called for the levirate marriage, and, as in
other cases, the custom was finally embodied in
the written law. Deuteronomy is specific on this:

1 When brothers dwell together, and one of them dies leaving
no son, the wife of the deceased shall not be given to a stranger.
Her brother-in-law shall come to her and take her to him for
wife and perform a brother’s duty. And her first-born shall
succeed to the name of the brother who is dead, and his name
shall not be blotted out from Israel.

How seriously the brother’s duty is taken is made clear by this story in the book of
Genesis, where the reason given for Onan’s early death is his refusal to raise up seed to his brother,
and where, also, it is held that Tamar, when re-
 fused another husband, is justified in taking a substitute by
deception. In Deuteronomy the recalcitrant brother is put to open shame by the
ceremony of pulling off the shoe.

On the death of a man under discussion is a survival from the time when a man’s wife went to the
next-of-kin. In fact, the levirate was the duty,
et not of the brother alone, but of the next-of-kin, whoever he might be. So Judith was the one upon whom the duty devolved when her husband was in
default. This is also the theory of the book of
Ruth. Ruth offers herself as a wife to Boaz in
the belief that he is next-of-kin to her deceased hus-
bond. Boaz informs her that there is a nearer
kinsman, and he takes her only after this other has refused. Here the connexion with the right
of inheritance is made clear by the statement
that the kinsman has the right of redemption of
such real estate as belonged to the deceased, the
wife going with it. The book is not altogether
clear, because it does not give the first-born son to the
deceased; but in its general conception it agrees with
what we have a right to expect. At the present
day it is Jewish custom to release the brother from his duty.
The subject has a place here only so far as it throws light on the Jewish idea of property, and what was in force so
long as it was thought necessary for a man to have a
male heir. When the right of daughters to
inhere was recognized, the law forbade the
marriage of a woman to her brother-in-law.

The device of adoption, by which a man who has
no heir of his body begotten takes a child from
another family to be his son, seems not to have
been much in use among the Hebrews. Where Abraham expects his slave to become his heir,
however, we think of the slave as having been made a ‘son’ of the clan. In the patriarchal
period we find also the recognition of Ephrahim and
Manasseh by Jacob, which may be called an
adoption; and the reception of Moses into the
family of Pharaoh shows the idea not to have been
unknown to the writers of these stories. At a
later date one of the genealogists tells of an Hebrew
who had no son, and who gave his daughter to his
Egyptian slave to wife, and the children were
counted in the Hebrew line. None of these cases
are adoptions in the historical and Biblical sense.
The right of the first-born son of a husband to
inhere was brought up by Mordecai, came to him not by
adoption, but as his ward by the ordinary law of
inheritances. The declaration of the book of
Proverbs, that a maid may inherit from her mistress,
is too slight to build upon.

We come to a time, finally, when daughters are
allowed to inherit. It would not be strange to

discover that the idea that a woman holding property
rose in connexion with the clan sage. When
the clans were brought into genealogical relations,
those who had feminine names appeared as daughters of the clan.

In all the cases to which we have referred, the
name of the clan was that of the mother, not of the father.

The evidence is that the patriarchs had given portions to daughters as well as to sons.

We must suppose the daughter to have been an heir in the Promised Land, the
Daughters of Zelophehad came to Moses informing
him that their father had died, leaving no son.

In consequence they fear that his name will be blotted out,
for he will receive no portion in the coming
division of the land.

On the death of a man under discussion is a survival from the time when a man’s wife went to the
next-of-kin. In fact, the levirate was the duty,
et not of the brother alone, but of the next-of-kin, whoever he might be. So Judith was the one upon whom the duty devolved when her husband was in

default. This is also the theory of the book of

Ruth. Ruth offers herself as a wife to Boaz in
the belief that he is next-of-kin to her deceased hus-
bond. Boaz informs her that there is a nearer
kinsman, and he takes her only after this other has refused. Here the connexion with the right
of inheritance is made clear by the statement
that the kinsman has the right of redemption of
such real estate as belonged to the deceased, the
wife going with it. The book is not altogether
clear, because it does not give the first-born son to the
deceased; but in its general conception it agrees with
what we have a right to expect. At the present
day it is Jewish custom to release the brother from his duty.
The subject has a place here only so far as it throws light on the Jewish idea of property, and what was in force so
long as it was thought necessary for a man to have a
male heir. When the right of daughters to
inhere was recognized, the law forbade the
marriage of a woman to her brother-in-law.
daughters are obliged to marry within their own tribe or clan, which has seemed a hardship. It hardly seemed an innovation, it became widespread. Job gave his daughter portions along with his sons, and the author of the last chapter of Proverbs found it natural that a capable woman should buy a field with the earnings of her own hands. Written testaments are nowhere spoken of in the OT, but it is assumed that a man about to die would dispose of his estate by will. So Athithophel gives orders concerning his house before committing suicide; and Itzeziah, when dangerous illness is advised to regulate his affairs.

The last words of a father to his sons would naturally couple advice and admonition with directions concerning property. Hence the character of the testament (though not so called) put into the mouth of Jacob. Ben Sira recommends, that one distribute his goods at the end of life, but not earlier. It is not certain that a will or testament is intended in any of these passages, or in the passage in Tobit sometimes cited in this connection.

The latest portions of the Pentateuchal legislation that limiting the right of testamentary disposition in accordance with the theory of divine ownership. The land being Jehovah’s, and assigned by Him to the various tribes, it should be kept in perpetuity, in possession of those tribes. To this end no man was to have the right of disposing of his property to any one but the next-of-kin. Moreover, in case he were driven by poverty so to dispose of it, he could have a lease for the time to the next Jubilee year, when it would revert to him or his direct descendants. The basis of this regulation is probably the old clan order by which the individual held only what was assigned him by the community. When dangerous illness is advised to regulate his affairs, it is assumed that, when land was sold, it was offered first of all to a kinsman.

Whether a criminal forfeited his property rights is naturally told us. When Naboeth was executed for blasphemy, his estate was seized by the king; but this may have been simply an act of tyranny, and without authority of law or custom. If we argue from Achan’s case, the man guilty of sacrilege had his property destroyed with himself. What became of his lands when he had any is not clear. We should expect them to be forfeited to the temple, as ‘devoted’ to the divinity.

LITERATURE.—The Hebrew law as understood by the traditional authorities is formulated in the Talmud braksheth Saba Bitha and Pemethut. The most thorough discussion and one still valuable, is in J. S. Uffendorf’s ‘De Successionibus ad Legem Hebraicae in Etymologiae Lexicographicae,’ in his collected works, London, 1776, vol. ii. 1-76; J. D. Michaelis treats the subject with his usual learning in his Rechts- u. Geschichte, Frankfurt, 1770. (Eng. tr., Commentaries on the Laws of Moses, London, 1814.) §§ 77-80 and 95: L. Levy, La Famille dans l’antiquité isnotratique, Paris, 1880, and Familiennsnent der Hebräer, Munich, 1809, give good summaries of what is known on the subject. On the levirate, see S. R. Driver's commentary on Dt 25:10, where other literature is cited. The customary relation between parents and son is described by E. Baudouin, in the Synagoga Judaicae, i, 1805, § 12; and G. Bodenmann, in the Schriften zur Verfasstung der heutigen Juden, Erlangen, 1744, pp. 145-150. Heterosex may be made also to the articles (ibid.) in ‘Bibl.,’ in ‘EB’ and ‘EHR,’ in ‘FEB,’ etc., and the various ature rules, such as ‘Heir,’ ‘Inheritance’ in ‘JER.’

H. Preserved Smith.

INHERITANCE (Hindu).—The rules of succession as developed by the Brahman lawyers of India, may be described as to some extent a spiritual bargain in which the right to succeed to another depends on the successor’s capacity for benefiting that person by the offering of funeral gifts (sacrifices). Thus the term saviqida, which is commonly used to denote a kind of peasant or vassal, means literally a relation connected through funeral oblations of food, such as a ball of rice (pippada). The more remote ancestors, viz. the great-grandfather, his father and his sons are offered only the fragments of that ball of rice which remain on the hands of the offerer, were therefore called ‘partners of the wrappers’ (lepa-bhadra). The relationship of vineda, on the other hand, is connected by the mere offering of food, said to extend to the fourteenth degree. In a decision of the Judicial Committee of the Privy Council, it was declared that ‘there is in the Hindu law a connexion between their religion and their succession to property, that the preferable right to perform aridhaka is commonly viewed as also governing the preferable right to succession of the aridhaka and the indivi-vid (in India, 1792-1823) observes (Hindu Manners, p. 374) ‘that the right of inheritance and the duty of presiding at the obsequies are inseparsable from one from the other. When, therefore, the grandfather dies without direct descendants, a crowd of remote relatives appear to dispute with each other the honour of conducting the funeral rites. The contest is occasionally carried on in courts of law, and it is said that the body of the deceased is in a state of complete putrefaction before a definite settlement of these many pretensions is arrived at.’ And so an old Sanscrit author remarks: ‘The dead man’s wealth presents the funeral obligation, and a son shall present the funeral oblations to his father, even though he inherit no property’ (Institutes of Vives, xx. 44, 631). The spiritual efficacy of the spiritual idea is further developed and relied on as a corroborative argument in favour of certain exceptions of the facts on inheritance, in the Dvayaka family and other leading works of the Bengal School of law. The Mitakshara, on the other hand, which is the leading authority on the law of inheritance for the majority of the Hindus, explains the term saviqida as denoting one of the same body, i.e., a blood relation, and gives it a narrower definition than any other principle than propinquity, or proximity of birth, as regulating the order of succession. Nevertheless, the connexion between the right of succession and the obligation to offer the customary funeral oblations (saviqida) may be supposed to have constantly presented to the Hindu mind. The widow, in particular, who succeeds her husband’s property on failure of male descendants, is enjoined to offer up the regular oblations to him at stated times. The religious element enters largely into the Indian law of inheritance in other respects besides the general rules of succession. Thus civil death i.e., the exclusion of a man from his caste on account of some offence or breach of caste rules, has the same consequences as natural death, and causes the property to pass to the next heir in the same manner, i.e., to devolve on his heirs, and himself to lose the capacity to inherit any property devolving on him. Civil death is now inoperative, as loss of caste, according to an Act of 1850, does not affect a man’s civil rights. Spiritual relationship is recognized as well as blood relationship, the pupil succeeding to his spiritual teacher and vice versa. No relative can, as a rule, claim a property acquired by a man during the time he was a samadhi (ascetic), it is taken by one of his disciples, who should perform the funeral rites according to custom. The succession goes either by nomination by the previous
INHERITANCE (Jewish)—The Jewish law of inheritance based itself on the Biblical regulations (on which see W. H. Bennett, art. "Heir," in HDB II. 340). In the Rabbinic Code these regulations were systematized, and the accepted principles are given in the Code of Maimonides (Hilkhot Nezikin, Nahaloth) and Joseph Karo (Hoshen Mishpat, §§ 250-258 and 276-280). In modern times, Jewish practice naturally conforms to the civil laws of the States in which Jews are domiciled. So far as the older Rabbinic laws are concerned, the rule of inheritance may be summarized as follows:

The order of succession in intestacy is: first, sons (oldest son taking a double portion), their descendants; daughters, their descendants. Falling issue, the father succeeds, then brothers (Wiss. Bab. Bathr. vii. 2), sisters some after brothers and their descendants (§ 6). If a son dies in his father's lifetime, his son (or sons) is appointed to his father's share in the estate of his grandfather (Bab. Bab. Bathr. 123). A man is his mother's heir, the husband is the wife's heir, but the wife is not always his wife (iv. 8). If the wife has, however, her dowry. illegitimacy is no bar to inheritance or transmission. Recognition by the testator is thus made no proof that children are his (iv. 9). Hotchotzoy was not recognized in Jewish jurisprudence (iv. 3). (M. H. Hayman, Monassarot u-Shmorotenu Loqm Koliov. London, 1918, p. 161; cf. J. H. Greenstone, in JER I. 250.)

The owner of property could not depart from this order in bequeathing by way of inheritance, though he could do so if he bequeathed by way of gift. The law of testamentary succession, as laid down in the Bible (Nu. 27:8), is not always, and any attempt made by the owner of property to bequeath it as an inheritance to those who would not naturally inherit it is null and void. No one can be made an heir except such persons as are mentioned in this Biblical law; nor can the property be lawfully divided from the heirs by the substitution, either orally or in writing, of some other persons (Bab. Bab. Bathr. vii. 6); but the owner of property has such control over it that he may dispose of it by sale or gift to any person, to the exclusion of his heirs. This important distinction, therefore, must be noted, that a bequest by way of inheritance to persons other than the legal heirs is null and void, whereas a bequest by way of gift is valid (W. Amram, in JER II. 43).

The Rabbis, however, regarded with much disfavour by the Rabbits (Bab. Bab. Bathr. 123; Keth. 53a), and it was very unusual for the owner to depart by bequest by way of gift from the order of succession (see L. N. Deutsch, J. Am. 31), J. F. B. of the Qur'ans (J. Furst, Gesch. des Geschichtslehrers, Leipzig, 1855, i. § 9) gave the daughters equal rights with their brothers. Nevertheless, in the Pharisaic scheme the daughter had ample rights for maintenance while unmarried. Very significant is the decision of Admon (first half of 1st cent. A.D.)—a decision confirmed by Gandelman's grant of land by Hindu princes and noblemen, their property being vested in the preceptor or head for the time being, generally called mahapat. Though many of the Rabbis were learned doctors, or were not even versed in the first principles of their religion, the acquirement of wealth by trade being their great object, the old rule of succession remains, and the property passes by inheritance to those who does not fill the office. It is devoted to the maintenance of the establishment, but the superior has large control over it and is not accountable for its management.

The two principal Sanskrit treatises on inheritance and succession on which the law as administered by the British Courts of India is supposed to be based are the Manaschari and the Dattayogapa. Oxford. The English translation of these two works was first published in 1810.

Inheritance laws in general The law of inheritance is one of the oldest and most important in Jewish law. It is based on the principle that the property of a deceased person should be passed on to his heirs in accordance with the will of the deceased or, failing a will, the laws of intestacy. The laws of inheritance are important because they affect the distribution of property among the heirs of a deceased person. The laws of inheritance are also important because they are based on the principle of the unity of family and community. The laws of inheritance are a reflection of the values and beliefs of the Jewish community, and are an important part of the Jewish culture. The laws of inheritance are also important because they are a reflection of the values and beliefs of the Jewish community, and are an important part of the Jewish culture.
... or—and this is significant to a disciple (cf. Bah. Bab. Bathra, 116). In particular, it was the father's duty to ensure that the inherit-
ance was passed on through the generations. This thought was based on the example of Abraham. 'I have known him, to the end that he may command his children and his household after him, that they may keep the way of the Lord, to do justice' (Gen 18). And, further, he who teaches his son's son is esteemed as though he had himself stood at Mt. Sinai, a personal participant in the original revelation (Ex. 20, Deut. 5).

From the text in Genesis just cited was derived the custom of Jewish fathers writing for their children an ethical testament containing moral instructions; and these testaments were an honoured heirloom (see I. Abrahams, art. 'Jewish Ethical Wills,' in JQR iv. 1881, 436).

For the part played in Judaism by the conception of the child's inheritance by the father's male see S. Levy's volume on Original Virtue and Literature, 1907.

ABRAHAM.

INHERITANCE (Roman).—As compared with the Greek, two features in chief distinguish the Roman laws of inheritance taken as a whole: (1) the testament, a relatively extended, power of devising, by the testamentum talis custos or the testamentum in procul, i.e. the recognition of the individual will as a decisive factor in the ascertainment of the group; and (2) the peculiarly Roman conception of the paternal relationship, the patris potestas.

In the regal period the estate of a paterfamilias was vested in his heir or his descendant as were 'under his power' (in potestate) at the time of his death and became by that event sui iuris. Such were his sons and grandsons (unless they were no longer subject, through emancipation), his daughters (unless they had passed by marriage into manus of their husband, i.e. into another family), and his wife in manus, and, therefore, standing loco filiae. All these were styled sui heredes, 'self-heirs,' as having an inherent right dormant during the father's life. All, including the widow, took an equal share. Failing sui heredes, the gens of the deceased inherited. Of primogeniture there is no trace. Heir from the first the father was able to regulate the succession by testament, if he cared to do so, within such limits as recommended themselves to his peers in the Caria.

Sui heredes, like other agnates as such, was perhaps established by the XII Tables, so as to bring both plebeians and patricians under the same law as far as possible.

Sukkia, a man's agnates were those of his collaterals who were under the same patris potestas as himself, or would have been had the common ancestor been alive. His children (whether of the body or by adoption) in potestate, and his wife in manus, being loco filiae, were mutually agnates; but a wife in manus, or a daughter who had passed in manus mariti, or emancipated children, were not their agnates, nor were they sui heredes to the father—for the tie of the potestas was broken (and in the case of the wife not in manus had never been created). So a man was agnate to his brothers and their children (assuming that there had been no separate minorities on either side); but not to his sister married in manus or to her children, 'for she had become a paterfamilias' (having become agnates of her husband's relatives).

In the absence of a will, succession was now open to the agnate heirs ab intestato (law: 'fi intestato moritur cui suus heres nec esset, agnatus proximus familium habet'). How far the agnates circumscribed is not clear. The order of suc-
cession was established by the XII Tables, as follows: (1) sui heredes; (2) the nearest agnate or agnates; (3) the gens as a body—this last possible only in the case of a patrician. The law of Justinian made a further provision that only the nearest agnate (or agnates of the same degree) could claim, so that, if they declined, the next in degree could not take the estate, and, further, that no female agnate more remote than a sister could inherit.

Sui heredes, whether instituted by will or taking ab intestato, could not decline the inheritance because of the daughter (hence they are called heredes seminum) but a stranger instituted by will, or an agnate heir ab intestato, could reject the inheritance.

The interpretation put upon the clause in the XII Tables—'ubi legatus super pecunia tutelave sui, in sui sequatur, i.e. in order to have together with the growth of that form of testament called per se et librum (originally not a testament, but a fictional substitute for one) made the testator's will supreme, even to the extent of dishearing his sui heredes in favour of a stranger he selected by will, or an agnate heir ab intestato, could reject the inheritance.

The decision of the praetor in the case of the agnates of the old ius civile, it put descendants (liberi), including the wife in manus, sons and daughters of the body whether in potestate or emancipated, and representatives of predeceased sons and adopted children who were in potestate of the deceased when he died; (2) legitimi iurati, i.e. the nearest collateral agnates; (3) cognates, i.e. a class not being precisely defined; (4) survivor of husband and wife. It was open for these classes in turn to petition for honores possessio; but it was for them to maintain the grant, it was any who claimed as heir according to the ius civile.

The above changes were in part the outcome of the doctrine of the ius naturale as embodying a higher ideal of justice than that of the old . The process was carried further in the Tertullian senatus consultum in Hadrian's reign. This gave pre-
ference to the mother over all agnates of her deceased child, except father, brother or sister, father and brother excluding her; but with a sister, and falling father and brother, she shared equally. This right was confined to women with the ius liberorum, i.e. free women who had borne children, or freedwomen who had four. In A.D. 173 the Orphi-

tian senatus consultum gave legitimate or illegiti-
mate children a prior right over all her agnates to succeed a mother. The Code of Justinian made her a mother's right of succession independent of the ius liberorum, and extended that of a daughter or sister to her descendants. In his 118th and 127th Novellae, Justinian wiped away the rights of agnates entirely, except as regarded adopted children, and settled the orders of succession purely on a basis of blood-relationship: (1) descendants of the intestate, male and female alike taking

1 Division between agnates was per annus et agnatus... In the case of a tree reliance his patres and his children took the place of agnates.

2 There were two other forms of honorum possessio—centra tabularum, practically setting the will aside, and ab intestato.
INHERITANCE (Teutonic) — For the last sixty years this subject has been a prolific source of controversy, which at present shows no sign of abating. Thus, it is not decided whether the right of inheritance was originally limited to the near family, or whether the wider kindred reserved it for themselves. The organization of this wider kindred is still a matter of debate, and scholars are not yet agreed as to whether matrilineal inheritance prevailed at the beginning of our era among the Teutons, or whether inheritance fell exclusively to males descended through males. A few facts, however, are clear. The Germanic (Germ. 265) tells us that the Germans had no system of testamentary dispositions, but that they had rules of intestate succession; and his statement holds good of almost all Teutonic countries until far into the Middle Ages. The heir, as some of the laws tell us, is born, not chosen. Adoption during lifetime is the only way of selecting an heir, and this proceeding is hedged about by restrictions. It is permitted only if the adopter is without near kinship of his own, as in the case of the Frankish affotamony and the Langobardian elaim; or else the amount which may be bequeathed to an adopted son is limited in subject to the consent of the legal heirs or kindred (Scandinavia).

Wills, which were introduced by the Church under the influence of Roman law, made their way slowly only, and even the ecclesiastical institutions, which would otherwise have been debarred from receiving bequests of land. In most Teutonic countries such bequests were of necessity given to the Church, and were thereby subject to the consent of heirs or kindred. Among the Frisian inhabitants of the little island of Wangerooog, testamentary dispositions were almost unknown far into the 18th cent., the children, or, in their absence, the nearest kinmen, succeeding automatically by the 'common kinmen' of the parties concerned.

The principle of primogeniture appears to have found no place in ancient Teutonic society. Theetes says (loc. cit.) that the children inherit, he in latter times (with the exception of the feudal nobility) the all the sons, at least, had an equal claim to inheritance. Where there are two heirs, the division of the share usually devolves on the eldest, the younger having the right of choice between them. In the case of a number of heirs, the matter is decided by the casting of lots after the eldest has divided the shares among all the sons or other heirs is still common in many parts of Teutonic Europe, and this feature survives in the Kentish gavelkind.

In many parts, however, the farm is not divided among all the children at the father's death, purely economic reasons or in order to facilitate the collection of dues or taxes. In such cases the farm is either held in common by all the co-heirs—a system which seems to have been common in England before the 16th cent. when the son is allowed to purchase it at a price quite irrespective of its market value, but calculated not to be an undue burden on the farm. This system persists in Schleswig-Holstein. Sometimes this right of purchase is granted to the eldest, but more often to the youngest son, the idea being that, while his brothers have had time to set up establishments of their own, he does so, but has remained with his parents. In the custom known as Borough English, still prevailing (in the case of intestacy) in certain English districts and boroughs, the youngest son inherits land to the exclusion of all the other children.

The inheritance of real property is often limited to males, especially in the case of ancestral land such as the terra avitatica, which appears in the earliest Frankish (riparian) law, and the Norwegiam odal. Frequently the son excludes the daughter, but she inherits in his absence. In other parts—Denmark and Friesland, for instance—receives half as much land as the son. Low Saxon law gives preferential treatment to sons; but, as soon as an inheritance falls to collaterals, it makes no distinction between males and females, nor between the paternal and maternal kindred. On the whole, we may say that a tendency to limit inheritance to agnates (persons descended through males) is observable chiefly in South Germany. The supporters of the mother Right theory lay weight on certain statements of Tacitus (with regard to the privileged position of the mother's brother and to inheritance by children, not by sons only), but find the chief confirmation of their view in the earliest texts of the Frankish Lex Salica, which, in the absence of children, gives all moveable property to the mother, or, in her absence, to her relatives, female taking precedence of males (Lex. Sal. tit. 29). It must be pointed out that it is unsafe to base theories of inheritance mainly on the rules governing the transmission of real property, since individual ownership of land was of late growth among the Teutonic races. Neither Tacitus (Germ. 26) nor Caesar (de Bell. Gall. vi. 21 L.) knows of it; and as late as 674 a Frankish edict, which must have had only recently and partially become heritable.

Moveable property may be regarded under three
heads: (1) cattle, farm implements, etc.; (2) armour and weapons (Haerger); (3) household furniture, also ornaments of silver and gold; (4) weapons, and the war-horse. This form of property was restricted to persons of noble birth, but in certain towns we find the workman’s tools, even the tailor’s scissors, being treated as Haerger as regards succession. (3) Rentenspield is almost the only estate in land now, and in the Old Saxon Sachsenpielt, to women, and generally to those whose connexion with the deceased person is to be traced through women. It cannot, however, be regarded merely as dower, for it can be claimed by unmarried women also in possession of it. It is best defined as consisting of those chattels which are under the woman’s charge. The Sachsenpield enjoins that, on the death of a married woman, the husband or successor to the husband must leave the widower his bed, a table and cloth, and a stool and cushion, so that evidently the entire household furniture is included in it. With regard to (2), it is important to remember that in heathen times a considerable proportion of the personal property of the deceased (weapons, ornaments, cattle, and even alcohol) was owned by or belonged to the original owner. The Arabian traveller Ibn Fadlan says that among the Scandinavians in Russia, one-third of a man’s personal property was burned with him, and another third expended on the funeral banquet. A memorial banquet was common all over Scandinavian territory, and was usually made the occasion for the heir to succeed to the dead man’s property. In Scandinavia this was signified by his taking up his position for the first time in the ‘high-seat’. In Germany the inheritance was usually entered into on the thirtieth day after the death of the predecessor.

In historical times rank is so closely bound up with the possession of land that its transmission necessarily follows the rules governing inheritance of real property. There can, however, be little doubt that in earlier ages the son was heir to the father’s position, and that a son to the rank and title was independent of inheritance of land, indeed probably of any form of inheritance. With regard to the order of inheritance, we must notice the difference between the immediate family (persons related within the first degree of consanguinity) and the wider kindred; for the principles governing inheritance are different in the two groups. The inner group, which is subject to the house-community, consists of children, parents, and brothers and sisters. The Frisian law calls these the ‘nearest six hands’: (a) (1) son, (2) daughter, (3) father, (4) mother, (5) brother, (6) sister. To this group the Salic law added mother’s brothers and sisters, and, later, father’s brothers and sisters. It seems that, if the son was dead, his sons did not originally precede all other relatives, but were regarded as no nearer to the inheritance than grandchildren of the deceased. This, however, is disputed by some authorities. In the wider group the degree of consanguinity is alone regarded: all persons equally related to the deceased have an equal claim, though, as we have seen, in certain forms of inheritance preference may be given to persons related through the father’s or the mother’s kindred. It is necessary to indicate the mode of reckoning kinship which prevailed amongst the Teutons. This is a subject on which there is a storm of controversy still raging; but, without commenting on any theory, we may say that the Teutonic kindred was regarded as falling into groups centring round the person whose property was to be inherited, and that any one tracing his descent through the grandfather of this person was nearer than one tracing his descent from the great-grandfather. Thus kinship was not reckoned by the number of births between the two persons concerned, as in Roman law, but by the number of generations (votum) between one of them and the common ancestor. The first ‘knee’ is formed by the parents: thus brothers and sisters are in the first degree of kindred. The second by the grandparents; first cousins are, therefore, in the second degree, and so on. To describe persons related in the unequal collateral line, Teutonic languages employ circumlocutions.

Sometimes the kindred is clearly thought of as divided on a ‘parental’ system, the first parents being (a) the parents and their descendants; the second (b) the grandparents and their descendants, exclusive of the children of the great-grandparents; the third (c) the great-grandparents and their descendants, exclusive of the children of the great-great-grandparents; and so on. It is the latter which is usually meant in modern times.

In the case of the kindred, the right of primogeniture is the only exception to the rule that there is no difference in degrees. The line of descent in the male line is traced, and the first son is the heir. In the female line, either the first daughter or the eldest son is the heir.

The outer limit of the kindred has been variously described in the early Continental laws as the fifth, sixth, or seventh generation. It is probable that the degree of kinship referred to is the same, the reckoning beginning in one case with the common ancestor himself, in another with his children, and in the third with first cousins. The children being in this case regarded as belonging to the family. When the outer limit of the kindred is reached, as in Norway, popular ideas on the subject have probably been affected by ecclesiastical ordinances determining the prohibited degrees of affinity.

INHIBITION.—Inhibition is a term commonly and loosely applied to certain aspects of physiological and mental processes in which one process is checked or displaced by another. It is thus not a function comparable, e.g., with nutrition, or circulation on the physiological side, or with perception, memory, or emotion on the mental side. It is a condition resulting from the action or interaction of these or other functions.

Whether regarded as a mental or as a physical phenomenon, it is a result of the incapacity of the organism to give simultaneous expression to its many different impulses to action. The organism’s energy being limited, under ordinary circumstances it tends to be more or less concentrated in a few directions. If it is scattered over many goals, it is less effective. If it is concentrated, it is correspondingly more effective. For instance, great activity of one part of the body, while not necessarily or always incompatible with the action of other
parts, may frequently interfere with the action of these other parts through the draining off of needful energy; when, e.g., the forces of the body are devoted to the digestion of a full meal, there is not much energy available for mental work or for vigorous physical exercise. If two such processes involving the large use of bodily force are attempted at the same time, the effectiveness of each is greatly diminished. Then, the type of action may be antagonistic to another. An athlete cannot run a race and observe the scenery at the roadside at the same time. If he wishes to run well, he must suppress the impulse to gaze about.

Inhibition is, then, an incident of the fact that effective action must be relatively concentrated, both because of the limitation of one's energy and because too many disparate processes interfere with one another.

On the physiological side there is some evidence of specifically inhibitory nerves. The best attested example is that of the vagus, which, when stimulated, tends to paralyse the heart of the frog. According to Yerkes, however, "the ease of inhibition which results from the functioning of inhibitory nerves centers, if such exist, are few and unimportant in comparison with those which appear to be due to the central competition of impulses within the nervous system itself. Indeed, in the frog, the inhibition, in other words, which results from the fact that the nervous system can only be excited at any one time to relatively few channels."

Only in extreme cases is this actually due to the limited fund of energy at the disposal of the organism; but every such case is a manifestation, in at least, of the fact of the limitation of the organism's resources. It may in its simplest form be due, however, to the neutralization of one nerve impulse by another when they meet in the same centre, as when "the appropriate reflex of the leg of the frog to stimulation of the foot may be inhibited by simultaneous stimulation of the other leg" (64).

The higher nerve centres, especially those of the cortex, tend to hold in check the impulses emanating from the lower centres. Hence in a broad sense the brain may be regarded as an inhibiting centre. The function of the brain is in part "to hold back or to inhibit the activity which other centres, left to themselves, would carry on" (64).

On the psychical side, there is abundant illustration of the apparent interference of states of consciousness. Within narrow limits one sensation, as an auditory, seems sometimes to enhance the vividness of another, as a visual; but, ordinarily, two vivid sensory experiences interfere with each other, both being diminished in their conscious effects, or one being ignored for the sake of the other. The distraction of attention by some exciting situation will render one suffering from acute pain unconscious of it. Strong emotions interfere with ideation and tend to annul weaker feelings or emotions. One absorbed in thought is unaware of many sensory impulses impinging on his nervous system, as he is when he exercises on the nerve centres controlling the more primitive forms of action; but this means, as we have just pointed out, not that the psychic, as such, inhibits the physical, but that different action complexes are associated with the higher intellectual processes, and that, if the latter are to function, it must be at the expense of the former or lower types of action. It is for this reason that all phases of character development and growth of personality involve a large amount of inhibition. In fact, it is through the capacity of the psycho-physical organism to suppress inconsistent modes of action that is vary for any definite type of behaviour to emerge at all. The growth of an individual from childhood to effective maturity is associated from start to finish with the building up of certain complexes of conduct, the reverse of which is always the draining of energy from the lower, less organized forms of action and their consequent inhibition. Thus the little child has an unlimited, but those which cannot fit into the associative system that is uppermost are suppressed. According to
instincts and impulses. The problem of character development is not that of suppressing the energy in its primitive form, but rather organizing it into more definite and desirable forms. The higher types of behavior, therefore, displace the lower by consuming their energy or by giving it outlets in accordance with more definite and desirable forms and ideals.

The re-construction, which thus takes place so conspicuously in the development of child nature into maturity, is typical of the process which occurs in every instance of change of attitude in the individual. The person who inhibits an undesired act or mode of behavior, he must accomplish it by fixing his attention upon some other mode of action, which thereby has a chance to develop. Nor is this fixing of attention to be thought of as some intervening outside agency. It is simply the expression of the fact that another impulse, or set of impulses, is present which, for the time being, is felt to be more definitely in accord with the real personal character as that has gradually integrated through many previous reactions. The inhibition of one mode of behavior by another is due to the superior power of the then dominant complex of psycho-physical attitudes over those less perfectly organized and for the time being inconsistent with the action of the dominant mode. The re-construction thus effected may be partially removed: 

'... when the suppressed impulse is merely suppressed or ignored rather than utilized. In that case the suppressed factor may drop out of consciousness and be absorbed, but it is still capable of exerting an influence or of causing a stress beneath the level of consciousness which is injurious.'

The strain of merely holding the undesired tendency in check or of preventing its finding expression acts as a drag, though unconscious, upon conscious processes, preventing their attaining their highest degree of efficiency. Moreover, the suppressor in this fixing of attention to be logical effects. In extreme cases, as Freud has shown (J.A.Ps. xxi. [190] 191), it may result in producing the condition of nervous disease known as hysteria. All these modes of training which attempt flatly to prohibit the expression of undesirable tendencies in children incur this danger. The inhibition resulting is not genuine. The better method, and the one which would accomplish real inhibition, would be that which would seek to re-direct the impulse into some more desirable channel. The energy of the impulse could thus be saved and turned to positive account in character formation. The tendency to tell falsehoods is an undesirable, but it is of little avail to say to the child, 'Thou shalt not.' What is needed is to determine the underlying motive leading to lying, and see that it can find expression in a more desirable form. The correction must, in other words, be positive, by opening to the child other lines of action which will afford an outlet to the energy thus far finding expression in an undesired form.

What is true of child-training is true of every phase of character development. Many adults are suffering from excessive inhibitions. The energy they expend, sometimes unconsciously, in holding their undesired tendencies greatly reduces their positive efficiency. The root of the difficulty is that their inhibitions are only partial. The undesired forms of behavior are struggling to assert themselves instead of being assimilated by more approved complexes of conduct. The work of Freud, referred to above, and of his followers in the treatment of these conditions is a step towards the cure of this condition. While some pathological conditions of adults have been traced to the improper suppression of impulses in early childhood, in the majority of cases they are the outcome of the determined repression of intense desires which develop in youth and which are usually connected, directly or indirectly, with the sex impulse. This normal and necessary phase of human nature frequently runs counter to accepted social usages. Desires recognized as improper are thrust into the background of the mind, are ignored or even forgotten, but when thus dealt with are apt to continue to exert a harmful and mysterious influence over the person's conscious life.

Thus, a governor treated by Freud for hysterical tendencies, finally confronted with the question as to whether she was not in love with her music teacher, replied: 'Yes, when the suppressed impulse is merely suppressed or ignored rather than utilized. In that case the suppressed factor may drop out of consciousness and be absorbed, but it is still capable of exerting an influence or of causing a stress beneath the level of consciousness which is injurious.'

The problem presented by this case, which is typical, was to dispose of the energy of the impulse in a manner that would not conflict with the woman's own sense of her function in life. The solution of the serious problems of the education of the adolescent is that of finding ways of using, in sports, in physical and mental labour, in artistic creation of various types, and in social intercourse impulses which, though intrinsically sexual, may thus be transmuted into forces of the utmost worth in the development of a well-rounded character. Here, if ever, it is important to recognize the practical character of the psychological dictum that the most effective inhibition occurs only through the re-direction of the energy into other channels of expression.

INITIATION

Czar (J. E. Harrison), p. 322.

Hindu (J. Jolly and W. Crooke), p. 323.

INITIATION (Introductory and Primitive).

1. Definition and nature of initiation. — Initiation in its general sense is synonymous with 'beginning' (initium), 'training,' 'instructing.' The word is usually applied in a restricted sense to signify admission to ceremonies or traditions of a religious or magical order. The communications made to the initiated are not necessarily secret; they may consist of teaching whose efficacy depends on the authority of the one who gives it, the
character of the one who receives it, and the conditions in which it is imparted. But ordinarily they are a secret carefully guarded from the profane, and so initiation comes to mean 'introduction to a mystery.' When a belief is zealously reserved for a chosen few. Among the Romans initia was a grand form and expression for the mystic bond.

Two exocletic schools, which have often held rival opinions on the subject of the history of religion, differ also in their conclusions as to the origin and function of these ceremonies. According to the one (Dupuis, Creuzer, Guigniant, etc.), initiation furnished a philosophical explanation of vulgar beliefs and led to a rational and moral interpretation of official cults. The other school (Libech, Andrew Lang, etc.) holds that it tended rather to perpetuate, under cover of secrecy, rites and myths of primitive barbarism, which their adepts were ashamed to lay bare to the open day. In either case, these may both be applied to particular cases, but neither of them can be accepted as a general view. Another theory, which is no less founded, is that every initiation is inaugurated by an unscientific representation of old legends or myths. In most cases it is not the myths that have given birth to the ceremonies of initiation, but rather, as has been supposed, some divination. Smith and Frazer, the ceremonies that have been explained by myths, after their original meaning has been lost sight of. In any case, an unbiased study of the history of various nations shows that the principal magical operations are undertaken by the clans for the benefit of the community, each clan acting on its own particular totem.

Among the native peoples of Australia, the aun clan that performs the rites supposed to be capable of ensuring the multiplication of the offspring of its members is the only clan which reaps the benefits necessary for the population, and so on.

In all primitive societies, individuals of the same sex and age, having the same interests, tastes, and occupations, have a tendency to group themselves into particular societies within the general society. Thus arise many classes standing in juxtaposition and including respectively youths, adults, celibates, married men, old men, women in different conditions, totemic groups, clans, phratries, inhabitants of the same territory, strangers, even dead men, and also, as a universal phenomenon, certain social categories constituted by normal though particular and temporary events, such as illness, pregnancy, a common danger, travel, seasonal occupations, etc.1 It was not until the invention of writing and the establishment of professional professions appeared. Now every passage from one of those states to another is accompanied by a modification in the form or nature of the superhuman influences with which the individual has to deal. In each group these influences, whether personified or not, are offensive and even highly useful to those who are within and know how to avail themselves of their help, but dangerous and extremely harmful to strangers. On the other hand, those passing into a new group are apt to bring with them the magical and infectious taints of their old milieus. They must therefore be purified, assimilated, and instructed, which is the threefold object of initiation.

Among initiation ceremonies of this nature, one of the most fantastic is that of the Andes, which marks the attainment of puberty, or rather the ceremony which about that age officially breaks all ties binding the adolescent to children and women, and admits him to the society of men. This ceremony is found, either as an established institution or as a survival of an older ceremony, among nearly all uncivilized peoples—among the Fuegians, the natives of North and South America, to the American, in Australia, Polynesia.

1 Van Gennep, Rites de passage, 12.

3 Fr. Francis Xavier, "Theorie generale de la magie," in
nesia, Melanesia, in New Guinea, and in India—not to speak of the traces of it still found among the civilized peoples of antiquity. Its function is to confer on the adolescent the rights and obligations of an active member of society: i.e., it enables him to take part in war, to lay the foundations of feudal life, and to choose customs and rights necessary for the well-being of the tribe. Initiation, so understood, may be considered as the oldest form of public instruction.

3. The initiation of the Tasmanians of North Carolina when they explained to Lawson more than two hundred years ago that initiation and the ceremonies which accompany it are necessary for the right education of our children to school to be taught good breeding and letters.1

This instruction, nevertheless, retains a magical-religious character which often envelops the whole cult of the tribe. Women also are divided into similar age classes; but with them initiation, even when it is a close imitation of the men's ceremony, is less important because it confers fewer privileges.2 There are many other social transitions entailing rites which may be considered as initiatory—e.g., naturalization, adoption, marriage, the consecration of priests, funeral ceremonies, etc. Sacrifice, too, at least in connexion with cults which regard the period of life as a means of penetrating into the sacred world, assumes the form and functions of initiation. The spot on which all these ceremonies take place is, as it were, a sanctuary, to which society is devoted to the initiated. The organization of the rites of initiation remains in the hands of the old men, who are the national guardians of the tribal traditions, and they lay down as the first duty of new obedience to the ancients and to their teaching.

4. Evolution of initiation. The initiation of adults loses its general character in proportion as the transition from the tribe of war to the tribe of commerce is made; the tribal and legal institutions become separated from the magic-religious rites of which they were at first part and parcel. The age classes tend to become subdivided into a hierarchy of different grades, which fill up their ranks sometimes without regard to age or seniority. The initiated of the higher grade think that they have a right to rule over those of the lower grades. Sometimes even their privileges become hereditary, at least to the extent that their children alone have a right of initiation into the grade. The age class is thus turned into one or more grades, which sometimes recruit their members from various tribes and even open their doors to women, as, e.g., in West Africa and North America.

5. In the district of Gabun, we are told, there was a secret society exclusively composed of women, who, like the ancient Bacchantes, celebrated orgiastic rites in the depths of the forest, and were much feared by men, who ran the risk of death if they surprised them in their ceremonies.3

6. The same individual can thus belong to several ‘brotherhoods,’ especially when they have different aims. Some of these societies become more schools for working magic arts, and thus assimilate themselves to the societies of sorcerers who unite for mutual benefit in the exercise of their art. Most of the societies, however, continue to play some part in the affairs of the community. In Africa they sometimes reinforce and sometimes limit the authority of the chiefs. Sometimes, like the Baumünder of medieval Germany, they form a sort of superior policeactuating with repressive justice, and they are all the more to be feared that they do not confine themselves to the initiates whose function is to members belong to different tribes contribute towards the maintenance of peace, and on occasion we find them performing the function of arbiters. Yet it is through these societies that the social and religious traditions and customs that have come down to them, and transmit them to their successors. As de Jonghe says with regard to the Lower Congo, ‘there is an organized system, a centre of religious instruction and civic formation.’

7. An analogous evolution has taken place among the Kurds, the Polynesians, the Malaysians, and the tribes of New Guinea. Each of the numerous secret societies of the natives of North America deals with some kind of magico-religious elements—the course of nature, the opening of crops, the falling of rain, the success of hunting or fishing, the protection of innumerable individual alliances. In the Oceanic islands and among the American Indians, the ceremonies connected with all these societies are usually kept secret and feared, according as they represent scenes from current mythology or explain to their neophytes the esoteric meaning of these representations.

When belief in the efficacy of magic begins to disappear, or when public cults gain in importance, secret societies gradually develop into mere clubs, from which all mystic elements have disappeared; their old sanctuaries become the social meeting-places of the club, and their rites degenerate into popular rejoicings or mere buffoonery. But we must not lose sight of the fact that these brotherhoods, which monopolize all communication with the domain of the sacred, are able to fulfill the characteristic functions of a cult as well as the magic rites proper to sorcery.

The transition may be seen in the order of the Ares in Polynesia, who accompany the worship of the god Oro with all sorts of magic practices. There were even established different grades, entrance to which was gained by successive ceremonies of initiation. All the great religious of the East had room for initiation ceremonies over and above those of the closed societies. The ceremonies of the Greek mysteries certainly go back to the pre-Homerian period.2 Texts analyzed by Mora, Lethbridge, and others show how, between the beginning of the Greek period, and the period of the passion of Christ, the famous Cadmean poem describing the descent of Bior to the gloomy shades of Hades to look for his lover Tammis presents all the characteristics of an initiation ceremony. From texts edited by A. H. Sayce we learn that certain priests or soothsayers had to submit to a formal initiation; they were made to pass through an artificial representation of the under world, where they were shown the altar amid the waters, the treasures of Ann, Bel and Es, the table of the gods, the delivering of the oracle of heaven and earth, and the cedar-tree, the beloved of the great gods, which their hand has cursed to grow.4

C. P. Zisch has shown that, among the Western Semites, Byblus and other centres of Syrian cults had their mysteries from before the time of the Assyrian conquest of the country.5 The OT has more than one allusion to mysteries reproved by the Prophets.6 In India, a man was a Brahman by right of birth, and could not exercise sacred functions without first having passed through a complicated initiation.

Even the subjectation of a nation by conquerors and the superimposition of their own cults tend rather to develop than to discourage initiation ceremonies. Sometimes the victors organize them for the use of peoples desirous of adopting the cult of the victorious power.

Thus the Macedonian religion, which was essentially a national religion to be born a Macedon or a Persian, was also to be born a worshipper of Ormazd and Mithra,7 who had no initiation ceremony other than the admission of children into the cult; but, when the Achaemenians had extended their sphere of influence as far as the Mediterranean, Macedians had to organize the mysteries of Mithra, which were to become of such importance in the Western world.

On the other hand, the victorious peoples often become converts to the cult of the conquered nation.

After the subjugation of Egypt, the Athenians could not gain admission to the sacred procession of some Egyptian families who had taken refuge in them.

2 K. O. Münzer made that the origin of the Greek mysteries was to be found in old Pelasgian cults, which were turned into sacred cults by the invaders who introduced them in ‘In Allgemeine Encyclopädie, vol. xxviii (1830) sect. 1.
3 A. Muro, Mysteres dyoynis (Cayenne Guimet Lecture), Châlons, 1913, p. 1 ff.

7 F. Cumont, Les Mysteres de Mythra, Brussels, 1909, l. 292.
worded to Demeter, until they had gone through the formalities of an initiation ceremony. This ceremony, which was instituted exclusively for the citizens of Athens, was gradually opened to the other inhabitants of Greece, and even to all the subjects of the Roman Empire, as a sacred common to the whole world. W. Diodorus, Library, Books 2, 329, p. 43). Every foreign religion which spread through the Hellenic world in the form of mysteries owes to all who showed themselves worthy or merely desirous of being initiated into them a new initiation the way for universalistic cults by substituting community of beliefs and rites for nationality as the foundation of religious ties.

The Christian sacrament of baptism (q.v.), the primary rite of initiation into the Church, was elaborately developed by the Gnostics. Two Mss., belonging to the sect of the Valentinians, the Pistis Sophia and the Book of the Great Lori according to the Mystery, give a description of four grades of initiation: the baptism of water, which gives access to the place of Truth and the place of Light; the baptism of fire, which admits one into the company of the heirs of the kingdom of Light; the baptism of the Spirit, and finally, the mystery which forces all the Archons to remove inequities from off the Disciples and make the Disciples immortal. Among the Jews, according to the Talmudic narratives of the Sages and the rabbis, there were no formal rites of initiation among them. They held the meaning of the Kaddish, the real origin of the universe, the immortality of the spiritual creatures, and the idea of all culture as successively taught. The Christian sects of the Middle Ages had frequent recourses to initiation ceremonies, the secrecy of which was always kept up to the last attacks of orthodoxy. The favor which symbolism then enjoyed allowed them to strengthen the bonds of sacred or at least important links with the initiates, and in the symbolism of the mysteries, this was revealed to neophytes. Even such exclusively technical details as the forms used in the ceremonies, the vestments worn by the initiates or the objects used in the ceremonies of the initiation of Freemasons, through freemasonry (q.v.), have been lost.

The importance of the rite lies in that, while preserving its outward form throughout this evolution, initiation changed its object somewhat in passing from magic to the service of religion. What was required of it now was to make the gods better known, and to bring about a closer intercourse with them. As a consequence, we notice among neophytes new feelings of curiosity, anxiety, and even anguish, allied with an ardent desire for communion with their religious and moral ideals. The rites giving them access to the sacred world—whether these ceremonies were originally held in connection with the changing of the seasons, the revolutions of the stars, or the transformations of the body—reared in a rhythm of periodicity and alternation which the initiates applied to their own development. The initiates, in bung, in which he had to play a part, the novice now saw the passion of a god—some divine sacrifice, the benefit of which he was personally called upon to reap. All the symbols of the most ancient mysteries found an outlet in this direction. The aim of initiation thus became once more the attainment of an individual advantage, but this time on a different plan: 'Thanks to these beautiful mysteries which come to us from the gods; we read in an Egyptian inscription, 'death is for mortals no longer an evil, but a boon.'

The question is to discover whether, as Paul Fourier, 18th century, 19th century, and XIX century, in the history of the neophyte with topographical information, as it were, to prevent him from losing his way in the under world, and with magic formulas to protect him from ambush in his path, or whether it insisted also on the necessity of his having led a just and righteous life. It would seem that initiation was sufficient in itself to lead the neophyte to the sources of Sinope without a more or less justified in putting the crucial ques-

2 Andrew Lang, Myth, Ritual, and Religion, p. 282.
3 Van Gennep adds to those which he calls 'magical' rites or periods, the object of which is to facilitate changes of state, without violent shocks or abrupt stops to the abdominal collective life ('Rites de passage', 14).
4 See D'Heriot and Maure, 'Théorie générale de la magic,' in A. Soc. vii, 188.

4. The ritual of initiation. — The formalities of initiation, which lose their ties binding them to the religious or the magical, present striking general resemblances. Andrew Lang notes the following general characteristics: (a) mystic dances; (b) the use of the tunic, or a garment of clay and earth; (c) the washing with clay and washing off; (b) performances with serpents and other 'mad doings.' To these we might add: (d) a simulation of death and resurrection; (e) partaking of a sacrament; (f) the wearing of a mask or other disguise. In any case, we may say that initiation ceremonies include: (1) a series of formalities which loosen the ties binding the neophyte to his former environment; (2) another series of formalities admitting him to the superhuman world; (3) an exhibition of sacred objects and instruction on subjects relating to them; (4) re-entry or reintegration rites, facilitating the return of the neophyte to the ordinary world. These rites, especially those of the first three divisions, are found fulfilling a more or less important function in all initiation ceremonies, both among savages and among the civilized.

(1) Separation rites. — In every initiation of any importance the neophyte has to leave his family, live in isolation, consent to all kinds of deprivation and tabus, and submit to purifications, aspersions, purgations, fasting, flagellation, even mutilation (and, more particularly, circumcision), and, finally, assist at his own burial, or at least, participate in the burying of him who has left this world. Sometimes spirits wearing masks corresponding to their supposed character come and carry him off to some hut or enclosure, or to some isolated spot where he lives in solitude for a certain period, which may be months or even years, as in Africa, America, New Guinea, and other countries. Even when initiation is nothing but a mere transmission of magical powers, the neophyte is supposed to be carried off to the spirit world.

Among the Egyptians, an angel goes through the ceremony of killing the aspirant to magical powers, and the body, thus killed at the depth of the body, which has been lying stretched on this frozen ground, and the patient then becomes an angel in his turn. It would be useless to insist upon the importance of this practice of stimulating death in the initiation ceremonies of the ancients. Many mysteries included, we are told by Janin and others, with Mystical mysteries, something similar to an illumination 'which was described or represented so as to produce unnecessary fear.' There is a story that the Emperor Commodus, filling

The role of mystagogue, one day took his part too seriously and saw daylight through the disinterested candidate. The alluring Apelles to his initiation into the mysteries of his is well known. Even to-day, in the "profusion of voices" in use among the initiates of the Eleusinian Mysteries, the figure of Apelles, a four-candles, and covered with a shining sheet, the service of the obelisk, a sacred symbol, above his body, and the whole congregation chants the Missæns for him.

It is noticeable that among nearly all peoples funeral ceremonies themselves imply a sort of initiation. Only the death of the deceased candidate. The alluring Apelles to his initiation into the mysteries of his is well known. Even to-day, in the "profusion of voices" in use among the initiates of the Eleusinian Mysteries, the figure of Apelles, a four-candles, and covered with a shining sheet, the service of the obelisk, a sacred symbol, above his body, and the whole congregation chants the Missæns for him.

by partaking of the food of the initiated, become assimilated with them, or, in the case of sacrifice, with the gods themselves.

(3) Communication of the sacra.—The communication of the laws and rites takes place at once the complement and the essential object of the admission rites. It includes: (a) exhibitions, (b) actions, and (c) instructions—a threefold distinction already made by Aristotle (Met. IV, 6). These are: (1) the sacra, "what is shown"; (2) the pravayana, "what is done"; and (3) the anavagya, "what is taught".

(a) The exhibitions include magical or evocatory instruments (amulets, charms, relics, the chariots of the Australians, certain shells, the rattle of the American Indians and Negroes, the contents of the medicine bags, the ephoria of the Egyptians, the fan, the cist, the tympanum of the Greeks); representational and symbolic objects (various images and effigies, masks, animals, ears of corn, etc.); or pictures representing the adventures of superhuman beings or figures from the other world. In this way the novice gets to know the inhabitants of this higher world, to familiarize or identify himself with them, and to live their life. (2) The performances vary according to the goal aimed at, but we must distinguish between the three objects: initiation, properly so called, and which are performed only once for each neophyte, and those which are repeated periodically and form the essential aim of the instruction. (3) The instruction, which often comprises several grades or degrees, bears of necessity on what the neophytes are to gain by initiation, but it generally extends to other matters than the explanation of rites and the teaching of formula. It includes the communication of the real name of divine personages, theogonies, and cosmogonies, mythical history, common law, the exercise of certain arts, moral and social obligations, tabus, and marriage laws.

Among the Bantu, the initiated are adjudged to be men, free from theft, free from adultery, honour your father and mother, obey your chiefs. Here we are reminded of the laws attributed to Agamemnon, and said by St. Jerome to have been carved in the sanctuary of Eleusis. To honour once parents, to worship the gods by offerings, and not to eat flesh.

The revelations may even include, under pressure of a more advanced state of culture, a supposed rational interpretation of vulgar beliefs, or even a religious philosophy agreeing with the most advanced philosophical views of the time. In any case, the instruction is protected by the obligation of secrecy, which the neophyte cannot infringe without laying himself open to the gravest consequences. But, as Seneca says, speaking of the mystics of his time, the secrecy could apply only to the sacra, i.e. to the formula of incantation, the esoteric explanation of symbols, and the signs by which the initiated recognized each other; it could not cover philosophical precepts, if philosophy there was, because they were current among the uninitiated also.

(4) Reintegration rites.—It is only very rarely that the initiated can remain for ever in the realm of the sacred. By some means or other he has to renew his relations with the ordinary world. But he does not return in exactly the same state as he went away. Since he reappears laden with mystic influences, which, are, of course, dangerous for the uninitiated, he has to be, so to speak, "detuned" and readapted to his original sphere. He has, for a certain period, to submit to rules of silence and asceticism, and, yet more, he must, in his new character, pretend to have forgotten all about his previous existence and re-learn everything connected with ordinary life.

In the Congo, he must pretend that he cannot either walk or eat by himself, and has to be fed like a child. In Virginia, he has to learn the language of his tribe all over again. In New Guinea, he has to go backwards into his house. Among the Brunnians, he throws his old garments into the river and puts on new ones.

These precautions are only transitory, yet a man who has once been initiated is, throughout his whole life, subjected to a special and more or less strict discipline. Sometimes he bears a special mark or wears special garments or insignia, e.g., the cord worn by the Brunnians, the white dress of the Essenes and Fytthagoreans, etc.; he must also respect certain tabus and avoid certain ways and means of living. In every case he loses his prestige in the eyes of the uninitiated. When one has visited the infernal regions, even though it is only after the manner of Dante, some trace of it always remains.

GOBEL D'ALVIELLA.

INITIATION (Buddhist).—1. Forms of initiation.—Admission to the Buddhist Order (sāmaṇga) is gained by two forms of initiation, pravrajyā (Pali, pabbajjā), and a higher, upasampadā, though the former is only preparatory to the latter, in fact, a probationary part of it.

(a) Pravrajyā means ‘going out’; and by this ceremony one goes out from a prior state of life, either from the worldly life in the case of an ordinary person, or from a monastic life in the case of one changing to another faith. This is in a certain way analogous with the Hindu ritual prajñā (pravrajya) by which a boy is admitted to a teacher’s hermitage (ārāma) in order to live with him (andevena) as a brahmacharin. With the Buddhists a layman is thereby admitted to the Order, and is henceforth obliged to live with a preceptor, without whose directions he is not allowed to do anything. The lowest limit of age is eight, children under that age being rejected. With this ordination the child begins his life as a ‘homeless one’ (pravrajya, pabbajjā), and is called a sāmaṇga (advayavasa), ‘novice’. The period of novitiate lasts for twelve years, and, on the completion of one initiated at eight, his higher ordination takes place only in his twelfth year.

(b) Upasampadā means ‘arrival,’ and is the entry into the circle of the fully accredited members of the sāmaṇga. This second and full ordination is never conferred on a novice under twenty years of age; but, if he receives the pravrajyā ordination at or after twenty, and is otherwise properly qualified, he can proceed at once to the upasampadā. One who has gone through the upasampadā is henceforth an upasampanna bhikṣu (‘fully ordained mendicant’), and will be called, after four years’ standing, a bhikṣu, ‘elder’, elders only being allowed to instruct others, that is, to become an upādhyāya (upajñāya), ‘preceptor’, or an ācārya (ācārya), ‘tutor’. Those who cannot ordain elders are called dāhara (‘small teachers’), according to I. J. Tsongkhapa, Record of the Buddhist Religion as practised in India, tr. J. Takakusu, Oxford, 1906, p. 164.

The name, brahmaṇa (Pali, sāmaṇga), ‘one performing austerities, or ascetic existence, accomplished’, ‘initiation into’ and ‘participation in’ the mysteries, ‘Ch. d. d. voyageur’ in the mysteries (cf. Goblet d’Alviella, Eleusis, Paris, 1906, p. 697).

E. Chassin, Les Béatitudes, Paris, 1890, p. 278.

Sceurche, L., X. vör.
plied to all the members of the Order except the laity, though, strictly speaking, these terms can be applied to the elder, but no one can be designated as an ascetic or a mendicant until he is fully confirmed by the upasampadā and becomes himself responsible for such a mode of life.

While the pravrajya remains in the initiation (upanayana) to the first stage of the Brahmanic life, the upasampadā makes the Buddhist system quite different from that of the Brahmanas. Continuing their course of walking, the bhikkhus, after a few months, becomes a sādhu (‘bathed’) and returns to house hold life (gyanadha), whereas a brahmaṇa becomes by the upasampadā a sōvika, a full member of the Order, or a bhikkhu in the more proper sense of the word, corresponding to the fourth and last stage of the Brahmanic life, i.e. sanyāsins, as an ascetic.

2. Particulars of initiation.—(a) The pravrajya chiefly consists of (1) the investment with a yellow robe, (2) a tonsure, (3) the declaration of the Three Refuges (saraṇāgaṁ), and (4) the imparting of the Ten Precepts (dasanikkhā). A lay person desiring to enter the Buddhist Order first chooses a vihāra (‘monastery’), approaches an elder living therein (bringing with him a suit of yellow roles), and requests to be initiated. If the elder is pleased with the request and instructs him to keep the Three Refuges creed by repeating it:

(1) take refuge with the Buddha, (2) I take refuge with the Religion, (3) I take refuge with the Order.

After this the candidate is again taught to adhere to the Ten Precepts (dasanikkhādānā): ‘Abstinence from taking life, Abstinence from taking things which are not given, Abstinence from immoderate speech, Abstinence from telling a lie, Abstinence from intoxicating drinks, Abstinence from eating out of doors, Abstinence from dancing, singing, and revolving, Abstinence from the application of perfumes, and Abstinence from the use of a high or large couch or seat, Abstinence from receiving gold and silver.’

So far the ceremony. Henceforth the novice lives with his preceptor and acts under the latter’s supervision until he is fully qualified for the next ordination.

The pravrajya is in reality a preparatory ceremony by which one enters into the monastic course of the priestly life. Without this course of novitiate one cannot proceed to the higher Order, the relation between a brahmaṇa and a brahmaṇa being analogous to that between deacon and priest in the Church.

(b) The upasampadā ordination is not so simple as the pravrajya, since it involves the fullest possible enjoyment of the privileges of the Buddhist Order and holds in right of seniority among the younger brethren. Every step of the ordination has to be performed before a chapter of fully equipped elders, the number of the members being in this case at least ten. An ecclesiastical vote of the chapter of elders is called kassevadika, and there are two forms of arriving at a resolution: (1) a summary decision (assattipajñākami), in which a resolution is arrived at by the first reading, and (2) a decision by the third reading (assatticchaththakam). In the upasampadā ordination all questions are decided by three readings. The method of voting is very simple. The assembly, or rather a silent, while those who dissent speak out. Occasionally, however, when there are dividing opinions in case of a difficult question, the chapter has recourse to the use of voting, and the decision is rendered in colours generally white and black, but sometimes of several different colours. The time generally chosen for holding the ordination is the full-moon day of Vaisakha (April-May), and the three successive days of quarters of the month. The proceedings are as follows.

First a preliminary examination of the candidate takes place. A novice is brought by a tutor before the president of the chapter, and an up pada (up pada, ‘preceptor’) is appointed for the candidate. Usually, the same man comes up as a second tutor, or, rather, witness. These two tutors is he questioned as to the preceptor’s name, his bowl, and his robes. All being well, he is placed on a certain spot, while the tutors remain before the president, and, having asked the questions, they instruct the candidate to tell the truth, and further examine him as to his qualifications. He is first questioned if he has any such diseases as leprosy (bodhi), boils (sura), itch (kāla), asthma (saṅghā), or epilepsy (kāraṇa). These questions are answered in the negative, but asked if he is a human being (sasana), a male (maha), and a free man (kāla); if he is not free from debt (saṅga), except from military service (sīha), and permitted by the parents (sasana), and, further, if he is of the full age of twenty. The questions as to the state of the body, the roles, and his name and his preceptor’s name, are also asked.

This strict and searching examination being over, the two tutors go up to the president of the chapter and report the result, and then the candidate is called out (agati) or kasi (kasi). Thereupon he comes out and stands between the two tigers and says: ‘Venerable sir, I ask the chapter to confer upon me the upasampadā. Have pity on me and lift me up (ulampatu).’ He repeats this request three times.

Now the tutors repeat the above examinations once more before the assembly, and finally a motion (Ratī) is proposed publicly with the words: ‘This Niga desires the consummation under the venerable Tissa. He is free from disqualificuations (anavapati dhāna) if any of the venerable chapter approves the ordination of the candidate, let him be silent; but if no object, let him speak.’

This motion also is repeated three times. If all are silent, the president declares that the resolution is carried. As soon as the ceremonies are over, the assembly, or rather a silent, while those who dissent are measured, and the session (utupamā) and the division of the day (tiṣanābhadā) begins, with the details of the assembly (saṅghā), should be recorded.

The four requisites (mukulī, suva and the four interdicts (okaraṇīyā) must be minutely taught.

The four requisites are (1) food collected in the almsbowl (pācātikākara); (2) robes made of bags (pācātikākara); (3) lodging at the foot of a tree (vaha暖心); and (4) a claim of superhuman power (uttaratamunassāna). To each of these several exceptions are given.

The four interdictions are (1) sexual intercourse (mahattham); (2) theft (adnapāt); (3) lying (mamādā); and (4) a claim of superhuman power (uttaratamunassāna). To each of these many exceptions are allowed.

With the instructions as to these two series of important moral precepts the ordination comes to an end.

3. Training of the initiated.—The upasampadā ordination confers on the candidate no mystic power, as is the case in the abhiseka described below; nor is it regarded as an indelible Order imposed upon him, for one’s free will is always respected in the Buddhist Order. But the upasampadā ordination alone does not give a man freedom of conduct, for he has further to live under the supervision of the superiors whom he has chosen.

The superiors are generally two, the being the preceptor (up pada), and the other the tutor (āgati).

1 The full-moon day of Vaisakha is the day of the Buddhist's pācātikākara; see Buhidhāsana's Saranāgacārā, in H. Oldenberg's Vigna Phūkā, London, 1892, pp. 278-282.

2 An elder who becomes president must be of more than ten years’ standing after his upasampadā ordination; see SBE XIII. 178.

3 Cf. Igouz, viii., which is used in the Brahmanic initiation in the Gāthās. The preceptor’s āpātikā, or the chapter’s parisekatā, etc., is received by a candidate, and the second āpātikā is received by the candidate under the supervision of the teacher. Āpātikākā, or ulampatā, are interesting.

4 The ordination is sometimes called okaraṇīyā kāriti (V. F. Church, Vajrayūna, Copenhagen, 1855, p. 119.)

5 SBE XIII. 178.
The duties of the two superiors are very difficult to define; it is perhaps impossible to draw a line between them. Their offices, as detailed in the Mahāvagga, I. 25–33, are exactly identical. Most probably, as the general purport of the two words indicates, the upādhyāya (preceptor) is responsible for his pupil’s study of the sacred texts, while the dāchāya (tutor) takes charge of the pupil in respect of discipline. The latter is sometimes called dācia, the former, meaning, most probably, a tutor in the ecclesiastical act, but personally a tutor in discipline.

The upāsakamāna bhikṣu is dependent on the two teachers. Though the upādhyāya seems to be more important than the dāchāya, contrary to the Brahmanic usage, the duty of giving a nissaya (dependence, protection) properly belongs to the dāchāya. It is prescribed by the Buddha in the Vinaya that a bhikṣu after the upāsakamāna should live ten years in dependence on a dāchāya, and that he who has completed his tenth year may himself give a nissaya to others. Thus an dāchāya is a proper nissaya-do (‘giver of protection’), and his protégé is nissaya-anteviśa (‘pupil in dependence’). The pupil should be regarded as a brother, and the master should be looked up to as a father. Yet it is said in the Vinaya that a nissaya will cease when the upādhyāya and the dāchāya come together. This would imply that, though the pupil is always dependent on his dāchāya, when he is in the presence of his upādhyāya for instruction or otherwise his dependence on the dāchāya would cease for the time being.

In this dāchāya (‘dwelling close by pupil’) towards his bhikṣu, so in a māttivivekārī (living in the same vihāra, co-resident) towards his upādhyāya. Of the two superiors one is something like a private tutor whose duty is chiefly towards the progress of morals, while the others is a professor in the college (vihāra) who is mostly responsible for the instruction of the pupil.

The mystic school of Buddhism (Jainism) is founded on the mystic doctrine of the Buddha in imparted, only by the abhikṣetra (‘anointing’) rite, which is important, as it raises one above the level of ignorance and reveals the real state of nature. The office can only be performed by a true bhikṣu-dithaka (‘mind arising from perfect knowledge’) of the Buddha, unite one’s mind with it, and become blessed and enlightened. An dāchāya’s sprinkling over the water of knowledge (jānatādaka) of the Mahāvibhūsana Buddha (one of the Dīghanikādas) is at once symbolical of dispelling one’s ignorance and one’s sins. The bhadra is in a certain reproduction of the crowning of Indian Ājījas.

In contrast to the upāsakamāna, liturgical elements come to the fore, which are considered to effect a mystical transmission in the candidate’s mind and person. A new name is always given to the anointed (abhikṣetra). In the Buddhist abhikṣetra there are, theoretically, three following forms: (1) the abhikṣetra of signs (mahādī); (2) the abhikṣetra of actions (karmā); and (3) the abhikṣetra of mind (chitta). The māttivivekārī, chiefly consisting of fingerings and vocalizations symbolical of actions, is a certain form of initiation to be conferred on an earnest believer who is short of means, whereas the abhikṣetra-abhikṣetra, which is beyond the scope of special consecration, is conferred on a holy personage (dāchāya), a riyam. The bhikṣu-abhikṣetra is the conferring of the dāchāya’s right to dāchāya in a fully equipped pupil, and is important in proportion as it elaborates in details. The abhikṣetra-abhikṣetra is again divided into three kinds: (a) the abhikṣetra for founding a sacred place (pratirmābhikṣetra-mālābhikṣetra); (b) the abhikṣetra for holding a magical power (vīrabodhisattva-abhikṣetra); and (c) the abhikṣetra for transmitting the law (dharma-samādhi-abhikṣetra).

These ordinations are the steps of training in the mystic school. The most common of all is the pratirmābhikṣetra-abhikṣetra, which may be performed for any person, making no distinction whatever of qualities or defects; sometimes one is forcibly brought to the ordination hall so as to improve one’s character. The object of this particular initiation is to make a connection with a Buddha or a saint in the mālāma (sacred diagram), a fact which in the end will lead one to perfect knowledge. Every one who begins to study must receive this ordination. During the rite the candidate is made to throw a flower over the sacred diagram, and this is the sign of his acceptance by his master. If the flower falls on a Buddha or a Bodhisattva, he is considered to be worthy of the Buddha-god; but, if it falls on the outer circle of the mālāma, as on Vinsaya (Gesapula), he is not allowed to study the mystic doctrine, though, as at the present day, there is no strict adherence to this rule. A pratirmābhikṣetra-abhikṣetra is a step higher than the pratirmābhikṣetra. It is conferred on the best qualified pupils who are able to grasp the highest truth. Vīrabodhi (‘science’, especially ‘cosmic science’) means maṇḍu (‘incantations’), śāstra (‘praise’), dharma (‘law’), and nāma (‘name’). One who possesses this knowledge is called vīrabodhisattva (‘holder of cosmic science’). An dāchāya through this ordination gives his select pupil permission to acquire the edges above specified, and also the kriṣṇa, a religious achievement such as the four paramās (‘perfections’); and this rite is, accordingly, also called the abhikṣetra for the position of a pupil (vīrabodhisattva-abhikṣetra). While the pratirmābhikṣetra-abhikṣetra belongs to the mystic circle, the vīrabodhisattva-abhikṣetra is an introduction to the mystic doctrine, and is therefore placed much higher than the pratirmābhikṣetra-abhikṣetra. The student-abhikṣetra-abhikṣetra, which gives one not the position of a pupil, but the position of a teacher, especially in the teaching of the dāchāya-abhikṣetra, is called anushakṣa-abhikṣetra (the abhikṣetra for the position of a teacher). This ordination is not conferred on a bhikṣu until he has passed the period he may be. This was in any case the rule set forth by Kukai, the founder of the Japanese school of mystic Buddhism.

5. The ceremonial of the Buddhist abhikṣetra.—The object of the abhikṣetra is to symbolize the mystical (a) an ideal religious personage, (b) an ideal religious scholar, and (c) an ideal religious instructor. Consequently the rules of the religious performance preparatory to the abhikṣetra are distinct. First, the samaya practice the candidate should produce a believing mind (‘faith’), a compassionate mind (‘compassion’), deep prabhu (‘wisdom’), and a great bhikṣu (a mind arising from perfect knowledge), and remain firm in determination. Samaya means ‘agreement’, ‘union’, ‘communion’, and the samaya-abhikṣetra is intended to keep a man in true firmness of the Mahāvibhūsana Buddha. Through the efficacy of this preparatory performance the candidate now assumes the position of the Buddha’s son, Vaśrāsa, and enters into the hall of ordinations (Pall, vīrmandalas).

Among the chief objects in use during this rite are a tooth-stick symbolising the cleansing of passion and sins, a bundle of vajra threads in five colours representing the five Buddhas in union, a pot of the holy water indicating the final determination to seek bodhi (‘supreme knowledge’), and so on. This ended, the abhikṣetra blesses the candidate and covers his eyes, meaning to shut the gate of evil so as to open the divine. He is now led into the room of ordination with his eyes covered, and is made to throw a flower as before described, his object of worship being determined in this way. Afterward he is allowed to gaze on this sacred mandala. He is then led into the terrace of the buddhi-mandala, and is made to sit in the pandanvam fashion or on a lotus seat, and wear a diadem of the five Buddhas (raita-muku) and a necklace of vajra. He repeats over his head the holy water of knowledge from five jars (pada-kuwa), and furnishes him with several things, such as a wheel (chakraw) and a torch-shell (dāchāya). While the rite is going on, a homa rite is performed, in which a sacred fire is lighted to burn all the past sins of the candidate.

Each ceremony is performed twice, first for the garbhasodakshākhānanda (or dharmaśākhā), and
then for the vaṣjatāṁsaṇḍha, or vice versa. Without entering into details of these maṇḍala, it is sufficient to say that they contain two quite different in Japan, whereas in Nepal the distinction is very vague, one maṇḍala serving for the other, in spite of the existence of two separate names.

The description here given follows the practices of the Japanese maṇḍāra school which were originally taught in China, by Subhakara Simha, an Indian akṣara, who was active in China A.D. 716–724, and eventually went to Japan by Kitai (A.D. 774–835). The tradition on the whole is no doubt much older than that in Nepal.

6. The pravrajya rites (Nepal).—In the Nepalese abhiṣeka, called the nepal daunting the initiation of the Nepalese bāraṇ (Sr. nāvaraṇa, 'worthy of honour, priest') is again different from those given above. A puruṣa, or representative of the king, prepares pot (kadha) full of water and puts into it a lotus made of gold. Five combustors, five flowers, five threads, threads of five colours, etc., are properly provided. The candidate sits in the vaiṣeṣika (worship) posture, while the priest is seated on a raised platform. The first day's service is over. On the second day the candidate sits on the śrīvaiṣeṣika and the guru gives him (1) the śrīvaiṣeṣika (protection) by placing a śīvai on his head; (2) the ādhi (iron) kālī by placing three iron rods on the head of the candidate, four on the hands, and one on the knees; and (3) the ādhi (consecration) by placing a wine-cup (srūvedhā) on his head. Then comes (4) the nāvaraṇa, the ritual bath, the holy water is sprinkled over his head. The nāvaraṇa bath (head of the śrīvaiṣeṣika) now comes to him and puts a silver ring on the finger of the right hand. To the sound of a bell he sprinkles rice on the papal and on the images of the protecting deities. On the third day the ceremonies of the initiation are made, the papal sita again on the śrīvaiṣeṣika and performs worship of the guru maṇḍala, the śrīvaiṣeṣika (consecrated top), the Three Treasures (Trīśrī, i.e., Buddha, Dharma, and Sāttvika), and the pūjābhaṭṭacāya (worship text), and, lastly, he gives the Ten Precepts. He is again sprinkled with sacred water, invested with a robe, and consecrated with a sceptre. Thereupon a diadem of five Buddha is put on his head, and the holy water is sprinkled on him, maṇḍala being repeated all the while. With an aṃśaṃkā (plush) the ceremony comes to an end, and a new Buddhist name is given to him.

Though maṇḍala, five-coloured threads, the holy water, and the diadem of the five Buddhas are in common with the Japanese abhiṣeka, the Nepalese rite is more Hindu in its appearance. The ceremony of abhiṣekā in Tibet is generally similar to that of the southern Buddhists. The viṇāya school in Nepal also mainly follow southern Buddhism in their ordination. The abhiṣeka belongs only to the maṇḍāra school of the mystic Buddhism.

J. TAKAKUSU

 INITIATION (Greek).—The Greek word for 'initiation,' τέκμαρση, has until quite recently not been rightly understood. The lexicographers tell us that it means 'accomplishment,' 'fulfilment,' 'attaining an end,' a τέκμαρση; hence a rite of accomplishment, hence initiation into the mysteries. But we are left uncertain as to what end is to be accomplished. The τέκμαρση cannot be understood as a word for its gist is best seen in the cognate τέκμαρσος, which means 'full-grown.' A τέκμαρσος ἅλπταις is a full-grown horse as contrasted with a foal. A τέκμαρση ἅλπταις is a full-grown man, an adult; τέκμαρση is the rite of the first human accomplishment, the rite of growing up, of coming to maturity.

This meaning of τέκμαρση is very clearly shown in the myth of the Pròzēs told us by Apollodorus (II. ii. 2). The daughters of Pròzēs, king of Tyrrh., went mad and ranged over the mountains. They were finally cured by the soothsayer Melampus, who healed them by a ritual dance, and eventually married one of them, thereby confirming the theory when they went mad is most instructive: 'when they had grown to maturity' (σὺν τεκμαρσώ). The reason why they went mad is equally so: 'they refused the maturity rite' (σὺν τεκμαρσώ). It is not safe to grow up without the orthodox rites of maturity; the crisis is momentous, and needs rēde de passagē. Not only baptism, but confirmation.

Another version of the story given by Apollodorus says that the maidens went mad because they held the image of Hera cheap. Hera was worshiped in three forms: as child (εῖς), as full-grown woman (παρθένοις), and as our wise mother (σῷοις). The image of Hera represented the three stages of a woman's life. This explains the sequel of the story of the Pròzēs. The maidens who are healed by initiation are immediately married to a demigod, i.e., the sign-manual of maturity. A boy among primitive peoples cannot take a wife till he has been initiated. In some cases initiation is not complete till after the birth of the first child. This explains the statement of Pollux (iii. 38):

'The married are nature'—τοῖς μανήσασιν. This explains also why to the Greeks the Danais were both 'uninitiated in nature' (νάπαρα ἄμαρτα) and became the prototypes of those who were 'uninitiated' in the Mysteries. To the Greeks, as in the English Prayer-Book, marriage is an excellent mystery.

Initiation rites will be discussed under the head of Mysteries (Greek). All that concerns us here is to grasp the important fact that the prōsē, or initiation, is a rite of maturity. This rite was, of course, carefully concealed from the immature, and in sex rites from the uninitiated sex. Therein resided the mystery, which was indeed the social sanctity of the whole proceeding.

How little 'mysterious' in the sense of maturity was as seen from a marble relief, probably funerary, now in the Central Museum at Athens, and dating about the 1st cent. A.D. A manly figure seated on a decorated chair is inscribed 'Increase' (Εἰκαστης). Before her, on a base, is a statue of 'Fertility' (Εὔμηλια), who carries a basket of fruit. Behind 'Fertility,' on a Doric pillar, is a goddess of 'Maturity' (Ματατής). Near her in the field is the inscription Τεκμαρση, 'Rite of Maturity.' Whether this refers to the figure on the pillar or to the whole scene is not very clear. What is clear is that the rite of 'Maturity or Rite of Maturity,' stands both for the fertility of man and for that of the fruits of the earth, for behind the figure on the pillar is a great tree with a fillet hanging from one bough and round the stem a snake, the emblem of the fertility of the ground. According to ancient thinking, the same rites promote and protect the maturity of man and of nature. In the light of this explanation we understand why the great Eleusinian Mysteries were a festival of sowing. In the light of the fact that Τεκμαρση stands on a gravestone we understand those hopes of immortality which centred round the Mysteries. Death was a rēde de passagē to a new life. 'It is sown a natural body, it is raised a spiritual body.' 'Then fool, that which thou covetest is not quickened, except it die' (1 Co 15. 36).

LITERATURE.—For Greek initiation rites see Mysteries (Greek) and KokKW; for possible survival of initiation rites in the Mysteries of the Mores and the Mysteries of the Mores and the KokKW, J. E. Harrison, Themis, Cambridge, 1912, pp. 1–29; for marriage as an initiation rite, J. C. Lawes, Modern Grecians, 1910, p. 90; for the Danais as an initiation, J. E. Harrison, Proleg. to Stud. of Gr. R., 1895, p. 618; for death as initiation rite, R. Hertz, 'La Representación de la muerte en la literatura griega,' in Asa x. (1906-08) 45; for sculptured relief of
INITIATION (Hindu).—The ceremony of initiation, or girding with the sacred thread, is considered one of the most important events in the life of a young Hindu. Before it he is, under the ancient law, equal to a low-born Śūdra, but the investiture is supposed to confer a spiritual birth in virtue of which he is reckoned a member of the higher classes, and these are therefore called the twice-born (dīnī). It appears probable that the original meaning of this Indian custom has been preserved in those celebrations which take place among wild tribes all over the world at the time when a youth attains puberty, the Indian notion of a spiritual birth in the in lowest-born Śūdra, and the staff is placed in his hand. Money presents are made to Brahmā priests, and fruits and flowers are handed round among the guests. At noon the boy is made to say his morning prayers, and in the evening his evening prayer. He is asked to join in his mother's Sanskrit, and afterwards of his father, and in the way of friends and kin. Each dress is made and silver coins into the boy's cloth wallet. On the following thirteenth day he is taught to say his regular prayers, and is made to worship the sacred fire. On the fifth day he is clothed in new clothes and taken in procession with music to a temple in the village, where he puts on the idol and returns home. Among the Paradesa Brahmans of Travancore, in the extreme south of the Peninsula, the sūdravan consists of no fewer than fourteen parts, which have retained their old Sanskrit names, and correspond in the main to the ceremonies in vogue at Dhārāvār as above described. The actual initiation, however, is performed by the teacher instructing the boy in the holy gāyaṭrī prayer, which he musters in a low voice so that the assembled throng of friends may not hear it. Elsewhere it is the father whoutters the gāyaṭrī, and the ceremonial investiture of the boy with the priest to kindle the sacred fire and to give the boy with the sacred thread. The initiation ceremony entails considerable expense; thus it is said to cost 40 to 100 rupees among the Deshāṭh Brahmans of Biṣāpur, and 20 to 50 rupees among the Patane Prabhās of Pomea. The course of instruction in the sacred books and prayers after sūdravan has in many cases been reduced down to a period of a few days, but the privileges of wearing the sacred thread continue to be highly prized. In the 17th century the valiant Śivāji, the founder of the Mahrattá power, on account of his low origin did not venture to wear the sacred thread till his solemn coronation had taken place. On the other hand, customs precisely analogous to the initiation of the Brahmans are found to occur even among those castes the members of which are not distinguished by the sacred thread. Thus among the Agarvas of Pomea it is customary for every boy at the age of eight or nine to be initiated by a priest once before his teacher, who presents him with a wreath and hence mutters a sacred verse in his ear. The Kamphasts of Cutch, a religious body, give every novice a black woven thread, which he ties round his neck with a knot; and on receiving him into their Order the teacher whispers a certain verse into his ear.

In modern practice only a few of the initiatory or purificatory rites (nāmasakara) remain in force. In the case of a boy, on the twelfth or some other lucky day after the fourteenth from birth the naming rite (nāmakarana) is performed, the name being regarded as a part of the personality. It is selected either by astrological or by adoption of that of some deceased ancestor, or in other ways. In the sixth or eighth month after birth comes the 'food-giving' rite (annaprāṇa), in W. India (bhojan), at which twisted milk and sugar or coarse wheat-flour mixed with sugar and clarified butter is laid on a rupee or gold plate and given to the child by the maternal uncle or by some other near relation (BG, i. 116, 1. 35; Census Reports, Kashmir, 1911, i. 145, 146).
Central Provinces, 1911, i. 156; W. J. Wilkins, Modern Hindustan, London, 1887, p. 13). This is regarded as an initiation into caste, and the child henceforth takes the food tabooed and tabooed to his group. In the Central Provinces, the lower Hindu castes and the Gonds (q.v.) regard the ear-piercing (Skr. karna-vadha, Hind. on-chheda) as the mark of admission to the caste community. It is generally done when the child is four or five years old, and up to this time he or she is not considered to be a member of the caste, and may consequently take food from any one (H. Y. Russell, Ethn. Survey, Central Provinces, pt. viii. Allahabad, 1911, p. 99 ff.).

There have been various explanations of this rite. F. B. Jevons (Introd. Hist. Rel., London, 1896, p. 171 f.) considers it to be a survival of the offering of blood to the deity. A. E. Crawley (The Mystic Rose, London, 1902, p. 135) classes it with other forms of savage mutilation:

1 When we find that the mouth and lips, the teeth, nose, eyes, ears, and genital organs are subjected to such processes, we cannot but feel that the society is in a stage of development where the taste for extra-respect is an embarrassment of riches, by what is practically a permanent amputee or of charm.

Russell (op. cit. 101) suggests that the continuous dissection of the body by women and the suppression of some mystical effect in opening the womb and making child-birth easy. It is claimed that this will refer to the horror felt by women if the fetus surrounding the hole is torn by accident or design. In such cases, women have to undergo a ritual of purification as severe as in the cases where the organs have formed in a wound or sore.

On the whole, the theory that it is intended as a protection to one of the body exits appears most probable (cf. KAPPLAKRIYA).

The initiation of a child of one of the higher castes into the Hindu religion is provided by the ritual purification, which consists in an actual teaching, whispering into the ear of the child a formula containing the name of some god, which henceforward becomes his special personal deity ('qandandh'). By repeating whose name he is to obtain present and future happiness ('W. Ward, A View of the Hist., Lit., and Mythol. of the Hindoos', Saranpore, 1815, ii. 253 ff.). Marriage is the only form of initiation required for a girl, as she thereby enters the group of her husband; but in some cases tattting (q.v.) is an indispensable preliminary to marriage, and is regarded as a form of initiation.

INITIATION (Jewish).—1. Philo of Alexandria regards the assumed allegorical sense of the Scriptures as a mystery. Thus, in a fragment of his Quaestionum in Genesis entitled περὶ θεοῦ λόγων, and preserved by Johannes Damascenus (Sacræ Parallelæ, p. 782; in Philo's Opera, ed. Mangey, London, 1742, ii. 638), he declares that it is not proper to divulge the sacred mysteries to the uninitiated before they have been purified by a perfect purification, and speaks of the words of Scripture as the true mysteries (τὰ ἵππηθες λεξίκα) which must not enter into profane ears (Ἑρμηνεία). These are really metaphysical terms, by which the author does not allude to any initiatory rite of mysteries description, appearing from the conditions he lays down for those to whom the Scriptural mysteries may properly be communicated, viz. (1) piety and holiness, (2) an absolute belief in the one true God; (2) 'to be cleansed by the sanctifying purification, in body and soul alike—by (through)'

2 Secreta Paral. 782 A. : οὔθ θάνατος τοιχῆντος κακάλοις ἔπεμψεν τοὺς οὐρανοὺς ὁ Κυρίων γενέσθαι τοῖς ἁγίοις καὶ παντίς. Of Course they are not to be understood in an exact sense, but as the reason given is that an uninitiated person will laugh at what is not to be laughed at (καμίαν λέγοντας κομικήν).

3 Secreta Paral. 782 B. : ἢ θάνατος τοιχῆντος κακάλοις ἐπέμψεν τοὺς οὐρανοὺς ὁ Κυρίων γενέσθαι τοῖς ἁγίοις καὶ παντίς. Of Course they are not to be understood in an exact sense, but as the reason given is that an uninitiated person will laugh at what is not to be laughed at (καμίαν λέγοντας κομικήν).

the laws and customs of the fathers'; 1 (8) seriousness of mind. Here the 'cleansing of the body' (καθαρισμὸς κατὰ σώματα) can be regarded only as being effected by the purifying baths prescribed by the law (see PURIFICATION [Jewish]), perhaps also by abstinence from forbidden foods, and by observation of the traditional Jewish fasts, while the 'cleansing of the soul' (καθαρισμὸς κατὰ ψυχήν) must be understood as that which is effected by the influence of religious and moral principles. The words θάνατος τοιχῆντος κακάλοις, καμία, require this interpretation, which we find fully confirmed by similar utterances of the same author. 2

2 In another work Philo (de Patieniæ, p. 717; Mangey, ii. 406), in counselling a kind behaviour towards proselytes, says that, having abandoned polytheism, the Jew is 'like men who, once blind, have recovered their sight, having from the deepest darkness deserted a most glorious light.' The context, as we have already seen, shows that the proselytes are not simply a rhetorical simile, for the instruction and baptism of Jewish proselytes cannot rightly be regarded as an initiation into a mystery, nor were they ever associated with any such rite.

3 The 'dreary ordeal' required of the neophytes of the Essene order (δομον... δομον) might perhaps represent the withdrawal of the Essenes, after recognizing the obligations which the candidates were bound by oath to fulfill, continues as follows:

Moreover, they swear that they will communicate the doctrines to no one on any other conditions than those on which each himself received them... and with like care they will preserve the books of their sect and the names of the angels and such... By such oaths do they [i.e. the Essenes] make their proselytes' lives,' etc.

Now, in his autobiography (Vita, 2), Josephus tells us that, when a youth, he became a pupil successively of the Pharisees, the Sadducees, and the Essenes, and thereafter of an enigmatic named Bandus, with whom he remained in solitude for three years, and then, at the age of nineteen, returned to the city. It is thus clear that he must have parted from the Essenes in his sixteenth or seventeenth year—at an age, therefore, when he could not yet have been received into the full membership of the sect. Accordingly, he had not taken the oath that would have obliged him to maintain the secrecy of the Essene mysteries; he had undergone the consecrating ceremonies or taken part in the initiatory rites of the order, so that, however willing he may have been, as a historian, to speak of these things in detail, he was not in a position to do so.

The present writer is, nevertheless, inclined to believe that, if initiatory rites were now and then again performed among the Essenes, either in converse with the admission of new members or on other occasions, Josephus would certainly have become aware of the mere fact, and in that case would doubtless have expressly attested it. Our conclusion, accordingly, is that, although baptism of proselytes is an initiatory rite, there was among the Jews no practice of initiation in the technical sense; that is to say, no mystical initiation and no initiations into a mystery.

W. BRANDT.

INITIATION (Parsi).—There are two distinct forms of initiation among the Parsis: mājūr, the reception of a child into the Zoroastrian faith; and 1 Sacræ Parallelæ, 782 B. : καθαρισμὸς τῶν αἰγύπτιων καθαράς, τῶν θανάτων κατὰ μάτη. 2 Cf. de Plantatione, c. x. 227 (Mangey, ii. 406); de Plantatione, c. xi. 227 (Mangey, ii. 406) f. 100. 3 See note on the passage cited above. 4 D. E. K. viii. 949. ἡττᾶται ἐν ἑαυτῷ, ἐκ τῶν εἰκόνων ἑαυτῷ ἐπετρέπτοντα, ἐκ μικρῶν ἑαυτὸς ἑαυτὸν ἐπετρέπτοντα. This is not to be understood in an exact sense, but as the reason given is that an uninitiated person will laugh at what is not to be laughed at (καμίαν λέγοντας κομικήν).
nākur and marābīb, the initiation into the priestly order.

1. Naqš-b. The naqš-b is essentially the ceremony of investing a child with the sacred shirt (sudrak) and girdle (kushī), which must be worn throughout the remainder of a Zoroastrian's life, unless, otherwise, he may adopt any costume he desires.

The word naqš-b (Pers. nāqšt) is derived from Avesta *nāha- 'sacred,' because after the completion of the ritual, the Parsi child is held responsible for prayer and for the observance of religious customs and ceremonies. According to another view, it means 'unveiling,' thus implying spiritual re-birth. The modern Persian Zoroastrians term the ceremony "nasjīdī" or "nasūk.

The age of initiation is seven, when, according to the pseudo-Platonic Alevisbades Prisius (121 D.), as confirmed by the Vendidad (xv. 45) and the Dinakart (ed. and tr. P. B. Sanjana, Bombay, 1874 II., iv. ch. 120), the education of the child began[see further, art. EDUCATION (Persian)].

If a child is not sufficiently intelligent to understand the ceremony and to know its responsibilities, the naqš-b may be postponed to any age below fifteen, when investiture must take place, or the child may be claimed by the Evil Spirit (cf. Vend. xvii. 59-64; Šard-dar, x. 1, xvi. 1; Šaft dār-Safvat, x. 13), and is guilty of the sin of frigidity. Full responsibility rests with the guardian of the child, or the adult in his stead.

Both the naqš-b and the kushī bear a symbolic meaning, though the symbolism is not explicit in the Avestas, but only in later Persian works.

The sudrak is made of white cotton, the white colour being symbolic of innocence and purity. It must not be made of one piece of cloth, but be pieced seven together on the sides, so that one may be on the right-hand side and the other on the left, with the sleeves sewn together on the sides, so that one sleeve may be on the right-hand side and the other on the left. The sudrak is worn around the neck and arm, and is tied with a red girdle round the waist. The girdle is symbolic of the new life, the old life being related to each other through the present. The most important part of the shirt is the gurushān ('that which preserves the knot') or kushī-kushī dar-kañāhī ('bag of righteousness'), which signifies loyalty to or faith in the religion. It is made in the form of a bag or purse, a little below the throat. It indicates symbolically that a man has to be industrious, and has not only to fill his purse or bag with money, but also with kushī, i.e. righteousness.

The kushī, or girdle, is made of lambs' wool, which is first combed and then spun into a fine thread on a hand-spindle (or 'kushī') with a little oil, and woven into one, and is woven into the kushī on a hand-loom, the ends of which are measured and made to correspond in length required. The twisted thread is passed round the loops seven-twenty times, so that the kushī consists of seventy-two threads, which are divided into each of the twenty strands. In the process of weaving, a continuous thread is made to pass through each of the twenty strands, which is almost finished, and only about a foot of the threads remains to be woven, the whole thread is removed from the spool and handed to a priest to cut, and it is the privilege of the women of the priestly class to weave and prepare the sacred thread, and it is the privilege of a priest alone to cut and consecrate it.

To consecrate the thread, the priest first performs the pāldūb (see next col.), and then recites the stād-kī (for which see J. Darmesteter, Le Zend-Avesta, Paris, 1858-60, ii. 480-482) as far as the word abahā. He next recites the nirnagī (liturgical formula) for cutting and consecrating the thread, followed by the ašva-ashvī and ganā-ashvī (Ys. xxiv. 15-16), and while reciting the latter he cuts the kushī into two parts as he utters the word spokenādana. On finishing the pāldūb kīdī, he utters a brief Pasand formula, and then finishes the kūy. The women who prepare the kushī generally get it cut and consecrated by the male priestly members of their own families. When they have so many members, and have, therefore, to get it cut and consecrated by a priest, they pay a small sum of money for it.

After this consecration the kushī is returned by the priest to the owner, who now completes it. First, by means of a needle, they stitch the thread inside out, and then knot by knot the remaining part of the thread. Three tassels, each

of four threads, are formed at each end of the woven thread. The kūy is then finally washed before being used.

The kūy, being prepared from the wool of a lamb, is held to remind a Zoroastrian of the purity of his race. A lamb is always to observe; the seventy-two threads comprising the kushī symbolize the seventy-two chapters of the Zend-Avesta; the twenty-four threads which make up each of the three tassels at each end of the kushī symbolize the twenty-four sections of the Pāyān-ītī, a part of the liturgy; the sixty threads, into which the seventy-two threads of the kushī are divided at the time of weaving, are said to represent the religious duties1 of a Zoroastrian; the twelve threads in each of the strands symbolize the twelve months of the year; the six tassels symbolize the six seasonal festivals of the Zoroastrian year; the hollow of the thread symbolizes the space between this world and the next; the doubling of the thread in the beginning symbolizes the connection between the present corporeal world and the future spiritual world; the turning of the knot inside out symbolizes the passage of the soul from the corporeal to the spiritual world; the final uniting of all the threads into one symbolizes universal brotherhood.

The kūy is said to have existed in the pre-Zoroastrian religion, and to have been adopted by Zoroaster, who held it to be a symbol of obedience to God, closing the door against sin, and breaking the power of evil.

Except when bathing, the sudrak and kushī must always be worn, but the latter must be untied and re-tied immediately after rising in the morning, on praying, after eating, and before prayer, after bathing, and before meals. After performing the pāldūb, or alutation of the face and other exposed portions of the body, the kushī is removed and placed in the same position as the mail. When the kūy is put on, it must be fastened with two knots, one on the front and the other on the back. When forming the first half of the first knot, it is explained that in the second round of the thread, a Zoroastian must think that Ahura Manta exists, and that he is one, holy, and is matched with Ahura Manta. When forming the second half of this first knot, he must remember that the Mazdaean religion is in the word of God, and that the knot is full faith in it. In the third round of the thread, while forming the first half of the second knot on the back, he has to remember that Zoroaster contains the seeds of Ahura Manda, and the second half of this second knot he must bear in mind that he has always to attend to 'good thoughts, good words, and good actions' (Šard-dar, x.).

Before a Parsi child is eligible for the naqš-b, it must know a few short prayers, of which the nirnagī kūy is the most important. A short time before the actual ceremony, which may now be performed in the evening, though formerly only in the morning,2 the child, until recently required to be fasting seven days, is now required to fast for six days, when the naqš-b is to be performed. The child, the upper part of whose body is covered with a piece of white cloth, is seated on a low stool, facing the east, with a lighted lamp, new clothes, etc., near him, and with a priest seated near him. After all the priests have taken their places, the officiating priest places a new sudrak in the child's hand, and all recite the pāldūb (for which see art. EXPLANATION AND Atonement [Parsi], § 2., vol. v. p. 694 f.) or Ys. i., the child repeating this or reciting the āshtā ashvī yarīy. The priest and child now rise, and the investiture proper begins.

This consists of four parts: (a) the recital of the Confession of Faith3 by the child, led by the officiating priest, who then invests the child with the kūy; (b) the recital of the nirnagī kūy, prefaced by Ys. vii. 1-10, and accompanied by recitations with the kūy; (c) the recital of Ys. xii. 3 f., as a brief summary of the Mazdaean prayer faith; (d) the recital of the tax darsīt, or of the benefit. The process of donning the kūy is as follows.

The priest holds the centre of the kūy in his left hand, and takes in his right the further end, and forms the knot, the remainder hanging vertically until the recital of the words munīy, gāmān, zāmānī (thought, word, deed) is the

1 The enumeration of these duties differs in different Palavi and Pahlavi books (cf. Šaft dār-Safvat, xiii. 21; Šard-dar, i. 3), but the naqš-b is to be performed. The child, until recently required to be fasting seven days, is now required to fast for six days, when the naqš-b is to be performed. The child, the upper part of whose body is covered with a piece of white cloth, is seated on a low stool, facing the east, with a lighted lamp, new clothes, etc., near him, and with a priest seated near him. After all the priests have taken their places, the officiating priest places a new sudrak in the child's hand, and all recite the pāldūb (for which see art. EXPLANATION AND Atonement [Parsi], § 2., vol. v. p. 694 f.) or Ys. i., the child repeating this or reciting the āshtā ashvī yarīy. The priest and child now rise, and the investiture proper begins.

2 The priest, in the course of the naqš-b, the mozdām, or prayer to the rising sun (see also, see Zoroastrianism, ii. 689-690).

3 See art. Confessions [Parsi], vol. v. p. 687 f.

4 For the text of the Ys. vii. 1-10, see Zoroastrian Liturgy, Pahlavi Texts, Bombay, 1900, p. 101 f.; for the tr., F. Speigel, Avesta Literatur, Leipzig, 1862-63, iii. 293 ff.
function, and in his right a mace or club (Pers. gur, Avesta xerōn) to symbolize his resolution to fight against all evils, physical or moral. If local conditions permit, as at Naosari, the headquarters of the Zoroastrian priesthood in India, the candidate, escorted by the head priest and by other elders of the community, is taken in procession of invited friends of both sexes to the Dar-i Mihir, or fire-temple, in which he is to be initiated.

Where conditions are unfavourable to a public procession, as at Bombay, the candidate lives in the Dar-i Mihir during the āvarana, and the friends assemble there, representing the procession by moving from one part of the temple to another.

The candidate having taken their places, the candidate goes to the yastān-gōd, where he is to perform the yastān, or recital of the Yasna. The assembled priests are generally seated on carpets spread on the floor. The candidate removes his upper garments, performs the pāyōh-bāstāi, and puts on the pādān (mouth-reel), which, at first, is not thrown across the face, but is held up and made to lie on the turban. Thus prepared, the candidate is brought before the assembly by one of the priests, who asks permission to initiate him. The head-priest, after the interval of a few seconds, takes the silent hand of the candidate and lays it on his knees for assent, and nods his head or puts forth with the two hands to signify the acquiescence of the gathering.

If the candidate suffers from leprosy, or if he has a wound on his body from which blood comes, it is expected that he may be rejected, and, accordingly, in order to enable the assembly to see him well, he is presented after the removal of his upper garments.

The candidate now returns to the yastān-gōd to go through the ceremonies of his initiation and to receive the Yasna with its ritual. The visitor issues forth after flowers and rose-water have been presented to them. If the father or the guardian of the candidate is well off, he distributes money among the assembled priesthood. Relatives and friends are, at times, feasted at noon and even at night when the parents can afford to do so.

On retiring to the yastān-gōd the candidate remains seated on the floor until the Vēmprād, with its ritual, he acting as the dīv, and the priest who initiates acting as the rāhūm. In the afternoon he performs the bōj ceremony and takes his meals, after which he performs the āfringān ceremony.

On the second day, on which, as also on the third day, the candidate is allowed only one meal. These three ceremonies are repeated on two more occasions, on the two following dāvās, and the bōj being performed in the morning instead of the afternoon, as on the first day. On the third day they are again repeated in honour of Sā rātāb (the thirty days of the month). On the fourth day, the Yasna is recited with the Vēmprād, the bōj and āfringān being in honour of Ahura Mazda.

Thus qualified, the priest, now called hāvērō (Avesta hēvēryāti, 'teacher'), can perform the āfringān, māyēg, marriage, and such other rites, but not the Yasna, the Vendēd, or the bōj ceremonies.

It appears that the nāhēr has been, from the first, a ceremony of trial of the candidate, with self-renunciation, and self-mortification. (1) The candidate is expected to keep his days during the whole ceremony, which lasts about a month, in a kind of retreat, in order to be free from worldly thoughts and engaged in pious thought. (2) He must not wash, nor eat, nor drink, nor take his meals at stated hours after-prayer, etc. According to the present custom, if the candidate has a pollutio nocturna during the two barāmūnās, he is disqualified and his days are over.  

1. Cf. the name of Mithra, Fr. vi. 6.  
2. On the Iranian word for leprosy cf. Vend. ii. 29 and Herod. i. 238.  
3. On the meaning of Yasa, Vīmprād, and Vendēd in this connection see Darmesteter, Zend-Avesta, l. p. xxii.  
4. On the bōj see Darmesteter, Zend-Avesta, l. p. 121.
through the heretics again, since the outward occurrence is held to show that he was not, passing his time in pure meditation, which he was expected to do, as a would-be priest, but that of worldly matters.4) (3) During the last four days, when he is being initiated and performs the Yama ceremonies, as well as the, he performs one on the second and third days, this also implying that the nābār is intended to prove whether he has control over hunger and thirst, and hence over other passions.

To obviate risk of the special danger just indicated, candidates are now made to pass through the ordeal of fifteen or sixteen years. Furthermore, not only those intended for the priesthood, but many others whose parents plan for them very different walks in life, are thus initiated with the idea that the nābār is a good preparation for anything, whatever the future occupation is to be. In these cases only a portion of the Yama is recited.

(b) Mariṣṭita.—Since the nābār is forbidden to perform for others the Yama, Vendidād, and būj ceremonies, or to officiate at the rites of purification, even though he has himself performed them at his nābār, he must, in order to qualify for these higher functions, undergo a second initiation, called marīṣṭita (Arabic 'high degrees,' pl. of marīṣṭa). For this he must read the Vendidād, in addition to the Yama and Visparad read for his nābār.

In the marīṣṭita the candidate has to go through one barakānān of ten days. On the eleventh day, in the company of a qualified priest, he performs the kāh. The rites of the marīṣṭita are for the mind nābār Yama with its ritual. On the second day, in the morning, he has to recite another Yama in honour of Sraos, and at midnight he recites the Vendidād. This completes his marīṣṭita. He is then entitled to perform and recite any of the Zoroastrian ritual and prayers, and his official title is mōbad (Pahlavi magaght), 'chief of the magi.'

(2) Literature.—The Yaman's quarter of Persepolis, which was there a centre of Zoroastrianism, was given over to the Parsees in 1660 by Zoravaranshir, the last of the Persian Emperors. The name of the place appears to be derived from the Persian word 'Yaman,' which means 'servant,' and is also the name of a tribe who lived in the province of Khuzistan.

INITIATION (Roman).—Although the word initio is used by Latin writers as the chief period of the best period to the same idea as our 'initiation,' the concept of advancement from a lower to a higher stage in cult hierarchy, by means of a rite which often partakes of the mysterious, is not native to Roman religious practice. In early Roman times the worship of the gods was more a matter of State than of private enterprise. It involved a complicated ritual, for the observance of which a trained body of men was required. Naturally this priestlyhood had its method of obtaining and training new members, but this can hardly be classed as initiation. Apart from the State worship, it may be said that the very life of the people was a continuous practice of religion. They imagined themselves surrounded by unseen forces, and practised innumerable means of appeasing those that were evil, and returning thanks for favours received. This was a matter of everyday usage, and required no special training or initiatory rites.

The practice of initiation involves a close organization of a more or less secret character, into which the initiate is received after an examination and ordeal, of which the tendency is to excite the imagination and render of more apparent value than in the case of initiations of any other sort. During the last four days, the candidate called sabātī ('non-existent') and is absolutely rejected as unfit for religious office.

The kūh is of two grades. For the major the recital of the whole Yama is requisite; for the minor the recital of Ps. 119.

(4) It must also be remembered that we ourselves use the word 'initiation' rather carelessly, and that in all probability the Romans did the same. Thus even when we find the word in their literature, without some explanatory context, it is often impossible to determine whether the writer means a distinct ceremony, or merely that the individual referred to has attained some slight degree of knowledge over and above things about him, or is well informed concerning a given subject. Moreover, the border line between initiation proper and cult practices which deal with the admission of new members is very narrow. Thus, in the cults of Vesta and Bona Dea, in which no men were allowed to participate, new followers were of course taken in. For the sake of limiting the subject, the word 'initiation' is here understood to involve a more complicated ceremony, with secret and mysterious rites, by means of which one was admitted to a close organization.

Even at a fairly late period in its history, the Roman religion was not a matter of any such practice before the introduction of the cult of Demeter (identified with the Roman Ceres) in the first years of the Republic. The Eleusinian mysteries connected with the worship of Demeter have almost been known, although they were not officially introduced into Rome until much later. Cicero refers to them in de Leg. ii. 9:

'Let no one be initiated into the mysteries save those of Ceres, and according to the Greek rites;' cf. also ii. 14: 'Certainly I do. I.e. make an exception of the mysteries into which we have been initiated, for among all the excellent and divine institutions which Athens has given to mankind, there is nothing better than these mysteries, which have a sublime, wild and savage state to one more noble and refined. As is made manifest by the example of the Eleusinian, in which we have always the same first principles of life, and not only to live happily, but to die with hope for a better future.' In de Leg. ii. 15 also Cicero insists that the initiation of women into the mysteries of Ceres must take place as it is done in Rome.

These passages bring out the respect in which the Eleusinian mysteries were held, and also the fact that they received some modern modifications in the hands of the Romans. They show indirectly that there existed at the same time other cults of a more harmful nature.

Something of the same import is also found in Varro, de Is Ratione, III. i. 5:

'Not without reason do they call her Mother Earth, and Ceres, and believe that those who worship her lead a vigorous and useful life, and that they are the sole survivors of the ancient Saturnian stock. With this in harmony is the fact that the term initio is generally applied to those rites which are held sacred to Ceres.'

Here, too, initio means the sacred mysteries to which only the initiated were admitted. In this connexion may be mentioned the references to the sacred mysteries of Gnosticism and perhaps S.E. Rome.

In Ep. ad Att. 29 he says:

'These are her [secret] initiatory rites, by means of which she is revealed, not the mysteries of a more than superhuman, but of the world itself, the vast temple of all the gods.' And in loc. cit. 26: 'Thus, just as only the initiates know the most holy of the sacred rites, so in philosophy,' etc.

We learn from Vitruvius that in temple construction account was sometimes taken of those who were to be initiated. In the preface to bk. vii. 7 he says:

'Ve have in mind the Eleusinian rite, which is the most sacred of mysteries, and in which the worshipper has to pass through a number of ceremonies, preparatory to his initiation into the mysteries; and we should have it in mind that the Eleusinian mysteries are the most sacred of all the mysteries, and that they are called the Sacred Mysteries. In order to become initiated into the mysteries, a person must first be initiated into the Eleusinian mysteries, and only after that into the other mysteries.'
little ceremony. The boy-candidate is brought to the monastery by his parent or guardian between the ages of eight and twelve. His parentage is inquiry into by a senior monk (not necessarily the head of the monastery) to ascertain that he is not the son of a butcher, smith, or other irregular trade, and that he is free-born; and he is physically examined to ascertain the absence of any disqualifying bodily or mental defect. On passing this examination, he has a tuft of his hair shaved off, as a preliminary tonsure, and is clad in the monastic robes, and made over to one of the senior monks, preferably a relative, as a tutor. He is now a 'pupil,' or ṭā-po (precept) of the monastery. His tutor or teacher (ger-gan, Skr. upādhyāya) takes him to an informal conclave of fellow-monks, and gains their consent to taking the boy as his pupil. The boy is not allowed to take part in the public services, but performs acts of personal service to his teacher. After several years spent in learning to read and write and recite from memory the elementary scriptures, he becomes eligible for the novitiate.

2. Novitiate.—This may not be entered before the age of sixteen years, and the ceremony is more formal and solemn than for the preliminary entrance. In Tibet it has two stages—a lower and an upper initiation. The candidate himself applies for admission into the Order. He is conducted by his tutor to the abbot or prior of the monastery, who examines him and, as a sign of his admission, places on the crown, and he is given a new religious personal name, usually that of some ancient Buddhist divinity. He is taught to repeat the 'Three-refuge' formula, 'I go for refuge to the Buddha, His Word, and His Congregation,' and is exhorted to keep the vows, the first five (or eight) moral commandments (bhāsā and 'the ten precepts' (dika- padā), the transgression of which creates the ten sins.

The novitiate is now of the class called śāstras, the opportunity to take the stage of the lay devotees of primitive Buddhism. The majority of the so-called 'monks' of Tibet do not advance beyond this stage of what is practically a lay devotion, and they still are called śāstras, or 'pupil.'

The higher grade of the novitiate, which is the real novitiate, is attained only by the more intelligent and meritorious pupils and those who can afford to pay the somewhat heavy educational fees necessary. In this stage the neophyte is called gr-tu'd, 'follower in the path of virtue,' the equivalent of the śramanavāna of Indian Buddhism. He must be specially approved by the superior of the monastery, and he solemnly vowed to renounce the world for a religious life, to embrace poverty and celibacy, and to keep the thirty-six moral and disciplinary rules. He is then permitted to mix with the other higher monks in the routine of the monastery, recite with them the sacred texts, participate in the various celebration rites, and take part in discussion. The profession into this grade takes place in a formal chapter or conclave of the monks, presided over usually by one of the higher 're-incarnating' Lamas, who during the ceremony completes the tonsure by removing the remaining tuft of hair, and calls the novice by his religious name, which now is exclusively used as his personal designation. This consecration to the higher novitiate is supposed, in Tibet, to bind the individual to the Order for life.

3. Full initiation or ordination.—Admission to
the final stage of full monkhood cannot take place before the age of twenty and is usually much later. In this stage the monk receives the title of ge-long, 'the virtuous beggar,' the literal equivalent of the Indian bhikkhu, or mendicant friar, the usual lay of the Buddha and his disciples. This stage is attained by comparatively few of the monks in Tibet, owing to the high standard of qualifications, intellectual and moral, demanded, and the educational expense. For this purpose several years of study are required in one of the great collegiate monasteries, at Tashilumpo, Gahidan, Sera or Depung at Lhasa, Kumbum, etc., for the yellow-hat sect, or at Sakya, Mindolung, etc., for the red-hat sects. To reach these centres of learning the novice has to undertake long journeys on foot, and great privations, and be for a time in a very literal sense a beggar of virtue. The examination, which is searchingly severe, is undertaken by a chapter of the most learned monks available, usually over ten in number. The successful candidate formally vows to keep the full rules, 266 in number. The fully fledged monk, or ge-long, is the scene of the Buddhist Order in Tibet. The Dalai Lama himself rejoices in this title. From the ranks of the ge-long are recruited the abbots, teachers, chief celebrants, high priests, and astrologers of the great monasteries and temples. The initiation of nuns is substantially identical with that of the male members of the Order. Into the esoteric theories and practices of Yoga mysticism special personal teaching is imparted by adepts.

INNER LIGHT.—See CERTAINTY (Religious), EXPERIENCE (Religious), FRIENDS, SOCIETY OF.

INNOCENCE.—There are two words in the NT which, though not uniformly translated in the English versions, seem to convey the ideas suggested by the word 'innocent.' In Ro 16th the word ἄνευ (Vulg. innoxia) is used of a child (1 Co 13th). In ΙΙΙ 7th our Lord is described as ἄνευ, ἄνειαυ, ἄλλονας (cf. ΙΙΙ 7th of Christ) 'guileless.' The other word, ἀνεια, occurs in 1 P 2th, where the Apostle exhorts his readers to long for the spiritual milk which is without guile (ἀνεια). Each word, however, has its own strict sense.

1. The ἄνευ (Vulg. innocens, innoxia) is he who hurts nobody by word, deed, or thought—the character which was described in 1 Co 13th. In ΙΙΙ 7th our Lord is described as ἄνευ, ἄνειαυ, ἄλλονας (cf. ΙΙΙ 7th of Christ) 'guileless.' The other word, ἀνεια, occurs in 1 P 2th, where the Apostle exhorts his readers to long for the spiritual milk which is without guile (ἀνεια). Each word, however, has its own strict sense.

2. ἄλλονας (Vulg. sive dolo, 1 P 2th) clearly connotes the absence of conscious fraud or intention to deceive (cf. ἀνεια). The word may thus be regarded as virtually synonymous with ἄλλονας. Thus Augustine in his Confessions shows himself unblemished and easily deceived. Hence the word ἄλλονας, like ἃνειαυ, tends to acquire a contemptuous sense in some heathen writers, suggesting the notion of one who is inexperienced and readily imposed upon.

3. The ἄλλονας, then, is he who has no malitia in him, and who harms none; the ἀνεια is without knowledge or guilt, and deceit is a sin. The ἀνεια is a fine, childlike simplicity, the simplicity which our Lord requires in the citizens of His Kingdom (Μκ ΙΧ). In fact, 'innocence is specially insisted on by the Indian as the characteristic grace of Christians: 'Neon ergo soli innocenti... Innocentiam Dei docet, et perfecte eam nomivis ut a perfecto magistro revelatam, et fideliter custodiam, ut ab incomtempitibili disceptore [al. dismente] retinet.' (Apost. 49.) Cf. the aphorism of Lactantius, Div. Inst. vi, 'de Vero Cultu,' 1: 'Nihil sancta et singularis illa majestas alii ad hominenceserat quam solam innocentiam; quam si quis olibent Deo, satis pia, satis religiosa literavit.' In a sermon ascribed (incorrectly) to St. Bernard some useful distinctions are drawn.

(i) There is an 'innocentia secundum potestatem,' the innocence which is incapable of committing sin. Innocence in this sense is the attribute of the child alone. He only is without sin; the Evil One comes 'that hath nothing in him.' (Jn 14th) In him only is there 'that absence of all evil which implies the presence of all good.' (I Thess. 5th) because he fulfils 'all righteousness' (cf. Aug. Enarr. in Ps. 100[101] 7: 'Tota ergo institia ad unum verbum innocentiae redigetur').

(ii) There is also an 'innocentia secundum oportitatem,' the 'harmlessness' of those who through weakness of body or simplicity of mind know not how to sin. This is the primal innocence of childhood, a negative state—the state of those who either are untempted or have not yet awakened to the consciousness of good and evil in choice and action. The 'innocence' of the first man was of this kind. He was not 'perfect' in the sense of having reached his full or final development, but 'upright' in the sense that he was on the right line towards the perfection of which he was capable. He had not the perfection either of knowledge or of sanctity (we must not confuse innocence with 'sanctity'); but he possessed those faculties which made him capable of a progressive development, which was to be conditioned, equipped, and secured by communion with God (see G. F. Alison, Outlines of Theology, no. 5, 'The State of Man before the Fall,' in his Works, Oxford, 1846, ii. 82-136; H. Martensen, Christian Dogmatics, Edinburgh, 1878, § 73).

Perhaps it is also appropriate to mention under this head the assertions of innocence and innocence, both personal and national, with which we must in the Psalter. It must be remembered that side by side with language of this tenor we find the most heartfelt acknowledgment of sin (e.g. in such psalms as 150, 50, and many others, together with a deep sense of dependence on the divine mercy (e.g. Ps. 35, 86, 100). The fact is that the consciousness of innocence awakened in devout belief by the study of the Psalms is a sign that in the argument of Ro 4 on the grounds of justification by faith, St. Paul illustrates his point by citing the language of a Psalm (G31).

(iii) There is, finally, an 'innocentia secundum voluntatem,' i.e. the confirmed habitual innocence of those who have retained their purity of heart in spite of temptation, and have conformed their will to be true to their highest ideals. This state is compatible with minor faults of ignorance or infirmity, but it is essentially a Christ-like state. The Christian believer does not incline to sin; he is exceptional, and contradicts the habitual
INQUISITION

tenor of his life, leaving his essential character intact (1 Jn 1: 9 2: 28).

Here, then, we pass beyond the conception of innocence as mere harmless. The innocence which is lost in the fall is restored to us in Christ. He enables men to become what He bids them to become—as 'little children,' and so 'simple concerning evil' (Ro 16: 2; cf. Ph 2: 9). Innocence is practically equivalent to that simplicity or single-mindedness which the old fall, with its many whole-hearted and entire devotion to God. As Augustine more than once insists, innocence belongs to him who injures neither others nor himself: that is, who abstains from the wilful self-injury involved in sin. Innocence, then, means the personal integrity of which the heathen dreamed, but which he had no means of realizing (Hor. Carm, i. 22). Nor does it exclude zeal for the good of another. 'Furtinet ad innocentissimum servum Dei, ut nullum malum inferre, verum etiam cohæret un peccato vel pudire peccatum, ut aut ipsa qui plectitur corrigitur experimento, aut ait terraeitat exemplo' (Aug. de Civ. Dei, iX, 16).

4. The question may be raised whether innocence once lost can be restored. Augustine touches upon this point in his Op. Imperf. c. Julian, vi. 18. The answer is no. This is the result of the true power of repentance so long as the soul is capable of it, and is willing to accept the discipline which penitence implies. There is such a thing as a reconstructed purity and beauty of character. And in this re-creative process a chief agent is the very spectacle of innocence. Christ acts upon the sin of the world, not only or chiefly by unveling and denouncing it, but also by exhibiting to men a flawless pattern of goodness, which exercises its own attractive power and elicits goodness in others. Men are drawn to Christ by what He is, not less than by His words of grace and works of power. The vision of stainless purity, combined with perfect humility and gentleness to the sinner, awakens the longing for holiness; the dumb yearning of the soul for righteousness is kindled by the actual presence and influence of a righteous personality. This power of kindling the desire for holiness is one of the many precious privileges of innocence. Others might be mentioned, such as the boldness and frankness of those as if they had no sin; this ability to be open; the unadorned hearts, open countenances, and untroubled eyes of those who neither suspect, nor conceal, nor shun, nor are jealous' (Newman, Fiz. Rel. Cath., i. 41).—the clear voice of science, strong will, and joyous temper of those who have experienced the renewing power of grace, and have tasted the powers of the world to come (He 6).

INQUISITION.—I. History. —Inquisition was a method for searching out heretics, instituted by Innocent III., in order to root out the heresies of his predecessors. But, if Innocent III. did not add to the canons, he justified them by motives which afterwards served to make them considerably more severe.

According to civil law, "a criminal convicted of treason are punished with death and their goods are confiscate, if even their children's lives are sacrificed in order to save the lives of some. But with much more reason than should they who offend Jesus, the Son of the Lord God, his kingdom, his religion, his people, his Church, be cut off from Christian communion and stripped of their goods, for it is infinitely more serious to offend against the divine majesty than to injure human majesty." Can longe agravius seternum quam temporalis ledens majestatem 

1 For the further history of the inquisition, see art. Office (Holy).
This saying, addressed to the magistrates of Viterbo on 23rd March 1199 (Ep. ii. 1), will live for ever; but the same may be said of the consequences implied in it; and the Constitution which he promulgated on 22nd Nov. 1229 for the whole empire expressly reproduces (ch. vi.) Innocent III's phrase (Mon. Germ. Leges, sect. iv. vol. ii. pp. 272-273) that Frederick's birth, declared by the Compromise, is an act of the Papacy, and therefore that the death penalty is decreed against the Manicheans; and, as the ancient legislation imposes upon them the penalty of death by burning, we may take it that the Roman question, condensed in the Theses of the Dominican prior of Besançon, was in the course of the negotiations in Bourges into the hands of the Dominican prior of Besançon and Fathers Gantier and Robert. This mission, limited at first to a well-defined area, soon extended over the whole of France. On 13th April 1235, Gregory IX advised the bishops of France that he had invested the Dominicans with the office of inquisitors in this country, because the dangers of their multifarious duties hardly left the bishops time to breathe. Finally, by another bull, dated 21st Aug. 1235, the pope nominated as Inquisitor-General of the kingdom of France ("per universum regnum Franciae") brother Robert de Bourgogne. Thenceforth, with the permission of the Dominican General, he himself had been a member of a body of Cathari known by the name of Bulgari, Bougres). Robert was required to act in concert with the prelates and religious Orders (Fredericus, Robert de Bourgogne, premier inquisiteur général de France, p. 13).

It is well known how these pontifical measures were welcomed by the king of France. The Statute-book known as "Statutes of Saint Louis" and the "Consulat de Beaune" in Beaune set out the penal code for both orders. In the south, the ecclesiastical dioceses had their seat on the two slopes of the Pyrenees; hence the frequent communications between the orthodox, as also between the heretics, of Spain and France. The King of Aragon, Jaume I., was always interested in questions of faith. On the advice of his confessor, the Dominican Raymond of Pennafort, he requested Gregory IX. to send him some inquisitors; and in a bull of 9th May 1222 the pope invited the archbishop of Tarragona and his suffragans to institute a general inquisition in their dioceses, either personally or with the help of the Dominicans or some other religious Order. A little later (30th April 1233), in reply to several questions, Gregory IX. handed over to the king of Aragon a whole code of inquisitorial procedure which had been prepared by the dominicans in Aquitaine, on the initiative of Raymond of Pennafort. From this time the Inquisition operated regularly throughout Aragon, with the co-operation of Dominicans and Franciscans, and extended its sway into Navarre (Leg. Hist. Ord. x. 113, xii. 162 ff.). Castile could not escape its influence. The "Futuro real", a code promulgated by Alphonso the Wise in 1255, and the "Seite Partidas of 1256" reproduce the prescriptions against heretics given in the "Decretum" of Gregory IX., and also those of his successors, which figured later in the "Seite of..."
Boniface VIII. (cf. El Fuerro real, iv. 1; Siete Partidas, i. 6, 58, viii. 24, 7, vii. 25). The Cathari heretics in the south of France had come over from the north of Italy; but Italy still cherished a goodly number in her breast. Even before Gregory IX. adopted the laws of Frederick II., the Inquisition was doing active work in these regions. As early as 1254, Honorius III. had ordered the Bishop of Brescia, Modena, and Rimini to expel the heretics from their dioceses. In 1229 the papal legate, Geoffrey, commanded the unconverted and lapsed heretics of Milan to be handed over to the secular authorities. We have already noticed the inquisitorial work of Guibert in Brescia in 1230. Seeing the trend of the movement, Gregory IX., nominated the Dominican Albertus inquisitor in Lombardia (1229), the Dominican Peter of Verona (St. Peter Martyr) inquisitor at Milan (1233), and the Dominicans Aldobrandini Cavalcanti and Rugieri Calcagni inquisitors at Florence—the former in 1230, the latter about 1241 (cf. Lea, ii. 201 ff.).

In Germany, it was given to the Dominican Conrad of Marburg to apply the imperial ordinances and pontifical bulls relating to the Inquisition. He died 11th Oct. 1231, gave him minute directions as to the procedure to be followed (J. P. Kuchenbecker, _Analecta Hispalica_, Marburg, 1730, iii. 73). From Germany the Inquisition spread into Bohemia and Hungary, and even into the Slavonic and Scandinavian countries. In short, with the exception of England, it soon covered the whole of Latin Christendom.

2. Procedure.—The working of the Inquisition is explained in a letter addressed by Gregory IX. to Conrad of Marburg on 11th Oct. 1231 as follows: 'An inquisition in a town, expose the pestilential, defame, and people, and deliver a solemn address; then, with the help of some discreet persons make a diligent search for heretics and suspect; who will have been denounced to you. These men, after examination, are considered guilty or suspected of heresy, must promise absolute obedience to the orders of the Church; otherwise you will have to proceed against them in accordance with the statutes recently promulgated by us' (Kuchenbecker, loc. cit.).

Here we have the whole inquisitorial process: the 'time of grace'; the summoning and deposition of witnesses; the examination of the accused; the sentence of recantation; the banishment; and the sentence of condemnation of the unrepentant. The several acts of this drama call for separate explanation.

The first duty of the inquisitor was to invite those who acknowledged heresy to present themselves voluntarily before him, within a fixed time varying from fifteen days to a month. The time thus set apart for voluntary confession was called the 'time of grace' ('tempus gratiae sive indulgentiae'; cf. _Proces sus inquisitionis_, composed between 1241 and 1254, in Vancard, App. A, p. 315). Those who took advantage of this and whose offence had not been previously discovered were exempt from all penalty, or were prescribed a secret and only nominal penance; those whose heresy was already known before confession were exonerated from the penalties of death and life-imprisonment, and suffered no worse punishment than a short pilgrimage or some other of the usual canonical penalties (Constitutiones of Cardinal Pierre of Colmius, bishop of Albano, formerly prior of the Holy Sepulchre of Rolen, in fons Doat, xxxi. vol. 5; cf. Tanon, _Histoire des tribunaux de l'Inquisition en France_, p. 142).

With the edict of grace was connected an 'edict of faith,' which made it incumbent upon any one who knew a notorious heretic or any person suspected of heresy to point him out to the inquisitor (Foncettes, pt. iii. nos. 22, 53-56). Thus, if they failed to give themselves up voluntarily, the heretics were rooted out by the denounced of the orthodox catholics. The number of witnesses required to make an accusation valid was not fixed at first, but was finally settled as two. Gui Fomenci (afterwards Pope Clement IV.) thought that more than two witnesses would be advisable in certain circumstances (Consultation in Doat, vol. xxxvi. qu. xv.; cf. Eymero, pt. iii. 10, 'testium multiplicatione,' p. 445). In theory the inquirer was not supposed to accept the evidence of any but discreet persons, and it had long been acknowledged by the Church that the evidence of a heretic, an uncommunicated person, a heretic, a thief, a sorcerer, a poisoner, a false witness was not valid in a criminal prosecution (Gratian, _Decretum_, pt. ii. causa v. qu. iii. cap. 5). But the great fear of heresy made room for an exception in matters relating to the faith. In the 12th cent. Gratian decreed that the evidence of a heretic or a person under civil disability (infamis) should be received on the question of heresy (Decretum, pt. ii. causa ii. qu. vii. cap. 22, causa vi. qu. l. cap. 19). The edicts of Frederick II. softened the right of appealing in a court of justice to members of a sect, but this disability was removed in the Constitution of Ravenna of 22nd Feb. 1232; 'sile quidem quodammodum in omnem usum possit' (cf. Huillard-Bréholles, _Histoire diplomatique de Frederic II_. iv. 299 f.). At first the inquirers sometimes hesitated to consider evidence so obtained. The Council of Vienne (1216) and Alexander IV. soothed their consciences (bull _Constatibus omnium_. Jan. 1226, in Eymero, App. p. 40). From this time onwards it was agreed that the evidence of a heretic should be valid at the discretion of the inquirer. This principle was accepted generally, incorporated in canon law (cap. vi. 'In fidei favorere,' _Sedes_, v. ii; Eymero, p. 105), and confirmed by constant practice. Of all the legal pleas of common law that an accused person (Gratian, _Decretum_, pt. ii. causa v. qu. iii. cap. 5) could put forward against the witnesses to a charge, only one held good—mortal or very serious enmity (Eymero, pt. iii. qu. lxvii. p. 606 f.; cf. Penna's remarks, loc. cit. 607-609). It was quite useless to count on witnesses for the defence; in fact, we very seldom hear of their presence (cf. Lea, i. 446 ff.). And this is natural, for they would be in all cases certain to be suspected of complicity as abettors of the heretics.

For the same reason, the accused could not put his case in the hands of advocates except under special conditions. The bull _Si adversus nos_, signed by Innocent III. in 1250 and inserted again in the _Decretals_ (cap. xlvi. 'De haereticis', lib. v. tit. xvii), expressly forbade advocates and notaries to defend heretics; and this rule, though meant by the pontiff to concern only the acknowledged heretics, was sensibly extended to the accused who were striving to establish their innocence (Eymero, pt. iii. qu. xxxix. p. 565; cf. p. 446; Vancard, p. 151, n. 3). The heretics and suspects, therefore, usually found themselves quite alone in the presence of their judges. They had to reply to the various charges (capitula) collected against them. It was not important that the sources of these denunciations should be known. But the fear—a fear, moreover, that was justified (cf. Vancard, lxxii, n. 1)—that the accused or their relatives might be received in the trial on their denunciators made the judges keep a prudent silence as to the names of the witnesses (see _Proces sus inquisitionis_, in Vancard, App. A, p. 317; cf. bull of Alexander IV. in _Constatibus omnium_, vol. iii. [1875] no. 4291). When Boniface VIII. incorporated this rule in the canon law ( _Sedes_, v. ii. cap. 20), he made express reservations, and required the inquisitors to communicate the names of the witnesses to the accused when there
was no danger involved in doing so (cf. Eymeric, p. 438, n. 72: *Ad nominem et demini- tumur sint delatis publicandis*). But as a rule, the accused had no other means of invalidating the evidence against him than the privilege of having the witnesses whom he knew to be bent on his destruction; if his denunciators were of his number, their evidence was dropped (Eymeric, p. 446 II.).

But the real aim of the inquisitor was to induce the suspect to confess. For this purpose various means were employed, an account of which is given by David of Augsburg (analyzed in Donains, L'Inquisition, p. 170): (1) the fear of death; the supreme penalty and the stake were held before the prisoner's eyes if he should refuse to confess; on the other hand, he was promised that he would be spared these punishments if he would consent to speak; (2) more or less strict imprisonment, made more trying by very scanty fare and the total absence of friends; (3) the visit of two capable judges who could force a confession from the prisoner by clever insinuations and tricky questions; (4) finally, from the time of Innocent IV., torture (Tractatus de inquisitione hereticorum, ed. Preger, Mainz, 1876, p. 43). No one was permitted to until the judge had exhausted all the gentle methods on the prisoner, and unless the latter was under very serious suspicion. Even in the torture-chamber, while the prisoner was being stripped and bound, the inquisitor continued his exertions to extort confession. The *vezatio* then began with the mildest ordeal; if these were ineffectual, others were tried, and from the very beginning care was taken that the prisoner should suffer the whole series of punishments, so that he might be inspired with a salutary fear by the thought of the pains in store for him (Eymeric, pt. iii., p. 481, col. 1). But, of course, the prisoner's limbs and limbs were not meant to be endangered: *egeere citrum membris deminitumem et mortis periculum,* says the bull *Ad extirpanda* of Innocent IV. (in Eymeric, App., p. 8). Originally it was not even allowable to repeat the torture; but later it became the rule that, if necessary, torture might be applied several times and even at intervals of a few days, not by way of *repetition,* but by way of *continuation* ('*continuationem,*' as Eymeric says in Directorium, pt. iii., p. 481, col. 2).

If on leaving the torture-chamber the accused repeated his confession, his case was easily disposed of; but, if he withdrew the confession made under the pressure of torture, he necessitated recourse to witnesses. The rule of the *Processus inquisitionis* was that the accused must not be condemned without confession or certain and clear proofs (cf. Vacandard, p. 321). But, whether he confessed or not, if two witnesses deemed competent by the inquisitor agreed in charging him, he was declared a heretic.

Helpless in the face of such witness, the accused could only choose between two courses: either he had to make a confession and show his penitence by submitting to whatever sentence the Church, in the person of the judge, decided to impose on him, or he might stand firm in his denial of crime or in his profession of heresy, and bravely take the consequences.

If converted, the heretic bowed before the inquisitor as a penitent before his confessors. He had no cause to fear his judge, for the latter did not inflict real punishments, but rather penances. These penances consisted, firstly, of pious observances—recitation of prayers, frequenting of churches, the discipline, fasting, and abstinence of days and fasts nominally for pious uses, such as a confessors might impose on his ordinary penitents. These were for offences of trifling import. Next in grade are the...

*perfusio sanabildis*—the humiliating and degrading penances, of which the most important was the wearing of yellow crosses sewed upon the garments; and, finally, the severest punishment among those strictly within the confines of the Holy Office, the *'aura,* or prison (Las, i., 462; cf. G. Molliner, L'Inquisition dans le monde de la Princesse aux aliers de chévaux, pp. 358–359).

Imprisonment might be temporary or for life.

*"There were two kinds of imprisonment, the milder, or *'aura larvus,* and the harsher, known as *'aura aurus* or *aura aurata.* . . . Is the milder form, or *muraus aurus,* the prisoners apparently were, if they were ordered to take exercise in the corridors, where sometimes they had opportunities of converse with each other, with the advice and comfort of the holy word. This privilege was ordered to be given to the aged and infirm by the cardinals who investigated the prison of Carcasses and took measures to alleviate its rigors. In the harsher confinement, or *aurus strictus,* the prisoner was thrust into the smallest, darkest, and most noisome of cells, with chains on his feet—I am sure cases claimed to the walls. . . . When the culprits were members of a religious Order, to avoid scandal the proceedings were usually held in private, and the imprisonment would be ordered to take place in a convent of their own Order. As these buildings however, usually were provided with cells for the punishment of offenders, this was probably of no great advantage to the victim. In the case of Jeanne, widow of L. de la Tre, in a nuns of *La Comtesse,* the prisoner committed acts of both Chadars and Waldenstarian heresy, and had previcirand in her confession, the sentence was confinement in a separate cell in her own convent, where none was to enter or see her, her food being pushed in through an opening left for the purpose—which, the bringing in of her food. . . . While the penance prescribed was a diet of bread and water, the Inquisition, with unpardonable cruelty, did not object to its prisoners receiving from their friends contributions of bread, wine, money, and garments, and among its documents are such frequent allusions to this that it may be regarded as an established custom* (Las, i., 486, 487, 491).

The greatest penalty was that of death. The inquisitor, however, never condemned to death, but merely withdrew the protection of the Church from the hardened and implacable sinner who affected no hope of conversion, or from the heretic by relapse that there was no trust to be placed in his pretended repentance (Ges, p. 159).

It was then that the civil authority intervened. The ecclesiastical judge handed the prisoner over to the secular arm (cf. Liber sententiarum, in Limborch, Historia Inquisitionis, p. 91), and it applied the legal punishment (amansuellce deo deberet), death by fire. The prisoner had one last resource, however: to save his life he could, even at the stake, renounce his error, and his sentence was immediately commuted to imprisonment for life (Constitution of FrederickII. of 1292; cf. Eymeric, pt. iii., p. 515).

Death did not protect heretics from the condemnation of *'a heretico literato.* Death was not unknown to the Romans: it was applied to criminals who had committed treason, and, in case of conviction, entailed confiscation of property and spoliation of heirs. The analogy established by Innocent IV. (bull of 26th March, 1250, contained in the Decretals, v. vii. 19) between heresy and the crime of treason led the tribunals of the Inquisition to punish deceased heretics just as if they were still alive. They were regarded as condemned in default, and treated accordingly; their goods were seized and their remains exhumed. The exhumation was carried out with great solemnity; bones and even semi-decomposed bodies were carried through the streets to the sound of trumpets, and then burned at the stake. The names of the dead were proclaimed, and the living were threatened with a similar fate if they followed their example (qui per al pera, says the Chronique de Guillaume Perisson, first inquisitor of Albi (published in Donains, p. 110)).

These various penalties could be applied only after sentence pronounced in a public assembly convened for the purpose and known by the name of Sermo generalis (see Tauss, pp. 425–431). This assembly was what is commonly known as *auo facere, or avo de feu (act of faith).* To the masses and to many others the name *auo de feu* suggests the very worst horrors of the Inquisition; they
section 'Sciences historiques,' Freiburg, Switzerland, 1896, pp. 318-367). We see in these councilors a foreshadowing of the modern jury; and it has been rightly observed that the inquisitors generally followed their advice and even tempered it with mercy (Donais, pp. 324-326, with examples). They were, furthermore, forbidden, from the time of Clement V (bull Aditorum querelae) to make any serious decision without first hearing the advice of the bishops, the natural judges of the faith. In a word, although they do not present 'a sublime spectacle of social perfection' (Civiltà cattolica, Rome, 1835, i. 295), the tribunal of the Inquisition conformed to a very high ideal of justice; an ideal as lofty as that conceived by the best spirits of the Middle Ages.

We could not adopt this ideal for our own; for among the methods employed by the Inquisition there was one, namely, torture, which could never find favour in the eyes of criminals with a love of justice. If they had even restricted themselves to flagellation, such as was administered, to quote St. Augustine, at home, in school, and even in the episcopal tribunals of the early ages, or as was recommended by the Council of Agde in A.D. 596, and approved by the Holy Fathers (Augustine, Ep. xxxii. 3; cf. clxxx, 23; Concil. Agath., can. xxviii; Benedict Regula, xxvii; cf. Vancasdard, p. 38, n. 3), their conduct would not have appeared so scandalous. Perhaps it might have looked upon it as a sort of domestic or paternal practice, somewhat rigorous, of course, but harmonizing with the ideals of goodness prevalent at the time. But the rack, strappado, and lighted torches were particularly inhuman inventions (cf. St. Augustine, Ep. cxxxiii. 1). When they were employed in the first centuries against Christians, every one agreed regarding them as relics of barbarism and inventions of the devil. Their character did not change when they were employed by the Inquisition against heretics; and it is a sad fact that, contrary to Innocent IV's appeal for moderation ('citra membrum damnationem et mortis periculum'), it was possible to draw a comparison between the pagan and the ecclesiastical tribunals. Pope Nicholas I, delivered a judgment on torture as a means of getting judicial information which is worthy of remembrance.

'Such processes,' he said, 'are contrary to both divine and human law, for confusion should be spontaneous and not forced; it should abound voluntarily, not by compulsion. The prisoner can endure all the torments you inflict without confusion, and then what shame there is in a man who has had what an exhibition of his Iniquity? If, on the other hand, the prisoner is overcome by pain and confesses a crime of which he is innocent, on whom does this external, more necessary not upon him who forced the poor wretch to tell the lie? (Beverwijk en omnaalde Burger, ixxxvi, i. 547).'

Innocent IV. was, of course, ignorant of this text when he recommended the use of torture. His excuse, if he had any, was that he was only following the example of the civil courts and conforming to the customs of his time.

The penalties imposed by the tribunals of the Inquisition are more difficult to judge. The death-penalty is of the first importance. Let us notice, to begin with, as a point of history, that the punishment of death for the crime of heresy owed its origin to the people, and was inserted in the council code only at the wish of the princes, without any intervention of ecclesiastical power; the Church never admitted the penalty of death into her code. This being so, it remains for us to consider whether heretics could be justly condemned to death, and whether the Church could have, or actually had, any share in their condemnation. The early Fathers, Greek, Latin, and Augustine, did not approve of the death-penalty for heresy (see texts...
in Vanciardi, pp. 3, 5, 29, 34; and their doctrine seems to conflict with our Lord's parable of the wheat and tares: 'Is it not possible,' said Wazan, bishop of Liège, in the 12th cent., 'that those who are tares to-day may be converted to wheat to-morrow?' [Pap. Vat. lat. 1023, fol. 274b]. To put them to death, then, was to deprive them at a stroke of any possibility of conversion.

Those who advocated the death-penalty, Frederick of Aquitaine (Simons, ii. qu. xi. art. 3), tried to support their doctrine by arguments from reason. The supreme penalty, they said, was the recognized punishment for persons guilty of treason or forgery, and accordingly ... and so on. Their argument is, of course, a case of mistaking comparisons for reasons. The State criminals in question were a serious menace to the social order, which could not be truly said of all and every heresy as such. There is nothing in common between a crime against society and a crime against God; and, if these were to be assimilated, it would be quite an easy matter to prove that every sin is Divine treason, and consequently punishable with death.

'To tell the truth, the heresies of the Middle Ages were nearly always interwoven with anti-society. Such a sort as the Cathari, for instance, which wrapped itself round in mystery and corroded the heart of the people, inevitably called down the vengeance of society and the sword of the State for no other crime than existing and acting: 'and, however much we may deprecate the means used for its suppression and comonnize those who suffered for conscience sake, we cannot but admit that the cause of orthodoxy was in this case the cause of progress and civilization. Had Catharism become dominant, or even had it been allowed to exist, on equal terms, its influence could not have failed to prove fatal to the State. Its association with regard to commerce between the sexes, if strictly enforced, could only have led to the extinction of the race; and as this involves a contradiction of nature, it would have probably resulted in revolution, communal disorganization and the destruction of the Institution of the family, rather than in the disappearance of the human race and the return of exiled souls to their Creator, which was the supreme lesson of the true Catharism. Its condemnation of the visible universe and of material things as such, the work of Satan rendered sinfully all thing after material improvement, and the consequences which in such a creed could only lead man back, in time, to its original abode of corruption. It was not of a revolt against the Church, but a renunciation of man's domination over nature' [Leo, i. 120].

Its development had to be stopped at any cost. In fighting it to the death, society was only acting in self-defence against the inroads of an essentially destructive force. It was the struggle for existence. It is not surprising that Church and State should combine to oppose their common enemy. If all disturbers of public order and ordinary law-breakers were to be struck from the list of sect-members sent to the stake or the dungeon, we should find the remaining number of condemned heretics to be very small indeed. They were, according to common received doctrine, equally amenable to the jurisdiction of Church and of State. It was inconceivable that God and His revelation should lack defenders in a Christian kingdom: the magistrates were held responsible to a certain extent for offences committed against the Deity. Hence heresy being indirectly to their tribunal. It was their privilege and duty to combat errors of faith as they did anti-socialţe crimes.

As regards the Church's attitude, in principle no heretic was condemned to death. The sacred formula ran: 'Dannati per ecclesiam seculari judicio relinquantur, animadversione debita puniendi' (cf. EcononimoGrammatikos, 15, lib. 5, tit. 7 [ed. E. Friedberg, Leipzig, 1882, pp. 65-6]). Bernard Gui presided over 18 auto da fé held by the tribunal of Paniers, and one in 22 or 23 for that of Toulouse (cf. Vascanard, 1898, p. 248 b, with notes). Taking everything into consideration, we may hold that the institution and working of the tribunal of Inquisition were the means of real social progress: not only did they close the era of summary judgment (cf. Vascanard, pp. 38-66), but they also considerably lessened the severity of the sentences involving the death-penalty. Leo, who could not be charged with any bias in favour of the Church, has found it possible to say in all truth: 'The stake
a large degree, heredity or predisposition, which plays so large a part in the causation of mental diseases. But there is another aspect of heredity which is not necessarily connected with the question of immunity, namely, the germinal transmission of inborn variations in the structure and functions of the nervous system, and which are produced by the repeated appearance of idiocy, imbecility, eccentricity, and similar insanities in certain families. We see, therefore, that the main divisions of mental unsoundness are: (1) congenital defects in the structure of the brain, which prevent the proper manifestation of its function, and produce idiocy and the various grades of imbecility and mental weakness or imperfection; (2) the acquired insanities which occur as a rule between the ages of 20 and 50 years, and which chiefly depend upon, or are invariably accompanied by, definite physical changes of a subtle nature, indicating in the majority of forms a general toxemia of the system; (3) the toxic insanities caused by the effects of poisons such as metallic toxins, phials, alcohol, lead, etc., acting directly or indirectly upon the cellular cells in the convolutions of the brain; (4) the insanities which accompany nervous affections as epilepsy, hysteria, etc.; (5) the mental unsoundness caused by gross lesions of the brain, including injuries, tumours, apoplexies, and other vascular diseases which destroy the brain substance; and (6) the mental symptoms which accompany the decline of physical and mental vigour in old age.

1. Causes of insanity. As scientific investigation proceeds to throw light upon certain limited fields of this broad question, two facts begin to assume prominence: the great influence of hereditary predisposition over the complex of the changes in the human system which occur in all cases of mental disease. As we contemplate these facts we are compelled to admit the importance of this theory in the prevention, and to relegate to a more distant sphere of influence the host of popular influences which our forefathers regarded as the proximate, intimate, and essential causes of insanity.

The question of heredity itself is beset with great difficulties, and it has to be admitted that we are very far from a true comprehension of its intricacies (cf. art. Heredity, vol. vi. p. 507 ff.). It is clear, however, that the inheritance of insanity from his ancestors both his mental and his physical characteristics. In most ordinary families it is impossible to obtain the accurate information upon which to found an undoubted history of transmitted disease. On the other hand, in the case of certain races, sects, and castes, e.g. Jews, Quakers, and the aristocracy, fuller information on these points can be obtained, and the result shows indubitably that insanity in the ancestors tends to reproduce itself either in the same form or as a mental anomaly of some kind in the descendants. But, according to the law of regression to the normal which has been expounded by Galton, and according to the law of stason, the incidence of this heredity varies greatly in different members of the same family, so that the majority of the members may escape the taint altogether. Even though it may be shown that actual mental disease has not occurred in the family history of an insane person, it is often possible to ascertain the presence of nervous degeneration as evidenced by epilepsy, neuralgia, sexual and alcoholic excesses, or paralysis of various kinds, in the past and present members of his family. Perhaps the most common proofs of the connexion of the insanity in a family is what is known as mental degeneracy, which includes feeble-mindedness, great impres-
sionability, suspiciousness, violent temper, impulsiveness, or excessive timidity. Certain families show a marked tendency to produce at intervals individuals afflicted with certain physical deformities of various types. This is, of course, the result of an innate germinal variation. When this variation affects the structure of the nervous system, especially that of the brain, it is apt to be accompanied by idiocy or imbecility. In estimating the influence of mental defect and aberration in ancestors upon the production of insanity in their descendants, it must be kept in view that the strain of circumstances may determine the appearance of insanity in a predisposed person who might, under different conditions, have escaped the incidence of the malady. Nor must it be forgotten that a person predisposed to insanity by heredity may, in favourable circumstances, manifest no symptoms of insanity during his life, and yet transmit the tendency to his children. Here we must face to face one of the problems of hereditary predisposition. What is, in the latter instance, transmitted? There can only be speculation on such a problem, but, so far as we can perceive, there are probably two elements, among others, transmitted, namely, a structural, functional delicacy of the nervous system, and a defective immunity of the body tissues against the action of toxins of various kinds.

Races and families become acclimatized to special environments and modes of life, and their removal from them is attended by degeneration. It is a well-established fact that the type of town dweller differs in many respects physically and mentally, from the rural inhabitant. A little consideration will show that the change from the one type to the other is effected, chiefly, by the elimination of those individuals who are not fitted for the life of the new environment. The process of this elimination of the unfit must necessarily be attended by disease both of the body and of the mind. It has also to be remembered that the conditions of all localities, whether urban or rural, are constantly varying, in consonance with the universal surrounding change. Populations fluctuate; new inventions disturb old social relations; food, dress, and customs vary. To one and all of these changes the human organism has to adapt itself, and always the less fit types—not necessarily the least desirable—are the least favoured. With respect to these variations in the environment, man has to suffer. But those who become first, and most readily, the victims of mental alienation as the result of changes in their environment are the hereditarily predisposed.

Closely allied with the influence of the environment in producing insanity is the question of the influence of certain habits and excesses. Chief among these is the alcohol habit. There can be no question that over-indulgence in alcohol exercises a baneful effect upon the nervous system, and that a considerable number of people now insane might have remained sane had they abstained from its use. Sexual excesses are, though to a less degree, accredited causes of insanity. There is also to be mentioned indulgence in narcotic drugs, such as opium, hashish, and cocaine. With regard to all these causes of insanity, it must be pointed out that their causative relation to insanity is complicated by the following facts: (1) in some cases they constitute symptoms of an incipient or already established insanity; (2) in regard to certain of them (alcohol in particular) there undoubtedly exists a special inherited tendency towards their excessive use, and this in itself gives additional right to be regarded as a separate psychosis; (3) unfortunately, the tendency to both alcoholism and insanity may be inherited by the same individual. This double heredity and the independence of alcoholism and insanity are established by the existence in the same family at the same time of alcoholic members who do not become insane, and of insane members who never become alcoholic.

With regard to the hosts of moral causes which are popularly regarded as producing insanity, their influence has been accepted with great reluctance. That a sudden moral shock may cause insanity in a highly nervous individual is probably true, but such shocks when they do occur must be regarded more as of the nature of trunsits, or direct injuries affecting the nerve cells and fibres, than as subtle influences of a spiritual nature. That prolonged anxiety and worry may cause insanity in predisposed individuals is probably also true, but here the effect is indirect, and due to the lowering of the general health and nutrition of the body as a result of insomnia, decreased appetite, and disorder of function.

The wide field of toxemia and its role in the causation of mental troubles can only be touched upon. It is usual to divide such toxic agents into two great classes: (a) those introduced into the system from without, e.g., alkaloids, poisons, etc., and (b) those formed within the system, e.g., uric acid, oxalic acid, gastro-intestinal toxins, and toxins due to defective gland function, especially that of the thyroid gland. The effects of these toxins will be referred to under the headings of the diseases which they are supposed either to cause or to influence.

2. TERMINAL SYMPTOMS OF MENTAL ABBERRATION.—(a) Mental excitement or mania is a condition in which the subject, under the influence of a corresponding emotion, exhibits intellectual excitement with defective self-control, impaired judgment, and consequent anomalies of conduct. This condition is known as simple mania. When the excitement becomes acute, the flow of ideas more rapid, the conduct of the patient less and less restrained, the speech incoherent, and the bodily restlessness incessant, the condition is known as acute mania.

(b) Mental depression or melancholia is the antithesis of the preceding condition. It is characterized by mental pain and gloom, slow reaction to stimuli of all kinds, slow muscular action, and diminished general sensibility. The ideational centres are always in the same state as when melancholic, and the thoughts of the patient are constantly engaged in formulating explanations of his misery, and in the invention of self-accusatory and self-deprecatory ideas. When the condition becomes acute, there may be motor restlessness, and, under the influence of gloomy delusions, strenuous resistance to any offers of assistance on the part of others. Suicide is probably contemplated seriously by all sufferers from this affection.

(c) Mental confusion or delirium.—In this condition, in contrast to both mania and melancholia, where the intellectual functions and memory remain clear, there is obscurcation of thought, greater or less unconsciousness of surroundings and, in an imperfect memory, or total loss of memory, of what has taken place during illness. The condition is met with typically in the delirium of fevers, in acute alcoholism, and in many forms of mental affections which owe their origin to toxic infection.

Stupor is a symptom which may occur in the course of any mental affections. It is a characteristic of the katatonic form of dementia praecox described below. Patients suffering from stupor manifest little or no volition, and do not respond to any of the ordinary suggestions. They usually retain the power of walking and
Thus a man who believes himself the victim of persecution generally develops hallucinations corresponding to his delusions, and a man who is the subject of delusions of pride and grandeur is liable to hallucinations corresponding to these ideas (see, further, art. HALLUCINATION, WANDERING). (g) Obsessions and impulses.—An obsession is a dissociated idea, or group of ideas, which suddenly enters consciousness, disturbing the ordinary course of ideation, and not involving the mind of the individual—that is to say, the subject of obsession regards it as an unreality, and as apart from his ordinary ideation. Obsessions are most common in the morbidly neurotic, hysterical, or hereditarily degenerate person. The number of obsessions is endless, there being almost as many forms as there are of thought. Some are harmless and meaningless, as, e.g., the desire to repeat words or phrases, to count objects of no interest, or to touch certain articles. Others are fatal, as the desire to kill, to commit suicide, or to steal.

As though in a trance or daydream, so does obsession lead up to impulses. Some impulses are harmless; others are serious. Among the latter are suicidal and homicidal impulses, the impulse to drink (diplophobia), or the impulse to steal (kleptomania). True impulse is generally great in thought, leads to much distress, due to the strength of the obsession against which the purpose will of the individual contends. The recognition of this conflict between impulsion and will is important in the diagnosis of obsession and impulse.

(b) Dementia or mental enfeeblement.—Mental enfeeblement is of two kinds—primary and secondary.

1. Primary. Dementia precoce, and 'paralytic dementia.' Dementia precoce varies from a condition in which the mental faculties are rudimentary, if, indeed, they can be said to exist, up to a state of mind characterized by such limited capacity that the subject is unable to take proper care of himself, or to perform any ordinary social or civil functions. All idiots are incapable of acquiring literary education. The higher grades of them, however, are trained to habits of decency and cleanliness. There are various types of idiocy, e.g., the geniuses or congenital type, which are malformed mental variations; the paralytic type, in which the ear is brain is affected; the paralytic type, in which the ear is brain is affected; and the inane form, in which the will or imagination is affected.

2. Secondary. Idiocy, as a result of disease, has been produced by disease, such as cerebral disease, or by disease of the brain, or by a disease of the skull, or by a disease of the skull. Idiocy, as a result of disease, has been produced by disease, such as cerebral disease, or by disease of the brain, or by a disease of the skull, or by a disease of the skull. Idiocy, as a result of disease, has been produced by disease, such as cerebral disease, or by disease of the brain, or by a disease of the skull, or by a disease of the skull.
often difficult to classify borderline cases. The absence of mental power in imbeciles may be so slight that it becomes apparent only in the continuing infantilism which the subject manifests as puberty approaches. On the other hand, it may manifest itself by inability to acquire ordinary education at an early period of life. Not only so, but imbecile young children generally manifest peculiarities of conduct, unusual attitudes of mind, and abnormal ways of thought, all of which are characterized by a feeble and undeveloped mind. Physical deformity is rare, as compared with idiocy, and many imbeciles, though not well developed physically, are of robust bodily constitution.

The mental reaction of imbeciles towards their environment is, generally speaking, defective; they are incapable of learning by experience the conventional social relationships of everyday life, or of understanding anything beyond the merely animal and the simpler human necessities of existence. At the same time, these defects are, in a few exceptional individuals, associated with some musical or arithmetical faculty, with an extraordinary memory for dates, or even an aptitude for certain limited mechanical skill. The power to protect themselves is greatly reduced, from helplessness in the midst of ordinary dangers up to a capacity for partially or even wholly earning their own means of livelihood by the performance of, as a rule, unskilled labour. The majority of imbeciles are deficient in self-control and in the moral sense; and, though many are good-natured, not a few are impulsive, passionate, and vicious.

A grade imbecility or degeneracy.

This class of imbeciles, though often apparently normal, physically and mentally, are only a degree removed from imbeciles. As a rule, such individuals, though of average intelligence—occasionally even exhibiting signs of various kinds, and anomalies of emotion either in the direction of hyper-emotionalism or in the absence of certain emotional qualities, such as sympathy, tend to be more or less malignant. Certain types of criminals undoubtedly belong to this class. The intellectual development of such persons is always defective, and presents well-marked irregularities, and often shows signs of physical degeneration. They do not possess the normal capacity to learn, and are subject to various forms of psychopathic affection, such as paranoia or hysteria, and to such nervous diseases as epilepsy.

III. THE ACQUIRED INSANITIES.

The acquired insanities include those mental affections which manifest themselves between puberty and the end of the fourth decade in life. Undoubtedly they may appear, though rarely, both before and after these periods.

1. Mania-melancholia.

(a) The circular form of mania-melancholia.

The attacks of mental exaltation and of mental depression succeed each other usually without intermission, and are followed by a lucid intermission of longer or shorter duration (cycle a double form). When the alternate attacks follow one another without a lucid interval, or are continuous, the form is known as 'circular insanity' (cycle circulaire). The term 'circular insanity' is, however, used to embrace both forms. It is unimportant whether the mental depression succeeds or precedes the mental exaltation.

Although the form of mania which occurs in circular insanity may assume an acute type, it is usually of the form known as 'slight.' There is a general exaltation of the mental functions, without any apparent incoherence of ideas, without hallucinations of the senses, and without the presence of marked delusions. The memory becomes extraordinarily acute, and the patients talk or write incessantly. At the same time, although they appear capable of reasoning correctly, they lose their sense of proportion and the fitness of things, and their judgment loses its normal balance. Thus they become less reticent regarding themselves and their affairs, and less cautious in speculation, and may say or do things, to the disgust of others, and thus become faulty and untrustworthy. They lose their natural affection for their relatives and friends, and the company of people of inferior type. In short, they become extraordinarily given to idle, vain, vindictive, quarrelsome, and lose their moral status. When this condition has lasted for months, it may be years, the subject gradually loses his abnormal energy, though occasionally it may flicker up, and lapse into a state of mental depression. The contrast between the same patient labouring under melancholia and in his previous maniacal condition is profound. He becomes silent, pale-faced, seeks solitude, and shows a disinclination to converse. His former energy is replaced by extreme listlessness and a most paralyzing inability to perform mental or physical work. The duration of the two periods of mania and melancholia are not always the same, the period of depression being generally longer than the excitement. Great irregularity also exists in the duration of the lucid interval, although there are some cases in which it bears a stated relation to the length of the mental affections which precede it. Circular insanity is, on the point of view of recovery, a very hopeless condition; for, though the individual attacks are almost always recovered from, the condition tends to recur with an almost fatal certainty. It is a condition that is more common among the educated classes of society, and which occurs not infrequently in persons with an inherent tendency to insanity.

(b) The recurrent forms of mania-melancholia.

1. Mania.

The form in which mania appears may be either simple or acute. The description of simple mania given above in connexion with circular insanity must suffice for the present purpose. Acute mania differs from it in that it is of short duration, and is followed by a lucid interval of intensity, and simple mania may in any patient suddenly pass into the acute form. In acute mania there is great mental exaltation combined with intellectual disturbance, sensory delusions, and uncontrollable motor restlessness. The first appearance of the affection is usually ushered in by malaise and mental depression generally of short duration. Gradually mental exaltation supervenes, sometimes suddenly, at other times after lapses into depression. The patient's ideas soon become confused, for the ideation becomes so rapid that there is difficulty in consecutively
expressing them, until finally speech becomes incoherent. The exaggerated excitability of the senses of sight and hearing becomes so intense that a stray word or an object startles the patient unconsciously, with the train of ideas unconnected with the train of thought. Thus the patient's attention becomes unfixed, and he tends to associate his ideas more by their external than by any internal relational character. The motor excitement manifests itself by increased movement and lassitude. The will-power at this stage can hardly be said to exist, and actions are determined, not by any formulated principle, but by the idea predominant for the time. Further, there is complete loss of the moral sense and of natural affection, and the emotions are equally disturbed: grief, joy, fear, and hatred may be manifested by the patient within a few minutes of each other. Notwithstanding this extraordinary mental disturbance, the memory in many cases remains intact. Not only do many of the patients remember afterwards what had been said and done to them, but they are able to describe their sensations and repeat their own sayings. The physical symptoms comprise a marked change in the facial expression, which betrays the instinctive and varied passions which dominate the soul. The disorder of movement to which reference has been made expresses itself in an agitation of all the voluntary muscles, which during intense mental excitement results in violent contortions. Insomnia is always a morbid or less marked symptom of acute mania; it often resists all treatment, and, when long continued, has a deleterious effect upon the patient. The function of speech and nutrition are always disturbed during the attack; the appetite, whether diminished or increased, is capricious, and the patients invariably lose weight during the acute stages. The basal temperature is often slightly, if at all, increased. Finally, there is high blood pressure and a marked increase in the relative number of the white corpuscles of the blood. This last change is regarded as indicating a toxic condition of the blood. Mania may be associated with various nervous and cerebral affections, such as hysteria, epilepsy, and general paralysis. After one attack the disease tends to recur at regular or irregular intervals. Although it is not a usual occurrence, it is right to remark that at any time in the course of recurrent mania an attack of melancholia may take the place of one of the maniacal attacks. The termination of the attacks is by recovery in from 70 to 80 per cent, a small percentage die of some complication, and a certain number pass over to chronic mania.

Chronic mania is simply the indefinite persistence, in a milder form, of the symptoms of acute mania. The excitement is continuous but less intense, and the patients are more manageable. Many of the subjects are able to perform some simple work. The illusions and morbid ideas of the acute stage become more fixed and crystallized, so that many patients exhibit the symptoms of delusional insanity (paranoid). A certain degree of mental enfeeblement is always present, and many such patients are unable to express themselves coherently. The patient may be liable, from time to time, to acute attacks of excitement which resemble those of the primary condition.

2. Melancholia. — The characteristic feature of melancholia is a morbid depression of feeling which expresses itself in every degree from silent resignation up to the most violent despair. At the same time, there is intellectual disturbance in which painful impressions predominate. In contrast with mania, the intellectual contents are more or less depressed and inactive, so that instead of the pleasurable feelings which accompany their activity there is produced a feeling of pain and misery. The treatment of the attacks of manic-depressive insanity is symptomatic, and as a rule the patients make satisfactory recoveries from the individual attacks. From the point of view of prognosis, however, the matter is more serious, for the danger of a relapse at some future period can never be ignored. In the circular form of the disease, the recurrence of the attacks is almost certain.

ii. The Dementia Praecox Group. — Dementia praecox is essentially a disease of adolescence; by far the greater number of cases develop between the ages of 20 and 25 years. The disease cases develop before the age of 20 and a few after 40 do not affect the validity of the above statement. The onset of the disease is so slow and insidious as almost to escape observation. The early symptoms extend over a period of years. Patients, the majority of whom have given promise of a normal development, may gradually exhibit, in early adolescence, unmisshakable signs of progressive mental deterioration. This intellectual decadence is almost always accompanied by emotional disturbances, such as outbreaks of temper, undue conduct, or violent language. These irritable manifestations are at first transient, but they become fixed, and the patient may fully realize, and be truly repentant for, his behaviour. As the disease progresses, these unaccountable and unprovoked emotional outbursts may become more alarming, and even dangerous, and the patient becomes apathetic, careless in his habits, tends to lie in bed too long, and often gives up work altogether without any adequate reason. His natural affection abates until it may disappear or become diverted into an antipathy towards his nearest relatives. Finally, he may develop loose ideas of persecution, or ideas in the paraesthetic form of the disease. These delusions of persecution are accompanied by hallucinations and illusions of the senses. The disease ends, in the great majority of instances, in dementia or permanent mental decay.

Dementia praecox presents three forms: hebephrenia, katatonia, and paranoia, or the delusional form.

1. Hebephrenia occurs, as a rule, in young subjects who, although fairly normal up to a certain point in the intellectual sphere, yet have always presented some symptoms of emotional instability or eccentricity. The mental deterioration, which sets in very gradually, is characterized by a desire for solitude, reliance, shyness, and suspicion of others. Suddenly a period of slight mental excitation may appear, during which the behaviour of the patient attracts attention; or, on the other hand, an attack of depression may supervene, in many respects similar to a mild attack of melancholia. These mental disturbances quickly pass off, but sooner or later they recur. The patient may suffer from indefinite delusions, or even hallucinations, but these, as a rule, are rare in hebephrenia; meanwhile the mental deterioration progresses. The patient comes to lose all initiative, all interest in his work or surroundings; become indifferent towards relatives; careless of appearance and negligent of duties. His speech becomes jery and hesitating, and the power to carry on a conversation is gradually lost. Throughout the course of the disease, and up to the time when actual delusions set in, there is a surprising degree of accurate knowledge of his surround circumstances and of what is being said or done in his presence. The inability of the patient to respond or react is the characteristic feature of the disease. Sooner or later, however, the patient is cast into a state of irresponsiveness due to permanent loss of mental
power. Before this final stage is reached, it is not infrequent to observe violent and impulsive conduct, as a result, probably, of hallucinations, of delusions, or of both.

2. Kataonia differs from hebephrenia chiefly in the presence of peculiar attacks of muscular tension or cataleptic rigidity of the muscles; in mutism—phases of the disease, during which the patients refuse to speak; and in the peculiar apraxia and grasping movements in which the patient resists all attempts on the part of others to do anything for them. Impulsive actions are perhaps more marked in the kataontic form than in the other varieties of dementia precox. In other respects, such as the presence of acute temporary attacks of mental excitement and depression, and in the gradual mental deterioration of the subject, katanais bears a general resemblance to hebephrenia.

3. Paranoia. This variety of dementia precox may commence exactly like hebephrenia, or kataonia, or with an acute attack of manic-depressive insanity followed by or not by kataontic symptoms. Its chief and distinguishing feature, however, is the presence of delusions of a more or less systematized nature, and of hallucinations of the senses. The clearness and consistency of true paranoia (see below) and, moreover, the patients almost always exhibit peculiarities and mannerisms indicative of mental degeneration. Some of these or other of the symptoms which have been described as characteristic of dementia precox supervene and are followed by a tendency towards dementia.

The immediate of a prognosis, dementia precox is a particularly grave form of mental disease, and only a small minority of the subjects make a satisfactory recovery. It has been estimated that of the cases about 90 per cent fall into permanent dementia, that about 15 per cent recover partially, though more or less mentally crippled, and that only 5 per cent recover absolutely. So little is as yet known of the pathology of the disease that no scientifically formulated line of treatment can be laid down. As regards causation, the hereditary factor would appear to be of great importance, no less than 75 per cent of the cases showing an hereditary tendency to mental affections. The environment of the subject is also, apparently, important, and it has been pointed out by some observers that dementia precox is particularly liable to affect families which have been subjected to sudden and extreme social changes, such as from poverty to wealth, or from a country to an urban life.

III. THE PARANOIA GROUP. Paranoia is a chronic mental disease of which systematized delusions, with or without hallucinations of the senses, are the prominent characteristic. The delusions may take the form of ideas of persecution or of grandeur and ambition; these may exist separately or run concurrently in the same individual, or they may become transformed in the course of the patient's life from a persecutory to an ambivalent character. The disease may begin during adolescence, but the great majority of the subjects manifest no symptoms of the affection until full adult life. The prominent and distinguishing symptom of paranoia is the delusion, which is gradually organized out of a mass of original but erroneous beliefs or convictions, until it forms an integral part of the ordinary mental process of the subject and becomes fused with his personality. This slow process of the growth of a false idea is technically known as "systematization," and the delusion is then said to be "systematized." As such delusions are coherently formed, there is no manifest mental confusion in their expression. Notwithstanding the fixity of the delusion, it is subject in some cases to transformation which permits of the gradual substitution of delusions of grandeur for delusions of persecution. It happens also that periods of remission from the influence of the delusion may occur from time to time in individual cases, and it may even happen, though very rarely, that the delusion may permanently disappear.

Paranoia is classified for purposes according to the form of delusion which the patients exhibit. Thus there are the persecutory, the ambitious, the amatory, and the delusional types, these divisions depending upon the prevalence of the primary emotions of fear or suspicion, pride or vanity, and love.

1. Persecutory Paranoia. This form is characterized by delusions of persecution, with hallucinations of a painful and distressing character. In predisposed persons there is often observed an anomaly of character dating from early life. Towards the commencement of the insanity the patient becomes gloomy, preoccupied, and irritable. Suspicions respecting the attitude of others take possession of their minds, and they ultimately come to suspect the conduct of their nearest relatives. Certain of the symptoms caused by sleeplessness and anxiety gradually supervene, and the patients become pale and worried in appearance, and their appetite is affected. The mental symptoms slowly become more pronounced, until the patient believes that people are conspiring against him. The conversations of his friends are supposed to be interlarded with phrases which, on examination, he believes to contain hidden meanings, and the newspapers appear to abound in veiled references to him. A stray word, a look, a gesture, a smile, a cough, a shrug of the shoulders, or the look of a stranger, are apt to be misinterpreted. The extraordinary prevalence of this imagined conspiracy may lead the patient to regard himself as a person of great importance, and may result in the formation of delusions of ambition which imagine themselves with the general conceptions of persecution, or which may wholly supplant the persecutory insanity.

At this juncture, however, it generally happens that hallucinations begin to appear. These, in the great majority of instances, are auditory, and usually commence with definite noises in the ears, such as ringing sounds, hissing, or whispering. Gradually they assume a more definite form, until isolated words and, ultimately, formed sentences are distinctly heard. There is great diversity in the completeness of the verbal hallucinations in different patients. Some patients never experience more than the subjective annoyance of isolated words, generally of an insulting character, while others are compelled to listen to regular dialogues carried on by unknown voices concerning themselves. A not uncommon form of verbal hallucination is formulated in the complaint of the patients that 'all their thoughts are read and proclaimed aloud.' Even more than the enforced listening to verbal hallucinations this "right reading" distresses the patient, and often leads him to acts of violence, for the privacy of his inward thoughts is, he believes, desecrated, and he often feels helpless and desperate at the condition from which there is no possible escape.

Though some of the subjects do not develop any other form of hallucination, it is the unfortunate lot of others to suffer, in addition, from hallucinations of taste, smell, or touch. The characteristic sensation of the subjective sensations in these sense organs leads to the formulation of delusions of poisoning, of being subjected to the influence of
noxious gases or powders, or of being acted on by such agencies as electricity. Such are the persons who take their food to chemists for analysis; who complain to the police that people are acting upon them injuriously; who hermetically seal every crevice that admits air to their bedrooms to prevent the entrance of poisonous fumes; or who place glass castors between the feet of their beds and the ceiling, the object of insulating electric currents. Such patients obtain little sleep; some of them, indeed, remain awake all night—for the symptoms are usually worse at night—and have to be content with such snatches of sleep as they are able to obtain at odd times during the day. It is obvious that a person tormented and distracted in this way may at any moment lose self-control and become a danger to the community.

This type of the disease may persist for an indefinite period—even for 20 or 30 years—without any change, except for the important fact that remissions in the intensity of the symptoms occur from time to time. These remissions may be marked as to give rise to the belief that the patient has recovered; but in true paranoia this is never the case, and sooner or later the persecution begins again in all its former intensity.

2. Ambitious paranoia.—After a long period of persecution, a change in the symptoms may set in, in some cases, and the intensity of the hallucinations becomes modified. Delusions of grandeur begin to appear, at first faintly, and occasionally the increase in force until they ultimately supplant the delusions of persecution. At the same time, the hallucinations of a disagreeable nature fade away, and are replaced by audible hallucinations conforming to the new delusions of grandeur. Undoubtedly, however, paranoia may commence, so far as can be observed, with delusions of grandeur, in which case there is seldom or never a transformation of the delusion. If the personality, or of the delusions from grandeur to persecution, although delusions of persecution may engrave themselves upon or run side by side with the predominant hallucinations. The emotional basis of ambitious paranoia is pride, and every phase of human vanity and aspiration is represented in the delusions of the patients. There is a considerably less logical manner displayed in the explanations of their beliefs by such patients than in the case of the subjects of persecution. Many of them, without any regard for the psychological or ideological detail, affect to be the descendants of historical figures, and have no compunction in disowning their natural parents or explaining that they have been “changed in their cradles.” In order to account for the fact that they are of exalted or even of royal birth. Dominated by such beliefs, paranones have been known to travel all over the world in search of confirmation of their delusions. It is people of this kind who drop into the ears of confiding strangers vague hints as to their exalted origin and kindred, and who make desperate and occasionally alarming attempts to force their way into the presence of princes and rulers. The sphere of religion affords an endless field for the ambitious paranones, and some of them may even aspire to divine authority; but, as a rule, the true paranoia does not lose touch with the more extravagant delusions of persons who call themselves by divine names and assume omnipotent attributes are usually found in patients who have passed through acute attacks of mania or “dementia praecox,” and who are mentally enfeebled.

A not uncommon form of paranoia, combining both ambition and persecution, is where the subject believes that he is a man of unbounded wealth or power, and assumes the airs of a potentate. He has, however, deprived by the machinations of his enemies. These patients frequently obtain through auditory hallucinations the knowledge on which they base their delusions. They are often so troublesome, threatening, and persistent in their determination to obtain redress for their imagined wrongs that in the public interest they have to be forcibly detained in asylums. On the whole, however, the ambitions paranoid is not troublesome, but calm, dignified, self-possessed, and reserved on the subject of his delusions. He is usually capable of reasoning as correctly and of performing work as efficiently as ordinary people. Many of them, however, while living in society, are liable to give expression to their delusions under the influence of excitement, or to behave so strangely and unconventionally on unsuitable occasions as to render their seclusion either necessary or highly desirable.

3. Amatory paranoia.—A distinguishing feature of this form of paranoia is that the subjects are chivalrous and idealistic in their love. Some of them believe that they have been “mysteriously” married to a person of the opposite sex, usually in a prominent social position. The fact that they may have never spoken to or perhaps never seen the person in question is immaterial. The conviction that their love is reciprocated and the relationship understood by the person they believe them to be married to is unshakable, and is usually based upon suppositions that to a normal mind would appear either trivial or wholly unreal. The object of affection, if not mythical or of an esoteric character, is usually one who has been approached, is not infrequently persecuted by the admirer, who takes every opportunity of obstructing personally or by letter the evidences of an ardent adoration. This assumption can easily become complicated and embarrassing before it is realized that the persecutor is insane.

The subjects of this form of paranoia are in the majority married women well advanced in years who have led irreproachable lives, or men of a romantic disposition who have lived their mental lives more in the realm of chimeras than in the regions of real facts.

4. Litigious paranoia (paranodia quaerulous).—The clinical form of litigious paranoia presents uniform characteristic features which are recognized in every civilized community. The basic emotion is vanity, but it is modified by the element both of acquisitiveness and avarice. Moreover, the subjects are, as regards character, persistent, opinionative, and stubborn. When these qualities are exaggerated, as they are in this type, which, as has been pointed out, is more influenced by the passions or emotions than by ordinary rational considerations, it can readily be appreciated that the subjects are capable of creating difficulties and anxieties which sooner or later may lead to their forcible seclusion in the interests of social order.

It is important to observe that the rights to which such people lay claim, or the wrongs of which they complain, may not necessarily be imaginary. But, whether imaginary or real, the statement of their case is always made to rest upon some foundation of fact, and there is, moreover, presented, if not with ability, at any rate with forensic skill and plausibility. As the litigants are one-sided and capable of seeing only one side of the case—their own—and they are swayed by convictions which preclude feelings of delicacy or diffidence, they ultimately succeed in obtaining a hearing in a court of law under circumstances which would have discouraged any normal and intelligent person. Once in the law-courts, their doom is sealed. Neither the loss of the case nor the payment of heavy expenses has any effect in disheartening the litigant, who carries his suit from court to court until the methods of legal
appeal are exhausted. The suit may be raised again and again on some side issue, or some different legal action may be initiated. In spite of the alienation of the sympathy of his relatives, and the invalid character of the claims, the paranoid continues his futile litigation in the firm belief that he is only defending himself from fraud, or seeking to regain his just rights. After exhausting his means and perhaps those of his family, and finding himself deserted by all those to whom he was accustomed to look for advantage as formerly, delusions of persecution begin to establish themselves. He accuses the judges of corruption and the lawyers of being in the pay of his enemies and imagines a conspiracy to prevent him from obtaining justice. One of two things usually happens at this stage. Though well versed in legal procedure, he may one day lose self-control, and in open court resort to threats of violence. He is then probably arrested, and may on examination be found insane and committed to an asylum. Another not uncommon result is that, finding himself non-suited in a court of law, he commits a technical assault upon, it may be, some high legal functionary, or on some person in a prominent social position, with the object of seeking an opportunity of directing public attention to his grievances.

Paranoia is generally a hopeless affection from the point of view of recovery. From what has been stated regarding its genesis and slow development, it may be inferred that no form of ordinary medical treatment can be of the least avail in modifying its symptoms. The best that can be done in the interests of the patient is to place those in surroundings where they can be shielded from influences which aggravate their delusions, and in other respects to make their unfortunate lot as pleasant and easy to endure as possible.

In this division are included those forms of mental affection which we know to be associated with the presence of toxic substances within the body. Among these substances are the poison of infective fevers and of syphilis, the auto-intoxication of the body by waste products, as in fatigue, the disturbance of metabolism by shocks, either physical or mental, or by caloric changes; at length, finally, the poisoning of the system by the habitual abuse of such drugs as alcohol. Such a number of causes necessarily produce different clinical symptoms, which, for convenience and clearness have been divided as distinct varieties of disease. It is manifest that only the typical forms can be dealt with here.

There are certain general symptomaties features common to all these affections. On the mental side there is more or less marked confusion of ideas, in striking contrast to the mental clearness found in patients labouring under the so-called acquired insanities, especially in the manic-depressive and paranoid groups. The mental state is dreamy, thought is dissociated, speech is incoherent, and memory is blurred. There is great restlessness of an aimless character, accompanied often by mental and physical uneasiness, or pain, or an anxious emotional state. False senses-perceptions amounting to hallucinations, accompanied by delusions of a passing kind, are not unusual. All these manifestations are further coloured by the bodily weakness which is present. On the physical side there are grave bodily symptoms, characterized either by fever and prostration or by anaemic changes and wasting of the tissues. There is always a tendency to destruction of the finer nerve elements and cortical cells of the brain. In the acute forms the prognosis is always serious, but the course is more rapid, and recovery often takes place in the more chronic forms, such as chronic alcoholism and general paralysis, the prospect of recovery is almost hopeless.

1. The delirium of fevers.—This delirium is typical of the whole of the toxic insanities. The delirium varies greatly in different fevers, being, as a rule, more severe in typhus and certain types of smallpox, and less severe in the milder exanthemata, such as measles or scarlet fever. Much, however, depends on the general state of health, the condition of the nervous system to the influence of the toxin. Some persons, children in particular, tend to become confused and delirious when subjected to the action of any disease poison, e.g., smallpox or influenza, which raises the temperature of the body. The delirium generally subsides after the crisis of the fever.

2. Septic delirium.—Delirium is also apt to occur when the system is invaded by certain poisonous micro-organisms. This condition is frequently observed in the blood-poisoning arising from wounds, in puerperal conditions and, in purulent affections of the pleural and abdominal cavities, and in some conditions unaccompanied by purulent inflammation. The puerperal insanities, because of their frequency, are important; but here there are various forms of this disease. In predisposed individuals, insanity may occur during pregnancy, especially in the later months; at the time of parturition the ordinary forms of manic-depressive insanity may assume an aggravation or delirium. It is with the last variety that we are at present concerned, because it is in all respects similar to the other septic deliria associated with blood-poisoning as septic delirium reach their climax of intensity very rapidly after infection, though in some cases there is a preliminary period of mental depression, with apathy and listlessness. The speech is incoherent; there is great motor restlessness, and a subdued but intense excitement. Vivid hallucinations of sight and hearing are present, so that the patients live in their environment and lives in a world of phantasy. Sleep is invariably suspended, and the expression is anxious and morbidly mobile. The bodily symptoms point to prostration with fever, and the temperature ranges at first high, and then low. The pulse is weak and rapid, the tongue furled, and there is marked loss of appetite. The great majority of the patients (70 per cent) recover, the recovery being often preceded by a period of stupor. In those cases which do not recover, the patients, as the disease advances, become more and more prostrate, their movements become more feebie, and they lapse into coma from which they do not emerge.

3. Delirium of collapse (the exhaustion insanities).—These mental affections are most apt to occur in persons who have been exhausted by long continued fatigue, insufficient food, or wasting diseases; but they are found most frequently after the crisis of fevers or during convalescence from fevers, after surgical operations, injuries of a severe kind, or during the acute insanity by which they are preceded. The mental condition is one of confusion, with excitement, incoherence of speech, and weakened ideation. The patients suffer from vague hallucinations, and not infrequently express delusions of persecution or of self-importance. Such delusions are, however, fleeting and ill-defined. On the physical side the patients are weak, and manifest profound disorder of nutrition; the pulse is feeble and slow,
the papilla are dilated, and the skin is clammy; the tongue is furrowed, and the appetite so perverted that the patients are averse to taking food. The great majority of the patients recover, but the prognosis is by no means always favourable. When the preexisting cause has been comparatively slight, as, e.g., influenza or pneumonia, the patients rapidly recover; but, when it has been prolonged and grave, as, e.g., some forms of typhoid fever, long-continued wasting illnesses, or severe injuries, the prognosis, depending always upon the patient's strength, is more grave.

4. Alcoholism.—Many other diseases besides alcohol, when habitually taken into the system, may produce chronic poisoning, accompanied by mental disturbances; but, in view of their greater frequency, the effects of alcohol only will be referred to here.

(a) Ordinary intoxication.—Alcoholic intoxication is itself an insanity, and a person who drinks himself from sobriety into unconsciousness passes through many phases of mental alienation. In certain predisposed or irritable persons, ordinary alcoholic intoxication may produce a great excitement, with a tendency to violence. In this condition, of which the patients retain but a confused recollection, serious crimes against others, or suicide, may be committed.

(b) Acute alcoholism (delirium tremens) is the result of excessive drinking, but it is a secondary and not a direct consequence of alcoholic poisoning. For a person who has drunk to excess, but who has abstained from alcohol for several days, or even for several weeks, may, after some physical shock, such as a surgical operation, an illness, or a fit of convulsions, or a bodily injury, develop the symptoms of acute alcoholism. Such an entity points to a secondary toxemia from the intestinal canal, for alcohol is very rapidly eliminated from the system. The chief mental symptoms are vague terror, mental distress, and confusion of ideas. These symptoms are further complicated by vivid hallucinations of the senses, especially of sight and hearing. The dangers attending the mental symptoms of acute alcoholism are the violent impulses to which the patients are liable—impulses to homicide and suicide. These impulses are partly obsession, but they are undoubtedly often the result of the impression produced by the hallucinations. The chief bodily symptoms are insomniac, want of appetite, great thirst, and trembling or twitching of the muscles. The danger accompanied by physical symptoms is death from heart failure, from pneumonia, or from nervous exhaustion. Under suitable medical treatment the great majority of the patients recover.

(c) Dipsomania.—Dipsomania is really more an obsession than an alcoholic disease, but it is more convenient to consider it here. Probably all the subjects have a hereditary predisposition to alcohol, but the chief inherited quality is an instability of the nervous system which renders them liable to intoxication, and consequently to impulse. The impulse to drink probably would not appear in a person who had never experienced the pleasurable effects of alcohol, but an attack may occur suddenly in a predisposed person of perfectly irreproachable character. There are, however, exciting causes, such as mental shocks or strain or physical illness, and the attack is usually preceded by malaise or mental depression. The attacks usually last several weeks, often with short intermissions, during which the patient carries on with his usual duties and even appears to overcome his obsession. According to circumstances and the environment, the attacks tend to become more numerous or less frequent. If the former, then rapid physical and mental deterioration takes place, and the case becomes hopeless; if the latter, (unfortunately the minority), the patient may experience only one or two attacks and afterwards be immune.

(d) Chronic alcoholism is a somewhat vague term including numerous conditions. It may be defined as a condition of mental deterioration, emotional depression, and enfeeblement of the will, with a progressing tendency towards dementia, met with in persons who have habitually used alcohol to excess. The enfeeblement of the will-power, which is the cardinal mental symptom, is not confined to the inability to resist the craving for alcohol, but extends into all the social and business relations of the individual. So much is this the case that the subjects are more likely to use the tools of dupe of other people. In more advanced types of the disease there is loss of memory, especially for recent events, with confusion of ideas. The bodily symptoms are also characteristic, and include tremor of muscles, weakness of certain muscle groups, various sensory disturbances, and, not infrequently, epileptic seizures. Certain internal organs, especially the liver, kidneys, and heart, are liable to organic disease. The condition is incurable.

5. General paralysis.—While modern authorities have long been agreed that syphilis is the antecedent cause of this disease, the discovery by Noguchi of the spirochete of syphilis (Treponema pallidum) in the cerebral tissues of persons suffering from general paralysis has placed beyond doubt the fact that the disease has a syphilitic origin. General paralysis is a disease chiefly of middle life, occurring most often between the ages of 35 and 45. It is a disease of modern civilization, and affects the middle classes of direct syphilitic origin. Certain internal organs, especially the liver, kidneys, and heart, are liable to organic disease. The condition is incurable.

For clinical purposes the disease is divided into three stages, although a prodromal stage is also recognized. The symptoms of the first stage, characterized by mental symptoms, are usually of fits of memory, revealing themselves in odd and uncouth lapses in writing, in spelling, or in the performance of their ordinary routine duties. The chief change, however, is in the moral character; the patient is irritable, and occasionally violent; among strangers he is facile, versatile, and easily led astray. Gradually there develops in typical cases a condition resembling simple mania, with, however, a certain mental confusion depending upon the underlying condition of progressive dementia. Delusions of grandeur are common in this stage; these delusions, which result from the predominant state of mental
INSANITY

345

exaltation, do not always exceed the bounds of possibility and credibility. It is important to bear in mind that the insanity of the first stage may be a simple mental confusion without any conspicuous feature, or may be of the melancholic type. The latter forms are more common in females. Towards the end of the first stage, the affection of the innervation of the muscular mechanism becomes more pronounced. The muscles of the face and neck become accomodatious and the speech becomes incoherent. Difficulty is experienced by the patient in pronouncing certain words, such as ‘artillery,’ ‘British Constitution,’ ‘incompatibility,’ etc. The staccato manner of pronouncing such words is characteristic of the disease.

In the second stage, the mental weakness and confusion are more marked, the delusions become extravagant and absurd, and the conduct of the patient uncertain and foolish. He is apt to steal useless objects, to stuff his pockets with rubbish, and to lose all sense of propriety, especially with regard to instinctive human habits. The embarrassment of speech becomes painfully apparent, and the muscular incoincidence becomes so great that the patient loses the power of performing accurately such habitual movements as buttoning clothes or nutting knowl and handwriting becomes shaky and unrecognizable, the gait ataxic, and all muscular movements feeble; towards the end of this stage there appear convulsive seizures which are sometimes as expressive as attacks, and which appear to accelerate greatly the downward course of the patient’s strength.

The state of mental weakness and confusion reaches its term in the third stage. The third stage of the patient appears to be devoid of emotion, sentiment, or memory, and the only animal instinct which seems to remain is that for food. The physical symptoms of the third stage are characterized by a progressive weakness and paralysis which necessitate ultimately the patient’s continued confinement to bed. The third stage terminates his life. He usually dies in a convulsive seizure, or from exhaustion of the disease to some vital centre in the brain, or from blood-poisoning or pneumonia.

General paralysis is the most fatal of all diseases, for no antiscetic instance of recovery is known. The average duration of this disease is from 2 to 3 years in the male, and from 3 to 4 years in the female.

V. INSANITY CONNECTED WITH THE NERVES.

There are many forms of insanity, but the types with which insanity may be associated are in order of importance, epilepsy, hysteria (q.v.), neurasthenia, and chorea. It must be remembered that the majority of persons who are the subjects of the neuroses do not become insane. As epilepsy is the most important of all the neuroses, and the one most commonly associated with insanity, it alone will be described here.

Epilepsy is a disease which is characterized by convulsions of a definite type, or by sudden and temporary loss of consciousness without convulsions. The former is known as the ‘grand mal,’ the latter as the ‘petit mal.’ In the severer form of the disease the patient, while and is violently convulsed; in the milder form he does not usually fall; he is suddenly overwhelmed with mental darkness, but after a few seconds he is able to continue his work in which he may have been engaged at the time of the seizure. The two forms of fit are often combined in the same individual. As a rule, beyond the congenital degeneracy or mental deterioration, to which reference will be made, the subjects of epilepsy who manifest insanity are free from mental symptoms in the interval between the seizures. Mental disturbances are most commonly observed either immediately preceding the fit, immediately succeeding it, or replacing it. The last form is designated ‘laved’ or ‘masked’ epilepsy. Of all the forms of insanity accompanying the fit, either before or after it, mania is the most common. The kind of mania varies, not only in different cases, but very markedly in the same case at different times. From mere irritability with capricious conduct it may vary to the most violent excitement, incoherence, and fury. But insanity does not always accompany the fits in the same person, and an epileptic mania may be free from it for long periods notwithstanding the regular recurrence of the fits. The insanity may then occur quite suddenly and be attended by acts of violence of which the patient retains no recollection. In the pre-epileptic mania the mental symptoms usually come on gradually, and may last a few days preceding the fit; the post-epileptic mania, on the other hand, is sudden in its onset, and usually of very short duration.

Another, but less common, post-epileptic form of insanity is stupor. When stupor occurs it is more persistent in its duration than mania, and may be accompanied by hallucinations and a tendency to automatic impulsive action.

The least common form of insanity connected with epilepsy is melancholy, which is not a passing insanity accompanying the fits, but a progressive, chronic, and usually incurable condition. Many epileptics exhibit mental degeneracy of a congenital kind which manifests itself by certain oddities and eccentricities of attack, want of self-control, and instability of the emotions. An extreme form of degeneracy is observed in epileptic idiots where epilepsy is superimposed upon a markedly degenerate mental condition which has been inherited from self-control and instability of the emotions. An extreme form of degeneracy is observed in epileptic idiots where epilepsy is superimposed upon a markedly degenerate mental condition which has been inherited from self-control and instability of the emotions. An extreme form of degeneracy is observed in epileptic idiots where epilepsy is superimposed upon a markedly degenerate mental condition which has been inherited from self-control and instability of the emotions. An extreme form of degeneracy is observed in epileptic idiots where epilepsy is superimposed upon a markedly degenerate mental condition which has been inherited from self-control and instability of the emotions. An extreme form of degeneracy is observed in epileptic idiots where epilepsy is superimposed upon a markedly degenerate mental condition which has been inherited from self-control and instability of the emotions. recovery does not take place so readily, if at all. In a typical case of apoplexy occurring after middle life, there ensues as an almost invariable result a certain amount of dementia accompanied by emotional disturbances. Depending upon the nature of the case, the patient may become/addiction in a state of confusion and the symptom of the lesion there may also occur loss of memory, mental confusion, and an impairment of judgment. Again, in most of the cases, the mental and emotional condition is slowly progressive, but in the majority of the younger cases and sometimes, though exceptionally, in the older cases, the condition is not progressive.

Apoplexy may be followed by any of the chief forms of insanity. Perhaps the most common form is that which is greatly modified by the underlying condition of dementia. The mania is characterized by a noisy excitement accompanied by restlessness, and illusions or hallucinations of the senses. The symptoms are usually more accentuated during the night, so it is not uncommon to find a patient either quiet or slightly excited during the day become noisy and sleepless during the night. This form of mania is also often intermitting, the attack lasting for two or three weeks, followed by a period of calm which, however, cannot be guaranteed as the episode cannot be precisely predicted. Mania-melancholia is less frequently an accompaniment of cerebral lesions of this kind. It is usually acute in appearance, but there is probably less mental distress than the restlessness and noisy emotionalism of the patient would lead one to suppose. Delusions with visual and auditory hallucinations may also be met with as a result of such lesions. The delusions are of the persecutory form, but are irregular and badly systematized.

2. With regard to the insanity arising from tumours and injuries to the head, it may be said in a word that it is very irregular and difficult to describe. In cerebral tumour, by far the most common form is a progressive encephalomalacia ending in complete dementia. Traumatic injuries may undoubtedly cause a confusional insanity in predisposed persons, immediately following the injury. Where a portion of the skull has been depressed and affects the brain, serious cerebral affections may be caused, which are relieved by operation. In the class of cases in which insanity is said to occur long after the receipt of the injury, some excusable doubt has been cast upon the relation of the injury to the mental trouble. It is believed by many authorities, however, that profound moral deterioration accompanied by impulsive tendencies may supervene as a result of injuries to the head received years previously.

VII. SEMBLE INSANITY.—The insanity of old age has been divided into: (a) cases in which there is no dementia present, and (b) cases in which dementia is the most prominent mental symptom.

(a) In the first class any form of insanity may be observed, but by far the most common are mania and melancholia. The mania usually presents itself in an acute form, the patients being restlessly excited, confused, and often troublesome and destructive in their habits. The subjects are generally hereditarily predisposed, or have suffered from mania at previous periods of their lives. The melancholia is also acute. The patients present a debilitated appearance, and suffer from delusions of persecution and from hallucinations of hearing. Melancholia in senile persons is not so favourable as mania so far as recovery is concerned, and either lasts a long time or becomes chronic.

(b) The second class, who present dementia, owe their condition to advancing age, which varies in its onset according to the cerebral integrity of the individual. In some cases it occurs as early as 50, in others as late as 90. Superimposed to this dementia there may be mania-melancholia, or a form of systematized delusional insanity. The mania and melancholia correspond closely to the types already described as accompanying gross lesions of the brain. Systematized delusions may take the form of either persecution or ambition. In the former type the patients are in constant dread of being robbed. They may hide their more valuable possessions in out-of-the-way places which on account of their faulty memory they are afterwards unable to find; or they barricade their house or room doors to prevent the ingress of imaginary thieves or robbers. The delusions of ambition usually exist side by side with depression and are generally accompanied by hallucinations both of a pleasant and of a disagreeable character. The progress of senile insanity combined with dementia is always fatal.

For primitive views concerning the insane, cf. the various sections of art. POSSESSION.

INSPIRATION.

Primitive.—See POSSESSION (Primitive).

INSPIRATION (Protestant doctrine).—Protestant scholars of the present day, imbued with the scientific spirit, have no a priori theory of the inspiration of the Bible. They do not attempt to define the term by abstract reflection. Their method of inquiry is critical and inductive, not metaphysical and deductive. They do not, of course, attempt to make the Bible a completely infallible book, and weigh evidence a mere tabula rasa—that is neither possible nor desirable—but they do their best to free it from prepossessions and presuppositions. They are thus brought to an inescapable conclusion as to the source and shape in which God must reveal His ways to men. They do not open any book of

Muslim (E. Sell), p. 331.

the OT or NT with the feeling that they are bound to regard its teaching as sacred and authoritative. They yield to nothing but what they regard as the irresistible logic of a principle which they hold that they are not convinced of the inspiration of the Bible by its intrinsic merits, they cannot be legitimately convinced in any other way. And, if in the and they formulate which receives the same name in the different forms. It is a principle of Scripture authority under which the Scriptures were written, this is an inference from the characteristics which, after a free and fair investigation, are constrained to recognize.

The time of privilege and prestige among books is past for them. The attitude of all liberal thinkers
towards the Scriptures was admirably indicated half a century ago by Richard Rothe:

'Let the Bible go forth into Christendom as it is in itself, as a book which neither requires, without allowing any dogmatic theory to assign a reserved position in the ranks of books: let it accommodate itself to the temper of the age through which each man can find in it for himself: and it will accomplish great things' (quoted by W. N. Clarke, The Use of the Bible, p. 112).

Some believers in inspiration prefer to avoid 'the ancient, ambiguous, confusing word.' They think that this word

has lost its meaning without losing its claim; it bears the urgency of sacred tradition and definiteness has forsaken it; it is now an enemy to clear thought, and a misleading guide to reverence for the Scripture and it will be a good day for theology, and for religion, when we fearlessly take the Bible for exactly what it is, with an abiding value resident in itself' (ib. 156).

The term ‘inspired of God’ (διακοσμειωτος) is, however, used in the Bible itself (2 Ti 3:16); and if, after the application of the most rigid tests, inspiration is proved to be a fact, it is better not to abandon the accepted word, but, if possible, to re-mint it as to free it from all misleading associations.

Inspiration and experience.—It is through an experience of the spiritual power of the Bible that the term first comes to have a real meaning. Something more than the ‘efficacities of pure reason’ is required for the correct and just valuation of the Scriptures. They make their appeal not only to the intellect but to the imagination, the heart, and the conscience. Their light is for the seeing eye, their message for the spirit which hungered and thirsted after righteousness and truth; and it is the testimony of one generation after another that through the Scriptures God finds the soul and the soul finds God.

Their utterances may be regarded as typical. In his Letters on the Inspiration of the Scriptures (Letter I), Coleridge tells how he re-read the books of the Old and New Testaments, each book as a whole, and then as a part, and then he concludes: 'Nay, I know that I have met everywhere more or less obvious sources of truth, and power, and purifying impulses; that I have found words for my highest thoughts, songs for my joy, utterances for my hidden griefs, and pleadings for my name and my falsehoods; and in short, whatever finds me, bears witness for itself that it has proceeded from a holy Spirit, even the Spirit of the Scriptures, which remaining in us yet regenerateth all other powers, and in all ages entering into holy souls, shall there be the voice of the Lord' (Isa. 55:7). 'If I am asked,' says W. B. Smith, 'why I receive Scripture as the Word of God, and as the only perfect rule of faith and life, I answer it because my fathers of the Protestant Church, because the Bible is the only record of the redeeming love of God, because in it is the only true way to the knowledge of Jesus Christ, and to arriving to us in His full will for our salvation. And this record I accept in belief by the witness of Holy Spirit in my heart, where I am assured that none other than God Himself is able to speak such words to my soul' (Reg. iv. x. [1865]).

2. Inspiration and ecstasy.—The theory that inspiration is an ecstasy, or possession, has probably few advocates to-day. It was the view professed by Plato, from whom it was borrowed by Philo, Josephus, and some early Christian writers.

'God has given the art of divination not to the wise, but to the foolishness of man. No man, when in his wise, attains prophetic truth and inspiration; but when he receives the inspired word, either his intelligence is enthralled in sleep, or he is demented by some diabolical possession' (Plato, Timaeus, 73). 'For a prophet gives forth nothing at all of his own, but acts as interpreter at the prompting of another in all his words; for so long as he is under inspiration he is in ignorance, his reason departing from its place and yielding up the command of the Father and of the Son, and entering into it and dwells in it and striketh at the mechanism of his voice, sounding through it to the clear declaration of that which He prophesied' (Josephus, Antiq. IV. 1, xiv, § 8). Josephus takes Balaam as a typical prophet, who spoke 'not as matter of himself, but as under the influence of the Divine Spirit, and makes him express himself thus to Balak: 'The Lord is stronger than my resolve to serve thee. For those who fancy that of themselves their works are all too weak to help saving what God suggests to them or to resist His will; for it is not received into us nothing that is in us any longer our own' (Ant. iv. vi. 5). Athenagoras, the Christian apostle (c. A.D. 177), and, in reference to the prophets, that, 'who upon the conviction of and derived from their natural powers of reason by the influence of the Divine Spirit, they uttered which that was wrought in them, the Spirit using them as its instruments as a flute-player might blow a flute.' Another favourite figure was that of a spectrum striking a lyre (Epiphanius, Her. xlviii. 4).

This theory commended itself to the Montanists (q.v.), whose excesses were castigated by Miltiades in a treatise bearing the title, That The Prophet ought not to speak in Ecstasy, which recalls the words of St. Paul, 'The spirit of man should be subject to the prophets' (1 Co 14:35). Few people now cling to the idea that the Divine influence was communicated to the Bible by dictation to its writers. It is seen that the prophets are inspired, but their doctrine and the apostle are degraded if they are regarded as the mere mouthpieces or penmen of Deity. Inspiration does not suspend the powers and faculties of the soul, but raise them to their highest activity, the supernatural intensifying the natural. A cognate word to inspiration (διακοσμειωτος) is enthusiasm (ευκοσμειωτος, from ευ and κοσμειωτος), and the Divine energy is comparable to a breath which quickens, a seed which fertilizes, a flame which kindles the human spirit to the finest issues.

3. Inspiration and revelation.—Inspiration is the correlate of revelation. Whenever God revealed Himself, He inspired men to receive and communicate the revelation. It is a truism that no lesson, human or Divine, is taught until it is learned; and it is inconceivable that the facts of the Kingdom of Heaven should have been imparted to appreciative minds. There were seekers ready to be initiated into the mysteries. Spiritual truths made their due impression upon the finest minds in the Hebrew nation and the Christian Church, in order that they might ultimately make a similar impression upon all mankind. Amos was disciplined to become the stern prophet of Divine righteousness. Hosea had an experience which sensitized his mind to receive a new image of Divine love. Isaiah's regal spirit apprelihed the Divine majesty. Paul knew himself to be separated and called that God's Son might reveal Himself in him (Gal. 1:16). Rare indeed were the minds which at first were possessed by any new truth, and impelled to utter it with a power greater than their own. Yet the Divine influence felt by the few was not essentially different from that which affected a much wider circle. Without a general inspiration there could have been no special one. Behind the inspired prophets and psalmists of the OT there was the inspired Hebrew nation and the inspired apostles there was the inspired Christian community. The organ of revelation was never a solitary visionary. It was in the religious consciousness of the many, purifying itself in the life and the teaching of their noblest representatives, expanding itself from age to age, and ultimately concentrating and summating itself in the Gospel of Jesus Christ, that the voice of God was heard.

4. Inspiration and literature.—It is self-evident that the true medium of revelation is not a book, but a man. Inspiration is a condition of the soul in relation to God, and can be ascribed to a roll or book only in so far as this is the record of a personal experience. It was not into prophecies and histories, laws and psalms, gospels and epistles, that the Spirit of God was directly breathed, but into their authors. If the truth always shaped itself first in some living mind, and whether it was published vide esse or by writing was immaterial. As a means of preserving the truth the art of writing was of prime necessity, but it could make no difference to the inspiration.

'The authority of the word written was precisely the same as that of the word spoken, and that the man who wrote was in the same sense in the person who wrote or spoke, and was derived from the special action upon that person of the Spirit of God' (W. Sunday, Inspiration, 2nd Edit. 1887).

5. In OT.—(a) The prophets are by pre-eminence the inspired men of the OT. Their inspiration is
the type of all inspiration. The 'madness' of the earlier prophets, such as those among whom Saul found himself (1 Sam. 10:6-10), had certain well-marked affinities with what is known as manic and with the emotions of the Muslim dervish, but the inspiration of the later Hebrew prophets purified itself from that taint; and if the claims which they made can be established by Divine influence upon the minds of men is an indisputable fact. Judged by their gospels, their credibility is the highest. The establishment of ethical monotheism as the religion of Israel, their achievements and the affirmations regarding the righteousness and love, the faithfulness and holiness of God, are to-day the kernel of the world's faith. It was their characteristic that, in complimenting and conjuring, they announced and commanded, and of them spoke as he was commissioned to publish the laws of heaven in the language of earth, as if his mind was a medium for the transmission of the white light of eternity. The ideas of which they were the bearers were not proclaimed as their own pious opinions or shrewd guesses. They drew a firm and unwavering distinction between the thoughts of their own mind and the sacred authorities which came to them by God's own prompting. They thus separated themselves from the false prophets, who uttered the deceits of their own heart. To the whole fellowship of the prophets, whose activities extended over several centuries, made the same claim to inspiration. 'Thus saith the Lord,' or some equivalent expression, was the formula by which they indicated the way in which they habitually introduced their utterances. And on the fact of their own consciousness, the belief of their contemporaries, the unanimity of their testimony, the ethical quality of their teaching, and the beneficial results of their labours a strong foundation is laid for the truth of their assumption that they were the organs or instruments of the Most High.

This, instead of dividing between accepting this belief as true and regarding it as a product of mental disease or delusion, led to being such a man as not against a few individuals but against the whole line of prophets from Moses or Shammai to Malachi, is a step from which most of us would shrink' (Sunday, op. cit. p. 39).

(b) In what sense and to what extent were the historians of Israel inspired? It is a remarkable fact that the books of the OT from Joshua to the end of Kings (Ruth excepted) are called 'The Former Prophets.' Historical criticism justifies this title, finding, as it does, that all the older historical writings were the work of men imbued with the prophetic spirit. That imbibition was their sole condition of receiving inspiration. They had the double function of relating and interpreting events, and as narrators they were dependent upon the channels of information—folk-ballads, oral traditions, the law, and the like. In their researches they were as liable as ordinary historians to fall into errors. Their inspiration did not fill up lacunae in their knowledge of events. If their sources of information were good, their narratives were full and accurate, but not otherwise. It is evident that they sometimes glorified the institutions of which, as patriots, they were justly proud, and that they frequently idealized the past, by reflecting upon it the beliefs and practices of a later time. The monuments of Assyria have shown how unreliable is their chronology. In the execution of the work in its several and with the technical part of their work—the collecting, sorting, arranging and combining of materials—the scientific historian of to-day finds many grounds for criticism. Yet their value remains, for they often have insight into the true meaning of events, their interpretation of history, and the lessons which they educe from the past for the guidance of men in the present, that they demonstrate their prophetic inspiration. History as well as Nature was for them a book written by the hand of God, and their community of spirit with Him made it possible for them to read His secrets. The stories which they tell—often with astonishing dramatic power—might, if otherwise related, have done infinite mischief. In the light of inspiration the annals of Israel's fortunes and misfortunes are so transfigured as to become the vehicles of spiritual and eternal truth for all men of all ages.

(c) If a measure of inspiration is also conceded to the Pentateuch, this cannot mean—except for the orthodox Jew—that the Torah is still authoritative in matters of conduct and in Genesis. The ancient Rabbis considered that the highest degree of inspiration was necessary for the Law, a lower degree for the prophets, and only a small degree for the other Scripture books. In other words, inspiration was limited to the Protestant

The 'Reform Judaism' of to-day, on the contrary, recognizes that the inspiration of the prophets extends to the Law itself. But this will not be the case if the books of the OT can be regarded as a sacred form without the volatile spirit of true religion which perhaps have perished in Israel's days of tribulation and distress.

The common origin of certain Chaldean and Biblical legends—notably those of the Creation, the Fall, and the Flood—cannot be disputed; but, with all the apparent affinities, which are too close to be mere coincidences, the stories play a remarkable difference, and the difference is the measure of their inspiration. The spirit of true religion penetrated the primitive traditions of the human race, purified them of their grossness and polytheism, and brought them into harmony with the ethical monotheism of the prophets of Israel.

If one of the marks of a book's inspiration is its spiritual power over its readers, no part of the OT is more fully inspired than the Psalter, which was originally the hymn-book of the second Temple, and is now the chief classic of praise and prayer, giving lyric expression to the mood of religious feeling, every phase of spiritual life. Its authors were the successors of the prophets. It need not be denied that some of them had a primary inspiration, a direct and original insight into the things of God; but as a class they were poets and singers who assimilated the characteristic ideas of the prophets and applied them to all the varied relations of human life. The products of their secondary inspiration are certainly not inferior in practical value to those of prophecy. Expressing for every type of experience—the grief of repentance and the joy of forgiveness, the agony of doubt and the serenity of faith, the agony of spiritual suffering and the rapture of communion, the Psalter bears on the face of it the unimpeachable stamp and sign of the Spirit of God. No part of the Bible is so equally inspired, or that every sentiment can be endorsed by a Christian. We cannot and we do not mean that the speeches which show an ignorance about the immortality of the soul, or the passages which breathe out curings and threatenings against personal enemies, are in any sense what the Psalter was meant to be. 'And the utterances of God' (E. P. Norton, Inspiration and the Bible, p. 311).

(f) The inspiration of the Wisdom literature—Proverbs, Job, Ecclesiastes—is for the most part secondary. Impregnated with the ideas of
RELIGION whose first principle is the fear of the Lord, the writers apply their minds now to the ordinary questions of conduct in the household and in society, now to the world’s ultimate enigmas of sin and suffering, of life and death, and nearly always as sage observing, reflecting, and ever speculating, rather than as diviners, forth from God’s immediate presence with authority to publish new truths in His name. Yet in some of the noblest passages of Job, where a great mind wields a difficult and difficult problem is rewarded, if not with a satisfying solution, at least with glimpses of Divine greatness and goodness which make life’s mystery bearable, and in such passages as the eighth chapter of Proverbs, where Wisdom is personified as God’s Master-workman in creation, the inspiration may be regarded as primary.

(g) In the Book of Esther, whose canonicity was long disputed by the Rabbis, and which Protestant Christian theologians accepted only in deference to Jewish tradition, inspiration is at a minimum. A certain vague doctrine of providence is presupposed, but God’s name is never mentioned in the story, and no spiritual interpretation is attempted, while the massacre over which the reader is invited to gloat sends him, by reaction, either to his own heart, his history, his personal romance and not history, or to the higher criticism of Marjory Fleming. ‘But then Jesus was not then come to teach us to be merciful!’ (John Brown, Suborne, Edinburgh, 1882, iii. 214). The Song of Songs is instinct with that which is the highest poetic inspiration, and, though the allegorical interpretation which secured it a place in the canon is regarded by Protestants as a mistake, it cannot but be welcomed on other grounds, such as its passionate delight in nature, its enthusiastic praise of a pure idyllic love strong as death and mightier than the grave.

To the inspired character of the whole, the equal and infallible inspiration of every part of the OT, with its correlated doctrine of the absence of inspiration from every book outside the Hebrew canon, is now rapidly disappearing among Protestants. There is, in reality, no clear dividing line between what is and what is not worthy of a place in the Scriptures. If some of the books of the Apocrypha could be included into the canon, few would be found to object.

‘It is out of the question to say that the Book of Esther is inspired by the Spirit of God and the Book of Wisdom wholly devoid of it. Just as there is a descending scale within the Canon, so there is an ascending scale outside it. Some of the books of our Apocrypha might well lay claim to a measure of inspiration’ (Sanday, op. cit. 228 ff.).

Further, our leading authority upon the Apocalyptic books finds in their contribution to the doctrine of immortality ‘a genuine product of Jewish inspiration,’ and in the ethics of some of them an advance upon the highest morality of the OT and a preparation for the Sermon on the Mount (R. H. Charles, Ecclesiastes, London, 1913, pp. 178, 226 ff.).

6. In NT.—The writers of the NT were as conscious of their own inspiration as those of the OT. The motive, like the Lord, spake with authority. They were not sent anticlerics, whether they used tongue or pen, they somehow knew that their minds were under the control of the Spirit of God. (a) St. Paul’s claim to teach is based on what he calls a special endowment. The gospel which he preaches was not received from man, but came to him through the revelation of Jesus Christ (Gal 1:11). He had no need to confer with man, for God was with him in an immediate, and personal. Having drunk at the fountain-head, he affirms that he and others who share his inspiration speak ‘not in the words which man’s wisdom teacheth, but which the Holy Spirit teacheth; comparing spiritual things with spiritual’ (1 Co 2:13). Like the OT prophets, he can in general distinguish clearly between the revelations of God and his own opinions. After expressing his preference for the celibate life, he adds, ‘and I think that I am not unjust to God; that as I speak, so the Spirit of God’ (1 Co 7:9).

(b) Evidently there is a borderland between inspiration and uninspiration, a region in which he has to tolerate, if he cannot welcome, difference of opinion, because the oracle is silent. On some important points—‘concerning the resurrection of the dead [he] was commanded no law of the Lord, but can only offer his own judgment for what it is worth’ (v. 12). When he is about to give advice to the brother who has an unbelieving wife, or the woman who has an unbelieving husband, he is careful to premise that his counsel is based merely on his own sense of the fitness of things: ‘But to the rest speak I, not the Lord’ (v. 15). When, however, he admits that he speaks ‘after the manner of men’ (δι’ ἀνθρώπων λόγου, καὶ ἐν ἀνθρώπων λόγοι, Ro 14:5, 1 Co 8:1, Gal 2:2), he implies that, unless he chooses to descend from a privileged position, he speaks and writes under a Divine influence to which most men are strangers.

(b) If the writers of the other Epistles do not directly refer to their inspiration, this is apparently because their authorship is of course not open to doubt. St. Paul’s been questioned and resisted. When St. Peter, St. James, and St. Jude teach and command, warn and exhort, they expect to be believed and obeyed. St. John’s claim to first-hand knowledge of Christ and His Gospel is peculiarly important, and he is quite right in saying that the OT prophets speak ‘not with us, as though we had looked upon, and our hands had handled, the Word of life, but unto you’ (1 John 1:3).

(c) The author of the Apocalypse makes a strong explicit claim to inspiration. He is a prophet, and his book a prophecy (1710). St. Paul’s theologically based upon the seven Churches is ‘what the Spirit saith’.

(d) Like the OT historians, the Evangelists did not depend upon inspiration for any of the facts which they wished to record. The Prologue to the gospel of St. Luke is in this relation singularly instructive. It indicates that a narrator required to be in touch with “eye-witnesses,” and ministerial assistants, and thus be able to trace the course of all things accurately from the first, before he could write in order. Papias of Hierapolis indicates the source of St. Mark’s information by saying that this evangelist, ‘having become interpreter of St. Peter, wrote down, as far as he remembered, the things said or done by Christ’ (Eusebius, HE ix. xxxix. 15).

Inspiration cannot, and there is no reason why it should, do the work of memory and research. It rather makes its presence felt in the spirit which was breathed into the evangelical narratives, and which is exhaled from them by the receptive reader. Two of the evangelists, according to tradition, were themselves apostles, and the other two belonged to the apostolic circles, St. Luke being the companion of St. Paul as St. Mark was of St. Peter. But behind all the narrators was the Spirit-filled Church, and many parts of the Gospels are doubtless not the composition of the evangelists themselves, but their transcripts from vivid traditions, first oral and then written, which had taken definite shape within the Church as the result of the apostles’ own preaching and teaching. It may be assumed that the Logia of the Synoptic Gospels came, as a whole, directly from Christ Himself, whose words form the standard of the highest inspiration. While the Divine power which seized the OT prophets was intermittent, and even that which worked in the apostles was given, not without brevity, yet the divine of Jesus was continuous and perfect. His words are revelations which touch the common heart of mankind as no other utterances of human lips. He is
INSPIRATION (Roman Catholic)

the inanimate Word, and no part of the Bible can be profitably used as a rule of faith and life until it is presented to itself in harmony with His Mind and Will.

7. Non-inspired Bible passages.—Tried by this standard, there are not a few passages in the Bible which cannot be regarded by Protestants as in any true sense inspired. Its simple statement (books certainly have not all the same measure of the Divine fire. Yet the old phrase ‘the inspiration of the Bible’ continues to have a real significance, which is thus expressed by Sambach: ‘It may be hard to sum up our definition in a single formula, but we mean to include all those concrete points in which as a matter of fact the Bible does differ from and does excel all other Sacred Books. ... And if we are asked to define the measure of this special influence, we can see it reflected in that wide margin which remains when the common elements of the Biblical religion and other religions have been subtracted and that which is peculiar to the Bible is left’ (op. cit. 155).

8. Inspiration in the Church and Individual.—The last matter is the bearing of the doctrine of inspiration upon the individual believer. Every Christian is inspired in so far as he is enlightened and renewed by the Divine Spirit. It is sometimes maintained that there is a certain kind of inspiration in the Church and that of the Church’s official pronouncements. This is probably a mistake. The real distinction is one of degree rather than of kind. The argument of an apostle should be conceived as that of a common Christian, reduced to a higher power in proportion to his clearer vision of Christ, his closer fellowship with Christ, and his deeper devotion to Christ.

'This must be understood, that the inspiration of the NT writings is not due to the mysterious endowment of a few chosen souls, but must be traced to the inspired life of Christian believers of greater or less intensity according to the moral and religious condition. In the Church of Christ to-day (as a whole) a new life has been imparted and the members have become a spiritual organism, and the Church is not a mere human institution, but a living body. Its life is a new and higher power in proportion to its clearer vision of Christ, its closer fellowship with Christ, and its deeper devotion to Christ.'

J. STRAHAN.

INSPIRATION (Roman Catholic doctrine).—I. In ascertaining what is meant and must be understood by inspiration in Roman Catholic doctrine, we are helped by several dogmatic definitions issued at various times. For this purpose these documents are the most important of the great pronouncements of the Church concerning the authenticity of the Scriptures, a further source of inspiration in certain respects, and the second hypothesis that was excluded by the above definition. It is the theory held, at a later date, by another theologian, J. Emmerich, of the School of Salamanca. In the following terms: ‘Hoc modo potest Spiritus Sanctus scriptorum dirigere, ut in nullo sumatur, nullumque se negligere; hic et atque ut nihil videat sum erratum, inspirationum sui esse aditum.’ This way of conceiving inspiration makes it practically identical with the ‘assistance’ of the Church to the interpretation of the Bible, which the Church understands to accompany the Supreme Pontiff in the ex cathedra pronouncement, lest guiding and pre-
INSPIRATION (Roman Catholic)

serving him from error; but inspiration implies more than this. The meaning of the Council requires something of a higher order, something positive, not negative; something not contingent, a motion

ation aut generis by which man acts as an instrument, conscious and free, while God remains the primary and responsible agent, or, in other words, he superintends the work of

by J. N. Franzen (De Div. trud. et erg., p. 3544.), "Deus est

inator Scripturae Sacrae per conscientias humanae." If the formula of the Vatican Council implies this much and no more, inspiration is not necessarily

mechanical, automatic performance, in which the Holy Spirit is the exclusive agent, and the human writer the mere material writing machine or 'penholder,' so to speak; nor is it

necessarily a process of dicta the, in which the writer acts simply as a scriber or registrar of effusa,
or oracles, in relation to which heis a mere conscious

but passive recipient. On the contrary, the definition of the Council does not even require that the things thus inspired by the Holy Spirit should always have been new and revealed to the sacred

writer. It may have been so, and in some cases at least the Council does not exclude the possibilitethey might very well not have been, and the Council says nothing about it.

3. If we seek now to form a theory in harmony with the definition contained in the Council, we can, by applying to the dogma of inspiration the old

scholastic doctrine of the instrument, give a notion of it which will appear both very luminous and very coherent, a thing to be a matter of faith, but merely a theological explanation. An instrument may be defined as a cause which receives its impulse and activity from a superior and principal agent, in virtue of which it produces the effect of the instrument, but produces it according to its own peculiar mode of action. An instrument is bound to show the traces of its own particular, specific, or individual characteristics in the effect which it produces. In the impulse of the instrument of the principal cause. Assuming now that, in the case of inspiration, God is the principal cause, and man the instrument, an instrument of a conscious and free nature, then it is clear that man will act through the impulse of God, who supernaturally inclines his will and illumines his mind to enable it to grasp, conceive, and view such things as God desires and in the way in which God means the agent to do. Sometimes God might reveal to the mind of the writer new and hitherto unknown facts or doctrines; sometimes He might content Himself with revealing to the writer, in very much the same way as inspiration the work of another equally inspired writer. The conscious and free 'instrument,' of which God makes use, retains his own individual characteristics, either congenital or acquired, his own temperament, culture, style, idiosyncrasies, etc., which will necessarily be reflected in his work. Hence the inspired writings of Isaiah must needs be unlike those of Jeremiah, the Gospel of Matthew unlike that of John, etc.

4. Such being the most accurate conception of the Catholic doctrine of inspiration—viz., that God is the moving agent and responsible author, and that the definition of the Vatican Council is correct, we are naturally led to inquire about the consequences that are likely to follow from such premises. We have already seen, by referring to the definition of the Vatican Council, that all the books and the parts of each book enumerated as canonical by the Council of Trent and contained in the Roman edition of the Vulgate are Divinely inspired. Hence, if a Catholic should convince himself, through critical researches, that the history of the adulteress, for instance, in the Gospel of

John, or that the final chapter of the Gospel of Mark, cannot possibly have been written by the same authors as those Gospels themselves, he must nevertheless maintain that they are in some other equal manner inspired. But, if we grant, as we must in the Catholic Church, that inspiration extends to all the books and to all the parts of the books, it does not necessarily follow that we are bound to accept every doctrine which we find referred to in them as, by that very fact, to be declared sacred, Divine, and God-appointed in themselves, so that God should be made answerable for every one of them; the definition of the Council, at least, does not say so. Accordingly, Catholic theologians are in the habit of distinguishing several classes of things, such as the teachings of faith and morals, the historical or scientific facts that may be known to the writer by natural means, the minor details or obiter dicta, the quotations, etc., and, finally, the words of the text themselves, and to inquire of each class separately whether they too are inspired.

The obvious cause for establishing such distinctions and separate inquiries is the difficulty often experienced, apparently at least, of reconciling some statements contained in the Scripture with what seem to be the well authenticated and reasonably certain conclusions of modern science. The natural tendency of some theologians is to limit inspiration to the things which are contained in the inspired writings (called 'moral teachings') as belonging exclusively to the domain of revealed religion, getting rid of scientific or historical objections by asserting that inspiration does not extend to the effect of the natural sciences, even when they are touched upon in the Scriptures.

5. Previously, therefore, to entering upon the question whether inspiration extends to the various classes of things or facts that can be distinguished among the contents of the Scripture, it is advisable, first of all, to answer the often mooted and vexed question, Can there be any errors in the Scripture? It is granted on all sides, and the concession has been officially recognized in the Encyclical Providentissimus Deus of Pope Leo XIII, that, once committed to writing, the sacred text became subject to alterations and vicissitudes, analogous to those which all other works undergo when repeated transcription are exposed; that, as a consequence, some errors foreign to the original slipped into the copies through the mistakes of the transcribers, or facts or things of another kind might even contain such expressions or modes of speech as a fastidious and scientifically trained mind might consider not strictly and rigorously accurate from a scientific point of view, since the authors themselves saw no reason for departing from the modes of speech that were prevalent at the time, lest they might uselessly arouse controversies foreign to their main object by ostensibly discarding the received notions in the minds of their hearers in non-religious matters. Every one nowadays will grant this. The question, however, remains, and must be solved. Can any inspired writer ever utter a false statement or perpetuate a false error?

The older theologians for whom the problem did not exist, and those modern theologians who apparently do not see the difficulty as present, have, perhaps, used to decide the question by simply answering in the words of Thomas Aquinas ('Sum. Theol.,

prima pars, qu. 1, art. 10, ad 3): 'Patet quod sensus literalis Sacri Scripturae quinquaginta potes subesse falsum.' The sacred text, giving expression to an utterance of the first truth, can contain no error, since God can neither deceive nor be mistaken. Other theologians, however, for whom the problem does exist, have often endeavored to modify in a more or less subtle way the rigorous
of the Thomistic axiom, while, of course, claiming to render both at heart and in word, perfectly orthodox.

As it would be tedious to enter upon a detailed historical analysis of the text, let it suffice to say that we shall content ourselves with recalling a simple, but pertinent observation, in which is the main aim of the text. The idea of a sacred author authoritatively to teach us a fact, necessarily alludes to a department in which the principal of Thomas Aquinas must have been placed full and entirely, in order to use a comparison of Thomas Aquinas himself: it is never definitively the intention of the Scripture to teach us authoritatively that Samuel was really the son of Elkanah. It is impossible that the statement should be erroneous, and that Samuel should have been in reality the son of another. Hence, however, obviously many cases where such an intention is absent, and can be introduced only by arbitrarily forcing one's private view on the text; the author is referring to received historical or scientific views, which are evidently immaterial to his purpose. Who can, in fact, without it be false that the role of a public interpreter of the mind of the sacred writer, to whom the latter certainly meant to teach us that, at the time of Gilbee, the son itself stood still in the heaven, is the literal sense of the words, and that any other interpretation of the text is therefore a complete failure.

Briefly, to assert in an absolute manner that the error is compatible with inspiration in the mind of the sacred writer is to adopt a position which many Catholic theologians would characterize as 'errorist', in so far as it is being indirectly opposed to the Catholic dogmas of inspiration. To maintain, on the other hand, that every statement in the Scripture must be taken as strictly accurate in the literal sense in which it appeared in the original text seems unnecessary, considering that the result of harmonizing the two is to maintain that the literal sense of the words, we ought to conceive of a supernatural influence full and one, pervading the sacred writing throughout, and casting its Divine splendour on everything contained in the most minute particles of the sacred text. There is no necessity to assume that inspiration enlightens the mind of the sacred writer in regard to his thoughts only, but abandons him to a natural industry when endeavouring to give literary utterance to his Divinely inspired conceptions.

INSPIRATION (Hindu). — Indian authorities and scholars in their references to the Hindu writings draw a clearly marked distinction between the Scripture, revealed and inspired, and other compositions which, however great their antiquity and worth, have, in their judgment and in accordance with the verdict of tradition, failed to receive Divine inspiration, or to direct derivation from a superhuman source. The former are 'sacred', that is, inspired, and its message divine; the latter are not, so far as their antiquity and character is concerned. In practice the line was not seldom overstepped, especially in regard to the non-priestly classes, which came to the general taste and inclination, and enjoyed consequently a wide popularity. In many instances these gained and retained a hold upon the allegiance and affection of the people, and especially of the non-priestly classes, which lay entirely outside of any theory or dogma of inspiration limited in its application to certain books and to those alone. The volume of Scripture is absolutely closed, and was incapable of either addition or diminution.

The language also that is employed with regard
to the Vedas is sufficiently definite to remove all doubt as to the religious estimate which the writers themselves placed upon them. For, although in certain passages a degree of inspiration appears to be claimed for other and later works, yet in more formal doctrine and practice the distinction was always observed between the Vedic writings which possessed authority as bruti and other compositions, in the production of which the mind and spirit of the writer did not rest. Hence in 7.7.4 it is said that the Rigveda, Yajurveda, Samaveda, Atharva-vedicrasa, Ilihasa, Purusa, and other works have been breathed forth from Brahman alone. The same theory is explained elsewhere in the same Upanisad, not always with an identical enumeration of texts. A definite doctrine of inspiration is assumed and stated, e.g., by Ramanuja on Vedanta-sutras, 1.43: "the Veda ... on account of its non-human character, is raised above all suspicion of error and other imperfections;" and the Veda, therefore, is the final authority and court of appeal on all questions of teaching and interpretation. The epithets applied to the Veda appear to be intended to convey the same idea, e.g., "imperishable," "eternal," etc. And the most comprehensive of all the names used to designate the Veda, or the syllable Om, which is the beginning and the end of the Veda, is identified with Brahman. The same thought also is postulated in regard to the Vedas, it is claimed, because it is said that the deity is resident in the sacred text. A further indication of the sacred character attached to the Vedic writings was the elaborate process on the part of the student for the exact preservation of the letter of the text. Apparently each of the schools had its own traditional recension, of which the members of the school were jointly and severally in charge, and which was their office and duty faithfully to bear in mind, and to communicate orally to their disciples. The Vedic texts, therefore, were committed to memory by all; and the precise and perpetual recitation of the texts, in which the Vedas were closely checked, was the safeguard against alteration even in the least detail of the accepted order and form of words. Moreover, as an additional precaution against accidental variation in the text, the written word was repeated twice in progressive order in the Vedic formula, or proceeding word. An extension of the same method, which further illustrates the anxious care with which it was sought to secure the saptasimha verb of the sacred text, was the jatiyapatha, 'twisted' or 'inverted reading,' in which each successive pair of words was repeated three times, in one instance in inverted order. Moreover, the verses and words of the hymns were laboriously counted, and the records preserved in the works of the Sanskrit grammarians; these numbers are found to be in agreement with the extant texts. It was in harmony also with this conception of the peculiar sanctity of the Veda recitation that the communication of them to Sutras, or out-estates, was strictly forbidden. They were the heritage and

1 Brhad. Up. iv. 11; cf. Sahasra on Vedanta-sutras, 1.13, a tradition which is generally shared by the other authorities; the latter being defined as consisting of the Rigveda and other works with the texts on the basis of the Samaveda; on Sahasra on Vedanta-sutras, 1.13 quotes the authority of earlier writers that the ten books of the Rigveda were "seen" by the ancient scribe; and elsewhere the same text is said to have been the bramhaca portion of the Veda (ibid. 1.34). Ramanuja seems to make an attempt to combine the theory of inspiration with a natural belief in the effective authorship of the poets: "the eternity of the Veda admits of being reconciled with what science says about the manuscript and copies of the sacred texts," etc. (SBE xxvi. 52), and the authors and editors were not regarded by the people as a whole hardly equalled the strict and anxious care with which the Jewish Rabbis erected a 'heige' about their Law. In fact, this was due to the success of the method. The writings were so jealously guarded by the Brahmanas, and screened from profane knowledge, that to the great majority of the Hindus they were and always have been invested with attributes of distance and mystery rather than accepted and known as a guiding presence and authority in the life. The theory of the inspiration and sanctity of the scriptures was universally taught and received, being denied only by the nisthikas, the atheists Sridhara (Vishnu, xviii. 12): 'let him not recite (the texts) indiscriminately nor in the presence of Sutras' (Manu, iv. 99).

2 Vedanta-sutras, 1.39. cf. Sankara's comment and citation of passages (SBE xxviii. 24). 3 Manu, 2.244: 'the sayings ... obtained the regulation of the Vedas through their ancestors'; and 3.244. Sankara (on Vedanta-sutras, 1.30) quotes the authority of earlier writers that the ten books of the Rigveda were 'seen' by the ancient scribe; and elsewhere is the same text is said to have been the bramhaca portion of the Veda (ibid. 1.34). Ramanuja seems to make an attempt to combine the theory of inspiration with a natural belief in the effective authorship of the poets: 'the eternity of the Veda admits of being reconciled with what science says about the manuscript and copies of the sacred texts,' etc. (SBE xxvi. 52), and the authors and editors were not regarded by the people as a whole hardly equalled the strict and anxious care with which the Jewish Rabbis erected a 'heige' about their Law. or infidels, whose influence appears at no time to have been widespread, or their numbers considerable. But its practical effect upon the everyday thought and experience of the Hindu was slight. Like the books themselves, it was the

doctrine and possession of a learned class. And, although theoretically acknowledged and accepted by all, it was in reality little in touch with the needs and movements of everyday life.

It was entirely otherwise with the belief in the inspiration and authority of the teacher, the man upon whom the spirit of the god had descended, and whose utterances, like his actions and person, were invested with the sanction and force of the divine. It would be difficult to indicate any one doctrine or belief which has had a more profound influence on the history and character of the Indian peoples. Beginning with the Brahmans, and passing down through a long series of deified men, among whom the guru, the teacher, has in India assumed a place, as one of the most important tenets of the direct inspiration of the individual has never ceased to be an effective and influential article of faith. The repeated incursions of the gospels came in the same terms of doctrine and belief. And, although modern changes in the forms under which modern education is being conveyed, are gradually and perhaps inexorably removing the ancient reverence of thought and life, it will be long before the Hindu affection deserts its ancient ideals, or regards as other than unwelcome a new teaching. It gives to the heart the spiritual element in the life and characteristic of the individual.

These numerous incarnations of the god, and the readiness with which men or women endowed with supernatural qualities or an attractive and dominating personality are deified, are evident of similar characteristics of thought. The highpriests of the different sects, in their formal visitations of the districts under their charge for purposes of pastoral care and confirmation of the young men, journey in state and are greeted by all with a reverence which implies the assumption of divine or semi-divine rank. Their persons and utterances are inspired; their touch confers happiness and deliverance from the bondage of evil.

In a similar manner the recognition of authority concentrated in the hands of an individual, whether European or Indian, is separated by a very narrow line in the thought of the Hindu from a belief in definite inspiration by the deity, who in greater or less fullness has taken up his abode within, and thus manifests his presence and power. The experience of any Englishman who has come into real touch with the mind and heart of the Indian would furnish many instances of the facility with which exceptional or unfamiliar gifts and powers are set down to the credit of a supernatural affiliate which for the time being, or permanently, confers upon the man the rights and dignity of god.

To the Hindu, therefore, the conception of an inspired personality or an inspired book is perfectly natural. In neither case would the affirmation of inspiration arrest doubt, or the necessity of an inquiry into the validity of the claim advanced or the possibility of the fact asserted. The disposition would rather be in favour of its acceptance as part of the natural order of things. It is regarded as not improbable, that it is even looked upon as highly probable, that the god will thus communicate his will and make known his ways.

The burden of proof lies with those who deny. And this disposition or tone of mind is part of the larger bias and tendency of the Eastern nature, which, for whatever reason, seems to live in closer touch with the real than in the unseen and the spiritual than the more practical and unemotional mind of the West.

LITERATURE.—See arts, God (Hindu), Hinduism.

A. S. GEDDES.

INSPIRATION (Muslim).—Inspiration may come to a prophet in an external form, and consist of the very words which God wishes him to give forth as the divine message. This is called wiṣāḥ ṣāḥib, 'external inspiration.' It is the highest form of inspiration, in the opinion of Muhammadans, and was used for the production of the Qurʾān. The mind of Muhammad was passive, and the message, an external one, was brought to him by Gabriel. A somewhat lower form of this is called isḥārat al-malak, 'the sign of the angel.' Muhammad refers to this when he says: 'The Holy Ghost has entered into my heart,' that is, the inspiration came through Gabriel, but not exactly. The other term is ilāham, which means the saint or prophet ushur his mental powers and, under divine guidance, gives forth the message of God, though not in the very words of God.

The recipient knows the medium, i.e. the angel, by which he receives the information and the form of inspiration of prophets, the inspiration of the Qurʾān. The recipient receives information from an unknown source and in an unknown way. This is the inspiration of saints and mystics. It is the ilāham of the mystic. The difference between wiṣāḥ and ilāham is that in the former the angel is the medium of communication, and in the latter he is not. It comes direct to the mind of the Prophet (see al-malak in the Mushaf of the Qurʾān, as an Urdu tr. of the ǐyāl ilāham al-Din, Lucknow, 1874, ii. 30).

Some theologians hold that, whilst the Qurʾān was revealed by the ʿīyāl method, the teaching of the Prophet was by the ilāham mode; that is, the traditions are a real revelation and convey divine injunctions, only the mode is different. Others hold that even the traditions were of wiṣāḥ authority, and that ilāham is not done under the constant influence of a divine inspiration.

The revelation given to Moses is thus described in the Qurʾān:

"We wrote for him upon the tablets a monition concerning every matter, and said, 'Receive them thyself with steadfastness, and command thy people to receive them for the observance of their most godly precepts.'" (Qurʾān lii. 1).

The latter part seems to refer to the Qurʾān, but the former distinctly asserts that Moses was rightly guided either by the wiṣāḥ or by the ilāham method of inspiration, and so all his words and actions form a rule of faith called the Sunna, which all Muslims must accept, for they were said or done under the constant influence of a divine inspiration.

The revelation given to Moses is thus described in the Qurʾān:

"We wrote for him upon the tablets a monition concerning every matter, and said, 'Receive them thyself with steadfastness, and command thy people to receive them for the observance of their most godly precepts.'" (Qurʾān lii. 1).

This equally describes the inspiration of the Qurʾān. The Muhammadan cannot conceive that there can be a human as well as a divine one to inspiration. This is clearly stated in the verse which Muhammad is directed to disclaim any knowledge apart from the words revealed:

"Say: I say not to you, "In my possession are the treasures of God"; neither say I, "I know things secret"; neither do I say to you, "Verily, I am an angel"; only what is revealed to me do I follow." (Qurʾān viii. 20).

The Qurʾān, then, comes direct from God. The word 'say' is either expressed or implied before each sentence. This to the Muslim mind is its highest perfection and also its most extreme form. The Christian view of inspiration—the divine mind working through the human consciousness—is considered to be very
INSPIRATION (Muslim) 355

inferior, and any book so revealed to be altogether on a lower plane.

The Khali‘dan says: "Of all the divine books, the Qur‘an is the one only of those words, and phrases have been communicated to the Prophet through the mediation of the Archangel Gabriel: "Say, "whoso is the enemy of Gabriel?" For he is he who God's leave hath caused the Qur‘an to descend on thy heart" (96:61).

Other passages, though they do not mention Gabriel by name, are generally believed to refer to him.

The faithful spirit hath come down with it" (xxvi. 109); "one terrible in power taught it to him" (III. 5); "the Holy Spirit hath brought it down with truth from thy Lord" (xxvi. 109).

Tradition, however, is very clear on the point that Gabriel was the medium. Sometimes a bright
effect of inspiration is shown in the verse of which Gabriel delivered his message; sometimes the angel appeared in the form of a man called Dhu‘biyya, one of the Companions of the Prophet, renowned for his beauty. This statement is supported by the verse:

"And if we had appointed an angel, we should certainly have appeared in the form of a man" (v. 9).

When the revelation was one of denunciation or a prediction of woe, the angelic nature of Gabriel overcame the nature of Muhammad, who was then transported to the angelic world; when the message was one of comfort and consolation, the angel, in the form of a man, delivered his message. Gabriel sometimes made his message known through the tinkling of a bell, a mode of operation which had a most disquieting effect on the Prophet. His body became agitated, and even on a cold day the perspiration rolled off him. His countenance bore witness to the agitation of his mind. If riding, the camel on which he sat would fall to the ground.

Zaid said: "One day when God sent wrath on the Prophet, his thigh was on mine, but it became so heavy that I feared mine would be broken." (Qur‘an: Dhu‘biyya, XIX. 35; Kita‘b as-Salah, Leyden, 1852-56, ii. 106).

Gabriel, sometimes, without appearing in person, so influenced the mind of the Prophet that what he spoke was a divine message. This is ilham, the inspiration of the traditions.

On the occasion of Gabriel’s night journey to heaven, "great mysteries and numerous conversations took place" (Mirkhond’s Baudat as-Safa, Eas, 1803, ii. 211). God is said to have spoken to the Prophet directly, though whether with face veiled or not is a matter of doubt. God sometimes appeared to the Prophet in a dream and made known His will. On two occasions angels, each having six hundred wings, appeared and brought the message (for other accounts see Baudat as-Safa, ii. 133-148).

The seasons when it came were usually periods of anxiety and care. His countenance changed; his fear seemed uncontrollable. This terrifying effect of Gabriel’s visit is shown in the verse: "The best of recitals hath God sent down, a book in union with itself and teaching by repetition. The very skins of those who fear their Lord do chafe in it." (Tafsir, Lucknow, A.H. 1311 [A.D. 1893], iv. 75).

The fear caused to men is not to be wondered at when it is believed that in heaven the effect of it is that angels become senseless and that Gabriel is the bear of their Lord. This is shown in the chapter of Tafsir, Lucknow, A.H. 1311 [A.D. 1893], iv. 75.

The revelation of sūras xl., lxi., and ci., known as the sūras of terror, turned the hair of the Prophet white.

Ibn Khālidn thus describes inspiration.

After stating that some souls cannot attain to a perception of spiritual truth, and that others can enter into a state of contemplation and ecstasy, which is the intuition of the saints, he goes on to speak of those whose souls ascend from the human body to the angelic state and there hear the divine voice. Both are the souls of the prophets. God has given them the power of leaving the human body and, when separated from it, they receive His revelations, which, when they return from the spiritual world, they make known to men. This explains the origin of the sūras of terror and the journey from the angelic world and the comprehension of the message received occupied less time than the twinkling of an eye. This is why inspiration is described to Ibn Khālidn, means "make haste" (Prologomena, i. 296-298, quoted in full in Neils, Faiths of India, ii. 149).

The orthodox view is that a prophet knows all things without having received previous instruction, that he gives information regarding the past and the future, otherwise than by analogous reasoning, and that he is superior to other human beings, as he has communion with the angelic world.

The sacred month of Ramadan has been specially selected as the Triduum for divine ecstasy: on the first day the book of Abraham, on the sixth the book of Moses, on the thirteenth the Gospel, and on the twenty-seventh the Law of God; or the Night of Power: the Qur‘an becomes complete to the "House of Glory," situated in the lowest of the seven heavens, from which, as occasion required, portions were brought by Gabriel and revealed to Muhammad: "We caused it [the Qur‘an] to descend on the Night of Power" (xxvii. 1 ff.). This is the blessed night, the night better than a thousand months, the night which bringeth peace and blessings to therosy dawn (ib.).

Some suppose that the first revelation was "Warn thy relatives of nearer kin" (xxvi. 214), but the objection to this opinion is that the words of the context, "kindly lower thy wing over the faithful who follow thee" (ib. 212), and "who seek thee when thou standest as prayer and thyrossy dawn" (238 L.), presuppose the existence of a small Muslim community. There are other objections also connected with the style and use of words in this chapter which show that it must be a later one.

The general view, then, may be accepted as correct, which is that, when in the cave of Hira, a little distance from Mecca, the Prophet heard a voice calling on him to recite the opening words of the sūras XIX. (v. 9).

Tradition has sur: of diviné ecstasy with many marvels. The following is a condensed account of the narrative concerning the inspiration of the Prophet given in Mirkhond’s Baudat as-Safa (II. 140).

The Prophet was sleeping in the cave of Hira when Gabriel made his appearance in the form of a man. But his Lordship answered, "I am not a reader." Then Gabriel squeezed him so hard that he thought his end was near; but the angel again said: "Read, and recite the words of thy Lord, even if he be the most benighted of mankind, i.e., Recite thou in the name of thy Lord, who created mankind; in the name of Allah, Gabriel comforted him by saying that he was the messenger of God to prophets. When Muhammad said that he could not read, Gabriel took from his breast a golden book, "The Book of Paradise," and gave it to him. This book was as full of munificence and beauty as the silver boards and pearls and gems, and threw it on his blessed face. All this very much alarmed the Prophet. He hastened home, and Khadija, his wife, said: "I perceive a light in thy countenance, the like of which I have never seen, and when I separated from it, I lay down in a paroxysm of fear. When I recovered, he said, "O Khadija, I have become a soothsayer of grace and mercy." God will not surely let such a thing happen to thee, for thou speakest the truth, dost not return evil for evil, art of a good life, kind to thy relatives and friends. Hast thou seen such things?" He then told her what had happened, whereupon she said: "Repulse, dear husband, the evil people." He whose hands stand Khadija’s life is my witness that thou wilt be the Prophet of his people (Lytton Itabrit).
The doctrine of waqā', the inspiration of the Qurān, is closely connected with the attribute of God, called kalām, 'word,' or 'speech,' and concepts which there is a long and bitter conflict between the Mu'tazilites and the orthodox section of the Muslims. It ranged round the great dispute as to whether the attributes of God were eternal or not. The orthodox belief is that the Qurān was written from all eternity on the Preserved Table. The unbound reverence of the Muslims for the Qurān runs parallel in the Islamic faith (which appeared at an early date through the influence of the doctrine of the eternal Word of God) that the Book, as the divine word, is regarded as eternal in God, and consequently eternal and uncreated (T. Jäckh, Sketches from Eastern History, p. 5). This view has been well stated by D. B. MacDonald:

There has grown up very early in the Muslim community an unbounded reverence and awe in the presence of the Qurān. In it God speaks, addressing His servants, the Prophet; hence all His words, with few exceptions, are direct words of God. It is, therefore, the best witness one can have as to His existence and attributes. But the Muslim piety went further and had even exalted from all eternity with God. Whatever proofs of this doctrine may have been brought forward later in the Qurān itself, we can have no difficulty in recognizing that it is plainly derived from the Christian Logos and that the Greek Church, perhaps through John of Damascus, has again played a formative part. So, in correspondence with the heavenly and uncreated Logos in the bosom of the Father, there stands this uncreated and eternal Word of God to the earthly manifestation in Jesus corresponds the Qurān, the Word of God which we read and recite. The one word is, of course, the idea to be gained from the expressions of the one is equivalent to the idea which would be gained in the other, if the veil of the flesh was removed from us and the spiritual world revealed (Development of Muslim Theology, p. 160).

It is interesting to notice how, right in the heart of the Islamic system, there is such a nearapproach to a great truth, and how, in rejecting the Incarnate Word, the eternal Son of God, Muslims have arrived at a conclusion that Christianity is a bogy.

The history of the development of the Qurān and of its exegesis lies outside the scope of this article; and so it only remains to state the various views on kalām, 'the word,' so far as they are connected with the question of inspiration (see, further, art. KA'LAM). The orthodox view of kalām, one of the attributes of God, is that God 'speaks' with a tongue as he does not. He speaks to some of His servants without the intervention of another, even as He spoke to Moses, and to Muhammad on the night of the ascension to heaven. He speaks to others by the instrumentality of Gabriel, and this is the usual way in which He speaks to the prophets. It follows from this that the Qurān is the word of God, and is eternal and uncreated (Muhammad al-Būkhārī, quoted in Sei, Faith of Islam, p. 187).

The speech (kalām), then, that is necessary to God is that which the glorious expressions revealed to the Prophet, brought to the lowest heaven, and thence were revealed to the Prophet. These are the views held by the Sunnī Musalmas. They were earnestly opposed by the Mu'tazilites, who deny the existence of eternal speech, and this on the following grounds. It is written in Arabic, it descended to earth, and is written and read. Events are described in the past tense, whereas, if the Qurān existed, it would only have been used; it contains commands and prohibitions; therefore, if anything existed, and would be prohibited? If it existed from eternity past, it will exist till eternity future, and so on. In the next world its laws will be incumbent on men, no man must perform the same religious ceremonies as they do now; if it is eternal, then there are two eternal, eternal and the Word, which would destroy the Unity of the Divine Being. If it is said that it is speech only which is eternal, and not the word and sounds, then how can there be speech without sound? To the latter objection the Sunnī reply that a man's thoughts are a kind of speech without sound. It is true that, as man's thought is originated, it cannot be compared to God's speech, which is eternal; yet the illustration is good as far as it goes to show that speech does not necessarily need sound.

The Mu'tazilites produced such texts as 'Verily we have made it an Arabic Qurān' (xxii. 2, xxii. 37, xx. 129, 133) and 'We have created speech and what God made He created, as it is said: 'Who hath created the heavens and the earth' (vi. 1). To which the reply is made: 'Are not the creation and the commanded Him?' (xxii. 52). The difference between the creation and the command, and, inasmuch as the command 'bo' creates, it cannot have been created, and is, therefore, eternal. Some of the 'Abābid sect and the dā'ī were supporters of the Mu'tazilites, and the Khalīf Ma'mūn in the year 212 A.H. issued a decree declaring that all who asserted that the Qurān was eternal were heretics. A little later on the Khalīf ordered an account to the Prefect of Bagdad denouncing as a mere babble and mbash, as men of no insight or knowledge, those who held the orthodox views. He was told to assemble the Qarīs, the Qurān readers, to question them as to their opinion, and to inform them that the Khalīf neither wished for nor would retain in his service any one who he considered to be in error in the faith. The inquiry was unsatisfactory, and so this order was issued:

What the pretenders to orthodoxy and the seekers after the authority for which they are united have not dared to speak to me. Now, who does not admit that the Qurān is created, despised his exalted and powerful and his authority in the traditions' (Jālod-dīn as-Sūgūt, History of the Khalīfs, Caliphs, 1801, Ch. on Ma'mūn).

The next Khalīf, al-Mu'tasim, severely punished and imprisoned the Imām Ibn Hanbal (q.v.), a theologian of great repute, because he would not admit that the Qurān was created. Al-Būqātī, a theologian, was brought from Cairo to Bagdad, and there imprisoned till the day of his death for the same reason. Whilst they led him on fettered and chained, he kept repeating to himself, 'Almighty God created the world by means of the word.' Now, if that word was created, one created thing would have created another, which he held to be impossible.

The reference here is to the verse, 'Verily our speech unto a thing, when We will the same, is that we say to it only "Be," and it is' (xxii. 87). This was a standing argument against the Mu'tazilites. So also is the argument, 'The word is a warning... written on honoured pages, exculis, paraded,' (xxii. 111), said to refer to the eternal and the Hidden Table, an argument repudiated by the Mu'tazilites.

When times changed and the orthodox returned to power, Imām ash-Shāfi'ī called before him a theologian named Hāfiz, and, quoting the verse,
'God said "Be" and it is,' said, 'Did not God create this thing by the word "Be"?' Hafs answered. 'Then, if the Qur'an was created, must not the word "Be" also have been created?' To this Hafs agreed. 'Then all things were created by a created thing, which is a contradiction and manifestly impossible.' Such was the effect of Shâfi'i's reasoning that Hafs was put to death as a pestilent heretic (Sell, Faith of Islam, p. 217).

The Mu'tazilites opposed the orthodox view, for they did not believe that man's free will was limited by an eternal law, and thus they deplored the great doctrine of the Unity of God. However, the reaction came, and the orthodox school gained the day. The Mu'tazilite movement was a great one, and, when it failed, Isâlam again resumed the rigid form which has characterized it till this day. In India, under the influence of Western thought and a liberal government, there has been some attempt to revive Mu'tazilite teaching. The leaders of the movement see that the mechanical view of instinct, which is characteristic of enlightened progress, and they have selected this very subject as one to be discussed, and as one on which sounder views should be propagated. One of them says:

"The prophet does not believe that even the simple act of blinking feels that his mind is illuminated by God, that the things which are expressed by him and spoken or written under the influence of this illumination are also to be regarded as the words of God. This illumination of the mind, or effect of the divine influence, differs in the present world, as the present life is the creation of the circumstances—physical, moral, and religious—in which he is placed" (M. Cheragh 'All, Critical Exposition of Islam, p. 133).

Another well-known writer, an avowed Mu'tazilite, speaks of the realistic description of man's existence and hell as borrowed from Zoroastrian and Tantric sources (see Syed Amir All, Spirit of Islam, London, 1891, p. 294). It may be said that, as his followers grew in the apprehension of spiritual conceptions, the mind of the Prophet developed; but the objection to this is that the later chapters of the Qur'an are, as a rule, less spiritual than the earlier ones; and so the development, if such there was, was in a downward direction. But it is clear that in the Prophet's life, there were few Muslims who see wherein the weakness of their system lies, who boldly repudiate all the teaching of the past, and adopt what is practically a Christian view of inspiration. These men, however, are repudiated by the great mass of the Muslim world, as men having forsaken a revealed religion, and are to be shunned as innovators, a class most distasteful to the orthodox Muslim. But herein the only hope of Islam lies; for, until more reasonable views of inspiration become general, until the dead weight of traditionalism is lifted off, and until intelligence and reason are allowed some force, there can be no enlightened progress in the community.

E. SELL.

INSTINCT.—With regard to the exact meaning which we should attach to the words 'instinct' and 'propensity to experience,' the individual and independent of instruction (Natural Theology, London, 1852, ch. xviii.) But the word 'propensity' is somewhat vague. Then it must be asked to what end the propensity leads. Is it a propensity to behave in some more or less specific manner, or to experience certain emotional states, or to believe certain things, or to transgress certain usages? And is it one of these, or all of these? Furthermore, what are we to understand by an instinct? Is it a propensity to a specific mode of behaviour, a particular belief, or a definite type of emotion? And can such a propensity be clearly marked off and isolated in analytic treatment? There are difficulties in doing so; and it is probably better to use the noun as a generic term—"intelligence"—to cover all those processes to which the adjectives 'instinctive' is properly applicable. But this still leaves us on one hand the question: What is the distinguishing nature of these processes?

Those who approach this question from the biological side tend to limit the term 'instinctive' to certain more or less specific modes of behaviour which are characterized by the fact that they came, without any intervening and guiding mental process, when the organism is appropriately stimulated by the presentation of a more or less complex signal situation, or to the automatic responses arising within the organism. And on this view they come because the organism, and, especially in higher forms of life, its nervous system, have been prepared by an evolutionary process to respond to such stimulation in more or less specific ways. The chick pecks, the duckling swims, the moorhen dives, the infant sucks, because the inherited organic constitution is such that these modes of behaviour are the automatic outcome when the requisite situation is presented, without any mental realization of the meaning of the situation or of the effect of the word 'instinctive' is thus, for those who accept this view of the matter, primarily a biological term.

But the presented situation, and the process of behaving in such a manner in its midst, are accompanied by a coherent mode of experience—the instinctive experience—and this is assimilated to or incorporated with such prior experience revived through association as the organism may have already gained in other ways by previous occasions. Thus, although the word 'instinctive' is primarily a biological term, it is secondarily a psychological term which labels a somewhat complex factor in the development of the mental life of the individual.

Now, such a definition of the term 'instinctive' as has been briefly indicated, tenable as it may be in the appropriate universe of discourse, seems hardly acceptable in connexion with the topics of ethics and religion. It seems desirable, therefore, so to extend the connotation of the word 'instinctive' as to bring our treatment into line with current usage in the familiar speech of educated persons, who are often impatient of subtle psychological distinctions. In this broader sense of the word, the traditional distinction between that which is instinctive and that which is based on carefully reasoned foundations is preserved and emphasized; stress is laid on the spontaneous as contrasted with the deliberate nature of the mental processes involved; and, though it may be difficult to distinguish between that which is the outcome of the net results of previous training and education and that which is due to congenital and hereditary disposition, it is generally implied that what is instinctive in this larger sense is in the main unlearned and, at least predominantly, the expression of the innate constitution of the mind.

William James has given a graphic description of the manner in which he was affected by the
California earthquake of 1906, which lasted some forty-eight seconds. It may be quoted in illustration of the spontaneous as contrasted with the varied and cultivated attitude of mind.

In my case," he says, "sensation and emotion were so strong that little thought, and no reflection or volition, were possible in their grip. They were not caused by the phenomena. . . . As such I could think, I discerned retrospectively certain peculiar ways in which my consciousness had taken in the phenomena. This included the power to speak, to write, to work, and to reason. . . . It came, moreover, directly to me. It stole in behind my back, and once inside the room, had me at its will, and could manifest itself convincingly. Animals and inanimate objects were never more present in any human action, nor did any human activity ever more definitely point back to a living agent as its source and origin. . . . For "science," when the tensions in the earth's crust reach the breaking-point, and strains take into an altered equilibrium, the Earthquake is simply the collective sense of all the cracks and fissures, and disturbances that happen. They are the Earthquake. But for me the Earthquake was the cause of the disturbances, and the perception of it as a living agent was irresistible. It had an overpowering dramatic conviction. I realize now better than ever how inevitable was man's earlier mythological version of such catastrophes, and how artificial and against the grain of our spontaneous percepting are the later habits into which science educes us" (Memories and Studies, London, 1911, pp. 210-216).

In this graphic account of his mental attitude at a moment of crisis given us by a leading psychologist and a master of description, although the term 'instinctive' does not occur, what is commonly meant by the term, or by the older and currently popular sense is admirably exemplified. The outlook of the moment was not that which calls into play the rational faculties developed by scientific thought; it was far more primitive and unsophisticated. What James wished to emphasize, that, in face of a new and thrilling experience, deep-seated natural tendencies, spontaneous and now more explicitly volitional, emerged unsuited in the light of consciousness—especially a tendency to personify the cause of the disaster, and to attribute to that cause malign intent. The natural man in William James was, during those forty-eight seconds, laid bare: his science, his psychology, his philosophy had not, just then, a word of protest to utter. The sudden onslaught of the earthquake shook the guardians of the citizenry of reason asleep at their post. Whether the verdict of reason or that of instinct was the truer verdict is not here the point. The point is that the verdict of instinct was that James's attitude was spontaneous rather than deliberate, and that his swift interpretation of the meaning of the calamitous situation was charged with a sense of being immediate and irresistible—so much beyond his control as the earthquake itself—is clear from the description he gave just after the event. But whether this direct and immediate pronouncement of the natural man within him was due to something innate in his mental constitution, or was the unbidden outcome of acquired habits of mind—habits perhaps acquired in quite early stages of his development—he does not attempt to determine. And, if it was partly due to the one and partly to the other, he does not pause to assign something like approximate values to the innate and to the acquired determinants of the attitude spontaneously assumed. No doubt, since his aim was to describe faithfully what passed through his mind at the moment when the earthquake caught him in its grip, he was wise not to enter upon a discussion of an exceedingly difficult problem. But difficult, indeed, is this problem that it is questionable whether it is possible to solve it on the basis of the broader definition of the term 'instinctive.' Instinctive tendencies and emotions are unalterably profoundly modified in the light of the experience which is personally acquired through education, through commerce with the world of nature, and through a thousand social influences in childhood and in later life. Can we eliminate these if the question arises whether the moral and religious attitude of the adult is instinctive in the sense of being, strictly speaking, innate and not acquired, or even predominantly inborn, no matter how much they have been directed in early education? To differentiate the strictly congenital factors of the tendencies and prepossessions of nature from those which have been insensibly developed through individual training and habit seems, at present, to be a task beyond the powers of psychological analysis.

Still, analysis may help us on our way towards the solution of such problems. A resolute and suggestive attempt to lay bare the innate foundations of the mental life of man is made in W. McDougall's Introduction to Social Psychology (London, 1908). He holds that the problem for solution has been mis-stated—nay more, completely inverted.

The doctrine has been accepted, he says, that 'men normally and in the vast majority of cases act reasonably and as they ought to act, so that the question of whether the circumstances act otherwise; whereas the truth is that men are moved by a variety of impulses whose nature has been determined by long ages of the evolutionary process without reference to the interests of men in civilized societies; and the psychological problem we have to solve is—how can we account for the fact that men so moved ever come to act as they ought or morally and reasonably? For, 'mankind is only a little less reasonable and to a great extent very unreasoningly moved in quite unreasonable ways' (pp. 10-11).

This is McDougall's way of asking the question how moral and rational conduct have been evolved. But he renders the question more concrete by asking from what primitive impulses, common to men and the higher animals, this progress has proceeded. And his answer is: From a relatively small number of primitive instincts.

These instincts are directed or indirectly the prime movers of all human activity. By the conative and impulsive force of some instinct, or of some habit derived from an instinct, every train of thought, however cold and passionless it may seem, is borne along towards its end, and every bodily activity is initiated and sustained. There is on the one side the presentation of some situation or of some problem; there is on the other side an appropriate response in bodily behaviour or in mental activity; and at the meeting of the two there is the conative impulse emotionally toned in some more or less specific manner. Analysis discloses in any such emotional impulse, no matter how complex, a subtle combination of the conative and the instinctive; and any higher secondary or tertiary product of evolution may, therefore, be regarded as a synthesis of a few primary constitutents. What, then, are these primitive and elemental factors in the conative life of social mankind? The principal instincts of man, each of which is also a primary emotion, are, according to McDougall's analysis, seven in number: (1) the instinct of flight and the emotion of fear; (2) the instinct of repulsion and the emotion of disgust; (3) the instinct of curiosity and the emotion of wonder; (4) the instinct of aggression and the emotion of anger; (5) and (6) the instincts of self-abasement (or subjection) and of self-assertion (or self-display), and the emotions of subjection or of elation (positive or negative self-assertion); and (7) the parental instinct and tender emotion. These seven instincts are those whose excitement yields the most definite of the primary emotions, and from these nervous excitations rise all the feelings of pleasure and pain (and perhaps also feelings of excitement and of depression) are composed. But if all these, the affective states that are popularly recognized as emotions, and for which common speech has definite names (p. 83).

To these are added, in a supplementary list, the instinct of reproduction, the gregarious instinct,
the instinct of acquisition, and that of construction. Among the more general innate tendencies, whose behaviour-outlet is less definite and circumstanced, are the hearty, suggestibility, imitation, display, habit, and certain ingrained temperamental factors.

It must be remembered that the presented situation, although a focus of such emotional impulses as self-abasement, or self-assertion, or the parental instinct with its tender emotion are very varied, and may be much modified in the course of the developing, and the individual experience as life runs its course. It must be remembered also that the resulting behaviour is no less varied and no less subject to modification through acquired habit.

The principal instincts of man, says he, are liable to modifications of their afferent and motor parts, while their central parts remain unchanged and determine the emotional tone and the visceral changes characteristic of the excitement of the instinct. "No doubt this must be taken in a relative sense; but even on these terms it is open to question whether there are not as many different shades and varieties of, say, tender emotion as there are situations which call it into being, and modes of behavior that further qualify its experiential nature. We must, however, attempt to classify modes of instinctive experience which are bewildering in their rich variety and multiplicity, and that perhaps no two are in all respects quite alike. McDougall's treatment is a helpful step towards such a classification of experiences which are differentiated, with much residual overlap, and where, according to H. G. H. Borrower terms of interpenetration, the presentation of diverse situations and by means of that instinctive behaviour in their midst which is a legacy of ages of evolutionary preparation.

We have thus a list of seven or more elementary ‘propensities’ or impulses which may be precipitated in man as the innate and hereditary constitution. Each concrete case of predication is, of course, conditioned upon the presentation of a situation of somewhat varied nature, and upon the performance of sundry appropriate activities linked therewith. But, as experience develops and becomes more complex, the life of emotions and conduct becomes richer, more subtly differentiated, and more harmoniously integrated. Still, according to McDougall, whom we are taking as our accredited guide, no new elementary factors are introduced. The higher and richer emotions are compounds of the primary emotions subtly combined or blended. We may take as examples adoration, awe, and reverence, since these are salient features in the religious attitude. With regard to admiration, McDougall says, there seem to be two primary emotions essentially involved in the state provoked by the contemplation of the admired object, namely, wonder and negative self-feeling or the emotion of submission. Thus admiration is a binary compound. But awe is a tertiary compound, since an element of fear is also present. Fear, indeed, of many shades, ranging from that in which admiration is but slightly tinged with fear to that in which fear is only slightly tinged with admiration. But, unless fear is in some measure incorporated with wonder and submission, the emotion which we name awe is not fully constituted. And, when to awe, as a tertiary compound, gratitude is also added, we experience the compounded emotion of reverence.

Gratitude itself is a binary compound of tender emotion and submission or negative self-feeling. Submission is doubly emphasized, for it is a constituent both of the emotion of and of gratitude. Thus we have a highly complex and predominantly submissive emotional state, but still one which is compounded of the primary instinctive and emotional constituents. Now, reverence is the religious emotion par excellence; few merely human powers are capable of exciting reverence. It involves wonder, fear, gratitude, and negative self-feeling. Those human beings who inspire reverence, or who are by custom and convention considered as entitled to inspire it, out their reverence character to their being regarded as the ministers and dispensers of Divine power. Religion seems to show us the gradual genesis of this highly complex emotion. Pruritive religion, to keep separate the superhuman objects of its component emotions, the terrible or awe-inspiring powers on the one hand, the kindly beneficent powers that inspired gratitude on the other, and which was not until religious doctrine had undergone a long evolution that, by a process of syncretism or fusion, it achieved the conception of a Deity whose attributes were capable of evolving all the elements of the complex emotions of reverence.

McDougall has an interesting suggestion with regard to the difference in attitude which characterizes religion on the one hand and magic on the other. He suggests that the fundamental distinction between religions and magical practices is not, as is sometimes said, that religion conceives the powers it envisages as personal powers, while magic conceives them as impersonal, but rather that the religious attitude is always a submission, the magical attitude that of self-assertion, and that the forces which both magical and religious practices are concerned to influence may be conceived in either case as personal or impersonal powers. Hence the savage, who at one time bows down before his fetish in supplication, and at another seeks to compel its assistance by threats or spells, adopts towards the one attitude of submission, and the other of assertion. In this connexion we may ask whether William James's attitude in the presence of the personified earthquake, as an attitude of submission, was religious in its nature. The point of view which McDougall has developed in his discussion of reverence in its relation to religion is interesting and suggestive. But questions of no little difficulty arise. Granted that reverence may be regarded as such a compound of elementary factors as McDougall has indicated, how far may we regard the process of compounding as an innate propensity, and thus lose reverence in its developed form as instinctive in the broader acceptance of the term—an acceptance somewhat broader than that which he advocates?

Is the process of blending as an instinct a related to the elementary factors which are blended? And, if so, instinctive in what sense? Is it instinctive in its unreasoned and involuntary spontaneity? Is it instinctive as wholly unlearnt? Can we say that it is entirely congenital and nowise acquired? And, if in some measure acquired, are we to regard the acquisition as a relatively negligible modification of an attitude that is fundamentally innate? The answers to these questions in some degree turn upon the previous answer to that most vexed of vexed questions with regard to the inheritance of that which is acquired in the course of a life. But apart from this question, which cannot here be discussed, it is exceedingly difficult to determine how far attitudes which are seemingly racial in character are due to inborn propensities or tendencies, and how far these attitudes are due to the influence of the environment on each succeeding generation and to the traditional outlook imparted through early education. C. D. Wedderburn, in his paper, "Concerning the Non-existence of a Man" (London, 1912, p. 251), has drawn attention to the fact that, whereas

*Chadsey and, more markedly, in Assyria, the gods were usually conceived as hostile to man, pursuing him in life and death with implacable hatred; in Egypt, as in Greece, the
divine powers were represented in mythology as friendly, ready to come to man’s aid in time of material danger and in the after-world. It would be interesting to enquire what should have been the effect of this special attitude towards nature and the mythology by which it was endeavoured to interpret the phenomena of the world and of concord and discord. In Egypt, the Nile, with its irregular and unfailing rise and fall, was the source of all fertility—steady, tranquil change, a symbol of the dispensations of the gods, the tempestuous and inconstant flooding of the Euphrates and the Tigris made life on those banks dangerous and uncertain. Nature was hostile, ready to swamp and deluge man and his works, and the work of one unforeseen flood was in one year undone. But, in the one case, any attempt to understand or to control the elemental forces was an impious and useless action. Doctrines and theories by magic and sorcery, or, at the best, prophetic knowledge, by which the hostile powers by sacrificial rites, represent the logical outcome of this view of nature. But in the other case, where the deities are friendly, any increase of man’s mastery over his surroundings propounded by the tutelary powers, and is probably directed by them, since it is their good pleasure to help him on his way. One of other of these alternative attitudes of mind predominates in every religious system, according to the race and circumstances of those who hold to it.

Here we have different attitudes as the result of differences of environment. We speak of the net as illustrating racial characteristics. But it is hard to say how far the ‘instinctive attitude’ assumed is congenital and innate, and how far it has been handed on by tradition in the social mind of the race.

Although McDougall deals with admiration, awe, and reverence under the heading of ‘complex emotions that do not necessarily imply the existence of sentiments,’ his treatment of their component parts is too simple. Religion leads us to infer that, at the stage of mental development when religious conceptions are in being, they are incorporated in that higher idealistic synthesis in which the sentiment plays so conspicuous a part. By sentiments, we are to understand, following A. F. Shand (‘Character and the Emotions,’ in Mind, new ser., v. [1896]), an organized system of emotional tendencies centred around the idea of an object. The object here is not merely a presentation to perceptive experience evoking such naive behaviour, adapted to the immediate situation, as is found in animal life. It is a centre, not only of a system of emotional dispositions, but of a system of knowledge in some degree organized, and of a system of conduct which is significantly related to the idea of the object or class of objects. It is always in some measure a centre of thought, of emotional tendency, and of conscious endeavour. Otherwise it does not attain to the level of sentiment, which is always in alliance with concepts and with conscious emotions, to the terms the sentiment cannot be wholly instinctive in the sense that it is on the same plane as the innate ideas of early writers. As McDougall says, the organization of the sentiments in the developing mind is determined by the course of experience; that is to say, the sentiment is a growth in the architecture of the mind that is not natively given in the inherited constitution (p. 109).

None the less, it may be founded on an inherited basis.

If, then, the question is raised whether the moral sentiments (centred around the ideas of self and of alter) and the religious sentiments (centred around the idea of a super-alter as source and cause of mundane happenings) are instinctive, our answer must again depend on the connotation to be attached to this perplexing elusive term. That in the course of life they may become instinctive, in the sense that they may be imbibed and spontaneously within the mind without explicit rational backing, when the circumstances are of the appropriate kind, can scarcely be questioned. That they are the outcome of a hereditary bias or proclivity in the native constitution of man, is more open to question, and is as readily asserted by some people as denied by others.

The fact is that, when once we accept the broad and general usage of popular speech, anything like a precise and clear definition of instincts becomes very difficult, if not impossible. And perhaps some measure of vagueness and elasticity is commonly regarded as only right; and sitting where strict accuracy of scientific interpretation is at present unattainable. If the instinctive in man is to be taken as synonymous with anything that belongs to his constitution as human, do we mean the constitution of the infant at birth, or the constitution of the adult after a long period of education and development? Or do we mean, as in one of those, but rather some indwelling principle of synthesis—or, if it be preferred, a synthetic tendency the existence of which is inferred from certain observed facts that arise from nature and are or may be throughout the life what he is or may become? By this nothing more mysterious is implied than that which is commonly accepted as the ground of the constitution, or even, in inorganic nature, as the ground of crystalline synthesis or of the formation of complex chemical compounds. The acceptance of a specific constitutional fact is only carrying up into the realm of mind what is by many regarded as a scientifically legitimate in the interpretation of other natural phenomena. Assume, e.g., that tender emotion (to select one item from McDougall’s list) is what, to borrow a term from interpretation, may be regarded as a ‘unit character.’ Even thus regarded, it is a synthesis of no little complexity. Its components are more elementary factors which are additive in a certain sense, and are probably more than additive in that in their combination they possess a constitutive quality which gives to the algebraical sum of the factors what we may perhaps term its peculiar and specific emotional timbre. Just as a note played on the violin gives a complex periodic wave according to our consciousness a simultaneous combination of the fundamental tones and its peculiar timbre, so a series of fainter overtones, and yet there is something about the timbre of the note which is not merely additive but constitutive of that peculiar auditory experience, so, in tender emotion there is a constitutive supplement to the additive factors—a supplement which gives to these factors in combination the characteristic property of the unit character as a synthetic whole. To pursue the analogy a stage further, just as in music the additive sum is not merely the additive sum of the constituent tones and overtones simultaneously presented to hearing, but has its constitutive property as a chord, so, too, the blend of wonder, negative self-feeling, and fear, as generators of the complex emotion of awe, affords in consciousness what we may term an emotional chord, the specific quality of which is not exhausted by giving a list of its factors. When the emotional chord has its definite place in life’s harmony, and derives further and richer significance from its context, it is raised to the level of a sentiment, and, in relation to the context, has a higher constitutive value.

Not all psychologists would concur in such statements as these. But many are prepared to accept what W. Wundt (An Introduction to Psychology, Eng. tr., London, 1912, p. 184) has termed the principle of creative resultants—creative in the sense that the resultant compounds have new properties. This principle, he says, attempts to state the fact that

‘In all psychical combinations the product is not the mere sum of the separate elements; it is not a combination of combinations, but that it represents a new creation’ (p. 184).

This is extended to the whole realm of life in Bergson’s doctrine of creative evolution, which many biologists can accept without subscribing to his radical dualism. Even in the inorganic world
the same principle holds. W. Nernst teaches (quoted in The New Realism, New York, 1912, p. 238) that, while a large number of physical properties are clearly additive, there are other properties which are not merely additive. Now non-native properties, he says, are termed constitutive.

Granted, then, that in the course of mental development new constitutive properties may arise, psychological treatises and religions and sentiments are characteristic evolutionary factors that supervene at critical periods of synthesis, our immediate question is whether they should be regarded as constitutive in that broader sense of the term which is here provisionally accepted. They appear to be distinctive of man in virtue of his inherent constitution as human; they appear to be in large measure beyond volitional control; from the ethical point of view they appear to be the outcome of character (which is the constitutive factor) rather than the sum of the conditions which, of course, must supply the requisite additive data; and on such grounds they may well be claimed to be constitutive in the widest sense of the term. On such grounds, therefore, it can scarcely be denied that a child receives, so to speak, its varnas as so many exogenous traits, nearly as prevalent in mankind, though they assume varied forms under varied circumstances, have an instinctive basis in the human constitution.

C. LLOYD MORGAN.

INSTITUTIONS (Indian).—A native of India, as observed by H. C. Bose in his attractive little work, The Hindus as they are, is a religious character. He is born religiously, lives religiously, eats religiously, walks religiously, writes religiously, sleeps religiously, and dies religiously. All the more important ancient institutions of the Aryan Indians may be said to have a religious tinge. Even the rules of Government, as framed by the Brahman, are essentially theocratic. It is true they could never have been fully enforced, but, whenever Brâhmanism was in the ascendant in a Hindu State, the orthodox union of Church and State was carried into practice as much as was found practicable. Thus one of the eight ministers appointed by the great Siâvi, the founder of Mahârta power, was entrusted with the exercise of all the sovereign's ecclesiastical powers, and was to order punishment to be inflicted after investigating into what is and what is not in accordance with the religious law (A.D. 1674). The main inspiring principle of the whole movement initiated by Siâvi, and carried on by his successors, was the preservation of the Hindu religion against foreign aggression. The administration of justice, which was considered one of the principal duties of a king, is similarly characterized. The trial by ordeal being a regular feature of judicial proceedings (see LAW).

Caste, whatever its origin, is another important institution of an essentially religious or historic character. As observed in the Report on the Census of 1901 (p. 360), the most obvious characteristic of the ordinary Hindu is his acceptance of the Brâhmanical supremacy and of the caste system. Although the political power of the Brâhman caste is gone, their influence with Hindu society continues to have a vitality that has been called the Brâhmanization of non-Hinduized castes—the endeavour to rise in the social scale by adopting the characteristic social customs of the Brâhmanas, such as sitting on the ground, and the prohibition of widow remarriage.

Passing to religious institutions in the proper sense of the term, we may perhaps mention the following as specially characteristic: a CRYSTAL with external and internal, is a great object with Hindus of every sect and persuasion, and manifold are the rules regarding the avoidance of pollution or defilement, and the removal of its consequences where it has been contracted (see PURIFICATION, FOOD). There is not only a fully developed system of penances (see EXPIATION AND ATONEMENT), but an endless row of devotional acts tending to the expiation of guilt and to the acquisition of spiritual merit. The śivākāras or sacrifices, to be performed during pregnancy (puṣâvatana, sivaṇtanaṇaṇaṇa), at childbirth (ādīḥaṇa), when the first gets rice to eat (uṇṇaṇākāra), on the first hair-clipping (cūhāa), when the boy is girt with the sacred thread (āpanaṇaṇa), on marriage (vivāda), and after death, etc., are established to wholesome ends, and form a regular source of income for the Brâhmanas officiating at these ceremonies. Thus among the Patane Prabhus of Poonia, a highly respectable caste, a birth was said to cost a gold basin, a thread-girding £20 to £50, the marriage of a son £150 to £400, of a daughter £100 to £500, a girl's coming of age £10 to £20, a pregnancy £10 to £15, the death of an adult £20 to £25 (BG xviii. 194). Marriage is a particularly expensive and solemn celebration, at which many of the old rites described in Sanskrit literature are still observed, together with many new ceremonies. The special importance and sanctity attributed to the institution of marriage in the Hindu religion become conspicuous equally in the before-mentioned customs of infant marriage and of prohibition of widow remarriage. By betrothing their children at an early age, parents could best provide for their not remaining unmarried, a spinster, especially of the Brâhman caste, being considered a disgrace to her family. This early betrothal was in reality the decisive act, though married life could not begin till some years later; and thus arose the peculiarly Indian institution of virgin widows, remarriage of a woman, like divorce, being unknown to the Brâhmanical law of India (see CHILD-MARRIAGE). The former practice of sati, or self-immolation of widows, has been abolished by the British Government. The two ceremonies of tenure (g.n.) and of thread-girding (see INITIATION) are considered important events in the life of a Hindu boy. The ordinary mode of disposing of the dead is by cremation (DEATH AND DISPOSAL OF THE DEAD). Every death is followed by a certain period of impurity, and by the offering, at regular intervals, of sacrificial oblations called śrīdās in the names. Adopting a boy, though not a sacrament, is a religious act of considerable importance for Indian family life (see ADOPTION). According to the religious duties prevailing in each successive stage of life, there are four dīnārassas, or orders, in the life of a Brâhman, of pupil (brahmacārin), married householder (gṛhastha), hermit (sānātana), and ascetic (brahmadāra); but, however, the order of hermits has died out, and the pupil and ascetic are chiefly represented by the ekās and gurus of the monastic orders of the
INSTITUTIONAL CHURCH

The modern type of the Hindu Brahman is the ordinary householder, engaged in commerce or industry, and the priest or the sacerdote of the Hindu temples. The Brahman is a member of the religious class, and the priest is a member of the religious caste. The Brahman is a member of the religious order, and the priest is a member of the religious community. The Brahman is a member of the religious society, and the priest is a member of the religious institution. The Brahman is a member of the religious community, and the priest is a member of the religious institution. The Brahman is a member of the religious society, and the priest is a member of the religious community.

The Brahman is a member of the religious order, and the priest is a member of the religious community. The Brahman is a member of the religious society, and the priest is a member of the religious institution. The Brahman is a member of the religious community, and the priest is a member of the religious institution. The Brahman is a member of the religious society, and the priest is a member of the religious community.

The Brahman is a member of the religious order, and the priest is a member of the religious community. The Brahman is a member of the religious society, and the priest is a member of the religious institution. The Brahman is a member of the religious community, and the priest is a member of the religious institution. The Brahman is a member of the religious society, and the priest is a member of the religious community.
confirmed by the new sense which was being developed among the members of all Churches as to their duty to the young. The English Sunday Schools have seldom succeeded in retaining their older scholars. Even in schools where large Bible classes exist, the need for more and more help for keeping in touch with these young men and women was increasingly felt. The statistics were alarming as to the small number of young people who were attached to the Church. R. W. Dale, on a memorable occasion, pressed home the question, 'How have we lost them?' Certain religious associations sprang into existence to meet this felt need. The Christian Endeavour Societies (see art. CHRISTIAN ENDEAVOUR) were probably the most successful in making appeal to the religious nature of the young. But the Church was even then hardly prepared to recognize that the physical and intellectual needs of men and women are equally urgent, and that it may form part of her duty to make provision for these. In some communions this ideal was advocated; and what was then known as 'Guilds' were founded upon the explicit basis of the organic unity of our nature, and that just because we are human beings we must be treated as such. Hence the Guild had its social and moral, and at the same time intellectual and religious one. The Guild movement had a partial success. Where the home-life is normal and strong, it is evident that the need for men of the Church is more insistent. But modern Britain and modern America have tended increasingly to produce overcrowded areas, where little or nothing deserves the name of home-life, and where all social and recreational satisfactions must be sought for elsewhere. Earnest people in all Churches began to see that the problem before them was to adapt the Church's institutions to the needs of areas such as these.

One movement had brought home this problem to the conscience of Christian people. This was what was known as the 'F.S.A.' movement, by means of which large congregations of men and women were brought together on Sunday afternoons for purposes which, it would be fair to say, were at once religious and social. These people, from what was often spoken of as the 'hospitals of the poor', formed themselves into societies with branches designed to promote thrift, to encourage reading, and to secure effective house-to-house visitation. But, in the majority of cases, the Churches had no hostility to offer them apart from the Sunday meeting. It was borne in upon the minds of those who were especially concerned that the Church should prosper in the industrial districts that something must be designed more satisfactory than the orthodox place of worship, with rigid pews, which is usually closed from Sunday night to Sunday morning. The Institutional Church, therefore, was a practical attempt to bridge the gulf between the Sunday School and the Church; it aimed at ministering to the development of a man's all-round nature; it aimed at making such provision as was necessary under social conditions which make true home-life impossible. In many instances old places of worship were modernized into halls, with seats instead of pews, platforms instead of pulpits, and equally serviceable for public worship, lectures, concerts, and other meetings. This becomes the central meeting-place of the Church, where its members receive their vows of dedication to the social service which Christ calls His people. There, too, the obligations of the Christian life are pressed upon those who have not as yet become members. There the Gospel of Brotherhood, with its innumerable applications, is preached to gatherings of men and women. Then, round about the central building and from the halls of various kinds, some of them for conferences and discussions, some of them for recreation and games, some of them for reading and writing, and some for social conversation. Clubs are formed for working lads or girls; and gymnastics, singing, elicution, cooking, wood-carving, dressmaking, signalling, and many other wholesome activities are organized. The settlement idea is conserved by means of sisterhoods, whose members conduct such classes, and do much of the visitation and administration of relief inseparable from a many-sided work like this; and who commonly live together in rooms on the Church premises in a house in the immediate neighborhood. Lectures, scientific, literary, historical, and economic, bring the public together on these. By all these means an attempt is made, and realized, to strengthen the social bond, and demonstrate that everything that makes for human happiness and efficiency is the result of the Christian life; that all these are parts of the same thing, and that the Christian Church is a living and growing community.

It will be seen from this that the Institutional Church is best able to carry out what is known as the policy of 'counter-attractions. W. S. Rainsford, formerly a missionary and now a Church administrator, has described (Preacher's Story of his Work, New York, 1904) how this policy was gradually forced upon him by the necessities of the situation. The evil associations of the saloon, the beer-shop, the place of public amusement, the dance-hall, were gradually being replaced by a central church and a central hall. The open air was gradually becoming an important factor in the scheme of the Church. The first step was to provide a central centre with wholesome food and drink; the undesirable dancing saloons drove him to permit dancing in his church hall; the delightful dramatic exhibitions of all kinds led him to organize a dramatic society for the production of good, wholesome plays. Probably few, if any, of the similar experiments in England have been so comprehensive a scheme as this one; but the need to provide counter-attractions to the public-houses, and to supply refreshments, good and lively music, billiards and other games, and abundant social opportunities, apart from the unwholesome atmosphere of licentiousness with its frequent inroads upon the pure life of the land as in New York. Instances might be quoted in which social enterprises of an even more ambitious character have been successfully carried out, such as labour-yards, night-shelters, and even hospitals and orphanages; but there is an increasing disposition not to burden the Church with work which the State should properly undertake. Nevertheless, the Church has led the way in many new forms of work among the young. The cirele, or day nursery, where infants are well nursed and fed while their mothers are away at work, and the play-centre, where, outside school hours, children who have no privileges but the street are taught organized games, form part of the operations of nearly all Institutional Churches.

The ideal aimed at is that of a Mother Church which thus offers hospitality to all men, women, and children, and applies herself to discover and to satisfy their needs. The centre of the whole organization is the society of avowed disciples of Christ, who are inspired by His example and teaching, and who, in His spirit, are dedicated to the ends of His kingdom. The members of the Institutional Church would always feel that they had failed in their mission to any one who had come within their influence, and joined one or other of their
insitutions, unless they had converted him into a Christian citizen, and inspired a disinterested zeal for human betterment. This could be brought about only, as they would confess, by contact with a living Church. Thus the Institutional Church is not under any temptation to magnify its institutions and depreciate the Church. On the other hand, the necessity for keeping the institutions of Christian leads to the emphasis of the Church and its conscious that the highest success of the Institutional Church has been realized where the worship and teaching of the Church have been effectually central to all the manifold operations of the Church.

The decay of the gild system after the Reformation left many blanks in the national life. Not prominent among them was the absence of the compensation against some of the great risks of life which it might provide. It is true that marine insurance was unaffected, and this was gradually extended. Before the end of the 16th century, the loan on bottomry had been supplemented by a type of insurance carried out by a broker and known as a "Bottomry Assurance." It was not until the middle of the 16th century that marine insurance was introduced. It was called the "vouchers for money," and was issued to the shipowner as a certificate of insurance. The shipowner could then sell the voucher to a third party, who would be reimbursed if the ship were lost. This system was gradually extended, and by the middle of the 17th century, the practice of marine insurance was well established.

The period bounded on the one side by the Great Fire and on the other by the feverish promotion of companies in 1720 was one in which marine insurance made great strides, both in the insuring against new risks, or to provide new benefits, and in the prosecution of new methods. In the reign of Charles II, marine insurance was well understood, and, with the growth of coffee houses, those interested in shipping began to use certain of those resort as meeting-places and offices. By 1688, Lloyd's Coffee House had been started, and Lloyd's News—a newspaper dealing with the movements of ships—was founded in 1686. Then, between 1717 and 1719, two companies were organized, both of which received incorporation in 1720 as the Royal Exchange Assurance and the London Assurance. These bodies, at their foundation, were endowed with a monopoly against any other companies, but not against individuals. Thus marine insurance has been effected, partly by individual underwriters, partly by joint-stock companies. The Great Fire naturally turned attention to fire insurance. In Germany, mutual fire insurance societies had been founded at least as early as the 16th century, and Sir William Petty mentioned associations of this type as being worthy of imitation in England. After the disaster of the Great Fire three or perhaps four distinct kinds of fire insurance were attempted. The Corporation of London opened an office in 1679 or 1680, that is, insurance by a municipality. Then there was the Grand Assurance Society, known as the Friendly Society, which had issued proposals in 1683. The remaining methods were practised by individuals underwriting fire risks, or by several individuals in partnership. Nicholas Barbon had opened an office in 1657 which was transformed into a joint-stock company in 1689. Of these four types of fire insurance only two survived. Insurance by individuals never became prominent as regards fire risks, and mutual insurance was soon abandoned. There remained the mutual fire insurance societies and the joint-stock companies, both on an equal side by side in competition. The Hand in Hand Society was a mutual one. It was founded in 1696, and was absorbed by the Commercial Union.
Assurance Company in 1695. On the other hand, the Sun Fire Office, which was founded by Charles Povey between 1706 and 1708, was a joint-stock company. In the first twenty years of the 18th cent. many fire offices were established in London, and as slowly spread over the provinces.

Besides the provision made against losses by shipwreck or by fire, other risks to property were gradually insured against. Thus by 1694 goods were insured against thefts (Merchant's Daily Companion, London, 1694). By 1720 schemes had been projected for insurances against losses by highwaymen, by the dishonesty of servants, for the payment of men's wages, and for making good losses sustained by owners of horses through disease, disablement, or theft. Such schemes had been propounded resembling burglary, fidelity, guarantee, and life insurance, though, owing to the excessive number of promotions, long periods elapsed before all of these were established.

Meanwhile, the provision for life contingencies lagged behind marine and fire insurances. In the middle of the 17th cent. a species of life insurance could be effected whereby any one who borrowed money to purchase a place or office could arrange by payment of small payments from the income that, in the event of his death, the part of the loan outstanding would be repaid to the lender. It is after the Revolution that something of the nature of life insurance can be traced. One of the methods by which the Government raised funds for the carrying on of the war against France was by the guaranteeing of annuities in return for loans. For the Company this gave the Government also to issue annuities. These schemes were very imperfect, owing to the want of anything approaching mortality tables. Even the population of the country was unknown, for the payment of men's wages, and for making good losses sustained by owners of horses through disease, disablement, or theft. Such schemes had been propounded resembling burglary, fidelity, guarantee, and life insurance, though, owing to the excessive number of promotions, long periods elapsed before all of these were established.

Accordingly, insurance relating to life contingencies was developed in a different direction from modern life insurance, being concerned chiefly with such risks or eventualities as terminated at a comparatively early date as compared with that of the payment of the premium. Before the Revolution, schemes of the type of the Endowment Insurances of children on their attaining the age of 20 years (Add. MS. 28,073, f. 462). Early in the 18th cent. there were many offices which transacted professedly private benevolent insurances, which were all dividend societies—that is, the premiums collected in a quarter or in a year, as the case might be, were divided among those claimants who, in the same period, ranked for the specified benefit. Thus, in a marriage society, all insured persons who had been married since the last division participated pro rata in the distribution. Similarly in other societies the parents of all children born in wedlock, who had paid premiums regularly, ranked for the benefit. Then again, in the same way, a sum could be secured to enable a young man to start in business for himself when his apprenticeship was finished. These were known as marriage, christening, and apprenticeship insurances respectively. In 1709 and 1710 there was quite a rage for participation in these offices, but it arose from the idea that benefit varied greatly, the idea appealed to the gambling spirit of the times. There were many scandals, and insurance of this type was prohibited by Act of Parliament. It was based on the dividend principle. Just as in marriage insurance, the premiums were divided periodically among those who were entitled to claim. There was no distinction at first as to the age or sex of the life insured. One of the earliest life offices was the Society of Assurance of Widows (1699), which was followed by the Amicable Society in 1706. The latter existed independently till 1866, when it was absorbed by the Norwich Union Life Insurance Society.

During the reign of the 18th cent. the chief progress in marine and fire insurance was in the extension of the system. As the various offices acquired reputation, the number of persons insured increased. In fire insurance, on the other hand, great progress was made. The researches of de Moivre, Kersseboom, Hodgson, Corlyn Morris, Simpson, and Price gradually provided the expectation of life, and these were used by the Equitable Society (which was founded in 1762) in the establishing of graduated premiums. In 1825 insurance began to attract the attention of the company promoter, and a great number of new offices were started, the majority of which were soon forced to discontinue business. The remainder of the century is marked by the more exact classification of risks, by the variation of the forms of policies, by the issue of policies against risks which were not previously insured, and, finally, by a great increase in the total sums insured.

In the early forms of insurance the benefits were confined to persons who were comparatively well-to-do. The working-class population was altogether outside of most of the schemes which had been started. The amount and the times of payment of premiums were unsuitable to the wage-earner, nor were the benefits offered of the kind which he needed. As early as 1775 a bill was introduced into Parliament which was designed to extend some of the advantages of insurance to the poor, but it failed to become law. The gradual development of Friendly Societies tended to provide some of the benefits of which the wage-earning classes stood in need (see Friendly Societies).

Though the first Friendly Societies Act was passed in 1773, it was some time before the advantages of these societies became general. While many of these bodies have proved insolvent, others have attained a high degree of financial stability, and the growth of the State insurance has also aided in extending the benefits of insurance. The general method of the organization of a Friendly Society or of a Trade Union, in relation to the part the State insurance has been derived. Unlike all the other kinds of insurance already described, it is not permissive but compulsory. In Germany and France the idea of insurance by the Government may be traced back to the beginning of the 19th cent., since it arises from the conceptions of Fichte, Lessing, and Sismondi. As early as 1854 Prussian miners were compelled to belong to one of the
Knapen'schaf exemptions, or associations for sick funds; and in 1883 the same rule was applied to other labourers. The next year accidental insurance was established, while in 1889 old age and invalidity insurance were provided. The old age pensions in Germany are to be distinguished from those in Great Britain, in that the former are contributory, the latter are non-contributory. State insurance applies compulsion not only to the worker but also to the employer. The usual method is to provide that the worker, his employer, and the State contribute.

State insurance on a large scale was established in the United Kingdom by the National Insurance Act, 1911, p. 2 (section 3, cap. 55). This scheme has two main divisions, the one for sickness and the other for unemployment. Thus an attempt is made to provide for two of the great risks of wage-earners, namely, sickness and unemployment. As regards the first of these risks, it is understood that while the payment of contributions is compulsory for all employed persons as defined by the Act, whose ages are between 16 and 65, and whose remuneration does not exceed £120 a year, the administration is committed to Friendly Societies under the supervision of a Government department. While insurance may be described as the normal rate of contribution in Great Britain is 7d. per week for men and 6d. for women. The man pays 4d. per week, and the woman 3d. per week; while, in most cases, the employer adds 6d. per week. The State adds 10d., which amount adds 2d. per week for both sexes. Where the total earnings in Great Britain are less than 2s. 6d. per day these rates are modified, and there is a reduced scale for Ireland.

The scheme consists of a medical benefit (including medicines and medical and surgical appliances as are prescribed by the Insurance Commissioners), indemnity benefit (including sickness benefit, maternity benefit (being a payment of 30s. on the confinement of the woman of an insured person or of any other woman by whom it is insured, additional benefits, which are dependent upon sickness in the financial year), the Friendly Societies working the Act, and which may include additions to the amounts of the foregoing benefits, or further benefits, such as dental treatment, in the case of poor contribution rates, payments to insured persons who are out of work through infection, etc. Though the intention of the Act is that it should be administered by Friendly Societies or similar bodies, account has had to be taken of those persons who, while compelled to pay contributions, are not members of a Friendly Society. These become deposit contributors. The sums paid by and for them are lodged at the Ministerial Office, and they are entitled to benefits only till the end of the year in which the amount standing to their credit may be exhausted. Though this system is sanctions in its rate. It is clear that the element of insurance is relatively small.

The second part of the Act—that relating to unemployment—deals with those trades in which irregularity of work is common, e.g., building, construction of works, shipbuilding, mechanical engineering, iron founding, construction of vehicles, saw-milling. Contributions are provided by the workers in these trades, their employers, and the State. Subject to certain exceptions, the worker and the employer both pay 2½d. per week. The normal rate of unemployment benefit is 7s. per week; there are numerous rules to prevent malingerers; and provision is made for a court of reference to which the insured person may apply in case his unemployment benefit is stopped by the insurance officer.

2. Modern insurance. — I. Risk of marine, etc. (a) Marine insurance. — Allusion has already been made to the resort of underwriters of marine risks to Lloyd's Coffee House, and from this grew the body now known as 'Lloyd's.' While losses on ships are effected both by the members of Lloyd's and by marine insurance companies, Lloyd's is the centre of this class of business, since the society is not only an association of underwriters, but its function also includes the distribution of intelligence. By means of its agents, it is in touch with all parts of the world, and all ships can be reported, and thus materials arrive in London which determine the positions of ships, as well as any accidents they may sustain. Since 1834, Lloyd's Register has been published annually; it provides for an elaborate classification of ships according to their condition. Lloyd's is a voluntary society resembling in its constitution the Stock Exchange. The affairs of the body are managed by a committee, and each 'underwriting member' is entitled to access risks subject to the rules of the committee. In addition to the shipowner who is insured and the underwriter who insures, there are sometimes women underwriting members and a special class of agent, the general broker who acts as an intermediary between the two interests, both in the initiation of the insurance and in the settlement of any claim that may arise through it. Besides the members of Lloyd's and marine insurance companies, there is another type of this class of insurance, namely, where a merchant or shipowner, owning a large fleet of vessels, insures them himself by paying a liberal premium, which is divided among the vessels which would otherwise be handed over to an underwriter; or a company may itself insure a part of the vessels of its ships and place the remainder with an insurance company or with members of Lloyd's. The methods by which marine insurance companies maintain their financial solvency is similar to that adopted by fire and life companies, but the way in which the individual underwriter meets his losses is not so clear. This is effected by a minute subdivision and diffusion of any 'line' he may underwrite; that is, the member of Lloyd's who insures a ship for a large premium will at once re-insure the greater part of his risk with other underwriters. In this way the stability of a Lloyd's policy is maintained.

(b) Fire insurance. — Fire insurance has long been standardized. The chief offices have formed a tariff association, according to which they charge identical rates of premium for risks classed as the same. To some extent this body serves a similar purpose to that of Lloyd's Register, though, in the case of fire risks, the property is not capable of the same exact graduation as is possible with
regard to shipping. Originally insurance began upon a basis of specialization—that is, the early offices were established in order to effect a particular class of insurance. It was not long before a tendency manifested itself to combine the underwriting of different classes of risks. Thus in 1729 the Royal Exchange Assurance added to its marine business that of fire insurance by the purchase of an undertaking which had been formed for the latter type of risk. While labour tends more and more to minute division, industry works on a larger and larger scale. In insurance the movement towards large scale operation finds expression in the combining of different classes of risks by the same office, either by amalgamation with other companies or by the adding of new branches to its colonies. Of recent years in both foreign and British offices there has been a tendency towards an increase in the size of the business handled by each office. In 1860 the total net direct liabilities of British offices were £2,206,878; in 1870 the total net direct liabilities of all British offices were £2,929,157,789. Some of these companies now have branches in America, other foreign countries, and the colonies. The business is now of such magnitude that the operation of underwriting and other branches cannot be pursued by one office. Where a company has many branches a reduction in the rates of insurance is made possible, and the profit made is apportioned among all the branches of the company. In addition to the fire and marine insurance and reinsurance, insurance companies have also underwritten contracts of life and accident insurance. The former type is known as life insurance, and the latter as accident insurance.

ii. Risks of Persons.—(a) Life Insurance. The insurance of a fixed sum on the life of a person is known as life insurance. The risk in this case is the death of the life assured. The risk is increased by the age and the health of the person insured. Life assurance tables are calculated to show the probability of death at each age. The premium is calculated on the basis of the tables and the amount of the sum assured.

(b) Annuities. An annuity is a contract by which a person agrees to pay a certain sum of money at regular intervals in exchange for an absolute or conditional payment of a specified sum. The annuity may be payable for life or for a fixed period of years. The life of the annuitant is the risk in this case. Annuities are usually paid to pensioners or to persons who have retired from business. The annuity is a series of payments made by the insurance company to the annuitant, and the insurance company is insured against the death of the annuitant, as well as against the failure of the annuitant to pay the premiums.
panies, the ordinary life companies had a premium income (after deducting re-insurance) in 1892 of £11,659,319—a figure which increased in 1910 to £25,994,404. At the earlier date the income from interest and dividends (loss income-tax) was £5,551,000, and hence the balance was £13,168,317. In 1910–11 the life policies numbered 2,883,851, and the amount assured was £800,215,596.

e) **Personal accident insurance.**—The number of policies issued in 1910 was 84, and their premium income for the year was £2,588,710. Many ingenious methods have been adopted to extend this type of insurance as, e.g., the printing of coupons in libraries and certain periodicals, which entitle the holder to compensation should he sustain an accident of a specified character and under certain conditions within a fixed period.

f) **Other contingencies relating to persons.**—Sickness insurance is the chief of these, whereby provision is made for the expenses incurred by an illness and, if desired, for the loss of earnings through disease. Transactions of this character are of minor importance in the business of insurance offices, whereas these are most important in the work of Friendly Societies and of State Insurance in relation to the wage-earning classes (see above, § 1).

**2. The principles of insurance.**—The general principles of insurance are fairly obvious, but they have many ramifications which require to be traced with much care. Some of the uncertainties of life and business at times involve most serious consequences to the individual, unless some method has been devised by which he can provide against them or against their pecuniary results. When Shakespeare makes all the ventures of Antonio miscarry and "not one vessel 'scape the dreadful touch of merchant-marring rocks" (Merchant of Venice, iii, 1, 25–26), the owner is confronted with ruin. But, while ships are wrecked, many complice peril their voyages in safety; while some houses are destroyed by fire, the great majority escape this catastrophic; indeed, there are certain risks to which property is liable which, on the one hand, involve the total destruction of the things, but, on the other, are comparatively rare. Similarly, in the case of death, life or illness involves the total or the temporary cessation of earning power. It is clear that these risks can be divided into classes, and all those which fall within a certain class are subject to that risk, though it may result in a far smaller amount. Further, the damage sustained by those who suffer is relatively great. Hence it is to the advantage of the members of such a class to sacrifice a small part of their income, upon a condition that the estimated amount of the loss shall be made good. In the special case of life insurance the sum assured may be regarded in most instances as a compensation for the loss of income, accruing to the person who insures, either by his labour or in any other way, which may be of a terminable nature. Thus, in fact, the risk of loss by a calamity which may occur to any one of a certain group is distributed over the members of that class. The method by which what may be termed "loss-sharing" is distributed depends on the law of averages, and requires a collection of statistics. Taking the period of adult life, every one is subject to the risk of illness which would interrupt the earnings derived from occupation; but, as between individuals such illnesses fall unequally, some may have none, others may have a few, and others may have many. Where statistics of uncertainties are available, and where the period of life has been suitably extended, it is generally found that an average will be established for a special kind of risk; and, therefore, the average liability to that risk can be made the subject of ascertainable calculation. Accordingly, it is on this basis that the premium to insure against it is arrived at. In the absence of statistical data, any calculation of a premium is impossible. So, insurance was affected against damage to seroplasses which occurred through their flying. Therefore, firms undertook this risk, any mistake in the rate of the premiums may be serious, in view of the relatively small part of such insurance as compared with the total transactions of the insurance companies. In the event of a number of new offices being formed for this class of insurance, it is probable that at first, owing to the imperfectness of the data, there would be considerable variations in the rates; and, as shown by the outcome, some would prove to have been too high and some too low.

The application of the theory of insurance in practice is modified by the conditions under which the event insured against takes place. In some cases there is the danger that this event may be simulated. Life insurance is least subject to this disadvantage. In fire insurance, fraud may take the form of an attempt to create the conditions insured against in order to obtain the proceeds of his policy, should the crime be detected. In marine insurance there is the possibility of "bar-tary" in order to defraud the underwriters. Sickness insurance is subject to a greater degree of difficulty, in so far as illness may be feigned. As a general rule, those risks who are usually insured against are such as admit of easy proof of loss, while the claimant, and verification of his claim by the insurer. Outside the risks which are usually insured against, or insurance offices there are other uncertainties which are similar to those of the event of life insurance. Again, there are usually insured against in this way. A business may not suffer from fire, accidents, or losses of ships, and yet may experience most serious losses. The reason why the latter risk is not undertaken by insurance companies is that such business risks are inseparably connected with the general management of the business, and the underwriter responsible for the management of the business (A. Marshall, Principles of Economics, London, 1888, p. 470). At the same time fluctuations in profits, due to variations in trade, enter into and form part of the expenses of the business, and these must be added to the prime cost of its products. The amount which it is necessary to charge under this head represents a species of premium against this risk. Losses are limited and attempts are made to reduce it by the rating of, or the dealing in, a number of commodities the demands for which are subject to varying conditions; or, again, by securing access to different markets for the same commodity, the purchase price of which is subject to the market price of the same commodity, at the same time the effect of the price of the same commodity is subject to the market price of the same commodity at the same time. Other risks which have been mentioned are those of instruments of production, against which he provides by a depreciation fund and at a sum is contributed each year that with compound interest
will replace the value of the machines by the time they are worn out. But machines suffer not only from wear and tear, but from the risk of being superseded. In so far as this contingency differs from that due to variations in trade, a further protection should be provided against a depreciation and a contribution towards obsolescence together constitute a species of insurance resembling life insurance as applied to inanimate things. In fact, this analogy has been so fully recognized that it is insurance, instead of a depreciation and a process just described is often termed 'amortization.' —i.e., the formation of a fund which will make good the capital outlay when the source of income will no longer be available. In this manner appear at a glance the insurance against risk; and, if all success continues, a loss of capital will result. The converse would apply where the history of a company was more favourable than had been expected at the time when the investment was made; and there might well be an appreciation of capital altogether independent of the provision available in insurance against risk.

Insurance, both in its common forms and in its wider signification, has important advantages, both for the individual and for the country as a whole. It lessens the dislocation of industry which would otherwise arise through the cessation of production by some firm that has sustained a sudden calamity through a fire which destroys all its works, or any other similar disaster. In fact, in so far as insurance tends to make production more uniform, it tends to augment its efficiency. Similarly it makes labour more efficient also, since it relieves all those workers who have persons depending on their earnings from the harrowing anxiety to see the pecuniary position of those persons in the event of the early death of the earner of the income. Further, the system undoubtedly prevents cases of actual poverty which would otherwise have arisen. It is thus beneficial not only to the families of persons insured, but to the whole community. It has important psychological effects. The necessity of the punctual payment of premiums tends to form habits of saving, which are valuable towards the accumulation of wealth of a company. For these reasons Governments are disposed to encourage life insurance as well as certain other forms of insurance. The encouragement takes various forms, such as the provision of statistical material and departmental supervision. In Canada, income tax is related on that part of an income, otherwise subject to it, which is employed in the payment of life insurance premiums. These aids are of the nature of insurance and operate not only on the Continent but on the Continent cases occur where direct bounties are paid by the State. In the National Insurance Act, the principle of a double direct bounty to the insured (the State and the employer) is adopted, reinforced by compulsion. The latter element conflicts with some of the necessary advantages of insurance, e.g., in the formation of habits of thrift. At the same time, even in the case of ordinary life insurance, while the person who insures himself is free in law to discontinue the payment of his premiums and to obtain the surrendered assets as a consideration of an event that once a policy has been begun, in the great majority of cases there is a feeling almost amounting to compulsion towards the maintaining of the insurance. The problem in relation to the insurance of the working classes is in reality a choice of the line of least disadvantage. Bounties would maintain the voluntary principle, and would extend its applications under a certain artificial stimulus. Compulsion secures at once that, in a properly devised scheme, a greater number of persons obtain the benefits. Every effort has been made to conserve as much individual action as is possible, within a scheme of general compulsion, by associating Friendly Societies with the actual working of the Act.

Finally, the tendency to the more exact gradation and valuation of general business risk has important social effects. Here, too, there is a development in averaging, and thus the hazard of uncertainty lessens, on the whole, to be reduced. The element of 'increasing' in insurance against risk, since its rate is determined, once for all, by the price paid for the stock, the dividend then paid, and the rate of economic interest in the case. The decline in prosperity will contract the estimated sum available for
saving. Outside the risks insured by underwriters, there remain many uncertainties, which are gradually being reduced by improvements in organization, by increase in commercial knowledge and experience, by development of communication. The last two always afford increased opportunities of averaging, while the first lessens the amount of uncertainty, and in favourable circumstances may remove large classes of transactions from this category altogether.

INTELLECT.—A. Bain says:

'Thought, Intellect, Intelligence, or Cognition includes the power known as Perception, Memory, Conception, Abstraction, Reasons, Judgment, and Imagination. It is analyzed, as will be seen, into three, called Discrimination or Consciousness of Difference, Similarity or Consciousness of Agreement, and Retentiveness or Memory (Mental and Scientific Method, London, 1862, p. 2).

Sully (Human Mind, i. 64) objects to the inclusion of retentiveness among the functions of intellect, on the ground that it is not confined to the phenomena of intellect, but underlies the processes of feeling and willing as well; that the representation, like the sense-impression, is nothing but material for the process of intellect; and that the revival of past impressions takes place according to laws of association which are closely connected with the processes of assimilation and integration. Sully substitutes for retentiveness, as the third function of intellect, what he calls association or the connecting of a given material with its concomitants in time and place. If we exclude the presentations of sense and the retentiveness, imagination, 'intellect' is the name given to the higher cognitio powers of the mind. It may be considered as identical with what Sir W. Hamilton called the Intuitive Power, the faculty of the sensitive phantasm, and also to include what he called the Regulative Faculty— the Faculty of Principles. So understood, it includes the 5es and 5idous of the Greeks, and stands opposed to merely sensitive knowledge, although always regarded as standing in close interconnexion with the latter.

While the above may be taken as roughly descriptive of the reasonings on the subject of any system of philosophy or psychology, yet the whole significance of the description depends on the way in which intellect is conceived to stand to sensation, feeling, will, and the psychic principle itself.

In the Platonic philosophy, the soul is, so to speak, externally related to the body. It exists in the body as a detached principle, which directs and gives the soul as the chariot of the charioteer. Although Plato distinguishes various parts of the soul, or even various kinds of soul, still it is only through the soul considered as intellect, as pure thought, that the passions of the irrational part are known (R. D. Archer-Hind, Philetos, London, 1883, Intro. p. 30). The same holds true of sensuous perception (Archer-Hind, Timaeus, London and New York, 1888, p. 256, note). As Reavey says (Greek Theories of Elementary Cognition, p. 27), 'It may help us to understand Plato's distribution better if, distinguishing sôcras as we have done into two elements, the element of feeling or the element of cognition, we refer the latter element of daimones union in the intellectual soul, which has its seat in the cranium.'

Sensation, therefore, as known, is an affection of the pure psychic principle, and is not to be regarded as something sui generis, distinct from intellect. It is rather to be regarded as a phase of Intellective activity itself—in the philosophy of Aristotle the psychic principle occupies a different position. It is not related to the body as agent to instrument, but as form to matter, as resulutum to correlate, as antecedently to consequence. The elaboration of a general principle, the active intellect, is not, in itself, purely intellectual. Not only do the merely vital activities proceed from the same principle which exerts the cognitive activities, but the latter also, so far as they belong to sense and imagination, stand in the same condition and conditioned relation to the organism in which the vital activities stand. If Aristotle had remained at this standpoint, he would have held a position substantially identical with the doctrine of the De anima, in which relations of similarity and difference between sensations are conceived to become the conscious apprehension of resemblance and difference as such.

Aristotle, however, did not remain at this position. He postulated the presence of a Divine element in the human soul—the 5eis, emanating from the Divine 5eis, and constituting the really immortal part of man. It emerges from without. Aristotle's doctrine of 5eis has been a problem from his day until now. What is its relation to sensitive knowledge? The answer to this question is contained in the older demonstrations. The active intellect may be thought to create the form, as one creates images in a transparent medium, as one colour it, in other words, to generate it on the occasion of the sensuous phantasm, so that the active intellect in creation is both from the phantasms or sensible species, but rather an entirely new creation produced from itself by the active intellect. In the Middle Ages it was maintained that no material agency could act on this immaterial intellect, nor could the latter fabricate intellectual species from the material phantasm (cf. Maher, Psychology, p. 348; and Hamilton, Boyd's Writings, London, 1853, p. 653, f., and the references there given). The species intelligibilis impressus is thus elaborated by the active intellect, and received by the passive intellect, where, together with the act of intellect, it constitutes the species intelligibilis expressus. It is consequently with this view that the active intellect and the passive intellect should be regarded as two powers or faculties, as was held by the majority of the scholastic philosophers. On the other hand, the intellect may be regarded as playing a far less important rôle, as not producing the intelligible species, but simply supplying the illumination, as it were, through which the intellect exercises its power, the intelligible form abstracted from the sensible phantasm. From this point of view the passive
INTELLECT

371

intellect is not a distinct principle, but simply the receptive ideal ectype. The parallelism of the distinction of the active and passive reason to the pure Ego and the transcendental self of Fichte, and the consequent absence of consciousness in God, are both contained in Fichte's system and in Hegel's, as interpreted by the Hegelian Left, have been pointed out by Triangles - Pattison (Hegelianism and Personality, London, 1887, pp. 46, 229). The problem has maintained (Objectivity of Truth, London, 1884, p. 196.) that, alike in the human and the Divine thinking, the two aspects coincide and are to be conceived as one. Intellect in its very receptiveness is determinative, and receptive in its determinativeness. If this determinativeness is regarded as a continuously acting timelessness activity, the passive intellect is not only active, but also the active intellect as distinct from the faculty of sensuous cognition.

Aquinus and Duns Scotus regarded not only the active but also the passive intellect as distinct from the faculty of sensuous cognition.

The following modern interpretations of the passive intellect are cited by Hicks (de Anima, Introd. Iviii. P. A. Trendelenburg). It is an intellect in contradistinction to the active intellect, F. Zeller with "the sum of those faculties of representation which go beyond imagination and sensation, and yet less far than that higher Thought which has found peace in perfect unity with its object." F. Ravaisson with "the universal potentiality in abstract ideas," F. Brentano with "imagination," O. Herrling with "this sensus communis," and W. A. Hammond with "the passive intellect as a potentially rational mass," the sum of the deliverances of sense-perceptions and their re-abstracted representations, and as a faculty of the individual soul. This view was held by Alexander the Aphrodiasian, and by Avicenna, who, however, substitutes for the Deity a lower intelligence that has proceeded by a series of emanations from Him (Stöckh,Philos. des Mittelalters, ii. l. 42). (2) Avroco separates both the active and passive or material intellect from the individual soul, and regards it as one and the same person. In identifying it, however, not with the Deity Himself, but, like Avicenna, with an emanation from the Deity (ib. 113). (3) Aquinas and the medieval scholastics regard the intellect as a faculty of the individual human soul. The first of these interpretations is exposed to the difficulty that it separates the active and passive intellects so that they cannot act together (cf. Aquinas, contra Gent. ii. clxxvli.). The second interpretation makes both the active intellect and the apprehension of the rational concept the act not of a faculty of the individual soul, but of an intellect that is an entity in the individual human being, and one and the same in all men. Such a conception divorces intellect so completely from the individual soul that it is hard to conceive how any tie remains between them. The third interpretation is exposed to great difficulties. Unless conceived as a distinct faculty apart from the passive intellect, it becomes more than a phase of the latter. It can only be regarded as illuminative of the Divine creative thought, already implicitly present in the phantasms. If the active intellect is conceived as something distinct from the passive intellect, and Aquinas did so regard it—it is difficult to understand how a merely human faculty, acting instinctively or blindly, can be creative of an intelligible species which, nevertheless, has an ideal community or identity with the independently existing phantasms. Lastly, it seems impossible to understand how a human intellectus agens should be in perpetual activity, still more a speculative intellect that is.

In medieval philosophy the intellectus agens is not rectified with a productive ideal archetype of the world, but with a
combines both active and passive intellect (see Hiskis' de Anima, note 439, a. 29).

A solution of these difficulties in Aristotle's doctrine may possibly be found if we view him as relating only in its relation to the human soul as a Divine-human faculty, or power—on the human side active and passive at once, on the Divine ever active, for the activity of intellect is life. This agrees with the language of the Nic. Ethic. 10, where soul is 'something Divine'—"the true self."

Nor is it necessary, as the villeneues have it, to think like a man because one is a man, or to think like a mortal because one is a mortal, but one ought to play the immortal, as far as one lies, and leave nothing undone to live up to the highest part in one; for even if he be small in bulk, yet in power and preciousness it far surpasses all things" (Stoic. tr. Oxford and London, 1866, p. 97).

The relation of the Aristotelian doctrine of intellect to the question of the immortality of the soul depends on the relation in which intellect and sense are conceived to stand to consciousness and memory (Work, p. 878) cites a passage from Aristotle (Pred. xii. 33) which he translates: 'To divorce Sensation from Understanding, is to reduce Sensation to an insensible process—therefore it follows that...Intellect sees and Intellect hears.'

This would lead to a Platonic view, essentially identifying consciousness with the immaterial intellect. On the other hand, if the latter were not unlike machines, their sense life implies some kind of consciousness. Balanus was consequently led to attribute to them an immaterial self and some sort of possible immortality (Fundamental Philosophy, bk. ii. ch. 5). The body must be a mediating substance, originating and persifying with the body, was held by S. Tongiorgi, and opposed by Stockl, who held that matter was the substrate of the organic life of brutes (Lehrbuch der Philos. II, 109). Unless, therefore, intellect and sensibility can be regarded as still united in some common root, to use Kant's expression, the separability of intellect from the body seems to involve the division of consciousness itself.

The doctrine of Aquinas regarding memory seems to involve a similar division of that faculty, the cognition of the past object being in the intellect, and the preserving only the intelligible species, yet having, nevertheless, in relation to the act of intellect, though not to the object, a cognition of the past act. The real significance of Aristotle's doctrine of the intellect in its bearing on the immortality of the human soul has been disputed in every age. W. Archer Brown

"It is not sufficient to satisfy the demands of human anxiety on this subject, that an eternity should be pronounced essential to an active intellectual principle, which itself seems described as unable to exercise any conscious energies apart from the bodily structure; a quickening essence whose very existence reclines into nothingness when it is left nothing to quicken."

(Lectures, p. 559).

The changed point of view from which intellect is regarded by H. Nies in his "Prolegomena in Summa." The intellect, whether finite or infinite, is regarded by him not as in actuality, not in potentiality; but then this intellect belongs, not to active, but to passive nature, not to nature naturata, but to nature naturans (Ethics, i. prop. xxii). Hence it does not represent a power standing over against nature, but one which is identical with nature. The same changed relation is also to be seen in Leibniz's metaphysics. The scholastic formula, 'Nihil est in intellectu quod non fuerit in sensu, nisi intellectus ipse.'

Intellect or reason is conceived in Leibniz and Kant as a sort of content essentially related to the objects of nature. We have already had occasion to mention the conception of intellect which we find in the Association school. This school makes feeling, sensation, the fundamental phenomenon of psychical and of rational life. Intellect, intelligence, is only the development of the most fundamental features of sensory life. Similarity, discrimination, retention, beget by means of the continued action of association the cognitive apprehension of objects distinct, or apparently distinct, from sensations themselves. It is unnecessary to call attention to the well-known criticisms to this doctrine which is exposed.

The unity of consciousness, through which similarity and difference are recognized, and which imparts significance to retention, is explained. In general, Associationists put the cart before the horse. In the most important activities of mind, phenomena are associated because they are cog-nized as related, not cognized as related, certain psychic events are associated. The same applies to the Herbartian school. As Höfling says, 'Consciousness is not merely a platform on which ideas work; it acts itself in and through the individual ideas' (Outlines of Psychology, Eng. tr., London, 1896, p. 144).

Owing perhaps to the influence of A. Schopenhauer and F. Nietzsche, a tendency has shown itself in recent philosophy, especially in Pragmatism, to regard intellect no longer as the refined product of Association, but as the creature and instrument of the will. According to Schopenhauer, 'nature has produced the intellect for the service of an individual will; therefore it is destined only to know things so far as they concern the creature with a will but not to fathom them or apprehend their essence in itself.' (Worke, ed. J. Frumenczi, Leipzig, 1897, II. 150). To Nietzsche 'reason is just a tool!' (Jenseits von Gut und Böse, do. 1906, p. 123).

The possibility of conceiving the force in nature as will, impulse, does not directly concern us here, but the possibility of so conceiving the fundamental principle in mind does. When it was thought that we had in the sense of effort an immediate consciousness of energy expended, it was not unreasonable to regard the consciousness of effort not only as determinative of much of our most intellectual perceptions, but even as affording a glimpse into the will, and intellect considered as the will.

But, now that the existence of such a feeling is generally rejected, it is difficult to conceive the stream of consciousness merely as such as presenting a conative process. According to Stout, the process of consciousness is in part self-determining. There is in it a current, a current which it feels, a tendency toward an end (Manual of Psychology, London, 1907). In this conative tendency the presentations of consciousness acquire objective meaning, and in general through conative continuity the processes of consciousness acquire meaning and significance. This theory seems exposed to the same objections as the Association theory. Such consciousness of an end, however vague, implies the presence of an intellectual power, which already sets out from such end from the current tending toward it. Only so can the current feel itself to be tending toward an end.

A much more decidedly voluntaristic explanation of intellect is involved in H. Münsterberg's Action Theory (Grundzüge der Psychologie, Leipzig, 1900, i. 525). According to that theory, the liveliness of a sensation depends on the strength of the centrifugal excitation in Leibniz's autointerpretation. Sensory excitation is not in itself accompanied by psychical processes, whether the excitation proceeds from the periphery or from associated centres. The afferent process is this whole which is only in its passage into motor discharge does it give rise to consciousness. The cerebral cortex,
which is the seat of the psycho-physical processes, must, in order to produce movements, act on subcortical centres. Every subcortical centre stands always in connexion with an opposite centre, viz. the centre which carries out the diametrically opposite movement. This fact, according to Münsterberg, is the basis not only of all motor antagonistic functions, but also of all psychical oppositions, even such as are purely intellectual and logical. On the contrary, Aristotle holds that the attitude in regard to our activity in the world. Upon the spatial variations in the discharge depend the varying intellectual values of the sensations. This theory is exposed to serious psychological and physiological objections, and its application in detail has not yet been given by the author. It is necessary only to mention that, at the point of transition to motor discharge, the author seems to postulate the action of a spiritual principle which determines the path of discharge and the consequent attitude of the agent to the world. It is here that the author's relation to Fichte comes in, whose ethical idealism he claims to unite with the physiological psychology of our time. The voluntaristic theory must not be confused with the practical Reason of the Scholastics. This concerns us purely to the application of reason to the harmony of action with nature and its final end. The voluntaristic conception of intellect appears in an interesting form in the writings of H. R. Bergson. To Bergson intellect is but a special instrument created by that divine vital which lies behind the whole process of evolution. This instrument is formed by the intellect, it acts not by unveiling the nature of things, but rather by falsifying the larger intuition of reality which flows through the vital impulse out of our consciousness. The falsification, however, works; it is useful for directing our activities, and is justified by its results. In fact, it is these activities which give us the forms of things. It is with inert matter, the solid, that our intelligence deals: the fluid in the real escapes it in part. Of the discontinuous and immobile alone can it form a clear idea. 'Intellect is characterized by a natural inability to comprehend life' (Bergson, "Creative Evolution," Eng. tr., London, 1912, p. 174). Intellect and matter have progressively adapted themselves one to the other 'because it is the same in both' (ib. 217). It does not appear how such a movement, even if it existed, could catapult the intellect on to the object. Thought may in determining its object be determined by it (Stokes, "Objectivity of Truth," p. 58 f.), but, except in the individual, this reciprocal determination does not take place as a mere process in the intellect. We have it as a psychological hypothesis that the origin of intellect implies intellect itself as already existing. It postulates a consciousness or supra-consciousness lying behind intellect. The sympathetic insight by which we penetrate the mobility of things, the supra- and ultra-intellectual intuition by which there is a taking possession of the spirit by itself—these conceptions are but intellect itself, misconstrued and misunderstood. It is the problem of the intellectus agens once atrophied by a natural inability to comprehend life, which the followers of Aristotle have trod, and meets the same difficulties. Grant, however, that intellect is somehow evolved on the earth, is grappling more or less successfully if not with the mystery, at any rate with the practical working of things. What does this amount to? It means at least that the key fits the lock, and that the lock is fitted to the key. It means that nature in its working is relative, in large measure, to the concepts which intellect has framed; therefore, in still larger measure to the intellectual work that has framed the concepts and will still frame others, by which nature itself will be better understood—a process which can be justified only on the preassumption, which is common alike to scholarly philosophy and Absolute Idealism, that nature is relative to intelligence, that we governs all.

GEORGE J. STOKES.

INTELLECTUALISM.—In its popular and most general sense, 'intellectualism' means the belief in the supremacy in human life of the intellect. More precise, technical meanings of the term appear in the theory of knowledge, in ethics, and in theology.

1. In the theory of knowledge, intellectualism is the doctrine which derives knowledge chiefly, or mainly, from the intellect, i.e. from pure reason. Intellectualism is here practically synonymous with rationalism (q.v.), and stands opposed to sensationalism (q.v.). Whereas intellectualism affirms that reason is the unique or the principal source of knowledge, and that knowledge so derived is independent of, and superior to, the impressions received from the outside world through the senses, sensationalism affirms that general ideas arise from sensations. In its extreme form, sensationalism maintains that independently of sensation the mind is a tabula rasa, that there is nothing in the mind that was not first in the sense. One may also oppose to intellectualism the systems of thought represented by Schopenhauer's philosophy, in which the 'will' is the same in both. This is the determination of action and the discovery of knowledge. German philosophy has been dominantly of the intellectualistic type, while sensationalism has found its most notable exponent in Condorcet, d'Alembert and in England (Locke, Hume).

The method pursued in the search for knowledge will differ according to the conception formed of its source or sources. The pure intellectualist will rely altogether upon the a priori, deductive method, the pure sensationalist upon an empirical, inductive method, since knowledge comes, according to him, through sensory experience (Condorcet, d'Alembert) and in England (Locke, Hume).

2. In ethics, the intellectualistic doctrine affirms that knowledge is in itself sufficient to determine action. Socrates is the first and the chief representative of this doctrine, and ascribed to him, no one does wrong knowingly. Sin is error, i.e. ignorance; for no man purposely injures himself. This doctrine is opposed by the Stoics, on the ground that the same must be done by knowledge, but is, at least in some degree, self-determined. Aristotle differed from Socrates in that he held it possible for desire arising from insufficient knowledge to determine action, hence proceeding from full knowledge. He thought, therefore, that the practice of virtue required not
only right insight, but a training of the will, by which it became able to resist the stronger allure-
ment of unenlightened desire and to follow the dictates of ethical intellect. Ethical intellectualism as it
appeared in the modern period, particularly in the English moralist, S. Clarke.

3. In theology and in the philosophy of religion, the logical intellectualism tends to lead to a more or less complete neglect of feeling and of will, impulses, and desires, in favour of thought—this both in the problems of the origin and in those of the nature of religion. A consequence of this tendency is that certain ideas, or systems of ideas, necessary to religion are identified with religion, and are treated as if they constituted the whole of religion. Thus, religion is defined as 'a department of thought having for its object a self-conscious and intelligent Being' (G. J. Romanes, Thoughts on Religion, London, 1886, p. 41), or as 'an attempt to explain human experience by relating it to invisible existence' (G. T. T. I, e.g., by Schelling. Asch, and Scientific Methods, i. [1904] 9). Martinsen's definition also puts the emphasis upon a belief: 'belief in an ever-living God, that is, in a Divine Mind and Will ruling the Universe and holding up moral relations with mankind' (A Study of Religion, Oxford, 1888, i. 1).

In the solution of the problems of origin, interest is led to an exclusive concern for the genesis of the ideas upon which the existence of religion depends, to the neglect of the other aspects of religious life, in particular of the emotions and of the ceremonial. Intellectualism is here opposed to affectivism and to voluntarism. The first emphasizes the feeling and the emotion; it looks upon some particular feeling as being the essential or vital part of religion. Schelling's maker's standpoint is an affectivism mitigated by an explicit recognition that feeling and activity are inseparable, though distinct. For him the essence of religion consists in the feeling of an absolute dependence upon God. In voluntarism a more comprehensive point of view disposes both intellectualism and affectivism. It recognizes that religion is a mode of life, and that it involves necessarily—as does every mode of life—ideas and feeling; and, in accordance with contemporary psychology, it insists that these exist only as a part of a conative act. There can be no thinking and no feeling without an intention. Religion, therefore, comes, thus, to be looked upon as a particular type of activity, or mode of behaviour (J. H. Leuba, A Psychological Study of Religion, London, 1912, pp. 35–45).

J. H. LEUKA.

INTELLECTUALISM (Philosophical).—I. Historical survey. The term 'intellectualism' had originally nearly the same meaning as 'idealism,' and it is so used, e.g., in the work of the Scholastic philosophers. It was regarded as the proper representative of the human mind in its entirety, the word 'intellectualism' seemed to be the most fitting designation of the philosophical view that stands opposed to materialism. It is only within recent times that the word has acquired a derogatory sense, and has come to signify a theory which exalts the intellectual at the expense of other elements of the mind, such as emotion and will.

Ever and again, in the course of historical development, there emerge periods in which the intellectual thought—up to the place of command, and these periods are always coincident with an advance in culture and a more conscious mode of life—conditions in which principles hitherto assumed to be self-evident begin to show them- selves insecure. As a matter of fact, the intellect is originally by no means the decisive factor in all aspects of civilized life. The truth is, rather, that all primitive culture contains a non-rational and positive element. In, for example, the history of religion, all have been believed to have been given by divine revelation, and anything like fundamental criticism of them is therefore barred. Or ancestral custom and communal tradition control to a rule with an authority that seems self-evident. Then all at once the hitherto unchallenged is assailed by doubt. External conditions and the inner life have alike undergone a transformation. The question arises why any particular institution should be precisely as it is and not otherwise, and there springs up a de-
sire for a rational vindication of things. The time now comes when the intellect asserts its independent power. In what had indeed, in a previous age, been received as simper, it now discovers defects, impossibilities, contradictions. Nothing shall count as authoritative that has not stood the scrutiny of the intellect. We have come to the stage exemplified in the Sophistic movement of Greek philosophy. The beginning of the modern period shows a number of powerful advances in the study of nature. The unity of medieval culture was broken up by the Renaissance and the Reforma- tion. It is true that, although the Renaissance and the Reforma-
tion did not originate new considerations, they availed to liberate the intellect by setting up, alongside of the institutions of the Middle Ages, other institutions having equal claims. For, when rival forms of religious thought stand side by side, the questions arise which of them can give the best reasons for its existence, and whether some other form is not possible; and, when such questions arise, it is in reality the intellect that is called upon to give a decisive answer.

This is clearly shown with reference to the question regarding truth. To the medieval mind truth was really tradition. The Church, for example, was not one of rigid repose. It had its own spiritual movements and its own problems; witness the controversy between the Thomists and the Scotists. While Thomas Aquinas and natural knowledge and the supernatural type of revelation as combining to form the one vast and regularly graded kingdom of reason, Duns Scotus considers the truth of the Church's doctrine to be something totally irrational. But these antagonistic views are both at one in assuming that the truth is actually there; that it requires, not to be discovered, but simply to be handed on from one generation to another. The Church is in possession of the truth, and she is its guardian. The Renaissance and the Reformation brought about a change—though not, indeed, as much as the intellect as such was not yet invested with the function of discovering and safeguarding the truth. The Renaissance itself was partly in-
volved in a tradition, though not so much in that of the Church as in that of classical antiquity, while for the Reformers the Bible, as the Word of God, came to rank as the foundation of all knowledge of the truth. But, when materially diverse truths, resting on different grounds, come into conflict with one another, the eventual result must be that the intellect acquires a larger measure of independence. The truth must necessarily operate and dispute with the same principles of reason, and hence the conviction gradually grows that the credentials of truth are to be
found in the reason—in the intellect—and nowhere else.

But these movements give rise to great incertitude. All real, as opposed to mere facts, truth is reduced to an unstable condition. In all things a new foundation must be laid, a new structure raised. The intellect finds itself face to face with a stupendous task. But it does not lack the right in this case to assume the solution of the difficulties is within its powers. For there is one kind of knowledge, viz. mathematics, upon which doubt has never been able to lay its hand. Now, mathematics is with the question an affair of the reason; it does not rest upon divine revelation, or upon venerable tradition, but is entirely a product of the intellect. If, therefore, the intellect has succeeded so well in this sphere, why should it fail in that one? This question is perfectly just, but it does not take into account the rise of opposition elsewhere. Mathematics thus comes to be regarded as the pattern of knowledge, and a close alliance between it and philosophy is the result. The powerful influence mathematics has clearly discernible in the systems of Descartes, Spinoza, and Leibniz. In alliance with mathematics the intellect gains a secure foundation and a robust intellectual confidence. It now undertakes the task of framing clear and distinct conceptions, and of exposing to view the ultimate grounds of existence. It claims that the essential nature of the world is determined by a unifying principle of all things, and also the decisive laws that regulate the life, action, and conduct of human beings, must all yield their secrets to thought and its methodical procedure. Now the intellect comest to assert its supremacy only in the sphere of scientific knowledge; it extends its claim of authority also to morality, law, religion, politics, economics, and art. Men are forced to recognize that the human life obvious principles of truth can actually be drawn from a state of affairs which has proved unsatisfactory and is incapable of justification. By means of a natural jurisprudence, a natural morality, a natural religion; political constitutions are drafted, rules are drawn up for economic life, laws are formulated for art. In addition to the philosophers specially noted above, this movement is associated with the names of Hobbes, Shaftesbury, Montesquieu, Lessing, Adam Smith, and many others.

Intellectualist tendency was enormously reinforced by the rise of modern physical science and technical craftsmanship. As in mathematics, so also here, we find an indisputable contribution of the intellect. By means of observation, calculation, and skillfully devised experiments, the most amazing results have been achieved. Intellectualism continued to make steady advances from the 17th century, and, not having overcome the opposing tendencies, it reached its culminating point in the 19th century—in the philosophy of Hegel.

Great as was the reliance placed upon the intellect, however, it has been noted that its special function was exercised in discovering and elucidating, not in creating. In all that it had achieved it had proceeded upon something which it had not itself produced, which confronted it as something given and already existing. Even mathematics and kinematics were seen to depend ultimately on space and time—on entities, that is to say, which the intellect could not evolve from itself, but must in some sense recognize as given to it. The fact was still more obvious in the sphere of physical science, where the intellect could not advance a single step except in contact with the objective fact. But in other spheres as well—in ethics, law, religion, politics, economics, art—intellectual activity encountered ultimate elements, such as God, freedom, immortality, en-lightened self-interest, the struggle of each against all, etc., which the intellect could not create from its own resources, but could only expound as it was. In the light of this the intellect was able to be comprehensible to the real all at. In point of fact the Kantian philosophy had restricted the function of the intellect to the logical articulation of phenomena. It was the Kantian philosophy that the intellect could without doubt apprehend the veritably real only if what had hitherto been regarded as given, as prior to experience, was itself the prior created thing. To show that this was actually the case was the task undertaken by Hegel. On the Hegelian theory all reality whatever is an absolute process of thought, a self-unfolding of opposition, a self-creation of the essential nature of which is logical; thought and existence are identical. Hegel describes how the absolute idea externalizes itself and so becomes reality—the world of space and time, the finite spirit issues from the world, and in the process of historical development it realizes itself in its essential identity with the absolute spirit. The entire development of thought with logical necessity. In this system, accordingly, the intellect assumed the position of absolute sovereignty, and, although it did not hold that position long—the Hegelian philosophy having been soon superseded—yet Hegel's mode of thought has in our own time experienced a revival both in Britain and in Germany. On the other hand, intellectualism has always encountered a good deal of opposition. In the very definite theory of empiricism, as represented, e.g., by Locke and Hume—in every system, that is to say, according to which the function of the intellect is one of mere passive receptivity, there exists also an anti-intellectualistic spirit. Reference has already been made to Kant. When Fichte and Schelling exalt moral vocation or artistic intuition above the intellect, their thought really moves on anti-intellectualistic lines. Schopenhauer finds the ultimate cosmic force in a mysterious will, and in this connection mention should be made also of Hartmann, in whose system, however, there is a Hegelian strain. But the authority of intellectualism has been challenged above all by modern psychology. Wundt has endeavoured in his great work on the recognition for the volitional element in all life, so that his philosophical theory may be appropriately described as voluntarian. Heinrich Maier, in a notable work entitled Psychologie des emotionalen Denkens, has drawn attention to the fact that besides 'cognitive' thought there is also an 'emotional' thought, which, while it contains logical elements, is nevertheless guided by feeling and will. An extremely anti-intellectualistic position is taken also by pragmatism—a product of British and American thought—of which the leading representa-tives are W. James, J. Dewey, and F. C. Schiller. According to the latter, the intellect is per se incapable of deciding what truth is. Only that which justifies itself to living experience is to be accounted true, so that the intellect is here subordinated to life. Reference should also be
made in this connexion to Vaihinger and his significant work, Die Philosophie des Als Ob. On Vaihinger's theory the function of the intellect is not the discovery of truth, but the pre-calculation of occurrences which are to be designated as sensations (Empfindungen). The most delicate creations of the intellect—those which it produces for that purpose—are not reproductions of the real, but fictions. To these psychological and philosophical movements a fresh anti-intellectual tendency has been added by the recent emergence of a new aesthetic culture. The inadequacy of purely intellectual attainments is increasingly being felt on all sides. The over-estimation of the intellect, with its tendency to require a further level, its indifference to individual qualities, and its elimination of the subjective factor, is blamed for the impoverishment of the inner life and the repression of all true individuality of character, while, on the other hand, it is felt that art, with its special interest in the concrete, its sympathetic understanding of individual characteristics, and its creative force, should be the guide to a richer, deeper, and fuller life. These considerations have brought about a complete revolution, as, e.g., in the educational sphere. Thus, while the views disseminated by Herbart—views designed above all things to secure intellectual lucidity in education—hold until quite recently a position of almost unchallenged authority, they are now to a very great extent discarded. 'Art in child life' has become a widely recognized maxim in contemporary pedagogy.

Yet the intellect, in spite of all these counter-movements, and in spite of the active depreciation which it is forced to encounter, still continues to assert its power and its indispensability. It is obvious that mere negation will not answer here, and that the question regarding the significance of the intellect requires further investigation. Of contemporary thinkers, Eucken, in particular, has submitted the problem to searching treatment. He, too, strives earnestly to transcend anything like intellectualism. It is a fundamental doctrine of his philosophy of the spiritual life that the spirit of man involves more than intellectual activity, that the spirit in its entirety is richer than the intellect, but also that the intellect belongs to the spirit, and that the proper development of the spirit is impossible without intellectual action. He certainly admits that the intellect cannot of itself alone evolve any complete reality. It can do only when it has something else—something that does not originate in itself—to act upon, as can be clearly seen in the sphere of natural science. Here the intellect, however far-reaching and comprehensive its activity, is forced to keep in touch from first to last with given facts, with the world of experience. And the like holds good in every other department of human life. Ethical laws and ideals, religious convictions, and aesthetic intuitions are not products of the purely intellectual function, but have their rise in deeper regions of the spirit. If the intellect relies upon itself alone, it moves in a realm of merely formal concepts; and if, nevertheless, it aspires to create a reality, yet this reality has, in point of fact, come to it from elsewhere—only the intellect does not itself realize this or else the fact is shrouded from view. In such cases the sources from which the intellect has surreptitiously drawn are empirical and spiritual experience. This, however, does not exclude the recognition of the fact that, conversely, knowledge and life, whatever their nature may be, can make no proper progress without the co-operation of the intellect. The intellect sifts and combines; it clarifies and moulds. It is present in all experience, and its presence is unconditionally necessary if a completely articulated and ordered reality is to be attained at all. What could we make of sensations, which to-day are often held to be the truly real, if the intellect did not interpret them? They would be something inert, orderless, chaotic, and, in the last resort, absolutely null. Similarly, morality, religion, and art can never attain lucidity apart from the action of the intellect, whose action is, indeed, essential to the very possibility of their progressive development and refinement. In what a rudimentary condition would not art have been doomed to remain if the intellect had not taught it how to look at human life and the surrounding world? By such considerations does Eucken seek to maintain the rights of the intellect, without making it the sole authority in human life.

We arrive at results similar to those of Eucken by a consideration of the fundamental character of reality. That fundamental character stands in a peculiar relation to the tendency toward a more complete rationalization of the universe. The intellect strives to rationalize all reality, to bring it under calculation, to view it as necessary; and its ultimate aim is to construct a formula which will embrace all that occurs in the world, and which is capable of determining the actual condition of things at any particular moment. To a large extent, moreover, reality submits to this procedure of the intellect. But there is a point at which all the efforts of the intellect must necessarily fail. The great instrument of the intellect is law—the formula. Law and formula, however, are necessarily generated, and may be made to comprehend as many particular instances as desired. But they cannot determine what particular instance will actually emerge. Thus the formula and the intellect may hold good precisely as they do even if there were more or fewer planets in the solar system. It does not follow from the law of gravity that its formula shall apply to that particular system, and no other. In a word, laws and formulae are in their nature merely general, while the real is in all cases special and concrete, and accordingly reality refuses to be completely rationalized. The real might be described, indeed, as an intermixture of the rational and the irrational, or positive—an intermixture in which, however, the latter factor predominates over the former, since the rational can operate only in contact with a positively given object, from which it moves in a mere vacuum, and with all its efforts produces nothing.

This is true not merely of the reality which meets us in our external experience, but also of that which we call spiritual. In the moral sphere, for instance, we are confronted by various alternatives: there may be a morality of enlightened self-interest and one of self-denial; a morality which affirms and one which negates the world; a morality of rigid justice and one of benevolence; a morality of natural selection and one of religious ends. The intellect cannot claim to have produced any of these, nor can it demonstrate that any one of them is exclusively authoritative. It may certainly be employed in combating or defending any of them, but the intellect's acceptance of a particular ethical tendency rests ultimately upon a personal decision which is incapable of logical explanation. Once the decision is taken, however, the intellect may render valuable service in illuminating, elucidating, and developing the theory chosen.

Every genuine work of art, again, is an absolutely individual act of creation. To interpret a work of art as due to an application of unvarying universal rules is utterly to misunderstand it; thus Richard Wagner was undoubtedly
right in protesting against the notion of an absolute work of art, i.e. a work which would be simply the result of universal laws valid for all time and under all conditions. To desist such a work would involve the establishment of an absolute intellecutalism in the sphere of art. As a matter of fact, the general laws of art are mere abstract deductions from existing works of art or from the achievements of a particular creative mind, and a new creative period will give rise to new laws. Such laws may serve as a means of comprehending and interpreting what already exists, but they have no creative power of their own. Thus in ethics and art, precisely as in science, mere intellecutalism always works to the prejudice of reality, while, on the other hand, the action of the intellect is not only valuable, but indispensable.

Intellectualism in religion, which is not necessary here to refer to the various forms of religion; it will suffice to elucidate the relevant facts as they appear in Christianity. Christianity in its original form made not the slightest claim to serve as a rational interpretation of the world; the love of God, the expiatory death and the resurrection of Christ; immortal life, and eternal salvation—all through a being incomprehensible, something which no human reason can attain to, and no human understanding exegogate, which eyes has not seen, nor ear heard, nor the heart of man perceived. That these rational proofs are of no avail here was an emphatic conviction in the mind of St. Paul. Nevertheless, intellectualism very soon found its way into Christianity, and, long stood in the way of a better understanding of what religion really signifies. In orthodoxy, in the Iamination, in rationalism and supra-rationalism, intellectualism held unbroken sway. The subject of religious truth was certainly of a very heterogeneous character, but the essential interest was in all cases a kind of knowledge which was accessible to the intellect and intuited by the heart. True, it was of a religious truth was certainly of a very heterogeneous character, but the essential interest was in all cases a kind of knowledge which was accessible to the intellect and intuited by the heart, of a manner to arbitrate. The views of Bayle, who emphasized the non-rational character of religion, and those of Spinoza, as set forth in the Tractatus Theologico-Politicus, were of the time of the early apostles, Christianity had come to be regarded as the true philosophy. In Alexandria the endeavor of Clement and Origen to reconcile their religion with Greek philosophy served to further intellectualization. The fact that these theologians regard λόγος as the highest attainment possible to man, and that λόγος, as pertaining to the perfect, is considered to be unequivocally superior to the human, is all that the ordinary member of the community can aspire to; simply implies that the Christian religion had opened the door to intellectualism. The conception of the Logos also played an important part in the rationalizing process. This conception, on the one hand, was in every respect a product of scientific thought; it signified the cosmic idea, and by means of this idea the world was to be linked to and interpreted, and interpreted, while, on the other hand, it is used in the Fourth Gospel to enunciate the eternal deity of Jesus Christ, and, although, at times, it is certainly brought into relation with the world, yet the conception is in no sense a scientific one, but purely religious, since the point in question is not the possibility of a rational interpretation of the world, but the dignity to be ascribed to Christ. Nevertheless, the conception served in part to bring various types of thought into contact with one another, and even to fuse them together. This process of dissonant intermingling of ideas, bringing great perplexities in its train. For one thing, correct knowledge was now considered to be the most important element in religion, and, on similar grounds, heresy was accounted the gravest of sins. At last, again, this position was constantly disputed by the natural conviction that religion is concerned with something else—something more essential than mere knowledge. Religious knowledge, moreover, was not only brought into contact with regard to itself. On the one hand, it was regarded as being of the same nature as rational truth, i.e. the type of cogitation found in logic, mathematics, and the natural sciences; on the other, the feeling that religion has essentially to do with an entirely different kind of truth, with a positive and non-rational truth, could never be wholly suppressed. A wavering between the two sides runs through the entire medieval theology; and, while Christianity sought to defend itself against intellectualism, it was never able actually to free itself from its grasp.

The work of Luther, in virtue of which faith was once more invested with its proper prerogative, offset the anathematization of reason from intellectualism. Faith is now interpreted as trust in the grace of God manifested in Jesus Christ, and thus alike in its character and in its object is no more matter of knowledge. Trust is never the outcome of purely intellectual reflection, but the grace of God in Christ is something that transcends all rational credentials and intellectual demonstration. Nevertheless, intellectualism soon reasserted itself in religion, even in the Churches of the Reformation. Faith came to be identified with the recognition of true doctrine, and this intellectualistic interpretation proved most detrimental to religion, and long stood in the way of a better understanding of what religion really signifies. In orthodoxy, in the Illumination, in rationalism and supra-rationalism, intellectualism held unbroken sway. The subject of religious truth was certainly of a very heterogeneous character, but the essential interest was in all cases a kind of knowledge which was accessible to the intellect and intuited by the heart. True, it was of a manner to arbitrate. The views of Bayle, who emphasized the non-rational character of religion, and those of Spinoza, as set forth in the Tractatus Theologico-Politicus, were of the time of the early apostles, Christianity had come to be regarded as the true philosophy. In Alexandria the endeavor of Clement and Origen to reconcile their religion with Greek philosophy served to further intellectualization. The fact that these theologians regard λόγος as the highest attainment possible to man, and that λόγος, as pertaining to the perfect, is considered to be unequivocally superior to the human, is all that the ordinary member of the community can aspire to; simply implies that the Christian religion had opened the door to intellectualism. The conception of the Logos also played an important part in the rationalizing process. This conception, on the one hand, was in every respect a product of scientific thought; it signified the cosmic idea, and by means of this idea the world was to be linked to and interpreted, and interpreted, while, on the other hand, it is used in the Fourth Gospel to enunciate the eternal deity of Jesus Christ, and, although, at times, it is certainly brought into relation with the world, yet the conception is in no sense a scientific one, but purely religious, since the point in question is not the possibility of a rational interpretation of the world, but the dignity to be ascribed to Christ. Nevertheless, the conception served in part to bring various types of thought into contact with one another, and even to fuse them together. This process of dissonant intermingling of ideas, bringing great perplexities in its train. For one thing, correct knowledge was now considered to be the most important element in religion, and, on similar grounds, heresy was accounted the gravest of sins. At last, again, this position was constantly disputed by the natural conviction that religion is concerned with something else—something more essential than mere knowledge. Religious knowledge, moreover, was not only brought into contact with regard to itself. On the one hand, it was regarded as being of the same nature as rational truth, i.e. the type of cogitation found in logic, mathematics, and the natural sciences; on the other, the feeling that religion has essentially to do with an entirely different kind of truth, with a positive and
proof. This new endeavour to rationalize religion was challenged by the Erlangen theologians and by the school of Ritschl, of whom in particular W. Herrmann has fought against the harmful influence of the unconscious in religious studies. He appeals to the Gospel as the criterion of all Christian belief and doctrine, to the historical investigation of religion, with its discovery of a vast mass of material which delineates all rational explanation, and, finally, to religious psychology, which serves to bring the unique character of religion into fuller relief. It is not thereby implied, of course, that the history and psychology of religion may not be used in the interests of intellectualism, as, e.g., when religion is repudiated altogether. In that case religious history may simply be drawn upon for materials to illustrate the story of human error, while the writer departs from religion only as far as his own study of the disorders of the human soul. Quite recently an endeavour to preclude this application of religious psychology has been made by Wöbbelin (see p. 276), who insists that the problem of religion proper is the psychology of religion proper and the psychology which is concerned with religious phenomena. The former, according to Wöbbelin, presupposes the existence of a religious people; the latter does not. It is only the former, however, that can arrive at a true understanding of religion, while the other, dealing with religious phenomena, is only a fiction with the external, empirical, sensation of religion. Religious psychology in this special sense is antipathetic to mere intellectualism. We are therefore justified in asserting that in the intellectualistic and materialistic scheme, forces are in opposition at the present day.

3. The significance of the intellect in the religious sphere. It is quite obvious that the intellect is not the most important factor in religious views of things. A fundamental element in every religious conception of the world is the conviction that God infinitely transcends all human existence. This involves the inscrutability of God, and thus also the importance of the intellect to be supreme. The intellect finds itself confronted here by an absolute limit, since the inscrutability cannot be brought within its capacities. The inscrutability of God is not merely a pre-condition of the possibility of religion; it is not something that might be surrendered without detriment to religion; on the contrary, religion stands or falls with it. God would not be God if He were not inscrutable. Nor is the inscrutableness of God merely one postulate of religion among others; it permeates everything embraced by religion. Thus, the fact that the central element of Christianity is the redeeming love of God is a blessed, but at the same time an incomprehensible, mystery. Of every genuine religious utterance it will be found to hold good that it grasps the conviction that God is incomprehensible. In religion there is something before which the intellect must abase itself, and its every claim to autocratic authority is utterly silenced.

On the other hand, discrepancy of the intellect finds no justification in religion. It would be an error to regard the intellect as alone, of all the functions of the human mind, hostile to religion, and to assume that the others are merely intimately allied with it. Even morality, for instance, is itself no more akin to the divine than is intellect. It is possible to have a morality which positively surpasses the intellect, and yet commits an act of God. Religion, moreover, must insist upon the fact that the intellect too belongs to God; that it is a gift of God which may be used in His service, and indeed ought to be so used. Hence religion itself requires that a high value shall be set upon the intellect, which, nevertheless, must be satisfied with a position below the highest. According to H. Pahor, long and the history of the idea of God and religion, the intellect, at least, may be satisfied with a position at least one particular reference the last word does not lie with the intellect. When we come to deal with the unavoidable problem regarding the truth of religion, is it to be decided by the intellect? To what other competent tribunal can we appeal for judgment? Self-evident as the answers to these questions may appear, it is nevertheless to be observed that the intellect would be able to maintain its sovereignty only on one of two conditions, viz. that it creates religion, or else abolishes it. Hegel undertook the task of evolving religion from the intellect, but any such deduction must inevitably founder upon the fact that religion has to do with the inscrutable. Were it on any possibility to succeed, it would bring religion itself to naught. To derive religion from the intellect would certainly be to go away with the inscrutable, and therefore with religion too. We should in that case have only the second alternative to consider, i.e., the abolition of religion by the intellect. And, indeed, that interaction between the intellect and religion may be a counteraction, i.e., of the intellect's power in this way seems actually to be concealed by religion itself—in the admission, namely, that all its affirmations resolve themselves into antinomies: God is an investigator himself; the latter does not. It is only the former, however, that can arrive at a true understanding of religion, while the other, dealing with religious phenomena, is only a fiction with the external, empirical, sensation of religion. Religious psychology in this special sense is antipathetic to mere intellectualism. We are therefore justified in asserting that in the intellectualistic and materialistic scheme, forces are in opposition at the present day.

Of prey, the recognition and avoidance of enemies, etc. If failure occurs, it is absolute, except that there are occasionally alternative reactions provided for special forms of situations. On the other hand, reason is said, may achieve the same efficiency as instinct, with the same immediacy, and without experience of similar situations, by the direct perception of the causal relations involved, by a general power, adapted to any kind of situation, and not tied down, as an instinct is, to a single class. In most cases, however, when a new contingency arises, the actions of an animal are not immediately effective; it appears to act blindly, with many fruitless efforts, until, by accident, as it appears, the right action may be hit upon, after a longer or shorter time or with fewer trials; ultimately, all unnecessary and inappropriate acts are omitted, and the one effective action is immediately adopted. This has been termed the method of trial and error, and under its formula all individual learning, in man as well as in animals, may be brought. Animal species, and individuals in the same species, differ in the time or amount of experience required to learn the same action, in the number of different actions they may learn, in the complexity of situations they can meet, in the extent to which previous experience is applied in new contingencies, and the like. Man's reason is itself an extension of the same process, and there are close approximations to it in the ape and other higher animals. But, while there is no ground for distinguishing between reason and intelligence, instinct and intelligence must be regarded as different in kind. They are not alternatives to each other, or different ways of achieving the same end, or 'lower' and 'higher' forms of action, or the like. Instincts provide the material on which intelligence builds; the intelligence of an animal is always limited and conditioned by its structure and habits, i.e. its instincts; intelligence develops progressively as the instincts become more numerous and more complicated. On the other hand, there is probably no species of animal which has instinct only, without intelligence, or a degree of complexity. The method of trial and error has been found, by Jennings and others, as low as the protozoa. In the development of the individual also, instincts and intelligence are concurrent from the beginning, but intelligence is progressive, while instinct is stationary: hence in the adult of the higher animal species, and especially in man, the primitive instincts are so buried beneath the accretions of intelligence that the dependence of the latter upon them is apt to be ignored.

3. Analysis of intelligence.—What are the mental qualities involved in learning by experience? If we take the classical instance of the burnt child dreading the fire, we have to distinguish between the first and the later experiences of the situation. In the first an object, the perceived object, which the child instinctively feels to be pleasing, and the instinctive reaction of grasping results; this is immediately followed in the supposed case by a strong sensation of pain, the instinctive withdrawal of the hand is provided. If there were no intelligence, the same series of impressions and acts would be repeated as often as the situation arose, with the same effect. How does any change take place through intelligence? The simplest assumption, that the child sees the fire to be the cause of the pain, avoids it in
consequence, is ruled out for numberless instances of such learning, although it may occasionally hold for a given child or animal in a given case. Let us suppose, then, that on the second experience the sight of the fire leads as before to the stretching out of the hand, that this associatively calls up in memory the painful sensation of the burn and this in turn the actual drawing back of hand and arm, the net result being that, if the association is rapid, the hand is drawn back almost before it begins to move. For this to be possible we need the presence of consciousness and mobility, of retentiveness of the impression, and associative recall, but above all intensity and unity of attention: the experience must have been appreciated as a single whole, otherwise the associative current would not run from 'fire' to 'palm,' from the conception of 'fire' to 'pain,' etc., but might be turned at 'grasp' to any other of the hundreds of grasping experiences. This comprehensiveness of attention is the essential thing in physical evolution, and it depends on the number of trials required in the trial and error method before success is achieved; on it depends also the transition from concrete to abstract imagery and thought. Abstraction is the power of neglecting the irrelevant and concentrating on the important features of a situation, whether in perception, in memory, or in thought, i.e. it is a process of attention. In its turn, attention depends on the degree of sensitiveness of the individual, his quickness of reaction, and, at higher levels, his retentiveness and the strength of his innate or instinctive or acquired interests. It may be said, in short, that the intelligence of an individual is the degree of his ability to learn, and to apply what he has learned, and that this depends on his willingness to engage in formal or trial and error methods. If, therefore, there is no wish to ask whether animals have 'intelligence,' if they have any form of mental experience-sensation, e.g., and no one denies this even of the lowest animals, then they have also intelligence. The task of comparative psychology is to determine the combinations of intelligence and adaptation in different animals and in the child, to reconstruct the scheme of mental evolution and development, parallel to the scheme of physical adaptation, and try to determine the combinations of intellectual adaptation in different animals and in the child, to reconstruct the scheme of mental evolution and development, which biology already has within its grasp.

4. Special problems.—How complex the nature of 'intelligence' may be seen by a perusal of the literature of the subject, and on two very modern problems—that of 'formal discipline,' and that of 'tests of intelligence.' The former is the question whether intelligence is a general power, which can be turned at will from one subject to another; whether, then, capacity in one sphere is or tends to be accompanied by high ability in other spheres; whether improvement in any kind of mental ability extends to improvement in different mental abilities, etc.; the probability being that intelligence is almost as specialized as memory, that ability in one subject gives no ground for inferring ability in closely similar subject, and that improvement in one subject carries with it improved ability in others so far as these others involve the same forms of perception, attention, and memory. The second problem is that of finding a scientific and tractable definition for the teacher's or doctor's rough classification (and rougher tests of children in regard to their intelligence)—'bright,' 'average,' 'poor,' 'dull,' 'backward,' 'defective,' 'failing,' etc. What is the second condition upon is that the most objective classification of children is by a comparison of the 'mental' with the 'physical' age; that for this an average mental ability for each physical age must be determinable, that the tests used in fixing the average, and in proving each child, must be of several kinds for each age, and must be graded for different ages, more difficult as the age is higher. But sex, social rank of family, school training, race, country, etc., as many other factors are found to interfere with the projected average or standard, and experimenters are still far from united in agreement upon the tests suitable for each age.

J. L. McINTYRE.

INTEMPERANCE.—See DRUNKENNESS.

INTENTION (Theological).—A sacrament involves some action of a minister, having a special significance; and, since the significance of a human action may depend in part upon the intention with which it was performed, it was inevitable that the progress of theology a question should be raised whether a proper intention in the minister is requisite for the validity of a sacrament; if so, the nature of that intention would have to be considered.

In the Eastern Church this question has been generally avoided; a sacrament is regarded as an act of the Church at large; the scholastic of which theologians speak is the purpose or spiritual meaning of the appointed rite, and the minister's only function is to exhibit that rite integrally. This applies even to the sacrament of marriage, in which, since it consists materially in the consent of the contracting parties, there is special room, because of the nature of a contract, for inquiry into their intention and specific consent. Some systems of law will annul a marriage on the ground of defective consent, even when all formalities have been ostensibly fulfilled; but the Canon Law of the Eastern Church allows no such objection to be raised against a marriage publicly contracted with the blessing of the Church.

In the Western Church, however, a different theory and practice followed. The final rejection of St. Cyprian's teaching about the baptism of heretics. When it was admitted that baptism administered by persons separated from the Church was valid, the sacrament could no longer be regarded exclusively as a public act of the Church. It was then necessary to inquire whether a particular baptism was valid. The Eastern Church evaded the difficulty by denying that baptism was sacramentae, in which case the consent of the Church is supposed to supply whatever may have been lacking; but the trend of Western theology and practice has generally agreed to treat such baptism as absolutely valid if the necessary conditions are fulfilled, or otherwise as absolutely invalid. Inquiry into the conditions of validity was, therefore, necessary, and the nature of such inquiry spread from baptism to other sacraments.

In his De Baptismo (vii. 53), Augustine considers several questions about the animus with
INTENTION (Theological)

which baptism is received as affecting the validity of the sacrament; and more incidentally, as though of less importance, he considers the animus of the minister: "Quid enim proit animus veraciter da tis faciendi actum non video." Taking the case where the minister alike 'faciendi actum' in ipsa unitas catholicam,' he asks: "An plus valent ad confirmandum sacramentum illi veraces inter quos agitur, quam ad frustrandum illi faciendas a quibus agitur, et in quo quis agitur?" In reply, he appeals to the practice of the Church: 'Si postea predatur, nemo repetit, sed aut excommunicando punitur illa simulatio aut poenitendi sanatur.' His own opinion he was unwilling to give where there was no express conciliar decision; but in counsel he would be disposed to support the proposition: "Habere eos baptismum qui ubiqueque et qui quibuscumque illud verbi evangeli consensu sine simulacris et cum aliqua fide accepissent." This seems to exclude the notion that the animus dantis can affect the integrity of the sacrament; only the stantio of the actum or his complectens with faith can it if administered in due form verbi evangeli.

The general acceptance of this judgment is proved by the present day usage of the solemn form of the minister's absolution, baptized in moonyrs on the stage. Augustine (loc. cit.) glances at the current practice of the menses, and shows a curious reluctance to give any explanation on the case "u isti tenuem indicem et minime et loquenter absolutionem." The story told by Gersen (s. ii.) about the boys of inyrs in play is less to the point, since it is implied that the children, though in play, had a more or less serious intention of doing what they had seen done in the Church.

The judgment of Augustine long prevailed. Nicholas (L. 557-561) ruled that persons representing to have been baptized by a Jew, "si in nomine sanctae Trinitatis vel tontum in Christi nomine... baptizati simus," are validly baptized, no question being raised about the intention of the minister. It should be observed that he proceeds (cap. 3) the necessity of consensus for a valid baptism, but without any indication that he would allow the intention underlying a publicly expressed consent to be called in question. In the early scholastics of the 12th century a contrary opinion appears. Hugh of St. Victor (Summ. Sent. v. 9) requires ut formas sacramentum servetur et intendat illud celebrandi lunaebus. Peter Lombard (iv. 6) follows him, and the great vogue of the Libri Sententiarum made the doctrine dominant. The nature of the requisite intention, however, was not yet settled. William of Auxerre (In iv. Sent. iv. 7) seems to have been the first to adopt the phrase 'intento faciendi quod facit ecclesia.' Albertus Magnus (In iv. Sent. iv. 6. ii.) limits the same by saying even if the minister does not believe the rite to have any spiritual effect; and he seems to meet the objection that the minister might maliciously withhold his intention, and so invalidate the sacrament. Sinibaldo Fieschi, afterwards Innocent iv., in his commentary on the Decretals (f. 42. 2), went further:

"... Non est necesse quod baptizans... siv est mentis facio quod facit... non est neces- sario quod facit ecclesia, sed fames tacta fodi formam servat, nihilominus baptizatu est, dummodo baptismum intendit..." He denied that specialis intention was necessary, and this was the intention to produce the effect of the sacrament, as the Compend. theol. veritas, however, does not want to be implied in insensitive, n. c. "ut iste baptizandus mundeatur." Thomas Aquinas, however, stiffened the requirement, saying (Opusc. iv. de Sacram.): 'Si minister sacramenti non intendit perium consensum conferre, non peremortum sacramentum,' and strengthening the current formula into 'intento conferendi et faciendi quod fact ecclesia.' Elsewhere he further defines the purport of the intention: Christ in the 'principal agent' in the sacramental action, and the minister must act as the representative of Christ; therefore requiring his intention to substantiate his principal act. But to the objection that all certainty about the sacrament is thus destroyed, since no man's intention can be known, he replies:

'Minister sacramenti agit in persona tutoris ecclesiae, cuius est minister; in verbo autem, quia verba sunt divinae, quae sufidic ad perfectionem sacramentum, nisi conversum exerit non recipiatur. (Summa Thol. iv. 64.)

This seems to deprive of all importance what he calls mentalis intention; and we are back at the position of Augustine, except that a concrescence to the Scholastic doctrine by the minister would invalidate the sacrament. A merely defective intention would do no harm; it must be positive and avowed. A soccoa intention, however, "cum aliqua non intendit soccoa sacramentum conferre, sed diversis aliquid agere," makes no sacrament; he adds, 'praecipue quando examinat intentionem exterius manifestat' (ib. 10). The case in view is clearly a mimetic representation of the sacrament, supported by the similar teaching of Bonaventura, become dominant in the schools until the 16th century.

In the meantime the Scholastic doctrine was finding its way into dogmatic decrees. In the profession of faith imposed by Innocent iii. on converted Waldensians, it is said that for a valid Eucharist is required fidem intentionem praebere (Deusdinger, Enchiridion, Freiburg, 1011, no. 424). In the dogmatic definition of the 4th Lateran, cap. 1, where something of the kind might be expected, there is nothing. According to Florencio, Eugenius IV., in his Decr. pro Armenis, adopted the language of the Opus. in. of Thomas Aquinas almost intact, for this as for other matters.

Luther made a brief reference to the Scholastic doctrine in the treatise de Bab. Capt. (ch. de Sacr. Baptismi), citing the ex demus quo quodam mino per locum baptizato. Maintaining the position that the sacraments operate as visible signs of the grace of God resting in the recipient, so that 'non in concentibus tantum quantum in suscipiendi fide vel usum sese est virtutis baptismi,' he brush aside completely the question about the intention of the minister. His bold treatment of soccoa intention had a large place in subsequent controversy, but as used by adversaries rather than as developed by his followers. One of the propositions extended that a solemn affirmation by condemnation by Leo x. was: "Si per impossibile confessus non esset corruptus, aut saecloribus non serio, sed falso assurdurat; si tamen esset in ambitu, verissime est absolutionis." The silence on this head of the Augustana, and of the Synod Confession presented to the Council of Trent, is significant. The Conf. Heliocitea (ch. xix. sect. 11), however, expressly excludes from the conditions requisite for a valid sacrament administration 'a concresce, et qui habeat intentionem concrescrandi.' Calvin's austere conception of the operation of the sacrament is certainly truly divine, and resting on the external decrees, left no room for any effect to flow from the intention of the minister.

Ambrosius Catharistan, in a treatise de ius Minist: Sacr: re-stated in the Scholastic doctrine with an important difference. Maintaining with Thomas Aquinas that the requisite intention is secured positively by the serious use of the external forms appointed in the Church, he denied that the minister could by any individual intention of his own, however contradictory, destroy the effect of those forms. Thus he excluded from validity only a mimic or derisory representation.
of a sacrament; the only intention required of the minister is the intention sincerely to use the appointed rite. Pallavice (ix. 6) asserts that the Church of Trent did not repudiate this teaching, though the language of secs. xiv. 6, denies the effect of absolution, *si... sacerdoti serio agendi est vere absolvendo desit,* seems to look that way. In secs. vili. c. 11, the Council condemned the opinion, *ex quorum intentionem sacramentum consuetudine.* Controversy turned chiefly on this point, it being said that the sacraments were thus robbed of all sanctity. Jewel, in his book on Harding (Tucker Soc., 1, (Cambridge, 1845) 139), used a phrase which became classic:

"This is the very dungeon of uncertainty. The heart of man is unspeakable. If we are in the possession of a mortal man, we may stand in doubt of our own baptism."

Horne (p. 59) fell back upon the position of Thomas, quoting, however, by preference the canons:

Lancelot:

"The known institution of the Church generally doth suffice, and, where the contrary is not manifest, I may presume that he which outwardly doth the work, hath inwardly the purpose of the Church thereof."

The peril indicated by Jewel compelled defenders of the doctrine to diminish their demands; and Bellarmine (de Sacramentis, ed. Gen. L. 27) said almost the last word on this side:

"Non est opus intendere quod facti ecclesia Romana, sed quod facti est ecclesia, quidem necesse habeat, sic est, vel quod Christus instituisset, vel quod facturum Christi voluisse."

Towards the end of the 17th cent. the teaching of Catherinus was once more brought up. There were stories current of a priest who declared that he had habitually perverted his interior intention when baptising, and of a bishop who had done the same when ordaining, and relief was sought from the implied consequences. This relief was denied by a decree of Alexander VIII. in 1690, condemning among others the proposition:

"Intercessum constituit a ministero, qui omno ritum externum formasse non tenuisset, si non observaret, he were in no case apud se resolvit: Non intendere quod facti ecclesia.

The main and looking of the 'dungeon of uncertainty' was resisted by some Thomist theologians, notably by J. H. Serrv, *Apostolicae Vindiciae, Patavium, (1727);* but the more exigent teaching prevailed, partly through the influence of Benedict XIV. and the Jesuit schools, until recent times. Thomism revived under the encouragement of Leo XIII., and in his bull *Apostolicae Curae* that pontificate laid down a principle which in practical effect differs little from that of Catherinus:

"Secundum que intentionem, utique quae se quidquid est intercus, ecclesia non intendit: at quosdam extra praelium, indicato de eo debeat. sed bono manito ad sacramentum confessandum et confessandum materia formansque debitam ac site reddat, eaque consensu ad alicub facere intendende quod facti ecclesia.

This seems to bring the authentic teaching of the Roman Church into line with that of Hooker (see above), and the conclusion may be held judicious.

**Literaturx.**—This has been sufficiently indicated in the article by T. A. LACKEY.

**INTERCESSION.**—I. Connotation of the Term.

The word is now usually restricted in its application to (a) pleading for others, as when a favour is asked for another from a fellowman; (b) praying for others, as when blessings are sought for another from God. When it is used of the intercession of Christ, it has a wider significance, and expresses the more general idea of (c) acting for others.

On the varying connotation of 'intercession' light is cast by its derivation and by the history of the Greek and Hebrew words of which it is the translation.

(1) *Intercesion* (inter, 'between,' and cedere, 'to pass' or 'to go') denotes (a) a passing between, as, e.g., an intervening period of time. Hence, in 16th and 17th cent. writers 'intercession' is equivalent to 'intercessionation'—a meaning now obsolete. Tyndale could write: 'We must call upon God without intercessionation' (Ged. v. 589); (b) a going between, as, e.g., the intervention of a mediator who strives to reconcile those who are at variance. The functions of a go-between may, however, differ greatly. Ordinarily required by the Roman tribunes of the people was known as *intercessio.* These tribunes could forbid the carrying out both of the resolutions of the *senatus,* or deliberative assembly, and the duties of the *comitia,* or legislative assembly. Referring to a statute which the senators could not oppose by argument, C. Merivale says: They gained one of the tribunes to interfere at a meeting of the *comitia.* (Foot of the Roman Republic. London, 1853, viii. 216.) The conception of thought must, therefore, determine whether the intervention is for or against. But it is in accord with the tendency to limit the meaning of 'intercession' to an appeal for a favour that in Ro 11 the AV reads 'how he (Elijah) pleaded with God against Israel,' instead of 'how he maketh intercession,' etc. (AV.)

(2) In the NT 'intercession' is once (1 Th 3:2) the translation of *προσευχή,* which is also once (1 Th 4:2) rendered 'prayer.' The corresponding verb *προσεύχομαι* (to fall in with, 'to have an interview with') is four times translated 'to make intercession' (Ro 2:27, 27, 27, Ro 7:27). In Ro 11 the rendering is 'to plead with,' and in Ac 25:24 to make suit to.' In his note on the last cited passage, P. Field (Noes on the Translation of the AV, Cambridge, 1899, p. 140 f.) gives quotations from Greek writers which show that frequently the idea of a personal interview seems to be required. In 2 Mac 4 the 'EV 'of the audience' is an improvement upon the AV 'by a verbal apology,' for the reference is to 'a confidential interview, face to face, between Jason and Antiochus' (cf. R. C. Trench, *Synonyms of the NT,* London, 1890, p. 190). The root idea of *προσεύχομαι* is, moreover, not prayer for others, but familiar intercourse such as obtains when confidential relationships are established, as between parents and children. Thus '4th prayer is the only possible translation, but it should be also noted that in EV 'intercession' is found (Jer 27:26) when the petition has no reference to another's benefit. It is by a natural and suggestive transition of thought that *προσεύχομαι,* which means prayer regarded as personal communication, familiar heart converse, should come to signify prayer regarded as application for others. The expression of this aspect of prayer is not, however, limited to this word; it is often represented by adding qualifying clauses to one or other of the synonyms for prayer.

(3) In the OT the subject of 'intercession' has great prominence, though the English word is of rare occurrence in EV. (a) The Hebrew verb *pأ�* is translated 'to make intercession' in Jer 7:27 36, Is 33:2, and the corresponding noun is rendered 'intercessor' in Is 59:1. This verb is closely related in meaning to *τρικάπτω* and signifies 'to encounter;' hence it is encountered with a request.' In two passages the context makes it plain that the meaning is 'to pray for others' (on Jer 27:26 36, cf. (2) above). In Jer 7:26 'pray not for this
INTERCESSION 363

people' is parallel to, and synonymous with, 'neither make intercession with,' in Is 53:2, a definition clause is added: 'he made intercession for the transgressors.' (6) The Hebrew verb most frequently employed to express the idea of prayer for others is יָנָא, 'to intercede,' which sometimes expresses the same idea is פ. By most modern lexicographers it is connected with an Arabic root signifying 'to sacrifice,' and its earliest associations are with sacred rituals. The usual root meaning is 'to treat for others.' In Ex 34:27, 28; 10:3 this verb is six times used of the prayers of Moses and Aaron for Pharaoh; in Gn 23:3 it refers to Isaac's prayer for his wife, and in 2 Sam 24:12 to David's prayer for Israel.

2. Intercessory prayer. — When 'intercession' is defined as prayer for others, it is obvious that the object of prayer against prayer in general applies to intercessory prayer. Indeed, the mystery which attaches to prayer of all kinds reaches its climax in prayer for another's blessing (cf. Prayers, p. xxiv). Hence it is that intercession prayer has been generally admitted by theists. Such controversy as existed in pre-Christian times was rather as to the nature of the gods than as to the propriety of invoking their aid.

We may not say that the efficacy of prayer was admitted by all ancient Theists, but it does seem that this doctrine was not denied by any whose theology rendered its admission possible. (J. H. Kellett, The Efficacy of Prayer [Donnellan Lectures], Dublin, 1883, p. 23.)

It is held to be a redactio ad absurdum of Epicureanism that it rendered prayer nugatory (cf. Cicero, de Nat. Deor., i. 44). In Origens treatise on Prayer (I. 186 ff., Benedictine ed.) the doctrine of later scribes is represented as a necessary result of their fundamental principles. In all ages men who have had knowledge of God have regarded it as a reasonable inference that 'to Him they might lift hands of prayer both for themselves and those who call them friend' (Tennysen, Morte d'Arthur). In this respect systems of religion agree, notwithstanding different interpretations of important particulars.

The conception of intercessory prayer, like the idea of prayer in general, presupposes not only a doctrine of God, but also a doctrine of man and of his relation to his fellows. That relation is best described by the word 'solidarity.' An intercessor is one with those for whom he prays, and yet he differs from them in that he is nearer to God. The qualification for the work of intercession is twofold.

The more eminent the great heroes of the Bible are for holiness of life, the more intensely do they realize their enemies with the people whose pastors and priests they are, and take upon themselves the burdens of their nation's transgressions and sins (Burck, Solidarity of Humanity, quoted by D. W. Simon, The Redemption of Man, London, 1908, p. 384).

To make intercession for the nation was alike the duty and the privilege of the priests of Israel. Only once during a priest's lifetime could it fail to be his lot to enwrap the Temple with intercession for the people. The incense he offered there was the symbol of Israel's prayers presented with his own, 'thrice a day, before the Lord, for Israel.' (Lev 16:22.)

In the history of Israel it is the prophets who most frequently act as intercessors. Moses, Aaron, and Samuel are singled out as pre-eminent in this regard (Ps 99, Jer 15). So intense was Samuel's sense of obligation that he described neglect of the duty of praying for others as 'sin against the Lord' (I Sam 12:23). Prayer for us was not made to Jeremiah by Zebediah (Jer 37), and again by 'all the people' (Jer 42).

Practically all the intercessory prayers of the OT are offered either by prophets or by men—such as Abraham and Job—of whom later ages idealized as prophets. As a rule their intercessions were for the nation they loved, but occasionally the petitions have a wider range. 'Jeremiah, for example, urges the exile (Jer 29) to pray for Jerusalem, (29); and, Daniel, in his dream (Dan 9), desires the prayers of the Jews for himself and his dynasty (E. J. McFadyen, The Prayers of the Bible, London, 1908, p. 26). Intercessory prayer has the sanction of our Lord's example during His earthly ministry. He 'continued all night in prayer to God' before selecting the twelve Apostles (Lk 6:13). That His prayer included intercessions is a reasonable inference, as well from His petitions for His disciples on the eve of His departure from the world as from His supplication before the Father on the day of the ascension (Lk 22:42). At the grave of Lazarus His words of thanksgiving for prayer heard and answered, according to the Father's wont, point to the habit of intercession (Jn 11:41), such as makes it natural for Him to use almost His latest breath in praying for His enemies (Lk 22:42). The command, 'Pray for them that despitefully used you' (Lk 23:34), falls from His lips with the authority of the teacher and Lord who could say of this grace, as of all others, 'I have given you an example that ye should do as I have done' (Jn 13:15). The true spirit of intercession broaches in the pattern prayer (Mt 6:9). Our Lord teaches His disciples that they 'should not pray as atomistic individuals, but as members of human society, of the believing Church, of the kingdom' (H. Martensen, Christian Ethics, i. (Individual), Edinburgh, 1881, p. 120).

T. von Hasings rightly finds a sufficient warrant for intercession in the 'Our Father' of the Lord's Prayer: 'Our' and 'us' instead of the natural and 'my' and 'me' is for the Christian a really natural utterance. This faith in the Father cannot exist without love to others, both to those who really are so and to those who may presently become so. "The religious sentiments of the Jews were broader, more general, than those of the Greeks, and of Mahomet less than of the religion of Christ. The spirit of prayer that passes through the hymns of Isaiah and Ezekiel is really more than through the Psalms of David" (Jellett, p. 57)."
But, if laborare est orare, then the entire life of this strenuous missionary was a continual prayer that all men might 'know the grace of God in truth' (Col. 1).

As to the value of intercessory prayer there is little difference in theory amongst those who believe in the efficacy of prayer at all. But in practice many Christians fail to imitate the example of Christ and of the Apostolic Church. Nevertheless, the test of the purity of our petitionary prayers is whether they concern intercession. This shows if the individual is concerned about the whole Kingdom of God. Without intercession, prayer becomes egotistic, the view and the heart narrow. When papyrak expansion is the rule, it lacks the heart, and energy. To many is praying, the right hand of the Father when He says: 'I glorified thee on the earth,' etc.

The words of the prayer belong at least to that upper sanctuary: 'They are the concentration of all the heavenly Intercessor, as He bore on earth, as He bears now, and will bear for ever, the sins of His people before the Father, who is both able and willing to supply them' (W. Milligan, The Ascension and Heavenly Priesthood of our Lord, London, 1901, p. 169).

Milligan also gives expression to a needed caution when he reminds us that the intercession of Christ is not to be interpreted as if He were asking aid from an external source (p. 153). If this be borne in mind, the idea of the intercession of Christ may be extended so as to include every way in which He acts for others (cf. Matt. 20:26).

4. The intercession of the Holy Spirit. — 'Advocate' is a title of the Holy Spirit as well as of Christ, and to the Holy Spirit the work of intercession is ascribed. "Advocate," within, and like Him who is our 'Advocate with the Father,' He is 'touched with the feeling of our infirmities. St. Paul assures us that the Spirit also helps our infirmity: to know not how to pray as we ought; but the Spirit itself maketh intercession for us with groanings which cannot be uttered; and He that searcheth the hearts knoweth what the mind of the Spirit is, because He maketh intercession for the saints according to the will of God" (Rom. 8).

The spirit of true prayer is identified with the voice of the Divine Spirit in man. There are times when we cannot express in words, or pray as we ought; but our inarticulate longings for a better life are the Spirit's intercessions on our behalf, unable to God who searches all hearts, and intelligible and acceptable to Him since they are the voice of His Spirit, and it is according to His will that the Spirit should intercede for the members of His Son" (H. R. Swete, The Holy Spirit in the NT, London, 1909, p. 321).

In the verses just quoted (Rom 8:26), the Spirit of God is distinguished from the spirit of man, even when in the mystery of prayer His relations with the human consciousness are most intimate. When the Christian is oppressed with the weight of 'this unintelligible world' (cf. v. 26), when he longs for light to shine on his surroundings man's prayers to God (He 13:19); (3) He secures access for man to God (He 4:13). It is a modern conception of Christ pleading in heaven His Passion, "offering His blood," as an offering for sins or to repeat His sacrifices made once for all, when He offered up Himself. R. F. Westcott shows that the fulfilment of the Levitical type by Christ takes three forms: (1) He intercedes for men as their present representative before God (He 7:25); (2) For those who made Christ's presence on the Father's throne. Meanwhile man on earth in quins with Him enjoy continually through His blood what was before the privilege of one man on one day is the year" (R. F. Westcott, The Epistle to the Hebrews, London, 1905, p. 239).

A. J. Tait discusses the subject fully in The Heavenly Session of our Lord (London, 1912), rightly insisting (p. 15) that "it is as Christ that Christ is also Priest, it is as seated on the Throne that He intercedes." The Session of our Lord signifies the cessation of prayer, our heavenly Father. The use of the intercession of Christ is not to be conceived as a continual process of propitiation. Propitiatory sacrifice and offering are alike over: the intercession of Christ of the presence of Christ on the throne, it is eternal (Tait, p. 151).

Discussion has arisen as to whether or not the intercession of Christ and of the Holy Spirit is understood as mere through words. A. B. Davidson (Handbooks for Bible Classes, 'Hebrews,' Edinburgh, n.d., p. 142, note on He 7:28) takes the negative view; but he makes a suggestion which approximates to the positive view when he refers to the example of Christ (Jn 17): 'The interceded in human speech to God in the days of His flesh, and translated this into the unarticulated word of communion, so far as we can imagine them, we may form some conception of it.' In our Lord's intercesory prayer it is important to note the significance of the simple past tenses which the AV substitutes for the perfect tenses of the AV. Our Lord is already thought of as the right hand of the Father when He says: 'I glorified thee on the earth,' etc.

INTERCESSION (Liturgical).—The custom of offering intercessions at the Eucharist seems to have been universal, at any rate from the middle of the 2nd cent. onwards. It would doubtless be conceivable that the earliest way of carrying out St. Paul's injunction to Timothy `that supplications, prayers, intercessions, thanksgivings (δεικνύω, παρακλητούμενος, ἐπιθυμεῖται, εὐχόμενος) be made for all men' (1 Ti 2:1), whereby the εὐχαίρετα were interpreted as having any reference to the Eucharist or not. We accordingly find that intercessions formed part of the Eucharistic service at least from the time of Justin (c. a.D. 150), and that in the 4th and 5th centuries they were developed into three different forms, of which two still remain in all liturgies.

1. Second and third centuries.—We do not get much information in the subject from the Didache. If the prayers there given are those used for the Eucharist proper, the only approach to an intercession is in the prayer over the 'broken bread' (διακονόν), and in the thanksgiving which follows being prepared in gathering and protection of the Church (§ 91 f.). If, as is suggested in art. Agape, they are the Agape prayers, while those for the Eucharist proper are intercessions, we cannot tell how far the feature of intercession was introduced. Justin Martyr, however, is explicit. In describing the baptismal Eucharist (Apol. i. 65) he says that after the newly-baptized is brought 'to the place where those who are called brethren are assembled,' they offer 'hearty prayers in common (κοινῶς εὐθύς) for themselves and the newly-baptized (illuminated) person and all others in every place.' Then follow the Kiss of Peace and the Offertory, bread and the mixed cup being brought to the president, who 'gives praise and glory . . . and offers thanks at considerable length.' Justin adds that, 'when [the president] has concluded the prayers and thanksgiving, all reply Amen;' and the administration by the deacons follows. So in the description of the Sunday Eucharist (Apol. i. 67) after the lections, at which the 'reader' officiates, the president preaches, and all 'rise together and pray;' then, 'when their prayer is ended,' bread and cup are taken and the president 'in like manner offers prayers and thanksgivings according to his ability,' the people answering 'Amen.' We are not here concerned with the rest of the description.

In view would probably that the 'prayers and thanksgivings' of the president did not include intercessions and this is borne out by the earliest 4th cent. evidence (see below, c. 69). The intercessions would be confined to the 'prayers in common,' at which all the people stood up. What this pruning means is not quite clear, but we may perhaps suppose it signifies that the minister (the deacon!) bids the prayers and that the people answered each petition separately, somewhat after the manner of an extempore or litany, though that, in the written form which afterwards attained, was not yet invented (see below, c. 69). The Brightman remonstrance (JTh 36 xii. 1893-11 332) that Justin's κοινῶς εὐθύς must have been some unconscious form of a litany in order to be σαρκί in all. See also JTh x. (1893-09) 600.

It is noteworthy, as J. Wardenworth points out (Holy Com., Oxford, 1891, p. 64 ff.), that neither in Justin nor in the Didache is there a trace of intercession at the Eucharist for any one outside the Church. For Justin's words 'all others in every place' are shown by the context to mean 'all Christians,' and this custom of confining the liturgical 'offering' to those of the household of faith is found long after in Augustine's rule that it is wrong to offer 'for any unbaptized.'

Thus we gather that both in the 2nd and in the 5th cent. there was some clear limit to the liturgical intercession. On the other hand, St. Paul emphatically orders prayers 'for all men,' including 'kings and all that are in high place'; indeed, he emphasizes prayer for those who are 'in the church,' and that they may 'come to the knowledge of the truth' (1 Ti 2:2). And Clement of Rome in the long prayer at the end of his epistle has somewhat elaborate intercession, which includes 'our rulers and governors upon the earth' (Cor. 60 f.). There is, however, no evidence that this was offered at the Eucharist (for a discussion of the prayer see J. B. Lightfoot, Clement, London, 1890, i. 352 ff.). Tertullian says (Apol. 39) that 'we pray for Emperors, for their ministers, and for those in authority (potestatibus), etc.; and (ad Scip. 2) that 'we sacrifice for the health (salute) of the Emperor, but to Him who is our God and his, but, as God commanded, in pure prayer'—probably an allusion to the Eucharist as opposed to the animal sacrifices of the heathen.

Cyprian speaks of penitents when restored to communion having the privilege of being prayed for by name at the Eucharist (Ep. ix. [xvi.], 2. 'To the clergy'; the true reading seems to be offertor nomine [not nonen] coram]; but this does not greatly alter the sense; if the Eucharist was offered in their name, they must have been named as the object of prayer). In Ep. ix. [xiii.], writing to the Numidian bishops, Cyprian says (§ 2) 'to present their captive brethren in their sacrifices and prayers, and subjoin the names of each of these and of others for whom he asks their intercessions.'

The Eucharistic intercessions in the 3rd cent. included prayers for the faithful departed. These appear first in Africa. Tertullian (de Cor. 3) says: 'We make obligations for the departed.' Cyprian, writing to the Church at Farni (Ep. lv. [i.], 2) says, that in the case of a certain offender, 'no offering is to be made for him, nor any sacrifice be celebrated for his rescue (dissolution). For he does not pray to be named at the altar of God in the prayer of the priest . . . no offering may be made by you for his repentance.' In Africa, the liturgy has been in the church in his name (for the recital of names in Cyprian's time see W. C. Bishop in JTh xiii. 1911-13 353).

We may here anticipate a little, and give testimony of a somewhat later form of the intercession (which must not be on a Sunday) the people's first partake of the mysteries and after the obligation receive the bread of exorcism and sit at an Agape (can. xxxiii.; ed. H. Achelis, TO vi. 4 [Leipzig, 1891], § 369 f.). In pseudo-Pionius's Life of Polycarp (probably of the 4th cent.), we read that the people took Boculus's body to the cemetery at Smyrna, and 'when all was ever they offered bread for Boculus and the rest' (§ 20 [Lightfoot, Ignatius]; London, 1889, ii. 462 f.). Of the other Church Orders, the Testament of our Lord (c. A.D. 350, i. 23, 35), the Arabic Didascalia (c. A.D. 400, § 38), and the Apostolic Constitutions (c. A.D. 375, viii. 15) may be mentioned as including prayers for the departed in their Eucharistic liturgies. For Sarapion and Cyril of Jerusalem see below, 2.

2. Fourth century and later.—From the middle of the 4th cent., at least, the liturgical intercessions began to take written and fixed forms, and were developed in three lines: (a) the diptychs; (b) the Litany, or Ecce, or Synaphe, or [Leonine] Proclamation, and other forms of the 'people's prayers' before the Offertory; (c) the Great Intercession in the middle of the Anaphora. Technical names did
not at first arise, but all three classes of intercession are found in the 4th century.

(a) The diptychs and their predecessors.—In the Testament of our Lord the priest, chief deacon, and readers, at some time not stated, sit in a special place to write down the names of the offerers of the oblations and of those for whom they have offered them, so that, when the holy things are offered by the priest, deacon, and reader, the names of the offerers may name them by way of commemoration, which the reader adds with supploration (c. 19).

In other words, the names of the offerers were recorded, and those for whom the prayers of the congregation were asked, were commemorated at the Eucharist, though the point of the service at which this was done is uncertain (in this manual to commemorate also means 'to say the Litany' (P. 35)). In the Pilgrimage of Silex or Etheria (c. A.D. 380f., though some have suggested a later date) the bishop on certain occasions commemorates the names of persons to be prayed for; but this is not at the Eucharist. In the middle of this century we find a recital of the names of the departed in the Liturgy of Sancip (see below). At the end of the century Jerome says that the names of those who offered for the Church were publicly read by the deacon (in Jerem. ii. 11, in Ezek. vi. 18).

Thus in the second half of the 4th cent. there is a recitation of the names of the departed at the beginning of the century there is an allusion to the custom, at the Council of Elvira, in Spain (can. 28f.); the bishop may not accept the oblation of a sinner, and a denial of the sinner's name is not to be recited at the altar 'cum oblatione,' i.e. as an offerer at the Eucharist. On the other hand, there is no clear evidence of a recital of names in the 4th cent. (p. 348) nor in A.D. 348 nor in the Apostolic Constitutions; and it has been denied that there is any, except in the case of martyrs and deceased bishops, in Augustine (E. Bishop, in Concilia, p. 113 n.; Swatton, Early Hist. of Liturgy, pp. 147, 215; on the other side see W. C. Bishop, in JTSSt xii. 235f.). In view of these facts we cannot affirm that the practice was universal in the 4th cent.

In the 5th cent. the name 'diptychs' came into common use. It is derived from the fact that the names of the living and of the departed respectively were inscribed on two-leaved tablets, 'normally' mentioned in the general inventory of the church, with the consul's portrait and name, distributed on his accession; many of these were transferred to ecclesiastical use (Brightman, Liturgies Eastern and Western, p. 80f.). The reading of the names of the dead became at this time a test of orthodoxy. The letters that passed between Cyril of Alexandria and Athanasius, bishop of Constantinople, early in the 5th cent. describe the controversy as to the insertion of St. Chrysostom's name, some enthusiastically demanding its recital, others as enthusiastically demanding its omission. The letters show that the living and the dead were at that time commemorated in two separate tables, the latter arranged in categories; and that the diptychs contained a list of the bishops of Constantinople from the first. The public recitation was an important and popular part of the service, and the inclusion or omission of a name might lead to a riot or at least to very serious disturbance among the congregation (Bede, De Est., p. 485, n. 7; E. Bishop, p. 102 f.; DODS i. 298).

The diptychs now become universal. We find them inserted in the Arabic translation (date uncertain) of the Testament of our Lord; they were used c. A.D. 500 by the East Syrians, for the Lit. Hom. of Narsai (ed. Comoll, p. 10, 112) attest the recital of the names of both the living and the dead, though the contemporary pseudo-Dionysian Ancyrense mentions only the names of the dead.

Edmund Bishop points out (op. cit. p. 101) that the form tends to be struck into the liturgy of the East and West; and that the recital of the names of the offerers was early abolished in the East, those of the departed being retained, while in the West the former were read and the latter not until a later period. In Gaul also the bishop does not read the names of the dead being recited till the 6th cent.; Innocent I mentions (Ep. to Deincesius, early 6th cent.) the reading of the names of the offerers, but not those who made offerings, and the recitation of names is explicitly mentioned in the oldest Gallican book, the Missale Rickenviaense, thus: 'Post nomina. Auditis nominibus offerentum.' (C. E. Hammond, Lit. Estabd. and Wckt., Oxford, 1878, p. xixii.) A similar phrase is found in many later Gallican books.

The place of the diptychs in the Eastern liturgies varies. In the Byzantine rites (Greek and Armenian), they come during or in connexion with the Great Intercession; and in so the Egyptian (Melita, etc.), the bishop may insert the names of the departed (Apostolike Apanagia of our Lord derived from the Testament), in the West Syrian (Jacobite) rite they came during or before the Kiss of Peace, in connexion with the Offertory, and similarly in the Gallican rite as given by Hammond (p. xxviii); and it is probable that this is the original position. The names were connected with the Offertory, as including those of the church. In the Western and Greek (Nestorian) rite there is, just after the Kiss of Peace and the Creed, a prayer for those who offer. In Narsai and in the Mesopotamian rites the recital is made before or after the Offertory and the Creed. Thus there seems to be good reason for thinking that in the Byzantine and Egyptian rites the diptychs have been moved from the neighbourhood of the Offertory to that of the Great Intercession. On the other hand, in the Syrian and Jacobite rite (A. H. Sayce, an explanation (recitation of names) of the departed comes in the middle of the Great Intercession.

(b) The Litany.—The intercessions before the Offertory took, at least in some places, the form of a written litany not later than the 4th cent., but probably that they were tending in this direction.

The technical name of this form of devotion seem to have been invented later. In Greek-speaking countries it was (and is) usually called the Edeke, which has been interpreted as 'the extended prayer' (Brightman, p. 500), or perhaps simply, as 'the forest prayer' (Lightfoot, Clement, i. 385, note how Clement lays stress on the prayer and supplication being fervent, cieren (Cor. 69), and pr. in Const. vii. 6-10, where the catechumen, the penitent, and the faithful after the dismissal of the others are repeatedly hidden to pray (see also Brightman, loc. cit.). Other names are the Synaxaria, or suffragia 'linked together,' and the Edeke, or 'the liturgy of the dead' (Sabal., 560, 829). In Syriac-speaking countries the litany is called the Kirabite, or 'Proclamation.'

We have two written litanies of the 4th cent., extant, as said before the Offertory in the liturgy, one in the Testament of our Lord and one in the Apost. Const., both being of the same form; and this form has survived in the East with scarcely any alteration to the present day. The deacon asks the prayers of the people for various persons and objects, e.g. 'For the emperor, the emperor's family, the army and the people, for the emperor and for them prudence and the fear of Him.' No response is given in either of these manuals; but probably, as in Silex (above, (a)) and in the later forms, the people answered 'Kyrie eleison' or some such formula. But in Augustine (if, indeed, he refers to a litany; see below) the answer is simply 'Amen'; and in the latter part of the daily litany of the East Syrians the people answer 'Kyrie, Christe, Kyrie eleison, not, as in the former part, 'Kyrie eleison.' (Brightman, p. 265.)

1 See some curious facts bearing on this in E. G. C. F. Alphonsus's Ordinum Romanorum Prinomis, p. 100.
2 In the West Syrian (Jacobite) rite the names are read both before the Kiss of Peace and at the Great Intercession (Brightman, pp. 83, 93).
3 When a memorial is made of persons departed, their names are read at the Great Intercession (Brightman, p. 246 n.).
INTERCESSION (Liturical)

In the Appendix to the Arabic Didascalia, which contains a Church Order based on the Testament of Tertullian and which formed the liturgy, but does not give it in full (c. A.D. 400), the lections read by the deacon follow the Offertory (t), and the deacons then pray for the sick and travellers, for the peace of God and the peace of the Church, for the rich and the poor, for the assembly and the congregation. Then the bishop "makes the liturgy" within the veil (F. X. Funk, Didascalia et Const. Ap., Paderborn, 1905, ii. 132; Brightman, p. 510). The place of the Offertory before the lections was very curious; but this may not be the exact meaning of the writer. He probably intends a litany by his description.

In the Testament and Apost. Const. the suffrages said by the deacon are concluded by an intercessory prayer said by the bishop, the text of the prayer being given in the latter but not in the former, and there was probably an extemporaneous utterance. In the Apost. Const. there are two other diaconal litanies (ii. 57, viii. 33), much shorter than that described above, but both concluded by the bishop. At first, as it would seem, they stood only in the epistle devotions, as in Justin, the older Didascalia (Funk, i. 160), and probably in Apost. Const. ii. 57 (i. p. 160); but in v. 8., as in the Testament, the people read for the suffrages and stood for the concluding prayer.

The further development of the intercession on these lines, by which, and by its conjunction with the Divine Procession, the modern Western litany arose, does not belong to this article; but it is noteworthy that the ancient place of the litany, just before the Offertory and after the lections, is preserved in the English Book of Common Prayer on one occasion only—at the consecration of a bishop. In the Roman Church it was said at the ordination of deacons just after the Epistle and Gradual (Atchley, Ordo Rom. Pr. i. p. 67). It has been doubted if there is other evidence for formal litanies in the 4th century. It seems probable, however, if Silvester was written at the end of that century that at Jerusalem they were then in use, though perhaps not at the Enchant.

The description in Silvester might appeal to a mere recital of names; but the authors can hardly mean that the boys cried "Kyrie eleison" after each name. If we refer to Hesychius, it follows that they were used, as at the present day among all Eastern Christians, at the daily morning and evening services; also at Jerusalem, while the deacon said the evening Litany, the bishop said the morning one.

In some other countries the Eucharistic Intercessions before the Offertory perhaps did not take a litany-form so soon as the 4th century. No litany is given in any Egyptian document of that period; nor, indeed, are any fixed intercessory forms found. Cyril of Jerusalem mentions no intercessions before the Offertory (see below, 3, for his detailed intercession at a later stage). The Council of Laodicea in Phrygia (c. A.D. 268) says that after the dismissal of the catechumens and priests' three prayers for the faithful were said, one in silence and the others aloud, and that at the kiss of Peace was given and the oblation offered (can. 19). This seems to exclude the litany, at any rate at this point in the service. It has been thought that in Augustinian liturgy there was no trace of a litany. His calls, however, the intercession 'common prayer' ('communes orationes'), and the deacon's as 'prayer (or 'voice of the deacon') (Ep. vi. 8. Hen. (ed.) ad episc. Jerusalem). The prayer for the brethren: 'May the Lord have mercy on the elect, and of his mercy...grant...and...May the Lord have mercy on all...' was probably a litany. The prayer 'for the people of God to pray for the unbaptized' ('pro ... baptizandis') (Ep. cxxvii. 2. Hen. (ed.) ad Fisulanus) the people's response 'Alas! ...yes, alas!' (Augustine), and about not offering 'except for the faithful (above, 1) must be interpreted as meaning only that private individuals could not be prayed for by name at the Eucharist unless they were Christians. Augustinus also mentions the prayer after the Eucharistic litanies, but does not give it in full (c. A.D. 400), the lections read by the deacons follow the Offertory (t), and the deacons then pray for the sick and travellers, for the peace of God and the peace of the Church, for the rich and the poor, for the assembly and the congregation.

Then the bishop 'makes the liturgy' within the veil (F. X. Funk, Didascalia et Const. Ap., Paderborn, 1905, ii. 132; Brightman, p. 510). The place of the Offertory before the lections was very curious; but this may not be the exact meaning of the writer. He probably intends a litany by his description.

In the Testament and Apost. Const. the suffrages said by the deacon are concluded by an intercessory prayer said by the bishop, the text of the prayer being given in the latter but not in the former, and there was probably an extemporaneous utterance. In the Apost. Const. there are two other diaconal litanies (ii. 57, viii. 33), much shorter than that described above, but both concluded by the bishop. At first, as it would seem, they stood only in the epistle devotions, as in Justin, the older Didascalia (Funk, i. 160), and probably in Apost. Const. ii. 57 (i. p. 160); but in v. 8., as in the Testament, the people read for the suffrages and stood for the concluding prayer.

The further development of the intercession on these lines, by which, and by its conjunction with the Divine Procession, the modern Western litany arose, does not belong to this article; but it is noteworthy that the ancient place of the litany, just before the Offertory and after the lections, is preserved in the English Book of Common Prayer on one occasion only—at the consecration of a bishop. In the Roman Church it was said at the ordination of deacons just after the Epistle and Gradual (Atchley, Ordo Rom. Pr. i. p. 67). It has been doubted if there is other evidence for formal litanies in the 4th century. It seems probable, however, if Silvester was written at the end of that century that at Jerusalem they were then in use, though perhaps not at the Enchant.

The description in Silvester might appeal to a mere recital of names; but the authors can hardly mean that the boys cried 'Kyrie eleison' after each name. If we refer to Hesychius, it follows that they were used, as at the present day among all Eastern Christians, at the daily morning and evening services; also at Jerusalem, while the deacon said the evening Litany, the bishop said the morning one.

In some other countries the Eucharistic Intercessions before the Offertory perhaps did not take a litany-form so soon as the 4th century. No litany is given in any Egyptian document of that period; nor, indeed, are any fixed intercessory forms found. Cyril of Jerusalem mentions no intercessions before the Offertory (see below, 3, for his detailed intercession at a later stage). The Council of Laodicea in Phrygia (c. A.D. 268) says that after the dismissal of the catechumens and priests' three prayers for the faithful were said, one in silence and the others aloud, and that at the kiss of Peace was given and the oblation offered (can. 19). This seems to exclude the litany, at any rate at this point in the service. It has been thought that in Augustinian liturgy there was no trace of a litany. His calls, however, the intercession 'common prayer' ('communes orationes'), and the deacon's as 'prayer (or 'voice of the deacon') (Ep. vi. 8. Hen. (ed.) ad episc. Jerusalem). The prayer for the brethren: 'May the Lord have mercy on the elect, and of his mercy...grant...and...May the Lord have mercy on all...' was probably a litany. The prayer 'for the people of God to pray for the unbaptized' ('pro ... baptizandis') (Ep. cxxvii. 2. Hen. (ed.) ad Fisulanus) the people's response 'Alas! ...yes, alas!' (Augustine), and about not offering 'except for the faithful (above, 1) must be interpreted as meaning only that private individuals could not be prayed for by name at the Eucharist unless they were Christians. Augustinus also mentions the prayer after the Eucharistic litanies, but does not give it in full (c. A.D. 400), the lections read by the deacons follow the Offertory (t), and the deacons then pray for the sick and travellers, for the peace of God and the peace of the Church, for the rich and the poor, for the assembly and the congregation. Then the bishop 'makes the liturgy' within the veil (F. X. Funk, Didascalia et Const. Ap., Paderborn, 1905, ii. 132; Brightman, p. 510). The place of the Offertory before the lections was very curious; but this may not be the exact meaning of the writer. He probably intends a litany by his description.

In the Testament and Apost. In the Apost. Const. there are two other diaconal litanies (ii. 57, viii. 33), much shorter than that described above, but both concluded by the bishop. At first, as it would seem, they stood only in the epistle devotions, as in Justin, the older Didascalia (Funk, i. 160), and probably in Apost. Const. ii. 57 (i. p. 160); but in v. 8., as in the Testament, the people read for the suffrages and stood for the concluding prayer.

The further development of the intercession on these lines, by which, and by its conjunction with the Divine Procession, the modern Western litany arose, does not belong to this article; but it is noteworthy that the ancient place of the litany, just before the Offertory and after the lections, is preserved in the English Book of Common Prayer on one occasion only—at the consecration of a bishop. In the Roman Church it was said at the ordination of deacons just after the Epistle and Gradual (Atchley, Ordo Rom. Pr. i. p. 67). It has been doubted if there is other evidence for formal litanies in the 4th century. It seems probable, however, if Silvester was written at the end of that century that at Jerusalem they were then in use, though perhaps not at the Enchant.

The description in Silvester might appeal to a mere recital of names; but the authors can hardly mean that the boys cried 'Kyrie eleison' after each name. If we refer to Hesychius, it follows that they were used, as at the present day among all Eastern Christians, at the daily morning and evening services; also at Jerusalem, while the deacon said the evening Litany, the bishop said the morning one.
the Apost. Const., and of Sarapion, and also in Cyril of Jerusalem's description. And this is its
practice in the Byzantine (Greek and Armenian) and West Syrian rites. In the East Syrian rite,
however, it comes between the Commemoration of Redemption and the Epistle, and this is the case
also in the Egyptian rite (Greek, Coptic, Ethiopic) it precedes the Com-
memoration of Redemption; and so in the Abyssinian Anaphora of our Lord (see art. INVOCATION,
Liturgical). In Egypt, for a translation see J. Cooper and A. J. Maclean, Test. of our
Lord, Edinburgh, 1902, p. 245 ff., where there is also a shorter intercession after the Invocation, as
in the Tzetantam from which it is derived also.

In the Roman rite the Great Intercession is divided into two parts, that for the living, with
a commemoration of saints, being said immediately after the Sanctus, and that for the departed, with
an intercession for the faithful dead, following the prayer for Divine intervention Supra quaes
supplices etc. (see art. INVOCATION [Liturgical], § 6).

The Ambrosian liturgy has the same feature. In
the old Coptic rite of the Copts, the Great Interces-
sion comes, with the names of the living and the
dead, before the Kiss of Peace (Duchesne, p. 211).
This custom was re-established by Innocent I. in
A.D. 407 (see Duchesne, loc. cit. 553 ff.; also Ascensio, Ordo Rom. Prim., p. 99).

The main difference between the Great Inter-
cession and the people's prayers at the earlier part of the liturgy, however, is that the former was a prayer
by the priest, the people answering 'Amen' at the
end, while the latter were at least usually re-
sponsorial, the deacon addressing the people and
the people responding at that time, and the people responding to each clause, usually with an
acclamation addressed to God. In the modern
Coptic rite (Brightman, p. 165) the people respond to
Kyrie eleison in the Great Intercession also, and the
deacon interjects some short exhortations.

3. Conclusion.—To sum up the evidence; it
appears that the liturgical intercessions have de-
veloped in three directions, into the diphythics, the
liturgical form of a dialogue, and being said as (in Justin) before the central act; the Great Intercessions growing into a long
prayer of the celebrant; while the diphythics, which
are more in the form of a dialogue, they became in time a mere list of somewhat meaning-
less names, and in most countries have fallen into complete de
complete.

INTERIM.—See Usury.

INTEREST.—See Usury.

INTEREST.—See Usury.
be militant; but Melancthon, who furnished them with an appendix on the papacy, did not hesitate to qualify his subscription to them with the clause:—

"... that we might admit the sacraments, that we might admit the Gospel advertising the people of the common council of Christendom to exercise by human right his present jurisdiction over the bishops who are now or may hereafter be under his authority."

Agreement was reached on the first four subjects of which concerned man's original state, free will, and sin, and even on the doctrine of justification by faith, an inquiring as well as imputed righteousness being affirmed on the strength of Christ's merit. But, when the subjects of the Church, the sacraments, and the papal authority were dealt with, it became clear that the two sides were irreconcilable. To concede the cup to the German Emperor was to concede the rite to Germany, but to touch the fringe of the problem, and to concede primacy to Rome without diminution of its prerogative was merely to postpone a settlement. Moreover, when the results of the discussion were submitted to the pope and to Luther, it was ascertained that each was profoundly dissatisfied. The Emperor made the most he could of the disappointing result; but although the Roman Catholics would not allow themselves to be bound by the later agreements, he imposed these upon the Protestants as the substance of the 'Ratisbon Interim.'

The Interim was, therefore, the recognition of the fact that the Ratisbon Colloquy thus virtually came to nothing, and the antagonistic interests were destined never again to come so near to a settlement of their differences; that, from the day it was sent to the Emperor, for the time being, master of the political situation and gave a new opportunity to his great design. Disrepairing of successful action by the Council, he set himself, as Linday writes (History of the Reformation, i. 389f.),

"to bring about what he conceived to be a reasonable compromise, which might enable Germany to remain within one National Church. He tried at first to induce the separate province of Saxony to unite among themselves; and, when this was found to be hopeless, he, like a second Justinian, resolved to construct a creed and to impose it by force upon all; especially upon the Empire, in their interest and, slight the General Council for which he had been mainly responsible. Not infrequently had he before demanded that the Council should return to German soil (it had been transferred to Bologna), and, when this was refused, he protested against its existence and, like the German Protestants he was coercing, declared that he would not submit to its decrees. He selected three theologians, Michael Hedio, Julius von Pflug, and Agricola—a mediævalist, an Erasmian, and a very conservative Lutheran—

"to construct what was called the Augsburg Interim."

The Interim was enacted on May 15, 1548, and was put in force by the Emperor throughout the Empire, many Lutheran preachers and teachers, e.g., Brenz, Osiander, and Bucer, being sent into exile for refusing to submit. But it was vain to force it on Protestants while Roman Catholics declined it and had to be furnished with a Formula Reformatiae for themselves. Where the preachers were established the churches stood empty. In a short time the Interim was a spent force.

The document is an example of what Thomas Carlyle calls 'concoctive science.'

"Nothing that Charles ever undertook proved such a dismal failure as the Interim, which divided external from annulments from two Confessions. ... It is a hopeless task to construct creeds as a temporary expedient."

(Knight's notes, 'Linday,' i. 308 f.)

Its propositions are cast in terms of studied ambiguity. To reconcile the party of reform it affirmed a doctrine of justification by faith, con-

ceded the marriage of priests and the use of the sacramental cup by the laity, and revised the doctrine of the Mass. But the number of the common council of ceremonies, the worship and invocation of Mary and the saints, the doctrine of transubstantiation, and the sovereign authority of the pope were regularly maintained in favour of Rome.

3 Leipzig Interim. In Saxony the Elector Maurice, assisted by Melancthon, whose heart was set upon the restoration of his beloved University of Wittenberg after the war, and upon the speedy return of peace to his distracted country, imposed upon his subjects the Leipzig Interim, the counterpart of the Augsburg settlement. The policy of Melancthon, for which he was never wholly forgiven by ardent Lutherans, was to yield to Rome and the Emperor well-nigh all that concerned ritual and usage so long as the essentials of the Reformed doctrine, in particular justification by faith, were conserved. Luther had remonstrated again and again with his scholar-colleague on this very point, but Melancthon was content at this time of his life to form a compromise, and he was not to go back on the compromise. He had done his utmost to save the Lutheran Church from falling into the perils of Melanphylsophism, and deplored his attitude. Not till the Formula of Concord took shape in 1577 did the controversy thus originated reach a termination. But the Interim which gave rise to it was blamed by the sudden change of front of the Elector Maurice, and the dramatic success of his bold stroke on behalf of the cause which he had betrayed, and by the establishment of the Peace of Augsburg, which authorized finally the repetition of the Confession of Augsburg.

INTERMEDIATE STATE.—See STATE OF THE DEAD.

INTERNATIONALITY.—The term 'internationality' may be used with reference to both law and morality. This word is of English origin.

In its legal bearing, it can apply only to the relations existing between those States which are within the sphere of international law. This circle of States includes the Christian nations of Europe and their offshoots in America, the Ottoman Empire, and Japan—which had been admitted even before the Russo-Japanese War. China and Persia, too, have now a recognized international status of some kind. How the circle comes to be so restricted may be explained as follows: International law, according to a well-known authority (W. E. Hall, International Law, pt. i. ch. 1.), primarily governs the relations of those States called independent States which voluntarily submit themselves to it, although to a limited extent it may also govern the relations of certain analogous communities. The marks of an independent State are: that the community constituting it is permanently established for a political end; that it possesses a definite territory; and that it is independent of external control. But, as international law is a product of the special civilization of modern Europe, and forms a more or less artificial system, such States only can be presumed to be subject to it who are in a state of that
civilization. States which are outside European civilization must enter in a formal way into the circle of those governed by the law, although an express act of accession is not to be regarded as necessary. When a new State comes into existence, its position is determined by the same considerations; and its origin decides whether it is to belong to the circle or not. Recently, however, the tendency has been for admitted States to conduct their relations with States which are outside the circle, so far as the case permits, in such a manner that, although they do not have themselves set up. And so the spirit of international law is making itself felt all over the world.

There are some principles of State action which are, as it were, over the borders of the law. For example, the State's duty to extradite criminals is said on good authority to be a moral and not a legal one. And such bordering rights and duties are supplemented by the more clearly moral, and by many duties in which the State's relationship is not so clearly extended to other States, but rather to masses of foreigners or to the world in general. Thus the duty of a State to permit intercourse with it to be maintained by foreign nations is said to be a moral duty, as opposed to a legal one. But, whether it is a moral or a legal one, it is only a limitation that the State may take what measures of precaution it considers needful to prevent the right of access and intercourse from being used to its own injury. And in so far as they are in force preventing the access of alien vagabonds, destitute persons, and so forth, the interest and importance of the subject lie primarily in its ethical and practical aspects, and not in its strictly international bearing.

Mention must also be made, more specifically, of uncivilized peoples. Obviously the principles by which a civilized State is to regulate its conduct towards the people of less highly developed races give rise to many burning questions, though in a legal sense such problems might be ruled out of discussion. A civilized country possesses in its army and navy a dangerous power, and the more power a State has actually in force preventing the access of alien vagabonds, destitute persons, and so forth, the interest and importance of the subject lie primarily in its ethical and practical aspects, and not in its strictly international bearing.

This feature appears in its most definite form in later Judaism: the Halakha and Haggadah (see art. Rabbinism). The one practical, the other theoretical, were the laws actually in force preventing the access of alien vagabonds, destitute persons, and so forth, the interest and importance of the subject lie primarily in its ethical and practical aspects, and not in its strictly international bearing.

2. Development of exegetical theory. — The human mind endeavours to reduce such exegetical practice to rules, to a theory. Rabbi Hillel formulated seven rules of exegesis which, according to Rabbi Judah further extended to thirteen, and Rabbi Eliezer to thirty-two, most of them simply showing how to foist an extrinsic sense into the text by arbitrary and artificial devices. They include the principle of the context, the rule of the analogy, the combination of two passages, the parallelism (ab-
Dionysius of Halicarnassus, etc., include in epi
tiques was a subdivision of rhetoric, dealing with
the formation of thought or judgment in word and
sentiment, and the mode of expression in the choice
and combination of words, diction in the gram-
matical sense, and, finally, style in the rhetorical
sense (elocutio; Arist. ἐλ.οκ.).

This was called the analysis of this process of
thought in a single writer; and, just as the terms
epiveias and interpretari were used to denote
translation into another language (transferrre), so
the latter was also applied to the explanation of a
sentence in itself obscure (expositio). The latter
sense was also expressed by διεσφραγιζω, a word
originally connected with the sacred mysteries.

But, besides the Holy Scripture, however, it
was not merely the thoughts of the human writers
that had to be taken into consideration; the idea
of inspiration, along with the notion of an incom-
prehensible and mysterious divine wisdom, was
sought after for a more profound hidden meaning
behind the natural sense. Hence Philo of Alexandria,
the Jewish philosophical theologian, adopted the
allegorical method of the Stoics, and the Christian
theologians followed his example. As he assumed
that the Biblical history was not the real sense
history at all, but was rather eternal, unchanging
truth under a spiritual and intellectual veil, so
they maintained that what was told in the OT about
Joseph, David, or Solomon was in reality the story
of Jesus. The tabernacle and its sacrificial worship
stood for the Christian Church and its liturgies. If the
true meaning of the text was to be discovered, every
detail must be read as implying something else, as
in a pictorial enigma; or, to put it more precisely,
the allegorical interpretation was something of
the sort of a pre-established harmony between
the OT and the NT history. Thus, e.g.,
it is a historical fact that Abraham was ready
to sacrifice Isaac, but the true significance of the
incident is its identification with the sacrifice
of God’s sacrifice in Christ. Typology, no less than
allegory, puts an extrinsic meaning into the text;
but it looks at the relation between the literal and the added
sense in a somewhat different way.

The allegory, after its excessive cultivation by
the Gnostics, found a footing chiefly among the
Platonizing theologians of Alexandria, while
typology, to which Jewish Christians had
responded from the outset, was brought to its highest
development in the so-called School of Antioch (cf. art.
ANTIOCHEN THEOLOGY). There is no good reason
for connecting the difference between the two with
the antagonism between the Alexandrian and the
Pergamene schools of Hellenistic philology. It
was believed by the ancient scholars that the two
methods worked quite well side by side.

Of the Christian theologians, the first to formulate
a theory of interpretation was Origen (Iepi ἐφηγε
κατηρ. iv.); by the hypothesis of the manifold sense
of Scripture (semiotic, psychic, and pneumatic, i.e.
veiled, interpreted, and mystical) he showed that
the several modes of exegesis were all valid in their
own place. This was expanded by the Greek
theologians of the 4th cent. into the theory of the
‘fourfold’ sense of Scripture, which was in turn
adopted in the West by Augustine, and then
fired and brought to maturity by the Scholastics.

Like the ἁγίας of Malato of Sardis, the treatise
Diodorus ‘on the difference between theory and
allegory’ and that of Theodorus ‘on allegory and
history’ are unfortunately lost, and the only extant
Isidore of Pelusium (Ep. iv. 117, 203; FG lxxvii.
1192f., 1230-92) and Niltas (Ep. i. 118-127, ii. 223,
et al. FG lxxvii. 133-137, 320), as also the Instit.
uta regia in secvum legio of Joaq. the Pelasgioticus
(a.d. 351 FG lxxvii. 15-42; also ed. H. Kuhn,
Freiburg, 1880), which enounced from the school
of Paul of Nisibis, makes but a poor substitute for
them. The most valuable contribution, here as
elsewhere, was made by Augustine, who, in his
de Doctima Christiana, with the distinction
between re and signum as his starting-point, arrived
at an almost modern theory of interpretation.

The interpretation of the ancient Church, he confined himself to the task of explain-
ing difficult passages of Scripture.

The other extant manuals of hermeneutics—the
Liber regulamentorum et elucubrationum (ed.
F. C. Birkill, T. 111. 1 (1894); its seven rules were
adopted by Augustine, Isidore, Thomas Aquinas,
et al.), the Formulae spiritualis 4ntellegantiae and the
Instructiones of Eucharius of Lyons (ed. Joseph
CSEL xxxi. (1894), as well as the Burugw eis tην
θεαν τηνος of the monk Adrianos (c. A.D. 500;
FG xvii. 1273-1312)—are simply practical direc-
tions for the allegorical interpretation of the
material and treat of the OT and the NT in exactly
the same way.

Scarcely any further advance was made by the
medieval writers Caesarius (who mentions the triad
with Augustine and Januarius, Isidore, Bede (de Schematia et tropa sacra
scriptura), Notker Balbulus (Notatia de inter-
pretationibus divinarum scripturarum), Hugh of
Victor (Praedicationem cuad Scripturis sanctis
scripsit), or the Scholastics. The allegorical
method dominated all of them, and was systematized as the
fourfold sense of Scripture. In the later period,
however, a new feature, due to the in-
dependent thought of men like Roger Bacon, and
to a revived knowledge of Rabbincal intepretation,
was introduced into the ecclesiastical
exegesis, as seen in Nicolaus of Lyra (1270-1340)
(Prologia in hebraeis bibliae). J. Gerson (1363-
1429) (Proportionis de sensu literalis sanctae
scripturae), and others. Santes Pagninus of Liene (1470-
1541) reinstated the mystical sense in his
Interpretationes (Lyons, 1580), and Sixtus of Siena (1529-90), in his
Biblia sacra (Venice, 1569), collected with
vast erudition all the learning of the past that was
necessary for Biblical exegesis. The new
and decisive impulse, however, came from a
different quarter. Humanism revived the study of
the ancient languages, and the Reformation made that
study subservient to an exegesis that centred in
the plain historical sense. But the real turning-
point was that, whereas the entire ancient and
medieval theology had regarded Scripture as
abstruse, as something that could not be
interpreted only by learned men, with the help of
allegory and under the control of the Church, it
was now asserted, in virtue of the new evangelical
ideas of a revealed God and the assurance of salu-
tion, that Scripture could be understood (its
eratiles) : the devout reader of the Bible, once
he was furnished with the necessary linguistic
aids, would discover the meaning without difficulty.
Hence, in addition to the philologie, the critics
of G. Scioptius (1669), J. Clericus (1736), and
H. Valensiis (Amsterdam, 1740), we have the Claus
scriptura sacra of Matthias Plenius (1751)
and the Philologia sacra of Salomo Glasisna (1625-
30), which are chiefly concerned with the lexical
and grammatical material required to bring out the verbal sense of the text.

It was Biblical exegesis, and not classical philology, as W. Dilthey (see Lit.) also holds, that gave rise to modern hermeneutics. The term 'hermeneutics' (a reminiscence of Plato, Epomnis, 195C 7) first occurs in a work of J. C. Dammhuber (1854), while others still spoke of the art of interpreting (Rudorff, 1747; 'Analekastum,' G. F. Moer, Halle, 1768). Through the renewed study of the ancient treatises ἐρμηνευτικά a great many topics were introduced, which belonged properly to rhetoric, but not, and do not, strictly speaking, fall under hermeneutics in the modern sense. In the 18th cent., hermeneutics was a favourite study; scarcely a single year passed without the issue of a handbook on the subject. The outstanding theologians of all confessions added their quota, and of these J. A. Turretini of Geneva (1728), his friend S. Werenfels of Basel, and the semi-Fiscatist, semi-Wolffian S. J. van der Aa, have been mentioned; the most influential of them all was J. A. Ernesti of Leipzig, whose Institution Interpreti (1762) is distinguished by its philological acuteness and lucidity.

The necessity of a purely historical mode of understanding the text, however, was not yet fully realized. In place of the ecclesiastical authority of the Church, with the dogmatic exegesis, the orthodox theologians of the Reformed Churches, notwithstanding their maxim 'scriptura scriptura interpreter,' substituted the authority of their respective creeds. Thus, for instance, among the standard authorities of Biblical interpretation in philosophy (L. Meyer, Philosophia s. Scriptura interpresa, Amsterdam, 1666; J. Amor, Cartesius Mosaiicorum, Leovardis, 1669), and in the philosophy of the Enlightenment, in their desire to keep their exposition of Scripture within the bounds of reason, did the same thing in their own fashion. Perl the Fiscata, on the other hand, like the medieval mystics, wished to use the Scriptures only for edification, and were not concerned to understand them historically (A. H. Francke, Manuductio ad lectionem Scripturae Sacrae, Halle, 1695, 1790, Prakticon Hermeneuticae, Halle, 1717), while Kant, as the founder of the philosophy of the Enlightenment, in their desire to keep their exposition of Scripture within the bounds of reason, did the same thing in their own fashion.

Apart from all the theologians of this period stands Baruch Spinoza, the Jewish philosopher, who, in his Tractatus theorematis (1670), first ventured to question the fundamental axioms of all previous theology and Biblical exegesis. What Luther had intuitively felt, but had not consistently carried out, viz., that the value of a book was in its being a religious work, was made explicit by Spinoza, who thus prepared the way for a distinctively religious estimate of the content of Scripture, and for a historical interpretation that should do justice to the different world-views of various lines of thought.

The pioneer of a fresh movement was F. D. E. Schleiermacher, in whose hands hermeneutics (cf. 'Hermes' and W. Kritik, mit besonderer Beziehung auf das NT,' Werke, vi. v., ed. F. Lücke, Berlin, 1838), which had hitherto been an aggregation of knowledge and devices needed for exposition, became a philosophy of 'comprehension' ('Philosophie des Versteheums'). While Augustine had analyzed the materials to be understood, Schleiermacher deals with the process of understanding itself, and the relations between difficult and simple passages, and nothing is self-evident. The interpreter's task is to understand the religious personality of the writer as manifested in every single word, to look from the details to the whole, and from the standpoint of the whole to set the details in their true light. Accordingly, hermeneutics is one and the same for all literature, sacred or profane, and yet is a personal character for each individual writer, even within the Bible itself. Schleiermacher's views were maintained by his pupil F. Lücke (Grundrisse der NT Hermeneutik, Göttingen, 1861), and then in Germany for each and every writer, i.e. a doctrinally correct, exegesis (E. W. Hengstenberg); on these, again, J. C. C. Hofmann's biblic-historical hermeneutics (Biblische Hermeneutik, ed. W. Voelck, Nördlingen, 1866) certainly marks a distinct advance. Exegetical theology, however, refusing to be led astray by these ventures, partly, indeed, incidentally, but certainly, for the most part, with them, and moving on various lines—from the dogmatic attitude of H. A. W. Meyer and his continuator B. Weiss of Berlin, through the so-called mediating theology of C. B. Reuss, P. Bloek, and others, to the Tubingen School of F. C. Baur—has, with constantly increasing emphasis on the historical element (H. J. Holzmann, C. Weltsicker, A. Ulich) striven to return to a grammatical and historical comprehension of Scripture. Nevertheless, it has failed to provide its ever-expanding industry with a proportionate increase in the theorectical discourse with which to join the discovery we cannot associate with any human name, and are, as the ancients believed, gifts of the deity.

To these three productive capacities correspond three reproductive, viz., to give them in the reverse order—silent reading, reading aloud, and interpreting. Knowledge of the script, whether the script be ideographic or phonetic, makes reading possible, and reading attains its full realization in reading aloud. Even silent reading involves an inward phonetic element, as, e.g., in accentuation, grouping of words, etc., and the special difference in reading aloud is that the cadence of the spoken language is not indicated in the script; certain marks of punctuation are but a mark-shift. Thus, vespere in the phrase ‘Laudate Domino’ may mean either 'you search,' or 'do you search?' or 'search,' and, moreover, the tone of the indicative form may imply approval or reproach. It is only when the separate signs in writing or speaking, and also the thought as a whole, are fully understood—by interpretation—that reading to oneself or to others is brought to perfection. It is a long step from spelling out a text to reading it, and interpretation is usually treated as something that comes of itself until experience has shown with how many possibilities of misconception it is attended.
When these operations are applied to an entire literary document, they become a process of comprehension and interpretation; i.e., the thought expressed in word and script is, in virtue of the gracelessness of thinking and writing, apprehended and reproduced by another mind (and may then be given once more in speech and writing). Modern psycho-physics has shown by other places in which the problems of the difficulties have to be overcome in the process, even under normal conditions, when the individual possesses the ability to hear, to see, to read, to think, etc.; the process demands an effort of the will, i.e., attention. Where there is congruency of spirit, no doubt, this process often takes place spontaneously, like the sympathetic vibration of strings tuned alike. The task of skillfully understanding the text is a different matter; this process by rules, and is conscious of both its method and its aim, though here also affinity of spirit and sympathetic intuition are necessary. The work of comprehending culmens, i.e., in making a thing comprehensible to others, in 'discovery and transmission of the sense' (G. Heinrich in F.R.G. vii. 7b). The decisive proof of one's having understood is reduced to a point showing, though we must here guard against the intrusion of the practical and hortatory element. The psychological laws of association show—what was already noted in some branches of the knowledge of history and what is required, the exposition of the sense for the expositor, who, in order to grasp the peculiar significance of details, must assign them to their proper place in the whole, and impair them with as many similar facts as possible.

The final test of exposition is in the free reproduction of the thought expressed in the text—in translation, as it were. How verbally what one has heard, but difficult to reproduce it in its true sense; and unless every detail is brought out by an abrupt paraphrase, something will usually be lost. The task of the translator in another language presents special difficulties; a careful translation must not be slavishly literal, nor yet merely a free rendering of the sense, but must be in keeping with as much of the genius of the original as with that of the foreign language.

Exposition, however, is more than a mere reproduction of the thought. It is rightly required of the expositor that he shall be above his text, i.e., that he shall in a sense understand its thought better than the original writer, so that he is in a position to criticize the thought itself as well as its formulation. Just as in the interpretation of a law it is an acknowledged duty of the expositor to elucidate and make good the intention of the lawgiver, so something in certain circumstances actually opposed to the letter of the law, so also in literature: what the author intended to say; how he ought to have said it; whether a particular thought is relevant to his general argument, and whether it is in itself a right thought; whether the form is artistic and the reasoning sound—all these questions must be considered by the expositor, so that the exposition really resolves itself into a criticism. Here again, no doubt, a strong subjective element enters—certainly a source of danger for the expositor, yet an involuntary operation of his personal interest in the work he has to expound. From this point a path leads directly to the homily, which does not, however, belong to the proper function of the expositor, but for which the critical exposition is a preparation. But the homily is not supposed to aim at the exegesis of the true text. There is often a difficulty even in reading an autograph, but it is specially difficult to reconstruct a lost autograph from copies of various grades (so-called Textual Criticism), as due consideration must be given not only to the logical relations of the derivative documents, but also to the psychological possibilities of error. Words and sentences as the vehicles of formulated thought, and as such must be specially careful of in passages where his author has not himself framed the expression of his thought, but has borrowed it, as, e.g., where there is imitation, use of sources, or quotation; here it will often be necessary to note three distinct things—the author's own thought, the original sense of the passage quoted, and the sense in which the author uses it. (c) The materials of thought—terms and ideas. As a means of understanding the matter of the work before him, the expositor must be acquainted with the relevant archaology, history, geography, etc., while, in order to grasp the ideas and judgments, he must make himself master of the period and the age from which the document dates; here he must carefully guard against making unwarranted additions to, and putting false constructions upon, the original. (d) The personality of the writer—it is of the utmost importance that the expositor should by painstaking psychological analysis gain an insight into the personality of his author. A literary work, like a work of art, is, in the highest degree, outward, but the outward manifestation of a creative mind, and even the exegesis of details is conditioned by a knowledge of the personality behind them; it is a difficult, indeed, not a common, task. The fact that the proper understanding of details rests necessarily upon information which the original readers could supply for themselves, but which
could subsequently be provided by exegesis only, justifies the time-honoured practice of prefixing a literary work with an introduction.

(3) Special hermeneutics.—General hermeneutics, when applied to a special field, assumes special hermeneutics, i.e., in the present case, Biblical hermeneutics. It is not thereby implied, however, that the Bible, as a book, is distinct from other books, and, in virtue of such finality, have the ordinary hermeneutical rules; but the particular conditions in which it took shape, its peculiar contents, and our special interest in them naturally require a specific application of the rules in question. To leave the Heb. text of the OT entirely out of account, it is not every classical philologist who can deal critically with the original text of the NT, who can rightly estimate the character of its Greek, or, the exegesis of the Synoptic is what is enacted by a popular literature; while the explanation of the material calls for special knowledge, and the principle of congeniality demands a receptivity for religious thinking, though this, again, must not be used to support the claim for a peculiar theological or 'believing' exegesis.

(4) Individual hermeneutics.—The conception of synoptic harmony, and the unifying role of the Bible is not a literary unity, but an aggregation; and, just as the OT and the NT must, in the present position of exegesis, be dealt with separately, so for every single passage it is necessary to institute an individual hermeneutic, i.e., to determine the modifications undergone by the general rules of hermeneutics in consequence of the peculiar points of the text, which the literary and historical books. We cannot interpret the writings of the Synoptists, Paul, and John all in one and the same way, and it would be a crude error to transfer thoughts from Paul to the sayings of Jesus, or from the Heb. to those of Paul or John; the word γραφή as used by Jesus, Paul, and John has in each case a different meaning. The Apocalypse has a hermeneutic of its own. General hermeneutics must always be additive to the individual hermeneutics, for every single book, or, at least, the exegetical development of the last hundred years.

4. The history of exegesis.—The exegesis of each writer is not without practical importance. As compared with the work of recent years, it proceeded upon entirely different principles and worked with very differing means. It is nevertheless necessary, in the interest of science, to study the earlier work; we must know upon whose shoulders we stand, and what our predecessors had already attained. We distinguish here between (1) the history of exeges or (2) the history of exegesis.

(1) The biography of exeges, part of the general history of Christian literature. It deals with many outstanding figures in the life of the Church, who were engaged in practical work as well as in other kinds of literary work, and only one of whose works is to be considered here. It is also concerned with the work whose names are not forgotten, and whose writings have been lost, but who were of some importance in their own day, and had an influence upon later writers; such names appear in great numbers in Eusebius, Athanasius, and Vegetius, etc., and the most eminent of them all—Christian Duthier—his works are associated. Walther Strabo with his Gnosis Ortiordinae laid a foundation for the succeeding period, in which Peter Lombard, Hugh of St. Caro, Aquinas, Albertus Magnus, and Bonaventura composed their great scholastic commentaries; among these have we the mystics, Rupert of Deutz, Bernard of Clairvaux, and Richard of St. Victor, Hervaeus, etc. The 14th cent. saw the production of the comprehensive Moralitates (Speculum morale, etc.) of Vitalis a
Thus, while J. G. B. Winzer (Paulus ad Galatas Epistola, 1828, p. 125) speaks of some two hundred and fifty interpretations of Gal 2, the later history of exegesis shows us that the variations fall under two main types, and that the older and the newer must lie between these. It would not be right, however, to take account of modern exegesis only; in many cases the various possible theories are found from the very outset, and were related to one another throughout the entire history of exegesis. The Greek exegetes, slight as they may be the value of their theoretical principles for us, had the immense advantage of a living knowledge of Greek (though we must certainly bear in mind the linguistic development that took place between the 1st and the 4th century, and the difference between the popular idiom of the Bible and the literary language of the Fathers), and the advantage also of an accurate knowledge of details. With reference to the fourth point of the Lord's Prayer, we learn more from Origen's statement that certain dogmas did not exist; from all the attempts to explain it; the comparison of the ancient versions gives a synopsis of all possible renderings of the word; Augustine's classification in De Doctr. Christii (I. xxiv. 129) shows the three lines on which all subsequent exegesis of the passage proceeded—the natural, the spiritual, and the sacramental; while the history of exegesis shows that the last two have gradually been given up, so that the first alone is possible to-day. As regards the Lord's Supper, again, a truly historical exegetical study of the narrative shows that it is true that here and there in the older exegesis, as in Chrysostom, Augustine, Luther, and Calvin, we find glimpses into the historical aspect of the institution, and these the modern exegesis must also take into account. (I. Zickert.)

Exegesis is an art; and of exegesis, as of all art, it is true that its highest merit consists, not in originality, but in the sureness with which the right thing is seized upon. It is the subject of the Rigauger, on which Browne had been thought and said before, it still remains both true and new.

INTERPRETATION (Vedie and Avesta).—The history of the exegesis of the Rigveda is not without value in its implications for the interpretation of other sacred texts. This Veda possesses an elaborate commentary by Sāyana, a South-Indian scholar (latter half of 14th cent. A.D.), and in the earliest stage of European study of the Veda it was believed that it would be sufficient to translate the text according to this commentary—a process which is actually exhibited in the version by H. H. Wilson (London, 1856-88). Theories, however, an earlier source in the Nirukta of Yaska, who was a, and not merely diverges from him, but declares that his own predecessors, who worked in this, were in error, both from himself and from each other. In other words, the meaning of a large number of Vedic words and passages was lost in
INTROSPICION—"Introspection," briefly defined, is turning the mind inward upon itself, and is thus practically synonymous with self-consciousness to that extent. It is distinguished from both external and internal events considered as a mere stream of experiences that are not held in the field of self, or as phenomena of self. External events may occur in a series; a stream of facts in a sequential or a causal order, but they are not aware of this fact, nor of themselves as individuals in the problems of Vedic religion. The ideal translation of the Rigveda, which shall take into consideration native tradition and the sciences of comparative philology and comparative religion, the Vedic and classical Indian thought, is still to be done.

The process of development in the exegesis of the Avesta has not been dissimilar. The major portion of the Avesta possesses an elaborate gloss in Pahlavi, with a Sanskrit version by Nerosangh (I. e. A.D. 1900). The first to attempt a translation of the Avesta, Anquetil du Perron (Paris, 1711), was naturally partial to the native Parsi tradition, which was itself based, in his day, on an inadequate knowledge not merely of Avesta, but even of Pahlavi. But Roth on the Vedic side had a counterpart on the Avesta in E. Burnouf (Commentaire sur le Yaga, Paris, 1833-35), and a savage controversy now broke out between the ‘traditionalists’ and the ‘linguists.’ The ‘traditional’ school was represented chiefly by F. Spiegel (Avesta übersetzt, Leipzig, 1832-63, Commentator über das Avesta, do. 1864-68) and F. Justi (Handbuch der Zend sprachen, do. 1854), followed, with considerable support by C. de Harlez (Avesta traduit, Paris, 1851), as well as by L. H. Mills (Gathas, Leipzig, 1854-1913), while the translation of the Avesta by J. Darmesteter (SEE iv. [1895], xxiii. [1883], and especially Le Zend-Avesta, Paris, 1892-63) is little more than a reprint of the Pahlavi version. The ‘linguistic’ school, inspired largely by Roth, found defenders in such scholars as H. Hübschmann, also J. and T. Baumack (Studien auf dem Gebiete des Ghréch, 1, Leipzig, 1868-88). As in Vedic exegesis, however, the best method has been found to be one of combination of ‘traditional’ and ‘linguistic’ methods. The ‘linguist,’ who began as a pronounced antagonist of traditionism (F. Gathas, Leipzig, 1853-60), became almost a traditionalist himself after residence in Bombay (Essays on the Parsees, London, 1867); and C. Bartholomae, who in his Arsische Forschungen (Halle, 1862-67) was pronounced a ‘linguist,’ now gives full credit to the tradition, weighing both sides impartially, and deciding strictly according to the merits in each case (Altertum, Wértler, Strassburg, 1904, from which he has compiled his Gatha's des Avesta, do. 1905, and his paper, F. Wolf, his Avesta... übererset, do. 1916). In the interpretation of the religion of the Avesta it is not impossible that a new stage has been inaugurated by the researches of J. H. Moulton (Early Zoroastrianism, London, 1813), who holds that much that has hitherto been believed to be magian is Magian, and that the Magi were neither Indo-Germanic nor Semitic (see art. MAGI). The ‘higher criticism’ of both Veda and Avesta is as yet only in its initial stages, though a beginning has been made by H. Oldenberg (Die Hymnen des Rigveda, 1, Berlin, 1888) and F. W. Arnold (Ved. Metre, Cambridge, 1895) for the one, and by K. Geldner (Über die Metrik des Avestahavas, 1877) for the other. For an account of the interpretation of the Qur'an, see art. Qu'rân.
INTUITIONALISM.

The term 'intuition' (inters, 'to look upon') symbolizes the conception that one among the sources of knowledge is the direct and immediate apprehension of truth. It opposes the notion that all wisdom is based, whether directly or indirectly, upon intellectual processes and reasoned judgments.

In the 18th and early 19th cent., the adherents of intuitionalism were engaged in combating the view of utilitarianism, which believed that the groundwork of moral judgments consists, in the last analysis, in the estimation of the greatest good to the greatest number. Locke, in his Scepticism, claimed that there is that within us which will, independently of any calculation of facts or expediencies, furnish an inviolable criterion of right and wrong, and good and bad, true and false.

In the present state of the theory of knowledge, the chief contention of intuitionalism is against empiricism, which reduces all rational verities and moral and religious certainties back, not directly to individual and tribal experiences, but to those also of the race which have been harvested throughout a long stretch of biological evolution in the form of instincts and the predisposition of the organism towards right behaviour.

Intuitionalism still tries to make the distinction, as Kant did in The Critique of Pure Reason (1783), that the necessary truths of morals are not caused and produced by experience, but conditioned and called out by it. Apriorism has also antagonized the point of view of empiricism.

Intuitionalism differs from apriorism in emphasizing usually the importance of affection rather than, or in preference to, cognition as being itself a direct source of knowledge. The uniqueness of the two is represented, e.g., in the fondness of apriorism for the doctrine of innate ideas—a point of view with which intuitionalism has but little sympathy. The relationship between apriorism and intuitionalism is, however, sometimes often a friendly one, as, e.g., in the intellectual intuitionalism of Plato and Fichte and in the claim of other students that, while affection is fundamental as a source of knowledge, it is essential that the content of the affective life be cognized and thus organized before it can constitute knowledge of an effective sort or consciousness of a high order.

2. Classification of intuitionalists. It is customary to classify intuitionalists according to the doctrine of innate ideas. One who affirms that conscience and the love of righteousness are the voice of a Supreme Ruler who hovers about and dominates the personal life; the juristic intuitionalist, who proceeds as does the Legislator, who speaks to the heart through Church, creed, or revealed word; (3) the mystical intuitionalists, who have a sense of the rapport between the personal life and the highest personality of the race, as invidiously and the rationalistic, or intellectual, intuitionalists (Chrysostom, Augustine, Cudworth, Clark, Calderwood), who believe that it is in the very nature of reason or the understanding to apprehend truths of moral life and who sometimes appeal by way of analogy to the axioms of mathematics, which they
INTUITIONALISM

claim to be finished truths that could not have come through experience; (6) the emotional or aesthetic intuitionists (Shaftesbury, Hutcheson, Rousseau, Herbart, Kant in his later years, and Schleiermacher), who discover finality in the feeling of the beauty or the restituere of certain kinds of thought and conduct as opposed to other kinds of thought, e.g., has used the analogy of our appreciation of consonant and dissonant notes which are unheard and unexperienced which is not the necessity of training and without the equipment of description or analysis; the Hebrew religionists were pre-dominantly of this type and were fond of appealing to the heart as the source of wisdom; (6) the perceptual intuitionists (Butler, Martineau, W. E. H. Lecky, and Kant during his middle years), who claim that the perception of right and wrong, which is never mistaken by a normal mind, can be compared to the perception of colour by the eye, extension by the hand, or the relationship among discrete objects by the mind.

Such a classification, while convenient, is unsatisfactory. There are those like Locke and Paley, who, while claiming to be consistent empiricists, naively accept as ultimate the intuitions of the law of causality, of God, and of the axioms. Others, of whom Descartes is typical, make a show of expanded intellect and at the same time accept the non-rational intuition as a starting-point and constant criterion of truth (Meditations II., et al.). In like manner, Spinoza, a strict moral logician, adopts a 'third kind of knowledge'—'scientific intuition'—which transcends the knowledge of the qualities and attributes of things given by reason and arrives at the apprehension of the absolute essence of things (Ethics, Edward tr., London, 1894, pt. ii. prop. 49, scholium 2; pt. v. prop. 29, et al.).

We find, too, an unassailable type of intuitionism in Plato, in the Mystics, which might be termed negative intuitionism. The reason is constantly defining truth in order to be able to transcend its formulations. The classifications usually suggested do violence to the facts, since so many of the writers cultivate a sort of eclecticism which would recognize the value of essentially all the sources of wisdom. Martineau, in letter and spirit, is as much an aesthetic as he is a perceptual intuitionist. Price, Reid, Butler, and others of the common man's group, ultimate the 'essential origin of the moral consciousness and at the same time find within it a rational principle of action along the lines of the natural impulses, instincts, and appetites, which, when normal, are useful.

A valuable instance of the refusal to accept a single faculty or function as the source of wisdom is that of Fichte (The Science of Ethics, tr. A. E. Kroker. London and New York, 1857, p. 182): 'Conscience is the immediate consciousness of our determined duty... The consciousness of a determined duty is a determination of a particular action: it is the immediate consciousness of the fact that its realization is the duty of the individual, and the consciousness that this determined action is one's duty is an immediate consciousness as soon as it is determined as such. The consciousness in question has a form. The consciousness of duty is formalized immediately, and this form of consciousness is a mere feeling.'

3. History of theory. — The 19th cent., particularly the first half, has witnessed the falling of intuitionism into disrepute. 'Pure' intuitionism, which assumes a final, though latent, form of ethical and religious consciousness, wanting to be called out by experience, has had almost no advocate. The general trend of thought has been inimical to such a view. Comparative ethics has shown that the moral standards among peoples in different parts of the earth are as diverse as are the social customs by which they are governed (e.g., L. T. Hobhouse, Morals in Evolution, London, 1906; E. Westermarck, MI., do. 1906). Developmental ethics has been able to trace out the laws of the evolution of morality from animal and tribal life to its higher types (H. R. Marshall, Instinct and Reason, New York, 1898; A. Sutherland, The Origin and Growth of the Moral Instinct, London, 1898). The study of instincts and their evolution has seemed to account for the consensual moral and religious life in terms of the content of instinct (T. A. Ribot, The Psychology of the Emotions, London, 1887; W. McDougall, An Introduction to Social Psychology, do. 1908). It has been easy to show how the individual, through his mental processes, is able to account for the 'sanctions' which are supremely authoritative (G. Tarde, Les Lois de l'imitation, Paris, 1895; J. M. Baldwin, Social and Ethical Interpretations, London and New York, 1906). The laws of suggestion have been so well described that one can understand how social judgments can penetrate themselves from generation to generation through 'social heredity,' and how they can become so authoritative that they assume the majesty of a transcendental authority; hence also the sifting of standards in the same tribe or people and the unity, time-wise and space-wise, of the united group that the social judgments (i.e., moral precepts as felt within the individual) seem absolutely universal, necessary, and changeless.

It has been understood, too, how in the lives of growing children and the commanding influence of the group, authority, the precepts, and all the emotional appeals leave their traces or franchises until the mind is clothed finally with a moral 'atmosphere' that is irresistibly impelling. The effect of suggestion on the child who is constantly submerged within the complex is not unlike that of hypnotic suggestion, which can alone and of itself produce effects indistinguishable from the natural impulses. Indeed, the person undergoing the suggestion will not believe his impulses other than of subjective origin, personal and original (cf. M. J. Guyan, Education and Heredity, London, 1891). If one combines in his thought the effect of all these influences upon the personal consciousness, and keeps well in mind the accumulated predispositions towards certain types of thought and sentiment which are passed on from generation to generation, it does not seem unreasonable to share the conviction of those who look upon conscience as a refined hereditary memory. It is not to be wondered at, however, that there should be some indication that the developmental explanation of all things, intuitionism, should have been well nigh swept away.

This irresistible evolutionary habit of thinking has recently found expression in the two widely accepted doctrines of radical empiricism and pragmatism. It would seem to the devotees of these schools that all the old landmarks of thought—a time, space, causality, freedom, God, conscience, the axioms—had been swept from their base and swallowed up in the current of a changing order. To be sure, they re-establish themselves as postulates, perhaps necessary postulates, of thought. But, even so, the doctrine of intuitionism has seemed to suffer a deluge of destruction, for it has been its genius to claim the most shaky thought and wavering faith of mankind upon foundations that are changeless and eternal.

What is there left, then, of intuitionism? Very little, indeed, in its older form, except to those who still cling to a conviction of static as against the plastic and changing universe. It is a remarkable fact, however, that during the last two or three decades the tide has been turning in exactly the opposite direction. However, even modified intuitionism as lively as was the English ethical intuitionism in the days of Hume. It is particularly noticeable among the recent students
of the origin, development, and meaning of religion. It has arisen not in spite of, but by reason of, the evolutionary conception of the world and of morals and religion. The point of departure of the newer intuitionism is the study of instinct and feeling; its method of procedure is the observation of coincidences in their genetic relations, and the analysis of the nature of thinking; and its culmination is the notion that intelligence and reason are not primary and controlling facts of consciousness, but secondary functions of a consciousness which is fundamentally of a pulsing, energetic kind, for the sake of aiding it in making finer and fuller adjustments. It looks as if the life of lower animals and plants is essentially pragmatic or voluntaristic. The first fact of organic life seems to be an impulse towards action, a want, a need. Probably in its early stages it does not cognize, much less rationalize, its behaviour; still it leads a relatively happy and successful career of deliberately intuiting the situations it meets. If the lower and higher kinds, including the mind of man, belong to a single order, if nature makes no leaps, but each "new" thing is but the variation upon and refinement of some old fact or function, then there is no difference in kind between the "native reactions" of simpler organisms and the conscious, and between the instinctive adjustments of animals and the logical judgments of a scientist. Genetic logic is approximating to a satisfactory description of the relationship between the two. The conscious is not uncommon for the students of the mental life to speak of the "intellectual instinct." Genetic psychology is making many advances towards discovering the kinship between the instinctive and the conscious, for the refined intuitions of cultivated minds. They differ essentially in two respects: the ability of higher creatures to "fix" more definitely, through cognition, ideation, and judgment, the old and the new, and the refinement, from within, of the "values" that accompany conduct, which have flowered into the inner life of art, morality, and religion. If the direct source of the wisdom on which these higher aspects of life is the "wisdom" that is bound up in instinct, and if there has been an evolution, not simply of intelligence, but of the mechanism for the immediate, affective interpretation of experience, as well, then we should seem to have a basis for a confidence in the worth of the higher intuitions. And such is the case—so that many students now believe that intuitionism has gained a more substantial foundation in philosophy than it has ever enjoyed. The history of intuitionism has been, indeed, a record of the knocking out, one after another, of false bottoms in the theory of knowledge, each time accompanied, on the one hand, by the fear that this doctrine had permanently collapsed, and, on the other, by the hope that it had established itself more securely upon a permanent basis. When science, during the 15th and 16th centuries, was destroying the conception of an "absence" God who spoke and operated upon the heart, the only alternative seemed to be atheism. Ratiocinative intuitionism has promised to establish intuitionism upon the surer foundation of truth, a copy of which is somehow reflected in the eternal verities of the understanding. Empirical assent to the axioms and conscience is built up out of experience. The impeding consequence seemed to be that the "natural sense" philosophers found in the experiences themselves the saving grace of truth, and thought that they had found a more substantial ground for morals and religion in the common experience of common men. Since latterly the dominant way of thinking about the mental life is in terms of evolutionary psychology, it seemed at first flush as if nothing were left but "pure" experience, or even, in the last analysis, the facts and laws of physics and chemistry and all there set in the reaction already mentioned.

4. Criticism.—At every stage in the ebbs and flows of the doctrine, important considerations have been overlooked. It is as if the mind could entertain but one impelling conception at a time. Atheism was failing to entertain a possibility of the divine immanence; associationism, a sort of "mental chemistry," was uses to the simple truth that the blending or fusion of "pure" experiences would be the summation of nothing which could give anything but one result so a result. This careless thinking has persisted through two centuries, and has begun to yield at last, as the outcome of more highly disciplined judgment and a more careful analysis of the facts of pathology and of physiological and experimental psychology, (e.g., two articles by J. Ward on 'Association and Association' in Mind, new ser., ii. [1893] 997-998, and iii. [1894] 590-592). Association is wholly confined to ideas that, to begin with, are distinct and in the end of the age, is in the mind, what it is true, as Ladd, Baldwin, and other psychologists contend, that perception is found in every sensation. The notion of pure sensation is an artificial abstraction. No less false is the "pure experience" of evolution and the supposition of radical naturalism that consciousness cannot be built up out of "organic memories," the fusion of original elements of "behaviour" that is the end of any ability to evaluate the quality or fitness of its reactions. Perhaps it is always impossible rightly to assume that something can come out of nothing. It may be true that an organism may do something to the environment at the same time that environment is forming consciousness. If so, it is wholly consistent to say that, while consciousness is constructed out of experiences, its relation to experiences is such that they are experiences at all is that they are, at every step in the process, parts of a personal consciousness. Then there would be the elements of moral and religious insight resident somehow within all experiences. The only absurdity of such a belief would arise in the thought of one who holds still to a static and finished, as against a plastic and developing, truth. With this amendment the old question assumes new significance.

5. Modern statement of theory.—The central problem of the newer modified intuitionism, however, is this: are the hereditary moral predispositions harvested up solely out of cognized experiences, or are there other of the higher affirmations of morality and religion than cognition, intellect, and judgment? There are several lines of evidence that the cognitive life is only one of the sources of such wisdom; that intuition is, in a certain sense, sui generis, our present intuitions having arisen not out of cognitions, but out of other intuitions in the past. Intuition is always more or less successful in guiding life into making 'wise' adjustments.

(I) It is clear from embryology, comparative anatomy, and genetic psychology that the intellectual processes have not been conceived in intellectual evolution, but are a later "afterthought" or "by-product," a specialized mode of carrying out that which is fundamental—behaviour. Reason has arisen out of conduct, and exists for the sake of improving it. The original means of interpreting the fitness of conduct and of distinguishing right behaviour from wrong was through the affective life—immediate intuitions, we may say, of its fitness.
(2) There has been a progressive redefinition of the mechanism of attention, which has kept pace with that of cognition. The latter has been refined through the agency of the cerebrum and the logical functions. The former has developed through the instrumentality of the nervous system and its connexions with the special senses, the glands, intestines, and the circulatory system, as the mechanism for the immediate evaluation of higher experiences as wholesome or unwholesome, good or bad, right or wrong. As indicated by the generally accepted James-Lange theory of the emotions, the organic responses often, if not generally, precede the cognitive reactions, and do much towards determining their character. The higher instincts and sentiments are the direct outcome of the redefinition of the coarser, simpler instincts.

(3) There is 'wisdom' in instinct. Judging by the behaviour of animals, this wisdom is more like intuition than cognition. Low organisms will 'learn' how to meet a novel situation successfully: a sea-anemone, e.g., will trigger a few times in the vain attempt of assimilating filter paper saturated with beef-juice, will soon refuse the tempting morsel. Every reaction of every animal seems to carry with it a tang or tone or flavour of its worth or value to the organism, and the ability to direct the discharge of the attention to the direction of the valuation reactions and away from those which bore ill. This evaluating quality of consciousness is itself probably a primary instinct. Should one care to give it a name, it might be designated 'cosmesthesia,' a feeling of relation, a sense of fitness. There is also in instinct the peculiar, unanalysed, of feeling after the consequence has completed itself, a dim awareness of ends about to be attained. It might be useful to give this quality a name, as, for example, 'telesesthesia.' This prophetic quality of instinct has been observed by several recent writers.

G. B. Mayer, e.g., says: 'Instinct and Intelligence.' British Journal of Psychology, vol. iv. (1919) 213: 'But there is even more than this 'feeling of activity' at the very first performance of an instinct. There is another element which, so far as I am aware, has hitherto been completely ignored. To my mind it is certain, that on the occasion of the chick's first peck or of the rabbit's first flight, something, of course very dimly, conscious of the way it is about to act.' G. F. Stout agrees with this view, and adds: 'But the instinctive equipment as a whole is not to be analyzed in any way, to account for the animal's actual behaviour. The animal will be on the alert to respond to a new situation before the developing situation brings it. This will be so because it feels interested in the situation, and especially in the situation as having a future. It will, successively, initiate or watch, or search for coming experiences. It will, so to speak, go to meet them.' (Op. cit. p. 240.)

The developed quality of these two endows experiences of consciousness, cosmesthesia and telesesthesia, which designate the essential nature of the wisdom of instinct, is the highest wisdom of the heart, much of which cannot be cognized.

(4) There is always operative the act of subconscious inaction, which presents to the field of clear consciousness new and unexpected results. These often arise from lines of conveyance among the instincts, impulses, and imperfect ideas, whose combined effect is a 'revelation' to the mind of the object which had been at most but dimly felt. The study of the subconscious, indeed, has robbed intelligences of the credit it had claimed for its control of life, and for our scientific, philosophic, and artistic heritage.

(5) The analysis of the processes involved in invention and discovery shows that something like intuition has played a most important role in this sphere, where formerly the highest efficiency and in complete control (consult Em. Mach, 'The Part Played by Accident in Discovery and Invention,' Popular Scientific Address, Chicago, 1897).

(6) Clear concise judgments are often derived from the summation of experience in experience. There is a vast array of evidence from psychological experimentation pointing in this direction, and much that proves the law conclusively.

A case in point is the work of A. Brückner upon touch sensations (Geschicht für Physikal. und Psychol. der Sinnesorgane, etc. 1901) [532]. Two simultaneous touches, one of which is below the threshold of consciousness, will produce a definite perception if the sum of the two is well over it (see also G. M. Stratton, Experimental Psychology and its Bearing upon Science, London, 1903, ch. iv. i.).

It amounts to a turning-point in the history of thought that the proof is forthcoming that even our clear conscious judgments are based upon evidences that must be felt rather than cognized.

It is not strange that with the many construing lines of evidence, of which the above are only typical, of the fact of an intuitive source of knowledge, there should recently have arisen a pre-audience for believing the values of intuitional as compared with that of intuition (see W. James, Varieties of Religious Experience, London, 1903, ch. on 'Philosophy'; H. Bergson, Creative Evolution, do. 1911). The genetic view of consciousness hinted above would tend to bring the two aspects of life into a satisfactory harmony. It would suggest the validity of the progressively enriching content of the moral, aesthetic, religious life, drawn from the content of all the instincts, independently of conscious description, and mayhap often transcending it. It would assume, too, that reason and judgment are the artificiated organized aspects of the entire stream of processes, not different in kind from the life of instinct and intuition. The intellect, being but a specialized expression of the rest of life in certain of its phases, preserves as its inner life the inner life of the instincts. It does not furnish 'values' to life because of its formulations; on the contrary, its formulations are for the sake of describing, so far as possible, the values that consciousness already apprehends.

It is likely that most of life will remain below and above the reach of accurate description and formulation, and that we will derive much of its truth or values from the recesses of feeling, the darker, blinder strata of character, which are the only places in the world in which we catch reality and directly perceive how events happen and how work is actually done' (James, op. cit. p. 301ff.).

Criticism of Intemalism: James Martineau, Types of Ethical Theory, Oxford, 1896, p. 11; F. Tait, Introduction to Ethics, New York, 1896, pp. xxvii, 37-51; H. K. G. Royce, Sources of Intemalism, in J. Ethics. 1915...

EDWIN D. STARRICK.
investiture were symbolic of the new relation into which vassal and suzerain entered. The vassal did homage and tended the oath of fealty to his liege-lord; therupon the suzerain invested him by delivering over some object which was the symbol of his new rights. The object might be a cloak of earth to symbolize his possession of the land, or a sword at once symbolized his power over those beneath him and the nature of the service he must render to his superior. Investiture, therefore, marked how, whenever a man entered into possession of a fief, he took his place in the feudal system, and enjoyed certain rights on condition of rendering certain service.

1. In the Empire.—The controversy which sprang up on the question between Church and Empire, and which bulk so largely in the medieval period, was the natural result of the increased wealth and social importance of the clergy. So long as the Church was the communion of the faithful and was supported by their gifts, its clergy were elected by those who valued their services, and owned no allegiance save to the flock whom they served. They were chosen in view of their capacity to fulfill spiritual functions, and were invested with spiritual authority over all who owned themselves their subjects. The ring and crozier, which became the symbols of investiture of the clergy, were symbols of spiritual authority. The ring symbolized the marriage between the Churchman and his bishopric or monastery; the crozier stood for the sure of souls which was the assurance that the Churchman had laid his office and from the Church to serve the ends of the Church; he was the Church's 'man.'

But the Church came into possession of great domains of its own land, and, since the Church never died, it rarely surrendered any of this property. As holders of land, Churchmen became at once involved in the responsibilities which, according to the feudal tenure of all land, were attached to such possessions. They became incorporated in the feudal system. Bishops and abbots became secular lords in virtue of their lands. As such, they held their property of secular lords on condition that they fulfilled their duty to their suzerain. They became responsible also for courts of justice among their own vassals, and required the secular service of their vassals. The king of France was vassal to one hundred bishops for his possessions in the Vexin. The bishop-counts held their temporal possessions as the king's men, even as their own vassals in turn held property as their men. The system which gave Churchmen rights and privileges in connection with their temporal possessions, could be safe only if the Churchmen fulfilled in turn the responsibilities to their suzerain which the possessions implied. But, because the Churchmen needed the services of the holder of an ecclesiastical property, he needed also some guarantee that a new holder was competent to fulfill that side of his duty. He interfered, therefore, in the election of bishops, not out of wantonness, but from the natural desire to have a loyal and capable vassal. Hence there was a tendency to construe the ecclesiastical benefice, not as a spiritual office, but as a feudal fief, like every other feudal fief, involved allegiance to a secular lord and conferred on him the right of investiture. The suzerain received homage and oath of fealty from the Churchman, and thereupon invested him with ring and crozier. While the claim was naturally most eagerly pressed in the case of the bishops, the situation was the same, though in an inferior degree, in connexion with the abbots and priors of other monasteries. The vassal became a man, and the Churchman was made a lord. The Churchman became conscious of its spiritual functions, and at once began to claim the power to govern itself with the view of fulfilling its special functions. Laying weight on the title of the Church, as every other feudal fief, insisted that a spiritual function could be conferred only by spiritual men. Churchmen must be chosen by the Church with a view to their religious qualifications, and must be free to act as they thought best. Naturally, the Church failed to recognize that such a change in the status of the clergy within medieval society must bring with it their renunciation of functions which they had hitherto enjoyed. No kingdom dared allow the establishment in its midst of a body of men who enjoyed all the privileges, but

VOL. VII.—26
were not to be relied on to fulfill the duties of their temporal possessions.

The rising claim for autonomy on the part of the Church found expression in the Lateran synod of 1059, which, in its sixth decree, forbade clerics to accept any spiritual office from lay hands; and the claim thus made in Italy was echoed by the synods of Vienne and Touloles the following year. But this was not, however, until Hildebrand became Pope Gregory VII that the battle was joined with increasing consciousness of all that was involved in this issue.

This was partly due to the uncompromising temper of the new pope, but still more was it due to the fact that he knew his own mind, and had no hesitation about uttering it. He saw, with the instinct of a born ruler, that the only justification for a government is that it should take the responsibility and the risks of governing. All Christendom recognized a certain privilege resting in Rome, but practically Christendom was going on in its several provinces as though Rome did not exist. Gregory grasped the reins and actually drove. He saw that the first aim to be sought was the Church's life, and its servants were to be reconstituted in the College of Cardinals, with the sole right to elect a pope; the Church, not the Emperor, must choose its head. That carried with it the free choice of the bishops by their clergy and people, who were to have more in the Church than a bishop's name and title. Any bishop who assumed authority till he had received his pallium, the symbol of his authority, from Rome. He extended the practice of sending legates from Rome to all parts of Christendom to unite with the head that it itself had chosen. His attack on simony and clerical marriage was meant to free the clergy from secular control.

The key to the situation lay in investiture. Who invested a Churchman with his authority? If the secular power, then he was chosen for his fitness to fulfill the duties of that power, and, as its 'man,' must take the duties of his office. If the Church, then his qualification was a religious one, and he must serve religious ends. Accordingly, in the famous Lenten synod of 1075, Gregory denounced the married clergy, excommunicated five of Henry IV's counselors because they had obtained their ecclesiastical offices by simony, and forbade every layman to grant investiture to an ecclesiastical dignity.

It was impossible for the Emperor to submit to this decision simpliciter. So long as Churches held high office in the Empire and large fiefs in every kingdom in Europe, they must hold these under pledge to fulfill the duties to the secular authorities involved in their dignitaries; and the secular authorities must have some guarantees at their election that the beneficiaries were loyal subjects. The revived power of Rome only made more intolerable the position which Gregory claimed. So long as the practical government of the Church was lodged in each provincial Church, the secular ruler could acknowledge beneficiaries who were loyal to a Church over which the provincial government held some control. But, when Rome not only claimed but exercised power over every section of the Church, the claim meant the institution in every kingdom of a body of men, holding large secular authority, who were liable to remain free to follow the dictates of a foreign power. The only terms on which the demands of the Church were admissible in their full scope were that the Churchmen should surrender their territorial power and secular dignities, and, since they claimed to be free to exercise spiritual authority, undertake to fulfill their spiritual duties. In the course of the struggle, many of the high dignitaries of the Church saw that this was involved in Gregory's demand, and were distinctly lukewarm in their support of the pope.

It is unnecessary to follow the course of the struggle between Gregory and the Emperor. It is enough to note that Henry's humiliation at Canossa in 1077 was followed in 1085 by Gregory's death in exile; that the sudden political changes in the situation proved that the question in debate was not ripe for settlement. Church and Empire could alternately win, but no lasting settlement had been arrived at. But the two popes who followed Gregory were content to reiterate the claims of the Church, Victor III at the synod of Benevento in 1087, Urban II at the synod of Molfi in 1089. Paschal II, however, made a significant admission. At Nutri his legates in 1111 met Henry V and offered, if the Emperor would grant freedom of election and the abolition of lay investiture, that Paschal was prepared to surrender all the temporalities which the clergy had received since the time of Charlemagne. But, when Henry arrived at Rome to be crowned on those terms, the bishops present entered a strong protest against what they asserted a surrender. The Church, apart from the pope, was not willing to pay the price of its liberty.

There followed more than ten years of confused debate and struggle. When, in 1124, Henry had taken prisoner after his abhorrent visit to Rome, was cowed or persuaded into a renunciation of the right of investiture. But a Lateran Council (1129) rejected the pope's submission on the grounds that Paschal was not at liberty; and the synod of Vienne, with the consent of the pope, renewed the uncompromising claim of the Church. Many other factors entered to complicate the situation between the Church and the Empire, but the main principle which divided the two powers, in that period of antipopes and rival Emperors, was still the question of investiture.

A compromise between the conflicting principles was reached by Henry V. and Calixtus II. in the Worms Concordat (1122), to which the Church set its seal in the 8th and 9th canons of the Lateran Council (1129). The excommunication of Henry IV's counselors because they had obtained their ecclesiastical offices by simony, and forbad every layman to grant investiture to an ecclesiastical dignity. The Church, however, retained the right of consecrating bishops, the Emperor the right of theinvestiture, though the elected must be accepted by the Emperor, and the Church alone to confer ring and crosier, the emblems of spiritual authority. The worst abuse connected with lay investiture thus fell away at once, for the Emperor was unable to keep a benefice vacant, since he could not prevent the elections from meeting. Otherwise the Concordat is a compromise, and, as such, theoretically open to criticism. The Church safeguarded the claims of the electors to whom belonged the right of declaring who was a fitting person to fill an ecclesiastical office; it preserved the recognition of every church dignitary as the holder of a spiritual office, since he was invested with ring and crosier by the Church. The State retained the power to make its influence felt by the promotion of its nominees, and the Emperor was acknowledged as feudal suzerain over Church fiefs as over all fiefs. Both parties, in fact, owned that the situation needed delicate handling, and could not be determined by either side pressing its claims to their logical issue. The practical utility of the Concordat was proved by the fact that, though it did not and could not prevent encroachments on one side or the other, its principles regulated the tenure of church dignities in the Empire till its dissolution in 1806. Then the situation was wholly changed, since Christendom no longer owned only one Church;
the investigue question passed into the issues of Church and State.

2. In France.—The controversy arose in France, but there its course was different, because the Church was not dealing, as in the Empire, with one central authority. The settlement, for the same reasons, was different. There could not be a Concordat, since any decision at which the king arrived did not bind the great nobles. Hence, for a full statement of the struggle and its settlement, it is necessary to consider all the greater diets. It need only be noted that by the Pragmatic Sanction under Paschal II., the king abandoned all claim to homage from Churchmen and the right of investiture. He demanded, however, an oath of fealty before any beneficiary was allowed to enter on his temporalities, and thus retained suzerainty over church dignities, so far as they were fees. The agreement, though different in its terms, was practically the same as the Worms Concordat. The arrangements made by the feudal lords, varied according to their power and the condition of the Church in their territories. In the South of France, where the clergy were less amenable to the influence of Rome, homage was long exacted from bishops.

In England.—In England the controversy was clearly raised by Archbishop Anselm under Henry I. Anselm's conduct in the matter illustrates vividly the service which the monastic order was destined to render to the long debate. Monks, who held high dignity, were indifferent, to a degree that the more secularized Churchmen were not, to the emoluments and dignities of office and to the assiduous obedience to the Church. Anselm, appealing to the decrees of Gregory and Urban, refused to do homage for his own see on Henry's accession (1100), or to consecrate bishops who had done such homage. The controversy which followed was sharp and decisive, as was to be expected from two men who were intelligent for each other's position. The compromise at which they arrived and which Personal Concordat (1101) was practically the Worms Concordat. It came to be embodied in Magna Charta.

CI. further, art. CONCORDAT.

INVINCIBLE IGNORANCE.—The question as to how far ignorance in its various degrees affects the ministerial character of action calls for consideration in any ethical system which aims at completeness. Only in so far as it is voluntary is an action imputable. In the moral theology of the Roman Catholic Church a broad distinction is drawn between 'invincible' ignorance and 'vincible' ignorance. A man is said to be in a state of invincible ignorance if, when he acts, he is altogether unaware of the law or of the facts of the case, and hence is unamissuous of the obligation of further inquiry on the point. Only, if after reasonable effort he is unable to arrive at certain knowledge. Ignorance is invincible when a man is conscious of his lack of knowledge and of the duty of making some further inquiry, and nevertheless neglects to use his opportunities of so doing. Invincible ignorance presents several varieties. A man may actually foster his own ignorance for fear lest the obligation should become known to him (ignoravit et sibi erecta supina); he may make some efforts, but such as are incommensurate with the gravity of the matter (ignorantia pure vincible). It will be noted that the terms 'invincible' and 'vincible' ignorance have reference to the state of mind in which a particular action (or series of actions) is performed. Invincible ignorance in no way signifies that the mind is incapable of further enlightenment on the subject. New information may transform it into clear knowledge. As regards the degree of certain moral obligations, he may be justified in pleading as an explanation of errors due to want of such knowledge, unless considerable efforts have been made to attain it. All are bound to make every good effort to acquire ignorance in matters affecting the salvation of their own souls or those of others. Yet even here much will depend on the circumstances and capacity of the person concerned. What would be invincible ignorance in the case of the uneducated or of one much occupied with duties from which there was no escape would be vincible ignorance in those less unfavourably situated.

Invincible ignorance excuses from all culpability. An action committed in ignorance of the law prohibiting it, or of the facts of the case, is not a voluntary act. The true character of what he is doing is unknown to the agent by the unanimous teaching of Roman Catholic moralists. This position was, however, traversed by the Reformers. According to Luther, invincible ignorance renders no breaches of human law alone inexcusable; it is otherwise as regards the law of God. For here our ignorance is due to original sin, and is itself sinful. It cannot, therefore, inexcusable, though it be, pleaded in excuse.

'In politics segetis petes case locus invincible ignorantiae ... sed hoc ad aenormes et conscientiae segetis transferendos non est. Summa enim null in secula seculorum originalis: si malum ignorantcum est, sed non adeo excusable est, ait scholasticorum invincibilibus ignorantiam diximus ex causis.' (Comment in LXXV. 15).

Calvin goes so far as to deny the possibility of invincible ignorance as regards the divine law. Our ignorance, he says, is never such as to be invincible ignorance of the law of the super'.

'Certum est ignorantiam zizinnam supinae crassaque negligratitam saccatae comitissim.' (In Lactan., xlii. 47).

Jansenius on this point followed the teaching of Luther (de Stat., not. I., vii. 6); and, even after the condemnation of the five propositions, his doctrine on this subject continued to be upheld by some of his adherents. In 1690, Pope Alexander VIII. authoritatively condemned the proposition: 'Even if there be such a thing as invincible ignorance as to the divine law, and if ignorance of that kind is such as to make the person ignorant of the commandment, it is not thereby excused from formal sin.' (Jansenist doctrine of invincible ignorance is 'commodissima in statu naturalis hominis ex ordine non insensum non occulta.' De Mari, no. 1992).
INVISIBILITY

This thesis had been maintained by the Jansenist theologian Jean Baptiste de la Mothe (A. Vacant, Dict. de théologie, Paris, 1903, i. 759). The doctrine that invincible ignorance from sin is, indeed, of great importance in Roman Catholic theology. It renders the dispensation of grace by the Church, that communion with the See of Peter is by God’s ordinance necessary to salvation, compatible with the confident hope that many who are outside all communion with the Roman Catholic Church will enter heaven. This point was clearly expressed by Pius IX. in his Encyclical to the Bishops of Italy (10th Aug. 1863).

It is known both to ourselves and to you (venerable brethren) that they who are in the state of invincible ignorance regarding our holy religion, and who correctly observe the natural law and its precepts written by God Himself on the hearts of all...can, through the action of God’s light and grace, attain eternal life, since God...will by no means suffer any to perish who has not incurred the guilt of wilful sin (Borromeo, no. 1677).

On the other hand, invincible ignorance regarding those matters which a man is under obligation to know is culpable. Here the want of knowledge is voluntary, either directly, as in ignorantia affectata, or indirectly, as in ignorantia crassa or pure invisibilia. And no man is justified in remaining voluntarily ignorant as to the duties of his state of life or as to the truths essential to his salvation.

On this point Roman Catholic moralists find themselves at issue with the very prevalent opinion that invincible ignorance error can never be a breach of the Moral Law. Where the speculative error relates to vital matters of religion, and is due to negligence, such error, they hold, is gravely culpable. Possibly, invincible ignorance is voluntary, the responsibility for the acts resulting from it remains with the agent. The guilt, however, of sin due to this cause is proportioned, not to the object of the thing done, but to the degree of culpable negligence to which it is due. Moreover, an act done through ignorance, even that ignorance be crassa or supina, is less culpable than an act done with clear knowledge; for it is less fully voluntary, and, therefore, less imputable. As regards the ignorance which is deliberatively fostered, there is a divergence of opinion among moralists.

How far can invincible ignorance extend?

It would seem that there are limits beyond which it is impossible. There are certain broad principles of the natural law which can never be altogether overlooked. No man, e.g., can be invincibly ignorant that he should not do to another what he would be unwilling to have done to himself. As soon, however, as we pass to derivative principles, invincible ignorance appears. To the Christian moralist it is evident that polygamy is contrary to the law of nature. Yet many a pagan and Muhammadan is certainly in invincible ignorance on this matter. Dwelling provides a case in which invincible ignorance prevails in certain more civilized countries. A question of special interest in view of opinions now often maintained is whether it is possible for a man to be invincibly ignorant regarding the existence of God. The general reply of Roman Catholic theologians is that, even if such ignorance be possible, it is altogether abnormal and can last at most but a short time: the evidence of God’s existence both in the created world and in the human conscience are so manifest and clear that it is impossible for ignorance on this point to remain long invincible (J. de Lugo, de Incarn., 1836, i. 331). It is plain that this view is incompatible with the admission that any one can continue long to be a conscientious agnostic. Agnosticism appears as invincible ignorance on a question as to which a man is under the gravest obligation to acquire certain knowledge and thus to which such knowledge is easy of attainment.

G. H. Joyce.

INVISIBILITY. The attribute of invisibility is one which is shared by gods, spirits, demons, the dead and the region of the dead, or the world of the gods, while the power of becoming invisible belongs to those beings as well as to certain mortals. Where invisibility was ascribed to gods or spirits, one simple reason probably was that in the case of most of them, apart from animal-gods or worshipful parts of nature, they were in fact unseen. When man begins to people his world with spirits, which, as many savages believe, swarm everywhere, so that one cannot move without striking against them, their quality of invisibility is obvious. In the case of the dead it was more a power which could be exercised by them or a property hiding them from bodily eyes, since they could be seen in dreams, and it was then considered that the soul of the dreamer had been with the dead. Gods or spirits are not always all-powerful; they have the power of becoming visible or invisible at will, assuming in some instances a bodily form for the former purpose. In the case of favoured mortals, the supposed power of invisibility was ascribed to or claimed by them because it was a desirable thing. What men wish for is often what they think they or others possess. Such a supposed power might easily then be ascribed upon supernatural beings, otherwise material and visible. It should be observed that medicine-men often claim the power of seeing invisible beings whom ordinary mortals cannot see. In some instances it is thought that, formerly, when gods and men dwelt together, the gods were visible; but, now that separation has taken place, they are no longer seen, except on occasion. Hence, among the wise, the reason of the wide-spread belief that it is possible to see a god or spirit, when he takes a visible form.

I. Spirits and gods. The Andamanese believe that their high god Pulaha is now invisible, even when he descends to earth. Ju-ru-win, the evil spirit of the sea, is also invisible, and so, too, are the soul and spirit of the dead. In general the high gods of Australian blacks—Ba-income, Daramutan, etc.—are invisible and unknown, though they may be heard. Coddington writes of the Melanesian nobts that they come invisibly and possess men. Should such spirits chance to be seen, they disappear at once. Someuwa are visible; others are not, being incorporeal. There is a belief that, if the latter could be seen, it would be as a grey indistinct something. In Polynesia, gods generally were invisible, or visible only in so far as they became incarnate (though not always then) or embodied themselves in a visible shape. Such a god as Tauroa (Leeward islands) was invisible to mortals, and he sustained the world by his invisible power. Men lived in an invisible world of spirits and ghosts, which often, however, manifests itself and seems to men. Among the savage races of the Malay peninsula many of the gods (e.g., the creator Pirmam of the
Invisibility

The gods of Babylon constituted a countless multitude of visible and invisible beings, whose bodies were of a more rarefied substance than that of mortals. The hosts of demons were invisible and impalpable, though possessed of some form, and could creep into houses through the narrowest possible openings. In Greece the gods had powers of invisibility or could surround themselves with a mist, but they could also make themselves visible to mortals in various forms. They would often assume their mortal forms, and their orders of beings are darkness or a mist to save them in time of danger. Early Hindu literature shows that the gods were invisible, yet could assume any visible form at will to favour or harm mortals, for they may possess a purely spiritual form. Such deities as Vâtas, the wind, are naturally regarded as invisible; 'his sound is heard, but his form is not seen.' Here also we find the belief in an earlier visible incarnation of the gods, which was broken off because of men's solicitations which wearied the gods. Formerly they drank with men visibly; now they do so unseen. Holy men formerly beheld the gods and the moral belief common to mortals and surrounded men invisibly. In modern Hinduism, while invisibility is an attribute of gods, as well as of most spirits and demons which surround men, the decided anthropomorphic forms attached to them make the belief in their visible appearance possible, as does also the conception of visible incarnations. Thus Radha 'by herself or by the numberless spirits where her ain vision may take shape, but he manifests himself to neatherdants and water-carriers.' The numerous gods of Northern Buddhism are invisible; e.g., they are invited to attend the ceremonies of the Buddhist creed. The earthly Buddhhas have ethereal and invisible counterparts in the formless worlds of meditation. In Shintoism the invisibility of gods is explained by the theory that since the Ance of the Gods they have removed farther from the earth, so that they are now beyond the scope of human vision.

In Celtic belief similar views have been entertained. The divine sid-folk appeared or disappeared at will, often from or into a supernatural mist, and one of them is represented as saying, 'We behold and are not beheld.' They may be seen by favoured persons, but not by others present at the same time, and some of the gods possess objects which cause invisibility—e.g., Manannan's magic cloak. Of him it is said that he makes the gods invisible and immortal.

The narrative of the 'Penz' shows that in early Hebrew belief the idea of a time when God visibly had intercourse with man was prevalent. In later times God is thought to be more withdrawn; and, though certain persons see Him or some part of Him or His glory, or theophanies of the Angel of Jehovah are granted to certain persons, or God is seen in visions, or He appears in symbolic form, e.g., as fire, yet no one can see even in some of these instances that it is dangerous to see Him. Thus 'no man shall see me and live.' The finest expression of God's invisibility is to be found in the words of Job. That God is invisible is also a doctrine of the NT and is finnally stated by St. John. God in Christ—the Incarnation—is the full manifestation of the invisible God. The idea of the danger of seeing God is found in the NT. Angelic orders of beings are darkness or a mist, yet they appear occasionally to men.

The Christian doctrine of God's invisibility is a natural corollary of the doctrine that God is spirit, but it does not mean that God does not manifest Himself as in the Incarnation and already in other ways: 'the invisible things of Him . . . are clearly seen, being understood by the things that are made.' The vision of God in the Beatitudes, in the Mysteries, Neoplatonist and Christian, is entirely a spiritual experience, 'not with the eyes of the body, but of the soul.' But the vision of God is enjoyed by angels, and is the reward of the pure in heart. The invisibility of God is also a doctrine of Islam, and here, too, it is held that such supernatural beings as the jinn can become invisible by a rapid extension or rarefaction of the particles which compose them, and even suddenly appear in the earth or air or through a solid wall. They can manifest themselves in any form which they please.

In folk-belief fairies, elves, dwarfs, etc., are supposed to have the power of invisibility when wishing to be heard of by men, or by means, e.g., of fansocred. They also confer their power on mortals. By a magical salve with which the eyes are anointed it is possible to see invisible elves.

2. Invisibility of the dead.—That the spirits of the dead are invisible is a general belief among most peoples. This is obvious when we consider how, in so many instances, where they are supposed to haunt the grave, or their former abode, or some particular locality, they are not usually seen, but their presence is known or felt, or they make manifest themselves to friends or relations there.

themselves heard, or, as in Manakihiki, where certain plants were protected by ghosts, those spots were known by their repulsive odour. On the other hand, they can be seen by the living—e.g., in dreams or trances—or they manifest themselves as apparitions, more or less visible, or they can be seen or communicated with by wizards. In many instances to see a ghost is dangerous to the percipient, causing death, disease, or madness. A few instances will illustrate the general belief in the invisibility of ghosts.

According to the Arusansans, they are invisible, but may be seen by the pali, i.e., the other souls of dreaming³. The Arusansans believe that the souls of the dead are invisible to human eyes, yet may be seen by dreamers with supernatural power (paka-mata), who can also see the invisible powers of good and evil.² Ghosts among the Melanesians do not appear in visible form, but if anything is seen of them it is as fire or flames.⁴ The Semang think that souls of the dead are visible to each other, but invisible to mortal eyes.⁵ At the Lapak feast of the dead the spirits are present invisibly—an idea which is constantly found in connection with all such feasts among savages and in folk-supernatural.⁶ In Sense, where the soul is thought to have the same form as the body, it is dreaded by those who profess to see it after death.⁷ Ben lived in a world of invisible spirits of the dead surrounding them, but they might be seen at night.⁸

In most cases, as Cooke has said, the dead have joined an indwelling ³¹ h genius. This is illustrated by the story told by Procopius²⁰ of the fishermen on the coast opposite Britania who were scattered by a ghost.²¹ They were taken to ferry across the shades of the dead, who were unseen by them.

3. Invisible of the Other-world.—The Other-world or the world of the gods, being a spiritual or quasi-spatial region, is generally held to be an atmosphere or ordinary circumstances. But like the dead, it may be seen in dreams and visions, the soul being supposed to go thither, or actual visits are paid to it by mortals in visible as well as invisible forms.²² Examples of this belief are found in the Polynesian conception of Ruhutia, the serial paradise, invisible save to spirits;²³ in the idea of the Dale of York Island natives regarding the place of the dead, matona nien, that, if our eyes were turned so that what is inside the head were now outside, we would see that matona nien was very near to us and not far away at all;²⁴ in one of the Celtic conceptions of Erym as a mysterious region on the same plane as this world or entered through a mist—a conception also entertained in later times regarding fairy-land;²⁵ and in the Jewish idea that the righteous dead (Psalm 17:14) will behold the world which is now invisible to them.²⁶ The unseen nature of the Other-world is a fact of ordinary experience, but in all ages and all religions it has been visible to select persons on occasion.

4. Invisibility as a power.—Invisibility, like shape-shifting, is a power frequently claimed by medicine-men, wizards, and witches, or various recipes or charms exist by which other persons can become invisible, or invisibility is produced by some magical means. A native told Count de Cardi that the Ju-Ju priests in W. Africa could make themselves invisible so quickly that one could not tell when they had done so.²⁷ Usually the means employed was a spell or potion. The Sinhalese think that a number of medicines mixed and charmed in a grave less than seven days old and rubbed on the face near the eyes makes the invisible at night.²⁸ The Ju-Ju priests make charms which give the wearer the power of invisibility.²⁹ In Dakhoney the potion used was made from the body of a male infant pounded in a mortar.³⁰ In a Kasaari tale collyrum rubbed on the eyes causes invisibility.³¹ In modern folk-survivals similar powers are ascribed to magic potions. According to a belief current in the S. Spondes, a snake should be killed on 1st May, and its head buried with a bean in its mouth. When the beans are grown, all should be gathered and placed one by one in the mouth of the dead, and invisibility as soon as a bean is found which makes the face invisible, this particular bean should be kept, and, when put in the mouth, will make one invisible.³² Witches in Lepsiu Island take the ear of a black cat, boil it in the milk of a black cow, and wear it on the thumb to produce invisibility.³³ Fern-seed, gathered between 12 and 1 on Midsummer Eve, censsed one to walk invisibly.³⁴ The ancient Druids were believed to possess the power of invisibility, either by means of a spell or by producing a magic mist. This spell, the fauth faethus, was also used by Christian saints, and survives in one form as St. Patrick’s Lorcan, by which he and his companions were made invisible to their enemies, or changed into deer—probably a late corruption of the earlier story through a confusion of the name with faethus, ‘deer’. The charm of invisibility is still remembered in the W. Highlands.³⁵ The gods of Greece frequently made their favourites invisible by means of a magic mist when they were in danger (see above).

A cap of invisibility is often mentioned in Middle時代—German, Greek, Italian, Balorn, etc. This corresponds to the helmet of Grecian which made Achilles invisible, the death mask of Macbeth and Siegfried—a hat or cloak, which is also a common property of demons and devils, especially in connection with the Devilishness of Norse tales, and the cap of Perseus.³⁶ Similar invisibility-producing articles are the ring of Ogden, Petason’s cloak, and many others mentioned in myths and legends. The cap or cloak of invisibility may have taken its origin from the disguise to which clothes lend themselves so easily, or it may have been from the natural desire of becoming invisible as a protection against danger.

In some myths of the Mundane religion, Hibil Izwa descends to the seven lower worlds, and remains invisible in them for long periods, acquiring their mysteries.³⁷ Gnostic descriptions of the descent and return of the heavenly son Christ through the spheres of the archons sometimes tell how he was accomplished invisibly to them, as in the basilidium system, where he probably descended through his mystic name ‘Caelau’. Gnostic souls, ascending through these spheres, were invisible to their rulers, who ordained their baptism or initiation, or because they had mastered the Gnosis and knew the names and nature of the archons.³⁸

The power of becoming invisible is still believed in sporadically, even by educated people, the process suggested being perhaps a kind of dematerialization of the body.³⁹

5. Invisible weapons.—As sickness or death is usually ascribed by savages to invisible demons, so they are often supposed to effect the evil by invisible weapons.⁴⁰

INVOCATION (Liturgical).—Invocation or Epiclesis is the technical term for the prayer for the Holy Spirit in the consecration of the Eucharist, but also, more rarely, at Confirmation.

1. The Eucharistic consecration conceived as an epiclesis.—The universal practice of the Church in early times was to use a prayer for the consecration of the Eucharist, just as it was the practice to use a prayer rather than any declaratory formula for consecrating the Eucharist, or in ordaining, the Church would think it right to do the same. In instituting the Eucharist, our Lord ‘blessed’ or ‘gave thanks’—with what words we do not know—and then gave the sacrament to the disciples with a declaratory formula, ‘This is my body.’ Etc. We remark that the ‘blessing’ (Mt 26:26, Mk 14:22) and ‘giving thanks’ (Mt 26:26, Mk 14:22, Lk 22:19) over the bread and wine are identical. St. Paul, who used the latter phrase in 1 Co 11:24, speaks in 1 Co 10:16 of the cup of blessing which we bless; and this explains why the form used in consecrating the Eucharist in after ages is called the Thanksgiving, although it consisted of prayer as well as giving of thanks (cf. 1 Ti 4:4). ‘Every creature of God is good if it be received with thanksgiving’ (I Tim. 4:4). It must be remembered that the words of God and prayer; here prayer is part of thanksgiving). At a later time the question arose whether Jesus consecrated the Eucharist by this ‘blessing’ (‘giving thanks’). Some, being only by declaring it to be His body and blood. The medieval theologians seem generally to have taken the latter view (and perhaps Tertullian; see below); yet the Council of Trent apparently inclined the other way, for it says (sess. 13, cap. 1):

‘Our Redeemer instituted this wonderful sacrament at the Last Supper, when, after the blessing of the bread and wine, He instituted in express and clear words that He was giving them His own body and His blood.’

We have, however, to consider what the early Christians thought to be the essence of the consecration as celebrated by the Church, whether the invocation of Divine assistance, or the declaratory words, ‘This is my body,’ etc., it will appear from what we have already said that there was probably no difference of opinion in the early Church as to how our Lord consecrated the Eucharist at the Last Supper, yet all agreed that the Church could consecrate only by praying God that what was done then by Jesus might be done at each Christian Eucharist. To use a mere declaratory formula, whether in Holy Communion or at Ordination, would have appeared to the early Church as presumptuous and irreverent.

2. Early period. — No clear deduction can be made from the Didache, as it is uncertain whether the prayers there given were used for consecrating the Eucharist or not (see art. AGAPE). But Justin Martyr uses language which, however interpreted, shows that he conceived the consecration to be effected by a prayer. He says (Apol. i. 69):

‘As Jesus Christ often being incircumcised by the Word of God (for the possible confusion here of the Word and the Spirit, see Eph 4:23) blessed both flesh and blood for our salvation, so we have been taught that οὐκ εἴρημεν ἀλλὰ τὸν πίστεις τῶν εὐαγγελισμένων προφητών... are both the flesh and blood of the true Jesus;’

For our purpose the words left untranslated are the important ones; but they are very obscure. They might be rendered: ‘The flesh which has been given thanks over (unincircumcised, consecrated) by the formula of prayer which comes from Him’ (so Batifol, Études, 2nd ser., p. 140). Similarly the English word of prayer (Acts of the Apostles, London, 1837, p. 334) is ‘by a word of prayer’ (Ibid. vi. 23).

In the Church Orders of the 4th (or possibly 3rd) cent., bishops, priests, and deacons are ordained simply by a single prayer, with laying on of hands.

3. Second period. — When we come to Ireneus, the matter is clear. This Father tells us (Hær. i. xiii. 2) that the Gnostics used an Epiclesis. Mark the Valentinian, who came from Asia to Gaul, used (apparently at his Eucharist) a cup full of wine and water which was at first clear, and continued ‘the word of invocation’ till (by some conjuring trick) it became dark. It was pretended that the son Grace mixed its blood with the wine in answer to the invocation. Here we see a parody of the Christian Eucharist. The Orthodox also used an Epiclesis. In Hær. iv. xviii. 5, Ireneus says:

‘Bread from the earth receiving the Epiastés (the essence of the printed editions seems to be a mistake) literally not in 170 v. 3, 1571 b. 1890, p. 363 of God is no longer common bread, but Eucharist.’ The bread and wine ‘receive the word of God, and the Eucharist becomes the Body of Christ’ (Hær. v. ii. 5).

Here the ‘word of God’ may be personal, as perhaps in Sarapion (see 8, below), but more probably it is impersonal; it may mean the prayer of consecration (see Batifol, Études, 2nd ser., p. 159), or may have exactly the same force as Justin’s phrase ὑπὲρ εὐαγγελισμοῦ. So cautio warns us not to assume that any form of invocation existed in the time of Ireneus; the εὐαγγελισμοῦ τοῦ θεοῦ (JTST 117 n.)

In the Gnostic Acts of Thomas (2nd or 3rd cent.) there is an invocation at the Eucharistic. To Jesus, did we wish to use us partakers of the Eucharist of the holy body and precious blood, let us make bold to approach the Eucharist and to invoke the holy name of our Lord.‘ Rossites, . . . come, perfect companions; come thus that you may know the mysteries of the ancients, discover the secrets, and manifest things not to be spoken, the sacred dove which hath brought forth twin young; open thus secret mother,’ etc. (II. 46, ed. M. Rost, Leipzig, 1868, p. 36 f.; Acta Suec. Ed. vi., Edinburgh, 1879, p. 161; for the Ethiopic Acts, of which the text differs somewhat from the above, see E. A. Budge, Continuations of the Apocryphal Acts, London, 1901, ii. 653.) This invocation is noteworthy as being addressed to our Lord; it shows also some approach to a prayer for the Spirit. The Syriac Acts (given in W. Wright, Apocr. Acts of the Apostles, London, 1857, p. 128) name the Holy Spirit in the invocation explicitly; but they may have been revised by an orthodox hand. The Gnostic Acts of John (ibid. 11, 1938) has no Epiclesis; the work is earlier than the Acts of Thomas.

Tertullian approaches the matter from a somewhat different point of view. He says that the Eucharist is the body and blood of Christ, because our Lord distinctly called it so: ‘Acceptum paschæ et distributionis discipulorum corporis summis, hoc est corpus nosi divinum, id est, corpus corporis’ (cfr. Hær. iv. 49).

This passage does not, indeed, deny that Jesus used words of blessing or thanksgiving to consecrate the Eucharist at the Last Supper, and it need not mean more than that the words ‘This is my body,’ etc., were those by which our Lord made the change in the elements known to the disciples;
but it undoubtedly gives us a fresh point of view. Yet it tells us nothing of the usage of the African Church at that period of time.

The usage of the Cappadocian Church in the 3rd cent. may indirectly be gathered from the words of Firmilian in a letter to Cyprian (Cypr. Ep. lxiiv. (=Ep. lxx in P. P. iv. 428) 10). He says that a prayer, described as apodeixis, had arisen 22 years before, when he had administered the sacraments, and in consecrating the Eucharist had used 'no contemptible invocation.' Firmilian, though a Cappadocian bishop, shows no knowledge of Cyprian's usage being other than the Asiatic in this respect.

The Alexandrian usage of that time was, doubtless, the same, for Origen (c. Cel. viii. 38) speaks of the bread becoming a sacred body through the prayer, and (in Mt 15) of the Eucharist as 'sanctified by means of the Word of God, and prayer.' In his comment on 1 Co 7 he speaks of the Eucharistic Lord 'over which the name of God and Christ and the Holy Ghost has been invoked' (τοις λαλησθαι).

The Pistoia Sophia, an Ophite work of Egyptian origin (early 3rd cent., perhaps based on an earlier work), describes a sort of Eucharist with bread and wine; when the invocation is pronounced, the wine on the right of the oblation (bosis) is changed into water (Srawley, Early Hist. of Liturgy, p. 43).

The Eucharist of Alexandria, a work of the 3rd cent., perhaps testifies to an invocation of the Holy Spirit; but the text is not quite certain (Srawley, p. 88 f.)

These quotations show that an invocation of some sort was in general use in the 2nd and 3rd centuries, but give us, except in the case of the Gnostics, very little idea as to its nature. The Eucharistic worship of that time was probably in the main extemporaneous; the invocatory prayer had no fixed form, and all that we learn is that a calling down of Divine power was, to all appearance, universal.

4. Period of development.—When we come to the 4th and 5th centuries, a great era of liturgical making, we have quite clear evidence as to the Epistles. The Hippolytian Canons, which perhaps represent Egyptian usage in the 3rd cent., though in their present form (allowing for some slight additions of a later period) they are probably of the 4th cent. (Maclean, Aen. Ch. Orders, p. 150 ff.), when describing the Eucharistic service, says, after the communicants have drunk and sung Confessio, 'receives the prayer and finishes the Offering' (προφορὸς, ed. H. Achelis, TU vi. 4, Leipzig, 1891, §§ 21-27). The Egyptian Church Order (early 4th cent.? [Maclean, p. 106 f.]) has almost exactly the same words. But, in addition to descriptions of the service, we now possess five 4th cent. liturgies, of which at least the central part is extant in full; those, namely, of the Ethiopic Church Order, the Latin Verona Fragments of the Didascalics, etc. (these two are almost the same, so far as they run parallel); the Testament of our Lord, and the Apostolic Constitutions, and that of St. Ignatius of Antioch, bishop of Timis in the Nile Delta. In all these, after the Sursam Confession, there is (in some cases with the Sancius added) a Eucharistic Thanksgiving, giving thanks for our redemption, among other blessings, and, in doing so, introducing the narrative of the Last Supper, mentioning more or less fully (see below) our Lord's words and actions at it. Then come the Offering of the elements to God and the fatiguing formula for the Divine intervention (see 3, below). These three elements—narrative with thanksgiving, offering of the elements, and prayer—will be found to be the essence of all later liturgical form, which may have been added.

Before dealing with the comments on the Eucharistic liturgy of this period, it will be convenient to consider the omission of our Lord's words in some authorities. Cyril of Jerusalem (A.D. 348) describes the service at Jerusalem (Cat. Lact. xxiii. 6 f.); he deals fully with the 'prayer' with the grace of the heaven, earth, sea, the angels and archangels, and the sanctus, and yet he says nothing of the commemoration of redemption, or of our Lord's words, 'This is my body,' etc. Immediately after mentioning the Sanctus he says:

'...and we call upon God to send forth His Holy Spirit upon the gifts lying before Him, that He may make the bread the body of Christ and the wine the blood of Christ. For whosoever the Holy Ghost has touched is sanctified and changed.'

This is what strikes him as the essential feature of the service. So in xxxi. 3 he says that the bread of the Eucharist, after the invocation of the Holy Ghost, is no longer mere bread, but the body of Christ. There is no evidence of the existence of the Words of our Lord in the Jerusalem liturgy of the 4th cent., and Cyril's silence is significant as showing at least that they did not appear to him to be the principal act in the service. He comments on them elsewhere (xxii.) as used at the Last Supper, but not in connexion with the liturgy. Brightman, indeed, thinks that there is a liturgical reminiscence about this chapter, just as the phrase 'His undeceived hands and feet' in xx. 3 (On Baptism) has a parallel in the Liturgy of St. James, Greek and Syriac (Lit. East. and West, p. 469, n. 11). However this may be, half of the Words of our Lord—those over the cup—are omitted in the liturgy of the Testament of our Lord, which only alludes to them; and so in the Abyssinian Anaphora of our Lord (below, § 7), which is derived from the Testament, and which, though it has inserted several later features, leaves the narrative of the Last Supper in the same mutilated state. The East Syrian Lit. of the Apostles Adai and Mari, which in its essential features is probably to be dated before A.D. 431 (though it has received additions in course of time,§ 7), omits the words entirely. That this was not regarded, even at the beginning of the 7th cent., as an essential omission, however unusual, appears from the curious opinion of Gregory the Great, that it was the custom of the Apostles to consecrate the sacrificial oblation solely with [the Lord's] prayer' (Ep. ix. 12 [18]).

He contradicts the prayer in use in his day, 'composed by some scholar,' with our Lord's own words:

'Inconvener vetusto esse quasi sacerdotes sanctissimae communionis super oblationem non redderentur. Nam sanctissimae communionis super oblationem non redderunt corpus et sanguinem nostrum dicentes non dicerunt.'

He appointed the Lord's Prayer to be said directly after the Canon for this reason. There is no question whether Gregory's opinion was right or wrong; but the fact that he held it shows that he did not consider the essence of the service to lie in the declaratory formula, but thought of the consecration as being effected by a prayer.

5. Patristic comment in this period.—Turning to the comments of the Fathers of the 4th and 5th centuries, we find the same conception of the consecration by a prayer. Basil (de Spir. Sanct. xxvii. 69) says:

'Wish of the saints has led us in writing the words of invocation at the making (συνέβαλε) of the bread of the Eucharist and the cup of blessing.'

This shows the absence of any fixed form. Athanasius (or pseudo-Athanasius?), in a sermon to the newly-baptized quoted by Eutychius of Constantinople in the 6th cent. (de Pneumate et de sancte Liturgia, 8 [Brightman, p. 633, n. 17; PG lxxvi. 2401, fr. 7]), says:

' '-'...in the synaxis the Holy Spirit is invoked, and the words of the Apostles or of the Church are said, and the prayer is said for the saving of the soul.'

1 Condoni (liturgical Hymns of Narsai, p. 94) more cautiously says that the extra-anaphoral part, in so far as it is represented by Narsai's description of Christ's liturgy, contains before A.D. 400. But we may probably go further than this.
INVOCATION (Liturgal.)

"When the great prayers and holy supplications are pronounced (as above), the Word descends on the bread and the wine (as above) and becomes His Body" (see verses above). (c. Origen, loc. cit., vi.)

Other Alexandrian writers speak of prayer for the Spirit. Thus, Origen, "... when the altar 'we invoke the descent of the Holy Ghost' (Theodore, HE iv. 19)." Optatus, a Nubian bishop (c. A.D. 389) speaks (c. Pervamentum, vi. 1). Augustine (as above) and the Holy Ghost being praying for (postulatur) and descending (cf. c. Donat. vi. 1). Jerome (Ep. cl. i. xxii. or clxvi.) "ad Evangelium" says: "The body and blood of Christ is made ('conficulatus') at the prayer of the priest." Ambrose (de Pide, iv. 10 [125]) speaks of the sacrament which by the mystery of the sacred transfiguration is transfigured into the flesh and blood. Elsewhere, if (as is probable) the de Mysteriis of his authentic work, Ambrose uses words which recall Tertullian: (in the consecration the very words of the Lord, the same words, he says, that were recited by Jesus while he was made by the word of Christ... The Lord Jesus Himself proclaims... This is my body... Before the blessing of the heavenly words another nature is spoken of, after the consecration this word is signified, etc. (de Myst. iv. 32, 34).

In fact, the Eucharistic prayers are both by Ambrose, as we must interpret the letter, in the light of the former, to mean that our Lord's command operates through the prayer of the priest (cf. Justin, above, 2). The de Sacerdotiis, which is almost certainly later than the de Myst. (though written 6), has a similar passage, but in more explicit terms (iv. 5).

Chrysostom's evidence goes both ways. He says that

'the priest stands, not bringing down fire [like Elijah; cf. i. 178], but the Holy Spirit, and prays at length... that the gracing on the same may pass through its ineffable power of all' (de Sacerd. ii. [179]) and that 'the priest stands before the table stretching forth his hands to heaven, calling on the Holy Ghost to come and touch the gifts set forth.' (Hem. de Com. 3).

Yet elsewhere he says:

'nor man who makes the gifts set forth to become the body and blood of Christ... the priest stands filling a part (gnysia,ologie), uttering these words; but the power and grace are of God.' (This is my body) etc. He says (cf. Justin, above, 2).

'The priest... the prayer of the priest, that is to say, the prayer of the priest in the narrative form found in all liturgies are those which consecrate the Eucharist, he does not say: indeed, he would seem rather by implication to deny it. He thinks of our Lord as consecrating the bread and wine at the last Supper by this declaration, or at least as consummating the consecration thereby; but he says that this declaration, once made by Jesus at the Last Supper, consecrates the Eucharist for all time. Putting with this passage those quoted immediately before it, we may take Chrysostom as teaching that every Eucharist is consecrated by the priest praying that our Lord's declaration at the Last Supper may make effectual the particular act on which he and the people are then engaged. There is not in Chrysostom, or in any other ancient writer, any approach to the idea that, if a priest were merely to put the bread and wine the words 'This is my body' and 'This is my blood' with a proper intention, a valid Eucharist would result.

The English text is, in some respects, (c. 1 Pet. iv. 11). PL xvi. 855f., speaks of the 'Word' (Verbum) being added to the bread and wine and of their becoming thereby the body and blood of the Word: 'The translation,' (On the增设), "Spera Corda," and "Thanksgiving mentioned... et inde jam [successit] quae agnatur in prebess sancta... ut consecratio de corpus et sanguis Christi... addo verbum et faciatur sacramentum.' In Semn. 227, Ben. in de Paschae, iv.); he says that the bread and cup are sanctioned 'per verbum Dei' (see p. 227, 17). - Aug. in Trin. iii. 4 [10]. Ben. (A.D. 396), Augustine speaks of the elements being consecrated by the 'mythic prayer,' and only by the invisible operation of the Spirit of God. "This instant the Body being taken in with the teaching of his countrymen Optatus (see above) and Fulgentius (see below), to show that Augustine used an invocation of the Holy Ghost at the Eucharch, and that this was the first passage about 'adding the word: the 'verbum Dei' in the second passage would suit better the Divine command at the Last Supper, and, if so, we have a conception very like that of Chrysostom. It should be added that Swithin thinks that at Hippo there was no invocation of the Holy Ghost in Augustine's time (op. cit. p. 150).

The Cappadocian Fathers of the 4th cent. attest an invocation without stating its exact form. For Basil, see above. His brother Gregory of Nyssa speaks of the Eucharistic bread as sanctified by the Word of God and prays (he interprets this as the 'mythic prayer,' and of the virtue of the consecration by which the change is accomplished (Cat. 37). So Gregory of Nazianzus begs Amphelinus to pray for him in his illness at Constantinople 'to draw down the Word by your word' (Ep. 171). On the usage of the Cappadocian Church in the 4th cent. see below, § 8.

That the Eucharist is consecrated by a prayer is an idea not confined to orthodox circles. Nestorius believed the same thing. In a fragment of his (P. A. Loro, Nestorianus, S. B. 255, p. 241) we read: 'Christ is typified in the Eucharist, being slain with the sword of the priest's prayer.' And we may add the comment of a distinguished writer also the first passage about 'adding the word.' The newly published Liturgische Hymnologie of Nasari gives us the nearest approach that we have in Eastern books so far likely a date (c. A.D. 500) to the doctrine of what has and this by some writers has been called 'the moment of consecration.' After saying that the chosen apostles have not made known to us what our Lord said, when He 'gave thanks and blessed' at the Last Supper, and after describing what is recorded in the Gospels, with a traditional comment of Theodore, Nasari adds that to this effect 'the priest gives thanks before God,' i.e. commemorates the Last Supper; then, after mentioning the Great Intercession which here, in East Syrian fashion, follows, he describes the Epiclesis: 'The priest... summoned the Spirit to come down and dwell in the bread and wine and make them the Body and Blood of King Messiah.' To the spirit be called, that He will also light down upon the assembled congregation, that by His gift it may be worthy to receive the Body and Blood. The Spirit descends upon the bread and wine. The changes of place, and causes the power of His Godhead to dwell in the bread and wine, and completes the mystery of our Lord's communication from the dead. 'The Spirit sends down from the height of the holy place, and at the request of the priest, he be never so great a sinner, and celebrates the Mysteries by the mediation of the priest when he has consecrated... Then the herald of the Church of the diascon in that hour: 'In silence and fear be ye standing: peace be with you. Let all the people be in fear at this moment, in which the adorable Mysteries be accomplished by the descent of the Spirit,' etc. Connolly, p. 16-17. It will be noticed that even here there is no cut-and-dried theory of a 'moment of consecration,' but only a statement that at the Epiclesis the consecration of the Eucharist by the power of the Spirit is completed. A similar proclamation by the diacon is still on some occasions used in this place by the East Syrian.

We may close this review of Pastoral evidence by two quotations from Fathers of the 6th cent., which tend in somewhat different directions. Fulgentius, bishop of Ruspe in North Africa, says (c. A.D. 507):

"The Holy Ghost is asked of the Father for the consecration of the sacrifice, (of Mass.) ii. 7; cf. 10, 12) so the fragment of the same writer c. Pascham, 25, 25.

Cassarius of Aries in A.D. 582 writes:

"When the ceremonies are to be blessed with the heavenly words are placed on the sacred altar, there being consecrated by the invocation of the holy name, the bread and wine is there, but after the words of Christ, the body and blood of Christ." (Herm. de Pide, vi.) Cassarius's thought is, that the ritual run on the same lines as Chrysos- tomos, as described above.

"When the great prayers and holy supplications are pronounced (as above), the Word descends on the bread and the wine (as above) and becomes His body" (see verses above). (c. Origen, loc. cit., vi.)
6. Place of the Invocation.—Taking first the 4th cent. liturgies of the Church Orders and of Sarapion, and the Great Liturgies of the four families, developed by Brightman as Syrian, Egyptian, Persian (i.e. East Syrian or Nestorian), and Byzantine (this includes the Armenian), and omitting the Great Intercession, which varies in province, the Liturgy of ST. IGNATIUS (Liturigical), 2 (g) is, the order of the central part of the service in all (except the Egyptian in one detail) is as follows. After the Sursum Corda (which is prefaced by a benediction, salutation) comes the Eucharistic Thanksgiving, with a reference, in most cases, to the work of creation (cf. Ireneus, Hær. iv. xviii. 4, 6, where emphasis is laid on the oblations being God's creatures), and in all to that of redemption, introducing (except in some 4th cent. forms) the Sanctus in reference to the angelic creation (which seems to be the reason of its occurrence here), and ending, except in the cases mentioned above (§ 4), with the recitation of our Lord's deeds and words at the Last Supper. Then comes the oblation of the elements, which usually takes up the words, 'Thus in remembrance of me,' and gives them and the recital of the act (hence this is often called the Anamnesis); and after it, in close conjunction, comes the Invocation. In this scheme the words of Jesus are introduced in the recital of what happened at the Last Supper as part of the Commemoration of Redemption.

Next let us take the Roman rite. It is not known for certain how the Eucharist was celebrated at Rome before the 9th century. Extemporaneous liturgy may have lingered there much longer than elsewhere, for in early ages it was Jerusalem that ordinarily led the way with regard to liturgical matters, and Rome showed the most conservative spirit. When we first meet with the Roman rite, there are two differences in detail from the scheme given above. (a) A prayer is found in the Eucharistic Thanksgiving before the Commemoration of Redemption, which in its earliest known form (in the De sacramentis, iv. 51. [PL xvi. 463], a North Italian work, probably written at a place where the Roman and Milanesian use were combined, c. A.D. 400; see Duchesne, Uhr, Worship, p. 177) runs as follows:

Make this oblation for us (nothia) established (sacramentum), valid, respectable, acceptable, for it is the pure of the host and blood of Jesus Christ, who, in the day before he suffered, took bread, etc.

This is slightly altered in the present Roman eucharist, where probably goes back, at least in its main features, as far as Gregory the Great (6th cent.), to the following:

Which oblation do thou vouchsafe to make blessed, established, valid, reasonable, acceptable, that it may become for us (nothia) for the body and blood of thy beloved Son our Lord Jesus Christ, who is in the day before he suffered, took bread, etc.

This prayer, the Quae obliviscens, was developed by Cranmer in the First English Prayer-Book (1549), and afterwards in the Scottish Liturgy of 1559, into a more detailed Epiclesis, with an invocation of the Holy Ghost.

(b) After the Commemoration of Redemption and the oblation of the elements comes a prayer for the Divine intervention, as in the other liturgies described above. It is made up of two parts, the Sic et Nunc and the Supplices te. But, instead of asking that the Holy Ghost may come down to the earthy altar, it asks that the elements may be taken up by God's holy angel to the heavenly altar. The two conceptions, though differing in form, are really one, and are both justified by NT usage.

A writer in CQR (xxix. [1890] 370) remarks that 'the same thought is expressed in two forms: we are said to be raised up with Christ and made to sit with him and to be in the heavenly places (Eph. 2:6, 6:5), and on the other hand the Holy Ghost is sent forth into our hearts, for he is in us, and we are strengthened by the Spirit so that Christ does dwell in our hearts (Gal 4:6, 16; Eph. 3:16)."

The earliest form of the prayers Supplices te and Supplices tibi in the De sacramentis (loc. cit.) is, after the narrative of the Last Supper in the liturgy described in that work comes the oblation of the elements, followed by the words:

We ask and pray thee to take up this element and put the same on the hands of thy angels, as thou didst deign to take up the gifts of thy servants, just Abel and the father Abraham and that which Melchizedek the high priest offered to thee.'

The present Roman canon has inverted these clauses, has changed 'angels' into 'angel,' and has made some additions; notably it expresses the purposes of the prayer:

'that all who receive the holy body and blood of thy son may be filled with every heavenly benediction and grace.' For the meaning these passages which in the heavenly altar is first found in Ireneus (Hær. vi. xviii. 6)."

We may next take the Gallican rite. The peculiarity of this rite is that the central parts of the Eucharistic service are the same as in the 'post praeda', as in Roman others it does not; but apparently it is always or almost always asks for the Divine intervention in the mystery (see examples in Scaudamore, Not. Encycl. 398, 394; Duchesne, p. 517 f.; Gurney, Cons. of the Euch., 334 f.) On some days, also the 'Post Sanctus' (a prayer said after the Sanctus and before the Preparation of the Last Supper) contained an invocation, or an anticipation of the invocation (see the 'Post Sanctus' for Easter Even in the Missale Gothicum [Gurney, p. 387]). So in the Mosaetric Missal we find anticipatory invocations, sometimes mentioning the Holy Ghost and sometimes using as well as invocations in the 'Post praeda' (Gurney, pp. 339, 350 ff., 333, 353).

The Egyptian rite is noteworthy in this connexion as having an anticipatory Epiclesis before the Narrative of the Last Supper in addition to the normal one afterwards, though the anticipatory one is not usually very explicit. The words of Sarapion, 'Full is the heaven, full also is the earth of thy excellent glory: Lord of hosts, this sacrifice with thy power and thy participation, are taken up and amplified in the Greek Liturgy of St. Mark (Brightman, p. 152) in the Coptic St. Mark and St. Cyril (p. 170). The latter amplifies the last sentence thus:

'Fill this also thy sacrifice, O Lord, with thy blessing that is from thee, through the descent upon it of thy Holy Ghost, and in blessing bless and in purifying purge these thy precious gifts which have been set before thy face, this bread and this cup.'

The most marked development of this invocation before the Narrative is in a newly- discovered fragment of an Egyptian Anaphora, perhaps of the 6th or 7th century, which has:

'Fill us also with the glory that is from thee, and vouchsafe to send down thy holy ould on these creatures, and make the bread the body of our Lord and Saviour Jesus Christ, and the cup the blood of the New Testament, which is the body of Christ himself, in the right in which He was betrayed (the narrative of the Institution follows ... ye announce my death and confess my resurrection. We also, after thy death, we confess thy resurrection, and pray ...' here the fragment abruptly ends, and all the rest is wanting (p. 353 of the Sixteenth Euch. Congress [1906], London, 1906, p. 582; Cadoux, D.M.C. II. 1924 f.).

There is no reason to suppose that an Anamnesis and Epiclesis did not follow, as in the other Egyptian Anaphoras which have an anticipatory invocation before the Narrative. There is no trace of

1 In some Abyhobinian Anaphoras the Sanctus is thrust in without any connection with the context by Brightman, J.J.40 p. 283. This may show that even later liturgists have found this section.

2 In some Abyhobinian Anaphoras the Sanctus is thrust in without any connection with the context by Brightman, J.J.40 p. 283. This may show that even later liturgi
any such anticipatory Epileisis in the liturgies of the Church Orders, and from the evidence given above it is clear that the invocation in this fragment is a development (for which we can see it in the passage above) and not the survival of an antique feature. The development may have been due to an imitation of the Roman rite. A still more striking instance of an anticipatory Epileisis may be found in the prayer to the Son in the Coptic St. Mark and St. Cyril and in the present Ethiopic Liturgy (Brightman, pp. 148, 204; E. Renandot, Lit. Orient. Coll., Frankfort, 1947, i. 2); this is said when the elements have just been put on the altar, before the lections are read, and is called in the Coptic the 'prayer of (or over) the Prothesis' (see Renandot’s note, p. 135). It runs thus:

'O Master, Lord Jesus Christ, come to this thy body and this thy blood on this amphorion, which we have set on this thy holy table: bless, sanctify, and hallow them, and change them that this bread may become indeed thy holy body, and that which is mixed in this cup indeed thy precious blood; and may they become to us all for participation and healing and salvation of our souls and bodies and spirits.'

On these anticipatory invocations it may be observed that, however puzzling they may be to the more logical Western mind, if the more subtile Eastern mind they would be natural enough. In Divine mysteries there is no such thing as time, just as there is no such thing as space.

7. The Person or Persons addressed in the Invocation. As the most ancient authorities sometimes the Holy Trinity is addressed, sometimes the Son or the Holy Ghost, but more often the Father. Doubtless occasions arise where the Invocation of a Person may mean a prayer for him, or a prayer addressed to him; but an invocation of the Holy Trinity can only mean prayer addressed to the Holy Trinity. In the 2nd Ecumenical Council, for example, the invocation of the Holy Ghost is used in two senses here, the first time as the Divine command ("thy holy word"), and the second time, by a sort of paronomasia, as the Eternal Word. But probably there is merely a confusion of thought, of which we find some instances elsewhere in Early times (e.g., Tertullian, de Adu. Prax. 28, 'hic Spiritus Dei, idem erit Sermo'; cf. also Justin, Apol. i. 33, 66; Hermas, Sim. v. vi. 5 f.; Euseb., Hist. Eccl. ii. 5, iv. 3, 5, and perhaps Aristides, Apol. 15). It may be permissible to conjecture that the reason of this confusion of language, as it is, comes from the fact that all that the Eternal Word does for us is done through the Spirit. He is with us, always even unto the end of the world' (Mt 28:20), but it is through the Comforter that He comes to us (John 16:14). Perhaps, therefore, before the Macedonian controversy in Cyril’s time, it was perhaps the custom sometimes to address the Father, sometimes the Holy Trinity. In the liturgies of the Ethiopic Church Order, the Verona Fragments, the Apostolical Constitutions, and Sarapion, the Father is addressed. But the Oblation and Invocation (such as it is) in the Testament of our Lord are addressed to the Holy Trinity (i. 39):

'We offer this the thanksgiving, the peace of the Eternal Trinity, O Lord Jesus Christ, O Lord the Father . . . O Lord the Holy Ghost; we have brought (this is the best reading) this drink and this food to the blessed, holy of the blessed; cause that they may be to you not for condemnation, etc.'

Just before this our Lord had been addressed:

"Remembering therefore the death and resurrection, we offer thee the bread and the cup, etc., etc.

It was perhaps in view of such a formulation that the Council of Hippo in 399 (can. 21: C. J. Hele, Councils, trans. tr., 1885, i. 383) forbade Encharistic invocations to be addressed to any but the Father:

'In prayer no one shall address the Son instead of the Father, or likewise the Holy Ghost instead of the Son, except at the altar during the prayer shall always be addressed to the Father. No one shall make use of any other invocation of prayer without having first consulted well-instructed brethren.'

If this is aimed at books like the Testament, the language is not unsuitable, for the Prayers in that manuscript are somewhat(Page 2: Continued)

features (as to the Olation and Epileisis) of its prototype; but before the address to the Holy Trinity (which it slightly modifies) it includes an invocation of the universal type, asking for the Holy Ghost, and addressed, as we see from its wording, to the Father, though from what had immediately preceded we should have thought that it was addressed to the Father. It is, in fact, a very clumsy insertion (this Anaphora is given in Cooper-Maclean, Test. of our Lord, p. 245 ff.). In the Great Liturgies the Invocation is addressed to the Father.

4. The object of the Invocation. We may group Invocations in three classes: (a) those which do not explicitly pray for the Holy Ghost; (b) those in which the invocation of the Holy Ghost is asked for, without any explicit mention of a change in the elements; and (c) those (the great majority) in which the mention of the Holy Spirit is asked for, that He may change the elements and make them to be our Lord’s body and blood.

(a) The invocation in Sarapion’s sacramentary (C. A.D. 350) exhibits some confusion between the Word and the Spirit, and prays that the Word may descend, as it were, 'o Lord, who art mine', etc. (see JThKs i. 88 ff., 247 ff.; for an Eng. tr. see J. Wordsworth’s ed., London, 1899). It runs thus:

'O God of truth, let thy holy Word come upon this bread, that the bread may become body of the Word, and upon this cup that the cup may become blood of the Truth, and make all who communicants to receive a medicine of life . . . For we have invoked thee, the Uncreated, in the [the] Holy Spirit.

(b) That it is possible to use it in two senses here, the first time as the Divine command ("thy holy word"), and the second time, by a sort of paronomasia, as the Eternal Word. But probably there is merely a confusion of thought, of which we find some instances elsewhere in Early times (e.g., Tertullian, de Adu. Prax. 28, 'hic Spiritus Dei, idem erit Sermo'; cf. also Justin, Apol. i. 33, 66; Hermas, Sim. v. vi. 5 f.; Euseb., Hist. Eccl. ii. 5, iv. 3, 5, and perhaps Aristides, Apol. 15). It may be permissible to conjecture that the reason of this confusion of language, as it is, comes from the fact that all that the Eternal Word does for us is done through the Spirit. He is with us, always even unto the end of the world’ (Mt 28:20), but it is through the Comforter that He comes to us (John 16:14). Perhaps, therefore, before the Macedonian controversy in Cyril’s time, it was perhaps the custom sometimes to address the Father, sometimes the Holy Trinity. In the liturgies of the Ethiopic Church Order, the Verona Fragments, the Apostolical Constitutions, and Sarapion, the Father is addressed. But the Oblation and Invocation (such as it is) in the Testament of our Lord are addressed to the Holy Trinity (i. 39):

'We offer this the thanksgiving, the peace of the Eternal Trinity, O Lord Jesus Christ, O Lord the Father . . . O Lord the Holy Ghost; we have brought (this is the best reading) this drink and this food to the blessed, holy of the blessed; cause that they may be to you not for condemnation, etc.'

Just before this our Lord had been addressed:

"Remembering therefore the death and resurrection, we offer thee the bread and the cup, etc., etc.

It was perhaps in view of such a formulation that the Council of Hippo in 399 (can. 21: C. J. Hele, Councils, trans. tr., 1885, i. 383) forbade Encharistic invocations to be addressed to any but the Father:

'In prayer no one shall address the Son instead of the Father, or likewise the Holy Ghost instead of the Son, except at the altar during the prayer shall always be addressed to the Father. No one shall make use of any other invocation of prayer without having first consulted well-instructed brethren.'

If this is aimed at books like the Testament, the language is not unsuitable, for the Prayers in that manuscript are somewhat(page 2: Continued)
elements may be taken up by the heavenly altar, as has already been described (above, 6).

(b) The implicit form is that found in the Ethiopic Church Order (Briand, § 83, 89) and the Verona Fragments (ed. E. Hauler, Leipzig, 1900, p. 197):

"... sent thy holy spirit on the oblation of this Church; give it together with all them that partake [for] sanctification and (from Fray, before all saints that partake) for fulfilling with the Holy Ghost, etc."

The liturgy used by St. Chrysostom at Antioch was not entirely similar in this respect (see the first two quotations from his writings given above, 5). The Testament of Our Lord is even less explicit in its invocation; the Holy Ghost is not directly asked for, though He is named in the address to the Holy Trinity, and only the blessing to the communicants is explicitly mentioned (above, 7).

The Nestorian or East Syrian Lit. of Adai and Mari (above, 4) has an invocation of this implicit form, though it has in addition a prayer for the blessing and hallowing of the oblation:

"May the Holy Spirit, O my Lord, come and rest upon this sacrifice, and may it bless and hallow it, and may it be to us, O my Lord, for pardon, etc."

(c) The explicit form is found already in the 4th cent.; Cyril of Jerusalem has it (above, 4), as also has the Patriarchal Constitutions (vii. 129).

"We implore thee... send down upon this sacrifice the Holy Spirit... that He may show (λύσσεται) this bread as the body of the Lord, and this cup as the blood of the Christ, that they who partake thereof may be strengthened in godliness, etc."

Similar explicit invocations are found in the Abyssinian Anaphora of Our Lord (above, 7), in the Egyptian Anaphora described in the Sacrae Eiae. Com., § 69 (Brillinger, p. 493), and in all the Great Liturgies (except Adai and Mari) if they have an express invocation of the Holy Ghost at all. Sarapion also has an explicit invocation, though it does not invoke the Holy Ghost.

It seems clear from the evidence here detailed that the implicit type of invocation is somewhat older than the explicit; and, indeed, it would be almost impossible for the former to be evolved out of the latter.

9. Interpretation of the evidence. - If we approach the evidence without any theory as to what are the words or the moment of the Eucharistic consecration—and to deal with all the details in their Eucharistic worship, the general scheme of the service was one and the same throughout Christian antiquity. The Eucharist, at least from the 2nd cent., was consecrated by a prayer, whether the prayer asked for the Holy Ghost, or for the Word, or for neither explicitly. But how are we to regard the invocation of the Holy Ghost? It would appear that before the rise of the Macedonian controversy about the Holy Spirit, the Third Person was not even in the East always mentioned in the Eucharistic Epiclesis. Indeed (now that the Pfaffian fragments of Lorenz have been dismissed as modern forgeries [Harnack, Z. v. 2]), there is no certain evidence; the Holy Spirit being mentioned in the invocations before the 4th cent.; the evidence is only consequent, and E. Bishop (App. to Connolly's Lit. Holy Euchar., p. 365) treats the kind of Epiclesis which became universal in the East and common in the West (see the Gallican and African evidence, above, 5, 6) as an invention of the 4th cent. In the case of the consecration, that is, in the fact that, in combating the Pneumatomachia, the Ortho-

1 An attractive theory identifies the angel with the Holy Spirit (see de Puniect, op. cit. p. 399); but the de Sacramentis of Credula (ed. V. Ant. 3, p. 307) is inconsistent with the Pauline invocations of the Holy Spirit, which are still more common.

2 Cf. Basil's use of ἁρπάζω, above, 5. For other parallels see Siews, p. 35 s.

did not appeal to the work of the Holy Ghost in consecrating the Eucharist, while they did appeal to His work in baptism. But the argument from silence here, as so often, is precarious; for at the very time when the controversy arose, and when it is said that this silence shows that they were not in the habit of using an Epiclesis of the Holy Ghost at the Eucharist, we find Cyril of Jerusalem (A.D. 348) and the liturgies of the Ethiopic Church Order and of the Verona Fragments (which, or some common origin, must almost certainly be dated about them) attesting its use, and (what is important) betraying absolutely no idea that it was a novelty. It will be remembered that Cyril and Sarapion were contemporaneous. Is it possible to explain the extraordinarily widespread—almost universal—use of the custom from that time forward, without a protest from any one, in most diverse countries, if it were an invention of that period? Is it not much more probable that the prayer for the Holy Ghost goes back to a much more remote time, although it was not the only form in use? It would seem that in this matter, as in others, the rise of heresy had indirectly a beneficial result; it forced the Church to think more clearly about the work of the Third Person.

In the invocation of the Holy Ghost the Church is transplanting into Christian experience the experience of the ancient Christians, after various trials, showing what were the forms most suitable for liturgical use.

Again, if we start with some pre-conceived theory, there seems to be no reason why the invocation should always be in the same place, or why there should not be more than one invocation in the same service. The Egyptian rite has a sort of invocation before the Narrative of the Last Supper in the preliminary service, and a fuller one after the Narrative (see above, 6). The Roman rite has the same feature. But there is no reason for denying that both prayers are, in their own way, invocations. No doubt, if we start with a theory that the consecration takes place at a particular moment, as when it is said that at the word 'mem,' in the phrase 'Hoc est corpus meum,' the bread is transubstantiated,1 then we shall be obliged by the theory to hold that the Supra quae and the Superius et in the Roman rite are merely periphrasis after we have made our theories a fatal mistake—we shall be impressed by the fact that, however much different ages and different countries may have used different details in their Eucharistic worship, the general scheme of the service was one and the same throughout Christian antiquity. The Eucharist, at least from the 2nd cent., was consecrated by a prayer, whether the prayer asked for the Holy Ghost, or for the Word, or for neither explicitly. But how are we to regard the invocation of the Holy Ghost? It would appear that before the rise of the Macedonian controversy about the Holy Spirit, the Third Person was not even in the East always mentioned in the Eucharistic Epiclesis. Indeed (now that the Pfaffian fragments of Lorenz have been dismissed as modern forgeries [Harnack, Z. v. 2]), there is no certain evidence; the Holy Spirit being mentioned in the invocations before the 4th cent.; the evidence is only consequent, and E. Bishop (App. to Connolly's Lit. Holy Euchar., p. 365) treats the kind of Epiclesis which became universal in the East and common in the West (see the Gallican and African evidence, above, 5, 6) as an invention of the 4th cent. In the case of the consecration, that is, in the fact that, in combating the Pneumatomachia, the Ortho-

1 The theory that, in the Roman rite, by the time the Words of Our Lord have been uttered the consecration is complete is not quite the same thing as this, inasmuch as it is the former which is the element of the offering to be offered to the faithful as such. The consecration in the Roman rite is a completed offering, and the consecration is effluxion, not consecration.
the Spondeis to it is always called the body and blood of our Lord—e.g., at the commixture (cf. Duchesne, p. 182). It appears, therefore, that the interpretation of writers of the school of Duchesne takes a view of the case which is more in accordance with the facts, namely, that the Spondeis and Sulpice beauty exactly correspond to the Epiclesis after the Narrative of the Last Supper which is found in the Eastern and usually in the Gallican liturgies, and are intended to be at least a part of the words of consecration.

The devout Christian need not ask too particularly, nor can he expect to know, at what moment God consecrates the elements; it is enough for him to be assured that, when all has been said, the consecration has been completed.

10. Invocation at baptism and confirmation.
The prayer for the gifts of the Holy Ghost is also in some early authorities called an Epiclesis. The bishop, in normal cases, was present at the administration of baptism, though he did not usually himself baptize; and directly after the immersion of the newly-baptized, the bishop spoke to him, and prayed for them (either before or at the laying on of hands) that the Holy Ghost might be given to them (cf. Ac. 8:17). Tertullian, who mentions the laying on of hands as an act distinct from the anointing, says:

"Having come out of the laver, we are anointed with the blessed unction... After this... invocating (advocavit) and invoking the Holy Spirit by a benediction (de Bapt. 7:1).

In the Verona Fragments (ed. Hauser, p. 111) the bishop after the layings on of hands have been anointed by a presbyter and clothed and brought into the church, lays hands (on a hand or on them) and invites (later) the prayer is given. In the Testament of Our Lord the same thing is found, the prayer is expressly called the invocation of the Holy Ghost which the bishop says and invokes over them (ii. 9). In other Church Orders a similar prayer is given, but it is not expressly called an invocation. It may perhaps be added that in the Gnostic Acts of Thomas there is an invocation of Christ and of the Holy Spirit before the baptism, at the anointing (ed. Bonnet, p. 68; Ante-Nic. Chr. Lit. ii. 43). The invocation after the immersion has no connexion with the invoking of the Divine name at the immersion, of which we receive no trace in Acts, I. 6:1; the name of God, the Father of all, the Lord, is named upon him) and in the Apost. Const. (ii. 10: "the name of God, the Father of all, the Lord, and His name only which shall baptize us in water"); for those refer only to the words used in baptizing. The same may be said of the allusion in Acts 2:38 and 31:20 (which is the same name which was invoked (ἐναποφήσει) upon you; cf. Acts 6:6).

A. J. MACLEAN.

INVOCATION (Roman)—It was believed by the Romans that, if a prayer was to be truly effective, it must be directed specially to the deity within whose sphere of power its fulfillment lay, and that this deity must be invoked by his right name; so Arnobius, iii. 43:

"Sueque ad deum legantur omnes able vacile nec ambigere nec dubitare de uniis cuiusque vi nominis, ne si alienis ritu et suppletionibus ferox invocaret, atque ille earum structur et piaculat nos tenet inexplicabilibus obligationi."

To know the right name of the competent deity was to possess a real power of compulsion over him (cf. A. Diez, Eine Mitkreuzigungsliturgie, Neuwied, 1910, p. 110f.; hence the names of the specific tutelary deities of Rome were kept secret, in order that they might not be used for evil ends by the enemies of the State (Serv. Hä, ii. 351; "hodie pontificum centum est se alia nominibus dei Romani appellautem, ne exagurari possent"); cf. Georg. i. 498; Plin. xxviii. 13; Macr. Sat. iii. 9). This explains also why it was regarded as of the utmost importance to invoke the gods in the proper form, and why every precaution was taken to avoid mistakes. If a supplicant was in doubt as to the right name of the deity he desired to address, he either uttered a variety of names to address the deity from (so Hor. Sat. ii. 2. 20; "Matrimine pater secus lancea libertus audias") or added some such formula as "sive quo alio nomine faci cas omni nani" (Maur. Sat. iii. 9. 10; cf. Serv. Aen. ii. 351; Apoll. Metan. xi. 2; CIL ii. 1823) or "quisquis es" (e.g., Verg. Aen. iv. 577, and the note of Servius: ""quisquis es" secundum pontificem morum, quid proponent, sed ut etiam deus in alio non nomine appetitur vello"); cf. E. Norden, Agnostos Theos, Berlin and Leipzig, 1913, p. 144 f.

If, however, the supplicant did not know which deity was concerned with the matter of his expediency this prayer was offered. He might omit the divine name altogether, and substitute for it a phrase like "Genio urbis Romae sive mae sive femina" (Serv. Aen. ii. 351; cf. Macr. Sat. iii. 9; Plin. Nat. Hist. 61) or "sive des secus des incul tudia tutice hic locuse est" (so among the Arval Brothers (CIL vi. 2099, ii. 3; cf. G. Henzen, Acta fratrum Arcatium, Berlin, 1874, pp. 147-149; a substantia quoniam (Arnab. iii. 3; cf. Gall. ii. 28. 21, 21), of which we have numerous instances in extant formulæ of prayer alike in literature (Cato, de Agric. 139; Macr. Sat. iii. 9. 7) and in inscriptions on altars (CIL vi. 70/1; cf. Epigraphica Epigraphica, v. 1043, ix. 608; on these cf. C. Pascal, in Bull. archéol. comm. xxi. [1894] 188 ff. - Studi di antichità e mitologia, Milan, 1896, p. 55, p. 55, edd. 7). It is thus simply a new name to the deity. It is certain that many of the recognized Roman deities derived their origin from the practice of invoking as divine things lying close at hand (e.g., genio, the door; vesti, the heart), or of using the names of the evils which the prayer was designed to avert (e.g., febris, fever, robigus, nil dum on grum); or of the virtues and conditions prayed for (e.g., fides, fidelity, concordia, agreement) as the names of divine beings. In such cases it was of importance to define clearly the conception of the higher power thus invoked, and to express its connotation fully. Hence the deities frequently received double names, meant to indicate their character from two contrasted points of view, as, e.g., Anna Perenna, who could grant a man a prosperous end (permanere); Genita Manna, who presided over birth and death; Fatuclus Chastivus, the god of the opening and shutting of doors and gates, etc. Again, the supplicant might use the qv (CIL vi. 70/1) testamentum, for which he sought divine aid into its several component elements, and frame for each of these an appropriate divine name. Thus, while in the aera Sericlea the flames offered the sacrifice (Pass. 71, Ceres) he gave definite expression to what he asked of them by invoking
twelve names which covered the husbandman's work from the first ploughing to the delivery of the grain from the granary, viz. Verwader, Resi- 
Hente, Obrantor, Obiotor, Ocator, Sarr-
Sari generator, Messor, Convector, Conditor, 
Dosan, Profesor, Serv. Georg. i. 21, and, similarly, the Arval 
and Verwader, etc. used to bring down, cutting, and burning a fig tree that had grown on the roof of their temple, offered sacri-
thesis to three newly created deities, i.e. Dafexura, Coen and another occasioning the same kind of sacrifice to Coenique and Aidelle (Henzen, op. cit. 147 f.1. In the case of gods whose range of power was very wide, it was necessary to specify the particular matter in which they were needed to be helped, and from this arose the practice of dividing the personality of certain deities and investing the component elements with distinct 
epithets, which, quite a number might appear to 
together in a single prayer. Thus, e.g., the Arval 
Brothers, in the vow which they made for the trium-
phant return of Tuscus from the Dacian cam-
paign in A.D. 101 (CIL vi. 2674, i. 25 ff.), invoked the 
Gazlabi, Mars and Mares and Mars, also Jupitier Victor and Mars Victor. In the case of so multiflora a deity as Fortuna, the supplicant was above all concerned to direct his plea to the right divinity; if, e.g., he prayed for the favourable issue of a battle, he 
pealed to Fortuna guisse diei i.e. the particular 
Fortuna in whose hands lay the destiny of the day of 
day of battle [Wissean, Rel. und Kult. der Eromen, 
Muir, 1918, p. 129; J. 192, p. 120, Great spirits are always but a transference of that which, at one 
no divine power who had a right to be invoked 
should be passed over. Hence, after all the deities 
specially concerned had been duly invoked in a prayer, it was customary to add a "general invoca-
tion" which should include all the others: 
'Post speciem invocavit templum ad generalitatem, ne 
missum praestaret, maxima pontifex, per quot sita veteri 
eminentes mortis post specialis dies, quos ad ipsum surremis quod futuro accessit oraculi, generalis omnium 
invocatores' (Soz. Georg. s. 31. et Rom. vii. 105, Cato, i. 10). 
This practice finds parallels in Greek prayers (cf. 
O. Cursius, Untersuchungen zu den Miniamen des 
Rheinicker, Leipzig, 1895, p. 89 f.**; R. Wünsch, in 
In forms of prayer that have come down to us, 
acordingly, the group of deities addressed is very 
frequently rounded off with some such formula as 
"Hail all, divine deities, etc. so that the divine deities 
confess of the earth and the gods infernal!" (Livy, i. 12. 10), or "ci novilaves, ci ingises, ci quibus et 
sub urbem extis se est universum hostium" (cf. Livy, ii. 6. 6). 
With this custom is connected the requirement that 
in every prayer, no matter to what god it 
was addressed, Janus and Jupitier should be in-
voked first of all (Mars. Sat. i. 16. 25; cf. Cat. 
de Agric. 141 [see also 134]: 'Janum iovem vino praefinam'), 
and that the series of gods invoked should always begin with Janus and end with 
Yesta (Cic. de Nat. Dii, ii. 67, and other passages, 
cited by Wissean, op. cit. 108).

IONIC PHILOSOPHY.—The schools of philos-
ophy that arose in Ionia, on the coast of Asia 
Minor, and among the adjacent islands, during the 
6th cent. B.C., are above all remarkable for their 
originality and vigour. With them begins the great 
epoch in Greek philosophy, and even their fragments 
are stimulating to this day. It is hard to 
fix precisely the limits of the term 'Ionic'. In 
so active a period of thought, systems gave birth 
to other systems with astonishing rapidity, and 
Xenophanes, Heroditus, Pythagoras, and Anax-
agoras, all of them bred in Ionia, were deeply in-
fluenced by the speculations around them. All 
historians would agree, however, that Thales, 
Anaximander, and Anaximenes, the earliest in 
time, form to some extent the class apart, and most 
would confuse the distinctive name to these three 
and their immediate disciples. But Xenophanes 
seems to come nearer to them than to their great 
successors, and we may include him here, especially 
as he gives particular expression to the opposite 
side of their views. Dominant in the four is the 
recognition of matter, motion, and physical causa-
tion,—i.e. of objects extended in space, and orderly 
movements and changes in space,—as being them-
selves manifestations of the Absolute Reality. 
There is a marked aversion to earlier anthropo-
morphic ideas, and to all such mythology as that 
in which a storm at sea would be explained simply 
as due to the incausable wrath of a Fossession. 
At the same time this 'matter' with which our 
philosophers are concerned does not appear to be 
considered as anything apart from spirit; they 
shrink from imagining it in terms of mere mechan-
ism, but do not ask themselves the precise distinc-
tion between mechanism and spirit, or the precise 
connection between the two. This is, however, 
that no one has answered yet. But, with the 
possible exception of Xenophanes, these early 
thinkers do not even raise such questions, at least 
not expressly; in Hegelian language, they do not 
ask how far spaces also take the "physical, 'painless'
manifestation of the Absolute; they are absorbed 
rather in the simple feeling that it is a manifesta-
tion. They feel that things do happen in the way of 
mechanical and physical causes, but the spirit is 
in space and time being followed by another as its 
necessary 'effect'; that a cloud, e.g., is formed 
and will be formed by an exhalation from the sea, 
not by the god choosing to send his messenger 
wrapped in a magic veil. At the same time, they 
insist that these physical processes are, in some 
profound sense which they do not determine, 
bound up with life, mind, and divinity. Thus 
they have been called 'hylolatry', 'seelentheorie', 
'life spirit', since they assert a union, though 
an undefined union, between the two; or, rather, 
they do not assert it, they assume it, for they 
have hardly reached the height of thinking 
as two. Aristotle sees the danger of this indef-
initeness, one result of which was to make ex-
tended things and movements in space as such 
appear to be the sole causes of all that existed, 
including the movements themselves and the glory 
and beauty of the universe (Met. A 3. 883&84-20). 
But no criticism can do justice to these pioneers 
that does not recognize the immense service done 
to thought by initiating research into the prop-
erties of space and the physical qualities of things, 
and connecting with this, rather than with the 
more mythical fancies, the search for the ab-
solute truth about the universe and God. Science 
and mathematics are not in themselves metaphysics 
and theology, but there will never be a great meta-
physical, that does not at least account for them, 
and never a great theology that does not take account 
of metaphysics.

1. Thales.—It is significant that Thales, the 
first of these thinkers, is said to have brought 
the elements of geometry to Greece, havingstude 
the science in Egypt and made discoveries of his 
own (Ritter-Pfleider, Hist. Phil. Greece, p E 
and reft. there). But how far it was a true deductive 
science and not a mere inductive, especially empirically, it is difficult to say. Our direct 
information for Egypt is derived from a document 
written, probably about 1500 B.C., by the priest
How exactly Thales conceived the ordered universe to be evolved from this fundamental water is quite unknown to us. Diog. Laer. states (i. 22) that, according to some authorities, he left nothing written, and certainly no writings of his have come down to us. Diog. Laer. therefore refers to his doctrines, speaks of them in a tone of conjecture. From a passage in the *Physics*, however (i. 4 init. 157° 12), where Aristotle is dealing with the early thinkers and the infinite substance underlying all the forms that we see, it may be inferred that Thales believed in a process of rarefaction and condensation. Still, this is only an inference, and Aristotle's seems to have held that Thales first, as the pupil of Anaximenes, considered the first to state a theory (Ritter-Pfleger, 288; Diels, p. 164). Perhaps Anaximenes was the first to state it fully.

Of greater interest is Aristotle's remark that Thales is reputed to have said that the magnet had a soul, because it could make iron move (in *Anaxim*, i. 2, 405° B) (Ritter-Pfleger, 283). As Aristotle saw, this suggests that Thales was not satisfied with mechanisms as providing an ultimate explanation for the cause of movement, and held that in some fashion (cf. Plut. *Laws*, x. 589 Β: δέ γάρ τοις ὁμαλοίς) soul must be the cause, and we are present through writing c. A.D. 456, but he quotes Eudemos (c. 325 Β. C.), who undoubtedly thought that Thales must have grasped the general principle that a triangle is determined when the base and two angles at the base are given; otherwise, Eudemos held, he could not have measured the distances of ships at sea, as he is said to have done (his base, apparently, being a tower, and the base angles being obtained by observation; Proclus, i. 32, 14). Thus we may see in Thales the first beginnings of that insight into the real importance of mathematics both for science and for metaphysics which so deeply influenced Greek thought, from the time when the Pythagoreans believed that the very essence of all things was to be found in number down to the days of Archimedes.

Herodotus tells (i. 93) that Thales foretold the eclipse of the sun which took place in the sixth year of the war between the Lydians and the Medes. Incidentally this gives us a date for Thales' life, since astronomy was well known in Asia Minor on May 28, 658 B.C. (Ritter-Pfleger, 88). We cannot suppose, without authority, that Thales had discovered the true cause of eclipses, but we know from Assyrian records that the Babylonians watched for eclipses at fixed dates (Burnet, *Early Greek Phil.* p. 42). Thales may have had access to this knowledge in his travels, possibly at the court of Croesus, king of Lydia (Herod. i. 90). In any case we can understand how such knowledge, coupled with his mathematical studies, would stimulate his search after one universal physical cause for all the changes in the world. This, he held, was water. Aristotelian authority, suggests that he was led to this view by observing that the seed of all living things is moist, and also the nutriment of all things, and that host itself is generated from the mud and kept alive by it (Met. A 3, 983° 18). It is not clear whether the last passage refers to animal heat alone, as the context certainly suggests, or, as later writers thought, to Thales' belief that the stars were fed by exhalation (Ritter-Pfleger, 12; Plut. *Plac.* i. 3; Diels, *Diog. Oxograp.* p. 276). It is quite possible that Thales had both in mind. Aristotle also states (DE *Cael.* ii. 1, 190a 16) that he believed the earth to float on water, as a piece of wood might float. This recalls the Semitic belief in the waters under the firmament.

2. Anaximander. — Anaximander, also a Milesian, and probably a pupil of Thales (Ritter-Pfleger, 15), assembles us by the boldness and subtility of his speculations. According to Aristotle and also, apparently, to a tradition preserved in Simplicius (Asc. *Met.* A 2, 989° 18; Simp. *Phys.* 24, 20 [Ritter-Pfleger, 16, 26]), he struck out the idea of one primitive substance, infinite in extent, but otherwise undefined in character, something that was thus none of the things we know, but something that was capable of becoming all things and manifesting all qualities. That the primitive substance was thus conceived as undefined has been disputed (see Burnet, p. 37), chiefly on the ground that Aristotle may have read into his predecessor an approximation to his own theory of matter as something that is essentially potentiality, i.e. something with the power of receiving form and change though not of generating it by its own force alone. But there is no real reason why Aristotle should have misrepresented his forerunner, whose book was in existence at the time. However, we must account for the tradition in Simplicius. If we accept Aristotle's account, we have a significant connexion between Anaximander and Heracleit.
The generation of the various elements, as we know them, is followed by their dissolution into the primitive substance, and this re-absorption is felt to be right and seemly (οἰκονομικός).

At the appointed time they make reparative action to one another for their injurings (Barret’s tr., slightly altered).

Thus Anaximander seems to hold that the diversity and multiplicity of the world depend on a struggle of opposites (e.g., of warmth against cold, of wet against dry); and that the presence of one element is a wrong done to the other. Heraclitus carries on this idea of struggle, but rejects in it and justifies it. Anaximander held also, it would appear, that this double process of generation and destruction was repeated incessantly; 'generation could never fail,' for the infinite fountain was always there ( Arist. Phys. i. 8, 208 B 8 (Ritter-Pfleger, 164)). Thus Anaxi-
mander may really have reached the idea, which later writers say he held, of immeasurable univer-
se, rising and passing away for ever (Ritter-Pfleger, 21). It is not clear whether they think he imagined many universes in existence at the same time, or meant that they followed singly, one after the other. But the latter is suggested by the coherent system which he conceived for the present universe, of which the earth and sun and stars, in one complete whole. He came very near to realizing that the earth was a globe; he conceived it, apparently, as shaped like a stampy cylinder, with a convex lid, and three times as broad as it was deep, swinging free in the centre of the universe, and surrounded by hollow rings of compressed air (or vapour) which contained the fire of the different elements. These, the rings with apertures in them through which the fire showed (Ritter-Pfleger, 19, 20; Barret, pp. 70, 71). His biological speculations were equally bold, and in many ways anticipated the modern theory of hereditary con-
nection between all animals by his suggestions that the earliest living creatures were of the nature of fishes, and that man was developed from these, supporting his view by the sound observation that man now requires a longer period of nurture than any other creature, and considering that it was hard to imagine how he could have survived from the first if this had been always so (Ritter-Pfleger, 22).

3. Anaximenes. — Anaximenes, his successor, also a Milesian (ib. 23, 26), was a man of much
tamer intellect. He fell back to the old idea of the earth as a flat disk, and to the old idea of fire, but less profound and fruitful, conception of the primitive substance as one of the recognizable elements. This was air, infinite in extent, but definite in quality. Rarefied, air became fire; condensed, it appeared successively as wind, cloud, water, earth, and stones. Motion existed from all eternity and was the cause of change, but no
explanation of motion itself was given (ib. 24, 25, 28). Soul, he said in so many words, was air:

'Just as our soul, being air, holds us together, so do breath and air encompass the whole world' (ib. Barret, p. 77; Ritter-Pfleger, 24).

We cannot say, however, whether he meant that the air encompassing the universe was the air vitalis, or that the air encompassing the universe was a sort of divine (Ritter-Pfleger, 28a), nor need we doubt that he did; but he is unlikely to have formulated the conception of divinity any more precisely than his predecessors. There is little now in his thought, but he too has a claim to what Hegel regards as the great merit of these thinkers—that they were the first to announce that the bewildering variety of the world could be explained as the manifestation of one principle, a principle that was in-
destructible (Gesch. der Phil., i. *' Grieche. Phil.' A i (Thylas), p. 233).

The theory of Anaximenes was revived a century later by Diogenes of Apol-
Ionia, whose system, however, shows the mark of other influences (Zeller, *Pre-Socratic Phil.,* i. 280 ff.).

4. Xenophanes.—In Xenophanes the mental enthusiasm of the time seems to blaze out into a careless irreligion of the first water. The best introduction to him is still the brief sentence of Aristotle (Met. 4, 980* b* 21), that Xenophanes was the first to believe in the unity of all things (cf. *Arist. Eth. 222 D 1*). 'All that we call many is really one,' an Elysian tenet derived 'from Xenophanes.'

Not that Xenophanes made any clear statement, or distinguished what was one in matter from what was one in principle.

He simply looked up to the whole heaven and said the One existed, and was God (''καὶ τὸν οὐκ εἶναι αἰσθητότα τὰ τούτα θεωρεῖν ποιεῖ' οὐκ εἶναι θεός.' For Xenophanes, *Hipp. Lfc. I, 1, αἰσθητήριον τὸν οὐκ εἶναι: Diels, *Deut.,* p. 555).}

We may compare the famous passage in Sext. Emp. (ado, *Phys.,* i. 98 1), which, no doubt, reflects Aristotle's opinion, telling how some have thought that the first conception of the providence of God came to man from the sight of the starry heavens:

'By the men who first looked up at the sky (οἵ τινες τοῦ οὐρανοῦ αἰσθήτηριον) and gazed at the sun running his course from his rising until his setting, and watched the ordered dances of the stars, these men not themselves to discover the creator of so glorious a harmony, believing that it could not have arisen by chance, but through a mightier and immortal power, and that this power was God.'

Xenophanes made no clear statement (οὐδὲ λέγει τὸ μὲν, ἔχει τὸ δὲ τοῦ οὐκ καταλέγει), cutting to the root of the matter in his trenchant way; as with Xenophanes' predecessors, so with himself, we are unable to discover any articulated theory of the relation between space and spirit, either in the unity of the One, or in the relations of the many to the One. His minds are instinct with the sense that these two conceptions are of ultimate importance, and must somehow be brought together. How to bring them together he does not tell; to one he tempted to say that he simply claps them together, but he has got hold of what neither philosophy nor religion must ever let go again. He will have nothing of the old anthropomorphic fancies by which the real grandeur and mystery of the physical universe are jiggled out of sight:

'What men call Isis is a cloud, coloured purple and scarlet and of all colours:

But that does not make him write the rainbow

'in the dull catalogue of common things.'
skeptical despair; the possibility of advance towards knowledge still remains:

'The gods do not reveal all the truth at once; men must seek them and they find the better.' (ib. 190).

The greater part of what we hear about his physical speculation is neither well attested nor of much interest. It was his revolt against a low mythology and his conception that all things must somehow form a unity, that had the profound and far-reaching results. There is much in both Plato and Empedocles that recalls his attacks on the Olympian creed, and there can be little doubt that Parmenides, whose philosophical centres in the conception of the One, is in the direct line of succession from Xenophanes, who thus forms the link between the Ionian and Eleatic schools. Aristotle says in so many words that Parmenides was reported to have been his pupil (ib. 101), and it is quite possible that Xenophanes, in his long years of wandering, came to Elea in Italy, his wife died there (ib. 97).

His own native city was Colophon in Lydia, but it is natural to suppose that he left it when the Mede appeared (ib. 85). The date given by Diog. Laert. ix. 62, 580 B.C. (ib. 97). Besides his religious writings he possesses a number of fragments, half-lyric, half-
diacritic. A very lovely nature appears in them, typically Greek in its union of sunny enjoyment with self-control, and high above all luxury, tyranny, and superstition. His picture of a drinking-feast is characteristic: the clean floor and the clean cups and the clean hands of the guests, the flowers and the flower-scented wine and the fresh cool water, the dance and the song and the drinking, but such drinking that a man needs no servant to help him home after it, the feast, and the beginning with prayer to the gods 'for strength to do right,' and ending with songs that have no lies in them, no worn-out fancies about gods and Titans and giants, and no bitterness, no reproaches, memories of past strife (Bergk and Hiller, Anthologia Lyrica, 'Xenophanes, 1 and 2).

IRANIANS.—I. Iran, the modern name of Persia, comes from the proper name of a city in the Avestan Airysena, used generally as an epithet of wadjah (of uncertain meaning) to describe the land from which the ariyah folk came; its identification has not been achieved. Airya, Old Pers. Aria, (cf. Gr. Aryan), is cognate with Skr. Ayra, and it seems to have been the name by which the undivided Aryan people called themselves, a race of invaders from Europe, who, perhaps about the middle of the 2nd millennium B.C., occupied Bactria and the neighbouring country, and imposed their form of Indo-European speech upon the inhabitants. This admixture of speculative reading of the facts of a dim pre-historic seems to suit best the evidence at present at our disposal. Whether the term 'Aryan' may be accurately used of a wider unity, as in British popular phrase (of cf. O. Schrader's art. AYRYAN [Lit. Indo-European] RELIGION, vol. I, p. 1).

It should be noted, however, that the S.Past (Kultur, Ausbrie-
sungen, 1911, p. 117) is strongly inclined in part on the evidence of the recently discovered Tocharian language, to revert the earlier view and see in the original home of the race in Asia, more specifically in Rus-
sian Turkistan. This is chronicled without suggesting that the writer finds himself shaken by this novel and bold argument.

II ff. need not be discussed here: for the purposes of the present article the term will be restricted to the Indo-Iranian branch of the family. The divi-
sion of the branch took place relatively late, the ancestors of the Aryan Indians migrating into the Punjab, where we find them in the 1st millennium B.C., and leaving the Iranians in possession of the wide belt of territory from Bactria to Media, down to the borders of India. The linguistic tests of Iranian as against the Indo-Aryan and Dravidian are not, it is true, the two groups lying closer together than any other distinct languages in the Indo-European family; it is as close a connexion as that between French and Italian. In Avestan and Old Persian, for instance, Hindu is the name for India, answer-
ing to the Skr. Sindu. This illustrates two characteristic Iranian developments—the provocative change of s to h, and the loss of the original aspirates. The application of a few principles enables us to transform the oldest extant Sanskrit into the corresponding Iranian of our early texts, and vice versa, with quite a small residue of new developments to be allowed for. A fact from some linguistic complications, involving certain specula-
tions on pre-historic movements described in the present writer's Notes on Iranian Ethnography, our material enables us to reconstruct a considerable fullness the cultural conditions of the Aryan people before the Indian trek. We restrict ourselves here to matters affecting religion.

Our evidence is collected partly from the comparative treatment of words, names, and ideas occurring in the older Indian and Iranian literature, and partly from historical notices of Iranian tribes found in ancient writers, of whom Herodotus is the most important. It will be remembered that the term 'Iranian' properly connotes a language only; the main reason to presuppose racial affinity among the wild nomad tribes who spoke, or may have spoken, an Iranian dialect is, accordingly, that such tribes as the Mazung or Sogdian in framing our picture of proto-Iranian religion, it is at least as probable that such tribes may be purely aboriginal.

2. Naturally the most certain elements in this reconstruction are those which we can prove to have been Aryan. The combination of Veide evidence with that of Herodotus, in the description of the popular religion of Persia, presents us with a system which agrees closely with that of the later Avesta (excluding the later prose and the ritual arts). Now these forms of thought, in a certain sense, are a counter-reformation, a refuge from the too drastic reform of Zarathushtra into the old Iranian nature-worship, conformed to Zarathush-
tra's most emphatic teaching, but not alone, and compounding for its abandonment of Zarathushtra's essential teaching by an apotheosis of the prophet himself. In language and thought alike we find the Rigveda closely paralleled by the 

Yatsa, and even more closely by the 'Gathā of Seven Chapters' (prose), which is actually com-
pound in the archaic dialect of Zarathushtra's own versus Gāthā. So great is the difference in religious standpoint, that, if we omitted one line (Ys. xii. 2, which offers adoration to Zarathushtra and Ahura in a breath), we might plausibly argue total ignor-
ance of the reform. The religious teachings would be practically identical with that of the Rigveda, allowance being made for the small compass of the Gāthā. We should have to provide only for some innovations like the cult of Indra on the Vedic side, and that of Mazda and the Holy Immortals (AAMA Spenta, now first collectively named; see art. AMESA SPENTAS) on the Iranian.

3. Leaving the reform of Zarathushtra and the dualism of the Magi, we may describe that religion as it was in special art.,
we may delineate here the religion professed by the Iranian people when Zarathushtra arose. According to Herodotus (l. 131), the Persians sacrificed on mountain-tops to Zeus, calling him 'the white-footed son of the sky Zeus.' It is highly probable that the Greek
traveller records the native name, "Diyana", identical with Vedic Dyuas, Zoroasian Ahriman, and "Sun, Moon, Earth, Fire, Water, and Winds." All six divinities belong to the circle of the 'heavenly ones,' Indo-European "deos", whose name declares them of the company of *Deos* (Deus). The evidence of the sacrifice also, he proceeds, "is in the name of the chief is not certainly found outside the South Indo-European tribes, the general term is universal in our speech area from India to the British Isles; they are all "sky-spirits in residence of the ancestors." So far, accordingly, we have set down only what the Iranians still observed of a cultus common to the Aryans alone, but to the whole of our family. We may add that they kept plentiful traces of the primitive ancestor-worship as well (see art. Fravashis). In Iran the names were wholly beneficent, and the darker side of the tenance of the dead separated itself entirely from association with them. "\[\text{Plutarch (Life of Theseus).}\]

"Av. abura," in which Veda and Avesta, as A. A. Macfadyen notes (Vedic Mythology, Strasbourg, 1887, p. 7), is applied to the highest gods, who in both are conceived as mighty kings, drawn through the air in their war charriots by swift steeds, and in character benevolent, entirely almost free from guile and mortal traits. The similarity of these attributes to those given in the Avesta to the Fravashis, who are largely names, suggests the otherwise probable inference that, if Aranya "avas" mean an astronomical deity, "ahura" analogically meant a 'here' in the Greek sense. This fits very well the etymological connexion traced by Schrader (ERS ii. 15) between *avara* and the Germanic anagorin (W. Gr. *anagogia*), whose ultimate rivalry was assured. The rivalry started largely, we may conjecture, in conditions different from social status. The elemental powers were likely to be popular deities, adored by uncultured nomads who could not understand gods of shadowy and abstract character. The latter, especially if connected closely with the names, would appeal to the nobles, prone everywhere to reverence ancestors from the very fact that they knew who they were, and therein showed their superiority to the common people. In some aristocracy of Eastern Iran, it would seem, one *ahura*—or rather *ahura", for the weakening of the *s* had not yet set in—was elevated above other such powers by the epithet "masda", 'wise, or 'wisdom." Closely linked with him were the *ahrmeta*, or the *ahuras* of the sky, in the sense that they are the "sky-spirits" in residence of the ancestors. In the Avesta the former name proves that the date of its annexation by the Semites was centuries earlier than that of the Zend. This discovery (for which see E. Hommel in PSBA xxi. [1899] 133) makes it necessary to date the name *Ahura Mazda" long before the days of Zarathushtra. The Beinmer, in the writer's opinion, was at the head of the race which worshipped this deity as 'god of the Aryans,' by which title he is known in one of the Behistun Inscriptions (Elamite version, iii. 77, 78). 'Aryans' there will mean here peoples of whom its ancestral home is already sketched will account excellently for the first hints which Zarathushtra improved so as to make the system underlying the Gathas.

Meanwhile the names were worshiping the "deos", like their cousins who had migrated into India. Chief among them was the Light-god *Varuna*, Mitthra. His later history, in Zoroastrianism and in Mythology, involves us in some complex problems which may be left to the articles concerned. According to A. Meillet (JA x. [1907] 133 ff), this Aryan deity originated in an ethical conception, that of the 'compacts' or "mitans," which occurs as a common name in the Gathas. Mitthra's Vedic companion, Varuna, is plausibly traced to a similar origin, his name being compared with Skr. "varnata," "ordain," Av. "varnata," "vastun," "contract," Pahl. "varnata," "bago arvata," or "BAGO ARVATA." From the pre-Aryan period also may have come other elements of Iranian religion, as is suggested especially by comparisons with Roman divinities and cultus.

4. Aranya religion has by the side of the 'heavenly ones' (Skr. deva, Av. daiva) another term, *ahura* (Av. abura), which in Veda and Avesta, as A. A. Macfadyen notes (Vedic Mythology, Strasbourg, 1887, p. 7), is applied to the highest gods, who in both are conceived as mighty kings, drawn through the air in their war charriots by swift steeds, and in character benevolent, entirely almost free from guile and mortal traits. The similarity of these attributes to those given in the Avesta to the Fravashis, who are largely names, suggests the otherwise probable inference that, if Aranya "avas" mean an astronomical deity, "ahura" analogically meant a 'here' in the Greek sense. This fits very well the etymological connexion traced by Schrader (ERS ii. 15) between *avara* and the Germanic anagorin (W. Gr. *anagogia*), whose ultimate rivalry was assured. The rivalry started largely, we may conjecture, in conditions different from social status. The elemental powers were likely to be popular deities, adored by uncultured nomads who could not understand gods of shadowy and abstract character. The latter, especially if connected closely with the names, would appeal to the nobles, prone everywhere to reverence ancestors from the very fact that they knew who they were, and therein showed their superiority to the common people. In some aristocracy of Eastern Iran, it would seem, one *ahura*—or rather *ahura*, for the weakening of the *s* had not yet set in—was elevated above other such powers by the epithet *masda*, 'wise, or 'wisdom.' Closely linked with him were the *ahrmeta*, or the *ahuras* of the sky, in the sense that they are the "sky-spirits" in residence of the ancestors. In the Avesta the former name proves that the date of its annexation by the Semites was centuries earlier than that of the Zend. This discovery (for which see E. Hommel in PSBA xxi. [1899] 133) makes it necessary to date the name *Ahura Mazda" long before the days of Zarathushtra. The Beinmer, in the writer's opinion, was at the head of the race which worshipped this deity as 'god of the Aryans,' by which title he is known in one of the Behistun Inscriptions (Elamite version, iii. 77, 78). 'Aryans' there will mean here peoples of whom its ancestral home is already sketched will account excellently for the first hints which Zarathushtra improved so as to make the system underlying the Gathas.

5. Meanwhile the names were worshiping the "deos", like their cousins who had migrated into India. Chief among them was the Light-god *Varuna", Mitthra. His later history, in Zoroastrianism and in Mythology, involves us in some complex problems which may be left to the articles concerned. According to A. Meillet (JA x. [1907] 133 ff), this Aryan deity originated in an ethical conception, that of the 'compacts' or "mitans," which occurs as a common name in the Gathas. Mitthra's Vedic companion, Varuna, is plausibly traced to a similar origin, his name being compared with Skr. "varnata," "ordain," Av. "varnata," "vastun," "contract," Pahl. "varnata," "bago arvata," or "BAGO ARVATA." From the pre-Aryan period also may have come other elements of Iranian religion, as is suggested especially by comparisons with Roman divinities and cultus.

6. The cult of the nature-powers in the list of Herodotus (above, § 3) calls for little further comment. Sun and Moon are objects of worship in the Vedas and (to a limited extent) in the later Avesta. For the popular cultus in Iran, Herodotus's notices of what he saw in Persia are much better evidence than the Avesta. (We might cite one striking proof that the historian got his information among the people and not only in Court circles—his note [iii. 67] that the Magian usurper, pseudo-Smerdis, "was lamented by all in Asia except the Persians as being the great benefactor, the Smerdis, as spouse of the Sky, is seen in the Indian coupling of Dynas and Prthivi, and on Iranian soil among the Scythians (Herod. iv. 59). The Aranyus *Aravati* (Vedic; Av. *Arnavi*), scanned as a "quadrantisable" in the 15th c.m. was a member of the Avesta from the first; and on the evidence of the commentator Sâyana (on Rigveda vii. xxxvi. 8, viii. xiii. 3) it is generally allowed that this was an Indian (and that shows that the conceptions were thoroughly assimilated, and with the very primitive form of the name proves that
IROQUOIS.

The sacred formula, which lies behind the important equation of Skr. orvahum and Lat. flamma (origin, heater), is thus included with the invocation of this site. There is no direct evidence on Iranian soil that such priests held hereditary office; but we may recall the combinations of Schrader to prove that traditional lore was handed down in Indiana. Magi succeeded to these ascendant functions in Persia, largely because of their influence over the non-Aryan population, which had more or less decorously adopted the forms of Iranian worship and a few features of Zarathushtra's reform (on this subject see art. MAGI).

IRISH.—See CELTS.

IROQUOIS.—The name 'Iroquois' was given by the French settlers in Canada to the great confederation of the Five Nations—Mohawk, Oneida, Onondaga, Cayuga, and Seneca, to which, after 1726, the Tuscarora, also the famous Six Nations. The most advanced of all American Indians in statecraft and political organization, they were the leading members of a linguistic family which ranges from the Ottawa River (the Sagunay on the north bank, and the Gulf of St. Lawrence on the south) through South Quebec and Ontario, the greater part of New York and Pennsylvania, and the north-western half of Ohio, with an exclave running south-west through portions of Virginia, Tennessee, the Carolinas, Georgia, and Alabama. Excepting the exclave, they were entirely surrounded by Indians of Algonquian stock. The name 'Iroquois' is itself Algonquian, 'real adders' (with the French termination -ois).

The chief Iroquoian tribes were the Huron (q.v.), the Tiennomati, or Tobacco People (the 'Nation du Poton' of the Jesuit Relations), who lived in Grey and Simcoe counties, Ont., and who combined with the Huron to form the modern Wyandot; the Atiwendakon, or Neutral (who, unlike the Huron, took no part in the wars between the Huron and the Iroquois), living north of Lake Erie; the Coasata, along the Susquehanna River; the Erie, or Catt Nation (in allusion to the panther or wild-cat), south of the Neutrals; the Tuscarora in North Carolina; the Notaway in South-East Virginia; the Meherrin, along the river of that name, on the border between Virginia and North Carolina; and the Cherokee (q.v.).

1. Government. —Iroquoian government was essentially a confederacy of clans, each composed of a number of gentes or families, which, in turn, consisted of several fraternities. The family (Mohawk, or Human) was matriarchal, its members being the male and female offspring of a woman and her female relatives. Male warfare was confined to women's line, together with such persons as had been adopted into the Human. The head of an Human was usually its eldest woman, and each of its members possessed the right of inheritance from deceased fellow-members, and the vote in its councils. In the process of development, Human, either actually or theoretically, then became coalesced, in which case certain

This equation is not made by A. Walle, Lat. etymolog. Worterbüch, Heidelberg, 1910, p. 295.)
The Iroquois gained the custody of the titles of chief and sachem, and the married women could, accordingly, take the initial steps not only in choosing, but also in deposing, a chief or sub-chief—in both cases subject to confirmation and installation (or deposition) by the tribe. In consequence, the matrilineages of the ohwachiras also appears in the fact that all the land of a family was exclusively owned by women. Each ohwachira possessed its own tutelary deities (oyaron or oching speaking), and the clans were organized into a matrilineal principle. The clans were to the ohwachiras what the latter were to the firesides (families in our sense of the term, except that they were matrilineal instead of patrilineal); and the clans, combined in a matrilineal fashion, into phratries, two of which normally constituted a tribe. The clans composing a phratry were brothers and sisters to each other, and cousins (or progenitors) to the other phratry. Consequently, marriage within a phratry was a crime, and, though long after the clans were exogamous, 2.

2. Family life and culture. As would be evident in a matrilineal society, the power of women is paramount in many respects in Iroquois society. Women's rights to land and her privilege of choosing the chiefs have already been noted. Being the source of life, she alone could independently adopt an alien (a man could do this only with the consent of his wife); she had the right to determine whether a captive should be put to death or adopted, and she might even forbid her sons to go on the warpath. Children were raised by the women, provided the food for festivals, etc., watched over the treasury, and, when of extraordinary ability, might even, in case of need, act as substitute during the vacancy of a male chieftainship. The penalty for killing a woman was double that for the murder of a man (see art. BLOOD-FRUD [Primitive], vol. ii. p. 725). Yet, although a son belonged to his mother's clan, a husband retained his own clan, as the wife retained hers. Their offspring had, therefore, a relationship to both clans; and the father's clan gave the son his tutelary (oyaron), supplied a prisoner or a scalp. If the fell in battle, his wife performed the sepulchral rites in case of death in his wife's clan.

The principle of adoption (g.v.) was one of prime importance in Iroquoian organization. As among the Huron (see ERE, vol. vi. p. 885 f.), a captive might be adopted to replace a fallen warrior, and, as Hewitt points out (HAL II. 15), to restore the ohvenda (as which see below) lost by the clan through the death of its member. Not only individuals, but entire tribes, might be adopted. This was notably the case when, about 1720, the Tuscarora were adopted by the Five Nations, through the successive stages of infant, boy, youth, man, assistant to the official women, warrior, and peer. The Tuscarora were Iroquoian; but Algonquins (Leni-lenape and Nanticoke) and Siouans (Saponi and Tatelio) were also adopted.

The character of the Iroquoians has been described in art. Huron; but that their reputed savagery was not inherent in the race is shown by the gentleness of the Tuscarora, who suffered from the whites the cruellest wrongs, perhaps the least of which was the constant kidnapping of both men and women into slavery (Hewitt, HAL II. 845 f.).

The Iroquoian dwellings were the famous 'long houses,' often over 100 ft. in length, and corresponding width. The stone walls were made of poles, which were covered with bark (as was also the roof), usually of the elm. Within, each house had its own apartment, curtained off, while through the centre ran a passage (ocoyaron). Among the Tuscarora, however, the round bark lodge was in use (ib. ii. 851). In war, body-armour of twined wooden rods or slats was used (W. Hough, in Rep. U.S. Nat. Mus. 1893, p. 848 f.)., and, besides the ordinary Indian weapons, blow-guns were frequently employed, while, at least among the Erie, poisoned arrows were not unknown.

3. Religion. The underlying concept of Iroquoian religion is orenda, a term which has passed into the vocabulary of comparative religion. Orenda is closely connected to the Polynesian concept of mana (g.v.), and denotes the active force, principle, or magic power which was assumed by the iroquois reasoning of primitive man to be inherent in every body and being of nature and in every object, whether animate or inanimate. It was a principle of life and death, property, or activity, belonging to each of these and connected in the active sense or force, or as it were, involved in every operation or phenomenon of nature, in any manner affecting or controlling the welfare of man. This hypothesis was conceived to be immediate, personal, mysterious in mode of action, limited in function and efficiency, and not at all connected, local and not comprehensive, or extraneous, or embodied or immanent in some object, although it was believed that it could be transferred, attracted, acquired, increased, superseded, or estranged or ritualistic formulas endowed with more power' (Hewitt, HAL II. 147).

The object of sacrifice is to secure the exercise, in behalf of the sacrificer, of the orenda possessed by worshipful beings; and the phenomena of nature are simply contents between different orenda. Orenda may be beneficent or malignant; the beings who use orenda for injurious ends are called oton. The chief defense of the individual against the oton is the oyaron, or tutelaries, which were also possessed by tribes, clans, and families. The normal mode of acquiring one's oyanon is detailed in art. COMMUNICATION WITH DEITY (American). Like the orenda, the oyaron differed in potency and in character. Those possessed of powerful and beneficent orenda, were the wise men and beneficent magicians, whose oyaron-revealed knowledge enabled them to foretell the future, divine remedies for disease, interpret dreams, and, if sufficiently potent, cure evil orenda, oton, and oyaron. Those whose oyaron were malignant were the evil wizards, who bore the significant name agaton or hokaton ('he is an olyon'), whereas the benignant type was orenda ('his oyaron is powerful'), and orenda ('Huron, 'one who examines another by seeing'), etc.

The good will of the oyaron must be retained by feats and sacrifices to keep it in health and strength, or it would turn against its possessor; neither could its dictates, as revealed in dreams, be denied without most serious consequences (for details see ERE, vol. vi. p. 885 f.). If the object manifested as the oyanon was an animal, the possessor's life was conditioned by that of the living creature in question; but in any case the material creature or object was not the oyaron itself, but merely

As in so many other cosmologies, the earth was female to the Iroquois.

1. Hewitt's notes (HAL II. 841 f.) that the number of the phratries was based on the duumviral of natural sex.

2. A 'council-house' of the Iroquois is preserved at Portage, N.Y., but, if genuine, is a very recent development, being simply a log-cabin. A similar didactic women's meeting place, the slating house of N.Y., is claimed to have been the home of an Indian family at the time of Sullivan's destructive invasion in 1779.
The personal oyaron was carefully carried by \textit{joya} (marriage or war) to the House of the Sun. A symbol or representation of it was made by the father's clan at the New Year ceremony after the death of the youth who was to bear it. It was traditionally interpreted as the head of the new world. In the oyaron concept lies at least one of the first expressions of a totemism of power.

The chief deities of the Iroquois were Taharonhawagon and Tawiskaron. They were twins, and antagonistic to each other, being the creator and enforcer of law and order respectively. The Taharonhawagon is the creator of the world, and the Tawiskaron is the bringer of winter. They were not, however, gods in the usual sense of the term, but man-beings (\textit{onques}), and their origin is inseparably connected with the cosmological myth of the Iroquois.

According to this cosmology, there were three cosmic periods. In the first race of man-beings—\textit{si-pueri} to man in every way, and uncared for by the old—life was both long and comfortable. In the second race of man-beings, which followed, life became more difficult. In the third and present race, life was hard and filled with suffering.

The Iroquois undertook various rituals and ceremonies throughout the year, driven by the rhythms of nature and the agricultural cycle. These included the five major ceremonies: the Strawberry Dance, the Bean Dance, the Greenland Hunt, the Deer Dance, and the Bear Dance. Each ceremony was associated with a particular phase of the moon, and the rituals performed were believed to have a direct impact on the natural world.

Belief in immortality was strong among the Iroquois peoples. The souls of the dead were thought to join the ancestors and participate in a form of collective memory and tradition. The rituals and ceremonies were designed to ensure the well-being of the souls of the deceased, and to maintain the balance of the natural world.

The Iroquois believed in a rich pantheon of gods and spirits, each with specific roles and duties. These included the creator god, the god of war, the god of the moon, and the god of the sun. The Iroquois also believed in the spirits of the natural world, such as the spirits of the forest, the spirits of the water, and the spirits of the animals.

The Iroquois were skilled at agriculture, hunting, and foraging. They lived in large communities, governed by a council of elders, and were known for their cooperation and teamwork. The Iroquois language was complex and difficult to learn, and it played a crucial role in maintaining the community's culture and traditions.
rate substance and local influence; his mother, Mary Leith, came of a family of "bonnet lairds" in the adjacent parish of Dornock. He was bap-
tized in the Established Church, which in the west of Scotland was much influenced by traditions of the Reformed Church. His education was received at the Academy of his native town under Adam Hope, who also became schoolmaster to Thomas Carlyle, and at Edinburgh University, where he matriculated at the age of thirteen. He gave no evident sign of his subsequent career; at school his only distinction was that of an athlete. At the University he graduated M.A. in 1809, and, still undistinguished, entered the Divinity Hall. Thereafter he followed the usual course prepara-
tory to the ministry of the Church of Scotland, supporting himself meanwhile by teaching in the Mathematical School recently established in Had-
ingston. With this work he combined the func-
tion of private tutor to the daughter of a medical practitioner in the town, Jane Welsh, the future wife of his friend Carlyle. Two years later, while his University studies still incomplete, he was appointed to the mastership of another new Academy at Kirkcaldy, Fifeshire. In 1815 he became a Probationer of the Church of Scotland, being licensed to preach by the Presbytery of Kinross. He remained at Kirkcaldy for the next three years, combining this new office with the work of his school. In 1818 he resigned his mastership and returned to Edinburgh, where he remained until, in the follow-
ing year, he was appointed assistant to Thomas Chalmers (q.v.) at St. John’s, Glasgow. The fame of the latter was too great, and Irving's genius was too strongly contrasted with that of his chief, to allow much scope for his own work. The next two years, though dis-
charged with uninterrupted loyalty and sufficient credit, was not such as to command the enthusi-
astic appreciation either of the minister or of the congregation of St. John’s, or to attract the notice of those who could further his interests. But his position as assistant to Chalmers was prominent enough to bring him under the notice of the Caledonian Church in Hayton Garden, London, a struggling outpost of the Church of Scotland, the pastorate of which had little to commend it to an amb-
tious man. In 1822, Irving was appointed to this charge, at least of the Atonal class. During his reception ordination from his native Presbytery at Annan.

In less than twelve months his popularity was assured. The incident usually associated with the sudden outburst of the new preacher upon the big world of London was the visit of Canning to the National Scots Church at the instance of his colleague, Sir James Mackintosh, and a subse-
quent speech in the House of Commons, in the course of which the statesman alluded to the eloquence of the sermon then heard. From this moment Irving was provided with the opportunity of his genius, and his permanent congregation, as it was swelled by the numbers drawn from every religious communion, not least from the Church of England, gradually lost its peculiarly Scottish complexion and took on the characteristics of the Old Testament Church. As affording examples of a new type of religious address (the title itself was ambitious, though justified by the contents), and exhibit the claim and recognition of the author to the public mind in a form alike more compre-
hensive and more vital than the conventional echoes of a narrow and moribund evangelicalism to which the ear of the church-goer had become accustomed. The Argument for Judgment to come foreshadows that prophetic teaching which, to-
gether with the exercise of spiritual gifts, constitutes the popular conception of Irvingism. This was followed in two years by Babylon and Infidelity Foredoomed of God, a survey of con-
temporary history in the light of that millennial principle of interpreting Daniel and the Revelation which had been such a powerful appeal to American Christians in the early decades of the 19th cent., and of which Irving’s mind proved readily recep-
tive. Another influence, which approached him from a different quarter, was that of S. T. Cule-
ridge, to whom he had been personally introduced in 1833.

The year 1826 is important as that of the first of the Conferences held at Albury Park, Surrey, by invitation of Henry Drummond, M.P., under the presidency of Hugh MacNeil, rector of the parish and subsequently dean of Ripon. Drummond had already been brought into contact with Irving, and, knowing his town, the state of the prophets, offered him a seat at the Conference, in which his eminence soon gave him a leading place. As will be apparent, the Albury Conferences were not the product of Irving's own brain; his London congregation directly concerned in them, though Drummond, by whom they were organized, afterwards became a prominent mem-
ber of the body associated with his name. The movement represented by them is still active in evangelical circles, and in Irvingism it became a formative principle. The Morning Watch, a periodical inaugurated by the Conference, virtu-
ally became, before its annexation in 1838, the organ of the new community.

In 1827 the church in Regent Square was opened to accommodate the crowds for which the small chapel in Hayton Garden was totally inade-
quate. The building still stands, but no longer as the National Scots Church. The congregation, which continued to use it after Irving's expulsion, became identified in 1843 with the party of the Scottish Disruption, and is now in communion with the English Presbyterians. It was about this time that Irving became acquainted with John McLeod Campbell of Row, who was beginning to re-state the doctrine of the Incarnation. This was developed in three volumes of sermons and a book on the Lost Days, published in 1828. It would be difficult to say that the alleged heresies for which the two men were severally deposed from the ministry had a single source in the mind of either. They are to be regarded as parallel developments of a com-
mon tendency. It is significant that the General Assembly (1831) which condemned Campbell di-
rected that any attempt on the part of Irving to exercise his ministry in Scotland should be met by the Presbytery concerned with an inquiry into his writings on the Incarnation. It was the sermons published in 1828 that contained the statements which first brought him under the suspicion of having asserted the sinfulness of Christ's Ation. Action had actually been taken the previous year (1830) by the Presbytery of London, from the con-
sequences of which Irving escaped only by the doubtful expedient of claiming exemption from their jurisdiction, and by there his ordination. The members of the National Scots Church required their minister to be ordained by a Presbytery in Scotland. His position, though anarchical, was practically ten-
able, because he was no longer under the control of his own Kirk Session, who in a few months were them-
selves to invoke the authority of the same Presby-
tery, when on a grave matter of Church discipline
they found themselves irreconcilably opposed to the pastor whose orthodoxy they had stoutly maintained.

Meanwhile events had taken place in Scotland, destined to precipitate the crisis which in a few years severed Irving from the communion of his native Church. An old friendship existed between himself and Robert Story, minister of Roseneath, which on more than one occasion had brought him to that place to consult with the venerable Alexander Scott, who, coming to London in the first instance as Irving’s assistant, received a call to the Scots congregation at Woolwich, and was in consequence involved before the London Presbytery in a charge of heretical teaching concerning our Lord’s human nature. Sharing Irving’s view of the Incarnation, he insisted that the exceptional gifts of the Spirit, manifested in the Apostolic Church, were a permanent endowment of the Body of Christ, restrained only by the faithlessness of later Christians. This teaching he disseminated, among other places, in his old home in the West of Scotland. At Ferniegare Farm, near Kirkcudbright, Row, lived Mary Campbell, a young woman of extraordinary piety and unusual personality, who, in 1830, while apparently a hopeless invalid, became the subject of spiritual manifestations which her friends clasped as a veritable reappearance of the tongues spoken at Pentecost in the NT. Shortly afterwards the ‘power,’ as it came to be called, visited a shipbuilding family at Port Glasgow. James and Margaret MacDonald, brother and sister, spoke in an unknown tongue, and the latter was raised from sickness at the word of the former. James then proceeded to inform Mary Campbell by letter of what had occurred, and the sister’s act of faith, whereupon she too rose from her bed, apparently fully restored to health. From that time she continued, like Margaret MacDonald, to speak with tongues, with which was associated what was claimed as the gift of prophecy. She married, and became a familiar figure among the friends of the new movement as Mrs. Caird. A sympathetic but not unquestioning account of these proceedings has been preserved in the Memoir of Robert Story, published (Cambridge, 1862) by his son Herbert, sometime Principal of Glasgow University. Wide-spread interest in the phenomena arose throughout Scotland. They were investigated by Thomas Erskine’s Lincluden, who acknowledged their genuineness. No money was made out of them, and there is no evidence of imposture. They may, perhaps, be classed as mediumistic or spiritualistic in nature, and in other parts of Christendom, Irving, predisposed alike by character and antecedents, at once accepted them as a baptism of the Holy Spirit and Fire.

In 1831 the gifts of tongues and prophecy appeared, it was believed, in answer to fervent prayer, among the members of Irving’s congregation. The gift of healing was also claimed, and an attitude towards disease, strikingly allied to that which in later times has become characteristic of Christian Science, began to be assumed by ‘the spiritual.’ But, if disease was spoken of among them as sin, it was because the Spirit was supposed to hold and consume, not negate and annihilate, the flesh. It was, however, the two former gifts that exercised a determining influence on the fortunes of Irving and his people, by being ‘called into the church.’ Irving and some of his ‘prophets’ of the ‘true spirits’ of the prophets, in right of his ministerial commission as angel or pastor, and, finding them to be true spirits, made provision for the exercise of their function in London. Soon afterwards another prophetic utterance sent him on a mission to Scotland, and, reaching Glasgow after a circuitous journey through England and Wales, he died in that city on 7th December 1834, and was buried in the crypt of his adopted cathedral.

The religious society thus brought into being still exists, but it has had little or no public
history. Popularly called Irvingite, a name only recently adopted by the Church, the Catholic Apostolic Church is a faithful successor of the Church of England. It is a congregational church, meeting in Newman Street. Its organization was practically completed when the college of apostles was increased from two to twelve in obedience to a prophetic message. Prophets and evangelists being already in existence, the fourfold ministry was completed by the ordination of pastors and teachers—a local priesthood consisting, in the case of each congregation, of the bishop or angel (cf. the ‘angels of the churches’ in the Apocalypse), or chief pastor, with the elders and deacons. The meeting-place in Newman Street has been replaced by a fine Gothic Church in Gordon Square, and there are churches in Edinburgh and other large cities, as well as at Albury, outside Britain and Germany. Its extension has been limited. Its terms of worship have been assimilated to those of ancient Christendom, and its ritual is elaborate. It possesses a liturgy constructed for the most part on Eastern models. These changes, which were spontaneous and independent, may be traced partly to the study of the Apocalypse, partly to the example of its members. Its ministry has never been professional, being composed for the most part of persons engaged in ordinary occupations. Many of its members are married, and some are actively engaged in public affairs, and as individuals take a prominent part in works of general utility and philanthropy. But in its corporate capacity the community has lived apart, and there has been no sensation caused by the outbreak of the ‘gifts,’ has neither courted nor received a place in popular consideration. This is the natural consequence of the theory of its origin, which also accounts for its apathy in respect to missionary work. It is due, not to the cooling of its early zeal, but to its expectation of a returning Lord. The appearance of the gifts was regarded as the sign of the approach of the Son of Man. The apostolic Church was constituted for the ingathering of the nations. Evangelists were at first sent out into the highways; apostolic journeys were undertaken in Europe and elsewhere; but their object was not to preach, but to feed the people in the spirit and on the method of the great missionary societies, and to bear final testimony before nations and kings to the coming of the Day of the Lord. The witnesses had no zeal for the extension of the Church, but for its preparation as a bride adorned for her husband. They had no special tenets to proclaim as contrasted with the received teaching of Christianity. Their exclusiveness was due not to what they conceived as the false teaching, but to the apathy, of the churches. If they were in a peculiar sense God’s people, it was only because they were aroused, expectant, waiting for the final baptism. Their Church was constituted for the ‘witness’ of the last times. Their testimony given, they were content to wait in spiritual readiness for the rending of the heavens. They became a church within the Church, instituted a rite of ‘sealing,’ or laying on of hands, by which those who received the witness of the last times were set apart against the final Day of Redemption. But the sealed were not necessarily required to withdraw from the communion of other churches. ‘Irvingites’ have always been found communicating and, it is said, even ministering in other religious bodies. A special affinity with those Churches which retained the order of bishops, successors of the ‘angels’ who presided over the apostolic Church, has always been recognized, in spite of the fact that Irving himself had been a Presbyterian minister, and that the connexion of his people with the Church of England was dissolved through the agency of individuals who had abandoned its ministry. The last of the apostles is now dead, and the church is in process of readjustment to the new conditions created by the increase of the college.

Differences of opinion regarding this Church have led to a division of the Irvingites, and to the formation of the ‘New Apostolic Church.’ The latter body holds that the number of the apostles may be five more than twelve, and traces its origin to Germany. Where Irvingism had been introduced by William Caird in 1841, centres were formed at Augsburg, Berlin, Königsberg, and Hamburg. The New Apostolic Church arose from the few members of the congregation in Hanover, by Heinrich Geyer, who formed new apostles chosen. Excommunicated in 1868, he joined Schwartz, the bishop at Hamburg, and formed the new organization under the direction of Schwartz, so that in Germany the new body has discarded much of its elaborate ritual, and lays less stress on the expectation of the speedy Second Coming. Its main centre is Brunswick, where one of their number, F. Krebs, gradually rose to be the ‘father of the apostles’). His successor, H. Niehaus, terms himself the ‘Stammapostel’ as well as the ‘leader of the apostles.’ Since the beginning of the new century the New Apostolic Church has suffered the ‘excommunication’ of the ‘Sceptre of Judah,’ which differs little except that it lays still less emphasis on eschatological hopes.

Except for the United States, no exact statistics are available for the Irvingites. They are supposed to number about 5,000 in Great Britain and about 20,000 in Germany and Switzerland; the New Apostolic branch estimated their adherents at 20,000 in Europe at the end of 1608. According to the last religious census of the United States (1900), the Catholic Apostolic Church reported 11 organizations, with a membership of 2,907 and 14 ministers; the New Apostolic Church, 13 organizations, with a membership of 2,650 and 19 ministers. Since the last previous religious census of 1890 the Catholic Apostolic Church had increased by 1 organization and 1,513 members; the New Apostolic Church was not reported in America in 1890. The main strength of both bodies is in the N. Atlantic States, especially in New York, which has 7 out of the total number of 24 organizations.

2. Criticism.—Our estimate of Irvingism as a religious phenomenon will vary according as we regard it in the particular community in which its principles are embodied or to the spiritual movements of the 19th cent., to which it is vitally related. The main strength of both bodies is in the N. Atlantic States, especially in New York, which has 7 out of the total number of 24 organizations.

The limitations of Irving’s personality and the isolation of his position will to a large extent explain the absurdities and inconsistencies which bear his name. It cannot be said that its failure to command popular sympathy and to carry
with it the reason and judgment of his contemporaries is self-evidence of error, for this would be a mistake of Christianity itself in its initial stages. But we are justified in pointing out the presumptions against a stable and progressive work which are to be found in the character of Irving's genius. His opponents held that he developed his gifts and his influence in inverse proportion to his intellectual equipment. Unlike the Tractarians, he had no solid basis of learning upon which to ground his theology. He had a vision of great religious ideas rather than a comprehensive knowledge of theology. This is the true criticism of his doctrine of the Incarnation. An adequate inheritance of theological thinking would have kept him from those clumsy statements of our Lord's human nature which exposed him to the assaults of a criticism equally ill-equipped. His philosophy was also at fault. While, therefore, he always maintained Christ's immortality from actual sin, he invariably insisted that the humanity which the Son of God assumed was sinful. By this he meant to assert that God became flesh under the conditions which sin had imposed, in order that He might redeem what He took. It is, therefore, the Spirit indwelling 'the creature' which lifts the Body of Christ and all its members above sin. The second proposition, which was the practical conclusion that Irving wished to reach, is genuine Nicene and over against it no better theological tribunal ought to have recognized. The imperfection of the first proposition, which really marked a return to a fuller doctrine of the Person of Christ than the formal evangelism of his contemporaries, lies in the false psychology, misled by the phrase 'sinful flesh,' which does not predicate sin solely of the will. But in so far as Irving's teaching was strong enough for his identification of Christ with human nature as sin has made it, not excluding its guilt, his doctrine cut deeper than that of his successors. The further criticism, which attempts to find in Irving's error concerning the peculiarity of Christ's manhood the secret of his attitude towards the spiritual 'gifts,' and to discredit in consequence his whole system, is not consistent with facts. In so far as the expectation which led him to acknowledge claims disallowed by others sprung out of his theology, rather than out of his reading of the NT, it must be attributed to his strong identification of believers with Him who is the Last Adam. He was more than involved in the statement of Athanasius, that ' God became Man in order that we might be made divine' (de Incarn. Verbi, liv. 3 [PG xxv. 192]). This language is admittedly hyperbolical, but it is intended to cover no more than the 'grace of union,' a phrase by which Hooker, a writer with whom Irving acknowledged his own sympathy, expressed the supernatural powers which human nature received by union with the Lordhead in Christ.

Again, the prophetic element in Irving's personality was allowed to dull his intellectual appreciation. John's experience rather than the Pauline temper, but in the form which appears in the Apocalypse rather than in the Fourth Gospel. He was the mystic in fervent action, not in calm contemplation, and not in the passion of events, and not in the natural silence, fascinated him. God was always coming forth out of His place rather than inhabiting eternity. His own impatience of spirit was manifested in his eager desire for speech, and his presence witnessed divine events from day to day. This injured his sense of proportion, and led him to give values to occurrences within his own circle which at once endowed them with significance in the history of the Church of Christ and of the ancient prophets with a difference. They saw in their immediate social experience types of God's judgments; Irving saw in the activities of Regent Square forces intimately connected with the shaking of worlds. This want of proportion in the Irvingite movement is one of the features that most readily offer themselves to the critic. If we may not deny that the Spirit manifests Himself in most of and pursues methods that are 'foolishness with men,' we are yet bound to judge a phenomenon in relation to its environment, and to estimate its value in some proportion to its effectiveness. Closest connected with the foregoing must be noted Irving's lack of humour, which belongs also to the whole movement. He always takes himself very seriously. Every occasion is great, every speech an appearance. His style is stilted, often turgid, never delicate. The world is identified too readily with Babylon. There is none of that shrewd observation of the facts of society which makes the prophet canonic and the seer sympathetic. He does not really know life as he knows his Bible. It follows that he did not know men, still less women. He took every one at his own valuation, mistook cranks for persons of insight, and became the tool of minds smaller than his own. It is a mistake to charge him with conceit. The movement which revolved round him never made him its centre or took the impress of his personality. It claimed an inspiration of the Spirit, but never through the medium of himself. No one, e.g., has ever ventured to claim for him the position assigned to Montaups in the primitive schism with which Irving sympathised, or to make the Irvingites resent being so named, not merely as unchristian, but as wrong in fact. The secondary position which their leader assumed without complaint after his identification of Christ with human nature as sin has made it, not excluding its guilt, his doctrine cut deeper than that of his successors. The further criticism, which attempts to find in Irving's error concerning the peculiarity of Christ's manhood the secret of his attitude towards the spiritual 'gifts,' and to discredit in consequence his whole system, is not consistent with facts. In so far as the expectation which led him to acknowledge claims disallowed by others sprung out of his theology, rather than out of his reading of the NT, it must be attributed to his strong identification of believers with Him who is the Last Adam. He was more than involved in the statement of Athanasius, that ' God became Man in order that we might be made divine' (de Incarn. Verbi, liv. 3 [PG xxv. 192]). This language is admittedly hyperbolical, but it is intended to cover no more than the 'grace of union,' a phrase by which Hooker, a writer with whom Irving acknowledged his own sympathy, expressed the supernatural powers which human nature received by union with the Lordhead in Christ.

Again, the prophetic element in Irving's personality was allowed to dull his intellectual appreciation. John's experience rather than the Pauline temper, but in the form which appears in the Apocalypse rather than in the Fourth Gospel. He was the mystic in fervent action, not in calm contemplation, and not in the passion of events, and not in the natural silence, fascinated him. God was always coming forth out of His place rather than inhabiting eternity. His own impatience of spirit was manifested in his eager desire for speech, and his presence witnessed divine events from day to day. This injured his sense of proportion, and led him to give values to occurrences within his own circle which at once endowed them with significance in the history of the Church of Christ and of the ancient prophets with a difference. No one, e.g., has ever ventured to claim for him the position assigned to Montaups in the primitive schism with which Irving sympathised, or to make the Irvingites resent being so named, not merely as unchristian, but as wrong in fact. The secondary position which their leader assumed without complaint after his identification of Christ with human nature as sin has made it, not excluding its guilt, his doctrine cut deeper than that of his successors. The further criticism, which attempts to find in Irving's error concerning the peculiarity of Christ's manhood the secret of his attitude towards the spiritual 'gifts,' and to discredit in consequence his whole system, is not consistent with facts. In so far as the expectation which led him to acknowledge claims disallowed by others sprung out of his theology, rather than out of his reading of the NT, it must be attributed to his strong identification of believers with Him who is the Last Adam. He was more than involved in the statement of Athanasius, that ' God became Man in order that we might be made divine' (de Incarn. Verbi, liv. 3 [PG xxv. 192]). This language is admittedly hyperbolical, but it is intended to cover no more than the 'grace of union,' a phrase by which Hooker, a writer with whom Irving acknowledged his own sympathy, expressed the supernatural powers which human nature received by union with the Lordhead in Christ.
Irving exulted his hearers to prepare themselves for the imminent judgment which awaited the world, and the coming glory which was to descend upon the Church. The great event had appeared, because past and future had alike lost their importance in view of the approaching end of the age. The ecclesiastical Church order, worked out by the miscellaneous group of ministers constituted his "ecclesiastical Church" after the rupture with the Church of Scotland, made no pretence of continuity with the past, and did not, in one sense, claim to supersede existing ministries. They were not fashioning an instrument for the conversion of mankind; they were simply settling their house in order to wait for the coming King.

There is, however, one criticism often levelled at Irvingism which has no foundation in fact. It is accused of adding to the Christian faith, by supplementing it with a revelation of its own. This is not the case. It does not claim to add anything to the Catholic interpretation of the Person and Work of Christ. Believing themselves to be a part of the universal Church, its adherents claim that, as the Spirit spoke by prophecy in the churches of Antioch and Corinth, so He spoke in their church in London. They claimed that the work for the evangelization of the world was the ministry of the prophets, so (they hold) a ministry was set apart for the sealing of believers in the latter day. Our attitude towards such a claim may involve rejection, but not on the ground that it adds to the deposit of faith.

Perhaps the greatest flaw in the movement was its unorthodox attitude towards the progressive developments of the early 19th century. Its adherents had not the power of discrimination to distinguish between the true and the false elements in the liberalism of the day. They saw in it nothing but the final apostasy, a destructive effort of Satan. In the weaver of change they failed to detect the operation of forces directed by the Spirit and prophecies of the Kingdom. In Glasgow, Irving had shown no sympathy with the social schemes of Chalmerians, whose experiment was in full operation when he was assistant at St. John's. So far as he was a politician, it was an unprofitable one for him. Toryism had committed itself to his mind and expressed itself in his personality. His leading followers in London were mainly of the same mould. There was not so much in the asceticism of the Oxford movement, with its antiquarian tendency and its rigidity of form, as was absent from Irving's teaching. He was always evangelical, even if his general vital and less legal than that of his immediate predecessors. And, amid much that was fantastic in the methods of interpretation current among those millenarian Christians to whose speculations Irving lent the authority of his name, he emphasized that expectation of the Second Coming which the study of apocalyptic literature among the scientific theologians and Biblical students of the 19th cent. shows to have been an integral element of apocalyptic and primitive Christianity, and the recognition of which as the ultimate hope of the Church is necessary to a true estimate of the task which confronts it, as the witness among all nations to a crucified, exalted, and returning Lord.

ISHTAR.—Ishtar was the Babylonian and Assyrian form of the divinity who was worshipped in Canaan as Ashtar (Ashoreth, Ashtoreth), in Mesopotamia as 'Attar, in Moab as 'Ashtar, in South Arabia as Athtar, and in Abyssinia as Athshat, Asphalt, Atargatis, Sareians.

I. THE SOURCES OF INFORMATION.—The cult of Ishtar is now known from a multitude of original Bab. and Assy. records: (1) historical inscriptions of the kings, (2) mythological texts, (3) hymns and prayers, (4) magical texts, (5) omen, (6) boundary stones, and (7) artistic representations in statues, reliefs, seals, etc. (see literature at end of art.).

II. THE ORIGIN OF ISHTAR.—In the art. Ashtar the reasons are given for thinking that this goddess was not a creation of the Semurrians, or of the Semitic Babylonians, but a primitive Semitic divinity. She was a personification of the force in nature that showed itself in the giving and the taking of life. As a glossator of Plautus has aptly expressed it (Mercator, iv. vi. 283 f.), she was ‘Diva Ashtar, hominem deorumque vis, vita, salus; rationem humanitatis intellegit.’ The conception of her character, which is common to all the Semites, was brought into Babylonia by the first Semitic settlers, and formed the basis of the development of the goddess in the third.

III. THE IDENTIFICATION OF ISHTAR WITH OTHER DIVINITIES.—The Semites who entered Babylonia found on the ground a number of local goddesses of the original Semanian population whom they proceeded to identify with their mother goddess. These old goddesses eventually disappeared in Ishtar, leaving only their names as titles, and some of their functions as attributes. Some of these absorbed Semanian goddesses are as follows.

1. Innanna, or Ishtar of Ereh.—In Semitic inscriptions of the Old Bab. period the most conspicuous goddess is the one whose name is written with an ideograph which the Assyrians sometimes reproduced as EI (R. Brunnnow, A Classified List of Ideographs, Leyden, 1889, no. 2561), which, according to the syllabaries, is to be read Innanna, Inanna, Anu, or Ninlil (V. Jenson, KIB iii. 1882) 1, 20). The temple of this goddess was the temple called E-an-na at Ereh (Vorderasiatisches Bibliothek, v. 1907) 1, 192 n.). For her cult in early times see FAB i. 1, 283, s.v. ‘Ninlil.’ In binalgal, texts, syllabaries, and historical inscriptions, Innanna is repeatedly equated with Ishtar (e.g. Owa. Texts, xxiv. [1908] p. 41, line 75; PSBA xxxi. 1889) 29, pl. ii. line 5; Code of Hammurabi, iv. 40-45). A large number of hymns originally addressed to Innanna are supposed to be Ishtar (e.g. PSBA xxxi. 60). For this reason, Ishtar bears the titles ‘Queen of Eanna,’ ‘Queen of the land of Ereh’ (loc. cit.).

2. Nin, or Ishtar of Lagash and Nineveh.—In the Old Bab. inscriptions the goddess mentioned most frequently after Innanna is the one whose name is often written with the ideograph generally read Nin (Brunnnow, 4890). This goddess was used also for a district of Lagash and for the city of Nin, or Nineveh. Hence it is inferred that the sign for the goddess and the district of Lagash should also be read Nin. It is possible that Nin was originally a title that Nineveh was prefixed by colonists from Lagash (cf. Gn. 10), and that the patron-goddess of Nineveh was originally the same as the patron-goddess of the old city of Nin (see also § 1). Also Nin should be written in the Old Bab. period see FAB i. 1, 283, s.v. ‘Nin’.

Eannatum (c. 3200 B.C.) carefully distinguishes Ninharak, Innanna, and Ninlil (18, 50°); so also Uli-Bab (c. 2700 B.C. [FAB i. 1, 90, 52]); but Hammurabi (c. 1800 B.C.) calls the goddess of Kish Innanna (Code, ii. 59-65), and Kurigalzu i. 500 B.C.) gave to Nin of Ishtar of Babylon a tablet that had originally been dedicated to Innanna, which shows that he identified the goddesses (H. V. Hfilprecht, Old Bab. Inscr., Philadelphia, 1898, 1, 11, nos. 15, 43). The Assy. kings frequently identify Ninlil = Belit-Ishtar (Brunnow, 11046; KIB [1889] 28); Winckler, Jastrow, Bab. and Ass. 1899, 105; and in one copy of a prayer of Assurbanipal the goddess is called ‘Nin’ in the inscription of Osiris of Babylon (Jastrow, Bab. and Ass. 418, n. 6).

Zarpanit, or Ishtar of Babylon. —The consort of Marduk, the chief god of Babylon, was Zarpanit, whose name means ‘bride of Nineveh,’ ‘shining,’ but was popularly interpreted by the Semites as Zer-banit, ‘seed-producing,’ with allusion to the reproductive function of the goddess.

Inanna and Ninlil (FAB i. 1, 18, 50°); so also Gudea (c. 2500 B.C. [FAB ii. 104, 142]). Hammurabi, on the contrary, calls the goddess of Nineveh Ninlil (Code, iv. 83), and the Assyrians always call her Ishtar. This shows that Ninlil was early identified with both Innanna and Ishtar (cf. Brunnow, 1060). The earliest Assyrian creation of Ninlil is in a prayer of Ashurbanipal ii. (c. 1100 B.C.; see literature). From that time onward she is frequently named in the royal inscriptions (see Barton, Hebrews, ix. [1892-93] 60), and her temple in Nineveh bore the name of E-sarratu. Hence she is described as ‘dwelling in E-sarratu,’ and Ninlil is called ‘beloved of Ishtar.’

3. Anunn, or Ishtar of Akkad.—The chief goddess of the N. Bab. city called Agade, or Akkad, was Anunnit. The name of her temple was E-uluma.

For her worship in early times see FAB i. 1, 282, s.v. ‘Anunnit’; Code of Hammurabi, iii. 54, iv. 471. There is no record that the Assyrian kings paid her any special attention, but she was a great favourite with the Neo-Bab. king Nabonidus, who honoured her above all goddesses, and rebuilt and repaved the temple of Akkad (FAB iv. [1912] 300, s.v. ‘Anunnit’). For her identification with Ishtar see KIB iii. 1, 1026; Jastrow, Bab. and Ass. 111; PSBA xxxi. 67; H. Zimmer, Beitrag, Leipzig, 1889, 105-111; Barton, Hebrews, x. 29; FAB iv. 170, 240; 246;

4. Nin-nil, or Ishtar of Nippur.—The chief goddess of the earliest Bab. pantheon was ‘En-nil, ‘master of the wind,’ the patron-deity of Nippur. His consort was Nin-nil, ‘mistress of the wind’ (see II. 236). Under this name she was worshipped in the temple of E-me-te-ur-nil at Kish, and in Girzu, a district of Sippar (FAB i. 1, 284, s.v. ‘Nin-nil’; Code of Hammurabi, iii. 54). Still another title of Nin-nil was Nin-mah, ‘exalted mistress,’ or ‘Mah, ‘exalted’ (FAB i. 1, 138, 196, 257); Brunnow, 1060, 1106). Under this name she had a temple at Babylon called E-mah (KIB iii. 1, 199); the seat of the Nin-mah was Nippur (KIB ii. 1, 1001, 113). For the Semitic settlers in Babylonia Nin-nil was the Ninn, or ‘Mistress, ‘par excellence; hence she called her husband Bel, ‘Mistress, just as they called her husband Bel (see KIB ii. 238; Brunnow, 11064 ff).

Eannatum (c. 3200 B.C.) carefully distinguishes Ninharak, Innanna, and Ninlil (18, 50°); so also Uli-Bab (c. 2700 B.C. [FAB i. 1, 90, 52]); but Hammurabi (c. 1800 B.C.) calls the goddess of Kish Innanna (Code, ii. 59-65), and Kurigalzu i. 500 B.C.) gave to Nin of Ishtar of Babylon a tablet that had originally been dedicated to Innanna, which shows that he identified the goddesses (H. V. Hfilprecht, Old Bab. Inscr., Philadelphia, 1898, 1, 11, nos. 15, 43). The Assy. kings frequently identify Ninlil = Belit-Ishtar (Brunnow, 11046; KIB [1889] 28); Winckler, Jastrow, Bab. and Ass. 1899, 105; and in one copy of a prayer of Assurbanipal the goddess is called ‘Nin’ in the inscription of Osiris of Babylon (Jastrow, Bab. and Ass. 418, n. 6).
ISHTAR

One of her titles was Erat, 'pregnant.' (C. F. Lehmann, Shanashnezemsuk, Leipzig, 1892, ii. 36.) She had a chapel called Kudshuq in Assuriga, the great temple of Marduk (V.A.B. iv. 726-4). For references to her cult, see 1 Hammratu, London, 1888-1900, no. 10, i. 41, ii. 12; Code of Hammurabi, xlii. 43, 56; KIB ii. 138 f.; Winckler, Sargun, i. 180; KIB iv. (1896) 307, et v. Zarpant.i. When, through the rise of the city of Babylon, Marduk became the supreme god to the Babylonians, she was identified with Emili = Bel, the ancient chief god (E.R.E. ii. 296 f.). The logical procedure was then to identify Zarpant, the wife of Marduk, with Ninlil = Belit, the wife of Emili = Bel (V.A.B. iv. 288 f.); KIB ii. 233 f.; J. A. Craig, Rel. Texts, Leipzig, 1895, i. pl. 12, obv. 25-26; Jastrow, Rel. Texts, i. 536.) Accordingly, when in later texts we read of 'Ishtar of Babylon,' we are to understand this of Zarpant. Herodotus (i. 199) calls Zarpant Aphrodite.

6. Ishtar of Ashur.—At Ashur, the capital of the early Assyrian monarchy, an Ishtar was worshipped, who was distinguished by the name Ishtar Ashurilatu, or 'Ishtar of Ashur' (KIB i. 43, 38°, 39°; L. W. King and E. A. W. Budge, Annals of the Kings of Assyria, London, 1902, i. 198 f.; Tiele, V.A.B. iv. 288, 316, 337). The primitive name of Ishtar of Ashur and the peculiarities of her cult are unknown.

7. Ishtar of Arbel.—At Arbel another Ishtar was worshipped in a temple called Egeshshana-kalamma, 'house of the lady of the world' (PSBA xxxi. 68). In the inscriptions of the Assyrian kings, from Sennacherib onwards, Ishtar of Nineveh and Ishtar of Arbel are mentioned as though they were separate goddesses (KIB ii. 1053, 124°, 154°). An oracle to Ešaraddon (WA.II iv. 68, coll. iii. 15) begins: 'I am Ishtar of Ashur.' Asurbanipal distinguished sharply between Ishtar of Nineveh and Ishtar of Arbel, and paid more honour to the latter (KIB ii. 178°, 200°, 203°, 248°, 255, 290°). Several astrological reports from her temple are known (WA.II iii. (1570) 61, no. 54 f.). Although she is not mentioned before Sennacherib, it is probable that she was an ancient local divinity of Arbel. The name of the city Arba-isu suggests either that four divinities were united there or else that the original name was Arba (cf. Kirjath-Arba in Palestine). The Sumerian name of her temple Egeshshana-kalamma suggests the high antiquity of her cult. The same conclusion is demanded by the fact that Ashur appears in connexion with the re-building of her temple. Whose 'wall from old (ula-sepu) was not built' (KIB ii. 290°).

8. Other goddesses identified with Ishtar.—The minor goddesses of the Old Bab. pantheon came also sooner or later to be identified with Ishtar. Antu, the consort of Anu, is called Ishtar by Sargon (Winckler, Sargun, i. 464), and is mentioned withNineveh and Ishtar by the lists (O. R. Texta, iv. 21 and 29; texts i. 22°, 23°; PSBA xxi. 51). Dinkina, the consort of Ea, is identified with Belit—Ishtar by Sargon (ou. cit., ins. 34). Nin-anap-luna, the consort of Sin, has the attributes of Ishtar in a hymn published by Craig (Rel. Texts, ii. pl. 1-2) and translated by Jastrow (Rel. Texts, ii. 547), and he has had to do with a similar fate, inasmuch as she early ceased to have any independent importance in Sumerian literature. The ancient name addresses Innana-erin, or Ishtar of the cedar forest—Inanna (see above, 8), by the title of 'king' (O. A. Barton, A Sketch of Semitic Origins, New York, 1899, p. 153, ii. 1824; see also H. A. Sayce, Rel. Egypt and Bab., Edinburgh, 1898, p. 357). Whatever tendencies of the Semitic hero-goddesses we existed among the Semarians, they exerted no influence upon the Semitic conception of Ishtar. For the Babylonians and Assyrians she remained exclusively feminine. The few passages in which she receives male attributes do not imply that she had changed her sex or was bisexual, but show only a sort of henotheism, in which for the moment she was regarded as the supreme divinity. Thus in the hymn published by Haupt (Cl. Ant. et Syn., Keilinschriften, 113-115; Prince, J.A.O.S. xcvii. (1906) 153 f.) Ishtar says (obv. 23-24): 'I am En-lil and I am En-erin.' The astrological tablet (WA.II iii. (1510) 327) contains the statement that 'Dilbat (the star of Ishtar) is a female at sunrise and becomes a male at sunset.' A hymn to Ishtar of Nihirm (Craig, Rel. Texts, ii. pl. 79) reads: 'Like Ashur she is bearded with a heart.' This probably refers merely to the halo, or radiance, that surrounds her star (see Jastrow, Rel. Texts xxi. (1913) 371-398).

IV. THE CHARACTER OF ISHTAR.—As a result of the syncretism which has just been described, Ishtar inherited the characteristics of several goddesses; nevertheless, at the end of the process she retained all the traits of the primitive Semitic Asherah.

1. Water-goddess.—In E.R.E. ii. 119 it is shown that the primitive 'Asherah was closely connected with springs as the source of life in the Arabian desert. This character she retained in Babylonian.
The sign for Nita, 'fish-house,' shows that she was originally a water-goddess; and her name Nita probably means 'mistress.' 8

8. H. Langdon, Pastuns, Paris, 1909, p. 247. In another hymn she is called 'the glad-eyed, goddess of desire, goddess of signing' (PSBA xxxi. 190). Offerings of fish were made to her, as also to INMANA (PSBA xxxii. 385). She is called 'amorous mother-goddess at whose side no god or bird dwells' (S. H. Langdon, Pastuns, Paris, 1909, p. 247). In another hymn she has been called 'queen of the sea.' (PSBA xxxi. 190.)

INMANA, the goddess of the sea, is often called 'fishara of the sea.' Archaic representations of her show her with some form of fish. Others show her with a fish on her head. In the middle ages she was called 'the mother of the fish.' The word 'fishara' is derived from 'fish' and 'arar,' 'the sea.'

In a hymn to SIMILIN (JASXL xxxii. 190), she is called 'the mother of the gods,' 'the child of the gods,' 'the bringer of spring,' 'the source of all,' 'the mother of all.' She is also called 'the mother of the gods' (JASXL xxxii. 190). In another hymn she is called 'the mother of all' (JASXL xxxii. 190). The word 'fishara' is derived from 'fish' and 'arar,' 'the sea.'

2. Giver of vegetation. - As the goddess of springtime, INMANA was naturally connected with the vegetation that prevailed.

In a hymn (Reiter, Hymnen, no. 56, rev. 140.) she says: 'In the heavens, I watch my rain and send it to the earth. In the rain I take my place and cause the green to spring forth.' In another hymn (Crit. Rel. Texts, i. pl. 15-17) she is called 'Gunos, who gives the growth of plants.' In a lament (HAP, xiv. 15, and i. 195, KELKELÎ, xvi. 115.) she is called 'the one who causes verdur to spring forth.' In the Gilgamesh Epic she says to her father Antu: 'I have kept up my gardens, and I have produced fodder for the cattle.' If there should be seeds, if there should be a garden, if there should be a cattle flock, I have gathered the seeds and I have made the fodder great for the cattle.' In this capacity she is the wife, or mother, of Tammus, the personification of vegetation. In another hymn (JASXL xxxii. 190) she appears as the personification of Ishtar in the earliest Babylonian inscriptions (see VAM, i. 157). In another hymn (Hap., 157, KELKELÎ, xvi. 115.) she says: 'In the verdure I hear the voice of the tree, which is probably derived from 'ezas,' 'green,' rather than from 'uruz,' 'Ezech' (JASTROW, i. 443, n. 6). She is also called 'queen of the garden,' 'queen of the verdure.' If the tree has gone to the bosom of the earth, and the dead are numerous in the field, how long shall the springing of verdure be restrained? How long will the leaves be green in the field?'

'To bring him home to life Ishtar descends to Sheol (JASXL xxxii. 190) and, as Ishtar, appears as the luminous image of Ishtar in the earliest Babylonian inscriptions (see VAM, i. 157). In another hymn (Hap., 157, KELKELÎ, xvi. 115.) she says: 'In the verdure I hear the voice of the tree, which is probably derived from 'ezas,' 'green,' rather than from 'uruz,' 'Ezech' (JASTROW, i. 443, n. 6). She is also called 'queen of the garden,' 'queen of the verdure.' If the tree has gone to the bosom of the earth, and the dead are numerous in the field, how long shall the springing of verdure be restrained? How long will the leaves be green in the field?'

In a companion hymn (HAP, xiv. 15, and i. 195, KELKELÎ, xvi. 115.) she says: 'In the verdure I hear the voice of the tree, which is probably derived from 'ezas,' 'green,' rather than from 'uruz,' 'Ezech' (JASTROW, i. 443, n. 6). She is also called 'queen of the garden,' 'queen of the verdure.' If the tree has gone to the bosom of the earth, and the dead are numerous in the field, how long shall the springing of verdure be restrained? How long will the leaves be green in the field?'

In a hymn to the goddess INMANA (JASXL xxxii. 190) she says: 'At the beginning of spring I fill the vessel, the mountain spring of Dumuzi I warm my head.' Ishtar is brought to the goddess by Shamash by sprinkling her with the water of life (KIB vi. 187.)

3. Creatress of animals. - In an amulet published in Mitt. der deut. Orient-Gesell., no. 9 (1901), p. 13, and translated by Jastrow (i. 335 fl.), Ishtar is called 'creator of the creatures.' In a hymn (HAP, xiv. 15, and i. 195, KELKELÎ, xvi. 115.) she says: 'In the verdure I hear the voice of the tree, which is probably derived from 'ezas,' 'green,' rather than from 'uruz,' 'Ezech' (JASTROW, i. 443, n. 6). She is also called 'queen of the garden,' 'queen of the verdure.' If the tree has gone to the bosom of the earth, and the dead are numerous in the field, how long shall the springing of verdure be restrained? How long will the leaves be green in the field?'

In a companion hymn (HAP, xiv. 15, and i. 195, KELKELÎ, xvi. 115.) she says: 'In the verdure I hear the voice of the tree, which is probably derived from 'ezas,' 'green,' rather than from 'uruz,' 'Ezech' (JASTROW, i. 443, n. 6). She is also called 'queen of the garden,' 'queen of the verdure.' If the tree has gone to the bosom of the earth, and the dead are numerous in the field, how long shall the springing of verdure be restrained? How long will the leaves be green in the field?'

In a hymn to the goddess INMANA (JASXL xxxii. 190) she says: 'At the beginning of spring I fill the vessel, the mountain spring of Dumuzi I warm my head.' Ishtar is brought to the goddess by Shamash by sprinkling her with the water of life (KIB vi. 187.)

3. Creatress of animals. - In an amulet published in Mitt. der deut. Orient-Gesell., no. 9 (1901), p. 13, and translated by Jastrow (i. 335 fl.), Ishtar is called 'creator of the creatures.' In a hymn (HAP, xiv. 15, and i. 195, KELKELÎ, xvi. 115.) she says: 'In the verdure I hear the voice of the tree, which is probably derived from 'ezas,' 'green,' rather than from 'uruz,' 'Ezech' (JASTROW, i. 443, n. 6). She is also called 'queen of the garden,' 'queen of the verdure.' If the tree has gone to the bosom of the earth, and the dead are numerous in the field, how long shall the springing of verdure be restrained? How long will the leaves be green in the field?'

In a companion hymn (HAP, xiv. 15, and i. 195, KELKELÎ, xvi. 115.) she says: 'In the verdure I hear the voice of the tree, which is probably derived from 'ezas,' 'green,' rather than from 'uruz,' 'Ezech' (JASTROW, i. 443, n. 6). She is also called 'queen of the garden,' 'queen of the verdure.' If the tree has gone to the bosom of the earth, and the dead are numerous in the field, how long shall the springing of verdure be restrained? How long will the leaves be green in the field?'

In a hymn to the goddess INMANA (JASXL xxxii. 190) she says: 'At the beginning of spring I fill the vessel, the mountain spring of Dumuzi I warm my head.' Ishtar is brought to the goddess by Shamash by sprinkling her with the water of life (KIB vi. 187.)

As a mother Ishtar was believed to love man-kind and to grieve over their sorrows. At the deluge she cried like a woman in travail over the death of the children that she had borne (KIB vi. 187.)

Several laws have been passed which she bewails the destruction of her city Ereh by the Elamites (see literature). In a hymn she is described as 'she who loves all men' (PSBA xxxi. 60). Another hymn says: 'Thou lookest most kindly upon the Children of Ereh and the wrong-doer daily' (JASTROW, ii. 67).

As another hymn calls her the 'mistress of heaven.
and earth, who hears prayers, who listens to complaints, who receives petitions, the compassionate goddess, who loves righteousness" (ib. ii. 112).

7. Giver of earthly blessings.—On account of her mother-love for men she bestowed life, health, prosperity, and all other blessings upon them.

Gudea speaks of her life-giving glance (V.A.B. I, 73). Kudurrus describe their goddess as "his life, prosperity, and all other blessings" (ib. 230). And-Sin declares that she gave him long life (ib. 214). Sargons says of her: "He endowed the Inshushinak, the land to prosper" (Winkler, Sargons, I, 845); and Nebuchadrezzar affirms that she gives him length of days (V.A.B. IV, 176). An old hymn to Kish says: "She gives prosperity to the man with whom she is pleased (=all), she guards his path, etc.

The physiognomy of Mashpiil with whom she is pleased is now often seen in the mirror. Her hand is with the masnawis and the scribes. Who can do anything without her?" (Jastrow, c. 533). Another hymn calls her "Ishtar, without whom none possesses peace and joy" (ib. 347).

She was regarded as the mistress of magical acts with which she counteracted the wills of the demons (Zimmern, Beiträge, p. 33; A.J.S.E. xxiii. 151). Accordingly, she is constantly invoked as a helper in the magical exorcisms (Jastrow, i. 283, 290, 292, 300, 315, 321).

On account of her good-will and her power, prayers were addressed to her more frequently than to any other deity. Ashurbanipal prayed for her long life for himself and his brother (Lahmann, Shamashshumukin, pl. xxiii.-xxiv.). Nebuchadrezzar prayed Ishtar, or Nimush, for long life, posterity, victory, and success. A large number of prayers and penitential psalms to Ishtar were found in the library of Ashurbanipal (see list in Jastrow, ch. xxv. II). These breathe a noble ethical and religious spirit, and are among the finest products of the Bab. religion. In one of them the poet expresses the joy of serving her goddess in the words: 'Her song is sweeter than honey and wine; sweeter than sprets and herbs, superior indeed to pure cream' (cf. Ps 19th). In many of the prayers Ishtar is asked to intercede with her father Sin, or with some other god, on behalf of the supplicant.

8. Moral counselor of men.—As the mother of men, who loved and cared for their well-being, she was naturally concerned with the enactment of laws and ordinances.

She was 'queen of all dwelling-places,' 'imparting all laws, wearing the ruler's crown,' 'executing judgments and despond to the king;' 'enjoining righteous judgments;' 'giving her name to the sovereignty of the land, and placed in his hand the sceptre over all peoples (V.A.B. i. 2459).

9. Giver of revelations.—In her care for men, it became necessary for Ishtar at times to make special communications of her will. Gudea calls her 'the child of Eridu, who counsels what is best, keenest interpreter of the gods' (V.A.B. I. 1, 90, 29). He says also that 'she directed her attention to the welfare of man' (ib. 1). ‘Lilum-Sin calls her 'reveler of all decisions, who causes the oracles of the land to remain' (ib. 218c).

Through an association of ideas with verdure, green colour in liquid abundance, flood, and birds were regarded as omens sent by her (Jastrow, ii. 722, 823). Many omens derived from the observation of nature were attributed to her (ib. 326, 327, 430 f.). She also inspired prophets to deliver her message. In a prayer of the king, Nebuchadrezzar (ib. 113) the king prays: 'Grant me a trustworthy oracle.'

Through prayer and through dreams, Ishtar, to Nineveh and Ishtar of Arbela for direction (K.I.B. ii. 107). A severe storm, or flooding, or a political calamity (ib. 113) the king prays: 'Grant me a trustworthy oracle.'

The king, Nebuchadrezzar, (ib. 120) the king prays: 'Grant me a trustworthy oracle.' She also inspired prophets to deliver her message. Ishtar was also addressed as 'the pleasant earth' (ib. 113) the kingly prays: 'Grant me a trustworthy oracle.'

Because of her influence over nature, she was also the patron of a great number of occupations and professions, from the farmer to the doctor. She was also the patron of the arts and sciences.

10. Destroyer of life.—In striking contrast to the life-giving beneficent character of the goddess that has been seen before, we now see her in another aspect as a destroyer of life. From the earliest times it must have been observed that life and death were only two aspects of the same force, and that love was the frequent cause of jealousy, hatred, and strife.

For Tammuz, the lover of her youth, she appointed yearly death (K.I.B. vi. 189). With him died the vegetation that she had called into life. On his account she herself had to descend into Sheol, and be afflicted there with all the diseases (ib. 30-41). Hammurapi (Code, ii. 245 f.) says that he 'decked with green the sepulchre of Maktu (the queen) of Sippar.' The sufferings that she endured she also inflicted upon man. Elamites she smote with disease and death (K.I.B. vi. 190). She sent the heavenly body to destroy Gilgashesh (ib. 172). Men prayed to her as the cause of sickness and sufferings. One lament says: 'The descent to the house of a man, thou art as the jackal which hath been caused to come to thee. She is a helper against the demon Tiu (ib. 347), and against the wicked seven' (ib. 361 f.).

On account of her good-will and her power, prayers were addressed to her more frequently than to any other deity. Ashurbanipal prayed for her long life for himself and his brother (Lahmann, Shamashshumukin, pl. xxiii.-xxiv.). Nebuchadrezzar prayed Ishtar, or Nimush, for long life, posterity, victory, and success. A large number of prayers and penitential psalms to Ishtar were found in the library of Ashurbanipal (see list in Jastrow, ch. xxv. II). These breathe a noble ethical and religious spirit, and are among the finest products of the Bab. religion. In one of them the poet expresses the joy of serving her goddess in the words: 'Her song is sweeter than honey and wine; sweeter than sprets and herbs, superior indeed to pure cream' (cf. Ps 19th). In many of the prayers Ishtar is asked to intercede with her father Sin, or with some other god, on behalf of the supplicant.

11. Storm-goddess.—Either as a destroyer or as a sender of rain, Ishtar was occasionally regarded as a storm-goddess. She was 'the lofty one who causes the heavens to tremble, the earth to quake, the flaming fire, who causes the bird-like Zu (the storm cloud) to fly forth as a devourer and destroy the mountains like dead bodies' (A.J.S.E. xxviii. 1907 f., 164 f.). In her character as storm-goddess she waged war with the gods of the mountains (A.J.O. iv. 144). In art she was often represented holding a caduceus of two serpents (Ward, pp. 155, 405, 408). This is apparently a symbol of the lightning.

12. War-goddess.—The primitive Semitic mother was the leader of her clan in war, and therefore from the earliest times Ishtar was a war-goddess (E.R.E. ii. 116). She promised Gilgamesh victory over all lands (K.I.B. i. 1698). She brought the Elamites upon her city of Erech (ib. 272). Hammurapi speaks of casting the net of Ninippar over the heads of the people of Gishas (ib. 216). Hammurapi (ib. 228) says: "She is the mistress of mankind" (Jastrow, ii. 76). Hammurapi says of her (ib. 110): "mistress of justice" (ib. 203). In a hymn she says: 'In the dispute when I take part, the woman who understands plaiting am I in the dispute, she who understands the law am I' (A.J.S.E. xxiii. 149). Like Shamash, she is the judge of the world. She is also the goddess of warfare, and the one who has the power to inflict the death of man. She is often called 'mighty hero of Ishtar, the warrior-goddess' (ib. 135). Nebuchadrezzar says: 'the command of Ishtar and Adad, the gods of war,' he defeated the Elamites (ib. 1694). In the inscriptions of the Assyrian kings, Ishtar appears chiefly as a war-goddess. Taduhili calls her 'the lord who supports the gods, mistress of warfare, the armorer of battle' (ib. 1059). Ashurbanipal says: 'set her heart upon the making of battle and war' (ib. 1609). He first applies to her the title 'Queen of Kittimurru,' i.e. 'Queen of Conflict' (Jastrow, i. 215, 245). Hammurapi (ib. 215) calls her the 'first born of heaven and earth, who is perfect in bravery, who establishes the fates, who enlarges my soul' (ib. 129). Ishtar is called 'she who controls heaven and earth' (ib. 1259). Sommerrich says: '1 prayed with Ishtar of Nineveh, Ishtar of Arbela, the great goddess, my mistress, I rushed to the source of water, and found no rival to her' (ib. 12479). For Ishtar's part in Ashurbanipal's campaign see a passage in which he makes her the savior who was sent to assist him in his wars. When she appeared to his hear, she appeared full of flames (ib. 2650 f.). Nabonidus calls her 'Ishtar, mistress of battle, who reigns on the mountain peaks; who overcomes the enemy, destroys the wicked' (V.A.B. vi. 2595). The war-goddess is personified in the hymns. One meets such titles as 'warlike daughter of Sin,' 'leader in battle,' 'Ishtar is known in courage,' 'goddess of heroes,' 'sharp dagger,' 'destroyer of the land,' 'mistress of countries.' In one hymn she says: 'Beside my father in battle I take my place; beside Bel in combat and...
13. The planet Venus.—Utterly unrelated to the other Semites, except in late times and under evident Babylonian influence, is the planet Venus. Even in Babylonian astrology this character cannot be traced back to the Old Babylonic period. It is impossible, therefore, that it was primitive Semitic (against D. Nielsen, ZDMG ixvi. 400-475). No certain evidence of Ishtar with the planet Venus is found before the time of Hammurabi.

Venus (A. B. c. 2500 a.c.) says that he dedicated a disk to Inanna (P. A. B. c. 2300 a.c.) speaks of Venus, the mistress, who is like the sky in gleaming splendor (Bo. 2205, but this also is not a certain astral on boundary stones of the Cassite dynasty, as early as the middle of the 12th cent. B.C., the four- to eight-pointed star is the established emblem of Ishtar (Hittite, Boundary stone of Iblei, top). In the ancient Babylonian, the period later is accompanied with a star (Ward, ch. xxv). In one case (Ward, fig. 412) she is represented with wings, rising above the sun, like a goddess of the morning star, which resembles her astral character (Jastrow, L 133). The fact that Markub, the chief god of Babylonia, is identified with the planet Jupiter, and Selos, lord of the sea, with Venus, appears very curious, indicating the identification of the great gods with planets did not arise before the unification of Babylonia by Hammurabi. It was part of the system of religious syncretism by which this monarch sought to consolidate his empire. The arithmetical sign XV for Ishtar, which is connected with her astral character (the sign for Sin is XXX), makes its first appearance in the list of Hammurabi. As to the reason why Ishtar was identified with Venus, one can only conjecture that it may have been the beauty of the planet, or its alternation as morning and evening star, which approximates to the life-giving and destroying functions of the goddess. Possibly the goddess Ishtar was the daughter of Sin, moon, as early as Astarte, her identification with the planet Venus.

The identity of Venus as a morning star with Venus as evening star was known in the Assyr. period, and probably much earlier. There are numerous official reports of the astrologers that speak of Ishtar as a morning and evening star (Jastrow, ii. 612). In a hymn she says: ‘Ishtar, the goddess of the morning, and Ishtar, the goddess of the evening, am I’ (Is. 531). Nalopotidas calls her ‘Anunnini, the sun-rise and sun-set gives me favourable signs’ (P. A. B. iv. 2208, 2209). The morning star was called Dilbat, and as the evening star Zib (P. C. A. Jensen, Kosmologie, 1890, p. 417). The difference of names in new periods in the two aspects of the planet were supposed to be different stars, but the list WAT ii. 45, line 51a b, asserts ‘Zib = Dilbat.’

The aspects of the planet gave rise to a variety of titles and identifications. Thus the list WAT iii. 53, col. ii. line 68 mentions ‘Dilbat at evening is Ishtar of Ereh, Dilbat at sun-set is Mistress of the Gods’ (as Ninhursag). See also the list of titles of the planet by Barnabas (P. E. ‘A. Br. 22). This list of titles is very similar to the list of the planet by Nipparad (P. E. ‘A. Br. 23). There seems to be evidence also that the mythological period of Ishtar and Venus is connected with the god of the sky, Enlil (P. E. Momon, iv. [1910] 83-186; E. Windisch, o. v. [1911] 28-39; P. H. H. 18, v. 81-109).

The claim has often been made that the planet Venus is a manifestation of a goddess, and that it bears the epithet ‘horror’ (PSBA xxxii. 22-94). This is very doubtful.

14. The star Sirius.—Less frequently Ishtar is identified with the Bow-star, or Sirius (Jensen, Kosmologie, pp. 62 ff., 149-161), and with Venus. The bow-star is a symbol of the rising and setting of the sun, which resembles her astral character (Jastrow, L 133). The fact that Markub, the chief god of Babylonia, is identified with the planet Jupiter, and Selos, lord of the sea, with Venus, appears very curious, indicating the identification of the great gods with planets did not arise before the unification of Babylonia by Hammurabi. It was part of the system of religious syncretism by which this monarch sought to consolidate his empire. The arithmetical sign XV for Ishtar, which is connected with her astral character (the sign for Sin is XXX), makes its first appearance in the list of Hammurabi. As to the reason why Ishtar was identified with Venus, one can only conjecture that it may have been the beauty of the planet, or its alternation as morning and evening star, which approximates to the life-giving and destroying functions of the goddess. Possibly the goddess Ishtar was the daughter of Sin, moon, as early as Astarte, her identification with the planet Venus.

The identity of Venus as a morning star with Venus as evening star was known in the Assyr. period, and probably much earlier. There are numerous official reports of the astrologers that speak of Ishtar as a morning and evening star (Jastrow, ii. 612). In a hymn she says: ‘Ishtar, the goddess of the morning, and Ishtar, the goddess of the evening, am I’ (Is. 531). Nalopotidas calls her ‘Anunnini, the sun-rise and sun-set gives me favourable signs’ (P. A. B. iv. 2208, 2209). The morning star was called Dilbat, and as the evening star Zib (P. C. A. Jensen, Kosmologie, 1890, p. 417). The difference of names in new periods in the two aspects of the planet were supposed to be different stars, but the list WAT ii. 45, line 51a b, asserts ‘Zib = Dilbat.’

The aspects of the planet gave rise to a variety of titles and identifications. Thus the list WAT iii. 53, col. ii. line 68 mentions ‘Dilbat at evening is Ishtar of Ereh, Dilbat at sun-set is Mistress of the Gods’ (as Ninhursag). See also the list of titles of the planet by Barnabas (P. E. ‘A. Br. 22). This list of titles is very similar to the list of the planet by Nipparad (P. E. ‘A. Br. 23). There seems to be evidence also that the mythological period of Ishtar and Venus is connected with the god of the sky, Enlil (P. E. Momon, iv. [1910] 83-186; E. Windisch, o. v. [1911] 28-39; P. H. H. 18, v. 81-109).

The claim has often been made that the planet Venus is a manifestation of a goddess, and that it bears the epithet ‘horror’ (PSBA xxxii. 22-94). This is very doubtful.

15. The constellation Virgo.—It is probable that Ishtar is occasionally identified with the zodiacal constellation Virgo (Zimmern, K implies 427). These different identifications show that her astral character is secondary, and rests upon late priestly speculation. From the foregoing survey it appears that Ishtar was the most important divinity of the Assyrian Bab. pantheon. She absorbed so many other goddesses, and exercised such a variety of functions, that she came near to being the supreme divinity. Many hymns addressed to her disclose a henotheism that approximates to monotheism.
the robes of Marduk and Zarratim (KIB iii 149a, 267a) and a horned and a beaked (ib. 250c) axe. Her priests are often mentioned, and the hierodouloi have been referred to above (IV. 4).

Slaves were dedicated to her temples (OLZ xii 116). The most important was in the chief city of Atargatis (ERE ii. 116), and instead titles derived from the astral form of Ishtar were employed, such as Kokakha, 'star' (=Bab. kubnu), Kokab-nuha, 'star of splendour,' or Nuna, 'splendour.' In the Old Babylonian period the name Nanai was used in Syria for the planet Venus (ZDMG xv. [1890] 459) and in use by the term; name Dilbat (Jensen, Karmologie, p. 118). Astara and Bélit were names for Venus among the Mandaeans (ib. p. 135). For survivals of Bab. myths concerning Ishtar in Mesopotamia see Baedissin, 'Tammuz bei den Harrânern,' ZDMG lxvii. 172 ff.

3. In Arabia.—In the South Arabian inscriptions Athtar, who is masculine, is represented by a star with eight points, and forms a triad with the sun and moon. It can hardly be doubted that this is due to direct Bab. influence. In North Arabia the original name of the goddess is displaced by titles such as al-Lät, 'the goddess,' or al-Uzza, 'the strong' (J. Wellhausen, Beiträge zur Heiden

4. In Syria and Palestine.—In the Amarna letters the Canaanite Ashatir is equated with Ishtar, and Canaanite artistic representations often conform to the Bab. type (see ERE iii. 182, 183). There is no clear evidence of Ishtar in the early writings of the OT. The efforts of P. C. A. Jensen (Gilgamesch) to show that the goddess of Jeremias (AT im Lichte des alt. Orientes) to show that Sarah, Rebekah, Tamar, Pharoah's daughter, Jephthah's daughter, and most of the other female characters of the OT are transformed Ishtar-myths cannot be pronounced successful. The first certain trace of Ishtar in the OT is in the neo-Bab. period in Jer 7th 44:1-22, where she is called 'queen of heaven.' This is a specifically Bab. name for Ishtar in her astral aspect, and the kowma, or 'cage,' that the Hebrew women bade her for her is the same as the kowma that was presented to Ishtar (KAP. 441f.). The waiting for Tammuz mentioned in Ezek 64 is closely connected with Ishtar and is specifically Babylonian. At the time of the Bab. supremacy the cult of Ishtar must have been established in Jerusalem, or even earlier under Assyri. rule (2 K 21). The name Esther is an Aramaic form of Ishtar, and the Book of Esther shows clear knowledge of Bab. Ishtar myths (see Paton, 'Esther' in ICC, Edinburgh, 1908, pp. 67-94). In Palestine the Bab. Ishtar was worshipped under the name of Athirat. In the later period, when the rites of the Phoenician 'Ashatir at Gebal, as described by Lucian (de Dea Syr. 6, 8), were evidently coloured by the Bab. mourning for Tammuz. For the whole subject, see on the West see Baedissin, 'Adonis und Eunomus,' Leipzig, 1911.
5. Among the Greeks and Romans.—During the period of Selucid Greek rule the religions of the East and of the West were fused with extraordinary rapidity in Syria and in Egypt, and under the auspice of the emperors Bab, astrology became the dominant religion of the day. The gods of Greece and of Rome were identified with the nearest Bab counterparts, and thus came to take on astral characteristics. The equations that resulted were: Jupiter = Bel-Marduk = the planet Jupiter; Hermes = Mercury = Nabu = the planet Mercury; Ares = Mars = Nergal = the planet Mars; Chronos = Saturn = Nibiru = the planet Saturn. Apollo = Ares = Venus = Ishtar = the planet Venus. To these identifications are due the names of the planets in all modern European languages.

Ishtar thus took the place of Aphrodite, and the mythology of the Bab, mother-goddess was grafted on to the myths of the ancient local Aphrodites and Astartes. Even the Sumerian name Dilbat for the planet Venus became known to the Greeks: Ἀθηναιόος ηήριναι Ἰσθαῖρα Ἐσθαηρία Ἐσθαηρία (see F. Cumont, Les Religions orientales dans le paganisme romain, Paris, [1900] [Eng. tr., Chicago, 1911] ch. v., Astrology and Religion among the Greeks and the Romans, New York, 1912).

LITERATURE.—I. On the Assyr.-Bab. religion in general and its literature see BARTHELEMY and ARMAND; also references in Ezech., 25:5, 10; 26:14-16; 30:24. See also ARTIFAC, ATAR-ATAT, BAB. CANAANITE.

II. On Ishtar.—See also A. Boaz, "Zum Namen der Göttin der Stadt Niniveh“ (see F. Cumont, Les Religions orientales dans le paganisme romain, Paris, [1900] (Eng. tr., Chicago, 1911) ch. v., Astrology and Religion among the Greeks and the Romans, New York, 1912).
The Isis-Osiris myth in its main lines is as follows: Osiris (Sarapis), known and loved for his benevolence to all mankind, is treacherously slain by his brother Set, who encloses him in a chest and casts it into the Nile, which bears him towards the sea. Isis, after much wandering, perseverance, and sorrow, discovers the mourners over the body of her husband, accompanied by Nephtys, her sister, who is also the wife of Set, but Set again gets possession of the body, and disperses it about Egypt. Meanwhile Isis gives birth to Horus, whom she secretly rears in the marshes of the Delta. After learning of what has been done, Isis, with the assistance of Nephtys and the members of Osiris, who, resisting the magic formulas of Set, Thoth, becomes a judge and god of the dead, and even visits the earth in the form of a child, the son Horus. The latter takes vengeance upon Set for the slaying of his father, spares his life, however, on account of the magic formulas of Set. Thoth restores Horus as a cow's head helmed (or cow's head), Horus and Set then appear before the court of the great gods of Egypt, where Horus, through the support of Thoth, is victorious, receives the crown and throne of his father, and unites both parts of the land under him (Plinarch, de Is. et Osir. Ekkia, Egyptian Religion, ch. 14).

Whether the Isis-Osiris myth is founded on a primitive attempt to explain the daily vicissitudes of the sun, or is the outgrowth of a local historical or religious legend which was grafted on to popular speculation, there is no doubt as to its having possessed a sort of significance in the minds of those who reflected upon religion. Osiris was the Sun, born of the Nuit, Earth and Heaven; Set was Night; Isis, whose names signify 'sister' or 'throne,' was the daughter of the heavens, and especially of the earth, who restored Osiris, the Son, after his death at the hands of Night, and also gave birth to Horus, the Sun, who took vengeance on Set, the Night, and became the son of the father's throne; Nephtys, the Western Horizon, or Evening, sister of Isis, the Eastern Horizon, or Dawn, mourns with the latter, by her, of Anubis, god of the realm of darkness and the dead. Transferred to the realm of morals, the myth symbolized the warfare between good and evil. It also symbolized human destiny, the rebirth of man in his children; but its greatest significance in the minds of the ancients was spiritual—the immortality of the soul, the resurrection, universal motherhood of Isis, and her etherial influence. The resurrection of Osiris through the efforts of Isis symbolized the rebirth of the soul, and it was this that made the Isis cult the greatest of all Egyptian religions, though there is no evidence that it had attained to any importance, or even to existence, before the New Empire. Through her mysteries the worshipper received the gift of immortality, which her magical powers enabled her to bestow. Her connexion with magic so doubtless made her cult still more popular. In a papyrus of as early as 1563 b.c., a physician invokes her aid, beseeching her to employ in his interests the same arts by which she had healed the wounds of Set and Horus. She was called "The Mighty in Magic." By the time of the Saite and Greek periods (from 663 on) she had gradually developed into a universal nature-goddess, a beneficent, maternal deity whose hand was full of all manner of blessings, temporal and spiritual. She was the "Great," the "Great Mother." "The Mother of the Gods!" Local goddesses were invested with her characteristics, and she in turn took on theirs, until the distinction between them and she was little more than one of name. She became the great prototype of all goddesses. Her importance in the cult far overshadowed that of Osiris; she even ousted independent shrines, as, for example, the temple of Osiris at Gizeh, called "the temple of the Mistress of the Pyramid." Her most important temples were in Egypt at Memphis and, on the Island of Philae, at the mouth of the Nile, she having a temple, first completed in the reign of Nectanebo II. (291-253 B.C.), remained open until A.D. 569, when it was closed by order of Justinian (Meyer, loc. cit.).

Outside of Egypt, the Isis-Osiris cult rose to importance nowhere until the Hellenistic period (from 333 B.C.), though it was known in Phoenicia in the 7th and 6th centuries B.C., and was communicated thence to other parts of the world. Evidence of it are abundant, however, in every part of the Hellenistic and Roman world. The Greeks saw in these mysteries an analogue to Demeter and the Eleusinian mysteries, identified Osiris with Dionysus, Horus with Apollo, Sob and Nut with Kronos and Rhea. As each of these three parts of Greek prejudice against foreign cults, the cult of a temple at Pergamus was permitted, and under the Ptolemies the cult was received at Athens itself, and a temple erected at the foot of the Acropolis. The use of the word 'Isis' in the composition of citizens' names—Isodoto, Isodoro, etc.—and the numerous relics representing Greek ladies in the character of Isis afford evidence of the popularity of the cult. There were two temples in Corinth (Daremberg-Saglio, Dictionnaire des antiquites grecques et romaines, s.v. 'Isis, Histoire'; Drexler, in Koschier, s. v. 'Isis', 373-391).

The success of the cult in the West was even more pronounced. Sardinia had received it before the Hellenistic period, probably through the Phoenicians; Malta, Sicily, and Southern Italy admitted it later. Puteoli was an important centre in Campania, while the cult was also strong at Pompeii, Herculanum, and Stabiae. The Pompeian temple of Isis, of which the remains are still to be seen, was founded between 200 and 30 B.C., was ruined by the earthquake of A.D. 79, and was the only temple in the city which had been restored when the final catastrophe occurred in 79 A.D. to the entire city, Pompejan. Stud., Leipzig, 1877, pp. 371, 170 f.). First introduced into the city of Rome in the time of Sulla, though probably it found a place in Ostia and the suburbs before this, it was the object of much distrust on the part of the conservative citizenship of Rome that in 58 B.C. its altars on the Capitol, and its chapels (to the number of fifty-three), were destroyed by order of the Senate. In 54, 50, and 48 similar events occurred; in 43 the Saite and Greek decreed a temple to Isis and Sarapis, and the cult seemed about to gain the permanent support of the State; but in 38 Augustus exiled the worship from inside the Pomerium, beyond this sacred line of the city, his policy of opposition to foreign cults having been inaugurated by the war with Antony and Cleopatra; in 21 Agrippa forbade the erection of chapels within a radius of seven and a half stades from the limit; and Tibullus, in A.D. 19, as a result of certain scandals in connection with the cult, destroyed its places of worship and banished its priests. Under Caligula, however, the cult seemed to have been recognized by the State, though it was not yet in possession of the right to erect temples within the Pomerium, nor supported by the public funds. It grew, nevertheless, and abundant evidence of its strength is to be seen in the art and literature of the Empire. Under Caracalla, the Sibylline law was made null which had kept its temples outside the Pomerium, and henceforth it enjoyed perfect equality of rights with other cults. Its altars and shrines of minor importance, of which there were only one or two in the city, and it had been strong in the support of the lower classes. Besides its lesser shrines and chapels, its greatest temples were those that in the sixth region erected by Caracalla, then on the Caelian Hill, and the Colosseum, from which the third region took its name (Isis et Sarapis), and the great temple in the Campus Martius, east of the Pantheum, which was voted in 43 B.C., but probably not erected until about A.D. 39, burned in 86, and restored by
times may be assumed to represent with more or less accuracy those of all lands in which the religion found favour. Its main festival occurred on the last day of October and the first three days of November (for the date see Wisowa, 'Religion und Kultus der Romer,' p. 354), as follows: October 31: Hierosol; November 1–3: the celebration of the resurrection, of Osrus, with unstrained expressions of joy, November 2 being called Ter Novaen, perhaps from a chorus consisting of three times nine participants, and November 8, Hilaria, from its character, which was like that of the corresponding festival of the Great Mother. Another annual festival was that called Isis Navigium, which occurred on March 6, at the opening of navigation. A ship, richly equipped and laden with spices, was sent to sea as an offering to the goddess. Apuleius (Metam. xi. 7–17) describes this festival as it took place at Cenehus near Corinth. It may have had a parallel at Rome in a ceremony at the mouth of the Tiber. Two other festivals, Sacrum Pharia and Saroparia, mentioned in the Menologio Rustico, the first on April 20 and the second on Christmas, were of less importance. The Pelasia, on March 20, was a festival whose motive was in the flooding of the Nile, and was introduced at Rome at a late date. Festi Philoecos, said Lydos, de Isibis, 446, and the first evidences of it (Wisowa, 'Religion und Kultus der Romer,' p. 354 f.)

The conduct of the cult was in the hands of priests and priestesses, chosen by the cultus for various terms. The priests to have been a high priest, summis sacerdos, sacerdos maximus, primarius, praeceptor (Apul. xi. 20, 17, 21, 22), who was perhaps the same as the prophetae primarii (ii. 28). The priestesses were another priest. Each association was officered by a pater, a questor, or treasurer, and decision, if the membership was large. Numerous names mentioned in inscriptions indicate that different associations performed special duties in the procession. There were the pastophoroi, who carried little urns upon litters; pousarii, so named from their pauses at certain places along the route. Anabei and Bubastiaci, who may have been impersonated Anubis and Babusiai; etc. Those who fulfilled a priestly office were obliged to keep head and face clean, shave, wear linen garments, and to abstain from certain things (Wisowa, 357 f.; Daremberg-Saglio, s.v. 'Isis, Les associations, Le sacré').

According to Apuleius, there were three degrees—one of Isis, another of Isis and Osrus, and a third of actual priestly functions. Accurate knowledge of the observances through which the mystic passed in his rise from one degree to another is impossible because of the comparative strictness with which ancient writers keep the rule of secrecy.

The account of Apuleius, however (Metam. xi.), throws general light upon both the public and the private character of the cult, in spite of the authorities' reticence. His experience, Lex, the hero of the tale, in whose character Apuleius is narrating his own experience, determines to devote himself to Isis. The goddess herself has so directed him in a vision (xi. 5). The procession of the following day was that of Isis Navigium. First, the tetrathemata, soldiers and musicians, dressed in robe to the accompaniment of music in their hands. Then the chief priest on a covered platform, with women on either side, with other musicians, in the course of singing, would light a wax taper, and then musicians with pipes and flutes, in
whose train advanced a chorus of chosen youths clad in mourning, and bearing a hymn. Horses followed, and heralds, after whom marched the train of mystics, men and women, all in mourning. In the middle there was a house in pure white, on which the women, with long hair, covered transparent veils, and the men with smooth-шин white heads; and all were bearing censers of fragrant incense, filling with balsam, silver, and evergreen sycamor. Then came the chief ministers in shining linen, bearing the images of their gods. The first carried a gilded lamp; the second, a golden bowl with golden leaves and a golden candelabrum; the third, a four-leafed palm tree, and a golden vessel in the form of the female breast, from which he poured libations of milk on the ground. Other vessels of golden wine, garnished with thick golden branches; and another, an amphora. The next feature of the procession was a number of men who represented various deities: Amun, the messenger-deity, bearing in his left hand the caduceus and with his right shaking a golden palm; a cow, erect, the symbol of the universal parent in her; etc. These were followed by one who bore a chest containing secret pharaonic charms; another who bore the effigy of a great divinity which resembled neither beast nor bird, nor even man; and, finally, by a priest with stigmata and crown of roses. After the solemn rites were over, the sacred ship returned to the temple, deposited the holy symbols, were formally dismissed, and all the priests and the servants of the gods, in their festive attire, left the temple gates and in a procession of ten days from wine, the flesh of animals, and all abundance of food and drink, and in this period the evening of his consecration arrived. Having been favoured, at sunset, with many presents brought by the sacred ship of the worshipers of the gods, he was led by the thrones, and in the night conducted to the inner recess of the temple, where he was the recipient of religious rites. For the wives of this god, as he was now permitted to divulge to a greater extent than in the following suggestive description: I approached the confines of death, the threshold of Persephone, and returned bearers through all the elements; at midnight I saw the sun gleaming with brightness, under whose保护 I approached face to face, and adored near by’ (CB. 23). The next morning he appeared before the people dressed in twelve stoles, a beautifully coloured garment of linen, and a precious scarf which covered his back from neck to ankles, all of these articles being red in colour, and with various colours. With a burning taper in his hand and a chaplet of palm leaves on his head, he was suddenly revealed to the multitude by the drawing of the sanctuary curtains (CB. 24). Then, as the adoration of the godess, spent a year in Rome, and at the end of this time the sacred ship was dispatched in her . A short time afterwards, he was for the third time directed in a vision to be further initiated. This he did, becoming also a member of the college of Paneplophoi, in which he held the office of Quinquennial Decurion (CB. 26, 27).

The sacred ceremonies in a temple of Isis comprised two ceremonies each day. The first occurred at sunrise, when the priest opened the doors, ‘waked the deity’; and after several moments of prayer, made the confession of the altar, performing the sacred service and pouring libations at each, after which rites the worshippers loudly announced the first hour of the day (April. op. cit. 20). At the second ceremony, which took place in the afternoo, the priest held up before the worshippers a vase of consecrated water, which they venerated as the first principle of all things (Martial, x. 48.1).

ISLAM. — Islâm is the term peculiar to the religion founded by Muhammad, and embraces all the different sects which are now found among his followers. Thus, a Shîite and a Sunnite are both members of the same sect, since the Shîites are the followers of the infallible form of Isââm, and means ‘to receive oneself’ or ‘to profess Islam. It is sometimes looked upon by European writers as expressing complete resignation to the will of God, that is, in all matters of faith and duty; but this seems to be a too wide extension of the term, as it is not the practice of all who profess Islam to obey the dictates of their conscience. The word does not imply, as is commonly supposed, absolute submission to a moral law, but means, on the contrary, stringing after righteousness’ (Spirit of Islam, ed. 1831, p. 289).

But what is the idea of righteousness which the term ‘Islâm’ expresses? It is given in the verse, ‘Whoso is a House in pure white’ (Qur. lxiii. 14). Here, again, we need a definition of the words ‘Islam’ and ‘right way.’

Muhammadan commentators explain them thus: ‘the former means’ one who places his neck under the yoke of God,’ ‘one who yields up his right order,’ ‘one who sincerely accepts the dogma of the Unity of God’; ‘the other, the rashâd, or ‘right way,’ is the ‘finding of the reward of good works,’ the ‘desire of goodness.’

The term ‘Islam’ occurs twice in late Meccan sûras, but not in the earlier ones. That man’s breast will be open to Islam (v. 125). Whose breast God has opened to Islam’ (v. 76). The entrance of Islam into the Jewish community was the signal for the conversion of a large number of Jews, and the early stages of the Prophet’s career were characterized by the conversion of many Jews to Islam. It is very important to bear this fact in mind. In a few places a more general idea of resignation seems to be referred to, as: ‘They who set aside their religion with resignation God (v. 126) and do that which is righteous, their reward is with their Lord’ (v. 127). ‘The Prophet gave the news of the coming of the Last Day, that a man becomes a true believer. Shahrâshâf, the Milâd-una-Nihâl (ed. London, 1848, p. 27), draws a distinction between Islam, isâm (‘faith’), and ihsân (‘devotion, ‘benevolence’) in the following tradition: Gabriel one day came in the form of an Arab and sat near the Prophet and said: ‘O Messenger of God, announce the good tidings of the near approach of the Last Day. The Prophet replied: ‘Isââm is to believe in God and His Prophet, to say the prescribed prayers, to give alms, to observe the fast of Ramâdân, and to make the pilgrimage to Mecca.’ Gabriel replied that he had spoken truth, and then asked the Prophet what was sin. He replied that it was to believe in God, angels, books, prophets, the Last Day, and resurrection. Again, Gabriel admitted the correctness of the definition, and inquired what else meant. The Prophet replied: ‘To worship God as if thou seest Him, for if thou seest Him not He sees thee.’

This is borne out by the meaning assigned in Persian commentaries to the term ‘Muslim,’ which is said to designate a man who is a mumph and a hukmââdir, words which mean ‘submissive’ or ‘obedient to orders.’ A Muslim, then, is one who carefully keeps the outward works of the law, but, when he adds to it ihsân, or devotion, he is a musalin, a man who does good works as well as pays attention to ceremonial observances; when to these he adds sincerity of heart and exercises faith (isâm), he becomes a mûmin, or ‘believer.’

The true believers are divided into two classes: those who believe in Allah and His Apostle, and afterwards God’s not?’ (xliii. 10).

The term ‘Islam’ emphasizes the Rabbinical precept that it is not the ‘study of the law which is most important, but the practice of it which notes the formal performance of certain outward duties. It is doubtful whether it ever had an
ethic meaning attached to it. The commentators seem to be unanimous in using it in a mechanical sense. That is, its literal meaning is the division of the terms of the earlier sūras; for it was not till Muhammad formulated his religion at Medina that the Arkān-ad-dīn ('pillars of religion'), the five obligatory duties, were first clearly defined in the Code of the Koran. Earlier, the word Islām does not appear to have been in common use. Thus, Islām, when looked at from the Muhammadan standpoint, loses much of the beauty which has gathered round the ethical ideas of his successors. It is essentially a political unity, it really emphasizes the external and legal side of religion.

For the religions of Islām see MUHAMMADANISM.

Incarnation, see God: Incarnation.

SOCRATES.—The place of Isocrates in the history of Greek oratory and the evolution of prose style is definitely described in John’s Attic Orators, and his art in Ebr. xiv. 877. In ethics, Isocrates interests the student of to-day chiefly as a measure of the altitude by which Plato towers above the flat and undistinguished tenor of refined and educated Greeks of the 4th cent. B.C. But to Ascham, Milton, and the educators of the Renaissance generally, he was a still edifying expositor of the great commonplace of morality and the conduct of life. Thomas Elyot says of him:

'Isocrates, concerning the lesion of corruptions, is everywhere most edifying, instructive, and takes up many error sentences as he bath words: and with that is so wise and delectable to read, that, after him, almost all other sense unnaturally and tediously; and in persuasions, as well a prince, as a private person, to virtue, in two very like and compendious traits, wherein he made the one to signify Nicocles, the other to his friends Democles, who be perfectly known, and had in continuall memoris. (The book named The Governor, London, 1396."

The (probably genuine) 'protean' or parrentic discourse to Democritus here mentioned is the ancient extant specimen of a long literary succession which in modern English literature ends with Sir Henry Sidney’s Letter to his ‘little Philip at school at Shrubsbury’. Polonius’s advice to Laertes, and Sir Thomas Browne’s Christian Morals, throve Checkers’ advice to a Schoolboy, Thackeray’s Mr. Brown’s Letters to his Nephew, and their numerous recent imitators. The Democles anticipates many fragments of the author of the Oedipus Tyrannus in Classic style.

The term 'a priori' or 'principle' or 'fundamentum' or 'condition' or 'premise' or 'proposition' is defined in Aristotle’s Astis (Athens’s Treaty, ii. ii. to ‘How do the little busy bee’. In its pages the appeal to the secret tribunal of conscience (i. 16) and the Golden Rule (i. 14), on which Isocrates twice stumble elsewhere (ili. 62 and IV. 81) as a happy turn of Gorgian rhetoric, stand in a prodigious constellation with the Chesterfieldian recommendation to win the favour of men by speaking 'advantageously' or 'advantages' or 'behind their backs in companies where is reason to believe that· they will tell them again'.

The two discourses in this kind that bear the names of Socrates are connected together with a large number of considerations concerning the duties of good kings and loyal subjects—the theme of the 11th and 22nd of post-Classical and Byzantine art and literature is the study of the kind of writing, which, Isocrates tells us, is appropriately disjointed and aphoristic, and its manner, which, it thinks, demands not so much originality as industry in the choice of the best and the oneIon of the best. He says, by Herodotus, Phocylides, Theognis, and other moral poets. Isocrates here (ili. 44) and elsewhere deplores the perversion of mankind, who prefer the pleasant to the useful and the fables of mythology to the profitable admonishments of the ancients.

The Areopagitica, which has only its title in common with Milton’s famous tract, was also a favourite with Renaissance moralists because of its impressive deal with the topics of the degeneracy of the age, the licence of democracy, and the need for a restoration of the salutary discipline of the good old times.

The main ethical interest of the other orations lies in their recognition of the orator’s task in Plato. Isocrates’ ethics is utilitarian, not in any speculative sense, but in its prevailing tone and temper. His preaching is exactly that of the excellent fathers of families whose prenalian philosophy fails to satisfy Glaucon and Adams in the second book of Plato’s Republic. He celebrates not the beauty, not the absolute worth and intrinsic sanctions, but the profitableness of virtues. Honesty is and ought to be spoken of as the best policy (x. 253). Isocrates repeatedly enforces this lesson with illustrations drawn from Greek history, and more particularly from the famous effects of a selfish policy of intrigue on the welfare and prosperity of Athens and Sparta (vi. 34, viii. 14, 23 ff., xiv. 40). But even this empirical coincidence of happiness and righteousness he will not affirm absolutely (x. 54 ff.,xiv. 185 f., but cf. xiv. 25). It is true, ‘for the most part,’ he says in a phrase made technical by Aristotle, and the wise man will govern his country by probabilities and the general rule. To this he adds the interesting remark that the laws are most certain of verification in the longer life of cities and States (xii. 180, vi. 34-38), and he maintains that we may fairly attribute the apparent violation to the neglect of the gods (xii. 187), an expression against which Plato would have protested. As Dryden more piously puts it:

'Thou hast heard, indeed, of some virtuous persons who have perished unhappily, but never of any virtuous nation. Providence is engaged too deeply, when the cause becomes so general’ (Prelude to Annus Mirabilis).

But, though Isocrates deprecates (xii. 118) or sneers at (x. 1), they are the sublitudes and the paradoxes of absolute Platonic ethics, he seems to have been increasingly moved to emulate by the success and the moral fervour of the Gorgias and the Statesman (iii. 17, xvi. 218) of the Areopagitica (iii. 47). This feeling appear in the passages already mentioned on the verification of moral law in history. It is still more apparent in certain edifying digressions on the true meaning of those ambiguous words, ‘advantage’ and ‘gain’ (ενεφαλίζῃ, ili. 9, viii. 7, 17, xv. 275, xii. 241; σφιχας, ili. 56). All men desire their own advantage, he repeatedly tells us, but they mistakenly seek it in taking wrongful advantage of others. All men desire gain, but they know not in what true gain consists.

In addition to this, Isocrates has many ethical or psychological observations that recall Plato or anticipate Aristotle. Though teaching alone will not make a good man of a bad one (xii. 21), he is confident that ‘virtue’ can be taught (i. 12 f.), as even the training of animals (II. 99). His list of virtues includes the Platonian four (iv. 22 f.) and incidentally others, as self-control and magnificence (ili. 19). ‘Great-souled’ is one of his terms of praise. He emphasizes the idea of magnification and the mean, and anticipates Aristotle in the remark that the virtuous man is more akin to deficiency than to excess (ili. 33 f.), as also in the affirmation that virtue when won is the most stable of possessions (i. 5 f.). The three notions of human action, he says, are gain, honour, and pleasure.

His conjectural influence upon Greek politics,
and the elements of political theory and terminology scattered through his writings, lie outside of our topic.

His religion is conventional and perfunctory, though he sometimes develops the Euripidean or anticipates the Platonic canons of the anthropomorphic polytheism, which attributes human failings to the gods (xi. 41). References to the subject are sometimes introduced by the phrase: 'if I may properly speak of such ancient or old-fashioned things' (vi. 12). In the same way, he tells us, the governs mank grip and appoortion good and evil, not by direct intervention, but by the thoughts which they inspire in men (v. 10o). In one passage he comes very near to the Ovidian 'expedit case deos at expedite case putumens' (xii. 24 f.). He alludes to the better hope of the righteous and of the initiated (il. 20, iv. 23; cf. viii. 35), and he makes use of the conventional formula: 'if any perception remains to the dead' (xiv. 61). But the only immortality which he really expects is the subjective immortality of fame (xii. 250).

In ethics and religion, as in philosophy and eloquence, he cannot bear confrontation with his two supreme contemporaries; but, removed from the shadow of that comparison, he appears as a worthy citizen, an excellent teacher, and an estimable writer. In this respect, which is the most lasting for himself, he is indispensable to the understanding of the life and thought of the age of Plato and Democles.

LITERATURE.—There is very little literature on the ethics of Israel; but in the collection of the Annals of the Berlin, 1882, may be mentioned. The philological literature is given in Bibl. xiv. 881; R. C. Jebb, Attic Inscriptions, London, 1882; P. Flood, Dicht. des alten Griechen, Berlin, 1882; and W. Christ, Gesch. der griech. Lit., ed. O. Stublin and W. Schmid, Munich, 1892.

PAUL SHOREY.

ISRAEL.—I. Introduction.—An adequate treatment of the questions suggested by the name 'Israel' would require an encyclopedia to itself. All that is attempted is to trace the religious development which has given pre-emience to Israel among the spiritual teachers of mankind. The religion of Israel cannot be satisfactorily studied apart from the external history of the race, but account will here be taken of the latter only in so far as it serves to elucidate the former. An inquiry into the historical value of the narrative of the Pentateuch is beyond the scope of the present article. Suffice it to say that by the name 'Israel' we understand that people which, though not originally homogeneous, may have been formed into a single nation in Palestine about a millennium before the Christian era.

Of this nation the strictly Israelite element was of comparatively recent introduction, the Israelites before the conquest of the Canaanites and subsequent mingling with them having occupied the oases in the wilderness to the south of Palestine, where they had entered into close relation with the Kanites and other tribes of kindred stock as well as with the Midianites farther east, from whom, perhaps, they learned to reverence Horeb, the high mountain. They regarded themselves as closely akin to the Edomites, who seem to have preceded the Israelites in coming to this district south of the Dead Sea at a somewhat earlier date; and somewhat less closely to the Moabites and Ammonites on the east. The belief that the Israelites had been a Canaanite race and that Arameans and Israelites had once lived in N.W. Mesopotamia may not, perhaps, be of very ancient origin, and may be due to the fusion with Aramean settlers which took place during the domination of Assur, which had once lived in N.W. Mesopotamia. It may be that the Israelites had been compelled to do taskwork, from which they had been freed by Moses. It is only necessary to be convinced whether all the tribes of Israel were ever in Egypt. The early legends which have come down to us had taken form at a time when stress was being laid on the national character of Israel, and in this unity in Egypt there has in many cases been wrongly ascribed to the past.

2. Tribal division and conquest of Palestine.—The twelve tribes of which, in later times, Israel was considered to be composed, were the children of Jacob, each group, severally connected by descent from four women to whom they traced their ancestry. The Leah group included Reuben, Simeon, Levi, Judah, Issachar, and Zebulun; the Rachel group, Joseph (subdivided into Ephraim and Manasseh) and Benjamin. To Zilpah, said to be Leah's handmaid (whereby some dependence upon the Leah tribes seems to be indicated), were assigned Gad and Asher; to Bilhah, Rachel's handmaid, Dan and Naphtali. We need not suppose that all the tribes finally incorporated in Israel had become confederated before the Exodus or even before the conquest of Palestine. It is probable that the tribes of the Rachel tribes at least we have the witness of Amos 2:1-3; for that of the Leah tribes we have no direct evidence apart from the Pentateuch; but when Moses, Levite, in the traditions of the Exodus, if only the Rachel tribes had come out of Egypt. The tribes which are represented as descended from the Leahs were probably of mixed origin, being Canaanite and incorporated in Israel only after the conquest of Palestine. In addition to these, in Judah, at least, were other tribes, such as the Calebites, which, however, remained more or less distinct for a long time after their inclusion in Judah. It is probable that these clans entered upon their inheritance from the south; but, since Reuben, not Judah, is reckoned as the first-born son of Leah, by which priority of settlement is probably to be understood, and since Moses the Levite was buried in Reubenite territory east of the Jordan, the Pentateuchal tradition, according to which the land between the Arnon and the Jabbok was first won by Israel, and W. Palestine was invaded from this region, may be accepted as correct for both the Leah and the Rachel tribes, though it is unlikely that these noted topographical details of the Pentateuchal tradition of the Joseph showing that Simeon is associated with Judah, but the writer to the contrary. We owe this section in its present form has probably modified an early tradition of Simeon's first invasion of Palestine to suit the fact that in later times Simeon was incorporated with Judah. Bezek, which is reasonably identified with the modern Bezik, 14 miles N.E. of Shechem, seems to be beyond the sphere of Judah's operations; but a Simeonite war in this neighbourhood is perfectly consistent with the fact that in Gn 34 (cf. 49) Simeon is found with Levi in central Palestine. We do not know

---

1 We must guard against the supposition that every statement in the Pentateuch and the historical books of the O.T. embodies a 'tradition.' Hebrew writers were as capable of drawing inferences as modern commentators, and in some cases they cannot have intended their statements to be taken literally. In the case of Gen 20-21 we have what appears to be a deliberate device to show in genealogical fashion the connexion of Israel with Midian and other sections. In the case of Gen 16:16-18 the position is now misplaced, and that it once followed the account of the birth of Ishmael; but it does not harmonize well with the tone of this story, and in any case the editor who made the change to its present position can scarcely have failed to notice its incongruity, if taken literally, with the narrative of the exodus. The writers were, in any case, writing mainly from a point of view to which the reader was not necessary to the text. The writer to the contrary. We owe this section in its present form has probably modified an early tradition of Simeon's first invasion of Palestine to suit the fact that in later times Simeon was incorporated with Judah. Bezek, which is reasonably identified with the modern Bezik, 14 miles N.E. of Shechem, seems to be beyond the sphere of Judah's operations; but a Simeonite war in this neighbourhood is perfectly consistent with the fact that in Gn 34 (cf. 49) Simeon is found with Levi in central Palestine. We do not know

2 It is a significant fact that Gn 29:36 evidently implies that the tomb of Israel was east of the Jordan, and that Jacob's death and burial at Shechem belongs to the later and exclusively Judaean modification of tradition.
the extent of the area occupied by these tribes, but it is probable that, allowance being made for the many strongholds which remained in the hands of the Canaanites, the five Leah tribes west of the Jordan and the originally contiguous, Judges being settled in the south, where the tribe came into contact with the friendly Calebites, and Issachar and Zebulun in the plain of Megiddo and the district to the north.

The permanent effect of this invasion of W. Palestine was not very great. Issachar and Zebulun were entirely dominated by the Canaanites; Simeon, which next to Reuben, must have been originally the least of the five Leah tribes, was before long expelled from its first settlements, the survivors finding a refuge in the south; 1 at the same time Levi as a territorial tribe ceased to exist. Simeon, however, he being the axis of the tribes, was by degrees to consolidate their position and to exercise some sort of hegemony over tribes of mixed origin—the sons of the handmaids. The assignment of Gad to Leah's handmaid may be explained by the position of the Leah tribes immediately to the north of Reuben—Asher, similarly assigned, being contiguous to Zebulun. Dan, assigned to Rachel's handmaid, lay immediately to the west of the Leah tribes, and the similar assignment of Naphtali may perhaps be accounted for by its proximity to the northern Dan. Benjamin, which would appear to have been originally a subdivision of the Joseph tribes, 4 gained in importance sufficiently to be reckoned as a separate tribe, and colonists from Manasseh re-crossed the Jordan and settled in Bashan.

3. Union of the tribes.—It is impossible here to do justice to the complex by which the tribes of Israel were welded together. The cause of unity was the common danger which for several generations threatened the tribes, either from the original inhabitants of Canaan, whom they had sought to dispossess, or from other invaders, such as the Philistines, who, like Israel, were seeking to gain possession of the country. Thus the struggle against the king of Hazor (Jos 1, Jg 4) probably involved not only Naphat, but also the neighbouring tribes; the power of Sisera and the fortified town of Hazor, Magiddo and Jerzeel threatened both the Leah tribes, Issachar and Zebulun, and the Rachel tribes to the south of them. From time to time a military leader who had been successful in struggles of this kind would exercise authority as a king in the region which he had delivered. Thus Gideon was elected king 2 over some portion of Manasseh and Ephraim. Somewhat later, apparently towards the end of the 11th cent. B.C., the opposition of Philistine Ammmonites and Amalekites demonstrated the need of concerted action, and for a time united the Rachel tribes with the Leah tribes farther south. The union was short-lived, and was broken in the reign of Rehoboam; but it gave to later ages an ideal of what Israel should be.

An exact history of the reigns of Saul and David is impossible. The longer accounts of these reigns—though they doubtless embody some true traditions—are inconsistent with the short summaries given in 1 S 14, and in 2 S 8. These sections, which are certainly quite independent, show that in the circles in which they originated the names of Saul and David were definitely known of the reigns of Saul and David was that certain wars had been waged during this period, the exploits of the two kings not being clearly distinguished.

4. Early religion of Israel.—Of the religion of the tribes of Israel proper at the time of the conquest of Palestine we have no direct information; all the stories relating authority are kings for the edification of later ages and are coloured by their circumstances. The most noteworthy passages which throw any light on the subject are Am 5, and Jer 51. 17. In the 7th and 6th centuries B.C. it could be asserted that Israel had not offered sacrifices and burnt-offerings during the Sojourn in the wilderness, we cannot doubt that throughout the Monarchy there still existed in some circles traditions of a religious life which have been very different from what is presented to us, not only in the books of Judges, Samuel, and Kings, but even in the earlier documents of the Pentateuch. We need not go so far as to suppose that in the early days sacrifice was altogether unknown, but we shall scarcely do justice to the plain words of the prophets if we do not conclude that it was a comparatively infrequent rite, perhaps confined to the feast of the Passover. The statements of Amos and Jeremiah are also in harmony with the fact that the great feasts of Israel were mainly agricultural, and could not, therefore, have been celebrated by such people as the Rechabites (g.v.), who were loyal worshippers of the national God of Israel. It is not improbable that the Rechabites may have been a representative of the true Israelite, as distinct from the Canaanite, elements in Israel. Presumably before the conquest of Canaan the Israelites lived mainly on milk, as do the Bedouins and other nomads.

1 That Gideon, or Jerubbaal (g.v), the two are identical, was king is evident from Jg 9. According to the account of Gideon's refusal of the kingship (Jg 8) evidently proceeds from the same covenant as the other accounts of the school of s. 1 S 10:27, and cannot be regarded as a tradition.

2 Jg 2:10, 16, Am 6:19.

3 Sci 2:10; Am 6:19.

4 Sci 14:27; 2 S 8:5.
times, though the eating of game may also have been permitted. Accordingly picture the primitive Israelites as a race of men cruel, fierce, and barbarous indeed, but preserved by their abstinence from agriculture that crude nature-worship with which agriculture was connected. It should be noted that the prophetic reformers of the 8th and 7th centuries B.C. were not so much innovators as champions of an ancient Israelite tradition which the most genuine Israelite families had never wholly abandoned.

The provenance of the name of the national Israelite God, Jahweh (Jehovah), 1 is as yet uncertain. Ex 3:16 (E) represents it as revealed to Moses at Horeb, whereas according to J the name was known to the antediluvian ancestors of Israel (Gen 4:26). Ex 3, as is shown below, reflects the circumstances of a later age, but it is noteworthy that Joshua bears a name compounded with the Tetragrammaton, and it is possible that the tribes of Israel were united in the worship of Jahweh before the conquest of Palestine.

Yet, if they gave to the God whom they worshipped the same name, they at all events represented Him by different symbols. The tribe of Levi, and probably all the Leah tribes, venerated a serpent, or winged serpent; the Rachel tribes, a bull as the symbol of their circumcision, though the story in Ex 4:25-26 might suggest that the rite had not been adopted by the primitive ancestors of Israel—but it was performed, at all events normally, not in infancy but in adolescence or manhood. 2 This fact and the use of flint knives (Josh 6:19, Ex 4:23) show that the rite was of a barbarous character, as among the modern Zulus and other peoples. In the earliest times Jahweh would seem to have been regarded as a God of war, and we may conclude that the tabus to which we find warriors subject (cf. 1 S 21:11, etc.) date from primitive times.

We cannot say whether other features of Israelite religion were brought by Israel into Palestine or were there acquired. We do not even know whether the observance of the new moon and the Sabbath goes back to the earliest time of the period. Similarly, we have no exact information regarding the ethical ideas current in Israel in pre-Palestinian days. It is probable that then, as in later times, political institutions prevailed, and that, though adultery was condemned, concubinage was freely allowed. Ideas of blood vengeance may also be ascribed to the earliest period.

5. BLEEDING OF ISRAELITE AND CANAANITE RELIGIOUS IDEAS AND TRADITIONS.—It was not long before the Israelite conquerors, with the exception, perhaps, of some families, such as the Rechabites, became thoroughly merged with the conquered Canaanites, adopting the customs and consequently, to a great extent, the religion of the latter. Canaanite sanctuaries continued to exist as sanctuaries of the mixed race resulting from the fusion of conquerors and conquered. At these sanctuaries, according to the traditions, the tribal sacrifices were made. The Israelites would acquire the traditions of the patriarchal heroes associated with them. They may suppose that at Bethel Israel learned the traditions of Jacob, at Ramah of Rachel, at Shechem of Joseph, and so forth; and these, being now regarded as prophecies by the united people, would have deeds assigned to them which in pre-Israelite times had not been told of them. The transparency of the characters of some features in the genealogies has already been noticed, and we have only to suppose that this loose treatment of the genealogical style was possible in early times to account for much in the patriarchal stories, which is otherwise inexplicable. Probably Joseph was at first revered as the ancestor of the population in the district of Shechem, where was his reputed tomb; Jacob and Rachel would be similarly honoured in the districts of Ramah and Bethel, Abraham at Hebron, and so forth. With the growing sense of the unity of the nation, traditions originally local would obtain a wider currency, and thus, in course of time, the reputed ancestors of clans would be regarded as ancestors of great tribes, or even of the whole nation. 1

Perhaps the only sanctuary during the period of the Judges which might be regarded as genuinely Israelite was that at Shiloh; it is noteworthy that no temple was established in connexion with it, and that the patriarch was buried there; its foundation is associated with no great name; while, on the other hand, a tradition which, though perhaps considerably modified, cannot be very late ascribed to it, the possession of the Ark, and Jeremiah states that Jahweh put His name there at the first. If Shiloh was Israelite rather than Canaanite, we can understand why, as the absence of prophetic references shows, it was not popular among the mixed population. Jeremiah (7:11 f.) certainly implies that Shiloh existed as a sanctuary long after the period of the Judges, and Jg 18:30, which is not at all early in its present form, is in harmony with the supposition. Jeremiah may have regarded Shiloh as the sanctuary which most nearly resembled Jerusalem.

That the religion of Israel should be very greatly affected by that of Canaan was inevitable. Since in primitive times agriculture was bound up with religion, so that agricultural operations might almost be reckoned as ritual acts, and people in adopting agriculture would, almost of necessity, adopt the religion of the agriculturists. Hence Canaanite festivals became Israelite (see, further, art. FESTIVALS AND FASTS [Hebrew], vol. v. pp. 663-667), and the name Bethel (q.v.), by which the Canaanites denoted their god, was applied to Jahweh.

Household gods appear to have been common (1 S 19:19, Gen 31:29, etc.); here and there a chief priest or wealthy man, such as Gideon or Micah, would build a sanctuary for an idol which would be revered by the family or tribe.

The appearance of these deities we have no information.

The implication that David's teraphim was in human form only proves that this form was common when the story took shape. We would suppose that the idol at Shiloh was a bronze serpent, 2 and

1 We need not suppose that all the stories of the patriarchs can be explained from incidents of which we have precise knowledge. The traditions of the nation generally have been finally shaped in the south, and the names of places in the north have been changed. No one could have accepted such an excuse, if the circumcision of infants had been a conscious act of the whole people. We may perhaps infer from the story of the circumcision of Moses that the rite was occasionally practised in the north, and that it was not held to be valid in the case of adults. We may also infer from the story of the circumcision of Moses that the rite was occasionally practised in the north, and that it was not held to be valid in the case of adults. 3 We need not suppose that the account of the abuse of the Canaanites was a genuine tradition, for it is to exalt the priesthood of Zadok, and the abuses described are probably those against which the Zadokites protested.

1 There is no doubt that the pronunciation 'Jehovah' results from an erroneous interpretation of the name of the same age as Sinai, and that the form Jahweh, having been used throughout this Encyclopaedia, is adopted in this article also.

2 On such points it is impossible to speak definitely. It cannot be maintained that polyandry is found in the OT, though some scholars on the weight of custom may be supposed to have originated in such a state of things.

3 We need not suppose that the account of the abuse of the Canaanites was a genuine tradition, for it is to exalt the priesthood of Zadok, and the abuses described are probably those against which the Zadokites protested.
that the image made by Miah and stoles by the Dinites was in the form of a bull (see, further, art, IMAGES AND IDOLS [Hebrew and Arabic], vol. II., p. 158).

Doubtless some cults were always merely local. In the Moloch worship which carried forth the de
monization of the 7th cent. prophets we may recognize
the name of the Canaanite god Moloch, perhaps.

In the first-born children were sacrificed to the
king as the embodiment of the god. High places with altars (see ar.t. HECHEM [Hebrew], vol. II. pp. 679-
81) were set up all over Canaan (see, further, art. ALTAR [Hebrew]), vol. I. pp. 350-354), appear to have been numerous, and there were not a few larger sanctuaries with temples and idols. Whether a priest was always necessary for a sacrifice it is difficult to say (see art. SACRIFICE [Hebrew]). The victim could, apparently, be slain by the offerer; but it is difficult to decide whether it was competent for the layman to burn the fat and to pour out the blood on the altar. All the more important sanctuaries had organized priesthoods in which the priestly office, though not necessarily hereditary, would tend to become so. The priest was the repository of religious traditions, and where there was no idol to be kóph, he, or a subordinate, was the custodian (see, further, art. PRIEST [Hebrew]). Most important of all, he was acquainted with the proper way of obtaining and preserving the sacred lot, and possessed the necessary paraphernalia. A decision thus reached would, in matters of dispute, become a precedent for the future, and the priests would gradually become the exponents of much of the common law. How far their functions ever coincided with those of the 'sacred men' (k'deshan) cannot be determined. Underlying the story in 1 S. 2:25-28 may perhaps be discerned a state of things in which the priests acted as k'deshan, but in many cases, at any rate, the office was distinct. These 'sacred men,' one of the greatest threats on the ancient religion of Israel, the existence of whom was the chief cause of the prophetic antagonism to the high places, appear to have been Canaanite in origin. They acted as the surrogates of the god in stimulating the reproductive powers of nature. It is double to the ideas associated with them that we may ascribe that other great blot, the sacrifice of the first-born. Since the 'opening of the womb,' the fruitfulness of marriage, was ascribed to the union with the god shekh, the person of the k'deshan, the first-born would naturally be regarded as the property of the god (cf. also art. FIRST-BORN [Hebrew], vol. IV. p. 101). The office of 'sacred women' (k'deshāh) may have been simply an extension of the principle implied in the k'deshan, or may have been directly derived from Ashthoreth worship.

In addition to the priests, who were definitely attached to certain sanctuaries, and who ascertained the divine will by casting lots in the presence of the idol with sacrifice and divine formalities, there were also diviners (k'dorant), who appeared like the priests, to have made use of some method of casting lots. They were not, however, attached to any sanctuary, and their divination required neither sanctuary nor sacrifice. The references in J. 2. 4 and in 3. 2 show that the

The diviner during the Monarchy was a prominent figure in Israelite society.

Besides the priests and diviners who ascertained the divine will by mechanical means, there was another kind of knowledge concerned with the knowledge of the future, the knowledge of omens. This was obtained by means of the

2. For the whole subject see Fraser op. cit. iv. 6, and of. art. DIVINATION [Hebrew], vol. ii. pp. 146-154.

3. It is impossible here to take account of classes of seers of which we are indebted for the preservation of their teaching. The collections of prophetic sayings have been made in many cases, as the collections of the sayings of our Lord which we have in the Gospel.

4. That this method of divining the Ark was not due to clerical

5. Although there is no reason for believing that any of the

6. Introduction of Baal-worship. Israelite religious history may be said to begin about the middle of the 9th cent. B.C., when a new danger for the religion of Jahweh began to arise from the Near East about by Omri's alliance with the kingdom of Tyre and the marriage of his son Ahab with Jezebel. Hitherto Jahweh, at least in name, had been ac-

Through intuition or inspiration. These fall into two main classes, represented respectively by the seer and the prophet (see, further, art. PROPHET AND PROPHETS [Hebrew]). These were in their origin quite distinct, although they were finally regarded as identical. The fusion of the two is best illustrated by the story of Saul's application to Samuel concerning his father's lost asses. The prophets, on the other hand, were originally enthusiastic bands together, whose function appears to have been directed in early times chiefly towards the stirring up of the martial spirit in Israel. Certainly such men as Isaiah or Jeremiah would not in earlier days have been included among the prophets. But—perhaps with the coming of peace—the prophets, whose efforts had been directed originally to the setting forth of Jahweh's will in war, tended to become exponents of His will in other matters, and thus, to some extent, approximated to the seers. It would seem that the prophets proper lived in communities, and were supported largely by the gifts of those to whom they prophesied. The Nazarites (p. 141), of whom we have a full account only in the later legislation, were merely persons who for a greater or less period were bound by certain tabus. The term seems originally to have included the consecrated warrior (cf. Am. 2:11-12).

Of the religious history of Israel under the Monarchy down to the middle of the 9th cent. B.C. we have little information. We have only the construction of altars (1 S. 14:3), of David's bringing of the Ark to Jerusalem and institution of a sanctuary on Mt. Zion, of Solomon's building of the Temple, and of the adoption of Bethel by the national sanctuaries of N. Israel as a set-off against Jerusalem. But the motive of all these stories belongs to a much later period; even the extremely extrabiblical narratives of 2 Samuel can be shown by both literary and historical criticism to have no claim to be considered contemporary history. It is only here and there, in some cases perhaps through the inaudience of later editors, that we have glimpses of the primitive type of early Israelite religion. The coming to pieces of Agag 'before Jahweh' (1 S. 15:30), the conception of the Ark (evidently regarded as Jahweh's actual dwelling-place), the method of the giving of a new cart-drawn by horned cattle (2 S. 6:2); David's dance before it (2 S. 6:14), and the mention of k'deshan in the reigns of Rehoboam, Ass, and Ahab are all evidence that parallel to the religion of the average Israelite during this period, we must look to modern Uganda or India rather than to modern Judaism. Doubtless there were exceptions to the rule; and some families, such as the Rechabites, though they remained barbarous and uncivilized, were uncontaminated by the grosser pollutions of Canaanite religion—the true salt of Israel, which never wholly lost its savour.
cepted as the sole God of the nation. But now an attempt was made to introduce the worship of the Tyrian Baal—an innovation dangerous since many elements of the Canaanite religion had already passed over into that of Israel. The new movement, which set forth with Tyrian gourgeousness the ideas which the people had inherited, the Arameans, was not entirely unpopular. In some circles, however, it was fiercely resisted. The protagonist in the struggle was a Gileadite prophet, Elijah, who left to posterity the name of maintaining the cause of Jehovah against Baal. It seemed for some time a forlorn hope, for Omri and Ahab were great kings; but the party of Elisha, taking advantage of the indignation against the royal family caused by the judicial murder of Naboth, at last succeeded, with the aid of the unscrupulous adventurer Jezabel, in overthrowing the dynasty of Omri, and in forcing on the nation the acceptance of the principle—'No God but Jehovah in Jehovah's land.'

It was in N. Israel that the cult of the Tyrian Baal had been most prominent; but Judah was not untroubled. We know that Jeroboam I, the first king of the N. Kingdom during this period; but it is almost certain that under Omri, and probably from the time of Busba, Judah had been tributary to N. Israel. The absence of mention of the Asherah here to this effect, is, doubtless, due to the pride of the Judean editors to whom we owe the OT in its present form, for the facts can scarcely be interpreted in any other way. That Judah remained a separate kingdom may be explained from the common practice of ancient Asiatic conquerors, whose sole object was to obtain tribute, and who were content to leave the collection of it to native rulers.

Whether the school of Elijah attempted any reforms in the worship ostensibly paid to Jehovah we cannot say. Certainly the times were not very propitious, for Israel was engaged in a death-struggle with the Arameans of Damascus, which lasted for more than half a century; but it is probable that the requirements of the religion of Jehovah were now formally set forth in the ancient Decalogue (Ex. 20:1-17), which can be distinguished in both of the earliest documents of the Pentateuch, and which was probably drawn up in N. Israel, and subsequently adopted in Judah during the reign of Josiah. The original draft of this Decalogue was probably written on two tablets of stone, which were preserved at Bethel, and the Judean copy on two similar tablets which, since they vindicated Jehovah's rights against any other god, might well be deposited in the Ark, which had probably been originally the portable shrine of Jehovah's image (the bronze serekh), and which perhaps still contained it. In this way we may explain how it was that the Ark came to be called 'the Ark of the Covenant.'

This early Decalogue was apparently as follows:

(I) I am Jehovah thy God, and shalt worship no other god. (II) Thy flesh of unleavened cakes thou shalt eat seven days, but on the seventh day thou shalt shave hair. (III) Thou shalt not commit sexual immorality. (IV) A sabbath shalt thou keep; seven days thou shalt eat unleavened cakes. (V) All that openeth the womb is mine; and all thy cattle that go to male, the first fruit of thy work. (VI) When thou bringest in the first-fruits of wheat harvest. (VII) Thou shalt not take the name of Jehovah thy God in vain. (VIII) Thou shalt not murder. (IX) Thou shalt not commit adultery. (X) Thou shalt not steal. (XI) Thou shalt not covet. (XII) The image which was set forth by this present, doubtless greatly modified, form of the very primitive story therein contained probably explains the extent of the feeling of the Rechabites and the prophet of the 8th cent.; but there is no reason for supposing that it was already current in N. Israel at this time. A very good discussion of the subject will be found in "The Decalogue in the Law of Good and Evil," by F. C. Lightfoot, in BJ xxxvi. [1910] 10-f.

It speaks volumes for the thoroughness with which the reformation was carried out in the time of Jehu that, with the Arameans into Israel during the 9th cent., the labors of the 8th cent. prophets, Amos and Hosea, appear to be directed not so much against Aramean cults as against superstitions which went back to pre-Aramean days. The three were not entirely unpopular. In some circles, however, it was fiercely resisted. The protagonist in the struggle was a Gileadite prophet, Elijah, who left to posterity the name of maintaining the cause of Jehovah against Baal. It seemed for some time a forlorn hope, for Omri and Ahab were great kings; but the party of Elisha, taking advantage of the indignation against the royal family caused by the judicial murder of Naboth, at last succeeded, with the aid of the unscrupulous adventurer Jezabel, in overthrowing the dynasty of Omri, and in forcing on the nation the acceptance of the principle—'No God but Jehovah in Jehovah's land.'

It was in N. Israel that the cult of the Tyrian Baal had been most prominent; but Judah was not unperturbed. We know that Jeroboam I, the first king of the N. Kingdom during this period; but it is almost certain that under Omri, and probably from the time of Busba, Judah had been tributary to N. Israel. The absence of mention of the Asherah here to this effect, is, doubtless, due to the pride of the Judean editors to whom we owe the OT in its present form, for the facts can scarcely be interpreted in any other way. That Judah remained a separate kingdom may be explained from the common practice of ancient Asiatic conquerors, whose sole object was to obtain tribute, and who were content to leave the collection of it to native rulers.

In this way we may explain how it was that the Ark came to be called 'the Ark of the Covenant.'

This early Decalogue was apparently as follows:

(I) I am Jehovah thy God, and shalt worship no other god. (II) Thy flesh of unleavened cakes thou shalt eat seven days, thou shalt eat unleavened cakes. (III) All that openeth the womb is mine; and all thy cattle that go to male, the first fruit of thy work. (IV) A sabbath shalt thou keep; seven days thou shalt observe. (V) But on the seventh day thou shalt rest. (VI) When thou bringest the first-fruit of wheat harvest. (VII) Thy flesh of unleavened cakes thou shalt eat seven days. (VIII) Thou shalt not take the name of Jehovah thy God in vain. (IX) Thou shalt not murder. (X) Thou shalt not commit adultery. (XI) Thou shalt not steal. (XII) Thou shalt not covet. (XIII) The image which was set forth by this present, doubtless greatly modified, form of the very primitive story therein contained probably explains the extent of the feeling of the Rechabites and the prophet of the 8th cent.; but there is no reason for supposing that it was already current in N. Israel at this time. A very good discussion of the subject will be found in "The Decalogue in the Law of Good and Evil," by F. C. Lightfoot, in BJ xxxvi. [1910] 10-f.
type that Amos, the first of those prophets whose teaching is collected in separate books, addressed himself. There is no need to question the statement that he was not brought up as a prophet, and that he did not attach himself to any school or gild of prophets. It was a common belief in the schools and in the ancient Israelites, that prophetic teaching, that of the whole nation, was the most significant and divinely inspired. The book of Amos, which forms part of the prophetic literature and was written by Amos, is divided into two parts: the first part, Amos 1-2; the second part, Amos 3-9. The first part contains prophecies against the northern kingdom of Israel, while the second part contains prophecies against the southern kingdom of Judah and against the general situation of the time.

Amos was a herdsman and a wool gatherer, who lived in the town of Tekoa, which was a city in the hill country of Judah, about six miles from Jerusalem. He was a simple, hardworking man, who was not interested in politics or religion, but who was moved by the suffering of the people and the corruption of society to speak out against the injustices he saw.

Amos's message was that Israel was a nation that had forgotten its covenant with God. They had become arrogant and proud, and had forsaken the ways of righteousness and justice. Amos called on the people to repent and turn back to God, lest they be destroyed.

Amos's prophecies were delivered in the days of King Jeroboam II, during the latter part of the 8th century BCE. The book of Amos is one of the most stern and uncompromising of the prophetic books, and it has been interpreted as a call to moral and social reform.

8. Continuance of the worship of Jahweh in Samaria after 722 B.C.—It has been too common mistake to treat the land of Israel north of the kingdom of Judah as virtually a vacuum after 722; but it is to the exigencies of this district that we must look for an explanation of the subsequent development of Israelite religion. Thousands of captives were deported by Tiglath-Pileser and Sargon, and probably by Esar-haddon; and Esar-
haddon and his successor (Ezr 4:24) introduced in their stead a number of colonists from N.W. Mesopotamia and other parts of the Assyrian Empire. But the glory of Jehoh was not being altogether extinguished. Indeed, it is not improbable that, on the one hand, the vindication of Hosea's teaching against idolatry by the destruction of the N. Israelite sanctuaries in 722 B.C. served to carry off all of their appeal and strength and resulted in the enlargement of the existence of the existing Decalogue by a law forbidding the worship of images (cf. Ex 20:24); and, on the other, the efforts of the leaders of Judah to tie over the heathen settlers brought about a new and important development in religion.

9. Reforming movement in Judah during the latter half of the 8th cent. B.C.—Of the religious history of Judah we know practically nothing from the reformation under Josiah till the reign of Ahaz. It must not be forgotten that the compiler of the book of Kings makes two assumptions which are of first importance for the criticism of the history which he relates. Writing from the standpoint of Deuteronomy, he concludes that those who have been especially used by God in the history of Judah are thereby to be classified among those who "have done evil in the sight of Jehovah;" and, believing that disaster is the chief proof of wickedness, he is apt to infer that those who have suffered disaster have been especially evil. Having regard, then, to the fact that, so far as we are able to form an opinion from the scanty materials available, Judah down to the middle of the 8th cent. was neglectful of the sacred word and worship of N. Israel, and may perhaps have been inferior, it is precarious to argue that, because a particular superstition is not mentioned before a certain date, it was not observed before. On the other hand, the attempt not justified in affirming that Ahaz introduced into Judah the sacrifice of the first-born simply because he is the first king of whom such a sacrifice is recorded. It may well be that an action which in the days of the earlier kings would have attracted no attention, because it was the universal practice, is specially mentioned in the case of Ahaz, because in his time it was done in defiance of the prophetic teaching. If more of Isaiah's discourses had come down to us, we should probably be in a position to understand the verdict passed on Ahaz by the writer of the book of Kings.

The most important contributions to the religious thought of his people are to be found in his insistence on the incompatibility of Jahweh's majesty and holiness with the images by which he represented his majesty, and in his declaration that the Assyrian has been the scourge in the land of Judah to chastise Israel, and that, this being effected, Assyrian ambition and cruelty must be punished. Isaiah's attack on idolatry, which may perhaps have been inspired to some extent by the teaching of his elder contemporary Hosea, dates from the very beginning of his ministry. In the allegory of extraordinary force and majesty in which he narrates his call (Is 6) Isaiah gave expression alike to a higher conception of Jahweh and to his conviction of the coming ruin of the national life of his people. He pictured Jahweh emerging from a cloud, his hand upon a serpent, but in human form, clad in a gorgeous robe of which the train covered the whole of the temple floor, so as to leave room for no other god. As though to years after 720 speaking happened to N. Israel which deprived it of any claim to be still considered a nation. It is quite likely that Egypt, for selfish ends, had induced Samaria to rebel, with the result that Samaria was taken and its inhabitants were carried away as captives. In the absence of any proof that the disaster to the Assyrian army happened during a later campaign, and having regard to the obscurity of certain details in Sennacherib's statement, the year 701 B.C. may still stand as the date of the great deliverance. In the absence of any proof that the disaster to the Assyrian army happened during a later campaign, and having regard to the obscurity of certain details in Sennacherib's statement, the year 701 B.C. may still stand as the date of the great deliverance.

1 In the absence of any proof that the disaster to the Assyrian army happened during a later campaign, and having regard to the obscurity of certain details in Sennacherib's statement, the year 701 B.C. may still stand as the date of the great deliverance.

2 In 2 K. 19 there is, as J. Wellhausen has pointed out (art. "Israel," E. F. Hultzsch, ii. 413), a combination of the general and the particular which is in no wise for all. It must not be forgotten that the image of Jahweh at Jerusalem was a flying serpent, as Ezekiel (Eze 17) taught. In both Nahu. and Ezek., the serpent is a symbol of the power of God, of his surpassing majesty. This is impossible to argue from 2 K. 12, that the reforms had preceded the Assyrian invasion. L. i. e. a flying serpent (see 2 K. 18:7, 8. Nu 21:9, 2 K. 19:35); cf. De 32:34, 1 K. 18:29, and Jer. 2:5, 13.

The serpent form may already have been modified by the introduction of some human form. show Jahweh's superiority to the popular conception of Him which found expression in the bronze serpent. Isaiah represented Him as ministered to by seraphim, who were described as angels whose work was clearly to bring out their inferiority, thereby implying that Jahweh was as far above the popular views of Him as the great king is above the ministers who dare not lift their eyes to his face.

The course of events which led to Isaiah's prediction of Jahweh's judgment on the Assyrian oppressors is somewhat obscure. The prediction itself and the prophet's unwavering assurance in his protection of His people in the face of Sennacherib's menace gave him a temporary influence in Judah which enabled him to induce the king, Hezekiah, to carry out a drastic reform. We have, indeed, no information as to the year of Hezekiah's reign when this was done, but there are indications that Isaiah met with not a little opposition during the greater part of his ministry, and it is, therefore, probable that a reform which must have been intensely distasteful to many people was not carried out till the prophet's influence had reached its climax. At the beginning of his activity as a minister in Jerusalem, the crudity of thought which could accept the bronze serpent as the representation of Jahweh. His teaching was now carried into effect, and the venerable idol was destroyed (2 K 18). Probably at the same time many other similar ceremonies had been accepted in Judah since the time of Josiah, was enlarged by the insertion of a prohibition of "molten gods" (Ex 34:13).

The precise extent of Hezekiah's reform is uncertain. We are told that the asherah (on which see art. POLES [Hebrew]), in the Temple court— perhaps association specially with the kedeshahin and kedashahin (2 Chr 29:3). We are certain, however, that the attempt may have been made to reform the high places. We may wonder that a king who so dared to wound the religious feelings of many of his subjects should have kept his throne. Yet in the last years of Hezekiah's reign the political situation was such that there was little likelihood of revolt; for, since Sennacherib had taken from Judah and had annexed to the neighbouring States no fewer than forty-six fortified cities, the population of the remaining districts, cowed by the horrors of the Assyrian wars, may have felt compelled to accept the king's action.

10. Reaction against the reformers.—There can be no doubt that the reformers had gone beyond that which commended itself to the popular conscience. There were many to whom Hezekiah's iconoclasm would appear to be a sin crying aloud for vengeance, and it is not surprising that, when his death occurred a few years later, there was a violent reaction. Not only was there a recrudescence of the ancient superstitions, but new cults were introduced by Assyrian officials and settlers; so that the cause of a pure monothelism appeared, for the time, to be lost in Judah.

It must not, however, be supposed that Israelite religion gained nothing from foreign influences during this period. Worship even at Jerusalem had been very barbarous, and contact with more highly civilized and cultured peoples could not fail to introduce something new. We find in the
this direction. It is noteworthy that the first meeting between the king of Judah and a king of Assyria resulted in an important innovation in the ritual at Jerusalem; for Ahaz, when he had been besieged at Damascus in 732, saw there a great stone altar more suitable for sacrifice on a large scale than the brazen altar which had hitherto been in use in the Temple, and had a copy of it erected (2 K 18:26), thereby inaugurating that increase in the volume of sacrifice which made it possible for a rite so savage to continue for centuries longer the rallying-point of Israel.

II. Religion of Jahweh in Samaria during the 7th cent. B.C.—Though in Judah, with the accession of Manasseh, reform was crushed and the religion of Jahweh itself appeared to be in jeopardy, in the north the religious outlook was soon to become somewhat brighter. Since the fall of the city of Samaria, the old kingdom of N. Israel had been governed by Assyrian officials, and the name Samaria was now applied to that portion of it which lay south of the plain of Megiddo. In consequence of the deportation of Israelites and importation of colonists from other portions of the Assyrian Empire, there existed in the province of Samaria at the end of Asar-haddur’s reign—perhaps earlier—already an admixture of Aramean and other settlers that the religion of Jahweh which still survived was but one of many cults. The great sanctity of Bethel had been deprived of its priests, and for a time there seemed a possibility that not only the worship of Israel had ended at Hosen, but even that of Elijah and Elisha, might be undone. But there were still prophets in the land, and a plague of lions, doubtless occasioned by the long war and the depopulation of the country, gave them their opportunity. They declared the cause of the trouble to be the neglect of the cult of the God of the land, and so far convinced the new masters that an appeal was made to the king of Assyria to allow the return of one of the Israelite priests, in order that he might teach the cult of Jahweh. The appeal was successful, and Bethel was reopened, by the express permission of a king of Assyria, as a sanctuary of Jahweh (2 K 17:31). It is probable that, if other sanctuaries had been closed, they were reopened at the same time; but Bethel was of particular importance, not only for its traditions, but also for its proximity to the boundary between Samaria and Judah. We may well believe that some at least of the Judean reformers who were persecuted by Manasseh would find a refuge at Bethel, and would add strength to the reforming ideas there existing. For the present, indeed, there was no thought of giving effect to the teaching of Amos and Hosea concerning sacrifices. The influx of heathen Arameans and others had put the clock back. It would have been impossible to persuade them at the same time not only to forsake their gods, but also to worship their new God Jahweh in a way entirely strange to them, without sacrifice. The first thing to be done was to win them over to the necessity of the religion of Jahweh, and, in order to do this, it was necessary, not to take the highest places and altars, but rather to encourage the building of as many as circumstances would allow, indeed, Hosea’s teaching had been vindicated. The golden bull of Bethel no longer existed, and worship without idols was accepted by the Bethelite priesthood, 1 who would presumably teach on the basis of the primitive Decalogue, now amplified by the insertion of a law forbidding the worship of images.

12. Codification of law for Samaria.—The newcomers in Samaria would require instruction not only in the Israelite law of worship, but in what it might be described as the common law of Israel, which may perhaps in some measure have already been modified by Assyrian influence. The old Decalogue was, therefore, now combined with a collection of laws relating to slavery, property, and the like, in order that the population of Samaria might be united by identity of law. If the Ten Commandments, which, with some later modifications, is now found in Ex 20:1-17, was probably issued originally as a separate document.

No mere code of laws could make those whose traditions were entirely heathenish whole-hearted worshipers of the God of Israel. They required to be taught the traditions of Israel, and to learn what great things Jahweh had done for the ancestors of the nation in which they were now incorporated. Hence the traditions which had been current at the great sanctuaries were collected, and worked into an authoritative narrative, which embraced legends of the patriarchs, the story of the deliverance from Egypt, the sojourn in the wilderness, and the giving of the Law by Moses, which was identified with the code described above. That this document, which we know as the work of the Elohist (E), was originally designed for people who had quite recently been heathen is evident not only from such a statement as that in Gn 35:4, but also from the fact that the principal name of the God of Israel is represented as not originally known to the nation as a whole, and as specially revealed to Moses. It may also be inferred that the story in Ex 24:14 was invented for people of Aramean stock, since the Tetragrammaton is explained as being identical with the Aramaic word meaning ‘He will be.’ 2 How long

1 The account of Moses’ destruction of the ‘golden calf’ (Ex 32:20) might be thought to be suggested by what has actually taken place in the desecration of Bethel. Holes of various sorts, however, must have riddled at some sanctuaries for a considerable time, and the method of destruction ascribed to Moses may be based on what was actually done in some places.

2 The phrase ‘to come near unto God’ (W) will naturally mean ‘to come to the nearest sanctuary.’ It doubtless arose when there were images, but presuppose them. There is no necessity to understand the term in 21:1 to mean ‘house of God’; the idea is probably that there is rise is, according to primitive thought, there can be no exemption from the common law (which in Israel forbade perpetual servitude) except for the gods. By being attached to the temple, the slave was brought into perpetual servitude, theoretically, to Jahweh, but, since Jahweh did not claim his service, in reality to the master from whom he did not desire to be separated. An apparently contrary procedure, but based on precisely the same conception of the gods as exempted from common law, is found at Delphi and elsewhere, where a slave, in order to receive his freedom—the assumption of slavery being prohibited by the common law—was made over to the god, to whom theoretically he belonged, though he was attached directly to the temple service (see Darmestert-Saglio, 302 ff. C. Locriam in Durbneb-Saglio, ill. 111; J. E. Mayer on Gen. 1, 101 ff.). This parallel is sufficiently strong for the assumption based on Ex 21 that we must ascribe the origin of these laws to a period when heathen gods were entertained in the temples, and in fact, indeed, Hosea’s teaching had been vindicated. The phrase ‘I will be’ (translation ‘I am’), in the sense of ‘epi, is impossible’ is given in the first person, because Jahweh is represented as speaking to those who had been depending on their gods from N. Israel. For the ‘adversaries of Reum’ we should probably read his adversaries.

3 It is probable that the priests of other N. Israelite sanctuaries were deported at the same time. There was, however, a special reason for the deportation of the Bethelite priests, since Bethel was the king’s sanctuary (Am 7:9), and the priests would consequently be more closely connected with the royal family.

4 That the explanation of Assyrians at this period will explain the presence of a law enjoining the making of altars ‘in every place’ (Ez 35:3) is the more probable, since the original writer evidently supposed that (Jahweh) Jehovah to be ‘yiqy (eined), ‘I will be,’ as the third person to the first. It must be remembered that, owing to the weakening which took place in the pronunciation of the vowels, some imperfect of the verb הָיְרֵ (the word, according to the Masoretes, pronunciation, would, if it occurred, be pronounced הָיְרֵ (‘gathering’), must in earlier times have been הָיְרֵ (‘yiqy (eined), ‘I will be’), and must, therefore, have been nearly, if not quite, identical with the proper name of the God of Israel.

5 The phrase ‘I will be’ (translation ‘I am’), in the sense of ‘epi, is impossible’ is given in the first person, because Jahweh is represented as speaking to those who had been depending on their gods from N. Israel. For the ‘adversaries of Reum’ we should probably read his adversaries.
the process of the collection and redaction of traditions lasted we do not know, but it was probably completed in the 7th cent. B.C. It may have gone on at more than one centre, but we shall not be wrong in assuming that Bethel, the chief sanctuary of Samaria, was responsible for its final shape.

It would itself be unlikely that the school of men who produced E would have ceased from their activity at its publication. We may suppose that, shortly afterwards, a beginning was made with the writing of other books, traditions as to the conquest of Palestine by the tribes, and the exploits of the judges, kings, and prophets. This does not mean that E itself was continued down into the Monarchy, for it is very doubtful whether any parts of the existing books of Joshua, Judges, Samuel, or Kings ever formed one document with it, but merely that the writing of E provided the stimulus for the collection of other N. Israelite traditions. It must be remembered that the collectors had a practical purpose, and were not actuated by antiquarian interests. Thus, in the story of Elijah, Jahweh's protagonist against foreign cults, we have precisely the teaching which was necessary in Samaria in the 7th cent. B.C. As Ex 20:19 encourages the building of altars in places consecrated to Jahweh, so Elijah is represented as repudiating the altar of Jezebel that is broken down, while at the same time he has friendly relations with heathen outside Jahweh's land (1 K 19:17). Similarly in E itself it is natural that Balaam comes from 'Aram, from the mountains of the East' (Nu 22:6). The story of an Aramean prophet who was constrained to declare the superiority of Jahweh and Israel would have special force in Samaria in the 7th cent. B.C.

13. Prophetic activity under Josiah. Meanwhile in Judah the violent reaction against reform which the accession of Manasseh had brought about was spending its force. Manasseh died about 641 B.C., and was succeeded by his son Amon, who died after a short reign of two years and was succeeded by his son Josiah, then only eight years old. We have no information about the early years of Josiah's reign, but it is evident from the subsequent course of events that the antagonism to the teaching of the school of Isaiah must have greatly increased, for some time nothing occurred to give the necessary impetus to a popular reformation; but about the year 629 B.C. news of the havoc which the Assyrians were working in the districts north of Palestine, and which menaced Judah itself, caused the prophets to preach repentance, in order that the threatened blow might be averted. Among these the most prominent, as he was undoubtedly the greatest, was Jeremiah, who for the next forty years or more exercised a profound influence on the religious development of his countrymen, though comparatively few were prepared to accept his teaching in its entirety. It is remarkable that Jeremiah shows few signs of direct dependence upon his great predecessor Isaiah, while he is evidently deeply imbued with the teaching of Hosea—a fact which may perhaps be explained on the ground that, when Jeremiah, during the persecution under Manasseh, Judæan reformers found an asylum in Samaria, especially at Bethel. The evils which Jeremiah believed to be calling forth upon Judah are to a great extent those which the earlier prophets had denounced, but in addition to those there were some foreign cults of Aramean and Assyrian origin, of which there had been an influx during the reign of Manasseh. About five years after the beginning of Jeremiah's mission, during some building operations at the Temple1 a book was found which, when read before the king, convinced him of the need of reform. There can be little doubt that the historian of 2 K 22:4, whose account, however, cannot be held to be contemporaneous with the events recorded,2 identified this book with Deuteronomy. But this identification is beset with difficulties, even if the book read to Josiah should have included only chs. 12-26. If Deuteronomy be anterior to 621, it is hard to understand how, at a time when the province of Samaria was governed by an Assyrian envoy sent by a native king,3 any man or school of men could have drawn up an entirely new code of law for all Israel. Men of average common sense do not legislate in the air for a situation which may conceivably arise nobody knows when, but for one which is actually present or imminent. Moreover, the ritual law of Deuteronomy with respect to the fat and the blood appears to be in substance later than that which is found in the Law of Holiness (Le 17), and which may reasonably be supposed to represent the custom in Jerusalem at the time of the Exile (cf. Ezk 44:19).

Further, Jeremiah's emphatic repudiation of the sacrificial law as a teaching which the king has accepted, he reiterated as late as the fourth year of Jehoiakim is incompatible with the supposition that Deuteronomy became virtually canonical Scripture in 621.4 Here indeed, an need to call in question the main incidents in the finding of the book. It is true that, although in the Deuteronomistic period the phrase, 'the book of the law' (אֱלֹהִי הַתּוֹרָה), would naturally suggest Deuteronomy, the mere omission of the definitive article would make a wider application possible. A 'book of the law' might be used of any collection of prophetic teaching (cf. Is 8:11), and the book read before Josiah may have been a roll containing sayings of Mish (cf. Jer 29:10), or of Isaiah, or, more probably, it may have been a collection of Hosea's prophecies which had been brought to Jerusalem from Bethel when the persecution under Manasseh had come to an end.

14. Reformation under Josiah. It is evident that the king and his advisers felt the necessity of putting a stop to the superstitious rites practised at Judian sanctuaries; but the enforcement of this that of this was by no means an easy matter, for the national welfare was popularly supposed to depend upon them. More legislation on the subject would have been futile, for there was no one in authority to enforce such legislation. A solution of the difficulty was provided by what had hitherto appeared to be an unmitigated calamity, viz. Sennacherib's curtailment of Judian territory eighty years before. No king, however absolute he may be in theory, can with safety shock the sensibilities of the overwhelming majority of his subjects, but...
thanks to Sennacherib, the kingdom of Judah had lost most of its important towns, and Josiah reigned over a little kingdom comprising country districts with small towns and vil- lages, Jerusalem being the only city of first-rate importance. 1 We cannot help thinking that the king and his advisors shrank from causing mortal offense to Jerusalem, they probably considered, however, that, if a measure of reform could be introduced which could be accepted by Jerusalem, the opposition of the remaining parties in the country would be a negligible quantity. Moreover, the Temple at Jerusalem was an annex of the royal palace, and Josiah doubtless supposed that he would be able to exercise over it a supervision which would be impossible in the case of the country sanctuaries. With these principles in view, the king and his advisors carried out a sweeping reform. The country sanctuaries were destroyed utterly, 2 the 48thnahm, who had quarters even in the Temple, were put to death; the foreign cults recently introduced were abolished. No change was made in regard to sacrifice, except that it could now be celebrated only at Jerusalem. Needless to say, a change so tremendous as the abolition of sanctuaries numerous enough to be described in the terms 'upon every high mountain and under every green tree' (cf. Je 19:3) for a time caused many difficulties. In the first place, it was necessary to make provision for the country priests, the Levites as they were called, who were now thrown out of employment, for the reformers would scarcely have dared, had they wished to do so, to treat them as they had treated the 48thnahm. Josiah doubtless supposed, since his nursery of worship at Jerusalem would now be increased, the Temple revenue alone would be able to support a more numerous priesthood, and he seems to have intended that the priests who had ministered at the country sanctuaries should now be allowed to become members of the gild of Zadok at Jerusalem. But he had not taken into account the opposition of the Zadokites to such a scheme, and in effect these country priests who managed to gain a footing in the Temple all were placed by the Zadokites in an inferior position, so that henceforward the Jerusalem priests were of two ranks (cf. 2 K 23:4, Ezk 44:20-21).

It is evident that the discontent caused by the king's reformers was not the less intense. Even in Jerusalem the forbidden practices went on, if not in the Temple, at all events more or less openly. The country people had good cause for discontent, for, since no change had been made in the sacrificial law, and the domestic animals could be slain only at an altar, it had become illegal to hold a feast except at Jerusalem. 3 It would seem that some inhabitants of the more distant districts, having no altar near, dispersed with one altogether, so that it now became necessary to urge upon them the requirements of the sacrificial law. Under these circumstances it is not surprising that, although the original impetus to reform had been given by prophets who repudiated sacrificial altogether, a school of prophets arose who laid stress on

1 The suppression that it was Josiah's teaching that gave to Jerusalem the unique position afterwards assigned to it is one of the many interesting facts which are the fragments of Josiah's teaching which have been preserved to us in their original form, it is clear that Josiah took the same view of sacrifice as Amos, Hosea, and Ahaziah, and although Micah, even had declared that Zion should be 'plowed as a field,' that is, a field of plowed land, it is better to say that Micah was not at this time subject to the king of Judah, and thus formally recognized by him.

2 The words put into the mouth of Rabshakeh (2 K 19:20) probably reflect the discontent caused by Josiah's reforms.

3 The necessity of performing sacrificial ordinances.

Against those who, because of their distance from Jerusalem, were inclined to drop sacrificial worship altogether, or to slaughter domestic animals without due rite, the obligation of keeping the great feasts, which were, indeed, specially mentioned in the ancient Decalogue, was insisted on (Ex 34:21), and old stories of the building of altars and of solemn sacrifice by the patriarchs were again told. 4 The result may be seen in the Jahvistic book of the Pentateuch (Deut 4-18), the idea of which may have been suggested by the similar document E, which was, perhaps, still taking shape in the province of Samaria. The population of Judah was homogeneous to a much greater extent than that of Samaria, and it was, accordingly, unnecessary to introduce any social legislation into this document; but the ancient Decalogue, which had probably been somewhat amplified in the closing years of Hezekiah's reign, and was perhaps already popularly ascribed to Moses, was enlarged by horitory additions to suit the exigencies of the present situation. The school which we owe this document, and which may be considered as representative among the prophets of the State religion of the period, found no favour in the eyes of Jeremiah. It is highly significant that he, the author of the account of Josiah's reforms given in 2 K 22:1, he remained unshaken in his conviction that sacrifice was unnecessary and displeasing to Jehovah. He gives an unequalled depth of insight into the assertion that Moses had commanded it (Jer 7:34-35); he may have introduced, perhaps of the Jahvistic document itself, that 'the king's head had wrought falsely' (89).

It is stated (2 K 23:9) that Josiah's reformation was inaugurated by a solemn covenant ceremony in which the king pronounced the law on the part of the king and the people. That there was some solemn publication of what was henceforth to be the law at some stage of the reformation is likely enough; it is by no means probable that this did not take place at the beginning of the movement, but when it had made sufficient progress to ensure the absence of any very violent opposition. The present narrative has a strongly Deuteronomic colouring, and seems to have been modified since it was first written. 2 The code now contained in Ex 34 may well represent the basis of the 'covenant' determined upon by Josiah (note particularly v.24), but though the horitory introduction is probably of somewhat later date.

Notwithstanding the deep cleavage between Jeremiah and those prophets who approved of Josiah's compromise, the influence of Jeremiah must have been great. He attacked unsparingly the superstitions which all Josiah's zeal had been unable to stamp out, as well as the moral evils from which even the reformed Temple was by no means free. It was doubtless in small measure owing to him that, at the disaffection caused by the troubles which followed the death of Josiah, there was not a far greater recrudescence of the superstitions which that king had put down.

The false hopes raised in Judah by the defeat of Pharaoh at the battle of Carchemish again
called forth Jeremiah’s activity. His earlier anticipations of Judah’s ruin at the hands of a foe from the north had not been realized; for, though the invader was soon near, there is no evidence that they ever invaded Judah. But now there was a prospect of the domination of a far more powerful nation, viz. the Chaldaeans, who in Judah would not naturally be regarded as coming from the north. Accordingly, in the fourth year of Jehoiakim (c. 604-603 B.C.), Jeremiah directed his disciple Baruch to write down a number of prophecies which he had composed since the beginning of his ministry in 623, with the object of showing that the judgment then threatened had been merely postponed and not averted.

15. End of the kingdom of Judah. - The ill-advised revolt of Jehoiakim, three years after he had taken an oath of allegiance to Nebuchadnezzar, brought against Jerusalem an army of Chaldaeans which, after some time, was joined by Nebuchadnezzar in person. Jehoiakim appears to have died during the siege. He was succeeded by his son Jehoiachin, who, three months later, surrendered to Nebuchadnezzar. Jehoiachin and many of the royal family with the aristocracy of Judah, including both the people and the priests, were carried captive to Babylon; Nebuchadnezzar appointing as king of Judah Mattaniah, the brother of Jehoiakim and uncle of Jehoiachin, who now assumed the name of Zedekiah.

But the new government proved no better than the old. The Palestinian States had not yet realized the full power of the Chaldaeans, while Egypt continued its policy, which she had followed for more than a century, of fomenting revolts in Palestine, in order to avert the danger which threatened herself from the great W. Asiatic empires. In spite of Jeremiah’s earnest warning, Zedekiah was induced to revolt, with the inevitable result. After a long siege, Jerusalem was taken in the year 596 B.C. King Zedekiah was made prisoner, blinded, and carried to Babylon; the Temple was first rifled and then, together with the king’s palace and the better houses in Jerusalem, burned; the city walls were broken down. For the second time a great number of the inhabitants, including those priests who had been left on the former occasion, were transported to Babylon.

The OT, as is but natural from the place and period of composition, is for the most part written from an aristocratic point of view; and accordingly, since the upper classes were taken into exile, it is not surprising that some passages give the impression that the whole population of Judah except the very poorest were transported. But, although the whole land had suffered greatly, it was Jerusalem only that had borne the brunt of Nebuchadnezzar’s wrath, and a not inconsiderable population remained in the land, whose numbers were augmented, as soon as the Chaldaean army had gone, by the return of numerous refugees, many of whom were doubtless of good family, who had sought an asylum in the neighbouring countries. Nebuchadnezzar, although even his patience was exhausted as far as the house of David was concerned, adhered to his former policy of leaving the government of the country in the hands of a puppet, and appointed Gedaliah the son of Ahikam governor of Judah.

How long Gedaliah’s governorship lasted cannot be determined with certainty. The year is not given in Jer 39:1, 2 K 25, and an interval of less than three months seems scarcely sufficient for the events recorded in 2 K 25. Since Jer 29:29 mentions a third transplantation of Jews to Babylon five years after the second, which, although it is stated in the eighteenth year of Nebuchadnezzar, must be the same as that which is described in 2 K 25, we may perhaps suppose that Gedaliah was governor for about five years, the last transplantation being the result of his murder (2 K 25, Jer 41), which the Chaldaeans regarded as a pretext for rebellion. Thenceforward Judah, like Samaria, appears to have been governed by a Babylonian official.

In the certainty that the Chaldaeans, after the murder of Gedaliah, would send a punitive expedition to Judah, a number of the inhabitants fled to Egypt, which had probably been for a considerable period a place of refuge for the distressed inhabitants not only of Judah, but also of Samaria. There thus arose a number of Israelite communities in Egypt, which were destined in after times to have an important influence on Israel. The refugees would naturally be representative of the mediocrity of cattle which existed in Palestine in the 7th cent. B.C., but the religion of Judah flourished among them, and in the times of Canaanites—apparently there had previously been oppressed by the captors; perhaps on the grounds of the choice of sacrificial animals—a temple for sacrifice was built to Jehoveh at Elephanthis.

Of the last years and death of Jeremiah, who, after the murder of Gedaliah, wascompelled by the refugees to accompany them to Egypt, we have no information. There is no evidence that his presence exercised any permanent influence upon the community in Egypt. He may have returned to Jerusalem and died there.

It had been Jeremiah’s sad office ‘to pluck up and to break down, and to overthrow and to destroy,’ and apparently it was not till the close of his ministry that it was perceived that he had also a mission ‘to build and to plant’ (Jer 31:14). Although he never wavered in his conviction of the futurity of opposition to the Exile, there can be little doubt that to those who believed his preaching he turned comforter. Perhaps the individualism which was beginning to make itself heard (cf. Jer 31:14) may partly spring from this phase, but it was probably due in the main to the conviction that Jehovah, who all through Israel’s sin had remembered the love of her espousal (23), could not wholly cast her off. The prophecy in 35:6, which appears worked up again in 36:23, although it was in its original setting, and perhaps not quite in its original form, may be dated with considerable likelihood in the period of the reign of the king after the capture of Zedekiah. The tree of David’s dynasty had been cut down, but from the root there would yet spring up a shoot (wrongly rendered ‘branch’ in EV) which would grow again into as goodly a tree. This restored monarchy, unlike Zedekiah, who had belied his name of ‘Jehovah is righteousness,’ would seek its ‘righteousness,’ i.e. wellbeing, only in Jehovah, and the restored community would enjoy a ‘covenant’ with Jehovah which would be permanent, in the conviction that Jehovah would be written on His people’s hearts (31:31,32). The prophecy of the ‘Shoot’ is the ear.

1 The term ‘David’ in 35:6 need not necessarily be understood to mean originally the actual family of David, but the royal line of Judah, which had so long belonged to the dynasty of David. In 2 K 25, although strictly speaking the king’s actual descendants are excluded from reigning, Jeremiah seems to mean the royal family generally.

Since the word rendered ‘shoot’ has a much wider range of meaning in Hebrew than the English rendering would imply, it is not quite certain what is here represented in the form ‘branch.’ The word may denote merely a state of peace such as that which exists between two parties who have entered into an agreement for mutual protection, and is so used, e.g. in Hos 2:24, Job 20:21. If this sense be adopted here, the earlier covenant will be the living relation between Jehovah and Israel described in Jer 31.
liest prediction of future happiness to which we may see subsequent definite reference in the OT (of Zech. 2:4, 6), and may be regarded as the starting-point of 'Messianic' prophecy.

15. Religion in Judah after the destruction of the Temple.—The deportation of the priests from Jerusalem and their acceptance. It is possible to see the reason why the Temple had not made sacrifices impossible, for the great stone altar originally erected by Ahaz probably remained, and in any case some sort of altar could have been continued on its site. But the absence of a priesthood might have occasioned many difficulties; for sacred and secular life were hardly distinguishable. In this respect Samaria was now better off than Judah, for Bethel had been reopened by special permission of the king of Assyria, and probably Shechem and other sanctuaries were to some extent flourishing. The removal of the dynasty of David had taken away the old cause of jealousy between Samaria and Judah; and, since the similarity in their political situations would doubtless have drawn the two provinces together, there was no reason why they should not combine for their mutual advantage. The position of Bethel, which may reasonably be regarded as Aaronite,2 represented in the main the ideas, not indeed of Jeremiah, but of the prophetic school which had drawn up the Jahvistic document (J); and it is probable that the proximity of Bethel to Jericho suggested the possibility of an arrangement by which the latter sanctuary should serve the needs of those who had hitherto worshipped at the former, Bethel for its part supplying the priestly body. That by some means, at some time, the province of Samaria was for religious purposes united with Judah is evident. The writer of Ezr. 4-6 believed that such a union had been effected before the Exile, and that the Samaritan and priestly Hebraism and subsequent worship at Gerizim is inexplicable unless the Samaritans had previously accepted the principle of one sanctuary only. The combination of the N. Israelite and Judahite documents E and J also presupposes some such union, which may most easily be explained on the supposition of a voluntary agreement. We need not dismiss the account given in 2 K. 23-25 as altogether fictitious, but it is probable that by some means, at some time, those who had worshipped at Bethel would be unanimously in favour of closing that sanctuary, and the majority may have perpetrated the horrors here narrated but may have been compelled to consent in assenting to Josiah. Probably this beginning of reunion affected at first only Judah, and the district hitherto served by Bethel. There were, indeed, many problems to be solved before it could have a wider scope. In particular, there was the question of the law-books, or, in Hebrew phraseology, the 'covenant'-books, recognized respectively at Jerusalem and Samaria. The Biblical document E was probably accepted not only at Bethel, but also at other sanctuaries in Samaria; while in Judah the Jahvistic document J, in spite of the opposition of Jeremiah, had probably acquired, except perhaps in Zadokite circles, a quasi-canonical recognition. If both communities should abandon its Scriptures, and the difficulty was solved by the combination of J and E into JE, the code of J (Ex. 34) being represented as given to replace the code of E, which had been broken up by Moses.

It must have been evident to those who cherished any nationalist aspirations that anything which tended towards centralization and union was of the greatest value, and it is not surprising that, when the compact between Bethel and Jerusalem had had time to prove its advantages, a further extension of the law of the One Sanctuary began to be mooted. But there were many difficulties in the way. The impossibility of slaughtering domestic animals except at Jerusalem had already been found a great burden in the more distant districts of Judah. It was, therefore, that still more distant districts in N. Samaria or Galilee would tolerate such an inconvenience. Besides, even on the supposition that the rest of the country would be willing to accept Jerusalem as the supreme sanctuary in lieu of others, there was the problem of the maintenance of the priests who had ministered at these, while a state of society in which the venal priest was recognized would simply shrink from abolishing local sanctuaries where an innocent homicide might find asylum. A further difficulty would be found in the fact that reforming ideas had in some respects made greater way in Judah. Thus, e.g., the Samaritan schism and subsequent worship at Gerizim is inexplicable unless the Samaritans had previously accepted the principle of one sanctuary only. The combination of the N. Israelite and Judahite documents E and J also presupposes some such union, which may most easily be explained on the supposition of a voluntary agreement. We need not dismiss the account given in 2 K. 23-25 as altogether fictitious, but it is probable that by some means, at some time, those who had worshipped at Bethel would be unanimously in favour of closing that sanctuary, and the majority may have perpetrated the horrors here narrated but may have been compelled to consent in assenting to Josiah. Probably this beginning of reunion affected at first only Judah, and the district hitherto served by Bethel. There were, indeed, many problems to be solved before it could have a wider scope. In particular, there was the question of the law-books, or, in Hebrew phraseology, the 'covenant'-books, recognized respectively at the time of the Exilarch.

We hear, however, of a solemn ratification of a covenant in the reign of Zedekiah (Jer. 34:12-16), though we are not told the circumstances under which it took place. While in Jer. 15 this covenant is assumed to be on the basis of an ordinance dating from the Exile. But ch. 34, though it may embody some of Jeremiah's phrases, is not from the prophet's own hand, and cannot be held to prove that there existed in Judah at this time a council of elders with regard to the eating of slavés which was ascribed to the period of the Exodus. It is therefore probable that the writer to whom we owe the account of Josiah's reforms in 2 K. 23-24, if he had heard of the destruction and desolation brought about by Josiah, would have given the limits of the reform as from 'Gibeah of Benjamin' (v. 6). Bethel lay outside Josiah's kingdom. 2 K. 23:8 is from the same hand as 2 K. 19:15, and is a command which is peculiar to the Deuteronomistic school, and was written at least as late as the third generation from Josiah. The reason why 2 K. 23:16, and also 2 K. 24:4, ignores the alleged destruction of Bethel and of the high places of Samaria.

4 For a fuller discussion of this point see KENITT, 'The Origin of the Deuteronomistic Priesthood,' in JPRhSt, 1906, 151-158.

5 The exact limits of Judah at this period are not known. It is possible to think that, when Judah ceased to be a kingdom and was made a province governed by a Babylonian official, its old limits were restored; but some districts which, as far as their political history was concerned, were Jewish may even yet have remained distinct with their old sanctuaries.

The outcome of these and other reforms and concessions was the book of Deuteronomy, of which the legal code (ch. 12-26) is evidently the.

1 The text that may be maintained of the teaching of Gn 22 is that the sacrifice of the first-born is not insisted on (cf. Jer. 7:24, 25). Ezekiel (34:25) recognizes that the sacrifice of the first-born has been legal in the past.
nucleus. In the forefront of this code is placed the law relating to sacrifice at the one altar,1 specially framed in view of the extension of the law to all Israel. The code also contains rules relating to the celebration of the great feasts, the maintenance of the priests, and the like, as well as a number of enactments designed to put a stop to superstitious and heathenish practices, and ordinances dealing with matters of common life. These last, which are to some extent based upon the code of the Samaritan, book E, appear to be intended more especially, though not exclusively, for the instruction of the non-Jewish districts of the land. This code of law, although it is directly at variance with Jeremiah (722) in definitely requiring sacrifice—which represents as commanded by Moses himself—indirectly did much to further Jeremiah's conception of religion. In time past, the motive of sacrifice had frequently been "to eat flesh"—a fact which had called forth the scathing sarcasm of Jeremiah (723)—but now those who desired to feast could do so at home, and thus sacrifice was at least lifted above such sordid considerations.

There was, indeed, the danger that the infrequency of ritual worship might bring about a forgetfulness of religion, but this was not to a great extent guarded against by the Deuteronomistic reform. The great sacrifice based on obedience to the common law of Israel on Israel's relation to Jahveh, and subsequently prefaced to the code of laws several phrases cast into the form ofhortatory addresses by Moses, yet the difficulty must have been felt that the old Deuteronomic covenant as was regarded as the basis of Jahveh's covenant with Israel, being chiefly concerned with ritual ordinances, had been repudiated by the school of Jeremiah, and that this school, which, indeed, had greatly learned religious thought, would never accept as the basis of a divine covenant a code which required sacrifice but did not insist on justice, mercy, and truth. Accordingly, since the tradition of the laws divinely given and gravely upon two tables of stone had gained firm hold of the popular mind, the bold step was taken of providing a new Decalogue (De 5), laying down the first commandment and that relating to the observance of the Sabbath, as well as the more recently introduced prohibition of images, but otherwise based on the ethical teaching of the great prophets, especially Jeremiah (see, e.g., Jer 7 9-11, etc.).

One of the last of the great Samaritan sanctuaries to fall into line in the matter of the Deuteronomistic law was that of Shechem, which claimed to be the burial-place of Joseph (Jos 24,7), and which possessed near it a temple and a standing-stone supposed to have been placed there by Joshua (Dt 27-8; Jos 8). It would have been strange if the inhabitants of Shechem had not been willing to destroy that which had made their city so famous, while without Shechem the unity of Israel could not have been attained. A solemn compact, legalized by an appendix to the earlier law of Deuteronomy (cf. 97), was therefore made with the Shechemites, whereby the latter agreed to accept the law of the One Sanctuary. This compact was ratified with sacrifice upon the old altar of Shechem, which was allowed to remain on condition that it should not again be used for its original purpose, while the standing-stones were purged of any heathenish or schismatic associations by being plastered over and described, with the provisions of the new law, 1 This fact alone is sufficient to dispose of the assertion that
Shechem was acquainted with the book of Deuteronomy, and, indeed, deeply indebted by it. The passage of laws not least prominent in Deuteronomy as sacramental prayers and rubrics in the Book of Common Prayer; but who will maintain that the latter is not concerned with sacraments?

1 Probably the story contained in Jos 9 had its origin in a similar conception with regard to some altar in the vicinity of the Jordan.

Advantage was taken of the gathering at Shechem to stimulate the national sentiment. Representatives of the twelve tribes were stationed, six on Erhel, on which stood the ancient sanctuary, and six on Gerizim, who responded respectively when the Levites pronounced curses on those who should transgress, and blessings on those who should obey, the new law. No doubt there still remained some heathen communities in Samaria, and, still more in Galilee and Gilead; but there was little cohesion between them, and much national sentiment as existed was Israelite. So greatly had the sense of Israelite unity been developed by the centralization of worship, that the reformers had considered it desirable to incorporate in their new law-book legislation for a future king (Dt 1717-20). The provision that such a king must be of Israelite blood might possibly be aimed at the ambitious schemes of some governor appointed by the Chaldeans as king of Palestine, or may be intended merely to ensure that a king of Israel should not be a man who had only recently accepted the religion of Jahveh, who was thoroughly imbued with Israelite tradition, while in the warning against Egypt and against horses we may see the fruits of the teaching of the great prophets. It is impossible to give a terminus ad quem for the adoption of the Deuteronomistic laws, but it may probably be dated before the appointment of Zerubbabel.

17. Development of religion among the Babylonian exiles.—Meanwhile a religious development of the utmost importance was going on among the Jewish community settled in Babylonia. It might have been supposed that these exiles, like their brethren who had taken refuge in Egypt, would have erected one or more temples to Jahweh, and would have continued the exercise of their own religion. But, whereas the refugees in Egypt had left their native land of their free will, the exiles in Babylonia were for the most part victims of rebellion, and less inclined to settle down in a foreign country; indeed, for some time it was difficult to persuade them that their exile would be of long duration (cf. Jer 38 f.).

The most important factor in shaping the religion of the exiles in Babylonia was the presence among them of the Exilarch priests, of whom the majority had been carried off with Johoiachin in 597 B.C. An unforeseen result of Josiah's reforms was that these priests had been placed in a unique position; for, since they had refused to accept an equality with the priests who had ministered at the country sanctuaries (Ezk 4424), they were compelled to maintain not only that there must be but one sanctuary, but also that that one sanctuary must be at Jerusalem. These men, therefore, could not have acceded to a demand for a temple in Babylonia—had such a demand been made—without nullifying their previous action.

Prominent among these priests was a certain Ezekiel, son of Buzi, a man thoroughly imbued with the traditions of the Exilarch priesthood as they had taken shape after 621. Ezekiel felt himself called to be a prophet in the fifth year of Johoiachin's captivity. Shipped on the Ararat, he performed for twenty-two years he exercised a powerful influence on his fellow-captives. It is vain to speculate why for four years Ezekiel was silent; but it is possible that for some time he, like his fellow-captives, did

1 Notice especially De 27.
not realize that the exile was likely to be of long duration.

Like the other great prophets, Ezekiel was conscious that the disasters which had come upon his people were due to sins, but his priestly training largely modified his conception of what those sins had been. He was alive to the social evils, but, in his opinion, Israel's chief sin in the past had consisted in idolatry and idolatrous practices in the religion of Jehovah. Unlike Jeremiah, he considered sacrifice a divine institution, and his standpoint is throughout sacrificial rather than prophetic. Himself a man of intensely strong convictions, he makes no allowance for the fact that his code of right is of very recent origin. Thus he condemns as some of the sins which have caused Israel's ruin the taking of a father's wives by his son (Ezk 22:12), as well as the marriage of a half-sister on the father's side (v. 11), though such practices had been, and perhaps in Palestine still were, the common custom in Israel (2 S 11:18; 19; cf. Gn 30:4).

That Ezekiel, under the circumstances in which he found himself, should have developed an individualism was but natural. It was inevitable that some of the evils should be merged in the heathenism of Babylonia; and the desire to keep the rest faithful to Jehovah must have called forth a care for individuals which had not been required of earlier prophets, so that Ezekiel became the prototype of the Christian minister. It is true that individualism of a sort was already in the air, even before the disester of 597, men had asked why, if the fathers had stood faithful, the children's teeth should be set on edge (Jer 2:19). To a prophet who felt himself bound to care for individual souls such a question must of necessity present a problem which could not be left unheeded and Ezekiel (ch. 18) attempted to grapple with it. The thought of the age was insufficiently advanced to render a full discussion of the problem possible, and Ezekiel was hampered by the supposed necessity of considering together sin and suffering as cause and effect; but in his efforts to vindicate Jehovah's justice he insisted on Jehovah's relation with the individual soul, and thus prepared the way for later and fuller teaching.

Ezekiel's great achievement was the forging of the weapon by which the religion of Israel was finally enabled to withstand the attacks of heathenism. He opened the eyes of the leaders of the right of the Zadokites to the priesthood, as well as of a return to Jerusalem, Ezekiel set himself to commit to writing the priestly traditions of the Temple ritual, freely introducing, however, in characteristic fashion, modifications and innovations which he considered would be an improvement on the old state of things, and insuring on the permanent degradation of inferior offices in the Temple of those Levites who had been at Josiah's reformation ministered at the country sanctuaries. He claimed no ancient authority for this new 'ecclesiastical polity'; but the school which he founded was naturally concluded, in accordance with his teaching, that what he laid down ought to have been practised all along, and this in itself would tend to produce the impression that what the priestly traditions of Babylonia agreed reed to be right must have been enjoined at the Exodus. It is possible that the Zadokite priests, before they left Jerusalem, knew the Jahvistic document J in its original form, though it is hardly likely that they would have accepted it as such; we should call canonical; or perhaps, after the combination of J and E into JE, the latter document, or an account of it, may have reached them in Babylonia, and may thus have preserved the prototype of a frame of reference to which they could add their traditions. The codification of priestly traditions was evidently spread over a considerable time. The nucleus of the collection, which bears a strong resemblance to Ezekiel's writings, is contained in the so-called Law of Holiness (Lv 17-26), and presents the remarkable feature that, in connexion with the slaughter of domestic animals, it requires the offering of the blood and fat at the centre of the altar, and must be in substance anterior to Deuteronomy.

The victories of Cyrus and the threatened conquest of Babylonia caused grave disquiet not only to the exiles themselves but also to the Jewish communities abroad, to their brethren in Palestine. The situation in Babylonia called forth the eloquence of one of the most attractive of the canonical prophets, whose compositions, however, have come down to us only in a very fragmentary form, and modified and interwoven with prophecies of a later date. In the coming overthrow of Chaldean rule he foresaw the release of his people from captivity, and hailed Cyrus as a deliverer. Whether his anticipations were justified by the event is very doubtful. The belief that Cyrus gave free permission to the Jews to return rests only on the statement of the Chronicler, whose trustworthiness in this connexion may be gauged by the fact that he represents (Ezr 1:3) Cyrus as restoring the vessels of the Temple, which, according to the more probable statement in 2 K 25:17 (cf. Jer 52:20), Nebuchadnezzar had carried away 70 years before. The Cylinder Inscription of Cyrus does not prove that all the captive population of the Babylonian Empire were allowed to return to their homes, but no other confirmation of the Chronicler's statement.

Neither Haggai nor Zechariah refers to any such return from captivity, and neither shows the least gratitude towards Persia. Probably the reign of Cyrus the province of Judah continued to be governed by the Babylonian official whose name appears in Ezr 1 as Sheshbazzar.

18. Zerubbabel appointed governor of Judah;
rebuilt the Temple. Though there is good reason for doubting the Chronicler's statement as regards Cyrus, there is no doubt that in the second year of Darius (539-538 B.C.) a member of the old royal family of Judah, Zerubbabel the son of Shecani- tiel, had been appointed governor of Judah. We know nothing of the fortunes of the house of David in Babylonia beyond the fact that Jehoiachin had been treated with contempt by Nebuchadnezzar. Zerubbabel may have commended himself to Darius in some such way as is described in 1 Es 3:8, or he may have been selected for the governorship of Judah because Darius, in the troubles which beset him at the beginning of his reign, wished to conciliate the inhabitants of that province. That there was any return of exiles on a large scale at the time of Zerubbabel's appointment is unlikely; but there is little doubt that he would be accompanied by a retinue of his own people, among whom there would be, in all probability, some Zadokite priests.

Hitherto little had been done at Jerusalem in the way of restoration. Sacrifices were offered at the altar (Hag 2:4); but the Temple had not been rebuilt, and, apparently, its ruins had not, call of Jerusalem was still broken down, and the community generally was poverty-stricken. The poverty, however, was not universal, and a certain number of people had built themselves houses which, in the opinion of the prophet Haggai, were unnecessarily luxuriously. This prophet, of whose antecedents we know nothing, took advantage of the enthusiasm evoked by Zerubbabel's appointment. We are not in a position to decide whether Zerubbabel and Zechariah had returned with Zerubbabel, or whether they had always lived in Judah. Zechariah's interest centres in Judah, from which he might be inferred that he was the exclusive Jews of Babylonia. On the other hand, the province
by Zerubbabel's appointment to urge the rebuilding of the Temple. On the new-moon festival (c. 1st Sept. 529 B.C.) he addressed the people on the subject, and so much success attended that, three weeks later (c. 29th Sept.), work, probably in the clearing of the site, was actually begun. A month later (c. 21st Oct.), the work was so far advanced that it was possible to lay the foundation-stone with stones taken from the Temple. Haggai had encouraged those who were dependents because of the inferior character of the building just begun, by declaring that the outcome of the shaking of the world—referring probably to Ezechiel's vision which had broken out against Darius in various parts of the Persian Empire—would be that the wealth of all nations would flow into the Temple. Two months later (c. 24th Dec.), Haggai gave expression to what was doubtless a general hope—that in Zerubbabel would be seen the reversal of Jeremiah's judgment on Jeboiachin (Hag 2:2, Jer 25:5).

Haggai's hope of the dissolution of the Persian Empire proved illusory, however, and it soon became evident that Darius would hold his own. The disappointment thus caused in Judah was combated by Zechariah, who endeavoured to keep alive the enthusiasm which had been awakened by the project of rebuilding the Temple. Zechariah's prophecies, of which those that have come down to us are, for the most part, in alphabetical form, are of unique interest, but only two features of his work can here be mentioned. As the work at the Temple proceeded successfully, the idea was mooted, perhaps by Zerubbabel himself, of rebuilding the wall of Jerusalem. Zechariah, although he hoped and believed that Zerubbabel would one day actually be king of Judah, was fully alive to the danger of such an enterprise, and earnestly deprecated it (2:8). The prophet seems in this instance to have been unsuccessful, and the proposed fortification of Jerusalem naturally aroosed the suspicion of the Samaritans, who imagined that Zerubbabel was aiming at making himself a second Solomon, and of exacting from them forced labour (Ezr 4:1-2).

It was inevitable that there should be collision between those who had always been settled in Jerusalem and their brethren who had returned from the wilderness. The chief priest at this time was a certain Joshua, son of Jehohanan, whose genealogy is connected with the Chronicles (1 Ch 6:31-44) with the Zacoiotes probably by the mere combination of Jer 35:8 with Hag 1:2, but who may have been chosen from the Amaronites or priests who had formerly ministered at Bethel. The Zacoiotes who accompanied Zerubbabel would naturally regard this man as disqualified, and at best not superior to the country Levites who had been permanently degraded to an inferior position. Joshua, however, found a staunch champion in Zechariah, who declared that so long as he should be loyal to Jehovah's law he should have the government of the Temple. Zerubbabel, Zechariah maintained, should be king upon his throne, and Joshua priest at his right hand; and of Samaria was probably in a more flourishing condition, as it had had longer time to recover from the effects of the Assyrian invasions.

3. Josephus in Ant. xiii. 6. 1. 1. 3 mentions a mistake in the foundation-stone.

The exact nature of the appeal to Darius is not stated, but it may be inferred from the subsequent appeal to have been addressed at the council of Babylon (1 Ch 36:19).

2 That Joshua's misfortune—which Zechariah allegedly deplored—was an accusation by Satan (Zee 3:2) was attempted deposition from office, and this evidently Zechariah's judgment is represented as clad in filthy garments, i.e., garments in which it was evident that he lavished his blood. In Zeo 9:3 for 'on his throne' (the second time of the occurrence of the phrase) the LXX has 'at his right hand'; and, since there is a reference to the Eschatological claims, it is evident that the name of Joshua has been omitted in this verse, which has been wrongly written for that of Zerubbabel in 1:8.

3 The prominence given in the existing books of Samuel to the rejection of Saul in favour of David was occasioned by the fact that he was claimed by some in Samaria that a king who should reign over all Israel should not be from the family of David. There is no difficulty in the supposition that some members of Saul's family still remained at Gath.

4 A good illustration of this is found in the words put into the mouth of Joshua (Jos 23:8). In mentioning the people who died beyond the Jordan the memorials of those have in view the immediate ancestors of many of those whom he is addressing.
tions of the sayings of Amos, Hosea, Isaiah, Micah, Zephaniah, Nahum, and Habakkuk.¹

The ideals of those whom Zerahiah had endeavored to dissuade from attempting to fortify Jerusalem, were to be cherished by many in that city. The work of rebuilding the wall was probably begun in 515 B.C., and Tattenai and Shethar-bozzeni appeared against it successfully to the Persian government. According to Ezra 4,² an appeal was made to Xerxes (Ahasuerus) against the Jews about the year 485 B.C., from which it may be inferred that there was then another attempt to fortify Jerusalem. The work was yet again taken in hand in the reign of Artaxerxes Longimanus, probably between 460 and 455.³ On this occasion the wall appears to have been almost completed when Artaxerxes, in response to an earnest appeal from Reheman and Shimshai, who appear to have been respectively governors of Samaria and some other Palestinian province, allowed these men to raise troops in the country and to stop the work. A force composed of Samaritans, Ammonites, Moabites, and others thereupon attacked Jerusalem, demolished a considerable portion of the newly built wall, burned the gates, and carried off many captives.⁴ The Edomites, after a long siege of more than a century being press ing northwards and had become incorporated in Judah, may have been induced by the Samaritans to take part in this attack—an act of treachery which the Jerusalem party never forgave.

20. Appointment of Nehemiah; rebuilding of the wall of Jerusalem. — It was not long before the tables were turned on those who had attacked Jerusalem. Nehemiah (Neh 2:8), the son of Hacaliah, was in the ranks seen by Xerxes as well as by Artaxerxes, and his appointment as governor of Judah, the son of the Exiles, was not a matter of indifference. The Persian king, therefore, appointed him to the post of governor, and Nehemiah, as soon as he had been confirmed in his office, set out for Jerusalem, which he entered in a state of great excitement. The walls were in a ruinous state, and the gates were not only destroyed but entirely abandoned. The cities and villages were inhabited by Gentiles, and the inhabitants were left to themselves and to their fate. The situation was indeed a critical one, and Nehemiah was called to face it with courage and determination.

Upon his arrival, Nehemiah immediately set about repairing the wall, and in a short time the work was completed. The Jews were enabled to resume their former way of life, and the city was once again a flourishing and populous place. The restoration of the walls was a great step forward in the building up of the national life of the Jews, and it was a fitting precursor of the more important work that was to come.

21. Mission of Ezra; publication of the Law. — Upon their arrival, another attempt was made to separate Jews from non-Jews, and to put a stop to mixed marriages. The attempt aroused intense opposition and little was effected. Ezra must indeed have felt himself powerless, inasmuch as among a people who possessed and revered the Scriptures they had none to which he could appeal as authority for the work which he proposed to do. He determined, therefore, to publish in Jerusalem the law of the Zadokite lawyers in Babylonia; and, since it was impossible to expect that Jerusalem would give up its Scriptures, he decided to follow the precedent set when the Scriptures of Samaria and Judah had been combined into JE. Probably in order to carry out this work, Ezra returned to the east, but on this point we are not informed. When he returned, Nehemiah got Artaxerxes to appoint him governor of Jerusalem, and returned thither, perhaps accompanied by Ezra. As yet little had been accomplished in the matter of reform. It was necessary, therefore, to take steps to ensure the success of the law, and Ezra accordingly set about the work of publication. The law was read in the temple, and the people were instructed in its provisions.

22. Final breach with the Samaritans. — From the first Nehemiah had shown himself uncompromising in his Judaeo-Zadokite prejudices. Having grown up as a member of a race which had for long been separate from other races for several generations, he could not bring himself to look upon people of mixed nationality as truly Israelites. Although those who accompanied Ezra seem to have been chosen as representative of the twelve tribes, Nehemiah soon showed that, in his opinion, the existing conditions, to indoctrinate their fellow-countrymen. Nehemiah came to the conclusion that the reforms which he desired could not be carried into practice unless the small minority who sympathised with him were to form a distinct community from Babylonia. Upon his return to the east he obtained permission from Artaxerxes for the return to Jerusalem under the leadership of Ezra¹ of a number of Jews (probably carefully selected)² then living in the exilic community.²

¹ For this view of the relation of Nehemiah and Ezra see Cambridge Biblical Atlas, p. 153 B.
² At first there were no Levites among the returning exiles, and Ezra made a special point of providing for them. It is probable that from the deportations of the Zadokites till the return of Ezra the clergy who ministered at Jerusalem had been all of one race.
³ This must not be taken to mean that any of these collections have descended from Nehemiah himself, as Helck, Theit, and others have all been more or less modified to suit the exigencies of later ages.
⁵ The rendering of the English version in Neh 2, 'the remnant that are left of the captivity,' naturally suggests to English readers the idea of a dual community, but the Hebrew is more naturally understood of the carrying off of those who had been recently captured in war.
Judah alone was genuinely Israelite. The Samaritans ho scorned and hated. This was, after the circumstances a breach sooner or later was inevitable, and we can scarcely wonder that, when Nehemiah dismissed the grandson of the high priest from office at the Temple on the ground that he had rejected the worship of Samshah, the governor of Samaria (Neh. 13:29), the last straw was laid on the burden of Samaritan patience. Shechem still retained memories of its once famous sanctuary, and the dispersed priest, whose name, according to Josephus (Ant. xiii. vii. 2, viii. 2, 4), was Manasseh, was soon installed there as priest in a new temple. 1

The cleavage seems to have followéd political lines, 2 the boundary between the two provinces being also the boundary between the areas of the rival sanctuaries. By this schism, which was, indeed, the culmination of Nehemiah's whole policy, the Jews of Jerusalem and its vicinity became as completely separated from their neighbours in Palestine as their brethren in the east had been from the heathen population of Babylonia. The Jew became a man apart, and a century of isolation gave to the new Judaism sufficient strength to enable it to stand against the flood of new ideas which came in with Alexander the Great.

We do not know what effect the Samaritan schism had on Galilee. The mention of Kedesh 3 as a city of refuge (Jos 20:33) implies that Galilee had, at least to some extent, accepted the law of the Ose Sanctuary, and in Maccabean times there were not a few loyal Jews (2 Macc. 5:1-2). It is impossible to say whether these had settled in the north since 352, or whether the Israelites of Galilee remained loyal throughout the Samaritan schism. The latter supposition is by no means impossible, for Galilea and Samaria formed different provinces, and the jealousy between Samaria and Judah was almost wholly political.

Since the deportation of Jews by Nebuchadnezzar, there had been a real fear that religions might develop on such different lines in the east and in the west as to cause a permanent cleavage in the religion of Israel. By the combination of the law of the east with that of the west, Nehemiah had avoided this danger. In Egypt, however, the Israelite settlers appear to have known nothing of the development of the Law at home. It is very doubtful whether they possessed any portion of the Pentateuch, and it is practically certain that they were unacquainted with Deuteronomy and the Priestly Code.

The drastic measures adopted by Nehemiah to get rid of those who would not accept the new Law, based as this was entirely on religious principles, inevitably transformed the population which did accept it into a church rather than a nation, and in such a state of things the priests were naturally all-important, and the high priest was regarded as the head of the State. It would seem, however, that the national spirit was not wholly dead, and that there were even proposals to elect a king—proposals which were vigorously opposed by the clerical aristocracy.3

1. Josephus puts this schism a century later, but that Samshah was governor in the 4th cent. B.C. is proved by the Elephantine papyri.

2. The idea that the kingdom of N. Israel was composed of ten tribes probably arose very late. Since Simon was absolved in Judah, and Levi was not a territorial tribe, the number ten can be accounted for by counting Benjamin. In some passages Judah seems to denote the kingdom of Judah, e.g. Jg 19:15; 1 K. 12:29, and is described as "one tribe," e.g. in 1 K. 12:17. Later on, probably in consequence of the presence of powerful Benjamite families in the province of Judah, Judea was reckoned as containing ten tribes. The number ten was obtained simply by subtracting two from fourteen.

2. No one can fail to be struck by the extraordinary statements put into the mouth of Samuel when the people demand a king, and the way in which the prophet is represented as giving his orders to the king.

23. Institution of synagogues and rise of the scribes. —Nehemiah's efforts to enforce the Law produced one result of inestimable advantage for the development of the religious spirit—the institution of synagogues with the consequent rise of the scribes. Since a Law so complex that even the people in the Pentateuch could not have been learnt at one hearing, it must have been necessary to provide for regular instruction in it; and the informal meetings which in the past had taken place in the prophets' houses (2 K. 4:38) probably suggested a way in which this could be effected. Henceforth those who wished to know the will of Jahweh before they took themselves, not to the prophets who had taught according to their own intuition, but to those who were duly instructed in the written Law. Professional prophets, indeed, long continued to exist, but they were men with whom prophecy was merely a livelihood. The nobler exponents of Jahweh's will found their inspiration for the most part in the Scriptures, though prophecy was by no means dead, if the word be understood not of the form, but of the substance of the message delivered. 1 It was impossible that the Jews should be among so highly civilized a people as the Babylonians without acquiring a considerable amount of culture, and the connexion between Palestine and the east in time of trouble must have brought much of this culture to Jerusalem. Doubtless a number of practices of which Ezra and Nehemiah would have disapproved lingered on or even found their way into Jewish religious life, and in some cases, such as the celebration of the Day of Atonement, were found to have taken such firm hold upon the people that it became necessary to enjoin them in the Law. There can be little doubt, however, that the spirit of Judaism in religion from the time of Nehemiah was in the direction of a higher spirituality. It is true that the princes whom Makkachi had bequeathed the middle of the 5th cent., and who were then far from being spiritual leaders, do not appear to have been any better after Nehemiah's reforms, but happily the spirituality of Israel did not depend on the Temple.

From the Samaritan schism till the coming of Alexander the history of Judah is almost blank. Josephus tells us (Ant. xiii. vii. 1) of a quarrel between the high priest Jannai and the high priest John. We have also the account of the revolt of a Jewess, and of the murder of the latter, which was punished by Bagoas, who may reasonably be identified with the Bagothus, who, according to the Elephantine papyri, was governor of Judah in 408. Perhaps the prophecy of Joel in its original form dates from the period between Nehemiah and Alexander, and doubtless the redaction of the historical books still continued.

24. Condition of Judaism, 332-198 B.C.—With the coming of Alexander the Great a new era dawned for Palestine and for Judaism. The Persians had been most unpopular rulers, and Alexander promised a large measure of freedom. But long isolation had produced, at least in the rank and file of Judaism, a shrinking from contact with heathenism, and it was perhaps for some time doubtful whether the little community of Jews in Jerusalem and the neighbouring districts of Judah would gain any advantage from the opening up of the world which had resulted from Alexander's conquests. It is probable that in the book of Nehemiah we have a re-echo of that spirit which was directed towards the Gentiles which was endangering the
very existence of the nation. The writer, who, like St. Paul, evidently contrasted 'Jews by nature' with 'sinners of the Gentiles,' maintains that Israel has a message for the world, and it was done with piety and sincerity, that they were like-minded, that Jews loyal to their religion now left the narrow district to which they had been restricted and settled not only further afield in Palestine, but also in more remote parts of Alexander's dominions.

It is not unlikely that the Jews had at first anticipated from the coming of Alexander greater freedom than was actually given them. They must have felt keenly their submission to the Ptolemaic rule, although that rule was mild compared with Persian methods of government. A new trouble was, however, arising. With the advent of Hellenism the religion of Jehovah had to grapple with a more dangerous foe than it had as yet encountered. At first the danger was scarcely realized, but, as milder government made it increasingly possible for Jews to become wealthy, the attractions of Hellenism became more serious.

In the book of Proverbs we have a picture of a fainly well-to-do community, and the warnings against foreign vices here given show the temptations to which the younger Jews especially were exposed.

25. Struggle between Judaism and Hellenism.—When Antiochus the Great became master of Palestine (198 B.C.), the condition of Judaism was outwardly more flourishing than it had been for centuries. The work which Simon the son of Onias had been able to carry out at the Temple (32 B.C.) (see above the end of the 3rd cent. is sufficient proof that there was probably at this time a considerable amount of wealth among loyal Jews. Moreover, there had been a great expansion of Judaism, and Jewish communities were to be found not only in Jerusalem and the almost exclusively Jewish districts of Judea, but also in Galilee and Gilead, as well as among the Ammonites, Moabites, Edomites, and Philistines. The poorer Jews, especially in the country districts, were loyal to the Law, but among the wealthier classes, particularly in Jerusalem, the social disadvantages of customs radically opposed to Hellenism were being keenly felt, and there were not a few people who were disposed to live in a way which the Law did not actually imply the abandonment of the Law, at least showed a dangerous inclination to coquet with Hellenism.

It is unnecessary to trace here in detail the whole history of the battle between the two, which was long and arduous. The attempt of Antiochus Epiphanes to make an end of Judaism that attempt marks the greatest and most glorious development in the religion of Israel. Never before had the religion of Jehovah been subjected to so severe a trial; yet it not only stood the test, but emerged from it spiritualized and glorified. At first the resistance of the Hellenizers was passive; martyrdom followed martyrology. Ralhito it had been the received teaching that compassion for sufferers would be given to the righteous before death, but now old theories of retribution, which had, perhaps, been quite recently attacked in the poems of the Psalms, were invoked utterly. The Hellenizers asked, 'Why standest thou so far off, O Jehovah?' and from many a synagogue there went up the cry, 'My God, my God, why hast thou forsaken me?' Those were the days when they found no answer, they were yet loyal. Hunted as they were from place to place, and treated as sheep for the slaughter, they nevertheless continued to meet, and to comfort one another. Lessons for the present distress were found in the words of the prophets whose utterances were now sometimes modified or amplified to suit the situation, sometimes imitated. Several passages in the prophetic books, especially Isaiah, as these have come down to us, show signs of having been composed or adapted during this period of storm and stress.

It is impossible here to tell the story of the Maccabean struggle and of the successes achieved by the Jews, beginning with the celebrated burning of the altar in the Temple on 25th Dec. 165 B.C. and culminating in the granting of autonomy to the Jews under Simon, who was accepted as high priest in 141. The tremendous importance of the religious development during this period has been overlooked, partly owing to preconceived ideas about the history of the Canon and the date of the Septuagint version, but largely owing to the quite correct feeling that the religion of the Psalms and the books of the Prophets is on a far higher plane than that which is found in the books of Maccabees.

Yet, if it be remembered that the Hellenists and the Maccabees were not identical, and that, whereas some of the latter (e.g. Jonathan and Simon) were, despite their personal bravery, stained with vice, of the former the Apostle writes, 'of whom the world was not worthy' (Heb 11), objections to a Maccabean date on this score will have little force.

Happily, the Maccabees were dependent for a time on the help of the Hellenists, and to this cause we may attribute the fact that, in the work of restoration under Simon, the Hellenists appear to have had considerable influence. In Jerusalem and in many synagogues the Scriptures had been burnt, defaced, or defiled, and after the struggle it would probably be necessary to revert to them from tattered and mutilated fragments, the original Scriptures and later compositions based upon them being in many cases indistinguishable. At the same time the synagouge collections of Psalms, which had now become an integral part of the religious life of the people, would be combined for the use of the Temple, and a beginning would thus be made of the last section of the Hebrew Canon.

In the Psalms and in the books of the Prophets, as they finally appear after the Maccabean struggle, we see how great an evolution has taken place in Israel. The crude religion of Israel, as it had existed several hundred years before, has been enriched and purified 'by divers portions and in divers manners.' The crudities often remain, but to a great extent they fail to obtrude themselves, because they too have been made to serve the purpose of a spiritual religion, and only the student of comparative religion recognizes their original nature.

The climax of OT revelation was achieved through the sufferings of the Hellenists. Those sufferings, which had once tried the faith of the best men in Israel almost to breaking, were seen in the final issue not only to have preserved the national life of Israel, but to have established a Church which attracted the best elements of other nations. At last the meaning of martyrdom was made clear, and those who in their suffering for the right had proved themselves to be the true Israel were vindicated. To this Israel, his steadfast servant who had faith to discern His utterance, Jehovah had spoken in no uncertain voice:

'It is too long a thing that thou shouldest be patient unto me, and that I should bear; for the children of Jacob have sinned against me, even my people Israel. They are very wicked; therefore I will speak against them, and multiply them that hate them. A prophet is despised in his own country, and among his own tribe; and whosoever speaketh against him shall be destroyed.'

R. H. KENNETT.
ITALY (ANCIENT).—1. Introductory. The design of this article is limited to recording briefly such features in the religious belief and usage of Ancient Italy during the last six centuries B.C. as are independent, so far as can be ascertained, both of Etruscan and of Roman religion. The materials for such an account are, of course, scanty. They consist mainly of ancient inscriptions or archeological remains from the areas inhabited by tribes not speaking either Etruscan or Greek. Etruscan, combined with what meagre records survive, in Roman and Greek authors, of the customs of those tribes. This record is often still difficult to interpret; and there is always the danger that a particular cult in a particular district (say in the 6th or later centuries B.C.), though wearing all the appearance of native usage, may really have been planted there by either Etruscan or Greek influence. Under these circumstances, the only useful method is to avoid general statements relating to the whole of the peninsula, and to present instead a brief outline of the salient features of each separate tribal area; so that, however limited our progress may be, there will be at least firm ground beneath our feet. By comparison of the details given here with the art, Roman Religion and Etruscan Religion, the reader will easily reach its general conclusions as may at present safely be drawn.  

2. Chronology. The period which is mostly represented by the statements that follow, when no more precise dates are given, is from 400–50 B.C. (or the beginning of the 3rd century from 300–150). After the latter year there were not many parts of Italy in which Latia was not commonly understood and spoken; and after 89 B.C., at the conclusion of the Social War, what remained of the local dialects rapidly died out. So soon as the conquering idiom has established itself in a locality, it becomes difficult to distinguish with certainty the surviving elements of local usage from the predominant influence of Roman custom. The beginning of the record is for most districts safely reckoned at 400 B.C., since (with the possible exception of a few Venetic inscriptions from Padua, and some interesting, but as yet mainly undeciphered, and almost wholly untranslated, inscriptions from the Eastern coast, such as the inscriptions of Catargium and Groselio) there are no dialectal inscriptions referred to any earlier date than 400 B.C., when the knowledge of the Greek–Etruscan alphabet first penetrated the mountain tribes of the centre, through their contact with Greek colonies of the Western coast and with the Etruscans. Nevertheless, it will be found that some of the records come themselves provided with a considerable history, from the analysis of which we can glean not uninteresting particulars of the beliefs of the tribes at a period antecedent to the first Gallic invasion, though in no case earlier than the arrival of the Etruscans. 

3. Tribal areas. For a description of the geographical distribution of the different tribes of Ancient Italy, the reader must be referred to other sources—e.g., the art. 'Italy' in Encycl. of Universal Language and Peoples. It will suffice to enumerate here the following different tribes of whose religious beliefs we have some limited knowledge: (1) the Messapians in the South Eastern peninsula; (2) the Samnites occupying roughly the southern half of the centre of the peninsula; (3) their kinsmen who settled in the Campanian plain between 440 and 400 B.C., overrunning a partlyItalic and partly Etruscan population, and creating the great city of Capua, which they held until it was destroyed in 311 B.C.; (4) their kinsmen to the North—a group of barby mountain-dwelling of whom the Marsians and Pelignians were the most conspicuous; (5) the Sabines, the brothers of the Roman Patricians and the predecessors of the Samnites; (6) the ancient inhabitants of Latium, probably identical with the Plebeians at Rome; (7) the Volsinians, a primitive tribe who occupied the mountains between the Tiber hills behind them, between the Latins and the Campanians; (8) the Umbrian inhabitants of Iugurium, the authors of the famous ignoves Tables; (9) the Veneti in the plains of the North East. This leaves out of account the Bruttii in the extreme South Western peninsula, the Ligurians in the North West (see art. Ligurian Religion), and the Finnic tribes in the East; no very substantial record of the religion of any of these at this period has been as yet discovered. For the usages of the Celtic invaders of Trans-Alpine Gaul, see art. Celts. 

1. Messapians. The scanty and difficult inscriptions that survive from this people (the tribe from which the Latin poet Ennius sprang) no deities have been recognized except such as are familiar on Greek soil; and the only divine name that occurs frequently without hesitation is that of the goddess Aphrodite in a genuine Messapian form (Aprodita), which is fairly good evidence that her worship was established in the locality, though it is not altogether certain that the goddess Damara (Attic Demeter) was also not unknown. According to Festus (p. 181 [ed. C. O. Muller, Leipzig, 1830]), the Jupiter to whom the Messapian Sabini dedicated a horse had the epithet Menaza—a name for which there is more than one possible but no certain etymology. Even Mommsen's careful collection (Unterital. Diath. pp. 35–36) of the evidence from ancient writers contains hardly anything that is of service to students of religion. 

2. The Samnite tribes. The Samnite tribes were in origin identical with the Sabines, and there is little doubt that, like them, they shared many of the beliefs and usages of the Roman official religion. There is no doubt, e.g., that they practised the curious institution of the yx sacrum, by which, under pressure of some public calamity, all the creatures, human and others, born in a particular spring were devoted to the gods, and compelled at a certain age to leave the territory of the rest of the tribe and seek a home elsewhere. Such, according to a well-authenticated report, was the origin of the distinction between the Samnites proper and the Sabines (see, e.g., Festus, p. 326 f., 106 [Müll]). In the intercourse between Romans and Samnites in the Samnite Wars they appear to have well understood the feitual ceremonies practised by the Romans (see Liy, ix, 1–12), and they certainly shared the body of early Italian custom which the Romans originally denoted by the term tim gestum. More definite information about their beliefs is afforded by a well-preserved monument, which has hardly attracted as much notice as it deserves. It is a bronze tablet, now in the British Museum, inscribed on both sides, known as the Tabula Apomnensia, from the name of the modern village (Agnume) near which it was found, and which is near the site of the ancient Boeumum. This tablet enumerates the deities worshipped in a sacred grove or garden, and presents some details of their cult. The text of it is typical of the religion of the most powerful tribe of Italy, and was doubtless written in full. A query in the translation indicates the points at which the meaning of the Oscan is still subject to doubt. It should be explained that the whole grove was sacred to a (presumably feminine) deity called Kore, who certainly stands in some association to the Latin Ceres; and most of the various deities 1 See (5) below.
have an epithet showing their subordination or connexion with a deity.

The following deities are placed in the Garden of Kerres. A statue to the goddess of Gestation (7); to the Good-Humoured god; to the Kerres Nurse; to the Kerres mother; to the goddess Midwife; to the Kerres Wet-Nurse; to the Kerres Korina; to the basket-borne (8) goddess; to the Kerres Nurse; to the Kerres Daeva; to the Kerres Ida; to the Kerres Dardel; to the Kerres Broom; to the Kerres Keeper (9); to the Kerres Ruler; to the Kerres Hercules; to the Kerres Hesperus; to the Kerres Hesperus; to the Kerres Greatness.

On the altar for fire-sacrifice a sacred offering is decreed at every lunar festival.

All the garden the statues are dedicated to the following attendants of Flora. To the Kerres Presentress (i.e. a goddess of sleep); to the Kerres Wet-Nurse; to the Kerres Nurse; to the Kerres Flora; to Father Good-Humour (Mercury).

The remaining altars belong to the garden.

Then follows an enumeration of the deities whose statues have been already mentioned in which Jupiter the Ruler is also called Fias; "outfit" (as son of father); (1) a repetition of the rule for the fire-sacrifice; and, finally, the statement that the garden is dedicated to the Demons (10) (deities of the sacred sites).

It would be out of place to discuss the details of this interesting list; but it will be seen at once that there could hardly be a better illustration of the primitive stage which Wace Fowler has traced in his Religious Experience of the Roman People (London, 1911), p. 117. Side by side with fairly complete persons, such as Jupiter, Hercules, and Ceres, we have a number of shadowy figures representing the different natural operations of importance to the worshippers in an agricultural community, and their connexion with the supreme creative force represented by Kerres is expressed with various faithfulness by the continual repetition of the epithet Kerren.

This town, Boianum, was the chief centre of the Samnites; but no Samnite inscriptions have survived connected with any buildings. An interesting characteristic, however, of a large temple which has been laid bare upon the site (modern Caceltalo, near Pietrabonanto) is that the hill on which it stood slopes towards the E.; and, in order that the worshipper might not have to turn his back upon the E. in addressing the statue of the god, this was placed on the N. side wall of the Cella, similar arrangements being made with the altars outside. The temple presumably belonged to Apollo. One other deity who should be mentioned was called in Samnite form Anagita, better known under her Marso-Latin title of Angitia (see below, § 4).

3. The Campanians. — The inscriptions of the prosperous towns of Pompeii and Herculanenum, which were overwhelmed in A.D. 79, include many which go back to the Osco period, and vouch for the veneration of Apollo, Flora, Venus, and Hercules under their Osco titles of Apollu, Fluna, Herntas, and Herculet. To Hercules, for instance, was dedicated a spacious temple on the confines of Nola and Abella, whose administration formed the subject of a solemn treaty between the two communities (R. S. Conway, Italic Dialects, no. 95).

On the leads of curiae, of which several have been preserved, having been originally put into tombs in order to be conducted by the dead man (who had no connexion with the curse) to another world, we find the deity Kerres with an epithet arentica (supposed to mean "avenging"); and also a euphemistic description of some punitive deities as "the best of maidens" (velatina puellam), who with Kerres are besought to punish the victim of the curse by depriving him of all capacity to undertake any operation of life, as well as by various species of torture (see the curse of Vibia [Conway, no. 130]). Kerres apparently has a "legion" of other spirits under her command; and the object of the curse is to secure some connexion, which, if necessary, will visit the victim from it.

The most interesting phenomenon, however, in

1 The epithet hpaanhedóti would be in Latin form "Hypanthes", and may conceivably mean "that indicates the proper trees to be hewn."
withnesses in classical times, and is still counted the home of witchcraft in Modern Italy (A. de Nino, Ue e costumi abruzzesi, Florence, 1891, passim, esp. vol. vi.).

To discuss the religion of the Sabines would be to examine the most lofty and austere elements of the religion of the primitive Latins at Rome, a system whose foundation truths are derived from the Sabine king Nummi. The Roman writers like Horace, Odes, iii. vii. 38, habitually associate with the Sabine element in the Roman stock the ideals of a simple if somewhat, i.e. in a more fact of joint life. It must suffice here to indicate this important distinction, and the sources in which further account of the evidence can be found.

"As the Spizzano (esp. on 'Ancient History'), 'Sabini,' and 'Volsci' in Etrusco give the considerable linguistic evidence. W. Edgcumbe's 'Who were the Romans?' (Proc. of the Coll. of Antiquaries, 1901, 1908, esp. p. 115), collects the anthropological data, which should be supplemented by the important criticism of Ward-Perkins in the Early History of the Kingship (in the Early History of the Kingship, London, 1906, vol. ii. 140), though his general standpoint (see p. 243) is not very far removed from Edgcumbe's. The traces of descent through the female line in the Roman legends of the kings are collected by J. G. Frazer, in Lectures on the Early History of the Kingship, London, 1898, vol. vii. Julius Caesar (De Bello Gallico, 1898) also maintains Schlegel's view of a racial distinction between the Sabines and the Romans.

Beyond this there is little to say of Sabine religious cults, for the reason that they were practically amalgamated with the Romans at so early a period; the legends ascribe the fusion to the 8th cent. B.C. There have been preserved to us, however, a certain number of divine names and religious terms from the Sabine district, mainly by the Augustan scholar, Varro, who was himself a Sabine. These will be found enumerated in Conway, pp. 353-354.

To the Sabines are specifically assigned by Latin authorities the deities Juno, Quirinus, Mamers (Mars), Minerva, Venus, and more shadowy figures, among which may be mentioned the picturesque name of Frisone, the goddess of wild creatures, who had also a great temple in Etruscan territory, descended by Hannibal in 216 B.C. The Etruscans, who were a half-Etruscanized Sabine community, especially worshipped the goddesses Juno and Minerva, and to the Etruscans is attributed also the curious institution of fire-keeping priests (Hirpi). Mention should be made here of the sacredness of the oak-tree and its connexion in many places with the worship of Jupiter. The evidence for this is collected by A. de Nino (GIE, xvi. (1904) 360 ff.) and of this wide use has been made by J. G. Frazer in his Lectures on the Early History of the Kingship (esp. in sect. viii.). But the criticism of W. Fowler (Religious Experience, p. 23) is not gratuitous.

There is no doubt that the oak had many religious associations in central ancient Italy: but it is not clear whether this belief belonged to the Sabines (Patriarchs) or the Etruscans (the Latin or Plebeian stock), or to both. This question is ignored by Fratres, who attributes it equally to the Latin centre of Areia and to the Sabine Patriarchs. In one interesting passage (in the Books of Ezechures, p. 227) it is not clear from the story, was regarded, with more reverence by the Roman than by the Sabine commander. The Diras, Sabine, is described as the Etruscan champion of the Sabines (p. 230) and of the Sabine side of the tribal division. But there is no evidence in the passage that the oak was connected with any particular god, and it is not to be observed in the light of anything that has accumulated since Cook's paper (see Windy, 'Who were the Romans?').

If, then, that tree is represented with the word meaning 'oak,' it is probably the Sabine rather than that in origin. On Quirinus see, further, Vines, in Nioche.

(6) Ancient Latium. - To attempt to separate the religion of the Plebeian or Latin part or parts of the Roman stock is impossible within the limits of this article. The evidence for their distinction from the Sabines and its already cited; but mention should be made here of the famous cult of the Lake of Nemi near Areia, which was an ancient cult of worship in Latium, and which in historical times was connected with Diane and the Vestal Virgins by whom the worship was properly conducted. There was a curious and very ancient person called Rex Namorissus, who is described by Strabo (V. ii. 12), and also by Ovid, Fasti, who makes him a predecessor of the VestalVirgin.

There seems no reason to doubt that this is a survival of a very primitive religious belonging to, or at least at home in, the Latin stock, and that Frazer's collection of the evidence of the Romans, and the collection which came in the end to be attached to the cult is of fascinating interest, although the political deductions which he would attach to his collection still need confirmation.

(7) The Roman district. - In an inscription (Conway, no. 252) from the Etruscan town of Velu- nium (the birthplace of Augustus), dating from about 300 B.C., whose language shows remarkable affinities to the Umbrian of Ignavium, we read directions as to what is to be done in the case of any profanation of the temple of a deity called Declunia or Decluna; among them it is notable that, in order to repair any injury to the temple, it is specifically permitted, showing that in the ordinary course that metal would be taboo, as to the Flamen of Jupiter at Rome.

(9) The Umbrians. - The most famous monument of ancient Italian religious outside Rome is the Ignavian Tables (sometimes erroneously called Etruscan), which were found in the town of Gubbio in the 19th cent., and are still preserved in its Town Hall. They are seven tables of bronze of varying sizes; all but two are engraved on both sides. They are all written in what is generally called the Umbrian dialect, though in different periods of the language. In the earlier Tables, i.e., the Umbrian alphabet, which is a variety of the Etruscan, is used. The two later Tables, vi and vii, with the last paragraph of Table v, are written in the Latin alphabet of about 100 B.C. All but Tables i and ii can now be interpreted with approximate completeness, and even of iv and v the general sense is tolerably clear. The Tables contain the liturgy of a sacred brooch, the Exfrater ad JEIAID, who in Latin style would be called the Frates Atiedj, together with some administrative resolutions of the same body. Tables vi and vii contain a later and greatly expanded version of the liturgical directions contained in Table i, both alike regulating the solemn curation of the town
of Igviunium and an assembly of the people closely connected with the lustrum. The curse which the pronouncing of the enemies of Igviunium denounced the Etruscans but not the Gauls, and must, therefore, have been first composed well before 400 B.C., when the Gaals appear in both Italy south of the Apennines in great numbers.

The chief item in the expansion is that the prayers which are to be recited by the priests, although the existing copies seem later than II, contain on the whole, the oldest mould of all the seven, give directions for sacrificial to be offered in a particular month to a number of deities: (1) Jupiter, (2) Pomona, with a doleful epitaph (Papilki, a, Ille dedit, us creator, aeternam 15), and (3) Venus, who is associated with Pomona probably as consors, since offerings of a peculiarly feminine character are made to her. Three other deities also receive honour: Terras, who seems to be a goddess of terror; and Portunus and Hula (or Partopitus and Hulus), who are dismissed somewhat briefly. Tursa occurs in one of the supplications as an associate, or originally perhaps merely as a potency, of the masculine deity known as Ceres Marcus. Part of the ritual prescribed in Table III seems to have been the carrying round of the victim in some sort of a cage, though the meaning of this has clauses (10-30) is by no means certain. If this view of the meaning of the ritual is correct, it gives a welcome ground for assuming some historical connexion between the ritual of the Tables and the remarkable ceremony still practised in Gubbio every year on 15th May, the date of the Roman Ambavalia. A full description of this modern and ancient rite with admirable photographs and a discussion of its connexion with the Tables will be found in H. M. Low, The Edition and Procession of the Car at Gubbio (= Publication xxxix, of Folk-Lore Society, London, 1897).

The following paragraph (Tab. Igvi. v. b. 19-38), taken from a manuscript, which may be observed at the Vejan Gate, will illustrate the style of the ritual. The two deities invoked are (1) Grabovis, who is probably the same as the Roman Gradovis, with an epitaph Volo, which probably means 'Eheer of Vovis'; and (2) Terer Jovins, the first title being presumably connected with Gr. τέρας, 'ashes', and Ocean ωτατημι, 'burnt-sacrifice'. For the sake of conciseness, the rendering that follows is given in the 2nd person; but the original is in the 3rd.

*Before the Vejan Gate sacrifice three bulls with white foreheads to Grabovis, the Hearer of Vows, on behalf of the Flaminian hill and the city of Igviunium. Offer the inward parts (2) with the sacrificial knife (3) the sacrificial dish; make offering either with wine or vinegar; offer the corn (4) pray silently. Sacrifice the right foot, libation, and the image of a pig. Make a hollow for the sacred basin; hold it in the left hand (5). The sacred basin is placed at the temple, and at the left foot offer the blood (6) the final offering. Then pray thus over the libation: "Thus I invoke thee, Terer Jovins, the Hearer of Vows, on behalf of the Flaminian hill and the city of Igviunium for the folk (7) to be kind and the hill to the city, to the folk of each. I beseech thee, holy Zeus, trusting in thy assistance, to make the Flaminian hill and the city of Igviunium to be kind to the folk of each. O Terer Son of Jovins, by the might of this offering, whatever fire has broken out (8) in the Flaminian hill, whatever solemn rites have been neglected in the city of Igviunium, or lost, whatever defect there be in thy sacrifice, seen or unseen, O Terer Son of Jovins, in as far as it be lawful, let it be made pure by this sacred purifying image of a pig. Therefore, Son of Jovins, make pure the Flaminian hill and the city of Igviunium. O Terer, Son of Jovins, make pure the folk of each. O Terer, Son of Jovins, keep safe the folk, the nobles, the sacred rites, the persons of men and cattle, and the fruits of the Flaminian hill and the city of Igviunium; make them pure, foster and be kind with thy peace towards the Flaminian hill and the city of Igviunium, and to the folk of each. O Terer, Son of Jovins, keep safe the folk and the city of Igviunium. O Terer, Son of Jovins, keep safe the folk, the nobles, the sacred rites, the persons of men and cattle, and the fruits of the Flaminian hill and the city of Igviunium; make them pure, foster and be kind with thy peace towards them. O Terer, Son of Jovins, thee with this thine own sacred purifying image of a pig on behalf of the Flaminian hill and the city of Igviunium, the folk of each, O Son of Jovins, I beseech thee: in the middle of the prayer, henceforth." It should perhaps be mentioned here that Frazer (op. cit. p. 275) accepts without criticism a tradition recorded in a fragment of Nicomachus Damascenus (Stoichaios, Frag. 343 [1884 ii. 167] to the effect that among the Umbrians, whoever may be meant by that description, the original national combat was regular. In view of (1) the losses with which these peoples were left, (2) the description is used by many Greek writers (see Conway, op. cit. p. 128), (3) the nearness of the Umbrians to the Celts, (4) the absence of any other evidence of such a practice among the Umbrians of Italy proper, the statement cannot be accepted without reservation."

(9) The Veneti.—Of the religion of the Veneti, a people speaking an Indo-European tongue which may be described as midway between Illyrian and Latin, and inhabiting the lower Plain of the Po before and after the invasion of the Gauls, we learn most from the inscriptions, both Venetic and Latin, of the district. From the Latin inscriptions contained in CIL, vol. x., we find a god named Bolconus, occasionally identified with Apollo (e.g., 741). Under the Empire he is often called Augustus (e.g., 2143 and 2144). He was extensively worshipped in the district, and, according to Tertullian (L. i. 2), he was of Norican origin (cf. G. Wissowa, Rel. und Cultus der Romer, p. 297). Another deity who should be mentioned is Bergium, whose name must be connected with the modern town of Berigo (e.g., CIL 4290).

We find here also the same instinct as far south, of worshipping geographical entities: an altar to Loua Hevecus (Ligus deus fortis) and to the Nymphae Augusti and Genius popi (919). These remarks, of course, apply mainly to the Latin period, i.e., after the foundation of the Roman Colony in Aquileia in 184 B.C. The most picturesque figure among the Venetic deities of whom we have knowledge is the goddess known as Rehtis, to whom belonged what must have been a popular cult in the ancient city of Ateste, the modern Este, where an admirable Museum contains the recently excavated traces of her cult (some account of these was given by the present writer to the British Academy, and reported in the Times of 28th July 1908). The name means 'goddess of straightforwardness or rectitude'; but there can be little doubt that she enjoyed the attributes of a goddess of fortune, like the Tuscan Nortia. Among the most popular of the Venetic deities, a temple is a number of long bronze nails of square shape, with inscriptions minutely incised along the sides. Attached to the head of some of the nails are small objects which may be compared with the amulets as representing the wedges of necessity (olim truncationes) which Horace described as borne by the goddess of Fortune (Od. i. xxxvi. 11). The inscriptions are all of the common votive type, and all in the Venetic language, save that the last line, which may be translated, the workmanship of the nail is degraded show also
a mere make-believe inscription—a string of zig-zag lines and crosses, with an occasional letter taking the place of the old formula.

Among the various types of vein-hunting are common: (1) bronze images of race-horses, of which little is left except the heels of their hind feet embedded in the pedestal that bears the inscription, and (2) bronze alphabetic tablets, often confused in the same magical purposes as similar inscriptions found elsewhere in Greece and Italy (see ET RUSCAN RELIGION, § 250).

There is at present no complete edition of the records of the Veuster (see Veuster), and the Veuster, as a rule, has filled with precepts of duty and profit (or the acts (thryta) of princes of men and great-souled men) possesses considerable historical value, as it refers to the "thāsās" the best among the thāsās, i.e. the Mahābhārata (cf., e.g., I. 1, 19, 259, II. 36 [208], III. 35 [244], IV. 9 [259], V. 38 [460], VII. 28 [380]), which, in point of fact, contains all the component elements of the "thāsās" ascribed to Kautiya, Bhamar- and arabhānas included. 1 To the category of the purāṇa may be assigned in this connexion—here the present writer agrees with Jacob—the legendary (cf. the definition Mahābh. i. 1, 2 [864]); to that of the thryta, the historical (cf. the passage cited above, Mahābh. i. 1, 10): to that of the ṛgveda, the prose narratives corresponding to the later ṛgveda and ṛgveda, 1 and to that of the udāravas, the moral inscriptions (cf. the udāravas kathā Mahābh. i. 1, 16), often introduced in the Mahābhārata with the verse already quoted, 'right here they begin,' etc. 2 This collective sense of thāsās probably also explains the variety of designations by which the same work is known, as ṛgvyāna, upapāṭyas, etc. 2

From what has been said it is clear that the "thāsās" were at first but one of the various possible and actually occurring forms of literary composition. The Mahābhārata itself is described as the most excellent of the thāsās (i. 268 [259], etc.). Moreover, there are positive grounds for believing that in ancient India there existed a collection of thāsās under the title of Ithāsā, or Ithāvasāsā.

In the pūrnikās ṛgvedas, a ten-days' cycle of ritual belonging to the udāravas (p. 2, 2), and repeated throughout the entire year in which the sacrificial horse was permitted to roam at large, every day a particular class of thāsās was performed, and to this class of thāsās the thāsās of the Mahābhārata (cf. i. 1, 17) are often referred; 2 and a hymn from the Rgveda was recited; and on the 2nd day there were given, in the respective parts, Yama Vaiṣṇava, the pātrīs, and a chapter of the Vajrasātra; on the 3rd day, Vāruṇa Aditya, the Gandharvas, and a purāṇa of the Atriya; 3 on the 4th day, Soma Vaiṣṇava, the Apsaras, and a purāṇa of the Agni; 4 on the 5th day, Ardhā- or Rādha-rāṣṭī, the serpent-serpents, and a purāṇa of the Pūrṇamadī; 5 on the 6th day, Kumāra Yājñavalkya, the Rākṣas, and a purāṇa of the Dāsanavamī; 6 on the 7th day, Aśva Dhāvanī, the Asuras, and a purāṇa of the Pūrṇa; 7 on the 8th day, Mahā-Hanumā, the Asuras, and a purāṇa of the Mahā-Bhārata; 8 and on the 9th day, Daiva, a purāṇa of the Mahā-Nāyika; 9 and a purāṇa of the Pūrṇa, and a samyutā of the Atriya; on the 10th day, Daiva Indra, and a purāṇa of the Dāsanavamī; 10 on the 11th day, Daiva Indra, and a purāṇa of the Mahā-Bhārata; and, finally, on the 12th day, Śaivismā, and a purāṇa of the Apsara.

Here, accordingly, we have the following series: Pañca, Yajñīṣṭha, Atriya, Apsaraṇa, Śrīvāsa, Pūrṇa, Parivraja, and Pārvatī. 11

In these ancient lists thāsās is always found side by side with purāṇa; sometimes, indeed, the two are joined together to form a dāśpurva (dual compound), and it is impossible, in view of the above remarks, to doubt their close relationship and affinity. The present writer has, in fact, noted in Vedic texts only a single occurrence of each

1 Of Jacob, op. cit., p. 909.
2 Stories about women, perhaps; cf. Sieg, l.c., p. 32.
3 Of Sieg, l.c., p. 32. Many of these terms may, of course, mean no more than "story," and, in particular, with ṛgveda; but with reference to the Mahābhārata it should be indicated that they work spoken of as stories (e.g., i. 1, 10 [245] also as stories or "rules"); much more especially in i. 1, 18 (208) it is called upamānas purāṇa ("last or eldest purāṇa").
5 So at least the present writer interprets the description given in S. R. xiv. 3. 2 ff., Śāhāk. Sr. S. xv. 11 ff.
unaccompanied by the other, viz. itihāsa in Śātaṃkara, xi. i. 6, 9, and purāṇa in Ahattaravada, xi. vii. 24. It is also of importance to note the position which the two terms occupy in the lists. It will be seen that in most cases they come immediately after the four Vedas, and it is, therefore, by no means surprising that in Chāndog. U. (vii. i. 2 and iv. 1, vii. 1) the Itihāsapuruṣa is actually spoken of as the fifth Veda (iḥtiḥsapuruṣaḥ pūrṇaḥ ca veṇuṇāḥ vedah).

To these indisputable evidences from Vedic texts, conclusively attesting the existence of a collection of itihāsas, or purāṇas, entitled Iktihāsa or Purāṇa and reckoned among the Vedas, there has been recently added a most significant datum in the discovery of Kautiya's Artihāśaka, which shows that this Itihāsapuruṣa was still extant about the beginning of the 3rd century B.C.

The relevant passage is i. 7 (2 R.): "The triad Śāna, Rg and Yajur Vedas, the Ahattaravada, and the Itihāsapuruṣa (or Vedas, V) in this connection we may call attention also to a passage in the introduction of the Mahābhārata, vi. 12. 2 (cf. Kielhorn, Bombay, 1889): 'The four Vedas with their ancillary literature and esoteric portions (śāstra) are divided in many ways...' the dialogue, the itihāsas, "the purāṇas," the ṛṣi, the mythological story of the ādityas," as also to the terms itihāsa and purāṇa applied respectively to those who knew or studied the Itihāsas or the Purāṇas.

Curiously enough, we find that in the Itihāsapuruṣa por excellence, i.e. the Mahābhārata, the title of the fifth Veda is given to Ākhyāna, while the Mahābhārata itself became the representative of this fifth Veda; cf., e.g., III. vii. 9 (1227): 'all four Vedas, and Ākhyāna as the fifth,' and X. vii. 21 (1257): 'the Vedas...the Mahābhārata is the fifth Veda.' Nevertheless, we also find in the Mahābhārata numerous references to Itihāsas and Purāṇas as ancient works that were studied together with the Vedas.

The number of such passages, which, of course, are far from having all the same historical value, the Mahābhārata in its present shape having been a growth of centuries—might easily be increased; but they are quite sufficient to show that the ancient Itihāsa or Itihāsapuruṣa has left distinct traces of its existence in the great epic. The Mahābhārata, in fact, must very gradually have come to the place of that fifth Veda, and the process may quite readily be explained by the assumption that the Itihāsapuruṣa literature was to a large extent incorporated by degrees in the epic. The source of these stories is often shown by the terms itihāsa, purāṇa, itihāsapuruṣa, and the like.

We must now ask what connexion exists between the extensive Purāṇa literature still extant and the ancient Purāṇa science. We must obviously assume that the ancient Purāṇa was the precursor of the later literary group bearing the same name, and that much of its subject-matter has been preserved in the Purāṇas known to us. The latter assumption will be especially valid in the case of those passages in which the Purāṇas agree more or less verbally with one another, or with the Mahābhārata, and will probably also of those in which the lokasarga (charioteers) belonging, according to ancient tradition, to the Purāṇas find expression in the extant Purāṇas. This occurs very sel-

dom, however, for the chief characteristic of these Purāṇas is their sectarian spirit, and they were certainly absent from the ancient Purāṇa.

The present writer is of opinion that remains of the ancient Itihāsapuruṣa can be traced elsewhere in Śrīkānatas literature. Materials derived from that collection must be recognized above all in the myths and legends of the Brahmānas, especially in such as occur in the Arthavada (explanatory) parts and are distinguished by form and matter alike from the general context; but the group is also recognized also in the shorter mythological-historical additions of the Brahmānas designed to explain them.

From Yāska's Nārikaś we learn that there was a Vedic school known as the Athithāśikas—so named because its members made use of 'the Itihāsas' in expounding the mantras; and to certain mantras (or sūtra) Yāska attaches short narrative supplements which he designates itihāsas or ākhyānas. Alike in their subject-matter and in the formulae with which they are introduced, these remind us of all the additions to the Brahmānas just mentioned. Such Itihāsas are found, further, in the Bhadda-devata, in the Amsāramānas to the Rigveda, and in the medieval commentaries—e.g., those of Dārāmāya, Durgā, Śāgadharṣikā, and especially Śāyana. Even these relatively modern texts contain several Itihāsas, and, as the present writer believes, do really preserve, ancient traditions, for it was an established principle in the exegesis of the mantras that the itihāsas (primal cause, basis) of this kind of itihāsas must be taught first in order to bring out the meaning, and that the verbal explanation could be entered upon only after that had been done.

It is, however, quite another question whether the writers of the Brahmānas and the exegeses of the Veda made a right use of the itihāsas, and whether, above all, they applied them at the proper places, in the exposition of mantras. The present writer is of opinion that the question can be answered only with reference to each individual case. He now holds the view that the ancient Itihāsapuruṣa was an independent collection of legends and stories not especially connected with any particular Veda. Even on the hypothesis that there was a general correspondence between Itihāsas and Veda with respect to mythological views and to mythical and legendary ideas; the Itihāsapuruṣa might still differ very essentially in form from the same sagas in Vedic mantras, and in particular, therefore, from those in the Rigveda. In such cases the employment of an itihāsa in the exposition of the mantras could easily prove a dangerous procedure.

We may here refer, by way of illustration, to the two specially prominent cases. The story of Suṣumna, which the text had to relate to the king at the Bālāyāna, is quite appropriately introduced into the Brahmānas of the Rigveda, since it formed the arthavada for the śākhās. The legend of Śoma was also used in the Bālāyāna, but the Brahmānas writer certainly erred in interweaving this saga with all the songs of the Rigveda which are ascribed to Suṣumna.

since the story of Súrya's being bound to and delivered from the sacrificial stake is only very briefly alluded to in the Rigveda (x, xxiv, 12-13, v. 7).

the story of Prárrúvasa and Urvasi \(^{1}\) is quite appropriately given in the Samhitás (cf. Satap. x. v. 1; Kāthās. x. vii. 10. Māntra, v. iii. 10) as the artharándha for the use of special fire-sticks in the Agnásatár, but the legend fits here only if the speaker--who represents the lovers--has a consolatory ending. According to the version of the story in the Rigveda (x. xxiv.), the dialogue ended tragically, and here the Sáhásra-príti writer took the proper course of utilizing the Rigveda strophes only so far as they fitted in with his śrīkāta, and discarding the rest.\(^{2}\)

It may be observed, finally, that the connexion between the Vedic sūkta and the itikātra is still a subject of dispute in Vedic philology. E. Windisch (Vorhandl. der dtsd. akad. d. Wiss. Phil. v. Ges. rij. W. 1880, p. 11) has advanced the conjecture that the song of Prárrúvasa and Urvasi (Rig. x. xxiv.) has a poetical origin from its original narrative context. This idea was further developed by H. Oldenberg,\(^{3}\) who advocated the theory that a number of Rigveda hymns actually postulated a prose narrative as the connecting medium of the metrical parts, and that such must be recognized as a popular type of story in ancient India—the type in which verses were set in a prose framework in favourite passages of a work, and especially in passages of adoring speeches, and the rejoinders to them. For the systematic transmission of such a narrative—Oldenberg calls it abhikṣandh—on the example of the Samhāprākāsa abhikṣandh, he holds, to teach and learn the verse parts only, while the prose matrix, the language of which had never been fixed, suffered numerous changes at the hands of successive generations of narrators, or else was lost altogether.\(^{4}\) In particular, the prose context which later tradition supplies for the abhikṣandh hymns of the Rigveda is, according to Oldenberg, mere drivel—not genuine tradition at all, but at most worthless gauś-tradition. Oldenberg believes that the Laksanabhaṣya has long enjoyed an all but universal acceptance. Pischel, Geldner, and the present writer have all expressed their agreement with it, except that, in contrast to Oldenberg, they have strenuously insisted upon the value of the Indian itikātra tradition for the Rigveda.

On the other hand, S. Lévi\(^{5}\) asserts that the majority of the dialogue hymns in the Rigveda are so lucid in their verse that they cannot have required a story to link the single strophes together; the mere reading of them calls up some sort of dramatic scene. As a matter of fact, Max Müller had thought of a dramatic connection in connexion with Rig. i. 16.\(^{1}\)

Independently of both, J. Hertel\(^{6}\) has rejected the abhikṣandh theory; he regards all the samhāprākāsa hymns of the Rigveda as dramatic responsive songs, which were performed occasionally at sacrificial festivals, and he conjectures that we have in these the garris of the Indian drama. L. von Schroeder\(^{7}\) takes the further step of explaining all these hymns as ritual dramas.

Winternitz\(^{8}\) adopts a middle course between the two views, advocating the theory that the dialogue songs of the Rigveda are not all to be explained in the same way. Some of them, he holds, are ballads, in which everything is told in versified speeches, and for which a prose introduction was necessary only in certain cases; some are poetical fragments of narrative composed partly of verse and partly of a prose element that has not survived; while others are to be regarded as strophes belonging to ritual dramas.\(^{9}\)

A. B. Keith argues that it is impossible to obtain really cogent evidence for either of the theories.\(^{10}\) He says that in the ancient Vedic literature there is no trace whatever of the knowledge of such a prose-poetic abhikṣandh as Oldenberg's theory requires,\(^{11}\) but there is likewise no trace of a knowledge of dramatic responsive songs at sacrificial feasts, or of the ritual drama. He further observes that the hypotheses of Hertel and von Schroeder sound, both types would certainly occur in the ritual texts of the Vedas. Keith's conclusion, accordingly, is that no explanation yields a solution in all respects satisfactory has as yet been discovered.

The last word on the subject, so far, has been spoken by K. F. Geldner,\(^{12}\) who, thus coming near to Hertel's views, has tried to solve the problem by regarding the hymns in question as ballads in the wider sense in which Goethe has defined the ballad. These ballads require no connecting prose, but explain themselves, as the subject used by the poet is not a free invention, but is taken from some well-known myth. Geldner's hypothesis is most attractive, as it allows the explanation of the hymns without calling for connecting prose that, in fact, does not exist. Little, however, is changed by it as regards the chief interesting point in this connexion. For these ballads, like a great number of the Rigvedic māntras, are to be understood only by one who knows the old myths, i.e. the old itikātras, from which their theme is taken.

2. J. Hertel's proposal (WZKM xxvii. [1909] 340) to delete the strophe Rig. x. xxiv. 16 in Satap. x. v. 1, 10 as an interpolation seems to the present writer a happy one.
8. But see also pp. 407 ff. for the edition of the 'Abhikṣandh' by Keith, for whom the present with Oldenberg in regarding as 'strange rubbish,' as 'bugger,' and of no traditional value (J.R.A.S. 1911, p. 407 ff.; 1912, p. 407 ff.);

---

---
The present temple was built about A.D. 1100 by Ananta Chodagangā (1076-1147), the most notable king of the E. Ganga dynasty of Kalinga (V. A. Smith, Early Hindu, London, 1906, p. 423). It stands in a square enclosure about 120 feet on each side; the stone is grey and white, and broad, the interior being carefully guarded from profane intrusion by a massive stone wall, 20 ft. high. Within the enclosure stand about 120 temples, including, besides those dedicated to Vaiṣṇava cult, some 13 dedicated to Siva, and several to his consort, thus illustrating the eclecticism of modern Hinduism. The central tower of Jagannath's temple rises to a height of 192 ft., and is surmounted by the mystical wheel (chakra) and flag (dhwaja) of Vaiṣṇava. It contains four chambers: a hall of offerings, where the harka and oblations are made; a storehouse, where the daily offerings are kept; an audience hall, where the image of the god is carried in procession; and a temple shrine, where the image of the god is kept. The temple is in a triple form, representing Jagannath, Balabhadra, and Subhadra. The theory that this triple image is a representation of the three forms of the Buddha, Triratna—Buddha, the Law (Dharma), and the Congregation (Sangha)—is due to A. Cunningham (The Temples of Bharat, London, 1879, p. 112; cf. P. Ray, Jātaka, and Sripaṭa, no. 190, p. 24 n. 6.). It has been connected with other authorities by the tritāla, or trident symbol (G. d’Alberti, The Migration of Symbols, Westminster, 1891). Padhod, however, remarks: "The Three Holy Ones" are action, if ever, concretely presented in Tōtō by Buddha, Dharma, and Saṅgha; nor have I found such a triad figured in Indian Buddhism, although many writers have alleged the existence of them, without however bringing forward any proof (Buddhism of Tōtō, London, 1890, p. 107; cf. A. Oldfield, Sketches from Nepal, 1820, p. 145 n., with a drawing of the Triratna).

The legends indicate that, under Buddhist and Hindu rule, the rule of the gods has been adapted to the Vaiṣṇava cult. In the East, a lower priesthood of a minor cast has been adopted to Vaiṣṇava. On one occasion, a young priest was sent, as a slave, to the king, and, when the priest arrived, the king, who was a Vaiṣṇava, was pleased to see the image of the god, the image of the god was put in the temple, and the priest was appointed as a priest. The priest was pleased with the image of the god, and the king was pleased with the priest. The priest was pleased with the king, and the king was pleased with the priest. The priest was pleased with the priest, and the king was pleased with the priest. The priest was pleased with the priest, and the king was pleased with the priest. The priest was pleased with the priest, and the king was pleased with the priest. The priest was pleased with the priest, and the king was pleased with the priest. The priest was pleased with the priest, and the king was pleased with the priest.

In a closely-packed eagerness of a hundred thousand men and women, many of these uncombecd to expense or hard labour, and all of them tugging and straining to the utmost under the blazing tropical sun, deaths must occasionally occur. There have, indeed, been instances of pilgrims throwing themselves under the wheels of a frenzy of religious excitement. But such instances have always been rare, and are now unknown. At one time several unhappy people were killed or injured every year, but they were almost invariably cases of accidental trampling. The few suicides that did occur were for the most part cases of diseased and miserable objects who took this means to put themselves out of pain. The official returns now place this beyond doubt. Indeed, nothing could be more opposed to the spirit of Viṣṇu-worship than self-destruction.

The sanctified death within the temple renders the whole place unclean. The ritual suddenly stops, and the poluted offerings are hurried, which is a sight of the sacred spot (Hunting, 1. 13.3.).

The last and most impure castes are never excluded from the sanctified death within the temple, and the customs regarding the consecrated food (maha-prasāda) are remarkable. This is properly the food cooked for deity or dedicated to the images. The local belief as the god Kahetra (Khetra mahāśraya) is that it is prepared by the goddess, Mahā Lākṣmi, who gives prosperity. She who eats it is absolved from the four cardinal sins of the Hindu faith: killing a living being, taking what is not given, adultery, and committing adultery with a female of a Guru or spiritual
JAINISM — See Israel.

JAINISM. — I. Introductory. — Jainism is a monastic religion which, like Buddhism, denies the authority of the Veda, and is therefore regarded by the Brahmanas as heretical. The Jain church consists of the monastic order and the lay community. It is divided into two rival sections, the Svetambaras, or ‘White-robbed,’ and the Digambaras, or ‘Sky-clad;’ they are so called because the monks of the Svetambaras wear white clothes, and those of the Digambaras originally went about stark naked, until the Muhammadans forced them to cover their virilities. The dogmatic differences between the two sections are rather trivial (see art. DIGAMBARA); they differ more in conduct, as will be noticed in the course of the article.

The interest of Jainism to the student of religion consists in the fact that it goes back to a very early period, and to primitive currents of religions and metaphysical speculation, which gave rise also to the oldest Indian philosophies—Sankhya and Yoga (q.v.). — Jainism, like Buddhism, marks an early stage in the theoretical pessimism of these systems, as also in their practical ideal—liberation. Life in the world, permeated by the transmigration of the soul, is necessarily in this world painful; therefore it must be our aim to put an end to the Cycle of Births and this end will be accomplished when we come into possession of right knowledge. In this general agreement with Buddhism, Sankhya, Yoga, and Buddhism; but they differ in their methods of realizing it. In metaphysics there is some general likeness between Sankhya and Yoga on the one hand, and Jainism on the other. For in these systems a dualism is acknowledged and the main premiss, without a proper feeling of reverence' (A. Sterling, Buddhism, p. 193).

Hence there is at Puri a temporary suspension of the rigid tabu which controls the use of food which is not cooked in the regular way, and all cannot thus taste of the food with impunity. Nowadays the priests impress upon the pilgrims the impropriety of dressing food within the holy limits, and provide them from the temple kitchen. The food, sacred that none can be thrown away, and it is only consumed in a state of purity, with the natural result that it causes danger to the public health. It has been suggested that the licence in the use of food at Puri, Pandharupur, and other holy places is due to the spirit-sense power of the god and his holy place; but the fact of its dedication sufficiently explains the feeling regarding it (BG xx. (1884) 474). Even among a tribe like the Kamlus (q.v.), friendship is sworn on the holy rice from Puri (Thurston, ill. 409).

In 1890 a remarkable attempt was made by a party of fanatics from Sambalpur, known as the Adavutis, who cut off the heads, they wear only ropes made of the leaves (pati) of the Kamalk tree (Gmelinoloma gossypium), to destroy the images. In the affray one of the fanatics was killed (L. L. S. O’Neill, Sambalpur Gaz., Nagpur, 1899, l. 60 ff.).

JAHWEH. — See Israel.

1 The Sankhyas endeavoured to explain, from their dualistic principles, purus and purusha, the development of the material world as well as that of living beings; the Jains, however, are almost exclusively concerned with the latter, and declare that the cause of the material world and of the structure of the universe is ahambhut, 'primordial disposition' (Tattvottarika-prakriti). Sankhya, probably based on cosmogonic theories contained in the Brahmanas and some of the Upanishads. But Jainism was, in the first place, a religion, and developed a philosophy of its own in order to make this religion a self-consistent system.

2 The Sankhya principle mahatmā, the primary substance, is divided into three parts: a. are admitted that, with the exception of Yoga, all these systems are essentially atheistic, i.e., they do not admit of an absolute Supreme God; even in Yoga the divinity is not the first and only object of everything existent. Their fundamental theological observances, in accord with cosmic law, their division of living beings, especially the elementary lives, are not found in Buddhism.

preserved in the canonical books of the Jains about Mahāvīra. His becoming a monk, and, some 12 years later, his attainment of omniscience (kevala), are, of course, celebrated events. But tradition is silent about his motives for renouncing the world, and about the particular truths whose discovery led to his exalted position. At any rate, Mahāvīra is not described by tradition as having first become a disciple of teachers whose doctrines afterwards failed to satisfy him, as we are told of Buddha; he seems to have had no misgivings, and to have known where truth was to be had,1 and thus he became a Jain monk. And again, when, after many years of austeries such as are practised by other ascetics of the Jains, he reached omniscience, we are not given to understand that he found any new truth, or a new revelation, as Buddha is said to have received; nor is any particular doctrine or philosophical principle mentioned the knowledge and insight of which then occurred to him for the first time. But he is represented as gaining, at his kevala, perfect knowledge of what he knew before in part and imperfectly. Thus Mahāvīra appears in the tradition of his own sect as one who, from the beginning, had followed a religion established long ago; had been more, had he been a monarch, no other prophet, ever engage to exalt a prophet, would not have totally repressed his claims to reverence as such. Nor do Buddhist traditions indicate that the Niganthas owed their origin to Nātapatta; they simply speak of the Mahāvīra of the time, and of the religion at the time of Buddha. We cannot, therefore, without doing violence to tradition, declare Mahāvīra to be the founder of Jainism. But he is without doubt the last prophet of the three great prophets of the last Tirthankaras. His predecessor, Pārvā, the last Tirthankara but one, seems to have better claims to the title of founder of Jainism. His death is placed at the reasonable interval of 200 years before that of Mahāvīra, while Pārvā’s predecessor Atriṣānami is stated to have died 84,000 years before Mahāvīra’s Nirvāṇa. Followers of Pārvā are mentioned in the canonical books; and a legend in the Uttarāmārgaṇa stotra xxvii. relates a meeting between a disciple of Pārvā and a disciple of Mahāvīra which brought about the union of the old branch of the Jain church and the new one.2 This seems to indicate that Pārvā was a real prophet of a sort; but in the absence of historic documents we cannot venture to go beyond a conjecture.

2. Jain view of their origin, etc. According to the Jains themselves, Jain religion is eternal, and it has been revealed again and again, in every one of the endless succeeding periods of the world, by innumerable Tirthankaras. In the present antarṣaṃśa period (see art. AGES OF THE WORLD [Indian], vol. i. p. 200 f.), the first Tirthankara was Rājaba, and the last, the 24th, was Vardhanamāna. The names, sīgas, and colours of the 24 Tirthankaras were as follows:

1. Rājaba (or Vṛṣṇa), bull, golden; 2. Aja, elephant, golden; 3. Sambhava, horse, golden; 4. Abhivama, ape, green; 5. Sunyavatana, monkey, yellow; 6. Umapati, parrot, red; 7. Suvajra, the scorpion, golden; 8. Chadrameru, monkey, white; 9. Svarāj (or Pajavanāra), dolphin, white; 10. Kṛttivaśa (or Jhūmā), lion, yellow; 11. Sreyēśa (or Arjuna), rhinoceros, golden; 12. Vasiṣtha, buffalo, red; 13. Vinoba, hog, golden; 14. Amaśaka (or Aḍapati), baboon, golden; 15. Dharma, thunderbolt, golden; 16. Śūbhata, mother-jaguar, golden; 17. Kusuma, goat, golden; 18. Arti, the māyāyaka, golden; 19. Malli, jar, blue; 20. Suvratā (or Muniśvaratā), tortoise, black; 21. Nami, blue lines; 22. Mahāmuni, conch shell; black; 23. Pārvā, snake, blue; 24. Vardhanamāna, lion, golden. All these names, sīgas, and colours of the Tirthankaras are recorded in the Śvetāmbara system; in the Digambara system, all are gold, except Nami and Nami who became the Haritvarṇa, the remaining 22 to the ākyuvara race. Malli was a woman, according to the Śvetāmbaras; but this the Digambaras do not believe; also, they cannot be expressed in definite numbers of years, but are given in jyotis-panchas and jyotis-prakūpo, the last being the time of one kosa of ālayagrāma. The length of the life and the height of the Tirthankaras is in proportion to the length of the interval (see art. Āyu or the Vara [Indian]). These particulars are here given according to the Śvetāmbara.

In connection with these times of the mythological history of the Jains, it may be added that they relate the legends of 11 universal monarchs (Chakravartīs), of 18 Vaisvēnas, 9 Baladevas, and 9 Pārvatīs (or Pragjñās) who lived within the period from the first to the 22nd Tirthankara. Together with the 24 Tirthankaras they are the 53 great personages of Jain history; the legends of their lives form the subject of a great epic work by Hemachandra—the Pravṛttigrūpaṇākhyāna (P. 7th cent.)—probably the Vāmadevañi (edited in Bāvanagar, 1906-09, by the Jainināraṣaṇasakhaṇḍa.)

All Tirthankaras have reached Nirvāṇa at their death. Though, however, released from the world, they neither care for nor have any influence on worldly affairs, they have nevertheless become the object of worship and are regarded as the gods.' (devo) by the Jains (see art. ATIJNISME [Jain], vol. ii. p. 180 f.); temples are erected to them where their idols are worshipped.3 The favourite Tirthankaras are the first and the three last ones, but temples of the remainder are also met with. The worship of the idols of the Tirthankaras is already mentioned in some canonical books, but no rules for their worship are given; it was, however, already in full vigour in the centuries of our era, as evidenced by the Paśu- mahārjinni, the oldest Prakrit āgacija of the Jains, and by the statues of Tirthankaras found in ancient sites —e.g., in the Kankāli mound at Mathura which belongs to this period.4 Some sects, especially a rather recent section of the Śvetāmbaras, the Dhumārā or Śāhānātavāsā, reject this kind of worship altogether.

It goes without saying that the Tirthankaras, except the two last, belong to mythology rather than to history; the 22nd, Atriṣānami, is connected with the legend of Kṛṣṇa as his relative. But the details of Mahāvīra’s life as related in the several Jaina canonical books may be regarded on the whole as historic facts.

He was a Kṣatriya of the Pāṇḍa line and a native of Kūrama, a suburb of the town Vaiśali (the modern Bārāthi, some 57 miles north of Patna). He was the second son of the Keśapīya Sātradhāra and Trilāka, a highly connected lady. The Śvetāmbaras maintain, and thus it is stated in the Ādharānyā vīrā, the Kulpārṣiṇi, etc., that the soul of the Tirthankara first descended into the womb of the Brahmāni Devānandā, and, by the will of Indra, removed thence to the womb of Trilāka. But the Digambaras reject this story. His parents, 3 For images and idols of the Jains see J. Burgess, ‘Digambara Jain Iconography,’ JA xxxiii (1903) 493 ff.; G. Bühler, ‘Spectra of Jaina Bhūtajñaputra, Mathura: A Reproduction from I. l. [1904] 311 ff.; J. Ferguson and J. Burgess, Cave Temples, London, 1880, p. 497 ff.
4 Some kind of worship, however, seems to be implied by the usual times of the monthing of the various cheṣas (diptas), or shrines, in the sacred books. These shrines were originally in gardens in which Mahāvīra resided during his visits to the towns to which they belonged. Cf. Horne, Ucchāsāṅgadā, tr. p. 2, E. 4, p. 4.
5 R. and R. E. 511 f.
6 See ‘Notes on the Non-Adulterous Svetambar Jains,’ by ‘Skeers.’ 1911; and Margaret Stevenson, Notes on Modern Jainism, p. 111.
7 Kuppyaganva and Pipiyaganva, both suburbs of Vesālī, have been identified by Horne from the ancient texts, p. 8 with the modern villages Bāliya and Jāmān, etc. on the Swatambaru R. 8 Of the transfer of the embols of Baladeva from the womb of Rohini to that of Derakvi, whence he got the name Sankarpāla, still retaining the monastic laylaya.
even afterwards, they have undergone many alterations—transposition of parts, additions, etc.—traces of which can still be pointed out. Along with these alterations there seems to have grown a gradual change of the language in which the texts were composed. The original language, according to the Jains, was Ardhamagadhi, and they give that name, or Mağadhi, to the language in which the texts. But it has, most probably, been modernised during the process of oral transmission. The older parts of the canon contain many archaic forms for which in later texts distinct Mahâbhârata idioms are substituted. It will be best to call the language of the sacred texts simply Jain Prâkrit, and that of later works Jain Mâhârâṣṭri.

As the works belonging to the canon are of different origin and age, some are in prose, some in mixed prose and verse. Frequently a work consists of disparate parts put together when the redaction of the canon took place. The later prose works are generally very diffuse and contain endless repetitions; some, however, contain succinct rules, some, besides lengthy descriptories, systematic expositions of various dogmatic questions; in others, again, the systematic order generally prevails throughout. A large literature of glosses and commentaries has grown up round the more important parts of the canon. A body of literary and the commentaries belonging to it, the Jainas possess several separate works, in close material agreement with the former, which contain systematic expositions of their faith, or parts of it, in Prâkrit and Sanskrit. These works were generally possess the advantage of accuracy and clearness, have in their turn become the object of learned labours of commentators. One of the oldest is Umasâvâti's Tattvarâddhakâtyâgama, a Śvetâmbara canon, which, however, is also claimed by the Digambaras. A sort of encyclopedia of Jainism is the Antakâsalamās-paṭākā, a Digambara work, which, however, is also claimed by the Digambaras.

The redaction of the canon took place under Devardhârâ in 880 after the Nirvâna (A.D. 454), according to the common redaction, actually perhaps 60 years later; before that the sacred texts were handed down without embodying them in written books. In the interval between the composition and the final redaction of the texts, even afterwards, they have undergone many alterations—transposition of parts, additions, etc.—traces of which can still be pointed out. Along with these alterations there seems to have grown a gradual change of the language in which the texts were composed. The original language, according to the Jains, was Ardhamagadhi, and they give that name, or Mağadhi, to the language in which the texts. But it has, most probably, been modernised during the process of oral transmission. The older parts of the canon contain many archaic forms for which in later texts distinct Mahâbhârata idioms are substituted. It will be best to call the language of the sacred texts simply Jain Prâkrit, and that of later works Jain Mâhârâṣṭri.

As the works belonging to the canon are of different origin and age, some are in prose, some in mixed prose and verse. Frequently a work consists of disparate parts put together when the redaction of the canon took place. The later prose works are generally very diffuse and contain endless repetitions; some, however, contain succinct rules, some, besides lengthy descriptories, systematic expositions of various dogmatic questions; in others, again, the systematic order generally prevails throughout. A large literature of glosses and commentaries has grown up round the more important parts of the canon. A body of literary and the commentaries belonging to it, the Jainas possess separate works, in close material agreement with the former, which contain systematic expositions of their faith, or parts of it, in Prâkrit and Sanskrit. These works were generally possess the advantage of accuracy and clearness, have in their turn become the object of learned labours of commentators. One of the oldest is Umasâvâti's Tattvarâddhakâtyâgama, a Śvetâmbara canon, which, however, is also claimed by the Digambaras. A sort of encyclopedia of Jainism is the Antakâsalamās-paṭākā, a Digambara work, which, however, is also claimed by the Digambaras.

The redaction of the canon took place under Devardhârâ in 880 after the Nirvâna (A.D. 454), according to the common redaction, actually perhaps 60 years later; before that the sacred texts were handed down without embodying them in written books. In the interval between the composition and the final redaction of the texts,
production, continuation, and destruction. This theory they call the theory of the Indefiniteness of Being. It comes to this: existing things are permanent only as regards their substance, but their accidents or qualities originate and perish. To explain: any material thing contains three elements or qualities; if we add to this; this matter, however, may assume any shape and quality. Thus, clay as substance may be regarded as permanent, but the form of a jar of clay, or its colour, may come into existence and pass out of the existence. Buddhist Brahmical speculations are concerned with transcendental Being, while the Jain view deals with Being as given in common experience. The doctrine of the Indefiniteness of Being is upheld by a very strange dialectical method called Syādvedāda, to which the Jains attach so much importance that this name frequently is used as a synonym for the Jain system itself. According to this doctrine of Syādvedāda, there are 7 forms of metaphysical propositions, and all contain the word syāt, e.g. syād asti sarvān, syād nāsti sarvān. Syāt means 'may be,' and is explained by kathāchārī, which is in this connexion may be translated 'somehow.' The word syāt here signifies the word asti, and indicates the Indefiniteness of Being (or astistvam). For example, we say a jar is somehow, i.e. it exists, if we mean thereby that it may exist or not; we do not say it not exist somehow, if we mean that it exists as a cloth or the like. The purpose of these seeming truisms is to guard against the assumption of the Vedantists that Being is one with the same in all things. Thus we have the correlative predicates 'is' (asti) and 'is not' (nāsti). A third predicate is 'inexpressible' (anuvakayya); for existent and non-existent (asti and nāsti) belong to the same thing at the same time, and such a co-existence of mutually contradictory attributes cannot be expressed by any word in the language. The three predicates variously combined make up the 7 propositions, or asaptā dhānaṅga, of the Syādvedāda.

Supplementary to the doctrine of the Syādvedāda, and, in a way, the logical complement to it, is the doctrine of the nayās. The nayás are ways of expressing the nature of things; all these ways of judgment according to the Jains, are one-sided, and they contain but a part of the truth. There are 7 nayás, 4 referring to concepts, and 3 to words. The reason for the statement is that Being is not simple, as the Vedantists contend, but is of a complicated nature; therefore every statement and every denotation of a thing is necessarily incomplete and one-sided; and, if we follow one way only of expressing or of viewing things, we are bound to go astray. Hence it is usual in explaining notions to state what the thing under discussion is with reference to substance, place, time, and state of being.

(b) Metaphysics. — All things, i.e. substances (dvāraya), are divided into lifeless things (saṅkhyā-s) and lives or souls (jīva-s). The former are again divided into: (1) space (ākāśa); (2) and (3) two subtle substances called dhāraṇa and adharma, and (4) matter (jīvaka). Space, dhāraṇa, and adharma are the necessary conditions for the substances; the other things, viz.: souls and matter; space affords them room to subsist; dhāraṇa makes it possible for them to move or to be moved; and adharma, to rest. It will be seen that the function of space, as we conceive it, is by the Jains designated under these three different substances; this seems highly speculative, and rather hyperlogical. But the conception of the two essential substances dhāraṇa and adharma, which occur already, in the technical meaning just given, in canonical books, seems to be derived from a more primitive notion. For, as their names dhāraṇa and adharma indicate, they seem to have been denoted, in primitive speculation, those invisible 'folds' by which contact is occupied by the world of things (loka-bhāsā), and the space beyond it (alo-ka-bhāsā), which is absolutely void and empty, an abyss of nothing. Dhāraṇa and adharma are co-extensive with the world; accordingly no soul nor any particle of matter can get beyond this world for want of the substrates of motion and rest. Time is recognized by some as a quasi-substance besides those enumerated.

Matter (jīvaka) is eternal and consists of atoms; otherwise it is not determined in its nature, but, as is already implied by the doctrine of the Indefiniteness of Being, it is something that may become anything, as earth, water, fire, wind, etc. Two states of matter are distinguished: gross matter, of which the things which we perceive consist, and subtle matter, which is beyond the reach of our senses. Subtle matter is that matter which is transformed into the different kinds of karma (see below). All material things are ultimately produced by the combination of atoms. Two atoms form a compound when the one is viscous and the other dry, or both are of different degrees either of viscosity or dryness. Such compounds combine with others, and so on. They are, however, not constant in their properties, but are subject to change or development (pargānās), which consists in the assumption of qualities (guna-s). In this way originate also the bodies and senses of living beings. Thus earth, water, fire, and wind—bodies of souls in the lowest stage of development, and are, therefore, spoken of as 'earth-bodies,' 'water-bodies,' etc. Here we meet with animistic ideas which, in this form, are peculiar to Jainism. They probably go back to a remote period, and must have prevailed in classes of Indian society, which were not influenced by the more advanced ideas of the Brahmins.

Different from matter and matter and matter are souls (sattva, lit. 'lives'). There is an infinite number of souls; the whole world is literally filled with them. The souls are substances, and as such eternal; but they are not of a definite size, since they contract or expand according to the dimensions of the body in which they are incorporated for the time being. Their characteristic mark is intelligence, which may be obscured by extraneous causes, but never destroyed.

Souls are of two kinds: mundane (saknātā-s), and liberated (muktā-s). Mundane souls are the embodied souls of living beings in the world and still subject to the Cycle of Birth; liberated souls will be embodied no more; they have accomplished absolute purity; they dwell in the state of perfection at the top of the universe, and to do with worldly affairs; they have reached nirvāna (nirvānti, or muktā). Metaphysically the difference between the mundane and the liberated soul consists in this, that the former is entirely filled by subtle matter, thus filled with sand, while the latter is absolutely pure and free from any material alloy.

The delimitation of the soul takes place in the following way. Subtle matter ready to be transformed into karma pours into the soul; this is called 'influx' (ākāra). In the usual state of things a soul harbours passions (kṣaya-s) which act like a viscous substance and retain the subtle
matter coming into contact with the soul; the
subtle matter thus caught by the soul enters, as it
were, into a chemical combination with it; this
is called the binding (bindus) of (karma-matter).
The subtle matter ‘sound’ or annalagamst by
the soul is transformed into the 5 kinds of karmas, and
forms the material organ of the 5 senses (karanasandhāra),
which clings to the soul in all its migrations and
future births, and determines the individual state
and lot of that particular soul. For, as each
particular karmas has been caused by some action,
goed, or habit of the individual in question, so this
dharma, in its turn, produces certain painful, or pleasant,
or indifferent conditions and events which the individual in
question must undergo. Now, when a particular
karma has produced its effect in the way described, it
(i.e. the particular karma-matter) is discharged or
purged from the soul. This process of ‘purgating
off’ karma, (i.e. the effect of karma-matter) will, in
the end, be discharged from the soul; and the latter,
now freed from the weight which had kept it down
before the time of its liberation (for matter is
heavy, and karma is material), goes up in a
straight line to the top of the universe where the
liberated souls dwells. But in the usual course of
thing, the presence in it being simultaneous, and thereby the soul is forced to
continue its mundane existence. After the death
of an individual, his soul, together with its karmas,
goes, in a few moments, to the place of its next birth and there assumes a new body,
expanding or contracting in accordance with the
dimensions of the latter.

Embodied souls are living beings, the classification
of which is a subject only of theoretic unrealism,
but also of great practical interest to the Jain.
As their highest duty (parina dharma) is not to
kill any living beings (akīmāna), it becomes
incumbent upon him to know the various forms
which their life may assume. The Jains divide living beings
according to the number of sense organs which they possess:
the highest (paricchātakirniva) possess all five
groups of sense organs; taste, smell, sight,
hearing, and the lower, the only one optic
organ, and the remaining classes
each organ more than the preceding one
in the order of organs given above; e.g. worms, etc., possess
only the optic organ; and then possess, in addition, smell, taste, etc., seeing.
The vertebrates possess all five organs of sense; the
higher animals, men, denizens of hell, and gods possess
an internal organ or mind (manas), and are therefore
called rational (svasamjñā), while the lower animals
have no mind (asamjñā). The notions of the
Jains about beings with only one organ are,
part, peculiar to themselves and call for a more
detailed notice.

It has already been stated that the four elements are ani-
mated by souls; e.g. part of earth, etc., are the body
of soul, called earth-souls, etc. These may we call common
beings; they live and die and are born again, in the same or
another elementary body. These elementary lives are either
great or small; in the latter case they are invisible. The last

1 The Jains recognize 6 bodies which an individual may possess (although simultaneously), one gross and 4 subtle kinds. Besides the karanasandhāra, which is the recollection of karmas and has no bodily functions, there are (1) the transmutation body (kshanakirniva); producing the wonderful appearance of the gods, magicians, etc., may assume; (2) the translocation body (vinyāsa); in which the body may assume for short time in order to consult a Tirthankara at some distance; (3) the igneous body (shantrikā), which in common beings causes the digestion of food, but in persons of great insight gives effect to their curses (that they burn their objects) and to their beneficent words; (4) the body of the moon, etc. The
document of the subtle bodies, in which, however, many details are
omitted, may not be of primary importance, and to controversy, seems to be the outcome of very
primitive ideas. The number of the six karanas and of the manas, etc., is reduced to a rational theory. With the term sakti-rija, and
the popular name of the 6s, are connected the senses and the jātaka dreams of the Śālikas.

2 The Jains acknowledge five kinds of knowledge: (1) ordinary (karmasandhāra), which is an agglomeration of embodied souls which have all functions of life, reproduction and nutrition, in common. That plants possess souls is an opinion shared by other Indians; it is not clear whether the Jains have developed this theory in a remarkable way. Plants in which only one soul is embodied are rare, and they are found only in the habitable part of the world only. But those plants of which each is a fakir (karanasandhāra) may have a number of very small, i.e.
invisible, and in that case they are distinct species. These little<br>plants are called sakti-rija; they are composed of an infinite number of souls because they do not cluster, have reproduction and nutrition in common, and experience the most exquisite pains. Immense sakti-rija form a globular, and with them the whole universe. The common pack of</br>the little things, which is packed, like a box filled with powder. The sakti-rija form the supply of souls in place of those who have reached nirvana. But an infinitesimally small fraction of one sakti-rija has sufficed to replace the vast number caused in the world by the development of all the souls that have been liberated from the beginningless past down to the present. Thus it is evident that the sakti-rija will be empty of living beings (see Lokapaksha, VI, II ini.

From another point of view mundane beings are divided into four groups (the four kinds of the four groups), which are the four walks of life (jivati), in which beings are born according to their merits or demerits. For details, see art. DEMONS AND SPIRITS (JAINA); also the total of bundle and COGNOSCOLOGY AND COSMOLOGY (Indian), § 4, iv, p. 160 f., and AGES OF THE WORLD (Indian), vol. i, p. 200.

We have seen that the cause of the soul's embodiment is the karma-matter. The theory of karma is the key-stone of the whole system; it is necessary, therefore, to explain this theory in more detail. The natural qualities of soul are perfect knowledge (jñāna), intuition or faith (dūkṣa), high and there are several perfections; but these inborn qualities of the soul are weakened or obscured, in mundane souls, by the presence of karma. From this point of view the division of soul's matter is understood. The karma-matter has penetrated the soul, it is transformed into 8 kinds (prakṛiti) of karma singly or severally, which form the karanasandhāras, just as food is, by digestion, transformed into the various fluids necessary for the support and growth of the body. The 8 kinds of karanas are as follows.

(1) Ājñānakāraṇa, which that obliterates the inherent right
knower (i.e. conscience) of the soul. These are further
into different degrees of knowledge and of ignorance; (2) fasind-
ākaraṇa, which that obliterates right understanding, i.e., sleep;
(3) vedanākaraṇa, which that obliterates the bliss-nature of the soul and thereby produces pleasure and pain; (4) mokṣa, which that disturbs the right notice of the soul with respect to the soul's
research, passions and other emotions, and produces desire, error,
right or wrong and taste; (5) manas, which that destroys the
truth of life of an individual is one birth as false-being, animal
or god; (6) manas, which that produces the various circumstances or elements; the meaning is another; (7) manas, which that destroys the peculiarity with its general and special qualities, faculties, etc.; (8) manas, which that destroys the bigness, caste, family, social standing, etc., of an individual; (9) manas, which that obstructs the inner energy of the soul and thereby prevents the doing of a good action when there is a desire to do it.

Each kind of karma has its predetermined limits in time within which it must take effect and thereby be purged off. Before we deal with the operation of karma, however, we must mention another doctrine which is connected with the karma-theory, viz. that of the six ṛṣis. The six ṛṣis, as it were, are agminated by a soul indites on it a transcendental colour, a kind of complex, which cannot be perceived by our eyes; and this is called ṛṣiśī. There are six ṛṣis: black, blue, grey; yellow, red, and white. They are talismans which can be worn externally, a moral bearing; for the ṛṣiśī indicates the character of the individual who wears it. The first three belong to bad characters, the last three to good characters.

1 The Jains recognize five kinds of knowledge: (1) ordinary cognition (mājñāna), (1) testimony (vṛṣṭa), (2) supernatural cognition (sukṣma), (3) the Jains acknowledge the knowledge of the thoughts of others (manasātāra), (4) conscience (śīla).
The individual state of the soul is produced by its incantatory nature and the law with which it is invitated; this is the developmental or परिवर्तित्ता state. But there are 4 other states which have reference only to the behaviour of the karma. In these four states of things karma takes effect and produces its proper result; then the soul is in the अद्यायिता state. By proper efforts karma may be prevented, for some time, from taking effect; it is neutralized (वाशोमता), but it is still present, just like fire covered by a cloth, then the soul is in the अपाकंतिका state. When karma is not only prevented from operating, but is annihilated altogether (कम्पत्ता), then the soul is in the कतक्षिका state, which is necessary for reaching निर्विक्रम. There is a fourth state of the soul, शत्याग्यकम्तिका, which partakes of the nature of the preceding ones; in this state some karma is annihilated, some is neutralized, and some is active. This is the state of ordinary good men, but the कतक्षिका and अपाकंतिका states belong to holy men, especially the former. It will be easily understood that these distinctions have an important moral bearing; they are frequently referred to in the practical ethics of the Jains.

We shall now consider the application of the कर्म्म-theory to ethics. The highest goal is to get rid of these gifts, to refrain from all acts, to sequent no new karma—technically speaking, to stop the influx (आवृत्त) of karma, which is called स्वाभव, or the covering of the channels through which karma finds entrance into the soul. All actions produce karma, and these actions are divided into (1) sāmānyās, which ensure the continuance of worldly existence (सामान्यास); but, when a man is free from passions and acts in strict compliance with the rules of right conduct, his actions produce karma, which lasts but for a moment, and is then annihilated (प्रायाप्ता). Therefore the whole apparatus of monastic conduct is required to prevent the creation of new karma; the same purpose is served by austerities (तपस्स), which, moreover, annihilate the old karma more speedily than would happen in the common course of things.

It is evident from the preceding remarks that the ethics and ascetics of the Jains are to be regarded as the logical consequences of the theory of karma. But from a historical point of view many of their ethical principles, monastic institutions, and ascetic practises were taken over from older and common religious classes of Indian society, since Brahmanical ascesis and Buddhists resemble them in many of their precepts and institutions (see SBE xxi. (1884) Introd. p. 228 ff.).

ii. Jain ethics has for its end the realization of निर्विक्रम, or मोक्षa. The necessary condition for reaching this end is the possession of right faith, right knowledge, and right conduct. These three excellences are metaphysically named the ‘three jewels’ (त्रिनंत), an expression used also by the Buddhist but in a different sense; they are not produced, but they are manifested on the removal of obstructing or obscuring species of karma. To effect this, the rules of conduct must be observed and corresponding virtues must be acquired. Of first importance are the five vows, the rules for which, are also acknowledged by Brahmans and Buddhists. The five vows (व्रताः) of the Jains are: (1) not to kill; (2) not to lie; (3) not to steal; (4) to abstain from sexual intercourse; (5) to renounce all interest in worldly things, especially to keep no property. These vows are to be strictly observed by monks, who take them on entering the Order, or, as it is commonly expressed, on taking दिल्लग. In their case the vows are called लीलबट्टा, or व्रती. Lay people, however, should observe them so far as their conditions admit; the five vows of the lay people are called the small vows (सन्नायन). To explain: not to kill any living beings requires the greatest caution in all actions, considering that nearly every living is believed to be soulful; hence a rule which is, therefore, obliged to refrain only from intentionally killing living beings, be it for food, pleasure, gain, or any such purpose. And so it also with the remaining vows; their rigour is somewhat abated in the case of laymen. A layman, however, may, for a limited time, follow some more rigorous practice by taking one of the following particular vows or regulations of conduct (सन्नायन): (1) दिल्लग; he may limit the distance up to which he will go in this or that direction; (2) अनार्थकालवान्न; he may abstain from engaging in anything that does not strictly concern him; (3) सार्थकालपार्ष्पार्ष्पात्म, he may set a limit to his food, drink, and the things he enjoys, avoiding besides gross enjoyments. It may be mentioned in passing that certain articles of food, etc., are strictly forbidden to all, such as roots, honey, and spirits; and likewise no food may be eaten at night.) The preceding three vows are called गुणान्वत्ता; the next four are the disciplinary vows (सन्नायन): (1) जम्बुन्न; reducing the area in which one will stay; (2) जम्बूत्ति, for the layman undertakes to give up, at stated times, all sinful actions by sitting down motionless and meditating on holy things; (3) जम्बूत्ति, to live as a monk, or fasting, for the 8th, and 16th day of the lunar fortnight, at least once a month; (4) जम्बूत्ति, to give a share to guests, but it is understood in a less literal sense, viz. to provide the monks with what they take.

Most of these regulations of conduct for laymen are intended apparently to make them participate, in a measure and for some time, in the merits and benefits of monastic life without obliging them to renounce the world altogether. The rules for a voluntary death have a similar end in view (see art. DEATH AND DISPOSAL OF THE DEAD [Jain]; vol. iv. p. 484 ff.). It is evident that the lay part of the community were non-religious and laymen only as friends and patrons of the Order, as seems to have been the ease in early Buddhism; their position was, from the beginning, well defined by religious duties and privileges; the bond which united them to the Order of monks was an effective one. The state of a layman was one preliminary and, in many cases, preparatory to the state of a monk; in the latter respect, however, a change seems to have come about, in so far as now and for some time past the Order of monks is recruited chiefly from novices entering it at an early age, not from laymen in general. It cannot be doubted that this close union between laymen and monks brought about by the similarity of their religious duties, differing not in kind, but in degree, has enabled Jainism to avoid fundamental changes within, and to resist dangers from without for more than two thousand years, while Buddhism, being less exacting as regards the laymen, underwent the most extraordinary changes, and essentially finally disappeared altogether in the country of its origin.

A monk on entering the Order takes the five great vows stated above; if they are kept, the spirit of the five times five clauses, तिथिविद्या (SBE xxi. 202 ff.), no new karma can form. But, to practically them effectually, more explicit regulations are required, and these constitute the discipline
of the monks. This discipline is described under seven heads.

(1) Since through the activity of body, speech, and mind, which is technically called yagna, the Jains, karma-matter pours into the soul (atman) and forms new karma, as explained above, it is necessary, in order to prevent the karmas (or effects, external), to regulate those activities by keeping body, speech, and mind in strict control: these are the three gyastis (e.g., the gyasti or guarding of the mind consists in not thinking or desiring anything bad; having only good thoughts, etc.).

(2) Even those actions which are inspired from the duties of a monk, he may become guilty of sin by inadvertently transgressing the great vows (e.g., killing living beings). To avoid such sins he must observe the five samāca, i.e., he must be cautious in walking, speaking, collecting alms, taking up or putting down things, and avoiding the body; e.g., a monk should in walking look before him for about six feet of ground to avoid killing or hurting any living being; he should, for the same reason, inspect and sweep the ground before he puts anything on it; he should be careful not to eat anything out of the goodness of his life, etc. (3) Passion being the cause of the amalgamation of karma-matter with the soul, the monk should acquire virtues. The four cardinal vices (kāyagāra) are anger, pride, illusion, and greed; their opposite virtues are forbearance, patience, truthfulness, and purity. Adding to them the following six virtues, veracity, restraint, austerities, freedom from attachment to anything, poverty, and contentment, these have been placed in the tenfold law of the monks (sattamahākarma). (4) Helpful for the realization of the sanctity of which an earnest searcher of the highest good stands in need are the twelve ‘advises’ (amantritah or bhāmāntah) on the transitoriness of all things, on the helplessness of men, on the misery of the world, and similar topics, which form the subject of endless homilies inserted in their works by Jain authors. (5) Furthermore, it is necessary for a monk, in order to keep in the right path to perfection and to annihilate his karma, to bear cheerfully with all that may cause him annoyance. There are 22 such troubles (parīpatas) which a monk must endure without flinching, as hunger and thirst, cold and heat, all sorts of trying occurrences, illness, ill treatment, temptations, etc. If we consider that the conduct of the monk is ascertained with the purpose of denying him every form of comfort and merely keeping him alive, without, however, the risk of hurting any living being, it may be imagined to what practical consequences the endurance of the parīpatas must lead. (6) Conduct (chārita) consists in control and is of 5 degrees or phases. In the lowest phase all sinful activities are avoided, and the highest leads to the annihilation of all karma, preliminary to final liberation. (7) The last item is asceticism or austerities (tapas), which not only prevents the forming of new karma (saharasa), but also purges off the old (mintaro), provided that it be undertaken in the right way and with the right intention; for there are also the ‘austerities of fools’ (bholatapas) practised by other religious sects, through which temporary merits, such as supernatural powers, birth in a god, etc., can be accomplished but the highest good will never be attained. Tapas is therefore, one of the most important institutions of Jainism. It is divided into (a) tapas internal and (b) tapas external; the former comprises the austerities practised by the Jains, the latter their spiritual exercises. (a) Among austerities fasting is the most conspicuous; the

1 The second part of the Jātakāgāra aśraṇa will give an idea of the next stage that is taken in this regard.
2 Cf. Manu, vi. 92.
self-mortification of the flesh,¹ which should be birth of a monkey's career, though it no longer leads to liberation, for Jainaharma, the disciple of Mahavira's disciple Sudharman, was the last man who reached karvaka, or nonexistence, and was liberated on his death.² (44 after Mahavira's 24th samay). As a result of the present Avatarsini period nobody will be born who reaches nirvāna in the same existence. Nevertheless these speculations possess a great theoretical interest, because they afford us a deeper insight into the Jain system.

In this connexion we must notice a doctrine to which the Jains attach much importance, viz. the doctrine of the 14 paññākānas, i.e. the 14 steps which, by a gradual increase of good qualities and decrease of karma, lead from total ignorance and wrong belief to absolute purity of the soul and final liberation.

In the first stage (sādhanyadvijn) are all beings from the nīcāgasa upwards to those men who do not know or do not believe in the truths revealed by the Tirthankaras: they are swayed by the two cardinal passions, love and hate (rīga and dṛṣṭa), and are completely tied down by karmas. In the following stages, as one advances, degrees in true knowledge, in firmness of belief, and in the control and repression of passions, different kinds of good karma are the result of these māyās; and as the being in question becomes purer and purer in each following stage, in all stages up to the 11th (that of a vikāpāya nirvāna), the same kind of māyās may take place and a man may fall even down to the first stage. But as soon as he has reached the 12th stage (that of a kārmikāya nirvāna of the kind of karvaka), he cannot pass through the last two stages, in which Comm. science is reached, in the 13th stage (that of a sūryaparāya nirvāna), the man still belongs to the world, and may continue in it for a long period; but relative activities of body, speech, and mind; but, when all his activities cease, he enters on the last stage (that of a sūrya, that of the nirvāna, that of the nirvāna). When the last remnant of karma has been annihilated, a question must now be answered which will present itself to every critical reader, viz. Is the karma-theory as explained above an original and integral part of the Jain system? It seems so abstract and highly artificial that one would readily believe it a later developed metaphysical doctrine which was grafted on an originally religious system based on animistic notions and intent on sparing all living beings. But such a hypothesis would be in conflict with the fact that this karvaka-theory, if not in all details, certainly in the main outline, is acknowledged in the oldest parts of the canon and presupposed by many expository and technical terms occurring in it. Nor can we assume that in this regard the canonical books represent a later dogmatic development for the following reason: the terms dārava, sāravara, nirjāra, etc., can be understood only in the supposition that karvaka is a kind of subtle matter, flowing or pouring into the soul (dārava), that this influx can be stopped or its inlets covered (sāravara), and that the karvaka-matter received into the soul is consumed or digested, as it were, by it (nirjāra). The Jains understand these terms in their literal meaning, and use them in explaining the way of salvation (the sāravara of the dārava and the nirjāra lead to niṣpada). Now these terms are as old as Jainism. For the Buddhists we have borrowed from it the most significant term dārava; they use it in very much the same sense as the Jains do, and in its literal meaning, since they do not regard the karvaka as subtle matter, and deny the existence of a soul into which the karva could have an 'influx.' Instead of sāravara they say asavikkayya (asavikkayya), 'destruction of the dārava', with certainty, with māyāga (māyga, 'path'). It is obvious that with them dārava has lost its literal meaning, and that, therefore, they must have borrowed this term from a sect where it had its original significance, or, in other words, from the Jains. The Buddhists also use the term samava, e.g. attanānava, 'restraint under the moral law,' and the participle kanavā, 'controlled,' which words are not used in this sense by Brahmanical writers, and therefore are most probably adopted from Jainism, where in their literal sense they may express the idea that they denote. Thus the same argument serves to prove at the same time that the karvaka-theory of the Jains is an original and integral part of their system, and that Jainism is considerably older than the origin of Buddhism.

5. Present state of Jainism.—The Jains, both Svetāmbaras and Digambaras, number, according to the census of 1901, 1,334,146 members, i.e. even less than 1 per cent of the whole population of India.¹ On account of their wealth and education the Jains are of greater importance, however, than might be expected from their number. There are communities of Jains in most towns all over India. The Digambaras are found chiefly in Southern India, in Māsīr and Kannada, but also in the North, in the North-Western provinces, Eastern part of India, etc. The head-quarters of the Svetāmbaras are in Gujārt (where Gujarati has become the common language of the Svetāmbaras, rather than Hindi) and Western Rājputāna, but they are to be found also all over Northern and Central India. The common distribution of the Jains as at present seems, from the evidence of the inscriptions, to have prevailed even since the 4th century.² Splendid temples bear testimony to the development the sect, some of which rank among the architectural wonders of India, as those on the hills of Girnār and Sātrupājaya, on Mount Abū, in Ellora, and elsewhere.

The jutā of a monk is restricted to bare necessities, and these he must leg: clothes, a blanket, an alms-bowl, a stīka, a broom to sweep the ground, a piece of cloth to cover his mouth when speaking lest insects should enter it. The monks' outfit is the same except that they have additional clothes. The Digambaras have a similar outfit, but keep no clothes and use peacocks' feathers instead of the broad raiment of the Jain, or remove the hair by plucking it out (locha). The latter method of getting rid of the hair is to be preferred and is necessary at particular times; it is peculiar to the Jains and is regarded by them as an essential rite.

Originally the monks had to lead a wandering life except during the monsoon, when they stayed in one place; compare the wānas of the Buddhist monks. Thus Mahavira in his wandering stayed for one day only in a village and five days in a town. But this habit has been somewhat changed by the introduction of convents (upārāja), corresponding to the vihāras of the Buddhists.

The upārājas are separate buildings erected by each sect for their monks or nuns. An Upārāja is a large barn hall without lathe-rooms and cooking places, furnished only with wooden beds.³ (M. Stevenm., Mod. Jainism, p. 39).

The Svetāmbaras, as a rule, go only to those places where there are such upārājas; and now they stay as long as a week in a village, in a town as long as a month. It is in the upārājas that the monks preach or explain sacred texts to laymen who come to visit them. The daily duties of a monk are rather arduous if conscientiously performed; e.g., he should sleep only three hours of the night. His duties consist in repelling of and expiating sins, meditating, studying, begging alms (in the afternoon), careful inspection of the utensils and other things for the removal of insects, for

---

¹ See Deka and Dinsmore, of the Dead Jain, vol. IV, p. 28. ² See Girnirn, Repertoire d'epygraphie jainas, p. 24.
cleaning them, etc. (for details see loc. xxvi. of the Uttara-dhārayana sūtra [SBE xlv. 142 ff.]. There are various monastic degrees. First there is the acariya, who is ordained. When he or any other man takes the vows (sāmghikā), he renounces the world (pravrajya) and is initiated or takes dīkṣā. The most important ceremony at that time is the shaving or pulling out of the hair up to the tika. After this a newly ordained monk may rise to the rank of a teacher and superior called upādhyāya, dāhārya, vṣaṭāka, gacchita, etc., according to degrees and occupations.

The religious duties of the laity have, to some extent, been treated above. The ideal of conduct is that of the monk, which a layman, of course, cannot realize, but which he tries to approach by taking upon himself particular vows. But in practical life also, apart from asceticism, the Jains possess a body of rules composed by monks which lay out a rational course of life for laymen and tend to improve their welfare and moral standard. The monks have also to provide for the religious wants of the laity by explaining sacred texts or religious treatises and delivering sermons; this is done by the upādhyāya, when the laymen visit them; similarly the nun is visited by or visits the lay women. But the most conspicuous habit of the laity is attendance in temples, and worship of the Tirthankaras and the deities associated with them.

We must now advert to a peculiarity of the Jains which has struck all observers more than any other, viz. their extreme carefulness not to destroy any living being, a principle which is carried out to its very last consequences in monastic life, and has shaped the conduct of the laity in a great measure. No layman will intentionally kill any living being, not even an insect, however troublesome; he will remove it carefully without hurting it. It goes without saying that the Jains are strict vegetarians. This principle of not hurting any living being bars them from some professions, e.g. agriculture, and 'has thrust them into commerce, and especially into its least elevating branch of money-lending. Most of the money-lending in Western India is in the hands of the Jains, and this accounts in a great measure both for their unpopularity and for their wealth. A remarkable institution of the Jains, due to their tender regard for animal life, is their asyumin for old and diseased animals, which, whenever they are kept and fed till they die a natural death.

6. History of Jainism.—The history of the Jain Church, in both the Svetāmbara and the Digambara sections, is chiefly contained in their lists of patriarchs and teachers and legends concerning them. The oldest list of patriarchs of the Svetāmbara is the Svakāvdaśī in the Kalpasūtra, which begins with Mahāvīra's disciple Sūdharman and ends with the 33rd patriarch Sāndilya or Skandila. Of most patriarchs only the names and the gotra are given; but there is also an expanded list from the 6th, Bhadradhān, down to the 14th, Vajrascena, which adds more details, viz. the names of the disciples of each patriarch and of the schools and branches (gopa, kula, and śāhā) founded by, or originating with, them. As some of these details are also mentioned in old Jain inscriptions of the 2nd cent. A.D. found at Mathura, this part at least of the Jain tradition is proved to be based on historical facts. Furthermore, a detailed list of patriarchs shows that after the 6th patriarch a great exten- sion of Jainism took place in the N. and W. of India. Beyond the details mentioned, we have no historical records about the patriarchs; but such legends as are known in the Mahāvīra, or Pārśvanātha, are a kind of continuous narrative. For later times there are lists of teachers (pravādryā, politically) of separate schools, called gachchha, which give a summary account from Mahāvīra down to the founder of the gachchha in question, and then a more detailed one of the line of descent from the latter downward, with some particulars of subsequent heads of the gachchha called śriptīya. The number of gachchhas, which usually (though not always in minute details of conduct, is allotted to some, of which only 8 are represented in Gujarāt, the most important of them being the Kharata Gachchha, which has split into many minor gachchhas, the Tapā, Acharla, and others. Separate mention is due to the Upanīsas Gachchha, the oldest known as the Ośval Jains; they are remarkable for beginning their descent, not from Mahāvīra, but from his predecessor Pārśva. These lists of teachers seem, as a rule, to be reliable only in that part which comes after the founder of the school to which they belong; the preceding period down to about the 6th cent. A.D. is one of great uncertainty; there seem to be a chronological blank of three centuries somewhere.

Records which allude to contemporaneous secular history are scant; such as we have in inscriptions and legends refer to kings who had favoured the Jains or were believed to have embraced Jainism. The first patron king of the Jains is said to have been Samprati, grandson of the great emperor Asoka; but this is a doubtful history. A historical fact of the greatest importance for the history of Jainism was the conversion of Kumārāṭa, king of Gujarāt, by Hemachandra (see art. HEMACHANDRA).

Finally, we must mention the schismas (niśāmaṇa) that have occurred in the Jain church. According to the Svetāmbara, there were eight schismas, of which the first was originated by Mahāvīra's son Vīmañjuka, and the eighth, occurring in 609 A.D., or A.D. 53, gave rise to the Digambara sect. But the Digambaras seem to be ignorant of the earlier schismas; they say that under Bhadradhān rose the sect of Archāpāparakas, which in A.D. 80 developed into the Svetāmbara sect. It is probable that the separation of the sections of the Jain church took place gradually, an individual development going on in both groups living at a great distance from one another, and that they became aware of their mutual difference about the end of the 1st cent. A.D. But the difference is small in articles of faith (see art. DIGAMBARA).

The sources for the history of the Digambaras are

1 Source: Bihārī, Bijāpī. J. [1905], 171 ff., 309 ff.
2 It is here, however, curious that another inscription states: "In India after the time of the Nanda kings the law of the Jains will become secure" (Panamachayya, lxxvii. 83). Perhaps this refers more specially to Magadhā and the adjoining countries, where, under the reign of the Mauryas, Buddhism soon attained the position of a state religion, and moral forces began to be a formidable rival of Jainism.
3 From the contents of the work given in the introduction to the text in the Bibl. Ind. edition.
4 The oldest gurukula known is that of Mundumbo, A.D. 30, followed by Ekanātha, A.D. 70, and Ekanātha, A.D. 106.
5 A full bibliography of this subject is contained in Gandhāra, ante, pp. 37 ff., and Repertorio degli Studi, p. 59 ff.
6 See E. de Léon, in Ind. Stud., xvi., [1896], 1 ff.
7 See E. de Léon, in Ind. Stud., xxvii., [1897], 1 ff.
of a similar kind to those of the Svētāmbaras, but later in date. The Digambara line of patriarchs is quite distinct from that of their rivals, except that they agree in the names of the first patriarch, Jamālī, and the 9th, Bhadrabahu, who, according to the Digambaras, emigrated at the head of the true monks towards the South. From Bhadrabahu dates the gradual loss of their sacred literature, as stated above. The inscriptions furnish ample materials for a necessarily incomplete history of their ancient school, but they do not quite agree in all details with the mere modern tradition of the Jainaists. According to the latter, the main church (nīla-sahāya) divided into four gopas, Nandi, Sana, Sihā, and Deva, about the end of the 1st cent. A.D.

LITERATURE.—Some of the more important works and treatments have been cited in the text; a full bibliography has been given by G. Greifenhagen, Bibliotheque Jacobia, Paris, 1907, to which the reader is referred for all questions of detail. Of new monographs on the subject besides the one by G. Bieder, Über die indische Seite der Jaina, Vienna, 1907, J. Burgess, London, 1909, the following will be found useful: Margaret Stevenson's Notes on Modern Jainism, Oxford, 1910; Herbert Warren's Jainaism, in Western Cults, as a Solution of Life, London, 1920; J. Beverley's The First Principles of the Jain Philosophy, London, 1920. For translations of the Jaina texts see W. H. Jones, Indian Religion, SBE xxii., xlv. (1884, 1889).

Hermann Jacobi.

JALAL AL-DIN RUMI.—Muhammad Jalal al-dīn, commonly known as Maḥmūd (or Maseehr), Jalāl al-Dīn Rūmī, was born at Bahk in eastern Persia in A.D. 1207 and died in 1273 at Qonīya (Leonina) in Rām (Asia Minor) ; whence the epithet 'Rūmī,' which he sometimes employs as a takhllih, or pen-name, in his lyrical poems. When Jalāl was only a few years old, his father, Muhammad ibn Ḥusayn al-Khatībi al-Bakri, governor of Ṣan'ā and ʿAla Wālid, was obliged to leave Bahk in consequence of a court intrigue which aroused against him the anger of the reigning sovereign, ʿAla al-Dīn Muhammad Khwārezmshāh. The exiled family, after long wanderings, in the course of which they visited Nināpār, Bagdād, and Mecca, arrived at Malāyya (Meitene) on the upper Euphrates, and, having stayed there four years, moved farther westward to Lārānā (Laranda), where Jalāl died in A.D. 1292. His brothers, Ṣamān and ʿAbd al-Qādir, were also poets. Finally, several years later, Bahā al-dīn was invited by the Sultan prince, ʿAla al-Dīn Kāmābud, to Qonīya. He died here in A.D. 1231. Jalāl had already married Mir-emīr ʿAṣma, a daughter of Lāl Sharaf al-dīn of Samarkand, who bore him two sons. One of these, Sulṭān Wālid, is the author of a mystical poem, the Bahābānuma, which, though written in Persian, contains 158 couplets in the Saljūq dialect of Turkish—the earliest important specimen of West Turkish poetry that we possess (see E. J. W. Gibb, History of Ottoman Poetry, i. 167). After several years of study at Aleppo and Damascus, Jalāl returned to Qonīya, where he was appointed professor and gained a great reputation for learning. About this time he seems to have devoted himself to theology under the guidance of Burhān al-dīn of Tirmiz, one of his father's pupils; but the crisis of his spiritual life was his meeting with Shams al-dīn of Tabriz, a warlike but pious man whom he met in Persia in A.D. 1444 and vanished mysteriously—according to one legend, he was killed in a riot—in 1346. This Ilhdarated God-intoxicated man exerted upon Jalāl an extraordinary influence almost amounting to possession, which was bitterly resented by his numerous disciples at Qonīya. To escape from their persecution Shams al-dīn left the city and returned only at his death. During his absence Jalāl composed part of the enormous collection of mystical odes entitled Divān-i Shams-i Tabriz; the rest belongs to a later period, but nearly the whole work is written in the name of his beloved teacher and friend. Jalāl founded—in it is said, of Cinnà al-dīn—the Mahalvi order of dervishes with their peculiar dress and whirling dance; and some of these hymns, first uttered in moments of ecstatic rapture, are still chanted by the Mahalvis, whose headquarters remain at Qonīya to this present day. In the Divān Jalāl's poetic genius is not hampered by didactic motives, and he sings out of the fulness of his heart; here he very often soars on the wings of pantheistic exaltation to such heights that few Sufi poets have been able to approach.

Probably about A.D. 1290, at the instigation of his favourite pupil Ḥasan Ḥusayn al-dīn, he began to compose the most celebrated of his works and perhaps the greatest mystical poem of any age, the Mathanwi-i Masnavi, or 'Spiritual Couplets,' in six books containing altogether some 27,000 verses. The Mathanwi may be described as a medley of anecdotes, dialogues, allegories, and discursive theological speculations. Each book, however, forms an independent whole and has an inward, though not always obvious, unity of its own. Such difficulties as occur are generally due to the abstruse nature of the subject; the narrative portions are written in a plain style, singularity free from rhetorical conclusions, self-contradictory, and sometimes tedious though it be, the Mathanwi stands unrivalled as a comprehensive and thoroughly characteristic exposition of the religious philosophy of the Persian Sufism which is inspired by intense moral feeling and illuminated by many beautiful and profound thoughts.

While no attempt can be made to describe the author's doctrines in detail, a few salient points may be noticed. Jalāl al-dīn is a pantheist in the sense that he identifies all real being with God and regards the world of phenomena as a mere image of the divine ideas reflected from the darkness of not-being: the universe in itself is nothing, and God alone really exists. Every atom of the universe reflects some attribute of God, but man is the microcosm. Finally, the poet (who claims Qur'an xxiii. 72), is responsible for his actions and can choose good or evil. Admitting for practical purposes the existence of evil, the poet is careful to guard himself against dualism: he holds that evil is a negation of real being, or that, in so far as it has a positive character, it tends to good. He insists repeatedly on the supreme value of love as the unifying and purifying element in religion. Those who love God will discern the soul of goodness everywhere and will realize the unity underlying all differences of creed and ritual; not only will a moral transformation be wrought in them by grace of God, but they will pass utterly away from selfhood and individuality, which are the great obstacles to absorption in the divine life. Another noteworthy doctrine is that of the evolution of the soul through stages and trials, of purifying —mineral, vegetable, animal, human, angelic—before its final return to the source whence it sprang. Besides the Divān and the Mathanwi, Jalāl al-dīn is the author of a prose treatise bearing the title Pīli ma fah, several copies of which are preserved at Constantinople.

LITERATURE.—1. Life and doctrine.—The most authoritative Persian biography of Jalāl, see his life of Jalāl by Aflākī, a pupil of the poet's grandson Chahār Aflākī, of which J. Redhouse has translated copies (see below). Further information will be found in the life of the Mathanwi and Divān and also in the following works:

JALANDHARA-JAMBUKESWARAM

JALANDHARA.—Jalandhara (Jullunder) is the name of a town (lat. 31° 59' N., long. 75° 26' E.), district, and division in the Panjab. The 'division' includes the 'districts' of Jalandhara (Jullunder), Hoshiyarpur, and Kangra. The ancient kingdom, called Trigarta by the Hindus and Jalandhara by the Chinese pilgrim Hui-sen Tan-t'ung, was at the time of the 7th century, included, like the modern 'division,' both the hill country of Kangra and the plain of Jalandhara. The latter is associated in Hindu mythology with an eponymous demon, on whose back the town is supposed to be built, and the neighbourhood is regarded as holy ground, pilgrimages to which are meritorious. The fort of Kangra (Naggar) formerly considered one of the strongest places in India, possesses the famous Brahmanical temple of Mata Devi, or Vaisnava Devi, thrice desecrated by the Muhammadans, and mostly destroyed by the earthquake of 1905, as well as some Jain shrines and images, but no Jains now reside there. At Jaldamukhi ('flaming mouth'), about 20 miles S.E. of Kangra, a discharge of inflammable gas from a fissure at the base of a high range of hills is honoured with great veneration and much visited by pilgrims. The Chinese pilgrim, Huen Tsang, twice visited Jalandhara in A.D. 634 and 645. The capital was then described as being 'the royal city of Northern India,' and the Rajā was specially selected by king Harṣa (Siladitya), the paramount sovereign, to escort the 'Master of the Law' when on his return journey from China. An earlier uncertain Rajā, who had become a convert to Buddhism, is said to have been given by the paramount power 'sole control of matters relating to Buddhism in all India,' and to have been vested, in his capacity of Protector of the Faith, with jurisdiction to reward and punish monks impartially without distinction of persons. The same prince was believed to have travelled all through India and to have erected stūpas (tomes) and monasteries at the sacred sites; but no record confirming these statements of the pilgrimage has been discovered. Although Buddhism was decadent in most parts of N. India during the 7th century, it was still the dominant religion at Jalandhara, where the Buddhist monasteries, served by more than 2000 brethren, students of both 'vehicles,' exceeded fifty in number. In the Brahmanical temples of the Siva sect of Pāsūpati were only three, with about 500 votaries. Probably the Buddhist worship survived until the Muhammadan conquest early in the 11th century, for it would not endure the multitude of images displayed in Buddhist establishments, and made an end of monks and monasteries wherever they found them. The Brahmanical temple at Jullunder made a special study of the Abhidharmā, or metaphysical, sections of the canon, and Huen Tsang studied an Abhidharmā commentyary for four months in 634 under the guidance of a teacher named Chandravara. The compilation of such commentaries is recorded to have been the business of the Council assembled by the Kṣṇa monarch Kaniṣka (q.v.), probably in about A.D. 100. But in the opinion of the Japanese scholar, Takakusu,'all arguments about the Council and its works will be valueless until the Mantravardhana— an encyclopaedia of Buddhist philosophy—is translated into one of the European languages.' He holds that the Council was almost entirely composed of the heretics of the Hinayāna school of the Sarvāstivādins (J.R.A.S., 1895, p. 415).

Huen Tsang had no doubt that the Council held at Rajagriha, the ancient capital of Magadha (Bihar) was also rejected, and ultimately it was decided to hold the Council at Jalandhara. The commentaries authorized by the assembly are said to have been engraved on copper-plates and deposited in a stūpa. It is possible that they may still exist among the ruins of Pandrothān, Asoka's capital, which lie to the south-east of Srinagar, or Pravarasenaapura, founded by a Rajā of Saiva faith, perhaps during the 6th century. A rival tradition alleged that the Council was held at the Kavana or Tamasvaya monastery of Jalandhara, and the Tibetan historian of Buddhism, Tamāntha, writing in A.D. 1608, was of opinion that this tradition was supported by the weight of learned authority (Schiefner, Tamāntha, p. 60). But the precise testimony of Huen Tsang, nearly a thousand years earlier in date, obviously is entitled to more credence, and the fact may be accepted that most of the sittings of the Council were held in Kashmir. It is possible that the assembly may have met first in a monastery at or near Jalandhara, and may have adjourned to Kashmir for the hot season. Paramānā, author of the Life of Vasubandha, fully confirms the tradition that Kashmir was the place of the Council (J.R.A.S., 1906, pp. 38, 52).

JAMBUKESWARAM (Skṛ. Jambukadvīpa), a title of Śiva, 'Lord of the jambulu, or rose-apple tree,' under an old specimen of which, much venerated, the symbol of the god is placed.—A famous Saiva temple in Srīrangam (Island) (a portion of the Trichinopoly District of the Madras Presidency. It rivals the more famous Vālsana temple at Srīrangam in architectural beauty, interest, and possibly in antiquity. The object of worship is one of the five known as 'elemental,' the 'element' being in this case water, by which it is surrounded (for the other 'elementals' Hīgus see Madras Manual of Administration, iii. [1893] 420 f.). According to the legend the first gateway of the outer enclosure is not large, but it leads direct to the centre of a hall containing some 400 yllars. On the right there is open to a tank fed by a spring which is one of the wonders of the place. The corresponding space on the left was intended to be occupied by a 400 yllar, requisites to make up the 1000, but was never completed. There are, in reality, 700 columns, or, in all 900, if the 142 round the little tank which adjoins the hall are added. Between the two pinnacal (entrance gates) of the second enclosure is a very beautiful portico of cruciform shape, leading to a large sanctuary, which, however, makes no show externally, and access to its interior is not conjectured to the profane (Hist. of Ind. and East. Arch., p. 396).
He fixes the date of the building about A.D. (1605); but this inscription, however, is said to be dated A.D. 1483. Formerly, when sectarian jealousy was less intense, the image of Vishnu used to be brought for one day in the year into a coco-nut grove within the enclosure of the rival temple, but owing to sectarian disputes this practice has now been abandoned.

W. CROOKE.

JAMNOTRI (Skr. Yamuna-avatara-puri, 'city of the appearance of the Jumna').—A sacred place of the Hindus near the source of the river Jumna; lat. 31° 1' N., long. 78° 25' E.; in the State of Gahrwal, United Provinces, India. The river rises from the group of mountains known as Badarpahar, 'monkey's tail,' the height of which is 20,731 ft.; at Jamnotari, at an elevation of 10,540 ft. above sea level. Close to the source of the river from a glacier there is a hot spring.

'From a rock which projects from the snow a small rill descends during the day, about 8 feet wide and very shallow, being only the remnant of a shower of spray produced by the snow melting under the sun's rays. Below this the snow-bed is dotted with lumps of ice, caused by the chilling effect of the snow as it is melted by the steam of the boiling spring beneath. The stream wind and twist, and will find its way through crevices formed in the snow-bed to the ground beneath, out of which gush numerous springs of water of nearly boiling heat [1847° Fahr.]; and the stream, which when we arrived was about 5 feet deep, as to form numerous excavations resembling vaulted roots of nutmeg. Perhaps further causes a copious shower, which affects the principal supply to the Jumna' (Atkinson, Himalayan Jour. iii. 376).

Jamnotari is a place of a resort of pilgrims, but is not so popular as Gangotri (q.v.), the source of the Ganges.

W. CROOKE.

JANSENISM.—Jansenism, a religious revival within the Church of Rome, originated in the 17th century, and is hardly yet extinct. Although its history is connected chiefly with France, its first home was the Flemish University of Louvain; and it bears the name of its chief Flemish apostle, Cornelius Jansen, bishop of Ypres. Jansen (1638-1688) was born of humble parents at Arcy in the province of Utrecht, and educated at Louvain, where he formed a momentous friendship with a French student, Jean du Vercier de Hallain, who introduced his ideas to France. Jansen rose to be tutor and professor at Louvain; in 1636 he was appointed bishop of Ypres, but died within two years of his elevation. In 1640 his executors published the work of his lifetime: Augustinus, seu doctrina S. Augustini de humanis naturae agricultura, sanatibus et medicina aduersus Pelagianos et Mansuenses. This bulky treatise is the chief monument of a controversy that had raged at Louvain ever since its great professor Bainis, otherwise Michael de Bay (1513-59), had revolted against the traditional Scholasticism of the college lecture-rooms. Medialval theology抱住 was held to be mere intellectual, making it clear to reason the dogmas that faith already accepted; and reason, to the medieval mind, meant the categories of Aristotle. With their help, it was believed that all the mysteries of religion could be translated into clear, coherent language; and, in pursuance of this end, the Schoolmen raised a gigantic monument of subtle dialectic, wherein they sought to envelop in its precise metaphysical equivalent. As time went on, however, the world grew increasingly dissatisfied with their performance. Simple souls were bewildered. They felt that faith and grace and love and eternity, and all the pomp of logical abstraction, were woefully unlike all that they meant to the unsophisticated human heart. Accordingly they accused the Church of over-intellectualized religion; the Flemish Huguenots told King Philip that man's happiness would be a saience humaine parmy la saience divine.' Their protest was in some degree supported by de Bay and other moderate Catholics, who were in favour of making all reasonable concessions to the Reformation.

They felt that scholasticism, in its doctrine and logic, had let theology drift out of touch with Christian feeling and experience. 'Divines talk of sin,' wrote de Bay (Linsenmann, Michaelis Basiu, p. 78), 'as though it were a creature dictated by some visionary dreamer, which must be pondered over and believed, although nobody could feel it or grasp it.' Under his leadership an Anti-Scholastic tradition grew up at Louvain, of which Jansen became the great exponent. In the preface to his Augustinus he declares that the first great enemy of God is Aristotle, the arch-logician. His pura, guta philosophiae may be well enough suited to the investigation of physical phenomena; it is utterly out of place in a discussion of spiritual things. It engenders a blind trust in argument; and argument transforms theology into a kind of dialectical titling-match, where everything is open to question, and nothing is held sacred or assured. 'What is held probable to-day will be considered false to-morrow, and the certainty of yesterday becomes the paradox of to-day.' Thus the scholastics, he concluded, brought Babel for confusion, and a Cimmerian region for obscurity.

Where had a remedy for this state of things? Jansen appealed to Augustine—rightly or wrongly to God's Providence to be the eternal and victorious foe of Aristotle. To follow him was to escape from the frosty intellectualism of the Schoolmen; for Augustine, although no more than a match in logic for the dogmatic Aristotelian who ever lectured in the Schools, had never hesitated to appeal to the imagination and the feelings; his works owed even more to his charity than to his brain. Again, to follow Augustine was to escape for ever from the instability of the theologians. He had always taught that faith and reason have nothing to do with each other. Divine truth in no way depends on the vagaries of the human mind. The truths are not solely by prescriptions and traditions flowing straight from the Fountainhead. In other words, it is given by God—not made by the hand of man. And what is true of faith is also true of works. Left to ourselves, we can neither make nor get right. All that is good in us is the fruit of grace implanted in the individual heart by the hand of God Himself. Jansen's three volumes are an inextricable elaboration of this central thesis. The changes are incessantly rung on the absolute necessity of grace, on the blindness of the human intellect and the weakness of the human will, until commonplace Catholics began to rub their eyes, and ask whether the bishop of Ypres was anything better than a Calvinist in disguise. They were wrong. Strongly as Jansen held to the Augustinian doctrine of individual sanctification by the direct personal agency of God, he held quite as strongly to the other side of the Augustinian system—to the Civitas Dei, or Visible Church, wherein the Redeemer became the Holy Spirit in its organization generation after generation. Thus communion with the Visible Church—acceptance of its dogmas, participation in its sacraments—was absolutely necessary for salvation. The Church found in the dry bones of righteousness; the inward witnesses of the Spirit clothed the skeleton with flesh. Hence, during their long struggle with the Roman authorities, none of Jansen's followers dreamed of casting loose from Rome.

Moreover, all their surroundings indisposed them from any sympathy with the Reformation. Jansen
spent most of his life at Louvain, the frontier-citadel of Rome over against Presbyterian Holland; there he had become, as it were, a swordsman with the great Calvinist, controversialist, Vouicius, still remembered for his attacks on Descartes. And he probably owed his life to the favour with which the Spanish Viceroy regarded him when he received his best Gallicians (1638), a fiery political pamphlet attacking Louis XIII. of France for having allied himself with the heretical powers of Northern Europe during his long fight with Spain and Anjou, traditional champions of the papacy. On the other hand, Jansen, like de Bay before him, may well have dreamed of gaining the Protostats with their own weapons, and proving that—a given strong infusion of Augustinian doctrine—Rome could be as truly evangelical as Wittenberg or Geneva. Certainly this idea appealed much to his friend and fellow-labourer, du Vergier de Hauranne. He came of a wealthy family near Bayonne, and was educated at Louvain, where he made Jansen’s acquaintance. After his ordination he spent some years as confidential secretary to the bishop of Poitiers; in 1629, the bishop made over to him the commendatory (or sinecure) abbacy of Saint Cyran, a Benedictine monastery in central France. Thenceforward he was generally known as Monseigneur de Saint Cyran. At Poitiers he was so well received that the abbots of Tours thought the centre of French Protestantism. And experience soon convinced him that their reconciliation with the Roman Church was impossible, until the Church had laid the foundations of a new order. Accordingly he settled in Paris, and there started on a vigorous campaign to bring the Church’s disorders to an end.

The disorders in question were fruits of the Wars of Religion. The French prelates, wearying of thirty years’ fighting about theology, most Frenchmen were sick of the very name of dogma. As the long struggle had ended with the conversion of Henry IV. to Rome, most of them were willing enough to call themselves Catholics, and perform the most solemn ceremonies of their country with a decent moderation, as one of their great writers enjoins. But independent spirits were drift ing away from Christianity altogether to a purely natural religion untainted by sectarian bickerings—a religion of noble self-respect and disinterested love of duty, learned from Marcus Aurelius and Epictetus. Such men seemed to need grace or redemption: was not the wise man sufficient unto himself? As for the frivolous many, they were frankly weary of religion altogether, and the Church’s only chance of gaining them back within its fold was to pitch its standard of decent moderation as low as possible. This view soon dawned on the Jesuits and the more worldly-wise among the clergy. They argued that severity in pulpit and confessional only scared sinners away altogether; thereby their money and influence were lost to the Church, and their souls robbed of the priceless benefit of priestly absolution. Accordingly, through their casuists—writers of official textbooks on the management of the confessional—they entered on a vigorous campaign to force priests to be lax. The kind of argument that a confessor might ask was rigorously defined. He must always lean towards the most ‘benign’ interpretation of the law; and for his guidance the casuists ran many an ingenious counsel and four through inconceivable enactments. Not that they went as far as some of their Protestant critics imagined. They did not legitimate grave sins; their object was to show that the Church’s minimum standard was no higher than that which the majority of mankind seem to require of human nature, or to expect. The Jesuits certainly did not ignore the necessity of sacramental grace. But they said that, if a man wished for it, he must take the first step himself, and merit grace by coming to confession. For grace, on their principles, never took the lead; its business was to complement and complete what human nature had begun. That being so, they argued that it was unjust to ask men for more than they were fully capable of performing; God must perform his part of the bargain. And, in fact, the Jesuits thought it fair and reasonable of Him to expect.

Saint Cyran brought all the batteries of Jansen’s theology to bear on this position. He refused to ask what a man could do simply by himself: the question was how contact with the Resurrection of Christ and the Church could be thus borne upon the wings of grace. And whether he was so upborne depended in no way on himself; God did not ask His creatures to choose whether they would accept grace or refuse it. The case of man was like that of a man who left to perish in its sins. On the few whom He elected to save grace descended like a whirlwind—irresistibly, unerring, victoriously. There were ‘thunder-claps and visible upheavals’—a sudden, violent, awakening. In every true conversion,’ wrote Saint Cyran in his Spiritual Letters, ‘God speaks at least once to the soul as distinctly as on the road to Damascus. He spoke to St. Paul, model of all penitents.’ There followed a long course of internal repentance and external penitential discipline, carried out under expert guidance: was not St. Paul himself ‘directed’ by Ananias immediately after his conversion? At last the sinner emerged a new creature, living only for religion. To all other interests he was dead. Even the most innocent—art and literature, family ties, civic and professional duties—might prove dangerous to the love of God, and were therefore better away. But for such a man the cloister is the only place, and of this Saint Cyran was well aware. As his first biographer says, he strove hard to make his amanuensis of himself, and give new citizens to Heaven,’ by driving most of his hearers into convents.

Hence it is scarcely surprising that his first celebrated disciple should have been a nun. This was Angélique Arnauld (1621–1691), abbess of Port Royal des Champs, a Cistercian convent near Versailles. She had early revolted against the spiritual deadness around her, and embarked on various schemes of reform. But all her efforts had been tentative and uncertain, until Saint Cyran appeared to give her the precise kind of guidance that she needed. In return, she furnished his doctrine with a local habitation and a name; within a few years Port Royal became the headquarters of the Jansenist party. Angélique enlisted in its service her large and influential family— notably her brother, Antoine (1622–94), one of the most promising young men of the time. Her convent opened in the capital a daughter-house, known as Port Royal de Paris. At the abbey gates a little group of masculine adherents formed the ‘hermits of Port Royal,’ who lived the semi-monastic life, although bound together by no vow. Under the guidance of Antoine Arnauld, they poured forth an ever-increasing flood of devotional
Jansenism

literature remarkable for its literary style. Both
runs and hermits opened ‘little schools’ for the
creation of clergy of the movement; Pascal’s
cister, Jacques, was a teacher in the one, and
Racine a pupil in the other. So successful was
the party that it soon excited the suspicions of
Richelieu’s police; in 1638 Saint Cyran was arrested
and forced to leave his country on pain of ecclesiastical
penalty, and kept in prison till the Cardinal’s death (December 1642).
Then he was at once released; but his health had
been broken by his confinement, and he died in
October 1643.

The leadership of the Jansenist party at once
devoiced on Antoine Arnauld, who had just pub-
lished (August 1643) a Traité de la fréquente con-
version, which for the first time set the Jansenist
case before the general reader. The Augustinian,
written in Latin, had been too learned; Saint
Cyran’s devotional works were at once too
monastic and too inspirational—too full of ‘thunder-
claps and visible spices.’ Arnauld, son of a
family of lawyers, used the language of the country,
and imported into theology all the hard-headed
calculations of his race. He dealt with the manage-
ment of the confessional, a subject of interest to
every one. And he dealt with it in a manner in-
telligible to every one. The casuistical party
maintained that Catholics were the Chosen People
—members of the One True Church—and that
God showed His particular favor to them by
blessing those sacraments, which ‘met their efforts
half-way,’ that is, made them holy with very
little trouble. Arnauld on their part, in his Traité
defended this position. He held that the fact
of being a Catholic was any recommendation
in God’s sight. Religion did not consist in believ-
ing a particular opinion, or conforming to a par-
ticular mode of life; it meant conversion, becoming
a new creature. But conversion was no affair of
a moment; it was a slow and gradual process,
involving a long course of discipline, internal and
external. How absurd, it said, to give absolution easily—‘like footmen, rather
than judges’—to all who chose to ask for it. How could a madder
absolution make a sinner a new man?

The casuistical party must needs take up soopen
a challenge. They could not dispute with the Traité
directly, for it had been very favourably received.
So they concentrated their attacks on the weakest
point in Arnauld’s position, and accused the Augustinian
of reviving the Calvinist doctrine, and the
Book of Calvin. The book had appeared in 1640, and was
promptly censured by the Inquisition, on the ground
that it was illegal to write controversial works on
the subject of grace without special leave from
Rome. This censure was confirmed by Urban VIII.
in 1642. But various technical objections were
raised to the legality of this condemnation, and a
lively war of pamphlets ensued. In July 1649
seven propositions were denounced to the Sorbonne,
or Divinity Faculty of Paris University. Two of
these, taken from the Fréquente conversion, were
soon dropped; the other five made up what Bossuet
called the soul of the Augustinianus, though only the
first proposition of the five was textually extracted
from it. They run as follows:

1. They are condemned which good men cannot obey, however hard they try. (2) In the state of fallen nature, internal grace is never needed. (3) To be active in the story of the fallen nature meritorious or otherwise, it is not requisite that they should be free from internal necessity, but only from external. (4) The Augustinian error consists in teaching that men can choose whether they will accept grace or reject it. (5) It is a Semi-Pelagian error to say that Christ died for all men.

These five Propositions gave rise to heated debates in
the summer until Arnauld’s supporters, finding
themselves in a minority, appealed to the law
courts on a question of privilege, and the whole
question was referred to the Assembly of the
Clergy meeting in the following year. But the
Assembly also was divided in opinion. In April
1651, eighty-five bishops wrote to Pope Innocent X,
begging him to examine the Propositions; eleven
other bishops wrote deprecating the action of their
colleagues. Innocent appointed a commission forth-
with to examine into the whole question, with the
help of advocates on both sides. Early in 1653 the
commission reported; and on the strength of its
findings Innocent declared all five Propositions
heretical.

At first the Jansenists made light of his judg-
ment. In the 17th cent. few Framboys believed in
papal infallibility. Rome was looked on as a
country where diplomatic intrigue went for more
than theological scholarship, and one pontificate
might easily undo the work of another. The
Jesuits might manage to hoodwink Innocent X;
Port Royal could afford to wait till he gave place
to a pope less amenable to their influence. Accord-
ingly Arnauld temporized. He began by denying
that Jansen was touched by the censure. Only one of the five Propositions was a literal
extract from the Augustinianus; and that one,
thought liable to Calvinistic misconstruction, was
also capable of being read in the semi-Pelagian
sense given it by Augustine, Jansen’s master.
Hence, to condemn the disciple was to condemn
the Doctor of Grace. The bishops replied that
Innocent had committed error in the precise sense intended by Jansen; and their asser-
tion was confirmed by Innocent’s successor, Alex-
ander VII., in October 1656. Arnauld had already
been expelled from the collegium of the spiritual’s
Provincial Letters (Jan. 1656—March 1657), begun
in an attempt to save him. Early in 1657 the
Assembly of the Clergy imposed on every priest,
analyst, and nun in Paris, or declaration,
that the Propositions really were in Jansen’s
book. For a while, however, the Formulary hung
fire. Although in a small minority, the Jansenists
had powerful backers among both bishops and
judges. Public opinion was impressed by the
Provincial Letters, and still more by the so-called
‘miracle of the Holy Thorn’ (March 24, 1656),
when Pascal’s little niece, Marguerite Férié, was
suddenly cured of an incurable disease, and the
relic from the Crown of Thorns in the convent
chapel at Port Royal. But the respite was short;
for in 1660 a new and most powerful enemy entered
the lists. Louis XIV. had become the government
into his own hands; and this great fanatic for uni-
formity was the last man in the world to tolerate
a handful of eccentric rednecks who believed them-
selves to be in special touch with Heaven, and
therefore might at any moment set their conscience
up against the law. In 1661 he stirred up the
bishops to enforce signature of the Formulary; and,
when the Jansenists objected that mere bishops had
no right to impose it, he got a new Formulary
drafted by the pope (1664).

At last the Jansenists found themselves between
two fires. Were they to sign, or were they not to
sign? A few of the most consistent were for a
blank refusal. Just before his death (1662) Pascal
had declared that the Augustinian was absolutely
in the right, and the pope absolutely in the wrong.
Hence to sign the Formulary, without expressly
accepting Jansen’s name from censure of every
kind, was to act in a way ‘abominable before God,’
evens in the sight of man, and of no use whatever
ever to those already marked out for destruction.
But the mass of the party followed Arnauld in his
temporizing tactics. He said that the Formulary
might be signed by any one who bore in mind the
common distinction of law and fact. In essential
matters of dogma the Church was certainly infal-
lible. But this infallibility ceased so soon as it
approached concrete cases of fact; and it knew no more than any one else what was in a particular author's mind when he wrote a certain passage in his book. Properly speaking, it had no right to pronounce on such questions at all; if it insisted on doing so, the conclusion might easily be that the 'respectful silence' that involves external conformity, but no inward acquiescence. Tacitly convinced at by many bishops, this position was openly accepted by others—though both of the leading bishops of Paris, Arnauld and Quensel, were very severe on the 'respectful silence' that involves external conformity, but no inward acquiescence. Tacitly convi...
in the services of a committee of moderate bishops, among them being Massillon of Clermont, the famous pulpitor. The committee produced two documents. One—the Corpus de doctrine—was a commentary on the bull, explaining away everything in its provisions that might stick in the gorge of an "apellant." The second document was a letter addressed in the same sense as the pope—which, as the indignant Clement pointed out, was often very different from the sense laid down in the Corpus de doctrine—and at the same time through some of the most extravagant utterances of the bull's extreme supporters. The two documents made up what was known as an accomodement, or compromise; and the Government decreed that any one who signed the compromise should be deemed to have accepted the bull, and be free from further molestation. After some wavering, Noailles and most of the appellant bishops accepted the Government's terms (1720); and Jansenism came to an end as an organized political force.

Not that it was by any means dead. The four original appellants refused the compromise, and were "re-appealed" to a general Council. The tolerant Regent let them alone; but after his death power passed into the hands of Fleury, former tutor to the young king, and an ardent aspirant to a cardinal's hat. He determined to make an example of the most representative appellant, Bishop Soanen of Senez. This old man of over eighty was deposed from his bishopric, and exiled to a remote monastery in Auvergne. Noailles protested against his treatment, and afterwards he died (1729), just after having made a humble submission to Rome. He was hardly in his grave before Jansenism burst out again in a new form. Persecution generally begets hysteria in its victims, more especially when they already accept a strong doctrine of conversion. Belief in material miracles goes hand in hand with belief in moral; and even in its great days Port Royal could furnish a long list of special providences and portents, like the miracle of the Holy Thorn. Now that the fortunes of the party were at their lowest ebb, these were multiplied a hundredfold. About 1728 the "miracles of St. Médard" began to make the talk of Paris. These were a series of astonishing cures—mostly of nervous diseases—effected at the tomb of François de Paris (1600-1727), a young Jansenist cleric of singularly humble birth. He was the founder of the Unigenitus. In 1722 the Government closed the cemetery, and gave rise to the famous epigram:

"De peur de la loi, défense à Paris
De faire miracle en ce lieu."

From mere miracles it was but a step to apocalyptic prophecy and speaking with tongues. The so-called Commissaires worked themselves up, by means of frightful self-torture, into a state of ecstasy, in which they prophesied and cared diseases. They were speedily disowned by the serious Jansenists, but they dragged on a disreputable existence for many years. In 1722 they were still important enough for Diderot to take the field against them. A curious law-suit revealed that they had a regular organization, with elective officers and a common treasury, known as the botte à Perrette ("Perrette's boot") from the name of the old lady who was its original custodian.

Meanwhile Cardinal Fleury was having much ado to enforce the Unigenitus on the clergy generally. The French judges were enthusiastically Gallican; and they hated the bull, because it was a triumph of their hereditary enemies, the Jesuits and Jansenists. But they knew the papists they put every possible difficulty in the way of its execution. Under their fostering care, a belief sprang up that to call oneself a 'Jansenist,' and abuse the Unigenitus, was to show oneself a lover of civil and religious liberty.

And, as the Jesuits grew more and more unpopular, the word 'Jansenist' came to mean everything that they were not; it stood for a sterling, upright character, and a manly hatred of double-dealing and shams. Thus the historian Sismondi, who was born in 1773, remembered an old gentleman who used to boast that he was an atheist. He was an adherent of the Jansenist sect. Men of this type had much to do with the eventual suppression of the Jesuits (1773), and not a little with the French Revolution. Here political Jansenism joined hands with religious in the remarkable figure of the Abbé Henri Grégoire (1750-1831), sometime constitutional bishop of Blois.

For religious Jansenism was not dead. The old Spirit of Port Royal still survived in many a country parsonage and convent, and led throughout the 18th cent. to chronic conflicts with authority. Often the causes of quarrel were trumpery enough; and Jansen's latter-day descendants did not always show themselves reasonable or broad-minded. Still, in their dim fashion they upheld the great principle of their school—that religion begins and ends as an inward 'touch of the Spirit,' and over the movements of that Spirit death. Outside France also during the 18th cent. much was heard of Jansenism, though the word was loosely used to cover a great number of different meanings. Any one of them might be absorbed—more especially abuses profitable to the Court of Rome—was at once set down as a Jansenist. So was any priest in any country who tried to keep a strict hand over his flock. In Ireland, down to quite modern times, Jansenism meant more than a conscientious objection to dancing on Sunday. Much the same is true of Italy, though here something of the true spirit of Port Royal inspired the efforts of Bishop Segismonde de Ricci (1741-1816), the leading spirit in the ill-fated synod of Pistoia (1786). But the most direct heir of Port Royal was Jansen's native country of Holland. Here, ever since Jansen's own day, Catholic ecclesiastical affairs had been in a great tangle. The Dutch priests clung to their ancient right of electing their own archbishop of Utrecht—or, rather, since the archbishopric had lapsed at the Reformation, they wished to choose their acting bishop, or vicar-general. Rome, on the other hand, wanted to assimilate Holland to other Protestant countries, where the chief ecclesiastical office was a vicar apostolic, chosen by the pope and directly under his orders. Thus was all the more burning, since in Holland, as in the England of Elizabeth, there were bitter quarrels between the Jesuits and the secular parochial clergy. The Jesuits wanted a papal nominee, the seculars held tightly to their local independence. Jansen had entered the lists on behalf of the seculars, while he was still a professor at Louvain; Saint Cyra and Antoine Arnauld had followed him, and ever since Port Royal had been on the friendliest terms with Utrecht. The fact was not forgotten at Rome. In 1762 the Vicar-General Codde was deposed by the pope on a charge of Jansenism. A section of the Dutch parish priests refused to recognize his deposition, and were supported by a number of French 'apellant' refugees, who streamed into Holland on the degeneration of the Unigenitus. Codde himself succeeded, under protest, in his deposition; but his supporters were not so meek as he, and eventually organized themselves into a separate community. In 1729 Cornelius Steenoven was consecrated bishop of Utrecht by Dominique Varlet, a French missianary bishop, who had been deposed by Rome as a suspected Jansenist; and suffragan sees were afterwards founded at Haarlem, which never entered the Counter. Popularity the community has always been known.
JAPAN

as the Jansenist Church of Utrecht; officially it rejects the name of Jansenist, and calls itself the Old Roman Catholic Church—"De Oud-roombeschouwende Religie van Kerspel"—nevertheless, its theology bears a strongly Jansenist complexion. It regards Arnauld's interpretation of Jansen as perfectly orthodox; and it rejects the Unigenitus and the inoffensibility of infants, and resists it adheres strictly to Catholic beliefs and practices—the practices of two hundred years ago; for it is rigidly conservative, and boasts that it does not move with the times. Of late years, however, it has given up something of its immobility. Since 1752 it has been in communion with the Old Catholics of Germany, although it by no means approves all their departures from established Catholic usage. More recently it has established a mission in Paris—the "Église gallicane"—and has consecrated a bishop to supervise the Old Catholics of England. And, if there is any future for free Catholic Churches in Western Europe, Utrecht will undoubtedly be their natural starting-point and centre.

JAPAN.—The country of Japan (exclusive of Korea [p. v.]) consists of more than 40 islands and a great number of islets, lying between 60° 30' and 48° 15' N. lat. and 134° and 142° E. long. having an area of more than 173,786 sq. miles. Of these islands Honshū is the largest, containing nearly two-thirds of the total area; and it has been, and is likely to remain, the chief seat of national life. But Kyūshū, to the south-west of Honshū, is historically of far greater importance, having been for centuries one of the main channels through which Asiatic and European influences reached Japan.

A remarkable feature of Japan is the high ratio of coast-line to land area, this being estimated at 1 : 35, whereas in Greece and Norway, which have the longest coast-lines in Europe, the ratio is 1 : 5. The coast-line of Honshū and Kyūshū is so long that narrow, oval faces of the sea, and the fact that the sea and the sea currents which flow into Japan are most violent, have no special projection of cheek bones, a straight or aquiline nose, more or less slanting eyes, and small hands and feet, long, delicate fingers. People of this type were called by the name of Idzumo. Mongol characteristics are a broad face, prominent cheek bones, oblique eyes, and a flat nose. The Malayans are said to have contributed the most important elements to the Japanese race. Their physical characteristics are the square-built, well-developed body, generally short in stature, and the round face with a prominent nose. They are found in S. China, in the south-western parts of Korea, and in all the islands along the eastern coasts of the Asiatic continent; and it is probable that at the dawn of Japanese history they landed in Kyūshū and thence pushed their way north until they finally conquered the Manchu-Korean settlers in Idzumo. These three types are now so blended as to make it impossible to trace any single one distinctly and exclusively in the features of particular individuals. Every Japanese is a composite, each differing from the rest only in the measure of proportion.

There is, however, a group of people in Japan who have preserved their racial distinctness until this day. They are the Ainu, the people who now inhabit the islands north of the Tsugaru Strait. It still remains an unsolved question whether they were the aborigines of Japan. Some assert that a primitive people known as the "Koropokkyu" inhabited the Japanese islands previous to the intrusion of the Ainu. In any case, it is certain that the Ainu are the only aboriginal inhabitants of the whole land, but were gradually driven out of Kyūshū and the main island by later intruders from the Asiatic continent or the South Sea Islands. Historical records show that the Ainu were not fierce, brave fighters, making strong opposition to the central government, and not infrequently becoming a menace to its security. There was, however, a distinct feeling in the Ainu, called the nio-yeo, the 'naturalized' Ainu, in contrast to the aro-yeo, the 'wild' Ainu. This tends to show that Ainu blood is flowing in the veins of the Japanese. The Ainu people, unlike the Manchu-Koreans or the Mongols, have a very close resemblance to some Europeans in physical characteristics. They are rather short and thickly built; they have prominent foreheads with deep-set eyes, bushy eyebrows, thick overhanging eyelashes, and, unlike their Manchu-Korean neighbours, with heavy heads, and, remarkably enough, long divergent eyelashes. There is, accordingly, good reason to believe that the Ainu are the best authority upon the Ainu, to hold that they belong to the Canadian race. He maintains also that the 'Ainu language is Aryan, with the marks common to the languages of the six great Aryan peoples' (cf. W. E. Griffis, The Jap. Nation in Evolution, p. 5; see, further, art. AINA, vol. i. p. 239 ff.), B. H. Chamberlain is opposed to this view, principally on the ground that the flattening of the shin bone differentiates the Ainu from the Arians (The Language, Mythology, and Geographical Nomenclature of Japan, in the Light of Aino Studies, London, 1905, p. 107). This involves the question whether there is an Aryan element in the physical and mental constitution of the Japanese race.

J. J. Rein declares that 'Japanese society exhibits a surprisely large variety and suitability to the four seas.' The latter, though, generally speaking, much darker than among Caucasians, is characterized in occasional instances by even the fair, clear complexion of the Germanic peoples. Not unfrequently the symmetry and the regularity of features are so great and so discreet from the general types that we imagine we are in the presence of a well-formed European (Jap. Japan, London, 1904, p. 37). If so, the 'evidences,' including physical features and mental character-
itself, of the Japanese being descended from
Iranian, Caucasian, or Aryan ancestry. It is a
fact that in certain sections of the country, e.g., in
considerable portions of Kyushu, Chagoku, and
Hokuriku—the inhabitants have at least physical
evergethecultures and the constant adjustment
of them to Japanese temperament and needs.

1. Early period.—The religion of ancient Japan
presents no definitely systematized forms of worship
or belief. It was ministric or spiritistic. The
term karai, which signifies 'deity,' was applied
indiscriminately to any object or natural phe-
nomenon that might arouse the feelings of wonder,
awe, fear, or love. Hence, mountains, rivers, plants,
sea, mountains, rivers, and winds, in which the
people believed some supernatural spirit dwelt,
were worshipped (see, further, art. God [Japanese],
volumes vi. p. 294 ff.). Belief in divine animism was
prevalent. Divination was practiced by various kinds of
mystical and magical charms employed to aver evil.
The introduction of Confucianism (see art. Confucianism,
vol. iv. p. 123 ff.) in A.D. 588, and Buddhism in A.D.
588, produced no change in these primitive practices,
which only refined outwardly.

The mythological accounts contained in the
Kojiki (Record of Ancient Events, compiled A.D.
712) and the Nihongi (Chronicle, compiled A.D.
720); however, seem to represent those ancient
beliefs and practices in the light of an age in which a
more formalized form of ancestor-worship had been
developed (see, however, art. Ancestor-
Worship [Japanese], vol. i. p. 455 ff.). The racial
blending and cultural unification of the tribes
inhabiting the islands, which took place at a very early
stage of development is not precisely determined, but may
have brought about a type of religion which, in subse-
quently ages, took the name of Shinto (g.w.).
The imperial thanksgiving festivals, such as the Dajiki
(Great Rite of the First Rice), the Shinji (Annual
Rite of the First Rice), and the Kamamarioi
(Thanksgiving Offering to the Ancestor-God), are
generally regarded as having been handed down
from time immemorial. All the mythological
narratives contained in the ancient annals show the
fundamental importance attached to the common
ancestry of all the Japanese people; and this is also evident from the fact that the religious
rites in which the ancestor-gods were invoked were
regarded as a function of government, both rites
and government having the same name, mitsukyrejito.
In primitive Japan, a man was bound to maintain
those religious rites. A system of ancestor-worship
implies a conviction of the immortalitv of the soul,
and this belief held by the ancient Japanese.
Death was called 'disappearing,' 'going away,'
and a 'departure of the soul.' Distinction was made
between the two kinds of soul existing in each
distinguished person. The one was the mitiguma,
gentle, peaceful, and benevolent; the other the
arutame, rough, fierce, and savage. An emergency
called kaikyo ('child of the god') was on an
emergency called to discover the will of a departed
ancestor. The idea of transmigration seems also to
have been present. Closely connected with ancestor-worship are the rites of purification, which
were of pre-eminent importance in Shinto ritual.
There were two principal forms, one of which was
harai, wind-purification (which often consisted in
paying a penalty or fine) and the other misojo, water-
purification. To the mind of the ancient Japanese,
cleanness was next to godliness. Any defilement,
sanitary, moral, or ritual, received the utmost care
and attention. Prayers, called norito, are more of
the nature of prayers than of religious ceremonies.

2. 559-1220.—Borne on the current of the
continental civilization which brought various forms of
art and culture to Japan, Buddhism came through
China to Korea to the island-nation in the second quarter
of the 6th century. This was the century of great
Buddhist propaganda in China (cf. art. China
[Buddhism in], vol. iii. p. 555 ff.). Many of her
inhabitants, who were coming in great numbers, seem to
have been devoted missionaries. In A.D.
538, through the agency of the king of Kadara in
Korea, a royal gift, consisting of a statue of
Buddha, sittaras, and banners, was presented to the
Japanese Court, accompanied with the message that
the Buddha Dharma, the most excellent of all
Laws, which would bring immeasurable benefit to
its believers, had been accepted in all the
kingdoms between India and the Sea of Japan.
Determination whether the new faith should be accepted was taken up by
two hostile Court parties struggling for political
supremacy. The new religion was in the mean-
time being continued to be studied by
missionaries, magicians, artists, sittaras, and
objects of ritual. It first received Court-sanction
when Prince Unayaro 0 Shohtoku des-
teated the army of the anti-Buddhist
Emperor, then, in A.D. 593, he became
regent to Empress Suikô in
A.D. 593. He drew up Japan's first constitution,
proclaiming the 'Three Treasures,' i.e., the Buddha,
the Law, and the Sutra, to be the cornerstones of faith,
and single-hearted devotion to it the
foundational factor of an upright life. At
the public expense he built Buddhist temples, pagodas,
seminaries, hospitals, dispensaries for the aged and
sick students, directly to China to study Buddhist doctrines.
The new faith made headway among both the
higher and the lower classes. In the year 624,
less than 70 years after the introduction of the
sittaras, the temples numbered 46, the priests
816, and the monks 569. From this time the influ-
ence of Buddhism continued almost without inter-
ruption to the close of the Tokugawa regime (1868).
During the Nara period (710-794), successive
Emperors fostered the faith. It became the
religion of the Court, and the security of the crown
and the peace of the land were thought to be depen-
dent upon the continuous favour of Buddha and his
saints. The cebonies, as his followers, were re-
elieved from the public service required from all
others. Under the Emperor Shômoin, a Buddhist
temple was built in each province, and the Todaiji
temple in Nara, the metropolis of that time, was
the central shrine (741), dedicated to Vairochana
(the universe personified as Buddha), whose
colossal bronze image, 53 ft. in height, was cast a
few years later. The beautiful consort of Shômoin,
Empress Komô, who had great influence with
him, was a zealous Buddhist. She called herself the 'servant of the Triune Treasure,'
and on one occasion prostrated themselves before
Buddha's image. Under such circumstances it was
but natural that the religion should become an
instrument in the hands of ambitious emperors.
In the time of Emperor Kôken (749-790), the
eclesiastical body had grown into a political power which
almost overshadowed the imperial authority.
Yugé-no-Dokýa, a notorious bonze, became Imperial abbot and prime minister, and would have usurped the imperial throne but for the heroic opposition of Waki-no-Kiyomaro, a devoted royalist. This同一时 a sympathetic movement was going on. Natural calamities and plagues, which frequently afflicted the people, disturbed their belief in Buddha’s protection, and tended to lower the moral tone of court and country. The Emperors themselves had a dread that the forsaken deities might be avenging themselves. A religious compromise was arranged by the priest Gyokki, when the colossal image of Buddha, already mentioned, was cast after he had secured an oracle at the Shintó temple of Ise to the effect that Amaterasu, the ancestor-goddess, was a manifestation of Vairochana. This example of combining the worship of native deities with that of Buddha and his saints was followed in other parts of the country, to the advantage of Buddhism. This syncretistic movement was brought to completion by Kukai, who appeared about fifty years later.

Whatever may be said of the Buddhism of the Nara period, it made an unparalleled contribution to the advancement of religious arts.

The period immediately following (894) is marked by the introduction of different divisions of Buddhism. The sect called Tendai-shi in Japan was inaugurated by Saicho (posthumously Dengyô, 767–822), a preacher and Buddhist statesman. He traveled to China and studied the doctrine of Tendai, which he rearranged and remodelled into something almost new. Saicho’s doctrine is based upon the teaching known as Tatsunomi, or the True Buddha, the historical revealer of truth, is here viewed as the full enlightenment. Realization of such Buddhahood in one’s consciousness is the supreme object of practice, and wisdom. Saicho’s system combined different aspects of the Buddhist doctrine which received emphasis in different proportion at the hands of later Buddhists, and thus became the fountain-head of different branches of Japanese Buddhism. Wealth of learning and purity of character made Saicho influential with the Court, and he built a monastery on Mount Hiei (788), which was for several centuries one of the greatest centres of Buddhist learning as well as of ecclesiastical power.

Another division called Shingon-shi (‘Sect of True Word’) was introduced in the Nara period, and for the greater part of the Heian, or Kôbô, 774–835). He began his teaching by classifying various forms of religious life in ten grades of development, the last and highest being that of Shingon. It is the state in which full blessedness of Buddhahood is realized. According to Kukai, the entire universe, including all spiritual existence, is made up of the six elements which again may be grouped as two, mental and material. The two are, however, inseparably blended. Matter contains mind, and mind incorporates itself in matter. The two are one, and the one is two. Every particle of matter is, therefore, pervaded by the divine presence of Buddhahood. The universe is but Buddhahood externalized. The Buddha within us may be called forth by practice of the ‘mystery’ in conduct, speech, and heart. This doctrine of Kukai led, especially on the theological side, to the syncretistic movement of Buddhism that had been inaugurated by Gyôki. The propagator of the Shingon sect thus became also the originator of Kyôba, namely, Buddhist Sahito, proclaiming that the Imperial custom of kuni-worship is, in reality, but disguised adoration of Buddha. Kukai had far greater influence than any of his predecessors. His versatile genius and his practical resourcefulness combined to make him a great power both in the Court circle and among the common people. He built a monastery on Mount Kôya, which became the headquarters of his denomination, and eventually overshadowed the influence of the hill-monastery on Hie. We may here note a remarkable change that took place in the religious atmosphere. During the earlier part of this same period, worldly blessings, as health, good harvest, prosperity, and peace, were the reward sought in the worship of the kuni, or Buddhist deities; and gorgeous rituals and the mystery practices pertaining to the Shingon sect made it attractive, especially in Court circles. Later, however, as the Fujiwara family declined and one civil war occurred after another, both the nobles and the common people felt the evanescence of this world; the yearning after supramundane bliss became imperative, while pessimism prevailed.

3. 700–900.—For half a century or more previous to Yoritomo’s founding of the Bakufu (military government) at Kamakura (1192), class struggles involved the country in constant warfare. Bloody combat, exhaustion, death, and the treachery of friends, all of which were daily occurrences, could not fail to produce a pessimistic temperament. Elaborate rituals and theological distinctions offered no attraction. The religion which could point to a place of refuge, no longer dis- turbed by the storms of life, was in urgent demand. To meet such a need Hôen (1133–1212) and Shinran (1173–1263) appeared.

(a) Jodo and Law sects.—Hôen, formerly a student of the Tendai doctrine at the monastery-school on Hie, renounced all its philosophy as effete, and denounced the mystery practices and the discipline of conduct as useless. He preached the doctrine of Sukhavati, the Japanese ‘Jodo,’ or the ‘Western Pure Land,’ according to which any man, ignorant or wise, high or low, could be saved by faith in the boundless grace of Amitábha. He作风 character, profound piety, and sincere conviction, with his doctrine of the future redemption, made Hôen the greatest religious influence with the Court and common people, until the jealousy of his religious rivals caused him to be exiled. Some of his disciples to be put to death. The faith which he once preached, however, did not cease to be a powerful influence. Hôen had many capable followers, the most famous of which is Kôbô Daishi, who carried his master’s teaching to its logical consequence. He unhesitatingly abandoned the repeated invocation of Amitábha’s name which constituted an important part in Hôen’s doctrine, proclaiming a simple, undoubting trust in the Deliverer as the sole condition of salvation. With a bold stroke of genius, he abolished the prohibition of the marriage of bonzes, practically removing the distinction between the secular and the sacred. He was married himself, and he called himself the gottou, the ‘tensored ignoramus,’ putting himself on the same level as common people. Thus the Shin sect was founded by Shinran, whose doctrine and influence have survived all vicissitudes of time, and are perpetuated to this day in the Hongwanji, the two greatest shrines in Japan. This especially on the external means. All doctrinal learning and rituals, therefore, are useless, and meditation or a con-
centrated reflection upon one’s essential nature is the
only way to realize Buddhahood in one’s self. A
complete disregard of the letter and of ritual
pageantry made Buddhism among the most popular
among military men, who prized them for its
extra extreme simplicity of life. The Dhyāna
doctrine also helped them to cultivate the spirit of
stoical indifference to hardship and the habit of
resoluteness in conflict. Many Shōguns because
adherents of this doctrine.

(c) Nichiren sect.—In the meantime there arose
an extreme form of bibilology. Nichiren (1222–
82) after the teaching of Saichō, based his teaching
upon the Suddhādharma-pārvitikā (‘Lotus of the
True Law’). His principal tenet consisted in
accepting the doctrine of Buddha’s Truth by repeatedly uttering
the title of that scripture in which alone, he held, the genuine and, indeed, the only true
doctrines of Gautama are set forth. Persecuted,
exiled, almost put to death, he ever grew bolder in his
denunciation of the faithless age, holding to
the firm conviction that he was the heaven-sent
Bodhisattva (g.v.), whose coming in the ‘latter age
had been predicted by Gautama.

The religious leaders whom we have just men-
tioned, we may call the precursors, the next disciples who
perpetuated and developed the movements which
their teachers had begun. Roughly speaking, the
Tendai and Shingon sects held influence among the
noble, the Zen among the warrior class, and
Shinshū and Shinshū among the mass of the people. In
the 16th and 17th centuries, an age again involved
in wars and political disorder, these religious bodies
often became political factors, or interfered with politics.
The Zen sect, being that of the military aristocracy,
became influential through its monasteries in edu-
cational work and literary culture. It was an
age of religious fermentation, and a great number
of minor sects arose, finding more or less of a
following.

(d) Shinshū.—Shinshū also awoke from the
dogmatic slumber which it had enjoyed under the
name of Ryōbu Shinshū, and sought an attempt to
systematize itself. Kitabatake Chikafusa (1539)
tried to show that the divine descent of the Imperial
sovereigns, and vindicate kumite-worship as essential
to the preservation of national order. In this
preaching he became a forerunner of the royal
Shintōists of the 18th century. In the 15th century,
Yoshida Kanetomo, borrowing his method largely
from the Buddhist Shingon, developed a new
Christian Shinshū (Yūritsu Shinshū), which stood in contrast
with Ryōbu (syácretist Shinshū). Shinshū did not
become a great social factor, however, until the
earlier 17th century.

(e) Roman Catholics.—In the 16th century,
the Jesuit missionaries began operations in Kyūshū
and extended them to Kyōto, where their message
was welcomed by Nobunaga, the ruling Shōgun,
who, at their instance, opened a theological semi-
nary at Azuchi, Omi, and also built a cathedral in
the Imperial capital. Their propaganda, often
accompanied with gifts of musical instruments,
cloaks, glasses, and even distribution of rice among
the poor, found great success among both the popu-
lace and the feudal nobles, especially in Kyūshū
and Nagato. Thirty years after the commences;
mentary (1588), and under Hidetsuki and the Tokugawa
Shōguns, patrons of Buddhism, the Roman Catholic
faith was annihilated. The suppression of the
insurgents at Shimabara, Kyūshū, in 1638 marks the
dowfall of the ‘Kirishitan’ as a political factor.

4. 1600–1688.—The Tokugawa government
adopted a Shintō-Confucian philosophy, designed
for the suppression of any political or social factor
to unmanageable magnitude. Religions of any
potency were, therefore, either paralyzed by gener-
ous patronage or put under prescription. The
aggressive movement of the Roman Catholic Chris-
tians was completely checked in 1638; and the
government tried to exterminate individual Chris-
tians by charging the Buddhist priests with the
office of taking a religious census. The nation as a
whole was compelled to be Buddhist, outwardly
in outward form. At the same time, Buddhism under
the Shōgun’s patronage fell into spiritual decay,
although to its credit is the fact that most of the
Buddhist scriptures and literary productions were
put into print. The doctrines and ecclesiastical
policy of each of the Buddhist sects were systemat-
ized. Takuan († 1645), Hakuun († 1789), and Jien
(† 1804) were among the most conspicuous priests
of this age. The oppressive policy of the Shogunate
government caused, as we have seen, religious and
spiritual lassitude on the one hand, but, on the
other hand, it produced a strong reaction on the
part of the adherents of those religions which the
government had neglected and overlooked. Such
was the case with the Shintōists. Since the time
of Dennyū and Kūkai, Shinshū had lost its pristine
purity and present movement was under the shadow of Buddhism. Now Hayashi
Rasen († 1657), officially a Confucianist, made an
attempt to free Shinshū from the ‘element’ of
Buddhism, but he had not the power to resist
strongly with Confucian philosophies.

It was Hirotaru Asatuné (1443) who claimed Shinshū
as the only true religion, asserting that Japan and her
Imperial house are the descendants of the Original
Creativity of the universe, the special objects of divine favor. All other
religions he denounces as false or deteriorated.

He had a large following, especially among the
samurai, and contributed greatly to the Restora-
tion of the Imperial government.

In the 19th century, religious beliefs arose which
claimed the name of Shinshū, but which really had
little connection with the ancient system of that
name. Probably the best known and most worthy
leader was Kurozumi, who preached on the four
elements of divine revelation, prayer, providence,
and honesty. He preached also the Goddess
Amaterasu was the fountain-head of all life, and
that man must be in constant communion with her.
Many other systems, such as Konkō, Tenri, and
Yomonomo, are but old-fashioned practices under
the guise of Shinshū worship.

5. After 1868.—The Restoration of 1868 brought
Shinshū into prominence, at least temporarily, since
it was regarded as representing the ‘way’ of
the national gods or ancestors. The first act of
the Emperor and government was to call the
Buddha’s Appearance, establish the Holy and
Monk, and establish a new form of government
under the guidance of the Imperial court.

Christianity was suppressed, and Buddhism continued in its inertness until
Christianity was again revived and new activity.

centres of influence through the agency of mission workers and teachers, of whom G. H. F. Verbeek, D. S. Thompson, W. S. Clark, S. R. Brown, W. K. Griffin, George Cochran, James Ballagh, Captain Janes, and D. C. Greene are the best known. Of the Japanese Christian leaders, Nakishima († 1890) and Honda (Bishop of the Japan Mission, 1897–1905), were particularly important. The mighty current of 'Europeanization' which swept the country at the end of the eighties gave an opportunity for Christian propaganda to make rapid headway. Its friendly reception, culminating in what was to become the Diet, was lamented, and confirmed the right of the Christians to maintain their faith. Indeed, the placards prohibiting the Christian faith had been removed in 1875, but it had continued to be a proscribed religion. Early in the nineties an extreme counter-current of Nationalism set in. The problem of Treaty Revision had aroused anti-foreign feeling, and Christianity, being regarded as an alien faith, suffered. The faith was attacked as detrimental to educational interests; the doors of the Government schools were closed against it, and Christian education became an impossibility. Moreover, the European culture which had flooded the nation brought with it some ideas that apparently were hostile to Christian doctrine as it was presented at that time. Not only Bentham and Mill were denounced generally as atheist. All this, however, presented no serious difficulty to progressive Christians.

The Buddhists now started a movement which they called the Romashika Buddhist Union, and stirred up all Japanese to join their anti-Christian campaign. The Shintoists combined with them once more. The Imperial Rescript on Education was issued in 1876 with the purpose of setting up a national standard of morality, and this document was employed by conservatives as a basis of argument against Christianity.

The war with Russia in 1894–95 had two opposite effects. On the one hand, it awoke the whole nation to a consciousness of her own resources, both material and spiritual, which led some to believe that Japan required no other religion than the one which she had had from old times. On the other hand, the very gratifying of a long-cherished political aspiration led the people to feel the spirit of a higher and deeper piety which more material or political glory could not satisfy. Here and there, amidst the blaze of the national exultation, a dark, cold stream of pessimism flowed.

From kawashiki ('spiritual distress') not a few young men took refuge in suicide. Christianity, now more 'naturalized' or 'Japanese' and stronger after many years of struggle, renewed her activity. At the beginning of the new century, all Protestant denominations (22 in number), except a few extremely conservative ones, joined in an evangelizing campaign which was carried on at strategic points in the Empire. Buddhism also, perceiving the spiritual crisis of the century upon the nation, made an attempt to promote religious interests instead of wasting its energy in attacking Christianity; and a body of Buddhist scholars, mostly of the new sect, started a philanthropic movement called 'New Buddhism.' Christianity and other forms of religion passed.

A new alternative of choice presented itself—religion or salvation; and the craving for a new spiritual power brought about a new Christian faith and other forms of religion passed. Christianity and other forms of religion passed.

An alternative of choice presented itself—religion or salvation; and the craving for a new spiritual power brought about a new Christian faith and other forms of religion passed.

Yet the younger generation seems to crave something deeper and more fundamental. Enkeik and Bergson are now claiming their attention, and Christianity and Buddhism are expected to develop new and more excited aspects of power than they have hitherto revealed.

III. ETHICAL DEVELOPMENT.—1. Earliest period to the 6th century,—The history of Japanese ethics reveals a composite character in the temperament of the people. In both ancient times, a combination of what may be called Hellenic and Hebraic tendencies, varying only in proportion in different ages. Clear sky, crystal waters, and a transparent sea surrounding the whole land all tended to develop a moral conception in which ideas fundamentally ethical blended with aesthetic ideas. In ancient times, good and bad desires were expressed in terms designating optical sensations, such as akai ('red, clear,' kuro (dark, black), kyon (clean, clear), and kitani (turbid, impure, unclear). Even to-day these terms, used in proper context, may convey a purely spiritual signification. To the Japanese karashi, 'red heart' (i.e. single-heartedness), and karamagiro, 'black-abdomen' (i.e. black-heartedness), do not sound strange. The conception of teim, 'offence, therefore, was not purely ethical. The idea is better expressed by the term 'evil,' or more strictly, 'soulfulness.' Among amatsu-teimu (offences against the heavenly gods), the 'sin' of which was so very much like modern ideas. All this, however, present no serious difficulty to progressive Christians.

The Buddhists now started a movement which they called the Romashika Buddhist Union, and stirred up all Japanese to join their anti-Christian campaign. The Shintoists combined with them once more. The Imperial Rescript on Education was issued in 1876 with the purpose of setting up a national standard of morality, and this document was employed by conservatives as a basis of argument against Christianity.

The war with Russia in 1894–95 had two opposite effects. On the one hand, it awoke the whole nation to a consciousness of her own resources, both material and spiritual, which led some to believe that Japan required no other religion than the one which she had had from old times. On the other hand, the very gratifying of a long-cherished political aspiration led the people to feel the spirit of a higher and deeper piety which more material or political glory could not satisfy. Here and there, amidst the blaze of the national exultation, a dark, cold stream of pessimism flowed. From kawashiki ('spiritual distress') not a few young men took refuge in suicide. Christianity, now more 'naturalized' or 'Japanese' and stronger after many years of struggle, renewed her activity. At the beginning of the new century, all Protestant denominations (22 in number), except a few extremely conservative ones, joined in an evangelizing campaign which was carried on at strategic points in the Empire. Buddhism also, perceiving the spiritual crisis new pressing upon the nation, made an attempt to promote religious interests instead of wasting its energy in attacking Christianity; and a body of Buddhist scholars, mostly of the new sect, started a philanthropic movement called 'New Buddhism.' Christianity and other forms of religion passed. A new alternative of choice presented itself—religion or salvation; and the craving for a new spiritual power brought about a new Christian faith and other forms of religion passed. Christianity and other forms of religion passed.
and officials. He included many injunctions which were Buddhist and Confucian in spirit, and therefore, theoretically speaking, opposed to certain moral principles which arose under the patriarchal form of society. Loyal obedience to the sovereign, for instance, is enjoined, not because he is the family head of the house of the ruling people, but because he is so appointed by heaven, it being presupposed that the ruler's position may be occupied by any one best fitted for it. The general welfare of the nation is considered as the most important, while loyalty to the clan receives no attention whatever. Further, the emphasis placed upon the importance of adhering to the "Yumi Tōme" may be interpreted as involving Bud-
dhist universalism, which is essentially subversive of patriarchal morality. All this, however, may be due to the effort of the Prince to check those evils which the ever growing clannism of that period had developed. In fact, the Taikō Reformation (A.D. 648) followed the downfall of the Soga family. The ethical history of Japan may in one sense be regarded as a struggle between the patriarchal morality (family or clan morality) indigenous to the country and the universal morality introduced from abroad, a combination of which may be found in the late development of Buddhism (342) (2). Similarly, universalism as expressed in the Confucian system of moral rules was weakened by the introduction of Confucianism from the Chinese civilization (the 14th cent.). The introduction of Buddhism awakened the humanitarian sentiment, particularly among the Court nobles and members of the Imperial Household. A new law of behavior has been established, with a strong emphasis on the protection of the weak, the sick, and the aged. In the establishment of asylums for the poor, in the building of dispensaries, and in the laws prohibiting the destruction of animal life. It also encouraged an appreciation of nature and a struggle against the customary barbaric treatment of the less fortunate members of society. The introduction of Buddhism also had a profound influence on the Confucian system of values, which was weakened by the introduction of Confucianism from the Chinese civilization (the 14th cent.). The introduction of Buddhism awakened the humanitarian sentiment, particularly among the Court nobles and members of the Imperial Household. A new law of behavior has been established, with a strong emphasis on the protection of the weak, the sick, and the aged. In the establishment of asylums for the poor, in the building of dispensaries, and in the laws prohibiting the destruction of animal life. It also encouraged an appreciation of nature and a struggle against the customary barbaric treatment of the less fortunate members of society.

The practice of Confucian obedience to the sovereign, the names of men and women were placarded, after the Chinese fashion, for their filial obedience to their parents, and those who committed the "sin" of filial disobedience were exiled to distant provinces. Believing the practice of filial obedience to be the foundation of all virtues, the Empress Kōken (749–758), earnest Buddhist, offered substantial contributions to the promotion of Buddhism in the early part of the Heian period (794–1185) and the Kamakura period (1185–1333). The study of the classics became a part of education in the upper classes, and the Confucian system of values was strengthened. However, the introduction of Buddhism also had a profound influence on the Confucian system of values, which was weakened by the introduction of Confucianism from the Chinese civilization (the 14th cent.). The introduction of Buddhism awakened the humanitarian sentiment, particularly among the Court nobles and members of the Imperial Household. A new law of behavior has been established, with a strong emphasis on the protection of the weak, the sick, and the aged. In the establishment of asylums for the poor, in the building of dispensaries, and in the laws prohibiting the destruction of animal life. It also encouraged an appreciation of nature and a struggle against the customary barbaric treatment of the less fortunate members of society.

Yet all these seem to have contributed nothing to the ethical culture of the nation; nor did Buddhism bring any perceptibly wholsome results. The deeper and more exalted aspects of the spiritual life were left untouched. The tendency was to en-
counter superstitions and practices such as magic and incantation, rather than to elevate the moral tone. Unrestricted admission into monasteries often turned them into institutions which menaced the peace of the community. Confucianism also seems to have had little influence. The Tenno's efforts to deliver the populace from ignorance and superstition. Teachings of the 1-King ("Book of Change") tended to encourage a fatalistic belief, which had, no doubt, a morally paralyzing effect. Buddhist moralists, particularly Zen, flattered the more luxurious, effeminate, and corrupt persons in striking contrast to splendid achievements in literature.

3. 1200–1600.—The rise of the military class at the close of the 12th cent. had a paralyzing effect somewhat similar to the occupation of Europe by the Northern barbarians in the 5th. century. The splendor and corruption of the Heian period were swept away with the fall of the Fujiwara family, and the establishment by Yoritomo of the military government became an occasion for the rise of a new type of military people, the samurai. It was a moral spirit of temperance, prevalent among the samurai, characterized by austere simplicity of life, duty endurance of hardship, love of peace, and unyielding devotion to one's lord. It was a product peculiar to an age in which fighters were the preservers of social order. It included, therefore, physical, mental, and emotional endurance, quickness of perception, and mental alertness were essential parts of samurai education. Intellectual culture received little attention until the latter part of the Ashikaga period (the middle of the 15th cent.). Among moral virtues, valor naturally occupied the central position. It had value by itself irrespective of the results which it brought, and the verdict of cowardice was more hated than loss of life. Courage, however, had to be accompanied by a sense of propriety (regī), even in the midst of fighting. Apart from the latter, valor itself was true to a promise, was emphasized equally with honor. The Bushi has no double tongue' and 'A gentleman never trifles with words' were sayings which became proverbial. The Bushi was the ideal of a samurai. The use of any base or cowardly means in war was despised and often involved destruction for its perpetrator. Chūshin, or the principle of loyalty, however, was as much a part of the samurai as of all military virtues. It was the organizing principle by which the samurai belonged to the same clan and were united into one solid body which lived and died for the cause of their master. And already been observed (p. 484). Bushido found a good ally in the Zen school of Buddhism which arose at the beginning of the period, and other branches of Buddhism also had some influence. Exposed to sudden and often extreme change, the samurai felt the need of some superhuman power upon which to rely. It became more or less a fashion among them, when they went to the front, to put a tiny Buddha image in their tuck of hair, or a prayer-leaflet in the pocket of their armour. Their religious faith, however, sometimes differed from that of other classes in that they believed that the deities whom they worshipped favoured only the cause of the good and the righteous: 'If thy heart be upright, the gods will protect thee, though thou mayest not invoke them.' Compared with that of the Heian period, the religious faith of the samurai was more free from superstition. Towards the latter part of this period, Bushido became more comprehensive, and took a form that might well serve as a moral code for the people in general. Some injunctions relative to economic and other practical lines of conduct, based upon Confucian teachings, were introduced in the written codes of certain feudal families. Popular education, so far as it existed, was in the hands of Buddhist priests. Text-books were compiled by them in which were expounded theories of filial duty and family propriety, based on Confucian as well as Buddhist doctrines.

4. 1600–1868.—The Tokugawa policy of diverting the attention of the daimyō from political to literary pursuits introduced a period of marvellous culture. Classical scholars were elevated to the
rank of official instructors, and numerous schools and libraries were established, some of which remain to this day. In accordance with the general movement, the lord of the province of Bizen devoted one-third of his total revenue to the cause of education. Under these circumstances, Confucianism blossomed in full splendour, though Buddhism withered under the blighting shadow of the Shōgun's patronage. Philological and logical historical interests caused a revival of Shintō. Buddhism, which during the period, burst forth after some vicissitudes into a political movement which brought about the Restoration of 1868. Side by side with all this, the Shingakuta ('spiritual culture') movement arose for the moral instruction of the uneducated (see below, (d)).

(a) Confucianism.—Of the different divisions of Confucianism, that of the Shushi School (named after its Chinese founder, Chu-Hi) was the earliest to appear, and became the pioneer of learning in this period. Its most prominent representatives were Fūjirara Issei (1561–1619), Hayaishi Rasan (1583–1657), Murō Kyōhe (1685–1748), Kaibara Ekiken (1630–1714), and, later, Satō Tsai (1723–1755) and Rai Sanyō (1750–1832). Sanyō's historical work, which had inspired the samurai to the political movement which resulted in the Restoration, was the first in the list which became personal teachers of Isyūya; and of these, Rasan, erudite, versatile, and scarcely equalled by his contemporaries, took the chief part in framing the legislative and administrative systems of the Shōgun's government. His office of instructor and counsellor was made hereditary, and it is to him that the majority of the Shogunate. The doctrine of the school became the orthodox and only authorized teaching. Indeed, towards the close of the 18th cent., an edict was issued prohibiting all contrary doctrines. Accordingly to this school, the teseōke, infinite, eternal, and absolute Essence, is the ri (reason, or logos), and the source from which emanate the in and yo (positive and, active, or so-called and positive principles, which together may be called the ki (spirit, temperment, or inclination). The manner in which the ri and the ki interact and thereby generate all things is the 'way,' which should be practically applied and observed. The ri, or reason, is the controlling and directing principle of the universe, and veritably dwells in man's original nature, from which springs all goodness and virtue, justice, propriety, wisdom, and truth. He who applies these virtues to his family and social relations is in accord with the 'way,' the Will of Heaven. The 'way' is not far from one, but is in the heart. This doctrine often led scholars to adopt a speculative method, yet the Mito School, which was founded by the lord of Mito for the purpose of compiling a political history of Japan, consisted of scholars of the Shushi School, and its influence became one of the most potent factors for the overthrow of the Shōgunate government.

In the middle of the 17th cent., there arose the Yomei School (named after Wang Yang-Ming, a Chinese scholar of the Ming dynasty) which, in opposition to the dualistic system of Chu-Hi, taught a distinctively monistic, idealistic doctrine. Among the Japanese exponents of this system, Sen Naka (1606–78), who declared the alleged difference between the ri and the ki to be only nominal, both being different phases of the same Being. All is One (Is). This led to the accomplishment of the political transformation of 1868. 

Saints.—This cult, which heretofore had never been an ethical factor of much influence, now appeared against a Confucian background. An exponent of the type of Shintō which was called Sutō-Ryū was Yamagaki Ansei (1818–82), who took the doctrine of Chu-Hi almost bodily and interpreted it in Shintō terms. He held it man's supreme duty to cultivate the original purity of his nature, and to regulate his conduct in accordance with the principle of righteousness. Bodily purification, prayer, and meditation received strong emphasis in his system. Rigid as it was, it was narrow and exclusive; but his intense zeal and sincerity awakened amongst his contemporaries a patriotic, nationalistic sentiment which contributed not a little to the accomplishment of the political transformation of 1868.

Shintō as a religious system, however, like its politically disinterested Imperial representative, absorbed and forgotten in prosperous Buddhism,
would never have regained its ascendancy but for the tidal wave of royalism which began to swell early in the 18th century. Kada Annamaro (1660-1736), Motoori Norinaga (1730-1801), and Hirata Atsutane (1715-1843) appeared one after another, and proclaimed Shinto as the only system original and indigenous to Japan, and, therefore, naturally adapted to her people. Shinto in its purity they held to be the kumamaga-no-michi, that is, the way of Kimmakunai, the supreme Deity, the 'way' developed among the ancestor-gods of Japan, the only way to be reverently and unrestrainedly followed. According to them, Confucian teaching is exotic, mechanical, and artificial; the Empress Jingu, descended directly from the goddess Amaterasu, is alone worthy of absolute respect; and the laws of the Japanese State, being the embodiment of the divine will, are to be observed with the utmost devotion. Of those Shintoists Hirata Atsutane, though of broad learning, held extremely nationalistic views, which he based upon his cosmology. He held to be the first created of all nations, guided by the constant presence of the spirit of the goddess Amaterasu, to be cherished and strengthened by all Japanese endowed with the divine spirit. His royalism during was contagious and greatly advanced the cause of the Restoration.

(c) Bushido.—During the centuries of peace under the Shogunate, the samurai gradually lost the spirit of Bushido which had formerly characterized them, although, as we have seen, the spirit of loyalty was contagious and greatly advanced the cause of the Restoration.

(d) Confucianism.—During the centuries of peace under the Shogunate, the Confucian code gradually relaxed the spirit of the samurai which had formerly characterized them, although, as we have seen, the spirit of loyalty was contagious and greatly advanced the cause of the Restoration.

(e) Shingon.—In the direction of extending moral culture to the masses of the people which had hitherto been excluded from that privilege, a movement called Shingonkushu or heart culture arose in the first half of the 18th century. The leaders of the movement were Ishida Beigen and his followers. Their method was characterized by the free use of everyday language and humorous illustration, and, with a practical purpose in view, they derived their teaching from any source whatsoever, Confucian, Buddhist, or Shinto, which seemed adapted to their use.

(f) The Restoration.—The Restoration of 1868, viewed from an ethical standpoint, was a reaffirmation in politics of the samurai spirit of loyalty, moved by an inomitable aspiration for a new order of things. The new era was marked by the interplay of two opposing tendencies which were forced into united action by the pressure of political need, but which had to undergo radical transformation before they could be organized, the nationalistic, conservative, Bushido spirit on the one hand, the progressive, Europeanizing tendency on the other. It was but natural, then, that the leading engineer of these two in whom had clamorously condemned the Shogun's policy of opening the ports, eagerly sought, after the Restoration, to adopt European methods. The Restoration meant a perversion of the spiritual life of Japan. Under the new government Buddhism was deprived of its political prestige, and the bonzes became objects of unparagoned taunt. Confucianism was consigned to the hands of classical exegetes. Shinto itself, now that it had lost what it had long sought, was left to sink back into its old inertness. All moral doctrinists disappeared. Finally, Bushido itself, the moving spirit of the Restoration, was remodeled and incorporated into a new system of ethics and of state and society, with the progressive Westernizing tendency. The tendency of the time was represented by two personages entirely different in temperament and purpose. Uesugi Yukichi, founder of Keio-gijun, a pioneer importers of occidental learning. Standing upon a utilitarian ground, which he adopted after serious investigation, he daily converted, by his burning sarcasm upon the principle of royal fidelity. He held the establishment of one's self and the general welfare of the community to be the supreme objects to be pursued. Akitsu, the new Rousseau, he declared that State sovereignty is simply a power delegated by the people, implicitly denying the doctrine of its divine origin. He rigidly ascribed the spiritless and socially inefficient attitude of the commons to the evil political dependence to which they had long been reduced. Thus he became a champion of democratic and individualistic principles of morality, which, he held, ought to take the place of the old ascetic and militaristic tendency of the time. Salutary as his influence was in that respect, his teaching tended to encourage the pursuit of material success at the expense of spiritual dignity.

The other was Nishimura Jo. Born and bred a samurai, and, while in New England, thoroughly imbued with the spirit of Puritanism, he combined the essence of Bushido and Christianity. He was not a theologian; but he was an embodiment of the moral power which makes a man glad to sacrifice himself for whatsoever means spiritual progress and the enhancement of personal worth. In this he represented the general disposition of leading Christians who, while held to no particular system-bound ethical doctrines, aimed at the moral and spiritual transformation of society. Having embraced the religion that had been tempered by Teutonic and Anglo-Saxon individualism, the Japanese Christians were fundamentally no less revolutionary than the disciples of Rousseau or Bentham. Their persecution by the nationalistic, especially among government educators, was not altogether unreasonable, at least from the nationalist standpoint. Indirectly, but none the less effectively, the Christians brought home a truth that was bound to undermine the traditional forms of politics and society. Significantly enough, a considerable number of the leading politicians who advocated the cause of representative govern-
ments were Christians. Equally interesting is the fact that, in the minds of many Christians and Socialists, or men of 'dangerous ideas,' were associated. But profounder and more subtle in its effect than any other ethical system that ever impressed the faithful the teaching of Jesus was, and is felt in the secret recesses of the heart. Its social effectiveness is being shown in all virtues resulting from faith in the value and dignity of the individual, such as sexual purity, regularity in matrimonial relations, the elevation of the character, the desire for honor, cleanliness of habit, temperance, etc.

A conservative, nationalistic reaction set in at the close of the nineteenth century. The cry of 'Nipponism,' with its emphasis upon the supremacy of the nation's coming to a consciousness of its inborn privilege and power, was raised in a somewhat extravagant fashion. The movement was not altogether new in the Orient, and it gave expression to a legitimate and noble aspiration. The Imperial Rescript on education, which was issued in 1889, expressed the broadest and most ideal aspect of this movement. It was clearly the nationalistic, patriotic energy embodied in the Rescript that conducted the nation safely through the critical movements of war in 1894-95 and 1904-05. The consequent chauvinistic sentiment was embedded in the conclusion of the later war. The beginning of the new century brought the younger generation into contact with a spiritual atmosphere which was hitherto unknown in Japan. Neitzsche and Tolstoi have each found their ardent exponents among the young. Ibsen, Shaw, and Strindberg have gained a considerable number of admirers. Even a skeptical, rebellious, materialistic temper has not altogether been wanting. Yet this is simply an indication of the great spiritual struggle which new Japan is undergoing. From an ethical standpoint, Buddhism is intellectual; but it still has immeasurable resources, which is as yet insignificant in numerical and material respects, but it is ever growing and achieving. Which will be the commanding authority in the ethical and religious realm may be an open question; but that there will be one some assured.

The JAT (fem. Jâti; fem. Jâttî) is a caste found over all N.W. India, in the Panjâb, Sind, United Provinces, and the northern parts of the Rajputâna, especially Bhartpur, but hardly in Kashmir or the Himalayas to the east of that State. West of the Indus they are found in the N.W. territory, probably as such in the southern districts, but not in Afghanistan or in Balochistán, though they appear to have once occupied the latter territory. The Bâlochî term for Jâti is Jagjâl or Jagjâl, and one of the Bâlochî tribes traces its descent from 'a Jâti, a Jagjâl, a nobdy,' who on account of a woman, i.e. marrying a Bâloch bride, became a Bâloch. The Jâto tribe of the Balochi may also be of Jâti origin.

The term castes, to which any certain race, be it as ethnic, or is it easy to draw any hard and fast line between the Jâto and Râjputs in the N.W. Panjâb. The traditions of many Jâti tribes declare that they are by origin socially degraded Râjputs, whose fathers, by marrying a Jâti wives or espousing widows, lost their Râjput rank and sank to the status of Jâti, or yeomen. Other Jâti tribes are of undoubted Brahman origin. But, while many thus claim to be of gentle (Râjî) extraction or priestly (Brâhman) origin, few will admit that they have risen in the social scale. Nevertheless it is possible that the Sânsi tribe of the Jâti is akin to the criminal tribe of that name, though it produced the greatest of the Jâti in the person of Mahârâja Ranjit Singh, the famous Sikh ruler of the Panjâb.

The earliest mention of the Jâti in history occurs in Ibn Khurdadba, before A.D. 912, who mentions the Zâti (Jâti) as keeping watch over the country between Kirmâ and Manstra. The Majmû 'Ut-Tastorîk observs that by the Arabs the Hindus are called Jâti and the Moslems a Sind tribe, are descendants of Haim. The Arabs appear to have found Jâti at Châlma as well as in Sind, but the Muslims who later invaded the Panjâb cannot be said with certainty to have found them in that Province, and it is not until the 17th century, in 1398, that we have any insubstantial reference to Jâti as settled to the north of Delhi. While, then, it is credible that there is a Sûfiic element in the Jâti, it is impossible to regard them as identifiable with the 'wintry Getae,' the Marathaot, or the Goths.

That the Jâti are not a pure caste, or race is, indeed apparent from the rules which they observe in marriage. While marriage within castes is, to use a convenient, but not a scientifically accurate or definable, term, is the rule, marriage with a woman of inferior castes is not invalid, though mixed unions are rare in a caste society. The Jâti are, in that Jâti, as that which centre round Rohitak near Delhi, and public opinion reproves them.

The popular derivation of the term Jâti is closely associated with the various religious traditions. It is said to be derived from the hair (Jâti) of the god Siva, and the Mân, Her, and Bhollar, which are reputed to be the oldest Jâti tribes and to form a kind of nucleus of the caste, in particular claim this ancestry. In the S.E. Panjâb the Jâti are divided into two bagomous groups—one, the Sîvagotri, who say that their forefather was created from the mixed hair of Siva and so named Jâti Budh, and the other, the Kâsalagotri, who claim connexion with the Râjputs and are so named after Brahman's son Râsâh. It may be permissible to regard the Sîvagoti as autocratic, Siva being the earth-god, and the Kâsalagotri as later accretions to the caste.

The Jâti cannot, however, be said to have any distinctive religion or code of ethics. In the Central Panjâb they are mainly Sikhs, but to the south-east they have touched on their other Hindu caste traditions, and to the west the vast majority have embraced Islam.
Islam, whose tribes not only professing that falsehood but seek to make them Arab or Saryays by descent. Indeed, the Muhammadan Tahims are not invariably a Saari Qurashi by origin and descended from Tamim, but it is much more likely to be through the Tahims, some of whom became Brahman, and worshippers of the goddess Sri Dadi Matta. Tod mentions the Dahims an extinct Rajput race.

Another tribe, the Arbi, certainly appears to be A. There are many genealogies can be almost proved to have been invented on conversion that no reliance can be placed on etymologies corrolorated by pedigrees.

The tribes of the Jats probably number more than a thousand, and among the Hindus and Sikhs they are spoken of as gota, a corruption of the Skr. gata.

Some of these tribes bear names which suggest a totemistic origin. Such are the Jat, Jum (Jungs), Gorka (Moseqow), Banda, Bajaj (meaning), Balai (Balai), the Popali from sing, Pisnis religiosus, Nand (from Jan, Prasos nipson), Mar (from peacock), Khand (from gandhis, etc.). But no reverence is paid to any of these things. The Panthial tribe is so called because Jaiga girl married to a Rajput son and he was reverence and his membes save those who had placed 'peacock's feathers' on his head. The Jats are protected by a peacock from the snake. The Jars (from Jora, twins') is said to have five branches, or apparently subgroups, all named after parts of the joro, the jora's hind (Paras successiva), vach (from ruga, barn), Jars (from jora, jackal), Binia (from the plum or fruit), Jhara (jewelling), and Khan (horn). It is also very common to find a tribe named from some event at an ancestor's birth. Thus the Basrakh is so called because his ancestor committed suicide near a banyan tree, and the Sibo or Sibi tribe derives its name from sibs, a funeral pile, because its ancestors gave birth to a son when about to commit self. But such tales are told of countless tribes which are not Jats, and folk-etymology is probably responsible.

The Jats, religiously, are generally adherents of the great orthodox religions, the Jats are often devotees of some sect, or devotees of a tribal or personal cult, as well. Thus in Hissar, a District near Delhi, large numbers are Sindhis, a Valiquetta sect, while in Karnal, a District on the Jumna, many of them are Saistics, or 'Pure' saints, belonging to a sect, founded about 200 years ago, which affects great personal cleanliness, forbids smoking, adorns only the one God under the title of Sat, or the True One. Other Jats do not eat or marry with them. Another cult very popular among the Jats is that of the 'generous' Sikh Sarwar, the Dallam, the Dallam boy is considered to be of Nigihai (Nigeria), the earth-god—probably Siva—taken over by Islam and transformed into the cult of a Muhammadan saint and the chief of the Panthial elements. The fertility which is the object of the worship naturally appeals to a landed peasantry.

Thus a Jat may be by birth and education a Hindu or Musalim, by choice or conviction a Sikh, a Saistani, or a sectary who has thrown in his lot with one of the countless sects old and new to be found in India. He can even become a Christian. But under or alongside of his religion and his sect is a mass of usage partly social, partly religious, and wholly based on custom, not on belief, to which he clings with a tenacity all the greater because it is irrational. In the northern and central Districts of the Panjais these usages centre round the worship of forefathers (jathes), but in the S.W. of that Province they cluster round the godling of the village (khera) rather than the tribe.

This change is the religious system is in congruence with the evolution from the tribal system of the tracts towards the N.W. frontier to the 'village community' organisation of the long-established Delhi. The jathera is usually styled Bawia (master) or Siddit (perfect) and bears some conventional name which shows that his real name has been forgotten. His tomb is sometimes called bathshahin (p.,), and consists of three or four pits with pillars formed of earth dug out of them. He is usually worshipped at marriage.

A typical Jat wedding according to the rites in vogue in the sub-montane districts which lie under the Himalayas in the Central Provinces and Berar, is carried out in a heap of wheat weighing about 50 lbs (23 kg.), and by it are put Harry of coarse sugar. A lump is lit and put on the embers to melt, and it is thrown to all the females of the family and the bridegroom do obeisance. The bridegroom cuts the twig with a knife or sword; and the grain and sugar are divided, half going to the Brahaman and half to the vere (mangel). The last turns them a ram (dehra, whose name is the rite itself), cuts its ear, and with his thumb impresses a mark (tikka) of its blood on the youth's forehead, and on those of all present.® He gets the ram and a rupee as his bride. The youth then washes, and boiled what is distributed. He is old, and a red tape is tied round his forehead. Thereafter he must keep a knife or sword in his hand till the wedding day. On that day he bathes again, breaks earthen vessels and does new clothes. His kinsmen offer their presents, and the mesthans get their dues. The bride is then brought home, and the newly-wedded pair, with all the females of the family, go to the temple of Har Mandir the progenitor of the tribe, offer him a double cloth and a cake (the priest's perquisite), and how their heads in the temple. The wedding ceremony among the Bajewa Jats, an im...
ever, does not appear to be thus chosen or regarded. He is often a martyr, or shahid, who fall fighting with daalis or in an affray with a neighbouring village. A disciple of the Buddha may be, it would seem, a Jogi, a Bairagi, a Gosain, or a Naga, though in such a case the priest regarded as the jaktha was expected to be an embodiment of the god Siva or Vishnu, and among the Jats, for the obvious reason that they allow widow remarriage, but the hindu mata called the khanghan, or monastery, of Sataoo.

LITERATURE.—D. C. J. Robertson, Punjabi Bibliography, Calcutta, 1885, is the classical authority. See also Madhava, Punjabi Census Report, 1897, H. A. Rose, Glossary of the Tribes and Castes of the Punjabi and W. Frontier Provinces, Lahore, 1912, etc., *Jat*, and W. Crooke, ToB 13, 23, *Jat*. For the possible connection of the Jat or Sati, an Archana form of Jat, with the Gypsies see Wohler, The Indian Origin of the Gypsies in Europe, in *Journ. of Punjabi Hist. Soc., ii. 3* (1914).

JATIKA. 1. Meaning of the word. A jatika (in Buddhist dogmatics and literature) is a story in which the Bodhisattva (g.v.), i.e., the Buddha, appears in the form of his former birth, plays some part, either that of the hero or of some other character, or sometimes only that of a looker-on. Hence the word might be translated ‘Bodhisattva story,’ or ‘a Bodhisattva tale.’ But the current rendering of jatika is ‘Buddhist’ birth story.’

‘Jatika, birth, nativity, a birth or existence in the Bud dha’s life, the jatika, or story of one of the former births of a Buddha,’ (L. G. Childers, Dictionary of the Pali Language, London, 1878, 2nd ed.). This is the generally accepted explanation, the word being derived from Skt. jata, in the sense of ‘birth.’ Another explanation of the word has been proposed by H. Kern, in the ‘Zeitschrift für Indische Sprache,’ Leipzig, 1899, 44, (1.23), and adopted by J. S. Speyer (Jatikastudien, London, 1909, [S 111], p. xxiii), who derive the word from jita in the sense of ‘what has become, what has happened,’ and would translate it by जन्ितिक, tale, story.’

Jatikas originally means only a single ‘birth story,’ but it is also used as the title of the Collection of Jatikas, in the Tripitaka, and in the Jatika Commentary (see below).

2. Origin and purpose of the Jatikas. We read in the SuttaNipanasavatika, (SE XI. 1884, 190), that the Buddhists, knowing the differences in faculties and energy of his numerous hearers, preach in many different ways, ‘tells many tales, amusing, agreeable, both instructive and pleasant, tales by means of which all beings not only become pleased with the law in this present life, but also after death will reach happy states.’ And the reason book is stated (ib. 44 [SE XI. 44a]), that the Buddha teaches both by suttas and jatikas and by legends and jatikas. It is, indeed, likely enough that Gautama Buddha himself made use of parables and tales in preaching to the people. It is certain that the Buddhist monks and preachers did so. In fact, we know that the preachers of all religious sects in India always took advantage of the Hindu passion for story-hearing and storytelling, and made extensive use of stories in preaching to the people, much in the same way as Christian preachers in the Middle Ages introduced ‘experiences’ into their sermons to attract the attention of their hearers. They sometimes invented pious legends, but more frequently they told fables, fairy tales, and amusing anecdotes from the rich storehouse of popular tales or from sacred literature, altering and adapting them for the purposes of religious propaganda. The Bodhisattva dogma (see art. Bodhisattva), in connexion with the doctrines of rebirth and Karma (g.v.), was an excellent expedient for turning any popular or literary tale into a Buddhist legend.

3. In his numerous existences, before he came to be born as Sakayamuni who was to be the Buddha, the Bodhisattva had been born, as a horse, a karna, sometimes as a god, sometimes as a king, or a merchant, or a nobleman, or an out-caste, or an elephant, or some other man or animal (see SBE II. 745, note §). It was thus only to identify the hero or any character of a story with the Bodhisattva, in order to turn any tale, however secular or even frivolous, into a jatika.

Hence the jatikas regularly begin with some such as: ‘Once upon a time, when Brhatadhatu was reigning in Benares, the Bodhisattva (Skr. Bodhisattva) was born in the womb of his chief queen;’ or ‘Once upon a time, when Brhatadhata was reigning in Benares, the Bodhisattva was born into the family of a forester;’ or ‘Once upon a time...’ the Bodhisattva an ox called Mahakala (the Big Red One);’ or ‘Once upon a time... the Bodhisattva was born in the womb of a crow;’ or ‘Once upon a time... the Bodhisattva was born in the womb of the god Siva;’ or ‘Once upon a time... the Bodhisattva was Saka, king of the gods,’ etc. In many of his existences the Bodhisattva, according to the jatikas, was a god, a king, a Brahman, a minister, an ascetic, a merchant, but he also was a gardener, a musician, a physician, a barber, a robber, a gambler, an elephant, a lion, an ape, a dog, a frog, some bird, etc. (see the list in A. Grünwedel, Mythologie des Buddhismus, Leipzig, 1902, p. 197.)

3. The Jatikas in the Pali Tripitaka. Some of the stories which were afterwards turned into jatikas are told in the Suttas as simple tales, without any reference to the Bodhisattva. On the other hand, there are a group of stories which, while told in the Suttas—e.g., the *Kācitāyanta and Mahākācitāyanta* in the *Dīgha Nikāya* and the *Mahāvamsa* in the *Majjhima Nikāya*. That the jatikas form an essential part of this canon is shown by the fact that they are included in the list of nine angas (twelve Dharmapravachanas in the Sanskrit canon) into which the sacred books of the Buddhists were divided according to the ancients, as the 7th anga (the 9th Dharmapravacana).

The *Book of Jatikas*, however, is one of the fifteen collections of texts forming the Khaddaka Nikāya (Collection of Small Texts) of the Pali Tripitaka. This *Book of Jatikas* consists of gāthās or stanzas only, and is divided into 22 sections (nipātas), which are arranged according to the number of stanzas belonging to or forming a jatika.

The first section is supposed to contain 150 jatikas, each verse belonging to a separate story; the second, 100 jatikas, with two verses each; the third, 50 jatikas, with three verses each, and so on, each successive nipāta having a larger number of stanzas and a smaller number of jatikas. This *Book of Jatikas* has not yet been published, and MSS of it are rare. In many of these jatikas are poetic tales, ballads, or epic poems, but very often, more especially in the first sections, they are quite unintelligible by themselves, and must be understood as belonging to some other tale. Why these prose stories did not attain to canonical dignity we do not know. Probably they were supposed to be well known, and, therefore, left to the improvisation of the preachers. It is only in a more or less contaminated form that the prose parts of the jatikas have been preserved in the Commentary (see below) that was composed or compiled at some later period, after the final redaction of the canon.

1. Of Chalasangwa, vi. vi. 3, with the *Tittitijakasas (no. 27);* or Mahasangha, vi. vii. 0, with the *Dīghā-Kaṇḍakasasas (no. 271).* 2. It is worth mentioning that, according to the Pali Mahavamsa, the chronicle Dipancharasasv (v. 79), there was a school of monks, the Mahavasthigitas, who rejected some portions (we are uncertain not told which) of the jatikas as non-canonical. The Dharmagosas had also a *Jātaka Book in their canon* (see M. Asen, The Four Jatakas Agamas in Chinese, Ser. XV., xxviii. [1906] pl. III, p. 8. 3. It is not found in the King of Siam’s edition of the Tripitaka.
JATAKA

relation between prose and verse in works like the Paśchātana and the Jatakas. The Jatakas, like the Sūtras, are not a single work but consist of many books, each of which is further divided into chapters. The Jatakas, like the Sūtras, are not a single work but consist of many books, each of which is further divided into chapters.

5. Place of the Jatakas in Indian literature.

Though the Jatakas are not a single work but consist of many books, each of which is further divided into chapters, they are not a single work but consist of many books, each of which is further divided into chapters. The Jatakas, like the Sūtras, are not a single work but consist of many books, each of which is further divided into chapters.

As regards the 'stories of the present,' they are of little value, being either inventions of the commentator or borrowings from other texts, such as the Vinaya-piṭaka, Suttanāṇīta, or Apanā, or from other commentaries. But in the 'stories of the present,' they are of little value, being either inventions of the commentator or borrowings from other texts, such as the Vinaya-piṭaka, Suttanāṇīta, or Apanā, or from other commentaries.

The Jatakas vary also in length. We find short stories of hardly a page by the side of long romances or epic poems covering more than a hundred pages in our Jatakas.

Many of the stories found in our Jatakas Book occur also in the Paśchātana, Kathāśāstra, and other Indian story books, and are important for the history of Sanskrit literature. Some of the tales have parallels in the Mahābhārata and in the Rāmāyaṇa, and many others in Jain literature.

A great many Jatakas have also parallels in the literatures of the West. Thus, the tale of the peasant that lost his brute through his shameless dance (Jatakas, no. 35, represented on the slings of Bhārata) was known to the Hebrews (p. 139), who tell us the story of the Huns in Spain.

The Jatakas have innumerable uses. They are a storehouse of moral teaching, and have been used as a source of information about the life and customs of ancient India. They have also been used as a source of information about the life and customs of ancient India. They have also been used as a source of information about the life and customs of ancient India.

1 These narrative verses are called Ahāmamuddhikapātika, or stanzas told by a Buddha (see, for instance, B. H. and S. W. E. xliii. 329, and ii. 439). The Ahāmamuddhikapātika may be said to be a form of the word "praise," and is the same as the word "praise." 1. Only the Fāvajjukapātika seems to be a work of a later date; see O. O. Franke in Skandavaita, ed. V. F. Pembury, xliii.

2. Only the Fāvajjukapātika seems to be a work of a later date; see O. O. Franke in Skandavaita, ed. V. F. Pembury, xliii.

3. Only the Fāvajjukapātika seems to be a work of a later date; see O. O. Franke in Skandavaita, ed. V. F. Pembury, xliii.

It is probable that these stories were first told by the Buddha himself, the redaction of the Jatakas being the work of many individual Buddhist masters, who added their own versions and variations to the original text. These stories are still popular in modern times and are considered to be important for understanding the teachings of the Buddha.

The Jatakas are a collection of Buddhist stories, each of which is associated with a particular Buddha. These stories are believed to have been compiled in the 3rd century BCE and were later added to the Buddhist scriptures. The Jatakas are considered to be especially important for their moral teachings and their ability to make abstract concepts accessible to a lay audience.

The Jatakas are divided into two main sections: the Early Jatakas and the Later Jatakas. The Early Jatakas are believed to have been compiled by the Buddha himself, while the Later Jatakas were compiled by his disciples. The stories in the Early Jatakas are generally considered to be more traditional and conservative, while the stories in the Later Jatakas are more innovative and experimental.

The Jatakas are also significant because they provide insight into the historical and cultural context of the Buddha's time. The stories often reflect the social, political, and religious issues of the time, and they are considered to be an important source of information about the historical Buddha and his teachings.
high poetical merit, composed by the poet Aryanā or Sura. There have been several āstakāmalas, or 'garlands of āstakas,' i.e. poetical selections of āstakas, but Aryanā's work is best known. It is a florilegium of 34 āstakas, mostly known from the Sanskrit, and a lowly style of Sanskrit court poetry, elaborate prose alternating with verse. As in the Āryāvīrakā (see above), so also in the Jātakāmalā the āstakas serve as illustrative episodes in the lives of the ārāṇys, especially those of generosity and kindness towards all creatures.

Thus the first story (not occurring in the Pali collection) is that of the Bodhisatta throwing himself before a starving tiger that is about to devour her offspring. Most stories occur also in the Āstakāmalā and in the Āstakāmalā, as the Pali literature of the Indian period, especially in the Pali literature of the 4th century. The Āstakāmalā is a work of high merit, composed by the poet Aryanā, who flourished in the 4th century. A.D. Sianas of the Āstakāmalā are inscribed on frescoes found in the caves of Ajanta, and the Chinese pilgrim I-tsing mentions the Āstakāmalā among the works that in his time were very popular in India.

10. Āstakas and Āvadānas are also found in Śrīvijaya's Śrīvaṃśa (called Almahāra in art, Āṣyoga or, in Śrīvijaya's Āvasāra, as Ávadāna). Āstakas are also mentioned in the Jātaka, a work of the same period, by the Bodhisatta Bharadāvāja.

11. In the introduction to the tr. of the Āvadānas of Āstakāmalā, in Magna Indica, Paris, 1901, and J. S. Speyer in his ed. of the same text (Bibliothèque de l'École, Paris, 1900), vol. I, pref. p. iv; also Winteritz, Gesch. der Ind. Lit., II, 215 f.

The Āstakāmalā has been edited by H. Kern (Harvard Oriental Series, I, Cambridge, Mass., 1909) and translated by J. D. B. Anderson, London, 1925. Aryanā's work on the same (or a similar) collection of āstakas as we have in the Śrīvaṃśa, Speyer's. In his ed. of the same text (Bibliothèque de l'École, Paris, 1900), vol. II, p. iv; also Winteritz, Gesch. der Ind. Lit., II, 215 f.

11. Āstakas and popular Buddhism. The Āstakas are highly important for the history of Buddhism, especially as it grew up to popular Buddhism. The whole system of relating āstakas is based on the most popular dogma of karma, and the ethical ideal of this religion is not the Arhat (q.v.), who has attained to nirvāṇa,1 but the Bodhisatta who, in all his former existences, has shown one or more of the great virtues by which he prepared himself for becoming the future Buddha. However high or low he may have been born, in every āstaka he is either helpful, kind, and self-sacrificing, or brave, clever, and even possessing supernatural wisdom. Āstakas like those of King Sivi (no. 499), who gave away his eyes as a gift, or of Queen Vessantara (no. 547), who gave away his own children as a gift to the wicked Brāhmaṇa, are standard texts for this ideal of ethics. It may easily be understood how the theory of the āstakas which sharpen the ethical ideals in the Mahāyāna Buddhism, though not mentioned in the Āstakas Gāthās, but only in the Buddhavoras, Āryāvīrakā, and the Āstakas Commentary, was already in the Mahāyāna Buddhism, and so it is not wonder that the āstakas belong as much to the Mahāyāna as to the Hinayāna Buddhism. They are indeed the chief vehicle of Buddhist propaganda, and the chief witnesses of popular Buddhism.

As to the popular Buddhism, it is sufficient to quote the words of B. Spence Hardy, Manual of Buddhism, London, 1899, p. 103. 'The Buddhist has been taught that he should do good to his fellow creatures, and that he should do good to his fellow creatures, and that he should do good to his fellow creatures. In them the doctrine of the Buddha specks of light in the darkness of the mind of the people. They are the chief vehicle of Buddhist propaganda, and the chief witnesses of popular Buddhism.

12. Āstakas in Buddhist art. The enormous popularity of the āstakas is also proved by the fact that representations from these stories are among the earliest productions of Indian art, and they have remained the favourite topic of Indian artists and paintings through all the centuries in all Buddhist countries. In the 3rd or 2nd B.C. we find them in India in Bharat and Sanchi (see above), in the 3rd CENT. A.D. in Amaravati, and later on in the caves of Ajanta. The Chinese pilgrim Fa-hian, when visiting Ceylon in A.D. 412, saw at Abhayagiri 4 representations of the 200 bodily forms in which the Buddha was assumed during his successive births; and Huen Tsang mentions atūpas erected in honour of the Bodhisattvas whose deeds were related in āstakas. The famous temples of Boru-Budrī in Pālā (late 7th cent.), Abhur in Burma (13th cent. A.D.) and of Sukhodaya in Siam (14th cent. A.D.) are decorated with hundreds of bas-reliefs representing scenes from āstakas.
The foundation of the present city was laid by Frūz Tughāq on his return from an expedition into Bengal in A.D. 1360. Subsequently under Khwāja Jahan, who was viceroy of the Emperor Mahmūd Tughluq (1326-54), even those of Timur, became independent; and for nearly a century the Shaqhrī, or eastern dynasty, continued powerful rivals of the Delhi kings, and formed one of the rival kingdoms of India. Their ascendency, however, gave way to that of the Deccan, which was not finally overthrown by the Emperor Bahādur Lodī in A.D. 1487. The religious buildings still in existence consist of mosques and tombs, the work of these Shaqhrī princes. They are the finest example of what has erroneously been called the 'Pathan' style, which is really Persian, but executed and modified by the native architects whom the conquerors were forced to employ. So beautiful was the city at this period that the Emperor Akbar of the Deccan, on his visit to the Shahīr of Delhi, found so many mosques that the emperor took a fancy to them. The present three mosques, with others in the fort, date from A.D. 1377. The three great mosques are in the city. The Aṭālā mosque, so called because it stands on the site of the palace of that name, which was donated to the Sūfī Shaikhs of the Aṭālā order, is the most famous of the three. It was completed in 1378. The greatest mosque is that of the 4th century, and found in 1406. The most famous of the three mosques is the Aṭālā mosque, which was completed in 1378. It is distinguished by a majestic gateway pyramid or propylon, and three massive columns. The gateway, which was completed in 1378, is the most notable feature of the building, as little known at the time in Jaunpur as it was in Delhi. It was completed in 1478. The third great mosque, known as that of Bihī Raj and Tarā, is commonly called Lāl Darwāzah, and was completed in 1478. It is distinguished by a magnificent gateway pyramid or propylon, and three massive columns. The gateway, which was completed in 1478, is the most notable feature of the building, as little known at the time in Jaunpur as it was in Delhi. It was completed in 1478.

With the fall of the local rulers the religious history of Jaunpur came to an end.

LITERATURE.—A. Forbiger, The Shaqhrī Architecture of Jaunpur, Calcutta, 1846, and Monumental Architekture and Inscriptions of the North India, Calcutta, 1846. A. Cunningham, Archaeological Survey Reports, xi. (1856) 108. J. Fergusson, Rise of Indian Architecture, London, 1876, p. 352. W. Crooke, JAVA, BALI, AND SUMATRA (Buddhism in), 1. The Indian name of Java, known to the geographer Ptolemy (vii. 29) as Isabadi (50, χαδάδί) is a correct one. It is derived from the Sanskrit word Jaya, which means 'he who conquers.' The island, which is one of the largest in the world, is divided into two main parts: the northern part, which is called Java, and the southern part, which is called Bali. The southern part is the more mountainous, and is divided into several smaller islands. The capital of Java is Jakarta, which is the largest city in the country. The island is divided into two main parts: the northern part, which is called Java, and the southern part, which is called Bali. The southern part is the more mountainous, and is divided into several smaller islands. The capital of Java is Jakarta, which is the largest city in the country.

The most renowned and best explored monuments and groups of religious buildings, besides the sanctuary at Kalasan, are the so-called Chandi Sari, Chandr Sowu, and Chandi Ploosa; the magnificent sannyāsa of Boro-Budur; the beautiful shrine at Mendut; and the great statue of the five vāndhaas, which are brought into connexion with the five (Dhyāni) Tathāgatas. We also find an enumeration of the saktis of those Tathāgatas, and, finally, prose, on the treatment of coition.1

The worship of the five Dhyānibuddhas and their female counterparts, or saktas, as taught in the Kanakāyājñikam, must have been very popular in Java, as it is attested by the numerous images of those supernatural beings discovered in or near sacred buildings.

During the whole period in which Buddhism was flourishing in Java, it found favour with kings and royal families. The earliest document bearing witness to marked favour is the inscription of Kalasan mentioned above. We know also from a copper grant, dated 861 Saka (A.D. 949-50), that the King Mpu Kertanagar, otherwise called by his title Śri Isāna Vijaya Dharmottungga Deva, confes Buddha.1 His daughter, who reigned after him under the title of Śri Isāna Tungga Vijaya, was likewise a convert to Buddhism. The King Kṛtaraṅga, who reigned from 1194 to 1214 Saka (A.D. 1272-92), is glorified by the court poet Prapāneha as being a most devout Saktist, though his posthumous image at the Mahāyana temple was so pointed to his being a latitudinarian.2 He calls himself, however, in a Saksitott inscription an upāsaka of the Mahāyāna. The inscription, in more than one copy, has been taken from the text of Kṛtaraṅga's granddaughter, Tribhu-vanattungadive, who ruled as sovereign over the whole of Java during the minority of her son, the famous Hayam Wuruk, in the 14th cent. of our era, was of the same persuasion as her grandfather; likewise her consort, the Prince Kṛtavardhana of Singhasari, her sister, and the consort of the latter.3 The Queen Dowager of the King Kṛtaraṅga, the founder of Majapahit, is described as an energetic woman, and so earnestly devoted to the religion of Buddha that in her old age she became a nun.4

Apart from all documentary evidence in writings, the remains of splendid buildings destined for the worship or use of Buddhists cannot fail to leave the impression that those architectural monuments must have been the expression of a definite system of society. The majority of the mere gorgeous Chandi on Javanese soil are undoubtedly Budhdhistic, whereas out of the whole mass of literature and inscriptions upon stems come few or any connexion with Buddhism. To explain this fact it may be assumed that the great bulk of the population were Saktists. It is quite certain that in the Middle Ages, before the irruption of Mahāmādhanism, Javanese society was based upon the caste system, just as in India, and that in civil and criminal law the Code of Manu was the chief authority. The present state of things in Java, where such Javanese as remained faithful to their religion have found a refuge after the fall of Majapahit in the beginning of the 16th cent., tends to confirm the conclusion that the Saktists, or, more generally, the Brahmins, had the superiority. For the great majority of the Ballinese confess Sāivism, with an admixture of practices deriving from an ancient animistic religion. It appears from a notice in the Nāgārāyājñikam that in the 14th cent. there were established two communities or sects of Buddhists

in Bali, one of followers of the Vinaya, i.e., the regular clergy, the other of the so-called Vajrayana, evidently identical with the Vajrayära in Nepal and Tibet, and consequently Tantrists. There are sufficient proofs of Tantrism having had its votaries also in Java. Nowadays the number of Buddhists of any description in Bali is insignificant.

As to Sumatra, there is a blank in our knowledge of the conditions of Buddhism from the days of I-tsing down to the middle of the 14th cent., the time when King Adityavarman was ruler of Middle Sumatra. It is known from sundry inscriptions, ranging from 935 to 1278 Sakas (A.D. 1342-56), that Adityavarman was a staunch Mahayana, identified with Pandang Chandah in Sumatra, informs us that he was dedicated by order of the same king. As Amoghapāsa is a Tantric form of Avalokiteśvara, the inscription is an indication of Tantrism having its votaries in Sumatra. In an inscription on the tomestone of Adityavarman he is glorified as an acárya of Lokesvara. It may be remarked that the Sanskrit of the Sumatran inscriptions is entirely idiomatized and at least non-Buddhist ideas and practices.

LITERATURE.—This is fully given in the footnotes.

JEALOUSY.—See ETVY.

JEROME.—I. Life. —Jerome was born at Stridon, a town on the confines of Dalmatia and Pannonia (de Vit. Illust. 135). He was the son of a Moesian officer, according to F. Bulté, the ancient Stridon, which was demolished by the Goths in A.D. 375, may now be identified with the modern Gmhofo Polje. The birth of Jerome is said to have been sudden, and, as is frequently stated from his own pen himself to point to a later date—somewhere between 340 and 340. He was born of Christian parents; his father was named Eusebius, and was evidently well-to-do. He received his elementary education in his own home at Stridon, and then, together with his friend Bonosus, went to Rome in order to study grammar and the rhetorical philosophy. He became a pupil of the renowned grammarian Donatus, and gained a thorough knowledge of the Latin classics, especially of Cicero and Vergil.

His teacher in rhetoric was not, as was formerly supposed, the veteran rhetorician C. Maurius Victorinus. He did not study Greek during his early residence in Rome, but presumably learned it later in Antioch.

He was baptized in his early manhood by Bishop Liberius (+ 366) in Rome (Ep. xv. 1). Notwithstanding this, he fell for a time into serious moral errors (Ep. iv. 2), but thereafter manifested once more an enthusiastic piety, visiting the graves of the apostles and martyrs at Cæsarea and Cæsarea in Cappadocia (Comm. in Petr. xii. 40). From Rome he travelled, in the company of Bonosus, to Gaul, and stayed for a while in the still semi-barbaric district of the Rhine (Ep. vi. 5). While in Transylvania he began to busy himself with theological work, copying, on behalf of his friend Rufinus, the Commentary on the Pentateuch and the de Synode of Hilary of Poitiers (Ep. vi.). He then went to Aquileia, where he connected himself with an earnest-minded group of men, including Chromatius, subsequently bishop of Aquileia, and his friend Rufinus, a native of the town. It was in Aquileia that he took a decisive step towards carrying out a resolution that he had already formed in Trèves, viz. to devote himself to the ascetic life. All at once, from reasons that we do not know, he set out with a few companions and journey to the East (A.D. 378). Having reached Antioch, he lingered there for some time, and attended the proceedings of the celebrated Anti-ecumenical Council of 378, which met under the presidency of the theologian Apollinaris. It was during this period of indecision as to whether he should become a hermit or not that he had the experience, known as his 'anti-Ciceronian vision' (Ep. xxii. 30), in which Christ appeared to him, asked him regarding his religious profession, and, in answer to Jerome's claim to be a Christian, said: 'Thou speakest falsely; thou art a Ciceronian, not a Christian; for why should I heart thee.' For a considerable time afterwards Jerome renounced the study of the classics (Comm. in Gal. iii. pref.); but at a later date, in the monastery at Bethlehem, we find him engaged in instructing youths in Vergil and Cicero (contra Hieron. i. 28). Very soon after his vision he went to live in the wilderness of Chalcis as an eremite, and there, amid severe self-castigations, he began the study of Hebrew under the guidance of a certain Greek Jew (Ep. xxv. 12), while he was also involved in the dogmatic controversies that divided the Christians of Antioch into various parties. Being, as a native of the West, quite unknown to the older Nicean and the younger Orthodox groups who were here at feud with each other, he appealed to Pope Damasus for advice as to which party he should join. Subsequently he attached himself to the anti-Melitian bishop, Paulinus of Antioch, whom he was ordained a presbyter, though on the understanding that he might still remain a monk, i.e. that he should not be compelled to undertake the cure of souls (contra Joh. Hieronymi, 41).

Jerome then went to Constantinople, where he came into close touch with the great Cappadocian, Gregory of Nazianzen, at that time bishop of the Eastern capital. Gregory drew near to him the theology of Origen. On the invitation of Damasus, Jerome returned in 382 to Rome, where a synod, called that year, was to meet for the purpose of settling the Anti-ecumenical schism (Rufinus, contra Hieron. i. 28). Without any clearly defined function or any distinct charge, but rather in a confidential position to which no responsibility attached, he was observant, in Eith. Hist. xxvii. (1863); H. Cullin, De Hieronymo, de Hieronymi observationes in nominum verborum usum pertinentes, ib. (1883), and Gruter, Hieronymi observationes (ed. 1888). It was on this ground that later tradition made Jerome a cardinal; cf. Gruter, i. 224.
assisted the Roman bishop in the composition of official papers (Ep. cxxix. 10). Moreover, during his residence at Rome (382–383) he was commissioned by Damasus to revise the Latin NT on the basis of the Greek text; and this, again, proved to be the initiative to his greatest literary achievement—his translation of the OT from the Hebrew. In Rome he gathered around him a band of women of high rank, to whom he expounded the Scriptures, and whom he inspired with enthusiasm for the ascetic ideal. The more eminent personalities in this group were Marcella and Paula, both widows, and the two daughters of the latter, Basillia and Eustochium. By his mendacious criticisms of the Roman secular clergy he alienated the sympathies which at the outset he had won, and which, he ambitiously hoped, would secure him for the death of Damasus, his successor to see (Ep. xlv. 3). In August 385 he left the ungrateful city in the company of his brother Paulinian and his friend Vincentius, in order that his house at Bethlehem might be the scene for many of the last years of his life. With Paula and her daughter Eustochium they followed him shortly afterwards. In order to give no occasion for scandal, the two parties had arranged to make the journey separately, but they met again in Antioch. From this point, they started on a pilgrimage through the Holy Land, visiting, first of all, Jerusalem and Bethlehem, then the South of Palestine, and, finally, the sacred sites of Galilee, Nazareth, Cana, Capernaum, and the Sea of Tiberias (Ep. civii.). Some- what later they proceeded to Egypt, and stayed a month in the houses of St. Antony and St. Pachomius, where Jerome attended the lectures of Didymus the Blind, the head of the long-renowned catechetical school (Ritumus, contra Hieron. ii. 12). Thence they visited also the Nitria, the most holy colony—the city of the Lord, as Jerome calls it—and then, in the late summer of 386, returned to Bethlehem, where they settled permanently. Here they had to be content with somewhat cramped quarters for three years—until, in fact, the monastic buildings for the lodging of monks and nuns were quite complete. The monastic houses built at Paula’s expense were four in number—one for monks, and three for nuns—who were attached to these hospices was erected for the entertainment of pilgrims on their way to Jerusalem.

The period of Jerome’s stay in the monastery at Bethlehem, in the last thirty-four years of his life was by far the most fertile in literary work. His manner of life at this time is described by Sulpicius Severus (Dial. i. 9) from information supplied by a monk named Postumius, who had spent six months in Bethlehem:

‘He is ever occupied with reading, with books; he takes no rest by day or night; he is always either reading or writing.’

Yet Jerome did not find in his solitude the peace he had come to seek. His passionate nature led him to take part in all the conflicts that were agitating the Church. In 392 his controversy with the Roman ascetic Jovinian brought him once more into touch with the capital. He was subsequently drawn into the Origenistic controversies—in conflict, first, with John, Bishop of Jerusalem, and then with his former friend, but now embittered enemy, Rufinus. Towards the close of his life we find him issuing biting pamphlets against the Spanish priest Vigilantius and the Pelagians. Among the events of the world-politics of the day, the sack of Rome at the hands of Alaric in 410 affected him profoundly (Comm. in Jer. vii. 2. Ep. cxxvii. 5). Paula had died in 404; and in 410 Marcella also passed away (Ep. cxxvii.). In 416 the religious mission at Bethlehem was assaulted by a band of Pelagians, and Jerome was able to save his life only by a hurried flight to a stronghold, his monastery being demolished (Ep. cxxviii.). Then came the death of Eustochium, his most devoted adherent, and shortly afterwards, on the 30th of September 420, Jerome himself, now old, lonely, and weary of life, passed away at Bethlehem (Prosper, Chronicon, ed. Mommsen, Chron. min. i. 499).

2. Writings.—Jerome left behind him a large and varied mass of literary work, which may be classified as follows:

(a) Letters.—These form the most valuable source of information regarding his life. They are unquestionably the most brilliant productions of his fertile brain, and furnish a richly detailed picture of the contemporary life and society. They reflect his personality in the most vivid way. They date variously from the interval between 373 (Ep. i.) and 420 (Ep. cxxviii), and their contents show a great variety of topics, from scholarship, and, in particular, of exegesis, appearing among purely personal communications. Jerome corresponded with most of the outstanding people of his time—e.g., Pope Damasus, Theophylactus of Alexandria (Ep. liii., lviii., lxxvi., lxxviii., lxxix., lxxxv.), Augoustus (Ep. cli., clii., cv., cvii., cxxv., cxxvi.), and the whole series, exhibiting, as they do, the diverse characters of the two greatest Fathers of the Western Church, Paulinus of Nola (Ep. liii., lixiv.), and Paustianus, the Roman senator who became a monk (Ep. lxxviii., lxxxvii., lxxviii., lxxxv.), as well as to Laeta, on the training of her daughter; Ep. clii. to Paris, and cxxvi., to Agatha, on maintaining the continence of widows; and Ep. lxxvi., to Paula, on the life of clergy and monks.

(b) Engaging portraits of his associates are given in his obituary notices of Nepotianus (Ep. lxi.), Fabiola (Ep. lxxviii.), and Paula (Ep. cxxvi.), and Marcella (Ep. cxxvii.), on the life of clergy and monks. The following is an extract from his obituary notices of Nepotianus (Ep. lxi.), Fabiola (Ep. lxxviii.), and Paula (Ep. cxxvi.), on the life of clergy and monks. The following is an extract from his obituary notices of Nepotianus (Ep. lxi.), Fabiola (Ep. lxxviii.), and Paula (Ep. cxxvi.), on the life of clergy and monks.
been written in Antioch in 376, but, as the present writer thinks,1 falls rather within the years of Jerome's stay in Rome (382-385). In this work, which is in the form of a dialogue, he assails the opinion of those who followed Lucifer of Calaris, and especially their non-recognition of heretical baptism. To 382-384 must likewise be assigned the treatise adv. Helvidium de perpetua virginitate B. Mariae, in which, in opposition to Helvidius, a resident in Rome—Jerome supports the doctrine of Mary's perpetual virginity, asserting that the Lord's brethren were in fact his cousins. The ad Helvidium letter II. was composed in Bethlehem (392-393). Jovianus, the Roman ascetic, had asserted that the state of celibacy was in no way superior to that of widowhood or marriage, that the regenerate were essentially without sin, that fasting was of no real merit, and that all the regenerate would attain the heavenly reward in equal degree. Jerome assailed the position of Jovianus with great acerbity, awaking a resentment that for some time he endeavored to mitigate in Ep. cxlvii., the Apologetica ad Pacamuthion pro libris contra Jovianum, in which he somewhat modified the severity of his strictures upon marriage in the ad Helvidium. In 390, amid the controversy regarding the orthodoxy of Origen, he wrote the unfinished work contra Johannes Hierosolymitanum (Jehan, bishop of Jerusalem). In 420 he composed the Apologetica ad Rufinus in two books, to which he added a third in the following year. These, together with the Apology (two books) of Rufinus against Jerome, form our most valuable and authentic source for the Origenistic controversy, in the course of which Jerome renounced the heresies of Origen. The short but extremely bitter pamphlet against the Spanish presbyter Vigilantius, in which Jerome denounces the worship of martyrs and relics, the keeping of vigils, and the monastic life, dates from 406. Finally, in 415, he wrote the Dialogus ad Poligianum in three books—a work in masterly form, in which he seeks to controvert the views of Poligius from the stand point of the Catholic doctrine current in his day.

(2) Historical works.—The most extensive historical work from Jerome's pen is the Chronicon Chronicon (ed. I. H. Herz, 1852), a translation of the second part, i.e., the chronological tables, of the Chronicler of Eusebius of Caesarea.2 He followed the original as far as it went (A.D. 325), making additions, and he wrote a supplement covering the period between 325 and 378. In spite of many errors and oversights, the work is a mine of information for that period.

We have from Jerome's hand also three biographies of monks. The Vita Pauli Eremitae was written between 374 and 379, and its matter was in all likelihood drawn from the monastic traditions of Egypt,2 though fancy plays a large part in its composition. The Vita Malchi monachi capitis, based upon information given to him by the aged Malchius himself in the wilderness of Chalcis,3 and the Vita Hilarius (the founder of monasticism in the eastern and southern provinces of Palestine) date from the early years of his residence in Bethlehelm (c. 386-391). All three are characteristic examples of the monastic literary genre.

The most important of Jerome's historical writings, however, is his de Viris Illustribus. This a-eone highly extolled work has been called by many a gross instance of his literary methods;5 it is virtually taken piecemeal from Eusebius, HE.6 Nevertheleen, we cannot deny Jerome the distinction of having in this work made the first attempt to compose a history of Christian literature—a task in which he had many successors. The little book was translated into Greek by his friend Sophronius.7

4 (4) Ecclesiastical works.—(a) Under this head come, first of all, three works dating from 386-391, viz. de Situ et nominibus locorum Hebraeorum—in reality a translation of the Onomasticon of Eusebius of Cesaras,8 and for modern scholars a valuable contribution to the topography of Palestine; Interpretationes hebraeorum nominum,9 a work based, according to the preface, upon a new lost treatise of Philo, which Origen extended by adding the TETE proper names; and Questiones hebraicas in libro Genesis,10 an aphoristic commentary on Genesis, the value of which is enhanced by the interpretations derived from the Jewish Haggadah and communicated to Jerome by the Rabbis—interpretations such as he uses also in his other OT commentaries.11

(b) The OT commentaries.—In 388-390 Jerome composed his commentary on Ecclesiastes, in 392 on the Minor Prophets Nahum, Micah, Zephaniah, Haggai, and Habakkuk; in 395-396, on Isaiah and Obadiah; and in 398 on the ten visions of Isaiah 18-28. In 402 and 404 he wrote his Commentarius in Psalms.12 In 406 came his exposition of Hosea, Joel, Amos, Zechariah, and Malachi; between 406 and 408, that of Daniel; 408-410, Isaiah; 410-412, Ezekiel; between 415 and his death in 420, Jeremiah. Jerome's work on the last-named book was interrupted by his death, no more than the first thirty-two chapters having been dealt with. These commentaries show a certain vaesilation between the historical and allegorical methods, and are specially valuable because of the Jewish exegesis which they have brought down to us. The exposition of Daniel, Jerome makes concessions to Ptolemy.

(c) The NT commentaries.—In 388-378 Jerome wrote expositions of Philum, Galatians, Ephesians, and Titus, all of which he was specially indebted to the now lost commentaries of Origen. In 398 he composed his commentary on Matthew—valuable by reason of its extracts from the Gospel to the Hebrews. His translations of that Gospel into Greek and Latin are lost. We are unable to date the date of his exposition of Revelation, which is in no sense an independent work, but an adaptation of the commentary of Victorinus of Peteanus (4th cent.), in which the chiliasmte interpretation of Victorinus is superseded by a spiritualistic one.9

texts from the Psalms, Mark, and other books of Scripture have come down to us. They were preached between 392 and 401 to the inmates of his monastery, and were afterwards committed to writing by them.

3. Significance. — Jerome was no great creative spirit, as was Augustine, but he was certainly the most learned of the Latin Fathers. Not only was he equipped with an extensive knowledge of the one sacred tongue; and in his day the most important works of the Church were written in the vernacular tongues of all the Fathers in his mastery of Hebrew. His significance lies in the fact that he stands supreme among those who mediatised the religious heritage of Hebrew and Greek antiquity to the Latin world. His personality was not of the most attractive kind, although the strictures passed upon him in this respect—e.g., by Luther—are often unduly severe. He had the natural temperamen of the scholar, but his work is frequently impaired by lack of thoroughness. He was passionate and sensuous, yet he was the champion of the most rigid asceticism. Pull of petty vanity and learned rivalry, he was self-assertive and unjust towards his opponents; and, though desitute of the constructive theologian's gift, he liked to pose as a pillar of orthodoxy. By his translation the Bible exercised an immense influence upon the development of the Church and its theology in succeeding centuries, and in that work he produced what must be numbered among the supreme achievements of the Church in the Middle Ages.

LITERATURE. — Books dealing with special parts or aspects of Jerome's work have been fully referred to in the course of the article. Here we note further:

O. GRÜTZMACHER.

JESUITS.—1. Origin. — The Jesuits, or members of the Society of Jesus, are the name of an institute of 'Clercs Regular,' men devoted especially to the care of souls and to the works of mercy spiritual and corporal, like the Theatines, e.g., or the Barnabites (q. v.), both of which are slightly older in date. The Society is not a sect nor even a theological school, but simply a religious Order (that is to say, a body of men living under vows of poverty, chastity, and obedience, which, though differing in many respects from the old monastic ideal, has its recognized place in the organization of the Roman Catholic Church. In accordance with this, it is obvious that the term 'Jesuit,' which, almost as much as the word 'Jesuitism,' originated with critics who attributed to the Order a certain distinctive spirit independent of, and distinct from, the Church to which it belongs, would be deprecated by all who bear the name of Jesuits, in so far as it implies the existence of a doctrine, system, policy, or line of thought, as if it were said at the outset that it was certainly not the object of the founder to create such a spirit. Nothing would have been more abhorrent to St. Ignatius Loyola than the erection of an imperium

1 These names were well known and recognized by him in the Acta Secundae generalis, iii, 2 (1907), 2 (1908).
in imperio either in the domain of external discipline or in the domain of ideas. At a crisis when mutaul confidence was lacking, it was to the clergy and to the sovereign pontiff. The spirit of his Society was to be exceptional only in this, that its members, as the result of a religious training unusually proracted and severe, were to be instructed with regard to the model of Jesus Christ Himself, full of zeal, detachment, and self-sacrifice, and of a virtue so highly temperd that they might safely be exposed to an extraordinary strain. This was the founder's conception, and it was realized by many of his followers, especially in his own lifetime and in the first century or two after his death. To admit that with the lapse of years some relaxation of these high ideals may have taken place in the Order is only to admit that the work of Ignatius was a human work and was carried out by human means.

Ignatius Loyola (1491-1556) converted from a careless, if not a sinful, life during the long convalescence which followed a wound received in battle (1521), determined to fit himself for an apostolic vocation by the study of theology. Passing from Alcalá to Saragossa, then to Toulouse and from Salamanca to Paris, he there (1534-35) gathered a handful of companions around him, who in 1534 took vows of poverty and chastity together, and, placing themselves shortly afterwards on the papal vacation of the Holy See, were formally approved as a religious Order by Pope Paul III, 27 Sept. 1540. Although it may be said that Loyola felt his way only by degrees to the complete organization of the Society which he founded, one dominant idea is discernible in all his projects. From the first, as might be expected of an old soldier, his conception was a military one. The Spiritual Exercises of St Ignatius de Loyola, though it may be correctly translated 'Society of Jesus,' is at least patient of a military interpretation. It probably first conveyed the idea of a company, i.e., a band commanded by a captain. The term Jesuit (Jesuita), let us note parenthetically, was not chosen by the founder. It appears first in 1544, and was then used by opponents as a nickname (see Astin, Hist. i. 183), but eventually was tacitly acquii red in even by members of the Order. The military conception is especially emphasized in the fundamental meditations of the 'Exercises.' The Jesuit, as he was named, was he, training devised by Loyola and communicated to his fellows, to be used first of all in securing their own progress in virtue, and afterwards for the salvation of their neighbours. The characteristic meditations known as the 'Kingdom of Christ' and the 'Two Standards' are parables of human warfare. In the first Jesus Christ is set before us as a leader appealing for volunteers in a crusade against the infidel. In view of His promise that in all hardships He will share alike with His men and that they shall share with Him the fruits of victory, the conclusion is pressed home that no right-minded Christian who possesses a spark of knightly courage can remain deaf to such a call. In the 'Two Standards' the character of the spiritual campaign is more closely studied. It is pointed out that the tactics of the enemy Satan are to enchain mankind and drag them down by love of money, worldliness and pride. From this the conclusion is drawn that the only effective combat on the side of Christ is that has been has bound itself to a life of mental poverty and humiliation after the example of the leader Himself. It is plain that all this makes appeal to two of the strongest instincts of human nature, instincts deeply rooted in the Spaniards of Loyola's day, viz. loyalty to the feudal chieftain, and the spirit of generous fortitude.

Now, it is easy to see what a marked ideal which above all supplies justification for the 'blind' obedience which Ignatius desired to be the distinctive characteristic of his followers.

'More easily,' he says in his famous letter on obedience, 'may we suffer ourselves to be surprised by other religious Orders in fasting, watching, and other austerities, and by their clothes, which they practice according to their rule, but true and perfect obedience and the absence of our will and judgment, I greatly desire that those who serve God in this Society should be conscious.'

Insubordination is the soldier's most unforgivable crime, discipline a virtue which, so far as great bodies of men are concerned, comes even before courage. Consequently, in the military organization of his Company, Ignatius insisted on obedience most of all. 'Theirs not to make reply, theirs not to reason why, theirs but to do or die,' must be the soldierly ideal as long as the world lasts. And this was especially true of such a force as the Spanish knight had conceived, a lightly equipped force ready to take the field at a moment's notice in any forlorn hope, whatever the nature of the service required of them. The blind obedience of the Jesuits has often been made a matter of reproach, but in point of fact it was imposed by the founder to be an entirely blind obedience. It was 'casea guadarn obedientin' even to him, and in almost every context when speaking of obedience he limited its scope to things which were not sinful. For example, he says (Summarium, cap. 31) that his disciples must 'endeavour to be resigned inferiorly . . . conferring their will and judgment wholly to the superiors,' and in all things in which no sin is perceptible 'in omnibus obsequia non sine decretali recto.'

The charge that St. Ignatius in the very text of his Constitutions (lib. vi. cap. 5) empowers a superior to bind his subjects to obedience even though compliance with the order involves the commission of a grievous sin—the famous obligatio ad pecossum—is based on a ridiculous misinterpre tation of a formula well known to the earlier canonists (see De Laudibus et Pauella, p. 517 ff, and Monkar's preface to Bochmar, Les Jesuites). Many writers, like F. von Ranke, John Addington Symonds, J. N. Figgis, and others, who have at first made this misapplication upon inadequate evidence, have afterwards withdrawn it when they have given themselves time to consider the texts at leisure. Always regarding the priests of his Order as a corporal of special training, and as a special service, Loyola saw the necessity of, besides perfect obedience, equipment by an extremely severe training. Instead of a single year of novice ship, as in the older Orders, two years, abounding in tests of the most varied kind, were imposed upon every candidate before he was permitted to take vows. Even then the vows were 'simple,' not solemn. The recruit was bound to the Society, but not the Society to the recruit, and the Father General might still at any time dismiss him if he proved unsuitable. Practically speaking, a state of things soon resulted in which ordination to the priesthood could not be conferred much before the age of thirty, and the public vows, which finally marked a recruit's acceptance as a 'founded' member of the body, were even then permitted only after a sort of the enemy Satan is thus defeated under strict control, a large part of the time having been spent in study, three years in purely spiritual discipline, and, ordinarily speaking, another long period in the teaching or moral supervision of youth. Such a system seems
This idea, as well as that of an organization of crypto-Jesuits and secret emissaries, has been largely fostered by royalty. British in 1588, and French since 1625, of Dumas per and still more seriously by the dissemination of the notorious Monstra Secreta, a supposed Jesuit code of secret instructions, the apocryphal casuistry of which has been recognized (on this see Duhm, Jesuiten-Fabrik, ch. 5; Brou, Les Jésuites de la légende, i. 275-301; and Monod's Introduction to Boehmer, Les Jésuites, pp. 151-152), were in early life for a period of a month continually, each Jesuit, leaving all other occupations, devotes himself to making the Exercises, thus to renew the memory of the principles upon which his choice of a vocation is founded. It was an extension of this practice in a modified form to select bodies of the clergy, students, sodalities, and whole parishes which first brought into vogue the system of retreats and missions. The Jesuits found universal favour in the Church of Rome, and has of late years become prevalent among the more advanced type of Anglicans.

2. Organization.—As regards the organization of the Society of Jesus not much need be said. The Constitutions, by which the Order is still governed, were drawn up by Loyola himself, but the rule was incorporated into the Roman Missal of 1570, and the Society has ever since been subject to the authority of the Holy See. The form and spirit of the Constitutions are the same as they were when Loyola dictated them, to their translation into French by Saint Ignatius. The Constitutions of the Order, as adopted by the General Congregation at Seville in 1562, have never been amended or altered. The General Congregation, which meets every six years, is the supreme authority of the Society. It is composed of the Superior General and the heads of the various provinces. The Constitutions of the Order are divided into two parts: the General and the Provincial. The General Constitutions contain the rules for the government of the Society as a whole, including the Constitutions of the Provinces. The Provincial Constitutions are the rules for the government of each individual province.

3. Criticisms.—Perhaps the charge which has most seriously weighed upon the Order, and which has at any rate entailed the most serious consequences in rendering them obnoxious to anti-clerical governments, is the accusation of teaching the fallibility of the Church. That this charge is not founded on the older canons, and that the younger Jesuits, not being well understood by the ordinary reader, is probably due the wide-spread fiction that there exist among the Jesuits various degrees of initiation like those of the Freemasons.
published anonymously, was primarily a "jeu d’esprit." But, as time went on, thanks partly to the bitterness of the Jesenian controversy, and partly to the pardonable indignation and retributions in deadly earnest of the 'victims themselves, the attack was understood much more seriously, and it is now quite commonly treated as if it were a protest of outraged virtue against a corruption which threatened all the men of William, the author of Sir Edmund Berry Godfrey, etc., or, again, the Gunpowder Plot, with the teaching and influence of the Jesuits. The weakness of the evidence on which such charges are based cannot be adequately illustrated here, but it may be pointed out that refutations have been published on the Jesuit side in such books as the "Jesuiten-Relief" of Duhr and the similar French work of Brun. Nor are there wanting independent writers (see, e.g., A. Marks, "Who Killed Sir Edmund Berry Godfrey?", London, 1900) who range themselves on the Jesuit side.

The much-abused casuistry of the Jesuits stands upon precisely the same footing as their alleged advocacy of tyrannicide. To begin with, they did not create this branch of theological study. The cardinal errors of the Jesuit casuistry were first laid down by the Cappuccinos and the Jesuit casuistry's real opponents have always been the austere Jesuits, and not Loyola himself. The casuistry of their contemporaries who were not Jesuits, and indeed against the moral teaching of the whole Catholic Church. The Jesuits have drawn the fire of opposing critics simply because their textbooks were the most widely appealed to and most commonly accepted. The Jesuits now or in the past have merely echoed the warnings given by the Istituuti casuistry of the whole Catholic Church, by its discrediting laxity. The famous "Problematis" of the Society is based upon a very simple maxim, "le plus bête n'est obligé," which in ordinary life is acted upon as the dictate of simple common sense (see the book "Quo ego", by "Pilatus" [Viktor Naumann], a non-Catholic writer, published in 1603 in answer to the attacks of von Hoovenbroek). So, again, with the Jesuits. A similar principle can be put aside, which, while in certain texts it may obviously bear a quite innocent meaning, has always been repudiated by the Society in its absolute and immoral significance. The Jesuits have also been copiously dealt with by Duhr, Brun, and many other writers. No doubt much of the disfavour which attaches to the casuistry of the Jesuits is due to the "Itineris provinciales" of Pascal. The Jesuit synods in these brilliant contrivances dealt a heavier blow than he foresaw or probably intended. He himself knew enough of the Jesuits to be aware that a sort of cynical indifference to right and wrong could not be laid to their charge. He also knew that the cultured audience whom he first addressed were equally far from believing that the religious brethren of St. François Régis, and such men as M. de Brébeuf, C. Lalemant, J. Jogues, J. Marquette, etc., between 1633 and 1655 among the Great Lakes Indians. For all this the impartial testimony of F. Parkman in his "Jesuits in North America," London, 1885, is even more remarkable for the "reductions" established among the Indians of the coureurs de bois. But does the splendour which once characterized this noble race fall to make itself felt even in such lively pages as those of R. B. Cunninghame Graham's "A Vanished Arcadia," London, 1901. But there is hardly any part of the earth's surface for which the Jesuit missionaries have not laboured. Five Fathers went to the Congo at the instance of the king of Portugal as
early as 1547. Five sailed for Brazil in 1549, where the labors of Father Joseph Anchieta in particular were soon to make him known as the apostle of all the New World. In 1552, ten Jesuits started for Abyssinia, founding a mission where some wonderful story is told in a long series of volumes now being published at the expense of the Italian government, by Motto. In the same year, 1558, three other priests began to labor among the Káfers of South Africa, and a couple of years later two others reached Memphis in Upper Egypt. In 1566 a great missionary work was inaugurated by the arrival of Peruvian Jesuits in Pera. Before fifty years had expired, the Peruvian Jesuits were divided into two separate provinces; while a hardly less thriving centre had been established in Mexico, whence thirteen Jesuits sailed for the first time in 1572. In 1615, St. Peter Claver began his extraordinary apostolate among the Negro slaves of Carthagena (see M. D. Petre, Aethiopum Seruus, London, 1895). A mission was sent to the Tartars of the Black Sea region in 1663. In 1684 A. de Rhodes opened up a new field of labour in Tonking, and in the same year Antonio de Andrade reached the heart of Tibet. But the record is endless. Of course, many regions remained a Church where, before long numbered over 300,000 converts had been founded by Xavier in Japan, but between 1600 and 1840 every missionary was killed or deported, and China was reduced to a confraternity by fire and sword (see M. Steichen, The Christian Diaspora, Tokyo, 1908). In most other countries, despite contradictions, and in particular the domestic troubles originated by the controversy over the lawfulness of the 'Chinese rites,' there has been a remarkably vigorous growth until the suppression of the Society in 1773.

The third special work of the Order was the education of youth; and here also, as soon as the Jesuits began to set up colleges of their own, their success was remarkable. A more or less uniform method and arrangement of studies was contemplated from the start. But the rough draught de Studiis Societatis Jesu, outlined by Jerome Nadal between 1548 and 1552, reached its full development only after much discussion and experiment in the Instituto et Universitatis S. J. of 1561. (Important collections of documents relating to the Society's educational methods and aims may be found in the four volumes contributed by G. M. Fischer to the Monumenta Germaniae Pede-
gagogica, 1887 ff., and in the two volumes of Monumenta Pædagogica published by the Madrid Fathers, Madrid, 1901.) Perhaps no more convincing tribute can be founded to the educational success of the Jesuits than the fact that in 1606 Bacon in England could write of them as follows:

"Education: which excellent part of ancient discipline hath been in some sort revived of late times by the colleges of the Jesuits: of whom, although in regard of their superstition I may say Quo melius, so inferior, yet in regard of this, and some other points concerning human learning and moral manners, I may say, as Aguinaldo said to his enemy Pharnabazus, Tuies quos sis, ultimum munere ostendis." (Advancement of Learning, bk. 1.)

In 1694 the Collegio Romano had 2108 students. At Rouen the attendance averaged 2000. For a great part of the 17th cent., the scholars at the college of Louis le Grand, Paris, varied from 1800 to 2900. In 1616 the Sacred Congregation of cards seminaries under its direction. In 1700 the number of collegiate and university establishments had risen to 789. Schwiererath computes that, when the French Revolution came in 1791, there was, at the height of its educational fame, the number of students attending its classes at any one time must have amounted to a total of 300,000. As regards the growth of the Jesuit body itself we may note that, while at the death of St. Ignatius in 1556 there were 12 provinces and 1000 members of the Order all told, these numbers at the death of Laynez, the second General, nine years later, had increased to 18 provinces and 3500 Jesuits. In 1615, at the death of Acquaviva, the fifth General, there were 32 provinces and 18,112 members, and in 1770 just before the suppression 42 provinces and 23,000 members. No Jesuit has ever been elected a cardinal, and comparatively few have been created cardinals or raised to higher dignities in the Church, but it must be remembered that all professed Fathers take a vow to accept no ecclesiastical dignity, and from this vow they can be released only by the express command of the Holy See.

The Jesuit Order, in virtue of its monarchical government, its centralization, and its special vow of obedience to the pope, has always inclined to an extreme ultramontanism. This has constantly brought it into conflict with nationalistic movements, while, on the other hand, its independence of episcopal control and its claims, whether justified or not, to figure as a corps d'élite, have made the secular clergy somewhat lukewarm in its defence. Add to this the bitter attacks and calumnies with its avowed enemies, the free-thinkers, Evangelicals, Jansenists, etc., and you have probably sufficient explanation, even apart from the prayer of the founder that persecution should be their lot, for the numerous deces of banishment of which they have been the subject. In the latter half of the 18th cent. the spread of infidelity and corruption of morals, especially in France, together with the political intrigues of the ministers of the Bourbon kings, led to a combination of attack upon the very existence of the Society. Pretenses were naturally found in the inducements or alleged misconduct of some individual members of the Order—the bankruptcy of Father A. Lavalette in certain commercial transactions connected with the missions being the most serious of these. As a result the Jesuits were banished and their property was confiscated in Portugal (1759), France (1765), Spain and its dependencies (1775), and, finally, Naples (1787). A few years later the pressure brought to bear upon Pope Clement XIV was so great that he yielded to the storm, and in 1773 published abriefsuppression which had been under discussion for some years. Strangely enough, in White Russia the autocratic Empress Catherine would not allow the decrees of suppression to be promulgated, and a few Jesuits still held together. After the French Revolution, Pope Pius VII, approved their constitution in France and eventually, in 1814, restored the Society by the bull Sollicitudo omnium ecclesiarum. Since then the Order, though with many vicissitudes, has again established itself in all European countries, in N. and S. America, and in many of the old mission fields; it has resumed the work of education; and at present it numbers in all some 17,000 members.

LITURGICAL.—The literature relating to the Jesuits is vast, and for a relatively complete bibliography the reader must be referred to some such work as that of Father Max Heinrich, Die Orden und Kongregationen der katol. Kirche, Paderborn, 1898, 3 vols., and similar works on the Society of Jesus, in CE xiv. 81. The ten volumes of C. Sommervogel and A. de Backer, Bibliographie de la Compagnie de Jésus de Paris, 1800-1890, not only contain an enumeration of all the books and editions published by the Jesuits, but also, in vol. x, an elaborate classification of the colleges and other works; in the same series are the volumes of J. P. H. Merks, Der Jansenismus in den holländischen Missionsgesellschaften, 1901, which, besides a list of apologetic works written by Jesuits in defence of the Society in the Netherlands, contains a useful bibliography. Bibliographies compiled from mere or less authentic point of view may be found in Pp. VIII v. 729, and in C. Moxod and H. Bosch, J. Jesuiten, 1906, 2 vols., and similar works. The Jesuits published a number of important works, the most important of which is the series of Monuments Historiques Societatis Jesu, containing a very complete edition of the letters of St. Ignatius as also of documents emanating from nearly all the countries of the founder, notably St. Francis Xavier, Laynez, Blessed Peter Faber, St. Francis Borgia, etc. Another remarkable collection
is that of O. Brunnberg, "Petrus Convati et sola, Freiburg, 1566," of which six volumes have now appeared.

Many documents connected with the history of the Jesuits in France have been published by A. Carayon, Documents inédits concernant la Compagnie de Jésus, 23 vols., Poitiers, 1885-90, and by J. F. S. Prat, Les Histoires de nos Catholiques Forsfathers, 3 vols., 1874-77, as also The History of the Catholiques sans Frontières, 1875, and other works. Much original material concerning Scottish Jesuits may be found in W. J. T. Curran, The History of the Society of Jesus, 2 vols., London, 1888-90, and in Reminiscences of Scottish Catholic Jesuits, 4 vols., 1888, and of Scottish Catholic Jesuits, 3 vols., 1889. With regard to the foreign missions, collections of letters from Japan, China, and other countries are too numerous to mention in detail, but profusely may be given to the great American undertaking under the auspices of the Jesuits, The Jesuit Relations and Ancient Documents, 73 vols., Cleveland, 1886-1901, and to the Lettres et documents inédits, of which the first edition, prepared by C. Le Goben, was published in Paris, 1865.

Of general histories of the Jesuits the best known is that of G. Chanut, Histoire des missions, de l'ordre de Jésus, 8 vols., 1851, but it has been translated into various languages, and an abridgment has been published in English by C. C. Gall, The Jesuit Missionary, 2 vols., London, 1860, and in the Geistliche Bibliothek, 20 vols., Vienna, 1870.

is important to notice, what must be more fully considered later in this article in relation to the founder of Christianity, that the moral and spiritual history of each of the three personal founders threw peculiar light upon the field of thought, so that his followers derived, as it were, their needs through that history.

(2) The special function or office of the founder.

Here three ideas must be recognized as essential. The founder is imperial, exemplar, or prophet, or redeemer, or as a combination of two or three of these. Yet, when the central idea of each of these functions is thoroughly conceived, it will be found to involve the others. Buddhism in its first stages knew its founder primarily as exemplar of the process of enlightenment. His teaching function arose from and was based upon his personal experiences of salvation. But later Buddhism showed powerful tendencies to enlarge his authority into that of a prophet and his experience into that of a redeemer. The founder of Islam was conceived of primarily as a prophet, inspired with definite and direct messages from God. As in Buddhism the prophetic, so here the exemplary, function of the founder was obscured. And yet, of course, the personal character and condition of the man his society and the ethical of his religion. The 'imitation' of Muhammad is confined to the 'copying of external acts' (D. R. Macdonald, Aspects of Islam, New York, 1911, p. 20), but the influence of his spirit and personal life has gone deeper. Christianity views Jesus Christ as the perfect exemplar of the character of God the Father, as the full revealer of religious truth, and also as the redeemer, whose personal experience, interpreted as His 'work', changed the moral relations of God and men.

(3) The person of the founder.

Though the Buddha himself, according to legend, assumed an amnestic position as to the Absolute Being, and was wholly concerned with a system of ethical culture for the attainment of deliverance, his followers in later generations came to think of him as an incarnation of the Supreme Spirit. So also some of the followers of Muhammad gradually worked out a doctrine of his person resembling the Arian doctrine of Christ, though this has no basis in Muhammad's own literature. Christianity from the first viewed its founder as a superhuman being, as one who had become incarnate, who as such an incarnate, divine personality exercised the whole historical function, as the redeemer, distinctly and with ideal completeness, and who met the fundamental needs of man for moral harmony with God, for victory over all evil, and for eternal life.

3. The field of practical decision.

It is obvious from this brief comparison that in certain matters a modified parallelism exists between the three great 'founded' religions. Hence their founders are often compared with one another or named together in current literature. And one result of this modern spirit is the energetic challenge as to why one should be accepted as final in preference to the others; e.g., J. Estlin Carpenter, after comparing the 'exaltation' of Gautama with that of Jesus, addresses Christendom thus: 'In each case the belief is justified by an appeal to experience. The one to be rejected, the other to be accepted?* (in Jesus or Christ? London, 1909, p. 247). There can be no doubt that each of these great personalities has proved to be a most powerful theme in the history of man; each has contributed rich material to man's religious experience; each has exercised profound influence upon the ethical conceptions and the civilization of great masses of humanity; each personality has become more or less directly bound up with that interpretation of God and the world which on the whole is the distinguishing property of the religion and the form of civilization associated with his name. It is not the aim of this article to carry out the comparison any further. That comparison is being carried out in another way by the scientific theories of religion and ethics, and indeed by every scientific contribution to the history and science of religion. For every serious and extensive study of any religion raises the question of its historical and final religion is necessary or possible, and, if so, what that final religion may be. But the comparison is being carried out in another and still more potent way, to which indeed each scientific piece of work is subordinate, on every mission field where the heralds of the personal founders confront one another. There each system faces what is after all the final test of the result; a movement of adequacy to meet the deepest needs of the human soul.

II. THE CONSCIOUSNESS OF JESUS CHRIST.

1. The rise of the problem.

The investigation of the life of Christ in the 19th cent. and the whole trend of modern thought have combined to set in a new light the problem of His Person. One of the most vital elements in that problem is stated in the phrase 'the epoch-making Leben Jesu' of Strauss. Even as the epoch-making Leben Jesu of Strauss began to be considered, the subject came to view. The change appeared at once on the orthodox side in Neander's Leben Jesu (1837). It was signalized in the successive editions of Ullmann's Die Sündenkindheit Jesu (Eng. tr., The Sinlessness of Jesus). Strauss's method of attack compelled men to think more seriously than he did himself of that which lay behind all the separate utterances of Jesus, namely that consciousness of Himself from which His whole attitude, action, purpose, and speech arose, on which, as on the absolutism of His Person, we have the first earnest dealing with His consciousness and its historical development. Parallel with the development of the sense of history and contributing to the same result was the growth of thought which sprang mainly from Schleiermacher. His very definition of religion as 'the feeling of dependence' and his penetrating analysis of the religious consciousness compelled men to apply to the founders of faith the same criteria of reality which they were learning to apply to the whole range of religions inquiry. From the days of Strauss and Neander the volume of inquiry grew steadily. Modern, as it ever did, on the insights of GUSS (Christi Person und Werk, vol. 1) found this to be the central question: 'What was the form and content and history of the self-consciousness of Jesus? In English the first use of the phrase is to be found, perhaps, in John Young's The Christ of History (1857), in which he says 'His Own Idea of His Pable Life' (bk. ii. pt. 1) and 'The Forms of His Consciousness' (bk. iii. pt. ii.). In H. P. Liidon's Hampton Lectures, The Divinity of our Lord, we find the Fourth Lecture entitled 'Our Lord's Divinity as witnessed by His Consciousness.' But it was only gradually that the subject won a large place in the theology of the English-speaking world, and that mainly through the writings of three men, A. R. Bruce, the translator of the Vulgate, The Humiliation of Christ (Lect. vi.), The Kingdom of God, A. M. Fairbam (Studies in the Life of Christ, The Place of Christ in Modern Theology), and C. Gore (Essay in Luzi nuclei, the Incarnation of the Son of God, and Dissertations). It is important to remember that for a brief period strong objections were felt to the investigation in question by the church at large. For example, W. Sanday in his article on Jesus Christ' (Hastings' DB II. 603) said: 'On
the Christian hypothesis, frankly held, any such grasp [i.e., the consciousness to be investigated] would seem to be excluded, and the attempt to reach it could hardly be made without irreverence.

The difference between that position and the bold speculations on this very topic by the same author in the articles, "Ages Annihilated: Moderns mark the increasing range, confidence, and reverent courage with which this absolutely unique historical problem has been explored by English and American theologians during the last quarter of a century.

I. THE NATURE OF THE PROBLEM. — There is still much uncertainty among those who discuss this subject as to the exact nature of the question before them. And the uncertainty leads to such haste in reaching a hasty or determining its dogmatic conclusions in advance.

1. The Christian Hypothesis. — If Jesus is conceived of primarily and definitely as a prophet or as an abnormal religious enthusiast, or even as the sanest and deepest religious spirit in human history, the question of His consciousness will be classed wholly with the study of religious geniuses, or, at most, of inspired messengers of God. And then the phenomena of O.T. prophecy, of religious devotion and insight among religious leaders of various races and ages, will be relevant to the issue. But Jesus had a purpose worth while, and what with what inheritance the normal human mind and will did attain such moral and spiritual prominence as His will be the main matter of investigation. On this point there is here concerned with something more, something quite unique and raised beyond the level even of the highest religious experience known to history. The NT and the vast mass of Christian believers, as well as the whole of theology, present us with a new idea, namely that of a superhuman consciousness which has entered for definite moral ends into the conditions of human experience. It asserts that Jesus has a unique type of personality. It is at once human because it is conscious will, and yet more than human because it has invaded the course of human life from a realm of consciousness being and human mind, and clung. The neglect to take this matter seriously has led to such amazing confusions of thought and fact as infest, for example, so brilliant a work as that of Wene (Die Geschichte Christi, etc.) and that of Ritschl (Christ’s consciousness and Reconciliation, Eng. tr., p. 386).

2. The word "consciousness". — It is in the interests of sound thinking about this unique history consciousness that modern science and philosophy have combined to clear and also vastly to extend the use of that word "consciousness.

We recognize now everywhere that there are various grades of consciousness in all evolution, and, between all of which there are definite units as well as diversities. Thus so calm and careful a thinker as C. A. Strong (Why the Mind has a Body, New York, 1898) says that "the origin of consciousness can be explained, if at all, only out of antecedent realities of the same order" (p. 386), and, again, "consciousness has arisen out of simpler spiritual facts." No one except a materialist believes that this world contains all the forms of conscious beings that exist. There may be many kinds and grades of consciousness, but all of them are out of consciousness having a natural cause, being out of existence, many below the human. Nor would it be quite "modern" to hold dogmatically that the human consciousness is shut off from contact with all forms of consciousness. But we will remove to any one time upon this earth. Now the Christian hypothesis hitherto been that, in Jesus Christ, a superhuman consciousness will have taken its place in history, manifesting throughout all its range of expression at once its alliance with and its difference from the ordinary type of human consciousness. Upon that difference in unity the whole peculiar religious value of the history of Jesus Christ has been made to rest from the Apostolic days down to the world-wide promulgation of the Christian message in our own day.

3. Elements involved in the investigation. — The investigation of the Christian consciousness of the historic Christ must contain difficulties which are peculiar to that subject. As to its modes of action, its development, its content, its relation to the divine purpose of redemption, the inner meaning of human life and the destiny of the race, such a consciousness must present unique features to the student of history and religion. These peculiarities must be examined in the study of the relations with the men about Him, their estimate of Him, their appreciation and their memory of His words and deeds. If the natural and inevitable confusion of mind is reflected in their records, if these records show that their estimate of Him varied and grew, and that their memory of His earlier words and deeds became coloured by the fuller knowledge of later days—all this will add to the perplexity even of that historian who believes most profoundly that in Jesus Christ a more than human self manifested its consciousness, and who at the same time seeks accuracy of historical statement, and order in the psychological analysis of experience. And here we are facing the supreme problem. If Christ was divine and His history on earth was and is essential to the perfecting of mankind, then His consciousness in its self-manifestations was and is one of the basic facts of human existence. And consciousness has this wonderful property, that in it knowledge and being are not distinct and separate. It is not dependent on my thought, nor may thought on my existence. The self-conscious thing exists only in being conscious and is conscious only in existing. Hence we do not merely argue from the words and acts of a human consciousness to a human being being or above them. In those words and acts the self is revealed. The conscious will is the ultimate fact, the real and immortal nature of it.

II. FACTORS IN THE SOLUTION OF THE PROBLEM. — A. The Religion of Jesus. — Any study of the consciousness of Jesus must begin with the qualities of His own religious life. Jesus must take note both (1) of what He inherited and retained in mature life from His Jewish ancestry and from the religious life of His environment, and (2) of what His modern science and philosophy have combined to clear and also vastly to extend the use of that word "consciousness.

We recognize now everywhere that there are various grades of consciousness in all evolution, and, between all of which there are definite units as well as diversities. Thus so calm and careful a thinker as C. A. Strong (Why the Mind has a Body, New York, 1898) says that "the origin of consciousness can be explained, if at all, only out of antecedent realities of the same order" (p. 386), and, again, "consciousness has arisen out of simpler spiritual facts." No one except a materialist believes that this world contains all the forms of conscious beings that exist. There may be many kinds and grades of consciousness, but all of them are out of existence, many below the human. Nor would it be quite "modern" to hold dogmatically that the human consciousness is shut off from contact with all forms of consciousness. But we will remove to any one time upon this earth. Now the Christian hypothesis hitherto been that, in Jesus Christ, a superhuman consciousness will have taken its place in history, manifesting throughout all its range of expression at once its alliance with and its difference from the ordinary type of human consciousness. Upon that difference in unity the whole peculiar religious value of the history of Jesus Christ has been made to rest from the Apostolic days down to the world-wide promulgation of the Christian message in our own day.

3. Elements involved in the investigation. — The investigation of the Christian consciousness of the historic Christ must contain difficulties which are peculiar to that subject. As to its modes of action, its development, its content, its relation to the divine purpose of redemption, the inner meaning of human life and the destiny of the race, such a consciousness must present unique features to the student of history and religion. These peculiarities must be examined in the study of the relations with the men about Him, their estimate of Him, their appreciation and their memory of His words and deeds. If the natural and inevitable confusion of mind is reflected in their records, if these records show that their estimate of Him varied and grew, and that their memory of His earlier words and deeds became coloured by the fuller knowledge of later days—all this will add to the perplexity even of that historian who believes most profoundly that in Jesus Christ a more than human self manifested its consciousness, and who at the same time seeks accuracy of historical statement, and order in the psychological analysis of experience. And here we are facing the supreme problem. If Christ was divine and His history on earth was and is essential to the perfecting of mankind, then His consciousness in its self-manifestations was and is one of the basic facts of human existence. And consciousness has this wonderful property, that in it knowledge and being are not distinct and separate. It is not dependent on my thought, nor may thought on my existence. The self-conscious thing exists only in being conscious and is conscious only in existing. Hence we do not merely argue from the words and acts of a human consciousness to a human being being or above them. In those words and acts the self is revealed. The conscious will is the ultimate fact, the real and immortal nature of it.
the great mass of the people. The relation of Israel to God and the purpose of God with Israel remained as the supreme subjects of thought and discussion in the synagogue. Jesus heard the Law read and expounded from tender years. To the Temple He was taken in due course for the performance of His inherited duties there. His own reading of the Scriptures must have been deep, since His teaching is supported by quotations and illuminated by fresh interpretations of nearly all parts of the OT, and especially of the Psalms, Isaiah, and Daniel. Important references to the Pentateuch occur, which He used and cited without quotation as to authorship or historicity. For Him the OT remained the true revelation of God Himself. God is the creator and sustainer of nature and of man, the ruler of history. God is the Father of the people (Mt 7:10, Mt 16:27) and they are 'sons of the kingdom' (Mt 8:1). He has promulgated His law of righteousness through Moses (Mt 7:10, 12:34), and has announced through the prophets the day of the Messiah when His kingdom shall be established in the earth (Mt 5:17, Lk 4:16-21). These things He had been taught, and He held them true. And He takes for granted that His hearers know and believe them. But, as Baedeker has pointed out (Das Selbstbewusstsein Jesu, p. 72 ff., 2nd ed., p. 54 ff.), there was felt at that time a deep pathetic unness in regard to the Temple worship, and at the same time a strained and passionate concentration upon the application of the law to the desolate and dried-up conditions of the day. God in His transcendental holiness seemed to have vanished from the sin-sainted land. The voice of prophecy had long ceased, the Temple had been repeatedly defiled by Gentile conquerors, and the kingdom was under foreign rule. The sense of fellowship with Jahweh was broken. Yet His Law and promise were there in written form. In three directions relief was sought: first, by setting up the internese between God and man with heavenly hierarchies; second, by the formation of quietist circles like the Essenes, who sought, away from the clash of the world's turmoil, in the spirit of the ancient fellowship with Jahweh; and third, by the cherishing of apocalyptic dreams, in which the Day of the Lord was seen as the near and sudden act of God breaking in upon the course of history. Not with earthly armies but by the power of the word of God, many now look for the appearing of that hour when the ancient promises would be fulfilled, and Israel once more vindicated, justified, as the chosen and supreme people of a mixed atmosphere at once of stubborn faith and of spiritual bitterness, of national humiliation and legalistic pride, of religious fervour and moral blindness, of political defeat and apocalyptic hope, Jesus grew up. In some measure all these elements can be found in the men of His day, and in Him. But in Him appear now and distinctive characteristics.  

2. Elements in the religious consciousness of Jesus. Through what processes of experience and thought His youth and early manhood passed, we do not know. When He stands before us in the Gospels, He has already attained fullness. His self-consciousness is fully developed. All attempts to prove that, after His baptism He obviously changed His mind, or received entirely new revelations in the first years of His ministry, as yet failed to win general consent. The utmost that has been done is to mark out more clearly the manner in which His central self-consciousness adapted itself to the conditions when He was unfolded in the lives of those with whom He came in contact. His wit was indeed conditioned by the wiles of others in its progressive operation, and His method of dealing with them developed itself appropriately from stage to stage. His capacity to do as of old did appear as these stages were passed through. But from first to last His own religious consciousness remained consistent and unchanged, and it implies from the beginning the fundamental elements of His work. Of His religious consciousness we shall here name four principal elements.  

(a) Secret of Divine favour. He found the secret of fellowship with God in the condition of the heart. At one stroke He lays aside the burdens of the external law and their elaboration by tradition. Even the most righteous, as an act and gift of grace at the advent of the Kingdom, is deeply modified. Righteousness before God, the 'blessedness' of the divine fellowship, rests on what a man 'thinks', the 'inmost sources of thought and volition.' Out of the heart proceed all evil things (Mk 7:21). In His 'heart' a man may commit the vilest sin, and, there, before God, it is a completed deed (Mt 5:22). It is the pure in 'heart' that shall receive the vision of God at that day. This does not mean that the outer life has no significance. No one can insist more relentlessly upon full and literal obedience to the known will of God (Mt 15:9 and Lk 10:27). But, when applied in the parables of judgment against unfaithful lives are unmitigated. For Jesus, the supreme law is love to God and love to man (Lk 10:27). But, as love to man the circumstances of men, so love to God is conditioned by its object. It manifests itself in faith, which should know no bounds, in obedience at all costs, and in prayer, which should be holy and passionate, persistent, and unostentatious. These and other important features are not new when taken singly. Parallels can be found in many quarters. But in the teaching of Jesus they acquire unique significance from three facts: first, from their being unified in the thought of one mind, as they are nowhere else; second, from the exclusion of any alloy of formalism, worldliness, superstition, or mere ceremonialism; third, from the fact that they are expressed and find their unity and power in, His own religious experience and moral character. He is not dealing with the results of abstract speculation or with the current morals of His time. He is not attempting to justify a certain doctrine about God before men. He is describing what life is to Him, as He confronts man and walks with God. The Beatitudes, even though interpreted eschatologically, describe the life and character of His own work as a result, His own actual blessedness. Men feel as they read, they must have felt as they heard, these utterances that what He commanded and promised He Himself realized in His own soul.  

(6) Conception of God.—This applies in the fullest manner to that which is at the centre of the religious consciousness, its conception of God. And here it is not possible to exaggerate the change which Jesus wrought in human history. He assumed that God is holy and supreme. All man's awe of God, his sense of the majesty, wisdom, and purity of Jahweh of Israel is for Him not only justified but increased. But Jesus with one word transmuted the whole. He taught men to think of God as the Father. Not one attribute of reverence was cancelled, but a new meaning was, as it were, shot through the whole true picture of God, and has attributed a new relation to the others and all stood in a new light for man. It is true that, founding on Ex 4, Dt 32, 33, 34; Hos 11, the Jews spoke of God as the Father of Israel, and references to Him as Father among the individual Israelites are not unknown (see G. Dalmann, Die Welters Jesu, Leipzig, 1888, p. 150 ff.); yet Jesus did make the same central and supreme in an entirely new way, while avoiding, except on rare occasions, other Jewish titles for God. He nowhere
speaks of God as the Father of mankind: rather do men need to become His sons (Mt 5:6, Lk 6:20, cf. Mt. 23). The persons which He uses are 'my Father,' 'your Father,' 'thy Father,' and once 'our Father' (in the Lord's Prayer), and occasionally He speaks of 'the Father.' His use of the word is thus the profound bond up with it always presuppose faith and obedience in those addressed. But, for them, 'the Father' who is 'in heaven' is the God of nature (Mt 5:25, 6:25, 10:10), who cares for them with love (Mt 6:25, 32), who demands righteousness (Mt 5:26-30), hears prayer (Mt 6), forgives sin (Mt 6:12), and at last receives them to glory (Mt 18:19). There is then no lessening of awe or reverence before God. In the use of this name, He corresponds to that demand for 'inwardness' in the religious life of men. It is a searching, penetrating demand which He makes, that men shall treat God as their Father. His correlatives as His Father are: man, son, and child—Da'atHa'—the Kingdom of God. The very power as well as love, the righteousness as well as mercy, of the Father combine to set up a moral standard the most searching and the most severe of which the world has heard. 'Your righteousness shall exceed'—the most exacting system of law known to history. This teaching also came out of the inner conscience of God. As we shall see later, He knew Himself as Son of God in a unique Sonship. But its uniqueness neither removed it from analogy with that of believing men nor made the moral demand any lighter, but intensified it, made it more penetrating. His own Sonship raised questions of self-adaptation, of self-denial, demanded wisdom and grace, sympathetic insight and brooding patience, which caused it always to be faintly disagreeable as we see Him training the twelve, dealing with His foes, moving to the Cross. It was out of the disciples well as the joy, the surrender as well as the confidence, in His experience of being, that He made of the Sonship of God, which changed the face of God for the hearts of men. (c) The sinless conscience. We come to a point at which the religious consciousness of Jesus is paralleled, in that of man, always and everywhere in an incomparable manner. Whereas the whole religious history of the races assumes and proceeds from the sense of moral failure, that of Jesus is a characteristic and continuous sense of moral harmony with the will of the Father. Put in the negative form, this means 'the sinlessness of Jesus.' (d) The witness of His disciples ought not to be unheeded. These are evidences for the fact does not rest upon their inability to find and record definite moral or religious failures in His character. Their belief in the unseen of fact could arise only from two sources, viz. the impression made by His whole personal bearing, and the definite tasks which he undertook and accomplished. Hence we find that His sinlessness is not a deduction from, but a fundamental presupposition of, the essential Christian doctrine. It is as such referred to explicitly in a few passages (e.g., 2 Co 5:10, Ro 1:4, He 4:17-23, 1 P 2:2, 1 Jn 2:29). But they are not needed. The whole apostolic conception of Jesus and the Sonship and Lord was utterly inconsistent with any thought of His own guilt and need of pardon or redemption. The Fourth Gospel is more definite on this, as on other elements of His life. But even the words 'I have glorified thee,' 'I have manifested thy name' (Jn 17:4), do not surpass in their inner meaning the saying of Mt 11:28 (even when abbreviated by Harnack in his search for the original form (Mt 3:17), which is not paralleled in the New Testament). The pronouncements of Jn 13, in which the Son's sinlessness and sin is recognized, are paralleled in the pronouncements of Mt 16:13 in which the Son is sinless and sin is recognized, or in the pronouncements of Lk 15, in which He openly represents Himself as setting for and revealing God in that very conduct which severe and superficial moralists condemn. That chapter practically says, 'He that hath seen me hath seen the Father.' (5) It has been the custom to discover the quality of His moral consciousness from the way in which Jesus dealt with sin. He not only exposed and rebuked it, but He even went the length of pronouncing the forgiveness of sin upon individuals (Mt 9:3-5; Lk 7:36-37), and that in a manner so authoritative that He was accused of blasphemy. For He demands of all who would enter the Kingdom of God that they should pass through a great moral renewal (Mt 11:2-5, 18:10, Jn 3:12). But, on the other hand, He departs from the method of all other moral leaders in that He nowhere manifests the consciousness that He Himself had passed or needed to pass through such a change of mind and heart and faith. He seems never to have repented or become as a little child or pleaded for pardon. As Harnack in a powerful passage has asserted: 'There lie behind the period of the public ministry of Jesus no powerful crises and tumults, no break with his past.' He carried no 'scares of a frightful struggle' (Das Wesen des Christentums, p. 21). These facts, if we are to estimate their meaning aright, must be kept in close relation with what was said above about His doctrine of sin and the searching quality of His doctrine of God as Father. His penetrating and sensitive view of inward sin must have made some conscious flaw in His own moral character an infallible rule. But His recorded agonies have a very different source. (2) But arguments like these are subordinate to those central facts which recent discussions of the eschatological character of the Christian religion emphasize with fresh power. There can be no doubt now that Jesus, in calling Himself the Son of Man or the Man (see below), asserted that He was a superhuman being, and that as such He had appeared to act as King in the Kingdom of God, as the Suffering Servant (cf. Is 53) working redemption, and that He would Himself appear as Judge of the human world; these assertions were the result either of moral blindness or of a sinless consciousness. They were evidences either of a self-seeking spirit which His whole teaching ruthlessly represses or of a self-montisicacity compatible only with frankness, humility, and utter purity of soul. It seems impossible to picture any combination of ideas under which He should be admitted to be the foretold personal Revealer of the Father, of a sacrificial Redeemer of men, of the real Head (Principi) of the new moral order, and yet to have carried in His bosom the sense of personal guilt. The sense of a personally needed redemption and the claim to be an atoning Redeemer or the supreme Judge of mankind are not to be conceived of as nurtured sincerely, intelligently, and piously in the same heart. The kind of vocation on which Jesus entered at His baptism presupposes the consciousness that He had 'fulfilled all righteousness,' even including that rite prescribed by fresh prophetic authority (Mt 3:2). That He represented in His ministry was mirrored always in the placid, teeming depths of His own soul. (6) Objections to the doctrine of the perfect moral harmony of Jesus with the Father and His open will of the Father have been founded on certain incidents recorded in the Gospels: (e) On his relations with human beings, alleged disobedience in boyhood (Lk 2:46-47), alleged undisclosed intercourse, even a relationship with woman (Mt 15:20, John 8:44), alleged insouciance with disciples (Mt 21:15), alleged dissipation as to the destruction of sin (Mt 16:23-25), alleged passionlessness in the Temple (Mt 21:11, Lk 19:41), towards scribes and Pharisees, etc. (Mt 23); (f) On His relations with God, alleged insouciance with His own sin (Jn 8:44), alleged lack of harmony in Gethsemane (Mt 26:36-42), on the Cross (Mt 27:40), and in His famous treatment of the title 'good' (Mt 15:17).
natural culmination of a long history, whose deepest elements were to be found in the opening of His mind, by prayer, obedience, and faith, to the meaning of this immeasurable difference between a moral consciousness which could not doubt the inner presence of the Father, and His performance of the obligations of the Father, and His forgiveness of any sin, and the religious experience of all other souls. His very great love for man was born out of an active, sacrificial passion out of those crowded hours of unworldly communion with God, before His baptism.

This, then, is the religion of Jesus. He surpasses all others in His insistence upon man's dependence on the Father for all things, temporal and spiritual, raiment for the body and goodness for the will.

This penetrating insight and faith applied to Himself discovered His perfect Sonship, His qualification for the throne of all worlds, and the fitness of His which, though in such unity with ours, yet created and discovered those transcendental differences which have made the Christian consciousness possible.

JESUS AND THE KINGDOM OF GOD.—Even though the phrase "Kingdom of God" seldom occurs in the NT Epistles, and its use has been exaggerated in modern times, yet no true description of the consciousness of Jesus can fail to give it a place of fundamental importance. No less constant was the word "kingdom" than the word "law". The kingdom was the central idea of Jesus, and the consciousness of its unfoldings, its institutions, and its spiritual nature.

1. Jahweh as King.—The phrase was not unknown in Jewish circles. The OT is pervaded by the idea that Jahweh is to Israel what kings are to other peoples. When Saul was rejected, there was a sense, preserved in one tradition, of a new departure in religion as well as in political consciousness through that event. The successive dynasties of Saul, David, and Solomon, and the successive kings accepted or rejected by Yahweh. The prophets were His spokesmen, exercising at times more than kingly power, just because they represented, and interpreted the will of Israel's true King. In Daniel (see ch. 2), the conception of this Kingship comes to fullest expression, and that in close connexion with the perception that God, who is Creator and Lord of all, must control the history of all kingship and the day when He shall reign directly, alone and for ever. And the apocalypticists, to whom it seemed as if God's power were in abeyance, and the powers of evil in possession of the earth, pictured the day when suddenly the might of God would reveal its shattering power, when the present evil order would collapse and a new heaven and a new earth would vindicate the doubted righteousness of God. But Jesus lifted the phrase into new and rich significance.

2. Jesus and the imminence of the Kingdom.—(a) The exhortational problem. With the extraordinary conviction and energy, from the beginning of His public career, He affirmed the imminence of that Kingdom (Mk 10:33). Certain of His words, uttered at great crises of His work and experience, imply, and many think that He believed, that the literal and concrete fulfilment of apocalyptic hopes and pictures would take place immediately (Mt 10:34, Mk 8:38. The disciples of this subject in recent days bears upon the two subjects of form and time: What did Jesus really expect the Kingdom to be? How far was His language deliberately pictorial? In what sense did he think and measure did He expect to see it established in that generation? According to the extremists in one direction, Jesus thought of the Kingdom of God as an inward spiritual and spiritual consciousness of man's mind and heart in which, by communion with the Father, and the development of a holy character, he shall
fulfi the divine will, and carry out the divine spirit in all his social relations. This ideal is being progressively approached as the spiritual and teaching of Jesus win wider and deeper influence over the life of man. According to the extreme eschatologists, Jesus held the strict apocalyptic view that the end of the world would be overwhelmed by outward miraculous and portentous physical events as the instruments of the vindication of God. The Son of Man would appear in the clouds, the order of nature would be convulsed, and the whole world would be overwhelmed.

J. Weiss [Die Predigt Jesu vom Reich Gottes], Göttingen, 1906, p. 123 f. even attributes to Jesus a regard for the political side in the overthrow of kingship. History can also happen in another generation, might happen any day or hour, though on that point He would not commit Himself to definite prophecy. This is not the place for a detailed discussion of these hostile views. We must try in a brief statement to do justice to both elements in His sayings that we may grasp more fully His marvelously self-consciousness.

(b) The phrase ‘Kingdom of God’ (κράτος θεοῦ).—This phrase does not primarily refer to the organized community over which God reigns, but to an active, personal, effective reign of God over human life, displacing the present, active power of Satan, that is announced when the Kingdom of God has come upon us. Here Jesus announces the establishment of this Kingdom as an act of God. It is the Kingdom of heaven, probably called by Him (for whatever else the prophets and other evangelists may have had for avoiding it). Matthew can hardly have used the phrase so consistently unless it had fallen from the lips of Jesus because in heaven that Kingdom is not yet realized and remains until the forces come which are to establish it on earth (Mt 6:34). In acts of overwhelming power and glory it shall appear and be seen of all men, for then shall be fulfilled what was written in the prophets. Here Jesus uses language which echoes that of apocalyptic from Daniel to Enoch, though Daniel is the only one actually quoted by Him (Mt 14:10—Es 7:18). The historical Jesus has the Kingdom established on earth before heaven.

(c) Transformation of current conceptions.—The Jews of that day held certain eschatological ideas which Jesus did not openly attack, though the effective kingdom He preached was not in the light of history, not in the sense of the Jews. Here Jesus uses language which echoes that of apocalyptic from Daniel to Enoch, though Daniel is the only one actually quoted by Him. The historical Jesus has the Kingdom established on earth before heaven.

The Jews of that day held certain eschatological ideas which Jesus did not openly attack, though the effective kingdom He preached was not in the light of history, not in the sense of the Jews. Here Jesus uses language which echoes that of apocalyptic from Daniel to Enoch, though Daniel is the only one actually quoted by Him. The historical Jesus has the Kingdom established on earth before heaven.
but they were both present with apparently equal force and value to the consciousness of Jesus.

(b) Further, it is clear indeed that Jesus views the fulfillment of the Kingdom as an act of grace, a natural development of the universal reign of God's power and glory, most certain and most real. Yet He also sees that God's act is not arbitrary, undetermined as to form and date by an external agent; He was not a mere agent through whom the预定 event which is unrelated to man's conduct. On the contrary, Jesus views the coming of the Kingdom as conditioned by human historical events and acts.

(c) It is a central idea in the parables of growth that the "consummation of the age" (cf. W. C. Allen on Mt 13:28) presupposes the conditions of attainment. When the fruit is ripe, the hour of the sickle has come. The meaning of the "mustard seed" and the "bitter" parables cannot be reasonably confined to the contrast between the small beginning and the great result with J. Weiss, or to the "miraculous character of such occurrences" with W. H. Goetz. These must be understood to be directed to those in whom a predicted event which is unrelated to man's conduct.

(1) Jesus taught that the coming of the Kingdom must be preceded and conditioned by various events. Among these must be named the conquest of the powers of evil, on which He even speaks: "With power will I go forth with vengeance, - to consume them that rejoice in unrighteousness" (Isa. 11:4). The opposition of the Kingdom indicates the presence and activity of the forces of evil, which, however, are ultimately to be overcome and destroyed.

(2) It appears from the preceding parables that the coming of the Kingdom will be preceded and conditioned by various events. The coming of the Kingdom is not separate from the present world, but is manifested in the present world. The coming of the Kingdom is a process, a development, a progressive activity, not a sudden and complete change.

3. Conclusion.—For Jesus the Kingdom of God, which means His active, direct rule of human life, on earth as in heaven, is to be established by acts of God which Jesus does not mean to do with the physical universe, nor to effect it by the exercise of mere spiritual or supernatural power. The Kingdom of God is not a spiritual upon the literal interpretation of the text, but it is a reality that will be established in the world through the agency of Jesus' disciples. The Kingdom of God is not a spiritual upon the literal interpretation of the text, but it is a reality that will be established in the world through the agency of Jesus' disciples.
declare and even to enforce the ultimate laws of human existence, is an ineradicable element of the gospel story. It is no less evident in the Synoptics than in Mark's Gospel that the discussion of the Messiah's kingdom is to be found from being brought to an end. He exercises power or authority (διακονία) in His teaching (12), over unclean spirits (13), to forgive sins (14), and to send out His disciples (15). All great religious leaders have followed a nameless spell over their followers, and their allegiance even unto death. But the range and quality of His authority as represented in the Synoptics has peculiar elements.

2. Messiah-King.—He is dealing with the final fact—the King of God—through which human nature is to reach its consummation. Yet it is He who has received 'kingship' and the power of the kingdom (Lk 22:29; cf. Mt 15:29, Mk 9); or accept the tribute from others (Mt 22:28, where for 'kingdom' Mk 10:36, 'glory' the substance is the same). In His mind, it is that of His followers the sovereignty of Jahweh over Israel was directed towards a great consummation, with which the prophets were much concerned. The end to which they were looking forward is fulfilled in the fact of the presence of the Messiah in Himself (Mt 13:34). But the end must surpass the stages which lead to it; hence He does not hesitate to set His mission above all the glory of the OT, and He claimed as His predecessor. It would be enough to refer to the passages found in the document now known as Q which is emblazoned in the Gospels of Matthew and Luke. Is it not clear that the teachings of Jesus deeply impressed the minds of His disciples; e.g., 'more than' Jonah, or Solomon (Mt 12:40, Lk 11:33). The same idea is even more pronounced in the parables attributed to Him in Matthew 12:39: 'Something greater than the temple is here.' It is now almost universally admitted that Jesus knew Himself as the Messiah, that personal representative of Jahweh for whom Israel waited and for the signs of whose appearance were searched heaven and earth. But opinions still differ widely as to the conditions under which Jesus discovered His Messiahship, or interpreted the details of its task, and made it known to His disciples. The term does not occur in the OT as a personal name, but came to be used in Jewish thought of that One through whom they hoped for deliverance from the foreign yoke, and as the claim for supreme sovereignty for the Israel of Jahweh. That He could be an invincible king and 'laid up in Himself the ideal qualities of royalty' (cf. 2 S 7:13, Ps 72, etc.), that He was the Son of David, that He would usher in the Day of Jahweh, that He would be the Christ or Anointed One of Jahweh (Lk 23), the Holy One of God (Mk 1:1; cf. Mk 1:2, Lk 4)—all these ideas were found among the people who came in contact with Jesus. That the 'political' aspect was prominent is plain from the fact that, when He confessed Himself to be the 'Christ' as His trial, His enemies at once made that the basis of the accusation before Pilate that He claimed to be king, and that this title 'King of the Jews' was set upon His cross (see below). It is this fact that makes sufficient content for His avoidance of the title, His open acceptance of it from the disciples only after they had learned something of its transformation of His meaning. To have used that title premonitory earlier would have been, in the attitude of His day, to demeant completely His interpretation of prophecy and His own consciousness of His functions. To have dispensed with by itself would have also been to misrepresent Himself and His mission. For He knew Himself to be the One in whom prophecy terminated, who had come to fulfill the best hopes of Israel, to establish over all mankind, beginning at Jerusalem, the Kingdom of God. It was His supremely delicate task to claim the substance and disown the popular form of Messiahship. Hence what we find Him doing is to fulfill the sublime functions of that office without formal acknowledgment of His relation to it. The difficulty of His position is made plain by the misunderstandings of His disciples which are recorded with power to His disciples (30). All great religious leaders have followed a nameless spell over their followers, and their allegiance even unto death. But the range and quality of His authority as represented in the Synoptics has peculiar elements.

3. Elements in His will as Messiah.—When we come to His own concrete interpretation and application of the idea of Messiah by Jesus, we find ourselves in the presence of a will greater than that which any prophet or saint of the OT had desired or foreseen. Their partial glimpses into human need and divine fullness are united and then surpassed in that which He essays to accomplish. His functions at once surpass and elevate, gather and reorganize, the scattered spiritual principles of OT religion.

(a) Receiver of God.—He acts as the Receiver of God. The OT treasures of God's full knowledge of Jahweh in the day of His appearing to judge the nations. But the nature and medium of that knowledge had been left vague. Jesus in His great passage, Mt 11:25, asserts this as His function, to reveal the Father. There is undoubtedly a mystical element involved in this work of revelation, but no less clearly is there a natural and concrete element which is the security for the historical development of the doctrine. Thus His words about God throw welcome light upon His will and spirit, and He uses the definite and vivid name of Father to describe Him. Further, He does not shrink, as we have seen, from assuming that His own conduct is a revelation of the character and will of God (Lk 10). This is carried to the extreme in those passages in which, while interpreting the OT proclamations, He sets Himself in the place of Jahweh—e.g., Mt 11:23 = Is 52:3, Lk 4:14 = Is 61:1; Lk 7:22 = Mal 3. This whole matter is fully expounded in the Fourth Gospel, but we must begin with the teaching of Thomas and Philip (Jn 14-16).

(b) Power over demons.—The attitude of Jesus towards the world of evil spirits must be taken just as it is set forth, if we would understand the significance of His conquest of these powers. He has met and conquered the prince of demons (Mt 4:31-32), and has power over all lesser spirits of evil. He therefore accepts as true to fact the testimony of the evil spirits themselves (Mk 3:11), as well as the recognition of this superhuman power by the people who saw His works.

(c) Miracles.—The earlier rationalism strove to extrude from the story of Jesus all the miracles. They were regarded as inventions or legendarygrowths arising from the desire to illustrate His teaching or to add to the superhuman claims. The later rationalism draws a distinction between the miracles of healing for which analogies can be found elsewhere, and the 'natural miracles' such as multiplying the loaves, raising the dead, walking on the sea, etc. The former, or some of them, are retained par excellence, while the latter are rejected. The dilemma is a peculiar one. For, on the one hand, the same records preserve both classes of
works with the same simplicity, directness, and relevance; on the other hand, the supposed distinction is not grounded on objective science, but has been created for the express purpose of dealing with the gospel story.

Science has not yet drawn any such line as this imaginary one, and the theological writers who advocate it use only vague and conventional terms, but of the Gospel (cf. E. A. Abbott, The Kernel and the Husk, London, 1888; P. Gardner, Explorations Evangelica, d., 1899).

In that central passage of Q (Mt 11:27, Lk 7:28) Jesus appears as the King of glory, and the raising of the dead as work which He performed. His consciousness held Him in a relation to natural processes above that of other men. And this is necessary to the unity of that consciousness; it concerns us with the general trend of the operations in the whole round of its life presents a consistent unity.

For Jesus the distinction above referred to did not exist. He was conscious of power to direct the forces of nature. He was to reveal God, to announce the eternal conditions of bliss or woe, and to conquer Satan, to forgive sins, to judge the race, and to rise from the dead. (d) Lawyer.—While He did not have the power to fulfill the Law and the prophets (Mt 5:17), He yet appears as Himself the lawyer of the Kingdom. The Sermon on the Mount reflects this consciousness of supreme authority in the moral and religious life. Here He speaks in criticism of the holiest ethical code of antiquity, much of which He would have to be denounced by God through Moses. But, in passing behind those prescriptions to reveal the inner principles of human character, He deliberately and repeatedly uses the form 'I say unto you,' as if He spoke, as no prophet spoke, in His own name and authority. What appears formally in that phrase, is, in substance, the expression of His teaching.

He is everywhere laying down the laws of eternal righteousness for the citizens of the Kingdom of God. (e) Administrator of law.—He not only brought law to those who might not know its existence by its operation in their lives. It is significant that Judaism had not attained to the view that the Messiah would act as Judge (though that office is assigned to 'the Son of man' in the Shema') and teacher of the Law, and the more so, as the matter of forgiveness of sins was inevitably reserved for God Himself. Even if they could have conceived of such a judge-ship, the scrutiny of conduct and the award of appropriate rewards and punishments would have been the prerogative of God. To a representative, the question would still remain, 'Who can forgive sins but one, even God?' (Mk 2:7). But Jesus not only asserted that He would act as Judge of mankind, but by the operation of His life the whole world saw that the prerogative of forgiving sin (cf. C. W. Votaw, art. 'Sermon on the Mount' in HDB, vol. i, p. 30).

This is Messianism of a type which men had not dared to ascribe to any personal being, save in the special instance of the idea was transferred, and even then the Messiah's death was looked on as a dark and mysterious fate which He shared with His people. But with Jesus a new view has taken hold of history, viz., that His death is to be regarded as the means whereby salvation, a weapon of the divine Kingship. Whether He contemplated His death from the beginning of His ministry is much in dispute. Certain passages would seem to show that the idea of the death was in His mind from the time of the baptism. The words which He heard at the baptism, 'Thou art my Son, the beloved, in whom I am well pleased' (Mk 1:11; cf. Lk 3:22), contain phrases from Ps 2:7 and 4:4, from which it is clear that He had in His mind the Isaiahic picture of the Servant of Jehovah, and that He interpreted His life and the events of His ministry as fulfilling this prophecy. It is significant that the story of the Temptation shows that renunciation was from the first an essential feature of that mission. The sayings about persecution (Mt 5:10-11, Lk 6:22-23, and the like (cf. Mk 6:10, Lk 4:4, Mt 13:39). Indicating He expected relentless opposition which He could not avoid and others would not abate. Hence the saying about the Brdigeom was not of keeping with His general outlook at that early period (Mt 3:9). Moreover, when He does speak more definitely of His death, He does not treat it as a new factor or as a surprise. It is the complete fulfillment of that which was clearly to be the means of His victory over the world (Mk 10:22-23).

From these passages we learn: (d) That His death was to be inflicted, and consummated His rejection by Israel; (f) that it was also the will of His Father (Mk 14:36); (g) that He looked on it in the light of Is 53, and therefore could call it a 'ransom for many'; (Mk 10:45; Ps 22:22, Ecclus. 53:29), and as the price for saving a Man who is supreme in authority over the Kingdom; He would suffer as Messiah not merely with, but, for Himself; (h) that He deliberately and solemnly set forth as the last supper as a means of redemption, as the ratifying of new relations between God and man ('blood of the covenant') (Mt 26:26-30, 28:6), as a means of creating a new order and as a means of bringing death with peculiar agony of soul, but ensured its accomplishment, its outer shame and inner horror, with steadfast will as the sacrifice without which He could not establish the Kingdom of God of the many.

(f) The expectation of death.—This is not the place to discuss either the theory of the Attonement or the detailed and successive steps through which His consciousness passed. Suffice it on the latter point to say that the phenomena of the Gospels are based on those facts. (1) A great mind can hold a great concept in view and see its general outlines without allowing itself to be prematurely concerned with the particular details of the planned work of the Redeemer, and yet hold off the agony of a coming sorrow. The solemnity which some people see in the earlier days of His ministry is a witness not to His ignorance that only death can bring salvation for the world, but to the greatness and soundness, amounting in His case to majesty, of self-direction, self-estimate, and self-control. To say that He could not have preserved a calm composure in view of that event is to belittle Him absurdly, below the standard of many brave men and women. 'For the joy that was set before him he endured' is not a psychological blank, but the expression of a great idea. (2) Much must be allowed for His 'patience' method. Not only did His task unfold itself to His own mind in successive steps, from great principles in the beginning to very practical details, but the mind of the world was already formed and firmly held when He entered on His Messianic functions, but He had also to communicate these principles and their practical issues in like (but not always parallel) steps to His disciples. The agreement of salvation, a weapon of the divine Kingship. Whether He contemplated His death from the beginning of His ministry is much in dispute. Certain passages would seem to show that the idea of the death was in His mind from the time of the baptism. The words which He heard at the baptism, 'Thou art my Son, the beloved, in whom I am well pleased' (Mk 1:11; cf. Lk 3:22), contain phrases from Ps 2:7 and 4:4, from which it is clear that He had in His mind the Isaiahic picture of the Servant of Jehovah, and that He interpreted His life and the events of His ministry as fulfilling this prophecy. It is significant that the story of the Temptation shows that renunciation was from the first an essential feature of that mission. The sayings about persecution (Mt 5:10-11, Lk 6:22-23, and the like (cf. Mk 6:10, Lk 4:4, Mt 13:39). Indicating He expected relentless opposition which He could not avoid and others would not abate. Hence the saying about the Bridegroom was not of keeping with His general outlook at that early period (Mt 3:9). Moreover, when He does speak more definitely of His death, He does not treat it as a new factor or as a surprise. It is the complete fulfillment of that which was clearly to be the means of His victory over the world (Mk 10:22-23).

From these passages we learn: (d) That His death was to be inflicted, and consummated His rejection by Israel; (f) that it was also the will of His Father (Mk 14:36); (g) that He looked on it in the light of Is 53, and therefore could call it a 'ransom for many'; (Mk 10:45; Ps 22:22, Ecclus. 53:29), and as the price for saving a Man who is supreme in authority over the Kingdom; He would suffer as Messiah not merely with, but, for Himself; (h) that He deliberately and solemnly set forth as the last supper as a means of redemption, as the ratifying of new relations between God and man ('blood of the covenant') (Mt 26:26-30, 28:6), as a means of creating a new order and as a means of bringing death with peculiar agony of soul, but ensured its accomplishment, its outer shame and inner horror, with steadfast will as the sacrifice without which He could not establish the Kingdom of God of the many.

(f) The expectation of death.—This is not the place to discuss either the theory of the Attonement or the detailed and successive steps through which His consciousness passed. Suffice it on the latter point to say that the phenomena of the Gospels are based on those facts. (1) A great mind can hold a great concept in view and see its general outlines without allowing itself to be prematurely concerned with the particular details of the planned work of the Redeemer, and yet hold off the agony of a coming sorrow. The solemnity which some people see in the earlier days of His ministry is a witness not to His ignorance that only death can bring salvation for the world, but to the greatness and soundness, amounting in His case to majesty, of self-direction, self-estimate, and self-control. To say that He could not have preserved a calm composure in view of that event is to belittle Him absurdly, below the standard of many brave men and women. 'For the joy that was set before him he endured' is not a psychological blank, but the expression of a great idea. (2) Much must be allowed for His 'patience' method. Not only did His task unfold itself to His own mind in successive steps, from great principles in the beginning to very practical details, but the mind of the world was already formed and firmly held when He entered on His Messianic functions, but He had also to communicate these principles and their practical issues to the world.
justified His method. (a) Resurrection.—That Jesus spoke not only of His death, but also, though with significant reserve, of His resurrection, was at one time much questioned. But the frank acceptance of philological evidence and the facts of tradition sets that dispute at an end. He who announced both His death and His coming in the clouds of heaven as "Son of man" did foresee a resurrection of His people when His followers shall arise (with only verbal variation (Mk 8:31; [after three days!]) that He prophesied His resurrection as they afterwards record it, implying the idea of a physical resurrection. It may be taken as certain that Jesus carried in His consciousness something more than the human hope of a future life. It entered into His will, it modified the scope and method of His work, it qualified His whole conception both of the kingdom as a future event and of His relation to it as its Ruler. No doubt, as Strauss saw with characteristic clearness, this (continuous) certainty must have been as supernatural as the event itself (New Life of Jesus, Eng. tr., iv. 40). But that need not trouble us nowadays. We are manifestly in the presence of a consciousness which contains elements that must be frankly conceded to be superhuman. One of these is the idea of a bodily resurrection which includes the life after death. It is not at all inappropriate to find in the Fourth Gospel this aspect of eternal life radiating from its wonderful picture of "the life which is life indeed." Jesus had, it seems, told Martha, "I am the resurrection and the life, He utters in mystical phrase what is implied in the assertion that after death He will come in glory and receive the faithful to the rewards of the Kingdom.

4. His demands on the disciples.—It is a natural and constant of all these forces in His consciousness that they should issue in demands on His subjects. (a) He imposes on them the law of faith, a faith in Himself which He nowhere discriminates from faith in God. It is this attitude of trust that produces His miracles of healing and His words of forgiveness. (b) He imposes the law of complete surrender even to death. "For my sake." The varied Greek equivalents for "for my sake" may be taken back to a primitive form, but the freedom of translation and allusion means no loss to the frequency and the penetrating quality of the words of Jesus in this regard. This phrase, uttered in respect of separation and of death, throws light upon such an attitude as is now enjoined by the young ruler to sell his possessions and follow Jesus, and upon the completeness of that devotion which He demanded of the twelve. (c) He imposes a still more searching test—a test of character—when He speaks of those who are "worthy" of Him. To be worthy of Him (cf. Mt 10:43, and Harnack's searching analysis [Sayings of Jesus, pp. 86-90]) is tacitly assumed to prove that a man belongs to the kingdom of righteousness. The idea must not be treated superficially, as if any distinguished leader might determine who are worthy followers. It must be connected with the other ideas in which Jesus seems to be constantly reconceiving Himself to His disciples as an object of religious regard. The worthiness here referred to, must, therefore, be compared with the whole standard of personal worth which is presented in the Gospels. That standard has various phases and elements. It demands unlimited inward purity, unlimited outward consecration to the known will of God, love for God which absorbs the whole personality, and love for one's neighbour which is equivalent to the love of one's own life; it sets up the character of God as the object known, in His righteousness and His love, and it makes this supreme test of character; it lifts the whole problem from local, national, external tests to those which are universal, supreme, eternal, inevitable. It is in the heart of this system of ideas, even in the course of its unfolding, that the character, will, teaching, and very Person of Jesus emerge as an unexpected and not essential part of His teaching, though the question how the historical could thus be realized with the eternal, how one person in time could determine the moral standing of all others through their deliberate vacation of Him; that is a later question. The matter before us is one of fact. It would seem that, according to the earliest tradition, Jesus did without formality of claim, but certainly, on all sides of His self-expression, in word and act, draw to Himself the faith and affection of His disciples and present Himself to them as the standard of moral worth—in fact, became to them the object of a religious regard. The effort to prove that this worship of Christ arose only after His death and is reflected into the story of His ministry has been prolonged, painful, and futile. The fact is too deeply and subtly involved in the whole presentation of His personality, even in the Synoptic Gospels, to have been added and merely reflected from later and baseless enthusiasm. The vast majority of modern scholars—even including many life-long and historicist—have, in the so-called 'liberal' position—admit that there are here in the Gospels indubitable proofs that the consciousness of Jesus contained elements not invented by the apostles, though they are native to the human mind as known everywhere else in history. These elements, as we have surveyed them thus far, appeared in the kind of things He undertook to do among men, in the manner of His self-expression. They do not hint at personal workings of His mind, into the foundations of His character, into the substance of His purpose. Conceived by them as possessed by a man—a son of the race—and not by the apocryphal, the life native to the human mind as known everywhere else in history. These elements, as we have surveyed them thus far, appeared in the kind of things He undertook to do among men, in the manner of His self-expression. They do not hint at personal workings of His mind, into the foundations of His character, into the substance of His purpose. Conceived by them as possessed by a man—a son of the race—(c) D. The special titles.—I. The Son of God.—The NT contains material for tracing in part the remarkable development of the meaning of this great title. In tracing this critical method, we shall assume that N. Schmidt (ESB iv. 4690 ff., and The Prophet of Nazareth) occupies an impossible position when he maintains that Jesus never used the term "Son of God" and was never addressed by that title (ESB iv. 4761, where the last clause, strictly taken, may be true, but is irrelevant).

(a) Two terms.—The termiitas a quo in NT usage is reflected not only in the Synoptic Gospels, but even in the Fourth, where we find in certain passages what appears to have been the current Jewish usage of the phrase. Its history goes back to Ps 2:7, where the twin ideas of Messiahship and Sonship are brought together. The well-known Hebrew way of conceiving of Israel as God's Son by making the deliverance from Egypt the birthday of the people (Ex 4:22, Hos 11 etc.) was followed by an equally careful avoidance of the idea that any King of Israel was His offspring. The idea of Sonship expressed in Nathan's words (2 S 7:14) is quite evidently religious, but the language in which it is fashioned may have given rise to the language of Ps 2. In the Jewish period, outside the Gospels, no certain cases are found in which the Messiah is spoken of as 'Son of God'. But in the Gospels, though the evidence is confused, signs are not wanting that occasionally the phrase was employed as a honorable title for the anointed one; cf. Mk 3:35 (Mt 8:16), Mt 16:16 (wanting in Lk), Mt 27:54 (wanting in Mk 8:9, Lk 9:4), Mt 26:66 (different in Mk 14:63, Lk 22:63), Mt 27:54 (different in Lk 22:63, wanting in
of the Spirit of God by His works in Mt 12:28. Did He exclude that kind of revelation when He thought of the 'all things'? And further, if it is 'teaching' that is done by the 'yoke' (Mt 11:29), wherein does that differ from the 'burdens' which He deplores? If the paragraph is not to be interpreted in this setting, the best place to put it was mode of birth the Messiah. The terminus ad quem in the NT literature is seen in the Epistle to the Hebrews quite as clearly as in the Fourth Gospel. There the words only of a divine being (He 1:1) are put in the mouth of a son of God, a son of man who partook of human life by a sublime act of His own gracious will (2:14).

(6) The source of the later use.—That which came historically between these extremes and made possible the distinction between the Messiah and the Messiah as a son of God was the consciousness and self-manifestation of Jesus. As we have seen, He spoke of God as His Father with a note which differentiated His relationship from that of all other men. He avoided the most unavoidable phrase 'Our Father' except when He taught His disciples how they should pray. According to the Synoptics He rather took this Sonship as a fundamental fact, not to be discussed, while the Fourth Gospel represents it as an open claim which caused much controversy between Him and the Jewish theologians and nearly brought Him to death (Jn 5:17-28). And it is of the utmost significance that John in these two passages represents this claim to a unique and divine Sonship to have been made by His enemies simply in His person, emphasis upon the words 'My Father.' If it is true to fact, then certain passages in the Synoptics must have conveyed the same idea to His disciples. In the Synoptics reference must be made to Mt 11:27 (Mt 16:16-17 where He implies describes Himself as 'Son' as compared with the prophets and others, who are 'servants,' to Mt 17:5 (see Dalman, Worte Jesu, p. 231), and to Mt 18:20 (see Dalman, Worte Jesu, p. 231), where He implies.

(c) of a central passage.—One of the central passages is Mt 11:25-27, Lk 10:16 (from Q), concerning which it is clear: (i) that He reveals a consciousness and place in Sonship which is the basis of mutual knowledge between Himself and the 'Father'; (ii) that He recognizes that 'all things' have been 'delivered' unto Him in fullness. (iii) that all doctrine and knowledge is among the Jews wpa&IoG. But the father&JoG of Jesus springs immediately from God, not from men. It is very common to restrict this phrase to the matter and teaching (sonship) (so Harnack, Wellhausen, Denney). And yet, if we read the passage in its Matthean context, it would seem that 'all things' must include at least the Messianic functions to which He refers in His answer to John's messenger (Mt 11:23), and which ought to have brought to repentance the cities where His mighty works were done (Mt 11:20). To some it still seems jeane and which of His consciousness and the type of His Messiahship to restrict the 'all things' to His 'doctrine' (see Harnack's argument in Sayings of Jesus, p. 207 ff.). The revelation to which He refers at the beginning of these verses (He does mention the 38:17; but when they rejected His revelation of the Son of Man, etc.), that is, the consciousness that everything necessary for establishing the Kingdom of God was now committed to His will, and that, as we know, included far more than teachings.

(d) The answer of this Sonship.—The idea that the term 'Son of God' was only equivalent to the term 'Messiah' having been discarded, some scholars tried to prove that Jesus first conceived of His Messianic functions and that He was aware of His unique Sonship. That theory in turn seems to be doomed. It is clear that His Messiahship arose out of a religious background, but that religious background had no reality as such for Him, the Son, as the consciousness of 'the Father' in His relation to 'the Son.' But, if this filial relationship with God is the basis of His consciousness, and if it is unique and incomparable and in a secondary sense in a sense, where Jesus speaks of 'all things' had come fully into view. Then the true meaning of 'all things have been delivered unto me' would appear clearly as a reference to the functions of the Messiahship. It was only as their consciousness that everything necessary for establishing the Kingdom of God was now committed to His will, and that, as we know, included far more than teachings.

2. The Son of Man.—(a) Origin of the term.—Controversy has gathered around the use of the term 'Son of Man.' Until about twenty years ago, it was generally accepted as a historical fact that Jesus used the phrase, and infamy was spent upon discovering what He meant by it and why He seems to have preferred it to any other. (For full accounts of the variety of opinion see the summaries sub voce of S. R. Driver in HDB, and of N. Schmidt in EBL.) A sadden of some German scholars, especially Lietzmann, Wellhausen, and Fiebig, raised the question, on purely philological grounds, whether Jesus could have used the phrase at all. Assuming that He spoke Aramaic, it was pointed out that the Aramaic equivalent of 'a id&JoG tow 36&JoG ou&G could only be Barnab in Barnabiah, and that this was the ordinary Aramaic word for 'a man' in the indefinite sense, and had come to be used as an indefinite personal pronoun for 'one.' The conclusion was reached by some (Wellhausen, Schmidt, etc.) that a sheer misunderstanding of certain (authentic) sayings (especially Mt 10:42), where Jesus speaks of 'man,' had led early Greek translators from the Aramaic to use the unnatural Greek phrase, and that by a natural process this was extended to other
authentic passages, and also to some new ones which theological conceptions of His Person led them to attribute to Jesus. The discussion of this problem must therefore be left to the apologetic specialists. But a survey of the controversy yields the following conclusions:

(3) Much depends on the date ascribed to the first documents in which it occurs. Now the authors of Matthew and Luke found the maturation of this document in Q. In all probability Q gave them as many as 20 passages of the words of Jesus. If they independently got hold of Q in its final form, it was compiled before the Fall of Jerusalem, but it must be dated in the lifetime of many of the first disciples of Jesus. This fact will go far to prove that the language of the New Testament is much more akin to that of the Apocrypha in its independent material, which also must have existed before a.d. 70. The double process of misunderstanding the Aramaic phrase and using it for theological purposes, by which N. Schmitt accounts for its place in the Gospels, is then thrown back to the lifetime of the primary apostles. This seems incredible among people who speak both Aramaic and Greek. (3) Those who believe that Jesus used some word to mean an idea agree that He therein directed them to Da 7, and did so most distinctly at His trial (Mr 1439). It seems difficult to believe that He could not have made this reference to a form on the ground that, as He imparted, the title Son of Man 'did not, and for linguistic reasons could not, mean anything Aramaic'—an extreme which Dalmann refuses to accept (Worter Juden, p. 161). As a matter of fact, when the Greek Gospel writers combined in the Synoptic canon the Aramaic phrase which 'may, perhaps, bear a close resemblance to that in which Jesus applied the title Son of Man' (J. Nestle, Nov. Testament Exegesis of the Greek NT, Eng. tr., London, 1929, p. 163), two forms were used, certainly not to mean the same. Moreover, the phrase 'Son of Man' (N. Schmitt, EB, 847) is an Aramaic phrase, as is also the phrase 'the Son of Man,' which in the Syriac is translated as 'the Son of Man' (J. Nestle, Nov. Testament Exegesis of the Greek NT, Eng. tr., London, 1929, p. 163). The phrase is indeed, and admittable, unclad in the Aramaic language. But its very strangeness makes it the more of the value for the purposes of Jesus. Those who believe with R. H. Charles that Jesus adopted the phrase from origin, others assert that He said 'Son of Man' to his disciples on a number of occasions, and that He was using such a phrase in His early preaching. To this it may be objected that the phrase is not found in any of the Gospels before the trial scene. When Jesus is asked what He 'is the Christ,' He 'is not the Christ, but immediately, as if still avoiding a misunderstanding, makes the statement that the Son of Man is on the right hand of power and in the form of man.' Now, it was no blasphemy, as has often been pointed out, for a man to claim to be Messiah; the only claim for which He was put to death was to say that He was the Son of God. What is remarkable is the occurrence of the phrase 'Son of Man' in the presence of so many witnesses, and the fact that this phrase is known to the Syriac form of the Gospels. The difference between the Gospels and the Synoptics, the Jewish judges did not lay before the political (Son of Man) but the political (Messiah) claim. He objected to the Son of Man being called the Son of God. (b) The use of the term by Jesus.—It must help us to understand His consciousness if we try to discover how and why He used this strange term. The use of the term 'Messiah' did not occur as a personal noun until Jewish times, and that the indiscriminate use of it by us is as an equivalent for other terms may and does tend to show this. The word must, indeed, be found to cover all the phenomena of this word, and there is no hope which held the eyes of that race directed upon God and the future with passionate confidence; and 'Messiah' has become fixed for us in that usage. But we must not forget that many descriptions of their hope even in the OT contain no allusion to a personal Messiah. The word 'Messiah' in late Jewish literature was used by people of the 'the')—anointed one'—is used most frequently where the mind of the seer is fixed upon the clash of nations, where he thinks of dynasties succeeding dynasty and empire, overrunning empire. This is precisely the conception of the Anointed One, generally as the 'Son of David,' as appearing to overcome all foes. From this it becomes plain that in the days of Jesus—whether false Messias had already appeared or not—the word Messiah would inevitably suggest a powerful historical king, a warrior, an army, a sedentary and relentless revolution. But, if we take Enoch 77 to be pre-Christian, another conception of the great deliverer had arisen. Developing the central idea in Da 7, the eye of faith saw one appear, who comes down upon the scene of history from above, wholly 'supernatural,' for whom a new name must be found. (c) He is very rarely called 'the Anointed.' He, the Son of Man, shall execute judgment on men and angels alike. His sphere is evidently other than that usually associated with the picture of the anointed king, David's lineage. The difference between the Gospels and the Synoptics, the Jewish judges did not lay before the political (Son of Man) but the political (Messiah) claim. He objected to the Son of Man being called the Son of God. (b) The use of the term by Jesus.—It must help us to understand His consciousness if we try to discover how and why He used this strange term. The use of the term 'Messiah' did not occur as a personal noun until Jewish times, and that the indiscriminate use of it by us is as an equivalent for other terms may and does tend to show this. The word must, indeed, be found to cover all the phenomena of this word, and there is no hope which held the eyes of that race directed upon God and the future with passionate confidence; and 'Messiah' has become fixed for us in that usage. But we must not forget that many descriptions of their hope even in the OT contain no allusion to a personal Messiah. The word 'Messiah' in late Jewish literature was used by people of the
founder of the Kingdom of God on earth. Some of these correspond with the functions assigned to the Son of Man in the Book of Enoch, but many are profoundly different.

(i.) Before the critical passage describing His appearance to His disciples near Cæsarea Phillippi, He had already used it, according to the three Synoptics (of which Mk 8th 29th and 9th); according to Q, four times in Matthew’s arrangement, and twice in Luke’s arrangement (Mt 16th 13th 9th 28th and 38th); according to Luke alone, once more (6th, where Q), and once more (24th). Of these, the most significant are that the Son of Man has power on earth to forgive sins and is Lord of the Sabbath. The latter is not a strange claim, as Wallhauser and others maintain, when we remember that the Sabbath was a Jewish institution, and that the saying is parallel, therefore, to His assumption of authority over other institutions, such as ‘the Law’ in the Sermon on the Mount, the Temple (Mt 12th, cf. Mk 11th 5th-18th), and even the Covenant itself (Mk 14th).

(ii.) He uses the title ‘Son of Man’ when He begins to teach His disciples about His death (Mk 8th 9th 9th). And the religious and moral nature of these appearances of the Son of Man are expressed in words which have a dreadful and distressing meaning in the light of events. The Son of Man appears as the one who will be present at the end of the age, and who will cause His enemies to be subjugated to Him; who will judge men and women; who will come with power and authority; who will be present in glory on His throne as King of kings and Lord of lords. These appearances of the Son of Man are the expressions of the divinity and the infinity of His nature, and they are also the expressions of the power and authority which He holds as the Son of God. The Son of Man is the One who has power and authority, and He will rule over His enemies.

(iii.) The title ‘Son of Man’ is used also and most frequently in the eschatological, or eschatological, parts of the New Testament, and it is to be understood as referring to the coming of the Son of Man. This title is used in the context of the coming of the Messiah and the establishment of the Kingdom of God. The Son of Man is the One who will establish the Kingdom of God on earth. He is the One who will bring about the end of the world and the judgment of all mankind. He is the One who will come with power and authority, and He will judge men and women. He is the One who will come in glory, and He will be present in the midst of His people.

And these appearances of the Son of Man are the expressions of the divinity and the infinity of His nature, and they are also the expressions of the power and authority which He holds as the Son of God. The Son of Man is the One who has power and authority, and He will rule over His enemies. He is the One who will establish the Kingdom of God on earth. He is the One who will bring about the end of the world and the judgment of all mankind. He is the One who will come with power and authority, and He will judge men and women. He is the One who will come in glory, and He will be present in the midst of His people.
add to the conviction that we must not attribute to Him the crude 'miracleism' that His disciples saw in the form of His sayings. On the other hand, we must not take refuge, with the timidity of the modern mind before the word 'miracle,' in the notion that He possessed and claimed no superhuman power. This is a difficult nature. There is a 'paramount spiritual' view of His relation to history, whatever that may mean, was His as little as it was His disciples' view. It is the higher conception of evolution (not the natural), mechanism that gives it to our day better than to His own or any other generation the means of interpreting His consciousness at these points. That view is that the history of our world has been carried upward and enriched by the appearance and operation of new factors. For it is a crude evolutionism which holds that the simple produced the complex or the lower caused the higher to exist. To say that the higher was in the lower, when there was no sign of its presence, does not enlighten us. It is best to say that, when the conditions were ready, life or thought appeared, whence we know not, and became a self-multiplying power in history. The new factors are 'from above,' they have 'come,' and they have laid hold of the material prepared for them, with a strange power and for ends that we ourselves cannot suggest. The Son of Man was conscious of being such a new factor in history, and hence of a relation to nature which was both human and more than human. He came as such to lay His head, He had to face the conditions of human history even in temptation of the devil, in hostility and betrayal by those whom He loved, in death, because He was a son of Man. But as the Son of Man, He could do those mighty works among the forces of nature and even raise the dead. And He would come, soon or late (His words leave room for both), with power and glory for a supernatural reign over the human race in the name of God.

(3) In the Fourth Gospel.—The use of the title 'Son of Man' in the Fourth Gospel, where it occurs 12 times, is characterized fundamentally different from, and yet fundamentally the same as, its use in the Synoptics. (a) The peculiar use of the 3rd pers. in connexion with this title is emphasized by the fact that in this Gospel He uses the superordinate term 'Son of God,' not 'Son of Man,' just as Peter was, according to the Synoptists. The Jews and the multitude likewise are perplexed (6:62), and ask, 'Who is this Son of Man?' (12:34).

(c) It is in answer to a perplexed mind that in two cases Jesus gives His own interpretation of that apocalyptic and less familiar title 'Son of Man' (if familiar at all to any but the doctri with death and with eating His flesh and drinking His blood (6:51-57). His disciples are discouraged (6:69) just as Peter was, according to the Synoptists. The Jews and the multitude likewise are perplexed (6:62), and ask, 'Who is this Son of Man?' (12:34).

(d) It is in answer to a perplexed mind that in two cases Jesus gives His own interpretation of that apocalyptic and less familiar title 'Son of Man' (if familiar at all to any but the doctri with death and with eating His flesh and drinking His blood (6:51-57). His disciples are discouraged (6:69) just as Peter was, according to the Synoptists. The Jews and the multitude likewise are perplexed (6:62), and ask, 'Who is this Son of Man?' (12:34).

(e) It is in answer to a perplexed mind that in two cases Jesus gives His own interpretation of that apocalyptic and less familiar title 'Son of Man' (if familiar at all to any but the doctri with death and with eating His flesh and drinking His blood (6:51-57). His disciples are discouraged (6:69) just as Peter was, according to the Synoptists. The Jews and the multitude likewise are perplexed (6:62), and ask, 'Who is this Son of Man?' (12:34).
This fact as fully and clearly as they do His words of an eschatological character. And their understanding of His self-estimation was rooted in the fact that, not merely in His words of prophecy. The Gospels prove on every page that Jesus deliberately set Himself to establish the Church as the manifestation of the Kingdom of God. Whether He purposely used the word 'Church' (Mt 16:13) or not is a minor matter; and it may be even irrelevant. The fact is, that as He found individuals responsive to His call, repenting and following Him (Lk 9:2) ready to rise up and follow Him at all costs, waiting upon His will as upon that of a king, He saw in them the members of the new community of God. He speaks of it as 'salt of the earth,' 'light of the world' (Mt 5:13), and distills their kind of righteousness from that of the Pharisees (40). He sees publicans and harlots, who repent and follow Him (as many of them had believed John the Baptist) in His day, as a part of the Kingdom of God (Mt 21:31). He takes the faith of the centurion in Himself as the harbinger of that multitude of Gentiles who shall come from the east and the west while the Kingdom are cast out (Mt 10:18). The idea that Jesus was primarily a teacher, and a personal revelation only so far as He went about doing good, just as He expected John the Baptist to do (cf. Mt 11:11), is more pictured to Himself, and to others, certain transcendent acts of God lying yet for Him wholly in the future, through which the Kingdom would be established out of time. Thus, it is not surprising that we find certain facts and events in the Gospels. The central fact is that He created, consciously, deliberately, patiently, the new nation, the community in which God's Kingdom is formed. (Neue Untersuchungen, etc., p. 97) names it as one of the 'developments' in which is pictured as addressing a definite community ('eine geschlossene Gemeinde'). This abstracts a slight element of exaggeration in the phrase, the fact is not less true of Mark. In the latter His movements are affected by consideration of three groups—the masses and the leaders, the officials and their representatives, and the disciples. The last, even when limited to the twelve (though not always so limited), form a definite community, which even in Mark is looked upon as the nucleus of the Kingdom of God (11:28, 25. 22:40. 13:28, 36. 20:26, 27 [al. d. o.]).

What is the evidence in the Gospels that His disciples experienced the force of that creative will during His earthly ministry? On the outward side the answer is easy. For it is clear that Jesus, as we have seen, gathered His followers around Him, as individuals who became a more or less definite body, through their willingness to accept His teaching, obey His behests, and put their hope in His power. We do not know how large this body was, it appears indistinguishably as varying in number, intelligence, and enthusiasm. That crowd which followed Him so much as to endanger His work is made very clear in Mark's Gospel, where He is represented as repeatedly eluding them and their superficial and earthly desires. Then we find the Gospels describe Him as selecting twelve men on whom He concentrated His attention (Mk 1:19 = Mt 10:20; cf. Lk 6:13, 14. Mk 3:13-19. Lk 6:12-19. 10:1-4), and finally (Mk 3:15-16) shaking the very foundation of Judaism in His own attitude and action towards them.

2. The new Israel. —The whole Jewish thought may be summed up in this, that as surely as there is one Jewish community, there is the community of God. The people of God are the representatives of the new community of God. The disciples preserve this fact as fully and clearly as they do His words of an eschatological character. And their understanding of His self-estimation was rooted in the fact that, not merely in His words of prophecy. The Gospels prove on every page that Jesus deliberately set Himself to establish the Church as the manifestation of the Kingdom of God. Whether He purposely used the word 'Church' (Mt 16:13) or not is a minor matter; and it may be even irrelevant. The fact is, that as He found individuals responsive to His call, repenting and following Him (Lk 9:2) ready to rise up and follow Him at all costs, waiting upon His will as upon that of a king, He saw in them the members of the new community of God. He speaks of it as 'salt of the earth,' 'light of the world' (Mt 5:13), and distills their kind of righteousness from that of the Pharisees (40). He sees publicans and harlots, who repent and follow Him (as many of them had believed John the Baptist) in His day, as a part of the Kingdom of God (Mt 21:31). He takes the faith of the centurion in Himself as the harbinger of that multitude of Gentiles who shall come from the east and the west while the Kingdom are cast out (Mt 10:18). The idea that Jesus was primarily a teacher, and a personal revelation only so far as He went about doing good, just as He expected John the Baptist to do (cf. Mt 11:1), is more pictured to Himself, and to others, certain transcendent acts of God lying yet for Him wholly in the future, through which the Kingdom would be established out of time. Thus, it is not surprising that we find certain facts and events in the Gospels. The central fact is that He created, consciously, deliberately, patiently, the new nation, the community in which God's Kingdom is formed. (Neue Untersuchungen, etc., p. 97) names it as one of the 'developments' in which is pictured as addressing a definite community ('eine geschlossene Gemeinde'). This abstracts a slight element of exaggeration in the phrase, the fact is not less true of Mark. In the latter His movements are affected by consideration of three groups—the masses and the leaders, the officials and their representatives, and the disciples. The last, even when limited to the twelve (though not always so limited), form a definite community, which even in Mark is looked upon as the nucleus of the Kingdom of God (11:28, 25. 22:40. 13:28, 36. 20:26, 27 [al. d. o.]).

What is the evidence in the Gospels that His disciples experienced the force of that creative will during His earthly ministry? On the outward side the answer is easy. For it is clear that Jesus, as we have seen, gathered His followers around Him, as individuals who became a more or less definite body, through their willingness to accept His teaching, obey His behests, and put their hope in His power. We do not know how large this body was, it appears indistinguishably as varying in number, intelligence, and enthusiasm. That crowd which followed Him so much as to endanger His work is made very clear in Mark's Gospel, where He is represented as repeatedly eluding them and their superficial and earthly desires. Then we find the Gospels describe Him as selecting twelve men on whom He concentrated His attention (Mk 1:19 = Mt 10:20; cf. Lk 6:13, 14. Mk 3:13-19. Lk 6:12-19. 10:1-4), and finally (Mk 3:15-16) shaking the very foundation of Judaism in His own attitude and action towards them.

2. The new Israel. —The whole Jewish thought may be summed up in this, that as surely as there is one Jewish community, there is the community of God. The people of God are the representatives of the new community of God. The disciples preserve
not the question of whether Harnack is right in extending from consideration the great passages (cited earlier in this article) in which the conscious will of Jesus is represented as determining the destiny of men. But it is not a question to be decided merely by quoting utterances which explicitly and formally put Him into the gospel as He preached it, or by refusing to accept them as authentic. The real question is whether we have proof that Jesus became to His disciples a religious object during His earthly life, and whether their experience in that manner was in their minds the nucleus of that community in which He intended the Kingdom of God to be realized. Have we any right to limit His gospel to His disciples in terms of formal teaching, addressed to the multitudes, if we find that the whole effect of His training of the twelve was to replace their Jewish religion with a religious attitude of life by teaching, miracle, example, and direct moulding of their life formed them into the nucleus of that community in which He intended the Kingdom of God to be realized. Have we any right to limit His gospel to His disciples in terms of formal teaching, addressed to the multitudes, if we find that the whole effect of His training of the twelve was to replace their Jewish religion with a religious attitude of life by teaching, miracle, example, and direct moulding of their life formed them into the nucleus of that community in which He intended the Kingdom of God to be realized. Have we any right to limit His gospel to His disciples in terms of formal teaching, addressed to the multitudes, if we find that the whole effect of His training of the twelve was to replace their Jewish religion with a religious attitude of life by teaching, miracle, example, and direct moulding of their life formed them into the nucleus of that community in which He intended the Kingdom of God to be realized.

4. The method of Jesus. This, which is purely historical as well as a vital religious inquiry, we must now deal with. It will be best to deal with considering the matter in relation to the three functions of personal founders described in the opening section of this article. The appearance of repetition, when compared with the discussion of the consciousness of Jesus, will be lessened if it be remembered, as already explained, that we are here considering the other half of the central fact (the founding of the Christian religion), viz. the religious consciousness of the disciples of Jesus. We must see the experience through which the first disciples passed as the conscious realization of the function of Messiah, and another who, like John, was absorbed wholly in the thought of that supreme crisis, and He too announced the Kingdom. But they found many great differences between their experiences. These differences are not exhausted by speaking of His geniality, breadth, sympathy, social interest, and so forth. For He was also stern, definite, authoritative. His disciples found themselves involved by their discipleship in
new personal relations with the living, present, and insistent will of God. Jesus did not, like the Baptist, postulate that Kingship to an outer cataclysmic event. He makes them feel that they have to do with God now, as He is dealing with them now. This lies at the bottom of all the Lord’s Prayer, every clause of which involves the idea of God’s present action in our human life, even though it may have an eschatological background. It is precisely this that He says about prayer, against anxiety, concerning the Father’s love, in the call to repentance, to faith, to self-sacrifice. In spite of the eschatological element in His sayings, through which He taught them to cherish the expectation of the future acts of God, we must see in these records their memory of the awe, the humility, the confidence towards God, the sense of His actual Kingship which Jesus awoke in their souls.

(5) Jesus also took up the Baptist’s call to repentance. But His disciples found that with Him this meant a change more profound than any prophet had ever sought to effect, for no prophet had ever learned it as they did from the Messiah Himself (cf. Mt 13:17). This repentance was something which He wrought in them by His whole conduct, and which He had worked in them as well as by any explicit preliminary call. They learned from Him the depth and subtlety of their sin. Apart altogether from lessons about outward sin, which He does not altogether leave His listeners to understand from the Law (Mt 10:16), they were taught to see deadliness of self-righteousness and self-seeking and unbelief. On these matters they received, and have preserved these principles, as the most penetrating and heart-breaking experiences.

For His words created the Christian world by first making history in their own souls. The teachings gathered together in the Sermon on the Mount were addressed to them as disciples, and cannot be understood if viewed as spoken to all and sundry—a thrilling, excited crowd (Mt 5). Not only was Peter first encouraged to become a permanent follower in an hour of moral agony (Lk 6:14), but he was repeatedly compelled to deeper knowledge of the distance of his heart from the ideal of his Master (Mt 14:2617; 18:2; 19:35-36; 20:28; 21:31-32). The years of constant training revealed in that series of passages expressed only in part the effect which Jesus produced upon the disciples when He thus proved to them how much there was still to learn as to what He summoned them. In the conversations of Levi the publican, of Zacchaeus, of the woman that was a sinner, there must have been powerful emotional crises. And the disciples were witnesses of these, and learners from them. They saw and felt the extending effect of the personality of Jesus upon the moral consciousness of susceptible souls. On the positive side, we may note that He taught them to repent, and got them to repent, by demanding the attitude of a little child (Mt 18:3), by measuring their sin with the most terrible of all standards, the principle of a single sin (Mt 12:31-32), by insisting that the essential spirit of the Kingdom in which they now began to live was that of service, unselfishness, and complete (Mt 20:28), which cannot be rendered unless one unselfishly committed them with the call to love as God loves the unworthy and ungenerous (Mt 5:40). He even taught them that this inner moral revolution must be carried in upon the deepest apparently most natural and prevalent desires of human nature (Mt 19:11-12; 24-38). It is impossible to measure the work of Jesus in founding the new and final religion unless we see in these mere excerpts from the wealth of material in all four Gospels, not the quiet, placid teaching of a Rabbi, but the active penetrating spirit, the conscious will, of their Lord bearing the idea of repentance persistently and insistently, deeper and deeper, into the heart, conscience, and will of the disciples. And they were thus actualized even in the modern human heart, that which is not merely moral relation with the holy will of the actual and living God. And Jesus made them feel that need while He was there in the flesh, or they could not have seen or felt what He was in His power when He came to them in the Spirit.

(2) How the need was satisfied.—The second matter of inquiry as to a personal founder is this—What function did He exercise in meeting the need which He revealed in man’s heart? Did He actually give them the new relation with God for which penitence is at once the preparation and the passionate outcry? It is plain from the Synoptics alone that they knew what their world was about (Ps 93:1; Jer 26:11; Zeph 3:19); they spoke on things human and divine with authority unmistakable, and announced the laws of the Kingdom of God. The religious results were not what they came to teach or understand, but which they were in kind the same. They found Him to be a fountain of the grace of God. No doubt the idea of saving the lost (Lk 19:10; Mt 18:13; [un certain text]; Mark 2:1-12) in its most radical implications, as the word ‘salvation’ continues to have even in Paul’s Epistles. But we cannot get rid of the fact that in the parables of the lost sheep, the lost coin, and the prodigal son Jesus described His own present conduct as He pursued and received those who became His disciples. The fact that the recorded words of explicit forgiveness were addressed to strangers (Mt 5:24 and 6, Lk 7:49-50) must not obscure the underlying fact that they became associated with Him entered into that state of forgiveness. It is true that He glancingly describes the willingness of the Father to receive, and the supreme joy in the heart of the Father that His own disciples had that grace of heaven manifested to them in the will of Jesus towards them. He treated those as penitent who followed Him, and His followers were children of God, enjoying the love of the Father because they were under His own will and objects of His own love. This comes out more clearly if we recall, in its significance for their religious experience, the kind and extent of submission which He exacted and they yielded to Him. The very symbols and metaphors employed to describe their relations to Him and His functions towards them are significant. Thus He is the Shepherd and they His flock (Mt 10:12; 23:7; Lk 10:12; 12:50; Jn 10:14-18), and therein encourages them to remember the OT conception of Jehovah as Shepherd (Ps 100:3; 90; Is 40:11; Ezk 34:13-15). He is the builder of the new temple, i.e. the community which shall take Israel’s place (Mt 21:33; Jn 2:21), for He is ‘more than the temple’ (Mt 12:24). He is the sower, and the souls whom He gathers to Himself are the harvest of God (Mt 13:24; cf. 9:39). In all these metaphors we must note the gulf between shepherd and sheep, builder and house, sower and ground, as if they must be made to feel that this difference lies between Him and them, and yet that it is His love, His wisdom, His powerful care and control, that is their supreme hope. He does for them what the moral insight of a true penitent would ask from God. Even more strikingly, He is the
Lord who appoints to every man his task, as a slave-owner deals with the slaves who are his property (Mt 19:18-23), who returns to judge them. The metaphor is that of the consumption of human destiny: the disciples of Jesus must wait in eagerness, faithfulness, and faith. These metaphors are added to the positive fundamental assurance that the Servant of the Lord is the Man, final Judge, mysterious Servant of Jehovah doomed to death, whose tremendous force is felt with increasing awe as they watch Him move along His strange and awe-inspiring path to death and resurrection. But without the detailed enumeration of the latter group of ideas are present to their minds, now as startling sayings and anon as more startling explanations of Jesus, the former group are those which describe his actual will as it takes effect upon their present experience. Therefore, they have given up all for His sake (Mt 19:28), are ready, as He assumed, to meet persecution and even death for His sake (Mt 20:28, cf. Gess, Christ, Person and Work, i. 15 f., Mt 20:28). They learn to believe in Him as the Messiah-King (Mt 16:16-19), and, when they reach this measure of insight, Jesus rejoices because He sees now the new community established through which the Kingdom of God is made actual on the earth. He sees in that confession of Him the work of God's grace ("my Father") in their hearts. The death He then referring not only about His death, but about their relation to Him, begins to find expression (Mc 8:38-39). (Much of the material in Mt 10 probably belongs to this later period.) Now it becomes, not only about their relation to Him, but about their relation to Him, begins to find expression (Mc 8:38-39). (Much of the material in Mt 10 probably belongs to this later period.) Now it becomes necessary to tell them of the weighty matters of the new life, which every disciple may be tempted to be ashamed of (Mc 8:38, Mt 10:32, 11:29, Ro 12:2). There is a gospel which they may begin to preach foreign to them, a picture of the world which no longer has the power to influence their lives, and the spirit which is to influence their lives. For Jesus begins to speak of a cross (Mc 8:38, Mt 10:31, Lk 9:26) which they may be called on to carry to their own execution. (It is obvious that this is not just a reflection from a later date, for then the minds of Christians were absorbed in another view of the cross and spoke of being crucified with Christ (Gal 2:20), and of dying with Him, not of hearing each one an independent cross.) And He is said to have spoken of His drawing the world to Himself by being "lifted up" (Jn 12:24).  

3. Their inchoate thought of His Person.—We now find the first explicit statement regarding the personal religious experience of the disciples. All that fullness of the inner life which created the rest of the NT writings (and in a sense the Synoptic Gospels too) is absent from the story of their intercourse with Him in the days of His flesh. They have preserved the records of their unbelief, their quarrelling, their selfish ambition, their blindness to His meaning, their readiness to forsake or deny Him when the supreme stress came. But they do not speak of their joy or peace or hope. It is evident that these were transition days from the acute, enduring life of the Jewish world of that time to the exaltant hearts that were later filled with the Spirit and presence of the Risen Christ and of God in Him. They do not make clear how they thought of the Father as Jesus taught them, nor how the peace and satisfaction as they walked with eyes of trust and awe fastened upon this incomparable yet tender Master of their souls. But certainly they had begun to feel a religious joy in His fellowship, a religious reverence in His presence, a religious confidence in Him as their Master as He showed Himself and as they learned the deeper meaning, even the deeper significance, in the nature of the penitent, consecrated, and faithful life did seize their wills and change their hearts. The story of Peter's contrition at the beginning and end of the record (Lk 5:8, Mk 14:70) presents one side. The words of Jesus (Mt 16:27) indicate that in His view the recognition of His Messiahship was a religious experience of the highest character, in which Peter had been brought into relation with the Father. It is quite certain that they entered into the new life of prayer in which we could never have received their record of His many teachings on that central matter. No less certain is it that, as they thus sought communion with the Father, the constant presence of the spiritual spirit, the authoritative word, and the personal atmosphere of the Messiah and Son of God conditioned in the deepest way their thought of God and their endeavours after a realized fellowship with Him. The vagueness of the matter at this point is obviously natural on the orthodox view. For, if the gospel must, in Christ's own view, contain Himself as essential to it, it was inevitable that this should not become clear to His disciples, nor the form of religious experience which He alone could make possible become realized, until His relations with them had passed through all stages and reached that climax at which alone the full situation could come into view. It is those who hold that the personal religion of Jesus Himself was meant by Him to become realized that is that He did not think of entering into their religious consciousness except as an inspiring teacher and example, who cannot explain the absence from the Gospels of any proof that the disciples felt, that He and them, the God in the new world, the Son of God, and the Gospels all would give the idea of the new life and its joy. For this His martyr death was not necessary. That event could only add a glow of pathos—but why not of despair—to a picture of perfect relations with God which life alone could reveal and death could only blot out.  

II. THE EXPERIENCE OF THE DISCIPLES AFTER THE RESURRECTION.—This is the place to attempt a history of the apocalyptic Church. Our task is to set forth as briefly as possible some of those elements, described in the apocalyptic literature, which constituted the Church as a community, whose existence is founded on conscious reconciliation with God, conscious possession of His Spirit, and that through faith in Jesus as the Messiah, Son of God.  

1. The Resurrection faith.—It is universally admitted that the inchoate community left by Jesus at His crucifixion had no basis in their brief intercourse with Jesus for continuation as a community. They were not organized for political action. Nor was their religious experience definite and strong enough to give them a distinct consciousness or place within the system of the Jewish Church. Their later conduct towards a universal gospel proves this. As an experience it was, as we have seen, real, but bound up with and dependent upon the presence of Jesus with them, and unreleased from Jewish bonds. When He lay dead, their faith was ready to die. They allowed outsiders to bury Him (Joseph of Arimathaea [Mc 15:45]; Jn 19:38 adds Nicodemus). The story of two of them, according to the poet, gives the most vivid and realistic picture of their attitude of mind, as persons who retained a gracious memory of Jesus without hope. The grief which all the Gospels depict, the story of Thomas, the story of the women, the testimony of Peter, the evidence for the preparation for a permanent burial, combine to illustrate a situation which the white history of human experience would compel us to expect as the only natural conclusion. There was a sporadic glimpse of the situation which must have stained even the inevitable despair with shame and dismay. For an ancient law which was perfectly familiar to them, and which, indeed,
made all crucifixion a matter of peculiar horror to the Jewish imagination, asserted that a man who was executed, or exposed in death, on a cross was proved by that very event to have been accursed of God (De 21:22, Ac 5:30, Gal 3:1; cf. 1 Co 1:2; "a Mark on the man", 1:24). These facts are named here not for an apologetic purpose, but to account for the fact that practically all scholars, from Strauss onward, have held that the Christian Church could have come into being only when the disciples came to have the Resurrection faith. What produced that faith is the matter in dispute, a discussion of which would involve critical details and a philosophy of miracle too involved for this article. But it was this sudden conviction that God had raised Jesus from the dead that thrilled the despairing disciples with new life.

2. The Holy Spirit.—Another event occurred in the experience of the community which is known as the Descent of the Holy Spirit. What the matter is accurately described in Ac 2 or not (cf. Jn 20:22), something happened early in the history of the disciples which made the language of Paul about the Spirit intelligible, and the Book of Acts is pervaded by the atmosphere and psychological effects of it. The coming of the Spirit meant that the power of God had come upon them. This power was manifested in various ways, some of them now obscure. Miracles and other forms of endowment (ἐνδοξία) were the result of His presence (see H. Gunkel, Die Wurzeln des heil. Gottesdienstes, 1899; J. E. Wood, The Spirit of God in Bib. Lit., London, 1904). It was natural and the records show it, that at first there should be much confusion of mind among the disciples on a subject so new and so startling as the consciousness of the indwelling of God in the hearts of a human community. But it rapidly became clear that this experience meant that Jesus Christ Himself was still in living contact with them. They were—to use William James’s striking word—"co-conscious" with Him in this overwhelming suffusion of their hearts with a superhuman divine power.

3. Christ of history and of experience.—The disciples had no intellectual difficulty about the transition from “the Christ of history to the Christ of experience,” with which modern thought has concerned itself so deeply. On the one hand, they believed in the same Jesus whom they had known in the flesh had appeared to them after His death, and that the experience of the Spirit’s power was the fulfillment of His promise (Ac 1:8; 2:38; 10:42), and that the proof in their own life that they were under control of the same conscious will that dominated them in His earthly days. Even Paul, when he defends his authority as an apostle, claims to have “seen Jesus” (1 Co 9:1; cf. 15). For him this conscious will (Οἶδα, the spirit of God, Christ, the spirit of Christ, Ro 8:11) that rules him is the will of the historical personality whom they all knew as Jesus. But, on the other hand, they seem to have assumed that there was a continuity in the course and nature of their religious experience itself. It is a strange feature of the early addresses of Peter, and trace to this view of the experience of the early Christians, and he does not represent the primary disciples, all of whom had been with Jesus (Ac 1:1-13; 2:4), as having now for the first time received the forgiveness of sins; and there is no record of their having been baptized at this time. Repentance, baptism, forgiveness, are proclaimed to others (Ac 2:32, 38, 39), but are presupposed as already characteristic of the disciples. This can only mean that they cannot deny or ignore the past blessings which they had enjoyed in His outward presence. What was obscure has been made clear, what was inchoate is fulfilled.

The Messiahship of Jesus is now openly established by transcendent acts of God on Him and in them.

It has been made a difficulty that the Kingdom of God of which Jesus spoke so much seems to disappear from their vocabulary. But the fact remains and is now reflected in their use of the term ‘Kingdom’ as applied to Jesus. His Lordship over them, so real and potent and glad, is the Kingship of God! In Paul’s language the ‘salvation’ ‘takes the place of ‘kingdom’ (Ac 28:28; Ro 14:9), or ‘life’, ‘eternal life’ (Ro 5:19). The prevailing Johannine term is ‘eternal life’, They are all used now in a presental and now in an eschatological sense.

4. The experience of union with God.—William James said:

“We have in the fact that the conscious person is continuous with a wider self in which more experiences come, a positive content of religious experience which, it seems to me, is literally and objectively true as far as it goes. (The Varieties of Religious Experience, London, 1902, p. 162.)

This may be set beside the still more penetrating statement of another American thinker:

‘That which can happen only with the consciousness of God is an act of God’ (W. E. Hocking, The Meaning of God to Human Experience, London, 1912, p. 140).

These assertions may be held true of religion at every grade of its development. But they do not give their full illustration, and, indeed, have been made possible, only by the complete fulfilment in the experience of the community founded by Christ. It is, of course, impossible to distinguish, the light from the lower types of religious experiences by the mere intensity of subjective emotional experience. It is the historical setting and moral qualities of that experience that make religion greater than another, and the religion of Christ the supreme fact which it is. The immeasurable force of the apostles’ witness in the history of the world arises from the following among other facts.

(a) The greatness of it.—The ‘wider Self’ with whom the believers were in contact was conceived in terms which had not been attained before and have not been surpassed. The living God, Creator, Sustainer, Father, is described in a series of magnificent statements of Paul (Ac 17:22, Ro 1:5, 11; 11:36; Col 1:15, 19), and no less clearly though less elaborately by other writers (Jn 1:1-3, 4:14).

Throughout the apostolic literature it is assumed that He is personal, holy, and righteous, whose hand of sin is righteous (Ro 1:15), and whose purpose with man is glorious. Those concepts were not scientific or theological in form or origin. They were derived from the past life and thought of the Jewish people. They had been confirmed by the teaching of Jesus. But they were now driven deep into the human consciousness by the immeasurable power of the new range of experience. Every word and phrase in which they describe the new life is a witness to some new form of the divine action upon human nature, which transformed everything. Hence we hear of it as a new birth (Jn 3:1-19), as a new creation (2 Co 5:17), Gal 6:15, as dying to the past life of sin, weakness (Ro 6:6, Col 2:12), Gal 2:20), and entering into light after darkness (1 Jn 1:5, Eph 5:8), liberty after bondage (Gal 4:31), and so on. Thus the change is often described in terms which have been used for the vital and fundamental conditions of human existence. Men who are convicted of sin are yet living in the conscious fellowship and peace of the living and personal God.

(b) The divine power as conditioned.—This new form of religious consciousness can be fully understood only in and through its ethical qualities. The mystical experience is that which men cannot deny or ignore the past blessings which they had enjoyed, the present, and the people have living with them. It is a divine power, it is divine life, it is the divine spirit, which has come upon them and swept them into
ecstatics of joy and rapture. There are signs that
many of them (even Paul (2 Co 12:2) were carried
into abnormal psychic conditions. The scene
said to have occurred at Pentecost (Ac 2), many
of the incidents connected with demons (e.g., Ac
19:11), as well as Paul’s discoursing of tongues
and other phenomena (1 Co 14:26), prove this abun-
dant. For though these many parallels can be
found elsewhere in the history of religious
experience. The new thing, or the excellent thing,
in the NT religion is that the experience of the
unknown power which permeated the spirit of
Christ, the spirit of God, Ro 8:11, Jn 14:16) is
conditioned rationally, ethically, and historically.
This was no mere inflow of inexplicable energy
from an unknown source, no afflux which breathes
upon the soul from mystic ‘eaves of the winds.’
Yet nothing is taken from its mystery, its serious-
ness, its intensity, its solemn awe. These qualities
are simply relieved of their ‘brutishness,’ their mere
infantile nature, by the conditions under which
the mystic union with God is realized. Mysticism
is delivered from its sheer darkness and filled with
real meaning. For the word of God in the soul is
laid up by the word of the gospel which is ad-
ressed at once to the understanding, the conscience,
and the heart. There is no demand for asceticism
or for prolonged technical self-denial. Meditation,
such as the early ascetics practiced, was dis-
approved as an avocation by the Church. The
attitude and experience of the Church, especially in the
following century, demanded. It is assumed that all
men must think, indeed, to become Christian; but the
simplest man may think well enough to understand the
simplest truths, even when a sacred idea is calling him.
And then he will find, as Paul showed the untaught Galatians as well as the
philosophers of the University of Athens, that the
language of the soul, the language of the Heart, after all, the
reason and faith, are those under which the divine
will deals with the human, and the human must
deal with the divine. Hence we are not surprised to
find that Galatians (4:18), of the righteousness of God as an effective fact, a living
force, in human experience; just as the same
apostle no less than John (1 Jn 4:18) speaks of love
— for God, who is working in us and begetting
His children among us, has commended His love towards
us and has proved that He is love.
(c) The historic Christ as related to these condi-
tions. —The whole effect of that word of the gospel
is to teach men that it is God who is now invading
the individual life, that the divine is pressing in a
new way and under purely moral conditions upon the
human. The gospel is an appeal to men not to
scale the heights of God, but to submit to the
influence of God’s grace which is His very spirit and
presence, an experienced force, in the inner depths of
the soul. But this new religious attitude and
experience, constituting the substance of the new
religion, has been intelligible, and therefore is
possible as a programme of spiritual history, be-
cause it is organically connected with the fact that
in Christ the divine has invaded man’s history
personally, definitely. Every phase of the
divine grace is linked with His name. It is the
deeds of God in Him, in His historic consciousness
and person, that are the revelation of the quality
of God’s will and the moral ground of
His new and supreme appeal to man’s reason,
science, and heart. For the primary disciples this
sense of union with God could be only by
the continuance of the power of Jesus, now exalted
as Christ, to exert His supreme influence upon
human nature. And the Church has never been
content with any other explanation.
(3) Universalism and Parousia. —The religion of
Jesus Christ, being of this nature, was inherently
a universal religion. It required a great struggle in
the primitive Church before the full meaning of
this fact was grasped and its consequences were
accepted. Into that story we need not enter here.
But is it necessary to do more than point out in a
few words that the eschatological view, which ex-
pected the speedy manifestation (Parousia) of Christ,
did not prevent the development of the universal-
istic view of the gospel. The former and the later
in the future, the latter was made an experience in the
present. The old antinomy, which was, as we have
seen, in the consciousness of Jesus Himself, was
now present to the faith of His Church. It is the
ethical and historical effect of the eager waiting for the return of Christ, the coming
of the Man from heaven. Potent as that hope was,
it did not destroy the diligence of a man like Paul
or hinder (rather it greatly helped) the rapid spread
of the new religion. Yet we see in Paul’s letters
epistles (when his own death drew near) how a
world programme seemed to open before him, whose
outlines could not be filled in within a brief space of
time (Christ the Head of the Church, I Co 15, Eph, Col).
And the Fourth Gospel, as well as
1 John, represents an effort not to forsake that
hope, but to see it through the medium of an experi-
ce which means that Christ is here and His people
already live in Him. Just as, in the Gospels, He
is confessed as Messiah, and accepts the confession as
sprung from God, so, also, in Ephesians (see note 199),
in fullness of power; just as He spoke also of the Son
of Man as there where He forgave sins and sought
the lost, yet announced that the Son of Man would
be seen coming on the clouds of heaven (2 Th. 1:7)
but in the righteousness of God as an effective fact, a living
force, in human experience; just as the same
apostle no less than John (1 Jn 4:18) speaks of love
— for God, who is working in us and begetting
His children among us, has commended His love towards
us and has proved that He is love.
trition, and reformation. This means that Jesus Christ remains in the life of the Church not as a fossil memory growing dim and less effective upon the conscience of the Church and mankind, as time flows, but as a living judge and unexhausted source of moral power. Let us consider Him as the supreme personal force in the moral history of man.

2. The ethical teaching of Jesus.—The first appeal is naturally made to the teachings of Jesus which have been explored with extraordinary minuteness to discover their personal and social application. Two things have gradually become clear which modify the nature of that appeal. (1) The first is that He abdicated all dependence on outward ceremony as a means of salvation. Jesus revealed the ethical nature of man's religious relation. The same principles of faith and love unite men with one another and with God. Even worship of God is a moral act, and God's readiness to answer is compared with the attitude of good parents to their children (Mt 7:10, 20; 18:1-4; Jn 4:14). (2) The second is that Jesus did not, except for illustration, deal with the concrete details of life, and that He did not announce an organized system of laws. The only matter in which He approached the method of statutory legislation was that of marriage (Mt 19:5, 6; Mk 10:1-12) — a fact which is of the utmost significance for the fundamental nature of that institution in His community. His teaching on moral issues was more occasional, fragmentary. They penetrate to the fundamental principles of conduct, rather to the inner spirit, the secret self-determinations of man. For example, take His words on divorce (Mt 5:32; Mk 10:12; Lk 16:18; Jn 8:40-44). Jesus provides parables, parables, or mere simple illustrations, as well as direct commands, to state these principles, to make them distinct and impressive, to startle His hearers from the moral somnolence induced by their traditional habits of thought and evasions of serious moral issues, to show His principles at work in concrete social relations. In all this we note a certain finality which makes His principles inevitable for the highest and most critical circumstances and certain urgency which makes them impressive, solemn; and He binds them as ethical statements to religion as their final explanation, justification, and sanction. He makes the great principle of reward and punishment to the heart of all His teaching. But He makes it appear that these are not accidental, external, and confusing to the conscience. The reward and penalty come from God and are part of the history of the Kingdom and of the individual soul. The moral order of the universe is at once established and revealed through them.

3. His personal character.—In addition to the teaching of Jesus we must take account of His personal character as a moral force. It is true that the direct appeal to that character in the ordinary relations of life in apostolic literature are few (cf. Ac 10:9, 3 Co 10, 1 L 2:11). But on every page we see its searching and inexpressible influence. The picture of that holy and merciful life is ever before the Church, cherished in their hearts. In the Gospels it is preserved for us simply and directly, with such unity of spirit in its apparently divergent or even contradictory elements that it has won for itself a position of majesty, a strange and irresistible authority over the imagination, if not yet over the will, of the human race. He stands before the world as harmonizing in His own will with the perfection of self-mastery—for He was tempted to the utmost, yet sinless—such contrasts as these: (1) the consciousness of high and even superhuman station united with the will to obey unto death, unresisting and unafraid; (2) the nobility and dignity of a great mind and powerful soul united with simplicity and lowliness of life; (3) severity of the utmost in His purity, frankness of the least compromising in His truth, united with tenderness, pity, and comprehensive sympathy with the clear, relentless perception, exposure, and hatred of man's sin united with the unflattering resolution to be Himself the Saviour of man. Such a character was itself a revelation of the ideal of human life, and has since these Gospels were written ruled the hearts of men with royal supremacy.

4. His character measured by His divinity.—If there was more than man's teaching and more than His character as a perfect man, it might have seemed impossible that a character formed from such a consciousness as His should be of any avail for him, selfish, earthly-minded, impulsive men. For His superhuman consciousness of the fact of man's native sinlessness would open up a gulf between the achievement of moral glory and man's continuous and dismal failure which no man could cross, the very sighs of which would crush all faith and hope with the weight of personal despair. But the picture of Christ's moral quality sets before us in the light of His Incarnation and His redeeming purposes in life and in death. Passages of the Epistles (1 Pt 2:22 and 3:18) show that the pre-existence of Christ was not for the apostles what certain Ritschelians have too often represented it to be—an empty and uninspired ideal. On the contrary, it was the will of the Son of God, His 'grace,' His 'mind,' that are revealed in His self-emptying and self-purification. It is not the limited though noble sacrifice of a man that is seen in the Christian Church. It can only be measured by the movement of His will from the throne to the cross. When the Word became flesh, His glory was beheld, the glory of His truth (Jn 1:14), and, when He was seen and handled, it was the Word of life that stood revealed (1 Jn 1:1). When the author of Hebrews refers to the Incarnation (He 1:3-10), we cannot miss the effect of contemplating the Son of God as He chose to partake of the flesh of the blood in which all the children share, and to become in all things like unto His brethren. When in 1 Peter we read of the lamb without blemish (He 10:9), of His patient endurance of shame and suffering (He 12:2-3), of the purpose of His suffering once for all (He 9:28), we cannot but realize that the writer is thinking of a man, but of the divine being who entered into human life in His own full and holy will of love. When in Paul's writings we read of Him 'who loved me and gave himself up for me' (Gal 2:20), of His own desire to know the fellowship of His suffering (He 2:10), of Christ's love which constrained him (2 Co 5:4), from which no pang or shame can separate him (Ro 8:39), we realize all the time that this is the love of a divine being. The whole subsequent history of the Church shows that the inner secret of that spell which the name of Jesus Christ has cast upon man's heart lies in this view of His character as that of one whose eternal holiness and love became active and powerful for man. Many good men have suffered for their fellow-men. Patriotism and friendship, stern devotion to duty and a certain royal self-respect, have produced their myriads of martyrs of varied degrees of worth. But they are men entangled without their will in human relations, and rising worthy to their task. Here is the picture of one whose sinless life, whose love, whose will is more than man, and who is, of His own will, set into the entanglements of man's moral situation for man's deliverance. His very difference from us gives moral stimuli to His deliberate and merciful self-union with us.
5. The will of God revealed as the ultimate ground of moral ideals. — The ethical values and force of the story of Christ is not yet fully stated. Another element in the greatest and most potent of all, is involved in it.

(a) A permanent problem in the history of morality. — That we may estimate aright its true significance, let us recall the central problem of the higher ethical systems of different ages, which have often penetrated far into the heart of virtue and have tried to picture the perfect man. Aristotle did so, and discovered that the virtuous man is alone capable of true happiness. But he was apparently baffled by the fact that he cannot be pictured as attaining the ideal in our world because the environment proves hostile. There ought to be a relation of ‘perfect virtue’ and ‘perfect life.’ But the latter fails even the best of men, either through misfortune in life or through the close of life itself in death. The States faced the same situation, and their very name means for us in English what it does because they girded themselves to meet it not merely in speculation but in practical life, by the discipline not merely of the mind but of the will. They sought their sure guide to virtue and peace in an appeal to the Reason which informs the universe as a whole. Yet, just because their vision of this Reason was won only by the severe labour of the statesman, in its objective ground, but only an inner and therefore indemonstrable conviction, their virtue lacked joy. It could not and did not become a social good, a wide and permanent force in history. In Kant, again, in the same opposition between a very high conception of the will and of duty and the actual situation of man appears. For he too saw — and more clearly, as the heir of Christian culture — that in the end virtue must find its justification in the universe. God must have conceived of a scheme, some sort of perfect environment for the good will, that the need of happiness may be enjoyed. Hoppé, from a narrower vision and in the language of our thought, puts the same problem when he says, ‘the conservation of value is the characteristic axiom of religion,’ and adds that, therefore, ‘the religious problem also is concerned with the problem of the universe.’ In the special point of view (Philosophy of Religion, Eng. tr., London, 1906, pp. 10, 13). The same principle or problem appears in the Hebrew Scriptures in the terms of the God and religion. It created the drama of Job. It even produced the fifty-third chapter of Isaiah. The Psalms ring with its passion and wail. For Israel was confronted with the fact that the man who was righteous, who was conscious of integrity before the will of Jahveh, was yet left to the mischiefs of life and the doom of the grave, just like the virtuous man of Aristotle. Man needs for his clear and sure grasp of the idea of goodness, and for its social fulfilment on a large scale, the assurance not only that the universe is ultimately in accord with it, but more definitely that the Will which rules history confirms and secures it finally and absolutely.

(b) Its solution in God’s will concerning Christ. — According to the NT and the continuous faith of the Church since then, this supreme problem was solved by the story of Jesus Christ. For the whole ‘fact of Christ’ is viewed steadily as an act of God (Jn 3:16, Gal 4:4, He 1:3). Outwardly this is depicted for us in the stories of His birth and His crucifixion. Inwardly it is made certain in His resurrection, and it is said of Jesus Christ with the will of God. That is not viewed either in the NT or in the faith of the Church, it was not viewed by Jesus Himself, as the product of a pure human will (Mt 16:21, Mk 10:25). It was the product in Him of the spirit of holiness, which became God in Him (Ro 1:3), of the Logos incarnate in Him (Jn 1:14), of the Son of God incarnate in Him (Ro 8:32) by the will of God. (6) In His sacrifice on the Cross. For that event is distinctly and repeatedly described as the will and central problem of the higher ethical systems of different ages, which have often penetrated far into the heart of virtue and have tried to picture the perfect man. Aristotle did so, and discovered that the virtuous man is alone capable of true happiness. But he was apparently baffled by the fact that he cannot be pictured as attaining the ideal in our world because the environment proves hostile. There ought to be a relation of ‘perfect virtue’ and ‘perfect life.’ But the latter fails even the best of men, either through misfortune in life or through the close of life itself in death. The States faced the same situation, and their very name means for us in English what it does because they girded themselves to meet it not merely in speculation but in practical life, by the discipline not merely of the mind but of the will. They sought their sure guide to virtue and peace in an appeal to the Reason which informs the universe as a whole. Yet, just because their vision of this Reason was won only by the severe labour of the statesman, in its objective ground, but only an inner and therefore indemonstrable conviction, their virtue lacked joy. It could not and did not become a social good, a wide and permanent force in history. In Kant, again, in the same opposition between a very high conception of the will and of duty and the actual situation of man appears. For he too saw — and more clearly, as the heir of Christian culture — that in the end virtue must find its justification in the universe. God must have conceived of a scheme, some sort of perfect environment for the good will, that the need of happiness may be enjoyed. Hoppé, from a narrower vision and in the language of our thought, puts the same problem when he says, ‘the conservation of value is the characteristic axiom of religion,’ and adds that, therefore, ‘the religious problem also is concerned with the problem of the universe.’ In the special point of view (Philosophy of Religion, Eng. tr., London, 1906, pp. 10, 13). The same principle or problem appears in the Hebrew Scriptures in the terms of the God and religion. It created the drama of Job. It even produced the fifty-third chapter of Isaiah. The Psalms ring with its passion and wail. For Israel was confronted with the fact that the man who was righteous, who was conscious of integrity before the will of Jahveh, was yet left to the mischiefs of life and the doom of the grave, just like the virtuous man of Aristotle. Man needs for his clear and sure grasp of the idea of goodness, and for its social fulfilment on a large scale, the assurance not only that the universe is ultimately in accord with it, but more definitely that the Will which rules history confirms and secures it finally and absolutely.

6. The moral foundations of the Church. We have already seen that, in gathering His disciples into the nucleus of the new community of God upon earth, Jesus united them with Himself by the ethical bonds of patience, trust, obedience, and hope. The apostolic communities grew up in various parts of the Roman Empire on the same foundation (Mt 16:18, Co 3:1). These new social groups are filled with the consciousness of a divine indwelling (1 Co 3:16, Ro 8:17, Col 1:9, Jn 14:16) which they describe under the three names of God, Christ, and Spirit. They live in new ethical relations with God, and the human relationships appear in a new light. A new form of moral consciousness has taken its place in human history. It was destined to pass through many outward forms, but it was destined to pass through many periods of clearness and confusion, of effective energy and feebleness. But, having the secret of renewal within its own nature and in its connection with the history of its creator and redeemer, in Christ, it has preserved itself as inextinguishable source of light and power for all periods of culture and all races of man. In proportion as the religious life...
feeds itself directly upon the deeds of God in Christ, and upon Christ's character, word, and work, as the embodiment and manifestation of those deeds, it becomes aware again of its moral ideals and becomes charged afresh with faith and passion for their fulfillment. A few words only can be used here upon the social influence of the Church as a moral organism. As a social group its outward moral influence on the State and on all other social groups and institutions is dependent on the principles of its own organization. These principles are faith, love, obedience towards God, and mutual love and service towards one another. The Church as a distinct institution is created by these. The measure of the intensity with which they are practised by the Church has always been the measure of the Church's moral influence on society. Not its mere teachings, but its actual rules of combination and cooperation have proved to be the most potent revolutionary forces. The meaning of these rules, their inner logic, has not yet been read off into the continual flux and change even of its own life. But the humanizing of man's heart, the democratizing of his governments, the socialization of his possessions and all 'values' are the laboured, slow, and not yet completed effort to translate the ideals or principles of Christ into its own being into the organization of the whole world. And that process is slow and laboured, because the Church, being composed of only partially enlightened human beings, and as such, is incompletely able to understand itself, as well as because the 'kingdoms of this world' fight for the holistic principles on which they are so widely and firmly established (Mt 23:23, Ro 13:1). From this we can see the ethical meaning of the fight of Paul for the universality of the gospel against the Jews and on. It was a movement of the Spirit by which the will of Jesus in relation to the human family was to be fulfilled, and the moral value of God's deeds in Him, were translated into human action, and into the very organization of the Church. That all races, both sexes, every grade of social life, every quality of mind, should be baptized into Christ and become one body in Him, on the same ethical terms, was necessary to make the practice of righteousness and love, as He taught them (and, in His own work, fulfilled them), possible to the whole human family. And the conscious human community of man could arise, so as to become a historical force, only in communities which had begun to practise it across all these gulls which cut the human family. It is that the new society, the community of man, is the basic principle of the speedy return of Christ mercifully hid from the imagination of the first Christians the length and breadth and heath and depth of the task of the Church as the embodiment and promulgator of the will of God in Christ for the re-organization of society. But they did their work no less effectively. It is not the possession of any theory as to the ideal form of general society, whether politically or economically considered, that has given the Church its power. Where it has attempted to dictate such a form it has always incurred disaster. Its supreme function and power have come from the possession of those of the life of control by which the ambitions, passions, appetites, and convictions of men—out of these the forms of government and social order are themselves regulated and directed within its own life. The Church’s control lies in its continuous sense of responsibility to the living Christ and its continuous dependence upon the manifestation of His will in all the transactions of its earthly life.

7. Eschatology and morals.—The attempt of some recent eschatologists to prove that the teaching of Jesus contains an *Interimanthiké*—a view of conduct dictated by the expectation of the speedy establishment of the Kingdom of God in which the whole condition of life would undergo a catastrophic change—deserves a few words. There is no teaching of Jesus which relieves men from the regular duties of life. No reasonable man so interprets the words about hating one's family (Lk 14:26), et. Mt 10:29, or applies to all men the demand made on the rich ruler (Mk 10:29), or understands that the forbidding of anxiety about clothing and food (Mt 6:25) is the bidding of idleness, even for a season. Jesus could not have seen less clearly than Paul did that a definite life lies in the refusal to work (2 Th 3:3). The deep moral and religious principles underlying the commands about the laying up of treasure (Mt 6:19), the docility of the little ones (Mt 18:1), are not annihilated away by the idea that they were based upon an excited view of the imminence of the last day. The teaching about eschats (Mt 19:28) is likewise misunderstood, if it is taken to mean that men should not marry because the day of heaven is near, or shall be no marrying or giving in marriage. On the contrary, our Lord assumes that men will have money to use for their almsgiving (Mt 5:3, 6:4, 23:11, Lk 16:12), while such a passage as Lk 14:26. (with every mark of authentically) assumes a condition of society in which the love of men is not yet annihilated away by the love of creatures, the world, the flesh, and the devil. The fact (πάντα ἔρχονται) are always present to its consciousness. Death and judgment, the transitoriness of this world and the hope of consummation and blessedness for the race in the unseen universe, the brief life of the individual and his eternal destiny—these facts make all the possessions and the values of society, all the human enterprises, limited in their positive value, dangerous in their misuse, good only in their subjection to the ends of the soul and the meaning of the Kingdom of God. The antithesis of the present human society and the society of the Kingdom of God is thus not an eschatological doctrine of evolution, as Schweitzer and others suppose, but actually essential to its application in the moral history of man. For the evolution of moral and political life in humanity is not the present, but the future. And when the reality and imminence of the eternal fills him with a sense of solemn urgency and makes the joys of earth seem by comparison meagre and incomplete, and when, on the other hand, the reality and definiteness of the holy will and the
loving mercy of God, apprehended now and here, make the earthly task seem noble. Christ's own character, and even His work of redemption, was evolved from the appeal to His will of these two aspects of the human situation. And His disciples were taught by word and example, and His Church by His spirit, to cherish both the urgency and the magnificence. But the latter aspect, the eager waiting for a Saviour and the determined devotion to the present opportunity, out of which the loftiest morality has arisen, and the spiritual which alone the perfect civilization can be evolved.

V. APOSTOLIC CHRISTOLOGY.—I. THE CHRISTOLOGY OF PAUL THE APOSTLE.—I. His religious experience.—All attempts to explain Paul's fundamental doctrine of the Person of Christ except through his contact with the primitive Christian community, and through his faith in the risen Christ, have utterly failed. A profound experience was the beginning of his Christology. Not merely in the Acts of the Apostles but in his own letters the evidence on this matter is as direct and conclusive as possible. Many writers from Bauckham onwards have treated him as primarily a speculative theologian whose opinions about Jesus have the value only of deductions from Jewish Messianism, and of attempts to reconcile these with Alexandrian philosophy. Many such views fail to do justice to the central things in the self-revelation of his own letters.

(a) As a Jew.—It is abundantly proved, first, that he was an original, and in his practical religion he was exceedingly zealous for the traditional faith of his race (Gal 1:14). It would seem that he had given years to the earnest study of Jewish and non-Jewish books, and that he had given himself with great energy to the practical side (Ph 3:6). The intensity of his love for his race never abated, and proves that, while it was fired by a deep contemplative bent of mind, it was no less active and practical in the demands which it made upon his will (2 Co 11:16, Ro 9:9–11). His ardour for the fulfilment of the Law carried him apparently to all lengths. His contemporaries saw him 'advanced' beyond them all and 'excessive' in his zeal (Gal 1:14; cf. Ac 22:20); they found him 'blasphemous' (Ph 3:13; and Lk 20:26), in the details of legal observance. According to Ac 30:25 he could appeal before Agrippa to the reputation which he had won as a Jew for strictness in practical religion.

(b) As a foil of Christianity.—His intensely practical nature made him the bitter and most powerful enemy of the gospel. He refers to this period with shame (1 Co 15; cf. Eph 3:1, 1 Ti 11), in proof of his Jewish orthodoxy (Gal 1:19, Ph 3:5), and as proof also of the power of the free grace of God in Christ. The grounds of that fierce hatred of 'the Way;' and of Jesus, may be surmised to have included the usual prejudices of others, his fellow-perservers. He led in the attack on Stephen, who was condemned for teaching the abolition of Temple-worship and the Law (Ac 6), and for blasphemy in ascribing a divine exaltation to Jesus that was crucified as 'Son of Man' (Ac 7:56). It would seem that Paul had a particular horror at the idea that the crucified and accused Jesus should have been the Messiah and Saviour of the world (Gal 3:13); and he ever after realized that this must involve a particular evil befallen to Jesus (1 Co 15). It is accepted, therefore, by most scholars who are not exploiting some private method of approval that Paul before his conversion knew Jesus and the gospel. This is to be, and that this was the original of his hatred of them. To make them curse Jesus was for him a religious act, a service of Jehovah which he must render with his whole soul; and that implies at least a general knowledge of their claims concerning Jesus.

(c) The grace of God.—If Paul became a believer in this gospel, he attributed the change not to the processes of his own mind, but to the gracious act of God (Gal 1:15, Eph 3:7). The revealing act was so direct, vivid, personal, objective, that he never entertained the slightest doubt that he had seen Jesus even as the other apostles (1 Co 9:1, Gal 1:12). His heart was changed, and all his letters predicate with the light and joy and love and power from the very work of God, which henceforth filled his consciousness. It is at this point that some writers, like Percy Gardner (The Religious Experience of St. Paul, London, 1911), pass too hastily to a supposed preparation of the Apostle's mind in his pre-Christian days for his distinctive Christology. Gardner not only attributes to him a reasoned Jewish conception of the Messiah, and knows its outlines, but credits him with a conception already illumined and expanded by Alexandrian philosophy (pp. 26, 56). Against this must be set two facts. First, the 'hints' of Paul's familiarity with Greek speculation before his conversion are too meagre and precarious. The elements in his Christology which ally themselves with the Greek world are found in his later Epistles, after he had spent years in direct contact with such views as those in Asia Minor and Achaia. Scores of modern missionaries can parallel this experience, even as late in life as he. Secondly, it is clear that the effect of his conversion was to make him receive Jesus as the primary apostles declared Him. The differences which developed later between some of that first group and himself were never concerned with the Person of Christ, but with the contrast between the act of faith on which the Church was founded and the act of circumcision on which the Jewish system was based, or with the work of divine grace in mind as against the principle of legalism. There is no sign that he had any controversy with the original group in the field of Christology.

2. Three stages in his Christology.—It was natural and inevitable that a mind so keen and powerful should seek to interpret the Person and Work of Jesus, and on these three distinct strata of thought are discernible in his letters.

(a) Data from early Christianity. He received from the primitive Church, as confirmed in his own experience, the fact that Jesus must be called Messiah (Christ), Son of God, and Lord (Koios). Of course these are not mere titles of honor. They are so closely descriptive of His very being and of His functions in the salvation of men that they are used by Paul as proper names. Moreover, as proper names they are applied to that one historical Person who is known to him as Jesus, of whom Peter, standing up with the eleven, spoke in Jerusalem, and who is described in every paragraph of the Synoptic Gospels. Hence Paul is free to use these terms, whatever status he is thinking of. It was 'Christ' who existed eternally in the nature of God (Ph 2); it was 'Christ' who was crucified (1 Co 15, Gal 2); who died for our sins (1 Co 15), who was raised from the dead (Ro 8), who is exalted and ever liveth (Ph 2, Ro 8), who is the final judge (2 Co 5). It was the 'Son of God' who was sent forth (Gal 4, Ro 8), who gave Himself unto death for all (Php 2:7), who is definitely marked out in the Resurrection (Ro 1), in whom the universe has its origin, its order, and its meaning (Col 1). It was 'the Lord' whom men must see and believe (Io 1), who was betrayed (1 Co 11), who is received as the Spirit (2 Co 3), who controls human experience (2 Co 3). To confess Him as Lord absolutely is
not, like the worship of heathen gods, to detract from, but, on the contrary, it is to manifest and magnify the very glory of God (Ph 2:1). And this Lordship extends over the created universe (Ro 14:9, Ph 2:11). All three original titles are brought together by Paul into one full-hearted and glorious description of this Person when he says: 'Blessed be the God and Father of our Lord Jesus Christ' (2 Co 1, Eph 1:3).

(6) Relation to the Spirit of God.—In the mind of Paul the supreme term for Christ is 'Son of God,' and the great peculiarity of the Christian faith is that which he can give to God is 'the God and Father of our Lord Jesus Christ.' But the relation of Christ to God is also stated in a very different way, through the use of the word 'Spirit.' Paul considers this Spirit as an elemental part of the very being or life of God Himself (1 Co 2:9-12), and as the form under which God enters and operates in the heart of man. And the Spirit's work is performed in a distinctive way, as the Spirit of Christ. It is going too far perhaps to say with some that the Spirit is the essence or basis of His personality; even Ro 8:1 (cf. 1 Co 15:19) will hardly carry us so far. The famous passage in Ro 8:10 does indeed seem to carry the identification through to the end —'The Lord is the Spirit,' 'even as from the Lord the Spirit.' But this must be compared with the elaborated interchange of names in Ro 8:2, where this identification is deliberately avoided. And yet a form of unity is even there implied which is supra-temporal. The Spirit of God is the Spirit of Christ, and the experienced presence of the Spirit in the believing man is at once the presence of God and of Christ.

The two main practical aspects of this conception for Paul are these:

(a) The Holy Spirit reproduces in men the divine relations and qualities of God. He is included in the Father, the Son, and the Spirit, and victory over death. The love of God for His Son, which is presupposed as the fountainhead of all grace (Col 1:9), is shed abroad in our hearts by the Holy Spirit, which is given in us as the sense of divine sonship which He sets forth in divine majesty (Ro 5:5). His work is referred to as a 'partaking of the divine nature' (1 Pt 1:21), and as 'giving us the indwelling Spirit which gives men freedom (Ro 8:2), and becomes the principle or source of their life (v. 2).' Even the Holy Spirit lives and abides in the Resurrection of Christ (Ro 8:11; cf. Ph 3:12). The Holy Spirit is thus for the mind of Paul the production in men of the moral qualities of Christ. All spiritual 'gifts' must be tested by the attitude of those who possess them towards Jesus (1 Co 12:3-11) and the subject of life to His Lordship. Christ's Spirit which is after the likeness of God and of Christ, the Spirit is yet a communication name with these, and must be specially named in a full statement of the God in whom Christians believe and whom they worship (2 Co 13:14).

(b) Anticipations of this doctrine.—Once more we must be careful, while allowing for the originality and power of the Apostle's mind, to recognize that in this magnificent doctrine he bases himself upon the common say, more correctly painted it into 'the man from heaven' (cf. Jn 3:16). It is less likely both to the idea of the Son of Man' or 'the man' as Jesus used it at His trial and to the Hebrew translation of the former, which is 'Son of God' (Jn 3:18) than the latter idea, as given to him in the disciples' accounts of Jesus and His words, led him to carry the parallel back to the former. J. Weiss in his Commentary states that the influence of Ps 8, Dn 7, and the 'Similitudes' of Enoch without the mediation of the words of Jesus.
ness of Jesus (In 12th. 14-19), who promised this word of his Church (cf. 28). Even in the Synoptics we find that: (a) the Holy Spirit is described in the account of the Virgin Birth as the energy which causesthe appearance of His mother (Mc. 1: 20, Lk. 1: 35); (b) John the Baptist named the gift of the Spirit as one of the marks of the Messiahs (Mk. 1: 7, Mt. 3: 11, Lk. 3: 16); (c) the four gospels also name the baptism of Jesus as the hour of the coming upon Him of the Holy Spirit, for His anointing to the work of Messiahship (Mt. 3: 26, 29, 30, Lk. 3: 21, 22), In Lk. 3: 16, cf. Mt. 3: 11, Lk. 4: 1). It is asserted in that Gospel that He went to the desert to face His trial in the power of the Spirit; (d) Jesus claims that He does His works of wonder by the Spirit of God (Mt. 15: 30-31, 17: 22). These passages show that in the first place the word 'Holy Spirit' in the Gospels has the same meaning as it has in the Book of Acts; in the second place, the phrase in Acts 1: 4-9 shows that the Holy Spirit for their service of Him (Mt. 3: 11, Mt. 17: 5; cf. Lk. 11: 11).

The extraordinary fullness of reference to the presence and workings of the Spirit in the book of Acts can only be accounted for ultimately through some communal experience which was, in their minds, at once a manifestation of God's presence and power and also connected directly with Jesus and their past experience of Him. That whole situation is needed to explain the significant fact that Paul everywhere assumes that his readers must understand his references to the Spirit in relation to Christ and the Church life. Here as throughout his Central teachings, even as to what he calls 'my gospel', he appeals steadily and even passionately, not to his speculative prepositions as a theologian, but to the real and Christian experience of every Christian community.

(c) The influence of Greek thought. — There is another range of Pauline thought concerning Christology, especially, which comes to expression in Colossians and Ephesians. There are evidences nearly all his Epistles that Paul in his mission work strove to make sympathetic contact with the moral and religious peculiarities of the people whom he taught (cf. Ac 17: 28, and W. Ramsey, Galatians, London, 1889). Much controversy has been waged in recent years as to the extent and content of his浸信会 as a theologian to the mystery religions, the Gnostic philosophy, and even the Stoic philosophy, which were popular at the great centres where his work lay. It has not been proved that anything essentially new was added to his Christology from any of these sources. But it has become very clear that he did set himself to make Christ intelligible to minds saturated with Gnostic interpretations of life and attractive to souls absorbed in an irreligious, thought pecu-lia to the people. It is to be held that he learned to think of 'the cosmic Christ' from the Philo doctrine of the Logos or some Asiatic reflection of it. That he was compelled, as a missionary is often compelled nowadays, to relate the doctrine of Christ to the intellectual concepts of his field of labour, and that this led to the use of new terminologies, is obvious. But it is significant that, while the term 'Logos' occurs in the Pauline Epistles about eighty times and occasionally in meanings verging on the technical philosophical use of it, there is not one occasion when he does use it in the Philocanic sense. In the critical passage of Col. 1: 15 he undoubtedly addresses men who have cherished some phase of what is generally known as the logos doctrine. And the result is a setting forth of the eternal being of the Son of God by the manner of Christ which is more elaborate philosophically than we find in any other place, except In 12th and He 1: 14. But the exposition is intended deliberately to exclude all comparison of Christ with other angelic beings, or heavenly powers (v. 18), which Gnostics seem to have intended. They are described as emanations from the absolute and controllers of the world. He does not borrow their categories to add some new and unthought of quality or dignity to the glory of Christ, but to reveal to them in their own language that which He is essentially for the Christian consciousness.

The result is that Christology in Paul begins to take on the language of the Greek world, as it is of characteristic of all creation'. In Him the attributes of God are concentrated, and He has His being before all creation' (v. 9), 'before all things' (v. 16). In spite of J. Weiss's argument at the inspiration of the Holy Spirit for their service of Him (Mc. 3: 16, Mt. 17: 5; cf. Lk. 11: 11).

The words ἐκ τοῦ κόσμου mean more than ἐκ σώματος, implying that He is not a mere instrument but a continuous, abiding, conditioning cause. This is made explicit in the further statement that all things 'stand together' receive their organic unity, through their continuous dependence upon Him. (b) In addition to origin and continuity, we have in Christ the third great metaphysical conception of end or final cause. 'All things have been created unto Him'.

1. Characteristics common to both. — In the two great systems of the ancient philosopher there are commonplaces of thought which are drawn from the same atmosphere and charged with the Logos doctrine. It must, however, be carefully noted that these writers move...
2. The Fourth Gospel.—The entire meaning of the Fourth Gospel lies here. It is an effort to show the Logos, who is thoroughly conceived of in Paul very specifically as an eternal, living, purposive, rational being, as He appeared in flesh, as He moved a man among men. It is a profound study of the consciousness of Jesus as the consciousness of a God living under the conditions of human experience. Incidents and discourses are recalled, interpreted, re-stated, and recorded, as they reveal that ‘glory’ which shone through the veil of flesh into His disciples’ hearts, full of grace and truth (Jn 14).

There can be no doubt, whether the author be John the Apostle or some other mind working upon material which must be traced back to Jerusalem and the Lord’s immediate disciples, that he is describing the actual consciousness of the historic Jesus. He is not inventing; nor is he using what he knows to be the inventions of a Pauline group, but what he has learned from the lips of whom Jesus said and did. If, as seems certain, he had at least Mark and Luke before him, then it is impossible, without impugning his honesty in the most sacred manner, to account for us of whom Jesus knew Himself to be the Son of God. This it is that accounts most reasonably for the well-known and fundamental features which distinguish his few but penetrating words about the Logos from the doctrine of Philo. He has not as an independent metaphysician discovered the defects of Philo, and then clothed the name of Jesus with the eternal attributes, but rather has he begun with a magnificent grasp of the idea of divine Sonship and read that back into the philosopher’s idea of the Logos. His work is therefore as truly a criticism of the inadequacy of the Logos doctrine as Paul’s, of the same idea of Sonship in the same philosophic atmosphere (Col 1 above), which was intended to be at once a condemnation and transcendence of the wisdom of the Greeks.

3. The Second Epistle.—The same facts appear in the Epistle to the Hebrews. It is true that in the great opening sentence the metaphysical terminology is more closely involved with the idea of a doctrine and normal being, than appears to be the case in John in verses 14. In literary manner it is more akin to Paul’s passage in Col 1:9-2. But we must remember that John in later verses (16-18) deliberately re-states in relation to Jesus the whole of the ideas which are set forth in v.14 in relation to the Logos. It is this later verses that are the true parallel to the passages in Colossians and Hebrews. In like manner, then, for the author of the Hebrews, the Son of God is a supreme Being, who as a Son possesses the essential and fundamental feature common to all—that the one common term in all their descriptions is ‘Son of God.’

Their real unity is not to be found either in their philosophical terminology, which is very different in each case, or in a common metaphysical theory, supposed to be in the background but which we have no real means of discovering. Their unity is found in this, that they are describing the eternal and cosmic relations of a concrete personality, who is identical at once with Jesus of Nazareth and with this divine Spirit which fills the Church. But the significance of the matter is not seen until we emphasize against the one point which is most generally ignored in our day—that as a mere matter of fact these writers all feel that their whole view is based originally upon the consciousness of the historic Jesus, the Son of God.

III. CONCLUSION.—It is in the interest not of apologetics but of actual history that we may in presence of these facts agree with J. Moffatt:

‘We cannot explain primitive Christiasity either as the transformation of the Jesus of History into that of the historical Jesus, or as the evolution of a Jesus-cult out of a current series of christological doctrines (Theogony of the Gospels, London, 1912, p. 174m).

But the same historical interest must prevent us from using, as wholly true to these facts, a certain form of expression which is quite popular in our day of psychological approach to every problem of history. For example, we may take the following from J. Weiss:

The total impression is that early Christianity has used current ready-made forms and concepts in order to express in generally understood language, and yet it is an absolute and supreme manner, the overwhelming impression made by the Personality of Christ. Men sought out predicates whereby to announce that the Ideal and the highest religious values are in Him (Ohrdnung, p. 67).

The perfection of such a summary appears in the succeeding paragraphs, where it appears that these ancient predicates, even that of Deyt (‘Gottheit’), are an account of whom Jesus was and what He said and did. If, as seems certain, He had at least Mark and Luke before him, then it is impossible, without impugning his honesty in the most sacred manner, to account for us of whom Jesus knew Himself to be the Son of God. This it is that accounts most reasonably for the well-known and fundamental features which distinguish his few but penetrating words about the Logos from the doctrine of Philo. He has not as an independent metaphysician discovered the defects of Philo, and then clothed the name of Jesus with the eternal attributes, but rather has he begun with a magnificent grasp of the idea of divine Sonship and read that back into the philosopher’s idea of the Logos. His work is therefore as truly a criticism of the inadequacy of the Logos doctrine as Paul’s, of the same idea of Sonship in the same philosophic atmosphere (Col 1 above), which was intended to be at once a condemnation and transcendence of the wisdom of the Greeks.

The Second Epistle.—The same facts appear in the Epistle to the Hebrews. It is true that in the great opening sentence the metaphysical terminology is more closely involved with the idea of a doctrine and normal being, than appears to be the case in John in verses 14. In literary manner it is more akin to Paul’s passage in Col 1:9-2. But we must remember that John in later verses (16-18) deliberately re-states in relation to Jesus the whole of the ideas which are set forth in v.14 in relation to the Logos. It is this later verses that are the true parallel to the passages in Colossians and Hebrews. In like manner, then, for the author of the Hebrews, the Son of God is a supreme Being, who as a Son possesses the essential and fundamental feature common to all—that the one common term in all their descriptions is ‘Son of God.’

Their real unity is not to be found either in their philosophical terminology, which is very different in each case, or in a common metaphysical theory, supposed to be in the background but which we have no real means of discovering. Their unity is found in this, that they are describing the eternal and cosmic relations of a concrete personality, who is identical at once with Jesus of Nazareth and with this divine Spirit which fills the Church. But the significance of the matter is not seen until we emphasize against the one point which is most generally ignored in our day—that as a mere matter of fact these writers all feel that their whole view is based originally upon the consciousness of the historic Jesus, the Son of God.
apologist and the denier of the deity of Christ to war over the issue as to whether the will to wear these titles was madness or miracle, delusion or divinity. But the effect of the pre-condition, the facts which constitute the field of battle.

VI. CHRISTOLOGY IN THE EARLY CHURCH.——

I. INTRODUCTORY.—1. Logic and community life.——Christology for Christology's sake is the nature of all human social organizations. All groups that are formed for definite ends are compelled to work out, not only those ends, but the principles of efficiency toward those ends. Of course this must be done actually, whether it is done formally or informally. The history of every social group in the world, from a private club to a national government, includes the working out of the logic of its inherent principles. Moreover, the group history is always more logical than the development of the individual members of it, for in the individual the emotions play upon the core of the will, confuse the logical powers, and make the individual's life an imperfect reflexion of the inner logic of the principles which he professes to have adopted. But, for the group life, private emotions are cancelled in the clash of wills and in the course of controversy as to the meaning of the ends, the principles, and the methods which inhere in the constitution of the group. For this reason it is the heart and very life of every institution, of a government, of a political party, of a church, is often severely logical. It is the reading off into active life of the rational implications of those principles on which it is founded. This process of unfolding the logic of its adopted rules is aided by every institution by the challenge of the environment. For each organized group lives in a world of its own, and its own principles come into collision or co-operation with theirs. Controversy arises, and that is, in all important and continuing cases, pushed further and further, until the full inner meaning of each interpretation is revealed. Acceptance and rejection of the institution and its ends, the loosening or confining of conviction, the desertion of an ineffective or untrue principle, the deepening of the power of the true principles, even the gradual death of an institution when its once logical bases of thought lay in non-Christian speculations about the nature of God and His remoteness from all contact with the evil inherent in the material universe, is a natural and inevitable result of the attempts of the church to rise to a new plane of intellectual and moral development.

Christ inherent in the new community.—The theology of the Christian church, as its orthodox form and including all its departments and phases of history is the natural and inevitable result of this process. As far as Christology is concerned, it is the gradual unfolding of the central fact that Jesus Christ is from the first accepted by the Church as the incarnate Son of God, the redeemer of man by the Cross, the ruler of our experience by His Spirit. The institution that was organized on that basis must work out to the very end all the implications, the inner logic, of the conviction which gave it being and power. It would be impossible to relate here the particular stages and various adventures of the human spirit in this great undertaking. We must be content to give a mere outline of the logical process by which the Church, through all natural causes of controversy, sought to define and develop its faith and was as refiner of Christ. That faith and worship of Christ created the Church. It separated, not without pain and surprise and alarm, the primary disciples from the Jewish Church. It was the explanation and power of individuals from all classes and races as the message of redemption through Him and of control by Him was carried from place to place. The Perfection of God and redeemer of man was the foundation of the new community. This principle brought it at once into conflict with the monotheism of the Jews and the polytheism of the Gentiles. Among cultured classes it was confronted by the Gnostics with their confident speculations about the deity and His invisible hierarchies of creative agencies, and by the practical Agnosticism of vast numbers for whom neither idolatry, nor Gnosticism, nor mystery-religions contained any solution of life's enigma. Collisions of this order were felt from the beginning, as the NT proves. But, as time went on, the warfare became more definite and more keen, especially as the number of Christian adherents increased and varieties of culture, of intellectual equipment, of moral and spiritual insight and intensity, took their place within the growing host of the baptized.

II. THE FIRST STAGE IN CHRISTOLOGY.—During the sub-Apostolic period, and through that of the apologists down to nearly the close of the 2nd cent., Christological inquiry had hardly begun on the Christian basis. Such cruder phases as are known by the names of Ebionism and Docetism started from conceptions of God and the world which themselves were anti-Christian. Thus Ebionism, obscure in its history and teaching, while it affirmed for Jesus as Messiah, shrank from seeing in Him the actual presence of God. Jewish prejudice against believing that God could come into such close relations with the material world as are implied in the divinity and crucifixion of the Son of God held that view in abhorrence. If it came upon Him at baptism and made Him the supreme teacher; the death was an ineradicable horror, but He would come again in power and glory to make all things new. Docetism, on the other hand, rose from or was adopted by various phases of Gnosticism. Even Justin Martyr bears witness that many Gnostics were in the Church and must be specifically eulogised on the basis of their thought lay in non-Christian speculations about the nature of God and His remoteness from all contact with the evil inherent in the material universe. This is to be found in such a mixture of dogmatic speculations on the origins of God and the universe with reverence for Jesus, as a member of the supernatural forms of the divine nature which are the agencies of our universe has arisen, as was attributed to Basilides towards the middle of the 2nd cent.; and in such a union of Christian faith with purely chthonological conceptions of the divine generation as proceeded from the poetic mind of Valentinus a little later. From such sources, in the main, arose the Docetic view of the Incarnation, according to which the divine element in Christ was the only real and permanent element, and it assumed, in this way or that, the appearance of a man, but did not partake of actual life and blood. (Logically it was inevitable that the Ebionite and Docetic positions should appear as barely possible, as at least conceivable, explanations of Christ, the one denying the reality of the divine, the other denying the reality of the human nature in Him. Actually these views made in their original and crude forms less disturbance among the general mass of Christians and in the minds of the greatest Christian teachers than other interpretations of His person which appeared later.) Thus Clement of Rome, the Apostolic Fathers, and the Apologists, the apostolic positions were maintained, often in their own language of concrete and positive affirmation, used by means of carefully chosen equivalents for their words and phrases. Thus Clement speaks of 'Our Lord Jesus Christ, the sceptre of the majesty of God' (Cor. 16). In another passage (ch. 2, whatever or not with Lightfoot and Harnack we read 'God' instead of 'Christ'), the clause 'His sufferings were before your eyes', the dependence upon Christ as at once revealer of
truth, redeemer from sin, and living Lord is vividly and passionately expressed. In the Epistle
of Barnabas He is spoken of figuratively as the Son
of God and Lord of the World. As Maker of the
Sun before which our eyes quail, how much more
glorious must He be; His incarnation was the
veiling of His dazzling radiance. For Polycarp,
in his martyrdom and death He is the fascinat-
ing centre of thought. He is Lord and Saviour
(ch. 1, 6), Son of God (ch. 12), and His name is
associated with that of God as supreme object of
fear, He is the object of mercy (ch. 11). Ignatius is
more full and varied in his forms of
expression. He uses the so-called Trinitarian
formula but naming Christ first, 'in the Son and
in the Father and in the Spirit,' or 'to Christ and
to the Father and to the Spirit' (ad Magn. xiii. 1).
He speaks of Christ as right as 'our God' and 'my
God,' asserts His pre-existence (ib. viii., ad Phry.
), and uses the striking mystical expression 'Who
is His word (VERUM) proceeding forth from Silence'
(Var. 5) (ib. viii.). Echoes of controversy with Doc-
teism appear in his repeated use of the adverb
ἀναφέρεται (ad Eph. xvii. 2) when referring to the
incarnation and death. But the double being of
Christ is stated in terms which were possible only
before the rise of the great discussions of His
Person: e.g., he says in one place:

'He is at once flesh and spirit, begotten and unbegotten, God

in the flesh, the real life, both from Mary and from God at
first possible and then impossible' (ad Eph. vii. 2; cf. xvii.
4, ad Sminth. 1. 1, 1).

By these and other such writers (e.g., Epistle to
Diognetus) we are kept in the atmosphere of specu-
losic language. The Church is still in the glow of
its first enthusiasm, eager in its missionary labours,
absorbed above all in the task of teaching God through
the risen Christ, that conqueror of death and giver of
the Spirit, and concerned with the continuous
fight against heathen vices and the inoculation of the
new life of inward holiness and of the new loyal
soul. They were building on the foundation
without inquiry as to its material and mode of
construction.

II. THE SECOND STAGE IN CHRISTILOGY. - 1.
The Gnostics and Grecian Christology. A new
wave of heresy entered into the life of the Church with
Justin Martyr, the race of men who before or after
their conversion were saturated with Greek culture and
spoke the language of the Hellenic world. They were
Gnostics, men like Origen, Clement of Alexandria,
Gregory of Nyssa, and many others. But whether or
not they took Justin's motto, 'Whatever is
rightly said among all men belongs to us Christi-
ans,' they began the long and delicate task of
determining what was 'rightly said' by tests found
within the Christian system itself. Thus opened
the next stage in the unfolding of the nature of
Christ. Given the reality of the pre-existent Son
or Logos and the reality of the man Jesus, the
doubly being of Christ, the question arose as to
what was meant by and how much was contained
in those respective realities. At this point it is
a modern powerful school of thought has
found the chief disaster of Christianity (see A.
Ritschl, Die Entwicklung der christlichen Kirche,
tr., Hist. of Dogma, London, 1894-99; E. Huch, In-
fluence of Gr. Ideas and Usage upon the Chr. Church
[II. 1885], London, 1889). For such writers it
appears that literalism not only to the divine
nature of Christ and especially the use of the
Logos idea, with the resulting minute discussions about the
modus of the Incarnation, diverted faith from
Christology; A. Harnack, for example, characterized
from its true and only source of inspiration. For
them the gospel lies simply and directly in the
experience of God's Fatherhood by the soul of Jesus
and the practical teaching which flows from that
(cf. W. Herrmann, Der Verkehr des Christen mit
Gott, Stuttgart, 1903; Eng. tr., Communion of the
Christian with God, London, 1906; A. Harnack, Das
Wesen des Christentums, Leipzig, 1909, Eng. tr.,
What is Christianity?, London, 1904). The effort
to treat His Person as a metaphysical and philo-
sophic problem is inevitably to the idea that
salvation depends on the right solution of that
problem, and so to the substitution of an orthodox
creed for a historical and personal revelation of
God as the true object of faith. Such an all-
discussion of this subject is out of place here, but, as
the centre of the controversy has been the Person
of the founder of Christianity, a few facts on the
other side must be briefly stated. (1) From the
beginning the Christian consciousness, as we have
seen, has been determined in its form and content
by a definite conception of Christ as superhuman
Messiah and incarnate Son of God. This concep-
tion was not invented for Him, but given forth
from His own consciousness and involved in His
actual power and in the new consciousness of His
Church in relation to God. (2) The results of
through inquiry into the nature of His Person
could have avoided being only by a universal con-
cept not to investigate intellectually the ultimate
facts of the religious life. (3) Given the right to
think, the alleged divisor, attribution of any intel-
lectual definition of orthodoxy, must be compared with
the effects which would have been produced upon
the religious consciousness in that age by the
general acceptance of the opposite conception that
these were treated as essential to the existence of the
Christian community, or if treated as of equal
value to its life with any others, or even if treated
as matters of indifference. It is true that any intellec-
tual definition of the Person of Christ, and of His
Messianic function, if sincerely used, produces characteristic effects in the further
spiritual and social life of the community which
adopts it. There can be no doubt that the preva-
ience of the 'Liberal' picture of Jesus in our time
has put its own colour upon wide circles of religious
life. (4) The real and vital problem of the Church,
in preserving its true relation to its divine founder,
is as to the right use of its conclusions in any con-
troversy about His Person. The ancient Church,
especially under the power of the Emperors, turned
its conclusions (mediations of the Church) into
weapon by a centralized authority. This the
modern Church cannot do. It was at this point,
and in this way, that disaster entered.

2. The First Phase: the divine nature of Christ.

Assuming that in Christ the Son of God has
appeared as a man, the problem arose as to what
is meant by the Son of God or Logos. How is He
related to God? This question was not forced by
the metaphysical, but by a very practical, interest.
For the worship of Christ was the life of the Church
from the beginning, and it inevitably raised the
rebut from heathenism that Christians themselves
had two, or, counting the Spirit, three Gods. It
was the effort to meet this condemnation that drove
men to define how Christ, a man, could become an
object of worship for answered and sincere mono-
theteists.

(a) Monarchianism.—The first answer came from
those who are called Monarchians. They were
of various kinds. Some evolved an East
Unitarianism, not unlike Ebionism. But those
who made history took a higher road. Their chief
representative was one Sabellius, who lived in the
first half of the 3rd century. God in Himself was
said to be without temporal succession and
impossible, unknowable. As He acts outwards upon
the universe, He assumes aspects (πρόσωπα) for
which various names are needed. The three names
Father, Son, Spirit, are appropriate to describe Him as Creator of the universe, Redeemer (in Christ, from Birth to Ascension), and Life of the Church. But these names should be used only in relation to that phase of the divine action to which they exclusively refer. Much ingenuity was apparently borrowed to allegorically and illustratively translate this ineffable unity of God. Thus He may be called ἐσώτερος, to abolish the idea that in Him any distinction exists, though we rightly name Him Μέσος. For the worship of that perfect action, which is from the divine condescension summoned to divine honours. The solution of the problem was too easy. The Christian view of Christ had always implied a closer and more mystical relation of God Himself to the cradle and the cross. The ape and the joy of faith in Christ arose from the presence of God in Him and in His deeds of redemption. The Arian Christ, mighty as He could be depicted, was less than the Christ who was the personal manifestation of God, and in whose death the righteousness and love of God Himself were directly realized, and made effective in the actual history of man.

(c) The Nicene Christology.—The third possibility regarding the relation of the Son of God to the Father was that which won the day at Nicea (A.D. 325). Constantine took the portentous step of summoning the Councils, and for a time, as for a while, the baneful step of using the fleshly arm to enforce its conclusions. It must be remembered that these acts of Constantine introduced a new principle into the organized life of the Church, that of putting a character that it took long centuries to unfold its finer logic. Trust in the State and trust in the ruling Spirit of Christ are principles whose reconciliation is not yet achieved either at Rome or at Berlin. More than half a century of Arian strife and shameful confusions of statecraft scattered out before the unforeseeing Church after Nicea. But in the conclusive itself there were men of profound Christian conviction and powerful intellect who saw that in this controversy the apostolic faith was itself at stake, and the defensive creed which they formulated became a living force in the Church from that day to this.

(e) The Nicene theology, as such, really began with Origen (*A.D. 254). Against Monarchianism he affirmed the Personality of God, teaching that He is the indivisible, and for Him is the first of all creatures, and with Him time begins. But ὅτι is the root of all. Hence we may say that God is the Father, and that the Son does not directly know God. He is known under many conceptions (πρότερον), indicating His great glory. And yet 'God is ineffable to His Son,' for it is plain that it is impossible for that which has no contact to make any impression or to grasp the idea. The Son became incarnate in Jesus Christ in the simple and obvious sense of entering into a human body. There was no need for another human soul in that body, save the Son of God was God, to be the instrument of that condescension both as the medium of Creation and as the glorified Christ. On the surface this view makes a fair show. It seems to avoid some dangers of Monarchianism. But on the one hand and Pantheism on the other, and yet in its deepest principle Arianism is Monarchian. Over against the dominant Origenistic theology it escapes the difficult idea of 'eternal generation' and the tendency to make the earlier phase of Jesus an unreal thing for imagination and faith. But Arianism as a religion was too close to heathenism and too far from the centre of Christian faith to live. In reducing mysteries it lost its hold over the realities of revelation and redemption, for its God is too remote and abstract to be known or to appear in time. And, worse still, it made a distinct approximation to idolatry in its arguments for the worship of the Logos. From the divine condescension summoned to divine honours, the solution of the problem was too easy. The Christian view of Christ had always implied a closer and more mystical relation of God Himself to the cradle and the cross. The ape and the joy of faith in Christ arose from the presence of God in Him and in His deeds of redemption. The Arian Christ, mighty as He could be depicted, was less than the Christ who was the personal manifestation of God, and in whose death the righteousness and love of God Himself were directly realized, and made effective in the actual history of man.
with the pure, personal Spirit, of which it is the self-expression, better than the unity of a Son with a Father, while we can apprehend the distinct hypostasis of each more easily through the latter terms than through the more abstract. Each set of terms is used to describe the same unity and new the difference, but always the eternal reality of God the Father and the Son, on the danger of deriving the Son from the Will, and not from the essence, of the Father, see Athan. de Syn. 35 f.).

(b) In this substance of man is subordinate to a higher view of spiritual nature. And we have already seen that for Origen the supreme facts in the being of God are will, intelligence, and love. The resistance with which Athanasius and others encountered in the discussions which involved the use of σῶμα, ἐπίπτωσις, etc., is a witness to the fact that they were fully aware of the limitations of the human mind when applied to the mystery of God's nature. These terms were used in the Nicene Creed (in the Athan.) only that the dogmas of Ariyanism and Monarchianism might be denied, and that the substance of the Christian faith, which rests in the fact that God was in Christ and that Christ is 'eternally one with God,' might not perish from the earth.

3. Second phase: the humanity of Christ. — The official victory of Trinitarianism, the affirmation of the proper deity of Christ, led naturally to the raising of the next problem, viz., the question of His humanity. The supreme emphasis of orthodoxy on the deity of Christ seemed to endanger the unity of His appearance in the flesh. Even in NT times this tendency was felt (cf. Jn 1: 18-34, 20-33), and the reproach of Docetism has been uttered against many writers in the 2nd and 3rd centuries who were yet counted orthodox. Indeed, Harnack goes so far as to say that down to the beginning of the 2nd century "no single outstanding church teacher really accepted the humanity in the unqualified way" (Hist. of Dogma, iv. 129). Origen used his daring genius on the problem. Believing that all souls of men have pre-existence, and become incarnate because of the mystery of God's nature, he held that the one unassiled soul became united with the divine Logos and then by an act of will, and love, became incarnate as the soul of Jesus. This theory did not deeply influence the history of the subject, though Arius owes something to it. It was Apollinaris who first dealt with it in a more sober and suggestive manner. That he was true to the doctrine of redemption is evident from such words as: "He is both God and man: in Christ only two natures are preserved, and if only God, he did not save through suffering. If Christ was only man, or if only God, he was not a mediator between man and God." But Apollinaris was equally clear that, if a perfect God were united with a perfect man, there would be two, one by nature. Son of God, and the other by adoption. (Athan. c. Apoll. 1: 3.)

He solved the problem partly by falling back on the Aristotelian view of man's nature as tripartite and buttressing that with 1 Th 5th ('May you, spirit, soul, and body be preserved entire,' etc.). He finds the essential features of human nature in distinction from God to be body and soul, while in mind or spirit (σώμα, ψυχή, πνεῦμα) man is of one type with the divine Logos. Hence in Jesus Christ the union of the two natures must be found in this, that the Logos became the ψυχή (or πνεῦμα) of the man Jesus by becoming united with the body and soul in the womb of His mother. Thus we have a mind in Jesus 'unaffected by psychical and fleshly experiences, and one by nature, as the commonwealth of the Son and God. When Gregory of Nyssa deals with human nature he can be seen struggling to say that the essence of man, though distributed throughout his body, is not something 'spatial,' as we would so naturally put it. And, when he would state the difference between the divine and the human nature, he finds it is reside ultimately not in a difference of substance, but in this, that God is the Creator and man wholly dependent on Him (On the Making of Man, xvi. 12). There we are in the region of volition and ethics, and religious insight. The cross view of substance is subordinate to a higher view of spiritual nature. And we have already seen that for Origen the supreme facts in the being of God are will, intelligence and love. The resistance with which Athanasius and others encountered in the discussions which involved the use of σῶμα, ἐπίπτωσις, etc., is a witness to the fact that they were fully aware of the limitations of the human mind when applied to the mystery of God's nature. These terms were used in the Nicene Creed (in the Athan.) only that the dogmas of Ariyanism and Monarchianism might be denied, and that the substance of the Christian faith, which rests in the fact that God was in Christ and that Christ is 'eternally one with God,' might not perish from the earth. —
ner man; and his opponents have ever since made the most of that concession. The hostile arguments were based on the idea that this affirmed a mutilated humanity, and thus left it unredeemed at its highest point. For, while Apollinaris (Greg. Nyss. ad "Apol. It.) insisted that "the death of man does not abolish death," others answered that the death of the divine Logos (if that were possible) would not redeem the soul of man. What was required for redemption was a redeeming manhood in the person of the Incarnation, that body might redeem body, soul redeem soul, and mind redeem mind. What was not assumed was not redeemed. It was in vain that Apollinaris urged his two strongest positions, that only the divine can redeem the human, and that, since the soul is the seat of personality, to conceive of Christ as possessed of all these human elements is to conceive of Him as a true human individual, and to make the Incarnation inconceivable. He was not himself released from the realistic (some would say, magical) view of redemption, and could not rebut the strong argument made against him on that basis. The very conception of personality which his own speculations were helping to clarify was still so confused with that of substance that his vision of the Incarnation was held in alien bonds. That in God there is a human element; that the divine Logos and the human mind are of a type so that the former can act for or as the latter; that the seat of personality is here; that it is fatal to faith and reason alike to see in the Incarnation Christ two distinct, immanent, and imitative forms of unity—these are positions of great power, which account for the fact that 'Appollinarism' reappears persistently in later ages, and in our day is more widespread than it has ever been imagined. But he was himself hindered, by a meagre psychology and by the remainder in his mind of the tendency to define human nature in mutually exclusive 'parts,' from doing justice to his presupposed fact. Hence Appollinarism was explicitly condemned in the first Council of the Council of Constantinople (A.D. 381), at which the Nicene Creed was revised, decreed, and maintained. The Decree of Chalcedon (A.D. 451) elaborate care was taken to rule it out completely. Christ is 'at once God truly and man truly of a reasonable soul and body' (τὸν ἄνθρωπον τόν ἄνθρωπον); He is 'of the same substance (ὁμοούσιος) with us according to his manhood.' The conclusion of the Church was therefore officially announced in the doctrine of the perfect manhood, in the sense of the parts of an individual man, must be ascribed to Jesus Christ.

T. THE THIRD STAGE IN CHRISTOLOGY—The third stage in the development of Christology was now reached. With its insistence upon the full deity of the Logos (Son of God) and the full humanity of Jesus, the Church was driven to consider more deeply the mode of the union of the divine and human in one life. The matter had not been ignored indeed. Origin, as we have seen, confronted the problem from the speculativte side; Athanasius had dealt with it in close adherence to Scripture. The latter held that the Logos in assuming human nature did not merely unite Himself with an individual man, but become the true subject of the human life of Jesus. At the same time He retained His functions as Lord of the universe. He did, indeed, as man experience growth (Lk 2), and as a moral being, He increased in wisdom and stature (Mk 13), but in such aspects of His incarnate life the Logos restrained His powers. This double consciousness is the very mystery of the Incarnation. For our salvation, we are encouraged of all our divine glory and now veils it, in the limitations of a man's mind and body. But the chief difficulty with this position is the uncertainty, the apparent discontinuity, of the subject in the self-expressions of the incarnate state. The doctrine of a continuous self-limitation was not yet admitted by some Christian theologians likewise, with their intense hostility to Apollinarism, while holding the unity of the Person, yet insisted very strongly also that each 'nature' was perfect; the union was effected by an indescribable 'commingling.' Apollinaris, however, raised the question to new distinctness and importance, and these uncertain views were subjected to fresh and closer scrutiny.

(a) First phase: Nestorianism—On the one hand arose the so-called Nestorians, who were prepared for by the famous school of Antioch among whom the name of Theodore of Mopsuestia stood out as a brilliant expounder of the Scriptures. With a keen sense of the historical, he approached the problem as one who was filled with the reality and power of the life of Jesus. But he was also a vigorous defender of the Nicene Creed and as vigorous an opponent of the Apollinarian Christology, and therefore faced the problem of the nexus between a complete divine nature and a complete human nature. This he found in the Will of God the Word, who, Himself begotten from the Father, unites the man Jesus Christ with Himself. Hence Christ is rightly called 'Son,' because beyond all else. He possessed the adoption of a Son through that union (Rom. on Gal 4). But it is a union that was expressed by his own voice, who carried this doctrine to its full issues in the controversy which led up to the third ecumenical Council at Ephesus (A.D. 431) to the fourth Council at Chalcedon (A.D. 451). Rejecting the use of the term "ἐμπράξωσις" (Mother of God) as applied to Mary the Virgin (which was defended with great energy by Cyril of Alexandria), he also, like Theodore, set the union of the human nature of Jesus Christ with the Logos in the region of will. It was the grace of God that bound this sinless man in an inseparable oneness with Himself as Logos. The general term λειτουργία (eternal union) was used as over against the "ἐναρμοσμένος" (real union) with which Cyril of Alexandria sought to express the higher view. In a series of mutual "analithemata" these two protagonists defined their hostile positions, which lay in a region that philosophy was only beginning to explore. Nestorius insisted that, as Jesus possessed a 'rational soul,' He was a complete human individual, while Cyril maintained that He was a complete and a rational soul but insisted that 'the Word having personally united to Himself flesh animated by a rational soul,' the result was a true union in 'one Christ and one Son.' Cyril, that is to say, insisted that the Word did not unite Himself with a human individual, but united the two natures in one (οὐδηδήν). For the result, for the basis of their oneness, he could find no technical term. "Φύσις (natural) and συνώσις (substantia, substance) were still applied as a rule to the total content of the human and divine elements in their respective and distinct reality, and Cyril's use of συνώσις in the so-called Creed of Union (A.D. 451) is not as yet distinct enough to define their basis of unity. But this school came near Docetism in maintaining that the Logos appeared, for our sakes, to be ignorant, weary, etc., but that such sufferings could be ascribed to real experiences to the Logos incarnate. Nevertheless, Cyril and his party, in spite of their own difficulties of construction, made it clear that the Nicene Creed was perfect; the union was perfect; the union was perfected by an indescribable 'commingling.' Apollinaris, however, raised the question to new distinctness and importance, and these uncertain views were subjected to fresh and closer scrutiny.
his carefully drawn anathemas, failed, is because in his fear of Apollinarism (of which, however, he was accused) he shrank from taking the full consequences of making the Logos the personal instrument of the Incarnate One. Striving to maintain the completeness of the humanity for soteriological reasons—and this with great earnestness and insight—he yet failed to define, so as to satisfy the Nestorians, how the human can remain human if it has not its basis, and indeed the divine 'nature,' but the divine Logos. Nestorius had a curious trick in his anathemas of describing his opponents' language about the incarnate Christ, in His unity, as if they applied it to the one 'nature' or the other as Nestorius conceived of these; e.g., in the eleventh he accuses them of maintaining 'that the flesh which is united with God the Word is by the power of its own nature life-giving'—an incredible misrepresentation, and possible only because Nestorius was so possessed of his own vision of the facts that he could not read the words of others as they meant them. He could not see their vision.

(b) Second phase: Eutychianism.—From this strong insistence by the orthodox party upon the Logos as the true basis of the one Christ logical exegesis had to some extent permeated Christian literature. If Eutychianism failed when starting from the integrity of the human, as though that were primary in their interest, how would it be if the start were made from the integrity of the divine in the incarnate One? Eutyches cared little for the soul over the ever-narrowing edge of definitions into another 'heresy.' For him it was clear that the incarnate One had but one nature, as indeed Cyril insisted. But the students, urged on by their own views, the whole system must have been changed in its very substance by union with deity. The humanity is absorbed into the divinity (cf. Origen's approach to this view, c. Cate, iii. 4). This was condemned, of course, as docteric in its ultimate effect, and as 'confusing' (Σωχυρωμεν) the natures.

(c) The Decree of Chalcedon.—At Chalcedon the matters thus brought to a climax. Subsequent councils dealing with further developments of the matter (Monophysitism and Monothelitism) could only insist on right maintenance of the Decree of Chalcedon. Theological speculation had passed beyond the limitations of analyses and psychologies in that age, and could only be restrained by repeating the formula which marked the utmost boundary of knowledge and safe reasoning. This formula, nearly word for word, was to be kept. But the high-water mark of ancient Christology, has in recent times become the object of serious criticism. Theologians pour contempt upon it as a mere assertion of logical contradictions. Historians (Harnack especially, who does less than justice to Cyril) strive to prove that its terms were a miserable compromise which, to satisfy the ambitions of the West (led by Pope Leo, author of the famous letter to Flavian known as 'Leo's Tome,' on which the Decree was founded), obscured the real issues by asserting the two natures in one person, and muffling in the nonsense of the Athanasian Christology, which sought to assert that the result of the Incarnation was the 'One incarnate nature of the Logos.' In spite of Harnack's vehement pages, the view will probably continue to have its adherents, and justly. It actually saves the fundamental Athanasian position. Moreover, a protest should be entered against the frequent yet absurd suggestion that the 'two-nature hypothesis' was just before Chalcedon. The very idea of an incamation involves that of two natures somehow made into one life. The idea dates back to the NT, to the combination of 'Son of God' and 'Son of Man,' of 'existing in the form of God' and 'found in fashion as a man.' And the entire course of Christological speculation presupposed this hypothesis from the beginning.

There is, however, much difference of opinion as to the real effect of the Decree at the critical point. The following are its main points for our purpose: (1) each nature, the humanity and the Godhead of 'our Lord Jesus Christ,' is 'perfect'; (2) He is consubstantial (ιοινωνια) with the Father and consubstantial with us'; (3) the property [δυνατος = property] of each nature is retained even in one person (παραουρος = person) and one substance (ινερατος = substance); (4) the famous four adverbs (without confusion, change, division, separation) condemn Eutychianism, Apollinarism, and Nestorianism. The main difficulty about the interpretation arises from the fact that the crucial clause starts with the different natures, defining each in its distinctness and completeness, and then speaks indifferently of 'the property of each nature' as 'being preserved and continuing in one person and substance.' This is not the way of Scripture or of the Apologists or of Greek theology as a whole, which was to view the Incarnation steadily downwards, as it were, from the side of the Glory of God as a living and personal act of consecration. Hence it has led some (Dormer especially) to maintain that, according to the Decree, 'the substance' is the resultant of the union of the two natures, and not that the Person or substance of the Son of God, having already a divine nature as the instrument of the union of the human nature as a parallel and distinct means of action. Harnack seems to agree with this:

"In Leo's view the 'Person' is no longer entirely the one subject with two natures, but one union of two hypostatic natures" (Hist. of Dogma, ii. 395).

But this interpretation is not borne out by Leo's Tome itself. In the very sentence of that famous letter from which the Decree is taken, the pope says: 'Lowliness was assumed by majesty,' etc. Leo even uses the Apollinarian phrase 'which (the flesh) he (Logos) animated with the Spirit of rational life.' And again he speaks of the unity of the Person in the two natures, and of the one Person of God and man.

If that clause, which has curiously absorbed attention to its method, as over against the method of earlier clauses, is accepted as the view which tends to proceed, as it were, from differences to their unity, Dormer's interpretation may result; but, if read from another point of view which moves from unity to diversity, to be held to be the high-water mark of ancient Christology, has in recent times become the object of serious criticism. Theologians pour contempt upon it as a mere assertion of logical contradictions. Historians (Harnack especially, who does less than justice to Cyril) strive to prove that its terms were a miserable compromise which, to satisfy the ambitions of the West (led by Pope Leo, author of the famous letter to Flavian known as 'Leo's Tome,' on which the Decree was founded), obscured the real issues by asserting the two natures in one person, and muffling in the nonsense of the Athanasian Christology, which sought to assert that the result of the Incarnation was the 'One incarnate nature of the Logos.' In spite of Harnack's vehement pages, the view will probably continue to have its adherents, and justly. It actually saves the fundamental Athanasian position. Moreover, a protest should be entered against the frequent yet absurd suggestion that the 'two-nature hypothesis' was just before Chalcedon. The very idea of an incamation involves that of two natures somehow made into one life. The idea dates back to the NT, to the combination of 'Son of God' and 'Son of Man,' of 'existing in the form of God' and 'found in fashion as a man.' And the entire course of Christological speculation presupposed this hypothesis from the beginning.

There is, however, much difference of opinion as to the real effect of the Decree at the critical point. The following are its main points for our purpose: (1) each nature, the humanity and the Godhead of 'our Lord Jesus Christ,' is 'perfect'; (2) He is consubstantial (ιοινωνια) with the Father and consubstantial with us'; (3) the property [δυνατος = property] of each nature is retained even in one person (παραουρος = person) and one substance (ινερατος = substance); (4) the famous four adverbs (without confusion, change, division, separation) condemn Eutychianism, Apollinarism, and Nestorianism. The main difficulty about the interpretation arises from the fact that the crucial clause starts with the different natures, defining each in its distinctness and completeness, and then speaks indifferently of 'the property of each nature' as 'being preserved and continuing in one person and substance.' In spite of Harnack's vehement pages, the view will probably continue to have its adherents, and justly. It actually saves the fundamental Athanasian position. Moreover, a protest should be entered against the frequent yet absurd suggestion that the two-nature hypothesis was just before Chalcedon. The very idea of an incamation involves that of two natures somehow made into one life. The idea dates back to the NT, to the combination of 'Son of God' and 'Son of Man,' of 'existing in the form of God' and 'found in fashion as a man.' And the entire course of Christological speculation presupposed this hypothesis from the beginning.
victory to orthodoxy against the persistent teachers of Monophysitism and Monothelitism; but its inner and real meaning, that the Logos became the Ego of the human nature, encouraged persistent speculation as to how much is included in a conception Ego (now ἴδιος), and in what sense human nature retains all its ‘parts,’ when it is said to be absorbed. It was thus that the problem of the human nature, as formulated by the Holy Council of Chalcedon, stood forth for them all as the supreme Christological utterance of the Church. But this loyalty to the Councils was conditioned by the idea that the Councils of the Church were authoritative only in so far as Scripture supported them. The reformers completely disowned the notion that the official Church had power to develop and enforce an authoritative theology. The central fact for the reformers is that the Christian faith is a living experience, made possible by the full revelation of God in the historic Christ. Apart from Him there is no saving knowledge of God. Through varying phases this characteristic evangelical view of Christianity has persisted in the reformed Churches. In periods when emphasis was placed upon doctrinal definition rather than upon personal experience, and a new intellectual formalism arose instead of the appeal to conscience, the Protestant communions have felt an arrest upon their spiritual life and their world influence. The Puritan movement in England, or the Moravian and Wesleyan movements both in Europe and in America—have all arisen from a fresh insight into the fundamental nature of Christian faith and apostolic Christianity. In the 17th century, the extraordinary expansion of Christianity, through the foreign missionary movement has borne an ample and more impressive witness to the reality and power of the Christian faith as thus re-apprehended and proclaimed. It must be observed that in Christianity, thus defined and thus operative the Person of Christ always stands forth as unique, supreme, divine, redemptive, and directive. ‘ubi Christus, ibi Ecclesia.’ And no less true it is that where Christ is, the presence of the living, eternal, and immediate God is immediately and directly sensed. He is believed, and His followers insist that He is irresistibly proved, to be the invisible, spiritual, divine power or will which is directing man to his true good.

1. INTRODUCTORY: THE MODERN MIND.

1. The reformation of religion.—The history of Christology in modern times is bound up exclusively with this question. The spirit of Protestantism, and here more ecclesiasticism has played but a minor part. The broken condition of the Protestant communions has prevented anything like the careful critical study of the Councils, the action of individual denominations having authority only for themselves. Hence such terms as ‘history’ are applied only by a certain limited class of historians to certain thinkers of the ancient Church. It is universally thought to be inappropriate under modern circumstances to use such a term of any modern theologian. Modern Christology is more intimately connected with the modern religious and intellectual life as a whole than with that of the ancient world, for in the civilization which we call Graeco-Roman it is involved as in many respects an exotic. But modern civilization is deeply moulded by Christian principles, and its defects are to be corrected only by a fuller measure of the Christian spirit. Indeed, some of the ideas which have seemed most hostile to the Church have been nourished and ultimately sustained by her own supreme teachings. With the Reformation came a new conception of the Christian life. Martin Luther was not so much the discoverer as the chief exponent of this sense of religious experience. His power, and indeed that of the entire modern movement, is due not only to the nature of his experience, but to the fact that it can prove itself identical in its fundamental elements with that of the primitive Church. Modern Christology is the conviction that the grace of God is a living force which has entered history in Christ and which lays hold of

the individual directly without any essential human mediation save that of the preached word, the gospel. On the human side it is penitence and faith that apprehend the grace of God and are the means through which that grace apprehends the human soul. Luther and the other great reformers maintained that they were loyal to the Councils of the Church, but the loyalty was not that of a strict adherence to the decisions of the Holy Council of Chalcedon. They were authoritative only in so far as Scripture supported them. The reformed Churches disowned the notion that the official Church had power to develop and enforce an authoritative theology. The central fact for the reformers is that the Christian faith is a living experience, made possible by the full revelation of God in the historic Christ. Apart from Him there is no saving knowledge of God. Through varying phases this characteristic evangelical view of Christianity has persisted in the reformed Churches. In periods when emphasis was placed upon doctrinal definition rather than upon personal experience, and a new intellectual formalism arose instead of the appeal to conscience, the Protestant communions have felt an arrest upon their spiritual life and their world influence. The Puritan movement in England, or the Moravian and Wesleyan movements both in Europe and in America—have all arisen from a fresh insight into the fundamental nature of Christian faith and apostolic Christianity. In the 17th century, the extraordinary expansion of Christianity, through the foreign missionary movement has borne an ample and more impressive witness to the reality and power of the Christian faith as thus re-apprehended and proclaimed. It must be observed that in Christianity, thus defined and thus operative the Person of Christ always stands forth as unique, supreme, divine, redemptive, and directive. ‘ubi Christus, ibi Ecclesia.’ And no less true it is that where Christ is, the presence of the living, eternal, and immediate God is immediately and directly sensed. He is believed, and His followers insist that He is irresistibly proved, to be the invisible, spiritual, divine power or will which is directing man to his true good.

Europe experienced an amazing revival of intellectual life in the same general period in which the renaissance of Christianity took place. In part this renaissance of the mind was due to fresh contact with the literature of the ancients, but it had its roots also in the long labours and deep intellectual interests of the Christian Church. For example, even in its darkest days that Church bore in upon the mind of Europe the conception that there is but one living God, who has created the entire universe for ends worthy of His own character. This great conception conserved nature and abolished the crude ancient dualism. Modern science has arisen from, and still depends upon, certain principles which Christianity first enforced upon the human mind especially those of the unity and order and sameness of the natural universe. Hence the investigation of nature must now be considered as a religious act, though the officials of the Church learned this with difficulty and dismay. Modern Christology is the conviction that the grace of God is a living force which has entered history in Christ and which lays hold of
the basis of all reality. Only gradually has this conception been transmuted. But now for all heirs of Christian civilization the universe of consciousness and conscious beings has come into view as the true source and seat of reality. Through this mighty process of change certain facts have emerged which we must briefly state. And in stating them we may assume that for Christian thought the purely mechanistic view of the universe must be held as false. First we must note the emergence of the universe as the ideal centre of consciousness. In personality the conscious universe must be recognized as the supreme fact. As yet the human mind can conceive of nothing higher which can be named as the ultimate form of reality. If it is ultimate, it must be also final, and every other form of the actual must proceed from and depend upon it. Next, there is the emergence of the idea of reality as the most general term which can be applied to all that exists for personality. The material universe seems to be undergoing, not merely through philosophical reasoning, but through scientific investigation, a complete transformation, in virtue of which all its elements are seen to be symbols and instruments of a spiritual universe. Hence ancient words like 'nature,' 'substance,' 'body,' 'essence,' even 'humanity' and 'parte of humanity,' require to be thought through afresh. Many of these ideas are contained in the Christological controversies of the early Church has simply fallen away from them for the modern mind.

The spirit of science. Further, we must note the deep influence of the modern scientific spirit. It has learned through long and painful processes of discipline that truth concerning the natural universe and the history of man can be discovered only by patience, method, and the critical faculty of reason. A new conscience has arisen in reference to the requirement of knowledge and the interpretation of life. For, if nature and history be taken as a divine process, this nature and history must be there and to find it there he must wait upon nature and history with a spirit of utter sincerity and patience, and with the calmness of trust in his methods of investigation and their sure result. Through the labours of the scientist the universe has undergone a great transition and has emerged the great conception of evolution. The very idea is itself undergoing a process of development. We have seen it in two generations pass from the idea of the universe as taught in the name of science by such men as Spencer and Darwin to the more spiritual conceptions which begin to guide the thought of our day. But common to them all is the idea that there is a unity in the history of nature and of man, and that this vast unified process must be read in terms of reason and of will.

Certain assumptions of Christian thought. In the main, it may be said without much risk that the following constitute some of the fundamental elements of prevalent modern thought. (c) What reason can explain is rational; what is rational must be derived from reason. (d) What exists in relation to consciousness exists for a conscious being or beings; and what exists for conscious beings, having its raison d'être (subject), must be derived from a conscious source. (e) If there is a universe of life and of conscious beings, they may or must exist in various grades as to structure, power, and meaning. (f) If there is a universe of rational, conscious beings, they must be capable of mutual intercourse, and such intercourse may depend upon the existence of media through which they become aware of and act upon each other. (g) The universe constitutes the world or universe of nature, which must be conceived of as an ultimately unified system of facts. The trend of philosophy in all its chief forms to-day is controlled by the varying influences allowed by different classes of thinkers to these and such-like fundamental conceptions. With the gradual extinction of mere materialism these have emerged as in some way the common property of the main groups of thinkers. Even natural science, through its physics, biology, and psychology, is gradually approaching a statement of its actual discoveries and provisional inferences regarding material substance, life, and mind, which is bringing it into close correspondence with these general assumptions. When the field of knowledge and its processes, of philosophy and its assumptions, one can see the irresistible pressure of the fundamental and characteristic Christian doctrines concerning God as Creator and Lord of All, concerning man as primarily a moral and spiritual being, concerning the spiritual universe as at once the source, explanation, and end of human history. For the Christian Church the conviction remains that for these ideas, however reason may strive to support and illuminate and systematize them, the one indefeasible guarantee of their truth, in the field of objective reality, is to be found in the inwoven processes and the permanent spiritual presence and power of Jesus Christ.

As Trollope has put the matter: '... the image of Jesus will always remain the center of the religious faith of the Christian believer in God.' A Christian mysticism: will always remain the central point of true and genuine Christianity as long as it exists. Without this, the personalistic belief in God would sink into a shroud and the Report of the International Congress of Free Christianity, London, 1864, p. 284.

Modern Christology, with a longer history of the Church behind it and a wider if not a deeper religious experience to correct or confirm it, is the inevitable effort of the Church of Christ to verify afresh for itself the conception of the founder of Christianity as the personal self-revelation of God, the personal interpreter of human nature, the personal director of history, the creator.

II. The first phase: Absolute Idealism. Christology received its greatest modern developments in the 19th cent., and most of these arose in the midst of the unparalleled intellectual life of the German universities. This philosophical and historical research combined to produce a complete re-casting of the Christian system of doctrine by concentrating attention upon two supreme subjects—the idea of God and the subject of the history of Christ in history. The giants of philosophy from Kant to Hegel endeavoured to do justice to both features of the Christian religion. Out of that period, whether by direct derivation or by reaction against the prevalent philosophies, arose three main views of Christianity, and hence three main forms of Christology.

1. Hegel's Christology. In the first place Absolute Idealism must be reckoned with. It has made the modern mind familiar with the theory that God is an immanent principle, generating the history of the entire universe. But, as Hegel works the subject out on his vast canvas, God must not be conceived of as above or before the process. He is the idea realizing itself in the two successive forms of nature (subject and object) and man (subject, spirit), and coming to consciousness only in the latter. God became personal in humanity. At some point in human history the Spirit which has struggled to free itself from the bonds of the world of nature as the world in itself, but not in itself, must come to the full realization of that climax. That full incarnation of the idea in the form of conscious Spirit was achieved in the Person of Christ, who is the supreme self-communicated, self-conscious, self-conscious form appropriate to history of the unity of man with God. But in Christ the Spirit appeared in fullness, that from Him the whole of humanity might be set free
and made conscious of itself as the dwelling-place of the divine. In spite of its vivid insight into some deeper meanings of Christianity, Hegelianism remains abstract, elusive. Its conception of God, as it has been said, appears as an ingenious apotheosis of Hegel's own dialectic. Again, in spite of its emphasis on the idea of the absolute, it failed to enter into the spirit of the Church. In its denial of the grace of God, its denial of the illumination of the Church, and in its failure to grapple with the facts of the Church's history, it is not true to the picture in the Gospel nor to the faith of the Church. Its early promise, that of the Light of the Church, Lehre von der Person Christi, p. 97 (Et), had not brought Hegel close to the fact that Jesus knew Himself distinctively as Son of God, and that God is a Being with whom men must deal in the lofty regions of personal relationship. Sin is for him a stage in the process of man's movement towards the divine self-consciousness; and grace therefore is not the mercy that forgives, but the sense of unity with the immanent God, achieved by Christ.

2. Its influence.—Nevertheless the marvellous energy of Hegel's expositions and the vast sweep of his system, its sublime confidence in the power of reason to unlock the ultimate secrets of being, and its complete subordination of the physical to the meanings of the spiritual universe, have had a permanent and deep effect on the whole course of modern theology. The exaggerated emphasis upon the doctrine of the divine immanence in more recent popular Christology in England and America is due to him. That theological phase sometimes called 'modern spiritualism' has appealed to natural science as teaching the unity of all things in its doctrine of evolution, and to idealism as teaching the immanence of God in the entire process of time. From Hegel, it has drawn its doctrine that in all men the divine is in some measure inherent, while in Christ manhood has been filled with the divine to its utmost capacity. These are, somewhat, the main inheritances, inheritances from Hegel. In Germany the Hegelian influence showed itself in many ways. It gave Baur his method of conceiving the development of Christian dogma amidst the conflicts of the early Church. For a time it seemed to give Strauss a resting-place for his faith after the destructive work done upon the story of the Gospels. It gave the clue by which men like Biedermann, for whose life work, the natural (in the old sense) had fallen from Christianity, sought to secure the permanent essence of that faith while its historical setting was discarded, as the husk of mere circumstance is removed from the kernel of truth. But everywhere it failed to satisfy the Christian consciousness. That consciousness cannot deduce history from ideas, but rather derives its ideas from history. It cannot persuade itself of man's power to see God through reason, and then prove that what it has seen independently was also discovered in the Christ of history. Hence, as Fairbairn (The Place of Christ in Mod. Theol., London, 1889, p. 215 f.) insisted with such force, Hegel's view of Christ endeavoured to translate into his own terminology what the Church has held; but the whole reality and value of the Church's faith consists in the fact that men have met with God in a way that is not to be reduced to its object, real and effective, and of ground of fact is not present to his mind. This element in the Hegelian method, which is not personal or the subjective, but the pervaded modern thought very deeply, as we shall see.

---

**JESUS CHRIST**

great movement was that which sprang from the remarkable personal gifts, the spiritual life, and the distinctive theological method of Schleiermacher. Many elements which seem to his critics, and even to his admirers, utterly inconsistent with one another had their unity for him through his deep mystical type of religious life, his poetic and during imagination, and his great gift of analytic thought. This remarkable combination carried him in distaste away from the abstract and unreal dogmatism of Abbei. It carried him through the strong and powerful temptations of the period of surrender to the Romantics, dominant in Berlin society, without delivering him from the intellectual independence of his spirit. His vast reading and reading made him sensitive to the realities of history and to the supreme significance of a fellowship like that of the Christian Church. He therefore set forth with convincing and almost revolutionary power the absoluteness of religion. It has its seat in experience, i.e. in the living, feeling consciousness of man. In that consciousness man finds himself dependent on the Infinite, on God, for his very being and for all the true meanings of his existence. Religion, which rises out of the fundamental fact of dependence, and also nourishes it as a feeling which has infinite worth, is for that reason independent of the organized church system, and, on the other hand, must be restrained as a mere department of social ethics. The poor straining which Kant knew as religion, an adjutorium lepida, is repulsive to the richer soul of Schleiermacher.

2. His idea of God.—In his conception of God, Schleiermacher, while defining Christianity as a 'theological monism,' yet fails to realize the pantheistic trend inherent in the 'romantic' view of the universe. The sense of its unity, its vast life, its mystery, its moral beauty, made it unnatural for him to insist upon the personality of the God of the Christian Church, and to define that conception. God is immediately given in the universal, persistent, and supreme feeling of our absolute dependence on the Infinite. It can be accounted for by the only thing which is also its very essence, viz. that it is a feeling produced by God. He and not the self is its 'Weltgeist' ('das Woher'). Similarly the fact of sin is not to be distinguished from the consciousness of sin, and that apparent self-sufficiency, the feeling of failure, of incompleteness, and self-reproach. We are guilty because we feel guilty. As God is not to be proved by reasons which lie outside the God-consciousness, so sin must not be traced to any source outside the universal human feeling that there is something wrong.

3. His view of Christ.—It will always seem an intellectual inconsistency that Schleiermacher, in spite of this view of God and man, affirmed with unconquerable conviction that in one historic consciousness, that of Jesus Christ, we find a new departure in human history. Christ was and is the redeemer of mankind. This fact is found by us in the continuous existence of the Church, as that body of human fellowship which, in spite of all imperfection, possesses the sense of the grace of God, the feeling of the fact that God extends even to the moral issues and the destiny of man. The Church sprang from Christ and depends on Christ, and holds in its own spirit and life the future of man's religious history. Schleiermacher, though he worked directly on the Gospels, did not go into an examination of the consciousness of Christ in the construction of his theological system. It was enough for him that in Christ, through the faith of His original community in Him, we have an
assurance of God's perfect union with a human life. In Him that union was a new, original act of God, incorruptible but intangible. He is the archetype of the new life of which He is the fountainhead. But He is not to be interpreted through any doctrine of rebirth, or re-existence, or resurrection, or even of the Resurrection. These are reflections of this divine impression of unique and perfect union with God which He made upon His disciples, and through which He filled them with a communion animated by His own life and light, controlled by His Spirit, which is the Spirit of God. The conclusions of the ancient Connels he lays on one side. Their whole aim was irrelevant. The idea of two natures in one Person is illogical. God has no 'nature', and the insistence of a divine Person in human nature must inevitably annul the essential characteristics of the latter. Yet God was uniquely in Christ, constituting Him the object of universal faith and the permanent life of His Church. In sanctification others may go far towards the heights of peace and holiness, but only and always in their confessed dependence upon Him and the nourishing qualities of the Church which He created. To lose faith in Him would mean the collapse of the Church and the return of man to the unredeemed consciousness of guilt.

4. Criticism.—In this brief sketch of some of the main positions of Schleiermacher, certain facts are clear in reference to the subject of this article. (a) Schleiermacher, by his bold appeal to experience of the innermost, the real, the vital, and to the sense of dependence on either metaphysical or theological dogmas as the sources and sources of faith. His passionate appeal to the human consciousness of the reality of consciousness, of its feeling of dependence, sin, and reconciliation revealed the depth, the fact, and the reality of that consciousness in its religious, and above all in its Christian, manifestation. Yet he failed even in his acute analysis of the process of consciousness to find the personality which is conscious. His account of experience on both the objective (Godward) and the subjective (manward) side is left as a stream with no containing banks, a system of real and beautiful clouds with no sense of solidity or guarantee of continuance. (b) His welcome emphasis on the uniqueness of Christ and on the fact that His image and spirit are preserved for us in the living faith and life of the Church, gave rise to the whole speculation of the Rischkianism in its various phases. It is Christ-in-His-value-for-faith, in his total impact on His followers, that constitutes Christianity. Again the problem of personality is avoided. His consciousness as a reflection in the hearts of others, not as the seat and definite manifestation of His own will and thought about Himself, is the object of faith. (c) By this subtle and persuasive method of winning man to a sense of the divine power of Christ, attention was diverted from all questions about His origin and His miracles. The miracles may have helped the first disciples, but they are remote from our experience. The mystery of His being is lost where the mystery of our own disappears, not to be discovered by metaphysics. As E. Kahler argues, "his formula is ambiguous (\textit{misverstandend}) since it does not clearly enough assert that it is concerned with a school or a 'movement' in theology whose members have been identified with much of the best work done in Germany during the last thirty years. Ritschel owes what is most valuable in his thought to the earlier thinker, but he set it forth in a more definite manner, and in a generation prepared by prolonged discussion of the history of early Christianity to welcome a system which made it seem controlled by the theological and the Spinozistic, the Spinozistic and the modern, the modern and the rationalistic. So Ritschel on the one hand, and despair as to the historical on the other. He justified the scepticism by accepting the Kantian theory of knowledge, as it was reinterpreted by his colleague at Göttingen, Hermann Lotze. Of that which is above the experience of knowledge we can have no real knowledge. Hence it is vain to investigate the problem of the Trinity, or to attempt a Christology in the sense of the early Church. Our experience is built up of judgments of fact and judgments of value. The former deal with the material of the sense, and form the field of natural science. The latter deal with the moral and spiritual elements of experience. All religious conceptions are in their essence value judgments. They arise out of our view of the world in relation to our human, moral, spiritual interests. The conception of God as a God who is known form the mind of man through his felt need of superhuman spiritual powers to supplement his own in his unequal struggle with the natural world. The existence of God and the activity of God becomes to us a matter of conviction through the attitude we take up to the world as religious men. (Rechtsverwaltung und Versehrung, Bonn, 1870-74. Education and Reconciliation, Edinburgh, 1900, p. 218).

(b) His view of Christ.—For the Christian Church, God, thus assumed to exist, has been actually revealed in Jesus Christ. His Christ founded the community in which this revelation was first realized, and through which it is perceived as the perfect form of religious conviction and life. Jesus Christ became aware of His world as the bearer of this revelation through His own perfect religious knowledge of the Father, which included the assurance of God's purpose to found the Kingdom of God through Him. This task He undertook with unfailing devotion. It is in God's word and deed and by the majesty of His unanswerable faith in face of sin, hostility, and death. So completely did He absorb the divine and end of God's governance of the world in the interest of His Kingdom, that in Him, His faith, His obedience, His love, we see the love, the grace, of God towards us. Thus Christ, in the famous phrase, has for us 'the very nature of God.' In the mind of God and in our faith, Christ, as the Son of God, is the founder or source of the organization of men according to God's idea of their destiny. His end with there is made known in the Person of Christ, and Christ is the type after which they are to be conformed. The doctrine of His actual Godhead is translated into this eternal purpose of God concerning man which was ever bound up with the fact as object of the divine Mind and Will,' and 'shaper of God's attribute as end of creation.' Concerning His actual pre-existence we can say nothing. It lies as completely beyond the range of knowledge as His post-existence, and is unnecessary to our faith in Him. Nor can we conceive of His exaltation otherwise than as the experience of the abiding influence of His historical manifestation. Of His origin we can say nothing. All we need and all we are given is the assurance that in His holy will, in His limitless love, and in His invincible faith we see the

- 1. Ritschel's Christology.

IV. Third Phase: AGNOSTIC PHILOSOPHY AND POSITIVIST THEOLOGY.
purpose of God and His love for the community which Jesus took to His heart and in whose service He died. However, the right appreciation of the completeness of the revelation of God through Christ is assured by the predicate of His Godhead.

(c) His influence.—This Christology has held sway over many portions of the church and its virtues are negative and positive. On the negative side it has seemed to give the Christian faith a position where the forces of natural science could not assail it. Miracle is not an inherent part of Christology. The supernatural is limited to the sphere of moral influences and spiritual cognitions which the categories of the scientific understanding cannot penetrate. Also, as especially with Herrmann, it has seemed to make faith independent of the results of historical criticism of the Gospels. Enough is given when we have insight into the invincible assurane of Jesus Himself concerning the love of God His Father, and His complete surrender to the divine will and the divine ends. But some have gone further even than that. They are so sure that the ideas of God's Fatherhood and His gracious promise of life eternal are confirmed in the long and deep experience of the Church that they surmise, Christianity will survive even though Jesus fade from among the facts of history. And with them the reduction of the Christian notion of God, of sacred history, and of the historical reality of reality is attained. On the positive side the Ritschelian position has gained through its valuable insistence upon the 'fact of Christ' as the essential object of any living and communal faith in the Church. This position, which led all Agnosticism in essence sceptical, leaves us in the dark as to the foundations of the phenomena of all history, yet within that history and among itself, a new faith is engaged with all characteristic of the Christian consciousness. This view drove Ritschel's followers into the deeper study of the consciousness of Christ, some of whose results we have already considered above.

(b) Christian consciousness.—(a) Content of the Christian consciousness.—Like all great movements, the Ritschelian has broken into several directions. One is represented more completely by W. Herrmann than by any other. He declares the more transcendentally than Ritschel between metaphysics and religion, and holds that in religious experience we move in a sphere where no use of the logical understanding can construct into an objective framework for the universe which science investigates, and which metaphysics tries to interpret as 'one,' with the moral and spiritual contents of the Christian consciousness. The following points may be taken as summarizing Herrmann's view of these contents.

(a) We are, as human beings, conscious of our dependence on an infinite power. (b) We are as Christians conscious of moral reconciliation with God when we understand the 'personal life of Jesus.' For it is in the historical Christ Himself that we see God revealed as Father. This positive vision of God in Christ awakens in us the moral impulse to deny self, and in that we find ourselves released from the tyranny of the world. We must not so define Christ as a mediator that we may seem to get past Him to God, or find a greater good in God than in Him. With a right appreciation of Christianity to a merely relative and perhaps vanishing form of religion. 'It is true to say that we find in God Himself nothing but Christ.' On the other hand, we know nothing of the God except as He becomes revealed in Christ. (c) Hence we must not make true faith depend on a theory of His Person, or a system of doctrines about Him. We must find a moral record or an individual heart faces Jesus for itself and yields itself to the vision of God in Him. Hence Herrmann has the daring to say, 'We must get past the old dogma of the Deity of Christ to a higher conception of Christ' (Der Verbrennende Christus, p. 84). The higher conception of which he speaks is not a higher metaphysical, but a higher working conception, one which consists in realizing that Its virtues are real and that it is not a power of God apart from, or beyond, or above the historical Christ. How Christ knew God and lived in Him is His secret. All that we can know is the redemption of Christ, or His redemptive relation with God. We cannot deal with God except in Jesus. (d) Herrmann insists further that we must not seek to image for ourselves a living Christ of to-day with whom we can get into personal contact. That image will again abolish the historical Jesus and seem to us independent of Him. The supreme secret of Christianity is this linking of the past with the present, this perennial flow of living water from the heart of the historical Jesus. When we turn our eyes away from Him to a theory of His Person, or to a picture of His present exaltation, we depart from the real faith of Christianity. It is only as we gaze upon Him in His, however far off, historical reality and see God disclosed in Him that we enter into a sense that God is here with us. Yet even in that instant view of His present power in us we dare not separate Him from the vision of Him in that historic Jesus. (e) It is true that we must have many and great conceptions of Christ. But they do not precede faith or produce faith. They are, therefore, preposterous (Glaubengedanken'). The resurrection, exaltation, and mediation of Christ are conclusions drawn from faith, and in which it delights, but they are not the faith's presuppositions, nor the saving attitude of trust. Herrmann discusses with unwavered care the difference, which seems to him immense, between the view that the deity of Christ must be taught to men and the view that men may come to put their trust in Him, and so find God in Him, and the view that men must come straight to Him in history and receive from Him the overwhelming presentations of the redeeming grace of God which compels them to see the very presence of God in His personality and so to confess His deity.

(b) Estimate.—There is no better witness to the intellectual peculiarities of the Christian theologian to-day than the appearance of such a view as Herrmann's. His writings have from the first revealed a most earnest and most Christian spirit. There can be no doubt that in his own heart he has had an experience, intense and vital, which he has spent his life in making as real as possible to others. But our minds stubbornly demand that a man shall be placed in our intellectual map. And Herrmann seems to elude us. He seems a mystic, but denies mysticism. He seems a subjective idealist, and argues for an objective ground of faith. He is not a romanticist, closely as he adheres to part of Schleiermacher's position, nor a pantheist, for he will utter no word that does not speak of God as a personal Father. His Christology, with its mingling of deep loyalty to the deity of Christ as given in expository form, his respect for or even his claim to define His Person or even His work, except in passionate repetitions of the redeeming power of His historical personality, is possible only in an age when the war of God except as He becomes revealed in Christ. (c) Hence we must not make true faith depend on a theory of His Person, or a system of doctrines about Him. We must find a moral record or an individual heart faces Jesus for itself and yields itself to the vision of God in Him. Hence Herrmann has the daring to say, 'We must get past
tuous and universal human experience which has its own rights and its unquestionable reality (see H. Schultz, Christliche Apologetik, Göttingen, 1884). There faith, the soul's organ for sight into the spiritual and moral universe, reigns beyond the assails of science or metaphysics. And human faith, in the historic Jesus, reached such heights of such intensity and spiritual illumination for other souls, that it has ever since produced faith in Him and in that grace of God which, concentrated with infinite force in Him, breaks out from Him as the very glory of God's own face upon all susceptible souls. This has proved itself to be a refuge and fortress for many individual minds. But it has not been fruitful, either practically or theologically. Its psychology is faulty when it deals with the relation of dogmas to individual experience, and again when it attempts to picture the Church, living and growing, conquering and thinking, over wider horizons of human experience, without making its explanation of the objects of its faith credible, verifiable, and authoritative for its own life and in its appeals to the world.

3. Kaftan. The Ritschlian movement, while carried to this extreme in so noble a way by Herrmann, has in another direction tended towards a closer affiliation with historic theology. In Kaftan (Doyimatisi, 1901) we find a less strict use of the spiritual faculty in question which carries the latter semet, at any rate, to say that the religious view of the world consisted only in value-judgments, Kaftan holds that it consists much rather in a fund of mystical, or 'metaphysical,' which are reached through judgments of value. It is real knowledge (e.g., that God is and God's will), although it does not arise from our scientific knowledge. Kaftan, no less than Ritschl and Herrmann, carries on the magnificent emphasis of the whole movement upon the nature and royal significance of faith. He holds that the 'relation theory' which underlies the whole Christology of the early Church, was due to the conception of salvation which was then held. The reformed Church, and that in the life of the whole modern world, has undergone a revolution which consists neither in the magical communication of life (as in the early Church) nor in the transactional soteriology which arose with Anselm. We have in Jesus Christ one who is truly the image of the invisible God, a person whose character and work, His triumph and exaltation as the Risen Lord of the Church's faith, an act of God through which His forgiveness is assured to us, and we are made partakers of His Spirit and life. The Church thinks of Him first and directly as the exalted Lord, and as such the Head of the Church. But that exalted Lord cannot be conceived except by reference to the historical Jesus. It is the spiritual content of His Person on which we depend, and that is known to us only in the story of His life in the flesh, for there the central fact is that the development of His self-consciousness as a man proceeds from His consciousness of oneness with God. That unique and supreme historical self-shape in the divine attribute of omnipotence in its ethical aspect. This perspective is logical dependent on abstract speculative premises. It appears in His actual life, His independence of the world, His complete control of all things and relations ('alle Dinge und Verhältnisse') for the fulfillment of His task. But this fact of moral omnipotence proves that the human life in which it was manifest had a unique origion, arose from a special, unparalleled, and irreplaceable subject. It is this which shows that God prepared human nature for the great event of His own manifestation in and through it, but refuses to consider this event only in terms of an immanent process. There is in it a definite impartation from God. Christ therefore, while wholly and truly man, is also the manifestation under human conditions of God's very being. The Church therefore will and must always consider Jesus Christ as eternal. He is more than a divine ideal (as Harnack and others before him have maintained). He is both "Ja" and "Nein" to the pre-existence hypothesis. The definition of that pre-existence through such a conception as the Logos meant and means the introduction of a speculative and really unknown factor, which disturbs the concrete object of Christian faith. All that we can properly assert is that 'the coming of Jesus into the world ('das Werden Jesi in der Welt') absolutely surpasses the conditions of ordinary human development. God sent and God gave Him.'

4. Other representatives. Among those who are reckoned as of the Ritschian school, Harnack must be mentioned, not as having a remarkable contribution to Christology, but as one whose historical investigations have done so much to refresh interest in the long history of its controversies. We have seen above (p. 201) he seems to utter inconsistent ideas concerning the place of Christ in the gospel. Perhaps the real cause of this is that within the vigour of the scientific historian he carries the heart of a mystic, who makes 'feeling and inner vivacity the measure of truth' (see a keen estimate of Harnack's position by J. Baumna, Grundzüge der Religionsgeschichte, Stuttgart, 1885) and he carried out a spirit of negative criticism, which he sought to interpret in the Ritschlian doctrine, modifies it even further than Kaftan. He warns us that we must not confuse metaphysical realities with historic realities before us as discoveries of the rational understanding and objects of a priori speculation. Our knowledge of them is limited to and by the very means and conditions through which we have become certain of their existence and of some aspect of their nature (cf. G. Webberdin, Theologie und Metaphysik, Berlin, 1901, pp. 26–40, and Der christliche Gottbild, Seebach, 1903). Ritschel's includes a large number of the leading theologians of the past and present generation in Germany. A full account would have to include the names of Herrmann Schultz, H. H. Wendt, J. Häring, W. Bornemann, and M. Reischle. None of these has made any distinctive contribution to the problem. They differ mainly in their emphasis upon the essential reality of the historical Jesus to the gospel, upon the form of the presence of God in Him, upon the distinctness with which He is to be conceived of as the exalted Lord in living relation with the Church. They are all characterized by the effort to disown any adhesion to the doctrine of His two natures, with its Trinitarian background and its permanent puzzle regarding the presence of the Divine subject in the consubstantial life of the man Jesus. They all insist on the faith of the first disciples ('die Gemeinde') in Jesus as the Christ, as forming the original source and type of the conception which must permanently rule the mind of the Church.

v. Fourth phase: the keniotic christology. — 1. Its origins. — Parallel with the movement which arose with Schleiermacher and continued through Schleiermacher, one in the 19th cent., another known as the Kenotic Christology (from the phrase ενοικειμένος, Ph 2)).
theory avoids the pantheistic tendencies of Absolute Idealism or of such a man as Schleiermacher. On the other hand, it rejects the philosophical Agnosticism which rules the movements derived from Kant. However closely it may approach any other standpoint, it can never be, like that of Fichte, an agnosticism of the state of mind of God, and as a rule develops a definite doctrine of the Trinity. It had various roots in the thought world of Germany, connecting it with the Lutheran doctrine of the Holy Ghost, and with the influence of the majesty of the pre-existent Christ, and with the Reformed doctrine of the excommunication with its emphasis on the reality of the human nature and experience of the Incarnate Son of God. Its formulation was hastened in the ecclesiastical sphere by the efforts to bring about the union of the Lutheran and Reformed Churches. On the other hand, it was not least intense where the personal participation of God in human experience, for revelation and redemption, has been most vividly realized.

Parallels were the direct fruit of the modern emphasis upon consciousness and will as the seat of reality, which has undermined the ancient concepts of matter, substance, and nature as objective and independent realities. Accepting the two principles of community of the philosophical writers of the ancient Christology, which was founded, the Kenotists have set themselves to translate its terms, and also to analyze as a living process that act by which a human person is united with Himself the human nature and therein lived as the Gospe depict Him. Günther (op. cit., §§ 25-28) has traced the various stages by which the full statement of the idea of Thomasius was prepared for.

2. Its full statement.—(a) G. Thomasius.—In this theologian the theory received its first complete and systematic exposition (Christi Person und Werk, Erlangen, 1835 ff.). According to Thomasius, the Incarnation is an act by which the Logos, Son of God, laid aside the so-called "relative" attributes of omnipresence, omnipotence, and omniscience, while retaining the identity of his consciousness, with the limits of human nature. The essential ethical attributes of love and holiness He retained in His assumption of that nature. Thus the Son of God in the Incarnation is only the only and single personal life of Jesus Christ, in whom we see human nature assumed by the Son of God, and the Son of God limiting Himself to human conditions through that very act. To say that such an act is impossible is to limit the power of God's will. Given the possibility of this act of infinite love, we see its fruits in the story of Jesus Christ. Thoroughly human in the forms of His consciousness, He yet manifests the essential qualities of God in His perfect love and sinless life. Though we must call Him "the man who is God," we must recognize the reality of His human consciousness. Hence He is the image of the perfect ideal of human nature. Other theologians, like Luther and Ebrard, adopted the Kenotic theory with variations of their own.

(b) Goss.—F. Goss (Christi Person und Werk, Basel, 1870) who made the most important stage in its development. The first volume of his work deals directly with the consciousness ("Selbstziehende") of Jesus, as it is set forth in the NT. In his constructive theory he shrieks from any implication of the idea of a "self-emptying" of the Son of God. By a supreme act of will He deprived Himself of the self-consciousness as Logos. He entered into that night of unconsciousness in which our life begins. Adopting the "Creationist hypothesis that each human soul is a fresh creation of God, Gess found in that an obvious way of accounting for the union of the Logos with the human body of Jesus. In the earthly life the Logos gradually attained knowledge of His being through the ordinary principles of human development. But we may well suppose that in His unique case there would be operative a deep inexcusable (the "instinctus" and its emphasis on the majesty of the pre-existent Christ, and with the Reformed doctrine of the excommunication with its emphasis on the reality of the human nature and experience of the Incarnate Son of God. Its formulation was hastened in the ecclesiastical sphere by the efforts to bring about the union of the Lutheran and Reformed Churches. On the other hand, it was not least intense where the personal participation of God in human experience, for revelation and redemption, has been most vividly realized.

Parallels were the direct fruit of the modern emphasis upon consciousness and will as the seat of reality, which has undermined the ancient concepts of matter, substance, and nature as objective and independent realities. Accepting the two principles of community of the philosophical writers of the ancient Christology, which was founded, the Kenotists have set themselves to translate its terms, and also to analyze as a living process that act by which a human person is united with Himself the human nature and therein lived as the Gospe depict Him. Günther (op. cit., §§ 25-28) has traced the various stages by which the full statement of the idea of Thomasius was prepared for.

2. Its full statement.—(a) G. Thomasius.—In this theologian the theory received its first complete and systematic exposition (Christi Person und Werk, Erlangen, 1835 ff.). According to Thomasius, the Incarnation is an act by which the Logos, Son of God, laid aside the so-called "relative" attributes of omnipresence, omnipotence, and omniscience, while retaining the identity of his consciousness, with the limits of human nature. The essential ethical attributes of love and holiness He retained in His assumption of that nature. Thus the Son of God in the Incarnation is only the only and single personal life of Jesus Christ, in whom we see human nature assumed by the Son of God, and the Son of God limiting Himself to human conditions through that very act. To say that such an act is impossible is to limit the power of God's will. Given the possibility of this act of infinite love, we see its fruits in the story of Jesus Christ. Thoroughly human in the forms of His consciousness, He yet manifests the essential qualities of God in His perfect love and sinless life. Though we must call Him "the man who is God," we must recognize the reality of His human consciousness. Hence He is the image of the perfect ideal of human nature. Other theologians, like Luther and Ebrard, adopted the Kenotic theory with variations of their own.

(b) Goss.—F. Goss (Christi Person und Werk, Basel, 1870) who made the most important stage in its development. The first volume of his work deals directly with the consciousness ("Selbstziehende") of Jesus, as it is set forth in the NT. In his constructive theory he shrieks from any implication of the idea of a "self-emptying" of the Son of God. By a supreme act of will He deprived Himself of the self-consciousness as Logos. He entered into that night of unconsciousness in which our life begins. Adopting the "Creationist hypothesis that each human soul is a fresh creation of God, Gess found in that an obvious way of accounting for the union of the Logos with the human body of Jesus. In the earthly life the Logos gradually attained knowledge of His being through the ordinary principles of human development. But we may well suppose that in His unique case there would be operative a deep inexcusable (the "instinctus" and its emphasis on the majesty of the pre-existent Christ, and with the Reformed doctrine of the excommunication with its emphasis on the reality of the human nature and experience of the Incarnate Son of God. Its formulation was hastened in the ecclesiastical sphere by the efforts to bring about the union of the Lutheran and Reformed Churches. On the other hand, it was not least intense where the personal participation of God in human experience, for revelation and redemption, has been most vividly realized.
from other men, as He read in the OT the Messianic prophecies and faced the question of His own life-work. He could not but be forced to ask, 'Who am I?' The persistent enigmas of His consciousness are answered at His baptism, 'Thou art my Son.' Another interesting statement of the kenotic view was given by J. B. Hearde in *Old and New Theology* (London, 1884), ch. vi. 'The Person of Christ.'

But the leading champion was A. M. Fairbairn (*Phases of Christ in Mod. Theol.*, London, 1883), who boldly went back to the Thessalonian distinction between the external or physical attributes of God—omnipotence, omnipresence, etc.—and the internal or ethical—truth and love. The former are 'under the command of the internal.' The Son surrendered the physical attributes which are 'the less' in order to realize in human conditions 'the more Godlike qualities.' Fairbairn made the suggestive statement that the problem of the union of God with human nature is only a part or phase of the question, 'Who was this Man.' We may answer, 'He is the Logos,' only when we accept a modified form of the kenotic theory. He, like Fairbairn, deals directly with the historical material. It is in the Gospel records that we find both the divine and the human in one consciousness, and that manifested consciousness is characterized by such holiness and love as can only be the working of a divine Will. He finds in a direct recognition of God's self-limitation in the act of creating in the form of a law. The Incarnation is a further step in this process of self-humiliation, and it was prompted wholly by grace. Therein both the Father and the Son made a 'real surrender.' We do not know how, and the divine attributes could be retained in exercise or abandoned; but the record seems to assure us that our Lord in His mortal life was not habitually living in the exercise of omnipotence. Nor can we decide anything as to how this self-emptying affected the 'cosmic functions of the Son.'

Among all the British Kenoticists (D. W. Forrest, W. L. Whitney, etc.) Fairbairn was the only one to give a full answer to the question of the kenosis. He places the kenotic section in a higher plane, and he sees it as a process of self-call to the periphrastic formula. The kenosis is found in the 'kenosis' which some suppose to presuppose it. 'If the infinite God was so constituted that He could not live also as a finite man, then He was not infinite' (p. 316). The fact of the Incarnation sprang from the holy love which is of the very essence of God, in Him and in all of God's omnipotence exists. The limitation of His power was 'His intense concentration on His fixed purpose with the world' (p. 316). Implicit in the kenosis is a pre-existence of personality, of Christ. The process of the means to the end; and the second, as the fulfilment of God's ideal of self-relation with human nature, involves His being in the person of the humanity He has redeemed into ideal union with Him in the Spirit.

Strident opposition to the kenotic theology has come mainly from Anglican theologians. The exegetical basis has been examined by E. H. Gifford. Criticism from a strictly philosophical standpoint is seen in the volume of the older creed and the work of J. C. Garrow, *The Principles of the Incarnation* (London, 1890). The critical examination of the kenotic theology as a whole is given by F. J. H. Henry, *The Kenotic Theory* (New York, 1899).

Mackintosh rejects both the division of the attributes of Thomasius and the complete self-renunciation propounded by Gess. He suggests, agreeing with Ponsot, what he calls the 'transposition of attributes,' which must result from the change of consciousness in the sphere of its action. The intelligence that the external state is 'intuitive and complete' must, if it submits to the conditions of time, become 'discursive and progressive.' So omniscience becomes in the temporal state a mere exercise of 'phrenological faculty.' Mackintosh stoutly rejects the scorn of Ritschl for the kenotic theory, and insists that, on this theory, Jesus did not become God, nor was the significance of the—i.e., the assumption of the flesh. There is all through the earthly life of Jesus a 'potentiality,' which does not mean that the divine was not in action, but that it was in sublimed action. In His consciousness of the Father, and 'Spiritual omniscience' in relation to Him, we have the proof of the divine self-active in Him.

Mackintosh confesses warm sympathy with the very powerful setting which this point of view has received in P. T. Forsyth's work (*The Person and Place of Jesus Christ*, London, 1899). The preexistence of Christ is not necessary postulate of Christology, because it is a necessary implication of the Church's faith in its Lord, who is not only Reconciler and Redeemer, but also Sanctifier. For sanctification is creative work and possible only to a person who is a divine being. Our faith implies a divine reality of both Father and Son—'both being equally personal and divine.' The possibility of the kenosis is found in the 'infinite' which some suppose to presuppose it. 'If the infinite God was so constituted that He could not live also as a finite man, then He was not infinite' (p. 316). The fact of the Incarnation sprang from the holy love which is of the very essence of God, in Him and in all of God's omnipotence exists. The limitation of His power was 'His intense concentration on His fixed purpose with the world' (p. 316). Implicit in the kenosis is a pre-existence of personality, of Christ. The process of the means to the end; and the second, as the fulfilment of God's ideal of self-relation with human nature, involves His being in the person of the humanity He has redeemed into ideal union with Him in the Spirit.

A singularly wise review of the movement is given by H. R. Mackintosh (*The Doctrine of the Person of Jesus Christ*, Edinburgh, 1912), who is in sympathy with it. He admits that the difficulties are 'very grave,' but adds that 'they are as no bold construction can avoid.' There are four positions which he says are 'impossible in the completely Christian view of Jesus' (p. 469f.). There are: (1) 'Christ is now Divine, as being the object of faith and worship,' (2) 'In some person sense He Divinity is identical with truth and God,' (3) 'His person presumes being is real, not ideal merely,' (4) 'His life on earth was genuine human life.' (2) We cannot predicate of Him two conscious-nesses or two wills. The unity of His personal life is such that there are continuous experiences of consciousness in the person of Jesus.

The effect of all this is that we must throw the ethical back more vividly into the life of God than the Agnostic position makes possible. In God's holy love the pre-conditions lie for His cosmic relations, and these find their consummation in His consciousness of His relation with personal human experience in a human being. Mackintosh rejects both

vi. THE PRESENT SITUATION. It is possible only to say a few things, in concluding this article, regarding the principal features of the Christological problem at the present hour. The situation is full of perplexity and difficulty for all minds which lay themselves open to the forces of their own day. And no one can write without prejudice on a question which at every point is connected with the nature of the spiritual life and with the ever passionate, ever active, ever varied and complex life of the Church.

JESUS CHRIST

"It is impossible to over-estimate the value of what German research upon the life of Jesus has accomplished. It is a supreme and unique expression of sincerity, one of the most significant events in the whole mental and spiritual life of humanity."—George Buttrick.

(a) The logic of a circle.—We have more than once referred to the logic that characterizes the course of an intelligent community life. Such a course of events, typical and universal in character, has existed in the theologians of the German universities. They are, for good or ill, a class by themselves. Within that class more or less clearly defined, and have long been the object of intense scrutiny and criticism. The members are extremely sensitive to each other's influence, whose eyes are mainly directed upon the work of those who are like-minded with themselves. Through the means of intercommunication which they have created, they lead a life of unsurpassed intellectual intensity (see on this J. T. Mers, History of European Thought in the 19th Century, Edinburgh, 1890-1912, vol. 1, ch. II.), and are conscious of spending it, though separated geographically, as in each other's presence. Any principles which are adopted, as points of mutual understanding and common interest, in one of these circles (in science or history, philosophy or theology) must have their inner logic worked out to the end in the process of time.

(b) Schweitzer's history of it.—In relation to the life of Christ, Schweitzer's book is a brilliant exposition of this process. A powerful circle has existed within the theological faculties for a hundred years, whose unifying and minute and ambitious and critical efforts have led to the result that the problems have been attacked from two negative principles, viz.: that the proper deity of Jesus Christ and the occurrence of miracles are impossible. With the exclusion of these two of the NT picture of the Lord, the problem before this quasi-critical circle of ardent intellectual life has been, on the one hand, to recover an exact picture of the actual historical Jesus, and, on the other, to measure His religious value. Schweitzer gives scant notice of the men, sometimes of equally great erudition, who have written Lives of Jesus from which the two elements named above are no more. And there is no attempt to reach out to younger scholars, who are, on the contrary, the object of their study.

(c) The 'liberal' Jesus.—Through the process of exhaustive intellectual experimentation there gradually emerged before the circle of 'liberal' theologians the figure of Jesus as a prophet and reformer, who made to divine claims, whose words were confusedly preserved in tradition and recorded in successive documents out of which at last the present Gospels were fashioned. Jesus used the current Jewish religious conceptions, but shaped them to be instruments of His own clear insight into the Fatherhood of God and His strong grasp on the true moral principles which must guide men in religious and social conduct. This has come to be known as the 'liberal conception of Jesus.' It varies from one scholar to another in many features. Some would assign more of religious supremacy to His teachings. Some, like Wernle, would confess that He was a superhuman person, but decline to define it further, and hold that its presence was not inconsistent with grave errors. But others, like N. Schmitz (The Prophet of Nazareth, and Son of Man in E.B.) would know Him only as a prophet whose character of pure self-sacrifice and faith in God has made Him the highest source of inspiration down to the present day. He is the Son of God and the Son of Man (Christ in the Christian Religion, London, 1896, who writes as if J. Weiss, Wernle, Boussen, and others had said the last word on NT criticism, on whose scientific certainty all further thought must rest.) It has become quite clear, however, that the Jesus whom the 'liberals' depict never existed. Few, says F. C. Burkitt, in his Preface to Schweitzer's Quest, except professors, know what a protean and kaleidoscopic figure this 'Jesus of History' is. The stubborn facts remain that Jesus knew Himself and what He had heard and the Kingd of God, and that the Christian Church sprang from the disciples who by His self-manifestation in these superhuman relations passed to the understanding that we may experience in a new consciousness of the power of God.

But another conclusion has been drawn from the fact that the 'liberal picture' of Jesus is untrue to history. With the help of the religiousgeschichtliche Methode men have sought to prove that Christianity arose as a syncretistic religion (Gunkel). This again has been pushed to the extreme of maintaining that Jesus never existed as a historical person, that the gospel stories arose to illustrate and justify the faith in an ideal Christ as the revelation of God (cf. Drews and W. B. Smith). (In addition to Schweitzer's exposition of the failure of the 'liberal' Lives of Jesus [see cit. cit. iv.], see the hostile and severe but not unjust pamphlet by R. H. Grützmacher, Ist das libera Jeusbild modern? [Grosslitzendorf, 1907].)

(d) The eschatological Jesus.—The point of view from the radical and destructive view has been powerfully aided by the rise of the eschatological movement. It has been held inconsistent with the two primary assumptions of the learned 'circle' that the historical Jesus should have taught a strictly supernatural view of the Kingdom of God. What He held must have been the view that the Kingship of God the Father over human souls is to be conceived and realized wholly within the conditions of this life. If He spoke any words about a future life, He must have spoken as all human beings speak of that matter, in terms of faith and hope, without any peculiar authority arising from a superhuman consciousness. But the eschatologists (led by J. Weiss in the work often cited above) proved beyond a doubt that the eschatological sayings of Jesus are of assured authenticity. Moreover, these sayings are not occasional utterances peculiar to ecstatic moments and really foreign to His main principles. Rather can it be proved that they underlie the whole course of His consciousness. When He conceived of Himself as Messiah and Son of Man, of the Kingdom of God as near at hand, He is thinking of a catastrophic, supernatural act of God, in which He will share as its supreme organ and controller, by which the natural life of man will be submerged and a new universe be established. The eschatologists to whom we refer do not even yet break away from their 'circle.' Their primary negative presuppositions hold them still eagerly experimenting with new ways of accounting for this as an illusionary element in the consciousness of Jesus, and yet as one through which a divine spiritual conception of human history and given men the assurance of God's love. The noblest proof of the reality and sincerity with which men may give themselves to this as a compulsive religious fact is found in the fact that Schweitzer (at the behest of his Master, as he believes and says) has diverted his own career from that of a distinguished and brilliant German, the Father of a white medical missionary in West Africa. The radical school has put forth no higher proof that the grace of God is within reach of its view of Jesus.
2. The special influence of the sciences. — There are signs that the two great sciences which deal with the highest forms of phenomenal history, viz. biology and psychology, will yet exert powerful influence on Christology as well as on other sides of theology.

(a) Biology. — At present biology is itself embarrassed by two phases of discussion — that concerning the nature of life (energism — vitalism) and that concerning the process of evolution (mechanical, teleological, structural). It is the latter of these discussions that is at present the more controversial. The issue of the two was already decided by British theologians to use these biological discussions in Christology (e.g., D. W. Simon, Reconci1ication by Incarnation, London, 1898; W. L. Walker, The Spirit and the Incarnation, Edinburgh, 1901, and others; W. D. McLaren, Our Growing Creed, do. 1912; A. Morris Stewart, The Crown of Science, London, 1915). Such writers usually adopt some phase of Kenoticism.

(b) Psychology. — Psychology has proved more fruitful of suggestion already. That science is in the full flush of early and enthusiastic enthusiasm, and its results to date appear to be of great importance, especially in relation to religious experience. Its influence on our present subject is seen, partly in the more careful and thoughtful work of the Kenotics, partly in the work of those who have combined the two. The Schöneckel-Ritschlibns describe the conditions under which they view the consciousness of Christ, (cf. T. Häring, Der christliche Glaube, Calw and Stuttgart, 1906, Eng. trans., The Christian Faith, London, 1908; and A. Schlatter, Das christliche Dogma, Calw and Stuttgart, 1911. W. Temple in Foundations may also be named here. The position of Schöneckel (op. cit., p. 222 f.) is stated as follows: The God-will, as the history of mankind to salvation entered into history in Jesus, became man in Him, and worked after the method of human history in His words and deeds. By this personification of the will, we may, in the language of Schelling who has discussed the conclusions of modern theology, do not mean a mere active force such as proceeds from God actively elsewhere, but the divine Person Himself. For a person is not merely a potential being, who has its consciousness will (Hence-Fehl's divine person worked in the human life of Jesus so that He could not look upon His thoughts otherwise than as God's thoughts. He could not will, without the consciousness that God willed.') His divine personal will or His divine personality was for His own consciousness the eternal Son of the Father in heaven. Schöneckel (op. cit., § 87, Die Ewigkeit-Jesu.) goes further in his estimate of the eternal nature of Jesus. The words of Jesus and the Epistles do not set His deity and humanity beside each other as two static objects ('zahende Dinge'), but work of a volitional kind ('Wille verwandelt'). He approaches the biological point of view when he says further: 'In that the Word became flesh the humanity of Jesus was begotten (erezogen) through the Divine word and serves, therefore, but as an act of God which is the whole process of growth. This appeal to the idea of will is not, however, completely worked out by any Christologist. The fact is that neither for ethics nor for Christology have the psychological data of our day been thoroughly explored. The whole meaning of the word consciousness is undergoing a portentous change. The very question of the subconscious, a region shadowy and unexplored, to which Sanday (Christologies Ancient and Modern) has gone for help, is complicated by the almost terrifying phenomena of dissociated personalities (see Morton Prince, The Dissociation of a Personality, New York, 1906). There we have a demonstration of the most astounding kind as to the complex nature of the human consciousness something has power over them to reduce them to unity and harmony. But all this is cited here not as giving us any sure clue, but to prove that, when henceforth we speak of the consciousness of Jesus as carrying with it the divine and the human, and as manifesting a range and richness of power above that of our ordinary human life, modern investigation of our consciousness encourages us to believe that we are not speaking in mere contradictions. The ideas that consciousness means a stream or series of events is dead, and the other idea that a will can operate at one 'centre of control' is also dead. But chiefly its influence is seen in 'the Voluntarism' of men like R. Seeberg (Die Grundweserheiten der christlichen Religion, Leipzig, 1916, Eng. tr., The Groundwork of Christian Religion, London, 1908) and A. Schlatter, Das christliche Dogma, Calw and Stuttgart, 1911). W. Temple in Foundations may also be named here. The position of Seeberg (op. cit., p. 222 f.) is stated as follows: The God-will, that guides the history of mankind to salvation entered into history in Jesus, became man in Him, and worked after the method of human history in His words and deeds. By this personification of the will, we may, in the language of Schelling who has discussed the conclusions of modern theology, do not mean a mere active force such as proceeds from God actively elsewhere, but the divine Person Himself. For a person is not merely a potential being, who has its consciousness will (Hence-Fehl's divine person worked in the human life of Jesus so that He could not look upon His thoughts otherwise than as God's thoughts. He could not will, without the consciousness that God willed.') His divine personal will or His divine personality was for His own consciousness the eternal Son of the Father in heaven. Schöneckel (op. cit., § 87, Die Ewigkeit-Jesu.) goes further in his estimate of the eternal nature of Jesus. The words of Jesus and the Epistles do not set His deity and humanity beside each other as two static objects ('zahende Dinge'), but work of a volitional kind ('Wille verwandelt'). He approaches the biological point of view when he says further: 'In that the Word became flesh the humanity of Jesus was begotten (erezogen) through the Divine word and serves, therefore, but as an act of God which is the whole process of growth. This appeal to the idea of will is not, however, completely worked out by any Christologist. The fact is that neither for ethics nor for Christology have the psychological...
many genii, many saints, many prophets, and they are all dead. It is the infinite difference of Christ from us that has made an infinite difference of forms. It is what is more than man in Him, even in His sympathy, that has transformed the meaning of His sympathy in God with us, the 'more than man' is human. And this must be possible if God and man are spiritual, conscious beings.

(2) The superhuman 'aspect or 'element':—That which we see is a consciousness which is fundamentally of the same type as the human, and yet working in a range more than human. Human it is in that (1) He possesses direct superhuman knowledge of God, and that not by prophetic inspiration but in virtue of a Sonship relation, whatever that may be (Mt 1:23); (2) He is conscious of the flawless will—of perfect moral harmony with God; (3) He reveals Himself as in a unique, supreme, redemptive relation with the world and man. Hence His Self-consciousness, universal Lordship, was conscious of a future relationship to mankind, i.e., of the continuation of His control of history after His own death. His consciousness related to all; (5) He was open to all the physical experiences of mankind.

Superhuman it is in that (1) He possesses direct superhuman knowledge of God, and that not by prophetic inspiration but in virtue of a Sonship relation, whatever that may be (Mt 1:23); (2) He is conscious of the flawless will—of perfect moral harmony with God; (3) He reveals Himself as in a unique, supreme, redemptive relation with the world and man. Hence His Self-consciousness, universal Lordship, was conscious of a future relationship to mankind, i.e., of the continuation of His control of history after His own death. His consciousness related to all; (5) He was open to all the physical experiences of mankind.

(c) The problem of every human birth and this problem:—In solving the problem of this Person it is much more important that theologians realize that its solution is the ordinary human individual. How does the new human individual arise? By what process is, not only the physical, but the physio-spiritual, nature created distinct from the physical, as O. Lodge supposed? Is there a universe and an evolution of mental facts or natures distinct from temporal life as well as from the physical? Is there a unity of the universe of mental or spiritual facts such that there the facts which become fulfilled as human personalities are already of various grades within that unity? If, out of that universal universe of mental living facts, one of a unique kind, identical in type with the human, should enter into the stream of human life, evidently the history of the resulting individual must manifest at least some of the things which we have enumerated above. If, then, the question is asked how this self-conscious fact is related to that of the parents (or parent), we must answer that no discussion of that is possible till we know how the self-conscious fact in the ordinary human being is related to the self-conscious nature of the father and mother respectively. What is it, if anything, that enters from the mental structure of the parents into that of their child? What is evident in the case of Jesus is that through the processes of human birth an individual has arisen whose self-conscious nature manifests itself as of a new type. The basis of His being as a man was of two natures: the spiritual type. He became flesh. The Pauline conception likewise must have some difference in it, to account for the difference in His active consciousness.

(a) A new kind of historic self:—The question of the new Church, whether the new individual has all the 'parts' of human nature, such as body or soul or spirit, is entirely irrelevant here and for us. And we shall make no headway till we see that irreducible fact is that of the new combination of 'parts' peculiar to itself (in that ancient sense); e.g., it shares its physical history and nature with the lower animals. It shares its mental and spiritual nature, perhaps, with innumerable forms of being below or above itself.
the ordinary, healthy-minded, non-theological believer have always assumed that the mind and will of Jesus were more than human, just as they have always assumed that the mind and will of God are more than human, that there is one type with one type with mind and will in us. The self-conscious being, the pre-existent Christ, the Son of God, entered as an individual, vital, and mental organism into the history of the human and the blind impulse of the animal, which does not lie completely open to His mind. There is nothing there to experience. In these facts a finite content unfolds itself fully and all its beauty to the divine mind, which will it all.

But in man is it so? Here all the reality of creaturehood is gathered up with the infinitude of a subjective, rational, moral, conscious experience, dependence—of creaturehood is felt, thought, realized through all the range of human activity in a unique and supreme manner. There is something here that not even a divine observer possesses or realizes by observing. His sympathy is wondrous, but yet it is sympathy across the gulf. Its deep, infinitely deep, observation of man's experience can never be a substitute or full equivalent for that experience. To see and understand it, and to love it as it is, not the same as to live by its virtue; to create, trace, and watch growth is not the same as to grow; to measure the sorrow of that other creaturely heart even to the last, uppermost, deepest thrill of pain is yet not to know it as the subject of it. Even to taste God's pain is different from tasting man's. Now the Incarnation means that there is this one fact in His life which God would completely identify Himself, one fact not yet made His own which could become His own only in one way. Can He cross the gulf? Can He, the eternal divine Will, who has what it is to be a Creator, and to rule, and infer, and bear the conscious burden of all the universe of dependent beings, can He yet put our own peculiar cup to His lips and taste even that human dependence itself—on the human side—in its very essence? The Babe at Bethlehem, the tired Physician in Galilee, the praying Servant of Jahweh, the Man of the broken heart—what if all that means that He has tasted what it is to be a man? And, in love.

LITERATURE.—The immense range of literature on this subject makes any selection seem meagre and arbitrary. The following list includes some authors and their works that may be of interest:

JESUS CHRIST IN JUDAISM.

The relations between Judaism and Christianity have seldom been friendly. Two early Church fathers dismissed its Jewish element; and, in the centuries during which Christianity had the power to persecute, the Jewish people were thought of, not as the natural kindred of the Jews, but as those who had rejected and killed Him. There was seldom a good word for the Jews, except from those who were not Christians. Jews, on the other side, had no reason to love the Gentiles, or to say any good of them. The coming of Christianity into the world had perhaps brought blessing to the Gentiles; but to the Jews it was the herald of suffering, more severe and more prolonged than any which had been endured by them in earlier ages.

It would not be unreasonable to expect that the Jews, in their literature, should be most bitter against the founder of the Christian religion, as being the source of all their misery; yet that is not the case. The remarkable fact about the Jewish literature, whether of the Talmudic period, or of the Middle Ages, or of our own day, is the infrequency of any references to Christ Himself.

There is plenty of polemic against Christians mainly in regard to doctrine. The Jews were never at a loss to destroy their religion, in all its length and breadth, against Christ. But they said very little, I mean very little, about Him, except what would pass for a very slight and indirect allusion. They were not interested in the details of the spiritual history; and the main reason was that they had very little to say. No doubt, the knowledge that anything that they might say about Him would be unfavourably judged made them coincide in times when it was to be looked upon with fear. But, apart from that, they really knew very little about Him, and had no interest in knowing more. Only in recent times has there been, on the part of the Jewish writers, a real desire for fuller knowledge of the historical facts concerning Him, and a recognition that there was something to be learned which Israel would be the better for knowing.

The period covered by the Talmud includes the birth of Jesus and the rise of the Christian Church. In the Talmud, accordingly, and in the cognate literature will be found whatever the Jews of the first five centuries after Christ has to say about Him. Something is said; but the amount is extremely small, and the statements are seldom of any importance. There is enough to show that the person mentioned in it is Jesus, the Son of God, under the names of Ben Pandira, Ben Sada, and Mas'ah the Master, as is so often the case. When collected together, the references to Jesus in the Rabbinical literature may seem not incon siderable in quantity and contents; and the reader may get the impression of it being an important element in that literature than they do.

It is, however, a complete mistake to suppose that in that literature there is an undeniable hostility to Christianity or its founder. The Jews were thinking of their own religion, not of any other; and when, in a passing allusion, a chance remark here and there, they did refer to Jesus, it was only by way of a marginal note, so to speak, illustrating their argument; it was not for any intrinsic importance of the subject. There does not seem to have been, in the mind of any of the Talmudic Rabbis, a recognition of the greatness of Jesus. And even when they had a name for His, He was remembered as, after all, the man who had chiefly brought division to Israel, and the nearest approach to a defined opinion about Him in the Talmud is the statement (Bab. Sanhed. 90b) that the majority of the nation had practised magic and deceived and led astray Israel.

Round that statement there gradually gathered stray bits of gossip about Him, coarse allusions to His birth, reminiscences of His trial, and the like, having sufficient resemblance to the gospel narrative to show who is referred to, but not enough precision to be of any value as independent evidence. It is more likely that they were based on what was learned from intercourse with Christians than that the Rabbis themselves read the Gospels. But the point at present is that Jesus was of very small account in the range of ideas expressed in the Rabbinical literature of the first five centuries. He belonged to Christianity; and Judaism went its own way, caring nothing for Him or for the religion that He founded.

The Talmudic period was one of such hardship for Israel, not specially on account of Christian oppression. Indeed, the Talmud does not seem to mention Christian oppression of the Jews. It does refer to the adoption of Christianity as a title to the empire, but does not connect therewith any special display of hostility towards Israel. In the Middle Ages, on the other hand, the Christians sought to oppress the Jews, and the hatreds were kindled of the latter towards Christianity and its founder naturally underwent a change. They were not on their
defence when charged with holding false doctrine, and especially with speaking blasphemy against Jesus. Converted Jews were able to tell their Christian brethren of the unctuous passages in the Talmud which referred to Him, and the Christian contemporaries eagerly caught up the weapon. What use they made of it may be seen in the Pseudo-Bayemmus Martimns (18th cent., ed. Paris, 1631). The defenders of Judaism pressed the attack, so far as it related to Jesus, by asserting that the person referred to in the abusive passages of the Talmud was not the Jesus who founded Christianity, but another Jesus, who had lived nearly a century earlier; and a good deal of attention was given by medieval Jewish writers to the chronological argument by which this assertion was supported.  

But the attack was directed not against the Talmud alone. The book just mentioned, the Pseudo-Bidel, reproduced the whole (so far as known to the writer) of an anonymous lampoon upon Jesus, bearing the title of Toldoth Yehoshua (ed. E. Bischoff, Leipzig, 1895). Traces of this book can be found as early as the 9th cent., and it was probably of German origin. It is a connected story, based on the Talmudic references to Jesus, and amplified in a manner which was, no doubt, intended to be witty, but is now very dull. The coarse allusion in the Talmud are the most of; and the whole piece is entirely. Editio princeps of it are still published in our own day, but it would be unjust to say that it is representative of Jewish thought about Jesus. It represents the miserable revenge which the persecuted Jew of the then sort for the sufferings which he endured at the hand of Christians; but it has never been acknowledged by the leaders of Judaism as anything more than an unseemly satire. Judaism has borne its martyrdom in a nobler spirit than that which produced the Toldoth; and the attitude of medieval Jews is defined with far greater accuracy in the polemic which disclaimed any intention of disrespect towards Him than in the petty malice which made a burlesque of Him. In other words, the Jews of the Middle Ages would have left Him alone if they had not been compelled to speak of Him in self-defence.

Coming to modern times, we find a change in the attitude of Jews towards Jesus, not indeed shown by all Jews, but exemplified in some of them. It is no longer, as it used to be, true that the great mass of Jews, whose circumstances have kept away from them the influences of modern thought, that they have no idea about Jesus at all, except as of one who did harm to Israel long age; but, where increasing security and liberty allowed Jewish scholarship to profit by modern methods of research, there has been a breaking away from the old position of silent hostility to, or unwilling mention of, Jesus. The first to lead in this very new direction was L. M. Jost, who wrote with warm indignation of the way in which defect and martyr of Christianity was treated (Gesch. des Judentums, Leipzig, 1857-59, i. 396-409).

The line thus opened up by Jost was followed by his Gorgias. History of the Jews (Gesch. der Juden, ed. 1899, iii. 224-252) would be memorable for its treatment of Christianity, if for nothing else. Graetz boldly expressed his admiration for Jesus, whom he regarded as an Essenian, irrespective of the history of his followers than by the malice of his enemies. The sketch of

of Christianity was not spared, especially in Dātūtan-i-Dīnī, xxxvii. 90–92, and Sīkān-dīnīānī Vījār, xv., both documents dating from the latter half of the 9th century. The former passage, in which the expression is employed, is directed against the Christian Church, and is a repetition of a passage in the Avesta of the Zoroastrians, which contains a similar expression. The latter passage is directed against the Christian Church, and is a repetition of a passage in the Avesta of the Zoroastrians, which contains a similar expression.

The important passage is the second. This brings into play the terms 'his' and 'her', which are used in the Gospels to denote the third person, and which are also used in the Avesta of the Zoroastrians, to denote the third person. The expression is used in the Gospels to denote the third person, and which are also used in the Avesta of the Zoroastrians, to denote the third person.

The doctrine of the Trinity is also assailed. Assuming the truth of the Christian statement: that the Father and Son and Holy Ghost are three persons who are one in substance from the same source, and are the same substance from the other, nor is there one essence in them, and that the Father and Son are one substance, and that the Holy Ghost is one substance, it is clear that the doctrine of the Trinity cannot be maintained.

Again, the equality of the Persons in the Trinity is assailed, and it is alleged, on the basis of Mk 13:14, that the Son cannot be equal to the Father in every respect. It is further argued that the Jews showed Christ at the will of the Father, whence, with an allusion to Mt 20:14, a new argument is sought for an attack upon the tenet of the freedom of the will, and attention is called to the fact that, whereas Christ declared that He came not to destroy but to fulfill, the law and the prophets (Mt 5:17), 'all his sayings and commands were those that are distinct and adverbial for the law and the prophets', the NT plainly shows a belief in a separate power of God (cf. 2 Cor 11:14–23).

The precise source from which the polemists drew is yet to be discovered, but, as one of the proper names occurring elsewhere in the treatise betrays a Syriac origin (West, 3BE xxiv, p. xxviii), it was probably derived from faulty reading of a Syriac version—or a translation from a Syriac text—containing the same or similar statements, and which is more consistent with Christian doctrinal current in Persia.

JESUS, SOCIETY OF—See JESUS.

JEWEL (Buddhist).—The 'jewel' (Pāli ratana, Skr. ratna, also rotna) played a prominent part in the cult and terminology of Buddhism, throughout all sections of that religion. This conspicuousness of its symbolism in practical Buddhism is, we shall show, owing to the fact, not hitherto recognized, that this symbolism incorporates the deeply rooted archaic belief in the magical efficacy of the fabulous wish-granting gems as the means of procuring long life and immortality. Our inquiry into the source of this symbolism sheds much new interesting and important light upon the question of Buddhist origins.

The epithet of 'jewel' was applied to Buddha not only as the first member of the 'Buddhist Triad' or 'Three Jewels' (Tri-ratna) in whom every professing Buddhist must take his or her refuge (sīkān), but also to his teaching (dharma) and the sanctuary in which it was revealed. For that distinction is described in the earliest Pāli canon as the possessor of the 'seven jewels' (saptaratna), which are essentially the attributes of the highest pharisaical ritual, as monarch of the universe (Chakravarthi [q.v.; see also below]), and are, we find, traceable to remote pre-Vedic antiquity. The sacred texts express this jewel symbolism in universal use, through Buddhistdom, both 'north' and 'south,' as prayers and luck-compelling magical spells.

The origin of the symbolism.—In attempting to trace the origin of the 'jewel' symbolism of Buddhism, we find that originally the term ratana in the Vedico age (c. 1500–400 B.C.), including Buddha's day, denoted a 'treasure' rather than a 'jewel', such as came to mean in post-Vedic India, so that it embraced living and non-living entities (properly maṇi). In two early hymns of the Rigveda (v. 1.5.9, vi. xxi. 11) the deity who is homœothetically the supreme god of the universe, in the form respectively of Agni (fire) and Soma (wine), is described as the 'seven treasures' (saptaratna) of the world. He is invoked in both cases with the identical words (puttās in the seat of the mythical fire-prince Atri, in the first instance):

1. 'Breathe seven breaths on seven horns, bless three to our feet, and a blessing to our four-footed [creatures]!'

Upon the number 'seven' in this stanza Macdonell writes: 'The expression is probably without specific significance here; but is simply a vague expression equivalent to "all," so often it is in the Rigveda in connection with many other words besides ratana. However this may have been at the period when these hymns were composed (c. 1000 B.C.), it is certain that at the time of the Vedico commentary, the Bhāyāvat (c. 400 B.C.), the expression had become literally restricted to the number 'seven' and formed a symbol of the sacred seven.

For that commentary explains this particular verse referring to the "seven treasures of all Chakravartins," and it specifies them as the wheel, car (ratna), jewel, wife (bhāgavā = companion of her husband), horse, elephant, and chintamani. The evidence of this early commentator is against the view that terrestrical treasure, such as gold, silver, etc., was intended. It appears to be the first detailed list of the divine treasures; and it must take precedence over the list in the Buddhist Pāli canon, which, by its mythology, indicates for its compilation a date not earlier than the 1st century B.C.

The reference in the same extract to multiple symbols is:

1. Dīcchā-Kāliya: Mahāpārshuṭha Sīlātātra, slit, etc.
3. "Rudra," also called the great god, 'Mahādeva,' is in the Vedas a form of Agni (Macdonell, Vedic Mythology, Bâresburg, 1897, p. 312).
4. "Dāṇḍa-saṁjña atīta ratna daśāh, sa anu-ahāvapi dasyāh dvaśaṁ dace śreṣṭhaṁ" (Rigveda v. 1.5.9, vi. xxi. 11). The translation is kindly supplied by Macdonell.}

5. In a letter to the author.
7. "Text, p. 59; tr. p. 158.
8. There is a variety of seven precious minerals also called saptaratna, though post-Vedic in date, namely gold, silver, emerald, beryl (neatdāna), diamond or crystal, coral, and agate (cf. R. C. Childers, Dictionary of the Pāli Language, London, 1875, p. 462; E. J. Birt, Handbook of Chinese Buddhism, Hongkong, 1888, p. 145).
Chakravartins, or 'universal monarchs,' does not necessarily imply that those personages were yet considered to be human, as they become in later Buddhist and Brahmanical literature—for the references to human Chakravartins in the Mahabharata are also probably later interpolations, as they occur in the composite episodes exhibiting the characters of the Purushas and presumably of no earlier date than the latter (c. 1st cent. a.d.). These may be regarded as the forerunners of Buddha, who was ascetically pure and divinely inspired, but was not a god. He was born, and died, and is considered to have been the supreme creator, in the later Vedic period to resolve himself, the series of active creators, Prabhati, or Purusa.

3. Assyrian ('s) source of the 'seven treasures.'—The detailed list in the Bhagavata and Buddhist texts indicates the important fact, not hitherto recognized, that these seven treasures were the famous divine treasures of life and immortality won by the gods of light in their great struggle against the powers of darkness and the deep, in the contest termed by the Indians 'the churning of the ocean' (an appropriate metaphor for the creation of life, of which the power of whose food was largely obtained by churning). This conflict, forming a chief episode in the Mahabharata and Ramayana epics, whilst incorporating a rude version of the cosmogony of Newton, forces in evolving the universe from chaos, marks also, in the view of the present writer, the final breaking away of the Indo-Aryans from the Assyrian gods which their Aryan ancestors had borrowed from their western neighbours when in Iran. For it is the Asuras who seize the great serpent of the deep by the head and thus stir up from the ocean the treasures of immortality. Now, the great Asura of the Rigveda is the serpent-hooded god of the sky, Varuna, the Ouranes of the Greeks, who is now admitted to be identical with the supreme god Ahura (i.e. Asura) of the Zendavesta, and further traced by the present writer to the 'Asur' of the Assyrians.  

4. The epic relates that the Asuras, who had gained the ambrosia and other treasures of divinity were then deprived of them by stratagem and put to flight. Thus the pre-Vedic, non-Indian, and presumably Assyrian origin of these 'Indian' and 'Buddhist' treasures is now probable. 

The order in which the treasures emerged from the ocean varied, and according to the Mahabharata, i. 18 (c. 500-400 b.c.), 2 as follows (the corresponding number in the Bhagavata is added within curved brackets) in the Buddhist lists, given in this order: 

1. The wheel of a thousand rays or spokes 
2. Earth 
3. Horse 
4. Gem 
5. Wife 
6. Household chief 
7. General

The next and last object to issue from the waters at this 'churning' was the world-destroying poison 

The great significance of this discovery, that the 'wheel' of the seven treasures symbolizes the moon and not the sun, is that it postulates for those Hindu symbols an extremely remote and Western antiquity, long before the Indo-Iranian period. In giving this pre-eminence to the moon, they presumably belong to that early pre-historic period when the moon was regarded as the parent of the sun, as is found in the earliest Assyrian and Egyptian myths. In that pristine cosmic myth of the evolution of light from the darkness of chaos, the moon was conceived as the luminous moon most intimately associated with darkness, and as traversing not only the sky, but the waters of the deep under the earth; and the daily changes in its form led to its being regarded as taking a more active part in the workings of Nature than the unaltering sun. Vestiges of this primitive myth survive also in the early Vedas, and account for the fact that there are such Hindu symbols as Vritta, 'wheel,' and Vrata, 'round,' and Mantra, 'round.'

4. See S. N. Datta, Jt, i. 54-176; also V. F. Vickers, Theology, London, 1887, i. 90-81. The number is increased as the legend is expanded.

With this Brahmanical list may be compared the Buddhist, in the order in which the items are cited in the Pali canon, which is the usual sequence.
the great pronouncements given throughout the Vedas, which has the dual character of 'amulet' and the 'moon'; for in the Rigveda the 'moon' is called the 'treasure' (ravi); and in the Avesta, it is called the 'gem' (soma).

5. Original lord of the wheel and Chakra-varini: Varuna. — It is to be noted that it is Varuna, not the Sun, who is the original gem (soma). An amulet, which is worn on the neck, is called the 'jewel' (gumna) of Varuna. This is the amulet of the moon (soma) for it signifies the universal monarch (soma-raj; Macdonell, p. 24); and Soma is positively identified with Varuna in several of the aspects of the latter (Rigveda, ix. xix. v. 3), and is sometimes called the 'treasure' (ravi; ib. 110). It was, on the other hand, Varuna who not only placed the sun in the sky, but also placed Soma in the sky; and it is by Varuna's ordinances (that the moon shining brightly moves at night) (ib. 23). This expression associates the moon with Varuna does not necessarily imply, as Oldenberg thought, that the sun was placed by Varuna. It is probably the moon that he placed in the heavens, but the sun was put in its place by one of Varuna's messengers, who alone could traverse it. The sun is the Vedic god of the entire sky, including the luminaries, which traverse it, and lord of light both by day and by night, his eye is the solar disk (ib. 110-29). Varuna, the supreme god of Varuna. This god is brought into relation with the owners of the seven treasures, namely, Soma-Buddha, who are identified with the seven sacred treasures of the Vedic age of Varuna (ib. 129), thus implying that they were his agents, and that the seven treasures are primarily those of Varuna himself as the original Chakravarini of the universe. Varuna, indeed, in the Rigveda, personifies the wheel (chakra) of which the name is trita, the Soma-preserver, apparently personified lightning (ib. 68 f.); and the present writer has shown, firstly, that the entire Soma and Chakravarini cycle of the 3rd cent. B.C. Varuna is figured as the King of the Golden Swans (i.e. the winged sun conceived as a bird, as in the ancient Asyran and Egyptian sculptures of the sun-god) and actually bears the inscription of Chakravarini (i.e. Chakravarana, literally: wheel-crane, a title of the golden goose, or swan, as sun-bird); and, secondly, that Buddha was put by his chief in chief mode as a god (Puruṣa in the Pali canon and Amítábha in the Mahâyana) upon the model of the god Varuna-Chakravarana, the manifest prototype of the Chakravarini with whom Buddha was early identified.

3. The 'māṇi' gem symbolism. — Of the seven treasures other than the first, or wheel, whence the Chakravarini derives his title, the most popular is the jewel proper or 'wishing-gem,' the synonym of the moon (soma). This popular is doubtless owing to its being essentially of the nature of a primitive magical amulet of the animistic period. In the Atharvaveda (c. 800 B.C.) there is not only an amulet against all kinds of evil, and many sorts are mentioned. 1 In its special hymn to the māṇi (viii. 5) the amulet hanging from the neck is called the 'lucky repelling jewel' (ayyakṣatari, soma). Buddha himself refers in his Khevalukh Sattra 2 to the use in his day of the 'jewel-charm,' called maṇikjāli-vija, 3 which, he says, was used for 'making new promises, for satisfying feelings, the reasonings and thought of other beings,' enabling its possessor to say, 'So and so is in your mind; you are thinking of so and so; thus and thus are your emotions.' Besides its use as an amulet, the māṇi is identified with the thunderbolt in the Atharvaveda (viii. v. 3), which positively says that 'it was with the māṇi (jewel) that Indra struck Vṛtra, that he has vanished the Asuras, conquered the sky, the earth, the two worlds, and the four regions of the atmosphere.' In this sense of thunderbolt it is employed also in the Lalita Vitaras (c. 1st cent. A.D. pp. 417, 416), and it seems to us, in the Pali canon a descriptive of the birth of Buddha in the Airāvata-undersphere, the white umbrella which miraculously appeared over the infant, hīra, 'diamond,' being an ordinary title of Indra's thunderbolt.

On the other hand, the māṇi is interpreted by the commentator of the Atharvaveda as the 'sunstone' (dīlīyamaṇi), and the probability is that it represents the sun has something in common with the moon. It is described in the Pali canon 4 as the beryl (like)—jewel, bright, with eight facets, clear, transparent, . . . its radiance penetrates a day's march (yajjana) on every side . . . a turning night into day (ib. 311). The jewel is in the Jātaka, 331, which was given by Indra to Buddha in his former birth, was called 'the ever-shining' (vīrokkana), an ordinary epithet of the sun; and Vīrokhana is the title of Buddha in the Jātaka. 5 In the Jātaka 331, in which Buddha was habitually saluted with 'Shine forth as is thy might, Lord.' 6 it also occurs in the longer lotus-jewel formula: 'Oti! Amogha Varačchana mahāparama Māṇi padma nīlotapāravataya Hāṃ.' 7

7. 'Omi māṇi' formula. — The hitherto unknown origin of this famous Buddhist lotus-jewel formula (Omi māṇi padma namaha) has been here traced back to its Brāhmaṇical source. The māṇi is specially invoked in the Atharvaveda hymn cited above, and in the Brāhmaṇical invocation the sectarian Omi was extensively employed already in the earliest Rigveda, even in those hymns which are not of an obviously magical character. This syllable is stated in the early Brāhmaṇas (c. 800 B.C.) to be the divine counterpart of tāthā. 8 i.e. 'so be it,' implying an assuagement of certain threats or evil, in which Buddha was habitually saluted with 'Shine forth as is thy might, Lord.' 9 it also occurs in the longer lotus-jewel formula: 'Oti! Amogha Varačchana mahāparama Māṇi padma nīlotapāravataya Hāṃ.' 10

evolved anthropomorphic Brahmā before he created the universe.¹ From the Ośha the Prajñāva-Upanid (c. 800 B.C.)² derives the entire creation.

This anthropomorphic figure of Brahmā, created or personified as Vāhana, Brahmā upon a lotus-lotus, then appears to Brahmā himself. The word Ośha is probably a term of address or greeting. In this context, it may be translated as 'O Śiva' or 'O Gājendra', the king of the elephants.

Now, let us continue with the description of the ritualistic practice. Ośha is the oldest son of Brahmā.³ In the ancient Indian tradition, the practice of meditation and the ritual of lotus-worship were highly revered.

Here we have revealed, in this Brāhmanical ritual prevalent in India about 800 B.C., the manifest origin of two of the three elements of the famous lotus-jewel formula, whilst the third element, maṇi, is invoked as Ośha maṇi still earlier with a similar connexion; also there is enforced therein the magical efficacy of repeated reiteration of the mystic syllable. The lotus element in this Brāhmanical symbolism of creation has probably a sexual significance, denoting the union of prakṛti, or productive female energy, with the masculine puruṣottam, or cherished Indra in the Śatapatāka Brahmanas (c. 800 B.C.)³ the lotus-lotus is the womb.⁴

The Buddhist monks of the Mahāyāna school in India manifestly borrowed this Brāhmanical symbolism of the lotus of Brahmā (c. about the 2nd cent. B.C.) for their counterpart of Brahmā, namely the 'Buddha of meditation.' Aimitabha, who, like Brahmā himself, was evolved, as we have seen, on the model of the ancient primordial god Varuṇa. This Amitābha-Buddha in the Buddhist teaching is impassively in abstract meditation, performed his benevolent and creative functions through the medium of his active sons, corresponding to the creator-sons (Prajāpati) of Brahmā; and the greatest of Aimitabha's sons was Avalokiteśvara, to whom this lotus-jewel formula is solely addressed. On this Brāhmanical analogy, therefore, the Ośha would represent Avalokiteśvara, the active proximate creator 'elder' son of Aimitabha-Buddha, seated as a herāna-praditte upon the fertile lotus of his father, the remote creator-named as Adibuddha (p. 226). The maṇi, maṇi, etc., as well as the lotus is an essential attribute of Avalokiteśvara, is frequently figured in ancient Indian images as holding both the jewel and the lotus, and bearing the epithet of the holder of the jewel (maṇiśumber). In this regard it is to be noted, that the Brāhmanical homologue of Avalokiteśvara, namely Vīṣṇu in his later Brahmanised and mūnī-Vedā form of Vīṣṇu-Nārāyaṇa, several of whose attributes were borrowed by the Buddhist monks for Avalokiteśvara, is called the 'jewel-waist' (ratna-āhāra), and in his form as creator Vīṣṇu is figured with the lotus of creation springing from the jewel at his waist (or navel). Here we have all the three elements of the lotus-jewel formula unified in Vīṣṇu-Nārāyaṇa as creator, that is Ośha, the son of Brahmā as Vīṣṇu himself, while, issuing from the jewel at his navel, the lotus gives birth to the Brāhmanical triad. The Ośha maṇi formula of Avalokiteśvara, therefore, like the Vīṣṇu-Nārāyaṇa figure in Brāhmanism, presumably symbolizes the creative cosmic action by self-generated supernatural efficacy.

In the later Tantrik period, from about the 5th cent. A.D. onwards, when Indian Buddhism, following in the footsteps of the Gāthā tradition, the Śramaṇa, and the Yājñika, has been transformed into the Tantrik, the Vīra Śramaṇa, with the identification of the Buddha, (2) his Word or Law (Dharma), and (3) his Order of monks (Sāṅgha). As it is the stereotyped conventional formula found in the earliest Pali canon of Buddhism, the word maṇi has been translated into the Sanskrit maṇi, and for a layman's belief in Buddhism. It is doubtless coined by Buddha himself. In arriving at this nomenclature, the title of 'treasure' (ratna) was obviously, in view of the above facts, borrowed by Buddha from the Brāhmanical treasure concept. The Vīra Śramaṇa's identification of the divine Chakravartin, a form of the supreme Vedic god Varuṇa, with whose entire septet of treasures we find Brahmā already clothed in the Pali canon. The number three was thus a favourite in Vedic Brahmānism, as is the still earlier faiths. There are the three divisions of the universe, the three worlds, three classes of gods, etc.

¹ Cf. E. E. 129, footnote 2.
² Wackell, tr. in IA xiii. 1911, 218. The usual Sanskrit word for navel is tānḍava, translated by maṇi, 'beak,' evidently mirroring hands as tāndava.
³ By F. W. Thomas in J.R.S., 1900, p. 404.
⁴ Cf. E. E. 129, footnote 2. Footnote 2. Pusey considers that this is the formula referred to, though Cowell, who translated the text, expressly states in the preface that 'there is no mention of Avalokiteśvara or the other Nārāyaṇas in the Ośha maṇi.'
⁵ Waddell, Buddhism of Tibet, p. 39, 138-150, 286, where the mystical value of each syllable is described.
⁶ Bunjia Nanjio, Catalogue of the Chinese Trans. of the Buddhist Tripitika, Oxford, 1883, no. 349; other recensions of this text are nos. 383, 384, translated by E. E. 605 and 602-607 respectively. The following texts also contain the formula (see Sembo Fujii in Hinsui Zasshi, Tokyo, 1898, pp. 64-65; nos. 782, 1,177, and 1787 of Nanjio's Catalogue). The last is the Senso temple epithet of Nārāyaṇa Dārājī, translated 980-1001, 990-1127.

⁹ See art. INDIAN. (Buddhist), x.
the three Vedas, or revealed scriptures of Manu, and the tripitaka god Tra, who is the protector of some, the draught of immortality, and the nace in the wheel of Varuna. The latter god Varuna, indeed, is expressly related to several triads as well as to the law, the three heavens and the demons. If the deities are not within him... he is a great lord of the arts of nature. 2 Here the term for law is ri, or fixed law, which has the same value as dharma, the pre-Buddhist term in Manu and elsewhere for laws and ordinances, in the tripitaka, the law or code by which the early Buddhists used it for Buddha's word or dogma. 3 Buddha as the first member of this triad is termed the first of the treasures; but besides this he is independently referred to as a treasure-jewel (ratnamandam) or likened to one. In the Digha-Nikaya he is likened on his incarnation to this and to the beryl-jewel, and also in the Lelita Vistara, which further, refers to that event thus: 'the beautiful treasure (ratna) will shortly be manifested in the three regions', and the jewel-victor (jina-ratna) from the mine of religion will be manifested in the continent of Jambu (India). 4 Now, the latter epithet of Buddha is at the present day the ordinary formal title of him who professes to be Buddha's representative and successor, viz. the Dalai Lama of Tibet; his designation of Gyatso-ma-rin-po-che, the literal translation of jina-ratna into Tibetan, is thus seen to have its origin (atiberto unkowna) manifestly in this appellative of Buddha in the Lelita Vistara.

The central member of the triad personifying the fixed ordinances and speech of Sakayamunis was probably suggested to that saint by the personified Speech of Brahmanism, the goddess, Vach (or Vaka), who is one of the earliest of the Vedas goddesses, and was made the wife of Brahma about the time of Buddha, when the new eponymous god Brahma was being invested with the functions of the supreme god of Vedic religion, Purusa, Vakasana, the transition form of Varuna (Chakravaka). Vach in the Rigveda is called 'the queen of the gods,' and her original abode was the sea (suggestive of relation to Varuna and her original identity with Srti, the wife in the seven treasures); and, while she has a triad nature (terrestrial, middle, and celestial), she especially occupies the middle region of the atmosphere, and thus may have suggested the middle location for speech in the Buddhist triad. For the more closely we examine the mythology, idioms, and terminology of the Pali canon, the more manifest is the indebtedness of Buddhism to its parent religion, Brahmanism. The third member of the triad is the 'Order of Buddha's monks'—it is erroneously to translate this as the 'chureh' or 'congregation,' as is often done; for the latex, both men and women, are excluded from the Sangha. 9.

9. The treasure as a spell.—The fact that spells have been in universal use by all sections of Buddhism from the earliest times, and even by Buddha himself, has been established by the present writer. 11 Among the southern Buddhists, of Burma, Siam, and Ceylon, one of the canons of the protective spells, or paritta, is the 'Jewel or treasure' Sermon ('Dhatuvattada Sutta'). This discourse, ascribed to Buddha in the Pali canon, 1 is an invocation to demons to grant prosperity, and it is couched in the orthodox form of Buddhist spells, namely, as an 'act of appeasement' (sukkha-kiraja; Skr. satyakirija) 2 which is virtually an incantation. The Ratana Sutta begins: 'Of all ye demons who are assembled, terrestrial or celestial, may you all possess happiness! Be friendly to the man of the right understanding those who protect those who by day or night propitiate you by offerings! Whatever harm may he done to these, whether in this world or in another, or whether there be any disease or misfortune, this spell shall not be experienced by him. This gem-like Buddha is superlatively excellent. By this truth let there be prosperity!' and so on for the other two members of the triad, treasures, etc., in fifteen stanzas, the closing sentence of each being, 'By this truth let there be prosperity!' This is one of a large series of demonsitic and theistic texts ascribed to Buddha in the orthodox Pali canon, and belongs to a phase of Buddhism which, although usually overlooked by writers on southern Buddhism, yet forms a very conspicuous and important part of southern Buddhism as a practical religion. Its contents and form indicate that it must have been originally composed expressly for use as a luck-compelling charm, based upon the supposed magical efficacy of the pre-historic wishing-gea or amulet.

The 'jewels' and 'treasures' in Indian Buddhist symbolism and cults are thus seen to be of non-Indian, pre-Hindu, and pre-Iranian archaic origin, and possibly borrowed from Assyrian and pre-historic mythology.

LITERATURE.—This is sufficiently indicated in the footnotes.

Jews in China.—See Jews in China.

Jews in Cochino (Malabar).—I. History.—The earliest known history of this community connects it with the now extinct city of Cranganore, the deserted site of which is situated some 20 miles north of the present port and town of Cochino. Spelt Kranangur, it is the more easily seen to be the Portuguese form of Kodungallur, the name of a village which still exists close by. It is almost certainly to be identified with the ancient port of Monemis (Moysa), known to Ptolomey, and the author of the Periplous Maris Erythraei, where, according to the Pentingarian Tables, the Romans, up to at least A.D. 220, kept a force of two cohorts to protect the trade between India and Egypt. Another name in frequent use for the same spot in the Middle Ages is Shinkali. 4

The origin of the settlement is shrouded in obscurity. We may pass over possible deductions to be drawn as to a Palestinian-Indian trade from well-known foreign words in the Biblical account of the merchandise of King Solomon, suggesting an Indian, to some a S. Indian or Dravidian, origin; these traditions of the Cochino Jews themselves, embodied in a supposed record-book (Dibre Huganaim), represent their ancestors as arriving in Malabar immediately after the destruction of Jerusalem by Titus (A.D. 70). 5

however, be attached to this document, which bears signs of interpolation, and of which more than one version exists, and which may even have been wholly rewritten from memory after destruction from various causes. The first really reliable and explicit record in relation to the Jews of Cochin presents itself in the form of an ancient royal charter (sīyâṣa), engraved on plates of copper, whereby a piece of land, named Anjumavura, is conveyed by Bhāskara Rāva Varmā, the reigning monarch of Malabar, residing at his palace in Mu¬yirkodi,1 to one Joseph Rabban, headman of the Jewish community, and to his heirs in perpetuity, with the annexation to it of various privileges of nobility and rights of revenue. The charter is attested by the signatures of six subordinate princes, whose rank Joseph Rabban may be assumed to have been called to share. Buchanān in 1666 caused a facsimile of this charter to be executed in brass, and deposited it in the Library at Cambridge. A description of it by Burnet, entitled ‘The Original Settlement Deed of the Jewish Colony at Cochin,’ with reproductions of the plates, may be found in IA iii. [1874] 333 f. Burnet shows that this document, which is inscribed in arcaic Tamil, in the Vāgarānta font, must be ascribed to some time in the 8th cent., perhaps as early as A.D. 700. It reveals the Jews in an already affluent and organized condition in Malabar, bespeaking an antiquity considerably anterior to its date; and it was presumably preserved by the king in return for important State services rendered by the community. After the light afforded by this charter, all subsequent documents descend for upwards of a thousand years upon the history of the Jews in Malabar, covering perhaps a period generally prosperous. When it lifts, it is to disclose the setting in of a time of adversity and overthrow. About 1895 the sack of Cranganore by the Muhammadan Zamorins of Calicut, who previously had invaded the place in 1594 and massacred many, accompanied by the incoming of the Portuguese, involved the ruin of the small Jewish State, and resulted in the final desertion of Cranganore as a place of abode. Reduced in numbers, and with largely shattered fortunes, the main body of the dispersed Jews migrated to Cochin, and built their present Jewish Town in its immediate vicinity. Certain of their number, however, continued to linger in the neighbourhood of the old Cranganore, at places named Cherambur, North Parangam, and Māla, where their successors are still to be found; and several have settled at Ernakulam, the native capital of the Cochin State, situated a few miles eastwards from Cochin, across the Malabar Backwater.

2. ‘White’ and ‘Black’ Jews. A singular feature of the Cochin Jewish community in the eyes of foreign observers has always been its division into ‘White’ and ‘Black’ Jews. As early as 1655, Mannaṭṭa Ben Israël,3 addressing Cromwell, describes them as consisting one part of ‘a white colour and three of a tawny.’ Buchanan and a succession of later writers have not failed to call attention to the same distinction of colour. Yemenite writers have even seen their way to discriminate a third, or Brown, section. It is probably correct to regard the so-called Black Jews as comprising two classes, characterized by themselves as M’ukhasdam (those of lineage) and enam-M’ukhasdam (non-M’ukhasdam) (manumitted slaves). Regarded thus, the M’ukhasdam among the Black Jews constituted themselves to be the representatives of an original stock, older than the present White Jews, and look upon the

1 It is from the ‘Miyri’ in this name, elsewhere shown to be identical with Craganore, that the classical name Mazzucete is believed to have been formed.

2 See Life and Labours of Mannath Ben Israel, in A. Loisy’s Miscellanea of Hebrew Literature, ii. 2nd ser., London, 1877.

3 Mannath Ben Israel Jacob de Castro (1603-1684). The decision to be found in a Hebrew work of his entitled Ḥayyim (‘Life of Jacob’), published at Leghorn in 1728. Mannath gave decisions, or opinions, on questions of ritual and casuistry propounded to him. As Eng. tr. of the passage in relation to the Cochin Jews from the pen of ‘A. Cochin Jew,’ may be found in the Jewish Chronicle, 9th April, 1859.

4 The report of this Commission was published at Amsterdam in 1657, under the title of Noticias dos Judeus de Cochin, by Pereira da Silva (see J.E., art. ‘Cochin’ and ‘India’).
dants of the original settlers, and that the Black Jews are an entirely mixed class, resulting from unions between the former and their Indian slaves, have been the victims of too sweeping generalizations. A. Wolf, having given us a sketch in 1830, promptly met with an indignant reproof from the Black Jews, repudiating the theory. The fact, on the other hand, that the royal copper-plating charter is found at present in the keeping of the White Jews and not of the Black, Jews would seem to point to some position of consensual priority which the White Jews must have occupied in the bygone days of unbroken friendly intercourse between the two sections of the community. A White Jew, of the existing house of Halegus, held in old times a high position as Mudallar, or hereditary headman of the community, recognized by the Raja—an honor now abolished.

The present numbers of the Cochin Jewish community are small, and are slowly diminishing, as judged by the percentages of several past decades. By the census of 1911, the total number of Jews amounted to 1268. Of these, 73 are located in a patch of the Travancore State, which here curiously overlaps that of Cochin, and takes in the region of North Parur. Of the 1248 Jews mentioned, 1055 are Black Jews, and 192 White. Distributed according to residence in towns, there may be said to be 495 Jews at Jews Town, Cochin; 488 at Ernakulam; 147 at Chennanampalam; 110 at North Parur; 42 at Trichur; and 2 at Trichirappalli. The so-called Black Jews are to be found in all the above places, the White Jews almost exclusively in Jews Town, or in the neighboring European towns. Cochin, where the quarter north of the Jews Town itself consists of a single narrow street, running N. and S. Its northernmost end is occupied by the synagogue of the White Jews, paved with hard-burned bricks (jas) tiles, and flanked by a conspicuous clock-tower, furnished with a Dutch clock. About the middle of the street is situated the Thekumbagam synagogue, and near the southernmost end the Kada-vanbagam synagogue, both of the Black Jews. Eastwards, across the Backwater, at Ernakulam, the capital of the Cochin State, situated on ground granted them in 1711, the Black Jews possess two more synagogues, also known by the names of Thekumbagam and Kada-
vanbagam. These designations, meaning 'southside' and 'river-side' respectively, bear no relation to the synagogues of the same names in either place, but are derived from the positions originally occupied by the corresponding synagogues in Cranganore. Internally, the synagogues conform to the pattern of those in other parts of the world, except that peculiarities of native art enter into the structure of their fittings. Externally, after the manner of the country, the buildings are generally approached by a sort of prolonged porch or corridor. The Black Jews possess also a synagogue at each of the three places North Parur, Chennanampalam, and Mala. Disused sites and ruins of discarded synagogues are to be met with, as at Tirur and Vallacott, and an old synagogue known as the 'Cochin Angadi' is situated near Jews Town.

1 See the Oriental Christian Spectator, September, 1820.
2 While designated the 'White' and the 'Black,' it is by no means always possible to distinguish, even by the eyes of a native, or black, view on which side the sea, and hence, as is the case with the Black are the earlier conquerors.

3 Ritual.—In their synagogue ritual the Jews of Cochin do not differ appreciably from Jews in other parts of the world. They follow the Sephardic rite, like most of the Jews of the East. Immediately after the White and Black Jews are called to the reading of the Pentateuch, the former are assigned to the Book of Deuteronomy, and the latter to the Book of the Prophets.

4 Organization and occupations.—As to communal organization, the Black Jews formurally constitute a federation of seven synagogue communities, or yeganes, embracing the two in Ernakulam, the two in Jews Town, and one each at North Parur, and Chennanampalam. It is obvious that the symmetry of this arrangement has been broken in recent years by the secession of the Kadavanbagam synagogue at Jews Town to the jurisdiction of the White Jews, on account of a dispute. In respect of their occupations, the Cochin Jews are engaged mainly in trade and merchandise, though not to the extent prevailing in the days of their forefathers. The Black Jews deal fairly largely in rice, though some are handycraftsmen. Education is making way among both classes, although the recent census shows barely more than a quarter of their number to be as yet literate.

JEWISH RACES—See BENI ISRAEL.

JEWISH IN INDIA.—See BENI ISRAEL.

JEWISH IN ISLAM.—The attitude of the Muhammadans towards the Jews and the consequent position occupied by the latter in the lands of Islam must be traced ultimately to the decisions regarding them promulgated by Muhammad, and especially to the ordinances of the khalif Omar. Muhammad was the first of sym pathetic tolerance, for he hoped to range behind him, in support of the faith which he was establishing, the whole of the forces of the powerful Jewish tribes of Arabia. But, however, before he discovered that the absorption of Judaism into the new faith was unsustainable; the Jews were thereupon denounced as enemies of the faith, and a bitter war of extermination was waged against them. The khalif Omar, who reigned from A.D. 634 to 644, was the first to regularize and legalize the attitude of Islam towards the Jews, and, as it was under his khalifate that Persia, Egypt, and Syria, all lands with considerable Jewish populations, first came under Arabian influence, his Ordinances had immediately a considerable influence on Jewish life. By these Ordinances Jews were not allowed to change Judaism or to restore those which were in ruins; they were to conduct their services in subdued tones, and to pay heavy and exceptional taxes; they were not to hinder their converts from accepting Islam; they were debarred from holding public office or from obtaining a verdict against a Muhammadan in a court of law; they were forbidden to ride on horses or to wear rings—both marks of distinction; and they were compelled to wear distinctive dress. A Muhammadan was free to enter a synagogue at any time, but no Jew was in any circumstances admitted to a mosque. Even in death Jews laboured under a disability, for they were allowed only flat tombs, not monuments. These Ordinances are still the law in all countries in which the Muhammadans hold sway, although they are not always enforced. They were not invariably acted upon even while Omar still reigned, and it is probable that, although the Ordinances all bear his name, the Code in its accepted form came into existence gradually during a period which extended beyond the date of his assassination. To Omar, however, it was undoubtedly due one definite piece of persecution. Determined that Arabia should henceforth try no innovator, he ruthlessly exiled the depressed remnant of Jews who survived in the peninsula in a state of semi-slavery. Outside of Arabia the rule of the Muhammadans did not at first come to the Jews as a scourge. Under the later Persian kings they had suffered persecution. The advent of the conquerors was consequently welcomed, and the Jews, settled in Mesopotamia, aided materially in the conquest of that region. The Muhammadans, on their part, treated their allies with tolerance, and an era of relative happiness dawned for the Jewish communities of Babylonia. To the Jews of Syria and of Egypt also the Muhammadans came as deliverers from the yoke of oppression. In Arabia, however, the first home of Muhammadanism, the Jews have always been subject to persecution. There, if anywhere, the Ordinances of Omar had their full effect. As late as last century, the Jews of Yemen or S. Arabia were forbidden to wear new or good clothes, to ride on an ass or a mule, or to engage in commerce. With hardly an exception they were until recent times in a state of servile trade. Of late an emigration from Yemen has set in, and many of the former Jewish inhabitants are now settled in Jerusalem and in the modern Jewish settlements in Palestine, where they ply the trades which they learned in their former homes. There are at present about 25,000 Jews in Arabia.

In Persia, Jewish communities have existed since the period of the Arab conquest. The disorders which filled the centuries immediately succeeded that event reacted unfavourably upon the fortunes of the Jewish population, whose condition from that day to this has almost always been a pitiable one. To 83,000 Jews who are to be found in Persia to-day are due the most part of the Jewish community in the more important towns of Hamadan, Isfahan, Kirmanshah, Shiraz, Teheran, and Mashhad. They, with few exceptions, confined to their own quarters of the town, marked off from their neighbours by occupation, dress, and customs. As a rule they are engaged in retail trade or follow callings for which little respect is felt. Another serious disability under which they labour is the law or custom whereby a Jew converted to Islam inherits all the property of his relatives to the exclusion of the next of kin. The Alliance Israelite Universelle, a society founded in 1860 for the protection and improvement of the Jews in general, and now concentrating its attention on educational works in Muhammadan lands, has schools for boys and girls at Teheran.

Egypt had a considerable and important Jewish population at the time of the Arab invasion, and throughout the period of Muhammadan domination, except for a few short periods, the Jews were both prosperous and contented. The khalif al-Hakim (906-1020), after a period of toleration, suddenly began to enforce the Ordinances of Omar. He even exceeded their rigor. He compelled the Jews to wear distinctive dress, and to keep a wooden image of a calf. On the pretext that they mocked him, al-Hakim burned the whole of the Jewish quarter. But his treatment was quite exceptional, and more marked off from his actions. Under other rules individual Jews held high office in the State. Some of them—notably Maimonides, the greatest Jewish philosopher of the Middle Ages—were physicians to the khalif. Until the middle of the 16th century the Jewish communities in Egypt were presided over by a rabbi, whose rule was co-extensive with the Egyptian dominions. He had full civil and criminal jurisdiction, and was as powerful as power to punish by fine and imprisonment. The appointment of Rabbis rested with him, as well as the responsibility for seeing that the civil law was observed within the limits of his authority. The rabbi was appointed by the khalif, and his installation was attended by much ceremonial. The Jewish population of Egypt is at present estimated at 50,000.

In the other districts of N. Africa the conditions were much the same. Although there were times of persecution, for the greater part of the period of Muhammadan domination the political condition of the Jews was a tolerably easy one. The pre-Muhammadan conditions of Arabia were reproduced to some extent, and Jewish semi-independent tribes roved about the interior of Africa. For centuries after the Dissolution, and some of them persisted to the present day. In Tunis, towards the end of the 8th cent., there was a persecution by the Imam Idris, but his reign did not last long. The accession of the Almohads led to a longer period of tribulation. The first of the Almohads, 'Abd-al-Mu'min, was responsible for forcible conversions of Jews and Christians on a wholesale scale. This policy was pursued by his successors. At length the number of converts had become so large, and, in view of the circumstances of the conversions, their sincerity was so doubful, that a distinctive dress was allotted to them. Under the Hafite dynasty, which commenced in
1236, the condition of the Jews improved greatly. But even in the relatively comfortable period following, the Jews suffered from many disabilities, notably special taxation and restriction of residence. They, however, furnished the government with a succession of high officials, in particular the re-challenged grand vizier of the Janissaries. By such a title they had secured the grant of a constitution by Muhammad Bey, by which their liberties were secured. Tunis has since 1881 been a dependency of France. Its Jewish population at present numbers about 60,000.

In Algeria the conditions were identical with those in Tunis until the fall of the Almohads. Subsequent to that event the viceroyalty of the Jewish population was similar to that in the neighbouring State. Under the Turks in both regions the Jews, so long as they accepted with resignation the disabilities inherent in the Turkish system of government which were imposed upon them, found their condition one of relative comfort, much envied by most of their co-religionists settled in Christian lands. They were granted self-government under a sultan. This policy was continued after the fall of the Almohads, and the Jews were permitted to live and move in the Turkish dominions with perfect freedom. In occupation and dress they were without restrictions. They were even admitted into the army.

In Morocco the rule of the Almohads lasted until our own day and still exists nominally. In this, the westernmost of the lands of N. Africa, the history of the Jews until the severance of the country from dependence on Baghdad in 788, is the same as in the lands farther east. Idris, the conqueror of that year, was successful, by means of persuasion aided by force, in inducing the Jewish tribes of the west to join his standard, and with their assistance he was able to consolidate his power. In the same year the conqueror and the Jews, in consequence of which the latter suffered many indignities. For the following two centuries and a half their condition remained one of tolerate subjection. However, on the fall of the Almohads in 1146 brought upon them, they were, as elsewhere, all the rigours of persecution. The rule of the Almohads meant forced conversions to Islam and the expulsion of those who objected. Even the few Jews who were permitted to remain were subjected to heavy taxation and were compelled to wear a distinguishing badge. When the rule of the Almohads passed, their position improved somewhat, but always remained precarious. Mulai Arshid and his brother Mulai Ismail, who reigned at the end of the 17th cent., were especially severe, and the latter plundered the Jews without mercy. During the subsequent reign the Jews very often suffered cruel persecution, and on the other hand, there were periods of quietude. Whenever civil war broke out, as so frequently happened, the Jews in the disturbed region were saved from the fury of the sword, not by any special intercessions, but, on the other hand, there were periods of quietude. Whenever civil war broke out, as so frequently happened, the Jews in the disturbed region were saved from the fury of the sword, not by any special intercessions, but, on the other hand, there were periods of quietude. Whenever civil war broke out, as so frequently happened, the Jews in the disturbed region were saved from the fury of the sword, not by any special intercessions, but, on the other hand, there were periods of quietude. Whenever civil war broke out, as so frequently happened, the Jews in the disturbed region were saved from the fury of the sword, not by any special intercessions, but, on the other hand, there were periods of quietude.

The Sultanate at Constantinople was accustomed to absolute freedom to their Jewish subjects, and utilized with advantage all their services; they also, on occasions, intervened on behalf of foreign Jews who were suffering at the hands of other governments. Numerous instances of such action were the representations made at Venice on behalf of Donna Gracia Mandes which led to her release, and the protests sent to the pope against the treatment of Jewish prisoners in Ancona. The office of hakham bashi, or chief Rabbi, was instituted in the reign of Muhammad the Conqueror (1451-81). He was, and still is, the official representative of the Jews in civil affairs. The hakham bashi was a member of the State council. He had considerable powers over the Jews of the empire. He arranged their taxation, appointed Rabbis, and was, in fact, under the Sultan, the ruler of the Jews of Turkey. The first hakham bashi, Moses Cazzial, was appointed by the Sultan, and was subsequently appointed subject to the Sultan's approval. The Golden Age of the Jews of Turkey lasted for about two centuries. But, as in all despotic States, the conditions under which they dwelt were those of permanence. Their rights and privileges depended on the whim of the rulers, and, when a Sultan such as Murad iii. arose, they found even their lives in danger. It was by the party in power at the time that they were the object of a movement against the government. To the Jew, however, whether he was murdered or plun-
JEWS IN ZORASTRIANISM.

The account of the Jewish Exile and the fortunes of the Jews under the Achaemenian dynasty are too familiar to require recapitulation here; suffice it to say that the history of Montreal and Esther presents the proof that the Hebrew Ethnol. of the time was written in the Persian dominion, while such cities as Nekardea were centres of Jewish culture. The only convert of real note was the pious king of Adiabene, Izates (1 Macc. 10:1; Jos. Ant. xx. ii. 3), whose name (Avesta Yazata, Greek Yazat, or Yadra) suggests a Semitic etymology (cf. Armenian Amanzer, or Amanazar), is Iranian.

When the last Parthian monarch, Artabanus IV., fell in battle in A.D. 226, the Jews lamented his descent, but were consoled with the accession of the founder of the Sassanian dynasty, Artashata Paspakan, in whom, as in Josephus, and Parvak inscription on the Parthian stele, the truth of the prophecy of the Jewish exilarch (ch. 4:4–5), probably found a more Exilarch, and who became by her father the famous Bahram Gār (420–453). This queen established colonies of her compatriots in Parnor and Moribonos (cf. Armenian Maraγas), in Iberia.

When the Jewish exilarch (ch. 4:4–5), probably Bahram I., and who became by her father the famous Bahram Gār (420–453). This queen established colonies of her compatriots in Parnor and Moribonos (cf. Armenian Maraγas), in Iberia.

The eighth and ninth of these precepts mention the Jews, and may be based on Lv 4:25 and on distorted reminiscences of condemnation of human sacrifice, as in 2 Chr. 29:28,Ps 106:6, Is 57:5, Jer 19:29, Ezek 22:29.

There is a possibility that the Talmud is mentioned in the Talmud, if the reading Used in 19th century, the Tifereth Yisrael, p. 359, is 359 as is in 19th century.

The quotation is paraphrases rather than translations. Thus, De 24:16 is rendered: "The Lord, who is the sacred being himself, commanded Adam thus: "Eat of every tree which is in the garden."

1 On the lettering, see P. Iscch. 119; M. Sellhein. "Innu n. B. Nathan," JEW. vi. 4948.
2 JEW. vi. 4948.
3 JEW. vi. 4948.
5 A. Contrasted in this art. to Spy.
in this garden, except that tree of knowledge; because when you eat thereof you die" (in one passage xlii. 28-29, and "the serpent said unto the woman, 'Did God say that ye should not eat of every tree of the garden?'"). The serpent, therefore, seems to have had some idea of the nature of forbidden knowledge before his temptation. The garden is a place of knowledge as well as of innocence. Thus it is that the Garden of Eden is a place of trial. The Garden of Eden is a place of temptation. The Garden of Eden is a place of knowledge as well as of innocence. The Garden of Eden is a place of temptation as well as of innocence.

In Gn 2:9 there is a curious variant, "darkness was upon the face of the world," and in Gn 2:10, "and the light shone upon the face of the world." With this 'black water' we may perhaps compare the 'black water' (melek) which, in Mandan, means, according to the bottom of the abyss and forms the home of all evil (A. H. W. Brandt, Mandanische Religion, Leipzig, 1888, pp. 45, 60, 65-66). This is also termed WON C'NE, 'black water, water' being developed by metathesis from WICON.

Jinnwar, Dhimar, Jinnwar (Skr. dhīnvar, 'fisherman').—The term applied in the Banjhaë to the carrier, waterman, fisherman, and basket-maker castes of the E. districts and Kâshmir. The caste numbered, according to the Census of 1911, 575,694, of whom 61 per cent were Hindus and the remainder Muhammadans, with a small Sikh minority. It has a low place in the Hindu caste system, and, as with the Jinnwar, in Kâshmir, the Hindu or Muhammadan beliefs are only a slight veneer over Animism. Its members worship chiefly the deities or spirits connected with their occupation, and the divinities of the great rivers, Ganges, Jumna, and Indus; and they make use of the boats, nets, and other implements of their craft.

One remarkable rite is almost peculiar to them. In the Banjhaë the 8th day after the Revat or feast of lights, which is celebrated at the new moon of K防火 (Oct.-Nov.), the Hoi or Hoi festival is held, at which the Jinnwar, or female water-carriers, are given the first place, and is petted by the ladies of the family, who act as their firewomen. After the house has been purified by being smeared with cow-dung, figures of a litter and its bearers are drawn on the wall in four or five colours, and to it offerings, accompanied by the usual worship (pajul) with incense, lights, and flowers, are made, consisting of reds, white, and yellow, and many sorts of the roots of the banyan.

The legend tells that at the beginning of the KâlÄgya or present age, the Hoi, as a result of the Jinnwar's rites, was to be extinguished.

The story of the Jinnwar probably belongs to the pseudo-Jonathan ad loc., and Yalgut (Gen. 115), the vine which Jacob brought back from Damascus and which was consumed by the Jinnwar near the huts of the Jinnwar.

According to the story told in tyi xiv. 62-70, the Jinnwar, who were attached to the Targum of the Hebrew Bible (compare from Jinnwar to Jonathan), were given the first place, and were petted by the ladies of the family, who acted as their firewomen. After the house had been purified by being smeared with cow-dung, figures of a litter and its bearers were drawn on the wall in four or five colours, and to it offerings, accompanied by the usual worship (pajul) with incense, lights, and flowers, were made, consisting of reds, white, and yellow, and many sorts of the roots of the banyan. This tale tells that at the beginning of the KâlÄgya or present age, the Hoi, as a result of the Jinnwar's rites, was to be extinguished. This is a theory of the Jinnwar tribe, and in their minds and encouraged them to further efforts, as the result of which the goddess Phalak or Chánumâ, who appeared as the avenue of the sun, was already given the first place, and was petted by the ladies of the family, who acted as her firewomen. After the house had been purified by being smeared with cow-dung, figures of a litter and its bearers were drawn on the wall in four or five colours, and to it offerings, accompanied by the usual worship (pajul) with incense, lights, and flowers, were made, consisting of reds, white, and yellow, and many sorts of the roots of the banyan.
ditions of deliverance and is living his last existence. Since he has exhausted desire and illusion, which are the fuel of individual existence (Brahmanism), the soul takes the body from the ‘mundane’ (lesukka) plane, where thoughts and actions move, to a higher plane, ‘supramundane’ (lokottara), from which thought and action are, practically speaking, transferred from the coarse body, because the physical forces which sustain life are not yet dead, just as the potter’s wheel continues to turn by the force which has acquired; because the potter, who is the payment, has not been entirely paid for. But such acts, recent or ancient, which ought to be paid for in a new rebirth, are either suppressed and ‘skipped over’ or ‘transferred’ to this life. No new act can be imputed to the jivanmukta, for an act can be imputed to a person only when it is ‘redolent of desire.’

The origin of this definition of sanctity is to be found, on the one hand, in the speculations concerning the ascetic, aloof from all human interest and clothed with and fed on air, in whom, as it would appear, there is no longer anything human; on the other hand, in the doctrines relating to the identity of the atman and the brahman, and to nirvana.

All the Indian sects have adopted the idea of the jivanmukta, and they have all had to study the various complicated problems which it raises. Can the jivanmukta get free from the world? Is he unless, May he do whatever he pleases, since sin no longer exists for him? Is he incapable of suffering? Is he exempt from mundane thoughts? We have a great deal of literature relating to these problems, especially in Buddhism (jivanmukta-arhat). It is one of the characteristics of Hindu theologies that they have always had, with much loyalty, sagacity, and subtlety, to ‘organize’ mystical ideas which cannot easily be reconciled with morality and experience. Within the limits of this article we cannot even touch upon the problem that is here presented.

JANA-MARGA. — The term, jana-marga, ‘the path of knowledge’ (to salvation, moksa, mokul, or jana-karya, department of knowledge, covers what are known as the ‘systems of Indian philosophy.’ The term is opposed to karma-marga (q.v.), karma-karya, salvation by works. The literature of the Vedic period is characterized by a joy of life which forms a striking contrast to the pessimistic attitude that dominates Indian thought throughout the later periods. The Vedas themselves are chiefly concerned with the attainment of happiness in this world and its continuance in the next by means of sacrifices and other good works (karma-karya) pleasing to the gods. At an early period we find objections raised to the purely selfish character of this attitude; some of the earlier Upanisads reject works altogether as being utterly inadequate. If not useless, for the attainment of salvation, and because they aim at worldly happiness only. This opposition to Vedic ritual gradually disappears in the Upanisads, and ultimately the philosophy of ignorance of the Upanisads becomes the Vedanta, and the saving knowledge that they teach is called the Vedanta (end of the Veda).

1. Upanisads.—The general attitude of the Upanisads to works is that sacrifice and good works may procure happiness to a limited extent, but are on the whole a hindrance rather than a help in the attainment of real salvation, which is to be sought through knowledge alone. To have any merit, works must not be performed with a view to a particular reward; if performed in a proper spirit, they contribute to originate a desire for knowledge. In order that knowledge may arise, the effects of past evil works must be removed, and this may be effected by performing acts of piety not aiming at any immediate reward; when the mind has been purified in this way, there arises a desire for knowledge, and this desire is to an end. Works, however, although useless by themselves, are sometimes even said to be essential: ‘Only he who knows both knowledge and not-knowledge (works) can be saved, because by good works he overcomes death and by knowledge he obtains the immortal.’

At a very early period we find two new ideas, which were destined to influence profoundly all future Indian thought, making their appearance with striking suddenness—the dogmas of metempsychosis (Hindu) and of the influence of actions in a previous existence (karma). No satisfactory explanation has yet been given of the origin of these beliefs, on which the latter depends (see, further, art. METEMPSYCHOSIS; Hindu). The second idea is based on the belief that no good or evil deed can go unrewarded or unpunished; happiness in this life is the reward of good deeds in a previous existence, and the observer, even apparently unmerited, is readily explained as the result of evil deeds in a previous existence (see further, art. KARMA). What is true of the previous existence is also true of the cycle of existence.

The cycle of existence has no beginning, and similarly has no end; for in each existence there must be a certain balance of unredressed good or unexpiated evil to carry the individual on to a new existence. Every action unfailingly brings its own reward or punishment; the cause of action is desire, and desire is due to ignorance, which mistakes the real nature of things (cf. art. Desire; Buddhist); it is this ignorance that is the cause of the cycle of rebirths (cf. art. MIVA). The result of this doctrine is a firm conviction of the misery of mundane existence, which contrasts with the passionate love of life of the earliest period, and the belief that real happiness is to be obtained only by release from the samsara. This release is to be obtained only by destroying the ignorance which is the cause of the cycle of existence; the object of the various philosophies is to teach that knowledge which brings salvation from mundane existence to the happy few.

Vedic and allied knowledge, and indeed all existing knowledge, was early recognized as insufficient for the attainment of salvation. True, for example, the Vedas taught that, though he has studied the Vedas, the epics, grammar, etc., and is learned in the scriptures, yet he is not learned in the atman; and believing to be taught the atman which overcomes sorrow, and to be led to the shore that lies beyond sorrow. Similarly, Svetakota, having completed his education under his father Arhat, and failing to answer questions put to him,Dubbed his father for declaring his education perfect. More learning and book-knowledge then are not sufficient. ‘The atman is not attained by learning... and much knowledge of books.’

True knowledge in the Upanisads is a knowledge of brahman or the atman (q.v.). This knowledge was recognized as being different in its nature from what is commonly understood by the term ‘knowledge’; for it is possible to know all branches of human knowledge and yet lack the philosophy of ignorance of the Upanisads, and the saving knowledge of the atman; this state of ignorance of true knowledge is called avidya (not-knowledge); this term gradually lost the meaning of simple ignorance, and came to be applied to the false knowledge which impedes a knowledge of brahman, by preventing us from seeing things as they really are, and is based on illusion (maya) due to the limitations of the human intellect.
Ignorance, then, is the knowledge derived from the experience of the senses, while true knowledge is of Brahman or the atman.

There are two fundamental ideas in the Upanisads—Brahman and the atman, which came to be used synonymously. Brahman is the first principle of the universe. Not the Eternal One, the all-pervading power; atman is first the vital principle, the Self, then the All-soul, the One, and thus comes to be identical with brahman. Saving knowledge of the unity of Brahma and the atman is the object of the atman. The doctrine of the identity of brahman and the atman is summed up in such phrases as 

Brahmānu nauc (from whom Brahma, Brahma, the self being Brahma) 

The veil of ignorance, through which we see a plurality of objects when in reality brahman alone exists, is lifted when the underlying brahman of the object is recognized in the atman of the knower. Mundane objects are no realities, and are of no value for their own sake, but exist only through the atman, which alone exists and is the entire universe. Yajñavalkya compares the phenomena of the world to the notes of a flute or conch shell: the notes cannot be seen. It is not the instrument, but the player who is seized; only when the atman is known is all else known. He who has comprehended the atman knows the whole universe. When it is recognized that there is only one being, the Self or atman, eternal and unchanging, the illusions resulting from the limitations of the intellect disappear, and release is obtained from this world of ignorance.

2. VEDANTA.—The Brahmic speculations of the Upanisads are developed in the philosophical system usually called Vedanta, properly the Uttara-mimamsa, or 'Second inquiry' (concerning brahman; it is also called brahma-mimamsa); the founder of the system, Badarayana, flourished about the beginning of the Christian era, and his great expounder Sankara eight centuries later. The fundamental notion in the system, which is still the most influential in India, is the identity of the atman, or self, with the brahman. Brahman is the One, the Unique, the Self-existent, everlasting and unchanging, and cannot therefore be subject to any illusion. The self of each individual must therefore be identical with the self of brahman, instead of being a part of it; the self in each individual is therefore the whole un divided brahman. Nothing exists but brahman (adwitiya-vidyā, doctrine of non-duality). The apparent objections to this, which arise out of mundane experience, are due to ignorance, which prevents the self from recognizing that all else is illusion; the phenomena of the senses and the material universe are illusions, just as the idea of separate souls is. The Vedanta does not inquire into the origin of this ignorance, whether due to desire, etc., or not, but teaches that it may be destroyed by the saving knowledge that all that is not soul is illusion, and that the soul is brahman.

When this truth is known, the fetters that bind the soul to the cycle of existence are broken, and release is obtained (see, further, art. VEDANTA). We may here mention the Visistadvaita (modified monism) school of the Vedanta founded by Badarayana, one of the most important commentators on the Brahma-sutras, who flourished in the 12th or 13th cent. A.D. and belonged to the Bhagavata sect. He expounds the Vedanta system according to the tenets of this monistic sect in a way which differs in important respects from that given; according to the Visistadvaitas, the individual souls are not identical with brahman or God, but are elements of him and not separate from him; the individual souls are subject to the miseries of mundane existence, not entirely by ignorance, but by unbelief. The true means of salvation is therefore found, not in some means of self-knowledge, but in devout love of God (bhakti) and belief.

3. SAIVA.—The Saiva school, which has been called the oldest real system of Indian philosophy, is as much impressed by the infinite variety of the universe as the Vedanta. The system, the traditional founder of which was Kapila, is essentially dualistic; two principles are admitted whose interworkings produce the universe—prasaktyam (matter) and purusa (soul or spirit); the latter is not one all-pervading spirit like the brahman of the Vedanta, but rather an infinite number of individual spirits each independent, and thus the variety of the universe is explained. These two are entirely distinct, and have existed side by side from all eternity. Mental processes are mechanical actions of physical organs, i.e. of praktyam; purusa, however, would remain unconscious if it were not acted upon by praktyam; purusa, or soul, has no volition of its own, but the subtle body (sukshma sharira), the inner organs and senses which surround it has. Through this body the soul becomes waylaid, and thus has to suffer the miseries of mundane existence. The aim of the Saiva is to teach that purusa is absolutely distinct from praktyam in the most subtle organs. A knowledge that these two are absolutely distinct, and have been so from the beginning, delivers the soul from the cycle of existence; it then realizes that the knowledge of itself and matter, on which the miseries of the whole depend, is only an apparent one, and, when this is realized, the sufferings of praktyam are no longer the sufferings of purusa, while the sufferings of the formers are no longer experienced, since they are no longer illuminated by purusa (see, further, art. SAIVA).

The philosophical basis of Buddhism is considerably influenced by the Saiva school (for a further view see above, p. 213). It assumes that mundane existence is nothing but suffering, and that the cause of this suffering is the desire to enjoy the apparent delights of the world. The cure of this attachment is ignorance; this ignorance and all that follows it will be dissipated when attachment to the world is renounced.

4. YOGA.—The Yoga system, founded by Patanjali, who, if not identical with the celebrated grammarian of that name, likewise flourished in the 2nd cent. B.C., is closely connected with the Saiva. The philosophical basis of the Yoga is that of the Saiva with the addition of the notions of a personal God (deva) and of the occult powers to be derived from Yoga practices. Its characteristic feature is the influence laid on asceticism and mental concentration (yoga = concentration, concentration, union).

Asceticism and contemplation have always been practised in India as means of acquiring merit. Patanjali developed a formal system the methodical practice of which, in addition to giving occult powers, is regarded by him as one of the surest ways of gaining saving knowledge. The aim of Yoga was at first, that of the Saiva, namely, the separation (kayagamana) of soul and matter; but, with the addition of the concept of the Divine (deva) or Universal Soul, the ultimate aim comes to be union of the individual soul with God. The mind is to be deliberately and artificially withdrawn from the external world and concentrated upon itself; it is then enabled to return effortlessly to the external world, and to realize one the material fetters that bind it to the saumadiva.
and to awaken to a knowledge of truth, and the individual gains freedom and absorption in the World-Soul (see, further, art. YOGA).

5. Minor systems. — Of the minor systems that teach the way of escape from the samsara the most important is the Vaiśeṣika founded by Kaṇāda. The name (Vaiśeṣika = 'atom-eater') at quite an early date. Deliverance, according to Kaṇāda, is to be obtained only by a knowledge of the real nature of soul and the universe. Deliverance depends upon this knowledge of the "six categories" (padārtha), under which everything that exists can be classified; these are substance, quality, action, generality, individuality, and inherence or inseparability. These are narrowly defined and subdivided; it is from the fifth that the system takes its name (vaiśēga = atomic individuality); all substances (defined in the first category as earth, water, light, air, ether, time, space, soul (jīva)) consist of invisible atoms, from the combination of which all mental and physical phenomena arise. Freedom is obtained when the Vaiśeṣika doctrines have been comprehended (see, further, art. VAIŚEṢIKA).

The Nyāya system of Gantama is usually coupled with the Vaiśeṣika, from which it is developed. It is really the logical form of the Nyāya of means of knowledge. Truth is to be attained by the application of sixteen categories, or logical notions, and salvation depends on a correct knowledge of their nature. It is the only case in which the human soul has the role of ascertaining truth (see, further, art. NYĀYA).

The aim of the Īravatī-ṃūrti ("first inquiry"), which is usually coupled with the Vedānta, is, like the Nyāya, to ascertain the ultimate origin of liberation from the world, but, as the other name (Karma-ṃūrti) of the system shows, it is not its aim it is to discern the observance of orthodox rites and ceremonies, and not saving knowledge. It is particularly concerned with the study and interpretation of the Vedas (see, further, art. MIMĀṂSĀ).

Indra"

The Jaina. — P. D. Beissner, "Allgemeine Geschichte der Philosophie,

Joachites. — As a sect in the Christian Church the Joachites exercised an remarkable influence in the 13th cent. and, as we shall see, some of their tenets passed over into the motivod doctrines of the Reformation. The sect derived their name from Joachim of Floris, who seems to have been born about 1145 and to have died in 1202. He was, therefore, an older contemporary of Francis of Assisi (1189–1220), with whom followers the Joachinites were in vigorous sympathy. It is difficult to disentangle the personality or the work of Joachim from the mass of tradition which has gathered about his name, and it is equally difficult to discover what Joachim himself actually taught. He was certainly a creative personality, and works have been attributed to him which are really the fruit of the thought of later times. His teaching about the trinity of the Father, the Son and the Holy Spirit, which is in a way open to the year 1260. Of art. AGES OF THE WORLD (Christian), vol. i. p. 191.

3. His influence. — The Joachite views thus expressed by Joachim were eagerly caught up and developed by his followers, and the fullest expression of them is to be found in the comments on Isaiah and Jeremiah, which go under Joachin as a title. The stricter Franciscans also found them peculiarly congenial, and the idea of a spiritual Christianity and an imminent Age of the Spirit was at once
assimilated by them. Their criticism of the
secularized Roman Church had been exceptionally
vigorous. To them the Church of Rome was the
good and its greed of god,
should be, and in their methods for securing
be unfaithful to its true mission,
the saving of the world for Christ. The Church
could have trusted in the strength of God, not
in the sword. In the Age of the Reformation
it had been unfaithful in common
with the strict Franciscans, the Joachimites
looked forward to a purified Church and a spiritual
Christianity. In such a Church the monks would
remain as the organ of the National Gospel.
Outward authority must disappear in the Age of the
Spirit. The later Joachimite teaching was
peculiarly stringent in its anti-Romatism. One
of the fruits of this school of thought was the
famous Liber Introductories in Evangelium exter-
nunm, written probably in 1254 by the Franciscan,
Gerardus of Borgo San Domenico. In its teaching
the Introductories drew largely from the writings
of Joachim, whom it regarded as an inspired
prophet. The book was condemned by Alexander
iv. in 1255; but the apocalyptic ideas which it
bolstered up were accepted by the Franciscans and
the followers of Joachim. From the chronicle
of Salimbene of Parma, who belonged to a generation
after Joachim, we can gather how influential and
central was the place of Joachim in the
influence of the Franciscans and
in the teaching of the Joachimites. We can see how
the Joachimites were agitated by such questions as
the controversy between the papacy and the monarchy,
and the approaching last time.

Though much of the teaching of Joachim and his
followers was highly visionary and artificial, it
is apparent that there was behind it a genuine
religious experience. They made their protest against
the secularization of the Church and formed their
vision of the future out of the fullness of this
experience. So far as their distinctive teaching was
concerned, parts of it had been already before the
Church's mind. The doctrine of the Thirty
Years' War had been anticipated by Montanism, while
the teaching of the Eternal Gospel may be found in
Origen. But the religious experience of Joachim
and his followers was a real contribution to the
thought of the 16th century. Nor was it teaching
which passed away. In one form or another the
ideals of the Joachimites passed over into the
thought of the Reformation, influencing more especially
the later versions of Wycliffe and Huss.

and 856; — Church History of Gieseler, Edinburgh, 1846-59
JOSEPHAT, BARTLAAM AND. — The history of
Joasaph, Bartlam, and Josaphat, which has become known
through numerous translations in the West, is
derived from the Buddhist collection of stories known as the
Jātaka, the 'Birth-Stories,' records of the
and the Buddhist
in the course of his
upon events. 1 Of the stories
these themselves the date and origin are various.
None, however, has attained so great popularity
or passed through so many transformations and
variations as that of Bartlam and Josephat.
All are of the nature of folk-lore, parable, or fable,
derived from Indian sources or collections of tales,
which in the first instance were for the most part
non-Buddhist, but were adapted to the purposes of
Buddhist propaganda and made to serve ethical
and didactic ends. Gautama himself, in these tales,
them all the protagonist, and expounds or
illuminates the moral which the story is intended to
enforce. In the regions of the West, however, in
which not a few of these narratives have found
a home and become popular, the Buddhist element
thus introduced is again excluded and is replaced
by Christian terminology and teaching. Interpretation
and adaptation have frequently so changed the
'story' of the story and the definite
point of the moral that it is only historically and
by tracing the course of development that its
Indian origin can be recognized.

Of the original form of the story, as it was
compiled in India or adapted from more ancient
existing materials, nothing is directly known.
Incidents or parables contained in it have been traced
in the Buddhist Agadās, the Mahabharata,
and elsewhere. From the Buddhist original, which,
it may be assumed, was composed in Magadhi, or
in an early form of some Prakrit dialect, a Pahlavi
rendering was made in or about the time of the
reign of Chosroes the Great of Persia (A.D. 531-
579). This version also is no longer extant.
There is, however, a curious and certainly not
accidental resemblance between the life and history
of this king and the character of Abnerus, the
Indian ruler and the father of Josephat, as
presented in the Buddhist story. To this Pahlavi
rendering, which would seem to have been already
deprecated of its distinctive Buddhist
learning, all the numerous versions of the West
owe their origin. The earliest Greek translation
is derived from a Syriac version of the Pahlavi,
and is attributed to the beginning of the 9th
century, partly on the ground that in an enumeration
of the great religions of the world no reference is
made to Mummudanianism. The Greek text is
printed among the works of John of Damascus,
who it was ascribed by a mistaken identification
with a 'John, Monk' of the Convent of St.
Saba, to whom the work was assigned in the
color of early Greek MSS. There are also three
early Arabic versions, the original of which bore
the title of Kitab Balahevan or Badaq; and a
medieval Jewish translation into Hebrew, attributed
to Abraham ibn Chisdai in the 13th
century. From these Oriental renderings, of the
later versions, numbering more than sixty, are
ultimately descended. The first Latin translation
was made from the Greek by Anastasius, the
papal librarian in the latter part of the 9th
century, and became the parent of most of the modern
European versions, including the English. The
Greek was again independently translated into
Latin a few centuries later by J. Billius, Abbot
of St. Michel in Brittany, and both renderings
are printed among the works of John of Damascus.
The earliest English version was produced by W.
Caxton in A.D. 1483. There are also extant four
later versions or paraphrases, none of which are
in verse. The verse renderings have been
reprinted more than once, but the prose
version is rare.

Buddhist's Former Births, lr. from the Fall by various hands,
vols., Cambridge, 1896-1907; and the.
Essentially the legend is as follows. Variations in detail, however, are numerous in the different versions.

Antecedently to the reign of a powerful Indian ruler named Abner, Christian teaching had found its way to the East; and many converts had been made within his dominions. The king, himself, however, was strongly opposed to the foreign religion, and issued an edict against it. Among others an inhabitant of the city of Jerusalem went to Abner and informed him that if he persisted in this opposition he would be excommunicated by the Holy Church if he could be persuaded to return. The king was prevailed upon to yield, but he had lost the confidence of his people, and the sense of his religion, and the renouncing the world, adopted the life of an anchorite in the desert. Being bezir, delivered a brief and fulsome apology, by which Abner was further incensed against the Christian, and he fled to the north and formed a monastery in anger, forbidding him ever to return to his presence.

The king, however, had been childless, of fawning form and beauty, to whom is given the name of Josaphat (in the Greek Ισαβαάλ). At a birthday feast he met a scholar who presented to his form the prophecy of his future greatness and wisdom. In some forms of the story the hero, who bears a high rank for wisdom and purity of life, comes to the court and in successive interviews with the prince convinces him of the truth, whereupon the latter expresses his desire that Josaphat become his disciple. The anchorite's name is Barlaam. To convey his teaching he employs a simile or a parable which set forth the true doctrine and illustrate the vanity and fruitlessness of worldly things. In the number and arrangement of these parables the versions again present considerable variations. The king is naturally moved to grief and wrath on hearing of his son's conversion, and endeavors to change his argument to change his purposes.

He also issues orders for the arrest of Barlaam. The hermit, however, has left the city, and the attempt fails. Arrangement soon takes place for the holding of a public discussion before the prince, in which a stranger, Nacher, is to play the part of the apostate, to present the Christian argument, and to be defeated in it. Thus it is hoped to discredit the faith in the eyes of Josaphat, and to induce him to return to the faith of his fathers. In a secret interview with Nacher, however, the prince threatens him with death if he does not visitiate the truth. He urges his case therefore with eloquence and success, and offers before the king a powerful and convincing apology for the faith, by which his arguments and pleas are lost in the wilderness. A further attempt is made to lead the King to confess the vanity of worldly and spiritual possessions, in which the agency of Theodas, a magician, is employed. This also meets with no success; and Theodas himself is converted by means of a parable of a ship and its passengers and friend, given himself over to the life of an anchorite in the wilderness.

Some forms of the legend are in their details more strikingly reminiscent of the life history of Gautama and in the above, which in substance represents the Greek. Thus in an Arabic version the Bo-tree appears, with miraculous fruit. Josaphat flees on horseback from the city by night in company with his vizier, whom he sends back, together with his horse and all his possessions, when he arrives in the wilderness. After his conversion he is carried up into heaven, and on his return devotes himself with much success to preaching. He dies, as in the Buddhist record, reclining with his head to the west, and with a final blessing on his disciple Ananda.

The distinctively Christian features of the narrative are interpolations introduced to further the story, when the text was utilized for Christian edification and adapted to the purposes of Christian apologetic. The older Oriental version, as the Arabic above, more evidently betray their Indian and Buddhist origin. Both Barlaam and Josaphat have a formal place on the roll of Christian saints, and special days on the church calendar are set apart to their memory. In the Macedonian Church the Greek Church, August 26 is the commemoration of St. Josaphat, and, in the sister Church of Rossolar Christiania, August 27 is dedicated to the joint service of the two saints. The Church is said to be relics of St. Josaphat, in the form of a bone and part of the spine, preserved in a church at Antiparos. A monastery in Thessaly bears the name of St. Barlaam; and elsewhere also churches have been consecrated in their honour.

Not the least remarkable of the many strange features of the story is that the names of the two principal characters are both ultimately derived from one and the same source, and denote the Buddha, the founder of the Buddhist faith. The characters, therefore, are really doublets of a common original. The Greek Ἰσαβαάλ is a transformed and corrupt form of the title Ἰδασίκη, which through the Pahlavi has found its way into Arabic as Dádšáh, and then by a confusion of g and ţ, and by the dialectical point, became Yudhásat or Yudhás, and finally Yoszaf. Rasavara, the original form of the name which through the Syriac has become Barlaam, is the well-known title of the Buddha, Ḥaŋgaacən, 'the Lord', the patronymics of letters g and ţ being similar and easily confused in the Pahlavi alphabet. Thus the great Indian religious teacher reappears in a double form in the West as a venerated Christian saint. Other names also in the story seem to be derived from the Indian texts. Thus Zardan, the nobleman entrusted with the guardianship of the young prince, has been identified with Chandana, Gautama's charioteer and the companion of his flight from his father's palace.

The Latin version of Barlaam and Josaphat was printed as early as 1530 at Basel; but the Greek text not until three centuries later, at Paris in the year 1832. In the latter the story is described as 'a profitable story brought ... from the further part of Ethiopia, called India, by John the Monk ... or the Monastery of St. Sabas or Sabas.' John the Monk is believed to be identical with a well-known John, a member of an early fraternity on Mt. Sinai, who lived about two centuries before John of Damascus (A.D. 750). It was not, however, connected with the account in the monastery of St. Catherines, of the Syriac text of the Apology of Aristides, which it became evident that the defence of the faith offered by Nacher in the story was not original, but borrowed from the Christian author. According to Eusebius (HE iv. 3), Aristides addressed his Apology to the Emperor Hadrian (A.D. 117-138), but in the judgment of Rendel Harris the work belongs more probably to the early years of his successor Antoninus Pius (138-161). It was long believed to have been lost. With the publication of the Greek text its practical identity with the Greek form part of the story of Barlaam and Josaphat was at once recognized. In its Syriac form the text of the Apology is expanded by a number of characteristic repetitions which add considerably to its length. The Greek is supposed to represent more faithfully the original. In the early Christian centuries the Apology of Aristides enjoyed much popularity, and was regarded as an effective and complete defence of the faith, which was adopted accordingly by the Greek translator of the 1

JOSEPHUS.—The correct forms of the name of Josephus (or, according to his adopted Roman name, Flavius Josephus), the Jewish historian, were Jo-sé-phus, Josephus, or Josephus. The forms Iosepbe, Joseph, Josephus, Josephus, or Josephus. The forms

1. The Hebrew text is remarkable for the number of parables that it records. It will be found printed in all complete editions of the works.
2. That of the Sonne follows so closely the lines of the narrative in the Synoptic Gospels that its source can hardly be in doubt. It is found, moreover, in the earliest versions, Arabic and Hebrew, as well as in the Greek, in the version known as the Rabbinical or the Palestinian, and in the Christian Gospels. The likeness between the two is not striking. Perhaps it justifies the suggestion that the Christian form of the parable has replaced a Buddhist original of similar import.

Stories similar to that of the three caskets in Shakespeare's Merchant of Venice are distributed more widely. They are found in the Talmud as well as in Buddhist sources, and in medieval Europe seem to have been well known and popular. In the legend of Barlaam and Josaphat the king sets before his attendants four caskets, two of which are overlaid with gold and precious stones, and two covered with rough clay. The gold-encrusted caskets, however, contain only dry bones, the others are filled with pearls and jewels. The caskets are opened before the king, and required to estimate the value of the various caskets. Their judgment is, of course, at fault; and the king forces the moral that a fair outside view can conceal an evil heart, while the clay-covered vessels he likes are vastly more important in reality, but within full of noble and elevating thoughts. Whether the English poet was familiar with the legend of Barlaam and Josaphat it is impossible to determine; but the ultimate source of the story which he has adopted and immortalized is Buddhist and Indian. That it was contained in the original form of the Indian legend is proved by the fact that it finds a place in the earliest versions.

LITERATURE.—J. Jacobs, Barlaam and Josaphat, English Lives of Buddha, London, 1880 (the most complete discussion of the legend and its historical relations, where also numerous references will be found to earlier works); Max Müller, Migration of Peoples, in United States and Europe, 1881; K. S. Macmillan, Story of Barlaam and Josaphat, Calcutta, 1880; and The Great Unknown, London, 1886. See also The Romance of the World in the Bible of the Middle Ages, comps. and edd. by V. L. Hemming, 1881. The life of the Buddha is described in the K. S. Macmillan, Story of Barlaam and Josaphat, Calcutta, 1880; and The Great Unknown, London, 1886. See also The Romance of the World in the Bible of the Middle Ages, comps. and edd. by V. L. Hemming, 1881. The life of the Buddha is described in the

---

1. In this article the works of Josephus will be cited under the following abbreviations: BJ = Bellum Judææum, AJ = Antiquitates Judæææum, V. — Vita, CA = a letter, and the accompanying numbers refer to the paragraphs of the present writers edition.
authority, and to thwart the designs of his enemy, mainly because of the loyal support accorded him by the people of Galilee.

The men of the charge preferred against Josephus. In Galilee, John denounced him as a traitor to the national cause (BJ ii. 364), while in Jerusalem the same accusers contended that he had betrayed the Temple to the Tyrians, and that he had been dismissed from office before he became too powerful, and that there was a danger of his coming to Armenia and setting up a despotic government (BJ ii. 366, VI. 340)—an entirely different accusation, and one which practically means nothing, since Josephus is far from impartial in his narrative. It is highly probable that other and more serious grievances were also launched against him. It seems clear that he was not very enterprising or successful general, and showed obtuseness in many things. He was especially at fault in allowing Sophronia, one of his commanding generals, to fall into the hands of the enemy (BJ ii. 374, 669), and probably in other ways laid himself open to criticism. Whatever the truth may have been in these matters, it is clear that the dissensions with John of Gischala and others were anything but favourable to the preparations and defences being made by the Galileans in view of the imminent attack of the Romans.

In the spring of A.D. 67, immediately after Sophronia had been occupied and the surrounding country devastated by an advance guard of the Roman army under Phæceus, Vespasian, the legate of Nero, pressed forwards from Ptolemais with a large force. Josephus fell back upon Tiberias, and from there sent couriers to Jerusalem, and did not think it either that effective reinforcements should be granted him or that peace should be concluded. He seems to have felt that his position in Tiberias was precarious. Vespasian's advance against Jotapata, he marched thither, and gained admission before the investment was complete (9th June, A.D. 67). But he had little hope, as we learn from Flavius Josephus, of standing there and accordingly made up his mind to escape from the besieged town together with some of his more eminent colleagues. The inhabitants, however, furnished him with the privilege of seeking mercy, and after some consideration, he consented.

His companions, however, would not bear of submitting to Rome, and gave Josephus the choice of conforming to their plans or of dying at their hands; but at his suggestion they determined to kill one another in a certain order determined by lot, and the cast of fortune left as the last survivors Josephus and another. They had little difficulty in persuading him to join him in accepting the Roman clemency. We may venture to assert that the transaction cannot have been quite as he describes it, for among those whom he claims to have outwitted were persons by no means so simple as his narrative implies (BJ iii. 342).

After this act of submission, Josephus was brought before Vespasian, who had him put in irons, with a view to his being sent to Nero at Rome. The prisoner now asked for a special interview with the commander, at which he announced to Vespasian that the imperial throne would shortly be his, since he was at hand. He intended to deprecate such language, but, having learned that Josephus had previously shown himself something of a prophet, he took a different attitude. The captive still remained, however, with the same spirit; and all at once he was well treated, and all events nothing more was said about his being sent to Rome.

Suetonius has a statement not unlike this, though differing in details. He speaks of the capture first as not intended, when put in chains, that Vespasian would soon liberate him again, but as the Emperor (Satius Flavius i. 5; Dio Cass. livi. i). The prediction of Josephus must, therefore, have been known to other historians of the period. In point of fact, premonitions and prophetic dreams were then at that time highly credited and seriously regarded among all classes, and it is likely that Josephus in his precarious situation should have ventured to make such a prediction—hazards though it was. He wants his prophetic gift, and seems to have believed that God had specially favoured him and revealed the future to him (BJ iii. 316, 605 f.; VI. 306). In any case, the special favours shown to him by Vespasian seems to prove that the Emperor felt in some sense indebted to Josephus.

Vespasian was proclaimed Emperor in Alexandria on the 1st, then at Caesarea on the 3rd, of July, A.D. 69, and Josephus was at once set free (BJ iv. 623 f.). He accompanied the Emperor to Egypt, and in the spring of A.D. 70 joined him in his march towards Jerusalem. He was present during the whole siege, acting at the headquarters of Titus as interpreter and commissioner, knowing both the language and the art of war, and thus taking service with the Romans against his own countrymen (CA i. 48 f.). More than once, as he tells us, he unsuccessfully advised his people to abandon their futile resistance (BJ iv. 114, 201, 391 f., VI. 94 f., 118 f., 305); on one occasion, indeed, a stone was hurled at him and he was severely injured (BJ iv. 541), for the insurgents regarded him as a renegade and a traitor (BJ iii. 438). When the city fell, he was able to save his two brothers, including his own brother, and to rescue some sacred writings (VI. 417 f.), and he then accompanied Titus to Rome and took part in the Jewish Triumph. Thereafter he settled in the capital. Vespasian allowed him to occupy his own previous dwelling, and granted him a pension and the right of citizenship. He now took the name Flavius Josephus. This gracious treatment was continued by Titus, as also by Domitian and the Empress Domitia. Josephus likewise enjoyed the friendship of Agrippa II. and his household (BJ vii. 364), and it is probable that he kept in touch with eminent Jews in Alexandria and other places, as well as with the Adiabenean chiefs who lived in Rome (BJ vi. 356, vii. 447).

His wealth must have been considerable, as well as the orders he had received from Nero or at Rome concerning the bestowal of lands near Jerusalem, that had been taken by Titus in order to better suit some of his companions and Vespasian supplemented his income by the gift of another estate in Judaea, which, again, was exempt from taxes by Domitian. He was several times married; his first wife had remained in Jerusalem, and was also the mother of his son, who had married a lady of rank (BJ iv. 419). Josephus's second wife gave him a girl-appearing, who, however, deserted him in Egypt; thereupon he married a third wife at Alexandria, and by her he had three children, one of whom, a son named Hyrcanus, was still living in A.D. 94. Josephus had this child committed to the care of a certain girl of good family belonging to Cretics, who bore him two children, Atticus and Simonides (BJ iv. 414 f., 490 f.). The health of the streets Agrippa, is believed by K. Zaringimeler to be the M. Flavius Agrippa mentioned in an inscription found in Cesarea (EDP III. 380/923).

The outward circumstances of Josephus were thus fairly propitious. True, his good fortune was not altogether unbroken. He was hated, and more than once legally indicted, by his countrymen, notably by a certain Jonathan, who had raised some disturbance in Cyrene, and who, having been brought to Rome, denounced Josephus and other leading Jews as the instigators and abettors of the rebellion. Similar things occurred under Titus and Domitian (BJ vii. 448 f.; VI. 423 f., 429). But Josephus had always been able to clear himself, and retained the favour of the three Flavian Emperors to the last. Among his patrons was also the Emperor's freedman, Epaphroditus, to whom he dedicated his later writings.

The identity of this Epaphroditus is a disputed point. Some scholars, among whom is E. Schürer, identify him with the Epaphroditus of the Acts (Acts xx. 4)—an opinion with which the present writer cannot agree. Josephus endorses his friends as those who administered affairs of the utmost importance, and with whom he was on terms of the closest intimacy. It is true that our evidence is fragmentary, and that several names are mentioned in connexion with him, but the chief are: (1) the Epaphroditus whom Josephus names as his friend, and to whom he dedicated his works. (2) A. E. R. E. (Add. I. 8)—statements which apply, not to the grammarian and scholar, but rather to the freedman, who had previously been
We cannot say when Josephus died. For us his life comes to an end with his writings, and these do not carry beyond the end of his reign. What then follows, if we care, with H. Dodwell (Disquisitiones in Ieronomum, Oxford, 1689, p. 468), that he did not survive Domitian, and that he was involved in the fall of his patron Epaphroditus, or fell a victim to the suspicion manifested before the Emperor in his last days.

2. Works.—We have seen that Josephus spent the latter part of his life, from A.D. 71, in Rome, and that he was there that part of it which formed part of his literary career. His object was to give the Greeks—a term which, probably, also covers the educated classes among the Romans—a more thorough knowledge of his own people, and especially of their history and their religion. He accordingly wrote in Greek, which he had doubtless learned while in his native country, and, as he tells us himself (Cai. 1, 228), he guarded against defects in style by consulting writers of experience. It is certain that he also had some knowledge of Latin, and in one passage he quotes Livy (A.C. liv. 68; cf. xix. 257).

His first work was the History of the Jewish War (Ἰσραήλ ὁ Ἰουδαίως ἀληθεύως, de Bello Judeico)—to give the title which he himself chose, though the MSS show a preference for Ἰσραήλ Ἰουδαίως (de Israele Judaeo), which only is found in Christian literature, and is, indeed, used by Origen (Selecta in Theronem, iv. 14 [PG xii. 660]). In this work Josephus tells the story of the Jewish insurrection in which he himself took part, first on the national, then on the imperial, side. The book was written after the dedication of the temple of Pax (A.D. 75), and a little before the death of Vespasian (A.D. 79) (BJ vii. 158 sq.; Vit. 301; Ed. xiv. 60). As Josephus says in his preface, however, he was not the first to write a history of the war.

As account of it had been given immediately after its termination. Its compilation, however, was different from the earlier narratives was composed by a certain Antonius Julianus, who likewise took part on the imperial side, and was one of the procurators of Judea (Maine, Felix, Gesneriis, xxxiv. 4; BJ vi. 232). Josephus himself had previously written an Aramaic account (now lost) of the war, in which he wrote of his own people in the Past, and it was only after the completion of this that he resolved to make his own narrative a companion to the history of the Greeks (Cai. 1. 12). No part of this Aramaic record has come down to us, and we are, therefore, not in a position to fix its relation to the extent Greek narrative. The latter was probably a complete, exact, recast, constructed on a more comprehensive plan. A Syrian version of it, the Basor, is preserved in the Peshitta, the Syriac OT (ed. A. M. Ceriani, Milan, 1876-80). This is, however, as some have supposed, a survival of the original Aramaic work, but rather a translation from our present Greek text, as is clearly proved by its erroneous renderings (F.A. 1, 228; ed. Strauss, p. xxii).

In his preface to the B.J., Josephus proposes, by means of a true and straightforward chronicle, to bring his readers to a better understanding of the Jewish people and of the insurrection.

He proceeds to give a brief sketch of the world, and of the Jewish people, and of the insurrection.

In the first place, the details he lays down the period between that event and the outbreak of the revolt against Rome (A.D. 66). Then comes the revolt itself; first, the beginning of the campaign of Vespasian in A.D. 67-69 (iii. and iv.); the investment and capture of Jerusalem in A.D. 70; the fall of the city down to the taking of Masada (A.D. 73); and the Jewish disturbances in Egypt and Cyrene. He then turns naturally to a description of the Jewish nation's sufferings, the various things that happened to them while the war was in progress, and concludes with a description of the services of the Romans and their victories over the Jews. Finally, he concludes his account with an account of the final destruction of Jerusalem and the end of the revolt (A.D. 73). His account of the siege of Jerusalem is particularly interesting, and he devotes a great deal of space to it. He mentions the capture of the city by Titus, and the destruction of the Temple. He describes the sack of Jerusalem, and the burning of the Temple, and the capture of the city. He also describes the death of the Roman general, and the capture of the city by the Romans. He describes the destruction of the city, and the capture of the Temple. He describes the sack of Jerusalem, and the burning of the Temple, and the capture of the city. He also describes the death of the Roman general, and the capture of the city by the Romans. He describes the destruction of the city, and the capture of the Temple. He describes the sack of Jerusalem, and the burning of the Temple, and the capture of the city. He also describes the death of the Roman general, and the capture of the city by the Romans. He describes the destruction of the city, and the capture of the Temple.

Josephus likewise knows how to mingle self-approbation with his laudations of the Emperor and his family. In particular, he seeks to place his own martial performances in the best light.

He gives a full description of the way in which he so cleverly brought to naught the schemes of his opponents in Galilee (ii. 599 ff., 623 ff., and of the various measures that were taken to suppress the rebellion of the Jews in the Galilean revolt (ii. 524 ff.). He describes the capture of the city, and the destruction of the Temple. He describes the sack of Jerusalem, and the burning of the Temple, and the capture of the city. He also describes the death of the Roman general, and the capture of the city by the Romans. He describes the destruction of the city, and the capture of the Temple. He describes the sack of Jerusalem, and the burning of the Temple, and the capture of the city. He also describes the death of the Roman general, and the capture of the city by the Romans. He describes the destruction of the city, and the capture of the Temple.

Further, the history is steeped in rhetoric, in accord-
and occasionally amazing, exploits of war, performed by individuals, both Romans and Jews; he tells of remarkable natural phenomena, such as the river Bosphorus (ii. 189), the Sabine river (iii. 261), that flows only every seventh day (vii. 90), and the rock Mount (ii. 192) and, finally, he specifies the various omens which heralded various events (vii. 256). Considerable space is devoted to description—e.g., of the land of Judea, the Dead Sea, the city of Jerusalem, the Temple (vii. 25, 226 f., vi. 156 f.). It is evident that he has not to practice ingenuity in selecting and expressing his thoughts. His expression is clear, concise and accurate, and he is often the only one who tells the truth. His sympathy with his饱学的 comrades is evident in the description, for instance, of the magnificent ornaments and furniture of the temple which Josephus had been shown by a friend.

As to the sources from which Josephus draws his materials, we are left to mere conjecture. As he gives us no information on the subject. For the most part his work is based on the history of the rebellion, which he drew upon his own experience and sometimes even upon what he had actually witnessed. He may have also been, and probably was, indebted to some of the earlier accounts noted above—an inference strengthened by the occasional similarity between his work and that of Tacitus (Tacitus, Hist. v. 61 f.), B.J. iv. 476, ii. 186; v. 12; BJ vi. 251, 321 f.). As, however, these earlier accounts have all disappeared, we can say no more on the matter. Josephus accordingly states (CA i. 49) that he kept a record of events during the siege of Jerusalem, but this does not extend beyond the close of the war, and his knowledge of events in Jerusalem and Judea does not go beyond what he had been taught among the Romans themselves.

It is of interest to note that the chronological references are given according to the Roman, but according to a S. Macedonian calendar, which had been adjusted to the Jewish reckoning and, accordingly, corresponds with the calendar of Zoroastrianism. Known to us from the Jewish War, the specimen given by Josephus is used from this that the dates given by Josephus were obtained from a Jewish source.

In the latter part of the B.C. and the early history of the Jews, the names of the months, hours, and days are given. This, as well as from the books of the Maccabees, which he appears not to have used, suggests that the religious and historical Jewish Chronicle can hardly have existed. Josephus probably excepted from works in general history such passages as related to his own nation. In this connexion the name of Nicocles or Damascus is the first to suggest itself—the writer whose chronicle extends till the death of Herod's reign, and to which Josephus occasionally draws. From this, he must have drawn upon other sources as well. The names of Herod and the Byzantine emperors, however, are not made by him, and he appears not to have made any additions to the chronicle of the lives of the kings of David and Solomon as well as of Haggai and Zachariah (ii. 475, viii. 44, ix. 206 f., 239, x. 52 f., 78 f., 244 f., xi. 96). He is silent regarding Job, though it does not follow that he did not know of that book. He may assume, in fact, that it was a part of the canon in its present form.

The second outstanding work of Josephus is the Antiquities ('Aqkavayia Tawbaybi, Antiquitates Judaicae), which comprises in its twenty books the whole history of his people from the creation of the world to the beginning of the Christian era (AD 66), and which was completed and published in the 12th year of Domitian, i.e. A.D. 93-94 (AJ xx. 257). It is a number of years after the B.C. He tells us that he was 21 years old when he began with the B.C., he had entertained the idea of writing a book, but that this statement is belied by the preface to the B.C., in which he explicitly says that a work of that kind is now a superfluity, as other writers had been in the field (AJ i. 6; B.J. i. 17). The project of writing the A.B. must, therefore, have been a later inspiration.

As in the B.C., so in the A.B., the object of Josephus is to furnish the Hebrews with an accurate delineation of Israelite and Jewish history, in place of the misrepresentations of unfriendly or malevolent chroniclers.

It must be admitted that the knowledge possessed by educated people of the day in regard to the remotest part of the Jews was as meagre as it was inaccurate. Josephus takes as his basis ('ilustrationes et rerum quas reales (..)) the history of the Jews, as he has it from the Laws of Moses, and the Temple, and at best their idea of the history of Israel in its earliest times. Current tales about the Jews, some of which, such as those given by Thucydis, etc. were altogether fabulous, had mostly passed through Egyptian hands. In Egypt, as in Syria, and the adjacent country of Cyprus, and is common throughout Asia, from Seleucian times at least, the two peoples were constantly at feud, and this mutual hostility diffused itself through almost every region where Jew and Greek dwelt together, their respective material interests often contributing largely to the strife. The Greek antagonism to the Jews found expression in a series of acts, leading to vehement attacks upon both their personal characteristics and their national history. In these circumstances Josephus thought it incumbent upon him to give a faithful account of his people's history, in order to distinguish the minds of men, and especially of the Greeks, for it is this spirit which is for the Greeks whom he writes (AD i. 5 f., xvi. 36, xx. 262).

Josephus was not the first Jew to undertake the task of systematizing OT history. To say nothing of the Septuagint, other works of the kind had already appeared in the field of Alexandrine scholarship. Some of these were known to Josephus, and others he names Demetrius, Eupolemus, and the elder Philo (CA i. 218; cf. BJ i. 17). It would appear that the Alexandrian works referred to had not met with much acceptance among the Greeks, their uniting form not being resented. Moreover, none of them had gone beyond the period covered by the canonical Scriptures, while Josephus carries his narrative down to his own times, to the beginning of the rebellion, in fact. It is not known, accordingly, what was the character of these two or twenty-two books, viz. the five books of Moses, their alterations, etc., from the following epoch terminating with the reign of Artaxerxes I, and four books of Songs and Proverbs (CA i. 307). Jos. used the books which he himself had compiled himself, mostly of the historical books, but he supplements these from the prophets Nahum, Jonah, Isaiah, Jeremiah, Ezekiel, and Daniel. He makes frequent mention of the chronicler of the reigns of David and Solomon as well as of Haggai and Zachariah (AJ vii. 305, viii. 44, ix. 206 f., 239, x. 52 f., 78 f., 244 f., xi. 96). He is silent regarding Job, though it does not follow that he did not know of that work. He may assume, in fact, that it was a part of the canon in its present form.

To judge from what is said in the introduction and from other passages, he used the original Hebrew texts of his sources, and made use of the Greek versions to help him. He also tells us that he was acquainted with the B.C., and that he had entertained the idea of writing a book, but that this statement is belied by the preface to the B.C., in which he explicitly says that a work of that kind is now a superfluity, as other writers had been in the field (AJ i. 6; B.J. i. 17). The project of writing the A.B. must, therefore, have been a later inspiration.
JOSEPHUS

753

resorts not only to its phraseology, but also to its explanations and definitions. In the first place, the terminology of the Greek, a term like his. In the second place, he states that he has not always been consistent in his statement of facts. When, again, he repeats the strange mistakes of his sources, concerning the proper name Kléodis with Kléodis, 'a dog,' it makes Nabal the Calebite (2 Sam. 21:19, 25) the son of Jethro, whereas, from the version known as I EEdra, and theether which he used contained the additions found only in the Greek. According to the best and oldest recension of the Hebrew text, as regard to Judges and Samuel, the text was used that is the so-called Lachmian recension, to which he is, therefore, in accordance with the earlier writers. Neither, however, as is implied in the question whether Josephus really knew Hebrew, as some believe, though it is also denied. The present writer is of opinion that we have not sufficient evidence finally to decide this question, though, as Josephus himself testifies, that he is one of the most learned men among the Jews (AJ. v. 58), we need hardly hesitate to credit him with some knowledge of the ancient tongue. At the same time it should be observed that he makes no distinction between Hebrew and the Aramaic version (v. 298), and he is at least conceivable that on occasion he reads the Scriptures through the medium of an Aramaic paraphrase, i.e., a Targum. Special mention is also due to the fact that he interprets. In the one case he often differs widely from the Septuagint, and sometimes approximates to the Targum, and in the other case; e. g., he writes 'not Nàgge; not Tódáha, but 'Oóka; not Móda, but 'Olepous; it is clear that Josephus represents a pronunciation which differs greatly from that generally in use.

Josephus's rendering of the Scripture narrative is, on his own showing, anything but a mere paraphrase, without supplement or abridgment. He threads his recital with the additions and explanations which had been given by the exegesi, and often with the help of his contemporaries of Alexandria, upon both the historical and the legislative portions. He has thus used the Haggadá as well as the Halañá. The latter appears mainly in his description of the Pocket system of Moses (1891), which Haggadá, elements, legends, etc., occur with special frequency in b. i., as the patriarchal tradition given there readily lend itself to such supplementary or explanatory material.

As an instance of this we may refer to the table of nations given in Gen. 10, which Josephus harmonized with the geographical tables of Babel, a legendary addition which is found in 1.0 of Herodotus, there, in conformity with Hellenic traditions, he tells us that the son of Noah created two memorial pillars just before the Flood, in order that the science and invention of the one may remain on record for future generation. This conception is not far from the well-known narrative which Moses, as an Egyptian prince, composed his own account of the events during the duration of the Tanach and of other institutions of the Jewish exiles (AJ. i. 189 ff.; cf. Philo. ed. T. Mangey, London, 1742, ii. 159; according to AJ. i. 14 Moses himself in each case; and it naturally leads to similar conclusions. The next step in the same direction is the appearance in the narrative of Balaam, as given in AJ. iv. 122 ff., and Philo, ii. 127 ff., respectively.

In many other matters, however, Josephus and Philo differ. The former, for instance, is reproduces Josephus in the form quite unlike that given by Philo. Some of the Jewish authors that are just mentioned to Artapanus, but that with this writer does tell (Ep. Eusebius, Frag. Rerum. 26 of a war waged by Moses against the Ethiopians, he has in mind a different event altogether, so that the theory of Josephus having borrowed from him is out of the question. In brief, the enlargement is not a mere matter of translation, but a matter of interpretation. Josephus cannot be definitely assigned to his respective sources. In all probability he has read, not that the great text was quoted, including oral traditions, and chose what suited his purpose. It would appear as if it is in many of his own text and tradition had already been fused together.

His chronology of the Old Testament period presents considerable difficulties. He expands the chronological references of the Scriptures into a system. Thus B' contains calculations running back from the destruction of Jerusalem by Titus to the days of Abraham (v. 40, 143 ff.), in the AJ. the whole system is divided into two parts (i. e. 83 ff., 141 ff., ii. 81, 82 ff., vii. 86, 95 ff., viii. 6, 91 ff., ix. 250, x. 41, 147, xxvii. 230 ff.). In this he is probably following the example of Hellenistic experts, two of whom, Demottius and Epipolam, had set some repute as chronologists.

The details of his system are often inconsistent with each other. Such discrepancies have been explained on the theory that Josephus, using a variety of documents and traditions, revised and corrected them, and now another, without calculating for himself. Objectives have been brought against this view by D'Alonzo, who shows that Josephus obtained them at least, of his sources by computations based upon his own narrative; but even so, his discrepancies are not all removed. We must, however, believe the mind that the MSS themselves manifest considerable variation in regard to chronology, and that many of the statements may be due to copyists' errors, and may be eliminated by conjecture, the expediency should be adopted only with the greatest care, and, as all is done, differences in all cases. On the whole it seems impossible to deduce from Josephus a consistent system of chronology, or even any consistent system, and in this respect his work is of a somewhat careless kind.

The personal standpoint of Josephus is fixed by his religion and his position in life; he is a Jew, a priest, and a Pharisee. History teaches, in his opinion, that prosperity attends those who fear God, while the godless and the disobedient are daily punished (AJ. i. 13 ff.) and carried out in his account of how he is convinced that the world is ordered by divine providence; in a noteworthy passage (AJ. x. 277 ff.) he denounces the Epicureans, whom he puts on a level with the Sadducees, while the Phariséans correspond to the Stoics (v. 129). His views regarding God, destiny, and the human soul are in line with Pharisaic teaching, as appears also from the AJ. (v. 375 ff.), though he occasionally dilutes his Judaism with the conceptions of Greek philosophy, even showing some inclination towards pantheism (AJ. vi. 259, vii. 107). Nor is this his work for the theologian or philosopher, but is concerned, above all, to make Jewish history and Jewish character intelligible to the Greeks, and at the same time to present these things in the most favourable light. He accordingly takes pains to remove or to palliate the more sinister or repulsive elements, to bring the marvellous within the bounds of credibility, and to overlay the OT history with a Hellenistic gloss.

Abraham appears as a reformer of religion and science, as the founder of monotheism, and as the founder of medicine and arithmetical science. Josephus speaks of the Ptolemy of Hellenism as if they were the productions of a Greek legendary poet (v. 379). The tenth century the Maccabees he describes as the Messianic period, and the Hellenistic Jew, the Ozrián of (i. 36), and, similarly, the altar which Moses set up after his victory over the Amalekites is said to have been dedicated to the God of Victory, the god...—an idea of which there is no trace in Ex. 17:14. When Josephus refers to Moses two works, viz., Jair and T. Memni (v. 194, 196, 262), it is manifest that he has in his mind the great works of Plato bearing these names—the law-giver being the precursor of the philosopher. He is likewise from Plato (Leg. i. 676 ff.) that Josephus borrows the tradition that the stand-off from the hills to the plains after the Flight (AJ. 109); and the patriarchal history in b. i. affords, on the whole, the most numerous and least inconsistent evidence for the use of and modernizing methods. He makes no mention of the worship of the golden calf; he transfers the events into the time of Moses, for the traditions of the people's idols (v. 10); cf. 81 ff. (v. 19) and 100 (v. 18), and the 100 prophets of the Philistines which David is required to bring to so much in 600 heads (v. 261: cf. 181 D (K))
JOSEPHUS, seeking in this way to modify or expunge the specifically Jewish character of his narrative, closely connected herewith is his attempt to meet the attacks and suspicions current among the Moses and his laws (I. 13, II. 177, iii. 178, 205, vii. 116 f., cf. xiv. 381).

In order to invest the Missional legislation with a character of extraordinary humanfulness and compatibility, Josephus does not scruple to supplement the traditional text with engravements of his own (iv. 207, 234); and to win the suffrages of Hellenisation, he interposes the confirmatory testimonies of several historians. Of these the most outstanding are Herodotus (vii. 107, 293, 597), the Annals of Tyre (viii. 144 f., xiv. 293 f.), Berossus (i. 93, 107, 108, x. 39, 34, 219), the Shilleh Oreses (i. 118), Alexander Polyhistor (i. 240), and Nicolaus of Damascus (i. 94, 103, 159 f., xii. 101 f.), all noted and distinguished names.

With the book of Esther and the period of Artaxerxes, Josephus reaches the end of the OT narrative (xii. 206), and this marks the beginning of the second section of the A.J. At the very outset a lacuna occurs in the tradition, which extends to the time of the Maccabean revolt. For this interval of three centuries, embracing the reigns of the Syrian satraps, Ptolemy, and the Seleucids, Josephus had only disconnected legends of later origin.

There is, first of all, the visit of Alexander to Jerusalem, with all the consequences following it (xv. 297 f.), for the account of which Josephus is indebted to an apocryphal work which was written during the reign of the Book of Daniel (xi. 287). For the narrative of the Seventy and their traditions of the Mesopotamian Jews (xii. 111-119) his authority was the still extant letter of Aristeas, while the sections which follow, embracing the semi-legendary narratives of Apocryphon and the Joseph, the book of the Antiochus and Hyrcanus (xii. 157 f., 159 f.), appear to have had a similar source.

The beginning of a new era for the Jews is really marked by the Maccabean rising: it was then that they took their place in universal history, and came within the range of Greek writers, so that we have firm historical ground beneath our feet. The basis of the Maccabean history as given by Josephus is I Macc. (A.J. xii. 242-xiii. 225), for the existence of which work he is our earliest authority; he is of no small importance also for its textual criticism; but his use of it extends only to the death of Jonathan, the later portion (136-102 B.C.) appearing as commentary on a source.

Various explanations of this fact may be given. Destined up to this point he was to be a source. He was then in a position where it was not yet added to the present work. The exordium more probable that Josephus dis- regarded I Macc. at the point where it fails to bear the death of Jonathan because he now wished to work upon the basis of his own materials (ii. 107). That he used the MS in its earlier form, while he did not use the concluding part of I Macc., he was certainly acquainted with it. Of II Macc. he seems to have had no knowledge; but it is, nevertheless, probable that he was indebted directly or indirectly to its source, viz. Jason of Cyrene, for some of his materials. II Macc. 113 f., e.g., has no corresponding passage in I Macc. 1 but has points of contact with it, e.g., 21, 22, and, probably, some emendations from Jason. Another such insertion is found in xii. 36—an account of the temple of Omnipresence in Egypt. Further, in the narrative of I Macc., Josephus has made some alterations of his own. A special instance, he asserts that Judas Maccabaeus was high priest by divine indication, and the train of events changes more or less in harmony with this new order. He has also transferred some materials from his own previous work, the A.J., so that, taken all in all, his divergences from I Macc. are by no means insignificant. Finally, he was afraid of another characteristic of the A.J., viz. hostility to the Samarians, which is not found in the earlier writings, and first brought into relief by Josephus. This attitude is not confined to his account of the Maccabean period, but manifests itself as far back as xc. 291 f., giving occasion for manifest enlargements of greater or less extent. The last passage of the chapter (xii. 247), which, however, is, in my opinion, unanswerable, marks the conflict between Jews and Samaritans in Egypt under Ptolemy Philopator. We may very well believe that this is a passage in Josephus the antagonism between the orthodox Jews and the Samaritans is more pronounced than usual.

The beginning with Simon the high priest (xii. 218), Josephus took the BJ in review and enlarged, as his groundwork in the A.J. The two narratives are often quite identical, though verbal reproduction in passages of any length (with the exception of A.J. xiv. 489 f. = BJ i. 302 f.) is avoided. This agreement was formerly explained on the hypothesis that both works were drawn from a common source; the present writer has shared this opinion, but now regards it as erroneous, believing that Josephus simply incorporated in his later work a revised transcript of his earlier. As a matter of fact, the BJ is a work of unique character, composed according to the writer's own special design, and it is scarcely conceivable that any work capable of serving as a common source was previously in existence. Corroboration of the theory that the BJ is an expansion provided also by the inconsistencies and dislocations found in the former, as these would naturally occur where new material was imperfectly grafted upon the pre-existing text; a point which is evident in the account of Pompey (A.J. xiv. 37-44; cf. BJ I. 131).

Upon the older substructure Josephus superimposed a great deal—so much, in fact, that his additions, especially in the later books, greatly exceed the original in point of quantity. They are of many kinds; first of all may be mentioned the testimonies of various historians, such as Strabo, Timagenes, Nicolas, Livy; and to these we may add Agatharchides and Polybius, whom he had already quoted (xii. 5 f., 156 f.). Then there are the more or less extensive enlargements upon the earlier work which appear in the last sections of the BJ. Josephus has not divulged his authorities for these enlargements, and we must, therefore, depend upon conjectures, which in the present state of our knowledge, are most uncertain.

It is very unlikely that he directly availed himself of the Commentaries of King Herod, which he mentions once (xv. 174), and the most natural suggestion is that he relied upon the historians whom he now and again quotes—e.g., Strabo and Niclaus of Damascus. There is no doubt that latter in particular was largely drawn upon by Josephus (as was suggested above in regard to the BJ), more especially, though not exclusively, for the time of Herod; for Nicolas, as is well known, was a friend of Herod, and was likewise acquainted with Jewish history from a Jewish point of view. As a matter of fact, he is not only quoted in the A.J., but also criticized and corrected (xiv. 5 f., xvi. 13, 130). Josephus must have had other sources of information as well; nor must we forget his own original, for he was anything but a verbal plagiarist. As regards the post-Maccabean period, he must have depended largely upon the later writers. In this section he inserts several fairly long supplements in the account of Agrippa I. (xvii. 139 f., xx. 241 f.), of the Babylonian Jews (xvii. 287 f.), that the final section of the book, the last three chapters, which are of no great account, was added by the historian himself. Moreover, he must have availed himself of works dealing with Jewish history (cf. xx. 54); and from these he sometimes takes facts and incidents having little or nothing in common with the Josephus. From the embroils with Parthia under Tiberius (xvii. 32 f., 36 f.). An account of the death of Emperor Claudius, the bitter enemy of the Jews, is given with great differences (xiv. 211) and is adapted. T. Mommsen conjectures (Herod, iv. 160, 329), from the historian Claudius Rufus, though it may quite well have come from some other source.

Besides his classical authorities, however, Josephus also made use of native Jewish traditions. From the latter come the history of the Temple, and the annals of the successive high priests from br. i. 11 onwards, while the whole work is brought to a conclusion by a second historical sketch of the high-priesthood (xx. 241 f.), quite independent of the earlier, as appears both from the fact that it omits—rightly—the name of Judas Maccabaeus from the list. To this must be added the numerous, and sometimes very extraordinary, Jewish legends, a number of which reappear in the Talmudic writings (e.g., a story of the death of Hyrcanus I. and his wife), and the parables of Jesus and the parables of Jesus and the story of the Great Council (xiv. 411 f.), but there are many more, and the historical value of this, as, for example, xiv. 396 f., xx. 319 f., sqq. is not always high.

Notice is due to the documents and letters here and there inserted by Josephus. Some of them are simply transferred from their sources, where they already form part of the narrative, and are still to be found in 1 Eza and Esther, in 1 Mac., and the Letter of Aristeas. To this class in all likelihood belong also the Edicts of Antiochus III.
188-189), the genuineness of which is not unreasonably doubted. A different judgment must be passed upon the fairly numerous Roman edicts or decrees of the senate: the plebeian edict of 188 B.C. on the claim of the Jews to religious immunities, notably to the freedom of Asia Minor; and certain official deeds dating from the reign of Claudius (XII. 259 ff., XIV. 144 ff., 186 ff., 304 ff., XIV. 165 ff., XIX. 324 ff.), which have come down to us. These have no bearing whatever upon the narrative, or practically none; thus, to give a salient instance, there is found in XIV. 186 ff. a quite prominent conclusion of records emanating from most of the various periods. But their genuineness is not disputed, and is admitted by all.

Moreover, in this period especially those cities and persons which the Jews had before Marcus Agrippa—King Herod being also in attendance—in 16 B.C. It was Nicolas who conducted this case for the Jews, and he seems to have insisted in his speech, together with the relevant documents, into his historiography, so that Josephus had but to transfer them to his own work (XII. 125 ff., XIX. 278 ff.). The deeds of later date had, of course, a different origin. The three edicts of xix. 380 ff. go hand in hand; the first two, as appears from xix. 310, were articulated with the third.

We note, finally, that from the earliest possible point, viz. the Persian period (Xi.), chronological references were inserted by Josephus at the appropriate places. For this purpose he availed himself of the chronological schemes then to hand, and took the Greek-Roman reckoning as his standard, the chronology itself being a part of the general history within the range of universal chronology. The task was not without its difficulties, and at one point, indeed, a violation of the text was necessary; the Artaxerxes who, according to 2 Kings 20, reigned between Cyrus and Darius I. had to give place to Cambyses (XII. 21 ff.).

In the AJ, as in the BJ, Josephus took great pains with the form of his narration. He introduced general introductory long speeches of the type of the Eusebian, e.g. X. 140 ff., XV. 157 ff., XVI. 31 ff., XIX. 167 ff.—and he exerts himself throughout to write with vigour and elegance. Good examples of his style will be found in IV. 11 ff., VI. 327 ff., XVIII. 310 ff., XIX. 14 ff. In this respect, however, he puts more restraint upon himself than in the BJ, the diction of the AJ showing a change in the direction of simplicity. The contrast in style is best seen in passages which are substantially the same in both works. Thus Herod's address to his soldiers as reported in AJ XV. 157 ff. is quite different from what appears in BJ I. 373 ff. In general, Josephus endeavours in the AJ to fill out his earlier delineation. An example of this is provided by the section dealing with the Jewish parties, which is inserted at the same point in both narratives (AJ xviii. 11 ff., BJ I. 375 ff.). It is of great interest to trace the connexion of his relation to Thucydides, whom he specially chose as his model for the AJ, more particularly in bks. xvi.-xix., where he even employs forms of the old Attic dialect, as he does nowhere else, and is manifestly at pains to emulate the great historian in his form of expression, his massive sentence-construction, and his fulness of thought. Nor can it be denied, finally, that in the AJ Josephus has changed his views with respect to many things and persons discussed in the BJ, and utters a different verdict regarding them. An instance of this is found in AJ xx. 138 ff. (cf. vii. 193 ff.), which treats of the attitude of the Jews toward the emperor, and from which we derive an entirely different impression of the man from that gained from the story, and especially the characterization, of the corresponding passage in the BJ (iv. 6 ff.).

The thànhos of Josephus (θὴν ἀποκράτεια) forms a sequel to the AJ. It is appended to the latter without break or introduction, and at the close is distinctly spoken of as belonging to the long series of those subsequent writings which are like or equal to the AJ in style and purpose. Like the AJ, the CA is dedicated to Epaphroditus, who died, as has already been noted, in A.D. 95, and it must, therefore, have been written some time anterior to that date, i.e. very shortly after the AJ. It is a defence of the Jews against the imputations made by Greek writers, which Josephus had, on occasion, tried to ward off in the AJ. But his arguments had not carried conviction; the voice of calumny was not silenced; and he felt that he must have recourse to his pen once more, in order to furnish a thoroughgoing and final refutation of the charges. The whole of its appearance, been massed together by the Apion, the well-known grammaticus of Alexandria. This Apion was the leader of an Alexandrian deputation to Rome in connection with the conflict between the Jews and his fellow-citizens which occurred in the
reign of Galus, and he took occasion at this juncture to draw up an indictment against the hated race—a theme upon which he had previously touched in his "Apology." 

Josephus first of all impresses the assertion that the Jews were a people of recent origin—an assertion made on the ground that none of the ancient writers mentioned them. Greek Hellenes, he maintained, were entirely without warrant in charging the Jews with possession of the most ancient historical learning, when, as a matter of fact, their records were quite modern, and their early history was unverifiable. The statement of his authority for this is, that in the time of the more remote era, while the Jews had for ages preserved their history, concerning the time of Moses, they had nothing beyond the time of the death of David. The earliest Greek historians was thus simply to the geographical position of the Jews. Josephus himself sets forth the testimonies of Egyptian, Babylonian, and Phoenician historians, in order to prove that the Hebrew people had a far more ancient history than the Greeks, and that in his time (73-39 B.C.) he proceeds to show that even Greek authors of considerable antiquity were acquainted with the Jews, and had spoken of them with respect (i. 216-218), and he comes at length to the tales of Mantine, Chaldrion, and others regarding the exodus from Egypt, submitting them to careful examination, and showing them to be unworthy of credit. In bk. ii. Josephus is less certain with Apion, and relates the structures passed by the latter upon the person of Moses, the claim of the Jews to the free citizens of Alexandria, and the Jewish religion (ii. 1-12). Finally, by way of rebutting the assertions of the Jewish historian, he gives a summary of the facts of the Jewish history, and makes himself the historian of the Judaeo-Greek bearing character of the Jews with the religious indifference and the immoral mythology of the Heathen (i. 140-200).

The criticism of the various stories about the exodus of the Jews from Egypt is altogether to the point, their inconsistencies and other defects being most ably exposed. Josephus himself is of opinion that the Jews were one with the Hylese, and uses this identificatory to fix the date of the exodus. His arguments are not seldom defective, as, e.g., in his statement how the date of Solomon's reign according to the Hebrew chronology (i. 116 f.) he supposes, or distorts many things, the clearest instances of which are connected with the Jewish right of citizenship in Alexandria. The assertion that the Hylese (Apion, ii. 288) he procured by Al. that for the Great or Tobiomos i. is unquestionably a fabrication. Among the authors cited by him, moreover, names are found which are open to suspicion or simply for which he has, in this connection, preserved some valuable origins from the ancient historical literature, and especially from the annals of Egypt, Babylonia, and Tyre. Some of these had already been given in the Ap. It is so easy matter to identify the traditions from which he drew all these. He may possibly have borrowed a good deal of it from Apion himself. In Rome, which was at that time a great emporium for Greek literature and science, he would find no difficulty in securing the learned equipment requisite for his polemics.

A question may be raised as to the specific occasion of the booklet. This can scarcely have been the indictment framed by Apion, for at the time when Josephus wrote, i.e., A.D. 94 or 96, the pamphlet of Apion and the whole controversy which it had evoked were fifty years old. It is conjectured by A. von Germer that the revolt of the Jews had been the occasion of producing a fresh crop of anti-Jewish writings, and that it was these that moved Josephus to take up the challenge once more. His words seems to imply that the cause of defamation had been quite recently renewed—just after the publication of the Ap. In the end, he perhaps wished to bring us up to the closing years of Domitian's reign. About this time several persons were by the Emperor's orders put to death on account of their Jewish Judaism—a procedure which tended to revive the old charge of atheism (Oio Cass. xliii. 14). In many respects the polemic of Josephus is essentially the same as the polemic of the Ap. It was written with the same object in view, it followed immediately upon the larger work, and its contents had for the most part been written down in the Ap. (cf. A. J. i. 15-43, ii. 171 f., 172-192, 203). Josephus, must, therefore, have taken it in hand immediately after the publication of the Apian book.

(c) In addition to his extant works, Josephus had other literary projects in view, which in all probability, however, were never carried out. Among these are to be mentioned a book which was to deal with Jerusalem, the Temple, the sacrifices, and the worship, but this must have remained as an intention only, as otherwise he would accordingly have mentioned it, or quoted from it, in his subsequent writings. At a later period, again, he meditated a theological work of a similar kind, for at the end of the Ap. (xxv. 206) he announces his intention of writing a book on God, His nature, and the ground of the mandates and prohibitions of the Mosaic law, and, as he returns several times to this projected work (e.g., A. J. i. 25, 31, ii. 25, iv. 189, 193), it seems as if he had even drafted some definite plan for it. It was to be a kind of apologia of the Mosaic law, in the style of the rationalizing allegories of Philo. Whether the work was ever written we do not know; certainly not a single trace of it survives. Further, he proceeded to write another historical volume which should deal more with the life of the Jews till the date of writing. He more than once alludes to this forthcoming volume (e.g., A. J. xviii. 25, xix. 390), but it must remain open to question whether it was ever given to the public.

Finally, in numerous passages of the A.J. we meet with references to the phrase καθώς εις Ελλάδα δειδαλοικός ου ήδαιμόνιος (or δειδαλοικος) to an earlier work, which have caused much perplexity among scholars, and given rise to various conjectures. These references bear upon events in general history, and they punctuate the narrative from Philip and Alexander the Great (xvi. 295) to the battle of Philippi (xv. 391), appearing again in the passage dealing with the reign of Tiberius (xvii. 94). They suggest the thought that Josephus had produced still another historical composition.

A. von Germer and H. Drusen suppose that this work was an unpublished draft, the first of the Ap. Josephus had been a commentary upon Daniel—according to Jerome in Antiq. ii. ed. Vallarsi, i. 461 (P. L. xlvii. 277). Josephus had in fact himself occupied himself with the interpretation of the Ap. (cf. A. J. x. 269 f.) or elsewhere, both conjectures are equally improbable. Further, Jerome cannot be speaking here from his own knowledge, but must have borrowed the annotation from Porphyry, and repeated it inaccurately. It is, therefore, conjectured by Delitzsch that Josephus, in more care of the quotation, omitted the quotation-phrase from the source which he was using; but this also is an unlikely theory. There are still other explanations of the facts. On the whole, therefore, the references form an unsolved riddle. They may mean nothing more than that Josephus had a filling for a scaffolding phrase; but it is to be borne in mind that similar unintroductory references are found also in the iii. A. J. xvi. 244 and i. 25, by which Josephus had produced still another historical composition.

3. Value and significance. Josephus was assuredly no historian of the first rank, no conscientious or unbiased inquirer, seeking truth alone, but a writer whose supreme object was to produce a certain impression. Like other historians, he is not unwilling to afford his readers as instruction (A. J. i. 13, xviii. 228 f.), but the leading motive of all that he writes is that of the apologist. Though he did not overlook the needs of his countrymen (A. J. iv. 167), he also found no difficulty in securing the learned equipment requisite for his polemics. In view he endeavored to present the history of his nation in the most favorable light. His apologetic purpose reveals itself also in the selection of his documents, for he quotes with the intention of showing the favor in which the Jews had been held by the great monarchs, as well as by the Romans themselves (A. J. xiv. 186, xvii. 174 f.). It is his ambition to dissipate the prejudices against the Jews, to repel the imputations cast upon them, and to mitigate the antagonism between Jew and Greek. With such objects in view he endeavors to present the history of his nation in the most favorable light. His apologetic purpose reveals itself also in the selection of his documents, for he quotes with the intention of showing the favor in which the Jews had been held by the great monarchs, as well as by the Romans themselves (A. J. xiv. 186, xvii. 174 f.). Truth is sacrificed to tendency; for, though he asserts that he will set down nothing but the truth, and the whole truth (A. J. x. 218, xiv. 1), he does not keep his promise. He omits and he frequently quotes from his authorities in very casual fashion; and, accordingly, the Biblical narratives sometimes receive from his hand an entirely new complexion. The author of himself in all the resources which the art of rhetoric had provided, in order that he might render his narrative forcible and attractive. In spite of these defects, however, we cannot fail to disapprove him. When we remember the purity of
made use of his works, as many believe, remains very doubtful, and certainly cannot be proved. Nor does Suetonius, who mentions his name (Vestas. 5), seem to have read him. One of the first to quote him stands the Neoclaudian, Eusebius. It was in Christian circles that his reputation was highest. An author like Josephus, who stood upon the ground of the OT and the Law, and who had, nevertheless, wrought himself free from the narrow limits of Judaism and who interpreted the destruction of Jerusalem and the Temple as a penalty inflicted by God, had so much in common with Christian writers that they could speak up about him almost as one of themselves. We must regard the evangelist Luke as being the first to make use of his works, not a few well-attested indications of such dependence being found alike in the third Gospel and in the Acts of the Apostles.

4. Relation to Christ.—The problem of the attitude of Josephus to Christ and Christianity is of considerable importance. We find in AJ xviii. 63 f., appended to an account of the administration of Pontius Pilate, a short chapter about Christ, which has a place in all our MSS and which was quoted by Eusebius and many others after him. What is said here about Christ, however, does not take the form of a narrative, such as we should expect from a historian, but is, in the main, a eulogy, and of a kind that only a Christian could have written. But, as Josephus, alike in feeling and in utterance, is very near to a Jew, and as a Jewish priest, never manifesting the slightest hint of the Christian standpoint, the general consensus of investigators has long ago decided that the passage is spurious. Still, it is not improbable that it may have been interpolated in the old passage as an interpolation; others, such as A. von Gutschmid and T. Reinauch (RE J xxvi. [1897] 1-18), try to rescue a portion of it, supposing that it is a genuine passage that was afterwards re-cast from a Christian point of view, and seeking to restore it to its original form. This view appears to the present writer untenable; the whole chapter forms so obviously an indispensable unity that, if any part of it is a fabrication, the whole of it must be so, and ought to be removed from the text altogether. If objection be alleged to this conclusion on the ground that Josephus could not have completely ignored Jesus, it may be replied that he records only such events in Jewish history as attracted the attention of foreigners by disturbances or otherwise, and led to the intervention of the emperor, and that the silence of Josephus provides no difficulty. Further, if in reality he had written some account of Jesus, this would have been found in the BJ, for the Jewish history found in the AJ, so far as it relates to Jerusalem and Judea, is essentially a reproduction of the earlier narrative. Since, then, he makes no mention of Christ in the BJ, his silence regarding him in the AJ is precisely what we might expect. Finally, it should be noted that Origen (in Math. x. 17; c. Cels. i. 47 [PG xiii. 877, xi. 745, 743]) is not aware of the testimony of Josephus to Christ, his silence regarding Him in the AJ is precisely what we might expect. Finally, it should be noted that Origen (in Math. x. 17; c. Cels. i. 47 [PG xiii. 877, xi. 745, 743]) is not aware of the testimony of Josephus to Christ, his silence regarding Him in the AJ is precisely what we might expect.

The motive of the interpolation is no mystery: it was desirable that there should be some account of Jesus in the works of Josephus, some note in harmony with the Christian view, and, naturally enough, this was inserted in the section where the mention of Pilate and the governorship of Pilate. But the course of the narrative is thereby deranged, and even now we can see plainly that the passage did not originally exist in its present state. An incidental reference to Jesus is found in a later passage (AJ xx. 390), where the James who had been beheaded is spoken of as His brother (rev diδοθες Ἰωάννης τῷ Ἰησοῦ Χριστῷ, ἵνα ἀναλαμβάνῃ τὸν οἴκον τοῦ Ισραήλ). This passage is altogether beyond sus-

vol. vii. — 37
picion, and we are unable to agree with the scholars who regard it likewise as an interpolation. The manner in which Jesus is here mentioned collates with what Jesus should have reacted from Josephus. Thus, while Josephus had doubtless heard of Jesus, he did not deal with Him in his history, and the passage in *AJ* xvi. which we have discussed must be pronounced spurious.

The documentatio mariae must have helped to make Josephus still more acceptable to the Christians. They pored over his works, and from them, more particularly the two books against Apion, they borrowed a goodly portion of their equipment for their controversial writings. The earliest apologist—Theophilus, Clement of Alexandria, Origen, Tertullian, and Minucius Felix—refer to him by name and make use of him. The chronologists, in particular—Julius Africans, Hippolytus, Eusebius, and their successors—availed themselves of his help. In another sphere Eusebius also is indebted to him, especially in the *HS* and the *Prep. Eclog.* while in the later ecclesiastical writers are all acquainted with him. Throughout the entire medieval epoch he ranks as one of the great authors, alike in East and West.

The Josephus who has been controversial, since the death of Nieue, by F. C. Burritt (TAP civ. 1902) to the society for the study of Jesus in Antiquity, Dr. Nieue's argument for the

existence of Jesus (AJ xvii. 583-4; AA 1069-70, and W. E. Barnes (IL 1915), Dr. Nieue maintains that, in view of the evidence put forward by John the Baptist and James the Just by Josephus (AJ xvi. 119-19, xx. 200), we should naturally expect that the Son of God would have become a political figure, which was no more than a suspicion in the mind of Jesus in *Tactum* (Ant. xv. 44; cf. also S. C. O. A. Claudii, xvi. 60, N. 16. 6), a reference which, as Whitson had already suggested, was probably borrowed from Josephus. Thus it is in the passage of Josephus, as well as a "cool and pow'ring tone" which a Chrestian author has often repeated since (*Eus. HS* 44; cf. also S. C. O. A. Claudii, xvi. 60, N. 16. 6), a reference which, as Whitson had already suggested, was probably borrowed from Josephus. Thus the appearance of the Resurrection in the **passage of Josephus**, as well as a "cool and pow'ring tone" which a Chrestian author has often repeated since (*Eus. HS* 44; cf. also S. C. O. A. Claudii, xvi. 60, N. 16. 6), a reference which, as Whitson had already suggested, was probably borrowed from Josephus. Thus the appearance of the Resurrection in the...
JUJALAMUKHI, 579

Jerome or Rufinus (Cassiodorius, de Inst. Div. Litt. 17 [P.L. xxi. 1133]).

About the middle of the 6th cent. the A.J. (not including the Vit., however) and the C.J. were at the disposal of Cassiodorus, reproduced in a very inferior copy of Latin (ib.). The 6th bk. of the B.J., which treats of the destruction of Jerusalem, had been previously translated into Syriac, and incorporated into the Syriac OT (Peshitta) as the 8th bk. of Maccaebes. Subsequently there appeared a Slavonic translation or paraphrase, which is extant in several recensions, and there exists also a rendering into modern Greek (in the Batak Library [cod. Gr. n. 226, 229]). Rome, besides fragments of an Armenian version (F. C. Conybeare, TTStSt ix. (1808) 577-583).

The many translations into European languages which appeared shortly after the invention of printing all go to show how assiduously Josephus was read.

In view of this almost colossal prestige enjoyed by the writings of Josephus, we need not be surprised to find that he was credited with other works of unknown or disputed authorship, such as the following: (1) the so-called Fourth Book of Maccabees, an entire apocryphal work, not Josephus, but a later work, under his name; (2) the 'lordship of divine reason over human desires,' and illustrious works that the Sibyl of Gaul, according to S. Mac, suffered martyrdom under Antiochus Epiphanes. The fact is, so far as we know, to attribute it to Josephus. Some fragments (ib. 52, 26; 53, 27) of a work ascribed to Josephus, such as books vii., viii., and ix. of the Vita, are followed with, or in some MSS, Joseph as the author. In the rise of the Jewish sects and the ascension to Josephus, as is rightly observed in the ancient scholion to the Christian text, Epitomae, P. Alex. (Paris, 1673, l. 45), is a quite unwarranted conjecture. He had no connection with the book; in the A.J. he knows nothing of the seven martyrdoms; and the whole address, alike in form and content, is alien to the manner of Josephus.

(4) A third work, still extant, bearing the name of Josephus, viz. the Joannis eor Doctoris et Scholiastae, is a treatise on the art of writing, and a model for the most important principles. The author himself, and his pupils, indeed, consider this work the most valuable of all Jewish literature; and, above all, is a work of the highest importance in the study of the ancient world. It is devoted to the study of the sacred language, and is a work of great value in the study of the history of the ancient world. It is devoted to the study of the sacred language, and is a work of great value in the study of the history of the ancient world. It is devoted to the study of the sacred language, and is a work of great value in the study of the history of the ancient world.

(5) The works of Josephus were first printed in their Latin form in 1619. The first edition was by Joannes Foss, in 1617, and the second by Ioannes Oxenius, in 1619. The third edition was by J. M. Strickland, in 1623. The fourth edition was by J. M. Strickland, in 1623. These impressions were subsequently often republished, and the last complete edition was by Josephus in 1619. The first complete edition was by J. M. Strickland, in 1623. The second complete edition was by J. M. Strickland, in 1623. The third complete edition was by J. M. Strickland, in 1623. The fourth complete edition was by J. M. Strickland, in 1623. The fifth complete edition was by J. M. Strickland, in 1623. The sixth complete edition was by J. M. Strickland, in 1623. The seventh complete edition was by J. M. Strickland, in 1623. The eighth complete edition was by J. M. Strickland, in 1623.

Manuscript transmission and editions.—The wide circulation and popularity of the works of Josephus are indicated in the history of their transmission. The MSS were, and still are, very numerous, and the textual tradition branches out in manifold ways. Each work, again, had its own peculiar fortunes. Thus, the most comprehensive, the A.J., was first of all divided into four parts, then into two, and each of these, again, took its own particular path. It was only at the close of the period that the A.J. was put together in a single volume, the B.J. also being included; and scholars endeavored toounded and elucidate the transmission of a few MSS still show traces of a thoroughgoing revision.

The works of Josephus were first printed in their Latin form in 1619. The first edition was by Joannes Foss, in 1617, and the second by Ioannes Oxenius, in 1619. god-dreaded man. . . Other inidels have said that Sulîhu Muhammad Shâh bin Tughlaq Shâh held an umbrella over the sun and called it 'a lie, and good Muhammadans should say no lie to such statements' (E. M. Elliot, Hist. of India, London, 1897-77, ii. 34, 441, iii. 316).

The goddess Akbari, by Benoist, Akbâr, a description of the Empress Akbar, describes the shrine under the name of Mahamayâ, 'great illusion'. 

...Pilgrims from distant parts visit it and obtain their desires. So great is it that in order that their prayers may be favourably heard, they cut out their tongues; with some it grows again on the spot, with others after one or two days. Although the medical faculty allow the possibility of growth in the tongue, yet in so short a space of time it is sufficiently amazing' (Al-Adhâr, tr. H. S. Jarrett, ii. [Calcutta, 1861] 218). On such mutilations of the tongue, which fanatics sometimes offer to Exile. 16, Class. Jour., 1872, p. 492.

Abûl Faîl also refers to the legend, traced by E. B. Cowell in the Gopakava Brahmava, which tells the belief in the sanctity of the place arose from the quarrel between Siva and his father-in-law Dakâša, when the latter was refused admission to a sacrifice. The spouse of Siva, goddess Pushâni, or Sati, offended at the insult offered, cut her body, and Visnâ cut up her body, of which the tongue is said to have fallen at this place (H. H. Wilson, Vishnû Purana, London, 1854-77, iv. 337). On the word Pushnâ, Classical Dict., 1879, p. 76 ff.

The account in the Vâyu Purâna, that about the mountains of Subakâsa and Sikkhisara is a level country about a hundred yojanas in extent, and that the ground emits flames, doublets refers to Jullâhmukhâ (E. T. Atkinson, Hinduayán Gaz., Allahabad, 1884, ii. 258). The place, again, is connected with the story of the Sikh Guru Angad, who, on arriving there, extricated the idolatrous character of the râtes (M. A. Macalisse, The Sikh Religion, Oxford, 1909, ii. 3).

The best modern account is that of C. Hügel (Travels in Kashmir and the Punjab, p. 42 ff.). No idol represented the goddess; but the centre of the forecourt of the temple there is a pit with seats at either end on which he found fagirs resting. A perpetual flame rose from this pit, and two places in the smooth rocks, two flames were seen bursting out to a height of about 8 inches. The worshippers, on entering the sanctuary, delivered their gifts, usually flowers, into the hands of one of the fagirs, who first held them over a light, and then cast them into the temple. Close by is a shrine of the saint Gorkhnâh. 

On descending a good many steps I saw flames issuing from two holes in the perpendicular wall; and, on examining not attentively, I perceived, where the fire was burning, little cavities in the smooth stones, with just the same appearance as when a burning-glass is made to consume wood; the flame issuing, not from any aperture, but from those minute cavities emits a scent like alcohol, burning with an acrid and most agreeable mixture, which I could by no means identify. Under each of these flames stood a pot of water, of the same temperature as the atmosphere; the condensed residue of the gas thus deposited takes in the application of a light, and burns for at least a minute. Additionally this is one of the most extraordinary phenomena I ever recollect to have witnessed; and no doubt in distant ages was one of the spots most frequented by fire-worshippers. The sight of this flame rising out of the sanctuary building was next it, worthy of notice. 

The same traveller suggests that the place was an asylum for Buddhists, and J. Wilson believes that this is the explanation of the low esteem in which the Brahmans officiants are regarded (Indian Cast, Bombay, 1871, ii. 133). The high-priest is known as the 'fagir', that is to say, 'the officiant who eats the offerings', the term bhoto being usually applied to those degraded Brahmans whose only function is that of being fed vicariously by pilgrims in the hope that the food thus consumed may be transmitted to the deceased ancestors of the worshipper. They are said not to be genuine Brahmans, but descendants of a servile class of agriculturists, who from their connexion with the temples have professed to be Brahmins. Ar. Rose, Glossary of the Tribes and Castes of the Punjab, Lahore, 1911, i. 107 f.). The facts regarding fire-worship in N. India have been collected by Elliot, Hist. of India, v. (1877) 459. The cult of the goddess of Jullâhmukhâ is extended into Bengal, the Deccan, and the aboriginal Kâhrâns have a shrine dedicated to the holy fire which they call by the same name (Riley, T.C., 1891, ii. 294; Crooke, T.C., 1896, ii. 247; F. H. Skrine, 1880) 267 f.; MS notes received from H. A. Rose, Superintendent Ethnological Survey, Punjab.

W. CRooKE.

JUANG, PATTUA (the latter name meaning 'leaf-wearers' [Hindi, pathâ, Skt, patra, 'a leaf']).

A non-Aryan tribe found in the Kajak Tributary States of Dhubãnâ and Karmâ in Küntâl, and are the most numerous in the latter. At the Census of 1911 they numbered 12,945, of whom the vast majority recorded their religion as animistic. They are interesting as being the last tribe of the Kajak who retained the archaic custom of wearing leaves as clothing. According to the tribal tradition, they were formerly fond of dress and were accustomed to lay aside their costumes when doing 'foul suits of leaves. The goddess (Itsera) or, as some say, Sitâ) reprimanded them for their vanity, and demanded them to wear leaves in future, threatening them that if they wore them again, they would be eaten by tigers. Similar legends are told by other leaf-wearing tribes in S. India (E. Thurston,Castes and Tribes, 1908, vii. 20). The classical account of the tribe is that of E. T. Dalton (Misc. Ethnol. of Bengal, Calcutta, 1873, p. 152 ff.), who gives the following summary of their beliefs:

The Jungs appear to be free from the belief in witchcraft, which is the bane of the Kols, and probably influences nearly all other classes in the Jungle and Tributary Mahals. They have not, like the Kols, the reputation of being deeply skilled in sorcery. They have in their own language no terms for 'God,' for 'heaven,' or 'hell,' and, so far as I can learn, no idea of a future state. They are very partial to the earth to give them its fruits in due season. On these occasions an old man officiates as priest. The details of the rite are very obscure. The even tenor of their lives is unbroken by any obligatory religious ceremonies.

If this account, in itself improbable, be accepted, they stand in a much lower stage of religious belief than the neighbouring Dravidian tribes (see DRAVIDIANS [North India]). But Riley (T.C., 1891, i. 353) disputes Dalton's conclusions, asserting that the tribe in Kevâla worship a forest deity called Barân, who stands at the head of their system, and is regarded with great veneration. Next to him come Thâmâpati, the patron deity of the village site, Madâmâl, Kâlapât, Bêbbûli, and Benamât, or Mother Earth.

Joubles, goats, fowls, milk, and sugar are offered to all of them, and are afterwards par Takes of by the worshippers. No regular days seem to be set apart for sacrifice, but offerings are made at all seasons and seasons, and the forest god is care-fully propitiated when a plot of land is cleared from jungle and prepared for the plough. In addition to these elemental or ani-mistic deities, the Hindu gods are recognized, in a scanty and inconstant fashion, by the tribe. Brahmans are not admitted as priests, and the worshipper is discharged by the 'kâbir' or village priest. ... Judges burn their dead, laying the corpse on the pyre with the head to the south. The ashes are left at the place of cremation or are cast into a running stream. A few days after death a mock pro-cession or ceremonial is performed, at which the priest of the deceased officiates as priest. Offerings to departed an-cestors are also made in October, when the autumn rice crop is harvested.

JUBILEE.—See FESTIVALS and Fasts (He-brew).
JUDAISM.—I. DEFINITION.—Judaism may be defined as the strictest form of monothetic belief. But it is something more than a bare mental belief. It is the effect which such a belief, with all its logical consequences, exerts on life, thought and conduct. It is the religion which was first preached by Abraham, and symbolized by the covenant of circumcision (cf. art. Circumcision [Semiitic]), and it is still practiced by the present-day Jews. It is, in all essential respects, the same religion of the two patriarchs, the parent of two mighty faiths that have spread over the major portion of the globe. They have diffused the principles of Judaism in a modified form, but the kernel of their teaching is Jewish, in spite of accretions and losses, and Judaism does not, in consequence, repudiate these religions or class them as idolatrous and false. A formal and precise definition of Judaism is a matter of some difficulty, because it raises the question, What is the absolute and irreducible minimum of conformity? (see art. Creed [Jewish]). On the other hand, it may be said, more widely, that the foundation of Judaism rests on two principles—the unity of God and the choice of Israel. Judaism denominates idolatry and polytheism. It believes in a universal God, but it is not monothestic. It believes that this world is good, and that man is capable of perfection. He possesses a free will and is responsible for his actions. Judaism rejects any Mediator and any cosmic force for evil. Man is free, not to choose evil, but to choose good; nor are the material gifts of life inherently bad; wealth may be a blessing as well as a curse. Man is made in the image of God; therefore he is noble, like the rest of the universe. From this reason all nations are equally brothers. Just as they were united in the beginning, so will they be drawn together again at the end of time. They will be brought near to the King by the hand of Israel. This is the function of Judaism—to spread peace and goodwill throughout the world.

1. Judaism by its idea of a divine kingdom of truth and righteousness to be built on earth gave rise to a hope and a history of goals for which to live and strive through the centuries. Other nations behold in the world's progress a continual decline from a golden age of happiness to an iron age of toil, until in a great catastrophe of confusions and ruin the end of all things, of men and gods, is to be looked for. Judaism points forward to a state of human perfection and bliss to be brought about by the conversion of the Gentiles, the instruction of the divine man or the revelation of God's full glory as the goal of history. And herein lies its great distinction also from Christianity. Judaism's scope lies not in the after-life but in the world of the spirit, of which man on earth can have no conception. Both the hope of resurrection and of the world to come are beyond the other religions and indispensable to all tribes and creeds, seem evidently to have come to the Jews from without—the one from Persia or Babylonian, the other from the Stuarts. Judaism itself rests on neither. Its sole aim and purpose is to render the world that now is a divine kingdom of truth and righteousness; and this gives it its eminently rational, ethical, and practical character (K. Kohler, in JBE, vol. 1, 1904, 567).

This aim is pursued by the insistence on the belief in the Unity and on the practice of the Commandments. Judaism lays more stress on work than on faith, though the former are of no avail without the latter. Judaism is not a creed or system of beliefs upon the acceptance of which redemption or future salvation depends. It is a system of human conduct, a law of righteousness which man should follow in order to live thereby (Kohler, note).

Yet Judaism does not lack a doctrine of faith; it is very doubtful whether an atheist who kept the Torah, or the Jewish ideals of righteousness, could exist on a Jewish ground. (B. Commandments [Jewish], vol. ii, 187 f.). There is no doubt that he would be saved, in the Christian sense, because Judaism teaches that every righteous man, irrespective of his beliefs, has a share in the world to come. But just because Judaism believes that every good man is saved, it follows that to be a good Jew must include something more, and must be ethically higher, than being a good man.

While Judaism, on the one hand, opens the door to proselytes, it is inevitable, from the fact of its demanding self-sacrifice, that it must long remain the religion of a minority. The function of Judaism is to keep the great ideals, unaltered and intact, before the eyes of the world. A Jew must be prepared to defend their standard at the cost of his lives, as in the past, and to sacrifice, not only their lives, but their material prosperity—often a harder task. Many a potential martyr becomes indifferent, through prosperity, to the ideals for which he would offer his life in time of persecution.

The world has need of a minority of idealists. For, although Judaism recognizes the truth taught by Christianity and Islam, it believes at the same time that there are other elements contained in these faiths which are not in complete harmony with the primitive source of truth. Judaism, then, has not to compete with the other religions; it is their religion; its raison d'être is not to rival the successful missionary activity of its daughters, the Church and the Mosque; it claims, not to be the only form of truth, but to be the living, ever-renewing tradition of truth. While Christianity and Islam are permeating the world with their teachings, Judaism awaits the day when it will, as originally, extend its influence over both of them, and so over all mankind. How this will take place is a problem. Under this universal worship of the One God will be, it does not seek to define. This 'despised faith,' which holds itself to be in reality the Remnant or essence of righteousness, is safeguarded from extinction or contamination by the fence of the mimkōt (Commandments). It has developed and grown, but ever in unbroken continuity, from the simple declaration of monotheism to a complete and comprehensive scheme of life. From Abraham to the present day the story has been written, and the pen has not yet been laid aside.

II. GROWTH AND DEVELOPMENT.—1. To the end of the Restoration period.—The Exile marked a new stage in the religion of Israel. It was the beginning of internal consolidation and external expansion. The patriarchy, the lawgiver, and the prophet represented the three great epochs of Jewish history. The young religion monotheism, the Law, is laid waste. The faith of Abraham was moulded into the religion of a people, to become, ultimately, the source of ideals for a world; monotheism, purity, righteousness, and justice had developed under the impetus of lawgiver, prophet, and priest until the time of trial arrived. Exile and persecution were to test the reality of these lessons, to show that the work of the teachers was sound and the faith of the pupils unshaken. The touchstone of misfortune clearly demonstrated this: the seed had indeed been skilfully sown on fertile soil. The teachings of Isaiah had not been in vain: the exhortations of his contemporaries and predecessors succeeded in creating a compact remnant to carry on the truth and hand it over unimpaired to posterity. The Ten Tribes were lost, with the Remnant, the southern kingdom, endured.

1 Even Eliezer ben Abura is ultimately pardoned after the death of B. Merir (see B. Hag., 166).
2 The immutability of the Covenant Law in the coming time was a matter on which divergence of opinion prevailed; see, e.g., Nidah, 618, and Minorah Tanna, Ps. 146, 17:2171 Peel 11:1177. 217.
3 But, on the other hand, the 8th Crete of Mammonides (the Singer, Authorized Daily Prayer-Book, London, 1915, p. 50) (the pagination is identical in all editions).

JUDAISM

by the prophet. After the Return, no more is heard of temptations or lapes in this direction. The spark kindled and fostered by the prophets had spread into a mighty flame. From the day of the Return on, that as far as the Jews were concerned, "the Lord was one, and His name was one." 

The belief, then, of the returned exiles in a supreme God, supreme not only for Israel but for the whole world, was a sign of the changing times. The idea of God as the father of the Jewish nation was no longer adequate. Linked to this belief was the corollary that God was good and His service obligatory on mankind, to each one of whom he was accessible as a father to his children. The insistence on the compassionate character of God, that element which was later called the middath hārādhāmin—resulted in reflections on the nature and origin of evil, sin, and suffering. These speculations produced a repugnance to ascribe to the Deity the authorship of any actions which seemed incompatible with His attribute of a merciful Father. Hence the exiles of Babylonia were somewhat allured by the Persian dualistic theology, which seemed to offer a more satisfactory solution of the riddle of the universe. It was not a desire for idolatry, not a negation of the Unity, nor the attraction of a new religion whose doctrine of a dominant religion that led Jews to regard the contrast of Ahura Mazda and Ahriman with approval. Their attitude arose from mistaken motives of piety, and from earnest shrivings after the hidden truth. Again and again Judaism has witnessed a recrudescence of the desire for a dualistic explanation of the problem of evil. Answers were not wanted from the prophets and teachers, yet new generations repeatedly felt the old difficulty in a newer and keener form. The book of Job and the Lamentations of Jeremiah declared vehemently for the Unity, and did not shrink from attributing evil to the Creator. The change of the Exile states explicitly (Is 457): "I form the light, and create darkness; I make peace, and create evil; I the Lord do all these things;" and this clear definition of God's activity left no escape from attributing to His omnipotence that which man considered evil. Yet a later age again felt repelled by this outspoken avowal and sought to mitigate its seeming harshness.

In the present time, the Jewish liturgy, in the daily morning service (see Singer, p. 35), contains this passage as an introduction to the service of the day. In the important section, the alinu (Ps 64), it is not apparently directed to the very principle to which it owes its insertion. For the passage now runs, "who formeth light and darkness, who saith peace, and我们也 get an idea of the change. This alteration is, of course, merely external, since "all things" is not translated as "evil"; yet the change is significant, and marks, no doubt, a revival of the hesitation to ascribe evil to God.

Closely allied to the problem of evil was the question of the prosperity of the wicked and the sufferings of the righteous, dealt with frequently in the later Psalms and in Job. In this, as in all the great problems, considerable fluctuation may be observed. The unity of God was a sheet anchor to which all held fast. His existence and divine providence presupposed a true solution to man's perplexities; if man could but succeed in finding the key, he would be able to unravel the mysteries. The certainty and dogmatism of later ages seem lacking during the Exile and in the two following centuries. From the Apocrypha it can be seen how much the minds of men were exercised and how little they were satisfied by the answers which they possessed. The Apocrypha, taken as a whole, is at least two centuries younger than the Return, and it is only since the earlier age evoked no solution of which the later was ignorant. While taking care, then, not to read into the former period the progress and development of the latter, we may at least infer that none of the philosophical ideas of the former escaped the notice of the later generations, and, therefore, of our own time. Our knowledge of the period immediately succeeding the Return is very scanty; but, as the centuries advanced, the period of Apocrypha, Maccabaeus (see TALMUD), and Midrash (q.e.), our material becomes more abundant, and it is practically certain that no great idea, no supreme solution of any of the problems which agitate the mind of man in all ages, would have disappeared from the intellectual heritage that our ancestors bequeathed to us.

From the 2nd cent. before the Christian era onward such a summary of the facts is unthinkable. The solutions of the problems of evil and suffering ran on two lines, in a way closely allied. Man was incapable of understanding the inscrutable ways of Providence. The prosperity of the wicked was unseemly or unreal even in this world; how much more in the world to come? It was only a superficial judgment that would convict the Almighty of injustice, by measuring His actions with an imperfect human norm. This line of argument, that of Job, Ps 73, etc., combines two thoughts—the insufficiency of human reason and the belief in the future world to relieve the inequities of this life. Ps 49 is difficult to interpret. On the one hand, vers. 12—vers. 14 EY) seems a clear indication of a future life, yet the last verse seems a pessimistic summary of the fate of humanity, couched in terms of a momentary almost recalling the language of Lucretius.

The corollary of the future world was not always employed. It was sometimes argued (e.g. Ps 129) that the fall of the wicked and the triumph of the righteous would be manifest even in this world; or that, as God had saved His people in the past, so would He deliver them from present troubles; the appeal to history is common in the post-Exilic prophetic. Coupled with this (e.g. Macc 9) is faith in the future. Some believe Moshe will save the Jews and frustrate their enemies, though the latter seem successful and the Jews doomed to failure. The different treatment of the problem afforded by Ecclesiastes will be discussed when dealing with the Apocrypha.

Closely allied to the problem of sin and suffering is the question of a future life (see, in general, art. ESCHATOLOGY, § 10, vol. v, pp. 376-381). At the early age of the Return, it is difficult to state precisely how this question was regarded. Judaism has usually refrained from defining with precision the details and circumstances of the future world, contenting itself with a belief in its reality. This belief is, however, firm and unshaken; the difficulty felt in later times was to deduce this belief from the Pentateuch. There can be little doubt, though direct evidence as to the antiquity of the idea is not plentiful, that the post-Exilic Jews believed in a world to come; whether they believed in a resurrection of the body or of the soul is a difficult point to determine (see art. RESURRECTION [Jewish]). With the future life was bound up a belief in future reward and punishment; it is hard, in the first instance at any rate, to conceive of a future state which will not differ from the present. If this world is to be one of trial and testing, the life beyond the grave must surely bear some relation to it, depending on the success or failure achieved during the preliminary stage. The latter must be correlated to the present. The sin of mankind, if not expiated, must surely be visited at a later time; and, if the sin, so also the merit.

The famous first chapter of Isaiah is formerly taken as the authority for a belief in vicarious atonement, and the idea of human Christology interpretation has always been repudiated by Judaism; the general principle has always been conceded (see H. D. Driver and A. D. Neubauer, The Fifth Third Chapter of Isaiah according to the Jewish Interpreters, Oxford, 1877). Thus the Kethuvim (q.e.) use the expression "my servant" to all those God-fearing Jews who were in exile; Kethuvim, p. 452-527), the exception of these commentators reflect traditional exegesis; their views do not merely represent contemporary opinion. The suffering of the Exile is regarded by them as an explanation
JUDAISM

for their sin; but this opinion, put into the mouths of the Gentile Kinsmen, was a form of amanu-ment at the persistence of the Servant under such unpunished persecution. The impossibility of a vicarious atonement is clearly stated in the refusal of God to become a substitute for the sins of Israel. "Whoever hath sinned against me will I blot out of my book." (Ex. 34:23.)

Similarly, although inherited punishment might be deduced from the Decalogues, the post-Exilic Jews relied on the teachings of Jeremiah and Ezekiel, which maintain emphatically the doctrine of individual responsibility (Jer. 25:19-2, Ezek. 18). The problem of free will (q.v.) developed more fully in later ages. In Derrnonacy the free will of man is distinctly stated, and it is not felt to be an encroachment on the divine prerogative of omniscience (De 13:22, 19:29). Man is free, and God is all-powerful. The dilemma does not seem to have troubled the post-Exilic Jews.

One of the most important elements in Jewish theology was the idea of cause and effect. The books of Kings, which were compiled after, or at least at the end of, the Exile, show very clearly that the writers were prone to link together events between which there was not, of necessity, any connexion, to find some religious motive in all affairs, and to account for history by the aid of theology. Thus the disaster to the village children who were eaten by the bears is narrated after the murder of Uzziah the prophet (2 K. 22:15). To the writer it was obvious that the former incident was directly caused by the latter; post hoc ergo propter hoc. The Exilic or post-Exilic Jews seem to have had no notion of secondary causes; the division of causes into material, formal, efficient, and final belongs to the later age of Aristotle. Consequently, their ideas as to divine agency were summative, primitive, and influenced their estimates of persons and events.

Thus the compiler of the books of Chronicles, who must have lived at least in the age of Alexander, cares little for political historical details to that of religion, and to a less extent this is true of the writer of Kings. If the early theory of causation be kept in mind, many difficulties, such as Hosea, can be satisfactorily solved. The influence of this theory on theology was great.

Both in Babylon and after the Return the Jews held tenaciously to the belief in their divine election (q.v.). Countless texts and teachings reminded them of the fact that God had chosen them to be His people, His witnesses, a kingdom of priests, and a people of light and truth to the nation of the earth. However much they might have fallen short of their duty, however much they might have neglected not only to teach others, but even themselves to remain faithful to their sacred task, God had not deposed them for ever from the office to which He had appointed them and their ancestors. Although the Jews had at times misinterpreted their position to mean a freedom to sin with impunity from punishment—a view strongly opposed by the prophets (e.g. Am 2:3)—yet they never felt themselves to have been superseded. Their mission was not taken from them. How deeply they realized their responsibility and at what personal cost they were willing to fulfil their obligation may be seen from the great domestic sacrifice which Ezra exacted from a willing people (Ezra 9:1-3).

It was no light matter to separate from beloved wives and children, yet it was obvious that, if the mission of Israel were not fulfilled, the Suffering Servant was not. The re-

The post-Exilic Jews, however, were wrongly attributed to the Jew, and as an act of remembrance and as evidence of callousness; it was in reality an instance of their devotion and their unswerving fidelity to the idea for which they had been called to be a light to the Gentiles. The words spread the Word of God to the uttermost ends of the earth.

At this point it becomes necessary to examine the relation in which the Jewish considered them-

selves to be placed with regard to Gentiles. Did they regard themselves as a separate nation among other nations? This question acquires fresh importance in later and in modern times, and seems to have been regarded differently in different epochs. It must be remembered that the Jews, being Semites (q.v.), must, in consequence, be regarded from the Semitic and not from the modern ethnological point of view. The idea of a unity of mankind is the idea of a unity of culture; the Semitic bond was community of worship. From the earliest times the principle of divine selection has been religious and not racial; otherwise there is no reason why distinctions should have been made between members of the same family; e.g., Abraham, not his father Terah nor his brother Haran; Isaac, not Ishmael; Jacob, not Esau. The twin brothers have the same parents and the same racial conditions, but even the primegeniture is ignored, and the spiritual heritage is given to the younger brother. A Moabite is one who worships Chemosh, an Ammonite one who worships Milcom, and an Israelite one who worships Adonai. It was not the possession of a territory, for nomads have no settled territory. It was not the ties of blood, for the descendants of Esau, though called the brethren of Israel, are yet not sharers of Israel's Abrahamic heritage. The strife of ideals is graphically portrayed as originating in the womb (cf. Gen. 25:24, and see Rashi's remark on the alliteration). The link between Semites is that of a common worship. At times this might acquire a racial sense, for inter-marriage with non-Jews, involving almost necessarily an abandonment of Judaism in the home and among the offspring, was prohibited. This prohibition, however, arose from a fear that religion would be affected, not from a sense of superiority of blood. The book of Ruth is a lesson in the misfortune of pushing this tendency too far; the people can be as worthy as the native, and from the Moabite woman David himself was descended. For the same reason a distinction was observed between the seven nations of Canaan, who were irremediably steeped in wickedness (a fact borne out by archaeology), and others, who, coming to sojourn under the wings of the Shekinah, would develop into true sons of the Covenant.

The effect of the Exile upon the Jewish community is summarized as follows by W. O. E. Oesterlicher and G. H. Box (Religion and Worship of the Synagogue, London, 1911, p. 31):

'For a large extent it denationalized religion by demonstrating that the religion of Israel could survive the destruction of the State, and was, therefore, independent of a national centre. It is true that the elements of a national organization and life still existed in the Jewish communities, long after the Babylonian exile, and even later asserted themselves in new national forms. The connection between race and religion, though modified, was not destroyed. Judaism, in fact, has never given up altogether the racial basis. In this, as in other respects, it has ever been inconsistent. When the idea of a community, organized for purely religious purposes and recognizing no distinctions of race, has attempted to translate itself into action from within organized Judaism, a reaction back to the national idea has invariably followed. And it was after every outward sign and vestige of separate nationality had been swept away by Judaism (a.b. 135) that national feeling and sense of solidarity became more intense. But all the same, it remains true that ever since, the widely separated and (in all other respects) distinct communities of Jews wandered over the world and find their one link of continuity and unity in a common religious idea. It has been pointed out, justly, that in principle, the separation between the State of the Church had already been effected in the Book of Deuteronomy. But in practice Deuteronomic principles met with the most serious obstacles in the way of their realization. The last of these disappeared with the destruction of the State. . . .

The first step to unite and enforce the lessons of the Exile was the
This universalistic consummation was regarded by all the prophets as the purpose for which the Deity was working. This must not be taken to imply that Israel was to lose its particularism. Zion is constantly exalted to a position of leadership, and this position is contrasted with the Oriental despotism, with which the kings and nobles were associated. At certain times, traces of a nationalistic spirit may be observed, especially in the Kings and in the Hasmoneans in persecution. By the waters of Babylon the Jews were, so to speak, driven into nationality because they felt themselves to stand apart from the empire wherein they dwelt. But it was not to a contrast between the two religions, not a cease of nationality, that sinned the Jews from their conquerors. The Northern Kingdom was essentially more nationalistic in proportion as it was less religious in spirit than Judah. Destruction and expatriation fell upon both kingdoms alike; but Judah survived. Samaria persisted. During the Maccabean persecutions the contrast between Jews and Greek acquired something of a national tinge. In Babylon, after the Return, the religion alone seems to have been the essential characteristic.

The dispersal of Israel began before the Exile; it continued after the Return. Exiles were scattered by trade and other motives, as well as exile, had removed many Jews from the land of their fathers. They were to be found in Assyria, in Egypt, in Hamath, in the eastlands of the Mediterranean, and even in remote and mysterious 'Sinim' (Is 11:11; 49:6). The presence of Jews in Gentile surroundings, differing from their neighbours in so many ways, must have stimulated, on both sides, introspection. The Jews were driven back on themselves, and they studied their own religion the more carefully. They would naturally look outside their own camp as well, and contrast the forms of worship and the beliefs that existed without. At a very early stage the influence of the Jewish Diaspora, as a missionary agency, began to be felt. Judaism became more and more universalistic. Cumulative inscriptions reveal an intense Jewish life in Mesopotamia; socially and religiously the Jews played a small part in the land of their conquerors. The other world power, Egypt, was also the home of a solid Jewish community. Doubtless many other colonies existed, for silence must not be construed as an argument. Until the appearance of the Assuan papyri, we had no evidence for Jewish life in Egypt at the time of the Return; we now, by one single papyrus, are largely to re-construct the history of the Jews of Yeb (Elephantine). The favour of the Persian governors protected them; they prospered commercially, engaging in various trades and holding property. They seem to have had a temple of their own, at least an altar with incense. They felt themselves in spiritual communion with Palestine, corresponding with political and religious officials. Their names are mostly Biblical, and they seem to have clung to their ancestral faith. It is unfortunate that most of the documents are of a business nature; more positive details as to religious life and thought would have been welcome. Doubtless the activity of the Jews prevailed in many other places, of which, at present, we have no knowledge. We can safely assume that, wherever they settled, a centre of established whences Judaism was diffused not only from Jerusalem, but also to Genile. Already Jeremiah, from the womb (Jer 1:5), had been designated as a prophet to the Gentiles, to preach a belief in God and the tenets of righteousness to the heathen world. The Temple and its sacrifices (see SACRIFICE) fulfilled a large part of Judaism after the Return as before the first destruction. It is often urged that the prophets deprecated the sacrificial
JUDAISM

system and were not over-seals for the Temple itself. This view is scarcely correct. The prophets frequently decry sacrifices, when brought in a wrong spirit or regarded as licences to sin. It is extremely doubtful whether they rejected sacrifices qua sacrifices. Similarly Jeremiah denounces those who make the existence of the Temple and the Ark of the Lord an excuse for sin. Jeremiah 3:12 is definitely clear: it cannot be regarded as otherwise than a denunciation of those who felt that the Temple was inviolate, and that its inviolability would safeguard them from the effect of their wrongdoing. The prophets of the Return favour the sacrifices. Malachi, speaking not merely of the present but even of the Messianic age, looks forward to a time when the minhag of Judah and Jerusalem shall again be pleasing to the Lord as in days of old (39). Haggai and Zechariah, so far from depreciating the Temple idea, reproach the people for being lukewarm in the work of rebuilding. There would have been no possibility for these admonitions had the idea of Temple and sacrifices been superseded. The rebukes are directed against those who are despondent or those who are apathetic. The first Return was followed by a certain amount of disorganization. Not until the advent of Ezra was the religious life firmly established. Ezra and Nehemiah were required to right wrongs among the tithe-payers and those who would defraud God of the sacrifices due to His Temple. There is no indication anywhere that the Temple and the sacrifices were to be relegated to the past. The Messianic idea seems, to some extent, dormant at the beginning of the Restoration. The term 'Messiah,' of course, occurs in early passages of Scripture, but in a purely literal sense of 'anointed,' i.e., king, or one appointed to fill a certain office (cf. art. MESSIAH, MESSIANISM). Temple and sacrifices are also never used in the Old Testament in the special sense to which it has been consecrated by Jewish and Christian usage. (J. Skinner, Book of the Prophet Isaiah, Chapters 40-66, Cambridge, 1886, p. ivii.) During the Exile the term is even applied to Cyrus, a Gentile ruler, because he had been chosen to be a divine instrument in Israel's release. What may be termed the Messianic idea is to be seen in two matters: (1) the redemption of Israel, from the first Exile; (2) eschatological prophecies of a Golden Age of universal peace and brotherhood. Under the influence of the Restoration, when the people and prophets alike were animated by optimistic hopes for the present and the more immediate future, the Messianic idea was not so strongly dominant. The settlement of the people and the restitution and spread of divine worship in its former home occupied general attention. The age of the Apocrypha saw a renewal of eschatological speculation and a development, and perhaps an extension of the Messianic idea. Prayer was naturally associated with the Temple ritual, and the phrase Mō adhê El (Ps. 74) has been taken to denote assemblies for worship, synagogues. Sermon prayers are recorded in Chronicles and Ezra, and Jewish tradition assigns to this period the institution of the Amidah prayer (Singer, p. 44 ff.; see, further, art. PRAYER (Jewish).) During the Exile the term is even applied to Cyrus, a Gentile ruler, because he had been chosen to be a divine instrument in Israel's release. What may be termed the Messianic idea is to be seen in two matters: (1) the redemption of Israel, from the first Exile; (2) eschatological prophecies of a Golden Age of universal peace and brotherhood. Under the influence of the Restoration, when the people and prophets alike were animated by optimistic hopes for the present and the more immediate future, the Messianic idea was not so strongly dominant. The settlement of the people and the restitution and spread of divine worship in its former home occupied general attention. The age of the Apocrypha saw a renewal of eschatological speculation and a development, and perhaps an extension of the Messianic idea. 3

3 For a detailed survey of this idea in its earlier forms see Skinner, p. lvii.

3 For a detailed survey of this idea in its earlier forms see Skinner, p. lvii.

3 3 See MÖ adhê El (Sifre, § 342, ed. M. Friedmann, Vienna, 1894, l. 44th, l. 2; ed. Boncompagni, Venice, 1546, col. 238). See also Meg. 179, where in an attribution to the Great Synagogue a man named is probably old, but has been redacted. Ezra instituted the public reading of the Law on certain occasions.

1 The Maccabean period.—After the Return the thoughts of the restored exiles were primarily devoted to religion, to the rebuilding of the Temple, and to the exposition of the Law. Considerable time elapsed before the idea of nationality asserted itself. At the outset the Jews were governed by Persian officials whose authority power was in ratio to their distance from the Court. Such a policy of decentralization was ill-adapted to consolidate a vast and unwieldy empire. In the great political convulsions occasioned by the conquests of Alexander and the strife between the Diadochi, the evil consequences of such a system of administration became manifest. There was neither a national idea nor an imperial spirit to foster a sense of unity or attachment. Unity would, in any case, be well nigh unattainable in such a heterogeneous collection of subjects, although patriotism might perhaps have been aroused by a strong personality at the head of the State. The local governor, not the remote and unknown 'King of kings,' represented to the country folk their actual master; with his overlord they had no concern. The feuds of cities would often result in civil wars, and remote districts would not feel the weakness of the central government; these internal conflicts affected the provincials, not the great battles of the Empire. The Jews felt themselves at first neither citizens nor Palestinian nationalists. The Empire was too large and Jewish Palestine was too small.

4 The Jewish people had not the extension which is shown us in the days of Christ. The foundations of the national life were laid in the Persian period, through Alexander's conquest of Asia to the Parthian dynasty. The Jews were scattered through Galilee—through all those sacred places so familiar to us, Nazareth, Cana, Bethsaida, Capernaum—we should have been among heathens. The name Galilee is the short for Galilee of the Gentiles, that is, the region of the Gentiles; the name clinging to those upland districts after the destruction of Jerusalem and after they had become predominantly Jewish. We should have been not only among heathens, but among barbarians, a population in which the original race of Syrian peasants, tillers of the soil, had been crossed with the wilder Arab blood which came in by infiltration from the desert. The people of the Jews we should have found only in Jerusalem and in the fields and villages around Jerusalem in a radius of some ten to fifteen miles (cf. R. Doran, Jerusalem Under the High-Priests, London, 1934, p. 11).

5 Nationality was produced, amongst the Jews, by purely political causes. The overthrow of Darius and his Empire at the hands of Alexander did not at first react on them. For nearly a century they were under the dominion of the Ptolemies, and the change in the political aspect was slight. It was not until Palestine was transferred to the Seleucids that a new era really began. To the spread of Hellenism and to the fostering by the Seleucids of Hellenic institutions and customs the growth of Jewish nationality is due. Antiochus was a much more zealous disseminator of Greek culture than Alexandria, but the Hellenic spirit of Antioch, more intense and aggressive, was correspondingly debased in quality. The Jews of Alexandria were not offended by Egyptian Hellenism, but the Syrian Hellenism of Antioch stirred up strife through the whole land.

6 The attempt of Antiochus IV. to suppress Judaism and substitute the worship of Olympian Zeus roused intense opposition. The Maccabees were supported with devotion by the Hasideans (see art. HASEDEANS, HASSIDEANS) and their victory secured the permanence of Judaism. The beginning of the conflict was a fight for religious liberty; the end resolved itself into a struggle for nationality. When once the triumph of religion was assured, the Hasmonaean leaders, in continuing the struggle for the sake of national expansion, lost the support of the Hasidim, who became their undisputed opponents. No circumstance is more
instructive in the annals of Maccebean history than the succession of the 'Pious' party, as soon as the aims of the Hasmonaeans became material. It is not difficult to discover the cause of this divergence. The gulf between Judaism and the Church was great; for not only religious beliefs but social practices were involved. Judaism, like Islam and other Semitic faiths, included under 'religion' many elements which elsewhere would fall under a different classification. This point, so important to remember, will be dealt with again in considering Ḥāṭiḥāṭ. The Ḥāṣdim could not tolerate many things, harmless in themselves, which would have been allowed to pass unchecked had religion not been at stake. The Greek dress and ablutions would not have inspired traits to Judaism. In Palestine, under Antiochus Epiphanes, all contact with the heathen became impossible. Things innocent by nature became actively noxious. The gap was complete, and could not be bridged. With this utter loathing for all things Greek, there came an insistence on all things Jewish; the antagonism revealed itself in numerous forms. There was no national feeling before; it was this religious antagonism that created it, perhaps on purpose to oppose Greek nationalism. The aim of Alexander was Hellenisation, and the aim of the Ḥāṣdim was a strong national feeling; Antiochus and his party unholy peers of a great ideal, and boastful of their national superiority, produced by their ex- fanaticism a corresponding national feeling on the part of Judaeans.

It was not among the pious Ḥāṣdim that this spirit was strongest; it was chiefly evident in Judas and the leaders. The Ḥāṣdim were connected with one object and one object only—freedom of worship. Beyond this they cared for nothing. Judas believed that there could be no security from a repetition of the persecutions unless the Jews possessed a State as well as a religion. Hence he favoured all institutions that tended to arouse national feeling. Here he parted company with the Ḥāṣdim, for his staunchness and his passion for independence were not shared by the majority of the Hasmonaeans. As high priest, the Ḥāṣdim were ready to accept him, and this was the beginning of the breach. Hereafter Caspar was for national and dynastic ambitions (Beraq, p. 117). In exactly the same way Jonathan and John Hyrcanus lost the support of the Pharisees, the spiritual successors of the Ḥāṣdim, because they combined the offices of high priest and king (see Ps.-Sol. 17:9). The Ḥāṣdim and the Pharisees despised all worldly elements. They cared not who ruled them or to what nation they belonged if only they could have freedom to worship God. The tendency may be often paralleled in Semitic history. The Khnawarij in A.D. 657, deserted the cause of Ali, the fourth Khalif, and made their battle-cry, 'No judgment save that of God.' At another stage, the government was, in the main, theocratic—that is to say, the priests and the exponents of the Law enjoyed considerable power; the book of Ezra mentions four branches of secular rulers (10:9)—princes, elders, rulers, and nobles.

The functions of these classes are not clear, nor is it possible to state with certainty that these different names imply different offices. It was a system of religious democracy, and thus constituted for, as Benner remarks (op. cit., p. 4), 'the Community at Jerusalem was no democracy of men, but of priests were included the high priest gradually acquiring more and more power, until, in the time of Jonathan and John Hyrcanus, the high priest was the head of the State as well as of the religious community. He was the president of the Assembly later known as the Sanhedrin.1 The Sanhedrin, composed of both Rabbis and nobles, possessed, up to the Roman period, the power of life and death. Even Herod, after the course of his career, was summoned to appear before them; and from this it will be seen that the authority and influence of this body of men was exceedingly strong in the Jewish State. The priests, in accordance with the provisions of the Pentateuch, were maintained by the people. They received their produce as atonement sacrifices, and their salaries, and were regarded with reverence on account of their sacred calling. They were treated with considerably more respect than the secular officials by all classes of the population.

On the first day of the month Shavuṭ, 444 B.C., Ezra the scribe and Nehemiah brought out to the people the Law of Moses (Neh 8), and read its contents to the assembled multitude. From now onwards, under the influence of Ezra, priest as well as scribe, the study and observance of the Law were prosecuted with ardour. From his days the scribes, or interpreters of the Law, came into existence. The canon of the whole Bible was most probably formed later (see further, p. 594), in the time of Akiba (A.D. 135); on 'Aqiba himself see art. AKBIA BEN JOSEPH, vol. i. pp. 274-276). The Pentateuchal legislation pronounced the people, moulded their lives. At the Torah spread, the influence of the scribes increased in proportion. Not only in Palestine, but wherever the Jews had settled, the zeal for the Law accompanied them. In Syria they made Hellenistic Judaism (Stukenbrok, B.V. VII. iii. 3). In Egypt by about 260 B.C. the Septuagint translators began their work, and the Bible was made accessible to the Gentiles in their own tongue. The various Aramaic versions, known as Targumim (see art. TARGUM), are of later date and were made for Jewish use. The Septuagint seems to have been intended, according to the account of Aristobulus, for non-Jews. The Samaritan community accepted and received the Pentateuch about 430 B.C. Their reception differs in certain respects from the Jewish or Massoretic text (see, further, art. SAMARITANS).

All these facts show how the knowledge of the Torah was becoming diffused. It is safe to assume that many of the other Scriptural books circulated freely, as well as the Law. For the intense devotion to the Law and to Judaism the scribes and priests, the successors of the prophets, are largely responsible. The strength of the religious spirit appeared in various guises, not always uniform. Some began to see an Irit in the Law, and though Jews were brought face to face with the fascinations of Greek culture, a Hellenizing party grew up. Originally, no doubt, this party desired to adopt all that was good in foreign culture while remaining steadfast to the Jewish solid principles of their faith. In course of time partly by compulsion and partly by choice, the Hellenizers succumbed to the allurements of their Greek friends and made jettison of their religion to save their material prosperity (1 Mac. 10). There were not wanting, doubtless, among them those who did not prove utterly faithless, but the real resistance came from the uncompromising opponents of Hellenism. From these the party of the Ḥāṣdim developed, men zealous for religion and for religion only. These were the mainstay of the forces led by Judah; they were pioneers of martyrdom, ready to die not merely for the broad principles of their faith but for the absolute observance of the Law. They were, at first, prepared to suffer death rather than defend themselves if attacked on the Sabbath. After their breach with Judas, the Ḥāṣdim pass away. The term disappeared, but the spirit survived, to reappear under the guise of the Pharisees.

After the fixing of the text of the Law, the functions of the scribes centred on the exposition of the precepts and commandments, and the conservation and teaching of the traditions. These traditions, called the Oral Law (Torâh shel beit el peh), are believed by orthodox Jews to have accompanied

1 See J.S. V. [1894] 593.
the Written Law (Torah shelikhitah), and a tradition of Mosaic authority is called Halakhah (Masheh)
and Midrash (see, further, arts. LAW; Jewish). The Written Law (Torah shelikhitah) contains all of the bible, but the
details are not prescribed (cf. above, vol. p. 440). The object of the scribes (rav) was to
teach the people how to follow the requirements and laws that were revealed to them.
The absence of such scribal teaching had been a persistent and significant cause of their
teaching had been concentrated on the Written Law and of idolatry in earlier times; the work
of the scribes consolidated Judaism and gave it stability and endurance through the later ages.
The Torah was not a system of laws to be followed
was adopted by or applied to those who were careful to observe the Written and the Oral Law
(see, further, art. PHARISEES).

The letter of the scribes and Pharisees. The enormous moral and spiritual effect of the
was very intense, and attention is focused on
their so-called 'hair-splitting.'

(1) This mistaken attitude is due to ignorance of the true

(a) Judaism includes many civil elements under the head of
many of the actions and prescriptions referring to civil matters had to be decided by
the religious teachers. Similar legal arguments are found in every ancient legal code. Every system must
necessarily contain some elements of formal expediency, if it is
survived. It is not uncommon to find that
had been added to their logical conclusion.
Moreover, a legal fiction was often designed to
preserve the memory of a principle, while alleviating the
special hardship of a particular case. If the fiction had
become too difficult for the community (ghéshar), it
must be removed, in order to prevent it becoming a
law in itself, if not, it is considered, society and
personality; he was a civil judge as well as a religious
teacher. It is not fair to confuse the two functions and
ignore that the result of the deceptions of the
sometimes easy to draw a line of demarcation. Further,
the statement is a generalization. There was nothing
what was regarded by the people, to secure homogeneity of practice.
It is obvious
the vague prohibition of work on the Sabbath would lead to
public scandal and Sabbath-breaking, if the interpretation of
work were left to individuals. It was by specification and
precise rubric, 'Pirahah was achieved.

The Sabbath was not merely a day of work. It was a day of

A. At a matter of fact, the circumcising
of activities in the material sphere impelled a high
sense of rest and consecration. This statement is capable of
simple proof. On the whole, in the course of time, the
Sabbath laws have not been relaxed.
The tendency has been in the opposite direction (Pahadim). Consequently the observance
of the Sabbath must be more rigid today than in the days of
the early scribes. Hence the Sabbath is to
be anything but a day of true delight, awedness and
sacredness and consecration.

And this delight can be realized only
within. No non-Jew is competent to describe it, for
those who have not experienced it for a day or two can never have enjoyed it.

The Sabbath is to the Jew a day of beauty, a day of
peace, a day of good cheer, not a day of restraint;
It has a positive, not a negative, character. Only
who can work so long a day, exercise the
and the undercurrent spirit, tend to
by prohibition exactly specified by the codes, but which is
inevitably, obviously out of keeping with the Sabbath
to the Sabbath. Plans are circumvented and are observed in
the letter and not in the spirit, then the restrictions are felt to
be irksome. But the fuss with the Sabbath wavers, not
the scribes. The result is that the breach of the letter
soon follows that of the spirit, and the observance of the Sabbath is
abandoned. Those who keep the Sabbath do not suffer
a perturbation, but they are often falsely imagined: those who see only
the restrictions, and not the underlying spirit, tend to
process of time, to lose the Sabbath altogether. It is therefore
those who do not keep the Sabbath that find it a burden.

10 Many authorities T. Haran holds that the Letter of exercises in logic and dialectic in which every
hypothesis is examined. Benjamins and Simon often correspond to
John Doe and Richard Roe.

It must be observed that when the Sabbath contravene two ways of
serving God, 'from love' (nefesh tahara) and 'from necessity
(tripple), and exalt the former, they are practically in
unconscious agreement with this saying. Both involve
and implies disinterested service, performed for its own sake. According to Antigonus and the Pharisees in

question of free will. The Pharisees held that man's freedom of action was limited. They
subscribe all to providence and to
God, and yet allow that as is right, or the contrary, is practically in the power of men; although fate does cooperate in every action... But the Sadducees take away fate entirely and make God the only agent of what is evil; and that to act as if good or as evil is at man's own choice and not determined by anything ascribed to the one or the other will" (Josephus, BJ n. vii. 11).

It would be wrong to imagine that the whole code of life, especially the laws of ritual purity, prescribed by the Pharisees, was not intended by them to have an impact on all alike. "The 'am ha-āres (ב', or multitude, was free from most of these provisions, which were observed only by the 'hōherīm, or 'associates. This has been conclusively shown by A. Bickler (Der gallitische 'Am-ha Ares, Vienna, 1906). Nor was the antagonism of Pharisees and 'am ha-āres general, as is often thought. Had that been the case, the Sadducees would have been more influential and popular.

A third sect existed among the Jews, the Essenes (ג', or whose name is inapplicable as the sect itself. Josephus (BJ n. viii. 242) gives a long account of their manner of life and forms of belief.

They were extreme ascetics. They rejected pleasure as evil, owned property in common, and recruited their numbers mostly through adoption of orphaned and the reception of younger brothers than by marriage, which, however, they did not entirely avoid. Their piety was extraordinary, and they indulged in religious fasting. They were noted for their fidelity: whatever they say is finer than an oath.' They devoted themselves to the study of the Law and the sacred writings and to the study of nature and medicine. They believed in the corporeality of the body and the immortality of the soul.

Their sect was based on a desire to live in isolation and to maintain the purity of the body. Their asceticism was an incentive to right conduct. Many of their customs give evidence of some foreign connection, and it has been suggested that they derived some of their ideas from Gnostic, Pythagorean, and other sources. It is clear, however, that they formed but a small body of men, and that they could not have been a serious menace to the life of the people. Their influence and the Temple ritual was a sufficient cause for separation. They were a religious and ascetic people, which would not appeal to a multitude. Most important feature in connexion with the Essene is their mysticism. For their influence on the Rabbinic Sages see Rambam.

The oldest Jewish schismatics were, of course, the Samaritans (ג'.). After the fall of Samaria, the king of Assyria introduced the Inmigrants from Babylon, Cushan, Ov, Hamath, and Seepharvaim to replace the departed Israelites (2 K 17:24).

These settlers partially adopted Judaism, serving the God of Israel, but not entirely abandoning idolatry. In 538 B.C. they were joined by Jewish exiles from Jerusalem who had quarreled with Nehemiah (Bek 13th; Josephus, Ant. n. vii. 2, v. 7). The Essene sect was founded about the same time. Being excluded from worship at Jerusalem, they desired a temple of their own. The high priest, who represented the high priestly blood, had married a daughter of Sambaitat, the governor of Samaria. For this he was deposed from office by Zerubbabel and, and he therefore urged his father-in-law to cause an altar to be erected in Shechem. This was done, and the leaders and the people of Shechem confirmed the relations between the Jews and the Samaritans. The Sanhedrin of the Samaritans sided with Antipatros (Josephus, Ant. n. iii. v. 5). Later, John Hyrcanus destroyed their temple. They possessed the Pentateuch in a somewhat different recension, which they wrote in their own characters, resembling the ancient Semitic series, but none of the Prophets, whose inspiration they did not recognize.

In addition to the books of Daniel, Chronicles (in part), and Ecclesiastes, and the works of the historian Josephus, other sources are available for information about this period. The Apocryphal writings furnish contemporary, furnish abundant material, especially for a study of thought and religion.

In using evidence from the Apocrypha, it must be borne in mind that the Apocrypha is not a part of the Bible, and that the author of any such book is not an eyewitness of the events described. It is the work of some said from orthodoxy. It does not follow that orthodoxy changed between the composition of the Apocrypha and the formation of the canon. However, the Apocrypha, and the formation of the canon. In some cases, books, once orthodox, have become Apocryphal, and in others, the text of the Jewish, non-Christian, or secular interpretation.
Judaism has never adopted this idea, care must be exercised in studying those early allusions, and in accepting their testimony as typical (but see the theory of S. Levy, The Doctrine of Original Virtue, London, 1907).

The existence of an active power or powers for evil also comes into prominence, especially, though not exclusively, in the Apocryphal writings (cf. art. DEMONS AND SPIRITS [Jewish], vol. iv. p. 612ff.). Not only such books as Enoch, which are full of demonology and angelology, but even Wisdom (22:1), contains such allusions: ‘By the envy of the devil death entered into the world, and they that are of his portion make trial thereof.’ Perhaps this re-emergence of demonology is due to the old remembrance of the Deity. Thus, Jubilees, in describing the temptation of Abraham, makes the agent not the Deity, but an evil spirit, Mastemâ (17:3). The later Chronicles of Jerahmeel omit the incident entirely. Tobit also contains references to the devil (6:58) and to demons.

The pessimism of Ecclesiastes represents one trend of thought, probably Sadducean; Wisdom (12:12) another:

‘God alone is good; neither delighteth he in the living perish: for he created all things that they might have being; and the generative powers of the world are healthcare, and there is no portion of destruction is there; nor hath Hades royal dominion upon earth.’

The Pharisaic teaching was predominantly optimistic, and the Rabbinic writings are full of the sentiment that God is good: ‘the observance of the Law was a joy in itself.’ It was good because it was the handiwork of the Creator, who saw that it was good. Probably the pessimism of the Essenes, as much as anything else, contributed to their disappearance. The fatherhood of God was one of the keystones of Rabbinic teaching.

‘The latter end of the righteous he calleth happy; and he varrieth that God is his father’ (Wis 2:24).

The immanence was always upheld, and the transcendental nature of the Deity was held to correspond with, not to contradict, His nearness to man.

The divine fatherhood was one of the answers to the problem of suffering and a protection against the assaults of evil.

Two books of the Apocrypha, Ecclesiasticus and Wisdom, belong to the category of didactic literature, but the first, in the latter, is the counterpart of the OT Wisdom literature. With the Rabbis wisdom was often lauded, and its great powers are often enumerated, but it is symbolic with the Torah, the wisdom of the Apocrypha ‘wisdom’ implies knowledge in a wider sense. While ‘the fear of the Lord is the beginning of wisdom,’ general secular learning is sometimes meant. Holiness and perhaps Gnostic influences may be held responsible to some extent, for the growth and spread of these ideas.

Wisdom, as in the OT, is personified. She save Adam after the Fall, Lot from Sodom, Jacob from Esau, Joseph and Israel from Egypt; in fact, she is God’s instrument (Wis 10:9). By the wisdom thou hast made man’ (69); Wisdom is ‘the aridutus of all things’ (77). Wisdom is associated (60:11) with the ‘Word of God,’ though the Logos theory is not developed very far.

Perhaps the personification of wisdom, of course, can be paralleled in Proverbs, as in 8:3, may be regarded as the first stage in the growth of angelology. Except in the definitely Apocryphal books, angels seem to have been used as poetical images, and regarded from a figurative point of view. In Jubilees, however, and in the Ascension of Isaiah, very advanced angelology — 9 — division into groups, and rules by grades; of this kind of books are later in date, and the references belong to Christian rather than to Jewish Apocrypha.

Perhaps the most distinctive feature of the Psalms of Solomon is the central position occupied by eschatological and Messianic ideas. In no portion of the Apocrypha is a clearer view presented or a more spiritual hero portrayed. The title ἡματος [here, perhaps for the first time, rhymed epithet of Messiah] is used, not later known as the ‘birth-pangs of the Messiah’ (ḥabbaMaššiah). The deliverer was to be descended, but not supernaturally, from the house of David, the Davidic relation being a link with the Messiah of the prophets. He will be so described as an eternal, but under God; he will be king and prince; he will destroy ‘proud sinners’ and break up the rule of the Gentiles, i.e. the Romans. He will restore the kingdom and gather in the outcasts of Israel. He will rule the nations and peoples in holiness and wisdom, and he will be known for his justice.

The era of universal peace and brotherhood is not clearly indicated as by Isaiah; there are, however, distinct allusions to it: ‘There shall be no more uprightness in his days, nor will he reign by means of war (Psa. Sol. 17:26); ‘Blessed shall they be that shall be in his days, in that they shall see the goodness of the Lord’ (18:9). There shall be perfect performance for the generation that is to come’ (18:11). The blessings are not to be restricted to Israel; the converted Gentiles shall share them. There is no reference to judgment, resurrection, or immortality.

Kyle and James (p. iv) quote an earlier parallel from the Alexandreine Sibylline Oracles in the later 4th cent. B.C. Here (Orac. Sibyl. III. 923-960) the Messiah (called ‘King’) is sent by God to make war to cease from the whole world, punishing and rewarding, not in virtue of his own power, but by the authority of God.

The views as to the Messiah were various and by no means uniform. Most described him as expected by some, spiritual by others. In such a complex situation it is difficult to get a synoptic view. In 2 Maccabees the Messiah element is measurer; in 2 Esdras, on the other hand, the length of his dominion is specified as 400 years. Enoch associates the Messiah with the future life and reward and punishment (chs. 48-51, 90, Charles, ii. 216 ff., 259 ff.), and in the later Apocryphal books the idea is developed. Enoch’s Messiah, ‘the king (Heb. שטוח), in a future life (174-28), has no place for a Messianic personage. The absence of this idea is a distinctive mark of Sadducean origin.

The Sadducees accepted religiously only not lacking in devotion to the Torah; their observance was perhaps less extensive, but not less fervent. They rejected the sabbath, or fence, which the Pharisees erected. They did not insist so strongly and frequently as the Pharisees on the necessity for observing the Law, because this was taken for granted.

The Sadducees had their traditions as to the way the Law should be carried out in practice, but they refused to make the authority of the scribes absolute. It is sometimes said that the Sadducees were analogous to the modern rationalists. The comparison is not a happy one; it would rather be to those in the eighteenth century who adhered to the church of the fashionable classes, reassembling any religious claim upon them outside the routine of conventional observance. They were opposed the fantastic ‘reformers,” as they called it, of the followers of Wesley” (Bryan, p. 155).

A stern judgment is threatened, ‘awfully and swiftly,’ upon those in ‘high place’ who have not kept the Law (Wis 6:4). The aim of the book of Judith, the composition of which has been assigned either to the age of the Maccabees or to the period following it, is to exalt the Law. The Sabbath and festivals are mentioned (8:10), firstfruits and tithes (11:2), circumcision (14:2). Tobit is similar to Judith in enjoining strict adherence to the Law; the dietary laws, firstfruits, charity,
prayer, and repentance are specially emphasized. Baruch, Jubilees, and the Psalms of Solomon all 'magify the Law and make it honorable.' In Ecclesiasticus, on the other hand, the function of the scribe is that of a philosopher rather than a religious instructor (39); he is an exponent of ancient lore, of sententious doctrine, rather than of statutes and ordinances. The principle that is lighted on in the light is self-evidently a true one, that the Commandments were to be carried out; and the maxims and wisdom of Ecclesiasticus were intended, doublets, as a complement to the essentially practical teaching of the other books.

The attitude towards the Law may be paralleled by that adopted towards the Temple and sacrifices. No finer tribute to the ecclesiastical system can be found than the magnificent eulogy of Simon, the son of Onias, the great high priest, the type of the Kohén Gedéz, in Sir 50. Great as was his well-deserved popularity, one feels that some, at least of the praises are intended for the office rather than for the personality of the occupant. Significant: is his 8 motto, 'Upon three things the world is based: upon the Torah, charity, and the practice of charity' (Abdót, i. 2; Singer, p. 184; Charles, ii. 691). His disciple, Antigonus of Socho, the founder of the Saducees, is hardly likely to have inculcated a discipulenum spiritus, having been the pupil of so distinguished a high priest. Ecclesiasties, like Ecclesiastes, makes no great point of the sacrificial system; like the Law, it was taken as a matter of course (see also Jdt 19).

Finally, reference should be made to an appreciation of natural phenomena, just as in the Psalms and in Job the pietistical genius was impressed by the beauty of the heavens. It is reechoed in such stirring passages as Sir 42f.

Little has been said hitherto as to the domestic practices and personal religion of the Jews. These subjects can be dealt with more conveniently in the next epoch.

3. To the completion of the Gemara. — Isaiah had warned his countrymen against appeals to foreign powers for aid. The unbridled passion of such alliances scarcely concealed the sullen but effective fetter of vassalage. Judah, flattered at the idea of being an equal ally of a mighty monarch, was, in point of fact, reduced to a dependent state. The very name of the Exodous, the final political error was committed by the Hasmonaës, in seeking the aid of Rome. Wherever the eagles once set foot, the country ultimately fell under Roman rule and was deprived of every vestige of independence. It may be argued that, in any case, Judaea could not have remained unnoticed, but must inevitably be drawn into contact with the great world power. This is true; but, had Judah not broken with the Hasdám, it is possible that dissolution of the Jewish State might have been accomplished more peacefully. The pious party—whether Hasdám or Pharisees—were supremely indifferent to the personality of their civil rulers and the political system by which they were governed. So long as freedom of worship was secured, they were ready to 'render unto Caesar' his due. The Maccabean princes, on the other hand, although they coveted territorial and political independence, could not fail to pre-

2 See Montefiore, Judaism and St. Paul, p. 46.

3 See above art. Festivals and Fastes (Jewish), vol. v. pp. 879-881.

4 The influence of Roman government on Judaism was manifest in three ways: (1) the functions of the Rabbis became more exclusively religious than civil or political; (2) the unity of the Roman Empire stimulated the growth of the Didascalia; (3) the Roman persecutions had the most fruitful epoch of internal religious expansion and constructive development in Judaism. To begin with, the civil authority of the Rabbis was diminished by curtailing the jurisdiction and field of the Jewish courts. The right of giving decisions in questions involving finance was abrogated in the time of B. Simon ben Shetah, during the reign of Alexander Jannaeus; the power of inflicting the death penalty was suspended forty years before the fall of the Temple (Jer. Sanh. 18c, inner col., line 24 of first perek, ed. Krotoschin, 1865; Schwab's tr., Paris, 1888, p. 229; see Crimes and Puni-

5 On the functions of these officials see Jfb ix. (1905) 541 f.
JUDAISM

the Jewish formula of marriage, ‘Thou shalt be my wife,’ not the customary Egyptian declaration, ‘Thou shalt be my maid.’ Philo, de Vita Mosis, ii. 137 [Manzey]; ed. L. Cohn and P. Wendland, Berlin, 1902, iv. 209f.; tr. Cohn, Breslau, 1909, i. 352) bears testimony to the strictness with which their descendants kept the Sabbath, abstaining from all manifold work, neither kindling fires nor carrying burdens, nor in any way violating the Pluriasic sabbath. In Syria, too, Judaism flourished and spread (see Josephus, BJ v. iii. 342). From the Babylonian business documents of the great commercial house of Marash and Sons, in which documents many Jewish names occur, Samuel Damesh has shown how great was the zeal for Judaism existing among the Jews in Mesopotamia (The Jews in Babylon in the Time of Ezra, London, 1910).

Judaism had also planted itself firmly and extensively within the Roman Empire. The allusions of the classical writers are instructive. Already before the time of Pompey’s conquests, Jews were to be found in the Italian cities (cf. Gnaecet, Hist. of the Jews, Eng. tr., London, 1891–92, ii. 67). Josephus, War, ii. 194, brought to Rome as slaves, were freed by their co-religionists and added strength to the Jewish community. The hostile, or at all events contemptuous, attitude of Horace, Tacitus, and Suetonius was due to the innate pride of Roman race rather than to Jewish blood; it reflects a superficial popular verdict, not a judgment of matured reflection. But such phrases as ‘in qua qua pars promotus, (Javanis, ii. 246) are illuminating for the purposes of our study. They show that Jews brought their worship with them in their wanderings, and that their synagogues were numerous and well known. Caesar, like Alexander and Seleucus, founded Jewish communities, which, in time, ramified through the Roman empire in its provinces, that Jews were worshiped in Rome, 4 Augustus decreed the inviolability of synagogues, and exempted Jews from appearing in the law-courts on the Sabbath and on Friday after the ninth hour. Judaism was indeed a missionary religion. The disgust at the hollowness of the old faith was causing many cultured Romans to waver in their allegiance to the gods of the Capitol, and a desire for the truth was making itself felt. The Jews were an open sect, and the public were permitted to hear the proselytes explaining their beliefs and teaching the truth of their religion. The Jews of the Roman Empire were divided into two classes, the devout and the proselytes. The devout were those who had left their own country and had settled in Rome. They were called the "Jewish Jews," and they formed the nucleus of the Jewish community in Rome. The proselytes were those who had adopted Judaism as a secondary religion, and they were known as the " converts." The proselytes were a large and influential group, and they played an important role in the development of Judaism in Rome.

Their position was sufficiently important to require a special treatise of the Gemara, containing laws, etc., affecting them. This treatise is Mase. Berinim and belongs to the Babylonian Masehshatoth. The proselytes of the gate, gire haška, haška, and gire haška, see Di 5° 14, 12. Ab. Zara, 645, who accepted part of the Torah, that is to say, the Seven Noahian commandments, for which see Di 6° 242, are distinguished from the gire haška, haška, proselytes, for whom a blessing was added to the Amidah (see Singer, p. 48). The translations of the Bible into Greek, by Aquila, and into Aramaic (the Targum Onakadu hag-go'), are ascribed to the proselytes. Queen Helena of Adiabene, her son Zechariah, and King Monobazus adopted Judaism before the time of Claudius (Josephus, Ant. xx. ii.); Flavius Clemens, the cousin of Domitian, died a martyr for his adopted Judaism in A.D. 95, his wife and fellow-convert, Flavia Domitilla, being exiled to Pandaia (see Dio Cassius, lvii. 14; and art. PROSELYTES).

As a rule, Rome did not persecute for religious motives, preferring to overlook nonconformity wherever possible; but with the spread of Judaism and of Christianity the refusal to sacrifice to the Emperor or to look on him as divine was regarded as treason, and punished with death. The private and public life of Rome was so closely associated with idolatry that intercourse between Jews and Romans was very rare. Every civic or social act or custom was allied to idolatry in the Jewish mind, and the pouring of libations to heathen deities. The refusal to participate caused the Jews, and the Christians too, to be regarded as atheists and as unseemly hosts of mankind. It is true, the private observance of Judaism did not become a matter of public regulation; but the public observance was a matter of public concern, and the refusal to participate was regarded as a day of black misfortune to Israel, no less disastrous than the day on which the Golden Calf was set up (see Misha Shabb., i. 4 f.; Bab. Shabb. 13a, 11b, etc.; Tos. Shabb. i. 16; M. S. Zuckermandel, Passowale, 1898–82, p. 111, i. 2). This is, doubtless, a verdict of poesy on the consequences of interfering with the practice of a religious custom in the Roman world. The Haggada for Passover, or order of domestic ceremonies, with which this festival is observed, is saturated with customs copied from Roman etiquette.

The menu, ab uno usque ad mala, is represented by the hard-boiled eggs, eaten just before the meal, the brenthites (apples soaked in wine and spiced); the piece of unlevanted bread, omodi, omodi, omodi, "after the bread," or perhaps abi omodi, "during the meal," takes the place of the usual dessert of apples for a special occasion on this festival. The meaning of "lending" at the meal is that of the triclinium; the prescription of four glasses, reminiscence of the proportion of the number of glasses and proportion of wine by the Aristotle on Ethics (see Her. Ol. 61 xii.; Hec. Furtw. v. 7, 20). The most instructive comments are corresponded to the number of letters in the name of the chief guest. You would obviously represent the Numerals on the day of the wedding of the sons of the Kings of the Haggada (Dio Cassius, vii. 4).
Another Sadducean sect was that of the Dositheans (see art. 'Dositheus' in JE iv. [1903] 643 f.). The Ophites and Nazorean serpent-worshippers, who were mystical sects that arose in the Roman Empire, were also called ‘heretics’ by orthodox Jews. The Christian Church, however, was a more fruitful soil and actually ‘lent’ learning to Palestine, so that Hillel ‘brought’ Babylonian wisdom to the land of Israel. Just as in the case of Christianity, the growth of the Church was less a source of strength than of weakness. When Judaism spread abroad, sects arose within.

A contrast has often been drawn between the Jews of Egypt and those of Mesopotamia. On the whole, the latter country was more favourable to the growth of the spirit of Judaism. Babylon was the birthplace of the larger Talmud, undying in its influence on Judaism; Egypt is the home of the Septuagint, which was superseded by Aquila’s version and became the heritage of the Greek Church, as well as of Philo Judeus (q.v.), whose philosophy, though important in its day, cannot for a moment be compared with the teachings of the Babylonian Rabbis in its importance for Judaism. The Jewish communities of Egypt seem to have fluctuated and disappeared periodically, at all events, when the Arab general, Amr ibn al-A’as, conquered the country (A.D. 640-642), no mention is made of the Jews among the religions enumerated in the treaty of peace with the Munkatsis. The Jews of Egypt and of Mesopotamia were mostly orthodox; but sects, more or less heretical, manifested themselves in Palestine at an early date. Justin Martyr enumerates (Dial. cum Trypho. 80 [PG vi. 660]), besides the Sadduceans and Pharisees, the Gnostics, Merismos, Galileei, Helleniani, and Baptists. A. Clement of Alexandria also mentions (Strom. vii. 15 [PG ix. 924]) the existence of Jewish sects. Against the exact dates of these sects—a term which at certain periods included Jewish Christians—a special combination, drawn up by Samuel the Younger (early part of 2nd cent.) at the request of Gamaliel, was added to the Eighteen Benedictions. The Jewish Christians, a Sadducean sect, were descended from Simon b. Boethus of Alexandria. The Cairo Genizah has recently furnished documents of an unknown group of sects. These have been edited by F. S.ра (Documents of Jewish Sects, i. Cambridge, 1910), which attributes them to a Zadokite sect at Damascus founded in Macabean times.

This hypothesis has been disputed, however, by many of the scholars who have devoted themselves to the book. See Israel Levi (REJ lii. [1911] 162-192); M. J. Lagnum (EB, new ser. ix. [1912] 213-240, 351-360); W. Barclay (Leiterster für hebr. Bibel, vol. xi. [1911], ii. 1, pp. 23-35); G. Margulies (Attestation, 30 Nov. 1911, Esp. viii. ii. [1912] 469-477, iii. [1913] 121-225), who believes that the Zadokites regarded John the Baptist as the Messiah and Jesus as the teacher of righteousness; R. W. Charles (ib. 735 ff.), who regards the book as the composition of a party (not a sect) originating among the Sadducees, but closely related to the Pharisees, and writing between 18 and 50; and A. Bieber (JQR, new ser., iii. [1912-13] 129-135), who regards the book as coming from the period preceding the Karaite schism. At all events, this sect agrees with the Zadokites of Kirjath, mentioned in the Tishbi, in rejecting Rabbinic ordinances in several particulars, notably divorce and the regulation of the calendar.

1 See last line of Saba, 446, and Rashi, loc. cit.
2 These sects were known to Eusebius (EB, vi. xx. 6) from the work of an older author, Hegesippus; and Epiphanius (HA, xvii. 27) was able to quote the Heron, to which the name of 'Herodes' (Jer. Jer. 3rd rev. iii. 4., 6) is not to be confused with the Essenes.
5 Inter alia, they were strict Sabatarians and did not believe that representing the messiah (Saba, 1650).

VOL. VII. — 38
JUDAISM

die iben und höchsten Kultusbehörden vorstanden, ist es selbstverständlich, dass auch religiöse Anerkennungen durch diese Repräsentanten verleihen wurden. Die disziplinierte in der Schule gelehrt, wurde durch diese zum Gesetz erhoben. On the other hand, the law... (The Canon of the OT, London, 1911, p. 397, note 1). The evidence is quite insufficient to justify us in regarding the "Gentiles," a term which may indicate either secular books or prohibited heretical scriptures, and, probably, the Gospels, means had to be taken to protect the people from ascribing inspiration to documents that had no claim to such authority. "Apostolic books are called 'Genizai,' 'hidden away,' books preserved as ancient but not adapted for public reading... (Ib.). This word "Genizai," the Heb. root of "Genizah," meaning books and 'proven,'... in spite of the similarity in the derivation of the word, from Apostolic. The name denotes doubt rather than final rejection... (Ib., p. 187).

It is said that the fierce fight raged about the inclusion of Canticles and Ecclesiastes, the former because the allegorical interpretation was not universally adopted, the latter because of its Sadducean tendencies. The strength of Akiba was excited in their favour, and the books received the stamp of canonicity, i.e. they were said to "deify the hands." This expression is indicative of the care for books insculpted by the Rabbis. In order to ensure safety and to preserve the scrolls from careless handling, they were declared to be "unclean" (see the Mishna, treatise Tishkui).

The Jews, at the fall of the Temple, may be divided into three groups, each of which may be typified by a representative hero... (Ib.). There was the party of extreme nationalism, the party of the zealots, who repeatedly repudiated Rome. An example of this class was Akiba, who supported the revolt of Bar Kokhba against Hadrian. The zeal... of his work as a Halakhist was nearly lost through the terrible persecutions and wholesale exterminations that followed the suppression of the revolt which he had encouraged and aided. Akiba stood for nationalism, but he stood for the Halakhah as well, and in this respect he differs from the zealots and from Bar Kokhba, whose aims were almost wholly political... (Ib.). AKIRA BEN JOSEPH, vol. i, pp. 274-276. (2) At the other extreme stood Johanan ben Zakki, who represents the old Hasidic idea in its purest form. He and his followers concentrated on the Halakhah, and were indifferent to politics. Johanan, like Jeremiah, was denounced as a traitor, because, like Jeremiah, he realized the hopelessness of resistance, and saw that hope lay only in submission and in strict attention to the law. He was subjected to persecution as Jeremiah was, and had to escape from Jerusalem in a coffin. (3) The third party may be typified by Josephus (p. 62), who, though equally eager for the independence of Judaism, believed in friendship with Rome. In this, but in this alone, he is reminiscent of the Hellenizers under the Maccabees and the Sadducees.

JUDAISM 585
dees. As regards nationalism he stands at the opposite extreme to Akiba, Johanan being perhaps midway between the two, though nearer to Akiba. Administration was what was laudable in Roman institutions was not confined to the Sadducees. Paul boasts with pride of his Roman citizenship, and, almost in the same breath, of being a keen Pharisee. Even if Paul was less conscious of the pride of Roman citizenship, it was faithful to the Law.
The fall of the Temple made the Jews wanderers, with a book for their portable fatherland and a code for their nationality. But the yearning to return to Zion showed itself to be deep and real. The liturgy contains many allusions to and prayers for a restoration, but the restoration which is described as the Return to Zion and the rebuilding of Jerusalem meant something more than a merely physical return and rebuilding. It was associated with the reign of universal peace and the coming of the Messiah. Under the overpowering influence of the catastrophe, such aspirations could not have been expressed in other phraseology. In the course of time the ideas became separated. It is signifi-
cantly that the Return are not included in the Thirteen Creeds, based on Maimonides (see Abrahams, Annotated Prayer-Book, p. 561; EEKE iv. 246), although the coming of the Messiah is mentioned. The attitude of faith in the God of the universe, the dogmatic precision as to eschatology. The Return may be exclusively physical in form, but not necessarily so. So, too, the restoration of the sacrifices. The verse of Hosea (14:4) 'Let us make up for the sacrifices with good lips' (see Kimhi and also Abrahams, p. xxv), was taken to indicate the supersession of sacrifice by prayer. The allusions to sacrifices in the liturgy are, for the most part, unavailing. They were designed to preserve the memory of the Temple, as is the Aboda, or Temple service, of the high priest, in the Misaf of the Day of Atonement. The belief in the restoration of the sacrifices is not clear, and many citations could be adduced on both sides (cf. O. J. Simon, 'Authority and Dogma in Judaism,' JQR v. 231-243, and the counter-statement of M. Hyamson, ib. 438-442).

This spiritulation has its counterpart in the homilies of the Midrash and the allegorization of Philo. It was also one of the points of difference between Sadducees and Pharisees. As an instance it is noteworthy that it was held that the Sadducean sect of Boethus (Meg. Tama'ith, iv.) rejected the old traditional interpretation of the lex talionis, adopted by the Pharisees, in which 'the value of an eye' was to be given for 'an eye.' The Sadducees claimed that the apparently literal explanation was correct and upheld severity. The Pharisees, on the other hand, pointed out that the injured party did not, in fact, receive compensation by this means. In this, as in other matters, the tendency to spiritualize and allegorize had been long existent.

For the growth of angelology, see art. Demons and Spirits (Jewish). The effect of Greek learning and the continued influence of Greek philosophy made themselves felt even on Rabbinics. It is said (Too. Hagigah, ii., ed. Zunckerman, p. 224, l. 7) that four Rabbits entered Paradise, i.e. indulged in the use of tobacco in philosophy. Ben Zoma in his lost record: Ben Azzi died young; Elisha ben Abuya 'cut down the little plants' (corrupted young students) and became an apostate; Akiba 'waved his gauntlet' (a la Paracelsus) to the Spartees and said: 'I shall not be taught publicly; that is to say, they might be imparted to two

---

Students but not to a greater number at one time; other portions, e.g. shevet, 'cosmology, genesis,' should not be taught Joseph in private. The most mystical of all chapters was not taught all, but was reserved for individual study in nature age.

The chapter thus prescribed was Mark 1, known as הָגִיגָה, 'the work of the, Joseph, on the nature of the Deity which was to be adorned. For this reason, cosmology was not much encouraged (see Jewish' 'art. Josephus) or was taught only in the presence of the teacher (see Abrahams, Annotated Prayer-Book, p. 607). The word qetub (sect of the dead) is also used in the sense of a fixed time for devotions (see Mishna Berihkah, iv. 5), but in the passage cited it has a bad sense. It was 'impossible to imagine a keter (a crown) or an attoned spirit; without this feeling of attention, the prayer was nugatory (see the formulation of the self-dedication, before performing a commandment, which begins יְהֹוָה יְהֹוָה יְהֹוָה יְהֹוָה (Singer, pp. 14, 15, 216, 222, etc.). The early Hasidim used to wait as long (yiqb) before prayer, in order to induce thoughts of God. We do not rise for prayer unless imbued with deep seriousness. 'אָהָבָה (Ps. 28, 2, in 'beaviness of head,' opposed to יְהֹוָה יְהֹוָה יְהֹוָה יְהֹוָה (Licht, iii. 17; Singer, 162). The ' revelation, if the king greet a man, he should not reply; even if a serpent be wound round his heel, he should not pause' (Mishna Berihkah, v. 1). It is to be noted, 'Whose soul is upon his fixed burden (qetub), his prayers are not appeals' (ib. 4). Similar citations could be freely added. Prayer was to be not merely heart-felt, but also fixed (יהוה יְהֹוָה יְהֹוָה יְהֹוָה (ib. 4, v. 6).

Further, it is known that originally it was prohibited to write down a formula of blessing.

Those who write down יְהֹוָה יְהֹוָה יְהֹוָה יְהֹוָה are like those who learn the Torah (Shab. 115a). It is doubtful whether this does not simply mean, as Rashbi suggests, that written blessings are not to be rescued from a fire on the Sabbath. In any case, however, וְיִשְׂרֵי הָעָדָה were not generally written down. The reader knew or received instructions as to the subjects of his prayer and the order in which they were to be arranged. Frequently certain phrases were specified, but the general framework was left to the taste and inspiration of the טֵבֶן יִשְׂרֵי הָעָדָה, or preacher. In the course of time, owing either to ignorance on the part of officials or to a desire to ensure uniformity, the prayers were written down, and the imposition and composition of original prayers survived in the pizgah, or poetical hymns, of later times.

The central portion of the morning and evening service was, of course, the recital of the ateret (see Singer, p. 40; Abrahams, p. 1; cf. also Taylor, Excursus iv., p. 110) with the blessings appropriate to it. This is fully discussed in the opening chapters of Berahkoh. The Amida, laked by R. Jamaliel, who 'introduced the usage of set prayers' (Graetz, ii. 360), the kernel of the prayer is much older, and very probably goes back to the early Soferim.

It is well known that tradition has sacrificed to Moses and Ezra many institutions, whose origin, dating back to ancient times, was thus forgotten. It was feared that many who.were uninitiated might be led to undertake metaphysical research, and the Rabbis accordingly ordained that certain portions (i.e. וְיִשְׂרֵי הָעָדָה, instruct, etc.) of the Scriptures and liturgy be taught publicly; that is to say, they might be imparted to two

1 See above, p. 685.

---

Many Psalms and Scriptural extracts were included in the service, and many touching prayers

of the Tannaitic age have been preserved. The Lord's Prayer has been shown by Taylor to be composed of phrases taken from contemporary Rabbinic prayer. The great use of Holophite passionate and prophetic passages took place on Sabbath, festivals, and fasts; the Law alone was read on Saturday afternoons, Monday and Thursday mornings (market days), and on other occasions, such as the New Moon. In the first centuries of the Christian era, Hafṭārā (from the root pāṭār, 'to be free, or finished') was, additionally, to be free, or finished. This name, as also the alternative e’regē, seems to be due to the fact of its following the Siṭānā, or Pentateuchal lesson (see Abrahams, p. cvii). When, therefore, the Māṣīl, or additional service, was read after an interval, and not immediately following shakārāh (morning), the conclusion of the Hafṭārā would mark almost the end of the service. The Law was read, in Babylon, in an annual cycle of consecutive sections. In Palestine, a triennial cycle existed (see A. Büchner, JQR v, 429 ff.), but cf. M. Gaster, i. 77). It is possible that, notwithstanding the sobriety of the Hafṭārā was, to a considerable extent, in the hands of the reader (Lk 4:4), but it was intended to have some point of contact with the Pentateuchal portion of the day. Both Siṭānā and Hafṭārā were interpreted by the interpreter, verse by verse. In the case of the Hafṭārā, the version was more homiletical, and greater sections were rendered at a time. The Targum was greatly esteemed (see art. TARGUM). A man was to study the Targum twice in Hebrew and once in the Targum. To this day the Targum is universally studied among Jews, privately, all over the world. The Yemeinites also have an Arabic Targum; the Sefer ha-David, a Spanish Targum, which is read publicly verse by verse on the ninth of Ab; the Ashkenazie Yiddish versions are not generally used in service.

The Eighteen Benedictions contain paragraphs relating to the Messiah and to the resurrection. The former subject is introduced at the beginning, after the mention of the patriarchs; and it is often repeated, perhaps, to imply that the proof of immortality employed by Jesus (Gen 12:7; 18:18, 21:17, 22:18) was an unshaken. The tendency of Tannaitic religious thought, in the Haggadah especially, was optimistic, and these two ideas are the outcome of optimism. The range of Haggadah extended over the whole sphere of life and tinged everything with bright and pleasant hues. The Haggadah reflects the spirit of the Halakhah, and, consequently, the conceptions of the next world, as well as of this, were given an optimistic turn. The Messianic idea is based on the prophetic reign of peace. The troubles or 'birth pains' that were to precede the advent of the divine Saviour were naturally identified by many of the people with the hardships and persecutions connected with the Maccabean revolution. Hence, it is thought, was the Messianic idea of the Messianic age, and thus the temporal Messiah, of the type of Judas and Theudas (Acts 5:38) and of Bar Kokhba, gained popular support may be seen (see also M. Gaster, Book of Prayer ... acc. to the Custom of the Spanish and Portuguese Jews, i. 9).

dispersion, in proportion as the personal history of the Jews becomes of interest, owing to their varied fortunes and their continuous influence upon human thought. Judaism was, in fact, recuperating after the creative energy of the preceding centuries. Evolution moves in stages, not in a path of gradual and imperceptible progress. The schools of Palestine, of Babylonia, of Galilee, had been fertile; so, too, had been the Babylonian academies in their time. But the ages of the later Amoraim and Saboraim collected and formulated. The chief centres of intellectual activity in Babylonia were Sura (also known as Mata Mahasaya), Nehardea, Mahnaza, and Pumbeditha. Abba-Arika, known as Rabbi (A.D. 175-247), was instrumental in raising the importance of the Babylonian schools. He was educated at Tiberias, under Judah I., and, after his return to Babylon, he founded his school about 220 and gathered a large number of pupils. Babylonia now began to attain a higher renown than Palestine and Galilee for scholarship and Rabbinic authority. Ammi and Assi, the leaders in Judaism, acknowledged the supremacy of Rabbi's successor, Babylon (e.g., Bab. Shothah, 247a). The growth of the school was followed by a rise in the morality of the inhabitants of Babylon, which had hitherto been of a low standard. The fine ethical sayings of Rabbi described a new conception of the old Jewish ideal of the sanctity of marriage, for decay had set in. He is said to be the author of Mahosh for the New Year (see Singer, p. 249), and of 273 117 167 (Singer, p. 250), for the Day of Atonement. He devoted much attention to the liturgy. The great opponent of Rabbi was Mar Samuel (also called Arokh (Shabb. 58c)), head of the academy of Nehardea (c. 185-257). The rivalry of these two teachers may, in some respects perhaps, be compared to the contests of Hiilei and Shammi. Yet Rabbi, though inclining to severity in his judgments, was not unlike Hiilei in disposition (see Pumbeditha, p. 5). The Persians, so far as the Persians to the Persians: Rabbi sternly opposed any non-Jewish influence and teaching. Dathan, who takes up with the affairs of his own nation, refused to allow the customs of the Persians to exert any influence on those of the Jews, and even forbad those latter to adopt them, however innocent, from the Magi: "If a man learns a single thing of the Magi ruin death." Samuel, on the other hand, learned many things of the Persian aces. None of his decrees, however, were possessed of such important results as the one by which he declared the law of the land to be just as binding on the Jews as their own law (Mak. 244a). ... Jeremiah had given to the families which were exiled to Babylonia, the following urgent exhortation as to their conduct in a foreign land: "Seek the peace of the city whither ye have been carried away captives." Samuel had transformed this exhortation into a religious precept: "The law of the land is a binding law." To Jeremiah and Mar-Samuel Judaism owned the possibility of existence in a foreign country (Gen. ii. 245, 259, 259). Another of Samuel's claims to fame is his regulation of the calendar, based on his knowledge of astronomy, which he had acquired from Magian instructors. He said of himself that he knew his way as accurately among the paths of the heavens as the streets of Nehardea, but that he could not explain the courses of the comets (Ber. 556). His other name, Jarshinah, was derived from the place near which he was born. Among the later principals of Pumbeditha was R. Joseph, regarded by Hai Gaon as the author of the Targum on the Prophets (cf. J.E. xi. (1866) 61). He is said to have translated those portions of the Prophets which had hitherto not existed in an Aramaic version. His object was purely to supply the Pentateuch, just as Aquila supplied the Song of Songs. Although the Pentateuch version of the Targum was not as much used as the versions of the Jewish translators, certain of the Prophets—e.g., Isaiah—were revised by Christians and amended from the Greek text. The NT was retranslated by Babylonian bishops of Edessa (411-480), and the unrevised text still exists in the Christian MS and the Syriac Peshitta, where it was seems to have been the receives of the MS of J. Parfoot, in PJotropa Syneno, t.l (Paris, 1842 p. 401), a contemporary of R. Joseph. It is, therefore, very likely that Joseph undertook a Targum in order to provide the Jews with a version of their own.

The great achievement of the schools in Mesopotamia was the Babylonian Gemara. When the creative power of the teachers of Halakhah began to diminish, the time arrived to seal up tradition. R. Ashi, the son of Simai (352-427), a teacher of the Sura school, who had become president of the great seminary, was one of the greatest exponents of his time, and he was known by the honorific title of Rabbâni, 'our master.' Ashi began the collection and arrangement of the Talmud, although this must not be taken to imply the production of a written text. He devoted his labours, which extended over fifty years, to the comparison of materials and placing in order of all the decisions, corollaries, and fancies of Haggadic and Halakhah which had accrued through the ages. The text was preserved orally for some considerable time to come. Ashi's work was continued and completed by Rabina and Sura and Jose of Pumbeditha. In 499, when Rabina died, the Talmud of Babyloyn was finished. The Jerusalem Talmud had been concluded, it is generally held, about a century and a half previously. (See W. F. Grätz, Judeen, p. 95.) The Talmud is so encyclopaedic for this period that nothing can be said with certainty, but it is generally assumed that the place of compilation was Babylonia. The Talmud was in no sense a popular work. It was taught and studied in the schools by the Gemara and successors of the Saboraim. As a code it was unwieldy and could not be easily consulted by private persons. Consequently, in course of time there grew up other arrangements which were shorter and more accessible. The Talmud has, however, always remained the ultimate source of learning. Its decisions have been modified and its contents arranged and rearranged repeatedly. But to book, after the Bible, has exerted such influence on Judaism.

Code succeeded code, commentary followed upon commentary, finally, the Talmud became a field of learning, more or less abstract, while for practical questions reference would be made in the first instance, to the code of the day (see, further, art. TALMUD). Between the Talmud and the Shalhan Arakh of R. Joseph Qaro (1604-1661), is the most universally accepted to-day as the exposition of orthodox Judaism, many other codes intervene. With these the development of Judaism is vitally concerned (see S. Dalcheh, Jewish Codes and Codifiers, J.E. Chroo., Jan. 1, 1900, p. 247, Jan. 8, p. 26 f., Jan. 15, p. 25 f., also reprinted in pamphlet form).

The three first codes emanated from Babylonia. The Gaon Jehovah b. Nahman, at Sura, is said to have written the Halakhoth Tamid, about 770. The Halakhoth Gedolah, or Bishnahoth of R. Simon Kayara, who was, according to Abraham ibn Daud, a Rabbi of Pumbeditha about 770, was thought, in reality, to be of later date, about the beginning of the 9th century. They could not have been the model for Judai. The Cairo Genizah has preserved part of the work, which probably existed in the form of loose letters. Gaon Abah wrote his Shemith, a book of responses, constituting a Halakhic exposition of the weekly Seder, or Pentateuchal lesson. The Talmud was the warp of the Jewish translators, certain of the Prophets—e.g., Isaiah—were revised by Christians and amended from the Greek text. The NT was retranslated by Babylonian code, commentary followed upon commentary, finally, the Talmud became a field of learning, more or less abstract, while for practical questions reference would be made in the first instance, to the code of the day (see, further, art. The triumph of Christianity and its adoption by Constantine meant the humilation of the Jews. Numerous repressive acts of legislation were passed against them, and the boycotts were frequent. Jews were prohibited from entering Jerusalem, and their lives were burdened with hardships and oppressive restrictions. Prelates of the Church, notably Ambrose of Milan, and Cyril of Alexandria, were among their bitterest persecutors, and the Emperors, whom friendly, or at least not ill-disposed, to the Jews, were frequently persuaded by their priests to inflict on them these unbecoming punishments. Even Jerome, who, like Ambrose, owed his knowledge of Hebrew to Jewish teachers, publicly declared his hatred of them. Yet the popes themselves and the Roman bishops were often exceptions to this rule, and they did not infrequently stand forth as the champions and protectors of the Jews. The Arians, as a rule, were more tolerant than the Ostrogoths. The reign of Julian, who abandoned Christianity, was a brief interval of light for the Jews amid their sorrows. But on Judaism itself the domination of Christianity had little influence. In the same way, little effect was experienced from the rise of the Sassanian dynasty (224-651), founded by Ardashir I. Papakān, which brought into greater prominence the worship of fire. The Jews themselves suffered at first from the extreme sternness with which the profane use of fire was prevented, but by the time of the first Shakhād (243-271) the relations between the two religions were amicably readjusted.

Mention must be made of a false Messiah (see art. MESSIAH, PSEUDO-) who arose in Crete during this time—i.e., before 427. About this time the hopes of the millennium were spreading, and the long-awaited deliverer was expected. This was, to some extent, due to an ancient Sibylline oracle (see GAEBER, B 617), which placed the advent of the Messiah in the 8th jubile, between A.D. 440 and 470. In proportion as persecution became stronger, these hopes grew more vigorous. The Chronicles of Josephus, composed, according to Gaster, during the first centuries of the common era (M. Gaster, Chron. of Jer., London, 1899, p. xxix), contain such eschatological calculations. These Messianic ideas were strongly discouraged by Ashi, and this event had no permanent influence on Judaism. It has been mentioned that the successors to the Amoraim were called Sabborim. The name is connected with the Arian and Syriac words for giving, giving to, giving off, etc., and probably meant a teacher or expounder. The Sabboraim, however, made their appearance at a somewhat later period, during the time of the Gemara. The word Gaon (pl. Goim) literally signifies 'great, majesty' (Hebrew hiddol, in a bad sense: Am 8, 15, in a good sense), and is said to be derived from this 47 (Hebrew). The word Gaon (pl. JUDAISM (599)

(929-942), who met the Karaites attacks first of all by translating the Bible into Arabic, and secondly by replying directly to the enemy. Saadya's great work was the Kitab al-Anwamalal wa-l-Bid'at (Hebrew, "The Book of Words and Custom", and other titles), or "Faith and Philosophy," which was the first attempt to bring revealed religion into harmony with Greek philosophy. 

"... an ascetic, who discarded the Bible, and formed his opinions solely by his own reasoning. But he might safely8 only say that he repudiated indeplicity of revelation, the truths which revelation had given. Faith, said Saadiya again, is the soul's absorption of the essence of a truth, which thus becomes part of the individual who believes, and therefore contributes whatever the occasion arises. Thus Saadiya identified reason with faith. He excluded the fear that philosophy leads to scepticism. You might as well, he argued, identify astronomy with superstition, because some deluded people believe that an eclipse of the sun is caused by a dragon's mouth. The same occurred (R. Abdr. El, ed. Hist. of Jew. Lit., London, 1906, p. 56). Many lost portions of Saadiya's anti-Karatian writings have been published by H. Hirschfeld, from the Cairo Genizah, in JQR. Thus of his Kitab al-Rudi 'al-Mutanabbi ("Exegeta of the Unfair Aggressor") two leaves exist (JQR xvii. 118-119). In these Saadiya maintains the Jewish tradition of deqqaqah, or post-mortem speculations. The fragment is probably a reply to Ibn Saqqawai. There is also one leaf of a treatise on mary (m. 1191). In JQR xivi. (1901-02) 72-73 Hirschfeld has published four leaves of a manuscript recording the giving of marriage manuals, and two on transgression of laws. Saadiya saw that the way in which the Karaites developed their Judaism in their attacks could be counteracted only by adopting the Kalam itself for the defense of the orthodox position. He thus became a disciple of the Jewish Mithkala, the great logician, Mithkabbonah, who sought to reconcile a belief in the divine creation with the Aristotelian theories of the universe. The unity of matter (Hirschfeld, Kzaer, p. 4). 

Judaism was not modified by Karaism, except in so far as the study of philosophy was stimulated and the impetus to philosophy created. The Karaites never once officially followed contact with Islam. The Karaites were never very numerous, and probably do not number more than 12,000. In the eyes of the Muslims there was never much question that Karaites and the Jews were equally Jews. Interesting light is thrown on this point of the controversy by the decisions of the four Imams, recorded in B.M. S. Or. 2538, vol. 73-83, headed "Story of the Karaite Laws and the Decrees of the Karaites," published by Hirschfeld (see Jews' Coll. J. J. Ed., 1848, p. 88). Yet, on account of their dietary customs and law of incest, intermarriage with Jews is very rare. 

In spite of Muhammad's treatment of the Jews of Arabia, the relations between the two faiths were intimate and not unfriendly. Islam had far more influence on Judaism than Christianity, because it was more tolerating. Theological status of Jews and Christians was recognized. They were Ahd al-Kitab, people possessing a legitimate scripture, as opposed to idolaters and to the Magi and Magians, whose revelation was not regarded as authentic (man Isbn shufflea-Kitab). 

It is necessary to emphasize the correct use of the phrase Ahd al-Kitab, first, because it is so frequently misinterpreted and applied to the Jews only, who are said to have called the people of the book. 2 The Jews are, however, in the strict sense, the people of the book. Even writers like Gersht have made this mistake (see Gersht, lii. 50, but, on the other hand, see p. 82, and where the term is correctly used). Secondly, it is a clear indication of the attitude of Islam to the Jewish faith: it did not claim a monopoly of salvation. In consequence, Jews and Muslims were able to study and discuss theology and science in a way that was impossible between Jews and Christians. 

The love of learning prevalent in Muslim lands was carried over to the Muslims; it was shared by all classes of the population. Consequently, when, after and as a result of the growth of Greek philosophy, the Arabs began to turn their attention to their own language as less deeply affected, and impetus given to philosophical study created a Jewish religious philosophy. 3 Hitherto, Jewish theology had been essentially the science of the world. But after the light of the Karaite, was extinguished in Islam, and the Jewish family of the Ben-Tibbon were mainly instrumental in making Arabo-Iranian knowledge known in Europe (see G. W. Thatcher, in EHR, iii. 229). 

The term is used of Christians as opposed to Jews in the First Vatican Council (Act., 1870, p. 11, line 50 (70th Syll of the Kitab el-Iman)). 

The influence was not confined to Judaism. Jewish schools and colleges of the place is teaching Arabic. 

Occupied either with questions of practical Halakhah or, in refutation of Karashism, with a defence of the Talmudic system of legislation. Ishaq ibn Sulaiman, better known as Isaac ibn Abba, or Avichai (d. 932), was perhaps the greatest, who died about 932, was well known as a scientific and philosopher and physician (see W. Engelkes, Religious-philosophical Werke Salmei ohne von der Möhrer, Jued. Hist., 1903, p. 2, note 2). His title name remains purely on his scientific work, not on his theology. Jews took up these studies with avidity, and a series of famous writers arose who sought to harmonize Judaism with the thought of the age, and who thus developed its philosophy of religion. 

Babyya b. Joseph ibn Pakhuda, who lived at Saragossa at the beginning of the 11th cent., was one of the first of Jewish authors to expound a system of ethics in his Arabic Al-Hikayat el-Farid el-Qulub (1040) ('Guide to the Duties of the Heart'), which was translated into Hebrew by Judah ibn Tibbon under the title of Hikba al-Hikmat. 

Babyya attempts to show that 'Jewish faith is a great spiritual truth founded on Reason, Revelation, and Traditions, all stress being at the same time laid on the willingness and the joyful readiness of the God-loving heart to perform life's duties.' He was influenced by Aristotelian philosophy, and by Galvani, and leaned toward Neo-Platonic philosophy. Faith must be intellectual, not bilateral and unreasoning. He proves the necessity and unity of God, and of God's will. The divine attributes are twofold, negative and active. One, not the other, is within the knowledge. God's existence is knowable from the circumstance that non-existent beings cannot create existent beings. His Unity and Eternity are also comprehensible, since the Supreme Cause must of necessity be indivisible and permanent. The other divine attributes are in his power, since they are an indispensable medium for thought and speech, and in reality, symbols and not realities. From these postulates Babyya deduced his system of ethics. He maintained that immortality must be reserved for mature speculations; hence the comparative poverty of biblical allusions. Neither was he essentially a mystic, but at the same time practical in his system of the religious life. Asceticism, as a discipline of abstinence and self-purification, is advocated, but not for general adoption. 4 

Babyya was a Spaniard, and one of the many Jewish scholars who arose in his Hebraic period during the Muslim domination. The light of Jewish learning was first kindled by Moses ibn Enouch († 966), from Babylon, who founded an academy at Cordova which soon eclipsed Sura. Among the great Jews of Spain were Hassadai ibn Shaprut, poet, physician, and politician (915-990), Menahem ben Saruk, Dunash ibn Labun, Judah Hayyuj, Abn-ib-Waliha, and the great scientist and theosophical philosopher, Samuel the Nasi (993-1055), the vizier of Abbas, king of Granada, who wrote an introduction to the Talmud and many liturgical hymns. 

The religious philosophy of Judaism owes much to Solomon b. Judah ibn Gabirol, commonly known as Avicenna (see art. IBN GABIROL, above, p. 69). His greatness, both as poet and as philosopher, is mirrored in his Keter Mahloth, or "Royal Crown," the text and translation of which may be seen conveniently in Gast (ii. 47); and his Akbath al-Abiyad, or Improvement of the Moral Qualities (ed. and tr. S. S. Wise, New York, 1901), is a summary of ethics for popular use. 

In this the virtues and the vices are arranged, coherently, in the same manner as the four elements distinguished by the physical from the psychical perceptions. The senses are indications of the disposition of the soul itself, as, for example, the animal soul, not the divine soul within man. His quotations are in most cases drawn from the Bible, not from Rabbinic writings, though the latter have, of course, an influence and popularity among non-Jews. In his First View of the Virtues, the following statement to the schoolmen. It was amongst them, especially in Maimonides, that Aristotelianism was most assimilated the Jewish family of the Ben-Tibbon were mainly instrumental in making Araco-Iranian knowledge known in Europe (see G. W. Thatcher, in EHR, iii. 229). 

See, further, L. Broidy and L. Kohan, 'Babyya ibn Joseph,'
neither Bible nor Rabbinic authorities are cited at all. This work, written in the form of a dialogue, reduced everything the Sefardim to two categories: (1) God, the first substance of the world, matter and form; and (2) the will, as intermediary. His teaching is based on Neo-Platonism, and, owing to the great Zechariah, the great influence of Jewish thought. There is a difference between the pantheistic emanationism of Greek and the Jewish concept of creation. Moreover, the Neoplatonic doctrine that the Godhead is unknowable naturally appealed to a Jewish rationalist, who, while preserving the existence of God, secularly refrained from ascribing definite qualities or positive attributes to Him. On this basis, and in the spirit of his unique philosophy, he created a wondrous philosophy as the "handmaid of theology," pursued his philosophy regardless of the claims of religion. (Rev., "Ezra on the Most Valuable Gifts."

While Gabirol leaned toward Neo-Platonism, Judah Halevi, born in Toledo (c. 1085—c. 1148), whose poems are tender and sacred, furnishes some of the most inspired examples of the later Hebrew ase of the doctrine of emanation as well as the Aristotelian doctrine of the eternity of matter. As Hirschfeld says (Kalamari, p. 6), his doctrine, like that of the Muslim al-Ghazali, may be summed up in one sentence as a philosophical scepticism in favour of a priori belief. His most famous philosophical work was the Clement, properly Kuzir al-Kalamari.

In this book he sets forth Jewish belief in a popular form, under the guise of a dialogue between a Rabbi and a king of the kingdom of God, who, in turn, consults with a Muslim and a Christian in turn, and, finally, a Rabbi, whose talks are not quite so tiresome. The form of the Kalamari, and, in a more positive form, the beliefs and practices of Judaism are enumerated. The pivot of his argument, the fact that men understand and the cooling down of the revelation by uninterrupted tradition (Kalamari, 98, 123, 748), is well seen through the fact that he assumed the idea of Judaism as revealed from any reliable source at his disposal. He mediated on the beginning of the world, but found as much difficulty in the theory of a beginning as in that of eternity. Finally, the absolute nature of the world does not exist, and the world as a whole is created by God, his world cannot be destroyed, and he found no reason to inquire into the chronology or derivation of those who lived before him. Had he lived among a people with well established traditions he would have established the theory of creation, however difficult, instead of restricting himself to the great statements and the general difficulties such as Ga 139 (see A. T. Chapman, "Intro. to Pent.," Cambridge, 1911, p. 20). The solutions which he gives are similar to the solutions which are upheld under the phrase "Am-naz-Makri," the "intelligent will perceive."

From the great families of Ibn Ezra and Kimhi, Jewish philosophy enjoyed marked and valuable support. Their contributions to learning were incalculable. France and Germany were the home of Talmudic and Biblical exegesis, Spain being more strongly devoted to philosophy.

The outstanding figure among Jewish medieval scholars is Moses Maimonides, also known as Rambam (1135—1204), of whom it was said, "From Moses unto Moses there arose not one like Moses." His fame rests on several foundations, but for the present it must suffice to refer to the great influence which he exercised on Judaism, first as a philosopher, then as an exponent of Halakha. His famous Guide was written for "religious persons who, adhering to the Talmud, have studied philosophy and are embarrased by the contradictions between the teachings of philosophy and the dictates of the Jewish law. He devoted much more attention to explaining them one by one, and laid far greater emphasis on the incomparability of God. Further, he subjected the divine attributes to a searching analysis. He rejected the teaching of the Metzillamim, and based his philosophy entirely upon Aristotle, for whom he had a profound admiration.

He adds twenty-six propositions to prove the existence, unity, and incorporeality of God (Guide, pt. ii, ch. 1; tr. M. Fischel, London, 1908), in it, the theory of God is based on the theory of motion. Motion requires an agent to produce it, the number of intermediate causes being finite. Some hold that motion is possible but that it can receive but do not impart; consequently, such a theory is a scholastic idea, a convention, not a fact. The unity of God is demonstrated in two ways: (1) Two gods can not be assumed, for they would
necessarily have one element in common by virtue of which they would be gods, and another element by which they would be distinguished from each other; furthermore, neither of these could have independent existence, but both would themselves have to be created. (3) The whole existing world is "one" organic body, the part of which is man. The sub-
immary world is independent upon the forces proceeding from the sphere, so that the whole universe is macrocosm, and thus the immediate world is due to one cause" (p. 161 ch. ii, p. 128; cited from J.B. ix. (1951) 76).

The chief point in which Maimonides differed from Aristotle was the eternity of matter, although he maintained that the Greek philosopher was fully correct in suggesting his thesis. Maimonides believed in the creation ex nihilo, and he held that this was in harmony with the teaching of Aristotle. The spheres and intelligences were not, as Aristotle taught, co-existent with the Prime Cause, but created by it. Evil does not proceed from God, because, being negative, it has no actuality. It is a negation, the absence of a capacity for good. He asserts human free will, somewhat at the expense of divine omniscience. This omniscience is incomprehensible to man, with his limited knowledge, but it is none the less, supreme. The fact of God's foreknowledge which of several possibilities will occur does not abrogate the freedom of choice. God foresees the result of a choice, having conceded full liberty of action at the outset.

Maimonides was entirely optimistic in his outlook. The ultimate aim of existence is happiness, and the object of the Commandments is to secure this end. He was the exponent of pure reason, and maintained the absolute reality of the rite of the intellect. It is most typical of him that he did not believe in the creation ex nihilo because of the Bible. He declared that, had his reason prompted him to adopt a natural doctrine in this matter, he would have had no difficulty in reconciling it with the Scriptures. Maimonides has been styled the first pragmatist. His breadth of mind and his attitude towards other faiths are remarkable. He recognized the validity, to a certain extent, of Judaism and Christianity, and maintained that the adherents of these religions must not be regarded as idolaters. Salvation is not confined to Jews. The rightousness of all nations have a place in the Books of the Scriptures.

Maimonides, in his famous commentary on the Mishna Hilek, regards immortality as intellectual. The wise man — i.e., the truly virtuous — will pursue good for its own sake. The child had to be taught to study by the offer of prizes. As man grows, his desires become greater, and the prizes have to be increased. So too, in mental and spiritual development, the hope of reward is the inducement to the wise to live virtuous lives. The saint requires no inducement. His reward is in the raising of his soul to that level of the divine essence. His motive must be, like that of Antigonus of Socho, to serve the Master not for the sake of a reward. In the Thirteen Articles of Faith which are formulated in the 12th precept of Hilek (which is quoted, in part, in Singer, p. 184, before ch. i; see also A.R.T. 793, 590), Maimonides included: "If it is the Resurrection of the Just.

As a code, not less than as a philosopher, Maimonides exerted great influence on Judaism. Mention has already been made of the growth of codification, a necessary consequence to the nature and method of the Talmud. It was found desirable to assemble the prevalent hand-books or large digests, in which the laws could be more readily consulted; some of these were for the learned, others for the people. Laws had to be introduced to explain the Mishpah, and to meet the needs of the day and of local conditions, occasioned by the scattering of the Jews.

R. Isaac b. Jacob of Pes (1018-1100), called Alfasi, a pupil of R. Isaac Asher, wrote a Compendium, which is practically the Babylonian — sometimes the Jerusalem-Talmud described of Haggadah and of all opinions were warranted as authoritative. Where the Gemara had modified the Talmud, their modification was adopted by Alfred: Isaac ben Ghayyad (950-1019) and Isaac b. Reuben (1012-1105) compiled books of laws, the former concerning festivals and fasts, the latter about a code.

All these were eclipsed, however, by the brilliance of the Mishna Torah or second Torah, of Maimonides, which contains more than the Mishna, because it 'includes the fundamental doctrines of the Jewish religion... it represents a system of the whole of Judaism, ethical and philosophical' (A. D. da Silva, 'Jewish Cods and Codifiers,' Jea. Chron., Jan. 1909, pp. 1, 8, 15, 22). Maimonides did not, like the other codifiers, follow the order of the Talmud, but introduced new divisions and groupings of laws. His style is concise and he cites no authorities — a practice for which he was blamed by his foes.

The Mishna Torah, also called Yad ha-Hazakah ('Strong Hand'), was written in Hebrew, because it was for general use. The Guide, being intended for students of Arabic philosophy, was composed in that language. Maimonides, in his letter to his pupil Akins, states that he did not intend the hand to supersede the Talmud as a study, but to provide a convenient work of reference, and to present students from going astray in practical laws.

By reason of its originality, and, especially, of its free attitude towards faith and reason, Maimonides was very much attacked by Abraham Ibn Daud, the son of David of Posqueres being a keen though sincere opponent. His works were even committed to the flames, and the controversy was not softened by the passing of time. It was, however, a great benefit to his death. Maimonides omitted from his code anything of the nature of superstition or demonology which had crept into the Talmud. His description of the liturgy is very important for the study of the development of the Prayer Book.

The influence of Maimonides is too great to be estimated briefly. He saved Judaism from being controlled by Aristotelianism, and was the forerunner of the School of Averroes. He was the first to attack the magic of the Cabala, of which he was himself a follower, and to criticize the mystical teachings of the Kabbalists. He was the first to make a complete and thorough study of the science of mathematics, and to classify the different branches of it.

JUDAISM

aptitude for learning needed no encouragement; as soon as hindrances were removed, they applied themselves zealously to liberal culture. Many of their co-religionists in other lands, however, being permitted to enjoy these advantages, did not entirely appreciate the work of the Spanish Rabbins. They were rather repelled by the cold reason of Maimonides, and they also disagreed with his Halakhah. Hence a mystic reaction had every chance of making itself felt. Several distinguished scholars were attracted by the cult of the mysterious and lent it support. This new teaching, which was called Kabbalah, or tradition, spread from Gerona all over Spain, and also northward. It was a revolt against logic, and sought to unite the divine element in man with the world spirit (shekhel hatov, by striving to attain perfection and self-purification. It instilled the recognition of a harmony in all things. The macrocosm is a counterpart of the macrocosm. The doctrine of the Sephiroth ('spheres'), the agencies of the En-Sefi ('Infinite'), and the emanations and revelations of the Tree of Life, the grades and functions of spirits and angels, and the relation between the material and the ideal were all worked out with mathematical precision (see, further, art. KABBALAH). Metempsychosis has already been taught by Isaac b. Abraham of Fonserannes, the Blinded (d. 1190-1210). Life was surrounded with countless customs and acts having a mystical origin. In every secular deed, in every word of prayer, in every mishnah, man was to be in the conscious state, to think of a new connection with the spiritual world, and thus to induce the desired communion with it. The divine name was a mystery which overshadowed and influenced everything, and the deaden was said to have had a mystical power (see, further, art. TETRAGRAMMATON).

All kinds of devices were invented or employed to interpret the sacred books and their relationship with Kabbalah. Examples of such incantations were: thea, vavath, and gersa, or permutations, the use of letters according to their numerical value and transposition. Various systems of substitution prevailed—e.g., avatkh (...), which, in the first letter of the alphabet was equated to the last, the second to the last but one, and so on (see, further, art. Neoplatonism).

The Abulafia, Isaac Ibn Latif, Joseph Jikhitall, and Moses de Leon, the pious of Kabbalah, wereSpaniards. The most distinguished adherent was Nacimahah (Nahmanides or Haman), 1195-1270, who was known at an early age for his saintliness and learning.

His influence on Judaism was very great, because he was really the first to establish methodical Rabbinal mysticism; as an absolute Kabbalist, for he believed in a creative ex nihilo, who selects the letters; who chose as the essence of reason, Nahmanides was the defender of authority. The former adopted a rationalistic attitude towards the Biblical miracles, ignoring those of the Talmud. To the latter the Biblical miracles were the object of veneration and implicit belief. Although his respect for authority was not limited to the Talmud, but extended to the Gemara and rendered sacred in his eyes even the utterances of his contemporaries, Nahmanides did not hesitate to declare, at the great disputations of 1263, that a belief in magic is not incumbent on the Jew. Nahmanides' chief activity lay in the Talmud. His philosophical theories, though based on logic, in reality rest on authority. He made miracles the foundation of his system, rejecting Maimonides and Aristotle. 1 For Nachman, on the other hand, the belief in miracles was the foundation of Judaism, on which the three pillars of his structure rested: the creation from nothing, the omniscience of God, and the divine providence. He was assumed, with the philosophers, that the sensory instincts are a disgrace to man, since he is destined to a spiritual life. Nachman was a strenuous opponent of this view. Sin, which is perfect, has created the earth world... nothing in it should be regarded as... hateful.

Judaism was for Nachman a cult of the intellect, for Nachmam it was a religion of the feelings (Graetz, iii. 591). Thus Maimonides insisted on the power of the intellect to solve the mysteries of religion, while Nahmanides regarded the divine secrets as a necessary not to be revealed at penetration. Demons and angels were rejected as heathenisms by Maimonides; they are part of the system of Nahmanides. The Kabbalah, laying great emphasis on nature and the ideal, was admiringly with his view of life, and the approval of so famous a Rabbi was of great value to Nahmanides.

The Kabbalistic scriptures achieved their fame very largely by the fact that they were pseudographica. The most famous book was the Zohar (zohar), composed by Moses b. Shem Tob de Leon (1220-1290) after 1255. This work has been attributed to Simon b. Jehuda; it was written in Aramaic, and its preservation was accounted for in a miraculous way. Its aim was to show that the Bible was never intended to be understood in a literal sense. In spite of its extravagances, the book exercised enormous influence for a long time. The Bakhai was composed by Azriel, one of the pupils of Isaac the Blind, and was attributed to Nissanka b. hak-Kanna. 2 Contemporary Rabbanus, however, refused to acknowledge it, and Meir b. Simon of Narbonne (second half of 13th cent.) ordered it to be burned. The Kabbalistic movement lasted for many years. Its failure to capture Judaism completely was largely due to the firm bulwark in defence of reason erected by Maimonides; yet it saved Judaism from being reduced to a mere system of logic. It produced many saints, and it created some fantastic enthusiasm. In the persecution it stimulated hope and encouraged pietjy, and by emphasizing the inner underlying ideas it prevented observance from losing its original meaning. The fault of Kabbalah lay in the fact that it was not fitted for the populace. In the case of a scholar or recire, mysticism produced devotion and ecstasy; in ignorant masses it generated superstition. Gradually the Kabbalists drifted to Palestine. Safed became a centre where its devotees gathered, and Joseph Qaro, Isaac ben Solomon Luria, and Alkates settled in the Holy Land. Their saintly lives are fine examples of the higher side of the movement. 2 So strong was the influence that the Zohar was studied by many Christian scholars, who attempted to find in it proofs for the Trinity and Christianity. The famous Pico della Mirandola, the disciple of Elia Delmeisio, translated several Kabbalistic works into Latin, and introduced the Zohar to the notice of the Medeces in the work Pope Sixtus IV. (pope from 1471 to 1484) procured translations, and ordered them to be disseminated as evidences of Christianity (Graetz, iv. 314).

The influence of the Kabbalah on Christianity was not wide or permanent, and, similarly, Judaism was to no great extent influenced by Christianity during the Middle Ages. It was as persecutors and as sufferers that Jews had knowledge of the Gentiles among whom they dwelt. 3 It is scarcely a source of wonder, therefore, that Judaism was so little affected by contact with Christianity. The followers of either religion knew and cared nothing for the thoughts and beliefs of the other. In the disputations between the two faiths—e.g., Paris (1240), Barcelona (1263), Burgos and Avila (1578), and Tortosa (1415)—the Christians endeavored to convert the Jews, and the Jews, who had no desire for controversy, were forced to argue. The attacks on the Talmud, the persecutions incidental to the Crusades, to the Black Death, and the increasing fear of poisoning wells, the blood accusation, the whole...
sale massacre of entire communities, the tortures of
the Inquisition, the *auto de fe*, and the ex-
pulsions and sequestrations all combined to stig-
mattize Christianity in the eyes of the Jews as a
religion of hate and blood. Consequently they
ceased not to use it as a weapon, and made no
attempt at a compromise. Marranos and others, to force
their career open, seized the earliest opportunity of
recanting their feigned conversion, even if their
inhabitants were men of death.
The Renaissance and the Reformation brought
some amelioration. Erasmus and Reuchlin were
champions of freedom in thought, far in advance
of their age. Luther, at first favourable to toler-
ance, ultimately changed his views. His pamphlet
*Concerning the Jews and their Lies* was full of
bitterness; he detested the Jews themselves as
much as he hated their religion, and his invective
against both was boundless. The study of Hebrew
by Christians was too strictly confined to a few
learned men to influence the masses or even the
classing classes. Only in the case of Reuchlin did
Hebrew learning among Christians prove of
advantage to Jews, and it is not certain that even
Reuchlin would have championed the cause of
the Talmud had his hand not been forced by his
Dominican superiors. Perhaps the most important
event in which the influence of Christianity on
Judaism may be observed is the expulsion from
Spain, in 1492, by which the Jews were dispersed.
Learning was spread abroad generally; in par-
ticular, a nucleus was formed in the East.

Towards the end of the 13th cent. a controversy
arose in Judaism as to the study of science. The
period when the *Zohar* began to circulate, was
intellectually poor. There were no outstanding
personalities who could have suppressed the
extravagant fancies of Kabalism and restored a
due sense of proportion. Men had lost the sense
of proportion and were involved in intrinsics.

Biblical exegesis and preaching became
tinged with obscurity, allegorization, and
pseudo-philosophy. Their activity was frequently
devoted to merely empty words and the twisting
and the twining of words. The chief of this
school, Levi b. Abraham of Vilnafrance, near
Perpignan (1340-1315), a follower of Maimonides,
became the intimate friend of Peter of Navarre.
Perpignan itself was the seat of this sort of false
learning; the allegorization, e.g., by Levi, of Biblical
characters (thus, Abraham and Sarah were regarded
by him as types of master and in-
tellect, who provoked the antagonism of the orthodox
and of those who favoured the literal exegesis.
A conflict arose in 1303 which resolved itself into
the question, Is the study of science opposed to Judaism?
and should it be suppressed? The
leader of the obscurantists was Abbah b.
Moses of Montpellier, who, from the outset,
posed Levi of Vilnafrance, who stood for freedom
of thought. The Rabbi of Perpignan, Don Vital
Menahem b. Solomon Meri (1249-1300), was
a very different type of scholar from his contempor-
aries. Of unimpeachable orthodoxy, he loved
science and philosophy, and refused to be coerced
by Abbah Maro, became a champion of science,
but declared that it ought to be studied only after
the Talmud was thoroughly mastered. Abbah
Moro, however, managed to involve the Rabbi of
Barcelona, Solomon Ben Abraham, in his quarrel,
and secured his support. The lovers of science
were led by Jacob b. Makhir Tibbon, a mathematician
and astronomer, and the famous Tibbon family
were naturally all the more adherents to science
by its cause to accusing their adversaries of being anti-Maimonists.

While the strife was raging, there came from the Rhenishland,
where he had been driven by persecution, the dis-
tinguished Asher b. Jehiel (1550-1597), a pupil of
the famous Meir of Rothenburg. Asher wandered
from his native country to escape the massacre of
Rindleisch, which were destroying communities. And, in 1595, he was made Rabbi of
Toledo. He was a great Talmudist and the com-
piler of a famous abstract of the Talmud, but he was a bitter enemy of secular scholarship. Naturally he joined the side of Abbah Maro and proposed to convoke a synod in which science was to be
condemned and utterly banished from the Jew-
ish curriculum. Finally, on 29th July 1593, a solemn ban, to remain valid for fifty years, was
pronounced against all secular study and also
against the works of Maimonides. Any person
under the age of twenty-five reading a scientific
work was to be excommunicated. The organiza-
tion of the Jewish communities was such that the
ban affected only the town under the jurisdiction
of the particular Rabbi who issued it—is this case
Barcelona. Attempts were made to have the
decree recognized elsewhere, but meanwhile the
other side were not idle, and issued a counter-ban
from Montpellier by which excommunication was
pronounced against all who should read the books
of others or other persons from studying science, in
whatever language the text-book was written,
against those who abused Maimonides, and against
those who attacked religious teachers because
of their scientific or philosophical beliefs. The
cause of the enlightened party prospered and gained
much from the famous circular letter (lqqaret hikhamaselet) which Jedediah Bedarei
(on whom see J.E. ii. 626-627) wrote in 1597 to
Adarit and his party in defence of science and
Maimonides. After the French expulsions, partis-
sans of the two parties settled in Perpignan, and
the controversy continued; but the liberal gains
were perhaps the simple assert itself in favour of
scarcity.

Perpignan had been the centre of the obscur-
antists, but scholarship was not killed there. From
this town came forth a worthy successor of Maim-
onides, who went even further than that scholar
himself in his daring attitude towards reason and
learning. This great man was Levi b. Gershom
(G. F.), called Gerondes, Rabha (from his birthplace),
Leon de Bagnols (from his birthplace), or Magister
Leo Hebraus (1288-1344). The ban against science
had no effect on his education. Before his thirtieth
year he began his famous philosophical work
*Mithnawth Adonmi* ("Wars of the Lord").

Of his numerous others works, his Talmudic knowledge,
and his scientific and medical attainments it is
impossible to write here; his influence on Judaism
may be measured by his philosophical attitude in the
work mentioned above.

He stood forth as a convinced Aristotelian, to a much greater
degree than Maimonides, so that he sometimes does not scruple
to follow Aristotle when he disagrees with Jewish doctrine,
even where Maimonides threw the Greek philosopher over. He
denied that the Torah requiredblind faith or belief in anything
opposed to truth and reason. The *Wars* deals with the six
questions on which Maimonides deserted Aristotle or on which
he gave no clear reply, these points being: (1) immortality;
(2) prophecy; (3) divine omniscience; (4) divine providence;
(5) the nature of the sphere; and (6) the eternity of matter.

Rabbi carries the intellect born in man as a faculty which is
operated by the universal intellect; man cannot grasp the
object of his thought. He derives mortality from the doctrine
of the realists. He maintains the freedom of the human
spirit in the spirit of the divine conicience. He differs from
Maimonides on the position assigned to the function of the
imagination in prophecy. Maimonides holds that it is a secondary
power, the other that it should be subordinated to reason. Further, for
Maimonides the special will of God is the same as the
prophecy; for Levi moral and intellectual perfections are quite
sufficient." (I. Brody, in J.E. v. 405.) Rabbi demonstrated
that this world had a beginning, and was not a mere copy of
a previous world, but that it has no end. The tikkun had
been from all times, but was formed by the

Creation. As regards miracles he was extremely rationalistic, and believed that they could only be justified as convertible conditions by which they were to be judged: (1) miracles are transitory; their effect does not endure; (2) the natural working of nature; (3) nothing can be traced and white simultaneously; and the crucifixion was not in one of the celestial spheres. Miracles are not supernatural, but are natural occurrences. And yet, he was himself convinced of the existence of miracles. In 1038, the miracle was not the sensation of the sun, but the reappearance of the sun with the Jewish covenant. He was also convinced of the existence of miracles. So also in the case of Harkh (2 K. 40-45), it was the shadow, not the sun, that went westwards. 

The theories of Rabbein did not pass unchallenged. His ideas were not popular with the masses, but retained their hold over learned minds for generations. Pepe Clement VI. ordered his astronomical works to be translated into Latin, and Simplicius adopted works on the treatment of miracles (see Graetz, iv. 101). A contemporary of Rabba, was Moses b. Joshua of Narbonne (Vidal Narboni), who was born at Perpignan. He died after 1332. In the history of the study of philosophy at the University of Toulouse.

He was a follower of Maimonides and Ibn Hazad (Averroes; Averroes, Azeyrox, vol. ii, pp. 295-296). In spite of a chequered life, he was a productive author, and his most considered influence. He conceived Judaism as a disinterested guide which led to the attainment of the highest degree of theoretical moral truths: the Torah had a double meaning, the one spiritual, made easy for the thoughtless and the other, a deeper content, made available to the spiritual. This was a common opinion in those times, from which he never departed. He endeavored to give expression to rational views, that is, such as were contrary to the accepted understanding of Judaism, but not with the freedom and collection of the Arab philosophers. He also rejected the belief in miracles, and attempted to explain them away altogether. He also wrote on the freedom of will by philosophical arguments (Graetz, iv. 102).

Rabba was a staunch Aristotelian, but the Jewish philosophers were not confined to this school of thought. Abraham Crescas (1400-1410), born in Barcelona, sought to free Judaism completely from Aristotelianism, and was thus at variance both with Rabba and with Maimonides. His was the greatest of all the Jewish philosophers. He was a master of reason and style.

Crescas declared that the teachings of Rabba and Ramban were contrary to orthodoxy, mainly because they were based on Aristotle, whereas differed from the other opponents of those teachers in that he came to his conclusion through argument, not with appeals to authority or threats of excommunication. Maimonides himself disapproved of the use of Aristotle. Crescas rejected them. He held that philosophy was insufficient to demonstrate the unity of God. Although philosophy might show that the First Cause was simple and compound, yet there might still be deities subservient to the same cause, which were reactualizations of God's essence, not knowledge, but love. Crescas also admitted the miracles. He rejected the thirteen articles of the creed of Maimonides as being either too few or too many, and laid down his own six essentials: God's omniscience, providence, and omnipotence; prophecy; free will; and the belief that the world was created for a purpose. Man's will is free because he feels it to be free; though in reality God's omnipotence pre-determines, yet man will in sufficiently free to admit reward and punishment. The world was created, and would pass away, while the heavens would endure. The good of the world was human happiness, to be brought about by love, both here and in the hereafter. Knowledge is apart from the soul.

It will thus be seen that the gulf between Crescas and his predecessor was very great. Crescas was not only attacked, was strangely ignored by his contemporaries. So was his teaching was diffused largely by the works of his pupil Joseph Albo, chiefly through the Igudah ('Roots'), in which there is little originality, but the matter being almost entirely derived from Crescas.

The appearance of David Reuben (c. 1450-1535) and Solomon Molko (c. 1500-32) kindled great hopes in the hearts of the Jews and Marranos. Their extraordinary nature gained them many followers, and the honour which they were received in Rome and Portugal deluded many into the belief that their Messianic claims were valid. Their failure caused bitter disappointment, though the heroism of Molko at his martyrdom (1332) encouraged many who were doomed to a similar fate. Their importance to Judaism lies in the fact that the failure of one pseudo-Messiah did not prevent his successor from receiving credence.

Only 150 years later, Judaism was rent by the schism produced by another claimant, Joel Zehi, whose followers were numbered by thousands (see below, p. 603). Kabbalah was largely responsible for these eschatological ideas. Already in 1284, Abraham Abulafia declared himself to be the Messiah, and fixed the millenium for 1999. Two of his disciples, Joseph Jiquatilla and Samuel, from Medina Celli, alleged themselves to be prophets and heralds of the Messiah, and Messianic hopes were largely predominant in the minds of the later Kabbalists at Safed.

It has already been pointed out that Christian persecution was driving the Jews into Muslim countries. Little by little, Turkey and Palestine were receiving a large Jewish population; Safed, in particular, became the home of many distinguished Rabbis. Among these Rabbis there grew up the desire for the classical Rabbis to maintain the Rabbi's supremacy of Palestine. They desired to maintain once more the "simkhat," or ordination, and thus ordain a Sanhedrin which would be recognized throughout the world. In 1338, Jacob Berab began to ordain in Safed; but his pupil's ministry, conducted by Levi b. Jacob Rabbi, the chief Rabbi of Jerusalem, and his colleague, Moses de Castro. Berab failed and was forced to emigrate, but before doing so he ordained his disciple, Joseph Karo. When Joseph Karo was Joseph Karo. Had Berab succeeded, a great step in the direction of Jewish ecclesiastical unity would have been accomplished. It is significant that he failed. Judaism has never liked the idea of an institution of authority, certainly not since the Diaspora, and it has flourished perhaps by reason of its local autonomy in religious spheres. Had a single authority been able to control Jewish thought and belief during such controversies as raged over Kabbalah, Maimonides, the study of science, and the Arab and Greek philosophy, the result would have been the death of sects, from which Judaism is so remarkably free. But the twenty-five years during which many of these conflicts, taken sides, Judaism would have been crippled. Freedom of thought, the result of local autonomy and independence, alone has preserved the rich tissue of Jewish life.

The convocation of synods, however, is not an unknown event in post-Talmudic Judaism, but the feature of these synods has usually been their temporary character and their convocation for a particular purpose. Thus, the 'Arba'ah, or assemblies, of R. Ta'an, in the middle of the 12th cent., met at Troyes and Rheim; to determine many cases, generally those arising out of the intercourse of Jews and Christians. Perhaps the most famous synod was that summoned about 1000 by R. Gerhard (960-1040), which (1) prohibited polygamy, (2) maintained the principle of mutual consent in divorce, (3) ordained leniency for forced conversions, and (4) prohibited the opening of other people's letters. Assemblies were also held at Mainz (1223), at York (1281), of the Spanish Jews (1314), and at Bologna (1416), Forli (1418), Jerusalem (1532), and others.

Labin (1589), while Napoleon (1806) and Alexander I. (1804) summoned synods. In 1903 a synod of 60 Rabbis was held at Cracow, under the presidency of R. Eliahu Hayzàn, chief Rabbi of Alexandria, who repudiated the blood accusation and schism which they were induced into.

2 Also the followers of David Alroy (c. 1100) formed a sect called the Manicheans (cf. M. Adler, in J.BQ, 451.)
3 See J. H. Ginser, 'Berab, Jacob,' in J.BQ, iii, 47-47.
denounced Nihilism. In America and Germany synagogues have been summoned in modern times, chiefly by the Reform party. The synods of Lublin, in 1650, was that of permanent character, the famous "Arba Arba" of the Council of the Polish Jews a year later, in 1653, the Lublin, Poland, Polish Russia, and Volhynia), regularly during two centuries. But all these synods were, in effect, local. They did not pretend to legislate beyond their own jurisdiction, much less a serious and vital question. The theory of the Rabbis has always been mutually exclusive; that there has been no official primate inter partes. At the present day in Europe, many of the Zaddikim and Ashkenazim communities exist side by side, in friendship and mutual recognition; their position may be compared to adjacent dioceses of the same Church, without a primate.

The great Halakhic work of Maimonides did not change the utilization of codes. Many teachers devoted themselves to the task, either for popular use or for the elucidation of the principles of Halakhah. Eliezer b. Nathan of Mainz (Rabbi) was the author of the "Evasa ha-Ivri". Menasseh b. Isroc wrote the "Shemah", or Sefer M Megosh Gedoloh, and Isaac of Corbeil composed the "Sena", or Sefer M Megosh Katan, a smaller work. Efraim of Worms (1176-1238), a prolific and vigorous writer, was the author of the "Kabbalistic" works. His fame rests chiefly on the "Kallah", an ethical-Halakhic work in 497 paragraphs. His Kabbalistic views, shallow and superficial, yet the "Kallah" is a valuable contribution to Judaism. Solomon b. Adar of Barcelona wrote a comprehensive scheme of laws, covering all the practical needs of Jewish life. In distinction to Maimonides, he gives in this work, "Tora ad-din ad-din", the sources and proofs of his rulings.

Perhaps the most famous of those post-Maimonides codes was the "Arba Arba" of Jacob b. Asher (1290-1340), a son of Asher b. Jehiel. Its influence on Jewish life is, perhaps, greater than that of any other code, and it became a household word. Joseph Caro, when he thought it necessary to compose the "Shulhan Arukh", practically revised and brought up to date the work of Jacob b. Asher. Caro was a mystic and devoted to Kabbalah. His life and those of the Sefed Kabbalists have been well portrayed by S. Schechter in his "Studies in Judaism" (London, 1896). Their influence pervaded Jewish life and ceremonial, and many a touch of spirituality, a high association, an ethical hint, is due to their teaching. They introduced a spirit of concentration, a sanctification of religious practice, devotion, and self-sacrifice. Every part of their teaching would have made Judaism unreal and superficial; in due proportion it gave life and light. Protected and fortified by his philosophers, Judaism was safe from the dangers of an exaggerated mysticism. On the other hand, the exactitude of the law and its enforcement would be reduced to the collection of intellectual dogmas, lacking man and vitality. Its stability is due to the heterogeneous nature of its component parts and to the proportions and moderation with which each one had to fulfill its appointed function.

Poland was pre-eminent in the home of Talmudic studies of Jewish education; given an impetus to this learning, and the practical jurisdiction of the Rabbinical tribunals forced judges as well as litigants to master the code by which judgment would be given in the printing presses worked, the output of copies of the Talmud was speedily sold out. In forty years, three large editions were exhausted (Cracow, 1602-05, 1616-20; Lublin, 1617-39). So great was the devotion and so numerous were the Rabbis and pupils that the supremacy of Poland was everywhere acknowledged. The dispersion of the Polish Jews, due to the terrible atrocities in 1648 of Chmielnicki (1555-1675), had scarcely any effect on their attachment to the Talmud. They carried their love with them into exile and claimed their rabbis and schools. This enthusiasm carried with it one great disadvantage, for every other study, Jewish and secular, was abandoned, and the Polish Jews immersed themselves in an intellectual ghetto, the confines of which were as narrow and crushing as those of the physical pale. There began a period of darkness and ignorance, which was ended only by the light of the Mendelssohnian movement. It is incorrect to attribute this misfortune to the nature of the Talmud. It was not concentration on the Talmud, but the exclusion of everything else, that was responsible for this retrograde tendency. The devotion of the Polish Jews to the Talmud is largely maintained to-day, but other influences are at work, and, while they no longer shut out general knowledge from their curriculum, their zeal for Halakhah is not abated.

In the 17th c. three different influences exerted themselves upon Judaism. The Talmudic influence, alluded to above, became more powerful with the diffusion of the Polish-Jewish chasidim. Secondly, a strong wave of Kabbalah infected Jewish communities in every land, East and West. This, too, was naturally followed, in reaction, by a strong spirit of opposition. This phase of Kabbalah had nothing in its favour. The earlier saliency of the mystic idea was gone; it degenerated into senseless tricks and jugglings. Isaac Luria and his pupils, in spite of their piety, were the teachers of an unworthy supposition. They claimed to work miracles, and belied the ignorant by their visions and alleged wonders. They preached metempsychosis, the union and redemption of souls, and practical magic, often by means of the inefable names. Hayyim Vital Caban, his brother Moses, and his son Samuel lived in Palestine (Jerusalem, Safed, and Damascus being strongholds of Kabbalism). Isaac Saruk, a pupil of Luria, and Azaria da Fano, in Italy. The teaching of these men and their numerous followers prepared the way for the pseudo-Messiah Shabbethai Zebi.

This wonderful impostor succeeded in deceiving thousands; not merely the ignorant multitude but learned and earnest Rabbis followed him. All over the world preparations were made for the Messiah's advent. He became the centre and leader of the Chasidim, or "Mirabils, 1665. London and Amsterdam were filled by Smyrna in anguish, and few kept their heads during this commotion. So strong was his personality that, in spite of his ludicrous fables, multitudes believed in him. A rumour afloat about Shabbethai similar to the Doctrinale theory of theGrundtvig, which maintained that a substitute had intervened and saved Jesus from the Cross, it was said that another had appeared, and that the real Shabbethai had withdrawn for a while and would reappear in glory. The belief in him has remained in the present day, and a separate sect of Turkish Jews call themselves "Dinnaah" (on whom see B. J. H. Goffe, "J. B. iv. 293), await his second coming. When the majority of his misguided followers recovered their senses, every reminiscence of the false prophet was banned. Thus it is said that an imposter, for the second day of Pentecost (July 27, 1704) by Rabbi) is emitted from the usual Ashkenazic Kabal, because of some supposed association with Shabbethai-Zebi. The Mendelssohnian movement, however, times itself self imposed in Holland. It was re-echoed by the English Puritans, and to no small extent facilitated the return of the Jews to England.

The excesses of Talmudism and Kabbalism produced an intellectual revolt, the last of the three tendencies to which allusion has been made. For the first time Judaism had to deal with rationalism and philosophical scepticism. This new trend of thought was first manifested in three contemporaries, Uriel de Costa (1590-1647); see art. ACOSTA, for these see J. E. viii. 210-212, xli. 421 ff., xxli. 64.
Far more important to Jewish development was Moses Mendelssohn (q.v.) (1729-56). No less brilliant than Spinoza, no less erudite, and similarly endowed with a capacity for philosophy, he was a tower of strength to Judaism. The crisis in Judaism is due to the great revival which aroused thought, stimulated culture, and once more brought Judaism into contact with external learning. Without Mendelssohn, it would have sunk more deeply into the clutches of ignorance and remained an easy prey to the attacks of atheism.

Mendelssohn had to contend with opposition on account of his translation of and commentary on the Bible, but his teaching was enormously diffused and gave vast numbers of young men as insight into modern thought, without destroying their faith. Like Maimonides, he was one of those intellectuals that give another turn to the wheel of Jewish ethics and intellect. His effect was all the more potent since it almost coincided with the break up of the ghetto. The Jews emerged into more intimate contact with their surroundings and, despite the element of light, found help in his guidance. His influence for German over Judaism was in itself epoch-making. He taught fidelity to Judaism and respect for the belief of others. His friendship with Lessing helped to make the cause of Judaism known outside and may be counted as a stage in the progress of Jewish emancipation.

Mendelssohn and Naphtali Hirz Wessely were the founders of a Jewish Renaissance, and their work was continued by Nahmann Krocchnal (1785-1840) and Samuel Hirsch (1778-1858). The large array of Jewish scholars of the 19th cent. all owed inspiration ultimately—in whatever branch they were engaged—to the Mendelssohn revival.

Wessely, in his Dibberi Shelahim ve-emeth (Germ. tr. by D. Friedlander, Worte der Wahrheit und der Fakten, Berlin, 1798), had outlined a scheme of Jewish education in which the Talmud should both find a place; nevertheless, he was not regarded with cordiality by many Polish Rabbis, some of whom were genuinely frightened at the combination, though not hostile to it, while others were merely obsequious.

The spirit of the 19th cent. was, it is true, that a certain number became estranged, but many were fortified in their belief. At the same time a curious development had arisen in Poland, a revival of Essenism and mysticism, the followers of which called themselves by the old name Hasidim. The founders of the new movement were Israel b. Eliezer, known as Biala Shem-Tob (Leipzig, 1750) and other Hasidic leaders. Biala Shem-Tob was the Breshei of Mezritz (1710-72). The extraordinary piety of the Hasidim was re-echoed in their followers. Prayer was a vital force and was the means of union and fusion with the Godhead. In spite of the attempts at miracles and predicting the future, Hasidism remained within the bounds of kosher practices. The sect was, and remains to the present day, a band of devotional enthusiasts, giving themselves entirely to introspection and prayer. The quasi-religious exercises of the Hasidim and their partial antagonism to the Talmud brought them into conflict with the Rabbis, and they were denounced by Eliezer Wima (1790-97), but in 1781 they were declared to be heretics, and the agitators, the Mithkademet ('opponents'), rightly perceived that Judaism has no liking for extremes. The excesses of the Hasidim were becoming intolerable, and, as their numbers grew, the Talmudic and Hasidic controversies developed. It is estimated that at one time they numbered 100,000, although this is perhaps too large a figure. With the political emancipation of the Jews, a new era in Jewish life began; this emancipation is still incomplete in many lands.

The effects can scarcely yet be estimated. Russia, the home of the greater number of the Jews, is still pursuing a policy of repression which affects not only the Russian Jews, but other Jews as well.
countries to which fugitives go. Emancipation brings many problems in its train; for, so soon as a community begins to solve some of the difficulties and readjust itself to new conditions, an influx of Russians renews the process. Education is in the main desirable, but it is a dangerous thing in which religious and secular knowledge shall each have a proper place, is being gradually and variously evolved. In Russia, the Haskalah movement has usually followed because the tendency of the Maskilim and their children is almost invariably towards assimilation. This is in reality due to economic conditions. The oppressive restrictions imposed by the Government on schools and learning prevent the rise of a carefully planned scheme of education. Thus modern knowledge must be acquired, almost entirely, either surreptitiously or from anti-religious sources. For the Zionist movement in modern Judaism, see art. ZIONISM.

III. JUDAISM AT THE PRESENT DAY.—The future of orthodox Judaism and its relations with Christianity, on the one hand, and Zionism and liberal Judaism on the other, may be briefly summarized. It is unnecessary to dwell on the origin of Christianity. Graetz (ii. ch. xiv.) has traced the steps by which the breach between the two in the first instance was made. Judaism does not admit that Jesus was the promised Messiah. It cannot accept such distinctively Christian doctrines as the miraculous birth of Jesus, His divinity and relation to the Father, the Triumphant Entry, the Resurrection, the idea of mediation, the conception of sin. Further, Judaism differs from Christianity with regard to the Law, neither admitting the possibility of its abrogation nor regarding it as burdensome. The Commandments are given to man 'that he may do them and live by them' (Lv 18:5). Judaism has a more optimistic view of life than Christianity; it does not hold that the pleasure of the mighty is that their wealth is a bad thing under all circumstances (Lk 6:24, 25; Ja 1:25; Mt 10:28) and that marriage is evil. No Rabbi may be a celibate. Marriage is the first commandment of the Bible (Ex 20:18).

The "Return to God" (from see F. C. Porter, Yehu Benayahu Bib. and Sem. Studies, London, 1901, p. 123; it is called see zc (Gen. Rab. 7:61, 70, of Theodor's ed., Berlin, 1903; see his note), and God instituted it 'for his glory.' See, e.g., God and Man (Singer, p. 299; cf. Book of Common Prayer, The Form of Solemnization of Matrimony: 'Matrimony, which is an honorable estate instituted of God.' In the case of the "Return to God," the remedy against sin and against the smallest of the sins is found there, and the marriage of the man of Nazareth and of the man of Ithmael... We cannot mention all the services of the service, for it is so vast a field... In Babylon only the ninth of Ab was observed. Finally, Judaism does not declare that relief in any dogma is necessary for salvation. It teaches that 'the righteous of all nations have a share in the world to come' (Maimonides, Hilchot Teshuva, iii. 2), that 'the teachings of the sages are Torah and the of Nazareth and of the man of Ithmael... serve to bring to perfection all mankind, so that they may serve God.' (Maimonides, ed. D. Yellin and I. Alexander, 'Halakhic I.,' 1903, p. 244 f.), that 'the good actions of any man, to whichever people he may belong, will be rewarded by God. But the priority belongs to people who are near God during their life, and we estimate the rank they occupy near God after death accordingly' (Kuzar, i. 111 = Hirschfeld, p. 78; see also Exodus Rabba, p. 49, and, for other references, D. Wassermann, The Messianic Idea, p. 229). The foundation of Judaism is the assumption "Remnant." Though it recognizes the general truths of Christianity and Islam, and the religious validity of these systems, it cannot concede that its own destiny is such as to make the differences outlined above remain in existence. While rejecting eschatologicalism, Judaism can fully appreciate the life of the founder of Christianity; and, in estimating the practical value of that spirit, it pays regard to the noble lives fostered by its ideals rather than to the persecutors that have proved false to its teaching.

Judaism is to be the religion of a Remnant; from the material conditions demanded of its adherents, resulting from an environment preponderantly non-Jewish, it is inevitable that Judaism, under present circumstances, must be limited to a minority. This circumstance constitutes its strength. It must never be forgotten that the minority influences the majority, not vice versa, for good. All great movements spring from the few; when they have perished, the movement fades; but when they have failed, and that there is need for a new growth, that is that they have accomplished their purpose. Nearly every ideal degenerates with popularity. When the masses are stronger than their leaders, chaos results.

In a great population animated by democratic notions, recognizing no external authority in matters of faith or state, with a growing passion for equality and a creed that can handle the good things of this world, as recommended by the modes and methods of life of the wealthy and luxurious, it would be irrational to expect to discover any general refinement or delicacy of thought or feeling. To expect too much of the human race is the ancient error of moralists and philosophers, The human nature is to fail. In his lecture on "Numbers," delivered in the United States, Mr. Matthew Arnold illustrated by quotations from Plato and Idealism that it is always the remnant that saves a nation or a race, and the advantage of a big country and a great population is that the remnant has at least a chance of being a good large one. (Augustine Birrell, "Modern Conditions of Literary Production," 1900, p. 12.)

The losses sustained by Judaism through persecution and by the oppression of the Jews in Russia and Kuma, together with the more sable but no less severe persecution prevalent in some other countries, have produced a strong movement, first among the Jews, for the Zionists regard a minority as doomed to failure. Originally this movement was partly economic and philanthropic in scope; Herzl's Zionism was under the Basel Congress in 1895. "The Jewish people is an every-" a new home in Syria and Palestine for persecuted Jews. The words 'legally assured' differentiated Zionism from the other colonizing enterprises. Since the death of Herzl, who said, 'Der Weg zum Judentum fuhrt durch das Judentum,' Zionism has developed into nationalism, which asserts a Jewish nationality independent of religion. The division of certain sentiments into 'national' and 'religious' is arbitrary: it is a Latin or European conception, as the language of the terms indicates. The antithesis is not Semitic; for, while religion to a Semite—Jew or Muslim—includes, as has been said of him in the Old Testament, more than is now ordinarily understood by the word, a kinship on the basis of blood or language or any other but a religious tie is conceivable neither to the prophet of old nor to the Semitic ethnologist or historian of to-day. Monotheism, not some physiological inheritance, is the raison d'être of Judaism (see C. G. Montefiore, 'The Jewish People, and their Prospects,' 1868). See also id. xxvii. [1904-05] 1-25, 397-425; Jewish Chronicle Correspondence, 1900, Jan. 1, 19, March 12, April 9, 16, 23, 30, May 21, June 25; on the
JUDAISM

question of a Jewish race see R. N. Salamon, in Journal of Genetics, i. [1910-11] 273 ff., where a complete bibliography is given.

Every reencouragement of nationalism has brought misfortune to the Jews and to Judaism. It was the cause of the catastrophes of 1870, of the fall of the Maccabees, of the decay of the Sadducees, of the destruction of Titus, and of the desolation of Judea in 136. In every case the disasters came about as a result of bitter disputes with their opponents. Johanan b. Zakai built up what the zealous overthrow, and the breaches resulting from Bar Kokhba's declaration of national unity were beset by the Rabbis. A Jewish centre is not an essential to enable the genius of Judaism to assert itself. There was neither a physical nor a spiritual ghetto in Spain, yet the Spanish period is perhaps the brightest in the history of Judaism. Nor is the circumstance that the Jewish liturgy prays for a return an argument for Zionism; the return to which Judaism looks forward is always associated with religion. 'And let our eyes behold thy return in mercy to Zion, and there we will worship Thee in awe as in the days of old' (Adler and Davis, Service of Syn. [Tabernacles], p. 140). The true character of Zionism, as an alternative to religion, may be seen from such passages as the following: 'We will not find a satisfactory sphere of activity in the life of Miztvah ... to-day we have no one centre of Jewish loyalty, and the life of Miztvah is losing its hold. Such Zionism would save the Jews at the cost of Judaism. Finally, liberal Judaism has arisen as a missionary movement in order to rescue those Jews who have become indifferent to their faith. Liberal Judaism stands much nearer to orthodox Judaism than Zionism does. The differences between the two forms are internal and small in comparison with their points of contact; to the outside world both are united, although there may be a great gulf between individuals on both sides.

For membership of a liberal synagogue does not necessarily imply the repudiation of something not definitely taught from its pulpit. Liberal Judaism is not a necessity for certain practices, but it does not require their abandonment. It is thus in nature not Karaitic, but it asserts the continuation of Rabbinic tradition as a living force. Becher and Arickch in the sealing up of Halakhah, liberal Judaism maintains that its religious teachers and individual members to-day have the power to bind and loose as of old. In this respect it is something positive, not a mere negation of orthodoxy. The latter, on the other hand, cannot accept any development unless sanctioned by a Rabbi with Hadarorhord (facultas docebit), and permits a synod to decree changes only if its authority is recognized as equal to that of its predecessors. Liberal Judaism seeks to win back the lapsed, even at the cost of modifications; orthodoxy, however, maintains that the preservation of the ideal is more important than the salvation of the individual, for Judaism must be handed down unimpaired, even though by a minority. In theory the two bodies are in agreement, but in practice there would seem to be a sacrificing of its ideals; it is on the definition of the essential principles that the controversy turns. Orthodox Judaism foresees a danger of liberal Judaism, by not laying down clear-cut principles, a drifting into a colourless belief of universalist monotheism.

Since 1842, when the controversy reached an acute stage in England, orthodox Judaism has changed its attitude to the Reformers. Already in 1854 the Sephardim removed the ban which had been imposed, and to-day, while acknowledging that there are differences between the two points of view, the orthodoxy has come to regard the Reformers in harmony and tolerance. Judaism has always striven to secure union and avoid sectarianism. To the credit of Zionism it must be urged that it has brought back to the Jews the ancient idea of the great home in Israel, even if nationalism, at best, is a mere modification of Judaism, the children of the nationalists may become orthodox Jews (לַּעֲשָׂה בֵּית נֶגֶר וּלְבוֹשֵׂת עֵדֶת). In the case of liberal Judaism, many Jews, previously lacking all feelings of spirituality and loyalty, have been taught to love God, to keep His commandments, to attend worship, and to observe the festivals. Israelites and Samaritans are not entirely those of orthodox Judaism, but of the sincerity of their purpose there can be no doubt. How much more then can there be applied to them the saying, 'Always let a manbusy himself with a Mişwa, even though it be not for the purpose of the Mişwa, for by practice he will come to do the Mişwa for the proper purpose' (Bab. Pes. 50b); since the purpose of liberal Judaism is to promote the sanctification of God's Name, its cause is related to a sense of duty, the choice of method, unpleasing though it be to the orthodox, must be left to the conscience and judgment of the liberals themselves. Hence if Judaism, orthodox and liberal, and Zionism can look forward with confidence to a future, one and indivisible.

LITERATURE.—The following is a selection of works, chiefly those that have appeared since the bibliography of the B 8 was compiled.

JUDAIZING

3. The Christianity they could not adopt.—The teaching of Jesus offended Pharisaic Judaism by its unanswerable criticism of the traditions of the elders (the Oral Law), by its want of deference to the hierarchy, and by exalting the end of religion (love to God and man) and consequently depreciating the current estimate of that of the Pharisees, dietary rules, and the 'hodge about the Law'—generally, however. He claimed an authority which shocked the scribes. Not by vision, or by dreams, or by prophetic inspiration, or by writing a Pseudepigraphon, but in his Own name he restated the Mosaic Law: He spoke as the Judge of the whole religious past of the nation, and prescribed for the future a mission of world-wide benevolence. He had kindled a new spirit in a few disciples; and this religion of the spirit would seek to save that which Judaism considered to be lost. He thus claimed the Messianic rank, and the hierarchy induced Pilate to consent to the Crucifixion.

The company of disciples, animated by the spirit of the Risen Christ, continued steadfastly in the apostles' doctrine and fellowship, and in breaking of bread, and in prayers (Ac 2:47). They were conscious of being called to preach the gospel, and they chose Matthias in place of Judas. They showed no hatred for their enemies, and some men who had professed the death of Jesus; what had happened was part of a divine purpose foretold by the prophets. As yet the disciples were not cast out from Temple or synagogue, or considered as inscrutable to the incipient Church. The believers continued to frequent the Temple (Ac 2:38; 21:38), they increased rapidly in numbers and were joined by ‘a great company of the priests’, the new interpretation of Israel's history and mission was proclaimed by Stephen, which seemed to the authorities to be 'blasphemous words against Moses and against God' (Ac 6:12).

The stoning of Stephen and the active part of Saul mark the end of toleration for the followers of Christ—the Galileans, or Nazarenes, or Mums, as the Jewish authorities began to call them.

4. Appearance of 'Judaizers.'—Persecuted in Jerusalem, the Church made converts among the Samaritans, who did not profess the Oral Law. The Good Samaritan of the Temple, sacrifice, was bidden, like the priest and the Levite under the Oral Law, to help a wounded stranger. The apostles Peter and John had no hesitation in accepting Samaritan converts (Ac 8:12). Philip admits the Ethiopian, who could not have been more than a ἐθνικὸς ἔθνος (De 29:3). Other converts are admitted, in Damascus (Ac 9:33), Lydda (9:33), and Joppa (9:38); but the mission is directed to Jews only, or to proselytes attached to the synagogues (11:19), at Salamis (13:13), at Antioch in Pisidia (13:14), at Iconium (14:1), at Thessalonica (17:1), at Berea (17:12), at Ephesus (18:19; cf. 19:18), and at Rome (28:19). Thus for some fifteen years after the Crucifixion the Church included only the Jews or Gentiles who had become proselytes to Judaism. The admission of the Roman Cornelius was felt to be an innovation requiring the highest sanction; and Peter, on returning to Jerusalem, did not feel it necessary to criticize, the opposition to his act marking the first appearance of the 'Judaizers.'

At Antioch Greeks were admitted to the Church by the missionaries; and the name 'Christians' was first applied to the new brotherhood. The Church at Jerusalem at once sent Barnabas to inquire into this proceeding; and, after getting Paul to assist him for a year in Antioch, returned to Jerusalem with his new companion returned to Jerusalem, bringing gifts for the relief of the brethren in Judaea during a famine. From Antioch, Paul and
Barnabas set forth on their missionary journeys. With the help of Judas Antioch, they definitely announced their intention of appealing to the Gentiles, and on their return to Antioch they rehearsed their work and the reception of the Gentiles. Certain Jews from Jerusalem maintained that it was necessary to circumcise the Gentiles and to command them to keep the Law of Moses. This led to the Council of the apostles in Jerusalem, which gave the most important decision on the subject of circumcision.

5. The Council of Jerusalem.—The accuracy of the account in Acts 15 has been questioned; but, if we take A.D. 52 as the date of St. Luke's composition of the Acts and c. A.D. 50 for the Council, the time limit is against serious error. One MS (D. Codex Bezae) omits καὶ τῶν ἐθνῶν, and is followed by Irenaeus, Cyril, Tertullian, and Jerome. The Decree thus prohibits the use of flesh offered to idols, murder, and fornication—being "a summary of Jewish ethical catechetics" (Harnack, Acts of the Apostles, p. 299). The Textus Receptus reads, 'That they abstain from pollutions of idols, and from fornication, and from things strangled, and from blood' (Acts 15:20). A careful analysis of Harnack, reinforced by E. H. Eckel and S. A. Devan (Expositor, 8th ser., vi., [1913] 60-82), may be held that the TR is preferable. Idolatry and fornication are specified because they were considered vileness among Gentiles. Lambs killed by a non-Jewish butcher could not be eaten by a Jew by birth; it is fairly certain that St. Paul, for all the freedom that he claimed, would not release the law's unblemished victims. Unless this regulation were observed, there would be no common social barriers between Jewish and Gentile Christians. Higher hygienic reasons may have been instinctively present; the motive for instituting abstinence from blood in Gen 9:4 was to diminish the ferocity that had filled the earth with violence. It would cause little trouble to teach the Gentile Christians the method of slaughter.

For Moses of old time hath in every city them that preach him, being read in the synagogues every sabbath day' (Acts 13:15). In every such place there was a shofar, and the use of his services might help the Christians to go forth 'as lambs among wolves.' It may seem strange that the universal religion should include the menu of a Palestinian party, yet the matter of eating and drinking was regarded as a matter of conscience. Paul master asks for 'daily bread'; Islam commands abstinence from wine. St. Paul felt the incongruity when he wrote: 'The kingdom of God is not meat and drink; but righteousness and peace, and joy in the Holy Ghost' (Rom 14:17). The Apostolic Decree assumed that Gentile Christians honoured the sacraments, and had received the Holy Spirit and the evangelical temperament; it would be insulting to ask them to abstain from murder, as this interpretation of Codex Bezae proposes to do. The intention of the Council was that Christians should use kasher meat; but St. Paul's theological abolition of law, Jewish and Gentile, resulted in the survival of custom, Jewish and Gentile, in the preparation of animal food.

It is worthy of note that the Decree does not require Gentiles to abstain from eating 'of the share which shrank, which is upon the hollow of the thigh' (Gen 32:14), although this regulation was observed as kindling in the Mishna (Hullin, 7). When strict requirements that the hind quarter of sheep and oxen were disallowed to Jews, and had to be sold at any price to neighbours. The practice is still continued among Oriental Jews, though it entails loss for no visible gain.

The hind quarter (like blood and fat) is avoided as food on account of its association with immolation, Jewish ceremonial institutions and customs, p. 135, speaking in general.

The long-lost Jews in China had forgotten the Hebrew language and the Law, but retained this strange abstinence, and were known among the Chinese as 'the people of the sinew.' The rōorāwa could hardly have been a special class of foods referred to as with aqwa, and would denote such things as chickens, geese, or game killed in the Gentile manner. The idea that bloodshed was forbidden, in the sense that a Christian could not become a soldier, is excluded by the case of Cornelius.

6. Judaizing opposition to St. Paul.—The Apostolic Decree thus established a rule of guidance for Jewish and Gentile Christians. Many matters required regulation. Were Jewish Christians to circumcise their boys on the eighth day? Were they to keep the Sabbath, or the first day of the week? Were Passover, Pentecost, and Tabernacles to be kept with the old associations? Was the pilgrimage to Jerusalem obligatory? Were they to intermarry with Gentiles, to maintain the dietary rules, to eat unleavened bread for a week in spring-time, to wear phylacteries, and to recite the prayers of the Jewish liturgy, and to read the Law and the Prophets with the same uncritical deference? Heathen converts such as Trophimus (Acts 21:21) or Epenetus (Col 1:15) could not interpret the Decree; proselytes—of the gate or of righteousness—would also welcome it; the liberal Hebrew Christians who carried the Decree might continue the old customs, but this was an unwholesome strain upon Gentiles; but the minority of Judaizers refused all laxity, and hampered the work of St. Paul in most of his mission field.

The activity of the Judaizers is indicated in the account of the work and correspondence of St. Paul, and has to be kept distinct from the open antagonism of unconverted Hebrews. The Judaizers had sought to persuade the Galatian Church to observe days and months and times and years, and to require circumcision. They questioned Paul's authority, and may have cited the example of Peter. Paul's defence is to point to the presence and the fruits of the Spirit. If observance of Law is sufficient to give life, then the advent of Christ is a negligible accident. Peter's desire to conform to Jewish scruples is condemned as dissimulation; and Paul's sternness on this point is mentioned as sanctioned by the Church at Jerusalem. Again, at Colossae the Christians seemed likely to be spoiled by a 'shew of wisdom in idol-worship, and humility, and severity to the body' (Col 2:23). Here the legalism was tinged with theosophy, which interfered with 'meat or drink, or a feast day, or a new moon, or a Sabbath day' (Col 2:16). The Epistle shows the danger of losing freedom and universality, and insists on the need of conscious communion with a living Spirit. The Christian is under a Spirit whose voice was the true law. At Corinth the Church consisted mainly of Gentiles who had not passed through the synagogue (1 Cor 12:29); but included Jews (1 Cor 7:17); and it may be inferred from 2 Cor 3 that teaching of a Judaistic type had been addressed to the Corinthians. To the Philippians, Paul has to write 'Beware of the concision. For we are the circumcision, which worship God in the Spirit.' (Phil 3:3). The Epistle to the Romans warns that Church against 'them which cause divisions and offences contrary to the doctrine which ye have learned' (16). These were probably Judaizers; the argument of the Epistle is St. Paul's greatest effort to answer them. All old laws and customs, Jewish and Gentile, have ceased to be important because 'the love of
God is shed abroad in our hearts by the Holy Ghost which is given unto us" (Ro. 5:5). Paul's ex-position of righteousness through faith, of freedom, and of universalism has served to overshadow his important reservation for Israel according to the flesh. This is what Paul yielded to the Judaeans in these particulars: 

"In allowing that Israel sar epiqes, because of the promises, have a privilege in the kingdom of God, not to be only a race etwais; that only Christians who were Jews by birth were the good olive tree; that the Gentiles are not only on the branches, but also by the wild olive tree; that thus the whole Hope is the Hope of Israel; that the Gentile Christians have material obligations towards the Jewish Christians; that the Jewish Christians should, and indeed must, still observe the Law of Moses, though it is now abolished" (Barneke, Iate of the Acts, p. 60, footnote).

If we except the imperative 'must' in the last sentence, this summary fairly describes the attitude of St. Paul, and this attitude explains his conduct as described by St. Luke. He has Timothy circumcised (Ac 16); he has his own head shorn in Cenchrea, for he had a vow (18); at his last visit to Jerusalem he is ready to show his conformity to the Law by purifying himself with the four men who had a vow on them (21). It explains his words (1 Co 9:14), "unto the Jews I became as a Jew, that I might gain the Jews." The contribution from the Gentile Church to the poor at Jerusalem may be considered a form of tribute. It thus appears that St. Paul as well as St. Peter found it difficult to transcend the limits of Judaism; and that the universal element in Christianity does not reach to Jesus, who knew the best that was in the past, and rose above it, and appointed the whole world as the field for the good seed.

The power of the Judaeans is seen at its greatest during St. Paul's last visit to Jerusalem. They numbered many thousands of Jews, who were believers and all reasons for the Law (Ac 21:27). They were indignant with St. Paul, maintaining that he taught all the Jews who were among the Gentiles to forsake Moses, saying that they ought not to concentrate their children, neither to walk after the customs (21:24). No doubt was the effect though not the intention of St. Paul's teaching and example, but the antagonism of the real Jews saved the Judaeans from further trouble in persecuting the Apostle.

Later references to Judaeans.—(a) In Christian records.—After the death of St. Paul, the Church moved away from Judaising tenets. The Epistle to the Hebrews demonstrates the right of the church to Christian sacrifice, and the destruction of the Temple confirmed the argument. In the Fourth Gospel, Judaism within the Church has ceased to be of any account; the antithesis is the Jews. Christians are to follow a Light, but they have a new law in Christ's commandments. The religion of the Spirit, as proclaimed by St. Paul, has permeated the evangelical tradition in the Synoptics. The convert has much to learn, and his teacher is the Church. Christ is his Lawgiver, and has entrusted a power of legislation to the Church.

The Judaeans, who kept themselves distinct from Christ's followers, appear later as Ebionites and Nazarenes. The Ebionites admitted only a Gospel according to St. Matthew, rejected St. Paul as an apostate, and denied the divinity of Christ. The Nazarenes acknowledged the obligation of the whole Mosaic law, except the Christians of Jewish descent, but allowed Gentile Christians, as presbyties of the gate, to emit these observances.

See art. Ebionism, Ebionites.

(b) In Jewish records.—Rabbinical literature has few and obscure references to the Judaeans; for Judaism was firmly resolved to ignore the Christianity which had come into being. It set itself after the fall of Jerusalem to define the canon of Holy Scripture, rejecting the Apocrypha and apocalyptic Pseudepigrapha, which seemed to give prophetic colour to the new religion, and expurgating the Greek Bible by the versions of Aquila, Symmachus, and Theolosion. Within its own fold discipline became more stern.

'A Nazile who has become a proselyte, and been circumcised and baptized, and afterwards wishes to return to the Lord, not to be only a race etwais; that only Christians who were Jews by birth were the good olive tree; that the whole Hope is the Hope of Israel; that the Gentile Christians have material obligations towards the Jewish Christians; that the Jewish Christians should, and indeed must, still observe the Law of Moses, though it is now abolished' (Barneke, Iate of the Acts, p. 60, footnote).

By the end of the first Christian century the standard Jewish prayer included a formula, 'May there be no hope for the sectaries' (Y'd, afterwards changed to Y'devi, 'the slanderers'). One of the signs of Messiah's coming will be that the Kingdom (the Roman Empire) will be turned to the heresy of the Minim (Mish. Sotah, ix. 15). The growth of Christianity in the Roman Empire and the indignation of Jews at the claim of Christians to inherit the promises of the OT are seen in Jesus. Nedar. 356: 'Esaau the wicked will put his filth and sit with the righteous in Paradise in time to come; and the Holy One will drag him and cast him forth from hence.'

By the 4th cent. Judaism regards the Minim with disdain rather than fear. Yosefa son. xiii. 4-5 imposes grave punishment on the 'Gentile Christians' (Mish. Sotah, ix. 15). Moseith (informer), and Apelros (tree-thriker), and a Jewish comment on Ex 19:16 says that circumcision will not avail to save the Minim from Gehinnom (Shemot Rabba, 35a). This implies that Jewish Christians in Palestine still practised circumcision in the 4th century. Talmud and Midrash confirm Jerome in considering the Minim (Minha, Jewish Christians) an insignificant body.

'They had no share in the viality either of Judaism or Christianity' (Herford, Christianity in Judaism and Mithraism, p. 354).

Jerome's words in a letter to Augustine (Ep. Lxxvi., xiv. 60 (PL xxi. 224)) are:

'To this day in all the synagogues of the East there is among the Jews a sect called Minim, which is condemned by the Church. They are commonly spoken of as Nazarenes, and believe in Christ the Son of God, born of the Virgin Mary; the same who, they say, suffered under Pontius Pilate again. In whom we, too, believe; but while this sect desires to be both Jews and Christians, they are neither the one nor the other.'

8. Recusants forms.—About 1720 John Glass, minister of Tealing, founded a small sect, which refrained from things strangled and from blood, and his son-in-law Sandeman gave great attention to adherents in England (see art. GLASITES). The Seventh Day Adventists and Seventh Day Baptists Judaise in their observance of Saturday.

A Judaising sect appears in Russia about the middle of the 16th cent., their chief centres being Novgorod and Pleskaw, whence they spread to Moscow and other cities. They denied the Trinity and the Sonship and Messiahship of Christ, and rejected the invocation of the Virgin and the saints, the veneration of icons, the doctrines of original sin and redemption, the Church, and the Sacraments, while they gave greater honour to the Old than to the New Testament. Their adherents are mentioned in the early 18th cent., and Uklein, the founder of the sect of Melkonian, adopted for himself certain Jewish dietary laws, while his pupil, Sundukov, regarded Christ as infinitely inferior to Moses, observed the Jewish Sabbath, and finally submitted to the Mosaic rite. Sundukov established the modern sect of Subbotniks (Sabatarians), who are exclusively restricted to real Jews. They are divided into a number of sub-sects, the most important being: (a) Gers (Heb. גֵּר), who worship in Hebrew under the leadership of regular Jewish Rabbis and are practically
Talmudic Jews; (d) Subbotniks proper, differing from the less numerous Gezis only in the use of Russian Bibles and Prayer Books and in the abrogation of some of the Talmudic rules for the Sabbath and food; (e) Karaites or Karinim ('Karaite nation'). Also, like the Karaites, the Pentateuch and reject the Talmud, but who do not observe all the Pentateuchal laws, e.g. that regarding circumcision; and (d) the waning Transcendentalism and the resurrection of the dead. Mention may likewise be made of the 'Jehovists', founded by Nikola Hyin in 1846, in an effort to establish an OT Christianity or NT Judaism, although the rather fantastic sect was only short-lived.

Two minor American sects may also be classed as Judaizing. The first of these is the Christian Israelites, founded by Joel Wroe at Ashton, England, in 1819, to gather the twelve tribes of Israel under the doctrinal basis being the re-establishment of the Mosaic Law, and the condition of membership subscription to 'the four books of Moses and the written constitution'. Members do not cut their hair or beard (cf. Lv 19:27), and object to all images and pictures (cf. Ex 20:4, Dt 25:8). Both the Jewish and the Christian Sabbaths are observed. The second of these sects is the negro Church of God, established by William Crowdy in 1860. Believing that the negroes are the descendants of the lost Ten Tribes, this sect observes the Jewish calendar and festivals, especially the Sabbath, but insists on baptism by immersing, confession of faith in Christ, the Lord's Supper, and feet-washing.

LOUIS H. GRAY]

D. M. KAY

JUDGMENT (Logical),—r. Introductory.—The only use which the understanding can make of the objects by them, while 'the understanding may be defined as the faculty of judging' (Kant, Critique of Pure Reason, Eng. tr., London, 1881, pt. ii. bk. i. ch. i. § 1). Concepts are judgments. Judgment is the derivation of new judgments out of old. Method is the disposition of concepts and judgments in a system. Thus judgment becomes a centre of reference for the defining of the other logical entities, and is the task of definition is to be undertaken philosophically, it involves all the considerations which contribute to mark out the logical consciousness in general; the labour of precising in the case of each concept as idea, belief, truth, reality, fact; and studied limits between the levels of abstraction proper to psychological, metaphysical, and logical science respectively. But the motives of logical doctrine if we followed exclusively either of the two objects- to analyse the state of mind called Belief, or to define what is called a (System of Logic). London, 1872, bk. i. ch. v. § 6); or, indeed, if we followed too precisely a combination of the two. He himself in his Examinations of Sir W. Hamilton's Philosophy, 1878, relies heavily, on the reference to belief, while in his Logic he insists that 'intelligent assertion refers to external facts,' and that the import of propositions consists in connection between facts. In pursuing the latter analysis, after resolving facts, with metaphysical precision, into states of consciousness and relations between them, he allows himself in his substantie definition to use references by more popular conceptions such as 'things,' 'phenomena,' and 'attributes.' Similarly Ueberweg defines judgment as 'the consciousness of the object, the validity of a subjective union of conceptions,' without definitely undertaking to resolve the contrast or mediate the correspondence between the two worlds; a mere 'reference to existence' gives the judgment its character as a logical function ('System of Logic and History of Logical Doctrines, Eng. tr., London, 1871, § 67).

A more scrupulous orientation of logical consciousnes with regard to the psychological and the objective is attempted in some doctrines now current. The judgment is defined as identifying the content of ideas with reality, and the nature and possibility of such an achievement are explained by resolving reality into a system of tendencies sustained by judgment itself. Each single act of identification enters constitutively into an ever-expanding structure which in its totality is self-sufficient and all-controlling.

Our knowledge of reality, knowledge, exists for us as a judgment, that is, as an affirmation in which our present perception is amplified by an ideal interpretation which is identified with it. This interpretation or enhancement claims necessity or universality, and is therefore objective as our world, i.e. what we are obliged to think, and we all are obliged to think. The whole system of perception, viz., our present perception as extended by interpretation, is what we mean by reality, only with a restriction of forms of experience which are not intellectual at all (H. Rosencrantz, The Essence of Logic, London, 1830, p. 53).

If we assume as already understood and approved a definite epistemology such as Kant's, we might escape both unceritical references to psychology and popular physics and the intricacies of a metaphysical analysis. Kant himself defines judgment as 'the conception of the unity of the consciousness of different representations, or of their relation so far as they make up one notion' ('Logic,' § 17), while in the background of this description lies his more definite epistemological characterization, 'the way to bring given cognitions to the objective unity of the apperception' (Ueberweg, Logic, Eng. tr., London, 1871, § 87). The conception of judgment as 'the faculty which they form one whole, our specifically logical consciousness may be aroused apart from either introspective or external observation; and a clue to the recognition of the act of judgment may then be supplied from the detailed examination of its conceptual ideas, over and above the ideas of the concept. In the plan of our spiritual nature there must be a faculty which commits the detailed activities of intelligence to a resultant imposed by external nature itself. The concept provides bounds for each commitment and the measureless possibilities. The faculty of judg-
JUDGMENT (Logical) 613

ment, consequently, follows special constitutive ideas, which may be enriched with some technical adaptation and departure from the common usage of the words, necessity, universality, and synthetic unity.

(c) Constitutive Ideas.—(a) Necessity.—Necessity is akin to the inevitability of fact and the absoluteness of natural law. It is described by Sigwart thus:

"Besides the necessity of psychological normality, there is another necessity entirely from the content and object of thought itself, which is therefore grounded, not upon the variable and contingent characteristics of the individual, but upon the nature of the object thought of, and which may be far called objective." (Logik, Eng. tr., London, 1886, § 1, 6.)

It is an ultimate constraint upon intellectual spontaneity, and finds incidental expression in such phrases as 'I am obliged to think,' 'I cannot but believe' (Bosanquet, Essentials, p. 24). It is recognized in current psychology as 'objective control of ideational processes' (G. F. Stout, Manual of Psychology, London, 1913, bk. iv, ch. viii. § 1). It is described with variations of logical suggestion, such as the 'inherence of truth or falsehood (Aristotle, truth and falsity of individuals, p. 3); its identification with the idea, the 'claim to be true' (Bosanquet). It may be contrasted with the freedom of the concept, which Mill considers a 'faculty of creation of forms' (Elements of Thought, p. 419), and which is certainly differently related to personality.

Following a general, though ill-defined, logical tradition, we may distinguish three modes in which necessity confronts our ideas. It may be conveyed by the contents of the concepts which we employ independently of their origin. If we choose to conceive a three-sided figure, we must believe it to have three angles and these equal to two right angles. If we think of an organism in growth and decay, we must expect it to die; if we think of a perfect nature, we must, according to Descartes, predicate existence. The necessity may, however, be conveyed through the activity of other faculties than the conceptual—perception, introspection, memory, feeling, even respect for authority sometimes sways us white! 'Napoleon died at St. Helena'; 'I am of all men most miserable.' And a necessity, though conveyed neither through concepts alone nor through the more direct representations of the subject, may be conveyed through the union and co-operation of these media. As a case in point, the need of obedience to authority is in a large degree the result of the joint work of three faculties: necessity, authority, and habit. The inventiveness of the faculty of memory is also the result of an intellectual effort. The memory is often outside our control, and the necessity is the result of the union of the two faculties. And the necessity is the result of the union of the two faculties. The necessity is the result of the union of the two faculties. The necessity is the result of the union of the two faculties.

(b) Universality.—Universal, in the sense of our personality is common to the world of persons; what we are obliged to think is what we are not obliged to think (Bosanquet, Essentials, p. 24), modality being essential. The idea of necessity is subject to the same medium of necessity. It has already been noted (see art. Concept [Logical]) that it is because of a logical solvability for universal values that the idea of necessity is possible. The idea of necessity is the freedom of the concept sought, by means of conventions in the use of language, to be deliberately harmonized with the intellectual outlook of mankind in general, and only by the joint work of mind and nature can the idea of necessity be reached. The necessity of the concept may be given in presentation, or by the conceptual faculty, or through reflection on determinations of complete judgment itself.

But the harmonization of concepts is ultimately dependent on a common identification of similar things. And a logical system which, like the Aristotelian, has specialized in view to promote cooperative thought, must give fundamental significance to differences in the extent to which judgments presume the common identification of things. Judgment may be defined as the identification of a denotation, along with discrimination as to connotations or conceptual intentions (cf. E. C. James, New Law of Thought, Cambridge, 1911, p. 1 ff.). And, for purposes of common discourse or debate, judgments must be classified according to quantity—"as singular or general, where one thing or a collection of things is identifiable by all thinkers; or as particular, where the identity is only so far open to all that for each person it lies within the limits of a common totality of identifiable things: 'Alexander died'; 'All men die'; 'Some men die willingly.'" (c) Synthetic unity.—All the authoritative descriptions of the act of judgment, while varying much in their suggestiveness as to the sources of the act of judgment and the nature of universality, agree in requiring that synthesis, combination, or construction shall be shown in the product. It is owing to this uniform achievement of judgment that in psychological terms (Mill), connects the subject and predicate in definite form (Lotze).

Obviously a function of our spiritual nature which adjusts its reactions to the complexities of the world must be connective. In each act of judgment the constraint from reality and the stress of intellectual responsibility fall where they can meet with two conditions: a definite interest has selected a domain within the inaccessible area of possible truth, and a definite concept is available for reaction on it. Although the ultimate subject (i.e., reality in general) extends beyond the content of judgments, yet in every judgment there is a starting-point or points of contact with the ultimate subject, and the starting-point or points of contact with reality is present in a rudimentary form in the immediate or subjective judgment, as it is explicitly in the later and more elaborate type (Bosanquet, Logic, Oxford, 1888, bk. ii, ch. 82).

Thus the synthesis special to each pulsation of the faculty links a predicate with a subject. And, although the whole construct becomes a unity and has a necessary and universality dominant throughout, and the attendant psychical complex may present to introspection either simultaneity or a variable sequence, yet functionally judgment, following its own principle, duality, 'divides no less than it binds together ideas that are mutually associated,' in order that it may 'connect subject and predicate in definite form' (Lotze, Microcosmus, Eng. tr., Edinburgh, 1885, ii, 4, § 4, and Outlines of Logic, Boston, 1882, § 21).

Our logical consciousness must and synthesis in denial as well as in affirmation, notwithstanding such an antithesis between them as is in the description of judgment quoted above from Wolff, and notwithstanding that the character, while negation introduces only contrast, into the expanding system of timeless truth.

3. Grades of synthetic relation.—The delimitation of interest, on concepts we reach common media of necessity in judgment, and can then share, and co-operate in creating, a common 'inherence of science and civilization.'
(a) Presentational. — There are 'impersonal' judgments, in which the selection of subject is as indefinite as possible in a view of a proposed predicate—e.g., 'It rains'; and 'demonstrative' judgments, where only the position in space or time is definite—'This is the forest primeval.' And a legal judgment can neither be predicated of a subject nor inhere in a subject; but can only be a subject (Categories, v. 10); and this implies that the synthetic relation is between thing and concept, and not subject and concept.

(b) Conceptual. — The presentational faculties may receive aid from the concept in various ways and degrees: 'The first man was a living soul,' a 'singular' judgment; 'Our fathers have told us,' an 'enumerative' judgment; 'Man is few as days, a 'concrete general' judgment; 'Love is the fulfilling of the law,' an 'abstract' judgment. There is now a synthetic relation between two concepts, superadded to that between thing and concept.

(c) Reflective. — The starting-point of a judgment may be given directly neither by presentation nor by conception, but by the faculty of reflecting on judgments, actual or possible, whose starting-point is 'If I had standing ground, I could move the world'; 'If we are sons, then heirs;' 'Either there is a resurrection or mankind is irrational.' Mill describes such a judgment as arising from the logical quality of propositions: 'That we are heirs is inferable from our being sons;' other writers, as the relating of 'condition' to 'consequent.' Sonship is the condition of which the members are entitled by a hypothetical, and the specially composite form in which 'condition' and 'consequent' are found by negating any one of the members is entitled disjunctive: 'Either there was a resurrection, or mankind is irrational,' while, 'If mankind is not irrational, there is a resurrection.'

LITERATURE. — See the various systems of Logic; and especially in addition to the authorities quoted above, the recent ones mentioned as representative under art. Cognitive Logiqs, or as important or frequently referred to on the nature of inference under art. Inference. There are numerous monographs, especially on the psychological and epistemological influences of judgment, and among the more recent and relevant to logic may be mentioned A. Wolff, Studies in Logic, Leipsic, 1886; F. Tappen and G. Schlick, Die neue philos. F., Jena, 1887; P. Hillebrand, Die neuen Theorien der Logik, Berlin, 1892; W. Jena, Die Logik, Breslau, 1892; A. Menaor, Oor Aanarchie, Leipzig, 1890; J. M. Baldwin, Thought and Things, ii., London, 1896; J. BROUGH.

JUGGERNUTH. — See JAGANNATH.

JUMNA (Skr. Yamuna personified as Yamni, twin sister of Yamni, the god of death). — One of the great rivers of N. India, rising in the Himalaya near Jamnori (q.v.), and finally joining the Ganges at Prayag, 'the place of sacrifice,' par excellence, now known as Allahabad (q.v.). In the Rigveda it occupies a position lower even than that of the Ganges, the Aryans having reached its banks only at a later period when they migrated eastward from their original settlements in the Panjab. When it is addressed it is only in connection with other rivers, Ganga, Sarasvati, Sutdru, Parni, and others, twenty-six in all (Rigveda, x. lx., 5; cf. V. 17, 7, 70, and J. Muir, Ori. Stkr. Texts, ii. [1875] 346 ff.; A. A. Macdonell, Vedic Mythology, Strassburg, 1887, p. 86). In the later literature the geographical outline widens, and it is called 'the great river Yamuna,' and is described as one of the three children of Sun by Sanjana, daughter of Viśvakarman, architect of the universe (Vishnu Purana, tr. H. H. Wilson, London, 1864-77, iii. 23, v. 82). Another legend describes the river as the wife of Yama, god of death; and the story of their incest curiously resembles a tale which Pinceare (de Fleur iv.), doubtless from Indian sources, attributes to the Ganges. Naturally, as the river flows past Mathura, the seat of the Kṛṣṇa cultus, it has been included in this complex series of myths. Balarāma, in a state of intoxication, order the river to approach him, as he desired to bathe.

'The river, disregarding the words of a drunken man, came not (by bhārīd). On which, Bāma, in a rage, took up his ploughshare, which he plunged into her bank, and said: 'You must be called:" Will you not come, you Jādi? Will you not come? Now go where you please (if you can." Thus saying, he compelled the deep river to quit the earth and follow him whithersoever he wandered through the wood. Assuming a mortal figure, the Yamuna, with her ploughshare in her hand, approached Bālabodha, and entreated him to pardon her, and let her go. But he replied: "I will drag you with my ploughshare, thousand directions, since you contempt my process and strength." At last, however, appeased by her reiterated prayers, he let her go, after she had watered all the country' (Viṣnupurāṇa, v. 67 ff.).

Wilson interprets this legend as referring to the excavation of ancient irrigation channels from the river; but F. S. Grove (Mathura, Allahabd, 1883, p. 184 f.) holds that there are no signs of ancient canals in the neighbourhood, and that the existing irrigation of the river sufficiently explains the myth. When the classical writers gained knowledge of the river, it was known as the Sarasvati (Bharatar, 29, 42) under the name Diamonna (J. W. McRindle, Ancient India as described by Ptolemy, London, 1885, p. 98 ff.), by Arrian (Indica, viii.) as Jobares, by Pison (INN 3), and many others. The legend of incest connected with the Jumna, the fact that it is supposed never to have been cleansed by the marriage ceremony, the only rite of purification in which he Hindu woman shews, and the supposed resultant indigestibility of the water is some of the causes which have contributed to render it a less sacred river than the Ganges. Its source at Jamnori is much more frequented by pilgrims than Gangothri (q.v.). Though it flows through a country sanctified in the upper part of its course by many legends of gods and heroes (E. T. Atkinson, Himalayan Gazetteer, Allahabad, 1882-84 ii. ch. iii. poomia), thence past Delhi (q.v.), the ancient Indraprastha, an early Indo-Aryan settlement, Mathura, the seat of the Kṛṣṇa cultus, and Agra (q.v.), the Mogul capital, still, except Mathura (q.v.) and in a very small degree Batesar (q.v.), there is no great place of pilgrimage on its banks, and it does not acquire full sanctity until it unites with the Ganges at the holy place known as Triveni, or 'the triple braid,' where the Ganges and Jumna are supposed to flow together, due to means of an underground channel the waters of the Sarasvati. Here the stream of the Jumna is clear and blue, in striking contrast to the muddy waters of the Ganges.

LITERATURE. — The authorities are quoted in the article. For the geography see IGI xiv. (1906) 323 ff.

W. CROOK.

JUNAR (said to be a corruption of Jumana-gara, 'old city,' and wrongly identified with the Tagara of Greek writers and Hindu tradition, which is really Ter in the Nizam's Dominions (J.R.A.S., 1901, p. 537 ff.)) — A town in the Purna District of the Bombay Presidency; lat. 19° 12' N.; long. 75° 58' E. Its importance depends on its command of the Nana pass, which leads to the W. coast. The town is small, the hillock containing Buddhist caves nearly equally distributed in five different localities, including fifty-seven separate excavations. These caves are devoid of figure ornament in many respects, in keeping with those of later date, such as Ellora (q.v.) and Ajanta (q.v.).

Although none of these caves can compare either in magnificence or interest with the Chaitya and vihara carvings of the Viharas of Nāikā, their forms are still full of instruction to the student of cave architecture. The group comprises monuments of almost every variety of composition, and several forms not found elsewhere, and though plainer than
JUSTIFICATION

Justice. — See Righteousness, Law.

JUSTIFICATION. — The term ἴσχωσις, which 'justifies' represents, means 'account righteous.' It is used both in the LXX and in the NT, and is juridical in idea, though forensic associations are not necessarily present to the mind of the writer, who is not concerned with a court of law. It implies an acquittal or declaration of righteousness, whether the facts of the case correspond with the pronouncement or not. The situation to which it refers is the result of past action, not the act of righteousness itself. It describes the requirement of a status, not the production of a state. It has reference to personal relations, not to psychological conditions. The only instance in the LXX that seems to conform with this statement is Ps. 72 (AV 33) — δοθήνα τοῖς ἵσχωσισι τῇ καρδίᾳ μου, not improbably implies an act of justification before God rather than a process of self-cleansing. In every case where the word occurs, it is proof of righteousness that is implied. In view of Ro 4 the words of Ex 23,‘ολως ἰσχωσισμόν τῇ καρδίᾳ'—should be noted (cf. Is 52'). Thus the verb becomes equivalent to 'absolve'—e.g., Sir 25:8 etc. In the NT the parable of the Pharisee and the Publican shows the word as involving the sense both of self-justification and of absolution (Lk 18:14; cf. 10:30-35). The Epistle of James, in the spirit of Christ's words in Mt 18:23, regards Abraham's obedience and Rahab's loyalty as 'justifying' them, because their actions are stamped by the OT as winning the Divine approval (Hebrews 11:31ff.). It shows no sign of acquiring an ethical sense which attaches to the word in the parable cited above. But it is from St. Paul's use of the verb in the Epistles to the Romans and Galatians that the term 'justification' has its permanent place in Christian theology. The idea first appears in connexion with the controversy between Paul and Cephas at Antioch (Gal 2:13-21), when the latter, having lived 'as do the Gentiles,' separated himself together with other Hebrew Christians, fearing 'certain who came from James.' St. Paul represents himself as having contended that the recognition of Jesus as Messiah meant an acknowledgment that a man is not justified by the works of the law, but 'through faith in Jesus Christ' (v. 20). The old antithesis between those who were 'Jews by nature' and 'sinners of the Gentiles' (v. 12) had become little more than a convention. Justification was applied to any human being as such (v. 18; ὡσπερ), that henceforth living whether as do the Jews' 'as do the Gentiles' (v. 20) he might 'live unto God' (v. 20). This was the newly noted fact that Christians recover their relation to God is spoken of as 'justification in Christ' (v. 11). On its Godward side it depended upon the death of Christ, which was 'gratuitous' (v. 24; τευχήσθη), if righteousness were bestowed by grace. On its outward side it was by outward compliance with its ordinances, and not 'in faith of the Son of God' (v. 24). In the following chapter the idea is still further developed, so that we find St. Paul appealing to the bestowal of the Spirit (v. 39), which was an actual experience of the Galatian converts. As a result of 'hearing the gospel' (ib.) an effect had actually taken place which was in itself the relationship of the Galatians to God and the members of the Christian community. The delivery of the message had been met by, or, rather, had produced, 'faith' in those who heard (see Ro 10:9). They had been enabled to trust God and so become recipients of His grace. This leads the Apostle to introduce two pivot passages from the OT, one from the Law and the other from the Prophets, which express the principles that reach their consummation in Christ. Abraham believed God and it was reckoned unto him for righteousness' (Ga 15:6, cited v. 6). 'The righteous shall live as a result of faith' (Hab 2:4 cited v. 4). The book of Genesis presents as an initial act what Hahakuk represents as a continuing condition. The purpose of salvation begins with Abraham, though the promise reaches its fruition in Christ. His surrender to the promise was an act of faith which was rightly described as 'reckoned for righteousness' because it enabled God to establish those relations with him, which, viewed from the manward side, constitute 'righteousness.' And it can be extended forward to its consequent realization in the full 'vision' (Hab 2) or revelation only if the attitude of faith is permanently maintained. The real scope of St. Paul's argument cannot be understood unless it be observed how he undertakes the whole controversy in which he had been involved. 'Neither circumcision availeth anything nor uncircumcision' (Gal 5:6; cf. 1 Co 7:19). The self-condemned action of Peter in going from the Gentiles (22) and the subsequent defection of the Galatian Church under stress of the demand that they should submit to circumcision and its practical implications (4:7-8) had emphasized those precepts of the Mosaic system which were occupied with ceremonial rather than with conduct. It was, in fact, ceremonial observance, and not the keeping of the moral Law, that was endangering the freedom of the gospel. This fact, though even in Galatians the conception of law is not wholly confined to these provisions, enabled St. Paul to perceive that moral actions have only the value of ritual acts if regarded in formality with law. Law, therefore, is a system of regulations and has the value of discipline (3:3). That particular form of it which was immediately in question, viz., the Mosaic Code, could only be held to prepare those whose faith had already responded to the promise for the fuller response which its fulfilment in Christ would demand. The Law was until Christ (ib. 5:19). If they are justified at all, are justified, as Abraham was, by trusting in God. Their obedience would be a 'fruit of the Spirit' (5:6) so far as the life unto God was granted in anticipation of the fulfilment of the promise in Christ. All this is implied, if not implicitly stated, in the argument concerning the faith of Abraham (3:9). In principle, God's dealings with mankind have always been the same. His purpose has always been to bring men into those relations with Himself which confer the status of sonship, the gift of the Spirit, and the possession of life, in Christ. The historical work of Jesus is only the saving forth of the fulness of the time (4), i.e. at the appropriate moment in the education of the human race. The gospel was preached beforehand to Abraham, who received the promise (9), as afterwards to the disciples, who have received 'the promise of the Spirit through faith' (v. 18). The Cross of Christ
stands in living relation to both. All alike were loved by the Son of God, who gave Himself for them (2 Co 5:19). All alike must acknowledge, at least implicitly, that the life that they now live in the flesh they live through faith in Him (1 Th 1:9).

It has been observed that St. Paul uses the phrase ‘justified in Christ’ (Rom 4:25). Here he combines in one sentence two lines of teaching, which many modern interpreters have found it difficult to correlate. It has been asserted that the deepest and most significant of the Christian teachings is expressed in the phrase ‘in Christ,’ and that the whole argument concerning justification by faith is only a controversial device to account for the apparent paradox of abandoning the Jewish system while acknowledging Jesus as the fuller fulfillment of the Messianic expectation. The Epistle to the Galatians is too obviously a vehement attempt to express the personal experience manifested in its autobiographical passages to make such a conclusion probable, and the fuller elaboration of the soteriological doctrine in Romans, which has no immediate reference to controversy, renders it practically impossible. The personal history of St. Paul’s faith, the point of contact, the point of contact was wanting, would itself be sufficient to hold together justification by faith and the life in Christ as representing two equally important aspects of the one Christian experience. But at the very outset the Apostle has welded them together in this conception of justification of Christ, which may in turn be interpreted by the phrase used in Rom 5:1-2, ‘justification of life.’

Condemnation, not a formal sentence, but an attitude of God toward transgressors, rests upon all those who ‘in Adam’ (Rom 5:12). So justification, i.e., the act of God whereby He accepts mankind for the sake of whom Adam has become, of which the issue is life, rests upon all those who as a consequence live in Christ. What we have to recognize is that to the mind of the Apostle justification is a Divine act, and only figuratively a declaration. The metaphor is forensic, but the fact is such only so far as all forgiveness may be said to partake of this quality. Being the act of the living God, it is dynamic, and as such necessarily involves the infusion of the Spirit. Consequently it brings with it love, joy, peace, etc., which are the fruit of the Spirit, and the presence of which is part of the essential experience of the life in Christ. But (1) the act ‘justified in Christ’ (Gal 2:16) and it is manifest that active faith is involved in the complex result. It is, therefore, all one whether we say that we live the new life ‘in Christ’ or ‘through faith in Christ.’ St. Paul’s doctrine is not one of a mystical union ex opere operato. It is reached through a conscious act of appropriation. And (2) the sending forth into our hearts of the Holy Spirit of the Son (Gal 4:6), though it issues in the reproduction of Christ in us (v. 19), an ethical as well as spiritual transformation, is primarily the medium through which we are enabled to call upon God as Father (v. 19). This involves a dative case, which is not given the experience, but to which experience testifies, viz. that we are no longer bond servants but sons and heirs of God (1 Th 1:9). The fundamental fact, therefore, lies in the realm of absolute, theological truth. To recognize Jesus as Redeemer is to acknowledge Him as the Messiah, in whom the Kingdom is established, in which a new status is conferred on every disciple expressed under the figure of ‘adoption’ (v. 21). Compare the Epistle, which takes up the language of the earlier Epistles—by grace have ye been saved through faith (Eph 2:8)—and it means the translation of sinners, through forgiveness by the blood of the Cross, into the ‘body of Christ’ (Col 1:24).”

It is clear that St. Paul accepted in general outline the dogmatic belief of the primitive community concerning the Kingdom of the righteous, which had been brought in by the exaltation of Jesus, which was also the advent of faith in the life of the ecclesia, and whose final revelation was anticipated in the sacraments. ‘We through the Spirit by faith wait for the hope of righteousness’ (Gal 5:5), being delivered by Him who gave Himself for our sins out of this present evil world (1 Cor 1:27). There is, therefore, an eschatological element in the idea of justification. It is initial to the Christian life in the sense of inaugurating those relations with God which issue in the presence of the Spirit. It is final in so far as it is only ultimately reached with that judgment which at the end will establish the Kingdom. What St. Paul criticized in the Pharisaism of his contemporaries was not the passion for ethical righteousness, which he shared, but the spiritual blindness which did not perceive the need of a new creation, of the uplifting of human life, whether Jewish or Gentile, on to a new level, the ‘Jerusalem that is above’ (Col 3:1), into which men must be reborn by a Divine act. This act is forgiveness (3:8; cf. Ro 4:25), to which justification is therefore equivalent.

The Epistle to the Romans presents the teaching of justification in a less controversial and more philosophic spirit. First of all, it affirms the ethical proposition that ‘not the hearers of a law are just before God, but the doers of it’ (Rom 2:13). Condemnation, not a formal sentence, but an attitude of God toward transgressors, rests upon all those who ‘in Adam’ (Rom 5:12). So justification, i.e., the act of God whereby He accepts mankind for the sake of whom Adam has become, of which the issue is life, rests upon all those who as a consequence live in Christ. What we have to recognize is that to the mind of the Apostle justification is a Divine act, and only figuratively a declaration. The metaphor is forensic, but the fact is such only so far as all forgiveness may be said to partake of this quality. Being the act of the living God, it is dynamic, and as such necessarily involves the infusion of the Spirit. Consequently it brings with it love, joy, peace, etc., which are the fruit of the Spirit, and the presence of which is part of the essential experience of the life in Christ. But (1) the act ‘justified in Christ’ (Gal 2:16) and it is manifest that active faith is involved in the complex result. It is, therefore, all one whether we say that we live the new life ‘in Christ’ or ‘through faith in Christ.’ St. Paul’s doctrine is not one of a mystical union ex opere operato. It is reached through a conscious act of appropriation. And (2) the sending forth into our hearts of the Holy Spirit of the Son (Gal 4:6), though it issues in the reproduction of Christ in us (v. 19), an ethical as well as spiritual transformation, is primarily the medium through which we are enabled to call upon God as Father (v. 19). This involves a dative case, which is not given the experience, but to which experience testifies, viz. that we are no longer bond servants but sons and heirs of God (1 Th 1:9). The fundamental fact, therefore, lies in the realm of absolute, theological truth. To recognize Jesus as Redeemer is to acknowledge Him as the Messiah, in whom the Kingdom is established, in which a new status is conferred on every disciple expressed under the figure of ‘adoption’ (v. 21). Compare the Epistle, which takes up the language of the earlier Epistles—by grace have ye been saved through faith (Eph 2:8)—and it means the translation of sinners, through forgiveness by the blood of the Cross, into the ‘body of Christ’ (Col 1:24).’
lieveth’ (1 Thess. 5:3). To accept this message, to obey this gospel, to be ‘in Christ Jesus’ (see above, p. 11) is to walk in the Spirit (89) and to escape from sin in present experience, and so to have the assurance that there is ‘no condemnation’ (v.4) here or hereafter. The righteousness of God, a living, active force in Christ, is expressed with a mannerism of his own righteousness, which the revealed law shows to have no existence in fact. This Divine righteousness is by faith unto faith (103). Faith contemplate the manifest acting of God in the Person and Work of Christ (11-14, 20, 21), the trustful acceptance of which as the gift of God leads to that faith by which, abandoning self-sufficiency, we become obedient, surrender ourselves, to it. First of all there is the experience of ‘newness of life’ (6), an identification with Christ so complete that St. Paul can use the expressions ‘buried with Christ in baptism’ (7), crucified with Christ, risen with him’ (6). In proportion as this faith is active in us, we henceforth cease to serve sin (v.3), we are liberated from ‘the law of sin and death’ (8), and no longer find sin reigning in our mortal bodies (8). The fruits of the Spirit (8) become manifest in the mortifying of the deeds of the body. The love of Christ—the love of God in Christ—became, as the Apostle had himself proved, an intense moment of his soul. He could speak of Christ, or the Spirit of Christ (the two expressions are practically indistinguishable (8-10)), inhabiting his personality, the source of holiness and of good works. But, as in Galatians, this is clearly a new source, transforming the character ex opere operato, but a conscious fellowship based upon loyalty and trust. As it is expressed in Ephesians, he had yielded himself to Christ, to the Redeemer, that Christ might dwell in his heart by faith (Eph. 3:17).

But, if this were all, the Death and Resurrection of Christ would remain unexplained; the relation of these facts to the reproduction of the life of Christ in the believer would be undefined. Once again, therefore, the ethical result is taken as the pledge of that altered relationship to God which was dogmatically expressed in the theology of the primitive community as the covering effect of the work of Christ on our behalf. The Spirit himself beareth witness with our spirit that we are the children of God’ (Ro 8:16). The actual, realized effectiveness is attested to the fellowship of disciples, the fulfilling of the ordinances of the law in those who were walking not after the flesh but after the spirit, are the immediate and subjective pledge of an ultimate and objective relationship between the members of the community reconciled in Christ on the one hand and Him who is God and Father on the other. Viewed from the side of God’s action, which is all along spontaneous, paramount, and free, this condition is brought about by grace or free favour. On man’s side it results from faith, which is not a meritorious and independent act, but is itself a Divine gift, the reflex in human experience of free grace.

That the Pauline doctrine is forensic in form rather than in fact should be clear from the following considerations. The Apostle necessarily comes to walk in the Spirit as a Christian, and the altered relationship to God, to which it testifies, with his former experience as a Pharisee. He had believed that as a circumcision he had been admitted to the community in which the stigmatizing observances of the Mosaic Law both on the ceremonial and on the moral side afforded a meritorious ground for the final sentence of the Divine Lawgiver and would procure his acceptance. What he found in Galatia, according to which St. Paul is by a process of legal compliance had now been reached by the establishment of relations which were not legal at all, viz. by the free exercise of God’s fatherly love towards him in Christ, which had awakened a responsive trust. This is the essential Christian experience, however it be expressed. Its note is the restoration through forgiveness of personal relations with a Father, not the not the claim of a Lawgiver. Thus the term ‘justification,’ as used to express what the NT elsewhere calls ‘salvation,’ is forensic in what it denotes rather than in what it signifies. But, insomuch as the Pharisaic arises out of that righteousness in which he learns to recognize the holy love of God through the disciplinary revelation of His character in the precepts of a formal law, the conception of salvation is not adequately expressed unless it is seen in relation to what ‘the law could not do in that it was weak.’ Nor must we fail to perceive that faith is not an antecedent condition, but is involved in the idea of justification, so that the method cannot be separated from the fact. What the gospel means by ‘they faith hath saved thee’ St. Paul expresses by saying that we are justified through faith. The corollaries which together are the keynotes of justification and faith, the former being the activity of God’s personality towards man as realized and expressed in the historical work of Christ, the latter being the activity of man’s personality directed to that end in Himself as Redeemer. They are indeed two sides of expressing the same relation viewed from opposite sides. It is logic, not experience, that separates them, and that requires a third term like justification to express the resultant of both. But it is faith that is the norm of the Pauline theology. And justification must always be interpreted in the light of the experience implicit in the Apostle’s obedience to the heavenly vision (Ac 9:25–27), summed up in the declaration: ‘The life that I now live in the flesh I live in faith, in the Son of God, who loved me and gave himself for me (Gal 2:20).

The connexion between justification and baptism, though St. Paul does not himself explicitly adopt the terms, arises out of the fact that ‘we are justified in Christ’ (i.e. Christ is the sphere in which justification takes place. The Son of God is revealed not merely to, but in, the believer (Gal 1:4), and this because he is ‘created in Christ Jesus’ (Eph 2:5). The purpose of God was to group all things in Christ (1:10). The mystery of the Divine will was ‘the one body,’ in which all believers are reconciled to the Father through the Cross (2:20). Thus ‘we are members one of another,’ which for St. Paul is the reason and motive of the ethical life (Ro 12:1, 1 Co 12:25). St. Paul’s doctrine of the body of Christ, or the ecclesia, is the counterpart in his theology of the Kingdom to which in the Gospels the forgiveness of sins stands in a constant relation. Similarly, to be ‘justified in Christ’ is ipso facto to be placed in relation to the body in which he realized the fellowship of the one Spirit. And baptism is the act of initiation into the Christian fellowship (1 Co 12:13), wherein justifying faith perfects itself and thus becomes the starting-point of the new life in Christ. In this rite the believer washes away his sins (Ac 22:16), and puts on Christ (Gal 3:28), not because he cannot achieve these results by faith, but because he can ‘appropriate the forgiveness of sins by faith only when he unites in his faith at the same time in God and Christ, and the intention to connect himself with the community of believers’ (Ritschl, Rechtfertigung und Seelsorge, III. § 30, Eng. tr., Edinburgh, 1890, p. 111). In view of recent discussion of which St. Paul is by a process of legal compliance had now been reached by the establishment of relations which were not legal at
Interpreting justification by a false appeal to its etymology (= justum facere), he recovered the conception of salvation as a free gift of God (gratia is that which is gratuitous and gratuitous), but failed adequately to realize that it involved the re-establishment of personal relations with the Father through Christ. Grace was represented as a supernatural grace infused into the regenerated through sacramental channels and gradually built up into a righteousness which was not meritorious only because it was imparted rather than achieved. Thus his teaching was a more or less materialized form of the Pauline doctrine of sanctification, i.e., the teaching which God transforms into the image of Christ those whom He has already accepted for His children through faith in Jesus. The initial action, which alone is covered by the NT view of justification, was entirely omitted by Augustinianism, which became the accepted mould of the medieval theology, the standard expression of which is found in the Summae of St. Thomas Aquinas. Thus in Summ. Thol. ii, 1, qu. 100, he asserts that gratia justificans is quidam realis et positivum in se, a supernatural quality, infused like the virtues—faith, hope, and love—of which it is the cause. In conformity with this view, he regarded justification as a corrupt action. Though involving the observance of the will, at least when formed by love (dei voluntate per caritatem), it is primarily intellectual assent and has no reference to subjective action. There is no limitation of the redemptive personality of God, and it is then a preliminary condition of justification rather than its channel. In its imperfect stage (justitia informis) it is scarcely distinguishable from the nakedness to truth which is wrong even from devils, who 'believe and tremble' (Summ. Thol. ii, 2, qu. 1-10). These ideas were stereotyped by the Council of Trent, after being disputed by Humanists and Reformers, in the 'Dissertatio de Justificatione,' which published an anathema against those who declare that men are justified either by imputation of Christ's righteousness alone, or by remission of sins alone, excluding the grace which becomes inherent in them, or who say that the grace by which we are justified is only the favour of God (Conv. Trid., sess. vi, 'Dissertatio de Justitie,' can. xl.). The point of this position is not the objection offered to the phrase 'imputation of Christ's righteousness,' which is admitted not to be scriptural, but the identification of grace with an imparted gift and the consequent description of justification as a naturally realized psychological experience. This was the position of the Church at a time when St. Augustine's system parted company with Paulinism, and opened the way to the re-establishment of salvation by merit, which was characteristic of the formal teaching of the medieval Church. For a supernatural gift, if it be transmuted through use of the prescribed sacramental means into virtues inherent in human character, becomes the achievement of the possessor, precisely as the result of labour, though not obtained without the employment of material, are acquired by the worker. Thus Aquinas, in opposition to the spirit of St. Paul, allows that fides est meritorium. It is easy, therefore, to see how this effect of the party that had most keenly opposed the Augustinian view of grace to produce that combination of sacramental mysticism and ecclesiastical legality of remarking to be content with conformity to established and traditional institutions as a sufficient discharge of the Divine claims upon them, converted organized Church, which was the framework for salvation, which the Mosaic system had failed to allow, in the case of St. Paul, began to reassert itself in the Western Church, St. Augustine partially reaffirmed the Pauline position, but without rising to its characteristic and essential principle.
The 16th cent. saw the rediscovery of the NT doctrine of justification. This was rendered possible in the first instance by the Revival of Greek, which threw men back upon the original Greek, and prepared the way for Reformation as distinguished from scholastic theology. But the renewed knowledge of Greek was not the only key to a living interpretation of the NT. The awakening of personality, the new mening of nature had only imperfectly understood whether by the classical, the patristic, or the medieval mind, quickened those religious needs which only an experience akin to that which produced the Pauline theology could adequately satisfy. The story of Luther, laboriously climbing the Santa Scala at Rome, till the words of Habakkuk twicerepeated by St. Paul in his crucial arguments — *the just shall live by faith* — sent him incommingently down the steps with a revolution in his soul, is typical of the Reformation. For Luther, as for St. Paul, the vision of God in Christ brought home to his fatherly love as manifested in the Person and Work of the Redeemer, with the consequent assurance of free forgiveness and a personal share in the purpose of salvation. This is the essential Christian experience, and though, as Husserl affirms in his sermon on *justification*, there have doubtless been in all ages thousands who have been the subjects of it (Serm. ii. § 84.), it is difficult to find room for it in the official theology of medieval Catholicism. Confidence in God became the mark of men of Luther’s own teaching and of Reformation theology, and confidence is nothing else but faith aware of itself. It is the subjective aspect of the restored personal relations, or re-connection with God, by which it is inspired, and which constitute what Protestants have always meant by justification.

Neither the general outlines of the teaching of the Reformation nor the particular theories of individual writers correspond in every detail with the Pauline statement. These last do not, of course, agree one with another, either in terminology, in scope, or in adjustment to other balancing principles. Further, it must be borne in mind not only that the phraseology of St. Paul is to be interpreted in relation to the NT generally, but also that his Epistles do not present us with a system in itself. The upheaval of religious thought in the 16th cent. followed upon a long dogmatic history, in relation to which its theology was re-constructed. While, therefore, St. Paul speaks of faith as the basic truth of the gospel, the Protestant divine uses *the imputation of righteousness* as a technical term defined in respect to a general body of doctrine, and justification by faith becomes justification by faith only. The deviation in the latter case is due not to an exaggregation of St. Paul’s teaching, but to the conditions of the later controversy. The Reformers did not deny that hope and love no less than faith were necessarily present in those who are justified. What they saw was that to connect those virtues with justification itself was to shift the meaning of the term from the Biblical to the medieval sense. Whether *imputation of righteousness* is to be regarded as a Biblical idea depends upon whether such a phrase as *the righteousness which is of God* (Ps 33:19) has a positive content, and means, e.g., the merits of Christ, or whether it is simply equivalent to the status of those to whom faith is reckoned for righteousness. But what is really involved here is not so much the meaning of justification as the validity of certain theologies. And this is true also of Ritschl’s contention, that the community of believers is primarily the object of justification (op. cit. iii. § 26, etc.). For the question really is whether the Church is part of the revelation of God in Christ or not, and justification is still equivalent to the forgiveness of sins in either case. Whether the Cross is a satisfaction for sin, whether the work of Christ possesses a substantive, whether the sacramental Church is part of the Divine scheme of redemption, are questions affecting the revelation of God in Christ rather than the status of those who through faith become members of the Church. The parting of the ways in respect of justification depends on the relation which exists between forgiveness and the infusion of holiness. The latter is not denied by Protestants, but it is conceived as resulting from the communication of the Spirit, which necessarily springs from the Divine act of pardon and acceptance. Roman theology, on the other hand, regards forgiveness as consequent upon the transmission of holiness, which it calls righteousness, the normal channels of this process being the sacraments. The distinction is not merely a matter of terms, but has an important bearing upon the Christian character. The provision of aids, however powerful, for the attainment of justification must have an entirely different effect upon the daily life of the believer from the assurance of a reconciliation already fully won.

JUVENILE CRIMINALS.—By ‘criminals’ we mean those offenders whom the criminal law of the particular State takes cognizance by way of punishment, not those wrongdoers, against the wrongdoer’s family or others, whom the State refuses to prosecute and punish. By ‘juvenile’ in the expression ‘juvenile criminals,’ we primarily mean offenders who have reached the minimum age at which the State prosecutes for crime, but who are under the age at which full legal responsibility is held to begin. In a secondary sense, we include as juvenile criminals those young persons who, although they have not actually committed crime, are danger of becoming criminals. In many cases, an accident whether a boy or a girl is in the one class or the other. State or voluntary action to prevent the manufacture of criminals may be as necessary in the one case as in the other.

This delimitation of our subject is convenient; but it does not in all cases square with the facts. There are exceptional children, under the age of possible prosecution, who might be held responsible for their wrongful acts, because they are as conscious of the nature, probable results, wrongful character, and legal consequences of these acts as those who are above that age. On the other hand, there are many juvenile criminals—some authorities say twenty-five, others seventy-five, per cent—whose mental and moral development is so stunted that they are not fully conscious, when they commit crimes, of the conditions involving legal responsibility. Although the modern State will not prosecute and punish persons below the age at which it considers legal responsibility of the individual, it is entitled, in certain circumstances, to interfere with the liberty of these persons, and with the natural rights of their parents, and to take such steps as it thinks fit to prevent their becoming criminals.
This is the principle of 'prevention better than cure,' on which the Industrial School and, to a lesser extent, the Reformatory School of the United Kingdom, and similar institutions in other countries, are founded.

In theory, the law of all countries used to treat juveniles (above the age at which the particular state held legal responsibility to begin) and adults as equally liable to punishment, although, in practice, the obvious distinctions between the two cases were more or less acted upon, at least by the more humane administrators of the law. Children were sentenced to be transported or hanged; but these sentences were modified in their case more frequently than in the case of adults.

In modern times, by criminologists of all countries, increasing stress has been laid on the view suggested by the words: 'Vengeance is mine; I will repay, saith the Lord.' (Ro 12:9). Torture, mutilation, branding, starvation, and transportation had each their study advocates who honestly and believed that, on their abolition, discipline inside the prison and the safety of the inmates would improve. Yet these worse than useless horrors have all disappeared with the pileory and the stocks, the treadmill and the wheel, the whipping post, and the pillory, and all the rest. Flogging and other forms of discipline have been reduced to a minimum, and, with the silent system, will, for similar reasons, cease to be things of the past. It has been sharply questioned whether, except as an incident of the reformatory and reformatory treatment of the individual or in order to secure the safety of the community, the State, as such, has any right to punish offenders, whether by fine, imprisonment, or other punishment. It is generally agreed that, whether the idea of punishment pure and simple is, or is not admissible in the case of adults, it has no place (except in very exceptional circumstances, as an adjunct of reformation) in dealing with juveniles. It was only in 1808, by clauses 102 and 103 of The Children Act of that year, that it was made impossible in the United Kingdom to send to penal servitude, or to hang, a boy or girl under 16. The efficacy of rewards rather than punishments, the power of sympathy rather than coercion, in the interests both of discipline and of reformation, are not yet fully recognized in prisons, in schools, or in families.

Modern methods of dealing with juvenile criminals have proceeded on similar lines in Great Britain and its Colonies, the United States, and the Commonwealth, and are based on two considerations: (1) the conviction that the crimes of juveniles are not in fact (unlike those of adults) the result of wilful wrongdoing or deliberate choice, but of heredity polluted by want, drink, and disease, of physical hardships (due in large measure to the periodic unemployment and the insufficient wages of parents), of defective religious and secular education, of want of parental supervision and control, and of vicious associations; and (2) the general agreement, founded on experience, that juveniles, when withdrawn from their vicious surroundings (the nursery, the public house, or the streets) and provided with a firm, kindly, intelligent reformatory influences more readily and more permanently than adults.

The movement in Europe, the United States, and the British Colonies for a radical change in the treatment of potential and actual juvenile criminals was the result of a quickened sense in the State, and in the Church, of the supreme value of the interest (in the broadest sense) of the nation, and of national as well as parental responsibility, for all the children in the community, whether they are normal or defective physically, mentally, or morally. In Great Britain it was, like many other movements for the welfare of children, partly at least the consequence of the Ragged School movement, begun by John Pounds, the Portsmouth cobbler, early in the 19th century, and subsequently extended over Great Britain and Ireland, under the inspiration of such men as John Street, John Dean, and Mary Carpenter in England, and Thomas Guthrie and Sheriff Watson in Scotland. It was not till Ragged School methods had been proved in Britain and elsewhere that the State in Great Britain took any share in the work, which results in benefit to the whole community, and is, therefore, suitable for State recognition and support.

In later years, the State's action in Great Britain has been accelerated by the success of similar preserving and reformatory institutions in the United States and in the British Colonies, and by the splendid work done by such agencies, independent of State aid, as those of the Ragged School Union and Barnardo and Müller in England, Quarrier in Scotland, and the Salvation Army in different parts of the world.

Modern legislation dealing with juvenile crime has been mainly directed (1) to exclude juveniles from prison; (2) to provide institutions for the preservation of those who are in danger of falling into crime, and for the reform of those who have been convicted of crime; and (3) to secure for any who may be in prison such treatment, in confinement and on release, as will at least make it possible for them to redeem their past, and live honest and useful lives, keeping in view the sad and unfortunate statement, or, rather, understatement, made by the Departmental Committee of 1895: 'Few inmates leave prison better than when they came in.' It is not possible in a short space to exhaust the application of these views in different countries. The matter may be illustrated by stating the position in the United Kingdom, where the law relating to juvenile crime is to be found in parts iv. and v. of The Children Act, 1878 (Edward vii., ch. 67), entitled 'An act to consolidate and amend the law relating to the protection of children and young persons, Reformatory and Industrial Schools, and Juvenile Offenders, and otherwise to amend the law with respect to children and young persons.' The First Offenders Act, 1887, The Prevention of Cruelty to Children Act, 1904, and The Probation of Offenders Act, 1907, should be read along with The Children Act, 1908.

By section 58, magistrates may send to Industrial Schools (1) children who are found begging, (2) children found wandering, and (3) children who have no adequate means of subsistence, (4) destitute children, and those whose parents (or surviving parent) are in prison, (4) children of criminal or drunken parents, unfit to have the care of them, (5) children living in grossly immoral surroundings, (6) children who are refractory and beyond the control of parents or guardians, or, if in a workhouse, of the managers, and (7), in exceptional circumstances, children not older than 13 charged with crime. All boys and girls sent to Reformatory (with the exception of refractory children sent from Industrial Schools) must have been convicted of crime.

The body of legislation which culminated in The Children Act, 1908, has, in conjunction with voluntary effort, resulted in the establishment, in different parts of the United Kingdom, of two institutions designed to prevent and deal with that brand which, once affixed, is rarely effaced, and to fit them, convicted or unconvicted, for a new career: (1) Certificated Industrial Schools for children not old enough to be convicted, but in imminent danger, from their destitute and neglected condition, from their immoral surroundings, or from their refractory habits, of falling into crime, or who have been convicted of minor
offences; they may be committed for any period, but cannot remain in an Industrial School beyond 16; (2) Reformatory Schools for children over 12 years and under 16 at entry, who have committed more serious offences, or who may be beyond the Industrial School age of 14; they are committed for not less than three, and not more than five, years, but cannot remain in a Reformatory School beyond the age of 19.

(1) Industrial Schools certified and subsidised by Government. The State has interfered in favour of Industrial Schools in four ways: (1) by certifying those of whose management and methods it approves as fit places for the detention of the boys and girls for whose benefit the Acts already mentioned were passed; (2) by conferring powers on magistrates to send boys and girls to these schools under detention orders for a fixed period; (3) by paying a proportion of the cost of the boys and girls so committed under magistrates' orders; and (4) by providing Government inspection of certified Industrial Schools.

Government recognition and subsidy were not obtained for Industrial Schools without opposition. It was said that these schools were merely doing the work which the parents ought to do; that to support them was to pauperise both parents and children. It required to set free the children’s money to feed the vicious indulgences of the parents. If there were parents, who, although able, were not willing to do their duty by their children, why did not the criminal law compel them? These arguments, although specious, were inapplicable to orphans, deserted children, and children of long sentence prisoners. Even where they had a basis in fact—e.g., the compulsory cases of parents spending their drink money on that alone—true in the case of the children, it was proved that it would be of advantage to the State to save the children from joining the criminal ranks, even at the cost in some cases of pauperising the parents and feeding their vices.

The opponents of Government interference relied on another great principle, viz., the inalienable rights of parents in their children. But, while this principle could have no application in the case of orphan children, it had only a technical application even in the case of those deserted or neglected children who, although one or both parents might be living, were worse than orphans.

(2) Reformatory Schools. As in the case of Industrial Schools, voluntary effort had proved the success of Reformatory Schools for youthful offenders before the system was adopted by Government. In the preamble of the first Reformatory Statute (passed in 1854, 7 and 8 Victoria, ch. 86) there is a recital of the establishment, by voluntary contributions, of Reformatory Schools in various parts of Great Britain.

Dealing with both Reformatory and Industrial Schools, the 1908 Act makes careful provision in the choice of a school, for respect being paid to the religion in which the child has been brought up. It also provides for the parents of the children, wherever possible, being compelled to contribute to the cost of their maintenance and education. In the case of Industrial Schools, the children may, when the managers of the school think the case a suitable one, be boarded out instead of being kept in the school; and they may be licensed out, from both Industrial and Reformatory Schools, before the normal period for which they were sent to the school.

The statute does not contain any provision for emigration; but it is the practice, especially when the home is an exceptionally bad one, to send the children to the Colonies. There is no difficulty in finding employment for the children, who go as domestic servants, and the boys in all kinds of skilled trades and in the army and navy. After leaving school, the children remain under the supervision of the managers—Industrial School children till 18, Reformatory School children till 18. The cost of these schools is not met entirely by the Treasury or by local authorities. Voluntary contributions cover a proportion of the cost; but, as in all cases when Government aid is available, the directors of these institutions find it increasingly difficult to maintain voluntary subscriptions. Government has wisely left the administration of the schools to voluntary committees of non-official men and women specially interested and specially skilled.

Naturally, looking to the age and careers of the inmates, the discipline in Reformatories is more severe than in Industrial Schools, and, for the same reason, the percentage who do well after their time is up may not be so high. But, whatever differences of opinion there may be as to the best methods of dealing with juvenile crime or as to the precise percentage of satisfactory cases, it is universally admitted that the State has got many times more than full value for all the public money spent on Reformatories and Industrial Schools.

(3) The Borstal system. In addition to Industrial Schools and Reformatories, there are State institutions in England and Scotland on what is known as the Borstal system, for offenders, from 16 to 21, too old for Reformatories, but whose habits have not yet matured beyond redemption, although they may have long enough been criminal times. The success already achieved in these institutions—the first was founded in 1902—makes it certain that the test of age will be abandoned, and that, sooner or later, all prisoner will be treated as capable of reformation, save only those professional criminals who have shown by a strengthened career in crime that, for the safety of the community, they must be confined for life.

See, further, art. CRIMINOLOGY.

(4) Truant Schools. The position of Day Industrial Schools in Scotland, established under the Day Industrial Schools (Scotland) Act, 1893, in relation to Certified Industrial Schools appears from clause 83 of The Children Act, 1908. In the United States remarkable results have been achieved in an establishment called ‘The George Junior Republic,’ founded in 1885, in which the inmates are put upon their honour and trusted with administration and discipline to an extent unknown until 1913 in any institution, public or private, for similar purposes in Great Britain. An institution on similar lines, called ‘The Little Commonwealth,’ was started in 1913 in Dorsetshire, the success or failure of which may have important results on the whole method of dealing with juvenile criminals. Mention must also be made of the work carried on by the Ragged School Union and other associations, which prefer to work without State aid that they may be independent of State control.

The tendency is increasing to eliminate both the appearance and the reality of prison life from the institutions mentioned above. This does not proceed from any pseudo-humanitarianism, but from experience that thereby the children are better braced for the battle of life when they leave school. The Reformatory Act of 1854 enacted that every young person sent to a Reformatory must first be imprisoned for not less than 14 days, and it was not till 1899, 45 years thereafter, that this most objectionable condition was abolished. Experience proved that even this short experience was sufficient in many cases to rob the prison of its terrors, and to affix an indelible prison-brand. The discipline is firm, and temporary causes and difficulties may make it, at times, severe. Few, if any, boys or girls go voluntarily into Reformatories,
or even Industrial Schools; and few, if any, remain of their own free choice. The food, although ample, is plain. The children, consistently with the preservation of robust health, work hard, both in the school-room and at industrial work. Yet every school has abundant testimony from former pupils, many of them occupying positions of trust at home and abroad, that they owe everything to these institutions.

There is another provision in the Children Act (first put into practice in the United States in 1869), which cannot be passed over, viz., that for the establishment of Children's Courts, separate from the ordinary Police Courts, and to which none but those directly interested, including the Press, are admitted. Reference may also be made to clause 62 (2), in which it is contemplated that Industrial Schools will provide a department for children suffering from mental or physical defect. It is a sad feature of almost all effort, State and voluntary, in connection with juvenile criminals, actual or anticipated, that the institutions for their benefit are open only to children mentally and physically normal, or nearly normal, and that no effort is made to segregate the defective, who are thus allowed, by the production of children, weak physically, morally, and mentally, to maintain the supply of the criminal class. The Mental Deficiency Act of 1913 is, however, evidence that this aspect of the question is at last to be seriously faced.

The 1908 Act recognizes by clause 60, dealing with probation of offenders (a system, like so many others, adopted from successful experience in the United States), how essential it is that the child, when he or she leaves the Industrial or Reformatory School, shall be provided with a suitable situation, and shall be supervised in his or her earlier years of freedom. In reference to juvenile criminals who have been sent to prison, we may merely mention the noble work done by them, during confinement and on release, by Prison Visitors, Discharged Prisoner Aid Societies, the Churches, and the Salvation Army, working in conjunction with the Prison Commissioners and the prison officials.

The advocates and managers of the great reformatory institutions and agencies above described have always been keenly alive to the drawbacks and deficiencies of all such establishments, however well managed, compared with home life as it ought to be. While doing what we can to safeguard the tempted and to reform the fallen in our own generation, we must look forward to the day when the conditions of life of the working classes—their religions, moral, and intellectual opportunities, the regularity of their employment, their wages, their housing, their means of innocent and health-giving recreation, and their resultant law-abiding character—will be such that there will be no need for any of these institutions, and when the subject of juvenile criminals will have only an historical and antiquarian interest.

KABBALÁ. I. History. Kabbalá (Heb., 'he received') was a term usually reserved to denote the Prophets and Hagiographers as opposed to the Pentateuch, e.g., T. B. Bahr hash-shahna, 10s (see C. Taylor, The History of the Jewish Fathers, Cambridge, 1897, p. 114). The prophetic teaching was 'received' or 'traditional.' In the course of time, however, the meaning of Kabbalá underwent a change; it was applied to hidden and mysterious doctrines, dealing with the nature of the Deity and His relation to the world. This secret mysticism had no late growth. Difficult though it is to prove the date and origin of this system of philosophy and the influence and causes which produced it, we can fairly certain that its roots stretch back very far, and that the medieval and Geonic Kabbalá was the culmination and not the inception of Jewish esoteric mysticism. Already in the days of the Mishna, it was felt that speculations concerning the origin of the world (see art. COSMOGONY AND COSMOLOGY (Jewish)) should be restricted to those of nature, intellect, and the same tractate (Haggiga, ii. 1 and T. B. Hagiga, 13s; see A. W. Strane, Chagigih, Cambridge, 1891, p. 55) associates themselves (v. 11) with cosmology (v. 12) and philosophy (v. 13). In the same tractate, the same tractate (Haggiga, ii. 1 and T. B. Hagiga, 13s; see A. W. Strane, Chagigih, Cambridge, 1891, p. 55) associates themselves (v. 11) with cosmology (v. 12) and philosophy (v. 13). These two sciences are subject to the same restrictions and are regarded as interdependent. The famous admonition of Sirach, not to seek 'that which is too wonderful for thee'

(Sir 39.1; see Taylor, 'The Wisdom of Ben Sira,' JQR xxv. [1902-3], 442; repeated in Bereshit Rabbá, viii, ed. J. Theodor, Berlin, 1903, p. 58) and in Mazigita, 13s, shows not only that these speculations were rife in the 2nd cent. B.C., but that in pursuing them caution was deemed necessary. It is superfluous to cite further evidence, since this statement is now generally accepted.

One of the etymologies of the same essence (Kaprão; cf. Essere, v. p. 4000) is 'secret' (Hebr. 'mesi,' or 'mesi'). This is based on 'Meschurá (D.J. ish, 8), who says of the sect of Qe'der as wurbab r v-quarter to the kheret earahemars. This would seem to imply a tendency to esoteric doctrines on the part of the Essenes (see Taylor, Essays, p. 73, note). The name of the Elekabá, a Gnostic sect (s. v. 180), would furnish a parallel to this etymology, according to the derivation given by Espliánsi (cf. Bereshit Rabbá, v. p. 262, viz. 77'22, 'hidden strength."

The Apocryphal writings, especially Enoch and Jubilees, mark a considerable development in the history of Kabbalá. Gnosticism and dualism played a great part in influencing its growth, and contributed towards the body of ideas that found expression in the Sifre Yeira and the later Zohár. Kabbaláism denies the creatio ex nihilo and the possibility of knowing God. Hence it taught the doctrine of negative attributes, by which expedient the Godhead might be described. Kabbaláism, further, represents the insistence on the divine immanence; it is a reaction against excessive emphasis on the transcendence of God, an opinion which is often held that Judaism is a purely formal religion, in which the warmth of mysticism has no place. Such an opinion, in any case erroneous, is entirely untenable.
if attention be paid to the history of the Kabbalah. For centuries it has coursed through the veins of Judaism in a fiery flood, raising man to God and bringing God to man, cheering him with hopes of a speedy Messiahian advent, and comforting him in times of trouble, care and need. The Kabbalah is the universal religion, reaching a peak of mystery which draws the remote future, with its promise of peace, into the immediate present with its clouds and sorrows. It has filled the lives of the poor and the rich, the learned and the unlearned with the love of God, and with the assurance of His interest in their daily concerns, and has made them feel at every moment that they should and could 'imitate' Him. There is no lack in the Kabbalah of the fantastic, the childish, or the grotesque, or sometimes even the blasphemous, but the proportion of the dross to the gold is insignificant, though not infrequently misrepresented and exaggerated. Nor is it altogether correct to regard the Kabbalah as the antithesis of the ceremonial Law. There have been mystics, notably among the later Russian Hasidim, who laid more stress on study of the Talmud and Codes, but, on the other hand, many have striven to combine mysticism with the invariable observance of the Din. The very author of the Shabath Arakh was a Kabbalist. Every act and every thought of his life has been surrounded with a mystic halo, given a new vigour and meaning, and preceded by a formula of self-consecration. Thus the tendency of Kabbalism, in general, has been largely to strengthen the ceremonial Law, not to destroy it.

From the time of Graetz it has been the fashion to decry Kabbalism and to regard it as a later invention, as something of which Judaism had reason to be ashamed. To remedy this judgment goes back much further; it rests ultimately on the authority of Moses Maimonides, to whom reason was the foundation of Judaism, and the imaginative faculty abhorrent. The weight of his influence was sufficient to prejudice the majority of scholars against the Kabbalah. Further, the Kabbalists claimed extreme antiquity for their doctrines. The Zohar, e.g., was attributed to Simeon bar Jo‘aš, a Galilean Rabbi of the 2nd cent.; it is, in point of fact, a Spanish work, more than eleven hundred years later. In consequence of the critical analysis to which modern historians have subjected the history of Judaism, such traditions as the traditional date of the Zohar, have been exposed, reaction has pushed too far to the other extremes. The recent tendency requires adjustment. The Kabbalah, though later in form than is claimed by its adherents, is far older in material than is allowed by its detractors. It is not entirely a collection of fantasy; it is poetry, spirituality, and idealism as well. Nor has the excess of imagery and anthropomorphism been suffered to spread too far. Simeon bar Jo‘aš, a pillar of mysticism, declared a ban on those who expounded the Zohar as a personification of the Deity which is known among the Kabbalists as the Shekhinah. He preferred to use the word of mouth, so that it is not easy to say exactly what was taught and believed by those who first spread the Kabbalah through Italy into other countries. The doctrines which he taught found ready acceptance, and through him the seed soon bore fruit in Europe. But at this time little was written down. Mysticism was transmitted by word of mouth, so that it is not easy to say exactly what was taught and believed by those who first spread the Kabbalah through Italy into other countries. The alphabet are of frequent occurrence in the Geonic writings, which are probably responsible for the French, German, and Spanish Kabbalah. The German Kabbalah, brought from Italy by the Karolins of Bohemia, has lost much of its originality. In England, the Kabbalists are not easy to study. The greatest of them, Moses de Leon, who died in 1271, his pupil Eleazar of Worms, and Abraham Abulafia, who was a great mystic, have worked miracles by the use of the Divine Name. The doctrines which he taught found ready acceptance, and through him the seed soon bore fruit in Europe. But at this time little was written down. Mysticism was transmitted by word of mouth, so that it is not easy to say exactly what was taught and believed by those who first spread the Kabbalah through Italy into other countries.
KABBALA

dignitaries. The authenticity of much of his written work is doubted because he wrote down but little, his disciples being the repositories of his teaching. If the Songs of Unity and Song of Glory are, in fact, his composition, his mystic teaching is still obscure. At any rate, whether composed by Judah, by his father Samuel, or by any of his contemporaries, they reflect the current mysticism. In these mystic songs, which may be found in the Sopher Yeira, many Kabbalistic and philosophical ideas occur: they deal, in general, with the divine nature, either from the transcendental or from the immanent side.

- Thou encompass all and fillst all; and since Thou art the All, Thou art in all...
- Colour and shape cannot be applied to Thy Oneness, nor body to the essence of Thy Unity.
- Neither is anything separate from Thee in the midst: nor is the smallest place void of Thee.
- Thou art not in them, nor time, nor space, nor discord, nor any imperfection.

("Hymn for the Third Day")

- We may not class Him with matter or substance, or ascribe to Him accident or attribute.

- Things that are seen or concealed or known are included in the ten categories; there are seven kinds of quantity and six kinds of motion, three kinds of predication, three times, and three places, all contained in the Creator, and we cannot name them exactly, for He created them all together. ("Fifth Day").

- I have not seen Thee, yet I tell Thy praise.
- Not known Thee, yet I image forth Thy ways.
- For by Thy scroll and servants' mystic speech
  Thou didst Thy servant splendidly teach us.
- And from the grasper of Thy work they drew
  Their piety and power, and Thy inner greatness too.
- They told of Thee, but not as Thou must be.
- From since Thy work they tried to body Thee.

("Hymn of Glory")

In addition to other liturgical works, Judah's mysticism was expounded in a commentary to the Pentateuch and in an ethical will, but chiefly in the Sopher Hadasah, a collection of mystical and ethical sentences. Probably Judah had no more than a share in the last-named work. His fame, however, rests not on his personal writings, but on the impetus which he gave to the German Kabbalah. This impetus will best be measured not by his books, but by the number of pupils and associates who carried his ideas and influence far and wide. Of his disciples Eleazar ben Judah ben Kallir, who is said to have written as much as twenty books, was the most distinguished both as a Kabbalistic and as a writer of ethics. Though his title to fame rests chiefly on the Kabbalah, which is devoted to ethics and halakhah, he was also an important Kabbalist. Eleazar was given to asceticism.

- In his cabalistic works he developed and gave a new impetus to the mysticism associated with the letters of the alphabet. The philosophical Cabala of the school of Isaac the Blind is replaced by arithmetical speculations. By the gematria and arithmetical systems of interpretation found in the Talmud, Eleazar invented new combinations by which miracles could be performed. The hebraic anthropomorphism which he had combated in his earlier works ("Iza-Boqar"), "Sea are made without-Tupi") occupied later the foremost place in his cabalistic writings. (T. B. Pesahim, 110b: רפואת פקיעת הים, 'even numbers are to be avoided in drinking').

The Kabbalah of the Arabic-speaking Jews was in the meantime undergoing modification. The Arabic Jews, who were more familiar with Greek philosophy, and their own was thereby affected. The influence of the "Brothers of Purity" in Basra, whose writings were directed to the renewal and survival, was felt in Jewry; notably Baiba ibn Pakuda wrote in a free manner of their movement. In the treatise Men and Animals their philosophy is expounded with special reference to cosmogony, angelology, the soul, the Godhead, and the interrelation of man to God. It was chiefly their theory of emanation (see F. Dietricher, Thier und Mensch vor dem König der Genien, Leipzig, 1851, p. 69, line 1, etc. =

Der Streit zwischen Mensch und Thier, Berlin, 1888, p. 97, foot, etc.; see also p. 169 for the discussion about angels) and of the nine numbers that found favour with and adaptation by the Jewish Kabbalists. Already in the 16th cent. signs begin to appear of an opposition between the rational and mystic. Prayer and the study of the Haikkah tended to become antitheses in Germany, while the German and Spanish Kabbalists differed in many important points. The Spanish school was more purely mystical and visionary, while Germany devoted more thought to speculative Kabbalah and to permutations. The details of the spread of the Kabbalah into Provence are obscure. Isaac the Blind cannot be the founder of the movement here, as was formerly held. In him Kabbalah is already so far developed as to make it certain that he must have had predecessors. The advent of philosophy to Provence produced a mystic reaction, and thus Kabbalah, which had hitherto remained obscure, came forward as a protest against the coldness of rationalism.

A new stage in the growth of the Kabbalah was marked by the appearance of the Zohar (see below), which became the mystical Bible. This pseudographical work probably dates from the 14th century. It paved the way for the last stage of mysticism, which has continued till the present day. This stage is associated with Isaac Luria (1535-72), known as Ari, and Hayyim Vital. They and their followers combined spirituality and permutations. Their piety was of extremely high order, but coupled with it was their use of charms and amulets. In the Orient, Galicia, and Poland their influence is strong; their precepts have sometimes been misunderstood, and in distant hands, have degenerated into superstition. In Russia the Hassidim have incorporated the Kabbalah, laying special emphasis on prayer and mysticism. But the lower elements have not been wanting; hence the Hassidic movement has met with strenuous opposition on the part of the Rabbis.

2. Chief theories and doctrines of Kabbalah.

The complete Kabbalistic system consists of two main subdivisions — theoretical, joyousness, and practical, Ma'asitl. It is impossible to deal exhaustively with the individual points in each branch, and it is difficult to make a rigid line of division between the two; but it is proper to consider briefly the chief ideas and principles.

(a) The use of numbers and letters. —The permutations and combinations of numbers and letters are not entirely mystical and pagan, for Hebrew has no numerical symbols, and the use of the alphabet for numerals goes back to Maccabean times. This practice is, no doubt, responsible for the later gematria or enumeratio, by which the numerical equivalents of letters and words were made a means of interpretation. An interesting example is cited in art. EXPiation and Atonement (Jewish), vol. v. p. 662 § 3. Unrelated numbers are known in the Talmud (T. B. Pesahim, 110b: רפואת פקיעת הים, 'even numbers are to be avoided in drinking'). Owing to the principle of the connection between letters, one letter, or a word, might be replaced by another, or by number. Many examples can be seen in the Ethics of the Fathers (e.g., ch. vi. Taylor, Sayings, p. 78ff. From this personal observation of seeing a connexion between gematria and anthroponymic, one felt that more active employment of numbers might be possible, and that he who held the secret of the mystical chain might force nature and attain fuller power. In earlier times seven, and in later times ten, was regarded as the permanent number. The permutation of letters and numbers is called יִנָּה. As perfected in the Sopher Yeira, which is arranged according to the letters of the alphabet, it is doubt-
KABBALA

less Pythagorean, but the Jews cannot have borrowed it altogether; the knowledge of the science was ascribed to BezeAle (T. B. Berakhoth 55a).

(b) Classes of angels and demigods.—The belief in the existence of angels and demigods is still commonly held by the Jews, and angels play an important part in Jewish mysticism. The angels are divided into three classes: the Seraphim, the Cherubim, and the Thrones. The Seraphim are the highest order of angels, and are said to be the bearers of the Shekhinah. The Cherubim are the second order of angels, and are said to be the protectors of the Shekhinah. The Thrones are the lowest order of angels, and are said to be the messengers of the Shekhinah.

(c) The term 'Shekhinah.'—The Shekhinah is the feminine form of the word 'Shekhinah,' which means 'manifestation.' It is the personification of the divine presence, and is said to be the embodiment of the divine feminine principle. The Shekhinah is said to be the source of all life and creativity, and is the object of the Jewish mystic's love and devotion.

(d) The doctrine of emanation.—The doctrine of emanation is a central tenet of Jewish mysticism. It states that the universe was created by God through the process of emanation, in which the divine spark was successively subdivided into various forms and qualities. The doctrine of emanation is also known as the doctrine of the Worlds of Being, or the Worlds of Creation.
