HYMNS (Babylonian).—In the extensive literature of Assyria and Babylonia a considerable number of hymns are found, most of them in the old Sumerian language, and generally accompanied by renderings into Semitic Babylonian. Several examples of this class of literature, however, are known to us only in the Semitic idioms, and do not seem to have been based on any Sumerian original. These compositions are generally in praise of the gods, and are such as might be expected from a nation so appreciative of the benefits showered down upon them from on high as the Babylonians. Hymns to heroes are exceedingly rare, unless those addressed to Marduk, Tammuz, and other deities who are stated to have been originally kings may be regarded as poems of that nature.

Though the Sumero-Babylonian hymns are addressed to various deities, it cannot be said that they vary greatly. They sing the gods' praises, exalt their might, and descant on the glories of their temples. They also speak of the gods' mercies, their places in Nature with regard to man, and the benefits which they conferred on the world as the Babylonians knew it. The wording is often well-chosen and even elegant, whether the idiom is Sumerian or Semitic.

The poetical form is somewhat monotonous, variety in these compositions, whether Sumerian or Semitic, having apparently not been aimed at. This is probably due to the fact that most of them were composed by the priests, with whom all religious forms originated, and who copied the style of older compositions.

Muslim (D. S. MARGOLIOUTH), p. 47.
Vedic (A. A. MACDONELL), p. 49.

Naturally many theories concerning the nature of primitive Sumerian poetry are possible, but in all probability it was the root-syllable, or the principal root-syllable, which was accentuated, the others being passed over lightly. The lines are generally divided into two parts by the caesura, indicated by a space so arranged that the text seems to be written in two columns. The Sumero-Babylonian hymns are often of considerable length, but among the shorter compositions of this nature may be cited the hymn to the setting sun, from the temple-library at Borsippa—a gem in its way:

'Sin the midst of heaven, at thy setting
May the bolt of the limpid heavens speak thee greeting;
May the door of heaven shine thee;
May the earth, thy beloved minister, direct thee;
At K-babbar, the seat of thy lordship, thy supremacy shall shine forth;
May As, thy beloved spouse, joyfully receive thee;
May thy heart take rest;
May the feast of thy divinity be set for thee;
Leader, hero Sinak, may there be praise to thee;
Lord of Eshbar, may the course of thy path be straight;
Make straight thy road—go the direct road to thy resting-place.
Then art the country's judge, the director of its decisions.'

The above being part of a series (the next was a hymn to the Sun-god on his rising), the composition deals only with the satisfaction and peace that the god experienced when, after fulfilling his task in the sky, he was greeted by his home and his spouse, and, having been refreshed, thought over all that he had seen on his course above the earth, the decisions of whose tribunals he directed. The first four lines are alternately of 11 and 15 syllables, while the 5th and 6th contain 15 each. At this
HYMNS (Babylonian)

point are again four short lines (10-12 syllables), followed by two long ones (18-19 syllables). Evidently this regularity of form is intentional.

The Sun-god was one of the deities whose influence the Babylonians could appreciate, hence the tone of the above composition addressed to him. Enil, the older Bel, however, was a divine personage who aroused more interest, and in some of the compositions addressed to him there is noticeable a tone of reproach. This is exhibited by the text beginning Ame sumanatu 3egg368 nippin (G. E. B. 3egg368, sumanatu-babylon). Hymnen, 1896, p. 130 ff.) - a composition in dialect, where the god is called Mulil:

"The hold of the lord bitterly lamenteth:
The fold, the fold of the lord, bitterly lamenteth.
O lord of the lands, honoured one, lord of the lands:
O lord of the lands, whose word is faithful;
He does not turn - with regard to his command he does not turn;-

The honoured one, Mulil, changeth not his utterance.
Troubling the waters, he caught the fish, he scattered the birds, he sent the 'son of the plain' up to the mountains, and he sent 'the son of the mountain' down to the plain, etc. -
O lord of the lands, heart-remote Mulil, how long wilt thou not hearken?
Father Mulil, who regardeth, how long wilt thou not hearken?
Who coveth thine heart with a garment, how long?
While thou art entered into the city of Sinrib, how long? -
Who coveth thine heart like a reed, how long?
Honoured one, who placeth thy fingers in thine ears, how long?

A kind of litany closes this long and interesting enumeration of 'the older Bel's' inattention to the work of gardening under his auspices. It contains much hidden teaching of the Babylonian priesthood.

Before the rise of Merodach, the worship of Enil was probably more favoured in Babylonia than that of any other god except Ea, and the importance of Nippur, which was originally his city (before the adoption of Ninip as patron), always maintained Enil's supremacy. This is shown by the descriptive hymn published in FSBA, March 1911, p. 86 ff. After describing the district wherein the temple of Enil and his spouse Ninlil lay, the text continues as follows:

"The god Enil, the lord of heaven, Mulil, the god Enil, to be taken to the reception-hall. Enil, may the sodothu (7) go forth from the city; Nippur, may the sodothu (7) go forth from the city - O Enil, for the fate which thou hast decided; O Ninlil, for the fate which thou hast decided. Enil cometh, Ninlil descendeth -
Nanunnur cometh - the king. Enil calleth to the man of the great gate: 'Man of the great gate, man of the lock - Man of the bell, man of the holy lock - Thy lady Ninlil cometh!"
If (anyone) set thee for my name, Then shall not reveal to him my place. Enil calleth to the man of the great gate: 'Man of the great gate, man of the lock - Man of the bell, man of the holy lock -
Thy lady Ninlil cometh -
The handmaiden who is so bright, so shining! Let none wax her, let none kiss her -
Ninlil so bright, so shining!"

Enil, the bright, the fair, will pronounce the decision.

In contradiction to the 'heart-remote Enil,' or 'older Bel' is his younger representative, Bel-Merodach, 'the merciful one,' who later, took Enil's place. The hymns to Merodach are naturally, for this reason, ascribed to that deity, among the most interesting:

'The merciful one among the gods -
The merciful one who loveth to verify the death -
Marduk, king of heaven and earth, king of Babylon, lord of E-Sagris,
King of E-sagis, lord of E-mahs, and Heaven and earth are thin,
Marduk, the great one, the strong one,
The incarnation of life is thin,
The philtre of life is thin.

Marduk, the powerful one, is thin,
Marduk, the powerful one, is thin,
The living creatures, as many as there are, which bear name in this land;
The four regions, as many as there are;
The Sun-god, which are the host of heaven and earth, as many as there are,
To them do they (turn) their ear.'

More popular than other deities of the Babylonian pantheon were in all probability Tammuz and Istar, whose worship goes back to the fourth millennium B.C. Hymns to them are here composed in dialectic Sumerian, and are, therefore, of comparatively late date. As examples of Semitic Babylonian hymns to these deities will be found, further on, an extract from the exceedingly well-preserved bilingual hymn to Istar, excavated by George Smith, is given here:

'The light of heaven, which dawnteth like fire in the land, art thou.
Godess of the earth, art thou:
Shes who, like the earth, widely advanced, art thou.
As for thee, a path of righteousness blesseth thee.'
The goddess then answers:
'The twin sister of the sun, the abodes of the heavens,
To produce the omens I exist - in perfection I exist;
To produce the omens for my father Sin I exist - in perfection I exist;
To produce the omens for my brother the Sun I exist - in perfection I exist.'

Though daughter of Anu, the god of the heavens, Istar is here called daughter of Sin or Nannar, the Moon-god, probably because, like the moon, the planet shows phases. She was regarded as the sun's sister because she accompanied him on his course, sometimes at his rising, at other times at his setting.

One of the gods of war and also god of pestilence - Nergal, patron-deity of Cutha - was worshipped as one of the sons of Enil, the great divinity who, as the author of the story of the Flood informs us, desired to destroy mankind to prevent them from increasing too quickly on the earth. Notwithstanding Nergal's unsparing nature, hymns were addressed to him, and he was glorified therein with every confidence that harm would not overtake the Babylonians at his hands, but would benefit their enemies:

Let me glorify the hero of the gods, the powerful, the brilliant one, the son of Enil;
Ura (i.e. Nergal) let me glorify, the hero of the gods, the powerful, the brilliant one, the son of Enil;
The beloved of Enil, the supreme leader, the avenger of his father;
The offspring of the Lady of the gods, the great queen, the son of the king, who trusts in his might;
The clever one of the gods, the sublime oracle-priest, the great hero, the trust of Enil.

He is, after this, addressed as the one who overcomes evil devils and fates, the evil and powerful foe, subduing the evil gods, and loving the saving of life. Bel-šarrummi, who seems to be mentioned as the composer of the hymn, asks for the god's favour upon the city of Marad, where the god was worshipped; and for the saving of his own life, which was threatened by some hostile fate. Another noteworthy Sumerian hymn addressed to Nergal is in the form of verses chanted by the priest, and repeated by the people, as follows:

Priest: 'His bright image, /overshadoweth the demons right and left,'
People: 'His bright image, etc.'
Priest: 'The long arm whose blow (i.e. disease and pestilence) is invisible, the evil one with his arm [the amulet],'
People: 'Nergal, the long arm,' etc.

This text, which is very mutilated, was of considerable length when complete, and is important not only on account of its form and the words used, but also because of the light which it sheds upon the Babylonian conceptions of life and death.

Another Sumerian hymn (WAJ iv. pl. 28, no. 8, and 27, no. 3), regarded as being in the form of a 1

1 The holy incantation, the word (from) the Abyss, so called because communicated to Merodach by Ea, king of the Abyss and lord of wisdom.

3 Cf. 1 K 13, 13. 6 Possibly another name (or title) of Enil
2 The temple of Bel there.
HYMNS (Buddhist), differs widely from the above. To what god it is addressed, however, is uncertain: Priest: *In affection of heart, in evil weeping, in sighing of his sin.*

In bitter crying, affection of heart,
In evil weeping, in sighing,
He seems like a dove, in anguish night and day.
To his merciful god he bows as a wild cow—
He constantly makes.
To his god in supplication he has bowed down his face;
He has looked up without weeping.
Penitent: *I will tell my deed—my unpeachable deed!*

I will repeat my word—my unpeachable word!

(These lines are repeated, after which the text is broken away.)

From the other inscriptions of a similar kind, it would seem that the gods of Babylonian loved to hear the confessions of their worshipers, which, composed in poetic form, were regarded as having weight with them to the penitent's advantage (cf. also the Confession [Assyro.-Bab.], vol. iii. pp. 825–837).

The above extracts show the nature of the Semero-Babylonian hymns, composed, apparently, in that ancient idiom, and generally, on the tablets which have been preserved to us, provided with a Semitic (Assyro-Babylonian) translation. Those composed in the Semitic Babylonian (Assyrian) idiom only were modelled, to a certain extent, upon the Semitic hymns in the canons. Naturally, as the language is a widely differing one, the poetical form departs from that of the old writers of Sumer. The personal and prepositional inixes of the Sumerian verb, and the use of post-positions instead of prepositions account for such differences as are noticeable.

As far as can be judged, the diction of Semitic Babylonian poetry is more regular, and, therefore, has the appearance of greater dignity. Each half-verse has four principal accents, as a rule, though this is by no means without exceptions. The following will give an idea of the nature of the Semitic compositions:

*Thou, Sitar, whose spouse is Tammuz,
Daughter of Sin, the heroines traversing the land,
Shes who loveth reproduction, she who loveth all men art thou.
I have given to thee thy great gift—
A suit of lapis-lazuli, a suit of gold, the adornment of thy divinity.

To Tammuz, thy spouse, take my pledge—
May Tammuz, thy spouse, take away mine indisposition.*

After this the supplicant addressed Tammuz him- self:

*Tammuz, the lord, shepherd of Anu, son of En art thon; Spouse of Sitar, bride, ruler of the land; Clothed with the scarf (bearing) the staff; Producer of all things, lord of the fold; Eater of pure food, the adnake:*

*Deeper from the seven skins, etc.*

In certain of the Semitic compositions a similarity with the Hebrew psalms has been pointed out. The following is from a tablet of this nature:

*God, my lord, maker of my name;
Keeper of my life, causing my seed to be:
My angry god, may this heart be appeased;
My acharit goddess, be at peace with me.
Who knoweth, my god, thy test?

Thine holy dwelling-place, thou holy abode, have I never seen.

As for Illuc (7), let it pass from me—
I will be removed with thee,
Abbot to me then the lot of life;
Let my days be long—grand (one) life.*

Among the most noteworthy texts of the nature of hymns may be mentioned also those which accompanied the new-year ceremonies in honour of Marduk. The lines are complete, the first of each being dialectic Sumerian, and the other Semitic Babylonian. Though the second is regarded as a translation of the first, it is only an exact copy. One of the comple test reads:

*Celestial king of men, celestial king who beseechth;
Lord of kings, bestower of gifts,*

and every other line at most merely reflects the sense of that preceding.

Among the royal hymns are compositions containing the names of Nebuchadrezzar r. of Babylonia (about 1200 B.C.), Sargon of Assyria, Esarhaddon, and Assurbanipal. The last name only occurs in a dialectic bilingual psalm. A hymn containing the name of Nebuchadrezzar is an acrostic upon the name of the god Nebu.

T. G. FINCHER.

HYMNS (Buddhist).—The word 'hymn' is ambiguous. It has been defined as a 'song of praise,' a 'religious ode,' a 'sacred lyric,' a 'poem in stanza form written to be sung in congregational service.' In the last of these various senses the Buddhists, who have neither churches nor chapels, neither congregations nor services, have consequently no hymns. In the other senses there are quite a number of hymns scattered throughout the longer prose books; and in the supplementary Nākya we have twelve anthologies, mostly short, of religious poems of different kinds. These are collected in the anthologies either according to the subject (as in the Vaddana and the Nittipakk), or according to the kind of composition (as in the Udana and the Iti-vuttaka).

An example or two will make this clear. In the Sutta Nipata, undoubtedly containing some of the very oldest of these hymns, we have seventy-one lyrics of an average length of sixteen stanzas each. These are arranged in five cantos (each of which existed as a separate booklet before they were brought together in one book) and in them the arrangement and order of the lyrics have little or no reference to the subjects of which the lyrics treat. Quite the opposite form of arrangement is found in the well-known Dhammapada, where all the verses are arranged according to subjects—such as Earnestness, Thought, Wisdom, Foolishness, the Path, Craving, Happiness, and so on. The title means 'Verses of the Norm,' the Dhamma, the Dhammapada. This word is often rendered 'religion;' but the idea is not the same, and the word 'religion' is not found outside the European languages. More than half of these 'Verses of the Norm' have been traced back to the extent that they can be traced. The rest were verses current in the community at the time of the rise of Buddhism; and some of them may even be pre-Buddhistic, belonging to the stock of moral sayings handed down in verse among the general body of Indians interested in such questions. This will, however, always remain doubtful, as no verse has as yet been traced in pre-Buddhist literature. We can only say for certain that quite a number of the verses are reproduced, in either identical or closely similar words, in the various sectarian books of later speculation. We cannot be sure that these verses were not first composed among the Buddhists.

The fact is (though it has not been noticed anywhere in the voluminous literature on the Dhammapada) that the 'Verses of the Norm' deal for the most part with the lower morality of the unconverted—man—that is, with the ethics more or less common to all the higher religions. This may explain the great vogue that this anthology

1 See, on the growth of the Sutta Nipata, R. D. Davids, Buddhist Indis, London, 1903, pp. 177–180. The whole work has been translated by V. F. Russell (J.B.E., vol. x., 1889), and a second edition of the text by D. Anderson appears in the P.T.S. for 1908.

2 For the details see R. D. Davids, JRAS, 1900, p. 309 ff.
recital of ancestral deeds; and they may have been a kind of spell ensuring the help of the gods. Chants were likewise sung by the 'priestesses' of Sema for the purpose of raising storms (Mela, iii. 6).

Such hymns were used also by the Irish Celts (cf. Coll, vol. iii. p. 298). One curious chanted, preserved in the Book of Leinster, is said to have been sung by Amaigren, the poet of the Milesians, as they approached Ireland, and by its means the magical dangers raised against them were overcome. It is an invocation of Nature or of the natural scenery and products of Ireland, and was evidently a ritual chant used in times of danger. The following represents the translation given by H. d'Arbois de Jubainville (Cours de litt. col., Paris, 1883-1902, ii. 230; Book of Leinster, 12, 2; cf. the gloss on these lines cited by E. O'Curry, Manners and Customs of the Ancient Irish, London, 1875, ii. 100):

1 I invoke the land of Ireland!
2 Shining, shining sea!

Fertile, fertile hill!
Wooded valley!
Abundant river, abundant in waters!
Fish-abounding lake!
Fish-abounding sea!
Fertile earth!
Irruption of fish!
Fish there!
Bird under wave!
Great fish!
Irruption of fish!
Fish-abounding sea!'

Such arcaic formulas, unhymned and alliterative, which have parallels in savage ritual, may have been in common use. There is a similar one in the words spoken after the destruction of Da Derga's host, by Mececht on his finding water. He bethes in it and sings (ROD xxii. [101] 409):

'Cold fountain,
Surface of strand,
Sea of lake;
Water of rath; stream of river;
High spring well; cold fountain.'

At a still later period there is a trace of hymn-invocations in Highland folk-custom in Lewis. A man waded knee-deep into the sea and poured out an offering of ale or wassail into the waters, chanting:

'Of god of the sea,
Put weed in the drawing wave
To enrich the ground,
To shower on us food.'

Those on shore took up the strain in chorus, their voices mingling with the noise of the waves. F. Carmichael, Carmina Gadelica, Edinburgh, 1900, i. 163; cf. M. Martín, Doctr. of the W. Isles of Scotland, London, 1716, p. 28). In Ireland, the Scottish Highlands, and Brittany many charms still survive and are sung or chanted in connexion with magical rites, usually for healing, or as invocations for a variety of purposes. In these, names of the Persons of the Trinity, the Virgin, and the saints have taken the place of those of older divinities (for these see Charms and Amulets [Celtic] and reff. there given). Scanty as these data are, they prove sufficiently that the pagan Celts must have had a large number of hymns, chants, and the like in common use.

LITERATURE.—C. Jullian, Recherches sur la religion gauloise, Bordeaux, 1902; J. A. MacCulloch, Religion of the Ancient Celts, Edinburgh, 1911. J. A. MACCULLOCH.

HYMNS (Chinese).—It must be premised that idolatry is not social in its service in the way in which Christianity is. The worshippers and not gather together in a congregation to hymn the praises of the gods, nor is singing employed by those who go into the temples to present their solitary petitions and prostrate themselves before the images.

In ancestor-worship there is an approach to a united service, but it is confined to the family or
Hymns (Greek Christian).

The old rural processions in Greece and Rome, which were mixed with religious ideas, had a counterpart in China among the songs of the Buddhists. Their hymns and folk-songs some hymns or sacred songs of filial piety, which were in use in ancient times in the worship of ancestors. The following is one used at one of the services and addressed to the progenitors from whom the king descends, the Shao dynasty (1122-249 B.C.) traced their origin:

'G. thou accomplished great Hau-chi; To thee alone was given To be, by what we owe to thee, The corollae of Heaven.
On all who dwell within our land Grain-food didst thou bestow Tis to thy wonder-working hand This grace we have been. God had the wheat and barley meant To nourish all mankind None would have fathomed his intent But for thy guiding mind.
Man's social duties thou didst show To every tribe and state From thee the social virtue, flown That stamp our land 'The Great.' 1

A hymn in honour of his ancestors was sung before the sacrifice of Cain when he performed the ancestor-worship. It was divided into three parts, and was begun when His majesty stood before the table or altar on which were placed the representations of the ancestors. The second part was sung while he performed the kow-tow; and, after the offerings had all been made, the third part followed, during which the spirits of the ancestors were supposed to return to heaven. The hymn was accompanied by music of a slow and solemn nature, played on a number of instruments. The solemnity and pomp of the occasion were increased by grave men who postured, and by their motions and attitudes expressed the feelings which the Emperor should evince at such a time, while the singers also expressed in the words of the hymn the sentiments that should actuate him. The first stanza of the second part was as follows:

'To you I owe my all, as I willingly confess. Your body is the source of this body I possess. The breath I breathe it comes from you, From you the strength to dare and do. When my deep gratitude I wish to make appear And promulgate, which duty devoutly I wish nay, I rejoice, Paternal Spirit, that you are present here, Desirous to bestow upon me your glorious home on high.'

In the worship of Confucius—a State-worship performed at stated times by high officials of government—a stanza adulatory of the Sage was chanted by a chief man:

Confucius! Confucius! Great indeed art thou, O Confucius. Before thee None like unto thee; After thee None equal to thee. Confucius! Confucius! Great indeed art thou, O Confucius.'

Hymns are also used in the worship of Heaven and Earth. In the Taoist cannon there are several hymn-books containing hymns of aspiration and of repentance, and hymns to the 'Three Pure Ones,' as well as to other deities, such as The Dipper,' or 'Charles's Wain,' and certain other constellations and stars. 4 In the Buddhist books used in worship there are also stanzas which are chanted when the priest is employed in the services. In both Taoist and Buddhist tracts hymns of praise to deities are to be found.

5. G. 0., Alexander, Confucius, the Great Teacher, London, 1900, p. 597.

The celebrated Venetian traveller, Marco Polo, in his account of funerals at the city of Kinsay (the modern Hang Chou), says that the mourners follow the corpse to the sound of music and singing hymns to their idols, and that 'the instruments which they have caused to be played at his funeral and the idol hymns that have been chanted shall also be produced again to welcome him in the next world, and that the idols themselves will come to do him honour.'

Literature.—This is cited in the footnote.

HYMNS (Greek Christian).—The vast accumulation of Christian hymns in the Greek language falls, in respect of form, into three sections differing widely in magnitude and importance. Thus we have (1) the prose hymns of Christian antiquity; (2) Christian hymns in the ancient metres; and (3) the new rhetorical compositions of Byzantine hymnody, the metre of which depends upon the enumeration of syllables and the stress accent.

1. Prose Hymns.—The first prose book of Greek-speaking Christians was the Psalter in the LXX version. This was at an early period supplemented by an appendix containing other passages, nine of which, already brought together in the Codex Alexandrinus, form the group of so-called Songs, viz. (i.) and (ii.) the Songs of Moses (Ex 15: 21-31 and Deut 32: 46); (iii.) that of Hannah (I Sam 2: 7-10); (iv.) Hallelukkah (Hab 3: 18-20); (v.) Isaiah (Isa 26: 5-6); (vi.) Jonas (Jon 3: 8-9); (vii.) and (viii.) the Three Holy Children (Dan 3: 26-30 and 3d: 40-58 LXX [as Three 1: 41-59]; and (ix.) Mary and Zechariah (Lk 1: 46-55 and 56-57). Here we should note that the mode of rendering these Biblical lyrics was of decisive importance for the development of Greek hymnody in the centuries to follow: they were recited by a single person, who was the congregation, or, as representing it, the choir, simply responded at the end of every verse with a short refrain, the hypopaulina. Such hypopaulina (a list of which, as used in Constantinople in the early Middle Ages, is still extant (D, CL. 1. 3043)), or; cf. 240 and 251) may be said to constitute the simplest form of Christian prose hymnody in the Greek language.

Even in the 1st cent., however, we can trace the production of new Christian hymns, for which the Greek text of the 'Psalms of David' served as a model; and, as that text has no regular metrical structure, the imitations likewise were composed in prose form. Now and then we hear the echoes of such psalms and spiritual songs in the Epistles of Paul and the Apocalypse (see Eph 5: 1, Tit 2: 11; Tit 3: 5, Jas 3: 5, 1 Peter 1: 17) (Julian, "dict. of Hymnol."? London, 1877, p. 4589); and in the 2nd cent. we find a non-Christian writer, Pliny the Younger (Ep. x. 97), speaking of the 'carmen' in which—as an essential element of their worship—the Christians of Bithynia glorified Christ as their God before their assembly, i.e., probably, in some kind of antiphonal song. The statement of the heathen writer strikingly recalls the 'psalms and hymns written by the brethren from the beginning,' which, on the testimony of a work quoted by Eusebius (HE v. xxvii. 5) as by an unknown writer of the early part of the 3rd cent.

1. Legge, Chinese Classics, I. 97.
praised 'Christ the Word of God, calling Him God.' The hymn which was composed by Athanasius, who suffered martyrdom in the reign of Septimius Severus (193-211), and to which St. Basil appealed (de Spir. Spong. 9) in support of the doctrine of the Holy Spirit, was probably one of those primitive prayers on which in early Christian hymnology of this kind—the 'Odes of Solomon'—fragments of which had long been known in a Coptic translation, has been recently re-discovered, almost complete, in a Syriac version. But whether the Gr. text upon which the two versions undoubtedly rest, was the original or was itself a translation from Hebrew; whether these spirited lyrics are, as a whole, of Christian origin, or simply a Christian redaction of a Jewish original; whether they are Gnostic or Montanistico productive of the Church—these questions are still in dispute, and may perhaps never find a definite answer. It may at all events be taken as a fact that a type of religious poetry designed to compete with the OT Psalter was zealously cultivated in Gnostic circles. Certain pieces in the Syriac Apocryphal Acts of Thomas and Acts of John give us an idea of the nature of such heretical compositions, although in the case of those in the Acts of Thomas the Syriac text is probably the later version.

The favour enjoyed by such non-Biblical pieces among heretics naturally led the Church to make a stand against them and their use in Divine service. John Paul of Samosata, writing not later than A.D. 290-297, sought to justify the suppression of certain 'psalms' in praise of Christ, to which he objected on the ground that they were of quite recent origin (Enochs. HE VIII. 11. 10). Nevertheless, in the 4th cent., still held in high regard various prose hymns which were undoubtedly a legacy from the pre-Constantinian period, and at least of these two maintain to the present day an important place in the worship of the Greek Church. (a) The evening hymn sung at the close of vespers, the άος, ἰσαρίης, is attested c. 375 by St. Basil (loc. cit.) as a universally known form of Evening Prayer, the origin of which was altogether unknown. (b) The corresponding morning hymn, the Ἀλατείας τοῦ τάφρονος, called 'the Great Doxology,' an extended form of the original on which the Western 'Gloria in excelsis' is based—has, on the other hand, been ascribed to the Codex Alexandrinus, and also in a more archaic redaction at the end of bk. vii. of the Apostolic Constitutions. In the former place is found another evening hymn and a hymn-like grace before meat. Moreover, the Gr. original of a short hymn to which the Rule of St. Benedict (ed. Weisflin, Leipzig, 1896, p. 25. 28) gives a place in the monastic Morning Office of the Western Church is, at least, not of later origin than these. A relatively early origin must be assigned likewise to another prose text having the essential features of a hymn, viz. the 'Prologue,' which in the consolations of water at the Feast of Epiphany preceded the solemn prayer proper, and is a glorification of the day upon which Jesus was baptized in the Jordan, in tune to the Easter 'Exultet' of the Roman liturgy. Of this there are, besides the Greek, a Slavonic and a remarkably interesting Armenian version. Certain Gnostic features still adhering to it show that its composition was long prior to the days of St. Sophronius (see E. H. 2. 383), to whom it is ascribed, apparently without MS authority, in the printed add. of the Gr. Euchologia.

Hymns in classical metres.—Besides the fragments here with the Gr. version of the OT, we find also, from the 2nd cent., a Greco-Christian hymnody employing the ancient poetic forms. It is in accordance with the general position of Gnosticism in the religious sphere that it took the lead here, and guided the development along fresh lines.

We are unable to say whether the 'psalms' or 'odes' of Basilides and a psalm-book of Marcion or the Marcionites attested by the Fragm. Muratorianum belong to the Gnostic or the Pseudepigraphic type. But a hymn of the Roesus and a specimen of the psalms of Philotheus, preserved in Josephus' Philotheus in his Philotheoumenon (V. 10, vi. 53), both exhibit logiean anapests, and lines, in spite of a certain irregularity of treatment, show undoubtedly that here the Gnostic hymnody, if not completely, was at least closely followed the traditional forms of ancient lyrical composition.

In the sphere of Catholic Christianity the new style appears in the hymn to Christ with which Clement of Alexandria closes his Protreptich. Apart from its introductory lines, which are of very doubtful authenticity, this hymn is manifestly composed in anapests, and, as compared with the Gnostic survivals, exhibits an even more rigid adherence to the laws of classical metre, while its contents do not seem to preclude the possibility that compositions of the kind were actually used in the service of the Alexandrian churches about the beginning of the 2nd century. The further stages of a development which doubtless begins at this point are certainly very obscure.

The list of the works of Hippolytus inscribed upon his statue in the Lateran makes mention of 'Odes,' and the Gnostic bishop named Nepos as a prolific writer of psalms about the middle of the 3rd cent. (Euseb. HE VI. 24. 1). But its date is still uncertain; and we may assume that all these works written upon the lines of the development in question, and the whole body of historical facts are not sufficient to substantiate the hypothesis.

To the hymn of Clement, however, is closely allied in a formal way a fragment preserved in a hymnary of the Amharic Collection of the 4th cent., which is in the 5th anapestic metre, and dates probably from the 3rd rather than the 4th century. It has been described as a versified ethical catechism of early Christianity, although it might quite as fitly be regarded as a hymn forming part of the liturgy of initiation, and addressed to the newly baptized. By reason of the formal characteristics which differentiate it from Clement's hymn to Christ, it is of great interest in the development of Greek hymnody.

Its anapests, e.g., are constructed with much regard to accent, as to quantity, and it thus marks the transition from the older metres of quantity to the new system of accentual metre, while its verses are linked together by the tripe-repeated articulation of the alphabetical acousis, which was to form so prominent a feature in the rhythmical hymns of the Church.

This artifice is also the connecting medium between the strophes of a hymn—likewise in anapestic metre—intended for use by a girl entering after death into the enjoyment of eternal bliss, and the conclusion of which is found in a Berlin papyrus. Although all the historical facts are without significance, the relationship between the strophes of the 'psalms' of the virgins with which St. Methodius of Olympus (I. c. 311) concludes his Hypothesis. The latter is perhaps not entirely unrelated to the ancient Pneumatiic of Abanun and Eulogius. But in the expansive freedom of its laudable rhythms it conforms not less closely to the acousis of the classical metre thans to the anapestic text of the Ambrose papyrus, and in the ephebos unexposed after each strophe there appears for the first time another feature which came to be of great importance in this kind of composition. We may, therefore, regard this production, which was in the first instance purely literary, as the representative of really vital elements in the development of hymnody.

An altogether different type appears in the archaic Greco-Christian lyrics of the subsequent part of the 4th and the beginning of the 5th century. While it is explicitly said of the heresiarch Apollinaris, bishop of Laodicea from A.D. 301, that he sought to win acceptance for his doctrines by composing short metrical lyrics intended for the use not only of the community in public worship, but also of individuals in their household worship (Soc. HE II. 10), yet in general this type of lyric took a course which from the outset diverged widely from the sphere of congregational worship. This is true not only of the lost 'Odes' in which the younger Apollinaris (rather than his master) tried to emulate the art of Pindar, and of the
HYMNS (Greek Christian)

extant hexameter paraphrase of the Psalms which bears its name; it holds good equally of the hymns like poems which are found in the rich and varied literary heritage of St. Gregory of Nazianzus, by far the most eminent representative of this school (491-523). A devout expression of personal piety, these compositions of Gregory, which in their learned perfection of form are closely akin to the Hellenistic poetry of the Ptolemaic period, have naturally been regarded as liturgical prayers uttered by a Christian assembly. Of the ten extant 'hymns' in the Doric dialect composed by the Neo-Patonian philosopher Synesius, who became bishop of Cyrene in 406 or 409, not more than five in all (nos. 5 and 7-10) belong to the Christian period of their author, and these, no less than the poems of Gregory, exhibit an individualistic spirit and a technical structure incompatible with their liturgical use.

In the Byzantine period the classical metres sometimes employed in hymnody as in other kinds of poetry came to be reduced in effect to two, viz. the Anacreontic strophe and iambic trimeter. Hymns to saints are first found among the Anacreontic hymns to a pagan god, such as Dionysus, in which the artistic devices and forms of the new rhythmic poetry appear in the linking together of the regular strophes by the alphabetical acrostic and the framing of a stanza with a different metrical structure after every four strophes. As regards the poems which are so called, no exact style may be compared with the hymns of the Western writer Prudentius, there is, again, good reason to doubt whether they were ever actually used in the liturgy. Synesius also shows himself clearly implied by the note indicating the ecclesiastical tone to which the Anacreontic personal hymns of certain Synesius tell us was to belong and here, too, the strophes are connected by the alphabetical acrostic. The iambic trimeter was used by Georgios Paphitios, dedicated to the Church of St. John in Constantinople in the reign of Heracleius (610-641), in an Easter hymn of 159 verses; through the dactylic hexameter line clearly implied by the note, indicating the ecclesiastical tone to which this artifice was never held a place in the liturgy. As regards a truly liturgical type of composition in rhythmical verse, we find that St. John of Damascus (cf. below, 3 (c)) makes use of ancient dramatic metre in his three canticles for Christmas, Epiphany, and Pentecost respectively—in which the initial letter of the stanzas forms an acrostic of two elegiac distichs. It is true that this artifice produced no imitations worthy of note, and it was left for a much later writer, Manuel Chrysaeus, in the first half of the 14th cent., to commit the barbarism of recasting in quantitative iambic trimeters one of the noblest examples of accentual sacred song in the early period, the hymn Athousia (cf. below, 3 (d)).

3. Rhythmic hymnody.—The earliest examples of Greek-Christian sacred poetry in a metrical form based upon the accentual system are found in two of the poems of St. Gregory of Nazianzus, where they appear strung outly of keeping with their surroundings. One of these, at least, an evening supplication addressed to Christ in the nature of a hymn. The fact which conditioned the development of the new type of hymnography was that Greek had in ever greater measure lost the quantified distinction of its vowels. The development was prepared for by the artistic prose of the rhetoricians, and was in an equal degree influenced by the example of Christian Semitic poetry, which was accentual from the outset. Besides the abandonment of quantitative metre, there were two artistic devices which had an important influence upon the new genre, viz. rhyme and the acrostic. The purely rhetorical use of rhyme enervated unquantitative free versification, which in the hands of Christian preachers made use of it with increasing frequency; while the employment of the acrostic was based essentially on Semitic models, though, as has been pointed out, occasional use of this artifice can be traced in the earlier poetic composition. Whether and to what extent, in addition to the influence of the ancient literary period, that of ancient quantitative metre made itself felt in the extraordinarily copious and artistic forms assumed by the new rhythmic poetry must be left an open question.

(1) The simplest type of rhythmic hymnody is a type of the two coincidentative pieces in the poems of St. Gregory of Nazianzus form a direct link of transition—found in a class of hymns with lines of equal length, in which attention has been paid only in recent times and in primitive compositions of this type one example, found in a papyrus of the 6th or 7th cent., has permanently maintained a regular position in the 'Great Antiochus,' the liturgical song of Lent in the Greek rite. The other compositions of this group must also have been actually intended for a place in the liturgy. One of them is a special form of Eudosson for the twofold festival of the Birth and Baptism of Christ, still celebrated on the 6th of January (cf. att. CHRISTMAS, EPIPHANY).

Another begins with what are in reality the opening words of a hymn after communion, of which a piece in the Antiphonary of Burying (ed. F. E. Warren, London, 1883-86, i. 32 e, Ad communicant, 'Corpus domini accepimus') may be a Latin translation. All these were probably composed in the 6th century.

To the same period belongs a song in adoration of the Cross on Good Friday which is found only in MS liturgies of the Italian Basilians. Its two-line strophes, which already indicate the beginnings of a less simple metrical structure, are connected by means of the alphabetical acrostic, which it has in common with several other kindred poems (on the Mother of God, for Christmas, for the festival of the Presentation in the Temple).

(2) Dependence upon the Semitic poetry of Syria, of which St. Ephraim (+ 373) was the chief representative in Nisibis and Edessa, appears in the principal form of ancient Byzantine hymnody, viz. the kontakion. Here the Eastern Aramaic class of sogdian was of fundamental importance, though this, again, in its characteristic features can be fully understood only as a product of Hellenistic influence. Its fruitifying effects upon the work of Greek hymn-writers, according to a recent theory, were of great extent mediated by Greek preachers. The use of the (originally alphabetical) acrostic, an introductory stanza of a different metrical structure, the refrain, or epbynion, sung by a choir, which, breaking in upon the solo parts, bound together the procession or kathisma and the ordinary (klypses, or odes), and a highly dramatic treatment of the subject—such features were borrowed from Syrian hymnody. The rhetorical splendour of the diction, and an artistic structure of line and stanza which was intimately related to the melody and did not need to fear comparison with the most elaborate metrical examples of ancient choral lyric poetry, were contributions of the Greek genius. Of Greek origin likewise were these forms of the acrostic, which, instead of being alphabetical, gives the name of the writer, or the theme, or the liturgical purpose of the piece—forms which, it is true, are found also in the Carmina Vista, the collection of Ephraim.

If the Versus Passus of Methodius may be regarded as a transitional form between the hymns imitative of ancient models and the kontakia, there are other two early compositions which show how the new mode was related to the prose hymn. These are (1) a purely prose composition noted upon a parchment in the John Rylands Library, and which, in its alphabetical acrostic and its short epbynion (Kipia, 664 cm.) exhibits two essential features of the Kontakion, complete intonation for Good Friday, which, however, surrenders the place of the prose form for an accentual mode which, like a related poem for Palm Sunday, is known thus far only in the Italo-Greek liturgy. The Good Friday kontakion is in the first also as regards its theme, because of a lamentation supposed to be spoken by the suffering Saviour, after the style of the Western liturgy.

The new species of poetic composition is first met with in its full maturity in a series of hymns and fragments of hymns which, like the earliest
HYMNS (Greek Christian)

e xamples just specified, are anonymous. The oldest extant is probably a kontakion on the first man, showing a four-line strophe and the alphabetical acrostic. A lamentation of Adam for the loss of Paradise, as also a kontakion (dating from before 530) on the 'holy fathers' of the earliest century, are fragments of another on Elijah and the widow of Zarephath. In the latter a double rhythm of the iambic system is employed with compositions of singular vigour and beauty. If Cyril, the writer of a hymn on the raising of Lazarus, endowed with confidence be identified with the Palestinian ascetic whose name he bears, the testimony of his biographer, Cyril of Scythopolis (A.D. Sept. viii. [1865] 151), acted as choir-master (episkopos) in the Laura of St. Chariton for thirty-one years (443), and is known to have regarded him as the earliest writer of kontakia known by name. But the unrivalled master in this kind of composition was Romanus, the deacon, who in the center of a text and disdained by the epistle of the 'Mourning Man.'

Romanus, born at Ensas of Jewish parents, removed from Beirut, where he had laboured in the Church of the Resurrection, to Constantinople in the reign of the Emperor Anastasius II. He went to the city, and filled the magnificent churches of Justinian in the multiple splendour of his hymns. His sacred poetry, according to a notice that is probably legendary, numbered over six hundred octoi. One primary among those might be a feast he bears his name, even though he is, says the calendar, has nothing much that is springs and inferior. The poet's Daminus and Anastasius, may be regarded as nearly contemporary with Romanus. Of the octoi in Justinian's time the most outstanding part is the festal hymn for the second dedication of the Hagia Sophia. (462).

In this first and golden age of Byzantine hymnody, however, as in later times, it was not customary to create a new form of strophe and a corresponding meter for each new composition. On the contrary, the metre and melody of older pieces were frequently adopted. The typical strophe used as the pattern either of the koulition or of the koloi of a later song was called its hieros ("series"). The hieros (from hieros, sacred), in his time the most celebrated part of Romanus, and the meter of that hymn must therefore have been composed as early as the 6th century. Thus, the most natural form in the first third of it. Tradition assigns the highly esteemed Song in honour of Mary variously to Romanus himself and to a considerably later writer, Sertius, patriarch of Cappadocia († 673), while Georgius Pselles and even as late a writer as Photius have also been credited with its authorship.

Actually a kontakion on the Annunciation, this production of the 7th century, is largely transformed by the addition of a new ekdoxa into a song of thanksgiving delivered to the Most Blessed Virgin in the city of Constantinople for deliverance in the stress of war, in all probability when the change was made at the time when the city was threatened by the Avars in 626. It was at this period also that twelve of its twenty-four strophes were furnished with dogmatics beginning with the word \\
"Latin", and even at a late writer the Protassio have also been credited with its authorship.

A kontakion was occasionally imitated, as in a lyric on St. Sabas the Younger by a melodont named Orestes, and in others on the Falling Asleep of the Most Holy Mother of God and on the Holy Cross by unknown authors. Even in later centuries, indeed, certain writers added not a little to the store of kontakia in the Greek Church. Writers whose compositions belong in the main to another and a later poetic type, such as Theodorus of Byzantium and Joseph the Hymnographer (cf. below, 5), cultivated also the older form. But in genuine poetic qualities the productions of the later period, destitute as they are, above all, of dramatic power, are of inferior quality. But on the 10th cent. the kontakion itself lost the place which it had held in the liturgy.

The book known as Kontakia (hymns), in which the hymns of this class were collected, fell more and more into oblivion. Only a few strophes of the older hymns, and at length—apart from the ekdoxa—generally but one, retained a permanent place in the daily office. These ekdoxa are found in the public service under the names of kontakion and koloi (or odes) were mere imitations of such multitudinous survivals of ancient Christian hymns for Christmas, however, continued to be sung annually on the 25th of December, even at the Emperor's festive board, and on the 12th of January, even at the imperial court. The Abbot of Mount Athos still forms the nucleus of a festival service dedicated to the Mother of God on the Saturday of the third week after Christmas. The popular religious sentiments of the Orthodox East it the place filled conjunctly by the Liturgy of Loreto, the Canticle, and the Te Deum in the Roman Catholic West or the impressive funeral kontakion of Anastasius—though in a much modified form—is used to the present day in the office for the burial of priests.

(3) As compared with the kontakion, which in the zenith of its vogue appears to have been called also the troparion, a diminutive of the latter word, signified a shorter form of what was essentially the same thing: it was a single strophe constructed generally of accented lines of various kinds, the part performed by the precursor being, at least originally, accompanied by an epiphany sung by the congregation or the choir.

We learn the nature of this species of sacred song in its earliest form from the troparia with which St. Axintius, a prominent representative of the monasticon, enriched public worship in Bithynia and Constantinople in the first half of the 5th cent., and specifically those composed by the eighty-piece which bears his name, have survived, though with a legacy of authentic materials. Prefixed to the Chersonese treatises thus collected much that is superb and inferior. The poet's Daminus and Anastasius, may be regarded as nearly contemporary with Romanus. Of the troparia, in Justinian's time, the most outstanding part is the festal hymn for the second dedication of the Hagia Sophia. (462).

In the rich development which this form of Hagiastical poetry likewise speedily attained, more especially on the native soil of the mainland, it is especially the case in the eastern church speaking Syriac, can still be seen in the so-called ecclésiology of Severus of Antioch—a complete hymnbook, the ground-work of which was laid by that celebrated exponent of the 5th century in the years 512-518. This invaluable liturgical monument, lost in the original, is preserved in the revised form which Jacob of Edessa re-constructed in 675 from the older Syriac translation executed by a bishop of Edessa named Paul. Its component pieces, 306 in number, are, without exception, lyrics of a single strophe, and in their general structure are all to be classed as troparia, although they exhibit several characteristic features in the fact that by far the larger number of them are related to be sung in connection with a verse from the Psalms. Many of them already show an affinity, in manifold respects, with the numerous troparia found in the later liturgical books of the church, a group of its texts, meant for use in the celebration of the eucharist and called prophecies, bear a formal resemblance to the troparia of Axintius. Besides Severus, two contributors of special importance are John bar Apaṭonya (+ 538), and John surnamed Pseudes, both archimandrites in the monastery of Qa-nesi in the Emirate. A terminus ad quem even for the latest poems in the original collection is found in the date of the translation, which may be assigned to 619-629. A number of very short pieces seem to be of even earlier date than those of Severus. Two of these, lyrics in this Syriac hymn-book are definitely called 'Alexandrian.'

In point of fact the ancient Greek liturgy of Egypt also must have had its own stock of troparia. To find, from the first, the results of hymns for the Feast of Epiphany found in a papyrus of the Archbishop of Alexandria Collection in the British Museum, probably belonging to the first half of the 5th century, it is not possible to trace that of any troparia, devoted to the celebration of the Epiphany, which is contained in the martyrion of the Greek Church and on the Synaxis, is furnished by fragments of the earlier Syriac and Coptic translations. The almost indecipherable state of neglection in which these have been subjected to the lapse of a considerable interval between the date of the archetype and that of the surviving transcripts. Nevertheless, a terminus ad quem is indicated by the fact that several of them are based...
HYMNS (Greek Christian)

on the Trignon in its distinctively Monophyletic expansion. Those writings which may, therefore, be regarded as of contemporary origin with those of the hymn-book of Severus.

The rapidity with which the entire public worship of the Church was characterized by the troparia, the chanting of such pieces, each of which was sung but once by either of the choirs, and thus, when these troparia were welded into an integral whole either by an acrostic or by an ekphrasis, a common to all, there arose a distinct artistic type of antiphon. It may be assumed that the use of this form of choral art was not altogether infrequent at an earlier stage of liturgical development. An exact example is furnished by the third of the fifteen so-called antiphons of Good Friday, which an undeniable tradition ascribes to St. Cyril of Alexandria. Generally, however, what we find here in the early period is a combination of verses of psalms with troparia which have no distinct inner link of connexion, and at the present day even the verses of psalms formerly so employed have disappeared, so that only the name of the antiphon now survives. The name 'antiphon' came also to be associated with the so-called monosticha, which had a recognized place in the matins on Sundays and important feast days, as also in the office of burial. The monosticha are two series of poetical passages of the Psalms beginning and ending with a pause after the final word in two troparia, to which was attached, as a sequel to the Order of Troparia, an ekphrasis of theody, and in private prayer in the praise of the Holy Spirit. It must be taken for granted that these very ancient forms Eusebius were originally intended to be used in an antiphonal rendering of the clear of the Great Doxology.

Finally, special significance seems at one time to have attached to an antiphonal rendering of Ps. 118. That psalm, sung antiphonally in combination with a hypopompa of very short length, remained a regular feature of the burial service. In similar manner the sticherarion (see below, (6)), called from their opening words αἱ ἄγγελοι τῷ ἄνθρωπῳ, which come before us as the work of Hormisdas and divided into short groups, are used at the present day in the matins for the 20th, 24th, 28th, and 30th of December for quite a different purpose-forming a peacrous festal hymn on the Redeemer's birth. In the stable at Bethlehem—must originally have been the poetic investment of an effective three-fold antiphon constructed with the aid of the same psalm. On the other hand, a lyric in its own way not less magnificent, though many years later, is now combined with Ps. 118 in a peculiar antiphonal rendering for the matins of Easter Even.

These are the so-called enotriba—composing a markedly poetic element at the Salvator's bier—which, surviving in various reconstructions, and varying after Communion (Διακονησιά τοῦ σταυροῦ) is assigned to the year 624, and of another (Ὡς αὐτὸς τῷ ἄγγελῳ), which takes the place of the Cherubic Hymn in the Mass of the Pre-sanctified, to 645.

(4) The early Antiochene troparia of Severus, their hymn-book, perhaps because they are essentially connected with verses from the Psalms, are assigned to a certain class, the antistrophe (Syr. ma wilid). On the testimony of the Western pilgrim Ethelao, or Eucherius (Pecosprag, xxiv, 5, xxvii, xxix, xxxi, xxxv, xxxvii, xi, xiii, 5, xlvii), in which bearing that title, together with hymns and psalm passages, has an important place in the worship of the churches in Jerusalem towards the close of the 4th century. They are the troparia of the following period: a hymn formed of a Biblical passage or troparia is sung. As a rule, two verses by two different choirs alternately was regarded as 'antiphonal.' Here it was customary at first to render whole psalms in this way; later, with increasing frequency, a few verses only, and also, in extending beyond the narrower limits of the formulae originally employed, developed first of all into a somewhat longer prose formula, as frequently the three strophes of the antiphon, and the conclusion of the liturgical poetry of the liturgical psalm, the hypnotoma, again, a particular model strophe of which correponds to the number of verses in the associated Biblical song. A composition essentially of this kind is actually found in the early Greek, penitential psalm, τῷ ἀνθρώπῳ, penitential poem of two hundred and fifty troparia.
HYMNS (Greek Christian)

which, notwithstanding its rhetorical embellishment and its wearisome diffuseness, is of a most incomparable character, and is now recited annually on the Tuesday after the sixth week in Lent, in exactly the same way as the hymn *Athos athitos* two days later.

The author was Andreas, archbishop of Crete († 749), a native of Damascus, who, trained in the religious circles of Palestine, became in his youth secretary to the patriarch of Jerusalem, and remained so until he retired to a monastery, where he dedicated himself to composition. As it is not known to what church he belonged, it is not possible to say whether he was the same as Andreas, bishop of Crete, who is mentioned in the Life of the Virgin. This Andreas is said to have written the hymn *Athos athitos* and also the *Hymnos* of the Virgin. The author of the *Hymnos* of the Virgin is said to have been a monk named Theodotus, the latter by the Emperor Theodosius II.

Ceremonial and liturgical, the two churches of Constantinople and Alexandria, the former by the name of the former, to which was applied the same of 'Canon,' hitherto given to the whole morning, or to its most important part, viz. the four Biblical songs.

Certain other compositions of Andreas, e.g., the *canon *Myrophori, sung on the second Sunday after Easter, and one of 180 *troparia* on Simeon and Anna, approximate in length to the Great Canon. But, in general, the practical necessity of limiting the duration of public worship soon led to the practice of attaching not more than three or four poetical strophes to each Biblical song. The same requirement held here, as in other parts of the office, gradually to the entire omission of what was originally the cardinal feature, i.e. the Biblical text, in the form of literal paraphrases restricted to a few verses. Thus the essential nine sections of the poetical canon—to which the term 'odes' is hereafter specially applied—accordingly fell to the lot of the fifth of the fifteen, the reason being that the second Biblical song had been previously lost out of the actual recitation—from a supersitious dread, it was said, of uttering the imprecatory things contained in it. Then, besides complete canons, *diaclasia, triodia, and tetradia* were composed to be sung with groups of two, three, and four Biblical passages respectively. Of special importance are the *triodia* and *tetradia* of the Lenten season, which owe their existence to the circumstance that during Lent one of the Biblical songs, e.g., was recited on week-days from Monday to Friday, and nos. vi. and vii. on Saturday, to which it was followed each day nos. viii. and ix.

The term *heirmos*, conformably to what was noted in the case of the *kontakion*, denotes here the model strophe which was most in cases borrowed from an older canon, and with which the *troparia* of each ode had to conform both in metre and in melody.

The entire mass of compositions which follow the norm introduced by Andreas of Crete comprises two strains differing in date and place of origin. The earlier strain had its origin in the ancient Byzantine form of worship formed in Jerusalem, and embraces the lyrics of Passion Week, and of the Christian Year, the morning canons of the so-called Oktosich, which contain the ordinary Sunday office arranged for the eighth ecclesiastical times. The basis of this group was the *Hymnos* of the Virgin, the so-called seven-strophe of rhythmical poetry called the *hymnos* to the *theotokos*. Of the two strains, the first, now called the *kathisma*, interrupts the continuity of the canon after the third ode, just as at an earlier period it interrupted the series of Biblical songs as a corresponding point, while the second was superseded by *kontakion* and *ode*. The *linguadrausica* sung in connexion with the ninth ode of the canon at the chief festivals of Christian and the Mother of God recall the troparia and one other of the *magnificat* (Lk 1:46-55).

Next to the canon, the most important element in an *akolouthia* are the *stichera*, which almost always occur in groups. They derive their name from the fact that they are combined with verses of Biblical passages or *paideia*. Before the Psalms the stichera have been usual taken from the Psalms. The *stichera* to the Psalms is *ístico* to the *neutis*, and to the *neutis* is usually identified with the *troparia* which in the 6th century, were attached to these Scripture passages; and the present usage of reciting *Mater Theresia* and *Gloria Patri* on the whole of Ps 149-150, but only a few verses in *Stichera* with the appropriate *stichera* is merely a later abbreviation. Another class of *stichera*
however, which are rendered towards the close of vesters, just before the canon, in the hours of prime, tierce, sext, and none, in general, and, in particular, in the so-called 'great hours' of Good Friday and of the vigils of Christmas and Epiphany, at the Greek Church. Outside the regular Daily Office, were meant from the first only to be inserted between two stichoi separated by the Lesser Doxology, and appear to have been so used originally for the Divine Office. Antiphons, which are the last type of troparia, are only known to us in the liturgical books from the 13th century, and single incises were incorporated in the liturgical books at a still later date. Mention may be made of the manuals of the 14th, 15th, and 16th centuries, as authors of such later elements of the liturgy.

In Byzantium and the East, hymnography as an active and living development virtually came to an end. In a book on the codification of the definitive liturgical books of the Greek rite, viz., the Octochos and the Parakletikos, and, above all, the Triodion, the Penetkostarion, and the Menologion, which were so popularly used and so extensively preserved for Lent and Passion Week, for the period between Easter and Pentecost, and for the fixed feasts of the Christian year. Only in the Iberian-Greek West was the revival of liturgical hymnody. The art was assiduously cultivated in the famous and still surviving Basilian Abbey of Grottaferrata, near Rome, till well into the 12th century. The founders of the abbey, St. Nilus the younger († 1004), and his successors, Paulus and Bartholomew, were the heads of a school to which Arsenius, Germanus, Joseph, Procopius, and others belonged. Within this school, the hymnus, the stichos, and the troparion, as well as the coloni and the melodia, were the most important authors of the liturgy. At a still later date, mention may be made of the manuals of the 13th, 14th, and 15th centuries, as authors of such later elements of the liturgy.

HYMNS (Syriac Christian).

Our knowledge of the hymnody of the Syriac-speaking Churches has been greatly increased during the last 25 years by the publication of much literature in that language, which formerly existed only in MSS, and in particular of many of the East Syrian or Nestorian service-books in Syriac, with English translations. But much still remains to be done, and until a similar work is effected for the West Syrian, or Monophysite (Jacobite), service-books, some considerable gaps in our knowledge will remain.

1. Early Syriac hymnody. — The earliest known writer of Syriac hymns was Bar-daisân (Bardeanes), whose book of 150 hymns after the number of the Psalter was in the hands of Ephraim the Syrian (see below). Bar-daisân was born at Edessa (Syr. Ur-hâlî), the capital of Osrhoène, A.D. 155 (for the date, see DCB i. 250), and was deceased by his successors to be heretical (for this and similar dating see Eusebius, HE vi. 30). Sozomen (HE iii. 16) tells us that his son Harmonius was learned in Greek erudition, and "was the first to subdue his native language (Syriac) to metres and rhymes, and to render verses he delivered to the church, and even now the Syriac frequently sings, not the precise copies by Harmonius, but the same melody..." As these verses were somewhat infected with Bar-daisân's heresy, Ephraim applied himself to the understanding of the metres of Harmonius, and composed similar poems in accordance with the doctrine of the church... From that period the Syriac sung the odes of Ephraim according to the law of the code established by Harmonius" (cf. Theodore Horm. iv. 29).

From these statements of Sozomen it has been deduced that the hymns ascribed by Ephraim to Bar-daisân were really written by Harmonius, or at least that father and son worked together. It is clear, if Sozomen is to be trusted, that the Syriacs derived their method of hymnody from the Greek Christians in the first instance; and we know from Ephraim that the latter used sacred poetry at an early date. That hitherto ascribed to "Bar-daisân" (HE vi. 25) the "many psalms and hymns, written by the faithful brethren from the beginning," celebrating "Christ, the Word of God, speaking of Him as Divine (βασιλεὺς βασιλέων), is a clear indication here that these hymns were sung in church; but there is such an indication in Flinian's famous letter to Trajan (Ep. 66): --

"Christ, the Word of God, speaking of Him as Divine (βασιλεὺς βασιλέων), is a clear indication here that these hymns were sung in church; but there is such an indication in Flinian's famous letter to Trajan (Ep. 66): --

In Eusebius (HE vii. 24), Dionysius of Alexandria (†249) is quoted as praising the schismatic Nepos, an Egyptian bishop early in the 2nd century, for his "extensive psalmody," and saying that his compositions still delighted many of the brethren. Probably Antioch led the way in the use of hymns in church. Socrates (A.D. 410) describes the origin of singing antiphonal hymns in Ephesos, and the nghty, who "saw a vision of angels hymning the Holy Trinity in alternate chants."

The most famous hymn-writer of the Syriac-speaking Christians was Ephraim (Edessa, A.D. 306), a native of Mesopotamia. He is always represented as a deacon, and his words "Christ gave me the talent of the priesthood" (Op. Syr. iii. 467 D; DCB ii. 188) are not really against this, for the Syriac κάθοδα ("priesthood") includes all ranks of the ministry (A. J. Maclena and W. H. Brown, Catholicon of the East, London, 1892, p. 185); so the E. Syr. Sînêdâdûn (Book of Canon Law), vi. 1. In addition to his numerous other works, he composed metrical homilies and other religious poems, including commentaries in metre on Holy Scripture; and he also wrote a large number of hymns for liturgical purposes, and many of his hymns are still sung (see below, § 4(a)). He made use of hymnody to spread orthodox doctrine, just as Bâdîshân and Harmonius had used it, and as the Arians did, to spread their erroneous tenets. For the latter, see Socrates, HE vi. 8, where we read that they went about Constantinople at night chanting antiphonal hymns to support their heresy, while the Catholics imitated their example. Ephraim seems to have done much to promote and improve ecclesiastical music, and his compositions became extremely popular (for an account of his writings see H. Payne Smith, in DCB ii. 157). His metres are irregular, and, as is the case with most of the early Syrian poetry (see below, 3), his lines do not rhyme. There is no good reason to suppose that he ever wrote in Greek; his extant works in that language are doubtless translations. His very interesting and newly published Syriac metrical homilies by him on Bâdîshân may be seen, with English translation, in Tjus. v. 1904 §466 ff.

After the separation of the Nestorians from the Nicene Church, the most famous Syriac hymn-writer was the Nestorian Narsai (Narses), known as the "Harp of the Spirit" (kîdâd d'rûkhâ), who, after spending 20 years at the great school of Edessa, left it A.D. 477 to preside over his less celebrated school at Nisibis; he died A.D. 502. His metrical compositions include 360 homilies; of these 47 have been published in Syriac by A. Mingana (Mead, 1905), together with 10 short poems (sîyghâthâh); and four of these homilies, dealing with the Liturgy and the Baptismal Office, have been translated into English by R. H. Connolly, with illuminating Introduction and Notes (The Liturgical Homilies of Narsai, TS viii. 1, Cambridge, 1909). These homilies, however, were not meant for church use, and for the hymns by this writer used in the services reference must be made to the East Syriac office books (see below, § 4(a)). Narsai's favourite metre was the six-syllable line (see E. A. W. Budge's ed. of Thomas of Marga's Book of Governors, London, 1893, ii. 300 n.), but hymns by him in other metres are found. Of other early Syriac hymn-writers may be mentioned Isaac of Antioch, a native of Amida (Diarbekr), who was an Orthodox priest at Antioch c. A.D. 450, and a disciple of Zenon, who himself had learnt from Ephraim (DCB ii. 315). Also the Jacob, bishop of Batnûn (Batnaye) in Syria (Samg), a district of Osrhoène, in the 6th cent. (1 A.D. 521 or 522). Two volumes of the Hymnology of the latter have been published by Bedjan (Paris, 1906, 1908), and some account of them may be seen in Tjus.
gives from Cardakh (see in Literature) a list of 9 or 10 writers of the 13th cent., who wrote in an artificial style, with a pronounced 'Syriac' accent, in Monophysite Bar-hebraeus, and the Nestorian An-dishā' (Abdisho, Ebedjeus) the bibliographer, Khāmis (West Syr. Khams), and George Wardā. From Wardā and Khāmis, hymn-writers of great reputation, have been named two Eastern service-books, containing 'propers' for festivals, etc., several of them probably having been written by these authors.

These later writers are distinguished by an extremely artificial style, and by a profusion of Greek words and strange forms. For examples of their compositions reference may be made to the anthems at the Blessing of the Months, sung at Evening Service on the first day of every month except February (A. J. Maclean, East Syrian Daily Offices, p. 230). The stanzas attributed to Mar Abraham of Sinak (Seleucia) on the Tigris contain the following: 'Abīyūlā = Nyw, 'Tākūn = Ibrū, Aghātātūs = Augustus, the reigning king, and 'Tulūgh = Ibrūyū, the reigning patriarch (these stanzas rhyme in -ād). In the anthems given on p. 221 ff, each line of a stanza ends in -ād, -ādān, -ādū, -qādū, -ādina; while the last four stanzas are non-rhyming. The authors of these rhyming stanzas are of the 13th cent. or later. A good example of a hymn of this period may also be seen in the highly artificial prayers said before the psalms in the East Syrian Morning Office on festivals, composed by Mar Eliya (Elijha), Catholics, surnamed Abakhalia (J. S. Assenean, Bibl. Orient., Routledge, London, 1903, i. 224); they are given in an English translation in Conybeare-Maclean, Rituale Armenorum, Oxford, 1904, pp. 577-579. They are taken from the book called Abakhalia after Eliya; they abound in foreign words to such an extent as to make them quite unintelligible to the Syrian. The famous Audishū (see above) was a great composer of hymns of praise (tishkbatā) and anthems (Payne Smith, The Syrian Syriac, ii. 402 ff; Assenean, Bibl. Orient., i. 191), but his style is greatly disfigured by its artificiality.

Hymnody in the present service-books. — In what follows the East Syrian service-books are those principally dealt with. They were largely re-modelled and systematized by Iahwah III. (Isahyāhū, Jesuabas, lit. 'Jesus gave'), who was the Nestorian Catholicos from A.D. 647 to 658. Till his time the theophania, or symposium writer accepts Bernard's correction (JTAS xii. 31) of his own suggestion in the English edition of the Testament (Edinburgh, 1902) that the Song of Songs is meant, and adopts his view that the Odes are here referred to. Now, though it has been suggested by Abbott (Light on the Gospel, and JTAS xiv. 441) that Syriac, or some Semitic dialect, is the original of the Odes, yet the argument by Connolly (JTAS xiv. 314 f, 530 ff), that our Syriac text is translated from the Greek, appears to be very strong (see also JTAS xv. 1913-14 44 ff). If it be sound, we have here a good example of the use by Syriac-speaking Christians of Greek hymns. Another example is the Syriac version of the Greek hymns of Severus, Monophysite patriarch of Antioch (A.D. 510-529), made by his bishop of Edessa, A. (A.D. 510-529), see DCB iv. 259), and revised by Jacob (see above). The Syriac has been edited by E. W. Brooks in Patristica Orientalis, vii. 5 (Paris, 1912).

V. Hymns in prayer. — The metrical compositions alluded to are not rhymed, but about the 12th cent. the Syrians learnt from the Arabs the art of rhyming. A. Minangia states (Connolly, Narr. ii. 319 ff), that when the poet has this characteristic; and Connolly (p. xxxviii.)
East and West Syrian, of prose hymns like the 'Gloria in excelsis' (called by the West Syrians the 'hymn of praise of the night' and by the 'Song of the Three Children' (called by the East Syrians the 'hymn of praise of the company of Ananias').

The usual 'hymn of praise', however, is a metrical composition consisting of a number of stanzas sung alternately by the two choirs (which are called respectively 'the former' and 'the latter'), and usually of two lines each, though occasionally of four or more. Rarely these hymns of praise are acrostics, beginning with the letters of the alphabet (ESDO, 251, 283), or with the letters of a name, as Ištraš Shakhā (Jesus Christ) or Shināš-sahā (sun and moon) or the like (ESDO, 167, 230).

The East Syrian service-books frequently (but not always) ascribe those hymns of praise to definite authors. The following, among others, are mentioned: Ephraim and Narsai (above, § 1); Shināš (Shimān) Barashā (Simeon Barabba), Catholicos in the 4th cent.; Awa (Abba, Abba), Catholicos in the 6th cent.; Thomas of Uqrah (Edeza), contemporary and friend of Awa; Bawā (Babbā, Babacān) the Great, Abbot of Mount Ida early in the 7th cent. (see Budge, ii. 90; Budge, ii. 55); Ahmad al-Maqari (Bawā), b. 1212, he was famous for his beautiful voice; George, Monophysite metropolitan of Nisibis (7th cent.; see DUB ii. 942, Asemanni, iii. 456); 'Abraham, Doctor' or 'Abraham of Ida', i.e. Abraham of Kaschara, the revealer of monasticism in the 6th cent., the head of the monastery of Mount Ida near Nisibis (Budge, ii. 37); Abimilech (Ido); 'Abraham of Nithpar, whose life was written by 'Sarvahān Rishān (Saharūsho Edōmān, Saharūsh Jostām), a disciple of Narsai (above, § 1); Bago, b. 528, a disciple of Bawā the Great, Abbot of Mount Ida (see Budge, ii. 108 n.); John of Beth Raban (6th cent.), founder of a monastery in Daisin, a district on the Great Zab south of the modern Qahārān, the seat of the present Nestorian Catholicos Mar Shimun (Budge, ii. 67, 301; DUB iii. 405); Sarurāš, Catholicos e. A. D. 500; Barasamī (Barasmanis) of Nisibis (6th cent.; Kūnāma of Khādyāw (Khādyāwah, Addīnī; a district east of the Tigris, between the two Zabs (Asemanni, iii. 51). The ascriptions are in some cases doubtful, and the scribule himself sometimes hesitates, and gives two names as alternatives.

(§) The Madrāshā (lit. 'commentary', Payne Smith, Thes. Syr. i. 956; pl. Madrāshā, said to be a later word) is a less common form of hymn. It consists of an antiphon (šāntāq) and two or more verses (bātāq; these two names are used by the West Syrians also). The antiphon is said first, and the two choirs then sing the verses in turn. There is a daily Madrāshā at Compline (which is uncommon as a daily service, but is used, combined with Evensong, on saints' days and in Lent; it is, however, used by the more religious as a private devotion; see Maclean-Brown, Catholicos of the East, p. 234); two Madrāshās are said at the Night Service on Feast days of our Lord; one is said on Sundays, on saints' days, and on week days in Lent. A Madrāshā is sometimes called a 'station' (Syr. šatāpūnā).

(c) The Anthem ('sāntāq, pl. šāntāqā; this word sometimes denotes a stanza of an anthem) is at once the most characteristic and the most common form of East Syrian hymnody. It consists of a number of stanzas; each stanza is prefixed by a clause from the Psalms (occasionally from other books of the Bible) said in monophone; then the metrical stanza is sung to a chant. No Anthem usually ends with a stanza prefixed by 'Glory be to the Father and to the Son and to the Holy Ghost,' and often with another prefixed by 'For...'

The length of the stanzas varies greatly; but they are usually short, consisting of 2, 4, or 6 lines; the lines are often of 4 feet (spondees or dactyls), sometimes of 3 or of 5 feet or more. Under the heading of the 'Gloria' and of 'Let all the people' there are frequently grouped several stanzas, and these are sometimes elaborate and probably late compositions; they often commemorate the East Syrian martyrs and other noteworthy events. (ESDO, 134 ff., where several other groups of stanzas are added after the 'Gloria'.)

As this form of hymnody is unknown in the West, it may be useful to give a specimen, taken from the Ferial Evening Service of First Tuesday (ESDO, 24):

Our help is in the name of the Lord (Ps 124). Our help is from God; who by name of His mercies chastiseth us all; for He is the giver of our life. The hope of the salvation of our souls shall never more be cut off: but let us cry and say: Keep us, O my Lord, in thy compassion and bare mercy upon us. And one helper in times of trouble (Ps 40). Our help, etc. (Ps 40).

Glory be to the Father and to the Son and to the Holy Ghost. O Christ, who dost reconcile us thy loving creation with Him who sent thee: pity the Church scattered by heretics and bring to an end within it strifeful divisions: which allow the devil in sorrow to the wonderful dispensation of thy manhood: and raise up in it priests to preach the sound doctrine. Amen.

In the Anthems some of the stanzas inserted before the 'Gloria Patri' are often called 'Of prayer' (see, e.g., ESDO, 145, 195); but the meaning of this heading is not clear. Some are 'occasional' stanzas, as for a journey or a storm (p. 149). The Anthems at the Night Service, especially on Festivals of our Lord, are extremely long; the translation of those appointed for the Epiphany takes 84 octoechos verses printed in 44; but the daily Anthems are only of from 3 to 6 stanzas. The 'Martyrs' Anthems' in praise of the heroes of the past, which are sung twice daily on ferial days except in Lent (according to the rubrics, they are appointed for Sundays also), are somewhat longer. They are a great feature of the services.

The martyrs are called architects, the beams of a building, combatants (ṭabābatā, ḏānīnā); merchants buying the pearl, such as they are, valiantly in the name of the Rubāīya (p. 225). In almost every one of these Martyrs' Anthems the following are mentioned: St. George, the famous martyr under Diocletian (DUB ii. 645); St. Cyrus, the boy-martyr in the same persecution, and Julitta, his mother (T. Eutbert, Acta Sanctorum Martyrum, 2. Amsterdam, 1713, p. 477; St. Pithyous, who opposed the magi and was martyred by Adōnir-præs ḡalār (for a detailed account see the anthem in ESDO, 139); St. Sephina, martyr in Syria under Maximian or Maximin (DUB iv. 618; sometimes his companion, St. Bacchus, is mentioned, for whom see DUB i. 236); and the sons of Shomōn (the seven martyrs of Ṣ Macq 2), and Eliāzār (Eleazar) their teacher (4 Macq 5f.); their names are given (ESDO 111) as Gadiā, Mawā (Maqābi, Macbacus), Tarsai, Khūrūn (Khūrūn, Hebron), Khūqūn (Khūqūn), Bakas (Baccus), Yasāwā (Yāsāwā, Yūsādāh, Yūsādāh, Yūsādāh, Yūsādāh), in the Latin paraphrase of 5 Macq 8f., published by Cranmer (The Rule of Reason); the names are given as Macbacus, Aba, Machar, Judas, Achas, Arēs, Jacob; and the mother's name is Sālamah (Cranmer, Uncanonical and Apocryphal Scriptures, London, 1884, p. 572f.).

Anthems are used at each of the four daily services (Evening, Night, Morning, and Compline—for the last, see above, (6) and also the Eucharistic Liturgy, in the baptismal service, and in large numbers in the occasional offices such as marriages and funerals. Many of the anthems at the burial of the dead are of great beauty, and are highly dramatic. Those used at the Eucharist
HYMNS (Ethiopian Christian) — Hymns enter largely into the services of the Abyssinian Church, and in catalogues of Ethiopian MSS the names of certain hymn-books are usually found, viz., the *Degsos*, the *Lagrigher ayeseg* ("The Lord is king"), the *Mekäl* ("Chapter"), and the *Macwåshåt* ("Responses"). Like other hymns, they are dedicated to particular persons, and intended for special occasions; a complete hymn-book is one which contains hymns for every solemnity in the year. A specimen of a Response or Antiphon is given by A. Dillmann in his *Christianitatis Ethiopianic* (Leipzig, 1886, §§ 10); it consists of Scripture texts, chanted by the minister, and partly repeated by the choir; their response is called *Melōna*. Although it bears the title *Widēm Hyån* ("The Holy Hymn"), which resembles ("metre"), it bears no trace of rhythm or rhyme. Other hymns exhibit rhyme similar to that used in Arabic versification; i.e. a series of lines all terminating in the same consonants and vowels: but, whereas in Arabic rhyme pervades the poem, in Ethiopian it pervades the strophe, which is ordinarily of five lines (see examples in

are: the 'Anthem of the Sanctuary,' sung after the Gospel service; the 'Anthem of the Gospel,' sung after the Gospel is read; the 'Anthem of the Mysteries,' sung after an unnamed and fixed: optional antiphon; an Anthem at the Fratation; and the 'Anthems' of the Mass said by the choirs during the communion of the people, which is unlike other anthems, and more nearly resembles a Matrah, consisting of an antiphon and verses (for mention of the Mass anthems see *LEW*, 297, 298). The Mass anthems are found in the *Epiphany* (ff. 320v-31), and are remarkable for including four unique verses in an old Persian dialect, in metre of lines of eight syllables. D. S. Margoliouth finds them to belong to a dialect of Christians in Persia before the Muslim conquest (*JFRS*, Oct., 1905, and *RA*, 397 n.). Another instance is a Canon the *Lakâhâ sâtrâ* (lit. 'Thee, Lord'), named from its first words, and sung at almost all the services.

"Thee, Lord of all, we confess: thee, Jesus Christ, we glory: for thou art the quickener of our bodies, and thou art the Saviour of our souls.

This is used as a form of a psalm-clause with 'Gloria Patri' (see *ESDO*, 3, 104, etc.; *LEW*, 249). Yet another instance is the 'Holy God, Holy Mighty, Holy Immortal,' which is also sung with the 'Gloria Patri' (*ESDO*, 10; *LEW*, 250). These two compositions, however, are not called 'Canons' in the service-books. It may be added that 'farsing' is a favourite practice of the East Syrians; the psalms, and even the Lord's Prayer, are farsed (for the last see *LEW*, 292; *ESDO*, 11).

Besides the works mentioned in the course of this art, reference may be made to Gabriel Cardacli, * Liber Thesauri de Arte Poetica Syriacorum*, Rome, 1879 (an anthology of poems of different dates); G. Felix, *Syriaco-Hebraica Historia Der Stämme der Syrer*, Vienna, Leipzig, 1886; J. Julian, *Dictionary of Hymnology*, London, 1907, s.v. 'Syria Hymnology.' Some hymns have been rendered in English verse by R. M. Moorman, *Renderings of Church Hymns*, London, 1901, and by others.
HYMNS (Latin Christian)

E. A. W. Budge, *Miracles of the Virgin Mary*, London, 1880; sometimes, however, it is only of their general character that we can be sure, for they do not appear to correspond exactly in other respects, and at times vary considerably in length and sequence of syllables. The chanting is of three styles: *Gece* or *Zeno*, which is the early chant, and *Netser*, which is the later and more developed. The names of the second are identical with the Arabic *Ghazal*, *love songs*, but the others are obscure. The *Dopu* is supposed to be the composition of one Yared of the 8th century; but this ascription is probably valueless. The matter contained in these hymns does not differ from the content of analogous compositions in other branches of Christianity.

D. S. MARGOLIOUTH.

HYMNS (Latin Christian).—I. EARLY CHRISTIAN HYMNS. — The language of the Western liturgies was originally Greek, not Latin, and the numerous Greek expressions in the present Roman liturgy are, in all probability, of this original dependence. Greek, moreover, was the written language of the early Fathers and ecclesiastical writers till Ter- tullian, so that it is not surprising to find that no original and independent Latin hymns were composed before the 4th cent. after Christ.

Isidore of Seville designates Hily of Poitiers as the first hymn-composer of the Latin-speaking West, and, according to Jerome, compiled a whole book of Latin hymns, but had apparently no decisive success. The reason of his failure was that he made no attempt to convey to the uncultivated Gallic populace, but tried to raise them to his own level.

Regarding the hymns of Hilary there was no certain information until quite recently. The *Liber hymnorum* of which Jerome spoke was lost, and the other compositions which circulated under his name in anthologies and literary histories either could not be proved authentic or were associated with his name only through an error which has found its way from Daniel's *Theologiae hymnologicae* in the works of his compiler. In 1884, G. P. Gaminour discovered fragments of the missing *Liber hymnorum* in the public library of Arezzo, and published them in 1887 in the *Bibliotheca ecclesiastica* (vol. iv), under the title, 'S. Hilarii Tractatus de Mysteriis et Hymni et S. Silvii Aquitanis Perigrinatio ad loca sancta.' Unfortunately, the hymn-book is a mutilated condition; it contains only three hymns, which are all incomplete, two being defective at the beginning, and one at the end; two of them are acrostics, or alphabet-hymns. In spite of this mutilation, the hymns are of priceless value to us, for they help us to estimate the oldest Latin hymns, and the poetical attempts of the great Gallic Church Father. Their contents—especially those of the first hymn, which deals with the doctrine of the Trinity and the consubstantiality of the Son—are not very clear, and have no popular character. They are metrical in form, but show no artistic taste; and great liberties have been taken with the texts.

Although Hilary was the first Western writer to compose hymns in Latin, Ambrose may be rightly called the Father of Latin hymn-composition, and, indeed, of all Christian hymnody and popular song. There is far more evidence of the activity of Ambrose as a hymn-writer than in the case of Hilary. Many of his hymns are still extant, and are characterized by distinct individuality, among which his own takes the first rank, assure us of his poetical activity as well as of his striking success. Augustine, his younger contemporary, has preserved quotations from the hymns of Ambrose; we have his good authority for four of them, viz. 'Eterna rerum conditor,' 'Dens, creator omnium,' 'Jesum surgit hora tertia,' and 'Intende qui regia Israel.' If, by means of these four hymns, which are the oldest extant, we examine the characteristics of Ambrose's style of thought and poetical expression in language and metre, we may be able to prove his authorship of a series of other hymns in the collection of the Church of Milan.

The first fact that strikes us in connexion with the success of Ambrose is that his influence as a hymn-writer was as strong as it was lasting. Both Augustine and Ambrose himself describe the inspiring and even fascinating effect which these hymns exercised when they first appeared. They were songs for the people and the congregation in the fullest sense of the term, being not only popular in content, form, and melody. Of course, the population of an imperial seat of residence like Milan stood at a higher level of culture than the people of a Gallic provincial town like Poitiers or Bacanius, the authors of Hilary, and those who could follow the sermons of Ambrose with intelligence and affection would also appreciate his hymns, and sing them with enthusiasm.

The hymns of Ambrose spread rapidly over the West, and became popular everywhere. The ancient Latin hymns were also folk-songs, and they continued to be so as long as Latin remained a living tongue. When it became the language of liturgy, the sphere of influence of these hymns naturally became narrowed; instead of being the property of a whole people, they became, as poetry of the Church and cloister, the possession of a privileged class. But, later on, a popular form of poetry was evolved from this poetry, which continued to exist, and even flourished luxuriantly, in a dead language—an evolution which took place not in one, but in many languages; and thus we have the surprising phenomenon of a popular form of composition passing through an artistic stage to return again to the popular level. In this sense, also, Ambrose is the father of our present national and popular hymns; even to-day some of his poems and melodies are sung by the people. It is impossible now to discover the stages through which the popular hymn of Ambrose passed in its development into the clerical and monastic hymn of the Middle Ages, or the time when the transformation was completed. The want of liturgical records, and especially of MS hymns, reduces us almost entirely to the expedient of combining fragments—an untrustworthy method when the data are scanty and uncertain. With the exception of a few MSS, such as the *Vaticanae Reg.* 1, and the *Antiphonary of Bangor* (ed. F. E. Warren, London, 1803-05), which, however, belong to quite a different environment and a different kind of composition, we have hardly any hymn-collections before the 10th century. In half of them the transforma-

2 1 De Vir. Illust. 58.
3 This is the aim of Breyer's *Antiquitates Ambrosianae*. Following the example of F. Biraghi (Inni sacro e carmi di S. Ambrogio, Milan, 1803), he proves fourteen hymns to be authentically Ambrosian, and four others to be probably composed by Ambrose (see *Annu. Amb.* pp. 133-140, and *Annu. Hymn.* 11, 21). Breyer is also the first to attempt to ascertain the original meaning and musical method the melodies which we are justified in regarding as originating from Ambrose (Annu. Amb., p. 139 ff.). His statements on both points have not been contradicted or disproved.
tion is complete; and they also show another change—the hymn governed by quantity and metre has evolved one governed by rules of ascent. The hymnal tradition in fact is a composite one, derive from the monastic rules of Benedicite, and of Aurelius and Cassarius of Arles, which show us a small number of hymns as existent in the 6th cent., and the Latin hymn almost completely transformed in the monastic hymn.

Contemporary with Ambrose, although his hymns appeared later, Prudentius introduced a new kind of religious poetry; the non-liturgical hymn form, in fact, was both reinvented and developed alongside of the liturgical; to the poetry expressing official and public congregational devotion was added the poetry of personal and domestic edification.

Besides its greater works (he wrote in all over ten thousand verses), which are mostly didactic and polemic, Aurelius Prudentius Clemens composed two works of mixed lyric and epic content, the Cathemerinon and Peristephanon, which have given him a name a leading place in the history of hymnology. The first is a collection of hymns for the different hours of prayer in the day and the festivals of the year; the second consists of a series of poems of Notitia Christianorum, suffering of martyrs, especially those belonging to Spain. These compositions belong to epic rather than to hymnic verse, but some of them were adapted into popular use as hymns.

Prudentius presents a striking contrast to his immediate forerunner Ambrose, writing as he did from an entirely different point of view and call for private reading. Among the early Christian hymn-writers, Ambrose may be called the Classic and Prudentius the Romantic. While Ambrose everywhere betrays the genuine Roman character, with its sustained dignity and strenuous self-control, in the poems of the hot-blooded Spaniard there is a sparkle and glow, a thrill and enthusiasm unknown to the ancient Roman poets. The contrast between the Liturgist and the poet is also obvious in the external form chosen by the two writers. While the hymns of Ambrose invariably consist of six stanzas—a number which remained the rule till far into the Middle Ages—Prudentius are much longer, a restraint, and the other as a stimulus; the influence of Ambrose has been the more permanent, and that of Prudentius the more extensive, as he did not confine himself within the narrow limits of liturgical hymn composition. Further, the influence of Prudentius on posterity was as great as that of a compositions of his has ever been, because, like the poets of classical period, he was the more comprehensive and property of all nations who shared the intellectual wealth bequeathed by ancient Rome.

In comparison with these two masters of ancient Christian hymnody, the other Christian hymn-writers belonging to this period fall back into the background. We possess merely a few of their works; a most distinguished exception is the De Synagoga of Pope Damasus (+384), which are distinguished by elegance of expression and artistic polish. The hymns attributed to him, however (one in praise of Agatha, and a hymn commemorating his death, which has long been in liturgical use), apparently do not belong to him; the former is probably of Mozarabic, and the latter of Gallo-Frankish origin.

Augustine (+430) also touches the province of hymnology in so far as he composed a 'rhythm' against the secular hymns of the Donatists, each strope beginning in alphabetical order from the voc. He himself calls it 'Paulinus contra partem Donatit liber unus.' It was intended for popular singing, in order to make the common people better acquainted with the distinctive teaching of the two parties, and had a refrain (antiphona). Although the form is lyrical, the contents are so pronouncedly didactic that the poem can hardly be counted among sacred lyrics; but it is of the highest importance for the history of rhythm Latin poetry because of its indisputable authenticity. Pontianus, Aegidius Paulinus, has his Carmen Pontinum (+431), composed a whole 'book of hymns.' Either this refers to the Carmine Natalicio or St. Felix or the book has been lost. Among the extant poems of Paulinus, all that can be called hymns are the 'Prayer' (Carm. iv.) and three paraphrases of Ps 70-73; Calixtus Sedulius, who flourished about the middle of the 6th cent., has left two poems besides his great 'Carmina Paschali.' These he himself intended to be hymns, although the first is really a combination of didactic and lyrical poetry; and the second, the famous 'A solis ortus cardine,' is a poem in iambic dimeters, the initial letters of whose strophes form an acrostic. This hymn was used in the Mozarabic liturgy, where it was divided into six sections for the Festival of the Annunciation, of the Virgin Mary, the Birth of Christ, the Epiphany, Innocents' Day, the Feast of Lazarus, and Maundy Thursday; it is also used in the Roman liturgy, but in a condensed form. Some verses from the 'Carmen Paschale' have a place in the Roman Missal, in the Introt of the votive Mass of the Virgin. Pope Gelasius (+461) also composed hymns in the manner of Ambrose. Unfortunately his hymny is lost, and we cannot authenticate any single authentic piece of his literary property.

II. MERovingian Hymns.—Between, early Christian and mediæval hymn-composition there are two transitional periods—the time of the Merovingians, which shows a further development from metre to rhythm, and the Carolingian period, which is a time of artistic renaissance, and which also inaugurates a completely new epoch.

Ennodius, bishop of Pavia (+291), like Gelasius, belongs in time to the Merovingian period, although in his whole character and tone of thought he is a product of the former early Christian age. We possess a complete hymnary written by him containing twelve hymns, most of which have survived only in a single Brussels MS. Ennodius was obviously roused to poetical activity by the example of Ambrose, and at any rate he used his hymns as archetypes of the Mass for the use of the Church there. His hymns, with the exception of the eighth, are in the same measure as those of Ambrose. He always divides them into eight

HYMNS (Latin Christian)

stanzas, and chooses only subjects that had not already been treated in verse by Ambrose. The Church of Milan, however, did not respond to his desire; his hymns were not adopted in her liturgy, and only three of them came into common use. The first of these is one of the poems on which, as a rule, literary historians pour out the vials of their wrath. His hymns hardly deserve the censure generally heaped on them; in spite of being modelled on the models of Ambrose, they are not entirely devoid of originality, and, notwithstanding their obscurity of style, they do not lack a certain inspiration. We must mention here Pope Gregory the Great († 604) — not as a hymn-writer, but as a supposed hymn-writer. Just as all the reforming energy of this Pope with regard to the Liturgy lies in obscurity, so nothing is known about his poetical activity. All that we read about hymns which he is said to have composed is either the product of private supposition (such as that of Mene), or derived from an anonymous manuscript in the Bibliotheca Corviniana in Vienna. In any case, the authenticity of these hymns is doubtful. After the time of Gregory, the number of hymns in the liturgy decreased. The first to assign a few hymns to Gregory, without any reason. During the whole of the medieval period, down to the time of Gregory himself, absolute silence prevails on the subject.

The greatest and most conspicuous figure of this period is Venantius Honorius Clementianus Fortunatus, who was made bishop of Poitiers in 579. His poetry, with the exception of the few books of his *Life of St. Martin*, is 'occasional poetry' in the narrow sense of the term. According to Paulus Diaconus, he also composed a number of hymns for the various church festivals, but these have not been handed down. In his collection of hymns, there are three hymns on the Holy Cross and an occasional poem on Easter, which, in an abbreviated form, was used as a processional hymn. Besides these there are other three hymns ascribed to Fortunatus: the baptismal hymn, 'Tibi laus, peregrini aucter'; called 'Versus Fortunati presbyteri'; in an 8th cent. office-book from Poitiers preserved in the Bibliothèque de l'Arsenal in Paris, the Christian hymns of the Roman canon are presented, and the well-known hymn in praise of Mary, 'Quem terris, pontus, aetheria.' 3 In spite of all the artistic form, the hymns of Fortunatus belong to the ancient Western Christian literature. Hymns like the 'Pange lingua' and the 'Vexilla regis' have never been surpassed, and will remain immortal. They had a great influence on both text and music of later hymnody.

Among the contemporaries of Fortunatus we may mention Eugenius of Toledo († 655), who bestowed special care on Church-hymnody, and revised the Church office-books; but, as no ecclesiastical hymns have come down under his name, we cannot ascertain his probable share in the hymn-composition of the Mozarabic liturgists. After Venantius Fortunatus the most conspicuous poet of the period is the Mozarabic Bede († 735). In the last chapter of his Ecclesiastical History of England, in which he inserted a synopsis of his own works, he says that he had also composed 'song' for these various verse-measures and rhythms. We have to lament the loss of this book as a whole; but eleven hymns have been handed down to us under Bede's name by Georgius Cassander in his *Hymni Ecclesiastici* (Cologne, 1556), regarding the genuineness of which there has been much controversy. Besides these hymns we have an attentive study on St. Editha's in the Ecclesiastical History (iv. 20), and two Psalms paraphrases preserved in various MSS. Bede's hymns are of unmistakable sobriety, corresponding with the whole character of his writings. They did not circulate widely, however, and exercised no lasting influence on later Latin hymn-writing; only a few of them occur in liturgical MSS. The hymn on St. Editha was imitated in a large series of Anglo-Saxon and Irish hymns, e.g. those of Wulstan of Winchester (cf., further, below, p. 209).

We may mention here a double series of hymns, which began in the Merovingian period, and have a decidedly national character, which is strikingly evident in the national form of writing: the ancient Irish and the Gothic or Mozarabic hymn collections. The ancient Irish hymns were discussed in art. HYMNS (Irish Christian). More important than these, however, are the hymns collected in the Mozarabic Liturgy. This Liturgy, which differs very little from the Roman, was first entitled 'Old Spanish', then, with the union of the Goths, 'Gothic', and, finally, after the conquest of Spain by the Arabs (A.D. 711) 'Mozarabic', i.e. the Liturgy of Christians living among Arabs. The liturgy of Seville seems to have been for this Liturgy what Gregory the Great did for the Roman, but the facts of the case are equally uncertain. The hymns, numbering about 250, which can still be collected out of old Mozarabic manuscripts, are by no means the product of one period; on the contrary, there are some in the classical metre of the early Christian period, some which show the gradual transition from metrical to rhythmical composition, and some displaying all the linguistic barbarism of the 10th century. The Mozarabic Liturgy is much richer in hymns than the Roman. It has a whole series of hymns for special occasions, such as the consecration of a bishop, a bishop's birthday, a coronation, a king's birthday, marriages, etc.

With the demise of the Mozarabic Liturgy this mass of lyrical poetry became obsolete, and found its way from the Church into the libraries and archives.

III. THE CARLOVINGIAN RENAISSANCE.—The empire of the Carolingians, with its Cesaropapism, often resembling that of Byzantium, brought in a new epoch for Latin hymnody. During this period, two tendencies appear which afterwards run parallel through the whole of the Middle Ages, viz. the artistic reproduction of the old and the obsolete, and the preparation of the new and original. Charlemagne was not only a warrior but a patron of art, and under his rule artistic Latin poetry received a new impetus which has been called the 'Carlovingian Renaissance.' The central focus of these efforts was the 'palace-school' of Charlemagne, with which the most famous learned men of the time were connected. It must be admitted that, considering the numbers and their poetical activity, the authors belonging to the learned circle of the palace and its 'school' composed few hymns—no doubt because the introduction of the Roman Liturgy into the whole empire of the Frankish church and the Liturgy towards hymn-composition. Still, the majority of them made small contributions towards the treasury of Church hymnody.

The most important was Paul the Deacon († 799),

who from 732 to 749 stayed at the Court of Charlemagne. Besides a hymn on the miracle-worker, Benedict of Nursia, in his History of the Lombards (i. 26), we have the immortal poem on John the Baptist. Paulinus I., patriarch of Aquileia (c. 646-653) was an effective composer. His best known and most popular hymn was that on the Apostles Peter and Paul, beginning 'Felix per omnes festum mundi carinae.' Alcuin (+ 860), a central figure in this group and one of the most prolific hymn-writers, is represented only by two hymns—one on Vesasant and an evening hymn. Legend says that Theodulf, bishop of Orleans (c. 821), from his prison-window greeted the Psalm Sunday procession in Angers, in which King Louis the Pious took part, with the improvised hymn 'Gloria, laus, et honor,' fragments of which are still in use in the Roman Liturgy. The only other extant hymns of Theodaldus are those for 'The Salutation of the King.' In Adventus Regis. In this circle of poets we may also include Florus, the deacon of the Lyons Church, and Secundus Scotus (+ c. 754), the scholar of Liutgar. We have some hymns of Florus (d. middle of 9th cent.), composed in elegiac verse, and some free translations of psalms in heroic metre (one Psalm-paraphrase is written in iambic dimeter). The poems of Secundus Scottus belonging to the rank of hymns are very few. 

Beside this group of poets of the early Carolingian period, there is another in the later period—the poets of the school of Abbot Gall. The two groups are connected by Rabanus Maurus, who was a pupil of Alcuin, and Walafrid Strabo, who came from St. Gall to Rabanus at Fulda, and later on became abbot of Reichenau. Walafrid, who also wrote two, is the better and more artistic poet, Rabanus the more productive and influential. The poems of Rabanus (+ 856), especially his hymns, are known chiefly from the ed. of C. Brower (Mainz, 1617), who took them from a MS which probably belonged to the Fulda monastery. A small portion of this MS is preserved in the monastic library at Einsiedeln. In his hymns Rabanus is more original and inspired than in his other works. The immortal 'Veni Creator Spiritus' is assigned to him by a Breslau MS now in London. Walafrid, nicknamed Strabo or Strabos (+ 'the cross-eyed'), abbot of Reichenau (+ 849), seems to have been the author of Hymnorum Liber unus (J. Pitsen!), but it has been lost. Only a few hymns of Walafrid are known—a Christmas hymn, a hymn on Gallas, well known in Germany in the Middle Ages, hymns on Mammes, Januarius, Sergius, and Bacchus, and poems to welcome the Emperor. Another pupil of Rabanus—the monk Gottschalk of Orbais (+ 890)—composed hymns, or, rather, spiritual songs. Two of them are specially interesting because of their original rhythms. The 'School of St. Gall', to which we now pass, produced two classes of writers—the first class being an offshoot of the Carolingian Renaissance.

1. From the opening words of this hymn, 'Ut quassat luxis resorubris floria,' Guido of Arezzo borrowed the tonus 'Us. re, iu' for the Roman hymn in Pfeiffer's Chorpersammlung (1857). See also E. Dümmler, 'Zu den Gedichten des Paulus Diaconus,' in Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde (1860) ii. 345-47, and J. A. Wieland, ib. 117 ff.

On the genuineness of the poems assigned to Rabanus by Brower, see Dreyen, 'Hymnologische Studien zu zweien Denkmalen Romanischer Pfarrschatz,' pp. 50-130.

8. Anal. hymn. I. 128 ff.; for the hymns see also PL xii. 751 ff.

11. Ibid. I. 219 ff.

cal, poetical, and musical innovation—as the hymns of Ambrose had been, and their circulation and influence find no parallel except in the case of the great Milanese. Rome alone showed little appreciation for the Teutonic innovation of Notker—a circumstance which afterwards, at the Council of Trent, proved momentous for sequence-composition. Besides his sequences Notker composed a series of hymns on St. Stephen.

Next to Notker the Stammerer, Tuttilo († 989) is the most influential member of the St. Gall school; for he ranks as the first writer of "tropes" (i.e., additions in prose or verse to an already existing liturgical text). These insertions were afterwards more frequent in Missals or Graduals than in Breviaries or Antiphonaries. In the former we find them in the Kyrie, "Gloria," "Sanctus," "Agnus Dei," and in the Epistles (Epistolaria) as well as in other fixed or changing parts of the Mass (Introit, Offertory, Communion); in the latter, as a rule, only in some of the Responsories.

Only a few tropes composed by Tuttilo remain, and those are mostly in prose, and therefore interesting to liturgists, not hymnologists. As regards hymn-writing Tuttilo is important, not on account of his compositions, but for what he inaugurated and suggested: the composition of tropes, introduced in German territory and cultivated to a moderate extent in Germany, spread into France, Italy, and England, where it attained a much fuller development. The 'School of Saint Amand' (Schola Etinonensis) also flourished during this period. Milo († 872) was one of its most celebrated teachers and a prolific hymn-writer, but none of his hymns have been preserved. The most distinguished, however, was Hucbald († 930), one of the first composers of harmony. He discovered the organum, or art of accompanying a melody in perfect fifths; and his name is also connected with the introduction of the metrical or rhymed office (Historia rhythmica), i.e., a daily liturgical prayer-office, comprising the seven canonical hours, in which the hymns and everything else sung, except the Psalms and lessons, are composed in metre, rhythm, and rhyme. Besides hymns on St. Theodoric of Rheims and St. Cyriacus of Nevers, he composed rhymed offices on St. Richard of Marchienz and others. At any rate, the district of St. Omer, St. Amand, and Liége may be rightly regarded as the birthplace of this kind of composition.

IV. THE EARLY MEDIEVAL PERIOD.—When treating of the school of St. Gall as a whole, we have already touched on the early medieval period (10th and 11th centuries). The 10th cent. faces up the task—interrupted and postponed by the Carolingian Renaissance—of liberating the Latin hymn from ancient metrical laws and of bringing it under the government of rhythm. During the process, which is tedious and confusing, the hymns which appear are neither metrical nor rhythmical; they have neither accent nor metre; in fact, the composers seem simply to have followed the principle of counting syllables. Rhyme appears in a subsidiary manner in the Carolingian period, in Rahanes and Gottschalk, but throughout the 10th cent. it remains weak and imperfect. It was not till the 11th cent. that both accent and rhyme reached the pitch of perfection which they maintained in the 12th and 13th centuries. At the same time the art of writing sequences, begun by Notker, continued to be cultivated, although it never again attained Notker's depth of thought and mysticism. In the 11th cent. sequences appeared in France which, re-constructing Notker's trope in rustic form, and his syllable-counted cadences in rhythms and strophes, introduced a new type of sequence. They constitute—to borrow a figure from architecture—the transition-style, in which Romanesque blending with Gothic elements. During this period, as throughout the whole of the Middle Ages, metre holds its ground, but, like rhythm, it is re-modelled and re-modelled in the disguise of the most variable and purely ornamental forms.

One of the most famous hymn-writers of this period is the Anglo-Saxon Wulstan, precentor of St. Swithin in Winchester. We have several ecclesiaries composed by him in elegiac measure on local saints of Winchester—Athelwoald, Binin, and Swithin. They are modelled on Bede's hymn on Edithhilda, and have been revised by Ordericus Vitalis. The monastery of the reformed Benedictine order at Cluny, which at this time influenced not only France but all the Christian kingdoms of the West, is represented in hymn-composition by the two most celebrated abbots that it possessed—Odol, the best known in his time († 943), and Odilo († 1048). Only a few fragments of their hymns remain. Odol celebrated St. Martin of Tours; Odilo panegyzed St. Majou, abbot of Cluny, and the empress St. Adelheid, consort of Otto the Great. The German poet-pope Leo IX., a count of Egisheim († 1048), is closely connected with the Cluny group. Besides two hymns he bequeathed a rhythmical office in honour of Gregory the Great.

More famous than all these, however, as theologian, schoolman, and poet, is Fulbert of Chartres († 1028). The comparatively few poems of his which are extant are composed in the most varied metres and rhythms. The more widely-circulated of his writings were the sequence 'Sonnet regni rati', the Epiphany hymn 'Nunc ritum vocis', and the Easter songs 'Chorus novus Jerusalem' throughout Christendom. Other French hymn-writers of this period are Adhemar of Chabannes, a monk of Angoulême († 1053), who panegyrized in hymns the patron of his monastery, St. Etienne; Bruno, Bishop of Angers († 1081), who composed a number of rhythmical religious poems, of which one on St. Stephen became the common property of the medieval Church; and Anselm of Canterbury († 1119), the composer of some pious prayers. It is to be regretted that we cannot give more substantial proof and a more detailed description of Anselm's activity as a hymn-writer. In a MS of the poems of Eusibius Bruno there is a poem of Berengar of Tours († 1088), 'Juste Judex Jesu Christi'.

In Italy, besides pope Leo IX. just mentioned, there are two conspicuous poets, who in other respects differ as widely as two writers can—Peter Damiani († 1072) and Afanis of Salerno († 1050). One writes in medieval rhythms; the other might be designated as a herald of humanism.

Peter Damiani belongs to the prolific hymn-writers of the Middle Ages. As regards artistic form, his poetry can hardly bear comparison with that of the exquisite sonnets of Jacobin verses with its elaborations and artifices, the versus caduati and the "cadet," "cruciat," and "cruciat'li" etc. (Ansal. hymn. xxvii. xxviii. xxx, etc.); and yet there is a great deal of humanism in his work. Peter Damiani belongs to the prolific hymn-writers of the Middle Ages. As regards artistic form, his poetry can hardly bear comparison with that of the exquisite sonnets of Jacobin verses with its elaborations and artifices, the versus caduati and the "cadet," "cruciat," and "cruciat'li" etc. (Ansal. hymn. xxvii. xxviii. xxx, etc.)
the more polished and elaborated compositions of the succeeding age; but under its bald exterior with the feeble assonantal rhymes are hidden a genuine poetic genius, and a warmth of feeling which is not in the least detracted from by the three stanzas of six rhymes apiece, with a refrain, 'Varietiam paschali laudes.' This sequence is of special interest because it is a classical example of those transitional sequences in which the old forms keep abreast of the sciences and arts, and not least in the form of religious Latin poetry. There are no more writers of reputation; the forms of composition show a richer variety; the rhythms are more correct, the language more tuneful, and the rhymes purer. Good writers of the 13th and 14th centuries obey the rule that the masculine (imberbe) rhyme must be twice-syllabled. The writers of this period may be arranged into several groups. The first group is formed round Hildegard of Lavardin and the second round Abelard. The whole mass of liturgical composition, however, remains as a poet, the popular songs of St. Victor. Another group is dominated by Philippe de Grève. Finally, there are several less celebrated writers.

(1) The chief members of the first group are Marboe, bishop of Nantes (+1150), Baudri (Baldricus), abbot of Bec, and Richard of Dambray (+1180), and Reginald, monk of Saint Augustine's, Canterbury (+1190). All these writers have two characteristics in common: they cultivate classical and metrical poetry, although Marboe and Reginald also write Leonine or rhymed hexameters; and in their poems they incline towards worldly or religious - epic or didactic poetry. Marboe wrote a series of hymns and prayers (the latter partly in metre and partly in rhythm). Of Baudri's compositions only a few hymns on St. Samson of Dol remain. The form which he prefers is that of the poetic epistle, and in the selection of his letters is of great importance from the point of view of the historical student. Reginald of Canterbury, in the last book of his chief work, the Life of St. Hild, has collected a series of hymns addressed to God, to Christ, to the Holy Spirit, etc.; all of which he puts in the mouth of his hero. These hymns show unmistakably a feeling for poetic form and a certain energy of sentiment which secure for their author a place in the great throng of mediæval writers.

Hildebert himself (+1133), archbishop of Tours, belongs to the most careful cultivators of form among the mediæval poets. Some of his verses were actually included by modern philologists in the anthology of Latin classical authors, and taken for genuine productions of antiquity, until Hauréau drew attention to the mistake. It is unfortunate that there are no liturgical compositions of Hildebert known. But, even if Hildebert had given us nothing but the single Oration de Très Personas SS. Trinitatis, 'Alpina et magnum Deum,' this one poem would win a claim to be reckoned with the greatest hymn-writers of all ages and tongues.

(2) Of an 'Abelardian' group we cannot, strictly speaking, say anything, since Abelard does not belong to any one school or tendency; but, considering the fact that the two men most deeply and permanently affected his life—Bernard of Clairvaux and Peter the Venerable—we are both engaged in hymn-

Mention must be made of one more contemporary composer, Wipo, a Burgundian Court-chaplain to the Emperors Conrad II. and Henry III., and, according to a marginal note on an Einsiedeln MS, author of the famous Easter sequence still kept abreast of the sciences and arts, and not least in the form of religious Latin poetry. There are no more writers of reputation; the forms of composition show a richer variety; the rhythms are more correct, the language more tuneful, and the rhymes purer. Good writers of the 12th and 13th centuries obey the rule that the masculine (imberbe) rhyme must be twice-syllabled. The writers of this period may be arranged into several groups. The first group is formed round Hildegard of Lavardin and the second round Abelard. The whole mass of liturgical composition, however, remains as a poet, the popular songs of St. Victor. Another group is dominated by Philippe de Grève. Finally, there are several less celebrated writers.

(1) The chief members of the first group are Marboe, bishop of Nantes (+1150), Baudri (Baldricus), abbot of Bec, and Richard of Dambray (+1180), and Reginald, monk of Saint Augustine's, Canterbury (+1190). All these writers have two characteristics in common: they cultivate classical and metrical poetry, although Marboe and Reginald also write Leonine or rhymed hexameters; and in their poems they incline towards worldly or religious - epic or didactic poetry. Marboe wrote a series of hymns and prayers (the latter partly in metre and partly in rhythm). Of Baudri's compositions only a few hymns on St. Samson of Dol remain. The form which he prefers is that of the poetic epistle, and in the selection of his letters is of great importance from the point of view of the historical student. Reginald of Canterbury, in the last book of his chief work, the Life of St. Hild, has collected a series of hymns addressed to God, to Christ, to the Holy Spirit, etc.; all of which he puts in the mouth of his hero. These hymns show unmistakably a feeling for poetic form and a certain energy of sentiment which secure for their author a place in the great throng of mediæval writers.

Hildebert himself (+1133), archbishop of Tours, belongs to the most careful cultivators of form among the mediæval poets. Some of his verses were actually included by modern philologists in the anthology of Latin classical authors, and taken for genuine productions of antiquity, until Hauréau drew attention to the mistake. It is unfortunate that there are no liturgical compositions of Hildebert known. But, even if Hildebert had given us nothing but the single Oration de Très Personas SS. Trinitatis, 'Alpina et magnum Deum,' this one poem would win a claim to be reckoned with the greatest hymn-writers of all ages and tongues.

(2) Of an 'Abelardian' group we cannot, strictly speaking, say anything, since Abelard does not belong to any one school or tendency; but, considering the fact that the two men most deeply and permanently affected his life—Bernard of Clairvaux and Peter the Venerable—we are both engaged in hymn-
composition, it is perhaps justifiable to bring them together in a group. Bernard of Clairvaux (+1153) composed hymns in honour of saints Virgil, Malachias, and Malachias, which are not very remarkable in contents or form. All the other works ascribed to him in the medieval period have been proved by B. Hauréaux2 not to be his, unless well known. John Peckham3 (+1295), who composed the lovely nightingale-song "Philomena pnevin," a hymn of the Holy Trinity, which displays deep thought and warm feeling with the most elaborate Graviti expression, and some widely celebrated hymns in honour of the Virgin, etc.4 Julian of Speyer (+1178), the author of rhymed offices in honour of St. Francis of Assisi and Antony of Padua, remarkable for both contents and form; and Constantine of Orvieto (+1257), the author of an equally elaborate office in honour of St. Dominic, and Thomas of Celano (+1250), the author of some sequences and of the Inmonnal sequence on the Last Day, the "Dies Irae," so often translated and set to music.

This was originally composed for private devotion and ended with the words, "Gere agents uti Deus." The "Dies Irae" was sometimes adopted as a sequence in the Mass-books of the Franciscans. The opening words (which are not consistent with the rest either in contents or in form) were appended to it. It was not till towards the end of the 16th cent. that the "Dies Irae" was used more frequently as a sequence. By that time it had been forgotten that a Mass without an "Agnus," such as the Mass for the dead, ought to have no sequence. All these writers, to whom a large number of less importance might be added, are surpassed by a man who still remains as the recognition and honour which he enjoyed among his contemporaries—the chancellor of the Church of Paris, Philippe de Grève (Philippus Gravitas +1298). From his hand we have a Studenta Theologica (unfortunately still unprinted) and three collections of sermons—for feast-days, on the Psalms, and on the Gospels appointed for Sundays. These sermons of a still for the most part unpublished. In spite of his zealous and deep theological studies, Philippe de Grève found time for copious poetical activity. His chief poem was the 'Canto,' a sacred song intended for social performance. The liturgical in contents and origin, it found its way into the liturgy and pervaded it, while it also prepared the way for the sacred popular song in the vernacular. We have a whole series of the songs composed by him on subjects arising from hymns to the Virgin, of a child-like simplicity and devotion, to verses of keen wit and satire. He also wrote some hymns properly so called; and there are few hymns in the great treasury of the mediæval Church with which his hymn on Mary Magdalen will not bear comparison. Henri d'Andel on, in his poetical panegyric of Philippe de Grève, called him the most valiant and wisest "qui fat in la cristenité."5

(5) We have still to mention a series of writers belonging to this period who produced some fine religious lyrics: the 'doctor universalis,' Alain de Lille (+c. 1230), on account of his Anticolonaeus, ranks among the most famous and widely read poets of the Middle Ages; Alexander Neckam (labeled as Nequam), abbot of Clarendon (+1217), also one of the most skilful authors in verse of his time, composed fine hymns to the Virgin and in

Hymns (Latin Christian)
honour of Mary Magdalene; 1 John Hovenden (+ 1275), Court-chaplain of Queen Eleanor of England, mother of Edward III., composed a series of mediocre religious lyrics, and a narrative lyric poem, didactic and sufferings of Christ entitled Philomena, which is of conspicuous excellence; 2 Guy de Baschoes (Guide de Bascose), precentor of Chalons-sur-Marne (+ 1250), in his collection of sacred songs, which is important for the literary history of the period, has interwoven numerous hymns and religious poems; 3 Adam de la Basse (Adamus de Esesine), canon of St. Pierre de Lille (+ 1258), composed songs of the most varied kind, suited to existing liturgical or popular melodies; 4 and Orgius Scaccabrazzi (+ 1293), the archbishop of Milan, wrote several liturgical offices, hymns, and Masses, which, however, are not remarkable either for contents or for form. 5

We must specially mention two female writers: 6 St. Hildegard, the abess of Rupertsberg in Bingen (+ 1179), and Herradis of Landsberg, abbess of Hohenbourg in Alsace. Hildegard, the greatest seeress of the 12th cent., also composed hymns and sequences, as well as rough, bold, and coarse songs of hymns and sequences, which are corrected by another hand in the Wiesbaden MS (the only one which they occur) these rough drafts are set to music—whether by Hildegard or some one else we do not know. 7 The compositions of Herradis of Landsberg (+ 1179) are of a different kind. She enriched the library of her convent with a MS which is equally interesting for the history of art and the history of literature. The Hortus deliciarum, as it was called, seems to have been inspired by the Theological Encyclopedia, and was illustrated by interesting miniatures which are quite famous. On 23rd August 1879 the MS was destroyed by fire. This Pleasure-garden of Herradis also contained a series of poems composed for the anthology. 8 Whether these are her composition or not, she certainly wrote poetry, and so far mastered the Latin tongue as to be able to clothe sentiments of simple piety in an unadorned and pleasing garb. We must here merely mention the fact that a number of hymns had been appearing anonymously during these early centuries, and, in fact, these far exceed in numbers the compositions whose authors are known.

VI. THE LATER MIDDLE AGES.—In the 14th and 15th centuries Latin hymn-writing slowly and steadily declined from the high level at which it was attained in the 12th and 13th centuries. There were many writers interested in the further development of the art, but they do not raise our admiration. And the great stream of anonymous poetry increased. Some works of first-rate quality appeared, but the gradual falling-off continued. The focus of hymn-writing seems to have undergone the most rapid eclipse in France, where it had reached its most perfect development. Word-accentuation, which constitutes the basis of rhythmical composition, did not even with Abelard attain the perfection to which Adam of St. Victor brought it, and in Philippe de Grève's work it perceptibly declined. The process of deterioration went on rapidly until hymn-writing was at last reduced to the system of syllable-counting from which it had begun to emerge in the 10th century. In England, and perhaps more gradually in Germany, the same deterioration took place. In Italy it had never reached the perfection which it attained in France.

This period begins with Jacopone da Todi (+ 1306), the Franciscan poet, who composed many celebrated Italian religious hymns. He is considered monightly regarded as the author of the world-renowned 'Stabat Mater,' the most beautiful medieval elegy in honour of the Virgin. Like the 'Dies irae,' the 'Stabat Mater' was originally a hymn for private devotion; but it occurs in many of the 15th cent. books of prayers, and before the end of the century it found its way into the Liturgy. Cardinal Jacobus de Stephanescis (+ 1340) displayed activity as a liturgical writer and as a composer. Among his acknowledged compositions, one of his most famous is his 'Georgius,' an antiphon in honour of pope Celestine V. (Petrus Moreone), and a few other liturgical and extra-liturgical pieces. 9 Another cardinal, Guillemur de Mandagato (+ 1281), more famous as a lawyer than as a poet, composed services which his nephew (of the same name) included in the Missal of Uzes, and thus handed down to posterity. Faultless in form, these poems are greatly lacking in the glow of inspiration. 10 These writers are succeeded by two Austrian poets, the Cistercian Christian of Liliennfeld (+ before 1339) and the Carthusian Conrad of Gaming (Gemmenstein; + 1390), who is also called Conrad of Hainburg, after his birthplace. From the pen of the former we have a great many hymns of a high rank, offices and prayers in rhymes, which are all remarkable for their carefully-cultivated form and the tone of deep piety. His rhymed prayers are short; they nearly all contain five stanzas, each beginning with the word 'Ave.' 11 Conrad of Gaming has left liturgical compositions, chiefly hymns in honour of the Virgin and the saints. They are, as a rule, rather long, but reveal a childlike and touching piety. 12 Conrad of Gaming was more widely read in Germany than his model, Christian of Liliennfeld, whose poems are preserved almost exclusively in the MSS of his own monastery. There were other imitators of Christian of Liliennfeld besides Conrad, e.g. the Carthusian Albert of Prague (first half of 14th cent.), who compiled a book of devotions entitled Scilla Ceili, in which there is a series of his own compositions. They are inferior in style, and of rare prose. 13 The prolific writer, Ulrich Stocklin of Rottach, abbot of Wessobrunn (+ 1445), shows skilful manipulation of the forms, but suffers from the same weakness of barren verbiage. He followed the lines marked out by Christian and Conrad, and may therefore be mentioned here, although he properly belongs to the 15th century. Turning from this group of South German writers to the North, we find in the 14th cent. a small group of Scandinavian hymn-writers of some importance. The oldest of them is Brynolf, bishop of Scania (+ 1317), the author of a rhymed office on St. Helena of Skotisio, with the hymns belonging to it, and probably also of a rhymed office in honour of St. Nikolas of Linköping.

To Birger Gregersen (Biericus Gregori; + 1389), bishop of Upsala, we owe five rhymed offices in honour of St. Birgitta and St. Beutidos, with accompanying hymns. 14 The hymns of both these writers are distinguished by carefully modelled poetic forms, showing the influence of the third northern writer, Petrus Olavi, attendant of St. Birgitta and confessor in Vadstena (+ 1378), seems more careless regarding cadence and rhyme. He arranged the choral office of the monks of the order of St. Birgitta, and composed a whole series of new hymns for it. 15

In the first half of the 14th cent. there flourished in France Guillaume de Deguileville (Guillermus de Deguileville; + after 1350), prior of Chaalis,
known through his epic didactic poems in his mother tongue, "Pélerinage de la vie humaine," "Pélerinage au Père Jean Hainms," and "Pélerinage à Jean-Christ. He has also left several very long Latin poems, in which is noticeable a vanishing of the word accentuation. Along with him should be mentioned the Dominican Juan de las Fuentes, a Franciscan poet († after 1367), who composed several hymns in honour of the Virgin, in carefully-handled forms. At the end of the 14th cent. lived the two poets who are closestily connected through the Feast of the Visitation of Our Lady, which was just then beginning to be observed—Cardinal Adam Easton, also called "Adam Anglais" († 1367), and Johann of Jenstein, archbishop of Prague († 1400). An illuminated edition of Jenstein's works, which he himself revised, appeared in Rome. This is the present Codex Vaticanus, 1172. It also contains the ecclesiastical compositions of Jenstein—sequences, tropes, rhymed offices, hymns, and rhymed prayers, which are very unequal in content and form, his worst being the hymns on St. Wenzel. Jenstein was the first to introduce the observance of the festival of the Visitation of the Virgin into his Archepiscopal see, and urged Urban VI. to introduce it into the whole Church. The festival was prevented by death from carrying out the suggestion; but his successor, Boniface IX., in 1389 issued the bull commanding the observance of the festival. The office prescribed by Jenstein, however, was not adopted into the Roman breviary, for that honour was reserved for a rhymed office composed by Cardinal Adam Easton. It begins with the words: "Aequum laudes virginis," and exhibits an acrostic on his name, which, however, has fallen into disorder. This office was handled severely, and not altogether justly, by the Humanist Jakob Wimpeling in his Cantigas ecclesiasticæ et divinis officiis deum praebentor (1500). The festival of the Visitation of the Virgin caused great activity on the part of poets. There are no fewer than ten different rhymed offices in honour of it. One of them, used by the Dominicans, begins, "Collatentur corda fidélium," was composed by Raimund of Capua († 1399), confessor and biographer of St. Catherine of Siena. Another Dominician, Marius Arbelle († 1473), wrote acrostic hymns in honour of Saint Vincent Ferrer.

We have already entered the 15th century. Among the works in the earlier part of it is the unfortunate fanatic Johann Hus († 1415). Only a few of his hymns remain, composed partly in Czech and partly in Latin. The most widely celebrated was his "Jesus Christ, nostra salus," which shows his name woven into an acrostic, and which is still occasionally sung. With the name of Hus we may connect the host of anonymous Bohemian poets who zealously cultivated a special kind of Church hymn, the so-called "canzoni," Next to France, no country has so delighted in this form of vocal music as Bohemia. Their form—dubbed stanzas, and a concluding song to follow, sometimes similarly doubled—often very artistic; their rhythm and rhymes, however, show every sign of decadence.

This form belongs to universal history marks the end of the 15th cent.—that of Thomas a Kempis († 1471). He wrote a number of hymns and rhymed prayers, sometimes of the prayers seem to have been provided with melodies, most of them not for public but for private use. The compositions of the famous mystic are not of great poetic value. Somewhat younger than a Kempis, and following in his track as a mystic and poet, is

Johannes Mauburnus († 1503), abbot of Livry. Most of his works are still unprinted. Those which we know to be his are found in his Rerum exercitationes spiritualiæ (first ed. 1504). With those two mystics we may associate a third, Henricus Pistor, canon of St. Victor in Paris. John Cechtoues has preserved in his Evangeliarrum speculum a sequence of his composed for the festival of St. John the Baptist. One of the most prolific theological authors of this period is Dionysius of Rigel, known also as "Dionysius Carthusianus" († 1471). He has been given the cognomen, "Doctor Ecclesiastical," as a matter of fact, his character appears to have been the prosaic one of compiler. He also composed some Latin hymns. There are extant long poems on God and the Holy Trinity, or, rather, rhymed dissertations and reflections which are wearisome from their proximity. They are known only from the author's Opera Minora, Cologne, 1582. A few other religious poets of this period deserve mention. Matthias Ronto, a monk of the Olivetan convent at Siena († 1449), wrote some hymns which are preserved in a MS of the Wilhering monastery.

Hieronymus de Verdec (as he was called in the convent, though christened John), prior of Monem († 1479), wrote religious poems (which never take the form of liturgical composition) celebrating Christ and the Virgin, Ignatius Benedict, Florian, George, etc. Considering the period in which he wrote, their form is well managed, but there is no genuine poetical inspiration in them. We may also mention Wynandus de Stega, priest at Bauern, who has left hymns and sequences in honour of St. Werner. A Vatican MS has preserved two other poems of his, one in a German adaptation. At the close of the century stands the Franciscan Johannes Tiscarrad, who founded an order of Magdalens in Paris in 1463. A Paris MS has handed down some of his poems, whose form reminds us of those of Guillaume de Deguileville. He composed the Acts of Bernard de Corbié and the five martyrs of Morocco, and possibly also the rhymed office which exists in honour of these martyrs.

Summary.—It would be easy to add to the foregoing list of hymn-writers, but the purpose of this article has been rather to indicate only the principal figures and most significant tendencies at work. We have seen that all through the Middle Ages metrical as well as rythmical poetry was cultivated, while poetry modelled on that of ancient Rome was never entirely extinct. But towards the end of the medieval period the character of this poetry changed; and the so-called humanistic poetry, the product of the Renaissance of classical learning, appeared. It is distinguished from the metrical poetry of the Middle Ages, not only by greater purity of language and poetical form, but also by greater independence on the common models—a dependence which is sometimes repellent. This kind of composition first appeared in Italy in the beginning of the 14th cent., but soon passed over into Germany. At first it was only partly in the form of religious poetry or hymns, but later it became quite an important branch of religious lyric poetry. As this humanistic poetry seldom found its way into liturgical use, for the exigencies of which the period of rhythmical poetry had made ample provision, we have here disregarded it. It was a new art, allies and hostile to the Middle Ages. Although medieval composition in its offshoots reaches far past the Council of Trent, we may designate the Council of Trent as the dividing line between

HYMNS (Irish Christian)

1. Liturgical hymns. — The use of hymns in the offices of the Church seems to have been an ancient custom in Ireland. In Adomnán’s Vita S. Columbae, a hymn called Liber septemannisuis sanctorum Columbae is mentioned. In the Fita of Vercelli, the hymn for use on each of the days of the week is mentioned (il. 9), and we learn from one of the prefaces to St. Columba’s hymn, ‘Altus Proctor’ (p. 794), that the gift of the hymns was a donation to St. Columba of the Hymns of the Week. We find also that, on the morning of the death of the Saint (9 June 597), hymns were sung in the monastery of Iona; *hymnis mortuorum terminatis* is the phrase used by Adomnán. By a directive of St. Columba, portions of hymns in the offices of the Church were sung from this at least as early as 576. The collection of *Liber Hymnorum* of Bangor dates from the end of the 7th cent., and twelve hymns used in the Church offices are given in it. Again, in the directions given in the liturgical fragments of the end of the 9th cent., a copy of the Gospels called the Book of Monkwell, portions of three (possibly four) well-known Irish hymns are directed to be sung, with certain supplementary stanzas, in the course of a short office which seems to have been designed as a service of intercession against the yellow plague, a pestilence which decimated Ireland at frequent intervals during the 7th and following centuries. An office practically identical with this is appointed in the tract entitled *The Second Vision of Adamnan* (Leabhar Béinne, p. 258² f.), for special days of fasting and prayer; also on the first three leaves of the 10th cent. (4) Greek Psalter at Basel (A. vii. 3), which contains some odes and directions for what appears to be a monastic office in Irish handwriting, three Irish hymns are found.

In the largest existing collection of Irish and Latin hymns, that known as the Irish Liber Hymnorum, of which two MSS, slightly differing from each other in manuscripts, exist—one now in the Franciscan Library, Merchant’s Quay, Dublin, which belonged to the Librarius of the 12th cent., and now in the Library of Trinity College, Dublin (classed E. 4, 5), a MS of the 11th cent.—the material does not appear to have been arranged in any order of service. It contains in the main body of the collection 17 hymns and poems in Latin and 39 in Irish, also the Te Deum, Benedictus, *Magnificat*, *Glória in excelsis*, an abridgment of the Psalter, et al. and among the extra matter added at a later time in the Franciscan MS are found two other Latin hymns and the *Lorica* of Gildas, with the Bene dictes, *the Quieronymus vulgat*, etc.

From the manner in which the material is thrown together and the elaborate introductions in which it is accompanied, it would appear that this is a miscellany of religious pieces rather than an actual choir book. The editors suggest that it may have been composed by the monks of St. Columba when they were giving place to the use in England, in order to preserve all those pieces which were most cherished in the memories of the monks, as connected with a system of the mass and the office which was being superseded by a new and less national order of religious services.

Several of the poems contained in the Liber Hymnorum are ascribed to saints of the 6th and 7th centuries. Besides the *Lorica*, or hymn of protection, ascribed to St. Patrick himself, there are hymns by St. Sechnall (Secondarius), a contemporary and disciple of St. Patrick, by St. Columba (+ 597), by St. Ultan (+550), by St. Brocna (+630), by St. Cummian Fada (*the Tall*) (+681-2), and by other saints of the 7th and 8th centuries. That many of these hymns are of great antiquity is shown by the use of them in pre- Hieromonic texts in both the OT and NT quotations, and stanzas as found in Sechnall’s *Audite omnes* in honour of St. Patrick, and in St. Columba’s *Altus Proctor*.

The surprise of St. Patrick, expressed in the Preface, at the use by St. Sechnall of the word ‘maximus’ in the phrase *maximus namque in regno caeliolum* is also interesting, as this is the reading of St. Cyprian and of the Rushworth Gospels, the Vulgate (Mt. 59) having ‘majus.’ It shows that the hymns preserved a reading of the word, the time of the composition of the Irish prefaces, which are probably in all cases later than the hymns.
HYMNS (Irish Christian)

themselves, and that the author of the preface was perplexed at the use of unstudied Latin.

The ascension of the ‘Lorica’ to St. Patrick (+461), and of the hymn ‘Auditae omnes’ to his contemporary St. Sechnall, is confirmed by their rude Latinity and by the use of unequal grammatical forms of the language, as well as by the structure of both poems. The ‘Lorica’ is not metre, and, though constructed with a sense of proportion, it shows no knowledge of either Irish or classic form—forms appear as a result of accidental practices, and is evidently the direct descendant of the native pagan rite or charm. The hymn of St. Sechnall is unmetered, and quantity and elision are completely ignored; nor does it show acquaintance with the Irish poetic rules of composition, which required a certain fixed number of lines and syllables, besides alliteration, rhyme, and assonance. It would seem that these poems were composed before the native poetic metres had reached perfection, and this is in accordance with their early legendary origin. In St. Columba’s great poem, the ‘Altus Proserat’, we are carried a step forward, for some more definite effort at structural conformity. It is formed by a word or three or more syllables, with a rhyming sound in the last syllable and a careful choice of the concurrent vowels. This hymn recmits in an alphabetical progression of sounds, addressed to the Trinity, the creation and fall of angels, the creation and fall of man, the foundations of the earth and the world, and the second coming of Christ. It is a monument of the last, and shows curious affinities with the Book of Enoch and may be compared with the ‘Sultair-a-Buann’, the longest Irish medieval poem on any religious subject, which contains sections treating of the same questions in astronomy and speculations of the system and fate of the universe. It is found in many MSS among works ascribed to Prosper of Aquitaine (498–546); in three cases or more it follows on the work de Fide contemplationis, now known not to be a genuine work of Prosper. But its subject and character, its barbarous Latinity, and its use of words found only in a few pieces which have Celtic origins (see below, §3), as well as its use of an O. Latin text similar to that in early use in Ireland, tend to confirm the traditional ascription of the hymn to St. Columba. The inclusion of a long portion of this poem, the hymn by Rabban Marqar, bishop of Mauvinus (785–856), and its appearance among the works of Prosper, testify to its popularity. It is said in the preface to have been written in Hi (Iona) and sent as a gift to Pope Gregory, who found no fault with it except the scantiness in it of praise of the Trinity per se, though the Persons were praised through their creatures.’ This reproach reaching St. Columba, he wrote the hymn ‘In te Christe’ to amend this lack in the former composition.

A gradual approach to a more perfect form of verse-structure according to native Irish ideals is seen in the hymn of St. Cummian ‘the Tall,’ ‘Colubha Jeda,’ which has a rich end-rhyme or harmony of two or more syllables, with a careful correspondence in the vowel sounds and occasional alliteration and internal rhyme. In the later hymns of St. Columba, such as the praise in praise of St. Michael, and in St. Cuchulain’s hymn to the Virgin, written about the middle of the 8th cent. (at a time when we know from the fragments of manuscripts that there were verses that remain to us that Irish poetry was approaching its highest perfection), we find this verse-system developed with the richest and noblest effect. The prosody of the classical language is replaced by accent and rhyme, and the verses still espouse the same high aims, with its rich trisyllabic rhymes, its alliterations, cor-

responsesesses, and harmonies, could not easily be surpassed;

aeterna posuit praestare
ut possidam cum Christo
(regis regni aula
paradisi gardia)
(Hymn of St. Columba (+ 733),
or again:
cinctibus in usu die
consilisactis Dei
circulatibus variis
(Hymn of St. Cuchulain (+ 465),

The only hymn in the Ir. Lib. Hymn. not by Irish saints is that ascribed to St. Hilary of Poitiers, ‘Hymnus to pagan rites, a primitive unrhymed poem which is praised by Bede (de Arte mel. 23 [PL xc. 1733]), but without naming any author. It is not accepted as Hilary’s by Daniel or Drees; the latter considers that only the three hymns found in the Gamarrini MS in Airezzo are genuine works of Hilary. Yet there is much more solid ground for accepting it as his than there is for receiving the seven hymns printed under Hilary’s name by Daniel and accepted by D. S. Wrangham in Julian’s Dict. of Hymnology (London, 1907, p. 522), the authorities for which are very late. The ‘Hymnus dicat’ is expressly ascribed to Hilary in the Antiphonary of Bangor, 7th cent., in two great codices of St. Gall (cod. 567 and 377) of the 8th and 9th centuries, and in the two MS copies of the Ir. Lib. Hymn.; it is also so named by Hincmar, archbishop of Rheims (+888), twice (de Vita et morte Tho, Li., 7, and xii. [PL xxxv. 446, 560]); it forms part of the offices in the Book of St. Mulling, in the Second Vision of Adamnan, and in the Book of Cerne—the last a document which has clearly been formed under Irish influences; in the Second Vision of Adamnan, as in ‘de Arreis,’ an old Irish tract (for which see R. Col. xx. [1894] 283–289, it is directed to be repeated as a spiritual exercise, and the value attached to its recitation is shown by the story of the three clerics (W. Stokes, Lives of the Saints from the Book of Lismore, Oxford, 1888, pp. vii. IX). It would appear from the Buli of St. Ailbe of Emlyn (+473 [2]), and from its place in the Book of Cerne, that it was sung in the early morning; but one of the prefaces suggests another purpose. It says hic nobis conventus canone post praemunium, and the St. Gall MS no. 597 directs its recitation omnis tempore.

The lines seem to be an addition by an Irish writer. Among the addittamia copied into the Liber Hymnorum, the well-known ‘Christe qui lux es et dies,’ and a poem in praise of St. Peter and Paul, ‘Christi Patris in dextera’; the latter poem is not found elsewhere, and it is probably a native composition. Among the hymns in Irish, the poem in praise of St. Brigid, variously ascribed to St. Columba and to St. Ultan (+930), beginning Breigit e bhatmanach—‘Brigid, ever-great woman—is the most perfect, and shows a complete mastery of the difficult technical laws which governed Irish verse.

In the Antiphonary of Bangor are found twelve Latin hymns, ten of them placed close together in the first section of the book, and two at the end, but probably sung at intervals during the recitation. For we find the musical rubric ‘Post Hymnum’ attached to four of the Collects. Besides these hymns proper, there is a whole series of rhyming Collects for the hours of the day (nos. 17–26), and similar Collects are found elsewhere interspersed among the prayers and antiphons of the Twelve hymns, two, the ‘Hymnus dicat’ of St. Hilary and St. Sechnall’s hymn in praise of St. Patrick, ‘Auditae omnes,’ are found in the Ir. Lib. Hymn., and elsewhere. Three (nos. 14, 95, 129) are personal to the monastery of Bangor (Co. Down), from which the service book originally emanated; they celebrate the praises of this important foundation and of its first abbots. It con-
HYMNS (Irish Christian) 27

tains also a hymn in praise of a St. Camalec, of whom very little is known. Of the remaining six hymns, one, 'Medine noctis tenuas est' (no. 10), is also given both here and in the Mozarabic Breviary (see PL lxxxvi. 382 f.) for 'medium noctis.' It is cited in the Rule (xlii. 89) of Cassarius of Arles (f. 542; AS, Jan. ii. 18) for use at the first nocturn of the 5th antiphon of the Mass of All Souls for use at Nocturns on Sunday. Daniel (i. 45, iv. 26) thinks that it is an Ambrosian hymn, and that it is distinct from the hymn 'Jesus defensor omnium' with which it has often been printed. It does not seem to be Irish in origin.
The remaining five hymns are not found elsewhere, and nos. 3, 8, 9 are almost undoubtedly Irish. Nos. 11, 12 do not show sufficient indications to pronounce upon their origin, but they are found in no other copy, which argues in favour of their local origin. The hymn of the Apostles (no. 3) was very popular in Ireland and is mentioned with St. Sechnall's hymn 'Audite omnes, St. Colman's hymn' in the Trinitarian Breviary, and the 'Hymnum dictum' of Hilary as among the penitential hymns recommended in The Second Vision of Adamnan (c. 1096). It consists of 42 stanzas beginning 'precedentiae quae sunt praegatae in Easterday or Sunday hymns. Daniel thinks, and J. D. Chambers (in Julian, p. 642) agrees with him, that it bears evidence of having been translated from a Greek original.

The beautiful hymn, 'Sancti venite, Christi corpus sumite' (no. 8), is entitled Hymnus quando communicant sectorii, and was sung during the communion of the priests who formed part of the monastic body. According to Daniel's argument (i. no. 160, iv. 160) that the administration of the sacrament in both kinds to the laity is implied in such lines as 'hoc sacramento corporis et sanguinis' falls to the ground so far as this hymn is concerned. Tradition says that, when Patrick and Sechnall were passing a church, they heard this hymn chanted within by a choir of angels at the offering. It is still used in the offices of the Western Church, and is familiar in Neale's translation, 'Draw nigh and take the Body of the Lord.' The hymn 'Ignis Creator igneus' (no. 9), entitled Hymnus quando sacerdos benedictur, seems to have been sung at the daily lighting of lamps at the 'Hora Vespertina' or else at the annual festival of the benediction of the Paschal candle on Easter even. The custom of lighting a Paschal fire was very ancient in Ireland, and it has been observed from there to other countries (Christian Worship, London, 1912, p. 390 f.). The hymn to martyrs, 'Sacratisanmi martyres summi Dei' (no. 11), is rhythmical rather than metrical. No. 12, 'Spiritus divinae lucis gloriae,' is for use at matins on Sunday. Its origin is unknown.

It is to be remarked how common was the use of alphabetical hymns in the Irish Church. Nos. 1, 2, 14, 25, and 26 of the hymns in the Tr. Lib. Hymn. were of alphabetical hymns, and nos. 13, 14, 15, and 129 in the Antiphonary of Bangor. In some instances, as in no. 14, the hymn to St. Congall, abbott and founder of Bangor monastery, the trilingual poem is a tour de force; almost every line in the stanzas of 8 or 10 lines each begins and ends with the same letter or syllable. The hymn of Ceiunu Sedulius, 'A solis ortus cardine,' is also trilingual. Among the Latin poems of St. Columbanus (i, 548) and Sedulius Scotorum (f. after 874) are several on religious subjects. Drexel includes seven hymns by Sedulius in his Antiphonal, and there are several others by Irish authors (Ansel. Hymn. i. [Leip.

2. Hymns used as charms.—A large number of the Irish hymns were composed as charms, the recitation of them being supposed to ward off disease, fire, or pestilence, or they were used to safeguard against evil. Codex Rhynianus has such directions. Such are the 'Noli Pater' of St. Columba, the 'Loricas' of St. Patrick and St. Columba, the hymn of St. Colman mac Úi Chusainigh (Sén Dé), the hymn of St. Cuichmaine, 'Loricas', the hymn of St. Colman mac Murchon, 'In Trinitate spes mea,' and many others. The recitation of such hymns was supposed not only to confer protection on the author, but to be a safeguard against similar perils to all who recited them afterwards, besides in most cases securing heaven to those who kept up the practice regularly (see prefaces to these hymns in Tr. Lib. Hymn.). In several instances, where the hymn was long or difficult to remember, the same benefits were obtained by reciting the last three stanzas only. For instances of this practice see the office in the Book of St. Nualing, in which the stanzas 'Audite omnes,' 'Celebra Judae,' and 'Hymnum dictum' only are given. In one instance, 'Christes in nostris,' only the last three stanzas of one of the hymns have survived either in the Tr. Lib. Hymn. or in the office in the Basil MS. (A. vii. 3), where also it is found. A similar custom is the recitation of 365 verses gathered from the Psalms, which was held to be equivalent to that of the whole Psalter.

3. Loricas.—Among these charm-hymns, the Loricas or Loricas, Hymns of the Breast-plate, which were composed as a protection against danger or disease, form a group by themselves, showing special peculiarities. Ten of these are known, but they are, doubtless, only examples of a common form of religious invocation. They usually fall into two or three parts, the first invoking the power of the Trinity and of the angels and heavenly hosts, the second enumerating at great length and with extraordinary minuteness the members of the body which might be subject to injury, with often a third part detailing the dangers to which the body is exposed, as in St. Patrick's 'Loricca.' A common feature of all these charm-hymns is the repetition of the same phrases and invocations, often at great length. Sometimes the whole is repeated three times.

The following are the most important of these Loricas: (1) The Loricas of St. Patrick is of early date, though it is not found in Muirchert's Life of the saint. It was traditionally composed as a protection when the saint and his companions were in flight before the king of Tara, and is said to have rendered them invisible. It is uncouth in language; but in spirit and structure, as in religious fervour, it is by far the finest of all the charm-hymns.

(2) More pagan and very fatalistic in tone is an ancient and rude Loricas of St. Columba, in which God is addressed as 'King of the White Sun' and Christ as 'My Druid.' It is said to have been composed as a protection when the saint was journeying to Donegal after the Battle of Caldermach.

(3) The authorship of the long Loricas of Celladas (called also the Loricas of Lachadóc or Celladóir) is uncertain. In the oldest document which contains it—the Book of Stummernach (Man. H. 3048, 3195)—the 5th century, it is attributed to Lorcus in the year of danger, and that the virtues of the hymn are great if it is chanted three times a day. It was translated into Latin by Mene, weapon spirit, and was composed of 236 lines (ending 8th cent.), and is the earliest. 'Hymnum sanctum Loricas Sceínotius genuit,' and the Book of Céna (5th cent.), 'Lorcus sung this Loricca three times a day.' The copy in the Liber Gardi (fol. 121v) is more explicit. It has Lorcus sedit arma ubi spectabant the words: 'Lorcus sits among the arms which watched...
HYMNS (Modern Christian)

The great interest attaching to this ‘Lorica’ arises from the number of peculiarities of language that it contains, some of the forms being found elsewhere only in the Psalterium Hebraicum, a fragment containing an abstract of rare and difficult words from a continuous Latin text, with portions of an enlarged recension of the tract Hesperius jamina (first published by A. Mai in vol. v. of his Classici Antiqui, Rome, 1823-38), pp. 479-500, from P. F. V. d. *Lett., Reg. lxxi. ; cf. also Migone, XL xx. 1197-96.

The same pomposo and artificial Latin, interspersed with Greek and Hebrew, is found in the Lorica of Jambula, date of which resembles that of the Lorica of Gilgas in its detailed list of the parts of the body as well as in the obscurity of its word forms (V. H. Fricke, ZCP ii. 1883-84).

It will be seen that the two prominent features of all these charm-hymns are (1) the tendency to repetition of words and phrases, and (2) the use of uncommon words and forms. These peculiarities occur in a greater or less degree in the two remaining ‘Loria’ charms here published, the Lorica of Mugron, successor of Columbella (c 900) (K. Meyer, Hibernica Minor, Oxford, 1894, pp. 42-44, from MS Raw. R. 512), and a ‘Lorica’, classed 23. E. 18, p. 227, in the Royal Irish Academy (partly translated by R. Wynn, in *Ir. Lib. Hymn*. ii. 210; text printed by R. Meyer, *Archiv für Celt. Lexikographik*, iii. 1907; cf., from MS. 23 N. 10, p. 19, Royal Ir. Acad., and by A. O’Kellahan, in *Erna*, iv. 1910, 236), with translations by *Allan Proctor* of St. Columba shows similar peculiarities of language, while redundancies of expression are a common feature in prayers, confessions, etc., proving that the language used was intended primarily for public recitation.

To any one familiar with the ancient pagan charms of incantations universal among the pagan charms, and runes are still found in the highlands of Scotland and in Ireland, and a group of some of these collected in A. Carmichael’s *Carmín Gadael* (Edinburgh, 1696), or in Hyde’s *Religious Scourge of Convall* (London, 1696) will show that their form is patterned after the ‘Lorica’ of St. Patrick or of Mugron. Incantations were taught and practised as a regular part of their profession by the bardic schools of the 14th-15th cent. or later, and the black books of incantations on the same model found in the St. Gall MSS show that they were also used in the monasteries. The pagan charms were Christianized in tone but their forms remained unchanged (see, for instance, HYMNS [Coltic] above, p. 4). It is also to be remarked that all charms contain large numbers of words that have become so corrupted by constant oral repetition that they remain as mere meaningless sounds; they are simply spell-words essential to the charm. Is it not probable that some of the ancient spell-words found in the ancient ‘Loricas’ of Ireland may be explained in this way?

ELIANOR HULL

HYMNS (Modern Christian).—The rise of modern hymnody may be regarded as synchronous with the rise of Protestantism, and in the earliest hymns is mirrored the antithesis between the old faith and the new.

1. German hymns.—The earliest hymns of the Reformation were those of the Bohemian Brethren, of which a collection of 80 was printed at Prague in 1501, and another, of about 400, in 1505; but these were so effectually suppressed that only one imperfect copy of the former is known to exist, and none of the latter. For practical purposes the history of modern hymnody begins with the publication, in 1524, at Erfurt and Wittenberg respectively, of two small books of German hymns, in each of which about three-fourths of the contents were from the pen of Luther. Altogether, Luther’s hymns and sacred songs number 38; of these 11 are wholly or partly translated from the Latin, 4 are revised from re-formation hymns, 6 are metrical psalms, 6 paraphrases of the Holy Scripture, and 11 original. At least 24 are still in more or less common use.

The hymnody of Protestant Germany is the richest in Christendom, and by 1525 it was known to include more than 80,000 hymns of varying merit. The great majority of the authors were members of the Lutheran Church, whereas the hymn-writers of the ‘Reformed,’ or Calvinistic, Church were comparatively few, and their efforts were generally more suited to private devotion than to public worship. This is due to a belief, strongly held by Zwingi and Calvin, and generally accepted by their adherents, that the Biblical Psalms furnish a complete manual of Jewish public worship, and the only one divinely sanctioned. As a result of this belief, more than 130 German Matrical Psalters, more or less complete,
are known to exist, and seven-eighths of them were composed by members of the Reformed Church.

The great German hymn-writers may be conveniently grouped into three chief periods, each of which has its own distinctive character.

(1) The first group consists of Luther and his contemporaries, from about 1517 to 1560. Their hymns are neither didactic nor poetic, nor are they recondite, or obscure; and they were certainly not popular or churchly. As long as the German language endures, men will sing Luther's "pathetic "Aus tiefer Not, bis ich heut noch du kennet:" Ich bin der Welt zu wert: Ein festes Burg." With him must be associated Michael Weiss (1480-1534), who translated many of the Bohemian Brethren's hymns into German, but who is perhaps best remembered for his funeral hymn "Nun lasst uns das Leib begraben," Paulus Speratus (1494-1551), Nicholas Hermann (+1551), Paul Eber (1511-69), Johann Zwick, of the Reformed Church (1496-1543), and Hans Sachs, the cobbler-bard of Nürnberg (1484-1570).

(2) The second period, 1560-1618, is one of transition towards the subjective style of later times. There are occasional references to personal experience and didactic matter is sometimes introduced. Many worthless compositions of this age have come down to us, and the best authors were too prolific. Among these may be named Bartholomäus Ringwalt (1534-88), Johann Michael Altenburg (1584-1640), and, above all, Philipp Nicolai (1556-1608).

(3) The third period is that of the Thirty Years' War, 1618-48. The Psalms may become the model and type; brutality and tawdryness give place to enlargement of thought. From this estimate one hymn must be excluded, the "Nun danket alle Gott." Of Martin Rinckart (1586-1649), which is almost the only one of his voluminous writings which has escaped oblivion, and which has become the national doxology of Germany. Martin Opitz (1587-1638) was a literary man of no very decided principles; but he greatly influenced German hymnody by his literary style, and as a reformer of the German prosody. This influence operated chiefly on writers of what is called the "Pietist School." Of these the foremost place belongs to Johann Heermann (1586-1647), the author of 400 hymns, including "Herr Jesu Christ, du walst uns Ruh" and "Heißt lebtest Jesu, warst du vor uns schamlos." Johann Pfeiffer (1625-97) was also a prolific writer. Others of the school are Josua Stiegemann (1658-1692), Paul Flemming (1609-40), Matthias Apelles von Löwenstern (1649-1648), and Johann Matthias Meyhart (1590-1642). To the contemporary school of Königsberg belonged Simon Dach (1605-59), Georg Weisell (1590-1635), Heinrich Alberti (1604-81), and others.

(4) The fourth period reaches from the peace of Westphalia to the outbreak of the Pietistic controversy, 1648-90. Hymns of this period assume more and more of a subjective character, the objective features tending to disappear, while hymns relating to various circumstomtaneous and events in life—affliction, consolation, death, the family, etc.—become more numerous. There is often a tendency to excessive length, a common fault of mediative verse. The chief singer of this generation is Paulus Gerhard (1607-70). Foremost among his 120 hymns is the incomparable "O Haupt voll Blut und Wunden," and not far behind it come the ever popular "Beließ du deinen Wein," "Nur dich, mein Jesus, lieb," and "Seligst du, mein Jesus Schatz." To the same school belong Ernst C. Homburg (1605-81), Johann Franck (1618-77), Georg Neumark (1621-81), and Johann Georg Albinus (1624-79).

Contemporary with these is a group of poets whose hymns are, in general tone, mystic and contemplative. Foremost among these is Johann Jakob Schöfler (1624-77), who, becoming a convert to the Roman Communion in 1653, assumed the name of Angelus Silesius. Many of his hymns, written both before and after his conversion, display a marvellous sweetness, in strange contrast with the bitterness of his controversial writings, e.g. "Ich will dich lieben, meine Süße, 'Liebe, die du mich zum Bilde,' etc. With him may be associated Christian Knorr von Rosenroth (1639-89), Michael Franck, Sigismund von Birken, Christoph Wegleiter, and others of less note; and in the Reformed Church Joachim Neander (1650-80).

(5) The fifth period is that of Pietism, about 1690-1750. The hymnists of these two generations are far too numerous to be particularly specified, but they may be classified in five groups. (i) The contemporaries of Spencer, persuaded by a healthy and sincere piety. Spencer himself wrote few hymns of any value, and those produced by the rest of the group are noticeable for quality rather than for quantity. We may mention Adam Dross (1620-1701), Johann Jakob Schütz (1640-90), Cyriacus Günther (1649-1704), Samuel Rodigast (1649-1708), Laurentius Laurentei (1660-1729), and Gottfried Arnold (1666-1714).

(ii) The older school of Halle. Their hymns are of a scriptural, practical, and devotional tendency, and are mostly for individual edification and for the closet, rather than for the church. Most worthy of notice are Wolfgang Christoph Deissler (1660-1707), the author of more than 100 hymns, of which the best known are "Mein Jesus lend dem die Sächerinhä" and "Ich lasse dich nicht, du musst mein Jesus bleiben," Johann Andreas Freylinghausen (1670-1739), Johann Heinrich Schröder (1687-99), Bartholomäus Crus- culus (1674-1724), and Johann Joseph Winckler (1670-1722). (iii) To these succeeded a younger school, representing the decline of Pietism into sentimentality and trivialities. The better writers of this school are Johann Jakob Rambach (1655-1736), Johann Ludwig Conrad Alselendorf (1653-1728), Carl Heinrich von Bogatzky (1690-1774), and Leopold F. F. Lehr (1709-44).

(iv) Side by side with these is a group of poets devoted to strict Lutheran orthodoxy, and fore unsympathetic towards Pietism. Three of these composed, among them, nearly 2000 hymns, many of which, though not of the highest order of merit, are of great and permanent value. Salomo Franck (1659-1726) is best remembered by his hymn for Easter even, "So ruhest da, O meine Ruh!"; Erhard Neumeister (1671-1776) was the author of many cantatas for use in church, and re-modelled a number of older hymns; Benjamin Schmelck (1672-1737) was the most prolific of the school. (v) The school which is represented in theology by Bengel and Ursinus, mediating between Pietism and orthodoxy, claims a few sacred poets. The chief of these are Johann Mentzer (1658-1734), Johann Andreas Rothe (1688-1758), P. F. Hille (1699-1799), and C. C. L. von Pfeil (1712-94). Two distinguished hymnists of the period appear to stand apart from all these various groups. Gerhard Tersteegen (1669-1770), brought up in the Reformed Church, but from early manhood a mystic and a separatist, has been identified with Schüller than with any other poet. His numerous hymns were long restricted to a limited circle, but during the last 70 years have been represented in most German hymn-books as well as in the Reformed. 'Gott ist gegenwärtig' is the most popular; but 'Siegesfahrere, Ehrenkönig,'
HYMNS (Modern Christian)

‘Gott rafet noch,’ and others are of sterling value.

Nicholas Ludwig von Zinzendorf (1700-60), patren and afterwards bishop of the Moravian Brethren, wrote upwards of 2000 hymns of almost every possible degree of merit, even at the lowest displaying deep personal devotion to Christ. His extraordinary aptitude for improvising led to the production of a huge mass of rhyme, of which sincerity and piety is the only redeeming feature. The use of his hymns is now restricted to the Moravian Church; but ‘Jesu, geh voran’ and ‘Christi Blut und Gerechtigkeit’ are hymns that Christendom will not willingly let die; and a few cents, translated into various languages, are current.

(6) The sixth period, from about 1750 to 1830, is that of the ‘Enlightenment’ (q.v.), whose effect on hymnody was for the time disastrous, especially in the dilution of the church hymn-books and sacred poetry in general. During its earlier years the orthodox tradition was worthily maintained by Christian Furchsiegelt (1715-69), who in 1757 published 56 hymns characterized by rational piety and good taste, but generally individual rather than churchly. Many of them are still in use, the most popular being ‘Jesu lebt, mit ihm sah ich.’ Friedrich Klopstock (1724-1803) produced in 1758 modernized re-casts of 29 earlier German hymns, apparently without any doctrinal motive. Of his original pieces, mostly emotional and subjective, few if any are in the triumphant funeral song ‘Aufersteht, ja, auferstewirst em.’ Modernizing of standard hymns, without doctrinal purpose and with undesirable results, was undertaken by Johann Andreas Cramer (1723-88) and Johann Adolf Schlegel (1724-93). The one spiritual singer who stands conspicuous in this dreary time is Johann Caspar Lavater (1741-1801). Of his 700 hymns the best known is ‘Jesus Christus, wascht in mir.’ Georg F. P. von Hardenberg, commonly called Novalis, was a religious poet rather than a hymn-writer.

(7) A seventh period, one of Evangelical revival, may be dated from the publication by Christian Karl Josias Bunsen in 1833 of his Verzeichn von einem allgemeinen evangelischen Gesang- und Gelehrtblacks, containing 506 hymns, followed in 1837 by the Evangelischer Liederzonten of Albert Knapp, with 3590. Bunsen endeavored to restore, as nearly as possible, the original text of each hymn; Knapp, under the pressure of less scrupulous; but from that time the countless hymn-books of the preceding age gradually disappeared; and those now in use usually contain the best productions of evangelical singers from the Reformation downward. It would be impossible to pass in review the original compositions of the last three generations. Five names are specially worthy of mention: Ernst Meritz Arnold (1799-1860), Christian F. H. Sachs (1782-1850), Johann Wilhelm Meinhold (1797-1851), Albert Knapp (1798-1864), and Carl J. P. Spitta (1801-69), of whose Psalter und Hymne 55 editions were printed in as many years.

Hymns. Even in the 15th cent. a number of macaronic hymns, partly Latin and partly Dutch, and generally of a Hassite character, were current in the Netherlands. A collection of them was printed at Keppen in 1590. The Reformation in these regions was of so strongly Calvinistic a type, however, that several synods forbad the singing of any hymns except those found in the Liturgy. A collection of metrical Psalms, with music, was printed at Antwerp in 1593; and two complete metrical Dutch Psalters appeared in 1596. To another Psalter, published in 1598, were added metrical versions of other Scripture canticles, together with the Ten Com

mandments, the Lord’s Prayer, the Creed, and the ‘Gloria in excelsis.’ Altogether between 30 and 40 Dutch Psalters appeared before the end of the 17th cent. Each year the Synod of South Holland issued an authorized version, which is still commonly used in the Dutch Reformed Church.

The Dutch Lutherans, in 1615, published at Utrecht a collection of 58 hymns translated from the German. The suppression of these was attempted by the Synod of Dort (1619); but a few years later lost synods authorized their use on festival occasions. In 1629, Willem Elbing published a volume entitled Psalmen, Gezangen en godsdienstige Liederen, which, together with a posthumous volume of hymns by the same author, was long in popular use for domestic worship. The first religious bodies in Holland to authorize the use of hymns in public worship, however, were dissenters from the Dutch Reformed Establishment. The Anabaptists published an Appendix to the Psalter in 1713; a hymnal for a separatist congregation, compiled by Jacob Greeuwegen in 1751, ran through several editions; and a large volume of Metzatene hymns appeared in the latter half of the 18th cent. It was not until 1799 that the first authorized hymn-book of the Dutch Reformed Church was offered to the public. It contained 192 hymns, of which a large proportion were translations. An Appendix, which had been in preparation for 20 years, was authorized in 1869. This hymn-book and appendix are still in common use both in Holland and in South Africa; and nearly all other Dutch hymnals have borrowed largely from them.

Of the older Dutch Lutheran hymns almost half were appropriate only to festivals. It was not till 1836 that the Lutheran Synod of Holland published its own hymn-book, containing 1500 hymns, of which 150 were from the older Lutheran books, and 100 were new compositions. Some serious omissions were supplied in an Appendix 24 years later. The other most important Dutch hymn-books are the modern Baptist hymnal, a volume of translations from the Latin by R. B. Janse (1860), and a volume of revival hymns, translated from English and American originals. Very few Dutch hymns are original compositions; according to the best authority, the whole number does not much exceed 3000, of which at least two-thirds are translations.

3. Scandinavian hymns.—The Reformation in the Scandinavian countries was, to a great extent, a work of the rulers rather than the people. The national Churches of Sweden, Denmark, and Norway were thoroughly Erasmian. The Reformation these churches, at least on their publication and use in public worship.

The father of Swedish hymnody was Lars Peterson, archbishop of Upsala (1570-1610), who, in addition to original pieces, made many translations from Latin and German hymns. His brother, Olaf Peterson, also has some repute as a hymn-writer. They were assisted in their poetic work by two other brothers, Lars and Peter Anderson. Those, in 1588, published Swenske songer eller visor nu paa nytt pandrade, forbrakte, och under en annan titel De svenska festlig kyrkomusik (Swedish Songs or Hymns, now newly printed, enlarged, and published in a different shape from the former); what that former book was we are not informed. Two kings of Sweden—Erik XIV. († 1577) and Gustavus Adolphus (slain at Lützen, 1632)—added the national hymnody; the latter, shortly before his death, wrote the renowned battle-song, ‘Förråras ej, da lilla hop.’ The number of Swedish hymn-writers is not great. Of the 15 who wrote within the 16th and 18th centuries the greatest was Johan Olaf Wallin.

(1779-1839). In 1819 he published *Den svenska Psalmbooken av Konungen gislad och stansfattad* ("The Swedish Hymn-book, approved and confirmed by the King"), which is still in common use throughout the country. To it he contributed about 150 original hymns, besides translations and revisions.

In 1837 there was published at Rostock, in the Danish language, *Een nyt Håndbog*, and *Psalmier af aendelige Sange*, written off then helige Skrift ("A new Hymnbook, with Psalms and Spiritual Songs of Praise", derived from Holy Writ). This contained translations from the Latin, German, and Swedish, and some originals. Its principal author was Claus Martensen Tondel-binder (1809-70); and it was the hymnbook of the Danish and Norwegian Lutherans for more than a century. In 1863, Thomas Kingo, bishop of Funen, whose *Aendelige Sjusage-chor* ("Spiritual Choral-Songs") had attracted attention, was commissioned to prepare a new hymnbook for the churches in both countries. The first part appeared in 1869; it contained many of Kingo's own compositions, and was greatly admired by some, while others, of the Pietistic school, unsatisfactorily decried it as rationalistic. The controversy was so violent that the completion of the book was entrusted to a committee, who, however, worked on its lines, and included many of his hymns. The resultant *Forordet af kilke-Pietistisk-Bog* ("Authorised New Church Hymn-book"), in its complete form, appeared in 1869. Several attempts were made to supplant it by collections on Pietistic lines. Especially noteworthy was *Salmebog* (New Hymnbook) edited in 1740 by Eric Pontoppidan. This contained a large number of hymns, both original and translated, by Hans Aclof Bronson, bishop of Ribe, whose views were definitely Pietistic. Another attempt in the same direction was made by N. H. Balle, bishop of Seeland, who in 1767 produced a revision of Kingo's book under the title *Evangelisk-Kristiog Salmebog* ("Evangelical Christian Hymn-book"). The attempt failed, however, because of the feebleness of the verse; and more than half a century passed before any real improvement was effected. This at length was brought about, mainly through the influence of Nicolai Frederik Severin Grundtvig (1783-1872). This eminent scholar, true poet, and fervent evangelist waged war for many years against the prevailing Rationalism and Einaudism among the national Church, and suffered accordingly. While under ecclesiastical suspension he wrote and compiled *Sang-Vårk til danke Kirke* ("Song-Work for the Danish Church"). His moral influence at length prevailed so far that his worth was appreciated, and steps were taken to prepare a new *Salmebog til Kirke og Hus-Andtgift* ("Hymn-book for Church and House Worship"). This was sanctioned for general use in 1853, having been edited by the poet Bernhard Severin Ingemann (1758-1862). It was based on the old book of Kingo, but contained many hymns by Bronson, Grundtvig, and Ingemann.

It is closely bound to Denmark by political relations. For a long time the only hymn-book in use there was the *Graduale or Mess-sang-bok* ("Mass-Song-Book"), consisting of translations from the Old Norse of a few of the earlier hymns of Martinson's collection. The last edition is dated 1773. Since then local translations of the Danish books have been in use. In 1851, Thorsen of Roskilde issued *Ny stor og aendelig Salmebog* ("New Contributions to the Evangelical Psalm-book"), much on the lines of the Danish book of 1855.

Norway, until 1814, had been politically united with Denmark; and Danish hymn-books, or revisions of such books in modernised language, have been in common use—the churches allowing themselves considerable freedom. The books now most in use are *Kirke-Salme-Bog* ("The Church Hymnbook"), edited on the basis of older books by Magnus B. Landstad, and authorized in 1869; and *Christelige Psalmier til Haus og Uebel* ("Christian Hymns for Domestic Worship and for Use in Schools"), published in 1851 by Johan Nikolai Frantzén. A very large proportion of the Scandinavian hymns are translated from German Lutheran authors. The older hymns are generally doctrinal or invocative; those of later date are rather subjective, expressing personal sentiments, hopes, and fears. As to the characteristics of individual singers, it is commonly said that 'Kingo is the poet of Easter, Bronson of Christmas, and Grundtvig of Whitsunfeast.'

4. French hymn-books. — The earliest known French hymn-book was printed in 1527. It was entitled *Hymnes communs de l'année*, and consisted of translations of Latin hymns by Nicolas Maunoy. In 1533 appeared the *Motel d'une dame pittoresque*, by Marguerite de Navarre, which was appended by sectarian collections, by Clément Marot, of the Creed, Lord's Prayer, Ave Maria, Grace before Meals, etc. Between this date and 1567 nine small books of Hymn-music were published, containing arias, canons, ballads, and paraphrases of Scripture. Meanwhile, in 1542, Marot published his 50metrical Psalms, which, being sung to ballad tunes, became widely fashionable. In hope of suppressing these, several other volumes of devout songs were produced by Huguenot writers, such as Nicolas Denisot, Charles de Navères, Etienne de Mainz Fleur; but none of them were designed for public worship. The Reformed Church in France, as in Germany and elsewhere, limited its church-song to Biblical Psalms and Canticles. Various writers, therefore, sought to supply what was lacking in Marot's work; and in 1560 a complete Psalter was published in Paris, consisting of Marot's versions, with others by Gilles d'Aurigay, Robert Brinoulé, C. R., and Cl. B. This was generally supplanted by the Psalter printed at Clermont Montet Théodore de Bess, 1562. Of this at least 24 editions were printed within the year, at Paris, Caen, Lyons, Genoa, and other places. Until the early years of the 18th cent., this Psalter alone was used in the public worship of the Reformed Church; and beyond the bounds of that community its influence has been far wider than that of any other metrical Psalter.

The Lutheran Church in France, besides using the Psalter, made free use of translations of the best German hymns. *Psalmes, hymnes et cantiques... mis en rime française selon la maniére allemande*, Frankfort, 1612, contains 68 hymns or paraphrases. Successive enlargements or developments of this book appeared under various titles in the 17th and 18th centuries, that of 1759 having 381 pieces. The rigidity of the Reformed Church also gave way in 1705, when Benedict Pictet published *Cinqante-quatre cantiques sacrés pour les principes civilisés*. Twelve of these were authorized for use in public worship, while an appendix to the Psalter throughout the Reformed Church. Some of them are among the finest hymns in the French language.

The French Roman Catholic hymnists of the 17th cent. are not numerous. *La Philomèle séraphique*, by Jean l'Evangeliste, 1632, consisted of hymns of
HYMNS (Modern Christian)

This seems a fitting place to mention a group of French Roman Catholic poets of the 17th and early 18th centuries, who wrote in Latin, and whose hymns are to be found in the Parisian Library of 1736 and other Gallican Breviaries. The foremost of them in merit is Charles Coffin (1678-1749); he must be ranked Jean Baptiste de Santeuil (1639-1697) and his elder brother Edme, both of whom are honoredly associated with Gaullist tradition. The spiritual poems of Vittoria Colonna (1490-1547) were highly esteemed, but there is no evidence that they were ever used in public worship.

From this time to later in the same century, no religious poet of eminence arose in Italy. But in 1888, Matteo Cofarea, a priest of Florence, edited a collection of about 350 hymns, under the title Corona di sacre canzoni, or Laude spirituali di più divoti autori. The author’s names are not stated.

This is the earliest known Italian hymn-book.

Bernardo Adimari, a priest of the Oratory of San Filippo Neri, was the author of 212 hymns, published at Florence in 1739.

The most noteworthy of these is Cantiques populaires, which with its supplemental contains upwards of 60 translations of English and American ‘revival hymns.’

An undeniational hymn-book with music, appeared in Paris in 1834, under the title of Chants chrétiens, edited by Henri Lutteroth. Its aim was to collect the best hymns of the older poets, as Racine, Pascal, Bossuet, Voltaire, together with others of recent date. It was much modified in successive editions, assuming its final shape, with 200 hymns, in 1857. Its influence has been wide and beneficial. Tracts have been sung with numerous of great merit. Its chief blemish is that it is too didactic—an unusual fault in French hymnody. Which is, for the most part, intensely subjective. French, Corneli, rarely or never have the strength of good German or English poetry; but the best of them have much sweetness and tenderness, while some are highly picturesque, and others of delightful simplicity.

5. Italian hymns.—The religious revival initiated by St. Francis of Assisi in the 13th cent. called forth a number of religious songs in the Veronese and Umbrian dialects, some of which were sung by the Flagellants in their processions. Towards the end of the century Jacopo da Todi (to whom is usually attributed the ‘Seiati Mater dolores’) wrote many vernacular songs extolling the divine love, which, though never used in the regular church services, were much sung during the two following centuries by members of the religious orders. Towards the middle of the 16th cent. G. Savonarola wrote Hymnus de Praise and Contemplation, which, however, were not suited for use in public worship. Two of his contemporaries, Maffei Balotti and Girolamo Beneveniti, wrote hymns which were widely known and used. The spiritual poems of Vittoria Colonna (1490-1547) were highly esteemed, but there is no evidence that they were ever used in public worship.

From this time till late in the same century, no religious poet of eminence arose in Italy. But in 1888, Matteo Cofarea, a priest of Florence, edited a collection of about 350 hymns, under the title Corona di sacre canzoni, or Laude spirituali di più divoti autori. The author’s names are not stated.

This is the earliest known Italian hymn-book.
HYMNS (Modern Christian) 33

served in MSS. of the 14th and 15th centuries, some of them of no little merit, they are all—except a few of them—too elegant to have been used in public worship. The earliest printed English hymns are probably those in Marshall's Primer of 1536 and the Saram Primer of 1538. These are translations from the Latin, and their verses are in the form of the Latin antiphon.

The first English hymn-book, properly so called, is the Goodye Psalmes and Spirituall Songs of Miles Coverdale, 1539. It contains 41 pieces, all of which, except one or two, are adaptations from the German—17 being from Luther. There are versions of 13 Psalms, the 'Magnificat,' 'Nunc DIMITTIS,' 'Gloria in excelsis,' the Creed, the Lord's Prayer, and the Ten Commandments. Efforts were made to suppress this book, but in 1545 Henry VIII. authorized a new Primer, which contained 8 hymns, smoother in versification than the former primers. In the Creamer is believed to have had a hand, and it was his desire that English versions of the old Church hymns should have a place in the projected new service-books. It is thought that the influence of Calvin and Bucer had to do with the abandonment of this project.

During the interval between the death of Henry and the accession of Elizabeth the 'old version' of the Swiss liturgy was used. The chief contributors were Thomas Sternhold, John Hopkins, Thomas Norton, William Kethe, and William Whittingham. To several successive editions a few hymns were prefixed or appended: the complete edition of 1569 has 23, including 'The Lamentation of a Sinner' and the earliest known non-Roman Communion hymn in the English language, 'The Lord be thanked for His Gifts.' The next really significant hymnological publication is the Guide and Godlie Ballaties, which bears the same relation to the Reformation in Scotland as Coverdale's Goodye Psalmes does to that in England. The principal, not the only, authors were the brothers John and Robert Woodburne, clergymen of Dundee, who became exiles on account of their Protestant principles. The earliest editions have been entirely perished, and their date is matter of conjecture; the oldest known perfect copy was printed at Edinburgh in 1578, with the title An Eopenhous Book of godlie Psalmes and spirituall Songs concernyng Christ and his contayners. Besides the 22 metrical Psalms, 8 Scripture paraphrases, the Creed, 34 hymns, 8 graces, and 43 ballads, some devotional and some satirical. More than a fourth of the whole is translated from the German, and a few pieces are borrowed or adapted from Coverdale. Several of the devotional ballads are remarkable for their beauty and tenderness, while the satirical pieces, some of them coarse as well as humorous, attack the Roman Catholic clergy with considerable vigour.

It may seem surprising that, of about 130 English writers of religious verse in the latter half of the 16th century, scarcely any connect themselves with the worship-song of the Church. The explanation lies in the fact that—largely, no doubt, through the Calvinistic influence brought to bear upon the formative period of the English Book of Common Prayer—only the sonorous and noble form was allowed for hymns in public worship, an injunction of the first year of Elizabeth granting merely that 'in the beginning, or in the end of the Common Prayer, either the Psalms of David or other Psalms may be sung; or, such like song, to the praise of Almighty God.' It was not until the revision of 1661-92 that the insertion, after the thirdcollect at morning, of the 23rd Psalm, was made, and the anthem opened the way, even though slowly taken, to a true hymnody. In modern times a few English hymns have come into common use, e.g., the earliest original English morning hymn, 'You that have spent the evening in the Holy of the holies, and the delightful 'Jerusalem, my happy home,' of which the author, 'F. B. P.' has not been satisfactorily identified.

Between the death of Elizabeth and the outbreak of the Civil War the conditions were much the same; and the sacred poets of the day, such as John Donne, George Herbert, and Phineas Fletcher, for the most part offered no contributions to public worship. Their devout lyrics have found a place in modern hymn-books. A few attempts were made to supplant the Sternhold and Hopkins Psalter, but with little success. The very meritorious version of George Sandys failed to win the public ear; that of William, Earl of Stirling, though put forth in the name of King James, had no better success; and the faithful but indubitably harsh version of Henry Ainsworth found favour only with the Separatists.

To this period, however, belongs the first really great English hymn-writer, George Wither (1588-1667). His poetical works, sacred and secular, are numerous. His noble version of the Psalms has been undeservedly neglected. His Hymns and Songs of the Church was printed in 1629, with 'the particular approbation both of the king and of all persons that diet in church worship,' but the chief of the publishers, I. W. Company, frustrated the intentions of the king and clergy, and practically suppressed the book. It contained all the OT and NT Canticles, the Song of Songs, the Lamentations, versions of the Lord's Prayer and 'Ven Creator,' and 44 original hymns for various ecclesiastical seasons and special occasions. In 1641, Wither published Malabarish, or Britton's Second Remembrancer, with a dedication to the Parliament, his sympathies being at that time on the popular side. The book contained 233 hymns, classified as occasional, temporary, and personal; 22 of them were taken from the former book, often with alterations which are not always improvements.

The Sternhold and Hopkins Psalter had become unacceptable to the Puritans, not because of its rugged versification, but because it was not, in their opinion, sufficiently close to the original. They conceived the impossible idea of a literal translation from the Hebrew in an English metre that could be sung, and in the Scottish dialect. There were 22 metrical Psalms, 8 Scripture paraphrases, the Creed, 34 hymns, 8 graces, and 43 ballads, some devotional and some satirical. More than a fourth of the whole is translated from the German, and a few pieces are borrowed or adapted from Coverdale. Several of the devotional ballads are remarkable for their beauty and tenderness, while the satirical pieces, some of them coarse as well as humorous, attack the Roman Catholic clergy with considerable vigour.

It may seem surprising that, of about 130 English writers of religious verse in the latter half of the 16th century, scarcely any connect themselves with the worship-song of the Church. The explanation lies in the fact that—largely, no doubt, through the Calvinistic influence brought to bear upon the formative period of the English Book of Common Prayer—only the sonorous and noble form was allowed for hymns in public worship, an injunction of the first year of Elizabeth granting merely that 'in the beginning, or in the end of the Common Prayer, either the Psalms of David or other Psalms may be sung; or, such like song, to the praise of Almighty God.' It was not until the revision of 1661-92 that the insertion, after the third collect at morning, of the 23rd Psalm, was made, and the anthem opened the way, even though slowly taken, to a true hymnody. In modern times a few English hymns have come into common use, e.g., the earliest original English morning hymn, 'You that have spent the evening in the Holy of the holies, and the delightful 'Jerusalem, my happy home,' of which the author, 'F. B. P.' has not been satisfactorily identified.

Between the fall of the Monarchy and the Revolution several poets produced lyrics which, though not designed for use in worship, were utilized by later compilers of hymn-books. Such were Henry Vaughan, Richard Crashaw, and John Quarles. There were also at least three genuine hymnists: William Blacklock has been unaccountably neglected, Samuel Crossman, and John Mason, whose best productions are still deservedly popular. Mention must also be
HYMNS (Modern Christian)

made of two rhymesters, whose verses are undistinguishable doggerel, but who did excellent work as pioneers. Abraham Cheare, a Baptist minister of Plymouth, who died in prison in 1668, is the first known English author of hymns for children. Robert Blyth had been set at the pillory for seeking to propagate his opinions through the press. His Spiritual Melody (1691) is poor; but by it, and by a couple of vigorous pamphlets, he practically broke down the prejudice with which the art then existed among Baptists against singing in public worship.

In 1699 was printed the first edition, unauthorized and incorrect, of Bishop Thomas Ken's Morning and Evening Hymns. It was the first book written for the scholars of Winchester School, they have won an abiding place in the esteem of all English-speaking Christendom. Ken's other hymns, for the festivals of the Church, were a posthumous publication, and have been little regarded.

At the time of the Revolution the Psalms of Sternhold and Hopkins, already archaic, were still almost exclusively used in the Anglican Church; the well-meaning attempts of W. King, John Patrick, John Denham, and others had totally failed to supplant them; and the noble versions of Sanders and Warburton, and the popular Carey, were not published until 1698. A New Version, by Nahum Tate and Nicholas Brady, was put forth under royal patronage, and soon became immensely popular. Its one merit is that, smooth and unimpeachable, it is an easy taste of the day. For 150 years it held the field against all rivals; at present about half-a-dozen of the psalms of the 'New Version' continue in use, the most popular being the 34th and the 67th.

In 1712, the General Assembly of Presbyterianism after the Revolution, the General Assembly considered the question of an authorized appendix to the Scottish Psalms. A year later, a letter from Robert Lyon to John Dunlop, of Edinburgh, six books of Spiritual Songs or Holy Poems, consisting of versified parables of all the poetical parts of Scripture except the Psalter. The work is of a dogmatic, solstitial character, the rendering being fairly close, without that rigidity which marked the Scottish and New English Psalms. In 1663, Simonson being Moderator, the Assembly appointed R. Cohn also a Moderator, to write a version of the Scottish Songs; but the business was delayed year after year, and in the end nothing was done, so that the Scottish Psalms continued in exclusive use for about two more years.

Among English Nonconformists the manuals of Church Song chiefly in use were the Scottish Psalms, a revision of the New English Psalter, and, occasionally, Baxter's. During the last decade of the century several ministers—Robert Fletching, Joseph Boys, Thomas Shepherd, Richard Davis, and Joseph Stennett—produced hymns for the use of their own congregations, some of which found wider, though very limited, acceptance. Nearly all these hymns are personal rather than congregational; and most of them are more Calvinistic theology in rhyme. The first selection of hymns for Nonconformist worship of which we have found any trace was published in 1694 under the title A Collection of Divine Hymns upon several Occasions. To this seven authors contributed, among whom were John Boys, Richard Baxter, and Thomas Shepherd. The next selection, Matthew Henry's Family Hymns (1690), consisted entirely of cantos from various metrical versions of the Psalms.

In 1697 Henry presented a list of objections to the metrical form, and was challenged to produce something better. The next Sunday the spirited paraphrase 'Behold the Glories of the Lamb Amidst His Father's throne' was 'lined out,' to the delight of the worshippers. The young man was Isaac Watts, in after years renowned as pastor, philosopher, and poet. In 1707 he published Hymns and Spiritual Songs, in Three Books, containing 223 pieces, which in the second edition had been increased to 360. These were followed in 1715 by Divine and Moral Songs for the Use of Children; and in 1719 by The Psalms of David imitated in the Language of the New Testament. Other publications, in the same volume, were followed; and Watts's various works contain at least 750 hymns, of which nearly 200 are still in common use. Before his death, in 1748, fifteen or sixteen editions of his hymns had been circulated; and for many years the years of their use, with or without a supplement, was almost universal among Congregationalists and Baptists. His meditative hymns are not usually superior to those of Cowman, Ken, and Mason; but in hymns of praise fitted for united utterance he has no superior and few equals. His theology is in the main Puritan, without the Puritan rigidity and intolerance.

Watts was the first who could be deemed the founder of a distinct school of English hymn-writers. Among his followers may be reckoned, in addition to a multitude of inferior rhymers, Simon Brown (1680-1728), Philip Doddridge (1702-1751), Charles Wesley (1707-1788), Thomas Gifford (1712-58), Thomas Gibbons (1725-83), Samuel Stennett (1737-1806), and Samuel Hinton (1784-1835). The influence of Watts extended into Scotland. In the hymns of John William (c. 1750), and in the Spiritual Songs of John Erskine (1726), he is plagiarized almost as directly as in Watts's own books. The Translations and Paraphrases prepared by a committee of the General Assembly in 1774, 49 of 51 pieces, are based on Watts and on Doddridge, the last 12 or basis of the Translations, even to the praiseful or unison parts. The most successful of these alterations is the fine paraphrase transmitted from one of Watts's best known hymns—'How bright those glorious spirits shine.'

Of writers more or less contemporary with Watts, but outside the sphere of his influence, we may mention John Dryden (1631-1701), who is believed to have translated from the Latin most of the hymns which appear in the Roman Catholic Primer of 1706; Nahum Tate (1711-1801), already mentioned, the chief author of these hymns and alternative versions which appeared as supplements to published works. Matthew Prior (1664-1721); Samuel Wesley the elder (1730-1816), and Joseph Scott (1765-176), most of whose hymns are strongly Calvinistic.

We come next to the greatest of all English hymn-writers, Charles Wesley (1707-1783), the poet of the Methodist revival. The exact number of his hymns is doubtful, because of an arrangement with his brother John (1703-1761) that in works for which they were jointly the author, the name of John should not be distinguished. The poetical publications of the two brothers number 62 distinct issues, ranging from single leaflets to stent volumes, 9 of which include pieces by other authors. In the lowest estimate these works contain 4395 hymns by the Wesleys. Of these 100, including all those translated from the German, are certainly the work of John, while of 225 the authorship is uncertain; so that 2970 pieces at least may be ascribed to Charles. His general tone is strongly Arminian. At least 500 of Charles Wesley's hymns are in use in the Methodist Churches, and a large proportion of them are equally valued in other communions. The unapproachable greatness of Charles Wesley seems to have had a repressive influence on hymn-writers. Christ Church, Oxford, has a collection of 1400 volumes of hymn-books, and is perhaps the richest repository of hymn-books of all denominations. A large number of these are dedicated to Charles Wesley; indeed, no other hymn-writer, with the exception of Thomas Olivers, is so fully remembered by the great hymn, 'The God of Abraham praise.'

A difficulty to the argument is represented by a succession of writers who seem to have derived their inspiration from the Moravian Brethren. The German Moravian hymns are too often characterized by a kind of uniformness, with a sort of sonorousness, and the same feature is found, in a mitigated form, in many English hymns of the same denomination. John Gainsdon (1747-1771), sometimes called Stenton Harcourt, and afterwards Monseigneur, bishop, edited the great Hymn-book of 1754, containing 1153...
HYMNS (Modern Christian)

Hymns of the Children of God in all Ages, which, expurgated and revised, furnished most of the material of Moravian hymn-books till quite recent times. Its influence is evident in the hymns of John Cennick (1718-53), of James Allen (1764-1804), of Walter Shirley (1725-58), and of Jonathan Evans (1740-1809). Other Moravian hymns are also found in the works of Augustus Montague Toplady (1740-78) (‘Rocks of Ages, call for me’); but they are modified by his militant Calvinism.

The first edition of the Olney Hymns was published in 1779, the joint work of William Cowper (1731-1800) and John Newton (1725-1807). The romance of Newton’s adventurous youth, and the pathetic story of Cowper’s intermittent insanity, are well known; the effect of each on their respective contributions is easily traceable. The features common to both resemble those of J. Mason; Cowper is remarkable for his tenderness, and occasionally for expressions or thoughts that seem suggestive of Moravian sources; Newton is sometimes gloomy, and sometimes descends to mere doggerel, but at his best he exhibits a strength and joyousness to which his colleague is a stranger. His hymns number 250, of which 50 or 60 are still in use; Cowper produced 60 (besides his translations from Stocholm, of which nearly half have a place in modern hymn-books). To the Olney may be referred Thomas Hauis (1732-1820), John Flavell (1740-1817), John Ryland (1753-1826), and many others of lesser note.

A few writers of the 18th cent., who cannot be classed with any particular school, are remembered as the authors of single hymns; while the rest of these latter, however good, are all largely forgotten. Such are Robert Seagrave (1693-1750) (‘Rise, my Soul, and stretch thy wings’); James Fanch (1704-67) (‘Beyond the glittering starry skies’); John Bakewell (1721-1819) (‘Hail, Thou once despised Jesus!’); Edward Pernott (1726-92) (‘All hail the power of Jesus’ name!’); and Robert Robinson (1735-90) (‘Come, Thou Fount of every blessing’).

Two small sects which originated in Scotland about the middle of the 18th cent. yielded hymns of some literary interest. Among the Christian Societies of Scotland, the latest is the One Hundred and Sixty-five’s; and a number of hymns were produced by Robert Sibbald. Of similar importance is the Society of the Holy Name. The hymns of the latter are especially designed for secular tunes; and this idea was still more vigorously carried out by John Barclay (1734-98), the leader of the Berens. Some of Barclay’s hymns, set to familiar Jacobite and other Scottish tunes, possess real beauty. Similar adaptations occur in A Collection of Spiritual Songs, published in 1761 by John Geddes, a Roman Catholic clergyman. Here, too, may be mentioned the Christian Hymns, Poems, and Sacred Songs of James Reilly, the Universalist (1729-58), published in 1777; these display a good deal of rugged vigour.

It seems fitting to notice also some of the more important selections of hymns that appeared in the 18th cent. The first of any note offered to the Church of England seems to have been the Collection of Psalms and Hymns, 70 in number, published in London in 1717. This excited little interest, and was not reprinted. More important was George Whitefield’s Collection of Hymns for Social Worship (1735). The hymns were mostly from Watts and Wesley, often freely altered, and some compiled by an Anglican clergyman, were chiefly used in ‘Tabernacles’ and Meeting-houses for Nonconformist or undenominational worship. This collection passed through many editions, the last being dated 1781. Martin Madsen’s Collection of Psalms and Hymns (1760) had a great influence on subsequent developments of hymnody, chiefly through his very skilful alterations and corrections. Other collections were those of Drye (1761), R. Conyers (1767), Richard de Courcy (1779), and Toplady (1779). All these editors were Anglican clergymen of the Evangelical type, and the tone of their books was distinctly Calvinistic. So were the various collections used in the Continent of Europe from 1735 till 1780, when they were displaced by her own Select Collection. A strong Evangelical Arminianism, on the other hand, pervaded the selections made by John Rippon (1761), and the General Baptist Hymn-book (1776) and Dan Taylor’s (1793) were just as distinctively Arminian. The Scottish Baptist books also deserve notice: the collection made by Sir William Sinclair of Keiss (1761) and A Collection of Christian Songs and Hymns (Glasgow, 1796).

The growth first of Arminianism and then of Socinianism in the English Presbyterian Churches necessitated a special provision for worship. This was usually made by eliminating from the hymns of orthodox writers all allusion to the Trinity, the Incarnation, and the Atonement. The earliest selection made on this principle was published in London in 1727; but it not till 1790 that such books appeared at various places before the close of the century; one of them, by William Enfield (Warrington, 1778), proved to be ‘unmixed with the disputed doctrines of any sect.’ Most of these books contain little that could not be sung by a pious Jew or Muhammadan.

The earlier years of the 19th cent. were barren of new or striking hymns; but before long these burst forth such a flood of sacred melody as England had never heard before. It is quite impossible to review, within any reasonable limits, the production of the English and Scottish hymnologists of the century, of whom more than 550 are enumerated between 1800 and 1890. A few points may be briefly noted.

1. The large number of women writers who produced not merely sentimental, but genuine hymns of lasting worth. Prominent among them are Cecil Frances Alexander (1823-90) (‘The golden gates lift up their heads’), Sarah Flower Adams (1803-88) (‘Nearer, my God, to Thee’), Charlotte Elliot (1799-1871) (‘Just as I am, without one plea’), Frances Ridley Havergal (1836-79) (‘Take my life, and let it be’), Adelaide Anne Procter (1825-64) (‘The way is long and dreary’), and Anna Letitia Waring (1823-91) (‘My heart is resting, O my God’). Others have displayed remarkable skill as translators, especially from the German, as Jane Borthwick (1815-97), Frances Elizabeth Watson (1823-96), and Catherine Winkworth (1829-78). Others, again, are unrivalled in adapting themselves to the capacities of children, e.g., Cecil Frances Alexander (‘There is a land far away’), Jane E. Leeson (1807-82) (‘Saviour, teach me day by day’), and Jennie Luke (1813-1906) (‘I think when I read that sweet story of old’).

2. The appearance, for the first time, of really good hymns for children, child thought in child language. Isaac Watts had led the way, but for two generations he had no followers. Even
Charles Wesley's efforts in this direction were far from being a complete success; his famous "Gentle Jesus, meek and mild," needed explaining, to make it intelligible to children. But Jane Taylor (1738-1824) and her sister, Ann Gilbert (1732-1806), understood child nature; and, though sometimes chided in theology, their songs for children usually excelled those of Watts as far as his did the efforts of Abraham Cheare. The path they opened up was worthily followed not only by C. F. Alexander and Jennifer Locke, but by John Newton (1725-1807), John Wesley, H. W. Neale (1815-66). Among these may be associated a few Roman Catholics, especially Edward Caswall (1814-78). The foremost translator of the late Latin hymns of the Dominicans was Isaac Watts (1674-1748), first urged on public attention by J. M. Neale, and his versions are still most in favour; but many others have been effectively translated by John Brownlie.

The early anthologies, and revival hymns, mostly subjective or hortatory, and many of them set to the tunes of popular songs. These became common in connexion with the great religious revival of 1842, and were augmented about 1873 by hymns of a more humanitarian origin. Some of them were valuable, but many were sentimental and, when judged by strict canons, not always in the best of taste. It must be owned, however, that the Anthologia of this class, used in evangelical bodies, like the Salvation Army, have often availed to call forth genuine religious emotions in persons of the most degraded type. The hymn-books of the 19th cent. are literally innumerable. No fewer than 160 were compiled for use in the Anglican Church alone between 1800 and 1860, to which in the next 30 years 90 more were added. The use of many was merely local, while others are fairly representative of distinct schools of thought within the Church. Of the collections in use prior to 1850 by far the greatest number represented the Evangelical school; and it is estimated that these were used in nearly three-fourths of the English parish churches. The most popular books of this class were William Mercer's Cathedral Psalter and Hymn Book (1804), Charles B. Sneyd's Songs of Grace and Glory (strongly Calvinistic, 1879), and Edward H. Bickersteth's Hymnal Companion (1876, revised 1876). Of the later Hymn Books of the High Church type was Hymns Ancient and Modern (1861, revised 1875; a reissue 1899; another revision 1904), which has become the most popular of all English hymn-books. To the same school belong William Cooke and Benjamin Horden's The Churchman's Aid (1854), Hymns (1871, revised 1903). To the advanced Church party belong The Hymnal Noted (1852), with its many supplements, James Skinner's Daily Service Hymnal (1858). Hymns (1857), Hymns Ancient and Modern (1861), revised 1875; a reissue 1899; another revision 1904), which has become the most popular of all English hymn-books. To the same school belong William Cooke and Benjamin Horden's The Churchman's Aid (1854), Hymns (1871, revised 1903). To the advanced Church party belong The Hymnal Noted (1852), with its many supplements, James Skinner's Daily Service Hymnal (1858).
HYMNS (Modern Christian)

than that year. Two Universalist collections were published in 1792; Lutheran and Unitarian collections in 1795; the first Congregational selection and the National in 1796, were by English authors. In 1838, the most extensively used hymn-books of the Episcopal, Presbyterian, Methodist, Baptist, Congregational, and Reformed Churches, published between 1836 and 1880, less than 14 per cent of the hymns are of American origin.

Until the great religious revival which commenced in America about 1858, and extended over a large part of English-speaking Christendom, very few hymns of American authors were included in English collections. Since that time, however, many have gained great popularity, especially hymns embodying the Gospel call, hymns of aspiration, and such as relate to the future life. A common fault of American hymns is a too great tendency towards sentimentalism; and many of them seem to owe their popularity to the light singing of the tunes.

8. Welsh hymns.—There is some evidence of use in the Early British Church, of hymns in the native language; but no specimens remain, and by the time Protestantism arose the apathy of the Church had apparently given the gift of composing hymns. Early in the 17th century, the celebrated Vicar of Llandyfriog, Rees Pritchard, published a volume of religious poems, largely didactic, entitled Cantedig y Cywyngor ("The Welshman's Cup"), portions of which were commonly sung as hymns. It became immensely popular, was many times reprinted, and its influence is not yet extinct. In 1621 Archdeacon Williams, F.R.S., produced his metrical version of the Psalms, which is still in use, though partially supplanted by the more modern version of William Morris. Skill in poetical composition is so widely diffused among Welsh-speaking people that the number of hymn-writers is very great, while the peculiarity of family names makes them somewhat difficult to distinguish. Two poets of the 17th cent., Rowland Vaughan (c. 1620-58) and Ellis Wyn (1670-1734), are held in immortal remembrance, each by a single hymn. As early as 1703 a collection of sacred hymns was published by Thomas Baddy, a dissenting minister. A few years later, 1707, Charles Wesley, the celebrated educationalist, Griffith Jones of Llanddowror (1683-1731), but it is not certain whether it included any of his own compositions.

The great outflow of Welsh sacred song began with the religious revival initiated by the early Calvinistic Methodists, in whose ranks are the greatest of all Welsh hymnists, William Williams of Pantycelyn (1717-91), his contemporary David Williams, Morgan Rhys (+ 1776), and Ann Gruffyth (1776-1805). Outside that circle we find the names of David Jones of Caio, who in 1763 translated into Welsh Watts's Psalms, and afterwards his Divine Songs. He was a Congregationalist, as was Ieuan Thomas of Rhaeadr (fl. 1779-86), many of whose hymns are still in use. The great hymn-writer among the Unitarians was Edward Williams, 1718-78, the founder of the Unitarian movement in Wales. The first Baptist hymn-book in Wales was compiled by Joseph Harris, called "Gomer," in 1812; it contained many of his originals.

The best striking characteristics of Welsh hymnody are depth of emotion and abundant use of metaphor—every kind of natural object being enlisted for the illustration of things spiritual. The hymns are in general long, and the doxology, the Benediction, or the Last Supper, is the subject.
HYMNS (Egyptian).—The religious literature of ancient Egypt is fairly prolific in the department of hymnology, and a considerable amount of religious poetry has been preserved and translated. In these, it cannot be said that the quality is on the same level with the quantity. To a great extent the hymns which have survived bear the stamp, not of a genuine personal religious feeling on the part of the writer, as in the case of our own best hymns, but of a merely official and stereotyped attitude towards the deities whose praises are celebrated. Religion in Egypt, as we know it, was far too much of a business of caste-ridden ritual to leave much room for any natural outpouring of thoughts and feelings of devotion and affection. If there were such outpourings, they were probably not on account of the great gods, whose position was infinitely removed from that of the ordinary worshipper, but rather of some of the minor deities, whom, as we know the common people of Egypt took to their hearts in particular, are frequent and unpretentious figures of the great gods and goddesses. Such effusions were not at all likely to survive in any quantity in comparison with the stilted official odes which had the sanction of the priesthood, were multiplied in an infinity of copies, and were continually used for ritual purposes.

In the time of the New Empire, however, there were signs of a genuine feeling of impatience with the stereotyped formulae of the official religion, and one or two of the hymns which have survived from this period give us what is otherwise very unusual—the expression of a personal and living interest in religion. Thus, from a hieratic papyrus of this period we have the following:

'Amen-Ra, I love thee and unfold thee in my heart... I do not fear anxiety in my heart; what Amen-Ra saith cometh to pass.'

To the same period also belong a hymn which gives us one of the very few evidences that the devout Egyptian ever realized his own sinfulness: 'Christ, forgive me not,' says a writer whose poem is preserved in the Anastasi Papyrus, 'according to my sins.' A hymn to Thoth from the Sallier Papyrus presents another character, and contains an interesting nature of true religion totally alien to the beliefs of the upholders of the great religious cults of the nation, who emphatically seem to have thought that they would be heard for their much speaking:

'O thou sweet spring for the thirsty in the desert; it is closed for those who speak there; it is open for those who keep silence there. When the silent man cometh, he finds the spring.'

Such natural expressions of love, confidence, and inward intercourse with God are, however, quite exceptional in Egyptian hymnology. Taking the ordinary run of the hymns to the great gods, we find a constant repetition of the same cycle of ideas in practically the same phrase—a repetition which becomes wearisome, and gives a very poor idea of the song, which any genuine devotional feeling can have entered into Egyptian religious Erman's opinion (Life in Ancient Egypt, p. 389 f.) is amply justified:

'There seems to be no question of devotional feelings on the part of the singer; in fact, the greatest number of stilted phrases, which could be adapted to any of the mighty gods, have been used in adoration of the king.'

In fact, the average Egyptian hymn seems to have been constructed on a certain definite recipe. It was essential that the writer should say that the gods—Upper and Lower Egypt—Together show honour to the god, that his fear is in all lands, that he has subdued his enemies and received the dignity of his father, that he is praised by the great cycle of the gods, that all creatures are full of delight at his coming and adore his beauty, and so forth. All this belonged to any of the gods. In order to make the effort appear characteristic to Ra or Amen, there were added the name of the god in question, and perhaps one or two allusions to the myths associated with him and to the particular temple or town to which he was more or less attached; the result was a standard hymn which had this advantage, that with a few alterations it would do equally well for Ptah or Osiris.

Thus we have the following from a Hymn to Ra when he riseth (Papyrus of Nebhepet):

'Hymn to thee, O thou glorious being, thou who art dowered with all sovereignty... The regions of the north and south come to thee with homage, and send forth aclama-
tions as they riseth in the horizon of heaven... The goddess Nun doth homage unto thee, and the goddess Madu embracing thee at all times... The company of the gods rejoiceth at thy coming, the earth is glad when it beholdeth thy rays.'

Ani (Papyrus of Ani) can find nothing more original to say of the solar deity:

'Hymn to thee, O thou who hast come as Flappers, the creator of the gods... Thy mother Nut doth an act of homage unto thee with both her hands. The land of Manu receiveth thee with satisfaction, and the goddess Maat embraceth thee both as mora and ne.'

Osiris fares no better than Ra at the hands of his devout worshipper:

'Glory be to Osiris Unessef, the great god within Abydos, king of eternity, lord of the ever-living. He is the King of the North and South, and the white king, Lord of the throne of Nut, lord of the crowns of the north and south, lord of the white chaps, As prince of gods and of men he hath received the crook and the shepherd and the dignity of his divine father. Thou art crowned lord of Abydos and ruler in Abydos.'

The great bulk of Egyptian hymn literature consists of poems in praise of one or other of the three great gods, Ra, Amen, and Osiris.

1. Hymns to Ra.—A certain amount of real religious feeling was apparently awakened in the Egyptian mind by the contemplation of the rising and setting of the life-giving sun, and this was transferred to the Sun-god, though its expression is often very stilted.

'Hymn to thee,' says an interesting hymn in the Papyrus of H中介, 'O thou who art Ra when thou risest and Tum when thou settest; thou risest, thou risest, thou risest, thou risest, thou art crowned king of the gods... Thou didst not create the earth, thou didst not create man, thou didst not make the watery abyss of the sky, thou didst not form the Nile, thou didst not create the deep, and thou dost give light unto all that therein is... Thou art unknown as a god, but one thing is worthy to declare thy greatness: only thou thyself... Millions of years have gone over thee; all the gods, or at least of those through which thou hast passed. Thou didst pass over and travel through space requiring millions and hundreds of thousands of years; thou passest through the watery abyss and thou art revered thy way across the watery abyss to the place which thou lovest. Thou art in the midst of the moment of the hours, and thou dost sink down, and dost make an end of the hours.'

Thus Ra is here adored as the Creator, the Inexplicable, and the Eternal, and in this hymn, at least, there is a distinct vein of genuine poetical feeling in the description of the Sun-god's swift journey over space. But even in such hymns the constant reiteration of the creation formula and the endless repetition of the solar journey in the morning and evening boats become very tiresome.

One of the most important of the hymns to Ra is that series which is sometimes called the 'Litanies of Ra.' It exists in the form of a long text sculptured at the entrances of the royal tombs in the Valley of the Kings at Thebes. Its importance lies, not in its poetical merits, which are certainly far from great, but indeed, in the fact that throughout the hymn Ra is successively identified with 75 various gods or cosmic elements. They are all forms of the god, who, as primordial deity, exists still, and from whom emanate all the other gods, who are only his manifestations.

'Hymn to thee, Ra, supreme power, who dost ascend into the sphere of Amenet, his form is that of Tum. Hymn to
c. Hymns to Amen.—Next in importance to the Ra hymns come those addressed to Amen. Of these perhaps the best is that found in a hieratic papyrus (no. 44) in the British Museum. It contains, of course, the usual formulas, which belonged to Amen, as they belonged to Ra, to Osiris, or to any of the great gods, and were mere matter of habit, so many lines to be filled according to the usual recipe, such Chief of all the gods, Lord of truth, father of the gods, creator of beasts, maker of men, lord of existence, creator of fruit from things, maker of herbs, feeder of cattle, and it expressly identifies Amen, not only with Ra, but with Tum, Min, and Khepera. Yet it contains also here and there traces of that realization of divine power in the sustenance of living things which characterize Egyptian hymn-writing.

The verses, with their minute description of the divinity as the smallest creatures, suggest a far-off anticipation of Coleridge’s "I prayeth best who loveth best/ All things both great and small;/ For the dear God who loveth us/ He made and loveth all.”

At the same time, the writer’s sense, somewhat unusual, of moral quality in his god. To him, Amen is a god who "listens to the poor, who is in distress, gentle of heart when one cries to him, who has power over the crafty of the evil man from the vident, judging the poor, the poor and the oppressed, Lord of wisdom, whose precepts are wise, Lord of money most loving, at whose counsel men live.”

The pantetheistic tendency of Egyptian religious thought is clearly seen in the late hymn found in this same papyrus of Amen at the Oasis of Kharghes. The hymn is specifically addressed to Amen; but we find that the god is completely identified with the other great gods of Egypt: “I am the god of the earth, the god of the sky; I am the god who dwells in all things, the revealer who was from the beginning... I am the god of the earth... I am the revealer in truth.” This god is Amen, who is the only one who is present in all the gods.”

Hymns to Osiris.—Of all Egyptian hymns, those addressed to Osiris are perhaps the most disappointing. Here, anywhere, we should have expected to find the evidence of sincere religious feeling. For the cult of Osiris was one of the most popular and long-enduring of Egyptian cults, but so precisely because of the human elements in the life of Osiris, the sympathy which these created between him and his worshippers, and the ethical character of many of the beliefs regarding him. If any personal relationship existed between an Egyptian worshipper and any of the great gods, it is to be looked for in the Osiris cult. Yet, we find that the Osirian hymns we find, almost more than anywhere else, only the multiplication of bombastic and meaningless epithets.

The hymns to Osiris, sun of Min, son of Horus, son of Nut, son of Iunu, son of the horns, and don lean upon shigah pillar; to whom the crown was given, and joy before the nine gods. Great in power in Rosetta, a lord of might in Abydos, a lord of might in Zemrut, great of appearance in Abydos, before whom the great ones of power rose up upon his mats. To whom Upper and Lower Egypt come bowing, because his feet are so great and his might so powerful. This is the song of Amen (Zemrut, p. 49). This praise seems to find nothing to say of this most human god of all the gods. A certain amount of human feeling does, however, enter into the funeral hymn known as the "Lamentations of Isis and Nephthys", in which these goddesses are supposed to bewail the deceased Osiris:

- "Come to thy house, come to thy house, Osiris!... He is beautiful youth, coming to me... I am thy sister whom thou lovest; thou dost not abandon me... Come to thy house, come to thy house, Osiris, Osiris, Osiris!... I am thy sister whom thou lovest; thou dost not abandon me... Come to thy sister, come to thy sister, his house is in truth still... I call to thee and wist so that it is heard in heaven, but thou dost not hear my voice; and yet I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovest none beside me, my brother, my brethren, my kinsman, and dost not love me, but I am thy sister, whom thou lovest upon earth. Thou lovet
HYMNS (Greek and Roman).—I. GREEK.—The term σάρξ (first found in Hom. Od. viii. 429, and Hesiod, Works and Days, 637), of unknown and probably (like ὥραμα, ναός, δόρυ, etc.) non-Greek derivation, was applied to poems addressed to the gods, as σαμαίος was used to denote eulogies of human beings. In its widest sense it included such species as dithyrambs, odes, hymns, nomes, threnoi, etc.; but, according to the definition of the grammarians, it was appropriated to narratives of or addresses to divine personages, without dancing and without music, other than that of the cithara (Pindar, Chremonichth, p. 644, ap. Pho. Did. 320 A 12, Bekker: έκ 1νήδων δέ καθεσί τάυτα τοις υπερφερέντες τε καὶ τοις πρώτοις καὶ τα καλά τα φαινόμενα, φαινόμενα ἄνευ καθήλωσεν τῶν ἐν αὐτῷ πρὸς τοὺς φανέοντες). It was convenient to distinguish Greek hymns according to their metre, since the character of the hymn varied materially with the metrical form.

1. Hesiodic hymns.—These originally constituted a kind of department of epos, and were in the hands of its executants, the rhapsodes. They were of different dimensions: some, such as the greater Homeric hymns (see below), were as long as a book of the Odyssey; others consisted of a few lines. The latter were known as χοιροί and were used by rhapsodes as a preface to their recitation (Find. Nom. ii. 1-3; Apoll. Tith. iii. 104, to the Homeric hymn to Apollo). The lay of Demodocus upon the loves of Ares and Aphrodite (Od. viii. 290-306) appears to be an imitation of a hymn of the first period; the first ten lines of Hesiod's Works and Days are the earliest specimens of the second. In the same poem (604 ff.) Hesiod says that he won a three-legged pot with ears at the wake of Amphidamas at Chaleis with a hymn; and a quotation from an unknown Hesiodic poem (fr. 386, Rasch) represents Hesiod and Homer competing at Delos with 'new hymns' to Apollo. Another hymn which we can refer to an early period is the χοιρός written by Kambyses of Corinth (8th cent.) for a Messenian pilgrimage to Delos. Two Doric hexameters are quoted by it from Pausanias, iv. xxiii. 2.

Hymns began with a formula of invocation—usually to the Muse: Μόης... δόθη δ' ἄφετος (Hes. Works and Days, 1 ff); Εὐρυπό τε Μόης, Δίς καὶ Μανθίνος τοῦ (Hym. Homer. in Herm. 1); ἄρης τε ἔρημα φῶς γίνοντες, Μόης (Hym. Homer. in Parn. 1) (this last opening was so frequent in the dithyramb as to give rise to a verb ὀμηνικοῖν [Suid. s.v.])—and ended with one of farewell and transition to another theme (λέγω, ματά, μετά χειρός [Zephos, v. 291]; τοῦ δ' ἄρχα μετεπεισθεὶ πρὸς [Æneas Dionysius, ap. Euth. 380]; καὶ πάντα ὑπὸ χειρός, σύν τε γεωργίαν, σύν τε καὶ ἐξ ἄρα μεταβαίνεις μέν [Hym. Homer. in Apoll. 145 ff.]).

The extant hexameter hymns may now be considered.

(a) Homeric hymns.—This name is applied to a collection of 22 poems handed down by the tradition of the rhapsodes with the hymns of Callimachus and Pindar and similar poetical literature (ed. A. Baumeister, Leipzig, 1860; A. Gemoll, do. 1877; E. Abel, do.).

1 It is possible, however, that σάρξ has arisen from φυσίς, and is connected with φυσώ, πάχος, etc. "to tell of, etc." (pass. of φύειν, φυεῖν; Brugmann, Gr. Gram., Munich, 1913, p. 88, and the ill. there cited).

2 This statement is confirmed by the hymnal language of Tuscarius, xvii. 1; Aristotle, Poet. 1. 22. 330 B 1; Theocritus, v. 33. 1; of Hesiod, ch. 15; Nonnus, xiv. 174, 182; Sapph. ap. Pho. 176, Ann. Poet. 16.
HYMNS (Greek and Roman)

By the hymnologists the collection of the eighth hymn (to Ares) and cannot at earliest be fixed much before the Christian era.

The hymns in the collection were on a large scale, and of them a short account may be given. The hymn to Dyonysus (No. 74) is said to have been composed by the neo-Orphic character of the eighth hymn (to Ares), and cannot at earliest be fixed much before the Christian era.

HYMNS (Hebrew and Jewish)

literary quality, but they are quite meagre and frankly modern, and, like the Alexandrian epics in general, find their interest in their subject-matter alone. (c) Orphic hymns.—These poems (ed. G. Hermann, Leipzig, 1908; E. Abel, do. 1885), 88 in number, have nothing save the name in common with the older Orphic hymns and poems. They are supplementary to the Orphist religious literature. According to A. Dietrich (De hymnus Orphici, Marburg, 1891, p. 24), they are of different dates; the extremes are, on the one hand, the allegorizing dithyrambs; on the other hand, the briefest and most incisive inscriptions (A.D. 100-150) in which the hymns are quoted (see also Petersen, Philologus, xxvii. [1888] 385-431).

(d) Hymnus of Proutus.—This philosopher, the head of the Academy († A.D. 438), composed, amongst his many other works, 8 hymns of a Neo-Platonic character (ed. A. Ludwig, Königsberg, 1886). Like the Orphic hymns, they are contained, for the most part, in the Stobaeus, amongst the Homeric hymns. Their literary value is not great.

(e) Hymnus xenon-stoicorum.—Among hexameter hymns which are no longer extant the following are the best known:

(1) Olen of Lycia wrote hymns to Eleutheria, Hera, and Achaim, which were in use at Delos. According to Pausania (ix. xxvii. 2), he was the oracle of the Lycia, which is not Greek, confirms their Lycian origin, and Lycia is the most probable source of the Apolline worship. It is remarkable, therefore, that Herodotus (vii. 114) mentions his hymn extant in his edition of the Apolline influence, viz. the legend of the Hyperborian tribe, which, as we have seen, is passed over in the Homeric hymn. As Suidas calls Olen xenon-stoicorum, we may infer that his hymn were in hexameters.

(2) Pampchos (Παμφόχος), whom Pausania (ix. xxvii. 2) puts between Olen and Orpheus, wrote hymns for the Athenian sacred family of the Lycomides, who had the hereditary function of performing worship to Demeter at Pitya in Attica. He wrote about Demeter, and perhaps also on other divinities. Two hexameters (on Zeus) are quoted in Philostorus, Hierocles, ib. 124, ch. 11, p. 536.

(3) The quotations of the hymns and hymnal poems which go under the name of Orpheus are collected by E. Abel, Orphica, Leipzig, 1885, pp. 224-251 (see also De hymnus Orphici, ii. Diels, Fragmenta der Vorschriften, Berlin, 1906-10, pp. 473-492). According to Clem. Alcr. (Strom. i. 21), the greater part of the Orphic corpus was composed by various hands in the 6th cent. A.D., although both the hymns and the poems were universally believed to be older than Homer. These hymns, like those of Pampchos, were written for the Lycomides for temple-worship at Pitya, and were used also at Eleusis. They were more devotional and less literary than the Homeric (Pausania, i. 12. 12), short and few in number (18), and appear incredible and anachronistic to the uninitiate (Menander, de Encom. v. 41). The poem dealing with the rape of Perssephono (fr. 209 cf.) illustrates this criticism, and, compared with the Homeric, shows the difference between the Orphic and the Homeric treatment of myth.

(4) Similar to the Orphic hymns were those of general, mythological nature. The most important are: Phaedo (60 D); a beautiful imitation (to Adonis) is inserted into Theocritus’s 16th Idyll; and the existence of many short ritual hymns in the classical period is inferred from imitations in drama by Adriani, Jachet, & k. klass. Philol., 1891, p. 213 ff.

2. Melic hymns.—The poem is as old as the Homeric (I. 473, xxvii. 201); the Aphabetos also (Eurip. Her. Furi. 607) and the Cretan minstrels of Delphi (Hymn. Hom. in Apoll. 519) sang a poem; and, if we took the word literally, would find the following material for the making of the hymns: Alceus, Alcmene, Anacreon, Castor, Lasus, Simonides (all in T. Bergk, Poetar lyr. Gr. 2, Leipzig, 1882, iii.), Findlar, and Bachylides, as well as Ion of Chios (ib. ii. 251, with a kind of elogia hymn to Dionysus) and Aristophanes (to Aret. ib. 300, of uncertain classification). All these, however, have perished, so far as direct tradition is concerned. A certain number of hymns or similar compositions have been preserved on stone; among these are Ilyiad’s poem on Aespleus (IG Pol. Ins. i. 690) of about 300 B.C., of unusual literary merit (see von Wissowa-Remmendorf, Ilyiad von Euthydme, Berlin, 1890); three hymns discovered by the French at Delphi (BCH xvii. [1894] 651, xviii. [1895] 71, xix. [1896] 39) by Araisamos, Cociheus, and Philodamus; a hymn sung by the Cretans (IG II. ii. 484, with commentary by Boanquet and Murray); a hymn to Aespleus (UB viii. 171 [3rd cent. A.D.]). See in general the article “Hymnen” by S. Heinach in Daremberg-Saglio, Lex. des ant. gr. et rom., Paris, 1896 ff., p. 357.

II. LATIN.—Hymns play a very small part in Latin literature. The aecumen, hymns of the Sibyls were not unintelligible even to the priests (Quintilian, i. vi. 40), exist only in a few quotations (see Tenföö-Schwabe, Gesch. der röm. Lit. 1, Leipzig, 1899, § 4). The hymns of the Fratres Arcates, however, are preserved in inscriptions first dug up in 1595 in the Via Cassareci, near Magliasa, on the road from Rome to Porto. They are edited in CIL vi. (1886) 2223 ff., and by Heinzen, Acta Fratrum Arcatium (Berlin, 1874).

In literature proper we may point out Ovid’s 34th poem (‘Diasme sumus in fade’) and his invocation of Venus (xxxvi. 11-16), and Horace’s Carmen sacr.

LATEINER.-Besides the sources mentioned in the article reference may be made to the usual Histories of literature, c.g. G. Baudard, Grundzüge der griech. Literaturgesch., Berlin, 1867, i. 246 ff., K. Sitt. Gesch. d. Litt., Munich, 1884, ii. 124 ff., 282 ff.

T. W. ALLEN.

HYMNS (Hebrew and Jewish).—It will for the present be best to adhere to the boundary line between Hebrewism and Judaism provided by the destruction of the Temple by the Romans, A.D. 70, and the consequent substitution of synagogue worship for that of the Jerusalem sanctuary by the Jewish leaders assembled at Jannia. We shall thus have to consider (1) the hymns embodied in the OT and the apocryphal and pseudographical writings, which stand in some degree of relation to the Hebrew Canaan, and (2) the hymns that appear in the Jewish liturgy and other literary sources belonging to synagogue times.

1. Hymns of the OT and Hebrew writings related to it.—The ancient Hebrews were endowed with a high degree of poetical sensitiveness which often showed itself in quite literary utterance reflecting the inward emotion with wonderful force and vividness; and, as the select and most refined spirits among them were also pre-eminently gifted with religious feeling and intuition, it was only natural that their literary faculty should have exercised itself in strains of sacred song. Such song, moreover, though in each case naturally
HYMNS (Hebrew and Jewish) 43

issuing from an individual spirit, generally expressed in the feeling and thought of the national or tribal circle to which the poet belonged; for the sense of communal oneness, which is to the present day a marked characteristic of the Jewish diaspora, was the strongest among the Hebrews than among any of the nations surrounding them, and the religious poet, as a rule, gave genuine utterance to the emotions which at the moment swayed the community to which he belonged, or we are supposed to have swayed it in the historical period which his song was intended to celebrate.

The three outstanding national songs of victory inducted by some of the most gifted poets of the race are the Song of Deborah (Judg. 5), which critic generally admit to be the earliest source for the history of the events which it celebrates; the Song at the Red Sea (Ex 15), which, though apparently composed in the time of the monarchy, may embody a nucleus from very ancient times; and the Song of Victory contained in 2 Sam 22 and Ps 18, supposed by some critics to be in part a genuine product of the Davidic age. The sense of Jehovah's might and of gratitude to Him for victories vouchsafed is a dominant note in all the three songs, but in power and intenseness of expression that of the Song of Deborah stands unequalled.

With mightiest tread thou onward, O my soul! (v. 2, E.)</p>

The outstanding anithesis to these strains of triumph is the Book of Lamentations, or Tears, which is traditionally ascribed to the prophet Jeremiah, and for the most part undoubtedly reflects the mournful attitude of the community in the early years of the captivity. In the highly finished five elegies comprised in the collection, Israel is seen heartbroken and weeping with bent head in the presence of Jehovah, who has allowed judgment to fall on the sinful nation. The book thus consists of five dirges of a type akin to 'Dies Irae,' written, not in the dread contemplation of future judgment, but in actual sight of the havoc wrought by the 'wealth and glory' of the offended Judge whom the nation, in a flood of tears, nevertheless implores to allow His love and pity to reassure its ancient away.

Striking instances of lyrical utterance occasioned by events, real or supposed, in the life of individuals, but affecting the community by reason of the great significance to it of the persons concerned, are the triumphal hymn of Hamah (1 Sam 5:10-12), the lamentations of Hosea (13:2-14), and what may be called the Psalm of Jonah (Jon 2:1-11). The literary prophets, with their soul wrapt in the contemplation of things supra-mundane and hid from ordinary sight in the counsel of the Eternal, also naturally break out at times in longer or shorter hymnal strains in the midst of scathing admonition or description of happiness to come (so, e.g., Is 9:2, 12:44, Jer 16:16, and note particularly Hab.3); and the controversies of the Book of Job regarding the justice, power, and providence of God are as naturally apt to lead to occasional outbreaks of hymn-like utterance (so, e.g., 35: 36: 42: 50: 66: 103: 113—119).

Apart, however, from the pieces named and others of a similar nature to be found in different parts of the Hebrew Canon, the Book of Psalms is the great book of spiritual training of the Church, embodying the typical expression of all possible religious moods, and ranging historically from David and the Davidic age down to the re-awakening in the time of the Maccabees. Beside the compositions which were primarily communal in character (as, e.g., Ps 33: 47: 50: 66: 103: 113—119), many Psalms appear to have been originally lyrics of individuals; but personal experience of whatever kind—whether of penitence, exaltation, prayer for help, or even of violent remembrance of oppression and thirst for vengeance—is there, so far as it was not to represent a true aspect of Israel's relation to Jehovah and the world, fully owned and echoed by the community at large, so that the original 'I' of the poet has everywhere become the voice of the great community of which he was, in truth, the genuine mouth-piece, uttering individually the religious emotions of the great body to which he belonged.

The titles most in use to denote a hymnal composition are Shir, Shirah, Mismoreh, Chalil, and T'fillit. The first three terms point, in one way or another, to the rhythmic and musical character of the pieces concerned; Chalil denotes a hymn of praise; and T'fillit, which primarily means 'prayer' or 'supplication,' sometimes bears the general sense of liturgical composition (see particularly Ps 90). 'Lamentations' or 'Tears' translates the term Checel, though not so styled in the Hebrew Canon, the Synagogue name of the Book being Qinn ("How!"); which is the first word of the first chapter.

Regarding the question of rhythm, a subject which has been much discussed of late (for reference to summaries see Literature at the end), one can say that there is now a sufficiently general consensus of opinion in favour of the view that it is the accentual beat which mainly, if not exclusively, counts in Hebrew versification, the intervening number of syllables having (within limits, of course) no determining effect on the poetical structure. The 'parallellismus membrorum,' though 'not a constant phenomenon of Hebrew poetry' (G. B. Gray, 'Israel i.-xxvii,' in TIC [1912], p. 121), is yet almost everywhere as striking a characteristic in hymnal pieces as in gnomic composition. The only special kind of rhythm so far definitely established in OT poetry is the elegiac or end form (first pointed out by K. Budde), in which the second hemistich of a line is shorter than the first, the turner being supposed to break off his plaint in a sob.

The proposition, however, that this rhythmic form had its origin in the ancient lament for the dead performed by women mourners (see, e.g., HDB iv. 5) is so far incapable of verification, and it is, moreover, true that 'it can no longer be maintained that the rhythm is peculiar to it, though it may be said to be characteristic of it' (Gray, op. cit. p. xiii, note).

The question of strophic arrangement in Hebrew hymns and OT poetry in general has also been much discussed in recent times (for a summary see HDB iv. 71). A decisive factor in favour of, at any rate, occasional strophic structure is the refrain that is sometimes found (see, e.g., Ps 42: 99); and there is, besides, a strong auxiliary argument for fairly frequent strophic arrangement in the undoubted fact that music, both vocal

---

1 The question of the individual element in the Psalms has been discussed in recent times. But we have something very similar in Middle English ballad collections. Tolkien's 'Book of Ages, cleft for me,' and Newman's 'Lead, Kindly Light ... lead Thou me on,' for instance, were primarily utterances of personal religious emotions, but they at the same time express the genuine cry of all Christian believers, that is to say, of the whole community. Hebrew Church's striking modern instance of the patriotic emotion of an individual poet becoming truly national in character is that of the Tenth King of Israel, while fighting for the liberation of Germany. In the Psalter the national and religious spirit is one and indivisible, so that the hymn-writer is a national as well as a religious poet, and nationalist.

2 For the places that are used more or less rarely the reader is referred to the Introduction and Commentaries on the Psalms.

3 Cl. the classic elegiac metre, in which the pentameter alternates with the hexameter.
and instrumental, regularly accompanied the recital of hymns (besides the headings of Psalms, which are by themselves quite conclusive, see 1 Ch 25:7, 2 Ch 29:3), for the musical tune is naturally either repeated with the successive longer units of the poetical composition, or else changes its character at the beginning of a part meant to express a different strain of poetical inspiration, or at certain intervals, for which there is some evidence (see Ps 105:4), would seem to lead to a similar conclusion. A composition like Ps 186, in which the second hemistich is throughout the antiphonal responses to the first, has, of course, no bearing on the question of strophic arrangement.

The poetical compositions embodied in the Apcerypha stand on a lower level, both with regard to inspiration (using this term in its widest sense) and to their bearing on the national life; yet they do in some limited, and partly sectarian, manner continue on lines similar to the hymns and pieces contained in the Canon.

The Song of the Three Children (the Benedicticles) has a grand liturgical effect, notwithstanding the deliberate artificial attempt to enlist every part of the congregation. Among the other notable examples are the Prayer of Manasseh, portions of Baruch, 2 Mac 13:4-15, Wis 9. The praise of Famous Men in Ecclesiasticus (44:20-50) is in reality almost the anthem of a hymn, and among other similar passages, the Psalms, 146, 147, 148, 149, 150, the famous Nishmah ("The breath of all things living") in the Sabbath and festival prayers, and several compositions of the Psalter (Ps 69:1-31, 110:1-4) which is the starting point, however, whether these verses formed part of the original composition or not.

The most notable hymnal section of the psuedopigraphical writings connected with the OT is the collection of 18 pieces belonging to the time of Pocaply's invasion of Palestine, which are known as the Psalms of Solomon; but shorter or longer hymn-like strains are also found in the fourth Book of Ezra and the Book of Enoch. The Greek hexameters of the Sibylline Oracles, iii., of which there are some in Latin form, follow the prophetic writings with regard to the presence of an occasional hymnal strain.

Apart from the Psalms of Solomon, which have the same characteristic historic importance, the poetical portions of these writings are, as may be expected, as much removed from actuality as the prose frameworks in which they appear; yet they sound a genuine note of the religious idealism by which the Psuedopigrapha—largely sectarian in origin—were called into existence.

2. Hymns of the Synagogue. — After the destruction of the Temple by the Romans, Judaism definitely succeeded the ancient Hebraism. The bulk of the Hebrew people could not see their way to adopt the form of Christian adoration which, in the minds of its true devotees, was expressive of the most real inwardness of the religious life. The Jews, therefore, clung to their own ceremonial and devotional forms, which, indeed, enshrined a genuine note of the inwardness of their own, and it is this special Judaic religious inheritance that was perpetuated and developed—very often in beautiful language of true devotion—in a long series of hymnal compositions, which have become more or less closely attached to the general framework of the daily and festival prayers. The great model in the earlier stage of this liturgy was naturally the Psalter, which, as in the Temple services, was itself largely drawn upon for purposes of synagogue and individual devotions, and to which the present day provides the ritual with some important constituent elements (so particularly the Hallel in the festival services and the series of Psalms in the earlier portions of the daily prayers). The liturgy, moreover, in its general idea as well as in its prevailing form, is a systematic elaboration of the Bréhhé, or Benediction, which is in its simpler form well represented in the OT (see On 246, 1 K 19, 30, 29, Neh 9), but in the specifically Jewish period gradually developed into a system of prayers and doxologies, to some parts of which the lyric-religious genius of the race could not but give a high poetical form.

Among the finest and most important of the poetical Benedictions which thus came into existence are the pieces which precede and follow the recitation of the καὶ (Hear, O Israel, the Lord our God is one Lord, etc.) in both the morning and evening services, the former having two Benedictions before and one after the SHAMM, and the latter two before and two after this central confession of the Divine Unity (see Mishna Brébheth, i. 4). Among the earliest times is attested by Talmudical references the famous Nishmah ("The breath of all things living") in the Sabbath and festival prayers, and several compositions of which the first 14 are modelled on the antiphonal strains of Ps 136. It is a disputed point, however, whether these verses formed part of the original composition of the "Sons of Sirs.

The most notable hymnal section of the psuedopigraphical writings connected with the OT is the collection of 18 pieces belonging to the time of the Geoniin, which followed the Talmudical period, are the famous Ehrlich Schémer of the morning service, and the equally famous En Kédém hémé, which stands in the modern Ashkenazi ritual at the end of the Sabbath service, but is recited every day by the members of the Spanish and Portuguese congregations scattered in different parts of the world. The Aramaic Treaty Purim inserted in the Sabbath services, which also belongs to this period, may be classed as an interesting and characteristic congregational application in poetical prose.

The earliest synagogue hymn-writer known by name is Jose ben Jose, who appears to have lived in the 6th or 7th cent., and among whose compositions is an Apódé (on this term see below, p. 455) which is still used in Piedmont and other places. His pieces exhibit no rhyme, whereas Yannai, as well as his famous pupil and successor El'azar ben Jacob Kalir, adds the use of rhyme to the acrostic and other earlier marks of poetical form. Kalir opens a new and most prolific epoch in the history of synagogue hymnology. On his date and birthplace widely conflicting views have been held, but Zunz, who is the highest authority on questions of this kind, places him in the latter half of the 10th cent., and names southern Italy as the place of his nativity. He composed no fewer than 390 pieces, scattered over various portions of the Ashkenazi and Italian forms of the Mishach, as used at the present day. His subject-matter is derived mainly from Talmudic and Midrashic sources.

1 The question as to whether Hebrew or Greek was the original medium of composition for this and the other pieces named is not important in the connection, the spirit pervading them being in all cases Hebraic, though no doubt influenced by Hellenistic tendencies.

2 He has also been maintained by some that the so-called Odes of Solomon, of which J. Benda Harris discovered a Syrocan origin, were originally Hebraic, but this opinion is not likely to gain many adherents.

3 Zunz (Gottheitentheologische Verträge, p. 382.) considers that in their present form these pieces show later additions, but the rhyme of some parts, e. g. the Hebrew prayer of Ps. 119, 60, is accidental.

4 On the Yadéth, which is also Aramaic, see vol. i. p. 460.

5 So in Gottesd. Verträge (pp. 370 and 392); in Liturg. geschichte, p. 51, however, the first half of the 9th cent. is regarded as the earliest possible date.
HYMNS (Hebrew and Jewish)

His language is very often obscure and to the ear of the Hebraist at least strange and even uncouth, but his hermeneutical inspiration is of so high an order that the impression which he made on his contemporaries has— notwithstanding much influential opposition—continued its sway down to the present time.

An impetus to an entirely different style of liturgical poetry was given by Saadaya Gaon (891-941), whose original home was Egypt, but who spent the most eventful part of his life as head of the Academy of Sura in Mesopotamia. He cannot be said to have been the founder of a liturgical school in the same sense as Kair. His poetical compositions are not very numerous, nor was he strong as a poet, his genius enabling him rather to shine as philosopher, commentator, and controversialist; but, on the other hand, he brought to his task the best literary and scientific training of his age and surroundings, and he was in this way able, among his greater successes, to give an important fresh direction to liturgical efforts, which later on developed into the finest poetical achievements of medieval Jewry. Acquainted as he was with the pure classical themes and forms of Arabic literature, he naturally aimed at similar purity of language in his Hebrew compositions; and the subject-matter of his poems rested for the same reason on philosophic contemplation rather than on Talmud and Midrash. His strophic system is elaborate, and he also uses rhyme besides the alphabetical acrostics.

There arose two distinct schools of liturgical composition, Kair representing the more exclusive Jewish spirit of nationalism which found its chief nourishment in Talmudic and Saadaya paving the way in the direction of general human culture and the philosophico-scientific aspect of religion; and so deep-rooted as well as far-reaching were these tendencies that each in its turn became the starting-point of one of the two main divisions of the Jewish liturgy, the Romano-Germanic order of festival services prevailing, in the main, to the school founded by Kair, whilst the Hispanic-Arabian liturgy has been built up by the great poets who worked on in the spirit of Saadaya.

No wonder, therefore, that the names of the leading writers of the last-named school, such as Solomon Ibn Gabirol (fl. 1090), in whom the Spanish school reached its most classical development, Moses ben Ezra (11th to 12th cent.), Yehuda Halevi († about 1140), and Abraham Ibn Ezra († 1167) sound more familiar to the cultured Europe of the present day than the, in their own way, also highly distinguished names of men like Moshulam ben Kalonymos of Lucca (10th cent.), Gershon ben Yehuda (fl. first half of 11th c.), Solomon Yehiyya († 1103), and his son-in-law Samuel ben Meir.

It was, however, on account of the general bond uniting all synagogal communities into one great organization—inevitable that the poetical compositions of each school should exercise an influence on the other. The Jewish liturgical writers of each country were, moreover, naturally to some extent affected by the surroundings amidst which they worked; nor could individual poets help importing into their compositions their own intellectual, doctrinal, or emotional peculiarities. Among the later (post-classical) writers of a more peculiar reason or another, become entitled to particular mention in even a brief historical survey of the subject are Abraham ben Bezalel (13th cent.), his son Ye'adaya (entitled Ha-Pinai), Yehezkel ibn Moses (fl. 12th century), Isaac Luria (1534-1572), and the Yemenite Shalom ben Joseph Shabbeii (17th cent.).

The most prolific author of short hymnal compositions among those just named were Israel Nagar, the Shalom Shabbeii, though of the former there is a few penetrated into the liturgy; and of the others apparently none.

Among the most important terms used since early times in connection with this synagogal liturgical poetry are (besides Piyut and Piyutim, respectively denoting 'poet' and 'poetical piece of devotion', the significant part of both words coming no doubt from the Greek eurýomai): (1) Kaddish, which is sometimes used in the general sense of liturgical poetry (the word denoting coming near in prayer), but in the plural usually bears the more restricted meaning of pieces accompanying the Prayer of Eighteen, or, rather, its festival representative; (2) Yigdal, i.e. Piyutim accompanying the benediction Yigdal Or ('Creator of the Lights'), but sometimes also used in a more general sense; (3) Piyutot, or pendentival pieces; (4) Kaddish, or elegies; (5) Akedah, a species of elaborate composition for the Day of Atonement descriptive of the Temple Service as solemnized on that day, the account being based on the Mishna Yoma; (6) Ashkenazi, the Pontifical commands; (7) Hoshannah, i.e. pieces with a Hoshannah refrain, used on Hoshana Rabba (the 7th day of the feast of Tabernacles); and (8) Widdus, or composition of this character. The entire collection of the festival services is entitled Mezuzah, i.e. (annual) cycle.

The introduction of hymns into liturgical poetry poetical may, with regard to the use of acrostics, it is important to mention that, besides the very frequent employment of the alphabetical device, the authors of Piyutim were very much in the habit of forming their compositions with the stress of their own names, themate underly under this practice being, not vanity, but the desire of linking their own personalities with their sacred compositions. In the case of Kair, it has been shown (see Zunz, Gottheitsdienstliche Vorträge, p. 398), that he also often achieved this object by means of Gematria, i.e. by the equation of the numerical value of his name with that of a sentence from the poem. Of special interest is the fact of which which has been employed in Hebrew hymns— and, indeed, Hebrew poetry in general—from the time of Solomon ben Gabirol onwards. The motive rests in the quantity of the syllables nor on the accent, but on the difference between a simple syllable (vowelled) and a syllable beginning with a moving shadow (called yiqrah, i.e. 'tent-pi' or 'tent-pin'). The simple syllable is in modern editions of Hebrew verse marked — irrespective of quantity in the usual sense of the term, and the yiqrah is marked . Seventeen different forms of verse founded on this principle are generally counted, but it will here suffice to give examples of two only, represented by the opening melodies of the well-known hymns respectively beginning Adon Olam and Yigdal: 1

1. לְדוֹן | עֹלָם | יְהֹודָה | מַלְכָּה. 1
2. יִギャל | אוֹלָם | בִּין | יִギャל | יְיֶחֶשֶׁק | טַנְסָפָה.

In the first case the line is described as consisting of a yiqrah and two וֹתָלִית, followed by another yiqrah and two וֹתָלִית. In the second case the scansion is two yiqrah and two וֹתָלִית, followed by another yiqrah and two וֹתָלִית.

Among the most popular pieces attached to the daily services are Adon Olam and Yigdal (just referred to), which was probably not composed before the end of the 13th cent., lays special stress on the

The post has, however, allowed himself considerable licence in this piece.
Divine Unity, and was in this way probably meant to enforce the Jewish side of a polemical religious topic. The *Pyg valley*, written in Italy by Daniel ben Yehuda Dayyan in the early part of the 14th cent., composed in a form of poetic form the thirteenth articles of faith formulated by Moses Maimonides in the 13th century. The *Lekh Diqah*, composed by Solomon ben Moses al-Kabish (16th cent.), is a fine poetic description of the *Bride of the Sabbath*. It recited at its entrances in every Friday evening service. Of considerable popularity are also the *Habadatim*, i.e. poetical pieces recited in the home at the Sabbath, some of which embody legends of the prophet Elijah. Solomon ibn Gabrio's great philosophico-religious poem entitled *Keter Malkhit* deserves special mention; it may be described as a great Hymn of Adoration and Penitence, though only attached, and that loosely, to some of the rituals.

The number of *Pyyáshim* of various kinds for fasts and festivals, and more particularly for the festival of the Day of Atonement, is so large that much space would be occupied by the mere enumeration of its titles, and it is impossible to specify even a careful selection. But it should be remarked in conclusion that the note of sadness that is so prevalent in the recital of the nation's manifold sufferings and its desire for redemption, as well as the strain of joy in other parts of the liturgy, is very often conveyed with such intense lyricism that musical expression becomes almost a necessity, and it is for this purpose that the profession of *Bacadimim*, or Synagogue Cantors, came into existence in early times, and has remained an institution down to the present day.

HYMNS (Muslim)  

Music and verse have no place in the ordinary worship of the Muslims, so that it might be difficult to find in Islamic literature anything precisely analogous to the Christian hymn. The Qur'an is hostile to the poets, and the Prophet was at first careful to dissociate himself from them; he 'had not taught versification' (Qur. xxxvi. 69), and seems never to have had any appreciation of it, though towards the end of his career he employed a court-poet, and allowed poetical eulogies on himself to be recited. Still it is asserted that his troops inspired themselves on the field with war-songs, which, owing to the religious character of their cause, might be called hymns; and the songs of triumph which celebrated the early victories of the Prophet's adherents to deserve the same name; an example is to be found in the verses of the poet 'Allī celebrating the victory of the Muslims over the apostates of Bahrain (Aghnī, xiv. 49). In the early poetry the verses had ordinarily little more than an artificial connection with each other, so that the same poem might contain edifying and unedifying matter; but, with the establishment of the Arabian State and the consequent development of study, the departments of poetry came to be separated, and two which bear some analogy to hymns are encomia of the Prophet and his Companions, and the subject called ziyād, i.e., contempt of the world. The composition of the former sort began, as has been seen, in the Prophet's lifetime, and has ever since been popular. Perhaps the most celebrated poem of this kind is the Burdah of Sharaf al-dīn Muhammad b. Sa'īd al-Butīrī († A.D. 1250), in 170 lines. Miraculous powers are supposed to be attached to this work, which has been frequently interdicted and translated. An example of a poem in praise of the Companions is that by the inventor of the magāhā, Bādī' al-amān al-Hamadhānī († A.D. 1068); see Yaqtī, Dict. of Legend, 1897, p. 114–116). The Shi'ah naturally have poems in praise of 'Ali, Fātimah, and their family; an author of celebrity in this line was 'Ali b. 'Abdallāh al-Nāshī († A.D. 976), one of whose lauds on Husain was chanted by a professional mourner in a mosque (Yaqtī, v. 349). The beginnings of ascetic poetry are found very early; the author who is usually regarded as the best representative of this department is Abū Atāiyū († A.D. 829, 837, or 826). His Risād (published at the Roman Catholic Press, Beirut, 1880) is mainly devotional and introspective; and, since the ode rendered into English, much of its content would be found to resemble that of many a hymn-book.

The use of music for the purpose of stirring religious emotions scarcely appears in the various lands of Muhammad, but appears to have commenced early in Islam; 'Abū b. Aḥmad Rabi'ī († A.D. 784) is said to have introduced the practice at Mecca during the days of the pilgrimage, month called Muharram. Many of the early poets have kept up singing during these occasions (Qūt al-gūlāb of Abū Ta'llīl al-Makki, Cairo, 1310, ii. 62), and the custom was maintained in the Hījās. Probably the verses
HYMNS (Samaritan and Karaite)

The dates of the leading writers of the 10th and subsequent centuries cannot, in the present state of our knowledge, be fixed with much certainty; but Cowley, whilst fully appreciating the confused character of the reference found in the chronicles and elsewhere, considers that the style of the compositions assigned to al-Dustān suggests a date in the 11th cent., that Abīl-Hassan of Tyre also belongs to some part of the 11th cent., and that Ab Gelugah and Tabīsh b. muvaflīr flourished in the early part of the 12th cent. Firmer ground is reached in the allocation of dates in the third period. The founder of the new school of writers was apparently the high priest Pinhas (582–63), and the talent and zeal shown by him remained hereditary in his family for some generations. Of his two sons, Eleazar and Abisha, the former, who left only a small number of liturgical pieces, succeeded to the office of high priest, whilst to the latter, who enjoyed a great reputation as a writer, seventeen pieces can be assigned with certainty, and seven others with a high degree of probability. Pinhas, the son of Abisha, who succeeded his uncle Eleazar in the high priesthood, and died in 1442, was also a liturgical writer.

There is, on the other hand, considerable uncertainty regarding the date of the liturgical works of B. Ithamar, who was high priest at Damascus. Cowley is inclined to accept A.D. 793 (A.D. 1391) as the beginning of his term of office, but he acknowledges that the possibility of his having flourished about a century later is not excluded. There is also some uncertainty about the dates of several other hymn-writers connected with Damascus (e.g., Abraham Ḥazin, probably about the middle of the 13th cent., perhaps Aaron b. Isaac, probably about the same date). Of the hymn-writers of later times, chiefly belonging to the Levitical, the Danites, and the Marṭūb family, only a few representative names can be mentioned in this place. A prolific writer of the first-named family was Tabīsh (or Ghazuʿl) b. Isaac († 2105), and among the latest hymn-writers of the same stock was Pinhas b. Isaac († 2130). The Danite names which most frequently occur are Marjūn and Musliḥ (Me Ḥazin), and the latest member of the Marṭūb family to write liturgical compositions was Abīraham b. Išma’īl, who flourished about 2150.

For a list of the services (which, as may be expected, follow mutatis mutandis the order of the Jewish liturgy) and the manner in which they are developed in the liturgical poems, see Cowley’s edition of the Samaritan Hymnary, which includes an ‘Index of First Lines’ of the pieces published in the work (Intro., pp. xxiii–xxvii). With regard to metre in the poetical compositions, writes Cowley, ‘no certainty is possible, since pronunciation varied at different periods and we know little about it at any time.’ Yet, however, agrees that some pieces seem to be metrical, though the majority exhibit only some sort of rhythm. The alphabetical acrostic has been very usual since the time of Marqāḥ, and the acrostic giving the author’s name, which is found once in Marqāḥ (piece beginning meṣaḥḥaḥ), is very usual in later pieces. Rhyme, which is used by neither Marqāḥ nor Darah, becomes very common in the later periods, when it is not infrequently (in the long hymns) employed up to a high degree.

1 The high-priestly family of Aarocin descent died out in 1226–27; from that date onward the office seems to have been reserved to members of the family of Uziel, a younger son of Kohath. 2 The services are praised of the prophet Moses, as exemplified by the British Museum MS Additional 29051 (Arabic copy) in 553 by the Shabbat ha’Ezri Ḥaṭzai, the Rabbinah, should be added to the list embodied in Cowley’s edition. It should also be noted that the Samaritan order appears to betray at some points conscious imitation of the Jewish liturgy (so, e.g., the frequently occurring form of ḥaṭzai).
degree of tediousness, a long row of lines ending in the same rhyme.

2. Karaita hymns.—At the foundation of Karaitism, about A.D. 750, the traditional liturgy of the Jews was, as a part of Talmudical legalism, discarded by the sectaries, and the Pentateuch, the Psalter, and other parts of the OT were henceforth to constitute the only sources from which, besides lections, psalms and devotional songs were to be drawn. The totally unimaginative and stationary attitude toward the Bible on the part of the Karaites and of his followers could not, however, be maintained for very long; and, just as the abandonment of Talmudical hermeneutics and general Halakhah led to the gradual development of an almost equally involved system of Karaita legal hermeneutics, so also in the course of time, the Rabbinite liturgy was replaced by a Karaita ritual running on parallel lines with the Rabbanite services. As, moreover, the Karaita leaders possessed the knowledge of a much higher degree than the poetic faculty, they for the most part not only found it necessary to imitate the hymnal models of the Rabbanites, but even could not help admitting Rabbanite compositions into their liturgical collections (as by Solomon ibn Gabîrîd and Yehuâchâh ha-Lôvî)

The most prominent among Karaita liturgical authors was Darî, who also was successful as a writer of secular poems. He is believed in Karaita circles to have flourished about the middle of the 9th cent., and it, accordingly, claimed that Solomon ibn Gabîrîd, Moses ibn Ezrâ, Yehuâchâh ha-Lôvî, and others, had worked on the models provided by Darî. Investigations—principally by Steinmechin and Geiger—have, however, shown that the position must be reversed, Darî having really been the borrower from the Rabbanite poets referred to, so that the end of the 15th cent. is the earliest date that can be assigned to him.

The greatest name connected with the develop- ment of the Karaita liturgy is that of Aaron b. Joseph (called Aaron the Elder to distinguish him from Aaron b. Eljah of Nicomedia), who flourished at Constantinople (though born in S<ulhat in the Crimea) in the second half of the 13th and beginning of the 14th cent., and who is often affectionately referred to at the head of his poetical compositions in the printed Karaita Service Books as the Master, may his memory be for a blessing). The impression made by Aaron b. Joseph's personality and work (which includes a series of poetical pieces for the pericopes of the Pentateuch as liturgically recited throughout the year) was, indeed, so great that his reduction of the liturgy remained, under somewhat varied forms, the norm of the Karaita services down to the present day. Traces of other rituals, in some cases actually exhibiting different sets of liturgical poems, and in other cases also having no doubt contained pieces by other authors, are, however, not lacking. Joseph b. Mordecai Troki, writing to his countryman Elijah Bashiatski (both of them having belonged to the Byzantine body of Karaites) towards the end of the 15th cent., states that there were at that time three different rituals in the Karaita synagogues, and that the early liturgists (גוחים), (2) by Ascan b. Joseph, just mentioned, and (3) by Joseph, the father of the same Aaron (see Neubauer, *Aus der Petersburger Bibliothek*, Leipzig, 1883, pp. 176, 180). More definite evidence about the development of different ritual forms is afforded by the British Museum MSS Or. 2051 (dated A.D. 1700), 2530 (16th-17th cent.), and Or. 675 (written before A.D. 1700), the first representing the ritual of Damascus (see for full descriptions, with lists of pieces, see Margoliouth, *Catalogue of the Heb. and Samaritan MSS in the Brit. Mus.*, ii. nos. 720-727).

Among the other noted Karaita authors who, for the most part in addition to works of larger compass—composed liturgical poems, is Eljah b. Eljah of Nice), (a) formerly referred to, Israel b. Samuel Râfâ (early 14th cent.), Samuel al-Maghrîbi (i.e. of North Africa; in this case, Cairo or early 15th cent.), Elijah Bashîtsak (already referred to), Caleb Efendîosko (latter half 17th cent., first at Adrianople, then Constantinople), Yehuâchâh b. Elijah Gibbîr (author of *התרע* = a series of poems on the pericopes of the Pentateuch; beginning of the 16th cent.), Moses Póreòs (living at Damascus in the last part of the 17th cent., where he also composed an introduction to the Damascene ritual), Isaac b. Shalom (end of the 18th cent.), and, finally, a writer of the same name (presumably resident in the Crimea, now the only important part of the Karaita settlements), who edited the Karaita Service Book printed at Vienna in 1845. In the Museum MSS referred to the name Samuel very frequently appears as the author of hymns, and other names (such as *בנה* = Muslim or Mashhâli, and *מעניר* = a series of poems on the pericopes of the Pentateuch; beginning of the 16th cent.) occur there also await further investigation. Among the topics dealt with are the praises of Moses, Aaron, Samuel, and Elijah. In the hymns occurring in the MSS, Hebrew is sometimes intermixed with Arabic, and occasionally Arabic only is employed. It is further remarkable that in the order of the Karaita services corresponds (again, of course, *mutatis mutandis*) to the Jewish Synagogue services, and that in point of metre, rhyme, acrostics (i.e. the order of the letter bearing the names of Jesus, Joseph, etc.), the Karaita liturgical poems run on parallel lines with the Rabbanite *Piygâthim.*

**Literature.**—I. SAMARITANS.—The most important work to consult is *The Samaritan Liturgy,* ed. A. P. Cowley, Oxford, 1916, on which the section dealing with Samaritan hymns has been based. Other works (or articles) are: W. Gesenius, *Carthina Samaritana in ostensionem et cotitasse,* Leiplig, 1854; M. Heldenaum, *Die samaritanische Liturgie,* Leipzig, 1858 (in *Bibliotheca Samaritana, ii.*), and *Die liturgische literatur* in different parts of Deutsche Vierteljahres- schrift für religions-Theol. Forschung und Kritik, 1900-1; A. J. Noy, *Carnina Samaritana e codicum toscandi et gallice,* Rome, 1907; L. Rapoport, *Die Liturgie samaritaner,* in *Ann. d. Acad. Europ., Rome,* 1897; 1900; G. Margoliouth, *"As Ancien MS of the Samaritan Liturgy,"* (i.e. the Brit. Mus. MS 3264, referred to in the article), *in ZDMG.* ii. (1897) 499; J. A. Neudorff, *Samaritana,* Philadelphia, 1897, where also a number of additional details on this literature will be found (bibliography, pp. 322-340).

II. KARAITES.—The two principal editions of the Liturgy (both reposing forms of Aaron b. Joseph and of the early liturgists) are (1) by Aaron the Elder, as published in the *Liturgie amazigriques,* Vienna, 1544, *and סנהדריה ליגuria,* Odessa, 1868-72. Complete lists of hymns found in the Brit. Mus. Karaita Biblical and Religious manuscripts, and the *Liturgie amazigriques,* *Aus der Hebr. der Liturgie amazigriques,* *Aus der Hebr. der Liturgie amazigriques,* *Samez.* 1900; *Aus der Petersburger Bibliothek,* by A. Neubauer, has been referred to in the body of the text, and scattered information on liturgical matters will be found in the works named in the bibliography appended to *Av der Herbauer* text.

**Hymns.**—I. Importance.—The body of literature comprising the *Hymns* claims a very high place in the history of civilization; for it supplies the investigator not only of Indian but of Aryan life with his most ancient data. The language in which these hymns are composed possesses the oldest and most abundant material. From the information contained in them can be constructed a fairly detailed description of the ancient conditions of the earliest Aryan inhabitants of India. In them we find the sources of Aryan mythology and religion; here alone can be traced the process of personification which leads from the one mental natural phenomena, and the stages by which polytheism was transformed into the pantheism that for far more than two thousand years has domi-
nated the thought of the Hindus. In them can be
discerned the foundations of the indigenous Aryan
religions of India—Hinduism, Jainism, and Buddhism—
and in the faith of four-fifths of the Indians
of to-day, the last a world religion that has pro-
foundly influenced the civilization of the Farther
East. Without a knowledge of these later
religions cannot be understood any more than the
NT without the OT.

2. Definition.—Owing to the somewhat different
sense attaching to the word in other literatures, it
is necessary to say what is meant by the term 'hymn' as applied
to the Vedas. Here it means a ritual poetical
verse, on the higher side of religion, in praise of the
gods, and generally accompanied by a sacrifice
offered to them; or, on its lower side, in spells or
charms, addressed to hostile powers, and accom-
panying some domestic practice of a magical
character. Hymns of the former type, in which praise of one or
more of the gods is associated with prayers for all sorts of worldly
interests, is the chief feature, are collected in the Rigveda, the oldest
of the four Vedas. Hymns of the latter type constitute the main contents of the later
four, the Atharvaveda. The use of the term 'hymn' is also extended
as to include a certain number of poems, philosophical or even quite secular
in character, that have found their way into the canons of both Vedas. These two
collections alone consist of hymns.

The two Vedas are formed of disconnected
verses or spells employed solely for application to special
ritual purposes; the Upanisadas contain hardly any independent
matter, all its verses (except 76) being borrowed from the Rigveda and used
exclusively in the ritual of the Soma sacrifice. These verses are
strongly poetic, without any intentional connection, being
fundamentally applicable to any particular rite when they are
employed in the various melodies collected in certain
song-books. The Yajurveda consists solely of ritual
verses, about one-half being in prose, which, unlike
the verses of the Samaavedas, are successively
applicable to the whole sacrificial ceremonial.

One-half of its metrical portion is borrowed
from the Rigveda, the sacrifice was regarded as possessing, its formulas
viewed as specifically religious ideas; they are
dedicated to the Soma sacrifice, and are not
sacrificial spells, not differing fundamentally
from the domestic spells of the Atharvaveda.

3. Chronology.—According to the native tra-
ditional authorities, the Vedas were the creation of
Brahma, and were only revealed to, or, as they express it, seen by
various seers (rishis). Scientific investigation, however, has shown from internal
evidence that not only the four Vedas but parts of
the same Veda differ in age, and that they were
composed by seers who belonged to various families,
and who often refer to the skill with which they
have endeavoured to fascinate a new hymn to win
the favour of the gods. But, although the relative
ages of the various Vedas are known, we have
nothing in the nature of exact chronology in
record of them. All that we can say is that the lower
limit of the period covered by the Vedas is probably
about 800 B.C. For Buddhism presupposes the exist-
ence not only of the Vedas themselves, but of the
interwoven theological and theosophical literature
if the Brahmanas and Upanisads (see Vedic Rel-
igion, 2, b, c). Since that literature is extensive and
lacks the characteristic unity within its limits, it cannot be assumed to have
begun later than about 800 B.C. Again, the
evidence of their language, their religious ideas, and
their geographical data proves that the Vedas vary
greatly in age. Thus we find that, between the
earliest and the latest of the Vedas the hymns were composed, the Aryan invaders had spread
right across Northern India from Eastern Kshat-
tristan to the delta of the Ganges. Similar evidence indicates the existence of successive chronologi-
al strata within each Veda. To allow for all this
gradual development it is necessary to postulate a
period of some centuries, decidedly longer, for example, than that between Homer and Greek.
Hence the age of the Vedic hymns cannot be
assumed to begin later than about the 13th cent.
B.C. In the opinion of the present writer, which
practically agrees with the earlier moderate esti-
nated of Max Müller, in his Ancient Sanskrit
Literature, five hundred years are amply sufficient
to account for the gradual changes, linguistic, reli-
gious, social, and political, that this hymn litera-
ture reveals.
4. Growth of the hymn collections.—When the Indo-European entered India, the personages of the Hindu-Kush, they brought with them a religion in which various powers of Nature were personified and worshipped as gods, of whom a few, such as Indra, Agni, and Varuna, became the chief deities of the Harappan period, and several others, such as Mitra, Varuna, Indra, to the Indo-Iranians period. A comparison of Veda and Avesta shows that they also brought with them the cult of fire and of Soma, and were acquainted with the main religious lyrics in several metres. The object with which most of these ancient hymns were composed was to win the favour of the gods by praising accompanying the offering of melted butter in the fire and the offering of the juice of the Soma plant on a litter of grass. Doubtless many hymns of this character composed in the earliest period of the Aryan invasion have been lost. Those which have survived were composed almost exclusively by singers of the hereditary priestly class. They were handed down in different families by memory, not by writing, which cannot have been introduced into India before 800 B.C. at the earliest. These family groups of hymns were by gradual stages brought together till, with successive additions, they assumed the earliest complete form of the hymns as they are contained in the Rigveda, which is the oldest text of the Aryan religion, with which the second period of their textual history begins, and in which they have come down to us. The constitution of the Sanshitä text of the Rigveda must have taken place in the second half of the period of the Brahmanas or about 800 B.C. but before the appellations to those works, called Upanisades (see Vedic Religion, 2, c), came into being. The editors of the Sanshitä did not alter the diction of the text already in existence, but merely applied to it certain later euphonic rules, by which, in particular, vowels are contracted or changed to semi-vowels in such a way as to obscure the metre. On the completion of this work extraordinary precautions were taken to preserve intact the sacred text fixed in this manner. The first step was the constitution, by a grammarian named Saunaka, of a commentary text in which all the words of the Sanshitä were separated and given in their original form as unaffected by the rules of euphonic combination, and all compounds are analyzed. This text, which postdates the earliest commentary on the Rigveda, was followed by others of a more complex character devised to prevent the possibility of any change or loss in the sacred collection of hymns. The result of all these safeguards is that the text of the Rigveda has been handed down for 2500 years practically unmodified, with a fidelity elsewhere unparalleled. There is evidence showing that even in the earlier period of the text the hymns of the Rigveda were preserved with such care that, if the Sanshitä text is pronounced with due regard to metre, it represents the hymns almost in the very form in which they were composed. This text, which postdates the first, is a commentary, and its compilers, called the authors of the Sanshitä, are not the original composers. The Sanshitä of the other Vedas were also provided with Pada texts and other safeguards, but the tradition in their case has been a good deal less trustworthy than that of the Rigveda.

5. Language and metre.—The language in which the Rigveda (and to a less extent the other Vedas) is composed represents the oldest stage of the classical Sanskrit, a language thus far set by the grammarian Panini (c. 300 B.C.), differing from the latter about as much as Homeric from Attic Greek. It is much richer in grammatical forms. Thus it possesses a

subjunctive in frequent use and some twelve forms of the infinitive. The former has entirely died out in Sanskrit, while of the latter only a single form survives. The language of the Vedic hymns also differs from Sanskrit in its accent, which is marked in all the Indo-European languages of the ancient Greeks, is of a musical nature, depending essentially on the pitch of the voice, not the stress. This accent was, some time after the beginning of our era, exchanged in Sanskrit, as in later Greek, for a stress accent.

All the hymns of the Rigveda are metrical. They consist of stanzas mostly of four verses or lines, but also of three and sometimes five. The line, called pada ("a foot"), forms the metrical unit, consisting generally of eight, eleven, or twelve syllables. A stanza is usually composed of lines of the same kind; but a few of the rarer forms of stanzas consist of a combination of different lines. The metres are about fifteen in number, but of these only seven are at all common. Three of them, the triishtû (four lines of eleven syllables), the gâtrâ (three of eight), and the jogathā (four of twelve), are by far the most frequent, accounting for two-thirds of the total number of the stanzas in the Rigveda. The metres of the Vedic hymns, compared with those of Sanskrit, of which they are largely the foreshadowing, are longer and more irregular: only the rhythm of the last four or five syllables in the line is fixed, while that of the first part is not subject to any fixed rule. They occupy a position intermediate between the free verse of the Indo-Iranian period, in which (according to the evidence of the Avesta) the metrical principle was the number of syllables only, and those of Sanskrit, in which (according to the Rigveda, called śloka) the quantity of every single syllable in the line is determined. Generally a Vedic hymn consists of stanzas in the same metre: a typical variation of this rule is to mark the conclusion of the hymn by a stanza in a different metre. A certain number of hymns are strophic in their construction. The strophes in them consist either of three stanzas in the same simple metre, usually gâtrâ, or of the combination of two stanzas in different mixed metres. The latter strophic type is found chiefly in the eighth book of the Rigveda and is called prâvanathās.

6. Extent and divisions of the Rigveda.—The Rigveda consists of 1017 (or counting eleven that are recognized as a later addition) 1029 hymns, containing altogether about 10,600 stanzas. The average length of a hymn is thus rather more than ten stanzas. The shortest hymn consists of only one stanza and the longest of fifty-eight. The Sanshitä text, if printed continuously like prose in Roman characters, would fill an octavo volume of about 600 pages of 33 lines each. The Rigveda is divided into parás in two ways. The one division is a purely mechanical one into agatyas, or 'eighthists,' of about equal length, each of these consisting of eight adhyayas, or 'lessons,' each of which is subdivided into varyas, or 'groups,' of five or six stanzas. The other division is into ten mandalas, or 'books' (literally 'cycles'), and sūtras, or 'hymns' litig of these ten. The Rigveda was also divided into Padas and other safeguards, but the tradition in their case has been a good deal less trustworthy than that of the Rigveda.

7. Arrangement.—Of the ten books, six (ii. to vii.) are homogeneous. The hymns contained in each of them were, according to the present day ("seen") by singers of the same family, which handed them down as its own collection. This tradition is supported by the internal evidence of the seers' names mentioned in the hymns and of
the refrains occurring in these books. Hence they are generally designated the 'family books.' The principle of arrangement which prevails in them is uniform, each of them being divided in the same way into groups addressed to different deities. Books i., vii., and x. are not the composition of families, but of groups of which they consist are the productions of different individual seers. Book ix. is peculiar in that all its hymns are addressed to one deity, Soma, while their arrangement is in no way connected with their authors, for the groups within it are constituted by identity of metre. In the family books the first group is always addressed to Agni, the second to Indra, and the third to less important deities. The arrangement of the hymns within these deity groups is in the diminishing order of the number of stanzas. Thus in bk. ii., the Agni group of ten hymns begins with one containing 16 stanzas, the last having only six. The first hymn of the Indra group here has 21 stanzas, the last only four. The entire group of family books, again, is arranged according to the ascending number of the hymns they contain, if later additions are allowed for. Thus the second book has 43 hymns, the third 62, the sixth 75, and the seventh 104. The homogeneity of these books renders it probable that they formed the nucleus of the whole, which grew to its final extent by later successive accretions. The first of these additions seems to have been the second part of bk. i., which, as formed of nine groups each by a different author, composed of collected and prefixed to the family collections, following the latter as their pattern in their internal arrangement. The eighth resembles the family books, inasmuch as it is composed for the most part by members of one family, the Kāṇrputas. But it differs from them in other respects. Thus it does not begin with a group of hymns addressed to Agni; and it is peculiar in the predominance of the strophic pradhāna metre. The fact that it contains fewer hymns than bk. vii., indicates that it was not included in the collection of family books; but its somewhat analogous character makes it to be the first to be added at the end of that collection. The hymns forming the first part of bk. i. (1–50) have various points in common with those contained in bk. vii.; more than half of them seem to have been composed by seers of the Kāṇrputa family; the strophic metre affected by that family reappears in them; and many similar or identical passages are found in the two. The present state of research does not enable us to decide the chronological priority of the two collections or to explain why they were divided. The fact, however, remains that they were added at the beginning and the end of an older collection.

The addition of bk. ix. was the direct result of the formation of the first eight into a unit. This book consists entirely of hymns addressed to Soma and recited while the pressed juice of the plant was 'clarifying' (paramāṇa). Their composers were seers belonging to the same families as those of bk. i.—vii., as is shown, among other evidence, by the occurrence of refrains peculiar to those families. The hymns to Soma Pavanāma have all been extracted from the family books (in which no Soma hymn of any kind occurs), as well as from bk. i. and vii. (they contain only one and two hymns respectively to Soma in his general character), being gathered into one book as the hymns proper to the Udāgatr, or chanting priest (while the rest belonged originally to the Hoir, or reciting priest), and added at the end of bk. i.—vii. There is no ground for supposing that these Somali hymns were of later date than the others. On the contrary, the presumption is that the hymns belonging to the Soma ritual, which goes back to the Indo-Iranian period, date from early Vedic times. It has not as yet been possible to detect differences of chronology in this book. As to the arrangement of the order of its first 60 hymns depends on the number of their stanzas, which decreases from 10 to 4. In the remaining 54, some of which are very long (one having as many as 38 stanzas), this principle is not observed. The two groups of 27 stanzas are composed except for stanzas in gāyatrī, nearly all the rest consist of groups in other metres: thus 65–66 form a gāyatrī, 47–57.

Book x. was added last of all. It is undoubtedly, as its language and contents show, of later origin than the rest of the Rigveda. Its composers were evidently acquainted with the older books. Not only the position that it occupies at the end of the whole collection, but the fact that the number of its hymns (196) is made up to that of bk. i., is an indication of its supplementary nature. It consists of hymns by a large number of seers of different families, the names of some of which occur in other books. But the traditional names of the authors of a great many of these hymns are very doubtful. Though this book is in general more modern than the rest, it contains some hymns as old, and at least as poetical, as the average of those in other books. Such hymns perhaps found their way into this supplementary collection because a some reason been previously overlooked. As a whole, the tenth book approximates in language and general character to the Atharvaveda, with which it is also closely associated. For of about 1350 stanzas from the Rigveda incorporated in the Atharvaveda more than 40 per cent are taken from bk. x. Here, in contrast with the other books, we find earlier grammatical forms and words growing obsolete, while indifference in abstract ideas and philosophical speculation, as well as the introduction of matter connected with witchcraft, such as is characteristic of the Atharvaveda, has much increased.

8. Subject-matter.—The great bulk of the hymns of the Rigveda consist of invocations of various deities. Their content are, therefore, largely mythological, and furnish the main knowledge of the Vedic religion. The gods to whom most hymns are addressed are Agni (about 200), Indra (over 250), and Soma (over 100), who thus between them claim considerably more than one-half of the whole Rigveda. Only a few hymns (not exceeding 38) are not intended for the worship of gods or deified objects. About a dozen of these, almost restricted to bk. x., are concerned with magical practices, the proper sphere of the Atharvaveda. Two such (li. 42, 83) deal with anger; two others are directed against poisonous vermin (li. 191) and the disease called gāndhara (x. 163); two (x. 58, 69, 7–12) consist of invocations for the preservation of life; one (v. 55) is a charm to induce sleep; two (x. 183, 182) are spells for procuring offspring or for warding off a demon destructive of children; one (x. 185) is directed against enemies, another (x. 145) against rival wives; one (x. 159) is a song of triumph over rivals; another (vii. 103) a paenegyric of frogs as magical bringers of rain.

Some 20 others are more or less secular poems, concerned with social customs, moral questions, riddles, and cosmogonic speculations. Several of these are especially important as throwing light on the earliest thought and civilization of the Vedic people. Though much information of this character may be gathered from incidental references scattered through the rest of the collection. One of the most noteworthy is the long wedding hymn connected with the marriage ceremony, though containing a large admixture of mythological
HYMNS (Vedico) 53

matter. There are also in bk. x. five hymns (14–18) dealing with funeral rites. Four of them, however, are addressed to deities concerned with the life beyond the grave. The last, being quite secular in tone, supplies more information than any of the rest about the funeral usages of early Vedico India. 

DEATH AND DISPOSAL OF THE DEAD [Hindu].

Besides several mythological dialogues in which the speakers are divine beings (iv. 62; xxii. 51, 52, 89), there are two in which one or both agents are human. One is a somewhat obscure colloquy (x. 95) between a mortal lover Pururavas and a celestial nymph, who is on the point of forsaking him. The other (x. 10) is a dialogue between the twins Yama and Yami, the ancestors of the human race. This group of hymns has a special literary interest as precursors of the dramatic poetry of a later age.

Among the secular hymns of the Rigveda are to be included the dānavadāyī (‘praises of gifts’), which are represented by one complete hymn (i. 120) and appendages of 3-5 stanzas to over 50 others. They are poems of a semi-historical character, being panegyrics on liberal patrons in whose behalf the singers composed their hymns to accompany the sacrifice. They furnish interesting glimpses of the ideas about the seers and their employers, as well as about the names and habitat of the Vedic tribes. They are late in date, belonging chiefly to bkbs i. and x., and to supplementary hymns of bk. x. 4.

Four of the secular hymns are of a didactic type. One of them (x. 34) is a remarkable poem, being the lament of a gambler who, unable to resist the fascination of his vices, deplores the ruin he has brought on himself and his family. The other three, describing the various ways in which men follow gain (ix. 112) and praising wise speech (x. 71) or the value of gold, are also didactic in character; the forerunners of the sententious poetry which was so assiduously cultivated in post-Vedico Sanskrit literature.

Two of the hymns of the Rigveda consist of riddles. One of them (viii. 26) in ten stanzas describes various gods by their characteristic marks, leaving it to the hearer to guess who in each case is meant. A far more elaborate collection of riddles is to be found in a separate theme (143) consisting of 52 stanzas. These propound, in mystical and symbolic language, a number of enigmas, many of them connected with the sun. Thus the wheel of order with 12 spokes, revolving round the heavens and containing within it in couples 729 sons, means the year with its 12 months and 360 days.

Lastly, there are six or seven cosmogenic hymns containing speculations regarding the origin of the world in connexion with a Creator (called by different names) as distinct from any of the ordinary gods. Only one of them (x. 129), however, treats the subject in a purely philosophic spirit, as an evolutionary process from the non-existent (a-sat) to the existent (sat), and thus forms the starting-point of Indian philosophy.

The historical data furnished by the Rigveda, especially the numerous rivers mentioned there, we are justified in concluding that at the time when these hymns were composed the Aryan tribes had the possession of the territory drained by the Indus river system lying between 35° and 28° northern latitude and 70° and 78° eastern longitude, and corresponding roughly to the North-western Frontier Province. This conclusion is borne out by the references to the flora and fauna of the country in which they were settled.

From the historical data of the hymns we further learn that the Aryans were still engaged in warfare with the original inhabitants. Many victories over these foes are recorded, and once 1600 of them are said to have been bound and 30,000 slain with the aid of Indra. That the Aryans were still best to conquer is to be inferred from the mention of rivers as barriers to their progress. Though split up into numerous tribes, they were conscious of religious and racial unity, for they contrasted the aborigines, whom they called Dāsas, with themselves, designating them as non-sacrificers and unbelievers, and calling them ‘black skins’ and the ‘Dāsa colour’ as opposed to the ‘Aryan colour’. This racial contrast appears to have been the starting-point of the later system of caste (g. v.); the Sanskrit name of which (candra) means ‘colour’. The enslaved Dāsas became the Sudras, the fourth or lowest caste, first mentioned in one of the very latest hymns (x. 90) of the Rigveda.

The names of many of the Vedic tribes are mentioned. There was no political cohesion among them, for, though they sometimes formed confederations, they were constantly at war with one another. A coalition of several tribes is referred to as taking part in the battle of the ten kings,’ when Aryans fought against them daily on the banks of the Panjū river (now Ravi).

The hymns also furnish material for a fairly detailed account of the social conditions of these early days. Thus we find that the family was the foundation of society with the father as its head, and that women held a freer and more honoured position than in later times. Mention is made of various crimes, of which robbery, chiefly in the form of cattle-lifting, seems to have been the commonest. Indolence was known, mainly as a result of gambling, and reference is made to the clearing off of debt by instalments. Various details are given about clothing and personal adornment. Thus we see that it was usual to wear an upper and lower garment, which were made of sheep’s wool and were often decorated. Bracelets, anklets, necklets, and earrings were used as ornaments. Hair is mentioned as worn in different ways. Men usually wore beards, but occasionally shaved. The usual food consisted of milk, clarified butter, grain, vegetables, and fruit eaten only on ceremonial occasions, when animals were sacrificed. The commonest kind was apparently beef, since bulls were the chief offerings to the gods. But the sacrience of the cow which prevailed, having round the pracating, was done in the Indo-Iranian period, gradually grew in strength till in later times beef in general came to be absolutely forbidden, and has remained so among the Hindus down to the present day. Two kinds of spiritual liquor were made: soma was restricted to religious ceremonies or festivals, while sura, made from some kind of grain, was that in ordinary use.

That one of the main occupations of the invading Aryans was warfare is only natural. He fought either on foot or from a chariot; but, as far as can be seen, not on horseback, as in later times. The usual weapons were bows and arrows, but spears and axes were also employed. Cattle-breeding seems to have been the chief means of livelihood: cows are the most prominent objects of desire in the prayers to the gods. But tillage was also practised to some extent. Fields were furrowed with a plough drawn by bulls. Corn was cut with a sickle, and then threshed out and winnowed. The mention of chakli, an agricultural tool, in the water seems to indicate that irrigation was not unknown. Wild animals were trapped and snared, or hunted with bows and arrows, sometimes with the aid of dogs.

Navigation in boats (doubtless of a very primitive
HYMNS (Vedico)

The average degree of literary skill is in fact remarkably high. This is perhaps partly due to the fact that these early singers felt the necessity of producing a hymn composed with the highest art in order to please the gods. A poet often says, generally in the last stanza, that he has praised the deity according to his knowledge or ability; that his hymn is the most wondrous, well-woven garment, or a bride adorned for her lover.

The hymns in which literary merit is most conspicuous may be briefly indicated. The group of over twenty addressed to Usha, goddess of the morning, is the most poetical in the Rigveda. It will probably be admitted by all who read them, even if only in a good translation, that their beauty is quite equal, if not superior, to that of the descriptive religious lyrics of any other literature. Some of the hymns to Indra (esp. i. 82) show much graphic power in their account of the conflict of that god with Yrtra, the demon of drought; those to the Maruts, or storm-gods, often depict with much striking imagery the phenomena of thunder and lightning, and the mighty onset of the wind. One hymn to Purjanyu (v. 83) paints the devastating effects of the rainstorm with great vividness and power.

The hymns addressed to Varuna, the most ethical of the Vedic gods, describe the various aspects of his sway as moral ruler of the world, in an exalted strain of poetry. Several of the hymns to Pratya, the Sâmanas, also addressed to Varuna, are religious poems in which the poet expresses his love and admiration for the god, and his longing for the protection of his wise counsel. These hymns are characterized by their simplicity and directness, and the prayers are often accompanied by the melodies in which it was chanted were numerous, and are already often referred to by their special names in the Brâhmanas and Upânishads.

9. Literary merit.—The diction of the hymns of the Rigveda, is, on the whole, simple and natural. The moderate use of compounds, which are practically restricted to two members, contrasts with the freer and more elaborate style of the later Vedic literature. The frequent and inordinate use of as many as five or six words in a single phrase was a feature of the diction of the Rigvedic hymns. This tendency was probably aggravated by the necessity of ringing the changes on a limited range of ideas throughout a large number of hymns, comprising nearly one-third of the whole collection. Here we already meet, in its earliest form, that partiality for subtle and difficult modes of expression which prevails in post-Vedâk literature, and which one of the Brâhmanas already indicates by observing that the gods love the obscure. In spite of such words, the Rigveda contains much genuine poetry. Since the gods addressed are, for the most part, personifications of natural phenomena, and their connexion with the hymns is still felt, the praise addressed to them gives rise to much beautiful and even nobil imagery. It is, however, only to be expected that the literary merit of so large a body of poetry should vary considerably. In the case of cosmological and mechanical verse, while others attain a high level of poetic excellence.
by practically all Western scholars. Roth proved
that, though the Ayākṣas were invaluable guides in explaining the theological and
ritual texts of the Brāhmaṇas and Sutras, with the atmosphere of which they were familiar, they
did not possess a continuous tradition of the
true meaning of the Vedic hymns. They could not in fact
possess any such tradition, for interpretation began only
when the meaning of the hymns had become obscure.
That the gap between the poets and interpreters was wider in Yāsaka than in Ayākṣas must have
been considerable is shown by his predecessor's
opinion quoted above. That Yāsaka's own
interpretations are often merely conjunctural appears
from his frequently giving two or more alternative
meanings for a word. Yet he must have had more
and better means of ascertaining the sense of various
obscure words than Śāyana, who lived nearly
2000 years later. Śāyana's interpretations, how-
ever, sometimes differ from those of Yāsaka. Hence
either Yāsaka is wrong or Śāyana does not follow
the tradition. Again, Śāyana often gives several
inconsistent explanations of a word in interpreting
single passages or commenting on different
passages. In short, it is clear from a careful ex-
amination of their explanations that neither Yāsaka
nor Śāyana possessed any certain knowledge about a
word, the sense of which is fixed in the Rig Veda.
Hence their interpretations can be treated as de-
cisive only if they are borne out by probability,
by the context, or by parallel passages. For the
traditional method Roth therefore substituted in
the epoch of interpreting the difficult parts of the
Rigveda from internal evidence by the minute comparison of all passages parallel in form
and matter, while taking into consideration con-
textual, etymological, and comparative philology.
In the application of his method, Roth attached too much weight to
etymological considerations, while he undervalued
the evidence of native tradition. Pischel and
Geldner, on the other hand, emphasized the
principle of Indian character of the Vedic hymns,
connect the interpretation of them too closely with
the literature of the post-Vedic period and the
much more advanced civilization which is described
there. The results achieved is good reason to hope, from the
results already achieved, that a steady adherence
to the critical method, by admitting all available evidence, including that of etymology, and by avoid-
ing the excesses just indicated, will eventually
clear up a large proportion of the obscurities and
difficulties that still baffles the translator of the Vedic hymns.

II. The Atharvaveda.—The Atharvaveda, re-
garded as a whole, deals with the lower side of
religion as represented by witchcraft, the word
itself meaning the 'lore of the Atharvans or
magicians. The oldest designation by which this
Veda is known in Indian literature is Atharvāvi-
girasth, 'the Atharvans and Angirases', the names
of two classes of pre-historic fire-priests, referring
respectively to the two kinds of spells, the propiti-
ation and the hostile, that form the main content
of the collection. Very different from the world
of the Rgveda is the sphere to which we are now
introduced. There we have moved among the
beneficent spirits of the world, of which the
sorcerer seeks to win over by flattering or to drive
away by imprecations. The priest and the magician,
the sorcerer and the witch, all work for the same
end, that is, the making of spells, and the unenlightened
man, from the beginning of the Vedic period been separated, the
functions of the former being concerned with the
gods, those of the latter with the unenlightened world of
went a process of growth by successive additions until it assumed the form in which it has come down to us. It is clear that the first eighteen books had been combined before the last two were added. That older collection consists of three main divisions, in the first two of which, bks. i.—vii. and viii.—xii., the hymns are arranged according to the number of stanzas they contain while the guiding principle in the third, xiii.—xvii., is unity of subject-matter in each book. The first group comprises short hymns (none exceeding eighteen stanzas), the second containing but more than twenty stanzas, the subjects in both being miscellaneous.

There can be little doubt that the first six books of the first group formed the nucleus of the Atharvaveda, their hymns consisting of its characteristic matter, charms and spells exclusively in metrical form. These six books are arranged primarily according to the amount of text they contain in an ascending scale, the first having 153 stanzas, the sixth 454. This principle is supplemented by the arrangement of these books according to the normal number of stanzas contained in their hymns, also in an ascending scale. Thus bk. i. contains hymns of 4, ii. of 5, iii. of 6, iv. of 7, v. of 8 stanzas. Book vi. contains hymns of only 3 stanzas, occupying this position because the secondary principle here is subordinated to the primary one. Book xii. is to be regarded as a supplement to this group. This is indicated by the fact that it infringes both principles that govern the arrangement of the preceding books. This book consists of hymns containing at least one stanza only, and which, therefore, hardly be accounted hymns at all.

The next division, bks. viii.—xii., the hymns are arranged according to decades, each of the first four containing ten hymns of 20 to 50 stanzas, while bk. xii. has five of more than 50 stanzas. This group thus consists of its characteristic matter in two special points. As contrasted with the mainly popular matter of the group it is clearly of a hieratic origin, its sphere of thought being that of the Brahmanic priesthood. It also conforms with the first group in each, of its books containing an extensive passage of prose like that of the Brähmanas.

The third main division, xiii.—xviii., distributes its hymns among its six books according to their subject-matter. Thus xiv. deals with the wedding ceremonial, and xviii. with funeral rites, both borrowing most of their stanzas from bk. x. of the Rigveda, and thus not being specifically Atharvan in character. Bks. xiii. and xvii. consist of hymns addressed to the sun, in the character of Rohita, or the Buddha one, in the former, and as identified with Indra and Vivas in the latter. The whole of xv. and most of xvi. consists of prose resembling that of the Brähmanas. The former treats mystically of the ēkātya, probably meaning the religious mendicant; but it is hard to say exactly what unity of subject-matter connects the hymns of the latter.

Some time after these main divisions had been formed into a collection of eighteen books, the nineteenth was added to it as a supplement. That this was the case is proved by a considerable amount of cumulative evidence. The most striking is that the book supplies a sort of table of contents to the eighteen preceding books, and presupposes their existence practically in their present arrangement. It is also to be noticed that the first eighteen books have been handed down in an almost unaltered state, in contrast with that of the earlier collection. Last of all was added bk. xx., which consists almost entirely of extracts from the Rigveda taken over unchanged (while the material borrowed from the Rigveda at an earlier stage had undergone considerable modification), and is in no way related to the rest of the Atharvaveda. This supplement was appended simply in order to bring the Veda of spells into connexion with the sacrificial Soma ceremonial of the Brähman priesthood. It is a significant fact that two of the most important auxiliary works belonging to the Atharvaveda and dating from the latest period of Vedic literature, its Prātiśaṅkhyā and its Kāṇḍikā Sūtra, ignore bks. xix. and xx.

It now remains to give a brief survey of the various contents of the Atharvaveda. A large number of its hostile spells are intended as remedies, together with the use of different herbs, against a number of diseases, ailments, and injuries, such as fever, jaundice, scrofula, leprosy, dropsy, cough, baldness, opthalmia, impotence, poisoning, snake-bite, wounds, and fractures ('Disease and Medicine (Vedic)'). These incantations are addressed to the demons personified as demons, or to whole classes of demons supposed to cause them. This Veda, supplemented by its Kāṇḍikā Sūtra, is thus our earliest source for the history of Indian medicine. Allied to the remedial spells are the charms which invoke or praise healing plants, the purifying water, and the most potent elixir of all—the sun. Among the auspicious spells are many prayers for protection from the various forms of death and disease, and for long life, often expressed in the form of a desire to live 'a hundred antaras'. Others are prayers for the prosperity of flocks and the produce of the fields, or for luck in undertakings, especially in gambling. Another group aims at the attainment of harmony and concord or of success in the arts and sciences. A large class is concerned with wedlock and love. Several of these are of a pacific character, being charms for the obtaining of a husband or bride, blessings on a new marriage, and the like. A still more miscellaneous group of hymns concerns the person of the king. They consist of spells to be employed at the royal inauguration or intended to secure for him the attainment of power, fame, and especially victory in battle. There are, again, a few hymns consisting of spells for the expiation of sins or moral transgressions, such as the non-payment of debts. Finally, there remain three or four classes of hymns which, being alien to the true Atharvan spirit, date from a later period in the growth of this collection. One of these comprises the hymns composed in the interest of Brähmans. Though the later literature frequently refers to witchcraft and sorcerers in a hostile spirit, their use is even sanctioned when employed by Brähmans against others. In these hymns the inviolability of the person and property of Brähmanas is emphasized, while imprecations are hurled against their oppressors. They also contain exaggerated panegyrics of the sacrificial fee (dašāśīna), the liberal bestowal of which is pronounced to be the highest gift, group prayers of a less interested nature, as for wisdom and theological knowledge, are rare. Sacrificial hymns and spells, besides those borrowed wholesale from the Rigveda in bk. xx., occasionally appear in other parts of the Atharvaveda. The group of cosmogonic and theosophical hymns doubtless constitute the latest additions to this collection. Their speculations and terminology indicate a development of philosophy according to that which appears in the Upaniṣads. They are not to be regarded as forming a connecting link between the philosophy of the Rigveda and
HYMNS (Vedic) 57

that of the Upaniṣads. They are mystical productions not of genuine seekers after truth, but of sorcerers who utilize the philosophical notions current in their day mainly to subserve their practical purposes. Among the hymns of this class the Samaveda is the most important. In the four stanzas of the sacrifice (xi. 7), are defined as the Supreme Being.

The literary merit of the Atharvaveda is, as may be expected from its contents, much lower than that of the Rigveda. But a few of its hymns, besides many isolated verses scattered throughout the collection, furnish specimens of true poetry. Such is the long hymn (xiv. 1) in which the Earth is invoked as the supporter of all living things and the bestower of all blessings. Another (iv. 16), though concluding with two verses essentially Atharvan in character, exalts the omnipotence of Varuna in language unsurpassed by any hymn addressed to that deity in the Rigveda. The geographical data found in the Atharvaveda indicate that its composers lived in a region much to the north of the Aryan Indians. The information we derive from the former supplements in a remarkable manner what we know from the latter about the religious and social conditions of the times, especially the side of domestic life, the regulated form of which is preserved by the Grihya Sūtras, or manuals of domestic ritual, belonging to the latest stratum of Vedic literature (c. 500-200 B.C.). Between the two, there exists a body of material which is of inestimable value, not only for the early history of India in its various aspects, but for the study of the development of human institutions in general.

12. Though the two liturgical Vedas cannot be said to consist of hymns, it is perhaps advisable to describe as briefly as possible their form, their arrangement, their contents, and their relation to the other Sāhkāras. The Sāmkaveda consists of 1549 stanzas chanted in various melodies, called sūman, to accompany the Soma ritual. Its stanzas are nearly all borrowed from the Rigveda, chiefly from books viii. and ix. The 72 stanzas not derived from the Rigveda are to be found in other Sāhkāras or in ritual works. Its stanzas are mostly composed in the gīyagītri metre or in the sāmkaveda stropāya, both of which metres forms were originally meant to be sung (their names being derived from gā, 'to sing'). It is divided into two parts. The first consists of 585 stanzas, the second, arranged in groups of stanzas, closely connected and generally three in number, which follow the order of the main sacrifices. Internal evidence shows that the second book is secondary in character as well as later in date. As regards the age of the Samaveda, it is at least certain that the divisions of the first book are known to the Sāmkatḥa Brāhmaṇa. There is also some ground for believing that as a collection the Samaveda was as early as the recensions of the Yajurveda, the Taittirīya and the Vājasaneyi Sāhkāra. The two parts of this Veda supply only the words. The melodies of the chants were doubtless long, very ancient only. They were later collected in gīyagītri, or 'song-books', which indicated in musical notation the manner in which the words were to be sung. These stanzas received special names in very ancient times, two of them, the Bhāg and the Rājñatha, being even mentioned in the Rigveda. They are indications that the oldest of them may have been of popular origin and connected with the rites of pre-Brāhmaṇal sorcerers. Thus the second part of the Sāmkatḍāna Brāhmaṇa, a ritual work belonging to the Samaveda, is a manual of witchcraft which prescribes the employment of various sūman for purposes of sorcery. The injunction of the Brāhmaṇal law-books, that the recitation of the Rigveda and the Yajurveda must cease on the sound of a sūman being heard, is, perhaps a reminiscence of the kind of sorcerers. Thus, though the contents of the Samaveda are worthless from a literary point of view, they are of some value for the history of sacrifice and witchcraft, and decidedly important for that of Indian music.

13. The Yajurveda is the prayer book of sacrificial formulae (gāyitas), from which it receives its name, and which are in present use. The prājñapāta, or 'trumpeter of the sacrifice', the Brahman, and the sāhkāra give the formulae of the various sacrifices, which are taken over singly or in groups for application to a particular ceremony, but a few entire hymns, such as the puruṣasūkta, 'Hymn of Man' (x. 90), have found their way into this collection. In the characteristic prose formulas and prayers of the Yajurveda, the gods are not always invoked or prayed to, but various sacrificial implements or rites are brought into connexion with the invocation of the gods, in offering or in oblation, says, 'Then is the body of Soma, take (I offer) to Viṣṇu'; or, in taking hold of some utensil, he exclaims, 'At the stimulation of god Śāvitr I grasp thee with the arms of the Áśvins, with the Imāc.' The object of most of these formulas is not to worship the gods, but to force them to fulfil the desires of the sacrificer. Many of them are in fact nothing else than spells in prose. Among them inscriptions like those of the Atharvaveda are also to be met with. Here, too, we find the beginnings of that form of prayer which seeks to influence a god by the repetition of his various names and which was greatly developed in later times. This is represented by the Sātaśurūdra, or enumeration of the hundred names of the god Rudra. A similar tendency appears in the frequent employment of sacred but unintelligible or meaningless words, especially the syllable oṣa, which, having originally been a particle of assent, is somewhat analogous to the Hebrew 'Amen.' Thus prayer in the Yajurveda shows deterioration as compared with the Rigveda and a proclivity to revert from the domain of religion to that of witchcraft.

The language and the metre of the prose formulae and of the original verses of the Yajurveda agree on the whole with those of the Rigveda, but represent a distinctly later stage. The internal evidence of the subject-matter points in another direction. It shows that the country in which the Yajurveda was composed lay much farther east
than that of the Rigveda, having as its centre the tract between the two small rivers Sarasvati (Sar-
sutri) and Dhyandvati (Chautang), somewhat to the west of the Jumna. The organization of society
more than in the Rigveda, the caste system in particular having
grown up and been consolidated in the interval.

The Yajurveda has come down to us in six rec-
censions. One of the now more connected group, called the Black Yajurveda, the texts of
which are often identical word for word. They
agree in mixing up, to some extent, explanatory
matter with their sacrificial words for usanae and
ulesas. The two other recensions, which are very closely
alike, form the so-called White Yajurveda.
This contains the prose and verse formulas to be recited
at the sacrifice only, the explanatory matter being
collected in the Brahmanas. It is divided into 40
chapters, in which several chronological strata may
be distinguished. It appears to have originally
consisted of the first eighteen aneke, for this is the
only portion explained word for word in the Brahmanas
and recurring in the Taitytirya reci-
sion of the Black Yajurveda. To them were then added
the next seven chapters. These 25 chapters
together make up the first part of this recension and
contain the prayers for the most important great
sacrifices, which comprise food offerings on the one
hand and soma offerings on the other, both being
necessary for the life of five. The remaining
fifteen chapters are evidently of a supplementary
character. The forties, being an Upanigad,
was added last of all. Even the original part of this
recension is not clear, having been cut off at a later date
than any of the recensions of the Black Yajurveda,
because the separation and distribution of its matter
are more systematic than in the latter.

Though the Yajurveda, as a body is said to
display any literary merit, it is important and
even interesting to the student of the literature,
especially with reference to the signifi-
cance of prayer.

HYPNOTISM.—Hypnotism is the name now generally given to the study of, and the practice of inducing a peculiar abnormal state of mind which in some respects is allied to sleep, this being the name under which it was, and is still, usually called. The modern practice of hypnotism has been developed from the practice of magnetic or sympathetic healing, which enjoyed a great vogue in France and especially in Paris in the latter half of the 18th cent., owing chiefly to the labours of F. A. Mesmer (whence the term 'mesmerism,' still in popular use). Until the middle of the 19th cent. almost all practitioners of mesmerism followed Mesmer in attributing the effects produced in their patients to the passage from the operator to the patient of some subtle physical influence or fluid, generally called the magnetic fluid, or by means of this unverifiable conjecture largely accounts for, and to some extent perhaps justifies, the extreme scepticism and hostility with which the arts of the mesmerists were regarded by the great bulk of the medical profession until almost the close of the 19th century.

To a French physician, Alexandre Bertrand, belongs the honour of having first pointed out (Travédu savanitnitude, Paris, 1853) that the therapeutic and other effects attributed to animal magnetism are (in so far as they are genuine, and not, as in the early days so many were, errors due to fraud or to malobservation) to be regarded as in the main produced through the mind of the patient working upon the organism, as effects of expectation induced in the mind of the patient by suggestions given either directly or indirectly by the operator. These effects being generally favoured and intensified by a peculiar mental and bodily condition of the patient induced by the mesmeric procedures. Bertrand's great discovery was, however, almost neglected by the medical world; and twenty years later James Braid, a surgeon of Manchester (Neuropsychology, London, 1843), arrived independently at the same conclusions, and by his success fully established the theory that the measures in his practice secured for them, under the name of 'Brainism,' a certain consideration even in medical circles. But it was not until the truth was discovered and published independently for the third time in 1884 by H. Bernheim, Professor of Medicine at Nancy, that it began to gain general acceptance in the scientific world and (under the name of hypnotism,) which Braid had been supplied by medical men in all parts of Europe without serious risk of loss of their professional reputations. In the last decade of the 19th cent. it became generally recognized that hypnotism was a legitimate means of a therapeutic practice, extremely useful in many cases of nervous and functional disorder.

When Beralinheit published his work (De la Suggestion, Paris, 1884), he took the view that the therapeutic effects he recorded were secured by creating in the mind of the patient the expectation of the disappearance of symptoms; and the process of inducing such expectation, which generally took the form of confident affirmation on the part of the physician, he called 'suggestion.' He realized that such suggestions operate more powerfully if the patient to whom they are directed is first brought into a drowsy or half-sleeping state. But he did not recognize that this state, so favourable to the operation of suggestion, differs essentially from a normal state of drowsiness, on the other hand, Charcot, the celebrated physician who extensively applied the hypnotic methods in the Salpêtrière Hospital at Paris (in the eighties), taught that the hypnotic state is a peculiar and abnormal condition which can be produced in persons suffering from certain nervous deficiencies. These two views of the hypnotic state were opposed to one another in a lively controversy prolonged through many years. It is now generally recognized that the truth is to be found by adopting the middle way. Hypnosis (as the hypnotic state is now generally called) is a peculiar state of mind, involving some abnormal condition of the nervous system, as Charcot maintained; but this condition is one which can be temporarily induced by a skillful hypnotist in the great majority of normal and perfectly healthy persons. The only constant, feature or symptom of hypnosis is the increased suggestibility of the subject; for, although in most cases, especially in cases of deep hypnosis, the subject presents the appearance of drowsy passivity or even prostration, this is not always the case; and in this respect much depends upon the methods used for the induction of hypnosis and the general handling of the case by the operator.

In a typical condition of hypnosis of moderate depth, the subject appears completely plastic in the hands of the operator. He remains unresponsive to, and apparently unaffected by, all persons and things of his environment, except the operator and those things or persons to which the latter may direct his attention. But, in relation to the operator, his mind and senses seem to be peculiarly alert and responsive; and he obeys implicitly the slightest indications of the operator's wishes or expectations. This responsive obedience, however, which is the essence of the abnormal 'suggestibility' of the subject, is not necessarily obedience; it differs from the most subject voluntary obedience in two important respects. First, the hypnotized subject may, and sometimes does, exert his will to resist the suggestions of the operator; and, though such exertion may be attended with more or less success according to the depth of the hypnosis, the degree of training of the subject, and the extent of the personal influence exerted by the operator, the measure of its success is very much less than in the normal condition, or the effort required for success is much greater.

Secondly, the subject's obedience to, or acceptance of, suggestions is much more complete, unhesit-
ing, and uncritical, than in the normal state. He accepts with conviction suggestions so improbable and against all common experiences that in his normal state he could not accept them or believe in them even though he should endeavour to do so. For instance, he may be told that he cannot lift his hand from his knee, and forthwith he finds himself unable to perform this simple action. And in a similar way he may be prevented from performing any movement or be made to execute any 'suggested' movement. In both cases it is argued that the essential condition of the effectiveness of the 'suggestion' is that the notion suggested to the subject shall be accepted by him with complete conviction, and shall prevail firmly in his mind without being subjected to the criticism or opposition of other notions. There is good reason to believe that, if any person in a normal condition could be induced to accept apathy or suggestion with complete conviction, the notion thus established in his mind would be just as effective in controlling his movements as is the suggestion now described. We occasionally observe instances of such control of movement by an idea suggested under peculiarly favourable conditions to a person in a normal state. And not only control of bodily movement, but many other effects of the phenomena of hypnotism, notably the induction of hallucinations and delusions of all sorts, and the abnormally increased influence of the mind over corporeal functions such as sleep, the action of the bowels, and the circulation of the blood, these plausibly be brought under the same type of explanation.

According, then, to one view widely prevalent among the more orthodox psychologists and practitioners of hypnotism, hypnosis is essentially a condition in which the suggestibility (the tendency to accept any proposition imparted) normal to all minds is temporarily increased such that the peculiar condition of the patient's brain induced by the process of hypnotizing him; and this condition of the brain is held to be one of 'relative dissociation' (i.e. a certain degree of isolation) of the systems of neurons (the anatomical elements of which the brain is composed) is rendered less free and lively than it normally is, so that, any one system being activated, it vetoes out its effects in an untrammeled and thorough manner.

But there is a class of hypnotic phenomena which does not easily lend itself to interpretation of this sort. In various ways the subject's behaviour may seem to express two independent and simultaneous streams of mental activity, and this peculiar condition seems in many cases to be prolonged beyond the period of hypnotism into the fully waking state. It is, in fact, the influence of commands or suggestions given during hypnosis, but designed to take effect after the termination of that hypnosis (post-hypnotic suggestions), that the dual stream of mental activity is most clearly revealed. For the waking subject may be quite unable to recall to consciousness any incident of the period of hypnosis or the nature of any suggestions made to him during that period, and yet he may carry out such suggestions with minute accuracy; and these post-hypnotic suggestions thus carried out by the waking subject, without conscious recollection of the instructions given, may be such that their execution implies complex intellectual activities. For example, the subject may be instructed to perform some simple action after the lapse of a given number of minutes; and in some cases the number of minutes so named may be so large that the accurate determination of the appointed moment may necessitate either continuous counting of the passage of the minutes throughout hours, days, or even weeks, or the carrying out of complicated arithmetical operations which seem to be beyond the ordinary powers of the subject. Such post-hypnotic exeクtions of suggestions are typical of a large class of phenomena which seem to render necessary the notion of subconscious or semi-conscious mental activity.

Some of the effects of the hypnosis of neural dissociation attempt to apply it to the explanation of the facts of this order also. Others, notably Pierre Janet, attempt a rather different line of explanation, but it must be said that the notion of any productive mental process is always fully conscious and involves the activity of a centre of synthetic mental energy, the subconscious processes are always of the nature of semi-mechanical or automatic repetitions of processes previously achieved by true activity.

To many students of hypnotism it seems that both these attempts at explanation are wholly inadequate. It may be admitted that neural dissociation of various degrees is characteristic of the hypnotic state, while yet it is recognized that this dissociation affords but a partial interpretation of a part of the facts. By those who take this view it is urged that, according to both these theories, hypnotic and subconscious mental processes must be considered on a relatively low grade of efficiency (and many of them, no doubt, answer to this description). In some cases, it is pointed out, they far surpass in intellectual level or in range of control over bodily functions the normal mental processes of the subject; and it is insisted that these features of hypnotic process must be considered in relation to a wealth of facts which have been recorded in the course of modern studies of hysteria, spontaneous trance, mediunism, genius, religious and mystical experiences and ecstasy, and other unusual mental states and processes in which the bounds of normal mental activity seem to be transcended.

When hypnosis is regarded in relation to the larger field of manifestations of obscure but wide-ringing powers of the mind, hypnotism appears as a means of experimental investigation capable of greatly extending and deepening our conception of human personality; and it is from this point of view that many of the most effective students have pursued it, and that many interesting speculations have been made for the purpose of rendering the facts in some degree intelligible. Such speculations are, in the main, of two types. On the one hand, the psychical constitution of man is regarded as infinitely richer and more complex than it is revealed by the control over our normal mental life, as comprising potentialities or faculties which normally find no expression owing to the limitations imposed by our bodily organization, and which find only partial and very incomplete expression in the super-normal phenomena of the abnormal states of which hypnosis is the experimental type. Of speculations of this group, the conception of the subliminal self put forward by F. W. H. Myers (Human Personality and its Survival of Bodily Death, London, 1901) is the boldest and most elaborated.

Speculations of the other type (best represented by William James in A Plurality of Universes, London, 1909, and other writings) attempt to account for the super-normal phenomena by conceiving human individuality as relative only and as conditioned by the nature of the bodily organization. Each human mind or personality is conceived as a fragmentary and temporary expression of some larger personality, and it is sought to explain the super-normal phenomena by assuming that they are rendered possible by some temporary union or breaking down of the conditions by which the isolation of the individual mind is commonly maintained, so that for the time being it may share in
HYPochondria.

—In the literature and practice of medicine, hypochondria is regarded as one of the many forms of mental affection embraced under the term melancholy. Any uneasiness or disease of the regions on either side of the abdomen beneath the cartilages of the false ribs, of the hypochondriacal regions in short, was, from the earliest times, associated with those feelings of profound depression and sense of ill-being which constitute the basis of the affection. This is well illustrated in the old Folio frontispiece of The Anatomy of Melancholy, where Hypochondriacs is depicted leaning on his chest.

Underlying all signs of hypochondria are functional disorders, less frequently organic disease, of any portion of the intestinal tract from the stomach downward or of the larger secretory glands in the abdomen, especially the liver and the sexual organs, or a combination of these conditions. Consequent on deranged chemical processes incumbitated by the aberrations in the functional distribution of the abdominal organs and the absorption of poisonous substances thus elaborated into the blood stream, all parts of the body may be functionally disturbed, and more particularly these organs and tissues which are predisposed.

There is a consensus of opinion that hypochondria is induced by poisons arising from the deranged chemical processes above mentioned (metabolic origin); but recent researches suggest that the virus in the blood may be due to the presence of micro-organisms, which find a footing in the disordered walls of the intestinal tract; cases of hypochondria have been recorded in which the mental illness has disappeared with the elimination of such organisms under appropriate treatment (microbial origin).

Sense impressions received by way of the several intestinal and abdominal organs do not intrude on the mind in healthy states save as vague, and not clearly distinguishable, pleasurable emotions. Where disordered or diseased functioning occurs, they become so prominent that the mind area of more or less painful nature. Further, where there is an insane or neurotic inheritance, such as is commonly found in hypochondria, varied manifestations are seen from worry, shock, or mental stress and strain of any kind.

Hypochondria is more prevalent in men than in women, and is usually met with in middle age; it is rarely seen in persons under thirty. It is preceded, as a rule, by dyspeptic and ascetic conditions, is insidious in its origin, and develops slowly. The attack may be slight, and take the form of mild depression. In such circumstances it does not interfere with work or health, and in recovery after a few weeks or months of proper attention. In many cases, especially where there is a hereditary taint, the disease develops and may pass the limits of sanity. Here the disturbed general sensations are referred to force themselves on the attention, gradually arrest it, and occupy the whole mental domain. The affected person becomes fearful and anxious. There is marked mental depression and particularly, want of power. The sensations perceived are much exaggerated; thus excessively painful spots are pointed out, shooting pains are complained of, and loud lamentations are made of loss of power or want of sensation in various parts of the body. The trouble grows worse until the hypochondriac thinks of nothing but his many ailments, and believes he is the subject of some frightful malady. He seeks relief in all sorts of remedies, and consults all kinds of persons in the hope of finding help. He is constantly searching his excrescences for signs of serious disease; he reads medical and quick literature in order to diagnose himself. Any mild disorder he has, or change in his appearance, is magnified into a grave malady; spots on his skin are signs of syphilis; vague pains and throbbings in the head tell him that his brain is dissolving or breaking up. He points to well nourished limbs and says they are wasted or dead. He believes he is the source of infectious disease, and recons all his ailments are contagious. The sensations arising from the disordered or diseased organs of the body are falsely interpreted, and are, therefore, to be classed as illusions. These illusions constitute prominent symptoms of the affection, and the most striking examples of the serious effects of illusion are seen in this connexion. The misinterpretations thus referred to pass insensibly into false conceptions and judgments. Hallucinations, i.e. the experience of sensations, when the terminal sensory organs are not excited, are not common. When they do occur, they are generally auditory and incidental (see, further, art. HALLUCINATION).

A lady known to me, in an advanced stage, believed that an egg, which she had partaken of, had developed into a chicken. She heard the chirp of this chicken for some days coming through the walls; and, believing this to be her stomach. As the chicken grew the chirp was no longer heard, and the belief changed into horror based on the illusion that a foul was located somewhere in the intestine, and that, whenever food was taken, this bird poked itself up. The sensations of the act of picking were graphically described, and an ulcer, subsequently discovered in this patient, accounted for the sensations and the beliefs experienced, as they disappeared with the surgical treatment of the ulcer.

The mental pain felt by the hypochondriac is more apparent than real. He may look the picture of grief when detailing his distresses, but, unlike the true melancholic, he can for the moment be diverted from his troubles to talk rationally and act brightly. Defective will power and loss of memory are associated with hypochondria. The memory defect is due to the concentration of the mind on the bodily troubles. All other thoughts for the time are excluded, and so the experience of recent events not obtruding on his limited mental outlook is lost.

Hypochondria is not easily confused with other mental affections. Though it differs in degree only from true melancholy, which is more concerned with morbid thoughts than with sensory impressions, there are obvious differences: the hypochondriac is restless, always seeking for sympathy and the ear of one to whom he may detail his sorrow; the
This intense eagerness to conform can easily be seen in such arrested civilizations as those of the East. The hardening of the cake of custom became too much for India, and men were so stereotyped by this hardening that they were unable to break through it. There is a tendency in descendants to differ from their progenitors, but the Indian discouraged variation from the original type. Among successful peoples the children dissembled at first, they became strong enough to soften the cake of custom, though they pretended to themselves that they had changed nothing.

This course, however, was the exception, not the rule; for the propensity of man to imitate what is before him is one of the strongest parts of his nature. In early times it was a case of 'that which has been is that which shall be; and that which has been done is that which shall be done; and there is no new thing under the sun' (Ec. 1:). This extreme propensity to imitation forms one great reason of the amazing sameness which every observer notices among savage nations. No barbarian can bear to see one of his nation deviate from the old barbarous customs and usages of his tribe. All the tribe would inevitably expect a punishment from the gods if any one of them retracted from what was done, or rejected what was new (cf., farther, art. CUSTOM).

Comparative sociology at once reveals a substantial uniformity of genius. The habitual existence of chiefship, the establishment of households, the transfer of war, the rise everywhere of the medicine-man and the priest—these are evident in all early organizations. It is true the old order changes—leaving some room for assemblages—yielding place to the new, but the new does not wholly consist of positive additions to the old; much of it is merely the old very slightly modified, very slightly displaced, and very superficially re-combined. If you want, remarked Swift, 'to gain the reputation of a sensible man, you should be of the opinion of the person with whom you are conversing.' It is obvious, then, that all primitive men were profoundly sensible. When Lord Melbourne declared that he would adhere to the Church of England because it was the religion of his fathers, he was acting upon one of the most deeply rooted maxims of his ancestor.

Conduct in the olden days was never individualistic; it was always corporate. To early man all his acts were tribal, for all the acts of the tribe involved him in their consequences. Hypocrisy to him was abhorrent, for he could not bear any divergence from the observed ritual. When the street statutes of Hermes were mutilated, all the Athenians felt afraid; they thought that they would be ruined because one of their corporate body had mutilated the image of a god. The mind of the citizen had been so permeated by the ideas of the day that they were part and parcel of its mental furniture. His brain, not merely his actions, was so cut and marked as to conform to the orthodox type. His habits, his superstitions, and his prejudices were absolutely those of his fellow-tribesmen. In the Fiji Islands, for example, a chief was one day going over a mountain path followed by many of his people, when he happened to stumble and fall. All his followers, save one, also stumbled and fell. Immediately they beat the defaulter, asking him whether he considered himself better than the chief. The Greeks and the Romans possessed the seed of adaptiveness, and were therefore unable to free themselves from the cake of custom. This, however, made possible the existence of the hypocrite, and Astylos (Agam. 788 ff.) analyzes the traits in his character:
The Pand (ix. 321 f.) speaks even more plainly:

... and another... and another... and another...

With this passage may be compared Od. xviii. 392 f., and Theog., Eteg. 87. So far has the Greek travelled from the old conception that Plato lays down in the Republic (π. 394) that our guardians ought not to be imitators, and that the productions of the initiatory arts are bastard and illegitimate (π. 603 f., Lws., xi. 915 f.).

During the last two centuries of the Roman Republic the superposition of superstition and scepticism is very noticeable. With the unreality of human literature was combined the unreality of education. The teacher often selected questions of casuistry for discussion by the pupils. Such discussions inevitably developed the tendency of the age to abstractness and loss of reality. To this Lucan, Seneca, Statius and Velucius bear witness. In the pages of the first writer we meet the sham philosophe, speaking loudly of virtue while his cloak covers all the vices of the age. Cicero (De Nat. Dei, i. 28, 70, i. 17. 43, De Div. i. 3. 6), Seneca (frag. 39), Fanucius, Polybius (vii. 86), Quintus Scroda, and Varro (Aug. de Civ. Dei, vi. 4) regarded religion as the device of statesmen to control the masses by mystery and terror. It had become impossible for these men to believe in the old faith, yet the people continued to take part in a gross materialistic worship. According to Gibbon, all religions were regarded by the people as equally true, by the philosophers equally false, and by the statesman equally useful. Cicero quotes a dictum of Pontifex Maximus that there was one religion of the poet, another of the philosopher, and another of the statesman.

Stoicism maintained the idea of a "double truth"—one truth for the intellectual classes and one for the common people, the climax being reached in the phrase, "It is expedient for the state to be deceived in matters of religion" (expedit ignem fallior in religiis civilibus). Thinkers in the community adopted this attitude towards religion in the last century. It is too much to say that they were hypocrites, but the outcome of their thought was hypocritical. Sulla used religion for State purposes, and with him it became merely another department of political activity. In Cicero's time old women had ceased to tremble at the tables about the infernal regions (De Nat. Dei, ii. 2-5). Even boys, according to Juvenal, disbelieved in the world of spirits (Sat. ii. 140-152). Cicero was an anger, yet he quotes with approval Cato's saying that he wondered how one anger could meet another without laughing. On the whole, however, the people still retained their faith in the old gods, which the educated had lost. The latter, in spite of their diablerie, attended carefully to the details of ritual. In their case creed and practice were utterly divorced, and the effects of this divorce on moral conduct was manifold. The Spirit of the age could be easily imagined in commenting upon the life of Seneca, Macaulay remarks:

"The business of a philosopher was to declare in praise of poverty and virtue; to meditate on the virtuous life lived at leisure; to meditate on the consequences of the evils of luxury, in gardens which would interest philosophers; to rant out liberty, while frowning on the haughty and oppressed freemen of a tyrant; to celebrate the divine beauty of virtue with the same exultation with which he had written a defense of the murder of a brother by a son" (Essays, p. 360).

Just as many a sturdy beggar in the Middle Ages donned the cowl of a beguining friar, many an idle vagabond and profligate called himself a Stoic, and brought discredit upon the name. (See Tacit., Ann. xvi. 32, for Egnatius, a hypocrite of this order). A. Grant, Ethics of a Stoic, London, 1866, 231; J. B. Lightfoot, Ep. to Philemon, London, 1878, p. 284, note 5.)

The last day's philosophies of Greece proved to the Roman that the foundations of his religion were baseless, yet its existence had been invaluable for the preservation of the State. This conflict between private belief and public conduct can be seen, for example, in Ennius. He wrote treatises, embodying advanced sceptical doctrines, and he also wrote patriotic poems in which the whole cycle of Roman gods was exhibited and most reverently treated. From Augustine's De Civ. Dei (iv. 27) we learn that Quintus Scroda develops the "double truth" of Ennius into the familiar triple one—the religion of the philosophers, of the statesmen, and of the people. The writing of Scroda and Varro came too late, for Sulla's control of religion by the State had killed it.

Contemporary with the classical possessors of "double truth" and "triple truth" were the Pharisaes, the people often taken as typical hypocrites. Their hypocrisy was a consequence of their desire for commerce with the people. In the catastrophe of the Exile Ezra perceived the danger of associating with the neighbouring peoples. The policy of splendid isolation was that best fitted to save Israel; it was necessary to do all that is written in this book of the Torah, that is, what is contained in the five books of Moses.

The importance of the Torah forms the central point in the outstanding religious creation. Henceforward the Jew felt, as he had never felt before, that he had a guide laying down a detailed code of conduct; it was an honest attempt to guard the religious life of the people from the danger of intercourse with strangers. The strict Jew became the Pharisee, "the separate one." As his strictness increased, he explored the Torah more thoroughly, and came to see that by analogy its precepts applied to cases not originally contemplated. The Scribes, the Sophrén, interpreted the Divine teaching so widely that many traditions came into being; the Responsa Prudentium, the answers of the learned in law, furnishes a parallel case from Roman law. The Sophrén worked out rules applying to particular cases, much after the fashion of the Jesuits. Their system inculcated deliberation in judgment, which is the casuistry of the Talmud. Moreover, the Scribe and the Jesuit equally urged that this deliberation proceeded from the desire to do justice to every possible aspect of the question at issue.

Under the princes of the Maccabean house there was a steady tendency towards a stricter enforcement of the Torah. The Pharisaic (Pirahārin, "separated") frowned upon the worldliness of the rest of the nation, and formed themselves into distinct societies pledged to observe certain rules in the matter of meat, drink, and clothing, according as the Torah or traditions derived from it allowed or forbade these points. The rules of right conduct, the Halahkah, increased so much in scope that they practically covered all the actions of a man's life. It is plain that the Halakoh imposed upon the Goyim with all their codes, but the result was hypocrisy, and formalism became prevalent. The tithing of mint, anise, and cummin was performed, while the motive of these actions was not sufficiently scrutinized. Then long speech contained in Mt. 23, when he said: "Woe unto you, scribes and Pharisees, hypocrites!" In their case the letter had killed the spirit. They had played
a noble part in Jewish life, but their hypocrisy (of the seven classes of Pharisees, of whom fire are hypocritical or foolish, Saatik (22) had destroyed their usefulness. They had been truly patriarchic, truly scrupulous, but their social ritual forced them into a pluralism of sins. It is the degeneration of the best which makes the worst, and the sincere observer of the Torah in the days of Ezra left for his successors in the days of Christ the most treacherous of men.

Most men want their lives regulated for them, and what the Sfôhûm had done before the Christian era the Christian Church undertook to carry on. Cases of conscience had rules formulated for them, and in the writings of Thomas Aquinas we find an elaborate code of morality. In the Summûm Theologica, II, 2, the question of hypocrisy receives careful treatment.

Qu. 1s. 1. sa. "Is all sinulation sinful?" Simulation, we learn, is properly a lie enacted in certain signs, consisting of outward signs, which consist of the identity of which that which is meant is not, so it is simulation when by outward signs, consisting of a pretense, Pihrat the Positist expresses it, that which is meant, but not when one enacts to signify that which is; hence without any inward character no sin may conceal his sin.

Art. II. "Is hypocrisy the same as simulation?" Augustine says: "As actors (hypocrites, geonpa) pretend to other characters than that of which they really are not, so in the churchmen and in all human life, whatever which is done by the one is not by the other; for he is not a hypocrite or actor; for he is not pretended to be just without rendering himself such." So, therefore, hypocrisy is simulation, not; however, any and every simulation, only by which a person pretends to a character as his own, as when a man pretends to the character of a just man by the mere \

Art. III. "Is hypocrisy a mortal sin? There are two things in hypocrisy, the want of holiness and the state of possessing it. If, therefore, by a hypocrite we are understood one whose intention is carried to both these points so that he cares not to have holiness but only to appear holy—this is what is usually seen in Holy Scripture—it that understanding it is clearly a mortal sin; for so one is totally deprived of holiness another by mortal sin. But if by a hypocrite we are understood one who intends to counterfeit the holiness which mortal sin removes from him, then he is not in mortal sin, but the more prudence on his part is not always a mortal sin, but is sometimes only venial. To tell when it is venial and when mortal, one must consider the soul of the person, for it is inconsistent with the love of God and of one's neighbor, it will be mortal sin when one pretends to holiness in order to dissemble false doctrine, or to gain some ecclesiastical dignity or public favor, or to gain something by other worldly, or any other temporal good, placing his last end in them. But if the end intended be not immorality with charity, it will be a venial sin, as when one finds pleasure and satisfaction in the name and more a caracterization of a character that does not belong to him: of such a one it is said that there is more vanity than malice in him.

This analysis is noteworthy because it is the presentation that dominated medieval life, and in the Summûm Theologica Latin Christianity received a definitive form, covering all the transactions of life. The relationship between law and custom, thought and action, lies at the very root of all forms of hypocrisy, and literature bears witness to this divorce of creed and life.

The term "Platonism" expresses the corruption of the times, while Chaucer's Canterbury Tales does not overlook the essential hypocrisy. The reformers devote much attention to this particular vice. Bradfield describes a hypocritical profession of the gospel (Sermons, Cambridge, 1844, p. 430). Ridley speaks of the "holy men and hypocrites" (Dissent, 1844, p. 62). Deacon points out its prevalence (Early Writings, 1848, p. 39), analyzes it (Propers, 1844, p. 60); cf. Bulleiner, Decades, v. I, p. 327. Pelham exposes the danger of God's word (Chalcedian, 1844, p. 463), the liability to fall in time of persecution (The Martyrs, 1849, p. 38); and the danger of the age (The Early Years, 1859). Bulleiner compares hypocrisy to craft and rotten meat (Dissent, 1844, p. 327). Lamplin emphasizes the difficulty in knowing them (Reminiscences, Cambridge, 1844, p. 62), dwells on their subtlety and conduct (Sermons, 1844, p. 298) and their desire to sell their works, their "opera superorganica" (89, 422; Reminiscences, 200). John Woolton notes their observation of rites and ceremonies (The Christian Remains, Cambridge, 1851, p. 45). William Tindal observes that they extol their own works above the law of God (Expositions, 1843, p. 137). William Dean observes their outward abstraction from sin (p. 80), their impurity in heart (Expositions, 11, 125). Their judgment of others (v. I, p. 247—8). And on the world on their aids (Dissertationes, 123), that they must be rebuked (Expositions, 41), and their wisdom must be turned to foolishness (Dissertationes, 184).

A perusal of the works of the Reformers proves how conscious they were of the relaxation of moral discipline in the 16th century. Moreover, where persecution overrages, it transforms a man into a hypocrite. The weak bent to the intolerant policy of the time by the use of the weapons of intrigue and falsehood, and both then and ever since this has frequently been sought from censure—whether ecclesiastical or social—by a feigned compliance which is the mark of hypocrisy.

E. H. H. NAYR.

HYSTERIA.—Hysteria (hêsteria, 'the womb') is a psychical, or at any rate a functional, nervous disease, which is so much more frequent in women than its consideration as regards the male sex may for the present be omitted. The chief clinical feature of the disease, which, however, is not manifested by the majority of the subjects of the affection, is the hysterical fit; the other symptoms are either preliminary or subsequent to the fit, or they occur as isolated symptoms with a tendency to neurasthenia in the fit. The fit may succeed a period of great excitement, or it may come on spontaneously, but is either preceded by or coincident with epilepsy; and it usually takes place when other people are present. Consciousness is never entirely lost, as may be ascertained by touching the conjunctivi, which is a sign that the left part of the eyelids will at once occur. The eyelids are always turned up, so that the pupils are concealed under the upper eyelids. The hands are clenched, and the thumbs inverted. These are due to the laryngeal spasm of the muscles, and the patient struggles and throws herself about. She may moan or cry and breathe stertorously, but there is no bitting of the tongue or blood, and nothing about the mouth, as in the epileptic fit. The paroxysms generally terminate with crying, laughing, sighing, or yawning, and is followed by a feeling of exhaustion. Various mental, motor, and sensory symptoms appear in hysterical subjects, in The Scorn of Egypt, in the fit, associated with it, or independent of it.

1. Mental symptoms.—The subjects of hysteria are neuropathic, and a hereditary tendency to nervousness or the neuropathic condition is often found in their family history. They manifest prominently those symptoms of instability which are described by modern writers as mental degeneracy. Chief among these are a loss of the power of intellectual vigour, excitability, ostentation, vanity, depression, and a deadening of the nerve fibers, and a craving for sympathy and notoriety. The subjects are extremely susceptible to suggestion by stronger wills than their own, and exhibit
HYSTERIA

a feebler resistance to various insinuative promptings or temptations to which they may be subjected. As a medicine, they are not to mean deficient in intelligence, and the ingenuity they display in attracting attention to their supposed maladies, or in simulating diseases, is often phenomenal. Upon such a psychical basis it is easy to see that the slightest symptoms may assume many and diverse forms. Some of the patients are depressed and moody; others gay, excited, and reckless in their conduct. Many of them are restless, irritable, incapable of patience or self-control, or to live with the morbid ambition of others leads them to such means of attaining notoriety as protracted fasting, the invention of improbable tales of assault upon themselves—usually of an indecent nature—or the simulation of various forms of obscure diseases, of which paralysis of motion is the principal.

2. Motor symptoms. It is a mistake, however, to suppose that true hysterical paralysis is a simulated affection. This paralysis is distinguished from ordinary organic forms in so far as sensation in the paralyzed limb is never abolished, and the nutrition of the affected part is not impaired. In hysterical hemiplegia the face and tongue are rarely implicated, while in hysterical paraplegia the two lower limbs are usually unequally paralyzed.

3. Sensory symptoms. The principal sensory disturbance is a condition of hyperesthesia, or over-sensitiveness, which involves both the special senses and the general sensibility of the patient. She feels a sensitiveness of the skin; the cutaneous pressure produce undue and exaggerated effects upon the nervous system. Neuralgic pains in various parts of the body are often complained of, and the most common is the globus hystericus, described as a choking feeling or a constriction in the throat or chest, as if a ball were passing up or down the cavity. Anesthesia of different parts of the body, sometimes confined to one side, is not an unusual symptom in advanced cases. The patient may be unaware of the presence of the symptom, and the anesthesia may either be complete or partial. Generally speaking, in hemianesthesia the condition is permanent, but fluctuates in degree from time to time. Charcot attached great importance to tenderness of the orav, usually the left, in hysterical hemiplegia, and ascribed it to pain in the lower part of the abdomen, corresponding in site to the position of the affected ovary. This pain may be so extremely acute that the slightest touch on the part is dreaded, while in other patients firm pressure is required to elicit it. Firm pressure has usually a decisive effect in checking the advent of the hysterical fit. In other cases it tends to bring out certain sensations which are known as the aura hysterica, prominent among which is the globus hystericus already referred to. The hyperesthetic ovary is usually upon the same side of the body as is affected by the various sensory and motor disturbances which have been mentioned.

4. It is necessary to refer briefly to three phenomena which are associated with hysteria. These are the trances, the catalepsy, and the ecstasies. These three phenomena are so intimately associated with one another that the one may merge into the other in the same subject. In catalepsy there is a condition of stupor accompanied, or not, with loss of consciousness, and followed or not by a recollection of what took place under the condition. The will to move is in abeyance, and the movements of the patient when he is brought out of it are prosaic, and as far as an observer, it remains in any position in which it may be placed. In the state of trance the patient lies as if dead—some persons have even been 'laid out' as dead in this state; the skin assumes a deathly paleness; and the functions of respiration and circulation are so attenuated as to be almost imperceptible. In the ecstatic state the patient becomes so vividly hallucinated that complete scenes which she is able to describe fluently pass in sequence before her mental vision. The nature of the 'visions' changes according as the mental condition of the patient varies emotionally from grave to gay. The ecstatic state is accompanied by posturing and gesturing of an exaggerated character, and it frequently terminates in dancing movements such as are practiced by certain religious communities.

5. Estimated by its universal diffusion over the world and by the frequent references to it in the writings of travellers, lay and medical, hysteria must be the most common of all the nervous. In the very oldest Brahmanical writings, which preceded the Christian era by thousands of years, mention is made of it among the diseases of the nervous system (J. Jolly, Med. J. G. I. A. P. iii. 10 (1901), p. 119). The origin of the word, derived from the writings of the Greek physicians, is also very ancient. Coming down to comparatively modern times, we find it constantly referred to in the writings of travellers. Judging from the comparative frequency of these references, one can form the opinion that one of the principal seats of the malady is the group of countries in the Arctic latitudes of the Eastern Hemisphere, including Iceland, the Faeroe Islands, Lapland, and the parts of Europe in Russia in the farthest north. From the last of these we have information of the truly endemic prevalence of hysteria among the women of the Samojeds . . . and of the Yakuts and other Siberian tribes (G. E. and Hist. Pathol., Eng. tr., London, 1833-38, iii. 610). Among the inhabitants of the Malay Peninsula a peculiar manifestation of the disease, known as leprous, is very common. A more detailed description has been given by Ellis (Journ. of Mental Science, 1897, p. 32).

6. When we turn from endemic to epidemic hysteria, a wide and difficult field of inquiry presents itself. As hysteria is a transmissible disease, the latent in otherwise apparently normal populations is to an enormous extent. This latent potentiality may suddenly become active, under the influence of any powerful exciting, moral or spiritual, acting on a people. It is generally believed that these powerful emotional excitants sharply delimit the neuropathic from the normal elements in a population. The history of religious hysterical epidemics is inextricably associated with the history of the human race, so far as we know it, and can be traced, through the records of the Asiatics and other Eastern races, down to the accounts of the Mad Mullahs of our own day. In Europe, during the Christian era, the most remarkable instance of it was the 'dancing mania' of the Middle Ages. An account of it is given by Raynal, as it was witnessed at Lausanne in 1724, is as follows: 'They formed circles hand in hand, and appearing to have lost all control over their senses, continued dancing, regardless of the bystanders, for hours together, until exhausted as well to the ground in a state of exhaustion. . . . While dancing they neither saw nor heard, being insensible to external impressions through the senses, but were haunted by visions, their fancy conjuring up spirits whose names they shrieked out. . . . Where the disease was completely developed, this was accompanied with epileptic convulsions. . . . They soared at the moon, and suddenly springing up, passed by a recollection of what took place under the condition. The will to move is in abeyance, and the movements of the patient when he is brought out of it are prosaic, and as far as an observer, it remains in any position in which it may be placed. In the state of trance the patient lies as if dead—some persons have even been 'laid out' as dead in this state; the skin assumes a deathly paleness; and the functions of respiration and circulation are so attenuated as to be almost imperceptible. In the ecstatic state the patient becomes so vividly hallucinated that complete scenes which she is able to describe fluently pass in sequence before her mental vision. The nature of the 'visions' changes according as the mental condition of the patient varies emotionally from grave to gay. The ecstatic state is accompanied by posturing and gesturing of an exaggerated character, and it frequently terminates in dancing movements such as are practiced by certain religious communities.' (quoted from J. P. C. Heccker, Epileptology of the Middle Ages, Eng. tr., London, 1894, p. 37).

Those interested in this peculiar form of psychic...
patology will find a very full description of it in J. F. C. Hooker's *Epidemics of the Middle Ages*. That such epidemics are not necessarily associated with religious fervour alone is seen from the similar outbreaks of hysterical excitement which occurred in Paris during the Revolution and after the close of the Franco-German war. In Madagascar, in the year 1864, an epidemic of hysteria occurred among girls and young married women between fifteen and twenty-five years of age. The occasion of the outbreak, which began at one point and spread gradually over almost the whole island, was the death of a depot, caused among the people by the violent death of the king, and the consequent changes in the form of religion and laws. The morbid phenomena were almost identical with those of the dancing mania of the Middle Ages (Hirsch, loc. cit. p. 529). See also art. DEGENERATION.

From the above facts and many others that might be cited, it appears probable that in every population there is a certain amount of hysteria; that it varies in amount in different communities or races; and that in predisposed individuals the disease varies in intensity—from those subjects who without known cause present the pronounced clinical symptoms of conversion, hallucination, mental aberration, or disease-mimicry, up to those who only under extreme excitement manifest perversions of feeling and conduct of a pathological nature.

JOHN MACPHERSON.

I

IBADIS.—The Ibadis were a Muslim sect, a branch of the Khwārījī (q.v.). They were called after 'Abdallah ibn Ibad, who figures in the *Chronicle* of Tabari (ii. 417) in the year 65, as separating from and young from 'Ali, founder of the Khwārījī, (founder of the Azārqiā), and taking a more lenient view of the treatment to be accorded the monastic Nāṣr, but less lenient than that of 'Abd al-Most, caused among the people by chronicles otherwise say little about him, and in- indeed confuse him with other personalities; but, in an Ibadite treatise excerpted by E. Sachau (*Mittheil. des Seelsorger für Orient. Sprachen*, ii. (Berlin, 1899) 47–58), two letters purporting to have been written by him to the Umayyad Khalif 'Abd al-Malik are preserved, and his birth and death are said to have taken place in the mosque of Masjīd wa 'Ali (A.D. 681–680) and 'Abd al-Malik (685–706) respectively. These letters are homiletic in character, and contain little that is definite respecting the special doctrines of Ibn Ibad, though insisting on the political prorame of the Khwārījīs, who were responsible for the assassination of Othman, and afterwards for that of 'Ali. There is probably little reason for supposing them to be genuine, and analogous forgeries are common. Ibn Ibad appears to have devised a new interpretation for the word kafir, 'denier,' which ordinarily means 'unbeliever,' but may also signify 'ungrateful'; according to him, a Muslim who committed a capital offence might be described as a kafir in the latter sense; and the consequence to be deduced was that the good of Muslims might not be appropriated as spoil, though their lives might be taken. This doctrine, which is sketched by Tabari (loc. cit.), is afterwards said to be characteristic of the Ibadis by writers on sects (b. ‘Abd al-Qahir (461–459), in *al-Faraj bain al-Madhahib*, Cairo, 1864, p. 307; and ‘Abd al-Qadir al-Jilūnī (461–459), in *al-Ghayyab*, Cairo, 1888 A.H., i. 76, 19).

By the end of the Umayyad period the views of Ibn Ibad appear to have found adherents, since the Ibadi 'Abdallah b. Yahya, who headed an insurrection in A.H. 130, found support in Bagn, Hadramaunt, and Yemen. A detailed ac- count of this revolt is given in the *Agkari* (1st ed., Beirut, 1865, xx. 97–114); and perhaps the most authentic documents which we possess about the tenets of the sect are the sermons which in that narrative are ascribed to the heads of the rebellion, which was shortly crushed by the Umayyad forces, after the Ibadis had enjoyed brief supremacy in both Mecca and Medina. Early in the Umayyad period they gained adherents in Khurasan. From 708 they founded Sijilmassa, and held Qairawan from 765–762. They became prominent again be- tween A.D. 942 and 947, but were defeated by the Fātimid, and the survivors took refuge in Jebel Nefusa, where they were to be found in the time of Ibn Hanqal (461–466), and where the community still survives. From Africa they spread to Spain, where in the time of the author last quoted they were represented in Castille, and an author of the 9th century, who speaks of the Ibadis in that country rejecting meat slaughtered by Jews or Christians. In the somewhat earlier treatise by ‘Abd al-Qahir they are divided into four sub- sects, called Hafsiyyah, Šarīḥīyyah, Yazidiyyah, and ‘believers in pious acts not done for God the sake’; they differ on a variety of subjects, but almost agreed on the interpretation of the word kafir given above, with the consequences deduced.

From an early time they appear to have been dominant in Oman, where their religion is still official. There they were found by Ibn Battuta in the 14th century; he observes that at midday on Friday they have a prayer of four inclinations, and something like a khutba (‘sermon’). They ask God’s favor for the first two khalsīs, but say nothing of the third or fourth, and indeed speak of the last as the ‘man,’ whereas they call the assassin at whose hand he fell ‘the faithful servant’ (ed. and tr. Derémy and Sanguinetti, Paris, 1853–54, ii. 228). J. R. Wellsted (*Travels in Arabia*, Lon- don, 1838, i. 322) claims to be, after Sale, the first European to give any account of their tenets; he appears to have been burn up by a contemporary dervish, which he imperfectly understood; the statement that the Ibadis deny that the Deity will be seen in the next world (as the other hands think) is, however, confirmed by Sachau’s treatise. The account of W. G. Polgravo (*Travels*, London, 1865, i. 366) is even less accurate than Wellsted’s. Other places, besides Jebel Nefusa, where Ibadi communities continue to exist are the island Zemla, and the Curie Laghouat in Algeria, where the M'zab profess this doctrine. L. Rinn (*Marabout et Khawān*, Algiers, 1884, p. 142) states
that this settlement dates from about A.H. 400, and that those who started it had originally dwelt south of Yavat al Kharma, Sofara, and Jebel Ibad. These Algerian Ibadis, who in 1884 numbered about 49,000, are, according to this author, more like an ascetic sect than a political community. He speaks very highly of their honesty, morality, and religious devotion, which resembles many respects of the Sufi confraternities.

The most accurate account hitherto published in Arabic is that excerpted, as stated above, by Sufi Mahmud Nafis, who is only a specimen of a large Ibad literature, little known in Europe. The treatise is evidently late, and appears to be modeled on the manuals in use among the larger Muslim communities; and the differences between the Ibad doctrine and the Sunni do not appear to be very numerous; moreover, the author, in his polemic against the Sunni doctors, seriously misrepresents them. Like the Sunnis, the Ibadis believe in predestination; they define faith as "word and deed," and declare that repentance is only for unintentional omissions. The bulk of their polemic is directed against views which are associated with the Shafi‘ah, the Mu‘tazilis, and the Mu‘tazilis.

Owing to the French annexation of the Mzab confederation in 1883, the legal system of the community has been studied by French scholars, and a manual of Mzabite legislation was drawn up by E. Zayes (Alger, 1886). This is based on a work called the Nih by the Shafi‘i ‘Abdal-Aziz, of the second or beginning of the 13th century. Furthermore, the list of Ibadite works enumerated by A. Imbert, Le Droit abkhita chez les Musulmans de Zanzibar et de l’Afrique orientale (Algiers, 1900); the early 19th-century work Belal bin Shur’i ("Explanations of the Code"), in more than one volume, written by Muhammad b. Sulaiman al-Mazhar (d. A.H. 588), while the most authoritative is of about the year 1840 A.D. (Muhammad b. Shur’i ("Ocean of the Law"), in more than 90 volumes. Imbert gives an account of the peculiar features of the system in the matter of inheritance, based on a monograph by Sacken ("Mahomedanisches Erbrecht," in SBdW., 1884, p. 188).

---

**INB EZRA.**—I. Inb Ezra, Abraham ben Meir (Aben Ezra, Avenares), Jewish philosopher, poet, grammarian, and exegete, and one of the most widely-known Jewish scholars of the Middle Ages, was born in Toledo, Spain, during the last decade of the 11th century, and died c. 1167. The first part of his life was spent in his native country, which he seems to have left in the year 1140. From that year until his death he was a continuous wanderer, his way leading him to Egypt and through Northern Africa, Italy, and Southern France, and to England. His place of death is variously given: some authorities contend for Rome, others for Calahorra on the frontier of Navarre. Ibn Ezra was a prolific writer; his roving life did not prevent him from composing works upon a variety of subjects. His style is always precise—sometimes so precise as to be slightly unintelligible, especially in his commentaries; and at times hurried—owing to the circumstances of his life.

As a poet, Ibn Ezra is a work representative of the Hispano-Jewish Hebrew poetry, which was modeled upon that of the Arabs. While not possessing the simplicity and naturalness of its great objects, Hisayyib’s, Ibn Ezra’s style is always precise—sometimes so precise as to be slightly unintelligible, especially in his commentaries; and at times hurried—owing to the circumstances of his life.

Their way into the prayer-book of the Synagogue. His discs, or collected poetic works, comprises about 209 different pieces, and contains many that are of a purely vocal character, but he arranged them with numerical relations, as he was much interested in mathematics. As is the fashion in Oriental literature, he clothed a variety of subjects in poetic garb. Not only do they incorporate short poems in the introductions to his various commentaries on parts of the Bible, but he versified treatises on religion, on calendar-rules, and on chess.

In philosophy, Ibn Ezra shows distinct traces of Neo-Platonic and Pythagorean influence. His Neo-Patonic ideas he seems to have adopted from his earlier contemporary Solomon Ibn Gabirol (p.54); the Pythagorean from the writings of the Arabic "Breviarum de Pythar," According to Ibn Ezra, the whole universe is made up of substance and form—with the exception of God, who is substance alone; though substance is defined as that of which being can be predicated. God is further described as the power of the universe, the source of all that is felt and thought. He is incorporeal and spiritual, knowing in a sense very different to the knowledge of man, since He is not and cannot be known. But God knows only general ideas—those permanent and permanent species, not the individuals that go to make up the species. When we attribute wisdom, goodness, and righteousness to Him, we are describing His actions or effects. When we speak of God's creative act, we refer only to the sublimar world; the rest of creation— heaven bodies, angels, spheres, and stars—have neither beginning nor end. He is thus opposed to what became the official theological doctrine of Judaism, the *creatio ex nihilo*. God determines the species, to which He gives the power to fashion the individual. The sublunar world is created through the instrumentality of the angels. In fact, God acts upon the world through the angels, and through certain human beings who have not entirely lost the character of angels, prophets, sages, and the righteous. He also uses the intermediaries the heavenly bodies, which, by their conjunction, work good or evil upon mankind. But, in order to give his religious conceptions, Ibn Ezra holds that God can overpower the workings of the heavenly bodies; and that this interference depends upon the moral condition of the subject affected, thus making free will possible. It is accomplished through the angels. Ibn Ezra does not rationalize the wanderers in the Bible, though he warns against exaggerating their importance. The universe is composed of the highest world (angels), the Middle world (sun, moon, and stars), and the Lowest world of Nature (made up of the four elements and the three kingdoms). With the exception of his *Avagot ha-Be‘olah* and *Pardas ha-Mizamarin*, written in Arabic, Ibn Ezra has left no work of a peculiarly philosophical character. His ideas are scattered throughout his other writings.

See Korn, in "Vierteljahrschrift für Gesicht und Wissenschaft des Judendoms, xiii. (1889), 156; xvi. (1890), 144; Hamburger, "Zur Geschichte des Judenrecht in der Judenwissenschaft, iii. (1890).

Two theological-religious works of Ibn Ezra deserve mention. The first is the allegory *Hasen ber Ma‘ban*, a rhymed prose description of the Supreme Being, composed upon the lines of Avicenna's *Hasen ber Yebina*, and to be classed with Ibn Gabirol's *Keter Maktib* (best text in Egger's ed. of the *Dinwut*). The second is his *Yeshur Mora*.
IBN EZRA

(ed. and tr. by M. Croizeau, Leipzig, 1840), a book which was written in England, in which he treats of the study of the Law and of the nature of the divine commandments. But Ibn Ezra, not only gives semasiological explanations; he tries to find the ethical foundations for the various commandments.

As a grammarian, Ibn Ezra was the first of the Spanish school to write in Hebrew, though his method of treatment and his terminology are still wholly dependent on his Arabic prototypes. His wish was to popularize the Arabic system among the Jews and to make them acquainted with the works of his great predecessor, Judah Hayyaj. His largest work on grammar is his Sefer Shabot, written in 1145. To this must be added a number of smaller treatises: Yosef ha-Dagglul, Sifat Berith, Yosef ha-Kham, Sefer ha-Yikar, and a popular treatise entitled Masmugan, a sort of terminological dictionary of Hebrew lexicography. Most of these works are poor and hurried in their arrangement, and written probably merely as textbooks.

See W. Bacher, 'Die hebräische Sprachwissenschaft,' in J. Winter and A. Wünsche, Die jüdische Literatur, ll. (1892-95) 190.

Ibn Ezra is best known as a commentator of the Bible. His commentaries were always popular among the Jews, being usually printed together with the works of his other commentators. The following books are among the most important: Pentateuch, Isaiah, Twelve Minor Prophets, Psalms, Job, Canticles, Ruth, Lamentations, Koholel, Esther, and Daniel; and, of course, the commentary on the Psalms, Canticles, Esther, and Daniel. As a commentator Ibn Ezra opens up a new era among his contemporaries because of his judicious aloofness from the claims of tradition when they cannot be substantiated by the plain meaning of the text. In the introduction to his commentary on the Pentateuch he discourses upon the methods hitherto employed in explaining the Biblical text: the degenerative, the anti-traditional, the allegorical, and the Midrashic. All of these he rejects in favour of his own method, which he characterizes as a combination of both tradition and free research. In this manner he supplies the criticisms of his predecessors, which causes him to reject the theory of the verbal inspiration of the text, to lay minor stress upon the miracles, and, exegetically, to emphasize the distinction between scriptio plena and scriptio defecta as indicating a difference of meaning. Whenever he himself departs from this level, it is either with the object of finding a deeper end, more philosophical meaning or of indulging in astrological speculations, to which he was much given. Free research, however, leads him to take up positions on certain questions which, though on a line with currents which were not strange to the Synagogue (see Gotthilf, 'Some Early Jewish Bible Criticism,' JBL, xxii. [1903] 1-12), would have rendered him an object of suspicion, had he not at times veiled his real meaning, at times given his reader a choice of explanations by adding such expressions as 'the reader will adopt the opinion which recommends itself most to his judgment,' or 'the difficulty should keep silence.' Thus, because he does not believe that the writers of the Bible anticipated history, he holds that the latter part of Samuel was written by Samuel himself; another instance is that the second part of Isaiah was not written by the author of the first part. His influence upon Spinoza's theories in this respect (Tract. Theol. Pol. viii.) is evident.

See M. J. Joël, Spinoza's theolog.-pol. Tractat, Breslau, 1870, p. 54; and, in general, Bacher, in Winter and Wünsche, Die jüdische Literatur, 11. (1892-95) 190.

In addition, Ibn Ezra wrote a number of works on mathematical subjects, e.g. Sefer ha-Mispar and Yosef ha-Mispar on arithmetic; Sefer ha-Abbor on the calendar; and Kelé ha-Nehoshet on the astrolabe, as well as a treatise on the construction of the calendar. Despite his tendency to rationalism, Ibn Ezra was a child of his times, and, as mentioned above, was much interested in astrology. As many as eight small treatises on this subject have come from his pen. See M. Sontheimmer, 'Abraham ibn Ezra . . . zur Gesch. der Mathen. Wissenschaft, in xii. Jahrhundert, in Abhandl. zur Gesch. der Naturwiss., Leipzig, 1890, pp. 57 et seq. W. Bacher, Abraham ibn Ezra als Grammatiker, Strassburg, 1888, also in JBL xxii. 230.

2. Ibn Ezra, Moses ben Jacob, Jewish poet and philosopher; contemporary and relative of his greater namesake Abraham ibn Ezra; born in Granada c. 1071, died c. 1138. He was the most fruitful writer of religious poetry, which is all characterized by gravity and a touch of pessimism. It is not surprising, therefore, that the 229 such poems ascribed to him the greater part are to be found in the rituals for the solemn festival of New Year and the Day of Atonement. Of his secular poems, which do not possess the wit and sparkle of Abraham ibn Ezra, a large number (500) are found in his Tik'ah, which is still in existence. He is also the author of a remarkable poem, variously styled Torah and 'Anak, containing some 1210 verses and written in the style of the Arabic tajmû'a, in which the lines of each strophe end in words similarly written and pronounced, but differing in meaning (homonyms). Ibn Ezra intended by this tour de force to show the possibilities of the Hebrew language in the working of such literary conceits. The poem is divided into ten chapters, in which the tajmû'a-rhymes are arranged alphabetically. The first chapter is occupied with the praise of some great men, who are supposed to have been the learned astronomer Abraham bar Hiyyah of Barcelona.

Even in his secular pieces, Moses ibn Ezra preserves his seriousness; but so varied is the Hebrew language that these propositions are often preferred to those of Jehudiah Halevi and Abraham ibn Ezra.

The Torah has been inadequately edited by David Ginsberg for the society Berenstein. See, however, T. Lewenstein, Prolegomena zu Moses im Ezra's Buch der Torah, Bielefeld, 1895.

The most important work that has come down to us from Moses ibn Ezra is his Kitab al-Muhadarah, written in Arabic. It is the only work of its kind written by a Hebrew scholar, and contains a detailed treatise on Hebrew prosody, a history of Hebrew poetry, and a mirror of the history of the Jews of his time. It is evidently fashioned closely upon the model of the Arabic Adab-books.

Only a portion of it has been edited by P. R. Eckstein, in Poldermania, 2d series, 1910, pp. 183-289; but a general account of its contents has been given by M. Schreiber in 1911, 227-231. Moses ibn Ezra also wrote a philosophical work under the title 'Arugáh ha-Bosem. Only fragments of this composition have been published, so that it is impossible to understand the system to which be adhered. He cites a number of Greek philosophers, al-Farabi, and, of Jews, Sandia Gau and Ibn Gabirol. It is evident that this work must be of inferior importance, for it has left little trace in the literature of the time.

A few selections have been published by L. Dukes in the Hebrew periodical Hayyin, 2. (1942) 127 ff.

RICHARD GOTTHEIL.

IBN GABIROL—IBN HANBAL

IBN GABIROL.—Solomon ibn Gabirol (Gabirol) enjoyed two distinct reputations. To the Synagogue he was known as a hymnologist, to the Church as a philosopher. It was S. Munk who, first, in a periodical in 1848 and later in his Mélanges de philosophie juive et arabe (Paris, 1857–60), proved the identity of Ibn Gabirol with Avencebroc or Avicebron. This name seems to have arisen by successive corruptions of Ibn Gabirol into Avencebroc, Avencebroc and the other forms occurring in the medieval Scholastics. E. Renan (Arsenio, Paris, 1832, p. 76) describes Munk’s discovery as an “eminent service to the history of philosophy.” For the obvious implications of the identification, compare the remarks of Ueberweg-Heinze, Gesch. der Philos. (Berlin, 1838) ii. 296.

Ibn Gabirol was a Spanish Jew, who passed the years 1040–50 in Malaga (M. Steinschneider, Die heb. Uebersetzungen des Mittelalters, Berlin, 1893, § 219). It is commonly supposed that he was born about 1020 and died about 1070. Some authorities fix his death in the year 1088. The picture drawn of his personal life by H. Graetz may be found in the later History of the Jews (Eng. tr., London, 1891–92, vol. iii. ch. ix). There are no authentic details of his literary activities, however, we are better informed. Many of his Hebrew poems have been preserved in the Synagogue liturgy. Among these may be particularly cited his Psalms of Creation, which has been more than once rephrased into German, and is to be found fully in English prose in the Prayer-Book of the Spanish and Portuguese Jews (ed. M. Gaster, Day of Mourning, Oxford, 1894, p. 16). A number of his poems are to be found in English verse in Alice Luce’s Jewish Year (London, 1898), p. 140. It is an interesting fact that Ibn Gabirol, famous philosophically as a Platonist, should in this poem, the cornerstone of the new Church, have gone for inspiration to Aristotle’s short treatise On the World. Gabirol’s text is Aristotle’s saying: ‘What the pilot is in a ship, the driver in a chariot, the coryphaeus in a choir, the general in an army, the lawyer in a city—that is God in the world’ (de Mundo, ch. vi). Where Gabirol differs from Aristotle is not merely in the moral optimism of his outlook, but in the surviva of his inversive. There is, moreover, a charm of ‘youthful freshness’ in his verse, a quality which led to the erroneous belief that the poet died young. Many others of Gabirol’s poems are to be found in the Prayer-Book; a short invocation of his, translated by Mrs. R. N. Salaman, is now included in the ‘German’ service-book (see Authorised Hebrew Prayer-Book, annotated ed., London, 1913, p. cxvi). Gabirol also wrote didactic hymns, such as his Ashkith (Ehortsations), poetical summaries of the Biblical Laws, for recitation on Pentecost. Another long poem of his is termed ‘Asfag’; this is a linguistic treatise. Others of his poems previously unknown have been recently published. Ibn Gabirol, like other medieval Hebraic authors, wrote secular as well as religious poems, and several of his epistles have come down to us. His command of a pure Hebrew style is as remarkable as is the elevation of his thought. He stands very high among post-Biblical writers of Hebrew.

Beside his poetical works, Ibn Gabirol composed ethical and metaphysical treatises, some of them of minor importance. A full account of these may be found in the work referred to above. For a most popular collection of moral maxims, the Choice of Pearls, is attributed to Ibn Gabirol, though authorities are divided as to the correctness of this ascription. The book was translated into English by E. H. Asher (London, 1859). More authentic is the Improvement of the Moral Qualities, written in Saragossa about the year 1045 (ed. S. S. Wise, in Arabic and English, New York, 1901).

On two respects the "Ethics" (by which abbreviation the work may be cited) is highly original. In the first place, as compared with Saadia, his predecessor, and Bahya and MAIMONIDES, his successors, Gabirol took a new and unique approach to the problem of the individual and the State, of the unity of the religious, ethical, and political principles which are the foundation of the universal order. Further, he substituted the idea of the solidarity of the soul, in embryo, for the idea of the physical, and therefore the medi eval, soul of the Scholastics. E. Renan (Arsenio, Paris, 1832, p. 76) describes Munk’s discovery as an ‘eminent service to the history of philosophy.’ For the obvious implications of the identification, compare the remarks of Ueberweg-Heinze, Gesch. der Philos. (Berlin, 1838) ii. 296.

By far the most important of Ibn Gabirol’s philosophical treatises was the Arabic work of which the original is lost, but which is known in Hebrew as Ma’aroq ha’Elyon and in Latin by the equivalent title Fons Vitae. The fullest edition of the Latin is by C. Buxuncker, Aenecbrodica Fons Vite (Münster, 1685). Mysticism naturally attaches itself to Platonism; hence the Fons Vitae, being Platonistic in spirit, easily influenced the Jewish Gabirol, especially in its theory of emanations. On the other hand, it did not affect the progress of Jewish scholastic theology, partly because the latter assumed an Aristotelian garb, and partly because about the Fons Vitae, though it essentially, is an attempt to harmonize the Jewish monotheism with Platonism, is based on extra-Biblical foundations. The Fons Vitae is, however, frequently cited by the later Jewish Scholastics. Albertus Magnus cites it as an Arab (Ueberweg-Heinze, 206). Duns SCOTUS, whose hostility to the Jews is notorious, had no suspicion that the author whom he so admirably imitated himself was a Jew. Of Duns SCOTUS the historian just cited (p. 291) says that ‘many Platonic and neo-Platonic ideas penetrated into his thought by the channel of the Fons Vitae.

Holding that every created substance, whether spiritual or bodily, possesses matter as well as form (a position contested by Albertus Magnus and Thomas AQUINAS), Duns SCOTUS asserted: ‘ego sum qui sim ad positionem Avicebronae reduco.’ He agrees with Ibn Gabirol in holding ‘quod nihil ad nihil moved’ (p. 286). Platonistic realism and an underlying hyperrealization of Ideas have obvious relations with Ibn Gabirol’s materia immaterialis, though, unlike Socrates, the Gabirol does not identify God with the materia immaterialis. On the contrary, he absolutely excludes God from any such category. The identity of substance coming through the universe of spirit and body is a hypothesis of far-reaching interest, and in all Gabirol has been revived in recent and the new turn which has been given to mythical and monistic conceptions.

IBN HANBAL.—Ahmad ibn Hanbal, the founder of the Hanbalite school, was born in the month of Rabî the first, A.H. 164 (A.D. Nov. 780) in Bagdad. His lineage was of pure Arab stock, from the great tribe of Bakr ibn Wâil. Hanbal was the name of Ahmad’s grandfather. His father, Muhammad, died when Ahmad was still in infancy. Rarely the student is called to such a task. His father, named Ahmad ibn Hanbal. When 15 years of age, he began the study of tradition and other Muslim sciences. To acquire a full knowledge of the holy texts, he visited Medina, Yemen, Syria, Mesopotamia, Kufa, and Basra, and studied under Suzan ibn ‘Uyain, Abu Yasa, Al-Shâbāb, and many other famous teachers of those days. During this time he showed a remarkable ability in the study of law and the sciences, and was exalted as a soldier in matters of public business. The Hanbalite school was held in reverence as an authority in matters
of Muslim tradition. Al-Shâfi‘i too seems to have had a great respect and affection for Ibn Hanbal. It is told that, when al-Shâfi‘i went to last to Egypt, he said: ‘I do not leave behind any one greater as a faqîh or more pious and learned than Ahmad ibn Hanbal.’

After the long and arduous task of travelling, Ahmad continued to reside in Baghda’d. Soon he was regarded as one of the greatest teachers of tradition and faqîh. During his whole career he was a great defender of his faith and religion. In his pomoc and sales he was scrupulous in his adherence to the ritual observances. It is said that he was wont to pray every day 300 rd’s at least (every prayer consists of a certain number of rd’s). It was his custom at night, after the last prayer of the day, to sleep only for a short time, and then to arise and offer prayers of supererogation until the morning. He recited the whole Qur’an once every seven years. His needs were so extremely few that his life might seem a continuous fast. His demeanour was that of a man abstracted from the common concerns of life.

Ahmad’s maintenance of the integrity of orthodox faith, during the inquisition (shari‘a) ordered by the Khalîf al-Mut’tam and his successors, is looked upon as one of his greatest merits by his Mâlikî and Shâfîî brothers. Al-Mamûn had adopted in the year A.H. 212 (A.D. 827) the doctrine of the Mu’tazîlites, that the Qur’an was _created_. The Khalîf made this tenet obligatory upon his subjects. Ahmad was sent letters to all the provinces, ordering that his governors should cite the gullas and learned men and demand of them a clear answer as to Allah’s _creation_ of the Qur’an. Those who were unable to produce such an answer were frightened by threats and tortures. But Ahmad ibn Hanbal remained firm in the orthodox faith that the Qur’an was Allah’s _uncreated_ word. He was sent a repeated order to come to Baghda’d, and a refusal to assent to the Khalîf’s doctrine. In the year A.H. 219 he was scourged in the palace of the Khalîf Mu’tasem, Mâmilûn’s successor. Finally, as the sword’s edge became moved with anger and was preparing to attack the palace, the Khalîf ordered the suspension of the punishments, and soon after set Ahmad free.

After the scourging Ibn Hanbal was left alone. It was the first time he feared a popular outbreak if any further action was taken against the holy man. In the year A.H. 234 (A.D. 849) the Khalîf al-Mutawakkil stopped the application of the law. Ahmad was commanded by the Khalîf to undertake the teaching of the Mu’tazîz, his favourite son, in the palace at Surrammamn; he excused himself, fearing that the Khalîf was going to make him an attaché to the court.

As a faqîh and a traditionist, Ibn Hanbal bore a great reputation among his own and the following generations. He was a man of great influence among the people, and the leading representative of the strictest orthodox party in those days. He died on the 12th of Rabî‘ the first, A.H. 241 (A.D. 31 July 855), at the age of 77 years. When the news of his death became known, there was general grief over the city of Baghda’d and even in distant countries. It is told that many thousands presented at his funeral.

In regard to Ibn Hanbal’s works we know very little. Only one book, the _Musnad_, his great work, is well known. It is a compilation containing 20,000 or 40,000 traditions relating to the _munah_ of the Prophet, and which was compiled by Ahmad ibn Hanbal, only the traditions in it were a reliable basis for argument in _fiqh_ and other Muslim sciences, whilst the traditions omitted therein were not at all to be regarded as a sound basis. The _Musnad_ is not arranged with any reference to the subjects of the traditions it includes, but only according to the earliest authorities of the cited traditions. The work has always had a great reputation in Muslim circles; it has been used by many traditionists, but its immense size and the inconvenient method of its arrangement prevented it from becoming a popular book. A printed edition was issued at Cairo in 1896.

After the death of Ibn Hanbal, his pupils and admirers continued to form a society, known as the _madrâsah_, one of the four Muslim schools of _fiqh_, which still exist at the present day. The _Hanbalites_ have always distinguished themselves by their aversion to liberal theories in matters of faith, and their enmity against the Muslim rationalists and freethinkers (see further, art. _SECTS_ [Muslim]).

**TH. W. JUYNBOLL.**

**IBN HAZM.**—Ibn Hazm (Abû Muhammâd ibn Abî Muhammad, 'All ibn Abî Ahmad), a celebrated and influential Mu’tazîz, was born A.H. 384 (A.D. 994) in a suburb of Cordova, the Umayyad capital. He belonged to a Spanish family of converts (mukallât) of the Umayyads. He was the nephew of Ibn Abî Ahmad, the brother of Muhammad ibn Abî Ahmad, and nephew of Al-Hâmid b. Abî Ahmad, the brother of Al-Hasan b. Abî Ahmad, and of the famous philosophers and theologians of the Umayyad period, Al-Hasan b. Abî Ahmad and Al-Walid b. Abî Ahmad, both of whom were conspicuous figures in Andalusian Islam. He died there A.H. 456 (A.D. 1063).

His literary work was of a varied character. His son, Abû Râfî’, estimates that he was the author of some 400 compositions, consisting in the aggregate of 89,000 pages, and there is no doubt that he was a most prolific writer. He was a tasteful poet, and his love poems are often quoted. He composed a belittling monograph on love, entitled _Tawq al-hamma fil-ulfa wal-nilaf_ (‘the dove’s necking on sociality and the sociable’), still extant in a single MS (in Leyden), of which is being prepared for publication by a Russian scholar. From this work a charming love-experience of his author has been translated by Dyrn. Ibn Hazm, _An Accidental Study_. A short treatise of a historical character, _Nujud al-‘urûs_ fi wanirikh al-khalifâ, was recently edited from the sole surviving MS (in Munich), and published with a Spanish tranla-
tion ('Regalo de la novia sobre los anales de los califas') in the Revista del Centro de Estudios Históricos de Granada y su Reino (1 [1911] 160-180, 236-248), by C. F. Seybold. Of more importance is a paper, the 'Jamhurat al-anāb' (in Magzīn, Kitāb ut-tā ḍal-humāfī ('History of the Valimids'), ed. H. F. Ems, Leipzig, 1939, p. 8, n. 4, the title appears as Kitāb al-anāb, Ms. 7 of the Berlin Library). Taking of the genealogy of the Arab and Berber tribes, with special reference to the branches of the family in the Maghrib. This work, a section of which has been published in India by S. Khudai Bukhsh, was highly praised, and left an influence (cf. Subhi, Zanāqīl al-Shāfi‘īyya, Cairo, A.H. 1324, iv. 78), and were seldom quoted. This explains why most of his works are lost, and why some are extant only in rare MSS. Under the Abbāsid ruler Mu‘āhid, indeed, his books were publicly burned in Seville—a proceeding upon which Ibn Ḥazm commented in an epigram carved with supreme disdain:

'Though you burn the paper, you cannot burn what the paper contains, for it is laid up in my breast;

It goes with me wherever I go, it is in every part of my body. I cannot burn it, I will be burned with me in my grave;

Let me alone with your burning of parchment and paper, and speak rather about science, so that the people may learn which of us knows anything; if not, to school again! How many secrets has God beyond the things you aspire to!'

In his increasing isolation he was summoned even by students. Of the few pupils who availed themselves of his oral teaching the best known is Muhammad b. Abl Naṣr al-Ḥumaydī (A.H. 488 (A.D. 1095)), who speaks in laudatory terms of his learning, and his moral and religious character.

Amongst his pupils, it included still an extant satirical poem of 137 couplets in which he holds up Christianity and its institutions to derision by way of a rejoinder to a 地线ist writer whom had taken the rejection of the non-traditional sources for the deduction of the Laws in a special work (Kitāb al-maṣūb) first made known by the present writer, so, in the Zāhirī school, in the Ottoman schools (medrashī), in the special chapters of his work al-Muḥaddīlī, which deals with the religious law, while in various editions in each of the Zāhirī synods he is the method in its broadest application. In one direction, however, he advanced beyond the normal position of the Zāhirī school; for, whereas they had had an identical place of their principle to the science of law (fikh), and had regarded the province of dogmatic theology as indifferent, Ibn Ḥazm applied their method to the latter as well. In contoversing, on the one hand, the Asrārists held the Qur‘ān and the Sunnah as the source of all law, Ibn Ḥazm continued the Zāhirī tradition and taught the principle that this source was the Qur‘ān. He teaches that there are two forms of knowledge, the first is held by the Zāhirī school, and the other is held in the Asrāristic school. He, however, in his criticism in his best known work, the Kitāb al-maṣūb, fī-mī‘āl wa-l-ḥakīm wa-l-mī‘āl—a title usually abbreviated to Kitāb al-mi‘āl wa-l-ḥakīm—of which a printed edition is now available (4 vols., Cairo, A.H. 1317-21; on the Mokhtar, cf. ZDMG vii. [1912] 160).

In this treatise the first of all, for polemical purposes, as an account of non-Mohammedan religions and their doctrines, and then a critique of the doctrinal divisions of Islam. The first part of the work is devoted mainly to Judaism and Christianity, and to criticisms of the Qītim and the inconsistencies and absurdities thereof, his design being to confirm a view already expressed in the Qur‘ān and elaborated with increasing distinctness in later Islam, viz., that the alleged documents of revelation in the latter have no connection with the events narrated in the sacred writings given by God. He deals also with later religious writings of Judaism and Christianity, and, in particular, he submits the Talmud to severe criticism. This side of his work would never of itself have aroused the animosity of other theologians, but it forms a very different matter with the bitter and merciless spirit in which, alike in the work before us and in his writing as a whole, he adorns himself with the most eminent authorities in Muslim jurisprudence and dogmatics.

In his theological writings his tone is immo-}
IBN TAFSIR.—Ibn Tafasir, also known as Ibn Taimiya, was a prominent legal scholar and theologian of the 14th century. He was a leading figure in the development of Islamic jurisprudence and had a significant impact on Islamic legal and religious thought.

IBN TUFAYL.—Ibn Tufayl, also known as Abū Bakr Muhammad ibn Abī al-Mālik, was a philosopher, writer, and scientist. He is best known for his philosophical work, "The Book of Knowledge," which discusses the nature of reality and existence.

IBN TUFAIL.—Ibn Tufail, also known as Abū Bakr Muhammad ibn Abī al-Mālik, was a philosopher, writer, and scientist. He is best known for his philosophical work, "The Book of Knowledge," which discusses the nature of reality and existence.

IN PRISON.—Ibn Tufail was imprisoned in 1222 Dhu al-Qa‘dah, 728 (29th September 1328).

Though a stringent interrogator was laid upon the acceptance of his doctrines, he was not left without champions. Even after his death, pamphlets were written on the question of his orthodoxy, and to be regarded as an arbiter ('ulama') or as a genuine representative of orthodoxy. The tradition of his teaching was continued by his followers, and the conception of Ibn Tufail as the opponent of the School of Ibn al-Jauziyya (cf. A.H. 723 (A.D. 1328) in numerous works. At a much later period his views enjoyed a reviving interest, and it is interesting to note that the most striking historical result of his teaching is the fact that in the 18th century the founder of the powerful Wahhabite (Qa‘dah) movement in central Arabia derived his inspiration from the writings of Ibn Taimiya (cf. Goldziher, ZDMG iii. (1896) 156).

His name is the abbreviation of the Wahhabite ancestor's (Abu Bakr) and the controversy with the orthodoxy, who in turn take as their watchword the name of Ghazali.

As regards the influence of Ibn Taimiya at the present day, it should be noted that the party championed by Muhammed Rashid Rida in his periodical of Maudud in its 16th year— a party which rejects the Twelver (a) orthodoxy schools, appeals to the land, and is opposed to the worship of saints and the superstitious practices associated therewith—draws its constant inspiration from the writings of Ibn Taimiya and Ibn Qayyim al-Jauziyya. It is perhaps true to this side and the acceptance of Ibn Taimiya's views that within little more than a decade so many of the kibrisi much neglected works of the great Wahhabite theologian have been issued in printed form in Cairo and Haidarabad.
thought, he aspires to ascend to the highest,—i.e.,
to the state of ecstasy, in which the soul experiences
what the eye has never seen, the ear never heard,
and the heart of man never imagined. Just because
such a spiritual process cannot be described easily,
or accurately at all, it must be
represented allegorically. The persons in his allegory,
so far as their names are concerned, are borrowed
from the mystical treatises of Ibn Sina (Avicenna).
In the 'Asâl, he derives his knowledge of man and
the universe from the field of Hel lenic-Jewish tradition,
while 'Hâyy' recalls the first syllable of 'Gâyomâr,' a
mythical king of Persia. Many features of Ibn
Tufail's work are of legendary origin, but the
arrangement is doubtless his own. The theme
proposed was a practical question in Western
Islam at the time, just as it had been in the East
at an earlier day. The problem was, in fact, the
relation of the individual to society, or, to state it
more precisely, the relation between the
philosophical reflexion and intuition of the individual
and the traditional belief of the multitude.

The author seeks to portray as clearly as possible three
distinct types: (1) the philosopher, who by natural endowment
and his own reflection and self-education is fitted to receive
experiences of the divine, truth, etc., which rise step
by step to a mystic unity with higher spirits, and ultimately with
himself; (2) the uninitiated individual ('Hâyy'); (3) the man
who, like the 'Salman'; and (2) the speculative theologian,
who interprets the figurative language of revelation,
as given in the Koran, and proceeds to 'Abîl, the
'source' of his reason. 'Abîl is 'the starting-point
of his development, which completes itself in 747
years. He has an intense desire to learn. The
skein that such a man does and shrivels afterwards he begins to
disseminate, continuing till he comes to the conclusion that
the heart is the central bodily organ, the seat of the
principle of life. Having discovered how to produce fire, and
having fixed a lamp at the upper end, he proceeds to dissect various
other animals, either dead or alive. Then, just as he studied
the animals of his island, even turning a number of them, so he
investigates its plants and minerals, its atmosphericphenomena,
and, in a word, the whole philosophy of Nature. He is struck
by the interdependence of all these phenomena, and he endeavors to fit
them into a unity in all—the unity of the organism, that of the
species and the genus, the unity of its production by the fatherly
propensity of the world. From his study of physical Nature, in every part of which he
notices the distinction between matter and soul, he proceeds to
unify in the 'Divine Spirit' the existence of a pure and inviolable Form as the
cause of his own being. He is not satisfied with this, however, and
works. The existence of the Divine Spirit is inferred also
from the fact that space must necessarily be conceived as
finite. Thus far he has recognized the Creator of the world only as the
most perfect spiritual being. He now proceeds to study
these superpowers of the minds of Bodhisattvas, the
whirling dervishes. He restricts his physical wants to what is
strictly necessary for the maintenance of his body,
and only in case of necessity resorts to animal food,
with a consequence that he finds himself a
true ascetic. This asceticism becomes
the basis of his whole
home. He aims at scrupulous cleanliness, and in his
movements on the island, he sees himself as those
who have had God's grace, and in the knowledge of those
of the heavenly bodies. By these means he is gradually
enabled to raise his true self above the heavens and the earth,
and to unite himself in the Divine Spirit; and at this stage, in place of
his earlier logical proofs of God's existence, he enjoys the ratio
sense of the body, not only as a transcendental, but
mathematical-logical categories of unity, plurality, etc. So far as
the world still exists for him, he regards it only as a reflection
of the mind, a dream.

Ibn Tufail has often enjoyed the raptures of ecstasy, when at length
his body has been released. Upon a neighboring island lives a
people who, though adherents of the Mamluk faith, are given
to sensuous pleasures. A friend of Salmane's, the ruler of this
island—an individual named Asâl—desiring to devote himself
to study and self-denial, sets out for Hâyy's island, which he
supposes to be uninhabited. Here, then, by dint of
sterling perseverance, and, when the latter has at length acquired human language,
the two become convinced that the religion of the one, in its
spiritual interpretation, and the philosophy of the other, are essentially the same. With a view to proclaiming this
true version of the truth to the adjacent island, accompanied by Asâl. But their design
is not discovered; and the two friends ultimately to admit that
Mohammed had acted wisely in giving the Koran a garment
under a veil of ayyabulh language. They, therefore, go back
Hâyy's island, the uninhabited island, probably that they may further give
themselves to a life consecrated to God.

The greater portion of Ibn Tufail's book is devoted to the
course of Hâyy's education, and it is not to
be wondered at that those who first translated the
work, and gave an account of the author's philosophy,
were mainly concerned with the person of Hâyy.
But the central theme of the allegory, as
has been indicated, is a religious one, in the
sense that the author's and philosophy, and the principle that philosophy
is one with religion properly understood. This
has been specially emphasized by Geuthner, though
perhaps somewhat one-sidedly. For certainly it is obvious that in several passages Ibn Tufail is on
Hâyy's side: the eyes of Asâl are opened to the
profound mysteries of the Spirit, not by the
immediate revelation of the Divine, but through
Hâyy's philosophy of enlightenment; and at all events
the work permits the inference that man may attain to supreme salvation by the inner light
of the soul, without the mediation of Christ. This point of view
was enough of itself to render the book objectionable to the Christian theologians of the
Middle Ages, while, in particular, the
monopoly of the author's work was stigmatized by
Albertus Magnus (see also 'souls

The Happy Ibn Yaqût has at first but few readers. The Neo-Platonists of the Renaissance seem not
to have known it, else they would have found it acceptable,
insanely as they taught that there were rays of the one Divine truth in all religions and
to which the connection between Hâyy and Ed Crüden, a work by the Spanish author Baltasar Gracián, published in
1555-56—links recently pointed out by Menéndez y Pelayo—'have not been

Literature.—1. TRANSLATIONS OF HAPPI Y AQI K. The
Arabic text with a Lat. tr. by E. Pococke, Jr., and an
English version of the work of the 20th century,
revised and reprinted in 1796. The first Eng. tr. (1674; from the Lat.)
was the work of George Keith, who, during the
guad of the apartment of a revelation. A second Eng. tr. (also from the Lat.), by George
Auchurch, appeared in 1755. The Dutch
version of the original, by van Dyck,
was published a new English version from the original, and this was recently
revised with few alterations by J. G. Eichhorn.
for the use of his pupils (Cairo, 1800). Of Dutch translators
probably the first was J. Bouwezen, a friend of Spinoza,
who rended (Amsterdam, 1677) was executed from the Lat.
by Pococke, and this work was re-published at Amsterdam in
1791, while in the same year another Latin, collated with the
original Arabic and translated by the oriental scholar
H. Beer, a professor in Utrecht, was published at Rotterdam.
The earliest Germ. tr., by J. G. Fritius (Frankfort, 1790), was
based upon the English of Ockley; that of J. G. Eichhorn
(Berlin, 1792) is more independent. The Spanish text
have appeared only in recent times (see below).

Pococke's designation of the work, 'Philosophiae Autodidactus,'
appears on the title-page of the first edition, and is repeated in
1606. Blum (1701) has 'De naturales philosophiae ('The
Natural Philosopher'), and this
name, in the 17th century, even the Spanish
of 1600. Calderon (1701) has 'De naturales哲学家('The
Natural Monarch'), and this

IBN TUMART—Ibn Tumart was a famous Muslim reformer of Morocco, surnamed 'the Madhhab' or the Almohada. According to the Khaludin, his name was Aaghar Berber for 'the chief.' The names of his ancestors were also Berber. The date of his birth is unknown; but it must have taken place between A.M. 470 and 490. He was born in a village of Sús called Jijli en Warghán. His family were Israshins, a section of the Hitata, one of the chief tribes of the Atlas. Ibn Khaludin says that they were celebrated for their kindliness, and that Ibn Tumart seemed easier to learn, and frequented the mosques, where he burned so many candles that he received the surname Aaghar (Berber), 'the fire-brand.' It was probably the thirst for knowledge that drove him to the East.

At this time the Almoravid dynasty, which ruled in the Maghrib and a part of Spain, was declining, and corruption of morals had followed closely on conquest. One of the strictest Muslim sects, that of Malik ibn Anas, was in power; it confined its attention to the study of fiqh, the manuals which had been written on the Koran and the hadiths. Ghazali had strongly opposed its doctrines in the East in a chapter of his Ihya 'l'din al-din—the Kitab al-'Ilm, which called forth the hatred of the lawyers for he censured such as the qudri 'llay, and even Alshairi, like al-Turtashi, who did not admit independent minds into its sects. His works were burned by order of the Almoravid amirs. Further, the grossest anthropomorphisms (tajaddud) were discarded; and the allegorical expressions of the Qu'ran were taken literally, and God was given a corporeal form.

Ibn Tumart started his travels in Spain, and it was undoubtedly there that he began to modify his ideas under the influence of the writings of Ibn Hazm (q.v.). He then went to the East, but the chronology of his travels is not certain. If, contrary to the opinion of al-Marrakushi, it was during his first stay in Alexandria that he imbibed the doctrines of Abu Bakr and Turtashi, the latter—a believer in the Ash'arite teaching, although opposed to the Ummayyads—must have imparted it to his pupil. He afterwards made the pilgrimage to Mecca, and studied at Bagdad and perhaps at Damascus. There he became imbued with the ideas of Ghazali. Later writers say that it was under Ghazali's influence that Ibn Tumart decided to reform the beliefs of his country; but the two men never met.

During ten years of travel and study had transformed the Maghrabs. If his plan was not yet fixed in all its details, he had at least thought of it. On the vessel in which he sailed he preached to the crew and the passengers, who in obedience to his words, set themselves to read the Qu'ran and to pray. Thoroughly inspired with Ash'arite doctrines, he continued his preaching in Tripoli, in Mahdis, where the ruling sultan, Yahyá ibn Tumart, showed him kindness; and he received lettres of pass, which he was to present to the Sultan in Granada. There he played the part of moral reformer without restraint, making liberal application of an early maxim of his: 'Whoever among you sees anything reprehensible must change it with his hand; if he cannot, he must do it with his tongue, if he cannot, he must do it with his heart. This is the minimum of religion.'

The Hamadad sovereign was annoyed at this impudence of his authority; the people themselves rose up, and Ibn Tumart fled to the Real Grisgold, a neighbouring Berber tribe, who took him under their protection. The Sultan, who was well pleased with the man who was capable of continuing his work, 'Abd al-Mumin, a poor Sabbath, to the north of Nedroma, who, like himself, went to the East to study. Legend, which ascribes to Ibn Tumart a knowledge of the qibla, which he learned in the East, claims that he recognized, from certain signs in this young man, the person for whom he was looking, just as Ghazali had recognized the future reformer in him. All that we know is that he had an interview with 'Abd al-Mumnin, that he questioned him minutely, and that he ended by making him decide to give up his travels in the East in order to follow him. He then returned to the Maghrib by way of Waranis and Tlemcen, out of which he was driven by the governor; and then he passed through Fez and Meknés, where the people received his remonstrances with blows. At last he arrived at Morocco, where he asserted more than ever his role of uncompromising reformer of morals and doctrines. The Lemtuna women, like the Turegues and Kabyles of the present day, did not veil their faces. On this account Ibn Tumart insulted them, and even assaulted Sura, the sister of the Almoravid amir 'Ali. 'Ali himself was not free from his insults. He rebuked him even in the mosque. 'Ali, who was more patient than than the reformer, did not punish him as he deserved; he merely summoned a conference at which Ibn Tumart had to argue with Almoravid lawyers. They examined an important point of each other's, as: Are the ways of knowledge limited or not? The principles of the true and the false are four in number: knowledge, ignorance, doubt, and supposition. He had no difficulty in defeating them, although among them there was a Savan and a Sufi, and as obstinate as himself—Malik ibn Wuhailb, who advised 'Ali to put him to death, but in vain. The amir spared him, and Ibn Tumart fled to Agnim, where he took part in further discussions, and thence to Aginil, where he inaugurated his apostleship in a methodical way. At first he posed simply as the reformer of morals in so far as they were contrary to the Qu'ran and the traditions; then, when he had obtained a certain influence over his followers, he went on to preach his own doctrines, inveighing violently against the dynasty that followed agreed doctrines, and which he called 'inside' any who transgressed his teaching: it was a preaching of holy war, not only with pagans and polytheists, but also with other Muslims. He chose ten companions, 'Abd al-Mumnin among them, and, after preparing their minds by a description of the characteristics of the Mahdi, he made them recognize him as such, and composed a genealogy for himself which made him a descendant of 'Ali ibn Abi Talib. His doctrine was not pure Ash'arism; it was mixed with Shiiism. The historians mention tricks of jugglery and perey which to his resorted in order to justify his claims. He rallied round him all the Herigs and a large section of the Masmada, who had always been hostile to the Lemtuna (Almoravides), so much so that Ya'zein (ibn Tashfin) had founded Marraksh in order to keep them at a safe distance, and had written various treatises for them in Berber—a language which he spoke very well. One of them, the Tashfin, is preserved in an Arabic version, published at Algiers in 1903. He completed the organization of his followers, and died 1According to the Rawd al-Qur'ain, this meeting took place at Taja, the birthplace of 'Abd al-Mumn in.

2 The Berbers knew so little Arabic that, in order to teach the uneducated Masmada the Fa'ilun (first verse of the Qu'ran), he named each of them by a word of this verse; 'Abd al-Mumnin's was al-Hamda Kifsh ('praise to God'); the second, Fubbh ('lord'); the third, al-Adhim ('of the world'). By asking them to repeat their names in order, he succeeded in teaching them to recite the sura.
into categories: the first was composed of the ten who had been the first to recognize him; they were called the jumua’a (‘community’). The second was made up of fifty faithful ones; these he sometimes called ‘believers’ (and slaves) and sometimes ‘united’ (from which came the name ‘Almohads’). His authority, however, was not recognized all over, as was shown particularly by the inhabitants of Timmâl (or Timmâli). The latter set up a military strategy on a scale of 15,000 men; took the towns as slaves, divided the land and homes among his followers, and built a fortress. He converted the neighbouring tribes with their consents, or by force, and in A.H. 557 he sent an army against the Almoravids under the leadership of ‘Abd al-Mumin. It sustained a terrible defeat, and the Mahdi found himself blocked in Timmâl. Some of his followers suggested surrender. Ibn Tamrî had recourse to charlatanism with the complicity of ‘Abd al-Allah al-Wansharisi, whom he had brought from Wasiq, and, having regained his prestige, he massacred those of whom he was not sure. ‘Abd al-Mumin, however, in this evidently exaggerated number of 70,000 men, and disabled its effect. The cause of the Almohads revived as the power of the Almoravids was weakened and was even reversed upon itself, where the Mahdi died in A.H. 624 (522 according to others), ‘Abd al-Mumin, whom he had chosen as his successor, was ready to re-commence the struggle. His tomb is in Timmâl, but his name and his history are completely forgotten.

RENÉ BASSET.

IBSEN.—Hennik Ibsen (dramatist and poet) was born at Skien, in southern Norway, on 29th March 1828, the eldest son of Knud Ibsen, a substantial merchant. Scotchman, German, and Danish strains predominated over Norwegian in his ancestry. While Henrik was still a child, his father failed in business, and the family removed from his first home, a stately house in the marketplace, to a humble suburban dwelling. His education was law and, distinguishing chiefly by a bent for art. This could not be induced, and he was apprenticed at fifteen to an apothecary at Grimstad, a place still smaller and more remote. Here he spent seven years (1832-1839), his time of storm and stress. The revolution of 1848-49 quickened his instinct of revolt and quickened his lyric power. He wrote fiery odes on behalf of struggling Ibsen had been the first to recognize him; Catiline (1860) excited no attention whatever; but its importance is great. Ibsen re-published it in 1875, with a preface which forewarns the reader of the tone of his later drama — ‘the conflict of will and power.’ And he is already a dramatist; in spite of his revolutionary sympathies, he has not idealized his hero in Catiline. He is a tragically mixed character, who owes his ruin more to his own inner corruption than to the power of his foes.

A few months before its publication, Ibsen, having completed his apprenticeship, had come to Christianity. Here a second book, The Viking’s Bark (Kjærnesø, 1887), was acted with some success. He lived precariously by journalism, editing, with two friends, a short-lived periodical. In Nov. 1851 an appointment as stage-poet of the theatre at Bergen brought him a practical training in stage technique of the utmost value to him. Besides staging numerous plays by other men, he produced four new pieces of his own — in particular Dame Inger at Ostrea and The Feast at Solthouse. Enthusiasm for the national past was in the air at Bergen, and Ibsen did not escape it. But his mind was utterly unhistorical; history, even the national history, attracted him only as a source of dramatic or psychological problems, and these he was soon to find were furnished in greater abundance by contemporary society. Even when he was shaped it freely to his needs. The historical Dame Inger was a spirited and high-handed, but not a tragic figure; Ibsen involves her in a harrowing conflict of ambition and motherly love, which ends in her involuntary murder of the son for whom she has dared and endured. The Feast at Solthouse (1856) was the first result of his study of the sagas of Iceland. Something of their trappings was already reflected in the heroine Margit. But the lyrical form of the dialogue echoes the Norwegian ballads, and the temper of the play has a romantic and mediæval air. There were other pieces written and performed at Bergen — St. John’s Night and Olaf Liljekrans, both based upon Norwegian legend. Both remained till recently unprinted.

In the summer of 1857, his contract at Bergen having terminated, Ibsen accepted a similar post at the Norwegian theatre in Christiania. A few months later he brought a wife to his new home, Susannah Daae Thoresen of Bergen.

The theatre had been recently established expressly to combat the dominant Danish taste by presenting a national Norwegian repertory. With The Vikings at Helgoland (1857), Norway definitely acquired an original and very noble drama of her own. But the resources of the Norwegian theatre were unequal to sustaining it, and the old churches both at Christiania and at Copenhagen rejected it with scorn. Danish poets like Oehlenschläger had dramatized the heroic saga in elegant laments, and with a persistent effort to assurance and refine. Ibsen kept the rude strength of persons and situations, and the sinewy unadorned prose of their speech. Hjôrdis, the passionate young woman, who slays in deliberate vengeance the man she loves, is a tragic creation worthy of her prototypes in myth and saga, Brynhild and Gudrun.

The rejection of The Vikings, which was not played anywhere before 1861, increased Ibsen’s estrangement from Christiana society. Conservatism in politics, orthodoxy in religion, and devoted to Danish ideals of culture, the official and mercantile circles of the capital offered a stolid resistance to the young and restless idealist of the Nationalist cause. Four years later Henrik Ibsen’s junior, a born orator, and already the author of Synnøve Solbakken (1857), stood above the taciturn Ibsen both in persuasive power and in public repute. And Ibsen’s next drama was a satiric comedy which ridiculed well-to-do society at its
most sensitive point, and turned its apathy into furiously indignant. Love's Comedy (1862) is, on the surface, an amusing exposé of the foibles into conventional courtship and marriage; a plea for the subjection of these relations to calm good sense, undisturbed by sentiment and romance. But this attack upon 'romance' was inspired by a conviction that a great drama is an extreme. Love's 'comedy' concerned only the shallow sentiment which society called by that name. The plight of genuine love in marriage could only, in Ibsen's eyes, be portrayed as a case of the cares of household and children, vulgarized, he thought, the passion of souls. Falk, the young poet who preaches this doctrine, is at once ardent and shallow enough to make it, in his own case, plausible. The heroine, Svanhild, one of Ibsen's loveliest and most pathetic creations, gives him her heart, and they are on the point of adopting the conventional solution when the representative of calm good sense, an elderly merchant, intervenes, poses the young lovers with their own forgotten principles, and offers his own hand to Svanhild, who, sadly accepts it. The play is written with abounding wit in ringing rhymes, and is now popular on all Scandinavian stages; but its imperfect technique and impossible ethics have hindered its vogue elsewhere. Love's Comedy is, in any case, an improvement in the Ibsenian line of the modern 'social' drama. A second saga-drama followed. The Pretenders to the Crown was written in a few weeks of the summer of 1863. Lisa, the heroine, is a Norwegian, and Ibsen, the historical, but is at once less unhistorical and more Ibsenian. The two figures, whose prolonged duel for the throne of Norway we watch, are admirably individualized and drawn; the bent ruler, clear-sighted and strong-willed; Skule, paralyzed by his own doubts. In Skule, Ibsen's own still hesitant faith in his powers may be reflected; but it is realized by a structure and a power of build of this striking play.

Early in 1864 Ibsen's affairs reached a crisis. His outward circumstances, always precarious, had been seriously embarrassed by the failure, in 1862, of the Norwegian theatre. A small appointment as 'esthetic adviser' at the Christiania theatre was given him. His inner estrangement from society grew more bitter and intense. Sensation in Norway ended; Brautigam, the editor of On the Fields' (1860), an autobiographical confession shot through with the passion of Faust and the cynicism of Meisterlinphizes. The outbreak of the Dano-Prussian war in the spring of 1864 added a new and more definite provocation. Norway and Sweden declined, as in 1849, to support their Danish brothers; and the poet, who as a young man had then strenuously roase them, felt their abstention yet more bitterly now. Some enthusiastic students went to the front as volunteers, but the government remained neutral; and service in the Norwegian army remained, as Ibsen intimated in his mocking verses, 'The Ground of Faith,' one of the safest of callings. He sought to leave the country, and applied for a travelling pension, as had already been granted to Björnson. But Love's Comedy was too recent, and the favour was refused. In April 1864, Ibsen left Christiania for the south. Off Düsseldorf he heard the Prussian drums; at Berlin he saw the Danish triumphs, and the first idea of a great retributive poem upon his unfaithful fellow-countrymen flashed into his mind. It was the germ of Brand. In May he settled in Rome. The project at first made life easier, and his health improved. Brand was formerly a narrative poem, but the few cantos executed are laboured, and they were finally thrown aside and lost sight of. Thirty years later the Danish col-

lecto Pontoppidua discovered the MS in an antiquarian shop at Rome; it was published at Copenhagen in 1871. Meanwhile Ibsen, better inspired, had reverted to the dramatic form in which he was a master, and to a swift, flexible, ringing verse; he now wrote with fire, and in three months of the summer of 1867 he poured out the colossal poem. Brand, the prophet of 'All or Nothing,' hero and fanatic, is a great tragic figure, subtly, but not quite consistently, conceived; and the drama itself is something less and something more, and excels, like the plays of Norway which it set out to be. Types of her prevailing weaknesses—of compromise, sentimentality, faint-heartedness—are drawn with brilliant and incisive touch; peasants and artists, officials and clergy, come under the satirist's stroke; but the final upshot is in the spirit of Agnes the devoted wife rather than of Brand, of love rather than uncompromising will. Brand has language, but in its greatest moments, such as the close of the fourth act, it reaches a tragic intensity unsurpassed in the literature of the century. Contrary to the expectation of both author and publisher, it was received throughout the Scandinavian world with rapturous applause; its fierce invective counted for nothing with readers who recognized that the poet who dashed his country passionately loved it, or who hated it, meant them to be touched by his religious romance. With Brand, Ibsen's Scandinavian name begins.

A yet greater work was immediately to follow. In Peer Gynt (1867) Norwegian home and history is celebrated in a banal and wordy style; a style of saying essentially the same thing. The hero, instead of being the prophetic assailant of Norwegian failings, is their embodiment. The sombre tones andibel called the best ruler, clear-sighted and strong-willed; Skule, paralyzed by his own doubts. In Skule, Ibsen's own still hesitant faith in his powers may be reflected; but it is realized by a structure and a power of build of this striking play.

Brand was formerly a narrative poem, but the few cantos executed are laboured, and they were finally thrown aside and lost sight of. Thirty years later the Danish col-
Part he is too far degraded to rouse genuine tragedy.
Ibsen, for the first and last time, appears not compiled by master of his material. In both the contending forces, Hellenism and Christianity, he saw the seed of failure, and looked forward, like Heine, to the coming of a 'Third Kingdom,' superse-
deeding and surmounting both.

The passage containing this prophecy is deeply interesting; but Ibsen never reverted to it. It suggests a belief in the permanence of some form of religious community, which events were rapidly sapping in his mind. His fervid championship of Scandinavian brotherhood, of a union of the Northern States, had for years held in check his native individualism, but had allied himself with the Norwegian conservatives, and, not without astute arrangement on their part, had received flattering attentions and distinctions from the Swedish king, as an illustrious pillar of the Union. He was thus drawn into a false position.

To political and ecclesiastic institutions as such he had at no time attached value. He had defied them in the persons of the mayor and the dean in Brand. His letters of the early seventies express a yet more radical antagonism. 'The State must go!' he wrote to Brandes in the crisis of the fate of France, 1871; 'all religion will fall!' The picture which he presented was, he was convinced, rotten; and the hope of humanity lay in a revolution which would alone make possible the free development of the individual. That such a revolution was imminent in Europe Ibsen for at least twenty years (1864-84) believed. One who thought thus could not long remain in alliance with the conserva-
tives; in 1877, Ibsen cut himself off from the old

It may pass in some sort as an antithesis to The League of Youth, he wrote to his publisher shortly before its appearance. The satire is now aimed, not at the democrats, but at the men

test of truth, in the person of Lena Hessel, upon the fabric of an imposing but shallow respectability is represented with extraordinary force. The coming evening, his reputation only, expected a blow. One yet more searching followed. A Doll's House (1879) probed the roots not merely of social status, but of the family unit, and what women want, when men are individuals, and to share men's claim to self-development, was now

In marriage this claim seemed to be all but universally ignored. Ibsen's ideal for women had hitherto been the selfless devotion of an Agnes or a Solveig to husband or lover. Even the emancipated Lena shatters the 'Pillars' only that she may vindicate her brother. Nora is the first to discover that she herself has a person-

Social status and the children! Ibsen replied in the terrible drama Ghosts (1881), a work far greater in technical mastery, far more in intellectual reach, than any of his predecessors. In laying bare the horrible possibilities of inheritance, Ibsen discovered a new source of tragic terror and pity, analogous to the antique destiny, but indefensibly real; he also struck the tragically beautiful blow for the cause of woman-

But Ghosts only redoubled the scandal of A Doll's House. Ibsen, provoked by what he took to be a general conspiracy to ignore ugly facts, re-
torted the next year with An Enemy of the People (1882), an insincere and brilliant satire, in which

'With this challenging cry, however, the pol-

emical phase of Ibsen's drama closes. In his eight

remaining plays the temper of revolution is still present, but it no longer altogether reflects his own; on the contrary, he probes its weaknesses as remorselessly as those of conservat

ism and orthodoxy; and his attitude is now that of the imperial observer who putes

searching questions everywhere and answers none. To find answers, as he said, was not his business. The Wild Duck (1884), a masterpiece of construc-

tion, is a wonderful study of the disasters wrought by the blundering idealist; Gregers Werle is a

liminary Stockmann, Hjalmar Ekdal a mean and

shabby Peer Gynt. Romeo and Juliet (1866), perhaps the greatest of the prose dramas, paints the guilty passion of an emancipated woman, and her purifi-

ication by love and in death. No other modern

play is informed with so deep a sense that sin may be

forgiven, but must be atoned for; the one white horse of Rosenholm gleam eerily in the

background, foreboding the fatal issue; and The Lady from the Sea (1888) is a study of such revolt as Nora's, inspired by no doctrine of self-develop-

men, but by the spell of the unseen. Contrary too, to

Ibsen's wont hitherto, the spell is finally

mastered; Eline is reconciled to her husband. In

Reddik Gobler (1890), even more than in The Wild

Duck, he is occupied with the inner types of emancipated character; Hedda is a pitiful

romantic of revolt drawn with merciless

power. The Master-Builders (1892), which shows a

growing use of symbolism, portrays a man in

form at once more fascinating and more
dangerous; his old theme of rivalry by youth and

maturity is resumed but in other terms. Solness

merits no longer the young men's revolt but the

too stimulating homage of a girl. Little Eyolf

(1894) and John Gabriel Berkenheide (1896) painted

other tragic issues with diminishing power. Finally, in 1899, When We Dead Awaken, more

than an eccentric parody of an Ibsenian play, closed

the great series. In 1901, Ibsen suffered a nervous

collapse, from which he never recovered. On

23rd of May 1906 he died. He was buried with

national honours.

The fierce controversies once provoked by Ibsen's name have long subsided, even in England, where they survived longest. It is premature to de-

termine the final rank of his work; but there can be

do in doubt that it will count among the most potent

and original literary forces of the 19th century.

The wealth of ideas in the plays of Ibsen is endless, but, apart from his individualism and to their brilliant imagination artistic con-

science, method, and will. Drama was for him from the first a means of expressing his power a

preoccupied apprehension of the dissonances of

modern society; but he fashioned the instrument to his purpose with deliberate and calculated

precision. In mastery of dramatic invention, as of

his technique, without disdaining tradition, was

shaped essentially by the need of presenting with

utmost cogency and elegance a moral story to

say. This meant, however, a wholesale rejection of

conventions, stage situations, and stage
ICONECLASM

1. Origin.—The source of Iconoclasm is much discussed. Just before the Roman Emperors began to persecute image-worshippers, their rivals, the Khilifs at Damascus, had started a similar campaign, among their Christian subjects (Yazid I., 680-683; Yazid II., 720-724). The Iconoclast movement in the East, was warmly approved by the Musulims; yet it is unlikely that it should have been caused solely, or even chiefly, by the influence of the great emperors of the Eastern Emperors. Undoubtedly in the 8th and 9th cent., the worship of images in the East had arrived at an extreme point, and it was not even by long usage, and we guard the medicine.

2. The first Iconoclast persecution.—Iconoclasm throughout was no government movement; the chief secondary issue all the time, indeed, from some points of view, the main issue, was the right of the Emperor to legislate for the Church. On the other hand, the monks were always defenders of images. The lasturian dynasty of Emperors were the Iconoclasts of the first period, and the first of this dynasty, Leo III. (A.D. 716-741), began the campaign. As soon as he had made himself Emperor, he developed a policy of strengthening the Empire by enforcing uniformity and centralizing the power. He persecuted Jews and Paulicians cruelly. Then he was persuaded by the party opposed to images that they were the chief obstacle to the conversion of Jews and Muslims. There was also a certain rationalizing tendency in this dynasty which helps to explain his attitude. Constantine of Nalos's party persuaded the Emperor that the worship of images was the great hindrance to the unity of the Empire, that it caused superstition and divisions, and that it was forbidden by the first commandment (in the Byzantine numbering). Seeing the coming trouble, John of Synnada wrote to warn the Patriarch of Constantinople of Constantine's views; and the Patriarch, Germanus I. (A.D. 717-730), wrote a treatise in favour of images, addressed to Thomas of Klaudiopolis. But the Emperor, having now made up his mind to forbid image-worship, began to enforce their destruction ruthlessly. In 723 he published an edict declaring that image-worship was idolatry, and commanding all images in the churches to be destroyed. The soldiers began to carry out his order, and there were disturbances throughout the Empire. Germany was especially against the edict and appealed to the Pope (Gregory II., A.D. 772-731) in 725, whereupon the Emperor declared him a traitor, deposed him, and set up an Iconoclast, Anastasius, in his place (730). Leo had already written to the Pope, commanding him to accept the new edict, destroy his images, and summon a general council to forbid their use. In 727 Gregory answered by a long defence of images; he also blamed the Emperor's interference in Church matters, denied the need of a council, and demanded that Leo should cease his policy in this matter. A correspondence between the Emperor and the Pope followed in which each maintained his position, Leo claiming the right to legislate for the Church, on the strength of both the apostles and their successors. Meanwhile the persecution of image-worshippers raged in the East, and the Emperor repeatedly interposed against them, as being the chief defenders of images. Monasteries were destroyed, monks punished, tortured, and put to death. The Iconoclast movement took its first lines of rejection.

2. The cult of icons in the Byzantine Church just

3. One of the earliest forerunners of Iconoclasm was

and destroying relics, and denying the intercession of saints. These two further points, though not necessarily involved by Iconoclasm, became generally identified with it. At this time St. John Damascene, safe from the Emperor's anger at the Khalif's court, wrote his famous defenses of icons. 1 In the West, too, the people rose against the Emperor's Edict. In 727 there was a revolt in Greece against the Iconoclast Emperor, and a council met at Ephesus, with the purpose of calling the Patriarch to Constantinople and not to put down the worship of icons. But in 727 the Emperor sent a synod of 93 bishops to Rome, who excommunicated all who destroyed pictures of Christ or the saints. 2 This time the legate was sent to Constantinople with a copy of this decree which was not obeyed and imprisoned in Sicily. The Emperor then sent a fleet to Italy to punish the Pope; but it was wrecked by a storm on the way. He confiscated all the property of the Holy See on which he could lay his hands (in Sicily and Southern Italy), and affected to withdraw Illyricum from the Roman Patriarchate and to join it to that of Constantinople. To make the Byzantine Patriarchate more powerful he left before his Empire was part of his general centralizing policy. He continued an active persecution of all image-worshippers till his death in 741. His son, Constantine V, was a more enlightened, not a persecutor, but an Iconoclast than his father. At Leo's death there had been another rebellion when Artabasdos, a Patriarch of the West especially, there was much angry feeling against the Iconoclast Emperors. Irene first deposed the Patriarch of Constantinople (Paschal I), 3 780-784, naturally a partisan of the late government, and pronounced image-worshipper, Tarasius (784-806), an uncle or cousin of Phocas, 4 was appointed to succeed him. Then the Emperor renewed relations with the Patriarch of the East, and sent an embassy to the Pope (Adrian I., 772-795) begging him to come himself or send legates to a synod which should undo the work of the former one. 5 Adrian in answer sent two legates, one for the Empire and one for the Patriarch. He is not pleased with Tarasius' succession to the Patriarchate, but prays his orthodoxy about the images. He expostulates with him about the restoration of Illyricum to his Patriarchate. He sent a Bishop of Syria to the Pope to the Pope (Adrian I.) 772-795) begging him to come himself or to send legates to a synod which should undo the work of the former one. 5 Adrian in answer sent two legates, one for the Empire and one for the Patriarch. He is not pleased with Tarasius' succession to the Patriarchate, but prays his orthodoxy about the images. He expostulates with him about the restoration of Illyricum to his Patriarchate. He sent a Bishop of Syria to the Pope to.

2 3 Muli, xii. 297 ff.
3 The acts of the Iconoclast synods of 754 are contained in those of Nicæa II., Mantzik. viii. 203-36.
4 Paschal I., 756-784, was elected to the vacant see of Constantinople, and the government at once published the decrees of this synod, demanding that all bishops in the Empire should sign the acts and in their dioceses. Instead of pictures of saints the churches were then decorated with those of flowers, fruit, and birds. The Paulicians were well treated, but the monks were tortured and put to death. A great number of the martyrs of the Iconoclast persecution come from
6 Muli, xii. 394-396.

and is given for the sake of their prototypes. There is nothing new in this. It is what the defenders of image-worship had said throughout the controversy. The synod then anathematized the chief Iconoclasts, and, in opposition to the principle of the other council, declared that the Trinity has made these three (Germanos, John Damascene, and George of Cyprus) gloriouis. Twenty-two Canons were drawn up, of which the first five laid the condition of going to the Western bishops. Copies of the acts were sent to the Pope, who approved them and had them translated into Latin. Then the images were restored in all the churches, and the first Iconoclast movement came to an end, although there remained a strong Iconoclast party, especially in the army.

4. The second Iconoclast movement.—Twenty-seven years later Iconoclasrn broke out again. In 718, after the death of Constantine V., the line of the house of the Emperor was continued by a son of Theodosius II., Leo V., the Armenian, who desired to inaugurate a new Iconoclast movement, although there remained a strong Iconoclast party, especially in the army.

5. Iconoclasts in the East. At the end of the 8th cent. there was a slight echo of the great Iconoclast movement in the Frankish kingdom, caused by two misunderstandings. First, the Frankish bishops misunderstood what had been decreed at Nicaea II., and knew its acts only through a grossly inaccurate version.

For instance, in the 3rd session of the council a bishop had declared: "I receive the holy and venerable images, but I give that worship which is real adoration (cadalexia) only to the consubstantial and life-giving Trinity." This phrase was mistranslated into Latin. The Frankish bishops misunderstood the word "worship" (cadalexia) to mean "adoration," and the Frankish bishops thought it meant what we understand by the word "adoration." Further, they were not used to, and did not understand, Byzantine etiquette. The Byzantines prostrated themselves before the Emperor, kissed his feet; they even gave these marks of respect to his image. The Frankish bishops understood these marks of respect to be a natural form that they should do the same to portraits of the saints. Really all such forms have no absolute nor inherent meaning. They mean just what the custom of the time and place assigns to them. But the Franks, unused to such ceremonies, interpreted them according to their own custom; they thought them idolatrous. Lastly, there was the tradition of the Greeks and the deep distrust of all that they did (the Franks were just about to break with the Eastern Empire altogether and to set up their own king as rival Emperor). Yet it should be noticed that the Council of Nicaea II. had never meant to take the side of the Eastern Iconoclasm. If they for a time condemned the second Council of Nicaea, they also condemned the Iconoclast Council of 787. Already, in 797, Constantine V. had tried to gain the Frankish bishops for his views, but without success. A synod at Gentilly sent a declaration to the Pope (Paul I., 757-767) which quite satisfied him, 2 but, when Adrian I. (772-795) renewed the acts of Nicaea II. (wrongly translated) to Gaul, the bishops sent back a rebuttal of them (795) in 85 chapters (790). This answer, expanded later, is the famous Capitulare de imaginibus, or Liber carolinus. 2 In it the bishops admit that images and relics should be kept in churches and treated with due respect; but God only can receive adoration. The images are to have opportuna veneration, not adoration. Except for the misunderstanding of the word adoration (ποιησθήσεις), this is exactly what Nicaea II. had declared. In 794 they held a synod at Frankfurt in the presence of two papal legates, who seemed to have done nothing to improve the misunderstanding. This synod formally condemned Nicaea II., while showing plainly that the bishops do not understand what there is here decreed. They report it as a synod held by the Greeks at Constantinople (they do not even know where Nicaea II. sat), in which the 'Greeks' had declared that the same service and adoration are to be given to images as to the holy Trinity; and, accordingly, the Franks at Frankfurt, not sorry to}

be able to condemn 'Greeks,' declare that they 'despire and condemn that synod.' They sent their acts to Rome with a petition that the Pope would confirm them, which, of course, he refused to do. He had already written a long explanation of the acts of Nicea II.; but this did not arrive in Gaul until after the synod of Frankfurt. These matters rested for a time. When the second Iconoclast persecution had broken out, Michael II. wrote to Louis the Pious demanding that the Greek insignia of the monks who had died to the West should be handed over to Byzantine justice, and also arguing at length against the images. Louis then begged the Pope (Eugene II., 834-837) to receive from the Frankish bishops a collection of texts from the Fathers bearing on the subject, and to prepare this document they met in Paris in 825, where they again attempted a middle way, but, though not quite towards Iconoclasm. The treaty was sent to Rome with every possible expression of respect, as useful material for consideration in the crisis. Nothing is known about the result of this document, except that it made no change in the attitude of the Holy See. Then gradually the Frankish misconception was cleared up, and the movement in the West died out. Pope John VIII. (872-882) sent a more accurate translation of the acts of Nicea II., which helped to allay the suspicion of the Franks.

There are a few later isolated cases of opposition to the veneration of images in the West. In 884/885 Charlemagne destroyed all pictures, crosses, and relics in his diocese; for which action he was reprimanded by a number of other bishops and by a Frankish abbett, Theodemir. He was condemned by a local synod. Agobard of Lyon at the same time was very critical; but Walther of Strassburg and Hincmar of Rheims defended the attitude of Nicea II., and so explained it that we hear little more of Frankish Iconoclasm. Still, as late as the 11th century, Iconoclasm was severely reprimanded by Pope Alexander II. for Iconoclastic ideas.

6. The cult of images. — Both the Catholic and the Orthodox Churches accept the decrees of Nicea II., with their distinction between εὐκαρπία προκοινούμενος and σαρκία. But there is a practical difference in their application. The Orthodox have in mind both after the synod even heretical beliefs, which they treat with great reverence. But they have no solid statues, and are very much disposed to regard these as idols. The Catholic Church, on the other hand, sees no difference between a solid statue and a flat picture. Except the Nestorians, all the other Eastern Churches agree with the Orthodox in this matter. They, too, have pictures, but no statues, though some of them (notably the Armenians) are more reserved in their forms of reverence towards pictures, and sometimes blame the Orthodox in this matter. The Nestorians now have no pictures of any kind, only a plain cross, to which they pay the greatest reverence. They alone among the Eastern Churches make a principle of not venerating images, although there is evidence that formerly they did so; and according to the usual Eastern custom.

ADRIAN FORTESSO.

IDEA. — This word has been used by philosophers to denote (a) eternal natures or essences, the objects of true and abiding knowledge; (b) such natures considered as contents of a Divine mind, and archetypes of the things we perceive with our senses; (c) the contents, or some of the contents, of the human mind or consciousness. The present article will be devoted to tracing the historical origin and connexion of these several usages.

I. In Greek philosophy. — The importance of the word in the vocabulary of philosophy is due to Plato, and its earlier history concerns us mainly in its relation to the kindred term éidos, from whose history its own is, down to the time of Aristotle, inseparable, are derived from the root of deo, 'to see,' and originally had the sense of 'look,' 'gaze.' Already in Homer (Od. xvii. 454) éidos is used for 'beauty.' The primary sense of 'appearance' passes easily into that of 'form' or 'kind,' and in such passages as Thucydides, ii. 50 ("éidos ryvo), the reference is plainly so much to outward appearance as to true structure or essential nature, and this meaning seems to have established itself in scientific circles before the time of Plato. A. E. Taylor has recently contended (Fabia Socratowia, Oxford, 1911, p. 178 ff.) that it is independent of the meaning 'kind,' and is derived from a Pythagorean use of the word for geometrical figures, conceived as the ultimate elements of reality (cf. Plato, Tim. 53 C) and then extended to such elements (érosia) however conceived. The evidence seems insufficient to support this conclusion (see C. M. Gillespie, in Classical Quarterly, July 1912).

We learn from the patricians of Meno (see J. Burnet, Early Greek Philosophy, London, 1906, p. 355 n.) that Plato's contemporary, Philiscus called Eupolemos 'idea,' but this may only have meant 'kinds of body.' The fact that Democritus called his atoms éide (see Sext. Emp., Math. vii. 187; Plut. adoro. Col. 1114a; see Burnet, p. 388 n.) is explained by his view that the atoms differed from each other only in shape (Aristotle, Met. A. 4, 1055 a, 26, de gen. et corr. 1, 2, 336 b 7). On the early history of the word see C. A. Brandis, Greek. der gr. und rom. Phil., Berlin, 1858, pp. 545, 569, 587; H. Fleischer, Philologie Elementar, Leipzig, 1899, p. 26; Burnet, op. cit., p. 388, and the rest under éidos, etc. in the index; Taylor, op. cit., p. 173 f.; Constantin Ritter, Neues Untersuchungen über Platon, Munich, 1905, p. 229 ff.}

The full examination of Plato's doctrine of Ideas and of the question of the priority of the forms, or as far as it was once thought, the priority of the common inheritance of the Socratie circle (see Burnet, p. 354 ff.), and what changes it underwent at different periods of his life, lies beyond the scope of this article, which will confine itself to a general description of his usage, especially in relation to the later history of the word. Aristotle (Met. A. 6, 987 b 29 ff.) tells us that Plato, when young, learned from Cratylus the doctrine of Heraclitus, that everything sensible or corporeal is such things alone Heraclitus referred, according to Arist. Met. N. 4, 1073 b 11) was involved in a process of perpetual flux or change; and that Plato, who perceived the deadly consequences of this doctrine for knowledge, sought a way of escape suggested to him by his intercourse with Socrates, who, in dealing with attempts to show the purely conventional nature of all ideas, whether forms of justice, courage, and the like, had attempted, by defining these terms, to reach fixed objects of moral approval. For the very statement that what was just under those becomes meaningless unless what is meant by 'just' is the same in both cases. Plato, by extending this principle beyond the ethico-political sphere, reached his doctrine of ideas—permanent
realties or natures corresponding to general terms. Such permanent natures are not objects of sense; they are apprehended by understanding. Others, e.g. Democritus, had thought that such truly existent natures, ousia or Idea, must underlie the showings of the world; but this was not recognized by Plato (and, it would seem, first by him) that they must be incorporated.

Aristotle, by giving this account in close connection with a treatment of the theory, usual with him, of the purification of the Pythagorean doctrine that Numbers are the ultimate realities, suggests that the Pythagorean influence on Plato was not independent of the Socratic; and there are other indications (collected and insisted upon, not without exaggeration, in Taylor's Varia Socratica) that Socrates stood in closer connexion with Pythagorean circles than has always, despite Plato's Phaido, been recognized.

Aristotle's account brings out clearly the fact that Plato's ideas are objects of thought (noéai); they are not 'concepts' or 'thoughts in the mind' (noýeta). The latter explanation is actually put by Plato (Parm., 132, 29 ff.) into the mouth of the youthful Socrates, only to be dismissed by Parmenides with the pertinent inquiry whether there could be a thought which was a thought of nothing (nothingable). Platonic philosophy has been regarded as the case of who, at first, a 'conceptualist,' went on to 'substantiate' or 'hypostatize' concepts. Such a gratuitous proceeding could not be regarded as an indication of the mythology here (see Lotze, Log., Leipzig, 1874, iii, 2, § 313 ff., Eng. tr., Oxford, 1888, ii, 200 ff.). We should rather approach his theory by considering that, while we should actually admit that the eighteen and the number of the alphabet may be about the motive of an act we thought just, or the beauty of a face which affection predisposed us to love, or which had been injured since we last saw it, we could not claim even this slight acquaintance with us, we do not know what justice or beauty is. So, too, a judgment that two visible lines are equal to one another can never express more than an opinion; but if we did not know what equality is, no such judgment could have any meaning at all. One could not doubt what was just in a hard case, or correct a wrong definition of justice on the production of a case not in accordance with it, except in very rare cases ability of the person who thought of the 'form.' It is no notion in my mind: I have a notion or knowledge of it, but for that very reason it is distinct from the notion or knowledge which I have of it. We may legitimately ask how this Idea is related to particular instances of it, or to the sensible phenomena which exhibit it, or to the mind which apprehends it; but in all such questions we are talking and thinking of it as something real, permanent, known; and, whatever it be, it is certainly neither a body nor a mode of consciousness; if it is less plain that it is not a spirit, it is certainly not plain that it is so.

Aristotle held that Plato was wrong in assuming that this Idea was ousia, separable and separable from the particulars which might be said to 'copy' it or 'partake of it.' The former metaphor Aristotelian, 1877 (11) ascribes to the Pythagoreans, the latter to Plato. The difficulties of both are exhibited by Plato himself (Parm., 130 Ef), But Aristotle did not hold that it should have been developed permanent natures are not objects of sense; which we think; and 'conceptualism' is at least as open an Platonism to the charge of ousia, 132 D, 111, the separation of the universal from the particular.

What Aristotle denied was that the Platonic view that certain intuitions of 'separate' Ideas (Post. Anal. i, 11, 77, 35 ff.), whereas it only required the possibility of universal predication. What Plato called an Idea Aristotle called a concept, or a conceptually real thing, as Plato (but see Meno, 77 A) and implying the Aristotelian criticism. The ousia ousia is for Aristotle 'one beside the many' (τὸ τὰ πολλά ἑν), like Plato's Idea (Post. Anal. ii, 106, 7), but as thus separated from particulars it is in the mind only. Any other separation is not necessary for science, and involves inescapable difficulties. Aristotle, then, did not take Plato for a conceptuалиst, who 'substantiated concepts,' but for a realist who placed the essence of individual substances outside of them, and supposed that in predicating universally of them we were ascertaining another substance beside them, which possessed their common predicates without their distinct individualities. This had led to denial that the individual substances were substances at all, because they were not this additional substance. Hence Plato's ousia or Ideas to which Aristotle had good-by (ὑν τὰ πολλά [Post. Anal. i, 38, 35 ff.] were mere idle sounds (εἰσαγωγα); but Aristotle himself held to ousia otherwise conceived. For Aristotle ever had it that thought and had what was said on the subject of 'form,' that of that of the group of beings of whom the same essential predicates hold, the in the species ιδέα (croup ιδεα). Where one individual is (like a planet) eternal abstractions, and of individuals of that kind. Eventually 'form' has come to be the usual rendering of ousia in the sense of the essential or fundamental characteristics of a substance; species in that of a group of substances, whose essential characteristics are not to be distinguished. But this differentiation has been only gradual. Cicero preferred formae as a rendering of ιδεα, because it could be declined throughout, while species is used only of the individuals of a species, the equivalent term, and signifies 'form' rather than 'kind' or 'class.'

Cf. P. Notary, Plato's Idealism, Leipzig, 1860, 21; Ritter, Neue Untersuchungen, p. 355 ff. In consequence of the fact that Aristotle rarely used ιδεα in its philosophical sense except when referring to Plato, while ousia is used by him to less when expounding his own views, Idea has become the recognized name for the Platonic Form; and, even when it has come to be used in very un-Platonic fashion, its Platonic associations have constantly led either to a misinterpretation of Platonic Idea, because so-called, or to such a modification of the word's non-Platonic meaning as will bring it into closer accordance with Platonic usage.

In the Rhodians (the earliest Platonic dialogues in which the word occurs) the Idea of holiness is to be used as a πολυπερίγραφον (6, 3). This is important, for much of the subsequent employment of this expression by Plato himself (e.g. Resp, p. 427 C, ix, 598 E, Parm., 132 D) and of the fact that it is as a proper term to Phenomena things that are trite.

For passages illustrating the Platonic concepts see G. A. F. Ait's Lexicon Platonicum, Leipzig, 1856-66 (until superseded by Brinton's). Note the very full essay (21) in his History of Antiquities, and see his discussion of terms with respect to specific characters, and Campbell, Republic, vol. ii. As Campbell shows, the transition to specificity Platonic use is from the Rhodians. 131 E, 132 A, and the frequent combination πλατικά is deserving of notice.

On the question whether, or not, to all or any of these terms there correspond Ideas, see Parm., 135, where the young
The essential features of the Platonic Idea are that it is (1) an object of thought, not a thought (νόημα, not νοήσις); (2) an object of thought or knowledge, not of sense (νοεῖν, not ἀνοεῖν). Plato’s philosophy is not Idealism in the sense of a doctrine which resolves the phenomenal world into facts of human consciousness. Lotze’s explanation (Log. iii. 2) of the νοεῖν of the Ideas as ‘validity’ ( Gültigkeit) or Natorp’s description of the ιδέα as ‘realis’ is useful. If not understood as making them mere attributes of something else, considered in abstraction from their substances; but J. A. Scott’s expression ‘points of view’ (Plato’s Doctrine of Ideas, Oxford, 1969; see esp. p. 4) so plainly makes them ways of apprehending, not realities apprehended, that its use is fundamentally incompatible with the account given of νοεῖν.

Aristotle’s abandonment of the word to Plato determined its subsequent history, although instances of its use which involve no reference to Plato’s doctrine are to be found in many later writers, and even in the Middle Ages (see Du Cange, s.v.).

Among the problems about the Ideas beaconated by Plato to his successors historically the most important was that of their relation to the Divine mind. A doctrine of a personal God in the Christian sense forming no part of Plato’s theology, he himself freely varied his language to suit his content. Thus (Tim. 38 D) he ‘contemplates’ them (Phaedr. 247 D, E), ‘uses them as models’ in creation (Tim. 39 E). Such expressions are mythical or imaginative. More philosophically Plato’s doctrine is interpreted by S. 240 A, Philol. 23 D. The Ideas cannot be ‘of inferior nature to the soul which finds its chief good in knowing them; they must themselves possess life and thought. Again, as the material elements of our bodies are derived and replenished from the matter masses of like nature in the great world, so must our souls be derived from the ‘royal soul and royal reason’ in the nature of Zeus, wherein dwells the wisdom to which the order in the world is due. The relation of the Ideas to this world-soul (for which see also Phaedr. 245 ff., Tim. 34 ff., Laws, x. 892 ff.) is a genuine problem for Plato’s Speculum. So to suggest that in order to solve it Plato would have surrendered the sovereignty of the Ideas. Rather they inform us and our souls, which are parts of it, ‘as a light to enlighten and a guide to govern’ (Acts, xiv. 13, Hist. Fr. ed. Frasor, Oxford, 1871, ii. 496). It was their indwelling of the soul as the ἠγοίεσθε (Aristote, de An. 429a 27) that proved Platonists that it was immortal.

Of course, it is not with Ideas, his speculations influenced the development of thought respecting them, which led to the view of them as Divine thoughts. While no idealist in the later sense, he held that the Divine mind cannot be (like ours) in a position of dependence upon its object; still less can it exercise itself in knowledge of what is inferior to itself: thus its object must be what it is, and its activity νοεῖν ἀνοεῖν (Met. A 9, 1074a 34).

After an interval of five centuries Plotinus stands in the direct line of succession from Plato and Aristotle. While in sense-perception the perception conforms to an object other than itself, νοεῖν or understanding, can only be an object external to itself. Its object must exist in it, but such an inaccessibility νοεῖν, just because νοεῖν is higher than anything but the One or the Good which transcends (like Plato’s ἀκάλλυτος the distinction between subject and object, is a higher kind of existence than the independence which the objects of inferior faculties enjoy over against the apprehending faculties. The intelligible natures of all things, which, of course, are no other than the Platonic Ideas, thus form the content of the eternal νοεῖν, which is the ‘second person’ of Plotinus’s Trinity (the One, the νοεῖν, and the World-Soul); see Enn. v. ix. 8. Here we reach the interpretation of the Ideas as Divine thoughts which became traditional in the Middle Ages; but the νοεῖν of Plotinus is not what we should call ‘a personal’ God.

In mediaeval thought another step is taken under the influence of Christianity, which seriously concerns God as ‘personal’. A passage of Augustine (De Dio, qu. 83, xlvii.) became the Dogma of the Middle Ages that the Ideas are eternal. This is quoted as such by Albertus Magnus (Sum. Thol. i. xiii. qu. 53, 2, § 3), Alexander of Hales (Sum. Thol. i. qu. 23, 2, § 4), Thomas Aquinas (Sum. Thol. i. qu. 15, 1, ex in Sent. iii. art. 1, de Veritate, art. 3, ‘de Ideis’); Bonaventura (in I. Sent. dis. 35, Comp. Theol. i. 55, Sum. Thol. qu. 11, art. 1), and Duns Scotus (Op. Oxon., in I. Sent. dis. 35, art. 1). Augustine could reconcile his earlier conviction that we must suppose Ideas as eternal and immutable patterns of phenomenal things with his Christian belief in one eternal Being, the Creator of all things, only by supposing the Ideas to be eternally dependent on the Divine mind but its eternal pattern, the world of Ideas, is an integral part of the Divine nature. Augustine assists himself by the analogy of the designs in an artist’s mind. To make a more direct analogy appeared in Philo (as a Jew was also accustomed to regard God as personal). See de Opificio Mundi, §§ 16, 25, pp. 4, 5 (the Divine Logos, as one with the world of Ideas, the κόσμος Ṽοιος, is called by Philo Ἰδεῖς Ἰδεῖς; the phrase, however—which occurs in Origen, c. Cels. vi. 64—is bracketed by Colson). The same metaphor of an artist’s designs had been used by Seneca (Ep. 88, § 10) in exposition of Plato; and we may compare with it a passage (in which, however, the word Ἰδεῖς does not occur) in the Introd. Arist., of the 1st cent. mathematician Nicomachus of Gerasa in Palestine (i. 6). The Phaedo Plato’s Ethics is nothing (Gr., Berlin, 1879, p. 309) already assert that Plato held the Ideas to exist et τοι Ἰδεῖς καὶ τοῖς Ἰδεῖς Ῥωμαῖοι καὶ τοῖς Ἰδεῖς τοῖς Ῥωμαίοις; the use of such language was encouraged by the Christianity laid on the thought of Divine personality. Hence the importance of Augustine’s adoption of the analogy with the artist’s designs. In the earlier period of Western medievalism, Augustine’s influence was paramount, and to the same still powerful influence it was due that even after the triumph of Aristotelianism in the 12th and 13th centuries the Platonic Ideas, as interpreted by Augustine, retained their place in the
philosophical tradition beside the Aristotelian Forms.

In the 12th cent. we meet with an explicit Platonicism which regards the Ideas as eternal patterns; e.g., in Bernard of Chartres (John of Salisbury, *Metalogicon*, ii. 17, where the author traces the history of the doctrine of Ideas, and, it may be noted, apocalypses the standing *Ne in the relation of exemplum to exemplar*). We find other examples in the *Megalographos* and *Micrologos* of Bernard Silvester (sometimes identified with his probably older namesake of Chartres) and in the *Antisthenes or Helen of Italy*. This Platonicism depends not only on Plato’s *Timaeus* (the only accessible dialogue) and Augustine, but on such writers as Boethius, Macrobius; and Martianus Capella. After the triumph of Aristotelie the acceptance of Ideas was still, as we have seen, general. It was a subject of controversy whether they were Ideas of individual things (Thomas Aquinas) or of universals only; whether they were practical or only speculative (Henry of Ghent); whether they were in God’s essential nature as *ratiocina cognoscendi* or only in His intelligence as objects of His knowledge (Ockham). The answer to such questions depended, of course, on the general philosophical and theological position of the thinker concerned.

3. Transition from the medieval to the modern uses have now to trace the process by which a word hitherto associated with eternal nature and archetypal Divine designs came to be commonly employed for the thoughts and even imaginations of human beings. This, perhaps carrying on a Cynic tradition; see E. Zeller, *Socrates and the Socratic Schools*, Eng. tr., London, 1898, p. 254) interpreted the Platonic Ideas as mere concepts (e.g., *Platonism*), or objects of sensible things (Plat. *Philo*, 382 B, Stob. i. 15, p. 332 H; Diels, *Dox. Gr.* pp. 309, 473). Great as in certain directions was the influence of Stoicism (esp. through Cicero, Seneca, and Boethius) on medieval thought, it is doubtful whether this interpretation of the Ideas affected the fortunes of the word before the Renaissance, when a general revolt against Aristotelianism brought into favour a word free from Aristotelian associations, which at the same time attention was drawn to the Stoic logic as the chief ancient rival of the Aristotelian. Thus the habit gradually eroded in using *idea* where the originally equally explicit *spécies*, *idea*, *forma* etc. (species intelligibilis, *sensibilis*) of Aristotle’s *de Anima*. We find Pietro Pomponazzi (1460-1529) passing from the Divine Ideas to the idea *qua est in mente nostra, quae est species* (de *Continentibus*, Basel, 1567, p. 36). Melanchthon identified *ideas* with the *actus intelligendi*, which is best described as the formation of an image (de *Anima*, Lyons, 1555, p. 187), and characteristically attempted to reconcile Plato and Aristotle by interpreting Plato’s Ideas as *imaginum* (*Érot. Dial.*), in *Corp. Reform. Halle, 1584-60, xiii. 233), or (in an exposition of the *Ethics*) as *commissae notions*. In the latter interpretation he was taken to task by J. C. Scaliger (de *Sublt.*, Frankfurt, 1576, vii. 4) on the ground that *notiones* are accidents, whereas Plato held the Ideas as *species* and *notiones* are defined by Godenius (in *Exercit. J. C. S. de Sublt.*, Marburg, 1599, p. 98), whose *Lexicon Philosophicum* (Frankfort, 1613), s.v. *idea*, is worth consulting.

The 16th cent. physician François Duquesnoy (de *Intellencis*, i. [Opera, Venice, 1574, p. 139 A, 139 A]) uses *idea* as equivalent to *universalis*, and the so-called Spagyric school of medical writers affected the word, from which their master Paracelsus formed a number of technical derivatives (see B. Castellio, *Lex. Med. Benov*, Nuremberg, 1682, pp. 705, 756). The Paracelsian terminology was the source of Jacob Boekhout’s, to whom the word ‘ideas’, when he heard it from Cranach and Warnica, ‘proved vastly agreeable’, suggesting to him ‘a beautiful, heavenly, chaste virgins’ such as is Sophia or Wisdom in his theosophical system (*Memoria of Life, etc.*, tr. F. Okeley, Northampton, 1717). In the 18th cent. we find ideas in both the *Mémoires de la Société des Arts* (1782, p. 3), which is being illustrated by examples from the *Mémoires de la Société des Arts* (1782, p. 3), which is being illustrated by examples from the *Mémoires de la Société des Arts*. The word *idea* as the source of Jacob Boekhout’s, by whom it is the source of Jacob Boekhout’s, ‘proved vastly agreeable’, suggesting to him ‘a beautiful, heavenly, chaste virgins’ such as is Sophia or Wisdom in his theosophical system (*Memoria of Life, etc.*, tr. F. Okeley, Northampton, 1717). The word *idea* as the source of Jacob Boekhout’s, by whom it is the source of Jacob Boekhout’s, ‘proved vastly agreeable’, suggesting to him ‘a beautiful, heavenly, chaste virgins’ such as is Sophia or Wisdom in his theosophical system (*Memoria of Life, etc.*, tr. F. Okeley, Northampton, 1717).

Outside the Schools the tendency at this period to give the word a wide extension of meaning may be illustrated from *Shakespeare*. Here the general sense of ‘pattern’ or ‘model’, ‘idea’ as the source of Jacob Boekhout’s, by whom it is the source of Jacob Boekhout’s, ‘proved vastly agreeable’, suggesting to him ‘a beautiful, heavenly, chaste virgins’ such as is Sophia or Wisdom in his theosophical system (*Memoria of Life, etc.*, tr. F. Okeley, Northampton, 1717). The word *idea* as the source of Jacob Boekhout’s, by whom it is the source of Jacob Boekhout’s, ‘proved vastly agreeable’, suggesting to him ‘a beautiful, heavenly, chaste virgins’ such as is Sophia or Wisdom in his theosophical system (*Memoria of Life, etc.*, tr. F. Okeley, Northampton, 1717).

4. In modern philosophy before Kant in the technical language of the *proposition of idea for species* served to some extent to conceal the fact that the difficulties of the old theory of ‘representative species’ passed unsolved into a later psychology (cf. Reid, ‘Human Mind’, ch. vii). In *Hume, Work*, ed. Hamilton, ii. 140; H. W. B. Joseph, in *Mind*, Oct. 1910). These difficulties are traceable to Aristotle’s statements in *de Anima*, ii. 12, 3, about the relation of the perception of the form of an object to the object without the matter, which easily lent themselves to a quasi-materialistic interpretation, and in any case tended to make the immediate object of perception and ultimately the sensation itself, an image or representation within the mind of the real thing without. This substitution becomes generally current through its adoption by Hobbes and Descartes. In his *Hib. Anima Humanae* (Paris, 1636), P. P. Buchan frequently uses *idea* as the equivalent of *species* for the immediate objects (objecta interna) of human consciousness. There is no evidence that he enjoyed personal intercourse with Descartes, but it is clear that he made the possibility; his *idea et liquida idea* (p. 339) reminds us of the Frenchman’s ‘clear and distinct’ perceptions. With Hobbes *idea* is synonymous with *phantasm* and signifies in the brain the impression of external bodies upon the organs of the senses. Such appearances, if they represent external bodies where they are not, are properly ‘ids’, ‘false ideas’. How the false idea or *idea* is to be distinguished from the true Hobbes leaves obscure; but it is clear that ‘idea’ and ‘id’ alike are something in the brain or mind. Thus we have different ‘ideas’ of the same thing in succession when what we first saw at a distance to be some material object we see on coming nearer to be a living thing, and on coming yet nearer to be a human being.

As an instruction controversy arose between Descartes and Hobbes over the use of the word ‘idea’. Descartes had spoken freely in his *Meditations on the Idea* of God; Hobbes objected that he had laid no such ‘idea’. He did not mean that there is nothing to suggest to us the existence of a God; but that we have no means of our minds a desire of a mind in God, that the idea of the admirable order of the world leads us to suppose exists. Descartes submitted and said that by ‘idea’ he meant the concept of ‘images of material things in the corporeal phantasy’, but always ‘anything of which the mind is directly aware’; that, when we perceive ourselves to be, e.g., that we have a body, we call the volition or the fear ‘idea’. He adds: ‘I have made use of this word scetticaly and philosphically’ (de *Intellencis*, 177). Descartes accustomed to it to signify the forms of the perceptions of the divine mind, although we do not suppose any phantasm (sensible imagination) in God. Thus the history of the word shows the difficulty of the word with the Divine thoughts recommended it to Des-

---

1 Bacon had already contrasted *hominis mentis idea* with *human mentalia* and philosophical ideas with *cerebrum Ocrium* (Nov. Op. i. 22, 124).
out of this very un-Platonic theory of ideas a more Platonic one is developed by Berkeley in the much later *Siris*. Among the *ideas* of Locke and Berkeley, *Hume* (1717–76) distinguished direct perceptions or sensations as *ideas*, while *ideas* are confined to reproductions of these, which are known as such by their inferior *liveliness*. This has become, on the whole, the tradition of later English philosophy. *Spencer-Peirce, Principles of Psychology*, London, 1872, pt. vii, ch. 16 [vol. ii, p. 434 f.]; cf. *Baldwin, DFM 1, s.v.* *'idea'*. *Hume*’s contemporary *Johnson*, who in his *Dictionary* defines *idea* as *'mental image*, branded (erroneously) as *'modern cant'*, the use of it for a notion or opinion of which there can be no such image (*Boswell, Life*, ed. Oxford, 1826, iii, 176).

5. In modern philosophy since Kant—This use of *idea* as primarily denoting a sensation reproduced in memory or imagination passed with the English empirical philosophy to which it belonged to the French free-thinkers of the 18th cent., among whom *Condillac* (1715–80) uses *idée* for sensation remembered and related to an external object, except in the case of a sensation of touch, where the sensation by itself is an *idée* because directly relating itself to an object (see *Encyclopédie* [1751–89], iii, 123). Not altogether dissimilar is the account of *'idea'* given by *Wolff* (1679–1754), in *Psych. Emp.*, Frankfort, 1732, § 46, as a mental representation in relation to the represented object. This use of *'idée'* was not confined to Germany. *Kant* (1724–1804) set himself ([Kritik der reinen Vernunft, Transl. Dial. i 1 [Werke, ed. Hartenstein, Leipzig, 1867, iii, 256 f.]) to restore the word from its derogatory connotation, in which it could be used for *'the representation of the colour red' to its original Platonic use of a *conception* transcending the possibilities of experience. Of such conceptions, which Reason inevitably forms, but which cannot be verified in experience, he recognized three: the soul, the world, and God. To *Kant*, that we necessarily think a thing to be so and not by any means implies that it is so (*Kritik der reinen Vernunft*, ed. Hamburg, 1787, ii, 229 ff.). For the use (or uses) made of the word by *Spinoza* (1632–77) the reader must be referred to Spinoza himself (see esp. *Eth. ii*, ch. 3, 4, prop. 48, 49, ch. 6, prop. 69, *Treatise on Religion*, *Ethics of Spinoza*, Oxford, 1901). As the spiritual or psychical correlate of an extended thing or body, a man's mind is described as the *'idea'* of his body.

*Locke* (1632–1704) and *Leibniz* (1664–1718) both make *idea* the immediate objects of the understanding in the widest sense (*Locke*, *Ess. i*, i, § 8; *Leibniz*, *Nouve. Ess. ii*, i, § 1 [ed. Erdmann, Berlin, 1849, p. 229]). *Locke* held, against *Descartes*, that they are never *'innate'*, but always derived from experience or from reflection upon experience. For *Leibniz* all ideas are innate; if distinct, they represent objects. Thus for both *Locke* and *Leibniz* they represent objects from which they are themselves distinct. With *Berkeley* (1685–1735) ideas, though conceived, after *Locke*, as the immediate objects of the understanding, do not represent objects beyond themselves. They are themselves the only objects; of everything, except spirits or minds (of which we are said to have no *'ideas'*, but *'notions'*, the case is percipi; thus the object of a *sens perception* is called an idea rather than a thing, because things are generally supposed to denote something existing without the mind; and also to include *spiri*s (see *Princ. of Human Knowledge*, i, § 39 [Werke, ed. Fraser, Oxford, 1871, i, 175]).
humanity. This Schopenhauer holds to be in agreement with Plato’s true meaning, while Kant’s three Ideas of the Reason have nothing in common with Plato’s except a transcendence of experience which they share with the nearest chimeras. The Idea, thus conceived, Schopenhauer holds to be the object which the fine arts aim at representing (it is to be observed that Kant recovers aesthetic Ideas of experience Kritik der Urth. i. §§ 17, 49, 51 [Werke, ed. Hartenstein, Leipzig, 1867, v. 233, 324, 338]). Such a view gives to art a higher rank in the scale of values than is assigned to it by Plato, who, although sometimes describing the apprehension of the Ideas in language suggestive of aesthetic contemplation, regards the productions of the artist as an imitation not of the Ideas, but only of the sensible copies thereof (Epic. x. 368).

Following Kant, who had taught that the Ideas, which were mere problems for the Speculative Reason, became postulates for the Practical, sufficient grounds for action though unvaried in experience—thus we can, and indeed are bound to, act as though free, yet a speculative proof of freedom is impossible—Herbert (1776–1841) speaks of objectified Ideas (Idee, Idealität, etc.) springing from judgments of value (Kurse Enzyk. der Phil. § 47 [Werke, Leipzig, 1852, ii. 79]). A similar usage is found in Wundt.

6. Ambiguity of the word ‘Idea.’—Some of the difficulties which have beset the word ‘Idea’ are merely verbal, and may be removed by careful definition. Such is that arising from the application of the word at once to eternal principles which encompass the universe and are discovered by the exercise of reason, and also to varying modes or states of a finite consciousness. Less easily kept apart are the sense of ‘mental image’ and that of ‘concept’. The latter is more readily derivable from the ambiguity which the word ‘idea’ inherited from the word species when, in the 17th cent., it took its place in the philosophical vocabulary. Used now for an activity of the mind and apprehending an object (cf. the phrase ‘I have no idea’ = ‘I do not know’), or the occasional use for ‘the faculty of apprehension’, as in the well-known line in Thomson’s Season, ‘heaven and earth, and spring’! (1720), now for the object immediately apprehended (even where, as in Berkeley, this is not treated as representative of anything beyond itself), it inevitably comes to suggest a tertium quid internal to the mind as compared with the external object it is supposed to represent, yet not the mental process or activity of apprehending, but its immediate object. The assumption of such a tertium quid is rendered plausible by the difficulties due to a comparison between the experiences which different individuals, or the same individual at different times, have of one and the same object. Even just seems to be done to all of these if each be considered as an apprehension of a different ‘idea’ of the same thing, which is itself in no case the same object of the experience. This may seem to be supported by the fact that we can seldom, if ever, think without imagery—a fact expressed by Aristotle in the saying, ἀφετέρου ρούτ τίνι δέν αὐθεντάρι, gen. § προτετ, an αὐθεντάρι a transcendent thing without an image—even when, as in the instance of a chillogian or of the Roman Empire, any image that may present itself is plainly not that of which the apprehension is the taking. In thinking, however, of a sensible thing not actually present to the senses, but remembered, it is easy to confuse the image with the object, to talk as though it were the object of our thought, as though it were what we remembered (and yet, as it is here in our imagination now, it is clearly not what represents, that we remember); and, lastly, as though, even in perceiving an object actually present to the senses, it were such an image, and not the object, that is before us. A fuller discussion of talking which, when used of others, comes naturally enough, because we do not share their perceptions, but picture to ourselves what we take them to be perceiving, forgetting that this is not what they perceive, but only a picture of it in our imagination.

The assumption of such a tertium quid between the apprehending mind and its object appears to be confirmed by the existence of hallucinations and of dreams, where what seems, as presented in consciousness, to be indistinguishable from a real object is afterwards judged not to have been such. This suggests that, just when a real object is present and when it is not, what we actually perceive is not this object, but a ‘mental image’, which may or may not be representative of a real original. But this assumption of the difficulty; it is so more easily understood how, on the hypothesis that our immediate object is always such an ‘idea’, we can become aware of all of an external object represented by some of them and not by others (cf. Berkeley, Prince of Human Knowledge, § 8), than how in any case we sometimes come to think we perceive external bodies when we do not. These disadvantages of a word as ‘idea’ (which are not removed by substituting, with J. Ward, ‘presentation’—a literal rendering of the Vorstellung of Herbart and Wundt) make it a hindrance rather than a help in discussing the nature of our experience prior to any such reflective discrimination between the respective shares of subject and object as must appear in any account which can be given of it. It is significant of the confusion of this word by English psychologists that W. McDougall avoids its use on the ground that most who have so named features distinguished in the stream of consciousness have tended to regard it as confusing, and Green’s Introduction to Psychology (Oxford, 1923) the word ‘idea’ and its scarcely less misleading synonym ‘syneymes do not occur at all.

C. C. J. WEBB.

IDEAL.—I. Use of the term.—The term ‘ideal’ is perhaps one of the most used in common use. In popular usage it signifies sometimes what is excellent of its kind, e.g., ‘we had ideal weather’; sometimes what would be perfect if it could be attained, but as a matter of fact is utterly unattainable, as when we speak of the ‘ideal’ State; sometimes what is regarded as unworthy of serious attention as being curiously fanciful and oblivious of the facts of the case. With the last two usages in mind, Hegel speaks of

the popular fancy that ideals are nothing but chimeras, and the very different fancy that ideals are something far too excellent to possess reality, or anything like it, which is to procure them for themselves (W. Wallace, Logic of Hegel, Oxford, 1882, p. 8). From philosophical language, too, there comes an ambiguity, for the adjective ‘ideal’ may correspond either to either of the two nouns, ‘idea’ and ‘ideal’; and in the former case, corresponding to ‘idea’, in the
sense in which the English psychological philosophers from Locke to Hume made the term current, 'ideal' is apt to be interpreted as in contradiction to what is actual. The 'ideal' and the 'real' are in some degree, and the distinction becomes an opposition, and the tendency is intensified to think of what is ideal in any sense as nonexistent and permanently so—something that is 'all in the air.' Furthermore, this notion of ideals derives strength from consideration of the ideals of the artist. His ideals, the types of beauty which he depicts, are commonly taken to be representations of a beauty which never and nowhere existed, nor can.

'The light that never was, on sea or land, 
The consecration, and the Poet's dream.'

(Wordsworth, "Pied a Terre").

Turning from popular usage to writers on psychology and ethics, one's impression that 'ideal' is a word of vague import is strengthened. Some have no use for the word at all. Some introduce it casually in the course of discussions without any explanation. Some use it as synonymous with 'end.' Some draw a careful distinction between ideal and end, and, having drawn it, seem to ignore it. Various questions as to the nature, character and characteristics of the ideal; few think it necessary to define the term or give a connected treatment of the topic. It is difficult to understand why 'ideal' should not be handled with something of the care which, e.g., 'motive,' 'intention,' and 'desire' receive.

2. Definition.—An ideal in general may be defined as a conception of what, if attained, would fully satisfy; of what is perfect of its kind, and, in consequence, is the pattern to be copied, and the standard by which actual achievement is to be judged. The ideal is the standard of value, and the standard of worth in so far as it embodies the ideal. (For a general discussion of ideals and their significance, see Epistemology, § 20 ff., in vol. v. p. 332 ff.)

The moral ideal is what we are now concerned with; and a moral ideal is a conception of what, if attained, would completely satisfy man as a moral being. It stands, as what ought to be, over against what is in character and conduct, and constitutes the standard by reference to which character and conduct are estimated. The ideal is not synonymous with the end. It is a product of constructive imagination in which the end is anticipated, and is conceived as one that can be attained, embodied, and expressed. Individuals who agree in their way of defining the end may differ widely enough in their ideals. The ideals of a hedonist, for instance, may be high or low. On the other hand, it seems quite erroneous to say, as has sometimes been said, that difference of conception of the ideal determines the difference between various schools of ethical speculation. For men who differ profoundly as moral philosophers do not necessarily differ widely as moral individuals. They may approve, condemn, seek after, and avoid the same things; their ideals, therefore, are not dissimilar. It will appear that difference of ideal—the kind of difference in view in the statement which we are considering—marks, not school from school of ethical theory, but stage from stage of moral progress.

3. The nature of ideals is part of man's nature. It is given with his power of retrospect, forecast, and choice. All men have an ideal of some kind, for all rational beings distinguish what is and what should be. The most elementary and only formally defined as a conception of man with his powers at the best, using them for the best. It cannot be concretely defined. For man is a developing being, and does not know what his powers at the best may be. And conceptions of 'for the best' may differ, and do differ. Further, a particular individual may find that, in constructing his ideal, the peculiarity of his circumstances requires that there is a conflict of some kind between 'at the best' and 'for the best.' It is a serious question for some, e.g., whether, in view of all their circumstances and obligations, they are justified in or not in taking a University course, or going into a certain career for which they are fitted, the result of which requires an expensive training which will mean hard sacrifice for others. Hence it is that 'ideals are relative to the lives that entertain them.' (W. James, "Talks to Teachers on Psychology," London, 1889, p. 292.) An ideal, however, is not conceived to be something purely or essentially individualistic. He who holds it is not impressed with the relativity of it, but with its universality. It is not something which he alone should seek after; it is what he conceives all should follow.

There is an infinite variety of ideals as held by different individuals. They may be low or high, good or evil, or simply not the right ideals for a person. They may be held for a short time or for a long time. They may be changed over time as one's beliefs and experiences change.
looses in colour but gains in clearness. It comes down from the skies to common earth. While it remains something singular, peculiarly our own, we lay more stress on its universal character. (On the contrast between the 'idealism' of youth and the 'realism' of mature years, see H. Lotze, Microeconomics, Eng. tr., R. Kightley, 1889, ii. 335 ff.)

4. Is the ideal realized?—To this question the answer is Yes and No. (a) On the one hand, we must hold that the ideal is attainable and is realized. An ideal which is absolutely and inherently unattainable cannot be an ideal; for, as we have said, the ideal is our conception of what should be, and, as Kant says, 'an ought implies a can.' If a thing cannot be, there is no sense in saying it should be. And, unless we are prepared to deny that men ever act rightly, or that there is such a thing as moral progress, we must hold that the ideal is realized. The moral ideal may be said to be realized every time we truly act. (J. S. Mackenzie, Manual of Ethics, p. 29.) We know, too, that multitudes find their ideal realized in some individual; their effort is to try to be like him. What would be the think of this is their standard of judgment? (b) On the other hand, most men are constrained to admit that the ideal is never attained by them. Strive as they like, it remains ahead of their accomplishment. The fact is that man is a defective being, and that moral progress means, not only that in achievement the individual is ever coming nearer an ideal, but that the ideal itself is progressing. Like character, the ideal is only relatively fixed and permanent. If, as we have said, the ideal gives coherence to the moral life, it must obviously have stability of a kind. But we have to think of a stability in progress—a moral triumph. As we progress in the moral life, the ideal unfolds and expands.

5. Change of ideal.—Apart, however, from the change of ideal which proceeds in every life gradually and imperceptibly, probably the majority are familiar with a change of another kind, when the cleavage between old and new is distinctly marked, and the change is not merely one of sharper contrast. There are times when one can say, 'The old things are passed away; behold, they are become new' (2 Co 5:17), when one feels oneself to be a new creature, a creature of a new world. This may come about under a manifold variety of circumstances in which little, if any, general rule may be discerned. It may happen that needs of our nature of which we had not previously been conscious should make themselves felt, so that what formerly satisfied is no longer adequate. Needs which were weak or suppressed may become relatively stronger. Or we may find that what we thought would satisfy proves unable to do so. It may happen that our call to, and assumption of, fresh responsibilities give a new vision of what life and character ought to be. We see that the old ways are unprofitable, that the old habits must be broken, and our whole scheme and view of life revised, as Henry Y. found when he assumed the dignity of kingship. A new bond of friendship or love may mean a similar new vision. The ideal may be, and often is, concomitant with a religious experience; 'if any man is in Christ, he is a new creature' (2 Co 5:17).

In some cases the phenomenon admits of explanation; in others, especially when religious elements enter, it is too recondite; obscure factors are involved which the individual himself can give no clear account of, and the case defies psychological analysis. We cannot explain our tastes, our likes and aversions; it is a cold-blooded sort of love if one can explain why he prefers one person before others. And of that change of ideal which means a revolution in the moral life, and comes, or seems to come, suddenly, an adequate explanation is seldom possible. 'The wind bloweth where it listeth, and thou hearest the sound thereof, but knowest not whence it cometh and whither it goeth; so is every one that is born of the Spirit' (Jn 3:8).

When a new vision of the ideal comes to us, it may affect us in a variety of ways. We may feel at once a peace and satisfaction like that of the merchant who has long been searching for the goodly pearl, and, having found it, sells all that he has and buys it; we may yield to intellectual and spiritual inspiration. More often, especially when we do not merely get a new conception of the ideal, but see the ideal realized or approximated in a new actual life or ideal, we may experience a sort of despair; we may feel overwhelmed with a sense of the contrast between what we are and what we now see we ought to be (on this topic generally, and the value of self-abasement, see French, The Other Side of Greatness, serm. 1). Or we may for a time be involved in a conflict of ideals, undecided as to how we can proceed. Sometimes we see more or less clearly which is the new 'better' is, sometimes we have nothing but a sense that what we used to regard as best is not good, and that a 'better' there must be, though we cannot yet say what it is. We have to grope our way, 'moving about in worlds not realized' (Wordsworth, Intimations of Immortality).

6. The teaching of ideals.—It may be said to be the duty of every moral being to unfold and develop an ideal to those who are morally undeveloped, or are searching for an ideal, and to propose something better to those who are plainly following a low ideal. In various aspects of this, it is the special task of preachers, teachers, and parents (see art. EDUCATION, MORAL, vol. v. p. 216 ff.). We may note some of the most important principles which must be kept in mind in this connection. Regarding the kind of ideal which should be commended for imitation, some remarks by L. T. Hobhouse are worth noting:

*It is just worth nothing, as we pass, that Ideals are interesting or valuable according as the element of construction or abstraction preponderates in it. Proves in which differences are left out, in which you try to get down to the pure, free from all incorporation of other shares in proportion as their delineation is successful. This kind of Idealism* "gives us the heroes and heroines who live to utter
moral platitudes, and spoil whole chapters of good writing. It
inspires the morality which tries to make all life a study of what
you ought not to do. The bare, generalized picture of the idealism, on the other
hand, is an artless satisfaction always in incompleteness, and finds
completeness only in the mind as well as character and the varied
life (The Theory of Knowledge, p. 111).

It is very important that the ideal exhibited
should be positive, and not negative. Otherwise a
boy will get the impression that a good man
does none of the things that an average boy
wants to do, and at any age one will conceive of
virtue as a negative thing, and goodness as essen-
tially some form of abstinence. Further, the aim must
be to make the ideal concrete, not abstract, to show
moral and blood examples, not merely to lay down
precepts, to point to lives or deeds in which the
ideal has been approximately embodied, to show
that, as actual occurrences prove, virtue is not in-
capable of attainment. (On this topic see S. M.
Bligh, The Direction of Desire.)

7. The unrealized ideal.—We have seen that
the ideal is unrealized and unrealizable in the
sense that it is a noble thing which constantly
keeps ahead of us in our moral progress. It ever
appears as 'a better beyond the best.' But, apart
from this, every one who is earnest in moral
endeavor must deny that the ideal is not realized in
another sense—in the sense, namely, that in his
conduct he comes short more or less, and usually
more rather than less, of what he purports to be
seeking at any moment, and the ideal as it is
then presented to us, and striven after, there
is often a wide gulf between what was to be and
what is. This may be due to our failure to
realize the ideal, or our failure to realize the
good ideal we would do not; or the evil that
we would not do (Ro 7:9). Or in ignorance we
may adopt a wrong means of realizing our ideal.
Or we may find that circumstances are in
consanguinity against us, and forbid the realization
of our purposes, that we are barricaded, thwarted,
hauling by the force majore of practical facts
which we cannot circumvent or remove. Besid-
es, we must take account of our general in-
ability to give adequate or appropriate expression
to the deepest things of the spirit. Take the case
of emotion. We can only stammer to the
peanut, or to an unresponsive or uninterested ear
indiscriminately, about our love. We search in vain for an
adequate mode of expressing contempt or hate.
In an excess of joy we are moved to
weep, and the expression we can give can
to heart-breaking disappointment or despair.
So with the ideal which in our highest moments
may be revealed to us. Unutterable thoughts,
expressible and attainable may come to us; we feel
we know, that they are the most valuable of our
possessions, though neither in word nor deed
can we fully reveal them. They are among the
trust riches of our nature though we cannot ex-
hibit them:

'Thoughts hardly to be packed
Into a narrow act,
Fancies that break through language and escape;
All I could never be,
All men ignored in me.'

(Browning, 'Rabbi Ben Ezra'.)

The familiar words of Kant respecting the good
will may be applied to the ideal:

'Which could desert it, which
Whole lack power to accomplish its purpose,
This, I was worth to God.'

'And you that love the truth,
As a jewel, it would lose its
In the abode of its own light, and
Of its own value.' (T. K. Abbott, Kant's Theory of
Ethics, London, 1830.)

A lover of paradox might well say that a man's
real worth depends on what he fails in.

'Thou didst well that it was in thine heart.' (2 Ch. 69)

The ideal in some cases is doubly ideal; it is
a conception not of what would but of what should
satisfy. The individual does not feel the needs
which it would meet, but in some sense he ac-
knowledges that he ought to feel them, or that
they ought to be felt generally, and that
the individuals of which they are immoral, or even
criminal, will hiss the villain of melodrama, and
applaud the triumph of long-suffering virtue.
One who makes no attempt to realize it in
his own conduct may be very exacting in de-
manding them of others, or very earnest in con-
mending them to others. Ideals which are not
realized in conduct may thus still be very useful
as a form of character; though ineffective to shape conduct,
they do have a share in making the individual
what he is. Further, ideals which he never seeks
to realize as a private inducement to his own
conduct, his public duty, his moral and social obligations.
We may regard such a man as we please, but we
cannot say that the ideals he never seeks to real-
ze are altogether valueless to his own development, and
for society. Conduct is at the best but an imperfect
expression and revelation of an individual's
deals, and, similarly, institutions and customs
are imperfect embodiments of the ideals, the moral,
and the moral standpoint of a community.

'That which gives life its keynote is not what
men think good, but what they think true.' True, this is not the part
of belief which is embodied in conduct; the real man
is able to know only what is visibly wrong; the best man does
not always make us aware that he is striving after what
is right. We do not see people growing into the resemblance
of what they admire; it is much if we can see them growing into
the likeness of that which they condemn.

But the dominant influence of life lies ever in the unrealized.
All that we discern is the negative aspect of a man's ideal, that ideal itself
lives by admiration which never clothes itself in word or deed.
In seeing what he avoids we judge only the least important part of his
standards. It is that which he never even attempts to
realize in his own person which makes him what he is. He
by the average secular man. To-day is a
Christendom has hallowed the precept to give the poor
to whom he asks the cost; it would be easier to argue
him for what most would regard as his virtuous acts
—his income is injurious than that it has been
impossible. Christianity has moulded character, where
we should vainly seek to discern
that it had indifferent conduct. Not the criminal code,
but the social perfection shows us what a nation
and he who cares on any act of daily the shadow of the second
best, so far as he is successful, does more to influence the moral
deals who succeeds in passing a new law? (The Moral
Ideal, p. 573.)

W. D. NIVEN.

IDEALISM.—i. The term.—'Idealism' is a
term of very varied application. As a state-
ment it may denote the whole of human
life which all utilitarian and endemistic considerations
are

operative to the objective ideals of
life, and in which the mind is the cen-
trity in the face of all determinism and material-
ism. This is the type of idealism the attainment and vindication of which find recognition in.

Carlyle's Sartor Resartus.
Again, the term may be applied generally to philosophical and religious systems, to views of the universe and poetic creations, in which the world is depicted as being dominated by spiritual ends of a moral, religious, or aesthetic character. An idealism of this kind is found in all the great national religions, in the most diverse philosophical systems, in the Commedia and Goethe’s Faust; its antithesis are sceptical relativism and hopeless pessimism. But these rather general applications of the word have no place in a scientific terminology, and have not much significance even in the inexact speech of everyday life, as everything turns upon the particular ethical, religious, or aesthetic sense in which the nature of the ideal and its authority over personality are conceived. As a technical term, idealism concerns us only as denoting a distinct type of metaphysical thought, and in that sense alone will it be dealt with here.

2. The fundamental position of idealism. In order to determine the philosophical import of the term ‘idealism,’ it will be necessary to fix the place which the corresponding theory occupies among the various fundamental philosophical positions; and as these positions may be combined in the several systems of philosophy, but they always remain separate and distinct as regards their starting-points. No single or solid property of subject can be ascribed to the metaphysical philosophical relaxation. On the contrary, the data of experience form from the outset the subject of various problems, the very variety of which renders any answer to a real one impossible. Thus we have, first of all, the question as to the ultimate reality given in experience; secondly, the question as to what the thinker expects to attain by a logical elaboration of the given; and, finally, the question regarding the attitude to be assumed to the facts of becoming and change, and therefore also to the existence of ends and values, in the data of experience. These three questions, even if the answers to them can be harmonized and combined, cannot, as has been said, be reduced to one another. To begin with the last: we note that from this question arises the systems of pantheists and the others. The two sides of the antithesis being exemplified by the Eleatics and Heraclitus respectively. In the second question, on the one hand, the systems which by logical elaboration of the given find a more specific and certain reality behind or above the manifold of experience—as, indeed, the basis and explanation of all other systems on this hand, and the systems which seek merely to explain psychologically the formation of the concepts actually applied in experience, and thus to regulative such application. These systems are respectively the dogmatic a priori theories of which Platonism is the type, and the empirical pragmatic theories represented by the Sophists. The first question, again, gives rise, on the one hand, to the systems which regard material reality as the primary element of experience, and find in it the explanation of consciousness; and, on the other, to the systems which begin with the individual consciousness, and pass thence to the idealistic reality as they are respected by the realistic systems represented by materialism and by a naturalistic pantheism of the Spinozistic type, and the idealistic systems framed by Descartes and Hume.

Now the place of ‘idealism’ among philosophical conceptions lies within the confines of the last of these antithesis. It denotes the metaphysical theories of the primary and most certain datum of experience, takes its stand upon consciousness and its contents. In its most uncompromising and self-consistent form idealism is solipsism, and finds its initial and most difficult problem in the question regarding the trans-subjective reality of knowledge, or the reality of the merely subjective element from elements which are super-subjective and universally valid. This problem, which had been touched upon by the Greek Sophists, Dante’s Divine Comedy, and the medieval Nominalists, became the real axi of Descartes and Malebranche, of Locke and Berkeley, and it is impressively expounded by Fichte in his Voraussetzungen des Menschen. This idealism is often called ‘Phenomenalism’—a designation which implies that consciousness and its content of phenomena must form the starting-point of all philosophical reflection, that the entire range of physical and psychical reality is given as a mere phenomena to a consciousness which carries the whole within itself. Whether the phenomena thus immanent in consciousness have correlatives of an objective character, and what such correlatives may be, are questions left entirely unanswered. Of late it has become common to speak of this view as ‘Immanence’—a etcifying that all reality is comprised in consciousness as sensation, perception, and idea. All these views are less than metaphysical idealism in the only technical sense that we can ascribe to the term. Hence, to put the matter shortly, idealism implies that the relation of subject to object is that of the essential starting-points of philosophy, and in its view of that relation it lays down the decisive principle that objects can exist only for a subject, and that the subjective realm within itself is the higher category, and as such must determine the process of philosophical thought.

3. Various developments of the idealistic principle. As thus understood, idealism is simply one of the essential starting-points of philosophical thought. But if it further development as a system it may assume a vast variety of forms. It really implies a method, not a school of opinions and beliefs with a definitely fixed result, or, at most, it involves such a result only in so far as it is opposed to materialism, according to which consciousness has its source in material reality, and arises from it in certain conditions, as was maintained by the ancient materialists and their successors, as well as by the naturalists and agnostics, who often refer to them; and, of course, it similarly opposes every kind of objectivism which would derive personal consciousness and its contents from some such supposed primordial datum as God, nature, the All, or cosmic law, as was done by Neo-Platonism and the ecclesiastical philosophy, by Spinoza and his modern followers. So far, it is true, idealism means something more than a mere method: it signifies a mode of thought whose subject-matter is fixed and defined from the standpoint of consciousness and the ego. Even so, however, the most varied lines of systematic development lie open to it.

a) Various attempts to reach trans-subjective reality from the idealistic standpoint. Thus we may, with Descartes and Malebranche, begin with the idea of God, as an other world than the experience of the objective world, and then from that position explain consciousness, or the ego. Or we may, with Locke, assert merely the probable existence of objective contents to the contents of consciousness, and upon that probability, whether subject-matter is fixed and defined from the standpoint of consciousness and the ego. With Berkeley, we may attribute our experience of phenomena, primary and most certain datum of experience, to the divine will, and thus attain to a theological theistic, or, with Hume, Comte, and the Pragmatists, we may hold the
relation of subject and object to be inexplicable and inscrutable, and so content ourselves with what can be based upon the laws of phenomena. Some, with Schelling and Hegel, derive from experience the identity of subject and object, and with their theory of consciousness a basis elucidate the being and evolution of all things. Others, again, with Leibniz, Herbert, and Lotze, derive from the facts of consciousness a pluralistic concept, be it corresponding these to y, while some, finally, with Schopenhauer, derive from the individual consciousness the theory that it subsists in the unconscious, from which subject and object severally arise, only to fall back again into the unconscious after their activity. This extraordinary variety in the systems evolved from the fundamental position of idealism. Some of these approximate to materialism, or else to objectivism; some do not pass beyond the subject; while some propound an objective reality corresponding to it. But in virtue of their common starting point they are all rigidly opposed to pure materialism or pure objectivism.

(b) Idealism combined with epistemological theories.—Further specialized forms of the idealistic theory present themselves, however, when this metaphysical starting-point is combined with concepts developed from the epistemological starting-point. Here we meet with the great main divisions of idealism related to the second source of philosophical reflection (as noted in § 2 above), viz., the rationalistic and a priori realistic idealism—a distinction which, as represented by the Greek Sophists and Sceptics on the one hand, and by Plato on the other, differentiates idealistic systems as between the present day.

1. Nominalistic idealism culminates in Berkeley's Phenomenalism, in Hume, in Pragmatism, in James's Voluntarism, and in the entire psychological school of modern times. It employs the a priori idealism, and affirms that not only the facts of mind but also the facts of nature are phenomena of consciousness. Here consciousness becomes simply the stage on which the facts of nature are exhibited; the movements and associations and dissociations which take place according to the laws of nature and the psychological laws of social life are the material of which our so-called knowledge—and, therefore, also our philosophy—is built. Here philosophy explains the genesis of the conceptual world as a process of moulding the contents of experience, of consciousness, and distinguishes itself from any trans-subjective world and those that pertain to the ego, and it ascribes to both groups of conceptions a power of continuous self-direction and of progressive self-adaptation to the ends of practical life. What these ends really are is a question that cannot be decided from the standpoint under consideration; it belongs to the ethico-theological series of problems (see (c) below). But, if we bring the modern doctrine of biological evolution within the epistemological circle of problems, then the theory of empirical idealism resolves itself into the doctrine of the continuous adjustments, invariances, and selections according to which the contents of consciousness group themselves conceptually with reference to the ideal ends realizing themselves therein. We have here, in fact, a psychological theory of the idealistic method and its pre-condition, but it entirely avoids the metaphysical endeavour to reach absolute reality, and abjures even from a metaphysical interpretation of its own starting-point. At the same time, however, it leads to the systems which it embraces an anti-materialistic bent that does justice to the mystery of existence and of spirit. The idea of the great mystery which Comte recognizes in his 'Idée de l'Humanité,' Spencer in his 'Unknown,' and Simmel in his hypothesis of a relativistic Pantheism unites with the idealistic starting-point.

ii. The idealism directed by an a priori and realist epistemology, i.e., Tionism in its various forms, proceeds in a directly opposite way. From the psychological data of consciousness and the psychologically explicable laws of association it distinguishes a specific inner capacity of forming conceptions. This capacity, derived from, anything else, but, on the contrary, is itself the necessary condition of all explanation and derivation. It is a spontaneous and creative faculty of spirit or reason, and is independent of the soul as such, of its contents and their interaction under the operation of psychological laws. This independence finds expression in the attributes 'a priori' and 'autonomous,' which imply that the faculty does not originate in experience, but that, on the other hand, experience is spiritually permeated and so rendered intelligible by it. Thus a priori idealism does not merely differentiate between the bare elements of phenomena and their associative combinations, but also distinguishes from the latter the conceptual faculty, which follows its own logical laws. As valid, self-consistent, and essentially knowledge results only from an elaboration of the data of consciousness in conformity with these laws, it is the conceptual faculty that transforms the chaos of mental phenomena into a reality systematized by means of concepts. True reality is generated only by a process of thought governed by autonomous a priori principles. Hence this type of idealism is also designated realism, and it is the role of the really real by means of concepts. Such an idealism, by reason of its epistemology, stands at the opposite pole from nominalist-empirical idealism. But in this very circumstance lies the peculiarity of the position, viz. (1) the dependence of all conceptual activity upon experience, and the observed variability of the views advanced—facts even in conflict with the authority and autonomy maintained by the theory; (2) the very idea of a reality which is attained by means of concepts—an idea which led Plato to hypostatize the concepts as absolute entities, and has led others to regard them as the Divine mind acts; (3) the question as to how far the entire manifold of consciousness can be rationalized by concepts, and whether the process does not leave a residue of elements that remain outside our philosophy; (4) the doubt which has re-asserted itself in fresh forms from Plato to Schelling and Schopenhauer; and, finally, (4) the difference between the purely theoretical concepts, on the one hand, and the practical ideals or values whose inherent a priori necessity coincided, in Plato's view, with the cognate necessity of theoretical knowledge, but whose genuinely practical and theoretically inexplicable character could not permanently remain unrecognized. Thus, while the subsuming of idealism under the a priori epistemology corresponds to a certain importance of knowledge and of the conception of truth—since, of course, every sceptical and relativistic theory must likewise find its warrant in autonomous and logical evidence—yet this idealism, in setting up a reality which is approximating to idealism, and which stands higher than the reality of immediate experience, involves all the difficulties of rationalism. The idealism which is interpreted on nominalistic-empirical principles, lies closer to mediocrity, and does more justice to the changes that occur in the separate sciences and their presuppositions, but precisely on that account it surrenders the autonomy of truth, and falls into scepticism and sophistic relativism.

(c) Idealism combined with teleological theories.—
Idealism assumes definite forms of yet another type, and encounters fresh problems, when it is brought into relation with the third main philosophical position (cf. § 2 above), i.e. that from which Hegel derived the anarchy of pluralism, monism, of change and immutability. In itself idealism is not exclusively bound up with either of the alternatives, but may take both directions. In its negative aspect it leads to the one as well as to the other. But, once it becomes involved in the two antitheses, it manifests a very different character in each.

i. Thus, when it proceeds from the individual consciousness, it encounters at the very outset the fact of a variety of consciousnesses. The joint action of these and the dialectic of their common discovery of the concepts are here held to be the necessary conditions of a kingdom of knowledge.

From this point, then, idealism becomes pluralistic; and, moreover, when the question is raised as to the possibility and probability of an extra-human consciousness, idealism must, on the higher plane, admit the existence of a plurality of intellectual realms, and, on the lower, must regard it as probable that the sub-human, and perhaps even the inorganic, world is endowed with a spiritual life. Where movement and reciprocal influence, consciousness—conceived as a subjective activity seeking to reduce its contents to clearness and order—contains also the impulse to strive and advance towards self-comprehension and organization. Then, as ethical and practical values are at length recognized in this striving and developing subjective principle, there arises the ideal of personality and of a kingdom of individual minds. This form of idealism finds typical representatives in Augustine, Nicolas Cusanus, and Leibniz. Further, this multitude of spirits must, of course, remain united in their common starting-point—in consciousness in general. But this in turn brings us naturally to an absolute relativism, as in Heraclitus; or to a pan-psychism, as in Averroes; or to that unreconciled opposition between the cosmic consciousness and finite personal spirits which is characteristic, above all, of European idealistic thought.

ii. At this point, however, we touch upon the other factor of the antithesis—that which presses towards monism and changelessness. The cosmological point of view confronts here with the casual finite consciousness at all, the latter being indeed simply its representative. The individual consciousness represents consciousness in general, inasmuch as it is a consciousness of the simplest metaphysical conditions. Here ‘being’ means being for a consciousness; esse est percipi. Then, as consciousness in its individual aspect cannot perform this function except on the absurd supposition of solipsism, and as, moreover, the individual consciousness has its genesis and its decay, its own ‘being’ can exist only for and in an absolute consciousness. In this way the individual person, like all else, becomes an element in the divine mind. Here then we find ourselves within the sphere of monism—the monism of consciousness.

If, however, we begin with the absolute consciousness, it is difficult to find a place for becoming and movement, as these can be predicted only of particular, finite, and relative things. Hence, either the absolute consciousness is completely determination, i.e. as a being who creates, inverts, and directs the movement of things, or else movement is altogether denied, and the finite consciousness becomes a more illusory abstraction, as the plural consciousness. With the surrender of plurality and movement, in fact, the ego and consciousness themselves disappear, and become the unconscious. From the mysticism of Brähmanism to Schopenhauer runs a quite intelligible line of development, which Western thought, under the influence of Christianity, has been able to avoid only by tracing the human personality in somatization, i.e. by stepping into the well-known antinomies in the idea of God.

We thus see that the bare adoption of metaphysical idealism does not lead to the one as well as to the other. But, once it becomes involved in the two antitheses, it manifests a very different character in each.

4. Transcendental idealism, which flows from the experience of consciousness, as from the source of the whole range of phenomena as the ideas of the penetrating power and the empirical-nominalistic idealism of Hume, as well as that of Berkeley—certainly no less empirical, but corrected and supplemented by a metaphysical theology. The characteristic of this idealism is its clearest expression in the distinction which Kant drew between his own views and the empirico-nominalistic idealism of Hume, and the dogmatic opposition between the metaphysical theology and the empirico-nominalistic idealism of Hume, as well as that of Berkeley—certainly no less empirical, but corrected and supplemented by a metaphysical theology. The characteristic of this idealism is its clearest expression in the distinction which Kant drew between his own views and the empirico-nominalistic idealism of Hume, as well as that of Berkeley—certainly no less empirical, but corrected and supplemented by a metaphysical theology. The characteristic of this idealism is its clearest expression in the distinction which Kant drew between his own views and the empirico-nominalistic idealism of Hume, as well as that of Berkeley—certainly no less empirical, but corrected and supplemented by a metaphysical theology.
victions by a practical postulate on the basis of the moral reason; and, finally, the reconciliation of the metaphysical postulate of moral freedom with the theoretical-natural law of an ordered totality of experience by the doctrine of the purely phenomenal character of the latter—these are the leading features of the Kantian idealism. It is, accordingly, a philosophical fabric sui generis, which, by its very nature, must come into existence at all until the several starting-points of philosophy had been adequately developed, and until, in particular, the idealistic principle had been fully wrought out. Still, it is, essentially idealism—idealism within the sphere of consciousness as embracing all experience, and in it the individual consciousness represents consciousness in general. But it does not sanction any advance beyond the idea of representation, or any reaching forth towards what is represented. The rational articulation and valuation of the contents of consciousness—that and that alone is its aim. How consciousness itself comes into being, how it is related to what transcends it, how the theory comes to embrace a plurality of consciousness and the possibility of their mutual intercourse—these are for it unanswerable questions. The metaphysical range of Kant's idealism does not, however, include the fundamental thesis of a system outside the limits of conscious experience.

The nature and deduction of the principles by means of which the contents of consciousness are reduced to order and valued need not concern us here. But it is necessary to point out that the Kantian system is also a form of personal idealism, i.e. that in its recognition of ethical ends and imperatives, and its corresponding conception of the All, it rests upon practical judgments and postulates which lie wholly outside its metaphysical idealism as such, and are admittedly drawn from interests of a non-logical character. Hence it is possible, by divesting the system of its practical aspect, to interpret it in a decidedly naturalistic way. In point of fact, however, Kant himself, by thus expanding his system, has burdened it with a dualism which brings in its train all the old antinomies and perplexities of philosophical thought.

Whatever significance is to be ascribed to the Kantian idealism, it at all events broke away from the practice—inherited from Greek philosophy—of all a priori theoretical and metaphysical with personal and ethical idealism, and of extending the consistency of the former to the latter. Theoretical procedure and practical procedure, logical and ethical, are in Kant's system, natural law and moral imperative, though both members of each pair have a common idealistic foundation, are rigorously differentiated by Kant. While necessity and validity are predicated of either side, yet they are not of the same type in both, and are in each case demonstrated on different grounds. The personal idealism of the ethical, religious, and aesthetic sphere must, accordingly, be clearly distinguished from the ethical idealism that ranks consciousness above all its phenomena, nor is it to be identified with the logical and theoretical articulation of these phenomena. Thus a fresh source of philosophical principles is required, not only in a philosophical, but in an ethical sense, whereas in the Kantian system the moral imperative adds to the logical, and logical, on the other hand, and a noumenal, intelligible, and personal, on the other, is obviously unsatisfactory, as human experience exhibits, and, for a true interpretation of demands, not expressed, even, by a special position, but the settlement, of the two aspects. This explains why Kant's subjective idealism of logically ordered experience and moral freedom soon fell back again into an objective idealism, i.e. a theory which derives reality from the absolute or divine consciousness.

5. German idealism. — The objective idealism evolved from the Kantian system is usually called 'German Idealism'—a term covering the movements which, in the first place, extended from Schopenhauer and Herbart, of the last of whom, again, such thinkers as Lotze, Fechner, and Windt, notwithstanding the independent character of their contributions, may be regarded as the legitimate successors. But this type of idealism has spread far beyond the confines of Germany. In France it is more or less independently represented by Cousin, Renouvier, and Maine de Biran; in Britain by Coleridge, T. H. Green, Hutchinson Stirling, the Cairds, and the Seths. It thus forms one of the outstanding phases of modern philosophy. It is impossible to deal here with the movement in detail. Suffice it to emphasize its most vital feature, viz., that in all cases its starting-point is the individual consciousness, and that, as this is treated as representing consciousness in general, it forms the bridge by which thought advances to the consciousness of the universal will—the internally organized process of the former, or the active movements of the latter, being then the source of the world of subjective consciousness, which, in turn, is the universal consciousness or universal will. Of the utmost importance in this connexion, accordingly, are the several interpretations of the idea of God which is disengaged by analysis from the subjective consciousness, as being, in fact, its necessary foundation and pre-condition. Thus we have theistic, pantheistic, or pessimistic interpretations, corresponding to the various leading conceptions of the subjective consciousness. This form of idealism, in reality, a revived Platonism or Neo-Platonism, except in so far as, on the lines of Descartes and Kant, the idealistic factor depends upon the principle of a philosophy of consciousness, and all laws and values are regarded as respectively but the processes and ends of the absolute consciousness which is deduced from that principle, whereas in the older systems their idealistic character rests, not upon any central element abstracted from consciousness, but upon the hypostatization of the general concept readily evolved from it. This expansion of the central idea of Kant—a position which was of set purpose narrowed by the judgment, nature, law, and moral imperative, and which all the antinomies and perplexities which in his conscious and studied agnosticism he had so ingeniously got rid of.

6. 19th cent. development. — The remarkable advances of physical science and the concrete study of sociological development which mark the 19th cent. brought about the collapse of this idealistic metaphysics in the grand style, and thus gave materialism once more pre-eminence. This is a counternutation of the law of physical and psychological phenomena; the mind has no creative power of its own, but has only a capacity of adaptation by means of which, in its differentiations and integrations...
tions, it may maintain and further the existence of human beings. To that existence itself no independent
spiritual content is ascribed; there is nothing which
embraces the occurring capacity for existence. Here the
mind is not derived from matter,—and so far an idealistic ele-
ment is retained,—but it is divested of all specific and
immanent content, it is elevated from the
surrounding world. Hence the relation
between subject and object, and thus also the
problem of idealism itself, together with all the
fundamental views which serve to determine its
degree, can now only be grounded and of
practical utility, be relegated to the sphere of
the unknowable. This positivism, it is true, was
challenged by a revival of the Kantian idealism—
in the form of Neo-Kantianism, in which, how-
ever, Kant's ethics, his doctrine of freedom, and
his philosophy of religion were for the most part
set aside. Strong opposition came also from the
nominalist-empirical idealism which, in the hands of
G. Simmel, produced a type of thought as
definitely idealistic as it was relativistic.

But the modern or German idealism, as a philos-
ophy based on consciousness, met with a very
serious and powerful criticism from the side of
modern psychology, with its experimental investiga-
tion of consciousness. This psychology
demolished the conception of the ego, the soul, and
the unity of consciousness, and thus made it
difficult to deal with and make use of the individual
consciousness as the representative of consciousness
in general. Still more effective were the investiga-
tions regarding the relation of supraliminal con-
sciousness to the subliminal or unconscious (or the
unconscious). Consciousness now became a mere
series of isolated movements associated by con-
tiguity—a mere fortuitous intensification of the
subconciousness. It is in the latter that the real
continuity of consciousness lies, and in it likewise
subsist the most important movements and forms,
of which only a few ever come into the light of
clear consciousness. This being so, supraliminal
consciousness cannot be regarded as the primordial
metaphysical datum, or as representative of the
universe, or of reality in general. It should be
remarked, however, that the subconsciouse, in
which Schopenhauer and E. W. Hartmann find the
principle of the cosmos, is itself no immediate
datum of thought—no ultimate reality of experi-
ence.

But, as a matter of fact, these psychological
theories of consciousness do not shift, and do not
subvert, the foundation of idealism. Even the
Kantian idealism—like the earlier Leibnizian
theory of petites perceptions—took as its basis an
unconscious or pre-conscious activity of reason,
and his entire system was based upon the develop-
ment of the occurrences due to that activity into the
consciousness of principles, and upon the self-
reflexion of reason which it rendered possible.
Hence we should probably distinguish between a
kritico-transcendental conception and the
psychological conception of consciousness. The
latter alone need be taken into account by the idealistic
psychology, and for that concept the distinction
between the psychologically subconscious and the
psychologically conscious fusion of subject and
object does not really matter; in fact, that fusion
and the preconception of the object over its con-
tents are thought of here as only relative, as more
or less complete. But, even if the foundation of
the philosophy of consciousness is thus maintained
and the same principle is therefore confronted with
new problems. Account must be
taken from the outset of the distinction between
the two grades of consciousness, and consciousness
in the ordinary sense must be regarded as in itself
inadequate, and as capable of being supplemented
by elements and ideas which emanate from the
subconscious. Above all, the higher concept,
which embraces both the consciously
subconsciousness, becomes something which lies
beyond the possibility of experience, and the true
conception of reality is detached from experience
and thought in quite different ways from Kant's
method in the doctrine of the antinomies. To
enable us to grasp that conception, in fact, we
must fall back upon an imaginative and poetic
intuition of the feeling of life and reality—a feeling
of the object of which cannot be known and is
experience or grounded in thought. Idealism thus
becomes intuitive, as in the most recent school,
viz. that of Bergson—a school whose influence is
steadily increasing—and the conclusions drawn
from that fundamental position confirm less and
less to the idea of a homogeneous and complete
system.

7. The significance of idealism for religion.

Having thus surveyed the development of the
idealistic conception of things, we are now in a
position to determine its significance for the veri-
ification and valuation of the constitutive ideas of
the Christian religion, however it must always bear in
mind that idealism is concerned with only one of the
fundamental problems of philosophy, and that, whatever its contributions
to religious thought may be, it does not thereby
solve the problems associated with the other main
starting-points of philosophical reflexion. Thus it
in no way furnishes a solution of the questions
arising from the antithesis of an empirical-relative
versus a rational-absolute theology, or from
that of pluralism versus monism, for these ques-
tions lie outside its range. Nor, again, does it
decide anything with reference to practical and
personal idealism, inasmuch as the question re-
garding the import of ideas and values is not solved
simply by ranking consciousness above all its con-
tents. What is of importance in personal idealism
is rather the question as to the practical ends
which we must recognize in the mind—ends that
always have a spontaneous character and are not
to be established by formal reasoning; here, in
point of fact, the decisive factor is the personal
individual will.

Still, even with due recognition of all these
reservations, idealism is of immense significance
for religion. It invalidates all materialism and
semi-materialism. It maintains that consciousness
cannot be derived from matter, but that matter
cannot be derived only for consciousness—
that its essence is perception. Nor does this imply that
matter is simply given in consciousness, for in that
case it would be of no consequence whether we
started from the one or from the other. But in the
fundamental relation between the two, according
to idealism, consciousness is the formative and
regulative principle—that which contains in itself
meaning and life, and is, therefore, pre-eminently
and intelligibly to itself. Idealism asserts the
mind's supremacy over the real. But the convic-
tion that mind cannot be explained by matter,
and that it is the formative principle of the real
a fundamental scientific postulate of religious life
and thought, and is recognized as such wherever
religious thought is consciously directed upon its
possibility and its rights. It is true that the
idealistic theory cannot in itself determine the
direction in which the mind's supremacy will assert
itself, or the ends and values which that supremacy
involves. Idealism regards the mind merely as a
formal principle, the materials of which are given
and the ends of which are revealed to the will in
the process of spiritual development. What par-
ticular ends the mind will choose are determined
IDENTITY

in part by the solutions of the other two groups of philosophical problems, and, above all, are drawn from the supreme convictions of the mind itself. No more than any other concept can identity itself develop into religion; it must ever be supplemented by independent elements of religious life, and from these receive a concrete determination. But in so far as mind and the spiritual idea are not to be reduced to the condition of religious belief, idealism is to that extent the utmost significance for religious life and thought.

IDENTITY. — x. General (logical Law of Identity).—Any discussion of the problems connected with Identity must necessarily begin by a definition of what is meant by Identity as a concept of pure logic, and what is the precise sense of the so-called Law of Identity. This is the more needful since Hegel at least presupposes the Law of Identity, and some of the most eminent of our modern philosophers, have, in consequence, been led to minimize the significance of the formula, though they have usually stopped short of actually denying it. There are several ways of defining sameness or identity as a notion in pure logic, but all of them are logically equivalent (on the meaning of 'equivalence' a few words will have to be said farther on). Thus, in a logica which, like that of Boole and Peano, is founded on the notions of class, of a member of a class, and the relations of inclusion in and exclusion from a class, we may conceivably begin by defining the identity of individuals, and proceed to extend the identity between classes as derivative; or we may first define the identity of class with class and then deduce an expression for individual identity. Taking the first course, we may say that if $x$ and $y$ are terms (i.e., determine individual objects of thought represented in language by singular names or denoting phrases), $x$ and $y$ are the same term when every assertion which is true of $x$ is also true of $y$, and every assertion which is false if made of $x$ is also false when made of $y$. Or, to put it in other language, if $x$ and $y$ are not to be the same, there must always be at least one assertion which is true of the one but false of the other. Now, this definition of identity will also hold good if $x$ and $y$ are not individuals but classes. For classes are identical only when they comprise precisely the same members, and in that case it is clear that whatever can be truly asserted of class $x$ and no else can, may be truly asserted of class $y$. But again, we may reach an equivalent result by first defining identity as a relation between classes; thus, the class $x$ is identical with the class $y$ when, and only when, for every member of $x$ is a member of $y$ and every member of $y$ a member of $x$. Bearing in mind that for every individual term there is at least one class of which the term in question is the only member (as, e.g., Thomas Hobbes' name of the class 'author of Leviathan,' 2 the only member of the class 'even prime number,' and so on), we get the result that,

if $x$ and $y$ are both classes of one member, the one member of $x$ is the same term as the one member of $y$. This obviously reduces to our previous formula for the identity of individuals. For, if $a$ is the same as $b$, and there is a proposition which is true of both $a$ and $b$ but not of $c$, such as 'the $x$ is $w$,' it must be true that ' $a$ is $w$,' but false that 'the $y$ is $w$,' contrary to our previous deduction from the condition of identity between the terms.

When we say of anything that it is 'the same' or is 'identical,' our statement is manifestly incomplete, and, as it stands, without significance, unless we say what it is the same as or identical with. It is thus a relation of some kind. Further, it is a symmetrical relation, i.e., it is its own converse, since, if $a$ is the same as $b$, $b$ is always the same as $a$. Also, the relation is transitive, i.e., it is always true that, if $a$ is the same as $b$ and $b$ the same as $c$, $a$ is the same as $c$. Again, identity, like self-love, self-support, suicide, is a self-relative, since everything is always 'the same as itself, or, to put it more technically, the same term which is antecedent, or first term, in the relation may always be present, or last term. It is this that is expressed in the abstract formula known as the Law of Identity, $a = a$ (for some remarks on the meaning of the symbol '=' see immediately below). It should be noted that the formula of itself does not state that the asserted identity excludes the co-existence of difference or variety, and that the attacks which have been directed against it on this ground thus arise from misapprehension of its precise purport.

Thus, if for $a$ we substitute 'the crosser of the Rubicon,' the formula in no way denies that the person who crossed the Rubicon is the same person who was killed by Brutus and Cassius; all that it denies is that the person who crossed the Rubicon can be identical with a person who never crossed the Rubicon, or who did not cross it in the circumstances described in the proposition. This consideration of itself largely invalidates the Hegelian attack on the principle. There is, however, a further peculiarity about the relation of identity which is not taken into account by the formula, but has now to be mentioned, and does afford more plausible grounds for raising metaphysical difficulties. Self-relatives in general are relations which may subsist between a term and itself but may also subsist between one term and another. Thus, a suicide is one who kills himself, but the relation of killer to killed may, and most often does, hold between distinct persons; a man may govern or love himself, but he may also love or govern other persons. But absolute self-sameness, or identity, can subsist only between a term and itself. If $a$ and $b$ are numerically distinct terms, then it is never absolutely true that $a$ and $b$ are identical—a point which is perhaps most clearly brought out when we consider such relations as those studied in pure mathematics, where, e.g., it is fundamental that a point or an integer is never identical with any point or integer which is not itself. And, as we shall see directly, the same consideration that a thing is never identical with anything but itself is really of no less moment in the study of human moral and mental nature.

Summing up, then, we may say that identity is a relation which is symmetrical, transitive, and self-relative, and that in its strictest logical sense it is the only relation which can exist only between a term and itself. We have now to mention the objections which have been urged against admitting the reality of such a relation. But per-
IDENTITY

haps it will be well first to say a word about one or two possible misapprehensions which arise from the ambiguity of the commonly adopted symbol = to denote relations.

It must be remembered that the symbols which represent relations and operations are, in the first instance, arbitrary. Such symbols as +, -, x, or = of themselves tell us nothing of the relations or operations for which they stand. The person who first introduces them is at liberty to put what sense he pleases upon them. He is only under obligation to make the symbol and its usage clear to those for whom it is intended to be used. It is perfectly clear and that the symbol = remains, so long as no other = in a given context, the same = as given in the first place. In the same way it is, so far as possible, clear that a certain relation or operation is denoted by the same symbol in one context as in another; i.e., it is clear that the symbol = is given the same precise sense every time it is used. This follows, further, that there is no objection to the employment of an already familiar symbol in an extended or otherwise new and novel context, provided two conditions are observed: the relation or operation for which the symbol is henceforth to stand must have certain formal logical characteristics in common with that for which it had been formerly used; the same symbol must not be used for relations and operations which have essentially different consequences.

Thus, in arithmetic, if the symbol = has first been defined for the domain of natural numbers and multiplication of one natural number by another has thus received an unambiguous sense, we have no right to use the same symbol = to denote an operation with rational fractions, or with 'abstract' or real numbers in general, without first fixing its sense by re-defining the symbol = for the new domain in which it is henceforth to be employed. It follows that, taken apart from its definition, a symbol of relation or operation is usually ambiguous, and some at least of the criticisms which have been passed on the formal expression of the Law of Identity in the stage of the acquisition of the symbol =. It has been said, in support of the view that the relation symbol in mathematics unless it relates two distinct terms that the whole point of such expressions as a = b + c, or (a-b) = c, would be destroyed if the sides of the equation were reduced to different elements. It must be replied that this is the first case, where we are dealing with a genuine 'equation.' the symbol = signifies logical identity (in other words, identity of magnitudes). The symbol = here stands for a number, as yet supposed to be unknown, but such that, when is added to itself, the result is equal to it. If we replace = by the only value which satisfies the equation, viz., 1, the statement becomes 1 = 1, which is a strict identity. Its meaning is that the self-same number which results from the operation of adding 7 to 3 is the number which results from adding 1 to x. The two operations are distinct; but, since each integer occurs only once in the series of natural numbers, the result of the operation is clear: no number than one of the two, (i.e., the result of the operation to which we are to speak. There is only one 10 in the whole universe of thought, and it is this unique object 10 about which we are making an assertion. If there could be two different numbers 10, one of which resulted from the addition of 1 to 9 and the other from the subtraction of 10 from 11, then arithmetic would be impossible. Thus, if we take 3 + 7 = 9 + 1 as a statement about the results of two different operations, we are asserting the identity of a term—10—with itself; if we take it, as we are also at liberty to do, as a statement about two operations of addition, the symbol = no longer signifies identity, but rather that the two operations (i.e., the operations of adding 1 to 9 and of adding 7 to 3) are not identical, but they yield a result which is identical. So in an algebraic formula, like a + b = b + a, which contains no variables, though it is often convenient to speak of the formula as an 'identity,' or to say that b and a are 'identically equal,' this is usually a phrase that is really stated is an equivalence. The meaning is not that the expression (b + a) by itself is the same as that of multiplying a by itself, b by itself, and 5, a, b by one another, and then adding the results, but that the two processes yield a final result which is the same.

It may still be urged that, at any rate when we make significant judgments of identity, there is always an assertion of difference included in our statement. For when we say 'the apple is the apple' of the view, hence criticized, that two terms are required for the relation of identity, see particularly Varisco, Conosci te Stesso, p. 147, note.) Thus, it may be said that, even in the 'identities' of which we have spoken, there is still our own admission of what we assert is that different operations determine one and the same result, and that, apart from the difference of the operations, it would not be possible to speak of identity of the results.

Who, for instance, would be the wiser for knowing that 10 = 16, or, to take Hegel's example, that 'a plant is a plant'? And yet it may even be urged, as by Bradley, that the so-called Law of Identity or the principle of judgment or proposition at all, since every significant proposition is a synthesis of different elements. Yet neither criticism seems to go to the root of the matter. It is not true to say that 10 = 10 (the symbol = being here taken as meaning 'is identical with') is an unmeaning or otiose assertion. For it means that the number 10 is unique in the series of natural numbers, e.g., in counting, when one has once passed 10 he will never come back to it; or, to use other words, that the series of integers is non-recurrent. If we do not usually think it necessary to mention this, it is for the simple reason, not because of its familiarity; in a logical study of the properties of number the peculiarity of the series of integers is an important one, and the proof of it a highly elaborate and complex affair. Hence it is not strictly true to say that, whenever we assert identity, we simultaneously assert or, at any rate, imply difference as well, though this is, no doubt, most commonly the case. And reductio will show that, where we assert 'identity in difference,' there is always an assertion of absolute self-sameness involved. Thus, if we say 'the wall-paper in Mr. X's study has exactly the same shade as that in Mr. Y's dining-room,' we do state, in fact, that the paper is on the same shades, but one. Or, if an actio-scope scene explains, 'That person is my long-lost son,' it is implied, of course, that the long-lost son has changed in many ways, but there is something of which absolute identity is asserted; he is numerically one and the same person. If personal identity were the fiction that Hume asserted it to be, such a statement as 'This is my long-lost son' would always be false. Hence, wherever a statement of identity in diversity is made, it will be found to include as part of its meaning an assertion of the form a = a. This is not to deny that physical things change or that organisms grow; it is merely to state that, unless the change or growth is a process within something permanently self-identical, the very statements 'This changes,' 'This grows,' cannot be true.

With respect to the statement that an expression of the form a = a, if it means what it says, is a genuine judgment, one may say that the matter is partly one of arbitrary definition. If, in Bradley's fashion, a judgment is defined in such a way as to make the presence of distinct terms part of the definition, then, of course, with such a definition, no affirmation in which there is only one term will be a judgment according to this definition. But this obvious consideration does not detract from the question whether there may not be true and significant statements which fall outside the limits of this definition. Thus 10 = 10, according to what has just been maintained, is significant and true, since it disposes of the conceivably possible view that the number-series may be recurrent; but it would not be a judgment according to Bradley's definition. And certainly the abstract schema of all such propositions, the formula a = a, cannot be an actual judgment, for the simple reason that a has here no determinate signification, but is merely a blank form standing equally well for any actual term, but not itself a term at all. And, where there is not even one term, there clearly can be no judgment. But this criticism has of itself no more direct bearing on the Law of Identity than upon any other pure logical schema of possible judgments, such as, e.g., 'All a's are a's.' As the present writer understands it, none of the so-called formal laws of thought claims to be more than a rule or formula according to which true propositions can be made, and in violation of which the whole system of propositions can be made. The real function of the Law of Identity is thus simply to assert that every object of thought has a definite character. Simi-
identity of the stockings is not preserved unless at least some part of the material has remained all through the processes of mending; but we have no fixed standard by which we can determine whether the material must be preserved, and thus the question admits of no determinate answer. What we may learn from it is that in any concrete case the question of identity cannot be answered unless the exact respect in which the identity is sought. It is possible to have, for instance, absolute identity of material constituent without identically of formal structure, or, again, complete identity of formal structure and whatever it may be, shall possess a definite and recognizable individuality. Since each of the three ‘laws’ is required to guarantee this result, it seems impossible either to deny the logical value of the Law of Identity, or, in Hegelian fashion, to maintain that an actual thing is only identical with itself because it is also different from itself, and vice versa. Indeed, we have seen that, in the case of such objects as the natural numbers, there seems to be a self-identity which excludes all differences whatsoever. To revert to our example, 9 + 1 = 10 = 8 + 7, there is undoubtedly a difference between 9 + 1 and 3 + 7, but it is a difference not in the result of the operations, the numbers 9 and 10, but in the number 9 which is obtained. What is identical here, the result, has no element of difference within it; and what is different, the two operations, is not identical, but merely equivalent. So, when we say that two different men, A and B, see the same sun, the whole situation exhibits identity in difference; but the identity belongs to one thing, the object seen, and is absolute down to the utmost particular; the difference to some other particular by which the perception of the object is effected in the case of A and of B respectively. So more generally, if it is said of A and B that they are ‘the same and not the same,’ meaning, e.g., that their formal structure is the same but their material different, it is clear that identity is asserted about one constituent element of A and B, and difference about quite other constituent elements. The common form of formal structure, e.g., in respect of which A and B are pronounced the same, is strictly and numerically one and the same with itself, and it is precisely this that is expressed in the affirmative part of the statement.

2. Application.—It is no part of the business of logic to formulate criteria of identity, or to say when any particular assertion of identity is correct. Still it may well fall within the logician’s province to utter some warning against one or two popular fallacies, which might, if unnoticed, present the recognition of identity where it exists. The chief of these prejudices is perhaps the invertebrate tendency to assume that identity, wherever it is asserted, means the presence of an identical material constituent or constituents in a complex. This, of course, need not be the case: the point of identity in a given case may lie entirely in the formal structure of the complex, as when a melody is said to be the same, though it has been transposed into a different key. Or we may mean to assert identity of formal structure together with identity of matter, but it is very uncertain whether the pair of stockings which had been darned so often that no part of the original silk remained were still the same or a new pair. The point is that, in a case like this, we must be careful to assert something more than the formal or structural identity of the pair of stockings; we feel that the identity of the stockings is not preserved unless at least some part of the material has remained all through the processes of mending; but we have no fixed standard by which we can determine whether the material must be preserved, and thus the question admits of no determinate answer. What we may learn from it is that in any concrete case the question of identity cannot be answered unless the exact respect in which the identity is sought. It is possible to have, for instance, absolute identity of material constituent without identically of formal structure, or, again, complete identity of formal structure and whatever it may be, shall possess a definite and recognizable individuality. Since each of the three ‘laws’ is required to guarantee this result, it seems impossible either to deny the logical value of the Law of Identity, or, in Hegelian fashion, to maintain that an actual thing is only identical with itself because it is also different from itself, and vice versa. Indeed, we have seen that, in the case of such objects as the natural numbers, there seems to be a self-identity which excludes all differences whatsoever. To revert to our example, 9 + 1 = 10 = 8 + 7, there is undoubtedly a difference between 9 + 1 and 3 + 7, but it is a difference not in the result of the operations, the numbers 9 and 10, but in the number 9 which is obtained. What is identical here, the result, has no element of difference within it; and what is different, the two operations, is not identical, but merely equivalent. So, when we say that two different men, A and B, see the same sun, the whole situation exhibits identity in difference; but the identity belongs to one thing, the object seen, and is absolute down to the utmost particular; the difference to some other particular by which the perception of the object is effected in the case of A and of B respectively. So more generally, if it is said of A and B that they are ‘the same and not the same,’ meaning, e.g., that their formal structure is the same but their material different, it is clear that identity is asserted about one constituent element of A and B, and difference about quite other constituent elements. The common form of formal structure, e.g., in respect of which A and B are pronounced the same, is strictly and numerically one and the same with itself, and it is precisely this that is expressed in the affirmative part of the statement.

2. Application.—It is no part of the business of logic to formulate criteria of identity, or to say when any particular assertion of identity is correct. Still it may well fall within the logician’s province to utter some warning against one or two popular fallacies, which might, if unnoticed, present the recognition of identity where it exists. The chief of these prejudices is perhaps the invertebrate tendency to assume that identity, wherever it is asserted, means the presence of an identical material constituent or constituents in a complex. This, of course, need not be the case: the point of identity in a given case may lie entirely in the formal structure of the complex, as when a melody is said to be the same, though it has been transposed into a different key. So more generally, if it is said of A and B that they are ‘the same and not the same,’ meaning, e.g., that their formal structure is the same but their material different, it is clear that identity is asserted about one constituent element of A and B, and difference about quite other constituent elements. The common form of formal structure, e.g., in respect of which A and B are pronounced the same, is strictly and numerically one and the same with itself, and it is precisely this that is expressed in the affirmative part of the statement.

2. Application.—It is no part of the business of logic to formulate criteria of identity, or to say when any particular assertion of identity is correct. Still it may well fall within the logician’s province to utter some warning against one or two popular fallacies, which might, if unnoticed, present the recognition of identity where it exists. The chief of these prejudices is perhaps the invertebrate tendency to assume that identity, wherever it is asserted, means the presence of an identical material constituent or constituents in a complex. This, of course, need not be the case: the point of identity in a given case may lie entirely in the formal structure of the complex, as when a melody is said to be the same, though it has been transposed into a different key. Or we may mean to assert identity of formal structure together with identity of matter, but it is very uncertain whether the pair of stockings which had been darned so often that no part of the original silk remained were still the same or a new pair. The point is that, in a case like this, we must be careful to assert something more than the formal or structural identity of the pair of stockings; we feel that the
always individual differences; no one oak is a mere replica of any other, and no mere general formula applicable to all oaks alike is an exhaustive statement of the living law of development or 'form' of this special oak). From this it follows that any concept presupposed in such a formal identity, it seems to follow at once that identity would be destroyed if there could be an instantaneous change of all the material constituents of the organism. Wherever there would be no sense in speaking of a structure in which all the material constituents were simultaneously replaced as a growth or development. It would be in the strictest sense a new creation. Finally, a word or two may be said about personal identity. Does it reside solely in the soul or mind, or does it involve identity of the physical organism? In actual practice, of course, life does not present us with cases in which personal identity is found apart from such an identity of the organism as has just been spoken of. But we can at least imagine such a possibility.

Suppose, for example, that the Pythagorean doctrines were true, and that the soul of a man could become associated with the body of a parrot. If it were possible for the supposed parrot to convince us that it retained the psychical character which we have already known as that of a friend, it is difficult to see how we could refuse to believe that we were dealing, not indeed with a bird, but with a human being. We should, e.g., be morally bound to treat the parrot, not as a mere parrot, but as having the same moral claims and rights as our friend. And we should accordingly regard the belief in personal immortality as capable of refutation by the mere consideration that there can be no identity of organism between an embodied and a disembodied spirit.

And, again, though many theologians would maintain that complete immortality involves a "resurrection of the body," it is hard to see in what sense of the term are we to understand that the 'glorified' body is the same organism as the 'corporeal' body. Personal identity would thus seem to be essentially psychical and, in its concept (whatever the full concrete facts may be), independent of bodily identity. Once more, as in the case of the organism, it is important to understand that personal identity is, primarily, identity of form. It does not require the permanent and unchanged persistence of any special material content, such as a group of sensations or thoughts or feelings, throughout the course of personal existence. It is not more required, in order that a man may be the same person at the present as at any time, than that some mental 'contents' should have persisted unchanged, during the twenty years, than the same-ness of his body requires that some of its particles should still be the same as twenty years ago.

What is required is the preservation of the continuity of changes in mental and moral character should be linked together as a continuous development according to a law of growth which in its concrete fullness is characteristic of the person in question and of no other being in the universe. A man's present experience is his experience, because it fits on to his past experiences as it does not fit on to any other series of individual experiences. It is thus an abuse of language, which may easily lead to the gravest confusion of thought, to speak of personal identity as involving anything in the nature of an unchanging psychical 'substratum.'

The doctrine which attempts to express the difficulties raised by Hume about personal identity, his difficulty is real only if we assume that personal identity means the permanent persistence of some internal mental 'contents' in a well-defined group of states. If this is conceded, it is, of course, easy to show that we have no evidence for the existence of any such permanent 'impressions' or 'ideas.' Even Bradley's suggestion that the 'grounding' core of consciousness is something in which it is very hard to believe. The difficulty vanishes when it is seen that personal identity is primarily identity of form, not of content or matter. The same mistaken demand for identity of content as a basis of personal identity seems to lie at the bottom of the contemporary tendency to exalt the "subliminal" self into all psychological difficulties. It is, of course, a fact capable of establishment by careful observation, even if it were not already presupposed in the conception of the mind as a thing that grows and changes, that mental 'states' do not arise and vanish instantaneously; they have a period of 'marginal' existence which may exist both before and after their occupation of the 'centre' of attentional consciousness. But the doctrine of the 'subliminal' self extends this conception of the 'margin' surrounding the 'focus' of consciousness beyond the limits within which its validity can be submitted to experimental tests. The 'subliminal' is thought of as a region in which mental contents of all kinds still persist as actual, though unconscious, when they have disappeared from even the 'margin' of consciousness, and from which they can be brought again in the processes of recall. As a symbol for the truth that the actual condition of consciousness may be largely determined by experiences which are no longer present to consciousness, there is no difficulty of any kind. But when the attempt is made to regard the symbol as an explanation—for instance, to explain recollection by the supposed persistence of a percept or idea 'below the threshold,' or to convert a mental tendency into an actual conjunction of 'subliminal' states—and, most of all, when personal identity is supposed to rest upon such an actually existing body of 'subliminal' mental contents, it should be clear that any attempt to deal with the Humean fallacy in a new dress. An identity which is really one of form and law is being illegitimately converted into one of material constituents. If we are right in holding that personal identity requires no notion of an unchanging 'substrate,' the theories which may be formed of the character of the supposed 'subliminal' self will have no bearing upon the problem of identity. In fact, the very problem to be solved, in what the identity of a person consists, obviously breaks out again when we ask what is meant by the unity and self-identity of the supposed 'subliminal' personality itself.

Without introducing any reference to the 'subliminal,' we may simply state the facts of which it appears to give a mythological account thus. Since personal identity would appear to depend on the unique linking up of past with present mental states in virtue of the law of mental development, it seems to involve as a consequence at least the possibility of a recall in memory of whatever experiences have belonged to a self. That we in all probability forget most of our experiences so completely that they are never recalled, at least in the life that we know, is no objection to such a view. For it may well be that they are not recalled simply because further experience does not provide us with the appropriate cues. From abnormal cases, such as those of persons who have survived the very near approach of death and have recorded their experiences, it would seem unsafe to extend any experience that it has certainly passed beyond all possibility of recollection. On the other hand, it is hard to see how the kind of continuity in mental development which is implied in this meaning in speaking of certain past experiences as mine, and not those of another person, could be preserved if all possibility of their actual recovery were precluded. If the experiences would not be 'linked up' with any personality at all, and, if they could be supposed to exist, would seem to have become ownerless. But an owner.
IDENTITY (Buddhist).

IDENTITY (Buddhist).—I. We find the notion of identity principally in material objects which preserve the same aspect for a long time, and which may be moved in space without change of form. The Buddhists have carried the doctrine of non-identity so far that they have come to deny movement. According to them, when a body seems to move, it is really being continually renewed, and is, so to speak, reborn of itself—reborn each moment in a different spot. Such is the opinion of the orthodox (Skt. Abhidharmaka). The Vaisāpastriyas, who are heretics, believe that a gesture is a movement, whereas, according to the orthodox opinion, gesture is but a new disposition of a body, which is the same as it was before. Yet, like all Buddhists, the Vaisāpastriyas admit begetting their faith on Scripture and experience—that a flame is always being renewed, and that it never reaches the same moment identical with itself. The flame of the last and third watch of the night is the continuation of the flame in the first watch; these two flames form a series (suntati); the first is the cause (hetu) of the second, for they have both the same aspect; the wick and the flame are not causes, but only coefficients (pratyayanī). This series may be developed in space while it lasts: when there is a prairie fire, the flame of the

Northern extremity of the prairie stands in the same relation to the flame of the Southern extremity as the bird arriving in the South to the bird which has come from the North. But we may follow the problem still more closely. It may quite well be the case that flame, sound, and thought are essentially 'momentary,' 'persisting from moment to moment,' and yet that certain objects and the events constituting all objects remain identical. Certain things remain in existence as long as there is no cause to destroy them.

If things (sunnatayatā) are momentary, then they perish of themselves, without any cause. It is denied that the flame dies because it is blown out, or that sound dies because a hand is laid on the bell. The cause which is in opposition to the existence of the flame does not destroy the flame; for how can we destroy what exists, or how can we destroy what does not exist? This prevents the new flame from springing up to replace the present one, it interrupts the series of the flame by paralyzing the forces which made it last. From all existence, it is the same with wood.

Are we to think that wood perishes by contact with flame? Yes, for we no longer see wood, because the condition of the new flame is reasoning is worth the evidence of our senses. No. It is a matter of reasoning: for even if we no longer see the wood, that may be the outcome of the first flame. What it has ceased to be, it has ceased to be something new. The non-existence of the wood, which you see, is caused by the fire, and is not due to the new flame; the wood and the fire do not coexist. They are two distinct entities, and fire and wood cannot be caused to be the same thing.

If things perish without cause, from their very nature—as objects thrown into the air fall—they must perish in the very moment of birth, and they cannot exist beyond the moment in which they actually receive being; they perish in the spot where they are born, and they cannot pass from one place to another.

If destruction, being without cause, does not take place at the very birth of the thing, it will not take place later, for the very thing remains what it is. But, one may say, the thing changes into ripe fruit, it grows elder. What grows older and what changes is a series, for the notion of change is by its very nature contradictory: 'That the same thing should become other than it is, is absurd; that the thing should remain the same, and its characters become different, is still more absurd.'

There is much discussion over the example of water which disappears by evaporation. The fire prevents the atoms of water, which disappear every moment, from procuring new atoms. Thus the mass of water is reduced more and more, until it entirely disappears, and finally does not exist in its series, or in its being.

2. The point of view of the Digambara school (6th cent.) is too well known to require more than brief mention here. By existence is meant the capacity for producing an effect (arthakriya-kriya). Now, a permanent thing is inactive. Does it possess, at the very moment when it is accomplishing its present act, the power to accomplish its past and future acts? If so, then it will certainly accomplish them at once, for it is not usual for anything capable of an act should postpone it. If the old school believes that things are eternal, 'fragile'; but it does not say that they are all Arjuna, momentary, 'instantaneous.' Buddha says: 'It is evident that this body lasts one year; . . . a hundred years, or even more. But that which is called mind, intellect, consciousness, keeps up an incessant round by daily production, and is as one thing and springing up as another' (Samyutta, II, 99).

Sunnatayatā—what is composed, composed. The sanskrit alone is not a name.

not, it will never accomplish them, just as a stone, which is at the present moment incapable of producing a bud, will never produce one. It may be said that the permanent thing produces such and such an effect by reason of the co-operation of additional factors. If these factors remain ex-
tended, it is they that are active. If they give some new capacity to the permanent thing, then our point is proved: the primitive being, who had this capacity, has perished; a new being has been born who possesses this capacity. It is very difficult to attribute to a non-mortal thing, to a thing which is permanent and identical with itself, a successive activity. That which produces no effect—space or time—is not a thing, since it is incapable of action or reaction, and incapable of being caused.

3. If we consider in a series (samsatā) two moments which are very close, the one 'cause' and the other 'effect', we shall have no difficulty in understanding ourselves that they are neither identical nor different. The philosophy of Nagāra-
juana (1st cent. A.D. [1]), arguing from the fact that the cause has no effects, that the relations of cause and effect are 'inexpressible', grants the primacy in fact of the relative character of the idea of causality; there is, in absolute truth, no cause and effect. A more moderate or less critic-
ical philosophy admits a certain identity in the series. Every atom of water, according to it, is finiteness; every atom of fire, heat.

With regard to the most interesting of all series, the mental or intellectual series which constitutes our pseudo-individuality, our substantial and permanent personality, the Mēlindaṇājī remarks that the murderer deserves to be punished, although he is, at the time of punishment, no longer the same being who committed the crime; just as the married woman belongs to the man to whom she has been promised as a little girl. Thus the series which constitutes our soul is divided into an infinite number of existences (nākṣatras, jām-
man), each one of which is prepared to make retribution for a certain lot of actions (see act),

DEATH AND DISPOSAL OF THE DEAD (Buddhist).

In each of these existences the soul really remains identical with itself: its acts, with the exception of the external acts, will not be required till a future existence. There is no reason for surprise over the fact that it makes retribution (siṃha), for its past acts, or that it is disposed either to good or to evil by reason of the 'having' (nāgara) of its past acts, although there is nothing per-
manent in itself. It is a parallel with the flower which receives the counter-flower from the sub-
stances on which the seed has fallen.

The Saṃhatikas believe that acts bring about a certain modification in the series, i.e. in the soul—a spiritual modification, if we may call it so, from which retribution springs. The school of Abhidharma believes that the act creates a subtle sensitivity (nayavāpa), which develops in an uninter-
rupted series, forming part of the series of the human beings, just as the series of thoughts or the series of grown elements does. So the past is perpetuated in the future; and the being, although developing, yet remains to a certain extent similar to itself.

1. H. Taine: De l'Existence, Paris, 1879, p. 9; "There is nothing real in the ego, except the train of his events."

2. Mēlinda, ii, i, ed. V. Trinchieri, Lond., and Edinburgh, 1880, p. 244. Davids: "Questions of King Milinda, in SEB. xv. (1905) 63: 'The king said: 'He who is born, Nagasena, does he remain the same? Is the son his own? of the same source? Of the same body? Give me an illustration.' 'Now what do you think, O king? You were once a baby, a tender thing, a little thing. In that state you used to ask things to be taken back. Was that the same state as you are now growing up? No. That child was one, I am another. "If you are father also, neither father nor mother, neither teacher."

IDleness.—The essential idea of the word 'idle' seems to be empty or unoccupied. This idea may be applied vaguely to what is called an innumerable, trivial, useless, fruitless. More definitely it may refer to time that is not filled with occupations. In English the latter is the more prominent meaning; in the German eitel, the former. Probably the German meaning refers to the original meaning of the word, and the prominent English meaning is derivative; but it is this meaning that gives definite import to idleness as descriptive of a condition in the moral life of men.

In this sense idleness presents an aspect that is not necessarily unfavourable, but is at times even favourable, to morality and happiness. It offers an agreeable relief from the incessant and occasional attendant on nearly all the occupations of life. This does not mean that W. Morris speaks of himself in The Earthly Paradise as 'the idle singer of an empty day,' and that Johnson named one of his well-known series of papers The Idle. But its higher popular idleness is commonly denoted by 'leisure'; it means such relief from the occupations that are necessary for physical existence as leaves time and energy for the higher interests of life. In a practical shape this idea of idleness has found embodiment in the holidays or festivals of all races. Of those the highest type is the Hebrew Sabbath. But the Greek mind embodied the idea of the Sabbath in its own way. The name for an institution designed to cultivate the higher life—

the name from which our 'school' is derived—is the common Greek word for 'leisure,' xólas. In his blunter fashion the Roman called a school ludus, 'play' or 'sport.' Both of the great races of the ancient pagan world thus saw, like the Hebrews, that the culture of a higher life becomes possible only when men have secured a certain relaxation from the serious labour for physical existence—such relaxation as appears comparatively like playful exercise. As Gray puts it, life must 'leave us leisure to be good' (Hymn to Adver-
sity, 89).

But this is not the most prominent feature in the moral aspect of idleness. The truth is that in this higher aspect idleness is conceived as idleness only in a relative sense of the term. The idle man enjoys relief from one class of occupations only that he may be free to occupy himself with others.

1. How various his employments when he is not so busy!—so busy?

2. What a busy world an idle one! (Cowper, Task, III. 262-264).

Accordingly idleness, as such, is never viewed by the moralist in a favourable light. Even Thomas, though the praise of industry in his second canto is a very palpable failure to neutralize the drowsy spell of the first, has yet to describe idleness as 'a most enchanting wizard, ... than whom a secret more full is nowhere found!' (canto i. 2). The ethical literature of the world is therefore full of warnings against the evils to which moral character is exposed by a life of idleness. The moral character of the moral life, that of personal character and that of social relations.

1. Personal character is injured in various ways by an idle life.—(1) Even if morality be interpreted in the spirit of a moral code, the following of no worth or aim beyond personal pleasure, it is clear that this aim itself is defeated by idleness. What-
ever theory of pleasure and pain may be adopted, it is self-evident that they are but emotional products of the activities that make up life. Pleasure, therefore, can be obtained only by a sufficient degree of occupation to counteract the fatigue of work. If the interest of life is not sustained by adequate employment, there is apt to grow up an emotional desire for life-lessness—sloth or idleness—which may become so intolerable as to drive its victim, if not to suicide, at least into some escape from idleness by means of laborious sports or feverish excitements like gambling.

(2) But not only is activity necessary to enjoyment; it is necessary also to maintain our energies in vigour. Bodily organs become atrophied from lack of exercise, and all the powers of life become encrusted if not constantly employed. Consequently a general featability of character is the inevitable result of idleness.

(3) Probably, however, the malign aspect of idleness, which is mainly emphasized by the moralists, is that it leads to the unoccupied mind open to any seductive influences of evil. We have seen that sheer idleness becomes intolerable by eliminating all interest from life, leaving nothing to strive for, and so worth living for in some direction becomes irresistible; and, if it is not found in useful occupations, it will be sought in occupations that are frivolous, if not positively pernicious. This is such an obvious teaching of common experience that it has found expression in many a familiar proverb, as well as in the homely lessons of popular moral and religious literature.

The larger aspect of idleness, as of ethical problems in general, is that which bears upon social relations. By its very nature idleness connects itself with the economics of society, and it draws its significance for social morality from a familiar commonplace of economical science with regard to the production of wealth. All those commodities—the necessaries and comforts and luxuries of life—which constitute wealth are producible only by labour expended on raw material furnished by nature. Every human being, therefore, who lives in unproductive idleness, who is merely a consumer without being a producer of wealth, requires others to work and to suffer in his subsistence. But this also for himself. This fact forms the foundation of that sturdy moral sentiment to which St. Paul gives expression, that, if a man will not work, he has no right to the means of subsistence (2 Th 3:9). This principle is a peculiar feature in the moral ideal of the Hebrews. They stand almost alone among the nations of the ancient world in their appreciation of the moral value of industrial labour. On this subject there is nothing in all literature more noble than the utterances of some of their Rabbis (some are quoted in E. Deutsch's essay on the Talmud, published in the volume of his Literary Remains, London, 1874, p. 9).

The sentiment with regard to industrial labour took a very different course. The ideal of uncivilized tribes is well known. It is often illustrated by Herodotus's description of the savage life, which is accounted to be the most honourable thing, and to be a tiller of the ground the most dishonourable. To live by war and plunder is of all things the most glorious.' This ideal was undeniably confirmed by slavery. The institution of slavery is generally regarded as indicating an advance upon a more savage practice, by which captives in war are ruthlessly slaughtered, if not eaten, to gratify hunger, or revenge, or some horrid superstition. Instead of this, captives came to be adopted by their victors, and forced to undertake those peaceful, steady labours which are out of harmony with the bodily and mental habits of a warlike race. The result was that such labours came to be viewed as appropriate occupations only for persons of an inferior rank in society. As slavery was universal in all the later and higher civilizations, the prejudice against industrial labour became deeply engrained in the moral sentiment of the ruling classes everywhere. Cf. M. H. Lescot, 'Rationalism', London, 1877, ch. vi. ad init.; see also his Hist. of European Morals, 2nd ed. 1869, i. 277; the fullest exposition of the varied influence of slavery upon the free classes will be found in H. Wallon, Hist. de la salavage dans l'antiquité, Paris, 1876, especially bk. ii. ch. xii., and bk. i. ch. ix.

The great pagan races of the ancient world, in general regarded most forms of industrial labour as incompatible with the highest morality, and more particularly with the moral character of a free citizen. It is not indeed to be understood that the great States encouraged idleness, and in some the law required every citizen to show that he had some honest means of living, and failure to do so was punishable by death (Herod. ii. 177). According to Herodotus, this law was imposed upon Athens by Solon; but, according to Polybius (Hist. of Greece, London, 1846–56, ch. xi.) rightly judges this to be improbable, it may be taken as implying that the great reformer did provide some measure to protect the State against idle vagrants. Herodotus, however, himself indicates the sweeping qualifications by which such condemnations of idleness are to be interpreted. For he takes care to inform us that, among the nations with whom his researches had made him acquainted, barbarian as well as Greek, the prejudice against trades (travas) was almost universal, those persons being held in highest rank (perasati) who kept themselves aloof from such occupations, and especially those who devoted themselves entirely to war (ii. 166, 167). The truth is that the ancient States were in their whole sentiment military, not industrial, societies. The strength of their prejudice against trade, as Herodotus observes (loc. cit.), went at times so far as to prohibit their citizens from engaging in trade; i.e. tradesmen were not allowed the full rank and rights of freemen. This remarkable prohibition is taken by Montesquieu (Cours de loi, Genève, 1748, iv. 7) to illustrate the prevalent conviction of ancient legislators, that the trading spirit is incompatible with the moral character necessary for civil freedom. It was for this reason that philosophers sometimes justified the institution of slavery as being the only means by which industrial labour could be carried on in a free State. It is, moreover, significant that the moral treatises of ancient paganism, being designed to exculpate the moral life of freemen, not only ignore the industrial virtues, but, when they do touch upon trade, are in general opposed to the recognition of it as a legitimate sphere of life for the common man. The only great teacher among the Greeks who had surmounted this prejudice was Socrates (Xenophon, Memorab. i. 2, ii. 7, 8, iii. 9); and his wholesome teaching on the subject throws a light, which has been accounted to be the most honourable thing, and to be a tiller of the ground the most dishonourable. To live by war and plunder is of all things the most glorious. This ideal was undeniably confirmed by slavery.
While holding that the best democracy is that of an agricultural country, and that of a pastoral, he declares democratic government by a town population to be far inferior, because 'there is no room for moral excellence in any of their employments, whether they be mechanics, or traders, or labourers' (Pol. ii. 69). The fact that the ascendency of Greek philosophy carry the same sentiment to an extreme. Two extraordinary illustrations are furnished in Plutarch's Pericles and Lucian's Domitian of the decline of the arts of sculpture, even in the hands of Phidias and Praxiteles, as merely a manual occupation. In each employment, says Plutarch, op. cit., ad init., 'though we are charmed with the work, we often despise the workman, as we are pleased with perfumes and purple, while dyers and perfumers appear to us in the light of mean mechanics.' It thus appears that the prejudice against manual labour continued down to the beginning of the Roman Empire. Cicero, in fact, during the last days of the Republic, had struck the keynote of Roman sentiment on the subject. After dismissing need of the kind of industry, except agriculture, as 'sordid,' he turns to commerce; and he utters the length he is willing to go is a grudging admission that, if it is conducted on a large scale — if it is 'magnum et copioso, multos undeque apportant, multumque sine vanitate, non sine imparitate' — then it is not to be severely condemned 'non est admodum vituperanda' (de Offic. ii. 42 (151)). Such a state of sentiment accounts for the vast number of Roman citizens who were content to live the parasitical life of clients, or even to accept a daily dole of bread from the Government rather than take up any industrial occupation. Even the learned professional, alike in the law, suffered from the same degradation from the same cause, and were left to men of lower rank, mostly slaves or freedmen (Cicero, loc. cit.). Apparently it was this cause also that prevented a freeman or any of his family from cultivating music professionally. In this connection Aristotle's discussion on the place of music in education is curious. While recommending that the young should be trained in music, he insists that the practice of it should be abandoned in mature years, and must never be undertaken for gain. 'Professional performers,' he says, 'we call vulgar (basarenum), and no freeman would play or sing unless for exercise or making fun' (Polities, viii. 5). It is evidently owing to the same sentiment that Juvenal is shocked at a man of consular rank driving his own chariot. The satirist finds in the incident a proof of the degrading innovations that were invading society, and he cannot palliate the degradation even on the ground of its having occurred by night, for still 'the moon and the stars were witnesses' — sed luna vident, sed sidera testes | Intendunt octolcs (Sat. viii. 144-182).

It is evident, therefore, that, when Christianity began to spread over the pagan Empire, it had to encounter a deeply-rooted prejudice that encouraged idleness so far as most forms of industrial labour are concerned. It is true that Christianity brought with it the more wholesome sentiment of the Hebraic tradition, which is always in the young Christian community industrial labour was elevated to the loftiest dignity by the example of the Master (Mk 6:3). And it is true still further that it would be difficult to overestimate the far-reaching influence of industrial life; in fact this is the slave took equal rank with his own in relation to their common Master (1Co 3:9, Col 3:24). But the conversion of the Empire did not mean that pagan sentiments were dashed out altogether. On the contrary, new tendencies growing up in Christendom itself created some additional forces hostile to the industrial life of the world. One of these was the happy prominence given in the Christian ideal to the gentler virtues, and especially to charity. There is evidence, indeed, that at first careful precautions were taken to avoid the abuse of this expansion of moral and religious life. The best proof of this is the fact that some of the official titles in the Church seem to have been adopted originally to designate those officers who were appointed to administer the Church's charitable funds (O. Ullhorn, Chr. Charities in the 4th Century, Eng. tr., Edinburgh, 1883, bk. ii. ch. iv.; E. Hatch, The Organization of the Early Chr. Churches, London, 1881, especially Lec. ii.). But, notwithstanding all precautions, there is ample evidence to show that unfortunately the charity of the Church was often misdirected to the encouragement of idle beggary (Ullhorn, op. cit. bk. ii. ch. v.; a glimpse of this abuse is afforded by Lucian's de Morte Pergr., even if it be but a fictitious story of contemporary life). This unfortunate effect was aggravated by the development of the simple conception of almsgiving as a sacrifice into the theological dogma of the sacrifice of the pagans against labour was carried over into the aristocracies of medieval Europe. In fact, it was apparently intensified in the transmission. In many countries a nobleman or gentleman lost all the privileges of his rank by engaging in trade (H. Hallam, Middle Ages, London, 1846-48, i. 191).

It will thus be seen that practically through all the ages and nearly all the race has been an ideal of social rank strongly hostile to industrial activity, strongly favourable to industrial idleness. This inheritance has come down to the modern world, and infects even its most advanced industrial communities. It is still an object of ambition among many of the most energetic industrial workers to attain rank in the leisure class of their community; and all the usages of such a class are based on the principle of avoiding everything that has the appearance of industrial labour — the principle of flaunting conspicuously the fact that they are living in unproductive idleness (T. Vehlen, The Theory of the New York, 1888; cf., by way of antithesis, his The Theory of Business Enterprise, do. 1904). There is obviously but one cure for this condition of things; and that is a revolution in the ideal of social rank, such as was foreshadowed in the memorable address: 'Ye know that in other communities the rulers are those who lord it over them, and the nobles who exercise authority. Not so shall it be among you; but whoever will become a noble among you shall be a servant, and whoever will be your prince shall be the slave of all. For the Son of Man also came not to be served, but to serve, and to give his life a ransom for many' (Mk 10:42-45).

In the love of idleness extremes meet. Besides the idle rich who live upon accumulated wealth, there is in every community a vast horde of idlers who have no such habits render steady labour so irksome that they prefer subsistence by beggary or theft. Not only is this class an object of serious concern to moral and religious reformers, but its maintenance and its control impose an immense burden on the working labourers of the world as to form a perplexing problem for the statesman. 

LITERATURE.—This is sufficiently indicated in the works referred to above. 

J. CLARK MURRAY.

IDOLATRY.—See IMAGES AND IDOLS.
IGNORANCE.—Ignorance has a bearing on the ultimate problems of philosophy (see art. Axiology); but it has an important significance in moral and religious life as well. This influence cannot be anticipated, has been but gradually evolved. In the moral and jural condition of primitive society there are many facts which prove that ignorance regarding the nature or injustice of action is not recognized, at least not unequivocally recognized, as freeing the agent from responsibility for the injury done. This early confusion of the moral consciousness was evidently connected with the peculiar jural organization of primitive tribes. It is now a commonplace of historical science that society did not originate by previously isolated individuals combining. On the contrary, society is historically prior to the individual. Its primitive unit is not the individual, but some community—a family or clan—in which the individual is born and brought up. The moral life, therefore, is at first associated with the clan and not with the individual. The moral responsibilities of the individual are absorbed in those of his family or clan. The whole family or clan is held responsible for the misconduct of any member, nor is the misconduct of the offender personally even when he is well known. In such a condition of society any individual may find himself involved in responsibility for an action of which he was entirely ignorant; and consequently ignorance is not felt to be of essential importance in determining whether or how far any one can be called to account for an action. All this is abundantly illustrated in societies at the tribal stage of development. It was a striking feature of the aboriginal tribes of North America at the time of their discovery, and it may be traceable still in the conduct of the surviving tribes with which the Government of the United States is called to deal. An elaborate and interesting illustration of this phase of moral consciousness is given by F. Parkman in his Jesuits in N. America, Boston, 1876, pp. 363–369. More familiar illustrations are furnished by the clans of the Scottish Highlands prior to the collision of the clan-system after the disaster of Culloden. It is but a logical corollary from this moral and jural condition that criminal jurisprudence in its primitive crudeness often involves the whole family or kindred of the offender in the punishment of his offence. A well-known example of this, bringing it down even into the folk tradition of a modern age, is the story of Haman in the Book of Esther. War has continued this barbarous confusion of moral ideas to a much later period. Even in the wars of Christendom down to a very recent date it remained the custom to plunder and even butcher indiscriminately not only the combatants, but also the unoffending civil population of a conquered town or an invaded country.

The tribal organization, with its limited moral ideas and sentiments, has not always vanished at once on the welding of tribes into a nation. Among the ancient Hebrews tribal distinctions remain clearly marked long after the attainment of a larger nationality. Greek civilization copied the Hebrew ideal that the various tribal alliances and tribal feuds continued to the very last to complicate and fetter all nobler political aspirations, so that they never succeeded in establishing any unity of national life. In actual history, therefore, the morality of the great nation is still narrowed and hampered by the moral ideas of tribal life. In the States of the ancient world generally the individual finds his chief solace in being a citizen. Man exists for the State, not for the State for man. It is true that with the loss of political freedom individuals in the ancient States took to personal culture as the supreme object of life; and this explains the virginal vitality which for generations was imparted to the ancient schools of philosophy, to the Academies and Peripatetics, the Stoics, Epicureans, and even the Cynics. But the absolute worth of the individual finds distinct recognition for the first time in the teaching of Christianity that it is impossible for man anything in a whole world, if he himself be lost (Mt 16:4). Still, the significance of this teaching did not make itself felt at once in the reorganization of society after the conversion of the Roman Empire. The old ideas of social organization continued to dominate the minds of men and modified the whole medieval interpretation of Christianity itself. Under that interpretation the individual lost his direct religious responsibility and entered into relation with God only as a member of the religious community, the Church. The great revolution of the 16th century was a new assertion of the independent worth of the individual, and that not in his religious life alone, but in all his relations, social, economical, and political as well (this is illustrated by many interesting facts in the monograph by E. Belfort Bax, On German Society at the Close of the Middle Ages, London, 1894).

But, if the narrow ideas of a tribal society continue to cramp the larger life of nations, on the other hand the ideas of a more spiritual morality begin to purify the moral life even in the communities. Then the import of ignorance for moral responsibility comes to receive more or less explicit recognition. Thus among the Hebrews, while the tribal custom of blood-revenge is still recognized in law, there is an explicit distinction drawn between the deliberate murderer and the man who happens to slay another 'ignorantly' ('De 19', 'unawares and unwittingly' (Jos 20; cf. Nu 35). For the latter, the law makes the equitable provision of cities of refuge where he can find protection from the avenging kinsmen of the person slain. Moreover, Deuteronomy (24') explicitly abolishes the custom of punishing a whole family for the misconduct of a single member, limiting the penalty to the actual transgressor. This enactment is given as the ground in law why the children of the murderers of King Josiah were not put to death (2 K 14:5). On this point, of course, the prophets represented the higher morality, and it finds eloquent expression in a singularly noble passage of Ezekiel (18:2): 'I will judge you according to your ways, O man of blood.' Athenian law had a similar civilizing influence to that of the Hebrews. At an early period it had drawn a distinction between φόνος ανάφλους and φόνος τρομάτως (Smith's Dict. of Gr. and Rom. Ant., s.v. 'Themos'), recognizing the fact that actions done in ignorance do not belong to the same moral category as those done in full knowledge. It is true that some of the old Hellenic myths, like that of Oedipus, point to a state of moral confusion which does not discriminate between an unwitting transgression of law and an intentional wrong; yet the handling of these myths by the great dramatists of the 6th cent. B.C. indicates in general a complete emancipation from the perverted morality of the old myths themselves. In fact, the two great tragedies of Sophocles on the Oedipus myth, especially the Oedipus in Colonus, might be interpreted as taking for their leading motive the vindication of an unfortunate transgression on the idea of ignorance (see esp. lines 392–270, 540–547, 957–988).

While the import of ignorance in relation to moral responsibility was being brought to the light by the great drama of Greece, it received at the same time a more explicit recognition by the philosophic teachers. This was specially the case with Socrates. The one definite doctrine which can with certainty be ascribed to him seems
to give an exaggerated value to knowledge and ignorance in the moral life. This is the doctrine that in its essence virtue is knowledge, and vice ignorance (Xen. Mem. iii. 9, iv. 2; cf. Plato’s Laches, Protagoras, Meno, and numerous references in other dialogues). In later ethical systems the Stoical type there has been generally and logically a tendency to the same view. The view is criticized by Aristotle on the ground that virtue is not a question of an act or of any other kind, but a habit (q.v.) trained by repeated action. The Socratic doctrine undoubtedly fails to recognize sufficiently the fact that virtue implies something to be done, not merely something to be known. But, as Aristotle himself points out (Eth. Nic. vi. 13-3), though all virtue is not knowledge, there can be no virtue without knowledge (epistémē). That is to say, in order to do what is right a man must know what is right; and therefore knowledge is an indispensable factor of virtue. A very fair plea may also be made for the contention that at the critical moment in a vicious action the agent is so blinded by passion that he does not really know what he is doing. To this extent also Aristotle recognizes a certain truth in the Socratic doctrine (Eth. Nic. vii. 3, 14).

But the truth implied in the doctrine is not the whole. The criterion looks at least to two other truths: (1) that knowledge does not necessarily involve will to do what is known; (2) that ignorance is not always or wholly involuntary.

(3) Socrates assumed that, as virtue is knowledge, and vice ignorance, a man needs only to have his ignorance removed—to learn what virtue requires—in order to become virtuous. That would be the doctrine which follows with certainty the knowing of what is right. Now it may be admitted that a scientific psychology does not allow us to regard knowledge and feeling and will as absolutely dissociated in actual life. Not only is there an element of will in all knowledge, but without knowledge will becomes merely the blind impulse of emotion. The power of will is thus so intimately dependent on knowledge that to common thought they appear at times identical. We say, in Bacon’s phrase, that ‘knowledge is power’; in many a popular phrase in different languages the knowledge how to do a thing is spoken of as equivalent to being able to do it; and equivalent to the ability to act upon it, to know and experience it. Yet, while every allowance may be made for these significant facts, a scientific psychology also obliges us to admit that at times even the knowing of what the agent desires, of feeling or will—may so predominate as to make the others practically negligible quantities. There is often a cool inert contemplation of bare fact without any response from the emotions or the will. There are even morbid conditions of mind, in which the patient has a perfectly clear conception of what it would be wise for him to do or not to do, while his will is so enfeebled that he has no power of constraint in the one case or restraint in the other. The pathology of mind furnishes strange illustrations of this practical dissociation of intelligences and will. (T. Ribot, in his Les Maladies de l’esprit, Paris, 1883, a detailed exposition of the subject; H. Maudsley also treats it in Body and Will, London, 1883, p. iii., ‘Will in its Pathological Relations.’)

(4) This phenomenon exhibits an exaggerated form that disintegration of mental unity which in less injurious forms is a common characteristic of imperfect mental action in general. For that intellective life is that in which intellect and emotion and will harmoniously cooperate. Moral and religious teachers therefore have found it necessary to distinguish that mental state which represents merely an intellectual activity from that knowledge or faith which carries the whole mental nature with it, involving the assert of the affections and the will as well as of the intellect. But all this implies that virtue cannot be identified with knowledge, nor vice with ignorance, in the ordinary sense of these terms.

(2) But there is another invalid assumption in the doctrine of Socrates. It is not true that a man may not be willing to do what he knows. Knowledge is not a state of passive reception; it always implies active effort, even if it be only the effort of attention. Consequently, as a man cannot do his duty if he does not know what his duty is, he is bound to put forth the voluntary effort required to obtain a knowledge of his duty. If he does not make the necessary effort, then he is to be blamed not merely for having done wrong, but for the ignorance that led to his wrong-doing. Such ignorance may relate either to particular facts or to general principles.

(a) To discern what is right in particular cases, the facts must be known; the agent may fail to learn the facts because he makes no effort to know them, possibly even because he makes some effort not to know them. In such cases his is properly said to be evilful ignorance; and, if it is pleaded as an excuse, it pleads with the reply that he ought to have known better.

(b) Often moral ignorance extends to general principles. In the moral life of men there is no fact more familiar than the experience that conscience is kept clear by a consistent course of virtuous conduct, while it is darkened by persistent indulgence in vice. Men may come to prefer moral darkness to moral enlightenment because their deeds are evil (cf. Jn. 36). As this darkening of moral intelligence is a natural penalty resulting from habitual disregard of its teaching, the condition has been described in old religious language as judicial blindness. Such moral ignorance, so far from being an excuse for sin, may be its most heinous aggravation. In an extreme form it may become that fixed habit of resisting the enlightenment of the Divine Spirit—that ‘sin against the Holy Ghost’ (Mt. 12:31)—which by its very nature cannot be forgiven.

But ignorance is often involuntary. Not only individuals, but whole races and classes of men are placed at times in such a condition that it is practically impossible for them even to conceive any lofty ideal of morality. In particular cases, also, the most cultured moral intelligence may be so captivated by a wrong habit as to yield to a correct judgment; and consequently it is not an infrequent reflection of good men that they would have acted differently if at the time of action they had known better. Under such conditions ignorance is, in the technical language of the old moralists, spoken of as invincible; and it forms a valid apology for faulty conduct. The same principle of justice demands further that all moral judgments on the conduct of men must be multifaceted by a regard for the opportunities of enlightenment which they have enjoyed. This principle is made peculiarly explicit in the teaching of Christ (see esp. Lk. 12:48, Mt. 11:21). Cf. INVINCIBLE IGNORANCE.

The problem of the moral import of ignorance is thus seen to be by no means simple. The external circumstances and the internal motives of moral action are so complicated that human judgment practically breaks down in attempting to determine how far in individual cases ignorance is a moral flaw. It remains, of course, one of the sustaining assurances of religious faith that in the final account all the misfortunes of every man’s career are not to be lightly condemned and justly appreciated by an Omniscient Intelligence. But the perplexity arising from these com-
ILLEGENITY

Applications has naturally opened a wide field for casuistical ingenuity. Unfortunately the science of casuistry, which might be made a valuable discipline for the enlightenment of moral intelligence, has been made merely a pretext to the side of moral safety, but rather to try to find how near action may go to the brink of the precipice of sin without actually slipping over into the abyss. But, and probably, there is a humbler attitude; and in the problems connected with the moral import of ignorance probably the jurists will be found more helpful even to the moralist than of the casuists. It is true that the juridical point of view differs from the moral. Still it is based upon it; and, as jurisprudence demands specific statement of the conditions under which an action is done, it can hardly fail to impart some of its own definiteness to the moral aspect of the action as well. In regard to our present problem, jurisprudence is in general governed by the maxim that 'ignorantia faeti excusat, ignorantia juris, quae in eorum persona est, nemo excusat.' It is specially in medical jurisprudence that the problems of moral ignorance take their most interesting and important shape. For the largest section of this science is that which deals with insanity in its medical and legal aspects. 'To accept definitions of insanity generally made moral ignorance its test. It was a common judicial decision that, unless a person was at the time ignorant of the moral quality of the action for which he was called to account, he should be held legally responsible (Maudsley, Responsibility in Mental Disease, pp. 88-98). Obviously this involves the assumption, which has been shown to be involved also in the Socratic doctrine of virtue, that the knowledge of what is right implies will-power to do it, and that the knowledge of what is wrong implies will-power to refrain from doing it. But this assumption has been shown to be upset by psychology, especially in its analysis of moral phenomena. It is now, therefore, acknowledged that mere ignorance of wrong-doing is not a sufficient criterion of insanity. Nervous or cerebral disease may generate an impulse which the patient knows to be wrong, but which is so irresistible that he cannot, in justice be held responsible for yielding to its power. There is another class of actions arising from ignorance, on which the moralist may receive some guidance from the more specific definitions of the jurists. These are the actions coming under the general category of malas praeteritae, of which there are instances in the professions or trades. In all the occupations of life, injury may be inflicted by the ignorance of practitioners or by that negligence which, as etymology indicates, is a peculiar form of ignorance, a temporary lapse of intelligence. In cases of this kind, while allowance must be made for a certain amount of ignorance or negligence as 'invincible,' yet justice also demands that every man shall be more tenacious of innocence in mastering and applying the knowledge which he possesses in his occupation. But the complications of modern professional and industrial life run this general principle of justice into an infinite number of details, for which the legislation of all countries has been obliged to make elaborately minute provisions.

It may be added that a peculiar modern phase of semi-professional life raises a curious question of moral responsibility. The body of knowledge is always growing, for believing that in their abnormal condition 'mediurn' indulge at times in trickery or deceit, although in their normal consciousness they are not aware of what they have done. It is therefore very important to see how such persons are justified in allowing themselves to lapse into a condition in which they lose intelligent self-control, and become capable of doing unwittingly actions which in their normal state they know to be wrong.

LITERATURE.—On the doctrine of Socrates, the original sources of information in the works of Xenophon and Plato have been given above. Reference has also been made to Aristotle's critique, and it may be noted also that three chapters in the seventh book of the Nicomachean Ethics are of interest in this connection. The casuistry of moral ignorance is discussed at length in J. F. Gury, Compendium Juris Gentilis Moralis, Paris, 1856, which is illustrated by his companion volume of Cases Quotidianes, do 1855. In this work Tractatus i., de Actibus Humanis, has a section (cap. ii. art. iii. 11) de Ignorantiis, and Tractatus ii., de Conscientia, also bears on the subject. These passages should, of course, be read in the light of Gury's cases of insanity. On the relation of ignorance to legal responsibility the maxim quoted above finds a discussion in some interest to the moralist in A Selection of Legal Maxims, Classified and Illustrated, by H. Broom (pp. 263-277, 2nd ed., London, 1898. On the connection of insanity with responsibility, moral as well as legal, valuable aid will be found in any of the greater works on medical jurisprudence. H. Maudsley's Responsibility in Mental Disease, London, 1874, has been already referred to, and with it may be mentioned his Pathology of Mind, do., 1866, which devotes nine out of its eleven chapters to insanity. It must always be remembered, however, that Maudsley's psychological and ethical views are deeply moulded by an extreme determinism. In The Juridical Review for March, June, and September, 1894, the present aspect of the problem of insanity is discussed from both the medical and the legal points of view in a series of articles, by J. B. Buck and C. R. A. Howden, jointly on 'The Relation of Insanity to Criminal Responsibility and Civil Capacity.' On the moral aspect of negligence there is a discussion in W. Whewell's Elements of Moral, London, 1843, art. 114, Responsibility for negligence is the subject of a vast juridical literature, but it is mostly an exposition of the details of civil law on the subject. In legal legislation. In T. Bevan's elaborate work, 'Negligence in Law' (1st ed. Principles of Negligence, London, 1885, &c. may be referred to as a whole. The law of the Mediator, in T. O. Peacock's Law of Tort, London, 1857, is treated under chapter 6. Negligence is a matter of the law, F. Pollock's "The Law of Torts," London, 1894, discusses two chapters to negligence. In the Mediator an attempt at psychological and ethical analysis of a peculiarly subtle condition of mind, while it cannot be accepted as based on a fair study of facts. Of recent and ethical value, however, is the discussion of the same mental condition in F. Pedmore's Modern Mediators, London, 1877, pp. 235-252.

J. CLARK MURRAY.

ILLEGENITY.—The subject of illegitimacy, in general, presents a number of complex problems which demand the close attention of the sociologist. No single explanation can account for all causes, still divers causes have as their reason the wide variations in the rates of illegitimacy in civilized communities. Differences of religion, of mental range, of social conditions and aptitudes, of race, and of the marriage laws in different countries, must all be taken into consideration. The importance of the subject, so far as it concerns Great Britain, is shown in the fact that 43,517 illegitimate births were registered in the British Isles during the year 1907. As far as the present statistics are available those for Great Britain and Ireland, a detailed examination of the prevalence of illegitimacy in the separate parts of the United Kingdom will throw light on some of the problems before mentioned. Taking the countries in the order of an ascending scale of frequency of illegitimacy, and estimating the percentage of illegitimate births to the total number of births, unless otherwise stated, the percentage for Ireland is 28, for England 43, for Wales 54, and for Scotland 70.

The percentage of illegitimacy in Ireland varies in the four provinces from 0.7 in Connaught to 3.7 in Ulster. The latter province is the only one which has been above the mean for Ireland (2.8) during the quinquennium period 1896 to 1910. Of the counties of Ulster, ten out of the twenty-two percentages are above average (Ann 2.6) and Down (4.6), the two with the lowest percentages are Donegal (0.9) and Cavan (1.1). In Antrim, the district of Ballymena had 7.7 per cent of illegitimacy, in the district of Newtownards 7.3 per cent; Down, the district of Ballymena 7.3 per cent; in Donegal the district of Newtownards 5.5 per cent of illegitimacy, and Banbridge 5.2 per cent. The percentages of illegitimacy in the cities of Dublin and Belfast were 25

105
and 3-3 respectively. As an analysis of those varying rates in the different parts and districts of Ireland points to the prevalence of illegitimacy in large market towns subserving agricultural districts, and the populous rural and maritime districts of North East Ulster—a condition deriving from that obtaining in England, Wales, and Scotland, where illegitimacy is most common in thinly populated rural districts. At first sight racial differences may appear to account for the discrepancies noted. In the eastern half of Ulster the majority of the inhabitants are of Scottish descent, while in Connacht the race is almost wholly Celtic. Illegitimacy, however, as common, if not more so, among the Celtic population of Scotland as among the Teutonic, and commoner in Celtic Wales than in Teutonic England. Probably the explanation, so far as Ireland is concerned, is to be found in the influence of the Roman Catholic Church, which has a wholesome effect in preventing illegitimacy.

Of the ten districts into which England is divided, those which are under the mean rate of illegitimacy (4-3 per cent) are the South Midland (4-0 per cent), the East Midland (3-9 per cent), and those which are over it are the North Midland (4-9 per cent), North Western (4-5 per cent), Yorkshire (4-5 per cent), and Northern (5-5 per cent). Eight counties of the Southern, Midland, and Northern districts, of these four of these (Middlesex, Hertfordshire, Buckinghamshire, and Northamptonshire) illegitimacy is on a relatively low scale; in the remaining four the percentages are: Berksf. 4-1, Oxford 5-1, Huntingdon 5-6, and Oxford 5-7. In the Thames district of Oxfordshire, which comprises Lewknor and Thame, the high percentage of 8-2 is attained. This rate is higher than that obtaining in the highest of all the districts, the Northern, and exceeds by 2-9 per cent that of the County of Westmorland, which is the county with the largest amount of illegitimacy in the Northern district. In London there is 4-0 per cent of illegitimacy. It will be noted that illegitimacy is more prevalent in the rural and agricultural districts of England, and especially where these districts are not thickly populated. The relatively low rates in London and large towns are undoubtedly helped by the steady influx of well-doing and enterprising young people from country districts; the same cause adversely affects the country districts. In this connection it is noteworthy that in the low country districts, the illegitimacy and immorality are not synonymous terms. In large cities, sexual immorality is prevalent, and opportunities for its practice are more abundant and less exposed to the force of public opinion than in the country. In large cities, moreover, illegal means to prevent the fulfilment of pregnancy are not uncommonly used, and can be resorted to with less risk of detection, injury, and punishment. On the other hand, the system of cohabitation, especially in the poorer districts of large cities, is a source of illegitimacy, and such a mode of life is not necessarily associated with sexual immorality.

Wales affords, in contrast to Ireland, the example of a Celtic race with the presence of a large amount of illegitimacy in its midst. The average percentage for the whole of Wales is 5-4, or 1-9 per cent higher than that of England and 3-6 per cent above that of Ireland. In the country districts of Wales, the highest levels are reached in Anglesey (8-7 per cent), Radnor (6-1), Denbigh (5-9), Montgomery (6-0), and Glamorgan, has the low percentage of 2-8. When subdivisions of counties are taken into consideration, Bala, an inland rural district of Merioneth, shows a rate of 18-1; and Anglesey maritime-rural district, has 11 per cent of illegitimacy. The same remarks which were made on England with respect to the prevalence of a high rate of illegitimacy in a rural and thinly scattered populace apply to Wales, and, as the sequel will show, to Scotland, with this proviso regarding the last two countries affairs quite differing from that obtaining in England, Wales, and Scotland, where illegitimacy is most common in thinly populated rural districts. At first sight racial differences may appear to account for the discrepancies noted. In the eastern half of Ulster the majority of the inhabitants are of Scottish descent, while in Connacht the race is almost wholly Celtic. Illegitimacy, however, as common, if not more so, among the Celtic population of Scotland as among the Teutonic, and commoner in Celtic Wales than in Teutonic England. Probably the explanation, so far as Ireland is concerned, is to be found in the influence of the Roman Catholic Church, which has a wholesome effect in preventing illegitimacy.

Of the four countries, Scotland has the highest percentage of illegitimacy, namely 7-2. The percentage varies from 14-51 in Banffshire to 4-49 in Dumbarton. All the Scottish counties, towns, and cities have an average illegitimacy rate above the English mean of 4-3 per cent. In the principal towns, there is a variation from a maximum of 9-79 in Edinburgh to a minimum of 3-08—the percentage found in Govan and Coatbridge. It is worthy of notice in passing that Govan and Coatbridge are two large industrial centres, whose populations are mostly members of the working classes. The percentage for the principal towns in Scotland is 7-35. Large towns have 5-74 per cent of illegitimacy; small towns 6-63 per cent; mainland rural districts 7-24 per cent; and insular rural 8-14. Both with a more fertile soil and better adapted for agricultural purposes than the Western, show a greater prevalence of illegitimacy than the Western. The Northern and Southern districts have the highest rates of 8-7 and 11-26 per cent respectively. When a comparison of county districts is made, there have been an unusually high percentage of illegitimacy—Banff 14-51, Elgin 14-27, and Wigtown 19-41. These three counties, obtaining with a large admixture of seafaring population. More than one-fourth (25%) of the male population of Banffshire are engaged in agricultural pursuits, and more than one-fifth (41%) are fishermen or seafaring men. Almost similar conditions to those prevailing in Banff with respect to the occupation of the population are to be found in Elgin and Wigtown. On the other hand, in counties with the lowest number of illegitimate children, such as Dumbarton (4-29 per cent), the populace is to a large extent occupied in shipbuilding, foundries, engineering, and calico-printing works. The housing of farm servants of both sexes in both—such a condition is regarded as a fruitful source of illegitimacy, especially in those districts where the rate is high.

The decline in the birth rate of the majority of civilized countries throughout the world has been very marked. If the quinquennium 1901-1905 is compared with that twenty years earlier, the fall in the birth rates in Switzerland, in Ireland, and in Spain has been about 3 per cent; it reached 14 per cent in France and Italy; 16 per cent in Servia, England, Wales, and Hungary; 25 per cent in the Australian Commonwealth; and 25 per cent in New Zealand. Except in the cases of the Ottoman Empire, Sweden, France, Belgium, and the Australian Commonwealth, the decrease in the number of illegitimate births is greater than the corresponding fall in the general birth rate. This marked decrease in the majority of European and other civilized countries has been almost continuous during 20 years. With the exception of Sweden and France, where there has been an increase of 1-7 and 2-9 per cent, the decrease has varied within wide limits. Thus it has been 3-1 per cent in Spain, 9-7 per cent in England, 32-4 per cent in Scotland, and 13-6 per cent in Ireland. The proportion of illegitimate births per 1,000 marriages and widowed women between the ages of 15-45 years of age and for the years 1900-1922 reached
its highest points in Austria and the German Empire; the numbers in those two countries were 40.1 and 37.4 respectively. Calculated on the same basis, the smallest number of illegitimate births took place in the Netherlands and Ireland, where the numbers were 6.8 and 3.5 respectively.

The causes underlying the almost universal decline in the amount of illegitimacy are difficult to determine. Beneficent legislation, social activity, and the spread of education and extended practice of the Christian religion are undoubtedly at their root. In the discussion of illegitimacy throughout the British Isles, reference has already been made to the influence of race, religion, and in some social surroundings and conditions. It now remains to refer to these more fully and add other factors which exert a modifying power.

There are differences in laws relating to illegitimacy which have a restraining influence on the reverse on its prevalence. By the law of Scotland and in accordance with the laws of most of the Continental countries, an illegitimate child is fully legitimated by the subsequent marriage of the parents. Such laws were intended to benefit the child by removing its dishonour and disgrace; but a subsequent marriage does not always take place, and a woman is often led into immoral courses by the promise of marriage, which the man either refuses or never intended to fulfil. In Scotland at any rate, this state of the law, combined with a common custom among the lower classes in country districts and fishing villages, whereby the child is not taken place until the woman is with child, is mainly responsible for the high position it takes with respect to illegitimacy. This conclusion is justified when the effect of the existing state of the law in other portions of the British Isles is considered. By English common law, an illegitimate child cannot be legitimated, though the civil and canon laws legitimize children whose parents subsequently marry.

A factor that cannot be disregarded in the production of illegitimacy is the state of the law towards the fathers and mothers of such children. In Scotland, the mother has legal custody of the child until the age of 10 years, and the father is legally bound to contribute from 2s. 6d. to 5s. weekly towards the aliment of the child; in England, the putative father may be summoned and compelled to make a proper allowance not exceeding 5s. per week. Here also the maintenance of the child devolves on the mother, who is bound to maintain the child as part of her family so long as she remains unmarried, or until the child is 16 years of age. In the event of settlement in her own right, or, being a female, is married. Thus a man is penalized for having an illegitimate child to the extent of, at most, a meagre pittance of 5s. per week, and is often allowed to go so free, either from fear of the eye of the mother to sue for alimony, lest such action might spoil the prospects of a future marriage, or by the facilities afforded of escaping his obligations by emigration to another country. Even when all the legal obligations are undertaken by the parents, an illegitimate child is only bound to earn its own living and take care of itself at the early age of 18. Social legislation tending to guard child life from immorality, and providing for the better care and training of such children, sought to embrace more suitable provision for the illegitimate child as well as sounder measures for combating illegitimacy. Already the Children's Act in this country has had a beneficent effect in these directions, and it is rather to be regretted that the mortality of illegitimate children is compared with that of legitimate. It cannot be doubted that the illegitimate child is life less fitted physically for the battle than the legitimate. The deaths from all varieties of disease are greater among illegitimate children under one year than among legitimate children of the same age. With reference to statistics applicable to England and Wales for 1910, the proportion of deaths among illegitimate infants to 1000 illegitimate births, and among legitimate infants to 1000 legitimate births is seen in the following table to be greater for the illegitimate in all varieties of disease, and with respect to diarrhoæ and tuberculosis it is double the deaths from similar causes among legitimate infants.

As in Great Britain, so it is elsewhere. In several European countries, new legislative measures have been adopted or are in the course of being promulgated which will have a material effect on the existing amount of illegitimacy. In Germany, where the illegitimacy rate ranks next to the highest amount, that shown by Austria (see Table 1.), the laws which allow the father of an illegitimate child to be freed from his responsibilities by a small monetary payment have been widened in their scope so that such a father, in addition to monetary whereby, is now required to provide training for his child such as will fit it to earn its own living in after life. Further, if the child should be physically or mentally unfit to earn its own livelihood after the statutory age of 16 years, the father must then support it all his life. The governing principles of recent legislation, both in Germany and in Austria, are for the betterment of the illegitimate child. It is generally recognized that neither the mother nor the father is the most suitable guardian for an illegitimate child: such parents make the interests of the child subservient to their own, and in general they have not the moral strength to retrieve the position which they have lost by giving the same attention and care to the child which it would receive had it been born in lawful wedlock. On these grounds an official guardians— the Vormund— is appointed to enforce the law. In the event of the mother being married, the Vormund may be—who is seldom—appointed guardian. In Austria, it is illegal for the mother to be appointed to this position. The reasons given for forbidding the mother to be Vormund are those already mentioned, in addition to the fear that she might not like to displeasure the father by putting into force the laws protecting the child, and this might lead to the child's being neglected. Again, the Vormund must be some person other than the father of the illegitimate child, or the father's relatives, or any one who may have an
interest in saving expense to the father. In the
case of his or her duties, the guardian is
assisted by voluntary agencies—such agencies as
the Vigilance Societies of Britain. The guardian
appointed by law is usually the president of one of these
Societies, and the duties which are
required to be performed are the proper direction of
aliment so as to educate and train the child to be
self-supporting, and the legitimation of the
child by inducing the father to marry the mother.
In practice, over one quarter of the illegitimate
children have become legitimated in this
way through the influence of the **Formund** and
his voluntary helpers.

In France, where the let of the illegitimate has
been made extremely hard by the existence of
article 349 of the civil code containing the well-
known clause, 'La recherche de la paternité est
interdite,' an Act to remove the hardships and
amend the existing law has been announced.
There are many points in this Act which find
general acceptance throughout France; and, should
it become law, it will tend to diminish illegitimacy
and to make the legitimation of the illegitimate
child easier. A process at law a mother may establish legal
responsibility on the father for the child if the action
is brought within two years of its birth. Such
an action may also be brought by the Court which,
according to the law of July 1907, acts in the
capacity of the conseil de famille.

One source of illegitimacy has not been referred to,
but is worthy of special prominence—that which
occurs as a result of the following: (1) the feeble-minded
person who is under the provisions of the Mental
Deficiency Act is guilty of a misdemeanour.
Legislation such as has been described is being under-
taken in many countries other than those referred to
in the previous paragraph. It is to this reference
which has already been made. There is good reason
to believe from experience that it will not only reduce
still further the general prevalence of illegitimacy,
but also, where the latter occurs, will remove or
alleviate the disgrace that clings to the illegiti-
mate throughout life.

**ILLUSTRATIONS.—By the common usage of psy-
chology the name 'illusion' is now reserved for
certain special anomalies of sense, which do not
necessarily involve any process of cognition in the
strict sense of the term.

For the most part our senses provide us with a
well ordered and steadily integrated system. This
is the general position (convention, convention) of
differences that are known as the attributes of
sensation. States also occur that are dependent
upon variations in these attributes, and that pre-
sumably are founded upon them or consist of them.
These are known as the states of perception
and usually constitute variable series. Examples
are found in the series of distances of increasing
length in any of the three dimensions—in the line
of sight, or vertically or horizontally perpendicular
thereto—in the series of motions of increasing
speed, in the series of surfaces of increasing area,
in the series of positions 'round the head' of
auditory space, and so on. These series become
associated with one another in the sensory experi-
ence of ourselves, and presumably of all other
creatures in proportion to their complexity and
development. In these higher developments at
least the order of the series is unchangeable. But
fails to respond coherently, by action or by thought,
to the integration of apparent size with distance
from the point of observation. To unocular vision
the apparent surface of an object varies inversely
with the square of the distance. In unocular vision this rule holds good with modification
only from beyond a certain distance from the eye.
For nearer distances, within which differ-
ences in optical position converge, divergence
are effectively distinct, the apparent surface tends
to retain one and the same size. We do not
notice differences in the apparent size of equally
tall persons seated in the future, either of them
facing each other or of both facing the same
direction, and yet, in the distance of the eye itself,
the apparent size of the persons is greatly reduced.
In various circumstances various integrative processes, based upon a mani-
fold of simpler sensory data, guide us, or rather
our cognition. From their own point of view,
however, our sensory processes are simply har-
monic and systematic. It is a common sound of a motor horn, I can usually locate
it in a position in the horizontal plane round my
head with considerable accuracy. If my head and
eyes are impelled to turn towards this point, its
source, they will turn rapidly and accurately. If
the motor horn is a familiar one, I shall have
some idea I shall experience some mode) of the
distance of the motor from me, even before I see
it. And, when I see it, this auditory distance will
be confirmed by the visual distance at which it
will appear, and that again by its apparent size.
In a sense there is, of course, no confirmatory
process here at all, for that strikes upon the
intellection, anticipatory belief, and judgment
of coherence. It is rather merely the fact that
all the more complex and usual sensory processes are
adjusted to one another, integrated and related in a systematic way. It is also true
that, if sense is stripped of cognition, it can never
be illusory, in so far as illusory is taken to include
a reference to the realities of the world.
For, stripped of cognition and the memory where
it involves, sense can refer only to sense, both
being actually present and given, linked to one
another by integrative processes. A reference to
a permanent object means at least a reference to
the contents and implications of experiences that
are not actually present. Nevertheless, every
cognition of the outer world implies and
involves such an integration of sense as will make it
possible. And sense must be systematic for
scientific knowledge to be possible by means of
it.

In the major part of the complex integrations of
sense, then, the combining factors and their
references and attachments to one another are
patent and manifest. An illusion, on the con-
tary, is a 'departure' from these generally pre-
vailing schemes of sense by reason of the operation of
of 'hidden' factors — factors which do not them-
selves fall within any of the main integrative
schemes of sense. As their effects, however, ap-
pear in sense and within a common integration,
they get wrongly attributed to the operation of
that process which in the course of ordinary in-
tegration would bring them about. Thus arises
a primitive kind of error, which has much interest for
epistemology, just because it is so primitive.

It provides a case of natural and possible error,
which is, none the less, erroneous and misleading.
This peculiarity gives special importance to the
study of illusions, and raises them far above the
triviality which any practical considerations would
attach to their study.

Thus in the case of retinal irradiation whereby
a bright surface looks larger than a dark surface
of the same real size, the unformed mind will act
and think as if the bright surface were really
larger. Such a mind is guided by the habitual
integration of distance from the eye and apparent
size of surface, according to which two surfaces of
the same apparent size and at the same apparent
distance should be of the same real size, i.e., should
give the same results by the method of visual
superposition through the medium of, say, a foot-
rule. The hidden cause of this illusion is sought
on the retina, where its presence is hardly verifi-
able, because there is no psychological difference
between the two cases which might account for the
effect. Similarly the red letters of a coloured
lamp sign appear farther away than the green or
blue ones, because the cause — a mere matter of
the difference of refraction of coloured lights, and
hence of retinal 'disparity' — is hidden (cf. the red
and blue patterns on many rugs).

We see distinct differentiation in this case when we see that the
frame of the sign or the glass upon which the
letters stand is flat. Still it is to be noted that
we discover this only in virtue of the correlations of
the experience which we suppress.

In the illusions of reversible perspective there is
no retinal distortion. The cube that appears solid,
though merely drawn upon a flat surface, makes
identical impressions upon both eyes. This is
proved by the fact that the paper upon which the
cube is drawn still appears flat, that the illusion
holds also for uniocular observation, and that the
illusory solid changes its aspect from moment to
moment, all the then familiar points now appearing
to be near and vice versa.

If there is thus no change in the outer or in the retinal impressions to account for
the apparent solidity and its reversal, the cause of these will lie in some more central physical
forces, or in a purely psychical factor. Thus fatigue is said to determine at which moment
the reversal shall happen, when the psychologi-
dal determinations of change of fixation and
thinking of one or other form of the solid have
become too intense.

Under certain circumstances, e.g., subjective
momentary exposure, suppressions of background, etc., the illusion can be greatly
increased. The cube will appear to be 'really'
solid. Here, of course, we have succeeded in ex-
cluding only the integrations of sense which in
ordinary circumstances make the illusion obvious,

viz. that we see the object looked at — paper and
drawing of cube upon it — as if it were at one flat
and solid. The hidden cause of this probably
lies in the nature of stereopsis as a purely
psychical process. Possibly a primitive form of
integrative recall operates here. It is not sur-
prising that the cause of the illusion is such, whether it be found is the process of
redintegrative memory or not, should be hidden;
for the fusion that characterizes stereopsis almost
entirely obscures any psychical integrative factor
it may contain.

We are not usually aware of the double images that all vision involves, but only of
their integrative result.

The other illusions of sense still await definite
classification. Much research has been done on
them, but the discovery of their causes is per-
plexingly difficult. A familiar example is one
of the most pronounced is the Müller-Lyer illusion,
in which the lengths of two equal horizontal
lines are distorted by the addition to their ends of
two arrow-heads, pointing, in the one outwards
(←→), in the other inwards (→←). The
former line seems much shorter. The amount of
the illusion has been measured under various
circumstances. Anything that tends to let the com-
pared horizontal lines become prominent reduces,
or destroys, the illusion. Certain primitive people
are not subject to the illusion; their visual
capacity is probably absolute.

If an analytic habit of vision is practised, the illusion can like-
wise be suppressed. But the synthetic attitude is
the usual one in oneself; for the illusion appears
even when the exposure is momentary. If a regu-
lar series of Müller-Lyer figures is prepared in which
the arrow-head lines revolve harmoniously
about the two end points of the horizontal line,
and if this series is shown in the stereoscope
(projection by the cinematograph would be the
equivalent of this), the illusion will show its pre-
sence most emphatically, for the horizontal line
will appear to shorten and lengthen, and the end
points will appear to move up and down.

Many theories of this and other similar illusions have
been given, but most of these — especially such as
involve a reference to the physiology of the retina
or of the optical muscles — have been shown to be
untenable. The final explanation, however, is not
even yet quite clear. Though we are told to com-
pare the lengths of the horizontal lines, we seem to
be compelled by the hidden cause of the illusion
to compare the spaces enclosed by the two figures
instead, and to refer the result of this comparison
to the comparison which we were instructed and
endeavoured to make. Of course, it is easy to
learn that it is the end lines which are ultimately
responsible for the illusion; but it requires very
little insight into psychological science to discern
that this most patent factor is insufficient to account
for the illusion. There is nothing in the side lines
which should alter lengths (or the cause must lie hidden in psychical processes, built upon
the skeleton of lines given in the figure, but not
patent in it; for the illusion just consists in the
difference between the size of the line and the size of the line as an element in a
complex of lines and spaces.

Much remains to be discovered before we can
fully explain the illusions. Apart from this discov-
ery of special facts, the greatest contribution
towards their solution will probably be made by
the progress of general psychological theory re-
garding the interconnections of sensory states of
different complexity.

In the illusions of perception proper, we have
dealt with the redintegrative completion of a
sensory presentation that forms a part of two or
more of the perceptual complexes of an individual.

Egyptian (J. BAIRIE), p. 131.

IMAGES AND IDOLS (General and Primitif).—There is a theory that certain species of animals have the instinct of proportion and even a feeling for art, as shown by the habitations which they make for themselves, the way in which they ornament them, the influence of the plumage or the song of the male on the female, etc.; but it must be admitted that man alone possesses the gift of making images, i.e., of creating figured representations of beings and objects for a utilitarian or sentimental purpose. This kind of representation implies not only that man reasons about his onrul impressions, but also that he claims the power of externalizing them accurately and even of reproducing them after they have disappeared from his vision.

I. CLASSIFICATION.—Images having a religious value may be divided into three classes: (1) purely representative images, (2) magical images, and (3) idols.

1. Purely representative images.—This class includes drawn, carved, sculptured, or painted images of beings, objects, or edifying natures, i.e., whose only aim is to reproduce the features of a real or ideal person, the shape of a well-known object, an episode taken from history or legend, the appearance of a sacred spot, or the celebration of a rite. Every one likes to have near him whatever reminds him of the beings whom he loves or worships—especially their images. The child will suffice to explain the frequency of figures representing either persons who have played an important part in worship, such as priests, reformers, miracle-workers, scholars, theologians, and martyrs, or the superhuman beings to whom the worship is rendered. J. B. de Rossi,1 analyzing the different kinds of

1. Images and Idols (General and Primitif) (General and Primitif).—Thus a shadowy form seen at the roadside on a dark night might be the outline of a bush, a brigand, or a beast. One would suffer ill in the illusion if one took it for anything but the harmless shrub. But the mind sometimes makes clear though hidden motives. What is seen and heard, and felt and known all suggest the ordinary wayside objects, but the fears that more or less assault us all in the dark help to shape what we see. To children, who instinctively dread the darkness, the terrors of the way to bed up the dark stair through the unlit halls are very real indeed. We need not appeal to special traumas for an explanation of the origin of these fears. Children naturally fear darkness, strangers, and animals separately; and these fears are sufficiently similar to be able to induce one another where that is possible. Of course, many a child knows that there is really nothing to fear in the unlit home, but revived images combine so readily with the data of perception of the same sense which evoke them the shadow of a purely constituted, to the casual observer of the latter. Their own cause thus becomes hidden. In the illusions of suggestion we also see the operation of hidden causes which, of course,

may be either emotional or merely associative and cognitive, or both.

In general, then, true illusions all owe their being to the fact that incidental integrative and fusional coherences of (broadly) simultaneous experiences may obscure or usurp to themselves the references which parts of these experiences possess and would otherwise plainly reveal. True illusions are, therefore, all of psychical origin. There is no sense or purpose in speaking of the disparity between the psychical and the material as being illusory. For the same reason, illusions caused by the association of sensations, imitated by the sense-organ hardly deserve the name. They enjoy it only in virtue of the fact that the anomaly which they represent exists both on the material and on the psychical side.

LITERATURE.—For a very broad treatment of illusion as equivalent to error, see James Sully, Illusions, London, 1883. For an introduction to the experimental investigation of the illusions, see any good text-book of experimental psychology, e.g. C. S. Myers, A Text-book of Experimental Psychology, Cambridge, 1911, ch. xii., or E. B. Titchener, Experimental Psychology, New York, 1910, p. 161-173, and p. 220-229, where numerous references to the experimental literature will be found.

HENRY J. WATT.

The image may be realistic, but interpreted in such a way that it becomes a pure symbol—e.g., among Christian images, the lamb and the dove; in Buddhism, the wheel and the lotus-flower; among the Egyptians, the crocodile, the winged globe, etc. Some of these symbols are so clear as to require no comment; the representation of the moon by a crescent, of the sun by a disk or a rayed face, the scales of Justice, the bannerage over the eyes of Love, the aureole hand coming forth from

---

1. Apocryphal scenes (General and Primitif).—Greek and Roman (P. LARDNER), p. 133.

Images found in the catacombs of Rome, makes a classification which might be applied to the figured representations of religions in general: (1) hieratic portraits, (2) ideographical symbols, (3) allegorical paintings illustrating parables, (4) historical scenes drawn from OT and NT, (5) scenes taken from the history of the Church, and (6) reproductions of ritualistic ceremonies.

The maker of an image may either content himself with imitating an accepted type as inspiration for the treatment of his subject in the character and rôle ascribed to his model by tradition. As a matter of fact, the resemblance to the original person and the accuracy with which scenes are represented are secondary points: all that is necessary is that people should believe in their accuracy or convention sanction them. It is a short step from this to purely allegorical images—representations of abstractions or ideal beings, such as Faith, Hope, Charity, Virtue and Vice, Religion, in forms borrowed from life. Even God Himself has been treated in this way. A. N. Diderot, a famous 18th-century figure, wrote a volume on the iconographical history of God.1 As an antithesis to this we might mention the capricious iconography of the Devil published by Paul Carus.2

The image may be realistic, but interpreted in such a way that it becomes a pure symbol—e.g., among Christian images, the lamb and the dove; in Buddhism, the wheel and the lotus-flower; among the Egyptians, the crocodile, the winged globe, etc. Some of these symbols are so clear as to require no comment; the representation of the moon by a crescent, of the sun by a disk or a rayed face, the scales of Justice, the bannerage over the eyes of Love, the aureole hand coming forth from

a cloud and brandishing a weapon; others are so complex that they become resebes or hieroglyphs, the origin of which is lost. In Greek (τραγος) gives the anagram of Christ. These remarks are still more applicable to the representation of religious groups. Every great historical religion except Judaism and Islam has attempted to express its legends and myths in images. These representations may have only a commemorative or explanatory intention; but we must remember that certain religions used them especially for the purpose of education and edification.

All the pictures that we see in the Church tell us as plainly as if the image spoke the story of Christ's coming down among us, the miracles of His Mother, or the struggles and exploits of the saints, so that we may imitate their wonderful and ineffable actions.1

No religion can rival Christianity in the multiplicity of its images. In some large churches, such as the French cathedrals of Paris, Chartres, Reims, and Amiens, there are as many as two, three, or four thousand statues; and in the cathedrals of Chartres, Bourges, and Le Mans, three, four, or five thousand, especially attributed to Medici.2 The foot quite a number of these are merely figures of unimportant personages, nevertheless we have here what has been called a whole Bible for the use of the unlettered. Next to Christianity comes Buddhism, which has covered India, Ceylon, and the Malay Archipelago with its bas-reliefs, and flooded Tibet, China, and Japan with its painted images; in this it has been imitated by the other religions of the Far East, including Hindooism. It is superfluous to mention here the service rendered to art by the mythological compositions of Greco-Roman sculpture. Of less importance from an aesthetic point of view, but none the less interesting, are the bas-reliefs and paintings of Egypt, and the sculptures of Mesopotamia and Asia Minor. It may be said that the region where religious images are found forms a belt on the surface of the globe which includes the Northern hemisphere from Japan to Mexico, while in the Southern hemisphere there are only some rudiments of art.

The desire to be permanently in touch with venerated objects has led man, in his own images in places where everything evoked the memory of his Divine patron; hence the effigies of private persons which were so frequent in the sanctuaries of pagan antiquity. In the same way the desire to see the sanctuary was almost entirely confined to the images of the Pharaohs, the Pates, and the Great kings; even the most favoured citizens never aspired beyond having their features reproduced on a stole or in a statue placed near their tomb. In Greece, the privilege of seeing the temples was accorded to the images of the most illustrious citizens or of private individuals who were rich enough to prevent a general stoutness along with their effigy. The sanctuary chosen for this purpose was generally the one belonging to the god who had watched over the professional occupation of the donor, or to the god who was the patron of his trade. The aim of having the gods near oneself and being near them were frequently combined by placing religious images on objects of everyday use—jewels, pendants, whips, clothing, weapons, tools, vessels, fish, seals, and coins. The discovery and interpretation of which have contributed so much to our knowledge of the principal ancient religions. For a still closer combination the faithful engraved the portrait or the symbol of the god on their very bodies. Tatting has enabled man to assume this

Divine uniform, and examples are found all over the world, from the Australian to the European. On his breast he bears the image of his totem to the Breton or Italian sailor who has the image of the Madonna or the Sacred Heart figured on his arm. It is now admitted that everywhere the tattling of the uncivilized has a religious significance.

2. Magical images, i.e. images having magical properties.—Recent etnology has thrown light on the close connexion which primitive intelligences established between a being or object and the modifications they produced. This is an application of the laws of similarity and contiguity, in which J. G. Frazer has found two of the chief sources of magic belief. Primitive man believed that, by tracing an image, he was producing the reality, and that, when he acted on the image, he was also acting on the thing itself. From the quaternary age onwards we find, on fragments of stone and bone, and also on the walls of caves, sculptured, carved, or painted images, representing animals of the period. Salomon Reinach1 reproduces more than 1,200 of these figures, and points out that they nearly all represent species of animals which formed the food of the people of the time, and the people would naturally desire to favour their multiplication—mammoths, reindeer, horses, goats, etc.

As a result of observations made in our own day among the savages of Africa and Australia, it has been proved that among the magical proceedings for promoting the development of species which provide clans with their totem and their food there is a certain worship of the chimeras, i.e. blocks of stone or pieces of wood which previously have been traced the schematic image of the totem and which are placed underground in sacred places. In other places, these same figures are painted on rocks, and become the centre of ceremonies for furthering the multiplication of the totem.2 Another hunting people, the Bushmen of S. Africa, painted on the walls of their caves very good likenesses of the animals that they hunted, or carried off from their neighbours, the Kaafs.3 Finally, similar paintings have been observed on the rocks of California and North Africa.4

Even among the figural representations of prehistoric times, man has found some images of harmful and undesirable animals; but these exceptions may also have a magical import. Thus the negro of West Africa cuts out figurines representing crocodiles, tigers, and the serpent monarchies, which have been made by his black images by totemism, but it is simpler to account for them thus: the negro thinks that, possessing the copy, he will be able to compel the original to go away or even destroy it altogether.

The Kailhas of Australia believe that the rainbow prevents the rain from falling or makes it stop prematurely. They therefore draw a rainbow on a shield, which they hide far from the encampment, thinking that they will prevent the phenomenon by making its image invisible. The natives of Malaysia used as preservatives bamboo sticks carved with representations of the serpents and centipedes which infest the country; but they set the remedy and the scourge side by side by also carving on the bamboo the image of the peacock which devours this vermin. Among the Bismarck, the natives of the Shan States use the concept of a plant two heads, which has the aim of having the gods near oneself and being near them were frequently combined by placing religious images on objects of everyday use—jewels, pendants, whips, clothing, weapons, tools, vessels, fish, seals, and coins. The discovery and interpretation of which have contributed so much to our knowledge of the principal ancient religions. For a still closer combination the faithful engraved the portrait or the symbol of the god on their very bodies. Tatting has enabled man to assume this
Durkheim has even extended this formula thus: "Anything that affects an object affects also whatever has any relation of proximity or solidarity to that object."

As a general rule, the portrait of an object is supposed to give its possessor control over the original. This is the belief of savages, who usually refuse to be photographed or sketched, and who in nearly all countries make use of this kind of spell to increase the influence of their magic. The idea of using a relieving saporce which have come down to us are perhaps the figured representations discovered on the walls of the grotto of Niaux (Ardeche), where we find figures of men with back arrows. We have here, combined with the solidity of the image, the idea that the realization of an event may be brought about by simply sketching it. According to the practices of the Middle Ages, when one wanted to wound, paralyze, or kill an enemy, it was sufficient to make a figurine more or less like him, have it blessed by a priest on some pretext, and then prick it with a needle in the heart or in a certain spot. It was desired to harm the original. Similar spells were in use among the Chaldeans, Egyptians, Hindus, Greeks, and Romans. They are also found among most uncivilized peoples who employ the arts of black magic.

The same idea of artificial solidarity is found in ex-votos, where imitations of legs, arms, other organs, and even of whole bodies are placed near sacred images by believers who have been granted or are praying for the cure of certain ills; in one case the donor hopes that, on account of this proximity, the god will act on the injured member through the medium of the image; in the other, the desired effect having been obtained, he expresses his thanks to the deity by offering up the organ, of which the deity has already in a sense taken possession by expelling the malady. These same images, which abounded in the temples of Aesculapius and other gods of healing, are found on the continent of Europe, without any modification of material or form, even in the smallest chapels of Roman Catholic rural districts. Often the possession of the image is sufficient to ward off illness and all kinds of calamities. Each image has its special charm; some guard against fever, others against plague, others against lightning, the pangs of childbirth and thus shot, and so on. There are even some which show where lost objects may be found, as, e.g. certain of the Congo fetishes. Some have still wider scope, as talismans for appeasing fate and mastering destiny.

In Central Africa is the promised land of fetishism (g. v.); yet the negro, according to a statement made by Albert Réville, which seems to be well founded, distinguishes clearly between fetishes, which he believes to be inhabited by a spirit, and amulets, which he wears about his person, but does not worship, even when they reproduce the form of a living being. Schoolërt also speaks of domestic fetishes in human or animal form found in the huts of the American Indians, but they were more of the nature of talismans, for they were not worshipped in any way. We may place in the same category the amulet of the Antilles, i.e. figuration of wood, stone, or bone, representing fish, turtles, lizards, serpents, and even men. These were so numerous at the time of the discovery of the Antilles that the Benedictine monks who founded them. In this, however, Columbus boasted of having destroyed single-handed more than 170,000 of them at Hayti. To the same class belong the teraphim of Laban, which Rachel concealed in the camel's furniture (Gen 31:28-34) and the statuettes which abound in ancient tombs from Aegean times to the end of paganism.

Large statues are as highly prized by communities for their magical services as small ones are by individuals and families. The desire to possess them frequently gave rise to armed conflicts, which took place as often between the cities of antiquity as between the towns of the Middle Ages; the desire was not so much to have the monopoly of paying homage to the divinity or the saint as to gain possession of a talisman of repute. This is proved by the bas-reliefs which in the incised sometimes received, either to punish the original for having refused a demand, or to compel him to fulfill it. It is not only in the Congo that nails are hammered into the sacred image to command its attention.

In a church in Louvain there was until quite recently an old statue of Christ, the red velvet robe of which used to bristle with pins. Now worshippers stick their pins into two contours placed at the feet of the image, over which is the inscription in French and in Flemish: "Please do not stick pins into the robe." This practice, however, may be explained in another way: it may be a case of getting rid of an illness by ridding it into the image, or of removing the cause of pain by pleasing it or by passing it in another way on the image lines which have been in contact with the injured member. Fraser, following Mannhardt, gives sufficient evidence in his Golden Bough of cases of fertility cults among savage and barbarous populations, having manufactured an image or a manikin representing the spirit of the last harvest and to its destruction and burial of the image the spirit is supposed to come to life again. This is the sort of thing we have seen in Egypt, and it is just such a thing that we are told of the Grecian cults at Athens where a statue of Dionysus was vanquished, it is true, for a year, and sometimes for longer periods, if the citizens were ever so sparing in their donations.

Just as the copy procures the services of the original, it may replace it on every occasion; the offering of the image instead of the reality thus becomes both an attenuation and an extension of sacrificial rites. Thus the Egyptian offerers, in the temples of the gods, offer them the offerings intended to maintain indefinitely the posthumous existence of the deceased, or depicted experiences that they would like him to be able to continue or repeat; they even added figurines representing his wife, slave, and workmen so that in the life beyond the grave he might have all the co-operation that he enjoyed on earth. It seems now to be admitted that this was also in many cases the aim of the bas-reliefs and paintings decorating the tombs of Thebes and ancient Greece.

3. Idols, i.e. conscious and animated images.—The talisman, the fetish, and the idol form an ascending scale. The talisman is a material object endowed with marvelous properties, either because of its nature or of some magical operation it has undergone, or because it is invested with supernatural properties by some external Power. The fetish is a talisman in which resides the spirit that gives it its power. The idol is a fetish representing the supposed form of the spirit dwelling inside the image.

Idols are formed in various ways. (1) By the natural association of natural objects with the human features which they resemble, e.g. the rocks resembling human beings worshipped by Negros, Pijjans, Chippewaans, Lappe, etc. In all peoples inhabiting hilly countries—not to speak of other similar ludi naturae. (2) By forgetfulness or ignorance of the significance originally attached to an image. This is the most ordinary form of idolatry. In most cases, it is only a question of the transfer of an image from one cult to another. Sometimes belonged the teraphim of Laban, which Rachel...
and he gives several examples of it: the child Horns, who becomes among the Greeks the god of silence, because he holds his finger to his lips; a Farnese Bull, or bull's head on a column, which formed the prototype of Cacus slaying the three-bodied Geryon, etc. Examples of legends which originated in misunderstood images are no less frequent in medieval Christianity. It is asserted that the stories of cephalophorous saints (i.e., saints who are pictured with their heads in their hands) had their origin in the figured representation of their decapitation. The martyrs and saints were in this way transformed into objects of awe and adoration. Thus in the bas-reliefs of pagan sarcophagi are too numerous to be quoted. By simply manufacturing an image representing a superhuman being, the artist, choosing his subject either according to his own taste or in obedience to orders, may conform to tradition; but it is the popular voice alone that ratifies and sanctions his work. Sometimes the idol is an ancient fetish of wood, stone, or brass charged to the worshipper with some magical power. By the supposed command of the divinity whom the image represents. In the Antilles, the tree in which a spirit dwelt revealed to the sorcerer how to set about manufacturing a statue with the wood of the tree which the Corinthians, in compliance with the command of an oracle, had worshiped under the name of Dionysus. In France, Italy, Spain, and the East there are frequent examples of images of the Virgin which are said not to have been made by the hand of man. We might mention in passing the Buddhist legend that the portrait of Maitreyana, the future Buddha, was drawn by an artist temporarily transported into the special division of Paradise where Maitreyana was awaiting the moment to descend on earth. Among the Greeks the same reputation was enjoyed by many of the most venerated statues, including the palladium in the Acropolis at Athens, representing the protectress goddess of the city. By means of some magical operation. Among the Negroes of the West Coast there are regular shops for fetishes and idols, kept by sorcerers. The purchaser makes his choice, and the sorcerer who causes the spirit to descend into the idol. Among the New Zealanders, the priest makes the souls of the dead pass into statues which he shakes up and down as if he were rolling a sleeping man: if the operation is unsuccessful, the soul may pass into the body of the officiating priest, who then falls into convulsions. In Finland a kind of doll, or puura, made out of a stick and some rags, is carried nine times around the house and then burned. 'Live, Parru, the puura then begins to live, or, rather, a spirit comes and dwells in it. Towards the end of classic paganism, the operation was more complex, but its nature remained the same. According to Anned (Inscr. der. Rel. v. 293), Hermes Trimest- gius speaks of it in the following terms:

'To unite, therefore, a certain art those invisible spirits to certain statues which were none other than the animated bodies, dedicated and given up to those spirits who inhabit them—this, he says, is to make gods, adding that men have been deceived by this art.'

The last upholders of paganism met the taunts of the Christians with the reply that they did not worship the bronze, gold, or silver of the statues, but the divinities that had passed into them on consecration (Aug. de Civ. Gent. vi. 15; adu. Gent. xiv. 8). Nevertheless, an explanation is needed as to how this unlimited multiplication of the person of the divinity, and the belief in his actual presence in each of these images, could be reconciled with the unity of his person. Often, too, in the cults of the偶像, we are in the domain of things sacred, where a lack of logic is overlooked, or, rather, a particular logic is admitted which applies the principle of contradiction in a different way from the classical logic. According to a rudimentary idea, a superhuman individuality may be doubled or multiplied ad infinitum, and yet remain an unbroken whole in its original type and in each of its manifestations. II. HISTORY.—A favourite theory among 18th century theologians and philosophers was that idolatry was a degeneration. Man was supposed to have begun with a very high and pure idea of the divinity. Then, desiring to have a material picture of his deity, he represented him by the noblest and most elevated thing that he knew—his own image. Gradually he came to regard these symbolical images as real and to attribute to them individualities. As early as the time of the author of Wisdom (13:26) it was held that idols were originally the images of deceased ancestors; and Herbert Spencer has revived this idea. It may be right to show, however, that history, pre-historic archaeology, and ethnology are agreed in giving an entirely different explanation of the origin and evolution of idolatry. Undoubtedly there may be found in more than one religion periods of decadence in which idols, which had been more or less outgrown, re-appear in the worship. Thus, Judaism, which had shaken the very foundations of idolatry, judging from the quasi-philosophical doctrine of its founder, re-installed the ancient idols of Hinduism and even of Taustism, merely surrounding them with a new mythology created specially for them. But these are cases of inflation or retrogression, not of logical and spontaneous development.

Strictly speaking, idolatry is neither a general nor a primitive fact. It was entirely unknown in India in Vedic times. We have to come far down in the history of China and Japan to find any traces of its development. It was not practised by the nomadic tribes of the Semites. Among the Jews it appeared only in exceptional cases (e.g., the Golden Calf and the Serpent, Exodus 33:4). Caesar de Bell. Gall. vi. 21) and Tacitus (Germ. ix. x.) assert that there were neither temples nor images among the Teutons. In Rome, according to Varro (Augustine, de Civ. Del. v. 21) the Romans lived for 17 years without representing their gods by images. Even among the Greeks we find scarcely any traces of idolatry in the time of the Peloponnesian War. The question is whether this absence of idols is due to the fact that these peoples were too spiritualized a conception of their gods to give them material forms. It will be sufficient answer to note that idolatry is equally unknown to most of the peoples who are still on the lowest rung of the social ladder—Bushmen, Hottentots, Fugisians, Eskimos, Akkas, etc., who are at the first stages of intellectual and religious development. This seems to have been the mental condition of mankind up to the period of which we have just spoken. Even
among the nations where idolatry has been pushed to its extreme, the Egyptians, Chinese, Greeks, and Hindus, it came into being only with their progress in the arts of civilization. In the case of the aborigines of the New World, while idolatry flourished in the civilized States of Mexico and Central America, it was encountered but rarely among the savages of the two American continents. Laistian recognized this fact as early as the 17th cent.: "We may say in general that these people have no idols." In Japan, idolatry was equally unknown before the spread of Buddhism. Even to-day, broadly speaking, Shinto has no idols. With a few exceptions, the pictures of the gods sold at Shinto shrines in the present day are owing to Chinese or Buddhist influence. But, as the same author shows, this is simply due to the arrest of development which made itself felt, more than a thousand years ago, in the ritual as well as in the theology of the old national religion of Japan.

This absence of idols from Shinto is not owing, as in Judaism and Islam, to a reaction against the evil caused by the use of anthropomorphic pictures and images, but to the low artistic development of the Japanese nation before the awakening impulse was received from China. It indicated weakness rather than strength."

We may conclude, then, that idolatry is but a step in religious evolution, and that it even represents a step backward. From the time of its first appearance onwards, man appeals to art—or, rudimentarily, the attempt may be—to aid him in giving material shape to his religious ideal. Several authors have given reasons of religion that the plastic arts originated in the service of religious or magical ideas (see Amy, vol. i. pp. 817-827). The oldest images that have been discovered are the sculptures and paintings mentioned above, which go back to the rein- deer period, in the second half of the quaternary age. For a long time before that, man had probably imitated the attitudes and movements of the animals he wished to capture or cause to multiply. Then it suddenly dawned upon him that approximate images of them existed in certain fragments of stone, bone, or wood, or in some seed or shell. In his magical excitations he may already have become familiar to his infantile imagination seeming like living beings, and for this purpose he naturally employed the natural or chance products most favorable to his illusion. He would thereby increase the resemblance by clamping touching up the object. Examples of this have been found in the primitive sculpture of various entirely different peoples. The next step would be to carve, or directly manufacture with the help of suitable materials, the image which he wished to possess and utilize. The fig, represents an object, now in the Oxford Museum, which was used as a charm by seal-hunters in the Queen Charlotte Islands. It is simply a pebble roughly resembling a seal, but sufficiently like it for the natives to have tried to increase the resemblance by scratchings in the eye, mouth, and nostrils. It was probably a similar idea that inspired the first figured representations of the superhuman beings whom man desired to have within reach to be able to invoke the intercession of the gods. Among the Chinese, it was the Q. G. K., the way of the man, which is known by the expression "Le Religions chinoises, Paris, 1889, p. 182. Among the Japanese, W. G. Astor, Shinto, the Way of the Gods, London, 1901, see also M. Revon, "La religion japonaise," Paris, 1905, p. 221.

Mysterious forces which he conceived of as being, on the one hand, embodied in certain natural or artificial objects, and, on the other, situated at the very source of the phenomena of nature. The first image which seems to have been formed was that of real worship occurs long after the quaternary age. These are the rudest sculptured female figures in the caves of Moreno in France, found side by side with the representation of an axe, just as in the pre-Mycenaean pictures discovered in Crete. As a matter of fact, statues of women have been found belonging to the reinder age, with the abdomen, breasts, and hips exaggerated out of all proportion; but these very probably represent pregnant women—a magical means of ensuring the increase of a tribe. At any rate, it is certain that man began at a given moment to make his fetishes in the form of the spirit which he believed to dwell inside each one. Examples of the transition from fetish to idol may be found among the most widely differing peoples. The first step seems to have been the representation of upright stones or more or less conical stones, found among the aborigines of India, the tribes of the Upper Nile, the Ostkans of Siberia, and in some small tribes of Oceania and North and South America—note to speak of the ancient populations of Western Europe. Elsewhere the natives set themselves to manufacture a kind of doll. The idols of some of the Siberian tribes consist of skins stuffed with grass. The Cree of the United States worship bundles of sticks topped with a head made of rags. The Brazilian sorcerers make idols out of calabashes which they set on a stick and bore with a hole to represent the mouth. In the Society Islands, fragments of columns dressed in native costume are worshipped. In the Fiji Islands, the natives decorate conical stones with a girdle and assign a sex to them. In the Deccan, the head at the top of the figures is represented by a round mark painted red. Among the Indians of Virginia, a head was carried at the top of the staff, as is seen in a curious illustration in Laet's work. The head once formed, the rest must have followed rapidly. Arms and legs still joined to the body were sketched, and then finally these were separated off to give them the necessary appearance of life and action. These facts are nearly all given in Lord Avebury's The Origin of Civilization, so it is not a little surprising to find, even in the seventh and last edition (London, 1912, p. 284), the following assertion: "Fetishism is an attack on Deity. Idolatry is an act of submission to him, rule, no doubt, yet humble. Hence fetishism and idolatry are not only different, but opposite; so that the one cannot be directly developed out of the other."

As a matter of fact, fetishism is a direct antecedent of idolatry, and is everywhere co-existent with it. The fetish and the idol are both conceived of as the body of a spirit; they are used for the same purposes and employed under the same conditions, except that idolatry lays more stress on the anthropomorphic, or rather zoomorphic, conception of the divinity, and so lends itself to a more accentuated development of the cult. There exist, on the one hand, domestic idols, and, on the other, tribal or village fetishes. There are even fetishes that fill a still higher role, e.g. the black stone of Pessinus, which represents the Mother of the Gods in the Palestine temple. No occurrence is found of an intermediary state between fetishism and idolatry; on the contrary, the history of art makes it clear that idolatry is the direct and immediate outcome of fetishism. Nowadays this continuity more evident than in Greece, from the thirty stones of Phæa, which in..."
the time of Pausanias (vii. xxii. 3) were regarded as the most ancient images of gods, down to the masterpieces of Phidias and Praxiteles. Among the first idols, representations of animals or monstrous proportions, as is still the case with the uncivilized peoples of to-day. All that can be maintained with certainty is that the tendency to invest supernatural beings with human shape increased the growth of the growing conception of the personality as a type of emboiled manhood. At the same time the animals which originally represented these beings did not entirely disappear from iconography; they became the companions or slaves of the divinities whom they used to embody, as, e.g., the owl of Athene, the eagle of Zeus, the hind of Artemis, the dolphin of Poseidon, and the dove of Aphrodite. In other cases, the bestial or reptilian forms have been left to evil spirits, the enemies of gods and men; examples of this are too numerous to be mentioned here. A third combination has helped to give rise to a new type, sometimes with a human head on an animal's body, sometimes with an animal's head on a human body. The Egyptian pantheon is formed almost entirely of these curious figures, and they are found in nearly all ancient and modern forms of polytheism. Peoples such as the Egyptians, Assyrians, and Chinese, who had left barbarism far behind, undoubtedly believed in the actual existence of such monsters. Their written traditions testify to this belief, and traces of it are found even among French authors of the Middle Ages.

We must remember, however, that, when the sculptor in ancient times represented Janus as a god with three faces, to mark his faculty for seeing the present, the past, and the future all at one time, he was probably as fully conscious of making a pure allegory as the sculptor who in Christian times symbolized the Trinity by a three-headed being. It is questionable whether the Greeks, or before them the Phoenicians, when reproducing the image of a spirit with two pairs of wings, the one raised and the other lowered, really aimed at representing perpetual movement and not at simply reproducing superhuman beings who for the Assyrians had an actual existence. Again, it is a most point whether, when the Buddhists assigned to their future Buddha, Avalokiteśvara (q.e.), an infinite number of arms, it was really, as they say, that he might the better save all his creatures, or whether it is not rather an expressive imitation of the numerous pairs of arms attributed to the Hindu Siva.

We must, however, take into consideration another factor, viz. the possibility of the fusion of two types. There is a law in symbolism which holds good for all kinds of images. When two signs or two plastic types in any given neighbourhood express the same or similar beliefs, they are inclined to amalgamate, if not to unite, and form an intermediate figure. An attempt has been made by the present writer 1 to show how symbolic images differing as much as the wheel, the winged globe, the rose or the lotus, the conical stone, the cross, or the key of life, the cuneiform star, the sacred plant, and even the human outline, have changed their forms and passed into each other, making composite types, in the different features of which the various originals may be recognized. These phenomena of plastic hybridization are rarer in the case of the representation of living creatures, but even here some examples are found. Dusoir, referring to the totems in use among the Indians of North-West America, says:

2 In The Migration of Symbols, London, 1894, ch. v. and vi.

"When the descendant of the "hawk" carries off a wife from the "pigeon" tribe, a totem representing a fish with a hawk's head for a time keeps alive the occurrence, and finally becomes the deity." 2

This emblem is just as odd as the hawk-man who represented Horus among the Egyptians.

We have already reckoned upon various types which continue to exist after the disappearance of the worship to which they originally belonged. In present-day iconography, we may still find representations of subjects which have originated among the sculptures of ancient Chaldaea, five or six thousand years ago, and which have come down to us through two or three intermediate religions and still retain at least a symbolic value. Such, e.g., is the sacred tree between two monsters facing each other, which has passed, on the one hand, to India, Persia, China, and Japan, and, on the other, to Greece, Rome, and the Christian countries of the West, where sculptors used it in cathedrals to represent the tree of the Garden of Eden. The transmission of images does not necessarily imply the transmission of the beliefs to which they were originally attached. When in a new religion it is desired to represent personages or traditions already figurative yet been expressed in plastic art, the artists naturally treat the subject on the principles of the only art within their reach. In the catacombs, Christians did not scruple to use, the taming the wild animals with his lyre, to symbolize Christ teaching men. Psyche being teased by Cupid came to represent the soul guarded by an angel. The ram-bearing Hercules, who originally figured in the sculptures of Asia Minor as a priest bearing the sacrificial lamb, furnished the essential Christian type of the Good Shepherd, and we know from the sculptures of Gandhāra that this subject passed into Buddhist India about the same time. 2 The first representations of the Heavenly Father as an old man seated in a cathedra were inspired by certain statues of Jupiter; it is even possible that their prototype may be found among the Assyrian images of seated divinities which occur among the rock sculptures of Maltai.

Again, we have to reckon with the deformations which in the long run always appear in the reproduction of images. It is somewhat difficult to recognize in the classic type of the thunderbolt two tridents soldered together at the base. Joachim Menant 1 has shown that the Greek Sagittarius has its prototype in the winged figures in the Assyrian palaces, which became among the Persians the image of the mythical bull Gāyomart, half transformed into an archer; and, by a series of easily discernible modifications, the East of Apollo has become the simple eponon found upon coins. Among the paddle carvings exhibited in 1872 at the British Association for the Advancement of Science, there was a crouching human figure and next to it a crescent placed on the point of an arrow. No one who did not possess the whole series of intermediary figures could possibly have imagined that the latter was the outcome of the former. 4

Inversely, there are examples of the transformation of a linear image into a human figure. The sacred baetyl which figures on the coins of Bybios reappears, modified in form through contact with the Egyptian cuneiform, in certain representations of Astarte and Venus which depict these goddesses in a conical form with their elbows close to their sides and their forearms outstretched.

It must be borne in mind that a religion, more

especially when it has just superseded another, has often to tolerate the worship of images and even of sanctuaries belonging to former gods. When it is unable to destroy them altogether, it finds that it is more advantageous to appropriate them. By adopting the Kabarmam, Constantine wittingly chose an emblem which could be accepted both by the worshippers of Jesus and by the worshippers of the Sun. Even today, Leroy-Beaulieu speaks of an old Buriat idol, preserved in the Monastery of Possokh on Lake Baikal, which has been transformed by the monks into a staiine of Saint Nicholas, and is adored by men, human or pagan and Christians alike. The Buddhists are still less scrupulous about appropriating the images of the religions which they have succeeded in suppressing by the spread of their propaganda; the solar wheel becomes the wheel of the Law; the feet of Vishnu are transformed into the feet of Buddha. When the Buddhists gained possession of the sanctuary erected at Bachelot by tree- and serpent-worshippers, they simply appropriated the Isis-relief for their own religion by attaching to each scene an inscription giving it a Buddhist interpretation. The followers of Hinduism acted in the same way when they had succeeded in expelling Buddhism from India. It is sometimes rather difficult to judge whether the image of a superhuman being should be considered as an idol or as a magical or purely commemorative representation. Even the people who use them are not always clear, the on this point. When the priests of Hierapolis explained to Lucian (De Dea Syria, 34) that they had not placed the Sun and the Moon among the images of the gods in their temple, because he was accompanied see and worship them directly, it is possible that, at least to the priests, divine images were merely representational signs. But, when the Tyrians, besought by Alexander, chained up the statue of Baal Melkart to keep the god from escaping to the enemy’s side (Curtius, iv. iii. 21 ff.), it is evident that they considered it and treated it as an idol. The same idea recurs in Sparta, where, according to Pausanius (iii. xv. 5), the statue of Ares was chained up to prevent its escaping.

Speaking generally, we may include in the category of idols all images that open or close their eyes, gesture, utter forth sounds, or move on their own or on other’s command, or converse with their worshippers. On the other hand, it would be an exaggeration to maintain that every image worshipped or even venerated is necessarily an idol. Nothing is more natural than to set up in a conspicuous place the images of the beings loved or esteemed, and to take as a personal insult outrage perpetrated on them. Later, the image is regarded as an intermediary in all dealings with its original, and it is invested with the supernatural faculties attributed to the original. This tendency is co-existent with the mental state, mentioned above, which confuses the copy with the original and leads to investing the images with a personality of their own. In the time of Pericles, Stilpo was banished from Athens for having maintained that Phidias’s statues of Athens and of his image of the goddess herself (Diog. Laert. ii. 12). In Buddhist iconography, Gautama’s entry into Nirvana was represented at first only by an empty throne or a Footprint of Buddha. Gradually his image was introduced, and it finally achieved innumerable miracles and became a regular object of worship. In order to escape from these superstitions certain monarchs, religions, such as Judaism and Islam, have entirely forbidden the representation of the human figure or of any animate being.

**Gorbl d’Alvilia**

**IMAGES AND IDOLS (Dgegna).** It was thought a few years ago that Dgegna religion was animistic, that the Mythological figure worshipped in certain deities in all forms, and that these deities in all forms, and that with a sublime simplicity they confined their worship to trees or stone monuments in which the divine spirit was supposed to take its residence, or to be placed in sacred spots as single stone seals, an empty throne, for the god to sit on, unseen by his worshippers. This view, however, always seemed rather improbable to some observers, who were convinced that the phenomena of religion being prehistoric, the same in every country and all over the world, the Dgegna would eventually be proved to have been no myths so lofty in their ideas as the “animistic” view would have us believe. This has come to pass; Dgegna now know that the Dgegna made idols and venerated them as did every other people of their time. Whether D. G. Hogarth is right or not in claiming (EBE i. 148, 147, EBS ii. 249) that the Aryan worshipped only two deities, Mother Rhea and the son Zeus, or whether we should rather say that these were the two primary objects of worship, it is at least probable that the “Sun” and the “Mother”, which he postulates was accompanied by the veneration of spirits of wood and water, sky, sea, and land, as in every other country of the world. In later Greek religion there is many a trace of these Hellenic worship; and, though we may say that Atenism, Dityism, or Britonartis of Crete is but another form of Rhea, yet we may doubt whether the worshippers themselves thought so. They surely would have considered that they were venerating different goddesses. And in the representations of deities which we have on seal-rings, etc., we do doubt see different forms of the goddess. We have representations, too, of deities, like the Tanuris-headed water-carriers, no doubt deities of streams, who must be regarded as, if not gods, at any rate supernatural beings worthy of worship and distinct from the two primary deities.

We have not, however, an idol of other gods than Rhea and Zeus, although we may yet find them. The few images of the gods that have been found in the Cretan and other excavations are almost exclusively female, and represent different forms of the great goddess, who is usually associated with the snake, no doubt to mark her chthonic character. The faience images of her, or of various different forms of her (or of different but closely-related goddesses), are well known. They are found at Knossos (EBE i. 138) are well known. One figure has on its head a spotted cat curled up. This is a hienar attribute of the goddess, and may perhaps connect with Egypt. (Ae a we to see by connection also the panther of later Greek iconography?).

The ruder figures of the goddess found at Knossos and Gournia, with their accompaniment of votive clay trumpets, are well known. They are common with the equally rude ‘owl-headed’ figures from Mycenae, also representing a goddess.

*Primary Rhea and Zeus certainly were, one only doubt if they were the sole objects of worship. Such monarchism is, after all, an artificial development of later times; the actual man is polytheistic and idol-making. Monarchism is a product of high spirituality. We have now no more spiritual beings with the same at all a spiritual people: it is highly probable that they were nothing of the sort; and, if Egyptian and Hittite worshipped gods, it is probable that Agwe did so too.*
One cannot say more as yet of Minoan iconography; but more light will doubtless reach us with the further progress of study, and we may be able to distinguish between different forms of different deities. For, though one may consider that Hoehn's fundamental characterization of Egyptian religion, its special worship of Rhea and Zeus, is without doubt correct, yet one may doubt whether their "Dual Monothism" excluded all other deities. It is certain, however, that the figures of the goddess and the god were not included in the representations of deities, and that the representation of the human form which we have in fresco and other materials are really meant to portray men, and that the representations of the human form which we have in fresco and other materials are really meant to portray men, and when many are intended to shadow forth the god's head. One would expect, as one obtains in the case of Rhea and Zeus, complete anthropomorphism.

The theomorphic deities look exotic. The likeness to Thesus may have some special reason of which we are ignorant. Can it be referred to the most ancient days, when the Ægeans first came from the Nile-delta (as they probably did) to Crete? They might have brought with them a memory of the great hippopotamus, a beast associated in their minds with water. This is but a suggestion. The cat on the head of the Knossian goddess points, as we have seen, to Egyptian influence, and the sphinx has certainly been traced in their art. One cannot say more as yet of the Minoan religion, and the development of the Minoan art is not contradicted by the Greek mosaics and sarcophagi, since we know from the treaty of Kames II. with king Khattusil of Khatti (1279 B.C.) that the Minoan religion is not contradicted by the Greek mosaics and sarcophagi.

I. R. HALL.
and changing phases precluded the possibility of such a limitation in his case. The god of lightning must surely leave his temple, since he is seen riding upon the storm-cloud, while the true dwelling of the Sun-god himself must obviously have been in the abyss of waters below the earth until he was translated to the Southern heaven. We have no means of dating this association of some of the greater gods with the Sumerians. It is possible that if the Sumerians had passed this stage of thought before their arrival in Babylonia, and also that they found some of the ancient religious centres of the country already associated with sun- and moon-cults and with other divisions of nature-worship. However that may be, it is quite certain that during all subsequent stages of Babylonian history the divine images never degenerated into mere symbols of divinity. They continued to enjoy a very real, though mystical, connection with the gods they represented. Without consciously postulating a theory in explanation of his belief, the Babylonian never lost his faith in his god's actual presence within the image, and he found no difficulty in reconciling such a localization of the divine person with his presence at other cult-centres and with a separate life in the heavenly spheres. It is actually the case that even if we refer to a few historical examples of image-worship taken from different periods.

Of the Sumerian epoch it is unnecessary to speak at any length, as Gudea's cylinder-epitaph proves the sacrosanct character of a city-god's image even in the latter half of the period. The elaborate ritual and purification of both people and city, preceding the removal of Ninurta's image from the old shrine at Lagash to the new, are a sufficient indication that the god and his image were still identified. With the rise of Babylon we note the important part which the actual image of Marduk played in each king's coronation-ceremony and in the renewal of his oath at every subsequent Feast of the New Year: the hands of no other image than that in Esagila at Babylon would serve for the king to grasp. In the reign of Hammurabi, the real founder of Babylon's greatness, we see the Babylonian's conception of his visible gods reflected in his treatment of foreign images and in the limits set to their appropriation. It was not mere professional bootsy, but in order to gain their favour, that Sin-idinnam and his army carried off to their own land and the images of certain Elamite gods. As for the Near Eastern monarch's veneration for foreign gods, it is not argued here that they were assimilated to his own native divinities, but simply that the foreign gods were represented by his own native divinities. The land of Mitanni and Egypt were on friendly terms at the time, and the city of Nineveh was under the former's control. So, when Assurbanipal II requested Tashratta, king of Mitanni, to send Ishtar of Nineveh to Egypt, he consented, and with the image sent a letter which throws light on the relation which the goddess was believed to bear to her image.

In the letter the goddess Ishtar herself is ready to declare her intention of going to Egypt: Thus saith Ishtar of Nineveh, the lady of all lands. 1 unto Egypt, thus will I go.2 Tashratta exhorts Amenehopis to pay her due honour and to send her back, saying: Take her (her) and she is gone. Indeed, in the time of my father, the lady Ishtar went into that land; and, just as she dwelt (there) formerly and they honoured her, so may you also honour her ten times more than before. May my brother honour her, may he allow her to return to her native land, and there no question of the image being a mere symbol of the goddess; the image is the goddess herself.

It is clear from Tashratta's letter that this was not the first occasion on which Ishtar had paid a friendly visit to Egypt. Indeed, we may infer that, at any rate at this period, the custom was not uncommon for the image of the goddess to accompany the deity himself to be sent on a ceremonial visit to a foreign country, where, if properly treated, he would, no doubt, exert his influence in favour of the land in which he was staying. And this conclusion explains the great value that was always set on the capture of another race's gods. The captured images were not valued simply as symbols of victory; they constituted the conquering nation's chief weapon of offence. Not only were the conquered deprived henceforth of their god's assistance, but there was a very great probability that, if the captured image was pleased with its new surroundings and the deference paid to it, it would transfer its influence to the side of the conquerors.

This explains the care with which captured images were preserved both by the Babylonians and by their more civilized neighbours, and the joy which marked any subsequent recovery of them. It is needless to cite instances; the most striking is Ashur-bani-pal's recovery of the goddess Nanna's image from Susa in 630 B.C., by which Elamite king had in the reign of his father Sargon made a tour of the Near East some sixteen hundred and thirty-five years before.1 During this long period the Elamite king had lavished over the image, for their civilization and their religious cults had much in common with those of Babylonia. It is probable that, even when a barbarous nation who was conquered, and whose sacked, its divine images were never destroyed, but carried off and preserved in the temples of the conqueror. This close connection between the god and his image endured into the Neo-Babylonian period, and Nabonidus' offence in the eyes of the priesthood, which rendered Cyrus' conquest of Babylon so much more easy, was simply the fact that he ignored this feeling. With his natural instincts blunted by archeological study and a philosophy of civilization in these new regions, he allowed the images to be destroyed that were sacred to the gods of the conquered peoples.

Far less close was the connexion between a Babylonian deity and his sculptured symbol or emblem, by means of which his authority or presence could in certain circumstances be invoked or indicated. The origin of such emblems was not astrological, nor is it to be sought in liver-augury; the emblems were not derived from fanciful resemblances to animals or objects, presented either by constellations in heaven or by markings on the liver of a victim. They clearly arose in the first instance from the characters or attributes assumed by the gods in the mythology; their transfusion to constellations was a secondary process, and their detection in liver-markings resulted not in their own origin, but in that of the omen. The spear-head of Marduk is a fit emblazon for the player of the demon of chaos; the style or wedge of Nabu suits the god of writing and architecture; the lightning-fork was the natural emblem of the weather-god, and the lunar and solar disks for the moon-god and the sun-god. Some divine emblems were purely animal, such as the dog of Gula, the walking bird of Bau, the scorpion of Ishkara. In these cases there is nothing to indicate a totemistic origin, and the source of the symbol is not to be sought in one of the gods of the Deep or the Deep, suggests that they
are not to be traced beyond the mythological stage. In the earliest period the emblem of the city-god was that of a lion, and might sometimes symbolize the city’s power, as in that of Nirgiris of Lagash, represented by a lion-headed eagle grasping lions. Images of divinities, when adopted as symbols of the city, acquired a new and independent significance, ensuring that the monument was under the protection of the deities to whom the sculptured emblems belonged. Legal documents concerning ownership of land were protected in this way from the law courts and brought the owner into contact with a similar object that the later Assyrian kings carved at the head of their stele the emblems of the chief gods of their pantheon. Divine emblems, in addition to the figures of patron deities, were also engraved upon cylinder-seals, and both were, no doubt, intended to ensure the owner’s protection.

Another class of animal images entered very largely into the Babylonian religious scheme, and, though not the emblems of gods themselves nor the objects of direct worship, are entitled to be referred to in this connection. The colossal lions and winged bulls which flanked the doorways of Assyrian palaces and were borrowed for the Persian palaces at Persepolis, the enameled lions of Sargon’s palace at Khorsabad and of the Sacred Way at Babylon, and the brick bulls and dragons of Ishtar’s Gate were not merely decorative, but symbolized protective influences under animal forms. Texts of earlier periods also describe the lion, the bull, the raving hound, the serpent, the dragon, and other mythological monsters as characterized by religious protection. In two instances at least, the lions of the Gates of the Sun on whose backs their pivots rest, we may undoubtedly trace their origin to the noise of the creaking gate; and it is probable that the lion, rather than the serpent, was the more important factor in determining the outward form of many mythological creations, whose protective qualities were portrayed in images which were often strange and ferocious. Other Babylonian images of regal form represented evil and not beneficent beings, and spells engraved upon them were intended to ensure the employment of their powers in the owner’s favour, or, in any case, to his detriment. The clay images of gods, along with those of demons, were also buried near the gateways of palaces and temples to ensure their protection; but these, again, were not objects of worship, but mere images of the flesh and blood-figures. Thus the dances of the Babylonians in sympathetic magic, see MAGIC (Babylonian).

LITERATURE.—In addition to the references given in the footnotes, works dealing with Babylonian religion and cult may be consulted, such as M. JASTROW, Religion Babylonian and Assyrian, London, 1895 f., with Bilderdarstellungen [1901]; R. W. ROGERS, The Religion of Babylon and Assyria, New York, 1905; or L. W. KING, Babylonian Religion and Mythology, London, 1893. For a convenient survey of the religious literature (which has a close bearing on the subject), see O. WEBER, Die Literatur der Babyloniener und Assyrier, Leipzig, 1897.

LEONARD W. KING

IMAGES AND IDOLS (Buddhist).—It would naturally seem as though, of the great religions of the world, Buddhism were the least likely to have developed a system of idol-worship and image generation for images. The doctrine, as it was set forth, in the form of lectures by the Buddha, was essentially negative: it deplored the rendering of any special honour or reverence to himself, made no claim to divine prerogatives or rights, and ignored, if he did not distinctly repudiate and deny, the presence and influence of the supernatural in human society. What he had done in the way of the attainment of perfect knowledge and of achieved deliverance or salvation, every man might do by the force of his own will and his own deeds. Consequently, the Buddha was but to show the way. Each man must travel the road and win the goal for himself, none helping or hindering him in the supreme task. In a system of philosophy controlled by such principles there would appear to be no room for adoration or worship, and no authority to whom such worship might be addressed. Ultimately, however, and after no great interval of time, the tendency to create or conceive supernatural beings to whom homage might be rendered and from whom assistance might be hoped for reasserted itself. Apparently the conception of the deification of the Buddha himself began to take place in the thought of his immediate disciples even during his lifetime, and thus a system in intent and purpose non-theistic, neither postulating nor requiring the divine, became endowed with as extensive and varied a system of idol-worship, which in concrete and visible presentation embodied and satisfied the desire of the worshipper for a substantial object of his adoration and regard.

1. Deification of Gautama himself.—It was upon the person of the Buddha that this reverence and worship concentrated itself; and throughout the entire history of Buddhism the figure of the founder remained central for all art and imagery. The degree of prominence assigned to him, however, varied greatly in the different countries in which Buddhism found a home. In some instances the influence of pre-existing faiths, with their popular deities, proved too strong for the doctrines and principles of the imported creed, and the figure of the historic Buddha was in effect superseded by forms of gods or goddesses, to whom a more sympathetic and helpful rôle was assigned. Theoretically, for the Buddhist, Gautama Buddha is supreme; and in general it is his image that occupies the place of honour in the temples, and is indelibly multiplied in the halls of the monasteries, and in all places where an opportunity offered itself for a work of merit in erecting an image designed to embody in actual concrete form the gentle spirit and teaching of the founder of the faith.

The tendency, therefore, to regard Gautama as more than human, and to endow him with some at least of the attributes of divinity, began to develop itself during his lifetime, and therewith the tendency also to represent him in a spiritual sculpture as an object of adoration. The earliest sculptures, however, do not yet venture apparently to depict him as a man, but his presence is symbolically indicated by the sacred wheel (Dharma-chakra), the Bodhi-tree, the fire, or a dagoba, etc. In the older representations also, the more important figures of the Hindu pantheon retained a place, especially Sakka (Sakra, Indra) with his thunderbolt, who was associated with one of the celestial Buddhas, Vajrapani, and to the end occupied a considerable place in Buddhist legend and tradition. It is not possible to determine at how early a period this desire for concrete and visible por-
traiture of the Buddha himself did in fact find expression in art. Images of him were certainly known to the Chinese pilgrims Fa-hian and Huen Tsiang. Their narratives suggest, if they do not assert, that such images were neither rare nor a novelty. A more or less conventionalized figure also was adopted by the Chinese artists of the Gandhāra and the North-West. Its artistic development, however, was checked and limited by the historical conditions of Gautama's life and character, and the need to preserve a general identity of aspect and feature throughout the wide area to which the Buddhist faith had gained access. The type, therefore, became stereotyped, the conventional and recognized form under which the Buddha was depicted. Almost the only variety permitted to the artist was in the pose of the hands (mudrā) and, to a less extent, the arrangement of the feet. The Hellenic character also was always symbolical, designed to create not noticeable especially in the expression of the face and the disposal of the folds of the robe. In the earliest and oldest representations this is most apparent; in the later there is a distinct approximation to Hindu forms and ideals. The figure thus delineated is that of a young Indian in the garb of a monk, with gentle and thoughtful countenance. In frescoes and paintings the head is often surrounded with a nimbus or halo, the symbol of deity and of the claim to adoration, a feature which is derived from Greek model and precedent. The type adopted was severely simple, and afforded comparatively little opportunity for the development of artistic taste or display of artistic skill. These found a limited opportunity for expression in the figures of the Buddha's disciples and, more widely, in the extensive pantheon of divinities, Bodhisattvas and others, of the Mahāyāna school.

The character of the type was thus determined, and is easily recognizable. From whatever part of the Buddhist world the figure may be derived, the general features are the same, and convey the same impression of calm dignity and untroubled repose. The painter or sculptor had, as it were, the main outline and framework of his subject pre-plotted and comparatively little latitude was admissible in the filling in of details. Three attitudes or poses of the figure are represented—sitting, standing, and lying or recumbent. Within each of these there are varieties of type, which are usually associated with events of the Buddha's life or offices which he performed. The ascetic ideal was maintained in all, and in all the dress and outward appearance were plain and decorous, contrasting strikingly, on the one hand, with the richly ornamented figures of the Bodhisattvas and other divinities, and on the other with the nude statues of the Jainas. The difference in the three attitudes are by no means equally common on the sculptures or in the temples. The sitting posture is most frequently represented in all Buddhist countries. The recumbent figure, on the contrary, is hardly met with in the monasteries of the north.

2. Types of sculptures.—There are three main types of the seated Būdha as

In all of them the Būdha was represented sitting cross-legged, the right foot resting on the left, the soles usually turned up and bearing one or more of the auspicious marks which indicated the Buddha's Buddhahood. The body is clad in the conventional robe of the monk, which leaves the right shoulder bare, and in some examples is very lightly indi-
Gautama Buddha himself should have been preserved. The presentation of face and figure is entirely ideal, and that of a young Indian prince of noble birth, embodying the conception of gentle, thoughtful, deeply mystical and religious character, which tradition associates with the name of Gautama.

3. Ancient images. —The Chinese Buddhist pilgrims never wrote much about the existence of images, which were believed to be authentic and, in some instances, contemporary portraits of Gautama himself. The earliest of which mention is made by Fa Hsien, a sandal-wood image which Prasenajit, king of Kosala, had caused to be carved and placed in the Jetavana vihāra in Śrāvasti in the seat usually occupied by the Buddha, but now vacant during his absence in the Trayastriṃśa heaven. On his return Gautama is said to have recognized the image as a faithful copy of himself. Not long after, the monastery was accidentally set on fire and consumed. The image, however, was preserved unscathed, and later was restored to its place. 1 A second and even more fanciful sandal-wood image about 20 ft. high is described by Huen Tsang, erected by Udayana, king of Kausambi, a replica of which the Chinese monk carried with him on his return home on his body. The royal city was in ruins at the time of Huen Tsang’s visit, but the statue stood within an ancient vihāra, a stone canopy above its head, having resisted, as it was said, every attempt to remove it. This image also had been carved in the Buddha’s lifetime, the work of an artist who had been transported to the Trayastriṃśa heaven that he might there observe the appearance of the Buddha and take note of the sacred marks on his body. The miraculous and bright light shone forth from it intermittently. 2 Mention is made of other images, and, in addition to sacred relics and books, Huen Tsang took with him on his return a considerable number of statues of the Buddha in silver and gold as well as in sandal-wood.

4. Hinayāna school. —With the exception of the figures of the Buddha thus stereotyped in normal and regular form there is no uniformity in the number, character, or disposition of the images worshipped in the different Buddhist countries. No general or comprehensive description which would unite the diverse traditions is practicable. It will be most convenient, therefore, to give a brief account of each of these separately, in regard to the nature and variety of the images recognized, followed by a note as far as possible on the geographical order. The pantheon of the Hinayāna is usually simpler in form, of a more severe and restricted character, than that of the Mahāyāna.

of ivory and wood. Formerly in all Buddhist countries and for many centuries the manufacture of the images was almost entirely in the hands of the monks, who were able to bless and consecrate their handiwork. It is now for a specialized occupation or trade, and the work is done by skilled artisans. Some of the more ancient and famous idols were traditionally said to have been self-produced. The temples also contain frequently a specimen of the sacred footprint (ēripada), to which adoration is paid. Of these footprints the most renowned is the hollow upon Adam’s Peak, held sacred for Hindus, Muslims, and Christians alike, as well as by Buddhists, and explained in accordance with the creed of each as the footprint of Gautama or Siva, of Adam, Muhammad, or St. Thomas.

By the side of the principal image in the vihāras are frequently represented one or more of the Buddha’s chief disciples, especially Moggallāna and Sāriputta, or, with the recumbent Buddha in the nirvāṇa scene, Ananda. They stand on either side or at his feet in attitudes appropriate to the image of the ancient Hindu deities, especially Brahmā and Viṣṇu, are found, usually in buildings (dvaradāla) attached to the vihāra itself, and representations of icons, demons, etc. The image of a Buddha is equal to the images of the gods equally with the Hindu deities. The images of the image, and therefore the representations of the Buddha and other gods, are distributed in a temple the same as the divinity of the temple, and of the Hindu gods Viṣṇu, Śiva, and Ganesa. In the temple of the sacred Tooth also, at Kandy, either side of the central shrine is occupied by images. In the country vihāras, where the worshippers are few in number and poor, the images are often used as a refuge and little heed is paid to them even by the priests or monks themselves.

The sites of ruined cities which have been excavated in Ceylon have supplied many ancient and remarkable figures. It is evident that in former times the concrete representations of the Buddha for purposes of worship were no less numerous than at the present day.

One of the oldest is a dark granite statue of the seated Buddha, 8 ft. high, carved from a single block of stone, believed to be more than 1500 years old, now deserted and lonely in the jungle near far from Anuradhapura. In the rock temple at Polonnaruwa also are three colossal images, that of the Buddha lying at full length, 46 ft. long, the head resting on the right hand on a bolster, and the details of the robe carefully and skillfully rendered; the erect image by the Buddha’s side on a pedestal ornamented with lots of woodwork, high, probably represents Āruṇa, the favourite disciple. Within the temple is a large seated Buddha, carved in high relief, about 15 ft. high, and at the further end behind the altar a similar figure, 15 ft. high, on a pedestal with lion ornamentation, in front of a carved and decorated screen. As a rule, all the great temples and monasteries were possessed of countless images; and numbers of monastic images still exist there, preserved on the ground, or standing amidst the ruins. The greater statue by the side, 10 ft. high, represents King Dutthagamani, of whom legend tells that he caused a golden image of the Buddha to be made, and set up near the sacred B-tree of Anuradhapura.

(2) Burma.—In the monasteries of Burma the principal hall or room set apart for the reception of the images contains usually a large central figure of the Buddha against the further end,
while others stand on either side or are ranged round the walls. Smaller figures are placed on brackets or shelves. The material employed is brick, wood, or alabaster, or, for more costly images, brass, silver, or gold. The process of casting and an image is accompanied by religious ceremonies, and the occasion is made a public holiday. Formerly, and perhaps in some places at the present day also, offerings of silver, gold, and jewellery were made to the image by pious devotees to whom much merit accrued, as their gifts were thus incorporated in the body of the image. Similar offers are said to have been made at the casting of bells for the temple.

The same three positions of the figure are found as in Ceylon, but the seated Buddha is more usually in the ‘witness’ attitude. Kneeling in front of the figure of the Buddha, the two disciples, Sariputta and Mogallana, are frequently represented, worshipping or listening to his words. Gantama’s three predecessors also, the earlier Buddhas of the present age, Kakusanda, Konhamana, and Kasenakan, sometimes find a place, and Dipankara, the first of the 24 great Buddhas, his forerunners. In the larger temples and viharas other buildings beside the central hall are filled with images. Great and important temples like those at Pagan contain monasteries with many hundreds of images of different sizes. These are, for the most part, the gifts of Buddhist laymen, presented as an act of merit. It is prescribed also that the offering of the images must be made in a definite order, first the standing figure, then the seated, and, finally, in the recumbent attitude. In the courtyard of the temple will often be found, as in Ceylon, a demesne of the sacred elephant, with its mats. The steps that lead up to the temple or shrine are ornamented with fantastic figures, in platter or stone, of lions, dragons, and other monsters.

Offerings of incense, flowers, and plain or coloured candles are made before the images, with prostrations and prayers. The more enlightened Burmese declare that worship is not thereby intended, but that the image serves as a reminder of Gautama himself, and excites in their minds similar feelings of reverence and devotion. It is only in the temples of Lower Burma that considerable numbers of images are seen. In Upper Burma few except those of the most important attitude to be found. In these the standing figures in the attitude of preaching are often of great size, some of the Pagan images reaching a height of over 40 feet. A Buddha in marble at the foot of the hill at Mandalay is 25 ft. high; and around the dimly-lit building in which it stands are smaller shrines, the gilt images in which direct their gaze towards the central figure. In Burma, as elsewhere, the recumbent attitude is the least common; but very large figures exist, usually constructed of brick, as at Pagan and Ava. These are often surrounded by the figures of the disciples, or of mythological rulers of the heavens or other deities.

It is comparatively seldom that the images are found in the open air. There exists, however, a large seated statue at the ancient capital, Amarapura, which is judged to be 80 ft. high; small statues are grouped around. At a few river-side places on the Irrawaddy, rock-cut statues may be seen, facing Ava, and a few miles below Prome, some of which are colossal size. Opposite to Pagan and elsewhere, with the aid of bricks, the rocks themselves have been moulded and shaped into the form of enormous Buddhas. These, for the most part, are now crumbling to ruins, and are overgrown with vegetation.

(3) Siam.—The images and worship of Siam are entirely similar to those of Ceylon and Burma, and further description of them is therefore unnecessary.

5. Mahayana school.—In the pantheon and imagery of the Mahayana school new developments of the native character have been introduced. In some forms of the faith and doctrine, Gautama Buddha himself has ceased to occupy the central and most important position; and the sculpture and temple furniture reflects the views of the worshippers, who address his prayers to one or another favourite divinity, and in practice ignores the personality and claims of the founder of the faith. In the result, the Buddhism of some of the northern countries has become endowed with perhaps the largest pantheon in the world. The imagery and cult, however, vary in the different lands, in each of which the introduced worship of the Buddha has blended with the native religion, and more or less completely taken over the native gods to form a composite whole, the characteristic features of which are seen in the figures and images with which the temples are provided. The refined and ascetic type of the image of the Buddha himself is preserved unchanged. The artistic sense of the worshipper, however, finds its opportunity in the variety and lavish adornment of the figures of the divinities around him, whose multiplicity and influence exceed that of Gautama himself to a very marked extent. The source and home of all these developments and varied types, as of the legends and traditions on which they were based, are to be found in Northern India, and especially the districts of the North-West and the border-land of Afghanistan, where the Greco-Buddhist art of Gandhara was responsible for more or less rigidly determined forms under which the principal gods should be delineated. These chief types or classes of images, therefore, which are more or less common to all the northern Buddhist countries, account for the greater detail account may then be given of the features in which the imagery and worship of the different countries vary from that which may be supposed to be the original form, the modifications which have been introduced, or the actual additions that have been made to the accepted figures of the pantheon.

Reference has already been made to the adoption by Buddhism of the principal Hindu gods. These retain their distinctive attributes and appearance in the carved representations and idols. The most ancient images found in India are Buddhist. In the older Buddhist sculpture, however, at Sisachal, and on the Buda relief of the 2nd century a.d., the Buddha himself is not depicted, although the figures of other gods appear. Only in the early centuries of our era do images of the Buddha become common. Their existence at a previous date cannot, however, be disproved; and it would appear most probable that as the attractive centre of worship the Buddha early dispossessed the ancient Hindu deities. Later carvings at Ellora and elsewhere exhibit numerous figures of the Buddha, among which are some of great size. Occasionally a triad is found, in which Brahma and Indra are represented on either side of the Buddha, as if guarding him. This is not rare, and the lesser deities or semi-deities also of Hinduism, as the Nagas, etc., sometimes find a place.

The sacred triad of the Buddha, the Law or Religion, and the Order or Society (Dharma, Dhamma, Sangha) found early and frequent representation, and, although Gautama usually occupied the central place, the relative order seems not to have been invariable. It has been suggested indeed, perhaps without adequate justification, that in this triad Buddhist thought first gave concrete expression to its feeling of reverence to the person of its founder,
and the personified doctrine and order in which he embodied and perpetuated his teaching. Ancient examples have been found at both Gayā and elsewhere.

The Sañjā is usually depicted as a male figure with the right hand resting on the knee, and holding a lotus flower in the left. The hands, the drapery, and the lotus in the hands of the Buddha and the Buddha image itself in India (in Orissa and western Bengal), a solitary survival and witness to a faith once widespread and influential throughout the Indian subcontinent. In some of these districts images of the Buddha are common, before which animal and other sacrifices are offered by the lower classes of the people, and in parts of Bengal a temple stands in nearly every village. A figure of Buddha, recently discovered at Daula in Orissa, exhibits a position of the arms and hands which seems designed to be a compromise between that described above and one or more of the medallions of the Buddha. The hands are placed on the knees, the right pointing downwards; the other, upturned to the level of the head, bear a rosary and a bell in the left hand, a characteristic of the Daksinakuru, or district to which the Kachcheras are assigned. The actual image of the Buddha is, or was, worshipped as Dharma.

In the elaborate and extensive pantheon of the Mahāyāna the favourite figures are those of the Bodhisattvas (q.v.) and the Dhyānibuddhas, none of which find a place in the south. The general type of the Buddha is that of a young Indian prince, with turban or crown on the head; and the richness of the dress and ornamentation forms a striking contrast to the severe plainness of the monk’s robe in the statues of the Buddha. The principal Bodhisattva is the Buddha in the ancient Indian sculptures; and in the Buddhist caves of Ellora Avalokiteśvara and Vajrapāṇi are represented in attendance on Gautama. These two with Mañjuśrī form a kind of second group of figures, the members of which are sufficiently distinct to be recognized. For the most part, without much difficulty, in the sculptures. For others a general character or type is made to serve, and it is often impossible to determine which particular Bodhisattva is intended. It is worthy of note also that, in scenes before the ascertainment of bodhi, the figure of Gautama where it appears is always depicted after the Bodhisattva model, not according to that of the Buddha. The usual position of the hands in the Bodhisattva images is the full-blown lotus, or sometimes a bunch of blossoms. The presence of the flower is due not only to the fact that it is the emblem of purity, beauty, but also to its constant association with offerings and worship. Figures of Padmapāni Avalokiteśvara are the most common, and are frequently mentioned by the Chinese pilgrims, who state that the images were found on the summit of the high hills. The portraiture of this Bodhisattva seems to have been borrowed from that of the ancient Indian deities, especially Vīṣṇu. It appears usually with several faces, with two or four pairs of arms, and bears on the front of his crown a small figure of a Buddha. Two of the hands are raised in the attitude of adoration; the others carry emblems, as the lotus or the chakra. Figures of Avalokiteśvara therefore, resemble those of Vīṣṇu, but are readily distinguished by the position of the hands, which in the case of the Hindu god are never in the attitude of worship. Special forms or representations of Avalokiteśvara are known as the eleven-headed; this is especially common in Tibet and Nepal, but is met with already in early Buddhist cave sculptures arranged in pyramidical form, in three tiers of three each, with two single heads one above the other at the upper tier, the prominent head representing Amapāla, the spiritual father of the Buddha. The rows of tiers or of heads sometimes exhibit each its appropriate colouring in the order of the white, yellow, red, blue, green. Other figures have a larger number of arms, and the god is then described as "thousand-handed.

Vajrapāṇi either carries a chakra or a lotus on his forehead, and a sañjā in his hand. Mañjuśrī is represented as a seated figure, holding a book and sometimes a spear. Sometimes his hand is grasped directed towards the head, and the hand supported on a flower which the hand holds. The two great figures of the Mahāyāna Buddhists have each their appropriate emblem or emblems by which they may be recognized. Mañjuśrī, himself the "enlightened," carries the sañjā and the lotus, like Vajrapāṇi; Vajrapāṇi carries a sword resting on his shoulder.

Of the Dhyānibuddhas only Amāmitā, judging from the frequent mention of them in the Chinese fasts, establish the claim to approval and worship. He is depicted seated in the "meditative" pose, the hands laid one upon another, in the dhyanasana. According to a well-known form of the legend, he was born from a lotus flower, and is sometimes represented in the sculpture.

Kṣyapa, the Buddha who immediately preceded Gautama, may be recognized by his close-fitting robe, which hides the right hand in its folds at the level of the breast, while the left, resting on the knee, supports the gomukha, or lion’s mouth, in the sculpture.

Of the series of Buddhas besides Gautama himself, only Maitreya, the Buddha of the future, finds a place in all the schools, and is worshipped by all the Mahāyāna Buddhists. His image is found in North India at the time of the visits of the Chinese pilgrims. Both Fā-hien and Huien Tsang report having seen a wooden image of Maitreya, 80 cubits in height, from which a bright light proceeded. A second figure of sandalwood was possessed of the same light-giving virtue; a third at Bodh Gayā was made entirely of silver. Since he has not yet become a Buddha, Maitreya is not usually represented in the conventional Buddha pose, but appears in the dress and equipment of a young Indian prince. Both standing and seated figures are found, the former being more common; in the latter case, the feet rest on the left knee, while the legs hang down, as though seated in Western fashion on a chair. In standing figures the robe is often drawn up, to leave the left leg bare. His emblems are the wheel of the law, the bell, and sometimes depicted resting upon lotus blossoms, which the hands hold. The latter usually assume the attitude known as the dharmachakra mudrā, in which the hands are raised to the breast with the fingers touching. The hair is abundant, and often curls. His image is also found in the conventional Buddha form, but it returns in all cases the characteristic position of the hands.

Tibet.—A marked feature of the imagery and worship of the Lamasitic type of Buddhism is the prominence assigned to deities of Hindu origin, and to gods and demons derived from the native mythology. ‘The pantheon is perhaps the largest in the world. It is peopled by a bizarre crowd of aboriginal gods and hydra-headed demons, who are almost jostled off the stage by their still more numerous Buddhist rivals and counterfeits.’

The number of images and statues is correspondingly great; and these are not confined, as for the most part in other Buddhist lands, to the temples, but are found everywhere in the open air and in private houses; and in the form of charms, talismans, etc., they are carried on the person. Local forms and diversified as these images are, there are also some which are of universal acceptance. The image of Maitreya is placed in the centre behind the great altar, and on either side are the figures of Maitreya and Avalokiteśvara. The latter is usually present, as would naturally be expected, seeing he is instituted in the Dalai Lama; but Amāmitā not seldom takes the place of Maitreya, and instead of Maitreya there stands the founder of the sect to which the monastery belongs. The trinity of the Buddha, Dharma, Saṅgha—is said to be rare.

Waddell apparently does not cite a single instance; in comparison with other countries, therefore, it is little if at all known or held in regard.

The normal attitude and pose of the Buddhist images is hands in the lap, or in the hands, or, when seated, behind and overshadowing him is the sacred *pījata* tree, beneath the shade of which Gautama attained supreme wisdom. Accompanying the larger figures the two disciples frequently appear, Śāriputra on the right of the Buddha, and Maudgalyāyana on his left.

The same general type was employed to represent the earlier Buddhas, the predecessors of Gautama. The more distant and mythical of these were not as a rule depicted, except Dīpaṅkara, whose image is often found, with small holes or sockets in which lighted lamps are placed at the festivals. Of the more recent Buddhas a frequent arrangement is in groups of three. The former consists of Gautama together with his six immediate predecessors; the latter, of the three latest Buddhas, Krākulechchanda, Kanakamuni, and Kāśyapa, with Gautama himself and Maitreya, the celestial Buddha, or Jina, are depicted in general in the same attitude, but they never carry a begging-bowl such as is often seen in the figure of the earthly Buddha. Each, moreover, has his appropriate wheel, or pole of the hands, and a different colour. Amītābha is the only one of the five who receives a popular worship, as is attested by the frequency with which his image meets the eye. He is depicted in the *meditative* attitude, without begging-bowl, and is coloured red. Healing or medical Buddhas so-called are also present and are held in high honour, being resorted to in time of sickness; their pictures or images are held to be possessed of magical healing virtue. Images of these Buddhas, however, are not common in Tibetan temples. A superior or primeval Buddha is also worshipped. He is represented seated in the *meditative* attitude, as Amītābha, but with the body of a blue colour, and often unrobed.

The most distinctive feature, however, of the Mahāyāna, or Northern, school of Buddhism in art and sculpture, as in doctrine and cosmology, is associated with the lotus. In Tibet these images are to be found everywhere, and their cult far surpasses in popularity that of the Buddha himself. The figure of Avalokiteśvara, the Bodhisattva who becomes incarnate in the Dalai Lama, is most frequently encountered; but the others—Mañjuśrī, Vajrapāni, and especially Maitreya—are to be seen in very considerable numbers. The original type is that of the youthful Indian prince as on the Gandharan sculptures, in rich embroidered robes, crowned and wearing earrings, and carrying in the hands distinctive emblems. The typical form, however, has been modified to almost of second recognition under the influence on the one hand of the ancient Indian deities, and on the other of the native gods, tutelary divinities, demons, and others, of the early religion of Tibet. Thus the whole body of the image is represented under various *aspects*, which are distinguished not only by appearance and mien, but usually also by colouring.

The mild or Indian type is coloured white or yellow, and a hair or a little red is often added. A red or black shade is characteristic of the fierce forms, designed to awe and terrify more. These last forms belong more especially to the *Manúrik* type of Buddhism, which has close affinities with the Śāktism of the Indian faith. The figures are tall and slender, and graceful, the latter differing only in the absence of the beard and by the prominent breasts. The head is large, with a small underpinning formed by the centre of the forehead, and the whole expression is severe and unsmiling. They stand or are seated upon a *vehicle*, in the form of some animal. In other instances they are represented trampling upon the bodies of their victims, brandishing weapons, and wearing deformed heads.

During the life of Buddha Mahāvīra, as the personification of wisdom, carries a book and sword. With the latter he displays a monk the breast of the Bodhisattva he has no female counterpart. He is usually represented seated in the *meditative* attitude.

Vajrapāni bears a serpant or rod in his right hand, and a bell or other emblem in the left. His aspect is fierce, and his image is correspondingly colored dark blue or black. Maitreya's figure usually appears seated in the *teaching* attitude with the legs dangling down. Celestial figures of this Bodhisattva are to be seen, carved in the rock, upon the grey cliffs of the Himālaya.

Avalokiteśvara is said to have twenty-two forms. In all he is represented with features or members beyond those appropriate to ordinary men. The eleven-headed figure is the most usual, but a type almost as commonly depicted is four-hands, with the ornaments and garments of a prince. Two of the hands carry respectively a lotus and a rosary; the others are joined in the attitude of worship. As Vajrapāni has borrowed the manner and weapons of Indra, so the figure of Avalokiteśvara is modelled on that of Brahmā.

In Tibetan Buddhism not only Avalokiteśvara but the other Bodhisattvas also frequently bear on the head a small figure of one or other of the Dhyāni-buddhas, who are in the spiritual father of the Bodhisattva represented. Exceptionally, however, Maitreya is found with the figure of a Jina as his head. Instead of the actual figure the symbol or emblem alone of the Jina sometimes appears, placed on the head or seated among the locks of the Bodhisattva's hair.

Moreover, each of the female powers who are worshipped has its characteristic figure or delineation, and appears under a *mild* or *fierce* type. The most common and popular is Tarā, wife of Vairocana, or the consort of Avalokiteśvara, but also the Chinese Kwanyin. Her forms are *green* and *white* respectively; and the two foreign wives of King Sron Tsam Gampo, who introduced Buddhism into Tibet in the 7th cent., are believed to have been incarnations of Tarā, the Chinese princess of the white form, the Nepalese of the green. The latter is depicted as an Indian lady seated, with a lotus in her hand and the left leg pendant; the face is green. The *white* form of Tarā, with a white face, is seven-eyed, the palms of the hands and the soles of the feet being each provided with an eye, while another is placed in the centre of the forehead; her worship is said to be confined mainly to the Mongol period and the southern parts of India, the number of Tarās multiplied almost indefinitely.

Marichi, the queen of heaven, is represented with three faces and six hands, with a sword and weapons. She is seated on a lotus throne, drawn by swines, and one of her faces is that of a sow. The abbess of the Samding monastery near Lhasa, who bears a high character for sanctity, is an incarnation of a sow-goddess who is perhaps to be identified with Marichi. At Lhassa there are shrines of Kail, where the figure of the goddess is black, ornamented with skull masks, etc., and others of a mild type of handsome aspect, wearing robes of silk and adorned with pearls and precious stones.

The four Guardians of the four quarters appear frequently in the temples. Yama also, the god of the under-world, has his house in the hands. His consort, Lhamo, is the tutelary divinity of Lhasa.

The images of local and tutelary deities are to be found everywhere; and the demonic festivals of evil are not less numerous than those of the good. Defaced images and the founders and patrons of local temples obtain considerable worship, and are frequently represented with unnatural features or members in excess of the normal, to emphasize their superhuman character. Of these the Dalai Lāma is the most popular. Padma Sambhava also, the founder of Lamāism, takes a high place.
Of the disciples of Gautama Buddha, besides Sāriputra and Maudgalyāyana, a group of sixteen is commonly found. This name is usually written as the early arhats, or the more important monasteries at Lhasa and elsewhere may be seen statues of Buddha or of other deities, of much value, either from the material employed or the costly precious stones and ornaments with which they are adorned. In the private chapel of the Dalai Lama at the Potala palace in Lhasa there stands an image of Avalokiteshvara of solid gold. The great temple in the same city contains, among many other images, a celebrated gilt figure of Gautama, said to have been brought from Peking by the Chinese wife of Sron Tsham Gampo. Another representation is that of Gautama as a young prince, crowned and robed, at the time when he left his home. The workmanship of the latter figure is said to be poor and inartistic, but the crown and shrine are thickly set with precious stones. In a third temple in the same city, the ‘Temple of Medicine’, is a renowned figure of Buddha, with a bowl of blue lapis-lazuli stone, surrounded by other statues, which are supposed to represent physicians whose skill and fame have won them dedication after death. They are sometimes worshipped as gods (Tibetan).

(2) China.—The Buddhist images of China are similar in character, but not so numerous as those of Tibet, and they are almost entirely confined to the monasteries and temples. In addition to the Bodhisattvas and Buddha, tutelary deities and demons appear, together with patriarchs and saints of olden time who have been raised to the position of gods. In the monasteries there are usually two halls set apart for the service of the gods. The central and more important hall contains the effigies of the Bodhisattvas, with their disciples, and of the Bodhisattvas, placed at the further end of the hall and ranged round the sides. Large monasteries have, in addition, more than one entrance hall, where the figures of the guardian spirits stand, and of the protecting genii of the place, the images of founders or patrons, and of the native popular gods adopted by Buddhism into its pantheon.

Of the Buddhas, Gautama is the chief. His image is most frequently found in the ‘meditative’ pose, sitting on a throne and holding a scripture. This pose is usually drawn over both shoulders so that the arms are also crossed, the neck and chest being exposed. Frequently a halo surrounds the head, on the back of which is a circular screen behind which the image represents the head of the sacred Bo-tree, and serves the purpose of a back and glazed background. Two standing postures are not uncommon: the one as a child, with the arms extended and pointing upwards and downwards; the other as a sitting, with the hands on the knees. Recumbent figures are rare. They are represented in full dress, lying in the usual attitude upon the right side, sometimes even upon an ordinary cushion.

Of the celestial Buddhas, Amitabha (in Chinese, Om-to-fa) is the most revered and popular. The normal Buddha type of figure is adopted for his characteristic gourd. Amitabha is usually depicted in a standing position, with long arms hanging at his sides. Among the Buddha of the past, Dipankara alone is generally recognized. There is often found, with the image, a lamp. The number of these last varies; but usually there are 108, a number said to correspond to that of the sacred books.

With the exception of Gautama himself, certain names of the Bodhisattvas are more widely revered and receive more constant worship than others. The image of Kwan-yin, the ‘goddess of mercy’, the female form of Avalokiteshvara, is universally honoured. There is evidence that in the early centuries this Bodhisattva was often worshipped in his proper maleness, and circumstances under which the transition to a female deity took place are altogether obscure. There seems to be no definite or accepted type for the figure of Kwan-yin. The goddess is known under very varied forms. Universally, however, she is loved, and perpetual offerings are brought to her shrine. Of the other well-known Bodhisattvas of Indian origin, Mahākāyana (Chin. Yama), and Satyanātha (Chin. To-shih-chi) are perhaps the most widely known and most frequently delineated in painting and sculpture. Each is depicted riding upon a vehicle, usually a lion, a horse, or an elephant. They often appear as members of a triad in which Kwan-yin occupies the middle place. A frequent triad also is that of the ‘three holy ones of the western region,’ i.e. the paradise of Amitsābha. In this triad Amitsābha himself is in the centre, Kwan-yin on the left in the place of honour, and the Bodhisattva Mahākāyana (Chin. To-shih-chi) on the right. The Chinese Yama, Ti-tsong, the ruler of Hades, with his twelve subordinate demons, who execute pain and torture upon the wicked, is a familiar effigy in the idol temples and halls.

An altogether strange and anomalous figure is that of the Bodhisattva Maitreya (M-i-to-fa), the Buddha of the future, who does not occupy so prominent a position as in Tibet and elsewhere, and seems to have become identified with a native genius or tutelary deity. He is usually represented in a crouching attitude, the robe thrown back so as to expose the breast, with long pendant ears and shaved head, and with the right leg drawn up and the right hand resting on the knee. In the right hand is a lotus flower or a rosary, in the left a purse or bag, described as containing the ‘lucky six gifts’. The expression of the face is lively and even merry, and the whole figure is reminiscent of a comfortable, well-living friar of the Middle Ages.

Other tutelary deities are the four Guardians of the four quarters, whose images stand in a defensive or protecting attitude on either side of the entrance to the temple or hall of the monastery. Their figures are carved in the round, and are given his own appropriate colour, and emblem or device which he carries in his hand. The Guardian of the South (To-son) is red and bears a sword and a shield; the Guardian of the East (Chāi-fa) is blue, with an instrument of music; the Guardian of the West (Tso-wu) is holding a fan; the Guardian of the North (Kwung-so) is white, and holds in his hand a sword. In the same hall, in addition to the Guardians, two figures are generally placed in the centre, facing in opposite directions, towards and away from the entrance. Moreover, a special deity presides over the kitchen department, and his image is said to be found in the kitchens of most monasteries. The well-known and popular god of war, Kwan-yin, is a deified hero of early Chinese history; and the images of other gods, saints, or demons, of native origin or derived from Indian sources, are very numerous, and are more or less closely associated with Buddhist worship.

Of the disciples of the Buddha, the most commonly figured are Ananda and Kāśyapa. They stand or kneel on either side of the Buddha in a reverential attitude, with upraised hands, and are having the appearance and mien of a young man. The group of the 18 Lohan frequently finds a place in the temples, where their images are ranged along the sides of the buildings. In the older monasteries the original group of 16 disciples is sometimes found, as elsewhere in the Northern school. Comparative rarely a larger group of 500 Lohan is met with, consisting of the most part of deified emperors or other notable heroes and men of former times. Of deified saints, the most prominent and popular are the six present personages of Chinese Buddhism. The first of these, Bodhidharma (Zu-foo), who established the patriarchate...
in China in the 6th cent., is universally known and honoured. His appearance lends support to the tradition of his foreign origin, the face being beardless and possessing very characteristic Chinese features. His image usually stands near the principal altar, at the farther end of the great hall.

In the principal hall a trio of images is often found behind the principal altar. The members of the trio vary. Frequently Gautama is accompanied by Amitabha and Yo-shih-fo, the Buddha of healing; sometimes by other Buddhas or Bodhisattvas. Malavara, Directora, is sometimes to be represented. If the figure of Gautama is unaccompanied by others of his own rank, then the two disciples, Ananda and Kasyapa, stand before him. In front of the altar are smaller images of Bodhisattvas and others. The 18 Lokah, occasionally with other gods, occupy the sides of the room.

The material employed for the images is generally wood or clay. Bronze images are rare and costly; a few are of marble. They are usually straight and a curious ceremony is observed, by virtue of which the deity is supposed to take possession of his habitation. Through a hole at the back of the statue, a strip of paper, tied to an asp or an adder, or to a small creature—is introduced into the hollow interior. The hole is then sealed up, and the soul of the animal passes into and gives life to the image of the god. The last act is the painting in of the eyes. The :-altars may have complete vision. This is known as kai-iwong, the giving of light.

(5) Korea.—There is little that is distinctive of the temple images and statues of Korea as compared with China or Japan. The most remarkable feature is the presence of pictures on the walls of the rooms of the monastery. These are never so found in the two countries named, with which the Buddhist thought and practices of Korea have otherwise been in the closest relation. The images themselves are few in number, and with little or no decoration; they are usually also of comparatively small size, gilded as in China, the material used being wood or clay. The five chief Buddhas are represented, and the corresponding Bodhisattvas, Kwan Yin taking the place of Avalokitesvara. Amitabha maintains a popular worship, which rival, if it does not surpass, that of Gautama himself. Of the celestial beings and deified saints, Indra and other gods recur, and the 16 Lokah; the larger group also of the 600 disciples is met with in Korea. Tertiary deities are common, and personifications of the forces of nature. The mountain god, whose emblem is the tiger, and the kitchen god are well known, and are worshipped with offerings and prayer. Perhaps the most feared divinity, whose wrath is most to be deprecated, and whose image is most frequently set up, is Ti-taeng, the ruler of the lower world. There are traces also of a solar cult, adopted by Buddhism, in the reverence paid to the sun and moon, the Great Bear, etc. For the last a special hall or chapel is sometimes provided within the monastery.

(4) Japan.—The most striking feature of Japanese Buddhism is the extent to which it has asserted its independence of Chinese influence. The independence of thought is reflected in its images and works of art in a characteristic manner in the architecture and arrangement of the temples, and the general disposition of the figures of the deities therein, but in the spirit and in detail a difference is very manifestable. In the principal hall of the temple the chief images are placed, as in China, on the altar at the further end. In front a partition is sometimes erected, and the remainder of the hall remains free and unoccupied for the purpose of worship. There is usually also a chapel dedicated to the founder of the sect to whom the temple or monastery belongs, and separate rooms are provided for the shrines of the Kwanon, Amida, or other favourite divinity. In addition to deities of Hindu and Buddhist origin, Japanese Buddhism has adopted Shinto and Chinese gods also into its pantheon.

Of deities that are definitely Buddhist in origin the five Buddhas and Dhyānibuddhas, and the five corresponding Bodhisattvas, are naturally the most prominent. The Adibuddha is not represented. Of the Dhyānibuddhas Amítábha (Amida), the compassionate ruler of the western paradise, is the favourite, and his figure is to be met with everywhere, especially in the temples and monasteries of the Far East. He is represented in the usual Buddha attitude, cross-legged, with the hands lying in the lap. The ōdō on the forehead is said to be indicative of wisdom. At Kamakura the great bronze statue is said to represent Amida. The figure is nearly 50 ft. high, and is hollow, with a small shrine within to which access is obtained by means of a ladder. The larger dābulata in the Todaiji temple enclosure at Nara is said to represent the Buddha Dipankara (Jap. Dainichi). The image has suffered from successive fires, and has been repaired. It is 53 ft. high, and is seated on a lotus throne, with the right hand raised to the level of the shoulder, the left resting on the knee. The whole is believed to have been originally gilded. Behind is a wooden halo richly girt, and on either side of the principal figure and at the back are images of Bodhisattvas and other deities, of more than life-size.

In Japan as in China Avalokiteshvara has become a female deity, Kwanon, the Chinese Kwan-yin, the goddess of mercy.

She is depicted under various forms, sometimes with three heads and many arms. The hands grasp objects typical of Buddhist doctrine or practice, as the wheel, a peg, a lotus, or an axe, etc. A begging bowl is sometimes held in the lap. The Sanjusangendo temple at Kyoto contains 100,000 images of Kwanon. A thousand smaller figures, each 5 ft. high, and gilded, represent the goddess in her thousand-handed form. On the hands, forearms, etc., of these there are executed smaller figures, the arrangement of which is said to be different in every instance. Besides Kwanon, the Bodhisattvas most commonly represented are Manjusri (Jap. Monju) and Samantabhadra (Fugen). They often appear seated on the left and right hands respectively. The only other Bodhisattvas who commands wide reverence and worship is Daijō-kei, joint ruler with Amida and Kwanon of the western paradise. The figure of Fugen is sometimes seen rock-carved, of great size; but it is not found in the temples.

The temple entrance is usually guarded by the ancient Hindu deities Brahman (Bonten) and Indra (Takshak), who stand in threatening attitudes on the left and right sides respectively. The popular divinity Fudo is by some authorities identified with Siva, but others regard him as representing Vairochana. His appearance is fierce and grim, with black face, and he bears in his hand the sword of justice. Other Indian gods are found, as Vaiśravana (Bishamon), the god of wealth, who has become one of the seven deities of good fortune, and Ganeśa. The real god of wealth is Daikoku, who carries with him bales of rice. The ruler of Hades, Emma-O, is frequently depicted. He is seated with a judge's cap on his head and a staff in his hand, and is usually accompanied by attendants who bear Carthusian forms. This image is probably a corruption of the Sanskrit Yamaraji. Ti-taeng, the Chinese ruler of the world below, is represented by the Japanese Iko, whose stone image is perhaps the most popular object of worship throughout the country. He is the patron of travellers, the guide and helper of all who are in trouble, and is represented in the attitude of a monk sitting cross-legged, with
closely shaved head, holding in his hands a jeweled and a staff.

Of the disciples of the Buddha, Ananda and Kasyapa (phys., Anan and Kasha) are most usually found with Gautama. The 16 Lohan (Jap. Rakan) are often represented, and the larger group of 600, the latter sometimes in a special hall or chapel. Of the Rakan by far the most popular is Benzairin, the healer of disease, whose image in the forepart of the temple is frequently defaced and has its features almost obliterated by the constant rubbing, to which it is subjected, the practical advice and belief among the lower classes being that relief from pain may certainly be secured by rubbing in succession the corresponding part of Benzairin’s image and the affected limb or other portion of their own bodies. The Chinese patriarch Bodhidharma (Doramen) is also present in many instances; and the founders or patrons of the various sects are deified and their images erected in the temple.

Shinto deities that have been adopted by Buddhism are the most popular is Hachiman, the god of war, to whom many temples are dedicated. He is said to have been a deity of the 3rd or 4th century.

Images and Idols (Celtic).—I. Terminology.—A specific Celtic terminology for idols is found only in Irish, i.e., idol, ‘idol,’ being borrowed from Gr. through Lat., while ir. arracht is a native term meaning ‘shape, likeness, specio, or idol.’ A non-Celtic common word is blin-leis or idren-din, ‘hand-god,’ a small, portable idol, a kind of household god somewhat similar to the panthea of the Romans (ZCP ii. [1898] 448). In Cornish’s Glossary (Gr. O’Dowd, ed. W. Stokes, Calcutta, 1898, p. 158), O’Dowd cites the word tromie from an old Irish glossary as meaning ‘tutelary gods, i.e., floor-gods, or gods of protection.’

2. Gauls.—For lack of evidence to the contrary, it has been held to be an accepted fact that the pre-Roman Gauls had no images or idols of their gods.

The reasons advanced in support of this belief are that the Druids, who were pre-Celtic in origin, but who became eventually the priests of the Celts, were opposed to image-worship, which they prohibited in Gaul as early as the end of the paenitetic age (S. Régnier, ‘L’Art plastique en Gaule et le druidisme,’ in Écol. xiii. [1892] 189 fl. = Celtie, pag. 419, note 2), citing the lack of evidence. However, there has been found of the existence of such a prohibition, save that various classical authors postulated a connexion between the Pythagoreans and the Druids, and that the analogy between these doctrines was obviously hostile to anthropomorphism. More recent authorities, who refuse to accept this explanation, claim that the similarity between the two sects is to be found in the common belief in metempsychosis or the immortality of the soul. Since no evidence of the existence of a prohibition against image-worship has been found in the doctrines taught by the Druids, or in the observations of Latin and Greek historians, it is impossible whether there were official prohibitions, or whether by this, houses, of wood only (J. A. MacCulloch, Rel. of the Anc. Celt., Edinburgh, 1911, p. 288). Yet it remains to be explained why the primitive Gauls were able to carve on stone or wood such forms, which may or may not have been objects of worship, but did not make use of the same material to represent their gods—unless one or two figures among those that have been recently discovered belong to the period antedating the invasion of the Romans.

Most authorities seem to hold that, though anthropomorphism was an accepted belief among the primitive Gauls, their gods did not figure in a statue form at the rites performed in their honour because they were considered to be invisible (C. Jullian, Hist. de Gaule, Paris, 1898, i. 359). This was especially true of those tribes who dwelt in other countries than ancient Gaul, whose gods had for a long time assumed a more or less clearly defined human shape in the belief of the people did poets and artists attempt to relate their lives and deeds to give them individuality, that of man (Jullian, Recherches sur la rel. gaul., Bordeaux, 1905, p. 48).

According to Badoian (Bibl. xix. 9), the Celtic chief Brennus, having entered a Greek temple and found there images of wood and stone, laughed loudly at the Greeks who made their gods in their own likeness. This chief was obviously not acquainted with guided images of the anthropomorphic kind; although that fact does not preclude the possibility that he as well as his soldiers worshipped the crude figures of animals painted or scratched on a wall of a sacred grove on stones—a cult that persisted in most of the tribes (D. d’Arbois de Jubainville, Les Druides et les dieux colt. à forme d’animaux, Paris, 1904, p. 159). But in primitive times in Ireland, even these divinities were invisible. Among the many that could be mentioned, the most interesting is probably Sabh, the god of war and murder, who only on important occasions—usually the death of a king—appeared to the human eye, always in the form of a raven (J. Sturman, Stories from the Táin, Dublin, 1908, p. 6; W. M. Hennessy, Eccl. i. 1850-71, 44).

Anthropomorphism arose among the Celts from the cult of trees and stones, principally of those set up over the graves of the dead. The stone associated with the dead man’s spirit became an image of himself, and was perhaps later on usually fashioned in his own likeness (MacCulloch, 284). This is probably the point of departure of the neolithic idol whose artistic history has been so aptly traced by J. Dechelette (ed., Les Origines de l’idole neolithique, in his Manuel d’archéol. préhist. collo et gallo-romaine, Paris, 1908-10, i. 494 fl.). Lucan describes trunks of trees in a sacred wood roughly carved to represent gods—esturius maestus deorum (Phars. iii. 419 ?), and this rude likeness became an image of the spirit or god of the trees. When Caesar states (de Bell. Gall. vi. 17) that there were plurima summiacrai, especially of the god Teutates in his time, he does not mean carved idols.
images, but probably boundary stones, like those of the Greeks and Romans, or shapeless pillars that symbolized the god but did not show him. On seeing them objects of a special cult, he concluded that they were really simulacra of a god (MacCulloch, op. cit.). Some authorities even maintain that these simulacra were nothing else than accumulations of fragments found all over ancient Gaul (Reinach, loc. cit.); and Julian maintains that there is only one statue found thus far that really belongs to the pre-Roman period—a strange, immobile, geometrical figure, avastikas, and the like (Bull. archéol., 1898, pp. 339-401). If this be true, then it forms the sole exception, for not another one has been found anywhere in Gaul belonging to a period previous to the Roman epoch (G. Dottin, Rev. des Celtes, Paris, 1903, p. 32 f.).

The adoration of boundary stones and pillars, or menhirs, continued until well into Christian times. In the time of St. Samson of Dol, written at the beginning of the 7th cent., there is mention of a standing stone—simulacrum abominabile—worshipped by the ancient Bretons (J. Mamillon, Acta sacra, fasc. III); Benedictus S. Benedicti, Paris, 1856-1701, i. 171 f.; 290 f. In the same sense of stopping these heretical practices, the saint carved a cross upon this stone. The fact that many menhirs have been found in France containing dedications to the sun, is an indication that this was the usual method adopted by the Church to oppose such worship (Reinach, Éd. xxvi [1804] 336 = Cœtes, iii. 402 f.).

Later on a terrestrial abode was assigned to the gods, usually an oak-wood, for the oak and the mistletoe were especially sacred, according to the doctrines of the Druids (G. Callegari, Il Druidismo nell antica Gallia, Padua, 1864, p. 58 ff.). Then, when the tribes had more fully developed the custom of apotheosizing their dead chiefs, the divine and the human were brought into still closer relations with one another, which tended to strengthen the belief in anthropomorphism. Thereafter, such gods as Tuterac, Eua, Tarcan, and Belenos not only assumed human form, but, under the influence of other nations, were clothed and armed like the Gauls (Julian, Hist. ii. 152 f.).

The Gauls at Ephesus and Marseilles were the first to take up the practice of idol-worship, due, without doubt, to their contact with the Greeks and Jews (Pavelson, vol. i. 365 f.), and thus, according to the notice of the Celto-Ligurians in the earliest period (Bouc. xiii. 189 ff. = Cœtes, i. 146 ff.); it may be our opinion of this ingenious explanation, it is possible that the Druids did not encourage the spread of this worship; for, according to Luccat (i. 459 f.), that symbolized the notion that they discouraged it as far as they could, because they realized that the moment a man gives to his god a figure and lodges him in his home he has need of the intervention of priests (Bouc. xiii. 189 ff. = Cœtes, i. 146 ff.). Whichever way we may regard the influence of the Druids, or the Gallic influence over it and offers it to his idol gods. He then sacrifices the idol, and if he has not received the illumination before the next day, he pronounces incantations upon his divinity; he then takes his idol gods unto him (into his bed) in order that he may not be interrupted in his offerings. He then places it upon his two cheeks and falls asleep. He is then wakened so that he be not stirred nor interrupted by any one until everything that he seeks be revealed to him at the end of a second (i.e. a day) or two or three, or as long as he continues at his offering, and hence it is that this ceremony is called tabes, that is, the two hands upon him crosswise, that is, a hard over and a hand hither upon his cheeks. And St. Patrick prohibited this ceremony, because it is a species of terras isochridas (another kind of incantation mentioned in the Galley), that is, he declared that any one who performed it should have no place in heaven or on earth (Stokes, loc. cit.; Hyde, loc. cit. 84). It is related also in the Book of Leinster that Dalz, who succeeded Niall of the Nine Hestanes as King of Ireland in A.D. 405, consulted the Druids on the eve of the great festival of Samhain in the seventeenth year of his reign, on the 9th of October, during the next year, for he was then contemplating an invasion of the Continent. Dalh and his ancestors were taken to the plain of Bath Archall, where the Druids had their idols and altars, and there the prediction was made (K. O'Curry, Lectures on the 9th中部年代 in the City of Dublin, 1878, p. 284). As stated above, these passages seem to indicate that the Druids had private images at that time which they alone were permitted to consult. They show also that, whatever may have been the attitude of the Druids on the continent towards idol-worship, there was still some influence in accepting it and adapting it to their own ends.

As for public idols, there is sufficient evidence that they were very numerous throughout the country. To these sacrifices were offered up by the people, or rather by the Druids on behalf of the
people, for the purpose of securing good weather for the crops and an abundance of cattle. St. Patrick is supposed to have introduced Confession (viii) that previous to his arrival in Ireland the people 'worshipped only idols and abominations' (PL iii. 810; N. J. D. White, 'The Latin Writings of St. Patrick,' in Proc. Roy. Irish Acad. xxv. (1856) 270, § 41). According to the Tripitika Life, during a certain year Patrick found no more fitting place to celebrate Easter than Mag Breg, 'in the place wherein was the chief (abode) of the idolatry and wickedness,' called *Inanna drudaihta*—of Ireland, to wit, in Tara' (W. Stokes, Tripitika Life of Patrick, London, 1887, p. 41). Again, when Patrick visited Oengus, the son of Nathriach, in Munster, the morning after his arrival 'all the idols were on their faces—inna arrachta hurla inna righ' (lit. 'in their beds'); ib. p. 195. Furthermore, Jecellius, in his biography of Patrick, remarks that 'idol worship ad vampum S. Patrick in Monemnon' (J.S. Mart. ii. (1863) 553). That the chief purpose of Patrick's sojourn in Ireland would be the destruction of all the images of the idols was, in fact, foretold by the wizards and enchanters at the court of King Laegaire, son of Niail (ib. pp. 92–93); and when, at the end of the Tripitika Life, we are told that, 'after destroying idols and images, and the knowledge of wizardry,' the time of holy fasting drew near, the prophecies were fulfilled (ib. p. 250). So strong a hold had idolatry gained upon the people that two maidens, converted to Christianity, were persecuted and drowned by a petty king named Echaid for having refused to engage in the pagan form of worship (ib. p. 225).

These idols were generally very rudely carved, most of them, in fact, being mere pillar-stones (J. B. Bury, Life of St. Patrick, London, 1905, p. 74). There was, however, in the plain of Moha Sceat, one great idol which apparently was of much finer workmanship. The image, ornamented with gold and silver, was called, according to the Dimnaichus in the Book of Leinster (p. 213), Cromn Crian ("Bloody Crescent"); but in the Tripitika Life of Patrick the name given to it is Cenn Crian ("Bloody Head"); Stokes, 91). This gold-covered idol, surrounded by twelve lesser ones ornamented with gold, was the abode of certain Irish tribes, representing, in all probability, the sun-god ruling over the twelve seasons. According to the Dimnaichus mentioned above, this great idol was a tributary tribute from its worshippers. In return for the beautiful weather they desired for their crops, they offered up to it their first-born children 'with many cries and heart-rending moans for their death, assembled about Cromn Crian' (d'Arbois of Julivertin, Le Cyclo mythologique irlandais, Paris, 1884, p. 107).

The Rennes MS of this poem tells us that Cromn Crian was, before the arrival of Patrick, the vag-idal h-Erinn, or 'king idol of Ireland.' Around him (were) twelve idols made of stone; but he was of gold. Until Patrick's advent he was the god of every folk that colonized Ireland. To him they used to offer the festivals of every year and the chief ales of every clan. And they all prostrated themselves before him, so that the tops of their foreheads and the gristle of their noses, and the caps of their knees and the ends of their elbows broke, and their heads and limbs became a mass of green stumps (K. Mayer and A. Nitt, Voyage of Bran, London, 1895–6, p. 59, in the revised form, see ib. p. 216 ff.). Many were the legends grouped about this idol. The Dimnaichus states that the Book of Leinster informs us that, several centuries before the Christian era, King Tigernach and crews of his people were destroyed in some inexplicable manner while they were worshipping this idol on the first of November, or Samain's Eve (F. Foys, Soc. Hist. of Anc. Ireland, London, 1859, i. 274). According to the Tripitika Life (pp. 91–93), this idol, which was 'very high and had wings,' was worshipped by men and maidens, was overthrown by St. Patrick, who cast his curse upon it. The ground opened, and swallowed the twelve lesser idols as far as their heads, which are interpreted that, when the life of the saint was written, the pagan sanctuary had so fallen into decay that the twelve lesser idols remained above ground (J. Rhys, Celtic Heathendom (UL, 1887), London, 1892, p. 200).

Another famous idol in western Connacht was Cromn Dubh, or 'Black Crescent,' whose name, according to O'Curry, is still connected in Munster and Connacht with the first month of the year (MS Materials, 632). This Sunday, the anniversary of its destruction, is still called 'Cromn Dubh's Sunday' (Donachair Cromn Dubh). There was also an idol called *Lon Parhain na Cruach* (G. Petrie, On the Hist. and Antig. of Tara Hill, London, 1889, p. 84). At the festival of *Bren-Tropin*, i.e. the beginning of autumn, the young of every sort of animal was assigned as an offering to this god (Ecol xi. (1890) 485).

According to another legend, 'a fire was always kindled in Bial's name at the beginning of summer, and cattle were driven between the two fires' (Stokes, Cormac's Glossary, p. 23).

According to the passage quoted above from Cormac's Glossary, St. Patrick abolished the imbas foroarnai and the teinn ledga, because the performance of these incantations needed an offering of some kind to idols or demons. These probably include the An-duis, or 'the pagan form of worship' (ib. p. 225).

These idols were generally very rudely carved, most of them, in fact, being mere pillar-stones (J. B. Bury, Life of St. Patrick, London, 1905, p. 74). There was, however, in the plain of Moha Sceat, one great idol which apparently was of much finer workmanship. The image, ornamented with gold and silver, was called, according to the Dimnaichus in the Book of Leinster (p. 213), Cromn Crian ("Bloody Crescent"); but in the Tripitika Life of Patrick the name given to it is Cenn Crian ("Bloody Head"); Stokes, 91). This gold-covered idol, surrounded by twelve lesser ones ornamented with gold, was the abode of certain Irish tribes, representing, in all probability, the sun-god ruling over the twelve seasons. According to the Dimnaichus mentioned above, this great idol was a tributary tribute from its worshippers. In return for the beautiful weather they desired for their crops, they offered up to it their first-born children 'with many cries and heart-rending moans for their death, assembled about Cromn Crian' (d'Arbois of Julivertin, Le Cyclo mythologique irlandais, Paris, 1884, p. 107).}

Notwithstanding St. Patrick's prohibition, idol worship in certain forms continued in many places in Ireland far down into Christian times; and traces of these rites exist even to-day in some of the more remote districts of the country.

4. Welsh.—The lives of the early Saints of Britain inveigh frequently against idolatry or even magic-worship to which the British Celts were addicted (MacCalloch, 296). Gildas tells us that in his time there were images 'mouldering away within and without the deserted temples, with stiff and deformed features' (de Escul. Brit. ii. [1891] 457; MacCalloch, 296); and before the lady Cessare decided to make a trip to Ireland, she consulted her hand-god to see if the omens were favourable (ib.). In the account of the Battle of Moutara, mention is made of a speaking sword, which had that power, because at that time 'men worshipped arms, and they were a magic safeguard' (d'Arbois of Julivertin, Le Cyclo mythologique irlandais, 1884, p. 107). Notwithstanding St. Patrick's prohibition, idol worship in certain forms continued in many places in Ireland far down into Christian times; and traces of these rites exist even to-day in some of the more remote districts of the country.

5. Scots.—M. Martin relates that the inhabitants of the Scottish islands worshipped an image of a god called Bel, without which the Irish god of that name (Descr. of the Western Islands of Scotland, London, 1716, p. 105).

6. Bretons.—The ecclesiastical canons of Brittany mention stones, fountains, and trees as being
worshipped even as late as the 10th cent. (J. Ferguson, *Rude Stone Monuments in all Countries*, London, 1872, p. 24 f.). Proccedions of images were quite common in Britaia until a recent date. St. Martin was the object of one of these processions, because he considered them a form of pagan worship (Sulp. Severus, *Vita S. Martini*, xii). These processions were forbidden by the edicts of various councils, and often, in an attempt to make this method of inveighing against them to be of no avail, they Christianized them. Thus the rogation processions with the crucifix and the Madonnas, as well as the pilgrimage of St. John's image, at the Midsummer festivals, were but a continuation of these ancient forms of worship. The *Großvogel*, or *Venus of Quinquini*, which may date back to pre-Roman times, was for many centuries an object of important rites in Britain (D. Monnier, *Trad. pop. comp., Paris*, 1854, p. 921).

**LITERATURE.**—This has been sufficiently indicated in the article.

**JOHN LAWRENCE REID.**

**IMAGES AND IDOLS** (Chinese).—China is full of images. Buddhism, Taoism, and Confucianism have all fostered the use of them, and there are to be found in Buddhist and Taoist temples in the greatest abundance, in private homes, in boats, in streets, and almost everywhere.

3. Emperor Wu Yik (1198-1214 B.C.) is credited with having made the first images or idols. The objects of worship then were heaven and earth, the spirits of mountains and streams, etc. The Emperor was believed upon the mythical; and to allow his disbelief in, and contempt for, them, he had images of clay and wood made to represent them, and ordered men to fight with them. As a result, he said that men were stronger than the gods, and it was folly to worship them.

4. The art of sculpture and the making of images of stone do not reach back in China to the high antiquity that they attained in Egypt and some other ancient lands, though the gem was present before the Christian era, and revealed itself in sculpture in bas-relief on the surface of stone. The earliest known specimens were executed in the 2nd cent. B.C. and display a primitive character in their composition, and convey the impression that the art was in its infancy and could not have been in existence more than one or two centuries after the date of the first great monument of art in China was nearly as old as Egyptian and Chaldaean civilization.

5. The mural decorations of buildings were apparently the precursors of the isolated image which later came out, as it were, from the stone stelae of which it had previously formed a part, and on the surface of which it was carved. Chinese art is also greatly indebted to Buddhism in the treatment of animal and human life as we see it revealed at a later period; for it, again, developed the germ of the idea in the Chinese mind, and gave a great extension to it. It inspired the statues which hitherto had only half emerged from the stone, and, copying the examples introduced by the Chinese Buddhist pilgrims on their return with the idols which they brought from India, the first Chinese statues were of Buddhist deities.

6. The majesty forms of some of the gigantic images—*one is 100 ft. in height.*—Bear a certain grandeur in their mien; a serenity and calmness appears in their faces in keeping with the conditions on which Buddha should have over the passions. The Indian inspiration is distinctly to be seen, and for some time the Chinese were mere copyists. In the stone work of images there has been no development in an artistic sense. A slight progress has been the type of it, whether seen in the gigantic figures of warriors that line the approaches to royal tombs or in the more common stone idol of Buddhism. Images of animals also appear, cut in stone, at these royal mausoleums, and a pair of lions before temples and official and public buildings, these stone images of lions, as well as clay images of cats on the topmost part of a roof, being believed to act as charms against the malign influences.

7. Clay images placed by evilly-disposed builders and plasterers in the wall of a house are believed to exert an evil influence, since these images, it is said, are imbued with life by the infusion into them of some of the men's own life-blood.

8. Ghosts of idols are not unknown.

9. Straw images are used to injure enemies in witchcraft.

10. Miniature images of white cockels in sugar are conspicuous objects at a Chinese wedding. Bits of them are broken off and given to the newly-married couple to eat. A white cockel, or a paper image of one, is carried on the coffin in a funeral procession to induce one of the souls of the deceased to enter it.

11. Both Buddhism and Taoism have legends of images of their founders being revealed in dreams to emperors, and the introduction of the former into China is ascribed to one of these—a dream of a golden image. As the result of the Taoist dream, a stone image of foreign material, 5 ft. high, was built at Lo-yang, and the P. L. Wiegler is inclined to believe that this image, discovered in 1912 a.d. 741, was Neoclassic, and not that of Loo-lee; for he says that it was a Neoclassic service copy made by seven priests which was held in the palace on receiving the image, and it was the same Emperor who showed a favor to this image.

12. In bronze work (gilded bronze is much used for Buddhist images) copied from Buddhist sources, it was not servile copying, but judicious imitation, with freedom for the artist to carry out his own ideas in the world which he created of gods, goddesses, heroes, sages or patriarchs, ascetics, and others. The technique is such as to call forth the untainted praise of the artist. In the image of Buddha himself the Chinese have adhered most closely and longest to the Indian models which were introduced centuries before, and which give the characteristics of Buddha as told in the sacred books (cf. *Images and Idols* [Buddhist]).

13. Chinese have excelled in their images of the Goddess of Mercy, some of which have been compared to the work of Donatello and Ghiberti.

14. Taoist.—Viewed from an artistic standpoint, the Taoist bronze images as well as some of other materials are most interesting. Here there is a freedom from foreign influence, and a national expression shows itself. The images thus produced are not confined to one type, but much variety is seen. An animated life often reveals itself in the place of the serene contemplative mood of many of the Buddhist images, which have, of course, a beauty of their own. The founder of Taoism, Loo-lee, is often represented with long beard, bushy eyebrows, and huge forehead; and the Eight Great Genii are also often produced. It would be impossible to particularize all the celebrated Taoist deities which are constantly to be seen. One must confine oneself to a mention of only a few of the most notable. One of the most interesting is the Star-god of Literature, who is more a Confucian god and whose attitude is most artistic. Poised on one foot on a sea-monster's head, with outstretched arm and hand holding a pen, he recalls some of the classic statues of Mercury. Another control which is the Northern Ruler, with unbound locks, and bare

foot, one placed on a tortoise, while his banner has a sombre ground on which appear the seven stars of the plough, or Charles's Wain. There are also the Ten Judges of Hades, and in their courts are images of women—most of whom are emblems of Hell. Besides these, there are the State-gods, such as the God of War, the Patron Saint of the late Manchu dynasty, and a number of others.

3. Confucius.—Statues of Confucius came into vogue during the T'ang dynasty (A.D. 618-906). It may be noted here that there is not much scope in China for statues or statues except for religious purposes, since the form which monuments take is not that of statues, but of ornamental arches over roads or streets in town or country. These images of Confucius, however, seem to approach nearer to our idea of a statue than any others; for the tablets to the Sage are retained as well. At one time these images were prayed to for the granting of posterity; but this was stopped. The adoration offered to him is adulatory and not supplicatory in its nature, and the idol himself was allowed images of wood, but in A.D. 960 clay images were used.

In A.D. 1457 a copper statue of the Sage was placed in the Imperial Palace and saluted by ministers before admission on State business. The literati did not approve, and it was done away with. In A.D. 1530 the images were removed from Confucian temples. There are still, however, images of Confucius and his disciples to be found here and there throughout the country. No image of the Sage is allowed in Buddhist or Taoist temples; but there are some temples styled "Three Religion Halls," in which Buddhist, Lao-tse, and Confucius are enthroned as a triad.

4. Images of ancestors.—Images have not been used in ancestor-worship, tablets for one of the souls of the deceased being considered the proper mode of providing an object of worship. But a notable instance of a contrary practice is recorded: one of the Twenty-four Paragons of Filial Piety carved wooden images of his parents, and served them as if alive. His jealous wife pricked the fingers of the images, and they wept.

5. Aboriginal images.—In the south-east of the empire there is a large boat population who are descended from aborigines. They have customs of their own, and one is that of having wooden images made of their dead children, which they worship. As the space on the boats is limited, the shrines, with their small images, are easily carried, and consequently the images are likewise of small dimensions, ranging from about 4 to 8 or 9 inches in height. Most of these images represent what are evidently older persons than mere children. There is quite a variety in the positions and attitudes: some, like many of the gods, are seated on thrones and are clothed in official attire; others are represented as standing, perhaps even on dragons, and clad in warlike robes; and many of them carry swords or daggers and halberds in their hands. One in the writer's collection has English clothes on—blue jacket, light green trousers, and a low-crowned hat. One curious feature of these images is that some of the girls, or women, represented as riding on storks—that bird being supposed to carry the soul to heaven—and some of the boys, or men, on small ponies. In others, not content with one, the image is astir with several; for it is of its feet resting on two of these wild beasts as well.

6. The spirit of the being worshipped is supposed by the Chinese to be present in the image when a ceremony has been performed invoking its presence. At a temple near the writer's house in Canton, where extensive repairs were to be effected, the spirits were asked to give the order of the images; and, when the repairs were finished, another ceremony was held in which the spirits of the gods were invited to return.

Some images are made hollow, and hollowed-out parts of the internal organs are placed inside them. At the same time, a live creature, such as a lizard, is placed inside, and the idol is then apparently considered to be vivified.

There is a niche or shrine or loft in a Chinese house or shop for images, or a red-painted board, or red paper, with the names of one or more gods, in addition to ancestor tablets, unless the eun has an Ancestral Hall; but in Central China this general rule does not hold good, for a considerable proportion of the houses... are devoid of idols or even Ancestral Tablets. The changes now taking place in China are causing a movement towards disbelief in idols among a good number of them.

LITERATURE.—This has been sufficiently indicated in the footnotes.

J. DYER BALL.
manship, and, among other relics sculptured upon them, have representations of the fetish embossed upon it—a tall pole, adorned with a garland.

2. Images of deity in human form.—Somewhere about the time of the 11th dynasty the Egyptians began systematically to represent their gods by images. The god appears as a man wearing the ordinary clothing of an Egyptian, a tunic, adorned, as in the case of a king, with the tail of an animal. On his head he wore a helmet, or a crown, or a hall plumes. While in his right hand he carried a sceptre or leading staff, the goddesses carrying, as their distinctive emblem, papyrus stalks. From this time onwards throughout the historic period, the use of images, either human in form or human with an animal's head, to represent the gods to the senses of the faithful was constant, save for one short interval, when, in the reign of the reforming King Akhenaten (c. 1355-1353 B.C.), all such representations of deity were forbidden, and the only image tolerated was the figure of the solar disc with outspreading rays ending in human hands.

Of the images of the gods used for purposes of worship, the most important type was that of which, unfortunately, we have no surviving example—the small cultus image which was kept in a costly shrine in the Holy of Holies of each Egyptian temple. This temple was tended day by day by the priests, and exposed to the view of the general public only on great ceremonial occasions. While no identifiable specimen of this most sacred object of Egyptian worship has survived, we can form a fair idea of its style and material from the literary references which have come down to us. The sacred image was in curious contrast to the gorgeous and gigantic temple which was constructed for its sake. It was generally neither of large size nor of costly materials. Thus in the temple of Hathor at Denderah, there were, among others, the following sacred statues: Hathor, painted wood; copper, inlaid eyes, height 3 ells, 4 spans, and 2 fingers; Isis, painted acacia wood, eyes inlaid, height 1 elli; Horus, painted wood, inlaid eyes, height 1 elli and 1 finger. The largest, therefore, was scarcely of life size, the smallest only about 16 inches in height. The reason for this insignificance in size was that for certain acts of worship the images had to be easily portable.

The form and material of these little wooden dolls were, however, attuned for by the splendour of their abodes, and the reverence with which they were served. The shrine of the god was in the innermost chamber of the temple, which was in total darkness save on the entry of the officiating priest bearing artificial light. It consisted generally of a single block of stone; often, especially in the later periods, of enormous size, hewn into a house which surrounded with impenetrable walls the image of the god. The doorway in front was closed with bronze doors, or doors of wood overlaid with bronze or gold-alloy plate, and each day, after the daily ritual had been gone through, these doors were closed, fastened with a bolt, and then tied with a cord bearing a clay seal. On either side of the sanctum sanctorum of the main or principal god of the temple were subsidiary sanctuaries, containing images of the other two members of his triad. Thus in the temple of Amen at Thebes, Amen would occupy the central position, while his consort Mut would be on one side, and the Moon-god, Khonsu, on the other. Within the shrine, the image of the god reposed in a little ark, or portable inner shrine, which could be carried out and placed upon the ground in the temple, or at the home of the deity made his journeys abroad on stated occasions.

The daily ritual of service to the image was in its main outlines the same in all the temples, though there were many minor variations, and in some temples the ritual was much more elaborate than in others. At Thebes the priest of Amen had sixty separate ceremonies to perform each day; at Abydos there were only thirty-six.

Generally speaking, the procedure was as follows. Early in the morning the priest of the day, after ablutions, entered the Hall of Holies, bearing incense in a vase, and a censer, and a file of priests followed him in the shrine. He first loosened the door that closed the shrine, repeating as he did so a stereotyped phrase. The cords of the doors were broken, and the seals removed, and I bring thee the eyes of Horus. Thine eyes belong to thee, O god Horus. The breaking of the clay seal was accompanied by a short phrase, and also the drawing of the bolt. As the doors of the shrine opened and the god was revealed, the priest prostrated himself and chanted: 'The gates of heaven open, the gates of earth are undone.... The gates of heaven are opened, and the nine gods appear radiant, and the god N appears enthroned upon his great throne.... Thy beauty belongs to thee, O god N; thou naked one, clothed thyself.' Taking his vessels, the priest then began to perform the daily toilet of the god. He sprinkled water on the image twice from jugs, clothed it with linen wrappings of white, green, red, and brown, and painted it with green and black paint. Finally he fed the image, by laying before it bread, beer, and wine, and water, and decorated its table with flowers.

This was the regular daily service; but in addition there were great festival occasions when enormous quantities of food and drink were offered to the god. After their ceremonial appropriation, the greater part of these provisions, no doubt, became the perquisite of the priests; but a certain portion was reserved for the use of the distinguished dead who had adorned the temple by the dedication of votive statues. These statues were entitled to share in the food from the altar of the god, after that the god had satisfied himself therewith.

In addition the wrappings of the divine image were taken off, and given as bandages to the mummies of those who had been benefactors of the temple—thereby, no doubt, securing their blessedness in the other world.

On great festival occasions there was one special addition to the ordinary ritual, besides the multiplication of offerings. The chief event of such a day was that the people should 'behold the beauty of their Lord.' The little image was, therefore, taken out of its chapel in its portable shrine, which, carefully swathed in veils, was placed on a barque carried by poles on the shoulders of several priests. This barque was carried through the open court of the temple, and thenceforth through the town. At intervals it was set down upon a stone pedestal, and, when one of these stations of the god was reached, incense was burned and prayers were offered, and at last the hangings which closed in the sides of the ark were withdrawn, and the image of the god was revealed to a moment to the eyes of the faithful. Besides these journeys through his own town for the benefit of his local people, the image was in the habit of making occasional ceremonial visits to the gods of neighbouring towns—voyaging, on these occasions, in one of the ships which were attached to the temple. The visit, which doubtless had its origin in some traditionary intercourse of the two gods, was duly returned by the image which had been visited.

These little cultus images were supposed to be endowed with the power of giving oracles. For a discussion of the consultation of images, see art. DIVINATION (Egyptian), vol. iv. p. 793 ff.

One other attribute of these images remains to be noticed. The images were not only considered to have magical powers of healing, and, on sufficiently great occasions, these powers were brought into requisition. A late legend, composed for the glory of the Moon-god, Khonsu, in the temple of Bekheten, and sister of Nefer-ru, the wife of Ramses II, was possessed by an evil spirit which could not be driven out. In answer to a request
made to Ramses by the prince of Bekhten, the image of Khonsu was sent to the rescue, healed the distressed damsel, and was detained in the land of Bekhten for more than three years. The princess whom Khonsu would fain have kept the wonder-working image altogether, but was induced to send the god back to Egypt by a vision in which he saw Khonsu coming out of his shrine in the form of a goat and flying back to his native land (cf. art. DISEASE AND MEDICINE [Egyptian], vol. iv, p. 773).

These little images were the chief objects of Egyptian worship, and were in all houses; but, in addition, the temples of the various deities were provided with innumerable other images of the gods. These were mainly votive offerings contributed by pious people who believed themselves to have been the recipients of favours from some particular god, or who desired to receive favours. Thus the little temple of Mu at Thebes became, for some reason, a perfect storehouse of votive images, especially Sekhmet, and the bronze and stone images of the gods found in most museums are largely of this votive class. Further, images of the gods were extensively used in connection with household shrines and personal images.

The remains of several houses give evidence of the existence of a recess in the wall of the central hall, whose adornment of religious scenes points to it having been the focus for family worship, and the multitude of little statuettes of the gods in pottery, bronze, silver, and even gold, shows how widespread was the custom of having a tetrality image of the favourite god to watch over the house. In the later stages of the Egyptian religion the image of Horus subduing the powers of evil seems to have been the standard protective figure for the house; but under the Empire the favourite domestic divinities were not any of the great gods, but minor deities. Chief among these were the grotesque little handy-legged god Bes, and his wife, the hippopotamus-shaped Taaret. Images of these very immobile gods had an unbounded vogue, and were supposed to protect against evil spirits. They were found in every household, and were often wrought into the handles of mirrors and other toilet articles, while they were frequently worn, especially by children, as amulets.

The curious little images of deformed children, called paatoua by Herodotus (iii. 37) and regarded as the sons of Ptah, shared in the popularity of Bes and Taaret.

Animals as living images of deity.—It must not be forgotten that, in addition to all their graven and molten images, the Egyptians possessed living images of certain of their gods, and that in the later historical period the worship of these developed to an extraordinary extent, so much so as to have impressed upon other nations the idea, totally erroneous at least as regards the greater part of Egyptian religious history, that the Egyptians were a race of animal-worshippers. Originally, as we have seen, certain deities were conceived of under the guise of animals, and through the whole historic period certain animals were in by living images, incarnations of deity. Chief among these, of course, were the Apis-bull of Memphis, the incarnation of Ptah, and the Mnevis-bull of Heliopolis, the incarnation of Ra. But, while this is so, the development of animal-worship which excited the attention of Herodotos and the derision of Juvæn belongs only to the decadence of the religion. 'It was a reflection on the devotion to the Egyptian religion, but it did not belong to its original structure. In later times veneration for the sacred cat, monkey, sheep, and serpent increased greatly, but the ancient faith of the people knew nothing of this error.' (A. Erman, Handbook, p. 54).

Of one Egyptian divinity alone no image was ever made for purposes of worship. This is Maaat, the goddess of truth, who appears in judgment before Osiris, and whose little figure, crowned with a single feather, is continually presented by the king as an offering to the god whom he is worshipping.

4. Images of human beings used in a religious connexion.—There remains to be noticed the extensive use made by the Egyptians of images of human beings in a religious connexion, especially in connexion with the life after death. The necessity of securing that the ka of the deceased person should have a recognizable habitusation to which to return resided in steps of a very elaborate kind being taken to secure so important an end. First of these was, of course, the mummification of the body, ensuring its continuance for a long period. But the mummy might perish or be destroyed, so there grew up, from a very early period, the custom of placing in the tomb of the deceased an image, or many images, of him in stone or wood. The first requisite of these images was that they should be absolutely faithful likenesses of the person whom they were meant to represent; and the result is a series of statues which aim, not at beauty, but at life-like resemblance—physical deformities being reproduced with as much accuracy as possible. The dress worn by the deceased was copied, and offerings anything in the least corresponding to the series of portrait-statues which has been preserved to us in the tombs of Egypt.

Besides the portrait image or images, the tomb of an Egyptian was furnished with a number of other images, of tiny size, representing the servants who were supposed to discharge for their master any work which he might be called upon to do in the Sokhât-Aaru, or 'Fields of the Blessed.' These tabaltis, or 'answerers,' probably represent the survival from a time when the slaves of the Egyptian grandees were slain at his tomb to accompany and serve him in the other world (cf. further, art. DEATH, etc. [Egyptian], vol. iv, p. 490).

In common with many other nations, the Egyptians believed in the magical power of images of gods and men. These images, made of wax and bound into the house-pillar or shrines of the person to be injured, were believed to 'cripple the hand of man.' The standard instance occurs in the trial of certain conspirators against Ramses III., where it was proved that the 'superintendent' of the temple had taken a magical book from the Pharaoh's own library, and, in accordance with its directions, had made waxen images, and introduced them into the palace for the purpose of injuring Ramses. This belief plainly comes down from a very early period, as a waxen crocodile is used to punish a criminal in the earliest of Egyptian folk-tales, whose action is supposed to take place in the time of the 11th dynasty.

JAMES E. CALKE

IMAGES AND IDOLS (Greek and Roman).

I. Greek.—The cult of images belongs to a later stage of religious development than mere fetialism, or the holding sacred of any object which has acquired supernatural power (montere). It is develop-
opened out of such fetishism by growing anthropomorphism, as the gods become humanized and come into closer relations with the human spirit. Among primitive peoples there is a belief in a near connexion between an image and the person or thing portrayed; so that what affects the image must also affect the original of the image. Connected with beliefs of this kind were some of the customs of early Greek religion. The temple was the abode of the deity, his image being his surrogate, and taking his place. The deity in a measure resided in the image; petitions to him were laid on its knees, incense was burned before it, and the treasures given to the god were heaped about it. Among the most pleasing gifts to the god were other images, whether of himself or of votaries. The notion appears to be that, as the image of a votary stands in the presence of the image of the god, so the god will be near the votary's person to aid and direct him. The tomb rivalled the temple as a place for images, and with the dead were buried a great quantity of terra-cotta figures.

The religious objection to the use of images in the worship of gods and heroes, which was strongly denounced by the Jews, and has been adopted by the Muhammadans and some branches of the Christian Church, can scarcely be said to have existed in Greece. We have learned from the brilliant discoveries of Schliemann and Evans that idols were known in the country many centuries before the arrival there of the Greek race. The chief deity at Knossos in Crete seems to have been a great goddess of nature, of the same class as Mylitta and Cybele, represented on gems as flanked by lions, and in a remarkable statuette of enamelled bronze adorning the necks of her hands. With her was associated a male deity of less importance, who is sometimes depicted on gems, but who was usually worshipped in the symbol of a double axe, which is of frequent use in Crete (see, further, 'Egyptian' section above, and art. AXE).

After the decay of the Minoan and Mycenean civilizations, and the entry of the Greeks upon the scene, still in a barbarous condition, the art of image-making, like all other products of civilization, seems to begin again at the lowest level, and gradually to rise. When a site of an ancient city in Greece or on the coast of Asia is excavated, there is usually found on the lower levels a multitude of rude terra-cottas. The same is true, in a less extent, of graves.

It is a noteworthy fact that the great mass of these images represent the female figure. This may be the result of religious conservatism, as the Greeks probably adopted, from their predecessors in the country, the cultus of goddesses of growth and procreation, the varieties of the great Mother-goddess whose cultus was spread over the whole East, from Babylon to the Egyptian. Figures of the characteristic deities of Greece—Zeus, Apollo, Poseidon, and others—do not appear. Figures of men on horseback and in chariots do, however, occur (fig. 1),1 most commonly in Cyprus, but also in other places. Whether these images represent ordinary mortals or the heroised dead is a question not easily to answer.

Before the 7th cent. B.C. these works are of a very primitive character, and their date is not easy to determine. If of stone, they represent the naked female body in rudest form, the arms and legs being roughly indicated, and the head a mere flat protuberance. These figures are especially characteristic of the limits of the Egyptian. Commoner on all the coasts of that sea are figures of terracotta of conical form. Sometimes they are naked, more often draped, the legs being draped by the garments, the arms mere stamps, the head formed by a few incisions of finger and thumb in the soft clay. Some points, such as the breasts, are roughly indicated. There is the standing type (fig. 2, 3) and the seated type but slightly distinguished from it by a bend in the front of the figure (fig. 4). Jewellery and adornments are added, for the most part in paint. Sometimes the image grasps an infant in its arms.

Such images have been found in abundance on the great religious sites of the Greek world—Ephesus, Argos, Naucratis, and elsewhere. Numbers of them are also found in the early tombs. That they had a religious meaning can scarcely be doubted; but clearly to define that meaning is not easy. In some way they were regarded as a gift pleasing to the gods, and as talismans to protect the spirit of the dead in his journey to the land of souls. The outstanding feature is that they are predominantly female, male figures being almost entirely absent; here we have a point of contact with pre-Greek religion in Greek lands. It seems that the worship which in the Mycenean age adhered to certain sites, and dedicated them to the worship of the ancient goddess of nature, still survived for many ages. It has, in fact, survived in those regions to the present day, when the Mother-goddess of Christianity takes in the beliefs of the people the place of her heathen prototype.

In the 6th cent. B.C. the old generalized type of goddess becomes differentiated in various localities. She merges in the goddesses of the Greek pantheon, and carries their symbols. As Aphrodite she carries the dove, as Artemis the stag (fig. 5), as Persephone the sacrificial pig; as Athene she wears the helmet or the aegis. Excavations, e.g., on the Athenian Acropolis have brought to light a multitude of seated and standing figures which can represent: only Athene herself, and are sometimes armed (fig. 6). In Corfu there is a series extending over a long period, in which Artemis may clearly be recognized. Many such local series may be studied in our museums; and at this time male...
dainties as well as female become common. The terra-cotta figures are now swept from the vague and merely traditional use of the pre-historic age into the full current of Greek Olympian religion.

In the 4th cent. B.C., if not earlier, we may trace a further change of usage. The great mass of terra-cotta from temples and from graves at sites like Myrina in Edolis and Taormina are clearly not religious in character. They represent youths and girls of pleasing type, either simply or as engaged in conversation or in games. Sacred figures are rare among them. When such figures were thrown into a grave, they seem to have been purposely broken, as if to unfit them for any but sepulchral use. The meaning of these images has been much discussed. Some archaeologists would see in them survivals of the primitive custom of stripping with or slave to accompany the dead to the world of shades; others would see an intention to furnish the tomb with pleasing copies from the world without. Probably the true explanation is a very simple one. Figures of terra-cotta were used as playthings by children, and they were part of household decoration. When representing the gods they served as images for domestic worship, and were placed in niches or on pedestals. The Greeks were so devoted to the representation of the human form that they applied it everywhere, even to common household utensils. So they naturally regarded little images as gifts grateful alike to the gods and to the dead, fitted to people alike the temple and the tomb. And they had one very great advantage as offerings—they were extremely cheap.

Meantime, for the larger cultus-images of the gods and goddesses who were brought in by the Greek invaders we may trace another origin. The primitive Greeks have no scruple in attaching divine virtues to stocks and stones; but they must be stocks and stones of a special character, such as the divine powers themselves had marked out and chosen. Trees which for some reason were regarded as full of divine energy, and meteoric stones which had fallen, or were supposed to have fallen, from the sky, easily acquired a sacred character. That mere obelisks, called ἀπὸ τοῦ θεοῦ, were even in later Greece regarded as sacred we learn from Pausanias, who saw ranged in the agora of Pharnaces thirty conical stones, each of which received the name of a particular deity. The testimony of Pausanias has been confirmed by the recent discovery in Arcadia of a number of square pilasters, each surrounded by a conical stone, and inscribed with the name of a god—Zeus, Artemis, the Hero, and so on.

As the spirit of anthropomorphism in religion grew strong in Greece and Asia Minor, it was very natural to add something of human appearance to a conical stone or the trunk of a dead tree. The coins struck in the Roman age in cities of Asia preserve for us the outlines of simulacra which can scarcely be said to be of human form, yet are by no means shapeless blocks. Of such a kind were the images at Perga of Anassa or Artemis (fig. 7),

at Ephesus of the local goddess (fig. 8), at Euromus in Caria of the Carian god of the double axe (fig. 9). A head, wearing a tall crown, emerges from the stone; arms are missing; the wooden cylinder is covered with bronze or gold wrought by an artist. The process is well described in Is 40:12. Some,

times rude images excavated from the ground, or brought from foreign lands, were accepted as a kind of revelation of a deity. Their unseeliness was no obstacle; for there is truth in the well-known saying of Goethe: 'Wonder-working images are usually but ugly pictures.'

The origin of idols is similar in most countries. But what is most interesting in the present connection is the way in which Greek artistic taste and the love of human beauty formed out of such promising beginnings a pantheon of exquisite forms. In this the Greeks are almost unique; for, although medieval Europe ran riot in the production of images of angels, apostles, and saints, it was not then in existence the appreciation of beautiful bodies which is shown in Greek sculpture.

In the religion or religions of historic Greece there were several strata or tendencies; and the tendency to religious sculptural idealism does not belong to all of them. To the philosophers the representation of the gods in human form did not appeal; and the writings of Plato and other great thinkers show a steady contempt for plastic art. At the other end of the scale, the uncultured husbandmen and slaves were ready to venerate figures of the gods in proportion to their wonder-working power rather than in proportion to their beauty. The Dionysiac and other mysteries afforded to their religious feelings a more suitable field of exercise than did the staid worship of the great temples. But between the intellectuals on the one hand and the superstitions on the other came the mass of intelligent and art-loving citizens. To them the State-religions, belonging to the cities and great shrines of Greece, centring in the worship of the deities of Olympus, and the heroic ancestors of the clans, afforded full satisfaction. For them

1. An excellent general account of Greek figurines will be found in F. Pottier's Statuettes de terre cuite, Paris, 1890.
2. VII. xxii. 4.
4. Figures 7 to 18 are from coins in the British Museum.
the poets and dramatists worked into beautiful poems the tales of mythology; and for them the arrows and the image were fashioned in bronze or marble or ivory and gold the ideas of the race as to the higher powers. As to the great city festivals, they were of mixed character. The conservative tradition, which was so marked in Greek art, was retained in them much that had belonged to prehistoric and even to non-Hellenic days, spoils of savage religion preserved as if they still existed in amber. For the whole the festivals were transformed by the Olympian religion and filled with Hellenic sweetness and light.

Maximus of Tyre, a rhetorician of the Antonine age, has left us a pleasing, if somewhat verbose, defence of Greek image-worship. Men, he says, who can raise their spirits directly into communion with the divine perhaps need no images. But this kind of man is rare; and it would be impossible to find any whole race conscious of the divine and needing no such aid. The Persians worship fire, and solemnly feed it with logs; the Egyptians regard the animals of the Nile as sacred, poor things though they be; the Celts venerate the caen of the Parians, a small disk set upon a pillar; the Phrygians worship Aphrodite in the form of a white pyramid. But the Greek custom is to represent the gods by the most beautiful things on earth, pure material, the human form, consummate art. The idea of those who make divine images in human shape is quite reasonable, since the spirit of man is the nearest of all things to God and most god-like. If the Greeks wished to the contemplation of God by the skill of a Phidias, and the Egyptians by honour given to animals, while others honour a river and others fire, the variations do not vary much; only let men know God, love him, think of him.

There is a well-known saying of Herodotus, that it was Homer and Hesiod who first distinguished the functions of the gods and assigned their forms. Of course, in the time when the Homeric poems were written, there could be no question of statues of the gods; there can have been none but the rudest images. But it is doubtless true that Homerite incidents and descriptions may have dwelt in the minds of great sculptors of subsequent ages, and inspired them. It is expressly told us that when Phidias made the great statue of Zeus at Olympia, he had in mind the lines of Homer which describe how the nod of Zeus shook Olympus, and how his hair floated out, although he seated the order and personality of the Hellenic pantheon; but, as a matter of fact, he has not a statuesque imagination. We should be mistaken if we took back to Greek times that predominance of literature over art which has been, though of late years less markedly, a feature of modern times.

The great difference between the religious art of the Greeks on the one hand, and that of Babylon, Egypt, and India on the other, is that, whereas the Oriental nations were content with merely symbolic representations, the power of the Greeks were ever struggling to merge more symbolism in anthropomorphism.

The gods of Egypt differ one from the other not in shape but in name. The animal heads which are placed on their shoulders. Isis has the head of a cow, Horus of a hawk, and so on. The attributes of the Babylonians and Persians with wings to indicate longevity, is not meant for real flight, but to indicate their power over animal nature; and the arrange-ment is merely a conventional one; the creatures are not carried up into the air; the varied powers of the gods are indicated by giving them many hands, and many bands of instruments for various purposes.

In the earliest distinctive Greek art, deities like those of Egypt and Babylon sometimes make their appearance. On the pediment of a temple at Olympia, Pausanias saw represented a female figure which puzzled him. It was inscribed with the name of Artemis, but it had wings on the shoulders, and carried a bow and a panther. As it became adult, Greek taste set aside this rude symbolism, and preferred to represent the swiftness of Artemis not by wings, but by the lissness and vigour of her frame, and her power over nature by giving her as an attendant and friend a dog or a stag. In the art of the 4th cent. the Greek deities almost always carry an attribute by which they may be identified—Zeus an eagle or a thunder-bolt, Hermes a herald’s staff, Apollo a bow or a lyre, and the like; but these become less necessary later, when the deity can be identified by bodily type. There is no fear of hesitation whether of the 5th cent. image represents Apollo or Herakles, Athene or Aphrodite, since in each case the qualifications of the deity are thoroughly incorporated and revealed in the bodily form. In mature Greek art external symbolism is not entirely absent. Even in the 2nd cent. B.C. and 1st cent. B.C. still retain their wings, though they use them to fly with, and do not merely carry them. Hermes has small wings on his cap or on his heels, and the river-gods are still winged. These, however, are little more than survivals.

If we bring together Pliny’s Natural History (I, xxxvii–xxxvii.) and the descriptions of Pausanias, we are able to discern the two historic origins of religious sculpture. Just as Homer stands at the source of Greek poetry, so at the source of Greek sculpture we have the figure of Dædalus, who is himself merely mythical, and who was set down as the maker of most figures the actual origin of which was lost in the mists of antiquity. But a number of artists classed by the ancient writers as pupils of Dædalus (Dædalides) really existed, for we find their signatures on existing bases of statues. Beginning about 600 B.C., we can trace lines of descent in a variety of materials. One school in Peloponnese began with work in wood; and so, by inlaying the wood with gold, ivory, and ebony, or clothing wooden figures in bronze, they worked their way towards that technique in gold and ivory which was used in the 5th cent. for the most magnificent of the statues of the gods. Another school, of which Rhicous and Theodoros of Samos were the most noted members, discovered or improved the art of casting statues in bronze, and so made antiquated the earlier fashion of thrusting out plates of bronze into the required shape, and fastening them with nails. Other schools, belonging mostly to the Greek islands, such as Chios, Paros, and Naxos, used their native marble, and superseded the old rude figures cut out of limestone by delicate and beautiful statues of glittering material.

It is impossible here to follow, even in outline, the process whereby the sculptors of the great power of the Greeks were struggling to merge more symbolism in anthropomorphism. The gods of Egypt differ one from the other not in shape but in name. The animal heads which are placed on their shoulders. Isis has the head of a cow, Horus of a hawk, and so on. The attributes of the Babylonians and Persians with wings to indicate longevity, is not meant for real flight, but to indicate their power over animal nature; and the arrange-ment is merely a conventional one; the creatures are not carried up into the air; the varied powers of the gods are indicated by giving them many hands, and many bands of instruments for various purposes. Three statues of Apollo, represented on coins, may serve to illustrate the process: fig. 10 is of the Apollo of...
It is evident that the higher qualities of the deity are much less easy to incorporate than the
lower. Apollo as the god of the gymnasium was easy to render in art, since he had to be only an
idealized athlete. Apollo, the god of music and song, could also be embodied, a rapt and poetic
expression being not beyond the resources of developed Greek art. But Apollo as the prophet
of the supreme Deity, or as the great patron of purification, was a less easy subject for art. In
the same way, Artemis as an archeress or as the
queen of the nymphs naturally attracted the artist,
but Artemis as goddess of moisture and source of
the springing powers of nature was less easy to
depict. Thus the rendering of the gods in human
form did undoubtedly tend in a measure to limit
them, and to throw into the background that
which in them inspired awe rather than pleasant
appreciation. Perhaps, however, we may make
a few exceptions to this rule. Of the gold
and ivory colossal of Zeus at Olympia (fig. 19), Quin-
tilian says that it added something to the accepted
religion; and Dio Chrysostom in the 1st cen-
t. A.D. tells us how it affected educated men.

In the same way, the great statue of Athene
Parthenos at Athens (fig. 14) concentrated about
herself the patriotic adoration of the people of
the city; she was not only the deity who gave wisdom
but also embodied the common life, the destiny, the star of the
Athenians, and all the better because she was as
dignified and majestic as Pheidias could make her.
So also, when, about 300 B.C., Euthydides the sculptor
made for the people of the newly-founded
city of Antioch a representation of the Fortune,
or Tyche, of that city, he represented her as a
most graceful figure seated on a chariot set
in motion by a river god. The statue of Antioch
is one of those copies extant (fig. 15), not
only gained wide admiration, and was copied in
many other cities, but we are told that it was held
in the highest religious reverence. Possibly it greatly helped to make the people of Antioch feel
that they were citizens of no mean city. In Greece,
civic politics and religion were nearly related: the
general or the statesman was often also a priest of
the deity of the city.

A different fate attended another sculptural crea-
tion of the same period—the Sarapion of Bryaxis.
Religiously, Sarapis was of great importance, as he
united the conquering Greek and the conquered
Egyptian in a common cult; since the former
could see in him a form of Hades, and the latter a
modification of Osiris. But the sculptor, if we may
judge from the poor copies extant, tried to intro-
duce into the expression of the face of the deity too
much of mystery and solemnity, and so passed the
bounds of possible sculpture. In a painting he
might have been more successful.

Strict anthropomorphism in the embodiment in
art of their deities was eminently suited to the
Greeks. They were little inclined to mysticism;
their minds were clear-cut and practical; and they
were content to idealize their gods within the limits of
the eminently static or characterized variety of art.
At the best, they could produce images perfectly
adapted to the character of their worship and their
religious festivals—figures which a good citizen of
fine taste could look on with pride, and which he
could with self-satisfaction contrast with the poorer
inventions of surrounding peoples. But in the
latter part of the 4th cent., when the city-State was
falling into decay, and the city festivals were becoming
more pageants, we cannot be surprised that the
statues of the gods lost their high dignity. Sculp-
tors of that age, notably Praxiteles, though they
could still produce exquisite forms, produced them
at a lower level. The images of the gods no longer
embodied human nature at its highest ideal stage,
but rather human nature on the level of the average
sensuous man. The Apollo killing a fay, by
Praxiteles, represents the deity on the model of an
idle and sporting youth. His Aphrodite, though she
cannot be called impure or sensual, is yet little more
than a woman of exquisite form engaged in taking
a bath. The tendency thus began soon after Plato,
and in the Hellenistic age we find representations of male
and female deities which could satisfy only a
sexual and pleasure-worshipping people. Of course,
there were reactions. The great statues of Demeter
and Persephone set up by Damophon at Lykosura
in Arcadia in the 2nd cent. B.C., still extant in a

Our Zeus is peaceful and gentle in all ways, as the
overlooker of an undivided and united Hellenes . . . set up gentle
and stately in form above all grief, giver of life and means of
living and all good things, the common father and suaver and
guardian of men, so far as it was possible for a mere man by
meditating to copy the divine and infinite nature . . . if any
man were utterly hardened in heart, after meeting in life many
misfortunes and troubles, a stranger to sweet sleep, even he,
I think, standing before this image would forget all the terrible
pains and sufferings of our mortal life (Orat. xii. 9).

1 See Orat. xii. 9.
2 See Orat. xii. 10.
fragmentary condition, have much of the ancient dignity. Sculptors who were set to make cult-images for temples went back for their models to the great creations of the 6th century. Some new types, such as that of the Fortune of Antioch already mentioned, had real religious value. But an art which cannot produce original types suited to the genius of a new age must soon decay. In the Roman age the figures of the Greek deities which were produced in unlimited abundance in the workshops of the sculptors have no vitality. They are only elegantly eclectic—charming compositions, but not at all stimulating to the powers of worship. We are not, therefore, surprised to find, from the trustworthy evidence of coins, that many of the cities of Asia Minor set aside the fine Greek statues of their city deities which held the place of honour after Alexander the Great, and re-installed the quaint and ugly figures which those statues had superseded. In the time of St. Paul the people of Ephesus had gone back to the image which fell from heaven. Rome was filled with splendid statues of the gods brought from Greece by conquering generals and by Emperors; but they were cherished mainly as works of art, and not as cultus-images. In fact, the same transition from worship to adoration took place in regard to these statues which has occurred in the change of modern feeling in regard to Gothic cathedrals.

2. Roman. In Roman religious usage, images do not take nearly so important a place as they do in Greek. Neither the anthropomorphic tendency nor aesthetic taste was so highly developed among the Romans. In fact, the primitive deities of the Romans were in nature too vague and abstract to be at all appropriately rendered in plastic art. At least, there were no traditional chthonic forms connected with agriculture, or the pastoral life, or the various activities of man; at highest, special aspects of a great spiritual force. Perhaps, apart from Greek and Etruscan influence, the Romans would not have had any statues of the gods. The early graves of central Italy furnish us with no such population of terra-cotta figures as do those of Greece and Asia. Perhaps the only images of true Roman type, which the Romans themselves called imaginiae, were the naturalistic portraits or masks, in wax or metal, of heroes and ancestors which Romans of birth set up in their houses and carried in funeral processions, and which served to localize the spirits of the departed, and bind them to the living. But Greek influence began at an early period to tell upon Rome, alike radiating from Greek colonies such as Cumae, and coming through the mediation of the Etruscan. As the Greek gods, through the influence of the Sibylline Books, were called to Rome on the occasion of famine or pestilence, or any crisis with which the native deities seemed unable to cope, they must needs have their temples, and Greek sculptors were called in to make images for those temples. On the coins of the Roman Republic we find copies of many such statues. It is little that is Roman about them; they are merely Greek figures of the Hellenistic age. Occasionally the sculptor was called on to portray beings of Roman origin, such as the silens (fig. 10), Saturnus, Janus (fig. 17), Nero, or Acca Larentia; but he fulfilled his task by merely adapting the nearest Greek type in his repertory. The veneration of images, however, by the 1st cent. a.d. had become part of the ordinary devotion of the people. We read of the excavations at Pompeii that many houses had a Lararium, or private shrines, presided over by the Larus (fig. 18), who were represented either by snakes or by the figure of a man. The type of whom was probably taken from the Greek Dioscuri.

The vast crowd of images of the gods which had been constantly increasing in Greece and Italy until the 3rd cent. a.d. met with extreme hatred from the Christians, who were as eager to destroy them as the Puritans of England to break up the sculptured figures of our churches. A few great statues were carried to Byzantium, as works of art rather than as objects of cultus; but they gradually disappeared; and naturally none survived the Turkish conquest.

LITERATURE. In addition to the works mentioned in the course of the text, reference may be made to F. B. Walters, Art of the Greeks, London, 1906, and Art of the Romans, 3 vols., Paris, 1917-1918; G. Wissowa, Rel. und Kultur der Römer, Munich, 1912.

(Lucian, de Dea Syr. 3), and Persians (Deinos, in Clem. Alex. Protrept. 65 [ed. Dindorf, i. 71]; Herod. i. 151; Siraba, XV. iii. 13 [382]).

In fact, the religion of Jehovah at the time of the sojourn in the desert probably did not carry with it such a strict prohibition against the use of images in worship as the first decalogue ascribes to it (Ex 20:24; Dt 5:24); otherwise it would be difficult to explain the freedom with which the most faithful worshippers of Jehovah made use of them down to the 10th cent. (see II. 2).

The much more ancient decalogue of the Copts, as it stands in the dangerous manuscripts, does of course (243) insist that the worship of images (244) is to be prohibited. It is probable that the nomadic Hebrews used statuettes as amulets and in private worship (Gu 312. 35–35–12). Among the Arabs of the time of Muhammad (W. R. Smith, Rel. Semi. 5, London, 1894, p. 293 f.), the Phoenicians, and the Canaanites, images were much more frequently employed for domestic purposes than for public worship. The same is true of the Egyptian peoples (G. Karo, AEW vii. [1904] 153 f.).

II. AFTER THE SETTLEMENT IN PALESTINE.—

1. Idol-worship among the Canaanites.—Canaan was a land of idols (Nu 33:5, Dt 7:2, 12:29, Ps 106:30, etc.), which has been confirmed by the excavations recently made in Palestine. As yet nothing has been found in the sanctuaries but steles, and it is probable that the deity was usually represented by a stele (see Urartu, etc.). S. I. Curtis has noted a maqṣūbah, an abūra, or some natural object. But in private houses, in tombs, and in a sacrificial trench at Gezer, statuettes have been discovered in profusion which were carried about in private worship (amulets, ex-voto, etc.). Those of most frequent occurrence are images of goddesses (Astarte) in bas-relief or, more rarely, in the round, tending towards the Babylonian type in the North and becoming more Egyptian in the South. At Atargatis (?) has also been found, some phalli, heads and shoulders of the bull, a brazen serpent, figurines of doves, cows, fish, statuettes of Egyptian divinities—Pthah, Osiris, Thoth, Napūt, Tiunā, and, above all, Bes. Although statues were of rarer occurrence in the public sanctuaries of Palestine, we need not conclude that they were entirely lacking (I 5:7); they were naturally much more exposed to destruction than private ones.

2. Idol-worship in Judah.—After they had settled in Palestine, the Israelites, no doubt taking their lead from the people of the country, procured freely to the fabrication of images of Jehovah (and eventually of other gods), and began to worship them in the public sanctuaries as well as in private. Michæl had in the ‘house of gods’ of which he was proprietor a graven image and a wooden image (according to another version, an ṭeqqād and a ḍāʾrethūt), which afterwards were transferred to the great sanctuary of Dan, where priests of the line of Moses officiated (Jg 17:5-7). Ob-ḏōnū made an ṭeqqād which was worshipped by the whole of Israel (22). At Nōb there was an ṭeqqād served by the priests of the family of El, which was also consulted by Saul and David (see II. 7). David had a ḍāʾrethūt in his house (I 8:19-19).

In the great sanctuaries of the Northern kingdom, e.g. at Bethel and Dan, and perhaps in Samaria (Hos 8:7), there were images in the form of a golden bull (1 K 12:29). The author of the Book of Kings, who looks on the past from the point of view of the prophets of the 7th cent. B.C., did not regard idolatry as innovations of Jeroboam I., but they were quite in keeping with the ideas which were dominant in the Jewish of the 10th cent. B.C. neither Elijah nor Elías, nor even Amos in the 8th cent., thought of censoring the worship of ‘golden calves.’ In the kingdom of Judah a brazen serpent, said to have been made by Moses himself, received sacrifices till Hezekiah destroyed it (2 K 18:4). Ezechiel, about 592 B.C., mentions an ‘image of Jeleus’ set up in the Temple (38). At Gezer and at Taanach several statuettes of Astarte have been found in heaps of Israelite débris (Vincent, op. cit., 163, 164 f.).

3. The meaning attached to idol-worship.—The first Semitic statues were probably stele (maqṣūbah) which had been discovered in the course of certain excavations (Hos 4:14). The status of Panammon is called ṣyb, the same word as sôlôth (a Heb. synonym of maqṣūbah), and the Arab. sūd. Idolatry was thus in principle only a variety of fetichism, practised by the Hebrews and the other Semites (maqṣūbah, ṣôtār, ‘ark). We must, then, consider the image as having been, like all other fetiches, a dwelling-place offered to the god, where he consented to take up his abode only after the performance of certain inauguration ceremonies (Jg 8:27; cf. C. Fossey, La Magie asyrienne, Paris, 1905, p. 1521; M. J. Lagrange, Études sur les religions, 2, do. 1905, p. 390; 329; E. T. Ylger, FCP, London, 1891, i. 168 f.).

4. The rites connected with idol-worship.—In ancient Israel images were kissed (Hos 13:1, 1 K 19:27); cf. Job 31:5; Mish. Sənāq, v. 6; Ap. v. 6; Schick, l. c. 113; S. I. Curtis has noted a Uldül, an image of the deceased (Orients, Leipzig, 1903, pp. 164, 257); incense was offered to them (Ezk 8:27); they were consulted as oracles (see II. 7 and 8); they were placed in a closed cell, differing thus from most of the other sacred objects of the ancient Semites (Jg 17:7; cf. Jp. 12:16, l. c. 5, 1 Mac 10:25, Wis 18:25); they were clothed in sumptuous garments (Ezk 16:12; cf. Jp. 10:12, 16:24, v. 6); Mish. Sənāq, v. 6).

Other customs connected with idol-worship are mentioned, but in passages which refer expressly only to pagan idolatry—e.g. the custom of carrying idols in procession (Am 3:22, Jp. 4:19, of giving them food (Sir 30:18, 30:19, 30:23; Bél and the Dragon), of embracing them, anointing them, wasting them, and sprinkling them with water (Obad. v. 7, 6), of bowing before them (Ob. v. 6), of decorating them with jewels and garlands (Ob. v. 8; Mish. Sənāq, l. c. 5), of fixing them in their place with nails (Is 44:17, Jer 10:14, Wis 15:19) or chaining them (Is 44:19), and of lighting candles for them (Ez 26:7).

5. Names for idols.—The diffusion of the worship of images in ancient Israel is attested by the multiplicity of words used to designate them (cf. HDB ii. 161; G. F. Moore, EzBi ii. 240-242:1. C. Fossey, La Magie asyrienne, Paris, 1905, p. 1521). The Semites (Ezekiel, etc.) sometimes (at least in the case of pagan idols) painted (Wis 13:13, 18) or ornamented with silver and gold (Jer 10:9). This must have been a very common kind of image, for the word pēṭyll (sing. pētill), ‘graven image’ of wood (Dt 7:19; or of stone (Is 21:9, 11; Jer 10:9); Ps 135:15, 16; Vincent, 163, 164 f.) must have been one of the most usual of all images made of metal (Is 44:17, 44:19, Jer 10:14).
There was also (8) the molten image, *masækkîḥ, nesōbîh* (Is 41:19, 49:2, Jer 10:5[6]), *nāšēk* (Dan 11:1), in gold, silver, or sometimes bronze (see II. 6 (2)). According to certain texts, the bulle of Dænos and Bethel were *masækkîḥ* (Hos 12, Ex 32, De 26, Dt 28, 7, Neh 9), made by pouring the molten metal into a mould (Ex 32:5, 15; 11.2 = ‘to cast,’ ‘to melt’ (Is 44:14, 20:17 f.; cf. Jer 51:15 f., 177, 178)). Again, we have (9) the *tewîgevora* and *sairpîh (De 7:2, Is 33:2; cf. also E. Jer. 2:3, 32, 4:21, 15, 25, 25, 26, 27). The frame-work on to which the sheets of gold or silver were hammers and soldered might be of some common metal (Is 44:11); cf. the statue of Osiris, R. A. S. Macalister, PEFS, new ser., xxxv. (1905) 39 or of wood, such as the ‘golden calves,’ according to the evidence of Hos 8 (‘in pieces’), Ex 23 (‘in a graving tool’), 22 (‘burnt it with fire . . . strewed it upon the water’). (10) Figured stones, *eben masōbîh (Lv 26, Nu 33, Ezk 8:2), probably intermediately between the stele and the statue (Lv 26:2), were used as idols, and also (11) images carved out (or according to others, ‘drawn’ (*‘graven images’) on the inner walls of the Temple (*Ezk 25:3). There are numerous textual descriptions of the manufacture of idols, but they are all post-Exilic, and are directed against foreign cults (Is 28:5, 6:22, Ezk 26:14, 465:14, 462:5, Jer 10:18-19, 14:8, 15:21, 32:13, Ps 115:4-5, 15:8-15, Wis 12:13-16).

6. Forms of idols.—(1) Human.—The Israelites, like the Canaanites (see II. 1), the Philistines (1 S 5, and the pagans (Is 44:19, Ps 115:5-7), possessed a host of idols (see Xachbar, Halle, 1896 (n. 282), ‘a carved image and a graven image.’) The sanctuaries of the Nabataeans and in the sanctuary of Noh, there was an *ephod* behind which the sickle of Goliah was kept wrapped up in a cloak (1 S 17:51). This *ephod* was often consulted by Saul and David in their campaign; the priests on those occasions consecrated the metal on the *altar* (2 S 23:18; 28, 32:23); but he was asked to ‘bring it hither,’ and carried it to the person who was committing it (14:23-25 307): he ‘carried it’ (971) ‘to carry,’ not to wear’ (14:2; LXX)

It would be utterly impossible to bring together all the different acceptations of the word *ephod* under one general meaning, by supposing, e.g., that the word had always the signification of ‘pagan,’ one corner of which formed a pocket for holding the *sortes* (*Foote, The Ephod*, pp. 19, 27, 41-44; Moore, EBI, art. ‘Ephod’ [exception made for *ephod* of Gideon], or that it was the golden mask of the divine statues which the priest put on when he was delivering oracles (Dahn, Handkomm. zum AT, Gottingen, 1892, in Is 30:22).

One could rather do well to remember that semantics has disclosed in every language diversities of meaning which are far more singular than those attaching to the word *ephod* whatever its etymological significance, and whether the word *ephod* ‘to cover’ is to be assimilated to *ephod* or not, or mean a ‘garment,’ then a ‘covering’ of precious unity by a covering by a mantle (this is the natural meaning of *ephod* in Is 30:22:1 398), and in the end a ‘covering’ covered with a layer of gold or silver (cf. II. 5). The objection has been raised that a statue does not declare oracles, especially oracles obtained by a sort of drawing lots (see the Urim and Thummim (Is 14:14 (LXX)); yet the *ephod* (Ezk 21, 18, 15 (see, however, II. 8)) and the molten image (Hab 2:20) gave consolations. In Byzantium, questions were apparently ‘whispered’ to newly consecrated idols (Blades, *Rel. Sem.* 3 (1891) 233).

In Egypt there were statues which nodded their heads or spoke, the priests who made them more or less speaking being supposed to be inspired by the god. Another supposed model of the *ephod* was a statuette which, when set in motion by the priest, could stop in two or three different positions, or an idol with a cavity containing sacred lots, possibly like the vases of lamas or other vases found in the Palestine excavations (Vincent, 229, 312).

LITERATURE.—In addition to the works quoted above, see C. F. Moore, Judges, London, 1898, p. 381; T. C. Foote, The *Ephod*, its Forms and Use, Baltimore, 1871, with bibliography; H. T. Elliott, *EATF*, XXX. [1910] 236-276.

7. The Teraphim.—It is difficult to draw from the text any coherent idea of what the *teraphim* were.
Rachel steals those of her father Laban, and, when he asks for them, the answer is that the animals are the fruits of hard work and effort. In this context, the sanctuary of Rachel's father, Laban, is mentioned as a place of worship for the Israelites.

The explanation of the difficulty of finding any agreement between the terms in contexts in which 

orpheus may be that the word, for which no satisfactory etymology has been found, is one of the obscure words used by the Jews in recent times in Biblical texts, for the abhorred names of idol gods and false gods (see III. 3). Orpheus may be the plural of the words, in which the Hebrew of the Mishnas means 'foulness', 'obscenity.' Now, in this case, we have no assurance that the word only term was everywhere and always substitute for one single expression. In Zec 10:2 the Peshitta still appears to have read 3722, 'spirits of divination' or 'necromancers', i.e. 0041, 0043, 0028, 0029 etc.; in other contexts there may have been some term signifying idol in general (3711, 3712 LXX; 3722 or 3723 or god (3723). 

Literature. In addition to the works quoted, reference 

may be made to A. Loew, LaOrigine de la vie future et le culte des morts dans l'antiquite Israelite, Paris, 1906, ii. 227, 353, 354; S. Torge, Seelentauflage und Unterleibskühlung im AT, Leipzig, 1959, pp. 141-143.

III. REACTION AGAINST IDOL-WORSHIP. -I.

Before the 8th century B.C.-The worship of images soon became suspect to the upholders of the true religion of Jahweh: Asa is said to have done away with those which his fathers had erected (2 Chr 15:4), towards the 9th century, condemned only the worship of 'molten gods,' i.e. statues whose splendor contrasted too strongly with the simplicity of older times. The history of the Golden Calf (Ex 32) reflects the same point of view. 

2. The Prophets.-Hosea is the first to lay down the principle of the incompatibility of idol-worship with the true worship of Jahweh (Hos 3:1-3, 4-8). 

Josiah forbids the use of images of gods of silver and gold (2 Kgs 23:19, 20); and Hezekiah, apparently at his instigation, breaks the brazen serpent in pieces (2 Kgs 18:4). It was probably about this time that all manufacture or worship of images of the deity was absolutely prohibited (Ex 20:4). The reforms instituted by Josiah (621 B.C.) include a prohibition against all representations of Jahweh—ever unformed ones (Dpl 23:14, 15). 

The line of argument presupposes that it is an accepted Jewish belief that Jahweh has not, and cannot have, any material representation. 

One of the arguments used by the prophets of the 7th century B.C. and later against pagan gods is that they are gods of stone and wood. They describe the manufacture of these idols as pleasant irony, and identify them purely and simply with the divinities that they represent (a frequent theme from the 6th century B.C. onwards; see II. 5). 

The divine images still retained their prestige among the common people to a certain degree (2 Sam 15:27; cf. perhaps Ps 109:27; 110:5). If Yahweh's people are post-Exilic and refer to Jews). In the ruins of Jewish houses at Elephantine some bas-reliefs and statues have been found, which were probably worshipped by the Jewish colony of that town (O. Rubensohn, ZA xvi. [1909] 20; E. Meyer, Der Pappysurfn von Elephantine, Leipzig, 1912, p. 631). But probably idol-worship was not so much of a popular superstition of the Jews, as the author of Enoch (99-104) accuses his Jewish adversaries of following idols, it is apparent to be understood as a polemic exaggeration respecting their tolerance of the pagans and Grotesque arts. Among the Jews who were most rigorous in keeping the law, the Second Commandment was
so scrupulously followed that all manufacture of images ceased, even when the images were not intended for worship at all (cf. Wis 14:30). Thus, while animal representations abounded in the decoration of the pre-Exilic sanctuary (cf. Sir 38:26), a picture of disapproval arose when Herod set a golden calf, the sacred image of the doors of the sanctuary (Jos. Ant. XVII vii. 2-4, BJ i. xxxii. 2-4). Plate also met with great opposition when he attempted to allow the legions to enter Jerusalem in their uniforms (Jos. Ant. XVIII iii. 311, BJ ii. ix. 2 fl.). In A.D. 66 the Jewish insurgents destroyed the palace of Herod Antipas at Tiberias because it was decorated with sculptures representing animals (Jos. Life, 12). It was out of regard for this scruple that neither Herod nor the Romans put human or animal effigies on the as or fractions of the as coined for Judea.

The pious Jew avoided even pronouncing words signifying 'immortal,' ' idols,' 'devils,' and even the name of the God, Pa 159, substituting for them opprobrious terms, which were usually those used to replace the names of pagan gods (Ex 23:12, Dt 12:2, Hos 2:25; 7:2, e.g., was rendered by the singular 'devil,' a proper name), so that it is often difficult to tell whether idols or strange gods are meant: 'idolium,' 'nothingness' (according to others, 'small gods'); 'galaudum,' 'dung' (RV 'abominations'); 'Achel, 'vanity'; 'grotesque figures'; 'Aplòs, 'abomination'; 'meis'eheq, 'object of horror'; 'p ž Qharm (Lv 20:23), 'n'belâ'ì (Jer 19:1); 'carass'; 'mèthim (Pa 105:9), 'the dead'; 'cheese; 'troubles,' 'blackness.' (Jer 16:1, Dc 27:1), 'abominable thing.' Some of these terms of abuse go back to the Prophets (e.g., Am 5', Jer 2, Is 48); but in many cases they were introduced into Scripture at a very late date by Jewish scribes as a substitute for gentiler terms. As a matter of fact this process continued even after the time of the Septuagint version (2 S 5:16, 1 K 11:2.9, 2 K 22:16, Is 19). Cf. G. F. Moore, EB ii. 2148-1950.

ADOLPHE LODI

IMAGES AND IDOLS (Indian).—1. Introductory.—In no part of the world, perhaps, can the practice of idolatry be investigated with more success than in India, owing to the abundance of the material, and the attention given to it since Hinduism and its allied faiths, Buddhism and Jainism, came under the observation of the foreigner. A visitor to one of its sacred cities is at once aware of the prevalence of image-worship. The streets, like those of Athens in the time of St. Paul, are filled to the brim with images dedicated to the gods (Ac 17:14 AV). Writing forty-five years ago, M. A. Sherring estimated that the city of Benares contained 1454 temples, and that the number of idols actually worshipped by the people certainly exceeds the number of the people themselves, though multiplied twice over; it cannot be less than half a million, and may be many more. 'Idolatry,' he adds, 'is a charm, a fascination to the Hindu. It is, so to speak, the air he breathes. It is the food of his soul. It is the foundation of his hopes, both for this world and for another' (The Sacred City of the Hindus, London, 1858, p. 41 ff., since his time, for reasons elsewhere explained (§ 8), the number of temples and images in that and other sacred cities has largely increased. There are in all about sixty temples in Nasik, a number which for the name of the Benares of India (BG xvi. 1833:503). Within the sacred enclosure at Puri rise about 120 temples dedicated to the various forms in which the Hindu mind has imagined its gods' (W. W. Hunter, Oriens, London, 1872, i. 128). At all the Hindu sacred places the minor idols embalmed in little niches along the streets and the entrances to the bathing-places are innumerable.

Among the more primitive tribes only a few, like the Mundas or Konds, are said to practise no image-worship; but this does not exclude the custom of rude stones and stones (E. T. Dalton, Descrip. Ethnol. Bengal, Calcutta, 1872, p. 236; S. C. Roy, The Munda and their Country, do. 1013, p. 232; S. C. Macphen, Mem. Indian Arch., London, 1855, p. 102). According to J. G. Scott, in Burma 'none of the races have, or at any rate admit that they have, idols. There is no bowing down to stones and stones' (Upper Burma Govt., 1900, pt. 1. vol. ii. p. 83). There are, of course, numerous images of the Buddha, but to the Burman 'the ascension of bowing down to stones and stones is intolerable, and the implication is combated with feverish energy. Where there are no prayers, in the technical sense of the word, there can be no idolatry.' The words uttered before his impressive features are not a supplication for mercy or aid, but the praises of the Lord. The contemplation of whose triumphant victory over passions and ignorance the most devout may be led to a better state' (Shway Yoo [J. G. Scott], The Burmans, London, 1882, i. 236). Some later writers, however, recognize that the prevalence of image-worship is not the chief obstacle to the spread of Christianity. The growth of agnosticism, the revival of Vedantism, and the introduction of modern sects, like Sikhism, or the Arya and the Brâhma Samaj (qq.v.), which reject the idolatrous Purânic cults, and seek to revive an earlier and simpler form of worship, are a more serious hindrance to Christian propaganda.

2. The historical development of idolatry.—The universality of image-worship in its more elaborate form is comparatively modern among the Hindus. In the Vedas we observe the dedication of terrestrial objects—rivers, mountains, plants, trees, implements, and weapons; and 'material objects are occasionally mentioned in the later Vedica literature as symbols representing deities (A. A. Macdonell, The Vedic Myth. Strassburg, 1897, p. 167). Existence of idols in Vedic times has been asserted in the cases of a painted image of Rudra, of Varuna with a golden coat of mail, in the distinction drawn between the Maruts and their images (Rigvesa, ii. xxxii. 9, 1. xxv. 13, v. iii. 15, in J. Muir, Orig. Str. Texts, v. [1872] 433 f.). The comparative scarcity of these references, however, does not support the conclusion that idolatry, in its general sense, as contrasted with the lavish idol-worship of a later age, is modern, because, though the higher Vedic religion may not have admitted images or sacred places, there must have been a lower stratum of Animists, who did not confine their worship to the deities of Nature (cf. A. Barth, Rel. of India, London, 1882, pp. 60 f.). Ferguson (Hist. Ind. Arch., do. 1866, p. 181) pressed the point too strongly when he suggested that 'it may become an interesting investigation to inquire whether the Greeks were not the first who taught the Indians idolatry.' The influence of the heroic traditions of Gandhâra on Hindu sculpture is undoubtedly (V. A. Smith, Hist. of Fine Art in India and Ceylon, Oxford, 1911, p. 97 ff.) but it is more than doubtful whether the use of idols can be solely attributed to this influence. Mann (c. A.D. 170) in the present recension, but embodying much more ancient
4. The iconic stage of idolatry; anthropomorphism.—The Hindu forms his gods in his own image, and we can trace the development, by various means, of the rude stone or stock image to the idol.

In parts of the Central Provinces, squared pieces of wood, each with a rude figure carved in front, representing the village goddess with her five brothers, who are credited with the power of sending disease and death, are set up close to each other beside the highways (S. Holop., Papers XXXI., 1893, 35). In many of the hill tracts of the Central Provinces, Nagpur, 1860, p. 15). In Mirmarar, similar figures, with rude heads and faces, represent the woman, the cattle goddess of the Abode of Buddha, if the attitude of the Buddhist to images of the Master can be considered a form of idolatry, dates from the 1st cent. A.D., a devout of lawyers couple to objects of art. Further, the absence of images in the temple, the Indian art does not imply that images of the Hindu gods were then unknown; they were certainly in use as early as the 4th cent. n.C. (Smith, 79 n.; A. Xxviiil.

[Image 0x0 to 526x760]

3. The aniconic stage.—It is needless to discuss whether the stage of aniconism historically preceded or led up to that of pictures and images—an evolution denied by some modern anthropologists (E.Br. xi. 329). In India the two stages exist side by side, and it is possible in many cases to watch the rude stock or stone developing into the anthropomorphic image. The so-called ‘fetish’—to use a term which has lost most of its significance to students of the present day—appears in many forms, included in the two general types of images.

We observe, first, the pre-aniconic type, in which a rude stock or stone, from its quaint or unusual appearance, is looked on as the manifestation of some unknown, vague power. In the second stage, the imagination of the observer.

In the case of stones, this form of belief is more apparent in the great alluvial plains, where stone is a rare substance, and is naturally regarded with a feeling of awe. Thence we pass to the aniconic stage, where the stone, stock, or pole suggests a well-defined form, animal or human, which fits it to be the abode of a spirit. In one type such beliefs the stone is supposed to be a retired man or animal, the conversion into stone being due to the wrath of some offended god or saint, or it is a punishment for the breach of some stringent taboo. Many such peculiarly shaped stones are connected by some ethnological legend with the cults of one or other of the orthodox deities. Some stones, stocks, or poles, again, acquire special sanctity, like the boundary-stone, the guardian stone of the village, the garden, the memorial stones, the stone on which the bride is made to stand so that she may acquire strength and stability, the grindstone used as a fertility charm at birth or marriage. Similarly, among the Portuguese, who, we have the sacrificial post, the wedding post, the tank post, the village guardian post, the death post, the house pillar and posts, the post barn and post, the hut, the temple and the bar, all the burning of the old year (see art. STONES [Indian]; POLES AND POLES [Indian]).

5. The manufacture and consecration of images.

(a) The substances from which images are made.

These are made of the most varied in the Hindu world, the so-called ‘fetish’ the industry is specially vast.

In Bombay, the goddess of the Veil, a forest tribe, is represented by a ball made from the bones of a cow, or by a
small figure of the animal; their household deity, Hirukt, is a bull of peacocks' feathers, or the figure of a hunter with his gun on his shoulder, on which a four-footed monster rides. A tiger (Bh. xviii, p. i. [1887] p. 190). An image of one of the village goddesses in S. India is made of turmeric knotted into a paste (H. Whitehouse, 163). The Madá goddess, Sinhalakumá, S. India, is in the form of a cow made of boiled rice and green grain, dried in the sun, and this is filled with butter, onions, and palse; four lampwick are put into it, a nose being stuck on the outside of the lump, two garlands are tied round it, and the whole structure is decorated with various small flowers (Thurston, 7C iv. 357). Ashes, either from the sacred fire or from coal, are thrown on it, and it is often hung up on a tree as an offering to the gods. Sometimes in the central space, among the Goddess of Madras, an image of the deceased is made on the spot where he was cremated, and to this food is offered (ib. i. 273). Bulls or cows of clay often represent the deity or a sainted ancestor, as among the Aruivas, whose gods are a man and cow in close shape, with an arcub in the stick on the top (ib. i. 60; c. iii. 661 f.). Eight little heaps of brick plastered together, or with clay represent the village gods in the Shabatudh district of Bengal (J.I.C. i. [1891] 183). The household deity of the Kovam of Madras is a brick placed up at random, or the cairn ornamentation (ib. i. 278). The worship of the image of a horse, hanging on a wattle, is common (ib. i. 437). The sacred cow of the household is represented by a plastic model of a cow, hung out to dry in the open air. The house often has a small shrine, or a pot kept at the feet of the family god (ib. i. 398 f.). Clay cows are commonly used by the deity, as among the Mulas of Madras, who represent Laksámi, goddess of prosperity, by a model of a cow. In W. India pots are commonly used as houses for spirits (Thurston, iv. 269; B.G. xv. pt. i. [1893] p. 249 n.).

For anthropomorphic images the material most used in ancient times, as in the case of the Greek gods, was probably wood (J. G. Frazer, Pausanias, 1899, iv. 245 f.; Farnell, C.G. [1896] 141 f.).

Jagannáth, originally a rude block, has, under Buddhist influence, been adapted to represent the God (Dekholer, 163). Dhanu, a Linga (A. Cunningham,瓶颈, Togon, London, 1854, p. 124, fig. 188; S. C. Roman, I. 123, 139). The wood of the ring, or mango tree (Melia azedarsho), is used for the most sacred inscriptions, Bengalese, and the Bokhara; and, in the direction towards the mountains of Belur, there is a wooden block belonging to the goal of the temple (ib. i. 273). Ancient wooden images have naturally, for the most part, disappeared. But there are records of their existence in Káshmir, 'in Kashmir, on the banks of the Jhelum, there are three images of the deity, as in the lake, from which they are thrown out at the three months' journey from the capital, in the direction of the mountains of Belur, there is a wooden block belonging to the goal of the temple' (ib. i. 273). The sacred cow of the household is represented by a plastic model of a cow, hung out to dry in the open air. The house often has a small shrine, or a pot kept at the feet of the family god (ib. i. 398 f.). Clay cows are commonly used by the deity, as among the Mulas of Madras, who represent Laksámi, goddess of prosperity, by a model of a cow. In W. India pots are commonly used as houses for spirits (Thurston, iv. 269; B.G. xv. pt. i. [1893] p. 249 n.).

Many of the images now in use are made of metal of various kinds. Among the more primitive in various shapes are used. If a Sádhu dies of wounds caused by a knife or other iron weapon, a piece of iron or an arrow is thrust into a rice-pot to represent him (ib. xiv. 221). Among the gods and the Gopis are found a spear, sword, or iron bar (H. V. Russell, Census Rep. O. A. 1906, i. 94). Spears often represent the S. Indian village goddesses (D. Chakravarti, 163). Bombay needles are worshipped in the name of dead ancestors (H. V. Russell, 164; S. C. B. 119, 120). For house images and for those carried in procession, brass is usually employed, and, as the brass is pure brass, it is found even among primitive tribes like the Kandis (ib. xiv. 221). A combination of eight metals—gold, silver, copper, tin, lead, brass, iron, and steel—are used in the making of the images of the gods; and, it is said, of the sacred fire, that is, the fire burned in the temple, the image is made of these metals, because the sacred fire is lighted; and without the burning the priest recites verses. The image is kept under the canopy of a roof for about half an hour, and it is then covered with a cloth. The priest the image in all its limbs, and finally breathes into it. The sacred fire is lighted, and the image is then said for worship (ib. xiv. pt. i. [1887] p. 167 n.).

In Bengal, at the festival of Durga, the following Brahman consecrates the image of the goddess, and, placing it in its appointed place in the temple, recites the proper formula. After this comes the giving of eyes and life to the image. With the tip of his right hand he touches the forehead, eyes, and back—of the head of the image, saying, 'These are the eyes and life-long happiness in this image!'.

After this he takes the image (the gods of the rice trees) and rubs it with butter, and holds it over a lamp until it is covered with butter. When he takes a little stick on the altar of another rice tree and fills the cup with the eyes of the rice tree, a lamp is made of cast glass to India, which under the shell of the marble images of the gods, or the gopis, images of various kinds and shapes, with internal organs of dough or clay are sometimes inserted into the bodies of the larger images, but the head is usually empty; and into the more valued ones are put gold and silver of the noble metals, and a few grains of consecrated rice, a sacred bearing "the Buddhist Creed," and occasionally other texts, books, and relics. These objects are sometimes

When the worship falls into the hands of Brahmas, who are influenced by the local inhabitants, the image is often supposed to be a personage, often is a god, and is therefore not worshiped apart from the idol itself. The festival is observed in the same manner as the other, and the image is again treated with respect and awe. The god is then again placed in the temple, and is again worshiped as before.

There are also many other festivals and ceremonies in which the image is used, such as the celebration of the festival of the new moon, when the image is again placed in the temple, and the image is again worshiped as before.

6. The ritual of image-worship.—(a) Forms of worship.—The ritualistic worship of images takes various forms, ranging from that adopted by the more primitive tribes in the cult of the rude stocks and stones in which their spirits, usually malevolent, are believed to dwell, to the more highly organized cult of the village and local deities, up to the worship of the orthodox gods conducted by Brahmans or by members of the ascetic orders.

Among the forest and tribal tribes the worshipers, more particularly the hunters and gatherers or other calumniac messengers, the hunters, make a sacrifice to the stone or collection of stones which represents their local or tribal deity. The victim, usually a chicken or a castrated goat, is taken to the shrine, the worshipper or his priest decapitates it with a single stroke of a axe or knife, the head being used as a ritual implement, being sometimes specially prescribed, and they are placed in charge of the Brahmin who consecrates them down to his successor, at the same time explaining to him the form of the ritual and the invocations which are used at the service. The victim and the head are then sacrificed, and sometimes rude offerings consisting of milk or the fruits of the earth are laid on an earthen plate or altar in the image, the deity is supposed to occupy. After this the victim is cooked and eaten in the immediate presence of the deity by the worshiper and his friends, that it may be better received as a sacrifice by the deity as a perquisite of the priest.

In India the Buddhist tribes, particularly in S. India, the ritual assumes a more refined form. Thus, at the worship of Mariyam in the Bally district, men and women give birth to the images. They are then placed on the ground before the goddess, with the right foot, which is washed in cow’s milk, on the image, and the fourth day of the festival a bock is erected in which the goddess is represented by a brass plate containing sausages, red powder used by women for their adornment, and the head of a black goat, and a black necklace.

The people commemorate this, and a man who possesses a natural image ("okk") brings a small black goat to the goddess. Standing in front of the goddess, he holds the goat in his arms, and seating its teeth with its teeth blows the animal until it kills him. He then takes the goat’s bleating blood with his teeth and holds it in his mouth to the goddess. The body of the goat is then used as a sacrifice to the goddess, and the image is then bathed by the head of the village, who puts a new turban of cow’s milk on the image, and the image is kept in the temple. A pious Brahmin dons a substitute for an older practice of assaying a god by ensnaring the face, and especially the lips, of an idol with the blood of a sacrificial victim (CONS ed. [1969] 243; GEW, pt. 1. The Magic Art., [vol. 111 [1911] p. 175).
(d) Binding the god.—The custom of binding an image so as to keep the deity under control is found in India (FL vi. [1897] 325 ff.).

The Brahman, the monk-god, is sometimes harnessed by means of strips of wood nailed in front of his airies, to prevent him from wandering in the jungle (K. V. Russell, Hinduism, pp. 107, 147, 169; J. G. Frazer, THAI, v. 110). In Kumaun, scenes of the local gods are shut up in a copper vessel or covered with a cylinder, lest they should wander (ibid. 168). Near Madras is a temple where the hermit, Sthulakhrayana, put the goddess Kali down a well, and placed a large stone on the top to keep her prisoner, and it is said that she used to eat a Brahman daily (J. AS, II, p. 251). The Kurnubas of Madura worship their god, Vira, the hermit, in his annual festival, and for the remainder of the year keep him shut up in a box (G. Oppert, 236).

(e) Stolen images.—Images which have been stolen from other people are more valuable than those acquired by purchase or gift, because they bring with them the luck of the former possession, and are more easily prostituted (NYQ ii. [1893] 56; cf. J. Grimm, Teut. Myth., tr. by S. Stallybrass, London, 1895, pp. iv, 1321; On 317).

Among the Mahais, in recent times, a celebrated amulet, was stolen which had been more than once, the subject of a law suit in the British courts. Most recently the Mahais used to plunder and remove to their capital the sacred stones of the Nagas (C. O. Haddan, 1902). The Kalkans, a believing tribe in Mahas, had used to steal sacred stones, if they think they may be of use to them in their predatory excursions (Thurston, ill. 306; Haddan, Teotihuacan, 1907, p. 313). It is not the habit of some Kandas to steal their neighbours' gods in order to acquire influence as priests (S. O. MacGregor, Modern Hinduism, London, 1896, p. 182). With impunity, they would advise in a dream to steal the image of the god Raghunath from the temple, and burn it. The kings who stole the god, were pursued and overtaken, but the god showed such a decided wish to go to Kulu that they were allowed to take him away, and the Rajas were compelled to make a present of him to the king of Kulu.

7. Legends of discovery of images.—Most of the legends of the discovery of images are spurious, invented to explain the rudeness of the temple images of the Mahais, Malabars, and other races. Mnemonics, or other miraculous powers attributed to them.

The image is often said to have been originally a shapeless log which was found growing down a river; or it was discovered on a moun.tain that the image was discovered in a ravine on the river bank (J. Tod, i. 589). That of Jaggannath was discovered by a Savara, one of the jungle tribes (W. W. Hunter, Griesser, i. 92ff.). About a century ago the god Manochari appeared to a K infrastructure in Bombay, and informed him that his image had floated ashore; when search was made it was discovered (BG v. [1890] 31). Many temple images have been identified by a cow dropping her milk on the spot where they were subsequently discovered. That of Balabari still bears the mark of the cow's hoof; that at Jaffna was discovered by a cow which passed over it on its way to the sea, and when it dug out, it sank into the ground, and was thus proved to be the spot where the image was discovered (BG v. [1890] 31). At Bhatimastak, a man, while cutting timber, saw blood oozing from a tree, but the wounded healed when a cow dropped her milk on the stump, and a likeness came out of the tree; at Puskar, a man found a cow feeding a snake in an ant-hill, which, when excavated, disclosed five images (BG i. [1883] 653, xvii. pl. iii, 1904). An image is often discovered as the result of a dream, one which recently appeared to a woman in Bombay, or that at Bherghora on the Nerbudda (BG viii. [1894] 42; W. H. Beeman, l. c.). When the Mysorens attacked the image of the bull Nandi, at Nargunni, or that of Oonkarki on the Nerbudda, blood gushed out, and the assailants were discomfited (BG xvii. pl. ii. [1888] p. 229).

8. The future of idolatry.—The attitude of the Hindus towards their images has been discussed elsewhere (art. HINDUISM, § 35). The influence of monotheistic religions, like Christianity and Islam, has done much to suggest purer conceptions of the Godhead. The Brahman belief in a single, spiritual, omnipotent Providence. A significant effect has been the result of sectarian movements, such as Sikhism, the Brâhu and the Arya Samaj, and other recent movements of the Brahman, which encourage the lowering of the Vedânta, reject the Panurie scheme of Hinduism, and aim at restoring the Nature of the Vedas. Age. But, granting this, idolatry still not only prevails widely among the lower castes, but is actively encouraged by the Brahman hierarchy, and, in particular, by

those priestly classes which act as pilgrimage guides at sacred cities and places of pilgrimage. The growth of a monied class under British influence has largely encouraged the erection of temples, which are still built in great numbers, as the result of religious enthusiasm and superstition, and from the belief that little merit can be gained by the restoration of an old image. It is improbable that a form of worship which is so deep-rooted and universal, and which, in the present state of their culture, meets the wants of the masses of the population, will readily disappear.

To quote A. C. Lyall (Atavist, iv. [1897], 251):

"Idolatry is only the hieroglyphic of what is popular; and the more spirited it is rendered by a medium of the sort of stone and simple imagination of a god; and this manner of expressing the notion by handwork continues among even high-sounding intellectual societies, until at last the idea becomes too subtle and subliminal to be rendered by any medium except the written or spoken word."

LITERATURE.—The vast subject of Indian idolatry has as yet been investigated in no single monograph. The illustrations of images contained in the popular works on Hinduism are, as a rule, taken from the coarse lithographs found in the houses of many castes. It is understood that the Hindu Department prepares the completion of a complete treatise to show the history of the different images, which is a laborious task, and has not been undertaken. But I have seen the existing books on Hindu mythology and calendar, such as E. H. Newbold, History of the Hindu Gods, London, 1904; H. Tagish, Mythology of the Hindu Gods, London, 1835; W. J. Wilkins, Hindu Mythology, Delhi and Bombay, 1904; J. Dowson, Sanskrit Dictionary of Hindu Mythology, London, 1879; R. Ziegler, Genealogy of the South Indian Gods, Madras, 1904, are largely based on Bierczkci's information on local temples, their images, and cultus. The illustrations of these works are, as a rule, inferior. For the earlier period much information will be found in the various series of Archaeological Reports edited by A. Cunningham, J. Burgess, J. H. Marshman, and others. Monocluons, or other miraculous powers attributed to them."

W. COOKE.

IMAGES AND IDOLS (Japanese and Korean).

1. JAPANESE.—In the INDIGENOUS RELIGION.

The use of images and idols as objects of worship is not indigenous to Japan, for one characteristic of pure Shintoism is the absence of an image. Among the archaic religions remains of greatest antiquity, however, many clay images of men, and of horses and other animals, known as hanaiwa, have been found in the burial vaults of Imperial and noble families. It had been the custom at a funeral to sacrifice attendants, servants, and beasts of burden, that they might accompany their master upon his journey and attend him in the spirit land. The last instance of such a custom is that of Suinin (C. G. A. D. 23), when the Queen died, Nomi-no-sukune, councillor to the throne, advised the Emperor to substitute clay images for living victims. One hundred potter's vessels were made to represent the court, and these made figures which were placed about the royal tomb. The custom thus established was followed by the nobles and prominent families for a time. The last instance recorded is that of the 7th cent. A.D. Recent excavations in ancient tombs have brought hanaiwa to light in many as 32 provinces of the Empire, thus witnessing to their widely prevailing use. The rules concerning tomb-construction issued in the first year of Taikwa (A.D. 645) make no mention of hanaiwa;
but in special cases their use was probably con-
tinued to a later date. The most complete instance was
in 1212, when haniwa were placed by the tomb of the
Emperor Meiji Tenno, in deference to ancient
custom and sentiment. At no time were these
images objects of worship, though they possessed
rather the attributes of symbols representing the
spirits of the dead (see, further, art. HUMAN
Sacrifice [Japanese and Korean]).

2. Although in Shinto no images are used to
represent gods, the mirror is specially placed in
the holy place within the shrine. The mirror
within the shrine at Ise is alleged to be the
one used by Ama-terasu, the sun-goddess, or
ancestress of the Royal Family. It is octagonal,
although usually the mirrors are round. They
are not strictly objects of worship, but typical of
the human heart which in its purity reflects the
image of Deity; and faithful followers of Shinto
are instructed to bow before the mirror of the
shrine morning and evening in an act of self-
examination.

3. Before the mirror of the Shinto shrine hang
the gokoku, strips of white paper cut into small
squares and draped upon an upright of wood,
supposed to symbolize the ancient offerings of
cloth. Together with the mirror, the gokoku are
more generally used than any other object for
averting evil.

4. About the shrine the shime-sawa, a straw
rope with tufts of straw or cut paper at regular
intervals, is often hung. This rope may be placed
about anything considered sacred or worthy of
reverence. The name "shime" means to avert evil.
The reason is, that its energy and skill almost exclusively to the making of Buddhist images and idols. Among the most famous are those of the Kannon of Ina, Kamakura, and Kyoto. See art. DAIBUTSU.

i. As Influenced by Buddhism.—The begin-
ing of real image-making in Japan dates from the
coming of Buddhism, whose influence is to be
noted even in Shinto shrines, for a gradual mutual
adaptation took place and various images came
to be placed in the shrines.

The most popular of these is that of Sugawara
Michizane (f. A.D. 901), worshipped by the people
under the posthumous name of Tenjin, as the god
of learning, especially of calligraphy. He is represen-
ted in the robe of an ancient court-noble seated
on a litter drawn by oxen.

2. The Ni-o or Dova, as gate-guardians to scare
away demons, are often found before Shinto
shrines as well as before the temples of certain
Buddhist sects; and the images of animals tradi-
tionally associated with specific deities are placed
in their shrines and popularly worshipped as
images of the deity itself. For example, Inari,
called also Uga-no-Mitama, is the goddess of rice,
and hence much worshipped by Japanese, who are
rice-raising, rice-eating people. The fox is her
servant or messenger; and images of foxes are
always found at Inari shrines, being regarded by
many as images of the goddess herself. In the
case of Benkei, one of the seven deities of luck,
the snake, her attendant, is often imaged as an
embodiment of the goddess.

3. Images of Buddha.—For the most part,
images to which religious reverence is paid are
closely associated with Buddhist temples. The
first record of the introduction of Buddhist images
in Japan is in the reign of Emperor Shomu (673).
Shibatani of Ryo (one of the provinces of China at
that time) came to Japan and settled in Yamato,
bringing with him several images which were
worshipped by his subjects. The people in general,
however, paid little attention to the fact. Some
time later, in A.D. 552, the Korean king sent
ambassadors to the Japanese court, who brought
a gilt-bronze statue of Buddha with hanging
canopies and a Japanese Buddhist Scripture. The
new faith gained ground through favour of the
court circle, and the making of images became a
professional art. Shibatake was himself a skilled
sculptor, and was succeeded by his son and grand-
son, the latter, Torinokyo, who is considered one
of the greatest artists in Japan. Several of
the most famous images at Horyuji, the oldest
Buddhist temple in Japan, are declared to be by
his hand. In the reign of the king of Kudara a
present to the court of Japan of a large image of Buddha which was
accompanied by the artist; and in A.D. 555 a
Japanese sculptor is known to have executed two
images of Buddha. The images of this early
period were of wood; but during the reign
of Bintoku a large stone image of Miroku was
presented by the court of Kudara, and set the fashion
for work in stone. Gradually bronze, clay, and
hard lacquer were used; and images were made in
great numbers, especially about the middle of the
8th century. This continued till the 12th cent.,
when the art began to decline. From the 9th to
the 12th cent., many famous sculptors, including
Keibunkai and Kasuga (8th cent.), Esaki (10th cent.),
Kozho, Kokei, and Usuki (11th cent.), and
Yoshinobu and Kudari (12th cent.) came into
the making of Buddhist images and idols. Among the most
famous are those of the daihoto in Nara, Kamakura,
and Kyoto. See art. DAIBUTSU.

ii. As Influenced by Buddhism.—The begin-
ning of real image-making in Japan dates from the
coming of Buddhism, whose influence is to be
noted even in Shinto shrines, for a gradual mutual
adaptation took place and various images came
to be placed in the shrines.

The most popular of these is that of Sugawara
Michizane (f. A.D. 901), worshipped by the people
under the posthumous name of Tenjin, as the god
of learning, especially of calligraphy. He is represen-
ted in the robe of an ancient court-noble seated
on a litter drawn by oxen.

2. The Ni-o or Dova, as gate-guardians to scare
away demons, are often found before Shinto
shrines as well as before the temples of certain
Buddhist sects; and the images of animals tradi-
tionally associated with specific deities are placed
in their shrines and popularly worshipped as
images of the deity itself. For example, Inari,
called also Uga-no-Mitama, is the goddess of rice,
and hence much worshipped by Japanese, who are
rice-raising, rice-eating people. The fox is her
servant or messenger; and images of foxes are
always found at Inari shrines, being regarded by
many as images of the goddess herself. In the
case of Benkei, one of the seven deities of luck,
the snake, her attendant, is often imaged as an
embodiment of the goddess.

3. Images of Buddha.—For the most part,
images to which religious reverence is paid are
closely associated with Buddhist temples. The
first record of the introduction of Buddhist images
in Japan is in the reign of Emperor Shomu (673).
Shibatani of Ryo (one of the provinces of China at
that time) came to Japan and settled in Yamato,
bringing with him several images which were
worshipped by his subjects. The people in general,
however, paid little attention to the fact. Some
time later, in A.D. 552, the Korean king sent
ambassadors to the Japanese court, who brought
a gilt-bronze statue of Buddha with hanging
canopies and a Japanese Buddhist Scripture. The
new faith gained ground through favour of the
court circle, and the making of images became a
professional art. Shibatake was himself a skilled
sculptor, and was succeeded by his son and grand-
son, the latter, Torinokyo, who is considered one
of the greatest artists in Japan. Several of
the most famous images at Horyuji, the oldest
Buddhist temple in Japan, are declared to be by
his hand. In the reign of the king of Kudara a
present to the court of Japan of a large image of Buddha which was
accompanied by the artist; and in A.D. 555 a
Japanese sculptor is known to have executed two
images of Buddha. The images of this early
period were of wood; but during the reign
of Bintoku a large stone image of Miroku was
presented by the court of Kudara, and set the fashion
for work in stone. Gradually bronze, clay, and
hard lacquer were used; and images were made in
great numbers, especially about the middle of the
8th century. This continued till the 12th cent.,
when the art began to decline. From the 9th to
the 12th cent., many famous sculptors, including
Keibunkai and Kasuga (8th cent.), Esaki (10th cent.),
Kozho, Kokei, and Usuki (11th cent.), and
Yoshinobu and Kudari (12th cent.) came into
the making of Buddhist images and idols. Among the most
famous are those of the daihoto in Nara, Kamakura,
and Kyoto. See art. DAIBUTSU.

The Ni-o or Dova, as gate-guardians to scare
away demons, are often found before Shinto
shrines as well as before the temples of certain
Buddhist sects; and the images of animals tradi-
tionally associated with specific deities are placed
in their shrines and popularly worshipped as
images of the deity itself. For example, Inari,
called also Uga-no-Mitama, is the goddess of rice,
and hence much worshipped by Japanese, who are
rice-raising, rice-eating people. The fox is her
servant or messenger; and images of foxes are
always found at Inari shrines, being regarded by
many as images of the goddess herself. In the
case of Benkei, one of the seven deities of luck,
the snake, her attendant, is often imaged as an
embodiment of the goddess.
fact that less and less respect is paid to the images which once meant something very real in the life and thought of the people.

So, in these images, the commonest object of worship is the ancestral tablet, $a$ta, which plays a prominent part in Japanese Buddhism. The custom was introduced from China and is universal among all classes of people, and with Buddhists as well as with Non-Buddhists. The tablets are usually of rectangular shape, a slip of planed wood, rounded at the top, and placed on a pedestal. The size differs according to the rank or wealth of the family and the age of the ancestor. On the front side is inscribed the posthumous name of the dead, and on the back the date of his or her birth and death. They are put in a small shrine or on a shelf, not infrequently with the images of Amida or other Buddhist deities, and are placed in a room specially prepared for the purpose or in a sitting room of the family. Often duplicates of the tablets are kept in the Buddhist temples of their own attachment. For a certain length of time after death food and drink are offered, generally until the 49th day, and thereafter on the 100th day and on the 1st, 3rd, 7th, 13th, 25th, 33rd, and 50th anniversary. The idea of the tablets is that before the tablets is not the same as for deities. It is with the idea of feeding the souls in the world beyond, or simply to keep bright the memory of the dead. Priests are invited on the anniversaries to read scriptures before them. In the festival of the $bun$-festival on the 13th, 14th, and 15th days of July (old calendar) the souls of the dead are believed to come to the world in order to visit the members of their family, whose names are written on the tablets. The custom is steadily declining, giving way to the coming in of more intelligent faith.

9. Picture-trampling.—It may be of interest to note that, following the introduction of Roman Catholic Christianity by the Jesuit missionaries in the 16th century, the persecution found expression in a peculiar form of efami, or picture-trampling, all suspected of Christian sympathies being required to trample upon the picture of the Christ. Later, an iron plate was substituted for the picture; and the practice was continued until the beginning of the Meiji era, when religious freedom was allowed to the people.

II. KOREA.—Buddhism was introduced into Korea at a time when the country still formed three separate kingdoms—Shiragi, Korai, and Kudako.

1. Buddhist images.—Korai, being nearest to China, was the first to receive Buddhist missionaries, with whom came the ideals of that faith, in A.D. 343. Soon after there was built a large Buddhist temple called $bunmuji$. Twelve years later, Buddhism was introduced into Kudako, and forty years later into Shiragi, gradually spreading over the entire peninsula. The idols and images in the Korean temples are for the most part not different from those in Japan, images of Bodhisattvas, Kwanon, Amida, Miro, and Rakan being most frequent. The largest Buddhist statue in Korea is that of Miro (Maitreya), in the temple of Kwanchokji in the province of South Chusei (Chung Chong). It was made in stone about 1000 years ago, by a priest called Emyo (Heinjunang), who offered or collected one hundred workmen for thirty-seven years. It is 55 ft. in height, with a width of 30 ft. On the forehead, which measures 6 ft. in width, is set a precious stone.

In Korea, attractions are pictures, and in the city of Kaokakwong-woo is frequently seen. Kaokakwong was an ancient Chinese general; and in the city of Seoul alone there are four shrines to his honour, one each in the north, south, east, and west. He is popular as a household deity with the common people; and the images of Gentoku, Choki, and Komei, three other generals, are often placed near him.

3. The mountain-god.—The image of the mountain-god is that of an old man mounted upon a tiger. He is very popular, and occupies small shrines upon the hill-tops.

4. Post-gods.—Everywhere in Korea, by the wayside and at the entrance to villages, stand demon-posts, rudely cut with grinning teeth and horrible faces. They were originally distant post-stations, which gradually became objects of worship, believed to be strong defences against the countless forces of the unseen world.

5. Ta Chue or the Lord-of-the-place, is made of straw in a hollow secreted in the base 1 ft. long and 1 ft. wide; and within him are placed old coins, bits of pretty cloth, and similar treasuries. He is enshrined in the corner of the roof, in the kitchen or store-house, and offered wood-lice, rice cakes, and, on the 1st and 15th of the old calendar months. He is supposed to avert evil and bring luck to his owner.

TASUKU OKADA.

IMAGES AND IDOLS (Lapps and Samoyeds).

—The worship of idols and images of wood and stone appears to have been at one time common to all the Ugric races occupying the Arctic regions of the Kurious continent. This worship still survives among the Samoyeds of the Russian Empire, and has not been long abandoned by the Samelats, or Sameh, of Lapland, otherwise known as Finns or Lapps, the former term being current among the Germans, and the latter in Sweden, Denmark, Britain, and other countries. It is true that the people of Lapland outwardly profess the Lutheran form of Christianity as early as the 17th cent., but even at that time they secretly retained the religious ideas which they had inherited from their forefathers.

Of the condition of the Lapland Samelats in the 17th cent., the best contemporary exponent is John Scheffer, Professor in the University of Upsala, whose $Lappona$ published at Frankfort in 1673 (Eng. tr., Oxford, 1674), contains very precise accounts of the existing religious practices of these people. A striking feature of the Lapp religion was the worship of certain idols.

These were two in number, very popularly known as the wooden god, and the stone god. The wooden god (smora intsm) was called Aijakse, the ancestor; and, alternatively, Thor, or Turors, the thunderer. It may be that the name of Thor, and his association with this particular idol, ought properly to be regarded as a Teutonic intrusion in Lapland, but that is a detail into which it is unnecessary to enter here. The image of Aijakse or Thor was always made of birch wood.

*Of this wood they make so many idols as they have sacrifices, and, when they have done, they keep them in a cave by some hill side. The shape of them is very rude; only at the top they are made to represent a man's head (Scheffer, p. 40, Eng. tr.).

Scheffer's book portrays one of the rudest of these idols, a mere wooden block, but there is also a more elaborate representation of Thor's image, standing upon a table or altar. The trunk is simply a block of wood, with sticks projecting on either side to represent arms. At the end of the right arm is fixed a mallet, intended for the hammer of Thor. Across the chest are cross-belts or handkerchiefs. The head is shaped to resemble a human head, with eyes, and a nose, and mouth. On either side of the skull are two spikes, in accordance with Scheffer's words:

*Into his head they drive a nail of iron or steel, and a small piece of iron to strike the nail, to drive in his head a mind to evil (p. 40).

On the table, in front of the image, is a plate of
bark Birch, containing portions of a sacrificed reindeer. Behind the figure are deer's antlers, and round the base of the table are branches of birch and pine. A Lapp kneels in adoration before the altar.

Gustaf von Dülken, in his work *Om Lappland och Lapparna* (Stockholm, 1873, p. 288), reproduces a drawing from a MS of the year 1671, by Rehn, Södermanland, but not in agreement with Scheffer's contemporaneous picture. Rehn's drawing shows three images of Thor upon one table, and in front of them are three upright sticks bearing portions of the sacrificed animal. Von Dülken draws attention to the branches adorning the sides of the altar, to the two antler-heads between the images of Thor, to the hammers wielded in each hand of these images, and to the hoes encircling their heads. It is noteworthy that the sacrifice of animals is an essential element in the worship of these idols. Scheffer states that the Lapps make a new image to Thor every autumn, consecrating it by killing a reindeer, and smearing the idol with its blood and fat. The skull, feet, and horns are placed behind the image. Part of the meat is eaten by the Lapps, and part is buried, together with the bones.

In addition to 'the wooden god,' the Lapps also worshipped 'the stone god' (*kind kejubel*) in, otherwise, in Swedish, *Storjunkar*, or 'the great Lord.' The term *seita* was also applied, generally, to a stone god. In form, the *seita* sometimes resembled, or was supposed to resemble, a bird, or a man, or some other creature.

The truth is, its shape is so rude that they may sooner fancy it to be something themselves than perceive other people that it is so. Their imagination is so strong that they really believe it. Attempts have been made to identify the *Storjunkar* and *seita* with Thor and Odin, respectively, but this is unlikely since the names are not derived from the names of the gods, and it is unlikely that the Lapps would have made such a connection with the Norse gods.

The last sentence, it will be soon, implies that the *seita* was the medium through which an invisible deity was worshipped, and was not itself an object of worship. Von Dülken shows (op. cit., pp. 236-246) representations of three Lapp *seitas*, one taken from a reindeer-pasture and another from a stream, while the third, of white marble, with a covering or cap of cæloraceous spar, was found in a small island, at a spot known to Lapp tradition as a place of sacrifice, where many horns and bones were found. It may be added that, although the *seitas* are generally quite unworked, there are some instances in which the stone has been carved sufficiently to bring out a resemblance to the head of a man or of an animal.

The ceremonies connected with the worship of *Storjunkar* were very similar to those associated with 'the wooden god.' The animal specially selected for sacrifice was a male reindeer. Its right ear having been pierced and a red thread run through it, the reindeer was killed, and its blood carefully preserved in a barrel. The officiating priest then took the blood, some of the fat, the antlers, the bones of the head and neck, and the feet and hoofs, to the hill where the sacred stone had already been placed. Uncovering his head and bowing reverently, he then anointed the stone with the fat and blood, and placed the antlers behind it, the right horn having the pins of the reindeer attached to it, which when the left horn was an amulet of tin and silver worked together with red thread.

Although not represented by any special image, the *seita* was worshipped by the Lapps of the 17th century. Scheffer states his belief that the sun was incorporated in Thor, who, it may be noted, was sometimes decorated with a nimbus round his head. The set of sun-worship, at any rate, was performed before the altar of Thor, upon which occasion the sacrificial bones were arranged in a circle upon the altar.

In return for the revere paid to them, or through them, the wooden and stone gods were believed to protect their worshippers against misfortune and to aid them in hunting and fishing. Each family had its own sacrificial mount, with its name, and the families possessed *seitas* who were understood to be specially interested in their welfare and to whom they prayed.

Rites similar to these are common to other cognate races in Northern Europe and Siberia.

Among the Samoyeds of to-day the religious practices of the 17th cent. Lapps are still in full swing, as several modern travelers have shown. In 1873 and 1875 the Swedish explorer Nordenskiöld and his comrades visited sacrificial sites on Vaygatsk Island and the Yemal Peninsula. To these places the Samoyeds are accustomed to make pilgrimages, sometimes from a distance of six or seven hundred miles, in order to offer sacrifices and memorial offerings.

At a sacrificial eminence on the south-western headland of Vaygatsk Island, the Swedish explorers found a large number of reindeer skulls and horns, bones of the bear, various objects of metal, and several hundreds of idols, described as 'small wooden sticks, the upper portions of which were carved very clumsily in the form of the human face; most of them from fifteen to twenty, between them 370 centimetres in length. They were all stuck in the ground on the south-east side of the altar. Near the altar there were to be seen pieces of drift-wood and remains of the fireplaces at which the sacrificial meal was prepared. Our guide told us that at these meals the mouths of the idols were smeared with blood and wetted with brandy, and the former statement was confirmed by the large spots of blood which were found on most of the large idols below the holes intended to represent the mouth' (Nordenskiöld, *Voyage de la Vega*, Eng., London, 1881, p. 94).

That these customs are still in force seems quite evident. In 1834, Frederick Jackson, in the course of his expedition to Franz-Josef Land, learned that the Samoyeds of Vaygatsk at that date were accustomed to sacrifice a reindeer to their god, killing the animal by slow degrees. The Samoyeds, moreover, carry small portable idols with them during their sledge-journeys. In 1878, Nordenskiöld purchased four of these gods from a Samoyed woman. Two of them were dolls, one was a miniature garment, and the fourth was 'a stone, wrapped round with rags and part of the corner of the stone forming the countenance of the human figure it was intended to resemble' (op. cit., p. 86).

That this appears to have been identical with 'the stone god,' or *seita*, of the Lapps.

*Professor De Harles thinks it possible that the small domestic idols of felt and rags, used by the Mongols, and mentioned as early as the year 1500 by Armenian authors, may have been introduced by the Buddhist preachers, as the Tartar states without hesitation* (Abercrumby, op. cit., p. 153).

The stationary wooden idols of the Samoyeds seem to have been larger in past times. Martiniere in 1633, Linschoten in 1601, and an old Dutch engraving reproduced by Nordenskiöld (p. 84) all show images as large as a man; and in the last instance the human trunk as well as the head is carved with some elaboration. Probably the earliest written description of Samoyed idols is that given by an English traveller, Stephen Burrough, in 1556 (Hakluyt's *Voyages*, Glasgow, 1903-9, *Principali Navigations*, ii. 338).

Burrough speaks of his visit to 'a heap of the Samoeds idols, which were in number above 300, the worst and the most unartificial works that ever I saw: the eyes and mouths of numbers of them were bloody, they had the shape of men, women, and children, wrought, & that which they had made for other parts, was also sprinkled with blood. Some of their idols were an old
stucke with two or three notches, made with a knife in it. . . .

There was one of their seeds broken, and lay by the heaps of idols, & there I saw a deers skin which the Idols had spred over their images, and their family, which were made as high as their mouths, being all bloody, I thought that to be the blood of the Idols themselves.

A comparison of these various statements makes it evident that the idol-worship of the Samoyeds and of the Lapp Samelats was substantially the same. The only striking difference is that the Samoyeds had not the outstretched arms wielding the hammer of Thor which formerly characterized the wooden gods of Lapland. It is reasonable to presume, therefore, that the idea of Thor and his hammer was introduced into Lapland from the South.

LITERATURE.—Appended to Von Diben’s Lappland (Stockholm, 1873) there is a list of over 200 works relating to Lapp, a considerable number of which include references to their religion. Nearly as ample is the bibliography prefixed to Abromovitch’s Essai historique sur les Lapons, pp. 175 et seq., and to his Mémoire sur les Lapons des îles de l’archipel du Spitzberg, pp. 21 et seq., in the Archiv für Volkerkunde, v. 8, 1895. There are some articles in the Zeitschrift für vaterländische Geschichte, in the Sitzungsberichte der Akademie der Wissenschaften zu Göttingen, and in the American Journal of Archaeology, among which are the articles by E. P. Geist, “Die Lappen,” and by F. S. Franson, “Die Lappen.”

D. MACRITCHIE.

IMAGES AND IDOLS (Muslim).—Muhammad protested strongly against idolatry, but other Arab tribes had done so before him. While he was yet a lad, there were men, called the Hamis, who rejected the gross idolatry around them. Some of these afterwards became Christians; some remained unitarians. At the latter, Zaid ibn ‘Amr was one of the chief. He embraced neither Christianity nor Judaism, but said that he worshipped the God of Abraham and Isaac. He even went so far as to declare that all the old and new religion were false, and that he believed in the oneness of God alone. "The last day," he said, "the people will be in the same light in which they died." The mind of the Prophet being set at rest, the revolution came as it now stands in the Qurân:

Do you see al-Lat and al-Uzza, and Manî, the third idol besides? What, shall we make partners with God whom He has created nothing like unto Him? This we, indeed, an unfair partition! These are mere names: ye and your fathers named them then (xxviii. 19, 20).

The Meccans were much disturbed at this, and said, "Muhammad hath repented of his former sentiments, and it behoves the rank and file of our goddesses before the Lord. He hath changed the same and brought other words in their stead." This was commenced, but Muhammad henceforth attempted no compromise, and now and for ever broke with idolatry. He received a solemn warning never to run into such danger again:

Verily, they had well-nigh begged thee from what we revealed to thee, and caused thee to invent something other than what was revealed to thee (xxvii. 59).

The idols of Mecca are derided:

What think ye of the gods whom ye invoke besides Allah? Show me what part of the earth they have created (xxxvii. 89).

Before he left Mecca, Muhammad said to his opponents:

Call now on those whom ye made God’s companions; and they shall call on them, but they will not answer them (xxviii. 64).

The statues of false gods furnish fuel for hell:

Fear the fire prepared for the idolaters, whose fuel is men and stones (xxviii. 52).

Idolaters are likened to the spider who builds her a house; but, verily, failnot of all houses surely is the house of the spider (xxviii. 49).

They are not to be prayed for (ix. 115); their end is to enter into the fire (vii. 36). Marriage with an idolater is forbidden (ii. 221). Idolatry is an unpardonable sin (iv. 51).

An unpardonable sin (iv. 51).

A few converts were gained at Medina, who, when they came to Mecca to perform the annual pilgrimage, took an oath of obedience to Muhammad, in which a promise to give up idol-worship, as with all converts, was an important point. Later, in Medina the Prophet made it quite clear that idolatry was a great crime, an unpardonable sin.

Verily, God will not forgive the union of other gods with Himself! But other than this will He forgive to whom He pleases. And he who unites gods with God hath devised a great wickedness (iv. 61; cf. 1165).
In the year A.D. 629, Muhammad, with the permission of the chief men in Mecca, was able to perform the pilgrimage to the Kaaba, and went through the usual ceremonies—after which he returned to Medina. The times, however, soon came when it was necessary that Mecca should be the centre of the new religion; and so, seizing an opportunity which he so well understood, he marched with 10,000 men against the city. The Meccans saw that the time for opposition was past, and submitted. Muhammad proceeded to the Kaaba, saluted the Black Stone, destroyed all the idols, and Idolaters are heretofore to be severely dealt with:

"When the sacred months are past, kill those who join other gods with God, wherever ye shall find them; and seize them, and lay wait for them with every kind of ambush; but if they shall convert, and observe prayer, and oblige the alms, then let them go their way (lxv 2).

"O Believers! only they are idolaters in your midst who associate with God, let them go their way (lxv 3).

The people of Tบร�; made a stout resistance to Muhammad, and when they finally submitted, begged to be allowed to retain their idols. They received fairly good terms, but this request could not be granted, and the idols were all destroyed by Muslims. Muhammad destroyed the pagan ceremonial of the Pilgrimage and the Black Stone as an object of superstition reverenced by the heathen. The worship of the pagan Arabs is intact. The retention of the Pilgrimage was perhaps a necessity in order to win over all the Arab tribes, by yielding to their reverence for Mecca as the centre of a national faith. Islam was spread as well as preserved, not only by giving undue importance to the mechanical performance of the old pagan ritual, but by emphasizing the idea that Islam was a local and national religion, and that the rituals suited to Arabia in the 7th century, are binding on the most diverse peoples in the 20th.

There is a custom which relates how Muhammad was born in the year 1515 B.C., and how he was called the King of the Jews. He then built a temple in Mecca, and called it the Temple of the Jews. He then went seven times round the idol, kissed its head, and said, "O exalted One, whose weapon is this woman is?" But the idol was so old, and had been so often handled, that the idol-worshippers could not tell which was its greatest idol. So they answered, "It is to be Muhammad, and that is, he is to kill no one, but that all that follow him shall be safe." (Thirteenth century.)

The Wahhâbîs, who are most careful to avoid anything which might seem to impair the dignity of the unity of God, and who look upon many practices of other Moslems as tending towards polytheism, or shirk, have defined the latter in these four terms: shirk al-tasârurī, ascribing knowledge to others than God; shirk al-tasârurī, ascribing power to others than God; shirk al-tasârurī, ascribing power to others than God; shirk al-tasârurī, ascribing to the world of the heavenly streams; yet such an interpretation still awaits more authoritative approbation. (cf. Jackson, op. cit. p. 225, n. 3.)

Other examples of images as effigies, but not as idols, may likewise be cited from Sasanian carvings as referred to in ART (Persian), in vol. i. p. 881 f. The general result is that the inscriptions and the statements of the Greek and Latin authors bear out this fact, as shown by the testimony from the classic writers cited in the following paragraph.

2 The figure is known to represent Ormuzd, because his name appears in the inscription on the stone as describing the purport of the base-relief; for references see G. E. Marilhow, _I. a._, and E. T. West, _Fahami Literature_, in _Ghil, I._, (Strasbourg, 1904) 77.
2. Greek and Latin testimony to the Persian abhorrence of idols and image-worship. — The evidence of this abhorrence is, however, somewhat indirect to the Persian hatred of images and temples is found in Ἀσκληπίου, Περσης, 809 (produced in 472 B.C.), in which the Athenian dramatist places on the lips of the spectre of Darius the statement that they would not worship their gods in images, 'when invading Greece, shrank not from destroying the wooden figures (ဖلاFra) of the gods, nor from burning the temples.'

Though, on the contrary, they love all, however, is the classic passage, which was written a few years later in the 5th cent. B.C. by Herodotus (Hist. i. 131, in which the father of history said of the Persians:

The Church Father Clemens Alexandrinus (at the end of the 3rd cent. A.D.), when referring to the Persian Magi in his Protrep. 5, cites the other authority of Deym in his statement that

The great patriotic writer Origen (c. A.D. 185—233), in his controversy of Christianity in opposition to Celsus, inveighs against all the points made by that Epicurean philosopher, but dialectically, and in the name of the Persians, who had a natural aversion to idols and image-worship. In referring to other peoples who, like the Persians, were non-idolaters, Celsius says of the latter (in Origen, c. Celsum, vii. 22):

'If there are no religions, nor images, or images, and he continues by citing the passage quoted above from Herod. i. 111 as to the abhorrence of such images to which Origen replies (vii. 67) that the Persians do not reject idols for the same reasons as do Jews and Christians.

Equally strong is the statement of the later Greek historian and biographer, Diogenes Laertius (ll. c. A.D. 200), in his reference to Persian Zoroastrian Magi, of whom he says:

The Persians do not erect images (ဖilaFra) and altars, though they do mention, a few paragraphs beyond (tv. ii. 15 p. 725), and in the 7th cent. (c. A.D. 175) in his Description of Persia, viii. xvi. 3, t. xvi. 3.1. Nor, again, did it deter Xerxes from taking to Sardis a Greek statue in bronze of the 'Water-carrier' (Πιναρχη, Πιναρ, 31) or from removing from Athens the famous statue of the Two Tyrrhenicides (see Paus. x. viii. 5; cf. Pliny, HN xiii. viii. 70; Arrian, Anal. iii. xvi. 8; Val. Max. Mem. ii. 16, ex. 1). The significance of these passages in their general bearing upon the religious attitude of Xerxes is discussed by G. F. Quackenbos, in the Deut. Rev. xii, 113, p. 399. In the same connexion it is plain that the procedure of Xerxes is referred to likewise by the Greek rhetorician and Platonist Maximus of Tyre (2nd cent. A.D.) when he upbraids the Persians for their fire-worship and their destroying and robbing of Greek sanctuaries and images (Dissertationes, viii. 4, ed. Fr. Dümker, Paris, 1840, p. 28—Deissert, 36, in the ed. of J. Davis, Cambridge, 1703, p. 302; and cf. the comments on the passage by J. F. Kleuker, Zend-Avesta, Anhang, ii. iii. [Bigot, 1785] 106 f., n. 4 f.).

The late Latin historian Ammianus Marcilullus (c. A.D. 330—400) records, in his History, xxvii. vii. 29 f., that in the latter part of the Parthian period the Arsacids came to the power.

This allusion to a simulacrum Conoci Apollinis may possibly be compared with the existence of statues of Omnes, or Vohm Manah, as referred to by Strabo in the passage (XV. iii. 16) quoted above, and again discussed below. The disasters which afterwards fell upon Rome were regarded by the superstitions as a direct visitation in consequence of this act of apostasy. The bearded god, who sits there, is a finely carved figure image which was taken to Persia by Xerxes, and afterwards sent back to Greece by Alexander the Great.

3 According to Paus. i. viii. 5, the latter group was eventually restored to Athens. It is possible that the statue of the bearded god, which is set up in the temple of Apollo in Athens, in the district of Colophon (in Athens, Deipnosophistae, xii. 69) to "touch the gods with sacred rods" when he speaks of Nius, king of Assyria, as not taking his place among the gods. Certainly, however, he is much less beloved in the passage, however, does allude to the aaron-twigs, or rods, used in the Zoroastrian ritual (cf. art. RASSON).
the ground and is broken in pieces. A parallel text calls the image the idol of the statue (rā ekščaštām). This is held by Mys. to be Ahura Mazda (AS. Nov. i. [1887] 470; cf. also the version of Simeon Metaphrastes, v. p. 496 [= FG cxxvi. 20]). These citations practically exhaust the material that may be considered outside sources; what follows is derived from the Persian sources themselves.

3. Earliest times: before Zoroaster, or at least prior to the 7th cent. B.C.—There is little or no direct evidence regarding the appearance of idols and images in the most remote period of Iranian history, because no truly archaic sculpture of any size has yet been found. It is possible that some of the small terra-cotta images and bronze figurines which have been unearthed from ancient graves or excavated from antique sites may indicate signs of idolatry (see ART [Persian], vol. i. p. 881); but, if so, it would be merely a witness of primitive beliefs or of foreign practices that were later rooted out when Zoroastrianism became the religion of Perseis. Support is lent to such a view by the tenor of some of the passages referred to below, especially in the section on Pahlavi literature.

4. Absence of special allusions in the Avestan.—The Avestan texts, which represent the conditions prevailing in the period of Zoroaster, or before and after the 7th cent. B.C., contain practically no reference to sculpture, and can be construed into a direct allusion to any prevalent existence of idol-worship in Iran. It is true, as already stated, that some of the passages in the Avesta referring to demon-worship (daeva-worship) and sorcerers (ỹšvis) may possibly contain an implication as to idolatrous customs existing among infidels, but, if so, an excursus of such practices is equally implied. 1

An obscure Avestan word barsām (possibly a plural, though its etymology is wholly uncertain), which occurs in the fragmentary Hsamt Naštī, xii. 13, and in the likewise fragmentary Yśtpašt Yašt, 37, has been interpreted as alluding to the sin of idolatry among unbelievers, because its obscure Pahlavi rendering, ẽ h n h k, is glossed by aškā (ٱحکا) ‘ shot (šōt), which, is, ‘the demon-worship of them.’ Possibly some support for this interpretation may be found in the Pahlavi rendering of the word barsēm (as it is there written) in the parallel Avestan fragment, Yśtpašt Yašt, 37, the gloss being in Pahlavi, ažāl-bāt-panamašt, lit. ‘idol-worship;’ but the whole matter remains rather uncertain. 2

5. Presence of special allusions in the Avesta.—In the Avestan literature (see above, § 2) and for other Mathnic monuments, as bearing indirectly upon the whole question in relation to Persia, consult ART (Mathnic) byCumont, vol. i. pp. 575-874. In direct connection, however, as covering the general subject of image-worship during the Sassanian Period, reference may once more be made to ART (Persian); and for numismatic representations of Iranian divinities see M. Stein, in GS, 47, 1887, pp. 135-168.

6. Allusions in Pahlavi literature of Sassanian times and later.—Important in its bearing—as a sequel to and to supplement the material drawn from glyptic art—is the testimony offered by the Pahlavi literature of this period, or the centuries directly preceding and following the Muhammadan Conquest about A.D. 630. The entire subject will be found fully discussed in a monograph prepared for the Persia, Volume of the Sir Jaminot Tejenbhy Zoroasthi Mandressa, to appear in Bombay, 1914. Many of these Pahlavi allusions refer back to an age, a millennium or more, before Zoroaster appeared, and yet the stereotypes slowly emerging under stress upon the fact, of the action of Cambyses in slaying the Apsa bull (Herm. iii. 29), and of his sacrifice of both horse and flesh, sensitive to steel, as well as of Cambyses’ mockery of the idol (lēyš). In the temple of the Egyptian Horapetus (iii. 27).
as the founder of the national religion of Persia, and are the more valuable as showing the traditional attitude of Iran in regard to idols and images. Only the main references need be given here.\footnote{1}

The Dinkort (vii. 1. 19), which is a Pahlavi work based upon very old material, contains an antique legend of Takhmûrâp (a monarch placed by some scholars (e.g. Pahlavî nûmâni n. c.) that names him as a pioni- er who introduced idol-worship (\textit{aštêtê-para-stâkîh}) and promulgated among creatures the reverence and worship of the Creator.\footnote{2} The same words appear in other passages (vii. 4. 72) to the idol-worship (\textit{aštêtê-parastatêsh}) and witchcraft practised by the monster Dâhak of Babylon, whose usurping reign over Iran is assigned by tradition to the 3rd millennium B.C., and whose beneficent influence in this heretical regard was only eradicated two thousand years later by the establishment of the religion of Zoroaster. The passage reads in translation:\footnote{3}

"The man who destroys \dot{\textit{Dhêak}} man, has cast to idol-worship:... but through the words of the triumphant ruler, the man (\textit{Dhêak}) proclaims in opposition to that sectery, it (i.e. the heresy) is all dispersed and disabled.\footnote{4}

Another legend, oft-repeated in the Pahlavi books, is the story of the crusade waged against idol-worship by the ancient ruler Kaê Khusraw (\textit{Kari Housrawv} of the Avesta), who is reputed to have reigned about 800 B.C. By the help of the Kingly Glory (\textit{Pahl. darê}: cf. Av. \textit{draevê}) this monarch demolishes the idol-shrine which his arch-enemy, Frangrišâli of Turân (Pahl. Frâhshâli, Mod. Pers. Frâshâli; cf. Av. \textit{Farsahasan}, has made and on the shore of Lake Chêchast, and substituted for it the great fire-temple of Adhar-gushmâsh, with which his name was afterwards associated.\footnote{5} The Dinkort (vii. 1. 39), \textit{p.}, tells of how Kax Khusraw: \footnote{6}

- "aquituated and anointed Frangrišah of Tur, the sorcerer, and his fellow-murderers, (namely) those of Vakyan, Kewvân, and many other vilâs, and destroyed, and applied himself to the demolition of that idol-temple (\textit{aštêtê-dé} on the shore of Lake Chêchast, which was a frightful thing of sinfulness."

The same legend of the destruction of this noted idol-temple is referred to several times in other Pahlavi works. The \textit{Bûndahîsh}, xvii. 7, \textit{p.}, in telling of this pious achievement adds a detail regarding the help he received from the hero in his work by the demon fire, Atâr Gushmâsh, as follows:\footnote{7}

"When Kaê Khusraw was demolishing the idol-temple (\textit{aštêtê-dé}) of Lake Chêchast, it (i.e. the fire) settled upon the temple of the devilish demons, seizes him with its flames and destroys the idol-temple.\footnote{8}"

Kaê Khusraw's religious act is praised, furthermore, in a long passage of the \textit{Mainâg-Khorâsh} (ii. 93-95 and xxvii. 39-61), which may be dated somewhere about the 6th century A.D. The idolatrous practices of the tyrant Frâshâli (Afrâshâli) are alluded to in a somewhat later treatise, \textit{Sodarek-tâl-i Akrên}, 7, which anathemizes this foe for having transformed each of the sacred shrines in the city of Samarkand, in Sogdiana, into an idol-temple (\textit{Pahl. aštêtê-dé}). the abode of demons.\footnote{9}

A statement has been made about the attitude which Zoroaster in his own time must have held towards anything approaching idolatry, as shown by the tenor of his religion, even though no direct pronouncement by him is preserved in the Avesta itself. Additional evidence is furnished by the fact that in the Pahlavi \textit{Bûndahîsh} (vii. 30 and 31 ff., the hero Pêšyûtan, the son of Zoroaster's patron Vîs-âtar, is shown to have received divine authority from Oramzd, combined with the archangelic aid of the Amâasar; and that of the sacred fires, in his crusade to destroy and smite the idol-temple (\textit{aštêtê-dé}) of the demons", and that that idol was destroyed through the glorious exertion of the illustrious Pêšyûtan." Again, a section in the Pahlavi \textit{Jâmâp Nûvâk} (vii. 1; \textit{ed.} J. J. Moli, Bombay, 1903, p. 78), which is a book probably written some time before A.D. 900 and purporting to hand down the words of the sage Jâmâp, chief-counsel at the court of Zoroaster's patron Vîs-âtar, contains, in its Pâzand version of this chapter, a prophecy of the time (not then wholly future) of the last days and of the rise of the wicked 'idol-worshippers' (\textit{aštêtê-parastatêsh}) in the last millennium of the world when the Saviour (Pahl. Sûûnas, Av. Sadôyant) shall appear before the Day of Judgment.\footnote{10}

There are several general allusions to the hatred of idolatry in other Pahlavi books besides those already mentioned.

The \textit{Artiv Fêrût Nûvâk}, xxvii. 11, \textit{p.}, in an account of an apocalyptic vision, enters upon the roll of the damned a woman whose perverted leer to do the practice of "idol-worship" (\textit{aštêtê-dé}); and the \textit{Sûûnas-I-Sûûnas}, iv. 17, a compilation dating from about the 7th century A.D., though based on older sources, sees a nice fulfilment of the prophecies of the \textit{Zâyân} (Av. \textit{Zâyân}) that the statues were overthrown, and the idols were smote away; and the same thing is said in the \textit{Bûndahîsh} itself (p. 105). The Abûnāh from idol-worship (\textit{aštêtê-parastatêsh}) and demon-worship, because its enormity is "c utils" (\textit{Pahl. hastâs}) among the most heinous sins (xxvi. 10). For this reason the \textit{Dhikâr}, p. 275, sees in the disannihilation of idolatry a sign of the growth of the true religion, on the ground that, "if idol-worship be annihilated, no faith is the god spurious?"

It is easy, therefore, to understand the importance attached to the exploit of Ardašir, founder of the Sassanian empire, in overthrowing an idolatrous temple and killing an idol and called the "Worm" (Pahl. \textit{Kûrim}), a vile practitioner of idolatry (\textit{aštêtê}), as said in the Pahlavi romance \textit{Ahrštakhtâsh}, vii. 11-12; this story presents interesting parallels to the Jews and the Dragon, as discussed, with bibliographical references to the Pahlavi editions of the work concerned, by Jackson, "Notes on OT Apocalypses," in Essays published as a Testament to Charles Augustus Briggs, New York, 1911, pp. 95-97.

The practice of idol-worship by foreign nations, who were outside the pale of Zoroastrian Iran, comes in for a share of condemnation in the Pahlavi texts. For instance, the veneration which the Hindus paid to images, personified as the idol \textit{Bêl} (lit. "spectre, spook", then "image, idol"), is described in \textit{Bûndahîsh}, ed. B. T. Ankelisaria, Bombay, 1908, p. 187) as follows:

"The demon \textit{Bêl} is he whom they worship among the Hindus, and his prayer is in the \textit{bêl}-shrine idols (i.e. golden images)."

A similar damnable practice of the worship of a \textit{bêl} is attributed, according to the Pahlavi \textit{Pãzand Jâmâp Nûvâk}, v. 3-4 (ed. Moli, p. 787), to the people of China, Bârbistan, and the Tájiks—the same people, it is added, whom the Arabs and Franks are hostile to.\footnote{11}

Regarding this regard, which appears in Pahl., \textit{Av}, and Mod. Pers., see Bartholomae, \textit{Das alte Persische}, 2跖, 1893, p. 396, where it is discussed by A. Yohannan, in \textit{Spiegel Memorial Volume}, Bombay, 1908, pp. 150-152.
name of the latter nation probably including the tribes of Central Asia as well as those of their Islamic neighbors. The Avesta, however, declares that territory and may have retained traces of pre-Muhammadan idolatry fostered by the primitive beliefs of the people they vanquished.

7. After the Muhammadan Conquest in the 7th cent., the overthrow of Zoroastrianism as the national faith through the Muhammadan Conquest by the Arabs in the 7th cent. A.D., whatever it may have signified in other regards, meant no significant change with respect to the true Persian hatred of idolatry. Vanquished and vected were at one in this matter, and many of the citations given above from the Zoroastrian patrician works in Pahlavi may, in fact, date from a time after the Muslim victory over Persia, even if the sources on which their standards were based go back to a far earlier period. It must be conceded, however, that the iconoclastic spirit of Islam killed off all progress in the Persian art of sculpture, as being a factor that might lead to encouraging idolatry, despite the fact that there was no such inclination in the Persian heart. This circumstance accounts for the fact that no sculptured portrait was carved after the downfall of the Sassanian Empire through Islam until modern times, when, about the beginning of the 19th cent., Fath Ali Shah (1798–1834) came to the throne, and he has since been sculptured over an antique carving of Sassanian times, thus unfortunately effacing an old bas-relief that had been cut some 1600 years before; but this innovation, or, rather, this resumption of the old practice of carving portraits on rocks, combined with one or two other modern instances, is a matter of recent times (consult ART [Persian]).

8. References in later Persian literature.—The whole tone of later Persian literature, or for the past 1000 years and more, has been strongly against idolatry, and that, too, irrespective of Muhammadan influence as well as under a natural sympathy with the iconoclastic tenets of the Qur'an. Only a few references need be given to show this. The great epic poet of Persia, Ferdowsi (fl. A.D. 1000), e.g., tells with evident zest and in spirited heroics verse how Faridun, 2500 years before, overthrew a talisman (from which is derived the form of an idol which the monster Dahjakh or Dahik, whose idolatry has been alluded to above) maintained in his palace (see Ferdowsi, Sh-khanâmah, ed. Vulcher and Landauer, London, 1872; cf.ols. 161–166). Many instances might be cited from other Persian authors. The poet and moralist Sa'di (c. A.D. 1184–c. 1291) recounts how he discovered in his travels the trick by which the famous idol in the great temple of Somnath in India lifted its hand; and, outraged by the infamous deception, he thereupon slew the priest in charge of the sanctuary. Yet it must be confessed that, in his account, Sa'di has hopelessly confused some of his allusions to Hindu idolatry with the so-called worship of fire in the 4 Avâstâ and Zandâ to which he refers (cf. Sadî, Bistûn, ch. vii., Story 3; tr. A. H. Edwards, London, 1911, pp. 106–109). Sa'dî also makes use of a story of an idolater to adorn a tale in his Bistûn, ch. x., Story 3 (tr. Edwards, p. 121 f.). The great lyricist Hâfez (c. 1315–1390) often makes allusion to his Ghazâlî, or 'Odes,' to 'idol-worship' (but-parast), or likens his beloved to an 'idol' (but or to an 'image' (aron)) but his references are mostly in the private and family love (e.g. Ghazâlî, 301, verse 3; 210, v. 3: 254, v. 8: 297, v. 5: 172, v. 10, in the ed. by H. Brockhaus, Die Lieder des Hafez, Leipzig, 1883, pp. 265, 130, 175, 221, 222). Finally, the last of the Persian poet, Jâmî (A.D. 1414–1492), in vol. vii. of his Hâfez

Aurang, entitled Khiwâ'id-nâmeh-i Iskãndâri, or 'Book of Alexander's Wisdom,' represents Alexander the Great as being so much impressed with the influence of idols. Citations might easily be multiplied from other later Persian writers, but they would all be of a similar character as showing the deep-seated Persian hatred of idolatry. This persistent denunciation of the use of idols and images is as marked as ever in the attitude of the Parsis, or modern followers of Zoroastory, both in India and in Persia.

A. V. WILLIAMS JACKSON.

IMAGES AND IDOLS (Teutonic and Slavic).—I. Teutonic.—The evidence for the existence of idols and images among Germanic peoples is somewhat conflicting. The pronouncement of Tacitus, that the Germani had no images of their gods, is repeated by later Christian writers; but this is evidently an unceremonial restatement. On the other hand, there is evidence, if not always so direct as to attest the existence of images among the different Germanic peoples, at the several periods of their conversion to Christianity.

Tacitus definitely says of the Germani: 'Ceterum, nec cohorsit parvioribus deos, neque in illius humani cris semper assimilaret, ex maxime ciuisinum arsiterianum' ( Germ. 9); and again, of the Nahanarvali, that they have no simulacra of their twin-gods Alice (Germ. 43). Elsewhere, however (Germ. 7), he tells of the symbols taken from the sanctuaries, graves, or works of art. And in the battle: sigmâ, probably attributes of the gods, as the ship which he names the 'signum Indus' (Germ. 9); and effigies, probably representations of animals which possessed a sacred significance. There might be the ferorum imaginem of the Batavi (Hist. iv. 22). Later examples would be the dragon-heads on poles shown among the spoils taken from the Germani by Marcus Aurelius, and depicted in the Antonine Column (cf. P. S. Bartoli, Columna Antoniniana, Rome, n.d., pl. 37 f.). These are perhaps similar in form to the Dragon of Wessex displayed as Harold's standard by the Bayeux Tapestry. Such representation is described in, in which an image is used (Olafa Saga Tryggvasonar, Forornum Saga, ii, ch. 175). If the cult of Nehalemia, representations of whom were found at Walcheren, contains any Germanic element, they have then very early evidence of the representation of a deity; but, even if she is Germanic, the whole style of the figure shows very strong Roman influence.

It seems probable that the Germanic representation of gods passed through the usual stages of development (cf. R. M. Meyer, Allgemeine Religiousgesch. ch. v. § 24). There is no actual evidence for the shapeless log or stone; but this would probably be the earliest form of idol for the worship of meteoric

2 Hereafter quoted as F.M.S.
stones, as in classical mythology. But it is likely, from what we know of the later use of logs, straw figures, branches, etc., in plough, harvest, and other ceremonies, that this stage did exist (cf. W. Mannhardt, Mythol. Forschungen, Strassburg, 1854, p. 332 f.; Grimm, Text. Mythol. ch. 24, pp. 768, 782, 784); and it is even possible that some such rough image may be deduced from the name-ignis of Nordic. Contemporary evidence does exist, however, for the second stage—the trunk or log, carved with a representation of the head only, or of the head and shoulders. Pillar-worship, of which the reverence was paid by the Saxon Himing, and to the high-seat pillars by the Scandinavians seems to have been a late survival, probably belongs to this stage. For the more artistic stage—the complete reproduction of deities—there is sufficient evidence, especially from Scandinavia; they are represented with their attributes, as Thor with his hammer; or with ornaments of gold and silver. Finally, as with some statues of classical gods, and with Christian images, one finds instances of images that can move, walk, and speak.

The earliest definite evidence for the existence of Germanic idols is connected with the Goths, and dates back to the latter half of the 4th century. The Constantinople Column, erected by Arcadius to commemorate the wars of Theodosius, has representations of German gods, borne on the backs of bears. These are life-size figures of bearded men, of which the head and shoulders only are carefully carved; the rest of the figure is of the zoomorphic type, with slight indications of ornament to represent a robe (cf. A. Bardon, Imperium Orientale, Venice, 1729, ii. 417, pl. ix.).

Sozomen, HE vi. 37, writing of the same period, mentions that Athisaric, king of the Goths, in his attempt to revive heathenism, caused a statue (Ephrem) to be carried in a wagon to the houses of Christians, that they might worship and sacrifice.

The references of Christian writers to the existence of idols among the remaining Germanic peoples are numerous, but reliance can be placed only on those in which images are specifically mentioned or described (simulacra, imaginari). Phrases such as 'idola colere' are not definite enough, nor is the mere mention of images sufficient evidence, as it is possible that Germanic temples did not invariably contain images; the custom of alluding to Germanic gods under the names of the approximately corresponding classical deities sometimes causes confusion.

In the Frankish images, there is continuous evidence. The earliest reference, dating from 491, is the speech of Clotilda to her husband King Clovis, in favour of baptism: 'Nicht mitt diu quois colitis, qui neque sibi, neque aliis potens sustinens; sanctum an tu ex lapide, an ex ligno, an ex metali, alium scripti Gregorii a 4f' (Hist. Franci, i. 39).

In the Constitutio of Childebert, c. 554, punishment is decreed against those who refuse to destroy from off their land, or who prevent the priests from destroying, 'simulacra constructa vel idola danatorum dedicata' (Paulinus, 'MGH', 'Liber I', c. 355 f., i. 1). In the Vita S. Gregorio, contained in the Acta Ordinis S. Benedicti, Paris, 1688–1701, sect. ii. p. 582, we are told that c. 640 the saint 'costum ... simulacra senatoris publici atque ... idola superstitionis eius deceptaque verum auctoritatis legis' (n. 40).

The only definite authority for Saxon idol-worship is to be found in the anonymous Indicentum Superstititionum of the 8th century. With entry 26, 'De simulaculo de comarsa farina,' may be compared the story of the figure of Baldr, which was baked and smeared with oil (Fröls's Saga, 9; Formaldr Sögur, ii.). Possibly such cakes were sometimes representations of a divine attribute, or of an animal sacred god, and not of the god himself. Entry 27, 'De simulacris de pannis (pannis), fictatis, may refer to doll-images for the private use of worshippers (cf. A. Sauppe, Indicentum Superstitutionum, Leipzig, 1881, ad loc.) or to figures in straw and hay images, such as the image of Death, which in later times we know to have been carried round in procession (cf. Grimm, ch. xxiv. p. 771). Entry 28, 'De simulaculo, quod per campos portaret,' shows that the Saxons practised the general Germanic custom of religious processions, probably to secure fruitfulness and prosperity.

There is little definite reference to the practice of idol-worship among the English: the most convincing is the description of the heathen reaction in Essex, c. 660:

'Gocerunt ams, una demelare ærnat, restaurare, at adare simulacras' (Bede, HE iii. 30).

Boniface I, writing to Bishop Mellitus, gives instructions, 'Ipsa quae in ea (i.e. facie) sunt idola, desunterant' (i. 30).

Other references are found in Bede: Pope Gregory, writing to Bishop Mellitus, gives instructions, 'ipsa quae in ea (i.e. facie) sunt idola, desunterant' (i. 30).

Boniface I, writing to Bishop Mellitus, gives instructions, 'Ipsa quae in ea (i.e. facie) sunt idola, desunterant' (i. 30).

The force of these two references is weakened by the fact that the writers of the letters were foreigners, and not immediately in touch with English conditions. Again, in the story of Cuthwig, and of his active share in the destruction of the temple at Goodmanham (Bede, HE ii. 12), no word more definite than ydola is used; but in the poetic account of the incident by Alcuin, 'Ponitilvius et Sancta Bervonica Ecclesiae, 1. 162, Paulunus is represented as saying, 'omnia stomen tur fundo simulacra deorum.' The word wode occurs in Old English in the meaning of 'idol'; thus it is used of Nethuchedræzer's golden image: its most peculiar use is in the phrase Widen worhtes wode (Gnomon Verses, i. 133, Exeter Book). Again, in Beowulf (line 176) the word seinvoroburg, 'honor to idols,' is used in an expression description of a heathen custom: 'At times they ordained worship of the idols in the temples.' For the Frisians the evidence is neither full nor very conclusive: there is no direct reference to an idol in the description of the sanctuary of Pöste on Heligoland given by Alcuin, Vita S. Willibrordi, i. 10 (PL cl. 700); by Altrid, Vita Liudgeri, i. 19 (MGH, 'Scriptores'), Hanover, 1830 f., ii. 410 (PL xxix. 778); and by Adam of Bremen, Gesta Rinberg burg, iv. 3 (MGH, 'Scripto' vii. 369 (PL exvii. 623 f.). Elsewhere (i. 13) Alcuin speaks of Willibrord's arrival 'ad quamdam villam Wulacro burn nomine, in qua antiqui errores idolum renascerat.'

In Willibald's description of the heathen reaction under the Frisian king Rebéd, c. 718, we read:

'Idolum quomque collum, constructa idolum cumus, fucum et is deplorat renovatam' (Vita S. Bonifaci, iv. 12 (MGH, 'Scriptor' ii. 333; PL livt. 611).

The most definite reference is that of Anskar in his account of the preaching of St. Willibald in the middle of the 8th cent. to the Frisians at Hurnebeck:

'Sacerba coepit, primo ... sancta subedit auxilium petere, et a simulacris multa et arcis simulacros superstiti solvat' (Vita Willibaldi, 3 (MGH, 'Scripto' iii. 280; PL xxvii. 103 f.).

Grimm quotes from different lives of St. Gall an incident which would be a proof of the existence of idols in Alamanian, if, as he thinks, it can be referred to Germanum ('Scripto' vi. p. 108). Although there is some confusion in this account of Ratpert, Caes. S. Galli, 1 (MGH, 'Scriptor' ii. 61 (PL exvii. 1038)), it seems clear that on the Lake of Constance, near Bregenz, St. Gall and Colmbon discovered, c. 612, a sanctuary dedicated to
St. Aurelia; it nevertheless contained "trees imagined aeres et debaratas" (Vita S. Galli, i. 6 [Vita B. Galli, i. 6; PL 71, 172]). The missionary sown the tree; these were probably planted in wood. "(Vita S. Galli, i. 6 [Vita B. Galli, i. 6; PL 71, 172]).

The missionaries threw into the water. Walraard Strabo says definitely that they were images of heathen gods; "isti sunt die veteres et antiqui iuvenes morti et " (Vita S. Galli, i. 6 [Vita B. Galli, i. 6; PL 71, 172]). Gramm cites later instances of practical endeavors to retain the ancient gods, probably to consolidate the people's prejudices, and it has approximated parallels in classical mythology (cf. Pausanias, iii. xiv. 5; 'the wooden image [i.e. the archaic image of Thetis is still preserved in secret').

For Scandinavian images there is very full evidence, the most trustworthy coming from Christian sources; the words "skjovoggi" and "tegoggi" are used in Iceland, but the custom prevails of speaking of the image merely by the name of the deity. The most important evidence is the account by Adam of Bremen, in the 11th cent., of the great sanctuary at Upsala, with its statues of Thor, Odin ("Wodan"); and Freyr ("Friedo"). Odin is represented armed, the symbol of fertility, and Thor "cum cepit roem simulam velictum"; this probably refers to his hammer, the attribute of the thunder-god (Gesta Hamaunam, iv. 28 [MGH, Script. Ord. scandinav. iv. 28]). N extraction and Freyr were mentioned (ib. ii. 60, p. 331, iv. 9, p. 371; PL clxvii. 545, 627). The most detailed accounts we owe to the Christianizing expeditions of Olaf Tryggvason and St. Olaf.

Thus at Roskild, Olaf Tryggvason encountered a representation of Thor which could speak, walk, and even make war upon him ("Olaf's Saga Tryggvasonar, 150, F. M. S. i"). At Mori near Trondheim the king found an image of Thor with his hammer, armed with gold and silver; it stood in a chariot drawn by two wooden horses, round the horns of which was a silver chain ("Thorgardolfs, Olaf's S. Trygg, 288"). St. Olaf was opposed in the Highlands by Guðbrandr, a votary of Thor, and a great chief; Guðbrandr's son described Thor's image to the king:

"It has a hammer in his right hand and is great of stature ... he is hollow within, his four leaves are brought to him every day, and therewith meat in the same proportion." The image stood upon a rock, which was adorned with gold and silver; if it was scattered, it came "more as big as cats, and lizards and snakes" ("Olaf's Saga Hápl, 297, F. M. S. i.

Such images have seem to have been particularly numerous; in Njál saga 88 we find, in a temple at Hööf, Thor in a chariot, and with him Þórgestur, Hóljagårdr, and Írpa; each wears a gold adorned with silver, and Þórgestur has a kerchief on her head. Reference has already been made to the story of Freyr, and of his image being borne in yearly procession ("Olaf's S. Trygg, 178, F. M. S. ii."); also to the story of the baked image of Baldi ("Friedo's S. 9"). It seems to have been a common Scandinavian custom to place several statues in one temple; even the temple built by Hrafnkel, who was a special votary of Freyr, contained other gods ("Ivarshals S. Friedo, 15"). Still, the notice of the great temple in Gautland, with its hundred gods, is probably an exaggeration ("Jomsvinna S. 12").

Traces are found of the practice of carrying on the person small images, probably for secret worship, or as amulets; the skald Hallfred carried an ivory likeness of Thor in his pocket ("Hallfred's S. Friedo, 6"); and Ingimund was a silver talisman of Freyr ("Götterbuch, S. 10"). For similar protective symbols Earl Eirikr carried an image of Thor at the prow of his ship ("Friedo's S. ii. 253"). We even find such a familiar use as the image of Thor carried in the arms of a child ("Fosterchild's S. pt. ii. 9"). The walls of Olaf's Pá's hall in Lee-

land were adorned with representations of old stones, probably in painted wood ("Olaf's S. 29"); these were described by Úlfur Ugason in the Hâla, and, from the fragments that remain of the poem, they seem to have depicted the burning of Baldi, Himmel, and his flight with Loki, Thor's journey to Hymir, and his fight with Mýgjarporr. The high-seat pillars were also adorned with figures; thus Thor was carved upon the pillars which Thóðir Móstræskgæg threw overboard on the Italian coast in order to find a landing-place; these same pillars were afterwards set up in the temple built by Thorolf.

To sum up, then, our knowledge of Scandinavian images: they were very numerous, often life-size, generally of wood (cf. "trennjar", "wooden man"), and frequently adorned with gold and silver. In later times the people identified the image with the god, and in this way they were able to believe that the figure had the power of movement; a very clear example of this occurs in the story of Thendorf of Gata ("Fréseyingsa S. 23"), where the statue of Thógerðr loosened a ring as a sign of acquiescence, but clamps it tightly when she denies her favour. The story of Gunnarr and his intercourse with Freyr's priestess proves that the god was identified with his image. The idea of vitality and volition in the image is carried so far that the statue of Thor at Brauðstað is made to compete in wrestling with Ólafr Tryggvason, the object being to hurl the vanquished into the fire; the king proved the stronger, and the wooden figure was burned to ashes.

There is very little archaeological evidence for Germanic gods; the representations of Nehalemnia and of the dea matres are more Roman than Germanic in style, and with them may be related the altar to Mars Thugens, with its representation of the god armed. Although it was found in England on Hadrian's Wall, the votaries, who came from near Deventer, were probably Batavi; the stone dates from the first half of the 3rd cent. (cf. Helm, "Allgerman. Religiongesch. i. 366 ff."). Again, the most important evidence is connected with Scandinavian mythology. The figures on the Gallehus horns are too problematical to count as evidence; and even the figure on one of the plates of the Torlanda helmet may represent a mere warrior, though it is tempting to identify it with Odin, accompanied by his two ravens. The representations of Odin exist on the gravestones of Arde, Habbinghó, and Þjønghive; here we see Odin on Sleipnir, but even these are late representations and show a somewhat specialized aspect of the god (cf. Helm i. 214 ff.; according to him, the majority of them may be considered to represent deities of fertility.

a. Slavic. The discussion of Slavic images is rendered difficult by the fact that much of the early evidence really refers to Scandinavians who were settled among Slavic populations; in particular, the chief god of whom one figure is really Thor, the Swedish thunder-god, worshipped under the same aspect, but under a Slavic name, Perun, thunder-bolt. It is therefore not easy to disentangle the Scandinavian work from the Slavic, and only at one period does the evidence refer incontrovertibly to the Slavs—the period of
Slavic settlements in the island of Rügen, and around the Elbe. The evidence for Poland, however, appears fairly trustworthy.

The 10th century narratives of Arabian travellers, though nominally concerned with the Slavs, in reality treat of the Russians, i.e. of the Scandinavian settlers around the Volga. Ibn Faddlan (ed. Paris, 1851-71, ch. xvi.). Apart from the inherent improbability of his account, it is difficult to know of whom he is speaking, and of what place; Arkona has been suggested, but there seems to be no means of settling the question.

Even some of the early Christian evidence really refers to Scandinavians. The so-called Chronicle of Nestor, dating from the 11th to the 12th century, gives a detailed account of the setting up of idols in 978 at Kiev by Vladimir:

"Perum in wood, in a silver head and a golden beard, and also a throne, Dobog, Sirolog, Smargd, and Mokoch. Sacrifices were offered to him on his throne and their daughters committed to his service as victims to the idol (Chronicon de Nestor, ed. and tr. L. Leger, Paris, 1884, p. 36).

"We hear again of an attempt to force a Christian Vareque to sacrifice to the idols; he repiled: "There are not gods; these are only wood, which is to-day, to-morrow, to-morrow, etc.; they do not eat, or drink, or speak It is the hand of man which has cut them out of wood."(ib. 36)

Ten years later Vladimir reversed his work at Kiev:

"He commanded the idols to be thrown down. Some he had burnt, and the rest cast into the fire. His command to tie Perum to the tail of a horse, and to drag him down ... to the stream; and he ordered twelve men to beat him with staves, not because he thought the wood had any feeling, but to insult the demon who in this form had insulted men, and to punish him; and so he was being dragged along the stream as far as the Dnieper, the heathen went for him. ... Then they threw him into the Dnieper." (ib. 45).

Adan of Bremen's testimony is important as contemporary 11th century evidence; he mentions the town Rethra:

"templum ibi magnum constructum est deo ensibi, quorum principis est Sclavum. Simulacrum eius auro coronatum est et aurea manus举（Gesta Hammaburg. ii. 18 [MGH, Script. vii. 812; PL clxxviii 913].

Thielmar, Chronicum, vi. 17 (MGH, Script. iii. p. 812), gives a more minute description of this sanctuary in Mecklenburg-Strelitz, but differs in some important details, notably in calling the town Riodegost, and the god Zuarasici (contrast Helmold, Chronicum Scavorum, i. 23 [MGH, Script. xxii]). In the temple "dii sicut in sancto, simulacrum nominis incautis, galeis lapis colocavit, vestit, quorum primus Zuarasici dictur. ... Viridem quaeque ruris, nix ad expeditos circumvix." (ib. 813)

Later, he speaks of the Liutici and of their goddess whom they carried with them into battle in verissimam operam" (ib. vii. 47, p. 837); and elsewhere he refers to the general Slavic practice of image-worship:

"Quod regiones sust et in parvis sanctis, totem habebat, et simulacrum dixit eum, nullum sinu Singularis est nasci, ubi infideline arcuato, in sanctum surnum deum de tera habebat, quoniam eum procurat regna, et est cocci, eterni et inferni, et faciem celi aperie pro merito pecuniae hominum suorum patrinis descendit." (ib. iii. 1, p. 829; AS, Jul. i. 988).

Next in chronological order come the references connected with the Christianizing missions of Otto of Bamberg to the Vemarian Slavs, early in the 12th century. The references to idols and their destruction are frequent; unfortunately the value of these lives by Herbold and Ebbo is much disputed. The most detailed description is that of a great temple at Stein, apparently very like that at Rethra:

"Erat autem ibi simulacrum tripedis, quod in uno corpore tria capita habebat, Trigula vocabatur (Herbold, Dialogi de Vita Ottone, 3 [MGH, Script. xi. 707]).

At Gutzkow there was an idol of great size and beauty, which was mutilated and burned (Ebbo of Bamberg, Vita Ottone, iii. 10 [MGH, Script. xii. 869]). Ebbo gives more details on the image of Trigula at Stein:

"Triippetum habebat simulacrum, quod aures ciddari oculis et labia contorta, et simulacrum deorum, in haeretica, in haeretica, in haeretica, in haeretica, in haeretica, in haeretica simulacrum creatum dea tera habebat, quoniam eum procurat regna, et est cocci, eterni et inferni; et faciem celi aperie pro merito pecuniae hominum suorum patrinis descendit." (ib. iii. 1, p. 829; AS, Jul. i. 988).

In the temple at Julin were "statuae ... aure et argento decoratae" (ib. iii. 1, p. 829; AS, Jul. i. 357).
In descriptions of late survivals of Prussian or Lithuanian paganism, mention of the appearance of the images is frequently made; but apparently there is no other reference to images.

To sum up the evidence: Teutonic and Slavic peoples alike seem to have had no idols in early times, but they must have certainly possessed them at a later stage; in their adoption of them they may have been influenced by classical cults. Although individual references by early chroniclers may not always be accepted, the weight of their collective testimony is too great to be disregarded.

M. E. SEATON.

IMAGES AND IDOLS (Tibetan).—1. Occurrence.—In Tibet images and idols abound, though not, perhaps, to any greater extent than in other Buddhist countries, even of the 'Southern', or relatively primitive, division of that religion—e.g. Burana and Ceylon. In Tibet, however, the famous image of the Buddha in the supreme moment of attaining Buddhahood, under the 'Tree of Wisdom' ('Bodhi'), in Tibet, on the other hand, as in the other countries of the polytheistic Mahāyāna form of Buddhism, the images represent also a host of defined Buddhas and celestial Bodhisattvas (or potential Buddhas), saints, and demons. Besides the images enshrined in temples and other religious buildings, shrines (g. m.), etc., a large number of miniature images are met with on domestic altars, and worn by the people in amulet-boxes, as talismans. Pictures of many of these divinities are as abundant in the homes of laymen as in temples, and illuminated in a great variety of colours on the title-pages of favourite scriptures and manuals of worship. Consecrated medals are also bestowed by the grand Lamas upon generous donors of alms. The images of the 'primordial' aboriginal religion, the Bon, are now cast in Buddhist form.

2. Divinities, saints, etc., represented.—The great majority of the divinities represented by the idols are those of the orthodox Mahāyāna Buddhism of India, as was first elicited by the present writer, who has also traced the origin of the majority of these divinities and their images to an adaptation of Brahmanist myth, and to the delusion of metaphysical categories and different modes of Buddha's 'Word' (or Logos) by a concrete symbolism. The more commonly prevalent images are as follows.

(a) Buddha, celestial and human.—Of these the most frequently represented is perhaps the divine Āmitābha (Od-dapnjon), or 'The Buddha of Boundless Light' (see ÁDI BUDDHA) of the Western Paradise, and his mode Amithāya (Tie-dapnjon), OD-DAPPNIAVA, 'The Boundless Life' (see AMITĀBHĀ). Other common forms are the Medical or Aṣṭākāpi Buddha (Men-lo), the primordial Adibuddha as Samanta-buddha (Kun-tse-bnan-po), or Vajrādāra (De-rod-chen), or Vajrasattva (De-rod-kun-po). All of these images have a mystical triadens in which they mark their female energies; also the remaining Buddhas of the four quarters of the universe; and—less common than these—the historical Buddha, Sakyamuni (Sākyā- muni).

(b) Bodhisattvas: the coming Buddha, or Mañ-
treya (Byāms-pa), usually figured seated in European fashion, cross-legged, and usually of gigantic size, as a stored image, or carved on carved wooden pedestal (yig-chos-sgra-log) or personified Compassion, Manjushri (Sam-dbyin-pa), personified Wisdom, Vajrapāṇi (P’ye-ma-rdo); Tarā (Skor-ma), consort of Avalokiteśvara, as ‘the wheel of the Law’ (Bka’-brgyud); Māra (Sde-lo rgya-mag); Prajñāparamita, personified Divine Wisdom; ‘the all-victorious Diśam, Uṣṇīṣa-vijaya; ‘the White Umbrella Inviolable in the Conquest of Sin’, Dpal-dam-po-rig-pa-ston-pa, ‘the Great Turner away of Harm’, Mahāvyutthāna, ‘the Flaming Crown’, Umjyodesa.

1. Placed gods (bka’ag) of Brāhmaṇism type: modes of Indra and Brahman, as door-keepers and attendants on Sakyamuni; the four Guardian gods of the Quarters, and Jambhala, the god of Wealth.

2. Demonic tutelaries of the fierce type of Siva as ‘Defenders of Religion’ (Chos-skron), e.g. ‘the fearful Thunderbelt’, Yeru-shaṅgu (iVarge-byi-gyi), a form of Yama, the god of the Dead; ‘the horse-necked demon’, Huyagriva (rTa-mgrin); ‘the Goddess’, Devi or Lha-mo.

3. Gods and demons: chiefly indigenous, namely ‘country-gods’, yul-lha, and earth-demons, sa-bdag, of which the most numerous are red (tson) and black (bdu). (bdu).

4. Saints: the sixteen apostles or ‘the sixteen Ancestors’, who are also the two chief disciples, Mongag-pa and Sar-mo-pa; Padmapāra or Padmasambhava, whom the present writer has shown to be the founder of Lamayuru; also the reformer of Tibetan Buddhism, Tsongkhapa, the founder of the Yellowhat sect, who became the most famous, and to which belonged the Grand Lamas of Lhasa and Tashilhunpo.

The image of Padmasambhava is given the chief place of temples of the Red-cap sect, and of Tsongkhapa in the Yellow. Each of the other sects accords its own particular founder a chief place on its altars.

3. Canon descriptive of images.—The authoritative source for the detailed description of the images of Buddhism is the great body of the Sādhanas (Sgrub-tab) literature of rituals for the worship of these respective divinities. The rituals were composed in India, in the early centuries of our era onwards, during the rise of the bhakti, or devotional movement, which permeated both Brāhmaṇism and Buddhism. They number many hundreds of each part, or to contain minutes of descriptions of the form assumed by each deity on becoming manifest to a votary; the distinctive form, dress, posture, and pose of body and hands, as well as the colour, and the symbols held in the hands to emphasize the functions and attributes, are all detailed therein. Several recensions of these texts are on record as translated into Tibetan. Two large collections are included in the great Tibetan commentary, Langyur, of which the titles have been published by F. W. Thomas and P. Corrèl. It is from these Indian manuals that Tibetan artists form their images. Many of the deities are given a variety of forms, owing, it seems to the present writer, to the apparent incorporation of popular Brahmanist and other aboriginal divinities to whom their functions and symbolisms are thereby absorbed. These polyphonic forms fall into three types: (a) placid, mild, or benign (byel); (b) fierce (bdom); (c) terrible and demoniac (drogpo).

4. Style of art and technique.—The Tibetan artist, so revered to the greatest extent the medieval Indian style of Buddhist art, is especially noticeable in the dress and form of the female divinities, who are represented displaying exuberant charms of figure, according to the Indian ideal of female beauty. This characteristic is strikingly with the Chinese treatment, which tends to repress sexual distinctions. In the conventional treatment of exteriors, such as landscape effects, clouds, water, trees, and houses, the Tibetan images and pictures exhibit a degree of realism in composition rather than Indian, though Tibet has to some extent evolved a special style of its own, intermediate between that of its two great neighbours, and distinct from that of Nepal. Some of the large images in Tibet were cast in Nepal by foreign artists.

5. Materials of images.—The commonest images are composed of plastic material—clay, or a mixture of incense-paste, flour, and clay moulded into shape, dried, painted, and gilt. Other images are fashioned from brass or copper, usually cast from moulds and gilded. The most valued images are inlaid with turquoises and other precious or imitation stones. Some is seldom used for images or statues, though figures are sometimes outlined on rocks. Bas-reliefs and medallions are often made in bronze, in the winter season, for certain festivals. Following the Indian custom, auspicious times must be selected for the preparation of the materials, and for the execution of the work, especially of the principal organs, e.g. the eyes, etc. A remarkable realistic detail is the insertion into the larger images of parts of real human heart, lungs, stomach, and intestines. The conventional colour of Buddha’s hair is dark blue.

On completion of the image, it requires to be consecrated. For this purpose, the image is first recited, and into the hollow interior are inserted small rolls of texts, one of which is often ‘the Buddhist Creed’ or a spell (bhrārāya). Other objects thus inserted are grains of consecrated rice from the altar, bodily relics, hair, nails, etc., and the robes of holy men, and fillings of precious metals. The image is usually wrapped with silk scarfs, giving the impression that it is clothed. Pictures (s’a-l-ba) of images are painted in distemper, usually on cotton, seldom on silk. Sometimes the paintings are executed on the walls of temples as mural frescoes.

6. Worship of images.—The image, as in other Buddhist countries, is popularly worshipped as a sort of fetish, holy in itself, and not merely as a diagram or symbol of the infinite or unknown. Food and drink are regularly offered to it. It is believed to hear and answer prayers, to appear in a common experience to hear the devotions in a temple addressing personal requests for benefits before the image. Certain of the older images of which the history has been lost, are regarded as miraculous in construction, and credited with being ‘self-formed’ or as ‘fallen from heaven ready fashioned’.

L. A. WADDELL

IMAGE OF GOD.—I. General view. (1) ‘God is a Spirit,’ said Jesus to the woman of Samaria at Jacob’s well at Sychar (Jn. 4:24). The plainness of utterance to the deep truth that God is free and self-determining, essentially ethical in His nature. This great idea is the basic conception on which the interpretation of man as made in God’s image, as set forth in Scripture, must proceed. If God is a Spirit, then man, reflecting Him, must be a spirit too; in other words, human nature has more in it than what we find in sensuous experiences, animal proclivities, and fleshly inclinations. He
stands erect, and is by nature allied to the Divine; and his attachments, in the first instance and properly, are heavenwards and not towards earth. He has co-operation with the Son of his being; and his own nature, to the extent that it is pure and unalloyed, may be held as revealing the Divine. The foundation of his being is deeper than anything that may be seen or tasted or handled; it is found in the relation to the eternal and the eternal. Consequently, what the nature of the great God is can be discovered in part by consideration of His image as reproduced in man; and, however much more complex it is than what finite intellect, finite will, finite conscience, and finite love may disclose, He must at least correspond to the reflection of Himself that the higher faculties and emotions of man's soul exhibit: if the human spirit is not the Divine Spirit, at any rate it reflects it, and may be trusted as a revelator to the extent of its capacity.

The line of argument which is suggested by Jesus' utterance is supported by the OT, and especially by the Creation narratives (Pentateuch and Genesis, ch. 2), at the opening of the Book of Genesis. Whatever be the historical or the scientific value of these narratives, they lie at the root of both the Jewish and the Christian view of God, that they are truths that are indispensable for the understanding of redemption. Acccording to them, man is a spirit, being created by God, who is 'the Father of Spirits'; and having the breath of life 'breathed into his nostrils' by God Himself. The image of His Maker: the Divine Spirit is the Source of the human spirit, and the rational creature is thus far stamped with the stamp of the Creator.

(2) Now, if this be the Scripture teaching, OT and NT, what is the practical significance of it? Clearly this—that, if men is essentially a spirit, drawing its being from the great Creator Spirit, the agnostic position that God, even if we suppose Him to exist, is unknown and unknowable is untenable. God cannot be unknown, much less unknowable, man bears in him the Divine image. Even the reflection of a face in a mirror is a copy; and, although it lacks the warmth and fullness of the original, it does, nevertheless, within limits reproduce it, and thus gives a true idea of the original. And the Biblical conception of man's spiritual nature and original heavenly relationship, both natural theology and Divine revelation become possible, and, indeed, are seen to be inevitable; and, on the supposition that man is not a spirit, it is not possible to see how either natural theology or Divine revelation could be. Divine revelation is shown to be a necessity from the fact that, as man's deepest need is God, and as God is a Person, it is only if God reveals Himself that we can come to know Him. It is the characteristic of personality to be self-determining and self-communicative. Even in the case of our fellow-men, who are persons, we cannot know them unless they themselves will to disclose themselves to us. Knowledge of a neighbour depends upon whether he will open his thoughts to us: the motion must come from his side; otherwise, we are powerless. We might, without his revelation, come to learn something about him; but then we should not know him. Now, the revelation of one person to another is also the revelation of that other to himself. We can never know ourselves except in the light of our experiences, and knowledge of ourselves. And knowledge of ourselves, it is plain, comes from the necessities of the case—in particular, from the circumstance that our nature is in the essence of it social, and that imitation is largely our nature. Innumerable times, more, then, is the revelation of God to us also the revelation of ourselves to us! It is only in His light that we see light. But the meaning of this is that humanity is taken up into the Divine; which, again, implies that the very Godhead is taken up into the Divine. Consequently, therefore, the Godward attitude—is the primary fact in man. God and man in union and communion is the same thing as saying that man is naturally allied to God, that the Infinite is not the contrary, but the complement of the Finite.

Still more obvious is the need for revelation if we introduce, as Scripture does, and as our own experience attests, the idea of sin, or voluntary transgression, intention to create a rupture between man and God. There is now not only genuine or limited knowledge to cope with, but also voluntary alienation or estrangement. The understanding is weakened, but the will is also perverted, and the affections are turned away in the wrong direction. A thorough transformation has to be effected in the sinner—clearness of perception has to be brought back to his intellect, strength to his will, purity to his heart, and peace to his conscience. Only a Divine revelation can do this.

2. OT teaching.—(1) The psychology of the OT conceptions of 'body' and 'spirit'. Of these four factors man consists. His body is at first conceived simply as 'dust' (אָדָם, 'adam'), or 'dust of the ground,' i.e. simply as the earthly part of him, composed of dust and resolved at death into dust (Ge 3:19). But it is the part of man that idea of unworthiness or degradation attaching to it. It is a work of the Creator, and, like other such works, it was pronounced at the beginning to be 'very good.' Looked at the spirit-mind, and sentient organism, it is viewed as 'flesh' (בָּשָׂם, 'basham'), devoid, however, of any implication of vitiosity or carnal desire, which so frequently attaches to 'flesh' in the NT. Nevertheless, although 'flesh' is not represented in the OT as the source or origin of sin, it is regarded as indicating man's mortality and frailty, and also the fact that the body may be the instrument of evil desires and passions. Thus, while, on the one hand, it says, 'All flesh is grass' (Ps 103:14), on the other hand, it records the depravity of the race at a particular moment in the significant phrase, 'All flesh had corrupted his way upon the earth' (Gen 6:5), though even then the concomitance of 'flesh' with 'spirit' is not lost sight of, for it is said, in almost immediate connexion, 'My spirit shall not always strive with him, for he is but flesh' (Gen 6:5). The body as flesh is congruent with spirit: hence the Psalmist can say, 'My heart and my flesh cry out unto the living God' (Ps 56:9). The soul (נפש, 'nephesh') is specially the seat of the emotions and the will, although other functions are frequently attributed to it. It is the soul that 'hopes,' 'fears,' 'trusts,' 'resigns,' 'praises,' 'is glad,' and 'longs,' etc.—all emotive and volitional states. To the heart' (לב, 'laba' orלבבות, 'labbabb'; 2. 22) are assigned thought, wisdom, intellect, understanding; so that the heart,' in Hebrew usage, so far from signifying the chief seat of affection, as in English, is the nearest equivalent to the English term 'mind.' It is also the seat of character—the centre of man's being, moral and religious. As the seat of sin, the heart is deceitful above all things, and it is desperately sick; 'it is the door of the mouth' (Ps 21:2). It is deep and hidden from common view, and is reached only by God: 'If the Lord search the heart, I try the reins, even to give every man according to his ways' (Ps 139:23). This arises, not simply from the necessities of the case—in particular, from the circumstance that our nature is in the essence of it social, and that imitation is largely our nature. Innumerable times, more, then, is the revelation of God to us also the revelation of ourselves to us! It is only in His light that we see light. But the meaning of this is that humanity is taken up into the Divine; which, again, implies that the very Godhead is taken up into the Divine. Consequently, therefore, the Godward attitude—is the primary fact in man. God and man in union and communion is the same thing as saying that man is naturally allied to God, that the Infinite is not the contrary, but the complement of the Finite.

[VOL. VII.]
expression of the vision and the aspiration of the psalmist and of prophet prompted by the longing for purity and righteousness, and poured out of the individual's glowing faith: 'As for me, I shall behold thy face in righteousness, when I awake, with thy likeness' (Ps 17:8; 'likeness' = φάτνη, LXX φάτνα, Vulg. gloria). But the objection has been raised that immortality was lost by the Fall; for our first parents were driven out of the Garden of Eden (such is the representation), lest they should 'put forth their hand, and take also of the tree of life, and eat, and live for ever.' The significance of this clearly is: that an everlasting life to a fallen or sinful creature, in the condition to which his fall had reduced him, would not be a blessing but a curse, and that something better was in store for erring man, even though it should cost him labour, pain, and sorrow. To eat of the tree of life and live for ever just as he was would simply be to prolong degradation and misery. But the whole lesson of the Fall is that of hope for man. The curse of the ground was for man's sake; it was for man's sake that he was expelled from the Garden, and that access to the tree of life was strictly guarded by cherubim and a flaming sword. In a finely impressive way the myth has now realized that his life is to be a battle of the right against the wrong, of good against evil, of strenuous resistance of temptation, of rising to higher things through personal effort; and that through this continual warfare the potentials that are in him are to be actualized, character is to be formed, and spiritual progress secured. And the NT throws further significance into the fact when it insists that the conflict is not confined to men, but is shared by Heaven itself. It is the characteristic of the very Son of God, the Ideal Man, who was made perfect through suffering, and in whose victory over sin and temptation we have the highest revelation of the Divine purpose with men and the truest manifestation of the Father's love.

3. NT teaching. — The fact of sin and the universal degradation and bondage of men on account of it, and the need, nature, and purpose of the remedy offered in Jesus Christ, are the subject-matter of the NT. The worth of the individual image of God in man, which had become corrupted, defaced, and blurred ('How is the gold become dim! how is the pure gold changed!' [Is 48]), and the determination that God is represented as making to Noah, as recorded in Gn 9, the condemnation of murder and the punishment of it are based on this very fact: 'Whoso sheddeth man's blood, by man shall his blood be shed; for in the image of God made he man.' And in this same spirit St. James, in the NT, tries to curb the unruly tongue, and to show the enormity of slander, backbiting, and the like (all of which are really species of murder), by the very same argument of man's native dignity and celestial relationship: 'Therewith bless we the Lord and Father; and therewith curse we men, which are made after the likeness of God' (Jas 3:17).

(3) In man's spiritual nature, drawn from its heavenly Source, is involved the fact of immortality and never-ending life. This is a logical deduction of the Jew who is fully conscious of the Divine image: spirit cannot die. How far, however, this was understood by the Jews is subject to dispute. What is obvious is that the idea of a future life grows in the OT as the ages run on; and, when we come to the NT, it comes as an intuition of the heart rather than as the result of logical reasoning, and is associated with the thought of communion and fellowship with God. It is the
not of its own will, but by reason of him who subjected it, in hope that the creation itself also shall be delivered from the bondage of corruption into the glorious liberty of the children of God. For we know that the whole creation groaneth and travaileth in pain together until now. (Ro 8:21-22)

This gives the meaning of the whole teaching of the NT regarding man and God.

(1) In regard, first, to the NT psychology, it is pertinent to remark that it follows largely that of the OT. Neither of them is, strictly speaking, philosophical. How should they be, seeing that religion, not philosophy, is the great end of the Bible? But Christianity is the completion of the OT revelation, and would be unintelligible if severed from it. Yet it must not be forgotten (a) that Divine revelation is a progressive thing, and, consequently, that the terms received new content as time went on; and (b) that Christianity was affected by Hellenism, especially through the LXX. It is only quite recently that scholars have come to realize how much the NT owes to the LXX, not least for its language; and, indeed, it is hardly extravagant, in the face of modern researches, to say that the NT is the Christianization of the Septuagint.

(2) How, then, is sinful man’s nature renewed? Through redemption bought by Christ, and applied by the Holy Spirit.

In considering this, it is well to begin with the fact that Jesus is set forth in Scripture as ‘the image of the invisible God’, ‘the brightness of the glory of God’, ‘the firstborn of all creation’ (Col 1:15). This means that He is Himself a Spirit (for ‘God is a Spirit’), and that, in a special sense, He is ‘the Son’. His ‘Son’, ‘the Image of God’, and not simply, like men, ‘made in it’. On this account He makes to men the supreme revelation of God’s nature, which is that of a Father, whose essence is love—the revelation of a compassionate God (‘not willing that any should perish’), and of a suffering God with love at the core of it, bringing redemption through sacrifice.

He is also said by St. Paul (Ph 2:6) to be ‘in the form of God’ (εἰς μορφὴν ἐστίν). That refers to Christ in His pre-existent state; but it cannot fail also to suggest the Divine image in which man was at first made (Gn 1:26, where ‘form’ might not inaptly translate the Hebrew sehem (‘shadow’). And, agreeably to this, St. Paul, in Ro 5:14, speaks of those who are predestinated as ‘conformed to the image of his Son’ (συμμορφωθέντες τῷ εἰκόνι τοῦ υἱοῦ τοῦ θεοῦ), where the word ‘conformed’ clearly takes us back to the original Hebrew, even for ‘shadow’, with outline or form as the predominant idea. And it is significant in this connexion that, when St. Luke traces the genealogy of Jesus from Joseph with the words ‘of the house and tribe of David’, he designates ‘the Son of God.’ Thus the Latin pedigree connects the second Adam with the first Adam: ‘it places a son of God at either end of the genealogy, and it has been the tradition of God both by nature and by grace, by birth and by second birth’ (S. Cox, Expositions, 1, London, 1885, p. 27). And so it is well for us to remember that both he that sanctifieth and they that are sanctified are all of one origin—ἐν ᾗ οὐκ ἔχετε (He 8:5).

(3) How the image of God in sinful man is renewed is set forth in many ways in the NT. Sometimes we meet with terms that come from Christianity and Greek thought, such as ‘following’ and ‘imitating’—significant words to be found frequently in Plato and among the Stoics and the Neo-Platonists; but, when this is the case, the powerful personal feeling of the Christian that there is a root of the process. It is not simply ‘following’ Jesus that we find, but it is Jesus’ magnetic personality drawing men towards Him as disciples and Himself saying to each, ‘Follow me’ (ἀκολουθεῖ μοι). Hence, it is not the verb ἀκολούθω that is used (that verb never occurs in the NT), but ἀκολουθεῖ, thereby indicating that it is the following of disciples who are also companions that is meant—men who are living in the constant consciousness of the Master’s presence with them. Again, it is not only the command to ‘imitate’ Jesus and take Him as our Example or Model that is issued to us, but it is also St. Paul’s Exposition of the Colossians (3:10). ‘The apostles (μάρτυς ἐμοί), as I also am of Christ’ (1 Co 11:11). In other words, the personal note in this connexion is distinctive and supreme. But there are other modes of Hellenism, and classicizing the fact that the renewal of the image in the individual man is a gradual process, requiring time and life’s experiences, and even looking forward to the future life: ‘Now are we children of God, and it is not yet made manifest what we shall be. We know that, if he shall be manifested, we shall be like him; for we shall see him even as he is’ (1 Jn 3:2). Yet, although the renewal is a process, in every man who has accepted Christ the new image is there at any moment, needing only to be realized, for ‘Christ is all, and in all.’ This is brought out very clearly in Col 3:10 and in 2 Co 5:17. These passages and many more go to show that the recreation, or the new birth, or regeneration, does not mean a despising or rejecting of the faculties that man as man possesses, or a making of any addition to them, but a taking of them by the Spirit of Christ into a higher influence, imparting to them a new vigour, quickening them in their exercise, and turning the operation of them in a new direction. Intellect, feeling, and will are found in every man that is the result of original creation), but, through Christ and through Divine grace, they are purified and invigorated and dedicated afresh to the service of God.

(4) It is obvious, from the whole tenor of what has now been said, that the renewed image of God in man cannot be restricted to man’s life on earth. We saw, under the OT teaching, that immortality is logically involved in the conception of man as a spirit. But this is explicitly brought out in Christianity and put in the forefront. St. Paul claims for Christ that He ‘abolished death, and brought life and incorruption to light through the gospel’ (2 Ti 1:10). That was the end and aim of His earthly mission: resurrection and immortality are effected by Himself as ‘a life-giving Spirit’ (τούτων οὐρροῦντα, 1 Co 15:45). The assurance of immortality, therefore, is now connected with ‘the image of His Son’, ‘you shall live also’ (Ja 14:2). And the life promised is to the whole man—body and soul, not soul only apart from body. There is more than philosophical and metaphysical implication in the final redemption of the body, as well as the salvation of the soul—complete redemption means complete future existence for the redeemed. Even under the OT, the fact of future life might be said to be indicated, and Himself indicated to the Sadducees (Mt 22:30),
when he reasoned from God's revelation of Himself to Moses in the land of Midian as the God of Abraham, of Isaac, and of Jacob, on the ground that 'I am the resurrection and the life,' and added, 'He that believeth in me, though he were dead, yet shall he live,' and that the law of association is quite inadequate to explain the processes involved (see, e.g., H. J. Watt, Théorie des Dérivances, Leipzig, 1904). A more fruitful and full perception of memory and imagination is in the purpose or function of each. The object in memory is to revive a past experience of the individual, something that has already occurred, the 'life' or the event, perception, or thought. In imagination the object is to construct or prepare for a new experience, something hitherto unrealized by the individual; it faces the future, as memory the past; its product is essentially new, spontaneous, original, as that of memory is essentially old, reproduced, imitative. In the history lesson, it is by memory that a child recalls the words of the textbook, or of the teacher; it is by imagination that he pictures, and 'lives himself into' the personalities and events. So I may remember what I have read or heard of Tibet, but it is imagination that makes real to me the country and its people. The two processes are to a certain extent antagonistic to each other: a strong and accurate memory for details is rarely found accompanied by a vivid power of realizing in imagination the events passed through, or of communicating their spirit to others.

Imagination does not work merely with images, but also with concepts—as in the child's play with doll or pet, the artist's work with colours and forms, or the sculptor's work with materials. It combines images and concepts, abstractions, non-presentational meanings and thoughts—as in scientific invention and literary creation. On the other hand, images are used not only by imagination and by memory, but also by every other process of mind, with conscious effort to bring perception itself. Thus images are by no means characteristic of imagination, either as materials or as products. Imagination is a complex power, to be paralleled with reasoning in the use of symbols, with will, not with sensation or feeling. It is the primitive form of reasoning, 'thinking in pictures.' Reasoning works more in the abstract, with verbal image, imagination more in the concrete, with object-images; reasoning is governed by ideas of law and necessity, imagination is free and unlimited; reasoning in the main seeks to determine what is, or what must be, as the necessary outcome of what is, imagination is free to find what might be, or might have been, had other conditions been present. But none of these characters is essential. Some recent criticism would reduce imagination to a sub-process of reasoning (A. Krones, op. cit., 1904). P. C. S. Schiller, Formal Logic, London, 1912).

In all higher thinking, at any rate, imagination is as essential a constituent as reasoning in the narrow sense. Both rest, as Ribot points out (Essai sur la pensée créatrice, Introd.), upon a faculty of perceiving or thinking resemblances—a preponderance of exact resemblances on the one side, or of remote and superficial resemblances on the other, making the difference between the 'thinkers' and the 'imaginators' or 'dreamers.' One may add that vividness and accuracy of imagery may be a bar rather than an aid to imagina-
tion; the French are described by Galton as the keenest visualizers among European races; in science and criticism they are also among the foremost; but none of their own psychologists describes them as dependent on association (A. Krones, op. cit., p. 161). No one would deny that Edgar Allan Poe had imagination, but a study of his poems and tales shows his imagery to have been vague and formless; it is not the pure imagery that matters, but vagueness in a child's imagery, that makes its thinking 'imaginative.'

What most strongly separates imagination from reasoning is, how the latter is an idea of the individual element—the emotional tone, that characterizes
the first, and is absent, in theory at least, from the second. Imagination, like other psychophysical functions, has, in its origin, a purely practical value. It is an extended perception, an anticipation of experience, foresight of the issue of an action, a foreknowledge of the consequences, of the effect from an observed cause, of the outcome of a given situation. Its possession enables the organism to adapt itself to new situations and environments, not merely as actuality, but as potentiality. In this way it retains this practical side, from the earliest attempts to meet physical dangers or to satisfy hunger, up to the scientist's search into the hidden causes of things or the artist's pursuit of the ideal. Its driving force is, therefore, always an emotion of some kind—a want or desire and its accompanying dissatisfaction with the present. In the imaginative mind there is necessarily a combination of strong desires and impulses, on the one side, and a rapid and varied flow of imagery, on the other.

'There may be in the mind an inexactitude as to fact and imagery, yet nothing is created, for example the great travellers who have seen and heard much, and who cannot draw from their experiences anything more than colourless recital, men thought to be the most imaginative or political events or imaginary adventures which leave memories of the dreariest and poorest kind; prodigious readers, living encyclopedias, crushed under the weight of their memory (Gottsched, p. 57).

Equally uncreative, however, is the vigorous active type, with poor imagery and intellect. Two good examples of the contrast referred to are to be found in the two tramps in R. L. Stevenson's essay on Regency.

Several features of imagination are explained by the closeness of its connexion with emotion: (1) the vagaries, the bizarre connections, the inexplicable leapings in jargon forms and experiences. It tends to be revived, not through their direct connexion with other ideas, but through the emotional tingex which they have in common with the exciting ideas; (2) the predominance in emotional nature of the type called 'active imagination'; as opposed to 'passive imagination'; in the former the flow of imagery is spontaneous, uncontrolled by the will of the subject, who is a spectator rather than an actor, while in the latter the subject can alter the imagery at will, but has a far poorer range and vividness (see A. Binet, Étude sur l'intelligence, p. 43); (3) the intensity and concentration of the artistic type's imagination, its richness and deafness of-day-dreams, of play, of the creative mood (see Stanley Hall, Aspects of Child Life); as in all strong emotion, there is a temporary disintegration of the utilitarian. The imagination is always an accessory to some other function. But the disintegration of the imagination is not always bad; it is sometimes a symptom of health. It is the mental effort to the limit, the strain on the imagination, that causes the creative process. The imaginative state suggests conjunction with somnambulism, hypnotism, and with the phenomena of double consciousness; (4) the sense of strangeness, suddenness, 'inspiration', or 'possessiveness', with which innumerable creations of the imagination are accompanied. Much of the elaboration which is embodied in imaginative products takes place unconsciously. R. L. Stevenson's account of the source of some of his plots (see 'A Chapter on Dreams') is paralleled by the reports of many writers, artists, musicians, as to how their greatest creations 'came to them. The most interesting attempt to explain this feature is that of Freud and his pupils (references in Lit.). A dream, as it is experienced by the subject (the manifest content), is the transformed, symbolic pre-sentment of a disintegration of a system of ideas (the latent content) suppressed by the censorship of consciousness; this latent content in its turn may be the suggested realization of some hidden desire, which the conscious subject has repressed, because impossible of attainment, or forbidden, or immoral. These principles, originally formulated for dreams and for some forms of mental disease, are being applied to the materials of poetry, of art generally, and especially to the myths, fairy tales, and legends of primitive imagination.

IMBECILITY. — See Degeneration, Development (Mental), Insanity.

IMMACULATE CONCEPTION. — The Roman Catholic Church teaches that from the very first instant of her conception the Virgin Mary was immune from original sin, this phase of her purity is called 'immaculate conception.' Before the 12th cent. there was no thought of exempting the mother of Christ from the law of original sin. The Feast of the Conception of Mary, however, is from the 12th cent. that the belief in the immaculate conception arose.

1. The Feast of the Conception of Mary originated in a legend circulated by the Protevangelium of James, a 2nd century apocryphal writing. The substance of the book is as follows:

Joachim and Anna had no children, and their unfruitful union caused them to be exposed to public contempt. One day an angel appeared to Anna, and told her: 'Anna, Anna, the Lord hath hearkened to thy prayer: thou shalt conceive and bring forth a child, and thy posterity shall be spoken of throughout the whole world.' At the same moment Joachim, who was tending his flocks in the field, also received a revelation from heaven. An angel said to him: 'Joachim, Joachim, the Lord God hath hearkened to thy prayer: descend hence, in thy sight thy wife Anna has conceived in her womb' (according to other MSS: 'thy wife Anna will conceive in her womb,' but the reading 'has conceived' is thought to be the original; this is the form known and followed by Ephraimus in the Paschale (fhr. 229). Nine months later, Anna gave birth to a child who they called Mary, and who became the mother of the Saviour. The Protevangelium seems to say that Mary was conceived in the womb of Anna in a virginal manner (especially if we follow the reading 'has conceived'). In any case it is in this sense that the story was interpreted for a long time by the Church. But Ephraimus (loc. cit.) and, following him, several other writers explains that the conception of Mary took place according to the ordinary laws, after union with Joachim. Gradually the justice of their explanation was allowed, and the virginal conception gave place to a conception which was no double miracle—for Anna was barren—but at least conformable to the ordinary laws of human reproduction.

Christians wanted to celebrate the marvellous events related in the Protevangelium, and so they held a Feast of the Conception of Mary—of the conception as they understood it, i.e. at first the virginal conception, and later, the miraculous, though not virginal, conception. This Feast made its appearance in the East probably during the 7th cent.; but its first witnesses are Andreas Cretensis and Joannes Eubeensis, who belong to the 8th century. Andreas, in his Carmen (fgr. 1809 and 1812), mentions, under the date December 9th, what he calls the 'conception of St. Anna,' i.e. the conception of Mary in the womb of Anna. Joannes Eubeensis has the conception of Mary (PG xvi. 1459-1500), which concludes with the words:

'On the 9th of December we celebrate the anniversary of the day on which the blessed Joachim and Anna conceived the conception of Mary. We celebrate this festival, which is not universally accepted.'
IMMACULATE CONCEPTION

From the East the Feast of the Conception spread in England. A portrayal of the details of time and manner we are reduced to guess-work. Most probably Theodore, archbishop of Canterbury, was the cause. Born at Tarsus, a monk at Rome, placed by Pope Vitalian at the head of the church of Canterbury, he was consecrated archbishop after less than twenty years (608-690), Theodore was an Easterner dwelling in the West—a combination of the conditions necessary for the solution of the problem before us. The annals of Canterbury previous to 1050 contains a benefaction: 'For the day of the conception of the holy mother of God, Mary'; and two calendars belonging to the abbey of Old Minster and New Minster in Winchester contain under the date of December 8th the following inscription: 'The conception of the holy mother of God.' The Irish Church supplies similar texts, some of which go back to the 10th century. From these evidence it is clear that the Feast of the Conception of Mary was celebrated in England and Ireland long before the Norman Conquest. At the beginning of the 12th cent. wonderful stories of the conception went a round tending to prove that the Virgin Mary patronized this liturgical practice. Supported by these 'revelations,' the Feast of the Conception gradually spread, and was approved by the Council of Lateran in 1123. It spread rapidly across the Continent, penetrated into Normandy, and as far as the church of Lyons, where we find it about 1128. At this date it encountered a formidable enemy—Bernard of Clairvaux. This famous abbot wrote a treatise on the Virgin that came to the canon of Lyons, in which he tried to prove that the Feast of the Conception was a 'superstition' (supersitione dependens) condemned by the principles of theology. His purpose was no longer to honour the virginal, or simply miraculous, birth of Mary; what he celebrated was the exemption of Mary from the law of original sin—an important transformation, the logical development of the realisation of the principle of generation ceased to be original sin, the conception of Mary might be regarded as immaculate, although taking place under the dominion of concupiscence.

Theology had come to terms; but not the theologians. They—at least those of them who were well known—remained firm. It was not until the 14th cent. that scholars took account of the new fact expounded by Thomas Aquinas. Duns Scotus, the Franciscan monk, took the initiative. He was English, and had been brought up in the belief in the immaculate conception which the English monks had harnessed, down from the 11th century. When he became a scholar, in spite of the authority of the scholars, he remained faithful to the convictions of his childhood, and exonerated Mary from the law of original sin. He was the first to be called the order of Franciscans, of which he was the oracle. After that time the immaculate conception ceased to be a purely popular belief; it took its first rank among body and soul were immaculate from the first moment of their existence; i.e., the objection of the opponents of the Feast was met by the proclamation of the immaculate conception of Mary. In a word, the legitimisation of the Feast of the Conception, of reconstituting this Feast with the Augustinian theory of original sin.

For nearly a century and a half scholars were unanimous in asserting that it had not attained its aim. Hugh of St. Victor and Peter Lombard held that Mary deserved for neither the title of Virgin nor of Mother until the moment when the mystery of the incarnation took place within her womb, and they did not concede even to discussion with the upholders of the new belief. Albert the Great, Thomas Aquinas, Bonaventura—in fact, all the scholars of the 13th cent.—discussed and refuted it. They all taught that Mary had contracted the original stain, and that the hypothesis of an immaculate conception was in contradiction to the principles of the faith. They should, logically, have condemned the Feast of December 8th, but it had become so wide-spread that there was no possibility of suppressing it. Being forced to tolerate it, they found themselves reduced to interpreting it. They said, therefore, that the Feast had as its object not the conception of Mary itself, but the expiation with which Mary had been gratified after her conception at a date which was unknown, but before she came forth from her mother's womb—a false statement, for, wherever the festival of December 8th was celebrated, the homage of the people was offered to the conception of the mother of Christ. In fact, theology and popular piety were in conflict. One or the other had to come to terms with the other.

IMMANENCE

sympathies of the people were on the side of the Franciscans, who maintained the most glorious theory for the Pope, and the papacy, although very circumstantial, found itself obliged to follow the people. The immanence conception assumed a more and more important place in the liturgy, and in the religious life of the Church, until it was gradually became accustomed to venerate it as a dogma, and were impatient for the day when it would be placed among the verities of the Catholic faith. Their prayers were answered by Pius IX., who enounced the dogma of the Immaculate Conception, which was promulgated on 8th December 1854, wrote as follows:

'We declare, pronounce, and define that the doctrine which holds that the Most Blessed Virgin Mary, from the first instant of her conception, was, by a most singular grace and privilege of Almighty God, in view of the merits of Jesus Christ, the Saviour of Mankind, was preserved from all stain of Original Sin, is a doctrine revealed by God, and thence to be firmly and steadfastly believed by all the faithful.'

JOSEPH TURMEL.

IMMANENCE.—1. Meaning of the term. The word ‘immanence’ is used in modern theology to denote the immanence or indwelling of God in the world. Its opposite is ‘transcendence,’ which means God’s apartness from or elevation above the world. The two concepts may exist together: God is at once in the world and above it; or they may be mutually exclusive: God is wholly in the world or He is wholly apart from it. The theological use of the words is modern, dating only from the 19th century, but the ideas for which they stand are very old.

2. History. Christianity inherited from Judaism belief in God as a strictly personal being, Creator and Ruler of the world; and, although Jesus in His emphasis upon God’s love for humanity and men’s filial attitude towards Him and His unrestricted sense of His nearness and approachability for the notion of His remoteness and inaccessibility, which had become increasingly common in later Judaism, the idea of Divine Immanence in the full sense of the word, seem to have been far from His thought. At least there is no trace in His recorded utterances of the notion that God is within the world of nature or that the human being is the instrument of God’s will.

In the vocabulary of philosophy the words have had a long and varied history, being employed, though in different senses, by the Schoolmen, Spinoza, and Kant. With the philosophical use of the words this article is not concerned.

When we hear that “God made all things out of nothing,” we used to understand by it nothing else than that God is in all things, that is, subsists as the essence of all things (de Div. Nat. l. 2). Sometimes it was interpreted in terms of activity or power, as, for instance, by Origen, who taught the doctrine of eternal or continuous creation, and by Augustine, who declared that God did not withdraw from the world after the fall, but was always filling heaven and earth with omnipresent power (de Gen. ad Litt. u. 12; de Civ. Dei, vii. 39). This was a very common notion both
IMMANENCE

in East and West, it being everywhere believed that God's activity was necessary to sustain the world and keep it from lapsing into nothingness. The idea of God's ever-active will did not exclude the notion of substance, which was always present, at any rate where the influence of Neo-Platonism was felt and with its conception of absolute being apart from God. From both these standpoints the idea of substance exclude that of activity. In the passage just quoted from Eriugena we read: 'In God is there no difference between being and doing, but only one and the same thing? I cannot avoid this conclusion.'

A position similar to Augustine's was held by many of the Schoolmen, e.g. Anselm and Thomas Aquinas. According to the latter, God is the absolute being, apart from whom there is no real existence. He has not only created all men and things, He is in them all, and every event is but an expression of His all-controlling will. Nothing but God has any independent reality or activity of its own (Summa, I, q. 8). God is thus transcendent, existing independently of men and things, but He is also immanent in the fullest sense of the word. In the context of this metaphysical theory of immanence, Thomas was an orthodox Catholic denying the possibility of communion with God here and hereafter to any but Catholic Christians.

A still more consistent and outspoken statement of the theory of immanence is given in the writings of the Protestant theologian, Ulrich Zwingli, particularly in his striking little work entitled De Pravitate. According to Zwingli, God is at once both the being and the will that is real will. All that is exists only in Him, and all that occurs is due to His immediate agency. All the acts of men, evil as well as good, are God's acts; but, as man is under law while God is above law, what is in man is not sin in God. There is nowhere to be found a clearer and more fearless statement of the view that God is the alone being and the alone will, a view in which an extreme doctrine of Divine immanence is associated with the unhesitating recognition of Divine transcendence.

A conception of Divine immanence, no less thoroughgoing but of quite a different type, is illustrated by many of the great modern mystics. Some of them, e.g. Meister Eckhart, were so full of the sense of God's presence that they almost wholly lost sight of the difference between God and the creature, and taught a monistic pantheism of an extreme, if not always consistent, form. Eckhart's pupil, John Tauler, and the author of the famous Theologiae Deutscns, while emphasizing the immanence of God and the possibility of immediate contact with Him, and while making religion consist in the complete loss of oneself in God, yet kept the distinction between God and the creature, insisting upon the majesty of the former and the meanness of the latter. They thus escaped the pantheism of many of the mystics and reached a religious position closely allied to the metaphysical position of Thomas.

Meanwhile in the period of the Renaissance a new conception of Divine immanence became common. It was not due to contempt for the world, which in Neo-Platonism and in the Christian theology influenced by it had resulted in the denial of all reality apart from God; it was due rather to the sense of the world's greatness. A more or less sentimental exaltation of the beauty, sublimity, and majesty of Nature grew universally common and resulted sometimes in its complete or nearly complete obliteration. The way was thus opened for a genuine pantheism in which the world itself is identified with God, and in which Divine transcendence, retained by all the Schoolmen and Scholastics, entirely disappears (cf. especially Giordano Bruno).

A similar tendency to magnify the dignity and worth of the creature—in this case man rather than Nature—a tendency in which the modern age was foreshadowed, did not exclude the idea of substance. Substance, and reacting against the determinism of Augustine, he pushed God out of the universe altogether, and gave the latter a wholly external relation to its cause. Closely allied with this doctrine of Duns was the Nominalism of his successors, which was pluralistic in its interest rather than monistic. As Nominalism gained in popularity in the latter part of the Middle Ages, the transcendence of God was inevitably more and more emphasized at the expense of His immanence.

A conception of Divine transcendence closely allied to that of Duns is found in the system of the Protestant theologian, John Calvin, who interpreted God, as Duns had done, wholly in terms of will. At the same time, sharing with Augustine and most of the medieval theologians a low estimate of man and the world, his doctrine of God as will resulted in the belief that God is the only independent will in the universe and that all the acts of man are caused by Him. The extreme transcendence of Duns was thus supplemented by an immanence doctrine in which the idea of substance was entirely absent or, as he maintained, unnecessary. His views were further developed by the 17th and 18th centuries, which contributed to the development of the doctrine of Divine transcendence more extreme than anything found in earlier days.

In the 17th and 18th centuries the development of physical science led to a further refinement of the doctrine of Divine transcendence, and in the 19th century an entirely new conception of it was made. The steady-growing tendency, indeed, was to find ever less place for Divine activity in connexion with the conduct of the physical universe.

It came to be more and more widely believed that the power of God was needed, not only to start the heavenly bodies upon their courses, but also to keep them in motion. Newton still thought Divine interference occasionally necessary to correct observed irregularities in their movements; but La Place, a century later, showed that such irregularities corrected themselves, and that Newton's assumption was mere conjectures. The steadily-growing tendency, indeed, was to find ever less place for Divine activity in connexion with the conduct of the physical universe.

The idea of Divine immanence, on the other hand, became increasingly popular, and in the 18th century a new doctrine of Divine immanence was developed, in which the idea of God as will was entirely absent or, as he maintained, unnecessary. His views were further developed by the 17th and 18th centuries, which contributed to the development of the doctrine of Divine transcendence more extreme than anything found in earlier days.

In the 19th century, the idea gave way again to a view of Divine immanence, as extreme in comparison with the ideas of an earlier time as was the 18th century's conception of Divine transcendence. The prevalence of the new conception was due largely to reaction against the currents of thought and it was a reaction against many of the leading tendencies of the 18th century, and it was aimed at various influences. The reaction found its most striking expression in the literary and esthetic movement known as Romanticism, which dominated Western
Europe during the early part of the 19th century. Romanticism was a complex phenomenon, but it was commonly marked by emotionalism, subjectivism, glorification of Spinozism, or exaltation of individualism in all its forms, by love of nature, affected if not real, and by the recognition of man as part of a larger whole, in oneness with which and in openness to whose influence he finds his true life. An important part of culture, according to the Romanticists, consisted in learning to appreciate the beauty and harmony of the universe, in coming into more intimate sympathy with it, and in acquiring a sensiveness to the whole world of nature and of man. It was a common tendency among them to try to reproduce the conditions of earlier ages before the modern spirit of enlightenment had taken possession of the world, when every one believed in immediate intercourse between man and the universe about him, in apparitions, fairies, and fables, and when the fancy had free play and was not yet destroyed by the ruthless hand of reason. The effect upon religion was very diverse. Many of the Romanticists felt the religious impulse strongly, but were led by their hostility to the dominance of reason which they believed began with the Renaissance and by their desire for the passionate energy and fervid enthusiasm of contemporary Protestantism, to turn to Catholicism and to seek in it what they could not find in the newer faiths. This was a great activity of Catholicism in Germany and France, and later in England, where the Oxford Movement gave expression to certain elements of the Romantic spirit. Many of the Romanticists, on the other hand, particularly in Germany, felt from their childhood that they were attracted by Catholicism, revolted against religion altogether, which they knew only in its rationalistic form, and looked down upon it in contempt. This was for Romanticists of this class the theologian Schleiermacher wrote in 1799 his famous "A Discourse upon Religion addressed to the Educated among its Desipers." The most important of the Discourses is the second, on "The Nature of Religion." Its general thesis is that religion has its seat neither in the intellect nor in the will, but in the feelings, and consists in the sense of the universal or infinite. Schleiermacher's religious sense was simply a translation into other terms of the artistic sense of the Romanticists. What they called openness to the universe he called openness to God. What they regarded as a sense of the beautiful they denominated as a sense of the Divine. And hence he claimed that the highest culture, of which the Romanticism made so much, includes religion, and that to be without the latter is to neglect an important part of one's nature and to be content with a partial and one-sided development. Religion raises a man above his individual limits into converse with the Infinite, and the religious man recognizes in everything a manifestation of the Divine. Every event is a miracle, a sign of God's presence and activity. The ego, or spirit, or non-ego, or matter, are simply differentiations of the Infinite. In the life of the individual, in the human society, in the world they are separated, but they become one again in every impression of the world upon us. The universal manifests itself only through the individually monistic, and the individual comes to his true life only in the universal; and to be aware of this life is to be religious.

This is a genuine doctrine of Divine immanence, and it illustrates the influence of Romanticism in the sphere of religion. The influence of the great philosophical tendencies of the modern age has also promoted the theory of the immanence of God. Much of modern philosophy, from Descartes down, was frankly dualistic; but now and then monism, evident in the 18th cent., when it became almost everywhere dominant, had its representatives, and resulted in a more or less thoroughgoing doctrine of Divine immanence, as, for instance, in the occasionalism of Malebranche and the idealism of Berkeley, both of whom made God the immediate and sole cause of all phenomena; as also in the Neo-Platonism of Jonathan Edwards, who thought of the universe as an emanation of the infinite fullness of God.

Of still greater historical importance was the system of Spinoza, in which the modern conception of Divine immanence had one of its principal roots. For a hundred years and more after his death Spinoza found little favour. The dominant spirit of the age was radically opposed to his spirit. He first came to his rights in the revolt against the one-sided rationalism and individualism of the century which began to be more and more the common condition of such men as Lessing, Herder, and Goethe. In 1787, in a little book entitled "Gotte" (see art. by A. C. McGilp, in "R/"), 1800, Herder came to the defense of Catholicism in Germany and France, and later in England, where the Oxford Movement gave expression to certain elements of the Romantic spirit, which was in many respects a misinterpretation, but had profound influence upon his contemporaries. He saw Spinoza in the light of the philosophy of Leibniz, he succeeded in showing, at least to his own satisfaction, that the former was neither an atheist nor a pantheist. In substituting forces for extension in his definition of matter, Leibniz had departed not only from Descartes, but also from Spinoza. He had departed from the latter also in substituting multiplicity for unity. The universe, according to Leibniz, is not the embodiment of one great and all-embracing force, but of an infinite number of forces. Spinoza was a monist, Leibniz a pluralist; and hence the two systems represent radically different tendencies. But, unlike as they may seem, they were combined by Herder, who preserved the unity of Spinoza's system without sacrificing the multiplicity upon which Leibniz laid stress, by making force the preponderating principle in the Divine substance. The result was a conception of Divine immanence of such a sort as to prove very attractive to multitudes of thinkers of his own and subsequent generations. The theory was essentially monistic, and yet it did not sacrifice individuality, but rather, so Herder claimed, promoted and deepened it. It thus fell in admirably with the growing Romanticism of the age.

Among others of the late 18th or early 19th cent. whose thought was dominated more or less completely by the influence of Spinoza were the poet Goethe, the theologian Schleiermacher, and the philosophers Schelling and Hegel, and the present writer largely because of Spinoza's influence that post-Kantian philosophy, whether idealistic or realistic, spiritualistic or materialistic, has been so controlingly monistic. Religion, too, has shown the same tendency. Many of the leading religious thinkers of the 19th cent. were completely under the sway of one or another monistic system, particularly Hegelianism. But the problem of Divine immanence is due ultimately, not to the prevalence of any particular system of philosophy, but rather to the general monistic tendency which runs through various systems of thought and metaphysics. Therefore, the problem of Divine immanence is due ultimately, not to the prevalence of any particular system of philosophy, but rather to the general monistic tendency which runs through various systems of thought and metaphysics.
IMMANENCE
to have called attention to the revival of Spinozism, and to have pointed out its general effect.
Meanwhile the influence of science, to which modern scepticism was largely due, was also working to promote belief in the immanence of God. As at the time when the belief was natural and rational. By most thinkers of the 17th and 18th centuries the universe was looked upon as a machine, and the laws of nature were viewed as necessarily immutable and from without. A classic illustration is found in the familiar passage in Paley's Natural Theology (1803), where the world is represented as a watch. When the universe is viewed under this aspect, God, if He exists at all, can be transcendent only, outside of the machine which He has made and set in motion. But during the 18th cent. evolutionary ideas became common, and in the 19th cent. took almost every field. Whatever form the theory of evolution may take, the general conception means the recognition of immanent energy by virtue of which the universe is continually changing and advancing. The world as we know it has not come ready-made from the hand of God or of any other power; it has gradually grown to be what it is through the play of forces resident within itself. This great change from a mechanical to an organic universe is an invention meant much for religious thought. With the old idea a transcendent God, maker of the world machine, Himself entirely above and apart from it, was a natural assumption. But with the new ideas of the universe as an organism suggests a God within rather than without the world process, and, as a matter of fact, one of the most notable consequences of the increasing preponderance of evolutionary ideas has been the rapid growth of the doctrine of Divine immanence at the expense of the doctrine of Divine transcendence. The following quotations will illustrate the situation:

'Out of all this the modern conviction has arisen that God creates now and will always create; that his creative act is normal and incessant, and that the notion of a definite era at which he brought the world into being is pure and gratuitous as is that of a theatrical "Day" of judgment with God seated on a throne. Hence, whatever matter may be, it seems to follow that it is co-eternal with God, and the thought inevitably presses itself in that the great forces of the universe, gravity, heat, light, and so forth, are the means by which creation and other divine actions are carried on. In fact, they seem to be strictly immanent in the divine existence, if what we call nature is inextricably interwoven with God, we have to make fundamental changes in the classical theory of the world.' (C. W. Newman, Relations of Theism to Modern Thought, Ramsay, 1872, p. 11).

'Theologically, immanence of God, in the present day, is that which represents Him as an occasional Visitor. Science had pushed the deist's God farther and farther away, and at the moment when it seemed as if He would be thrust out altogether, Darwinism appeared, and, under the guise of a foe, did the work of a friend. It has conferred upon philosophy and religion an insatiable benefit, by showing us that we must choose between two alternatives. Either God is everywhere present in nature, or He is nowhere. He cannot be here and not there. He cannot delegate His power to omnicos-called "second causes." In nature everything must be His work or nothing. We must frankly return to the Christian view of direct divine agency, the immanence of Divine power in nature to the end, the belief in a God in Whom not only we, but all things have their being, or we must banish Him altogether. It seems as if, in the providence of God, the mission of modern science was to bring home to us our unmetaphysical ways of thinking of things, and of the Divine immanence in nature, which is not less essential to the Christian idea of God than to a philosophical view of nature.' (Aubrey Moore, in the Spectator, London, 1857, p. 741).

Such passages as these, and they could be multiplied indefinitely, do not show that modern science promotes faith in God, but only that it leads many to substitute Divine immanence for Divine transcendence. Belief in God is not a scientific, but a religious idea. Even in nature there may exist what is religious, which is not less essential to the Christian idea of God than to a philosophical view of nature.' (Aubrey Moore, in the Spectator, London, 1857, p. 741).

The effects of the various influences that have been described are thus seen, and yet in many respects diverse. All have tended to promote belief in Divine immanence, but the belief takes many forms, according as one or another interest is dominant. God is conceived as the chief and universal master of the world, the spirit animating all nature; the universal force which takes the myriad forms of heat, light, gravitation, electricity, and the like; the all-embracing substance of all things; the principle of unity underlying all multiplicity; the infinite consciousness in which all things have their existence; the indwelling personality with whom we
commune when we contemplate nature or look into our own souls. The conception may be coarse or refined, spiritual or material, idealistic or real- istic, but in all of them there is a form of immanence, in the sense, that in the theism, faith in a god of whom the world of nature is in some real and immediate sense a manifestation or expression.

3. Present position.—An important result of the process which has been described is the outflanking of the scepticism of the 18th century. The God who had been read out of the universe by the progressive discovery of natural forces adequate to account for all phenomena has now been brought back into it, not as before to supplement its insufficiencies and incapacities, but to give it spiritual meaning and worth. Science, of course, can never prove the presence of God in the world, nor can it disprove it. The indwelling of God is an object of faith, not of sight. To him who believes in an immanent God the multiplying discoveries of modern science have no terror. Physical forces may accomplish all that is claimed for them, and natural laws be accurate descriptions of their way of working, but they are interpreted by such a believer only as manifestations of Divine activity, the doctrine of Divine immanence evidently offers a refuge for faith which science is powerless to invade, and this constitutes one of its greatest attractions to the religious men of our day. It is in an age of doubt and self-knowledge that the inroads made by the modern study of nature in the theism of the past.

The modern notion of Divine immanence has led to many significant changes in the traditional system of Christian theology. The old chasms between the Divine and the human, God and the world, this life and another, have been bridged by it, and the result has been a profound modification of the old doctrines of salvation, eternal life, the incarnation, the person and work of Christ, the sacraments, religious authority, and the like.

But the conception of Divine immanence is based on the point of view of Christian theism, with serious difficulties. The tendency of the doctrine is undoubtedly pantheistic. In the hands of many of its exponents, indeed, it has been nothing more than a transition to pantheism. But pantheism imperils, if it does not destroy, the personality of God, the individuality of man, and the reality of sin, and hence seems to make religion and the Christian life alike an illusion. As a consequence, many modern theists, while accepting the doctrine of Divine immanence, have striven to distinguish it from pantheism and to safeguard the interests imperiled thereby.

Thus they claim that, while God is immanent in the universe, He also transcends it. All things are pervaded by Him, but He is more than them all. A strict pantheism identifies God with the totality of men and things. The theists referred to recognize God as including this totality, but as more and greater than it. This form of theism has been called, in distinction from pantheism, panneumastic. On the other hand, the German philosopher, K. C. Krause, its formula being not 'all things are God,' but 'all things are in God.' In reaction against the extreme transcendence of the 18th cent. the tendency among Christian theists of the early 19th cent. was to emphasize immanence to the complete exclusion of transcendence. But more recent theologians have tried to make again the necessity and danger of the two views. Krause said that the difference between theism and pantheism lies not primarily in the character or nature of the God assumed by theists or pantheists, but in the assumption of denial of his transcendence (cf. Illingworth, Divine Immanence, p. 82). When, how-
IMMORTALITY.

I. Introductory.

The significance of this term—in that sense of it which has determined the shape of the problem as it has come down to modern reflection—may be stated in the words of Kant: 'The Immortality of the Soul means the infinitely prolonged existence and personality of one and the same rational being.' 1 By 'personality' here meant the comprehensive personality which links together the years of a same man's life on earth; and immortality signifies the continuance of this rational consciousness in secessu anfractuosum—the degree of its continuity at least as great as earthly life, and the duration of its continuity being essentially unlimited.

The purpose of the present article is to investigate the degree of truth and of value involved in this conception. Its adequacy, even as a mere conception, forms one of the primary questions to be raised; we shall have to ask whether it must not be materially modified in order to reveal even the significance of the problem itself. There are, however, certain inquiries which must first be referred to in their relation to the point of view here adopted, although the treatment of them lies outside the scope of this article.

(a) It is said that every form of belief in the power of human personality to survive bodily death is invalidated because it leads to beliefs so absurd; for instance, such an erroneous interpretation of the dream, and similar psychophysical phenomena. Against this, it must be insisted that the validity of a conception is a question entirely distinct from that of its origin or genesis. When the truth or falsity of a belief is under investigation, the question is that of the manner in which the belief arose in distinct ages of time. The latter question constitutes an important historical inquiry, belonging to a branch of anthropology in which valuable work is now being done (see arts. Soul, Animism, Dreams and Sleep, Life and Death, Dreams and Sleeps, Ascensionism, Communion with the Dead); but these historical and descriptive inquiries have no bearing on the validity of the developed forms of the belief in survival. From the historical point of view, we assume that assignable conditions and causes can be found not only for the first beginnings, but for the continued survival of any belief; and we must insist that the causes which condition its continued survival may differ fundamentally from those which originally brought about the belief. 2

(b) The 'animistic' explanation of the origin of belief in the soul as distinct from the body calls for a critical comment which has a bearing on our present argument. The theory is that the dream-images are the product of the primitive man seeing himself and others, together with common objects of experience; and to all these he attributes a spiritual existence. This interpretation becomes specially imperative to the man in whose dreams he sees the images of those who have died (see ref. under Animism, sep. Tyker, FC). This theory needs to be supplemented in one important characteristic. We must not ask: Where and how was the man to attribute an essential life to the moving image which he

1 Kant, Critique of Pure Reason, bk. II, ch. 4 (cf. John Watson, Selections from Kant, Glasgow, 1897, p. 294). Kant does not intend to exclude the idea of a ghost; he assumes that the essential element of its immortality is that it forever endures.

IMMORTALITY

seen in his dream, and which resembles the living body seen in waking life? It is evident that he must have had some vague awareness of his own body before he could recognize the image even as an animated ‘double.’ Hence some writers have spoken of the ‘passing away’ leading primitive man to attribute an inner life, resembling his own, to forms which he recognizes as outwardly more.

(c) It must be distinguished from the so-called ‘corporate immortality’ based on the solidarity and continuity of a human group, which means that the effects of each man’s thoughts, desires, and deeds on his fellow-men are real and permanent. The reality of this permanent influence of every personal life is not in question, but we must insist that it is mere expression of thought to regard this as equivalent to or as an adequate substitute for the belief in personal survival. In truth, the human individual cannot be regarded as a mere means to the survival and improvement of the race. When individuality has risen to self-conscious personality, it cannot be a mere means, existing only to contribute to an end in which an individual personality has no absolute part. If the individual were only a means, the humanity as a whole could be nothing more than a system of means, and, therefore, would exist only for the sake of some end outside itself—supposed ‘corporate immortality’ would prove illusory.

(b) It must be distinguished from that ‘eternal life’ which means experience of the super-personal and eternal, in which we may continue to exist for some time. This is not a question of survival—Does our individuality endure? It is not a question of what is to be. It is a question of present reality, and what is ‘Do we share in the survival and Eternal Life of God, and may this connexion become a matter of experience?’ It is evident that an answer to one of these questions is not necessarily an answer to the other. If man is a ‘re-embodiment’ or ‘differentiation’ of the Eternal Mind, it does not follow that, regarded as an individual spirit, he is eternal; and, if this metaphysical tie is what gives absolute value to human life, the thing of value would remain, however transcient each single life might be.

In the application of it which especially concerns us here, this principle leads us to lay special stress on the idea of growth in reference to human personality. ‘Growth’ is not exclusive of self-destruction. The growth of human personality is, so to speak, an achievement, realized through conscious activity. The essential nature of mind consists in its creative functions, which are inexhaustible, though they work under conditions which are given. From this point of view it follows (a) that the value of human personality must be estimated by considering not merely what men are, but what they have in them to become, and (b) that the future life, if it is to be anything at all, must be not a life of mere sameness, or mere endlessness, but of continued growth; (c) that human personalities as such—not merely the aggregate of what is achieved and of what is achieved and intended—must be recognized as a function of the physical body and perish at death. Here there can be no survival of finite personality. For Schelling, the indivisible reality is the unity of mind and body. Thus there can be no survival of the human spirit, for mind and body are united in the individual spirit, and spirit is the unity of the physical body and the immaterial. Hence Schelling's doctrine of the survival of individuality is that it is a function of the entire human soul, and only the human soul is capable of surviving. Thus there can be no survival of finite personality. For Schelling, the indivisible reality is the unity of mind and body. Thus there can be no survival of the human spirit, for mind and body are united in the individual spirit, and spirit is the unity of the physical body and the immaterial. Hence Schelling's doctrine of the survival of individuality is that it is a function of the entire human soul, and only the human soul is capable of surviving. Hence there can be no survival of finite personality. For Schelling, the indivisible reality is the unity of mind and body. Thus there can be no survival of the human spirit, for mind and body are united in the individual spirit, and spirit is the unity of the physical body and the immaterial. Hence Schelling’s doctrine of the survival of individuality is that it is a function of the entire human soul, and only the human soul is capable of surviving.

The most prominent representatives of this point of view in the history of modern philosophy are Spinoza, Schelling, and Hegel. Whether Hegel also shared it is open to dispute. There is no doubt that for Hegel the essential element in experience is the eternity of Spirit, which is not merely future, but is realized even now whenever the human spirit thinks and wills what is universal; but it does not apply to any distinct premonition as to the survival of the individual soul. With Spinoza it is different. In his early treatise, de Deo, Homo, et anima Politica, the concept of those souls who in love to God had come to have part in His unchangeable being. But in his late work, Ethics, the concept of those souls who have shared in the life of the Eternal Mind, it does not follow that, regarded as an individual spirit, he is eternal; and, if this metaphysical tie is what gives absolute value to human life, the thing of value would remain, however transcient each single life might be.

The vital importance factor in the conception, we repeat, is not mere endlessness, but continued growth. It is true, growth is the progressive fulfillment or realization of latent powers; it involves, and must involve, a process in time. But to suppose that the process is literally endless in time is to go far beyond anything that we have in our experience. We have no complete fullfilment of the purpose or meaning of each individual life. We have no means of knowing how far this fulfillment will carry us; only we know that it is not realized at death.

The survival of personality, so understood (whether as problem or as belief), must be carefully distinguished from two entirely different conceptions with which it has been confused.

IMMORTALITY

3. Objections to belief in immortality. — The main contentions of those who at the present time reject all belief in personal immortality appear to resolve themselves into three propositions: (a) there is 'no evidence' of the power of human personality to survive bodily death; (b) more definitely, such survival can be shown to be impossible on scientific grounds; and (c) if it were possible, it would have no ethical value.

In connexion with this proposition, we must ask: (1) What kind of evidence is in fact demanded? and (2) What kind of evidence would it be reasonable to expect in the subject under consideration?

If by 'evidence' is meant 'conclusive evidence,' it must be pointed out that of conclusive evidence for anything mankind possesses comparatively very little. What we usually have is a convergence of reasons more or less fundamental in character, which, taken together, may in some cases be overwhelming, but which are not strictly conclusive. Scientific evidence is essentially of the same character, which is why it is in scientific evidence, and has the same elements of strength and weakness.2

The kind of evidence available in the various branches of science is not experiment, but the accumulated results of past experience, which, if applicable, does afford a high degree of reliability in the results, because these rest on definitely measurable facts of sense-perception, constantly and uniformly recurring in our experience. The same can be said of mathematical and physical scientific exactness in measurement. If, then, definite facts of sense-perception are the only kind of evidence admissible, it is true that there is 'no evidence' for the survival of personality. This criterion of what is credible would, however, rule out most of the evidence on which, in this and countless other matters of serious import, we as rational beings are wont to rely, since we can find no principle of logic, or mathematics, or ethics, and no psychological fact in the way of thought, feeling, or will, whose reality and validity can be warranted by reason—perception alone. This may be said to be one of the assured results of modern philosophy, for it is the triumph of the publication of Hume's Treatise of Human Nature (1779).

What, then, are the actual logical conditions of the argument? The truth of personal survival may be held to be established by particular observations and experiments, but as a reasonable faith, based on the essential reasonableness of the world. The primary facts, which are appealed to, are not definitely measurable facts, and their adequate interpretation is not immediately obvious; but they form a constant and uniform experience. It has been well said that 'within the whole range of the wide world's literature we find no more constant theme than this disparity between man's possibilities and aspirations on the one hand, and the narrow scope afforded them by the brief space of the present life on the other.'3 These possibilities and aspirations are the distinctive features of human life, which is thus planned on a greater scale than earthly life can ever satisfy; hence, if existence has a meaning, human life is an expression of this higher life. This we may call the 'teleological argument' for survival. This is the only avenue of direct proof; and we must repeat that what it establishes is not conclusive evidence of personal immortality, but reasonable faith. From this point of view, the special work of philosophy in the matter is to show the connexion of this faith with the distinctive features of human personality, to demonstrate its value, and to purify it from all comparatively unworthy motives.

In addition to these considerations, there are lines of indirect proof converging to the conclusion which may be held with considerable confidence, namely, that there are no sound reasons for denying the power of human personality to survive bodily death. The purpose of these lines of thought is to show that the apparent impossibility of the annihilation of personality at death, which are supposed to be warranted by some of the facts of ordinary experience, or by some of the conclusions of 19th century science, are only apparent and not real, and break down one by one upon examination. Hence the original conclusion, established as a reasonable faith, remains in possession of all.

The 'indirect proofs' are, as we have already implied, coupled with objections, difficulties, and denials which have actually been alleged against belief in survival. In effect, they amount to a demonstration of the impossibility of a materialistic interpretation of the world.

These constructive philosophical systems which admit personal immortality have usually done so by combining with metaphysical spiritualism a teleological view of personality. That is to say, they have treated 'limited immortality' as an intermediate step in the development of something more than a material soul, which is material in the sense of growth. The more definitely pluralistic philosophy of Herbert Spencer, for whom the individual is alone the real, naturally carried with it a doctrine of the immortality of the individual soul; but an element of difficulty arises because, according to Herbertian principles, the consciousness of the soul springs only from its union with the elements which form the body; hence it is not easy to find a place in the system for the continuance of the same personal self-consciousness beyond death. The teleological argument for survival was revived and restated by K. G. F. Krause (System der Philosophie, Gottingen, 1832); cf. Philosophia, Phil. of Bel., Eng. tr., London, 1857, iv. 464 f.).

Dealing with the assertion that interest in the future life promotes forgetfulness of the claims and values of the present life, Krause observes that 'the claim of our earthly life as such has its distinctive value and justifiable satisfactions, and is not likely to be disregarded in the future life as well. Our earthly life as a whole, when considered in connexion with the experiences of life to come,—Krause observes that, just as each period of our earthly life (e.g. childhood, adolescence, early manhood, mature manhood) has its own peculiar significance and value, so also the aim of existence in the future life is never merely a means to the succeeding period, so this earthly life as a whole, when considered in connexion with the experiences of life to come, is not merely a means to the succeeding period, but is an end in itself.' But the whole life of the individual life now as it will do in the future.

Among the purely metaphysical, as distinguished from the ethical and theological, arguments for the immortality of the soul, there is one of special historic interest, which was elaborately worked out by Moses Mendelssohn in his Phantasm (1767). He declared the immortality of the soul from the abstract metaphysical idea of a simple substance, which idea he regarded as expressing the essence of the soul. A simple substance, from the nature, cannot cease to exist; hence the immortality of the soul follows. If so, we must add, it also follows that the soul must never have been created; it existed from the infinite past and must exist through the infinite future. Even if the validity of this use of the conception of substance be granted, it does not logically involve personal immortality, because the simple substance which constitutes the nature of the soul must have borne, in its past lives, qualities totally different from those which form the personality in which the soul itself, and it may do so again in its future lives. But in any case such a use of the conception of substance is not admitted to be valid. It was attacked by Kant, in his Critique of Pure Reason (1781 and 1787), as a serious logical paradox. In a later work, Kant, Critical Philosophy of Transcendental Idealism (1783, vol. ii. p. 200 f.). Kant pointed out that the unity of the soul is not that of a simple substance, but that of a unity of consciousnesses, in which the many different mental activities are held together in so far as they are able to be referred to the common centre, self, as 'mine.' Kant's Critique of Pure Reason (1787), made immortality a postulate of the practical reason. Reason prescribes the conformity to the Moral Law as the highest good; this is virtue. Reason also prescribes, as the complete good, the union of

1 Op. cit., p. 44.
IMMORTALITY

178

happiness with virtue. The highest virtue is unrealisable in
any finite period owing to the permanent opposition of man's
ambition to the demand of the moral imperative. Further, the complete good (the union of
virtue and happiness) is a matter of fact, unrealised in this
life. Hence Kant formulates immortality (an endless duration of
personal life) as a postulate which must be granted if the
seemingly self-evident truth of ethical reason are to be possible.
The defect in Kant's argument consists in the implicit
demand of moral perfection or holiness. Duty can never
be completely overcome and never be completely reconciled
with natural desire. But nothing less than this victory is the purpose
and meaning of duty; hence an endless life is demanded for
immortality. The idea of immortality is to be realized in
the world of the soul. The creation of a new body is not
the true meaning of immortality. The inner meaning
of Kant's argument is akin to what we have called the teleo-
logical proof. It is necessary that a soul should be
immortal, in addition to achieving perfection—a striving which
Mendelssohn held to be implanted in man by his Creator as his destiny. This destiny
even death cannot hinder him from fulfilling; and, if this
striving is to go on, the soul's essential properties of thought
and will must continue.

It is of much interest to notice that some philosophical
thinkers of the first rank have been prepared to defend a
doctrine of the type described as Conditional Immortality:
that there shall be immortal who are worthy of it. Spinoza appears
to have held such a view in his early treatise de Divino, etc. In
like manner, J. G. Fichte at least held as a possible view that
man's immortal soul, when separated from the body in the life beyond
death, but only those who in this life have developed out
of themselves a character of existing and universal worth.
Similar views were held by Goethe, I. F. H. Fichte, C. H. Weisse,
and Lotze. The spirit of the doctrine is well expressed in the
following passage from J. G. Fichte:

'Everything which has not been a dodecahetron in the world of the soul, and which has not been in the
mind only as a transitory phase of the world's course. That this principle admits of no further application is human
endeavour; all things being given, it is only against the

This is the fundamental assumption of modern
physical science; the substance of the world—however
that substance may be defined—has, as its most
fundamental and essential attribute, motion; and
motion is always a change determined from
behind, i.e., by some other mode of motion preceding
it in time. This is the essence of what
we may call the 'Mechanical.'

This theory has been applied to both the human body
and brain with remarkable results; it is a theory which
has been found to work. The laws which regulate
the constant interchange of material in the brain-
cells—so far as physics is able to determine it—
are found to be of no different kind in the
laws derived from a study of the mechanical forms of
matter. The difference is one of complexity.
It has been computed that there are
the 'grey matter' of the brain (i.e. that portion of
which is specially the 'seat of mind') about
3,000,000,000 cells; and every one of these cells is
an active organ of most complicated internal
arrangements, so far independent of one another, and
each has attached to it as part of it "dendrites" and
means of connexion with other cells and with
the organs of the body. Yet, notwithstanding
this unimaginable complexity, the human brain
becomes merely one small aggregate in the vast
material universe, and as such is swept into the
system of matter and motion to which physics has
reduced the world.

Now the question is not one of the right of
physics and physiology, as special sciences, to
regard the facts in this way and exclusively in
this way. It is clear that only in the light of the
mechanical assumption of physical science that
the laws of motion do not hold good absolutely.

Materialism rests entirely on the assumption
which is here rejected,—namely, that the mechanical
theory is capable of providing a complete
explanation of the facts because it is a complete and
unfailing method of science.

IMMORTALITY

accurate copy of the fundamental nature of things. This assumption involves a pushing of scientific hypotheses into regions where they have never been wanted before, and demonstrates no in tolerable that we have a prima facie right to deny that such verification will ever be forthcoming. The absurdity of the mechanical theory is seen when we ask how and why it is possible for consciousness to exist in such a universe? The distinctive feature of mechanism is determination a substratum, by previous mechanical movement. The distinctive feature of consciousness is freedom, a *prima facie*: human conscious activity is essentially purposive activity. It involves a specific process in the way of forecasting of ends. Now, in a purely mechanical universe consciousness is useless. Any momentary brain condition is the inevitable result of the condition immediately preceding, and both are only a part of the continuous series of mechanical movements which constitutes the universe. Hence the actions and words of every individual of the human race would have been exactly what they have been in the absence of mind. Had mind been wanting, the same empires would have risen and fallen, the same wars fought and won, and the same literature and art would have been produced, the same indications of friendship and affection given. Thus we have a universe devoid of purpose or rational meaning, continually evolving more and more complex forms of mechanism, and at numerous points producing a kind of existence (consciousness) diametrically opposed to its distinctive properties to those of mechanism—making no progress towards the course of events—yet continually creating illusions as to its own place and importance in the course of events.

Purposive rational action is not the only feature of human experience which is inexplicable if the Mechanical Theory is true. The same may be said of the unit of consciousness. Every retrospect of our past mental life arouses the idea of the ego as the combining centre of the successive states and its temporal succession; these are thus unified by their relation to a being which is in nature one. The unity of conscious life, centred in one single being, is utterly without parallel in the material series; 3,000,000,000 cells, each highly complex and variable, certainly provide no such central unity. Taking into account their molecular constitution and activities, it may be more rational to suppose that they do not even form a physical basis conceivable as the substrate of this unity.

Further illustrations might be given of the intellectual impossibilities involved in Materialism, but it is enough to select out that careful scientific thinkers are aware of these considerations, and have evolved a number of mental activities to mechanical processes are admitted. No effort enables us to assimilate them. That a unit of feeling has nothing in common with a machine is more than ever manifest when we bring the two into juxtaposition.

The speculative escape some of the more obvious of these difficulties, the speculation has been put forward that to every particle of matter in the universe there is attached an element of feeling or sensation. Clifford, who vigorously defended this doctrine, called these minute particles of sensating *mind-stuff*; and the use he made of the doctrine is shown in the following statement: *When matter takes the complex form of a living human brain, the corresponding mind-stuff takes the form of a human consciousness, having intelligence and volition.* This quality of sensation attributed to material particles is, a mere speculation for which there is not a shadow of evidence. Hence it throws a somewhat sinister light on the attitude of some materialistic writers when we find this hypothesis said dogmatically as an assured *scientific* result, as is done by Haeckel in his well-known book, *The Riddle of the Universe* (London, 1893).

Haeckel calls his system *Monism* and repudiates the name *Materialism,* on the ground that the system affirms the reality of *force* as well as of *matter* and assumes the particles of *mind-stuff* to be sentient. The arbitrary hypothesis of mind-stuff avail little in relation to the material of which the material particles are conceived to be combined in the brain according to mechanical laws: now the corresponding particles of sensating substances combine in the brain on the basis of consciousness involved in judgment and self-knowledge, we have a concrete notion of consciousness, the unity of which, must persist, not as an assemblage of particles of sensating substances devoid of intelligence and volition, but to a single central agent or permanent principle of intelligence and volition, which conceals the difficulties of Materialism affected by any distinction between *matter* and *force.* In fact, to conceal the real point at issue—the place of Mechanism in the universe. The Mechanical Theory means that the substance of the mind (whether that substance is materialized or not) *force,* or *mind-stuff*), has, as its most fundamental attribute, freedom, and is determined by it. It is used to hold consciousness in mechanism but also in other modes of activity, this means that there are changes in the universe where mechanical laws do not hold; and the fundamental assumption of Materialism breaks down.

In an Essay to which we have already referred (CR xviii. 1871, 464) Huxley said: *There is every reason to believe that consciousness is in the same sense of art or matter, when that nervous matter has attained a certain degree of organisation, just as we know the other *actions to which the nervous system ministers,* such as reflex action and the like, to be.* We must ask: *What is meant by a *function of matter?* The term is ambiguous in the extreme. It might mean the relations which had William James has called *transmission function,* in connection with the hypothesis that brain and nerves are the instruments of transmission by which the conscious mind is carried to the external world in the spatial and temporal world. The mind is independent on the instrument, but the instrument does not in any sense create or produce the mind.*

Those who use the language of *function* do, however, by no means desire to turn the conception in this sense only. If we keep to assured scientific results, what can the word *function* mean when used of the mind’s relation to the brain? James, in his *The Principles of Psychology,*-answer in the words of W. James: *If we are talking of science positively understood, function can mean nothing more than bare constituent variation. When the brain changes, changes in one way, consciousness changes in another. In strict science, we can only write down the bare fact of nervous activity.* This fact has suggested the famous hypothesis of psychophysical parallelism, that every change of consciousness corresponds to a change in the activity of the brain, the changes in the brain being well grounded as regards the more elementary facts of sensation and ideation but not more. This principle, rightly used, should exclude materialistic and all other assumptions as to the real connection between the mental and the physical series, for there seems nothing. It is adopted by careful writers for this reason, as a hypothesis regulating the study of mental relation to physical facts. But many of the physiological school have given it a materialistic turn by supposing that if the mental state were entirely *dependent* on the bodily, and a unique, the mental state is in explained when the corresponding bodily state is assigned. Hence the Materialist has found it easy to assert that the psychology has proved everything characteristic of human personality to be due to the brain and nervous system, while the truth is that, if such results appear in the end to be proved, it is only because in the beginning they were taken for granted.

In addition to the works already referred to, we may add the following references to literature dealing with the idea of consciousness in soul and body as two separate things, of which the body is necessary to the soul.

2. Spencer, *Principles of Psychology,* London and Edinburgh, 1882, cit. in *J. Ment. Dis.,* Address to the British Association at Norwich ("the passage from the body to the soul")
3. Address to the British Association at Norwich ("the passage from the body to the soul")
4. Address to the British Association at Norwich ("the passage from the body to the soul")
5. H. Bergson’s conception of the relation of mind and brain is essentially in the preceding of this interpretation; see *Matter and Memory,* Eng. tr., London, 1911, passim.
Immortality

only in this world of sense. We find it impossible to say where body ends and soul begins; but physiology affords us no means of making clear the distinction between them. And, apart from mere anthropomorphism or teleology as to their coexistence which is not obvious from common experience. We do not need the physiologist to tell us that there is a good deal of the body in the affections and emotions of the soul, that in deep thought the two are more or less blended, and that joy affects the heart, that other instincts affect other organs. There is nothing in all this to prove the identity of the soul with the body, since all the facts are reconcilable with the supposition mentioned above, that the dependence of the soul on the body is the dependence of an agent on the instrument which transmits and expresses its activities. All experience points to the view which may be thus stated: the soul is distinct from the body and has a being in and for itself as the subject of its various activities; the functions of the soul are in many ways dependent on those of the body through which they act, but not dependent in such a way that the soul necessarily perishes with the death of the body; we can conceive the distinction between the two only by saying that the soul is more essential to immortality, and may be more easily destroyed than that life has ever given him opportunity to realize. The 'ethical' objections to belief in another life are not characteristic of any particular school of ethical inquiry, though they appear to be most widely among the followers of Auguste Comte. It cannot be said that the objections are of great weight; but the discussion of them serves to bring out further features of the true meaning of the immortal delight. We may refer to John Caird, Lay Sermons, 1897, esp. p. 276 ff.; H. Jones, Immortality of the Soul in the Poems of Tennyson and Browning (Essex Hall Lectures, London, 1905); and Tennyson, The Immortal Hope, ch. ii.

4. The 'teleological argument' for immortality.

We have already indicated the general nature of which may be called the 'teleological argument' for immortality (§ 3 (a)); and in the absence of any valid scientific or ethical reasons for questioning the possibility and value of a future life, it must be admitted that this argument holds the field. The root of the argument lies in a twofold motive which is specially prominent in forming the desire for another life: that personal affection may continue, and that personal goodness may grow; i.e. that our faculties may be realized and exercised to their fullest capacity. In this life we do not find it possible to be and to do what we know ourselves to be capable of; every element in the life that now is seems rudimentary, incomplete, and preparatory. This principle is applied to the distinctive qualities of human nature. Without entering into interrupting refinements concerning 'animal intelligence' or 'animal conscience,' it is evident that, while human life includes animal life, it rises above the latter; and that those higher things which distinguish man from the animals are his higher rational, spiritual, and moral qualities. It must be admitted that everything that is best in us bears witness in itself to a power of life and growth far beyond the utmost afforded by the opportunities of this world. It is, indeed, true that there are human beings in whom the higher emotional, intellectual, and moral qualities have not yet come into full development; and there are others who seem to show no sign of possessing such qualities. Yet every one who has begun to use the higher gifts of his manhood has begun to find in the power of growth to which no limit can be seen; and, the more truly he does all that this life calls for, the
more he feels that many such lives would not exhaust his powers.

We may make in the sphere of spiritual life an assumption similar to that which science makes in the sphere of physical life; i.e., we may assume that the highest perfection of human qualities has for their proper use and function, which is not realized until they are exercised in all their fullness. Some writers have treated this principle as a self-evident axiom. It is, rather, a consequence or corollary of a more fundamental, which is not a logical axiom but a progressively verified fact—that the world is at bottom a harmonious and completed whole, a rational whole, and not a confusion and dispersion; so that nothing which exists and shares in the universal sustaining life of the whole can remain permanently incomplete and imperfect. Man, as a spiritual being, cannot completely realize his powers in that round of experience which he calls his life in this world. Their complete realization demands another life; and, if all things form, in God, a perfect system, that other life will be granted. Apart from this act of faith in the reasonableness of the world—an act of faith on which the trustworthiness of all reasoning depends, and which is progressively but never completely verified by acting on it or working it out—there would be no reason to suppose that human capacities fulfill any purpose by their growth, or that the incompleteness of life has any meaning.

These distinctively human qualities do not serve any merely physical purpose; they are not useful in the biological sense. As soon as we enter into the inner circle of human characteristics, the interpretation of these characteristics as instruments for the bodily organism utterly fails us. In fact, to explain them, in their present form, by this means is never attempted; but it is supposed that they were manufactured out of primitive animal instincts whose utility to the organism needs no demonstration. Against this whole conception it is contended that such a process of manufacture is inconceivable when seriously examined, and that it rests on a fundamental misconception of all that development can possibly mean. It appears then to be a reasonable assumption that human existence is constructed on a scale such that each man can put forth in his fullness the distinctive capacities of his humanity, and this unceasing the life begun here is continued beyond death, where these endowments may find progressively more adequate scope and employment. At first sight the analogies of nature's ways do not lead us to regard this suggestion as a very hopeful one. What if the undesirable waste in the animal and vegetable world has its analogues in the human world? It appears to involve a waste of resources and a frustration of purpose and capacity; if in the case of man death ends his life, there would only be a similar blighting of promise, and perishing of capacities which have only just begun to unfold.

Granting that the analogy is a true one—i.e. that there is mere waste in both cases—we must observe that in the one case it is a waste of physical capacity, in the other a waste of intellectual, moral, and spiritual capacity. Has there been any special significance? Have we a right to hold the growth of human love and reason as worth more—to expect that, though physical life may be wasted, spiritual life must be wasted? A conviction of the absolute and indestructible worth of these human ideals answers the question. These are the only things that give value to life; and, if we have a right to believe anything, we have the strongest moral and intellectual right to believe that they shall abide for ever. And, if the progress of humanity continues, while the actual human beings whose efforts contribute to it perish by the wayside, then what permanence is the best part of the whole achievement? the effects of such things would which remain in his living, growing self; since all ideals are realized in life only by personal activities which grow by their personal use.

It is at this point that we reach the absolutely fundamental issue of all arguments really relevant to the problem of immortality. In the last resort they all depend on the view taken of the worth of human personality, as such, in the nature of things. The essential question could hardly be stated better than by Pringle-Pattison: 'Man as rational, and, in virtue of self-conscious reason, the free shaper of his own destiny, furnishes us, I contend, with our only indestructible standard of value, and our clearest light as to the nature of the divine. He does what science, occupied only with the laws of events, and speculative metaphysics, which have only the exclusive guidance of the intellect, alike find unattainable, and are fain to pronounce impossible—his acts. As Goodness puts it in a secular phrase, man alone achieves the impossible. But inexplicable, as a sense, as man's personal agency is, may be the one perpetual miracle— it is nevertheless our surest datum and our only clue to the mystery of existence.'

Whatever view may be taken of this question of the significance of personality, if the question is seriously dealt with, its decision will determine the decision of the problem of immortality and, in fact, of all the fundamental questions of metaphysics and philosophy; and this question of personality may be used as a principle of division for the classification of the different schools of thought in philosophy. In this reference, systems otherwise opposed (e.g., extreme Idealism and extreme Materialism) may be found on the same side of the line. This division is not as fundamental as the division of the schools; for, in the first place, the principle of division is not fundamental; on the contrary, it is so fundamental that it brings to light the thing which is in essence the distinction of the philosophical schools. In fact, the division is a natural one, and doesn't appear as an opposition.

We must insist that the primary and fundamental aspect of existence consists in its personal form. Indeed, when we investigate the full concrete meaning of fact as such—we are not fully conscious of even the smallest fact in its full meaning of the word, you have 'a conscious field plus all that as object as felt or thought of plus an attitude towards the object plus the sense of a self to whom the attitude belongs.'

5. Conclusion.—From different points of view we are led to the conclusion that 'matter,' as it figures in the literature of physical science, is an abstraction. Some of the prophets of science would admit this, and eagerly assure us that we shall some day and perhaps never shall, know what matter really is. But they would at once repudiate the suggestion that the qualities of 'matter' which we do not yet know should make any difference to us which we do know; i.e., that they should be capable of any efficient action inside the region which is known. It is as if we were shown 'a sort of sunlit terrace where mathematical physics

2 W. James, Varieties of Religious Experience (Gifford Lecture), London, 1896, p. 490.
builds up its constructions of the world; and, where
terrace stops, science stops, and the absolute
metaphysical ground of the world begins (for science
the unworld). Certain views of recent idealists in
 philosophy have done much to encourage this con-
ception, that the teeming universe in which we live
is verily nothing else than a thing of two aspects—
mechanism and causation on the one hand, and
metaphysics or matter and causes of the absolutely
real. If anything," says W. James, "is unlikely in
a world like this, it is that the next adjacent
thing to the mere surface show of our experience
should be the realm of eternal essences, of platonistic
ideas, of crystal battlements, of absolute signif-
2. And we may add: if anything is likely, it
is that the material world contains objects of
many kinds and degrees of reality objective within
it, that there are kinds of matter and sources of
energy subtler and more complex than were dreamt
of, that the universe has in it resources deeper than
any of which we have the faintest inkling, deeper
than anything our thoughts can reach as long as our
bodily senses are limited as they now are. These
statements are in accord with the whole tenacity of
recent science, which is opening up to us a material
understanding of disembodied existence far larger than
that any that science has destroyed.

When, however, we seek for detailed knowledge of
the manner of the future state, we find ourselves
standing before the ultimate mystery, of that which
"eyes saw not, and ear heard not, and which entered
not into the heart of man" (1 Co 91). We have not
any conception, much less any mental picture, of
the conditions of that existence. Dogmatic insist-
ence on any particular representation is nowhere
more blameworthy than here. But it may be
maintained that absence of knowledge is
entirely beneficial. It leaves the possibility open
to every one to frame such a view of the future as
will meet his practical needs; and at the same
time it keeps the inclination (which easily becomes
dangerous) to revel in these representations of
the future to such an extent as to forget the claims
and value of the present.

There are, nevertheless, two distinct ideas, or
ideals, of the future state which may claim con-
sideration. Both are equally based on human nature,
and both have found expression in many
historical types of doctrine. This question, we may
observe in passing, is independent of the problem
of conceiving how willful wrongdoers will be treated
in the world to come. On the one hand, we find
that the dominant thought governing all represen-
tations of the future is that of restful peace;
on the other hand, that of active progress. The
one ideal is that of the Highest which
finds its perfect realization in Vision and Com-
monunion; the highest blessedness is pictured to the
mind as that of the Divine Home, the Heavenly
Fatherland. The other ideal is of rising in an
unwearying progress from one stage of existence
through the countless spheres of labour in the vast
economy of the Infinite Whole. It need not be
said that these are not two mutually exclusive ideas,
but both can be entertained. They

Society for Psychical Research, London, 1921.

IMPLICIT FAITH. — Implicit in contrast
to explicit faith means believing all that
the Church believes, or may in future believe.
According to William of Auvergne (†1215), in
nearly the first reference to the subject, Credores
eiusque adeo crederes in hoc universali, quia quidam credit eccl.
credere esse verum. He believes implicitly who,
although ignorant of the details, accepts whatever
is taught by the Church or is contained in Holy
Scripture. The concept is similar to the case of the
simplices or minores, i.e. the less
instructed laity and lower clergy. The higher
clergy (doctores et maioris) must believe explicitly,
with knowledge of the books of the Church to
give a reason for their faith. For, as the doctrine
held down by traditional theology became more
complex, it was necessary to recognize an en-
larger number as incapable of really lon-
ging or expressly accepting all the
Church doctrines. Learned theologians soon perceived
the dangers of this.

Thomas Aquinas and Duns Scotus both in-
sist that the laity must believe expressly these
things in their Doctrinal Sentences, as in the tracts,
an. S. H. MELLONE.
articles of faith which are concerned with redemption through Christ and are proclaimed in Church festivals. This practically means the Apostles’ Creed. Items in the Scriptures, however, for which they admitted implicit faith to be sufficient are: facts as that Abraham had two sons or that David was the son of Jesse. The lower limit of express belief appears to be fixed by He 11. Alarma may have been felt at the statement of Innocent III. (1226) that no holder of an orthodoxy opinion, provided he regards it as a belief of the Church, is a heretic; Innocent further says that by holding it in this sense he actually acquires merit. The scope of fides implicita was later much widened by William of Ockham, who used it to protect himself against the charge of heresy; and Bield took a position which really permits to the implicitly believing ignorant a total indifference towards all specific Christian truth.

The conception has been defended or explained in two ways. (1) The Church believes, and my faith is contained in her, since I am a constituent part of her. (2) The Church is the supreme doctrinal authority; hence whatever the Church teaches, I accept. I give a blank cheque, undertaker to honour it; it is a sum paid. It is dangerous that the notion of fides implicita is derived from the intellectualistic thought of faith current in Scholasticism. If, as with Thomas Aquinas, faith is an act of the intellect impelled to believe, to give it a summum, it will, and it, being the acceptance of doctrinal propositions, is an act of obedience to authority rather than of personal conviction, provision must of course be made for all those who are unable to follow the subtle obscurities of detailed theology.

The medieval discussion ended in opaque and inharmonious conclusions, very various opinions being held regarding the scope of explicit and implicit faith respectively. Roman Catholic writers subsequent to the Reformation tend to narrow the range of the latter. Modern Jesuit divines seldom touch the subject. Rüsch argues that the Vatican Council of 1870, in its determination of the relations between faith and reason, virtually gave a wide scope to implicit faith even in the case of the learned.

A man’s verdict on the admissibility of fides implicita will depend on his conception of faith and of the Church. If it be held that Christ offers a present salvation, in fellowship with God, and that faith means the heartfelt trust by which we take this boon, implicit faith must be rejected as unmeaning. It is indeed a strange suggestion, in that case, that things are made easier for any one by waiving the necessary and appre-henion of the mercy of God in Christ. Nothing but explicit faith can avail, since the trust of others is not our trust. In Protestantism this can be denied only by those who assign a sub-stantial degree of present saving unbelief, or of the unconscious Christian's faith. The fact which has been wrongly interpreted under the rubric of fides implicita is this, that a saving experience of Christ may be accompanied by many degrees of knowledge, but wherever faith is regarded as the obedient acceptance of dogmatic statements, not trustful adherence to a Person, the notion of implicit faith will appear unfaithfully, and piety will so far be gauged by theological attainment.

H. R. MACKINTOSH.

IMPOSITION OF HANDS.—See HAND.

IMPRISONMENT.—See PRISONS.

IMPUTATION.—Imputation is a term which belongs in the first place to law, and in the second to Christian theology, where that has been expressed in legal terms. The meaning is thus defined by Hodge, Syst. Theo. ii. 194: ‘In the juridical and theological sense of the word, to impute is to attribute anything to a person or persons, upon adequate grounds, as the judicial or meritorious reason of reward or punishment.

The theological use of the term belongs (apart from Biblical references) essentially to the Western Church, and may be distinguished as threefold: (1) There is a general usage, in which it has reference to God’s judgment of individual persons on the basis of their own merits or demerits. He is said to impute to them fault or blame (culpa) or merit (meritum). In so far, however, as merits are transferable, the merits of others also can be imputed to a non-meritorious individual (see Merit).

(2) In particular, however, the term is used of the judgment passed by God upon the human race as guilty in view of the sin of Adam. This usage prevails in orthodox theology. Roman Catholic and Protestant alike, from Augustine onward, the view of Pelagius, that Adam’s sin entailed no guilt upon his posterity, having been stamped as heretical.

(3) Feculnarius to the Protestant orthodoxy is the third usage, which speaks of the imputation of Christ’s righteousness to believers.

The last two usages demand further consideration.

I. The Imputation of Adam’s sin to his posterity.—This forms one aspect of Augustine’s doctrine of original sin, for which see R. Seeberg, Lehrbuch der Dogmengesch., ii. Leipzig, 1910, p. 450:

Augustine conceives the matter thus: God visited Adam’s guilt with punishment. In this state of punishment Adam begat children. On the one hand, these were now involved in the guilt and punishment of Adam. On the other hand, they participated thereby in the concrete condition of Adam, i.e., they received from him a taint of sin in nature, or evil consequence, ignorance, and mortality. Materially, however, the two things are identical, for just as Sanguinis consists of the punishment of Adam, so, therefore, all are placed, through procreation and birth, in the sanguine state of Adam, the punishment visited on him, which realizes itself in them, or his guilt is punished in them, and is therefore also their guilt.

This doctrine of Augustine determined the general view of Western Catholicism. Thomas Aquinas virtually repeats it, but defines further especially the point that, since original sin involves guilt before God, and guilt necessarily implies a voluntary act, therefore it is not enough merely to teach that from Adam his posterity derived a corrupt nature, but they must be regarded as involved in the guilt of his voluntary act of transgression. Cf. Summa Tho. II. i. qu. 31, art. 1:

* All men, who are born of Adam, can be considered as one man, so far as they agree in the nature which they receive from their first parent; just as in civil matters all men who are of one community and subject to one body, are regarded as one man, and the whole community as one man.” Thus all men are to be regarded as members of one body by reason of their common descent from Adam; and just as murder is not imputed to a man except as part of his body, so original sin is not guilt by reason of the will of each individual man, but by reason of the will of Adam. This is a very clear doctrine of imputation.

Aquinas accompanies it with an equally clear statement, after Augustine, that materially original sin is Sanguinis nature (II. i. qu. 82, art. 1).

Aquinas, however, also defines original sin as
Anselm had done before him) as the lack of original righteousness; and this definition opened the way to a more Pelagian appreciation of human nature, which was the accomplishment first in Duns Scotus, reached its full development in the Roman Catholic theologians of the time of the Reformation, Albertus Pichius and Ambrosius Catharinius. Duns admitted a corruption of human nature in such a way as to acknowledge a proneness to inordinate desire. This corruption, however, means for him much less than the longor naturae meant to Augustine or Aquinas. Cf. F. Loos, Dogmengeschicht., Halle, 1861, p. 566.

'The will remains free in spite of the pronata. ... Sin, however, can exist only in the will. ... Original sin is, therefore, for Duns only original guilt or, more properly, a state of condemnation, which God inflicts upon all the posterity of Adam, since they as his posterity sought to possess but do possess the justified original state. de Agatex. pro eum constituere.

Following along this line opened by Duns, Pichius and Catharinius taught that original sin was nothing but the imputed guilt of Adam (see Belharren, 'De Amicis gratae et statuto pecati,' Disputationes, vol. iii, Ingolstadt, 1693, h. v. cap. xvi). It was in opposition to this tendency of Roman Catholic theology of the early Protestant state that the doctrine of imputation was framed. The consequence is that it is chiefly the material side of the doctrine, or the corruption of human nature, that is emphasized in the early Protestant state, while the moral side was taken up by the Lutheran Church. (Spat. Theod. ii. 194, n. 1). The result as regards the Lutheran theology is thus expressed by H. F. Schmid (Die Dogmatik der evangelisch-lutherischen Kirche, Frankfort, 1881, p. 104). The doctrine of the imputation lapsus peporuni pereati is first developed by the later doctors, say from Calvin onwards. Though there is no suggestion of it to be found in the sentence of the Form. Conc. (col. 19), quod habetur in inimiciurum naturam et erutus, quoniam propter etiam conscientiam Adam et Hesper in odio apud Deum et natura sibi fruus sumus.

The doctrine is very clearly stated by David Holzau, who says: 'The first sin of Adam, so far as it is regarded as the common parent, head, stem, and representative of the whole human race, is imputed to all his posterity truly and by the just judgment of God, as guilt, and as ground of punishment' (see Schmid, p. 196).

It was in the Reformed Church that the doctrine of imputation was most fully developed and discussed. It was here that the controversy arose as to whether the imputation of original sin was necessary, i.e. whether men were punished directly for Adam's transgression, and the corruption that they derived from him was part of the punishment; or whether, inheriting as a matter of fact the corruption, they are punished directly for this, and only indirectly for the sin which brought it into being. It is to be observed, moreover, that, in the very beginning of the history of the Reformed Church, Zwingle repudiated the doctrine of imputation altogether:

'Culpa originis non vere et metonymica a primi parentis admiso culpae venit' (A. Schleiermacher, Die Geandemlichen der ersteren, Zürich, 1844-47, ii. 54).

As to the other great initiator of the Reformed theology, Calvin's doctrine of original sin certainly leans a good deal on the doctrine of mediocrate imputation that Zwingli asserted.

'Being perverted and corrupted in all parts of our nature, we are merely accused of such corruption deservedly condemned by God. Dei aeterni, nulla siti furtare.

The general doctrine of the Reformed Church, however, undoubtedly that of immediate imputation. B. Keckermann says:

'imputatum (ex peccatorum) est infelic, quatesin in Adamo in razii pristto nostro principio potestatis satis (see Schweizer, p. 54).

To the same effect also J. H. Alsted and M. K. Wulffen (Schweizer, p. 54). The doctrine of mediocrate imputation is especially connected with the name of Placan (La Place) of Saumur, who presented his views in a disputatio de Stato hominis, lapsi ante gradus, and afterwards fully in a treatise de Imputazione prae peccato Adami. But the doctrine was condemned by the National Synod of Charlestown in France (1644-45), by the Swiss Formula of Consensus, and by the theologians of Holland. J. H. Heidegger, one of the theologians of the Swiss Consensus, says:

'The imputation of Adam's sin is immediate and absolute, not mediocrate and consequent. The sin of Adam is not by the mediation of inherent corruption, but the imputation of sin is the cause of inherent corruption. In other words, the righteousness of Christ'

2. The imputation of Christ's righteousness.

This is a form taken by the doctrine of justification by faith in the Protestant theology, though not in its earliest stage of development. The expression "Justitia Christi imputatur" is seldom found in the older documents of the Reformation, and first comes more generally into acceptance through the controversy with' Oslander' (R. A. Lipseus, Dogmatik, Brunswick, 1693, p. 678).

Oslander taught that the forgiveness of sins was the effect of the historical work of Christ, but that justification was more than mere forgiveness, and consisted in the imputation to the believer of the essential righteousness of the Person of Christ. This imputation, however, involves the infusion of the same righteousness in the believer, since God's imputation is necessarily according to truth (cf. Loos, p. 570). This doctrine was rejected by the Lutheran Church as Catholicizing, and in opposition to it the Formula of Concord (col. deel. iv. 16) maintains:

'The righteousness (of Christ) which is imputed before God to faith or to believers, is the obedience, passion, and resurrection of Christ, by which He satisfied the law for our sake and made atonement for our sins.'

If there is, however, considerable difference in the later Lutheran doctrine as to the exact relation of the forgiveness of sins and the imputation of Christ's righteousness.

The Formula of Concord sometimes acts both expressions side by side, sometimes it reduces the content of the justifying judgment to the single expression of the remission of sins (Schmitz, p. 566).

J. Brenz says that the imputation of Christ's righteousness is the reason of the forgiveness or non-imputation of sins (ib. p. 257). D. Hollauz says:

'The remission of sins and the imputation of the righteousness of Christ are acts undivid and intimately united, but still formally distinct, since the former is privative, the latter positive; the former follows immediately from the passive obedience, the latter from the active obedience of Christ' (ib. p. 260).

As regards the Reformed Church, we may take as typical statements those of F. Turrettin (Inst., Edinburgh, 1847, loc. xvi. 3. 9) and Jonathan Edwards ('Justification by Faith alone' [Works, London, 1817, vi. 297]). Turrettin's statement is as follows:

'When we say that the righteousness of Christ is imputed to us unto justification, and that we through that imputed righteousness are just before God, and not through a righteousness which inhereth in us; we mean nothing else than that the obedience of Christ, presented to God the Father in our name, is so granted to us by God, that it is to be regarded as really ours, and that it is the one and only righteousness on account of which, and through whose merits, we are absolved from the guilt of our sins and made right to a eternal life.'

Edwards says as follows:

'First, I would explain what I mean by the imputation of Christ's righteousness. Sometimes the expression is taken by our divines in a larger sense, for the imputation of all that Christ did and suffered for our redemption, whereby we are delivered from the guilt, and stand altogether justified, and so implies the imputation both of Christ's satisfaction and obedience. But here I understand it in the imputation of that righteousness or moral goodness that consists in the obedience to Christ. And by that righteousness being imputed to us, it is meant no other than that the righteousness of Christ is accepted for us, and admitted instead of that inherent righteousness in ourselves: Christ's perfect obedience shall be reckoned to our account, so that we shall have the benefit of it, as though we had performed it ourselves.'
of Christ’s righteousness are closely connected. The one is set over against the other, as balancing and counterpointing it: B. de Moor, Commentarius in Marchi Compendium, Leyden, 1676-77. says: *Imputatio justitiae Christi et cupit Adami parum amabilis, et vel utrasque, ut vel utrasque ignoci debet.* (see Hodge, II. 93-96).

3. The Scriptural basis of the doctrine of the imputation of Adam’s sin and of Christ’s righteousness.—This is to be found principally in the Epistles of Paul. In the first place, Paul, following the Rabbinic theology, tends to view man’s relation to God, along juridical lines, though this is by no means his exclusive point of view, nor is his legalism thoroughgoing, even where it exists, in particular, as regards the imputation of Adam’s sin and of Christ’s righteousness the fundamental passage is Ro 5:12-21, where the effects of Adam’s sin and of Christ’s righteousness are contrasted: as sin flows from Adam, so righteousness flows from Christ. When this great passage is examined, however, it is found to lack altogether the sharp formulation of the later doctrine, and it cannot be said that the imputation either of Adam’s sin or of Christ’s righteousness is distinctly taught in it. To Paul, here and elsewhere, an exact systematic theologian must fail; there is always about his statements a breadth and expansiveness in which much is left to the imagination. The whole meaning is suggested rather than precisely defined. In the passage before us, while it is clear that Paul believed in the Divine imputation of sin and in the derivation of all human sin from the first sin of transgression, it is by no means clear that he held, let us say, the doctrine of immediate imputation. In fact, v. 13 is inconsistent with this and with the doctrine of mediate imputation. On the whole, the law was in the world: but sin is not imputed when there is no law. The famous ἄνθρωπος ἤτοι, of v. 12, will not bear the sense put upon it by Origen and Augustine of *in whom,* i.e. in Adam. In that case (i.) *eu* would not be the right preposition; (ii.) *qua* would be too far removed from its antecedent. (Sanday-Headlam, Commentary on Romans, Edinburgh, 1885, p. 133.) Again, v. 15 are by no means theologically precise. It may be argued (v. 14) that Paul traces back in general the condemnation of men to the trespass of Adam, but the intermediary links establishing the connexion are left vague. And so again with the condemnation of the world. The latter half of the verse between the ἐγκυρίαν and the ἀνθρωπισμόν. Besides, the exact meaning of ἀνθρωπισμόν is uncertain, whether the righteous act or merit of Christ (K. G. J. Houben, C. J. Vaughan, B. A. Lipsius, H. B. Liddon) or the justifying sentence (H. A. W. Meyer, E. H. Gifford, W. Sanday and A. C. Headlam). Finally, the exact sense in which we are to understand v. 19 that the trespass of Adam and the obedience of Christ constituted the many sinners and righteous respectively is left vague. It is, no doubt, right to understand Paul to mean ‘constituted’ in the Divine judgment, i.e. imputed: but how the sin of Adam and the obedience of Christ bring about the imputation of sin or of righteousness is left unexplained.

If we turn to Ro 4:5 we find, instead of the doctrine of the imputation of Christ’s righteousness, that of the imputation of faith for righteousness, which Paul derives from Gn 15:6, perhaps as a result of his Rabbinic training. It is at least interesting to observe that the imputation of one thing for another is known to the Rabbinic theology, e.g. **v. 5** for precedence, willingness to suffer for martyrdom (see P. Weber, *Jed. Theol.*, Leipzig, 1881, p. 55), which Paul also says or God (see also Ga 4:15). Abraham inherited this world and the world to come solely by the merit of faith, whereby he believed in the Lord, and He reckoned it to him for righteousness (see J. B. Lightfoot, *Galatians*, London, 1886, p. 1625).

4. Opposition to the doctrines of the imputation of Adam’s sin and of Christ’s righteousness.—With the above statements in view, it is not surprising that, even apart from the moral difficulties of the doctrines, they should have been challenged on Scriptural grounds, even where the legal terminology of St. Paul has not altogether been abandoned. The Pelagians, and the Socinians after them, entirely repudiated the doctrine of the imputation of Adam’s guilt. The Socinians and Arminians objected to the doctrine of the imputation of Christ’s righteousness; the Arminians proposed instead to follow Paul in speaking of the imputation of faith for righteousness. On the last point the opinion of A. B. Bruce, *St. Paul’s Concept of Christianity*, Edinburgh, 1894, p. 155 f., is noteworthy:
The great doctors of the Lutheran and Reformed Confessions employed faith of all moral contents, that no protest might remain for attributing it to justifying virtue, and assigned to it simply the humble service of claiming an interest in the foreign righteousness of Christ. They even went the length of setting aside the scriptural idea of the imputation of sin and righteousness, and maintaining for it the idea of the imputation of Christ’s righteousness, keeping themselves right with St. Paul by the ingenious device of taking faith, in the terms of faith, which was felt to be imputed, objectively, so bringing out the meaning that not the act of believing, but the object believed, i.e. Christ’s righteousness, is imputed. This manner of handling the locus of justification is very open to criticism. In the first place, it is unfortunate that the Protestant doctors, in their laudable zeal against neo-legalism, should have found it necessary to become un-Pauline in their terminology, because it is only in their theological vocabulary the imputation of faith as not only imputed but also credited, and employed exclusively a phrase which, however legitimate as an inference from Scripture text, has no express scriptural warrant. This fact is an index that someone they had got upon the wrong track, and had taken into one-sidedness.

Modern theology, as governed by the new emphasis on the Synoptic teaching of Jesus, and especially on His doctrine of the Fatherhood of God, tends away from legal analogies and modes of statement. The consequence is that the term ‘imputation’ has tended, except on account of its historical associations, to be banished from recent theology. So far as concerns, not the term, but the matter of the doctrines of the imputation of Adam’s sin and Christ’s righteousness, it is widely felt to be morally impossible to maintain that men in general are guilty because they are men and also that, as above stated, Paul himself does not distinctly teach this. The usual line of modern teaching, therefore, follows the suggestion made by Paul in Ro 4:13, and, while recognising the inheritance from the past of sinful propensities, admits guilt only where there is conscious and wilful transgression (so e.g., J. Kauten, in his *Dogenlehre*, Tübingen, 1900). As regards the imputation of Christ’s righteousness, the passage above quoted from Bruce is, on the whole, typical. Since Kant’s *Religion innerhalb der Grenzen der bloßen Vernunft*, the doctrine of justification by faith has been commonly stated in the form that God accepts our faith in Christ as the earnest of the Christ-likeness which it is destined to produce, or sees in Christ the full fruition of what in the believer is present only in its germ. It is noteworthy, however, that Ritschl, with his glowing admiration for the principles of the Reformation, here substantially maintains the orthodox doctrine, though without the parallel doctrine of the imputation of Adam’s guilt.

On the other hand, when what we want is to see forgiveness become operative as the attribute of a community, this aspect of it is guaranteed by the community’s Representatives. They are inevitably maintained position towards the love of God, which is distinctive of Sinners imputed to those who are justified. Hence Christ kept Himself in the love of God by His obedience even unto death. God’s forgiving love is thereby secured beforehand to those who belong.
INCARNATION. Introductory. — The term 'incarnation' is applied to the act of a divine or supernatural being in assuming the form of a man or animal, and continuing to live in that form upon the earth. This distinguished, on the one hand, from 'transmigration,' in which the vagrant entity is not a deity, but a soul; and, on the other, alikes from 'possession' (g.v.), in which a spirit or a deity takes up its abode in a human being, but only temporarily, and not for a whole lifetime, from 'emancipation,' which implies a divine source, but not the actual presence of a deity, and from the capacity of deities, or of holy men and magicians, to assume on occasion whatever forms they please, (e.g., Verethragna [XIV. xiv. 7.] and Tishtrya [XII. viii. 168.]; see art. METEMPSYCHOSIS.)

Among primitive peoples there is really no such thing as incarnation in the strict sense of the term. The men and animals worshipped among such peoples are usually regarded and treated as actual deities, or at least divine, and not as the manifestations of certain gods or demons. Frequently, in cases where the men or animals worshipped have been supposed by investigators to be the embodiments of demons or other supernatural beings, a more searching inquiry has disclosed that the animals thus ranked, and were worshipped, as living deities (J. G. Frazer, Lectures on the Early Hist. of the Kingship, London, 1905, pp. 132 ff., 279.). At a later stage, sacred beings of this type might be regarded as the incarnations of a god (e.g., Avatskibesvaras becomes incarnate in the Dalai Lama: see 'Tibetan' section of this art.).

Among primitive races the closest approximations to the conception of incarnation are found in (1) the animals in which the primitive mind traces the peculiar and mysterious force (see art. HOLINESS [Gen. and prim. vol. vi. p. 725] of the dead — now regarded as divine and endowed with power — and which therefore become objects of worship; and (2) the aged and the medicine-men in the parts they play in the performance of the mysteries; here they assume the forms of the great personages of sacred tradition, and the priests are one with these superhuman beings and deities (K. T. Feuss, Die Nayarit-Expulsion, Leipzig, 1912, p. 194.); it is true, of course, that this impersonation or embodiment was not permanent or complete. The sacrificed man-god of the Mexicans, 'our Lord God,' to impersonate whom a young and beautiful man was chosen from among ten picked captives, was regarded as the 'figurer' or representative of the sacrificers.

The approximation was much closer when this power came to be represented as the sacred civilization of Greece and Rome as a migratory individual being.

See, further, art. SIN, JUSTIFICATION.

Inerrancy. — The principal literature has been indicated in the course of the article. It is to be observed that C. Hodge's Systematic Theology, London and Edinburgh, 1875-78, especially i. 525 ff., and ii. 141 ff., is particularly valuable. See also the history of the doctrines of imputation and for an exact statement of their orthodox position.

Tsuchi, J. E., Die achtzehn Jahresfeste der Mexikaner, in Veroeff. des konst. Museums für Völkerkunde zu Berlin, vi. [1899] 194; see 'American' section. Even as a stage of religious development the craving for the immediate presence of deity gives rise, as a rule, to the practice of deifying men (as, e.g., in the Athenian Hymn to Demeter, Athenaeus, vi. 235 c, or in the culte of the emperors) rather than to the belief in incarnation.

Among Western peoples, again, the idea of incarnation in the proper sense seems to have originated in Egypt (see the 'Egyptian' section), and, then, with Hellenism as its medium, to have reached its highest form in Christianity (see art. JESUS CHRIST] and heterodox Islam. A parallel development is the Indian doctrine of avatâras (see the 'Indian' section) — first mentioned in the Bhagavad-gîta, iv. 71. — which in turn also exercised an influence upon the Muslim sectaries, i.e. in the Shâîte doctrine of the imâm.

The moderate Shi'ites do not teach incarnation in the strict sense; but certainly the Shi'ite doctrine of the right of succession belongs to the descendants of 'Ali, the Prophet's cousin, and of Fatîma, his daughter, in that it is a manifestation of blood-relationship and divine ordinance, and not, as the Sunnites hold, to the khilafahs installed by human election and appointment (I. Goldziher, Vorträge über den Islam, Heidelberg, 1910, p. 310), has some affinity with the idea of incarnation. The theory of the imâm, like Islam in general, rests upon various grounds. The divine sequence of these rulers is guaranteed not only by their legitimate descent from the Prophet's family and by their superhuman gifts, but also by their possession of a divine light-substance (cf. Shahristâni, tr. T. Haarbrucker, Halle, 1850, 1. 172, 206, 217 f.; it is a divine power [217], a part of deity [172, 290], and even the spirit of deity [170, 173]) which had streamed down from Adam in a succession of divine men, passed into the loins of the grandfather of Muhammad and All, and was then portioned out to 'Abdallah with his son, the Prophet, and the latter's daughter, Fatima, on the one side, and to 'Abd-Allah with his son 'Ali, on the other; transmitted thereafter by the offspring of the marriage of 'Ali and Fatima, and by the successive imâms of the Prophet's lineage, it will culminate in the last, the 'hidden,' imâm, who will appear in the final age.

The Sunnite tradition, too, had a place in the mir Muhammad, the 'light of Muhammad,' which rested upon the forhead of Adam, and from which all the prophets have sprung. This light pervades all the ages, falling ever upon the bearers of the
INCARNATION (American) — The notion that the 'life' may be transferred from one body to another is widespread among the American aborigines. It is a conception fostered by that type of Animism which sees in Nature powers rather than things, or, at all events, no sensible thing without its active and concealed potency; and, again, it is a conception already mythically expressed in the frequent cosmogenies which derive the life of the Earth and of Earth's children from that of the demigourge whose transformed body the Earth is.

In Persian Islam, God and man were regarded as more closely related. The identification of the Sufi with deity, which has been fairly common since it began with the great Sufi, Rumi, of Balkh, and with the sect — or, better, the sect — was conceived as a mystic union.

1 The thought originally expressed by the ancient teachers of the Iroquois and other barbaric peoples, writes J. R. R. Hoitze (Zt. d. B. d. W. 1889, p. 190), "was that the earth through the body, or life potential, united and immovable life into a new body, or life personified by Thorobnakawo — by feeding itself to them produces plants and fruits and vegetables which serve of the divine tradition. It went through the forefathers of Islam, with But Shēh Shāhī, and the All-One played a ruling part in the rise of Sufism was already noted by al-Biruni. Such forms of pantheistic extravagance are common in all mystical theories of the kind, and in reality involve an expansive theology that results in mere indistinctness. An incarnation that embraces all religious persons has lost its specific meaning.

The conception of one solitary incarnation of deity is peculiar to Christianity. In India the development of the idea resulted in an exactly opposite view. The earliest incarnation of Viṣṇu seems to have been Kṛṣṇa. Thereafter there was a constant increase in the number of embodiments — we find successively the figures ten, twelve, twenty-two, twenty-four, twenty-eight (A. E. A. Religions of India, London, 1891, p. 171) — until at length they are spoken of as immemorial, so that the great teachers of any religion whatever, as, e.g., Buddha and Jesus, could be numbered among the avatāras. Eventually every guru ('teacher') claimed to be an avatāra. Even the theory of a single incarnation for each age leads here to the idea of an infinite number, as the several ages always recur. In certain schools of the Mahāyāna the doctrine of a Buddha in each of the non-void cosmic entities of the world (Budd.), vol. 1, p. 189 f.) developed into the theory of a celestial prototype for each earthly Buddha, and subsequently into the idea of the one Buddha-god, of whom the various individuated Buddhas are emanations. Schopenhauer (Sämmtliche Werke, Leipzig (Recumb.), 1892, v. 413) and others are of opinion that the idea of a plurality of Buddhas is more rational than that of the one Christ.

The Sīlā and its sects adopted an intermediate position. There is among them no unanimity as to the number of incarnations, officially recognized by the Persian State religion; there are twelve, the last of whom, Muhammad Abu-l-Qasim (9th cent.), will return in the final age as the Mahdi. In the Middle Ages, the 'Sect of the Seven Immortals, the immortals, had a great vogue. They enumerated seven Nātīq ('speaking ones') or manifestations of God, viz. Adam, Noah, Abraham, Moses, Jesus, Muhammad (with 'All as his atmospheric deity), and the Imam Mahdi, the son of Ima'mī, from whom the sect took its name (A. Christensen, Muhamedanske Stygter og Tænorke, Copenhagen, 1896, p. 77 f.). As Islam, in conformity with the Bible as its literary source, teaches that human history has a consummation, the number of possible incarnations must in any case be limited.

Literature. — This has been given in the course of the article.
as food for birds and animals, all which in their turn become food for man. Hence the idea of the cycle of life is transmuted into that of man and of all living things.

'Tronahniwacouac' is the demiurgic titan, descended from the sky to become the fashioner and dispenser of life. The word means, says Hewitt, 'He grasps the sky (by memory)—a designation which clearly places this being in the pan-mythic group of beings cast down from heaven and brought back to earth for the benefit of mankind (cf. further, Hewitt, in Haij ii. [1910] 718 ff.). Other designations, such as 'Sprout' and 'Spraling,' indicate the reverse consideration of this being, i.e. as already fallen and as incarnate in the vegetable life of Mother Earth. This character appears explicitly in the close of the Onondaga version of the myth, as given by Hewitt (Jl RBEW, pp. 218-230):

'Moreover, it is said that this Spraling, as the manner in which he has life, has this to betial him recurrently, that he becomes old in body, and that when, in fact, his body becomes ancient normally, he then retransfers his body in such wise that he becomes a new man-beating again and again recovers his youth, so that one would think that he had just then grown to the size which a man-being customarily has when he reaches the youth of man-beings, as manifested by the change of voice as by a boy of twelve. Moreover, it is so that transferred the avendia immanent in his body—the avendia with which he is possessed force and potency—is ever full, undiminished, and all-sufficient; and, in the next place, moreover, he has life, and death, and death, and the Great Destroyer, others in itself and faceless, has no effect on him. Moreover, if the avendia, which is in the next place, there is nothing that can bar his way or bar his multitude. Moreover, it is very wise with all the things that are contained in the earth here present, that they severally retransform or exchange their bodies. It is thus with all the things that exist in the next place, with all the things that produce themselves and grow, and, in the next place, all the men-beings. All these are affected in the same manner, that they severally transform their bodies; and, in the next place, that they retransform their bodies, severally, without pain.'

This may be regarded as the general philosophy of those Animists who have not attained a clear conception of personality: life is regarded as fluid, passing readily from one embodiment to another; it has no material totality, but separates in qualities and functions rather than into organisms; into effluences and simulacra rather than into individual spirits. Almost universally in the Indian view—the notion of individual immortality, and even the 'Happy Hunting Ground,' being largely developed under White influence.

This conception of a fluid life permeating all material things finds an early and logical expression in the innumerable sacrificial rites where by the Indians endeavoured to acquire the traits of the body which they wished to possess or of the divinities symbolised in the sacrificial food. Thus Le Jeune (Jesuit Relations, ed. R. G. Thwaites, 1896-1901, ix) 121 notes:

'A savage, saying for the heart of a certain bird, said to him, 'How thou, who art a man, dost thou eat this? If it were people that eat, our enemies would surprise us and would kill us; this is a woman's food.'

The inter-continental custom of eating the flesh, especially the heart, and of drinking the blood, of an enemy who has proved his courage in death by torture, and that his courage might be transferred to the partakers (cf. Ethics and Morality [American]), is but a further, and terrible, illustration of this idea. Indeed, Garcilasso (Royal Commentaries, ed. Paris, 1833, i. xii.) states that some of the American tribes, after having eaten the body of such a victim, dried the nerves and bones and worshipped these remains as divine. In these tribes we find cannibalism fashioned into the likeness of the deity, or of its attributes, or even, in the case of Omacati, into the shape of a bone regarded as a bone of the god, which is then eaten as sacraments. Similar sacrificial initiations imply a sort of ceremonial cannibalism practised by the Aztecs and other Mexican peoples. The hearts of victims were customarily devoted to the divinity, but the bodies were eaten by the worshippers in many; if not all, cases. It seems to be beyond doubt that the partaker was expected to derive some magical or 'holy' power from the flesh of one who had in turn derived it from consecration to the divinity.

In the large number of Aztec sacrifices, the sacrificial victim is regarded as a personification of the god, this is certainly true. The theanthropic idea is everywhere present. Sahagün (Hist. gen., Paris, 1880, vols. i and ii) gives a multitude of examples. Thus, in the worship of the god of merchants, with his five brothers and his sister, 'they sacrificed to all together, or to each of them, one or more slaves, clothed in the garments of the god, as if they were his image.' Slaves were bought for this special purpose, care being taken that they were sound and without defect, they were fed and fattened for the sacrifices and the sacrificial banquet following it, all the while being encouraged to dance and sing and live a life of rejoicing, so that, says Sahagún, 'they made no case of the death that was reserved for them' (i. xix.). The Aztec gods were all richly provided with sacrificial victims and of this time he was sacrificed to the god, while at the same time another youth, beautiful and unblemished, was chosen in his place.

'During the year he [the youth] was to carry flowers in his hands and accompanied by a great following. He painted preciously all whom he encountered, and they, on their part, asking him for the veritable image of the god, they placed themselves on their knees before him and worshipped him.' (v. v.; see also the brilliant description in Prescott's Conquest of Mexico, London, 1874, ch. 11.)

The flaying of the victims and the wearing of their skins was a not uncommon mode of transferring the divine attributes. In the worship of the 'Mother of the Gods' the woman who personated the goddess was flayed and her skin worn by a priest, who, 'thus clothed, traversed the city, where he was the ornament to a thousand inhabitants' (Sahagún, i. viii.; cf. ii. xi.). A curious divinity was Xipe Totec, 'the flayed one,' in whose rites the worshippers wore the skins of the sacrificed victims, assuming that they were clothed in the skin of the god, and expecting thereby to be healed of skin diseases (ib. i. xviii.).

The notion appears to some extent in the northern tribes—at least the Potawatomi 'Story of the man with six sons,' narrated by de Smet (Life, Letters and Travels, New York, 1905, vii. viii.), presents striking analogies.

Ritualistic impersonation of mythical beings, spirits of ancestors, the heroic dead, etc., is to be found in many localities. It is probably a factor in all totemic rites and in symbolic face-painting. In the Pawnee Hako, when the consecrated child has been painted with the lines in which, says the priest, 'we see the face of Tíráwa atins, the giver of life and power to all things,' it is told to look into a bowl which has been filled with running water.

The running water symbolises the passing on of generations, one following another. The little child looks on the water and sees its own likeness, as it will see that likeness in its children and children's children. The face of Tíráwa atins is there also, giving promise that the life of the child may increase in the waters flow over the land' (A. C. Finner, "J RBEW, pt. i [1901], pp. 283, 241).

The most notable development of this conception is among the Indians of the North-West, where masked shamans personate mythical powers, and among the Pueblo Indians, with whom veritable mysteries are enacted by the priesthood. There is some degree of participation in the supernatural character represented
INCARNATION (Buddhist)

(see J. W. Fewkes, 15 RBFW [1897] and 21 RBFW; M. C. Steverson, 23 RBFW [1904]; J. H. Swanton, 30 RBFW [1908]).

It was the common belief of the Shawnee prophet Tekawatwana was regarded by his followers as an incarnation of Manabozo. For Manabozo is the demiurge, the servant of the Good Manitou, through whose labours powers have been brought from heaven to earth, and the life of man made tolerable—and it is in this capacity of creator and mediator that Manabozo holds a central place in the Midé rites. And not only was Tekawatwana himself an incarnation of this demiurge, so that 'his words were believed to be the direct utterances of a deity,' but his body was regarded as transsubstantiated in 'four strings of beans, which we were told were made of the flesh itself of the prophet'; these 'were carried with much solemnity to each man in the lodge, and he was expected to take hold of each string at the top, and draw them gently through his hand. This was called shaking hands with the prophet, and was considered as solemnly en- graving to obey his instructions, and accept his mission as from the Supreme.' (J. Mooney, 11 RBFW, pt. 2 [1896], pp. 675, 6753.)

It is with Manabozo, again, that Longellone identifies the Iroquoian chief and prophet Hiawatha—presumably by some right of tradition, since the Iroquoian demiurge is very similar to the Algonquian god.

The Aztec myth of Quetzalcoatl is a typical case of belief in re-embodiment. This deity—god of wind, maize, leisure, art and the wise—was closely associated in Quetzalcoatl, it is the creator (Pharmacurrion maleus), which was his emblem, was the ruler of Anahuc in a golden age of peace and plenty; driven thence by the conquering Teutanes, he set sail, over the eastern waters, for the land of Tlapallan, promising one day to return and rule again, king of a re-juvenated realm. The appearance of Cortés was mistaken for the return of this deity, re-embodied in his ancient form, for he was traditionally bearded and light of hue—a fact which modified the resistance offered to the Spaniards by the superstitious Montezuma. Possibly Quetzalcoatl is but the personification of the quetzal itself (to which temples were erected as far south as Guatemala), regarded as a symbol of the Sun, and, like the phoenix, periodically dying to be born again. The plumes of the quetzal were brought to Mexico in 1550, and it is an interesting analogy that the Peruvian Inca was a special sign feathers of the 'cornebue,' of which they supposed but a few were necessary to make one of their sun-descended ancestors, Monto Capac and his spouse (see Garcilaso, Royal Commentaries, vi, xxxviii).

The Aztec deity Huiztilpochtli is another deity regarded as having once been an earthly hero, to whom 'after his death they rendered the honours of godship, making him offerings of slaves' (Sahagun, i, l.). A very curious rite in his service was his symbolic slaying, an elaborate effigy being made of cereals, into the heart of which a dart was plunged by a man personating Quetzalcoatl. Afterwards the body was eaten, but the participants in this strange sacrament were compelled to undergo such penance that, says Sahagun, they sometimes fled the country, preferring death at the hands of their enemies (iii. l.).

The other two forms in which this general notion is expressed by the Jesuits (Thwaites, xv. 188). The most primitive and crude form in which the idea appears is in association with the bodies of deceased relatives, in order that their 'life' may be transmited to the partakers. This custom appears only among the lower peoples, chiefly in S. America, one form of it, interesting as probably representing a transition from the cruder forms noted by the Jesuits, is that of the Yapura river tribes, who burn the bones of their dead and then mingle the ashes with their drink.

An interesting custom in this connexion is the rite of bestowing the name of the deceased upon another person, who is then supposed to have assumed the dead person's character: 'It has often been said that the dead were brought to life by making the living bear their names. This is done for several reasons—to revive the memory of a brave man, and to incite him who shall bear his name to imitate his courage; to take revenge upon the enemies, for he who takes the name of a man killed in battle lends himself to avenge his death; to assist the family of a dead man, because he who brings him back to life, and who represents him, assumes all the duties of the deceased, feeding his children as if he were their own father—in fact, they call him their father, and he calls them his children. Mothers or other relatives who love a son, or a daughter, or any of their kindred, cause such persons to be resuscitated, through a desire to see them close by them—transferring the affection that they felt for the deceased to the person who takes their names' (Thwaites, xvii. 399; cf. xxv. 155-58, where the ceremony of reviving a chief is described in detail).

Nor must we forget the Indian messiah of the 'Ghost-Dance Religion,' who taught that the Indian dead were to be resurrected, the old life restored, and even the buffalo and other game of former days to be brought back in the body of the Indian (see 14 RBFW); he, too, was said to have been at work here, but they fell on well-prepared aboriginal ground.

LITERATURE.—In addition to authorities already quoted, the article, see last appended to COMMISSION WITH DEITY (American).

H. B. ALEXANDER.

INCARNATION (Buddhist).—I. It has been held that certain Australian tribes deny all connexion between conception and sexual intercourse, and believe that the spirit—an animal totem or the soul of an ancestor—takes its place in the womb of the mother in accordance with certain mysterious laws and under certain trees, without the normal intervention of any physical cause. The savage theories of conception, however, do not necessarily imply such ignorance of physiological facts as it is always productive—οὐκ ἔστω γὰρ ἀνθρώποι ἐνίκησεν (Hom, Od. xi. 449)—and from this it has been logically concluded in Australia and India that sexual intercourse, though it may appear to be the cause of conception, is not the cause of it. A living and intelligent germ is necessary. The Brahmins thought that this germ was a soul descended from the moon through fire, smoke, rain, rice, and seminal fluid. Among the Australians and Hindus the belief was that a kind of spirit, a totem or a gandhara, lay in wait for a suitable opportunity to penetrate the womb of some woman and so become reincarnated.

According to Buddhist belief, three causes are necessary to conception: (1) the father and mother have intercourse, (2) that the mother fulfills her time, and (3) that a gandhara is in readiness. Such is, in so many words, the reply of the Buddha when he is asked how children are born (Majjhima, ii, 156; Digha, 440; Milindapa, 152). It is after death: 'It is a name which is really a description—antarabhava, an intermediary being, succeeding the maranabhava, the being in the dyaging state' or 'death,' and replacing which conception begins in the state of being born' or 'conception.'
A certain sect possesses a sûtra, which is lacking in the Pali canon, where the Buddha speaks of the antarabhava: the Pali canonical sources mention only the pudi-ratana.

2. All sects do not believe in the antarabhava. In this connection we might quote more particularly the case of the Mahābhārata (in the Mahābhārata, Buddhavāsena, 88a; Patañjali, 36, 124, 324, 521; W. L. Wood's *Life of the Buddha*, London, 1884, p. 192) and the school of the Kāśyapa (with the title *Sūtra of the Time of Vajracchedaka*; see also the time of Vajracchedaka, 3rd-4th cent. A.D.) (7). A certain sect in India proper considered the doctrine of the antarabhava as a heresy, and its arguments coincide in many respects with those of the Bhuvanayogis (Kāśyapa); but, while the Pali school preserves the traditional text: "Three causes are recognized: There must be a seed, there must be a seedling, and there must be a tree." The Sanskrit scholars, who deny the existence of the antarabhava, read: "... the seedling in the dying state (antarabhava) ..." They believe that, just as an object projects the reflexion directly and without intermediary on a mirror, so the constituent elements (skandhas) of the dying being are immediately replaced by other elements, situated in a suitable womb, which form a new being which inherits the karma of the dying being. It is in this sense that we must understand H. C. Warren's *formula* (Buddhism in Translations, Cambridge, Mass., 1900, p. 325): 'Rebirth is not transmigration' (see the long and interesting discussion in *Abhidharma-Kosāla*, Fr., London, 1884, p. 161).

3. The belief in the antarabhava, however, is not contradictory to the doctrine of non-identity or to the denial of 'transmigration' (sunnāhāram), i.e. the passage of a person (pudgala), or skandhas (the bodily constituents), from one existent to another. The skandhas do not pass from one existence to another, but, as a flame, continually renewed, sweeps over the wholeprairie, so the skandhas of the dying being engender the skandhas of the intermediary being, which, being continually renewed, finally arrive at the point where they are to enter a womb and engender the skandhas of the new being.

The sûtra (Dhaga, ii. 63), as a matter of fact, speaks only of the "descent of the vijñāna into the womb," i.e. the "descent of thought," the "spiritual element," the "serpent thought," etc., while the new states are told, we must understand by vijñāna the five skandhas. In the sphere of desire and matter (kāma, rūpadhātu; see *Cosmonogy and Cosmology* [Buddhist], vol. iv. p. 180), thought is too weak to exist without the support of matter.

Theopompos, a servant of several European writers, that only the karma is reincarnated, would be of more weight if confirmed by undisputed texts. In conclusion, the existence of the intermediary being is denied, it is believed that the skandhas of the dying being project their substitutes into the womb, and such skandhas indeed—"inert, brute, mindless, or in some form or condition of formation it requires. But it is not to be explained how a karma could exist independently of the skandhas, or produce the skandhas.

4. The intermediary being is "projected" by the same karma as projects the future existence. It will in consequence have the form and aspect of the future being, i.e. it will be inferior, human, divine, and so on, according to the nature of the future being. Its dimensions are those of a child of 6 or 8. Its organs are developed; e.g., the intermediary being which is to generate a Bodhisattva bears all the marks of a Bodhisattva. It penetrates the womb, not along with animals, but by the natural way. This is the second-born, as it is considered the elder. The body of the intermediary being is transparent and mutable and is not susceptible to touch. Nothing can stop its progress towards the place of its birth, since it is armed with the magic power of karmas; it feeds on the aliment called 'involuntary food' (obol, etc.), but only on the subtle part of it, viz. the smell (pudgala), from which it derives its nourishment. So far as we may say there is no fixed rule as to how long this being lasts; it simply exists till the conditions requisite for conception are realized, e.g. till the union of the manas, or, in a higher stage, till divine consorts meet. The masses of flesh in a state of decomposition permit of its incarnation as a worm, and so on. Others maintain that the intermediary being lasts seven days. If, at the end of this time incarnation has been impossible, it dies and is reabsorbed for another existence. These statements (samma-samāhi) do not appear to be definite; it is only stated that it may be reincarnated as an ox, a tree, a black bear, it may be reincarnated as a buffalo, a jackal, or a brown bear. If it is not the season for cows and buffaloes then the animal class may be definitely determined; in this case the karma which has determined the intermediary being has no power about the realization of the causes necessary to incarnation, irrespective of season.

How is the intermediary being incarnated? With an eye born of the forces of karma, it recognizes, even from a great distance, the place where it is to be born and where its father and mother are united. When it is female, it conceives itself in the woman; when it is male, for the mother. Troubled by thoughts of love and hate, it roves round the place of its birth; in its desire for the delights of love, it imagines that it is the apple of the eye. Touched by this imperishable (semenal fluid and blood) already formed in the womb. The skandhas of the intermediary being then grow hard; it dies, and conception takes place. Conception presupposes also the destruction of the elements of productiveness—spem and blood; the first cause of the embryo is the intermediary being, for sperm and blood are devoid of thought. This is how the beings which are to be born out of the chorion or the egg are incarnated.

Those which are to be born of the exudation of the elements are attracted by smell. There is a special category of birth: the apparitional beings (anupadāsita, i.e. "suckling child") which comes to life instantly, as soon as their organs are formed, and all their members and sub-members are formed. To this category belong the gods, the beings of the lower world, the intermediary beings, the men who are born without the aid of blood, seminal fluid, or the exudation of the elements. The intermediary beings who are to be born in this way are attracted to the chorion by a desire to be in a special place or to dwell in a certain abode, e.g. a mother's womb. They do not come to desire to dwell in the lower regions? He is troubled in spirit, his heart is tormented by dry winds and rains, and he is struck by the cries of his son. He no longer seeks for his son, but for another boy, a more energetic. The inverse takes place in the case of the cold intermediary beings (Abhidharma-Kosāla, Fr., London, 1881, p. 166). Incarnation is rapid, for it depends solely on the conditions proper to the intermediary being itself. For the beings born in the mixed (called the "intermediary" or mixed), i.e. they may be born where they will - becoming thus a father of a thousand. He possesses the "mastery" over birth, i.e. he can be born where he wills. Becoming a father of a thousand, he can have as many advantages of being born of the chorion, the advantage of binding the great family of Sikyus by ties of parenthood to the Dharma, the advantage of inspiring with respect the people who would say of him: "He belongs to a family of Sovereign Kings (Mahārājas), the advantage of encouraging the faithful who would say: "He is a man; even men can attain to this perfection." If he had neither race nor family, people would ask: "Who is he? A magical man or a demigod being (piñatā)?"—There is another explanation: nothing remains of the bodies of apparitional beings at death, just as no soil remains in the lamp at morning. Now, the Bodhisattva wanted to leave behind him at death remains through the worship of which thousands of men could gain heaven and deliverance. That is the reason why he was born of the chorion. But this explanation cannot be accepted by the Bodhisattva as he of the three advantages to the Buddha a magic power of creation; he could have created remains." (Abhidharma-Kosāla, Fr., London, 1881, p. 166).

The Bodhisattva, however, is not incarnated in exactly the same way as the intermediary beings destined for the human race. These generally enter the womb under the impression that it is their duty to protect them from rain and cold (in the case of common beings), or a palace (in the case of noble beings). The Sovereign Kings enter the womb knowing that they are entering a body through the length of the period at seven weeks. Instead of being reincarnated as an ox, a tree, or a black bear, it may be reincarnated as a buffalo, a jackal, or a brown bear. If it is not the season for cows and buffaloes then the animal class may be definitely determined; in this case the karma which has determined the intermediary being has no power about the realization of the causes necessary to incarnation, irrespective of season.
alone enter the womb, remain there, and leave it in full consciousness of what they are doing.

The future Bodhisattva does not assume a human form to penetrate the womb of the mother, and does not become big (Máyā) in which the Bodhisattva becomes a white elephant with six tasks) being merely a portent of the future.

(b) The Great Vehicle, in its first stages (viewed from a corrected (point of view), continued to believe that the Bodhisattva is a man, 'not a god.' The Men must not be given the chance to think 'we are only men, incapable of fulfilling this task, incapable of attaining perfection' (Lalitavistara, 87f.). But the blessed or noble (bhadrika) character of his descent into and sojourn in the womb is insisted on; he is not soiled by the impurities of the womb by excrement matter. The question of the 'virtue' of Māyā [Lalitavistara, 42. 9] takes the octuple vow before conception; but the author of the Lalitavistara does not permit this.

The Mahāvagsa, the Suvarna, etc., hold that the Buddha is born as an apparitional being; his body is therefore, defined as 'spiritual' (manomayā), which is introduced by the spirit (ātman) without the aid of the elements of generation. It follows from this that there are no remains of his body after death.

The Bodhisattva was also regarded as a magical apparition (śramota), the unreal reflection of the true body which is resplendent in the Tuṣita heaven or in the distant and colossal empyrean familiar to the later sūtras (Saddharmapuṇḍarīka). 

INCARNATION (Egyptian).—The ancient Egyptians had great difficulty in forming abstract or general conceptions, 1 therein resembling certain negro races who to this day do not use general terms as, e.g., 'woman,' 'crocodile,' but think always of a particular woman or a particular crocodile. 2 Like children, therefore, they found it difficult to think of an ego or self as an integrating conception, and instead of saying 'I see,' 'you walk,' 'he strikes,' they said 'my eyes see,' 'your legs walk,' 'his hand strikes.' Similarly, they lacked originally the concepts 'all' and 'whole'; so that, instead of the expression 'all men,' they used the phrases 'each man,' or, more commonly, 'each eye,' 'such legs,' etc., according to the bodily organ concerned in the particular case. For 'whole' they had no distinctive term, but expressed the idea by such circumlocutions as 'to its limit,' 'to its extent,' 'in its scope.'

This inability to frame abstract ideas operated powerfully upon the formation of religious conceptions among the Egyptians. The thought of a more or less abstract deity, exercising his power in a transcendent manner, was entirely foreign to the Egyptian mind. Even a supreme being was conceivable only as a concrete existence. In order that such a being might conform to earthly norms, it must have earthly attributes, and give effect to its powers by earthly means. The Egyptian deities were accordingly thought of as being embodied in men, or in animals, or, though less frequently, in plants, and even in things fashioned by human hands, such as statues, obelisks, houses, or temples. A deity had to eat, sleep, and die. He was, therefore, always connected with a particular locality. If he went elsewhere, he deserted his previous locality, as he could not in his complete individuality be present in two places at the same time. 3

1 'Made by God' is by some Chinese authorities translated 'made by the sovereign' and so this element of the supernatural is included.

2 Examples, p. 91 ff.

3 According to C. H. Lassen, Denkmäler aus Aegypten und Äthiopien, Berlin, 1851-69, iii. 360, line 15, each of the four obelisks of Thutmose III in Thebes received as sacrificial offerings a hundred loaves and four pitchers of beer.
in different places at one and the same time. If he desired to hear or to see, he required ears or eyes; and while, e.g., ears were ascribed to a deity in large numbers in order that his might penetrate and understand the words and things beyond man’s powers, his reality invocations designed to flatter that particular deity, and to induce him to maintain his reputation as a supreme power by granting his supplicant’s prayer. The conception of a truly omnipotent deity was one that the Egyptians never attained; and that the ostensible references to such are, after all, but phrases to which no real conviction attached is made quite clear by the fact that similar qualities were ascribed to the reigning Pharaoh in the paeans of his subjects.

When the Egyptians sought to attribute a more universal character to a deity in a precise and complete sense, they had to resort to a kind of syncretism. They fabricated a number of figures as manifestations of the deity, and as bearing in that capacity various names (ren-n). To the Egyptian mind, however, the name wasn’t just as in modern languages, a general term. It was something by itself, and independent of the object which it denoted, and it possessed an immortality of its own. It was related in the closest way to what it signified, but was not identical with it. To have knowledge of a name was to have power over its bearer, but in certain cases the name might continue to exist apart from the latter. The name, in fact, was related to its bearer in some such way as the kx, the bs, and other immortal elements were related to the individual human being. In the several ‘names’ of a deity were not simple incarnations thereof, but were generally distinct personalities. Thus, if Isis was designated by, and worshipped under, various epithets, such as Hathor, Mut, etc., these were not regarded as mere evolutions existing in and through Isis, but were figures complete in themselves and endowed with a power and activity of their own. The Egyptians did homage to each by itself, and did not think of such homage as accorded to the central deity. When they wished to worship Isis herself, they required to direct their thoughts specially to her. The primary deity always remained unchangeable, and the regular twelve transformations were brought into relation with the twelve hours of the day by choosing one of distinctiveness to the subsidiary figures, not taking from them any of their attributes or achievements.

In order that a deity might exercise his power at a particular place, he required a material body, which served him for a longer or shorter period as a vestiture or embodiment; and, by way of facilitating such material manifestation, the temples were furnished with statues or symbols which corresponded to his supposed corporeal form, and could, accordingly, be used by him at once as a place of seclusion. When such object had been animated by the spirit of the deity, it was regarded as actually the deity himself. But a material tenement of this kind was not absolutely necessary.

Thus the god of Edfu, in order to help the sun god against his enemies, assumed the form of a winged solar disk, and thereafter some portion of his divinity always inhaled in this effectual manner accordingly, because one of the most potent apotropaic symbols in the religion of Egypt, is exactly the same way statues and symbols likewise permanently retained something of the original divinity. They became separate deities, whose existence in no way interfered with the continued existence of the original deity as an integral entity, or with his capacity to become incarnate in similar fashion at another place. Here we encounter a mode of thinking which is found among many other peoples, viz. the belief that in the painted figure, or even in a mere reflexion, there inheres permanently a part of the personality of the original, though without in any way taking from the latter any portion of his individuality.

Such modes of thought explain the rise of numerous distinct forms of one and the same deity in a single locality, and also, when once he had become embodied there in various objects, their continued co-existence. The several forms were differentiated from one another either by attributes which the deity had manifested in his various emblems or by the sacred localities from which he had been derived under a certain characteristic, and at which he usually resided in a particular form. Each of these forms had a distinct individuality. They were represented side by side in long rows of statues or reliefs, or else were enumerated in extensive lists.

So far as a deity was not compelled by incantations to abide in a particular place in order to serve the purposes of the person casting the spell, the choice amongst the various available forms of incarnation lay with the deity himself. By means of certain spells, a dead man, being endowed with magical powers, could, after his resurrection to life, avail himself of existing embodiments or not, having the power to assume whatever forms he liked, as that of a bird, a serpent, a crocodile, the god Ptah, etc., and was subject to no compulsion in the matter.

What we find here is not mesmerism, but the capacity of the dead to incarnate themselves as they willed. The number of possible transformations was unlimited; but these were merely a selection of peculiarly important forms, and by no means exhaust the series. The fact that a belief in the regular twelve transformations is brought into relation with the twelve hours of the day by the selection of one of distinctiveness to the subsidiary figures, and this selection in fact attempts to reduce the forms to a scheme. But the arrangement of the religious chapters in the Book of the Dead shows no uniformity, and the forms given in that text are not exhaustive, while such a relation between forms and hours is nowhere else referred to.

The dead might also assume a human form. Thus, in the first tale of Setna, Ahura becomes incarnate in Tabubu, and Neferkaptah in an old man. In this narrative, indeed, even the pieces of a game have incarnations as the fifty-two human.
incarnation of Tabubu. 1 The same text tells us that Ahure and her child Meray lay buried in the tomb, and yet that they reposed in the tomb of the husband and father. They declare that their mummies should likewise be brought to the tomb—a desire all the more natural because the mummy was regarded as the principal form in which the dead became incarnate; it was a vesture which he could resign for life, and in which he could once more move about.

The mummy was subject to bodily needs, and the more remarkable in this respect, the more the gods depicted as conveying bread and water to it through the shaft of the tomb. 2 Of equal importance with the mummy were the statues, 3 which in the Old Kingdom were erected in the serdab, and sometimes in the chamber of worship; in later times mainly in the latter. They were sometimes given a place in the temple, 4 where, being near the gods, they could more naturally look for a share in the sacrificial gifts than in a tomb situated at a distance. In particular, statues were placed in temples by kings as marks of special distinction for men of merit. 5

The dead man, moreover, had a singular power of incarnation in relation to the relics in his tomb. When he uttered his magic formula, the incidents portrayed in the reliefs became real. He incarnated himself in his own figure, and at the same time conveyed the other persons and the animals and things depicted in the relief to the body of his followers, and to perform the actions represented. 6 To the same mode of thought belonged the notion that a magician could by means of spells change the wax figures to their living image, and vice versa.

If befuddled men could thus become incarnate in so great a variety of forms, there can be no doubt that the same capacity was assigned to the gods also, and that they, too, had figures which were figures of the forms usually or possibly assumed by the individual deities, or of the magic formula employed by them in order to assume such incarnations.

Of more importance among the forms of incarnation resorted to by the gods were the sacred animals. This idea was not indigenous to Egypt. The god-animals were originally the independent deities of the primitive inhabitants. The normally anthropomorphic and spiritually conceived deities introduced into the country during the Naqada period by the invading and conquering peoples were brought into relation with the old indigenous objects by identifying a conquering tribe that settled in a particular locality was declared to be identical with the sacred animal hitherto worshipped there, and the latter was thereby transformed into a manifestation of the former. 7 But the deity did not thereby surrender his independent existence. Thus we find, besides the Ptah incarnate in Apis, the god Ptah; and, besides the ram, the god Ammon. In these identifications of deity and animal, no attention was paid to possible differences in the distinctive properties of the associated pair, and this inherent disparity, as we might expect, permanently stood in the way of a real fusion between the primitive and the incarnate deity. Even when the similarity of the two was more marked, as in the case of the hawk of Horus and the sun-god, they still maintained a mutually independent existence. The incarnation, in fact, added a fresh and independent by-form to the deity, but the distinct individuality of the latter remained as before.

These ideas emanate directly from the Egyptian conception of what is involved in personality. Man was not in himself an integral unity, nor, by analogy, was any other existent being. Each individual existence was rather a mosaic-like complex of various severally independent constituents which merely happened to be conjoined in a particular body, but was not in its own being dependent upon that body or its continued existence. Thus, in the individual human personality there were, besides the body, the various constituents of the soul—the ba, the bs, the sbem, etc.—which, while conjoined in the man during life, first attained complete independence after death, each of them then repairing to the world beyond in order that, according to the Osirian doctrine of immortality, it might, as a result of the judgment before Osiris, be once more united with the rest in the personality so restored in the realm of the dead. In beings of a higher rank, such as kings and gods, the partition of the soul was carried still further. There they had not simply two but three and even four souls, each of and each in these the various attributes combined in the divine person were at a later date supposed to be severally incarnated. 8

A crucial instance is that of the divine embodiment of these elements is found in the idea that the divinity of the king might be detached even from himself. In this case the divine personality is figured as a man being a general resemblance to the earthly ruler, but sometimes it wears other crowns besides his, and it seldom has even the hawk's head corresponding to the hawk-soul of the Pharaoh. It receives sacrificial offerings from the king himself, and bestows upon him heavenly gifts. 9 The proper divinity of the Pharaoh is embodied in this figure, but such disembogagement of a part of the monarch's personality in no way diminishes his own actual existence. A supporting king remains in himself complete, and is in no sense merely a partial or fragmentary being.

The bs of the Pharaoh is often represented as a little-child—less frequently as a griffin—on a staff, which he holds in his hand and on which, bearing the royal bs-name on his head, and carrying the royal symbols. It sometimes appears also as the human head to the inscription of the bs-name, furnished with arms in order to hold the symbols. 10 Here the incarnation of the sc-element in a hieroglyphic expression is of a different signification. The bs-name is a prerogative of life, power, stability, etc., of the king are embodied in the hieroglyphs for ‘life,’ ‘power,’ ‘stability,’ etc., which are here fitted with arms and legs, and carry symbols of the monarch. 11

Further, attributes which seem to pure abstraction were regarded as becoming incarnate, e.g., the divine protection, which was embodied in the blood of Isis, and is represented by the knot-smulet tft. This amulet likewise is fitted with hands, 12 or, in some instances, with

a head. Similarly, incarnate forms of various senses and ideas, as taste and feeling, hearing and sight, year, eternity, infinity, joy, love and friendship, etc., are met with as deities to whom homage is paid, and who, therefore, expected to manifest an individual activity in favor of the suppliant. Of such forms the most frequent was the tree; in the life of the goddess—of which the Saat was worshipped in a number of temples as a woman with the symbol for ‘truth’ upon her head. Further, the particular truth which dwelt in a particular man or deity could become incarnate in a similar scene, and this type of truth might be eaten or drunk, while the king might offer it to the deity.

The possible co-existence of a number of individually distinct entities in one being which yet maintained an existence independent of them is seen also in a curious conception of the royal person. The Pharaoh comprised in himself the kings of Upper and of Lower Egypt, each of whom retained his own individuality. The monarch not only bore the titles and dignities that severally belonged to the two provinces, and had a double home, in the temples of each province, he also offered two distinct sacrifices, and was not in some instances and two tombs, which, as it would seem, belonged severally to the king of Upper and the king of Lower Egypt.

When first regarded as of divine origin, and even as a god. In this aspect, however, he was not merely the incarnate form of a particular deity, but was a new addition to the pantheon—once a human being born of a human mother, lived as a man amongst men, and yet could associate with the other gods on a footing of perfect equality. At death he discarded his purely human form, and was not completely to surrender his human nature. In the earlier period, he was supposed to eat the older gods, thereby acquiring their peculiar qualities, and so becoming the supreme deity. In later times the process of complete deification after death, by which he became a kind of Osiris, is not depicted in detail.

The Pharaoh owed his divine nature to his having been begotten by a god—Apollo, which is often brought clearly before us. When the procreation of a new deity had been resolved upon by the higher powers, the god Ra or Amun-Heru was born to the wife of an ordinary Egyptian king, and the queen was enthroned in the palace. He revealed to her his divine character; he loved and suffused her person, and he begot the coming ruler, and decided what his name should be. So far, however, the god had implanted in the mother only the divine element of the son, and then adorned the god Khnum with the form of the child’s body, and accordingly that deity fashioned the body of the future ruler, as also that of his ka, which was of like shape with himself, upon the potter’s wheel, while he became a god. The king, therefore, was born in the presence of, and with the aid of, various gods and goddesses.

The circumstance that, when the god begot the child, only the divine element of the latter was created enabled us to understand why occasionally not merely a single deity was impleaded in the act, but why all the gods might claim to have begotten the Pharaoh, and to exist in him. To the purely concrete mode of thought characteristic of the Egyptians such an infusion of deity could be most simply represented after the manner of a procreation. It was only in respect of this divine element, and not in respect of the whole divine personality, that the god became incarnate in the king.

That a mere particle of divinity sufficed to make the newly created king a partial incarnation and a divine person is also implied in the myth of Ra and Isis. Here Isis kneads earth with the spittle of the sun-god, and forms a serpent, which is received by the spittle, may be a source of danger to the god himself. The same idea is found in an extant legend from the XIth dynasty, in which Isis tries to secure a portion of the seed of Seth as a means of gaining power over him. In such instances the implanted particle of deity does not always carry with it the entire range of the divine nature as an incarnation in another being. Sometimes, indeed, it is only a particular attribute that is transferred in this way. Thus the man who sucks the milk of a goddess or a sacred cow absorbs thereby, not her entire divine ego, but only her inherent immortality.

The choice of the reigning monarch’s figure for the act of procreation was determined by the fact that the god, on other occasions of his intercourse as an incarnate being with the king, chose a form which corresponded externally to that of the Pharaoh then upon the throne. Inasmuch as the two homologous figures both existed at the same time, it is clear that the deity did not become incarnate in the king as a whole independent figure of similar appearance. This figure might be designated by a special name, which applied both to the deity and to the reigning king. Thus we read of the Amun of Ramses II, the Sech of Sahur, etc. When a monument, and especially a temple or chapel, was founded, not by a king, but by a private individual, the latter was, equally with the king, regarded as the creator of a new divinity. Thus, e.g., in the reign of Ramses II, worship is said to have been accorded, 1 The ka and its relation to the man have been discussed most recently—with references to earlier works—by Maspero, in Tefnion, vi. (1902) 133 ff.

2 Naville, op. cit. ii. p. 63; Gayet, op. cit. p. 66. On the life-giving frud-deities of Egypt, cf. A. Jacoby and W. Spieritz, in der Schriften, vi. (1902) 153 ff., which (1804) 485 ff., in the same way as the kernel of a nut is germinated, a related idea that frud might be generated from the slime of the Nile, Wiedemann, in OEG XIII. 1889, p. 4; cf. Wiedemann, in Schriften, xiv. (1911) 80 ff.

not only to the Ptah of Ramses himself, but also to the Ptah of a certain Menma 1.

Besides real incarnations, however, considerable interest attaches in Egypt to pseudo-incarnations. The adept in magic, when uttering his spells, frequently claimed to be a particular deity, and as such was held in awe. At the same time he threatened the powers that resisted him. 2 It need not be supposed that he actually believed himself to be the god in question, but he was at all events convinced that such a claim would make an impression upon other gods. By way of making the thing more emphatic, the adept in some cases had the name of the particular deity inscribed upon his person. From similar motives the names of Isis and Nephthys respectively were inscribed upon the bodies of the two principal female mourners who recited the dirges in mourning celebrations, and effected the resurrection of the dead person by sympathetic magic. 3 Whether in early times masks of the gods likewise were employed with a view to a more complete identification cannot be decided by the extant records, but the practice is attested in connexion with the cult of Isis in the Hellenistic period, and may well go back to earlier usage.

Again, the glorified dead 4 and the gods might assume the forms of other deities. Thus Isis took the form of a serpent; Harmachis, of a bull or other animal that was sacred to Apis, in order to reach the city of Apis un molested. 5 In this case the incarnation was effected, not in the sacred cow and the Apis bull themselves, but in figures resembling them, and so, of course, commanding a like degree of respect. The story in which Batau is said to have assumed the form of a bull with all the beautiful symbols in its body, and thus to have identified himself with the sacred bull—though it was reality it was not such 6—must be interpreted in the same way. This text also shows the vast variety of possible metamorphoses which the highest might assume in their incarnations. When the bull had been slaughtered, Batau caused two trees to arise from the drops of its blood, and in these he then took up his abode. From the trees, again, he passed, in the form of a swan, into the body of a woman. She became pregnant, and the child she brought forth was his final form of incarnation, i.e. Batau himself. In most cases a particle of the being incarnating himself was implanted in his new form. The most that he adopted, though, as we have seen, this was not absolutely necessary. But certainly the Egyptians, with their concrete habit of thought, persistently sought to invest all beings with a tangible and material form. If the gods, or the dead, or any other entities were to endure and to eviscere their power, they could do so only by means of an incarnate form.

Literature.—There is as yet no monograph on the Egyptian ideas of incarnation. Apart from the passages cited in the article, we have in modern literature nothing to fall back upon. 1 2 3

---

1 See a writing-paletine in Berlin, no. 6764. The omission of the carious and the mode of writing the name Menma show that it is not the reference here is not, as Kuno Franke, "Das berühmte Schriftenpapier der Isis und Rahotep" (1907), p. 34, would suggest; to Kung Mena, but to a private individual, perhaps that charioteer of Ramses II. of whom we read in the Ptolemaic Papyri.

4 Attested as early as the time of the Pyramid of Pepi I., in which an ethereal kind of divinity is mentioned, p. 116.

upon every Hellen. All Greek philosophers claimed to be descended from Asclepius, and so from Apollo; and on the same lines Socrates is made playfully to argue in the Euthyphro (11 C) that all sculptures were descended from Dedalus, and so from Hephaestus.

But love was not the only motive which induced divine beings to take human flesh upon them. It was anger at the gods that drove Demeter to leave the earth and incarnate herself as a woman. It was to gratify her boy, Perseus, Heracles that Hera assumed the form of an Amazon. Occasionally, however, it is the censorship of human morals that is the operating motive. Thus it was to test the insolenice of Leomedon that Apollo and Poseidon assumed the form of men; and the great Zeus himself came to earth in the likeness of a working man (Apollo, ill. 98, εκατστείρι ἁρπή γετώρ!), in order to make trial of Lycoaes and his fifty sons, who excelled all men in impiety. The same motive underlies the well-known story of Baudis and Philemon, which has been immortalized by the genius of Ovid, and we know from Herodotus (vii. 69) that the belief was entertained that the gods came to earth in the likeness of men to take note of human conduct. That is the highest moral use that is made of the idea of incarnation in pagan mythology.

The idea of divine birth appears now and then among the Greeks even in historical times. Plato, after he had achieved immortality for his writings, was proud to say that he had been the son of Apollo. He is the only philosopher who has attained the honour of a birth-story. The Spartan king Demaratus, we are told by Herodotus (vi. 69), was declared by his mother to have been the son of the hero Aetes. But there was a malicious counter-statement that the supposed hero was really the donkey-driver. Alexander the Great was believed even in his own lifetime to have been the son of Ammon; and there is a story told by Plutarch (Alex. 3) that the reason for the loss of Philip's eye was that he had peeped through the keyhole of his wife's chamber, and had seen the god in the form of a serpent entwined about her couch. The birth-story of Romulus and Remus is an echo of many similar tales in Greek mythology.

INCARNATION (Indian).—The tenet of incarnation (avatāra) is a fundamental one in medieval and modern Hindu religion as taught in the Purāṇas, the Vedānta, and the Sāṅgīma works; it is so essentially with the Vājñitutes, the greater number of whom worship either Rāma or Kṛṣṇa, the two last incarnations of Viṣṇu, not god in his proper form; the reverse holds good with Siva, who is adored as such, or under one of his various forms which cannot be properly called incarnations. We must, therefore, examine the incarnations of Viṣṇu in order to comprehend the nature of incarnation as conceived in India, and to form an idea concerning the origin and development of the complex body of beliefs on the subject.

The theory of the incarnations of Viṣṇu presupposes an idea of the nature of the world, the god incarnates himself for the purpose of protecting it. This is expressed in two most quoted verses of the Bhagavadgīti (v. 75):

"Whenever there is an increase of iniquity, then I put forth myself (in a new birth).

For the destruction of the pious and for the destruction of the evil,

For the establishment of the Law I am born in every age."

Originally, therefore, the number of these appearances or births of the Lord is regarded as indefinite; but theological speculation tended not only to fix the number of incarnations, but also to define more clearly their relation to the Supreme God. This can be seen from the account of the incarnations in the Bhagavadgīti itself.

It commences with a verse made up of the beginning and the slightly altered end of the passage from the Bhagavadgīti just quoted:

"Whenever there is a decrease of dharma, then the Lord appears for the establishment of the Law."

And it continues:

"One form of him, the best one, for ever in later and encouraging pacts (Nāsaṇa seems to be intended), the second (form) is gone to sleep on his couch, for the destruction and creation of beings, meditating on his mysterious self; who after sleeping a thousand sons becomes manifest for the purpose of smiting at the end of a thousand years, as the god of gods, the Lord of the world (Viṣṇu)." Then some of his incarnations are related, the last of which—that of Kalki—being designated as the tenth (v. 298), proves that the prophecy of his incarnations amounted to ten, as in later times. It is worthy of note that in this place the incarnations are called prakṛtivākṣaṇa, 'manifestation,' and not avatāra, which has since been termed the modern term; thus it is usual to speak of the ten avatāras of Viṣṇu. According to the common belief these are: (1) Fish, (2) Tortoise, (3) Boar, (4) Man-lion, (5) Dwar, (6) Pāsurasūri, (7) Rāma, (8) Kṛṣṇa, (9) Buddha, and (10) Kalki, whose incarnation is still to come.¹

Now, if we examine the various incarnations of Viṣṇu, we shall find that they fall into several groups. First the Vāmana, or Dwarf incarnation is a legend developed from a mythical feat of Viṣṇu frequently mentioned in the Rgveda, viz. the three strides with which he measured the three worlds. Secondly, the Kārṇa, or Tortoise, and the Varaha, or Bear, incarnations ascribable to him dochs which originally were believed to have been performed by Prajapati the Creator (see Satapatha Brahmana, vii. i. 5, 1; Tatātirya Śāstrasā, vii. ii. 42; Tatātirya Aranyak, i. 19; and Satapatha Brāhmaṇa, xiv. i. 2, 11). Prajapati is frequently represented as taking one form or other for some special purpose; in our case the reason of his being assumed to have taken the form of a tortoise is not clear, but that of a boar may have been that his primitive worship had been of a theriomorphic character, at least with some classes of the people. When Nārāyaṇa (Viṣṇu) became the Supreme God, the Creator (see Purāṇa and the Brāhmaṇa, etc.) ²

¹The incarnations (prakṛtivākṣaṇa) are said to number ten, according to Harivaṃśa (loc. cit.). They are: (1) Varaha, (2) Man-lion, (3) Dwarf, (4) Dattatreya, (5) Pāsurasūri, (6) Pārashu, (7) Kṛṣṇa, (8) Buddha, (9) Kalki, which, as stated in the text, is called the tenth. In the Skitīparvan of the Mahābhārata (coxeax, 106-1299, etc.) the following incarnations (prakṛtivākṣaṇa) are enumerated: (1) Badha, (2) Tortoise, (3) Fish, (4) Boar, (5) Dwar, (6) Varaha, (7) Rāma, (8) Kṛṣṇa, (9) Buddha, and (10) Kalki. The Bhagavadgīti (loc. cit.) speaks of the 'many births' (samsāra) of the god; the Mahābhārata, Vaisākha, vii. 387, of the thousands of his manifestations (prakṛtivākṣaṇa). Of the account in the Mārāṇā and Bhagavata Purāṇas, etc. (Orig. and Prep. Texts, B.G. 1.37-41). ²Viṣṇu's incarnations are then enumerated (Mārāṇa Purāṇa, xiv. 199-204, etc.), viz. (1) a portion of him spring from Dharmas, (2) the Narasīha, or Man-lion, and (3) the Dwar, incarnations, which are called the celestial manifestations (mahākāl), the remaining seven being those of his incarnations, or, as his in the Kuria's curse. These seven are: (4) the Dattatreya, (5) Manthārya, (6) Pāsurasūri, (7) Kṛṣṇa, (8) Dharmasya, (9) Buddha, and (10) Kalki incarnations. (Eight instead of seven) seven and eight, except with the Maratha expounder, we understand the beginning of verse 243 to refer to Kṛṣṇa. The Purāṇa gives twenty-two incarnations (i. ili. 19), viz. those in the forms of (1) Purāṇa, (2) Varaha, or the Boar, (3) Kṛṣṇa, (4) Narasīha, (5) Kapila, (6) Dattatreya, (7) Kṛṣṇa, (8) Rāma, (9) Kṛṣṇa, (10) Varaha, (11) Kṛṣṇa, Rāma, or the Boar, (12) Kṛṣṇa, or the Tortoise, (13) Kṛṣṇa, or the Dwar, (14) Kṛṣṇa, or the Pāsurasūri, (15) Vāmana, or the Dwarf, (16) Purāṇa, (17) Yedaśya, (18) Dharmasya, (19) Kṛṣṇa, and (20) Kalki. The last two are represented as the exterminators of the incarnations (avatāra) of Viṣṇu are immemorial, like the riverine trees sawing an incalculable length of time, Mārāṇa gods, sons of Marus, Prajapatis are all portions of him. ³
and Lord of the world, he stepped into the place of Prajapati, the Creator in the period of the Brāhmaṇas, and the deeds of Prajapati were transferred to Viṣṇu. In this class of incarnations we may reckon, besides the Tortoise and Boar incarnations (which are the two Fish, incarnation, which refers to the legend of Manu's being saved by a fish during the Deluge; for that fish, according to the later version of the story in the Agni Purāṇa, reveals himself as the Boar incarnation), the Man-lion, stands by itself, or might be ranged with the Dwarf incarnation; it refers to a popular legend of Viṣṇu killing, in the form of a Man-lion, the demon Hiranyakashipa—a legend which is once alluded to in the Vedic literature, viz. Taśṭhillikā Aranyaka, X. i. 6.

The remaining three incarnations, viz. those of Parāśurāma, of Rāma Dasaśarmā, and of Kṛṣṇa, have this in common, that those heroes had originally no connexion with Viṣṇu. The story of Parāśurāma, as told in the Mahābhārata (III. 115 ff., X. 40), has no reference to Viṣṇu, but the first book of the Rāmāyaṇa, which is a later addition to that epic, contains a story more histrionic than the other, i.e., the story on which the hero was in possession of Viṣṇu's bow and met the young Rāma, so that he could eagerly subdue him; but the latter, who had already broken Siva's bow, now bent Viṣṇu's bow and subdued Parāśurāma. This story, apparently a late addition, is by no means the legendary tradition that holds Rāma are incarnations of Viṣṇu, since then the god would humiliate himself by fighting with another god and losing. It appears that Parāśurāma had, in popular tales, been brought into some connexion with Viṣṇu; and this circumstance, together with the name Rāma, which he shares with the seven famous Man-lion incarnations of Viṣṇu, may have facilitated his reception in the series of incarnations of that god. He was recognized as such at the time of the redaction of the present text of the Mahābhārata (see note on p. 1209), and thus in the introduction of his story there (III. 115) a confused passage is included (v. 30-40) in order to make allowance for the current belief.

The incarnations with which we have dealt seem merely to have been set up by theological speculators rather than to have constituted part of a general and popular belief. It is different, however, with the two next incarnations, those of Rāma and Kṛṣṇa. They are the only ones which have any practical importance in the religion of India; for, as stated above, their worshippers form a considerable part of the Hindus and the great majority of Viṣṇu-worshippers. Hence it will be necessary to enter into more details with regard to these two avatāras. According to the unanimous belief of the Hindus, Rāma came long before Kṛṣṇa, the former at the end of the Treta, the latter at the end of the Dvāpara Yuga. The reason of this belief is, no doubt, the fact that the Rāmāyaṇa, which celebrates the life and deeds of Rāma, does not mention Kṛṣṇa, while, on the other hand, the Mahābhārata, in which Kṛṣṇa plays a most important part, not only frequently mentions Rāma and the other heroes of the Rāmāyaṇa as belonging to a past age, but also relates his adventure in a lengthy episode (Bāmeśpāñkhāyaṇa).

In the case of Rāma we seem to watch an incarnation in the making, for in the original parts of the Rāmāyaṇa, viz. bks. ii.-vi., the poet regards his hero as essentially human, and seems entirely to have left the godly side of him out of sight. The latter, however, is fully acknowledged in bks. i. and vii., which by common consent of all critics are declared to be later additions. Therefore between the composition of the original work and the addition of these later parts the belief that Rāma is an incarnation of Viṣṇu must have arisen and have gained universal assent. Before that time Rāma had been an epic hero, but the Rāmāyaṇa, without making him in any way less a human being, has made him immensely popular. Since the poet has described him as the best of men, the most dutiful son and loving husband, as possessed of every virtue, in short, as a model of morality, he became the favourite of the people at large and so the subject of veneration. There is still another cause for Rāma's promotion to divine rank. His adventures are of such a wonderful character that he certainly appears more than a common mortal; he associates with superhuman beings represented as monkeys and bears, he undertakes an expedition against Lanka over one hundred yojanas of sea, fights and vanquishes the demon race of the Hīkṣṇas, etc. Thus it is not difficult to imagine that the epic hero became a popular god, and that in order to account for his divine dignity, notwithstanding his human character, he came to be regarded as one of the divisions of the highest god—as an incarnation of Viṣṇu.

This belief has a popular as well as a speculative side. The latter is determined by the ideas about Brahmā, the creator god, and by the identification of Rāma with the Navārāṇī. It is the belief that viṣṇu-vanquishes all of the seven famous Man-lion incarnations of Viṣṇu, may have facilitated his reception in the series of incarnations of that god. He was recognized as such at the time of the redaction of the present text of the Mahābhārata (see note on p. 1209), and thus in the introduction of his story there (III. 115) a confused passage is included (v. 30-40) in order to make allowance for the current belief.

The godly side of the belief in the incarnation of Viṣṇu is to some extent founded on that god's popular character as destroyer of demons (dā ṣīvyā); Viṣṇu vanquishes all of the seven famous Man-lion incarnations of Viṣṇu, may have facilitated his reception in the series of incarnations of that god. He was recognized as such at the time of the redaction of the present text of the Mahābhārata (see note on p. 1209), and thus in the introduction of his story there (III. 115) a confused passage is included (v. 30-40) in order to make allowance for the current belief.

The function, ascribed to some minor deity, becomes the bond that connects him with Viṣṇu in popular opinion. The idea of manifestation is here carried beyond the grasp of the mind of the people; they required a more matter link between the god and his incarnation. In fables and epic poetry the connexion of a hero with a god is usually accounted for by a myth relating how the god begets the hero in question with some giri or womán; the hero is the offspring of the god. This relation did perhaps savour of illegitimacy; at any rate, it was not assumed in the case of the highest god and his manifestations, but was replaced by one of a mere mystical character. The story about Viṣṇu's incarnation in Rāma is told in the Rāmāyaṇa, i. 15 ff.

The gods complain to Brahmā about the oppression and violence of the Kālikas Bāvāka, on whom he had conferred the boon that he could not be killed by a god. He was slain by a man, Viṣṇu consents to be born as such in the persons of the four sons of King Dasaratha by his three wives. When that king celebrated his birthday, and sacrificed to the gods, Viṣṇu appears in the sacrificial fire and gives Dasaratha a big vessel filled with divine sacrificial food (jaṭāyus) which he enjoins him to divide among his wives. Kāralīphe goes half of the portion, and Nārāyaṇa and Kauśika the remaining part, but in unequal portions. In due time all the three queens are delivered of sons, Kāralīphe of Rāma, Nārāyaṇa of Lakṣmana and Nārāyaṇa, and Kauśika of Sītā. In accordance with this story, the incarnation of Viṣṇu is not of the same degree in all four sons; but his essence is present to a greater degree in Rāma than in his brothers. Probably Rāma alone was originally considered an incarnation, and his brothers were only later, through their connexion with him, regarded as partial incarnations. By a similar process the wife of Rāma, Sītā, came to be regarded as an incarnation. The gods, however, are apparently

1 In the original story on which Viṣṇu based his epic, the character of Rāma is much less prominent than in the present; the original poem Rāma had been asserted to be Nārāyaṇa, no such passage as the above occurs in the original, but it would be surprising if the author of the original work had deferred till the end mention of the fact that the hero is no other than the highest god. It may be noted that the whole of this passage in this epic is which we meet with a name of Kṛṣṇa.

2 The same story is told in different Purāṇas and other works; but there is no agreement regarding the proportion of the several parts of the passage given to the four sons of Viṣṇu's wife.

the outcome of theological speculations, not of popular belief.

The remarkable change in Rama's position from an epic hero to an incarnation of Visnu, which, as stated above, took place between the redaction of the original Ramayana and the addition of the first and last books, does not appear to be the result of a slow development of religious ideas, but seems to have been caused by the application to him of a theory of incarnation already fully established. In other words, it is not likely that the theory of incarnation was first suggested by the story of Rama; in all probability there was already another similar incarnation of Visnu acknowledged by the people of India. This must have been his incarnation as Kršna, since the preceding incarnations, as appears from our remarks on them, seem to have had little importance as far as popular religion was concerned. In the opinion of the present writer, the widespread worship of Kršna as a tribal hero and demi-god, and his subsequent identification with Nārāyana, the Supreme Lord of creation in that period, gave birth to the theory of incarnation, not as a philosophical speculation of learned mythologists and theologians, but as the great principle pervading and upholding a popular religion. The recognition of Visnu in this sense prevailed in India probably centuries before the beginning of our era, while Rāmāyaṇa, so popular from the 10th cent. A.D. downwards, is a comparatively late development. The incarnation of Kršna is, therefore, the most important one for the elucidation of the problem under discussion—the origin and the development of the theory of incarnation.

The identity of Kršna and Viṣṇu (or Nārāyana) is generally acknowledged in the principal sources of the history of his life and deeds, viz., the Mahābhārata, Harivamsa, and the Purāṇas. References to him in the literature which precedes the redaction of our text of the Mahābhārata are few and short; but they are of the highest interest, and therefore deserve to be examined with great care. In these ancient allusions to Kršna we must distinguish between the names Vāsudeva and Kršna, though in historical times they denote the same person. Vāsudeva is mentioned first in the Taittirīya Aryanukta, X. 1. 6, as a god together with Nārāyana and Viṣṇu, apparently as mystically connected with the worship of the bull. The text next meets us with this name in Pāpīni, IV. iii. 98, where the word of the śloka and the context in which it stands indicate that Pāpīni regarded him not as a Rājput, but as one of the three prominent gods of his time.2

Kršna's name occurs first in the Chidāṃsakya Upanishad, III. xvii. 6, where it is said that Gbharāṅgira imparted a particular piece of secret knowledge to Kršna, the son of Devaki. Here, then, Kršna is still regarded as a man and not as a god. But in a verse quoted in two late Upaniṣads, the Nārāyaṇāthasavitaras and the Atmahodaka Upaniṣad, he, the son of Devaki, is mentioned together with Madhumādana (= Viṣṇu) as having the attribute brhmāṃya; whatever that word meant in this connexion, it is evident that the son of Devaki is here regarded as equal to Viṣṇu, or at least as his equal. The testimony advanced seems to warrant the assumption that when the Vedic period drew towards its end, Vāsudeva was considered an equal of Nārāyana and Viṣṇu, but that Kršna, the son of Devaki, was still regarded in the same way.

The question, then, is this: did Pāpīni not regard Vāsudeva as a Kṣaṇini in the usual sense of the word, since he then would fall under the rule in the next section of the text? Vāsudeva, according to Pāpīni's own rule (cf. III. 55), according to which Arjuna should be regarded as a Kṣaṇini, is an old man, and the invention of the word, if the order in the compound was apparently occupied by Pāpīni's own, is unlikely. Vāsudeva, according to Arjuna, abhīṣṇa, though the rule which assigns the first place to the last member of a compound abhīṣṇa was first given by Kṛśṇa, his successor (cf. III. 24, śūrti 4).

the Vedic period as a wise man inquiring into the highest truth, and only at some later time was he put on an equality with Viṣṇu. We conclude that Vāsudeva, the god, and Kršna, the sage, were originally different from one another, and only afterwards became, by a syncretism of beliefs, one deity, thus giving rise to or bringing to perfection, a theory of incarnation.

Vāsudeva is unanimously explained by all Indian writers as a patrónymic of Vāsudeva, his father according to the epic narrative, but Baladeva, who is likewise reputed a son of Vāsudeva, is never called Vāsudeva. Besides, an old variant of Vāsudeva, noticed by lexicographers and used by Bṛhaspati in the Daśāstvya, v. 6, is Vāsuvhādra, a form which recalls the name of another popular deity, Manibhadra, king of the Yaksas.

Now, as Manibhadra is also spelt Manibhadra (Manibhadra in Jaina-prakrit), and Nārāyaṇa Nārāyaṇa, by an inerter also in the first syllable, so Vāsudeva and Vāsuvhādra seem to have been forms, perhaps popular, of Vāsudeva and Vāsuvhādra—names directly derived from sanskrit, denoting either 'wealth, riches, the gods of that name. If this etymology of Vāsudeva is right, we must assume that the story of his being the son of a knight Vāsudeva and the name of his father have been developed from his very name. But in support of this opinion it may be said that the oldest tradition does not mention Kršna's father, but his mother, calling him the son of Devaki.

If the narrative of Kršna is more closely examined, we find indications that two different persons, a god and a man, are combined in him. For the story seems naturally divided into two distinctive parts: the first, according to the life among the cowherds as foster-child of Nandā; and the second, covering the rest of his life, relates his adventures as the leader of the clan of the Viṣṇus, and his alliance with the Pandavas, especially with Arjuna. In the former part it is easy to recognize him as a cowherd-god (Gowinta, the cow-herder), and in the latter, as a Rājput hero. As infant, child, and youth, he worked many wonders, destroying demons and chariot, and mostly in company with Baladeva, his brother, who is also called Rāma and Bāhāra, 'he with the plough,' or Bahlukas, 'he with the weapon, his plough.' Now, Baladeva too was a popular god—husbandman, as his plough proves. He is called Bahluka, the son of Rohini, but the story is that he was conceived by Devaki and afterwards transferred to the womb of Rohini.3 This story is apparently invented in order to make his brother of Kršna; probably the two names Gowinta-Vāsudeva and Baladeva4 were closely connected, and, after the former was identified with the tribal god, the latter came to be regarded as his brother. They are always found together till Kršna has slain Karna and placed Gandiva on the throne of Mathura. Henceforth he appears as the tribal god of the Yadavas; he is their leader in all important events in their history, he defends their country from their enemies, and when resistance seems hopeless he leads the tribe of the Yadavas to the shore of the western ocean; there he builds Dwārakā, the new capital of the Yadavas. He enters into an alliance with the Pandavas, and with their help overcomes his great enemy Jarasandha, king of Mekhaṇa; and as a child, the latter's general Śatāsikha, king of Āchala. He took part in the tribal feasts of the Yadavas, and at last witnessed their ruin and the destruction of Dwārakā. His death was occasioned by the hunter Jaraś (old age), who mistook him for an antelope and pierced his foot with an arrow. The most outstanding characteristic of this story seems to prove that it has been the subject of an epic or a cycle of epic songs. This epic must have been current among the Yadavas, the Bhājaj race which revered Kršna as its tribal hero: and, as the numerous clans of the Yadavas were settled in Northern India, the assumed epic must have had a wide circulation. The original, if ever they were written down, have been lost, but the matter they contained has been preserved in the Bhājaj poems and some Purāṇas. Their great popularity in so large a part of India seems to have been the cause either of it having, by an epic syncretism to be observed in other literature, been introduced into the national epic of the Bhājaj, where he appears as the friend and counselor of the Pandavas.

Now in the Mahābhārata, the Harivamsa, and the Purāṇas the poets take every opportunity of

1 Taittirīya Aranyaka, x. 1. 7.
2 A similar transfer of an embryo is told by the śvetāśrama Jaina of Mahāvīra, who was born from the womb of Devasiniva to that of Tritakī.
3 Notice the similarity of the names Vāsudeva and Baladeva, and of their variants Vāsuvhādra and Balabhadra.
INCARNATION (Indian)

...as the highest god is that of the Pāścharastras or Bāhuvaras. The oldest account of it is contained in the Nārāyaṇya section of the Mahābhārata (xii. 334-351).

There the Pāścharastra is represented as an independent religion professed by a section of the Śāvetu and Sāvāta religion (cvi. viii. 53, 54, 55); and Vasu Upanishads, who was a follower of that religion, is spoken of as having the same title as the Śāvetu god according to the Sāvāta manner (vi. 12) which was revealed in the beginning of the Sun (vi. cxxix. 19, 54).

It appears from the above quotations that the new religion was not a tribal religion confessed by the Śāvetas. Now, the Sāvātas are an important section of the Yādava race; thus we see that the religion which recognised Kṛṣṇa as the Supreme God was originated in that race to which Kṛṣṇa belonged. On this supposition we can understand that Vasudeva-Kṛṣṇa is not found in the落到阿甘 or the early Buddhist writings; for these works belong to Eastern India and the home of the Yādavas was Northern and Western India. (3) Some indications of the character of the religion professed by Kṛṣṇa may be found in the Mahābhārata Upanīṣads. There (vi. 10) the human life is described under the form of a तोमा-sacrifice, the natural functions—eating, drinking, etc.—are interpreted as elements of the sacrifice, and the cardinal virtues as the reward (जित्यांत). Then the text goes on:

This theory seems scarcely tenable for a very weighty reason: the deeds and adventures of Kṛṣṇa related by the authors of the great epic and the Purāṇas are essentially those of a warrior and a Rājput chief, and these are none which show him in the light of a founder of a religion. All that may safely be conceded, as a surmise, is that this Rājput chief, like some other kings of Upanīṣad renown, took a great interest in the highest theological questions, and thus gave an impetus to the formation of a new religion. Bhandarkar proposes an alternative theory:

"Or, perhaps, it is possible that Vasudeva was a famous prince of the Śāvarta race and on his death was divinised and worshiped by his clan; and a body of doctrines grew up in connexion with that divinity and the religion spread from clan to other clanes of the Indian people."

This theory is, in the opinion of the present writer, more probable than the former, but it requires some alteration. We must keep in mind three significant points. (1) Vasudeva seems to have been regarded originally as a god and as descended from Kṛṣṇa; for, besides the general reasons adduced above, there is an interesting story related in the Sabhāparvan of the Mahābhārata (i. 14) in connexion with the history of Jāraśaadha, Pāndavas, king of the Bāghas, Pūrṇaras, and Kṛṣṇa, pretended and was believed to be Puru-śottama (i.e. Viṣṇu); he was known under the name Vasudeva, and had assumed the emblems of Kṛṣṇa. In the Harivasistha and several Purāṇas, his conflict with and destruction by Kṛṣṇa are related at some length. Now, whatever facts, if any, may underlie this legend, it is obvious that it could not have been invented unless at that time the dignity of Vasudeva was not thought inseparable from the person of Kṛṣṇa; or, in other words, Vasudeva was still regarded as an independent deity, probably a form of Viṣṇu. (2) A religious sect was formed on the worship of Vasudeva-Kṛṣṇa. (3) A good account of the opinions put forward by various writers on this problem is given by Richard Garbe in the introduction to his Grammar of the Upanīṣads (1887). He will find there the references to the original papers.

to the earth and entering the womb of Devaki, the black hair was born as Kṛṣṇa, and the white one as Baladeva. This Kṛṣṇa
names the Kṛṣṇa, 'black,' and Kaliya, facetiously describes him as 'black snake.' It is accounted, moreover, for Kṛṣṇa
being of dark colour and Baladeva light. It is to be noted that the same Vṛṣṇi family is also an incarnation of Viṣṇu, though
he is generally declared to be an incarnation of Śeṣa, the snake.

As has already been mentioned, the incarnations of Nārāyaṇa seem originally to have been termed 'manifestations' (prādūrbhāvam), whereby it is indicated that the god continued to exist in his
true form though at the same time he manifested himself in a term chosen for a particular purpose. However, instead of prādūrbhāvam, another term has become current, viz. avatāra, literally 'descending.' It was imagined that a part of the deity descended from heaven and took bodily form as a man, etc., or was born as such; we find also the word anātavatāra, 'partial incarnation,' and even
anātavatāvakāra, 'incarnation by a part of a part.'

These terms were probably originated by a somewhat
materialistic conception of the process of incarnation, evidenced also in the case of the four sons
of Daśaratha. The orthodox opinion in the case of these sons, however, denies that the Supreme
Deity is not wholly present in him. What the orthodox opinion was will be seen from the following
extract from a commentary on the Viṣṇu Purāṇa which we transcribe from Mār. Orig. Śr. Texts, iv. 228:

"Pūraṇottama is here figuratively said to have become incarnate
with a portion of a portion of himself, because the Kṛṣṇa
incarnation is manifested in a corporeal body in a very cIRCumscribed form of a man, and not because of
any diminution in his form. Even Kṛṣṇa and the other incarna-
tions he is said to have shown himself in every possible form,
and to have possessed all divine power, and so forth. But it is
referred to the whole of a whole containing parts, there is a
degree of power, [in that whole], and that thus the inferiority of power will attach to the portion rela-
tively to the whole, just as when a heap of grain, or any other
such whole, is divided. I answer, No; since such a diminution does not occur in him whose nature is light; for though there is a seeming difference in the individually of one lamp, and of another lamp deprived from it, yet as the identity of a power is perceived in each; agreeably to the text from the Veda, "...That is full, and this a full: a full arises out of a full: if a full be
taken from a full, a full remains;" and also agreeably to such
texts as this, "The Supreme Brahmā with the form, and with
the characteristics, of a man, is a great mystery; but Kṛṣṇa
is the lord of the earth." And the employment of the term "hairs to the world." My hairs shall descend to the earth," and "My
hairs are Kṛṣṇa," etc., are intended to signify that the task of
removing the earth's burdens was such as Brahmā in all his
pressed into his divine service whereby, and not to deny
assert to assert that the two hairs were identical with [Balāaraṇa and
Kṛṣṇa]. Since, however, not being conscious spirits or su-
momiting the bodies of these two persons, could not fulfill their
task. If it be said that the lord occupying the bodies of Balāaraṇa
and Kṛṣṇa must be different, the whole complexion of the
hairs, will do so and we, reply, "Yes; for there is no differ-
ce in the result, and hence be himself said; I (shall)
be born) on the eighth night of the dark fortnight of the moon."

It remains to notice the application of the incar-
nation theory to other gods besides Viṣṇu-Nārāyaṇa.
We may exclude as alien to the present subject the various
forms under which Śiva is adored as Rudra, Braha, Mahākāla, Anāhāra, etc., and the worship
of his spouse as Gaurī, Pārvatī, Dēvi, Vīndhyāvasini, Ādamnanda, etc.; for these are not
limited and successive manifestations of the deity, as in the case of Viṣṇu’s avatāras, but they may
be said to be co-existent with each other. Different
from them are those avatāra or avatāvakāra of many
gods which are acknowledged in epic or classical
works, and are intended to establish a connection
between a person, famous in mythic or legendary
history, and some god or goddess. In original
everywhere, many of the heroes are supposed to be sons of a god. Thus, in the
Rāmāyaṇa, Hanumān is the son of the Wind-god,
Vāt of Indra, Sugrīva of Śrīra, etc., and in the Mahābhārata Bhima is the son of the Wind-god,
Arjuna of Indra, Karna of Śrīra, Yudhīśhvara of Dīhan, Nakula and Sahadeva of the Āśvins, etc. The
same view still prevails in the first book of the
Rāmāyaṇa (ch. 17) where Brahmā exhorts the gods
to beget sons with nymphs and demi-gods to be sons who as monkeys and bears will be the helpers
of Rāma in his strife with Rāvaṇa. In the Mahā-
bhārata (i. 67, xv. 31), on the contrary, all the
heroes of the epic are declared to be partial incarna-
tions of gods, demi-gods, demi-goddesses, etc. Here it is obvious that the idea of incarnation
becomes mixed with that of re-birth; for only the
latter could apply to the two last named categories.
It may be mentioned that something similar holds
good also in the fully developed theory of Viṣṇu’s
avatāra; for the demon Hīranyakasipu, whom
Viṣṇu slays as Nātha, is born again as Rāvaṇa,
and for a third time as Siṅgala, to be killed by
Kṛṣṇa. But in the case of gods we have true
avatāras, and, in this part of the epic, partial
incarnation is substituted for the original parental;
in some cases, however, opinions differed. Thus
Arjuna is the son of Indra, and should, therefore,
also be an avatāra of Indra, and so he is called in a
passage of the Harivanci (v. 3047); but in the
Mahābhārata he is considered an avatāra of Nāra. The
reason for this opinion, according to one school,
is that he is associated with Kṛṣṇa, and, as the latter is
an incarnation of Nārāyaṇa, who is also named together with Nāra, Kṛṣṇa’s friend was regarded
as an incarnation of Nāra. For a similar reason,
Bāladeva is occasionally regarded as an incarnation
of Viṣṇu, because his brother Kṛṣṇa is one; but usually
he is regarded as an incarnation of the snake-god Śeṣa.

This theory of avatāra has become very popular,
and is being applied in many cases even now. When
a local saint has a proper shrine where he is
worshipped, and his fame continues to increase, a
god is said to be fabricated which declares him an
avatāra of some god or sī. A similar
notion of avatāra is also frequently met with in Sanskrit and Prakrit tales; a hero or heroine of
the tale is declared to be an avatāra of a Gān-
dhara, Vidyādhar, Àparna, etc., in the sense that
the latter has been born as a man or woman on
earth, usually by a curse of some higher god whose
displeasure he or she has incurred, and will resume his
divine state when the cause of the punishment is over.
Finally, the notion of incarnation has occasioned a frequent metaphor in Sanskrit;
a man may be called an avatāra of Kāma, of a girl of Bahī, just as one says that he is an Apollo, or a woman that she is a Vēnas.
Such expressions prove how deeply rooted the idea of
incarnation is in the Indian mind.

LITERATURE.—The necessary references have been given in
the article. The subject has not been treated systematically before.

HERMANN JACOBI.

INCARNATION (Muslim).—Among the Muslims an interesting development of belief in incar-
nation occurred, though it is confined to the Shi‘ites
or Persian section of Islam and is in no sense
Semitic. The details of the belief have varied with
different sects and individuals; but its general
out-
line is clear. It arose out of the fact that Ali,
whose Muhammad desired as his successor, was set
aside by the leaders at Medina until after Abū Bakr, 'Umar,' and 'Uthman had occupied the posi-
tion of Khalif and out of the further fact that Ali
was assassinated in A.D. 669 by a Kharājite dagger.
Abū Bakr, his elder son, died of poison nine years
later, while al-Rusin, the younger, perished at the battle of Kerbel in 680. Since these events led the followers of 'Ali in Persia to regard
him and his sons as semi-divine, or even as
incarnations of God. Thus the Shi‘ites, who are called
ghulām or gholūl (‘ultras) or ‘Ali-ulīl (‘ ultras)

INCARNATION (Parasi).—Incarnation in the proper sense of the term has no place in the religion of the Avesta ('the incarnation of Ahura Mazda' not being a proper designation of Zarathustra [R. Edulji Dasoor, A True Zarathushtra Guide, Bombay, 1913, p. 1823], but the conception of the king's sacred endowment, or 'holiness' (see art. Holiness [General and Primitive]), in virtue of the somewhat vague personification of its supernatural efficacy, developed into something in the nature of incarnation. This khoravanah was the mysterious element which made the gods (Yt. xiv. 2, xvii. 15, v. 89, x. 141; Nac. iii. 9, 11; Nac. i. 1) and the souls of the dead (Yt. xiii. 9, 11, 14-16; Yt. ix. 4) powerful (Yt. xiv. 9) and worthy of worship; which gave the sun (Yt. vii. 1), the moon (Yt. vii. 5), the stars (Yt. viii. 1), the pre-eminent star, Sirius (Yt. vii. 20), the river, the ocean, the sea, the water (Yt. viii. 3, xiii. 65; Yt. xviii. 11, 21) their beneficent influences; which protected the house (Yt. ix. 7, 7) and the nation (Yt. xiv. 64, 65, v. 27), which, as the 'Aryan glory' (Sir. ix. 9), gave the 'glory of the Aryans' (Yt. v. 42; Sir. i. 25), bestowed wealth upon the Aryans, i.e. the Iranians (Yt. xviii. 1), endowed men with vigour and wisdom, with the power of overcoming the natural inclination of the heart and of avarice (Yt. v. 56; Sir. v. 26), and so forth. In the end, however, this kind of 'glory' is regarded as abstract (Yt. v. 36; Sir. ii. 8); it is also the soil of the Soma-plant (Yt. vii. 5; cf. iii. 7). In the Avesta, however, the 'glory' is identified with the name of the god (Yt. vii. 5; cf. ii. 8; Yt. ix. 7, 7). It is, however, compared with the song of a bird (Yt. xiv. 34 f.); it swims and hides in the sea (Yt. v. 42, xiv. 50 f.); it sojourns in reeds and in milk (Bund. xxxvi. 20); in the form of an animal it accompanies the Chosen. 1

The khoravanah of the Kavi dynasty was of a special and distinct type; here the 'Kavi khoravanah' becomes the 'king's glory' (Xt. i. 14; Yt. vii. 21, xiv. 9, 69 f.). It was in virtue of this Kavi glory that the world-rulers of that dynasty acquired their title to their position, and their ability to perform their exploits. Now, as this power-substance manifested itself as a deity, and was invoked and worshipped as such (Yt. xviii. 7 f.; Sir. ii. 9), we may speak of it in this aspect in some sense as an incarnation. The line of the Eloit, the men inspired and possessed by the khoravanah, begins with Hsiaoyian (Yt. xiv. 29), and is continued through Takhuma Urupi to Yima, the ruler of the blissful primal age (31). When once, in foolish arrogance, Yima spoke the word, the power-substance broke forth from him thrice (Yt. xiv. 34, viz., 'glory, as priestly glory, warrior

1 According to the Kāraṇdām, 41ff., and the Sāh-ñāmā (E. G. Browne, The Literary History of Persia, London, 1909, i. 137, 145), "a very large and mighty man" caught up Ardashir and rode beside him on his horse, the fine man being the royal glory."
INCARNATION (Semitic).—One cannot expect to find among the ancient Semites a doctrine of incarnation as the term is ordinarily understood in modern theology. The doctrine presupposes a reasoned conception of the universe, in which the natural and the supernatural, or the divine and human, are set over against one another. The Semites were too primitive in their thought to have made such a distinction. In the period in which their religious ideas took shape they conceived that gods, men, and animals formed a single society, and even plants were sometimes thought to have a connexion with this society. One might, accordingly, expect divine potency to manifest itself in men, animals, and trees. Such a stage of thought is preparatory to that in which real incarnation, and that is to say the process of taking flesh; it is itself too primitive. The Semites did not approach the later conception of incarnation until they came under the influence of the philosophical Greeks. Then their thoughts were coloured by their earlier and less philosophical views.

1. Rocks, springs, and trees. — In its earliest form their thought pictured the manifestation of the divine as exhibited in springs of water, trees, and eres of natural rock. This was, of course, not incarnation, but materialization, or rather the recognition of a divine power as resident in these material forms. It is not really materialization, for they had never conceived the gods as pure spirits separated from these things. Survivals of this stage of thought are seen at the present day in the East, where Moslems hang personal offerings on springs and trees.

2. Animals. — A closer approximation to incarnation was the conception of gods as living in animal forms. This stratum of thought is exhibited in its greatest perfection in Egypt (see Egypt), and in its most degraded form among the Egyptians of modern times. The supposed animals of Egypt were at the beginning but the totems of the originally distinct tribes, and what the ultimate explanation of totemism may be is not yet clear. 1

3. Descent from gods. — It is possible incarnation of a god in human flesh appears to have given rise to two different conceptions. The Semitic conceptions refer to gods; these are the descent of men from gods, and the deification of certain men. Of these two conceptions the former seems to be the older. In Gn 2:9 God is said to have breathed into man's nostrils the breath of life, and man became a living soul. This implies that man has a kind of kinship to God. In one of the Babylonian myths of Ummes it is said that he mingled his own blood with the soil and thus made man. This myth expresses in this way the sense of man's kinship to the divine which Gn 2:9 expressed. In Gn 6:4 the conception of a divine order (ḥad hēlākalā) married human wives, and that the issue of such marriages consisted of the heroes and men of renown of olden time. This is a recognition of a divine element in men of unusual or heroic qualities. The Babylonian Adapa, a man of unusual wisdom, is called a son of the god Ea. 2

The view that unusual persons were god-begotten was undoubtedly universal in the early Semitic world. It lingered in an attenuated form down to the beginning of the Christian era. Philo Judaeus declares that Zipporah was found by Moses pregnant by no mortal; 3 Isaac was "the result of generation, but the shaping of the unbegotten"; 4 Samuel was "born of a human mother who became pregnant after receiving divine seed"; 5 Tamar was "pregnant through divine seed." 6 It is possible that in the mind of Philo there was no thought of setting aside the

human father. He may have thought that the divine life-giving power of God was manifested through Abraham and Ishmael, whose language with reference to Zipporah is, however, hardly open to that construction. But, whether he thought of the human father as an agent in these births or not, it is clear that the older conception lived in some form in his mind.

At least as old as this conception is the idea that whole tribes are of divine descent. Thus the Mayans are called the sons and daughters of Chemos (Nu 21:9). Jeremiah (24:5) speaks of the名称 of the Hebrew Semites generally claimed descent from their gods; and, since these gods were represented by idols, he sarcastically refers to them as ‘a tree and a stone.’ Virgil (Aen. i. 729 f.) by the phrase ‘Belus et omnes a Belo’ describes the Tyrians as claiming descent from Bel. As pointed out above, the Arabian tribes who claimed descent from animals probably in reality claimed descent from gods.

This more general conception, that whole tribes were descended from gods, is further removed from what we understand by incarnation than the conception that heroes or eminent persons are god-begotten. The ordinary plane of human life is too commonplace for early men, who are as yet unable to distinguish the spiritual from the material, or to have any strong realization of that which is immortal. It was the more effective because opposed to the general customs of Babylonian thinking.

LITERATURE.—This has been fully cited in the footnotes.

GEORGE A. BARTON.

INCARNATION (Tibetan).—The theory of incarnation attains its most extreme development in Tibet. It is utilized there not merely in the usual Buddhist and Hindu way to explain the re-incarnations which are accepted by the individual, but also as a practical method of regulating the succession to the hierarchy, and even to postulate the perpetual incarnation of Buddhist gods within the bodies of the Grand Lamas.

The theory of hieratical succession by re-incarnation appears to have been introduced by the first of the series of Dalai Lats, called Geden-dup (4 A.D. 1479), the successor of Tsokhangpa who founded the now dominant Yellow-hat sect, the Ge-lug-pa. It seems to have been a device, on quasi-Buddhist principles, to secure stability for the succession, by providing for it against the intrigues of rival party leaders. It assumes the continuous succession to the headship by the same individual under an uninterrupted series of consecutive re-incarnations. This obviously differs from the orthodox Buddhist conception of re-incarnation of an individual, which is not confined to any one particular channel. It supposes that the deceased head Lama is always re-born as a child within the country and often in the neighbourhood of the monastery, and the infant is to be discovered by cranial means and then duly installed in the vacant chair. On his death, he is similarly re-born, and so the process is repeated ad infinitum.

At first this system of selection appears to have been restricted solely to the Dalai Lamas of Lhasa; but about A.D. 1602 it was extended by the then Dalai Lama to the newly formed province of Tashihunpo, and now it has been adopted by nearly all the great monasteries throughout Tibet, China, and Mongolia. It gives opportunities for much intrigue; and China as the monarch of Tibet has found it necessary politically to take an active part in controlling the ‘re-incarnation’ of the Dalai Lamas, the temporal sovereign of the country. In A.D. 1703, China prescribed for the selection of this priest-king a lottery-scheme called the ‘oracle of the urn,’ by which the names of the competing infants are written on slips of paper and put into a golden urn, and, after prayer and other rites, the name first drawn is the fortunate one. The official directions for the working of this scheme are notified in a Chinese imperial edict of A.D. 1808 engraved on stone slabs at the door of the great temple of Lhasa and translated by the present writer. It is a long document, and states near its beginning:

On the passing away of the Lama the individual born in his stead is called ‘the incarnation of the historic emperor’ (Soyud-son), which in Chinese is called ‘Son-sun,’ meaning ‘the accepted and undoubted individual (re-)incarnation.’

The lottery takes place in the immediate presence of the Chinese ambassador, the Amban, and it is also prescribed for the other three Grand Lamas of the Yellow-hat Church, namely at Tashihunpo,
INSECKS.—The custom of burning sweet-smelling substances to focus attention, sometimes as a separate rite, is wide of spread occurrence, especially in the higher religions.

1. Kinds of incense.—While frankincense and other gum resins are more strictly to be called incense, many other substances have been used for the purpose of producing an agreeable odour when burned—various kinds of wood or bark, branches, leaves, flowers, fruits, aromatic plants, seeds, gums, resins, aromatic earths, etc.

Of substances referred to in the Bible which are known to have been used as incense, the following are recorded:

The sacred incense used in the later Hebrew ritual was a compound of stacte, olibanum, and frankincense, seasoned with myrrh and reded to a fine powder. In later times—the Herodian period—Josephus records that thirteen ingredients (sweet-smelling spices) were used. Plutarch gives a list of twenty ingredients used by the Egyptians in preparing fragrant, sweet-smelling incense, including honey, wine, raisins, sweet-rush, rush, myrrh, frankincense, orris, clove, sawleaf, musk, and both kinds of acacia, cardamum, and orris root. In both cases the compound was of ritual importance and a matter of mystery. Sacred books were read aloud while the incense was being burned.

Frankincense (Gr. λαβάνθομα, Heb. פָּחָן, Mod. Lat. olbanum, labinum in Vulg. of Sir 24:20, 34; is the gum resin of the tree of the genus Boswellia (B. Carterii, B. Frereana, B. Saccardia), and is exported from Somalia and Kenya by the Port of Egyptian incense. Flavius refers to it as a product of Arabia (Hadramaut), and says that the Sabaeans beheld the tree which produces it, and of its usefulness through the virtue of hereditary succession. The trees are sacred; and, while pruning the trees or gathering the resin, men must not contract pollution by sexual intercourse or contact with a corpse. It is carried to Sabata, where the priests claim a tithe of it in honour of their god Sabus; but this is not done, as it may be displeased. Herodotus speaks of winged serpents which guard the trees and are driven off by burning styrax. It was one of the ingredients of Jewish incense, as it is still of that used in Christian ritual. Oiling Lamplighter, in speaking of frankincense, usually refers to its exporting place as the seat of its origin, e.g. Syria and Phoenicia.

2. Purpose of incense.—The use of incense is connected primarily with the psychological aspects of the sense of smell. Pleasant-smelling perfumes, in whatever way they are obtained, are agreeable to men. They were offered to honourable persons in ancient times, and were dispensed over the roads on which they travelled. Incense was also used at banquets as an agreeable accompaniment of food and wine. Hence it was supposed that such perfumes would also be agreeable to gods or spirits, on the same principle as that by which foetid substances were thought which men liked to be offered to them. This was obvious when we consider that the smoke of sacrifice is pleasing to the gods, and that they are thought to seize on the divine fires (J. Grube) then resident in Lhasa in the middle of the 17th cent., which refers to this disciple of the Lama as that devilish God-the-Father who puts to death all who offend him.

3. Egyptian incense.—Egyptian texts illustrate these beliefs. Isis has a wonderful odour which she can transfer to others, e.g. to the dead. Osiris transfers his odour to the dead, his friends, and to his own body. There is a familiar story of the Persians, which is related by Herodotus, and which is told by Diodorus Siculus. The Persians believed that the soul of the dead was transferred to another body and that the body of the dead person was returned to its former residence. The body was then embalmed and put in a tomb. The tomb was then filled with fragrant resin and other substances. The purpose of the incense was to preserve the body and to make it more pleasant. The incense was also used in the funeral ceremonies to honor the dead.

4. Chinese incense.—The Chinese also believed in the power of incense. They believed that the smoke of the incense would carry the prayers of the faithful to the gods. They also believed that the incense would purify the air and make it more pleasant. Incense was burned in temples and at home to honor the gods and to purify the air.

5. Incense in other cultures.—Incense was also used in other cultures. The Hebrews burned incense in their temples. The Greeks and Romans also used incense in their temples and homes. The Egyptians used incense in their burial customs. The Chinese used incense in their funeral ceremonies. The Persians believed that the soul of the dead was transferred to another body and that the body of the dead person was returned to its former residence. The body was then embalmed and put in a tomb. The tomb was then filled with fragrant resin and other substances. The purpose of the incense was to preserve the body and to make it more pleasant. The incense was also used in the funeral ceremonies to honor the dead.

6. Incense in modern times.—Incense is still used in many cultures today. It is used in religious ceremonies, in home decoration, and as a scented fragrance. Incense is also used in aromatherapy to help relax the mind and body. Incense is also used as a symbol of spirituality and as a way to connect with the divine.
with the smoke of the incense, as in the Egyptian view. So in Christian thought incense has usually been regarded as symbolic of prayer, though it also typifies creation, the preaching of the faith, etc. (3) Monomystical views have sometimes been entertained. Plutarch explains the beneficial effect of the Egyptian _kouphi_ by saying that its sixteen ingredients are a square out of a square. Being composed of aromatic ingredients, it is used to make people soon asleep, lessens the tension of daily anxieties, and brightens the dreams. It is made of things that delight most in the night and exhibits its virtues by night. Plutarch also gives medico-mystical reasons for the burning of other substances at other times, e.g. resin in the morning to purify the air, because of its strong and penetrating quality; _myrrh_ at midday, because its hot nature disposes and dispels the turbid qualities in the air. (4) Philo explains the four ingredients of the Hebrew incense as symbolizing the four elements, and thus representing the universe. Josephus writes that of all incense, _myrrh_ is of sweet-smelling things gathered from all places, points to the fact that God is Lord of all. In the Orphic hymns the different substances used and offered to the gods are chosen because of some occult reason in each case.

W. R. Smith (436 f.) considers the religious value of incense as originally independent of animal sacrifice, since frankincense was the gum of a very holy species of tree collected with religious precautions. The right to see the trees was reserved to certain sacred families. While harvesting the gum they used to practice continence and take no part in funerals. The virtue of the gum lay in its being regarded as the blood of a divine plant.

3. Ritual use of incense in ethnic religions. (a) _Lover races_. The use of incense among lover races is hardly known, since they have not been in contact with higher races using it. We may, however, note the American Indian custom of offering tobacco smoke to the gods, and the Polynesian offering of flowers and aromatic substances. Among the Sakai, Semang, Sakun, etc., the only common kind of offering is the burning of incense (benzoic). At a death among the Sakai, the magician waves a censer seven times over the body, recommending the dying man to think of his dead ancestors. As the smoke mounts up and then vanishes, so does the soul. Good spirits love its smell and evil spirits hate it. In sickness, among the savage Malays of Johore, the magician burns incense. The fumes rise to the abode of Jewa-Jewa and gratify him. He welcomes the soul of the magian and grants him medicine for the sick. Incense is burned at funerals, or burning at airways, saints' tombs, etc., among the Malays, and is the usual form of burnt sacrifice, with invocation to the Spirit of Incense. It reaches the nostrils of the gods and propitiates them as a foretaste of other offerings to the dead. It is also used in magical ceremonies, e.g., to make one walk on water or remain under water in an ordeal, in the use of the divining rod, or to cause a spirit to possess a magician. Callaway refers to incense burnt with Zulu animal sacrifices (blood and caul of a bullock) to the spirits, in order to give them a sweet savour. It is apparently some native product and is also used in rites for the cure of sickness.

(b) Among the Semites the use of incense came to be widespread. Its name among the Babylonians was _bintusimun_, and the incense-offering
INCENSE

constituted of odoriferous woods (cedar, cypress), myrtle, cane, and sweet herbs, by which the gods were made to smell a pleasing odour. After the Deluge, its survivor offered cedars, cedar, and fragrant scent as a symbol of the sweet odour and 'gathered like flies round the sacrificer. 1

Incense is frequently mentioned in the texts—e.g., before Samaas he makes an incense-offering—or kings are represented making this offering. 2 It was also used as a libation, e.g., of the gods' table and its necessary and the place where the gods were supposed to come, of houses, and of persons. 3

Evidence of the popularity of incense-offerings among the peoples of Canaan and the surrounding districts is found in the fact that it is the most commonly denounced form of idolatry in Israel. Incense was offered on altars of brick or on the house tops to Baal, the sun, moon, stars, etc. 4 In the temple, the incense was placed in the holy of holies and burned in the form of a cloud, which was supposed to carry the prayers to heaven. 5

(c) In Egypt the burning of various kinds of incense was always an important rite, each ingredient of it having magical properties, and, as has been seen, its smoke was supposed to carry the words of prayer as well as the souls of the dead to heaven. Prayer was made e.g., to Ra, that he would draw the soul up to heaven on the smoke of the incense. 6

The earliest reference to the use of incense in any religion occurs in the notice of Sanch- kara, a king of the Xvith dynasty, who sent an expedition for aromatics through the desert to the Red Sea to the incense land of Punt. Hatispe, a queen of the Xvith dynasty, also sent an expedition by sea to the island. 7 Punt is probably Hadramaut and Somalia. 8 Incense was also obtained from the island of Gleen. 9 A common representation on the walls of temples is that of a king offering incense. He holds a censer in one hand and with the other throws little balls or pastilles of incense upon it, praying the god to accept it and give him a long life. The use of incense is often spoken of as having been offered, e.g., 1000 censers, or, as an inscription referring to Rameses Iii. reports, 1,338,706 pieces of incense, etc., during the 31 years of his reign. 10

It was offered to all the gods, who delighted in its odour, their statues being censed with it and perfumed. Often it accompanied other offerings, greater or smaller—the incense, myrrh, and other perfumes were placed in the canoes of the bullock offered to Isis—or presented by itself, as described above. The censer was an open cup holding fire, with or without a handle, but other censers were also used. 11 At funereal rites the deceased was perfumed with incense. Five grains were twice offered to mouth, eyes, and hand, once for the north and once for the south; then incense from foreign parts was similarly offered, along with the litany of purification. Myrrh, resin, etc., but not frankincense, were placed in the body which was embalmed. 12

(d) Incense, in the sense of a gum resin, does not seem to have been used in Greece until post-Homerica times, and Pliny says that people knew only the smell of cedar and citron as it arose in volumes of smoke from the sacrifice. 13 The idea of a fragrant odour, e.g., of sacrifices, being pleasant to the gods was well known. 14 The wood of odoriferous trees, e.g., a kind of cedar (ro bavar), 15 as well as myrrh, was burned in houses for its fragrant smell.

dust as an offering, or it may simply mean 'sacrifice.' Later it came to mean 'incense,' and was the source of Lat. tus. The word for 'frankincense,' Nardus, was of foreign derivation. In- cette was not used before the 8th cent. n. c., and is first mentioned in Euripides. Schrader is of opinion that it may have been introduced through the cult of Aphroditte, and it was certainly transferred to Greece, thus having come from Phoenicia via Cyprus, where it was used in her cult. 2 It was brought into Greece commercially from Arabia, and imported thence by Phenicians. 3 Incense was used in bloody sacrifices as an offering or to combat evil odours, 4 or with fruits, cakes, wheat, etc., 5 or as a separate offering, both in domestic ritual and in the cult of the gods; e.g., it was burnt to Zeus Melichios, to Demeter before consulting the oracle at Patrae, and to Hermes and Sospolis. 6 The inventory lists of some temples contain evidence of the large quantities which came to be used, and it was sometimes given as a gift to a beloved person to another. 7 Incense of different kinds was also used largely in the Orphic cult, as the hymns show. It was offered along with cakes of honey, olive, a vine-wood, laurel branches, and Sabine herbs. 8 Guns and resin came to be used—frankincense (mox, culrum tus), myrrh, coccus, costum. 9 In the case of animal sacrifices, incense, saffron, and laurel were burned as a preliminary, and, as the animal was led up, incense and wine were sprinkled on the altar. It was also offered with the blood, and burned with the ashes. 10 Incense was also offered by itself in public or private ritual; and this is illustrated by the fact that one method of forcing a rec- nunciation of Christianity was to burn some incense on an altar before an image or to the emperor. Incense was offered to the lar familiares daily. 11 The method of using it was to burn it on the great altar, or in braziers, or in small portable altars (focus, turibulum). It was carried in a casket called averra (much used in funerary cere- monies), whence it was taken and burned. 12 It was also offered for the averter of pestilences. 13, 14 and burned in magical ceremonies. 15 The intro- duction of incense into the cult was connected with Bacchus, the first to make offerings of cinnamon and frankincense. 16—An obvious suggestion of its entrance into Roman ritual through the Greek cult of Dionysos. Elsewhere Ovid 17 speaks of its importation from the Euphrates region, perhaps connecting it with the Oriental cults which intro- duced it into Greece. 18

(g) Hindus have always been fond of pleasant odours, and Indus was already celebrated for its perfumes in ancient times. Incense from Arabia was early imported there, but many native kinds of sweet-smelling materials have long been in use—balsam, benzoin, and other gum resins, seeds, roots, dried flowers, and fragrant woods. These are burned ritually or in ordinary domestic usage. In ancient times sandal-wood was burned as incense in temples and as a fragrant stuff in houses, and in the daily rites the sacred fire was fed with consecrated wood, usually from the Palas tree. 19 In modern Hindism the use of incense is wide-spread in all forms of cult. Thus in the cult of Siva it is daily burned by the priest before the stone representing the god at Orissa, and perfumes are also placed on it. In the Vallabha sect of Vaishnavism the Maharrja's offer incense and swinging lights before the image, and the same act of homage is paid to them by the people. Camphor and incense are burned before the image of Rupas, and in the devotion cults of Western India perfumes are burned in the Siva temple. In the Patshajatana ceremony of the Brahman household perfumes and flowers are offered, and among the sixteen acts of homage is the offering of perfumes, sandal, flowers, and incense (dhupa; see Monier Williams, "Hinduism.")

(h) Incense was unknown in early Buddhism, which was opposed to external ritual, but in the course of time its use has become general. Thus, in Ceylon, perfumes and flowers are offered before the image of Buddha, and in the Pirit ceremony incense is burned round the platform on which the relics of Buddha are exposed. 20 But it is in Tibet that the use of incense is most prevalent, and there it is burned in front of the images of Buddha, together with the mantras and the incantations. Incense and perfume are used in the worship of the five sacred offerings, and figure prominently in the 'presentation of offerings,' which is one of the seven stages of worship. These offerings are 'essential,' and among them flowers and incense occur as early as the 7th century. They bear Sanskrit names, and are borrowed from Hindism. 21 In Japanese Buddhism, incense is also commonly used, and has influenced the native Shinto-religion. In earlier Shintoism incense was unknown, but it is now burned in ceremonies at many ceremonies, e.g., at the new moon, and at magical rites.

(i) In China, incense is much used in public and private cults. It is offered in the temples as part of the daily worship, and it is burned at festivals and in processions. It is also used in burning the ancestral tablets or before the household deities, and is used in consulting the gods and in magical

1 Parnell uses this as an argument against the likelihood of Mesopotamian influences affecting Greece in earlier periods ("Greece and Rome," Edinburgh, 1911, p. 292 ff.).

ceremonies. Chinese Buddhism also used it extensively. In Chinese funeral ceremonies the burning of incense plays an important part, both as an offering and as a funerary rite. Tertullian 2 says: "Not one penurious of incense do I offer Him." Athenagoras 4 declares that God commands sacrifice in the form of the sweet smell of flowers or incense. Arnobius 5 referring to the fact that the early Romans did not use it, maintains that Christians may safely neglect it. "Incantations are not desired by God, and agree with Neo-Ptolemaic writers that frankincense is the like should not be offered Him."

The fact that it was a Jewish usage may have tended to make Christians neglect it, but what had probably a more powerful effect was its use among pagans and the common practice during the age of persecution of insisting that Christians should offer a few grains of incense to the gods or on the altar of the Emperor as a token of their renunciation of their faith. Such apostasies as yield in this way during the Decian persecutions were called Tartari 2. Incense was, however, used for fumigations as a sanitary precaution, e.g., at burials or in places with a disagreeable odour; but otherwise its ritual use was almost unknown during the first five centuries. The Apostolic Canons refer to the use of incense (ophylas) at the Eucharist, but this is probably a later interpolation. It was used at the vigil ossaries on Sunday in Jerusalem towards the end of the 4th century. The pseudo-Dionysius 8 speaks of the priest casting the altar and making the circuit of the holy place. In the Liturgy of St. James it is used in the pro- and post-Anaphora portions, and in that of St. James before the Gospel, at the great entrance, at the kiss of peace, and at the commemoration of the dead. In the Liturgy of St. Chrysostom the sacred vessels, the Gospels, altar, priest, and sanctuary are consecrated with incense in the pro-Anaphora, and the altar is blessed in the Anaphora. Evagrius 8 refers to the gift of a thurible to a church in Antioch by a Persian king c. 354. In the West the Ordines of the 4th century describe the swinging of the censer during the procession of the pontiff and his acolytes from the sanctuary to the altar in the church of Rome. As for casting the altar, or the church, or the clergy or congregation, such a thing is never mentioned.

The further use of incense was gradual, since it is not mentioned by writers of this period who treat of ritual, and its use at the elevation and benediction was not known in the West till the 14th century. In the Roman Catholic Church at the present time incense is burned at solemn Mass before the introit, at the gospel, offertory, and elevation, at solemn blessings, processions, and offices, consecration of churches, burial rites, etc.

In the Church of England there is no decisive evidence of its ritual use in Divine service during the period after the Reformation. It was used, however, for sanitary purposes, as a fumigatory, and for the sake of its agreeable odour in churches, at feasts, at coronations, etc. Its ritual use was resumed towards the middle of the 19th cent., but this was decided to be illegal in Martin v. MacMack, 1889, and in Summer v. Wix, 1879. 10

Incense is used ritually in many churches of the Anglican communion, and the practice is certainly spreading as a pleasing adjunct to worship, and as a symbolic rite fumigatory prayer.

INCEST.—See Crimes and Punishments, Ethics and Morality.

INCEPTION.—Inception, a translation of the Gr. technical term ἐκπράξεις, denotes in comparison with the act of sleeping (or at least of passing the night) in a shrine or other sacred place with the object of receiving a Divine revelation or Divine aid; in a still more specific sense it means as was done on one occasion by the one most commonly noted by the word because of the Greek use of the rite—the aid in question is currently held to be the cure of disease, though this limitation is of later development. Naturally, the subject of inception is connected with those of communion with Deity, disease, divination, dreams, omens (qq.v.), etc.

In the state of sleep, when the soul is released from the ordinary trammels of the body, it is particularly subject to Divine stations, and may receive revelations from Divine beings (cf. Gen 28:12; 35:1-5, 1 K 3:5ff. etc.). Indeed, the whole basis of inception could not but be expressed, rather than in the words of Job (28:17):

'In a dream, in a vision of the night, when deep sleep falleth upon men, then he showeth them visions in their sleep, and tells them in their slumber.'

It is perfectly true that Divine revelations in dreams may come in almost any place (for examples see art. Seer (Divine)); and, as with the American Indian goes forth in search of revelation (cf. Southworth & Swett, American Missionary, vol. viii. p. 374), yet it is obvious that a godless man will himself more readily in a distinct locality with which he is already associated. For example, in ancient Mesopotamia, the druid was very well known, which has a dwellings provided in the shape of temple or shrine. In some instances this dwelling may be only temporary, and prepared for the special occasion on which Divine revelation is sought.

Thus, among the Malagasy, for a proper site for a house is found, four sticks are laid down to form a rectangle in the center of which a pole is set in the earth, with the prayer to the gods of the soil:

'If it is bad, show me a good one.'

After this, 'wrap the dead up in white cloth, and after funeral rites, place it in the grave.' In the same region, place it at night beneath your pillow, and when you retire to rest repeat the last two lines of the above charms on another to your dream in good provided, with if bad, destitute of your operations (W. W. Skeat, Malay Magic, London, 1899, p. 124; or, see also p. 144; and, for a second class charm, see ibid. pp. 11, 18, 133, etc.). As they have Irish had a kindred practice in the farman, which is usually called 'to pass the sight' (H. P. Wrietz, Grundzüge der magischen Gotteshaltung, 1899, pp. 58, 245; or, see also p. 30). In Stekling Consecrated, 211 (ed. E. Windisch, Irish Folklore, 1888: 211f), we read that the Irish kings Medb, Allia, Conchob, Fergus, and Finn assembled, but did not decide upon a king for Ulster because they were united against that kingdom. Therefore a farman is made there among them, that they might know from it to which of them they should give the kingdom. Thus this farman was done, i.e., a white sheet to be killed, and a man to eat of its flesh and his brood, and申报 for him from this sanctity, and the de ferdil (a certain charm) to be sung over him by four druids, and the sort of man who should be made king there was seen by him in vision from his form and from his description the sort of work he did. The man arose from his sleep, and his dream is told to the kings.' Such principles were the ancestors. In the above passages are pronounced over his palms by him who sought a revelation, after which he brought his palms to his cheeks and fell asleep, being guarded against any interruption. During his slumber the future was revealed to him (see above, p. 132); the text is corrupted and the above passage is very obscure. In other instances, dreams are hallucinated by fasting, vigils (q.v.), and they interest PE 33410 ff.; M. Hamilton, Incarnation, pp. 141, 121, 250, 1041 ff.

The place where such a revelation was vouchsafed would naturally be regarded as an abode of the Divine, and sacred stones and trees might long be held a centre of worship, as in the case of Bethel ('house of God', cf. 2 K 22:19, Am 7:14). Incarnation might also be practised at sacred stones and sacred trees. An excellent example of the former is found in the instance of the pre-Islamic priests who slept near the oval stone of al-Jaisad (J. Wellhausen, Reise arabisch, 1897, p. 55), and of the latter in the practice revived by Alexander the Great as he limbered under the plane tree at Smyrna (Pausanias, vii. 2). Consultation might likewise be sought in grave crises of the STATE, as was also on at least one occasion in Greece (Pausanias, iii. xxvi. 1). The usual locality for inception is the shrine or temple.

Thus, among the Mythians, when the king and his people had been assisted by the gods, who desired to show their power lest they be forgotten in Mehek prosperity, a maiden ('wise woman') gave a message to the king through him: 'Send all the men and women of the country to sleep in the temple of Tashkung (the god of the memory of the gods) and let the wise woman say in her sacred clothes... There in their dreams they were instructed to divide the people into sections, some for one day and some for others... Then, when they had told the king all the wonderful things communicated to them in their dreams, they were bidden to say to his majesty: the god had said' (C. G. Hodson, The Mysteries, London, 1898, p. 131).

Inception in shrines for advice in all sorts of problems of life is common, as in ancient Egypt (cf. E. E. B. 762), and especially v. 53, and among the modern Berbers (cf. E. E. B. 513). Of modern Mesopotamia we are told that 'the sheikah, the Muhammadan mullah, the Kama, and the Amea lie down in mosques or places of pilgrimage, and in ancient convents which formerly belonged to Christians, and to which they give the name of saints (from 120, to visit, go on pilgrimage 1, with the purpose of obtaining good dreams or inspirations suited to his purpose. In Mesopotamia it is not uncommon to find heretical or Catholic Christians who seek salvation in churches or convents to have good and lucky dreams' (C. H. Trench, in Antiquity, vol. 19).

From such consultation as to the proper course to be adopted in problems of various kinds has developed that type of inception which, because of its prominence in Greece, has gained much prominence, though not wholly deserved, prominence in the common parlance of comparative religion. This inception is in the main for the purpose of gaining cure from disease of the most diverse kinds. The object has been so thoroughly disused (see Literature appended below) that the briefest summary will be sufficient here (cf., for some special instances, also E. E. B. 542, 546, 552). There was a primitive American centre at Ismail.

'In their burial, the Aztecs' (the Mayas of Yucatan) raised one altar and temple to each of their gods, and dedicated them as a memorial; and they said that there they carried the soul and the sick, and the healthy.' The medicine man was appointed and healed by touching the hand... And therefore it was called and named Nahual, which means 'satisfied man,' in language, Selection de las cosas de Yucatan, ed. C. E. Brading, Munich, 1804, p. 306, quoted by H. E. Bamber, N.R.E. 173 (1876), 544.

The principal classical accounts, apart from the burlesque in Aristophanes' Phorbas (v. 638 ff.), are the stela of cures at Epidaurus (reading of S. f.; J. Baumann, Stud. auf dem Gebiete des Greek, v. der arischen Sprachens, 1. (Leipzig, 1888) 190-144; Hamilton, op. cit. 17-27); the Sacred Orations of Aristotle (ed. W. Dindorf, Leipz., 1852, summarized by Hamilton, 44-62); and the inscription set up at Epidaurus in the 2nd cent. A.D. by Julius Apellas, a Carian sophist (CIG iv. 936; Baunack, 110-118, Hamilton, 401 f.). In the earliest period there was entire dependence upon the healing, and he might work the cure either by himself acting as surgeon or by advising certain mediocines. Later skilled medical men became connected with the shrines, cooperating with, but not superseding, the revelations given by the gods in visions. Much obscurity exists as to the precise methods of procedure, and details doubtless varied at different times and under special circumstances. The general mode, however, seems to have been as follows:

On arriving at the shrine, the patient probably received instruction from the priest or priests, and was caused to perform
INDEX

... some rites and sacrifices to bring him to a thoroughly recipient frame of mind. After successful incubation, during which the patient was kept on the verge of death by the brute with actual cure or with counsel, the person thus healed was required to make certain payments being promised by recurrence of the disease. Your offerings would also be made, and in some instances were commensurate with the cure. The obscurity of these univale offerings, which is to be conjectured, were the earlier mode of showing gratitude, the 'tee being interpreted, in later times, as becoming comparatively elaborate and expensive in upkeep—naturally varied according to the means of those who had been cured. (See Ensign, 9th ed. 1858.) The reality of at least some of the cures resulting from incubation is acknowledged by many of the most prejudiced writers, and there is no doubt that a plethora of incantations and a complete cure of bodily ills.

There is, however, at least one point where scepticism seems warranted. It appears rather questionable whether the rites of incubation can be definitely derived (as by E. Thramer, above, vol. vi. p. 542) from Babylonia by way of Lydia. Incubation in its true meaning is far too widespread to be traced to any single locality for its origin; it is an expression of a religious conviction to a large part of the earlier human race; even the exact relation of the incubation of Asia Minor to that of Greece (cf. E.E.S. vi. 548) is uncertain. It may, in view of the lateness of our sources, have been influenced by the Greek practice; or it may (and this, perhaps, is the more probable hypothesis) have been an independent development.

INDEX.

INDEX (i.e. 'liberum prohibitorum') is the catalogue of books which ecclesiastical authority forbids Roman Catholics to read or have in their possession; by an extension, the name Index is used to cover the rules for the proscription of pernicious literature, and for the examination and censorship of books before publication. The Index is a product of positive ecclesiastical law; it is based on the assumption that bad books are dangerous, and concerns society as such, not the individual. The moral law forbidding the reading of pernicious books is motivated by the real danger lurking in them, and affects the individual directly.

I. HISTORY. It is natural that every religious community should set itself to prevent the publication and reading of such books as might disturb the faith and religion of its followers, or corrupt their morals. In the first centuries of Christianity there were doubtless prohibited the apocryphal and heretical writings (see especially the catalogue known as the Decretum Galliæum 'de libris recipiens vel non recipiens' (PL. lix. 152–164, 175–180)); and commanded pernicious writings to be committed to the flames (cf. Act 19:16); and the burning of heretical works, decreed by the Church, was sanctioned in the imperial law (cf. Juv. 2: 196, 208). Hence, also, the similitude of the 'Conciliar de Somma-Trinitate,' anno 449. Throughout the Middle Ages we find cases of heretical books being condemned. The true history of the Index does not begin, however, until the intercourse between the Church and the state grew into an assurance—when bad books were likely to be multiplied as rapidly as good ones. Before the close of the 15th cent. the University of Cologne passed the measure that finally became the 'Imprimatur,' or preliminary censorship of books; it prescribed the examination of every book before printing, and earned for the University the congratulations of Sixtus IV. and Innocent VIII. (14th Nov. 1487). By the constitution 'inter multis' (1st June 1561) Alexander VI. extended this practice; he forbade the printers of the dioceses of Cologne, Mainz, Trèves, and Mayence to print any book whatever, without the permission of the bishop; as for books already in print, the bishops were required to demand the printers' catalogues, and make them hand over the pernicious works to be consigned to the fire. These consciences became common law at the Lateran Council (Leo X., constitution 'Inter multis,' 4th May 1515).

The prohibition of books by name began in 1526 by Leo X.'s bull 'Exsurge Domine,' condemning all the works of John Hus. Clement VII. inserted examination laterat sententiae in the bull 'Concis,' as the penalty for reading books in support of heresy; this has remained unchanged to the present day. Lists of prohibited books soon began to be published by the Universities (Paris, 1542; Louvain, 1548; Cologne and Venice, 1549, etc.), the bishops (Milan, 1549, etc.), and the Inquisitions (Venice, 1554, etc.). Such an important movement demanded the attention of Rome; Paul IV. ordered the recently established Congregation of the Holy Office to make a catalogue of prohibited books, their first effort, printed in 1557, failed to give satisfaction, and a revised appeared at the beginning of the year 1559—the first official Roman Index. All the books in it are prohibited on pain of excommunication, and they are classified into three divisions: (1) authors condemned, with all their writings; (2) condemned books whose authors are known; and (3) pernicious literature, mostly anonymous. This Index was very strict; a bull of Paul IV. (1563) directed the Congregation of the Holy Office to consider, and, if necessary, issue a condemnation. In the Index of 1559, Cardinal Michel Ghislieri (afterwards Pope Pius V.), published, by order of Paul IV., a modification (moderatio) of the Index (24th June 1561). Almost immediately the Council of Trent took up its interrupted labours. In session xviii. (26th Feb. 1562) it commissioned eighteen fathers, assisted by theologians, to re-cull the catalogue of prohibited books and revise the general rules of the Index. The Commission had accomplished its task when the Council was abruptly concluded; but a detailed discussion of its work was impossible, and the assembly remitted the whole matter to the pope (sess. xxv., 4th Dec. 1563). The catalogue was almost the same as that of Paul IV., with its distribution into three classes; the rules, ten in number, were aimed principally at the books of heresies and heretics, and the editing and reading of the Bible; rule x. demanded the burning of the 'Imprimatur' for every printed publication. These rules, with several additional, remained in force until the time of Leo Xlll. In 1564, the rules of the Council of Trent were published by Pius IV. (bull 'Dominic gradus,' 24th March 1564).

In order to relieve the Congregation of the Holy Office without impairing its competency, Pius V.
established the Congregation of Cardinals 'de
reformando Indice et corrigendis libris' in March
1571. This institution, improved by Gregory XIII,
was included by Sixtus V. in the general re-expansion
of the Congregations (bull 'Immensa,' 22nd
Jan. 1588), with the title 'Congregatio pro Indice
librorum prohibitorum.' This Congregation was
consisting of a fixed number of cardinals, a per-
manent assistant, the Master of the Sacred Palace
(a Dominican, specially entrusted with the pre-
liminary censorship of books in Rome), a secretary
(also a Dominican), and several consultors, and
has continued almost unaltered down to our
own day. Pius X. having retained it in his re-
organization of the Roman Curia (constitution 'Sapienti consilio,' 29th June 1908). It is respon-
sible for the successive editions of the Index since
Sixtus V. and for various additions to the general
rules, as well as for the majority of condemnations
of books deemed pernicious.
A few words will suffice about the successive
editions of the Index. Those of 1559 and 1626,
printed, but not published (cf. Hilgcr, Der Index
der verbottcnen Buckcr, pp. 12, 324, 529), were super-
ceded by the 1566 edition, by order of Clement VIII.

retained, he appoints a competent reviewer to make a detailed study of it and indicate the objectionable passages; this report is discussed and the necessary countermeasures taken, and the decision is finally made by the General Council. The Congregation pronounces the condemnation of the work either absolutely or until correction (the condemnation 'doncee corrigitur' is now very rare). There is no injustice in condemning a book by a Roman Catholic, but it is another matter when the condemnation is directed against him but not against his book, which is circulated among the public, and against which readers must be warned. Benedict XIV., however, recommended that the Congregation should inform such an author and receive his defence. The decrees of condemnation are declared and promulgated in the name of the Congregation; the books are condemned everywhere and in every language (art. 45). Below the decrees are published the submissions of the authors received by the Congregation.

3. The preliminary censure of books and their publication. Certain books must be specially authorized; e.g., books put on the Index cannot be reprinted unless the corrections have been approved by the Congregation; official documents and collation lists are excluded. The Congregation cannot be edited except with their permission (arts. 30-33).

(b) Further, there are special regulations for certain classes of persons: missionaries must observe the decrees of the Propaganda; monks must obtain the consent of their superiors, besides that of the bishop; priests cannot publish any work or undertake the management of any periodical without the permission of their bishop (arts. 34, 36, 42).

(c) It is necessary to have the permission to print—the 'imprimatur'—of the bishop of the place of publication for all books on religious topics or sciences, but not for all books, as rule x. of Trent desired. The bishop entrusts the examination of the MS to a competent, upright, and impartial person, who studies it without bias; if, on examination, he sees nothing objectionable, he writes on the MS 'Nil obstat,' and signs; on this evidence, coming even from a censor of another language, the publisher gives permission to print. All this must appear at the beginning of the book, except in Britain, according to a decision of 1897 (art. 35, 38-41).

Preliminary censure of religious newspapers and periodicals was practically impossible; Pius x. substituted for it a special censor to read every publication officially and then submit his report (encycl. 'Pascendi,' 8th Sept. 1907).

4. Penalties. There are two kinds of penalties. Excommunication is incurred by those who write or print without permission a book or part of a book on the Index, as many people say, but not those who apostatize and heretics, countermines hearow, or the works condemned directly by the pope with mention of this penalty. Excommunication is the penalty also for those who without permission print or cause to be printed the books of Holy Scripture, and summaries, or commentaries on those books. For all other delinquencies the penalties are awarded by the bishops according to the degree of culpability (art. 5). The clause 'Opera omnia' put after the author's name does not now include those of his books that are not objectionable.

6. Conclusion. While the rules of the Index are wise and necessary, we must admit that the catalogue leaves room for criticism, owing to the conditions of our time rather than the actions of authority. It is abundantly evident that the Index is unsatisfactory to many people. It was not intended to condemn every harmful book by non-Catholic authors to pass, it seems to reserve its severity for the works of Roman Catholics which expose themselves to condemnation by certain tendencies rather than by definite errors. For this reason, the uniformity of condemnations without any indication of the degree of harmfulness, as if all the books on the Index were equally pernicious, is the more regrettable. Further, the faithful are led to regard the books inscribed in the catalogue of the Index as the most harmful, while they do not pay sufficient heed to the general rules, and think that every book that does not appear in the Index may be read. It would be far more to the purpose to appeal to the conscience and the observation of the general rules; for the Church finds it difficult to sanction its prohibitions in print or publications, and the Bishop is bound to grant permission to read prohibited books far and wide.

LITERATURE.—For the history: J. Hildes, Der Index der verbotenen Bücher, Freiburg im, 1899, Der Index im Papstbriefen, 50. 1907; F. H. Reusch, Der Index verbotenen Bücher, Breslau, 1899-90.

A. BUDDHISM.

INDIA.—See VEDIC RELIGION, BRAHMANISM, and HINDUISM. Caste and other subjects are treated separately, and under each of the great subdivided topics, like BIRTH, DEATH, DEMONS, etc., there is an Indian article. See also the various provinces and the religious cities each under its own name, and the art. MUHAMMADANISM IN INDIA. Christianity in India will be dealt with under MISSIONS.

INDIAN BUDDHISM.—The religion which was founded by Buddha (q.v.) towards the end of the 6th cent. B.C. is one of the three great world-religions, and has been calculated (but with considerable uncertainty) to have 600 millions of adherents at the present day. Its original and essential doctrine is that all earthly existence is suffering, the only means of release from which is renunciation and eternal death. The main importance of the Indian form of Buddhism lies in the fact that it represents the earliest phase of the religion; that it produced all the canonical texts of the faith; that without a knowledge of it the Buddhism of the many countries to which it has spread could not be understood; and that without the evidence of its architecture and sculpture the history of Indian art would be impossible. Though, like Christianity, it disappeared many centuries ago from the land of its birth, it has profoundly influenced the civilization of the Farther East, much as Christianity has done in the West. In India itself, Buddhism deeply affected the spiritual life of the country for over a thousand years, and occupies a prominent place in the historical development of the country.

1. History. Buddhism arose on peculiarly favourable soil, the S.E. half of the Gaugas territo-
450 B.C. This, the earliest approximate date in Indian history, is of the utmost importance in the chronology not only of Buddhism, but of Vedic and Epic Sanskrit literature also.

According to the statements of the Pāli texts, a few weeks after the death of the Master one of his most trusted followers, Kāsiyapu the Great, proposed to the Buddha that he should hold an assembly of monks who had been the immediate disciples of Buddha, for the purpose of reasserting the precepts of the Master, and fixing a new code of discipline (vinaya) and discipline (Vinaya) of the Order. An assembly was accordingly held at Rājagṛha, constituting the so-called first Buddhist Council (see COUNCILS AND SYNODS [Buddhist], vol. IV, p. 180). Buddhist tradition is unanimous in stating that exactly a century after Buddha's death the second General Council was held at Vaisali (ib. p. 183). In the reign of the famous king Asoka (p. 183) a third Council was held at Patalagruha after the schism of Mahāsāgāra (or Achāryāvaśa) had arisen (ib. p. 183).

The reign of Asoka, who ruled over the whole of India except the extreme south, forms an epoch of the highest importance in the history of Indian Buddhism. The patronage of so powerful a king must undoubtedly have supplied a mighty stimulus to the growth and spread of Buddhism in India, for the religion of which it was only one of several sects to the dominant position of a State religion. An era of zealous propaganda, not only throughout India, but in distant foreign countries, was inaugurated. Since all the Buddhist traditions agree on the date of the latter statement, it may be accepted as a historical fact. The conversion of Ceylon (see CEYLON BUDDHISM, vol. III, p. 331) was the most important result of these missionary expeditions. It is ascribed to Mahendra (Mahinda), son or (according to the Skr. Buddhist texts) younger brother of Asoka and a pupil of Tissa Moggaliputta. All sources agree in attributing the introduction of Buddhism into Ceylon to the reign of Asoka. Another prominent apostle was Madhyāntika, who carried the faith to Gandhāra and Kāśmir, while Mahādeva proselytized Mysore.

That a body of canonical texts already existed in the time of Asoka is shown by one of his edicts (that of the Bairat rock), in which he enumerates some of canonical works, and recommends their study by monks and nuns as well as by the laity. Some of these works were probably of both the doctrinal (sutta) and disciplinary (vinaya) type of canonical text were among them.

It is to be noted that, in consequence of his zeal for the faith, there arose in Asoka's reign that religious architecture which furnishes continuous and striking monumental illustrations of the history of Buddhism in India for many centuries till the disappearance of that religion from the land of its origin.

During the 330 years that elapsed between the death of Asoka and A.D. 100, Buddhism steadily strengthened its position in the north of India, though it was not favoured by the kings of the Sāṅga dynasty, the founder of which, Pusyamitra, is stated in more than one Buddhist source even to have suppressed the entire faith. In the 2nd cent. B.C. the doctrine certainly flourished in the N.W. under the Graeco-Indian rulers. There seems no reason to doubt that the most celebrated of these, Alexander the Great (known in Pāli as Müinda-Paśāka, or 'Questions of Menander'). Meanwhile, Buddhist doctrine spread beyond the confines of India to Sāstria and China, while in Ceylon it established that supremacy which it has retained ever since. In India itself, however, dimensions and schisms had been growing to such an extent that by the end of this period eighteen distinct sects were in existence.

With the reign of the Indo-Scythian king Kanishka (A.D. 78), a new epoch in the history of Indian Buddhism begins. The wide dominion conquered by him comprised Kāśmi, Gândhāra, Kāśmir, Sāndh, and parts of Central India. The memory of this mighty monarch was revered by the Buddhists of Northern India almost as much as that of Asoka. Like the latter, he was not originally a Buddhist, but adopted the faith after the fact that most of his coins bear the symbols of an Iranian religion; comparatively few of them have Buddhist emblems, but one shows a figure of Buddha, with the legend 'Buddha' on the reverse. The Skr. Buddhist tradition ascribes his conversion to Sādharma, but we have no evidence as to the probable date of its occurrence. Under Kanishka's auspices, another Buddhist Council was held, probably about A.D. 100 (see COUNCILS AND SYNODS [Buddhist], vol. IV, p. 184). The place where it met is variously stated as Jālandhara (in the Eastern Punjab) or Kaudalavara (in Kāśmi). The traditional accounts given of it are vague and conflicting; but we may conclude that it was attended by representatives of all the 18 sects of the older Buddhism called Śrāvakas or Hinayānists, and that the views of the new school of the Mahāyānists (see art. HINAYĀNA) on the doctrine of the Buddha, not represented or found no support. Yet all the Indian Buddhists, including the Mahāyānists, acknowledged the authority of the Council. The Ceylon bishops were, however, not represented in its deliberations. The main result of this meeting was the cessation of the divisions that had prevailed for a century among the Hinayānists, although it by no means extinguished the new doctrine of Mahāyānism; and the statement of a Tibetan authority that on the occasion of this Council the sacred books were revised, and thus some parts of the canon were then written down for the first time, is not improbable. None of the sources says anything about the language in which the sacred books were now recorded, but the Chinese pilgrim Hsin Tsang appears to assume that they were written in Sanskrit.

Under the influence of Hinduism the Mahāyāna doctrine, combining a fervent devotion (bhakti) to the Buddha with the works of the Buddha, became a kind of theism in which Buddha occupied the place of the personal deity in the Vedānta system of the Brahmans. This doctrine was destined to have a far-reaching influence on the history of Buddhism as a world religion; for by appealing to the sympathies of the masses it ultimately not only absorbed all the Buddhist sects of Northern India, but became the religion of all the countries that derived their faith from Skr. Buddhism. The old orthodox faith of the Pāli canon henceforth became restricted to Ceylon and the countries proselytized from that island. Since even the name of Kanishka is not found in the religious literature of Ceylon, its Buddhism appears to have been cut off from that of India by the 1st cent. A.D.

Many inscriptions, ranging from the time of Kaniska over more than two centuries, show that Buddhism flourished at Mathurā (Maṭṭha) by the side of Jainism. Other sources indicate that the Doctrine propagated in Kāśmi, Kūndālikā, and the N.W. of India. The epigraphic evidence of Nāsh and Kārī proves that there were numerous Bud-

About A.D. 400 one of the Chinese pilgrims, Fa Hien, describes the condition of Buddhism as very flourishing in Udayana (the
Swa territory), in the Pathākh, and at Mathura, though he never lived outside the territory of Nālandā (in Magadhā), the chief seat of Buddhist learning two centuries later. The same author is variously identified as the Buddhism schismatic school of the Mahāyana, which was fully developed; two, the Mahābhāskara and the Sattavākā, who were later, were adherents of the Hinayāna, while the third, the Mahāvijñāna, belonged to the Mahāyāna. The Mahāyānists, whose reputed founder was Nāgārjuna, were purely philosophical, holding that the phenomenal world is a mere illusion, an adaptation of the Māyā doctrine of the scholastic Vedanta of Hinduism. From Pañcāla we also learn that at Mathura the Mahāyānists and the Mahāvijñāna were worshipped, and that at Pāphālāputra the Hinayānists had one monastery and the Mahāyānists another, with 600 or 700 monks between them. Two other Chinese pilgrims, Hsuán Tsang and 1-8, who visited India in 629-40 and 673-80 respectively, tell us much about the state of things in the 6th and 7th centuries. During this period Buddhist scholasticism flourished greatly, the contention between the sects gradually weakening and resolving itself into rivalry between the two main parties of Hinduism and Mahāyānists. The great pentagon of the faith in the 7th and 8th was the famous monk Nāgārjuna of Kāsana (A.D. 550-640), who, originally a Sāivist, became an ardent Mahāyānist, but was tolerant to all sects except the Hinayānists. In fact, such religious rubbish as prevailed existed between Mahāyānists and Hinayānists, while the relations between Hinduism and Buddhism were peaceful. Hsuán Tsang found Buddhism, prospering not only in India, but in Kasmir and Nepal, where Buddhism and Hinduism lived in harmony. The last great Buddhist champion of Buddhism in India was Dānmahākirti, who flourished between the time of Hsuán Tsang and 1-8. In the 9th and early 10th centuries a revival of Hinduism took place, chiefly under the influence of the two great dialecticians Kumārila and Saṅkara (born A.D. 788), whom the tradition of Buddhism attributed to the Pelas dynasty of Bengal (A.D. 800-1050), who were protectors of Buddhism. Under their successors, the Sena kings, who were Hindus, though not active opponents of the Buddha, Buddhism still further declined till it received its death-blow in Magadha from the Muhammadan invasion in A.D. 1290, all the monks either being killed or fleeing. Buddhism lingered on for a considerable time after that date in other parts of India. Thus a Buddha stone inscription of A.D. 1220 from Srawasti shows that the doctrine was not altogether extinct in India in the 13th century. In Bengal it still had a few adherents in the 16th century. In Orissa it died out in the middle of that century, in consequence of the conquest of the country by the Muslim Governor of Bengal. In Kāsimār the accession to power of a Muhammadan ruler put an end to Buddhism in A.D. 1340. In Nepal, however, Buddhism has maintained its existence, in a degenerate form, by the side of Hinduism down to the present day.

2. Literature. — For this see art. LITERATURE (Buddhist).

3. Doctrines. — Since Buddhism arose on the basis of Brahmanism, its essential features cannot be fully understood without clearly ascertaining which of the religious ideas of the antecedent religion it retained and which of them it retained. On the other hand, Buddhism repudiated the divinity of the Vedas and the Vedico-sacrificial system; he condemned self-mortification; he denied the existence both of a world soul and of the individual soul; he discarded the distinction of male and female in the monastic order, though not as a general classification of society; and he was entirely averse to speculation on metaphysical problems, to which the adherents of Brahmanism were so prone. On the other hand, Buddhism held fast to the belief in transmigration (samsāra) and retribution (karma) practically unchanged; he also adhered to the doctrine that the great goal of endeavor is release from transmigration to be attained by means of renunciation. But this more or less residual Brahmanism could not possibly have constituted a new religion.

What, then, were the fundamental features that made the teaching of Buddha a new force in the life and thought of India? Stated quite generally, the doctrine of Buddha, on its philosophical side, was pronounced pessimism: the deep-rooted conviction that all earthly existence is suffering, the only means of release from which is the abandonment of all desire. Even this fundamental doctrine is only a development of the view of life already apparent in the Upaṇiṣads. Buddha may in this respect be regarded as a genuine descendant of the Yajñavalkya of the Brāhmaṇas, who turned with aversion from this unsatisfying world and sought refuge in the hopeless life of the spiritual mendicant. It must also be noted that Jīva and R. G. B. hold that the Sāṅkhya (g.v.) supplied the foundations of the metaphysical side of Buddhism. On the other hand, we know this most pessimistic of all the Brahman systems of philosophy had only been fully developed as it appears in the classical texts of the system, which are posterior by many centuries to the rise of Buddhism. Yet it is possible that, as the Sāṅkhya doctrine and the philosophical side of Buddhism have some common, a much earlier phase of the Sāṅkhya (of the existence of which we have no direct evidence) may have exercised a certain influence on primitive Buddhism in India. In what may be called its religious side — it was rather a religion of humanity — primitive Buddhism was a system of practical morality, the key-note of which is universal charity: kindness to all beings, animals as well as men. It is here that the originality of Buddha’s teaching is chiefly to be found; for the sphere of ethics had been neglected by Brahman thought, which was mainly directed to ritual and theological speculation. To this source is to be traced the profound influence exercised by Buddhism as a world religion.

The whole of the Buddhist doctrines are set forth in the fundamental Four Noble Truths, the first three of which represent the philosophical, the fourth the religious, aspect of the system. These truths are: all that exists is subject to suffering; the origin of suffering is human passions; the cessation of passions releases from suffering; the path that leads to the cessation of suffering is the eightfold path. They already play the chief part in the first address of Buddha, the sermon of Benares, and they continually recur in the sacred books of the Buddhists.

(1) The very first of them shows the thoroughly pessimistic character of the Buddhist attitude. Indeed, the Buddhist scriptures constantly dwell on the transitoriness and worthlessness of all things, and no other religion is so penetrated by the belief in the utter vanity and misery of existence.

(2) The origin of suffering is described as due to thérth (rājya, Pāli taṭhā), or the desire of life, which, until it is destroyed, leads to continued transmigration and retribution. That the origin of ‘thérth’ is explained by the formula of causation (pratītya-samutpāda, Pāli patiḥchchha-samutpāda, ‘origination from an antecedent cause’). This is one of the principal teachings of Buddhism as supplying a solution of the problem of evil.
'Thirst' is traced backward through a chain of several causes to ignorance, 'ignorance' (avidya), or lack of knowledge of the doctrine of Buddhism. From ignorance are derived the latest impressions (samskaras) of former acts, constituting present tendencies, and leading to present acts. While his contemporary Mahatma Gomila, founder of the Ajivika (g.t.) sect, denied the freedom of the will, he who did not know the formula of causation confused the doctrine of rebirth with the notion of a new birth. From the samskaras were produced 'consciences' (vijñāna), then, the views of the individual, regarded as a non-corporeal element that does not perish with the body, but remains along with the samskaras after death, and with these forms the germ of subsequent acts. These views are evolved 'name and form' (nāma-rūpa), equivalent to 'the individual.' From these, again, arise the six organa, that is, the five senses and 'mind' (manas); in other words, the individual assumes a practical form. From the organs are produced 'contact,' 'contact perception,' which is the immediate source of 'thirst'. From 'thirst' arises 'attachment' (upadhi) to worldly objects. This leads to continued 'becoming' (samsāra), an infinite series of new existences. These, finally, are the cause of birth, old age, and death, pain, suffering, sorrow, and despair.

The doctrine next in importance to that of causation is the doctrine of the five ākandhas (Pali khandhas), or elements of existence, of which every thinking being is composed: body, sensation, perception, consciousness, and the mind (ākandhas). In this connexion samskāra means mental powers or emotions, such as reflection, joy, and hate, of which there are 92. Vījñāna as a ākandha signifies critical cognition or judgment, of which there are 99 subdivisions. A being conceived was regarded as not in a permanent condition, but always in a state of becoming, personality being only an apparent, temporary, and transitory endowment. A sense remained the same in the next existence: as only the elements of the mind are constantly changed, like the flames of a lamp in successive watches of the night, he thus suffered the consequences of his deeds in the previous existence.

The Buddha's 'middle view' was regarded by Buddhists as a middle way between the two extremes of asceticism and sensual indulgence. It is the belief that the pursuit of either extreme will lead to neither happiness nor true liberation from the cycle of rebirth. The path to enlightenment involves the practice of the virtues and the cultivation of the mind. The practice of virtue and the cultivation of the mind are essential for the attainment of Nirvana, the ultimate goal of Buddhism.

The practice of virtue and the cultivation of the mind are essential for the attainment of Nirvana, the ultimate goal of Buddhism. This is achieved through the Bodhisattva ideal, which emphasizes the importance of the cultivation of wisdom, compassion, and loving-kindness. The Bodhisattva ideal is central to Buddhist thought and practice, and it is through the cultivation of these virtues that an individual can attain enlightenment.

Buddha laid great stress on the propagation of his doctrine by means of missionaries, his monks were scattered all over India and beyond its confines, forming many small and remote communities, over which his influence could not possibly extend. There was thus during his lifetime not one community, but very many. His personality, however, gave unity to the Order. But he neither designated nor made personally any visible head of the Church. This necessarily resulted in the formation of many sects, of which, two centuries after Buddha's death, there were no fewer than eighteen, with their own monasteries. The highest authority was the whole Church, or Sanga. 'Elders' (sākhāra, Pāli theragāha) were distinguished, but they were not officials, the term being merely an honorary title bestowed on monks who had long been ordained. This obvious looseness of organization in the Buddhist Church was undoubtedly a great source of weakness throughout its history, and was one of the main causes leading to its ultimate downfall in India.

(a) Confession.—The disciplinary and penal code of the Church was embodied in the Pātimokkha (Sk. Pratīyākṣa), a formulary of confession constituting one of the chief features of the ascetic life. It is a list of sins enjoined by Buddha to be recited twice a month on the days of full and new moon in an assembly of at least four monks. At the end of each section the reciter inquired whether any of these present had transgressed any one of the articles that it contained. These two confessional days are called upavisa, a term originally meaning 'fast-day,' since it was inherited from Brahmanism, in which it designated the Saturday on the eve of the great soma-sacrifice. The eighth day after the first and the eighth after full moon were also upavisa days, though not for confession. These four days together constituted the weekly recurring festivals of the nature of Sak的基础上。On these days laymen put on their best clothes, and the priests refrained from business and worldly amusements. Laymen were also regarded as religious if they did not observe, on the Sabbath, the first three of the five commandments especially enjoined on monks.

(b) Admission.—A man became a Buddhist layman by pronouncing the creed consisting in the words, 'I take refuge in Buddha, I take refuge in the Law, I take refuge in the Order.'—these refrains being called the three 'jewels.' He then had to promise to keep the Buddhist law, and to be ready to sacrifice the life of a monk or nun any one, without distinction of caste or race, could be admitted excepting murderers, robbers, slaves, soldiers, and persons suffering from contagious diseases or certain bodily defects. The act of admission is called pārājikā (Pāli pārājika), by emitting the yellow robe, shaving his hair and beard, and uttering the creed thrice in the presence of an ordained monk.

(c) Ordination...
accepted by the assembly, exhumed him to restrict himself to the four 'requisites' and to avoid the four capital sins. A monk could be temporarily or permanently expelled for committing any of these sins, or for general untrustiness; but he could also voluntarily leave the Order. A result of entering the Order was the dissolution of marriage. The new monk had also to give up all private property, and was debarred from acquiring anything outside the Order. The practice of marriage was forbidden to the Order.

(d) Clothing and equipment. A monk might possess only one suit of clothes, consisting of three parts: an under-garment, equivalent to a shirt; a lower garment, a kind of skirt reaching to the knees and fastened with a girdle; and a mantle which, coming down to below the knees, was thrown over the left shoulder, leaving the right shoulder and part of the breast bare. The colour of the garments in early times was yellow (as it still is in Ceylon), but in the Middle Ages it was reddish. Only a few other articles were required to complete the monk's equipment. One of these was an alms-bowl, which he carried in his hand for the purpose of collecting food. He was also provided with a razor, which he used for shaving his head and his beard twice a month on the occasion of his birthday. The bowl comprised a needle, a water-strainer, and later also a mendicant's staff. Besides regularly paring his nails, he used tooth-sticks for cleansing his teeth.

(e) Housing. Originally the monks had no fixed abodes, but lived in woods or caves, though within easy reach of a village or town, so as to be able to beg food. It was their duty to wander about, preaching the doctrine, but during the rains they went into retreat (vàrājaka, Pali váraṇa), generally several of them together. For their use during the retreat, pious laymen often built shelters to which they annually returned during the rains. These were called vihāras, in which monks later began to live even at times other than the rainy season. In this way regular monasteries gradually grew up.

(f) Food. In early times the monk was allowed only one daily meal, and that at noon, after his return from his begging rounds. The use of pí, or begging, was always prohibited. On the contrary, rice and sugar were permitted to members of the Order only in times of sickness, otherwise it was treated as an offence requiring confession and absolution. Fish and meat were absolutely prohibited under certain restrictions. Thus Buddhist himself is recorded to have eaten pork. Like the Balúman religious student, the Buddhist monk had to beg his food, but he was not allowed to ask for alms by word of mouth.

(g) Worship. In the early days of Buddhism, religious observances were of a very simple character. Twice a month all the monks of a district assembled to celebrate the uposatha, or Sabbath days, at new and full moon. The meeting, having been convened by the eldest among them, was held in the evening at the place designated. It was restricted to ordained monks, but all of these had to be present. It comprises, as has already been said, in a ceremony of confession. The Sabbath in general were days of rest and fasting, when no trade or business was allowed, hunting and fishing were forbidden, and schools and courts of justice were closed. Preaching and hearing sermons were a common feature of the celebration of every Sabbath. But the regular time for this was the retreat during the rains—an institution dating from the very commencement of Buddhism. The retreat began on the day of full moon in the month of Ashada (June-July), and ended with the day of full moon in the month of Kartika (about the middle of October). Its conclusion was marked by the Pāramiṇa festival, held, before the wandering of the monks again began, on the 14th and 15th days of the light fortnight, the latter being at the same time a Sabbath. This was made an occasion for giving presents, especially in the form of clothes, to the monks who invited them to dinner, and for celebrating processions.

In later times there was also a quinquennial festival, called Pañcaviśākha, on a grand scale, its distinctive feature being the presentation of extraordinary liberality to the Order. In the first half of the 7th century, King Harsha of Kanauj regularly consecrated such assemblies. In the 7th century the date of the Nivedana of Buddha was also celebrated as a great festival.

It was not long after the establishment of Buddhism that the worship of relics and the adoration of sacred sites began to develop. Buddha himself, before he died, recommended four sites as deserving to be visited by the places: his birthplace, the place where he obtained enlightenment, where he first preached, and where he entered into Parinirvāṇa. After the cremation of Buddha, his relics, as we are told in the Mahāparinirvāṇa-sūtra, were divided into eight parts, over which the various relics were divided into stūpas. The veneration of relics later became a very rich developed form of worship. Among these, the tooth relic, with which a whole sect is concerned, played a prominent part.

The records of the Chinese pilgrims show that stūpas were also erected over the relics of Buddha's descendants, and similar monuments in various cities, such as Vaiśali and Mathura. Fa Hian, about A.D. 410, saw Buddha's relics at Bodh-Gaya, near Nāgarāj (south of the Kabul river). In the 7th century, the head-stūpa of Buddha when a boy was to be seen in South India at Kōkhanapuram, where it was displayed on Sabbath days and honoured with flowers. In the same century, shadows, regarded as relics left by Buddha, were shown in caves at Kāśi, Gaya, and Nāgarāj. From the 1st century A.D. onwards, images of Buddha of Pāthakbodhivas and Dhyānabodhis, and Buddha- phenomena began to be made.

5. Art. Indian Buddhist art is peculiarly important, not only because it is of great value as illustrating the fortunes of Buddhism in India during nearly the whole course of its existence there, but because, if it has been lost, there could be no history of Indian art at all. The remains of Buddhist art in India are almost entirely architectural and sculptural. None of them, with one exception, goes back to a period earlier than the reign of the emperor Ashoka (variously fixed at 272-231 B.C. and 264-228 B.C.). The three centuries over which they spread may be divided into three roughly equal periods. In the first, 220 B.C. to A.D. 50, stone began to be employed in India for Buddha. Before this the architectural use of brick was known, as is shown by the stūpas of Pāphāvājana, which date from about 300 B.C. or perhaps earlier. But the ornamental edifices of the pre-Ashokan age must have been made of wood, like the modern palaces of Burma, the substructure alone being stone.

The whole history of Indian architecture points to previous construction in wood, the stone monuments being largely imitations of wooden models.

(a) Architecture. Indian Buddhist architecture may be divided into three classes: (1) stūpas, or reliquary mounds; (2) chaityas, or assembly halls, corresponding to our churches; (3) vihāras, or dwellings for monks.

(1) The stūpa was a dome-shaped structure, developed from the sepulchral mound, in which baked bricks were substituted for earth with a view to durability. This monument served to enclose the remains of an abbott of the early Buddhist the religious edifices. In the earliest sculptures we constantly find representations of the ab Patronage by
cestial beings, men, and even animals, such as elephants. It was also the sacred object always set up for circumambulation in all the early Buddhist monasteries.

(2) The chaitya (q.v.), or assembly hall, is the exact counterpart of Christian churches not only in form, but in use. Till recently only rock-cut examples, to the number of about thirty, were known in India. The type of their style can be followed step by step throughout these nine centuries. The oldest, dating from near the commencement of the reign of Asoka, are at Barabar, 16 miles north of Bodh Gaya. Here, for the first time, we find a structure such as we believe to represent in rock the form of the strucntural chaityas of the age, all the details clearly imitating those of wooden buildings. All the most important examples of chaityas occur at six places in Western India. As we pass from the earliest to the latest specimens, we can clearly trace progress towards stone construction on the one hand and degeneracy in cult on the other. In the later specimens at Ajanta (q.v.) a striking change is the fact that figure sculpture has superseded the plainer ornamental carvings of the earlier caves. The greatest change, however, is that figures of Buddha have now been introduced in addition to the earlier chaityas. In the earlier caves only ordinary mortals are sculptured, but Buddha himself never appears. Now he is the object of worship, his image being introduced in the front of the stūpa itself, which alone was previously adored in the older chaityas. In place of the earlier total lack of images we are here confronted with an overwhelming idolatry, in which Buddha, originally regarded as a human being, is the chief deity. By the latest of the Ajanta caves, dating from about A.D. 600, the sculptures are more mythological, evidently approximating to the iconography of Brahmanism.

The caves of Ellora (q.v.) are particularly interesting, because here the juxtaposition of Buddhist with Hindu and Jain temples throws light on the relation of the three religions. The large Buddhist assembly hall at this place dates from about A.D. 600.

Besides many other evidences of architectural lateness, its most striking feature is the stūpa which, instead of being circular, has a large frontispiece that makes it look like this: and contains a figure of a seated Buddha surrounded with attendants and flying figures in the latest style. In what is probably the most recent Buddhist cave temple in India, at Kholi, the stūpa is no longer solid, but is hollowed out into a cell, in which an image of Buddha is placed, and a successively smaller stūpa is built over it. The stūpa is the latest step in the development of the chaitya. A link connecting this stage with the later Jain and Hindu temples is to be found in the structural Vigna temple dating from about A.D. 700. Here the stūpa is superseded by a cell for the image, but the stūpa still stands as a separate tower, and is separated from the hall by a wall. The transition is completed by making the cell square, as in the case at Petrapole, but with a cell for the Buddha, while in the later Hindu temples of the temples of the Hindu temples of the first class, the cell is in the base and hence not visible.

The archaeological evidence of the development of the Buddhist religion gradually grew later, and came nearer and nearer to Hinduism. It supplies us with concrete evidence showing how Buddhist art was gradually disappearing before the encroachment of the new form of the faith, from an earlier phase of the Chaitya.

(3) Beside the chaityas there arose vihāras, or monasteries, as residences for the Buddhist monks. Our knowledge of these is still more dependent than that of chaityas on rock-cut examples. There are about 900 Buddhist examples of this class in India.

The vihāras, as a rule, of a hall, generally square but sometimes oblong, surrounded by a number of cells or sleeping-quarters, cubicles and hall by a list consisting of a nave and side aisles terminating in an apse or semi-dome. The pillars separating the nave from the aisles are continued round the apse. Under the flames of the pillars in the stūpa, in nearly the same position as that occupied by the altar in a Christian church. The tee was doubtless usually surmounted by a wooden umbrella, which has, however, everywhere disappeared except at Karli, the finest cave of this type in India. The roof is semicircular. Over the doorway, which is opposite the stūpa, is a gallery, and above this a large window shaped like a horse-shoe. This window is constantly repeated on the façade as an ornament.

In the rock chaityas, the excavation of which extended from about 280 B.C. to about A.D. 600, there seems to be little evidence of their style can be followed step by step throughout these nine centuries. The oldest, dating from near the commencement of the reign of Asoka, are at Barabar, 16 miles north of Bodh Gaya. The most important of these is carved so as to represent in rock the form of the strucntural chaityas of the age, all the details clearly imitating those of wooden buildings. All the most important examples of chaityas occur at six places in Western India. As we pass from the earliest to the latest specimens, we can clearly trace progress towards stone construction on the one hand and degeneracy in cult on the other. In the later specimens at Ajanta (q.v.) a striking change is the fact that figure sculpture has superseded the plainer ornamental carvings of the earlier caves. The greatest change, however, is that figures of Buddha have now been introduced in addition to the earlier chaityas. In the earlier caves only ordinary mortals are sculptured, but Buddha himself never appears. Now he is the object of worship, his image being introduced in the front of the stūpa itself, which alone was previously adored in the older chaityas. In place of the earlier total lack of images we are here confronted with an overwhelming idolatry, in which Buddha, originally regarded as a human being, is the chief deity. By the latest of the Ajanta caves, dating from about A.D. 600, the sculptures are more mythological, evidently approximating to the iconography of Brahmanism.

The plan of the third resembles that of the second, but the sculptures are all unmistakably Brahman. This is evidently the earliest Hindu cave, being a close copy of the preceding Buddhist example.

(4) Sculpture.—In the earliest period there are no images of Buddhás or Bodhisattvas. No sculptur of Buddha, in any of his conventional attitudes, that has been executed has been assigned to an earlier date than the end of the 1st cent. A.D. Reverence was paid during the first period to relics, stūpas, Bo-trees, footprints of Buddha, and sacred symbols, such as the thurible and the wheel of the law. These are constantly represented in the sculptures as adored by men, and even animals.

The sculptures of this period are found at Bihārī (now in the University Museum) and at Bodh Gaya, and in the early temples and monasteries of Western India. They appear on the rails and gates of the vihāras, on most bushes, and on the pillars and façades of chaityas and vihāras. The most ancient railings, as they are called, date from about A.D. 700. They soon began to be adorned with bosses, pannels, and friezes. The railing at Bihārī (500–119 B.C.) is covered all over in a part of the sculptures, which is now practically a treasure in stone on Buddhist mythology. The gateways of the vihāras are covered with sculptures, which are generally connected with Buddhist legend. It is worthy of note that both here and at Bihārī occur representations of Lakṣmi, the Hindu goddess of fortune, in the form of a lion or with an elephant on each side of pouring water over her from pots. This is the earliest example in Indian sculpture of worship being paid to any being, divine or human.

The commencement of the second period of Buddhist religious art coincides with the Mahāyāna school. Its history begins in the extreme north-west, the region of Gandhāra.
INDIFFERENTISM

Representations of Buddha and of numerous Bodhisattvas suddenly appear in the Buddhist monasteries of this district for decorative purposes. The current A.D. 599, which is characteristic of this new phase of Buddhism that figures of Buddha occupy the cells originally meant for monks, and that the heads of these figures are always adorned with a halo. In this corner of India was created the conventional type of Buddha images, which, spreading from this source to other parts of India, was finally diffused over the whole of the Buddhist world. From the already stereotyped character of the figure, it was possible to confuse the Buddha with the gods, with several heads and many arms. Probably the earliest image of Buddha is a statue found in the tomb of a monk of the 2nd century B.C. The statue shows Buddha in the lotus position, with two arms raised, one holding a danda, and the other, a lotus flower. This statue is said to have been found in a cave near Bhubaneshwar in Orissa.

INDIFFERENTISM.—This doctrine makes its first clear appearance in Stoic ethics. Virtue consists in living according to nature; but certain things are in our power, certain things are not. The latter are abdāpheres, things indifferent; they have nothing to do with the motives of the virtuous man; he must be entirely independent of them, taking them as they come, but trying to do nothing for, or indeed, if it is really impossible—either to secure or to avoid them. But the former are in our power, such as desire, impulse, inclination; others are not, such as the body, property, reputation. Should you really know what is your own, and what is not your own, you ought to exercise the most moderate restraint over your desires; you will never blame or chide another; no one will injure you, and you will never have an enemy' (Epic. Men. i. 113.). Virtue is nothing but the good will: Epictetus illustrates this by the story of two lads who were sent to fetch Plato: the one sought for him everywhere, but missed him; the other spent his time listening to strolling jesters in the street, and then happened to see Plato passing, and gave him the message. 'Abdāpheres, on the other hand, are things which, properly speaking, 'neither help nor hurt, such as health, pleasure, beauty, strength, wealth, good birth, and its opposites, health, disease, toil, disgrace, weakness, poverty,' etc. (Diog. Laert. vii. 103.). It is this concept of virtue, which is the chief element in the popular view of Stoicism, and it forms an interesting contrast to Aristotle's description of the 'great-souled man,' for whom the things in the first class of abdāpheres as described above are a necessary condition of happiness, and can only be received from other people.

But there are three objections to the conception:

1. It leaves man without guidance in a large part of life; (2) it is too narrow for the average man; (3) it is impracticable, since all life involves a continuous
INDIGITAMENTA

The Roman Indigentia were those portions of the pontifical books (Serv. Georg. ii. 21; and Urbanii Indigentia) whose origin was traced to King Numa Pompilius (Arnob. ii. 73: "Pompianna indigentia"). The citations made from the ancient books go back to the 3rd century A.D., the time of Granius Flaccus (Censor. de die Nat. iii. 2).

INDIVIDUALISM.

The term 'individualism' may be taken either in a generic or in a normative sense. In the former sense it denotes a system which presupposes the existence of a political society and its laws, as well as in the great manifestations of the human mind, creations of isolated or associated individuals; in the latter it denotes a principle according to which the integral and free development of the individual or the community shall be the aim of social life. Individualism in the generic sense has a historical significance; individualism in the normative sense has a moral significance. They may stand independently of each other; but, as a matter of fact, individualism in the generic sense of the word is often allied to a tendency which is individualistic in the normative sense, i.e. individualism in the generic sense only traces back to the origins of societies, which thus form a First Cause, the aim which we claim to assign to them, or, in other words, transfers into the historical mind of the individual the idea of his isolated social and political life. It seems best, therefore, to treat these two notions without separating them; as a matter of fact, they are often united and even confused. We shall discuss: (1) religions individualism, (2) moral individualism, and (3) political, social, and juridical individualism.

1. Religious individualism.—Primitive religions regarded the individual merely as the member of a clan, tribe, or community. Even their deities were not developed individualities, but personifications of forces of nature or of social laws. It was only gradually that the poets gave them more definite and powerful characters. The connexion of the religion of Israel has the same character as the other national religions. Jehovah is the God of a people. It is to this people that He has given His law. For transgressions of this law He demands satisfaction indifferently from just and unjust—those who have not sinned as well as the sinners who are guilty. The individual simply shares the lot of the whole of which he is a part.

The time of the prophecies witnessed the development of ideas in the meaning of individualism. The prophets themselves were powerful individualities who, strong by means of their inspiration and the revelations which they were given, overcame the old religious objects, opposed the people and the national tradition, preaching the religion of justice in opposition to the religion of worship, and realizing in their person an individual communion between God and man. They undoubtedly still speak to the people as a whole; they announce the punishments of God to the people as a whole, but in a different spirit. On the one hand, there appears the idea that the sufferings of the just are not punishments, but dispensations of God in view of the salvation of sinners by means of expiation; it is prominent in the parts of Deuteron. On the other hand, Ezekiel develops the idea of a strictly individual justice: every one will suffer for his own sins; they will no longer say in Israel: 'The father's home sitting to their face, and the children's teeth are set on edge' (Ezk 18).

The book of Job also marks an important stage in the development of religious individualism in Israel. Conscience was still subdued to facts; the Israelites judged themselves according to their faith, and they judged themselves in the same way. This is the point of view of Job's friends; they prove to him that he is guilty because he is unfortunate. But Job protests. To the verdict of
outward conditions he opposes that of his conscience, and maintains that, even if he were to despair of the justice of God, his exceptional misfortunes are not the proof of exceptional wickedness. He does not regard himself as an example of a sinner; his predominant feeling is that his conduct has been upright; and his friends are in the main convinced by God Himself, whose cause they thought they were defending. This is the triumph of the individual conscience over the collective conscience. The victory of individualism is completed by the coming of the doctrine of resurrection and the judgment of the dead which is announced in the book of Daniel and gradually becomes implanted in the mind of the Jewish people. The triumph of this belief was due—at least in the minds of many scholars—partly to the effect of foreign influences on the Israelite mind. Certain religions, e.g., Judaism and the ancient Egyptian religion, in their beliefs concerning the life to come and the judgment of the dead, have a very important individualistic element. As regards Jewish piety, it is more and more assumed the character of an individual effort to merit eternal life, by good works and a strict observance of the law. The ancient idea of national solidarity did not disappear, however, and the hopes still continued to bear a national character. The individual soul is the special object of Jesus. It is the object of His appeals, His solicitude, His promises. To Him the work of saving souls was more important than that of saving His people, although this too is not neglected. He was the real initiator of religious individualism, by the announcement of His filial communion with God and consequent salvation for all sinners, and by His invitation to His followers to enter into a communion with the heavenly Father similar to, if not identical with, His own communion with the Father. With St. Paul the individual soul is predominant; we find him, however, the idea of the Church as the body of Christ. He does not place it above individual souls, but there appears in his Church the notion of a spiritual reality which enters into competition with the individual. Afterwards the Church is regarded as an institution of divine origin, the mediator between God and man, and the regenerator of the thorough-going of the individual. In fact, if not in theory, the individual exists for the Church rather than the Church for the individual. The Christian becomes a member of the Church by a sacrament which is administered to him at a time when he has not the power to reject it, and he remains a member, not because of personal qualities, but because of the sacrament, as long as the Church does not think fit to exclude him from its communion.

Alongside of the Church institution another type of religious association appears in the Middle Ages, viz. the sect—if we may use this word to signify communities to which persons voluntarily attach themselves on account of personal convictions, and membership in which consists in the fulfillment of certain rules or vows. The sects were intolerably, in many cases, the refuge of individual piety and conscience from the hand laid by the Church on the religious autonomy of individuals. The Reformers proclaimed the principle of justification by faith, which is the basis of the soul with regard to the promises of God, and so brought the individual face to face with God, and prepared for the maturing of personal piety and religious thought. The consequences of this principle, however, were of slow development. The two great Churches resulting from the Reformation preserved the idea of the Church-institution on the whole, and took up a position against the sect of Anabaptists, which was based on the individualist principle. But the idea of universal priesthood expounded by Luther did not readily harmonize with the Church's dogma of a special priesthood. On the other hand, the idea of individualism, and perpetuated in the second place the idea of a Church as the guardian of the means of salvation. In the Lutheran Church, Pietism sought to realize the ideal of personal piety, and, without attacking the ecclesiastical institution in general, to revitalize the formation of groups of Christians animated by a conscious personal piety. The Reformed Church gave birth to a series of sects, Baptist and Methodist, which are all founded on the idea that the holiness of the Church and the efficacy of its work depend upon the character of its members—that the Church is an association of living and converted Christians who have adhered personally to the Christian faith.

As the doctrine of the Church came to be contested more and more by criticism, the question of the rights of individual religious thought in the Church was a pressing problem. Catholicism could not solve it except in a negative way; the traditionalist section of Protestantism might do no more concessions; while the reformist section set itself to ensure the independence of individual thought, by insisting on liberty of thought as an essential element of Christian liberty, or by reducing the doctrinal consensus to a minimum, or by making thought and doctrine quite secondary elements of the religious life, and seeking to unite souls in mystical and practical aspirations. In this order of ideas, Schleiermacher was the instigator, religious thought follows religious experience, which by its nature is much more individual than collective. The rights of the individual with regard to every religious doctrine are, therefore, secured, and the doctrinal decisions of the Church have to take account of them. And, in addition, although mysticism properly so called has always offered a protective refuge to individual piety, it is not positively favourable to individualism, as it tends to absorb the human individualities in God rather than to make them independent.

Once at this point of development, religious individualism necessarily generated in the bosom of the official Protestant Churches a movement in favour of ecclesiastical individualism, which the sects had been preparing for a long time. This movement had its reflex action on the connection of the Churches with the State. The Church-institutions were all united to the State. At first the effect of this union was to enslave the Church, but afterwards it produced exactly opposite results. The Western Catholic Church, very soon regarded itself as invested with spiritual glory in Christendom, while the State held the temporal glory under its authority and for its protection. The Protestant Churches too, at first, spoke more or less coldly of the idea of 'Christendom'—a political-religious body, of which the Church (subject, of course, to the State) was the inspiration and the union of Church and State, therefore, was part of a system in which the individual was surrounded in every respect, even intellectually and morally, by society, and in which the Church was the prop of a particular form of the Christian religion. In far as the State, under the influence of the widening of ideas and the enfranchisement of intellect, became more unconformist and even unreligious, the Church appeared to many minds prejudicial to the liberty of the latter, and to the liberty of the individual. The idea of a civilization founded on religion became gradually more vague, and in some places
disappeared entirely. A new notion made its appearance—that of the Church-association, composed of men animated by one and the same faith, independent of the State, and exerting no influence whatever on it or of persons who do not voluntarily belong to its membership. This is the system of the Independent Churches, or of ecclesiastical individualism. The great theorist of this system was Alexander Vines, the promoter of the Free Church movement in the canton of Vaud. According to this system, persons cannot become members of a church except by voluntary adherence to a confession of faith which forms the basis of the Church (Churches of professing Christians). The Churches have no longer anything in common with ethnic or historical groups; they are regarded as free creations of the spirit of God by means of individual souls who, on coming into contact with each other, form religious societies. As a matter of fact, the principle of ecclesiastical individualism has nowhere been carried out to its full extent, even in the communities in which infant-baptism is not practised. It clashes with the existence of the Christian family, which is itself a small church, and which, in reality, constitutes membership of the Church on the children born with it.

From the Protestant point of view religious individualism is legitimate, and inseparable from every higher form of religion, in so far as it asserts the right of the individual to enter into direct communion with God, to think and discuss about religious matters, to join or not to join such and such a religious society, and in so far as it asserts the right of the individual to form its own religious society, to declare its principles, and the like. Religious individualism, however, runs the risk of weakening religion, when it does not recognize its social position or its origin, its beliefs common to all the members of a society, and the inevitable connexions between the religious society and the political society—connexions which are beneficial when they are based on respect for the real nature of the two institutions.

2. Moral Individualism. Moral individualism is seen mainly in three forms: (1) the criticism of national customs and traditions; (2) the view that moral duties are born in the individual conscience, and that the latter is also the basis of the principle of moral duties; and (3) the view that the development of the individual is, if not the only aim, at least one of the chief aims, of the moral life.

We find the first form in antiquity. The Sophists submitted the traditional morality to a dissolving criticism, which appeared individual and national reflection on national tradition. Socrates, building on the ruins, appealed to reason to reconstruct a morality. This may call individualism in its second form. Naturally, this inner individual morality of Socrates is strongly influenced by tradition; it is even more so with Plato, who, when not under the influence of his mystic ideas, places the city above everything, and is equally so with Aristotle. The Epicureans and the Stoics represent the same individual reflection. The Stoics rejected the Epicurean and Epicurean school as the basis of their life.

The second form is the third form of moral individualism. They aim above all at the happiness of the wise man considered 'as himself.' This individualism, however, is very relative, or, rather, negative, for it allows of hardly any variety in the conception of the moral ideal. Each school produces only one uniform type, but this type is no longer that of the citizen who lives for his country; it is now the man who sees his way and his place in the universe and in humanity. The Catholic Church regards morality essentially as obedience to a code of positive laws. In the Middle Ages, Abelard was almost the only one who, in his Sei le spremi, invited man to look within himself for the foundation of morality. The Renaissance was, in theory at least, if not in practice, a very pronounced individualistic movement. Powerful individualisms asserted themselves to such an extent that in many cases they freed themselves from all tradition and all law. Among the Reformers, Luther especially laid emphasis on the internal nature of the moral obligation; he only acted upon it in his eyes were those accomplished by the individual in virtue of this inner constraint; while Calvin insisted above all on the notion of the divine law, not forgetting, however, that this law is inscribed on the conscience. The philosophy of Kant exaggerates the theory of moral individualism, and moral obligation is not only internal, but absolutely autonomous, and this obligation, which proves the liberty of man, is in a way his proper aim: all the contents of morality flow from it. Kant is the most characteristic representative of the second and third forms of moral individualism: morality comes from the individual, and it has as its aim the freedom of the individual and the dignity of the individual. This is similar, although less formalistic. For Hegel, on the contrary, the moral subject is only a stage towards the realization of the objective ideal in the State. The last word of morality for Hegel is the sovereignty of the State, which shows its majesty by sacrificing individuals, if need be, to the maintenance of its independence and authority. Hegelian morality is, moreover, a special type of an anti-individualistic morality, although Hegel had reality no intention of sacrificing the individual and disregarding his dignity. It is the spirit of Hegel that animates Fichte and Schelling when they attempt to make the idea of space (Raum) and the idea of the individual a new goal of science (Natur). Later, however, Fichte passes to individualism so extreme that it was exceeded only by Max Stirner (whose real name was J. Kaspar Schmidt), author of a book entitled Der Einzige und sein Eigentum (Leipzig, 1841), which recommends not only individualism but egoism, and which ends in the paradoxical idea of an association of egoists.

If the philosophy of the second half of the 19th cent. and the first half of the 20th cent. is generally favourable to moral individualism, the literature was equally so. In Germany the Sturm und Drang period, an age of geniuses, was ultra-individualistic; the neo-humanism of the classics also made much of human individuality, disregarding, however, man's social aspirations and work. Romanticism, again, exalted the individual in a way sometimes approaching the morbid, and now and then carried the cult of the individual so far as to forget all moral rules. It was as a disciple of Romanticism that Schiller, with whom he felt the influence of the abstract individualism of Kant, which he utilized with sagacity, developed a concrete individualism which takes account of the difference between individuals, and no longer cultivates the single individual, but individuality. This is the idea of Schiller's essay Phänomenen der romantischen Dichtung (Berlin, 1800), which are all impregnated with the Romantic spirit. If in his later works on morality Schiller, with whom he felt the influence of the abstract individualism of Kant, which he utilized with sagacity, developed a concrete individualism which takes account of the difference between individuals, and no longer cultivates the single individual, but individuality, whose development alone renders possible the complete moral life. Richard Rothe, the disciple of Schiller, defines morality as the penetration of nature by the personality: he was therefore clearly dominated by the idea of the value of the human person. The individualism of these two theologians can be traced back to the Gospel: it is no less connected with the philosophy and literary
movement of their time. Another theologian and writer, Sören Kierkegaard, the Dane, opposed the Hegelian tendencies in his country, and became the defender of a very extreme individualism which he identifies with true Christianity. This individualism is of a character which is both intellectual and practical: subjective experience alone grasps the truth; the suffering which is born of the opposition of the individual to his surroundings is inseparable from moral life. Kierkegaard was driven by the logic of his position into conflict with the Established Church.

In England an individualism which is the parent of German Romanticism, and has yet a distinct character as a way the privilege of the powerful, appears in Byron. Alongside of this great poet we must mention Carlyle, who, in his praise of a sort of hero-worship, sets forth great individualities as the flower and the perfection of humanity.

In France, moral individualism in the spirit of Kant was the distinctive characteristic of the morality of the spiritualist and neo-criticism school. The Positivism of Auguste Comte, on the other hand, was anti-individualistic; it made society the aim of the individual, and ended by preaching a legal maxim of the State which made the selfishness of E. Durkheim and Lucien Lévy-Bruhl the principal representatives goes still further in this direction. It identifies morality with custom, and submits the individual unreservedly to the laws of society; for man owes everything to society—his development from the animal state, the creation of language, religion, and law.

In opposition to this extreme anti-individualism there is at present a new form of individualism, via, Nietzscheanism. Nietzsche exempts the strong man from all rule, despises moral laws as an invention of the weak in order to triumph over the stronger; he makes the Superman the terminus of human evolution. In the fragments of his last work, The Will to Power (Nachgelassene Werke, Leipzig, 1901), however, there is a tendency to make the superman the creator of a new social rule.

3. Political, social, and juridical individualism.

—Primitive races present the spectacle of the abstraction of the individual which is made or the tribe without a family, in the modern sense of the word, was constituted, it generally exercised, in the person of its chief, considerable rights over its members. The State gradually weakened this family, and by the middle of the eighteenth century the individual was himself more or less in the place of the family, although at the same time recognizing important rights in the individual. Greco-Roman antiquity, to the very end, imposed an official cult on every individual. The Roman Catholic Church afterwards tried to impose a similar conception of society upon the State, and Protestant Churches did not at first proclaim the principle of individual religious liberty. The idea of tolerance and of non-interference of the State in religious matters did not begin to obtain a footing in Europe, and especially in America, until the Revolution in England. Apart from religious matters, which during the Middle Ages, for different reasons, were less concerned about the happiness of individuals than the modern absolutist State, at least at the beginning of the 18th century. It had no hesitation in unsparingly sacrificing the individual, when necessary, for the benefit of the State. At the beginning of the epoch of Cesare Beccaria (1738–

—Author of Del Delitto e della pena, Milan, 1764, there are signs of benevolence even with regard to criminals. From the end of the 18th century, the system of economic guardianship and direction of commerce and industry by the State was gradually attenuated, or even abandoned, in favour of a system of liberty and of free competition, which is often called economic individualism. Adam Smith, Cobden, and Bright in Britain, and Bastiat in France, were the chief exponents of this movement.

As regards the general welfare of individuals, Great Britain was for a long time the only country where serious precautions were taken to guarantee inalienable and inalienable rights of the individual. British traditions, the Anglo-Saxon temperament, and the Calvinist education all tended to the enfranchisement of the individual. The idea of inalienable individual rights was afterwards recognized in several constitutions of the States of North America, whence it passed into the Déclaration des droits de l’homme in 1789. The French Revolution was at first bent on establishing the liberty of the individual, though it was forced in the end to sacrifice it. The Liberal school took up this aim, and reduced the State to the position of guardian of the rights of the individual. This theory, however, could not meet the reality, and to the abstract individualism of the Liberalism socialism opposed a more practical care for the material welfare of all—at the risk, it is true, of compromising their intellectual and physical happiness at the expense of their independence; though idealist socialists claim that this will not follow. Anarchism is the extreme form of political and social individualism. It seeks to put free and contractual association in place of the State, and repudiates all constraint of society with regard to individuals. Down to the present it has not been able either clearly to define its ideal or to put it actively into practice.

We must now consider, independently of these theoretical and practical efforts to make the individual the chief or, at least, one of the chief concerns of the State and social life, the theories according to which governments and societies are the products of the conscious will of individuals. The idea that governments owe their origin to contracts entered into by individuals was known even to antiquity. It is found in the Middle Ages, and later among the Jesuits, with the distinct tendency to break down civil governments, originating as they do from contracts which are always insecure, in favour of the Church, an institution which goes back to God Himself. In the hands of the theorists of modern natural law, i.e. non-religious, the idea of contract becomes, on the other hand, a means of freeing the State from the Church. Hobbes was the first to trace back not only government, but society itself, to a social contract. Rousseau was his disciple in this matter, but with neither of these two thinkers did this theory profit individualism. Both of them, on the contrary, make the individual abide in favour of the society which he has helped to create—with this difference, that Hobbes makes society itself subsist in favour of an absolute monarch, while Rousseau makes society supreme. Rousseau's theory of social contract, treated in the book which bears the same name (1762), shows the wildness of his doctrine about the happiness of the savage, free from all fetters because he lives outside of society, and makes for the support of a civic ideal which is not even compatible with full religious liberty. The French Revolutionary was inspired by him when it instituted an obligatory civil religion, without any regard to the rights of conscience.

There is a kind of individualism also which has attacked the family and the institution of marriage. At the beginning of the second half of the 19th century marriage began to be looked at far more from the individual point of view than from the
social. Under the influence of Romantic ideas, even a theologian like Schleiermacher held for some time that marriage could be dissolved if the two parties no longer suited each other. Free love, or a conception of marriage which is very near to it, has been extolled by a series of writers (e.g. the brothers Marginette, Knebel) who were interested in the interests of individual liberty. It is far from being the case, however, that all the attacks against marriage and the family have been inspired by individualistic tendencies; sometimes they are the result of an anti-individualistic tendency which regards the strongly constituted family as an obstacle to the omnipotence of a society which aims at equality.

With regard more particularly to the idea of law, individualist theories and social or socialistic theories stand in opposition. The former maintain that the essential origin and aim of the law is the establishing of the liberty and dignity of individuals whose spheres of action and of influence are so prescribed as not to encroach on one another. This is especially the theory of Kantianism and French spiritualism. The German historical school, on the other hand, finds in the national spirit holding sway over the individual. Auguste Comte, with his Positivism, opposes the idea of individual rights, and insists on the rights of society and the duties of the individual towards it. This stands in opposition to the Positivism. Every school that finds in law only the expression of the social relations demanded by the character of men and things or by social utility, either limits or frequently suppresses the individual character of the law.

Moral and social individualism is an enormous improvement on the insecure and brutal solidarity of ancient times. But even so, the same time it runs the risk of isolating him, on the one hand, and, on the other, rendering him clever and making him forget what he owes to his community and to its traditions. Individualism is fruitful only when it leads men to accept solidarity with their fellows without reserve, and to make it an instrument of justice and liberty.

INDIVIDUALITY. — I. The term. — The word individuality is simply the last translation of the Gr. ἰδιωτικός, and thus originally signified 'that which cannot be cut,' or 'divided.' In this sense the word is found in Cicero, and Seneca uses it in the same way. Even by the later period of antiquity, however, the word had come to denote a single thing as 'unique,' 'distinct from others,' 'alone of its kind.' The medieval writers adhered to this sense of the word, and, by the 13th cent., at latest, they had also coined the terms individualitics and individualitas. The modern usage of the words in the sense specified is mainly due to Leibniz.

2. Historical survey. — The word individuality has two meanings, viz. that of a 'single' thing, and that of a 'unique' or 'peculiar' thing. The corresponding idea is associated with two main problems, which, it is true, are closely connected. These are: (1) whether human society is to be traced chiefly to the action of single individuals or to a general order which is superior to them; and (2) whether the development of the qualities shared by all or by some existence peculiar to the individual is to be regarded as of more importance in the sphere of education and culture. These two questions are closely related also to the property of history of the individual.

The historical process of human society exhibits a rhythmical tendency; we perceive in it a movement from a general order to the individual, as also a movement from the individual to a general order, and the culmination of either seems to lead inevitably to the other. In the earliest stages of culture the human individual is but part of a social economy which besieges him with inexorable laws and controls his conduct. The progress of civilisation brings with it a more extensive division of labour, and at the same time carries the individual to a position of greater independence; the human units do not now simply hear and obey, but begin to question the authority of the existing order, and at length, feeling themselves superior to it, they repudiate all outward control, and refuse to recognize anything that does not clearly and definitely approve itself to their minds. Such emanicipation, however, tends naturally to bring with it a state of things in which the stability of life is dissolved, and all communal existence is broken, with the result that a counter-movement sets in, and attempts are made, by spiritual means, to restore that relationship of human beings which its natural form had been irrevocably broken. At this stage the distinctive quality of the individual may be duly recognized so far as it fits in with the wider order. But, even when such an order has been attained, it may be that in the further progress of humanity it may be found to be too narrow, too inflexible, and may at length become intolerable. There will then set in once more a movement in favour of the individual, and a consequent transformation of the entire situation.

In this conflict between the general order and the individual the former is usually defended by an appeal to the necessity of a fixed and stable organization, transcending the aims and powers of the individual units, while, on the other hand, the individualists maintain that true human life real up in the individual soul alone, and that life re-

1 Seneca, de Prov. 5: 'quamvis separati et quidem homines non possum, coherent, individua sunt.'

2 The various senses borne by the term individualum towards the end of the ancient period were explained by the commentator on Theophrastus (Basile, 1967, p. 65): 'individualum pluribus duobus modo: sic dicatur individuum quod secum sciret omnia quae sensum in mentem et in ventrem et in locum tenet; et secundum duum praedictorum genus dividitur et quod de pluribus implicatur.' The leading passage in Theophrastus runs as follows: 'græca enim in alia cum eandem', et 'infinitas omni quae in aliam ad se referant, alia omni quae in alteram ad se referant.' This definition held ground throughout the Middle Ages till modern times.
INDIVIDUALITY

quires perfect freedom for its development, and
that a far greater inwardness and fullness of life is
to be looked for from such unhampered develop-
ment by general conditions.

This oscillation between the two sides can be
distinctly traced in the history of European civiliza-
tion. The complete emancipation of the individ-
ual, as manifested in the philosophy of the
Renaissance, was presently recognized as a grave
danger, and the political constitutions drawn up by
Plato and Aristotle are largely dominated by the
idea of once more giving a commanding position to
the State as head of a general order. By Halbert
themselves in particular of the idea of a living
organism, these thinkers illustrated, on the one
hand, the absolute subordination of the individual
to the community, and, on the other, the distinc-
tive function of each individual within the
community. While Aristotle certainly concedes
the individual a position of greater importance
than does Plato, that position must nevertheless
be within the whole; he never admits that the
individual has any rights as against the community,
and sets no limit to the community's claims upon
its single members. Aristotle's view finds still
stronger expression in his assertion that the
State (the organized community) is prior to the
individual.

The idea of the organism was extended by the
Greek philosophers to the universe as a whole. At
the same time, however, the Stoics insisted strongly
upon the unique character of every particular element
in the whole, asserting that no two hairs or grains of
corn were perfectly alike. Thereafter the metaphor
was adopted by Christianity, and was applied
to the Kingdom of God, as, e.g., in the figure of
the vine and the branches, although this concep-
tion is found only in the Fourth Gospel, but which
was strongly influenced by Greek modes of thought.
The endeavor made in the later period of antiquity
to fortify the individual by the formation of per-
manent associations appears also in the rise of
various schools—as, e.g., those of the Stoics and
the Epicureans—the object of which was not
merely unity of opinion, but also a certain
unity of life.

The movement towards a stable organization of
human society, however, attained success not
through the instrumentality of philosophy, but by
linking itself to religion. It was, in fact, the
Church which finally accomplished the task of
creating an organization which united its members
in a firm bond, and imparted truth and salvation
to them individually. The commanding position
won by this organization was largely due to the
rise of new nationalities, which required to be
trained to independent spiritual effort. But philo-
sophy likewise had a share in bringing about the
alliance with religion—in so far, namely, as it
gave the individual a link of relationship with the
cosmic whole. The outstanding name here is
Plotinus, who includes all things in their multi-
plity and variety in a universal life, and regards
all individual existence as being permeated thereby.

Thus, as the universal life is immediately present
in the individual, and may indeed become his own
essential nature, he is undoubtedly raised to a
mu cece: ever constant level, and is dependent upon
the universal, and the development of
his peculiar qualities is left out of account.

This mode of thought was fostered by mysticism.
But while mysticism advanced largely due to the
unanimous efforts of all religious sects, and
to aspirations to realize that unity directly, and while it
therefore admits of a greater freedom than does the
eclesiastical system, yet here too all life is de-
Rivered from the universal, and devotion therefore
prevails over the development of individual qualities.

Of the modern period, again, nothing is more
characteristic than the fact that it came to find
the medieval form of human life too narrow and
restrictive, and to look for new types of free
self-sufficiency in the face of the oppulence of the individual life to their full develop-
ment. The various civilized peoples have furthered
that development in various spheres: the Italians
in art, as is shown by the Renaissance; the
French, in literature and the fine arts; the
British, in the political and economic sphere; the
Spanish, in the structure of social life. These
movements have generated enormous activities,
unparalleled vast forces, and radically altered the
total conditions of life—facts so palpable as to
require no fuller treatment here. In the modern
period, moreover, the full development of individ-
ual characteristics came to be recognized as an
end of the first magnitude. Here, on the theoretic
side at least, it was especially the Germans who
led the way; thus Leibniz enunciated with telling
effect the unconfirmable character of the indivi-
dual 'monads'; Schleiermacher and the older
Romanticism asserted that the great end of life was
to be an individual, a personality, and to
invest every action with one's own personality;
while German pedagogy made it its aim to give
the most careful attention to the peculiar qualities of
individual children, and bring these qualities to
their full development. J. H. Pestalozzi emphasized
the opposition between the individual and the
'collective'; he scoffs at 'collective actions,' at the idea of
a 'collective conscience,' at 'official creeds,' and
asserts that the collective life of the race can only be
the best civilized, if it cannot give it a true culture
('kultivieren'); see Werke, ed. L. W. Seyfarth,
Berlin, 1851, xii. 154. In all this we can trace the
powerful influence of Rousseau, who, as regards
the whole range of human life, was the first to
bring out with perfect clearness the antithesis
between the individual and society.

Valuable as were the results of this individual-
istic tendency, and powerful as it still operates,
nevertheless we cannot fail to see that its limita-
tions and its dangers are being more and more
recognized, and that a counter-movement is setting
in and increasingly asserting its power. Among
those who should note first of all the theory which
from various sides directed attention to the signifi-
cance of society for individuality, and to the individ-
ual's dependence upon them—facts emphasized by his-
tory and the historical mode of thought, to which,
in particular, Romanticism gave an artistic form of
expression; by philosophical speculation, which,
in the hands of Fichte, Schelling, and Hegel, inter-
preted the manifold of experience as the evolution
of a single principle; and by modern sociology,
which showed that the individual cannot exist at
all except in connection with others, and who
made manifest the close dependence of the indi-

dividual's personal characteristics upon the social
environment—the milieu.

Theoretic considerations, however, were much
These and personal experiences in counter-
acting the preponderance of the individual.

The perils of the unlimited freedom of the individual
manifested themselves, above all, in the economic
sphere. As laborers and technicians, he is indi-
cidual in character, and was more and more concen-
trated in huge factories, and as, in consequence,

1 The term 'milieu,' as comprehending all the external
conditions of life, was probably first used in this
sense by the French eclecticism, and was a
Taine's prediction for the term that gave it general currency.

1 Polite, 1246. 19 (Bekker): πρόδρομος ου πλησίου μονάς οινοσ
κοινέναι και

2 Cf. Cic. Acad. Quaest. iv.: Stoicam est . . . nullo esse
plumum omnium rebus talis quatuor et plus alius, nullo
plumum praestat.etc.
the antagonism between varying interests became increasingly fierce, the evils of unrestricted competition became ever the more marked, and the social problem seemed to be less and less capable of self-regulation. In such conditions some interference of the State was imperative, and this policy has been more and more adopted even among those professing by their character and their history are in a pre-eminent degree the champions of individual freedom.

If a tendency to narrow the sphere of State action was characteristic of the 18th cent., a reversion to the opposite procedure asserted itself strongly in the course of the 19th. If reason and morality were to rule the societial life of man, it appeared to be urgently necessary alike to strengthen the power of the State and to circumscribe that of the individual. No exaggeration of this idea—such as we find very specially in the proposals of Social Democracy—can detract from its rightful claim.

This reaction against a sheer individualism takes its ground, in the first instance, upon the conditions necessary to the mere maintenance of life, and treats the inward interests of man as matters of secondary importance. It cannot be denied that a movement towards a closer association of mankind is increasingly at work in the inward sphere as well—that there is a growing desire for spiritual fellowships. The inner experience furnished by religion has for many people at the present day become all but evanescent, and the spiritual association based on such experience is like to be slowly dissolved. The individual reality that he is thrown upon his own resources, and begins to feel himself isolated; even in what he regards as exalted and sacred he encounters endless inconsistencies. In such a state of things his convictions cannot attain stability or win power over his conduct. The more earnest a man is in the spiritual life, the more intensely does he feel his isolated position to be unsatisfactory, and, indeed, intolerable, and the more eagerly does he crave for some fresh spiritual bond of union with his fellows, and for the support that such a connection would afford. It may be said, in fact, that the unstable nature of things, at this present time proceeds in a special degree from such desires—on a positive reaction against the threatened isolation and the growing apathy of the individual. Hence emerge great problems for the future; the present generation is engaged in the search for a new mode of life and a new framework of human society.

3. The problem of individuality.—On the problem of individuality itself we would add but a few reflections suggested by our historical survey. Mankind is acted upon by two opposite tendencies, each of which has its own strong points as well as its own weaknesses. It is indisputably the case that the immediate sources of spiritual life lie in the individual alone, and thus a system of things which places the individual above all else must undoubtedly prove superior to any other system in originality, mobility, and variety. But, on the other hand, the individual would appear to be incapable by himself of fully developing and consolidating such spiritual forces as he possesses, while, again, the separate individuals tend to come into such opposition and conflict with one another as to threaten the existence of all fellowship whatever. Society then develops a form of organization, but this in turn is exposed to the danger not only of permanently fettering human life to the organized structure of a particular age, but also of seriously hindering the individual and depriving him of all freedom in life and thought. It is thus quite intelligible that in the process of history now the one tendency, and now the other, should gain the upper hand.

It is scarcely to be expected that we shall arrive at a solution of the problem that would avail for all ages, but we may at least discover certain points of view which help towards a decisive conclusion. Such a conclusion will depend, first of all, upon the value attached to the spiritual and moral capacity of the individual person. These two points of view that capacity will base society as far as possible upon the will and ability of individuals, while a pessimistic estimate prompts the demand for a social order higher than, and as far as possible independent of, the individuals. Thus, modern liberalism is pervaded by a vigorous optimism, while pessimists like Hobbes and Schopenhauer were in favour of a solipsistic forms of government. In another aspect of the subject it is important to note the value that is attached to the element of change in human history. Changes are brought about primarily by individuals, and, accordingly, the more human affairs are regarded as being in a state of flux, the greater is the rôle assigned to the individual, while, in societies where human life is felt to be sustained by eternal truths, a social order is as preserving and testifying to these truths, ranks as the higher factor. In any case the actual decision between the two tendencies depends, not upon abstract considerations, but upon the existing conditions of human society.

A question of a different character is how far a particular age does justice to the peculiar nature of the individual. Manifestly the various periods differ very greatly in this respect, some developing more fully the characteristics common to individuals, while others rather foster the qualities which differentiate individuals from one another. The present age finds itself in great perplexity in this matter, its conscious purposes being the social and political, and economic, and ethical, and aesthetic. Against this modern life, with its technical arrangements of labour, its huge aggregations of human beings, its increased power of locomotion and its annihilating nearness, its complicated inter-relations of individuals, its railways and its newspapers, tends strongly to wear down the distinctive traits of individuals and to produce a uniform and average type. The social environment is asserting its power over the more and more man appears to become a mere product of that environment. The dangers involved in this process were clearly recognized by John Stuart Mill, who did his best to counteract them. The immense influence of Nietzsche in our own day is due, above all, to his vigorous crusade against the levelling tendencies of our modern social system. It is true that the positive elements of his polemic, and especially his doctrine of the Superman, are hardly adequate to the task of circumventing the evils against which he fought. In a world of necessary law there can be no freedom or independence for the individual.

4. The educational problem involved.—From ancient times the demand has been put forward that education should inculcate and foster the individuality of the pupil, but men have often failed to realize the perplexities inherent in this demand. To begin with, education must maintain against an extravagant optimism its right to put all individual qualities to the proof that task. It is not simply to recognize, but, if need be, to reject, and hence it must first ascertain which elements of the individual character are of value and worth cultivating. Even so, however, it is not implied that the valuable elements spontaneously combine
to form a rounded individuality; on the contrary, the several characteristics of the individual often hang loosely together and even conflict with one another, so that it is only with great pains that a look of individuality can be won from the materials. A complete individuality is not the starting-point, but the goal; it is no mere gift of nature, but a high ideal that in most cases calls for specific effort. Think of the travail undergone by great masters, as, e.g., Goethe, before they came to a clear understanding of their peculiar gift. Here too, then, we light upon an arduous task in what is often regarded as simple and self-evident.

R. EUCHE

INDO-CINA (Savage Races). The name 'savage' is applied in France to the group of half-civilized races inhabiting Tonking, Annam, Cochinchina, Cambodia, and Laos, and called Muong, Mois, Penongs, or Khao, according to the French, or Muong, Nha, or avarious barbarians' or 'savages.' These races are scattered over a vast district of 130,000 sq. miles, extending from 22° to 12° N. lat., from the frontiers of China to the confines of Siam. The number of the population is estimated at 20,000,000. The length of territory occupied by them is 30 miles between 21° and 22°, 300 miles between 20° and 21°, and 90 to 180 between 12° and 18°.

1. Physical characteristics.—The sages are an immense forest stretching from the plains (where they seldom stay) to the higher slopes and mountains. This forest, which is vast, is also extensive, and affords shelter for all the beasts of the forest, birds, and innumerable insects. The climate varies, according to the season, from 60° to 46° C. during the day, and from 18° (sometimes 7°) to 29° during the night.

2. Orige.—At the present day it seems possible to make the assertion that the Chinese form one race, practically the same in all the districts in which they are found, except for modifications due to admixture with the more civilized Chinese. In Cambodia, Annam, and Tonking, the races are mixtures of these.

3. Physical characteristics and mode of life.—Generally speaking, the appearance of these savages is rather certain physical, psychological, and social affinities, so that the account given of any one of them may be applied to the rest, except in minor details. They nearly all belong to the physical type (with very slight differences) whose characteristics have been summarized as follows by E. Bernard, medical officer to the colonies, in a study of the Khao of French Laos: 'Straight black hair, yellow skin with a tinge of red, smooth body, short stature varying in the different tribes from 1 m. 52 to 1 m. 69, long narrow head (dolichocephalic), average cephalic index 76, flat nose, generally broad, breasts of medium size, transverse nasal index varying between 85 and 94, prominent cheekbones, short broad face (cynocephalic), general shape of head viewed from front and profile, long oval or oblong-shaped; these are the characteristics of the savages of the Tonkinese race.' (Bernard, Les Khais, p. 36.)

4. War.—Although they live with arms continually at hand and are a constant struggle with the animals of the forest, the savages (with the exception of certain races like the Jarais and the Sedangs) do not like war. They hardly ever make war except to avenge some injustice suffered by one of their number, and only after repeated conferences with the enemy with a view to compromise. Nevertheless, they sometimes break into war from sheer want, or even from poverty, in order to steal cattle or elephants, or to get possession of prisoners, whom they then release for a ransom, employ, or sell as slaves, and thus enrich the village. Slavery, in fact, is a pernicious menace to their lives, and war is their means of obtaining those items for which they long, such as civies and weapons.

The savage employs a very clever ruse to start an offensive war: he gives notice, noiselessly across the almost impenetrable underbrush of the forest either to surprise the hostile village—this is a common occurrence—or to carry off women or solitary men who have left their shelter to work in the fields. In any case, old men and children to their terror as they are wonderful. Much more fortunate, or more careful to prevent the return of these invaders, the savages have a large area of territory which makes a great variety of crops. The only thing that roams these from their idleness of body is actual need; when the savage sees his rice-granary empty, and, finding no one near to give him victual, he repents the fact that he is a savage, lays down his eel and pipe, and, with a basket on his head and a pipe in his mouth, toils for hours on end, gets out for the forest to hunt or gather fruit; then no difficulty baffles him, and for whole days he will scour the woods in search of food for his family.

VOL. VII.—15

The savages have no ambition, and are naturally generous. They are, nevertheless, as greedy as children, and sometimes mercilessly impose upon ill-protected strangers who come asking for help, bringing, or simply shelter. Because of their large numbers they are ruthlessly robbed by all the Annamese, Siamese, Chinese, and Laos who deal with them,—in fact, their turn is justified in imposing upon any strangers whose merchandise attracts them. But they are not such thieves among themselves as might be imagined from their poverty, and people of the same village preserve the most absolute respect for each other's property.

They are very suspicious of a stranger, because they firmly believe that he comes with the object of robbing them. Yet they very rarely break their promise to him. They are not cruel, but timid rather, in spite of their innate bravery. They never kill any one unless they believe that he is a spy, or that he is in danger, or when moved by a superstitious terror which urges them to avenge on an intruder a ritual offense, committed; it may be, in ignorance, which would bring misfortunes on the whole village. The perpetual state of tribal war in which they live, always in danger of their lives, and sold as slaves, makes them reserved. Generally speaking, they are sociable, proud, and extremely polite without becoming obsequious. Conscious among their qualities is their love of liberty. They submit to no authority or legal constraint. To agree to any kind of taxation is regarded as an act of slavery. They would rather live in poverty and wretchedness, always on the alert, than obey any authority—even among themselves. Quite unconscious they realize the spirit of perfect anarchy. Their communism is equally striking, for a truly brotherly solidarity reigns among them. Great treatises are common among them. Each man keeps his property, and, if a man's property is kept, he always shares with his neighbors. barbarians' or 'savages.' These races are scattered over a vast district of 130,000 sq. miles, extending from 22° to 12° N. lat., from the frontiers of China to the confines of Siam, taking in Annam, Tonking, and Laos. The length of territory occupied by them is 30 miles between 21° and 22°, 300 miles between 20° and 21°, and 90 to 180 between 12° and 18°.

All the missionaries and explorers who have stayed any time among them are at one in praising the general purity of their morals, exception, of course, being made in the case of certain tribes (Jarais, Bolovens, etc.). Although their rules of morality are not the same as ours in every detail, it is noticeable that they are modest and have a keen sense of decency. These remarks apply specially to those savages who have not come into contact with the more civilized populations. The result of such contact is that they lose the best of their traditional customs, and adopt the vices of the Khmer, Annamese, or Laotian nations.
times in conflict with the prudence of the older men. This council is always accompanied by invocations to the spirits, sacrifices, and a feast. If war is decided on, one of the council members always, according to the custom, gives an announcement of the wrongs which his tribesmen have suffered without reparation. Of this council the time and place are specified, and from this event onwards the two villages live in a state of constant alarm, while their neighbors maintain an anxious neutrality, lest they too become involved in the conflict.

When the war has been bloody and directed against the whole village, the women of one tribe, on the night of the feast, are in proportion to the risks that they have run. Among the Bahans, according to the custom of the Kha-Pi, the "Festival of Victory" is announced every night for a fortnight beforehand by the beating of gongs and warlike marches in the common house. The number of buffaloes to be slain is equal to the number of prisoners taken.

In the event of the war on both sides does not lead to reconciliation by means of a mediator, every expedition is inevitably followed by a series of others, for vengeance is a sacred duty among the savages. The tribes which are too weak themselves will suffer injustice under force, but will never become resigned to it; they cherish the sacred hope of some day being avenged by means of alliances with a more powerful tribe. The savage spirit of independence of each village, however, makes these alliances very rare. The federation attempted in 1894 between the Bahans, Khoongs, and Sedangs by J. G. Gietlueh, director of the Roman Catholic Mission, who assembled almost 1500 warriors of different villages under his command, in order to put an end to the continual and unjust incursions of the Khoongs, failed. The reason was that the extraordinary phenomena that it succeeded in defeating the Khoongs by its moral effect. When these uninviting appeals are made to the more peaceable tribes, which are always the first to receive them, the missionaries try to unite them in order to guarantee them material as well as moral security.

5. Social organization.—The family, constituted among the savages by marriage, as a rule includes the eldest living descendants as far back as great-grandparents, but is not limited to this degree in almost all the tribes though for higher degrees of consanguinity the fear of incest is always felt. The women of the lower classes, who are removed from the belief that in heredity the maternal strain is much stronger than the paternal. Among the Radees it is the woman who occupies the first place in the home. Consanguinity among the savages forms a sacred bond which entails the avenging of each other's injuries, and never permits war with each other.

Marriage is endogamous, although some small tribes, such as the Alak, allow their daughters to marry men of neighbouring villages. It generally takes place at puberty, i.e., at the age of fourteen or fifteen years; and in almost all the tribes, the older girls marry first, the younger, the more skilled in household work, the better marriages they make. Among the Kho-Pi, however, marriages are mentioned where the wife is only eight years old. Among the Halangs, a girl at this age, who continue to live with their parents at the husband's expense until puberty, when the marriage is consummated. As a general rule women are greatly respected among the savages, and everywhere rape and seduction are punished by a heavy fine. It is even forbidden to abuse women prisoners of war. Among the Western savages, sexual relations before marriage are not considered improper, and a woman is often married at an advanced stage of pregnancy. The custom of sending the young boys to sleep in the common house among a strict morality. The Nihbns and the Bolevans impose a fine of three buffaloes for a case of seduction; but, if there is an acknowledged betrothal, the betrothed pair have full liberty of intercourse.

The woman nearly always chooses her husband, and the latter very often pays an indemnity to the woman's family; or he lives for a certain time— for some months to several years—in a kind of slavery, which is only annulled by marriage with his parents-in-law, in order to compensate them for the loss of their daughter. When he does not want to do this, he nearly always offers them a strong healthy slave instead. Under these conditions we can understand how many of the tribes welcome the birth of a daughter with more enthusiasm than that of a son: if the one will afterwards defend the tribe, the other will enrich it. Among the Alak the husband is compelled to provide a dowry, which usually includes four buffaloes and two Cambodian jars. Among the Kha-Pi, custom prescribes that the rich must marry among themselves, and the poor likewise members of their own class.

Among a great number of tribes, the intended husband gives only a few unimportant presents, and works for a year with his future father-in-law. The eldest daughter, however, even after marriage, never leaves the paternal roof. The asking in marriage is almost always done by the youth himself, through his parents or a mutual friend. The length of the betrothal depends on individual circumstances, especially on the time necessary for the making of all the rice-wine for the marriage-festival. The date of the marriage is usually fixed by the chief of the village, who for this purpose examines the entrails of a chicken. After the ceremony relating to the marriage have been received, and invocations and sacrifices made to the spirits, the marriage is celebrated, followed by a feast more or less magnificent according to the resources of the couple, in some among the more peaceable tribes. In the mass of which the wife herself chooses her husband and asks him in marriage.

Although chiefs and rich men marry as many wives as they can support, monogamy is the rule. The savage is generally only one wife, to whom he is very much attached and faithful; but the wife is never in any way opposed to new alliances, which would bring her valuable assistants in her household work.

Divorce is rare, and takes place on either side. The man sometimes seeks divorce on account of incurable illness or barrenness of his wife, when she sees an opportunity of getting a better home, or when her husband requires her to do too much work. The assembly of the old men, or the chiefs of the village, will pronounce judgment. The husband as far as possible avoids seeking a divorce, for his wife represents for him an actual value—the dowry he has paid to get her and the compensation he will have to pay for marrying another. Among the Nihbns this fine is three buffaloes; among the Halangs seven slaves. In a case of divorce the children are divided between the two parents, the mother usually taking the younger ones. As a rule this course of action is seldom resorted to, for the family ties of the savages are nearly always very strong.

Adultery is even rarer than divorce; some missionary reports that during twenty years among the Bahans, Sedangs, and Stiengs they have not recorded a single case of it. Among all the tribes it is punishable by a heavy fine, varying according to the rank of the injured husband, who always has the right to kill culprits when flagrant delicto, and in some cases the right to sell the lover as a slave. Among the Stiengs, only the husband is punished by being sold into slavery, the woman being considered irresponsible. As a rule, in practical life, punishment is limited to a fine paid by the lover; then the husband takes back his wife.

Among the Kha-Pi there is a sort of compulsory ceremony before this peaceful settlement: a pig is killed at the expense of the culprit, and the right foot of the pig is sprinkled with its blood; then he takes back his wife.

Though the moral and legal condition of the
women is based on the principle of complete equality of rights with the men, their material condition is miserable. On them devolves all the labour of the household, the fields, etc. They work from dawn like beasts; they carry water and wood, grinding rice, cooking, weeding, planting, weaving, plaiting, and dyeing, under the calm eye of their husbands, who pass most of their time in drinking, fighting, and the quotidian step of the common house. In spite of real affection for his wife, the savage would feel degraded if he did anything but fish, hunt, or fight. His duty is to protect the home, and to provide sustenance in time of famine, when he can show extreme bravery and devotion.

As a result of the spirit of anarchical independence of these tribes, the authority of parents over their children is virtually non-existent. In cases of serious offences on the part of children, the Khun-Pi performs the expiatory ceremony mentioned above in connexion with adultery.

The old men are very much respected, but in spite of a certain amount of respect for their age, the life of the village is diminished by their physical uselessness. Their number is very small, however, on account of the hardness of the savage life.

The disposal of the dead. —When a savage dies, his family proclaim their grief by cries and tears, and among certain southern tribes, particularly the Bahlarns, by laceration of their bodies and even by the sacrifice of their eyes. Owing to the sweetness of the domestic harmony, parents are honoured by their children, and love them tenderly. In cases of serious delinquency on the part of children, the Khun-Pi performs the expiatory ceremony mentioned above in connexion with adultery.

In the north, under the influence of the Laotians, death soon loses its mournful character; and relatives and friends flock to the house of the deceased in order to prevent the near relatives from giving themselves over to too keen sorrow, as well as to mourn. Hence the Bolovens, Niahous, etc., hold great funerals for the dead. Women are given a quart of alcohol, as the survivors get intoxicated in honour of the dead.

In the south, as well as in the north, burial, not cremation, is the rule; the ceremony is more complicated according to the wealth and position of the dead man.

In the case of the death of a poor man, as soon as he has breathed his last, his relatives or his children wash him, put on his hat, and GRATAS them leaving his eyes wide open, wrap him in a mat, along with several small axes, pots, necklaces, and baskets for his use in the grave. They close the mouth with a strong piece of rattan, and then bury him in a grave with the remainder of his personal goods, within 24 hours, taking care to put beside him two baskets of rice and two litres of alcohol, one at each of his head and one at his feet. The grave is filled up and covered with tree-trunks to prevent wild animals from disturbing the body.

For a chief or a rich man a coffin is always made, hollowed out of a tree-trunk. The use of coffins is becoming more prevalent throughout the south, and the shape of the coffin is improving the nearer the savages come to civilized races. The making of the coffin of a chief requires from 60 to 72 hours, that of a poor man 24 hours: this is what settles the time of burial.

Before burying the dead man in his coffin, the Bahlarns bend up his arms, and with a stick leaving his eyes wide open, wrap him in a mat, along with several small axes, pots, necklaces, and baskets for his use in the grave. They close the mouth with a strong piece of rattan, and then bury him in a grave with the remainder of his personal goods, within 24 hours, taking care to put beside him two baskets of rice and two litres of alcohol, one at each of his head and one at his feet. The grave is filled up and covered with tree-trunks to prevent wild animals from disturbing the body.

of the South.' If they return, they are feared rather than honoured, and it is not necessary to offer sacrifices except to the names of those who have been very rich or powerful during their lives and able to transmit a little of their good luck to their descendants.

Suicide is very rare, though not unknown, among the savages. It entails, particularly among the Badu and the Reddes, the out-cast of the forest, far from the haunts of men. Those who have buried a suicide must not enter the village again until they have performed certain purificatory rites and a sacrifice.

Eschatology.—If ancestor-worship is vague among the savages, their ideas of what fellows death are even more so. They almost all believe that the personality subsists after death and continues its terrestrial life in another place and another way; but among many of the tribes the idea of a judgment of the dead and a reward for good deeds in this world is very confused. The Badu, the Kha-Pi, and the Rades do not, as a rule, believe in the rewards and punishments of a future life. The Kalangis believe in these things, but without any clear notion as to what they may be.

The Bahnars believe in a whole mang hong, 'kingdom of the dead,' which the dead enter, a year after their burial, by means of a road which then ascends and called must k'ik, 'to enter the cemetery.' This kingdom is hidden in the depths of the earth and is not dangerous to old men. They have eggs in fear and trembling between two huge stones which continually strike against each other. They must slip through at this instant of weakness, for the one which is acting as hammer is raised in the air. They have next to avoid the formidable nations of two gigantic serpents, one black, the other white, whose fangful prescience, a bridge of trunks, stripped of their bark, and animated by a constant rotary movement which makes the smallest step dangerous. And, besides, it does not reach across the whole abyss: there is a considerable empty space, which the dead man must leap across. Only those who have done good deeds on earth can accomplish this leap; thieves and liars fall into the chasm, without hope of resurrection. When a person is victorious from this third trial, he finds himself standing before the cottage of an old witch or sorceress who is busy pounding rice from morning till night, and who in return for glass-ware or little axes provides the names with fire and light, which are absolutely necessary in these gloomy realms. If the ghost cannot pay in current coin, he must allow his ears to be cut off. They immediately attach themselves to the sorceress's ear, which, as a result of all this kind of this kind, reach down to the ground. Equipped with safe fire, the dead man reaches a cross-road—the junction of two roads leading to the two cities.

One of these roads, stream with brambles and briars, is for men who died a natural death; the other, very smooth and bordered with flowers, is taken by those who have met with a violent death—e.g., warriors slain by the enemy, in expedition, or by their own hands, maniacs, suicides, and the like. Members in bright red, because of the blood which they have shed, they dwell in a specially privileged village. In both the cities and the villages the sun sets the same as it was on earth, and the dead are happy proportion to the abundance of the stores of men, foals and cotton, slaves, and necklaces which are the relics of the dead in the coffins or on their tombs, of plumes, paper, and above all, of sar tung. Slaves are represented by rough little figures placed along with pot, crocuses, wooden sabers, etc., at the foot of the tomb.

The Bahnars have no definite ideas of a judgment of men after death, but their traditions imply that only the good can reach the cities of the kingdom of the dead; the wicked succumb to the trials of the journey.

18. Sorcerer-chiefs and sorcerers.—Although the savages of Indo-China do not recognize any constituted power, it is worthy of mention that there are among them three individuals with mysterious names: the wind king and the fire king. We have only vague information about the wind king. The designation sadates, which they receive in Indo-China, is similar to that given to the Khmer sadet, 'king.' They belong to the powerful Jarai tribe. In spite of their title, they have no effective power, and their authority, which is purely spiritual, is not even recognized outside the few villages bordering on their own territory. But all the savages know them by name, and dread them. They seem to offer an analogy with the god-kings of whom Frazer speaks (G.E. 1. 184). Their influence can greatly facilitate the movements of an explorer if he manages to approach them and to gain their good graces. The sadates who most feared is the fire sadate, known especially by the savages of the Annamese slope; the water sadate exercises a less perceptible sway over the Laotian slope; the power of the wind sadate is limited to the Cambodian villages. It is believed that at least those of fire and water are always at hand in a certain pair of families which are related to them, and that they possess objects endowed with magic power. The fire king has a sacred sword or magic blade, badly hewed, and carefully rolled in white cotton rags. No savages would dare to approach it. If the sadate drew this blade half-way, they say it would be enough to make the sun disappear and set fire to the forest. Moreover, a profound sleep; if he were to draw it full length, the whole world would be drowned by flame. The traditions of Champa, Cambodians, and Laos claim that this magic sword was stolen from them long ago. The Cambodians, Mons and Lazămen, and even a rebel chief, it would appear, have several times gone right into these inhospitable regions to ask for it or to try to get it back again. They never returned, because of murder, the savages cry, fire by fire from honest claim.

The water sadate has a magic cup and wand, according to some authorities, and, according to others, a rattle bearing flowers that never fade, and a hindwode saved from the deluge, but still green. Armed with these objects, which the cup is round to anger, is able to bury the earth under the waters.

Although legends of the most confused kind are current about the sadates, and although the savages shrink from giving explanations of the functioning of the spirit, strangers, and their strange powers are very difficult to approach, it seems certain that, in spite of their occult power, they live the simple life of the other savages, and go through the villages, making a tribute of stones, which is seldom refused them, but still more rarely offered. Certain Radè villages, of their own accord, present the fire sadate every year with a little cotton, some rice, and a chicken.

The sadates must never die a natural death. When one of them falls ill, the chief and the old men assemble to examine his condition. If he is judged fit, the man is declared cured; if not, he is pronounced as dead. The sadates, alone among the savages, are cremated, not buried. The ashes are gathered, and honoured for five years. The widow receives some of them, which she has to carry on her back in an um when she goes to mourn at the tomb of her husband.

It is certain that, in spite of its prerogatives, the office of sadate seems to be forced upon the members of families who benefit from it. To succeed the sadate a descendant on the female side is always sought; and the nomination is always made with universal unwillingness from the privileged family. This has given rise to several stories.

It has been claimed that immediately after the death of a sadate, all his relatives eligible for succession flee to the forest to escape this horrid. The village inhabitants set out to look for them, and the first one discovered is nominated. Another tale is that all go to sleep in the common house; an old man enters quietly during the night and wakes the sleepers in a loud voice, "Who will succeed?" The spirits prompt one of them to answer, 'I.' The old man ties a cotton thread, as a guarantee of the will of the spirits, to the wrist of the chosen one, who is thus recognized next day. Surer and more numerous testimonies lead us to believe that the new sadate is chosen by the old men from the appointed family.

Until the time of king Norodom, predecessor of the present king Sisowath, the sovereignty of Cambodia, at their accession, used to send expensive presents to the fire sadate: elephants, silk stuffs to wrap round the sacred sword, etc. The king himself signed the signature. Rice, sesame, and wax were sent to the sadate, or Bokhan priests of the royal palace, who used them in ceremonial sacrifices. In spite of the objections of the sadate, Norodom prohibited sending such costly presents, on the ground that it was of no use, for any reason for his action. Perhaps he saw in this gift a form of disguised tribute to Cambodia, which doubtless recalled either the services rendered long ago to the king, or the annual Epiphany ooc, or a relation of kinship between the sovereigns and the savages.

The sadates or patnas, still so little known, remain, as regards both origin and attributes, one of the most interesting problems to be solved in
the political and religious organization of the Indo-Chinese.

The extremely warlike beliefs and the complicated worship of the savages have given rise also to the singularly cruel practices of sorcerers expert in soothsaying and in nullifying the evil designs of the yang. They may be grouped in two categories: (a) wizard-doctors, who are employed in exorcising diseases and prescribing remedies and sacrifices to appease the yang, the greatest demand, and best paid, but not most influential; (b) wizard-sorcerers; they alone know how to blunt eggs, and their business is to discover by this means theft, murder, or death by witchcraft. Among the powerful tribes, they are very much feared, for their word alone is sufficient to have a man convicted of witchcraft and reduced to slavery. Naturally magic sorcerers abuse their terrible power. Certain wizard-sorcerers practise casting spells by means of wax figures, and belief in the effects of this practice is general among the Indo-Chinese savages.

A man who is either born a sorcerer or may become one; there is, in the one case, direct inspiration of the spirits, and, in the other, preliminary initiation. The wizard-sorcerers who practise divination by means of the so-called casting of eggs receive their mission directly in a dream from the spirit of the lightning. The wizard-doctor (böjau) may also be directly inspired by a special spirit called yang gra.

When the preliminary possession of a man, the latter becomes aware of it from the fact that he can no longer eat certain foods without becoming sick or fevered: dogs, frogs, lizards, and mice, from which he is usually exempt. He then is allowed, with a sort of hysterical delirium, which often lasts five or six days, and then creeps into the forest, to follow the yang; then he has paroxysms of fever, refuses to eat, and holds long conversations with his yang gra, who reveals to him all the diseases with which the village is beset and to be sanitary; and then he goes to sleep, overcome by fatigue. These paroxysms are always accompanied by illness, each time becoming feebler, and at last the initiated one appears to have returned to his normal condition, except that he has become a böjau, fe
cercer and healer. He always has with him in a little bag his special dömm, one of which contains the yang gra, or spirit which inspires him.

The böjau may also be initiated by another sorcerer.

Be first of all feels himself becoming feverish after having eaten the foods mentioned above. An initiated sorcerer examines him, and then, lifting up his eyelids, by the light of a sunbeam or candle, he repeats certain incantations, communicated to him by his yang gra. Then upon the sunbeam makes sure that the initiated man finds several dömmes, and he immediately becomes the executioner of sorcerers. But many of the savages show greater confidence in the sorcerer who has warded off the magic power to him than in one who compels it by means of a fellow sorcerer.

It is a remarkable fact that the majority of these sorcerers, the soothsayers as well as the doctors, are women. The böjau of the Bahmaras, Rönggoas, and numerous other tribes, with their hysterical stamping and their cataleptic sleeps, resembles the papu, the pythons of the Chams.

3. Penal law.—The crime most severely punished is theft, especially of domestic animals or of rice; the latter is sometimes punishable by death. A less serious theft is punished by a fine, almost always equal to double the value of the stolen object. If the thief is repeating certain incantations, his delirium makes him the slave of the man whom he has robbed. Crimes of passion—adultery, rape, and murder—are, as a rule, punished with a variable fine, which is handed over to the injured family or person. The laws of the savages are averse to punishing by death, because a man can always be useful to the village. Crucifixion, however, is practised among certain tribes, and exiling to death is allowed. Should the delirium of a böjau take hold of the sick, he may always regain his freedom by paying the sum due.

10. Oaths and ordeals.—When a person denies his guilt, the savages have recourse to ordeals, which are undergone in the presence of a sorcerer. The most usual, the water test, is a custom still in vogue among the Khmers. The accused and the accuser, both holding on to a post firmly fixed in the river, plunge at the same time underneath the water. If the accused remains longest under the water, the accused is judged to be guilty; if the water remains upon the accuser, the accused is pronounced innocent. The savages firmly believe that the hemorrhage which occurs in the waster of the two at the beginning of ordeals is proof of the real guilt. The results from the fact that the spirit of the waters, indignant at his falsehood, has pricked his nostrils.

Other ordeals consist in making the culprit plunge his hand into boiling pitch or even into molten lead. If his hand remains unhurt, he is proclaimed innocent. A more formidable test, because it allows more scope for manipulation or wickedness, is the ordeal of the 'breaking anything between the thumb and the first finger,' among the Bahnars, Rönggoas, Sedangas, etc. It is used in cases of theft and poisoning; and, especially in cases of witchcraft, it takes place with the aid of a sorcerer or a sorceress.

When, by superstition, ignorance, or brazen-faced falsehood, a savage of any village accuses a neighbor, or more usually, of a neighboring village weaker than his own, of having stolen something from him, or cast over him a spell of illness or of death, the two villages assemble to settle the issue. As a rule the accused is a poor man or woman, one of no lineage; and it is also very often happened that he has no faith in the fairness of the ordeal, and fearing that he will be abandoned by his village or that he may involve it in war, the victim pleads guilty rather than resist, and, in his turn, accuses another, allows himself to be sold as a slave to the Amanass or the Laotians. When the accused is rich and of a good lineage, the attitude of his relatives and of the whole village sometimes makes the accuser feel a rapid retreat. When the parties are about equal in rank, the case is nearly always determined by the geg-test. The böjau takes an egg between his thumb and fore

tinger and asks if it is good. If it is good, the egg, if cleverly pressed, never fails to break if the sorcerer wishes it. Other eggs are then taken and thrown out in which the village defies; generally one of the eggs is cracked and a crackle at the name of the guilty village. A third time the sacred eggs are inspected, and each time, out of a village of these names, the uninjured egg is thrown and, naturally, the guilty village.

Another very repugnant test is to make the accused lick the decomposed corpse of the person he is suspected of having poisoned, while saying: 'May I die within the year if I am guilty of the death of this man, and a model of a toadstone is made with it. This is sprinkled with rice-water and the blood of a chicken, while one of the company pronounces the following invocation: 'Thou! We are making libations of chicken's blood and wine in order that this business may be ended! May the per

current die, slain by the axe or the knife! May he be caught in a snare! May he be drowned in the water! May the lightning strike him! May his enemies pierce him with arrows! May they slay him with his bow! May his sister pull him away! May the blood gush from his nostrils and his mouth! Then they mix the earth, wood ash, and chicken's blood with a little ground stag-horn, each one present swallows some of it, and a 'bouquet of alcohol all round closes the ceremony. According to the savages' ideas, the culprit, if there is one, is sure to die within the year.

The oath of friendship is a complicated one, for if it serves to create a bond as sacred as kinship between those who exchange it.

Intermediaries are chosen between two persons who wish to swear allegiance to each other; but the agreement is only signed after they have expressed their intentions. They receive two jars of rice-water and two chickens from the contracting parties; for their trouble, and the other is required for the ceremony. One of the chickens is roasted, and each of the future friends receives an equal share of the heart, the liver, and the bones.
which he must eat. Then both drink together from the same jar of rice-wine by means of a flexible bamboo tube, while the spectator, too, feasts on the usual impersonal mess. ‘Remember that today you become brothers. . . . If one of you betrays his brother, may he be struck of lightning! May he be reduced to slavery! May he be deprived of his body divinity and his unbroken body become the prey of the ravens!’ In most cases they prick the arm of their partner with the point of a dagger, in order to mix their blood with the wine, which they have to drink together. The solemnity is greater still when not two individuals but whole villages, swear indissoluble friendship after a war. Into the jar of rice-wine are put a boar’s tusk, spearhead, or any curious fragment of a bow, arrow, or serpent’s head. Then the whole assembly drinks, after having uttered the monotonous maledictions against the village which they wish to try the courage of the other.

The savages are somewhat extravagant with their oaths when they wish to affirm or convince. They ‘eat’ their sword, their spear, their pipe, or their clothing—which means that, if they lie, they give themselves over to be killed by the sword or by the spear, or to smoke their last pipe, or wear their last dress in this world.

II. Religion.—The religion of the Indo-Chinese savages appears to be Animism strongly tinged with fetishism and polytheistic naturalism. It is both public and private; demands an infinite number of duties, very often onerous, and constitutes a utilitarian worship based on the fear of evil powers and the desire to conciliate them in order to obtain satisfaction of personal interests. The savages give souls or spirits to animals, objects, plants, and phenomena; these evil spirits take vengeance for wrongs, or are sent out of the way by offerings of rice and sacrifices to make them disappear. Famine, bad luck at fishing, hunting, etc., illness, accidents, and death are the result. Everything that the savage does to guard his wretched lot is pursued by him, or followed by ruses and sacrifices to baffle these formidable powers. These spirits, which are very numerous, are the possessors of considerable but not hierarchical power, and are dependent on one another. Having the same passions as men, they are in constant rivalry, contending for the offerings of men. Among the savages all manifestations of a supernatural power—spirits, ghosts, etc.—bear the generic name of yung, a word of Malay-Polynesian origin.

The spirits, or genii, are divided into two great categories: the good and the wicked. Among the good are those whose mission is to make the fruits of the earth grow, who is fêted with rites of all kinds. In their worship, rain, cold, or wind is the occasion, and who bestow rich harvest, health, and happiness. Although much honoured (for their anger might beget death), they are less powerful than the malevolent spirits, who hate men, and try to torment them in every possible way, or to make them die, and whose neutrality must be conquered by means of sacrifices. These evil genii live in large trees, in huge rocks, or in mountains. A savage would not dare to cut down a large tree or begin to cut wood in the forest without first having killed a dog, dipped some arrows in its blood, and drawn them across the tree. Then the tree may be cut down; the yung has changed its abode.

These spirits vary in power, attributes, and dwelling-places. First of all, they are the most powerful, the spirits of the sky. At their head is the god of lightning, whose voice is the thunder. This god, called by the Bahnars Bok Glang, ‘the Grandfather of the sky,’ is a giant and is supposed to sit at the earth in the guise of the storm, and with a stone axe strikes those who have offended him; hence the veneration among the savages for cut flints and meteoric stones. He is also the god of war, and then he assumes the form of a goat or of a shaggy old man with a long beard. He lives in the sky with the goddess of the harvest (Bahnar Yung Sê, cf. Skr. Sri, and Malay-Polynesian Sêri) and her mother, who has a pair of wings, and is ugly, dirty, and poor, but very fond of the liver of victims, and who comes down to earth to test the enthusiasm of men. The person who gave her a good welcome, in spite of her repulsive appearance, was immediately loaded with fortune’s gifts, but he who turned her away through pride came to misery.

Between the sky and the earth, in a zone of space, live certain ill-intentioned spirits, of whom the most famous is Grandfather, who, without a tag to cover him, tries to snap up the livens of victims, the blood, and the wine offered to other gods. These deities hurl their wrath on the unfortunate savage who is believed not to have offered anything, and becomes the prey of mischance. This spirit is by nature such a thief and so malevolent that it would be useless to attempt to stop his deprivations by heaping him with sacrifices.

The inferior spirits live in holes under the earth. Wounded unwittingly by the savage who is ploughing his field, they have their revenge by inflicting internal disease upon him, which become fatal unless they are disarmed by means of offerings. Along with these should be mentioned the earth-spirit and the water-spirit.

Among the inferior spirits, many become incarnated in the forms of animate objects. There are certain crickets whose cry always foretells a successful hunting expedition to the savage. In order to thank them, an offering is made in the form of a libation of rice-wine which is poured out; and of birds whose singing is taken as an omen. Omens are also taken from the songs of birds during the time of war fills all hearts with joy—and certain sparrows, whose flight, to right, to left, in front, or behind, decides what action the savage is to take. He never goes on an expedition or voyage without consulting the birds.

The savages also worship rocks which have roughly the shape of a man or an animal; they are supposed to harbour a yung. There is nearly always a legend attached to them. Offerings are offered to them, or a leaf from a neighbouring tree is plucked in passing.

Practically all the Bahnars, Sêdângs, Jarais, and Hadongans light a fire to which they add a bar of clay in which they put yung, ‘spirit-jars,’ nor are they honoured as deities, until a dream reveals their value to the savage who possesses them or wishes to buy them. On holidays the mouths of these jars are closed with blood and rice-wine. When a Sêdang makes up his mind to sell a very expensive one, he breaks off one handle of the jar in the hope of keeping the yung in the handle, and continues to worship it in the same way as before.

We have still to mention the protecting spirit of villages. The coarse incense which represents him is made of wood and adorned with a plume of grass, and he is an eternal fire, bounded by his diminutive arms. As soon as the grain is cut and the rice stored, the images of this spirit, carefully sprinkled with the blood of a chicken and washed down to the padi of the village and on the roofs of the houses, with the notion that he will pierce with his arrows the evil genii who might kill or ruin the inhabitants. In the next year the land is not, very much worn out, is replaced by another of the same kind without ceremony, the spirit having left the old one when it became too dilapidated.

More formidable is a malevolent spirit with human form, his body torn with wounds, his en-
trails hanging out of his lacerated body, and his heart visible in his open breast. He wanders and howls among the mountains and forests, chauking and groaning alternately, leaving large bloodstains as he goes. The savages are in mortal terror of him, and never dare to ascend the mountain where his howls are heard. They would pursue him, seize them by craft, and drown them in a sea of blood. Perhaps we may recognize in these spirits, whom the Bahrans call lai ke lom luy br, 'spirits which bar the forest,' the Javanese Gèlèh and the Malay punggai, the barking dog and the mangy cat, which are said to be buried unburied in the forest and covered by wild animals: for these and the souls of women who have died in child-birth are particularly malevolent spirits in the eyes of the savages. This last belief is very wide-spread throughout the whole of the Far East, and is found among the Malaysians, the Khmers, and the Annameses.

The worship of the savages consists chiefly in sacrifices and offerings, varying according to the circumstances and rank of the yang to whom they are offered. Almost every action of their life entails sacrifice: the choice of the site of a village, the building of a house (there are special rites for the erection of the first pillar and for the arrangement of the hearth), the act of drawing water from a well for the first time, birth, marriage, funerals, burial, hunting, reaping, the gathering of roots in the forest, etc. These sacrifices include several ritual actions, an incantation, and the presentation of certain offerings and certain dishes to the gods. They are always concluded by a feast, at which the sacrifices consume almost the whole of the victims and drink rice-wine until they are quite intoxicated. The principal animals offered in sacrifice are the buffalo (for expeditions of war, to celebrate a victory, in cases of serious illness, and at funerals), the pig, the goat (in cases of preparation of a crime or to celebrate a glorious glom par), and the chicken (in all the many daily occasions). The share of the yang is the victim's liver, a little of its blood, and some rice-wine. In sacrifices made after a successful chase, the hunter generally adds to the liver and the blood an ear or the tip of an ear of the quarry. Offerings of food are usually presented to the yang by the sorcerer on a board adorned with little candles stuck on the edge; he then throws several grains of rice on his left shoulder, reciting formuli which the bystanders repeat. In several villages small buildings are erected with a miniature roof and a platform, on which are placed dishes of meat for wandering or hungry spirits.

The Raïès still remember the human sacrifices which they used to offer at the funerals of great chiefs; but this custom has disappeared everywhere except among the Sedangs, who, at the construction of a common house, cast a prisoner of war alive into the hole dug for the first post, and crush him under the post.

12. Cosmogony.—Almost all the savages of Indo-China have ideas identical in their confusion, of the creation of beings and of the world. The sky and the earth existed always, but the human race comes, in their opinion, from the 'grandfather and grandmother,' with the big box.' These two survivors of a deluge which destroyed everybody long ago were saved in a large box, where they took refuge along with a pair of animals of each species. Then they built a nest and a nestling, and a chicken sent by the yang, they came out at last from their floating prison, and, while the animals again spread over the earth, from their union was born one of human beings—a race happy in every way, for another messenger from the yang, a big black ant, had brought to the 'Grand-

parents of the big box' two grains of celestial rice which grew without cultivation, and a single grain of which filled a mountains—a fountain of living water. The yang, being in a无论如何, the fire, which burned without fuel and made savoury dishes—a fire which one of the sons of the Grand-father of the big box had stolen from a powerful fairy—the Golden Angry god, and buried in a great tree, was restored to life in adult state; the earth abounded in happy beings. Then fecundity and the male of the yang deprived them of all, and the magic fire, the celestial violin, and the tree of resurrection disappeared. Since then the savages have been troubled, and suffer famine, cold, and death.

The evil was aggravated by the confusion of tongues which, among the direct sons of the Grandparents of the big box, followed the building of a vague tower of Babel. This confusion led to the dispersion of the races, or, rather, of the different savage tribes.

The legends of the savages still mention the existence of heroes of gigantic size who declared war against the gods. All were killed except their chief, Didong, a Bahrani who conquered Bik Glash, the god of lightning. This Đông also became reconciled with the yang, for he fought the Javanis, who sought a quarrel with him, and by his power over the winds he caused a torrent to flow under their feet in order to allow him to obtain his victory. In order to console the Javan chief, tranquillized in the midst of the battle, the yang presented him into a constellation—an honour granted to several other people famous for their misfortunes or their bravery in the savage traditions.

Although the savages do not know how or why the world was created, they hold that it will come to an end by a terrible fire due to a giant who lives in the cave of the earth.

13. Fetishes.—Pebbles of uncommon shape and colour, pre-historic axes or arrows of flint, and splinters of meteoric stones are the favourite fetishes of the Indo-Chinese savages. When a savage comes upon one of these objects, he picks it up, wraps it in cotton thread, and puts it into a basket which he carefully closes. He waits until the spirit of his fetish manifests itself in a dream and shows him by what sacrifice it wishes to be honoured. If the yang of the fetish-pebble does not reveal itself during the night in human form, or if it demands a sacrifice as costly as, e.g., a buffalo, the savage throws the pebble away in the forest, and there the matter ends. Otherwise he offers it a chicken and a jar of rice-wine; then the pebble, rubbed with the chicken's blood and sprinkled with wine, is put, along with similar objects, into a bag; there the pebble and the bag are attached to one of the pillars of the house.

These fetish-pebbles, which among the Bahrans receive the name of domong, are not peculiar to any individual; the village possesses a large number of them, carefully preserved in the common house, on a little altar placed on the principal pillar, or gorong. They are the city-protectors, and a savage is especially employed to sprinkle them with blood and wine during the ceremonies. Those most revered are the domong of war, which are generally picked up on the return from an expedition, and whose spirits manifest themselves in the form of strong shaggy men. After the return from a successful razzia, they are coated with blood of a sacrificed buffalo.

When fire breaks out, if the flames reach the domong, they are thrown away, for it is believed that the yang must have gone away before the fire had reached it. The city-protectors are the protectors of the rice, of fishing, hunting, healing, etc. Each one has his own particular sacrifice by which the others also benefit, receiving after him their share of his prosperity. By the help of a expert in the domong who is most worshipped is the rice domong, but great care is taken not to sprinkle him with
buffalo's or even pig's blood. In order that he may not get acclimated to such costly sacrifices, he is roasted alive and as a rule, eaten by the chicken. Both male and female domong exist. Their sex is determined by the sorcerer. Their power is equal.

You may add that, according to the missionaries, the savages, amid the great number of supernatural beings to whom they render worship, have an idea of a Higher Being, the creator and absolute master of the universe, who is both good and punishing evil; but this Supreme Being, stripped of all ill-will towards men and inspiring no fear in them, is not an object of worship.

14. Tabu.—Prohibitions are as numerous as offerings among the savages. The words dieong, deng, log, tan, man, kóm, etc., in Lower Laos, "kalam" in Upper Laos, or even tabung, among certain tribes bordering on ancient Champa, mean (see p. 16), abstinence against doing certain things at certain times, certain ritual interdictions—in a word, an ensemble of tabus.

When a village moves to another place, no one is allowed to walk on the road which it followed at its exodus. When a woman is confined, or when any one is married or dies, the village women are not allowed to cook for a variable period.

When there is a famine, the village which is suffering from it is forbidden to strangers, for fear that the rice-pump, already so depleted, should be given to them. When the wind blows in a certain way, hunters must not kill and such an animal in the forest will die either of hunger or by some disorder.

It must be added, however, that among the savages who are neighbours of more civilized races, and especially since the French occupation, the extent and intensity of tabus are on the decline.

15. Totemism.—Properly speaking, food tabustions do not exist among the savages; nor do they appear to render special worship to any animal, and so far no clearly totemistic tradition has been recognized among them. Nevertheless it must be said that all the savage tribes speak of the tiger with timid reverence, and, when they do bring themselves to eat its flesh, it is only out of revenge, and only among tribes which abstain from the flesh of the domestic elephant.

In fact, when a domestic elephant is wounded, they offer him a roasted pig, place some rice on his head, and pour libations of alcohol, all the while reciting prayers. The elephant, however, is taken to the village, where it is killed. A curious legend of the Bahams 'of the first ages of the world' relates that the first man of the world which left the village had gone away on business, and, on their return, found their wives and children transformed into monkeys, doubtless by the vengeance of the yam. In order to restore these metamorphosed beings to their human form, they made a tree of incisions on themselves, and with the blood that flowed they washed all the wounds, until they treated immediately resumed their human appearance. All the savage tribes and the Indo-Chinese in general—like the peasants—have a strong antipathy to killing monkeys.

16. Festivals.—The festival of Victory (see § 4), the Festival of the Dead (see § 6), and the Festival of the Fructification of the Rice.

When rice is sown, a chicken is first sacrificed; but the real ceremony in its honour does not begin until the rice is in the blade. To ensure fructification, the domong are taken down from the granary where they stay, and placed in the house after a chicken's head, and a part of a white or red rice have been offered to them. Then early next day the owner of the field carries them off with a chicken whose head and brains have been washed in the juice of a certain forest-plant, and a tube of bamboo filled with millet-skins. In the middle of the field are dug a hole, into which the domong of the rice are laid; he surrounds this hole with a circle of sticks ornamented with tufts of bamboo and joined together by several strands of cotton thread. The chicken is killed, and with its blood are sprinkled the fetish-pebbles, which are thrown on its grave, a post, a stone, a piece of broom, ashed with tufts of bamboo, and smeared with blood; this post ends in a leaf rolled up into the shape of a horn and filled with wine and other grave goods. and the god of the field is satisfied with a small bamboo tube full of millet, wine, and chicken's blood. The chicken is thus nourished and rewarded, after having adjusted the malevolent spirits to depart from his field.

LITERATURER.—P. Aymonier, Voyages dans la Laos, 2 vols., Paris, 1895-97; H. Ardenne, Dictionnaire bahâno-français, 'Excursions et Reconnaissances,' xii. (1856), nos. 27, 30, and note on the mention of the chicken. Both male and female domong exist. Their sex is determined by the sorcerer. Their power is equal.

1 On the geography and ethnology of the region deals with in this article cf. art. AUSTRALASIA. See also art. FANDOM.
barun and bruwa point to a derivation from ruva, ‘two’ ; so that these names probably mean ‘companion,’ a meaning which we find in ringas-ringas of the inhabitants of Minahassa, koko of the Javanese, katuwah (of the same nature as another) in Luzon, and isamaras of the Ibanan. Among the Batta tribes in Sumatra we meet with tendi and tondi ; and the races which have been strong under the influence of the Hindus, such as the Javanese, Balinese, use Sanskrit words, e.g. yita and sukma. Besides these names for the soul-substance, ojewa, originally ‘breath,’ is often used. The lives of the Javanese on after-death, bear quite different names. A word of frequent occurrence is nitiu, anitiu, onitu, meaning ‘soul’s’ in the Moluccas, but ‘spirits’ in Celebes, Nias, and other islands. The Batta tribes and the Niassians use the word beyo, which means ‘spectre,’ anga in Central and aundo in Southern Celebes. The Dayak tribes in Borneo have words such as hau, angau, luwa, etc. The belief in a life after this life is so vague with the Indonesians, and the conception they form of the soul is therefore so indistinct, that, having come into contact with monotheistic religions, they have adopted words from them. The Dayaks, e.g., have Sanskrit jive among the Malays and Javanese, and the Arabic malak, which all through the Malay Archipelago does not stand for ‘angel,’ but for the idea of magnificence.

The impersonal soul-substance in man.—All parts of the human body, and its secretions, contain impersonal soul-substance. This may be extracted from any part; and then pain is felt at the part.

(1) Many customs show that the Indonesians consider the human head to contain soul-substance. The great object of head-hunting is to possess themselves of their enemy’s soul-substance, in order to increase their own. In the Moluccas, missionaries have sometimes been charged by the natives with having made medicine out of human heads.

(2) Other important storehouses of soul-substance are the bowels and the liver. For this reason it is a general usage in the Archipelago to offer to the gods a piece of the liver of an animal, which means that not only the muscular part, but also the soul-substance of the animal is sacrificed. The Ole-nga of Borneo and other Dayak tribes regard the liver as the seat of all emotions. The Batta and the Negritos of Sarawak, a Negrito woman is afraid of abdominal operations, because they think that then the soul-substance is removed from the body. With the Javanese, the Malays, and the inhabitants of the Mentawai Islands and Halmahera also the liver is the seat of the emotions, with the Papuans the bowels. Among a few tribes (Minafikabianians, Niassians, and Kailans) the heart is believed to be a receptacle of soul-substance. The heart is sacrificed in some parts of the body when the death of the soul of the dead man should take with it all their soul-substance and they should die. Throughout the Archipelago the law holds that the blood of a man guilty of incest must not be spilled, because this would make the soil barren.

(3) The blood is of much greater importance in this respect. It is sacrificed as containing soul-substance. In the consecration of the house it is customary to spill the blood of the tribes. Each part of the woodwork, in order to give it strength. The Macassars smear old sacred objects with blood, in order to infuse new life into them. The Orang Sakai in Siak sprinkle, as para pro tota, a few drops of their blood on a corpse, lest the soul of the dead man should take with it all their soul-substance and they should die. Throughout the Archipelago the law holds that the blood of a man guilty of incest must not be spilled, because this would make the soil barren.

(4) That soul-substance is found in the placenta and umbilical cord appears from the connexion which the Indonesians see between child and afterbirth; the latter is called elder or younger brother. The placenta is carefully preserved or buried. The Battak call upon the soul of the afterbirth. Other peoples (Macassars, Halmahera, etc.) eat the placenta with salt and tamarind. The little piece of the umbilical cord which has fallen off is generally preserved by the Indonesians, and administered as medicine to the child when it is ill.

(5) A great deal of importance is thought to reside in the hair of the head; hence many object to having their hair cut, as this might cause them to fall ill for want of soul-substance. When a Javanese has lost two or more children by death, he does not shave the head of the next child. After their conversion to Christianity, many of the Battak were afraid that they would die if their long hair was cut. In case of accident or disease the mother rubs her child with her hair, to supply it with new soul-substance (Minahassa, Sanii, Central Celebes, Ainkola, Central Nias). Among the Dayaks, parents protest against the cutting of the hair of school children, for fear of disease. Hair is laid at the foot of fruit trees to make them more fruitful, i.e. to aduce soul-substance (Torajas, Malaya, Karo Battak, Timor, Dayaks). The Malays and the Javanese have a great respect for hair, which is considered a human hair to dedicate people by way of medicine. Betrothed couples exchange some of their hair, in order to become one in soul and always to think of each other (Moluccas, Central Celebes, Minahassa, Timor, Battak, Dayaks). With the Karo Battak the hair of bride and bridgroom is knotted together at the wedding. Father and mother give some of their hair to a child, that their child may feel that its parents are near it, and that it may not cry too much during their absence (Central Celebes, Minahassa). Therefore it is a prevailing custom to preserve some hair of deceased relatives, lest they should die with longing for the dead. According to Indonesian belief, a little hair (hence a little soul-substance) taken from a man gives power over all his soul-substance; whatever happens to the hair happens also to the man. This idea is at the root of all the sorcery with hair which occurs among the Indonesians. As a rule the hair is first wrapped up in a parcel with pungent spices, and then buried or hung in a tree; or the owner of the hair is afflicted with all kinds of diseases as the consequence of this. The worst thing one can do is to burn a person’s hair with an imprudence. The person is then sure to die. Hair is also used as a sacrifice when the person has told a lie about the consequences of which he fears. A Boni prince offered his hair when he had delivered his country from the enemy. Dayaks sacrifice some of their hair when they have returned unharmed from war. A general form of sacrifice in the Malay Archipelago is the cutting off of the hair of children. Frequently, however, a lock of hair is spared, as if to retain the soul-substance. The sacrifice of hair at a death is common: the relatives offer part of their spiritual existence, that the soul of the dead may leave them unharmed (Moluccas, Halmahera, Timor, Bata, Dayak tribes, Eilango, Malaya, Battak, Malagasy). This entire or partial cutting or shaving off of the hair is sometimes required only of the widow or widower, sometimes of the nearest relatives, at other times (when a chief of special importance has died) of all the subjects.

(6) Of equal value with a man’s hair are his nails. Hair and nails are therefore generally mentioned together. Great care is taken that the parings do not fall into the hands of people who might do harm with them. Among many of the tribes the nails must not be cut after sunset, because the spirits wandering about them might seize them.
The Indonesians imagine the teeth to be filled with soul-substance. This appears from the knocking out of teeth (as it occurs still in Central Celebes, the Toraja, and the Ilogano), and from the custom of filing off teeth which reaches its height in the skillful way practised by the Javanese and others. Originally this was intended as a sacrifice when entering upon puberty. What is left of the tooth after it has been filed off is blackened—originally for the purpose of hiding from the spirits the fact that part of the sacrifice was withheld. The sacrifice of teeth as a mourning rite is still found among the Indonesians in Kudja in Java, in Banjul in Sumatra, and in the isle of Suleier.

The secretions of the human body also contain soul-substance, as, e.g., the saliva. Many Dayak tribes spit on the objects they eat or drink, that the spirits may know that it comes from them. Spitting occurs as a sacrifice, in order to get rid of something impure or sinful. When the Indonesian bears some unclean sound, he spits; the Battak do so when a corpse is carried past them; the Galeareas immediately spit when they have pronounced a forbidden name. A dying man leaves some of his saliva in his grave, that the survivor may not be too much for him (Macassars, Olo-Dungel, in Borneo, and Javanese). By the possession of a person's saliva one gets power over all his soul-substance; therefore the Indonesians do not spit near graves or high trees, because the spirits might avail themselves of this saliva to take away all their soul-substance. Saliva is used in sorcery also, in the form of a charm (Moluccas, Nias). All the tribes are careful with everything that has been in contact with the mouth (with saliva), e.g., remains of food. That saliva contains soul-substance is proved by the fact that tools are rubbed with it to make them stronger (Minahaka—the especially rifles [Afikola, Kaili, and others]). The Land Dayaks of Sarawak begged Europeans to spit on bits of coco-nut shell, which were then scattered over the land to make them fertile.

Sweat also—and consequently the clothes saturated with it—contains soul-substance. Hence a Javanese thinks that his child will fall ill if an article into his sight has been carried away by the stream; and it is customary among various tribes to ask for worn clothes of European children, that their children, wearing them, may thrive because the sweat in which the clothes contain water. In which persons of high standing have washed off the perspiration of their hands and feet is believed to have the power of making the soil fertile. Urine is taken as a medicine (Dayaks, Macassars, Javanese); and the water in which clothes of certain people have been washed is used to cure all kinds of diseases, especially in cases where the urine is washed) to hasten a confinement. Even earth from footprints, to which something of a person adheres, is sometimes used to injure that person by sorcery (Malays, Battaks, Galeareas).

From the stories current among Galeareas, Torajas, and Javanese relating to deceased persons who were restored to life by means of tarek, it appears that this secretion of man is also thought to contain soul-substance. Urine has similar effects, where it is used as a medicine (Javanese, Kalilas, Macassars, Battaks, Dayaks). The Buginese rub people with urine to make them insolent-proof, while in Apolo and Halmahera a person's urine is used to destroy him; in the island of Kisser a young man urinates on the urine of his heart's elect, hoping that this will make her love him. Moreover, many stories are found among the Indonesians about animals which were impregnated with a human being by drinking human urine. Among the Macassars and Torajas fouses are used to heal wounds. Among the former and the Karo Battak they are also used to practise in sorcery.

In the opinion of the Indonesians the soul-substance discharged above in this way, and the blood, can and should be both increased and decreased. Primitive man was always bent on increasing his soul-substance in order to make his life stronger. He accomplished this by eating and drinking. The Indonesians imagine that the soul-substance of the food is absorbed by him (though he does not always realize this), as may be seen from the food which he forbids in different illnesses. This prohibition is not founded on empiricism, but on shape, taste, name, and properties of the various foods. On account of their form, name, etc., they are considered injurious to the patient, and their soul-substance corresponds to their name, form, etc. The Dayaks do not eat the flesh of deer, lest they should become cowardly (like a deer). The eating of white buffaloes causes leprosy (Central Celebes), etc. The Malays believe that they strengthen their own soul-substance when absorbing the soul-substance of the food. They tell a story, in which a poor man grows strong and healthy by eating the flavour of a rich man's food, whereas the rich man, eating the food itself, grows thinner and weaker. Moreover, many Indonesian peoples call rise the strengthener of soul-substance. If a person's shape is improved, it is supposed among the Battak, some Dayak tribes, and the Papuans; among other peoples we find traces of it in the drinking of human blood, the eating of brains and other parts of the body. That the great object was to add to their soul-substance appears from the parts eaten: the palm of the hand was eaten to get strong hands (Battak, Daoks, Galeareas); knee-caps, to get strong knees (Battak); scrapings of human bones, to make the whole body strong (Olo-Nagau, Macassars, Torajas). In the Moluccas, pieces of the heart, liver, and lungs are eaten to become 'brave'; and for the same reason dogs are eaten (Torajas, Moluccas). It is a general precept that a pregnant woman must not eat pungent, stimulating, hot things, else the child she brings forth will also be hot, i.e., unhealthy.

A way of adding to one's soul-substance is by drinking blood. The Macassar, Buginese, Torajas, Kalilas, Gerontalese, Minahassians, and Teloirese drink the blood of a slain enemy in order to become brave and strong. Who conclude peace drink each other's blood, as well as those who wish to become blood-brothers; some drops of blood from the shoulders or arms of the two parties were mixed and drunk; this betokened that their soul-substance, and so also their wishes and thoughts, had become one. This custom is especially prevalent among the Dayak tribes; but it also occurs among the Battak, the islands of the Molucca group, and in Timor. Among the Olo-Nagau in Borneo, when a child was adopted by others, it was given some blood to drink from the right shoulder of the foster-father and from the right breast of the foster-mother; and a newly married couple on their wedding-day, a man who has been appointed chief, or persons who settle a quarrel are smeared with blood to strengthen their soul-substance. The same customs also occur in the south of Celebes. In Java it is believed that the blood lost during confinement by a woman who has borne a child in jamat lugi or seloloe klawon has a special healing power.
(3) Since saliva contains a large amount of soul-substance, the Indonesians think that they can add to a man's soul-substance by spitting on him. This spitting is very general; sometimes some he has been in close contact with. Many people have themselves spat on by him to become strong and healthy. The Indonesians try to cure a bunamed leg by rubbing it with their saliva, the numbness being, in their opinion, caused through temporary want of soul-substance.

(4) The breath is another manifestation of soul-substance; hence a man may be supplied with new soul-substance by being breathed upon. It is therefore a prevailing custom among the Indonesians to breathe on sick or dying people. This is also done in cases of confinement which do not go smoothly, and when any one faints. With the Muhammadans water is exorcized and breathed on; in some cases soul-substance is also transmitted from one man to another by mere contact. In most parts of the Archipelago the people like Europeans to touch their children; and offerings are touched by the participants. Connected with this is the belief that, if a person has been infected with a skin disease through contact with a person suffering from the disease, the latter will have got rid of his illness.

(5) The personal soul-substance, in man. —The soul-substance of a man is also imagined to be personal; this is specially the case with the tribes among whom the idea of individuality is more prominent. In some cases soul-substance can be passed on by personal contact, and is then received through the personal soul-substance of the deceased. In the case of a community soul-substance is then the personification of all the personal soul-substances of the community. It has the shape of its owner, but the Indonesian always imagines it as diminutive human being, as large as a thumb; hence it is concentrated soul-substance. It can separate from the body voluntarily or by compulsion. Some tribes, e.g., the Toba Battak, endow it even with an independent existence outside of man. This is also found among the Karo Battak, who consider the soul-substance when it is going away, not to its owner, but to his house. A Koto tribe (the Siutemhamer) says that a person who keeps his soul-substance in a bottle. Sometimes people procure a certain object which the soul-substance is supposed to be very fond, and this object is then thought to bind the soul-substance to the house. This custom is specially prevalent among the Battak. Most of the Indonesians hold the belief that, although the soul-substance may carry on an independent existence, it has its home in the body. If it is too long separated from the body, the person falls ill and dies.

(1) The Indonesian sees his soul-substance embodied in his shadow. To the question whether a new-born child has soul-substance, the answer in Halmahera is: 'Of course, for it has a shadow.' Some assert that there are people who have no shadow, or only a very faint one; they will die sooner or later. In Nias (Nias, Macassars, Akoelians). Food on which a person's shadow falls must not be eaten, else the person is harmed, for his soul-substance is eaten (Dayaks, Minafikabians, Javanese, Malays). The person's shadow must stand on a shadow, tread on it, or stab it, lest his shadow fall on a grave or a tree or any other object in which a spirit is thought to reside, as the soul of the dead person in the grave or the spirit in the tree might seize the shadow (soul-substance), and cause the person's death.

(2) There is also a close relation between the name and the soul-substance of a man. If sorcery is practised, then the effect of the saliva. Dayak parents spit on their children daily to promote their growth; sores and wounds also are spotted; the remuneration which a witchdoctor demands for saving a life is called the reward of the saliva among the Madurese. Some years ago there was a holy man in Padang whose saliva was said to be particularly efficacious; many people had themselves spat on by him to become strong and healthy. The Indonesians try to cure a bunamed leg by rubbing it with their saliva, the numbness being, in their opinion, caused through temporary want of soul-substance.

(3) During sleep the soul-substance separates from the body, and wanders about; what it sees while the man dreams, the soul-substance also sees. When the soul meets the soul of the deceased, it is universally assumed by the Indonesians that, when the soul of the deceased receive the dreamer kindly, and give him food, he will soon die. The Dayaks, Torajas, and Javanese court meetings with spirits by going to sleep in places inhabited by them. On various occasions an attempt is made to learn through a dream what the dead say, e.g., in case of marriage (Dayaks, Niassians); when choosing a branch of a tree (Javanese, etc.). Among some tribes a person watching near a corpse must not see the soul of the deceased might easily seize the roaming soul-substance; and a sick person is not allowed to fall asleep, lest the soul-substance should go away and never return. After an oppressive dream, which may have frightened the soul-substance and caused it to depart, it is necessary to bring an offering to call it back. It is wrong to wake a person suddenly, because the soul-substance may not have had time enough to return. The strict prohibition against stepping across a sleeping person, which at present is only looked upon as bad manners, may be traced to the same idea.

(4) Fright, a word for some one or something, fear, and discontent also cause the soul-substance to move to another place, with the result that the person falls ill. Hence it is only when in a passion that Indonesian parents dare to beat their children; when it is beaten the child gets discontented, then its soul-substance may run away and the child fall ill. To prevent the loss of soul-substance, e.g., in times of epidemics, bits of tape are tied round the wrists (Torajas, Dayaks, Minakabians, Niassians, and Battak). The soul-substance goes into and out of the body through mouth, nose, or ears, but usually through the crown of the head, through the large fontanel. Only the Papuans say that it goes in and out at the shoulder, under the collarbone. The soul-substance does not always leave voluntarily; it may be carried off by other people, e.g., an Arab woman, gone (Macassars, Kaillans, Akoelians). The custom of refusing a stranger admittance to mother and child during the first few days after a confinement must be owing to fear of this; the very frail soul-substance of the child might so perish with him (Achinese, Dayaks, Macassars, Javanese). Women must abstain from festivities, dances, and some daily occupations while their husbands are travelling, in order not to hamper them on their journey.
INDOENSIANS

(Central and Southern Celebes). The fear which most Indonesian tribes have of being photographed arises from the thought that the soul-substance may be carried off with the photograph. The soul-substance of a man is often lured away by the sorcerers for the purpose of injuring him; and in times of war the soul-substance of enemies is lured away. Any fiction that the enemies themselves will follow it—such as the theft of a necklace of skin to fall an easy prey to their lurking foes. Rice and eggs are always used as an enticement (Battak, Niassians, Torajas, Dayakas). Finally, a man's soul-substance may be tempted away by the soul of one of his deceased relatives, either because it longs to have him with him or as a revenge for some offence.

If the soul-sub substance remains long separated from its home in the man, the man must die. When it is suspected that the soul-sub substance is gone it must be brought back. The sick person tells where he first felt ill, and the soul-sub substance is found there. After a burial the soul of the deceased is accused of having stolen the soul-sub substance, and it is brought back from the grave. If a spirit has taken away the soul-sub substance, this is revealed by sorcery or in a dream. The calling back of the soul is very simple, a mother, thinking that the soul-sub substance of her child is gone, calls, 'Come, soul-sub substance,' sometimes accompanying this by the sound with which chickens are called. When the Olo-Ngaju, when a child falls downstairs, the mother scoop up in a string the soul-sub substance, which she thinks has been lost by the fright; and among the Javanese, if a person continues ill, a relative takes one of his garments, and, trailing this along behind him, runs to the spot where the person first felt ill, catching up the lost soul-sub substance in this way. Generally, however, people have recourse to a sorcerer. He goes to the spot in question with an offering and a piece of cotton or a branch of a tree. The soul-sub substance is caught in the piece of cloth or in the branch, carried home, and applied to the sick man's head (Moluccas, Minahassas, Central and Southern Celebes, Timor; among the Dayakas, Javanese, Sundanese, Niassians, Battak, and Cayoos). In Bolaq Molkom on and among the Malay it is sometimes caught in a doll, among other tribes generally in a bowl or in a bag of rice (Southern Celebes, Watusela, Olo-Dusun, Land Dayakas, Karo and Timor Battak, Malay). The priests amongst the Borneo Dayakas declare that they split the sick man's head, and thus open the way for the soul-sub substance; or remove it by placing a beautiful garment on the patient's head. Occasionally the sorcerer uses a ladder for the soul-sub substance to pass along; this is a thread (Timorese) or a string of beads (Land Dayakas of Sarawak). When the soul-sub substance has been caught, it looks like a piece of a leaf (Minahassas, Torajas), a little spider (Timor, Nias), or hair (Dayakas of Sarawak), coal, oil, earth, or blood (Olo-Dusun and others).

(5) Squeezing is generally looked upon as one of the signs that the soul-sub substance is leaving the body or returning to it. The belief is widespread that a sick man will recover when he sneezes, because then the soul-sub substance has come back. The wishes pronounced by a mother when her child sneezes are evidence that the spirit may not take away the soul-sub substance which has issued out of the child (Torajas, Javanese, Battak, Dayakas). The persons of grown-up people sneezing is a sign either that friends think of them or that enemies want to harm their soul-sub substance. In consideration of the latter case imprecations are frequently uttered with sneezing.

When a spirit has caught the soul-sub substance, a doll is often made representing the sick person, and this, instead of the soul-sub substance of the patient, is offered to the spirit (Uliassians, Torajas, Minahassians, Macassans, all Dayak tribes, Malay, Battak, Niassians). The name given to this doll often has the meaning of 'rascal,' 'substitute,' 'price for which something is bought,' etc. The doll is generally brought beforehand into closer connexion with the sick person by adding to it a thread of his clothes, a hair, some saliva, or some of the scappings of skin to fall an easy prey to his lurking foes. Rice and eggs are always used as an enticement (Battak, Niassians, Torajas, Dayakas). Finally, a man's soul-sub substance may be tempted away by the soul of one of his deceased relatives, either because it longs to have him with him or as a revenge for some offence.

5 Voluntary departure of soul-sub substance.—When the sick person continues to be ill in spite of all efforts, this is a proof for the Indonesian that the spirit has taken the soul-sub substance to a spot whence men cannot bring it back. Then a priest or a priestess must be summoned, who is conversant with the spirits, and who can conjure up well-disposed spirits to help them in their search for the soul-sub substance. These priests and priestesses generally intone a litany, in which they record their experiences on the journey to the spirit world. Then the priest invokes the help of the spirits which are well disposed to ma. ust be come for the priest in some vehicle (generally the rainbow), and conduct him (i.e. his soul-sub substance) to higher regions, where after many meetings with good spirits and spirits, and lastly regains the lost soul-sub substance, and, having returned to earth in the same vehicle, restores it to the sick person. The idea which gives rise to this practice is that in sleep the soul leaves freely in the haunts of the spirits. Among the Javanese and Buginese, and in the Moluccas, the priests and priestesses still actually lie down to sleep. Among other tribes it is only feigned. The language used by the priests is a mixture of words of their own, circumlocations, and words derived from foreign languages. All these things have certainly been used to enhance the importance of the priests and priestesses, but among the Indonesians the priests have never practised a secret cult. The above is true of Dayakas, Torajas, Minahassians, Teloiorese, Buginese, Minakabasians, and Javanese.

The personal soul-sub substance may separate from the body in order to harm a person. Those who possess this power are wer-wolves and witches. Some tribes believe that the soul changes into a tiger (Malacca, Sunamata, Java), into a crocodile (Philippine Islands, Lombok), into a dog or cat (Timor); but most of them believe that only the soul-sub substance changes into an animal, and the body remains at home. As a rat, dog, snake, millipede, owl, etc., it penetrates into the houses of people to injure them. When the soul-sub substance leaves or enters the body, it does so in the shape of a mouse (Timor), a firefly (Bali, Central Celebes), or a lizard (Malaya). The harm which the wer-wolf is supposed to do to people is to eat their soul-sub substance; he does this by taking the entrails (especially the liver) out of a man (Bali, Halmahera, Central Celebes, and other places), by drinking the blood (Southern Timor), or by paying upon the heart (Korinchi). A man becomes a lymphoanthrop by inheritance (Central Celebes, Dayakas, Malayis, by pronouncing certain charms (Java), Bali, or by offerings to evil spirits (Halmahera). It is not always possible to recognize a lymphoanthrop; sometimes, however, he may be known either by twisted feet (Atche), or by want of the groove under the nose in the upper lip (Korinchi), or sometimes by peculiar actions, as, e.g., standing naked on his head (Central Timor). When some
one is suspected of being a werewolf, it has to be decided by an ordeal whether he is really guilty or not; if he is guilty, he is killed.

The Balinese (upupa) is a woman, who can sever her head from her body, and make it fly through the air to harm people; the bowels fly along with the head; she uses her ears (sometimes her lungs) as wings. Generally the power (e.g., among most of the Indonesian tribes) the word is connected with the Malay "tanggai, 'to draw out, to pull up.' The witch may be recognised by the noises which she makes on her journeys (represented by ko or po). She works harm in the same way as the werewolf. She can go on her expeditions only by night; if she has not returned to her body before daybreak, she dies. The Indonesians try to protect their homes from visits of witches by all kinds of means, the most common being the hanging up of some thorny boughs. The witch is killed when her guilt has been convincingly proved.

6. Soult-substance of animals.—According to the Indonesians, the soul-substance of animals is similar to that of man. This appears from their folklore.

In the story of creation of the Karo Batkak, men were created from eggs, but through the carelessness of a mythical personage the eggs broke too soon, and animals and plants issued forth. Numerous stories tell that animals were originally men, and that monkeys, crocodiles, snakes, and birds; but also to deer (Macassars, Torajas, Malays) and to dogs (Halmahera). Women give birth to animals, as is generally told of the crocodiles of the islands (Papuan, Madurese), of snakes and lizards (Batkak). Animals also may bring forth human beings, as monkeys (Malays), dogs (Java, Lombok, Southern and Central Celebes, Nias), buffaloes (Macassars, and etc. Dayaks). Men sometimes turn into animals by eating part of an animal, into birds by eating bird's eggs (Minahasses), into crocodiles by eating crocodiles' eggs (Dayaks), into snakes by eating the flesh of snakes (Minahasses, Padang). Animals sometimes play the part of allies of man.

Man uses the soul-substance of animals for his own benefit: the ashes of the milked or of the burnt personal tail of the crows are rubbed between the hands to make them strong in combat (Galelarase); lizards are used in cases of leprosy, on account of their regenerating power (Java); the head and the fat of the bat have a magical effect, if it be set under one's pillow at night, in virtue of its power of drawing in or putting out its head from under its shell (Torajas, Batkak). The bones have special power; bones of cows make a person dexterous in stealing, and in Central Celebes they make a person invisible. Everywhere we meet with stories that miraculous trees grow out of buried bones of animals. Skulls of deer and pigs are hung up in the house to call the soul-substance of their fellows (Macassars, Torajas, Galelarase, Niassins). The blood of animals plays an important part at sacrifices. Sacred heifers are rubbed with blood to give them power (Macassars and Buginese); palm-seeds are sprinkled with blood to make them grow rapidly (Torajas, Dayaks). The Macassars drank deer's blood to assimilate themselves to these animals, in order to catch them more easily. The saying "animals also has power; we find cases where people are cured by the saliva of a cow (Padang panjait), a tiger (Javanese), and dogs (Aëkòla, Halmahera). The saliva of bees is applied to wounds, as is also the venom of serpents and venomous beasts. On the other hand, the animal itself is very often used, burnt and pounded to powder. Animals which are of special importance to man among the Indonesians are also the ones which are most often eaten. Thus among a tribe of hunters dogs are considered to possess personal soul-substance; they have names, and are spoken to and treated as men (Torajas, Galelarase, Dayaks). This continues as long as they are hunted, or at least for some time when they are no longer hunters (Miasàkàbuans, Malays). Buffaloes and cows also have personal soul-substance; they are addressed, their soul-substance is invoked, and offerings are given to them (Minahassees, Achiminoes, Batkak, Dayaks, Javanese, Timoreses, Macassars, Buginese, and Torajas). As a rule one animal in a herd is considered as the leader which keeps the herd together, and is killed first.

7. Soul-substance of plants.—According to the Indonesians, plants too have soul-substance similar to that of man. The close relation between man and plant appears from stories. Sometimes a person going on a journey gives the relatives whom he leaves behind a plant, which will languish when he is in danger or ill. Many tribes plant a coconut at the birth of a child; the soul-substance of the child is then bound to the tree when it grows up. Other stories tell that some trees were originally men, e.g., the Medrozylos and the Arenga saccharifera; others deal with persons who have some form from trees, plants, and even from leaves; others tell how plants are grown from seeds from rotan and bamboo. There are plants to which a particularly strong soul-substance is attributed, on account of their tough vital power. With all Indonesians the Dracaena torminalis is regarded as most among them. It is the sacred plant, which is used by the priests in all their proceedings, and whose strong soul-substance they try to transfer to man. The name and shape of plants characterize their soul-substance, and to this the Indonesia pays heed when seeking for cures for diseases, or for bringing about some change in his body. In Central Celebes there is a tree called "Sundar;" now turns means to turn, and therefore the leaves of this tree are used to alleviate (cause to go to sleep) pain. The soul-substance of the principal trees and plants which are of great use to man is imagined to be personal; thus fruit-bearing trees are often addressed as persons. The rice is fed to the stalks with rice- porridge; wood and leaves of trees with large fruit are laid between the rice, that it may form large grains; all kinds of preparations must be taken, lest the soul-substance of the rice should be frightened and flee. If from the languishing condition of the rice it appears that the soul-substance is gone, then it is brought in by light, in virtue of its power of drawing in or putting out its head from under its shell (Torajas, Batkak). The bones have special power; bones of cows make a person dexterous in stealing, and in Central Celebes they make a person invisible. Everywhere we meet with stories that miraculous trees grow out of buried bones of animals. Skulls of deer and pigs are hung up in the house to call the soul-substance of their fellows (Macassars, Torajas, Galelarase, Niassins). The blood of animals plays an important part at sacrifices. Sacred heifers are rubbed with blood to give them power (Macassars and Buginese); palm-seeds are sprinkled with blood to make them grow rapidly (Torajas, Dayaks). The Macassars drank deer's blood to assimilate themselves to these animals, in order to catch them more easily. The saying "animals also has power; we find cases where people are cured by the saliva of a cow (Padang panjait), a tiger (Javanese), and dogs (Aëkòla, Halmahera). The saliva of bees is applied to wounds, as is also the venom of serpents and venomous beasts. On the other hand, the animal itself is very often used, burnt and pounded to powder. Animals which are of special importance to man among the Indonesians are also the ones which are most often eaten. Thus among a tribe of hunters dogs are considered to possess personal soul-substance; they have names, and are spoken to and treated as men (Torajas, Galelarase, Dayaks). This continues as long as they are hunted, or at least for some time when they are no longer hunters (Miasàkàbuans, Malays). Buffaloes and cows also have personal soul-substance; they are addressed, their soul-substance is invoked, and offerings are given to them (Minahassees, Achiminoes, Batkak, Dayaks, Javanese, Timoreses, Macassars, Buginese, and Torajas). As a rule one animal in a herd is considered as the leader which keeps the herd together, and is killed first.
INDONESIANS

spoken to (Torajas, Dayaks, Javanese, Niassians, Battak). In the Moluccas the clove tree is considered and treated exactly in the same way as a woman with child, during the time that it is in bloom; people are particularly careful to avoid anything that might frighten the soul-substance of the tree. The Battak believe that the camphor tree has a spirit of its own to which sacrifices are offered; the camphor-seekers use a language of their own making, less the soul-substance of the tree. But what is their reason for object is and hide its camphor crystals from them. In Sumba the natives call the sandalwood tree of nits, i.e. spirit wood, and formerly nobody dared cut down such a tree. In a grove of coastcherry trees there is one tree which is considered the chief of all, and which takes care that the soul-substance of the other trees does not vanish (and with it the sap); such a tree is never tapped.

8. Soul-substance of objects. — That objects also have soul-substance appears from the use that is made of them. Very often people carry with them iron objects, stones, chins, beads, or hard fruits, as some kinds of nuts, or make their children carry them about, that their soul-substance may be as hard as that of the objects mentioned (Malays, Battak, Gayos, Dayaks, Sundanese, Malabars, Torajas, Galaraese). Brittle objects are brought into contact with hard ones, to make them hard; e.g., an earthen pot is touched with iron or stone (Macassars, Torajas). Objects are also fed: agricultural tools are fed on the new rice (Dayaks, Torajas, Central Timor); the plough gets an offering (Macassars); the loom is given rice to eat (Southern Timor); the rifle gets part of the game (Central Timor); the Javanese offer sacrifices to all kinds of objects — to their cart, their barn, etc. The Indonesian smiths in particular offer sacrifices to their tools. A large piece of gold is supposed to attract other gold (Achinese, Parigians, Torajas, Dayaks), a particularly large diamond to attract other diamonds (Dayaks).

The soul-substance of iron plays an important part among the Indonesians: they sit down on iron to make their own soul-substance strong (Malays, Macassars); iron is used to make people invulnerable (Karo Battak); water in which iron has lain is drunk to produce strength (Nias, Java, Central Celebes, Halmahera). A Javanese woman-doctor tells how iron about with her in order to give additional force to her massage; among the Torajas and Dayaks iron plays an important part in various solemnities. The smith, who handles iron every day, is considered a very important man (Battak, Dayaks, Torajas), and among the peoples who have become Malaysians he has continued to be the representative of heathenism. In those countries where gold is found there are all kinds of precepts not to drive away the soul-substance of the gold (and with it the gold itself) (Malays, Minahassians). The Dayaks believe that the soul-substance of gold can avenge itself on the gold-seeker and make him ill. In the tin explorations among the Malays it is necessary to avoid everything that might frighten the soul-substance of the tin; the tin ore is always heated with great respect.

9. Metempsychosis. — What becomes of the soul-substance after death? Some of the tribes believe that it passes into the soul, but most of them do not. The facts prove that after the death of the body the soul-substance continues to be distinguished from the soul (Dayaks, Torajas, Papuans, Timorese, and others). A general belief is that after death the soul-substance returns to the chief of a house or deity, who doles it out again to other people, animals, and plants; or this animation takes place directly. The conceptions concerning the soul-substance have given rise to the belief in metempsychosis — which in its turn has been superseded by the belief in the soul, man living an independent spiritual existence after death. Even in this earthly life the soul-substance can move to another person. It is universally believed that, when a child resembles its father (or its mother) strongly, it has got possession of that parent's soul-substance, and (he or she) must die. If a child resembles a person who has died, the dead one has been incarnated in the child (Javanese, Balinese, Niassians, Dayaks). The soul-substance of the dead is also transmitted to animals and plants: beasts of prey are ancestors who avenge a violation of moral laws. The dead are also supposed to live on in animals which have something in common with the spirits; the firefly, because of its mysterious light; birds and butterflies, because they can soar up to the realms of the spirits; snakes, because they come forth from holes in the earth, from the under world, etc.; and house lizards and mice, because they live with men in the same house, etc.

The soul-substance of a living person is imagined as a fiery spirit (Torajas, Battak, Niassians); also that of deer and swine (Battak, Dayaks), and of plants (Javanese). Moreover, all the Indonesians look upon the firefly as the incarnation of a deceased person. The soul-substance leaves a sleeping person in the shape of a cricket (Sundaese and Galaraese). The cricket is a dead person placed living the way to the Land of Souls (Torajas). Sometimes a blowfly is an embodied curse which comes to some one (Kailians, Dayaks); generally, however, it is a dead person who comes to announce his visit to the living, a relative to the Land of Souls (Torajas, Javanese, Aikolians, Battak, Niassians); sometimes it is a person who has died abroad, and has come to announce his return to his relatives (Malays, Aikolians). Only in Aikolian and Nias is the butterfly regarded as a dead person; everywhere else it is looked upon as the soul-substance of a friend who has come to announce his visit to his house; sometimes it is the soul-substance of animals (Torajas, Battak). If a butterfly settles on a sick person, the latter improves in health, for his soul-substance has returned (Torajas, Minahassians, and Aikolians). Soul-substance is also supposed to have the shape of a bird, as is proved by the fact that it is summoned back by interjections with which chickens are called (Buginese, Macassars, Malays, Minahassians, Central Celebes). The idea that birds are incarnations of the dead is prevalent throughout Indonesia.

Among the Torajas, Dayaks, and Timorese the mouse is supposed to be the soul-substance of a living person. When a mouse nibbles at the clothes or nails of some one, it is considered by nearly all the tribes as a dead person who has come to take him to the Land of Souls. A snake is generally looked upon as a dead person, whose coming forebodes evil. Among some tribes, e.g., the Dayaks, the soul-substance appears as a snake, but as a rule a reptile represents a dead person. If it enters a house, it is a person who has died and has come to fetch one of the inmates. The soul-substance of a lycanthrope appears among some peoples as a house lizard (Malays). But in other cases this animal is taken as the incarnation of a dead person who wishes to continue living in the same house with his relatives.

Remnants of the belief in the transmigration of souls are found everywhere throughout the Archipelago. Man can pass into all kinds of animals; but in these ideas concerning metempsychosis there is not a trace of any thought of retribution. This is met with nearly only among the Dayaks and Balinese, who have been under the influence of the Hindus, and who try to find charms to secure
for themselves a new birth into a higher being, or lead the life of a hermit for this purpose.

Closely connected with the belief in the transmigration of souls is the worship rendered to some animals by the Indonesian peoples, because they think their ancestors are embodied in them. The animals must not be killed. Examples are the white hen (Battak), or another bird (Tagalis), or a species of monkey (Battak, Dayaks), pig (Barbar), buffalo, deer (Dayaks), etc (in the Philippine islands as in South America). An object of universal worship among the Indonesians is the crocodile. In Java and Sumatra it is believed that the souls of the ancestors have become crocodiles, which protect their descendants. They are killed only by way of revenge when they have killed a man. Mothers place the placentas of their children in a small vessel and let it float down the river, as an offering to the crocodiles (to the ancestors). In Batka good and evil are supposed to be due to the crocodile; it is addressed as 'high lord'; at festivals sacrifices are offered to it; the highest thing imaginable is to become a crocodile after death. Europeans and Macassars see their ancestors in crocodiles, and throw offerings into the water; a crocodile is believed to devour a man only by mistake. Formerly a virgin was offered to the crocodile in the Temese when a new ruler ascended the throne. All through the Moluccas the crocodile is worshipped, and people refrain from eating its flesh. In Celebes and the islands north of it the crocodile is called 'grandfather.' In all the temples of the Torajas figures of crocodiles are found. Many Indonesian tribes consider the lizard as the incarnation of the household gods of the ancestors living in the house. If an offering is put ready for those household gods, and a lizard is heard, this means that the sons of the departed have eaten enough, or that they want more (Halmahera, Southern Celebes, Nias). A worship proper, however, as is found among the Malaysians, does not occur in Indonesia. It is probably because there were no crocodiles found there that the lizard cult has developed so strongly. Wherever lizards are found (Java, Sumatra, and Malay peninsula) they are worshipped as incarnations of ancestors; they are called 'grandfather,' and are never hunted. The Temese Battak believe that only very young men with this much strength change into tigers, and protect their descendants in this shape.

II. Fetishism.—The fetishes of the Indonesians are objects with a soul-substance which is thought to be personal. These objects are used by men to their own advantage. All through the Archipelago stones are found in the shape of men, animals, and plants, but they are not generally fetishes. The Indonesians do not pray to their fetishes, but they feed them on rice, eggs, and blood to strengthen their efficiency and power to bless. The fetish is addressed as a person.

(1) All objects can become fetishes; this depends on their singularity or rarity, or the circumstances under which they are found. Very common fetishes are bezoar-stones, which are found in animals and plants. The Indonesians consider them as the corporal substance of the animal or plant. They are used for various purposes: they are worn on the naked body, to make the strength pass from them into the body; they are supposed to ensure a longer life to the sick; they are used as charms to procure invulnerability. In some parts of the Archipelago a trade is carried on in these stones. So-called thunderstones, objects from the Stone Age, are also treated as fetishes by the Nias and Moluccas. They are considered as the teeth of thunder and lightning. They occur everywhere, and are used to avert the elements and bring about rain or dry weather. They also render a person invulnerable in war. Among the Dayaks stones are also found. The Indonesians look upon stones and mountains as the skeleton, the bones, of the earth; and, just as they consider the bones of man as the most important, the least transitory part, so they think stones to be the most enduring part of the earth; hence their objection to the chipping of stones by explorers. Special stones may become fetishes; sometimes they are indicated in dreams, or their shape or color means something to some one's fancy. Stones as fetishes are found everywhere; the Minahassans have even stones producing sound; they are rubbed with blood to make them efficacious, and fumigated with incense. Stones are used as fetishes mainly in Timor; they tell their owners in a dream what sacrifice they wish; altars are erected for them; they are generally fed on rice and eggs. There are State and family fetishes. The soul-substance of the precious sandalwood is embodied in a stone. Among some tribes a large stone is erected at every village, and this embodies the soul-substance of the whole population (Nias, Minahassa, Borracc). Stones which are said to have brought forth little stones are also found as fetishes (Minahassan, Central Celebes). Fetishes are frequently used as amulets; they are worn round the neck, over the breast, across the shoulder, and consist mostly of stones, twigs or roots of a peculiar shape, or teeth of men and animals. War amulets are in general use as fetishes which give back in warfare. The Toras use a string of horned shells for this purpose. In Timor this amulet is a little bag filled with stones and roots, which is kept at the top of the house, where the ancestors are supposed to live. In Halmahera and among the Dayaks little pots filled with sacred oil are often worn round the neck. The Dayaks also use strings of the teeth of beasts of prey. Other amulets are hung in fruit-trees, to save them from being robbed of their fruit. They are often known by the name of 'red-eye,' and mostly consist of nettles and other things causing itching, which will bring illness to the thief. They have the distinguishing feature of fetishes viz. to act self-consciously like persons. A remarkable fetish is the pangulpabadang, a rough stone image, in which holes have been bored, and filled with a pulpy substance made of eyes, lips, nose, and other parts of a corpse. This mixture is animated, i.e. made into a person. The soul of the corpse of which the mixture has been made has nothing to do with this. These stone images are planted near the villages, and warn the inhabitants of an approaching danger. These stones are also found among the Dayaks, Minahassians, Niasians. Among the first and the last mentioned, life is infused into them by means of blood. The Dayaks sacrificed to them before they went to war, and the captured heads were placed near them. Among the Battak this principle is applied in the magic wands, carved sticks, which are also animated by means of blood, and are used for various purposes—especially to bring about rain or dry weather. The permanaks is a pitcher filled with blood, with a wooden stopper, on which a human figure has been carved as the conjuration. Puasa (string) consists of fetishes prepared in different ways and hung up in the house; these objects guard the owner against all kinds of evil practices and magic spells and poison.

Objects which have gradually become fetishes are old heirlooms, known in the Archipelago as pusaka. They derive their fetish power from the circumstance that in former times they were considered as the teeth of thunder and lightning. It is impossible to give an enumeration of the different pusaka;
their number is continually added to. We need mention only the belomants, or sacred earthen pots, of the Dayaks, seen all through Borneo. These pots are old and of foreign origin—the Dayaks say of supernatural origin. Frequent attempts have been made to copy the pots, but the Dayak easily distinguishes the genuine ones from the imitations. The Dayaks pay fabulous prices for these objects. It is recorded that vessels have been bought for £330, £1239, and one for as much as £2000. When a pot breaks, the shards are sold separately at high prices. These pots are of supernatural power: they bring luck and avert evil. They secure to their owners a flourishing trade, a plentiful harvest, success in hunting and catching fish; they ward off diseases and disasters, and banish all evil spirits from their neighbourhood. Water drunk from them has healing power. They are worshipped like gods; after one has been bought a sacrificial feast is given; frequently they are rubbed with the blood of pigs or of fowls.

Among the puwaka, or heiroombs, the State ornaments call for special mention. Each of the different Toraja districts in Central Celebes preserves some object—as a spear, a lasso, a coco-nut shell, or an earthen pot. These objects are said to have belonged originally to the household of a prince who ruled the whole of the Toraja district. Only the chief himself, who is the representative of the tribe. Among more primitive tribes these State ornaments are no more than fetishes, brought back from the country. They have become of more importance to more civilized tribes, as the Macassars and the Buginese. Their State ornaments consist of all kinds of objects; often they are made to them, and they are fumigated with incense; frequently a vow is made, in cases of disease, pregnancy, childlessness, etc., to sacrifice an animal to these objects. In cases of general disasters, sacrificial feasts are organized for them, at which they are rubbed with the blood of a buffalo. The man to whose care they are entrusted is the ruler of the people. All kinds of wondrous are told about the State ornaments in the Padjad highlands; they are said, inter alia, to emit a glow which is injurious to the health of children. People wash themselves with water in which they have lain. Another ornament killed the person whose shadow was cast upon it. In some regions of the Malay Peninsula the State ornaments at the courts of the Javanese princes are displayed only at feasts and ceremonies; they consist, for the greater part, of solid gold objects representing mythical beings or animals. A cannon was supposed always to warn the prince of imminent dangers, and another cannon could make women fruitful; for this reason barren women made offerings to that feish, during which they sat astride on horseback like men.

(2) Persons may also become fetishes even during their lives, i.e. some persons are considered to be endowed with supernatural power, which renders them objects of adoration. This may be said to be generally true of all native princes in the Archipelago, and indeed to have descended from heaven; they have white blood; their curse alone is sufficient to rain all the land, and so forth. Perhaps the most striking example of this may be found in the singa-maunggo, or priest-king of the Battak: he was said to have been in the womb for seven years; his birth was attended with all kinds of miraculous natural phenomena; when at a more advanced age he slept with his legs upwards and his head downwards, all the rice grew with its roots in the air. His tongue was overgrown with hair, and one word uttered by him could destroy a man or lay waste a region. Another example is furnished by James Brooke, the rajah of Sarawak: water which he had blessed, or in which he had washed his hands or feet, was scattered over the land to make it fertile; and he was invoked by the Dayaks in their prayers.

(3) We know only one example of living animals becoming fetishes, viz. the worship of the turtle-dove by the Javanese and Malays in Sumatra. This, however, is not purely Indonesian, but was introduced by the Hindoos. For the dove with the special marks a high price is paid; it brings its owner all kinds of blessings, averts disease, gives a good harvest of rice, and so on. These birds are tended with great care. Their dead bodies are embalmed and preserved, as they retain their power even after death. (See art. AUSTRALASIA.)

12. Spiritism; the appearance of the soul. — The soul living on after death is to the Indonesians a kind of essence of the dead body, having the same shape and the same defects as the material body; e.g., the souls of people whose heads have been cut off by the enemy enter the Land of Souls without heads.

On this belief is based the practice of tatung, which, as far as the Malaky Archipelago is concerned, occurs only in the Monroe tribes, as the Macassars and the Buginese. Their State ornaments consist of all kinds of objects; often they are made to them, and they are fumigated with incense; frequently a vow is made, in cases of disease, pregnancy, childlessness, etc., to sacrifice an animal to these objects. In cases of general disasters, sacrificial feasts are organized for them, at which they are rubbed with the blood of a buffalo. The man to whose care they are entrusted is the ruler of the people. All kinds of wonders are told about the State ornaments in the Padjad highlands; they are said, inter alia, to emit a glow which is injurious to the health of children. People wash themselves with water in which they have lain. Another ornament killed the person whose shadow was cast upon it. In some regions of the Malay Peninsula the State ornaments at the courts of the Javanese princes are displayed only at feasts and ceremonies; they consist, for the greater part, of solid gold objects representing mythical beings or animals. A cannon was supposed always to warn the prince of imminent dangers, and another cannon could make women fruitful; for this reason barren women made offerings to that feish, during which they sat astride on horseback like men.

Most of the Indonesian races believe that the soul is black. In the case of a funeral they blacken each other with charcoal, soot, or ashes (Torajas, Minahassians, Dayaks, Niasians, Karo Battak, inhabitants of Halmahera and the Aru islands, Papuans), to make the soul of the dead person believe that they also are souls, so that it might resent its own death so much that it would kill its relatives. In Timor people cover themselves with a piece of black cotton for this purpose. There are even cases where the practice of making people black is practised to delude souls or spirits; babies are blackened when they are left alone (Dayaks, Niasians), and the custom is followed during a thunderstorm or other natural phenomena, in which spirits are supposed to have a hand (A’ekelians, Toba Battak, Karo Battak).

13. Man’s fear of the soul. — Now and then we meet with instances of the love for the dead one overcoming the fear of his soul; this happens especially with dead children. But as a rule the Indonesians feel great fear of the soul of a dead person. They naturally think that the dead person represents leaving this earth, and in his resentment wishes to have his fate shared by others. He therefore tries to carry off the soul-substance of the surviving people into the grave, which will cause them to die.

The soul of a woman who has died in childbirth is especially feared. Such a soul is called pontianak with some variations. It has the appearance of a bird with long claws, which utters in plaintive sound. Resenting that she has died in childbirth, she tries to make other pregnant women suffer the same fate that has befallen her. She penetrates for this purpose into the women’s bodies, and drives her claws into it. In this way she kills both mother and child. Some peoples believe that
the pontianak tries to emasculate men (Western division of Borneo, Celebes, Moluccas, etc.), as a safeguard against the pontianak, people hang up thorny boughs (generally of a particular lemon tree) at the entrance of houses in which there are pregnant women. The pontianak will keep out particularly dreaded; thus the Battak and the Balinese of earlier times did so only with the bodies of persons of high rank; in Nias the corpse of a woman who has died in childbirth is removed from the house through the roof. The Minggins throw at a distance. Soul and body are believed to be in close connexion with each other, and it is thought that what is done to the body happens also to the soul. Therefore the corpse of a woman dying in childbirth is bound down to prevent her soul from turning into a pontianak. Needles and thorns are stuck into her hands and limbs, that she may be afraid to stir for fear of hurting herself. Eggs are placed in her arm-holes, that she may not open her arms like wings, for fear of losing the eggs. Besides these measures, which are universal, the Achinese give such a corpse an entangled ball of cord or long needles without an eye; when the pontianak wants to go off, she must first sew trousers from her shroud, but spends the time in disentangling the cotton and seeking the eye of the needle.

The corpses of other people also are bound (Engano, Malacca, Halmahera, Central Celebes, the Moluccas), or the thumbs and the big toes are tied together, that the soul may not be able to run and seize (Battak, Niasians, Dayaks). The openings of the head, eyes, ears, and mouth are filled up, that the dead person may not be able to see, hear, or speak (Malaya, Achinese, Battak, Niasians). The soul's way was from doing harm to throw ashes, by which the soul is blinded (Torajas, Battak, Niasians, Badui in Java, Dayaks, Gallealareas in Halmahera, in Ceram, and in Babar). The Indonesians also feel the need of representing symbolically the breaking of all connexions with the dead person: by splitting or cutting through a piece of rattan (Toba Battak, Torajas, inhabitants of Babar); by hewing a bamboo into two (Taninhar), or a coco-nut (Maccassars); by tearing a leaf in two (Papuans); by tearing the waist-cloth of the deceased in two (Niasians). Among the Karo Battak, if a woman dies, the women split the oblong leaf with which spices are ground or tears a sirth-leaf in two. Another common method of separating oneself from the soul is bathing. Bathing is in general a means of getting rid of any unpleasing, something ominous, especially of something in connexion with the dreaded soul. Among the Olo-Ngaji in Borneo this bathing takes place in a curious way. After the burial the relatives of the dead person sit down in a boat, which is upset in the river, so that they all fall into the water; this is done three times. Among some tribes this rite has been reduced to a partial bathing. Some wash only their hands or their feet (Karo Battak, Torajas, Minahassians, and in Babar). The Dayaks in Sarawak break a stone bottle of water to pieces on the ground after the funeral. The tribes which have adopted Islam generally sprinkle water on the beast before they feed it, others, with its head towards the village, that the dead man, when he rises, may not be able to see the village. Some, as, e.g., the Battak and the papuan, scrape the grave with the knife, every one trying hard not to be the last. Of very general occurrence is the custom of making the dead body lie down in the house through a window or a gap in the wall; it must face the West (Central and Southern Celebes, Halmahera, New Guinea, Borneo). Some peoples carry out in this way only the corpse of special personages whom they particularly dreaded; thus the Battak and the Balinese of earlier times did so only with the bodies of persons of high rank; in Nias the corpse of a woman who has died in childbirth is removed from the house through the roof. The Minggins throw it off to windward of a dead person by running quickly a few times round the house with the corpse. This is probably the origin of the rapid pace at which the Mahum-madans in Jawa and elsewhere in the Archipelago bury their dead. The Niassians make a special path to the burial-place to mislead the soul. It is a common practice, when returning from a funeral, to erect a forked stake or piece of wood behind oneself on the road to keep back the soul (To-buiku, Sea Dayaks, Battak, Niassians). Others block up the road with poles (Buru, New Guinea), or light fires and make a noise (Sunda, Minahassas, Bula Bukmoulong, southern Celebes, Borneo, New Guinea; among Dayaks, Battak, and Niassians). Some tribes make the coffin as narrow as possible, to prevent the dead person from taking one of the survivors with him into it (Torajas, Gallealareas, Olo-Ngaji, Niassians).

14. Mourning customs. — The Indonesians assume that, when a person has died, his soul is angry at renouncing life on earth. Afterwards it is gets used to its new condition, but at first it is in a mood dangerous for the survivors. Therefore great care is recommended for the first few days after a death; this fear has given rise to the institution of mourning customs.

During the first days after a death the inhabitants of a village must keep perfectly quiet. No noise must be made, dancing or singing is forbidden, music must not be heard, rice must not be pounded, nor coconuts thrown down from the trees, nor shots fired; in fact, they go so far as to forbid fishing, sailing on the water, and carrying goods in the usual way. The Intention is that no sound should meet the ear of the soul to indicate the way to its home; people try to conceal themselves from it. Such injunctions are found among all Indonesian peoples.

In the mourning clothing of the Indonesians is embodied the idea of hiding from the departed spirit or making oneself unattractive to it by wearing old, worn clothes; but these clothes have another purpose; the wearer wishes to make himself as much as possible similar to the dead person. Hence the Galealareas wear pieces of the shroud as clothes or as wraps round the wrist. This is found in the Taninhar Islands and in Southern Celebes. It is also advisable to wear old clothes or clothes no longer in use, because the souls of the departed in the Land of Souls are supposed to wear old-fashioned clothes. Thus the rule survives here and there to wear mourning clothes of old (Dayaks, Central Borneo, Torajas), or to return in some way to old times (Ceram, Ambon, Aru, Boni). It is a wide-spread custom to take off all ornaments, or to wrap the cloth round them, to prevent them from being seen.

These mourning customs are observed by the nearest relatives, or by a wider circle when the deceased was the chief of a tribe. Widows and widowers especially adore that the entrance to the village, that the dead man, when he rises, may not be able to see the village. Some, as, e.g., the Battak and the paw-paw, scrape the grave with the knife, every one trying hard not to be the last. Of very general occurrence is the custom of making the...
and among some Dayak tribes the serfs do so at the death of their master. Sometimes this shaving of the head is considered as the laying down of the ornament of the hair, but more probably it becomes a sacrifice of a part of oneself to save the whole.

Widows and widowers must also hide themselves from the souls of their dead mates in a special way, namely, by covering the head with a mat (Torajas), a piece of cloth, or bark (Bahar, Boni, Kenyah, Dayaks, and Batak), a hat or cap (Papuans, Minahassans, Bahau Dayaks, Ole-Ngaju, Etagao, or a net (Papuans).

One of the mourning customs is abstinence from certain food, especially daily food; hence no cakes are eaten instead of the usual sage-porridge (Papuans, Gelaaroe, Tobolese); or maize instead of the daily rice (Torajas, Minahassans, Dayaks); eating in the house of the deceased is not allowed (Silindu, S.E. Borneo, Southern Celebes); eating is allowed, but not cooking (Minahassans, Minakabans); among some tribes the widow's feet (Etagao, Southern Nias). Several authorities regard these customs as a renunciation in order to propitiate the souls of the departed. More probably they are attempts to be taken for souls, and to escape the vengeance of the departed soul. The rationale of these practices is that the souls of the departed do not eat — at least not in the same way as men; what they eat is invisible since those who wish to pass for companions of the dead must pretend not to eat; therefore they leave the house, or the food is put into their mouths by others.

The Melanesians have a short, deep mourning-time and a long, light mourning-time. The former is generally observed by a wide circle of relatives, and lasts from three to seven days (sometimes also till the new moon, as in some islands of the Moluccas). The light mourning is observed only by widow or widower, and lasts till the feast of the dead has been celebrated, when the soul is supposed to have gone to the Land of Souls. Among some Dayak and Toraja tribes the deep mourning is ended by the sacrifice of some animal, which pacifies the vexation of the departed soul. This may have been general in earlier times.

The Human Sacrifice. — The fear that a person who has died, especially when he is of high rank, wishes to have a companion in his misfortunes, has led the Indonesians to kill a human being, that the departed soul may be satisfied. Afterwards the thought has been added to this custom that the victim may serve the dead person in the future life. The Indonesians have also a bloodless human sacrifice. Among the Torajas on the south and east of Lake Poso and among the Balinese, when a chief dies, a family of slaves who are to live in the grave-lot are set apart, and treated as souls; nobody may deny them anything, or talk with them. After the feast of the dead has been held, this family is set free, but they are not allowed to live in the village; they are looked on as dead. This custom must also have been prevalent among the Batak; in former times nobody was allowed to give shelter or food to such slave. Among the Buginese and the Malaccans the custom survives to the present day that the slave, male or female, who receives the water in which the corpse of a high-born person is immersed, is set free. The Badui in the west of Java, who guard the sacred graves of the princes of Pajajaran, are most likely descendants from such a slave-family. It is recorded of many other tribes that for some nights after the death of a person watchers are placed on the grave, that the dead person may not feel lonely. This bloodless human sacrifice might be called the link between the mourning rites and the bloody human sacrifice; it was a preliminary measure, which, however, did not do away with the bloody human sacrifice.

In order to get a victim the Torajas go out head-hunting, or buy a slave from another tribe. The scalp is stripped off the head; with it the people who have captured the head dance seven times round the grave, after which they nail bits of the scalp on the coffin and the post of the hut. The leader of the expedition rips up the widow's or widower's mourning dress in the middle of the back, and cuts off a piece from the other mourning clothes. The Mountain Torajas sing for several days round the victim before they kill him; then the head is placed on the sleeping-wax of the deceased, and the scalp is stripped off and hung up in the house. In former days head-hunting on behalf of a dead person was universal in Minahassa. With the blood of the person killed the woodwork of the grave-lot was painted red, and the heads were buried by the side of the grave. Among the Dayaks in S.E. Borneo the victim was exercised on the evening before his death, to drive the soul out of his body; hence they thought that they were killing a soulless man the next day. The bodies of the victims were burned, and the ashes placed with the corpse in the coffin. The Kinji Dayaks, in the eastern district, boiled the head, and placed the coffin on them. In Central Borneo they generally bought a person of another tribe, whom they slowly starved to death; the body was buried under the grave of the dead person, and the head was placed on the top of it. Among the tribes in the district round Sarawak human sacrifices were of frequent occurrence. The victim was tied to the post, or he was left to starve, or he was slain, or buried alive; generally he was a slave from another tribe. In earlier times the custom of finding victims must have been prevalent as it is still among the Niassans. In Bali it has died out, but there are indications that formerly it was deemed necessary to offer a human sacrifice for a dead person. In Sumba, Savu, and Timor the custom existed, and continues to exist. In the first-mentioned island sometimes thirty men were slain for one chief. Human sacrifice was also universal among the inhabitants of the Philippine Islands. Sometimes a slave was earmarked as a companion to the dead person. Under the corpse of a brave man a bound warrior was buried alive. The meaning of human sacrifice is generally held to be that it gave the dead man a servant to attend on him in his future life. Taking into account, however, that originally there were no slaves, this conception must be of later date; besides, the conception formed of the Land of Souls is incompatible with the idea of servitude. No doubt the fear of the disappointed soul of the dead man, which would like to make others share his fate, has been one of the principal motives. But there is another reason; valour secures a foremost place to the departed soul in the life hereafter. The human sacrifice was intended to endow the departed man with a show of power; it must therefore be that the valour displayed in head-hunting by the relatives left behind would profit the departed soul. This is rendered the more probable by the custom prevalent among the Torajas and Dayaks of enumerating the brave deeds (which are much exaggerated) of the deceased on certain occasions, in the firm conviction that these brave acts will benefit the departed soul. That the slaughter of slaves must be of a later stage than head-hunting is proved by the fact that those slaves had nearly always to be from another tribe.
16. Widow sacrifice.—Widow sacrifice occurred only in Java, Bali, and Lombok. (It is also reported in New Guinea, Morogoro-bewa; but this is open to doubt.) It has been said that widow sacrifice was universal, and that the mourning rites are a mitigation of that custom; but this is not probable. In Java this Bali widow sacrifice has undoubtedly been introduced under Hindu influence. In Java women vowed that they would follow their husbands in death, and insisted on being burned with the corpse. The rite was performed at the end of the 18th cent. in the empire of Balambasan in East Java. At that time women were stabbed with a dagger. They carried a turtle-dove with them, in which the soul was supposed to soar up.

In Bali the burning of widows exists up to the present day, in spite of the earnest attempts of the Government to prevent it. Only women of the second and third castes are burned. Among the Brahmins widow-burning is rare; and the fourth caste is too poor to pay the cost required for the ceremony. Widow sacrifice is perfectly voluntary. As soon as they have offered themselves the widows are considered as saints; offerings are made to them, and all their wishes are satisfied; they are in a state of exaltation about all the delights which await them in heaven. Their death raises their family also to the station of the people. Widows are burned alive, or they kill themselves beforehand by falling up a dagger. In Bali also the turtle-dove is used to convey the soul to higher regions.

17. Sacrifices to the dead.—Sacrifices to the dead are not voluntary gifts; the dead are receiving what is due to them, i.e., their own possessions. Originally there was no private property; everything was the common property of a group of people; there was no question of offerings to the dead; they were not necessary, for the feeling of individuality was so undeveloped that there was no thought of an independent existence of the soul after death. The first individual possessions were no doubt hunting trophies and, in a wider sense, all personal adornments. These ornaments were, of course, taken into the grave, as they were supposed to be of no use to anybody but the deceased.

The offerings to the dead are paid from the inheritance of the deceased; sometimes presents are made immediately if this is convenient; more for the sake of the survivors than for that of the dead; these presents are returned later. The Indians exert themselves, therefore, during their lives to provide themselves with clothes and sacrificial animals which may be given to them at their death. The distribution of the inheritance is also connected with the offerings to the dead. As a rule, the inheritance is not divided; but, if it is, this takes place only after the great festival of the dead, because first all expenses must be paid from the inheritance. Generally the dead man receives the mat on which he slept, his clothes, cooking-pan, rice, water, betel, tobacco, valuables, and ornaments.

In earlier times, when giving possessions to the departed soul to take with him, people were prompted by fear of the dead man’s envy; if he should have more, his descendants, rather than by the wish that the gifts might be useful to him in the life hereafter. This fear must have given rise to the custom of giving the dead man something. The New Guineans, some islands of the Moluccas, Minangkabau.

At present the Indonesians are universally of opinion that the departed soul really uses these objects, and that this practice took place at the life hereafter; and in order to detach the soul from the objects, the food offered must be cooked and the objects broken.

It is also usual to give the deceased some trees of his plantation; these trees are then cut down (New Guineas, Monag-bewa; Halmahera, Minahassa, Bornoo, Egan, Nias, Malacca).

The conviction that the departed soul makes use only of the soul of his possessions must have led primitive men to develop the real objects, and to present the dead person only with representations of them. For this reason shrouds and coffins are painted with figures of men and animals; the Dayaks give two heavy cord representations of all kinds of desirable objects are represented. Arms especially, so valuable to the Indonesians, are copied in wood and given to the dead man (Bai Islands, Bura, Halmahera, Batu Islands, Malacca). All other property of the deceased is only exhibited and put away again after the funeral.

Many of the tribes provide the dead person with money (Madagascar, Bataqland, Nias, Timor, Halmahera, Macassar, Central Celebes, Bornoo), which is laid on his eyes, in his mouth, on his breast, or in his hand. It is supposed that he can procure something for the money in the Land of Souls; but this interpretation is of later date. The money may be considered as part of the dead man’s property, which is given to him to take with him, or as an indemnification for all the rest of his property which is not given to him.

The Indonesian thinks it of the highest importance that at least one sacrificial animal should be slain at his funeral, and this is universally done in the Archipelago. Often at the funeral of a man of rank so many animals are butchered that a great many of them remain unused. Among agricultural peoples, like the Indonesians, cattle constitute the greatest riches, and it is in the hands of the people. The rich in the life hereafter the dead man must therefore take cattle with him. Among those that have become Muhammadan the animal slain at the funeral is considered as a beast to ride on across the bridge to the future life. It is also customary to kill one or more horses for the departed soul (Madagascar, Bataqland, Rotti, Timor, Sumba). There are also a few records of dog sacrifice (New Guineas, Leti, Rotti, and among the Bahaus in Bornoo).

18. Lingerer of the soul temporarily near the grave or the house.—The soul of the dead person does not go to Lim, and is done to it; it roves about for some time in the neighbourhood of the grave or the house; therefore the Indonesian builds a hut on the grave as an abode for the soul. In the house of the dead man a kind of bed of state is arranged for his use, near which his property is exhibited and a light is burned every evening. This bed of state is left from three to forty days (Galearease, Ambonese, Thoras, Philippine Islands, Dayak, Minahakban). The third day after death plays an important part among the Indonesians, for they hold the belief that the soul is unconscious of the death of the body, and does not find out before the third day after death. Generally the soul of the person who has just died must first be convinced of his death by the souls of the departed (Dayaks, Galearease, Bataq, Niasians). The native Christians in the Moluccas spend this day, therefore, in prayer and psalm-singing. For the same reason people attach great importance to having the bodies of their relatives with them in their native country, that the soul may have the dead land of his own tribe as companions. When a person dies abroad, his friends, if possible, take his skeleton with them, or only the head. If this is impossible, his hair, or rarely (in Anokola) some earth from the spot where he has died. If they cannot get any part of his corpse,
The doll is sometimes used to represent him (Papuans, Galearese, A’okolians). The objects mentioned are used as a medium to convey the soul of the departed to his native country. The soul remains bound to the corpse, to the earth, till the great festival of the dead has been celebrated. This celebration cannot take place until all the flesh has been consumed; for until then the soul ‘stinks,’ and is not admitted to the Land of Souls. The most important part of the feast of the dead is the collection of the bones of the deceased, which are then buried or put away in a cave (Central Celebes, Am and Key Islands, Ceram, Timor Laut, Ialuma, Buru, Timor, Borneo, Battalond, Nias). Sometimes (as in Nias) all these solemnities are performed only with the head of the dead man. Many Indonesian tribes take the bones to a cavern, which they consider as the entrance to the Land of Souls.

20. Burning of Corpses.—Generally corpses are buried in the ground, or placed on a scaffold or in a tree. One tribe sometimes practises different methods. The essential thing is that the flesh must be decayed before the soul is really soul, and for this purpose corpses are burned among the Dayaks, Batak, and Balinese. The Dayaks in the South and Eastern division bury the bodies, and then at the festival of the dead burn the bones. This custom is also prevalent among some Dayak tribes in Sarawak; corpses of chiefs are often burned in one or two days after death. Among the Batak, the Karo Batak, and some more Northern tribes burn the bones of the dead. The ashes and the remnants of the bones are gathered in earth pots and entombed. One of the Danes of the Karo Batak, the Marga Simbing, put the pots with the ashes into miniature vessels, and let these float down the river. Among the Balinese, cremation is in direct relation to metempsychosis; for this enables a soul to ascend to heaven, and descend from there to the earth to animate another body. The souls of those whose bodies have not been burned become spectres, or ghosts. The corpses of people of rank are sometimes burned only a few days after death. Investigations have made it certain that cremation is not originally an Indonesian custom, but has been introduced by the Hindus.

21. Conducting the Soul to the Land of Souls.—When the soul has got quite clear of the body because all the flesh has decayed, it is not sufficient to give various objects to take with it on its way to the Land of Souls at the feast of the dead; it must also be ‘conducted’ there. This is done by the priests and priestesses whose soul-substance leaves their bodies in their songs, and conducts the soul of the departed to the Land of Souls. Among the Papuans the bones of the departed are wrapped up into a parcel and carried round in the dance; afterwards they are collected and put into a hut, round which the people dance faster and faster till at last they run back to the village. By this dance the soul is led or, rather, driven away. Among the Galearese the feast of the dead consists chiefly in performing dances, which after some days end in the people running forty times round the house of the family, and four times round the grave; on this occasion a daughter or sister of the deceased man arrayed like a warrior; she represents the deceased, and as such is treated with homage and reverence by the guests. The Tobeloese keep the feast of the dead for several dead persons at the same time, whose bones are wrapped up in a piece of cotton and placed in the temple. On this occasion the priests are supposed to deliver the souls from the power of evil spirits and convey them safely to their destination. After the feast the bones are placed on scaffolds round the temple,
tribes believe that it is a dog (Sarawak, Olo-
Ngah) that it is a fox (Minahassa, Ce-
tral Celebes), that keeps watch; in order to pass
the animal the soul gives it a hard nut (Central
Celebes) or a bead (Sarawak) to eat; while the
animal is trying to chew this the soul can pass unmolested.
It is a common idea that
there is a guardian in the Land of Souls who interrogates the souls. In Central Celebes he is
called Lufikoda, and is a smith by trade. Un-
married people or those who have never been
incestuous receive a blow on their knees, which
prevents them from going on; also the souls of
men who have never killed any one are not allowed
to pass undisturbed. Of the same nature is the
kula or of the Dayaks: the soul of a chaste man
is pushed into a ditch, and that of a chaste woman
pushed with a trunk of a tree (the ditch represents
a vagina, the tree a penis). Among the Min-
ahassans the guardian of heaven is Makawalang,
who treats the souls of the rich to a piece of pork,
but sends away those of the poor. According to
the Macassans, the guardian of heaven asks the
duties imposed by Islam. Among the Orang Lom
in Bafka the guardian of heaven is called Ake
Antak. An aged person always whispers to the
guardian, and is dismissed with a blessing. Among the Karo
Batak it is Bapa nubadala, 'the illustrious father-guardian,' who questions the souls, chiefly
concerning the way in which they have died (this
being, in Indonesian thought, closely connected with the order of their earthly life); he makes
the souls pass over a plank which lies across a
precipice; then he draws back the plank, and the
souls are separated from the earth for ever. In
Nias the guardian of heaven is called Kalecaro or
he inquires about the deeds of the people on
earth, and about the number of feasts they have
given. When he judges a soul to be evil, he
makes him cut his head on the edge of a sword; the
soul wounds his feet, falls into the water,
and dies. Many Papuan tribes also believe in
a guardian of heaven; he admits to the city of
souls only those who have performed the most
good deeds.
An idea common to all conceptions of the afterlife
hereafter is that the soul has to cross a sea; this belief
found its origin in the sun, which crossed the
sea every day on its way to the Land of Souls under
the earth. It is only with further development that this notion has begun to play an ethical part
in the ideas about retribution. Originally the
coffin must have been the vessel in which the soul
was supposed to cross the sea. The Torajas,
Dayaks, and Niasians still use words for 'coffin'
which have also the meaning of 'vessel.' Some
tribes put the corpse in vessels even to this day
(some Dayak tribes, Karo Batak, in the Moluc-
cas); the Kayans give an oar to the dead person.
In the Moluccas and in New Guinea the dead
receive miniature vessels in which to make the
voyage.
Many of the tribes who lived far inland, the idea
of the sea gradually gave place to that of a river,
across which a bridge was laid (Central Celebes,
Southern Celebes, Minahassans, New Guinea, Borneo,
Sumatra, Batak). The bridge consists of a plank,
or tree trunk, which jends and rocks violently
when it is crossed, or it is a sword, or at least
something as sharp as a sword (Galleseans, Banaus,
Maasians, Iban). Among the Papuans there is
found the idea of a snake being a bridge to the
Land of Souls.
22. Retribution.—The Indonesians have no idea
of retribution in our sense of the word; yet
they try men by a moral standard. Whether they
will be allowed to enter the Land of Souls is made
dependent on the possession of some virtues:
valour, liberality (and in connexion with this,
riches), the gift of invention, or the presence of
the marriage-duty. Killing an enemy after the
death of a chief had also the purpose of endow-
ing the chief with the character of valour. The
souls of some people were not allowed to enter
the Land of Souls; in the idea of the Indonesians they
either have their own City of Souls or continue to wander about on earth. They are the souls of
those who have perished suddenly by some acci-
dent, of those who have been killed in battle,
of suicides, and of those who have died of smallpox,
leprosy, or cholera. Such a sudden death was
regarded as a judgment of the gods: they had
offended in some way or other, and therefore the
gods had suddenly cut off their lives. People are
afraid of these souls; their bodies are often left
unburied, and, if they are buried, this is done
without any ceremonial. Some Indonesian tribes
have notions about retribution which must have
been borrowed from other peoples — e.g., when
thieves are condemned to carry for ever the things
stolen by them (Battaks, Southern Celebes, Sinitas
in Islam); or when the questions of the spirit.
In Aftoka two spirits are supposed to keep
watch near a trap. If the soul answers to
their questions with lies, the trap comes down
and the soul is crushed to death. Among the Karo
Batak it is Bapa nibdalalana, 'the illustrious
father-guardian,' who questions the souls, chiefly
concerning the way in which they have died (this
being, in Indonesian thought, closely connected with
the order of their earthly life); he makes
the souls pass over a plank which lies across a
precipice; then he draws back the plank, and the
souls are separated from the earth for ever. In
Nias the guardian of heaven is called Kalecaro or
he inquires about the deeds of the people on
earth, and about the number of feasts they have
given. When he judges a soul to be evil, he
makes him cut his head on the edge of a sword; the
soul wounds his feet, falls into the water,
and dies. Many Papuan tribes also believe in
a guardian of heaven; he admits to the city of
souls only those who have performed the most
good deeds.
An idea common to all conceptions of the afterlife
hereafter is that the soul has to cross a sea; this belief
found its origin in the sun, which crossed the
sea every day on its way to the Land of Souls under
the earth. It is only with further development that this notion has begun to play an ethical part
in the ideas about retribution. Originally the
coffin must have been the vessel in which the soul
was supposed to cross the sea. The Torajas,
Dayaks, and Niasians still use words for 'coffin'
which have also the meaning of 'vessel.' Some
tribes put the corpse in vessels even to this day
(some Dayak tribes, Karo Batak, in the Moluc-
cas); the Kayans give an oar to the dead person.
In the Moluccas and in New Guinea the dead
receive miniature vessels in which to make the
voyage.
Many of the tribes who lived far inland, the idea
of the sea gradually gave place to that of a river,
across which a bridge was laid (Central Celebes,
Southern Celebes, Minahassans, New Guinea, Borneo,
Sumatra, Batak). The bridge consists of a plank,
or tree trunk, which jends and rocks violently
when it is crossed, or it is a sword, or at least
something as sharp as a sword (Galleseans, Banaus,
Maasians, Iban). Among the Papuans there is
found the idea of a snake being a bridge to the
Land of Souls.
23. The Land of Souls.—The course of the
sun, which disappears in the West every day, and
is supposed to take the souls with it to the land
of the dead, gave rise to the belief that the Land
of Souls was situated in the West, and also to the
custom of indicating the age of one's soul by the
different positions of the sun; thus the word for
'setting of the sun' is used for 'dying' (Torajas,
Macassars, inhabitants of Halmahera, Aftoka,
Battaland). Allied to this is the custom of building
houses with the ridge from East to West, the
entrance facing the West, so that a person, on
entering the house, will have his face turned
toward the rising sun. For the same reason corpses are
buriied from East to West; or, in places where the
Land of Souls is no longer supposed to be in the
West, with the feet in the direction where it is
supposed to be. Many peoples think that the Land
of Souls is under the earth, and live in the
chambers and caves as being passages leading to it. Originally all the Indonesians believed in
the under-world, as may be seen from data still extant.
At present many imagine the Land of Souls to be
on the earth — on a mountain or in a valley. Among
the inhabitants of Northern and Central Celebes
it lies in the land which is their original home, so
that the direction in which it is supposed to be
also shows where the people have come from.
The religious conviction of the Tefigerese and the
Badus (both in Java) has had a share in the de-
termination of the Land of Souls; the former
consider it to be the volcano of Bromo, the latter
the tombs of the last princes of the empire of
Pajajaran.

The views about life in the Land of Souls har
monize fairly well among the different tribes.
Two features in them are strongly marked: first, in
the realm of the dead is simply a continuation of
the life on earth; he who was important here is
important there; he who was of no consequence
here is of no consequence there. A second
feature is that there are different divisions in the
realm of the dead; in every division the souls who
have died in the same way live together; those
who have perished suddenly by some accident,
those who have been drowned or committed suicide,
etc., live in others. Certain actions are done in
the Land of Souls contrary to the way in which
they are done on earth: thus the souls give each other a part of their life in the other land: the language of the soul is the same as that of man, but the meaning of the words in the Land of Souls is the direct opposite of their meaning on earth: e.g., 'black' there is 'white'; 'hunger' is 'satiety'; 'hurt' is 'heal,' etc. (Borneo, Ceram, Halmahera).

Some tribes believe that the hereafter consists of layers, generally seven, one above the other. Thus, if a soul is thrown into the first layer, it becomes a cow; in the second, a horse; in the third, it turns to water or dew (Torajas, Macassars, Dayaks, Balinese), a tree or a species of grass, a fruit or a blossom (Dayaks, Koro Battak, Papuans), an earth (Minahassians), an animal (Niasians, Minahassians, Papuans). This belief is another proof of how material the soul is thought to be. When it has died a few times, it finally becomes soul substance, and animates another part of nature. If, e.g., the soul which has been converted into dew or into a fruit is eaten, a new man is animated.

24. Nature of the souls worshipped. — About the land of the souls and the life of soul, general belief the Indonesian are indifferent; but there is frequent intercourse between the souls and the living people, which shows itself in the greater or less reverence with which the people feel for the souls (the difference between the souls of the departed and spirits which have always been considered as such is often hardly noticeable). For the souls of the departed continue to live with their descendants; they are feared for their superior power, but they are also looked to for help in the daily work; they have power over rain, and they accompany the living in war to help them punish bad crops, illness, and death, when the 'Adat (customary law) is not observed. Therefore the living always try to conceal from them careless observance of the old customs. Thus an oath which has been made must be kept. The Indonesians have a strong sense of justice, and, when they know that they are wrong, they do not think that they can rely upon the help of their ancestors. The souls of the departed have a very exclusive character; the souls revered by one tribe will not help members of another. The Indonesians cannot form a conception of a universal God. Strangers may violate the 'Adat without being punished by the souls of their ancestors, and the latter avenge themselves in this case on the inhabitants of the land, or their descendants, over whom they have power; this punishment can be averted only by killing the offender.

Among the Koro Battak the souls of stillborn children, or children who have died before teething, are honoured with sacrifices, which induce them to avert illness from the house and to grant the wishes of their relatives. In the eastern part of the Archipelago it is chiefly the souls of those who have perished in war and who have died by accident that are revered as helps by their living relatives. Very often the Indonesian does not realize what souls he invokes, as he very rarely mentions them by name.

The souls of people who have called into life a new state of things. So in Java every village worships the soul of the man who founded the village or first cultivated the land. At the beginning of every year a village-feast is held in his honour. In many islands of the Moluccas the founder of the village is revered; sacrifices are offered to him when a disaster is imminent. This is found also among the Celebes, Minahassians, and Niasians. An even more natural form for the souls of a man who has brought about great change in the economic or political state of things, e.g., the first tiller of the soil, the first smith, etc.

25. Accidental meetings with souls. — As the Indonesian believes that with souls one can not be certain what really happens on earth, they must sometimes come in contact with them. So there are stories relating how some one has seen a soul, and as a rule the consequence is that he dies soon after. It is generally believed that, when a dog howls without reason, it is seeing a soul or a spirit. This power of seeing spirits is often ascribed to chickens, cats (Macassars and Battak), and pigs (Niasians). Occasionally a spirit or soul speaks when his presence is desired. The result is an 'allah,' a physician who is afraid of the society of his fellow-men and soon withdraws to the wood—or a man endowed with supernatural strength. Some peoples pretend that they can perceive footprints of souls in ashes which are scattered on the floor for this purpose; these footprints are either transverse or only as large as the joint of a finger (Philippine Islands, Central Timor, S. E. of Borneo, Ankois, Batallan). When a soul returns to the house, it generally makes its presence known by imitating the noise of some one moving or dropping all kinds of household articles. When a spirit or soul speaks directly, or bites a person, the consequences are generally bad; a headache, fever, or a feeling of illness ensues. An irritating eruption of the skin, shingles, and similar illnesses are also attributed to contact with a spirit or soul.

26. Incidental worship of souls. — At such casual meetings there is no question of adoration. Reverential acts generally take place in the house, because the souls of the departed are believed to be present in places where they lived during their lives. At least the souls of the departed always get a share; it is placed in the attic, or in the ridge of the roof, the places where the souls are supposed to live. But the souls receive a share not only of the food, but of everything that is made in the village or outside it; if a house is built, the souls get a miniature dwelling (Torajas, Central Timor, Dayaks; the Torajas also make miniature smithies and salt factories for the souls); if a rice field is made, a small garden is specially laid out for the souls (Niasians, Minahassians, Rousals).

27. Worship of souls in houses especially erected for the purpose. — The souls worshipped in the houses are naturally the ancestors of the family living there. Besides these, there are ancestral souls that look after the affairs of the village. These are the souls of chiefs and brave warriors, who protected the inhabitants of their own village during their lives, and continue to do so now that they are dead. For them a home is built—a temple. We find such houses among nearly all Indonesian tribes; and, where they are no longer extant, there are usually indications that they did exist. We sometimes read that souls, battling for the people in war, live in the temple (Timor, Halmahera, Central Celebes, Nias), but the village guardian spirit has joined them. Where, through the influence of the Government, warfare has been made impossible, as among the Macassars and Buginese, only the village guardian spirit is worshipped in the temple. When the people go to war, sacrifices are made for the temple, and the souls are asked to march with them; as the legend says, it is allowed to enter the building till the warriors have returned. But offerings are also made in the temple when a general disaster visits the village, or when the people join in a large celebration. Even among such tribes as the Kolians and the Ibanians in Celebes, who have adopted Muhammadanism, heads of slain enemies are preserved in
the temple, which in other respects has more or less assumed a Muhammadan character.

One of the chief functions of the chiefs is to discuss matters of general interest with their fellow villagers (= relatives). The souls of the departed chiefs, however, must also have a share in the consultations of their descendants; therefore the temple of the village has come to be a council house (Sotor, Halmahera, Central Celebes, Borneo, Nias, Battalando).

The temples are mostly decorated with figures of animals, especially of crocodiles and serpents (New Guinea, Soler, Halmahera, Central Celebes, Borneo). These figures are believed to represent the incarnations of the souls that live in the temple. In the temples are kept the instruments with which the souls are summoned or their attention drawn, such as drums, bamboo speaking-trumpets, and triton shells (New Guinea, Ceram, Sotor, Central Celebes).

28. Corpse and parts of the body as medium in sorcery. — When the Indonesian invokes the souls, he has in view either a certain class of souls or the souls of the departed in general. When he wants to have intercourse with each soul, he does so usually by a medium. The medium must always be something with which the dead person was in close connexion during his life on earth — e.g., the corpse or the horns of a bull. Sometimes it is even the deceased person himself who is sometimes used to find out who is guilty of his death; if the coffin begins to move at one of the questions, this is considered to be an affirmative answer (Babar, Buru). Among the Torajas a skull is preserved in the former home or in the temple to remain in contact with the soul. The numerous graves where the Tumans continue to bring their offerings from year to end to end to obtain the fulfillment of a wish prove that the skeleton is considered as a medium for the soul. Among the Torajas an ancestor's skull is sometimes kept in the house, and on certain occasions people bring it offerings and ask it to heal their sick. Particularly among the Dayaks, preserving the skulls of deceased chiefs is of frequent occurrence. The Battaks consider the loss of such a skull so important that they would sacrifice anything to get it back; all the happiness of the house is intimately connected with it. The Niasians bury the souls of their men of rank before the house; in times of illness a cord is passed from the body to the house, and if this in a chimer is utters calls for the patient's recovery. In the islands of Timor, Ceram, and Buru, and among the Papuans, skulls are often used as mediums. Hair and nails of the deceased are used throughout the Archipelago to get into contact with the departed soul. The Papuans frequently use the teeth and the lower jaw for this purpose.

29. Objects as mediums. — Objects used by the deceased are considered as mediums, for something of its late possessor is supposed to cling to them. Many objects which have now become fetishes must originally have been mediums, which carried on intercourse with the former owners; the State ornaments mentioned above are examples. Besides these old heirlooms which constitute the connexion with the deceased, many other objects are used as mediums, not to get in contact with, but in some other way — experiments, resembling our table-turning, by means of which thieves are found out. The experiment with the rice-pan resembles our table-turning very closely; it consists in placing a pan of rice, and when it begins to tap on the floor, the answer is considered to be affirmative (Luwa, Ambon); among the Macassars the van rolls over the floor and falls at the feet of the chieftain, and, when it begins to tap on the top of their fingers. In Babar, Lelai, and Halmahera a piece of rattan or bamboo is made to vibrate; the Galelarese measure a piece of rattan with the span of the hand, and, if the fingers happen to fall on the ground, this is considered to be an affirmative answer. A lemon, a basket, or a stick is suspended on a rope; the answer is affirmative when the object begins to swing from side to side. Among the Tidorese there are countless experiments of this kind among the Indonesians.

30. Images as mediums. — Making images which represent the departed is certain recent development of the use of relics as mediums. The Torajas use wooden masks, which are bound before the door of the house of the dead; after the door the masks are preserved till another feast of the dead, or are used as mediums, yet people are very much attached to them. An image in itself has no value. It gets its value only when something of the deceased has been transmitted to it. Among the Torajas the masks owe their sacredness to their contact with the door of the dead. In Nias one of the shapes in which the soul appears, namely, a spider, is brought into the house. Between the houses of the New Guineans the Pappans drive the soul into the image, etc. The Pappans call their images korcar; they are hideous things, carved in wood, a foot long; people pay homage to them, and sometimes use them as e.g., when going on a journey. When the questioner is seized by a fit of trembling, the affair looks ominous, and he gives up his plan; in cases of illness the images are placed at the door of the sick bed. When a korcar has predicted something that has not come true, the image is ill-treated or sold. In many of the Moluccas images of the departed are found, which are generally stored away in the attic of the house; in times of need or illness the father of the family feeds them, and asks for their assistance. Sometimes the tribes of the Moluccas do not use images as mediums, but stones and pieces of wood (Wetar, Timory), or palm-leaves cut in the form of a hand with six fingers (Rottili). At every death such an object is made, hung on the roof, and sprinkled with blood; it is left there till it has completely decayed. In Halmahera the souls are gradually lured into an image, but only temporarily. In earlier times the Javanese must have made images of the departed; we meet with a remnant of this in the practice of the wayang golek, in which a doll made in a special way is animated, after which it jumps about in a jerky manner, to the great enjoyment of the children. From many examples of the game it appears clearly that we have really to do with an image used as a medium in former times. The Teugerese have their household gods, consisting of images, up to this day. The Battaks use some images of ancestors which they call desina torop. They are kept among the rafters of the roof, and frequently receive food-offerings. They are believed to give life and to bestow blessings, and are particularly worshipped by barren women. The Niasians always worship their ancestors by means of skillfully carved images called ada. They feed them by rubbing them with blood and egg, and adorn them by sticking feathers and bristles of pigs on them. If an image receives a crack, it is thought that the soul has escaped, and a new image is made. Offerings are made to the images on all important events of life, in particular, when a Dayak tribe in Sarawak keep images, which they feed at stated times, and which guard the village and watch over the work of the fields. Some tribes in the Philippine Islands used images made of stone, gold, and ivory. They were kept in the houses. Here and there, as, e.g., in the
be demonstrated with all but absolute certainty that both these peoples have adopted shamanism from the Mahunnadans.

32. Demonology.—For different reasons souls of dead people may rise so high in the sky that they live among the gods that they come to be regarded as gods. Besides these, the Indonesians have other gods who have never been men. They ascribe the mystery of the origin of man, natural phenomena —e.g., volcanic eruptions, landslides, storms—to gods who have always been gods. With the souls of his ancestors the Indonesian has daily intercourse; he fears them, but at the same time he is familiar with them. With gods and spirits he comes only occasionally into contact—e.g., when he happens to cross their path or offend them; but for the most part he feels indifferent towards them and leaves everything to the priests, who know how to manage them.

33. The Creator and Creation.—In the Archipelago we find some Hindu names for the gods, but it is going too far to say that the gods have been borrowed from the Hindus: the foreign names were given to existing concepts. Thus the name of Batara Guru is found among Battak and Malaya; among the Dayaks in Mahana and Batara or Pitera; among the Balinese in Pitera and among the Tagals in the Philipin Islands in Bathala. In the same way we find the Arabic Allah ditti in Haitiya among the Dayaks, Labata in Buru, and Latalia in Solor.

Among all peoples we find a supreme Being who has created the world; sometimes his functions are divided among different gods. In the Moluccas the creator is often called Upahero, but the connexion between him and the creation of man is very vague. In some islands people are supposed to descend from a woman who came down from heaven. In others the peoples living more to the West we find creation stories. Thus the Buginese say that the first men were born from a union of a son of the god of the upper world with a daughter of the god of the underworld. The children were the first men, who, when their parents returned home, were left behind in this world, which was formed from a handful of earth given by the god of the upper world to his son. This is the poetic expression of an idea current among the Indonesians that man has arisen by conjunction of sun and earth. It is also strongly pronounced among the Minahassans. The first human being, a woman, is nucleated from the earth, and is impregnated by the west wind. She bears a son, who wanders about on the earth, and, meeting her afterwards, but not knowing her to be his mother, marries her, and in this way becomes the progenitor of the first men. The son, Tiar, is merely the sun, who, in the morning arises from his mother, the earth, and in the evening returns to her again as her husband. Among the Torajas of Central Celebes, the departed gods Ili, ‘man,’ and Indara, ‘maid,’ make man. These two again stand for the sun and the earth. They make a couple of men of stone, who are animated by the wind and live. In Sian, among the other peoples, the highest god is called Devata or Dewata, a corruption of the Sanskrit Devatā (‘divinity’). This name is also found among the Macassars and Buginese in Dewata; among the Javanese in Dewata, Debat, and Jut; among the Dayaks in Debata and Juta; among the
Mongondowians in Duatu; in the Philippine islands in Duwata, Duwata, and Disuwata. The Dayaks in S.E. Borneo think that the world was created by Mahata and Jata, who are simply the sun and the earth. The Batak believe that the first men were created from the sex-cord of the chief god Ompa Tuhan mula jadi, who descends on earth, after having moulded it in the world-ocean with the aid of her father. Probably this daughter stands for the light Swift. In the Lauts, the god Lova-langi (Lau-lan-gi) and the lower gods and men are all believed to have come forth from the buds of one and the same tree.

34. The preserver of Creation.—Nature-worship, which is found in the Eastern part of the Archipelago, passes into myths of gods towards the West. The chief god is the sun, and this god continues to exert influence on his creation; he makes the earth fruitful, penetrates with his light everywhere, sees everything, and punishes what displeases him (chiefly incest, sexual intercourse with animals, lies, and theft). On the other hand, this sun-god has entered so little into the life of the people, that he is not worshipped to any extent.

Sometimes creator and preserver are united in one person; but often there comes one or more other gods the task of the administration of created things. Then the creator retreats to the background and he is known only by name, and his servants, to whom he has transferred his task, are worshipped. In the Moluccas, creator and preserver are one person; he is worshipped under the symbol of a lamp. Once a year a great sacrificial feast is held, at the time when he is supposed to descend to earth to make it fruitful. He never interferes with the deeds of other spirits, whether good or evil; he does not rule. In Borneo the chief god is invoked only on special occasions, at oaths, at ordeals, or in general calamities. The Timorese calls upon the preserver when making a vow, or by way of confirmation of the truth of what he has said.

The chief servant of the creator among the Torajas is Pat malaburun; he is the sun, who sees everything and punishes; he receives offerings in cases of general disaster, and his name is called upon when some one takes an oath or is cleansed from sin. The myths of the Minahassans set forth with great clearness how the creator has divided the administration of the world among different gods, but all these different gods may be traced back to him. But the sun of Loale of the Dayaks does not take note of unimportant things; he is called upon only in cases of the utmost need, and then it is always necessary to sacrifice a buffalo to him, the sacrificial rites being performed by seven priestesses. Tamed Tiled is the chief god of the Bauhaus, who punishes misdeeds and gives rewards. Other gods have the charge of husbandry, and are therefore called upon at harvest-festivals. The chief god of the Batak, Ompa mula jadi, has transferred his power to three gods: Batara gur, Soripada, and Manalabulam. The last is a wants, moon, sun, and sick deity. He has the principal share in the conduct of human affairs, and is always able to thwart the good intentions of the other two gods. For this reason the Batak are particularly anxious to secure his favour. The Niugto believe that the god Lantang resides in the sun; he is the owner of mankind, and can kill people at pleasure; therefore offerings are made to him that he may spare them. But Lovalang (Lubang) is even more powerful than Lantang. Lovalang is ever idle; he may be found anywhere, and he is the god of sacrifices, of the dead, of music and poetry; he appoints kings and deposes them; he is omnipotent, omniscient, omnipresent, and an avenger of evil. His name occurs in numerous expressions in daily life, but in spite of this the Niugtoans pay very little heed to him.

The administrator often interferes with men by means of animals, which are his messengers. Thus birds of bad omen are sent as the messengers of the gods to warn men. Among different peoples, crocodiles and tigers are sent by the gods to avenge some evil, and by oracles also the gods judge guilt or innocence among men.

35. Predestination. The Indonesian always consider an accident which has befallen a man as a punishment for some evil that he has committed. They also believe that their lot here on earth is predestined, and that they themselves have wanted it to be as it is. This idea is illustrated in a great many stories. There is, for instance, a story of a man who was dissatisfied with his lot, and went to the supreme lord to ask him to change it. The lord consented, and allowed the complainant to choose again, and then it was found that he had chosen the same as had fallen to his share before (Torajas, Batak, Dayaks, Galleh, Javanese, Niugtoans). The way in which a person is to die is also predestined at his birth; to prove this a story is told about a man who was always on his guard against tigers, because at his birth he had been told that he would die by a tiger. He was crushed by a falling wooden image of a tiger; of a child who was killed by a string of crocodile teeth, because it had been foretold that crocodiles would cause its death (Torajas, Batak). The length of a man's life is predestined among the Dayaks and Sea Dayaks by means of a plant; among the Dayaks of S.E. Borneo and the Torajas by means of a rope; among the Karo Batak by means of a measure for rice; among the Minahassans by a burning torch.

36. Moon-worship. At the present stage of development of Animism in Indonesia a definite moon-worship is rarely found. Here and there in the Moluccas the moon is worshipped. In Batak the moon-spirit is supposed to reside in the moon; the Tomorians point out the moon as the abode of the rice-spirit; and they have many songs in its honour. The Mafors in New Guinea receive the crescent of the new moon with shouts of joy, and the women sing in its honour. The Papuans believe the moon to be the abode of a woman. Many Indonesians believe that good health and misfortune are caused by the different positions of the moon—which proves that its influence on their spiritual conceptions must have been much greater in earlier times.

37. Intermediate gods. Just because the gods who have never been men are so far above the inhabitants of the earth, the latter have felt the need of intermediate gods, souls of the departed who have risen to be gods. They can assist man in approaching the original gods. A frequently recurring name for these intermediary gods, and other modified forms. They are of little use to the people, but of infinite use to the priests, who call upon them to assist them in their work, and then the spirits accompany and help them. The Dayaks have the most intimate knowledge of these intermediate gods. According to them these gods are sent to the souls of men, but are allied to men. They used to live with them on earth, but a quarrel induced them to move to the heavens. Every priest (or presider) of a shrine sends them to the man who signs the name of a spirit, worship of whom is forbidden to him, from which it appears that here we really have souls of the departed. This is also seen from the fact that heroic exploits are told of some of these ahatia. In a storm a special spirit is sent out to work for the tribes. These spirits punish their servant (the priest) when he does not fulfil a promise. The Torajas say that their intermediate spirits carry on an endless war-
fare with other evil spirits, who live in the air, and who always lie in wait to fall upon men.

38. Abode and manner of living of the gods.—These gods and spirits are supposed to live in heaven or on high mountains, for in the daytime they always live in the light, they are imagined as white figures, who for that reason require white offerings: white hen, white buffaloes, etc. Stories are current of their departure from heaven and their descent to earth, so that it was possible to reach it with the hand. Grease or oil was squeezed off from heaven, but, in consequence of some injurious action of an inhabitant of earth, heaven was drawn up (Mo-

39. Volcano gods and sea gods.—Volcanoes and

40. Tree spirits.—Besides gods and demi-gods, the Indonesians have lower spirits, who reside in trees, mountains, and rivers. It is only when people cross their paths that they injure them. If a person supposed himself to have been killed by such a spirit, he makes offerings to him; otherwise there is no worship offered to these lower spirits. Among them the tree spirits occupy a foremost place. Every tree has soul-substance, but not every tree has a spirit. These spirits inhabit large trees, generally some species of ficus. If the Indonesians cut down a large tree, they first make an offering to the spirit, and beg him to go to some other place. These tree-spirits are very dangerous. They often carry off the soul-substance of a man, and then a sacrifice is made to reclaim it. The Dayaks believe that they sometimes carry off even living people. They can also cause illnesses. Some tribes (as in Borneo and in Siau) imagine the tree-spirits to be spirits wandering about independently. The Minaaakabans believe what they appear in the shape of animals. The Dayaks of Sarawak hang on a piece of their clothing, as being a part of themselves, as an offering for the spirit.

41. How spirits appear and how they are banished.—We have already mentioned that tree-spirits sometimes appear as animals. This is also the case with other demons, when they reveal themselves to man. They sometimes appear as serpents (Buru, Sundia, Borneo), as fish, as bees, as birds (Minaaakab), as tigers (Sundanes), or as men. Some tribes believe that the spirits may appear in all possible shapes. The universal means of keeping them down are by the use of urgent and bad-smelling things, among which onions and ginger-roots take a foremost place; very often a bad smell is produced by burning something. A custom of frequent occurrence in the Archipelago is to lay women after childbirth near an ambullary

LITERATURE.—The greater part of Indonesia is under Dutch rule, and the Dutch have paid great attention to the customs and religions of its native races. Many valuable contributions to these subjects are dispersed in a number of Dutch scientific periodicals, and in the following works on the archipelago: Tijdschrift voor Indische Taal-, Land- en Volkenkunde (Batavia and The Hague); Bijdragen tot de Taal-, Land- en Volkenkunde van Nederlandsch-Indië (The Hague); Handboek van het Batavisch Genootschap van Kunsten en Wetenschappen (Batavia); Handboek van de Verenigde Nederlandse onderwijsverenigingen (Rotterdam); Tijdschrift van het koninklijk Nederlandsch Archipel-geselschap (Leiden); and Tijdschrift voor Nederlandsch-Indi".

INDULGENCES.

...indulgences, as employed in the Roman Catholic Church, is a partial survival of the primitive discipline of penance; they are the remission of the penitential satisfaction due for pardoned sins, and are granted by spiritual authority for the performance of optional works of merit. In order, therefore, to understand the true nature of indulgences, we must first trace their historical evolution.

I. History.—The fundamental principle, admirably stated by the Council of Trent (sess. v. n. 5, sess. xiv. ch. i., ii., viii.), lies in the different conditions controlling the pardon of sin by baptism and by sacramental penance. Baptism brings complete remission of all sins previously committed, and entails no further expiation; as soon as he leaves the baptismal font, the adult, born to supernatural life by the sacrament, is no longer responsible to God or to Christ except for any past fault or punishment. But the same conditions do not hold for the remission of sins committed after baptism, in violation of baptismal vows. Remission of post-baptismal sins takes the form of a sort of judgment, comprising a confession of guilt and a punishment—a penal reparation called 'satisfaction' in theological language. The Christian who had incurred sin during the time which he promised at baptism to observe assumes a moral responsibility of which he must give an account to God; and he also renders himself unworthy of the sacred mysteries into which he has been initiated. To recover his former status, to participate worthily once more in the holy mysteries, he must make amends for his guilt before the tribunal of the priest, confess his unworthiness, and ask to be reinstated in sacerdotal authority. Absolution remits his fault (culpa), and at the same time the punishment due for unpardoned sin ('eternal punishment'); but it may only ordain the sinner to undergo a certain penalty, and to earn full reparation by reparations or 'satisfactions' ('temporal punishment' for unpardoned sin). It is to this satisfaction, or temporal punishment, that the concession of indulgences refers. Following the development of penitential discipline, indulgences did not attain their final form until the 11th century; but the essential elements were present from the very beginning, viz. the remission, in consideration of certain good works, of such penances as the sinner would otherwise be bound to perform. In the early centuries this remission would result in hastening the return of the sinner to ecclesiastical communion; later, it would consist in the substitution of easier works or works of shorter duration for the required penances, and the sinner would cease to be individually imposed, they would be remitted all the more readily and generously.

The characteristic feature of ancient public penitential discipline was the indulgences of Pauline Bulls, by way of satisfaction, either from ecclesiastical communion or at least from eucharistic communion, this exclusion being supplemented by penances under ecclesiastical control. But the Church always reserved the right to terminate this exclusion; the bishop, who had judged the fault and given the sinner his penance, could also decide when the penitent had made sufficient satisfaction. The principle is clearly stated by one of the most ancient penitential canons:

The bishops shall have the power, after having tried the conduct of each, to mitigate the penalties, or to extend the time of penance; but they must take care to inquire what has passed before and after their fall, and their clemency must be exercised accordingly (Council of Sardica, c. 6).

These and similar canons were naturally confirmed and extended by the Lateran Councils; Leo IX. (1059) confirmed the indulgences of the Sardica Council; and the subsequent decrees of the Lateran Councils were merely an extension of what had already been enunciated by the earlier canons.

We have facts of even earlier date. If Cyprian denied confessors, imprisoned for the faith, the right of admitting penitents to ecclesiastical communion by giving them 'certificates of peace' (libellus pace), he himself reclaimed this right; for we know that he absolved all the penitents of Carthage en masse at the approach of the persecutors (Cyprian, L. x., xiv., iv., lxiv., ed. Hartel, ii. (Vienna, 1876)); and it has also been shown that the custom to give full ecclesiastical communion to repentant sinners at death. So much for the indulgence in the initial stage of penitential discipline.

In the system of the Palian Council, the most important part of the satisfaction is no longer exclusion of the sinner from communion, but works of reparation, prayer, psalms, fasts, mortifications, and alms, every sin having its penance assigned, and the whole system being reckoned by days, weeks, months, or even years. The priest imposed penances on the various sinners in accordance with the Penitentials, and naturally had the right to see that they were fulfilled. Primitive indulgences were thus a new form analogous to that new form of penance. Not only did the Penitentials allow the priest great latitude in assigning the penance, but they provided various methods of compensation for the satisfaction with a view to mitigating the sufferings required. Thus, a bread-and-water fast equalled two or three law suits which he promised at baptism to observe; a remission of a penance of 50 psalms, or a flagellation, was equivalent to several days of penance; while alms, which could not be prescribed indiscriminately for all, served as a basis for compensation which varied with the wealth and charity of the penitent. This gave rise to 'redemptions' of penance, left at first to the discretion of the confessor, and then officially regulated, in particular by the Councils of Tribor (A.D. 885, can. 30), and Rheims (A.D. 922).

A relief of this method of imposing and remitting penances has been preserved in the scale of indulgences, which are granted for a stated number of days, months, or years, and in proportion to the penances indicated by the Penitential Books, though the scale is no longer employed in imposing them.

The control of penance by the priest who had imposed it gradually fell into disuse, and penitents could proceed to redemptions of penance on their own account. It was then possible to offer them not only compensations, which were calculated according to the amount of their personal debt, but even general reductions, from which all might
INDULGENCES

profit, by performing a work, not prescribed for each one of them, but which all were invited to do, even though they did not know their own exact penitential actions. From the 7th cent. onwards, we meet with reductions of penances, either proportional (a seventh, a quarter, or some other fraction) or absolute (ten, twenty, or forty days), offered to every one on such occasions as the consecration of a church, the translation of relics, the festival of a venerated saint, or a pilgrimage, or even for alms towards the building or upkeep of churches, abbeys, hospitals, etc. This method of reparation or substitution was frequently used, and it covered all kinds of penance, which was done at the indulgence of the Crusade. At the Council of Clermont (1095), Pope Urban II. passed the following decree:

"Whoever, out of pure devotion and not for the purpose of gaining honour or money, shall go to Jerusalem to liberate the Church of God, may count that journey in lieu of all penance." (Can. 2; Mans, Codicilia, Venice, 1782 ed., xx. 860).

Moreover, he preached the same thing to the masses. This was not only an indulgence, but a plenary indulgence — indeed for a long time the type of plenary indulgence — until it was imitated by so many others. Though the work proposed to Crusaders at Clermont by Urban II. did not contain all the constituent elements of an indulgence according to the accepted definition; ecclesiastical authority renews the plenary satisfaction after the consecration of a church, and forty days in other circumstances (by a concession of Pius X., of 28th Aug. 1903, this is extended to fifty days for bishops, a hundred for archbishops, and two hundred for cardinals); it must not be imagined that it was making a great reduction of a right that had hitherto been exercised to a much larger extent. Undoubtedly the Council was aiming at making episcopal concessions uniform and restricting abuses; but the limits which it assigned were by no means excessive at the time.

The whole history of indulgences after this, however, is summed up in constantly increasing concessions, ever more easily obtained, for the most varied acts of piety and charity. By the end of the 13th cent. there were numerous indulgences for the dead; and in the second plenary indulgence, the Jubilee, granted for the first time in 1300 by Boniface VIII. for the pilgrimage to the apostles' tombs in Rome. Originally proclaimed for secular years, the Jubilee was afterwards rendered perpetual; and it was then extended beyond Rome, and imitated on various solemn occasions. Later, plenary indulgences were multiplied and made extremely easy of access; but by this stage the evolution of the indulgence was complete.

2. Theology. — The theology of indulgences was, in early times, complete according to the principles stated above: temporal punishment to be undergone after sin has been pardoned; penance imposed, controlled, and even reduced, by ecclesiastical authority, its concessions being approved by God, as pardon given in His name, but in a degree which cannot be definitely stated. When theologians came to consider, chiefly in relation to God, both the remission of the penalty and the absolution of the sin, they were inclined to ask how this temporal debt to divine justice was paid. This is where the theory of 'treasure' came in — the theory not, as has been alleged, invented by Alexander of Hales, but brought into relief by him and introduced into every thing else. It is no more than an attempt at a consequence of the Communion of Saints: ought we not to pray for one another? If merit properly so called is not directly communicable between the members of the Christian society, at least satisfaction can
be transferred, almost as a man can pay a friend's debts. The infinite satisfaction of our Lord and the superabundant satisfactions of the Virgin Mary and the saints form a treasure which the Church guards and administers, drawing upon it for the payment of the debts remitted to the faithful by indulgences. This explanation pleased the royalist spirit of the scholastics as much as that which the whole school; provided the limits of the comparison with debts between human beings are not transgressed, it is indeed quite satisfactory. Clement vi. was the last pope to issue a bull which in a general way professedly granted the Jubilee of 1350, and the Church upheld against the attacks both of Luther (Leo x. 'bull 'Exsurge Domine,' 15th June 1520) and of the Jansenist 'Synod of Piacca (Pius vi.'s bull 'Auctorem fidei,' 8th Aug. 1754).

Connected with the theory of treasure are the theory and practice of the application of indulgences to the dead, a new form which helped, rather than hindered, the development of the theology for the dead, a custom always employed in the Church. The transfer of indulgences to the dead seemed to clash with the principle that the Church has no control over the evil done by the deceased; but this was not a matter of granting indulgences directly to the dead, but simply a matter of offering to God for them the indulgence which is due to be paid to the Church by the living. In other words, it depended on the mercy of God. On this understanding the application of indulgences to the dead was adopted by the whole school (cf. 'Duns Scotus,' 'V. Tract., art. 3; Bonaventura, 'In IV. Sent., dis. 45, qu. 2, art. 3; Bonaventura, 'In IV. Sent., dis. 20, p. 2, art. 1, qu. 5). It was not included in any official document till 1476 under Sixtus iv. This Pope, the first to apply to the living, explained its significance; and from this time it became official doctrine and general practice (see the response of the Congregation of Indulgences of 28th June 1509: 'Dominus Authent., no. 285)'. The most notable official document was that of the Council of Trent (sess. xxv.), affirming the traditional authority of the Church to grant them (cf. Mt 16:20, Jn 20:28), and that the practice was most salutary for the Christian people.

This decree avoids precise statement, but this is because the real efficacy of indulgences cannot be estimated with precision. Not only is the Christian ignorant of the degree of temporal punishment that is due to the sinner on account of his sins, but also it is not known how God measures this punishment or in what proportion He accepts the indulgence; and this uncertainty is, of course, more marked in the case of the efficacy of indulgences for the dead. At least it is clear what indulgences are not: they are not merits, though some pious persons seem to think they are; nor the remission or suspension of temporal punishment for sin, itself, but the remission of the temporal punishment which, by His justice, He requires of the sinner, together with the prayers of the faithful which are offered for their soul's relief. (From the expression 'cambui et a pena,' we may formulate some conclusions: (a) no single extant text implies the remission of monastic vows; (b) no single extant text implies the remission of a sin not previously expiated; (c) no sin is remitted if the sinner's acts remain unexpiated; (d) a person who, after receiving absolution from his sins, obtains a plenary indulgence is actually free 'a cambui et a pena'; (e) as a matter of fact, this expression is not found at first, except in reference to the two early plenary indulgences, the Crusade and the Jubilee, for which every one was accorded remission of punishment for his own sins; (f) the same explanation holds for letters of confession and indulgence, so frequent from the 14th cent.; (g) the expression has always been correctly interpreted by the theologians; it is no more difficult to explain than such expressions as 'pecatorum remissiones, which continue to appear in pontifical letters without being misunderstood by any body. In other words, the indulgence is remitted so long as it leaves an expiation to be accomplished!}

3. Abuse and reform.—The abuse commonly known as the 'sale of indulgences' was a very real exploitation of the authority of the Church. To be granted the indulgence granted in return for almsgiving to the churches; but it must be remarked that this was always an abuse, never a legitimate custom, and that it was always combated by the Church. The principle that the Church can reward the contributions of the faithful to the temporal needs of the religious society by spiritual favours is unassailable, and requires no justification. The abuse consisted in the exaggerated and inaccurate statements made by preachers in order to encourage generous giving (especially for the deliverance of souls from purgatory), and the partial remission of alms, the deductions made from alms for the benefit of the Church dignitaries and even of civil authorities, and other modes of procedure which gave rise to the appearance of an indulgence as a traffic. It is well known that the granting of indulgences for reconstructing the church of St. Peter in Rome was one occasion of Luther's revolt; if the doctrine was sound, as Tetzel proved, appearances were very unfavourable.

The Lateran Council (1215) and the Council of Vienne (1311) had tried to crush the abuses of alms-gathering, but without much effect; it fell to the Council of Trent to strike at its root by condemning abusive practices, and abolishing the collecting of alms and trading in indulgences (sess. xxix. 'de reforma,' ch. 9; sess. xxxv.); the publication of indulgences was put in the hands of the bishops, assisted by two canon; they had to collect the alms of the faithful themselves, and keep nothing back. A further step was taken; indulgence-alms were completely suspended (except the bull for the Crusade in Spain, which was also freed from all abuse); on the rare occasions when general indulgences included almsgiving, the latter was only one of the prescribed duties, its taxation and employment were left to the free choice of the faithful.

The reform of indulgences was energetically pursued by the popes, and the problems relating to them were entrusted by Clement viii. to a provisional commission of cardinals. Clement ix. re-established it on a stable basis in 1667, charging it to resolve the difficulties that arose. It correct and suppress abuses, to do away with false, apocryphal, and indirect indulgences, etc. This Congregation of Indulgences continued to exist till 1904, when it has been united with the Congregation of Rites; in 1908, at the request of the Roman Curia, indulgences were entrusted to a section of the Congregation of the Holy Office.

4. Practical remarks.—A plenary indulgence is one which covers all penances required by the penitent; a partial indulgence covers a part of the penance, and is counted by days, months, or years. A better distinction would be that the latter is reckoned as a sacrament, the former as a debt of the sinner, but according to the ancient penitential scales, while the former is not. While all indulgences really refer to persons, those which
are granted directly to persons, e.g., to a confraternity, are called personal; those directly and that only for a day, or 'tonties,' whenever the penitential actions are repeated, and so on. The chief indulgences are, as formerly, the Crusade (still kept up by the Holy See) and the Jubilee, which occurs every quarter-century, and is imitated more or less frequently by solemn indulgences called 'in form of Jubilee'; indulgences attached to the most popular devotions, as the Rosary or the Stations of the Cross; those of famous sanctuaries, as Rome, Jerusalem, Compostella, Assisi, Portmorens, etc.; 'apostolic' indulgences, attached by the pope (or the priest authorized by him) to holy objects blessed by him, etc. The Congregation of indulgences published an official collection (Raccolta) of indulgenced devotions (Rome, 1854, and numerous editions), and two collections of decrees (Decreto autorizzato ab anno 1668 ed asmut 1888, Ratisbon, 1883), the other of scripts and summaries of indulgences (Raccolta authenticata. nevem Summaria indurgendia. . . .angers, 1880). Numerous other private collections exist, recognized and approved by Roman or Episcopal authority.

LITERATURE.—(o) HISTORI.

(2) THEOLOGY.

All theologians are occupied more or less with indulgences. The Tractatus dogmático-bibliae de indulgentiis of Theodorus a Spirito Sancto, Rome, 1744, has long been regarded as classical. The best recent practical treatments and collections are: F. Beringer, Die Ablass-H. Paternoster, 1863; Jr. Jr. by H. Magrier, Les Indulgences, Paris, 1859; P. Meccenegian and Monsan, Collectio indulgentiarum, Quaracini, 1837.

A. BUCHHOLD.

INDUSTRIALISM.—The conditions governing the progress of a country in civilization are exceedingly complex. Among these the industry of the people is of considerable importance. Wealth and culture are far from being interconnected; but, at the same time, a very poor country is unlikely to attain to the same status as one in which commerce has developed sufficiently to provide a moderate standard of comfort for the majority of its inhabitants. Thus industrial progress becomes the potentiality from which other agencies can realize a higher stage of civilization. In some recent discussions of progress, there are two forms of description, each of which is liable to mislead. On the one side, industry is spoken of in terms which imply that it is something altogether modern, while, on the other side, it appears to be inferred that industry alone will create a satisfactory amount of national wealth. Against the first theory it is to be noted that among primitive peoples, whose situation is disadvantageous, there are periods of sustained and painful labour. A tribe, trembling on the verge of starvation, is not unfavourably compared to a country, in order that progress may be made—to modify a saying of W. Petty: 'Labour is the father, and natural resources the mother of wealth' (Economic Writings of Sir W. Petty, ed. C. H. Hull, London, 1890, p. 371). But of these two conditions progress it is easy to over-estimate the importance of natural resources. There is some instinct or gift in certain peoples which urges them either to force their way from a disadvantageous situation or by their labour to bring about a change. Industry is almost barren so that it becomes moderately fruitful.

Wherever a society sustained itself for any considerable period of time, its institutions have been participated in by the life of its society. If it existed in a nomadic or pastoral state, there was the care of the cattle, while at the same time there was, no doubt, in most cases the work of providing clothing for the tribe. With the general advance of civilization there came the time when, as in England during a great part of the Middle Ages, the occupations of the people were predominantly agricultural. At this stage, the manor constituted a complete economic unit providing for almost all its own normal wants. In it one can trace the beginnings of organization in the allocation of specific functions to certain workers. The rise of the town involved the development of economic and social consequences. The bringing together of a population of some size and the contact with distant markets enlarged the horizon of the medieval town. Numerous other private collections exist, recognized and approved by Roman or Episcopal authority.
Infallibility

the 19th cent. witnessed a revolution in transport, which is still continuing. The facilities of communication tend to bring distant places into close commercial relationship, and thus to render possible production on a larger and larger scale, with further specialization of industry and increased invention of machinery.

All these changes may be summed up in the word 'industrialism,' and they have profoundly modified not only the mode of production, but also the moral life of those countries where they have taken place. The effects of industrialism by the factory system extend into almost all departments of the national life. Under the domestic system the power required for the primitive instruments then in use was supplied either by the workers or by animals. Now it is drawn from purely mechanical sources. Thus it has become possible to use the labour of men and women for purposes which, on the whole, require greater skill, while the total product can be very many times greater. Real wages are much higher, and the condition of the skilled artisan is certainly much better. The concentration of factories in large towns gives the worker the advantage of city life, and their lives are brighter and fuller than those of their predecessors who worked under the domestic system. These constitute some of the chief gains of the system, as against the disadvantages of its loss of individuality and its evils. During the transition period of the industrial revolution great classes of the population sustained severe hardships, and in the early days of the system the working classes were in a lawless and savage State—a doctrine which reached its most forcible development in the interpretation of leisures faire by the Manchester School. Gradually this attitude was modified by the acceptance of exceptions from the principle of leisures faire, in industry—as, for instance, in the Factory Acts. The pendulum of opinion has tended to swing in the direction of increased State-regulation of industry. And, if this tendency is carried too far, there may be a danger that initiative may be checked. Economic forces are so complex that the prevention of one evil sometimes occasions another no less serious. Thus the problem of the future will be, on the one hand, to correct, or at least diminish, some of the ills of the industrial system; while, on the other hand, this should be effected without the sacrifice of any of its essentially salutary principles.

Industrial Schools.—See Juvenile Criminals.

Infallibility.—I. General: Infallibility in Common Life.—1. Infallibility a universal idea; its basis and general significance; equivalent terms and cognate ideas.—At the heart of every such universal questions as What shall I believe? Whom shall I trust? Whom shall I obey? Where shall I find certainty? What is the foundation of faith? What is the principle on which it can obtain, as in the religion throughout the world which have canonsized the utterances and injunctions of their prophets, priests, and legislatures, but also of innumerable social and political labours which have been inspired with an analogous hope and confidence. Usually, it may be said, it is a practical or working infallibility that men agree to recognize; but just in proportion
as that infallibility is challenged and placed in need of vindication it is apt to be invested with a robe of mystery, and advanced to a dignity which it is fondly hoped will make it absolute and above question.

The word 'infallibility' is late Latin in its origin; but the idea, both religious and political, which it connotes has ancient ascendency in Church and State. As a negative virtue or perfection it is practically equivalent to 'inerrancy' and 'indefectibility,' the root notions of 'stumbling,' 'straying,' and 'falling' representing obvious and kindred defects in the outward truth. As a positive virtue or perfection it has for its counterpart 'reliability,' 'trustworthiness,' or 'trustness.' The same difficulties and problems inher in both sets of terms. In considering them we are brought face to face with an impressive series of ultimate questions, moral, social, political, legal, ecclesiastical, and religious. It is impossible to define, analyze, and weigh the concept of infallibility without recognizing that there are involved in it the foundations upon which human thought has built up its ideas of an absolute authority, a court of final appeal, a majesty of law and government, a divine right of persons or of institutions, a system of errorless acts of ordination, a rule of faith, a code of honour and of duty, a system of truth. To believe in inspiration, in revelation, in illumination, to accept a dogma, to proclaim dogma, to excommunicate a faith in some infallible. Human intelligence may locate this ultimate ground of faith and conduct very variously. A man may be convinced that it resides in the unerring mind or heart or conscience, or in the unbiased faculties of some ruler or official or dignitary, or in the unbiased instinct of some family or corporation or people, or in the contents of a sacred law or law or literature, or in any one of these conceived as dictated or imparted by supernatural instruction. But that an infallible seat and oracle of authority does exist is axiomatic in all the great religions, theologies, or powers not less than in religion, even to the supreme dogma of political faith.

'Oh that I knew where I might find it!' is the burden of a longing for it, hardly to be distinguished from the aspiration after God Himself. It is easy to say that to err is human, that inerrancy as a perfection belongs to God alone, that any human claim to it savours of rank presumption and, indeed, of blasphemy. And certainly it would be insufferable that any mortal mind or will should arrogate to itself an infallible individual possession. But, as we shall see, its claimants in Church and State seek to evade the condemnation which they would otherwise incur, and which they freely inflict upon others in like case, by representing themselves as hereditary or official life centers of a divinely delegated authority and wisdom. Kings or ecclesiasts claim divine right, not as created or won by themselves, but as given irrespectively to themselves. A prophet or a priest claims to express the very will of God, not as a maker but as a recipient of revelation. The maxim of civil law, 'The King cannot err,' is neither more nor less intelligible and defensible than the later maxims of canon law, 'The Supreme Pontiff cannot err.' Each rests upon a philosophy of absolute monarchy as profound, subtle, and elusive as the other; each springs from an infallibility-born in human nature, and satisfies in its own way psychological needs that never fail to assert themselves. It will be the principal suggestion of this article that ecclesiastical or papal infallibility is not to be explained or criticized in theological or philosophical terms so much as in political and practical. Forensic and public rather than academic considerations have defended it during its protracted development. Sentiment and prejudice have done more for it than logic and apologetic. It was no accident that in the Vatican Council of 1870 and in the Roman Catholic Church outside that imposing assembly the conflict resolved itself into a bitter opposition between the scholarly and the administrative genius of the Church, the former as hostile to the definition of papal infallibility as the latter was urgent in its favour. The Curia is a court, not an academy. Its utterances are degrees, not theories. Its language is theological so much as legal, and is to be interpreted and judged as such. To construe it literally, as if its vocabulary were derived from science, is perhaps as imprudent as to insist that court dress be made compulsory in the schools, or that wig and gown be borrowed from the hall of justice and made the dress of commerce and of recreation. It is true, of course, that infallibility, like other dogmatic formulations, has called into being a scholarship, or a scholasticism, of its own. But it rested on grounds distinct from scholarship and philosophy. It had silent reasons superior to the texts of Scripture which it cited. It was the canonization of a practical and essentially political principle. For its ecclesiastical promoters the doubts and hesitations and objections of their learned and eloquent opponents served merely as part of oratorical and polemical debate. The speeches of the ad vocatus diaboli at the canonization of an already venerable saint. They were as shadows to enhance the new illumination. They were the resistance needed to give zest and triumph to a victory.

2. Degrees of infallibility; qualified forms of the idea.—The term 'infallible,' as applied to an individual, an organization, a system of doctrine, or a body of literature, does not, of course, lend itself to qualification or modification. As a thing is either perfect or imperfect, so is a thing either fallible or infallible. But, in fact, the term is confusedly employed, especially in the Church, to express a variety of shades, its extreme asserters having in reserve a censured form of common sense for refuge when their exaggerations have been exposed and made untenable. And the term 'truth' has to sustain a formidable diversity of interpretations, infallibility, as hefts an idea so near of kin to it, has passed through the same experience. It may, as we have seen, be a guarantee of practical immunity from error or failure. At the top of the scale a person may be conceived as in himself so perfectly constituted as not only in all circumstances to be found never to fail of right and truth in any degree, but as to be the very fount of thus failing. At the bottom of the scale one may conceive a person not in himself, but by external influence, saved, on the whole and in the long run, from material or irredeemable error. Between these two conceptions there lies a considerable series of descending degrees of infallibility, each of which is an adequate basis of faith and conduct, though it comes short of the ideal. Viewed scientifically, the pride of infallibility tends more and more to qualify itself. Though real, it is virtual, official, conditional, occasional, derived, or relative, in every claimant except God. The Bible is deemed infallible as inspired and kept pure by divine agency, either in every syllable and letter or as a whole, either in matters of faith and morals only or in matters of historical fact also, either in text or in substance, either in the original or in a particular version, either in the literal, in the historico-literary, or in a figurative sense, either as interpreted by the Fathers, by the Reformers, by bishops and local hierarchies, or in the living Church, and so on. The Church is deemed infallible in its clergy alone or in the episcopate, in councils or in popes, or in its clergy and laity together, either in the sphere of faith and morals only, or in discipline or science or scholar-
ship also, either at a certain era or in its unbroken practice, either in a certain denomination or in its entirety, and so on. But, when viewed through the medium of religious or patriotic faith, infallibility rises in the scale and ascends to the lofty altitude at which truth and authority are absolute and divine. Of infallibility, as of truth, there are ideas in their relations in general and interpretations, and each varies in an individualistic or an institutionalistic direction.

3. Wide range of the idea.—It is important that the whole range of the idea should be recognized. Infallibility is claimed in some measure or degree in a large number of regions of human activity. While the ecclesiastical and political uses are the most familiar as themes of literary and academic discussion, others deserve mention in an article like this, since the analogies they present are valuable, and have undoubtedly lent support to the former. Wherever in human affairs authority is respected and truth recognized, a degree of infallibility appropriate to the circumstances is implied. Usually the quality of perfect trustworthiness is attributed simply to the object, person, or institution in which it is believed to reside. But in reality it is also implied that the mind which recognizes infallibility has itself formed an infallible, an absolutely trustworthy, judgment, whether directly on the basis of evidence before itself, or indirectly on the basis of evidence already accepted by a reputed infallible, external witness or authority, such as tradition, usage, or a living organization. Nothing assists the student of infallibility more effectively in appreciating its essential complexity and subtlety than a swift glance at the less notorious and controversial regions of life in which it is acknowledged to be operative.

(1) In external Nature.—External Nature, upon any view of an ultimate explanation, presents the eye of man with a spectacle of infallibility. Think what you will of her achievements, her products in her wise and purposeful depositions, her catastrophes, her laws operate with a serenity or a grimly perfect regularity, her processes are so absolutely reliable that an alleged suspension of them or exception to them might be a miracle, and no one credits it except a theist whose appreciation of the powers by which his law is enacted is such as to explain it as a divine suspension of a divine custom for divine ends, and thus implicitly leaves intact the general conception of Nature's normally unbroken continuity and harmony. The sequence of the seasons, the alternation of day and night, the underlaying course of physical processes and of natural laws which know no exceptions, have passed into a proverb of unerring trustworthiness. For religious faith Nature is infallible within her appointed sphere, because her Author and Upholder is infallible, and expresses His mind and will, within limits, through her. Failure in her would be failure in Him.

(2) In human Nature.—Trust Nature, says one school, and she will guide you rightly in the end. In other words, instinct is infallible. Convention is artificial and represses Nature. But Nature, though you expel her with a pitchfork, will make her way back and master you. A return to Nature in its primitive sense, however, is not more attractive than a return to his cradle would be to a grown man. The trouble for a sansculotist philosophy of any type is that the great conventions of life are premises profoundly natural; they are the dictates of instinct guided by long experience. It is more natural to the genius born to go clothed than naked, to observe law than to be anarchist. And for the individual the rule to trust one's instincts is a maxim of fatalism, of libertines, of indulgence in all manner of passing whim or fugitive passion. Even the brutes are above that. Instinct, the nature in us, is as complex as the universe around us. Each has required an age-long evolution to bring it to what it is. Nature instinct is a perfectly trustworthy authority, but it needs patience and impartial investigation to know her mind and catch her final mandate. 'Be natural,' a first law of manners and of style in art and literature, and, rightly understood, also in morals and rules of conduct, means 'Play the new-born babe, or play the backwoods savage,' but 'Be true to your real genius and station and mission in life.' Nature is infallible, in the region of human instincts as in her own external province, the world of the elements and forces; but her mind and will are expressed in decrees which are not momentary or intermittent or capricious, but are in time discerned as universal laws making for progress and cohering in consistency.

(3) In human society.—In human social life various degrees of infallibility are recognized under the conceptions of authority and discipline. No one pretends that all parents or that any parents are incapable of making mistakes and misleading their children, yet the will of the parent and the information and the advice of the parent is what is called a time infallible to the child, gladly accepted by him as such, and within limits authorized as such both by law and by public opinion. The rights of the parents in their capacity as such is not the law which the parent possesses of the temperament and capacity of the child and his natural desire to develop the best in him—such considerations make the interference between parent and child discipline. No stage in life profoundly undesirable, and lend at least a temporary infallibility to parental authority. The same is true of the authority of the teacher in school and university not only to command obedience, but to command faith in his instruction. The apprentice in business or in handicraft, the subordinate official in well-nigh every organization in commercial, military, professional, and public service, accepts, and is authorized to accept, within limits as final for him the mandate or advice of his superior. Such infallibility is maintained as socially economical and as conducive to public service, by assurance of its infallibility. It is held to be justified as working well, and flagrant instances of abuse of power are held to discredit the individual, not the system. Democracy itself is not less a form of government, entailing discipline and subordination in its public departments, than a theory of citizen equality. Expediency alone, based on confidence in special knowledge, is the warrant of military infallibility with its autocratic subjection of all ranks to one mind and will, of legal infallibility with its judicial *cul de sac* in a court of final appeal, and of political infallibility with its autocratic or constitutional vesting of all authority ultimately in a sovereign power. The physician in practice is assigned an all but arbitrary infallibility, tempered by occasional appeal to the specialist, and restrained from gross incompetency or crime by the common law and the Medical Council. 'Trust the expert' is a rule in which humanity for the most part has a childlike confidence, utterly misplaced in numerous particular instances, yet based generally on a solid foundation of close observation and long experience. Proverbial though it is that doctors differ, no proverb encourages the patient to consult a second doctor. Proverbial though it is that tastes differ, each generation suffers itself willingly to be
directed in its architecture, art, and music by the experts of the day, in spite of the fact, too clearly shown by history, that their judgment in many cases proves to be as transitory and as unfortunate in its issue as the aesthetic canons and decrees of national fashion.

(4) In reason.—If we turn to reason, the ultimate differential of mankind in the world of life, in search of an infallible principle, our quest is not in vain, but the result is not the discovery of an automatic solvent of all problems. Reason is infallible. It is the organ of truth. But, though it resides in every normal human being, it confers no immediate miraculous identity of judgment or opinion upon humanity. All men reason; but not all reason accurately or consistently. Fortified though it is by increasing personal experience and individual knowledge, and fostered and assisted though it is by tradition and by common intercourse, the individual reason is not delivered from errors and shortcomings. When we speak of reason as infallible, we look beyond the individual and even beyond the aggregate to what is anything but an abstraction, to the common principle of all our thinking and judging, which is not many but one, which guides and directs our science in all its parts, which appeals to men of every race. The rationalist isolates it as a standard and criterion of faith and duty, forgets that it is but an instrument, though the highest in our use, and in its favour ignores other elements in our spiritual constitution which are of no inconsiderable value to life. But reason, by which we discriminate truth from error, religion from superstition, and in great measure right from wrong, as an indwelling principle of human nature, remains from its complete and unimpeded exercise there is no rest to the soul. Through it the observation of nature and its operations rises from a pastime into science, enhancing not more man's knowledge than his power, and approximating his intelligence and his insight nearer and nearer to the divine. But, as with nature or instinct, so with reason—it is infallible as an ultimate principle, fallibly employed by individual intelligences even in the exalted sphere of science, which, outside the somewhat frigid bounds of pure mathematics, is never altogether immune to questionable dogmas and changing fashion.

(5) In conscience.—It is an axiom of all schools and all sects that a man ought to obey his conscience in all circumstances and at all costs. Religion, individualism, and conscience meet the very whisper of the infallible Spirit of God. But what one man's conscience sanctions for him another's sometimes in the same circumstances refuses to permit. The slavery which one generation contemplates with equanimity and justifies without a qualm revolts the soul of its successor. The polygamy which one race practices deliberately as its social duty appears abhorrent to another people. The pride, the ambition, the love of power and wealth, which are the breath of life to one class of men, are as death to the soul of another. Usages and impulses which pass unchallenged in the Old World are regarded as directly approved, are condemned in the New. Yet conscience is not dethroned from its sovereign dignity, nor is it acknowledged to lack essential unity. For the individual, the conscience is final, it is to be believed implicitly, and obeyed. But even conscience can be developed and trained, as in the individual so also in the race. It is the auspicious results of social conditions, in all individuals, periods, and peoples. Its function is the same. Its genius or spirit is the same. But, like everything human, it has to grow, to come to itself, to increase in self-knowledge and in vision.

If it is the whisper of God, it is also a soul, a small voice sounding in human ears amid the cacophony of other sounds, and it speaks a language whose vocabulary, accent, and tones man does not learn at once without education and taking pains. Conscience is not an oracle before which man, tripped the human soul can sink its native intelligence and responsible discernment and resign itself to passive listening. To regard it as an automatic index to duty, operated supernaturally apart from the dispositions of the heart and mind in which it is resident, is to degrade both it and its divine operator. The compass is an infallible pointer to the pole, but science which gave it to the seaman for his guidance has had to toil and search in order to discover its true direction and to instruct him how to use it, how to allow for its deflection, how to strengthen its power and protect it from external interference, how to construe its behaviour in all circumstances. So conscience in the individual, for all its dignity as a divine voice speaking in the soul of man, is no exception to the sacred law that revelation, though it comes to earth from heaven, enters through human faculties entrusted to human vision, human intelligence, and human utterance. Essentially the same conjunction of human and divine which Christological theology has made familiar in the human, is here, as a mystery to faith, and which baffles prosaic analysis in the divine message of the prophets and in the written Word of God, which are at the same time intensely human, presents itself to reverent inquiry in the divine Word which we call conscience. It is infallible for religious faith, though its organs of utterance are in themselves found to be imperfect and fallible. Apropos of the moral world it is better to do the wrong thing under the influence of some strong conviction that it is right than to do the right thing in spite of the conscientious conviction that it is wrong. But in either instance the organ of moral discrimination is at fault, and is in need of further education. Thus the infallibility of conscience, absolute as it rightly is for the individual, is always relative to his enlightenment, and ought to be consciously so, and therefore open to fresh enlightenment. Education and development may modify its actual decrees, but as a principle it represents a consistent attitude towards ethical values as in the course of tests and experience they are successively understood and rightly appreciated.

(6) In the State and in political life.—Again, it is a maxim of good citizenship that the laws of one's country are to be loyally obeyed. They possess a certain majesty more sovereign even than the king in whose name they are promulgated and enforced. They express the genius and spirit of a people, mould its life incessantly, and outline for common instruction a certain minimal suggestion of its ideal of justice. What represents the settled conviction of many generations of experience must, it is readily felt, be true, and has a right to be enforced. Conscience and expediency combine to dignify its authority. But in all civilized countries the development of parliamentary legislation as directly approved, and an amount of legal detail into statutory obligations, and the victories of party which carry legislative programmes into the statute-book frequently represent so much that is short-lived, and doubtful a majority of public opinion in their favor that the majesty which once rightly belonged to the greater and often unwritten codes of earlier days has become at once a moral and a psychological impossibility. Party government is everywhere in just dispute, except among the politically ambitious whose ends alone it serves, because more and more it pressures to employ coercion in
the name of the whole State and with the resources of the whole commonwealth to enforce the will of a section of the people in things morally indifferent. On one plea or another it will not wait to secure moral unanimity, the only legitimate basis of compulsion. It seldom cares to invite an explicit mandate, but prefers to merge a number of separate issues in its appeal to the constituencies, juggling its processes to a conglomerate result. Yet in the Crown, the State, the commonwealth, however organized for government and administration, there resides a real infallibility. Its authority, like that of conscience, articulates itself in different lands and at different periods in very various utterances, and sanctious things which in course of time it would fain repudiate. Even with the best and most honourable intentions it may do wrong, act tyrannically, and retard progress. But such cases constitute to the right-minded reformer simply a signal of the need of education. The just authority of public opinion, and of immemorial tradition, and of the institutions which they have constructed for the public good must not be overthrown if it is to be brought to bear with a freshly enlightened purpose upon the confused, chaotic understanding of the things. Infallibility, therefore, in the State, vested in its head and officers, its government and administration, absolute though it appears from moment to moment when the interests of individuals collide in the conflict of power, is an order of things. Autocracy at its worst has its restraints, and owes the very continuance of its power to them. Democracy is but a readjustment of the distributive responsibilities and authorities. The legal principle that the king or the legislature cannot err holds its own only by the help of the seemingly inconsistent rule that the decisions of the courts are not final. It is a constitutional order. If the interest of common order and public peace demand immediate obedience to the existing law, that obedience will not long be rendered where there is no confidence that the highest good of the people is being or will be promoted by the occupants of official power. Closely as the ecclesiastical claimants to infallibility have modelled their policies upon the theory and practice of the secular, there are analogous claims to infallibility in the Church. If, as the Church has held, they had to live, they have not found in them any example or analogy for an absolute regime whose decrees were not only affirmed to be final for the time but irrefutable and unalterable for all time. It was reserved for ecclesiastical statemen to endeavour to erect a hierarchical autonomy distinguished from all secular organizations by its steadfast and invariable exclusion of innovation even by constitutional means. (7)

In religion.—It is in religion that the principle of infallible authority asserts itself most powerfully. Every religion has its solemn ordinances and obligations, its absolute decrees which rule the public and domestic life of its people. The higher religions, which claim in some sense to have man's very destiny in their hands, use the same order of language and operate with the same instruments of instruction and discipline as the lower, but they leave the lower far behind in the urgency of their appeal, the dignity of their claims, and the variety of means whereby they bring to bear upon mankind for the accomplishment of their lofty purpose. They make explicit and articulate the presuppositions and the conclusions of earlier faiths. They are theoretically and ecclesiastically self-conscious. They are not content merely to proclaim, but feel bound also to explain. They develop organizations for their propagation and diffusion comparable in extent and in cost with the secular politics of history. They are not content to rest on the authority of custom or usage as the valid basis of their law, but affirm their direct origination by divine agency. They describe their authority not only as a prior demanding to be obeyed, but as a power desiring to be obeyed. The truth they preach does not derive its credibility or its cogency from human sources. It is God's Word. It is a divine revelation, not a human discovery. Tradition itself can add no sanctity to it; it can only keep it pure and pass it down the generations. In such a setting infallibility takes on an enhanced solemnity. It is no longer an empirical convention founded on natural right and supported by simple expediency, but rises into an agnostic principle of dogmatic faith. In Christianity most of all it has come to mature self-consciousness, and found expression in a series of transcendent affirmations of faith. Buddhism, Muhammadanism, Hinduism, Sikhism, Parseeism, have precisely analogous dogmae, agnostic regiments of things. Infallibility, therefore, in the State, vested in its head and officers, its government and administration, absolute though it appears from moment to moment when the interests of individuals collide in the conflict of power, is an order of things. Autocracy at its worst has its restraints, and owes the very continuance of its power to them. Democracy is but a readjustment of the distributive responsibilities and authorities. The legal principle that the king or the legislature cannot err holds its own only by the help of the seemingly inconsistent rule that the decisions of the courts are not final. It is a constitutional order. If the interest of common order and public peace demand immediate obedience to the existing law, that obedience will not long be rendered where there is no confidence that the highest good of the people is being or will be promoted by the occupants of official power. Closely as the ecclesiastical claimants to infallibility have modelled their policies upon the theory and practice of the secular, there are analogous claims to infallibility in the Church. If, as the Church has held, they had to live, they have not found in them any example or analogy for an absolute regime whose decrees were not only affirmed to be final for the time but irrefutable and unalterable for all time. It was reserved for ecclesiastical statemen to endeavour to erect a hierarchical autonomy distinguished from all secular organizations by its steadfast and invariable exclusion of innovation even by constitutional means. (7)

In religion.—It is in religion that the principle of infallible authority asserts itself most powerfully. Every religion has its solemn ordinances and obligations, its absolute decrees which rule the public and domestic life of its people. The higher religions, which claim in some sense to have man's very destiny in their hands, use the same order of language and operate with the same instruments of instruction and discipline as the lower, but they leave the lower far behind in the urgency of their appeal, the dignity of their claims, and the variety of means whereby they bring to bear upon mankind for the accomplishment of their lofty purpose. They make explicit and articulate the presuppositions and the conclusions of earlier faiths. They are theoretically and ecclesiastically self-conscious. They are not content merely to proclaim, but feel bound also to explain. They develop organizations for their propagation and diffusion comparable in extent and in cost with the secular politics of history. They are not content to rest on the authority of custom or usage as the valid basis of their law, but affirm their direct origination by divine agency. They describe their authority not only as a prior demanding to be obeyed, but as a power desiring to be obeyed. The truth they preach does not derive its credibility or its cogency from human sources. It is God's Word. It is a divine revelation, not a human discovery. Tradition itself can add no sanctity to it; it can only keep it pure and pass it down the generations. In such a setting infallibility takes on an enhanced solemnity. It is no longer an empirical convention founded on natural right and supported by simple expediency, but rises into an agnostic principle of dogmatic faith. In Christianity most of all it has come to mature self-consciousness, and found expression in a series of transcendent affirmations of faith. Buddhism, Muhammadanism, Hinduism, Sikhism, Parseeism, have precisely analogous dogmae, agnostic regiments of things. Infallibility, therefore, in the State, vested in its head and officers, its government and administration, absolute though it appears from moment to moment when the interests of individuals collide in the conflict of power, is an order of things. Autocracy at its worst has its restraints, and owes the very continuance of its power to them. Democracy is but a readjustment of the distributive responsibilities and authorities. The legal principle that the king or the legislature cannot err holds its own only by the help of the seemingly inconsistent rule that the decisions of the courts are not final. It is a constitutional order. If the interest of common order and public peace demand immediate obedience to the existing law, that obedience will not long be rendered where there is no confidence that the highest good of the people is being or will be promoted by the occupants of official power. Closely as the ecclesiastical claimants to infallibility have modelled their policies upon the theory and practice of the secular, there are analogous claims to infallibility in the Church. If, as the Church has held, they had to live, they have not found in them any example or analogy for an absolute regime whose decrees were not only affirmed to be final for the time but irrefutable and unalterable for all time. It was reserved for ecclesiastical statemen to endeavour to erect a hierarchical autonomy distinguished from all secular organizations by its steadfast and invariable exclusion of innovation even by constitutional means.
Broadly speaking, infallibility has been sought by Christian faith in a direction either external or internal to the individual. In historical documents, the Scriptures, the Church, and Confessions of Faith, or in sacred traditions embodied in literature or embodied in life, or in the living Church either as a whole or represented by some class or individual, or in the historical Jesus, a fundamental form of infallibility is found. 

In the Christian reason, or in the witness of the Holy Spirit within the individual Christian soul, an inward norm is accepted. But the common presupposition of all these views is that God may be trusted not to fail the believing soul, that His guardian and guiding Spirit is increasingly at work in the Church, bringing infallible conviction to those who, officially or personally, use the means of grace and knowledge available in the Church in reliance upon God. Individuals and Churches emphasize differently the particular instruments and vehicles of infallible guidance, but under all their differences it is clear that they operate with the same elements of spiritual power and knowledge. There is one Spirit, the common ultimate; and His instruments, though they are many, are essentially the same. In the end infallibility are more provincial than the ultra-catholic in so far as they are ultra-modern, and none are more individualistic than the papal since they are added to the organized or visible Church, in the historical Jesus, or in the Christian reason, conscience, or spirit. In that order they are here reviewed.

2. Infallibility of Holy Scripture.—Christianity was born to a new Bible. Its earliest place of worship was the Galilean synagogue, a House of the Book, a provincial equivalent for the distant Temple, whose open Holy of Holies, in the full view of the congregation, contained the Old Covenant, the rolls of the Word of God, in their shrine or ark. Master and disciples had alike learned in the synagogue and its schools to regard the Law in the Prophets as the veritable utterance of the Spirit of God. For them a visit to the Temple at the great feasts owed its impressiveness not less to the Scriptural instruction than to the ritual, for in the Temple promises, the light. Their nation, in the phrase so picturefully used by Muhammad in the Qur'an to describe them, was the 'People of the Book.' The most admired and distinguished class in the nation, according to the popular judgment, were the scribes and Pharisees, whose profession it was, not by birth, but by learning and talent, to be the priests and Levites of the Temple and Cultus of the Book. If the Temple priesthood who served in the sight of Israel principally at the great festivals represented Aaron in their ephods, the Rabbis sat in Moses' seat with the phylactery on their forehead as their symbol, exercising an authority which practically overshadowed the direction of public ritual in the capital alone, since it reached the infinitesimal details of daily life and piety throughout the country. Public opinion invested them in the prestige of the office as they enjoyed an authority in matters of faith and morals which Christian priesthoods with significant and ominous avidity have made the precedent and the model for their own. The Rabbis were the faith in Israel, the rabbis the faithful in the hands rather than the way they handled it that surrounded them with popular veneration. To the almost superstitious awe with which the popular mind regarded the Bible in ancient times, the transcendent character of the Holy Book which they expounded lent vastly added force. If we remember what the OT in Hebrew and in Greek was to Israel, and also bear in mind the profound impression of its foreign atmosphere and peculiar exclusiveness, upon the cultured classes of neighbouring races among whom it gained thousands of disinterested proselytes by its sheer grandeur and spiritual uniqueness, we shall not wonder that from the beginning something verging on Bibliolatry was native to Christianity. The NT, which has no infallible pretensions for itself any more than the OT had for itself, and gains our allegiance none the less readily because of their absence from a depart of its pages, from first to last, a desire that becomes of the OT and defer to it as a treasure of literal oracles of God. The reader of it does not need to recall particular references of Jesus to the authority of the Bible of His people whose 'Scripture cannot be broken' (Jn 10:35)—ignorance of which and of God's power is a cause of error (Mt 22:37)—an authority which was common ground for the strangely different interpretations of it made by Him and by His enemies. The oracles of God, as Paul calls them (Ro 3:4), are as truly in the Temptation and the Transfiguration, the strength of His life, as they are the source of the language and imagery in which the Apostolic writers set forth His teaching and His ideas of the consummate scholarship of our time is only coming to realize fully the minute and profound dependence of the NT upon the OT, Gospels and Epistles, Master and disciples alike. For one and all the OT was the Infallible Book, God's own Word and Revelation through inspired seers, singers, thinkers, statesmen, and anablasts, every word of which was authoritative for the soul, if rightly understood. The composition and publication of the Apostle's writings were necessarily followed by an immediate extension of the Canon, the infallible rule of faith and life. For, apart from their intimate connexion with the Lord Himself as veracious records and expositions of Him composed by men belonging more or less closely to His earliest following, they have a spiritual tone, power, and distinction, and they proclaim a message, which not only raised them at once to the exalted level of the OT, but made them in sober truth its completion and perfection, the crown of its hopes and the prototype of all that was to follow. Those movements, moving shadows as it drew near the world. If the OT was inspired, much more the NT. If the OT formed a Canon, much more without the late Apocalypse, much more the NT, also with or without the later writings, which were painfully marked by waiving power. Detailed examination, sentence by sentence, of these newer writings only served to vindicate the comparison. They preserve, to this day, the same inexhaustible edification and stimulus for religious minds which Israel and the first Christians found unfailing in the reverent perusal and study of the older Bible of their race. Both Testaments remain inextricably bound together as the Bible and Common Rule of the whole of Christendom. Greek, Roman, and Protestant alike use it, and it is the fountain of sacred truth, the unfailing and inerent source of Christian instruction, God's literal Word for all time, dictated by His Spirit and phrased by His chosen servants to be an eternal posession of His Church. For the Greek and Latin Fathers, for the Schoolmen great and small, for all branches of the divided modern Church, the unmistakable teaching of the Bible is infallible. It is written, for the first Christians, is officially final proof, where the Scripture is at
INFALLIBILITY

one and its sense correctly reached, just as 'Thus saith the Lord' is final on the lips of a true prophet.

Then how comes it that there are so many Churches, and so many Biblical theologies at their foundation, it may be asked, if the doctrine of an infallible, and accepted by all Christians? The answer is twofold.

(1) While the Bible is one, its contents are far from homogeneous. It is the creation of religious experience and many various experiences and many types of religious temperament; so that a Book which, on the one hand, involves many very natural appeal to men very differently, some responding to one sense in it, others to others, no single individual and no Church, it must be expected to contain all the errors, all the weaknesses of its own, or, consciously, itself, not unintentionally, to as many interpretations as it finds interesting. The rival Church theologies are neither wrong in themselves nor, as we are apt to judge in haste, destructive of the unity of Holy Writ, any more than the rival tendencies within its own pages, as, for example, of priest and prophet or of Paulinism and Petrism, are subversive of it. Scholarship and the spirit of justice of making the Bible into a code, or a quarry of materials for a code, of statute law which must be rigorously administered if justice is to be done to it and to the illegals. The letter killeth. The spirit giveth life. Faith cannot be legislated; it has to be individual, which is to say, the faith, not a dogma, a supposition, if it is not comprehensible enough to admit of a certain play of freedom and spontaneity in the faith which anciently, the division and subdivision of the Church in all lands, far from disclosing a merely schematic spirit, is in great measure evident in the fact that it has been able up against, that it has demanded a wider catholicity than orthodoxy would acknowledge, and that the many-sidedness of the Christian theologies has received recognition in spite of all legalistic repugnance and restraint. Bossuet's controversial use of the phrase 'the Bible ... is not a code,' is taken quite to the heart of the conception of the Bible, of the infallible, traditions external altogether to the Scriptures have been taken as a conscious and co-ordinated fact of the Church and duty. No Church, however devoted or however learned its Hierarch, has succeeded in eliminating the authority of tradition altogether, for the presence of tradition is as universal as the presence universally felt. But in no Church is a tradition hostile to the plain sense of Scripture welcomed or held in the Roman Catholic dogma expressly co-ordinates tradition with Scripture as a source of merely a conscience, but of truth and duty. This [final] truth and (no] moral discipline, as they call it, is the foundation of the Christian Scriptures, as are the written books and the unwritten traditions as the order of the Apostles from the mouth of Christ Himself, or from the Apostles themselves, the Holy Ghost dictating. have come down even to us, transmitted as it were from mouth to mouth, from the first to the last, from each generation to the next, following the examples of the orthodox Fathers, receivings and venerating with a most pious affection of piety and reverence all the books both of the Old and of the New Testament—seems that one god is the author of both—also the holy traditions, as well as the apostle to pass on to as to morals, as has been defined, either by Christ's own word of mouth, or by the Holy Ghost, and preserved in the Catholic Church by a constant succession. And in the 'Decree concerning Original Sin' it professes to follow 'the testimony of the holy Fathers of the most approved councils, and the judgment and consent of the Church itself.' But conflict between them is not conceived of as possible, for the Church is capable of being made explicit as much a sin worse than what has lain implicit in the treasury of ecclesiastical records. But any addition of Church tradition to the letter of Scripture on such terms must increase the room for divergence in men's interpretation of the letter. The inherent and actual infallibility of Scripture, as the opportunity for honest difference of opinion on the meaning of Scripture, it is as nothing to the Church's powers of accommodation and convention it is the Church. It may be difficult, to determine the harmony or 'consent' of Scripture, but will any one seriously maintain that a concordant paraphrase or a consensual tradition with any approach to unanimity could be produced for a similar range of doctrine?

The infallibility of Scripture consists of an absolute immunity from error in matters of historical and scientific fact. Even the Gospels defy the harmonist in some details, misname at first one passage from the OT (Mk. 12, Luke 22), where 'they' is substituted for 'my', and the whole meaning of Malachi as a prophecy. But, as time wears on, and versions into the vernaculars of Christian Europe, Asia, and Africa were made and recorded for use, and the process of manuscript reproduction steadily increased the distance between the current copies and the lost originals, the difficulties with which the men of the Church were faced by the interpretation of the Bible were greatly multiplied. None in its own practical and natural history makes one faint by ordaining that the Greek and Hebrew texts should retire into academic seclusion as antiquarian matter, and that a standard revision of Eusebius' Vorlagen without the use of all the ordinary Bibles for doctrinal and disciplinary and liturgical use. Even the Vulgate has none of this literal textual tradition, and is the result of a biblical Commission. The Scriptural Infallibilists who desire a single authentic text as the basis of his scholarship and dogma might well despair. But it is clear that the kind of infallibility which Jesus Christ and the early Church recognized in Scripture was not textual or linguistic or historical in character, but spiritual, and the Roman Catholic or Protestant controversialist who seeks for an absolutely intelligible, certain, that is to say, that which is infallible Canon, or postulates an infallible authority to be its interpreter, has accomodated to an unchristian panic, and has failed to recognize the true nature of this is a form of infallibility. It must be acknowledged without reserve that scholar- ship has made it is itself a kind of religious experience, admitting of superintend, to point to one text, or one rendering, or one interpretation of the Bible and say, 'This is the one true interpretation,' and not 'This is the interpretation that is most acceptable by the majority of men.' It is self-delusion, and in the strictest sense of the word, superstition, to supplant any authority, whether amateur or expert, and appeal to the Scripture as the primary authority. Further, we may make increasing approximations to the true sense, but nothing is more certain than that a certainty upon which it is beyond question can never be reached. Can Christendom, however, not be content to take up its Lord's position in the matter? to lay down a rule for posterity? About the Mosaic text or the Septuagint rendering. He frames no rule for exegesis. He proceeds without of no court to settle such disputes. The infallency of Scripture for him was compatible with its inclusion of much that was or had become imperfect. He distinguished the elements of this incompleteness from the elements of its infallency. He is not content to take up its Lord's position in the matter? to lay down a rule for posterity? About the Mosaic text or the Septuagint rendering. He frames no rule for exegesis. He proceeds without...
INFAILLIBILITY

Biblical learning that God has been at no pains to prevent errors of history and knowledge and defects in the text and its transmission from finding an entrance into the Church. The marvel is, that, truth, that detected errors are so few. The devout reader of Scripture may indeed accept them as they are, if not on accident, on purpose, to protect him from the falsehood of religious instinct which demands infallibility of a literal sort and insists on revelation as an opus operatum and on inspiration as a finished fact. Add together the sum of Biblical insufficiency and human frailty, and, while they do disprove the notion, formed a priori of all divine instruments, the Book contains no blomish, the aggregate is so slight as to be practically negligible. It merely serves to admonish us that Biblical infallibility is not to be sought in the letter, and proves to the discomfiture of our instinctive literalism that texts and tittities can pass away without disturbance of the spirit of the Book. No one will suspect the Westminster divines of disloyalty to the doctrine of Scriptural infallibility, and there is therefore a peculiar impressiveness in their distinguishing actions regarding it. Speaking, as they do, the last dogmatic word of the old Calvinism, they devote a great part of the opening chapter of their Confession to the subject as the key to their whole doctrine.

The authority of the holy Scripture, for which it ought to be beloved and obeyed, depends not upon the testimony of any man or church, but wholly upon God (who is truth itself), the source of the authority, and therefore it is to be received, because it is the Word of God. We may be moved and induced by the testimony of the Church to an high and reverent veneration of the holy Scripture, and the heauenliness of the mister, the efficacy of the doctrine, the majesty of the style, the compass of all the parts, the effect of the whole (which is to give all glory to God, the full discovery & making of the only way of man's salvation, the many incomparsable evidences, and the entire pacification thereof), are arguments whereby it doth abundantly evidence itself to be the Word of God; yet notwithstanding, our full perswasion and assurance of the infallible truth, and divine authority thereof, is from the inward work of the Holy Spirit, bearing witness by and with his Word in our hearts.

Those things which are necessary to be known, believed, and observed, for salvation, are so clearly propounded and opened in some place of Scripture or other, that not only the learned but the unlearned, in a due use of the ordinary means, may attain unto a sufficient understanding of them. The infallible rule of interpretation of Scripture is the Scripture itself: and therefore, when there is a question about the true and full sense of any one article of the Creed, whether in the Confession of Faith or in the New Testament, there must be collected and known by other places that speak more clearly. The examination, by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, doctrines of men, and private spirits, are to be examined by the same, not in such an audience as we are to rest, can be no other but the Holy Spirit speaking in the Scripture.

Thus, in Calvinistic as in Lutheran orthodoxy, rooted though each is in a thoroughgoing Biblicalism, a spiritual principle of dogmatic authority was resorted to in distrust of all external infallibility. The infallible in Scripture was not to be learned by scholarship nor by application to Church Councils in the wisdom.

As A. R. Davidson says in Theology of the Old Testament, Edinburgh, 1900, p. 355, 'When we speak of the infallibility of Scripture, we must remember it is not a scientific or philosophic infallibility, but the infallibility... of common sense.

It could be divided by the simple through the illuminating grace of God's Spirit. It concerned not secular knowledge but salvation. In the Thirty-nines Articles of the Church of England there is no formal reliance on Scriptural infallibility, but, instead, to the sufficiency of the Holy Scriptures for Salvation.'

4 Holy Scripture containeth all things necessary to salvation: so that whatsoever is not read therein, nor may be proved thereby, is not to be required of any man, that should be believed as an article of the Faith, or be thought requisite or necessary to be demanded in the统属 of faith: and yet it is not forwark the Church to ordain any thing that is contrary to God's Word written; neither may it so expand one place of Scripture, that it be repugnant to another. Therefore, although the Church be a well of living water, of Holy Writ, yet, as it ought not to decree any thing against the same, so besides the same ought it not to enforce any thing to be believed or observed, against the same.' In both these articles the authority of Scripture is drawn upon only so far as relates to the great practical needs of religious life and experience.

3. Infallibility of Scripture, or dogmas. The dogmatic symbols of Christendom, on any view of them, invite discussion in this connection as a sequel to Holy Scripture and as a preliminary to the Church in the sense of accredited authorities; for, on the one hand, like the Bible they are written documents, scriptures, and they are also canonical in their own degree; and, on the other hand, they owe their official authority to the consent of the Church and to unbroken tradition. They are regarded as inspired, but only in a secondary and derivative sense; not as delivered by prophetic men by whom the Holy Spirit uttered fresh truth, but as compiled from Scripture or deduced from Scripture by saints, scholars, and churchmen under the guidance or illumination of the same Spirit. In high theory they are all subordinate to Scripture, and unimpeachable as the primary Canon of Apostolical writings they form an appendix of ecclesiastical dogmas. But in practice they came to receive a liturgical, disciplinary, and didactic deference hardly inferable from primitive times.

Not seldom, indeed, in their character as authoritative summaries of its contents and definitions of the sense in which a Church accepted and construed God's Word, they effectively supplanted Scripture. Scripture was treated as the expression of the Church's liturgical, canonical, popular, its speech, its unconventional freedom, and its infinite suggestiveness, everywhere prompted men to think for themselves and fashion systems of doctrine for themselves. All the hierarchies, great and small, appealed to it. Each of the Churches was convinced that it was founded on it, and could cite a wealth of passages palpably in its favour. Thus, if uniformity was to be secured in Christendom, Scripture was seen to be inadequately narrow and exclusive as a standard of orthodoxy, and Creeds and Confessions (qy. w.) with growing elaboration were employed by succeeding ecclesiastical authorities, ostensibly to condense and supplement it, but in effect, for disciplinary purposes, to replace and supersede it. That has been a virtually universal process throughout Christendom. There is nought but the very face of the question.

Much of it was salutary. It represented a long-continued endeavour not only to exclude gross error and to keep the faith pure by the help, where possible, of Scripture itself, but also to define the essence of Christianity as a faith. The ancient Creeds have a character and a venerability all their own, so impressive as well nigh to disarm criticism. Yet even the simplest of them is scarred by controversy. The Apostles' Creed, the Nicene-Constantinopolitan, the Athenasian, or Quenouque Vul, and the Te Deum form a monumental group of dogmatic symbols, owing less of their authority to formal acceptance by councils and enforcement by discipline than to their willing and, indeed, devout acceptance by the devotion and the scholarship of the Christian centuries. But, different as they are in character, origin, form, and popularity, they are alike acts of faith in Scripture, human responses to the initiatory of revelation rather than inspired objects of faith. Their authority is Scriptural in so far as their clauses are based on Scripture with all the advantages and the limitations of mere quotation. If they gain by leaving out much that can be dispensed with in Scripture, they necessarily lack its intricacy, intensity, and intimate touch with life and experience. What they add to Scripture is controversial in its
origin, and as majority-opinion claims only a questioned immunity from error. What they gain through their approbation or imposition by concilis is but a ministerial and, as compared with Scripture, a secondary authority. Fashioned by the Church—for the most part quite obscurely, since practically Nicene-Constantinian, Molitorian largely consists of pre-consiliar materials—the Creeds differ from formal decrees and definitions like the Confessions, inasmuch as they represent a more apodictic growth and yield an authority less widely resented; but ultimately the question of their infallibility is the same as that of the infallibility either of the Scriptures from which they are drawn or of the Church which gave them birth, shelter, and recognition. Whether one has regard to the Scriptural elements within them or to the theological additions made in the varied interests of orthodoxy, comprehensiveness, and precision, they are one and all to be interpreted historically; their language, vocabulary, topics, and scope must all be understood in the light of their particular times. What Scripture owes to the affectionate patience of Christian scholarship dare not be withheld from the Creeds and Confessions, if they are either to be understood or regarded with affection. No Creed, not even the Apostles’, has the universal currency of Scripture. No Confession has the eminence of the Bible. The same agency which produced dogma is at any time competent to emend, augment, or unmake it. The same authority which gave it sanction is at liberty, if duty demands it, to set it aside. Few such documents make any claim to be infallible, except as far as conviction of their truth may be taken to imply infallibility; and those which do—the Arian Creed, the appendix to the Nicene, and, for example, the Decrees and Canons of Trent—betray, on close inspection, no generic difference, no logical elevation, no religious genius, to warrant such distinction. Though Newman and his school counted it a point in favour of the title of the Roman Catholic Church to be the exclusive representative of the infallible Church Catholic that it persistently and deliberately claimed to be such, nothing can exempt the products of the human intellect from the conscientious scrutiny of a living and enlightened scholarship, or from the practical test of never completed that by their fruits they shall be known. Most of them, it may be freely acknowledged with gratitude, served their original purpose admirably, and were faithful to their ample ends. The results of the learning and experience of their time.

Bul, as W. Sunday says in Christologies Ancient and Modern (1883), p. 127, although they are “great outstanding historical monuments of the faith of the Church,” which we cannot but regard with veneration, and to which we desire in loyalty to conform our opinions, “it is impossible that the thought and language of these centuries should exactly coincide with the genuine, spontaneous, unbiased, scientific . . . language of the present day. We must moderate, whatever we will or not.”

4. Infallibility of the Church.—(a) The Universal Church. Christian faith in the infallibility of the Church has expressed itself in a protean variety of ways. Some of these verge closely upon the theories which have already been considered. All of them rest on principles which have already been touched upon.

Whatever various modes, says W. Palmer in The Church of England, 1839, p. 127, “instructing the authority of the Church there may have been, I believe that scarcely any Christian writer can be found, who has ventured actually to maintain that the judgment of the Church is infallible.” In order to avoid all doubts, and deliberately gives, with the apparent use of all means, might in fact be used, how inconsistent it is to say, in order to the Church’s.

At their foundation is a common appeal to the promises of Christ regarding His Church, and an a priori theory or presumption as to the means which Providence must employ to have them fulfilled. Undeterred by the scantiness of Christ’s allusions to the Church as an organization, by His silence regarding its government, and by the unmistakable immediateness of the communion which He taught and promoted between the individual believer and the Father and Himself, churchmanship has fastened upon a few allusions in the Gospels, and erected upon their slender basis an imposing doctrine of the duty of the Church to the Christians in all matters of faith and morals, to trust and obey the Church. Appeal is made to the dictum of Augustine: “Ego vero Evangelio non crediderim nisi me Catholicae Ecclésiae commissum autori-tas.” The Church, it is urged, is a living institution, linking all the Christian generations together, nourishing and fostering the faith of individuals, bringing the Scriptures and other means of grace to bear upon them, and investing them with authority, whereas the Bible is a mere book, holy but inanimate in itself, requiring the attestation of the Church, requiring authoritative interpretation by the Church, itself indeed originally a product of the Church’s experience and self-nurture as well as a compilation made and adjusted by its care. In the nature of the case, the Church, as the Society which was founded to promote God’s Kingdom, preceded the NT, just as Israel, the older theocracy, preceded the Hebrew oracles, and, as it preceded it, also preceded the Church into being and received from it mysteries to view. Plausible as this theory appears, its inadequacy to fit the facts of history and to bear the inferences which have been drawn from them is becoming more and more evident. It is valid only against a doctrine of Scripture as an unaltered, a mere record and compilation as distinct from the utterance and activity which it records. Thus, for example, though the Gospels as books were composed by members of the Church, and were preserved by the Church from loss, the Church did not utter the words of Jesus which they record. We have to thank the Church for recording and transmitting them, not for their authority. The words and acts of Jesus founded the Church, not vice versa. He preceded both Church and Scripture. No matter how accurate and honest the Apostolic writers were, no matter how careful and trustworthy, transmitting and explaining Church, it would avail nothing for the ulterior authority of the voice which they echo. The Protestant preference of Holy Writ to tradition and Church authority rested upon the simple conviction, derived from sorrowful observation and painful experience, that the two contradicted, and that the Church of Scripture was unapproachably superior to the Church who, they were commanded to believe, spoke through the tainted lips of the Renaissance papacy, or through the very human and variable opinions of Schoolmen and Fathers. And it is significant that Rome itself betrays an unmistakable preference for Biblical authority where texts can be cited in favour of its views with any show of exegetical warrant. It will not do to set Scripture over against Church tradition as a dependent and apologetically inferior authority, and then to proceed to prove the superiority of Church and tradition by appeal to Scripture texts. Both sides in the long controversy have erred. If Protestantism has tended to overemphasize its doctrine of Scripture and to evade the duty of discriminating between its contents in the light of the mind and spirit of Jesus Christ, Roman Catholicism, while guilty of the same fault, has added to it a grave exaggeration of the independence of tradition. The Bible itself is tradition at its highest, supremely valuable and authoritative because of its intimate proximity to Jesus Christ, and its undimmed freshness for all time of the present image. The Bible is not a person, it is true; but
neither is the Church. The Bible is not more dead than the words of pope or council, once they are spoken. Its divine spirit and power are deathless. Wherever its truths are recognized, it is invited to make an inventory of all the truth in Jesus Christ which it has stored up in its treasury apart from Scripture, the aggregate is indifferently meagre and painfully at variance with Biblical tradition. At one time the earth stood fast and the heavens shrunk into a mere office of interpretation. It cannot, it is said, pretend to new revelations. Its inspiration is scholarly, its authority is rabbinical, its office is hermeneutic. Scripture is there. Scripture is God's undeniable Word. But it is in places obscure, and its testimonies are at times divergent. The Church must save the unity of faith by possessing and by exercising the prerogatives of definition. It can say, and it must say, what Scripture means upon any point of controversy. And what by the grace of God it is pleased to say, the faithful ought, without question, to receive as God's very Word. There must be every age, in every dispensation, at any moment, some voice on earth, whether single or conjunct, which can allay mortal questionings by the sincere and lawful use of the formula of faith of this Council: 'It seems good to the Holy Spirit and to us.'

Leaving out of account O'T passages which have been brought to bear upon ecclesiastical infallibility, there is the Preface to the Vatican Decrees, where the prophecy of the coming of a Redeemer to Zion is followed by the divine covenant: 'My spirit that is upon thee, and my words which I put in thy mouth, shall not depart out of thy mouth, nor out of the mouth of thy seed . . . from henceforth and for ever,' ecclesiastical infallibility in general is founded upon the following Scriptural warrant: Mt 1613-12 2819-20, Jn 1413-14, and I Th 312-13. In Mt 2818-19, immediately after Jesus' acceptance of Simon Peter's confession of Him as the Christ, which He declares to have been revealed, not by flesh and blood, but by His Father in heaven, He continues: 'And I also say unto thee, that thou art Peter (Hepeta), and upon this rock (petra) I will build my church; and the gates of death shall not prevail against it. I will give unto thee the keys of the kingdom of heaven: and whatsoever thou shalt bind on earth shall be bound in heaven: and whatsoever thou shalt loose on earth shall be loosed in heaven.' In Mt 2818, the Church: 'All authority hath been given unto me in heaven and on earth. Go ye therefore, and make disciples of all the nations, baptizing them in the name . . . teaching them to observe (rheo) all things whatsoever I commanded you: and, lo, I am with you always, even unto the end of the world.' In Jn 1426, after the words: 'If ye love me, ye will keep (rheode) my commandments,' Jesus says: 'And I will pray the Father, and he shall give you another Paraclete, that he may be with you for ever, even the Spirit of truth: whom the world cannot receive; for it beholdeth him not, neither knoweth him: ye know him; for he abideth with you, and shall be in you'; and in 1426: 'But the Paraclete, even the Holy Spirit, whom the Father will send in my name, he shall teach you all things, and bring to your remembrance all that I said unto you'; and in 1624: 'Father, I love thee: sanctify them through thy truth. And for their sakes sanctify thyself, that thy name may be given unto them, and thou hast promised them, what is manifestly the same assistance phrased in two alternative ways, first, His own unfailing and everlasting presence 'I am with them always even unto the world,' that is, His positive help and approval; and secondly, in
answer to His prayer to the Father, the Spirit of Truth is in Christ Jesus. In Mt 10:19-20, the Spirit of God, God's Father is promised to the Twelve Apostles to give them utterance when they are arraigned by their accusers and persecutors, so that they are not to be anxious how or what they are to speak. In Lk 10:17 Jesus says to the Seventy Apostles: "He that heareth you heareth me; and he that rejecteth you rejecteth me; and he that rejecteth me rejecteth him that sent me' and in Lk 10:21, Jesus saith, 'If ye then, being evil, know how to give good gifts unto your children, how much more shall your heavenly Father give the Holy Spirit to them that ask him?'

As to the passage in 1 Timothy, it is far from certain that 'a pillar and ground of the truth' refers to the 'household of God' which is the church of the living God. Gregory of Nyssa and Gregory of Nazianzus make it refer to Timothy, while Bengel links it with the 'mystery or revelation of godliness' which immediately follows it in the text. But, assuming that it does refer to the Church, God's household, and that rhēthos means 'ground' rather than 'stay' or 'support', the passage teaches simply that the Church is a pillar and ground of revealed truth, just as individuals like James, Cephas, and John are called 'pillars' by Paul in Gal 2, and in Rev 3:1, 'He that overcometh shall receive a crown on that pillar in the temple of God'. There is no suggestion that the house of God is the only pillar of the truth, or that the temple of truth is so built that each one carries its own column and base.

It seems clear, upon a review of the evidence of the Gospels, that Jesus gave His disciples to understand that His words would never pass away, but would live forever, and the power of the Spirit of truth, so His Church, built as on a rock upon Apostolic faith in His Messianic Sonship to the living God, would never perish, the gates of death would never close upon it. Faith in His followers' mission was the necessary complement to faith in His own. Faith in their teaching was essential to faith in the future of His own. He would insist that they be as His inspired and taught them in the flesh. His Spirit would lead them aright to the truth which they required. But of the teaching that His Church would never err, would have to learn through experience, that Christ's teaching would be true and that everything教会 in the Church into all truth may satisfy the requirements of its Lord's promises. The providence which makes all things work together for good does not preclude the incidence of evil in the experience and conduct of God's saints. The Church may by the grace of God withstand the gates of death and be guided into all truth, in spite of many partial and temporary local defections and mistakes. It will not help the Church to be circumspect if it is convinced a priori that it is certain that it is unable to carry through that is precarious or debatable. What it needs is to know itself fallible in detail, to be ready to confess error and profit by experience, and to make good the defect by the grace of God in leading it, however deviously, to the truth that it needs. Further, the gift of the spirit of truth is not promised to the Church and denied to the individual. Each of the Seventy, as we saw, was identified with his Lord, so that those who heard them heard Him. The Father in heaven will no more withhold the Holy Spirit from individual believers than an earthly father will deny good gifts to his children. Is the Holy Spirit unable, or unwilling, to bestow the same immunity from error upon the individual Christian that he enjoys upon the Church? Ubi Spiritus, ibi ecclesia. Ubi Spiritus, ibi veritas. The same promise of guidance is given to the individual as to the Church; the same assurance belongs to each. The Church can move mountains, the believing prayer whose persistence will prevail, is not vouchefather to the Church and withheld from the Church-member. The High Churchman or the Roman Catholic and the Quaker are on the same ground when they claim infallible guidance for the Church or the pope or the individual Christian through the inner light or illumination of the promised Spirit, except that the preponderance of evidence derived from the gospels lies unmistakably in favour of the Friends. All Christians are agreed that the Spirit of God can and will guide God's believing children, the humblest, not less than the most exalted or the most learned; but experience has taught most Christians to beware of constructing that faith into an assurance of particular infallibility. History deepens the conviction that a lively sense of liability to err, and a willingness to be corrected and to acknowledge fault, are an indispensable pre-requisite and guarantee of ultimate arrival at the goal.

(b) The universal consent of Christendom.—Few minds would hesitate to acknowledge the impressiveness and authority of the unanimous consent of Christendom to the teaching of faith and morals. We are all so profoundly indebted to authority, voicing the lessons of long experience external to ourselves, that the strongest presumption arises that what all Christians are agreed upon must be right and true. The consensus Ecclesiae Catholicae counts for Christian faith as the argumentum e consensu gentium counts for theistic faith. 'De quo omnium natura consentit,' says Cicero (de Nat. Deor., t. xvii.; cf. Seneca, Ep. 117), 'ilam sequere necesse est. It is the principle, urged by Augustine against the Donatists, which appealed so powerfully to Neoscholastic excitement. It is the principle which finds expression in the Vincentian Canon of faith and practice: quod semper, ubique et ab omnibus creditum est. Unquestionably the main unanimity of all types of Christian belief in every land and in every period of the Church's history could not fail to inspire trust in a doctrine or a usage, and would go far to prove it in advance against any onslaught of scepticism or criticism. But in practice the rule falls us lamentably. Outside the Holy Scriptures, and indeed outside the cardinal elements in their narrative and teaching, it is exceedingly difficult to point to any extensive group of universally accepted traditions and usages. Even the great Creeds and the great Festivals and the great Sacraments fail to satisfy a demand so exacting. Catholicity so comprehensive of a multitude of things in the Christian system.

But short of an extreme form of the Vincentian Canon of infallibility the principle of a 'common sense of Christian belief' is still asserted itself by all Christian lands. Even the Churches which elevate the clergy as authorities high above the laity and use 'church' and 'clergy' as almost equivalent terms, assign, whole or in part, the power of infallibility to the consent of the people. If the clergy have authority as teachers, their teaching gains added force when it carries the people with it, for they
INFALLIBILITY

can bring experience to reinforce and vindicate the experts who are their guides. To a far greater degree than is generally credited the determination of facts and the gift of the popular mind. What appeals to the people, helps their life, stirs their imagination, inspires their faith or satisfies their credulity, or calls forth their good will for their faith or for the faith of their instructors as demonstrably good and right and therefore inherently true. Very often there is divergence between the churchman and the theologian because of the different attitudes which they tend to adopt towards popular ideas and experience. The eclesiastic may value as a help to piety and obedience what the scholar distrusts as promoting superstition and servility. The eclesiastic may be suspicious of the scholar's 'truth' and 'open-mindedness' as savouring of scepticism and private judgment. The vox populi not only enthroned an Ambrose in the cathedral of Milan and procured for a Newman the red hat of his ambition, but it has, not less wholesome though less obtrusively, controlled the selection of many a form of dogma and many a pious usage. What is always said to be bad for the poor, the simple, the humble, the masses of the people, the 'little ones,' the 'babes and sucklings,' as Jesus called them. It has found universities, but no university founded it or fashioned its form. It is the voice of piety. The people may be easily led astray. They may make a poor judge, but they form the best of juries. Like the first Apostles, who receive them in their strength and weakness, they are apt to confound poetry with prose, parable with fact, myth with truth. But their heart is essentially as sound, and their instinct as reliable, to-day as it was then. And so Jesus simply and gave Him His first followers and friends. It is from their ranks that the Christian priesthood and ministry are still mainly recruited. It is for their minds that Christian dogmas and depositions are still primarily framed.

(c) Particular representatives of the Church; the Episcopate; general Councils.—Impressive as is the consensus of Christendom is, and weighty as is the authority of Christian common sense and popular feeling, their movement and utterance are too slow and unwieldy to enable them to be employed for the speedy solution of faith's problems or for their communal interpretation. Infallible direction has been sought in the consensus of office-bearers of the Church. The testimony of the Apostles, or the Fathers, or the Councils, or the Ecumenical, or the Episcopate, or the papacy, has been regarded and proclaimed in certain relations and at certain times as the final organ of infallibility. Even in these groups of official representatives a perfect consensus in every case lacking; as between the groups it is equally hard to find. But the assertion of their claims to implicit credence interestingly illustrates the determination of humanity to leave no stone unturned in its search for an infallible oracle of divine truth. One might have supposed that the Old Dispensation would have taught the Christian Church to beware of trusting either the official or the unchannelled transmission of hierarchical authority or prophetic vision or interpretative insight or governing power. But, as time advanced and the interval which separated each generation from the historical person of Christ steadily widened, it was natural and inevitable that men should cherish with augmented force the conviction that their Lord had constituted the Apostles and their successors in some definitive sense the heirs to His mission, to his parts in geographic infallibility. Had He not laid His enduring hands upon them, bestowing His Holy Spirit upon them for the discharge of their sacred responsibilities, and had they not transmitted to successors the ordination and the gift of the same Spirit? Further, since the Apostles had differed from one another upon occasion and had met in council at the chief seat of the infant Church to confer upon their differences and decisions and decisions for the guidance of the local churches, what more natural than that their successors should do likewise with results as binding upon the Christian conscience, especially if they were similarly unanimous in their decisions? Thus reliance came to be placed on the joint mind and unanimous consent of the Episcopate met upon occasion in duly convened universal councils, or acting through the administration of common creeds and ritual and discipline, or accepting the doctrine of certain great teaching Fathers or Doctors on faith and morals. Faith was turned into dogma; a mission into a hierarchy; a brotherhood into a group of federated but rival monarchies. Unanimous consent became majority-finding raised to the dignity of a creed or a coercive uniformity. The case was always the poor, the simple, the humble, the masses of the people, the 'little ones,' the 'babes and sucklings,' as Jesus called them. It has found universities, but no university founded it or fashioned its form. It is the voice of piety. The people may be easily led astray. They may make a poor judge, but they form the best of juries. Like the first Apostles, who receive them in their strength and weakness, they are apt to confound poetry with prose, parable with fact, myth with truth. But their heart is essentially as sound, and their instinct as reliable, to-day as it was then. And so Jesus simply and gave Him His first followers and friends. It is from their ranks that the Christian priesthood and ministry are still mainly recruited. It is for their minds that Christian dogmas and depositions are still primarily framed.

We bishops are absorbed in our work, and are not scholars. We need not ask the help of those that are. It is to be hoped that the Council will raise only such questions as can be dealt with competently by practical experience and common sense.

They were often not so much leaders as mouthpieces of religious opinion, chosen by their clergy to administer rather than to receive illumination. For that reason they may justly be claimed as representative men, living epitomes of the faith and common sentiment of their people. If they were incapable of seeming freedom from controversy throughout their period, it is not less true of course to Councils in which to confer upon their difficulties, they were at once confronted with the problem of method. The gathering in a theory was an ideal instrument for the determination of the Church's belief and practice appeared in a very different light at close quarters. Councils convened by princes and intended to be ecumenical were seldom, if ever, attended by bishops of racial, or populational proportion. Nicola, the first meeting-place, was con-
venient enough for Constantinople, the Emperor's own seat, but the prelates who came at the Emperor's summons were almost to a man Easterners or Greeks. The Bishop of Rome himself being absent though the occasion was one of extreme gravity for the peace of Christendom. And so it has always been. Ecumenical in name, general Councils have invariably assumed the condition of the region of the Christian world in which the chance to be held. Not seldom the locality was selected with a definite view to secure certain results. Moreover, they were increasingly restricted through the abstention of or exclusion of particular Churches, the Oriental first, and the Greek Orthodox next, until the claim of the latest Councils of Trent and the Vatican to be ecumenical was reduced to the verge of the farcical by the absence of the Greeks, the Protesants, and all but Roman Catholic delegates. The conciliar illusion was yet further discredited by the problem of a conciliar investigation of the dogmas of the Papal infallibility and controversy might take place without substantial disadvantage to any section of the membership, by the problem of rules of debate, of the determination of the procedure of the subjects to be propounded, of the method of voting, and the means of securing "ananimity." The breakdown of the conciliar apparatus of infallibility was evident in the long-drawn-out and continually interrupted proceedings at Trent, when the creed in infallibility was won at the close of the Great Schism by the Council of Constance (A.D. 1414-18), the unmaker and maker of popes, was dissipated under papal and Jesuit influence, and it was remarked by Cardinal Pole that the "inspiration" of the Council, in which, as always, Italian bishops and abbots predominated, was strangely affected by each arrival of the courier from the Vatican. In 1854 the publication by Pius IX., before a mere congress of assembled cardinals and bishops, of the dogma of the Immaculate Conception as a papal decree, and in 1870 the preliminary report of the Council on the business and method of the Vatican Council by the same pope, the adoption of the principle of the sufficiency of majority-findings, and the final supersession of Conclave by the dogma of papal infallibility were signs that, so far as the Church in communion with Rome was concerned, the age of Councils was at an end. Christendom had scarcely ever before witnessed such a truce from the meeting and proceedings of a Council. The dogma of infallibility, wrangling, recrimination, and acrimony that had almost always been unconceivable features of a Council, were removed.

Under the rubric and poetic exaggeration of James Martineau there is a solid foundation of fact when he says: "Catholic infallibility," ch. ii. of his "Essays of Religious Enquiry," London, 1866: "When you tell me of an infallible assembly—so insinuates he—when the voice is neverthe less liable to error, till confirmed by the signature of a certain bishop, I try to vain to conceive where the divine agency can take place, of what separate atoms of inspiration the collective miracle is made up, from what distribution of influence on the faculties of the several parts the diminution of error results. Every individual member in his separate capacity, and before he entered the assembly, is perfectly fallible; when there, he utters the very opinions which he brought thither, and retains the vote which he has previously designed; yet the aggregate of these separate efforts is an inspiration. When I remember the motives which actuate the members of such assemblies, and of the vehement operation of no which no reader of ecclesiastical history can doubt: the anxiety for imperial favor, or dread of popular displeasure; the love of display, the passion for influences, the ambition of promotion—the dread of episcopal mortification, and the hope of party triumph, and the horror of the reputation of heresy,—I look in vain for the resting-place of the divine in its actions. No such impulsion as that of spiritual inspiration moves it, every point on which I gaze; and goes out as fast as those mists and clouds which roll away in the morning, and come again (see "Authority in Religion," London, 1851, p. 67). "No crowd of pigeons can add themselves up into a God." Yet the Church accepts the values of their decisions—and there is to this day no ecclesiastical agreement as to which of them are genuinely ecc-
recognizes subjects and vicars or officials of the Pope, who exercises a power lent them merely during his pleasure, is not a necessary assemblage which would be called a Council in the sense of the ancient Church. If the bishops know the view and will of the Pope clearly set forth in the Church, they would be prudent to be silent and to vote against it; and if they do not their first duty at the Council would be to ascertain it and vote accordingly. An assembly of the clergy of the Church can have no existence, properly speaking, in presence of an ordinarius ordinariorum and superior in faith, though, of course, the pope's per-sonal, spiritual, or temporal authority of a Council may be displayed to the gaze of the world. And therefore the Papal legates at Trent were absent in no way to rebuke bishops as heretics and rebels who ever dared to express any view of their own. Bishops who have been compelled to declare their adherence to the teaching of their Pope—cannot be called free in all those questions which concern the authority and claims of the See of Rome, and very few at most of the questions which need be discussed at a Council do not come under this category. None of our bishops have sworn to man and in the Church and of religion the supreme object of their actions and ends; the terms of the oath provide only for the advantage of the Church. How the oath is understood and the meaning which is attached to it by what preaches a bishop expose himself who once chooses to follow his own conviction against the tradition of the Church, there are plenty of examples to shew. In Risini and Seneca (580), at Ephesus (449), and at Vienne (1311), and at many other times, even at Trent, the results of a whole legation have been disfigured. In early times, when the Popes were as yet in no position to execute compulsion or influence upon Synods, it was the Emperors who sometimes took a leading role. But from Gregory v.'s time the weight of Papal power has preceded ten times more than the moral and sometimes even diabolic authority. With abundant reason were the two demands urged throughout half Europe. In the 15th century, in the negotiations about the Council, first, that it should not be held in Rome, or even in Italy; and, secondly, that the bishops should be absolved from their oath of true men. The reason a proclaimed Council is to be held not only in Italy, but in Rome itself, and already it has been announced that, as the Sixth Lateran Council, it will abide faithfully to the fifth. That is quite enough—it means that, whatever course the Synod may take, one quality can never be predicated of it, namely, that it has been a free Council.

The Hierarchs and Canonists declare that without complete freedom the decisions of a Council are not binding, and the assembly is only a pseudo-Synod. Its decree may, have to be corrected.

Dillingler's words are deliberate, and are based on unrivalled knowledge. But they provoke a still deeper reflection than they intend, for they express the way the question of both papacy and Councils. In neither is true freedom, as such he desiderates and demands, conceivable. To bind the conscience of Christendom is the motive and the office of both institutions. Neither in reality is at liberty to claim the freedom it would withdraw from its subjects. The binder need not complain if he finds himself in bonds. Admit the principle of coercive authority in your Council and you will he able to deny it to the permanent officials of your Church. Better on such principles a living pope than a dead Council, or a Council yet unborn. You cannot indulge in Councils very often, or else you go in for pseudo-Synods. He need not act arbitrarily. He has advisors innumerable, informants innumerable, and access, presumably, to the mind of the vast dominion over which he rules; let him use it, give none but the best pope to His confiding Council, and none but the best advisers to His confiding Viceregent, and pour out His Holy Spirit upon them all to aid them from error and lead them to truth! The basis of the Papal power is as valid as against Councils. For those who believe in a hierarchy endowed with corporate infallibility. But, as we have seen, there is nothing in our Lord's teaching to suggest that God values the Church or watches over the Church as it is more important than over the individual. On the contrary, individual infallibility through perfect faith in God's readiness to bestow His Holy Spirit has a much stronger and more explicit warrant in the Gospels. If it be assumed, though, that Roman Catholics are prepared to acknowledge it, that the Vatican Council of 1870 was ecumenical and ecumenically binding, it is results are interesting in the present connexion. For it, a valid Council, decreed, in assent to the mind of the pope, that the pope is, when pronouncing on faith and morals as cathólica, infallible. It follows, that if the pope is not infallible, neither is the Council which pronounced him immune from error. It does not follow that Councils are henceforth set aside for ever. They remain infallible instruments of authority, obsolete but revivable at any time. Princes or popes may still convokes them, through which it would be strictly unnecessary to do so in the lifetime and health of a supreme pontiff, and might be construed as an insult and act of treachery to the office and prerogatives of the occupant of St. Peter's throne. But henceforth, unless the Council of 1870 is ruled out as merely Roman Catholic and therefore provincial and sectarian, or as morally lacking in unanimity, or as denying the liberty and freedom in voting, debate, and business, it may be maintained that, while a Council is infallible only when its decrees enjoy the adhesion of the Roman See, when it acts in communion with it, and even if, with its chief bishop, the infallibility enjoyed by the reigning pope does not depend upon any consent of future Councils. It may, however, be observed that in a great autonomous institution no law or convention can absolutely fetter the resources of corporate freedom, or destroy its initiative in great crises of its existence. The Council of Constance may serve as an example of an extreme emergency calling out into active service extremes and scarcely contemplated methods of procedure. The Vatican has not yet decreed that henceforth Councils are incompetent, lacking in infallibility, and therefore prohibited. It is one thing to say that the Pope, by acts of freedom, can prevent their resumption; quite another to forbid them altogether or to pronounce them for all time deluded.  

(d) Papal infallibility.—The Church of Rome is not but one of the sects of Christendom, but it is outwardly at least the most catholic of Churches. The most exclusive in its communion, it is the most comprehensive in geographical diffusion and in racial distribution. The most complex in its organization, it is the most rigorously unified in its discipline. Its history, its service to Christian life, piety, and tradition, and its numerical strength lend a peculiar importance to the theory of infallibility with which it has come finally to be identified. The term 'Papism,' which might formerly have been represented throughout Roman Catholic lands, is now, since 1870, at least as accurate a designation as the term 'Roman Catholic.' Since that date the doctrine that the pope is infallible, which had hitherto been repudiated in the strongest terms by the Roman Catholics, has not yet been accepted by Great Britain and in Ireland, has become a dogma of faith, part of the distinctive working creed of the Church. Its evolution is one of the most interesting and, in its significance in significant episodes in Church history. Thanks to the abundant literature which arose out of the controversy in which the completion of the dogma was involved, the story can be studied with

1 For the Roman Catholic position see ART. CHURCH, DOCTRINE OF THE (Roman Catholic), PAP.
Infallibility

unusual thoroughness and ease. In the present article a review of its broader features and main facts must suffice.

It is beyond dispute that the dogmatic infallibility of the bishop or patriarch of Rome stands in the closest possible relationship to his general authority as a ruler in the Church.

In a letter to Lady Simeon, of date 1967, quoted in W. Ward's Life of John Henry Cardinal Newman (London, 1872, IL 187), Newman writes: 'I believe in Cardinal Bellenarii whether the Pope be infallible or not in any pronouncement, anyhow he is to be obeyed. No good can come from disobedience. His facts and his dogmas must be right or be all wrong; his deliberations may have been biased. He may have been misled. Impediments and checks, terrors and cruelties, may be patent in the conduct of his advisers and instruments. But when he speaks formally and authoritatively he speaks as our Lord would have him speak, and all those imperfections and sins of individuals are overruled for that result which our Lord intends (just as the action of the winds, under the demands of the Church are overruled), and therefore the Pope's word stands, and a blessing goes with obedience to it, and no blessing with disobedience.' And in a letter to Fussey (6th, 277) is the same year he writes: 'Any categorical answer would be unsatisfactory—but I must say so. I should say that the infallibility (for that I conceive you to mean by "powers") is unlimited and suspensive. And I think that is the general opinion among us... There is nothing which any other authority in the Church can do, which he cannot do as at once, and can do as much which they cannot do, so much as the whole hierarchy, and so much as the whole hierarchy... As to the question of its... whether he could be... to make the facts of a doctrine... I do not know—but I suspect it can. Speaking generally, I think I can do anything, but break the divine law... But such a jurisdiction is (1) not so much a practice as a doctrine—and (2) not so much a doctrine as a principle of our system.'

In an institution which rests faith upon authority or tradition and makes belief a duty of obedience, the dogmas or decrees or dogmatic faith is naturally included within the wider right of the rule in spiritual matters. Much of the widespread reluctance on the part of Protestants to regard with seriousness the dogma of papal infallibility is due to their instinctively different attitude towards faith and the means by which it may be secured; they find it difficult to conceive of faith as a product of obedience, as an activity to be ordered. In Roman Catholicism, faith is a dead matter, the belief of the Church, the utterance of his faith in the Church. Not a doctrine, not a belief, but a living person is the basis of a standing Church. The gift or charge of the keys of the kingdom denotes his authority as a teacher; what he 'binds or looses,' i.e., in biblical language, 'affirms or denies,' in teaching spiritual truth is 'in heaven,' i.e., 'divinely;' affirmed or denied. In Lk 229., through the context and sequel are painfully adverse to the Roman Catholic theory, it is said by Christ that He has prayed for Peter that his faith 'fail not,' from which it may be deduced that the prayer has been answered; and the command is laid upon Peter (Lk 229.) not to 'resign his faith.' The risen Lord, moreover, commissions the forgiven Peter to feed His lambs, to tend His sheep, and to feed His lambs and sheep. It is a sign of infallibility, it is urged further, that our Lord intended such a change to terminate with Peter's individual tenure of it. Each successive generation would require at least the same guaranteed infallibility in a living inspired instructor. A living rock-foundation cannot have been withdrawn on Peter's decease; his faith cannot be allowed to fail in any age; his brethren still need stabilizing; the sheep of Christ still need not only to be fed but to be shepherded, which implies guidance and protection from error. The need grows greater rather than less with the passage of time, and, as it tends to cool as distance from its objects is increased.

On the face of these, passages in the Gospels cannot be so construed with any confidence. Since Peter is anything but a model of infallibility either in the Gospels or in the Acts or in the Epistles of the NT. To the same person who received the words 'Thou art Peter' came all too soon the words 'Get thee behind me, Satan.' The 'Rock' of the Church, of whose foundation became a few hours a 'stumbling-block,' a rock of offence.

The same Apostle who confessed the Christ not only denied Him, but endeavoured to deter Him from going to His death, and, as mistakenly though as naturally, tried to defend Him with the sword. It is the faith which it useth that fits him for our Lord's service, since it is recognized by its recipient as divinely revealed. Yet the faith did soon 'fail'; Satan did 'have' him. If he had been ever in any, sense, it is ultimate or practical infallibility, and it does not render him immune from particular failure of judgment in faith and duty. Further, it is brethren that he is to be in us. After his复活, and the restoration, and the duty of stabilizing is plainly enough a duty that each Apostle must discharge; and, however their gifts might vary (cf. the parallel use of confirmation with reference to Paul and others in Ac 14:15-21; 18:19), 'Bonding and loosing' is not a prerogative conferred upon one man alone; it is given to all the Apostles as such, duty as well as the Twelve, as an essential of authoritative proclamation of Christ's message. There is no indication that particular infallibility was given to every Apostle, or that Peter's was goaded in kind from that of the others. It is also unfortunate that Lk 229.28 should follow immediately Christ's rebuke to the disciples in their contention on the very subject of infallibility, and His warning to them not to be like Gentile princes who lord it over their people, and assume grandiloquent titles such as 'benefactor.' Peter's final commission contains no single unique element; it is simply a prayer, whose triple injunction refers to his threefold denial and repudiation of his Master. For the claim that Peter's office existed only in his lifetime, it proves too much for papal theory, since no pope has ever claimed an apostolic authority with this; but it contains a kernel of truth. Apostolic faith, and faithful Apostles, are needful by the Lord of the Church in every generation, and we are justified in believing that they will not fail. But we are still in total ignorance, as was the general Church in the first four centuries, of any evidence that our Lord desired to have Peter's faith and Peter's prerogative confined to one man, and in particular to the bishop of Rome.

"If all the Fathers," writes Dillingham (op. cit. p. 917.), "who interpret these passages in the Gospels (Mt 16:16-19, Mk 8:29, Lk 229.28, not a single one applies to them the Roman Bishop. How many Fathers have hurled themselves with these texts, yet not one of them whose commentary we possess—Origen, Chrysostom, Hilary, Augustine, Cyril, Theodoret, and those whose interpretations are collected by Eusebius—seems to have thought the faintest hint that the primacy of Rome is the commission and promise to Peter! Not one of them has explained the rock or foundation on which Christ would build His Church of the office given to Peter to be transmitted to his successors, but they understand it to be the Apostle himself, or Peter's confession of faith in Christ; often both together. Or else they thought Peter was the foundation equally with all the others, the Twelve being together the foundation-stones
of the Church (d. 330, cxxi. 14). They did not regard a power first given to Peter, and afterwards conferred in precisely the same terms on the other Apostles, as anything peculiar to him, or hereditary in the line of Roman Bishops, and they held the symbol of the keys as meaning just the same as the figurative expression of binding and loosing.

Every one knows the one classical passage of Scripture on which the whole of the Papistry of Rome is based. The symbol is a genuine one, which Peter was actually taught by Christ himself. "When thou art converted, strengthen thy brethren." But these words manifestly referred to Peter personally, to his denial of Christ and his conversion; he is told that he, whose failure of faith would have been referred to the whole Church, and the other Apostles, whose faith would likewise fail, it is directly against this case of the passage, which speaks simply of faith, first wavering, and then to be confirmed in the Mystical dignity of Christ, to find in it a promise of future infallibility to a successor of Peter as a vital part of the office of Peter first held in the Roman Church. No single writer to the end of the Seventh Century dared of such an interpretation; all without exception—and there are eighteen of them—explain it simply as a prayer of Christ, that His Apostle might not wholly succumb, and lose his faith entirely in his approaching trial. The first to find in it a promise of privileges to the Church of Rome was Pope Agapetus in 660, when trying to avert the threatened condemnation of his predecessor, Honorius, through whom the Roman Church had lost her boasted privileges of doctrinal purity.

Now the Tridentine profession of faith, imposed on the clergy since 1541, contains a veneration of the Holy Scripture otherwise than in accord with the unanimous consent of the Fathers—that is, the great majority of the Sacred Councils. The Council of Florence and the Council of the Lateran (679-680) were the first to place the authority of the Church above the authority of Jesus Christ as the sole and infallible norm of faith. This was a doctrine of papal infallibility, as it was pronounced in the form of a gift of infallibility promised by Christ to the Pope.

Human nature and political analogy can supply many reasons for vesting in the single holder of spiritual and temporal power such a claim as that of Peter on earth. Yet no traffic in human reason can reconcile the scheme of infallibility with any warrant in the words of Jesus Christ for such a claim. Think what one may about the limits and nature of the ancient spiritual authority, we cannot regard the tradition of the infallibility of the Popes either without a full discussion of the matter, and entirely without a single allusion either to Rome or to its Episcopate. Think what one also may about the legitimacy of a doctrinal 'development', the postulate of natural and moral laws as authoritative to bind men's consciences to Christendom seem to call for a delicate explanation.

The fact is that, while all the world deferred in many ways, especially after Constantine's accession, to the See of Rome, while the frequent dependence of lesser sees upon its guidance and direction prepared for the Western Church's ultimate submission to its authority, and while the bishop of Rome was a great power to reckon with in any ecclesiastical interest, the ancient Church betrayed no sign of any recognition of his infallibility. A patriarch among patriarchs, bishop of a church which came to overshadow, and usurp the Empire itself since it proved itself more lasting and more trustworthy, heir to traditions of office without rival in historical prestige, it was inevitable that to Rome a pope should be given, and should accept, a rank of his own as the centuries attested the permanence and the power of his office. No competent student of history would doubt the authority of the papal name as a historic fact. But it is plain that neither the early popes themselves nor the rest of the world credited their office with infallibility. The apocryphal See of New Rome erected by Constantine in his Eastern capital never acknowledged its authority as overruling its own. Councils, deemed canonical by East and West alike, were convened and issued their decrees without submitting them to the pope or final approval of the ruling pope. No one suggested that the existence of the Romanae See made Councils unnecessary, much less presumptuous and incompetent. How much might have been saved to the Christian world if direct appeal to an oracle in the Eternal City had been recognized as sufficient to decide all controversies in faith and morals! But, as Döllinger (op. cit. p. 64 f.) says:

'None of the ancient confessions of faith, no catechism, none of the pastoral writings composed for the instruction of the laity, none of the books of the Fathers, none of the writings of the New Testament, none of the teaching of the Church, nor can a single dogmatic decree issued by one of them be found during the first four centuries, nor a trace of the existence of any. Even the controversy about Christ kindled by Paul of Samosata, which occupied the whole Eastern Church for a long time, and necessitated the assembling of several Councils, was terminated without the pope taking any part in it. So again, in the chain of controversies and discussions connected with the names of Theodotus, Arsenius, Nectos, Sabellius, Beryllus, and Lucian of Antioch, which troubled the whole Church, and extended over nearly 150 years, there is no proof that the Roman Bishops acted beyond the limits of their own local Church, or accomplished any dogmatic results. In three controversies during this early period the Roman Church took an active part,—the question about Easter, about heretical baptism, and about the oneness of the Church. In all three the popes were unable to carry out their own will, and to impose their decision. The other Churches maintained their different usage without leading to any partition of Christendom. Concerning the dispute between the bishops of Sardica and Liburnia (337-340) the first pope took part in the course of events, but only increased the misunderstanding. The bishops of Sardica not only asserted an arched Sabellian, orthodox at his Roman Synod and Liberius purchased his return from exile from the same concessions to Athanasius, and signing an Arian creed. The apostacy of Liberius sufficed, through the whole of the middle ages, for a proof that popes cannot decide doctrinal questions. The bishop of Rome was ever appealed to for a decision, it was understood that he was desired to call a Synod to decide the point at issue. But at the same time the whole Church never conceded the most important definition of faith since the Nicene, 'by first formulating the doctrine of the Holy Ghost, the Church of Rome was not represented at all; only the decrees were communicated to it as to other Churches. . . . Where the Popes (Sacrilegium) in 1122, as well as other people. . . . During all the four centuries Constantinople alone decided dogmatic questions. The bishop of Rome of course was ever appealed to for a decision, it was understood that he was desired to call a Synod to decide the point at issue. But at the same time the whole Church never conceded that the decrees were communicated to it as to other Churches. . . . Where the Popes (Sacrilegium) in 1122, as well as other people. . . . During all the four centuries Constantinople alone decided dogmatic questions. The bishop of Rome of course was ever appealed to for a decision, it was understood that he was desired to call a Synod to decide the point at issue. But at the same time the whole Church never conceded that the decrees were communicated to it as to other Churches. . . . Where the Popes (Sacrilegium) in 1122, as well as other people. . . . During all the four centuries Constantinople alone decided dogmatic questions. The bishop of Rome of course was ever appealed to for a decision, it was understood that he was desired to call a Synod to decide the point at issue. But at the same time the whole Church never conceded that the decrees were communicated to it as to other Churches. . . .'
times of heated controversy and frequent deposi-
tions. 

It provided that 'as due to the honour of St. Peter, the
Roman bishop Julius shall be informed ... by letter, in
order that, under the presidency of his prebendar, by
a new trial may be held by bishops of a neighbouring
province' (c. 10). 

In the 5th cent., Augustine's macho abused saying
in a sermon (xxxvi. 10), 'Rome has spoken; the
case is ended, had reference to local African con-
troversies, and does not contradict his reiterated
adherence to Cyprian's position. For him, Coun-
cils as well as bishops were fallible, though vener-
able, and appeal might be taken as need arose.

To give his woe an ecumenical application is
unhistorical. But the postscript to Leo the Great
enhanced the dignity and power of the Roman See
in all eyes. In 445 the Emperor Valentinian gave
supreme judicial and legislative power to it over
the bishops of Italy and Gaul, and extended to it
as well the temporal power which his successor
Fridius held in 449 on the death of the exarch. Leo's
Epistle to Flavian in 449 was the first doctrinal utterance
of a pope to be accepted ecumenically; but it did not
receive any canonical force until it had been
announced to the Council of Chalcedon, and examined by
the bishops therein assembled, and ratified by them
in a procedure whose necessity it author acknow-
ledged. But Leo's successors quickly dissipated the
authority which his policies had achieved. The Historia in
466 pronounced orthodox the 'Three Chapters' of
Theodore, Theodore, and Ibas, which had been
announced by the Fifteenth Ecumenical Council, to whose
decree he bowed in 554, saying, very sensibly, that
it was not disgrace to perceive and recall a pre-
vious error. Even more serious was the fate of
Leo's Epistle. In 559, in two public letters to
Eastern patriarchs, he had endorsed the Monothelite
hypothesis, and after his death was solemnly condemned
by a heretic at the Sixth Ecumenical Council without
any dissentient voice, in presence of the legates of
his successors—a sentence which his own suc-
cessors carried out, expunging his name from
the liturgy.

Until the fabrication of the Isidorian decrees
adored, not an episcopal and patriarchal
prerogative was effectively claimed by the popes or
conceded to them; that prerogative no one in Church
or State seriously disputed. The bishop of Rome
could not summon Ecumenical Synods; he had
to petition the Emperor to do so. It was not his
right to preside over them in person or by legate. Rome
was not their usual place of meeting. The
Pope's signature was not required as a final
formality to validate their decrees. His legislative,
administrative, and judicial powers, i.e., his sovereign
crown, did not extend beyond his own province; neither African nor the East acknow-
ledged it. No councillor and no advisor enjoyed the
same acceptance or the same influence; but as yet
there was no Curia or sovereign Court, no tribu-
rate, no grant of foreign dispensations from the
obligations of ecclesiastical law. Of the power
of the keys, the power to bind and loose, the power
to excommunicate, Rome had no monopoly, either
exclusively or conceded. But there was a spirit at
work which operated steadily in the direction of
securing these things. The Sardican canons, the
name, prerogative, and throne of Peter, the
social influence and appellate council of Rome, were
stepped up to increasing accent. As the
Empire weakened, the papacy found its oppor-
tunity and became heir to its secular methods
and spirit as well as to its dignity and power. The
sixth canon of the First Nicene Council had recog-
nized the rights of the Roman See over part of the
Italian Church; but had assigned similar rights to
the bishops of Alexandria and Antioch over their
patriarchates; but the local Saxon canons were
speedily confused with it in the West as the papal
consultant claims were advanced by Innocent I. as
recognized by 'the Fathers' and the Synod. At
the Council of Ephesus it was affirmed by the
Roman legates that Peter lived and judged in the
persons of his successors in the Roman throne.
Leo I. reiterated the same plea. But the Council
of Chalcedon, in its 25th canons, maintained that
Rome owed its primacy to the decision of the
Fathers in view of the political eminence of the
city, and, in spite of Leo's opposition, it recognized
Constantinople as a patriarchate of the highest
rank, second only to Rome in precedence, and
equal to Rome in rights. When Leo declined to
recognize that canon, he did not base his action
upon any complaint of injury to his own episcopal,
or on the lack of his consent, but only on the in-
justices done to the older patriarchates. The East,
especially those of Alexandria and Antioch—the
one founded by Mark, Peter's disciple, the other by
Peter himself before he went to Rome and on
the alteration of the Nicene canon. When dealing
with other than Eastern bishops, he made much of
the 'merit of St. Peter' as a ground of Roman
dignity, and strengthened his disciplinary hold upon
the West. But nothing demonstrated so strikingly
the long distance which the papacy had yet to
travel, before it reached its final claims, as the
re-
buke of Gregory IV. to be addressed formally to
the patriarch of Constantinople, who assumed the
title of Ecumenical Bishop (lib. v. ep. 18; lib. vii.
ep. 33; cf. von Hase, op. cit. i. 225; Salmon, op. cit.
p. 435).

'it is with tears that I say that a bishop, whose duty it is
to guide others to humility, has himself departed from it. Paul
was unwilling to suffer that any one should call himself after
him or after Apollo. What art thou prepared to say to Christ,
the Head of the universal Church, at the last day, when thou
seekest to bring all members of the Church into subjection to thee
by means of the title of the universal ruler? This haughty
name is a copying of Satan, who also exalted himself above all
angels. ... Far from Christian honour be that blasphemous
title, in which all priests have their honour taken away, while
the one foolishly usurps it.'

Gregory did not hesitate to contrast his rival's
pretensions with those of St. Peter, who, although
first of the Apostles, did not place himself in a super-
ior rank to his brethren—a piece of historic-
ally sound pleading which was far from subsequ-
ently embarrassing to the pope's successors.

The subsequent course of the papal development
is a matter of common knowledge. The decreetal
gergories, beginning about the middle of the 13th
cent., many of them motivated by provincial, not
primarily Roman, ambitions, assisted powerfully
the extension of the papal primacy into an abso-
utely monarchy combined doctrinal with disciplin-
ar. powers, required papal confirmation for the
decrees of every Council, and elevated the bishop
of Rome into the sovereign bishop, from whose
hands all other bishops receive their authority
in matters of faith as well as government and order.
It was assumed that the extension of papal dignity
and authority over bishops would liberate them
from secular control and juridiction, a power
which survives at the present time in full vigour.
But, in liberating the provincial bishops from one
yoke, another yoke was imposed. Secular authority
was avenged. The bishops found this delicious and
the grasp of a power once spiritual, now both secular
and spiritual. The power from which they shrank
at the slightest doubts of the doctrines laid its firm hand upon them in
the Vatican. For a papacy which wielded temporal
power as a spiritual prerogative it was impossible
to exclude dogma from the sovereign function.
The papacy accordingly assumed control of synods.
greater and lesser; it alone could convene, secede, and dissolve them. It assumed the appointment and institution of bishops; dealt with vacant sees; made subjects of princes and kings; and claimed the right to override Councils and the teaching of the Fathers. The liturgical achievements of Gregory VII made it easy for the most extreme views of papal authority to impress the imagination of Christendom as a realizable ideal. He did not hesitate to claim personal supremacy as the successor of Peter, and to make the supernatural holiness of popes the foundation of their absolute power. ‘In Peter’ they had ‘power to bind and loose on earth and in heaven. They were subject to no man’s judgment, but answerable alone to God. The forged decreals of Isidore and Gratian were eagerly employed by an age already prepared for them; and in good faith medieval Schoolmen, like Aquinas, drew from them, and frequently from corrupted texts of conciliar decrees and writings of the great Fathers, materials which confirmed their confidence in papal autocracy. In the 13th cent. the rise of the great monastic Orders, under vows of obedience through their generals to the pope, and exempt from episcopal authority, increased yet further the extraterritoriality of the papacy. While the Fourth Lateran Council of Florence, 1439, short-lived though its recognition of the Roman primacy proved, revealed the extent to which dignitaries of the Eastern Church were prepared to abate their claims and their rivalry, understanding of the metrical character of the Christian period which was so soon to cripple them, and leave Rome without an effective rival in the ecclesiastical world. Unfortunately, however, for the papal regime, successive papacy among the Papal States brought with it no guarantee of a noble employment of its pernicious privileges. Instead there ensued a swift deterioration of the papal personnel, and even more of the papal influence. At length Christendom was amazed and shocked by the spectacle of rival popes, and disgusted and revolted by the gross luxury and unconcealed immorality of the Vatican. The secularization of the Roman church was responsible for both scandals. Both combined to make the work of reformation not only an urgent and clamant need, but by their noeticity a thing possible. In an age of new learning and kindled imagination, an age which explored the Apostolic past as enthusiastically as it thought about the future—the papacy proved incapable of supporting its triple crown. The lofty theory of a world Church, and a practical autocracy broke down abjectly before the Great Schism and the Great Scandal. With three claimants of the heritage of Hildebrand in power, the common sense and the reserved energies of Christendom asserted themselves in the Reforming Councils of Constance and Basel. Whatever popes in their majesty had asserted, their subject bishops, met in Council and supported by the conscience of the Christian world, dealt sternly with their rival overlords. The Church’s necessity knew no re- nunciation of law. The Council pronounced deposition. The rival claimed later another, submitted. For a brief period the Councils were to its own again a supreme authority in the Church. In its 4th and 5th sessions the Council of Constance decreed that every lawfully convoked Ecumenical Council representing the Church derives its authority immediately from Christ, and extends it to the whole world, in matters of faith, in the healing of schism, and the reformation of the Church. Without protest, the painfully elaborated doctrine and practice of papal infallibility and mon- archy was cut down to modest proportions by a lawfully convoked Council, which appointed the new pope, Martin V., as well as deposed his pre- 

VOL. VII.—18
for help to the then proscribed Society of Jesus, his policy had been more and more closely identified with the principles for which that Order had worked and had suffered. His first great experiment in the direction of his successor on the Immaculate Conception of the Blessed Virgin Mary in the bull Ineffabilis Deus, read before a Concourse of Cardinals and Bishops in St. Peter's, in the same year, was not only cloaked by other authority, but than that of our Lord Jesus Christ and the blessed Apostles Peter and Paul and . . . our own. Though it was preceded by a formal episcopal consultation of the individual bishops throughout the Church, the Decree was uttered without conciliar assistance, and, with the long succession of dogmatic judgments which were gathered together to form the Syllogism of Errors, immediately the practical advent of consummated infallibility. Nothing was left for the Vatican Council of 1870 to do but to add the ceremonial form of a conciliar sanction, and to furnish the already operative principle with a definitive form of words. For good or for evil, the vision held out before the eyes of a long line of pontiffs seemed to be realized in accomplished fact. The work of Loyola and Loyola and de Cajetan, Bellarmine, and Torquemada, appeared to have been justified. In faith as well as morals and discipline the pope was at last declared, in his own words, as the official preacher of the Christian world, supreme and infallible.

The terms of the Decree and of some portions of its setting, in Manning's rendering, are as follows (cf. his Casuist. System: Three Pastoral Letters to the Clergy of the Diocese, p. 214): the words of the First Dogmatic Constitution on the Church of Christ, chs. iii. and iv.):

We teach and declare that by the appointment of our Lord the Roman Church possesses a supreme, universal, and extraordinary power over all other Churches, and that this power of jurisdiction of the Roman Pontiff, which is truly episcopal, is immediate: to which all, of whatever rite and dignity, both pastors and faithful, both individually and collectively, are bound, by their duty of obedience, to submit, not only in matters which belong to faith and morals, but also in those that appertain to the discipline and government of the Church throughout the world; so that the Church of Christ may be one flock under one supreme pastor through the person of the bishop of Rome, both of the faithful and of all prelates, in the same way as the same pope of our Lord Peter, the foundation of the Church, in the exercise of the same authority as that of the Roman Pontiff. The said Council teaches that the doctrine of teaching also is included in the apostolic primacy, which the Roman Pontiff, as the successor of Peter, Prince of the Apostles, possesses over the whole Church, and that his See has always held, the perpetual governance of the Church confers, and Ecumenical Councils also have declared, especially those in which the East with the West met in the union of faith and charity.

To satisfy this pastoral duty our predecessors made unceasing efforts that the military doctrine of Christ might be propagated among all the nations of the earth, and with equal care watched that it might be preserved genuine and pure where it had been received. Therefore the Bishops of the whole world, now singly, now assembled in synod, following the long-established practice of the Catholic Churches, and the allowance of the ancient and sent word to this Apostolic See of those dangers especially springing up in matters of faith, that there the losses of faith might be most effectually repaired, where the faith cannot fail. And the Council, according to the exigencies of times and circumstances, sometimes assembling Ecumenical Councils, or asking for the mind of the Church scattered throughout the world, for the help of the Successor of Peter, which helps which Divine Providence supplied, defined as to be held those things which with the help of God they had recognized in harmony with the sacred Scriptures and Apostolic Traditions. For the Holy Spirit was not promised to the successors of the Lord to make known new doctrine, but that by his assistance they might invocably keep and defend anything assumed by the resolution or deposit of faith delivered through the Apostles. And indeed all the venerable Fathers have embraced, and the holy orthodox Doctors have maintained, their apostolic doctrine: knowing most fully that this See of holy Peter remains ever free from all heresies, and is always guided by the Holy Spirit as is promised to the Lord our Saviour made to the Prince of his disciples: I have prayed for thee, that thy faith fail not: and, when thou art converted, confirm thy brethren.

This gift, then, of truth and never-failing faith, was conferred on Heaven upon Peter and his successors in this Church, that they might perform their high office for the salvation of all; that the whole flock of Christ, kept safe by the patriarchal staves of Peter, and the Apostles, should be subject to them, and as a guardian of the purest food of error, might be nourished with the pasture of heavenly doctrine; that, the occasion of such a grace being granted, the whole Church might be kept one, and, resting on its foundation, might stand firm against the gates of hell.

But since in this very office of the extraordinary efficacy of the apostolic office is most of all required, not a few are bound who take away from its authority, we must bind ourselves solemnly to assert the prerogative which the only-begotten Son of God vouchsafed to join with the supreme pontifical office.

Therefore, faithfully adhering to the tradition received from the beginning of the Christian Faith, that Jesus our Saviour, the exaltation of the Catholic Religion, and the salvation of Christian peoples, the Sacred Council, in agreement, we teach and define that it is a dogma divinely revealed: that the Roman Pontiff when he speaks as cathedra, that is, when in discharge of the office of Pastor and Doctor of all Christians, by virtue of his supreme apostolic authority, he defines a doctrine regarding faith or morals to be held by the Universal Church; by the Divine assistance promised to him in blessed Peter, is possessed of that infallibility with which the Divine Redeemer vouchsafed that His Church should be endowed for defining doctrine regarding faith or morals: and that therefore such definitions of the Roman Pontiff are irrefutable of themselves, and not from the consent of the Church. But if any one—whatever may God avert—presumes to contradict this our definition, his error is condemned.

It is not necessary to enter into a detailed discussion of the somewhat painful features of the process through which this definition came to light, and of the policy which issued in this long-desired result. Nothing would be easier than to name the Vatican Council more representative of ecumenical Christianity than on technical grounds to pronounce the Vatican Council no true and Ecumenical Council, e.g., because of its lack of unification in debate, in conference, and in final vote, or because of papal interference and directness, or because of its lack of voluntary unaniuity. The result is not merely that the pope, with the approval or submission of the Council. The papal correspondence with the bishops of the Church had been tested in its attitude beforehand, and confronted such an individual with the perspective displeasure of the Vatican as an inevitable consequence of dissent from the policy of their venerable Head. Eminent theologians, like Dillingen and Newman, known to be hostile, were not officially invited to attend. The preparatory delegates of the same mind who had to be invited as officii were harassed throughout the proceedings by papal remonstrances. The proceedings were anything but reassuring to the mind of the reader: Lord Acton's account in the North British Review, litt. [1871], art. 'The Vatican Council'. But, while it is true that learning and ecclesiastical statescraft were in irremediable opposition, the opponents of the dogma were in an impossible position from the first. For 'Decrees' are essentially matters of statecraft, not of learning, science, or philosophy, and are provisorily fashioned with reference to expediency and opportunism, not with reference to truth. The ground on which alone they dare or desired to fight the issue was that the Decree, though true, would be unholy. They were Inopportunists, whose in- tense feeling in debate and in controversy threw grave doubt upon the genuineness of their faith in the doctrine. It is true that the Holy Father, the pope, and of Council to trust the divine illumination and guidance in serious and free deliberation and conference was never more distinctly displayed. For purposes of even religious censorship, the majority were entitled to bring their case of mere timelessness. They knew their own mind; they knew the mind of their beloved and compassionate pope; they were smarting under an acute sense of injustice and humiliation inflicted upon him and upon the Church by the times; they
were practical men bent upon drawing tighter the bonds of unity and discipline; and they, not their more brilliant antagonists, were the true representatives of the genius of the Roman Catholic Church. Without being philosophers, they grasped the logic of the system to which they belonged more easily than such acadiests as Newman and Dillingham. No one can survey the past of the papacy without recognizing that, however undisguised and desperate the method was by which its power was exercised and defended, it was profoundly consistent with the traditions of the papal Church. A Church which gave authority so exalted a place in faith as well as government, whose bishops were bound to a sacred oath to obey the bishop of Rome and accept his conscience and his judgment as their own, a Church which made external unity one of its vital notes and counted coercion when necessary a duty, could not be accused of betraying its past by crediting its visible Head with that infallibility that absolute assurance of divine guidance, without which unquestioning obedience to him was manifestly a crime. In von Hase's words (op. cit. 1, 251), infallibility is "the supernatural condition of the unlimited power." From one standpoint the Decree of 1789 is the redactus ad absurdum of the venerable Roman method of securing unity, a method as old as the Church, and as really a part of Jesus, as the Church of God could forbid those who followed not with them, as old as the contention of the Apostles concerning precedence. From the opposite standpoint it was the consummation of the system, the crown or climax of its development. In normal circumstances the Infallibility of the See, the Vicar of Christ, might have been doubted, but to the Vicar of Christ may intensify the care with which his peers in the Sacred College select him from their number. It is questionable whether the dogma concerning the infallibility of the Church, more distinguished Cardinal prophesied that, as worded finally, it would be such as to prevent any substantial exercise of the power to innovate. Newman's own fears were considerably allayed when he read its terms. In the history of the reception of the authoritative publication, prepared by Fathers Franzolin and Klugten (Ward, Life of John Henry Newman, I., 391), occurs the statement: The Roman Pontiffs, as the statesmen of ages and nations have made advisable, at one time calling Ecumenical Councils and deciding on the opinion of the Church dispersed through the world, at another by means of particular Synods, at another using other means of assistance which Divine Providence supplied, have defined those things to be held which by God's aid they had known to be in agreement with sacred Scripture and the Apostolic Traditions, or the Holy Ghost was promised to the successors of Peter, not that by His revelation they should disclose new dogme, but that by His assistance they might preserve inviolate, and expound faithfully, the revelation or deposit of faith handed down by the Apostles." Newman recognized all that, but based his fears less upon the risk of papal vagaries or arbitrariness than upon the fact that 'there will necessarily always be room about the Pope second-rate people who are not subject to that supernatural guidance which is his guidance' (op. cit. 298). The reason also is that no one but the ruling pope can authoritatively determine what is and what is not 

"cathedra" definition and de fide. Newman, Manning, and a host of theologians tell us, each in his own fashion, what are the tests of this august qualification, and unlimited ingenuity has been expended upon the problem. One by one the awkward instances of historical misunderstanding on the part of popes in the definition of doctrine have been taken in hand with a view to their elimination by hook or by crook. When misunderstanding has to be admitted, it is pleaded that the act was an indiscretion and less than ex cathedra, and that the intention was good, but that the pope was under compulsion, and so on. The result has certainly been to fall, as far as subordinate opinion can curtail, the limits of the pontifical power; but the real foundation for legitimate anxiety lies in the fact that in any crisis the personal will of the pope must prevail by virtue of his unbounded claim to obedience in faith and discipline. It is obvious that matters which pertain to morals and the discipline of the Church, not to speak of faith, may touch at a thousand points the private conscience, the political and social interests and the interests of the civil powers. Gladstone in his powerful and impressive attack upon the
INFALLIBILITY

dogmas has no difficulty in exposing this danger, and in expounding the legitimate cause of the threatened State. But in the statesman for once he forgot or sank the churchman, and his argument is open to the retort that the Church has the same need for autonomy, the same right to legislate for itself with sovereign authority, as the State. By all the principles which fence about the jurisdiction of the Crown, the tithes may constitute the spiritual and temporal enemies with other. With no consistency can civil power reproach ecclesiastical power for copying its own methods and invoking the same instruments of order. The statesman open to the retort that the Church has the same need for autonomy as the State.
does not exhaust Him. His words have not passed away, but are still spirit and life to those whose ears are gladdened and solemnized by them. His Church has not succumbed to the gates of death.

He has never been, and never will be, realized by men at the present time. Social life is reckoning with Him on a scale never previously attempted. He is transforming the world more radically than science and invention can. In all that constitutes spirituality a revelation of Jesus Christ, and His Spirit is the common faith of Christendom.

By the fruits of His contact with us we know Him. Every evidence of His divinity is testimony to His infallibility in thought, word, and deed. He is not only flawless but unassailable.

6. Infallibility of the Christian conscience.—
The Christian conscience, or consciousness, human conscience stimulated, educated, transformed, transfigured, possessed by the Spirit of Christ, is, for the individual, the nation, the Church, the world, the final arbiter of all duty and all faith. Whether we speak of Christ dwelling in the soul, or of the Christian conscience, our meaning is essentially the same.

The seat of judgment on earth is that tribunal within the heart. The Spirit of Christ, the Christian Spirit, is the sum of all revealed authorities. It is the power that animated the Christian Scriptures and breathes from them still, that inspired the Creeds and Confessions, that purifies and sanctifies the nature of that only-known judgment of clergy and laity of pope, bishop, presbyter, and deacon alike. It is invoked to constitute and sanctify and overrule the deliberations of Synods and Councils. Committed to the two or three met in the name of Christ, and promised to the solitary believer whose isolation it extends not less than to the world-wide fellowship of Faith. It is not the monopoly of the individual, nor is it the monopoly of the organization. Its activity is as universal as truth, as various in its embodiments. All mechanical or official oracles of the Christian Spirit are to be regarded with distrust. Our a priori assumptions of the modes in which God must have provided for our need of guidance and enablement are very liable to be overturned in the school of daily exercise. Every Scripture does not necessarily or necessarily kill or deaden faith and discernment but without unreasonable reliance upon the mere word of an official or a caste or an organization, however denominated and dedicated, is the only way in which Church life can assure infallibility exclusively in an order of office-bearers who are human, humanly trained, and humanly appointed forers the very liberty of God to choose His instruments as of old from every class, every race, and every type of men.

One may honour the faith in divine providence and divine predestination which can bind together a great communion of believers, yet recognize the dangers, which inhere in it, of superstition, arrogance, and illusion. To err is human: not to err is a divine perfection. To learn through error is our lot, both Churches and men. Therefore it is not a question of which is the right part of both, but only of how we avoid believing that God's Spirit will not fail us, of how we avoid the presumption of believing that we shall never fail God's Spirit. Timorous mistrust and religious persecution is an attack on the faith. To trust majority-findings in all cases is as fatal as to trust no one but oneself. Genias is greater than majorities or averages. An inspired priest is a higher gift than mere membership or consecration prelate or pope. God has sanctioned and hallowed many forms and instruments of authority in the Church in the world. The teaching of history, which is the sphere of His providence, seems to admonish us to learn from all, to give all their just place in our confidence, to be loyal to their dictates according to our conscience. The promise stands that the Church will not perish, but the promise also stands that the Spirit will not fail the individual believer. The heart of the Master-shepherd goes out to the one shepherd even more than the myriads by fifty and nine. One with God is a majority. Where the Spirit is, there is the Church. Where the truth is, there is the Church. The servant is not greater than his Master. If Christ disclaimed the power of his prerogative, the name of 'Jesus' belongs to God, and if Christ disclaimed or deprecated titular dignity and precedence, interpreting His Masterhood in terms of service, there is surely danger and dissimulation in the claim of particular human infallibility. Earthly authority, even the best, is intended to educe its subjects into independence of its help and its restraint. Every historic authority, as Saltzler justly says, demands at once respect and criticism. One may be loyal without being obsequious. One may be obedient without being a slave. It is as dangerous for obedience as for authority to be blind. For both there is no organ of vision save the eye, no organ of truth save a reverently open mind.

There have always been,' wrote W. E. Gladstone in his Foundations (London, 1870), 'and there still are, two proportions of our race, and those by no means in all respects the same, who are the two distinct schools of Churchmen, in times of religious disturbance, to discharge their spiritual responsibilities by power of attorney. As advocating Houses find Custum in proportion, not so much the body of the people as the resources as to the magnificence of their promises and assurance, so theology is divided into those whose claims are sure to pay, by widening certain circles of devoted adherents, however it may repel the mass of mankind. There are two special encouragements to the former of the two schools of the present day: one of them perhaps unconscious but manifestly leading of some, outside the Roman prelacy, to the ancient claim of Church power; the other the reaction which is and must be brought about in favour of superstition, by the levy of the destructive speculations as widely current, and the notable hardihood of the anti-Christian writing of the day (p. 66).

There are those who think that the craving after an infallibility which is to speak from human lips, in chapter and verse, upon each question as it arises, is not a sign of the strength and healthiness of faith, but of the diseased vitality of its weaknesses. Let it, however, be granted for the sake of argument that it is a comfort to the infirmity of human nature, and that it implies a prompt and clear and unequivocal solution of its doubts, instead of wasting on the Divine pleasure, as those who watch for the morning, to receive the supplies required by the Church's moral trials. A recommendation of this kind, however little it may reduce the morality of philosophy, does not seem to me to have probably a great power over the imagination and the affections of mankind.

One thing is clear: Between the solid ground, the terra firma of infallibility, and the quaking, fluctuating mind of the individual, which seeks to find repose upon the face which it cannot cross. Decrees ex cathedra are infallible; but determinations what decrees are ex cathedra are fallible; so that the private person, after he has with all docility handed over his mind and its freedom to the Schola Theologorum, can never certainly know, never know with "divine faith," when he is on the rock of infallibility, when on the shifting quicksands of a merely human persuasion (p. 108).
INFANCY.

The period of individual life immediately following birth. In law, human infancy extends to the attainment of one's majority, usually the age of twenty-one years. In other than legal usage the term signifies, according to convenience, any number of years from one to seven. The present article concerns a period of about five years during which, in an unusually complete sense, the family is the child's educator.

1. The relation of infancy to moral evolution.

John Fiske has shown that the extreme unripe ness of the human child at birth and the extreme length of his immaturity are crucial points for intellectual and moral development. Here is the opportunity for accumulating experience, and through that experience for forming habits and principles. Applying this to morals, we may say that the prolongation of infancy in the human species makes character possible. The period of the child's life in which the principles of character are formed and then the stable monogenic family. It is chiefly from the family, in turn, that regard for others has radiated. Todd's "Life Begins," fewer 'sets,' and fewer of them are formed early, than in the case with other species of animals. Human societies are formed later, when the individual has already begun to form character.

2. The period basis of the beginnings of character.

At two points the body of the infant has the closest relation to his soul in the moral life. (c) In the presence of the habits and inhibitions of the life, incidental physical conditions, whatever good or ill, have a peculiarly pervasively effect. Wrong feeding, e.g., is a potent cause of depressed states, such as peevishness. Inadequate care, or overstimulation, produces nervousness. The infant's attitudes and position of comfort or their opposites reach far beyond the date of their occurrence, for all of them tend under the law of habit to become fixed as disposition. (d) The acquisition of muscular co-ordinations constitutes the earliest will-formation, which includes self-control and self-direction. Hence each of the following conditions is unfavourable to moral growth: swaddling the body so as to prevent free movement of any part; lack of objects to handle (though toys can easily be too numerous or too complicated); repression of free movement and experimentation; failure of the parents to play with the infant.

3. The moral endowment of infancy.

The individual begins life neither moral nor immoral, but the period basis of the beginnings of character is the birth of the infant. Yet it is true that the moral nature is inherent in the infant, whether unfavourable or neutral. Two questions, however, remain.

(a) Specifically, where, among the instincts and other unlearned tendencies, do we find the infant's moral nature? The answer, in general, is that a complex of unlearned tendencies towards truly voluntary social response is the moral nature. One of these tendencies, the moral sense or conscience, is not found in the same degree in other species. But the two do not of themselves constitute a genuinely moral endowment; otherwise, individuals would be born with this faculty. However, there must be provision, also, for the growth of an individual's will that may erupt into deliberative, discriminative, and generalized ideals the otherwise infallibly exercised social motive. Without individual wills there is no true society. We include, therefore, in the infant's moral endowment, his enjoyment in being a cause, his curiosity, his instinct for collecting and hoarding, and certainly instinctive self-assertions, as jealousy, and what Thorndike calls "nasty and submission" and "avoiding andwarnania behaviour." That is (b) the moral nature grows into moral character only under some sort of stimulus. What, then, is the special condition or stimulus under which an otherwise unlearned character is realized? The principle is that the child is formed through conflict within the same tendencies that have just been described. The character is being constituted by the same process: the same "nasty and submission" and "avoiding" and "warnania behaviour." Whether this is not, as Z., 1917, p. 125, states, that the infant makes a straight line such as might represent a single instinct, but a zigzag from predominating self-regard to predominant other-regard and back again. This is not necessary for an organized group. Thus arises conscience. In its earlier forms, which clearly appear in all well-regulated families, conscience is simply the coincident experience of egoistic and social impulses which have not yet found their unity. Yet the resolution of the conflict may begin very early. Even in infancy, when the.CH. E. L. Thorndike, Education, New York, 1917, ch. v., also The Original Nature of Man, 69 1913, ch. viii., a sense of social well-being, and genuine victories over more egoistic desire. That such victories bring a heightened sense of self-control and of self-realization is an indisputable evidence that a genuine moral nature is growing into moral character.

The common impression that the conduct of every infant is purely egoistic arises from the relative immediacy of his objects, i.e. his lack of social consideration. Such impulses act on the part of an adult would, indeed, occasion selflessness, since adult society depends upon the pursuit of remote ends; but the ends of infant conduct are often social in the sense of pleasure in the pleasure of others, and even, as we have just seen, in the sense of preferring the social good even when it conflicts with egoistic desire.

4. The infant's life in the family.

Not only has human infancy produced the human family; but this is the only social organization that is inherently adapted to the infant's moral needs. The family develops individuality; the members can hardly be dealt with as classes or impersonally. Yet the intimacy that prevails among its members, based partly upon natural affection, partly upon the smallness of the group and the physical conditions of home life, is the most powerful socializing influence in the world. Institutional care of children, in orphan asylums, can save the
conditions of physical health, but not the individualizing and socializing influences that are essential to normal moral growth. It is now an accepted fact that the social worker finds that a child who is deprived of his natural family connection should be placed, as promptly as possible, in another family, not in an institution.

Even the intellectual growth of the infant is best promoted by individualizing intimacy. The reason is that genuine intimacy between parent and child becomes reciprocal—the parent fondles and plays with his child, but also grants him access to nature thoughts, attitudes, and activities. The soundest educational practices provide a rich environment for the child, never fearing that he will partake too freely or extend his interests unduly as long as fellowship with mature mind is part of the situation. To answer a child’s questions in a serious way, to create situations in which his curiosity will lead him to ask important questions, to cultivate his imagination, and to enjoy with him mutual intellectual discovery, this is the proper method of promoting intellectual progress in infancy. Children who have an early intellectual development without forcing or abnormally high demands are admitted to such intellectual intimacy with their parents.

These considerations, to say nothing of freedom as included in the individual’s moral destiny, make it evident that the first virtue to be inculcated in infants is absolute obedience. What parent, moreover, is wise enough to prescribe rules that deserve such obedience? The first moral need of an infant is to act consciously as a member of the family group. This conscious mutuality involves law and obedience, but it gives content to the moral will as ‘absolute obedience’ does not, and it begins at once the process of acquiring freedom.

5. The infant and religion. — No one at the present day looks for innate ideas of God, but there is a common notion that infantile thinking is spontaneously animistic. If the term ‘Animism’ is used in Tylor’s sense of belief in spirits, then Animism is not spontaneous in the infant, for he acquires the notion of spirits just as he acquires other concepts. On the other hand, the abstractions that characterize adult thought have not yet been made; the infant thinks in wholes, and these wholes are of the sense order. Yet emotional this infant thought; it is no longer the anthropomorphic tinge to his objects. The reason is simply that the emotionality of a whole mental situation still inheres in particular objects as they appear in it; i.e., a strictly objective point of view, which implies abstraction of the object experienced from the experience itself, has not yet been attained. The infant’s mind moves freely within stories that attribute language and motives to any object of his experience. As early as the age of four there is delight in dramatic ‘make-believe,’ which, helping the infant to make himself and other persons definitely individual, helps also to differentiate persons from things. At this age, and even younger, one easily believes in God; but the nature of this belief appears in the acceptance of fairy stories, and stories of the ‘black man,’ so wrongly used by nurses to secure obedience.

This god-belief is not yet distinctly monotheistic, for neither the thought-problem nor the moral problem underlying monotheism has yet arisen. The common belief may be polytheistic, or simply vague. (See INFANCE, p. 340.) Further, the idea does not necessarily have any specifically religious value. The writer, after years of child-care, and the recognition of likeness between things, and doc

Inference. — All attempts at logical science assume that inference is a source, distinctive, effective, and authoritative, of knowledge. It is in view of these three characteristics that schemes are framed for the self-conscious revision of it, and that mutual criticism goes on between different logical systems.

1. Distinctiveness of inference. — Inferential knowledge is distinctive because of its dependence on other knowledge and to the child’s scientific and religious growth respectively, see CHILDDOM, § 4.) Further, the idea does not necessarily have any specifically religious value. The writer, after years of child-care, and the recognition of likeness between things, and doc

Infant Baptism. — See Baptism.
innate intrinsically worthy of belief or commended to us by the good and wise (see arts. LOGIC, NATURA). On these infinities is dependent, from its obvious dependence, Aristotle, in his theory of science, argued to the independence of other knowledge, though he could not for science, as he did for mere desire, appeal to the opinion of the good and wise. Hence he lost all sound basis for the share in the complete function of intelligence which should be assigned to sense-perception and intellectual intuition respectively—these being the independent ideas of the mind. Modern epistemology has raised the latter question more definitely. Kant’s logical teaching seems to accept as independent the whole interplay of the two faculties in sensibility and understanding, which are required by his epistemology, until it sinks into the distinct moments of reason and consequent, and then it becomes inference (Introduction to Logic, tr. Abbott, London, 1865, § vii.). Modern psychology has encouraged the growth of a list, such as that given by Mill: perception, conception, memory—the forms of immediate consciousness—by reference to which inference may be viewed. By these it is conceded that reality may be treated as a mere matter of degree. Even the ‘irrefutable datum’ contained in perception exists only through qualifications imposed by judgment, and the datum itself is an element of reasoning, while inference owes its stability to its place in total knowledge, so that the paradox which Aristotle wished to avoid by his theory of independent ideas, is acknowledged as a truth, and the system of our inferences is one that returns into itself as a circle (B. Bosanquet, Essentials of Logic, London, 1885, § ii., and Logic, Oxford, 1888, ii. 7). But this still allows a dependence that is relative.

2. Effectiveness of inference. Inference becomes worthy of its special theory through its effectiveness in sustaining our confidence with truth. Mill acknowledges it only when we believe a fact or statement by reason of some other fact or statement (‘Logic’, 1852, ii. 1. 1). Kant defines it as ‘the manner of thinking by which one judgment is derived from another’ (‘Logic’, § 41). Hamilton, consistently with the stress he lays on the concept as an instrument of thought, required merely a new definition of the relation of whole and part between the two concepts. While Hamilton’s requirement, as Mill urges (Examination of Hamilton’s Philosophy, London, 1872, ch. 19), is too slight, in view of the countless riches of truth open to us beyond our immediate consciousness, Mill’s own demand for belief in new facts is too stringent. It sterilizes both immediate inference and the syllogism taken apart from an inductive foundation, and perhaps even scientific induction taken apart from deductive applications in detail. And it might well excise the logical paralysis affected by Meno in Plato’s dialogue (Meno, 80 D) when he was invited to proceed to knowledge out of consciousness ignorance: ‘How will you know, when you light on a result, that this is what you did not know?’ Aristotle, with this affliction in mind, required merely that the manner of knowing should be new: ‘We possess knowledge after a certain fashion before induction or the assumption of a syllogism, but in another manner not’ (Aristotle). On these inference is written: ‘Much of inference consists in demonstrating the connection of matters that as facts are pretty familiar’ (Bosanquet, Essentials of Logic, p. 138).

3. Insufficiency of inference. The despair of Meno in regard to novelty was a sequel to the demand of Socrates for conciseness; and the union of these two requirements constitutes the crisis in pursuing any systematic logical theory. Mill’s insistence on new ‘facts’ hampers him throughout a long labour to show a satisfying authority. He unites the two requirements, as the primitive logic of Gotama did, in the ‘recognition of signs’. And he perversely incidentally the scholastic axiom of intensive reasoning to suit this conception and to mean that whatever possesses any significant attributes possesses the signification of which it is a sign. But that one thing can be a sign of another is not a truth that can be left in this primitive crudity; and Mill only slightly softens the crudity when he appeals to empirical or causal laws. These do, indeed, confer signification on facts, but, being themselves inferences from facts, they appear to have no more title to do so than facts have to assume it for themselves. Signification remains a mere transference from the unseen. In contrast with Mill, Hamilton’s choice of the minimum in his requirement for novelty allows inference to carry with it the full authority of the conceptual faculty, but at the expense of its relativity. With Kant, it has the authority of a law of understanding imposing the relationship of reason and consequent, while other logicians, with doubtful success, attempt some formula which pledges reality more definitely than a reference to understanding can do.

The logical forms and the laws of their application are the conditions through which each particular logical inference finds itself, and brings the connection of its ideas with one another into that form, which for Kant thought itself, is truth’ (Mill, Logic, Oxford, 1884, § 239). And it is sufficient for the reassurance of philosophy is accepted that the Kantian principle of rational consequence ‘is but the side, not the main body, of that whole tendency towards empirical thinking, of the fact that there is in the thought-content such an immutable inter-connection that if something is true then something else is true and something else not true’ (W. Windelband, in Encyclopedia of the Philosophical Sciences, vol. i. p. 20; see also Lasskij, iv. p. 240 E).

4. Immediate inference. If the same fact, understood through the same concepts, nevertheless comes to be known in a new way without a new reference to independent sources, there is immediate inference. Kant suggests the forms of such inference, in speech or in writing, the transition from one judgment to another appears as a change in the order of ideas, ‘A is B, ‘B is A’; or in the use of a new one rather than the other form of a pair of contradictory ideas, ‘A is B, ‘B is not A’; or in what may be described as the logical self-consciousness of judgment, ‘A is B’, ‘it is false that A is not B’. ‘Ways of knowing’ are merely schemes for the use of whatever equivalent expressions may be available for the same fact. To Kant they suggest distinct plans of synthesis in the interplay between sensibility and understanding, of which one may be a reason for the other; and he names them syllogisms of the understanding. And other logicians recognize an internal development of the concepts employed in a judgment, which alters the judgment in type, but not in substance. There may thus be a change from a historical import to a scientific, or vice versa. Some sovereigns are tyrannical, a tyrant may have sovereignty, but any contradictory idea may arise as a species complementary within an implicit genus: ‘Lovers are prone to jealousy. Lovers are not indifferent to each other’s friendship. Through the formula for this, ‘A is B, ‘A is not other than B’ is considered meaningless by Kant.

5. Mediate inference. Where the new way of knowing is through a concept of mediators and boundaries, ‘X is Y, ‘Y is Z’, the authoritativeness is due to some mediating idea, and the inference is entitled ‘mediate.’
A scheme of expressions with letters as symbols for concepts has been inherited by current Logic from Aristotle, to which nearly all examples of mediate inference can by ingenuity be made to conform. As a personal discipline in which the mediating ideas that is employed in any example, this scheme has been almost universally commended; but it fails to make clear the ground and hazard of the mediation. And its rules can justify only the classification of the inferences and subordinations of concepts which accompany inferential belief. That 'All men are mortal, and the king is a man and therefore mortal,' reveals the 'human' as mediating idea, and arranges king, man, and mortal in a classificatory or conceptual hierarchy. That 'Alexander, Muhammad, and the other persons of history have died, and these are men, and therefore man is mortal,' reveals the list of historical persons as mediating idea, correlates the list with 'man' as a class concept, and subordinates this to 'mortal.' Nature, however, as Mill contends, has not arranged all the objects of the universe into definite a priori classes (Logic, people's ed., London, 1884, ii. 2, § 2), and we might add that neither does the universe present itself as a museum of permanently assorted attributes. And in the problem of personal identity it already accomplished that enables us to systematize our concepts either in extension or in intension, or to correlate a list with a concept.

6. Inductive Deduction. — A more material value may be given to such schemes as representing a plan of co-operation between different minds in building up a common inferential system. The insight transforming incident into generalization, or the mind that will make a rule, may be accomplished by one mind; and concrete expectation may be framed accordingly. 'The king is mortal,' by another. The rules of the deductive syllogism mark a dividing line between original and interpretative thought in their co-operative function, whether the personality requiring the distinction be that of teacher and disciple, audience and orator, legislator and magistrate, and the like, or otherwise. Mill considered that deductive interpretation does not amount to inference unless there is a reference back to the original datum for the sense. Thus (p. 79, § 4). If, however, the formula of authority be not merely understood as a meaning, but also adopted by the interpreter as a conditioned rule for his own beliefs, and not used simply as the interpretation of the rule, there really arises in the passage from rule to instance a 'new way of knowing.' The traditional maxim for the deductive syllogism—whatever is predicated concerning a class distributed may be predicated in like manner concerning anything contained therein—does not express this. But Kant's maxim does: Whatever fulfills the condition of a rule falls under the rule itself (Logic, § 67). And it is relatively to such inference that Gotama's inclusion of extrinsic authority, as an independent source of knowledge, along with perception and intuition may be still applied.

7. Demonstrative Deduction. — Independently of authority as a source, the deductive insubordination of concepts also represents inference where it is other individual and their fulfillment exemplified, intuitively, that is to say, when the occasion of inference is what has been known in widely separated epochs of philosophy and science that a doctrine (Gotama), primary scientific principle (Aristotle), a priori synthesis (Kant). Mill as an empiricist in epistemology would reduce this kind of inference to the same level as the interpretative—a treatment which is the less plausible in logic because the class extensions so natural and useful in the interpretation of experiential knowledge are here a superfluous gloss on the demonstration. It is as easy to see that a triangle ABC, constructed in Euclid's 'axioms,' is not by definition without referring to anything outside that figure, as with the aid of generalizations.

Where intuition fails us, and, according to empiricists, in all knowledge, the ultimate occasion of inference that the intuitively admitted be the coincidences and sequences of experience, and the 'new way of knowing' converts special features of these into a 'conditioned rule' for our expectations. The universality of the rule is not the 'logical' or a priori universality conferred by intuition (Kant, Logic, § 81), but analogues to it—a reaching towards 'the thought by which all things through all are guided' in the flux of Heraclitus. Intuence here is 'belief' in contrast with strict knowledge (cf. art. BELIEF [Logical]); and Kant entitles it 'syllogism of reflective judgment.'

8. Enumerative Induction. — Where many experiences repeat the conception of some attribute with the instances of a given concept, we infer the concept as the condition for a rule as to predicting the attribute. The concept may be simple, as 'metals conduct electricity.' From perception memory results, and from repeated collections of the same phenomenon come `natural regularities, experience, or from the entire universal which is retained in the mind as a principal element of the elementary principle of art and science' (Arist. An. Post. ii. 19).

Recurrence has no meaning except when environments or specific determinations change, but it is the recurrence, not that change, which calls to our inferential activity. The maxim followed is: Many things do not agree in one characteristic without a reason (Kant, Logic, § 84). The numbered of recurrences is, for progressive intelligence, the primitive mode of inference; and Mill considers that out of it scientific analysis grows as an effort to sustain or correct a narrower enumerative induction by a wider (Logic, iii. 3, § 2). And, converting this psychological precedence into a logical one, he declares that the distinctive maxim of scientific analysis, the Law of Causation, can 'have no better foundation' than our wider faith in uniformity as more recurrences (ib. 31, 19). But, while faith in recurrence is an indispensable factor in our expectations if these are to meet the requirements of concrete life, its authority is less secure than that of the tested and proved belief according to the rule, there really arises in the passage from rule to instance a 'new way of knowing.' The traditional maxim for the deductive syllogism—whatever is predicated concerning a class distributed may be predicated in like manner concerning anything contained therein—does not express this. But Kant's maxim does: Whatever fulfills the condition of a rule falls under the rule itself (Logic, § 67). And it is relatively to such inference that Gotama's inclusion of extrinsic authority, as an independent source of knowledge, along with perception and intuition may be still applied.

9. Eliminative Induction. — Where the instances of a concept differ in their environing circumstances or in their specific determinations that are concurrent with each other may become condition and rule. Friction between stilt and steel is an incident that concurs with the experiments of Eudoxus in the determination of contact; specific determinations of surface that concur in mother-of-pearl, Mill's two types of elimination, entitled 'Method of Agreement' and 'Method of Difference,' are worth of a doctrine (Gotama), primary scientific principle (Aristotle), a priori synthesis (Kant). Mill as an empiricist in epistemology would reduce this kind of inference to the same level as the interpretative—a treatment which is the less plausible in logic because the class extensions so natural and useful in the interpretation of experiential knowledge are here a superfluous gloss on the demonstration. It is as easy to see that a triangle ABC, constructed in Euclid's 'axioms,' is not by definition without referring to anything outside that figure, as with the aid of generalizations.

Where intuition fails us, and, according to empiricists, in all knowledge, the ultimate occasion of inference that the intuitively admitted be the coincidences and sequences of experience, and the 'new way of knowing' converts special features of these into a 'conditioned rule' for our expectations. The universality of the rule is not the 'logical' or a priori universality conferred by intuition (Kant, Logic, § 81), but analogues to it—a reaching towards 'the thought by which all things through all are guided' in the flux of Heraclitus. Intuence here is 'belief' in contrast with strict knowledge (cf. art. BELIEF [Logical]); and Kant entitles it 'syllogism of reflective judgment.'
descent colouring of a surface cannot be the peculiar chemical composition of mother-of-pearl, for the colour appears also on grooved wax or metal; nor can it be molecular consistency, nor weight. With Difference, on the other hand, an instance or species of the concept is found where the concurrence is isolated even as a passing one. Only a multiplicity and not the moment of use from the moment of rest, in flint and steel. Because eliminative induction infers a rule of change or variation, that is to say, a causal or disjunctive difference, it is so like the natural habitable such. This venture of belief fulfills the same function in practical wisdom as the a priori construction of examples fulfills in demonstrative science. And so in view of this function that Aristotle submerges it in a double syllogism which he entitles ‘Example.’ War between Athens and Thebes would be calamitous, as being a border war, like that between Thebes and Phocis. Gotama classes the ‘recognition of likeness,’ not as an inference, but as an independent source, like perception, that may contribute to inference. Modern Logic allows it as a kind of inference, or at least as an independent source of inductive hypothesis, co-ordinate with eliminative induction (C. Sigwart, Logic, Eng. tr., London, 1885, § 83).

Within a sphere of belief where environments and specific determinations are sustained by purpose or by the power of organic life—e.g., when we follow judicial precedents or recognize physiologically determined and justify analogy by a maxim corresponding to Kant’s maxim for induction: since the many characteristics do not unite in one thing without a reason (cf. Kent, Logic, § 3). But even when a belief unifies a collocation is not definable in terms of purpose or of life, our conceptual faculty still demands, in the spirit of the ancient realism, that destiny shall pre-ordinate the repeated exemplification of limited conceptions, and that the impending shall not be infinite in surprise (see art. Concept; and cf. J. Veenn, Empirical Logic, 1907, ch. 4). It is not sufficient that the world of facts follows, as Mill describes it, ‘from laws of causation together with a primeval collocation of forces that is inexplicable,’ (Logic, iit. 5, § 9).

It is necessary to suppose that not merely do general laws imply a disposition to be comprehended, but actually any of those that can be accounted of which a definite form of actuality flows from the laws is given over to chance, understood by any one, but rather that in the arrangement of the aforesaid also, a principle (that is to say, an ‘idea’) is effective, and that this principle is, in its way, molecular consistence, or molecular correlation of phenoms which are to be actualized (Lotze, Outlines of Logic, Eng. tr., Boston, 1886, § 18).

LITERATURE—This is co-extensive with systems of Logic. Among recent writers, in addition to those quoted above, may be mention of the especially important on the nature of inference: T. H. Green, Lectures on Logic, London, 1870 (Works, ii.); P. H. Bradley, Principles of Logic, do. 1883; L. T. Hobhouse, Theory of acquaintance, London, 1893; J. S. Mill, Collected Works, do. 1909; Edin., art. ‘Logic’; and the several contributers to the Encyclopaedia of the Philosophical Sciences, vol. 1. Engl. tr., London, 1875. Among recent German writers, W. Schlegel, H. Lotze, W. Wendt, and H. L. von Schiller are frequently referred to. There are numerous monographs and essays on species of logic especially connected with philosophy or with particular sciences.

J. BROUGHTON

INFINITY.—The problem of infinity is one of considerable complexity and difficulty, in that it is possible to do in such an article as this to give some account of the place of the conception in the development of human thought, to indicate some of its chief applications, and to suggest methods by which they may be met.

1. The meaning of the term. — There are two senses in which the term tends to be used, and it is very important to distinguish them. It may mean simply that which is endless, or it may mean that which is complete or perfect. One of the simplest illustrations of infinity in the former sense is to be found in the series of cardinal numbers. When we arrange the numbers in order by 0, 1, 2, 3, ... — it is evident that no point can ever be reached at which the series can be regarded as complete. However large the number may be that we have reached at any point, it is always possible to add one more. Hence this series is infinite, in the sense that it never reaches an end. On the other hand, the circumference of a circle may be said to be endless, or semi-infinite. This is not complete. It seems clear that these two senses of the term are not identical, and are even in some respects opposed to one another. Yet they are apt to be confounded.

A simple mathematical instance may serve to bring out the reason for this. The series 1, 2, 3 ... is infinite in the former of the two senses. Each number of the sequence is smaller than the next. The value of $\pi$ is infinite, and the value of $\pi$ is doubled at each successive step. Here, again, however large $n$ may be made, it is always possible to double it. But, in this case, when $n$ is made very large, the value of $\pi$ is very little different from that of $\pi$.

Hence $\pi$ may be said that $\pi$ is the ultimate value to which the series is approaching. This is sometimes expressed in the form that, when $n$ becomes infinite, the value is $\pi$. Here the series is represented as becoming completed when it reaches infinity. The endless series is thus regarded as reaching an end, in which it is completed. A more concrete illustration of this is found in one of the puzzles that were put forward by Zeno with regard to motion. If it is a body moves from the point A to the point B, it is evident that it must first traverse half the distance, and that in order to do this it must first traverse the halt of that, and so on in an infinite number of steps; and, in fact, it would be impossible to set it in motion, indentured. Hence it may be said that, in the motion from A to B, an infinite series is completed. In such instances the two notions of endlessness and endogeneity, which are sometimes opposed to one another, are somehow brought together.

Another illustration, from the sphere of religion, may now be given. God has sometimes been represented as infinite, in the sense of having no assignable and as regards formation of existence in time or possibility of action. He has been said to be Eternal and omnipotent. These attributes may be interpreted as measuring simply endogeneity with respect to two or three variabilities. They may be taken to imply that, however far we may go back in his history, there is something prior to the point that we have reached; and, however far we might go forward, there would be something to come after; and, again, that, however great may be the action that is performed by him, there is something greater that he might do. Here we have simply the conception of endogeneity. But God has also been represented as infinitely wise and infinitely good; and it is clear, on the face of it, that these are qualitative conceptions. They do not mean endlessly wise and good, but conceptions which are perfectly wise and perfectly good. We can hardly suppose in these cases, what is meant is the same as conceptions that are essentially or perfectly wise and good. We can hardly suppose in these cases, what is meant is the same as conceptions that are essentially or perfectly wise and good. We can hardly suppose in these cases, what is meant is the same as conceptions that are essentially or perfectly wise and good. We can hardly suppose in these cases, what is meant is the same as conceptions that are essentially or perfectly wise and good. We can hardly suppose in these cases, what is meant is the same as conceptions that are essentially or perfectly wise and good.
consist of numerable parts, they cannot be said to be either finite or infinite, in the purely quantita-
tive sense of the word. This appears to be true of
goodness, wisdom, beauty, colour; and, in
general, of all things that are essentially quantita-
tive rather than quantitative. But it is common
to apply the term 'infinite' to such things when they have a high degree of perfection—as in such
phrases as 'infinite penetration,' 'infinitely pure,' and the like. As the term means primarily
'endless,' it may be best to use it only in this
sense; but, as the two meanings are not always
easy to disentangle, the more qualitative sense of
the term must also be taken into account.
2. History of the conception. At a very early
period in Greek speculation we find traces of the
conception that the universe is to be regarded as formed from a material that is in some sense
boundless. Anaximander, in particular, took this
as his starting-point, and thought of the different
forms of existence as having been 'separated out'
from a vague and chaotic mass to which no definite
bounds could be assigned. What we have here is
perhaps rather the conception of the indefinite than
that of the infinite; but the transition is easy from
this view to another, in which it is being
made most clearly in the development of the
Pythagorean school. It would appear that the
fundamental view of the early Pythagoreans was the
idea of a two-fold and eternal process: 70 desmos,
received definite form through the imposition of
limits. This may be regarded as the earliest form
of the doctrine that 'determination is negation.'
Against this view we must set the Eleatic doctrine,
which involves the denial of negativity. According
to the view of Parmenides, reality is to be thought of
as always definite, and not boundless. It is
compared to a well-rounded sphere. Here we may
perhaps recognize the first statement of the con-
ception of a perfect whole, as opposed to that of a
chaotic mass. Malissus, however, appears to have
urged that this perfect whole should be conceived as
limitless, if not infinite both in time and in space,
thus bringing together the two conceptions of the
complete and the endless. But it was apparently
Zeno who first realized the difficulties involved in
the conception of a non-finite and infinite
subdivision. His familiar paradoxes—that 'the flying
and the resting,' and that 'Achilles could never overtake a
tortoise'—were evidently intended to emphasize the
same difficulty. The service which Zeno rendered to
exact thought by the statement of such difficulties
can hardly be exaggerated. The Atomists, how-
ever, whose views were developed from reflection
on the points brought out by the Eleatics, do not
seem to have taken much account of the problems of
Zeno when they postulated an infinite space and,
apparently, an infinite number of atoms moving in
the void, though, no doubt, they gained something
by avoiding the conception of the infinitely little.
In the later developments of Greek thought, especi-
ally under the influence of Socrates and his
school, the conception of infiniteness becomes rela-
tively unimportant; and its place may be said to
have been taken by the conception of the
infinite as being is partly due to Parmenides, but appears
to be more directly traceable to the speculations of
Anaxagoras. The view that Mind is to be taken
as the first principle of order was readily interpreted
as implying that determination is not merely negation
or limitation, but is due rather to the effort after
perfection. The 'Form of Good' thus comes to
be seen as that which determines, as it is especially with
Plato; and the material tends to be thought of
only as something by which the working out of the
Good is in some way limited. This may almost
be said to involve the inversion of Pythagoreanism
—an inversion which comes out most distinctly in
the philosophy of Aristotle. The Form has now
become the positive aspect, and the Matter is the
negative by which it is limited; and that which is
thus limited is no longer the boundless, but the
perfect.
This brief sketch must suffice as an account of
the way in which the conceptions of infiniteness and
perfection first came into prominence in Euro-
pean speculation. The most elaborate attempt to
combine the two conceptions is found in the doc-
trines of the Cartesian school. The most funda-
mental doctrine of the Cartesian is that the
absolutely perfect must be thought of as existing.
The grounds on which this is maintained cannot be
considered here. It is enough to say that the
absolutely perfect is regarded as the standard by
reference to which all other things are determined.
This standard tends to be thought of as bound-
less. Space is conceived as an infinite whole, and
all other realities are thought of on the analogy
of space. This is most definitely the case in the
philosophy of Leibniz. The conceptions of the Carte-
ssians are most logically developed. Thus the perfect comes to be
identified with the boundless, and everything determin-
ate is regarded as 'finite.' Leibniz has corrected this tendency by treating space as a
confused mode of thought, and by definitely re-
introducing the Platonic conception of the Good.
On the other hand, he sought to give a positive
significance to the conception of infiniteness; he
little, and thus revived those problems which had,
on the whole, lain in abeyance since the time of
Zeno.
The difficulties involved in the conceptions of
the infinitely great and the infinitely little were
strikingly set forth by Kant in his first two anti-
nomies. The main point there urged is that the
conceptions of the finite and the infinite involve
the recognition of a completed infiniteness,
which is self-contradictory. Reflexion on this led
Hegel 1 to regard the simply endless (schlecht un-
endlich) as an invention that has already
been made to the way in which he brought out the
difficulty involved in the recognition that the
space through which a body moves may be
regarded as being invariable in infinite subdivision.
His familiar paradoxes—that 'the flying as well as
the resting,' and that 'Achilles could never overtake a
tortoise'—were evidently intended to emphasize the
same difficulty. The service which Zeno rendered to
exact thought by the statement of such difficulties
can hardly be exaggerated. The Atomists, how-
ever, whose views were developed from reflection
on the points brought out by the Eleatics, do not
seem to have taken much account of the problems of
Zeno when they postulated an infinite space and,
apparently, an infinite number of atoms moving in
the void, though, no doubt, they gained something
by avoiding the conception of the infinitely little.
In the later developments of Greek thought, especi-
ally under the influence of Socrates and his
school, the conception of infiniteness becomes rela-
tively unimportant; and its place may be said to
have been taken by the conception of the
infinite as being is partly due to Parmenides, but appears
to be more directly traceable to the speculations of
Anaxagoras. The view that Mind is to be taken
as the first principle of order was readily interpreted
as implying that determination is not merely negation
or limitation, but is due rather to the effort after
perfection. The 'Form of Good' thus comes to
be seen as that which determines, as it is especially with
Plato; and the material tends to be thought of

1 Hegel's distinction was partly anticipated by Spinoza and,
more definitely, by Leibniz.
as are many different infinities as there are systems of relations that can be worked out without limit.

A special case of this is found in the conception of a part that is exactly similar to the whole of which it is a part. Thus, if the small square B is exactly similar to the large square A, its similarity implies that it also will have the same relation to C which it exactly similar to itself and to A. C also must have a similar part, and so on without end. The endlessness arises here from the constant repetition of the same relation of similarity; and the constant repetition is necessitated by the statement of the first relation. This particular case has a special interest from the way in which it has been applied by Boyce to the relation between the universe and its parts.

3. Critical summary.—We may now consider more definitively the exact significance which the conception of infinity has for us at the present time. In doing so, we may set aside the conception of perfection and also the conception of simple endlessness, and concentrate our attention on the definite conception of an endlessness that is involved in the working out of a system of relations. It seems clear that certain systems of relations do lead us into an infinite series. The instance already referred to is evidently such a case, and it seems to have a large range of possible applications—perhaps, as a matter of fact, the path of a moving body may be subdivided, and the like. It is important, therefore, that we should consider the exact significance of this conception.

There are three ways in which it may be regarded. It may be contended (1) that such mathematical determinations are essentially subjective, and need not be supposed to have any objective validity; (2) that they express definite characteristics of reality, of which we are acquainted; (3) that they are hypotheses having a certain objective significance, but not necessarily having any direct application to particular existences. To discuss these views thoroughly would involve a meta-physical investigation of the meaning of reality, and of the place of mathematical determinations in it. It must suffice to say here that the first view at least appears to be erroneous. It coincides with such theories as those of Berkeley and Hume and the modern pragmatists; and it falls to the ground along with the general doctrines of subjectivism. The arguments of Frege and others have probably convinced most people that mathematical determinations cannot be regarded as purely subjective. Hence, we are left to choose between the other views. It appears to us that the latter of them appears to err by overlooking the real distinction between the possible or hypothetical and the actual or existent, or, in other words, between what is formally valid and what applies to particular concrete objects. Any hypothesis, or (in Meinong's language) 'Annahme,' is no doubt, in a certain sense, objective. It is a real meaning, and is subject to the conditions that are involved in that meaning. The thought of a centaur, for instance, is subject to the determinations that are implied in a definite union of certain characteristics of horse and man. Nevertheless, so far as we know, centaurs do not exist; and there is no reason why they should exist; or, if a mathematical mode of expression is preferred, we may say that the number of existing centaurs is zero. Similarly, it may be asked, with reference to any other hypothesis, whether it is possible to apply it to any existing things. In some cases undoubtedly a direct application can be made, whereas in other cases this is not legitimate. For instance, any number of members of the series of all possible numbers can be divided into two; but the flocks thus formed could not again be cut into two equal portions without destroying some of the sheep. Yet the conception of such a subdivision has real meaning; and, though it is not directly applicable to the sheep, it may be applicable to some special aspect of them (e.g., their price). Similarly, the conception of an endless number has a real mathematical significance; but the question remains whether, in any particular objects, if any, that conception is directly applicable.

Some illustrations may serve to make this clear. Take the case, previously referred to, of an object that contains a part exactly similar to itself. It is clear that in this case we are led to the conception of an endless series. The meaning of the conception is quite definite and objective. But the question remains whether we can point to any existing object that contains a part exactly similar to itself. It has been suggested that such an object would be provided if within any country a perfectly accurate map of that country were constructed, showing every detail. For such a map, being perfectly accurate, would contain, among other things, a representation of itself; and the map of the map would, of course, contain another similar map within it, and so on without end. But this is manifestly an unusual illustration. A picture always represents something other than itself. Further, no materials could be provided by which such a detailed map could be constructed. At the same time, the conception is no doubt objective, in the sense that it conveys an intelligible meaning. Again, it has been said that, if it is true to hold that when I know anything I know it, then it must also be true that I know that I know it, and so on ad infinitum. This is a matter of fact, in this case, there is no definite limit that can be set to this knowledge of knowledge. The knowledge is actual, however, only in so far as we produce it by reflection; and, as a matter of fact, we should soon tire of this reflective process. Another illustration that has been given is that of two objects facing each other. Each mirror contains a reflection of the other, and in this reflection there is an image of itself, and so on without end. But this also is unusual. The conditions of the reflection of light would not allow the process to go on beyond a certain point. Another ingenious application of the conception of infinity has been given by J. Russell in his statement of the problem which he has called 'the barber.' As we know, he took two years to write the first two days of his life, and lamented that, at this rate, material would accumulate faster than he could deal with it, so that he would be unable to come to an end. Now, I maintain that, if he lived long enough, and not worked at his task, then, object of the life had continued as eventuall as it began, no part of his biography would have remained unwritten. This seems to be a clear case of a reduction of the attempt to apply the mathematical conception of infinity directly to a concrete problem. For, however convincing the mathematical reasoning may be, it is, of course, obvious that the conclusion must be wrong. The longer Trismegistus lived, the more would he be beset with his biography. It would, indeed, be difficult to find a clearer illustration to show that the mathematical conception of infinity has only a formal validity, and that it cannot be applied to concrete cases without considerable restrictions. Every existing thing excludes from itself the abstract possibilities. This is at least one of the senses in which we may interpret the saying that 'determination is negation.'

With this general view in mind, we may now consider briefly some of the chief cases to which the conception of endlessness has been thought to be applicable.

4. Infinite extension.—The conception of infinite extension is commonly thought to apply to things in space, and to events in time, and also to the series of conditions (whether temporal or not) upon which existing things are dependent. It might be supposed to be applicable also to series of degrees and qualities (e.g., degrees of heat or shades of colour). From a formal point of view, it is evident that there is no reason for stopping short anywhere in such relations; and it appears to be always possible to think of a further extension; and it seems quite arbitrary to stop at any particular point. It does not follow, however, that there is an endless number of such cases that can be determined by these formal relations.

5 *Elements of Philosophy,* London, 1908, p. 791.
In the case of the alphabet, B comes after A and before C, but there is no letter prior to A. Here the limitation is arbitrary; i.e., it is dependent on a human convention. On the other hand, grey is darker than white and lighted than black, but there is nothing darker than black or lighter than white. The fact that this particular scale of qualities has two ends is not arbitrary, like the similar limitation of the alphabet; but the limitation seems to be quite similar, red and blue appear to present themselves as endpoints in a scale of colour-qualities. May it not, in like manner, be the case that there is some occurrence that has nothing but it, that there is some star that has nothing due west of it, that there is some happening that has no determining antecedent, and so on in other instances? There are no doubt difficulties in conceiving any such end-points. The difficulty in the case of spatial extension was vividly stated by Laerztius. 1 He supposed himself to stand at an extreme end of the physical universe—say, at its extreme western verge—and to shoot an arrow outwards. What he asks, is to prevent him from doing so? The answer seems clearly to be that there is nothing in the formal constitution of space to prevent him; but, on the other hand, it is physically impossible for him to get to the extreme verge of to shoot his arrow outwards. Though there is nothing in the form of space to prevent him, there may be something in the general conditions of the Cosmos. A more serious difficulty was urged by Kant in the case of time. He contended that we could not suppose a first occurrence in time, because there could be no reason why one event should be at one point in time rather than at any other. It seems clear, however, that this is not a difficulty with regard to the temporal series as such, but rather with regard to the causal series. If causation is conceived, as Kant conceived it, as temporal sequence, the first member in the series of causes would be unexplained. If, however, the causal series is thought of in a different way,—i.e., teleologically,—this difficulty would disappear. In a theological series there may be a reason for beginning at one point rather than at another. What is necessary is only that something should be taken as self-existent or created. If it does not, of course, fall within our present scope to consider whether this is a legitimate hypothesis. It is enough to urge that it is conceivable one. If this is granted, and the series to which reference is made might be supposed to be finite, i.e., not endlessly extended.

But, of course, this does not prove that they are finite. It may still be asked whether there is any real objection to the supposition that they may be endless. The chief objection appears to be the one that was urged by Kant with reference to the particular case of time,—viz, that the supposition of an endless series which is actually completed seems to be self-contradictory. If we say that, however great anything may be, there is always something else that is greater, we seem to be assuming that both is and is not something which is greatest. If there is a greatest —viz, the infinitely great—the series is not endless; if there is not a greatest, the series is incomplete. Similarly, if we say that every ground has another ground, we are saying both that there is and that there is not an ultimate ground. But, it may be urged, does not the conception of a limited whole involve difficulties quite as great? Not, if we could see that the real ground can be assigned for the limitation. In most cases of limitation, the limits seem arbitrary or imperfectly explained. Why, for instance, it may be asked, are there only three dimensions in space as commonly conceived in the interpretation of the physical system? Why is there only a limited number of possible colour-experiences? Perhaps grounds could be assigned for these; but at any rate, there seems to be no reason for assuming that no ground could be given for the limitation of any particular series of concrete things. The conception of limits to existence seems the most difficult. For some considerations bearing upon this, reference may be made to art.

5. Infinite division.—The objection to endless division are even more apparent than those to endless extension. It involves the same difficulty of the completion of an endless series; but it has a further difficulty with respect to the limiting conception that is involved in it. When we think of anything as being divided without end, the ultimate parts have to be conceived as infinitely little. Now the infinitely little seems to be indistinguishable from zero; and zero seems to be indistinguishable from the non-existent. On the other hand, the grounds that lead us to postulate editionless division are in some respects more cogent than those that lead us to accept the conception of infinite extension. We start in this case with a completed whole, so that at least its completion cannot be questioned; and yet there seems to be no reason for stopping at any point in its subdivisions of the Cosmos. Hence Kant urged that in the case of division, the series must be supposed to be actually infinite, and not merely indefinitely extensible. But it is to be observed that Kant's argument depends upon the homogeneity of the whole that is to be divided. And this is where the weakness of the argument lies. If we assume that a given whole is homogeneous throughout, we are assuming that it is divisible throughout. The real question is whether any given whole is homogeneous. Now, at least, is clear, that we are not entitled to make any such assumption in the case of degrees and qualities. An intense heat does not appear to be made up of a number of smaller heats; nor does it seem legitimate to say that the distinction between any intensity and the next intensity below it is the same as the distinction between any other intensity and the next below it. Nor are we entitled to say that the distinction between blue and green is the same as that between green and yellow. Hence in such cases we do not seem to have been made aware that the postulation of an infinite series of homogeneous units within a given whole. Moreover, if we confine ourselves to recognizable distinctions in degrees and qualities, it seems certain that the number is finite. Similarly, modern physical science tends more and more to throw doubt on the view that physical bodies can be indefinitely divided into homogeneous parts. Rather it seems at least probable that physical bodies consist of parts which cannot themselves be described as physical bodies. If so, the argument from homogeneity is not cogent. There may be parts that are not capable of further division; therefore, it may be doubted whether any such conception is applicable to conscious states. An experience of pleasure, for instance, does not appear to be capable of subdivision into a number of homogeneous parts.

The strongest case is probably that of motion, to which reference has already been made. When any body moves from one point to another, it is certainly natural ground can be assigned for the limitation through an indefinite number of intervening positions; and it is here that we come upon the paradoxes of Zeno. With regard to Achilles and the tortoise, however, it seems clear that the motion does not
INFINITY

consist of homogeneous parts. Both of these moving bodies would presumably advance step by step. This suggests the question whether it may not be the case that all motion is discontinuous. If so, we, of course, come upon one of the other paradoxes of Zeno, viz. that 'the flying arrow rests.' If the flight of the arrow is discontinuous, this may be interpreted as meaning that it is successively at the points A, B, C, etc. and is never moving between them. But is this a serious objection? If it occupies these points successively, it does move from one to another. Its motion would not be made any the less real by the fact that it did not occupy any intervening positions. The fact that there is no cardinal number between two and three does not make the transition from two to three any the less real. Considerations of this kind may serve to show that there is no real reason for denying that the number of parts in the subdivision of any concrete thing may be finite.

6. Infinite attributes. The conception of infinity—especially in the Cartesian school, where it was most freely applied—has been specially used as a determination of the idea of God. In this use it is generally regarded as being applicable to certain attributes, of which the chief are knowledge, power, and goodness. Temporal and spatial infinity have also been frequently ascribed to God; but with these it is not necessary to deal further. The other three forms of infinity call for some notice. The first, as regards its infinity, is the one which has a clear apprehension of number at all. It is a given infinite number. A competent mathematician may be said to know all conceivable numbers, since the formation of numbers depends upon a single principle; and, if it be allowed that an infinite number is conceivable, the mathematician knows that. But he does not consider all the relations that might be ascertained as holding between different numbers. Infinite knowledge would presumably include this. It would also include a full apprehension of the temporal, spatial, causal, intensive, and qualitative orders and of all the different kinds of existence, and of all the relations that could be ascertained as holding within or between these various types; and this kind of knowledge might be held to be boundless. As regards particular existences, the knowledge of these would not be boundless, unless the things to be known are boundless—which is at least doubtful; but it would include the apprehension of every particular thing that actually does exist. In this respect it would be all-inclusive, but not boundless.

Infinite power is more difficult to interpret when infinity is understood in the sense of endlessness. Some writers have interpreted it in a way that seems to lead to absurdity. J. M. E. McTaggart, for instance, takes it as meaning the possibility of bringing about anything, however self-contradictory it may be—of making black white, good evil, the existent non-existent, the infinite finite, and so forth. This, however, seems meaningless. A being infinently powerful in this sense might evidently also be lacking in all power. Such a being would be, in the fullest sense, apriori and undeterminate. We might, however, interpret infinite power as meaning the possibility of accomplishing whatever is chosen. It would then be limited by the condition that what is chosen is not evil or absurd—i.e., it would be taken in conjunction with discontinuous conceptions of infinite goodness and knowledge. Infinite power.

thus interpreted, would be boundless, if there is an endless number of things to be chosen.

Infinite goodness, again, interpreted as boundless, would seem to mean the choice of what is best in every case. If the number of cases is endless, the choices would be endless. In dealing with goodness, however, it is certainly better to regard the attribute as essentially qualitative. The attitude of always choosing the best seems to be in itself a simple determination of will and character. It does not really consist of a number of distinct things. The endlessness lies only in the number of cases to which the one principle of choice may be applied. Hence it seems better to speak of perfect goodness than of endless goodness.

And this suggests the question whether the same is not really true of the other attributes as well. If infinite power means the possibility of bringing about what is chosen as best, this also does not seem necessarily to involve in itself anything that is endless, though there may be an endless number of things in which the potentiality is displayed. Similarly, infinite knowledge might be interpreted as meaning complete insight into the conditions on which anything is to be known. A thoroughly skilled mathematician might in this sense have infinite knowledge within his own limits and not have an endless number of facts present to his mind. It may be argued, therefore, that it is better to apply the concept of perfection, rather than that of endlessness, in the interpretation of all these attributes.

It is perhaps partly the difficulty in the application of the conception of endlessness that has led some writers to postulate the existence of a 'finite God.' 1 If an infinite God exists, it seems an easy task to show that such a being must be thought of as complete; yet it is difficult—if not self-contradictory—to think of anything that is not as being complete. It is, however, mainly from the point of view of perfection that the conception of a finite God has been brought forward. It is urged that what we know about the imperfections of the world forces us to believe that, if there is a God at all, He is either not perfect in goodness or not perfect in knowledge or in power. But the consideration of this question lies beyond the scope of the present article.

7. The Infinity of the Cosmos. It is evident that, in a certain sense, the Cosmos includes the endless; for it includes number, and number is endless. This does not necessarily imply, however, that the Cosmos contains an endless number of existences. This distinction has been partly brought out in the present article; but to explain it fully would require a careful consideration of the distinction between existence and reality. It must suffice to say here that existence seems to present itself as a selection from a larger realm of possibility. If we mean by existence that which occurs in the time order, within which our own conscious experience falls, it seems clear that some things—e.g., perfect knowledge, goodness, and power—may be real, though they do not in that sense exist. Again, there is a sense in which anything that is conceivable may be said to be real. If it is conceivable, it is really conceivable; and the conditions of such conceivability would seem to be contained within the structure of the Cosmos. In this sense it may be said that endlessness—insomuch as it has a real meaning—is contained in the Cosmos. But it does not appear to be correct to say that the Cosmos itself is endless. Rather it

1 One of the best statements of this view is to be found in H. Rashdall's Theory of Good and Evil, Oxford, 1907, ii, pp. 397-404; also McTaggart, Some Aspects of Religion, ch. vi, and J. Ward, The Realm of Ends, Cambridge, 1911, esp. pp. 447.
2 Reference may be made to an article on 'The Meaning of Reality' in Mind, Jan. 1914.
would seem that, if there can properly be said to be a Cosmos at all, it must be supposed to be a complete whole. But it may be infinite, in the sense that it is perfect and all-inclusive. Indeed, to say that it is a complete whole seems to imply that it is perfect and all-inclusive; but whether it is to be really so conceived, and, if so, how, is a problem that cannot be adequately dealt with in such a chapter as this. In this and the following sections, let us try to discuss here how far the conception of such a perfect Cosmos would agree with or differ from the conception of an infinite God referred to in the preceding section.

INFORMERS.—One who knows that a crime has been committed is morally, and frequently legally, bound to lodge information of such crime in order that justice may be done. This holds good in the strictest sense in the religious sphere; indeed, in many strata of civilization there is no demarcation between the two. The duty is binding; moreover, not only upon the official classes, whether civil or religious, but upon every one who has cognizance of the crime. Morally speaking, he who conceals his knowledge of, e.g., a murder, and thereby assists the murderer to escape detection (to give the least possible consequences of his deliberation), is parasite criminalis. This principle is recognized in primitive codes, as when, among the Aztecs, one who had cognizance of treason and did not divulge his knowledge was said to be "prudent," or, as in the prudent, Oldenburg, 1894–95, ii. 314, 324, with further instances and lit.). At the same time, there may be limits to this obligation. Thus Cicero of old time made the slave to lodge information, and even punishes with death anonymous informers, if their identity is established, while the African Kru regard as a culprit one who divulges information concerning a crime in which he has no concern (Post. ii. 314 f.).

The important assistance rendered to justice by the informer receives recognition in the usage of giving him a substantial reward, generally from the fine which the convicted must pay, this reward being a ninth among the Kalmucks; and the same code also recognizes the principle of 'king's evidence,' so that he who deserts a robber band and gives information regarding them escapes punishment (Post. ii. 315 f.). Such is the ideal theory of the informer, whose importance in aiding the ends of justice must be frankly recognized. Yet the informer is a hated creature, often despised and frequently proscribed by what he tells. The code of Mann, for instance, places him in the same category as madmen and soffers at the Veda; no Brahman may eat food purchased from an informer. The notion that false information is equivalent to the most heinous sin of killing a Brahman (iii. 161, iv. 214, xi. 50). In Europe any private citizen, who, with the most inequitable of motives, seeks to secure evidence of the violation of the laws of the land, such laws, for example, as those governing the sale of liquor or those regulating houses of ill-fame, may, indeed, further the ends of justice, but will too often be mere contrivances of a less concealed contempt of the official service and almost certainly to the contumely of the public, even of the more enlightened and thoughtful of its members.

This attitude, too, has its justification. The informer may be the most honourable of men; he may also be a thoroughly despicable creature, serving not for the promotion of the welfare of society, but for the mere money that he can make, or he may be influenced by personal hatred. This is why the informer is loathed, with the added factor that all peoples of even moderately advanced ethical development have a predilection for fair play and for open fight, if fight must needs be.

To summarize the ethical aspect of the informer, we may say that in many cases he unambitiously advances the cause of law and justice where without his aid crime could be perpetrated and flourish. That by his means many an instance of unjust punishment has been inflicted does not in the least mitigate against the use of his service so long as it clearly signifies that his motives and evidence need to be tested with more rigour than in the case of official guardians of the law. Indeed, he is a check upon these guardians, who may also be in the habit of using a little leniency (and not always from disinterested motives), just as he may be guided by undue severity (and sometimes from motives at least equally interested). As regards the ethical position of the informer, each case is to be judged separately. If he is convinced that the offence concerning which he lodged information is indeed wrong and that it should be punished, his act is commendable and in the interests of society, even though he may have a sub-motive of personal hate (perhaps in consequence of injury which he has suffered either from the system of crime as a whole or from the person or persons involved in the particular offence). If, however, his motive is merely to gratify personal resentment or to secure the pecuniary or other reward offered, then, while his act may be to the welfare of the social organism, he himself is ethically to be condemned.

The informer does not seem to have become a real problem until the days of the late Republic and early Empire, when the slave was a slave to lodge information, and even punished with death anonymous informers, if their identity is established, while the African Kru regard as a culprit one who divulges information concerning a crime in which he has no concern (Post. ii. 314 f.).

There is also reason to believe that the informer was not far beyond the mark when he said (Paus. xxxiv. 4):

"Videmus delatorum agmen infestum, quia grandissimum, quia latronum. Non portu lanceas illi, non lacer, sed tempestuosum, sed horrendum, sed inaudita, sed insensata. Nulla iure testamentorum, nullus status certus: ne orbis, ne liber prodest. Animis hoc numinum praevia arsita."

While the system of delatio flourished in all its worst forms, repeated efforts were made to curb it. Nero reduced to a fine profit by the Lex Papia (Suetonius, Nero, x.), and in his reign was passed the Senatusconsultum Turritallianum, by which the informer of informers by procuring evidence or suggestions for the lodging of false information is equivalent to the most heinous sin of killing a Brahman (iii. 161, iv. 214, xi. 50). In Europe any private citizen, who, with the most inequitable of motives, seeks to secure evidence of the violation of the laws of the..."
remains (Roman Soc. from Nero to Marcus Aurelius, London, 1904, p. 353.),

the period of its growth in reputation and eminence. It is a melancholy proof of the degradation of that society that the deliberate scepticism of his craft and even envied and ad

hired. Men of every degree, freemen, schoolmasters, petty traders, descendents of houses as old as the Republic, men from the masters of the Roman merchant Valutius to a Scarrus, a Catulus, or a Regulus, flocked to a trade which might earn a fabulous fortune and end in the empire of a prince. There must have been many a career like that of Paulinus, who had fought in the arena in the reign of Nero, who had been disgraced and disgraced and who had formed a nest and preached the gospel of popular government, and, by the help of a girl, had become a praetorian delator, and attempting to found a juristic theory of absolute monarchy.

After scourging delators, Titus either sold or exiled them (Suetonius. Tit. viii.); every possible impediment was placed in their way (Dig. XLVII. ii. 7.1; Cod. Justin. ix. i. 3, ii. 17, iii. 2); in 319 Constantine and Valens forbade anonymous delations (Cod. Justin. ix. xxxvi.); but all these measures proved ineffectual.

Yet in all these enactments attention was evidently directed to the suppression of the abuses of the system rather than to the abrogation of the system itself. It is true that Trajan banished the delator (Pliny, Hist. xxxiv. xxxvii.); but, at least in the provinces, they were not merely tolerated, but their evidence was received. This is admirably attested by Pliny's famous letter (xcvil.) regarding Christians and the Emperor's reply.

Certain individuals were denounced (defendentur) to Pliny as Christians, and he tried each case strictly upon its merits. The Emperor replies approvingly, directing that they [the Christians] are not to be sought out: if they are denounced and convicted, they must be punished: 'conferred non sunt: si defendentur et arguentur, puniendum sunt.'

The early Christians must frequently have suffered from the zeal of informers, whether honest or malicious (whether both types were found). It was not, however, until the early 3rd cent. that the Councils of the Church took official cognizance of them. The 3rd cent. of the Synod of Evora (305 or 306) caused the death penalty on any delation (Cod. Theodos. x. 2); and in 365 Valentinian and Valens forbade anonymous delations (Cod. Justin. ix. xxxvi.); but all these measures proved ineffectual.

Where it was possible to take vengeance on the

informers, he was not spared. This is clearly exemplified by the history of delation among the medieval Jews. Under Arab domination, information was rife in J ewry, as when, about 1089, Khalifa ibn al-Jab and his son Hayyim drove Isaac al-

Fasi from N Africa to Spain: and after the expulsion of the Moors from Spain in 1492, the informer continued to harass the Jews under Christian rule, as was the case throughout Europe generally. No

new principles appeared, but the penalty of death was not merely pronounced upon the delator, but was actually carried into effect, often with the consent of the King, notably in the cases of Joseph Pichon, royal farmer of taxes, beheaded at Seville, 21st Aug. 1579, and of a notorious Jew acquitted by royal authority at Valsengo about 1280. So heinous was the offence of an informer deemed that he might be seized and condemned to death forthwith, and the penalty might even be imposed in his absence. In Germany they tribulation led upon the Jews by the informer (tob, 'traditor,' 'defender,' 'slanderer') were especially severe, as in the expulsions from Augsburg, Nuremberg, and Regensburg; and in Poland, where, with government sanction, an informer's tongue or ears might be cut off, the death penalty is said to have been inflicted as late as the close of the 18th century.

As a survival of that gloomy phenomenon of medieval history, there had long existed in the Ritual of Congregations a prayer, which was recited in accordance with the laws and practices of their places of residence, which the Roman authorities had drawn up in the Emperor's edict (C. J. Hengel, Geschichte des Christentums in Gris, Eng. ed., 2nd, 1834, 1841, 1854). The ordinances previously promulgated by bishops who had turned delators were, however, valid. The following canon of the Synod of Constance by the Emperor's edict (C. J. Hengel, Geschichte des Christentums in Gris, Eng. ed., 2nd, 1834, 1841, 1854). The ordinances previously promulgated by bishops who had turned delators were, however, valid. The following canon of the Synod of Constance by the Emperor's edict (C. J. Hengel, Geschichte des Christentums in Gris, Eng. ed., 2nd, 1834, 1841, 1854). The ordinances previously promulgated by bishops who had turned delators were, however, valid. The following canon of the Synod of Constance by the Emperor's edict (C. J. Hengel, Geschichte des Christentums in Gris, Eng. ed., 2nd, 1834, 1841, 1854).

If, however, the Church condemned those who delated against her, she encouraged those who informed for her, and even bade them do so. In her efforts to suppress all manner of heresy in the Middle Ages, the informer was called into service. To further the extinction of the Catharism, penalties were imposed on all who knew or suspected to be heretics of that type, and delation was regarded as necessary proof of conviction.

How useful this is seen in the case of Sainte Rigaud, whose confession is recorded in 1254, where it is followed by a list of one hundred and sixty-six informers, or who, when criminated by her, their names being carefully tabulated with their places of residence, who then formed a nest and preached the gospel of popular government, and, by the help of a girl, had become a praetorian delator, and attempting to found a juristic theory of absolute monarchy.

From the second cent. the power of the informer was fostered by the practice of introducing him into the lists of the before-mentioned Synods, for the purpose of securing the condemnation of others.

The empirical principle of law that either husband or wife knowing the other to be a heretic and not giving information within a month was held to be a conciliating power without further evidence, and was punishable as a heretic (H. C. Lea, Hist. of the Inquisition of the Middle Ages, London, 1895, i. 49, 48). Where it was possible to take vengeance on the informer, he was not spared. This is clearly exemplified by the history of delation among the medieval Jews. Under Arab domination, information was rife in J ewry, as when, about 1089, Khalifa ibn al-Jab and his son Hayyim drove Isaac al-

Fasi from N Africa to Spain: and after the expulsion of the Moors from Spain in 1492, the informer continued to harass the Jews under Christian rule, as was the case throughout Europe generally. No new principles appeared, but the penalty of death was not merely pronounced upon the delator, but was actually carried into effect, often with the consent of the King, notably in the cases of Joseph Pichon, royal farmer of taxes, beheaded at Seville, 21st Aug. 1579, and of a notorious Jew acquitted by royal authority at Valsengo about 1280. So heinous was the offence of an informer deemed that he might be seized and condemned to death forthwith, and the penalty might even be imposed in his absence. In Germany they tribulation brought upon the Jews by the informer (tob, 'traditor,' 'defender,' 'slanderer') were especially severe, as in the expulsions from Augsburg, Nuremberg, and Regensburg; and in Poland, where, with government sanction, an informer's tongue or ears might be cut off, the death penalty is said to have been inflicted as late as the close of the 18th century.

INHERITANCE (Primitive and Savage).—1. Primitive property and the conception of inheritance. Among primitive races, both religious beliefs and social organization are such as to hinder rather

than favour the origin and growth of the conception of the transfer of estate, by regular succession, to a representative of a former possessor. This is especially the case with material property. In-
individual possessions are confined to a few weapons, implements, ornaments, and utensils. At death these are buried with the owner or destroyed by brent, either by fire if they may serve for his use in the future life, or because of the pollution of death which has made them useless to the living. The hut is pulled down or allowed to decay.

Even when the principle of inheritance is recognized, this custom of destroying property is continued, and may seriously diminish the estate, although not unnaturally there is a tendency to limit the practice to articles of little value.

In Savage Island the heir receives only what remains of the material possessions of the deceased after the greater part has been destroyed in his honor.1 The Ngaju of Manus is said to sacrifice 70 of his pigs on the occasion of his uncle's death.2 It is clear that the practice, whether based upon the idea of continued ownership after death or upon the idea of a limited right to articles of little value, nor are the conditions of land tenure such as to originate or to foster such rights. Among normal human societies it is generally the case that the possession of property is strong enough to lead them to guard their hunting grounds from trespass by their neighbours (which is not invariably the case), rights of individual ownership, while it might be inherited, are, as a rule, not recognized; and the same applies to lands in the occupation of primitive pastoral tribes such as the Yakuts, while among agricultural peoples, where the subsistence of the land and the heir is from the nature of the case of greater moment, it frequently happens that the conditions of tenure and the custom of periodical redistribution are such as to indicate a complete absence of ownership and heredity, rather than an absolute individual ownership. The right to hunt or pasture over certain lands, however, although belonging to the individual in virtue of his membership of a certain group, is hereditary in a somewhat diluted sense,

2. Origin of inheritance.—Although custom and religious belief operate in this way to prevent personal property from passing to those who might be regarded as the natural heirs of the deceased person, it is nevertheless probable, that the practice of inheritance and the rules of succession first grew up in connexion with this rather than with land, rank, personal rights, or calling, and the like, though at this early stage transmitted by other means, are inherited at a higher level of culture (see below, 3 (d)). This seems clear from the fact that inheritance of personal property is recognized while the tenure of land continues to be transmitted by the employment of rights originating in communal tenure; the chiefship or headship of a group is wholly or partly elective; and a profession, such as that of the medicine-man, or an industrial, cult, is transmitted by association rather than by relationship. Further, it arises out of the action of the living rather than the dead. Testamentary disposition appears at a comparatively late stage of development, and gifts inter vivos are frequently rendered void by death. It is the desire of the living to possess some specially valuable weapon or ornament which has overcome religious scruples, rather than the wish of the owner to benefit those who come after him.

Among the Arwak it is not uncommon for the hammock in which the body is laid in the grave to be withdrawn afterwards if it is new and good.1 In New Guinea, among the Kula and Motu tribes, although the house of a dead man is allowed to decay, the floor beams, which are valued as accounts of the deceased's workmanship, are not allowed to suffer the same fate, but are regarded as the most important part of the inheritance.2

The familiar custom of intestate succession to objects or models for objects of utility or value, and of the personal property from destruction, is frequently entrusted to a near relative, who at a later stage is either the heir or takes a considerable share of the estate.

In Samoa only the sister or the sister's child had the privilege of sitting at the head of the grave and breaking the bottle of scented oil to pour over the uncovered face of the dead man,3 while among the Balibung the younger brother, who inherited the chief wife of the deceased, entered her kula, of which he became the master, performed the 'rite of the twig,' and delivered the address to the ancestors.4 If a Kikuyu son refuses to assist in digging his father's grave, he is disqualified from receiving a share in the estate.5 The sons or grandsons chosen by the Baga man to perform the burial ceremony each took a widow from the inheritance, and the sister's son received a woman for performing the ceremonies which brought the mourning to an end.6

3. The inheritable estate.—(a) Personal property.

Material things, such as weapons, implements, utensils, and ornaments are the earliest kinds of articles to be regarded as falling by succession to a man's connections at his death. In ordinary circumstances these are affected by no special rule, but follow the regular line of succession, although certain articles may be by custom assigned to a particular person or class of persons.

The Tube-tube tribes of New Guinea distinguish two categories of personal property. Drums, lime-pots, lime-staves, and canoes go to the sister's children, even if they are girls, but in the case of their children. If the sister has no children, this class of property would pass to the maternal uncle, but with a reservation at his death to a man's own brothers and sisters. Property of the second category, such as arm-shells and the like, and also pigs, was divided between a man's own children and those of his sister. The eldest son is given to a wife by a husband are regarded at his death as the inheritance of his parent, a man who performs certain ceremonies

7 On the primitive custom of intestate succession among alienable and inalienable property see Post, 1. 306.
INHERITANCE (Primitive and Savage)

...at the grave, or his brothers. Among the Baganda, of the two sons, the larger one is given to the grave because, as he is the eldest, he is considered the more choice of the two. He is called the big son, and the other the little son.4 Among the Baganda, the定制 of property belongs to the one who is the eldest, and he is called the big son. The other son is called the little son. Among the Baganda, the ratio of inheritance is determined by the size of the son. The larger son receives the property, and the smaller son receives nothing. This is because the Baganda consider the larger son as more capable of taking care of the property. In the case of the Akaika, the son who is the eldest inherits the property, and the other son receives nothing.

(b) Land—Inheritance of land is closely bound up with the system of land tenure. Individual ownership is a late development, and even among civilised peoples, communal ownership still affects the terms upon which land is held. In the more primitive types of society—the hunting, pastoral, and early agricultural stages—it is the right of the dead and not the absolute ownership that is transmitted. Indeed, in the case of a nomadic community of hunters ranging over a wide tract of country, the term “inheritance,” as has been stated above, is hardly applicable in the strict sense to the methods by which members of the tribe enter into or are admitted to the territorial rights of their group. They obtain and hold their rights primarily in virtue of birth in a group, and not in virtue of their relationship to an individual. The same applies in a less degree to the conception of land held among pastoral tribes, except that the group tends to be smaller or a subdivision of a greater group, such as the sub-clan, or the family, among the Yakuts and the medieval Basques. The land descends through the head of the family as a joint possession and not as the property of a single individual. The strong principle of inheritance is shared by the groups of the north-west coast of America points to group tenure as the origin of the custom whereby the hunting grounds of the tribes and other tribes of that region are the hereditary property of the chiefs or the nobles.4

In an agricultural community, some degree of recognition of individual right of ownership with power of transmission (to heirs is usual. Uganda affords an instance to the contrary. All the land, with the exception of the clan burial-grounds, belongs to the king. The holdings cultivated by a man’s wives are granted him by the chief or directly by the king, who gives estates to chiefs in the several districts of the country. These estates are not inherited, and, on the nomination of the official, pass to his successor without allowance for improvements.5

It is more usual, however, where all land is regarded as the property of the chief, for the custom of giving what is practically a grant in perpetuity from the chief, either with or without an annual payment, the land then being transmitted as hereditary property, but being alienable by sale. This form of tenure was found in ancient Mexico, where, among the Nahua races, the property of the nobles was held directly from the king by the individual, but the land of the common people was the property of the clan, and held from it as inalienable but inheritable property by the individual.6

In Nigeria, land was granted in perpetuity subject to an annual rental and occupation. Although the grantees had no power to alienate, at his death it did not revert to the chief, but descended to his heir, usually a son,7 who held it on the same conditions as his father. Similar rules of tenure and succession are found among the Batanga, with the exception that the grants are made by the chief in the first instance to the local headmen by whom the lots are apportioned among the members of the villagers, without, however, affecting the right of transmission.

The mode in which land may be inherited sometimes varies in the same community, the variation being a matter of difference between group and individual ownership, with the result that the right to inherit is vested in two distinct classes of persons.8

Among the Mafulbo, each man has a house site in the village, which at his death passes to his eldest son, and reverts to the village; it is, or may be, then allotted to another member of the group. In addition, he possesses garden land and bush land, and his children (his eldest sister, her husband, and his cattle, goats, and sheep) all descend to them. In the latter case subject to a right of the villagers to pass over it. The land does not descend to a child by his own will, but is inherited by them and their heirs; it is never divided, so that the number of individuals holding a plot of land in joint ownership in time may become very large. Any house built upon this site remains the property of the family. In Melanesia an analogous distinction is maintained. There is a ‘permanent’ or village lot, in the ancient garden lot (because, it may be assumed, it was originally cleared or maintained by the labour of a group of tenants organised on a kinship basis) descends to the members of the owner’s kin, his sisters’ children, their husbands, and their cattle; but bush land cleared by the owner himself, and made into a garden lot descends to his children and continues to be inherited in the direct line so long as the origin of the clearing is remembered.3 In Fiji, though the bush land was held in common, and the tenure of arable land, descending according to a fixed law of inheritance, was little more than a grant of use from the chief, land in the Bega province, consisting of tracts reclaimed from the delta of the river, was appropriated by individual families, and as such was subject to ordinary chattel law, alienable, and inheritable by the eldest son in the first instance, and not by the eldest brother.3 An interesting parallel is in connection with a case of tenure as apart from land tenure in Melanesia and the adjacent area. Property in the trees being distinct from property in the land on which they stood, they might, and, indeed, frequently did, descend to an entirely distinct class. Trees planted with the consent of the owner of the land were inherited by a man’s children and grandsons; and trees planted on his own land might be declared to be the property of his sons instead of the sons of his brother.5

As the principle of individual tenure becomes more generally recognised, the custom regulating its transmission at a break in continuity of ownership caused by death tends to disappear. This is nearly to the rules of inheritance characteristic of a highly developed type of civilization, and to ignore claims outside the direct line. If any traces of the more ancient system remain in a community, it is sought in the rules for the disposal of the house and the house site, this being the part of the land in which the individual first makes good his claim to absolute ownership, and as such tending to preserve the original form of transmission.

In New Guinea the house site formed an important part of the inheritance, although the house itself was usually moved to make way for new structures. It passed either to the son (Kofo, Motu) or to the brother’s sister or sister’s son (Waguna-waguna, Tobuc-tobuc, Bartheley).9

(c) Women as inheritable property.—Many primitive peoples, especially in Africa, regard wives and daughters as an important part of the estate, to be transmitted in accordance with the regular rules of inheritance with the rest of the property. The explanation is to be sought partly in the economic value which women, whether as workers or as members of the family, in the case of daughters, as potential wealth in the shape of a bride-price; partly in the solidarity of group feeling which tends to regard everything over which the head of the group has a right to dispose of as his absolute possession, and, as such, to be transferred to his successor; and partly in the necessity, where the independent status of women is not recognised, for every woman to be attached by some definite relation to a male protector. As a rule the heir married the widow, except when she was his own mother, and received the bride-price for the daughter on her marriage.

Among the Akaika the son, if adult, inherits his father’s widow, but, as a rule, takes as his own wife only those in excess of three; as it is usual for a man not to marry more than three wives until his son has been received into the tribe, these widows would be of little use to the man. In Nigeria (Kagoro) the son takes any of the widows not taken by his paternal uncle.1 According to the rule of the Wa-Sania, the wife becomes the property of her husband, if he predeceases his wife; but, if he has already three wives, or if the number inherited would give him more than three, the number allowed...

For the inheritance of the totem and of tabus, reference must be made to the special articles dealing with these subjects.

Moreover, there is an inheritance of a toad tabu which is found among the Bangala of the Congo, whereby a man who may be said to have fathered a certain toad by the medicine man, as part of the consideration for a disease, transmits the disability to his descendant, while among the Bambal a hereditary class, wearing a distinctive head-dress and a braided tail which passes at death to the successor of the deceased but cannot be possessed, also inherits a tabu against eating human flesh or fowl.†

(c) Debt.—Inheritance usually connotes the acquisition of property by the heir. It may, however, on occasion involve the reverse, as among the Bangala and the Ba-Yaka, where a man's heir is responsible for his debts, even if there is no property, or as among the Jokor Jakun, where the heirs must pay one half of the debt, irrespective of the size of the inheritance.★

4. The heir.—(a) The kin and its members.—An inheritance tends by custom to follow the line of descent, in a matrimonial society the heirs to a man's estate will be his own children, but the members of his kin either as a whole or as represented by those members who are more immediately related to him (see art. FAMILY [Primitive], § 12). The argument used for believing that inheritance by the kin was far more widespread than it is at present, even if it was not at one time universal. It still survives, with or without modification, in a considerable number of instances, of which the following may be regarded as typical.★

Among the Melanesians the normal heir to an heir's property is his nephew, the son of his sister.6 So also among the Kurnai.7 The argument is that a man's property shall pass to the heir of the tribe to which he himself does not belong, i.e., to his mother's, brother's or his daughter's husband.8 In the Lusadas, land is inherited by the owner's brothers, sisters, and children.9 It is also the case with many of the members of his kin. Among the Wag-wag tribes of New Guinea, garden land passes to the sister's children, or, if these are too young, to the maternal uncle, or the owner's father, with provision to the sister's children. On the other hand, a woman's garden property, including coco-nut trees, descends to her children, while her personal property, such as ornaments not given her by her husband, is divided between her children and her sister.10 Among the Nden tribe this rule was followed in the majority of cases. Property was shared among the clans, and chiefly by the kin.11 It sometimes occurs in Africa, e.g., among the Gambals12 and some of the tribes of the Great Lakes.13 The Selangur Sukai choose the successor to a deceased headman from the owners' children.14 Among the仡佬 the chiefship falls to the sister's son.15 Among the Chinese, the chiefship is already mentioned, the priesthood was hereditary in the female line.16 In New Britain, the totemic chiefship could not pass to a son because descent was traced in the female line.17

Only certain classes of property may be hereditary in the female line.

Among the Baghawa, succession to the headship passes to the son of a sister's daughter, to the son of a maternal aunt, though property descends to the children.18 Among the Picas a sister's son likewise succeeded to the chiefship.19 Among the Naira, personal effects pass to a sister's children, and land belonging to the wife is inherited by a daughter or sister.20

Property may pass exceptionally to a sister or her children when direct heirs fail. Among the Bambal a sister holds the property in trust for her own children, if her brother should leave no direct heirs—in this case if no brother survives, the eldest son takes the property, and the female rule of inheritance of the clan chiefship is that, falling sons, if the sons are too young, the property passes to the sister's sons. In the latter case it would revert to the female if they had grown up when their uncle died.21 The heir among the Congo tribes, failing a brother, is the sister's son.22 Further, below, (d).

Some instances of the privileged position of women and of those related in the female line seem to point to an earlier system which has been superseded in general usage.

The peculiar close relation between maternal uncle and nephew existing in the Torsa Straits and in Fiji (where it is known as nora), which allows the nephew to treat his uncle's property with the greatest freedom, suggests that, although such close relationship, these people were case they were the nephew was the uncle's heir. A similar relation in dealing with property as between maternal uncle and nephew (sent to a limited extent between paternal uncle and nephew) is found among the Ngandu and the Masi. In this case it is reciprocal: an uncle may claim any article from the father of his nephew, and the nephew must buy it for him. The nephew, on the other hand, may claim any property belonging to his uncle.23 In Savage Island, where the people are in a transition stage, though the son inherited his father's property, the daughters had a claim on their father's property and the fact that one of the queens is the king's sister and that princesses are not allowed to marry and have children suggests that at one time the kingship was transmitted in the female line.24

(b) Transition from kin to family.—It is not surprising to find that, with the growth of family, as opposed to kin, feeling, an attempt was made to avoid this law of inheritance by various means, either by gifts inter vivos, as among the Melanesians, or the Bantus of South India, among whom, however, these gifts became part of the will and void at death,25 or by adoption of the heir, a common device among the Iroquois, in order to perpetuate the chiefship in their family, or by marriage of the heir—the sister's son—to the daughter, as among the Carriers (Dene).26

Evidence of what appears to be a transition stage is afforded by arrangements such as that which prevails among the people of Yiga Lomangoro, whereby the inheritance is divided equally among the children of the man himself and of his sister.27 A similar compromise between the maternal and paternal branches among the Wolof of Algeria divides the boonemans, waddies, etc., between a man's sons and his brother-in-law.28 Among the Kolo, personal property, such as canoes, is divided equally among the aunts (older brother, sister, or cousin) and res (younger brother, sister, or cousin). The girl's property is left to the eldest son, but is used for the marriage of any young children, while the garden land, assigned out of the clan holding, descends to the children and the house site descends rigidly in the male line.29

(c) The family and its members.—In addition to the father's increasing desire to benefit his own children rather than those of his sister, as the family tie gradually assumes an ascendency over those of the kin, two influences are at work which would tend to divert the line of inheritance to sons in preference to nephews. As the sense of property in land grows stronger, increased importance is attached to residence as a factor determining the heir. Even in Australia, where, as has been mentioned, in the case of the chiefship the idea of inheritance is not highly developed, the hunting grounds are regarded as the common property of the tribe and net of the individual, hunting.

INHERITANCE (Primitive and Savage)

rights descend from father to son, because the patrilineal organization, providing a residence for the sisters and daughters with their husbands’ tribe, makes any assignment of these rights to another than the sons an impossibility. 

The common law of property of the Savus. In case of default of sons, of assigning immovable property to the deceased man’s wife, the property devolves on his daughters; and among the Vozdif, the son who is to inherit the patrilineal household and land—usually the eldest—remains with the parents, while the other children marrying and leaving the parents to found a village of their own. 

The substitution of an agricultural for a pastoral life, with the consolidation of individual property in land, strengthens this tendency. Further, where the cultivation of the ground is the duty of the men, the inheritance of land is, as a rule, confined to the male members of the family. Among the Basques, while pastoral pursuits predominated, the estate passed to the eldest child, whether male or female; but with the introduction of agriculture, of which women were unskilled, it became impossible to take charge, and the gradual obsolescence of land taxes based upon the communal line, land inheritance tended to become the rule exclusively. In Nigeria, where security of land tenure depends upon the land being kept under cultivation, women continue to possess their properties, on the ground that they are regarded as unable to comply with this condition. 

The second set of circumstances, which supports the substitution of an agricultural for an pastoral inheritance from the female collateral to the male collateral or direct line, but affects movable as well as immovable property, is that which is connected with the payment of the bride-price. This custom not only bars the woman from the claims which the family or tribe may have over her, but at the same time, by effecting her transfer to her husband, cuts herself off from her children and children from participating in their father’s or brother’s “household property,” or “family (see Art. FAMILY [Primitive]). It is found, accordingly, among most of the African races, e.g., where the bride-price is a regular institution, that inheritance in the male line is commonly the rule. Exceptions; however, are to be found among races in a state of transition or who retain some traces of the institution of matrilineal mother-right (see below, p. 294). 

When once the predominance of the female line has broken down, it does not follow that the inheritance will fall to the sons as a matter of course, nor that the eldest son will take precedence over his brothers. Indeed, there is ground for believing that, in some regions at least, the course of development has been from the female collateral to the male collateral rather than from the female collateral to the direct line; that is to say, the priority of primogeniture or the right to hold good, but it is organized on a basis of male relationship rather than female. This is suggested by the priority or prominence given to the brothers of the deceased. A factor of importance which also helps to support the claim of the brothers or other adult members of the group as against the children is that only those are allowed to inherit who are able to hold the property, by force if necessary, to take their share in the affairs and the defence of the group if required. This leads to the exclusion of women and minors. 

The custom of the tribe of Mina in Maroua, that a clansman should take a part of the estate when daughters inherit in default of male heirs; 2 the trace of clan tenure of burial grounds in Upington; 3 the practice of “land which was regarded as being owing to the king, and for which at the death of the holder, who is a tenant for life, the successor of the clan is chosen by the clansman and the king’s sanction, as well as to the control exercised over the inheritance of personal property by the clan; 5 for the fact that in the semitribal he is not the heir of all his subjects, though in practice he receives only a certain quantity of gold dust on the death of chiefs; 6 the

8 The family tenure of burial lands in Korea; 2 and other analogous customs of which instances could be adduced—suggest that the place of the kin as collective heir is usurped by the clan, and that this group is later narrowed to the more immediate relatives, the brothers. Among the Ba Kwers the heir is a brother; among the Kasogu all the brothers must hold the inheritance before it can fall to the heir, the son. In Nigeria (Kagoro) a group of sons inherits each of the wives as are not taken by his paternal uncles. The Bodo of the Chad assigns the wives to the eldest brother, while personal property is divided into two equal parts between the children and their uncles. 4 The ceremony performed by the Nambas heir before he can assume possession of his father’s property, of which he throws a branch at his paternal uncle, saying, “I pay you before the eldres,” and the ceremonial subordination of the uncles to the eldest brother, seem to be a form of compensation or propitiation of the uncle, either, as is suggested by Hobley, as the representative of the deceased, or more probably, as an heir whose claims have been superseded. In other case it implies the solidarity of the family group. 5 The Wa-Santia chieftainship is inherited by the eldest brother and by the son only in default. 6 In Samoa the legitimate heir was the next eldest brother. 7 In Fiji the chieftainship depended upon a limited election for which the son was eligible only in default, first of brothers, and secondly of sons of the deceased. The normal heir to the house was the eldest brother. Among the Naga, Mays, and other races of Central America, where the succession was strictly hereditary, it descended to the son, but, where there was a limited election, choice was made from among the brothers. 8 The uncle, if the children are minors, is usually regarded as the natural holder of the estate until they are of age, when, in some cases, it passes to the eldest brother with them, 9 and sometimes hands it over to them as a whole. 

When the inheritances passes to the children, the eldest son being normally the strongest, primogeniture is a common but not an irrevocable rule; 10 but, should the eldest son be unsuitable, he may be set aside by his father, or, in the case of a chiefship, by those in authority. A chiefship may descend in a family while the actual member to hold office is chosen by election. A rule of inheritance may definitely set aside the eldest son. 

Among the Naga tribes, especially among the Mose, the youngest son, as already mentioned, inherited the house. 11 Sometimes, as among the Batais, the eldest son, the father’s, the youngest son the mother’s property, or, according to the En Temmu rule, the eldest takes all the mother’s property and the largest share of the father’s. 8 An important feature is the inheritance of the dead child’s property by a child of the deceased, whereby certain classes of property descend to the youngest son. 

11 When primogeniture is the rule, it is generally an obligation on the eldest son to look after and provide for his brothers out of the estate, as a reward for their maintaining themselves, or for holding itself to the estate and not from any direct property, or for holding it for their children. 

In some Naga villages, the eldest son has to maintain his brothers and his children; in Kintu, he supports the rest of the family; 11 at Lasaq, when the eldest son marries for himself and his brothers, the paternal possessions are transmitted on the understanding that the eldest son supports his brothers. 11 Sometimes the younger brothers act as the eldest brother’s assistant, or were virtually “adopted,” as among the Bahimas. 12 A rule which passes a further restriction on primogeniture, not uncommon, especially among the Bantu tribes, confines the inheritance to certain classes, and the eldest son. 

In Uganda the eldest son of the king, who acted as his brothers’ keepers or guardians, was expressly debarred from inheriting. 

The successor to the throne must be chosen from “children of the elder,” i.e., children born after the accession of the father. 17 Frequently only the children of the chief or principal heir are eligible to succeed to the father’s position, as among the Ndili 18 or the Zulus, 19 the chief wife in the latter case being the first of the wives for whom the bridge-price was paid with cattle from the father’s estate and not from cattle earned by the man himself. 

In ancient Mexico at Tenochtitlan only children born of the

It sometimes happens that, in cases where there is no apparent transmission of property to a female, it is held upon terms resembling a trust.

The Mafali widow, on the death of her husband, receives a pig from the estate, which does not, however, provide her with security of property, but is kept by her for the mourning rites which take place at the end of a year.

Among the Dyaks, the widow of a man who dies without a son passes to his widow, the reason being that it is her duty to perpetuate the name of her husband. She is provided with an heir to the property by taking a second husband, whose children are regarded as children of the first husband.

Among the Abois, on the death of the husband, the widow retains the plantation and the hut which were hers during his lifetime, together with the goats which he taught her to use in order to enable her to provide for her children; but they are in no way regarded as her absolute property, and, as her son marries, a portion of the land is cut off and transferred to the first wife of each.

Even where there is a distinct tenure of lands, as among the Tubu tribes of New Guinea, the husband and wife work side by side, and the wife has to give one half of her first crop after her husband's death to her relatives as the product of his labour.

(c) Daughters.—Although it is generally true to say that among any of the primitive races of to-day women do not inherit, there is evidence to suggest that at an earlier stage, and in a community organized on matriarchal and matrilocal lines, women were regarded not only as heirs, but as the natural and proper occasion and the legitimate and natural object of such proceedings, and in the early days of the era of the great African states.

In Egypt, a daughter had an equal, or in early times a preferential right to succeed in her father's property.

In some cases, when the daughter does not inherit, she may transmit the inheritance to her husband or to her children; this is especially frequent when the husband takes up his residence with the family of the wife.

Among the Puyumas of Formosa, the son-in-law resides with his wife's parents, and on their death takes possession of the house and property.

In Japan, the descendit of property belonging to her husband's group. A woman may, however, sometimes be allowed at the death of her husband to retain such articles, especially clothes, utensils, and other property, with the consent of his wife, but such property becomes closely associated with her by use, although her right of ownership during her husband's lifetime has not been recognized.

Among the Abois, a man's widows are allowed to take nothing but the yam stalks. The Mafali widow takes the current season's crop, which she has helped to plant, unless she has returned to her own people. On the other hand, among the Wagen-wagen tribe of New Guinea, valuable shell ornaments are given to a woman on her husband's death, and in Nigeria the widows appear to have an interest in the house, if she has no grown-up family and no relatives by marriage. In this case she may marry again, taking her husband's house.

Among the tribes of the Haringo district of East Africa, the property given to the wife at marriage is divided among the children on the death of the husband. Among the Ngoci, Kavirondo, each widow receives a certain number of cattle, which, at her death, pass to her son. Among the Wagana and the Aisunic, personal ornaments are distributed among the female members of the family of the deceased.11

INHERITANCE (Babylonian)

It is possible, in exceptional circumstances, for an estate to fall to a woman, among a people who do not, as a rule, recognize female inheritance.

Among the Babylonians, falling male heirs, a man's sister will inherit his property. Married daughters, however, among the Babylonians, after the death of their deceased father the women who were paid as bride-price for themselves, and have any children, and brethren make presents periodically to their brothers-in-law. In Banaa, land might be held by females when all the males in the family were dead. The inheritance, however, might be revived to emphasize the exceptional circumstances, as in the custom followed at Layy and Layl among the Moos, whereby, in the event of the inheritance falling to girls through lack of male heirs, the clan, the male relatives, or a paternal uncle took a share of the inheritance, usually the house.

Where it is generally recognized that women may hold property, the inheritance is frequently shared among them. Among the Bassa of Northern Nigeria, a portion of the property is assigned to the daughters, twelfths to the sons, and the Jukan of the left-hand division among all the children. The Tuareg children divide equally all lawful property, i.e., property acquired by labour. Among the Kolta and Moto tribes of New Guinea some of the land is divided equally between son and daughter, while the girls, which while the latter inherit a life interest in the land which is covenanted to them, to the Nias, among the Dayaks and other jungle tribes of Borneo, there is a customary allocation of different classes of property to the widow, son, and daughters, the latter obtaining old boats, etc., while among the Dayaks the Chinese jars, which are highly valued, are divided equally among all the children. Artificial brotherhood and kinship frequently involve the rights and obligations of inheritance.

5. Testamentary disposition of property. It is evident from what has already been said that inheritance to the primitive mind depends upon a rule or custom invariable outside the certain limits, over which the deceased person has no control. Property, in so far as it is not acquired by the owner in the life after death, is at the disposal of the living, originally the group-kin—family, village, or clan. Under the law of the Bassa, a woman could as property only clothes and personal ornaments, which, after her death, go to her husband, or are divided equally among her children. Among the Bonu Jako of the Northern Congo the property is divided equally between son and daughter, while the girls, which while the latter inherit a life interest in the land which is covenanted to them, to the Nias, among the Dayaks and other jungle tribes of Borneo, there is a customary allocation of different classes of property to the widow, son, and daughters, the latter obtaining old boats, etc., while among the Dayaks the Chinese jars, which are highly valued, are divided equally among all the children. Artificial brotherhood and kinship frequently involve the rights and obligations of inheritance.

6. Testamentary disposition of property. It is evident from what has already been said that inheritance to the primitive mind depends upon a rule or custom invariable outside the certain limits, over which the deceased person has no control. Property, in so far as it is not acquired by the owner in the life after death, is at the disposal of the living, originally the group-kin—family, village, or clan. Under the law of the Bassa, a woman could as property only clothes and personal ornaments, which, after her death, go to her husband, or are divided equally among her children. Among the Bonu Jako of the Northern Congo the property is divided equally between son and daughter, while the girls, which while the latter inherit a life interest in the land which is covenanted to them, to the Nias, among the Dayaks and other jungle tribes of Borneo, there is a customary allocation of different classes of property to the widow, son, and daughters, the latter obtaining old boats, etc., while among the Dayaks the Chinese jars, which are highly valued, are divided equally among all the children. Artificial brotherhood and kinship frequently involve the rights and obligations of inheritance.

INHERITANCE (Babylonian).—We must be careful not to assume the implications in English law of words used to translate into our tongue the legal terms occurring in Babylonian and Assyrian documents. The Assyrian civilization and customs were so entirely the same as those of Babylonia that they may be treated as one. The sense in which the term 'inheritor' is here used implies a right on the part of the inheritor to take possession, on the death of the possessor, in virtue of a personal relation between the 'inheritor' and the deceased.

The prime source of information as to inheritance in Babylonia is the Code of Hammurabi, which appears to have remained in force in the close of the 26th century B.C. down to the

8th century. The almost endless legal documents which deal in some way or other with the practice of which the Code records the theory may be noticed as illustrations and occasional exceptions.

The rules as to inheritance differed with the status of the deceased possessor.

1. Father's estate.—On the death of a father his children divided and take equally. But real estate was often kept together and enjoyed in common. It thus constituted the bit abešu, his father's house, on which a son had claims of reverence and dower, and, if possible, to preserve intact and redeem if sold. When portions had been parted with by the family, by way of sale, lease, pledge, or inheritance, to distant branches, it was reclassifiable, and an heir had a right to exercise this power of redemption to the prejudice of another claimant's power to sell. If one son sought to sell his share, another had power to stop the sale by buying it in.

All estates were divided equally by agreement among the heirs, who executed documents asserting that they were satisfied and pledging themselves not to dispute the settlement. Each took a signed and sealed document setting out his items of his share and giving attestations of acceptance. In the case of real estate which could not be conveniently divided, as a house, pond, or even a place of revenue office, etc., the division was often stated formally and liquidated on some convenient sale, or one heir paid off the others. The division was subject to some reservations.

A father might give a child real personal property by executing a deed of gift explicitly defining its extent. In such a case the gift was not brought into 'hotchpot,' and the son so benefited could claim to share equally with the other children in the residual estate.

A father was bound to provide every son with a bride-price, or means to procure a wife, and usually set him up with his 'portion,' which would include both real and personal property. At the division of the residual estate an attempt was made to reserve for this portion already received in estimating the share that was to be taken, unless exempted by deed or gift as above. If a son was still unmarried at his father's death, the others had to reserve him a bride-price and then share equally with him.

A father was bound to provide a dowry for each daughter on her marriage, or on taking vows, if this were done with his consent or at his instigation. Apparently a daughter might take vows without his consent. In that case she was entitled to her dowry on his death. If a daughter was left unmarried, she was entitled to receive her dowry from her brothers and sisters, and in addition they were expected to find her a husband. The daughter's dowry was her portion, but her right in it was only for life, unless she had children, when it passed to them. If she died childless, it reverted to her family—brothers in the first instance, and their heirs after them. A deed of gift might convey real property as well as personal, the dowry usually consisting of the latter. In the case of women the brothers were usually satisfied with her gift. If not satisfied with their administration of her estate, a votary might appoint her own steward.

The sons and daughters, having grown up, been married, and therefore portioned off during their father's lifetime, were bound to maintain him in his old age. But for various reasons this duty might become burdensome to them or their ministra-

2. Mother's estate.—The same held for matutina nustenka for mothers and daughters. In fact, more evidence is available of cases where women, widows or vestals, nuns or votaries, adopted daughters to care for them in their lonely old age and succeeded to their estate. As a rule, women could not transmit estate which had come to them from their own family, but only what was given by their husbands, or purchased with their own money. In the Hammurapi Code expressly gives to a votary of Marduk power of testamentary disposition of whatever estate she received from her father. In some cases, a votary of some other gift did so dispose of real property, which she had received by will from another votary, who had in turn received from yet another. In those cases, however, there was a blood relationship between the women, as aunt and niece, etc.

In the case of a married woman who had inherited or divided what had come to her from her father on marriage, what she had been given by her husband, and whatever she had otherwise acquired during her life.

If, after her death, her husband married again, the children of such a second marriage had no share in her property, nor did her natural sons of her husband by a concubine or a slave wife, even though he acknowledged them as his. If she married again and had a second family, both her families together she had grown up and left the paternal roof. A wedded pair might adopt a child while they still cherished hope of a family. In such a case, they might stipulate in the deed of adoption that the child now adopted should rank as elder brother to the family, if they should have other children.

If a man acknowledged his natural sons by a slave woman during his lifetime, at his death they shared equally with his legitimate sons; but these took first choice at the division of property on his death.
property. In every case half-brothers and half-sisters shared in the estate of their common parents, but not in that of a step-parent.

If a woman died childless, all she had received from her husband went to her father, ‘bride-price’ which her husband had paid for her to her father. If her father had given her that, her husband could keep it; if not, her father or her mother had to repay it to her husband. But, if her father had given her the right of disposal, she could dispose of it where she chose.

A widow would be left in possession of what her husband had given her on marriage, but had only a life interest in it. She could not leave it away from her children. She had the right to live on in her husband’s house, which, however, she could not dispose of, as it must go to her children. If her husband gave her a gift on marriage, she continued to enjoy it; and, if not, she took the same share of his property on his death as a child of his would do, but it reverted to their children. If, however, she preferred to leave her husband’s house, she could return to her own family, but must leave her children the wedding gift she had from her husband, and could carry off what her husband gave her as a new home, when she chose.

But her children by the first husband, if any, retained the right to share equally with her children by the second marriage in her father’s gifts to her in the first marriage. So long as she lived she would enjoy it as her child’s portion of her father’s estate; on her death all her children shared equally. If she had no children by either marriage, it reverted to her former husband.

3. Slave marriages. —If a man married a slave woman, or, being married to a free wife, had natural sons by another woman, he could acknowledge their legitimacy in his lifetime, or, if he died without children, thereby adopting them as his own. Thus, it was possible for a slave to inherit the property of his master, or, after the death of his master, to live in his home and to have his property.

If a slave married a free woman, as well-to-do slaves often did, their children were free. They, of course, inherited the property and half their father’s, the other half going to his master.

The children of two slave parents were, of course, slaves. It appears that custom allowed them to inherit of free, from their parents and masters, if the same laws, but probably the master had a large share also.

4. Vowed women. —Some special features attached to the cases of women who were vowed to a religious life was given her portion as if on marriage, and her brothers were constituted her trustees. If her father chose, he could by deed make it her absolute property and she would enjoy it as she willed it; otherwise it went back to her brothers, like the portion given to a married daughter who proved childless. If her father died without giving her a portion as for marriage, she, like an unmarried daughter, would take an equal share with her brothers, and, whether she subsequently married or not, this would be her brothers’ on her death unless she had children to inherit it.

It is not altogether certain how the various classes of votaries should be distinguished, but in some cases where the father had not given a vowed daughter a share before his death she came in for only one-third of a son’s share at his death. Of this she had the life interest, and on her death it reverted to her brothers.

The votary of Marduk had a special treatment. If her father had not given her a share during his lifetime, she was entitled only to one-third of a son’s share of his personal estate. But she had always the disposition, except her husband, was entitled to two-thirds. Further, she was not responsible for the State obligations which such property usually carried with it. By deed of gift, her father might give her both real and personal property, over which she had absolute power.

5. Concubines. —The children of concubines were free, but did not inherit unless acknowledged. A father might give his daughter to be a concubine, and he might give her a marriage portion and the right of gift. But she had no share in his property on his death. If the father, however, made her no provision, her brothers were bound to give her a proper marriage portion.

6. Disinheritance. — Sons might be disinherit, but only by legal process. If a father intended to disinherit a son, the judges were bound to look into the story of the disagreement, and, if the son had not committed a serious crime such as could be held to justify disinheritance, they would forbid it. Even if the crime was bad enough to justify such a penalty, and the son was bound to pay it, the father and son on the first offence; but, if, repeated, disinheritance was permitted. The exact nature of crime which would be held sufficient to deserve punishment by disinheritance, or any other, was never stated. A man might fall into a natural crime, without the nature of the consequences. It would, however, certainly imply exclusion from share in the father’s estate at his death.

The child was expected to care for a parent’s old age was usually bound to perform certain duties of maintenance personal care. These were specified in the deed of adoption, and a failure to perform them involved the annulment of the deed. This was a cutting off from sonship which amounted to disinheretance.

The adopted son might be repudiated by the adoptive father. In the old Semarian Family Laws this was most heavily penalized. The father forfeited all his estates and the adopted son took them over. Whether this rule continued into the time of Hammurabi is not yet certain. The Code deals with a different case. A man might fail to provide a child to adopt as a son, and repudiate him when he grew up. If he did so, the young man had no claim, probably on account of the advantages he had already received and worked and reared a child and afterwards acquired a family of his own, he was not allowed to send away the young man empty-handed. He must give him one-third of a son’s share, but not of real estate. An artisan who adopted a son was bound to teach him his trade or handicraft, and there his obligation ended. But indentures of apprenticeship were often entered into which strictly defined the obligations of both parties, so that this form of adoption may be merely a legal fiction for apprenticeship.

A man who committed incest was cast off from his father’s house. This, of course, involved disinheretance, but was always more; it was outlawry also.

C. H. W. JOHNS.

Inheritance (Celtic). — As has already been indicated in art. Family (Celtic) and Crimes and Punishments (Celtic), one of the chief features of Celtic society was the existence within it of a social class, and this feature is conspicuous in the case of Celtic inheritance. The
succession to property is here essentially the continuity, with any necessary readjustments on the death of one or more of its members, of a society of joint-owners and tillers. For this purpose, Celtic society, as known to us from Irish and Welsh law in historic times, had been articulated and organized into distinct family groups within the wider group of the tribe (Ir. cendel, Welsh cenedl). In theory the land of the tribe belonged to the tribe as a whole, and doubtless originally the land was so held as a matter of fact, but in course of time, through the evolution of the definite family groups in question, the land of a tribe had come to be allotted in a regular customary manner, and, though inheritance still continued to be regarded from the collective standpoint, cases of liability through contract had often arisen which required the emphasizing of individual responsibility. In medieval times, side by side with the older system, much of the land even of Ireland had come to be held by individual owners. Since the Celtic legal system of Scotland was that carried over by the Dalriad Scots from Ireland, the essential features of Scottish land tenure can best be studied in the Irish laws, especially in some of its earlier phases, such as the original exclusion in Ireland of women from any right to succession. When the Dalriad Scots entered Scotland, the few concessions afterwards made to women in Ireland through the influence of the Church had not been made, and, in the custom of the Highlands, were never made under Celtic law.

1. Ireland.---1. General.---Lands of inheritance were in Ireland technically called orba lands. These belonged in theory to the tribe (cendel), and were divided among the members of the tribe, the tribal land had upon it the dwellings of its members, the share of the chief, which was tilled by his special tenants, portions in exclusive ownership (made as grants), and wider group cultivated by common tillage. The portions cultivated by common tillage would be divisible into those held by members holding through recognized family groups, notably the kinsmen and those held under the chief, as representing the tribe, by others. For the present purpose, the important portion of the land was that held by the recognized family groups (see Panmara [Celtic], called the gelfine, the derbines, the tarfinne, the delfine, the tarna, and the inda, respectively. The gelfine consisted of the group of agnates or male kinsmen comprised in the series father, son, grandson, great-grandson, and great-great-grandson; the derbines were a similar group commencing with the grandfather; the tarfinne with the great-grandfather; and the inda with the great-great-grandfather. Of these, the most important group in practice was the gelfine. This consisted essentially of a group formed of a father with his sons and their descendants, the father occupying until his death the main dwelling of the group, while his sons, beginning with the eldest, would, as they came of age and married, occupy dwellings of their own, until at last, on the death of the father, the youngest son occupied the original family dwelling.

On the division of the gelfine, a fraction of the property, usually one and one-eighth part, passed to the next in point of exclusiveness, viz. the derbines, whose division was made up of a quarter of the gelfine, which received two centuries, and the inda, which received one century. On the extinction of the derbines, a third of its property went to the gelfine, a portion of the other quarter went to the tarfinne, and the inda—since the derbines had one century, while the tarfinne had two. On the extinction of the gelfine, two centuries went to the derbines, the other quarter to the gelfine and the inda, i.e. a century to the gelfine, and one to the inda. On the extinction of the inda, a third of its property went to the gelfine and the inda, and one to the inda. The land held by the gelfine as land held by a community, or, to use the Irish technical term, as cohabite land. The gelfine held the land under claims of the society partly to the fact that it was a union out of individuals, but of householders with separate households.

The right of hereditary succession in the gelfine was not transmissible beyond the fourth generation of the descendants of the original acquirer of the plot of ground on which the gelfine was settled; the sons of the fifth chief or head had no right to allotments; and no more independent households could be formed. The youngest son of the fourth occupier had to divide the original holding, the land of the family was broken up among the members of the various independent properties. It is this that explains a reference to covenants relating to cohabite property, which the sixth century in Ireland confirm, while the power of confirming them was allowed his five immediate predecessors. He was disqualified, because the sixth chief of the family, in whatever way, would be the first who was not a representative of the rights of the original acquirer of the property.

It naturally followed from this system of tenure that a close restraint was placed on the alienation of property; and so we find that the head of a family who owned property could not part with it for his own purposes, to the injury of his descendants. A person's sons, in their father's land, had a sufficient right to restrain the latter to restrain the person of alienation. While the gelfine was in existence, the gelfine chief was necessary for the validity of contracts dealing with cohabite property and with the land of the main tribe, and more importance was attached to correct conduct in the part of members of the family groups in the matter of contracts.

Inheritance lands (orba), outside those which the gelfine had occupied, were called dioch lands. The latter term is a very difficult one, since it appears to be also used for the property that passed from a deceased co-owner to his nearest relative. It is usually supposed that in dioch lands, the heir of the deceased was not held to have succeeded him; and, in the latter sense, it is clearly used to describe the share of a deceased co-owner in cohabite land, when land of that kind passed by succession.

The term dioch seems to stand in opposition to cohabite rather than to describe any specific class of lands. It appears to call attention to the divisible character of land among various persons as tenants in common, and not the members of an associated group. The same land might conceivably be classed as cohabite or dioch, according to the standpoint from which the rights of the individuals holding it were regarded.

2. Tenantry.---This term (Ir. tanaisteach) comes from the Irish tanais ("next"), and refers to the Irish system whereby a king's successor was not his eldest son, but the oldest member of the family, or possibly one from another family. The term tanais was used for the heir-presumptive of a king.

3. Inheritance of suidir-tenants.---These tenants were mainly recruited from those members of the tribes who had lost land and kinship, and who were settled on the chief's share of the tribe-land. In the tribal system they were supposed to form a portion of the tribe, or family, group of the chief; but they appeared, at an early period, to have formed artificial family-groups, based on the principle of reciprocal liability, and among them the custom of the hereditary transmission of property came to be established. They do not appear to have been originally regarded as kinsmen for the purpose of paying compensation for crimes; but, if there were live houses of suidir-tenants, each household having a stock of a hundred cattle, and in receipt of some kind of head chief, they formed an association recognized as a part of a tribe. Each in that way shared in the common tribe-land (doluan), and paid compensation for the crimes of the poorer members of their separate organization. In their case, too, it was said that the father sold nothing to the prejudice of his sons, grandsons, great-grandsons, or great-great-grandsons.

4. Inheritance of an adopted child.---An adopted child (mac foama) could not inherit without the consent of the family. If the gelfine or the derbines had conjoined in the verbal act from which the
adoption resulted, and if the distant branches had not objected, the consent was presumed.

5. Inheritance through the mother.—Originally in Ireland a woman could receive only a dowry (feadhainn), not an inheritance. At the same time, a sister or a daughter of a member of the agnostic group who was married to a stranger with the consent of the tribe could obtain tribal rights for her son and daughter, as described in early Irish literature, La Famille celtique, Paris, 1905, p. 72). Among the Pictish kings there appears to have been a tendency for the crown to be transmitted to a sister's son (W. F. Skene, Chronicles of the Picts, Edinburgh, 1887, p. 7), and in the Welsh Mabinogi stories of Branwen and Math ap Mathonwy there are apparently echoes of such a practice even in Wales. The origin of this custom has been variously explained, but it seems clear that in this custom the vestiges of a decayed matriarchal system. It is possible that the marriage of an acceptable stranger into the tribe was regarded as a partial source of strength, and, accordingly, it would not be unnatural to see provision made for the incorporation of his sons in the tribe. The will was the instrument adopted in Ireland by fathers for enabling their daughters' sons to succeed them in the inheritances technically known as orbacrubocuasislanta. The property, however, which a daughter owed to a father's will was not indefinitely transmissible by her to her heirs, and, in fact, it was in the nature of a woman returning to her father's agnates. When property passed from a mother to her son, care was taken to see that there was a guarantee of concurrence in the payment of the composition for crimes, and also of the share in the private wars waged by the family.

II. WALES.—1. General.—The Welsh evolution of the tribe (cenodol) was essentially parallel to that found in Ireland; and, owing to warriory, it is clear that a form of the family group has been developed which was practically identical with the gafline of Ireland. This family group was known as a gweoly dit, "best"), and the land occupied by it was called tir gweolyg. The members of these family groups were called free tenants in contradistinction to the taxogians, or unfree tenants, of Wales.

On the death of their father or the daughters took nothing, unless there was a failure of male heirs; the sons divided the land among them in the following manner:

When brothers share the patrimony between them, the eldest is to have the principal homestead and all his father's buildings and eight acres of land, his boiller, his full hatchet, and his belt; because a father cannot give them there to any one but to the youngest; and though they should be pledged, they never become forfeited. Then let every brother take a homestead with eight acres of land; and the youngest son is to share, and they are to choose in succession from the eldest to the youngest (Aneurin Owen, Ancient Laws of Wales, London, 1841, I. 543; Wade-Evans, Welsh Medieval Law, Oxford, 1909, p. 320).

When the inheritance had been thus divided among the first generation of descendants, it was again divided among the grandsons, and again among the great-grandsons, after which time there was a brother's son who could be the heir for another.

The right to inherit the share of any deceased relative was not held by any one as a collateral heir of the deceased, but as a direct descendant of the original inheritors. The inheritance, however, stopped short at the fourth generation of descendents. The descendant of the fifth degree had no hereditary claim derived from his ancestor to any portion of the lands of inheritance. Consequently, kinsmen more distantly related than third cousins could not be heirs to each other in the matter of shares in lands of inheritance. On the failure of relatives within this degree, the land escheated to the king. According to the Venedotian (or North-West Wales) Code, the division between cousins-german and their children took place only if they wished to marry a person of inferior rank (Poon, 4c, 2. 11). It will be seen from the foregoing statement that the Welsh equivalent of the Irish gafline did not take into account the great-great-grandson; otherwise the two groups were identical, and are a clear proof of the parallel development of the tribal institutions of the two countries. In Wales there were special provisions for inheritance beyond the sixth degree in the case of the descendants of an exile. The process was called dadanbudd.

2. Succession through the female.—In Wales, as in Ireland, the son of a woman who was married to a stranger that joined her tribe was allowed, under certain conditions, to become a member of his mother's father's tribe, and to inherit along with the tribesmen. In N. Wales, the brothers of a woman who had a son in the tribe of a daughter's marriage were considered a stranger, while in S. Wales (according to the Dinention Code, II. cxxii. art. 7) a woman might inherit in the absence of a son. In a system of tribal law there was an obvious objection to female inheritance, because the property was to be transferred to the sons of the family, and, by marriage with strangers, to transfer them to members of foreign tribes. When the idea of female succession entered into a social system in Wales, the first situation was the emergences of the principle of absolute ownership, in place of the older conception of collective agnostic tenure. In Welsh law, the woman's counterpart to succession was the law of co-inheritance, by which a woman who married a man of another tribe and had children was entitled to an inheritance equal to that of her husband, and in which the property was divided into two equal portions, one for the wife and the other for the husband (Anonymous, Welsh Laws, London, 1841, I. 543). As a brother is rightful heir to his patriarch, so is his sister rightful heir to her paternal, through which she may obtain a husband entitled to land: that is to say, from her father, or from her co-inheritors if she remain under the guidance of her parents and co-inheritors (Anonymous, Welsh Laws, London, 1841, I. 543).

3. Succession to a kingdom.—The heir-apparent to a kingdom is called in the Welsh laws eIgig, a term borrowed from the English 'etheling.' He had to be either the king's son, his brother, or his nephew (brother's son).

LITERATURE.—See Literature under FAMILY (Colicic).

INHERITANCE (Egyptian).— Introductory.—The sources from which we gather our knowledge of this subject are of several kinds: (a) mural inscriptions (or isolated stele) from private tombs, hypogees of the feudal lords of the provinces, sepulchres of high Theban dignitaries, and funerary temples; (b) indirect information furnished by the official temple inscriptions; (c) graffiti; and (d) papyri, referring more especially to the six last centuries of Egyptian history—a more abundant source than any of the other three. Generally speaking, the sources known to us cover a period extending from the end of the 11th dynasty (Ameny inscription) to the Graeco-Roman period (to which belong the Greek texts, which have enabled Revilloud to find the exact equivalent for numerous Egyptian legal terms). As a matter of fact, however, we have no Co-inheritance information subject till about the Saite period. Before that, except in the case of the XIth dynasty, we have only conjecture and analogy to help us, rather than positive sources of information. Discoveries like the Kahun papyri and the more recent interpretation of Memphis inscriptions allow us to hope for better things in the future.

In spite of the inequality and the restricted number of our sources, and the many differences of opinion among authors on this difficult subject, we may give a certain number of sufficiently well-
founded details concerning inheritance (1) in the succession of the nobility belonging to the provinces or 'nomes' (2) in the priesthood; and (3) in private family law. As a preliminary, we might note that, as is the case with everything connected with Egyptian property, the question is dominated by a number of principles more or less fictitiously, yet theoretically, all land of the 'eminent' property belongs to the Pharaoh. Even the cessions that he has made by special act from his nominal right of property may always be recalled. This is a principle which was frequent and in fact often in the Oriental civilizations, with the same consequences.

1. Inheritance among the feudal nobility.—The largest amount of information regarding the laws of feudal inheritance is gained from the documents belonging to the Middle Empire, the theory of investigation being founded on the idea that the laws of the old nobility would preserve more clearly than the laws relating to ordinary private individuals visible traces of the rules of primitive society, and thus furnish a means of guessing what the Egyptian family was like in its origins.

Feudal inheritance must be divided into several different categories. The succession to the exercise of the law and to the position of head of the province, from an administrative point of view, is hereditary from father to son, but is subject to the provisions of the constitution. It bears with it also the inheritance of the princely prerogatives or laws peculiar to the feudal province. Such a succession is entirely distinct from the inheritance of goods, and is affecting the lordly domain. In this case, as is seen from the 'Contracts of Sint', for example, Egyptian law distinguishes between two kinds of property for which the hereditary rights are subject to (1) the private domain, and (2) the feudal fief. In spite of the lack of agreement on this subject resulting from the obscurity or the small number of the sources at our disposal, it would appear that the feudal fief is regarded as forming part of the succession to the dignity of head of the province, and is, consequently, handed down to the one whose investiture is confirmed by the Pharaoh. As for the private domains, the rule seems to have been equal shares for each of the children, carrying with them the same rights for sons and daughters, and again in turn for their sons and daughters.

It is a fact that the patrimony of a daughter is never fused with that of the man she marries, but passes intact to her child at birth. The child inherits separately from its father and from its mother—a characteristic which we find again in the laws relating to private inheritance (see below). This peculiarity of Egyptian law clears up a great deal of the mystery surrounding the difficult feudal inscriptions of el-Bersheh and Beni-Hassan, which have sometimes been interpreted (not without hesitation, however) as signifying that in ancient Egypt there were traces of an inheritance passing to the son of the eldest daughter. This, however, is a confusion arising from the fact that sisters have the same hereditary rights as their brothers, and can pass on these rights as heads of families to their own children. It is a mistake, then, to suppose that there is, in this connexion at least, any text which would suggest the existence of a matriarchate in ancient Egypt. On the other hand, all the acts and other documents known to us establish the independence of the woman in the disposal of her hereditary share, her equality with man, and the high rank that she holds in the Egypt of history. This generosely towards the woman, which is so apparent in feudal law, is found again in everything regarding succession in private family law.

2. Inheritance of priestly functions.—These do not pass to the eldest son by law. As a matter of fact, no charge or function of a priestly character constitutes a property which an individual can dispose of in another's favour de jure.

It is a mistake has been made in taking as a legal assertion of the exercise of this right a series of formulae like the following: 1 shall leave my property to my son, and after the death of the child, to the male heir of his line. This is frequently made, but is merely an ex nunc expression. An even more definite case would seem to be the office left to a son 'between his hands', as an inheritance for ever, but it is simply another example of the preceding. This is seen more clearly if we consider the case of the dead, who in their formulae of adoration make exactly the same promise to those who are faithful to their memory or to their tomb, as those in the office of the Pharaoh. They promise them 'you will transmit your office to your children as an inheritance for ever'. A thing quite contrary to which they have obviously no control whatever.

Legally, the 'titularization' in a priestly charge belongs to the king, as it does in the case of public functions. What really takes place in practice, however, is that the priestly functions are transmitted de facto to the members of the same family, and generally from father to son. The Pharaoh considered that this transmission was desirable, and regarded it as the legitimate reward of services rendered by the father. All the same, it remained a favour, even though the favour came to be the general rule. The formal proof of this lies in inscriptions like those of Rekh-mery, who mentioning that Siphab is handing over his father's charge to him.

3. Inheritance in family law.—The law relating to private individuals offers numerous difficulties, principally as a result of the scarcity of legal documents belonging to the ancient period of Egyptian history. The time of Amasis and the following periods, on the other hand, abound in testamentary acts or acts connected with inheritance, and the unearthing work of Petrie and the de domotic papyri has thrown a great deal of light on these times. For the preceding centuries, no definite statements can be made without the greatest reserve. The discovery by Petrie, however, of the splendid Kahun documents (XIth dynasty) enables us to give a far greater cohesion to the fragmentary indications furnished by certain stela and certain passages of the tomb inscriptions. The combination.
tion of these, already connecting, to a certain extent, the laws of the XXVIIth and following dynasties with those of the Theban and even the proto-Theban period, enables us to interpret the Muraphite mummies far more successfully than formerly, at least in their essential points.

The initial principle that the 'eminent' property always belongs (at least theoretically) to the sovereign (or to the lord of the province, or to the provincial god of the temple) lies at the foundation of every interpretation of the laws regulating inheritance. It explains the registering of testamentary or similar acts in the presence of representatives of the sovereign, the forms if probate, the ratifications given by officers of the crown, and also the mutation taxes collected by them. Revillout has proved at great length the ancient and permanent character of these taxes. As constant characteristics of these laws, we have: (1) the absolute equality of the rights of men and women to will and to inherit, (2) the equal rights of inheritance of all children, whether male or female, (3) the preference given to the eldest, but only as administrator of the real estate, (4) the heres sui character of each of the children, and (5) their rights preserved during the lifetime of the paterfamilias, in the acts disposing of real estate, either gratuitously or under burden of certain conditions.

The disposing of an inheritance is known by the general name of amitopi (lit. 'what belongs to a donor,' taking the Latin word to mean what constitutes 'the family estate'—buildings, gardens, lands, etc.). The exclusive meaning of 'will,' suggesting the idea of gift, did not exist until Graeco-Roman times. Maspero, and Revillout, was afterwards extended by the three last-mentioned to include various acts of donation, cession, constitution of usufruct, etc. The stability of the family unit of the society itself and the legal expressions referring to it have been established by tracing it back from the Saite period to the XIIth dynasty, and even up to a certain extent to the Old Kingdom.

The formality of registering the amitopi attested by the demotic contracts is proved to have existed as early as the Theban period by a passage of the great Rekhmara inscriptions (XIXth dynasty). An examination of the Kahun documents shows that it was in existence even in the XIIth dynasty. This registration of wills is often accompanied by an act of donation to one of the children of the will and to prevent future lawsuits. It consists in a copy or an extract from a copy being placed in the funereal temple of the king or prince to whom the testator is bound, on the one hand, by some function which he performs for him or by a royal pension, or on the other hand, by a religious endowment (analogous to the Arab. waqf). A good example of this is found in the Sommes stele, placed in the funereal chapel of Uadzamun. The copy may also be placed in the testator's own tomb.

The act regulating inheritance ought to be completed, if it is to have its full value, by the production of family registers (usapen), which are necessary to put the heir in legal possession of the property. These registers give an account of relationship, ownership, of the testator and of the legatee's right to inherit. They are submitted to legalisation by competent magistrates, and at the same time the Exchequer is enabled to levy the necessary tax on the deceased estate of the testator, a proving one's right to inherit by authentic documents (2), paying the tax, and (3) registering it. The inherent provisions of such a transaction, on public tablets, on pain of a fine of 10,000 drachmas, is a prescription from the time of the Pharaohs, going back at least as far as the XIIth dynasty, which is as far as our present research can take us.1

The pre-emminence of the eldest son, which has been definitely proved for the whole of the last period of history, from Amasis onwards, is supplied, and not without reason, to have existed from the earliest times,2 or at least from the time of the Kahun papyri.3 Revillout and Maspero have shown that this peculiarity of Egyptian law persisted in modern Egypt, especially in Coptic families, until the insurrection of the civil law emanating from Europe.4 Later, in the time of Nephertis, we find that the shares to be inherited are regulated by the father, who deals exclusively with his eldest son. He, in his turn, has to settle the claims of his younger brothers and sisters. It is he that administers the hereditary domain for the common good. He is responsible for the dividing of the revenue, as his father's will has decreed, into the shares due to his brothers and sisters and the usufruct instituted for his mother's benefit, whether by will, marriage contract, or act of registration during the lifetime of the paterfamilias, of the children. The eldest, as representing his mother, brothers, and sisters, is legally bound to defend their inheritance against strangers. He acts as ab, or 'master.' Revillout has proved that he had even the right to prevent the family property from being disposed of by his father in any way contrary to family law.5 This last point, however, has not been definitely proved. Generally speaking, the eldest seems to have taken the place of paterfamilias at the death of his father, administered the estate, pleaded in the law courts, and been generally responsible for the family estate to each of his brothers and sisters and other members of the family, including his mother, his aunts, and any children who were still minors. At his death the inheritance passed to the second oldest son, who must observe the clauses regarding the usufruct for the benefit of the testator's wife, which he accepted as binding by registered act. The shares to which the eldest was entitled does not seem to have been any way larger than that given to the rest, and the principle of equal shares seems to have been the rule down to the Ptolemaic period, when a law was made entitling the eldest to a larger share coming out of the rest.

In these rules regarding inheritance, we find the same Egyptian characteristic as in everything relating to property in general—the permanence and fixity of the domain (nsw) is set above the claims of individuals. The estate, as we find from the stele, is often preserved intact with the same name, personality, and boundaries for several centuries.6

Two examples of wills belonging to the XIIth dynasty will give us a good idea of the general scheme:

The last will and testament of... named Askharam. All my goods, in the gardens and in the town, are for my brother the priest... Uahun. Everything connected with them belongs...

to the same brother. This was recorded at the office of the second conservator of Acts for the South district, in the year 44, in the 2nd month of Shonu, on the 12th day.

The above is an example of an elder brother's will giving his share to his brother full possession of an immovable estate of all that he had as a member of the common estate. The following is the will of Uahun himself:

The last will and testament of the priest... Uahun. To my wife... I bequeath all that was left to me by Anikrahun, all movable estate which I inherited from him, and any other gifts that I give to anyone of the children she has borne me. I leave her also four slave maids bequeathed to my brother, so that she may give them to any of the children she likes. With regard to the sepulchres where I shall be laid with my wife, let no one, whoever he may be, take away any part of it. Touching the buildings which my father constructed for me and where my wife resides, let no one dare to evict her from there. The Wall Shit will be my son's guardian. (Then follows a list of witnesses.)

Hereditary patrimony always seems to have been kept quite separate. The daughter has the same rights as her brothers. At her marriage, her share remains distinct, as far as we can gather from the contracts known to us. She still has the administration of it and bequests it, separately and with entire independence to her children. The husband may pass part of his property over to his wife, but only in the name of the children born or married to her. 

The marriage contract published up to date lead us to suppose that the widow might receive a usufruct by deciding marriage contract or after marriage. The dowry which is always known to have been the property during marriage was not subject to the 

rigorous rules affecting the family estate. In this case (as we find, e.g., in contracts of the time of Pharaohs) the dowry is not assigned at the time of the marriage, but is regularly paid in the name of the children that the husband will have or has had by his wife.

All that has been said so far concerns the inheritance of family estate exclusively, and has nothing to do with the transfer of an inheritance from any employment or office. This is regulated by a far more complicated law, of which we get some information by the inscriptions of the Memphite period like the nasab that, for instance, of Nof. Generally speaking, the divisible revenue from the fixed or casual income coming from the employment was equally divided, wherever possible, among all the brothers, the eldest son going to the eldest son to divide among his younger brothers and sisters. The remarkable concerning the priesthood (see above) apply to the inheritance of the dignity or functions of office properly speaking (distinct from its material advantages).

The double formality requiring (1) a warrant from the central power (the king, the feudal lord, or the temple administrations), and (2) the presence of the children interested at the signing of the act of partage, has given rise (as, e.g., in the case of testamentary acts or ante mortem acts of cession in connexion with the family estate) to abbreviations which describe the event, in a conventional way, in the form of frescoes or bas-reliefs, and may serve, in case of future dispute, to bear witness to the circumstances by which a transaction of any

1 Mapiero, Journal des Savants, Feb.-March, 1858.

2 This was separate from the indemnity, consisting of moveable estate (natums), money, or income, decided upon in the marriage contract, to be paid in the case of desertion or divorce.

3 This is the main cause for the case of adultery on the part of the woman (see Mariette, Egyptian).

4 C. Griffith, P.B.S.A. xxxi. 218; Revillout, Fréres du droit égyptien, I (1890), pp. 61-190.

7 The emblem or insignia by the paterfamilias, or the holding of a baton, a sistrum, a sceptre (hich), etc., or the wearing of some special article of dress by the inheritance son or daughter, serves in these cases as a sort of reminder of a codification which by long usage might have gone through in the past. There is still a great deal of work to be done in the way of interpreting a number of Memphite and Theban stelae and frescoes of this kind.

Of lawsuits or disputes concerning inheritance, the best example is found in the long inscription discovered by Loret, in 1864, in the tomb of Menthwebis in the temple of the Memphite under Eunennes. This functionary claims and finally obtains a piece of land, his right to which was disputed by relatives. It had been given to one of his ancestors more than a century before by the Pharaoh, who stipulated that it should be the common property of the whole family. The series of lawsuits over this lasted several generations, and exhausted every kind of trial and all the different methods of jurisdiction. An epigram will be found in Mapiero, RC (Nov. 1865, p. 249), of the masterly publication of these texts by Alan H. Gardiner (see Literature).

Inheritance (Greek).—The general unity of Greek law is seen in the rules governing inheritance, adoption, and participation in the blood. 1 Rights of property and succession were universally based on kinship and on the life of the family, in its extended form as yær (gene, clan); they were the outcome neither of caprice nor of policy directed by a legislator or Assembly, being the outcome of certain practices and religious in origin. These primitive ideas, and the rules to which they gave birth, were only slowly subjected to reconstruction as society developed. The course of this evolution consisted in the discovery or creation of the individual as the unit with which the State had properly to deal. In some departments the substitution of the individual for the group was carried out with logical completeness, but in others the older ideas were too tenacious of life and led to strange results. Naturally, our knowledge is chiefly confined to the details of Attic family law, but the Athenian rules were not necessarily in all respects the most admirable and enlightened.

The family property and family cult were conceived as forming indissoluble whole which was not perceptible to the eye and not spoken of as a distinct entity. Consequently the rules of law did not always correspond to the facts, and the one was not always the expression of the other. Under such a conception intestate succession within the family (des) was necessarily the rule, for there was no personal expression of will to direct the devolution of a body of rights and duties which could proceed only along lines sanctioned by immemorial, and

1 See Mitteis, Reichsrecht und Volksrecht, p. 72; ‘Es ist nicht eine Sonderstätte jedes Einzelnen, sondern das Recht eines grossen, weithinreichenden Nationen.'
Inheritance (Greek) 303

At Athens daughters had absolutely no rights of inheritance by the side of their father's sons; but their brothers were under obligation to provide them with a suitable dowry and to give them in marriage (Dem. xiv. 74).1

Failing limbs, will was thought a fair game (Wyse, The Speeches of Isæus, p. 650).

According to the letter of the Solonian law, a man with a legitimate heir of full age could not make a will at all, the devolution of his estate being entirely beyond his control (Pl. vi. 25). Whether he could have any legal means disinherit his son is not by will.2

Nor could be disregarded his daughter's rights (Ins. 41: ὁδὸς γὰρ ἐν ὕπερ ἐστὶν ἐν τῇ συγγενείᾳ τοῦ γιατροῦ, ἐν τῇ συγγενείᾳ τοῦ ἀδελφοῦ). Isaäus certainly speaks too strongly, as he practically asserts that the testamentary power permitted to a man, whose only legitimate descendants were girls, still unmarried, meant simply the appointment of their husbands, and did not include the right to bestow legacies outside his family. Usually, if a man wished to divert his estate from his next-of-kin, he would adopt the legatees in his will, with the essential proviso that he must marry the daughter; but it seems clear that he might, if he wished, bequeath her daughter. The original significance of a will being to enable a man without a son to adopt one, thus is effect also enabling him to defeat the anticipations of the next-of-kin, a will which adopted any other as his next-of-kin himself, and a further bequeathing both land and estates, and estates without at the same time adopting the devisee, challenged assault; and a perfectly legal will was always to be regarded as a remuneratory gift or grant of equity.3

If the estate was worth powder and shot, the gift would be more on the lines of a testamentary appointment, claimed at law as 'heirship' (heqaia) by the next-of-kin. Anyhow, the law was explicit that the estate could not be willed away from daughters, but must (Ins. 61) if it was in general usage for a man to try to divert his estate from his legitimate offspring on the one hand, or from his next-of-kin on the other. But custom, if not law, allowed him to give by will a special legacy to a son, even an illegitimate son, or to non-relatives or religious bodies, without such a legacy often being of considerable magnitude. Only the childless man of full age and in full possession of his faculties was at liberty to choose his own heir; and even he was powerless to thwart the application of the traditional rules of inheritance if the caprice of the next-of-kin tempted him to try his luck against the will.4

The right of inheritance of legitimate male descendants, including the son adopted inter vivos (see Adoption), was indefeasible, and was placed on a different footing from all other claims; for collateral and testamentary heirs must claim before the Archon (arkhénarchos), and get an order of him, or ultimately of a Bouleuspeis, before taking possession of the estate; i.e., they must accept their claim to public challenge (Ins. iii. 59). Sons of the body, or one adopted inter vivos, entered on possession without this want of process, and had us against a third party in actual possession an action of ejectment (εἴσωσις). On the other hand, lineal heirs could not escape the inheritance with all its collateral claims, whereas for all other heirs declination was possible.5

Rights of primogeniture were unknown in Greece, although an eldest son had by courtesy, as primum inter partes, a privilege of choice (σχευήσις). The law asserted the principle of equal division (Ins. vi. 25; τὸν υἱὸν κληρονόμον άρα τούτον τούτων τούτως εἶναι τούτων τῶν πατρίων); whether the sons were by the same mother or not was immaterial. If a married son predeceased his father, his sons were entitled to his share in equal parts; i.e., distribution was per stirpes.6

1 At Sparta in the 4th cent. B.C., if the story of the law passed by the Ephors Epitrepontes is true (Phyl. Arg. 5), this was possible.

2 Of the laws, esp. those leading up to the Law of the Dolphins (Law of the Dolphins, which only partially protected the will, see Ins. iii. 58.

3 Of the Speeches of Isæus, being all about claims to property, turn not upon evidence of its legal transfer, and the like, the doctrine is worked out in a way which does not correspond, inasmuch as at Athens.

4 In this line of development Isæus passed to the next of kin so that the son is not only not regarded as a heir, but also is not regarded as a heir. The law is then given in the form that the heir is the heir, in the form that the heir is the heir, in the form that the heir is the heir.

5 Of the use of ἐκτάσεις, one or more at Athens, and also at Athens.

6 At any rate there is nothing in the case of the estate of Isæus, where Isæus, in the absence of Isæus, in the absence of Isæus, in the absence of Isæus, in the absence of Isæus,
organization, perhaps designed to apply not originally to the traditional authority, but to distinctions of religious obligation towards the dead, and community in blood vengeance.

The death of the maxim πατέρα τοῦ δίκαιου was to split each family into two factions, the male excluding the female. Sons and sons' sons inherited before daughters and daughters' issue. Similarly, a brother's son, though a step further from the common stock, was admitted (the died child's father in the case), excluded his own aunt, the deceased's sister. This principle governed all successions, whether in the direct line or as between collaterals. But it has only within each in turn of the order of succession, so that a female in stock (1) excluded a male of stock (2). Thus, a sister of the deceased by the same father (Δηλόφρον δασμαγρεύει), he before his male cousin on the father's side (Δηλόφρον πατράρχα), because the son's daughter or issue from the same point on the stem, not being realized, male preference did not here operate; a female cousin on the father's side (Δηλόφρον πατραρχα) would, on the same principle, exclude the uterine brother (Δηλόφρον δασμαγρεύει). The law called to succession the paternal kindred down to and including first cousins once removed before admitting the maternal kindred. And these in turn ranked as follows: (1) uterine brothers, and issue; (2) uterine sisters, and issue; (3) maternal uncles of the deceased, and issue; (4) maternal aunts of the deceased, and issue; (5) first cousins' children. The symmetry of the table of orders of succession is intelligible; the real difficulty is to understand how precedence of males was so universally the principle of representation. Greek family law does not exemplify the interest or marriage of the widow by the deceased's brother for the purpose of perpetuating the line. The reason, as much, could not inherit from his husband, whose estate, failing lineal heirs, must pass to his father's or mother's relatives. An analogy to the levirate is perhaps to be found in Sparta, where a wife might be commissioned by her husband to bear children to another (Xen. Resp. Leg. 1.7; see M. P. Nilsson, Die Grundlagen des spätantiken Lebens, in Röfo, xili. 1912) 325 ff.).

Did Athens observe the 'monarchical succession of parents to the estate of deceased daughters'? A passage in the Code of Laws (xii. 30) seems to assert that under certain conditions a mother might succeed her son, and perhaps in his time the law was interpreted as containing an implicit recognition of her right; but the contradictory passage in the same speech (xii. 17.) That a father ranked before all collaterals has been deduced from the obligation of sons to maintain parents and grandchildren (Is. vii. 30); but this would be too much if it will bear any inference at all (cf. Ι. H. Littus, Das attische Recht, p. 157; H. Böckh, Abhandlungen, p. 195). If a man, having no son of his body, died without adopting an heir, leaving only a daughter (or daughters), she was in a peculiar position, in that she could not claim her father's estate, but was hereafter residing at law (είκοσι) by collaterals as an appendage there to (Is. x. 5). She was an είκοσιος 'on the estate,' and became the object of a claim at law (είκοσιος), in which a court of 3 decided who was next-of-kin and entitled to take her to wife (πυκνοκοιτα κεκοποιη, Is. viii. 31) with the estate.

The rules of succession to an είκοσιος followed those of intestate succession to the estate (ch. 50).

1 Would representation be possible when the division was amongst cousins' children, and so bring in the fifth generation, which fell outside the είκοσιος? When Isocles (xii. 12) says that male preference really began only with first cousins, he is simply misremembering (see Isocles, p. 560).

2 She might be, and is in fact generally was, related to him by blood.

3 And if the estate was the duty of the kings δυνατος πατεραρχος πατραρχα, he, the last dynast, the last, with the son's son, as δυνατος πατεραρχος πατραρχα, was not considered a man under the law (cf. H. Böckh, Aegyptische Sittensondernisse, p. 356). The law in respect of girls not yet married is not known.

4 The law in respect of girls not yet married is not known. The Gotthilfian Code permits the 'heirs' (ενδοτοι) to be divided into the male and female (ף' מנה שלמה), but this is not known. (cf. Aristele, Ath. Pol. 56. 7, fourteen was the lowest limit at Athens.

5 It must be borne in mind that a female, married or unmarried, without brothers or grandfather became είκοσιος on her father's death, though she had not a brother to succeed (and whatever her age), and had a claim as such upon the next-of-kin. The intention of the institution was important, and sometimes entailed serious consequences for the body politic (cf. Aristele, Pol. 1300A; κατ' ιηνείς είκοσιος εικοσιος, and in Hekatoma, in Phlaks, ib.). At Athens, Krimenes having died δυνατος πατεραρχος, his daughter got the estate (cf. H. Böckh, Aegyptische Sittensondernisse, p. 356).

6 The law in respect of girls not yet married is not known. The Gotthilfian Code permits the 'heirs' (ενδοτοι) to be divided into the male and female, but this is not known. (cf. Aristele, Ath. Pol. 56. 7, fourteen was the lowest limit at Athens.

7 It must be borne in mind that a female, married or unmarried, without brothers or grandfather became είκοσιος on her father's death, though she had not a brother to succeed (and whatever her age), and had a claim as such upon the next-of-kin. The intention of the institution was important, and sometimes entailed serious consequences for the body politic (cf. Aristele, Pol. 1300A; κατ' ιηνείς είκοσιος εικοσιος, and in Hekatoma, in Phlaks, ib.). At Athens, Krimenes having died δυνατος πατεραρχος, his daughter got the estate (cf. H. Böckh, Aegyptische Sittensondernisse, p. 356).

8 The law in respect of girls not yet married is not known. The Gotthilfian Code permits the 'heirs' (ενδοτοι) to be divided into the male and female, but this is not known. (cf. Aristele, Ath. Pol. 56. 7, fourteen was the lowest limit at Athens.

9 It must be borne in mind that a female, married or unmarried, without brothers or grandfather became είκοσιος on her father's death, though she had not a brother to succeed (and whatever her age), and had a claim as such upon the next-of-kin. The intention of the institution was important, and sometimes entailed serious consequences for the body politic (cf. Aristele, Pol. 1300A; κατ' ιηνείς είκοσιος εικοσιος, and in Hekatoma, in Phlaks, ib.). At Athens, Krimenes having died δυνατος πατεραρχος, his daughter got the estate (cf. H. Böckh, Aegyptische Sittensondernisse, p. 356).
concerning the ἐπιλογὰς are a violation of equity' (Wyse, p. 609).

It seems that a man, on becoming entitled to an ἐπιλογὰς by the death of his wife, or at least by bestowing on another, in order to take advantage of his good fortune (cf. Dem. Iulii. 50: ἐπιλογὰς λαμβάνω σὺν ἐκφώνο). II. The interest of the Attic law of inheritance lies largely in its application of the rules governing primitive society to a democratic organization steadily drifting away from the old point of view. The Gortynian Code exhibits these principles as modified in a Doric oligarchical society.

At Gorty interstacy succession is the rule, for testamentary power is unknown, so that the Code in this respect is more archaic than Solon's laws. Male precedence is in force, as at Athens. The estate passes to the following series of heirs: (1) the deceased's children, grand-children, or great-grand-children; (2) his brothers, their children, or grandchildren; (3) his sisters, their children, or grandchildren; (4) failing these, it goes to 'those entitled (οἱ ἐπιλογίζεται ὡς καὶ τοὺς ἀδελφούς τότε τοὺς ἑαυτούς τοὺς τοὺς ἐπιλογίζεται), (5) failing a kinsman, to 'those constituting the next of kin' (τοὺς εἰκόνες τῶν κόσμων, i.e. the serfs on the estate, who are thus a man's heirs in the last resort).

The Code is in advance of the Athenian law in its treatment of women's property, although some have some rights in the house and its furniture, and the cattle, daughters share in the real property only, a daughter's share being fixed at half that of a son. (2) A woman has rights of several property absolute during her lifetime against both husband and children; (3) her property is transmitted in the same way as a man's estate.

The Code contains elaborate rules about the ἀναστάσεις (εἰκόνες τῶν κόσμων). Clearly the original idea of providing male heirs did not mean that the deceased could not be left less strongly than at Athens, and the pecuniary interests of the relatives override the conception of duty to the dead; in especial, the institution of the κόσμως, or chief beneficiary of the inheritance given to women by the Code. The Gortynian ἀναστάσεις is, in fact, a true 'heir', retaining her inheritance in severalty for life, and is not, as at Athens, a mere vehicle of the estate to her son.

The right to marry the heirless belongs to (1) her father's brothers according to seniority—if there are several ἀναστάσεις, the second brother is entitled to the first; if there be no brothers, the second sister, and so on; (2) if there are no living brothers of the dead man, the sons of the senior uncle claim their cousins in order of seniority; but any living uncle excludes his nephew, son, or grandson of a sister. There is nothing to show that the right to marry the 'heirless' passes beyond these to the other collateral; i.e., the conception of the ἀναστάσεις is less than at Athens. The rule is that the deceased carries his account with the ἀναστάσεις (v. 27: μὴ δὲν ἄναστῆται ὡς εἴρηθη οὖσα, πάλιν δὲ μή; i.e., if a compromise is accepted by him, he cannot go on to assert a claim to the next sister; but, conversely, compromise with the senior claimant frees the ἀναστάσεις from all. But, if there is no next-of-kin, she is required to find her husband among her tribe-mens, if possible—giving them the credit of being her 'heirs'.

The Code deals with the situations arising when one or other of the parties is too young to marry, or is unwilling to do so. Neither is, in fact, compelled to marry; the ἀναστάσεις may simply waive his claim, in which case it is open for the next in succession to assert it, or he may accept the legal indemnity of half the estate (which frees the ἀναστάσεις from his father's claims of next-of-kin). It rests solely with the ἀναστάσεις to decide whether she will marry or indemnify the others. The liabilities turn upon the presence or absence of children. (a) The married ἀναστάσεις is not compelled, but is at liberty, so separate from her husband: (1) if there are children who are intestate, all claimants are extinguished, and she may remain in status quo, or, by surrendering one-half of the estate to her husband, regain her freedom to re-marry within their tribe; (2) if there are no children, the rights of the next-of-kin operate, but, at the price of half of the estate paid to him who has first claim, she can either remain in status quo or separate from her husband and re-marry within her tribe. (b) In the case of a ἀναστάσεις who becomes a widow: (1) if there are children, rights of relatives lapse, and she may re-marry, if she pleases, within her lifetime, without penalty. (2) If there are no children, the first marriage is of non-effect, the rights of relatives revive, and she must either marry the next-of-kin or indemnify him, as before. The heirs 'must, therefore, marry under any circumstances; she is not free from that obligation through failure of next-of-kin or by indemnifying. Again, it is not until she has borne a child that she has fulfilled her duty wholly, and is then free. On the other hand, if children are not, as at Athens, forced into a distasteful union.

III. An interesting inquiry is as to what happened when this body of Hellenic legal principles came into contact with the laws of the East and Egypt, and finally with that of Rome. Especially interesting must have been the relations established in the great Hellenistic foundations of the Seleucids. The answer is given here by the Papyri (cf. Mitteil, p. 46 ff.). In the East the Syrian Code shows how the social structure was modified by the combined influence of Hellenic and Egyptian legal ideas in the early centuries of the Empire.

The Syrian Code, in its rules of intestacy succession, exhibits the following chief analogies with Hellenic law: (1) natural right of legitimate children to inherit the estate; (2) a succession of stocks; (3) male precedence; (4) equal distribution within the stocks; (5) rights of inheritance given to relatives of the deceased's mother on failure of the paternal side. On the other hand, the Code exhibits the following departures from the Athenian rule: (1) daughters rank with sons, and sisters rank with brothers of the deceased, for equal share; (2) his mother ranks with his brothers and sisters for an equal share with them; (3) yet issues of daughters and sisters inherit after the agnates; (4) i.e., after his uncles and their sons, but before his aunts and their issue. A fourth divergence would lie in the fact that, by the Syrian rule, the father inherits before brothers and sisters of the deceased—if it were proved that at Athens he could not inherit from a son.

The right of daughters to some share in the patrimony was already recognized in the Gortynian Code; but it seems probable that these divergences from the general Hellenic practice are due to the influence of Egyptian law, and the interference of the law of Constantine (see Mitteil, p. 343 ff.).

1 The date of the actual Code is perhaps not earlier than the 7th cent. B.C., but its basis is very much older. The sections concerning inheritance and heiresses seem to have been given to the code in a universal law on their subject, and to belong to the universal section of the Code (cf. v. 27: μὴ δὲν ἄναστῆται ὡς εἴρηθη οὖσα, πάλιν δὲ μή; i.e., if a compromise is accepted by him, he cannot go on to assert a claim to the next sister; but, conversely, compromise with the senior claimant frees the ἀναστάσεις from all. But, if there is no next-of-kin, she is required to find her husband among her tribe-mens, if possible—giving them the credit of being her 'heirs'.

2 The law says simply, 'parting the estate as laid down by law' (παραχωρεῖται τῷ εἶσόντειν, ὡς εἴρηθεν) and this might mean that in this case and in this particular section of the Code that the Code is an innovation in the Code by the fact that the retrospective limit of its working is given. The definition of a ἀναστάσεις in the same sense as at Athens.
INHERITANCE (Hebrew).—Our word 'inheritance' has no exact equivalent in Hebrew. The various terms which denote possession may be used when the possession comes in the way of succession to a person deceased. But, if this is the case, the context must show how the possession came. When we inquire of the documents in the Canon how this succession was regulated, we find no answer until we come to the latest period of the history. The oldest code of laws is silence, and, at the point where the patriarchal narratives reflect later conditions. The Biblical writers evidently supposed matters of this kind to be regulated by well-known family and tribal customs. For Israel's national stage, therefore, we are left to conjecture. Fortunately the customs of the desert are much the same in all ages, and conjectures based on the analogies of nomad life may claim a considerable degree of certainty. Individual title to land is unknown in this state of society, and personal property is small in amount. The man owns his arms, the woman her ornaments. The cattle, while nominally the property of the sheik, are really common to the whole clan. The spoils of war are divided among the able-bodied men. At a man's death his arms are seized by the next-of-kin, or are divided, like the spoils of war, among the men able to bear arms. Women do not inherit, because they are themselves the property of their husbands and pass to the heirs with the rest of the estate. This was the rule in Israel even after the settlement in Canaan. Manannam's regulation, giving a daughter half as much of the estate as went to a son, was an innovation on the earlier custom, according to which none could be heirs who did not take part in battle. In the nature of the case Hebrew custom must have been the same.

Israel established itself in Canaan partly by conquest, partly by amalgamation with the older inhabitants. So far as the arable land was acquired by conquest it was treated like other spoils of war. Each family group assigned portions for tillage to its able-bodied men, but without relinquishing title. On the other hand, we must suppose the Canaanites to have had private property in land. The cultivation of the vine and olive is hardly practicable under any other system. Light on this point in this period may be got from present custom in Palestine. Here we find private ownership of part of the land, and along with it communal ownership of another part. The land ofiks is laid out in portions of equal value, and then assigned by lot to the cultivators. The frequency with which the lot is spoken of in the OT indicates some such system of allotment. But private property in land is also indicated. Na. 35:4, refused to sell his vineyard, and the narrative shows that there were no restrictions on his title. The patriarchal stories represent Abraham and Jacob as buying land from the earlier inhabitants.

While we suppose that private property in land was fully recognized in this period, it is probable that the right of inheritance was limited to male kinsmen. There is no clear case of women owning land before the time of the Exile, though they had legal possession of property. The mother of Michal saved a considerable sum of money, and her title was recognized by her son. Abigail brought five slaves to David, though this seems to have been the whole of her fortune. Rachel and Leah each received a slave girl from her father. The case of Achan, who is said to have received territory from Caleb, forms no exception, for Achan is only the eponym of a clan. Laban's daughters, just referred to, say quite frankly that there is nothing for them in the house of their father, and that he has sold them and eaten up the price. The language shows conclusively that at the time when these stories were written daughters had no claim as heiresses, and that the most they could hope for from a generous father was some part of the price that he had received for them. The difference between which the Hebrew writers represent the widow as an object of charity indicates that widows were without claim on the estates of their husbands.

The dormant rights of the clan naturally reasserted themselves when a man died. But in the period of the monarchy it probably came to be recognized that the sons were the rightful heirs. Gifts by the father during his lifetime were specified as valid, if we may argue from the conduct of Abraham towards the sons of his concubines. But the inheritance went to all the sons—there was no difference between the first-born and the rest. The sons of Zilpah and Bilhah are on the same footing with the sons of Rachel and Leah. This was always the theory, and we may venture to adduce the Biblical parallel. Here we read, if a man recognizes the son of a slave woman by calling him 'my son,' that son is entitled to a share of the estate. In Hebrew practice the son of a slave woman often suffered injustice. The expulsion of Ishmael is an illustration, and so is the banishment of Jephthah by his brothers.

The first-born son had special rights. The law in Deuteronomy, which probably reproduces ancient custom and guards it from abuse, is as follows: When a man has two wives, one beloved and the other hated, and they bear him children, if the first-born belong to the hated wife, then in the day in which he gives the inheritance to his sons he shall not be allowed to treat the son of the beloved wife as the first-born instead of the son of the hated. He shall recognize the first-born (son of the hated) by giving him a double portion of whatever he has; for he is the first-born of his strength and the right of the first-born is his.
blessing to Jacob, and where Jacob in turn pre-
fers Ephraim to Manasseh. The Chronicler be-
lieves that the birthright was taken from Reuben
and given to Joseph. All these stories are the
reflection of tribal relations, but they show that
the transfer of the birthright was not a strange
conception to the writers. We are now here told
that the double portion given to the oldest son
was to be held in suspense to be given to the widow
and the younger children, though this has usually
been assigned as the reason. That the dependent
members of the family passed into the care, or
rather into the possession, of the heir, we have
already had occasion to note. The right of the
first-born son of a king to succeed to the throne
was not necessarily a part of his prerogative, as
we see in the case of Solomon.

In default of sons the patriarchal system makes
the brothers inherit, and after them uncles, that
is, father’s brothers. Next come cousins in the
various degrees, always on the father’s side; for,
the women being excluded, their descendants have
no rights. The Hebrews, however, always felt it
to be a misfortune that a man should have no
son to succeed him. The root of this feeling must be
sought in the antiquity of the custom. The spirit of
a man is left without sustenance and honour if he has no son to pay these dues. To
prevent the name from being blotted out, custom
