonian tradition, which the Macedonians distinguished between the Πρέσβιτος Αυγορος and the spiritual power of God inseparable from God Himself (Dial. de Trin. iii. 23 [p. 1220 A]), Maced. i. 6 [p. 1238 B, C]; cf. Dial. de Spiritu Sancto, xxii. [PG xxxix. 1035 A]).

As regards the Christology of the Macedonians, we have, as far as can be gathered, only a single statement emanating directly from the Macedonian side, and unfortunately it cannot be detached with certainty from its context. In the Sermones Arianorum we read as follows:

"Macedonianum pos habe causas (heath br, unhep, a lacuna in what precedes) corrigitur as et dicunt: Filium similum per omnia et in omnibus Deus Patris esse dicimus; hic autem dicimus esse differendum inter humum naturam et inter humum non naturam, non communiam, quia non plures idem etiam inter Deum nos naturam dicimus; quaeque hanc, quaeque virtutis Sorophanes, principem coenon, scriptis" (PL xii. 616 B, C).

Is it only the words here italicized that are ascribed to Soriphanes, or are we to regard the whole statement, i.e. also the affirmation of the doctrine Ἰησοῦς κατὰ φύσιν (and therefore κατὰ οἰκονομίαν), as a formulation due to him or some other Macedonian? Be this as it may, the present writer has now—formerly he advocated a different view (cf. PREB xii. 47)—no doubt that the sect of the Macedonians (and it is of the sect only that we are meanwhile speaking) was not a distinct, not a Homoean, in their mode of thought. This is, in fact, distinctly stated—even if we leave out of account the passage just quoted from the Sermones Arianorum Didymus de Trin. iii. xxxiv. [p. 437 A]: Ἰησοῦς κατὰ φύσιν καὶ κατὰ οἰκονομίαν ἔχει, by the author of the Dial. de Trin. iii. 11 (p. 1234 C): ἤσαί [cf Macedoniana... , οὐ οἰκονομίαν λέγεις καί οὐ χρυσαπάσιν], and by the writer of the Dial. c. Arian. i. xiv. [p. 1235 B]; and there are good grounds (cf. Loofs, 'Zwé Maced. Dialogue,' p. 649 f.) for supposing that the passage in Dial. de Trin. iii. 16 (ἐν τῷ τόπῳ δέλερξης, γύρω ἐκ τούτων ἔσομαι) is borrowed from the longer Macedonian dialogue. There is in addition the fact that the so-called Confession of Leucius (Athanasinon, de Synodo, xxii. [PG xxxvi. 721 B]), which the Macedonians, to judge from their own utterances (cf. Loofs, 'Zwé Maced. Dialogue,' p. 550 f.), would seem to have regarded as their confession, does not contain the Homoean. The doubt that the Macedonians of the closing years of the 4th cent. and the first half of the 5th cent. were Homoeanians in their mode of thought, statements to the contrary are not, and among Western writers who did not know the facts (Augustine, de Hæres. iii. : de Patre et Filio recte sentiunt, quod unus sint eiusdemque substantia); also Philastrius (see below), or among Arians and Eunomians, who regarded the Homoeans as no less objectionable than the Homoeans (Sermones Arianorum [PL xiii. 611 A]: 'de Patre et Filio convenit illis'; on Philostorgius cf. J. Bode, in the pref. to his ed., Leipzig, 1913, p. 99 f.). Moreover, in circles where the Homoean orthodoxy of the later Nicenean differentiated the τριδοκαςία in an almost polytheistic fashion (Dial. de Trin. iii. 6 [p. 1239 B, C]; and perhaps: 1300 A), the distinction between the Homoean and the Homoean way of thinking was so slight that even the author of the Dial. c. Maced., who was acquainted with the Homoean teaching of the sect (ii. [pp. 1239 C, 1336 C]), could represent the Macedonian as saying to the orthodox: τριδοκ πον τοῦ καθε λέγει (L. 29 [p. 1239 C]). As regards their Christology in the narrower sense, it seems to me, according to the Dial. c. Maced. [pp. 1239 C, 1333 C], the Macedonians, like the Arians, denied
Macedonianism

that the Θέσανθος, or Θέος ἐφρονίσως, had a human soul.

The relation between these Macedonians and the Homologians of the 4th century.—What we know of the teachings of the Macedonians in the period between A.D. c. 381 and c. 480 (cf. § 3) would make it necessary to assume (even if we had no direct information on the point) that the sect was historically connected with the Homologian or semi-Arian party. In point of fact, however—even apart from Rufinus, Socrates, and Sozomen, whom we have already alluded to (cf. § 3)—that connexion can be traced in the older sources. Jerome, who, when referring (c. 380) in his Chronicae (ad annum. 342 [ed. R. Helm, Leipzig, 1913, p. 255 f.]) to the installation of Macedonius as bishop of Constantinople, does not fail to add, 'a quo nunc haresis Macedoniana,' regards the Homologian doctrine alone as the 'Macedonianum dogma' (ad annum. 364 [ib. p. 248 f.]) and in the famous twenty-four anathemas of Damasus (A.D. 380 [2]), given by Theodoret (HE v. 11 [ed. L. Parmentier, Leipzig, 1911, p. 258 f.; in Latin, PL xix. 306 f.; A. P. Pelletier, p. 11xxii]), all that is said of the Macedonians in

'σωματικά ἐν τῷ ἁγίῳ καταστάσει σώμα τῆς ἁγίασμα ἀλλά ἀλλὰ τῷ πνεύματι.'

Further, Auxentius of Dorestorum writes (c. A.D. 385) of Ulfila as follows:

'Αυξέντιον οὖν δίκαιαν ἐφεστία, πολίτην, λαμπρούς λαμπρούς κατά τὸν ἄγιον ψυχῆν ζῶντας ἐν τῷ πνεύματι.'

As the anathemas of Damasus in their opening words impugn Pneumatomachian ideas—though without applying any heretical designation (we may probably infer that Damasus was acquainted with the doctrine of the Spirit held by the Arians, Eunomians, and Macedonians. And Auxentius of Dorestorum does not mention the Macedonian doctrine of the Spirit is that, like Ulfila, he had nothing to criticize in the so-called Pneumatomachian ideas. For, like Origen, all the theologians who in the Arian controversy rejected the Homologian view of the Son (Nilometer, ed. C. Courau, p. 466), inclusively, in part at least, the same as the Macedonians. Jerome. Nicetas likewise, hardly before 381, speaks distinctly of the 'Macedonians' as holding views distinct from those of 'the questionem de Spiritu iuxta Aulaxentum.' (de Spirit. v. 2 [PL iii. 553 B]).)

5. Macedonians and the Macedonians.—This question leads us to a consideration of the life of Macedonius. It will not be necessary to discuss here the difficulties regarding the date and circumstances of his elevation to the episcopal throne of Constantinople (on these matters the present writer may perhaps refer to his article, 'Macedonius,' in PREV, and to E. Schwartz, 'Zur Geschichte des Athanasius' ix., in GGG, hist.-phil. Klasse, 1911, p. 476 f.). We here need merely state that Macedonius, who (1) the bishops Caesarius of Aquitania and Patricius of Aquileia, to whom he alludes in Ep. ad Serap. iv. 7 [p. 484 B], were (2) although V. Schulte ('Abhandl. Städte und Landschaften': 1. Konstantinopel, Leipzig, 1913, p. 45, note) regards the present writer labouring on this subject (ibid. p. 468), he does not write more than twenty years earlier by Franz Fischer ('Die patriarchalischen Constanitopolitaner, catalogus et chronologica, auctor is primierum patriarcharum', in Commentationes philologicae et historicae, iii. (1863) 279-380), yet the present writer has been able to arrive at the doctrine established by a comparison of his words with the doctrine of the South is far more than an expression of the present writer's opinion of what he regards as a theory of the doctrine of the Spirit, i.e., in GGG, hist.-phil. Klasse, 1911, p. 476 f.).

Klasse, 1911, p. 476 f.).
MACEDONIANISM

according to Socrates (II. vi.), had as an aged deacon (τὸν ἀγέταν διάκονον) contested the see of Constantinople upon the death of Alexander (installed, in all likelihood, while Constantine was still reigning), found himself in secure possession of the see after what the present writer (SE, 1999, p. 524) calls the "second deposition of Paul" (IV. 349). He had been raised to the dignity by the anti-Nicene party, and, as regards his theological position, must have belonged to it, although, as the presbyter of Paul, he must have been in ecclesiastical sympathy with the latter (Athar. Hist. Ar. v. vii. [PG xxv. 701 A]). This does not necessarily imply that he had been an 'Arian'; for the later Homeoniannis also belonged, till a.d. 359, to the 'Arian' church, although, according to the statement of the church historians, it was united to the Nicene party by the later Homeoniannis of the see of Constantinople. The name of Paul (359) is found in the cartularies of the see of Constantinople, and preserved by Sozomen (IV. xii. 2 f.), names him first among the persons addressed. Diocletianus (Hist. xliii. 23 and 27 [ed. D. Petavius, Paris, 1622, 870 D and 875 C; C. C. A., iv. 145 A, 456 B]) recognizes him as one of the Homeoniannis of the see of Constantinople, who was (from 359) opposed to the Acacians, the later Homeoniannis, just as his presbyter, Marathionis, subsequently bishop of Nicaea, and Eusebius, whom he succeeded, was bishop of Cyzicus (Soz. II. xxxvii. 4; Soz. IV. xx. 2), were partisans of Basil of Ancyra and Eustathius of Sebaste. At the Synod of Seleucia (359) he was associated with Eusebius, bishop of Nicaea, and other Homeoniannis in supporting Basil against the Acacians (Soz. IV. xxvii. 7 ff.), and, like Basil, Eusebius, Eustathius, and other Homeoniannis—as, indeed, the most prominent of them all—he was deposed by the Acacians at the end of the year 359 or in January 360 (Jer. Chron. ad ann. 369 [ed. Helm, p. 241ff.]; Philostorg. v. 1 [ed. Bidas, p. 60; cf. p. 254]; Soz. II. xlii. 3; Soz. IV. xxvii. 1), and, according to Sozomen (IV. xxvii. 1), to a place in the vicinity of Constantinople, and died there. He cannot have very long survived his deposition, as he does not appear in the important movements of 365, but, as his party after 364. In the interval between his deposition and his death, according to Socrates (IV. xiv. 1-3) and Sozomen (IV. xxvii. 1, 2), he founded a new party. But this cannot be ascertained (cf. C. P. Caspar, Alte und neue Quellen, Christiania, 1879, p. 42 f.).

Sozomen (IV. xxvii. 1) is more explicit:

επισκόπους μὲν τις Θεού θεὸν ἡμῖν δόθηκεν καὶ πάντα ταῦτα τα ἐναντίον εὐθείας τίμησεν τὴν δικαιοσύνην, καὶ τῶν ἱερῶν καταθέσεων, διότι καὶ προαγωγέων καὶ αὐτὸς τὴν περὶ τῶν βασιλεύων λέγειν τι οὐ δικαίως.

Rufinus (HE i. 25 [ed. T. Mommsen, Leipzig, 1908, p. 80]) is somewhat earlier makes a similar statement. It refers to reality in the earliest public appearance of the Homeoniannis, not of the Macedonians, and it displays even less knowledge of the actual beginnings of the Homeoniannis party some two years previously than does Philostorgius (IV. 9 [p. 62]). Then, in the further course of the narratives of Socrates and Sozomen, the term Macedonians' becomes, in conformity with that report, the regular designation of the Homeoniannis generally. Thus the 'Macedonians' in the reign of Valens, draw closer to the orthodox party; they accept the theological positions and, by the death of Valens, they come to an understanding with Pope Liberius, and, especially in Constantinople, live in religious communion with the orthodox (cf. esp. Soz. VII. i. ii. 2), until at length (cf. IV. 3), after the death of Valens, they no longer stand forth as a separate party by themselves. But, although the Macedonians have been in reality universally designated Macedonians, as Socrates and Sozomen assume, we should certainly have found some evidence of the fact in Athanasian literature. One is prompted to ask, nevertheless, whether the statement of Sozomen (V. xiv. 1), viz. that during Julian's reign of ἀφιερώματα, ἀποτρήματα καὶ καταστάσεις ἐποιεῖτο ἡ πόλις, can possibly be based upon mere error. We are compelled to assume that, just as in Antioch, after the installation of Eusebius, the loyal adherents of Meletian came to be called 'Macedonians', so in Constantinople the followers of the deposed Macedonians who did not attach themselves to the church of Eusebius, his successor (Soz. IV. xxvii. 7, VIII. 1, 7), were presently designated 'Macedonians'. The connexion between Macedonians and the later Macedonians would thus simply be that the latter gained ascendancy from the Homeoniannis, which the Macedonians of the early Christian era, as dwellers in the metropolis, formed the best-known group in the Balkan Peninsula. This solution of the historical problem—a solution which surrender the literal significance of the name (Jerome, Auct. circ. Joc. 6, 5) and, consequently, the Macedonians, are certainly a possible one. For it was in the neighbourhood of Constantinople on the Hellespont, in Bithynia, and in Thrace—that the 'Macedonians' were most numerous (Soz. IV. xxviii. 4, IV. 5); and it is from Constantinople and its neighbourhood that, with a single exception (Damascus), our oldest authorities for the use of the name (Jerome, Auct. circ. Joc. 6, 5) are derived, while both Socrates (cf. IV. 9) and Sozomen (cf. II. iii. 10) wrote largely under the influence of the same local tradition. In view of the active intercourse between Asia and Constantinople, the single exception of Damascus does not mean much. Rufinus, again, may have gained his information from Jerome through literary channels (cf. Jer. Chron. ad ann. 364 [ed. Helm, p. 243 f.]; Ruf. II. 24 f. [ed. Moltke, p. 96 ff.]; cf. M. Heffter, personal contact; and Didymus had relations with both. Moreover, the random use of the name 'Macedonians' is confirmed by the fact that, according to Socrates (IV. xxvii. 2), the Macedonians were also called 'Marathionis'; and Sozomen (loc. cit.) even expresses the opinion that, in view of the personal and material support which the party were indebted to Marathionis, the name was not inappropriate.

Still, it is quite intelligible that K. Holl (ZKG 385 ff.), especially in view of the witness of Didymus, should put forward the question whether the connexion between Macedonians and the Macedonians was not, after all, of a more substantial character. The present writer is of the opinion that the information preserved by Didymus is less than Holl makes out. Didymus seems, e.g., to have regarded Marathionis as the successor of Macedonians (de Trin. IV. xxv. 3 [p. 633 A]): "Ἀρσενίκης τοῦ διδασκαλίου τῆς Αμαρθίωνος" (Macedonians caluit "אזרך מיסג屍ון")—and if, as the present writer thinks possible (cf. "Zwei mazed. Dialoge", p. 544), the person addressed in de Trin. VIII. 1, 7 (p. 413 G) is not the author of the Macedonian dialogue, but, by a figure of rhetoric (cf. frag. 17, Did. de Trin. VII. 3 [p. 516 A]), Macedonians themselves, then the information given in de Trin. VIII. 1, v. that Macedonians was made bishop by the
Arians, but was previously a deacon of the orthodox Church, supplements that given in ii. x. only by the latter—and, indeed, correct (cf. Soc. ii. vi. 3)—statement. Nor is it inconceivable that Didymus obtained all or at least a part of the information regarding Macedonians from the Macedonian dialogue used by him. Yet the correspondence between what that dialogue tells us regarding the Macedonians and what is mentioned by the Arians must be based on the hypothesis that Didymus knew when he wrote his Epistles to Scarpion that this letter had come into Scarpion’s hands. This would explain how the Alexandrians had obtained information regarding the Macedonians at a relatively early stage. It would also explain the information possessed by Didymus regarding the alpoexdnuia Macedonon, and also the account given by Socrates (and Sozomen) of the origin of the Homoiouian party. The hypothesis is not impossible; for, if the first letter of Athanasius to Scarpion may quite well have been written as late as A.D. 361, the point, however, cannot be decided in the present state of our knowledge. 6. The persistence or recrudescence of Homoiouianism among the Macedonians. There is still another question to be considered. Athanasius wrote as if the Macedonians were in opposition to the synods as opposed to the Deity of the Holy Spirit felt themselves repelled by the Arian ‘blasphemy’ against the Son (Ep. ad Serap. I. i. [p. 529 f.]), and, like other heretics, he repudiated their views (ib. I. 3, p. 605 B); this fits in remarkably well with the situation of the beginning of A.D. 390. Somewhat later the Homoiouian (‘Macedonians’), as a consequence of the victory of Liberus at a synod held at Tyana in 397, passed completely over to the side of the Nicene Creed (Basil, Ep. cccxvii. 5 [PG xxxii. 917 D]; Soc. vii. xii. 2 f.; cf. Sabinus, Soc. vi. xii. 11). Thereafter, as we read (Soc. iv. 2; Theodoret, vii. 3), the Macedonian party had come to power. At that time there was neither a church nor a bishop in Constantinople (Soc. iv. xxvii. 6, viii. 17), maintained ecclesiastical communion with the Homoiouians, as opposed to the Antiochus. It is in the period since it seems to us that the later Macedonian doctrine was Homoiouian. Basil (Ep. cccxvii. 9 [PG xxxii. 924 B]) tells us that, as a synod held at Cyricon in A.D. 376—during the exarchate of Eustathius, as the synod of 375 discoursed with the Macedonian court-bishops (Basil, Ep. cccxvii. 7 [p. 921 A, B]; cf. S. 920 A], cell. 3 [p. 928 B]; cf. Loos, Euchologien, p. 76 f.)—Basil is of opinion that the fundamental Arian tendency of the Macedonians had once more manifested itself (Ep. ccccx. 1 [p. 564 A, B]). Was this a return of the position of Eustathius to the Homoiouian—an act that (as he merely suppresses, without overtly rejecting, the Homoiouian) did not as such altogether exclude recognition of the Arians at the later position of the Macedonians? Our sources do not enable us to answer the question. But to the present writer it seems beyond doubt that what is here said of Eustathius lends support to an account of similar purport given by Sozomen (vii. ii. 3), and less fully by Socrates (v. iv. 2 ff.), regarding a synod held at Antioch in Caria (379). These historians record that, when, after the death of Valens (9th Aug. 378), the Emperor Gratian enacted a law (not now extant) conferring freedom of worship upon all religious parties except the Manichæans, the Ptolemaeans, and the Eunomians (Soc. v. ii. 1; Soz. vii. i. 38), the Macedonians seceded again from the Homoiouians, with whom they had hitherto been in communion, abandoning the Nicene Creed, and on their preference for the διωκτησιν as against the ἡγεμονία. From that time a section of the Macedonians (Homoiouians) had continued to exist as a distinct party (διυκτητικοι, while another, breaking away from the latter, had united themselves all the more closely to the Homoiouians. These statements are not altogether free from difficulties. The present writer would not lay stress upon the fact that the notice in Soc. iv. xxvii. 6 (cf. the words ανάγονται διωκτησιν, κ.α.), which obviously refers to this reappearance of the Macedonians, points to the reign of Arcadius, as the notice in question is manifestly erroneous. The reference in Soc. vii. xii. 4 (and 397) and of v. ii. 3, clearly derived from Sabinus, and providing fresh difficulties! In vii. xii. 4 likewise we read of a synod in the Cariæan Antioch, where the Confession of Lucian was made the standard. This synod, however, was held subsequently to the synod of Tyana (367), and in opposition to these members of the Homoiouian party who had gone over to the Homoiouian party. The present writer is of the opinion that this finding this ‘doublet’—if it is a doublet—gives rise to a disturbing element. Still, it is possible that, as H. Valens (Adnot. to Soz. vii. xii. 4) assumes, there were two Homoiouian parties in Cappadocia (A.D. 368 and 375); and, in fact, if the bishop of that city was an intransigent Homoiouian, there is much to be said for the theory. If we accept it, we must regard it as probable that the second of these synods likewise gave its adherence to the Confession of Lucian, which, as we have seen, was so highly esteemed by the Macedonians. It is in the period since that the Macedonians became later Macedonians. For Macedoniana was simply the Homoiouianism which, on account of the doctrine of the Spirit, broke away from the Macedonians adhering to the Nicene Creed. The fact that Epaphroditus had also heard of certain Pneumatomachians who were orthodox as regards their Christology (see above) proves nothing to the contrary, since that author wrote at a time prior to the synod of Antioch; nor is our statement refuted by the fact that Gregory of Nazianzus, in a Whiteounds sermon of the year 381, addressed the Pneumatomachians as τοις των Θεογνησιων (Or. xii. 8 [PG xxvi. 440 B]). Gregory had as valid ground for this friendly judgment as had the Orthodox when, shortly afterwards, at the synod of 381, they reminded the thirty-six Pneumatomachians who attended under the leadership of Eusebius of their negotiations with Liberus (Soc. v. vii. 7; Soz. vii. vii. 4). The breach which had been started by the rupture between Constantine and Basil, and the synods of Cyricon and Antioch in Caria, was rendered absolute by the Council of 381. The Pneumatomachians withdrew from the Council, and were condemned by it (cf. § 4), and the amicable overtures made at the instance of Theodosius 1 to the Arians, Eunomians, and Macedonians at

1. J. Bidez has kindly informed the author of this act, that all the MSS read 'Pneumatoi.'

2. ἐφεξον τοῦ ἐνδυσκαλεῖσθαι Μακεδονον. If you refer here in referring mainly to the time of Valens, this would point to Gratian’s reign.
MADAGASCAR.

The sorcerers, who are called sanazainy, omboas, maxasa, etc., according to the different provinces, have as one of their occupations—and that not the least important—manufacture of amulets or talismans (ody), which generally consist of small pieces of carved wood, bulls’ horns ornamented with glass beads, or crocodile’s teeth. The horns and teeth are usually filled with earth or sand and various small objects such as gilt nails, iron-fillings, and so on. After invoking the god and sprinkling the talisman with grease, the sorcerer, for a consideration, bestows it on the purchaser, who then hangs it round his neck. The result is supposed to be that the wearer is successful in all his undertakings, fortunate in love, immune from gun-shots or crocodile bites, and so on. The natives have the most implicit faith in these ody.

The Merina introduced the worship of national fetishes, which were very similar to the foregoing. These fetishes were regarded as royal personages, and had a special residence with officiating servants. The oldest and most famous of them was Keliama-

3. Fady.—In almost every case there is some fady connected with these amulets and fetishes—i.e., it is forbidden to do certain things and to eat certain foods. If this prohibition is not rigidly respected, the ody generally works evil. The fady, which occurs throughout the whole of Madagascar, is extremely curious, and recalls the taboo of the Oceanians. There are some places which are fady for everyone, and others which are fady only for certain families or even for certain individuals. There are fady days, when no one should begin anything new or start on a journey. It is child is born on one of these days, it is killed—or, rather, it was until quite recently, especially in the southern parts of the island—because it is supposed to bring evil upon its family. There are also fady words, i.e., words which must not be pronounced; naturally, these are fast disappearing from the language. As an example of this we have the words which went to make up the names of the Sakalava kings, the use of which was prohibited after their death. These fady are really of a religious nature; their aim is to appease the wrath of spirits and otherwise gain their favour.

4. Human sacrifices.—Human sacrifice has now been abolished in Madagascar, but it is not very long since it was the custom, when a Sakalava king was shaving for the first time, to dip the razor for this important operation in the blood of some famous old chief killed for the occasion. This ceremony was still in vogue when the king of Ménabe, Toera, who met his death in the attack on the village of Ambaky by the French troops in 1897, reached the age of manhood. Not many years ago, in accordance with an ancient custom practised in S. and W. Madagascar, the favourite wife of a great Mahafaly chief was killed on his grave, that he might not be alone in the other world; four of his servants were also put to death and their bodies laid under those of the chief and his wife, so that they might not touch the ground.

5. Crimes and punishments.—The Malagasy have no moral code. Their religion seems to authorize anything and everything, and the only recognized sin is failure to observe the external formalities of worship; such a sin of omission may be absolved by the penitent’s making a small offering to the god.

Before the conquest of Madagascar by the French, justice was of an extremely summary nature (except in the case of the Merina, who had a code of laws modelled on European codes), based simply upon traditional use and wont.
Madagascar

Justice was meted out by the king or the village chief, and in certain tribes—as, e.g., the Betakiloe—by an assembly of the leading men of the tribe. The *leza talons* was in universal use. The principal crimes were cow-stealing, failure to pay debts, and the greatest crime of all: sorcery, which was always punished by death.

6. Ordeal and oaths.—In cases of doubt, recourse was had to trial by ordeal. The poison test, or *tongkin*, which has made so many victims among the Hottentots, is one of the best-known methods, and another test consisted in making the accused cross a river infested with crocodiles, or an arm of the sea where sharks abound, these animals being supposed to eat the guilty and to do no harm to the innocent.

Another interesting practice is the "water-oath." Into a bowl half full of water are put a bullet, some powder, earth from a sacred spot, the horns of the old kings of Madagascar especially a bit of gold. The accused, or the two litigants in a lawsuit, drink this water, vowing their good faith during the process; and all the ill that death befall is to be supposed to fall on those who swear falsely.

There is another ceremony similar to this—the "blood-oath," or *falan-ferid*, by which two persons promise each other mutual aid and protection throughout their lives, and enter into a voluntary relationship more intimate and binding than real blood-relationship.

To the contents of the bowl described above are added a few drops of each individual's blood, drawn from a slight cut made on his breast or on the flap of the jaw, and the sharer of the blood washes the arm and the mouth in the bowl, an act which marks the union of the two. The accuser then adds a bit of gold to the water, and calls upon the dead to inflict the most severe punishment if either of them fails to keep his oath (cf., further, *Baert's Madagascar*, 49).

7. Exorcism.—The Malagasy have a peculiar ceremony which shows their belief in demoniacal possession and exorcism. Its aim is to cure certain maladies, and also to render thanks for the cure effected. This is practised chiefly in the west and south of the island, and is termed *bito* or *salama-manga*. Those who are submitted to treatment of this kind are supposed to be possessed of a devil, which must be driven out.

The patient is led out of the village to a large open space where a platform or 12 ft. high, with a primitive ladder immediately ready for use, is prepared for the occasion. By the foot of this platform all the inhabitants of the neighbourhood are gathered on one side, and the cattle belonging to the invalid or his family on the other. When he arrives, dancing and singing begin, and there are great libations of focka (rum), large sums of money are consumed by the spectators. The patient, drunk with alcohol, noise, and the rest of the bull, has to climb up to the platform—an operation not altogether free from risk. If he reaches the top without much help, God is supposed to be favourable to him and he will get better; if not, his case is hopeless. Once he is safely established on the mast covering the top of the platform, a woman, who has had to remain in a state of absolute chastity for twenty-four hours previously, gives him food which she has cooked especially for him, particularly newly-killed oil-fish. If he eats it, or even прогулка a piece of cake, it is a sure sign of his speedy recovery to health and long life. The tumbling of singing and shouting then begins again with renewed energy. The sick man lies lying there, several feet above the ground, sometimes for a very long time, while those who have assisted at the ceremony intonate them with run and urge themselves with meat. He is then carried back with great pomp to his dwelling, where, nine times out of ten, he succumbs to the effects of his treatment.

8. Death and disposal of the dead.—Among the most characteristic customs of the Malagasy are those connected with burial. The funeral rites are not the same throughout the whole island; some peoples hide their cemeteries in the heart of the forest, among hills and rocks, in desert places, and the dead are buried in the sight and sound of men; others, again, bury their dead by the side of the high road or right in the midst of human dwellings. The former, who are terrified at death and everything connected with it, are mainly found among the coast tribes, except in the south-east, where the people are of Arab origin. The latter, who like to live within sight of their last resting-place, belong to the centre of the island, and consist chiefly of the Merina, Betakiloe, and other tribes civilized by the Malays.

The eastern tribes put the dead body in the hollowed-out trunk of a tree, closed with a badly-fitting lid in the form of a roof, and this improvised coffin they leave stone on the ground or on a small platform in the middle of a palisade roofed over with branches and leaves.

The Antankarana make their cemeteries in natural grottoes or rock-caves found in the numerous small islands along the coast or in the limestone mountains of the north, and here again the coffins, with beautifully carved lids, are simply laid on the ground. Some Betakiloe and Bara families follow the same custom, and bury their dead in the hollows and caves which abound on the higher reaches of their mountains.

The other natives of the island bury their dead beneath the ground. The western and southern tribes—the Sakalava, the Malaho, the Antandrano, and most of the Bera—cover their graves with a heap of loose stones in the form of a long parallel pile, with a small mound on top. The Merina cemeteries also consist of a hollowed-out mortuary chamber, above which they usually build a small house for those of noble birth, and for the Hova, or freemen, a small rectangular wall, where they gather together glass stones or small pieces of quartz, with a raised stone at one end. The head is generally turned to the north.

All the Malagasy have the same idea of the impurity of a dead body and its power to bring misfortune to others. A funeral procession must never pass in front of the king or anywhere near his residence, and it must also avoid the neighbourhood of sacred stones. Those who have taken part in a burial ceremony must cleanse themselves before going home.

As may be gathered from the prevalence of ancestor-worship, all the dead are buried in the family tomb. When a Malagasy (in particular a Merina) dies away from home, his urgent wish is that his relatives should come. No matter how long after his death it may be, and carry his bones back to his native land. This desire is respected in almost all cases, and even to-day it is no rare thing to meet little processions of Hova carrying back the mortal remains of a member of their family wrapped in a white cloth hung on a long bamboo pole. In many cases they go as far as five or six weeks' journey from Tananarivo. When the body cannot be reached, the pillow or mattress of the deceased is buried in his stead, or a stone or a post is erected to his memory at the side of the road or near his native village.

In Madagascar mourners cut their hair short and keep it dishevelled; they wear coarse dirty clothes, and are not allowed to wash or look in a mirror, even if they possess one—this burial is unkempt as possible so as to keep other people at a distance. On the death of, or—as the phrase goes in Madagascar, where ordinary everyday words would never be used in such high and exalted personages as kings—"on the departure," of a sovereign, a number of sumptuary
laws came into force which had to be strictly obeyed, if one did not wish to run the risk of being considered responsible for the death of the king and of being subjected to capital punishment as a sorcerer. The following are some of the restrictions enforced on the death of Radaana I. (1810–29): all the inhabitants of the kingdom, with the exception of the king himself and the throne, had to shave their heads, sleep on the ground instead of in beds, use neither chairs nor tables, pass each other without greeting in the street, neither play any musical instrument nor sing, if no fire or light at night, do no work except in the fields, refuse to be carried in a palanquin, use no mirror, go about bare-headed, wear no fine clothes, and, in the case of women, keep the shoulders bare. As in the East, white, not black as in Europe, is the colour of mourning.

Several Malagasy tribes—e.g., the Beteleiso and the Beraniko—have the peculiar and repugnant custom of not burying their dead immediately after death; frequently they even wait till decay has set in, and in many cases the putrid liquid is collected and set apart. Their funeral wakes are not naturally far from agreeable, and, to be able to live at all in the midst of the nauseating odours, the relatives and friends of the dead man drink rum all the time and burn quantities of incense,的真实 and every like. This custom, which is of Oceanic origin, comes from the desire not to bury any putrefying or impure matter along with the bones. Even the tribes which do not have this practice generally have two burial ceremonies—one consisting in simply burying the dead, and the other taking place some years after, when nothing but the skeleton remains, and when the body is finally thrown into the family tomb. Sometimes, as in Imerina, the body is put into the family vault at once, but it is wrapped round with several silk lamboas and is not placed in a coffin. Later, at a certain specified time, the ceremony of the manana- dika takes place. This consists in changing the soiled lamboas, and the Merina say then that they turn the bodies on their other side so that they may not get tired of lying in one position.

Feasts in Madagascar are always the occasion of feasts in honour of the dead. The richer the man is and the more cattle he possesses, the more important are the orgies that are indulged in. Shots are fired and bullocks are killed, the flesh being eaten at the funeral feast, and the head and horns being placed with great ceremony on the tomb of the deceased. Rum flows like water, and as long as there is anything left to eat or drink the feast continues; the funeral festivities of great and noble personages have been known to last for months.

MADHYAS, MADHVACHARIS: 233

brought up in great poverty, and (as a slab at the moment sub-
sequently, when he was older) it is related that in his boyhood he
could count only one thing at a time, never being able to see a
crew of ducks. Later, however, his memory improved. As a
patron of Sahas, he quickly mastered the sacred books (16).
He then goes to teacher to teacher, but is turned off by them
for his devotional views. He invents his doctrine, described as
Śrāda-dhāra and nirāsārasa, and is hailed by the demons as the
 awakened one. On advice he joins the Buddhist and
Buddhist mission of India. He makes it with no comment,
and equates Brahman with nothing-
ness (śūnyatā). He becomes a Śrādhaj, and messages of
Bhāravi, who confers upon him a magic spell (61).

The next section further describes further diagnostic events in Sa
kara’s life. He seduces the wife of his Brahman host (62).
He makes converts by magical arts. He falls sick and dies. His
last words are addressed to his disciples to uproot the learned
Śrāda-jñāna, the last of the great teachers of the true Vedic
devotees.

In the 5th sarga we have the doings of Sahasakara’s followers.
They present their opponents, burning down monasteries,
destroying cattle-pens, and by magic arts killing women and
children (2). They forcibly convert one of their chief opponents,
Śrāderas, and compel no one else (Śrādas) (63).

The next sarga describes the life of the early Madhvas in the
field system (5). These, however, still secretly adhere to the
true religion, and, after counting the Śrāda-jñāna, determine to
cause one disciple to become thoroughly learned in the field
system, who should start a line of disciples, outwardly Māyā, but
morally devoted to Hari (i.e., Viṣṇu). In this line of disciples,
came, in due course, Aচyukta-prakṣa. In his time the Loca, i.e.,
Vām, became incense of Madhva, in the house of Madhyas,
and studied under Aচyukta-prakṣa (54 ff.). The book ends
with a brief account of Madhva’s work, specially mentioning that he
communicates on the Vedanta on the Vedanta while utterly destroy-
ing that made by the thief Mādām-Sakarā.

It thus appears that Madhva, like Bhūma, was an
incarnation of Viṣṇu, who came to the earth to
destroy the Māyā field of Saṅkarā and all their

teaching, that the true religion was delivered to
the present age by Kṛṣṇa and Bhūma, that it was
upheld by Kumāra in the Pāśupata-Māyājñā, and
the same religion, as interpreted by Madhva, the
devoted to by the Śrāda field system was declared to be only Buddhist in dis-
guise (prachchhama-Buddhaka [Me. i. 51]). There
is no trace whatever of any attempt to reconcile the
Śrāda teaching with Viṣṇuism. Here also must be mentioned one
different doctrine of Madhva not referred to above, and of
considerable

importance—that salvation can be obtained
only through Vām (i.e., in the present age, through
Madhva), and through no one else (K. p. 68).

In the 1st sarga sums up briefly the
contents of Mūrja special stress being again laid
on the Māyā field (50), and on Bhūma’s close
connection with Kṛṣṇa: and the life of Viṣṇu (41). The incarnation of Viṣṇu
is plainly stated in ii. 24. The rest of the work is
a prolix account of Madhva’s life, too long to
analyse here. The main facts are as follows:
Madhva, called Śrāda-bhūta. Madhva’s father (Me. ii. 9, 14), was a Brahmana living at Rajatapiṭha (8),
close to the modern Udipi, a town on the sea-coast
of the present district of S. Kanara, and about 40
diles due west of Shringeri, then, and still, the
head-quarters of the Śrāda followers of Sa
kara-chārya.

The ancient name of the country now comprising
the Districts of Dáhavar and S. and S. Kanara, together
with the western portion of the State of Mysore, was Tulva, the modern Tulu, and it is here
that the Madhvas have always been strong.
No certain figures are available for their number,
but a very rough estimate of the materials avail-
able leads us to put it at something like 70,000.
Elsewhere they are very few.2

After the usual natal rites, the boy was named
Mahādeva. A few years later he was known as
Mahādeva. The most probable date of his birth is
the Saka year 1119 (A.D. 1197), but some authori-

1 Numerous tales are told of his youthful exploits and of miracles
that were referred to below. His prowess in

2 It is, however, important to note that the Vaishnavism of
the Chaitanya Chātars (p. c), is an offshoot of Mahāyāna
(see Pradeśa-Rūpa, Bhāravi-samudrakara, Lucknow, 1881, p. 46).

ties put it as late as A.D. 1238.1 A

terminology of that kind is to be explained by the fact that the
name 'Śrāda-prakṣa, which is still used by the followers of Śrāda
chārya, who use the name of Śrāda-bhūta, often means the same
thing as the name of Śrāda-bhūta, who uses the name of Śrāda
field system, or the name of Śrāda-bhūta, who uses the name of Śrāda
field system, or the name of Śrāda-bhūta, who uses the name of Śrāda
field system, or the name of Śrāda-bhūta, who uses the name of Śrāda
field system, or the name of Śrāda-bhūta, who uses the name of Śrāda

Fugnenta, Samudrakara, and Minor Religions (Hindu and Jaina),
Dharawad, 1899, p. 58.

2 See Bhandarkar, p. 69. A list of the thirty-six works
attributed to him is given in Bhandarkar’s Report on the Search
for Saṅkarācārya, 1899, p. 297.
2. Doctrines of the sect.—Madhvaism rejects not only the monism of Sankara but also the \textit{Viṣṇu-pūjā-dōtsīta}, or qualified monism, of Rāmānuja (see art. Bhakti-Mārga, vol. ii. p. 545). Its followers call themselves Saiva-Vaiṣṇavas to distinguish themselves from the Śrī-Vaiṣṇava followers of the latter. The basic point of the philosophical system is dualism or dualism. By this it is not meant the dualism of spirit and matter, or that of good and evil, but the distinction between the independent Supreme Being (\textit{Paramātmāna}) and the dependent principle of \textit{vākya}. There are five real and eternal distinctions (pātākhabheda), viz. (a) between God and goddess, (b) between God and matter, (c) between the soul and matter, (d) between soul and another soul, and (e) between one particle of matter and another. The account of the order of creation given in \textit{Mn. i. 2 ff.} closely follows the well-known Śākhya-Yoga system, as modified by the Pānñas, and need not detain us. Viṣṇu, Narayana, or Pārā Bhagavān, not Brahma, is the name given to the Supreme Being. He is endowed with all auspicious qualities (\textit{gosa}), and has a consort, Lakṣmati, distinct from, but dependent on, him. By her he has two sons, Bhrāmā, the Creator, and the Vāyu mentioned above, who is the Saviour of mankind. \textit{Māhāya}, or salvation, consists in release from transmigration (\textit{punarāvartana}) and residence in the abode of Narayana. Souls (\textit{jīvas}) are innumerable, and each is eternal, has a separate existence, and is subject to transmigration. They fall into three groups, viz. (a) the lesser gods, the \textit{nāgīra}, and a few other select classes of the good; these are destined to salvation; (b) those who are not sufficiently good to belong to the first class nor sufficiently bad for the third; their ultimate destiny is transmigration (\textit{nāgīra}); and (c) demons, etc., and sinners, especially followers of the \textit{Nāyika-dōctrine and other heretics who reject Viṣṇu}; these are destined to eternal hell. Again, it must be noted that there is no salvation, except through Vāyu, i.e., in the present age, through Madhva. It is also noteworthy that in this religion the idea of eternal bliss, or \textit{māyā}, is balanced by the idea of an eternal hell—a logical symmetry that is missing in the other religions of Madhva's time.

The natural soul is characterized by ignorance (\textit{avidyā}), and this ignorance is dispelled, and salvation is obtained, by right knowledge of God. This knowledge is obtained by souls of the first class, and eighteen means are described as necessary for its attainment. Such are distant of this world (\textit{vānīya}), erotism (\textit{śāma}), attendance on a guru, or religious teacher, \textit{bhakti} directed to God, due performance of rites and ceremonies (cf. the \textit{Pārā-Mānavīnā}, reprobation of false doctrine, worship (\textit{śrādha}), and so on. 1

Service to Viṣṇu (i.e. to God) is expressed in three ways: (a) by stigmatization, or branding (\textit{nākara}) the body with the symbols of Viṣṇu; (b) by giving his names to sons and others (\textit{nākara}); and (c) by worship (\textit{bhaveśa}) with word, act, and thought. Worship with word consists in (1) veracity, (2) usefulness, (3) kindliness, (4) sacred study; with act, in (5) almsgiving, (6) defence; (7) protection, (8) mercy, (9) longing, and (10) faith. Worship is the dedication to Narayana (i.e. God) of each of these as it is realized. 2

The custom of branding symbols of Viṣṇu on the abdomen is peculiar to the followers of Madhva, being also adopted by the Śrī-Vaiṣṇavas; but among the Madhvās, instead of being occasional, it is universal, and is declared to be necessary according to the \textit{Śrāvaka-dōctrine}. It is said that the former, whether male or lay, are branded. The chief of each math, or

1 The complete list is given by Sambhadrak, p. 691.
2 Sāra-darśana-satra, ñ. 91.

monastery, tours among the faithful, and every time he makes his rounds the laity undergo the ceremony (K. p. 40). The sectarian marks, common to monks and laity, are, besides these brands, two white perpendicular lines on the forehead, made with \textit{gopi-kamala} earth, and joined to the root of the nose. Besides, black lines made with incense-charcoal, and terminating in a spot of turmeric. Madhva did not allow bloody sacrifices. The old sacrifices were retained, but he enjoined the substitution of a fictitious lamb for the goat, and of rice-meal as the victim, instead of a lamb of flesh and blood. 3

Madhvaism is also remarkable for the extreme lengths to which fasting of great rigour is carried out. The life of an orthodox Madhva is one continuous round of fasts, and, according to one writer, this has had an injurious effect on the average physique of the members of the sect (K. p. 70). A full account of these fasts will be found in the \textit{BG xxii. 29 ff.}

The chief \textit{māṭha}, or monastery, of the sect is at Udir, and is said to have been founded by Madhva himself. He also founded two others at Madhva-tala and Subrahmanyag—both, like Udiri, in the coast district of Mangalore—and gave a \textit{śrāvaka} to, each of the three. The main settlement he divided into eight sub-monasteries, each of which he and a few others selected classes of the good; these are destined to salvation; (b) those who are not sufficiently good to belong to the first class nor sufficiently bad for the third; their ultimate destiny is transmigration (\textit{nāgīra}); and (c) demons, etc., and sinners, especially followers of the \textit{Nāyika-dōctrine and other heretics who reject Viṣṇu}; these are destined to eternal hell. Again, it must be noted that there is no salvation, except through Vāyu, i.e., in the present age, through Madhva. It is also noteworthy that in this religion the idea of eternal bliss, or \textit{māyā}, is balanced by the idea of an eternal hell—a logical symmetry that is missing in the other religions of Madhva's time.

The natural soul is characterized by ignorance (\textit{avidyā}), and this ignorance is dispelled, and salvation is obtained, by right knowledge of God. This knowledge is obtained by souls of the first class, and eighteen means are described as necessary for its attainment. Such are distant of this world (\textit{vānīya}), erotism (\textit{śāma}), attendance on a guru, or religious teacher, \textit{bhakti} directed to God, due performance of rites and ceremonies (cf. the \textit{Pārā-Mānavīnā}, reprobation of false doctrine, worship (\textit{śrādha}), and so on. 1

Service to Viṣṇu (i.e. to God) is expressed in three ways: (a) by stigmatization, or branding (\textit{nākara}) the body with the symbols of Viṣṇu; (b) by giving his names to sons and others (\textit{nākara}); and (c) by worship (\textit{bhaveśa}) with word, act, and thought. Worship with word consists in (1) veracity, (2) usefulness, (3) kindliness, (4) sacred study; with act, in (5) almsgiving, (6) defence; (7) protection, (8) mercy, (9) longing, and (10) faith. Worship is the dedication to Narayana (i.e. God) of each of these as it is realized. 2

The custom of branding symbols of Viṣṇu on the abdomen is peculiar to the followers of Madhva, being also adopted by the Śrī-Vaiṣṇavas; but among the Madhvās, instead of being occasional, it is universal, and is declared to be necessary according to the \textit{Śrāvaka-dōctrine}. It is said that the former, whether male or lay, are branded. The chief of each math, or
that there is little resemblance between Manichaeism and Sankhara's theology. The former is dualist and the latter is monist. But Mani's dualism taught the existence of two beings—light and darkness. Light being such a deity must have no god at its head. There is a certain resemblance between this and Sankhara's Brähman obscured by māyā. At any rate, it is possible that the Life of Madhya, who (K. p. 19; Mr. iii. 22 f) was the first representative of the Mīchehiyas (foreigners), may have become acquainted with Manichaeism, and may have assimilated it in this way with Sankhara's theory of māyā. The question deserves more investigation than has hitherto been given to it.

LITERATURE.—The Mahānṇasājar and the Madhyānījavas have been already mentioned. Several editions of these have been published in India. A useful summary of Madhya doctrines will be found in p. 303 of the Saktidelika-vāma-matā-sūtra-sūtra, an anonymous work published in the Pāñcaratna Series in 1867. A full account will be found in Pāñcaratna-śāstra, Madhyāvīhāra-bhāsa, Bombay, 1883, quoted by Bāndhārakar, p. 39. Finally, there is Madhyāvīhāra, Sārva-dārvīsa-sūtra-sūtra, of which many editions have been published in India. Of this there is an Eng. tr. by L. B. Cowell and L. E. Gosse (Ed.), London, 1871. The system of Purāṇas also, especially Mahāvīhāra, will be found in ch. v. p. 2177 of the translation.

As for works in English, the earliest among them is the Mahāvīhāra is contained in 'Account of the Mārā Gooarc, collected while Major Mackenzie was at Hardwar, 5th August 1808, printed on p. 2177 of the 'Characters' in the American Review, vol. 1, 1837. We next have H. H. Wilson, Sketch of the Religious Sects of the Hindus, republication of Eng. text, vol. xi, xvii and xviii of Ancestral Researches, London, 1861, i, 199 f. A useful little book is C. N. Krishnamoorthy Aiyer, Sri Madhyāvīhāra and Madhyāvīhāra, Madras, no date. This has been largely utilized in the foregoing pages. See also the following: K. G. Bāndhārakar, Vaiṣṇavism, Jainism and the Mahāvīhāra, Calcutta, 1879, p. 2407, vol. xx, 'Bhāvavikā, Bombay, 1884, p. 164 f, of the author, who in this he borrows from Christianity, quite possibly promulgated as a rival to the central doctrine of that faith.

A. Tract of Manichaeism.—In the two papers already quoted, Burrell points out that the Persian immigrants were welcomed in this part of India long after the time of Cosmas, and that before the beginning of the 9th cent. A.D. they had acquired sovereign rights over their original settlement of Manibra, by a grant from the pārānāi, or local chief. Burrell goes on to suggest that these Persians were Manichaeans, and that the name Mani, their settlement 'Mane', Mani-mercantile,' not 'Jewel-town,' a term compounded might ordinarily mean in Sanskrit. Burrell's theory was attacked in the same journal and, according to L. H. Collin's, a completely controverted by K. Collin. To the present writer it seems that, in the discussion, Collin failed in his main point—

the meaning of 'Māni' in Mani-grāma—and that Burrell's suggestion, though certainly not proved, may possibly contain more elements of truth than Garbe was prepared to admit. It seems that Burrell's suggestion that 'Māni' refers to Mane rves some confirmation from the Mahāvīhāra theory of the Madhyas. It is intelligible that Bhima should be selected as the hero, but it is unintelligible why the altogether unimportant Mani-grāma should be selected as the origin of the arch-herculean Saimka. Bhima killed many more notorious demons, who would have served Madhya's purpose better; but so small a part does Bhima play in the Himalayas, play in the epic 2 that Madhya's story according to the legend, actually to get Vyāsa's permission to re-write the story, so as to make it complete. It must, on the other hand, be admitted

1 The following are the references to the whole controversy. Garbe (loc. cit.) refers only to one of Collin's communications and does not notice any of Burrell's replies: I.A. ii. 318 (Burrell); ib. i. 213 (Collin); ib. i. 281 (Burrell). 2 Rājā Coochh’s, v. (1850) 25 (Burrell).

2 For the references see E. Scheler, Index to the Names in the Mahāvīhāras, London, 1894, p. 456.

1 See Literature at end of article.
the Buddha. It is difficult to determine what part Nagarjuna took in the redaction of the sūtras, but respect for tradition would lead us to believe that his share was a large one. In any case, the Madhyamaka school must be held responsible for a considerable proportion of the Great Vehicle.

2. The Madhyamaka System and its antecedents.

It is not difficult to show the place occupied by the Madhyamaka in the development of Buddhist philosophy from its beginning, and such a historical sketch is indispensable to a definition of the system itself.

The Buddha had given his revelation as a ‘path,’ or a ‘way’ (marga, pratipada), and had qualified this path by ‘middle’ (madhyama = madhyamika), doubtless, as has been often said, because he repudiated two ‘extremes’ (cetasas) — an exaggerated asceticism (tapas), and an easy secular life (sukhavida). But he had also condemned other ‘extremes,’ viz. contradictory theories, such as: ‘Everything exists,’ ‘nothing exists,’ ‘The person who feels the same thing as sensation,’ ‘the person who feels a different thing from sensation,’ ‘The Buddha exists after death,’ ‘the Buddha does not exist after death,’ and some other texts, but explicit — prove that, at the time of the redaction of the Pali Nikayas, ‘middle way’ meant a ‘way between certain negations and affirmations.’ This way is simply the philosophy of the dharma and of the negation of the individual (pudgala, ‘all’), which is almost exactly the philosophy of the Canon, and finds, from the very clear and skilful expression in the Theological Foundation (patichca sammutpadda, pratityasamutpada).

The Canon teaches that there is no individual (pudgala), one and permanent, of whom we can say that he is identical with sensation or different from it, or that he survives or fails to survive the destruction of the body. The individual does not exist in himself (pudgala-niratmya); he is merely a mass of dharma following one another in unbroken succession, cause — and effect.

What is meant by dharma? This word, as Max Müller said, is difficult to translate, though easy to understand. Man is a collection, a ‘series’ of dharma; every thought, every volition, every sensation, is a dharma. His body is composed of material dharma. Sound, colour, smell, whatever can be struck or touched, is composed of material dharma. The organs of sense and intellect (manas, indriya) are dharma of subtle matter. Consciousness, hatred, and delusion are mental dharma, ‘co-ordinated with thought.’

The dharma are ‘realities,’ things which actually exist, and nothing exists but these elementary realities, which are all doomed to destruction; some — e.g., the mental dharma and the dharma forming the successive instants of the existence of a flame — perish moment by moment, while others sometimes last for a long time. Just as a waggon is nothing but the collection of the parts of a waggon, so man is simply the collection of the elementary realities, material and spiritual, which constitute his individuality. Apart from dharma, man and waggon have only an ideal existence — an existence of designation (prajahati), as a name only. In any case, it will be observed that none of these elementary realities exists in isolation, but that every dharma combines with other dharmas to form a more or less solid complex. The four chief elements (mahabhutas) combine in the first, and every material thing. Anger presupposes, besides delusion, an elaborated complex of intellectual dharma — contact, sense-}

1 See in. [1956] 51.
an end to existence by this method, for existence is void of reality in itself, since the dharmas do not exist at all. - for put an end to a process of "void" (śūnya) dharmas which renew themselves in "void" dharmas. It is important to know this, for the only knowledge that can arrest the renewal of unreal dharmas is knowledge of the void, and fundamental reality.

The ancients saw that the essential nature (ārya-dharmatā) of things (dharmas) is to be produced by concurrent causes (pratityabhāsā-pratisthā-pratipoksha-dharma) , dependent on the fact that things do not exist in themselves, do not exist of all substantial reality—i.e., in vacuity (śūnyatā).

This term 'vacuity' has been variously understood. For some it is 'nothingness'; for others it is a permanent principle, transcendent and undeniable, immanent in fundamental and illusory things. It would be a long and difficult task to explain the mystical significance that it has in certain Buddhist books; we know that it exists by being confused with the term vacuity (śūnya), 'ether-dull', 'diamond, male organ.'

One thing is beyond all doubt: for the Madhyamaka, 'vacuity' is neither nothingness nor a transcendent-immanent principle, but the very nature of things. For them, things are not void because of vacuity (śūnyatā-gatvā) —conceived as exterior to things— but because they are void, and they are 'void' because they are produced by causes. Vacuity means a dependency on causes and is only an abstraction, a mere word; 'void' means 'produced by causes.'

Existence (svarūpa), therefore, is a complex phenomenon which has no reason in themselves for existing and which cannot exist substantially by reason of their causes, i.e., former dharmas which do not exist by themselves. The following formula explains this clearly: dharmas resembling delusions of magic or shadows in a mirror (āyatam-pratibhūmipratipoksha)—we might say 'contingent' dharmas—give birth to dharmas that are equally illusory. Like begets like.

True objection to phenomena, conceived as pleasant; purity is complete detachment from phenomena. Ignorance is a clinging to the substantiality of phenomena, which induces attachment; wisdom is the knowledge of the vacuity of things.

Nāgārjuna himself formulates this difficulty, and answers it. Existence is the continuous production of phenomena not substantial but actually existent, because they are existent by the only existence that there is—void existence, or existence produced by causes. Nirvāna is the end of the production of these phenomena. Impurity is attachment to phenomena, conceived as pleasant; purity is complete detachment from phenomena. Ignorance is a clinging to the substantiality of phenomena, which induces attachment; wisdom is the knowledge of the vacuity of things.

Nāgārjuna, Chandrakīrti, and Śāntideva very aptly took this point of view, which is quite within the logic of Buddhism and not unreasonable. But in order to give a true picture of the Madhyamika as it is, we must add that our teachers often go much further.

ii. Just as their criticism destroys all ideas of experience and religion—the notion of movement, of time, of 'passion' (āsā, the connection between the passionate man and passion 'does not bear investigation')— it also destroys the notion of causality; not only do the dharmas not exist substantially, but causality is also non-existent or apparently. They are like the daughter of a barren woman, like the beauty of the daughter of a barren woman: this beauty evidently does not exist except in so far as it may be described; but, in reality, the object described, the description, and the person describing are all similarly non-existent.

Absolute truth, which is, properly speaking, 'knowledge of a Buddha,' is a 'not-knowledge'; it is midway between affirmation and negation. The dharmas are like the hairs that a monk with diseased eyes thinks he sees in his almsbowl; he does not see them, for the knowledge which he has of them does not exist any more than its object. This is pramāna, or knowledge of diseased eyes has no thought about these hairs at all; he neither denies nor affirms their existence, because he knows them in their true nature (which is 'void') by not knowing them. The legitimate conclusion of this system is formulated in our sources: ' Absolute truth is silence.'

I. DE LA VALLÉE POUSSEIN.

MADRAS AND COORC.—In the Census for 1911 the vast majority of the population in the Madras Presidency are classified as Hindus. Out of a total population of 41,870,469 (in the Presidency and the union territories included in it), the Hindu number 37,230,094. The rest of the population are classified as follows: Muslims, 2,764,467; Christians, 1,658,515; Animists, 658,469; Jains, 27,005; Buddhists, 697; Parsis, 489; Brahmin Sanātins, 374; Jews, 71; while 42 are classified simply as others.

I. Christianity.—The most progressive of all these religious bodies is the Christian. Excluding the 40,026 Roman Catholic and Anglican Christians, whose numbers do not largely vary from decade to decade, we find that the Indian Christians have increased during the decade from 1901 to 1911 by 163,964, or 17 per cent—a rate more than double of that of the increase in the total population, and one which compares favourably with an increase of 8 per cent among Hindus, and 11 per cent among Muslims.

The main cause of this increase in the Christian population is the movement among the out-castes of Hindu society towards Christianity that has been in progress in S. India for the last sixty years.

Conversions to Christianity from the higher castes of Hindus or from the Musalmins have been comparatively rare. On the other hand, the out-castes are being gathered into the Christian Church in the village districts in increasingly large numbers, especially among the Telugs in the northern part of the Presidency. The causes that have led to this great movement are mainly social. The out-castes are the last castes in the Hindu system, and have been kept for many generations in a state of abject poverty and utter ignorance. They have seen in the Christian Church the hope of a better life, and for the last half century have been crowding into it in thousands. The great force behind the movement, therefore, is a natural human craving for life.
and freedom. At the same time, there is also a strong spiritual element in the movement. In almost every district where it is in progress it has owed either its origin or its power to a few men and women of true spirituality, and the fact that a large number of the converts have to endure a very bitter persecution when they first join the Christian Church, shows that the movement is due to something higher than a mere desire for immediate temporal gain. This great movement is bound to have a very striking influence in the future. India is today only uniting in its religious life but also upon the religious life, and thought of India as a whole. A great Christian Church is steadily and rapidly rising up in India from the lowest strata of Hindu society. The consecration of educated Hindus is becoming awakened to the injustice and the social evils inherent in the caste system. Slowly and surely the work of the Christian Church is preparing the way for a great economic, social, and religious revolution throughout the length and breadth of India.

2. Hinduism.—Hinduism in the Madras Presidency does not differ greatly as regards either its doctrines or its customs from Hinduism in other parts of India. One striking difference observable between the Hinduism of S. India and that of N. India is the predominance of the Brahman in the S. Hindu. This is due to the social and political conditions of S. India. The Vedantist philosophy and the monism of Sakkar is more widely held in the South than in the North, mainly owing to the doctrine of Mu. But in Ceylon, on the contrary, Mut, which has its basis in teaching on the unity and transcendence of God, has had less influence there than in S. India. The stern and gloomy worship of Siva, the Destroyer, is much more common in S. India, which has a附件 of elements of the old animistic cults, is the predominant form of Hinduism; but the worship of Vishnu, the Preserver, in all his manifold incarnations, has a deep influence, and, having a special attraction for the lower castes of S. India, has been admitted more freely to its temples than the rival cult of Siva.

3. Animism.—The prevalence of animism in the Madras Presidency is very inadequately represented by the small number of people (385,468) classed as animists in the Government Census. The large majority of the Hindus in the villages, with the exception of the higher castes, all the devotees of Vishnu and Siva, are also animists. Worshiping the village deities, the Grāma-Devattas, as they are called in the vernacular, and a host of spirits, good, bad, and indifferent. The worship of these village deities forms an important part of the complex of religious beliefs, customs, and ceremonies which are often gathered together under the term Hinduism. In almost every village and town of S. India may be seen a shrine or symbol of the Grāma-Devattas, which is periodically worshipped and propitiated. As a rule, the shrine of the village deity is far less imposing than the Brahmanical temples in the neighboring towns; very often it is nothing more than a small enclosure with a few rough stones in the centre, and often there is no shrine at all; but still, when calamity overtakes the village, when famine or disease makes its appearance, it is to the village deity that the whole body of the villagers turn for protection. Siva and Vishnu may be more dignified beings, but the village deity is regarded as a more present help in trouble, and is more intimately concerned with the happiness and prosperity of the villagers. In the animal sacrifices offered to these deities the treatment of the blood, which is sometimes mixed with boiled rice and sprinkled all round the village site, and also the sacrificial feast upon the flesh of the victim, connect the sacrifices to the Grāma-Devattas in India very closely with the primitive systems of animal-sacrifice which are found all over the world. traces of human sacrifice, too, are often found in connexion with these cults. In Mysoor State itself that the movement is due to something higher than a mere desire for immediate temporal gain. This great movement is bound to have a very striking influence in the future. India is today only uniting in its religious life but also upon the religious life, and thought of India as a whole. A great Christian Church is steadily and rapidly rising up in India from the lowest strata of Hindu society. The consecration of educated Hindus is becoming awakened to the injustice and the social evils inherent in the caste system. Slowly and surely the work of the Christian Church is preparing the way for a great economic, social, and religious revolution throughout the length and breadth of India.

The special features which broadly distinguish the worship of the village deities in S. India from those of Siva and Vishnu are three. (1) The fact that the village deities are male attendants, all of whom are supposed to guard the shrine and carry out the ceremonies. (2) The fact that one male deity, Iyayar, has a shrine to himself, and is regarded as the night watchman of the village. In the Telugu country there is a being called Pothu-Ba, who is sometimes husband and sometimes as the husband of village goddesses, and sometimes as an attendant. But, with the exception of Iyayar and one or two other deities, all the male deities are so distinctly subordinate to the goddesses that they do not contravene the general principle that village deities are male and not female. (2) The fact that the village deities are almost universally worshipped with animal sacrifices, and that the shedding of blood is low and irreligious. The animal sacrifices are regarded, therefore, as offered to the male attendants of the goddess and not to the goddess herself. (3) The fact that the Pothu-Ba, i.e., the man who performs the worship and officiates as priest, is not Brahman; he serves the Goddess of the village instead of the Brahman, in the performance of the sacrifices. While the Brahman is the priest of the goddess, the Pothu-Ba is the priest of the village. The origin of these cults is lost in antiquity; they are certainly pre-Aryan, but have been more or less modified in various parts of S. India by Brahmanical influence. Some details of the ceremonies used in them seem to point back to a totemistic stage of religion; some of the deities are the spirits of the dead, others are the spirits of women who have died in childbirth or of men or women who have died by violent deaths, others are connected with disease and pestilence, especially Cholera and smallpox, many of the deities are of quite recent origin, and it is easy to observe a deity in the making even at the present day. Snake-worship and tree-worship are also widespread throughout S. India and have become incorporated in popular Hinduism. Almost every village has its sacred pipal tree, representing a
female, and a mangrove tree, representing a male, planted close to each other. These two trees are married with the same ceremonies as human beings. In every house of one section of the Brāhmans (called Madhvas [g.v.] or Raojas) there is a tulasi plant (sacred to Viṣṇu). The snake is closely connected with the worship both of Viṣṇu and of Śiva. A cobra forms the offered vehicle of Śiva, and the king rides, and Śiva is always represented with a cobra in his hand. At the entrance of almost every village of S. India there are figures of the cobra carved on stone in bāja relief erected on raised platforms for the adornment of the public. Brāhmans and Śūdras alike make offerings at these shrines. The living serpent is very generally worshipped, and few Hindus will consent to kill one. If a cobra takes up its abode in the thatched roof of the house or in one of the walls of the compound, it is not only left undisturbed, but is fed with milk. A woman is often the priest in the worship both of trees and of serpents, and women are the chief worshippers, mainly for the purpose of obtaining offspring.

On the W. Coast in Malabar snake-worship is especially prevalent. Some families are supposed to be consecrated to the snake deity, and to exercise a peculiar influence over the deadly cobras which are reputed to swarm in their houses and carry their benediction to the brāhmans and the lowest castes of the family without ever doing them any injury.

Demonology is very prevalent, especially in the Southern part of the Tamil country, and the belief in demons, as among the Arabic nations, is accompanied by a large number of supernatural beings who are supposed to exercise a controlling influence over the lives of men. These include the gods, the ghosts, the spirits of the dead, the demons, and the genii. The demons are often represented as evil spirits, but they are also regarded as beneficent deities who bring good fortune to men. The belief in demons is widespread in South India, and is particularly strong in the Tamil Nadu region. The demons are thought to possess the power to control the weather, the crops, and the health of the people. The demons are also thought to be able to cure diseases and to protect people from harm.

The innumerable superstitions connected with popular Hinduism are excellently described by Edgar Thurston in his Owners and Superstitions of Southern India.

Madura—Madura is the name of an important District in S. India. It is about 350 miles south of the town of Madras. Its capital, Madura, had a population of 154,130 in 1911, and is situated at 10° N. lat. by 78° E. longitude. It is a prosperous town among whose progressive people are found about 50,000 weavers. Yet, apart from government and railway works and the Scottish spinning mill, there is hardly any horse power of steam used in the whole community—by which it may be known that modern improvements in the East are not necessarily connected with the use of modern industrial appliances and forces.

Madura is a town of considerable antiquity. It was occupied by the Pāṇḍya kingdom whose fame spread westward through the Greeks and Romans even before the advent of the Christian mission. Even to-day ancient Roman coins are occasionally discovered in the town and surrounding regions.

Madura has long been designated the Athens of S. India; the ancient and famous Madura College was the source and inspiration of Tamil classical literature for centuries. Many of its most popular legends gather round its peeps in the narrative of whose struggles and conflicts is a perennial source of delight to the people. But it is its great Mābhats temple that is the source of its pride and vehicle of its life. The town is built around its sacred precincts, the main streets running parallel to the four walls of the temple. This temple has a past which runs far beyond history into the misty realm of legend and myth.

The first historical reference is to its partial destruction by Malik Kāfir, the famous general of the Mughal emperor, Alā’ud-dīn, in 1310. He destroyed its outer wall and fourteen high towers, and left little but the inner shrines, which were saved only by an opportune disension among the vandals.

Perhaps all that now exists of this architectural pride of S. India (except the inner shrines and contiguous courts) is not older than the 16th cent. and is largely the gift of kings of the Nayak dynasty, by far the most prominent of whom was Tirumāla Naik (1623-39).

S. Indian temples are the most spacious in the world. The Madura shrine is the third in size, but is the first in architectural effect. It is in its upkeet, and most thoroughly devoted to its religious purposes. Its outer walls, which are 25 ft. high, form almost a square (380 ft. by 730 ft.) and enclose an area of about 14 acres. Each wall is surmounted at its centre by a richly embelished gopura, or tower, which is about 150 ft. high. These towers are the landmarks of the country around.

Granite is almost exclusively the material used in the temple, even the roof being of granite slabs. Its monolithic pillars are legion, and nearly all of them are elaborately carved, some exhibiting marvellous patience and skill. The hall of a Thousand Pillars (correctly speaking, its pillars are not marked 986 in number) is the culmination of its architectural claims. Of this J. Ferguson writes: its sculptures surpass those of any other half of its class I have acquainted with.... but it is not their number but their marvellous elaboration that makes them the wonder of the place ۔(12). This hall is eclipsed, perhaps, by only one other, the so-called Choultry, or Pathm Mandapam, which is outside and to the east of the temple proper and is the most imposing of all sacred edifices in S. India. It was erected by Tirumala Naik about 350 years ago, is 250 ft. by 156 ft., and is supported by 154 richly sculptured pillars 20 ft. high. It is a worthy granite monument to one of the great kings of S. India. The whole temple is distinctly Hindu in its architecture—a style in which the arch is entirely absent and densely padded halls predominate. Its many gopuras are pyramidal in form, and are a striking development of the ancient stupas or pagoda, of Buddhists.

The temple is one of the most distinguished of S. India, representing that type of the Brahmanic cult which first appealed to and was adopted by the Dravidian people of S. India. Because this is the temple which is most closely allied to the cult of its Vaishnavas to the cruel demonology of the aboriginal people of that region. This temple and its worship also admirably illustrate the post of the Brahmanic propaganda, which never antagonized a new and contigious faith, but rather fraternized with it, then adopted its leading features, and finally absorbed it entirely. The magnificent temple of this shrine is the Sākkingunam or Sundareswara. The first name is Dravidian, revealing the non-Brahmanic or non-Aryan origin of the god who was adopted.
MENADS

from the pantheon of the Dravidian cult to that of the Aryan. Later, this S. India manifestation of Siva polarized the northern faith among the people of Madura by his most dreaded demoness of that region, Minakshi. The latter, doubtless, was an ancient queen who was slain in war, and was soon exalted to the highest place in the pantheon. By this marriage the Aryan cult of the north was wedded to the supreme faith of the south, and the great annual marriage-festival of the temple celebrates and perpetuates the growth of diverse cults in that region. In that most popular festival there is another interesting feature: Minakshi is said to be the sister of Ailaha, a popular Vaisnavaya demon-deity a few miles from Madura, and this brother comes to attend the wedding ceremonies of his sister at Madura; but, unfortunately, he arrives a day late, and is so incensed by the fact that he will not enter the city or temple; his idol is thus kept for three days on the outskirts of the town, during which period all the people, both Saiyavites and Vaisnavites, fasten together and bring their offerings to the aggrieved god. Thus, upon this occasion, we find all three cults of that region, Saiyavism, Vaisnavism, and demonolatry, most strikingly brought together.

In many ways the worship of this famous Hindu temple reveals a fact which outsiders can understand with much difficulty. In a certain way, all the Dravidian people are a part of Hinduism, and are loyal to that faith. But it is a Hinduism which is completely impregnated with Dravidian and Aryan ideas. The worship of the Aryan deities in S. India is a pleasing pastime; but the people are still obsessed with the fear of their mythical demons, and find their chief religious comfort in appeasing them. The many demon shrines which are found in every town and village. Even Koli, the chief consort of Siva, who also finds a prominent place in this temple, is so Dravidianized and demonized with a bloodthirsty passion that no one can separate her from the many Dravidian ammans, or demonesses, who haunt that region and terrorize the whole community.

It is thus that we learn what the amorphous thing called Hinduism is in S. India. In outward form it poses as an Aryan cult, but in its inner spirit it reveals the pervasive animistic genius which has characterized the Dravidian mind and been time impossible. The Aryan has given to the religion its outer form and décot; but the Dravidian has retained and conveyed into it all the animism which his ancestors entertained and practised. It is largely the spirit of the south robed in the garb of the north. The Madura temple furnishes one of the best illustrations of this animistic type of Hinduism.

J. P. JONES.

MENADS.—The character of the Menads was long a subject upon which the most mistaken ideas prevailed. The accounts of them given by poets, mythographers, and historians were all mingled together, and were mixed upon by the representations of the cult of Dionysus in art, and, again, these artistic products were not submitted to any process of critical analysis. Thus arose the conception of a wildly fantastic religious service, celebrated by delirious women in nearly all parts of Greece and Asia Minor. The first to reduce the literary and artistic data to order, and to give a clear impression of the development and character of the Dionysus-cult, was A. Rapp, in his 'Die Mâne in griechischen Kultur, in der Kunst und Poesie' (Rhein. Mus. xxvii. [1872] 1–22, 562–611; cf. Roscher, ii. 2243–2283). Then at length the powerful movement introduced into Greece by the new deity, and the influence of that movement upon the spiritual life of the people, were exhaustively delineated by E. Rohde (Psychet, Tübingen, 1907, ii. 5 ff.). The researches of the folklorists among other peoples has only brought to light interesting parallels to the ancient Dionysian cult and custom; but great caution must be exercised with regard to the ideas of 'vegetation deities,' 'spirits of fertility,' etc., to which the modern tendency to trace analogies everywhere has given rise (cf., e.g., O. Gruppe, Griechische Mythologie und Religionsgeschichte, Munich, 1906, p. 905 f.).

Dionysus, the lord of the Menads, of the 'Reheux,' so named after him, was, as is now universally recognized, and as was already known to Aristarchus, not originally a Greek deity, but was derived from Thrace (cf. Herod. v. 7, and the notes of W. W. How and J. Wells, London, 1912), where he was worshipped under the name of Sakos or Sabazios (schol. Aristoph. Vespas, 94 ff.). It is true that Sabazios is also spoken of as a Phrygian deity (rhet. in Rohde, ii. 7, note 3), but, as the Taracians and the Phrygians were, in the remembrance of the ancient, closely related peoples, we need not be surprised that the worship of the Phrygian national goddess Cybele should show so many points of contact with that form of the Taracian cult of Dionysus. The latter was a non-Greek cult which was celebrated upon the mountain heights of Thrace in the winter of every alternate year (annually, 58), and was called the râmpes (cf. râmpes, râmpe). At these celebrations women danced in wild frenzy amid the glare of torches, whirling dizzyly to the clangour of rule music—the clashing of the bronze roll of large drums (cf. Cybele), the shrill whistling of flutes—and with loud shouts of oâ (which afterwards became euchos, euo, and finally evai). These raving creatures were called meandrites, and were accompanied (as Hom. II. xxvi. 460), with their dishevelled hair streaming in the wind, were clothed in long flowing epoa (whence they were also called Berspoides), over which they had a lene (cf. isch. frag. 64, and the pictorial representations), and in their hands they carried serpents (animals sacred to Sabazios [Theophr. Char. xxx. 4: cf. the pseus of Pseny. in Asclepius, 190 C. c.]), daggers, or thyrsus. In their religious frenzy they served upon the sacrificial animals, tearing them in pieces with their teeth (Eur. Bacch. 736 ff., sect. sp. xvi. 1 xv. eis tâv âvov òpov tâv tâvais tevâv kâvâv), a notable analogy to these practices is found in the leaping of the Perchias in the Tyrol; here, on Shrove Tuesday (cf. art. CARNIVAL, vol. iii. p. 208, esp. p. 229), the Perchias (so named, like the Kneissus, after the deity whom they thus honour) work themselves into a frenzy. Their raving is carried to such a pitch that at length they think that they actually see Perch herself in their midst, and in the maddening excitement she has sometimes mangled her worshippers (P. A. Voigt, in Roscher, i. 1044 f.).

This tumultuous cult, whose votaries were also called Klâos and Kallase, maintained itself till later times; even Queen Olga, the mother of Alexander the Great, was devoted to the wild
practices of the Thracian religion, and her tame snakes, which would suddenly wriggle out from amongst the ivy or from the sacred winnowing-fans, met with opposition as it spread through Greece.

What mythology tells us, now of Lycurgus and the sacred mountains in the region of Dionysus and his θησεως (so Hom. Il. vi. 132 ff.; some details regarding the θησεως are lacking), as of Pentheus, and now of the Minyads and the Plectides, shows at least that at some time the Bacchus cult had once or often encountered enemies in various districts to which it spread. Its complete triumph throughout almost the whole of Greece is, of course, a commonplace of history. The new religion, with its outlandish features, whose nature must have naturalized that its alien origin was almost forgotten: Herodotus speaks (iv. 79) of the Bacchic frenzy as a peculiarly Hellenic characteristic in contrast with the Thracian and the Lesbian; the Spartan Menads, the βασκαρις, raved over the heights of Taygetus (ref. e.g., in Rohde, ii. 45, note 2) and Galen (de Antid. 8, vol. xiv. 46 [Kühn]) could speak of a Bacchic rending as still practised at the Bacchic festivals.

But the educative power of Delphi was now at work, and Apollo exercised his softening influence on the fierce and overwhelming cults, for it was with very different rites that the women performed their worship of Bacchus on Mt. Parnassus. Here, every two years, about the time of the shortest day, the Thyiads "awaked" at Delphi, the god who lies in the sacred winnowing-fan (Πλατ. de I. et Osr. xxxvii.) here (Rapp, Rhän, Mus. xxvii. 6) a caste of priestesses was employed, who attended to the rituals of the winter festival on Parnassus. With such rites, too, the Attic Thyiads celebrated at similar intervals the orgies of the god at Delphi. Thus the celebration had now to do not with Dionysus only, but with Apollo as well (Paus, i. xxxvii. 7). Of this cult, whose Bacchic vestments had been refined by Apollonian moderation, we find a picture in the celebrated chorus of the Antigone of Sophocles (1136 ff.), which tells indeed of the torch-swinging and the dancing of the goats, the ground flows with milk and wine, and the stroke of the thyrus upon the rock causes a spring to break forth; ferocious animals are on a friendly footing with the Menades, who offer the beast to fawns and young wolves, while ill-disposed men flee before the hurrying thyrus (Bach., passim).

Investigators have had great difficulties also with the portrayal of the Bacchus cult in art. In this field, too, it was necessary to disengage the mythological aspects from the presentation of the real. As a whole, it is only the general impression to be gained that corresponds to the literary account. On the artistic side it is pre-eminent that the Attic vases merit consideration. On the earlier specimens of these we see the orgiastic dance of women to the cadence of flutes; later additions are the swinging of torches, the beating of drums, and the head thrown back upon the shoulders. According to the more recent explanation, the celebration thus represented is the Lenaia, the festival of the reverberating (Lena), which had been brought from Boeotia (on all this cf. A. Pickenhaus, Limenmäser [Programm zum Winkelblumennfeste der archäol. Gesellschaft, xx], Berlin, 1912). This connexion is also shown, others showing a distinct background of mythology, and here we also find names of the Menads, such as Maigra, Ophel, etc. (cf. C. Fränkel, Sättys- und Bacchensagen auf Vasenbildern, 1873, 1912).

Then later art brought the depiction of that furious, almost hysterical, ecstasy to its most vigorous expression, and even extended it, most unnaturally; this intense expression of feeling is seen in its finest form in the Menads of Scopas (M. Trea, in Melanges Perrot, Paris, 1902, p. 317 fig.). Nearly everywhere in art, however, the representation of the Menads is an expression of satyric-religious emotion, and the vase-paintings designedly set forth the strict reserve of the Bacchus in contrast to the loose merrymaking of the satyrs. The introduction of the Bacchic procession, with its troops of men and women rolling wantonly along, and the transformation of the primitive festival, attended by females only, into a turbulent orgy were the work of the superficial art of the Hellenistic age.

LITERATURE.—This has been sufficiently indicated in the article.

J. GEFCKEN.

MAGADHA.—Magadha, an ancient kingdom in India, was the scene of the greater part of Buddha's preaching and the last stronghold of his faith in India. It was equivalent to the modern districts of Patna, Gayas, and Bihar, and to a vast area which had been inhabited by the Dravidian branches of the Aryan race. Buddha was not born in Magadha, but in the country to the north of it, at the group of Lumbini (q.v.), near Kapilavastu (q.v.), the Sakya capital in the Nepaless Tarai. Magadha was the home and the nucleus of two of the greatest Indian empires, the Maurya and the Gupta. It is celebrated in Sanskrit literature as one of the richest, most fertile, and best irrigated districts in India. As the home of Buddhism and Jainism, it is full of archaeological remains of the greatest religious interest.

Its earliest capital city was very ancient hill fortress named Girivrajra (Pāli Giribāja), built, according to tradition, by an architect named Mahāgovernā; its place was taken in the 8th cent. B.C. by the better known capital, Rajagir (Pāli Rājagaha), built at the foot of hills on which Girivrajra stood; Rājagirā is the modern Rājāgarh, which, however, stands about a mile to the south. Its walls still exist, and are probably the oldest stone buildings in India. Rājagirā had reached its zenith about Buddha's time, soon after which it declined with the growth of Pātaliputra (the modern Patna). The modern town of Gaya, although now a place of pilgrimage for Hinayana and Mahāyana Buddhists, has no ancient religious associations; 7 miles to the south, however, are the remains of Bodh (Buddh) Gaya (see GAYA, vol. vi. p. 181 ff.), one of the most interesting sites in India, where Buddha is said to have attained the first enlightenment (bodhi). To the south of Gaya is the hill of Dhongra, the Prāgbodh (Pālo-ki-pa-ti) of Hiuen Tsang, with a cave in which Buddha once rested. Pañthar, a little north of Gaya, is rich in Buddhist sculptures; to the south of it is Hasagā, which has been identified with the Kukkutapādāgi of the Chinese pilgrims.
A. Cunningham, however, recognizes the latter in Kurukult, which lies some miles to the north. Gumeri, Bharatwar, and Kavadar are all rich in Buddhist remains, the latter unnamed with a colossal stone image of Buddha, Jetavan, or Jakhthikam, is the Tavvihna (bamboo-forest) of Buddha's wanderings; near it at Tapoban are the hot springs, visited by Hixue Teiag, at which Buddha bathed. In this neighbourhood the Chinese pilgrim visited a cave, a place which had been used by India and Brahman for pouring sandalwood to anoint Buddha's body. In the side of Baibhar hill, near Râjaâr, was the Sattapannâi cave in which the first Buddhist synagogue met in 544 B.C. According to Cunningham, this cave is the modern Son Bândar cave on the southern side of the hill. A hill on the adjacent hill of Ratnâgiri is the pipai-tree cave of Fa-Hian in which Buddha used to meditate after his meals. On the top of this hill there is still a small Jain temple; Ratnâgiri is the Pandav of the Pali chronicles and the Râjgiri of the Mahabharata. The extensive ruins at the modern Baragona are the ancient Nâlandâ (q.v.), the greatest centre of Buddhist learning in ancient India. Near Girik on the Panchâna river a bathing festival is held annually to commemorate Buddha's crossing of the river here on his way to challenge Jarsandha. An annual bathing festival of Sompur, held in November at the junction of the Gandak and the Ganges, is one of the oldest and most popular in India; it was here that Visnu received the garuda from the crocodile, and here Bândar built a temple. At Asar there is a fine sculpture of the ardhâ (boar) avatâra of Visnu.

MAGAS.—See SURA and MAGAS.

MAG.—Magh, or, popularly, Magh. Makkah, is the name of a group of Indo-Chinese tribes numbering 128,456 at the Census of 1911, and practically all confined to Bengal. The derivation of the name is uncertain. A. P. Phayre (Hist. of Burma, London, 1884, p. 506) connects it with Magda, the ancient name of modern Bihâr, and L. Vivien de St. Martin (J. W. Mcrindle, Ancient India as described by Megasthenes and Arrian, Calcutta, 1877, p. 133, note), identifies the Magh with the Maccoallans of Pliny (En VI. xxi. 8).

All Maghs are Buddhists of the Southern school, and respect the Northern Buddhism of Tibet as wholly unorthodox. The wilder sections of the Thongaia, however, retain some vestiges of an earlier animistic faith, which bids them sacrifice cattle, goats, and swine, and make offerings of rice, fruits, and flowers to the spirits of hill and river. Among the Marans, on the other hand, the tendency is to follow after modern Hinduism, particularly in its Zoroastrian developments, and to add the grossness of Siva and Bhraga to the simple observances prescribed by their own community. It thus comes to pass that while the Burmese Maghs of Prome and the recognized priests of all the tribes, considerable respect is shown to Brahmanas, who are frequently employed to determine auspicious days for particular actions, and to assist in the worship of the Hindu gods. Among the Thongaia and Maghs, who frequently perform the described ceremonies, are regarded as some sort of priestesses, and are called ‘ari’ (from the same word as ‘ari’ (H. H. Riceley, T. C. U. L., 1894, ii. 81). The people thus described are the Khyungtho of the hill tracts of Chittagong, who, as T. D. Lawin states (Am. Journ. of Ethnology, 1907, p. 37, Wild Races of S. E. India, London, 1870, p. 93), are known to the Bengalis of the plains as ‘Hill Mugh,’ and are to be carefully distinguished from the true Maghs of the Chittagong District, otherwise called Rajbanshi, who are the offspring of Bengali women by Burmans. The true Maghs, however, of the famous Magh cooks, well known in Calcutta and other parts of Bengal. The true Khyungtho are Buddhists and believe in the doctrine of metempsychosis or transmigration of souls. Their Buddhist worship is of a simple character—the presence of a priest is not indispensable; prayers are made and offerings of flowers, food, etc., are placed before the shrine of Gautama by the people themselves.

Many villages have no priest, except wandering friars, who are not so much ministers of religion as recipients of alms. Each village has a temple (kangin), a small table for offering food, and a shed under the shade of some tree or trees, inside which, on a small raised platform of bamboo, stands an image of Gautama, made either of gilded wood or of alabaster, the figure being in a sitting posture, with a pagoda-shaped hood, and a shield of superior power. Before it the village girls lay offerings of flowers and rice every morning, and, at the same time, bring the daily food of any priest who may happen to be passing. By the side of the image hangs a small stand of bells, which each villager, after removing his turban and bowing to the semblance of the Teacher, rings to announce his presence. Each day at noon, for hours, he prays for his children, and in the evening the prayer for himself, except that now and again a father may be seen leading his young son by the hand and teaching him how to pray. Each year, before the commencement of the burning of the jute for the purpose of sowing the crops, the boys are clothed in yellow robes of the priesthood, have their heads shaved, and go through a rite before a priest which seems to be an assumption on their part of the priest's responsibilities. Women do not participate in this rite; but it is common for a man to perform it two or three times during his life. If a relative is sick, or he himself has escaped any danger, he performs the ceremony as a supplication or as an acknowledgment of the mercy which he has received.

Letter A.—The authorities are quoted in the article.

MAGI.—The name Gr. Mânu, Lat. Magus, from Old Pers. Maga is familiar to us from the classical writers, and from two appearances in the NT. It meets as first on the Behistun Inscription of Darius, where the king describes (Dbb. [Pers. text] i. 35 ff.) the usurpation of Gama the Magus (Gamaata tyca Maga) and his own successful plot against him, by which he became the Achaemenian dynasty to its ancient throne. There is nothing in the inscription to show what Magus meant, and we must fall back on our Greek sources, Herodotus first, and the rest, e.g. Strabo, and the text (Greek text). In Herod. i. 101 we are told that Maga, Mânu, and four others were Mycena iaro. The six names were explained as Aray caste-titles by J. Oppert long ago (Le Peuple et la langue des Medes, Paris, 1879, 77), and again, on different lines, by A. J. Caunoy (Museon, nev. ser., ix. [1898] 121 ff.); the tolerable certainty that five are Aray makes a strong pre-supposition that Mânu must be interpreted from the same language group.

The etymology, however, must be left undecided. Putting aside some attempts of Semitists to clinch it, we have at least two plausible accounts from the Indo-European side. Camou (loc. cit.) compared maga and Mayur with the meaning ‘leader, ruler’ while Mânu (Greek Titan) is an etymologically distinct word. The word *mânu* (Pers. maga), pp. 439-450 connects Gothic magus, O. fr. mag—a connexion which Caunoy accepts, but in a different sense. The Gothic word translates ‘venerable’ and *nav* (‘servant’) elsewhere. The latter meaning is that of the Irish word; we may also compare (Etruscan) *magus* and the ‘mânu’ (‘servant’) of the Etruscan text. The significant fact that it means ‘to carry’ once in the Avesta, and that in a prose passage (Y. vi. 7)
obviously late, speaks for the meaning 'servant'; the Magi were thus the leading tribe of the aboriginal population, enslaved or conquered by the Medes as the subject by the invading Aryans. But the whole history of the word is open to great uncertainty. The authority of T. Noldkær and G. Besold (op. cit., Bartholomaeis, Abhara, Wirtschaftsd., Strasbourg, 1894, p. 1115) may be referred to against the Semitic claim.

2. While the Magi were thus a distinct caste of Medes, and apparently the recognized leaders of the subject population in the time of Aryan invasion, they began to build up power upon their popular vogue as shamans. It was easy to insinuate themselves into the open place of priest in the reformed Iranian nation, as Herodotus (i. 131 ff.) states, they only had to emphasize certain clear points of resemblance between their own religion and that of the Aryans, veneration of the sun and of the dead. The true Persian religion is not the inconsistent mixture of an Eastern sun-worship with the worship of the dead, as is traditional in the B'ahishta, but the consistent union of both, as we find in the later Parsi Scriptures (the Avesta has nothing one way or the other). On one side there is the official view that planets were malign; on the other we find them named heroes, as we see in the ancient Persian sources, including Ormazd himself. These names are simply equivalents for the Babylonian terms, like those which we ourselves have taken over through the later Greeks and the Romans, so that the whole system of Persian Magianism is but a late attempt to recapture the ancient and provide a true system of thought for the post-Avestan period. But it seems probable that the Magi played a part in the creation of Ahriman because of their irregular position, while the Parsees generally believed in the god of nature, and this is the same kind of discrepancy as in the views of mountains, which in Aryan and Semitic mythology alike were venerated as divine, but by the Magi were treated as places of the sun's burden, to be smoothed over when the regeneration came. It will be seen that most of these peculiar traits, by which we may distinguish the Magi from the people whose religion they adopted and amalgamated, are incompatible with either Aryan or Semitic affiliation, or at least do not suggest the one or the other. It seems a fair inference that they were aboriginal Medes, who, like the Elamites, belonged to neither of the two great races which divided Asia between them. To what stock they belonged we may not be able to say. L. H. Gray (Zypr. xxv. 1914) points out that there were Magas in India, about whom we hear in the Beaviana Puruska and the Bphastonhita; he thinks that these were probably Magians, accepting the general view of them which has been outlined above, and he believes them to be immigrants from Persia.1

It must be premised that the foregoing view of the ethnography of the Magi and their religious origins is to some extent new, and has not yet had the benefit of full discussion. The extent of approval expressed (by J. C. Cauburn, Dec. 23, 1935) and L. H. Gray (loc. cit.) encourages the writer to epitomize here the thesis set forth in his Early Zoroastrism, ch. vi. and vii. (of also K. G. F. and Chelsea, 1910, 1910) of 590.

4. Pursuing this thesis further, we are led to credit the Magi with having adopted that which is fairly called "dualistic" in Persiai. There is nothing really

1) It may be noted that a str. Maga cannot be directly translated into Greek with "Magus"; but Magi may be translated from a foreign word with altered declension (the form Maga also occurs in the Brani. text). This would imply an Iran. origin, which suits our theory. See, on the Magas, art. URABANIS and MANDAN.
that in Plutarch's quotation from Theopompus\(^1\) we should translate ‘Iades is to be depicted,’ which agrees with the other accounts of the testimony of Theopompus. The absence of any doctrine of immortality in Tobit can hardly be regarded (as in Moulton, p. 410) as an argument against Ahriman.\(^2\) The practice is entirely absent from the Avesta—a fact that does not discredit Plutarch, but only shows the survival of distinct usages among the Magi, whose genius is well suited by the mechanical division of the world into creations of Ormazd and creations of Ahriman. This is practically absent from the Gāthās, and even from the Yaštās, where a pure Iranian nature-worship shows small sign of influence from Zarathushtra on the one hand or the Magi on the other. The prose Avesta (excluding the early Gāthā ḫaŋkhahûići)—which by the loss of metre and the presence of much Gathic grammar in its own utterance (in a virtually dead language—is full of this dualism. Even words have to be distributed between the two camps; different terms are used for the human and divine, etc. in Avesta-worship, and those of an Ahrimanian. Every yazata has a deific opponent; but we note that the balance is imperfectly completed, and that the structure, often of a late origin and vague, functions, so that we should suppose the work of correlation to have been rather half-heartedly undertaken as a concession to theory. The type of this new assimilation is vastly different from that which apparently called forth the declaration of Is 46\(^5\). The presence of such a system in Babylon during the Exile suits our view of the Magi as shamans exercising influence far beyond their own land of Media; and the presumption adds something to the case for recognizing the Rab-Mag as an avšogyān. We may observe that, if Zoroastrianism emphatically denied this dualistic assigning of darkness to an evil demonise, Zarathushtra himself was no less clear in his claim that Mazda made the night as well as the day (Yaś. xlii. 5). People are reduced mainly to conjecture when we ask what was the Magian eschatology. That death must be abolished if Ormazd is at last to conquer Ahriman—foru-mahrēna, 'many-slaying,' accustomed to his stand in Dīstān—Avesta epithets to the Magi, a natural inference from their first principles. We know, further, that they pictured a regenerate world in which such asymmetrical features as mountains would disappear, and the earth would become a 'sleepless plain.' But how far they pressed their form of the doctrine of immortality we have no means of knowing. Our early Greek witness, Theopompus, according to an important statement of Diogenes,\(^3\) declared that the Magi taught the future resurrection of men to a deathless existence. This excellent 4th. cent. authority may, of course, be describing only the doctrine of Fire-worship in his religion, in which case even the Magi were its long-established priests. But the extract apparently connects this immortality with a doctrine that looks rather characteristic of the Magi themselves. The reference of late to Plutarch, already quoted, is ordinarily taken as silent as to any doctrine of a resurrection among the Magi. But E. Böök (Die Urowandhâch der jañat-christi, with the postscript Urowandhâch des babyl. Alten, 1905, p. 102) argues

1 De Is. et Osir. 46: 'Zoroaster the Magus... taught them to sacrifice to the other (Abrahamic) offerings for averting ill, and things of gloom.' The blood of a wolf is specially mentioned. The creation doctrine of Zoroaster is thus described (Kisch, A. M. Zoroaster, p. 330): 'The Magi, besides having a beginning, have a cessation, too.' See Moullon, pp. 455, 453 f., for a full discussion.
MAGIC (Introductory).—1. History of the term and meaning. In any general treatment of the subject of magic the problem of its definition must occupy the chief place, seeing that it constitutes a veritable storm-centre in the anthropological and religious world. And yet it so often happens when a word belonging to the common language, and used in vague and conflicting ways, is taken over by science that it may correspond to some precise concept, theory, or interest in different and at times incompatible concepts claim exclusive rights over the same technical term; so that, if they are at all equally matched, the term becomes for the time being ambiguous, i.e., it answers to more concepts than one. Something of this kind has occurred in regard to the word 'magic.' It may be instructive, then, to begin with a glance at its meaning as a popular expression. It is, of course, the literal descendant of the Gr. μηχανή and the Lat. magia, which in their strictest sense refer simply to therapeutics, and various practices of the Persian Magi, or parts of the sect of Zoroaster, in the form in which they became known to the West (see art. MAGIC). Such matters, however, being both foreign and ill-understood, would naturally be more or less suspect. Hence the word tended from the first to carry with it the unfavourable associations summed up in the notion of witchcraft (see, for instance, Hesychius, s.v. γιατρός, which he identifies with μηχανή, and Pliny, H.N. xxi. 11; and for further references, cf. H. B. L fond in, in Barthen-Saglio, s.v. "Magia"). These associations the equivalent words in the various languages of modern Europe have never lost. Even the attempt to rehabilitate magic as natural science in its operative aspect (de Augentius Scientiarum, iii. ad fin.) proved quite abortive. Thus it comes about that the modern anthropologist in attributing magic to a person or group of persons has to do without the same time implying that it is something inferior and bad—something that, however prevalent it may be, belongs to the lower levels or even to the pathology of mind and society. A survey of representative views on the subject will bring out the fact that, in this respect at least, most, if not all, theories tend to be at one.  

2. Representative views. As far back as 1870 E. B. Tylor laid down that the "confusion of objective with subjective connexion, ... so uniform in principle, though so various in details, ... may be explained by recalling the words of Rosetta and the more modern Roger and Chavannes, till it almost seems as though we were coming near the end of his list, and might set down practices not based on this mental process, as exceptions to a general rule. (The Early History of Menkind, p. 129.) He adds that the same state of mind will account for the same puzzling features of the savage, for instance, depending on the belief that the general assumption is that of the human being to be dominated by the forces that are uppermost in themselves. (ib. p. 133.) Such an attitude of mind he characterises as one of "gross superstition and delusion" (ib. 119), even while allowing that at a stage of development when human life "was more like a long dream" such a system of error was perfectly "intelligible" (ib. 139 f.). He pursues the same line of explanation in his later work, Primitive Culture, where magic is described as "occult science," i.e. a "pseudo-science," (pp. 119, 120). To the understanding of occult science is to consider it as based on the association of ideas, a faculty which lies at the very foundation of human reason, but in no small degree of human understanding" (p. 119). He adds a disquisition on the futility of magic arts, in which he maintains that "in the whole monstrous farago there is practically no truth or value whatever (ib. 135). Meanwhile, he holds that the laws of mind are as unchanging as the laws of chemical combination, so that "the thing that has been will be" (ib. 159). The symbolic magic of the savage and the magicalism are alike harmful superstitions born of fallacies to which the human mind is naturally prone (see ch. iv., præsum, esp. ad fin.). J. G. Frazer (The Golden Bough) maintains a position which in any respect is identical with that of Tylor. In the first edition (1890) he credits primitive man with two views of the world that exist side by side, the one view being that it is worked by personal beings acting on impulses and motives like his own, the other view amounting in germ to the conception of nature as a series of events occurring in an invariable order without the intervention of personal agency. The character is the view involved in sympathetic magic (GB 1, 9), though the savage acts on it, not only in magic art, but in much of the business of daily life (ib. 31). In the second edition (1899) Frazer lays far more stress on the "fundamental distinction and even opposition of principle between magic and religion," being influenced especially by the theories of H. Oldenburg (Die Religion der Völker, Berlin, 1894), F. B. Jevons (Introduction to the History of Religion, London, 1896), and A. C. Lyall (Aesthetic Studies, 1st ser., London, 1899). More than that, he is now disposed to affirm that, "in the evolution of thought, magic, as representing a lower intellectual stratum, has probably everywhere preceded religion" (GB 2, 1, p. 46). He still represents magic as "next of kin to science," since the two have in common the "general assumption of a succession of events determined by law." Magic is nevertheless "less the bastard sister of science." All magic is necessarily false and harmful; for were it ever to become true and truthful, it would no longer be magic but science. All cases of sympathetic magic resolve themselves on analysis into mistaken applications of the laws of the association of ideas by similarity and contiguity. "Legitimately applied these same principles yield science; illegitimately applied they yield magic" (ib. 62). Religion, on the other hand, is opposed in principle both to magic and to science, since it is based on the assumption that the powers of nature and of human life is controlled by personal beings superior to man. Towards such beings conciliation must be employed, whereas to exert mechanical control is the object of magic and science, though the former often essays to control spirits, treating them, however, exactly as
if they were inanimate agents (ib. p. 63 f.). Finally, the human race are assumed to have passed through an 'intellectual phase,' in which they 'attempted to force the great powers of nature to do their pleasure,' and had not yet thought of courting their favour by offerings and prayer. Such an 'age of magic' finally gave place to an 'age of religion only because mankind at length were led by experience to a 'tardy recognition of the inherent falsehood and barrenness of magic,' whereupon the more thoughtful part of them cast about for a truer theory of nature (ib. pp. 72, 75). In the third edition (1811) these main theses are retained, but the following scheme of the principal branches of magic (taken over from Lectures on the Early History of the Kingship, ch. ii.) is added, in accordance with the view that magic is simply misapplied association of ideas:

**Symphatic Magic**
*Law of Sympathy*

- Homoeopathic Magic
  *Law of Similarity*

- Contagious Magic
  *Law of Contact*

while the whole erroneous system, both theoretical and practical, which answers to the name of magic is classified under aspects according to the following tabular form:

<table>
<thead>
<tr>
<th>Magic</th>
<th>Theoretical</th>
<th>Practical</th>
</tr>
</thead>
<tbody>
<tr>
<td>Positive Magic</td>
<td>(Magic as a pseudo-science)</td>
<td>(Magic as a pseudo-art)</td>
</tr>
<tr>
<td>Negative Magic</td>
<td>Sorcery</td>
<td>Tabu.</td>
</tr>
</tbody>
</table>

(See GB*, pt. I, The Magic Art, I. 54 and 113.)

The view that tabu is a negative magic did not appear in earlier editions of The Golden Bough. Frazer holds that, if not the whole doctrine of tabu, at all events a large part of it, would seem to be but a special application of symphatic magic, with its two great laws of similarity and contact (ib. p. 111 n.).

E. H. Hartland (Ritual and Belief, London, 1914) writes on a full discussion of 'The Relations of Religion and Magic' (p. 26 f.). He insists at the outset that they spring from a common root.

'To express the emotional response to his environment, in his interpretation in the terms of personality of the objects which encountered his attention, and in their investiture by him with potentiality, atmosphere, orvoda, mana—call it by what name you will—we have the common root of magic and religion' (p. 56).

Correspondingly, magician and priest are differentiated from a common type, namely, the medicine-man.

Roughly and provisionally it may be said that the professional magician is he who in the course of the evolution of society, by birth, by purchase, or by study and practice in the conventional methods, has acquired the most powerful orvoda. Similarly, the professional priest is he who in these ways, or by prayer and fasting, has obtained the favour of the imaginary personages believed to influence or control the affairs of men—who has, in a word, the orvoda. The lines of the two professions in one person are not at all; it is probably fundamental' (p. 61 f.).

Hartland, while thus differing from Frazer on the question of origin, is disposed in other respects to follow the latter's method of delimiting magic and religion.

Magie covers the notion of power, by whatsoever means acquired, wielded by the magician as his own, and not as that of the god or of God; it is only obtained by supplication and self-abasement' (p. 93).

On his view prayers and sacrifices are magical processes just as far as a constraining power is attributed to them; and he asks, 'Have analogous beliefs in the magical powers of a rite even yet disappeared from Christianity?' (p. 87).

Religion, on the other hand, is'subjected to external systems, whose objects, so far as they are personal, are endowed with free will, are to be approached with true worship, and may or may not grant the prayers of their supplicants. Where the object is impersonal, or is but vaguely personal, it is none the less treated with reverence and submission, as by the transcending man; it is the object of an emotional attitude, activity directed towards it. Thus magic is an individual matter, even when it is not personal, tends to become so' (p. 89).

A. Lehmann of Copenhagen (Abertlauhe and Zauberere von den alttesten Zeiten an bis in die Gegenwart, Stuttgart, 1886) defines superstition (Abertlauhe) as any belief which either fails to obtain authorization from a given religion or stands in contradiction with the scientific conception of nature prevailing at a given time. Correspondingly, magic or sorcery (Magie oder Zauberere) is any practice which is engendered by superstition, or is explained in terms of superstitious notions (p. 61 f.). By insisting on the essential relativity of these two ideas he claims to have avoided many difficulties that puzzled former inquirers. For instance, if it be asked how magic is to be distinguished from miracle, the reply is that it is a question of standpoint. Aaron performing miracles when his Egyptian rivals are mere magicians (p. 9). For the rest, he finds two more or less independent theories to be equally at the back of magical practice, namely, the spiritist, which relies on the intermediation of personal agents, and the occultist, which calls into play mysterious powers of nature (p. 314).

H. Hubert and M. Mauss ('Essai d'une théorie générale de la magie,' in L'Anthropologie, 1901) start from the conception of rites. Rites are traditional acts that are efficacious in a non-mechanical way, thus involving the notion of mana (p. 14), or wonder-working power (p. 14: cf. p. 153). The formalist theory underlies the idea of the sacred as implied in a religious rite like sacrifice. A magical rite, though non-religious, involves ideas of the same order (p. 2 f.). The differential of magic and religion consists in the fact that they do not form part of an organized cult, and therefore tend to be regarded by the society concerned as illicit (p. 19). Thus religion and magic tend to stand to one another as two poles representing severally the social and the anti-social ways of trafficking with the miraculous. Finally, magic, as being always the outcast of society, becomes charged with all the effects of disrepute and rejection, and so is gradually differentiated from religion more and more. This very ingenious and weighty study of magic, to which a short sketch cannot pretend, has at least the merit of making it be remembered, from a strictly sociological standpoint, and throughout regards magic and religion not as phases of mind, but as social institutions, having as such a reality of their own determinable in terms of form and function.

Arnold van Gennep (Les Rites de passage, Paris, 1909) treats the magico-religious as an indivisible whole, distinguishing only between the theoretical and the practical activities which it comprises, and assigning the term 'religion' to the former and 'magic' to the latter. It is essential, in his view, to insist on the indissolubility of the relation between the theoretical and the practical sides, since the theory divorced from the practice passes into metaphysics, while the practice found on another theory becomes science. For the rest, the mysterious forces which underlie objects of magico-religious theory may be conceived equally well under an impersonal or a personal form; and, correspondingly, magico-religious practice, whether it issue in positive operations—viz., in the observance of tabus—may seek to deal with things either directly or indirectly through personal agents having power over the things, while the mechanism of association by
similarity and contact is involved in both cases alike. The theory is stated (p. 18) in tabular form as follows:

1. Theory (Religion)
   - dynamism (cosmist; impersonalist)
   - animism (dualist, etc.; personalist)
   - totemism
   - spiritism
   - polytheism
   - theism
   (with its intermediate grades).

2. Practice (Magic)
   - (Elites)
   - sympathetic contagious
   - direct
   - indirect
   - positive
   - negative
   (taboo).

Wilhelm Wundt (Völkerpsychologie, vol. ii. pts. ii. and iii., Leipzig, 1907-08) makes myth or belief the ultimate source of cult or ritual, since the latter is but the former put into practice. There is, however, a logical idea at the back of all rites, namely, the idea of soul; and from it are generated in succession three forms of cult, magic, fetishism, and totemism, which by reaction cause the evolution of soul to develop in a parallel manner. To deal only with the first of these, magic in its primary form consists in the supposed direct action of soul on soul, as when the evil eye is feared, while the incantations are supposed to perform no action from a distance, when the soul-influence makes itself felt indirectly by means of a symbol (ii. 46 f.). Thus Wundt is entirely opposed to the Fantasion theory that magic implies a theory of natural causation on the part of the savage. On his view, while ordinary events are accepted as a matter of course, extraordinary events, demanding as they do a theory that will account for them, are at first ascribed to the soul-power or will of a man, and later (when the stage of magic is transcended) to that of a magnified man, or god, similar soul-power or will being ascribed to animals at the intermediate stages of fetishism and totemism. Here the force must end the survey of representative views, those selected for examination at least summarizing the wide diversity of the notions which is sought for purposes of science to impose on a highly plastic, since popular, term. Now the purely verbal side of the question need not be a source of trouble. If the things are envisaged distinctly, the words may be trusted to look after themselves. Thus in the present case there are evidently different concepts answering to separate aspects of human life; and it will be sufficient for the present purpose if these aspects are discriminated, so that terminology may be given the chance of adjusting itself to the facts.

2. Magic as a general name for rudimentary cult.—On any theory of the evolution of religion which represents it as a single movement falling into distinguishable stages, there will always be a first stage of minimum development immediately preceded by a stage of what Wundt would call abstraction in proemio—a "pre-religious" stage, as it might be termed. Now, since the word "magic" means an unfavorable something, more natural than to dub magical whatever fails to come up to the evolutionary standard which religion is more or less arbitrarily taken to embody, "unhappily" matters whether, after the manner of Frazer, an age of magic is held to have preceded the age of religion, or whether, in the style of Wundt, magic is identified with the oldest form of religion. In either case magic answers to something to which is assigned an unfavorable, because inferior, place in the evolutionary scale as compared with religion at its most characteristic. Anthropological science, however, is becoming increasingly chary of constructing any such scale on lines so simple and so drastic. Human evolution is a tissue of many interlacing strands, and, again, the savage of to-day is no older or earlier than the civilized man, so that typological and historical primitivism cannot be identified offhand. At most, then, it is with the help of psychological and sociological considerations of a general type that a primordial stage of mind and society can be theoretically posited, out of which determinate religion may be shown to have emerged by some sort of cultural development. In so far as such considerations suggest that, just as Jourdain talked prose before he realized the fact, so the primeval savage acted before he thought about his action. Correspondingly, therefore, in the sphere of nascent religion there must have been a stage of cult or ritual (if so it may be termed), the product of sheer unreflective habit, which preceded the growth of the ideating habit by a better account of what was being done. Certain recurrent situations in the social life—and, as for the individual life, it is wholly subordinate to the social so long as mere gregariousness prevails—the social causes of emotional intensity. The emotions must find a vent somehow. This they do either through activities directed to practical ends, such as hunting, lighting, and love-making, the performance of which is the performance of the emotion itself at its most intense. In either case the emotion impels towards the activities in question all sorts of more or less functionless accidents; and the presence of these unaccountable details helps to make the whole performance seem mysterious to the person who is still more to the civilized onlooker. When the activity is of the directly practical kind, say, hunting, whereas the tracking, the killing of the game, and so on, explain themselves, the only thing enjoined by custom which do not explain themselves so readily—for instance, wanting such and such a garb, uttering certain words, and the like—may well seem to call for an indication that it is the unthinking savage, who will at least translate his sense of the value of custom into the vague doctrine that there is 'power' in these things, that they 'work.' When, on the other hand, the activities belong to those of the secondary type which are not immediately practical, constituting 'proreptic' rites, as they might be termed, which, while affecting emotional relief, act likewise on the whole as preparations for the business of life—very much as play does, in the case of the young—then accretions in the way of accidental features due to custom are likely to be inasmuch as there is no discipline of hard fact to impose bounds on the action. Meanwhile, in proportion as these secondary activities conformed to the same stimulus as the primary activities of which they are the byproduct, as for instance, when the hunting interest overflows into a pantomime rehearsal of the chase, they will wear an imaginative appearance, though in reality little more than simulations of things. When, however, an ex post facto justification of them becomes necessary, it is quite natural that the doctrines that they have 'power' should involve even less that their seemingly initiatory character has something to do with their efficacy. It is putting the
MAGIC (Introductory)

cart before the horse to say, as Frazer seems to do, that the belief that 'like produces like,' or what he sometimes calls 'the sympathetic principle,' is, on the contrary, a symbolic ritual — a more or less realistic reproduction of some practical activity — that generates the doctrine of 'sympathetic' causation in one or another of its forms. As a matter of fact, the so-called symbolic rites usually include all manner of details the mimetic bearing of which is at least not obvious; and the generalization that an 'age of magic' indulses in rites which are symbolic and sympathetic throughout and through is reached by picking out the abstract element of imitativeness which runs through primitive cult (and to no small extent through the more advanced types of cult as well), and ignoring everything that is like nothing but itself, yet forms just as persistent a part of the approved ritual. If, then, we are going to use the word 'magic' in general, let us at least identify the magical quality, not with the imitativeness, which is a secondary feature, but with the customariness, which is the real core of the value attaching to these non-utilitarian accompaniments of the more exciting moments of the practical life — these 'superstitions,' as the civilized colonists often call them in the rest, in so far as these relatively undirected discharges of the social energy need any supporting doctrine, they would seem to find, not in any philosophy about like producing like, and so forth, but in the history of thought — but in vague notions of the mana type (see MANA). In other words, the savage comports himself with no theory of how the magic practices work, but is content to feel and know that they work — that, despite all appearances to the contrary (since their non-utilitarian character may be supposed to be spread gradually), they have power and efficacy in them or behind them. It is just this faith in them, we reason, that distinguishes nascently religious practices from such as are merely aesthetic. The former are so closely related to the practical activities that a sense of their contributory value runs through them, and they thus suggest and overshadow practice in all sorts of ways that make for hope, courage, and confidence, whereas aesthetic enjoyment, however intense its source, does not thus point beyond itself. It remains only to ask whether 'magic' is a suitable word for the designation of the most rudimentary type of cult. On the contrary, we may put this justly for the evolutionist to apply a term redolent of disparagement to what on his view is a genuine phase of the serious life as lived under certain conditions of culture. It is far too question-begging to predicate religion throughout (unless, indeed, one is prepared to follow van Geenep and predicate magic throughout as a general name for the practical side of religion — which is surely an abuse of language). The science of comparative religion, if it is to do its work properly, must impartially embrace the cults of all mankind in its survey.

An observation may be added for the benefit of the field-worker, who, as a rule, has to take over his classificatory apparatus ready-made from the hands of the theorist. If such an one has learnt to identify magic with the sympathetic principle or with those early forms of cult in which this principle appears to predominate, he will be inclined to label his collections of specific ceremonies 'hunting magic,' 'agricultural magic,' 'ritual magic,' and so on. But it is just as easy to speak of hunting and agricultural 'rites' or 'ritual,' and it is much more likely to lead to an unprejudiced description of all the relevant facts, whether they be of the sympathetic order or not. So, again, falses can be better treated as a part of the ritual, namely, as observances of negative prescriptions, which will invariably be found to form one context with sundry other positive prescriptions; to make them a part of magic is neither necessary nor even natural. The proposition is the more obvious the nearer it is to speech. It may even be said to be now a recognized working principle that the first-hand observer should class all magico-religious phenomena under one general heading, and leave the theorists to determine how far, and along what lines, the differentiation of the magical and religious elements involved in the complex assemblage to be pushed (see Notes and Queries, p. 19)." The Royal Anthropol. Institute, London, 1912, section on 'The Study of Magico-Religious Facts,' p. 261.)

4. Magic as a name for the black art and allied developments. — The view which has just been discussed and deprecated, that identifies magic with an rudimentary cult as a whole, may be said to draw a horizontal line from the former rest, in so far as these relatively undirected discharges of the social energy need any supporting doctrine, they would seem to find, not in any philosophy about like producing like, and so forth, but in the history of thought — but in vague notions of the mana type (see MANA). In other words, the savage comports himself with no theory of how the magic practices work, but is content to feel and know that they work — that, despite all appearances to the contrary (since their non-utilitarian character may be supposed to be spread gradually), they have power and efficacy in them or behind them. It is just this faith in them, we reason, that distinguishes nascently religious practices from such as are merely aesthetic. The former are so closely related to the practical activities that a sense of their contributory value runs through them, and they thus suggest and overshadow practice in all sorts of ways that make for hope, courage, and confidence, whereas aesthetic enjoyment, however intense its source, does not thus point beyond itself. It remains only to ask whether 'magic' is a suitable word for the designation of the most rudimentary type of cult. On the contrary, we may put this justly for the evolutionist to apply a term redolent of disparagement to what on his view is a genuine phase of the serious life as lived under certain conditions of culture. It is far too question-begging to predicate religion throughout (unless, indeed, one is prepared to follow van Geenep and predicate magic throughout as a general name for the practical side of religion — which is surely an abuse of language). The science of comparative religion, if it is to do its work properly, must impartially embrace the cults of all mankind in its survey.

An observation may be added for the benefit of the field-worker, who, as a rule, has to take over his classificatory apparatus ready-made from the hands of the theorist. If such an one has learnt to identify magic with the sympathetic principle or with those early forms of cult in which this principle appears to predominate, he will be inclined to label his collections of specific ceremonies 'hunting magic,' 'agricultural magic,' 'ritual magic,' and so on. But it is just as easy to speak of hunting and agricultural 'rites' or 'ritual,' and it is much more likely to lead to an unprejudiced description of all the relevant facts, whether they be of the sympathetic order or not. So, again, falses can be better treated as a part of the ritual, namely, as observances of negative prescriptions, which will invariably be found to form one context with sundry other positive prescriptions; to make them a part of magic is neither necessary nor even natural. The proposition is the more obvious the nearer it is to speech. It may even be said to be now a recognized working principle that the first-hand observer should class all magico-religious phenomena under one general heading, and leave the theorists to determine how far, and along what lines, the differentiation of the magical and religious elements involved in the complex assemblage to be pushed (see Notes and Queries, p. 19)." The Royal Anthropol. Institute, London, 1912, section on 'The Study of Magico-Religious Facts,' p. 261.)

(a) Magic as the rival of religion. — Starting once more from the fact that the word 'magic' tends to stand for something mysterious and supra-sensible in the modern or superstitious sense, it is possible to treat magic as a general name for all the bad kinds of trafficking with the occult and supra-sensible in vogue in a given society, while, conversely, religion may be taken to comprehend all the good kinds of trafficking. Obviously the power of bringing wonders to pass is a two-edged sword, since surprising things may happen for evil and for good while, again, immoral as well as moral persons may seek benefit from miracle. It is, indeed, eminently characteristic of ideas of the mana type that they are, from a moral point of view, ambiguous, overweening, and a source of đang the efficacy of rites, whether they be beneficent or maleficent in their intention (see MANA). Now it is easy to see how rites of an ill-intentioned kind will come to be practised as ill have efficacy imputed to them. Hate, greed, and the other types of anti-social attitude being more or less endemic at all levels of society, they are bound to find expression in habitual activities that assume the character of mystic rites in proportion as they abound in accretions and in secondary activities of the expositive order, such as cursing in set phrases or depicting an absent enemy in pantomime. Moreover, the very fear which causes and makes awake the breasts of those against whom they are directed is enough to create an atmosphere in which the natural seeds of black magic cannot but germinate. The universal dread of the evil eye illustrates very well how the responsibility for the existence of a belief in sorcery often rests with the credulous victim just as much as, it may be, with the malevolent aggressor. Anthropological literature is full of striking examples of the tendency which W. E. Roth (North Queensland Ethnography, Bulletin no. 6, Brisbane, 1905, p. 28) calls \textit{chanatomania},
namely, the suggestibility leading sooner or later to death on the part of one who satisfies himself that he is doomed. Both has had personal experience of genuine or faked cases of death, among the Queensland natives. Thus it comes about that, by an extension of the same line of thought, 'evil magic' becomes the stock explanation offered for all sorts of accidents to nature medicine: 'the illness weighs upon his mind, and after a time he becomes more and more moody, and then the disease has been called "poling" - the magungi (death-bone) at him. I.e. that a "bone," pimple, itch, etc. has been put inside him and his blood removed.' (W. E. Both, Ethnological Studies among the North-West Central Queensland Aborigines, Brisbane, 1897, p. 164).

Indeed, it has often been observed that the savage scarcely recognizes the fact of 'natural' death, so ready is he to impute the event to the sinister arts of some particular individual or at least to the machinations of persons unknown. (cf. art. Life and Death: Primitive, § 7.) From these vague attributions of ill-will to one's neighbours it is but a step to the conception of an evil magic independent of the will and intention of any person at all. Various more or less impersonal forms of evil—such as the arunogwilha of the Arunta (Spencer-Gilpin), London, 1896, p. 545 n.), the opgen of the Eingana (Spencer & Gillen, op. cit., iv. 1902 37 n.), or the bals of the Malays (W. S. Skeat, Malay Magic, London, 1906, p. 94)—are regarded as malign and destructive agencies in their own right, very much as one takes the blame of the plague or of the influenza. In short, there is always more or less of black magic 'in the air' for the panic-ridden savage. For this reason, and seeing also how much the healer of diseases and the exorcist of demons do foster the evil reputation of the magician by their highly-coloured accounts of the dreadful arts which it is their professional privilege to be able to counteract, one is almost tempted to say that the sorcerer is a mere bogy, the creation of abject fear wedded to ignorance and credulity. But this would be to go too far. There seems good evidence that in Australia, men and women, despite the fact that black magic practised within the group is normally held to be punishable by death, wreak their vengeance in this way on their private enemies. Both own black servants, a mere layman, actually dared to point the bone at a native doctor, the latter dying about a fortnight later (N. Queensland Ethnography, Bull. no. 5, p. 36). At least, there may be hundreds of cases in which there are far more false accusations; and, in short, generally, in every witch-haunted society, whether it be native Australia or 17th cent. England, that the proofs of witchcraft mainly rest on an argument from effect to cause.

As for love-magic, it may not seem at first sight to have the anti-social character of the magic of hate; but, if closely observed, it will be found on the whole to minister to hardly less disrupting purposes. Thus among the Arunta of Central Australia such magic is chiefly resorted to in order to do bodily harm to a woman. It is to be despised, according to native ideas, it is merely a case of one tribal husband trying to entice the woman away from another tribal husband, so that, as Spencer and Gillen say, 'it is a breach of manners but not of custom' (p. 544). Even so, however, it would seem to be extremely liable to lead to a general fight within the group, or between one local group and another, from the material tendency not to be bound in the long run to become tolerably manifest.

So much for what are perhaps the clearest instances of types of ritual acts generated by passions and desires which society is bound to try to suppress in the interest of its own self-preservation. Such rites can be placed in a more or less determinate class by themselves, whereas ever against this class can be set in contrast another class of rites, entirely similar as regards the general nature of their mechanism, but embodying motives of an entirely different order. Broadly speaking, all public rites have this common quality of being lieit and reputable, since the fact that they are the recognized custom of the community is taken as a sufficient guarantee that they exist for the furtherance of the common weal. Thus the totemic ceremonies of the Central Australians, the object of which is the increase of the food-amines, are exactly in the same place in the life of the people as is filled by the rites of the Church in a Christian country. Hence E. Durkheim (Les Formes elementaires de la vie religieuse, Paris, 1912) takes the totemic system of Australia as the typical instance of an elementary religion, whereas Frazer, adopting what has been termed the horizontal line of division between magic and religion, would assign these totemic rites wholesale to the age of magic. Indeed, no better instance could be cited to illustrate the incompatibility between the horizontal and the vertical classification of religious conceptions. It is not only the totemic man, exactly in the same place in the life of the people as is filled by the rites of the Church in a Christian country, but also the magico-religious idea of the Primitive, as stated by Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'It was the community, and not the individual, that was being thought of in the making of the permanent life-size image of the totem. It was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:

'If it was a national not a personal possession that was taught by ancient religion. So much was this the case that in purely personal concerns the ancestors were very apt to turn, and to be regarded as dead and illogical'. According to Robertson Smith (The Religion of the Semites, London, 1894, p. 293 f.), it well-nigh amounts to this:
sorcerer and priest often meeting in the person of the medicine-man. The rites are of the same general pattern, whether they be manual or oral. Leading to ideas of personal and spiritual upstanding with the rite to conform to a common type, now to that of mana and now to that of spirit (cf. Huvelin, op. cit. p. 2). After all, it is no wonder that differentiation should so naturally have been brought about; and that, so long as society is represented by an aggregate of small groups living in a state of perpetual discord, what would be evil if practised on a friend becomes good when practised by the same person on the people past the way. Or, again, society may halt as it were between two ethical opinions, with the result that ritual practices of contradictory intent may obtain something like equal toleration; the moral status of love-magic was especially ambiguous, so that, for instance, among the Kumai tribe of Victoria, where marriage by elopement verges on the position of a recognized institution, while these who assisted those who wished to elope, there were other medicine-men who aided the pursuing kindred to discover them. (A. W. Howitt, The Native Tribes of S.E. Australia, London, 1877, p. 130.)

The man in his capacity of tribal head-man may use his supernatural power to punish offenders against the laws of the group, such as the novice who betrayed a plan to his initiation companions; or the man who attacks another by means of evil magic; but he will likewise in his private capacity use his power against his enemies, and will even bring about on the death of his power of Darmakamali, the great anthropomorphic god of the mysteries, the very embodiment of all that is most religious in the eyes of the tribe (Howitt, pp. 543, 592). Cleanly, it is the act of the differentiated societies that we must look for an accurate evaluation of the purposes embodied in rites, leading sooner or later to their organization in ritual systems that henceforth to some extent develop independently. Organization and system, however, are terms that perhaps are hardly applicable even to the later developments of black magic. It is religion that has all the organization to itself because public approval affords it every chance of free expansion. Magic, on the other hand, as the enemy of organized cult and, indeed, of the social organization as a whole, must lurk in dark places, and develop only by internal systematization, however merely as does a rubbish heap, by the casual accumulation of degraded and disintegrated rite of all kinds. At most it may affect a certain definiteness of form by imitating religious ritual in a spirit of blasphemous parody, as in the case of the black mass. On the whole, however, it is utterly deficient on the side of theory, and consists simply in a congeries of practices which by perversion and distortion have lost most of the meaning that they once had. Only in this sense, then, do they rest on the principle of compulsion as opposed to compulsion, that being mere rite, lacking the support of any consistent scheme of thought, they have to depend for their validity on the bare fact that they appear to work. Religion, on the other hand, is an ethically organized body of knowledge and practice which tends to inculcate the same virtues and to develop the same ideals. On the whole the tendency to impute value and efficacy to its ritual as such, is free to develop an ethical conception of the godhead in which the action of mere power is gradually converted into that of a power that makes for righteousness, and is therefore to be moved and conciliated not by rites but by righteous conduct. (b) Magic as the rival of science.—The view advanced by Frazer to the effect that the fundamental conception of magic is identical with that of modern science (GB, pt. 1, The Magic Art, i. 230) will hardly bear close inspection. The magician surely does not postulate that 'the same causes will always produce the same effects.' On the contrary, his art is based on the supposed possibility of miracle and on the idea of supernatural causation as contrasted with normal causation. In other words, he seeks to help out ordinary action by means of an increment of power borrowed from a supra-sensible world, and further by means of characterizing magic as 'occult science.' It makes a fatal difference if, after the manner of Frazer, this qualification be omitted. Magic thus stands in far closer affinity with religion than with science, inasmuch as religion and magic equally consist in dealings with the supra-sensible and differ not as regards the means employed but simply in regard to the ends pursued, since the one tries to bring blessings to pass by means of miracle, and the other to bring curses. On the other hand, at no known stage of his evolution does the existence of man consist in one continuous round of mystic practices. It is mainly at the crisis, periodic or occasional, in the social and individual life that the need to draw on unseen sources of support is felt. In the intervals of the workaday world of affairs, and in the absence of immediate and spontaneous perception, stands in the foreground of attention; and this is the world in which science has always been at home. Chipping a flat stone against a flint is an act of nascent science, whereas bringing up a quartz crystal mysteriously from one's inside is a magician's religio-logical proceeding belonging to quite another order of experience. But the rate of modern science has originated in technical processes of a directly utilitarian and 'lay' character. Thus European geometry would seem to be the outcome of a simple and more or less differentiated societies that we must look for an accurate evaluation of the purposes embodied in rites, leading sooner or later to their organization in ritual systems that henceforth to some extent develop independently. Organization and system, however, are terms that perhaps are hardly applicable even to the later developments of black magic. It is religion that has all the organization to itself because public approval affords it every chance of free expansion. Magic, on the other hand, as the enemy of organized cult and, indeed, of the social organization as a whole, must lurk in dark places, and develop only by internal systematization, however merely as does a rubbish heap, by the casual accumulation of degraded and disintegrated rites of all kinds. At most it may affect a certain definiteness of form by imitating religious ritual in a spirit of blasphemous parody, as in the case of the black mass. On the whole, however, it is utterly deficient on the side of theory, and consists simply in a congeries of practices which by perversion and distortion have lost most of the meaning that they once had. Only in this sense, then, do they rest on the principle of compulsion as opposed to compulsion, that being mere rite, lacking the support of any consistent scheme of thought, they have to depend for their validity on the bare fact that they appear to work. Religion, on the other hand, is an ethically organized body of knowledge and practice which tends to inculcate the same virtues and to develop the same ideals. On the whole the tendency to impute value and efficacy to its ritual as such, is free to develop an ethical conception of the godhead in which the action of mere power is gradually converted into that of a power that makes for righteousness, and is therefore to be moved and conciliated not by rites but by righteous conduct. (b) Magic as the rival of science.—The view advanced by Frazer to the effect that the fundamental conception of magic is identical with that of modern science (GB, pt. 1, The Magic Art, i. 230) will hardly bear close inspection. The
MAGIC (Introductory)

Among the specifics in common use among the natives observed by him, Roth enumerates more than forty different plants, for some of which at least genuine remedial properties can be claimed. Among the commonest of these are bleeding, massage, poultices and fomentations, dressings for cuts, the use of splints for fractures, and so on, are 'lay' methods of treatment which rest on a basis of what we would call scientific theories. But the fact remains that these are recognized as 'science,' i.e. a more or less organized common sense. At the same time, the lay mind is likewise addicted to what the modern doctors would regard as pure superstition, such as reliance on charms, amulets, the sucking-string, etc. But at any rate the atmosphere of mystery with which the professional faith-healer surrounds the exercise of his craft is absent from these applications of communal lore to the ills of life. Further, the professional enters into competition with the layman in order to demonstrate how superior his wonder-working is to the humdrum procedure of the ordinary folk-medicine.

Thus both religiously note that 'among the Balinese blacks, there are indications of a desire on the part of the medicine-man to claim a share in the cure, with a corresponding reward.' The common cure for snake-bite being a vapour-bath, which apparently is the only thing every man undertakes to help it out by operating on the snake. 'The doctor himself goes out at once, after the accident has happened, is shown where the snake lies hid, digs it out, and lets it glide away a few feet before commencing to pit it with sticks. During this process the medicine-man gradually becomes harmless, when it is carried back to camp, where the medicine-man, turning his skin half-way inside out while still alive, throws it into water, and so makes an end of it. It is needless to say that no layman is allowed to witness any part of this procedure.'

It only remains to add, in fairness to the medicine-man, that a reputation for magic in the sense of a more or less bad and anti-social kind of wonder-working is, such as relying on charms, etc., that he is a professional and hence has the public against him, according to the principle that whatever is private in rude society is suspect. As Havelin points out, 'It is long as society remains undifferentiated, all custom rests on the common belief and wears a religious character, so that every manifestation of individuality is destitute of sanction, when it does not actually amount to a criminal offense.'

Havelin further emphasizes that social organization begins to come into existence through the division of labour, individual activity is oblige to disguise itself under a cloak of religious ceremonies, and that the logia of the primitive character, not only in the eyes of others, but even in his own eyes, since others suspect, while he himself is obscurely conscious, that powers and practices of which originally came into being for the public service are being exploited for private ends (Havelin, p. 46). Whether it be the professional doctor or the professional smith, his right to be a specialist has been purchased at the cost of seeming, and being, something of a humbug.

Passing to the subject of divination, we have an even clearer case of a pseudo-science, since, whereas faith-healing has been to a certain extent purged of its supernaturalism and incorporated into modern medicine, divination has no part or lot in the science of to-day, unless we detect its aftermath in the celebrated postulate that the goal of science is prediction. On the other hand, divination has in certain of its developments all the appearance of science so far as concerns the organization of its principles and the amount of genuine observation. It is also to be noticed that here the practice of the art depending on this body of knowledge was thoroughly respectable, being, in fact, a branch or department of the official religion (see DIVINATION [Assyro-Babylonian]). It is not, in fact, until it migrates into Europe that the Babylonian astrologer becomes a professional victim of theologian, and the opposition between the two becomes apparent. Again, at a lower stage of social evolution divination can fill the place of science in so far as it calls out the reasoning power of the mind and supplies some sort of intellectual gymnastic. Thus H. A. Junod, a missionary, who gives an admirable account of the use of the divinatory bones among the Thonga of S. Africa, spends long hours with his native teachers trying to acquire the principles of this system of theirs which they call 'The Word,' and vaunt to be superior to the missionary's Bible:

"So I had as opportunity of reaching the depths of the Bantu mind, that mind which has perhaps invented nothing more elaborate and more magical than the divinatory system. Of course no sensible person would for a moment believe in the objective value of these practices. Yet their astrologers have ascribed to them a more real value than they have to Chiroiomy, Fortunetelling, and all the other "mammis." But I am obliged to confess that the Thonga system is far more clever than any other which I have met with, and that it admirably answers to the wants of the Natives, as it comprehends all the elements of their life, photographs them, so to speak, in such a way that indications and directions can be obtained for all possible cases" (The Life of a South African Field Missionary, p. 72).

It remains to show how science in the modern sense has managed to shake itself free of its rivals, the pseudo-sciences. As far as relates to what has been called 'the European epoch of the human mind,' the mother of science is undoubtedly ancient Greece. There the human spirit shook itself free of the domination of the magico-religious, thanks to its interest in the things of the world. 'Between Homer and Herodotus, Greek Reason has come into the world. . . . Man has become the measure of all things; and things are worth observing and recording according as they are as they do, or do not, amplify human knowledge already acquired, or supply us with fresh attempts to classify and interpret them.' In this high meaning of the word all Greek records are utilitarian, relative to an end in view; and this end is ever netherpoetic, it is nothing less, but it is also nothing more, than the Good Life, the Wellbeing of Mankind' (J. L. Myres, in Anleitung zur Geschichte der Philosophie, ed. Macth, Oxford, 1909, p. 125).

There is no violent breaking with the old-world rituals and the associated beliefs; but colonization, trade, and the growth of science itself begat a secular frame of mind which dismisses theological prejudices in so far as they conflict with technical improvements. 'All allusions are from Gaetan's; 'writes Hippocrates, 'no one of them being more divine than another, or more human either, but all alike from God's point of view, but growth, and nothing comes into being without a process of growth.' Wherefore he turns without more ado to the study of these physical causes (cf. p. 251). Meanwhile, in philosophy, which at first stands by 'nature' something eminently supernatural in its potency for making wonders happen, there gradually develops a scientific tradition by the side of a mystic tradition, the former of which affirms the reality of the many things of the sense, world as against the reality of the one transcendent world-soul conceived by the latter (cf. E. M. Cornford, From Religion to Philosophy, London, 1912, p. 144 f.). The former view culminates in the atomism of Democritus, which has prevailed in the sphere of physical science until the present day. Now this whole scientific movement is opposed in spirit to magic and religion alike. It contradicts the whole tenor of the magico-religious type of procedure whether by manual or by incantation and hence cannot be identified or equated, after the fashion of Frezer, with magic regarded as equivalent to the earliest phase of cult in general. Nor, again, has it a real affinity with the various parallel developments, save in so far as many technical processes undertaken by experts are at first more or less suspect as private exploitations, as has already been explained. Natural science
by association with the productive arts has taken into its hands the entire control of the mechanical and material sphere of human life, and within this sphere will brook no rival. In the moral sphere, on the other hand, it shows no signs of making headway against the claim of religion to be the supreme authority. Meanwhile, neither science nor religion can afford to tolerate the anti-social and immoral practices the man who tries to make a living out of the credulity and idle fears of weak humanity. In practice, however, both find it to distinguish between the delinquent and the innovator, so that the line between evil magic and charlatanism, on the one hand, and mere heterodoxy, on the other, tends to be even more of a somnolent fluctuating kind. As for black magic, it has almost disappeared from view in civilized society. As the folklorist knows, however, a permanent possibility of demonizing superstition lurks in human nature, and only education in regard to both physical facts and moral truths can keep the monster down.

R. R. MARRETT

MAGIC (Arabian and Muslim).—The word used in Arabic for this notion is *sifr*, connected with the verb meaning 'to produce illusion' on the eyes (Qur'., vii. 110); it seems, therefore, to be in origin the causative of the verb *hârâk*, 'to be bewildered,' and is explained by the verb 'to frighten' (i'tikhaba), whence the whole phrase resembles *mâyâris wa ilâdâr* in As 88. It is probable that the Hebrew *shârad*, used twice by Isaiah for 'conjure away,' is identical, and the Armenian *shkronnasc*, 'marvel,' may be borrowed from this word. The passage in the Qur'an which contains most information on the subject is ii. 96, where it is stated that the *sifr* was revealed to the two angels in Babel, Harût and Mûrût, who taught it to mankind, without concealing the fact that they were recipients of it; the *sifr* showed how to separate a man from his wife, i.e. was the contrivance of a love-philtre. Isaiah (47:1) connects the *shârad* with Babylon, which, according to classical writers also, was the heart of the magic region. *Tune* Babylon Persic liceat, secretae Memphisi Omne vehementer solvât penetralium /Magorum* (Lucan, Pharsalia, vi. 491); Haâtât und Mûrût seem from their names to be Arabian personifications of mischief and rebellion, with which their recorded operation corresponds. In the Qur'an, as might be expected, it is not clear whether the results of *sifr* are always subjective only or may be objective; and some commentators think both possible. When, therefore, a miracle is branded as *sifr*, it may be regarded either as an optical illusion or as an illusive magic or the employment of demons; it is true that Solomon employed them (according to the Qur'an), but this may have been a prophetic privilege. And a theological difficulty still remains, that the *sifr* was revealed to two angels, as what is revealed ought not to be evil. The orthodox view is that magic can be objective; but some Mu'tazilite doctors and some members of the Shâfi'ite and Ḥanâ'î schools took the other view; and even those who believed that it was objective thought that it could affect accidents only, and could not tranmum value.

The practice was forbidden, and, indeed, under penalty of death; Malik held that one convicted of sorcery should not even be given the option of repentance, whereas Shâfi'i confined the death-sentence to the case where examination of the accused proved him to be guilty of unbelief (Qastallâni, Commentary on the Masûlîn Ladhmiyyah, Cîrî, 1278, vii. 116). Acquisition of the theory was, however, permitted, and the agent, a duly in absentia on certain members of the community, as protection against those who practised the art.

The recognition by Islam of the existence of jinn furnished a basis for the belief in magic, to which, however, the attitude of the educated and of serious writers is about the same in most countries; it is not commonly recognized as an agent in the course of events, yet may well be admitted into tales of wonder and delight, whereas the superstitious may resort to it for a variety of purposes.

It figures on one occasion in the biography of the Prophet, when an illness was brought upon him by a Jew named Labi ben al-As'âm; according to one account, the latter obtained possession of some hair left on the Prophet's comb, which he hid with some other objects in a well; according to others, the object hidden was a string with a number of knots upon it. The latter version is doubtless suggested by the penultimate *sîrâ* of the Qur'an, which is a spell against eclipses and witches who breathe or spout on knots. The practice against which these spells are directed is similar to, if not identical with, those which are enumerated by classical writers (e.g. Lucan, vi. 460 ff.). Others, of which the Arabian Nights offers ample illustration, also has analogies in the literature of classical antiquity; the transformation of men into animals by a witch's potion is found as early as the Odyssey. In Arabic there is a special word for this process, *mâshî*. *Ujâj Khalifah* (Lecion bibliograph. it encycloped., ed. G. Flügel, London, 1835-58, iii. 584) classifies the various magical methods as follows:

The Indian consists in suspension of the soul; the Nabataean in the employment of spells thatlatable to the gods; the work in compelling the service of the spirits of the spheres and the stars; that of the Hebrews, Copts, and Arabs in mentioning names of unknown meaning—this method being a variety of that by inscription, those who employ it professing thereby to press into their service the angels who have power over the jinn. This last expression recalls Lucan's

*habeb hauc carinam certum imperio demn, qui mundum cogere, quiunici cognitor (poet i. 697 ff.)*

The classification cannot be maintained, though it is possible that the tendency in the case of the different nations corresponded roughly with the methods assigned; thus doubtless the theory that conjugal practice won command over the gods was carried to greater lengths by the Iranians than elsewhere, whereas the theory of mysterious words may be particularly Jewish, and the Hermetic
MAGIC (Babylonian).—For the purpose of this article we may regard the term 'magic' as containing practices which are supposed to be of such a nature that man is able by his exercise to control the unseen powers and force them to act in accordance with his own will. Without attempting to discuss the vexed question of the relation of magic to religion (see 'Introductory' section above), we may say that this generally accepted use of the term has great advantages for the classification of material. And it corresponds to a distinct contrast in attitude towards the supernatural. Magic may be said to be present wherever power over the unseen is believed to be inherent in the natural, whereas, according to the religious concept, power is derived from a background outside the sphere of man's deliberate control. When the term is used in this sense, it must be admitted that a great body of the religious beliefs and practices of the Babylonians and Assyrians should be more accurately described as falling under the category of magic.

It is true that, when reading some of the Babylonian religious compositions, one is struck by the resemblance which many of the phrases bear to ethical passages in the Hebrew Psalms and prophetic writings. Quoted apart from their context, such passages suggest an extraordinarily high standard of morality and great depth of feeling. But it is dangerous to judge any literature merely by extracts or anthologies; and, when studied in their own surroundings, they are at once seen to have a background that is largely magical rather than moral. To take a single example, the Babylonian penitential psalms and many of the prayers to the gods show that the Babylonians had a very keen sense of sin. The contrition and misery of the penitent are expressed with great beauty of metaphor; but it is essential to examine the precise meaning of the words employed, and not to read extraneous associations into them. In this connexion it is important to realize that the moral character of sin which we find emphasized in the Hebrew prophets is quite foreign to the Babylonian conception. In the collection of traditions by Muslim (Cairo, 1299, ii. 180-185) evidence is adduced to show that Muhammad sanctioned the employment of spells or magical prayers for treatment of the evil eye, snake-poison, and disease generally; the expert who employed the Qur'anic texts for this purpose might even charge a fee, out of which the Prophet would accept a royalty. The word rug-yah is employed for charms of this kind, and in the case of snakes it would seem, from a story told by Jabir (Zoology, Cairo, 1906, iii. 124), that their effectiveness depended on the loudness of the charmer's voice.

The name for collections of oracles is, as has been seen, Malakhim, and this word is applied to those prophetic works wherein the future is regularly read (e.g., the Book of Daniel), as well as to less authoritative books. Others were of the sort known as Consulting-books, i.e., books wherein the future could not be read by oral tradition, and to be learned only from the persons who performed them or from travellers who have made careful observations (e.g., E. W. Lane, Customs of the Modern Egyptians, London, 1839).

LITERATURE.—The authorities are quoted in the article. Cf., further, Divination (Musul.), Oracles and Amulets (Muharrm.).

D. S. MARGOLITH.
whose power or influence the sufferer had fallen, whether by his own act or through the machinations of a hostile sorcerer or sorcess. Such spirits and powers of evil were legion, and were ever on the lookout to inflict bodily harm on men. They might be ghosts of the under world, or gruesome spirits—half-human and half-demon, or, lastly, fiends and devils of a nature corresponding to, but lower than, that of the gods.

The sole object of the magical texts was to enable the priests to control and exorcize these demons, or to break in some way the malign influence which they exerted on their victim. And, in order to bring about a successful natural function—such as the ghosts of women who died in childbirth. As a rule, such spirits haunted ruins or deserted places, and, if a man wandered there, they might seize the man and plunge him in a sea of woe or doom. A spirit of this sort could also fasten himself on any one who had been in any way connected with him in this life, by the sharing of food with him or by the mere act of cutting drinking or dressing in his company. From these instances it will be seen that a man was liable, through no fault of his own, to supernatural attack, and precisely similar results were believed to be brought about by such ceremonial and moral offenses. To touch the chair or bed of a person already affected by such evil influence or ban was, according to the texts, quite as dangerous as committing a moral offense, such as theft, adultery, or murder, and the resulting condition of sickness or misfortune was the same.

In order to escape the ban and cure his sickness or misfortune, the sufferer had recourse to the magician, who, by his knowledge of magical words, prayers, and ritual, could invoke the help of the great gods, and so gain control over the demon itself, or, in cases induced by human intervention, over the hostile sorcerer or sorcess who had cast the spell. In a large class of texts prepared for the use of the magician their purely magical character is sufficiently apparent from their contents. In others, where the context refer more to the possible causes of his misfortune or the means to relieve it, the essentially magical character of the communications sometimes be detected in notices or 'rubrics' which give directions for their recital and for the performance of accompanying rites and ceremonies. For the rites prescribed were imbued with an intimate connexion with the subject-matter of the prayer or incantation. Sometimes the offerings and the accompanying rites have, to our eyes, only a vague relationship to the character of the god or goddess addressed. But in other compositions the media employed in the incantation are specifically named in the recitative, or liturgical, portion of the text. In fact, a study of the rubrics makes it clear that many present a certain general resemblance in giving directions for the recitation of the main text over something which is mentioned in the accompanying formulae. The relationship between text and ritual may be illustrated by the following group of rubrics from the Sixth Tablet of the Magia series, col. iii. lines 8-32, which give directions for the due recital of incantations on the Sixth Tablet of the series and the performance of accompanying rites.

(a) The incantation (beginning): "Thou art good, who in a pure place art born!" over a good offering shall thou recite, and upon the fumigation-bowl, which is at the head of the bed, shall thou place it.

(b) The incantation (beginning): "Come, my sorcerer or my enchantress!" over twelve pieces of sand shall thou recite, and upon the fumigation-bowl, which is at the head of the bed, shall thou place it; and with an upper garment shall thou envelop the bed.

(c) The incantation (beginning): "Come, my sorcerer or my enchantress!" over twelve pieces of sand shall thou recite, and upon the fumigation-bowl, which is at the head of the bed, shall thou place it; and with an upper garment shall thou envelop the bed.

(d) The incantation (beginning): "Come, my sorcerer, my witch, whose pains are over all the world!" over two caged locusts shall thou recite, and to the right hand of the enchanted man shall thou set them.

(e) The incantation (beginning): "Come, my sorcerer, my witch!" over a stone from the mountain shall thou recite, and in the court of the house shall thou lay it.

(f) The objects for ceremonial burning (incense), which belong to the incantation (beginning): "Ellil my head," all that are described as pools against locusts, shall he place together and make to go up in smoke. The incantation (beginning): "Ellil my head," shall thou recite.

This rite of the locusts, which may be regarded as typical of a great body of Babylonian ritual, will be seen, when examined, to be an obvious example of sympathetic magic. The locusts were set, one on each side of the sick man's door, to represent Lugal-girra and Meshal-tum, who, as gods of the watch, would be ready to pounce upon the sorcerer and slay her. The magic would work and the gods would act at the second recital of the incantation.

In many of the rites and ceremonies the use of fire was essential, and it would seem that, after the recital of the correct formulæ, the destruction of the objects collected by the magician for that purpose synchronized with the destruction or removal of the evil influence under which the patient suffered. The rites sometimes required substances of some value or parity, such as frankincense or myrrh, or gold or precious stones; and it is probable that, except for powerful or wealthy clients, the magician would make the same fragments do again and again. But the objects used by the magician also included plants, pieces of wood, various sorts of seeds, vegetables, dates, palm-splashes, sheep-skin, wool, etc.—all perishable substances which could easily be consumed. And in their use the sympathetic connexion between the destruction of the ban and that of the object is obvious. That this is the correct explanation of this whole class of ritual is clear from the destructive sub-section, in which the employment of images is prescribed in place of unfashioned natural objects or substances. The images were to be fashioned in human form, to represent the hostile sorcerer or sorcess, and the destruction of these by fire, to
the rectal of the correct formula, was obviously believed to synchronize with the destruction of the hostile person whose figure had been imitated. These images could be made of wax, honey, bitumen, silver, gold, or other materials. When metal was employed, we may assume that the mere passing through the fire was sufficient for the purposes of the magic. Evidence in favor of this interpretation is found in Baba. There is no indication that fire in Babylonia was sacred. There is no indication that fire in Babylonia was sacred. The fire was used to cleanse and purify the object. The magician engaged in exercising a demon from his patient, and, having gained control by the necessary formula, he transfers him to some object, which may be an animal or a plant. In one such case the medium is a pot of water, which is then broken and the water spilled; in another case a clay image is fastened to the patient's body and after being consumed, the image of a pig might be spread upon the sick man, and afterwards thrown out of the house. In these cases we have a physical transference of the hostile power from the sick man to the object employed. In other rites, such as the knotting of cords, the weaving and unweaving of coloured threads, and the like, it is not clear how far the physical action was believed to exercise a direct influence. It is possible that we shall explain such rites on the principle of imitation, which is the basis of sympathetic magic.

But it must be confessed that with regard to a considerable section of the ritual the writer is still not in a position to follow the underlying trains of thought. The large class of so-called medical prescriptions were, no doubt, essentially magical, and, although in some instances the substances prescribed may have actually had curative effects, the associations which led to their employment by the Babylonians are still obscure.

Most of our knowledge of Babylonian magic is derived from purely textual sources, for we have recovered but few amulets, in which we may be said to deal with magic in a concrete form. It is true that we possess several group of amulets, sprinkled with similar insulting to the plague, and intended to be hung up in houses to keep off the plague；we have also recovered the figures of human limbs, sometimes inscribed with incantations ; these, too, were doubtless employed in propitiation or defence. But the only magical apparatus, in the strict sense of the term, that has come down to us may be seen in certain rectangular plaques of earthenware, moulded on the face of the figure of a sick man lying on a couch, attended by the magicians or exorcizers, and surrounded by various hostile demons and protecting spirits or their emblems—arranged in horizontal registers. On the back is the large figure of a demon in relief, with his head usually protruding above the top of the plaque. From the subject of the reliefs it is clear that the plaques are to be classified under the general heading of sympathetic magic, but the precise manner in which they were employed by the magician in cases of sickness is not certain. Another class of objects, consisting of little clay figures of deities or birds, which were buried below the pavement in the main doorways of a temple or a palace, may be treated as magical in their application, being thought to ensure the safety of the structure, to check the special hauntings of foundation-deposits. It may be added that the magical beliefs and practices of the Babylonians survived their racial disappearance, and, largely through Jewish, Syrio, and Mandaic channels, contributed in no small degree to the great and composite body of medieval magic.

LITURGIES.—General treatises on the magico-religious practices of Babylonia and Assyria, such as M. Jastrow's Babylonian and Assyrian Mythology, 1890; A. H. Sayce, The Religions of Ancient Egypt, 1910; and W. Robertson Smith, The Religion of the Semites, 1894, have much to say on the liturgical side of the divinities. Some of these are dealt with in the special section of this article. For the most complete survey of Babylonian religious texts, see C. L. Tollaad, Das religiöse Leben im alten Babylonien, Leipzig, 1904; A. Hoehner, Das Religionswesen der alten Welt, 3 vols., 1905-11; and A. B. Bierhorst, The Mysteries of the Ancient Near East, 1954. For the Babylonian liturgy itself, see W. F. Albright, 'Religious Literature of the Ancient Near East,' American Journal of Semitic Languages and Literatures, 1925, 1927, and 1929, and A. M. E. F. K. Kees, Der Tempel des Kronos, 1930.

MAGIC (Buddhist).—If we rightly understand the real character of Buddhist magic, we ought to be according to its cardinal tenets, there is no possible connexion between Buddhism and magic. The only aim of the Buddhist monk is nirvana to be attained in this life, to attain freedom from passion in order to reach freedom from rebirth, i.e. eternal, blissful nirvana. All the machinery of intellectual and moral life is organized with a view to this. Buddhism does not deny that there are good (karmic) acts that ripen into happiness in a future life (svarupa, 'paradise'), but monks consider them not only as of no avail for, but even as obstacles to, nirvana. Ascetic and religious acts (sitara, tapasa) have no place in the training for nirvana, and it is a very grave and delusive heresy to lay stress upon them. A fortiori, in contrast with Vedism and Brahmanism, Buddhism ignores all the magical theories connected with sacrifice, worship, or asceticism as a means of salvation. As far as every-day or trivial magic is concerned, its efficiency is acknowledged, but Buddhists are strictly forbidden to practise it; all kinds of magical arts and performances—even of a benevolent nature—are regarded as pernicious. But the historic Buddhism is not, in every respect, what Buddhism ought to be. Buddhists are Hindus, 'regular' Hindus; and no large religious body has ever been found that was always scrupulously faithful to the true spirit of its creed, the more so as the Buddhist creed implies a superhuman disinterestedness and a non-oriental disregard for any kind of superstition.

1. Rddhi.—There is a large category of superhuman activities, which to some extent would be understood by Europeans as magical, and which are very good Buddhism. We mean rddhi (Pali raddi)—in the word of Birtha Davida, the mystic wonder, wondrous gift, magic power, power acquired by pious works, by penance, and also by formula, and especially by contemplation.

There is nothing (pre-natural) in the rddhi, and the natural character of the 'miracles' performed by only a few instances in the following list: in the other continents, and is sometimes performed by the relations concerned with the transmigration of souls (karma) and other 'constrictions' (sramana).

2. On the position of the Buddha and regard to magic see F. W. Fohn Davida, Dialogues of the Buddha, i. (SBE II), London, 1899, 272.

1 These are *mandana* ('blessing') good acts, in contrast with *sacrilegious* ('beggarly') ones, such as *supramandana* ('beggarly') of words, which the relations concerned with the transmigration of souls (karma) and other 'constrictions' (sramana).
a complete survey of the magical power of the bodhisattvas. It is said to be twofold: āparīṇāmauddhāya, power of transformation, when a bodhisattva modifies the nature of an existing thing; and uddhāsa, which creates something or some person. The created person (nirmita, nirmitaka) are frequently mentioned in the Mahāyāna works; but they are not unknown in the Hinayāna, both Pāli and Chinese. Elaborate theories on the nirmitakas are to be found in the Abhidharma treatises of the Sarvastivāda (Lokaprajñāpati, 1st cent. A.D.), which embody the views of the Sunakrti Hinayāna; and in the Abhidharma-brahma (ch. vi.), where the creative power of Buddha and of the gods (nirvāṇapati, etc.) is discussed.

2. Paritā. Another very orthodox form of magic is paritā, or rākṣa, guard, safeguard. It plays an important part in Sinhalese Buddhism under the name of pīra (Spence Hardy, Eastern Monachism, ii. 249, Manual of Buddhism, do. 1890, p. 47; J. D. Gogerly, sri lankan Buddhism, ed. A. S. Bishop, Colombo, 1906, pp. 327-328). Good examples are found in Pāli literature.

Taking refuge in the three jewels (rātra, rattana), Buddha, the Dharma, and the Sangha, forms a charm called sattvajāta, the jewels, which is very efficacious against illness:

Whatever spirits have come together here, either belonging to the earth or living in the air, let all spirits be happy, and then listen attentively to what is said. Therefore, o spirits, do ye all pay attention, show kindness to the human race who both day and night bring them offerings; therefore protect them strenuously. Whatever wealth there be here, or whatever excellent jewel in the heavens, it is certainly not equal to this. By this truth may they be salvation.1 In the same way: 'Nothing is equal to the Dharma, to the Sangha!'

So also, in the Peacock Jātaka, sun-worship ("the only king, the one who beholds, the light of the world") is connected with that of the Buddhas:

1 worship these, golden and luminous beings: May I spend this day under thy car! Homage to the omniscient sage! May they protect me! Homage to the Dharma and to the illumination, to the delivered and to the deliverer! ...

When Sakyanuni was a large golden peacock, he recited this half-solar, half-Buddhist prayer morning and evening, and consequently avoided all dangers. And, as the peacock is the born enemy of serpents, the 'satta (or charm) of the peacock' in use as a preventive and as a cure for serpentine bites.

In these examples the magical character is not very prominent: there is nothing pagan in the formula, which are, above all, acts of Buddhist faith; there is nothing bizarre; nothing really magical in the efficacy ascribed to the pīra. The non-Buddhist gods are clearly subordinated to the Buddha: it is almost a dogma that the Buddha converted gods and demons;1 and it is quite reasonable to believe that they will grant their favour to the disciples of Buddha. It is believed also that benevolence (maññati) possesses a power in itself (maññati-dána), in the world of protecting the benevolent person against all the consequences of the wicked; in order to avoid serpent-bites, it is not a bad plan to sleep on a raised bed, but the right method is to declare to all the tribes of serpents that they are being enveloped in a universal sentiment of benevolence.1 This magic of benevolence.

2 sattadāna (Sutta-Nipata, ii. i); Ry. Davids, SBE xxxv, 213.-139; J. Elliptical (Buddhism, ii. 3); Marutājata, Jātaka, ed. V. F. Faber, London, 1877-78, ii. 33. 1 It is a dogma for the Sarvāstivādins, both Pāli and Chinese. See Le Fèvre, 'Analyse du Kandjou,' AMR (1881) 167.
3 the Pali verses admit that there are still wicked gods (Dīptas, xxvii).
4 See Chullavatta, vi. 4, and v. 6. (SBE xx, 1891) 471.
volence is the most noteworthy invention of Buddhism in connexion with the subject which we are discussing.

3. Hindu influences. All practices tainted with magic or superstition, from the most trivial to the most serious, are strictly forbidden: astrology, divination, charms, incantations—in a word, all that any man may accomplish with the help of certain secret recipes and a technical method. Holy men, in ancient as in modern India, priests or sorcerers, had only too much opportunity for making huge profits by giving horoscopes and practising white or black magic. The Buddha—the first Order—was anxious that the monks should be sheltered from this temptation, and drew up a long list of "wrong means of livelihood," of low arts, that were strictly prohibited. The great Brahmins also made an effort to distinguish themselves from sorcerers.

Among these "low arts" we may mention specially:

1. Arranging a lucky day for marriages; using charms to make people lucky or unlucky, to procure abortion, to bring on dorminey, bastards; to keep a man's face fixed; obtaining oracular answers by means of the magic mirror, or through a glass; healing by smiting with a rod, as a witch might with a bridle; making a man impotent; invoking Sīt (Sūrī), the goddess of love; worship of sun, etc.

2. After precautions the Order took to avoid all paganism and superstition, there is, nevertheless, a Buddhist magic. It was impossible to guard against Hindu infiltrations. At no time could the people be totally ignorant of the sun or the inferior deities; a day came when the infiltrations became "streams," when paganism—gods, rites, theurgy—under a thin Buddhist veneer, took its place in sacred literature. Of course, we find popular magic always condemned in principle (loves, rites, elixir of life, etc.). What is more serious, official worship and mysticism are permeated with Hindu elements, heavily laden with magic; this is, properly speaking, what is called Tantrism (q.v.).

Among the earliest of these infiltrations we may mention: (1) in some very orthodox books of the Mahāyāna, the great value attached to the sacred texts, to the sūtras, the mere reading of which efficaces sin; (2) the great value attached to sacred names (e.g., the name of Amātākshita); devotion turns to superstition pure and simple; (3) the name revered, frequently sanctified by mystic formulae (see Avalokiteshvara), represented, when carried to an extreme, by the Tibetan "prayer-wheel;" it has been noticed that, in the Lotus of the True Law (q.v.), in which there is no mention of a female deity, the formulas are made from feminine vocatives; these invocations or litanies are undoubtedly borrowed from rituals; (4) the coming of a day when the rituals received the consecration of literature, and were put at the service of the great work of identifying the faithful with the Buddhas (Tantrism).

MAGIC (Celtic).—1. Wielders of magic. Magical rites resembling those used by other races abound in Celtaic paganism. They were performed by the gods, the Tuatha Dé Danann being later regarded as superman wizards, by kings (a reminiscence, perhaps, of the origin of the kingship in Irish paganism), and by all members of society, but, above all, by the druids as the official magical class. There is evidence that they had ousted women as the earlier magic-wielding persons; this is the evidence of agrarian and the procession.

1 See Ryba Davids, Dialogues of the Buddha, l. 23, a collection of interesting documents on the ancient life of India.

of much primitive lore having been first of all in the hands of women, and these rites being largely magical, they were par excellence magicians. With the gradual encroachment of man on woman's domain, with the growing supremacy of certain goddesses, men became also greater magicians. But women still professed magic, and their claims were never forgotten. The so-called druidisms of the later empire, the priestesses of Senus, and the virgin guardians of Brigit's fire were magic-wielders. The 'spells of women' were feared even by St. Patrick; as they had been in earlier times by Conna's father, and in the Irish texts women as magicians, performing all magical rites ascribed to druids, are much in evidence. But their magic was, so to speak, non-official; hence, when the druids were proscribed and destroyed, a great many of them retired to the forests, where they continued to work their arts. Their powers, and much mediaval witchcraft is directly connected with them. Women, as the earliest, remained also the latest, magicians, though in time they were proscribed and destroyed. On the other hand, many of the druidical magical rites were later ascribed to the filid, or poets, and also to Christian saints. Whatever view may be taken of the origin of the druids, it is certain that the Celts believed firmly in magic, and did not require to learn the supererogation of any of its branches from the races which they conquered.

For the druids as magicians in Gaul and Ireland see Davies, p. 7. Their prominence is seen in the fact that in later Celtic literature 'druid' is the equivalent of magus, 'magician,' as in the lives of Celtic saints sung 'druids,' while in angles and folk-tale 'druidism' = magic.

2. Elemental magic. The druids, who claimed to have created the elements, claimed also to rule them. They could cover the dry land with the sea to destroy their victims; they produced enchanted mists in which to hide people or places; they changed day into night, or caused blinding snow-storms. These feats are ascribed to them even in the lives of early Celtic saints. They caused showers of fire to fall upon enemies during battle. In other cases they dried up all the rivers and wells in an enemy's country by means of spells, though the druids of the latter caused water to flow again by shooting an arrow into the ground. They even claimed to remove mountains and dash them against an opposing host. Druids accompanied the warring hosts of Erin, and these marvels usually occurred on such occasions, the rival magicians striving to outdo each other. The foretold and other powers—e.g., rain-making—were later claimed by wizards (tempestarii) and witches in Christian times over the Celtic area. Rain-making was usually associated with a sacred well, whether the people went in procession, probably with an image of a divinity, which was sprinkled with the water; in some instances it was sufficient to beat the water with branches, sprinkled on stones, or throw it in the air. In certain cases the Church took over this rite by making it a part of an elaborate ritual, including a procession with an image of a saint, the priest offering "sprinkings." But in pagan times the presence of a druid was probably essential. The control of the elements by tempestarii, which was denounced by the Church, was directly borrowed from druidic magic. Until comparatively recent times, the
priest in rural French parishes was believed capable of causing rain in time of drought, or of averting tempests.

3. Magic affecting human beings.—The druids could make themselves or others invisible, and this was also done by Celtic saints. A spell used for this purpose, or by which the person using it appeared in another form to his enemy and so escaped, as well as the effect produced, was called *fasth *kada* (*‘the wild beast’s cry’*). By it he and his followers appeared as deer to their foes. The power of such an incantation is still spoken of in remote parts of the W. Highlands. Still more common was the power of shape-shifting, which was also ascribed to women. The evidence of Irish texts shows that the druid could take any shape, or invest others with it, while the same power is also ascribed to divinities.

The druids of Ireland were sworn to run through the area of their stepmother, the daughter of God Buri, while Odin’s mother became a fam through the power of the druid Fear Duibhseach. P. Kennedy, *Legends of the Celtic Druids*, 1866, pp. 39–40, suggests that the druid could take any shape (Pomfret, *Mal. iii*, 6), and many tales of goddesses or women assuming the shape of birds are found in the sagas. In some instances the belief is evidently connected with lassism, as explaining a tale upon eating certain animals by saying that they were human beings transformed.

‘Rimming’ people to death—a practice used by the *fíldi* as well as by the druids—was connected with the power of the spoken word, though it may also have been connected with the actual power of violent emotion to affect the body. It was usually the result of a satire spoken in verse to the victim; black, red, and white blotches arose on the face, and he was followed, sooner or later, by death. The satire was probably a magical spell, and the fear of such a spell brought about the result automatically. CealÉire pronounced the first satire in Ireland upon Ri’s, king of the Fer-morians, and many other instances occur in the texts. The power of the satire was attributed a quelling force over nature itself. A magical sleep was also produced in different ways. Sometimes it was done by music, which produced first laughter, then tears, then sleep. These three results are uniformly ascribed to music in Irish sagas; they were brought about by Doedal’s lap, as well as by the songs of the *fíldi*. All this probably reflects the power of music upon primitive minds, especially since it is so frequently connected with religious or magical dances and orgiastic rites, in which the motion and the music produce delirium, then exhaustion. But it may also suggest the soothing power of music. Similar magical sleep was caused by the music of divine visitants (see Bricer, *Athen. o. 711* [Celtic], §§ 2, 4). In other cases sleep was produced by a ‘drink of oblivion,’ probably some narcotic made from herbs; but sometimes the effect was curious, as when Cúchulainn, by the drink given him by the druids, was made to forget his fairy mistress, and his wife to forget her jealousy. Another ‘druidic sleep,’ in which the victim is made to forget or is rendered senseless, and occasionally in that state is caused to tell secrets, is of frequent occurrence, and is suggestive of hypnotism, the powers of which are well known to savage medicine-men, and may quite well have been employed by the druids.

The power of ‘glamour’ produced by magicians, by which stones or trees seemed to be armed men and were attacked by the victim, is also strongly suggestive of hypnotic influence. It may, however, be merely the record of actual hallucinatory cases, since the ‘glaomen’ in which the modern Celt believes is little else than hallucination. The druid might also turn a man into a madman by throwing a wisp of straw at his face after saying a spell over it. Even more primitive was the method of killing a person by throwing a spear into his shoulder. The victim died of fright and from him and sticking pins into it or placing it in running water, so that he might suffer or waste away. This image is the *corp creith*, still known and used in remote Celtic regions.

4. The Airbre Draud, or ‘Druid’s hedge,’ was an invisible magic barrier made by the magician round an army, probably by circumambulating it sunwise and singing spells. Its effect was that the ranks could not be broken, but, if any one was bold enough to break through, its power was gone, though the act usually cost the trespasser his life.

5. Magical rites connected with stones and trees.—The cult of stones and the belief that sepulchral stones were the abode of the ghosts of the dead probably gave rise to many magical rites, the origin of which must be sought in remote times. Many of these are still practised, and it is surprising that the method used throws light upon the earlier pagan customs. These are of a magico-erotic nature, and, like similar rites among savages, are founded on the belief that the spirit of the stone can kill or perhaps may incarnate himself in the barren woman who performs the rite. The woman sits on the stone, or slides down it, or thrusts her head or body through a hole in one of the dolmens. Pregnant women do the same to ensure an easy delivery, or unmarried girls to procure a husband. Similar practices are used in connexion with boasters or stones which are not sepulchral, and probably these were anterior to the use of megalithic monuments. In these cases the stones believed to be the abode of spirits, or perhaps manifestations of the power of the Earth divinity, who gave vitality or fruitfulness to those who worshipped the rites. A small offering was usually left on the stone. Such practices may already have been used by the Celts, though they necessarily adapted them to existing stones and monuments in the lands conquered by them. Other practices were the passing of sick persons three times through a hole in a dolmen or a weather-worn hole in a rock, to obtain strength and healing. In other cases a slit was made in an oak or ash sapling, through which the patient was passed, and the slit was then carefully closed and bound. The underlying idea is complex. The spirit of tree or stone was expected to cause healing, or there was a transference of the disease to either, or perhaps there was some idea of a new birth with renewed strength to the re-born.

Certain magical stones had the power of producing rain or wind when turned with appropriate rites, or in other cases the water in which stones of a feath or kind had been dipped procured healing when it was drunk—a method still used by druids. Other magical rites with stones were used in cursing an enemy.

6. Celtic saints and magic.—Much of the magic of the druids was popularly ascribed to the saints who combated them.—with this difference, that their power was held to come from God. In the Lives of Celtic saints we find them opposing the druids with their own weapons—neutralizing their magic, controlling the elements, producing rain, rendering their crops fertile, producing marvellous supplies of food, and causing transformation of confusion through their curses. The popular belief in magic could not be eradicated, and they who now filled the places of the ancient priesthood were freely dowered by the people and by their biographers with the ancient powers.

See also CHARMS AND AMULETS (Celtic).

J. A. MacCulloch.

MAGIC (Chinese).—Magic in all its forms is a subject which has always fascinated the Chinese mind. The literature which deals with the theory and practice of magic is enormous; and, if much of this literature is wearisome to the modern reader on account of the childish credulity of its authors and the extravagance of their speculations, it is nevertheless worthy of more patient scrutiny and analysis than it has yet received from anthropologists and students of folklore from serious students of Chinese life and character. In this article we cannot do more than touch the fringe of a subject which deserves much of its importance from the fact that in magic is still a living force in China of to-day.

There are many early references to a class of sorcerers or witches known as wu. This name is often applied to men as well as female witches, though the more correct designation of the former is chi. The term chi is rarely found outside the old books, but the term wu (usually in some such combination as wu-p'o), which means 'witch-wife,' has persisted throughout the ages, and is still in common use. In pre-Chinese days the wu held a recognized position in the social organization of the country. They were entreated even in the course of kings' trials to pronounce sentence of divine excommunication and compromise. Judging from the somewhat meagre accounts which we possess of the beliefs and practices of the sorcerers, the most common were those of mimetic dancing, drum-beating, chanting of esoteric formulae, and trance-mediumship, and their efforts were directed towards the foretelling of the future, the conjuration of spirits, and (in general) the invocation of good influences and the expulsion of evil. In the course of ages their position gradually deteriorated. This was largely the result of the rise of Confucian literature, which was always aimed at reducing every non-Confucian ideal and practice to a position of inferiority; but it was also due to the fact that many of the magical notions and methods of the wu fraternity were taken up and systematized by the Confucian priesthood. The sorcerers of the present day usually profess to act in co-operation with one or more of the innumerable Taoist deities, in spite of the fact that they are the sole representatives of the ancient wu, whose name they still bear.

There is reason to believe, however, that besides the officially-recognized wu there were always numerous 'free-lance' witches who carried on a lucrative business among the superstitious multitudes, and whose connexion with the State-cult or predominant religion of the time was little more than nominal. They were usually sorcerers of this type that were aimed at in certain anti-witchcraft regulations (reminding us of Plato's Laws, xi. 933) which we find in the Li-king—the canonical 'Book of Rites.'

Those who gave false reports about spirits, about seasons and days, about omens and tidings of the tortoise-shell and stalks, so as to perplex the multitudes; these were put to death. ('SUN xi. 257 f.) They may have been the same fakir inventors of 'wonderful contrivances and extraordinary implements,' hence have such things raised 'double among the multitude' (29.)

But it seems that even the official wu were not always free from peril, for the very fact that they were supposed to have a mysterious controlling power over the forces of nature rendered them liable to terrible punishment if these forces seemed to be showing hostility to mankind.

In the year 523 B.C., e.g., there was a disastrous drought, and a certain reigning duke expressed his intention of dealing with the situation by burning two persons—an emaciated or deformed man and a witch. Evidence as to the deformity of both individuals is afforded by the acts of the duke's minister—who seems to have been far in advance of his time in his attitude towards popular superstitions—the barbarous custom was not carried out.4

The ceremonial dancing of ancient China was not always magical. There were six classes of officials who, under the Chou dynasty, of which only one (the Huang) had anything to do with ritual dancing. Ceremonial dancing is not yet extinct in China, for it still forms part of the ritual performed at the Confucian sacrifices. For an interesting account of the ancient Chinese dances see H. A. Giles, A-textatically Studies, Shanghai, 1909, p. 129 f.4

1 See To Ch'uan, in Legge's Chinese Classics, vol. v. pt. 1. p. 179 f.

2 See S.S. xiv. 201. It has been suspected by commentators that the two stories refer to the same historical incident.

3 Ch'iao Li (Hsu's tr., ii. 193).

4 The ceremonial dancing of ancient China was not always magical. There were six classes of officials, of which the Shih, the Hsi, the Hsiao Hsin, the Shu, and the Hsin, of which only one (the Huang) had anything to do with ritual dancing. Ceremonial dancing is not yet extinct in China, for it still forms part of the ritual performed at the Confucian sacrifices. For an interesting account of the ancient Chinese dances see H. A. Giles, A-textatically Studies, Shanghai, 1909, p. 129 f.
accompanied by music; and, if there is any truth in such ancient legends as that of King Mu (whose
reign ended in 247 B.C.), we may suspect that
some of the ancient relics are means of producing
rain. We are told that the method adopted by
that monarch for putting an end to an excessive
drought was to play magic music on his flute.
Magic music is not entirely a matter for
the popular festivals in China are undoubtedly
a magical character, and are intended to regulate
the rain, to expel disease and misfortune, to
ensure health and to attract good luck.
Communal magic of this kind is sometimes official
in character, as in the case of the spring-welcoming
ceremonies presided over by the local district
magistrates; but for the most part the rites are
conducted by the villagers themselves, under the
guidance of their own clan-committees (hui-shou),
or headmen. Ceremonies which at one time were
doubtless carried out with pious cerea and
with something like religious awe, we have in my
many cases become mere village games and pastimes of
which the original significance has been partially
or wholly lost. Such are the lanter-dances and
the walking on stilts of the children of N. China at the
full moon of the first month of the year. Few of those who take part in such merry-making
understand that by the skilful manipulation of their
lanterns they suppose to be helping and encouraging the moon to go successfully through her phases; that in getting up before
dawn on a certain day and cooking a dumpling which
they eat early that morning, they are helping
the dormant activities of animals and vegetation;
and that in walking on stilts over ground destined
to produce a crop of grain they are helping the
wheat up to its full height. It is perhaps a significant fact (when we remember the
important part played by women in fertility-
magic in other parts of the world) that many of
the men and boys in these festivals
are dressed in women's garments.
Magical notions are also traceable in numerous
simple acts which practically every family performs
with a view to securing the blessings of the gods.
Such are the hanging of certain plants above
the doorways on certain days, the entwining of red
threads in the quenches of children to protect them from disease, the depositing of
pieces of scarlet cloth to the scrub-oak bushes to
ensure the protection of the shrubs and the silkworms against harmful insects and noxious
influences. At the New Year it is customary to
cover the outsides of doors and windows with
paper scrolls containing sage motifs, quotations
from classical and other literature, and words
expressive of virtues aims or suggestive of ma-
terial prosperity. These scrolls may fairly be
regarded as magic charms which will not only
prevent evil from entering the house, but will
attract the influences which make for good fortune
and happiness.
Many of the usages connected
with death and burial, the ceremonial summoning
of ancestral spirits, and the taburung of personal
names are also essentially magical, though their
initial connection with religious beliefs and ob-
ersances makes it difficult to decide where magic
ends and religion begins.
In China, as elsewhere, magic arts are practiced
for personal as well as for public and
family purposes, and many persons who know of
no normal method whereby they may bring about
the fulfilment of their desires are glad to seek the
aid of magicians and witches. The witches of
China have had many illustrious clients. One of
them was the Ta'ang emperor Hsian Tsung, who
ordered certain Taoist necromancers to summon
before him the shade of his dead consort, the beautiful Yang Kuei-fee. Very similar stories are
told of the emperor Wu of the Han dynasty and
the emperor Hsiao Wu of the earlier Sung dynasty.
As for the self-styled 'First Emperor,' who reigned
in the 3rd cent. B.C., the assistance of witches and
necromancers in his case was unnecessary—like the
king Seso I of Muhammadan legend
—was himself a king of magicians.1 Returning to
more recent times, we find that the great empress-
dowager, who died in 1908, put implicit faith for a
time in the magical arts of the 'Ancestors'; and, though the 'Sacred Edict' of the emperor
Kang-hi bids men abjure all kinds of heterodox
teachings and practices, among which the arts
of magic are numbered, it is apparent that in recent
years proclamations have been issued warning the
people not to allow themselves to be deluded by
witches and soothsayers, it is beyond question that
a belief in the reality of magic is by no means
confined to the ignorant peasantry.
The official attitude towards 'black magic' (to
use the convenient Western term) is clearly dem-
strated in the anti-witchcraft classes of the
Penal Code of the late Manchu dynasty. The
punishments inflicted on persons convicted of this
crime were extremely severe, though it is only fair
to add (in the words of a scholarly student of the
subject) that 'the images of Chinese history have
never been stained by such a mad epidemic of
witch-killing as disgraced Europe and America in the
seventeenth century.'
As recently as the summer of 1914 an alleged
case of 'black magic' occurred in the territory of
Wei-hai-wei, at present administered by Great
Britain.
The inhabitants of a certain village approached one of the
British courts with a petition in which they complained that
a fellow-villager had been practising magic with disastrous
results to their little community. It was stated that he had
spelled the village headman, and had foretold the headman's death. 'And, added the petitioner in
these festivals, the headman died, though there was nothing whatever the matter with him.' Two or three other enemies of the accused subsequently
died in the same mysterious way; and, to crown all, a villager,
going to the shrine of the guardian-spirit of the village,
discovered there a slip of paper on which were written, in
theaccused's handwriting, the names of various people with
whom he was known to be in dispute. Later he created a panic among the villagers, who took it for granted
that the list comprised the names of all those unfortunate
persons whom the wizard had condemned to a speedy death.
They therefore seized him and brought him before the wrier of
this article, who is himself a member of the Anglican clergy.
He is somewhat uneasy in the somewhat delicate task of differentiating between real
and imaginary sorrows and grievances.
From the point of view of the student of magic,
the special interest of this particular case centres
in the unexpected part played by the tutelary
deity of the village. Here, it would appear, we
have an instructive example of the interpenetration
of religion and magic, and the junction seems to
have been brought about in this way. One of
the principal functions of the t' u-t' i, or village
deity, is to receive the spirits of the newly
dead and to act as their spiritual friend and guardian.2
Each village has its own little shrine dedicated
to the local deity, and this shrine usually stands
by the roadside a short distance outside the village.
When a villager dies, the members of his family
first go in procession to the t' u-t' i shrine to make a
formal announcement of the death, in order that
the deity may make arrangements for the proper
reception of the dead man's spirit. For the first
ight, there seems to be no obvious reason why an
1 For some of the stories of this magical exploits, which included
the transplanting of the sun with a needle in order that inut-
ipated days might be secured for the f ARM, see E. F. Johnston,
Lion and Dragon in Northern China, London, 1899, p. 301.
2 E. T. Williams, in a paper on 'Witchcraft in the Chinese
3 For a full discussion of the Pictur8 and the 'Korcins,' see
Johnston, p. 311.
expert in black magic who wishes to bring about the
death of his enemies should expect the t'u-ti
—who is regarded as friendly to men and in-
terested in their welfare—will give him help and
countenance in carrying out his nefarious designs
against their lives. What, then, is the magician's
object in placing a list of the names of his intended
victims together with the village names of the t'u-ti?
The theory seems to be that, when the t'u-ti perceives
the list of names, he will assume that the persons bearing those names are already
dead and that his spirit will assume the form of the
living world for the reception of their souls. These
preparations will act with a powerful attractive
force upon the souls concerned, and will create in
them an irresistible inclination to sever their
connection with their respective bodies. The non-
arrival in the under world of the spirits of persons
whose death had already been announced in a
formal manner would cause bewilderment to the
workmen and might perhaps arouse his
wrath; and, as it is strongly advisable, in the
interests of the community in general, to 'save
the face' of the t'u-ti and maintain friendly rela-
tions with him, the only reasonable course the
spirits in question adopt is to bow to the
inexcusable negligence in the presence of their
physical bodies.

It is therefore a religious theory of this kind that
are hardly likely to find Western parallels; but
many of the ordinary magical practices of the
Chinese are strikingly similar to some of those
found in paganism and primitive magic with
which we are familiar in Europe.

The great artist Ka-Kai-chih (6th cent. of our era), one of
whose paintings is among the most treasured artistic posses-
sions of the Chinese, has left an account of the
Chinese practice of magic. When spurned by the girl whom he loved, she drew her portrait, and in the place where the heart should be he stuck a thorn. Thereupon the girl, who knew nothing of the portrait and the
thorn, began to suffer pain in the region of the heart, and next
time her lover paid her addresses to her she did not
soon him. The artist then withdrew the thorn from the portrait, and, though his heartly protested, he
loved for him remained.

That many of the poets and artists of China have
been credited with a knowledge of magic is
natural in their relations to nature, and we know have
frequently their passionate love of wild nature
brought them into contact with the Buddhist
and Taoist saints and hermits, whose
philosophical and magical notions and which
spirits are supposed to be conductive to
immortality, and, when we learn that a noted
hermit was in the habit of sleeping on
pine-needles, we may be sure that this was not
done merely as a means of mortifying the
lust. The willow is much used as a rain-charm. In
times of drought in Shansi and the other nor-
provinces adults and children may be seen going about
with willow-wreaths on their heads. The peach
is famous for its magical properties, and for
this reason peach-bows and peach-wood are
frequently mentioned in Chinese fairy-lore. The
fame of the peachwood for the exercise of evil spirits is very
ancient, for the branding of peach-wood was
part of the recognized procedure of the professional
gu the royal courts under the chou kings and
probably at a much earlier date.

That large and important subdivision of Chinese
magic which concerns itself with charms and
amulets and divination is dealt with elsewhere
(see Literature below). Here it must suffice to
mention that the principal purveyor of charms is
1 Ritual and Belief, London, 1870, p. 81.
2 For a full discussion see De Groot, Religious System of China, 11. 146ff.; also see art.
Legends.
the 'Celestial Master' — usually described by Europeans as 'the Taotist pope' — who lives among the Dragon-Tiger Mountains in the province of Kiangsi. The practice of divination is also largely in the hands of Taotist specialists and is called  shui-p’o ; but Confucianism has always had under its patronage the complex systems of divination which are based on that astral classic the I King, or 'Book of Changes' (SBE xxvi.). There is a grass known as the  yang-shen which grows on the graves of Confucius and is carefully gathered and put up into packets. The stiff dried stalks of this plant are believed to retain some of the  tao, or spiritual efficacy, which lies latent in the sacred soil, and they are or were highly valued for divining purposes. During recent years a very interesting discovery of oracle bones and tortoise-shell fragments was made in the province of Honan. They are believed (mainly on the evidence of the archaic script) to belong to the 12th cent. B.C., though certain authorities assign some of them to a somewhat earlier date. An inspection of these fragments throws a most welcome light on the classical and post-classical references to the ancient methods of fortune-telling.

Divination by the tortoise-shell and by the dried stalks of certain plants were the methods by which the ancient sage kings and their people believed in seasons and, to a certain extent, in the future. In the case of these methods (also by which they made them determine their political policies and settle their misgivings) (Le & T, t. 6, s. 27 [SBE xxii. 91]).

The forms of magic which are or were popularly supposed to be associated with astrology and palmistry, and with automatic writing, telepathy, clairvoyance, and possession by gods or demons, are all familiar to the people of China; and there is reason to believe that any society for psychic research which showed itself enterprising enough to conduct some patient investigations on Chinese soil would be rewarded by interesting and perhaps valuable results.

LITERATURE. — The subject of magic and allied topics is exhaustively dealt with in J. J. M. de Groot, The Religious System of Chinese Buddhism, 1877, 2 vols., re-issued, 1887, and vi. E. Hoot’s Fr. tr. of the Chan Li (Le Théâtre-Lit. Paris, 1850) should be consulted for information regarding the official standing and functions of the wix (see esp. I. 7, 31). There are many references to sorcery and magic — some of them shamefully critical — in C. H. Hume’s Eng. tr. of (by A. Forbes) his 8th ed. (London, 1807), by M. Berger (Berlin, 1871). In J. Legge, Chinese Classics, Hongkong, 1863, the text is described as ‘that of the romance and magic tendency’. In J. B. Robertson (1851, 1854, 1856, and 1859, 1851, 1854, 1856, 1859, and 1859), English readers will find all the references to the wonderful which occur in the classical literature mentioned in the above article. Students of the subject of which will do well to consult H. Döré, Recherches sur les superstitions en Chine, Shanghai, 1854, (rev. ed. 1862, 1863), and L. Wingerd, Folklore chinois moderne, Paris, 1863. From a more popular point of view magic has been described in N. B. Denny, Folklore of China, London, 1874, and F. H. Ballour, Lessons from my Chinese Scrapbook, 1855. Interesting sidelights on popular notions of magic can be gathered from the collection of stories known as the  Liao Chai, tr. H. A. Giles, under the title of Strange Stories from a Chinese Studio, London, 1886, new ed., Shanghai, 1888. The Chinese literature dealing with the subject from every conceivable point of view is voluminous, and hits only fragments of it have been translated. Good Chinese bibliographies will be found in the works of de Groot, T. E. C. and R. H. Johnstone. See also art. DEMONS AND SPIRITS (Chinese), CHINESE AND AMERICANS (Buddhists), Divination (Buddhists), Feng Shui, Fortunetellers and Tarots, Chinese; FORTUNETELLERS (Chinese); FORTUNETELLERS, COMMERCE WITH THE DEAD (Chinese), COMMERCE WITH THE SPIRITS (Chinese).

H. F. JOHNSTON.

MAGIC (Egyptian).—I. THE EGYPTIAN VIEW OF MAGICK. — The Egyptians had been more self-analytic than they usually were; they might, from their own point of view, have described all their actions as either ordinary or magical. By ordinary actions would have been understood all those simple works of man which we should call those things and living beings which were suggested by habit, mother wit.

See, e.g., various passages in the I King, Huo King, Le King, and Li King. For an account of the new discovery to be found in RAS (North China Branch) XIV. (1914) 67.

or acquired skill. But, when inanimate matter proved occultsantra, and living objects removed by requests, prayers, commands, promises, or threats, there still remained, in their opinion, a method of achieving their ends by means of an art that they called  oop, or  r (SBE xlv.). There is direct traditional authority for translating this as a very ancient term by the English word 'magie' (myeison, myeison, Ac S-31), and the examination of the hieroglyphic and hieratic examples of its use proves it to correspond fairly closely to the modern word, and to be understood by 'magical power'. Wherever mysterious, miraculous knowledge was required to effect a purpose, that was  r ;  r was something different only in so far as it was personal and of everyday life, since it postulated special powers in its user, and always made a greater or less demand upon faith.

2. MAGIC AND RELIGION. — For our traditional Western thought magic and religion are always more or less consciously contrasted with one another, whereas students have often unwarrantably assumed that the two are radically heterogeneous, and that they represent successive strata in the mental development of mankind. Some investigators argue that magic is the earlier and ruder product (e.g., Frazer), while others (e.g., Erman) hold it to be a debased corruption of the science of the higher ritual of religion. So far as Egypt is concerned, there cannot be the slightest doubt that  r was part and parcel of the same  Helakanaunum as created the religion which it deeply interpenetrated, either defining 'magie' and 'religion' for Egyptological purposes — and we must insist on our right to frame our own definitions within the limits prescribed by the current, untechnical meaning of the terms — or not, it will be profitable to make a rapid survey of the facts to be distributed between the two provinces.

It is with active relations that we are here concerned, and with doctrines only so far as they are related to these. There are three classes of being that are affected, namely the living, the dead, and the gods. Perhaps the most remarkable characteristic of the Egyptians' view of the universe is the thoroughgoing and impartial logic with which they drew the consequences of their belief that the gods and the dead were beings of like nature with themselves, subject to human appetites and needs, and amenable to the same methods of persuasion or compulsion. Hence the practical unity of the priests was to keep those whom they served provided with food and drink, and to attend to them in the normal way, in the same way in which, if need be, they might be inclined to do the same service for a man called 'the servants of the god' (hem-sen) and 'the servants of the departed spirit' (hem-sen) respectively, even as the temple was called 'the house of the god' (hem-sen) and 'the essential portion of it' (the house of the departed spirit (4-v-4)). Again, the Egyptians conceived Of the other world as of the same nature and unexploitable way as one man sought help of another — ngr. of prayer, by questioning (asking for an oracle), and by writing letters (for letters to the dead, see St. I. 4- Darrn (Egyptian, S). But in their own everyday life, as seen above (1), the Egyptians regarded, when all else failed, to mysteries assist (r) to achieve various difficult aims; the method employed was not simply coercion, but coercion of an aboriginal and special kind. It would have been strange if the practice of  r had been restricted to the narrow circle of the living, when the living shared with the gods and the dead all their other modes of intercourse. In point of fact, it was like more than anything else that welded together the seen and the unseen worlds. The specific rites of the living, as we shall have abundant occasion to see, are full of trafficking with the gods and the dead. But the gods and the dead themselves had a use for the miraculous power called  r; Tuth and Isis were not the only deities to be handled by  r than to observe its transference from secular to sacred magic, and in a denotative story the dead priest Nebemut is merely the attempt to rob him of a book of incantations which had been buried with him in the desert, to the benefit of the well-being of the departed, one may often come across spells that would originally have been directed against the likes of snakes (e.g., Die alepp. Paramecide, ed. K. R. L. Leisten, 1889, § 6, 249) or of crocodiles (e.g., Book of the Dead, ed. K. R. L. Leisten, 1889, ch. xxxi., xxiii.), for example; even erotic charms may be found inscribed on coffins (cf. H. Schack-Schebeck, 1899, ch. xxxi., xxiii.).
MAGIC (Egyptian)

Zwinglosenthal, Leipzig, 1908, pl. 16. 11-13). Conversely, the book of the dead mentions the name 'Hapi', being the mythical
snake that was supposed to be the eternal foe of the sun-god
Re'; the rubrics of this book nevertheless declare that it will
prove the greatest advantage to the private individual who
receives it in the presence of the god. It may be added that the
wax, upon which the common contents of 'The Book of the
dead' are inscribed, as well as in such temple rituals as the 'Book of Overthrowing
Apophis' just mentioned.

This long text cannot be paraphrased as 'hapi' was as intimately
associated with the presumed existence of the gods and the
dead, and was supposed to have a certain influence over
both, further than this, a greater or less element of "hapi" may have
been inherent in all the dealings between man on the one side
and the gods and the dead on the other. The two last classes
of being were, after all, creatures of a world apart, elusive in
their nature and hard to reach by ordinary, matter-of-fact
means. The very idea of their existence put a strain upon
the imagination, and for this reason the terms of words,
indicative of an effort to break down mystical barriers, had to
accompany even such simple deeds of homage as the presentation
of food-offerings. In other terms, the gods and the dead could
hardly be approached save by the medium of that which is known as
"ritual," and the attribute which distinguishes ritual from
ordinary performances may have been just that attribute which
the Egyptians called "hapi." The point is not susceptible of
absolute proof, for it was naturally only in the more extreme
cases, where the sense of mystery and miracle-working had to
be emphasized, that the term "hapi" was actually applied; but the
view that "hapi" underlies all ritual is favored by the close
resemblance between the divine and funerary rites, on the one
hand, and the menial performances performed for living people
(both protective and similar rites), on the other. The formule of the
Book of the dead, which is supposed to turn over in substance from
the incantations which the Egyptians used to heal their own
mortal wounds, and those which they also recited through the
daily liturgies of the temples and the tombs (see A. Moret, Le Rite

From the Egyptian point of view we may say that there was no such thing as 'religion'; there was only "hapi," the nearest English equivalent of which is 'magical power.' The universe being populated by three homogeneous groups of beings—
the dead, the living, and the gods—their actions, whether within a single group or as between one group and another, were either ordinary or
uncanny ("hapi"). But the gods and the dead were somehow uncanny themselves, so that all dealings with them or performed by them were more or
less "hapi." It was only when men treated them ordinarily, and as man to man, that this quality of "hapi" was reduced to a minimum, as in the case of spontaneous prayer and the letters to the dead—

3. Magic as a private religion.—We shall hardly be able to avoid
rendering "hapi" in English by the words 'magic,'
or 'magical power'; but, if the Egyptian conception of
"hapi" be taken as an illustration of what is meant by
'magic,' it will appear that we shall have little or no
use for the word 'religion,' and a multitude of
facts which the common parlance would more
naturally describe as 'religions' will fall under
the head of 'magic.' It is advisable, therefore,
in defining 'magic' for Egyptological purposes, to
strike a compromise between the Egyptian connotation of
"hapi" and the English connotation of 'magic.' Taking our cue from the former, we
shall restrict the sense of 'magic' to those actions
which clearly have the implications of mystery and
the miraculous; at the same time we shall
not necessarily contain between magic and
religion, or, rather, between magic and other
kinds of religious acts. It is fully in accordance
with the practice of Egyptologists, instinctively
adhering to the custom of the times, to carry on, to
contrast 'magic' with the 'cult of the dead' and the 'cult
of the gods,' as referring exclusively to those rites
which deliberately and in the first instance aimed at
the advantage of the living, or in which the
advantage of the gods was in this division
implicitly classed together as 'religion.' Magic
actions may therefore, for our purposes, be defined
as those actions which men performed for their
own benefit or for the benefit of other living men,
and which demanded their personal
presence for their performance. Warning must be given
against two misconceptions: in the first place, it
must be clearly understood that the gods and the
dead may, as indeed they usually do, be
involved in the "drunatico" processes of the magical
rite; the principle of division is not de quinque but cui
domino; in the second place, magic as thus defined did
not differ essentially in its mechanism from the cults
of the dead and of the living. It was therefore
regarded with feelings of moral repudiation.

For a similar definition see A. H. Gardiner, 'Notes on Egyptian
1890), though forming a very different estiimtion of magic from
here existed, accepts the same tripartite division of the
active aspect of religion into gymnastery, theurgy, and
theurgy. Magic as thus defined has a whole native literature
of its own; various hieratic papyri in Leyden, Turin, London,
Berlin, Cairo, Rome, Vienna, and elsewhere, mostly dating from
the New Kingdom; several similar papyri of the Middle King-
dom, in the Bannesseum end of 1896, still unpublished and in
the writer's hand. In the cases in which the manuscript has
been lost. Besides these must be named the medical-magical papyri (see
A. Monnert and Memmert (Egyptian), and the so-called 'Book of Horus,' of which the type is the Materiastrum Stele (ed. W.
Gebelnhart, Leipzig, 1879).

The abstract concept of 'hapi' is once or twice
found defiled, apparently in something like the
restricted meaning assigned to 'magic' in this
section. Two physiologists of the Old Kingdom, a priest,
besides the house of the god Horus in Heliopolis-

4. The purposes of magic.—In theory the
domain of magic was as wide as men's desires
supplying themselves, magical art supplying all those things
that were not procurable by simpler means. Our
existing materials, which minimize the
number of purposes, are probably very one-sided.
The Egyptians believed, or feigned to believe, that
their wizards could work all kinds of wonders; in a
late tale a charmer is made to boast of the victory of
Ethiopia up to Egypt, to the place where
Pharaoh dwells, where he is to be beaten with five
hundred blows of the stick, and returned to the
land of Ethiopia again, "all in six hours" (Griffith, Stories of the High Priest, p. 59). It is
said to have been related at the court of Cheops
how one magician fashioned a crocodile of wax
that devoured an adulterer, how another parted the
waters of a lake into which a jewel had accidentally
fallen, and how a third cut off a goose's head
and replaced it in a twinkling (Eranan, Diu March di Japura Westy, Berlin, 1891, i. 86). The
magical contests of Moses with Jannes and
Ananias (Ex 7:9-12. 2 Ti 3) is thus quite Egyptian in spirit.
Passing from such fabulous reports to practical
magic, we may classify the attested uses under a
comparatively small number of heads:

1. Defensive—How important this class was may be judged
from the fact that in a general panegyric of god as creator He is
said to have 'made magic wands and other things that happened' (Ps. Peterburg 116 A (ed. Gesmecht, Petron, 1913), line 260).
The poison which was rejoicing; the heart of multitudes grieve for it; Horus has slain it by his magic. He who mourns is in joy. Stand up, thou who wast prostrate, Horus has restored thee to life. He who came as one carrying life to himself; Horus has overcome his foes. All men, when they beheld he, praise the son of Osiris. Turn back, thou snake, conjured by thy poison which was in any sink or in the coffin of the magic of Horus is powerful against thee. Flow out, thou poison, come forth up in the victim and be burned. The head of the magic of Egypt (Fam. 13). To be recited over a hair with two feathers on its head, being made of reed and incantated, open the wind and offer it bread and beer and income. Plate 10.

7. Analysis of the magical rite. — Except in certain border-line cases (prognostics, medical treatment, etc.), the magical rite is always twofold and comprises (1) an oral rite, consisting of certain words to be recited, and (2) a manual rite, consisting of certain actions to be performed. These two portions must be discussed in detail.

(1) The oral rite. — The task that lay before the magician usually involved a struggle with some difficulty, which might consequently be regarded as a hostile and aggressive force. This force is not always completely personified, but more often than not it is treated personally, being commanded, persecuted, exalted, warned, threatened, or cursed, just like a human being.

A leading idea in defensive magic, which embraces no small part of our material, is that of 'possession.' The possible antagonists are often considered to be in a long line of descent—e.g., the "assassins of a god, the assassins of a goddess, the young goddess, the male assasins, the female assassin, the assassins of a dead man, or the assassins of a dead woman," etc. (Plate 30, 15); "enemy male or female, dead man male or female, adversary male or female." (Fam. 25, 15). Any god could doubtless attack human beings, but were savage or malicious deities, like Seth, the "murderer of Osiris or of Sakhmet, the 'lady of pestilence' and destruction of the earth, pagans, Egyptians, Byblius, negroes, or negroes, in this country, and the Near East (Plate 15, 15). The possessing spirit was particularly feared by the Egyptians of the 12th, a pagan or an Asiatic woman (Fam. 25, 15), and it was wont to come secretly, "arriving in darkness, hiding in its nose backwards and its face turned" (De 1. 9). In its mode of taking possession is, as a rule, desired; the 'demons' or 'Neb.' (De 1. 2) because often dwelt with or in the afflicted one (Bibbiana, 11. 9) and his body, or in the child of the lord of heaven. He raised his scimitar, and strangled the foreign born and thy throat. Thou shalt fall upon the ground on which thy only-child is spread, and there thou gropest in quest of thy heart. Do not say then, and the report goes forth in the house called to the gods of the magi and Horus has conquered the disease! (Fam. 25, 15) and the like, against the evil of the magic of the Egyptians, and incantated, open the wind and offer it bread and beer and income.

8. The magical rite. — A characteristic example of the whole in a single text, ste 6, the poison is hidden to flow forth through the earth.

Warnings frequently supplemented and reinforced such commands, as: —

Fall, upon his tongue: It is a serpent at the mouth of his house (Zamiego, 12. 11), it is the ruin of a long series of similar phrases)

Commands and warnings falling in their effect, a more persuasive means is tried: —

1. Command, lay the stone, departing to the place where thy

1. Command, lay thy stone, departing to the place where thy
More often the point of the narrative is merely implied; in the following short incantation against horses even the names of the interlocutors, namely a messenger and Isis, are omitted:

"Thy son Horus has been buried in the desert." "Is there water there?" "There is no water there. There is water in my mouth, and a Nilotic before me. I am thou, the king of the Nile."

(Ebers, 43-34; see H. Schäfer, in Z. Aeg. xvii. 1210-1213.)

Many valuable fragments of myths have been preserved to us by this means.

Especially frequent are tales that turn upon the revelation of the true name of a god; a well-known instance is the story of how Isis devised a stratagem by which the sun-god Re should be compelled to divulge his name; this she brought about by causing him to receive a snake-bite which none could cure save herself (Pap. Turin, 151-153). Less well known is the narrative of the attempts made by Seth to provoke Horus into betraying his real name, which would have given the mischievous god power over his nephew; Horus, however, invents various absurd names, and so manages to decide his wicked uncle (Pap. Turin, 154). The importance of names in Egyptian magic was very considerable; the knowledge of names gave control, whether for good or for evil. It was thought that a rare proverb in an ancient hieratic might be cure by its name (Pap. Turin, 136. 6, 11, 134. 7, 8, etc.). Thus to be familiar with the names of the epagomenal days (Pap. Leyden 346, 2. 6) was a safe method of protecting oneself against their perils. This is a topic that might be greatly elaborated (see art. NAMES [Egyptian]).

Closely akin to the question of the importance of names is that of the importance of language. Certain formulae were supposed to possess magical efficacy, such as the words 'Protection behind, a protection that comes, a protection.' (Zauber- sprüche, recto 6. 2.) The magical potency of anything depends on a large degree on its mystery, and it is therefore but little wonder that baldistic gibberish (Pap. mag. Harris, verso C) and foreign spells were held in high esteem (Der Londerer medicinale Papyrius, p. 28. W. Wendrich, Leipzig, 1912, nos. 27, 28, 32, the last being in the Kufi language).

The significance attached to names and language is an aspect of the doctrine of sympatheic magic, for language may be said to imitate and image the things it expresses, and in so far verbal references to a desired effect may have been considered instrumental in producing it.

Sympatheic magic takes curiosities of many kinds; one or two instances may be singled out. In connexion with the importance of language reference may be made to the significance of puns. A magician says:

"I make a charm for him against these of 'afri-plant, which does injury, of onions, which destroy thee, and of honey, which is good to men and sour to the devil.' (Zauber- sprüche, recto 2. 4.)

The virtuous here ascribed to the 'afri-plant and to honey are of obscure origin, but the destructive
MAGIC (Egyptian)

property of onions is clearly due to the fact that the Egyptian word for onions was hoty (the vowel is that of £ot|y). (£ot|y) (1907:17). In order to tell whether a new-born infant would live or not, its first articulate cries were to be noted:

"It is says ny, that means it will live; if it says mšb, that means it will die." (£ot|y). The sound mšb resembles the emphatic Egyptian expression for 'no' (see ZA xlv. [1907]:182).

A widely different example of the supposed influence of like upon like is illustrated by the following passage addressed to a demon that is causing sickness:

"Thy head has no power over his head, thy arms have no power over his arms, thy legs have no power over his legs" (£ot|y). A conditional curse that runs upon similar lines may also be quoted:

"He who is dear to this decree, may Osiris pursue him, may his pursuer his wife, and Horus pursue his children." (£ot|y). Ex ore prophetae: "The mystical potency attaching to certain numbers doubtless originated in associations of thought that to us are obscure. The number seven, in Egypt, was regarded as particularly efficacious. Thus we find references to the seven Hathors (Pap. med. Berlin, 21: 8; Pap. Turin, 177: 12; cf. al. érré Réw sbr w. sbr Réw (A. Disterich. Étude sur la magie égyptienne: Leipzig, 1910, p. 71)."

The seven daughters of Há (who 'stand and weep and make seven knots in their seven tunics' (Pap. Turin, 135: 1f.; and similarly, we read of:

"the seven hawks who are in front of the barque of Ré" (ib. 138: 3)."

Oral rites have occasionally been recited seven times (ib. 289: 9, 10), but the more usual number is four (Pap. Leyden 346, verso 2: 3, 5, 4, 10, etc.; Pap. mag. Harris, 7: 4), a number doubtless associated with the 'four pillars of heaven' (Éva in this world, 95: Paris, 1910, p. 71)."

Oral rites have occasionally been recited seven times (ib. 289: 9, 10), but the more usual number is four (Pap. Leyden 346, verso 2: 3, 5, 4, 10, etc.; Pap. mag. Harris, 7: 4), a number doubtless associated with the 'four pillars of heaven' (Éva in this world, 95: Paris, 1910, p. 71)."

A characteristic feature of the oral rite is its complexity. This is shown in various ways, and not least in the love manifested for enumerations. Reference has been made to the long lists of parts of the body, and to the formula naming all the possible enemies from whom attacks are to be feared. Similarly, lists are found of the various ways in which a man might meet his death (Pap. Turin, 120-121; Petrie, Gizeh and Rîfîch, pl. 27 c), and of the various exorcisms through which the demon might transmit his baneful influences (Pap. Leyden 346, verso 2: 9, 9f.). This quasi-legal tattoo

ogy is to be explained partly by the desire to cover all eventualities, and partly by the necessity of compelling respect for the learning and skill of the magician.

(2) The manual rite.—(a) Active elements.—The employment of images played an important part in the manual side of magic. Sometimes it is the hostile power to be destroyed that is thus counteracted and done to death; so in the Book of O ner.

throwing Aophis, the words of the oral rite are 1 to be recited over an Apophis made of wax or drawn on a new sheet of papyrus and thrown into the fire" (Pap. Leyden 346, verso 2: 9, 9f.).

More often the object imitated represented a means of effecting the purpose of the rite. Thus in a spell to assist child-birth there was made "a dwarf of clay to be placed on the forehead of the woman who is giving birth" (Pap. Leyden 346, verso 2: 9, 9f.). Miniature hands, seals, and crocodiles were powerful to ward off evil, doubtless by slaying it, sealing it up, or devouring it (Zaubersprüche, verse 2: 9, 9f.). A great number of the amulets found in such abundance in Egyptian tombs were of a magical nature, all, indeed, except those whose purpose was exclusively funerary. Like the images mentioned above, amulets can, if explicable at all, always be interpreted by the principle of sympathetic magic in one or other of its various forms (see Pétric, Amulets, London, 1914).

The materials of which such images and amulets should be made are nearly always specified, and it is evident that this was considered of vital importance. Here we meet with a new aspect of sympathetic magic, namely the doctrine of properties; every plant, stone, metal, and colour possessed its own peculiar virtue which prompted its use in the diverse ways. Wax and clay were very commonly employed, and perhaps not only because they were easy of manipulation; their plasticity may have been thought symbolic of a wide adaptability. Anthropo-myths assign a divine origin to various substances; thus the bees that supply the wax are said to have sprung from tears shed by Ré (Pap. Salt 352, 2: 6, 6, (unpublished)), and the cedar-tree emanated from the sweat of Osiris (ZA xlvii. [1910]: 71.

Images were not immediately potent of themselves, but had to be charged with magical power in one way or another. The oral rite is usually recited over them (dd nwt hr, passive), and this transitory and intangible kind of contact seems to have ensured their continuous efficacy.

In a fabulous story the magician Hor, the son of Pascha, made a litter with four bearers and 'pronounced writing upon it, gave it to the bearers, and made them live' (Gellhi, Stories of the High Priests, p. 10).

Elsewhere the ceremony of 'opening the mouth,' familiar from the funerary ritual, was performed over the magical figure (Pap. Turin, 131: 7) and offerings and incense were presented to it in token of its new animating condition (ib.; Pap. Leyden 346, 2: 3). Drawings upon papyrus or rag were treated in exactly the same way, and seem to have been equally effective (Pap. Leyden 346, ib.; Pap. Turin, 31:77: 3); or the figures of the gods whose help was invoked could be sketched on the patient's hand, a method often resorted to by some one (Pap. Turin, ib.). At times the mediating image could be dispensed with; the magician pronounced his spell, and then spit on the diseased limb (Ebers, 30: 10).

Magically charged amulets, images, or beads were often attached to the person whom they were designed to protect or heal; some kind of contact was a prime necessity of Egyptian magic; e.g., we read of spells that were to be recited "before the left foot" (Pap. Leyden 348, verso 4: 3); but the neck was naturally the spot where most charms were worn (Zaubersprüche, recto 1: 3, 8, 3, and passive). The string or strip of rag employed for this purpose was usually tied into magical knots (qv.), seven being the favourite number. Such knotted strings have often been found and are to be seen in many collections (Ermann, Zaubersprüche, p. 31). In other lands than Egypt the idea of the magical knot is frequently to 'bind' the hostile force; but, though references to binding demons can be found in Egyptian magical texts (Pap. mag. Harris, verso 2: 6), it is not in connexion with knots. One view that seems to have been taken of knots is that they were obstacles, as e.g., in the following words put into the mouth of a magician: 1 "If the poison pass these seven knots, which Horus has made on his body, I will not allow the sin to shine," etc. (Pap. Turin, 135: 8).

Particularly interesting is a spell where twelve gods were invoked. These were drawn "on a rag of fine linen to be tied into twelve knots. Offer to them bread, beer, and burnt incense. To be placed on the neck of a man" (Pap. Leyden 348, 2: 9).

Here evidently each knot was cast under the guardianship of a special deity, and thus formed a divinely protected barrier between the malignant influence and its possible victim.
MAGIC (Egyptian) [287]

Initiative or significant actions were frequently performed with the apparatus of the magical rites; we have seen how a waxen image of Apep was thrown into the fire and destroyed, and similar cases could be multiplied.

At this point may be mentioned the composite stela known as Cippi of Horus; these are of composite form, and parts of them are covered with magical texts of the kind described above, and with sculptured figures, chief among which is the figure of Horus with his feet on two crocodiles. Such stelae seem to have been placed in buildings for their protection, and especially to rid them of snakes and scorpions (see Golenischef, Mitternachtsle; G. Daressy, Textes et dessins magiques, Cairo, 1903).

MAGICAL RITES COULD NOT BE PERFORMED AT ANY TIME AND UNDER ANY CONDITIONS, BUT STRICT RULES AND RESTRICTIONS HAD TO BE OBSERVED. OF THESE SOME WERE ORAL, OTHERS WRITTEN; MANY OF THEM DATED FROM ANCIENT TIMES.

Magical rites were also in demand for safeguarding men against dangerous periods of the year, e.g., in ancient Mexico (G2, pp. 4, 5, 8, 25, 34), the intercalary days, in Egypt known as the five epagomenal days, were fraught with exceptional risks. Against which enchantments were employed (Pep. Leyden 546); the user of these had to refrain from all work during the period in question (ib. 3, 4, 5).

It is easy to see in whom he would benefit by magic Book of Overthrowing Apep, 24, 19, etc., just as ch. 41, of the Book of the Dead was ordained to be recited by 'one pure and good man having eaten venison or fish, and not having been near women.' In another place, the user of a spell is charged to purify himself for nine days, and his servants are to do the same (Ex. 27, 1. Davyville, Destruction des hommes' line 79, in TSBA iv. (1876) 16).

It is essential in dealing with magic.

In reference to a spell written on a strip of fine linen, he is to 'run than it is said with the sun setting in another case seven knots must have been tied, one in the morning, and another in the evening, until seven knots are completed' (Zauberprospe, verso 3, 2).

Magical rites were also in demand for safeguarding men against dangerous periods of the year, e.g., in ancient Mexico (G2, pp. 4, 5, 8, 25, 34), the intercalary days, in Egypt known as the five epagomenal days, were fraught with exceptional risks. Against which enchantments were employed (Pep. Leyden 546); the user of these had to refrain from all work during the period in question (ib. 3, 4, 5).

planations, it explains by superstitions reasons. So far as medicine was practised without a sense of mystery and without making appeals to faith, it was a technique of ordinary life like any other; but whenever there was consciousness of its exceptional, occult nature, it might be said to lapse back into the domain of magic. Egyptian medicine was at its best in diagnosis and in its physiologically based materia medica, on the one hand, remaining permanently under the influence of magical conceptions. 9. The magician.—A Greek alchemistic treatise quoted by Meyerhofer (P.P., xiii, 1897, p. 159) exactly defines the difference between the physician (σαρκοδοκος) and the practitioner of magic. The former exercises his craft αρχισεβον... σαρκοδοκος, 'mechanically and by book,' while the latter is a 'priest (προστάτης), of the magician, his own religious feeling' (δια της ταιρίας του νομος του ἀνθρώπου των). There appears to be no common word for 'magician' (σάρκωτος, 'charmer,' e.g., in Ebers, 96, 3, is very rare), and magicians certainly formed no caste of their own. It is in accordance with the homogeneity of religion and magic emphasized above (§ 2) that the priests should have been the chief repositories of magical knowledge, for particularly those priests whose function it was to be versed in the sacred writings. The subjects of many of the books kept in the library of the temple of Edfu cannot be described otherwise than as magical (see H. Brugsch, Ägyptische Literatur, Leipzig, 1889-90, p. 150; cf. Clem. Alex. Strom. vi, 268). The 'lector-priest' (χρησιμος) is specially named as empowered to perform cares (παρακληται), and it is manifest that discoveries and incantations (Pap. med. London, 8, 12) and as being endowed with the gift of prophecy (Pap. Petersburg 1116 E, recto 9) and the wonder-workers (δικαιοποιηται), that the priests of the temple were all 'chief lectors' (see Ermann, Diener des Pharao, p. 13). A passage in the Ebers Papируs (99. 2) singles out the 'priests of Sakhmet' (τεθρος Σαχχρητ) for special mention as 'chiefs of Sakhmet, for special mention as 'chiefs of the magic-medical profession; this is because Sakhmet was a ferocious goddess who wreaked her wrath in inflicting disease; her priests were likely to know best how to cope with her. Priests, doctors, and priestly women alike received the final touches to their education at colleges called 'the house of life' (περικομή); of these we know but little.

An interesting time of Doctor Abdes describes how he was summoned by Pharao to restore the perikom (at Sekhmet) because his Majesty knew the value of this (the medicine) art (C.A. xxxvi, 1897). There was a perikom at Abydos, apparently attached to the temple (Cowsell A 30 A 33). The most interesting point in the religious decrees is rendered in the dedication as 'sacred of the house of life' (see Griffith, Kyklos Papируs, Manchester, 1900, p. 81, n. 13, Stories of the High Priests, p. 19). Magic could be learnt at the perikom (ib.; Pap. mag. Harris, ii, 16).

On the whole, we receive the impression that less importance was attached to medicine in Egypt than in other lands to the personality of the magician; his powers might in some cases be due to special gifts, but, broadly speaking, the belief in magic was a tribute to knowledge, and not to the supernatural powers of certain men. The instructions appended to magical incantations usually presuppose that private individuals could use them for their own profit if only they observed the right procedures. Though the magician's presence was not essential, and his authority lay solely in the fact that he was the possessor of magical knowledge; the epithet 'knower of things (rahit) or skilful' (Ibid., Stele, 11, Ebers, 1. 91) point this is well brought out in a passage describing the all-wisdom of the Pharaonic Anubis:

"An unique king, whom Sethi taught, praised of the godness of his name. The presence of Thoth is beside him, and he gives to him knowledge of things, so that he guides seers according to the magic" (ibid., Stele, 11). The great of her (ibid., Stele, 11).

10. Celebrities in magic.—Egyptian-wise, we will begin with the gods. Thoth was the most powerful of all magicians; in the end this qualification of his gave rise to the fame of Hermeticism (see Griffith, Stories of the High Priests, p. 53). The skill of Thoth as a magician is associated with his reputation as the inventor of hieroglyphics and the sciences of mathematics; in the myth of Osiris he played the part of 'physician of the eye of Horus' (Pap. med. Heros, 14, 6). Isis enjoyed great fame as a sorceress, mainly on account of the charms which she devised to protect her infant son Horus (Pap. Turin, 3177. 6; Ebers, 1. 12 and passim). Horus himself was not devoid of magical abilities, though it was mainly in his skill in warding off attacks that this was displayed; the Horus of Lower Egypt is described as the 'chief physician in the house of Re' (Pap. Turin, 124, 5). The eye of the sun-god, which was subsequently called the eye of Horus and identified with the Uraeus-snake on the forehead of Re and of the Pharaohs, the earthly representatives of Re, finally becoming synonymous with the crown of Lower Egypt, was a mighty goddess, Uto or Buto by name; she is often referred to as 'Wrest-bike,' 'she who is great of magic' (Sethe, Untersuchungen zur Gesch. und Altertumskenntnis Ägyptens, v, Leipzig, 1912). According to Maneco, King Aha, the 43rd, practised medicine and composed anatomical books. Under King Zoser of the IIIrd dyn. lived the wise Imhotep, whose skill as a doctor led to his identification with the Greek god Asklepios, a son of Zeus, a famous man of the reign of Amenemis III (XVIIIth dyn.). Imhotep was in late times worshipped as a god (see art. Asklepios, v, 1906). The prince Hariden, the 6th, was similarly noted for his deep learning and wise utterances; he was the reputed discoverer of various books of magic incorporated in the Book of the Dead (see Ermann, Diener des Pharao, v, 1906). Another royal prince, who was high priest of Ptah, became the hero of many tales in which he appears as a great magician; this was Khamswes, one of the immemorial physicians of Egypt (see Griffith, Stories of the High Priests, p. 21). In the later Greek and patristic literature reference is made to various Egyptian magicians of note, such as Sothon, (ibid., vii, 1907), and the last native Pharaoh, who plays an important part in the legend of the Alexander the Great.

11. The nature of Egyptian magic. The magical ritual, as described in § 7, means by no means wholly irrational in its methods; indeed, granting its premises, namely the existence of gods and demons, the theory of possession, the principles of sympathetic, and the doctrine of propitiation, its manner of setting to work was perfectly logical and businesslike. Here, at first sight, we are face to face with a paradox: the essence of magic, we stated to reside in its opposition to the mechanism of ordinary action (§ 1), yet now the methods of magic are declared to be simple and straightforward. The fact is that no explanation of the magical ritual is afforded by the consideration of its parts either severally or collectively; its explanation can be sought only in the concept of magic, which is a thing apart from, and, as it were, superimposed on, the methods and premises of the magical ritual, a sort of all-comprehensive background out of which this was made. 1 Without the concept of magic the magical ritual would doubtless have seemed to the Egyptians no more than what to us it appears to be, a puzzle, though not wholly meaningless, 1 For the good of this assertion see H. Hubert and M. Mauss, 'Économie d'œuvre, p. 97-102. (1905-06), pp. 97-98.
MAGIC (Greek and Roman) 269

combination of words and pantomime. There was not perhaps once a period when even the most gifted were not utterly ignorant of the limitations of their own power and that of the world outside; they saw forces which they treated personally in all kinds of external phenomena, and the law of sympathy seemed to them to be a very good law indeed. In this way the period magic and science were undif-

ferentiated. Later on, a distinction became gradually discernible between the simple techniques of ordi-
nary life and the systematic magical practices in them; in all respects, the effective means by which men sought to achieve more difficult ends, and the notion of hıké, or magical power, was precipitated. Hıké gathered round itself just those less matter-of-fact concep-
tions and circumstantialities, and unspecific notions that were inseparable from ordinary culture, and these became its methods. Now, the simple techniques are always able to detect, the complex environment in which they are necessarily performed, the actual determining fac-
tor in their results; not so hıké, which is therefore apt to regard the whole complex environment as essential to the achievement of its purposes. This is the reason for the mediocrities that hıké pays to detail, the set-form of words to be recited, the restrictions as to time and place, the purity of the officiant, etc. The more restricted the more powerful hıké became and the less success it was, the greater the necessity which it felt of insisting on its own inherent efficaciousness, and of diverting attention from its methods; hence its love of secrecy and its mysticism, and its inexpressible jargon to enhance the impression of the wisdom lying behind it. In this context mention must be made of two more ways in which hıké was sought to obtain for itself, namely the appeal to antiquity and the appeal to auth-

ority.

Such and such a rite was 'bound at nightfall at the Erechtheum of the temple of Coctos as a secret at this goddess (say) a lictor of that fame; the earth was in darkness, the moon shining, etc.' This, illuminating it on every side. It was brought as a wonder to King Cheops (Pop. med. London, S. II.13). The papyrus from which this quotation comes was written in the time of Amemoplis III., more than a thousand years after the reign of Cheops. A mythical origin is assigned to other spells.

One was said to have been 'invented by Cheb on his own behalf' (Pop. med. Herst, § 11); while others were devised by Nubi and written on the walls of a temple of Bel (ib. S. 3. 14, 15).

A more reputable way of appraising the value of a magical rite was by appealing to the test of experience; it is often claimed for a particular spell whether it has been successful on many occasions (see above, § 8). Where the claim has proved justifiable, or where it has seemed sufficiently so for the rite to pass into general use, the more mysterious elements rapidly disappear, and the rite becomes an ordinary technique; so in the case of medicine and, it may be here added, of legal oaths.1 Nothing can better illuminate the nature of hıké than the alterations which it undergoes in the course of its transformation into some ordinary technique.

LITERATURE.—This has been indicated in the body of the article. See especially in Greek: A. W. Budge, Egyptian Magic, London, 1901; A. Erman, Apparatus Re- ligious, Berlin, 1866, ed. 1939; M. M. Warburton, Le Magie dans l'Egypte Ancienne (Bibliothèque de vulgarisation du Musée Guimet, XIX.), Paris, 1907; A. Windmann, Magie et Zauberei im alten Ägypten (Ber. d. oriental. Vol. 28, pt 1), Leipzig, 1907.

ALAN H. GARDINER.

MAGIC (Greek and Roman).—I. INTRODUC-
tory.—It is practically impossible to extract any principle, is more primitive and, for that very reason, more cosmopolitan, more literally devoid of distinguishable national traits, than magic. Anything which might be considered indigenous is usually secondary as well as comparatively unimportant, and, in any case, not the same. It is identified with certainty. This is especially true of the two great nations of classical antiquity. Here, as elsewhere, magic was believed and prac-
ticed by the common man, and even the literary record of magic that Zenodotus begins with Homer and continues with increasing volume and particularity until the latest times. But rich as they are, the records of classical magic are too cumbrous and the possibility of filling the lacunae is too remote to warrant us in hoping that a search for the indigenous would meet with any success. We shall therefore omit all reference to this aspect of essence of the intimate cultural relations between Greece and Rome, it seems best to deal with the two nations as one.

7. Magic and religion.—From more than one point of view the classical magic and ritual of the world is still quite justified in challenging comparison with that of any other period in history. No civilization has shown such remarkable capacity of almanacs, to observe, reflect, organize, and create in so many great departments of human thought and action. And yet among all the higher civilizations of the world there is none in which magic and the primitive and most archaically and essentially primitive—had such an abiding influence, none in which the religion of the people was based on magic in the same way as the religion of the farmers from the incantations of the philos-
osopher is more clearly marked and more profoundly illustrated.

The paradox, however, is only apparent. Owing to its exaggerated conservatism, the religion of both nations always remained amazingly primitive, so primitive that it was always impossible to distinguish it from magic on the basis of any essential details of ceremonial or of the generaliza-
tions from which they were derived. Even the doctrine of incarnation, with all the conclusions for which it is ultimately responsible, was never distinctive of the one as opposed to the other. It is obvious, therefore, that the Greeks and Romans were always in the position of their primitive ancestors—they were utterly unable to differentiate clearly between magic and religion on the basis of this or of any other criterion which, when seriously applied, would have left their religion unimpaired, and at the same time would have transformed their once reducible magic into an interesting but harmless fossil. Their only course was to cling to the ancient distinction of official recognition.

According to this distinction, 'religion is prescribed, official, an organized cult. Magic is prohibited, secret; at most it is permitted, without being prescribed' (N. W. Thomas, BR 11 iv. 109, summarizing H. Hubert). Magic cannot be distinguished from religion by the doctrine of sympathy, or by any supposed necessary sequence of cause and effect, or by its malevolent character. Religion, then, is the orthodox, magic is heterodox, it being understood, of course, that the Greeks and Romans the criterion of orthodoxy was the official recognition of their own State. The god must be officially recognized by the State, and his ceremonial must be the one prescribed by the official experts of the State. Other gods, and the great mass of magic, are heterodox. Even orthodox gods must be approached only by prescribed ceremonials. This Graeco-Roman retention of the primitive distinction between magic and religion is our only guide in establishing meaning and coherence in
the bewildering array of phenomena with which we have to deal. For instance, it will be seen at once that the only effect of this criterion, so far as magic itself is concerned, is, so to speak, to define its social position. It does not necessarily destroy or even impair the belief in the reality and power of magic, or in the efficacy of the rite from the very nature of the distinction, it takes them both for granted. Hence the persistence of magic in a civilization otherwise so advanced as was that of classical antiquity.

We must assume this test of orthodoxy, e.g., in the case of Cato's curse for a sprained hip (de Agr. 160). By any other test it is patently magic; but Cato did not consider it magic, or he would not have recommended it. It was orthodox, i.e., it was Roman, it had an immemorial tradition in the Roman countryside; at the most, it had become secularized. By the same test the old Roman ritual for calling out and appropriating the gods of a conquered city (Macrob. III. ix. 7) is religion, and the operation known as 'calling down the moon' is magic. Again, the same criterion is responsible for the well-known method of raising the heterodox to the orthodox by official recognition. This device of naturalizing foreign cults and thereby embracing within the sphere of their influence harmony and peace as well as humanity, is several times illustrated in the religious history of the Romana.

All foreign religions, therefore, were classified as magic. This cult, as such, was occasionally despised, but quite as often it was thought to be full of terrible possibilities in the way of mysterious knowledge. This was especially the case if it were considered that it were an older nation or a nation far away in space or time. Despite their native good sense, the Greeks were much impressed by the pretentious wisdom of the East, as after them the Romans by the complicated mummeries of the Etruscan. Nations living far away, particularly those who live at or near the place where the sun rises from the under world in the morning or goes down into it at night, are notable for their knowledge of magic. Under such circumstances as these whole nations may be endowed by nature with magic power, especially for some given thing. Remoteness in time is, if anything, a more powerful reason than space. When a fairy has been superseded, it thereby becomes magic. In Italy the term la vecchia religione is known to be used as a synonym for 'magic.' So the older and more alien race is apt to be looked upon, especially by those who superseded it in the same country, as a race of formidable magicians—so formidable, in fact, and, by reason of their antiquity, so much nearer the days of the gods, that they themselves are sometimes believed to have been of supernatural origin. But they are still heterodox, they belong to the old order of things, they are more or less allied to the Gods of Mysrae.

One of the most characteristic features of magic is a direct result of this persistent association of the heterodox and the foreign. From the very first, there is no magician like the one from foreign parts (Theban, or Egyptian, or Indian, or so-called imported brand. Helen's nepotism (Hom. Od. iv. 219), as the poet is careful to tell us, was Egyptian; the very word 'magic' suggests the influence of Persia and to the end of the Empire the native practitioner had no vogue as compared with that of his rival who was, or pretended to be, from Egypt, Chaldaea, Colchis, India, or any other place but India. It is true, of course, that 'magic is prohibited, secret; at the most, not prescribed.' But, so far as classical antiquity is concerned, these distinctions seem to be secondary and derivative. Magic was prohibited because it was heterodox. The Romans, in particular, disliked secret rites of any sort, above all, foreign rites with mummy-like images and statues, so much so that magic itself was heterodox. So far, then, we may be said to characterize magic as opposed to religion, the ultimate source of the distinction in Greece as well as in Rome was the criterion of orthodoxy.

To the same criterion is due the fact that, as a rule, men turned to magic for the things which they could not or would not ask of religion. Not, of course, was magic necessarily malignant; on the contrary, it might be distinctly useful and useful for long as orthodoxy was the test, magic was magic whether it happened to be white or black—and this, of course, explains why the Roman law never made any attempt to distinguish between the two.

2. Magic and Legislation. The general reputation of magic at all times was due to the same criterion: it was always illicit, it was always distrusted, it always had a bad name. And when the law stepped in—as it did at an early date in both Greece and Rome—the orthodox and the legal, the heterodox and the illegal, became synonymous terms. Magic was then criminal, and punished accordingly. The history of magic before the law began at an early period, but, so far, at least, as Greece is concerned, our records are too incomplete to give a very satisfactory idea of the question. In Greece, however, it is clear that, when owing to rapid expansion after the Second Punic War, alien beliefs and rituals came pouring in from every side. From the Decebalus to Theodosius and beyond, the Roman laws against magic were affirmed and reaffirmed, the domain of magic was at once particularized and extended, new laws were frequently passed, and the jurisprudence of the subject grew steadily in volume. And, so far as the legal aspect of magic is concerned, it may be emphasized anew that, whether in Greece or in Rome, the ultimate foundation and ground of procedure was always the old criterion of orthodoxy. It is clear, for instance, that the characteristic tendency of the law to extend its scope was both suggested and guided by this criterion. It was particularly useful whenever the law felt obliged to take cognizance of some system of activity more or less mental that was 'good in parts'—such, e.g., as divination (q.v.), which stands on the border line between magic and religion, or alchemy (q.v.), which hovers in like manner between magic and science, or, again, certain types of mysticism (q.v.), which were more or less an amalgam of magic and logical thinking. In every case what was to be considered legal and what illegal was determined by official recognition. Above all, the inclusion of foreign rites and religions within the legal concept of magic was entirely logical and entirely logical deduction from the test of orthodoxy. Not only so, but by the same test it was equally obvious that precisely those foreign rites were the most serious question in magic. How, e.g., shall we define the legal status of the native religions of the provinces? The final solution was again entirely logical. The Emperor was the civil and religious representative of the State. He was therefore entitled to investigate things and to make such use of them as seemed proper. But this privilege was his alone, and only by virtue of his office. In the hands of private individuals it was
MAGIC (Greek and Roman) 271

considered dangerous, and no doubt it was largely for this reason that magic was so rigorously proscribed and its illegality as audibly kept alive. The process and history of Roman legislation on the subject of foreign rites begins with the caudum celibre of its type, the Senatus consultum de Bacchanalibus in 186 B.C. (Livy, xxxix. 8-19), in connection with which it is plain that all books of divination and magic should be destroyed. The history of Roman legislation on the subject of magic, whether directed against sorcery or against magic as a whole, begins with the Decemviri (Livy X. II. 71). Notable in later days was the Lex Cornelia de Saceris et Veneres in 22 B.C. Dio Cassius (xix. 43) tells us that in 22 B.C. the triumvirs, Octavianus, Antony, and Lepidus, banished the magicians and astrologers, and refers (iii. 58) to a speech by Mecenas against foreign religions and secret societies for purposes of magic. In a.d. 16 Tiberius banished the magicians and mathematicians, and in the same reign L. Pittunius was thrown from the Tarpeian Rock and P. Marcus was executed 'more price' outside the Porta Latina (A.D. 24), and Mamurensianus was convicted of escape after magic (ib. vi. 29). Under Nero, Servilius, the young son of Sosanna, was accused of selling part of his dowry to procure the means to save her father's life by magic rites (ib. vii. 21). The prescriptions of Tiberius were renewed by Claudius (xii. 92) and Vitellius (Suet. Vitell. 28). The ban on officials and magicians was established by the laws of Diocletian against the malefice, manichaei, and mathematici (Coll. XV. iii. 1 (Huschke)). Sometimes the law prescribed special penalties against those who practised magic as a whole, itself had extended by the 3rd cent. A.D. may be seen from the Sententia of Julius Paulus on the Lex Cornelia de Saceris: 'Qui abscendens aut ammaetum publicum dant, et id idolo non sacrant, taenam nam exemplum secati, honores in metallum, honestiores in insulam sancta parte bonorum relegantur; quod igitur hoc mulier aut homo poterit, numquam scopio adiuvet. Qui quasi in ipso nocturnae ut quem obtantaret, def.setAdapter, discerrett, factis faceret, surrerit aut immolaverit, atque oblitus obruitur. Qui hominem immissorum certius esse discrimen aut, cum propinquitatis habet bellicus Christi, atque habet obedientiam Christi, vel se hominum et capitum puniatur. Magorum acta censenda summo supplicio adici placuit, id est, bestialis acti sanitatis. Libvrir as, ex quo, magica artis apud se neminem habere leget; et quern quoscumque remissete, non solum honestiers, sed etiam honestiores in insulam deportantur, humiliari capite punitur. Non tamen huiles artes procula, sed obtutientia scripta prohibita est.'

Doubtless the object of the law was or, at least, ought to have been merely to punish the abuse of magic (Plato, Legg. 593 D), but it went much further than that. All the old laws were revived and reinforced by new legislation as soon as, under Constantine, Christianity succeeded paganism as the official religion of the Empire. Of course, the moment the change was effected Christianity became the plaintiff and paganism the defendant in the ancient process of Religion v. Magic. It was Christianity now that was responsible for the welfare of the State in this world. But, among other things, Christianity differed essentially from paganism in the fact that it had also a keen interest in the welfare of every member of the State in the world beyond. The first of these two, the newer religion was representative of orthodoxy—in the hands of those who do not understand or appreciate its message and meaning, the most intolerant of all religions—thought fit to proceed against its predecessor with a zeal worthy of a better cause and a rigour that amounted to persecution. The practice of the courts naturally went hand in hand with the law and was regulated by it. The charge of magic in one form or another was always a cause of action. It was perhaps most common in cases in which there was a weak evidence of witchcraft or incantation. In Greek testamentary law, e.g., this plea was specified either as οὐδὲ φαμακον οὐδὲ γραμμων ηθοποιον (i.e., 'drugs,' in the ancient sense of the word, or 'persuaded,' by means of a spell) (Cret. v. 125-36).

The best known case of this kind is the one brought against Apuleius, the famous rhetor and author of the 2nd cent. a.d., by the relatives of the old widow, Pontullia, whom he had just married. The charge was that he had won her affections by magic, and specified practices were alleged. The legal basis of the action was perhaps ultimately the Lex Cornelia de Saceris and Veneres passed by Sulla in 84 B.C. The defendant conducted his own case and won it by a speech, the de magia, which still survives and is a valuable contribution to our knowledge of magic in that period. It must be said, however, that for the most part the great rhetor does not touch upon the real point at issue.

Considering the comparative frequency of such litigation in everyday life, we can understand with what interest the Athenian audience listened to the famous scene in the Andromache of Euripides in which she is charged by Hermione, the wife of Neoptolemus, with bewitching his spirit with the use of philtres. Her dignified and stinging reply, 'Not of my philtres thy lord hath thee, But that thy nature is so nate for this That is the love-charm: woman, 'tis not beauty That witheth broiderings, nay, but nebekness'; (505 ff.; in A. 719-56), is doubtless the poet's own protest against the folly of such a charge. But, if one may judge from cases still occasionally reported in the daily press, it is a charge which is still never ceases to be preferred in one form or another.

3. Derivation and definition.—All the words for 'magic' in Greek and Latin record some real or supposed fact in the history of the subject or else indicate that some particular manifestation of it was sufficiently prominent to stand for the whole.

The ordmary Greek words for 'magic' are μαγια, μαγεια, and φαμακεια. The last two are old and popular. The μαγια, according to the derivation offered by the Greeks themselves—μάγος noun and μαγεια, the name for the art or craft of making magic—was specifically a necromancer in the original sense of that word, i.e., like the Witch of Endor, he called up the dead (συναπεκακασθαι),—a thing which in all ages has been one of the most important specialties of the magic art. It is true that the derivations isajajj; i.e., in the meaning of professional mourners, and, as Hubert observes, the two occupations are not incompatible. The μαγια may very well have been both. But, as we learn from Strabo (v. 1), 'the mystagogy is not thinking of mourners; he is giving a very good description of a special and particular type of magic with which he himself was doubtless quite unfamiliar. The μαγια was, no doubt, much feared by the population in general, but he was also more or less a roadside charlatan, and in other respects the associations with a person of his type were such that of the three ordinary names of magic, μαγια appears always to have been the most distinctly reprehensible. The prominence of φαμακεια in this connection is due to the primitive idea that the action of any drug (φαμακα) usages that word in its most extended application—is due to magic power. In its original sense φαμακεια means the science which deals with the magic properties of plants and simples. Hence the φαμακεια—in all countries the primitive ancestor of the doctor, the botanist, and the toxicologist (amateur or professional)—was the magician who was particularly the special branch of the subject, and the φαμακεια, i.e., the 'drug' which he prepared, was always a 'remedy.' As such, the efficacy of the φαμακεια is enhanced, if not actually conditioned, by the concoction which generally accompanied with some stage of its history. In most cases, too, it must be discovered, prepared, or given at a certain time or in a certain way. Of its effect it may be helpful or harmful according to the intentions of the giver. Hence the secondary use of the word in the sense of 'art of magic' or a 'remedy.' Homer himself generally distinguishes by the use of an adjective (Od., iv. 367; K[A]) and sometimes a noun (Lat. magia), from which, through the substantivized adjective (τοιχικα, are magia), our own word is derived, are an
excellent illustration of the Greek and Roman attitude towards an alien faith to which allusion has already been made. In its original and restricted sense μαγια meant nothing more than the magic of the Persians (cf. Plut., life of Romulus, § 93). It is well known that this faith, which was imported to Greece by artificers, draws rank as one of the great religions of the world. But it was imported, and had no official standing; even amongst the Persians it was not authorized. Between these two facts μαγια became a general term for ‘magic’ as early, at least, as the 4th cent. B.C., as we see from Theophrastus, Hist. Plant., 664 a (ed. de Rijk, 248 a) and Aristotle, frg. 361 (though this is only an indirect quotation by Plut. Aegypt. Mag. [too], Plut., life of Romulus, § 93), and there arises a confusion of terms often of no specific and particularly original. Μαγευση is perhaps the most colourful of the three words; ἔργα, except when it returns to its original and distinctive use, is a pejorative term for magic in general: δαίμων, when used generically, is possibly finer than the others of vague and doubtful significance. It is otherwise that it has been no great difference between them in current speech. Hecataeus, e.g., defines μαγια by μαγευα, and for Polykleitos the general term for ‘magic’ is ἔργα (pejorative) and whatever may be detached from it is religion. The Mystics (e.g., Porphyry, De Aedificiis, 1. 4), it is differentiation unreservedly the use of these words; they distinguish between good magic and bad magic, and enter into all sorts of subtle speculations regarding the hierarchy of demons through whose aid the good or the bad magic, as the case may be, is able to accomplish its purposes. The Alexandrian school of philosophers undertook to draw a distinction between ἔργα and the particularly profession the latter bore a name. But Augustine (de Civ. Dom., x. 9) is too much of a practical, clear-headed Roman not to see the essential weakness of the entire theory. The worship of God, he says, is a matter of submission to the will of God, i.e., the will of the Logos or Logos himself, a pure idealism, from which the whole demolition of all magic must be expected. In other words, Christianity is orthodox; therefore all other religions, whether good or bad, are the same, and whatever we call it, however we disguise it, it is magic. This, of course, is nothing more or less than our familiar old criterion of orthodoxy, conformity to the revealed fact that Christianity indicates the abrogation of paganism to be the official and legal standard of comparison. For the Romans themselves—at least, after the 1st cent. A.D.—the distinction between the maleficus, the beneficent, the sages, and the magus was only difference of degree.

But it is said (p. 28) that magic began with medicine, and that the chief causes of further growth were the adixture of religion and astrology (arx mathematica)—all with intent to deceive. In the same way magic is extended to alchemy and to divination (Tert. de Idol. 9, de Cultu Fem. 1 f., etc.). Hubert rightly observes *that, in spite of the fact that the Chaldeans and the plain magicians are in the same class, a sharp distinction should be made between astrology and magic. The business of astrology is to foretell the very things which it is the business of magic to prevent or, at any rate, to make happen. Therefore, magic enters into astrology, it is for that purpose (Fap. Paris, 2891, 2901, 2910). Hubert does acknowledge, however, that the astrologer's ceremonial in consulting the stars derives no small part of its efficacy from the fact that it has no such common with the incantations of magic. We might, perhaps, add that the whole 'science' of astrology is based upon a type of reasoning so primitive, so nearly akin to that upon which magic itself is based, that one might be excused for failing to see sometimes where magic begins and astrology ends. There was at least one large and especially popular class of magicians, about whom there could be no doubt: the so-called ἁρμαγαρακτοι, or astrological groups, whose entire practice was founded on speculations regarding the mystic properties and office of the stars. The Roman legislators were justly justified in believing that, if there was any distinction between this theory and the theory of magic incantation, it was a distinction of degree.

It is also quite true, as Hubert insists, that alchemy should be reckoned per se as a science. We might add, however, that alchemy never had a chance to be reckoned per se. Not until it assumed the aetas of chemistry was it able to escape from its old associations with magic (see ALCHEMY).

It has already been noted that divination, even by the old criteria, is the official sanction of a more or less indeterminate position between magic and religion. Indeed, αρετα and magic are so thoroughly conjoined that even in ancient Greece the one was often more than the other. In others a fairly sharp distinction is supplied by official sanction. Νεκονοπάντα, for instance, was religious if used in a family cult, i.e., it was presumed that a man had the right to call up his own ancestors if he pleased. By a somewhat similar presumption it was also sanctioned in the cult of the heroes. Under any other circumstances it was not only distasteful, but one of the most formidable and characteristic operations of magic. The same distinction holds good in another very important and extensive branch of divination, time in which every one was interested and which all the schools of philosophy, especially the Stoics, investigated and discussed at great length—the source, valuation, and interpretation of dreams (εἴδοσις; see MIGNE, s. v. De mens., vol. p. 30 f., and cf. Artemidoros, Uromicron, a treatise of the 2nd cent. A.D. which still survives). The method officially sanctioned for securing true and prophetic dreams (λεγομορφα, λεγομερα) was incubatio, but the magic papyri (esp. the Fay. L. Batyus, Leyden, 1843-44, vi., etc.) are full of λεγομερα, formulas and charms for obtaining such dreams. Hubert would also include within the sphere of magic such practices as divination by means of *sortes with verses of Homer, Vergil, or the Scriptures, τιμουκοπαρπατια (Ath. vi. 80 [201 F]) and, in general, any ceremonial for purposes of divination which implies the use of magic rites in our sense of the word. By that criterion, of course, we should agree with Hubert that divination in private cults was strongly tinged with magic. The same was true of divination in public cults, although this was when the oracles were revived in the 2nd cent. and was for historical reasons. In all these cases, however, magic was distinguished from religion by the usual criterion of official sanction.

II. MYTHOLOGICAL PERIOD.—Until the age of Pericles the history of our subject is largely confined to what Hubert calls the period of genuine magic. This is partly due to the fact that our record is so fragmentary and that what survives belongs to types less likely to be concerned with such a subject. But it is fairly far from the time of Pericles magic itself rapidly assumed greater importance in the everyday life of the nation. By that time the average man's faith in the old gods was rapidly declining; and among the factors contributing to the growth and spread of magic and kindred ideas in any people the decay of orthodox belief is by no means the last to be considered.

1. The magicians.—Among mythical magicians, the Telchines (or Telchines), the Daictyi, the Curetes—and in connexion with the Curetes the Corybantes (see KOUKNETES and KORYBANTES)—hold a position which amply illustrates the fundamental ideas about magic already mentioned. The first three were reckoned the primitive pre-Hellenic inhabitants of Greek lands—the Telchines, of Rhodes (Strabo, p. 472; Diod. Sic., v. 55, though here, as with the others, there is a tendency to confusion in names and places of origin); the Daictyi, of Crestan or Phrygian Ida (Strabo, p. 355; Apoll. Hygin. 1. 35); and the

2 Ib. p. 236; L. Denizier, De Inunctione, Leipzig, 1900, p. 6.
MAGIC (Greek and Roman)

Cerastes, of Acanania.\(^1\) As such, they were all regarded as servants of the gods and, indeed, as themselves more or less divine; and, in some cases, they actually had a cult.\(^2\) Even the Telchines, a synonym of spitfulness in the folk-tales of Greece, were in their time the gods of smelting (Diod. Sic. v. 53; cf. Paus. ix. xix. 5). But they all belong to the old order, they are all heterodox; they are all classed as ψεφες (Nonn. xiv. 56 ff.; Strabo, p. 443; Plut. Mos. 21). They helped the gods and spiteful towards men. They use the water of the Styx in their charms (Nomus, Dionys. xiv. 38); they are malignant sorcerers, who, with the help of the gods and at the instigation of the gods, and make barren the domestic animals.

Most notable is the position of these clans in the history of the arts. As the Cyclopes were the semi-divine florin:s of metal, so, too, the semi-divine corporations of smiths were the first workers in iron and copper, gold and silver; in fact, they were the inventors of metallurgy. Hence the Telchines in particular are aptly compared by W. Pape\(^3\) to the Kolotes of the Hermes of Herakles (Diod. Sic. v. 64) and, long afterwards, to Pythagoras, Plato, Iasius, Aekides, the three great physicians of the epic, are all Dactyls. Later, they were regarded as inventors of the famed Epheus Grammeus (Clem. Alex. Strom. i. 15 [PG vii. 781]). The Centaur Chiron and Nessus are also masters of the healing art. The gift of prophecy, though naturally common to all by reason of their magic powers, is especially associated with the Curetes. Among all nations the most notable symptom of the power to prophesy is an ecstatic state of mind. The assumed origin and pattern of the Corybantic worship is the most famous and the most widely spread cult of this nature among the Greeks and Romans, was the wild noise and clatter of the armed dance of the Curetes around the baby Zeus—really a priest's dance, a dance to keep the child from harm (see KORITEUS AND KORYPLANTES).

The great individual magicians of Greek mythology are Promethes (Apoll. Rhod. iii. 845; Val. Flacc. vii. 356), Agamedes\(^4\) Melampus (Apollod. ii. ii. 2), Eunome (En. iii. vii. 6), Pasiphae (Od. vii. x. xv. 1), Agamedes or Perimece (Roscher, s.v.; Theoc. ii. 10 and schol.), Circe (Roscher, ii. 1186), and Medusa (s.v., the object, though not exclusively, the interest of all is in ψεφες). Prometheus, the wise and kindly Titys, belongs to the old regime. Melampus comes from Thessaly, the distant land of magicians. All the rest (except Eunome, and even she is a water-nymph) are in some way connected with the sun or—which amounts to the same thing—with the sea or the moon. Agamedes is the grandson of Poseidon. The rest are descendants of Helios. Agamedes is also the beloved of Poseidon. The greatest of all are Circe and Medea—both the seed of Helios and Poseidon, both from Colchis, the distant land where the sun god himself rises at dawn from the ocean stream.

Circe.—In the Homeric account—the most marvellously correct and sympathetic portrayal in all literature of her curious, abnormal, not quite human type—Circe dwells far, far away in the mystic and trackless seas. Cruel, but no more so conscious of herself than the child who separates some luckless fly from its wings, this ψεφες, whose special power is metamorphosis, is there herself with enticing such wandering mariners as come within her reach to drink magic potions which straightway turn them into swine. Like any other queen of the nymphals, Circe is unmoved rather than imperious. Nothing could be more in harmony with her type than her first meeting with Odysseus and their subsequent life together, or than the fact that, in the long run and all things considered, the Wanderer never had a more disinterested friend among women.

Medea.—Medea is a relative of Circe and, like Circe, was sometimes worshipped as a goddess (Hes. Theog. 236 ff.; Aleman, cited Athenag. Legat. pro Christ. 14); in fact, the Romans identified her with Angitia and the Bona Dea (Macrobi. i. xii.; Serv. on Æn. vii. 759). Of all mythical sorceresses, she is most distinctly the sorceress, and her powers as such are the most varied and terrible. As Hubert says,\(^1\) she is evidently the most highly developed personality in a group of homonyma. Therefore the constant tendency of tradition to make her the originator of rites and charms which previously had no definite pedigree at all or were attributed to some more obscure rival. At all events, in song and story, in long annals of magic itself, there never has been a sorceress to compare with Medea. Medea, the beautiful and awful Colchian, as awful as her mistress the goddess Medea, is the last word in the sun-god, is still the arch-enchantress of all the Occident. She is first and foremost a ψεφες. It is therefore perfectly, though not exclusively, from her knowledge of ψεφες that her power is derived. Her box of magic simples is often mentioned (Apoll. Rhod. iii. 802, iv. 25), and in art she is often represented as holding it in her hand. Her charms are innumerable.\(^2\) She can restore youth, bestow invulnerability, dull the dragon of the golden fleece to slumber, quiet the storms, make the rivers pause in their courses, call down the moon from heaven, etc. Indeed, Apollodotus' description (iv. 1655-75) of her procedure when, from the deck of the Argo, she cast the evil eye upon the giant Tantalus far away on the cliffs of Crete and brought him down to his death is enough to chill one's blood. But Medea is also beneficent, and K. Seeliger (in Roscher) even suggests that this was really her primitive character. She heals the wounds of the Argonauts, cures Eneas of his madness, frees the Corinthians from a famine, and is even a prophetess.

Even in the fancy of the unlettered her memory never fades. On his way to Babylonia, the popular tradition of her continued to grow in its own way (Strab. i. i. 51, note, ed. K. F. Smith, New York, 1913). Special feats of magic were supposed to have been her invention (Iep. xii. 2, xii. 1), and, as the line just cited from Thibull suggests, we may be sure that the λίθοι

\(^{1}\) Roscher, i. 1589.
\(^{2}\) Eubel, P. R. 112.
\(^{3}\) Roscher, ii. 4845, for list and references.
and commentators—few fail to mention her. Ovid
never escaped from her spell. From Homer to the
last feeble echoes of rhetoric, and again in the
renaissance of the modern world, here is a dominant
personality, and the story of her love and her
lover, her betrayal and her terrible revenge, has
ever grown old or lost its interest and charm.

As we might guess, Medea is the typical Graeco-
Roman enchantress. Her connexion with Hecate,
her methods of discovering, securing, preparing,
and administering her φαντασία, and the large pre-
ponderance of φαντασία itself in her theory and
practice of magic are all typical of every other
enchantress both in literature and in life from
Homer to the end of the classical world.

2. Their methods.—Φαντασία are either to be
swallowed or to be applied outwardly as salves or
pastes. The distinction is medical, but it is also
Homeric, and applies equally well to magic at any
time. Circe uses a salve to restore her victims to
human shape (Od. x. 391 f.); Medea uses another
to have seen the invincible Phineus (Apoll. Rhod. iii. 1014 f.),
and still another—in the form of an aspersion—to put the
dragon to sleep (ib. iv. 156); in the old Lesbian folk-tale Aphrodite gave Phaon a kiss which, when applied as directed,
gave him youth and surpassing beauty (Elian. Var. Hist. xii. 18; Serv. on Aen. iii. 279; Paus.
plat. 49; Lucian, Dial. Mort. ix. 2; Roscher, s. e.
(Just. Thon.)). The shirt of Nessus and the robe of
Corydon belong to the same type. Pamphilus (Apoll. Mt. iii. 21) went so far as to have a box filled
with little cakes, each containing a special salve for giving metamorphosis.

Quintus as ancient and characteristic is the φαντασία
taken as a drink. So Helen, herself a sorceress, administered her Egyptian nepenthe (Od. iv. 250-
253); so Circe affected all her transformations (ib. x. 257); so Medea performed some of her feats.
And here, again, the method is typical of later
times. One branch of it—the use of φάρακα or
pouca annatoria, i.e. drinks to inspire love—is
perhaps the commonest and most characteristic
feature of all ancient magic. It is to be noted
here that in Circe's case the process is not com-
pleted until she touches the victim with her βατόν,
or, as Homer says, 'in the heart'. Homer is frequently repre-
sented with a wand; with a wand Athena makes
Odysseus look young again (Od. xvi. 172); so
Hermes overpowers our senses (Ili. xxiv. 344; Od.
iv. 327). But, in the words of Pausanius, to this day
magician's outfit, even if he is nothing more than
an ordinary sleight-of-hand performer, is complete
without this ancient and dramatic accessory.
The use of the wand seems to be an application of the
docility of sympathetic. It facilitates the transfer
of the magician's power to the object upon which
he wishes to exert it. But in all cases the wand is
a help rather than an essential necessity. Perhaps,
perhaps, in the case of the gods just mentioned,
who, as such, are too powerful to need it, the
really essential thing is the φαντασία, and, as
we have seen, the Graeco-Roman theory of magic
supposes that Circe had already prepared her
φαντασία to the accomplishment of the proper charm,
and that Helen's nepenthe had been similarly
prepared either by herself or by the specialists
from whom she had procured it.

The same rules hold good for φαντασία in the
art of healing. The sons of Autolycus bind up the
wounds of Odysseus, and stop the flow of blood with
an ῥεφόβαθ (Od. xix. 457); the divine physician,
Aesculapius, follows the same methods (Pind. Pyth.
iii. 82; cf. iv. 217; schol. Isthm. vi. 83; cf. Soph.
Oed. Col. 1189 [Jebb]); and at all times the use of
incantations with a remedy was so characteristic
that one of our richest sources for the study of
φαντασία as magic is the works of the physicians
from Hippocrates to Marcellus. Not that men
like Hippocrates and Galen were much impressed
by the magic of medicine; but their patients were,
and any good doctor learns that his most powerful
remedies are the patient's own determination to
recover and his belief that he is going to succeed.
In popular medicine, of course, the survival of magic
is much more marked. Here, too, the practice of
pre-Periclean times is typical. The story of Aeneas
(Apoll. l. i. 12; Roscher, ii. 306) is an excellent
example.

For ten years Iphicles could have no children. At last he
consulted Melampus the seer. Melampus, whose specialty, like
that of Moses the Aegyptus (Apoll. Rhod. iii. 216 f.), was
the language of birds, consulted the great god ten years before,
while casting lots. Iphicles had threatened
his father Phylacho with the knife. It was then discovered that
the knife had at that time, and presumably by Phylacho himself,
been struck into the tree with which the life and well-being of
Iphicles was bound up. Iphicles himself
the knife was removed, the rust scraped off and pre-
pared as a φαντασία, and, when Iphicles had taken it as
prescribed, he immediately recovered his powers. Similarly,
the wound of Telephus could be cured only by the rust on the
spur of Achilles by which the wound had originally been
inflicted. The principle is, of course, frequently illustrated in
the later history of Graeco-Roman magic, and still survives
in our own history by saying that 'the hair of the dog cures its
bite.'

Other branches of magic referred to in this
period are equally typical. According to Homer
(Od. x. 516 f.), Odysseus learned from Circe how
to call up the dead, and the ceremonial of acyopa-
monia, as the poet pictures it, always remained
practically the same. Indeed the antithesis of Eno-
doeles, as described by Diog. Laert. (viii. 59, 82 f.),
show clearly that the type of the θεία became
finally fixed at a very early period. Again, the
tag of winds given by Kolus to Odysseus (Od. x.
16 f.) repeats the symbolism of wind and weather
magic in all times and countries. The same
true of the primitive rustic magic attributed to
the Telechines. Finally, the love-charm known as
'drawing down the moon' was certainly familiar
long before the time of Sophron, who, according
to Suidas, was a contemporary of Xerxes. Presum-
bly this charm was from the first looked upon as
the special property of the Thessalian witches. At
evenings, the idea was firmly fixed in the time of
Aristophanes (Nubis, 749) and was never after-
wards forgotten.

III. FOREIGN INFLUENCES.—We have seen
that, in conformity with the law of distance in time
or space or both, the early Greeks attributed special
power to the witch in Italy, and the Telchines, Dactyls, and Curetes—apparently, too,
the Pelasigers—and that unusual activity and ability in
magic were attributed to what at the time were
told to be such distant countries as Caleis, Egypt,
Thessaly, and even the Islands. As time went on
and the horizon of the known world became corre-
spondingly wider, such local centres became pari
passu more and more distant and the heathen
tribes of the African deserts, the mysterious
nations of the Far East, and the still more
mysterious peoples of the Far North took their
turn as redoubtable magicians.

But the primacy always remained with Thessaly.
In the time of Aristophanes as in the time of
Ampelius, Thessaly was par excellence the realm
of magic and magicians. The literature is full of it,
and evidently the literature was a faithful reflexion of average opinion in the
world at large. Numberless passages might be cited to
show that in the Athens of Pericles, as long after-
wards in the Rome of Augustus, the profession of
enchantress found it 'good business' to advertise herself as a 'genuine Thessalian.'

Orphism.—Thrace too, though Pliny (Hist. xx. 33)
1 W. Mannhardt, Antike Wald- und Feldkunde, Berlin, 1877,
MAGIC (Greek and Roman) 275

1. It denies it, was another famous locality for magic. But Thracian magic, as Hubert warns us, 1 was really another name for Orphic magic. Now Orphism itself was not essentially magic; on the contrary, magic is characterized more by the absence of magic, but a religious movement of the most momentous importance in the spiritual development of classical antiquity and ultimately of the entire Western world. But it was heterodox and, therefore, 'magic.' This seems to be the first great and definite example within historical times of the impingement of a strange religion or system of religious orthodoxy. Aristotle and his followers make all manner of fun of the Orphics, and such a passage as Euripides, Cyclops, 638 ff. (cf. Plato, Rep. 364 E), shows that Orphic-like Musaeus, had already become an inventor of magic, a sort of proto-magician and doctor. 2 Finally, Orphea the magician, as he appeared to the popular mind of the 5th cent. B.C., became a character of great importance in the Greek world. His whole life is reflected in the Orphic ascriptions. The Orphics claimed Orpheus as their founder, and he was even made one of the founders of astrology and medicine. All this is undoubtedly true, but it is difficult to distinguish between Orphic texts and magic texts. Further confusion was caused by the last ceremonial peculiar to Orphism, and to the association of their Orphic elements with Greek and Egyptian. So far as the average man was concerned, the distinction between the ἄγειρα and the ἀνεμός and the unattached priests of Orphism (Plut., Symp. vii. 8; Aul. Gell. x. 12; Apoll. de Mag. 27, 31; Diog. Laert. ix. 7; Lucian, Neopygmaea, 6; Apoll. Tyan. Ep. xvi), we now hear that Pythagoras was a pupil of Zoroaster; indeed, we are told that his whole life was an attempt to reduce the philosophy of Zaratua the Chaldæan (Lobeck, Apologia, p. 471). Democritus broke into the tomb of Darmanus in order to secure the wondrous MSS buried with the defunct at Delphi; and others say that, after being initiated by the Persian Ostanes, he became one of the fountain-heads of the tradition of alchemy.

Of these Persian sages associated with the tradition of Greek-Roman magic the most famous was Ostanes (HN xxi. 8, etc.). His special prominence was partly due to the belief that he had committed to writing all the voluminous and unanswerable proof, but until his name is sufficiently quoted, to his making the ancient oral tradition of ancient magic (ib.). The first book on medical magic was attributed to him (ib. xxvii. 8), and also certain apocryphal works on alchemy. 3 Of all the Ostaneses, he is the most frequently referred to, and his name may be found cited as an important authority in dream-books, 4 still for sale.

As we shall see, it is often foreign influence on magic was much discussed by the philosophers (Diog. Laert. proem. 1). One of the most notable contributions must have been the so-called Mysteria, usually attributed to Plato and Aristotle, in which is set forth the entire oral tradition of ancient magic (ib.). This was much discussed by the Neoplatonists and, especially by Plotinus, the latter of whom it is said that he had all the Egyptian MSS in his library at Rome (ib. xxvii. 8). The influence of these MSS is, however, quite negligible. The standing charge against the Mysteria was their emphasis on mystikos. But Orphism itself suffered from the fact that, being a strange religion and being reflected in the Orphic ascriptions. As such, it had no standing and inevitably began to deteriorate. It justified more and more its new name of oracular magic, and its adherents assumed names and moved about the world of ordinary magicians. On the other hand, ordinary magic was enriched and enlarged, as usual, by foreign influence and by new methods and procedures. Here, of course, we have one important reason for the remarkable wealth and variety of Graeco-Roman magic.

The Magi:—Of all these foreign influences on native magic the religion of the Persians, i.e. of the Zoroastrians, is the most important. At any rate, in the ordinary opinion of later times it was the type of native influence in general. An almost immediate result, e.g., of absorption by its native rival was the designation of the new combination as magica. As we have seen, this was not later than the middle of the 4th cent. B.C.; we are therefore safe in assuming that by that time the Greeks had already drawn the inevitable corollary, afterwards generally accepted, that the original fountain-head of the new combination was Zoroaster, the Persian. The intrusion of Zoroastrian upon magic is characterized by the fact that we find Solinus, 3; HN xxi. 31; xxv. 156 ff.; xxv. 13 ff.;

2 Lobeck, p. 665.

3 Solinus, 3; HN xxi. 31; xxv. 156 ff.; xxv. 13 ff.;

The Magi:—Of all these foreign influences on native magic the religion of the Persians, i.e. of the Zoroastrians, is the most important. At any rate, in the ordinary opinion of later times it was the type of native influence in general. An almost immediate result, e.g., of absorption by its native rival was the designation of the new combination as magica. As we have seen, this was not later than the middle of the 4th cent. B.C.; we are therefore safe in assuming that by that time the Greeks had already drawn the inevitable corollary, afterwards generally accepted, that the original fountain-head of the new combination was Zoroaster, the Persian. The intrusion of Zoroastrian upon magic is characterized by the fact that we find Solinus, 3; HN xxi. 31; xxv. 156 ff.; xxv. 13 ff.;

2 Lobeck, p. 665.
The usual term for a magician is *magus*, but the word does not occur in the law until Diocletian. 1 *Pennataria* is the generic name for any magic ceremony, whether legal or illegal, and *sacerdos* or *sorcerer* as the epithet of a magician is used in the same way. The *magus* in Cicero's time was still more or less associated with Persia, but with the first year of Tiberius 2 he comes under the ban of the law, and after Trajan's time the term seems to have been applied to any one who practised illegal magic (Fed. Theod. 3, 1. 8. 4; Cod. Justin. 13. 17). *Sage,* *wise woman,* is probably one of the oldest words for a woman. In the Greek race it also means a *maid* is a sufficient indication of the *sage's* social position as well as of the technical functions as a magician. She is one of the standard characters of the Roman elegy. *Striga* (striga, Petrus. 62; lat. *strega*), 3 *sorceress ova,* was a name for witches which records the popular Roman explanation of vampires.

As the Greeks looked upon Thessaly, so the old Romans appear to have looked upon Etruria, as a land of magic and magicians. Among other accomplishments, the Etruscans knew how to control the springs, and discover hidden springs (Wissowa, in Pauly-Wissowa, s. v. *Aquilea*). So, too, such ancient and mysterious peoples as the Sabines, Marsi, and Palliagni were perhaps the first to deal with the same main matter. Now (Vers. *Ephes.* vi. 786; Hor. Epod. v. 76, xvii. 29, 81, 1. xix. 291.; *H. N.* xxii. 78; Ovid, Fasti, vi. 141 f.). The Romans saved the Etruscan *harrupia* at an early date by naturalizing them in *Catiline* (de Agr. 6). They classed it with the rituals of the *augures,* *haurioi,* and *Chaldei* as a matter which any solid farmer would do well to avoid; but, although he himself was doubtless unaware of it, his own charm for a sprained hip has a magico-religious foreign sound. Even then Roman magic had been exposed for some time to the influence of foreign religions which set in soon after the Second Punic War; the overpowering influence of Hellenism began still earlier; and, as we have seen, Greek magic itself had been thoroughly commingled and overlaid with foreign elements. Finally, our principle Roman source for the details of magic practice is the poet—its tone is the same as the date the practice of antiquity began to feel the impact of foreign ideas and systems. The *Augury,* the *Magi,* the worship of *Mithra,* the *Assyrians,* the *Babylonians,* the *Chaldeans,* the Egyptians, the Hebrews—these are merely the most important. And the process was facilitated to an indefinite extent by the conquests of Alexander, as it was again later by the extension of Roman power to whatever seemed worth while in the way of territory. Laws were passed and, as we have seen, were severely enforced. But they appear to have been practically powerless.

The classical world was a land of cults, and in the time of Augustus the great capital was alive with a dozen different kinds of magicians, from the lowly *sage* to the impressive *Chaldeus.* As yet the average man of birth and education was not, as one might say, dangerously affected by these different varieties of heterodoxy; but already powerful disintegrating influences had long been at work. As early as three hundred years before Augustus, the great age of mysticism and related ideas was already rising. Orphism was prominent in it. But Orphism (and, for that matter, any other specific creed that one might name) was perhaps quite as much a symptom as a cause. Spiritual unrest was world-wide. Men needed new wine, and the old bottles could not contain it. The craving which for generations had been more or less vague in volume and intensity, assumed its acme not far from the beginning of the 2nd cent. of our era. There were creeds then—like those of *Isis* and *Mithra*—that would seem to have been but missed becoming great religions. There were men, too, in that period—e.g., Apollonius of Tyana and the Peregrini of Lucian—who were philosophers of the contemporary type,

---

1 Mommsen, *Strzygowski,* p. 482, n. 2.
2 ib. p. 480, n. 7.
and posed as the more or less inspired founders of creeds—all charlatans, of course, but not entirely so. They all professed to be authentic, and the names of some of these men might have gone ringing through the ages instead of being merely an object of occasional scholastic contemplation. But they were not logically driven to accept or realize the necessity of being thus; they were—recruited in a period like this—who had lost their faith in orthodoxy, but who lacked the character to seek the truth elsewhere and the contin- uity of purpose to attain it. They preferred to give themselves up to whatever promised the indispensable—in a way sufficiently dramatic and interesting to gratify the taste for novelty. Under such circumstances there is always another class ready to enter into this form of intellectual and spiritual dissipation. Both these classes—the willing deceivers and the willingly deceived—are pictured to the life in Lucian's admirable skit, the various initiations of which is so grand and few, of course, ridiculed the whole matter; the most notable example is Lucian himself, who has been well named 'the Voltaire of antiquity.' Other initiations to which the chief among these were the Sceptic, the Cynics, and the Epicureans, i.e. those who did not believe in orthodoxy, and therefore, by our familiar crite- rion, should logically have preferred the opposite, are at least the germ of the most remarkable development of magic in Graeco-Roman times. This is the magic of mysticism in its various forms. Among the most important and popular of the Alexandrian school are Porphyryus (de Abstinentia et de Mysteriis) and Proclus (de Sacrificio et Magia). The theory, as Habert observes, is one in which the philosophical and the religious elements are still imperfectly differentiated. It is a synthesis of all the known methods of acting on the powers of the supernatural world. It is half-way between religion and ordinary magic, and capable of moving in either direction. The philosophers, of course, emphasized the religious character of the combination, but, as Augustine (loc. cit.) says, and as Porphyryus himself acknowledges, by Enn. Prof. Enn. v. 10), they could make no satisfactory distinction between gnostics, magia, and theurgy. Their principal criticism was the character and intentions of the individual performing the given ceremony—a criterion hard to apply and of no real value in itself. Their theurgy became dissociated from religion; its position in society, like that of the theurgy of the old Egyptians, was not such as to give it the character of a religion; in fact, even without it the Alexandrian philosophy had all the outward appearance of magic. The attack on Apuleius was supported more by the various initiations of which is so grand and few, than by any specific acts of magic with which he was charged. Theurgy did afterwards enter religion, but it entered by the Gnostics, not by the philoso- phers—and this only in so far as the Gnostics transformed it into a cult were recognized as a religious organization. So, too, the cult of Mithra gave rise to theologies and ceremonies that in Pliny's time (LN xxxii. 17f.) were described as magic. On the other hand, it was always difficult to distinguish between the Orphite and the religious associations of magicists.

Theurgical philosophy was violently attacked by the Sceptic, Epicurean, and Gnostic (Philocr. Apol. Lycon, viii. 382). Among these works were the Kar ['Mau of the Epicurean Celsus (probably the adversary of Origen, and the one to whom Lucian dedicated his Pseudomethists, and the Epistulae of the Celsus). The Iobis Mau's of Sextus Empiricus still survives, and it is unusually dreary reading. Like Lucian (e.g., in his Alexander seu Pseudomethistis, Demosthenes, Physiologus), they assert only magic, but every charlatan in either religion or mythology, Lucian feels that the wandering priests of the Syrian goddess are no better than any other magicians. All magic is a mere pretense, all magicians are hypocrites, rascals, and charlatans, whose object is to play on the credulity of the average man.

The Christians—The attitude of the Christians, as we have seen, was different. According to Origen, Celsus had no right to deny the reality of magic; Augustine was quite certain that the rites used for summoning demons were efficacious (De Civ. Dix. xxii. 8); and cf. in Cicero, De natura divinorum. In general the Christians were far from denying the existence and power of magic (Epiph. Bar. xxxi. 1; Tert. Apol. 36, de Animis, 57; Eus. Prag. Evang. v. 14), especially in those early centuries when the Church Fathers had no difficulty in making the sharpest possible distinction between the Christians and the Gnostics. All heretics in general and Gnostics in particular were magicians, and their faith was the real (Iren. H.E. i. 13; Justin Martyr, Apol. i. 26). Paganism in any form was magic. For the Alexandrian theurgy the difference between gods and demons was merely a difference in degrees, and the Christians required through it to assure an absolute opposition between the two: God was good, all the demons were evil; the pagan gods were all demons, therefore all the pagan gods were evil. Any and all magicians which did happen to be orthodox were the work of the demons.

It will be seen that this is really the familiar old distinction between the orthodox and the heterodox, with a much greater emphasis on the secondary conclusion, also ancient, that the one was good and the other evil, per se. And the same old distinction can be carried with it the same old assumption that the one was just as real as the other. The Christians never seem to have realized any more than did the pagan forefathers that the difference between their gods and the pagan gods was not conceived by the difference between genuine, v. a. genuine gods, as are and gods who never were. The only way to deal with the pagan gods was to classify them as evil demons (Iren. Orat. viii.). They were just as real as ever; the marvellous and prodigies attibuted to them were just as real and just as readily believed as ever; it was merely insisted that the same had been wrought with intent to deceive. The 'idols' still raved and gave signs from time to time, just as they had always done; but that was a magica operatio wrought by the demons of the old religion (Iren. H.E. v. 28. 2; Eus. H.E. ix. 9). The persistence of this old god, godly nostalgia, etc., is an interesting proof that the Christians still clung to the old pagan idea, more or less generally entertained by the less educated class, that the gods actually inhabited their statues. Many a priceless example of ancient art has been destroyed for this reason, and the idea still survives in the famous medieval story of the "Ring of Venus."

Of particular interest to the student of magic of this strange period are such surviving treatises as the Poinandra of Hermes Trismegis, Aetopodion, and related works, and as the astrological works of Horapollo.
of Nechepero and Petosiris. The literature of the magic oracles belongs to astrology as well as to magic, and another important source is the Tabulae Diviniae, so many of which have come to light in recent years. The magic papyri.—But most important of all are the magical papyri; we continue to turn up from time to time in Egypt. Hubert gives the list of those published down to 1904; for later finds and their discussion, the reader is referred to Von Coblitz, cit., p. 126. Wilcken, Papyruskunde (Leipzig, 1912), the Archiv für Papyrforschung, and the occasional reports in Burian's Jahresbericht des klassischen Altertums.

The magic papyri belong for the most part to the period between A.D. 900 and 500. Their discovery is peculiarly fortunate in view of the fact that they belong to a type which came under the ban of the law, and which some of the later emperors, notably Diocletian, made sedulous efforts to destroy. They are not original and independent works, but merely handbooks of magic, and, as might be expected, the editorial tradition is very poor. There are often different versions of the same ritual; sometimes the hymn or formula in one version will be considerably abbreviated as compared with the same hymn or formula in another version; again, the particular省略了体的 words are often merely translated. It is therefore extremely difficult to reconstruct any complete and trustworthy text of this type.

The authorities habitually quoted and the sources, as far as we can trace them, seem in some respects to bear out: Pliny's statements in his account (HN xxx. 1 ff.) of the growth and development of magic. Pliny distinguishes the different sources of ancient magic: (1) the Persian school, founded by Zoroaster; his 2,000,000 verses on this important subject (note the childish exaggeration characteristic of this sphere) were revealed and explained to the Greeks by Osthene, Pythagoras, Elephodokles, and Democritus belonged to this school, and also certain ancient Mesopotamians, Babyloniens, and Assyrians. Democritus explained the magic books of Dardanus, which he said he had found in his tomb; they were written in Phoenician. (2) The second school is the Jewish school, descended from Moses, James, and Qimnas (Ap. Mag. p. 785; Apul. de Mag. 9: Ex 76-79), and (3) the third is a Cyproten school.

It will be observed that Pliny makes no reference to the Egyptian school, which was particularly important and which, of course, is often mentioned in the papyrus themselves. One of the most important authorities in magic alchemy is Maria, the Jewess, but the papyri also refer to real philosophers like Thales, Ammonas, Heracle, Diogenes. The genuine magicians, i.e. the contemporary or recent authorities, are generally referred to under such names as Euminus, Synescus, Osmiptopora, Pelagius, and Iambus. They and then we find such curious and characteristic documents as a letter of the magician Nephotes to Pseudoetichus, a charm of Solomon, or a letter of Plutarch to the Thracian. This gives some idea of the attitude of the Alexandrian magicians toward the tradition which they followed.

It is no longer possible to trace the Persian, Jewish, and Christian elements in this strange compound. Assyrio-Chaldean influence must have been strong, but it appears to have been indirect. Jewish influence, on the contrary, was both strong and direct, the text being strongly affected as by Judaism. Jewish magicians were in evidence, and they doubtless encouraged the impression that they were the only depositories of the genuine tradition of real magic. But as Hubert shows, they brought no organized system to bear upon the Greek-Roman type, but merely introduced certain powerful elements of magic. Especially important here was the Bible, and in this instance of the form by which the Egyptians were translated from Greek, and furnished part of the more or less peculiar mythology of magic at this time. Their gods, idols and incantations, were often mentioned in incantations, especially the different forms of their names (Aoth, Aabotu, Aariithn, Arizio, Adomai, etc.). Especially frequent, too, are the names of Moses, Abraham, Jacob, Solomon, and the various angels and Hebrew words more or less corrupted are frequent in the papyri, and Christian influence is also evident; it followed in the wake of Judaism, and, though naturally not so strong, is of the same general type. But one of the most remarkable contributions of all is that of Egypt, as we might expect of a country so ancient, so full of pretentious wisdom, with a language so full of mystic and religious figurative talk which to the ordinary outsider seemed so hopelessly complicated and mysterious. The last two qualifications alone—both sovereign for charms—are enough to establish the reputation of Egypt as a land of magic and magicians. It may be observed, however, that, unlike the Jews, the Egyptians contributed a complete, organized system of magic to the world, and that we learn from the Book of the Dead, a magician could be prosecuted shows that the old Egyptians had long since separated magic from religion by the familiar criterion of official recognition. So far as the Greeks and Romans are concerned, the great name here is Hermes Trismegistus. He is not only the principal vehicle and interpreter of Egyptian magic, but, as we have seen, the Hermetic tradition is quite as powerful in the attalistic presentation of the Hebrew contributions.

All these foreign influences on the theory and practice of Greek-Roman magic of this later period are more or less clearly traceable in the magic papyri. But it is to be observed that they are never clearly differentiated. Isis, e.g., reveals the wonderful art of magic to Horus. This is all well enough; Horus was one of the family. But Isis learned all her magic from one of the Egyptian archangels. It is equally surprising to see Saboth approached with Greek rites. Often special efficacy is gained by issuing a sort of general call to all the pantheon or—what, thanks to the doctrine of sympathy, amounts to the same thing—by adding to one god the names of the most revered gods in a number of nationalities. Magic naturalizes itself to the foreign religions. It also believes that the plural is more relatable than the singular. Hence the more or less chaotic pantheon of magic, especially in its latter stages. There is a characteristic tendency to multiplication and mixture for purposes of power, which reflects to a certain extent the fact that magic is an outlaw, that it is not subject to official control, and that it has no assured position in the body politic.

V. THEORY OF MAGIC.—The procedures of magic, especially of magic so highly developed as was that of Greece and Rome, are being strongly affected as by Judaism. But the main ideas, the essential principles from which they all derive and upon which they
are all founded, are simple, universal, and eternal.

The fundamental purpose of magic is to compel by supernatural means; the primary object and supposed result of every charm is a form of possession. Possession or obsession (συγκατάστασις) is a possession in all its numerous forms is a possession. The ancients habitually associate the processes of magic with the idea of binding, tying up, nailing down, and their opposites. A magic act is a σεβάστως, a συγκατάστασις 

The object of every magic act is to put things into or take them out of a state in which certain movements, certain changes, certain phenomena must inevitably ensue. A character or condition is either produced or suppressed, a spell is either imposed or removed.
ceremonially named with the true name of the person whom it is meant to represent. Names are not the only words which are an integral part of the things which they represent. A similar relation exists between the verb, or the sentence, and the event or state described by it. Hence, of course, the theory of incantation as opposed to that of prayer in the modern sense. From this point of view the lines of Euripides (Hippol. 474 ff.),

\[\text{σοφρονίσθητες ἵππος ἀμφίβολος νόσσω \ (Euripides, Hecuba, 711)}\]

\[\text{πονησίς \ et \ magnam \ moti \ deponente \ partem, \ \text{true not only of magic theory in general, but of the Greek-Roman conception of magic in particular.}}\]

Incantation is rarely, if ever, absent from some stage of the act. The influence of the indirect method is seen even more clearly in the fact that sympathy is often created by the incantation which accompanies the act (e.g., \textit{HN} xxvi. 93). In the exercise of disease the incantation is often sufficient in itself. Again, a mere verbal comparison is sufficient, especially if accompanied by a gesture.

\[\text{Salvum sit gaudem tuis!} \] (Praet. xiv. 526)—such incidents were possible consequences when he touched his friend’s arm to illustrate where and how the unfortunate character in his story was touched by the witch.

Given, therefore, the words in the right order and pronounced in the right way, the desired result must ensue. But what words? Ancient formulae connected with or naming the appropriate gods of certain ceremonies but in many cases nothing can compare with ancient words in an utterly incomprehensible tongue. The most famous example in antiquity was the so-called 

\[\text{Elogium} \] (\textit{HN} xxiv. 89),

But it is by no means necessary that an incantation should consist of what, even in the most general sense, could be termed articulate speech of any sort. More music, e.g., as such is distinctly magic. The great musicians of mythologists—Amphion, Orpheus, Vainmôdhe, etc.—are always magicians. We no longer attribute the power of magic to music in the literal sense, but primitive man can hardly be blame for doing so. The ancient doctors made a considerable use of music in their practice, and we ourselves have learned that it is sometimes distinctly beneficial in certain obstinate nervous disorders of long standing.

Here, however, our particular concern is with a class of sounds which are anything but musical, but are more or less mentioned again in the literature of the Empire as being especially powerful and effective in magic incantations. Lucan, vi. 686 ff., tells us that all the sounds of nature were imitated by such an expert as Erichtho, and does not fail to add his usual and characteristic catalogue. But Lucan is too anxious to tell us all he has read in his uncle’s library to be off greater value in a matter like this. Whatever he afterwards may have become, we can be sure that these phenomena were simpler and more specific, that they were probably inspired by some aspect of the doctrine of sympathy, and used for a special purpose.

We should almost describe them by 

\[\text{stridor \ et \ stridere.} \]

The sounds to which these words are applied are many, and vary from the filing of a saw to the creaking of a door and the shrieking of a hawk. But they are all alike in being inarticulate, high-pitched, and disagreeable. The obvious and instructive parallel is the primitive Greek 

\[\text{γοητεία.} \]

\[\text{The \ γοητεία \ were specifically necromancers and the stridors \ (as Pliny substantially says \textit{HN} x. 34) seems to make no effort to look or act like a well-meaning and self-respecting fowl of the air, belongs quite as} \]

peculiarity of their magic, viz. from their calling and crying among the tombs. So, long afterwards, in Greek-Roman times the charms described by 

\[\text{Stridor \ and \ Stridere \ are very characteristic of necromancy.} \]

If so, and we can hardly doubt it, the inarticulate magic charm connected by these two words should be just those described as ‘wailing and crying among the tombs,’ and their purpose should be to call up the dead. Such being the case, the two most common and characteristic uses of 

\[\text{stridor \ and \ stridere \ outside the sphere of magic itself are illuminating.} \]

1. One of these is that squeaking and gibbering of the dead to which the ancients so often refer:

\[\text{'Eco inter tumulos alique ova carnaria bustis Umbrae lapsus discerba stridore minus'; \ (Petrarch, xxii. 195); 'nervis \ acriba integros \ stridere \ umbrae,' \ (Lucan, vi. 668; cf. Stat. Theb. vii. 770; Bl. Ital. xii. 606; Claudian, in Rufus, 126; Ovid, Fasti, v. 458; Verg. Aen. vi. 402); 'Hymn. Od. xxiv. 5; and Hor. Sat. i. viii. 60.') \]

By the doctrine, therefore, of sympathy the 

\[\text{stridores \ of the necromancers were an imitation of the wailing and crying of the dead, and owed their efficacy to that reason.} \]

2. \textit{Stridor} is regularly used to describe the hoot of the 

\[\text{strix, or screech-owl—that long-drawn, shuddering cry that suggests nothing so much as the wail of the banshee, the moaning of souls that can find no rest, the ominous cry of the 

\textit{machaíræa,} questing ghosts of those that are dead before their time. (see \textit{Hecate’s Suffers}). \] No wonder the \textit{strix} is the most remarkable and illomened bird in classical folklore. Owls, disembodied spirits, or necromancers calling up the dead—no matter how far as the cry alone was concerned, how was one to be sure which was which? As a matter of fact, all three were more or less inextricably confused with each other, and there can be no doubt that the two were closely connected to the 

\[\text{Ovid, Amor. i. viii. 15-18, speaking of Dipasa, the redoubtable siren with eyes of different colours ('pupula duplex'), says:} \]

\[\text{'Hanc ego nocturnam versus volvere pellere umbrae; \} \]

\[\text{Susurrus et in tuberculum pellere pupula duplex. \} \]

\[\text{Pallida et tenebræ; oculis puplea pupula duplex. \} \]

\[\text{Erecta antiquæ proses tristissima sequitur. \} \]

\[\text{Susurrus longus carminis futu cum humanis.} \]

But the ever present and most gruesome side of this idea, as of magic in general, is the sexual side. Most frequently the witch is like Pampulla in the 

\[\text{Apolloëis (Met. iii. 21). She assumes the form of a \textit{strix} to fly to her lover; she never comes to him as a human and normal woman. The fires of hell are in her eyes, the fires of hell are in her veins, the taste of blood and death is on her breath. She is the erotic vampire—the 

\textit{succuba}, as she was called in the Middle Ages—who haunts her victim in his dreams and little by little draws herself the very narrow in his bones. Hence it is that the Greek-Roman screech owl they were supposed to have received their name from the most notable} \]

1 E. Rohde, \textit{Psyche}, Tübingen, 1907, p. 61; \textit{often in the paper.} \]

2 E. Kohner, in \textit{Paulus-Wissowa, v. 2721-2775, and references.}
much to the kingdom of dreams as to the kingdom of heaven, and in any given instance whether the _strix_ is a real spirit or a witch in the form of one (Ovid, Fasti, vi. 141)1. Indeed, as early as Plautus (Pseud. 520); cf. Propert. iv. 1. 25; Virgil, Aen. xii. 170, we have the idea of a "screaming owl," and this designation of what is evidently the Roman parallel of the old Greek _aphyes_ records a popular belief which showed no tendency to die down later days.

2. Sources of magic power.—Our surviving testimony is insufficient to give us a very clear idea how the powers of the classical magician were defined or from what sources they were supposed to be derived. For the Egyptians, as Hubert remarks, the magician was like the priest in being closely associated, if not actually identified, with the gods, and held in some way to be identified with them in the ultimate issue this is everywhere the explanation of his power. Particularly notable was the development of this principle among the Alexandrinan theory. Here, of course, the characteristics of whose imaginative faculty for the indirect method afforded a favourable soil, but, without doubt, the chief factor was the direct influence of the Egyptian theory in the Egyptian period. But, granted that he does identify himself with the gods, how does he compass it? Is it a gift, or does he acquire it, and, if so, how? The _theory_ emphasized the theory, that it was acquired, and the methods recommended indicate in themselves the effort to raise magic to the level of a religious-philosophical system permeated with the ideas and ceremonial characteristics of mysticism. Acsecism was recommended, but, above all, the magician must be a adept. Such persons may have a revelation coming to them more or less directly by way of the fallen angels or the archangels (Tert. de Id. 25). The magician was instructed by God Himself.2 Gods, kings, great philosophers, and sages of old loom large in this aspect of later magic. The "Book of Moses" gives us a good idea of the complicated ceremonies through which the candidate was supposed to pass in order to arrive at the perfect desired. There were purifications, sacrificial rites, invocations, and, to crown all, a revelation of the Koromia (how the universe was made and the secrets thereof). This puts the adept in relation not with certain specific gods, as appears to have been the idea of the Egyptians, but with the whole universal powers. The magician, especially the magician-chemist, derives his power from the acquaintance with the forces of nature. He has a sort of rapport with the universe; and, as there is also rapport between all the parts of the universe, he has extended his power over the entire universe as a whole. This, of course, is the old doctrine of sympathy in a particularly grand and impressive scale. The result of the ceremony is that the magician, the _theurgus_, is himself no longer a man, but a god.3

This is a conception calculated to appeal to any mystic imagination that is still in working order, but it does not emerge clearly in ordinary magic. It belongs rather to mystical magic, which was the special development of serious souls, some of them really great, who believed that this would lead them to the undiscovered secrets of life, death, and immortality. To speak in terms of the average man and of the history of the art as a whole, the ideas which developed the powers of the magician were much the same as those which dictated the choice of a magic object or the conjuration of a charm, and which, in fact, are fundamental in the art of magic as a whole. Generally speaking, magic is a gift and, as such, it is often due to some accident of birth or to some special privilege. In some cases it is inalienable; again, it can be outgrown. Its origin is either born within, or is merely as such, sometimes possessed it.4 Virginity has always been considered an important condition of the power to prophesy (Cephal. xii. 4; Plut. de Defectu Orac. 46). The idea seems to be that the seeress is, as it were, married to the god and that infidelity to him is punished by loss of the power which he gave her. The entire world seems to be agreed that women, simply as women, are peculiarly gifted in this direction (Demosth. c. Aristog. l. 17; Aristoph. Nubes, 749; Lucian, Dial. Deor. xi. 10, Dial. Mercur. l. 2, iv. 4, Elia Accusa, 21). We have already seen many similar superstitions on the principle of "omne ignotum pro magnifico," there are distant countries in which all the inhabitants are magicians or possess the evil eye or some such uncanny gift.

Any person with the evil eye is a magician, so, too, the ventriloquist (schol. Aristoph. Vesp. 1014; Plato, Soph. 202 C; Plut. de Defectu Orac. 9). Anything abnormal about one's birth or pedigree is likely to give one a sort of magico-religious power. "Fetlock" is a word that may be applied to the development of this, as well as to other usages of the Middle Ages, but it is also prominent in ancient tradition, especially in connexion with the Magi themselves (Catullus, xe.; Xanthus, frag. 28 [FGrH l. 43]; Sotion, ap. Diog. Laert. prord. 11, p. 423). We have some other usages of the whole peoples, clans, or families are supposed to be magicians (Herod. iv. 105); some—e.g., the Thiri (IN vii. 17)—owe it to the possession of the evil eye; others have some particular specialty.

The Orphieans, the Pythagoreans, the Etruscans, etc. (6. xxvii. 50, vii. 13-15), can kill snakes merely by facing them, or can cure snake-bites merely by touching the wound with their hands. A certain family in Thrace could calm tigers (Hesych. and Stobaeus, c. dionysii), and so on. Many similar usages were made by Alexandrian authors and others now lost are preserved by Pline (HN, esp. 15. viii. and xxviii.).

In the majority of such cases the ability is more or less vaguely conceived of as inborn, in others it is a secret transmitted from generation to generation. But, whether inborn or imparted, magic is a secret. Indeed, initiates were sworn to secrecy in the later days among the mystics.

3. The powers invoked.—But the most characteristic feature of Greek and Roman magic is the universal prevalence of the indirect method and its influence on the development of the art. So far as Greece and Rome were concerned, the theory of demons—those spirits to whose action practically every phenomenon is due—was as obvious to both of the world at large as it was to Plato and his

followers (Plut. de Defectu Orac. 10). Disease was caused by a special god, possibly by a spirit or a demon, but the exact nature of the causative force was not always known. The magicians used magical tablets, inscribed with the names of demons, to combat these ailments. These tablets were placed in the bath, and the demon would either absorb or emanate from them, thus curing the patient. There were also magical texts that could be burned in the presence of the demon, allowing the demon to be expelled.

The magicians believed that the power of demons could be harnessed for various purposes, including healing and protection. They believed that demons could be commanded to perform specific tasks and that these demons could provide insights into the future. The concept of demonology was closely tied to the belief in the dual nature of the universe, with good and evil forces vying for control.

One of the most important classes of demons connected with magic are the spirits of the dead, known as daimones. These spirits were important in Greek and Roman religion, and they were believed to have a significant influence over the lives of the living. The magicians believed that these spirits could be invoked for various purposes, including healing, protection, and divination.

A notable peculiarity of paganism as contrasted with its successor was the inability to make a sharp distinction between gods and demons. The obvious criterion would be power or divine intervention, but these were not always trustworthy. Some demons were greater than some gods, and some gods were as unmistakably malignant as some demons were beneficent.

The most famous and dramatic incantations of antiquity are the spells used to command spirits. These spells were written in various languages, including Greek, Latin, and Egyptian. The spells were often written on papyri, amulets, and other artifacts, and they were believed to have the power to command spirits to do the magician's bidding.

The control of these spirits was a common practice among magicians, and it was believed that they could be used for various purposes, including healing, protection, and divination. The magicians believed that these spirits could be summoned through various means, including incantations, offerings, and rituals.

But the Kepha Erei, the great gods, are also addressed, and not only the great gods of foreign races—which we should expect—but those of Greece and Rome. This habit, however, belongs more prominently to the later period. Here the habit of calling on a number of gods in one or other way is a result of the more liberal attitude toward the gods and goddesses in the later period. The demons, therefore, were not the only gods to be addressed by the magicians. The gods themselves practiced magie (Apollod. i. ii. iii. vi. 8); indeed, Findlay says (Pflüg. iv. 213 f.) that it was Aphrodite herself who taught Jason how to draw down the moon; and so the magician would naturally turn to them (Apul. de Mag. 31).

The preference is, of course, for the di inferi—Hades, Demeter, Persphones, Baubo, the Fratidai, the Earth, Gaia, Cyleis, especially those who, like Echato, Selene, and Hermes, habitually pass back and forth between the two worlds.

The greatest of all, the goddesses of excellence of magic and magick, and those gods of demiurgic, or demiurgic connexion, is Hecate, Selene, 2 the Des Triformis of the croseways, and the queen of the ghosts, who sweeps through the night followed by her dreadful train of questing spirits. Her power is universal, but she is specially connected with the magic of love, metamorphosis, and ἀφάντα. The most famous and dramatic incantations of antiquity are associated with her. The school of Apoll. Rhod. iii. 476 even informs that the wisest of the ἄγαθοιæ was her worshipper, 2 3 4 5 6 7 8 9 10.

this was more or less concealed or defined in the magician's characteristic effort to get at the true name, the name of power for the thing he wished to utilize. He must put all his soul into the accomplishment of the rite (Gargilinos Martialis, 19).

The time at which the rite should be performed is also very important. This is largely determined by the habits and associations of the god to be addressed, and is an immediate deduction from the law of sympathy. For magic in general, but in particular for all magic connected with the moon, sunset and the few minutes just before sunrise are very favourable; so, too, any phase of the moon, but above all, the new and full moon. The same and places for the most part became important only after astrology gave greater precision to the sort of influence supposed to be exerted by each. As a matter of course, night is a better time than day.

The place is quite as important as the time, and the choice of it is again a direct deduction from the law of sympathy, as regards either the god to be addressed or the person to be affected. Roads, sites, boundaries, corners, walls, and the like, are all places of great religious significance. In both magic and religion, the cross-roads suggest Hecate, the grave-yard sakonantia. Both are favourite spots so far as the magician is concerned.

Finally, as we have seen, there are ceremonies which the operator does not venture to perform unless he is armed with some sort of protective charm against the god whom he is addressing, or against any one who might violate his magic power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connections; then, before turning on the power, he must see to it that the power is really there.

The first class of rites, the machinery and connections, calls for the use of a certain number of objects or parts which, in the end, generally come to be considered magical in themselves. Of the most common and dramatic is the magic wand, which is really a conductor of the magician's mana. The divining rod, though used in a different way and for a different purpose, derived its efficacy from a similar conception. The Etruscans used it in searching for hidden springs (Daremberg-Saglio, s. v. 'Auleux'), and, as the writer of this article can testify from personal observation, as late as twenty years ago a similar method for discovering the best place in which to dig a well was still used occasionally in the American countryside. In addition to the magic wand and the divining rod, we have the apparatus of stelai, ouvai (Ann. Marc. in both magic and religion. The cross-roads suggest Hecate, the grave-yard sakonantia. Both are favourite spots so far as the magician is concerned.

The best and clearest description of the ceremony, properly speaking, is given by Hubert. It involves the use of two kinds of mantras, one of which is to accomplish the object itself of the ceremony by a logical application of the principles of magic action; the other is to be manufactured or, at least, to assure for the magic the actual power sufficient to work in the way prepared and thus to accomplish the purpose desired. In other words, to state it in terms of modern electrical science—the theory of which is curiously near to that of magic—he must construct the proper machinery and establish the proper connections; then, before turning on the power, he must see to it that the power is really there. All these end by being considered magic in themselves, but, in view of what has been said, it will be seen that this idea is secondary. Their real function and purpose was to facilitate or render possible the action of magic power and, at least originally, they were chosen from that point of view.

Sometimes the caretaker, as it were, Norris, provides the experience of a rite whose object is to put the person interested in a state to receive the benefit of the action desired. A case in point is the ceremonial of ‘incubation.’ The purpose of incubation is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were discovered and formulated appear to have been quite familiar with the results of J. Börner’s famous dissertation afterwards incorporated and extended in W. H. Roscher’s *Ephemerides.* The purpose of incubation is to surround a person with the appropriate conditions to secure for him the true and prophetic dream which he desires. Conditions are, as often, dictated by the law of sympathy. And, except that the nature of dreams was never quite clear to the ancients—and perhaps will never be quite clear to any one—the nameless theorists and thinkers by whom these conditions were discovered and formulated appear to have been quite familiar with the results of J. Börner’s famous dissertation afterwards incorporated and extended in W. H. Roscher’s *Ephemerides.*

Börner showed that, among other things, in a highly personal nightmare is usually due to partial suffocation caused by burying one’s head in the pillow, coverlet, etc., that the rapidity with which the nightmare, the incubus, approaches the dreamer is always measured by the rate of suffocation, but, above all, that the appearance of the incubus itself is to a surprising extent determined by the sleeper’s surroundings, especially by the visual and texture of the coverings. Such being the case, though L. Loebener goes too far in his theory that the *Umräumung* is the father of all mythology, we may at least suspect with Roscher that Pan’s legs were the inevitable result of his being buried in the pillows, coverlets, etc., by his primeval worshippers (cf. in the *Ephemerides* of magic power in Vers. *Etc.* viii. 61 ff.), and, for that matter, that the incubus, incubus *tiresius* (v. Ursula’s *Prana*), is another word for the person whom it represents, and sometimes this is accompanied by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful, and the patient to be benefited by it. Again, in constructing a devoto, one should specify in order each and every part in which it is desired that the proposed victim shall be made.

The indirect method is also directly responsible for the conclusion that incubations are a special help to the operator in the accomplishment of his second most important end. In many cases, the operator knows whom it represents, and sometimes this is accompanied by a written statement of what is to happen to him. So, when one gathers a medicinal plant, one should be careful, and the patient to be benefited by it. Again, in constructing a devoto, one should specify in order each and every part in which it is desired that the proposed victim shall be made.

Hence we have cases in which two puppets are used, one representing the person to be acted upon, the other the spirit to which the action is to be performed (Hor. Sat. i. vii. 23 ff.). Occasionally even three figures appear to have been used (schol. to *Euripides* *Egkis* vii. 75). Often they were hollow, and their power was enhanced by putting written incantations inside. As a rule, the puppets must be made of clay or wax, but occasionally other substances were just as rigorously prescribed. Eusebius (loc. cit.) speaks of an image of Helen made of pulverized lizards and the roots of rue. A sheet of metal or even of paper upon which the figure has been traced is often conserved. The verbal portions of a magic rite are of the highest importance. In many cases, the operator’s instructions to the intervention demon in order that he may make no mistake as to the meaning and object of the symbolize rite. The puppet is inscribed with the name by which the person to be benefited by it is desired to be called. It is constructed in such a way as to indicate his duty, and, if necessary, to frighten him into doing it.

We have seen how various objects, plants, simples, etc., originally selected as facilitating in some way magic *rapport,* finally came to be considered magic in themselves. Incubations underwent precisely the same secondary development. From being a means to an end they became magic *per se.* The further conclusion was then drawn that their power might be indefinitely increased by frequent repetition, by lengthening certain syllables to an extraordinary extent, by altering certain syllables and decorating them with affixes and suffixes, by separating them in different combinations, and especially by disposing them so as to form certain figures. Examples still surviving are *abracadabra,* and *'aropo* and *tar* *oper* *rapo* *sare* (see *Ephemerides* *Ling. Lat.* s.a. *Araxo*). The *Ephemerides* *Grammatica* belong to the same type (Forbon. *de Mystere* vii. 6). Mystery and power were further enhanced by the use of magic alphabets, because these were sacred, and so on. Numbers pass through the same experience and acquire the same magical power *per se*—e.g., there are seven planets. If, therefore, we wish to invoke them, there is nothing so compelling as the pronunciation of the seven vowels or a seventh repetition of a ceremony.

MAGIC (Greek and Roman) 285

gesture, or word (Eur. Prep. Euryd. v. 18). Odd numbers have always been significant (Verg. Ec. viii. 76, and often), three and multiples of three are sacred to Eleusis, and certain special numbers like four, ninety-nine, etc., have a special importance.

As in religion the object of sacrificial rites is to ensure the actual presence of the gods invoked. And here again the indirect method suggests that these rites are of material assistance to the worshipper in acquiring the desired power (Theocr. ii. 3, 10, 159). In the choice of what shall be sacrificed in any given instance the usage of magic as a rule does not differ materially from that of religion. This, of course, is quite natural. As a rule, the gods addressed are common to both and of equal importance in both; in fact, it is perhaps safe to guess that, so far as sacrifice is concerned, there are two, age of magic and religion is a common inheritance. For example, the notable preference of magic for black victims is not distinctive of magic. It simply means that, in accordance with the naïve analogy set forth, for instance, in the old hexameter quoted by Eusebius (Prep. Evang. iv. 9).

'ενθαύσασθαι δὲ σαβόροις, καθαρασθείν καὶ κολλαθείν χωρὶς,
'stand in the presence of the powers of darkness, light to the powers of light—
the gods to whom magic habitually addresses itself are the gods of the under world. 'So wine,' honey, meal, wine, cheese are of the utmost need (Theocr. ii. 18, 33), certain cakes dear to these same gods, a cock to Hermes, a white dove to Aphrodite, etc.—all common to both religion and magic—are frequently employed. The use of blood is defined by Hecate as a sacrificial rite; it is at any rate—as in Sallust's account of the oath administered by Catiline to his fellow-conspirators—a striking illustration of the law of sympathy (Lucan, vi. 544). The sacrifice of human beings, especially of little children, even of the unborn babe torn from its mother, is a standing charge against magic in all ages (Hor. Epod. v. 116; Philostr. Apoll. Tyg. viii. 3); and, for that matter, age of magic is a secret rite; there is no secrecy with secret rites. The Christians in their time were charged with such abominations as infant-sacrifice and promiscuous incest at their meetings—precisely the same charges which, a millennium later, they themselves preferred with weariness regularly during their long persecution of witchcraft, especially in connexion with the 'witches' Sabbath. In most cases the charge of the charge of human sacrifice is as conventional as it is untrue; but it would be unsafe to deny it to todo. We can hardly expect such an outlaw, such a strange man, the magic to attain altogether from what was quite regular in the religion of more than one savage race, and which—in accordance with the familiar theory that extraordinary occasions demand extraordinary sacrifices—has been known to occur more than once at some grave crisis in the religious life of nations which, comparatively speaking, occupied a much higher plane of civilization. Finally, it may be noted that, as was the case with the incantations, names of the gods, etc., mentioned above, the things sacrificed, whatever they were, soon passed into the secondary stage of being considered magic per se.

One important aspect of our ceremony—quite as important in religion as it was in magic—remains to be considered. As we have seen, the operator must be careful to follow certain prescribed rules in order to get into the necessary and intimate spiritual relation with the gods whom he is addressing, and, therefore, with the sacrifice which he is conducting. The place is, in abnormal and disturbing places. To get out of it safely is therefore, quite as important as to get into it safely; prescribed rules are as necessary for the one as for the other. The object of these rules is to end the ceremony, to limit the effects of it so far as the operator is concerned, to make it safe and possible for him to return to the influences of everyday life. Above all, the remains of the sacrifice, unless he wishes to preserve them to produce some lasting effect (as, e.g., in a divinity), must be disposed of ceremonially, and not be left lying about; or, if he does so, let it be disposed of at some prescribed spot sacred to the god to whom the sacrifice itself was offered. The sacrificial, for instance, the ceremonial remains of the sacrifices to Eleusis (see Hecat.) were deposited at the cross-ways. The more usual method was to eliminate them ceremonially by burning them, burying them, or throwing them into running water or into the sea (Verg. Ec. viii. 102, with the notes of Catenberg and Forger). The Magica Erotemic (Pap. Paris. 3099) shows that, at least in some cases, the ceremony closed with a prayer to the god in which he was invoked kindly but firmly to go back to where he belonged.

'Αμαρτία, χαῖρε, ἀμαρτία, καὶ ἀσφαλέσθαι εἰς τὸ ἔννοιαν ζωῆς, ἔντονον γὰρ τοιῷ τοῖς ἡμεῖσι. 'Αμαρτίαν, καὶ καρπὸν.

It will be seen, therefore, as Huber observes, that among the Greeks and Romans the standard ceremony of magic and the standard ceremony of religion, so far as their essential elements were concerned, were practically the same, even to the point of using the same names for their elements. Furthermore, with some comparatively slight exceptions, the gods of magic are equally important in religion, and, on the whole, they are treated with the same reverence. As we have seen, the knowledge of the abnormalities of magic are just as characteristic of religion, and they are generally due to the fact that, at the time when these abnormalities occur, both are specially concerned with the internal gods. The worship of these gods, whether in religion or in magic, is visibly influenced by the universal idea that the god under the world is the reverse of ours. It is dark, silent, barren, loveless, childless, eventless, stationary—a complete contrast to the world above, a contrast regularly symbolized in rituals to the dead and their gods by such things as the use of the left hand instead of the right. It is, no doubt, this ancient idea of reversed conditions in Hades that suggested the most striking feature of the famous 'Black Mass' as practised by the early Christians (Iren. Hier. i. xii. 2). The normal 'White Mass' is addressed to heaven; if we reverse it, i.e. if we read it backwards, we address it to hell. But the Christian magician, in so far as he was a Christian, was bound to assume that his Black Mass was a wicked and impious rite. Hence the inevitable deduction was soon established that, the more wicked and impious magic could be, the greater and more terrible its power. For the magician of Graeco-Roman paganism there seems to have been no such parading of religious rites—above all, no such deliberate and malignant desire of things considered divinities of which we hear so much in medieval magic and which appeared again in the modern cult of Satanism (q.v.), as described some years since by Jules Bois and as utilized for purposes of fiction by J. K. Huysmans.\n
Summary.—In so far as there was any real and essential difference between magic and religion in Graeco-Roman paganism, the little difference which it was largely, if not entirely, the steady maintenance of the ancient distinction of official recognition as defined and explained at the beginning of

this article. It is the business of magic, as long as it remains magic, to speak only in the imperative. It must, therefore, retain and emphasize those primitive doctrines—notably the doctrine of something like its forms—which are supposed to enable it to use the imperative successfully in addressing the gods. It is also the business of magic, partly because it is an outlaw and bound to assert its independence in order to live, to promise extraordinary, if not impossible, things—among them things which the social and legal restraints of religion would not allow it to promise. In the course of its long and exceptionally brilliant history classical magical promises practically everything from a cure for warts to a receipt for personal immortality—all tried and true. Magic, therefore, was only to retain but to develop in every possible way those primitive aids to its imperative. It pluralized for power. And religion had done the same. But magic was an outlaw, it had, among other things, its own code of ethics; and in its struggle for survival, it made a virtue of necessity. Even when it had been adopted, so to speak, by some distinguished family like the mystics, had changed its name, had been carefully studied and refined, it was still haunted by the old ideas, and generally ended by infecting them with its benefactors and teachers.

The same may be said of the contemporary development of popular magic. Our great authority here is the magic papyri. They all come from Egypt and are much affected by local influences; but they show that, under the circumstances, the old rule of official recognition was eminently wise. In the civilization of Greece and Rome magic was given a rare, a unique, opportunity to make the most of itself. But, whatever it improved the opportunity or not, the final result, as we see it in the papyri, is a striking illustration of its besetting sins. If it had clung to its native gods, as religion was forced to do, it is conceivable that, even with the heavy handicap of the imperative and its attendant vices, magic might have risen to comparative respectability. But its weaknesses were encouraged rather than checked. By the 2nd century the number of strange religions available, not to mention the semi-detached religious theories, had increased to an indefinite extent. The result was that being a thing which, at least, could appeal to the imagination and the aesthetic sense, it steadily degenerated into utter absurdity as pretentious and complacent as it was dreary and commonplace.

But, fortunately for us, Graeco-Roman magic in its best days was the familiar possession of all classes in a highly intellectual and highly imaginative people. Men of Ovid's caliber and training must not have believed in it to any extent, but there never was a time when magic as such became unfamiliar to any one. Even the major operations of magic were always being performed somewhere, and as we have seen, the charge of magic was always kept alive in the courts. Hermione was far from being the only jealous woman to soothe her wounded pride by accusing her successful rival of resorting to philtres. The charge was quite as characteristic of the Augustan age as it could ever have been of Homer's time (Tib., I. 24, 42; Prop. iv. vii. 72). Nor was the charge by any means always unfounded. Poluma ancipita were a regular specialty of all those from the lata, or go-between, and they actually were so frequently administered as to suggest that the average man generally assumed that they were responsible for certain lingering diseases, especially certain mental or nervous abnormalities, for which he could see no apparent cause. In point of fact the traditional account of the death of Lucretia and the contemporary explanation of the vagaries and perversions of Caligula's tempestuous brain (Jeron., Chron. Rom., 1924; Sueton, Calig., 50).

VI. MAGIC IN LITERATURE.—The more or less familiar presence of magic not only in folklore and legend, but also in the everyday life of every man, is reflected to an extraordinary extent in the written word. It is continually turning up in the works of science, science, and professions, in law, religion, and philosophical discussion, in the history and anecdote, as well as any other sort of everyday life past or present. All this, however, is characteristic of any people among whom magic still survives as an active force, and it appeals to the modern reader, just as much as to such persons as the special investigator and the historian of manners and customs. But the most characteristic and interesting aspect of Graeco-Roman magic is the deliberate exploitation of it in the interests of conscious literary art; and the use of it is inclined to assume, and perhaps justify, that this was particularly notable of such periods as the Hellenistic age, the time of the Augustan and Augustus and his immediate successors, and the Sophistic revival of the 2nd century. This use of magic was especially characteristic of poetry and of such types of prose as that of the highly rhetorical and semi-Roman historians of the Alexandrian age, the Ptolemaic historians, the writers of novels and tales of marvel, and the practical debates of the rhetorical schools, and, in later times, the thron of professional declaimers for whom the schools were ultimately responsible. But this aspect of classical magic is far from being a matter merely of period and place. On the contrary, nothing is more characteristic of it than the extent and variety, as well as the unbroken continuity, of its use in practically every department of artistic literature. No one could be more thoroughly alive to the aesthetic possibilities than was Horace, and he created a tradition of its literary use which not only the semi-Oriental and utterly dreary foibles of the papyri were entirely destroyed. In an article like this it is impossible as well as inexpedient to attempt a thoroughgoing investigation of the debt of creative literature to magic in antiquity. We must content ourselves with a passing reference to a few of the more magic operations which are most frequently mentioned, and which by reason of their dramatic possibilities are best suited to the purposes of literary art.

One of the most notable of these is nukygmantinw, calling the dead to ask them questions. Nukygman- tinw is rarely absent from that catalogue of magic feats with which so many of the Roman poets seem impelled to supply us (Tib. i. 24, 42, and note). They also mention even more frequently three other feats which are particularly awesome, but for which the modern reader, at least, can see no adequate reason until it dawns upon him that they are merely a useful, though ingenious, method of necessary, preparation for nukygmantinw. These are producing earthquakes, splitting the ground, and making the rivers either stand still or run backwards. The magician uses his earthquake to split the ground; the behaviour of the rivers is
merely a consequence of the quake. He splits the ground so that the ghosts can hear his incantation (i.e. be reached and affected by it) and then can come straight up to him from Hades (Sen. Epod. 671; Lucan, vi. 725). As we have seen, the literary use of necyomantia begins with the famous passage of the Odyssey (xi. 24 ff.). The essential details of the ceremonial are such that they were always the same not only in literary tradition but in actual life. Doubtless, Lucan felt that his own long and lurid description of Encholos’ special performance for the benefit of Sextus Pompeius before the battle of Thapsus (vi. 728 ff.) was the masterpiece of its kind. And so it is. It would be hard to find a mere glaring illustration of what can happen to literature in an age when a furious and his host is seated in any principle of rhetorical self-control or common sense. 

Necyomantia had a long and brilliant tradition in the drama. Examples still surviving are Asclepias, 

*Pseudis* (afterwards), and Seneca, *Edipus* 500ff.

Indeed, ghosts were as common, it would appear, in the ancient as in the Elizabethan drama. 

Klymene Karadoc, *Charon’s step-ladder,* was the prominent character on the moor. 1 The scene by which the ghosts appeared on the stage as if from the world below. 

Necyomantia was also quite a characteristic of comedy. In the later days of the *ektei,* it was a sort of a subject that was entitled *Necyomantia,* and we know that this and similar themes were characteristic of the mime as developed by Philistion and his immediate successors. We find similar themes in the satirical sphere are 

Horace, Sat. II. viii., and Lucian’s *Necyomantia.*

If we choose to emphasize the literary influence as much of the Homerica is, it is also true that the *Necyomantia* is the only example now surviving. The same is true of the satirists and popular philosophers of the Alexandrian and Hellenistic periods. It was an outgrowth of their didactic methods to appropriate for their own purposes the traditional forms and themes of literary art, and one of the most notable was the *Necyomantia.*

The name was conventionalized as a *mise-en-

scene* for the presentation of doctrines and opinions. Allied to it are such examples as Horace, Sat. II. v., Seneca, *Apocolocyntosis,* such works of Lucian as the *Diatribe of the Dead,* and *Glaucian*’s attacks on Eutropius. The *Epicharmus of Ennius* and probably certain of the lost satires of Lucilius and Varro were illustrations. The poet Sotades used it as a notable extant. 2

But, while *necyomantia* is the most prominent and pervasive aspect of literary magic, the most famous and picturesque was the love-charm known as *Ephedura* or *Delphic Wort.* It was the theme of no fewer than four masterpieces; a lost drama of Sophron in the time of Xerxes, the lost *Thetis to Menander* (Hes. *Theog.* 73), the second *Idyl* of Theocritus (founded on Sophron), and the eighth Sappho, (founded on Sophron). Certainly, too, Lucian, *Philosophus,* 14, is a masterpiece of its kind. The atmosphere reflects to the life that aspect of the 2nd cent. which suggests the modern *nurture* in which theosophy, spiritualism, and kindred ideas are wont to grow luxuriantly.

In this passage of Lucian we have the *Professor*’s story of how his disciple, Glaukius, was saved by the *necyomantia* of a *necyomantine* magician. It seems that Glaukius, a rich young orphan whose father had been slain by theCalydonian boar for the disheveled Chrysa—a genuine prototype of Jenny Grove and cruel Barbara Allen. His condition became so serious that the *Professor,* as he says, was in a state of despair. The witch of the Hyperbolaeon was paid in advance to secure the services of the great Hyperbolaeon. Four times had he to face the necessity to sacrifice and atone if the operation was successful. By way of preliminary—he was in a state of despair. The witch of the Hyperbolaeon was paid in advance to secure the services of the great Hyperbolaeon. Four times had he to face the necessity to sacrifice and atone if the operation was successful. By way of preliminary—

which showed that the witch was not only a great man but also a just and scrupulously conscientious man, was forced to live at first, but finally told them to proceed. A dramatic description of theosing ceremony follows—how the moon came down, how the beasts came up, how the ghosts looked around, how, at the psychological moment, the disguised operator ‘told the sort of little figure of Gitup which he had fashioned out of clay to go and fetch Chrysa.’ Away flew the tiny thing that he had fashioned, giving Glaukius’s door, in ruses Chrysa, throws her arms around him, &c. 

But the *Professor*’s listener is not duly impressed. Besides, he knows the girl. He doesn’t see the point of calling on one Hyperbolaeon, some god, and one clay ambassador to unite in overcoming the despair of a girl who, as every one knows, was a nameless trade to the North Pole and beyond for twenty drachmas.

Such books as the *Metamorphoses* of Ovid and the lost poem of the same name by his preceptor, Nicander, show that the rage of form was quite as characteristic of classical mythology and folklore as of the *Thousand and One Night.* Transformation was Circe’s specialty, and the Homeric account of her methods (Od. xi. 21 ff.) is the most famous literary account of the performance. Apart from the Homeric passage, the most vivid and circumstantial accounts of transformation by magic are those of the god Apollo (Met. III. 11. 21 ff.) and Lucian (Asinus [the common source of the best was the lost romance of Lucian of Patrae]) tell how the witch, Pamphile, made an owl of herself, and how, immediately afterwards, she made, an ass of Lucius. But, as a rule, magic as such is not prominent in metamorphosis as a literary theme. This is, of course, quite natural; for in this particular the transformation is the theme of the metamorphosis, and all else is likely to be subordinated, even in those cases where the transformation is confederate due to magic. Vergil’s succorces in *Aeneid,* which is that she has been the werewolf transformation with her own eyes and that it was done by magic:—

1 W. H. Roscher, *Sagen und Personen,* Leipzig, 1898, with a plate reproducing a vase-painting of the process; M. Sutphen, *Oedipus.* 

2 In *Notebook of B. L. Gilbertson,* p. 332.

But in all the famous werewolf stories of antiquity, as most of the stories told by Ovid, the magic element is either absent, ignored, or referred to so slightly that it calls for no notice here. Magic command of the wind and weather is often mentioned, and nothing in the way of magic was more common in everyday life, but the one famous passage in the *metamorphoses* is that of the bag of winds to Odysseus (Od. x. 19 ff.). Also unique—and terrible—is the spell of the evil eye cast by Medea upon the giant Talus (Apol. Rhod. xvi. 1622 ff.):—

It is a full and dramatic description of her charm for renewing the youth of Jason’s father, *Koon.* More familiar was her pretence of doing the same favour for the aged Pelias (Apoll. r. i. 27; Hyg. *Fab.* 24; Macrobi. *v. 9. 91.)* I. This was the theme of the lost *Piperomia* 

of Sophocles. Indeed, the lost plays of the Greek tragic poets would have been a wonderful field for the study of the use of magic for literary purposes. 1

Cronus's robe was a famous theme. Euripides (Medea, 1136ff.) merely described the awful effect of it upon the wearer: 

Semele (Midst, 740ff.), the preparation of it. Which is the more artistic and effective may easily be seen by comparison.

On the other hand, there are types of magic in which it is precisely the preliminaries, the things which witches do because they have something terrible in prospect, that are full of dramatic possibilities. This is especially true of necromancy.

As we have seen, the necromancers are always eager to get mortal remains in order to be better able to call up their late owners. Striking examples are Trimalchio's story in Petron. 63, and the dramatist experience of Thelyphron as told by him after dinner in Apuleius, Met. ii. 21ff., speaking in terms of magic theory, the dreadful scene of Horace, Epod. v., was only a means to an end, the object of the witch was to secure the strongest possible love-charm.

The liver is the seat of desire (Hor. Odas, vi. 12); therefore the liver is sovereign in a charm to produce desire. Now, when a demon wants a poison for his arrows, he first makes the dice of some one he has killed. He thenannya, which in fact, the liver is desired, and, being present, and the more it actually accumulates desire, as it were, and stores it up within. If, therefore, we can secure a liver still containing a maximum of desire so accumulated, we have a charm of magic, and this is what is found boring desire others. Hence, in this scene, the poor child who has been kidnapped by the witches for that purpose, is buried to the neck and left to die of a prolonged acme desire for food and drink, which is deliberately aggravated as much as possible by always keeping food and drink before his eyes. After the child is dead, his liver is cut out, and, upon being prepared with the appropriate ceremonial, became a love-charm of superhuman power, a φάλαιρος secured in a special way for a special purpose.

The gathering of herbs is another preliminary of ἀετοαίēτες, which was fully appreciated for its dramatic possibilities. In literature the process is regularly associated with Medea (Apoll. Rhod. iii. 238ff.; Apoll. Rhod. iii. 234ff.; Ovid, Met. vii. 552ff.; Apoll. Rhod. iii. 229ff.; Ovid, Met. vii. 234ff.; special emphasis was probably laid on this by Sophocles in his Philoctete). She went out at night and by the light of the full moon cut her plants with a drawn sickle, held in her left hand and behind her back, i.e. δεατοπεριτε (see Hecate's Supplices).

So far as philtres are concerned, the most notable containing in literature is what might be called the case of Beauty v. Magic in the court of Love. 2 Its first appearance is in the scene between Hermione and Andromache (Eur. Androm. 330ff.), to which attention has already been called. The subsequent tradition of this question at issue is a striking and characteristic illustration of the methods and development of ancient literary art. The topic was announced from the stage, discussed in the house, argued in the schools of rhetoric (Menander, frag. 466 K.; Afran. 374 K.; Lacret. iv. 1578 ff.; Tib. I. v. 43, vili. 23; Ovid, Met. viii. 231ff.; Asp. mag. i. 229ff.; Aen. mag. i. 258ff.). At some time in the unrecorded past, it was given a new turn and made the basis of a properly illustrative and sprightly anecdote in which the appropri-

ately magnificent mother of a great conqueror—any great conqueror could—was in the position of Hermione, but possessed the wisdom of Andromache. In Plutarch, Conv. proc. 23, the position is held by the mother of Alexander; the bands of Egypt have lately disclosed the fact that in Satyrus, too, est., it was held by the mother of Darius. Others may yet appear.

But for any one who is at all interested in the development of magic for literary purposes the Metamorphoses of Apuleius is a treasure-house. Those who have studied this unique book generally gain the impression that its author is a past master in the art of telling a tale of magic. Two examples may be given to test the author's imagination. The first (Met. 1. 11ff.) is told by Aristomachus, and might be called 'The Witches' Revenge.' While travelling about Thesaly a short time previously, Aristomachus ran across one Sophron, an old friend whom he had not seen for several years. The man was a monument of rags, squander, and wretchedness; he was also in a constant state of abject terror. He had drifted into a liaison with a famous but elderly witch named Merce, and, in fact, had been living with her, more or less, for a number of years. Now he was trying to run away. Aristomachus decided to help his friend to see the country. He took a room at the inn, made him presentable with a bath and some clothes, the two had a heavy dinner, accompanied by too much wine, and retired early so as to be off before it was morning. Aristomachus barred the doors, and for greater security pushed up his table with a large stone, and all went to sleep at once and snored loudly, but Aristomachus lay awake for hours. At last, about the third watch, just as he had dropped off into a doze, there was a horrible noise, the doors flew open and, indeed, came to the floor with such a crash that the bed with Aristomachus still on it, was flung through the window. He awoke with a start, and Aristomachus, who had been in the room, was back to him. 'Merce,' he said, 'you are a complete fool, and you will never outrun your balance.' With this Aristomachus' head was drawn towards one side, and Merce drove the stone into his neck just behind the left collar-bone. Then she plucked his arm into the gaping wound, and plunged his heart out. Meanwhile she caught all the blood in her bottle so skillfully that not one drop was escaped. When this was done, Panthia pushed her sponge into the mouth, with the words:

'Sponge, sponge, born o' the main,
Haste ye, haste ye back again!
When you reach the river side,
In the water slip and slide;
Wiser, water, flowing fast,
Bears you onward home at last.'

Then, after heaping nameless insults on Aristomachus, the two women left the room, the doors flew back in place, the bolts shot off (to a regular occurrence in witchcraft; cf. Lycophron, vol. ii. 411ff.), and all was as before—all but the murdered friend. Now it was Aristomachus' turn. He tried to escape, but the porter was obstinate and even suspicious. Then he went back in despair and attempted to hang himself from the window-frame. But the rope broke, and what had made it more horrible, he fell on the corpse—whereas the corpse leaped up in high delusion and so rudely disturbed. After all, it had only been a dreadful nightmare, a warning against too much eating and drinking late in the day. Next morning the friends set out, and when it was time, proceeded to take their breakfast beside a stream under the shade of a tree. Sources was as pale as wax, but he kept heartily, and then, at the suggestion of Aristomachus, knelt down on the bank of the stream to drink. As he leaned over, his neck gave way, and a sponge, followed by a few drops of blood, dropped off in the water, and was swept away. In a moment he was dead. So then and then Aristomachus 'covered his friend with a little earth.'

The second story (Met. ii. 23ff.) is unique as a salutarily exaggerated illustration of what can be accomplished by the doctrine of sympathy when it is really given a fair chance. During his stay at Pythos young Lycus, the hero of the book, was entertained by his father's old friend, Milt. The rest of the family consisted of Milt's three sisters, of whom the eldest, a doublet-sorceress, and Polis, a beautiful slave-girl, with whom Lysus immediately fell in love. One evening they went out to a dinner-party, and by the time he started for home it was very late and very dark—and the wine had been very strong. Just as he reached the door, he met a hideous woman, who looked like figures jostled up against him on either side. Thinking they were thieves, he leaped back, bumped out, and ran them both through. He was barely awake the next morning, with a vague but awful memory of what had happened, when all the magistrates appeared, full of fear and office, and arrested him for murder.

The trial scene, which begins at once, is a masterpiece. It

MAGIC (Indian).—I. HINDU.—Indian magic is essentially the profession of certain castes, though magical rites and magic formulas and magical properties are attributed to countless objects. The caste which is peculiarly devoted to magic as a vocation is that of the Yogis, which is primarily Hindu but has Muslim and European characteristics attached to it. The Yogi claims to hold the material world in fee by the magical powers which he has acquired through the performance of religious ceremonies, but this is a superstition of the worst type, and the Yogi in reality is little better than a common swindler, posing as a fakir. Thus, in the tale of the magic boat, the gift of the fakir is not to be identified with the fakir, religious mendicant. Brahmanas, however, possess much magical lore, though the practice of magic is not a Brahmanical function and the sections which make a profession of it tend to form sub-castes. The Brahmanas are said to have secret books on the subject which contain over 50 jatis, or figures, consisting partly of numbers and partly of mystic symbols, calendrical words, and geometrical figures not known to free-masonry; these are used for all kinds of purposes, including the causing of abortion, success in commerce, etc., as well as to ensure easy parturition.

The Yogi in particular claim power to transmute base metals into silver and gold—a claim which enables them (and those who personate them) to reap a great harvest from the credulous.

This power is said to be possessed by the Yogi Ema Nakh, who, passing one day by a money-changer’s shop, saw a boy with a heap of copper coins before him and asked for some in alms. The boy replied that they belonged to his father, but offered him some of his own food. Touching by his generosity and honesty, the Yogi evaded Vyasa for the child, bought him a boy, bade him collect all the copper coins he could find in his father’s house, and then, melting it down, recited mantras, or charms, and sprinkled a magic powder over it, whereby it was changed into pure gold. This occurred in the time of Subbaiah Chamar (A.D. 1230-1303). The Yogi’s performance was of a similar sort, and in commemoration of it had gold mohars struck with Ema Nakh’s name on them as well as his own. These Ema Nakh mohars are said to be still found. The secret of the mantras and the powder has been handed down, but is known only to the initiated.

1. Occasions.—Magical rites are practised at weddings, during pregnancy, at birth to procure offspring and ensure its safety and to determine and predict its sex, and to resuscitate the dead.

(1) Marriage.—The magic practised at a wedding is often symbolic. For example, just as naked women plough the soil in times of scarcity to ensure a crop, so at weddings a Telugu bridegroom of the Balija caste performs a minic ploughing ceremony, stirring up earth in a basket with a stick or miniature plough. Similar rites are in vogue among the Palli, Kamma, Sambodavan, and Toptyan. The Kamma bride carries seedlings in her lap, apparently to be planted by the groom. Among the Kapa a milk-post of Udina Woda is set up, and, it is taken to and from the shrine at times it is a happy omen. An Unni bride plants a jasmine shoot, whose flowers she should present to the deity. The parting of the bride’s hair with a thorn is probably an imitation of the ploughing rite.

The Indian conceptions that all life is one, that the universe is of the same substance, and that everything is magical or spiritual are found in the beliefs and practices of the Hindus. In the Indian view, all is one and all is magic.
seed on some white-ant earth near five pots filled with water. By the time the wedding is concluded, these seeds have sprouted and are called by the pair, taken to the village well, and cast into it—obviously to ensure their fertility. 1 An Haiyan couple, in nine trays, the groom digs with his knife a few furrows, which his bride fills with grains and waters after he has covered it up. 2 Apparently the widespread practice of pouring grain at weddings has a similar origin. This is done by five women, e.g., in Bombay. 3

The griststone is also used among the Bhondhari in Madras; see bridegroom stades on it, while women bring a mill-stone and powder three kinds of grain with it; then he sits on the dais, and a number of married women each touch seven times with a grinding-stone an area not placed on his head. 4 A Bedar couple are invited by the Brahman priest to stand on a grinding-mill placed beneath the pandal. 5

Among the Agamadiyan a grinding-stone and a roller, representing the god Siva and the goddess Sakti, are placed in the north-east corner at the actual wedding, and at their side pans containing nine kinds of seedlings are set. Seven pots are arranged in a row between the stone and a branched lamp, and married women bring water from seven streams and pour it into a pot in front of the lamp. 6 The grinding-stone is also used in Bombay.

The future offspring of the union is symbolized among the Komati by a doll which is rocked in a cradle, but both the prospective parents profess lack of interest in the baby. The bride has a stone rolling-pin to represent the child, which the husband hands over to the wife, who accepts it as ‘the milk is ready.’ 7 The Konga Veilala bridegroom stades on the stone where the bride is seated and throws a cow into a pot which he worship. It is supposed to represent the Konga king whose sanction to every marriage used to be necessary, and the cowette represents the villagers; but the custom is not explained, and the myth is probably etiological. 8 A newly-married Bedar or Boya couple sit on a pot, and are anointed with rice which has been boiled over spices. In Bombay the rice-powder is used to pertain the baby. 9

Fertility can also be communicated to a bride by placing a child in her lap, and fruit is an effective substitute for one. 10 On the same principle women who lack children are allowed to take part in marriage rites, more especially if they have sons living; whereas widows and those whose children have died should be excluded, at least from the more significant rites. 11 Similarly, widowers are excluded from certain functions. 12 Unmarried girls may, however, take the place of married women; e.g., among the Badaga, married women or virgins, preferably the bridegroom’s sisters, go to a stream in procession to bring water for cooking purposes in decorated pots. 13

Water as a source of fertility also plays a great part in wedding rites. Thus bathing is an essential part of the ritual for both parties at weddings, and visits to a well or stream are very common. The use of pots full of water is to be explained in the same way. Thus among the Haiyan a bride in a hurry married brings pots from a potter’s house to that of each party to the marriage, and after an elaborate rite the boy pours water from a cow-pulled rain barrel filled with water.

1 Thurston, l. 205. 2 Th. iii. 300. 3 Th. iv. 396. 4 Th. iv. 255. 5 Th. iv. 255. 6 Th. 251. 7 Th. 13. 8 Th. vii. 122, pl. l. (B. W. S.) 126. 9 Th. iv. 132. 10 Th. iv. 150. 11 Th. iv. 292. 12 Th. iv. 292. 13 Th. iv. 292. 14 Th. iv. 292. 15 Th. iv. 292. 16 Th. iv. 292. 17 Th. iv. 292. 18 Th. iv. 292. 19 Th. iv. 292. 20 Th. iv. 292. 21 Th. iv. 292. 22 Th. iv. 292. 23 Th. iv. 292. 24 Th. iv. 292. 25 Th. iv. 292. 26 Th. iv. 292. 27 Th. iv. 292. 28 Th. iv. 292.

The potter's wheel, symbolical of the creative power which fashions the earth as it fashions clay, is also in evidence at weddings. The clay is formed into a revolving lump, like a tipla, and wheel and clay together bear a strong resemblance to the conjunction of luna and sol.

The Pole-star (Dhruva in northern India) is called Arundhati in Madras, and, as the wife of the god Vastanag, is pointed out to the bride as the model of conjugal fidelity.

(2) Birth.—Magical rites to procure children are very usual. A typical rite, often resorted to by barren women, consists in burning down seven houses. In Madras a Koyi woman sometimes throws a cock down in front of the cloth on which portraits of ancestors are sewn, and makes obeisances to it, and this cures her sterility. Bathing is also a cure for this misfortune, especially bathing over a corpse.

In the Andamans a pregnant woman sows seeds. Pregnancy, moreover, involves peculiar risks necessitating the protection of magic and the avoidance of various acts, such as the stepping over the tethers of a horse, 11 which might apparently cause protracted labour, or crossing a running stream, which would result in miscarriage—a common belief in the Pais Pusth. In the Kollam a henna juice is dropped into a pregnant woman’s mouth to cast out devils. 12

When his wife’s first pregnancy is announced, a Kola husband in Madras lets his hair grow long and leaves his fingers nails uncut, and on the child’s birth he is under pollution till he sees the next crescent moon. 13 A Makkuban husband also lets his hair grow until the third day after the birth. A coco-nut, betel leaves, and areaa nuts are laid at the place where he sits to be shaved, and the coco-nut is smashed to pieces by one of his own sepulchres. 14 A Nambutir Brahman also remains unshorn while any of his wives are pregnant. 15

Pre-natal divination to ascertain and magic to determine the child’s sex are also common. Thus the Cheraman in Madras employ divinatory figures who seat the woman in front of a tent-like structure with a coco-nut-palm flower in her lap. When cut open, the fruits predict the child’s sex, the birth of twins, and the child’s expectation of life or death. The goddess Kali is supposed to be present in the tent, and prayer is offered to her to cast out the devil from the woman’s body. 16

Another rite which is believed to influence the child’s sex is the so-called rikamatu of the Suddras in Madras. In a first pregnancy, water or human milk is poured over the woman’s lack by her husband’s sister. 17

To ensure that the child shall be a male the punshavarna is performed in the third month of pregnancy, the wife fasting that day until she is fed by her husband with a grain of corn and two beans symbolically. The male twin sometimes curet is poured over them before she swallows them, and she also pours juice of a grass into her right nostril. 18

Quite distinct from this Brahmanical rite is one observed in the seventh month in Travancon.

The woman goes to the foot of a tamarind tree, where she receives a three-yard string. This she entwinds round a tree, and, if it breaks, either she or her child will soon die. Next day the thread is unwound, and her husband gives her a wooden ladle. On re-entering the house, he also gives her tamarind juice to drink, pouring it through his fingers into her mouth. Then, if the string is played in this rite then poisons on her navel, and from the manner of its fall decides the child's sex. As she drinks the juice, the woman leans against a cutting from a mango, which is then planted; and, if it fails to strike root, the child is doomed to adoration.

Among the polyandrous Kambalans the woman's brother gives her rice gruel mixed with spices of the tamarind, mango, and Hibiscus. In protracted labour the washings of a brick from the bazaar is given; if a woman who has had an "easy time"; she presents the patient with betel, etc., and, if that fails, a line of persons drawn up pass water from hand to hand until it reaches the woman who has the "easy time," and she gives some of it to the sufferer. He who has the luck or quality of the one woman is transmitted to the other.

In one caste, the Malas of the Telugu country, who are Parsees, the placenta is put in a pot in which are neem leaves and the whole is buried, lest a dog or other animal should carry it off, which would make the child a wanderer.

(3) A magical rite of resurrection is practiced by the Dasaars, a class of priests who minister to Sdars, in Madras. If a Dasaar is offended, he will revenge himself by self-mutilation or even by cutting off his own head. News of this is miraculously carried to all his caste-fellows, and, when collected, they display their magical powers by fusing the come to life again on being placed in water, by joining together limes cut in two, and, finally, by bringing the amulet to life again. The rite can fail only if the victim's wife is in passion or when the rite is not carried out reverently.

2. Agents.—First-born children have power to stop rain. Muslins say that they can do so by stripping naked and standing on their heads, heels in the air. In Calcutta they need only make a candle of cloth and burn it. A first-born son leaning against anything will, it is believed in S. India, attract a thunder-bolt to it. Girls born in the asterism of Mala are believed in S. India to place their mother-in-law in a corner, i.e., make her a widow, and so such a girl, if her mother is not already a widow, finds difficulty in securing a husband.

Just as charms are made out of various natural substances, so such substances often possess magical powers. The necia is inhabited by a jinn, but its wood is unlucky only if used to make or mend a bed; no one will be able to sleep on it. Here the geniuses, which is intended to influence the tree, and the spirit in the tree appears to endure it with magical properties; a man who carves himself in servitude to the spirit of this tree will get all that he wants, but only at the risk of his life. For twenty-one days he must take a pot full of water daily to the jungle, and the way back cut half of it upon a particular tree on the twenty-first night he will be irresistibly drawn towards it; the devil will appear to him, and, if he escapes death, he will get all that he asks as the price of his bondage. The tree called barbhar (Cofferivus cotinifolia) has magical properties; any one cutting it down or tampering with it loses all his hair and becomes very ill. It yields a milk which raises blisters, and even to sit in its shade, while it is exuding it, has that effect. Indeed it is dangerous to sit in its shade at any time. This belief is current in the Murree Hills, in the Panjab, but in that very part the usual Indian name; to ward off the evil eye (jassir) from both men and cattle, and its fruit is also much relished. To cure scorpion bite the insect should be cut and burnt, and the smoke allowed to touch the bite. To cure jassir, or consumption, in a child is said to be due to enchantment caused by ashes taken from a burning plant over or near the child) the parents should give away salt equal to the child's weight. Toothache is cured by a magical rite which consists in spreading and over a clean piece of hound's meat, writing on it the first six letters of the Arabic alphabet. The patient then holds his aching tooth between his thumb and index finger, and touches each letter in turn with a pointed instrument. When he reaches the sixth letter, if not before, the tooth will be cured. At each he should be asked if he is cured, and, when he says that he is, he should be asked how long he wishes for relief. He should reply "two years," as that is the limit of the charm's efficacy.

After a bad dream, a Gora, in Assam, collects a red-like grass and is beaten with it by a priest, who repeats certain exorcisms. Then they carry a cock to the nearest stream, kill it, and let its blood fall into a toy boat; the boat is launched, and as it starts the dreamer bathes in the water. The prayers, the chanting, and the song appease the spirits, and the boat is allowed to carry off the ill-luck.

On the first day of sowing sugar-cane, sweetened rice is brought to the field, and those who are working outside of the vessel with it, after which it is given to the laborers. Next morning a woman puts on a necklace and walks round the field, winding thread on a spindle. This custom is falling into disuse.

Magic squares are in vogue among Hindus. Thus one which totals 60 lengthways occurs quarter page; one totalling 100 every way on the excess of milk in cows and women and of ghee in a churn; one totalling 130 every way will, if worn round one's neck or in one's puri (turban), bring any person under one's power; and one totalling 15 each way brings luck and is commonly found on shops. Square totalling 55 and 20 each way should be placed under one's seat to ensure success at play.

1. *M.N.P. XIV. 1884.* 797
2. *S.P. III. 1884.* 272, and *Societe Calcutta Review, VIII.* 1896 225 (Calcutta Review, LXXXV. 220). In the latter R. C. Temple identifies the shrub with the lower burmese tron, but describes the barberry as a low thorny shrub of the Euphorbiaceae, or jujube, family, fruit of which is hung in panic to Arabic poetry—on which account the tree is much prized in Tripoli and Tunis.

The power of magic is so great that by mere assertion of its potency a 6r, or demon, may be brought into subjection.

Fast the whole of a ninth lunar day falling on a Friday, and in the evening and at sunset ring bells. At 8 p.m. dress the 6r in fine clothes perfumed, and make a circle of red lead on the ground. Sit in the centre with a glass of water, some cabbages, beetroot, nuts, and eight doves. Light a lamp fed with clarified butter and say:

I can break down the stars 5,000 times—and a demon will follow me.

II. ISLĀM. —Muhammadans classify magic as high (utivi, divine (rahmāni), low (sīfā), and satanic (shāhīdī). In divine magic perfection consists in knowledge of the name of God’s names—the ism-al-‘azīm, which is imparted only to the elect, and by which the dead can be raised. But God’s other names, and those of Muhammad and of the good jinn, are also efficacious, and written charms are composed of them or of passages from the Qur’an, as well as of mysterious combinations of numbers, diagrams, and figures. Satanic magic is condemned by all good Muslims. It depends on Satan’s aid and that of the evil jinn, who ascend to the lowest heaven and hear the angels so that they can assist magicians. Enchantment (al-‘išr) is a branch of this magic; but, as it has been strengthened with good devices and with the aid of good jinn, there is a science of enchantment which may be regarded as lawful. Enchantment results in death, paralysis, affliction with irresistible passion, possession, and so forth. Metamorphism is effected by spells or invocations to the jinn accompanied by the sprinkling of dust or water on the object to be transformed. Against enchantment and other spells, i.e., magical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

Divination is the greatest of the names of the jinn, and from its knowledge, which is also practised by the aid of Shaitān, is obtained by magic, by invoked names, and by burning perfumes. Its forms are: darb al-mudacl, inscribing the enchanter’s circle; darb al-rum, the moving of magic; darb al-jinn, astrology; and darb al-imam, magic spell, or surgery from beast and bird.

The inām Zamān rupee is said to be dedicated to that inām, and is worn by Muhammadans on their journey or in going on a journey.

The names of ’Ali and the inām are used in magical squares according to the object, or letter-value system of computation. Notices of the effect of these spells are not uncommon in Indo-Persian histories as having been practised on the Mughal court-ladies.

Islamic medicine is acquainted with the olive of Bishār, a stone found on the banks of the Indus. It is black with a little red and yellow, or olive-coloured with small white lines, and is used only for sprinkling over wounds and stings by Muslims. Hindus are said to worship it as a god, and to the Persians it is known as the sang-i-Yách, or ‘stone of Jahwah,’ or the hājir-al-Imām, or ‘stone of the Hindus,’ in Arabic. Jasper (Pars. yashm, Arab. hajr-al-iṣbah), or ‘hard stone,’ when olive, green-yellow, or opaque green, is used in charms; and, when white, in medicine.

The hair of a child will never turn white if a piece of it be tied on his neck at birth. If a piece be tied on the right wrist, this will make the witchcraft and the evil eye tied to a woman’s thigh, it ensures painless labour; and, if by the light of lailat al-ghadir (the night when Muhammad spake with God), a man may be sketched over his body, if it be worn over the head, the wearer will be safe from wounds in battle.

III. MAGIC AND RELIGION.—It has been held by many scholars that in a vague India the confusion of magic and religion was rife, just as it survived among other peoples that had risen to higher levels of culture. H. Oldenberg2 regards the sacrificial ritual of the earliest known period as pervaded with primitive magic, and he tells us that the rites celebrated at marriage, initiation, and the anointing of a king are complete models of magic of every kind, and that the forms employed are of the highest antiquity. Sylvain Lévi3 observes of the sacrifices prescribed in the Brahmans that they have all the characteristics of a magical operation, effective by its own energy, independent of the efficacy of the priest; producing evil as well as good; it is only distinguishable from magic in that it is regular and obligatory, so that both matters are treated in the same works. Thus the Sāmaṇḍar in which are stated the rites of incantations and sorcery, as is the Athāṅastra portion of the Saṅgītikā Brāhmaṇa.

M. Bloomfield4 also holds that witchcraft became intimately blended with the religious (Brahman), i.e., magical characters, astrological or otherwise magical, or a seal or image on which they are engraved, is effective. When rubbed, it calls up its servants.

On the other hand, J. G. Frazer5 also points out how in India, from the earliest times down to the present day, the real religion of the common folk appears always to have been a belief in a vast multitude of spirits visible and invisible, which are mischievous and harmful. This belief subsists under the great religions, like Brahmanism, Buddhism, and Islam, which may come and go; and in support of this thesis he cites Oldenberg for the Vedics and Monier Williams for the modern periods. It is to this deep-seated and universal belief in the existence of spirits, which fill all created matter—the sky, the earth, trees, beasts, the earthly waters and clouds—that many, if not all, magical practices are to be ascribed, at least in their inception. At every stage of a ritual sacrifice, e.g., spirits have to be appeased, and the very stake to which a willing victim is tethered for the sacrifice must be cut, shaped, and erected

2. Mandāli is doubtless from the Sr. pādakāla, and not connected with Sār. ṣaftakāla, a circuit or group of villages. The pādakāla was a kind of drum used to conjure up demons; hence an enchanter’s circle.

3. The name of one of the two fallen angels Hāšīt and Mirū, who became sentinels of the star Zuhra, who ascended to the sky and mingled her splendour with the star Zuhra (Venus).

4. H. Wilberforce Clarke, *Bekah-Itta*, Calcutta, 1851, p. 610, quoting the Makhmāl al-Adwiyat, E. 294, 295, 296, and 297, and Monier Williams, *Dictionary of HIndi dialects*, Calcutta, 1875, p. 296. The enchanter’s circle in which two rival spells will prevail see the Sirāj al-rumāl by Muḥarrir Rāshid ‘Alī and the Mughal al-rumāl by Muhammad ‘Alī, *Adwiyat*, e. 294, 295, 296, and 297. In the latter work the names are divided into two divisions, and in these, the greater in number will prevail.

6. Die Religion des Veda, Berlin, 1884, pp. 59, 177 (for particular examples of the binding of magical with religious ritual in ancient India see pp. 111 ff., 360 ff., 474 ff., and 626 ff.).

11. *GDP*, p. 1. The number will conquer; if both are equal, the lesser in age; and, if one be old, the other even, the greater in number will prevail.

with the most minute precautions against their sinister influences. Every point in sacrificial ritual is observed by them, but the guiding principle in it is not magical, but religious. By the part of the stake which is dug in the sacrificer gains the lower world of the fathers, by its middle part that of men, and by its top the world of the gods. But this winning of success is conditioned on his success in averting the onslaughts of evil spirits. In the whole ritual of animal-sacrifice at the stake (yaye), as prescribed by the Satapatha Brahmana, there is no trace of magic or of magical practices.

A question of minor interest is whether Indian magic was derived from or has influenced that of Arabia and the Near East. The Srd. word šipt, 'black magic,' may be the original form of šifi, or, conversely, the Arab word šift may have been Sanskritized as šipta. A typical rite in šipta illustrates the spiritual basis of belief in magic. When performed with the object of destroying an enemy, it is known as šchet, or qīhat, in the United Provinces. A vessel is filled with iron filings, etc., and certain incantations through the air until the victim's head and kills him. But, if a river intervenes, a sacrifice to the spirit called qatdīl (lit. 'flying up'), which is supposed to guard the river, must be made to induce him to let the 'vessels cross.' Thus black magic has to reckon with the spirits, however it works and whatever its origin.

Purification.—For the Zoroastrian the normal means of getting rid of an impurity acquired by sin is to outweigh it by merit—a process which, of course, is far from being magical. Sin, however, being in Iranian eyes not only a breach of order which has to be repaired by repentance and good works, but a positive product of the evil spirits of the evil creation, produces a substantial, though invisible, punishment in the mere illness—and death likewise results from some mysterious contrivance of the creator of all evil. A material means of removing that pollution is therefore required, just as much as by its beneficial properties, as a piece of good creation, cures an ordinary disease. The power of purifying man from impurity belongs in the highest degree to water—an eminently spiritual element of Mazda's creation. Besides water, other substances—e.g., goomata (urine of cattle)—are supposed to have great power to purify. The rites of purification by means of these substances are strictly fixed, as in a magical proceeding: the priest has to sprinkle every part of the body in a definite order, beginning with the head, till the dray is expelled from the left toes, which are the last refuge of the evil spirit. Dogs have a specifically powerful wholesome influence. More intricate ceremonies tending to the same result besides this relatively simple one—e.g., the great purification of the nins nights (Pahl. baraminu ni šak) expounded in Vend. ix.—are observed, holes are dug, and furrows are drawn, according to a strict ritual; goomata is put into the holes, the patient raises the ground, and it is sprinkled with water and perfumes by means of a spoon and a stick of a fixed size, etc. The proceeding cannot, however, be completely identified with magic, because, however natural and important to purification may be none in the thought of the Iranian people at that time, it was, after all, a duty not confined to human interests in this world, because the activity of the purifying ground, and acts derives from an essentially beneficent power, whereas the counter-spells, although tending to

---

1. Vogel, 'The Sacrificial Posts of Iran,' in Archæología Iranica, 2, 144; 2. "N.VII.9," 901; 3. Id., 383; 4. H. A. Rose, Magic (Iranian).—1. Religion and magic.—Although religion and magic are two essentially different things, the interpenetration of the two is fairly common; but nowhere are they so intricately commingled as in Manicheism.

First of all, a clear line of demarcation has to be traced between the real doctrines of Zoroaster, as it is expounded in the Gatha and the Later Avesta. In the Gathic hymns we find a religion of a highly moral character. It admits of no deity besides Ahura Mazda except personified moral entities, and it expressly undertakes a struggle against the lower powers of magic and the magical practices of the people of the time. The cult of the devas in general and the nocturnal orgiastic sacrifices in which homa (g.v.) was drunk by the worshippers were specially condemned.

The Later Avesta also anathematizes the sorcerers (yaona) and witches (paoxra), but many of the beliefs and practices which Zoroaster had associated with them have found their way back again into it. The whole subject is rendered all the more intricate by the fact that a coherent system has been formed from a combination of the superior elements of the Zoroastrian creed (sophistics), no greater extent by adaptation to a lower standard of religious thought—and the popular and inferior beliefs of the Iranian people, including much that is in origin magical. As is well known, this is the system called dastazan (g.v.). It is based on the assumption that there are two cosmic elements, the one created by

neutralize noxious influences, are regarded as possessing a power of the same kind as the one which they oppose, and, lastly, because the rites, in spite of their magical tendencies, are devoid of all mystery. They are a public and accepted procedure by no means out of fashion in any religious rite, and is the practice from the earliest times to the present day. It is clear from the Prophet's teaching, and forming part of the sacred straggle of good against evil. Man is supposed to make use of the weapons which Manoah has put into his hands for a contest in which he is serving the lord's interests. Nevertheless, it is clear that a real degeneration towards magic has taken place in these ceremonies, and also that many an ancient magical prescription for averting evils may have been introduced. This process is analogous to that which we observe in Mazaicism from Zoroaster to the Later Avesta period.

Moral beings, like the anuvaha agnatas (q.v.) justice, good spirit, piety, etc., have been turned into—or, rather, identified with—the fire, earth, cattle, etc., and Samsa's 'obedience,' has become a good spirit protecting men during the night against demons and sorcerers, having the cock and the dog as his assistants in this task (Bund. xix. 35).

1. Sacrifice. Of sacrifice we may say much the same as of purifications. Neither to the Indians nor to the Iranians was the sacrifice properly a magical act. Oldenberg is quite right when he says that sacrifice is at times a gift to the god, who, in the mind of the sacrificer, is to influence the intentions of the deity, not by way of compulsion, but by securing his powerful goodwill. This conception, however, was likely to degenerate, and did. India and Agni are sometimes described as being mastered by the sacrificer. Agni, the fire, is regarded as a miniature of the sun, the great fire, and, by kindling fire, one gets the sun to rise. Indeed, the Sutapath, While justifying 2 says that the sun would not rise if the fire-sacrifice did not take place. A similar process can be traced in Iran, where the sacrifice is given a place in the general cosmic conflict, so that it

1. is more of an act of worship; it is an act of assistance to the god in order to bring good fortune. That is to say, to be strong like men, they used prayer and encouragement to be of good cheer. When not strengthened by the sacrifice, they fby helpless before their foes.

Sacrifice has thus a value of its own independently of the will of the gods. It is an act of help, for help in His struggle against the evil creation, so much so that gods also have to practise evil:

1. Ashurmar performed the spiritual Yasuv ceremony with the arrows (narshguh) on the Babylonian Gilgamesch, and in the Yasuv he supplied every means for overcoming the adversary. 2

The value of sacrifice in itself is also to be discerned in the fact that it produces merits independently of the piety and attention of the sacrificer. If he does not obtain them for himself, they are not lost, but are collected in a store (genies) of merits. 3 The sacrifice of the haoma (Ind. soma), although itself not really magical in principle, was specially prone to develop in that direction. The haoma soma, in the thought of the proto-Aryans, was a plant wherein resided an extraordinary strength of life capable of giving immortality to the gods, who were supposed to live on it like the Homerics gods on σαρκόνες; and of giving a superhuman life to man, in whom it caused intoxication. As was said above, the haoma, prigastic sacrifice had been borrowed from the Gula religion in company with the magical procedure of the daeva-worshippers. In the post-Gaul period we see it reappear, but it has been deprived of its savage character. Not only was it supposed to confer a greater intensity of human life, but it was regarded as a highly beneficial spirit, imparting to man also the gift of spiritual life and a title to the supra-terrestrial reward. 4 It led to a division into two haoma, 5 the one, the actual plant, was the yellow haoma, the other, supra-terrestrial, called the white haoma, was identified with the tree gaokerena (Fravisz. Vess.) that stands in the middle of the sea Voavaha, that is called the "All-healer" and on which rest the seeds of all plants. 6 It is by drinking the gaokerena that men on the day of their resurrection will become immortal. For that reason it was customary to put a drop of haoma on the lips of a dying Zoroastrian. Haoma, having been made the principle of all life and fecundity, was seen during the night against demons and sorcerers, having the cock and the dog as his assistants in this task (Bund. xix. 35).—A sacrifice, a part which is completely magical.

primarily attained by the marvellous power of the substances and ceremonies mentioned above.

No wonder, therefore, if the mantra is mentioned as a regular means of curing diseases. *Vend.* xx. distinguishes healing by plants, by the knife, by the mantra, the last being the most powerful. A series of formula is to be found there for repelling both diseases and evil beings. The prayer contained in *Vend.* xx. 11 is supposed to be peculiarly powerful in all cases; inasmuch as it does, the phrase, "as a god, the good god par excellence. *Vend.* xxi. 18-23 is also a spell against all kinds of diseases, consisting of some fragments of other parts of the *Vendidad* and of some very well known prayers. These are the means that Aryanman has at his disposal for curing the 99,999 diseases created by Angra Mainyu for the bane of mankind (*Vend.* xxii.). Aryanman is an old, neo-Iranian god; in the Veda he is an aditya (Aryanman) who is generally found in company with Varuna and Mitra. He is a beneficent and helpful god, but in Persia he has been narrowed down to the character of a healing god. He survives in Parsiism as the Zoroastrian, but, in his quality of healing god, he is replaced by Faridun (= Thraetaon), who, having killed the dragon Azir Mazda, had been sent by the good god to protect the works of evil spirits. The Iranians knew, moreover, of a healing fruit, which, according to Bund, iii. 18, Ahura Mazda pounded up before his counsellors, and gave comfort from the calamity (azdina) might be less. On the same footing as the mantra for healing diseases must, of course, be put the numerous incantations and mystical formulae for removing the pollution, inflicted upon that which has come into contact with a corpse. *Vend.* viii. 14 ff., e.g., explains that a road whereon the dead bodies of dogs or men have been carried cannot be traversed again, nor can it be used by any living thing which has come into contact with a corpse. *Vend.* viii. 18 ff., contains the method of purifying wood which has been in contact with a corpse, and formulae for all kinds of good elements infected by the same pollution (cf. *Vend.* xi. xii., etc.). In such cases the aditya had become a mere spell (cf. *Vend.* x. 1 ff.). The reason of this custom with regard to corpses is originally a magical one, which has been fitted into the general Mazdaean system. The old conviction of smokin the death, like illness, cannot occur without the maleficent influence of some spirit, which has therefore to be averted. For a Mazdaean to die was to pass into the power of the drug Naus. Hence it was necessary to minimize the evil produced by this demon by protecting all good beings and substances from its power and freeing, as far as possible, the beings or substances that had fallen into its hands. The influence of maleficent beings and the utility of spells were felt in many other circumstances—e.g., in the case of a woman on the eve of child-birth (*Vend.* xxii. 9, 12, 18), or when some accident occurred to cattle.

5. Fire.—Among the elements which have to be kept carefully from any pollution, fire occupies a prominent position. It is well known that among the Persians it enjoyed a veneration which is not far from being superstitious. Here, the process is not a degenerative one, but rather the elevation of an elementary and, to a great extent, magical being which is connected to many natures, but which is specially Indo-Iranian (cf. art. FIRE, FIRE-GODES, § 6 f.). Fire is the great purifier, which illuminates the night, keeps off biting cold and wild beasts, and, like the sun, is the great enemy of demons and the friend and ally of man. It repels diseases, and it plays an important part in the proceedings of Indian magic, as is expounded in the Atharvaveda—a name which is taken from the atharvan, who were originally priests of fire. The Iranian myth of Aryanman's victory over the serpent Azir Daliaksa (Yt. xix. 45 ff.) belongs to the same order of thought. Indeed, fire, in the conception of the Persian atharvan, keeps closer to its original part, inasmuch as it alone, as a god, gives the agent which conveys to the gods the substances of sacrifice. It remains the great averter of everything impure, and must on no account be put in contact with anything that is pure, least of all with corpses or with anything coming from the body. It has become an earthly form of the eternal, infinite, goodly light, the purest offspring of the good spirit, the purest part of his pure creation, the weapon of Ahura (Ys. ii. 9). It is the principle of all life, in men as well as in plants, the son of Ahura Mazda. We can distinguish several forms of it, among which the bahun fire is the most sacred. It is supposed to be an emanation on earth from the fire above and the most powerful protection of the land against foes and fresh enemies. It took effect to the evil spirits (vritra), in Indian myth the genius of victory and the slayer of the demon Vrata.

6. Influence of stars. —Astrology, as is well known, was the most important science in Persia. The ancients described it to us; but there is abundant evidence that this element of activity was not of Iranian origin. The proto-Aryan element of astrology was extremely small, in contrast with Babylonian religion. We have, however, the cult of Tistry, the star (Sirius) which was regarded as a good genius that brought rain after having slain the drought demon Apnas (Yt. viii. 29 ff.). It is a very good god for children, and is connected with Babylonian religion. The ancients describe to us a sect in which creation and before man was created, destroyed the noxious creatures by an effusion of beneficial waters. It would be an exaggeration to treat as real magic such beliefs concerning the part of Tistry as we find in the Avesta. There is reason to believe, however, that in some parts of Persia rain spells were in use. The *Great Bundahish* says: The plague created against Sustain is abundance of witchcraft; and that character appears from this, that all people from that place practised astrology, and those wizards produce snow, hail, spiders, and locusts.

7. Recent superstitions. —Among the superstitions prevalent among the Persians and the Muhammadan Persians many customs, no doubt, go back to old Mazdaean practices or, more probably, to popular beliefs which persisted beside the official creed.

The great power assigned, among the old Mazdaeans, to plants in general, and in particular to some specially marvellous ones, as well as to the extensive practices, among the Babylonian Magi, of natural or magical treatment of diseases by herbs, probably explains the important part played by plants in the superstitions customs attached to the ancient Persian festival by Persian writers, rubbing with olive oil on the day of Nafriz as a riddance from sorrows during the new year, eating a pomegranate on the feast of Mithr (Mitra) to avert dangers, wearing the thushi, a garment of wool, and rendering leaves of the aloe. —J. E. W. C. Minturn, *The Debate between Arsacides and Zoroaster,* *Journal of the American Oriental Society,* vol. xvi. 1846, pp. 107-129.

7 Deacon, *Nouveau dictionnaire de la Religion Orientale,* xii. 1891.
of the national religion, in the most authentic documents of pure Shinto.

For this purpose we must apply chiefly to the ancient rituals (norito) collected in the Engishiki in the 10th century, some of which are precisely those that contain most of the magical element — were certainly composed at a much earlier date, even before the most ancient mythico-historical works, the Kojiki and Nihonshoki, were written in the 8th century. By glancing over the most typical of these norito, and explaining them with the help of certain related passages in the Kojiki and the Nihonshoki, we shall gain a vivid idea of what Japanese magic was in its most ancient and most formative

The old rituals seem to have been not so much prayers as magical formulae, solemn incantations, and we shall see that at the same time they were employed in powerful rites by which the magician priests of primitive Japan conquered their gods.

This magical spirit appears at the very beginning of the collection, in the 1st ritual, Totobito no Matsuri, which was said every year at seed-time in order to obtain a good harvest. The chief priest (isakatori), who recited it in the name of the emperor, addressed the gods in these words:

"I believe in the presence of the sovereign gods of the Harvest. If the sovereign gods manifest, they will in luxuriant ears the late-ripening harvest which they will bestow, the late-ripening harvest which will be produced by the dripping of rain from the seashore and by driving the clouds together between the opposing thaws, then I will fulfill their praises by setting up the festival fire and singing praises, and many hundred ears, raising high the sake-jars, filling and magnifying in rows the bellies of the sake-jars, in juic and in car.'"

Other offerings are then enumerated, among which we notice a white horse and carriage, a white cock, and a white dove, the god of the August harvest, had cast his curse on the rice fields; but the divinities obtained from him, by the gift of these same white animals, the secret of a magical process which enabled them to save the imperilled crop. The ritual is, therefore, based on a history of magic. The main point to remember from this first ritual, however, is the conditional character of the offerings which are to obtain the desired result. The same precaution is found again, in the same words, towards the end of this same ritual, in which a prayer invokes the gods who preside over the departure of the waters on which irrigation depends. This ritual, therefore, is not so much a prayer as a contract, a matter-of-fact agreement, by which the gods receive in advance the remuneration promised in exchange for the services expected from them, and thus find themselves morally compelled to render them. We accordingly see at the very beginning the familiar nature of the relations between these very human gods and the priestly magicians who exploit their power.

In the 2nd ritual, Kasuga Matsuri, we again find this idea of the bond which must unite the offerings with the services rendered; for it is in 'consequence' of these offerings that the gods are asked to protect the shrine and his court. We may also observe that, of the four gods worshipped in the temple of Kasuga, the first two, Take-mika-dengah and Patsu-nushi, were represented by male images. By the same ritual, such as (cf. Kojiki, tr. B. H. Chamberlain, 2nd ed., Tokyo, 1906), that the other two, Koyané and his wife, are connected with the famous eclipse in which that god, by his 'powerful ritual words,' helped to bring back the sun-goddess to life.

There is the same spirit in the 3rd ritual, Hara-Okin-i no Matsuri, devoted to the goddess of food.
Her worshippers make a bargain with her; while bringing her various offerings, they promise her others if the harvest is very abundant.

The 4th ritual, *Taturo no Kaze no Kamino no M刨suru*, is just as characteristic, and, moreover, relates its own legendary origin. For several years unknown gods and demons have been plaguing the 4th district, and the diviners have not been able to discover who these gods are. Then the sovereign himself 'deigns to conjure them,' and they reveal themselves to him in a dream. Two factors are central: the king's auspiciousness, and Country's Pillar's auspiciousness, the gods of the winds who maintain the order of the world. They require certain offerings, the founding of a temple of Tatsuro, and a hierophy, by passage of which they will bless and ripen the things produced by the great People of the region under heaven, firstly the five sorts of grain, down to the last leaf of the herbs. Here it is the gods who state their conditions. The people hasten to fulfil them 'without omission,' but evidently the recreation of past calamities has left some mistrust for, when making the present offerings, they announce future gifts for the autumn; if, between now and then, the gods have deemed not to send 'bad winds and rough waters,' but to 'ripen and bless' the harvest, they will punish the first infractors of it. This will be their small commissary.

We shall pass over the 5th, 6th, and 7th rituals, which are not so interesting, and come to the 8th, *Otsuka no Harashi*, i.e. 'Luck-bringer of the Great Palace.' This is the second in the series, and it is where the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, *anu to wa sumu ida goto*, the celestial magical protection. It is a ritual of which wards off all calamity from the palace, as an amulet would do; this is shown by the importance ascribed to the perfect regularity of the words pronounced. In certain places, the corrector-'gods' (naha) are beguiled to register all the omissions that they may have seen or heard in the rite or the words of the ceremony. This ceremony itself shows a abundant light on the magical character of the ritual of which it was a part. We have a description of it in the *Gi-shiki* of the 9th cent. (see E. Satow, in *TASS*, vol. i., pt. ii. [1881] pp. 150 and 151) a priestly retinue, in which we distinguish chiefly the 'abstaining priests,' and the vestals, going through the palace in every direction; and in different places, from the great audience-hall to the bath-room, even to the men's privy, the sprinkling rice and sake, while the *imbe* hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called *sannai*, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom—whether it is simply a bait thrown to the demons or perhaps a symbolic use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death—the rite in question was very frequently practised in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at crossroads (*tengi-ura*; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was thrown, in order to take afterwards as an oracle the word 'h}_{\text{r}}e' which crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to mount Takashiko, grains of rice were thrown at random to guarantee the darkness from the sky. Just the same is the magical use of grains to combat evil influences. Through the whole of Japanese mythology there is the sparkle of jewels, of some of which are talismans—jewels which, at the time of an eclipse, the gods suspended to the highest branches of the sacred *shimenawa*, and whose brilliance recalled the sun (Kojiki, 64); jewels which, in another famous story, enabled their possessor to make the tide flow or ebb at his will (ib. 190); jewels which even aimed at transforming the dead, as we shall see below. We can, therefore, easily understand the magical rôle of the red jewels which, paraded in the imperial apartments, caused the inevitable dark threats of fate's auspiciousness, and the dark threats of the Pillar's auspiciousness, the gods of the winds who maintain the order of the world. They require certain offerings, the founding of a temple at Pinzuru, and a hierophy, by passage of which they will bless and ripen the things produced by the Great People of the region under heaven, firstly the five sorts of grain, down to the last leaf of the herbs. Here it is the gods who state their conditions. The people hasten to fulfil them 'without omission,' but evidently the recreation of past calamities has left some mistrust for, when making the present offerings, they announce future gifts for the autumn; if, between now and then, the gods have deemed not to send 'bad winds and rough waters,' but to 'ripen and bless' the harvest, they will punish the first infractors of it. This will be their small commissary.

We shall pass over the 5th, 6th, and 7th rituals, which are not so interesting, and come to the 8th, *Otsuka no Harashi*, i.e. 'Luck-bringer of the Great Palace.' This is the second in the series, and it is where the magical character of the document, and, in fact, we find the ritual defined in its own text in the words, *anu to wa sumu ida goto*, the celestial magical protection. It is a ritual of which wards off all calamity from the palace, as an amulet would do; this is shown by the importance ascribed to the perfect regularity of the words pronounced. In certain places, the corrector-'gods' (naha) are beguiled to register all the omissions that they may have seen or heard in the rite or the words of the ceremony. This ceremony itself shows a abundant light on the magical character of the ritual of which it was a part. We have a description of it in the *Gi-shiki* of the 9th cent. (see E. Satow, in *TASS*, vol. i., pt. ii. [1881] pp. 150 and 151) a priestly retinue, in which we distinguish chiefly the 'abstaining priests,' and the vestals, going through the palace in every direction; and in different places, from the great audience-hall to the bath-room, even to the men's privy, the sprinkling rice and sake, while the *imbe* hang precious stones on the four corners of the rooms visited by them. We observe here an application of the custom, called *sannai*, which consisted in scattering rice to ward off evil spirits. Whatever is the reason of this custom—whether it is simply a bait thrown to the demons or perhaps a symbolic use of grains whose shape represents one of the aspects of the generative power, of the vital force which combats illness and death—the rite in question was very frequently practised in Japanese magic. Rice was scattered inside the hut in which a woman was about to be confined; in the divination at crossroads (*tengi-ura*; see art. DIVINATION [Japanese]), a boundary was sometimes marked on the road, where rice was thrown, in order to take afterwards as an oracle the word 'here' which crossed this bewitched line; and an old legend tells how, when the son of the gods descended from heaven to mount Takashiko, grains of rice were thrown at random to guarantee the darkness from the sky. Just the same is the magical use of grains to combat evil influences. Through the whole of Japanese mythology there is the sparkle of jewels, of some of which are talismans—
nected with our subject. The one is the 'planting of wands' (kashi-nashi) in rice-fields, probably with incantations—a process which an ancient native interpretation explains as the erecting of magic boundaries on the field of which one claims to be possessed. Although perhaps it is an example of pointed wands secretly stuck into the mud to hurt the bare feet of a neighbour, just as, among the Malays, a person in flight retarded the pursuit of his pursuers by the same device. The other offense (mai- mono soru tsushi) is the 'performing of witchcraft,' either in a general way (cf. Kojiki, 326 f.) or in particular against a neighbour's animals (obi- ome). This involves contact with the expression kemono-tatashi, 'to kill animals,' which precedes it. In any case the Chinese character employed shows that it is a question of black magic; and that is why the norito, although it is itself a magical text, does not hesitate to condemn it. The ritual afterwards shows that, when these faults are committed, the great nakatomi has to prepare some wigs in a certain way, doubtless intended to form a sort of purifying broom, then to recite 'the powerful ritual words of the celestial ritual' (ama ten norito no futo norito-gado). The native commentators (tried for a long time to point out what serious incantations and this passage could possibly allude, without seeing that it simply referred to the norito itself. This is the 'celestial' ritual which the gods revealed on high to the ancestors of the emperors, and whose powerful words his descendant causes to be repeated—an expression intended to recall the intrinsic virtue of this formula. When the high points of the rite are reached, according to the text of the ritual itself, the gods of heaven and earth will approach to listen, and all offences will disappear, being swept off, carried away to the ocean by the gods, who are driven by the goddess of the sea-currents, driven to the nether regions by the god whose breath behaves before it all impurities, and there they will be sealed at last by aSubsequently delay who will hold a delusion for ever. Clearly these deities are only the four wheels of the machine which the emperor sets in motion by the hand of the great nakatomi, the magician who knows the sacred words which even the gods obey. As a matter of fact, to the ancient text of the ritual, they bring a horse whose erect ears will incite these gods to listen attentively, just as the crowing cocks, the lighted fire—all these magical processes of the myth of the rites of the sacred horse (Kojiki) could recall the sun or, as, in another account of the old Shinto annals (Nihongi, tr. W. G. Aston, London, 1896, i. 116), one had only to whistle to raise the wind. Then an order is given to the urabe ('diviners') to throw into the river the expiatory offerings, to which a mysterious sympathy unites the sins themselves, which will disappear along with the objects to which they have been attached. The ritual finishes, therefore, with a last example of the magic which has inspired the whole of it.

We may mention the 11th ritual along with this one. It is a less common than the hereditary scholars of Yamato pionneered immediately before the ceremony of the Great Purification, and in which they presented the emperor with a silver-gilt human effigy, which would play the part of scapegoat by removing calamities from him, and a gilded sword on which he breathed before it was taken from him, with the same intention of driving away, after this magical transfer, both the sins committed and their material support. The next ritual, the text first recalls the celestial revelation which has confided to the emperor the 'powerful words' by means of which he is superior to this god. Then it recounts the atrocious crime of this 'child with the wicked heart,' who caused his mother's death by burning her when she gave him birth (cf. Kojiki, 32-33); and tells how Izanami herself, cursing this son who had caused her death, came up from the nether regions to give birth to the water-goddess, the gourd, the river further, and the princess of the clay mountains, four divine things whose magical use against fire she immediately taught. Then, in order that this wicked god 'may die not to be terribly lively in the palaces of the august sovereign,' he is loaded with offerings, which have the effect of captivating and subduing him. This ritual was accompanied by rites which consisted mainly in the lighting of a fire by the urabe in the four outside corners of the precint of the palace, with the primitive apparatus (hi-kiri-issu), of which a specimen may be seen in the University Museum, Oxford.

The 18th ritual, Mimichi-akhe, also aimed at employing certain gods to combat others. Those who were invoked on this occasion were three gods of roads and cross-roads, whose phallic character caused them to be called 'the three powerful gods' (sae no komin) against the epidemics sent by the demons. The ritual begins by reminding these protector-gods, without great reverence, that their duties were hereditary in the same island where they already served the son of the gods. It then dictates to them what they must do:

['Whenever from the Root-country, the Bottom-country, there may come savage men bearing lances, their weapons not with them, but if they go below, keep watch below, if they go above, keep watch above, protecting against pollution with a night guard and a day guarding.]

In return they are presented with offerings, which they are to enjoy while defending the great roads 'like a multitudinous army,' which and, finally, the celebrant insists once more on the 'powerful words' of his formula.

The next ritual, the 14th, was devoted to the Osha-nike, 'Great Offering of the Rice.' Before eating the new rice of the year, the ancient Japanese performed a ceremony called Niki-name, 'new tasting,' which had a propitiatory purpose towards the spirit of the rice (Uja no Mi-tama). The Osha- nike was a more solemn Niki-name, celebrated some time after the accession of the emperors, and constituting a sort of religious coronation for them. The ritual rite of the Nikuman is nothing very curious in itself; but it is interesting to find that the very complicated ceremony with which it was connected included a long series of preparations, in which magic occupied a large place, just as in the essential part of the festival, when the emperor in person, surrounded by ladies of honour who repeated a mysterious formula, shared in the repast which he had just offered to the gods.

The 15th ritual is another document whose magical value appears as soon as it is placed in its psychological surroundings. It is entitled Mi- tama shidensuru, which shows that its purpose was 'to appease the august spirit, i.e. the spirit of the emperor. It was a case of keeping the imperial soul in his body, of recalling it if it seemed to wish to escape—from him, and to stop it from taking magical rule. This is the meaning of the ceremony called Chikunosai, which was celebrated at the end of the tertiary of the priests of the court (see Nihongi, ii. 373). Now, the gloss identifies this festival with an ancient ceremony called Mi-tama Jursahiki, 'shaking of the august jewels,' which again plunges us into deep magic. The Kiujiki (ii. 2) says, in fact,
that, when the sun-goddess gave the investiture to the ancestor of the emperors, she bestowed upon him the name 197.

'one mirror of the earring, one mirror of the breast, one eighths-breadth sword, one jewel of birth, one jewel of return from death, one perfect jewel, one jewel of renewal (or things by the road they came, one serpent-scarf, one bee-scarf, and so on), and the honey they used. To one of illness, shake these treasures and repeat to them the words: 'Hi, ju, ni, san, shi, go, ju, ri, yu, wu, ro, ri, ju, ru, ri, ro. shake them pu-chan (nourish, au) and repeat to them the words: 'Hi, ju, ni, san, shi, go, hitto, ru, ru. They call to the dead and press it on to the body of the dead. If then they do so the dead will certainly return to life.'

The objects enumerated by the sun-goddess are tappamare, several of which occur in the most ancient Japanese mythology (see Kojiki, 88, 150, 324, etc.). As for the imitation, it represents simply the series of numbers from one to ten, which demonstrates its intrinsic power, independent of the meaning of the words. We know, besides, that the same imitation was recited at this festival by young sacerdotal virgins (ni-kuma-ko), who carried: Zushi-gumi, or a wreath, in imitation of the dance of Unme in the solar myth (Kojiki, 64–65), while a nakatomi, knotted threads, which were clearly meant to retain the imperial soul, and which the short priest in a mirror vessel.

We shall omit rituals 16 to 24, which refer exclusively to the offices of the temples of Ise; it will be sufficient to mention in this group the formation of the second ritual, for the installation of a princess as vestal:

'The offering of a sacred princess of the blood imperial to serve as the vestal's staff, having first, according to custom, observed the rules of religious purity for three years, is to be the first of the sacred princess, to be placed in the temple of Yamato, while his 'rough spirit' (on-amosami) especially the institute.

We have here evidently a survival of the 'abstainer' of primitive Japan, whose asceticism assured on pain of death the good fortune of the people of the village, in the same way as here the sacrifice of the imperial virgin is to bestow happiness and long life on the sovereign (cf. art. Asceiism (Japanese)).

The 25th ritual, of a more general interest, is entitled: Tashikite-tatemae, norito, 'Ritual for the Respectful Removal of the Gods who send Plagues.' In the 18th ritual the gods of roads were made to intervene against those who were directly addressed. It is, therefore, a real formula of exorcism. The text begins by reciting the supreme council of the celestial gods, wishing to 'purify' the court 'with the heart of the future emperor, sent Futsu-nushi and Take-mikadashi, who triumphed over the terrestrial gods and 'silenced the rocks, trees, and the least leaf of herbs likewise that had spoken.' After this warning, undisguised and all the more plain because, according to the ritual, the wicked gods know well, 'by virtue of their divinity, the things which were begun in the Plain of high heaven., numerous gifts are made to them to win them over—and not only the usual offerings of clothes, fish, game, vegetables, rice, and sake, but also, in a native form, as a thing to see in a mirror (or to play with, beads; as things to shoot off with, a bow and arrows; as a thing to pick up and eat with, a sword; as a thing which gobbles out, a horse.

Lastly, after having thus loaded them with numerous feasts and abundant dainties, which they beg them to accept, 'as if enfeebled in mind, as if bereft of offerings and sufficient offerings, they earnestly ask these 'sovereign gods' to be good enough, with a heart to be turbulent, deploring to be forced, and desiring to hurt, to remove out to the wide and clear places of the mountain-streams, and by virtue of their divinity to be tranquil.'

Passing in silence a less interesting ritual (the 26th), we come at length to the last document of the collection, the 27th ritual, which is called 

Idzumo no kuni no miyakko no kamuyogato, 'The Divine Words of Good Fortune of the Chiefs of the Country of Idzumo.' These local chiefs, after having lost their civil sway, had preserved their religious power. It is they who today in this old province hand down the primitive fire-kindler (kami). Which, when added: 'In case of illness, shake these treasures and repeat to them the words: 'Hi, ju, ni, san, shi, go, hitto, ru, ru; shake them pu-chan (nourish, au) and repeat to them the words: 'Hi, ju, ni, san, shi, go, hitto, ru, ru. They call to the dead and press it on to the body of the dead. If then they do so the dead will certainly return to life.'
as it was practised in the most ancient times. The following is the curious account of the subject given in the Sūkti (326 f.):

"The Delty of Idnakh (the country of the 'sacred stones') had a female deity whose name was the Delty of Idnakh. So eighty Delties wished to obtain this Maiden of Idnakh, but none of them could do so. Hereupon there were two men of whom the elder was called the Youth of the-Heaven-on-the-Emulous-Mountains, and the younger was named the Youth of the-Haunted-on-the-Spring-Mountains. So the elder brother said to the younger brother: 'Though I beg the Maiden of Idnakh, I cannot obtain her in marriage. Will you help me obtain her? I must marry her, or else the world will perish by drought.' The younger brother answered, saying: 'I cannot easily obtain her.' Then the elder brother said: 'If thou shalt obtain this maiden, I will take off our upper and lower garments, and distil liquor in a jar of my own height, and prepare all the things of the mountains and of the rivers, in payment of the wager.' Then the younger brother told his mother everything that the elder brother had said. Forthisith, having taken what she had, and went in the space of a single night an upper garment and trousse, and also socks and shoes, and a shawl and a sword, and arrows, and dotted him with this upper garment, trousse, etc., made him take the bow and arrows, and sent him to the maiden's house, where both his apparel and the bow and arrows all turned into wisteria-blossoms. Then, when the Youth of the-Heaven-on-the-Emulous-Mountains hung up the bow and arrows in the maiden's privy, she left. Then, when the Youth of the-Haunted-on-the-Spring-Mountains came, he thought that the blossoms were strange, brought them, followed behind the maiden into the heavens, and decreed her. So she gave birth to an elephant. Then he spoke to his elder brother, saying: 'I have obtained the maiden.' The Youth of the-Heaven-on-the-Emulous-Mountains, vexed that the younger brother should have married her, did not pay the things he had wagered. Then the younger brother took him by the hair, took a one-pointed bamboo from an island in the River Idnakh, and tied the basket with eight holes, and took stones from the river, and mixing them with brass (taken in hand), wrapped them in the leaves of bamboo and caused this tangle (tohāi) to be spoken (by her younger son). "Like unto the becoming green of these bamboo leaves, do thou become rich from the flowing and ebbing of this brass [again the word staha, but here meant 'sea-water'], do thou flow and ebb again, like unto the sinking of these stones, do thou sink and be prostrate." Hearing caused this to come to be spoken, she placed the basket over the smoke [apparently on the hearth of the house]. Therefore the elder brother dried up, withered, and by prostrate for the space of eight years. So the elder brother entrusting his august parent with lamentations and tears, for this caused the curse to be reversed. Then, having his body was pacified. This is the origin of the term 'a divine wager-payment.'

In this text we have a case of original sorcery, founded on sympathetic magic (a conception so well expressed by the Japanese word for 'magic,' yoinakari, which conveys the idea of 'to mix'), but before the time when the progress of the arts and sciences influences could have given the idea of exercising sorceries on the efficacy of an enemy. (For this later development see, e.g., the popular ballad of Shintō Zu, in Taisei, Vo. xxii. p. 294-308.) We are, therefore, in the presence of a thoroughly Japanese rite, whose ancient character is shown by its very obscurity, and which cannot be understood unless it is replaced in the midst of the primitive beliefs from which it came. First of all, the mother provides herself with the mysterious bamboo on which the life of her elder son is to depend. Purposely she does not gather it in any chance place; she takes it from an island—which already connects that object with the aquatic character. With this bamboo she weaves a basket, in which she takes care to leave eight holes, which will be the eight openings by which eight years of misfortune are to enter for the victim. In this basket she places the river-pebbles, which, even more than the bamboo, come from the water. But it is from fresh water that the Delty of Idnakh is born, and the nature of the rite demands that they should not change the maritime character. They are, therefore, put among brine; by this union the assimilation is made, and the sorcery is accomplished. The only thing that remains is to pronounce the formula whose powerful words will act on all these things.

The victim will wither like the leaves of bamboo, in the same way as, in another legend (Kojiki, 283), the magical imprécation (tohō) of a child had made a great oak-tree suddenly decay; or, better still, in the same way as, by the effect of a general curse, a man, formerly immortal, was condemned to die. The leaves of the cherry-tree fade (Kojiki, 160-143). Then, as the high water falls back, the guilty one will be washed away. Lastly, he will be seen foundering as a stone sinks when wet! He passes away. This curse pronounced, the basket of perdition is placed in the smoke of the hearth; the green leaves become black; the threat is executed. Yet in the end the mother's heart bears the repentance of her son. She reverses the curse, i.e., the terrible magical formula is this time pronounced backwards (cf. Kojiki, 289), and immediately the body of the young man is 'purified'; he returns to health, to life.

In this sorcery the most curious point is that which is connected with the sea element. The fate of the young man is, in fact, connected with the ebbing of the tide. We have here an interesting illustration, among the insular Japanese, of the belief so widespread among primitive races, according to which a mysterious harmony exists between the life of man and the flowing and ebbing of the sea. In this belief, it is with his mother, his younger parent, they flow in that one is born, becomes strong, prosperous; it is when it ebbs that one loses his energy, falls ill, and dies. The Japanese sorceress, the depositary of primitive traditions, is well aware of the secret of this agreement. She knows that, even far from the seashore, an artificial connexion can be formed between these two manifestations of a single force. Consequently she, in imitation of the connexion with the salt element these river-pebbles, into which the concocted words will bring the very essence of her son; and the cursed one is immediately delivered from the evil influence of the water; he becomes like a pebble on the beach, the tide carries him away, drags him towards the brightness of life, and then lets him fall back and roll in darkness and death. This story of witchcraft has, therefore, given us at one and the same time a typical case of Japanese magic and a new proof of the strange unity observable even in the most curious beliefs of Japan's unlettered society in general.

LITERATURE.—This has been cited in the article.

M. Revon.

MAGIC (Jewish). — The attitude assumed by Judaism towards everything not sanctioned by its own monotheistic teaching has also affected the practice which may be called 'magic,' and it thus becomes necessary, first of all, to obtain as clear a definition as possible of the OT and Jewish tradition allow as to what is to be understood by the term. It must at once be pointed out that divination and charms (see DIVINATION [Jewish] and CHAMAS AND AMULETS [Jewish]) are not part of Jewish magic, which, properly speaking, corresponds most closely to 'witchcraft.' The difference between witchcraft and other forms of magic is that the magician has nothing whatever to do with the casting of the future or with preventing any occurrence that is sure to happen in the ordinary course of nature. He has nothing to do with the influence of spells or incantations, placing the writing of any formula an indispensable condition for magic. Magic can only be 'performed'; no magic is effective unless it is the result of some operation; and the magician must do this in one way or another in order to accomplish his purpose; and always bears the profound difference between magic and any other form of superstition—preventing and altering the regular operations of nature. The magician is not helping things to fruition; on the contrary, he
seeks to subvert the regular course of events. He is expected, if possible, to obscure the sun and moon, to bring the dead to life, to change human beings into animal shapes or vice versa; he is to produce fruit in winter, and, in fact, to do everything that is contrary to the regular laws of nature. The magician will kill, he will create strife—his activity will always be an evil one. He is not exempt from the common punishment of the agent of vengeance, hatred, and everything that makes for strife, death, and destruction. But he cannot carry out his intention without an 'espionage'; he must 'do something' in order to bring about the desired result. Unlike the diviner, who is guided by certain signs and omens, which he is able to understand and combine, so that he can read the future in the events of the present, and unlike the charmer, who can only undo the magician's evil work by certain spells, songs, formule, and written amulets, the magician must perform a whole set of ceremonies quite independent of signs, omens, and spells. It is a new definition that is here offered, which, by circumventing much more narrowly the field of superstition, is an endeavour to give magic its real meaning. The magician's work, again, is not expected to be of a permanent character; it is temporary, and it can be undone by other means, or by other magicians who know the secret of the act; and even if it cannot be undone, it has been scattered. In order, then, to disturb the laws of nature, to transform existing things, to shape and mould new creations, the magician requires the help of superstition. The wand, hand, and garment of magical art; the magician must be able to command the services of spiritual powers—demons, gods, or ghosts—malignant in their disposition and wickedness.

Jewish magic presupposes the existence of such spirits, and occupies the borderline between orthodoxy and heresy, between Judaism and paganism. It is an art that lives in the twilight between truth and falsehood; and the line of demarcation shifts according to the change of theological views in the course of development and transition. It depends also upon the nature of the spirits and upon the theological attitude towards them—whether they are considered as forces opposed to God or as more negative forces that are also creatures of God and yet unwilling, by their own innate wickedness, to do God's will. Their changed condition has been cast down from the heavenly heights because of his arrogance and insubordination does not enter into the sphere of Jewish magic, nor, with rare exceptions, have the gods of other nations become evil spirits subservient to the wish of the magician and willing to do his behest.

The Hebrew term for 'magic' is keshaf, which, like all technical expressions connected with superstition, is of obscure origin; though many attempts have been made to elucidate its primitive meaning, not one has yet proved satisfactory. The primitive meaning of keshaf, in the view of the present writer, is apparently 'hidden,' 'obscure,' 'a thing done in a secret manner,' which is the very essence of magic. The performance is a secret one, and even those who are allowed to witness it are slow to understand its meaning. The word keshaf, with its various derivatives, occurs twelve times in the Bible. It is to be noted that all the references in the Pentateuch are to Egypt, while of the referents in the Tanakh and the books of the Prophets, as well as in the Apostolic writings, there is no trace of a magician. Wherever one finds allusion to a magician, he is declared Act 21:28; in Babylon there is only one allusion to them, in Dn 2.

The LXX translates keshaf by ὀμπαράσ, which does not mean 'poison,' but, as in later Greek, a 'spell' cast by a magician. Keshaf has remained the technical term in Hebrew literature. In Egypt, it is called kishaphh in the Mishna and Talmud, and no words have been more widely used, and yet with a very definite meaning attached to them, than kishaphh and malkahshhef, nor is there any doubt that the real meaning of the Egyptian term is exactly witchcraft. It is clearly stated (Sotah, vii. 4, 11) that only he is to be called a magician who produces a real act, but not the man who produces an optical illusion, a kind of juggler's tricks.

The fact that witchcraft is mentioned in connection with Egypt (exclusively, in the Pentateuch, and occasionally, in other passages in the Bible) shows the probable source of the magical art known and practised in Bible times. The Egyptian malkahshhef in Ex 7:22 performs precisely the acts defined above as the work of the magicians; they endeavour to change the order of nature. No details are given regarding the operation of the magician in the Bible; but from W. 47:12, Jer 27, and 2 K 9 it is clear that, in the eyes of the prophets, the work of sorcery was tantamount to idolatry and to lewdness, possibly through the performance of some action by the magician. That some of the witches performed such acts in a state of absolute nakedness is an assertion repeated throughout the history of magic, and it is possible that the prophets had this in view when in speaking of witches they placed them on the same plane as harlots. It is noteworthy that the witch, and not the sorcerer, was condemned to the fire (Lev 20:22, Dt 18:10). The sin of the malkahshhef is said to have been so heinous that the law punished it with death. Witchcraft must, therefore, have been connected with idolatry (Mic 3:9); it is described as an 'abomination' (Dt 18:10), and was also described as 'sin' (Lev 20:22, W 2 K 9).

The scanty references in the OT, which show that the practice could not have been widespread in Bible times, become clear in the light of the tradition of Rabbinical literature. We learn to know through what powers the magicians were able to carry on the operation of the spirits become, as it were, more materialized.

The existence of demons is not denied; on the contrary, they are universally acknowledged, possibly through the influence of Babylonia, and the Jewish belief of the period emphasized a angelic personage for them in a world created by God (see DEMONS AND SPIRITS [Hebrew] and DEMONS AND SPIRITS [Jewish]).

According to the Pirke Aboth, v. 9 (cf. C. Taylor, Sayings of the Jewish Fathers, Cambridge, 1897, ad loc.) and Gen. 4:6, manshim are created by God Himself at the close of the sixth day; but, as the Sabbath was observed before their creation had been completed, they remained half human, half spirit. They are not fallen angels, nor are they ancient heathen gods, but intermediates between angel and man, and mostly of an evil inclination.

How they are to be used—i.e., the art of witchcraft—has been taught to man by two angels who have forfeited all rights to the bliss of heaven. According to a legend found in the Book of Enoch and the Chronicles of Jerahmeel (tr. M. Gaster, London, 1899), and other Jewish Haggadic collections, the two angels Uzza and Azael, who showed their discontent at the creation of Adam, and after they were sent by God at their request, to Assyria as well as to Palestine itself. In 2 Ch 33:17 Manasseh is described as having practised witchcraft as well as other forbidden things (cf. also Mal 2:1). The words of Ezeckiel are mentioned in Ex 7:15; in Babylon there is only one allusion to them, in Dn 2.
MAGIC (Jewish)

25, and notes, p. lxxxii.) The Reitites, the descendants of Cain, were the pupils of these angels, and, according to the Book of Jubilees, corrupted the descendants of Seth and brought about the Flood. According to another tradition, the messengers and shdḥmīm were the children of Adam and Lilith, the shdḥmī and the messengers leads the procession of shdḥmī, and who, during the one hundred years that Adam was separated from Eve, consorted with him (Ezek. 28, i. 179; cf. Zech. iv. 614). Lilith plays a great role in magical literature; she later becomes the demon who kills infants at birth and, together with her companions, is constantly mentioned in Aramaic inscriptions on magical bowls from Assyria and Persia (see below). The demons are both male and female, and they also endeavour to consort with human beings—a conception from which arises the belief in incubi and succubi—and it is through these demons that the magician is believed to be able to carry on his work.

In apocryphal and legendary literature we get a clearer glimpse of the beliefs prevalent among the Jews concerning magic and magical operations. Faith in demons and demonic powers seems to have been established by that time; at any rate, these beliefs are far more in evidence, and do not seem to be seriously contested. The character of these spiritual powers is somewhat indefinite, except in the Book of Enoch, where, as we have seen, angels who had fallen in love with human women used such powers as instruments of deception and evil. In the book of Tobit another side of this belief is shown in which we may begin to see a differentiation between a white magic, or a magic tolerated by Judaism, and that kind of magic which was ranked as pure paganism, and which probably would fall under the category of witchcraft for which the death penalty was prescribed by law. Here we find the angel Raphael himself as a shdḥmī, who counteracted the work of a demon who, falling in love with Sarah, had become an incubus, and would, therefore, kill any one who intended to approach her. The spirit thus exorcized was a Ammonites, who is recognized in the later demonological hierarchy as the king of the evil powers. The position of Belial, or Belial (the name given also in Samaritan tradition to the evil spirit who deceived Eve), is, in the Ascension of Isaiah and other apocryphal writings, not so clearly defined, but in any case he is an evil spirit approximating to the character of Satan in the book of Job (cf. Belial, Belial).

To obtain the assistance and help of these powers, certain means had to be devised: gifts or sacrifices were made in order to win them over and gain control over them. Maimonides, in interpreting De 32, 47, 'they sacrificed to shdḥmī', says that the gift most acceptable to the evil spirits was blood, and that their willing help was obtained by giving them the blood of the sacrificial food; the magician must partake of the blood, thus sharing the food of the evil spirits, so as to become their associate. To this sacrifice, which was not limited to the shedding and partaking of blood, other ceremonies had to be added, all bent under- stood as sacrifices: just as the fumigation or burning of incense in the temple is an offering to God, so fumigation and the burning of incense must be understood primarily as gifts very acceptable to the spirits and not insufficiently materialized, to enjoy material food (cf. the Biblical parallelism of magic with idolatry, noted above). In addition there was the lighting of candles and the use of a knife with a black blade which is mentioned by Rashi to Salm. 101, and which can be understood only as a symbolical sacrificial knife. Philistines must be served in glass bowls (Biblia rephah, 2a). Fasting and other ceremonies are all intended to propitiate the evil spirit, and magical operations are objectionable to Jews and an 'abomination' to Judaism. Yet Rabbis made allowances for weaknesses of human nature and, except on rare occasions, avoided rigorous measures against witchcraft. But when necessary they did not shrink from them. During the first centuries of the Christian era the whole of what might be termed the civilized world—Egypt, Babylon, Greece, and Rome—stood under the absolute sway of belief in evil spirits. It was partly Babylonian tradition that ascribed every form of evil and harm to the action of the shdḥmī and messengers and produced a large literature of invocations and magical formulae for harm and for protection, and partly the Egyptian tradition of magical operations and ceremonies of a mystical and magical character. During Talmudic times it seems to have been believed that some shdḥmī were harmless, and, though they were looked upon as evilly inclined and malignant, a friendly intercourse with them does not appear to have been considered contrary to Jewish law. Thus a Rabbi once assisted in a dispute between two shdḥmī in which one had taken unlawful possession of a place belonging to the other, and a few drops of blood were found floating on the wall where they dwelt (Lev. Rab. 24); but, on the other hand, Abaya saw a seven-headed monster coming out of a well and killed it. The attitude of the Rabbi was justifiable as long as it did not lead to real idolatry.

The belief in the power of the Ineffable Name (see CHARM AND AMULET [Jewish], NAMES [Jewish]) was as old as any belief in witchcraft. As soon as the existence of evil spirits could not be denied, they were also given mysterious names, and it was held that, the moment the magician possessed the secret of their names, he could win their assistance, provided it was not contrary to the will of God. Legend says (Pol. Targ. to G. 2528) that among the first who obtained mastery over these demons and the knowledge how to deal with them for their own purposes were the children of Abraham by his wife Keturah, to whom he had imparted the knowledge of the mystical names of the demons (the names of the unclean). It was through the names of these evil spirits that, 'the prophet of the heathen', as Balaam is called, was able to perform his witchcraft and was expected to harm the Israelites. He was considered to be the greatest magician of old, and, according to Pol. Targ. to Nu 25, he taught the daughters of Mosh to practise sorcery and witchcraft and thus entice the young men to idolatry and immorality, which brought the plague upon Israel. It is also said that Balaam tried to escape by flying in the air, but Phinehas, through the Holy Name, was able to fly higher and smite him. The magicians in Egypt who unsuccessfully wished to enslave the Jews (see Joseph and Haman) wanted to use the knowledge of the names of the evil spirits. It is well known in apocryphal literature as the great magicians at the court of Pharaoh (cf. also 2 Tim. 5). According to the Testament of Joseph, when Moses was a child and before he left Paradise; but in Jewish and Christian

1 For an Egyptian parallel to this legend ascribing the origin of magical arts to the teaching of an angel who had fallen in love with women, see G. Bentheim, Collection des anciens egyptiens, Paris, 1861, p. 31.

2 Later the host of shdḥmī included other rulers and princes besides Adam (cf. Jezeb. Jer. 3, 179, Gen. 52, Levit. 22, 10, and later Midrashic compilations).

3 Guide, ii. 56.

1 This is one of the earliest mentions of a seven-headed dragon, which plays such an important role in fairy-tales.
apocryphal literature it is the 'Book of Adam,' or the 'Book of Raziel,' a title afterwards given to a handbook of practical kabbalah full of such mystical names of angels, rulers, princes, stars, planets, and spiritual beings. Still less could the Rabbit object to belief in power over these demons when they remembered that even the Temple in Jerusalem was said to have been built by Solomon with the assistance of the spirit of the hekhalotim which rested on a peculiar interpretation of the word shaddai, occurring in Ec 2. So firm was the later belief in Solomon's power over the shekinah—and whatever was allowed to Solomon could not be refused to any other Jew—that Josephus has preserved to us (Ant., viii. ii. 5) the tradition of Eleazar, who came before the Roman emperor Vespasian, and was able to drive away an evil spirit by using the ring of Solomon and certain herbs.

In the Solomonic cycle Asmodeus is mentioned as their king, and Lilith, Mahalath, and Agaron are also described later as leaders of evil spirits, while even daemonism has been evolved out of P's 91. Once the grouping of spirits was conceded, names came from various quarters to swell the host. Among these we find reference, in the Targum of P's 91, to the horns, eggs, 1 rulers over the thumb or, rather, thumb-nail, and over crystal—all shining objects used, no doubt, for crystal-gazing (g.e.). It was a time of sympathy, and every object that helped either to do or to avert evil was eagerly sought by the credulous. The work of the magician was wrapped in obscurity; his books were kept secret, and his operations he forbade the adepts, so that much of the practical operation is almost lost to us. What has survived is, with few exceptions, the accompanying formula by which these vast numbers of spirits were invoked or subdued either for evil, as in most cases, or for good. In the Greek magical papyri some fragments of the formulas are extant, but very little of the operation. Much more seems to have been preserved in the Hebrew Sword of Moses (ed. and tr. Gaster, J.R.A.S., 1896, pp. 149-198), of extreme antiquity, and in some MSS of practical kabbalah, or practical exorcism, mostly in the possession of the Sages (for the prescriptions in these is given below). A large number of bowls, many of them dating from the first centuries of the Christian era, have been found in Babylonia where the Syrian magical formulae of the papyri have been used, and several vessels being used by the ancient magicians for the purpose of making the incantation or conjuration written on them effective. The inscriptions in question contain whole lists of demons and spirits who are in the service of the magician or whose power he is expected to know. A large number of them have been published by J. A. Montgomery (Javanic Incantation Texts from Nippur, Phila-
delphia, 1913), and one (no. 32) may here be reproduced as showing the state of mind and the beliefs of the people. The translation is independent and differs somewhat from that given by Montgomery.

1 This bowl is prepared for the sealing of the box, and the wife and the children of Dibon, son of Iaspandarmid, that the Tert- rific (tragic) and evil Dreams may depart from him. The bowl I lifted up and I have watered (dashed), it, an operation like that which was established by Rab Joshua bar Perahyah, who wrote suggestions in the names of Demons and Devils and Satan and Lilliths and curses which are in the house of Dibon, son of Iaspandarmid. Again; he wrote against them a ban which is, in all time, the name of Arzu, Atzd4&A 4t0, within T, Atzd4 Atzd4, the name is a scroll within a scroll. Through which are anointed and the demon of the wind, and through which the heights are raised (lifted) up; and through which are far the spirits Demons and Devils and Satan and Lilliths and curse; and through which he passed over from the

2 The rulers of the egg must mean those who obtained an insight into the work of the spirits or mastery over them through the looking instantly into the yolk of an opened egg (Sankhț 375).

world and climbed above you to the height (of heaven) and learned all counter-charms for hurt and for healing to bring you forth from the house of Dibon, son of Iaspandarmid, of everything that belongs to him. I have dismissed you by the ban, and it is bound and sealed and countermeasured, even as ancient times (of writing) of writing, so that you were not surrounded (died). . . . Again: and sealed and countermeasured is this box in the house of Ymimthur, Yar, Yet, A. Amen, Amen, Selah.

Sealed and protected are the house and dwelling of Dibon, son of Iaspandarmid, from the evil spirit and the curse. And sealed and protected be his wife and son from the Terrifier and evil Dreams and Curses and Vanes and . . . Halleth, Amen.

This inscription has been selected because it contains the name of the famous Joshua (Jesus) b. Perahyah who was so important a figure in the time of John Hyrcanus at the end of the 2nd cent. B.C. He was the teacher and friend of R. Simeon b. Shetah, whose dealings with the witches of Ashkelon are mentioned below. In the apocryphal stories about Jesus a noteworthy part is assigned to this Joshua b. Perahyah who had fled to Egypt, where he was believed to have learned the art both of working and of combating magic.

The Jers. Text (Sanh. vii. 19, fol. 256) tells a curious legend concerning this same R. Joshua who is the contemporary of R. Eliezer and R. Gamaliel. Three Jews were cast into a place where they found a young man whose manhood had been taken on over his head. They pitched the seeds on the table, and they sprouted in an instant and grew up. Out of the midst a woman, with dishwater in her hand, emerged and said, 'I am the spirit of the sea.' They demanded of her what she could not undo the spell, because the things had been thrown into the sea. R. Joshua then ordered the angels of the sea to throw them up, and thus the young man was restored to health, and later became the father of R. Joshua b. Simeon.

In the light of the above it is not improbable that this is a story of Joshua b. Perahyah, but, as nothing was known of his magical powers, it was transferred later to another Rabbi who also named Joshua.

The Rabbits had no doubt as to the origin of witchcraft: it came from Egypt. According to Kiddushin, 496, ten measures of witchcraft have come down into the world, nine of which have come to Egypt, while one has spread throughout the rest of the world. The Talmud names one or two witches who are said to have practised in Jerusalem, among them being Yôhâna, the daughter of Rûth (Sanh. 25o), famous as a witch affecting childbirth.

One day, while she was assisting a woman in travail, a neighbour came into her house. Her husband treated her kindly like that of a child in the womb, she lifted the cover; the noise ceased, and the woman was delivered. Hence it was recognized that Yôhâna was a witch.1

Evidence of the Egyptian origin of witchcraft and of its purely temporary character—as is shown by the fact that, if put to the proper test, it vanishes—is seen in the Talmudic story of Zôerarti.

He bought as a slave in Alexandria, but, when he attempted to cross the river on it, it turned into a plash the instant it touched the stream, for no witchcraft can withstand running-water. All who saw him laughed at his discomfiture, but he recovered the money which he had paid for the ass. Another Rabbi, Sannal, being offered a drink of water, poured some of the liquid in the ground, whence the rest turned into scorpions. He then compelled the witch to drink and she was transformed into an ass, on which he rode into the market. There another witch, assuming he had broke the spell, and Rabbi was then seen to have the witch for his steed (Sanh. 61o).

As soon as magical operations came to be regarded as idolatry, stricter laws were taken, and for the three of the foremost opponents of magic, viz., R. Simeon b. Shetah (Sanh. 416, and Rash., ad loc.), who lived in the time of King Jannuaus and Queen Alexandra (1st cent. B.C.). He went to Ashkelon, there, with the help of the Wise and Meddled who caught eighty witches actually practising their magic arts, and he hanged them all in one day.

1 This idea of a witch who holds the soul, or the eye, or the heart is close in approach to certain vagaries of the witch-breaks (the contents being restored to the owner), restore life, health, and sight occur frequently in fairy-tales and is derived from Egyptian tradition.
The details are of much interest, for they show a complete conversion to idolatry and heathenism. The woman procured food and drink in a miraculous manner, and in the midst of their feasting did not disdain to invite the Rabbi's pupils to sit by her side and partake of the sumptuous feast. Each of the young men then took one of the witches in his arms and lifted her from the ground, while the old mother waved a magic wand over them, saying that the procedure being that no harm would befall a witch as long as she touched the earth.

The text, however, failed to bring some order into the chaos of magic, for the Rabbi could not transgress a clear prescription of the Bible, and a sin which was punished with death could not be committed lightly. On the other hand, what was a deadly sin for the followers of one creed might be tolerated by those following another; a heathen might be allowed to be a magician and not fall under the ban of the Law. The idea that a Jew was strictly forbidden to follow such practices, and vice versa, a Jew might be considered a magician by the followers of another creed. To a Jew all heathen practices and even religious ceremonies might be magic, and the Rabbi, therefore, divided magic into three categories. First, the death penalty by stoning (Lv 20:5) was inflicted only on those who practised magic and performed magical operations. The second class consisted of those who merely acted as jugglers or produced optical illusions, and who were warned not to indulge in such practices, but he who practised them was censured. A third type of magic was that by which operations and identical results obtained by the Holy Name were not only tolerated, but actually sanctioned. A difference was thus made between the use of the names of the unclean spirits (magicks) and the names of the clean ones (kabbalah). By the former are meant demons and spirits, by the latter angelic powers. At the same time, magicians over demonic laws might be obtained through the mediation of heavenly powers.

Thus, when Simon b. Yohai and other sages went to Rome, they were faced with a demon, ben Yehiel, to enter the emperor's daughter, and when they arrived at the city, they were able to cure her by expelling the spirit (briefly told in Midr. b. Aq. 60, ed. Buber, H. Rabinowicz, Drach, Vienna, 1882-83, vols. 189-190; also in Bacher, ad loc.; Goetze, Ezechiel der Rabbin, London, 1886, no. 19; M. Seeligsohn, in *J.E.,* 1887, p. 220).

Thus was established a compromise which was facilitated by the manifold meanings attached to the word *riba,* 'spirit,' used even in the Bible for both a good and an evil spirit coming forth from the earth to possess and depose the person who is possessed.

So strong was the belief in the harm which such evil spirits could produce that, as far back as the time of the Maimonides, a light might be extinguished on the Sabbath if an evil spirit was feared (Mishn. Shab. ii, 5); and in the Bible the *riab* is already occasionally applied to evil spirits, demons, and devils (Jg 9:29, 1 S 16:14. 18, 1 K 15:22, 139).

Despite the stern attitude taken by the Rabbi, magic flourished among the Jews, for the adepts of this science often deluded themselves as to the true character of it. Not only did they continue their forbidden practices and their operations for evoking spirits and subduing demons, but in their formalities they introduced names of spirits and demons gathered from every form of witchcraft and ancient tradition, and good and spirits long dead and forgotten were retained in magical practices and invocations. Gnostic, Babylonian, and Egyptian names, and even such approximations, as omega, and evocation are found side by side with Shabbath and Shaddai. Actual specimens of these conjurations are very rare, for the magician would never disclose his mode of operation, but the following, extracted from the copist's Cod. no. 443, fol. 135) is characteristic of the peculiar mixture of names and powers used by the magician.

'And they are called "the princes of idolatry." Take bidellium and write upon it in the name of the Great God, and take a boy seven years old and anoint his hand from the top of the head to the end of the finger, and put the bidellium into his hand in the same order as before, and you shall sit upon a three-legged stool and put the boy between your legs so that his ear shall be against your ear and you shall turn your face towards the sun and say in his ear: "Aum, I adjure thee in the name of Truth, God, keeper of the Hosts, Alma, Alma, that thou shalt send from thee three angels." Then the boy will see (a figure) like (that of) a man; and say (here the magic formula), and he will see two (figures); and the boy shall say unto thee: "Your coming be in peace." And the charade of them that which you wish. And if they will not answer him, the boy shall adjure them, and say: "Kama, Kama, Emr (or) Emeprain, the master and I adjure (you) with a second adjuration that you tell me that thing or who has committed that theft." And know that he who wishes to do this must do it on a clear, cloudless day, and in winter time at mid-day.

The most remarkable product of this type of syncretism is the *Zohar Mezukket Shabaoth* (*Key of Solomon*), a complete facsimile of which has been edited by H. Gollan (Oxford, 1914).

No legal command could eradicate so deep-seated a belief as that in magic and magician, and, though it is true that it was forbidden, almost on pain of death, to become a pupil of a magician (sama'el) (Shab. 70b), yet his help might be invoked to break a spell in the case of a man who had become seriously ill through witchcraft (Git. 92b), and almost to modern times (Tur, *Yesa d'eh*), §179, and the commentary of R. Joseph Karo (see Qabo, *Josph*), ad loc.

Belief in magic received an additional impetus through the mysterious teachings of the *Zohar,* which, from the 14th cent., held almost unbroken sway over the mind of the majority of the Jews. In it the Talmudic legends concerning the existence and activity of the shadim are repeated and amplified, and a hierarchy of demons was established corresponding to the heavenly hierarchy. The tales of the heavenly hierarchy are largely derived from the *Zohar.* These demons are fully described in the *Zohar* (Ex. 245b-256a) and exorcism of the shadim or any evil spirit was recognized as within the power of every man fully versed in mystical lore and in the mystical names of God. Many a tale is told of such exorcism of demons by holy and pious men, such as Heliodorus in Catania in the 8th cent. (L. Zunz, *Zur Gesch. und Lit.,* Berlin, 1845, p. 488); and others are mentioned by Manasseh in his *Mishn. Shab. ili. 5,* which is full of information concerning belief in demons and the power of the pious to master them and use them for their own purpose. Even the scholarly and pious Rabbis of the 17th cent. clung to the belief, while in the legendary lore of the Middle Ages such men as Maimonides (g.v.), Ibn Ezra (g.v.), R. Judah the Pious, Rashi, and Najmades (g.v.) were all credited with magical powers, and many a legend is told of their operations. Rabbi Jehiel of Paris has even found a place in Victor Hugo's *Notre Dame de Paris* as a wonder-working Rabbi, and no less famous was R. Loeb of Prague (17th cent.), who was regarded as a great magician and was credited with having a clay famulus that was able to perform wonderful deeds, since it had under its tongue a plate on which a mysterious name had been engraved. The Baal Shem (1760), who founded the sect of the Hasidim, had many encounters with the shadim, as described in his biography (Shibbe Ba'al Shem Toh, Berdichev, 1844) of miracles and miraculous deeds performed by him and after him by wonder-working Rabbs of the Hasidim as detailed in the *Khol Hasidim* (Lebem, 1884); nor should we forget the legendary contest, described by Dalby, *Old Magicians in the Talmud and in the Later Jewish Literature,* London, 1833.

*Ezekiel* (I). 5

*The three kings from the East, Kangar, Melchior, and Baltasar—*a curious invocation in the mouth of a Jewish magician. It is evident from the context, however, that the copist did not understand what he was writing.
influenced Slav myth and magic. The word Rügen is derived from the same root as the English "rough," and is called in Early Russian Ruyan. Now the word Rügen comes from a synonymous root, and looks like a translation of the Teutonic name Rügen; and it is thus a safe and probable theory to identify the fabulous island of Baya with the historical Rügen-all the more so as the mysterious stone Alatyr is thought perhaps to mean amber, which was an article of Baltic commerce.

When Christianity had effaced the old Slavic nature-gods, the need for which they stood still remained—that of dealing with nature, coaxing and dominating her, and mastering her secrets. Paganism of the old ritual, degenerating into incomprehensible pater, continued, in part, to be used at the old sacred haunts, but these incantations were clandestine; though the beings invoked were believed in, they were considered illicit or hellish; healthemdel had changed into magic.

Every village had its magician or witch-doctor. These practitioners certainly possessed great knowledge of healing, as herbalists and masseurs; but, where all nature consists of discontinuous mirage, such cures had to be accompanied with the ritual that was calculated to conciliate the powers and convey both a temporary comfort to those who are loath to give up old beliefs which are now recognized as vain imaginations.

GILMER AND AYERS (Jewish), Divination (Jewish), and BERN (Jewish).

SLAVIC MAGIC.

The Slavonic countries are a peculiarly rich field for the study of folk-lore, as they were not Christianized until the 10th cent. and remained isolated from Western influences, and have preserved their written traditions.

On the vast uplands of the northern steppes man's relations to nature were characteristic. The Greeks, in their narrow, diversified, hilly country, developed a corresponding mythology, varied and beautiful; the modern Western European, a city-dweller, turns to nature in a romantic manner, semi-religiously idolizing what is to him unwonted and fresh. But to the Slav peasant nature was business, his everyday surrounding, beside which nothing else existed. He was rather unimaginative and quite ignorant. Whilst the Norsemen and the Greeks created mythologies out of natural phenomena, the Slav, in the dear monotonous plains, fell into neither the deep religious fatalism of the Scandinavians nor the bright imagery of the Greeks; he simply saw that the sun rose and the sun set; that the earth was moist and fertile or parched and a Rabbi was asked why the aid of a magician may be invoked in case of serious illness, he replied, according to Joseph Karas (commentary on Tûr, Yorich Déd, ch. 170), that nature in a romantic manner, semi-religiously idolizing what is to him unwonted and fresh. But to the Slav peasant nature was business, his everyday surrounding, beside which nothing else existed. He was rather unimaginative and quite ignorant. Whilst the Norsemen and the Greeks created mythologies out of natural phenomena, the Slav, in the dear monotonous plains, fell into neither the deep religious fatalism of the Scandinavians nor the bright imagery of the Greeks; he simply saw that the sun rose and the sun set; that the earth was moist and fertile or parched and frozen; that he was envoried by unknown powers to be obeyed or to be seduced; he addressed prayers and incantations to them in a prosaic, almost rationalist, attitude of mind, without adoration, with merely a recognition of inevitable dependence. His spells and invocations (the bastard descendants of heathen rites) were unsound science, but good religion. A. N. Ramant's says that the primitive Slav adored matter and never felt the incentive to personify, idealize, or philosophize it; perhaps it was a mere acceptance of necessity.

The Pomeranian Slavs, the only Slavs who had access to the sea, had a very elaborate ritual, and worshipped many-headed images in temples, not in groves, like the other Slavs. Their sacred cairns and pilgrimage-worship in the vale of Rügen, these gogman shris were destroyed by Valdemar, of Denmark in 1168.

The resolution of this sacred island has strongly

* In the lofty chamber, at the river mouth, beyond the river, Volga, a fair maiden stands, stands and decked herself, adorned herself in gaudy fish, glory in her right hand she holds bulks of jad, in her left bulks of copper, on her feet halls of bone. To the, fair maiden, ward off the guns of the Turks, the Tartars, the Germans, the Circassians, the Russians, the Morvicins, all tribes and foes;
Again, in another formula, the Holy Virgin is depicted, like Svantovic, one of the ancient gods worshipped at Bügen by the Pomeranian Slavs, or St. George, as riding across the golden bridge on her horse—an unmistakable reminiscence of the chariot of the sun on the rivers of water.

There are charms to lull a child to sleep, and these sometimes invoke mysterious beings—Kriks, Płaks, and Sękotuza—as well as the dawn, coupled with the names of Christian saints.

To save a man from drunkenness a worm is taken out of an empty wine-cask, dried, and then steeped anew in wine, whilst thisformula is recited:

"Lord of the sea-deeps! Carry the meatless bone of thy servant out of the shifting sands, the burning stones; breed in him a winged brood."

The following examples illustrate the lyrical quality occasionally found in these strange compositions, especially in some of the spring invocations:

"Thou, Heaven, hearest, thou, Heaven, seest what I wish to accomplish on the body of thy servant X. [There follow four words unintelligible. An unframed letter sometimes found, which looks very like a tradition of a lost language.] Thou music, turn away the servant X. Send wine; thou little sun, bring peace to the servant of God from wine. Ye bright stars, do ye assemble in the wedding-cup! But in my cup there be water from the mountain-side; I have no wine, X, the servant of God, from wine. My word is potent."

"Thou bright Moon, come into my mouth! But in me there is neither bottom nor cover! Thou generous Sun, approach my door, my courtyard, but in my courtyard there are neither men nor beasts."

The field of Slav magic is too vast and intricate for adequate treatment in these few words. The varied superstitions have been voluminously compiled by Saksanov and his generation; but it should be particularly noted that there are extant songs of witches in a meaningless gibberish, which some philologist might very possibly interpret and so assign definitely some origin to part of the magic ritual, at any rate, of Russia.

In the 18th century, Russian magic became specifically demonological. An infernal hierarchy was foisted upon it with anti-ecclesiastical ritual. These late charms impress the reader as being identically artificial, like the imitative ballads of the same period; in form they copy the medieval spells.

Summary.—The history and decline of Russian magic, it would appear, traced the following course. The primitive vague and inchoate nature-worship of the Slaves, like Aryan was profoundly influenced and deflected by the subject races of Finno-Ugrian and other Turanian races, who became typical magicians and had mystic powers ascribed to them. The elaborate ritual of the Pomeranian Slaves originated in a greater intermixture of race, and, when suppressed, was soon forgotten but it lingered on in tradition and folk-lore, in the incomprehensible pattern of the spells, and especially in the legends of the isle of Buyán and the stone Alátyr.

As Christianity spread, the ancient gods of thunder, spring, and progeny, the sun and moon, etc., were duly canonized, while the old soul and the pagan adoration of nature remained the same, and the festivals were held, often on the same day in the same place, and with similar ceremonies.

In the second medieval stage, merged in and with the incantation are village science and medicine, village nature-poetry, and primitive religió gods. The specialization of the medicine-man, the healer, the priest, and the misInspectress came with advancing civilization, the herbalist degenerating into the magician and enchanter. Post-medievally, a formal demonology arose, a positive anti-Christianity, artificial, sporadic, and short-lived.
MAGIC (Teutonic).—In all ages and in all localities the belief in magic is found to have sprung from the same root-Religion, i.e. the conception of nature as alive in every object, the incapacity of primitive man to distinguish persons or things from their names or representations: the belief in the transferability of the powers of nature and of human souls, and the idea of spirits and demons, as well as of such hostile persons as were believed to be in league with these supernatural existences. We need not wonder, therefore, that in every country, and among every people, the old magic, as the machinations of magicians to counteract them, if possible, by a magic still more potent. From the earliest times the amulet and the spell have been specially resorted to, as the only means of protecting man and beast; nor is it to be wondered at when we remember that disease itself was regarded as due to demons and malefic magic. Magic alone, in fact, could undo the work of magic.

Now, the articles exclusively employed for the purpose of influencing the magical properties of things were amulets and ligatures. There was not the slightest misgiving as to their efficiency by the appropriate amulet. Discoveries in tombs furnish simple information regarding the objects specially in request as amulets among the Teutons. Thus, protection of the sorcerer, one of the gods which served as amulets likewise date from the period of Roman influence.

When the missionaries of the Roman Church introduced the Christian religion among the Teutonic tribes, they found ideas and practices quite similar to what had prevailed in pagan Rome and its provinces. Accordingly, they sought to apply the same procedure as had been previously resorted to, i.e., they incorporated the deities of the pagan Teutons into the system of demons whose existence the Church recognized, while they forbad all worship of them, and also the practice of magic in general, and inflicted severe penalties upon the disobedient. From the early centuries of the Church's history, synods and councils had found it necessary to forbid even the priests to pand to the people's craving for amulets, written spells, adjudications, and magic potions; and, as late as the 8th cent., dergy in Thuringia, the missionary district of St. Boniface, were making amulets of small slabs inscribed with benedictory formularies, protective or remedial powers, and hang from the neck by a cord, just as if they had been pieces of amber or agate. The use of incantations was also vigorously assailed, and the Church, with the other ecclesiastical enactments against amulets and spells are found among the rules for penance and in the ecclesiastical or Christian codes. Among the various collections of benedictory regulations—
superstitions—a peculiar place is occupied by those of the Anglo-Saxons, as the Frankish regulations are in great measure verbally dependent upon them. They warn against ‘divinationes,’ ‘auguria,’ ‘mathematicum,’ ‘emissio temperantium,’ and especially against ‘incantationes diabolicae,’ ‘filacteris,’ and ‘ligature.’ As yet excommunication was the extreme penalty for transgression. The Yenching Bede (LV. lvi. 27) relates that, during a time of pestilence and high mortality, recourse was had to adjuvants and spells. The abbot Regino of Prüm has incorporated an entire series of the decrees of councils dealing with the subject in his work de Sacrautorum Canonis (A.D. 906; FL. xxxiii. 187 ff.), and from that work much has been borrowed by Berhard of Worms, who wrote about the beginning of the 11th century (FL. cxi. 837 ff.).

That similar ideas and usages were still flourishing in England at this period is shown by Eadfrid’s Ponsio S. Bartholomew Apostoli, with its injunction that no one shall seek to regain health by using a ligature of medicinal herbs or pouring a herb in a ‘magic song.’ The ecclesiastical ordinances of Edgward and the Northumbrian priests later reigns in England have the same effect. Among the Northern Teutonic likewise canon law directed its mandates against superstition and magic.

Till well on in the 16th cent. synods and councils of the Church were constantly under the necessity of dealing with the use of spells and amulets and the evils arising from them. Thus can. 9 of a papal bull enacted for the Lateran Council of 1514 that sorcellaria made by invoking demons, by incanta-
tiones, and by superstitious practices are unlawful. Clerics who offend are to be punished at the discretion of their superiors, and laymen are to be excommunicated or visited with civil penalties.

In dealing with the national codes of the various Teutonic peoples we do not show the same unanimity as the Church. The Teutonic nations that came into existence on Roman territories and it necessary to base their legislation against magic directly upon the ordinances of Roman law. The earliest Teutonic code, the Lex Visigothorum, enacted (bk. vi. tit. 2, 4) that those who ‘willubant insaneum tempestantes, vel decubantur super animam in causa criminalis, orad fuerit upon the fields and the vineyards, &c. ducentenae flagellas publicis verbenerit et decalvati deformiter decem convicinas possessiones circums egetur iniquus manum sigillum autem monasterii, sterns prohibited the belief in, or the practice of magic in, or the belief in, in particular.

Among the Germans, as among all other races, the feeling prevailed that one who practised malefic magic was guilty of all crimes, whether by express or by tacit consent from the tribe or by death. But, on the other hand, we have a variety of testimony from Northern Europe which seems to show that the practice of magic was not in all circumstances deemed criminal.

In the civil law of the Anglo-Saxons, from the 7th cent. onwards, we find penalties enacted against superstitious and magic, and in particular against the employment of spells and amulets. The laws of Alfred the Great dealing with magic are founded mainly upon the Biblical denunciations of the practice. Of similar character are the legal ordinances directed against the occult art among the Northern Tribes, and the 13th cent. English canon law of the 13th cent. ordains that those who tamper with incantations or witchcraft shall be punished by banishment.

Against which the enactments of the Teutonic codes were mainly directed was malefic magic (maleficium). Until the 8th cent. we find no similar enactments against other superstitions which eventually gathered round the belief in witchcraft. But the belief in the existence of cannibal witches and in witches’ flights was explicitly forbidden by ecclesiastical and civil legislation, though Ivo of Chartres (c. A.D. 1100) thought it possible that witches exerted some influence upon the sexual functions. The Church, however, not withstanding all these ordinances, was successful in ridding the people of their magic beliefs and practices. Both continued to flourish abundantly in the department of medicine, thanks to the recommerce of the livelihood. In reality, the Babylonian-Egyptian—doctrine of demons. At an early period medicine had become the monopoly of the cloister; the demons of disease were exercised by the priests; and to relieve the rosary, and to the ‘Agnus Dei’ were ascribed the greatest virtues. Those who in sickness and trouble appealed to the priests were treated by means of the amulet and the incantation, so that it is not the 16th cent. that is, when a medical profession in the proper sense existed—adjudications were still resorted to by doctors.

The attitude of the Church towards the belief in magic was twofold. On the one hand, it accepted magic as an indisputable reality. On the other hand, it rang itself with the civil legislation in an uncompromising opposition to certain dangerous popular superstitions. In the 15th cent. there was a momentous change in the Church’s standpoint. The doctrine of Satan was now made the basis of the doctrine of magic and witchcraft. The nightly journeys of witches, the transformation of humans into animals, the sexual intercourse of men with female demons, and the operation of sorcery in the sexual functions—all these things were now accepted as facts not to be gainsaid. In the 16th cent. the two currents of heresy and sorcery, which had hitherto run side by side, became amalgamated with each other, and merged in the belief in witchcraft. While sorcery the tribes the practice of magic had hitherto been penalized—to speak strictly—only because of the mischief which it might work, in the 13th cent. the civil legislatures in Germany likewise resolved upon a new policy. The Old Saxo (Sachsenspiegel) sent those who practised magic of any kind to the stake, and its example was followed by other municipal and territorial codes. In spite of the rigour of the laws, the practice of magic continued, and the punishment was severe. The Inquisition at length silenced every stricture against its competence to deal with magic, by the civil legislation of the 16th cent. those who practised magic was death by fire, and his clause was taken over by the Imperial legislation—

—while we find that the criminal code of the Electorate of Saxony (1572) sentenced witches to death by fire, and its example was followed by the legislation of the several States. The persecution of witches was gradually introduced into the various territories of Germany during the second half of the 16th century. In Thuringia, the prosecution of this kind seems to have been trials for real or alleged attacks upon the person of the sovereign, as from the reign of Henry vi. But in England the laws against witchcraft were in general more lenient than was commonly the case on the Continent. Witch-persecution in England dates from about the middle of the 16th cent.; in Scotland cases are found as early as the 16th cent. of that century. With regard to Sweden, we are not in a position to say whether witches were burned
before or during the Thirty Years' War. These measures, however, were incapable of extirpating the menace of magic—just as many incantation spells failed to destroy it, though the delusion certainly received a telling blow from the Reformers. As to the question whether sorcery has a foundation in fact, men of the ancient world moulded themselves according to the ideas of their age, and the final death-blow to the belief in witchcraft and sorcery was administered by the reconstituted sciences of modern times.

We are ages clear of all incantation was drawn between lawful and unlawful magic. The latter was treated by all races with the utmost rigour, and not seldom punished with death. Among the Teutons, as elsewhere, incantations and amulets were used as a means of securing protection and profit to the individual and his belongings, and also to work injury upon others, and their possessions. The magic spells of the Teutons are subject to the same two main divisions, according to the purposes that they were intended to serve: (1) magic formule supposed to secure protection and advantage; (2) magic formule intended to injure others. But, as the subject itself suggests, the former class may be further divided according to the effects which the spells were intended to produce. Their object may be either (a) to drive away an evil spirit, or to 'exorcise' it, or (b) to avert a possible evil by means of a 'blessing.' This dichotomy of the first class, however, will not be found exhaustive, and, in the next chapter, we will have occasion to mark another subdivision—magic sidewalk. Magic formule were used not only for the purpose of dislodging present and avertimg future evil, but also as a means of inducing spirits to throw light upon unknown and obscure matters. The purpose of the latter, or introductory portion—the narrative—is generally borrowed from mythology. The procedure was to make as decisive a statement as possible, and the last part of the incantation was then repeated from beginning to end. When the performance was regarded as the earliest Teutonic spells, therefore, there comes down to us from the same age another species—

It is quite conceivable that spells of this kind should exist independently, and unattached to any preliminary narrative. This has been observed also by Schröder in his article 'Über das Spell' (ZDA xxxvii. 359).

"Probable as it is that at a certain stage of the incantation of the gods, i.e. the spell in the proper sense, or of certain species of it, was produced in connection with the recitation of a particular mythological text, let us consider the slightest doubt that in other periods the epic narrative and the magic formule are disjointed, and may each maintain a separate existence. Hence these adjurations strictly so called, which were complete in themselves, and may be regarded as the earliest Teutonic spells, there comes down to us from the same age another species—

"..."

While this epic type of spell is often referred to as the primitive Teutonic form, the facts would seem to imply its secondary character, though its root may indeed lie in paganism, but in any case the recitation of the incantations is the actual practice. Before the actual formula is not peculiar to the Teutons, let alone the Western Teutons—this form of spell being traceable among other races and in much more remote times. He was certainly known to the Romans and the Hindus. But, as a matter of fact, there is evidence to show that it was not even a distinctively Indo-Germanic usage, since it is found also among the Babylonians and the Egyptians. An Egyptian papyrus of the XXth dynasty (now in Turin), for instance, contains a spell which in its whole design shows a striking resemblance to the Mersburg incantation for fracture of the leg.

In the Babylonian and Egyptian spells, too, precisely as in the Teutonic, the scene of the narrative part is always laid in the mythological sphere. In view of the vast influence exercised by the Oriental, and especially the Babylonian, on the incantations of Europe—first of all in the Greek and Roman area, and then derivatively in the Teutonic. At all events, the theory that the Teutons had a primitive type of spell consisting of words or epigrams, and of another by a rhythmical formula, as adopted by Schröder (loc. cit.), is beside the purpose. The pronomial element was certainly the formula, the narrative being added later; and, as we have seen, each could
MAGIC (Teutonic)

be used by itself alone. We find, moreover, that in Christian times quite different introductions were combined with the real nucleus of the spell. We must therefore think of each part as distinct in itself, and in no degree the less so because in the recitation of the 'spelling' came alternately. In all probability the spells were simply muttered in an undertone; there is a large mass of evidence—and not from Teutonic sources only—pointing to this mode of recital.

The missionaries who came to evangelize the Teutonic tribes found two types of indigenous incantations, viz. the purely imperative and the narrative. As the Church was unable to put an end to these incantations and practices, or the use of magic formulæ, it adopted the policy of assimilating everything that could in any way be reconciled with its own views, hoping that by the device of clothing the objectionable thing in a Christian garb, it might succeed in eradicating the superstitions of the heathen. It likewise endeavoured to transform the ancient formulæ, and hastened its first, as also its most urgent, task was to eliminate the heathen characteristics from the narrative spells and put Christian ones in their place. These new formulæ were generally composed in Latin and were the more informative. These narrative portions exhibited Biblical characters, such as Jesus, Mary, the apostles, and others, in perfectly appropriate situations—a fact which in itself conclusively shows that the spells in question originated in ecclesiastical circles. Such imitations of heathen formulæ composed by the clergy are relatively numerous, and date for the most part from the 11th and 12th centuries. But besides this narrative species of Christian spell, again, was in part evolved a new type. This took the form of a comparison or allegory, and its symbolic representation was the 'formula'. As such and such a result was brought about by such and such a spell or incantation, the names of persons employed of the surviving spells of this type are in metrical form; the great majority are in prose.

A further form of blessing, for the use and direction of which a spell must again be regarded as mainly responsible, derives its origin from the special Roman Catholic ceremonies known as the sacramentals. New formulæ were formed on the pattern of the 'benedictions,' and the 'consecrations,' or these were simply translated into the vernacular. This species is probably not older than the 13th century. The devotee shuddered at a mode of a type of magic formulæ in regard to which the monks played merely an intermediate rôle. This group consists mainly of formulæ handed down in ancient medical writings. The design of most of these is the cure of disease, but adjurations for use in digging up medicinal plants were also transmitted in this way. These formulæ were, of course, mostly in the Latin language. Their potency lay mainly in phrases and letters—magic words and characters largely of Eastern origin, being derived from Babylonian, Egyptian, and Jewish magic. This group, accordingly, comprises the most ancient type of spell, which is also the obscurest; always exhibits an unintelligible jumble of words. From the earliest times, indeed, this very unintelligibility was the indispensable condition of the efficacy of the spell. Professor Lehrs, when introducing, in another contributory source of the superstition which is concerned with words and letters— and, it may be added, numbers also. This was the religious necessitated by the more specific, but also in the works of the Rabbinists (q.v.).

These leading types will suffice to classify the great majority of magic formulæ, and even the hybrid, composite, and other derivative varieties which inevitably made their appearance in the course of centuries. But the prime factor in such secondary formations was doubtless oral tradition, to the action of which a large proportion of the spells would certainly be subject at some stage of their development. The learned formulæ of the Church are usually known, and in their full form would have relatively little vogue among the common people. From these larger spells, accordingly, certain typical portions were excerpted, and then used independently. The popular mind laid the main emphasis upon the nucleus of the spell—the formula proper; and examples of this type become numerous from the 16th century. In these the strict parallelism of the earlier ecclesiastics is to some extent abandoned. It was now considered sufficient to say: 'As surely as this act has taken place, so surely may this effect ensue.' Sometimes, in fact, the place of the parallel is taken by the antithesis. It became the practice, further, to draw upon still more remote quarters for the conclusion of the blessing, and to introduce formulæ which in themselves had formerly done duty as blessings, so that the formulæ of blessing, being supplemented by invocations of God and multiplied petitions, often actually approximated to the character of prayer itself. When we consider the scope of Teutonic formulæ— even with the 16th cent. as the ulterior limit— in relation to the purposes which they were meant to serve, we see that the multiplicity of forms mentioned in the Hæmæmæl, the Sigurdrijm, and the Homélæ de numinibus, is by no means an exaggeration. Adjurations against disease certainly constitute the largest class. Many maladies were believed to be due to malevolent influences, and friendly magicians, and were therefore combated by the magic formula. But the same means was employed in dealing with diseases about the origin of which there was no uncertainty: The raven was supposed to acquire peculiar efficacy by having a spell uttered over them.

Nor was it human beings only who in whose distresses were brought to the layman. As had been believed from the earliest times, protection was equally indispensable for the lower creatures most closely associated with human life, viz. the domestic animals. For their protection ancient magical formulæ were used on off disease and other evils. The dog, and especially the shepherd's dog, was protected in this way from the dangers to which it was exposed from the elements. People were very specially concerned, however, to guard against the bite of mad dogs. A certain blessing, 'ad pullos de novo,' was supposed to help the growth of chickens. The purpose of the somewhat numerous 'bee-blessings' was to keep the insects from swarming.

There was, besides, a multitude of adjurations for animals other than the domestic. People tried to rid their houses of flies, mice, and rats by appeal to the power of the formula; wolves were adjured not to hurt the cattle in the fields; serpents, to be easily caught. The bite of the serpent was averted by spells, and by means of adorations the reptiles were induced to yield up the potent opalite stone, and to be obedient to all commands. The tooth and the right foreleg of the bulger acted as charms against bogs, and addition with the shoulder of a toad a man could win the love of whomsoever he chose.

In the therapeutics of ancient and medieval times an important place was given to medicinal herbs. It was of vital moment, however, that these herbs should still retain their supposed virtues after being plucked, and certain magical formulæ were believed to ensure this. The practice was to adjure either the whole world of herbs,
or a definite number of them (cf. the Anglo-Saxon 'nine-herb spell'), or, again, some particular herb. But still further manifestations of the potency of herbs could be elicited. They could be made to second their presence in the life of the people, to act as a defense against weapons, and to protect the cattle from sorcery and the crops from hailstorms. They could also help one to win love, to open locks, to ascertain truth, and to read both the future and the past.

Then the magic formula served to protect men not only against disease, but also against the malice of their fellows and the threat of misfortune. By their aid a person sought to safeguard himself—especially when on a journey—against the artifices of his enemies, to blunt their weapons, and to free himself from prison. By the magic formula he could defend himself, to malefic magic, and against the bewitching of his food and drink. Other formula possessed the power of procuring friendship, love, and favour, and of gaining justice before a legal tribunal. Wives sought, through the medium of magic, to turn the harshness of their husbands into love. An astute merchant of the 16th cent. would even try, without inducing people to buy up his stock of stale wares.

Human life was thus surrounded by a rampart of spells, and property likewise was in similar fashion protected against misfortunes. Houses were secured by spells against burglary and fire, and corn in the granaries was kept from decaying. If anything was lost or stolen, the magic formula could be used, and even to recover the discovery of the thief. The same means were also used to protect, and to increase, the fruits of gardens and fields.

The number of extant magic formula designed to work harm is quite insignificant—a circumstance which is, no doubt, due to the rigorous treatment meted out from the earliest times to the practice of malefic magic. Such harmful spells might be used only by persons known to have no honest intentions, to show disaffection between old friends, to change the love of a married couple into hatred, to bring every conceivable disaster upon another, and even to overcome the dead and the deceased and the possessed.

1. Literary sources.—The sphere of religion, as considered apart from magic, is chiefly represented by the earliest products of literature and the Rigveda, which consists almost entirely of hymns addressed to various gods, in which their greatness and their deeds are praised and all kinds of welfare are prayed for, and by the Soma sacrifice which can only be obtained by the Rigveda. The ceremony of the Soma sacrifice (cf. art. Hymns [Vedic], § 7) is a set of incantation formula, as well as the Rigveda, which consists almost entirely of prayers addressed to various gods, in which their greatness and their deeds are praised and all kinds of welfare are prayed for, and by the Soma sacrifice which can only be obtained by the Rigveda. The ceremony of the Soma sacrifice (cf. art. Hymns [Vedic], § 7) is a set of incantation formula, as well as the Rigveda itself. The Rigveda is a collection of metrical poems, largely to be accompanied by ceremonies aiming at the welfare of the magician or the injury of his enemies. The Vedic literature (Vedic, § 13) occupies an intermediate position between these two Vedas as regards magic. In its original part, which consists of prose formula, the gods are only secondary, bearing a kind of mechanical relation to the sacrificial ceremonial with which these formula are associated, and which they follow in its minutest details. Its character is thus of a magical rather than a religious type. The development of magic, in this period, of an interlaced form and the concentration of sacrificial thought on its perfect performance had led to the new concept that sacrifice was an end in itself, and that, directly to control the natural course of things.

The prose theological works called Brahmans,
which represent the next stage of Vedic literature, being concerned with explaining and interpreting the details of the ritual, supply much information regarding the magical notions and observances with which the sacrificial ceremonial was permeated. The Upanishads, though a continuation of the Brahmanas are philosophically rather than religious, but their speculations on the nature of brahman and upon the supernatural powers acquired by knowledge and asceticism are charged with magical notions. This magical phase of Vedic literature, which comes down to c. 500 B.C., is represented by the Sutras. These concise manuals, especially those dealing with domestic life (grihya), and to a less extent those concerned with customary law (dharma), show how the observances of everyday life were saturated with magical beliefs and practices (cf. also art. LITERATURE [Vedic and Classical Sanskrit], §§ 8-12).

3. Importance of the subject.—A knowledge of Vedic magic is obviously important to the investigator of magic in general, for here we have magical material, bearing on every aspect of human life, which began to be recorded well over 3000 years ago, from that time onwards, be historically studied in continuous successive literary stages, extending over more than 1600 years. Such faculties are afforded by no other Vedic literature and therefore either the amount or the quantity and quality of the evidence afforded. The material in Vedic literature does not require to be laboriously gathered together from separate and scattered references, as is necessary elsewhere. It is here supplied not only in great abundance, but, for the most part, in an easily accessible collected form. Its aid is, moreover, essential to the student of Indian religion without it he would arrive at erroneous or exaggerated conclusions as to the purity and advanced character of the beliefs and practices of that religion in its earliest form.

4. Sacrifice and magic.—Considering that in the Rigveda we have a collection of prayers, and in the Atharvaveda one of spells, we are justified in supposing that the spheres of religion and of magic were already separated in the Vedic period! By no means. It is, indeed, certain that the sacrificial invocation had by that time assumed a liturgical type, and that the hymns of a magical character found in the Rigveda are very few and late. It must be kept in mind that the prayers of the Rigveda, being addressed to the great gods, offered few opportunities for references to magical practices, while the ritual which the hymns of the Rigveda were intended to accompany, and which is fully described in other Vedic texts, is, though carried out by the sacrificial priests, from beginning to end saturated with magical observances. Again, where there is a group of ceremonies directed to the accomplishment of a particular purpose and, therefore, favourable to a greater prominence of the magical element, such as the wedding and funeral rites, we meet with quite a network of magical usages bearing the stamp of extreme and sometimes absurdity, and thus impossible to suppose that the sacrificial priests of the Rigveda, the composers of the old hymns, should have occupied an isolated position, untouched by magical practices derived from outside. Moreover, afterwards continued throughout the priestly literature of later times. In fact, a close examination of the hymns of the Rigveda actually affords evidence that even in them the belief in magical power independent of the gods is already present. (This x. xviii.) The sacrificing priest Desāpi begins with the intention of appealing to the gods for rain, but then himself brings down the waters by the magical powers of his sacrificial art: "the sage Desāpi sat down to the duty of Hymn priest, familiar with the goodwill of the gods; he then poured down from the sun above to the sea below the heavenly waters of rain" (V. v. 5). Every page of the Brāhmaṇas and of the ritual Sutras shows that the whole sacrificial ceremonial was overgrown with the notion that the sacrifice exercised power over the gods, and that the gods could directly influence things and events without their intervention. An insepient form of this notion already appears in the Rigveda, where an exaggerated sacrifice, which occurs mythically attributed to ancient priests; e.g., "with mighty spells the Fathers found the hidden light and produced the dawn" (VII. lxxxv. 4); the Fathers adorned the sky with stars, like a black steed with pearls; they placed darkness in night and light in day (X. lxiii. 11); with their kindled fire the Aṅgirasæ (ancient priests) found the cows and steeds hidden by (the demon) Pālī (I. lxxxiv. 4); sitting by their rite caused the sun to mount the sky" (X. ixii. 5); "(the ancient fire priest) Atharvan by sacrifices first prepared the paths; then the sun, the guardian of ordinances, was born" (I. lxxxv. 5). The ancient priests Visvamitra, by directly invoking the rivers, made them flow for the Biuratas (III. lxxxii. 1-12). The composers of all such passages must have attributed to the sacrifice in their own day the powers which they thus projected into the past.

An examination of the ritual literature shows that the dividing line between a sacrificial act, which is meant to propitiate the gods, and a magical act, which is intended to control the course of things, is by no means always well drawn, so that the two are often intermingled. Thus the morning sacrifice at sunrise, of which we read in the Rigveda (e.g., IV. lii. 7), when the fire is kindled and an offering is made to the fire, is followed by the fumigation or excommunication of the house (III. i. 5) assuming a magical character, the fire being kindled to produce sunrise: "By offering before sunrise he (the sacrificer) makes him (the sun) to be born; he would not rise, if he were not to sacrifice in it (the fire)." A similar view seems already to be expressed in a verse of the Rigveda: "Let us kindle these, O Agni, that thy wondrous brand may shine in heaven" (V. vi. 4). Again, there are several instances where the sacrificer is exhorted to consecrate the soma to the gods (e.g., X. xli. 1, xcvii. 17, cvi. 9, cvii. 9 f.) in which the Soma ritual is spoken of in the magical character of producing rain direct, without influencing the goodwill of the gods that are invoked subsequently. The blending of magical and a sacrificial act may be of two kinds. A ceremony which is primarily sacrificial may assume a magical character by the nature of the object which it is offered for the attainment of a special purpose. There can be little doubt that only food eaten by man originally constituted the sacrifice offered to the gods in fire. On the Vedic sacrificial ground there was, by the side of the fire, the litter of grass (bhrāha) on which the gods were conceived as sitting to receive the offering. On the conclusion of the ceremony the bhrāha was thrown into the fire, originally, no doubt, to render it innocuous after, by the divine presence, it had become dangerous to touch. To the bhrāha corresponds, in the ancient Persian ritual, the harem (a bundle of twigs; see art. Rāgo) on which the sacrificial offerings were placed, and which was the seat of the gods. This indicates that the oblation in fire was an Indo-Aryan innovation, and that the burning of the bhrāha not improbably preceded the transition to the fire-sacrifice.

The ritual literature furnishes innumerable examples of sacrificial acts being mixed up with magical turn by the employment or addition of a non-suitable element: as when a man wishing for cattle offers the dung of a couple of calves (bhhāla Gṛīgasāstrā, IV. ix. 131); or when poison is added to an offering in order to destroy ants (Kausān), or when, on the other hand, objects suitable for direct magical manipulation could easily be turned into an offering by those accustomed to the sacrificial idea in order to invest magical acts with the garb of sacrifice. Thus the
burning of injurious substances would become a sacrifice; for instance, arrow tips might be offered in order to destroy an enemy (49, lvi. 44). In this way the sacrifice came to assume the role of driving away demons; of helping a woman to overcome her rivals; of enabling a prince to conquer his enemies or to return from exile; and of producing many other magical results. The gradual mixture of the religious and the magical in the direction of the latter led the whole system of sacrifice to assume this character in the later Vedic period.

Various causes contributed to this result. The belief in the divine presence as the sacrifice, and in the mysterious success produced by the sacrifice, encouraged an increasing application of magical results as the ceremonial system became more elaborate. Secondary observances of the sacrificial ritual might already have belonged to the sphere of magic from the beginning. Efforts to explain accidental features of the ceremonial would lead to the discovery of effects allied to magic. Priests would also find useful the magical power of sacrifice in order to secure their own independences. The magical tendency would be increased by the mixture of prayer and spell; if in the prayer accompanying the sacrifice the magical effects of a spell were assumed, such effects naturally would be attributed to the sacrifice also.

5. Predominantly magical ritual. — There are several groups of rites which, though belonging to the sphere of sacrifice, are predominantly magical in character. They are partly connected with family life and partly with public life. The most important of these are:
