(e) The doctrine of the sefirot.—The sefirot are the ten Sephirot, which are the primary emanations of the divine essence. Each sefira represents a stage in the process of emanation, and is associated with a specific quality or characteristic. The sefirot are: the S'phirah, the S'phirah, the S'phirah, the S'phirah, the S'phirah, the S'phirah, the S'phirah, the S'phirah, the S'phirah, and the S'phirah.

(f) The doctrine of the Chariot of the Ark.—The Chariot of the Ark is a symbol used in Jewish mysticism to represent the process of emanation. It is said to be a vehicle in which the divine spark is transported from one sefira to another. The Chariot of the Ark is also known as the Ark of the Covenant, and is said to be the dwelling place of the Shekhinah.

(g) The doctrine of the Sefirot in the Kabbalah.—The Kabbalah is a system of Jewish mysticism that developed in the 13th century. It is based on the doctrine of the sefirot, and seeks to explain the nature of the universe and the role of the Shekhinah in its creation. The Kabbalah is a complex system, and its teachings have been the subject of much debate and controversy over the centuries.
duct is Reason (775), but this is not a separate emanation. These constitute the first group. The second consists of (1) Mercy (777), a father, and (2) Justice (777), a mother, which produce (3) Beauty (764); Mercy and Justice are both qualities of the Divine nature which check one another and produce a harmonious mean. The third group consists of (7) Victory (791); (8) Glory (787); and (9) Foundation (775). Victory, Glory, and Foundation are regarded as aspects that produce a direct connection with the Divine Foundation as their offspring. The last of the sférot, (10) Sovereignty (7757), has no direct connection with the rest.

The sférot are often known by different names—e.g., נְפֶס (nephēs) and נְפֶסִים (nephēsim), or נְפֶסִים. Abelson’s chapter on the sférot (Jewish Mysticism, p. 136) should be carefully studied. According to some Kabbalists, the sférot bear a direct relation to the corporeal members of Adam Kadmon.

(1) Adam Kadmon, or primal man.—This idea, originally held by the Gnostics, of an incorruptible primitive man, fashioned in the image of God, is also known to Philo and the Midrash. This being is sexless or bisexual (see Genesis Rabbi, 8976, Theodore, p. 55). St. Paul’s idea of a heavenly and an earthly Adam (1 Co 15a23a43) is, no doubt, based on the Midrash. The various portions of the body of Adam Kadmon are correlated to the sférot (see JE 161 and xi. 150). From the heavenly man the earthly Adam is derived. The Adam Kadmon is held by some to occupy a position between the Ein Sof and the sférot.

(2) Metempsychosis (767a) was rejected, without compromising severity by Jewish philosophers, but was adopted by the Kabbalists. It is taught in the Zohar (ii. 99a, tr. Jean de Pamiy, Paris, 1908, iii. 400), and was regarded as an answer of the prophets to the wicked. Luria believed that all souls were created at the same time as the different parts of Adam’s body; hence the quality of the souls varies according to the particular member of Adam’s body to which they are related. His successors taught that souls could wander on earth until fulfilled duties neglected by a man in his lifetime or to assist others to perform their duties. The term 727 was used to express the act of junction of a soul with a living man.

(3) Evil.—According to the Kabbalists, evil is essentially finite, as opposed to the divine good. It is the left side in the saxyx. Evil is an appearance, not a substance, and man’s sin consists of his separation from the Divine Being. The words ‘fall’ or ‘fall’, gave man the potentiality of sin, which he previously lacked. By penitence and asceticism man can join the ‘Riders of the Merkbabha’ and attain to life. The idea of the microcosm, or a comparison of man’s frame and members with the parts of the universe (macrocosm) and nature, came from the Greek philosophers to the Jews through Neo-Platonism. It was much favoured by the Kabbalists, and is mentioned in the Zohar. Of the many Kabbalistic devices and practices, notice must here be limited to three.

(a) Amulets (ניָפֶס, also נְפָה or נְפָה), private charms and prophylactic devices, were much in vogue. In spite of the fact that Maimonide and other teachers emphatically opposed the use of amulets and declared their ineffectiveness, the Kabbalists were not strong enough to resist the attractions of this superstition. Amulets were regarded as potent charms to ward off sickness and evil, to help women in labour, and generally to assist the wearer to attain his desire. The charms were usually written on parchment or engraved on a precious metal. The so-called shield of David, the opacic (הָלָעַם), is an example of this popular formula. The word 77 was usually figured, in addition to permutations of the Divine Name or the sférot. Very frequently the prayer attributed to Nebunya haq-Kâma (1st cent. A.D.) was used, or its initials (for the prayer cf. Singer, p. 273, last par.). The initials of the first line (לְאֵל) and of the second line (which form the words לְאֵל, ‘Rend Satan’) occur in most amulets. Reference should be made to M. Gaster, Sword of Moses, London, 1899, where many amulets are cited and explained; a Moorish charm against scorpions is reproduced in J.E. ix. 24; cf. also art. CHARMS AND AMULETS (Jewish). It must be remembered that in many cases people who used amulets did so from a spiritual and not material motives. The constant recitation of Scriptural verses and prayers was intended to relieve the mind and calm the soul, not directly to act on the body; hence not all amulets were put to superstitious use.

(b) The casting of lots, an old Biblical and Talmudic custom, for which many motives may be traced, was also adopted by the Kabbalists and practiced in various forms, chad yace, as a means of divination. Methods similar to the sortes vergitanæ were in vogue.

(c) Change of name (767a) was a Kabbalistic device, no doubt based on the idea of penitence and regeneration, employed in case of serious illness as a life-saving expedient (see M. Gaster, Book of Prayer, i. 185). Frequently the new name chosen was בורים, ‘Life’, or some variant, such as Via.

The chief Kabbalists and their works.—The following list are by no means exhaustive, but contain the principal exponents of Kabbalistic doctrines and the most important books on which the Kabbalah is based, and are intended to serve the reader as a guide for further investigation.

(1) Kabbalists.—(1) Aaron b. Samuel († after 807) is important as having carried the Kabbalah from Europe to Babylon. He lived in Italy. Until modern times he was regarded as a mythical personage, but his historical identity has been proved by Neubauer (see above, p. 625).

(2) Solomon ibn Gabirol (1021–58), a Spanish philosopher, though scarcely to be included among the rabbins of the Kabbalists, must be noted in relation to the Kabbalah, because he introduced Neo-Platonism among the Jews. He is, therefore, responsible for the theory of emanations. See, further, art. IBN GABIROL.

(3) Judah b. Samuel of Regensburg (the Pious, 1277 + 1297) was the founder of a school of noted Kabbalists (see above, p. 623).

(4) Elazar b. Judah b. Kalonymus of Worms (1176–1228) was a pupil of Judah the Pious. He was not only a Kabbalist, but a famous Jewish scholar and a scientist. His most important work is the Boukab. In his Shalvi ha-Asan Sidah he opposed anthropomorphism.

(5) Moses b. Nahman (Nahmamides, Ramah), the famous Spanish Rabbi (1194–1270), though hardly a Kabbalist, since he repudiated several fundamental doctrines (e.g., he held a creatio ex nihilo), supported Kabbalistic teaching in many ways. In his Pentateuchal commentary the influence of the Kabbalah is marked.

(6) Abraham b. Samuel Abravanel (born 1240 at Saragossa, † after 1291) was one of the founders of Spanish Kabbalah. He was an ascetic and practised all kinds of permutations, but did not attempt to work miracles. He travelled in Palestine and made a special journey to Rome in order to convert the pope (1286). In Saragossa he gave himself out to be the Messiah, but was discredited by Solomon b. Adret. He was a voluminous writer, but was responsible for much unworthy juggling and mysticism. Perhaps the most important feature of his teaching was his desire to convert Islam and Christianity to his views. In this desire to unite the three faiths he was, in a way, the forerunner of Elie
Benamozegh, Rabbi of Leghorn, whose life work was directed to the same end (see E. Benamozegh, Israel et l’humanité).

(7) Joseph b. Abraham Jigáthála (1248-1300), a Spanish Kabbalist, was, unlike his teacher Abraham Abuná da Israel, a mystic who was not a rabbi. He tried to reconcile philosophy and Kabbalah. He belonged to the mystic school, but made a large use of gematria. His works were many, chief among them being *Gemilath Elohim* and *Sefer Shabbath*. His systematization on the Haggadá for Passover, *Mizne Génesis*, was very popular.

(8) Isaac ben Latif, a Spanish physician (†1290), attempted to combine philosophy and Kabbalah. Much Kabbalistic terminology is due to his efforts to secure precision in reasoning and the exact use of names and qualities.

(9) Azriel b. Menahém was also known as Ezra; in fact, the two names gave rise to the belief that Ezra and Azriel were brothers. Azriel, the author of several works (born in Gerona in 1160, † in 1235), was a pupil of Isaac the Blind. He taught the theory of negative attributes, emanations, and the sefráth, on which he wrote a commentary, and denied the creatio ex nihilo. He was greatly influenced by Gaon of Vilna.

(10) The *Sefer Hasidim* of Posquières was regarded as the link between the mysticism of the Geonim and the Kabbalists; but, as he is said to have lived in the 13th cent., this is unlikely. Yet the Kabbalists held him in high esteem. Parts of the *Bahir* may be his work.

(11) Buhíy b. Ascher of Saragossa (†1340) must be noted as one of the first Bible exegetes to employ Kabbalistic methods for Bible interpretation. He himself a literalist and rationalist, he used Kabbalá with care and judgment. Among his other works, his *Discourse* (*Kad ha-kDamah*) is the most important.

(12) Isaac b. Moses Arana (1420-94) was more of a philosopher than a Kabbalist. He belongs to the Spanish school, but can scarcely be said to have added much to Kabbalah.

(13) Abraham b. Benjamin Reconati was a prominent Italian Kabbalist of the late 13th century. He is noteworthy for his mystical commentaries on the Bible, one of which was translated into Latin by Pios di Mirandola.

(14) *Zohar* (Ari) (1534-72) was the most important of the later Kabbalists. He lived in Palestine, and to him the whole of the modern Kabbalah may be traced. He was active for many years, and had extensive visions. His chief disciples were Cordovero, el-Kabiz, Joseph b. Qara, Haggaz, and Vital. The system and practices which he founded are still operative in the East. Most of his teachings were written down by his disciples, chiefly by Háyjim Vital. His system is far too wide to be summarized, but he is most important for (1) his teaching of metempsychosis or ‘impregnation’, and (2) his introduction of the *Zohar* into daily life. Every Oriental Prayer Book bears traces of his ordinances and recommendations. He even promulgated a new code, *Shulhan Arukh Shel Ar*, which his followers adopted and diffused. So great was the esteem in which he was held that his followers almost ‘canonized’ him. His teaching called forth opposition from the anti-Kabbalists, but his piety and holiness were his most effective answer to attack.

(15) Háyjim Vital (1543-1609) was a pupil of *Zohar*, to whose position he succeeded. He was a visionary and an alchemist; he also believed himself to be the Messiah for some time. Vital is important because he edited most of *Zohar*’s works, which the latter rarely committed to writing; but he also wrote works of his own.

(16) Israel Sarug, a pupil of *Zohar*, is noteworthy for having spread in Italy and Germany the new Kabbalistic teaching of Luria. He had great influence with Menahem Azarya of Fano, who became an adherent of Luria’s school and spent large sums on buying his MSS.

(17) Leo of Modena (1711-1848; see art. JUDAISM, p. 606), whose curious anomalies make him one of the most perplexing characters in Jewish history, attacked the *Kabbalah* in his *Art Niháh*. He shows that, as a system it is unsound and that the *Zohar* is a late work. For this he is important in the history of Kabbalah.

(18) Háyjim Joseph David Azulai (1724-1807), author of the *Shass ha-yag* (*Chasháh*), a most prolific and versatile writer, carried the Kabbalah of Luria to extremes. His credulity and superstition are all the more remarkable when his scholarship is examined. His works are full of numerical permutations, etc.

(19) Israel b. Elizeir, Be’al Shem Tob (Besht) (1700-1760), was the founder of the Hasidim, a sect which marks the latest stage in the history of Kabbalah and which developed from the school of Luria, with which it was finally in opposition. Besht, though poor, exerted unbounded influence in Poland and Galicia. Little is known of his life, and his teaching is not recorded for he wrote no books. Besht was a pantheist and rejected emanation. Further, he preached joy and ecstasy as opposed to asceticism. He raised the position of the Sabæik to a very high level of authority. The breach between Talmudism and Hasidism did not take place till after his death.

(20) Baer (Dob) of Mesezít (1710-72) was one of the earliest and most important teachers of the Hasidic movement in Poland. He was an ascetic and an enthusiastic adherent of the school of Luria until he became acquainted with Besht, whom he succeeded as leader of the Hasidim. Baer fought their battle against the Talmudists until his death. Like his master, he left no written works.

(21) Works.—(1) The *Sifer Yévid* is the oldest Kabbalistic book. It was attributed to Abraham and also to *Aqiba*, but belongs in all probability to the 6th century. It deals with permutations of numbers and letters, and is the first source of the emuná and effráth. The *Yévid* is so widely read that *Saadya* wrote a commentary to it. It is the basis of the *Zohar*, and has been called the most important of all works for the study of the Kabbalah (see Abelson, *Jewish Mysticism*, p. 98, etc.).

(22) *Sifer ha-bah-Bahir*, a mystic commentary on the first chapters of Genesis, was originally attributed to Nchunya ha-k-Kanna. It is now regarded as the work of Isaac the Blind, with later additions. The *Bahir* believes in the eternity of matter; it knows the effráth. It is important as a precursor and type of the *Zohar*.

(3) The *Hikkaháth* (or *Halls*), Greater and Less, are Geonic mystical writings, bearing relation to the book of Enoch. They are attributed to Solomon b. Elisha. The works deal with the Merkáth, and, finally, with the seven heavenly *Halls*. The *Hikkaháth* influenced the liturgy, chiefly the Kudshaháthah.

(4) The *Zohar* is the most important of all Kabbalistic works. It was circulated by Moses b. Shem Tob de Leon and attributed by him to Simeon b. Joha; the forgery was discovered, after his death. Many Kabbalists still continue to believe in its authenticity, which was finally disproved by Elijah DeMédico and also by Leo of Modena. It is now agreed that the *Zohar* was not composed by one person. Some of the sections written in Aramaic contains various appendices. In form it is a mystic and allegorical commentary on the Pentateuch. No book, except the Bible and the Talmud, has
been so widely read by Jews. It is the centre of the Kabbala, and innumerable works and commentaries have been written round it. Christians as well as Jews have studied it (see act. Zohar).

The Kabbala was born as the work of Rabbi Isaac Luria. It describes the celestial organization, and gives directions for the preparation of amulets.

(6)  Sh'ar 'Rō'ah deals with the dimensions and numbers of the Deity. It is usually included in Rashi. The book was known to Solomon ben Jorobam (b. 886). Gaster’s *Monatschrift*, xxvii. (1893), 224, shows that it goes back as far as the last pre-Christian century.

(7)  *Gittallos* is the name given to lists of transmutations of souls. Many of these works were composed by the school of Luria.

**THE EPISTLE.**—The text, with commentary, of Densu's translation, has recently been published by M. Grossberg, London, 1898; parts are translated by W. W. Westcott, do. 1895. The edition of the French translation arranged by Jean de Bury has been published by *Joseph de L'Étranger*. *Le Livre des Mystères* (Paris, 1904). For other French versions, see L. MacGregor Mathers, *The Kabbala Unveiled*, London, 1895; contains parts of the Zohar translated into French. Some of these works must be used with caution;

**EMARATROU AND SEPTINOTH.**—M. Ehrenpreis, *Die Entwicklung der Konstantinopeler in der Kabbala des Mittelalters*, Frankfurt, 1896. Many references to the *Ephod* will be found in the *Sephardic Moshe Maimonides for Israel* by Rabinovitch; this work may be conveniently seen, with its references, in M. Gaster, *Book of Proverbs*, London, 1930, vol. 2; L. Tittel, *Die alexandrinische Lehre von den Mittelwesen*, *Judaica* (Cohen's Periodical), Berlin, 1912, pp. 177–182.

**PLATONIC.**—F. Dieterich, *A. Plato's Cosmos Briefly Explained* (p. 824). In connection with this reference, see namely to Bahya b. Paquita, whose Guide has been edited by A. S. Yahuda, London, 1897; cf. on the *Platonism of Christianity* by C. Rabin, Cambridge, 1938.

**H. LOEWE.**

**KABEIROI.**—The elucidation of the Kabeiroi-mysteries is one of the most perplexing problems of old Mediterranean religion; nor can it yet be said that modern problems have thrown full light upon them. The literary record is partly Greek and partly Latin; but the Latin is derived mainly from Greek sources. It does not begin before the 5th cent. B.C., by which time the mysteries had long been closed from their Samothracian centres to other centres, such as Lemnos and Thessaly. It cannot therefore speak with authority concerning the earliest period. Even the 5th cent. writers to whom we are indebted for the first statements have been silent and the later writers contradict each other at several important points. The record is sufficient, however, to establish two facts: that the original home of the mysteries was Samothrace, and that they were the invention of a pseudo-Mycenean people. As regards the latter point, the statement of Diodorus Siculus is of interest and importance that the aboriginal natives of Samothrace possessed a distinct dialect of their own, much of which is still preserved down to the present day in their religious rites. He is not likely to be speaking at random here. The word ‗Kabeiroi‘ itself has never been satisfactorily explained on any theory of Hel lenistic derivation; the personal names of the Samothracian divinities that have been recorded by Mnasessa of Patrae—Axieros, Axiokeros, and Axiokeros—though the forms have been semi-Hellenized, betray an alien speech.

Near every writer starts with the facts, and constructs on it a theory of the origin of the cult, that the word Kabeiroi must be equated with the Semite *غَرَبَ،* meaning ‗the mighty ones‘; the almost exact equivalence of the two sounds hardly have been accidental, especially in view of the term *θεός* μεγάλοι, the constant Hellenic synonym of the Kabeiroi. It appears also that every one who accepts this origin of the word has regarded as inevitable the corollary that the Kabeiroi-mysteries were an importation from Phoenicia, the nearest or most likely centre whence Semitic influence could reach Samothrace. Hence certain scholars have been led to interpret them in the light of the knowledge that can be gathered of Phoenician and Semite religion. But upon reflection the necessity of this corollary is by no means evident. We may indeed have found an aboriginal mystery-cult in this remote and inaccessible island; they may have attached their own descriptive title *Kabeiroi,* the mighty ones, to the divinities that painted their souls, because this corresponded to some local divine appellative that the later Greeks translated by the phrase of *μέγας θεός*; and they may have devoted the island, because this corresponded to some local divine personality that points clearly to Phoenicia. Finally, there is no evidence yet forthcoming that the Phoenicians ever attached the appellative Kabeiroi to any group of their own divinities. The legends, beginning in the 5th cent., that associate the Phoenicians with the Pygmae may be of some value for religious history, but contribute nothing to the question of ultimate origin. Certain general considerations and certain coincidences seem rather to point to Thrac as their source. The Thracian coast lies nearest to Samothrace, and the aboriginal settlers in the island could most easily have come over thence. We have fair evidence that the ministers of the mysteries were called *Seari* or *Sairi,* and Strabo mentions a Thracian tribe of that name, while the name *Son* is applied by *Lysophron* to some settlement of the Korybantes located by the scheliana in Thrace. Also, when we look critically at the evidence we may discern certain features in the Samothracian religion which would accord with the theory of its Thracian origin. We must begin with certain monumental evidence which is earlier than the literary. The 1. v. 2. See, e.g., D. M. Robinson’s attempts in *Am. Jottings*, xvii. (1925) 420. 3 *Phii* iii. 194, frag. 27. 4 See esp. E. Friedrich, *Kabern und Kusanekrisyn,* Leipzig, 1894, 51. 5 See Strabo, p. 472. 6 See _Archiv._, ii. 325; Strabo, p. 407; Festus, p. 274; *Lex. Graec._, 76, schol. 66 (the sacred title *Luo* might be connected with the Phrygo-Thracian *Kudos*).
explorations conducted in the island by A. Conze 1 in 1873 revealed the foundations of the original shrine that was constructed in the 6th cent. B.C.; and to a central temple precinct being excavated, in which were found offerings of every kind. We discern the architectural provision for a chthonian cult; and we discover something more definite and certain than all that the later literature can teach us concerning the nature of the god worshipped, even if, by the powers of the under world, having fructifying functions, no doubt, and probably associated with the ideas of birth and death and with the world of ghosts. For this reason alone the cult would be fenced with a mystery, as chthonian ritual would be too dangerous to be openly approached. 2 It is to be surmised that these Samothracian powers might originally have been spirits rather than deities and individualized 3 and that something of the vagueness and indefiniteness of the ghost-world might attach to them; this would account for the vague collective name applied to them. There is evidence that the hereditary priests (or the bewildered mixed of the later Greeks concerning the equation of them to their own clear-shaped divinities.

Other archaeological evidence of importance is found in a work undertaken by Dörpfeld and the German School of Archaeology on the site of the Kabeirion near Thebes in 1887. The architectural remnants pointed to three periods of the shrine, the earlier building being assigned by Dörpfeld to the 6th or 5th cent. B.C., which would accord with a record in Pausanias 4 that the shrine was violated in a time of the Persian invasion; and some of the objects of religious art found within or near the precincts, bronze-dedications and fragments of vases, are dated to the earlier half of the 5th century. 5 We must suppose, then, a migration of the cult from Samotrace to Lemnos into Boeotia in the 6th cent. B.C. or even earlier; 6 and we cannot assign its introduction to any known fact in the history of colonization and tribal movements. What concerns us chiefly is the question: how much light is thrown on the original Samothracian religion by the discoveries on the site of the Thelan Kabeirion. In one point at least the ritual of the transplanted cult remained true to the tradition of its home; behind the collar which was dug a double barrow, where the offerings were thrown, the chthonian ritual proper to the powers of the lower world. 7 As regards the personality and form of the divinities, we must turn to the inscriptions and the works of art. Among the latter the most important and striking is a broken vase of the 4th cent., which appears with a group of five inscribed figures 8 on the right rein a stately bearded person, half clad in sporting and holding out a cup, his name "Kabios" appearing above his head; in front of him stands a boy inscribed "Hian," turning his back on the elder god and drawing wine from a sparagel before him, also fronting to the left, is an ugly little dwarf figure clasping his hands below his chin, and preserved only as far as the middle of the body; he bears the singular name of "Parskasos," and good food for the earliest generation of men on the earth; he is gazing in excited wonder on a group that forms the left extremity of the scene, a male and female personage—only the upper parts of the body are deep sacrificed; on the other hand, she designated as Kabios, he by the enigmatical name Mires. All these are ideal beings of the Kabiores-circle, not represented, however, directly as such; in fact, the curtain, she assimilates to Dyonisos; this would be natural at Thebes, and all the more inevitable if there was lingering a tradition of a Thracian origin of the Samothracian mysteries. The Ion is represented by the boy-minister, the young god whom Minasian calls Kaiseros, and who was an important and essential figure in the cult, though here he appears in a trivial character; for the numerous inscriptions that have been found, in which the individual worshippers commemorated their association with the shrine, contain the mention of no other divinities save those of Kabiores and the "Son." 9 This evidence only can be interpreted to be part of the Samothracian tradition, which we shall find preserved also in the later literary records. But the vase-painter has added two other figures that have the air of divine divinities, "Krateria" and "Mitos." Naming the goddess the 'mighty one,' he probably intended her for the female counterpart of Kabios, the earth-goddess who in Greek hands was individualized and identified as Demeter-Kore; her figure has something in it of the Kore-type, and her name Krateria reminds us of Krateria, the 'almighty one,' a sobriquet of Kore at Selinus. As to "Mitos," the only clue to his name and significance has been found in a passage of Clement of Alexandria, who en good authority mentions mitos as a hieratic word of the Orphic sacred books, meaning 'seed.' 10 We are tempted, then, to interpret this mysterious figure as the divine nourisher of all life, possibly the procreative god of the earth; but we should be embarrassed in fixing his true relation to the other elder god Kabiores. As the vase-painter appears to have been an initiated priest, who offerings were thrown in the worship of Orphic ore, he is not a trusty exponent of genuine Samothracian religion. But his quaint little figure, "Pantokos," may have been suggested by real Kabiores legend, since, according to a passage in Hippolytus, 11 part of which may be derived from a lost ode of Pindar, it was claimed in both Samotrace and Lemnos that Kabiores was 'the first man Adam'; it is therefore not unlikely that the mystery teaching included some dogma concerning the origin of man.

Turning now to the literary record, we find it confusing and often contradictory, as we should expect from writers trying to define and describe what was indefinite and alien. For certain historic reasons, especially owing to the relations of Athens to Lemnos, the Lennian Kabeirioi-rites appear earlier in literature than the Samothracian, having attracted the attention of Eusebius, Plutarch, and Aelian. As the chief god of Lemnos was Hephaistos, we find, as we should expect, that the two last-mentioned authors mention Hephaistos in their genealogical account of the

Kabeiroi, and their authority may have influenced Herodotus's view and some later genealogical fictions. Yet, outside Lemnos, the Hellenic smith-god stood alone, though in the later art the Kabeiroi may have borrowed their hammer from him. We cannot, therefore, deduce anything concerning their aboriginal nature from this fact, though Lemnos, the Land of the Kabeiroi, may have been a Leumalian god. From the literary tangent one fact of some importance for our view of these divine personalities emerges: the more trustworthy records present the Kabeiroi not as a vague plurality like the Korybantes, but either as a triad or as a duality. The latter view of them is in accord with the evidence of the inscriptions from the Theban Kabeiroi, with the later identification of them with the Dioskouroi, and with the statement of Hippolytus — mainly confirmed by Varro — concerning the two ithyphallic statues that stood in the Samothracian shrine uplifting their hands towards heaven; and the scholiast on Apollonius Rhodius, who summarizes Hellenistic learning on the subject, mentions a current view that the Kabeiroi were originally a group of two — an elder and a younger god whom the learned Hellenist mistook for Apollo and Artemis. But the confusion indicated in this aspect of them is original; it could not have been a later Hellenic fiction, for it clashed with the prevalent craving to identify them with the deities of the old religion. The names, in any case, had been divinized, so it is likely that they were called gods, at least in embryo, already there in the island mystery-cult when they came to know it. We cannot lightly reject the statement of Mnaseas of Patrai (or Patara), an antiquarian of the latter part of the 5th century B.C. merely because this writer appears to have been usually reckless and futile; for, maintaining that the Kabeiroi were a triad, he actually gives us their names, as above mentioned — Aixeros, Aixokeros, and Aixokera — the last being evidently feminine, the other two being appellatives of the elder and younger gods. He can hardly have known where he got for forging this statement, nor is it likely that he would have forged so well. These names ring genuine, belonging not to Hellenic speech but to some language akin to it, such as Thracian. Another Samothracian cult-name, applied to Aixeros or Aixokeros to the young god of the trio, was Κάημιθος or Κήμαθος, meaning apparently ‘the minister’; and this name alone is sufficient to explain how the story of the wandering Kadmos and Harmonia came to be engrafted on the hieratic legend of the island.

But, if the existence of the female earth-spirit, conceived as earth-mother or earth-bride, within the original Samothracian trio can be accepted proved, she would seem to have been subordinate to the male principle of divinity. The later history not the least prepared to foment toward the Phyrigian Rhea-Cybele or the Hellenic Demeter a prominent place in the mysteries; but there is no sign that these alien goddesses were able to unseat the old ‘mighty ones’ who were predominantly male, and who were therefore capable, on this ground at least, of being fused with the Dioskouroi. This comparative subordination of the female power is of importance for our judgment concerning the ethnic origins of the religion. It makes against any theory that would regard this religion as a survival of Aegean, or derived from pre-Aryan Phrygia or Crete.

The history of the mysteries is part of the secular history of the Mediterranean. We do not know at what early period they had spread oftshoots of themselves in Lemnos, Imброс, and the Troas. Towards the close of the maritime empire of Athens, it was becoming not unusual for Athenians to be initiated. Macedon, perhaps owing to its enthusiasm for Dionysiac worship, was deeply interested in them; and the establishment of Macedonian supremacy gave them a leading position in the Mediterranean. Their connexion with the Troads brought them into relation with the Korybantes and the Phrygian mother at least as early as the 5th century B.C., and later, evoked the interest and devotion of Rome; the learning of Pergamos, Rome’s ally and front of old a Kabeiroi region, may have been the cradle of inspiration that the Roman Femates were deities taken originally from Samothrace to Troy by Dardanos and from Troy to Rome. With such patronage the mysteries were still not much widespread, but they gained throughout the latter days of paganism, and in the 4th century A.D. Libanius refers to them as still existing. In the course of so long a period, how much they absorbed of the religious ideas and formation of ritual and what contamination of divine legend they experienced, we cannot determine with detailed precision. At the time of their chief expansion, we may be sure that they borrowed much in the way of organization and even of doctrine from the greater mysteries of Eleusis; and it was probably due to Eleusinian influences that the female divinity of the Kabeiroi-group was frequently interpreted as Demeter, who was specially termed Kabeira in Boeotia.

Less natural and appropriate was the Hellenization of the two main Kabeiroi as the Dioskouroi, an interpretation which ignored the important difference of age between the elder and the younger Samothracian god, and in no way harmonized with their aboriginal ethos. The motive force for this transformation was probably the coincidence that the Hellenic Dioskouroi were also called Zorigers in their own right, and from the fact that the ancient visitors to Samothrace, who would be often thankful enough to effect a safe landing on that harbourless island, had come to regard the Kabeiroi no longer as ephorous deities of vegetation, but preeminently as savours from the perils of sea; and this was exactly the function of the Dioskouroi. The ‘Samothracian savours’ was a name of divine power for the Aegean mariner; but the later writers of the Roman learned world tended to identify the Kabeiroi-trinity with Jupiter, Minerva, and Mercury; and, in accord with a later trend of philosophic-religious expressions, to interpret the chief among them as Caelum and Terra, ‘Heaven’ and ‘Earth.’

The indefiniteness of the Kaberei-trinity opened the way to this confusion in the interpretation and especially to the caprices of the later fashion of the *Theopaisia*.

It remains to be seen what we can gather concerning the purport and ritual of the mysteries. To commence with, the first inscriptions and the architectural remains in Samothrace and the vicinity of Thebes supplement the meager literary evidence. The sacrifice must have been an essential, if not the central, part of the ritual. And, as has already been pointed out, the sacrifice was cithonian; the victim's head may have been held over the pit and its blood shed into it where the powers of the earth would receive it; or the animal may have been thrown alive into the pit; both these forms of service being Hellenic and not specially Kaberiioi. As regards the animal chosen, we find on a vase-fragment from the Theban Kabereioi a bull standing near the redlining Kaberiioi with worshippers approaching; but this animal might have been suggested by the fusion of Kaberiioi with the Theban Dionysios to whom it properly belongs. In the great mysteries of Aiolis, consecrated to Demeter and Kore, where the Kaberiioi under the name of μυραδος διος had gained a footing, young oxen were offered to the latter. Finally, a ram-sacrifice of a peculiar and mysterious kind may have been held, as a way to the Samothracian tradition. But we do not know that the idea of the god's incarnation in the victim, which might transform the sacrificial meal into a sacramental communion, was really present in the Samothracian ritual. Nor can we discover there any clear indication of that other idea, sometimes linked with the sacramental and so momentous in the history of the Mediterranean zone, of the periodic death and resurrection of the deity.

Lenormant has indeed drawn this conclusion from certain late and doubtful records and still more doubtful monuments. Clement of Alexandria narrates the legend of the murder of one of the Korybantes by his brethren, and seems to assert that this story was transferred to the Kaberiioi, which is not improbable in view of the general confusion in later literatures between Kaberiioi, Korybantes, and Korethai (see art. Kourothai and Korybantes); but Clement does not clearly state that it ever entered as a motive into the sacred mysteries of the Kaberiioi. The former authority is Firmicus Maternus, who also narrates the murder of Korybas, and then adds: 'This is the Kaberiioi to whom the men of Thessalonike used to offer prayers with blood-stained hands.' If there is anything real behind this, we may surmise that the worship of Kaberiioi, which we know was prevalent in this Macedonian State, had attracted to itself the actual legend of the murdered and dismembered Dionysos, which was rife in those regions. It would be hazardous to assert that this was an original Kaberiioi myth; the old Samothracian religion, being less personal and anthropomorphic than the Hellenic, may not have evolved any mythology of its own.

But the sacramental idea might have been expressed in the Samothracian ritual in other forms than communion with the blood of the divinity. In the early Christian literature the expression of the καραον—-the cereal drink sanctified by the goddess herself and offered by the priest to each of the μυρας—may be called a sacrament; and the Eleusinion service must have influenced the later Samothracian at many points. A similar action may have been performed in Bucharest referring to the Kaberiioi-mysteries, if we accept an attractive restoration, may indicate the mystic ritual of the administration of holy scriptures and the architecture of the temple of the great gods and were called Kaberiioi; for this would explain the inconsequent opinion that prevailed in some learned circles of later antiquity that the Kaberiioi, although the name obviously designated high gods, were only μυρας, the ministers of these, like the Korybantes or the Kourothai. One of the most important functions of the priest was that of the custodians of the cisternums, so as to decide if they were ceremonially 'pure' and therefore suitable for admission. In the ancient ritual code the gravest impurity was bloodshed; and we hear of a Kaberiioi official called κυρη or κυρος, whose function was the purification of hemicides. A text of Livy reveals to us a temple-council or synod, in which the chief magistrate was called κυρηδωρς, who tried cases of homicide to decide whether they had to be held as the temple to offer them asylum; for the rights of asylum were rigidly respected in Samothrace and might be abused. The powers of the lower world, to whom the μυρας were consecrated by wearing a purple band round their waists—perple being a 'cithonian' colour—were specially sensitive about bloodshed.

A special form of purification, unrecorded elsewhere in the ancient Mediterranean world but in vogue in Samothrace, is the confessional: and the record that attests it contains also the first reproduction of it by the spirit of Protestantism: the haughty Lysander refused to confess to mortal man, when the priest of the Kaberiioi asked him what was the greatest sin that he had committed.

As regards the actual διαφημα, or sacred action whereby the initiation was consummated, we have less evidence about the Samothracian than we have concerning the Eleusinion mysteries. There was a distinction here, as at Eleusis, between the cisternums and the consecrated pool being called μυρα διαφημα, as possessing a peculiar piety, or, as at Eleusis, ενάσπις, and this term implies that the central act of the mystery was the revelation of certain sacred things or shows to their eyes. The show might have included a solemn dance; for we have a literary reference to the religious dancing of the 'pious Samothracians,' and a relief found by Conze near the sanctuary showed a dance of nymphs. The dancing may have been dramatic or mimetic; if so, it is useless to try to guess at its purport; we have no records that the most credulous could believe, nor can we point to any hieratic legend that is genuinely Samothracian; we know far less about Samothrace, which was perhaps never wholly Hellenized, than about Eleusis, and it is merely futile to recount the various legends, Cretean, Thrygian, Tholian, that the initiates had in those regions.

world tried to implant on this mysterious island. On discovering some passing attention. The scholiast on Euripides, who quoted from Euphoros, after giving the useless story that Kadmos carried off Harmonia from Samothen, adds words of greater importance: 'and even now in their foreign quarters, in Samothrace, they make search for Harmonia.' We know that the quest for the vanished deity of vegetation was part of an agrarian ritual in Greece; and Euphoros might have been referring to a country-pagan of the island, whether Hellenic or autochthonous. But, if we regard it as more probable that his vague phrases refer to the sacred drama of the mysteries themselves—the probability being strongly in favour that they had one—then we can draw some interesting conclusions: Harmonia was a Hellenic divine name attracted to Samothrace, because she was attached to Kadmos, and Kadmos was attracted there because Thebes had ancient communication with the island, and the native Kasmilos or Kadmis was identified with their Kadmos. Now, if Kasmilos in the mysteries carried off the earth-goddess, if there was the semblance of an abduction followed by a sorrowful search for the lost one, the Greek πάραν, misled by the name Kadmos, would interpret the Samothracian earth-bride as Harmonia, and the story of Kasmilos could be assimilated. If this was the case, and Kasmilos would be explained. If all this were certain, we should not feel convinced that this holy drama was autochthonous Samothracian; it is too local to what happened at Eleusis that we might naturally ascribe it to the reorganization under Eleusinian influences that the Kabeiroi mysteries underwent at the time when they were becoming Hellenic.

On the same analogies we must suppose that besides a sacred drama there was some ἱερός λόγος in them, some exegesis, accompanied probably with exaltation. And on a priori grounds we should believe that this would be connected with the doctrine of a future life and the promise of future happiness; for we could hardly understand how the Samothracian could compete so successfully throughout the later period of paganism with the other influential mystery-initiations, such as the Eleusinian, the Bacchic, the Phrygian, and the Egyptian, if it proffered to its μέρας no such message of eternal salvation as the others proclaimed. Moreover, the Kabeiroi, like the Eleusinian deities, were powers of the shadowy world, the ghost-realm; and the Greek mind would be sure to conclude that any communion with them would affect the lot of the departed spirit. Hence we may explain the growth of the legend that it was Demeter herself, the goddess who held the key of the Eleusinian Paradise, who instituted the Kabeiric rites. The belief in posthumous rewards and punishments may have a moralizing effect on conduct; and it is specially attested of the Samothracian mysteries, and of these alone, that those who had partaken in these mysteries became more pious and more just, and in every respect better than their past selves. A more intimate and more certain knowledge about these mysteries, Samothracian religion will perhaps never be attained. The evidence which has been used above is mainly indirect, incomplete, and vague. The Greeks themselves were confused in their view of these divinities, who for their measurements and the dimness of their personality resemble more the Roman minos, such as the Penates, than the clear Olympian figures of Hellen.

KABIR, KABIRPANTHIS. life of Kabir.

Kabir, an Indian teacher and religious reformer, flourished in N. India about A.D. 1440 to 1518. His origin is uncertain, and is the subject of various legends current among his followers. According to one account, he was a poor widow, the daughter of a Brahman. She accompanied her father, who was a follower of Rāmānand, the great teacher of S. India, on a visit to the spiritual guide. Rāmānand, while blessing her, offered her the usual wish that she might conceive a son, not knowing her state of widowhood. The sequel is variously reported. It was impossible to recall the blessing; but, while one version states that the mother abandoned the child to escape disgrace, another relates that Rāmānand contrived that the child should be miraculously born from his mother's hand. All stories agree that the child was brought up by a weaver named Nīnā and his wife Nīmā. The Kabirpanshis, or followers of Kabir, assert that the infant was an incarnation found by Nīmā floating on a lotus in a tank near Benares. Similar Samothracian dramas would be explained. If all this were certain, we should not feel convinced that this holy drama was autochthonous Samothracian; it is too local to what happened at Eleusis that we might naturally ascribe it to the reorganization under Eleusinian influences that the Kabeiroi mysteries underwent at the time when they were becoming Hellenic.

On the same analogies we must suppose that besides a sacred drama there was some ἱερός λόγος in them, some exegesis, accompanied probably with exaltation. The evidence which has been used above is mainly indirect, incomplete, and vague. The Greeks themselves were confused in their view of these divinities, who for their measurements and the dimness of their personality resemble more the Roman minos, such as the Penates, than the clear Olympian figures of Hellen.

Kabir’s teaching was purely oral, and throughout N. India thousands of villager couples are current which are ascribed to him. In addition, his immediate successors are responsible for a large number of hymns, odes, and doxological and argumentative poems. These have been collected, and a few have been published. Wilson gives a list of 29 works included in the Khalsa Granth, or the Sikh Bible. The Vaisnava tradition has obtained references to 82 in addition to eight of those mentioned by Wilson. The great majority are still in manuscript only. It is probable that the first collection of Kabir’s sayings was not compiled earlier than 50 years after his death. Of most authority is the Bhajak (literally ‘invocation- or account-book’), which has been printed with commentaries. It was compiled by Bhago Das, one of Kabir’s immediate disciples, and contains specimens of the various classes of poems referred to above. A number of sayings attributed to Kabir are included in the Adi Granth of the Sikhs (tr. Macauliffe). The Sikh Religion, vi. 142-316).

3. The Kabirpanthis. — The community has not escaped sectarian division. As already mentioned, Maghar is the headquarters of the Muhammadan followers of Kabir, and is situated on the west coast of the Hindus. The latter recognize the two main divisions: The Khamra, who are the core of the community, and the Banias, who are said to have been reconverted to Islam by Kabir himself. As in the case of other reforming movements in Hinduism, there is a tendency to relapse into ritualism and exclusiveness. Though Kabir preached against caste, the modern Kabirpanthis prefer that members of the unclean castes should join other sects, and should not wear the rosary of wooden beads which marks their own members. Members of the twice-born castes in ancient Sanskrit are called janas or sacred thread, of the Hindus. A woman may also wear the rosary, but not before marriage, and she may not become a disciple of her husband’s spiritual guide, for disciples of the same teacher are regarded as brother and sister. An elaborate ceremony of initiation is performed, which includes the consumption of water used for washing the feet of the head mahant, representing the master, and a betel leaf. Of the other religious practices, the name of God is inscribed with dew. It is called the parvatga, or passport, and is said to represent the body of Kabir. An important feature in the ceremony is the communication of a secret mantra, or text. In the Dharm Dasa section there are several mantras, and the ceremonies of initiation differ in a number of details. Every Sunday and on the last day of the lunar month a fast is observed, followed in the evening by a religious meal, at which a service is read, and an address delivered by a mahant, while hymns are also sung. A later ceremony follows, of even greater solemnity, and resembling the cabala in Christianity. When in extremis, the dying receive the holy water and betel leaf described in connexion with initiations. Monastic life is encouraged, and women may be admitted to the order, if found qualified, after a period of two years. They are usually widows or the wives of men who have joined the order. Branches of the community are ministered to by mahants who receive authority from the head mahant.

As a rule, at present the mahants are not men of great learning, though some are acquainted with Tulsi Das’s Raginiya and the Bhagavad-gita.
KACHHI—KAULISTAN

LITERATURE.—The best account of the sect is contained in G. H. Westcott, Kabir and the Kabir P aftermath, Cambridge, 1882. The comparison between the teaching of Kabir and Christianity was made by Professor E. F. C. Schurmann, a member of the Bible Presbyterian Church in the Kaira district, Gujarat. His conclusions were published in a book called Kabir Charitra (Gujarati), Surat, 1886. The sects of the Hindus, London, 1891, pp. 69-88, and especially to Allchin, K. A., The Silk Route to the East, Oxford, 1905, vol. ii, pp. 189-198: For a brief summary, see also R. G. Bhandarkar, Vaijapayani, Sarnus, etc. (OALP iii.), Strasbourg, 1915, pp. 67-72.

B. BURN.

KACHARIS.—See Bodos.

KACHHI.—An important agricultural tribe in N. India, an offshoot of the Kurni. At the Census of 1911 they numbered 1,304,296, the majority of whom are found in the United Provinces of Agra and Oudh, Central India, and the Central Provinces. Their name is usually derived from Skr. kaka, 'flank,' enclosure,' or kupa, 'furrow'; but they claim connexion with the Kachhwahas, a sept of Rajputs, who assert totemic association with the tortoise (kachhekhapa). The Kachhi are among the best agriculturists in N. India, especially devoted to the growth of the more valuable crops, such as rice, opium, and opium. Practically all are Hindus; and, if they can be said to belong to any sect, they prefer the Sikhs, and worship the goddess Durga Devi, more especially in the Hol and Dhavil festivals, when they propitiate in March-April and June-July with offerings of cakes, sweetmeats, and money, which are received by the kumbhar, or potter-priest, who attends her shrines. Except when they make pilgrimages to the shrines of the greater gods, they pay little regard to the orthodox deities of the Hindu pantheon, and devote themselves to the cult of the group of minor local gods, who are supposed to protect them from trouble and cause the increase of their crops. Such in the United Provinces are Nagarsen, one of the deities controlling disease; Chamar, who, if he be not propitiated with gifts of sweetmeats, incense, and red lead at the Holt and Dhavil festivals, stops the milk of cows and buffaloes; Lali Manji, 'red jewel,' the household god, to whom cakes and sweetmeats are dedicated and subsequently eaten by the worshipper and his family; and Bhumiy, god of the soil, who is the patron of the village and its people, the male partner of Dharti Mata, Mother Earth. The malevolent deity most feared is Bisisri, 'the poisoner of life.' One impregnable is true of him; those who neglect her worship. It is believed that her priest can bring this disease on sinners by lighting a fire and throwing hot coals on her image. When a person is afflicted in this way, he leaves seven cowrie-shells, a piece of turmeric, and some charcoal, as a mark of his vow to make a pilgrimage to the shrine of the goddess at Sankisa in the Farrukhabad District, United Provinces. The presentation of a silver coin here ensures immunity from the disease. People who are too poor to undertake this journey endeavour to appease the angry goddess by going a mile or so farther and making an offering in a field which must be beyond the boundary of the village in which they live. With this cult of the minor gods is combined that of local Muslim shrines, a fact mentioned by the missionary at Mukampur, or that at the tomb of some martyr of the faith, as Shahid or Sayyid Mard. Among the Kachhi of the Deccan there are indications of a form of temple worship, and most powerful families have a guardian (devalk) of the union, which usually consists of an axe and leaves of four species of the sacred fig-tree and mango, which are tied to a post in the marriage halls at the houses of both bride and bridegroom.

KACHINS.—See Burma.

KAULISTAN.—Kapuristan, or the land of the infidel, almost certainly is no longer correctly described by that epithet. Since it was visited by the present writer, who left the country in 1891, the Amir of Kabul is believed effectually to have conquered every one of its numerous tribes who were continuously engaged in intertribal fighting. No doubt among the old people the ancient gods are worshiped secretly still; but the former picturesque ceremonial, the dancing, the feasting, the ontological invocation of favourite deities, must have given place now to the austere rites of the religion of Islam, the self-righteousness, and the dignified authority of its priests. Fanaticism will be prevalent among the younger men, taken away, many of them, as boys to Kabul and returned as zealots of the new creed; and even the smallpox, the smallpox, and the smallpox, the smallpox rank and file of the converts, for naturally it is among the most recent recruits of any religion that, on the average, the highest enthusiasm prevails. There is little probability that the Kapirs will ever come back to paganism. Mohammedanism has a singular attraction for Orientals, and, once accepted by a people, it rarely seems to lose its hold upon their consciences or its insistent influence upon their outlook upon life, their manners, and their ways of thought.

This country, Kapuristan, is pressed in between Afghanistan and Chitral, Badakhshan, and the Kunar Valley. More exactly it is situated between latitude 34° 30' and latitude 36°, and from about longitude 70° to latitude 71° 30'. It is one of the most difficult and intricate mountain places of the world, harsh, inhospitable, and full of peril, both from the physical dangers of cag, precipice, and howling torrent, and because of its superfluity of lurking-places for robbers and assassins, in the great sombre forests or the menacing deities; soil, who is the patron of the village and its people, the male partner of Dharti Mata, Mother Earth. The malevolent deity most feared is Bisuri, 'the poisoner of life.' One impregnable is true of him; those who neglect her worship. It is believed that her priest can bring this disease on sinners by lighting a fire and throwing hot coals on her image. When a person is afflicted in this way, he leaves seven cowrie-shells, a piece of turmeric, and some charcoal, as a mark of his vow to make a pilgrimage to the shrine of the goddess at Sankisa in the Farrukhabad District, United Provinces. The presentation of a silver coin here ensures immunity from the disease. People who are too poor to undertake this journey endeavour to appease the angry goddess by going a mile or so farther and making an offering in a field which must be beyond the boundary of the village in which they live. With this cult of the minor gods is combined that of local Muslim shrines, a fact mentioned by the missionary at Mukampur, or that at the tomb of some martyr of the faith, as Shahid or Sayyid Mard. Among the Kachhi of the Deccan there are indications of a form of temple worship, and most powerful families have a guardian (devak) of the union, which usually consists of an axe and leaves of four species of the sacred fig-tree and mango, which are tied to a post in the marriage halls at the houses of both bride and bridegroom.

KAFIRS.—See BANGALORE.

KAULISTAN.—Kapuristan, or the land of the infidel, almost certainly is no longer correctly described by that epithet. Since it was visited by the present writer, who left the country in 1891, the Amir of Kabul is believed effectually to have conquered every one of its numerous tribes who were continuously engaged in intertribal fighting. No doubt among the old people the ancient gods are worshiped secretly still; but the former picturesque ceremonial, the dancing, the feasting, the ontological invocation of favourite deities, must have given place now to the austere rites of the religion of Islam, the self-righteousness, and the dignified authority of its priests. Fanaticism will be prevalent among the younger men, taken away, many of them, as boys to Kabul and returned as zealots of the new creed; and even the smallpox, the smallpox, the smallpox, the smallpox rank and file of the converts, for naturally it is among the most recent recruits of any religion that, on the average, the highest enthusiasm prevails. There is little probability that the Kapirs will ever come back to paganism. Mohammedanism has a singular attraction for Orientals, and, once accepted by a people, it rarely seems to lose its hold upon their consciences or its insistent influence upon their outlook upon life, their manners, and their ways of thought.

This country, Kapuristan, is pressed in between Afghanistan and Chitral, Badakhshan, and the Kunar Valley. More exactly it is situated between latitude 34° 30' and latitude 36°, and from about longitude 70° to latitude 71° 30'. It is one of the most difficult and intricate mountain places of the world, harsh, inhospitable, and full of peril, both from the physical dangers of cag, precipice, and howling torrent, and because of its superfluity of lurking-places for robbers and assassins, in the great sombre forests or the menacing deities; soil, who is the patron of the village and its people, the male partner of Dharti Mata, Mother Earth. The malevolent deity most feared is Bisuri, 'the poisoner of life.' One impregnable is true of him; those who neglect her worship. It is believed that her priest can bring this disease on sinners by lighting a fire and throwing hot coals on her image. The presentation of a silver coin here ensures immunity from the disease. People who are too poor to undertake this journey endeavour to appease the angry goddess by going a mile or so farther and making an offering in a field which must be beyond the boundary of the village in which they live. With this cult of the minor gods is combined that of local Muslim shrines, a fact mentioned by the missionary at Mukampur, or that at the tomb of some martyr of the faith, as Shahid or Sayyid Mard. Among the Kachhi of the Deccan there are indications of a form of temple worship, and most powerful families have a guardian (devak) of the union, which usually consists of an axe and leaves of four species of the sacred fig-tree and mango, which are tied to a post in the marriage halls at the houses of both bride and bridegroom.

Bashgul Valley one perceives the oddest differences between the children—a result no doubt of the indifferent selection of polygamous wives and the preference given to daughters. There is a larger number of heavy-featured clasmess of a remote valley, particularly difficult of access, seem curiously like another in form and feature; that, however, many, notably among the more prosperous section of the village, who is apt to identify the type while ignoring its variations. Usually the chief men and the priests are Aryan-looking, sometimes remarkably so; and it may be added, with something aproaching to certainty, that such a type never reveals itself among the poorer tribesmen or among the artisan, the field, or the domestic slaves. Difficult as it is to generalize concerning a congeries of peoples such as constitute the Khäfis of to-day, especially those living near the Eastern borders of the country, it may be stated broadly that in character they all display a curious lack of simplicity. With remarkable powers of secrecy and tenacity, they can persevere remorselessly in an intrigue or a plot decided upon many years previously. Possibly their most prominent general characteristics are an inordinate capacity, an easily aroused fierceness of temper, and a capacity for bitter, suicidal, inter-tribal hatred. They are ever ready to starve themselves for the sake of hoarding. Blackmailing they look upon as a virtue; in hereditary and immemorial itinerants, belief in the value of vague or pointed threats is deeply engrained in their nature. A head-man, whose little son lay very ill, once declared with a menacing growl, as long as there was breath in his body, he would turn Musalman. No one dreamt of accusing him of blasphemy; he was applauded for his wisdom and energy. Khäfs are untruthful. Always lie passive as the proof of a sagacious intellectual man. Obviously they hold the belief, common to so many wild peoples, that the truth merely because it is the truth must be harmful to a man. They are boastful and fond of admiration, which, added to a justifiable fear of the physical power of majorities, gives a remarkable sanction to public opinion. Khäfs have no fear of dying, although they cannot comprehend anyone committing suicide. Morality is unknown. They have a really wonderful sense of personal dignity; at all the religious festivals and sacrifices they strike the observer as equally cheerful and serene. In every way a Khäf is a model of politeness. At once and gracefully he yields precedence to a superior and unostentatiously takes his own proper position. In spite of his hauteur, which at times amounts almost to a disease, he is very hospitable. However grudgingly he may be so, he dare not disobey the unalterable laws on this subject. Family affection is not very strong. Some of the tribes are in the habit of selling little girls, sometimes even children nearly related to them, but as a rule it is the female offspring of their slaves that they dispose of in this way. Boys are rarely, if ever, thus treated. Nevertheless, Khäfs are kindly in family relationship. A man is fond of his old parents; his delight in a son is remarkable. They are never rough or cruel to animals. There is no special fondness shown for dogs, which are employed mainly for hunting and as houseguards. Goats are treated as domestic pets; but no reluctance is ever shown to kill them for food. Bulls and cows, accustomed to be handled gently, do not require to be bound when taking the animal by the horns, gently depressing the head, while a second, with the stroke of an ax, divides the cervical spine. Khäfs are wonder-fully benevolent. In case of illness, if a child, two or three, or even less, should be brought to them, they would immediately carry them up to a town, or they would bring them home; they would carry them, or, if they were too weak, would have him carried by some among themselves. It is a sign ofutility to take up a quarrel at the instant. But, if quarrelling is a manly virtue, peace-making is very sacred. Men, boys, and even dogs are separated at the first inkling of a quarrel, for one who will not help in stopping a village row at any moment is looked upon as unworthy. Nothing resembling religious intolerance exists. The men are extremely sociable, many possessing a sense of quiet humour. Their badinage with women is, of course, obscene to our way of thinking, and their jokes have much of the same nature, but they are highly amused at indolent remarks, and also at even the mildest attempt at repartee. It is as natural for a Khäf to thrive as it is for him to watch his flocks and herds. It is, in short, the business of his life. Little children are trained and encouraged to this end. Each individual, merely as a human being, is looked upon as a trivial affair except as the basis for boasting and vainglory, unless indeed the slain man happens to be a member of a Neighbouring tribe, friendly at the time, serious complications and difficulties would follow. In the opinion of an average tribesman, a man, mainly character, essentially a 'good' man, must be a successful huckster. He must also be an active hill-climber, one always ready to take up a quarrel, and known to be of an amorous disposition. If, besides possessing these popular qualities, he is an agile and untiring dancer at religious festivals, a sure shot with bow and arrows or with the matchlock, and a sound quoit player, he combines most of the characteristics of a really admirable person; but even with all these advantages he will possess no real influence in his tribe unless he is either wealthy himself or belongs to a family rich in flocks or herds.

The Khäf religion is a debased form of idolatry, with a certain admixture of ancestor-worship and perhaps traces of fire-worship also. Gods and goddesses are many in number, and in different villages and among different tribes hold varying positions in local estimation. Innur, the creator, Moni (commonly spoken of as 'the Prophet'), Gish (the war-god), Bagush, Dizans, Krumain, and Nimari are highly esteemed and popular everywhere. It is nearly certain that the same god, goddess, or inferior deity is called by a different name by different tribes, but, even allowing for this, there are many of the godlings who must be entirely disregarded except in particular villages. The difficulty in getting information from the Khäfs about their beliefs is extreme, although they are more inclined to open their hearts on such subjects to a Christian than to a Muhammadan, for they consider that a Christian is in some sense a relation because he is also always called approvingly a Khäf by the Musalman priests. A further difficulty is this—the people know seemingly little with anything like precision; sacrificed. The inquirer is constantly referred from one old man to another without final benefit. When it does bore him, cross-examination, if at all prolonged or tiresome, puts a Khäf in a good, or he jumps up and not infrequently rises from the inquirer. Prob-
ably as a result of mixing on the frontiers of their country with their Musalman neighbours, when at last, by a process of mutual contamination, the Kafrs, at any rate the younger portion, are inclined to treat it cynically and with scepticism. Frequently two or three waggish youths will burlesque the ceremonies of the faith. But everywhere where the war-god Gish is popular and respected, and in his worship at least there is remarkable sincerity, even among the light-hearted younger men. The older people, though undoubtedly devout, seem to abandon their faith without very poignant regret. In the inner valleys of Presungel the atmosphere is more distinctly religious. Devils' villages are continually met with. Old water-courses, long fallen to ruin, are universally believed to have been constructed by god or goddesses. Deep imprints of divine or demonic hands are shown on many a rock face. There, jealously guarded, is an iron pillar thrust in the ground by Imma himself, and likewise a sacred hole to look down which is certain death. Fertile lands consecrated to the Creator lie untouched by the plough, and the most famous temple in Kafristan, also dedicated to Imma, stands it to this day.

In Kafr theology there is both a heaven and a hell. The universe is divided into Urdesh, the upper world, the abode of the gods, Michdeh, the earth, and Ahrash, the lower world, but both heaven and hell are in Yurdesh, which is reached through a great pit guarded at its mouth by Maramalik, a custodian created for that purpose by Imma. Once passed into Yurdesh, no one ever returns to the upper world. At death a man's breath, his soul—the word shen has the double meaning—enters and becomes at once a vague shadowy form, such as we see in dreams. The elect wander about an area of paradise in Yurdesh termed Biash, while the wicked are always burning in fire. Worship consists in behaving in a dignified and cheerful manner at the sacrifices of animals, looked upon obviously as an entertainment, in dancing, in the singing of hymns, and in invocations to the gods. Fairies as well as deities have to be propitiated by offerings. The most common form of profane swearing is 'May the curse of Imma strike you.' Besides gods, goddesses, and goddesses and inferior deities, one hears much of demons, the chief of whom is Yash. The high priest of one of the Eastern tribes gave the present writer the following information:

Imma is the Creator of all things in heaven and earth. By the breath of his mouth he endowed with life his 'prophets' Moni, Gish, and Bish; by his blood he gave them existence from his right breast. Baghish alone among them all was born after the manner of men. In addition, Imma also created seven daughters whose special province it is to watch over agriculture. Thus the time for sewing approaches goats are sacrificed in their honour. The fairies and demons are created by Imma, but the latter gave so much trouble to the whole world that Moni with divine permission nearly exterminated them.

Most of the religious stories, told by this high authority and others, were bald, lengthy, and inconsequent, and of interest merely as showing the mental position at which the Kafrs had arrived—horses with swords concealed in their ears, women created out of golden goatskin churrs, the removal of the sun and the moon from the sky and their concealment for a time in the interior of a mountain, and so on. There were narratives of a sacred tree whose branches were seven families of brothers, each seven in number, while the trunk was Dizane, the goddess of harvests. And there were narratives of Baba Adam and his wife, who with their forty children once upon a time in Kashmir were all sleeping in pairs, and when they awoke in the morning no single couple understood how it was. The Cafrs ordered them to set forth and populate the whole world. With unfeigned reluctance, since everybody loves the country of Kashmir, they obeyed the divine order. And once existed: they were attacked and slain by a mighty god; the blood of one of these fabulous reptiles forms a tart pointed out to the traveller to the present day. Imra is sacrificed to frequently, but not more so than other gods. At the religious festivals and funeral dances he receives three rounds of stamping and shuffling by the quaintly dressed performers, but without any of the enthusiastic and inebriating exercises in honour of Gish, or the comicality of step and posturing which is necessary to please the goddesses Krumai. Every village has its temples. These are also to be found on the roadsides far away from any dwelling-houses. Usually these temples or shrines are small, mostly about 5 ft. square, and perhaps 6 ft. high. The lower two-thirds consist of nibble masonry built between frames of axe-squared timbers. The top is almost entirely of wood with small windows in front, through which the idol or sacred stone can be seen. They are very often ornamented with poles at the corners, upon which are hung fragments of iron resembling tongueless bells, iron scull-pieces, and other trophies placed there in memory of some successful raid. Occasionally a shrine is elaborately and prettily decorated, with Gish, the war-god, is the most devoutly admired of all the pantheon.

To liken a Kafr to Gish is to pay him the highest possible compliment, while nothing can be in better taste than to call a woman 'Gish istri,' i.e. 'the wife of Gish.' Gish killed false enemies—Hazar 'Ali, Hasan and Husain, in short, every famous Musalman the Kafrs ever heard of. Some Kafrs even say that Gish's earthly name was Yazdi. The most popular of the goddesses is Dizane. Any one having a son born to him in the preceding year offers a goat in sacrifice on the goddess's annual festival day. Dizane protects the growing wheat crop; Nirmali, the Kafr Lucia, takes care of lying-in women and watches over children. The special retreats for women are under her peculiar protection. Krumai is a popular goddess; she lives high up on the great snow mountains, but is chiefly remarkable by reason of the comical dance in her honour, which invariably ends the performances at the regular ceremonies after each of the chief gods has been danced to in turn.

GEORGE SCOTT ROBERTSON.

KAHAR (Skr. kシュndhakarva, 'one who carries loads on his shoulders').—A tribe of litter-bearers, cultivators, and labourers. At the Census of 1911 they numbered 1,388,608. In Bengal those who profess to be orthodox Hindus generally worship Siva and the Gokhi, or female element, the proportion of Vaishnavs being very small.

Members of the Khairi sub-caste observe a peculiar worship in honour of Ganesa on the seventh day of the waxing moon of Kartti (October-November) when, accompanied by children, they proceed to a wood and make offerings of vagha, dates, and sweetmeats under an oak tree (Phaladius emulion), but never sacrifice any animals. A feast is then given to the Brahmins, after which the Kharis drink and subsist in excess. The entertainment of Brahmins on this day is accounted as the most important after the gift of cow's milk on any other occasions. In addition to Duk, Karta, Baudh, Garaya, Dharam Raj, Soeka, Sanbarinath, and Rizk, the Khairis are numerous throughout Behar, the caste pay special reverence to a deified Kafr called Damolir, before whom offerings are made, and under whose auspices the interment of the dead is looked upon as a religious act. This practice is possibly connected with the Brahmans who are represented by the Kafrs. In the north they are represented by the members of the family, who share in the cult. In the south, such as in Bengal, however, the Matthil or Kasurni Brahman, who
KAILAS—KALAM

above the caves as priests of the greater gods, are called to
sacrifice to Dumah, and receive half of the offerings as their
perquisite. Mondays, Wednesdays, and Fridays are the days
set apart the worship of Dumah (Riley, To, 8. 1723).

In the United Provinces they are generally orthodox
Hindus, but are seldom initiated into any special sect.
They offer to Bhairor, an impersonation
of the male partner of the Earth-goddess, goat, pulse cakes, and spirits; to Mahābār
or Hanuṇā, the monkey-god, clothes, Brāhmaṇical
cords, and garlands of flowers; to the Pāfichor Tir (or a cow's ear) the offering is a kid and spirits.
In Jammu there is a curious combination of Hindu
and Musulmar usage. When a person worships Devi,
Mahāmād, and a butcher accompanies
him to the shrine. The Mahāmād pronounces the
invocation (kailas), and plunges the knife
into the throat of the victim, and the butcher
eats the carcass, which the worshipper and his friends cook and eat. They cultivate the water
nut (Trapa bispinosa) and melons. When planting
the former, they worship a local deity Siloman Bābā
and his brother Mādho Bābā; when sowing melons,
they add to these a third godling, Ghaṭauriyā Bābā.
In the sacred lake Kailas have platforms erected on
the banks of rivers and tanks, and are supposed to
protect crops sown near such places. When they
go out fishing or starting a carrying litter, they invoke Kailas, a deceased worthy of the tribe.
In the Deccan they are known as Bhot and in Madras
as Beṭhā.

LETTER-DATED.—H. H. Riley, TC, Calcuta, 1891, l. 870 ft.;
W. Crooke in the Meccan period and the first years of the migration he had
to argue with opponents, and certain fundamental
questions had been posed. One of these concerned
the freedom of the will, to which he could give
only an evasive answer (Qurʾān, vi. 149). According
to the tradition, he discouraged inquiries on
such subjects among his followers, and his Qurʾān
deprecates controversy with unbelievers.

The arrangement, however, whereby he permitted the
maintenance of certain non-Muslim cults rendered
a certain amount of controversy unavoidable,
though in the treatment of these tolerant laws a clause was inserted forbidding their members to
say anything against the Muslim faith. On the
other hand, sectarianism in Islam was an inevita-
ble consequence of the civil wars, and the
kailas is especially the abode of Śiva and his
consort. Its shape is roughly like that of a Hindu
temple, with a part of the conical summit removed;
this, with its resemblance to the phallic symbol
(linga), possibly was the cause of its sanctity. It
is a famous place of Hindu pilgrimage, the route
of which is prescribed in the Hindu scriptures
(Sherring, Western Tibet, p. 49 f.). Hitherto the
difficulty of the journey has prevented the assembly
of large bodies of pilgrims; but now that under
the treaty of Lhasa western Tibet is being opened
up by the treaty of Lhasa, the journey occurs
on an average three days. At one point is the
Gauri-kunda, the lake sacred to Gaurī, the 'yellow,
brilliant one,' the consort of Śiva. This
remains permanently frozen.

As some persons measure their length on the ground for
the entire distance, and others are ayed and accompanied
by worshipers, and others walk barefoot on the
road, either for contemplation or to bathe in the icy waters of the Gauri-kunda (though
the ordinary pilgrim merely breaks the ice and puts a little of
the water on his head, it is easy to see that the time occupied
by the journey varies very greatly. One and all condemn
the record-breaker, who harassed himself in so short a time as possible,
and they apply to him the opprobrious epithet of Asha-ka, the man who runs round like a dog" (ib. p. 270 f.).

LITERATURE.—The most recent account, with photographs,
is that of C. A. Sherring, Western Tibet, and the British
Borderland, London, 1906. For the Hindu legends of Mew see
E. T. Atkinson, Western Tibet, pp. 354, 369 ff., 896. The Tibetan Buddhist version is given by
W. CROOKE.

KALAM.—Kalam (lit. 'conversation') is ap-
parently a translation of the Greek kalērēō, used by Plato in a sense approaching that in which
'metaphysics' is ordinarily used, and contrasted
with ἐρωτήματα, of which the Arabic rendering
is modāl, occasionally employed as a synonym of kalām. The two are sometimes coupled with
falsafah, the Arabized form of the Greek physiologos.
The kalām is sometimes paraphrased as 'Fundamentals of Religion' (usul al-din), i.e. the study
of the ultimate concepts which religion involves.

That study, according to a manual of general
information compiled in the 4th Islamic century
(Maṭafī al-ulāma), deals with seven subjects:
metaphysical technicalities; the founders and dog-
mas of Islamic sects; Christian technicalities and sects; Jewish technicalities and sects; the
founders of the philosophical schools; paganism;
and the list of metaphysical questions. It is clear from
this statement that the matter included in the
kalām is mainly theological controversy—between Muslims and Jews, and between other religious
communities, philosophers and atheists, but also
between Muslims of different sects.

Before the end of the Prophet's life he had
covered that religious controversies could be best
settled by the sword; but during the Meccan
period and the first years of the migration he had
to argue with opponents, and certain fundamental
questions had been posed. One of these concerned
the freedom of the will, to which he could give
only an evasive answer (Qurʾān, vi. 149). According

According to the tradition, he discouraged inquiries on

a certain amount of controversy unavoidable,
though in the treatment of these tolerant laws a clause was inserted forbidding their members to
say anything against the Muslim faith. On the
other hand, sectarianism in Islam was an inevita-
ble consequence of the civil wars, and the

For the first century and a half of Islam the
kailas actually took the form of public contro-
versy, theorists being browed by laymen who
came together in the mosques, where they were
compelled to answer objectors; at times the public
debate may have been supplemented by contro-
versial correspondence, of which we have what
may be a genuine example in the letters of Najda
and Naīf, leaders of Khārijite sects, preserved in
the Kāmil of Mabarrad. The public discussion
continued long after the writing of the first
books had become popular; so we read of the
historian Tabari (towards the end of the 3rd cent.)
publicly disputing with the founder of the Zahrīr
school, and taking to the pen only because of
the personalities in which his opponent indulged. Reports of such discussions have, in one or two cases, reached us—e.g., in the treatise Mukhtasif al-Mukhtar (Cairo, 1326) of Ibn Qutbah († 276 A.H.); the treatise of Ibn Khallikân († 332 A.H.)—how animosity sprang up among these disputants adhered to their opinions, even when they had been decidedly nonplussed, excusing themselves on the ground that, if they allowed the arguments to change their views many times a day. As early as 125 A.H., we hear of a heresarch being summoned to defend his thesis in the presence of the Umâyya Khalif Hishâm; he was nonplussed by the theologian employed to oppose him, and barbariously executed by the Khalif's order.

According to some authorities, the standard author on kalâm, who had provided the material for all later writers, was Abû'l-Hudâl al-Kalâf of Bagh († 236 A.H.; see Yaqût, Dictionary of Learned Men, London, 1913, vi. 74). His chief work was called 'The Five Fundamentals,' and dealt with justice, monothelitism, the promise of the Hereafter, the intermediate state; the first refers to the freedom of the will, without which the punishment of unbelievers, etc., would be unjust; the second, to the creation of the Qur'ân and of the dogmas; the third, to the dogma of God; and so forth, to the doctrine that ultimate fate was man cannot be altered; the fifth, to a theory that the Muslim original was something between a believer and an unbeliever. These doctrines have certainly embraced most of the matter in controversy between Muslims, since, if a man earned his title of 'believer,' there would be no interference, and the day of judgment, etc., would become superfluous. Though those who accepted these views or modifications of them (the Mu'tazilites) were only spasmodically in the ascendant, they had never been the least objectionable. Abû-l-Hasan al-Asfârî († c. 324 A.H.), who is supposed to have won the case for orthodoxy, was one of the Mu'tazilites, but (according to his biographer) was miraculously converted, and told to use the controversial ability which he had acquired to refute the doctrines of the Mu'tazilites, whom the orthodox had been allowing to gain the victory through unthinking to delude or even 'share a carpet' with them (see art. AL-ASFÂR ABÎ, vol. ii. p. 111 ff.).

The list of subjects treated by Abû'l-Hudâl keeps clear of politics, and indeed the name is neutral neutral, possibly with this reference; but most of the Islamic sects were political, whence the discussion of the lawful sovereignty could not easily be avoided: hence the question, 'Who is the best of mankind after Muhammad?' usually figures in the lists of kalâm questions. Moreover, fresh theories on this subject were constantly being formulated, and in consequence new chapters of kalâm introduced. Although it was rarely safe under Islamic rule for any member of the dominant community to question such fundamental notions as the two which form the Islamic creed and the infallibility of the Qurân, there was never an idea of mistreatment by our informants, went a long way in this direction. It was, therefore, desirable that there should be some recognized method of meeting those who suggested doubts on disputed subjects, and this was the kalâmism had been extinguished in Arabia, the spread of Muslim conquest brought the followers of the Prophet into fresh contact with it, and in India it was necessary to keep the toleration which the code elsewhere excluded. Conditions both internal and external thus combined to keep religious controversy alive, and encouraged speculation on those very subjects from which the Prophet and his chief companions are likely to have kept clear.

Of controversies with Jews, Christians, and Magians we have echoes rather than reports in the 'Ecology of Jahîz' with which the author of the treatise of Dhahab al-Qasim († 330 A.H.) identified himself. For the reason mentioned above such controversy was not unaccompanied with danger, and the 'unorthodox' appear to have been more open-minded in these debates than in the change of their views many times a day. As early as 125 A.H., we hear of a heresarch being summoned to defend his thesis in the presence of the Umâyya Khalif Hishâm; he was nonplussed by the theologian employed to oppose him, and barbariously executed by the Khalif's order.

According to some authorities, the standard author on kalâm, who had provided the material for all later writers, was Abû'l-Hudâl al-Kalâf of Bagh († 236 A.H.; see Yaqût, Dictionary of Learned Men, London, 1913, vi. 74). Refutation of anthropomorphism. (5) Refutation of those who deny the divine attributes. (6) Statement of the conditions of the things. (7) Question whether the non-existent is or is not a thing; on matter, and refutation of those who assert the existence of the non-existent. (8) Proof that the propositions connected with the divine attributes can be known. (9) Proof of the same with regard to the eternal attributes. (10) On the essence of the Creator. (11) On the divine will. (12) Proof that the Creator speaks with an eternal speech. (13) Proof that the Creator speaks with a human speech. (14) Reality of human speech and psychic utterance. (15) Proof that the Creator speaks by creating. (16) Proof of the intellectual admittance and the scriptural attestation of the visibility of the Creator. (17) Meaning of the terms 'commendable' and 'invisible.' (18) Nothing exists without a cause. (19) On the Creator or on man before the revelation of a code. (20) Proof that the act of the Creator are without purpose or cause. (21) Refutation of the doctrines of utility (as applied to those acts); meaning of various terms, such as 'divine guidance,' 'favor,' etc. (22) Proof of the reality of the prophetic office, of the genuineness of miracles, and of the infallibility of prophets. (23) Proof of the mission of Muhammad.

It will be found that these two lists cover nearly, though not quite, the same ground. Some of the questions were suggested by the civil wars (as we have seen) and their bearing on the interpretation of the Qur'an. Others may have arisen in the course of studying the Qur'an and endeavouring to reconcile its various utterances. It is noticeable that the chief seats of Islam arose before the end of the 7th century; and so before the philosophy of Aristotle can have had much direct influence on Islamic speculation; since, however, much of the thought of the philosopher had long before become the common property of the educated world, his individual influence may have been considerable. Indeed, where in the Qur'an itself (vii. 10 f., xv. 28-33, xxxvii. 71-77) Iblis (Satan) descends to bow down to Adam because Adam had been created of clay, who was he but Iblis? If the works of Iblis were destroyed by fire, the underlying proposition that fire is more honourable than earth is drawn from the Aristotelian hierarchy of the elements, though by no means directly from the de Celo. There is, however, no doubt that, when under the early Abbasids the works of the philosopher began to be translated into Arabic, they found many earnest readers; and Ibn Qatalah charges one sectarian, Muhammad b. al-Jahm b. al-Burmi, with making Aristotle's De Generatione et Corruptuionibus serve as his Qur'an. Jahiz, a contemporary of this personage, refers to the 'author of the Logos' as a well-known writer, and speaks of persons who rely on the Meteorology, though he warns them against mistranslations and corruption of the text. The probability is that the decidedly Aristotelian clothing of some of the questions (as in the Shahrastani's list) is due to their having been suggested to the Muslim thinkers by the study of the philosopher's works; and, as those works became better known, the scope of the kalām had a tendency to enlarge, while ever increasing subtility was displayed by the disputants. In some treatises most of the subjects dealt with in the Aristotelian Physics and Metaphysics are treated as kalāms (e.g., the theories of time, space, and motion), and some even define the word kalām, in the style of the Metaphysics, as 'the science of Being qua Being.'

The extent to which the Muslim kalām was influenced by Christian theological speculation cannot be easily determined. One question which at one time provided the shibboleth for the chief sects, whether the Qur'an was or was not created, appears to have had a very echo as an echo of the Christian controversy about the Spirit 'neither made nor created nor begotten, but proceeding'; and, since the teachers of Greek philosophy were called by the Christians Arians, the mention of the Arian doctrine of Christ may have had some influence. The influence of the pagans on his thought is also evident, as e.g. on his doctrine of prophecy.

The attitude adopted towards these studies by Islamic rulers varied greatly. The early Abbasids, especially Harun al-Rashid and Ma'mun, encouraged the study of Greek philosophy and invited to Bagdad a large number of philosophers to work into Arabic. In 757 A.H., after the Islamic world had been united and after the decline of the orthodox and the Mu'tazilites, the Khaliifa Mutamid forbade the sale in Bagdad of works dealing with kalām, eristic, or philosophy. Since it was impossible to refute a heresy, it was best to make no mention of it, and in some form of repetition of the arguments whereby it was defended, probably this was the surest mode of preventing the spread of heresy; and this motive was dominant when Ma'mun of Ghazna (806-833 A.H.) carried kalām?
KALEVALA

is the work of one author. Its component parts were produced by various singers at different periods; but sporadic traces of apparent Christian influence are noticeable in the last two decades of the 13th century. The story, as a whole, belongs to the pantheistic, or at least to the naturalistic, school of thought. It is a synthesis of the various types and themes—a process which, in many cases, had already been effected among the people themselves. It was possible because the whole mass was of a single metrical form, the octosyllabic trochaic.

I. THE EPIC POEMS.—These were composed partly among the Finns and partly among the Lapps, although it was among the Karelians of Ingrina (in the Government of St. Petersburg) that the majority of the poems were produced. The Karelians of Ingrina are the largest group of the Karelians in Finland, and in districts lying beyond the borders of Finland (the Governments of Olonetz and Archangel) the epics were moulded and links between them. That they could be combined into an epic whole. These epic poems may be classified as (a) songs of heroes, (b) legends, (c) ballads of chivalry, (d) imaginative songs, and (e) narrative poems.

(a) Songs of heroes.—These date from a period anterior to the official adoption of Christianity in the latter half of the 12th century. The names of the various heroes vary in many instances, but the theme is the same: the hero's conception of himself as a Christian knight or of his origin from Scandinavian heroes, as, e.g., Kaleva (cf. Cædric æulu Finn in Widesi) with Kylling Skilling; Vetra (Vetrivka, from which comes Vettila), ‘rogue,’ in the Kalevala; and Ultys (Utri) (from which perhaps Uutam) with Veters, Vetsgaristas in Beowulf; Osmon or Osmo with Osmund, Osmund; Reger or Reikowithrii; Hermannsdieron with Hermarik. Vuo dolmen means the Gethlnder. The name Ahit or Ahv, which, being noted the ‘water-dweller,’ has been derived from ahu, ‘water,’ is likewise a human name, to which are attached epithets signifying dignity and strength. Even Vaiminoine, ‘dweller in the narrow sea,’ is to be interpreted, not as a divine name (as the present writer assumed in art. FINNS [Ancient], vol. v. p. 24), but as a hero-name. The name of the smith, Ilmarinen, as confirmed by the sky-god Ilmari, was formed from that of a smith called Ismaro (from Osmaro). To this group of songs belong also those of Jouki- nen the ‘mythical’ (9), Lemminkainen ‘the beloved’ (7), and Kankaanmäen.

These heroes are represented as beautiful and strong, with long curling hair. They wear mantles of red or blue material, and always have a sword by their side. They travel on horseback or by boat. They are rich in lands and gold, and possess slaves. They drink home-brewed intoxicating ale, and seduce maids, yet they are less eager for gold, ale, or women than for feats of warlike prowess.

The heroes, however, are also capable workers in field and meadow, and they are skilled blacksmiths. Moreover, they are poets, singers, and musicians. As experts in medical arts they also healing the people, and they know how to fashion the magic runes. They are

1 Cf. the words of Lemminkäinen in Kalevala, xii. 74-106:
'But for house-brewed ale I care not,
I would drink from mana-water.
From the end of tarry rudder.
Nought I care for house-stored treasures;
On the pyrites won by far is better.'

Cf. also cxx (1-100) the fine lament of his ship of war, and his comrades' eager readiness to follow him, though those comrades had but recently married a young wife.

designated kings, holy ones, and gods. In popular usage some of their names still survive as designations of individuals belonging to a former race of heroes, and also of towns, such as, e.g., K.-Kron, Kaljanun and seisa Sippe in Journal Soc. Finno-ugric, xxx. [1914] 35.

(b) Legendary poems.—These consist mainly of stories about the ancient Karelians, and from Karelian popular poets in the Government of Archangel had compiled a legendary epic, ‘The Cycle of the Creator’ (J. and K. Kron, Kantelelaren tutkimus [‘Investigations of Kantelelars’], Helsinki, 1900-01, iii.). An important element in the Sampo myth of the Kalevala is the beautiful legend narrating the deliverance of the sun, which was brought by the Sampo (Finnish ‘boat’) to the land of the north (i.e. the sea), and set in a tree of gold—first of all among the lower branches, whence it shone only upon the rich and the wise, and then among the higher branches, from which it gave light to all without distinction. The song of Lemminkäinen’s death is the same version of Christ’s death which is reproduced in the Icelandic myth of Balder (Fins.-ugr. Forsk. v. [1905] 85-106). Part of the account of Väinämöinen’s voyage to Lapland belonged originally to this legend telling of the storm on the Lake of Gnessen—legend which also underlies the story of Thor and the Midgard serpent (ib. vii. [1907] 167-180). The dreadful rash of blood from the wound in Väinämöinen’s knee is taken from the narrative of the blood which flowed from Christ upon the Cross, and Väinämöinen’s journey to Tuonela is simply a transcript of Christ’s descent to Hades. The scene of Henry IV’s coronation under the canopy of the apostle of Finn, is, however, of purely Finnish origin.

(c) Ballads of chivalry.—These date from medieval times, and are mainly of Scandinavian origin. To this class belongs the song of Kulervo’s (originally Tum’s) sister in the Kalevala (Grundtvig, no. 338. Hr. Truesse Dötre; Child, no. 14, Babylon). The song of Ivana Kojojokopka was composed in Ingria in the model of a Russian byin by Ivan Golovitch; and it correspends the story of the second wooing of Ilmarinen in the Kalevala.

Elinna’s Death, the greatest Finnish ballad of real dramatic power, is, however, a genuinely Finnish folk-poem.

(d) Imaginative poems.—This class consists of poems ostensibly but not really mythical, such as those telling of the process of evolution. The myth of the eggs of the giant oak, of the huge ox, and of the courtship of the heavenly bodies. The genuinely mythical songs of Sänkap Leffervinen (cf. art. FINNS [Ancient], vol. vi. p. 239) is a ritual poem.

(e) Narrative poems of everyday life.—These are chiefly about wives and maidens.

ii. LYRIC POEMS.—This class is now represented in West Finland only by lullabies, nursery rhymes, and pastoral songs. These songs, as yet only slightly investigated, arose mainly in Estonia, these finding their way through Ingrina to Finnish and Russian Karelians, though it is probable enough that some of them took shape among the Eastern Finns themselves. The most important sub-group is that of the marriage-songs.

iii. MAGIC POEMS.—These were versified in West Finland from the Christian spells of the Scadinavians, and in East Finland were further elaborated and embellished with additions from the epic poems. The Christian appellations of the characters involved are in some cases retained; in others they are superseded by heathen designations, and in still larger numbers are transformed into names apparently heathen. The later Finnish mythology is dealt with in Suomalainen rauvon kanto (The Religion of the Finnish Race), i. 'The Religion of the
Finnish Poems'), the first part of which has just appeared (Borgo, 1914). Of these originally Christian, and the Kalevala, a few may be mentioned as examples:

Miedikki, the goddess of the forest, is formed from miedikus, 'pleasant,' an epitaph of St. Aune (Amkki); her other name, Miekka (Arno), is from the old Finnish, 'he is majestic, Holmstén ('Studies in Finnish Folklore', 'King of Beasts'); Kupansa (also Kuhina, Kussa, Klass), the name of the forest-god, is a folk etymological derivation from Hubertus, the late Latin saint of the hounds and hunting (with the air man, Hummokan, 'the cunning maiden,' and Seurta or Ekkela, 'the daughter of the South,' are all epithets of the Virgin Mary, as is also Kivistar, 'maidens of the forest,' on the Kipinä, 'the mountain', and Gogotha).

K. KOHN.}

2. Name and subject.—The word Kalevala (Kalevipoika) is derived from Kaleva, the progenitor of the Finnish heroes, and means 'the land of the heroes.' Kaleva himself does not appear in the epic; but Kalevat, his daughter, and Kalevalaik, his descendant, are mentioned. In the poem there are five main characters: Väinämöinen, the patriotic minstrel; Ilmarinen, the magic smith; Lemminkäinen, the reckless adventurer; Kullervo, a morose and violent slave; and Louhi, the mistress of the Woods.

Pohjola, the North country, is in the poem understood to be Lapland, or a dismal land to the north thereof; and Kalevala, of course, is Finland. The plot of the poem is a continual conflict between the Finns and the Lapps, representing the constant opposition between light and darkness, good and evil. The hero is always able to overcome an evil power if he can chink the origin of it, implying probably that we could exterminate evil if we only knew how or were able to do it. The conflict is carried on by means of magic arts, which generally presuppose tell of some kind, thus suggesting that the best magic consists in industry, skill, and perseverance. It is interesting to note how frequently humble instruments are enlisted for the attainment of great ends, and how high a moral tone pervades the epic from beginning to end.

3. Origin.—The Kalevala is unique in being the only example of a national epic compiled from songs actually existing among the people, independent of a larger national poem. The composer, Elias Lönnrot, visited the most remote districts of his beloved land, industriously and carefully reaping and gleaning from aged singers and reciters such songs as he could. Vainamöinen's harvest was rich, and it has a literary charm absolutely unknown in compilations, and only to be found in a work proceeding from one, and that a more usually gifted, author.

Finnish literature proper is not ancient in the sense of having come down in parchment or print from former centuries. It is traditional, and was handed on from sire to son until about a century ago. Nearly all the traditional poetry is anonymous and composed in unrhymed lines of eight syllables, in the versification with which Long-fellow has made us familiar in Hiawatha, the idea of which was derived from the Kalevala. At first the versification of the translation seems cramped, but the reader is quickly unacquainted; for the vigour and grace of the poetry compel his admiration. One of the distinctive features of this versification is rhythm and metre, and in some of the OT Psalms, the second line repeating the sense of the first, either in different words or giving a new shade of meaning. Many of the songs reflect the national spirit, the common life of the people through this poetic form. The other features of this poetry are more common in other literatures; alliteration and assonance, for example, are freely employed.

Lönnrot has issued two collections in addition to the Kalevala. These are Leirisaruojo, 'The Magic Songs of the Finnish People' (Helsingfors, 1896), consisting of some 200 magic spells, incantations, and other religious formulas, which help us to understand the superstitions and magic of the Finns; and Kanteletar, 'The Daughter of the Harp' (1st ed. 1853; 2nd ed. 1858; 3rd ed., 1837), consisting of lyrics and ballad poetry which reveal the customs, habits, and life of the people in all their phases.

As these traditional songs were collated, the students of literature noticed the frequency with which certain names and characters appeared; and it gradually dawned on them that these fragmentary incidents might belong to some complete tale. Efforts were therefore made to gather in from every quarter every song or verse in the Finnish tongue, and eventually, in 1835, Lönnrot published a collection of the episodes and verses that seemed to belong to one original epic, and to this compilation he gave the name Kalevala. He divided the work into 39 cantos or runes, the whole amounting to some 12,000 lines. But he was not satisfied; and he continued to gather material until, in 1848, he issued the Akateemi, having by that time, 50 cantos, containing, in all, 22,763 lines. Lönnrot alone is responsible for the selection and arrangement of the material. As the original fragments and the material from which they were compiled, and which are sources, have been carefully preserved, often in many variants, it is known that the compiler made only such trivial additions and alterations as were absolutely necessary to weld the fragments into a connected whole. Universal praise has been accorded to him for his self-restraint, his literary skill, and his loyalty to the unknown poets whose songs had survived until he rescued them from possible oblivion.

4. Scheme of the epic.—The great defect of the Kalevala as a work of art is its lack of unity and continuity. Much might be left out, and additional verses or even runes might be inserted, without attracting the attention or decreasing interest. For this reason it is difficult to indicate in few words what the subject of the Kalevala really is. In the poem there are at least four main cycles of songs; and, in addition, seven separate romances are woven into the epic. The four cycles are: (a) the Sampo Songs, in which, inter alia, we find the Finnish conception of the Creation; (b) the Lemminkäinen songs; (c) the Vainamöinen songs; and (d) the Kullervo cycle. Probably it would be right to say that the Sampo is the key to the Kalevala. For the story of the Sampo and its possession by the Finnish people—the origin, the hiding, the quest, the rape, and the loss of the Sampo—is the central fact that makes the poem an epic; and Lönnrot himself says that, without the Sampo, the Kalevala would fall into a number of independent cycles having very little connexion with each other.

5. The Sampo cycle.—

Immer, the daughter of the Air, tired of solitary, descended to the surface of the waters, and was brought to her by the boisterous waves. She was tossed about for 100 years before she reached the earth and could bring forth her son Väinämöinen. In due time this son cleared the land and sowed barley and other plants. He was a Lapland girl, Aino, but she would not marry him, and woe was told, and then, in some cases, he was driven out. His mother advised him to seek a bride in Pohjola, the North country; and, as he was riding over the water on his magic steed, Aino's brother shot him and killed him. Väinämöinen, however, was conveyed by an eagle to the castle of Pohjola, whose mistress of love for her son Väinämöinen. In due time this son cleared the land and sowed barley and other plants. He was a Lapland girl, Aino, but she would not marry him, and woe was told, and then, in some cases, he was driven out. His mother advised him to seek a bride in Pohjola, the North country; and, as he was riding over the water on his magic steed, Aino's brother shot him and killed him. Väinämöinen, however, was conveyed by an eagle to the castle of Pohjola, whose mistress of love for her son Väinämöinen. In due time this son cleared the land and sowed barley and other plants. He was a Lapland girl, Aino, but she would not marry him, and woe was told, and then, in some cases, he was driven out. His mother advised him to seek a bride in Pohjola, the North country; and, as he was riding over the water on his magic steed, Aino's brother shot him and killed him. Väinämöinen, however, was conveyed by an eagle to the castle of Pohjola, whose mistress of love for her son Väinämöinen. In due time this son cleared the land and sowed barley and other plants. He was a Lapland girl, Aino, but she would not marry him, and woe was told, and then, in some cases, he was driven out. His mother advised him to seek a bride in Pohjola, the North country; and, as he was riding over the water on his magic steed, Aino's brother shot him and killed him. Väinämöinen, however, was conveyed by an eagle to the castle of Pohjola, whose mistress of love for her son Väinämöinen. In due time this son cleared the land and sowed barley and other plants. He was a Lapland girl, Aino, but she would not marry him, and woe was told, and then, in some cases, he was driven out. His mother advised him to seek a bride in Pohjola, the North country; and, as he was riding over the water on his magic steed, Aino's brother shot him and killed him.
This is the natural close to the epic; but the last cantos of these lines has an interest of its own.

6. The Finnish Virgin Mary myth.—The fifthith and final canto of the Kalevala gives us the story of Marjatta.

She was a damsel who was rarely beautiful, and was always pure and holy, and was ever very modest.

One day on the mountains she saw a spruce and a caer.

She was discrusted by her knees and compelled to take refuge in the stable of Illis, the Evil One; and there warmed by the vapours of the fire-breathing steed, she found comfort.

And a little boy was born her, and a sinless child was given, and the hay was in horses' manger.

On the hay in horses' manger.

The child was spirited away whilst Marjatta slept. In her dream, a Corda, Tolvii, started and the child refused to reveal the hiding-place; but the sun directed the mother to search, and there she was concealed. "The child possesses beauty, increasing in strength and in wisdom; and in favour with men, so that 'All Suomi [Finland] saw and wondered.'

Marjatta sent for a priest to baptize him; but he desired proof that the boy was no son of some black wizard. Vainamoinen, being spoiled, incurred the matter, and suggested that, as the boy had sprang from a bear, he ought to be exposed on the mountains. But the forthright-old child spoke up for himself and his own. The priests immediately took the side of the boy, crossed him, and

"Quickly baptize the child with water, As the king of all Karelia,
And the lord of all the mighty."

Greatly offended,

"Then the aged Vainamoinen
Went upon his journey singing,
Sailed away to lottier regions.
To the land beneath the heavens,
Leaving behind his harp and his songs as a parting gift to his people."

7. Other cycles and separate romances.—In the course of the epic there are many songs and episodes in which Vainamoinen, the Finnish national hero, appears, and which national course are unoriginal and halite are delineated with minuteness and vigour. The Lomminkinon songs set forth the misadventures of this reckless adventurer. Time after time the various disavowals of his own magic skill or that of his mother, to whom he is devotedly attached.

The Kullervo cycle has hardy any connexion with the main subject of the Kalevala; and these songs, with one peculiarly sad episode, are introduced because Kullervo killed Ilmarinen's wife.

The separate romances include the strange and moving tale of Aba, the fishing for the Maiden of Vellamo, the wooing of the Virgin of the Air, the Golden Maiden, the Son of Kojonen's woeing, the deliverance of the sun and moon, and the story of Marjatta, already described.

LITERATURE.—A full bibliography up to the year 1910 is given in the last Finnish ed. of the Kalevala, published at Helsinki, in that year. Unfortunately most of the best books on the Kalevala are in foreign languages which is but little known by scholars of other lands; but translations of some of these are promised in more common tongue. The most important of these works are:

at the Kālighāṭ in the neighbourhood of her husband’s shrine in the adjoining suburb of Bhawanipur. To Kālighāṭ also, as has been said, the mythological account of the sanctity of the Calcutta shrines Kālighāṭ has been transferred, with further lost particulars added. In these additions we seem to see a ray of light cast upon the beginnings of the southern shrine.

In the neighbourhood where the temple now stands, so the Kālighāṭ legend runs, somewhere about the 15th cent. lived an ascetic, by name Jaigal Gir (‘god of the jungle’). To him perhaps the first body of the portuated town endeared itself for worship in a small wooden house (Wilson, l. c. 150). Jaigal Gir, a jungle devotee, the traditional founder of Kālighāṭ about the 15th cent. was himself probably, as a historical fact, the first attraction to draw worshippers thither. The reverence for holy men is an attractive feature of Hinduism.

Two centuries later than Bipro-das, in 1769, when Streeansah Master visited the Gangā on behalf of the East India Co., he referred in his description of the river to the shrine at Kālighāṭ, and made no reference whatever to Calcutta, whose secular era had not yet dawned (Wilson, l. c. 54). Finally, by the 17th cent. of the 18th cen. the repute of Kālighāṭ is apparent. Leading past the town of Calcutta, upon the east, lay a great pilgrim thoroughfare to Kālighāṭ, known as ‘the Road from the East’, now Bentinck St. and Chowringhi Road. The Gaṅga Bhakti Tarasāgi of about A.D. 1740 speaks of Kālighāṭ as a wonderful place, where the worship is celebrated with much pomp and sacrifice (Census of India, 1901, viii. 2. 8. 11, note). The author of the Census Report of 1901 gives good grounds for believing that the shrine and the Tāntic rites associated with Kālī-worship began to rise into prominence at the end of the 16th cent., when the well-known Hindu general Mār-shing ruled Bengal for the Muhammadan Emperor.

The buildings within the temple enclosure are not in themselves in any way distinctive or of architectural note. The features of Kālighāṭ are the packed crowds of worshippers and the great slaughter of young goats on the days of the annual celebrations of the Durgā Pājā and the Kālī Pājā (pājā = ‘worship’). Between seven and eight hundred goats are said to be sacrificed during the three days of the Durgā Pājā. The decapitation taking place within the temple enclosure, it becomes at such times a veritable sea of blood. The trodden earth and blood. From the place of decapitation the heads are carried to be piled up before the idol, and become thereafter temple pious objects. The worshippers carry away the body with him to furnish the family feast.

In this [sacrificing there is no idea of effacing guilt or making various offerings for sin’ (Moher-Williams, Sīkha. Womanism and Hinduism, London, 1901, p. 85). The great mass of the crowd, too poor to offer a goat, press eagerly into the passage before the eastern door of the shrine to enjoy the opportunity of saluting the goddess as they pass and of casting their copper coins at her feet.

Kālighāṭ is of special interest to the student of religions as the chief scene of bloody sacrifices within India, probably in the whole world. Such sacrifices are associated with the worship of certain goddesses—Kali, the mātās, or Mothers, of Western, and the amma, or Mothers, of Southern India, and others. At Kālighāṭ, probably upon an aboriginal basis, they illustrate the later Sāktā and Tāntic aspects of Hinduism.

The Durgā Pājā, supposed to be a festival of the autumnal equinox, falls within the sixth Bengali month, Āśvin, beginning on the first day of the second quarter of the moon (the eighth day of the new moon between 15th Sept. and 15th Oct.). Of the three days, the second is the chief day at Kālighāṭ. The date of the Kali Pājā (kali = black) is fixed by the darkest night, the night of no moon, of the seventh Bengali month, Kartik (the night of no moon between 15th Oct. and 15th Nov.).

KĀLMUKS.—See Mongols.

KALWAR (Skr. kālāpyāla, ‘a distiller’, kālā, ‘spiritsuous liquor’).—The tribe of distillers, liquor-sellers, and traders, the great majority claiming to be Hindu by religion, found in all parts of India, but most numerous in Bihar and Orissa and the United Provinces. Agra and Oudh. At the Census of 1911 they numbered 894,241. Like most of the trading classes of India, the Kalwārs, though probably including some non-Aryan elements, wish to rise in the social scale, and pose as orthodox Hindus, favouring in this way that system which is usually adopted by the mercantile classes. But in Bengal they are still on their promotion, and, though they employ Brahmins for their religious and social rites, these are deemed to be of inferior rank in the priestly order. In the same province with the cultus of the orthodox gods they combine the worship of various minor deities. Thus one sub-caste offers rice and milk to Sokhā on Mondays during the light half of Tārhn (July-August); goats and sweetmeats to Kālī and Bandē on Wednesdays and Thursdays; sucking pigs and spirits to Goralā on Tuesdays. Another sub-caste during the same period presents cakes and sweetmeats to the Pāchperiya; and another offers similar gifts to Barhān Deo in August—September and January—February. All these offerings are eaten by members of the worshipper’s family, except the smoking pigs, which, being lawful food only to the menial castes, are buried after dedication. In the United Provinces the Kalwārs seem to occupy a somewhat higher position than in Bengal, the Brahman and Vaiṣṇāv being received on an equality by their brethren. Here they combine the cult of the Mother-goddess Durgā in the form of Kālākī with that of lower deities like the Pāhlavīs, Pāmlīs, Pathans, and the hero of cholera, Hardaur Lālī, Madain, the god of spiritsuous liquor, though worshipped by the Kalwārs when distillation is going on, is more generally revered by the lower castes, like the Chumārs or carriers, who are addicted to drinking. These people regard an oath by Madain as more likely, if violated, to attract retribution than that by any other god in the pantheon. The Kalwārs specially venerate the amrudī tree (Phylanthus emblica) by feeding Brahmans and performing a fire sacrifice (homa) at its foot. They also revere the nim tree (Melia azedarach) and the pipal (Ficus religiosa), the former being regarded as the abode of the goddess Devī, to which women bow as they pass; the latter as the home of Vasudeva (Krṣṇa) and other gods. They fast on Sundays in honour of Śrīsūti Nārāyana, the sun-god, and pour spirits on the ground in honour ofŚrīś or Śrīyari, who seems to be a form of the earth-goddess. Each house has a family shrine at which the household deities are worshipped. This rite is specially performed at childbirth, and the devotee’s name label is usually Ghāzi Miyan, one of the Pāchhoī Fir, whose symbol, an iron spear, is kept near his shrine.

In the Central Provinces the Kalāra, who are de-
tically with the Kalvāra, worship the defied bridegroom, Dalhā Deo, who is said to have perished in a tragic way during his wedding rites (Crooke, PP, 1896, i. 119 ff.), and a goddess called Rātmā, who is associated with a flat piece of gold or silver. Some, however, have advanced so far in the direction of monotheism that they worship Bhāgavan, 'the glorious, prosperous one,' who is recognized as the Sūryavins. They also practise the cult of its worshipers burning lamps at the Holī, or spring festival, Bāhādur Kaliarāja and his son Susan Chābāri, who were said to be successful distillers, and the ruins of their factories are still pointed out. The assertion that the Halba of Central India worship a pantheon of glorious distillers lacks confirmation.

LITERATURE.—H. H. Risler, TC, Calcutta, 1901, i. 386; W. Crooke, TC, s. o. 1895, i. 114; for the Central Provinces see R. G. Gonda's Stele, 1870, vol. i., pl. 92; J. AS, hill pt. 1, 1892, 397.

KANAKAMUNI.—Kanakamuni (Pāli Koṣāgamāna), according to the tradition, was the second of the four Buddhas of the present age, his predecessor being Kukuccehaorha (Pāli Kuçaśudda), and his successors Kassapa (Pāli Kassapa) and Sakyamuni himself. The three first are said to have been born in the neighbourhood of Kapilavastu (c.e.), the birthplace of Gautama, in the kingdom of Kāshāra. In the Brahmaputra, the time of Kanakamuni, men lived to the age of 40,000 years. Interest attaches to him, more than to the other predecessors of Gautama Buddha, on account of the discovery in the year 1896, in the course of a detailed archeological exploration undertaken on the border country of India and Nepal, of the pillar erected by the Emperor Aśoka in honour of Kanakamuni and in commemoration of his visit to the place where the sage was believed to have been born.

The Chinese pilgrims Fā-Hian and Huien Tsang both in turn visited the birthplace of Kanakamuni, and have recorded in a few words their journey thither and the condition of the buildings and site. Fā-Hian states that the town where Kanakamuni was born was less than a day's journey from the birthplace of his predecessor Kukucuschamahā, the latter place being twelve days' south-east of Sravasti. There was a stūpa, but no mention is made of the pillar. The narrative of Huien Tsang is as follows:

To the north-east of the town of Kukuccehaorha Buddha, going about 30 li, we came to an old capital (or, great city) in which there is a stūpa: this is to commemorate the spot where Buddha was born. The pillar, however, was not seen.

To the north-east of the city, not far, is a stūpa; it was here, having arrived at complete enlightenment, he met his father.

Further north there is a stūpa containing the relics of his bequahshed body; in front of it is a stone pillar with a line on the top, and about 50 feet high; on this is inscribed a record of the events connected with his Nirvāṇa; this was built by Aśoka.

The 'old town' where Kukuccehaorha was born is stated to have been about fifty 1 li south of Kapilavastu. In his human life human was prolonged to 60,000 years.

Of Kanakamuni, with relics seen by the Chinese monks, no trace appears actually existent. The broken parts of the pillar were found lying on the western bank of a large tank, the Nigila Sagar, south of and about a mile from the village of Nigila, not far from the spot where the pillar erected by Aśoka in commemoration of his visit to Gautama's birthplace was discovered. The tank is now almost dry. The pillar is broken, but the total length of the two fragments still in existence is stated to be about 25 feet. The capital also has disappeared, and with it the lion surmounting the pillar, to which Huien Tsang refers. There is, moreover, no trace of the inscription of which the pillar speaks, but four short lines of Tibetan script record the so-called Buddhist creed Om maṇi padme hūm. The more ancient inscription of Aśoka is imperfect; the pillar itself also has been removed from its original position, and now lies at the top and bottom of the high embankment of the tank.

The inscription is in four lines on the lower broken part of the pillar, which cover over 15 or 16 inches in the height of the stone. The rendering is as follows:

1 Hs. Majesty King Pandyas [i.e. Aśoka] in the fifteenth year of his reign enlarged for the second time the stūpa of Buddha Kusamamun, and (in the twenty-five years of his reign, having come in person, he did reverence, and set up (a stone pillar)."

The approximate position of the pillar is lat. 27° 46' N., long. 82° 10' E.

Of the numerous Buddhas whose names are recorded in the Buddhist books as predecessors of Gautama it would seem therefore historically probable that a real basis of fact underlies the name and personality of Kanakamuni; and also of his successor Kassapa. Nothing more, however, is known of him.

LITERATURE.—The available authorities are cited in the footnotes.

A. S. Gedén.

KANAUI (Skr. kanāj-a-kūpo, 'the crooked maiden,' in allusion to a legend of the hundred daughters of Kumarāha, king of the city, who were rendered deformed by the ascetic Yaśo because they refused to comply with his licentious desires [Rāmāyaṇa, i. 323].—A famous ancient city in the Farrukhabad District of the United Provinces of Agra and Oudh; lat. 27° 55' 30" N., long. 80° 37' 45" E. It has been identified with the Kano- giza of Ptolemy, but this is disputed (J. W. McCrindle, Ancient Index as described by Ptolemy, Calcutta, 1855, pp. 194, 227 f.; V. A. Smith, JAS, 1898, p. 178). It was an important seat of Buddhism, as appears from the account by the Buddhist pilgrim Huien Tsang (S. Beal, Buddhist Records, London, 1896, i. 306 ff.); but later, under the Gupta dynasty, it became a centre of Brahmancial Hinduism. Its last king, Chādi Chandra, was defeated by Muhammad Ghori, A.D. 1194 (Smith, loc. cit. 705 ff., Early Hist. of India, Oxford, 1914, p. 385 ff.). As the capital of the great modern region of Oudh (306-645), and a centre of the two chief religions of N. India, it has been reared numerous religious buildings; but of these nothing now remains above the surface. Out of the materials of some of them the fine Jumā Masjid, or cathedral mosque, was built in A.D. 1460 by Ibrahim Shāh of Jaunpur; but the site is still called Sitā-Ka Raso, the 'kitchen of Sitā,' the heroine of the Rāmāyaṇa epic. There are many tombs of Muhammadan saints, the most important being those of Makhān Mahānā, Makhān Akhaś Jamshid, and Balā Pir and his son Shāik Mahādī, famous religious teachers who flourished in the reigns of Shah Jahlān and Aurangzeb. Other names for the city were Kusatsāla, Kana, Gāhidpurā, and Mahodaya (C. Lassen, Ind. Alter-thaneschundes, Leipzig, 1867, 157 ff.).

KÄNCHELIPURAM (Conjeeveram).—A city in the Chingleput District. Lying about 45 miles W.S.W. of Madras.

W. A. Smith, JOSA, Oxford, 1893, p. 142.

W. Crooke.
1. Name.—In Tamil literature the most usual form of the name is Kaâkshi, with or without a suffix signifying ‘place,’ and this is probably the original name. Regarding its derivation nothing is known. The name Kâkshi is probably Sanskritized form of the Tamil name, the form Kaâkshi, which is also found, being perhaps a connecting link between the two. The attempt to connect it with kâkhi (‘to shine’) is fanciful. To Kâkshi the Chola people gave the title of ‘Garudam.’ According to the Europeans this was corrupted into Conjeevaram or Conjeeveram. The older forms, however, are still used by the people and by Indian historical writers.

2. Significance.—Kâkshi is included by Sâivas and Vaishnavas alike among the seven cities in all India which are regarded as most sacred. How it first came to be so regarded we cannot tell, but that its fame as a sacred city goes back to ancient times is certain. The oldest buildings date from the 7th cent. of our era, but the place was famous at least eight hundred years earlier. As a home of learning its name has been known for nearly two thousand years. The city is of special interest to the student of architecture. In the oldest temples we can study to great advantage the transition from Buddhist to Hindu architecture, and mark the beginning of the fusion of the two (see Architecture and Art [Hindu], while in some of the temples we can trace the slow evolution of that style through the centuries, until it culminates in the huge structures that astonish the visitor. To the mystic of religion, too, the city offers a unique opportunity. Almost every religious movement that has affected the South for two thousand years and more has been connected in some way with Kâkshi and has left traces of its influence. One has the feeling that, if its story could be fully unravelled, much would be added to our knowledge of the history of South Indian religion. The epigraphical records are unusually numerous, and much valuable work has been done, especially during the last thirty years. But much remains to be done, and many problems remain unsolved. All that is possible in the following sketch is to give the outline of the story, so far as it has been made out with tolerable certainty, with the proviso that further research may lead to some modification in detail.

3. (1) Early period (to 4th cent. A.D.).—The earliest mention of Kâkshi occurs in Patañjali’s Commentary on the Grammar of Pâini; and Patañjali lived not later than the 2nd cent. a.c. The city then seems to have been thriving, and leads to the inference that the place had already been colonized by the Aryans. The Chinese traveler Huen Tsang, who visited the place c. A.D. 640, states that Tâthâgata [Buddha] in olden days, when living in the world, frequented this country much; he preached the law here and converted men. (Buddhist Records of the Western World, tr. S. Beal, ii. 229.) It is possible that an Aryan migration took place as early as Buddha’s day, but that Buddha himself came so far south is extremely improbable. When, however, Huen Tsiang goes on to say, ‘And therefore Asêkâ-nâjâ built the city Kâkshi,’ it the sense of the context, ‘we may accept the substance of the statement as probable, for the Mahâvasuvas—a Buddhist chronicle composed in Ceylon about the 3rd cent. A.D. (T. W. Rhys Davids, Buddhas India, p. 86.) It was a result of the wars in which the monks of Kâkshi engaged among those to which Asêka sent missionaries. The fact that no trace remains of Buddhist buildings of any kind is not a fatal objection to this view, for many of the temples of Kâkshi seem to have been the work of the Aryan invaders of the land. If such a temple as the Sâravânsa, a temple of the Mahâanandha, was built in the 3rd cent. a.c., it may have been abandoned by the Buddhists, but would have been used by the Hindus. When Buddhism died, its buildings, like many others, would have been used for other purposes.

Regarding the date of the appearance of Jainism in the South nothing is known; but that it had obtained a footing before the end of this period may be taken for granted, since Huen Tsiang’s testimony shows its prevalence in the South. It may be sure that the Tamil epic, the Mânîmâkalâ, belonged to the 2nd cent. A.D. (see Dravidians [South India]), we would have in it an interesting glimpse of Kâkshi during this period, and testimony to the fact that early on those early days the votaries of the Brahmanical religion (doubtless considerably modified by contact with the Animism of the Dravidians) dwelt in a condition of mutual toleration, if not of actual harmony, with Buddhists and Jains; but regarding the date of this work there is considerable doubt, some recent writers putting it as late as the 8th century.

(2) Pallava period (4th to 8th cent.).—During the greater part of the early period Kâkshi belonged to the Chola empire. Before the end of the period a new power had arisen before which the Chola domination waned. The Pallava, of whose origin nothing can be affirmed with certainty, had established themselves in the Andhra country to the north of Kâkshi about the 2nd cent. A.D., and by the middle of the 4th, if not earlier, they had made Kâkshi their capital (see Architecture and Art [Hindu]). In 586 they were the dominant power in the South, though at times, more especially towards the end of this period, they had to defend themselves against the Chalukyas and the Râjasanukâsas of the North- West, and the reviving Chola power on the South. To this period belongs the visit of Huen Tsiang already mentioned. He describes the city, which he calls Kin-chi-pen-lo, as about 30 li (5 miles) round.

The climate is hot, the character of the people courageous. They are deeply attached to the principles of honesty and truth, and highly esteem learning. In respect of their language and written characters, they differ little but little from those of Mid-India. There are some hundred undevadrus and 10,000 priests. They all study the teaching of the Siddha (Changendrapal) school belonging to the Great Vehicle. There are some eighty Deva temples, and many heretics called Nirgranthas (loc. cit.).

Thus at the time of his visit (A.D. 640) Kâkshi was still a stronghold of the Buddhists. Huen Tsiang mentions Dharmapala, a renowned Buddhist teacher who is said to have flourished shortly before the time of his visit (H. Karm, Mianneum of Indian Buddhism, Strassburg, 1880), as a native of Kâkshi. The Jains (Nirgranthas) apparently lived side by side with the Buddhists. Under the head of ‘Deva temples’ he doubtless included the Seven Sanâkâtras of Kâkshi, and possibly the temples of the ammanas, or Mothers, whom the Dravidians worshipped before the advent of the Aryans. Thus several different forms of Hinduism were already strong; but just about this time began a remarkable revival of Hinduism, before which first Buddhism and then Jainism began to wane. Epigraphical evidence shows that the central shrine of the Kailâsanâtha temple was erected by the Pallava king Rajasîhâ (otherwise known as Narasîhavarman I.) about A.D. 670, and the Vaiâkûnta Perumâl temple a few years later by his son Paramesvaravarman II. (Venkayya, The Pallavas, pp. 199 and 302.) This is so similar in style that they may be placed about the same period, and the resemblance to the rock temples of Mânalipuram (the Seven Pagodas) is very striking. Apart from simple excavations, these temples are the work of the Cholas. The names of the central tower, of the Kailâsanâtha temple, for instance, is in the shape of a stdra, and consists of several storeys built up of imitation stdlas.
The gopuranam, or gate-tower (later), is in the form of a chalisa, and from such simple beginnings the evolution of the great gopuranams, which are such a notable feature of the Dravidian style, may be traced back to Prasanta Panji’s ‘Vijayan. Inst. of Ind. and East. Arch.’ i. 176-175, 392-392.

But the zeal of the Pallava kings, which showed itself in the building of these temples, was not the only factor in the triumph of Hinduism over its rivals in South India. The Pallava period, which is now remaining is alike, during the Pallava period, remarkable groups of poets arose, whose songs in praise of the gods did much to win the people over from Buddhism and Jainism. Appar and Tirumalaisamandhar in the 7th cent., and Sundaranar in the 8th or 9th, were the authors of the hymns in praise of Siva known as the Đivādana. The songs of the twelve Alvars, or Vaigēvva saints, who are placed in the 6th and three following centuries, are gathered up in the Nāalisāgrapattandham. How many of these poets actually lived in Kāché is we cannot say with certainty. Poyga Alvār is said to have been born there (though uncertain), and definite traditions connect Tiruījānasamandhar and Tirunāngai Alvār (9th cent.), among others, with the place. Be this as it may, the shrines of Kāché were well known to many of these singers, five Śiva shrines being mentioned in the Parthasarathy Kēśava shrines in the Nāalisāgrapattandham. These all remain to the present day, though only in cases where the local evidence is confirmed by the archeological can we be sure that the actual buildings which now exist can be traced so far back (K. V. Subrahmanya Aiyar, in Madras Chr. Coll, Mag., new ser. xiii. [1913] 264-267). Before the end of the Pallava period still another force took effect on the temple buildings. The great Śakara is said to have visited Kāché; and, if the usually accepted dates of his life are correct, the visit must have taken place early in the 9th century (66). Thus alongside of the Śaiva Siddhānta of the Đivādana poets, and the Vaigēvvaism of the Alvars, the Advaita (q.v.) system came to be taught.

An image of Śakara stands in the temple of Kāché’s saam for the wife of Śiva), and it is said that the goddess cannot sit beyond the temple precincts without getting permission from Śakara to attend to her business. The temple also boasts of a victory over the goddess, the local tradition being that in Śakara’s day Kāché was a ferocious goddess who could be satisfied with nothing less than human sacrifices, and that Śakara brought much pressure to bear on her as to lead her to abandon her evil ways. The latter part of the Śakara story is a marvelous episode which is no less touching. The temple of Śakara is surrounded by a cluster of the temples of Kāché, and may be of no more historic interest, but it may also interest. Yet it may be an attempt to depict the victory—only partial—of the philosophic idea of Śakara over the worship already mentioned, in which evil goddesses were sacrifices. As Tiruśiva being called to Śrīnāgara, (Saiglapalachāriyar, Vaivāhikē Reformer of India, pp. 97-135). The Chola king of the period was a king who was a kingly king (K. V. Subrahmanya Aiyar, Life of Rāmaṇāja, the poet).

According to local tradition, Śakara conducted a vigorous controversy with the Jains. The fact that nothing is said of the Buddhism in this connection may be an indication that, so far as Kāché was concerned, their day was past. In the 8th and 9th centuries Jainism still flourished, and two of its protagonists, Samantaśaadra and Akalaksa, are associated with Kāché. On the whole, however, Hinduism was gaining ground. Of definite persecution of Buddhism in the temple there is little decisive proof, but the combination of royal favour with the efforts of poets and sages led to the disappearance of the followers of these religions, making their gradual absorption into the Hindu community.

(3) Chola period (9th to 11th cent.).—During this period Kāché passed many times from hand to hand, but throughout the greater part of it the Chola kings were in close touch with the temple. When the capital moved to Thanjavur, the temple was regarded as their principal seat of worship. With this Kāché passed from Hindu to Muhammadan rule (Seewell, loc. cit.; Subrahmanya Aiyar, Madras Chr. Coll, Mag., new ser. xiii. [1814] ; for the Vijayanagara rule in general see Seewell, A Forgotten Empire).

(4) Vijayanagar period (15th to 17th cent.).—After a time of confusion Kāché became a part of the great Vijayanagara empire, which was the capital of a kingdom, it was still regarded as the capital of the province of Tōpanimandalam, and was the seat of a viceroy. Its sanctuaries were recognized by the Vijayanagara kings. Some of them frequented it, and at least one of them had his coronation ceremony performed there. It was in this period that the great temples attained their present huge dimensions, older buildings being added to and adorned, and in some cases surrounded by great courtyards with high walls and lofty gopuranams. The work of many of the kings can be definitely traced through the inscriptions on the temple. We learn that the temples were enriched with many royal gifts. Although the Vijayanagara empire received a severe shock in A.D. 1565, it lingered on as a small kingdom till 1646, when Chandragiri, capital, Chandragiri, was captured by the king of Golkonda. With this Kāché passed from Hindu to Muhammadan rule (Seewell, loc. cit.; Subrahmanya Aiyar, Madras Chr. Coll, Mag., new ser. xiii. [1814] ; for the Vijayanagara rule in general see Seewell, A Forgotten Empire).

(5) Modern period (middle of 17th cent. to the
present day).—During the first century of this period the Dravidian Hindus were in occupation of the place. This was not for their first appearance for in A.D. 1500 Kāñči was captured and plundered by Malik Kaflūr, a general of ‘Alā-ud-dīna of Delhi. A similar disaster befell it in 1481, when it was sacked by Mūḥammād Shāh of Bījāpur.

According to Fīrūzshāh, this conqueror was invited to the attack by what he had heard of the wealth of one of the temples and indeed it appears that the temple was so richly endowed with precious stones (Sewell, A Forgotten Empire, p. 101). Another conqueror, however, whose name is lost in history, invaded the city and the temples with the ground, and overawed all symbols of infidelity, and such a quantity of jewels, valuable pearls, slaves and lovely maidens and all kinds of rarities fell into their hands that they were beyond computation (quoted by Subrahmanyā Iyār, ibid.).

This statement must be regarded as an exaggeration. That great booty was carried off is probable, but, though some temples may have been plundered, others escaped with little damage, and the wealth of the place continued for many years. Such occupation was temporary, but from 1616 to 1731, when it was captured by Bidār, it seems to have been almost continuously under Muhammadan rule, first as part of the kingdom of Golconda, then conquered by generals of Aurangzib, and finally included in the dominions of the Mughal of the Deccan. During the Mysore wars it changed hands many times, the great temples being used as fortresses. Much damage was done, especially by Haidar Ali, who occupied the place in 1768 and again in 1790. In his time the terror of the Hindus was so great that many of the idols were removed to Tanjore and other places, and not till 1799 was confidence sufficiently restored to allow of the return of the deities. The temple had been granted by the Nawab to the East India Company in 1759, and, apart from Haidar’s occupation, it has remained British territory since that date. During the Muhammadan occupation there was much friction between Muhammadans and Hindus.

A number of mosques were erected, and one of the largest was originally a Hindu maṇḍapa (‘pillared hall’), the pillars of which remain, though many of the figures that may have been carved on them have been removed. This mosque bears the date A.H. 1106 (= A.D. 1700), and is said to have been the work of Ramānarkur Ali Khan, who came to take vengeance on the temple and to destroy the person of a Muhammadan who had dared to wash his hands in a sacred tank. The same general credit is given to the completion of the largest of the mosques, which commemorates a Muhammadan sage, Shāh ‘Aḥmad Anīlārāh, regarding whom and his contests with the representatives of Kānṣāli and other deities many wonderful stories are related (for this period see Crole, Manual of the Chingleput District, pp. 141-200).

4. Present condition.—Kāñči now measures nearly 4 miles from N.W. to S.E., with a maximum breadth of about a mile and a half. According to the census of 1811, the population was 53,884. Of these 17,468 were returned as Muhammadans, and 189 as Christians. Only a few families of Jains are left, and the only Jain temple is that already referred to as standing outside the city. A small Sikh monastery where the granth is worshipped forms a raling place for Sikhs pilgrims from the North, who, though not allowed by their creed to worship idols, have a remarkable fondness for visiting Hindu shrines. But, as has been mentioned, or sung gaining, a foothold, the city remains essentially Hindu. The visitor is astonished at the number and size of the temples. He finds, too, that almost everything that comes under the title ‘Hinduism’ is represented in the place.

The old Dravidian worship has survived the impact of all the other forces that have been at work, and the annamams are still worshipped, sometimes by themselves, sometimes in connexion with the Hindu pantheon. For instance, an obscure goddess called ‘Ełlgōli anamman’ is regarded as the mother of Pārvatī, and the latter repairs to her abode every year when her marriage is to be celebrated. In one of the smaller temples, where, among others, the five Pāṇḍavas are worshipped, the principal deity is the Kamakanta, who is identified with Mari, the Dravidian goddess of small-pox. The majority of the gods, however, are either the great gods of the pantheon under special aspects or deities of the city.

The principal divisions of the city are known as Siva Kāñči and Viṣṇu Kāñči. The nomenclature is not strictly accurate, for a number of ancient and important Viṣṇu-vaṁṣa shrines are in Siva Kāñči. The greater temples of this section, however, are connected with the worship of Siva. In the largest of all, Siva is worshipped as Ekāmrānath. Begun in the Pallava times, it was celebrated in the Dīrghun, and associated with the temple is a sanctuary which has been added to by succeeding dynasties till it now stands as one of the largest in India. Its great tower is 188 ft. in height, and the area enclosed within its outer wall is about 25 acres. Near the east end of the temple is the great temple of which Pārvatī is said to have done penance for putting her hands over Siva’s eyes. The principal object of worship is the purīta (‘earth’) Ṛṣṭipati. Among the other objects now worshipped are the sixty-three Saiva saints. During the last twenty years over 210,000 has been spent on the renovation of the temple by a few wealthy members of the Nayakkoṭal Čhēṭti caste. Second in size among the Saiva temples comes that of Kānṣāli, already mentioned more than once. Siva Kāñči contains seven tanks of special sanctity, each being specially sacred on one day of the week. The largest is the Sarvārtham, in which all the Indian rivers are believed to have gathered to witness the penance of Pārvatī. The temples which are shown by architectural evidence to belong to the Pallava period are all in Siva Kāñči, and all except one are Saiva temples.

In Viṣṇu Kāñči the greatest temple is that of Viṣṇu under the name of Varadarāja (i.e., the kindly giver of boons). It contains in its internal chambers the statues of the Chola and Vijayanagar periods (Sewell, Antiquities, where it is called the Arulal Perumal temple). Although it cannot be distinctly traced further back, it was already famous when Rāmānuja attached himself to it early in the 11th century. It measures about 190 ft. in length and 500 in breadth, being unsurpassed in size in the whole city except by the Ekāmrānath Temple. Its hall of 100 pillars is an excellent specimen of the carving of the Vijayanagar period. Although the temple is said to have been plundered by Haidar, it still has great wealth. It is said that a Brahman devotee vowed that he would not eat on any day till he had collected in all Rs.24,000, with which valuable ornaments were purchased. Rāmānuja and other great Śaiva (or Vaṁṣa, or Vaṁśa teachers), and several of the Alvars, are worshipped within the precincts. The comprehensive nature of Hinduism is illustrated by the fact that at one end of the temple the lofty philosophy of Rāmānuja is taught in a Sanskrit college, while nearer the outer end the Sastras are presented to a Saiva college. The great festival of this temple is by far the most important of all that are connected with the city. It takes place in the month of Vaiḍākī (May–June), and lasts nominally for ten days, but, as often happens, the great day, and seldom occupies less than three, the
festival usually continues at least twelve days. Except on the seventh day, when the idol is drawn in a huge chariot which takes about a thousand people to pull, the image, adorned with the temple peacock on morning and evening on different vehicles. The idol is carried along the narrow main street of Vipsa Kanchi, the broad street of Siva Kanchi (said to date from Chola times); and, after going round that portion of the city, it returns, the temple being distant about six miles. According to the local legends, Vipsa and Siva are brothers-in-law, and the Vaigaiva deity on the sixth day of the festival rests for a time in a mandapam in front of Siva's great temple. A strange relic of the Muhammadan domination is found in the fact that, when the daily procession reaches a mandapam near the tomb of Shah Amid Anilah, a representative of that stage receives tribute in the shape of two small cakes of different kinds, one in the morning, and the other in the evening. On the third day of the festival, when the image is carried on the garuda, or mythological kite, which is Vipsa's special vehicle, it has to submit to the doubtful compliment of receiving a garland from the representatives of a small shrine belonging to the Varaha. During these days large crowds, including many of the pilgrims, assemble from far and near, and men of wealth vie with one another in meeting the expense of the fireworks and other means of popular enjoyment. At times, and especially during the festival, the authorities have to be on their guard to prevent rioting between the two sects of the Vaigaivas, the Teikakais and the Vayakalais. The old feud between Hindus and Mahommedans is at an end, and Satish and Vayakai no longer manifest the rivalry of an earlier day. The controversy is now between these two sects into which Ramanuja's followers are divided, and, while the general majority of the sectarians know little or nothing of the points of difference, feeling always runs high, and law-suits dealing with the position of the two sects in connexion with the temple worship go up from court to court, occasionally even reaching the Privy Council. While the festival of Varadaraja far surpasses all others, there are probably not many days in the year when some temple or other is not on Féla; and quite apart from festivals a stream of pilgrims from the most distant parts of India pours unstoppably through the place. For their entertainment many choutories ('rest-houses') have been built and endowed.

KANCHULIYAS.—A class of Indian Sákkas (q.v.). The name is derived from the Skr. kañchula, 'a bodice.' They are found in Southern India. [Madras Manual of Administration, I, Madura, 1886, where they are called Kâńchuliyas (from kâñjula, the Tamil corruption of kañchula), and have also been noted in Bombay. They are adherents of the most extreme left-handed Sáka doctrines, their chief cult being cinnamal in the pernicious intercourse of the sexes. This ceremony is called ghatu-kañchula, 'jar and bodice.' The number of male and female celebrants must be equal. A jar is placed in the centre of the place of worship, into which each woman throws her bodice, leaving the upper part of her body exposed. An orgy of eating and drinking is followed by each man taking at random a bodice from the jar, perving with its owner, however near in kin to him she may be, for the rest of the night.

KANDH, KHOND (the derivation of the name is uncertain; G. Oppert, Original Inhabitants of Bharatavarga, 1853, p. 144), connects their title Koi, Ku, with ko, ku, 'a mountain'; Risley, TC 306, connects it with Khonds, 'a sword,' said to be the distinguishing mark of the Khonds. According to the Census found in Bengal and Madras, the bulk of those formerly residing in the Central Provinces having passed into Bengal on the transfer to that province of the States of Kálahandi and Patna and the Sambalpur District. According to the Census of 1911, they number 673,346, of whom 335,137 are found in Madras, 332,589 in Bihar and Orissa, and the remainder in Bengal, the Central Provinces and Berar, and Assam. The tribe has for a long time attracted the attention of anthropologists owing to their custom of human sacrifice, known as Merik. But, owing to their isolation, the information regarding them is still incomplete.

1 Much has been written about them: but from reports received it seems clear that observers have not yet been so well placed as to be too ready to attribute to the whole of the tribe customs which are only locally observed. Many people are split up, as they are, by hill and jungle intermixture, so that the Khonds cannot easily communicate with one another naturally develop considerable diversity in their ways (Madras Census Report, 1911, p. 161).

1. The tribe in Bengal.—The earliest and most generally accepted account of their beliefs is that of S. C. MacPherson (Memorials of Service in India, ch. vi. p. 84 f.).
KANDHE, KHOND

He represented them as believing in 'One Supreme Being, self-existing, the source of good, and Creator of the universe, of the ancient gods, of the sun and moon, of the waters and the earth, and of all the various things in heaven and earth and in the seas' (p. 293). He expresses wonder that such a pantheon as Macpherson founded on a collection of savages (p. 199), would exist among such ignorant people, 'and in the course of my long inquiries and researches, I found nothing in the hill districts resembling the array of deities held in veneration by them, and the sources of all evil.' Finding her wanting in worldly compliance, he determines to show her, without embarrassment, the 'true' or, to be sure, the 'pantheon,' of the Khonda people. He describes the Khonda as a 'most irreligious people' (p. 293). They have no idols more attached to the wood of log, sometimes rudely fashioned after the manner of some animal head, and usually used on the occasion of the immolation of a human victim; and he describes the sacrifice of a priest, corresponding to the elaborate system of idolatory provided for this semi-barbarous people (p. 293). Campbell, it is true, was, for official reasons, hostile to Macpherson. But he was too honest to trust his general conclusion that Macpherson, who knew little of the tribe, had, in a sense, fallen under any native sublimations. The whole story illustrates the danger of keeping with their own social organization, and in his account of the sacrifice of a priest, he himself he who has access to such a people. The Khondas recognize three principal gods—Dharna Pennu, Siru Pennu, and Dundu. Siru Pennu is the god of rain, while Dundu is the god of fire. The third class of inferior deities is again divided into two parts, the one being the period of 'chance' or 'chance', and the other being the period of 'chance' or 'chance', the two of which are maintained in the Khondas.}

2. Human sacrifice.—The chief interest in the religion of the Khondas rests in their system of human sacrifice, which has now, under the pressure of the British, been discontinued. A full account of these rites, based on the narratives already quoted—Macpherson, Campbell, Dalton, Jesuit, is given by J. G. Frazer in his *GFP*, vol. 1 (London, 1912) p. 245 ff. As Frazer's account of the Khondas is generally accepted, a bare summary is required. The *Merikas* (Oriya *meriki, from Kandi *meri, meri, meri, a human victim; * see Men, xi. [1911] 39) were sacrificed to Siru Pennu, the earth-goddess, to ensure good crops and immunity from disease and accidents. It was necessary that they should be bought for a price, and they were procured
through the agency of the menial Pān tribe from the plains of Bengal. The victim was well treated before the sacrifice, which was preceded by several days of feasting and dancing. The newlyweds were smeared with oil, butter, and turmeric. There was a struggle to secure relics of his person while he was tied to the sacrificial post. This post was often in the form of a peacock or elephant. The only supply of the body was preserved in the Madras Museum (E. Thurston, *Tastes and Tribes*, iii. 371, with photograph, p. 377). Before sacrificing the victim, he was sometimes led in procession, and he was finally killed by means of pins, knives, or clubs. His flesh was divided among the participants in the rite, who buried it in their fields. Frazer disputes the theory that the contemporaneous accounts of the rite, that the victims were offered to propitiate the earth-goddess. The custom, he thinks, cannot be explained merely as a propitiatory sacrifice. Part of the flesh was certainly offered to the goddess; but the rest was buried in the fields, or the ashes were scattered over them; some was laid in the form of paste in the granaries, or mixed with the new corn.

'These latter customs imply that to the body of the Merah the power of growing was imputed. Power of growing crops, quite independent of the instinct to eat which it might have as an offering to secure the good-will of the deity. In other words, the flesh and ashes of the victim were believed to imbibe the magical or physical power of fertility and growth. The body of the Merah was sacred to the blood and tears of the Merah, his blood causing the redness of the turnip and his tears producing rain. For it can hardly be denied that originally at least the tears were supposed to bring down the rains, not merely to propitiate it. Similarly the flesh of the Merah was believed to give rise to new life, for the flesh of the Merah was no doubt a rain-cult. Again, magical power as an attribute, the Merah appears in the sovereign virtue believed to reside in anything that came from his person, as his hair or spittle. The sacrifice of such power to the Merah indicates that the race had more respect for its gods than a mere man could be expected to propitiate a deity. Once more, the extremes reinforce each other, and the primitive tendency to regard a valued gift as a sacrifice to a divinity is thus suggested .... In short, the Merah seems to have been regarded as divine. As such, he may originally have represented the Earth Goddess or, perhaps, a deity of vegetation; though in later times he came to be regarded rather as a victim offered to a deity than as himself an immortal god' (GP, v. vol. i. p. 320).

3. Beliefs in the Central Provinces.—The following account refers to the tribe before its migration to Bengal. The belief in a future state is indicated by the death customs. A rupee or copper coin is tied in the shroud, so that the deceased may not go penniless to the other world. Sometimes his clothing and arrows are buried with him. On the tenth day the soul is brought back to his family. Outside the village, where two roads meet, rice is offered to a cock, and if it eats it is a sign that the soul has come. The soul is then asked to ride on a bow-stick covered with cloth, and this is brought to the house and placed in a corner with those of other relatives. The souls are fed annually with rice at the harvest and Dusserah festival. In Sambalpur a ball of powdered rice is placed under a tree with a lighted lamp near it, and the first insect that settles on the ball is supposed to be the soul, and it is brought back to the house and reverenced. The souls of infants who die before the umbilical cord has dropped off are not brought back, because they are considered scarcely to have come into existence. One cause of female infertility is said to be the death of the soul of the girl child who would not be born again. The souls of women who die during pregnancy, or after a miscarriage, or during the monthly period of impurity, are not brought back, but unless they are held to be malignant spirits (Etymological Survey Central Provinces, p. vii. [1911] p. 55).

'The Semi-jātrā, or frog festival, is held in Noor...
fasted all day, are obliged to eat; drinking and
dancing follow for two days, during which time
the manure is not removed from the shed. On
the third day a lump of manure is brought out
by each owner and thrown in a heap, over which
the procession passes four times. Behind this
there are taken before a basket containing a
blood-sucker (lizard), a bit of tiger's skin, a
peacock's feather, earth from an sat-hill, rice mixed
with paddy, and blood. Witchcraft is com-
mon, and various forms of ordeal are used,
such as holding the hand of the suspected
person in boiling water; if the hand is scalded,
the accused is condemned and has to pay a fine
to the tribe (ib. lll. 408 f.). From a still more recent
account it appears that the Hindu belief in karma
and reincarnation is not found, except in a vague
way, among those who have come in contact with
the people of the plains. They certainly believe
in the survival of the spirit after death, and in
its possible temporary transference during life, it
being commonly supposed that the spirit of a man
killed by a tiger takes the animal in its search
for other victims. But it is very difficult to dis-
tinguish their beliefs from those of the Hinduized
peasantry in their neighbourhood. Their gods are
Bra Penu, who with his wife Piti (probably the
Santhi) and the caste head, is not only the creator of
tigers, who controls a host of minor gods; Dondo
Penu, god of hunting, who lives in sacred trees
which no one dares to cut; Lohna Penu, god of
iron, who guides the arrows of his votaries
against the enemy and averts their counter-shafts;
Odu Penu, god of the outside, who is the village
warden, in which duty he is assisted by Dandere
Penu, the door-keeper, who watches the back
of the village, Dami Penu, who watches the inside
from beneath a heap of stones, beside which a
rotten egg is buried, Teki Penu, god of vessels,
who guards the house goods, and Goheen Penu,
god of the stable, who protects the animals from
tigers. Besides these are Mardo and Rugo, deities
of smallpox and cholera; another god whose ac-
activity is chiefly shown by his demanding tobacco;
and a god of proverbs and a hot spring at which
worship is offered. If there is no actual ancestor-
worship, tales are told of hero and giant fore-
 fathers (Maduras Census Report, 1911, p. 62 ff.).

KANDY.—Kandy is a modern town in
Ceylon, beautifully situated on the border of a lake
in a plain about 1713 ft. above sea level, and about
7 miles near NW. of Colombo. The moun-
tains, 3000 to 4000 ft. higher, rise around it; and
in the Sinhalese time the town was difficult to
approach, being surrounded by thick jungle. It
was the residence of the kings of Ceylon from
1632 to 1798. During this period the kingdom of
Ceylon had reached the lowest depth of disorder
and decay. Half its territory was lost; and the
half still remaining was harassed by frequent civil
wars between rival dynasties to the throne; and
when one or other of these claimants succeeded
in gaining the upper hand over his rivals, there
were recurring struggles against outside enemies—
Tamil, Portuguese, Dutch, and, finally, English.
These rival claimants to the throne were not
Sinhalese but South Indians by blood, and by re-
ligion, though nominally Buddhist, were as heart
Hindus. They built four devulas, Hindu temples,
in the town.

Kandy unfortunately gives no description of
Kandy. But we have a good one by John Pybus,
who was there in 1762. It is preserved in "Account
of Mr. Pybus's Mission to the King of Kandy,"
reprinted from the Madras Government records by the
Government printer in Ceylon in 1882. We read there
(p. 35) that the town then consisted of two
main streets (the one running north and south
being about a mile long) and covered quite 300
yards. Only a few of the houses were tiled. The streets
were not flat; but about 8 o'clock a bell was rung
along them, and after that no one was allowed
alone unless as watcher of the gate (ib. p. 35).
The Palace was a rambling pile to the south of
these streets with a large garden in front of it. This
is confirmed by J. Forbes,2 but in his time the lake
which Pybus does not mention was con-
structed 'by the late king' Raja Sinha in 1787.
J. E. Tennent, writing about 30 years later,3
describes the modern European town, and the
wonderful road to it up the Kadugannawa Pass.
It is now a prosperous little place of about 25,000
inhabitants, with a busy railway station, and many
villas on the slopes of the surrounding hills.

The English name, Kandy, is a corruption of
the old name, not of the town, but of the county or
province in which it was situated. This was
Kanda-uda ("Up in the Hills"). The Sinhalese
name of the town was Senkada-gala-nuwara.

Besides the four Hindu temples there are two
small viharas, or residences for members of the
Buddhist Order, named respectively Asgiriya
and Malwattie Vihara. No one, according to a regu-
lation issued by the vice-chancellor of the old Vinaya
(Rules of the Order), by the Sinhalese court,
can be received into the Order except at a chapter
held at one or other of these viharas.2 There is
also the well-known Daładā Mahāvīra, a pretty
little building containing the supposed tooth of the
Buddha—really not a human tooth at all, but
possibly the tooth of some pre-historic animal.
The history of this supposed relic is long and
complicated, and has been the subject of various
writings. In the 18th cent. Dhammad-kitti wrote a
Pali poem about it based on an older Sinhalese
work in prose.4 According to the tradition pre-
served in this poem, the tooth was brought to
Ceylon in the 4th cent. of our era, and had re-
mained there up to the time when the poem,
Dīṭhā Vāmas, was written. According to Portu-
guese accounts quoted by Tennent (loc. cit.),
the Portuguese captured the tooth, ground it to
powder, and threw the powder into the harbour
at Gona. The Sinhalese say that the tooth thus
destroyed was a Hindu relic seized by the Portu-
guese in the Tamil country at Jaffna, and that
the Buddhist relic now in Kandy is identical with
the one whose history was written by Dhammad-kitti.

3 See Forbes, op. cit. l. 292.
4 Edited by the present writer in Roman characters in JPTS, 1894.
Kandy was taken by the English in 1815, and the king of Kandy was deported to Vellore in S. India, where he subsequently died.

**KANHERI—KANJAR**

(Skr. कण्यपुरी, ‘hill of Kṛṣṇa’).

—one of the most important of the Buddhist cave temples in the island of Salsette, about 16 miles N. of Bombay; lat. 19° 19' N.; long. 72° 59' E.

The site, lovely, picturesque, and close to the great visting routes of the W. coast, combines the three leading characteristics of the chief groups of W. India temples. *But Kanheri is the only rock-cut monastery in W. India that has the feeling of having been, and of being ready again to be, a pleasant and popular dwelling-place. The rows of cells, water-cisterns, dining-halls, lecture-halls, and temples joined by worn flights of rock-cut steps, and the crowded burial gallery show what a huge brotherhood must have once lived in Kanheri.* (B.G xiv. [1882] 123). The caves were excavated at various periods, the great Chaitya cave bearing an inscription of Yajña Śrī Gautampitita Suryasena, the 4th king of the Andhra dynasty (A.D. 176-202) (V. A. Smith, *Early Hist.*, Oxford, 1914, p. 211). Not far off is the Darbār Cave, which is not a vihāra in the ordinary sense of the term, though it has cells, but a Dharānīśvara or place of assembly, and is the only cave now known that enables us to realize the arrangements of the great hall erected by Ajāta Śatru in front of the Sattapanni cave at Rājagṛha, to accommodate the first conversion held immediately after the death of Buddha (Fergusson-Burgess, *The Cave Temples of India*, London, 1880, p. 333).

**W. CROOKE.**

**KANISKA.**—Kaniska was an Indo-Scythian king of N. India and Afghanistan, who plays the part of a second Asoka in the traditions of the Buddhist school of N. India, Tibet, China, and Mongolia, especially as the convener of a council held in Kashmir, or, according to certain authorities, at Jalandhar (see Councils [Buddhist]). His name is sometimes spelt Kaniska in inscriptions on coins in Greek script as *Kanaši*, or in the genitive *Kanikōnum*, which some scholars read as *Kanisaki* and *Kanishka* respectively. Kashmir tradition gives the variant Kanisak, which becomes Kanjīka in Chinese.

He was a member of the Kuskāni (Kusāna, Gūsana, or, according to von Holsteiin, Koṣa) section of the great Yuechi nation of Central Asian nomads, and is mentioned in numerous Indian inscriptions bearing dates ranging from 3 to 41. Prolonged controversy has ranged round the interpretation of these dates, and general agreement has not yet been attained. In the opinion of the present writer, it is certain that Kanisaka was the immediate successor of Kāpkīṣhā II. (Wims, etc., of coins and inscriptions, Yen-kao-chhi, etc., of Chinese), and almost certain that his accession (overthrowing not being mentioned) coincides with A. D. 78, the epoch of the Saka era. That era appears to have been established by Kanisaka.

Kanisaka, who is often described as king of Gandhāra, had his capital at Puruṣapura, now the city of Peshawar, a powerful monarch, whose influence, as Huien Tsang (Yuan Chwang) testifies, extended to distant regions, even into the basin of the Tārān beyond the Pānār. He held all the countries now included in the kingdoms of Afghanistan, and was the lord paramount of the whole of N.W. India. His arms are said to have penetrated to Pātaliputra, and his dominions included Sind. His viceroy, called ‘satrapa’ after the Persian fashion, ruled W. India from Nāsk and Ujjain. He warred against the Parthians, and in his later years seems to have made an expedition from China the regions now known as Chinese Turkestan. It is said that he was murdered by discontented officers while he was engaged in a campaign. Vāsakā and Kuśika (Huśika), probably his sons, appear to have ruled the Indian provinces on his behalf, while he was absent on his distant wars. Vāsakā apparently preceeded him. Huśika certainly succeeded him in the rule of the entire empire, probably about A.D. 123. The father of Kanisaka was Vajraśaka (Vajrāsaka), presumably a near relation of Kadphises II.

During the long reign of Kanisaka his Indian subjects divided their allegiance among the three great indigenous religions—Buddhism in its various forms, Brahmanical Hinduism, and Jainism. Kadphises II. had favoured the Saiva form of Hinduism, but there is no evidence that Kanisaka took any interest in the doctrines of the Brahmans. The occurrence of numerous Persian deities on his coinage suggests that in early life he may have been a Zoroastrian, and that many of his subjects must have been adherents of the creed of Zoroaster. In his life the king became an active patron of Buddhism. He placed the image of Buddha on his coins, summoned a council of Buddhist theologians to prepare commentaries on the scriptures, and erected magnificent sacred buildings, notably the lofty stūpa of Peshawar, the foundations of which have recently been excavated. The explorers found a relic casket engraved with the names of Kanisaka and his Greek superintendent, Agesilaus, and adorned with images of the king. An inscribed portrait statue of him, unfortunately headless, has been discovered near Mathura. Tradition associates Kanisaka with Advaghaśa (q.v.), who was a pupil of Pārvā, by whom the council was summoned, according to some authorities. The president is said to have been Vasuki, Advaghaśa being content with the vice-presidency. The date of the council may be stated as ±A.D. 100, but, of course, it depends on the view taken of the chronology of the reign.

The powerful patronage doubtlessly promoted the cause of Buddhism in both India and Chinese Turkestan.

**LITERATURE.**—V. A. Smith, *The Early History of India*, Oxford, 1914, which gives abundant references. V. A. SMITH.

**KANJAR.**—One of the nomadic, gypsy-like tribes of N. India. At the Census of 1911 they numbered 22,932.

They are found in the United Provinces of Agra and Oudh and the Panjāb, with smaller groups in other parts of N. India. They wander about in gangs, supporting themselves by the usual gypsy industries, but more especially by theft and high-way robbery. According to J. C. Nesfield (*Culcuta Repository*, xxxvii. [1882] 388 ff.), they possess no idols, temples, or priesthood. They are in constant dread of evil spirits, the souls of the malignant dead. To these they attribute all deaths, except those obviously due to old age. Hence they bury the dead in deep graves to prevent the ghost from ‘walking’; and they believe that such spirits are under the control of an exorcist (nāgavāja), who by means of shamanistic rites is supposed to be able to transport a goblin into the body of some living person, and make that person his mouthpiece for declaring its will. Their principal deity is a man-god, Mān, believed to be one of the ancient worthies of the tribe. He is worshipped chiefly in the rainy season, when the tribe is less migratory.
than at other times. No altar is erected, no image is worshipped; but his votaries collect under a tree, where they sacrifice a pig, goat, sheep, or fowl, and make an offering of roasted flesh and spiritual liquor. Formerly, it is said, they used to sacrifice a dog, but this has made it impossible by draughts of fermented palm-juice. At the feast which follows most of the worshippers get drunk, and occasionally one of them declares himself to be possessed by the tribal god, and then dances round the tree, singing songs commemorating the wisdom and valor of Māna. Mari, the goddess of death or epide- my, known also as the 'Queen goddess' (Mahārāṇī Devi), is supreme, and seems to be worshipped as the animating and sustaining force of nature. Parbhā or Parbhā, goddess of light, controls health, and more particularly the welfare of cattle. With her is worshipped Bhuyān or Bhavāṇi, the earth-god.

In other parts of the United Provinces they are specially devoted to the worship of deceased ancestors, who are regarded as more kindly than among other infidels, and are satisfied if at marriages and other festive occasions platters of food are laid on their graves. The chief deified worthies are Dāmīnī Devī, or Mānī, and Pahlīvān, or the wrestler. To their graves they make pilgrimage, make a pig and pour spirits on the ground. The offering of meat is eaten in secrecy and silence by the males of the tribe, no woman being allowed to be present or to share in the meal. When they have become more elaborate they worship Vindhyavāsinī Devī, the guardian goddess of the Vindhyahills, and the Pāshaṅ Bhīrā (see PACHPIRYA) with the sacrifice of a cock. They also revere many of the local gods of the villages through whom they want, and one clan in particular is specially devoted to the cult of Nānak, the guru of the Sikhs, to whom they make a special prayer: 'Praise be to thee, who hast preserved us in safety for a year! We hope for the same favour in the future!'

They are devoutly devoted to mononology, and a special medicine-man, known as the wise one (ṣyānā), is appointed to propitiate those spirits which are believed to be responsible for the evils which beset the tribe. When a person is attacked by some disease which indicates spirit possession, the ṣyānā makes an offering of treacle, butter, clove, imence, and red lead to the tribal Devī, by throwing these through the four sides of the fire. The Devī enters the ṣyānā who names the evil spirit which is afflicting the patient. He then places a cup of spirits on the sick man's head, and waves it round him. This causes the spirit to enter the cup, which the ṣyānā drinks, thus taking upon himself the dangerous influence which has caused the disease.

In more serious cases an offering is placed on the spot where four roads meet (cf. Westernarz, Mf. ii. 226, n. 2). The friend of the sick man sings and beats a brass tray over his head to scare the evil spirit, which is believed to enter the offering and thence be transferred to any passer-by who may accidentally touch it. The ṣyānā, or ghost of a woman dying in a state of impurity, is much dreaded. The ghosts of young children take the form of maśān, the evil spirit which haunts graveyards. Any one dying by sleight of some other abnormal way becomes an ātāt, i.e. one for whom there is none to make the water oblation which causes the repose of the soul. The tribal beliefs are thus a combination of the personal worship of the tribesman and of Hindoo beliefs and usage. There are some indications of totemism, but this is closely connected with tree-worship, the tamarind being regarded as the special abode of the gods, and a kind of root grass and the leaves of the mango being fixed upon the marriage shed.

KANPHATA.—See YOGIS.

KANT.—1. Life and principal works. Immanuel Kant was born on 22nd April 1724 at Königsberg, in the province of Eastern Prussia. His father was a leather-worker in poor circumstances. Kant believed that his grandfather was a Scotch immigrant, and that the original form of the name had been Cant, the initial having been changed to avoid the pronunciation (Tsani); but there seems to be no documentary proof of this. He entered the University of Königsberg in 1740, registering himself as a student of theology; but the subjects of the preparatory ('philosophical') course, especially natural science and philosophy, soon claimed his interest. After completing his course he acted as a private tutor in several families in the neighbourhood. In 1755 he took his degree with honours, and was satisfied with private study and writing books, one year was like another. He never travelled beyond the borders of his native province; he never married; and he reduced the details of life to a clock-work regularity. Towards the close of his working days he was officially reprimanded for the breadth of his theological views, but he made his peace with the government. In personal character he was simple and reserved, generous and pious, and the reputation that ultimately came to him left him quite unspoiled. He ceased lecturing in 1786, and his increasing weakness of body and mind ended with his death on 12th Feb. 1804.

The development of Kant's thought is a very complex subject. Taken broadly, it consisted of two great periods, the pre-critical and the critical, with an interval between them of about ten years, when he was feeling his way to the position that was to prove so epoch-making. In the pre-critical period itself we can trace shorter stages. His doctrine of the sensibility or the 'pure' intuition of space, time, and causality, which may be added to the Thesaurus of Gottes Herren, erläutert durch Trümmer der Metaphysik (do. 1766), in his inaugural lecture as professor, De mundi sensibilis et intelligib. formulis (Göttingen, 1784), and Versuch den Begriff der negativen Griechen in die Weltanschauung eines deutschen Gelehrten (Berlin, 1785), to which he is indebted for the critical solution, and gave the first instalment of its exposition in the Versuch den Begriff der reinen Vernunft (Riga, 1781; 2nd ed., with important changes, do. 1787). Later, in his Gesammelte Werke (Adickes, Berlin, 1889, also in tr. of Max Müller, 1881). The great works of the critical period are named below; to them
may be added *Prolegomena zu einer jeden künftigen Metaphysik die als Wissenschaft wird auftreten können*, Grundlegung zur Metaphysik der Sitten (d. i. 1773), and *Metaphysik der Sitten* (Königsberg, 1780-97), dealing with law and the virtues. His interest in the problems and principles of natural science can be traced all through his life, as, e. g., in his early work, *Allgemeine Naturgeschichte und Theorie des Himmels* (Königsberg, 1755), and *Metaphysische Anfangsgründe der Naturwissenschaft* (Köln, 1786).

2. Kant in the history of philosophy.

(a) *His direct relation to Leibniz*.—Kantianism is the characteristically German philosophy just as the philosophy of France is to this day more or less determined by Cartesianism, and English philosophy is essentially characterized by the thought of Bacon, Locke, Berkeley, and Hume. The Germans lagged behind the other European peoples in taking a place in the movement of modern philosophy, but at length they secured in Leibniz (q. v.) a thinker who combined the new conceptions of modern philosophy in one grand system, from which, again, in virtue of a profound transformation, the Kantian philosophy sprang the philosophy of Kant. The Kaatian teaching is certainly a radical metamorphosis of the Leibnizian system as far as regards the method by which *a priori* knowledge is discovered, established, and delimited, and yet it is at the same time an essentially unchanged continuation of Leibniz's views regarding the nature and meaning of reality. Even as regards method, indeed, Kant's advance upon his predecessor must not be exaggerated. The system of Leibniz belongs to the rationalistic, Platonic type of speculative philosophy, or, in other words, it is an *a priori* doctrine of ideas, and this holds good also of the system of Kant.

The only real difference is that in the latter the *a priori* forms of knowledge are deduced, and applied, and have their limits assigned, in a different way. In order to understand the system of Kant we must, therefore, first of all make a rapid survey of that of Leibniz.

(b) *The system of Leibniz*.—Leibniz, like the other pioneers of modern philosophy, started from the empirical-inductive and mathematically-mechanical science of nature, and, in point of fact, from physics, the only natural science that had at that time attained any adequate development. Having adopted the doctrine that nature is built up of infinitesimal elementary bodies, he followed up the idea of a substance that must be assumed for the interaction and orderly inter-relations of these. This force he regarded as something immaterial, and this immaterial constituent, again, he described as a thinking, perceptive, or quasi-conscious power, thus applying to it the only term that was then available to denote a non-material reality. In this way he made the transition from a materialistic and mechanical to a spiritualistic and dynamic mode of thought. If the elements of force be taken as in reality a thinking substance, however, its activities in relation to the other elements of force, as also the latter themselves, will appear as ideas or perceptions of the element of force. Such an element thus becomes the monad, which perceives itself and its orderly relations to the other monads. Now it would be irrational to speak of this monad and its imagery of perceptions as the sole existing object. There must be a plurality of monads, existing *rester* side by side. This hypothesis, however, is possible only on the ground of two presuppositions, viz. (1) that the coexisting monads have each the same ordered and logically articulated content of perceptions or a condition which is explained by the pre-established harmony of the monads with one another, and (2) that each single monad virtually holds within itself the whole universe, though it may bring only a part of it to clear consciousness. This position elucidated by Leibniz's theory of the unconscious, or of the conscious in an infinitely small degree. We are thus brought to a thoroughly spiritualistic system, in which, by an essential necessity of reason, the individual monads severally perceive themselves and the universe contained in them as organic wholes, and, notwithstanding their absolute isolation, are in harmony with one another in virtue of the aggregate perceived and articulated by them. The various monads are endowed in very different degrees with the consciousness of the self-perceptive power, but are nevertheless connected and unified through the identity of the content variously known to each. Thus knowledge—in cases where the monads really have knowledge—may be interpreted as a process of discerning the content of consciousness according to the *a priori* laws immanent therein. From the condition of the non-conscious, or the pre-conscious, Leibniz disengages the rationally necessary laws and concepts in order that he may by means of them construct the system of the world as a complete whole. The ultimate pre-condition of all, indeed, is a self-identical, perfectly and logically conceived cosmic content, i.e., the self-transformed nature of the divine universal substance, covered by the infinite multiplicity of different monads, each of which contains in its own individual way the divine world-substance, and, in the measure of its individual capacity of becoming conscious, brings that content to a logically ordered comprehension. Philosophy is thus simply the measure of completeness and clearness to which the human monad can attain in its perception of the cosmic content.

(c) *Kant's reconsideration of Leibniz under the stimulus of Hume*.—Kant adhered to the views of Leibniz for about twenty years of his mature life, making modifications of them only in detail, more especially on the physical, mathematical, and astronomical sides. To the starting-point of the monadology in general, however,—its analysis of consciousness and of the content of consciousness—as well as to its idea of the *a priori* validity of the national laws that regulate that content, Kant remained permanently faithful, and we shall never understand his position unless we make full allowance for this survival in time of the dominant point of view and tendency. He was at no time the pure phenomenalist, who acknowledges only subjective phenomena within what might be called the closed space of consciousness, but he has always dealt with the thinking subject as a central force working towards the logical unification of the manifold, and rejected the idealism or phenomenalism of Berkeley—what German philosophers now call 'psychological idealism.' Moreover, he never denied the a priori of the logical laws, or their being evolved from their pre-conscious self-activity. He was never a sceptic or an agnostic, never a pragmatist or a relativist. The point which marks his departure from the philosophy of Leibniz and from which he proceeded to construct his own system was quite apart from such considerations. It was simply this, that he could not permanently remain blind to the fact that, while a system like that of Leibniz might logically articulate the reality immanent in consciousness, it was essentially incapable of passing beyond that sphere of predication anything whatever that transcended reality, that which transcends consciousness. Leibniz's conception of God, his doctrine of the pre-established harmony, and of the individualization of the reality into countless monads, was in their capacity of thought, at length seemed too Kantian, as already to other disciples of Leibniz, to be mere philosophical myths—figments of the imagination.
From this standpoint Kant began to suspect all forms of metaphysical theory, as they did not permit of strict demonstration and showed no unanimity in their conclusions. Although he continued to attach the utmost significance to the practical everyday experience of the mind, he now came to doubt the possibility of developing and establishing them as realities of a transcendent metaphysics.

If, however, the Leibnizian mode of reaching the reality beyond consciousness from the content of consciousness itself and from the reflexion guided by a priori laws was thus invalid, philosophy was thrown back upon what is immanent in consciousness. But, if this were so, of what avail were the a priori laws which enable us to articulate in thought our conscious experience? They never carry us into the sphere beyond consciousness; can we, therefore, cognize anything at all by means of them? Are they not, with their a priori necessity, restricted exclusively to formal logic and the mere explication of concepts? Is not their necessary truth thus a pure analytical truth, i.e., do they not merely analyze a given thought into the consequences already contained and implied in it? Is it not possible, therefore, that, in particular, mathematics itself, the chief instrument of natural science, may not be more than the logical elucidation of thought already virtually contained in finite numerical and spatial magnitudes? It was at this stage that Kant became acquainted with the views of Hume—views which had been developed upon an entirely different foundation. Hume, working from the standpoint of pure phenomenology, had divided knowledge into two departments: first, an a priori formal logic (including mathematics) entirely without content and purely self-interpretative; and, secondly, a real knowledge, empirical and substantial, but having no logical necessity or a priori character. For Hume, knowledge of reality was constituted only by the principle of custom—by our becoming accustomed to certain associations of perceptions—and by the practical verification of such customary associations, and thus our reference of perceptions and their relations to a reality lying beyond consciousness has no real ground to rest upon, but is at most the object of an absolutely indispensable belief. Hume's reasonings affected Kant in the most profound way, as they appeared to undermine the whole fabric of a priori rationalism, and, in fact, to bring all philosophy of the Platonic type to an end. All that remained of rationalism seemed to be 'analytic judgments a priori,' i.e., the analysis of the logical content of certain propositions in formal logic and mathematics—a purely logical play of reason, but not a real knowledge of things by means of reason. Hume had apparently rendered it impossible, not only to pass beyond experience, but even to articulate experience itself by logically necessary principles; he seemed to have shown the futility of all a priori synthesis of the real, and, therefore, also of rational and rational ethics. Thus, if Kant found in Leibniz his positive foundation, he was on the negative side decisively influenced by Hume, both as a stimulus to his thought and as an antagonist to be overcome.

(d) Kant's discovery of the critical solution... The arguments of Hume, as has been said, wrought upon Kant with profound effect, not, however, in the thought of driving him into the sphere of the Scottish thinker's philosophy, but in the sense of forcing him to provide new foundations for, and set new limits to, the essentially Platonic doctrine which he had inherited from Leibniz. Hume's influence, therefore, was not such as to convert Kant to phenomenology. The idea of an experience limited to consciousness he had taken over from Leibniz, and all thought of transcending that experience by metaphysical arguments based upon it he had at length abandoned in view of the contradictions in which alone such attempts result. Hume certainly confirmed him in this position, but it was not Hume who brought him to it. The influence of Hume was in clarifying his mind with reference to the problem of elucidating and systematizing the contents of consciousness with a view to attaining a logically demonstrable, however, necessary, conception of the real. Kant formulates this problem very simply in the question whether we have only analytic judgments a priori, or also synthetic judgments a priori, as instruments for reducing the contents of consciousness, or of experience, to form and order. Or, to give the question a more direct expression: Is there a logically necessary connection in the real—an inherently necessary conception of nature which imposes a logical order upon the concrete? The 'real' that Kant seeks is attained not by reaching out towards a realm transcending consciousness, but by a synthetic articulation of the empirical data of consciousness or experience. He entirely ignores the question how this experience comes to be; it is simply given, and that is sufficient for us. As a matter of fact, Kant finds the real in the results of the logical elaboration of experience, and that process he distinguishes logically classified and abstractly necessary relations of phenomena from the chaotic state of the manifold prior to such elaboration, as also from relations wrongly appealed upon the facts; and for him the former is the real. In short, the real arises out of the valid and correct elaboration and elucidation of conscious experience, as contrasted with relations wrongly appealed upon the facts; and for him the former is the real. The problem before him was the possibility of a natural science which is at once empirical and rational, enabling the mind to unify the empirical data of consciousness by rational and a priori principles, and thus to transform the naive and confused representation of things into a representation that is scientifically clear and valid. Kant's aim was to establish a rationalism of pure experience, upon which might be constructed a conception of nature at once scientifically valid and embracing all experience. This is the fundamental principle from which we must interpret Kant's thought—his presupposition of the ego as the focus to which all thinking is related, of the content of experience as given to the mind in order that it may be brought to a fully realized clarity and completeness, of the a priori logical activity of the mind as moulding and combining the matter given to all according to the laws which cohere in the logical subject itself, and which come into consciousness and unfold themselves in the actual operation of thought. With these, again, is connected his refusal to recognize a supposed metaphysics which would urge a priori thought beyond its task of moulding and arranging the data of experience, since the a priori formal laws have to do with such data alone, and, if employed apart from and beyond them, remain altogether empty—a use of them which results in a futile metaphysical hypostasis, such as was fabricated by Locke and, in a more cautious and covert way, by Leibniz. Kant's presuppositions and his surrender of a transcendent metaphysics determined for him the only possible aim of knowledge and the safeguarding of the a priori and ideal character of our knowledge of nature by confining it to experience within consciousness. This line of thought, which in the first resort related only to the conception of nature, Kant subsequently extended to ethics, the philosophy of
religion, teleology, and aesthetics, his method of dealing with all of these being essentially determined by his principles of intellectual cognition. As treated by him, these other spheres of rational speculation were not merely not necessitated by the objective knowledge of reality lying beyond consciousness, but the proofs of a valid mode of reflection which issues from the nature of consciousness itself, and as such is to be applied to the criticism of experience. Non of this passagae beyond valid and necessary modes of thought and interpretation. The proof of their subjective necessity supplies the measure of all the objective knowledge which they can attain. A philosophy of this kind is in reality reason's knowledge of itself, and is indirectly a knowledge of facts only in so far as it reveals the necessary activities of reason, and arranges and interprets the data of consciousness by means of them. It sets out as a theory of the presuppositions, possibilities, and limits of science, and then proceeds by analogy to comprehend the other great activities of the mind, which likewise possess merely the knowledge and interpretation of experience by means of reason.

(c) The meaning of the various designations of Kant's philosophy. — From this point of view, again, we shall be able to judge of the various designations applied to the philosophy of Kant, whether by himself, or by others. It is Idealism—in a double sense, indeed, as it regards the mind not only as that which possesses experience, but also as the active subject of the necessary forms of thought through which alone experience gains order and meaning; in other words, it is a system which arranges and interprets experience within the limits of consciousness by means of them, and is thus directly opposed to materialism and sceptical relativism of every type. It is also criticism, since, in fixing by a critical investigation of principles the limits of the realm of formal ideas, it prevents these from transcending experience, and disengages the separate activities of that realm from its naive and pre-scientific state of nebulousity. The system is transcendentalism, because it recognizes the a priori validity of the ideas and asserts that they contain an element superior to experience, while, however, it uses the ideas, not as a means of reaching beyond experience, but simply as a means of moulding, classifying, and interpreting it. The word 'transcendentalism' signifies the demand that the ideas have no validity with reference to what lies beyond consciousness, and are accordingly not 'transcendent.' They are, in fact, immanent in experience, but have never been truly a priori, are not derived from experience, and are only to that extent above or beyond experience. Such is the implication of Kant's original and noteworthy use of the term 'transcendental.' In contrast to 'transcendent'—as meaning 'making experience possible by means of ideas.' Kantianism has also been called a formal intra-experiential rationalism. Sense, again, describe it simply as an epistemology—a designation which, however, must be received with circumspection, and which has given rise to much misconception. Since the days of the Sophists and Plato nearly all systems of philosophy have held that 'sensation' was merely the pre-condition of, or the preparation for, the system proper, which might vindicate or deny the metaphysical knowledge of things. In Kantianism, however, this distinction is already inverted in the system itself, since for it valid truth or reality lies in the necessary character which it proves to be inherent in the activities of thought. The subjective necessity of the functions of arrangement and interpretation yields the only objective knowledge of reality possible. The mark of such knowledge is, in virtue of its being grounded in that necessity, is indeed genuinely objective. For similar reasons Kant's teaching has been known since Fichte's day as a Wissenschaftslehre, i.e. a gnoseology or doctrine of science, since its aim is to determine the possibilities and restrictions of science—the knowledge of the real. So understood, it would be the development of cognition upon which is based the systematic development of knowledge in the special sciences. But, in view of Kant's extension of the a priori from the field of science proper to the field of epistemology, and aesthetics, the designation is undoubtedly too narrow. In point of fact, Kantianism is a theory of reason in all the aspects of its a priori functions; it is a Platonism without Plato's metaphysics.

3. The structure of the system.—Except in its most general features, the actual structure of Kant's philosophy could not be inferred from the foregoing account of it as a whole. It is the fruit of earnest and persevering reflection, and its most important sections are those devoted to the solution of intricate special problems. These cannot be dealt with here. Of peculiar importance are the movements by which Kant proceeds in his original interest in the scientific conception of nature to the consideration of ethics, religion, and aesthetics. He grapples with these various subjects, one after another, and deals with them according to the peculiar harmony of field of interest, viz. the conception of nature. But, as might be expected, the changes of the subject-matter involved also certain amplifications and modifications of the method. The doctrine of the pure analytic character of mathematics, the synthetic nature of the spatial and numerical judgments of mathematics. It also signifies, of course, that in their application to possible sensory experience, and that they have no function whatever outside such experience—a view in conformity with which the possibility of a supra-experimental metaphysics is at the very outset greatly attenuated, since a space-less and time-less reality is for us absolutely unimaginable and inconceivable. To his doctrine of time and space Kant gives the name 'transcendental aesthetic,' the word 'aesthetic' meaning here, of course, not a critique of art, but the science of the laws of sense-perception. From this significant opening Kant then proceeds to his most great theme, the 'transcendental analytic,' the theory of the categories. Here he shows that, just as sensibility involves a priori forms of perception, so too the mentalistic and empirical in the system itself, the a priori principles of combination and relation, and, above all, the concepts of substantiality and causality. These principles, already naively and unsystematically used in the most ordinary thinking, are simply discoverable in the all-embracing mathematico-mechanical science of nature, and so developed into the conception of
the rational articulation of nature as a whole. To the conception of nature, according to Kant, belong also psychical phenomena, the relations of which to physical facts and to one another must likewise be dealt with by the principles of this conception of nature. The consequence of such a view is, of course, determinism. Then, as with psychical phenomena, so with the process of history, this too being incorporated in the conception of nature, though it must be admitted that Kant did not know the doctrine of determinism either to psychology or to history. Another and very important consequence of his argument is that the categories have validity only when applied to experience within consciousness, and that they fall into sheer vacuity whenever we attempt to carry them beyond that field. Their function is confined to the relation of form and matter, and, where there are no data of experience for them to encompass, they become void. This brings us to the most significant result of all—positively, to a conception of nature as partly conditioned by a priori forms of reason, and, therefore, also to the comprehension of the entire manifold of experience under rational laws; and, negatively, to the rejection of every attempt to apply these forms and categories to anything that may lie beyond, anterior to, or other than experience—in other words, to the impossibility of all rational metaphysics. Nevertheless, the need for such a metaphysic constantly re-asserts itself, and with this Kant deals in the third great division of his Critique, viz. the 'transcendental dialectic.' Here he shows that, while the need of a rational metaphysic is perfectly warranted, and belongs, in fact, to the a priori function of reason, yet it cannot be satisfied by means of a rational investigation, as the conceptions employed for the purpose by ordinary metaphysic are simply the categories of substanti
tuality and causality used without application to experience, and so working in a mere void. That need, for which the theoretical reason can accordingly make no provision, can be satisfied only by the convictions of the moral will. Only in the sphere which we are compelled to think of as lying behind the moral will do we find that which the need for metaphysics has a right to demand. The theoretical reason can lend support to these moral conceptions only indirectly—in so far as its intra-experiential rationalism has the unknown behind all experience and behind the thinking subject, and because, by restricting the conception of nature to experience, it nullifies every attempt to find a basis for the conception of nature in the transcendent sphere. Kant could accordingly say that he had abolished (metaphysical) knowledge in order that he might make room for (moral) faith.

(b) The ethical and religious philosophy.—This subject—the moral judgment and the metaphysic of faith based upon it—is dealt with in Kant's second great work, *Kritik der praktischen Vernunft* ('Critique of Practical Reason'). In this he extends his peculiar and original method of deducing the a priori in experience to ethical judgments. These, in the first instance, elicited psychologically, and, in view of their peculiar nature, characterized as imperatives, i.e. judgments regarding what ought to be—imperatives, in fact, of absolute authority, the nature of which appears in the fact that they condition them uncondition-
ally, and regards them as universals of the will. And that they appeal to the dignity of man which is to be obtained in obedience to their 'ought.' They thus present themselves, like the a priori forms and categories of the transcendental character, as purely formal judgments. Their function, however, is not to apprehend the matter of experience, but to determine the motives of the will. They must all be brought under the Categorical Imperative, i.e. the moral judgment which is distinguished from all others by its being formally unconditional. Man's recognition of an unconditional 'ought' constitutes his true dignity and his true person-
ality, and forms also the limit between beings as persons. It is true that, so far, we have here only a moulding of the countless empirical motives of the will by a judgment that issues as a priori principle, which bids us act unconditionally upon the personal con-
vention of conscience. We are not yet, it would seem, within the domain of metaphysics at all. But, as a matter of fact, we are; for the Cate-
gorical Imperative, unlike the logical category, does not govern its matter wholly by its own might, but is conditioned by the resolve of a will which thereby rejects other possible alternatives. Here, indeed, we come into touch with the fact of freedom—the power of submitting or surrendering ourselves to a law felt to be of unconditional authority. The realm of theoretical reason con-
tains nothing analogous to this. In the fact of freedom, therefore, Kant sees the germ and man-
ifestation of an altogether different realm—the super

(c) The aesthetic and teleological philosophy.—There remains still another function of pure reason, viz. that which finds expression in the teleological conception of reality as subservient to the ends of spirit. As reality, in relation to the beholder, is felt to have meaning and purpose also in art and in aesthetic satisfaction, Kant deals with both the teleological and the aesthetic judgment in his third great work, *Kritik der Urteilskraft* ('Critique of the Faculty of Judging'). This work, following the method of his earlier *Critiques*, he shows that in our teleological conceptions like-

wise there is an a priori mode of judgment that emanates from the very nature of reason. The design, or purposive character (Zweckmaessigkeit) of the world cannot be metaphysically demon-
strated, but it asserts itself in an a priori type of judgment or interpretation as an irresistible conviction. We cannot fail to see how far apart this a priori lies from that of theoretical science, as also from that of the ethical-religious sphere. It implies no necessary, universal, imperative obligation, but a process of interpretation that plays freely upon things, making as if these subserved a kingdom of spiritual ends. The task of interpretation is to make the beautiful, the beautiful thus the symbol of the inner unity of the real — a unity which cannot be demonstrated by theoretical metaphysics. As such a symbol it has an essential function in the domain of reason, since it guarantees freedom to disturbance of the habitual, because knowledge and conception of reality which could otherwise be fabricated only by a teleological metaphysic, though, of course, never really attained by it.

(a) The metaphysical development. — In its view of consciousness and the a priori, the Kantian theory undoubtedly contains metaphysical elements which it took over from Leibniz, but did not recognize or define as metaphysical. If, however, we follow up Kant's idea of consciousness and its a priori, we are brought once more to metaphysical problems akin to those of Leibniz, and, in particular, to the idea of the absolute consciousness, or God, and the task is then to find a way back to the individual reason. A metaphysics of this kind — partly influenced, no doubt, by the ethical and literary tendencies of the time — was evolved from Kantianism by Fichte, Schelling, Hegel, and Schopenhauer; and, just as each metaphysic sprang directly from Kant himself, so it is still drawn by many thinkers of to-day from the neo-Kantianism of recent times.

(b) The psychological development. — It was possible to proceed in a directly opposite way, and to emphasize and further develop the anti-metaphysical aspects of Kantianism. Those who took this course proposed to regard the a priori as assigning the final limits to specifically philosophical knowledge, and to conceive of reality which could otherwise be fabricated only by a teleological metaphysic, though, of course, never really attained by it.

With the Critique of Judgment Kant completed his discussion of the series of great philosophic problems which lay within his view. As was indicated above, his survey lacks a systematic psychology, while at the same time a psychologic basis is presupposed in the tripartite division of his critical work as well as in his exposition of the functions of reason to which he devotes his several Critiques; and this ambiguous attitude towards psychology has been much criticized. The system likewise lacks a properly developed logic — a want which is all the more felt because Kant carefully distinguishes his own transcendental logic from the formal logic of the Aristotelian type. He used the latter as the starting-point and guiding thread of his philosophy; the former, as a theory of an intra-experiential rationalism, constitutes the actual content of his system, which everywhere distinctly explains the relation between the two, and yet that relation is felt to be of the utmost importance whenever we ask upon what theory of knowledge his distinctively epistemological system is constructed. Nordit Kant give any special consideration to history; all that he provides in this field is a few short studies in which certain principles for an estimate of history are deduced from his ethical philosophy of religion.

The further development of the Kantian philosophy. — For a time the system of Kant in its original form seemed to German thinkers the only possible philosophy — philosophy, indeed, in its abstract, transcendent, unworldly expression. After the lapse of a decade or two, however, this attitude was abandoned, and the system has since been amended, supplemented, or transformed from many points of view. It has nevertheless maintained its position as the nucleus of German philosophy, and even to the present day all the great systems either emanate directly from it or define their position by critical reference to it. The development of philosophy partly from the system itself, in which lay the seeds of various germinative ideas and various possibilities of development, partly also from the influence of certain general movements of contemporary thought which the system had fostered, and mingled with it. We may distinguish three main lines of development.

(c) The epistemological development. — Finally, it may be regarded as Kant's great design to keep clear of both metaphysics and psychology, and to safeguard those presuppositions of all logic and all science which form the ground-work of pure thinking. Philosophy in that case is exclusively a doctrine of the a priori conditions of science, and of its vindication as an entirely independent and inwardly necessary activity in which the autonomous and ideal nature of the spirit finds expression. This view of the a priori is one that adheres rigidly to the Critique of Pure Reason, and altogether disregards the a priori of the other Critiques, which certainly cannot be brought under the conception of purely scientific theory. Philosophy is thus transformed into epistemology and logic. This is the theory held by Cohen, Natorp, Liebmann, Rieh, Windelband, Riecke, and Hahn. The a priori is the only real one brought within the sphere of the scientific consciousness. The method of philosophy produce and guarantee real objects by subjecting them to thought. The critical and logical analysis of consciousness must be much more rigidly separated from the psychological and genetic analysis than was done by Kant himself. The proper
subject-matter of philosophy is logic; metaphysics is abolished, or replaced with empirical convictions; psychology is a science of consciousness lying side by side with, but quite independent of, philosophy in the proper sense. We need not wonder that a thousand of this kind should be met with ever renewed criticism at the hands of both metaphysicians and psychologists.

LITERATURE. — Kant's works are collected in the ed. of G. H. Fleckenstein, 1875 (see under text). Kant's complete ed. is being issued by the Berlin Academy of Sciences. From the enormous mass of literature relating to Kant we may select the following works: K. Fleckenstein, Immanuel Kant und seine Lehre, Heidelberg, 1900 (= Geschichte der neueren Philosophie, iv. and v.); A. Riecke, Die metaphysischen Krise der Philosophie, Leipzlg, 1906; H. Cohen, Kant's Theorie der Erfahrung, Berlin, 1895; J. Völkle, Immanuel Kant's Erkenntnisslehre nach ihren Grundzügen (2 vols.), Leipzlg, 1879; G. Simmel, Kant, ed. do 194; F. Paulsen, Immanuel Kant: Leben und Lehre, Stuttgart, 1898; E. T. Zuckerkandl, Das Denken der neueren philosophischen Erlebnistheorie, Tübingen, 1912; W. Windelband, Praludien, do, 1913; Paul Naty, Plato, Ideenlehrer, Leipzig, 1903; E. Troeltsch, Das Hervorheben in Kant's Re- gelung der menschlichen Freiheit, Berlin, 1904; E. Caird, The Critical Philosophy of Kant, 2 vols., Glasgow, 1889.

E. TROELTSCH.

KAPALA-KRIYÀ.—Kapala-kriya (Skr., 'skull-rite') is the Indian ceremony of breaking the skull of the corpse, performed at the cremation or at the burial of a member of an ascetic Order.

We are told in the Garuda-purâna that when a man (who from his evil deeds during life or from some defect in the proper ceremonies at his decease, becomes subject to Yama's penalties) dies his spirit takes the form of a black bull, and emerges in the same manner as the excreta; whereas — because a man finds his way through the fourth aperture of the body, which is a suture at the top of the skull, called the Brahmananda, "Brahma's cleft" (M. Monier-Williams, Brahmanism and Buddhism, London, 1890, p. 197), the excreta are thrown out of the fourth aperture, the suprarenals. The Chuvashes of E. Russia similarly believe that the soul leaves the body through the back of the head (J. G. Frazer, J.A.I.xi. [1886], 83 n.). It is remarkable that in the Neolithic Age and among some modern savages it was the custom, in cases of epilepsy or similar maladies believed to be the work of evil spirits, to trample the skull of the patient so as to give exit to the evil spirit (A. W. Buckland, J.A.I. xi. [1882], 7 f.; W. Johnson, British Archaeology, Cambridge, 1912, p. 321.) Among the Buddhists of Kashmir, it has been observed that when a man of the sacred order died, the spirit thus given vent to the spirit through the roots of these hairs; and it is generally believed that apsaras (heavenly nymphs) are born as Lamas (i.e., as he should be, a Lamas), of exceptional virtues, an actual perfection of nature, who were at this instant through which passes the liberated spirit (T. J. Waddell, in Notes on Buddhism, London, 1896, 579 of his Buddhist of Tibet, London, 1896, p. 489).

Hence arises the belief that the cutting of a lock of hair from the head facilitates the departure of the soul (Frazer, loc. cit.). In India the rite of smashing the skull is generally performed when the corpse is half burnt, the chief mourner using a piece of sacred wood or a bamboo for the purpose.

LITERATURE. — In addition to the authorities given for the Brahminical ceremonies, see H. Maclagan, Brahmanical and other Cremations, i. 1 (1901) 49; J. A. Paddfield, The Hindus at Home, Madras, 1906, p. 314; J. A. Dubois, Hindu Manners, Customs and Ceremonies, i. 2 (1907), 458; H. A. Thoroson, Caste and Tribes of Southern India, Madras, 1897, p. 393; W. Crooke.

KAPILA. — The name of the founder of the Sâkhyâ system (see Sâkhyâ). Since all Indian tradition is unanimous in recognizing under this name the author of the Sâkhyâ school, we are unquestionably bound to see in Kapila a historical person, who, as is proved by the dependence of Buddhism on his teaching, must have lived before the middle of the 6th cent. B.C. All the accounts, however, which have been preserved in the literature of the Brahmans relating to the life of Kapila are so full of legends and contradictions that we are unable to attribute to them any historical value. The information given by the Buddhist authorities with regard to him deserves more serious consideration, since they connect Kapila with the name of the city of Kapilavastu, the birthplace of the Buddha, and ascribe to him therefore, a sphere of activity the geographical site of which agrees well with the internal relations which subsist between Buddhism and the Sâkhyâ philosophy.

No work by Kapila has been preserved. For that the Sâkhyâ-sutras are an entirely modern work, and have no claim to bear his famous name, has long been conceded; but the question, whether we have any real ground for supposing that any compositions at all are due to his authorship.

KAPILAVASTU.—Kapilavastu (vattu, nagara, -pura), interpreted either as 'tawny town' or as 'the town of Kapila' (a mythical sage), according as the first element of the word is taken to be an adjective or a proper name, is the name of a town famous in legend as the ancestral home of Gautama Sakyamuni, the Buddha, commonly called Buddha. The four great holy places of Buddhism from very early times were Kapilavastu, Gayâ, Benares, and Kusinagara, associated respectively with the birth, enlightenment, ministry, and death of the Master (see art. BUDDHA). The myths descriptive of the foundation of Kapilavastu, which assume diverse forms, all equally unhistorical, are summarized as follows by Watts ("Kapilavastu in the Buddhist Books," J.E.A.S., 1896, p. 533;)

This story, according to the mythical accounts of the Buddha's royal ancestors, had been founded by the sons of an Ikshvaku king of the solar race. The king who reigned at Patala, according to some, or at Saket, according to others, yielding to the entreaties of his wife or concubine, drove his four sons into exile. These princes, accompanied by their sisters, set out westwards, after a long journey halted at a pleasant suitable site near the hillside of a rich luxuriant forest. The rich wished the exiles, and with solemn rites gave over to them a piece of ground on which to settle and build their city. When the city was thus well set out and occupied, the settlers called it in gratitude Kapilavastu or Kapilapurâja, from the name of their kind patron. The city, regarded as a sacred place of remote antiquity. The city of Kapilavastu thus founds itself, according to the generally received accounts, situated near, or at the southern slope of the range of hills (Kapilavastudrâ) and in the kingdom of Kosala. ... It must be noticed, however, that in some of the Chinese texts it is placed in a district to the north of the Himalaya, the royal exile being represented as having crossed this range and settled on the south side of a mountain beyond. ... Hence it might be inferred that the majority of the texts is in favour of the supposition that the city was situated on or near the southern slope of the Himalaya. This position, which is indicated by the earliest Indian texts, ...
must be accepted as the correct one, because the town, notwithstanding the mythical tales of its origin, had a real existence to this date. Its site continued to be visited by a series of Chinese pilgrims for several centuries after a.d. 400, and even now, in spite of obscurities in detail, can be located. Two of the most important, in the 19th century, the Welchman, and not many miles distant from the outermost Himalayan range.

The Lollavistavara and other works which profess to tell the story of Buddha's infancy and early life are far from reliable, although they exalt the glories of Kapilavastu, and of the magnificence of the royal court supposed to have been held there by Rāja Suddhodana, father of Gāntana Buddha. But these tales are purely works of imagination without any basis of solid fact. The real life-story of Buddha is almost completely lost, and the romance which does duty in the books for his biography will not bear criticism. There is no sound reason for believing that either he or his father ever enjoyed the position of regal magnificence ascribed to them by the pious imagination of later ages. Even some of the Buddhist treatises, as Watters points out, describe Kapilavastu as a small insignificant town without any attractions, too small for the accommodation of the growing families of the legendary Bāsīval princes. The real Kapilavastu, although raised to a certain degree of importance and detailed account of the other religious buildings of the time of Asoka, could never have been a large and wealthy city.

Tradition placed the actual scene of the nativity, not at Kapilavastu itself, but at a grove or garden called Lumbini, some miles to the eastward. There the holy infant was fabled to have sprung from his mother's right side; as she stood under a tree, to have been caught, in the arms of the gods, and forthwith to have taken seven steps, and proclaimed himself Lord of the World. The legend of these and other supposed incidents of the nativity was well established by the beginning of the Christian era, and supplied subjects for long mythological narratives and numerous works of art. Writers and sculptors found equally welcome material in the many miracles with which the imagination of the faithful adorned the early life of the founder of their religion. All these marvels were closely associated with Kapilavastu. A specially favourite topic was the story of the demise of his father's garden, when the mischievous boys of the town, with the excuse of cutting away the grass, procured the stone which had hitherto been used as a boundary mark (L'Art grec et bouddhique du Gandhara, Paris, 1905, p. 280) exhibited the figure of a personification of Kapilavastu in the conventional garb and pose of a Greek city-god, lamenting the loss of her youthful lord. After he had obtained full enlightenment under the Bodhi-tree at Gayā (q.v.), Gautama was believed to have paid two visits to his Śākya relatives at Kapilavastu. The numerous words and deeds attributed to him on those occasions will be found detailed in all the works dealing with the legendary history of Buddhism. His final visit to his ancestral town is associated with many stories of destruction, by King Vīḍālaḥa (Vīḍālaḥaka, etc.). Like the connected fairy tales, this story is told in more ways than one, but all the narratives agree that Vīḍālaḥa either expelled or massacred almost all the monks of the town, who had gathered over the destruction of the place, which he had tried in vain to prevent, and departed, vowing that he would never return. From that time Kapilavastu passed almost out of existence, becoming the site of the first authentic record of the site at the beginning of the 5th cent. A.D. represents the town and its neighbourhood as a wilderness nearly uninhabited.

A curious group of seventeen small stupas discovered at Sāgarwā, two miles north of Tīlaurā Kūt, in Jan. 1898, by A. Führer, and destroyed by his excavations, may possibly mark the traditional scene of the massacre of the Sākya monks in the 6th cent. A.D. At the time of the foundations of each of these structures the lowest layer consisted of nine, seven, or five bricks, the central brick of each being carved with the design of the object on which the relics were placed. With the relic-caskets were placed embedded in the soil. The other bricks of the layer had figures of maces, tridents, axes, and other ancient weapons stamped upon them, which indicate that the monuments were erected in memory of a band of warriors regarded as sacred persons. If the massacre of the Śākyas by Vīḍālaḥa really occurred, it must be dated about 500 B.C. or a little earlier, the date of the death of Buddha being taken as 487 B.C.

In these legendary days the territory of Kapilavastu seems to have been a dependency of the kingdom of Kosala, which was equivalent approximately to the modern province of Oudh. The books enumerate a considerable number of towns and villages as situated within the borders of the Kapilavastu country, but none of them can be identified, and at the date of our first authentic records all literally the only known towns and villages had decayed. There is little reason to expect that the sites of most of the various settlements mentioned in the Buddhist treatises will ever be determined. A city designated variously by the names of Koli, Devadaha, and Vāgrāpara, which lay to the east, some miles beyond the Lumbini garden, was intimately associated with Kapilavastu by tradition, and there are some grounds for thinking that its position may be ascertained by local investigation. The introduction to the Kāvada Jātaka (no. 536 in tr. by H. T. Francis and E. B. Cowell, vol. iv., Cambridge, 1905) narrates a curious story about a threatened fight between the inhabitants of Devadaha and those of Kapilavastu concerning disputed claims to water for irrigation.

About 269 B.C. the emperor Asoka (q.v.), under the guidance of his preceptor, Upagupta, performed a pilgrimage in state to the spots sanctified by the sojourn of Buddha. The first place visited is said to have been the Lumbini garden, the scene of the nativity. The fact that Asoka actually came to that spot is placed beyond doubt by the inscribed pillar at Rummūn-dei, which was erected by the emperor in the twenty-first year after his coronation, to commemorate his visit to the spot. The inscription proceeds to Kapilavastu, and the inclusion in his tour of that locality, only a few miles distant from the Lumbini garden, is attested by another inscribed pillar now lying by the side of the Nīglī tank, but not exactly in its original position. The inscription, however, does not mention the name of Kapilavastu. The literary tradition (Adokavasthāna), which professes to give the details of the imperial pilgrimage, located at Kapilavastu a number of legends, which probably were not invented until after Asoka's time.

The earliest definite description of the town of Kapilavastu of the surrounding country is that given by the first of the Chinese pilgrims, Fa-hian (Fa-hsien) (Fa-hsien), who was shown round the reputed holy places at the beginning of the 5th cent. A.D., about six hundred and fifty years after the pilgrimage of Asoka. In or about A.D. 636, Hsin Tiang (Yuan Chwang), the most learned and eminent of the Chinese pilgrims, followed his predecessor's example, with the understanding that local monks thoroughly examined and carefully recorded the positions of the numerous localities at or near Kapilavastu associated by tradition with the legend of Buddha. All modern attempts
to identify existing ruins with Kapilavastu necessar-
ily because the descriptions recorded by the two pilgrims named, which are the only extant ancient detailed accounts of the town. The topographical and archaeological problems sug-
ggested by the pilgrims' narratives are far too compli-
cated to merit a brief notice which the travellers' observations is indispensable.

The visit of Fa-hian to Kapilavastu may be dated with
approximate accuracy in a.n. 438. He found there 'neither king nor people'. The site of the city was occupied only by destitute
ruined mounds, and was uninhabited save for a few monks and a solitary village. Immediately near the centre of the town, and
the road infected with wild elephants and tigers. The monks who clung to the dreary ruins and acted as guides to
pilgrims were not embarrassed by philosophical doubts, and had no
hesitation in pointing out the exact spots where Gautama sat under a tree, met his father, and so forth. Fa-hian, too,
was no more a believer, and it was difficult for him to accept the
scriptural truth all that was told him by his guides. Huen Tsang, not
withstanding his erudition, was equally credulous, and was
shown even more 'sights' than his predecessor. The country
turned out to be much the same as in Fa-hian's time, the
city of Kapilavastu being an utterly ruined that its limits
could not be ascertained. But the solid brick foundations of the
central 'palace city' were still visible, and were estimated to
measure nearly three miles in circumference. This walled town is not
mentioned by Fa-hian, who places Kapilavastu about nine miles
to the north of the Lumbini garden. Huen Tsang locates his
Kapilavastu some fifteen or sixteen miles from the same
point. Now the site of the Lumbini garden is determined
beyond a possibility of doubt, as already observed, by the Asoka
inscription, which, may be added, is supported by the second
in the matter of the distance from the fixed point, and
in sundry other particulars, show that different places must
have been pointed out to them as being Kapilavastu.

Local investigation, in which the present writer
took a share, makes it clear that the 'palace city'
of Huen Tsang is represented by the ruined
walled town now known as Tilaur Koth, while the
Kapilavastu of Fa-hian must be identified with the
group of ruins near the village of Piprawa, about ten miles S.S.E. from Tilaur Koth. This
conclusion, although in reality inevitable from the pre-
cedings, is as being indefinable, but a little consideration diminishes the apparent
improbability. The town, according to tradition,
had been utterly destroyed more than 900 years before the visit of the earlier pilgrim, and more
than 1100 years before that of his successor, and
both the pilgrims found the region in a state of
utter desolation. It is obvious that, if there is
any truth in the tale of the destruction of the
place by Veddahs and Kalingas, the latter was
of particular hot spots so gibly pointed out
by the local guides could not possibly have
survived, and that their identifications must
have been fanciful. As Watters observes (J.R.A.S., 1888, p. 543), they failed to show the Sakyas' assembly
hall and other objects frequently mentioned in
the books, the reason apparently being that the guides
either did not know where to place them or had
never read the books in which they are described.
The same inference may be drawn from their
silence respecting the new famous Piprawa stūpas
the most interesting building in the whole region,
which is not mentioned by either pilgrim. Evi-
dently it had been completely forgotten. The
whole of the 'identifications' recorded in detail by
the pilgrims have a fictitious and unverifiable
aspect and the mention of Tilaur Koth in the
works of Tilaur Koth was much better suited than the Piprawa ruins to fit in with the
legend of the regal splendour of Kapilavastu, and
it does not seem incredible that the site associ-
ed with the legend should have been moved in
the course of many centuries. It may be the
cause for overlooking the possibility that the
ruins of Tilaur Koth extend for two or three miles. The
outmost range of hills is about 15 or 15 miles to the north
of the Koth.

The mound now known as Rummim-dëli, is the
most interesting building in the whole region,
which is not mentioned by either pilgrim. Evi-
dently it had been completely forgotten. The
whole of the 'identifications' recorded in detail by
the pilgrims have a fictitious and unverifiable
aspect and the mention of Tilaur Koth in the
works of Tilaur Koth was much better suited than the Piprawa ruins to fit in with the
legend of the regal splendour of Kapilavastu, and
it does not seem incredible that the site associ-
ed with the legend should have been moved in
the course of many centuries. It may be the
cause for overlooking the possibility that the
ruins of Tilaur Koth extend for two or three miles. The
outmost range of hills is about 15 or 15 miles to the north
of the Koth.
KARAITES.—The Karaites are a Jewish sect which took its rise in Babylon during the latter half of the 7th century A.D. Their Hebrew name is קראי (Karai), i.e., adherents, or בגדאוש (B. Makketh), meaning ‘sons of the writing,’ the watchdog of the sect being ‘Back to Scripture from Tradition,’ i.e., from ‘Talmud.’ The watchword, however, is ‘the word of God;’ i.e., the theoretical one, according to which the Karaites developed a tradition of their own, the only difference being that it was called not ‘tradition,’ but ‘the yoke of inheritance’ (םנש), and that they held as the doctrines and usages which, while not taught in the Bible, were recognized as obligatory by all (םנש, or קראי, corresponding to the Muslim ‘ijma’), i.e., by consensus, and of which a large number had come down from those who returned from the Exile, i.e., from ‘the good signs,’ as they are designated, with an allusion to Jer 24.

The designation ‘Karaite,’ however, was not applied to them until the 9th century A.D. Originally they were known as ‘Ananites, from the name of their founder, Anan b. David, of Baghdad. Our sources of information regarding the motives that prompted him to initiate the new movement are meagre and shrouded in obscurity; moreover, they are not altogether reliable, as, in the first place, the oldest of them are not of earlier date than the first half of the 10th century; and, secondly, they all show considerable bias, as emanating either from his adherents or from his opponents, the Rabbinists. They agree only in two points, viz., that Anan was descended from the exilarchs, i.e., that he was of the lineage of David, and that he was deeply versed in Rabbinic and Talmudic lore. The Karaites will not admit, however, that they are a sect of late origin, or that they separated from the integral organism of Judaism. On the contrary, according to the earliest extant Karaite account, viz., that of Aba Yasuf Ya‘qub al-Kirkasani (or Kirkasani), as given in his Kitab al-Jamal wa-l-Mamalik, written in A.D. 957, the first Jewish schism took place in the reign of Jeroboam; thereafter arose the first sect—the Samaritans—and then, at the foundation of the State of the Jews, the Rabbinists, whose leader was Simeon the Just, and who simply continued the evil work of Jeroboam. These, in turn, were opposed by the party of the Sadducees, which arose under the leadership of Zadok and Boethos. Zadok discovered a portion of the truth, but the finding of the whole truth was the achievement of the exilarch Anan, who reigned in the year of the Khalf al-Mansur (754-759). The Rabbinists tried to compass the death of Anan, but God saved him from their hands. This reading of history appears in all the Karaita chronicles, and at length, in the later of them—Domecq b. Nisan, Solomon ib. Reuben, and Abraham Frinkovitch—it assumes the most fantastic forms. But it is quite unhistorical, and, besides, it fails to explain the origin of the Karaite inscriptions. The reports of the Arab writers all show the influence of the Karaites sources.

2 Ed. P. Weiss, ZAR, xvi, 181 ff.
3 The Arabic authors who give more or less inaccurate information are: Domecq b. Nisan, Solomon ib. Reuben, and Abraham Frinkovitch.
4 Thabit al-Maqdisi (pseudo-Balbi), ed. C. Hauré, Paris, 1899-1907, lv (1906), lvii (1907) in Arabic, ed. E. Sachau, London, 1879, p. 136, and Shabbetai (pseudo-Abulafia), ed. A. J. Davidson, London, 1845, p. 137, and in S. de Sacy, Christenamathica arabe, Paris, 1826, 1, 91. That again, the earliest of which is that of Sa‘adya Gaon (892-949), the motive of Anan’s revolt was injured pride. In the election of the exilarch by the Geonim, who did not believe in his orthodoxy, he was set aside, his younger brother, Hananiah, a man of inferior learning but more staunch in the faith, chosen instead. Anan refused to accept this decision, proclaimed himself exilarch, and was in consequence thrown into prison. Here he made the acquaintance of a comrade in persecution—one other than the celebrated Aba Hanifa, the alleged founder of the Manifite School—who is said to have advised him to appeal to the Khalf as the champion of another religion. In this way Anan was induced to take the path that led to schism.

That personal motives played a part in the action of ‘Anan may well be the case, but in the light of religious history it is quite impossible to suppose that personal motives alone could have created a movement which maintained a vigorous life for centuries. The truth is that in the 7th and 8th centuries the foundations of Judaism in the East were most insecure. The rise of Islam and the religious conflicts within its pale, the influx of general knowledge, and other factors of the kind acted with revolution on the Jewish mind, and gave rise to various sects, as, e.g., that led by Abu ‘Isa al-Isfahani (end of the 7th cent.), who was partly a pseudo-Messiah and partly a sectarian, who acknowledged the prophetic character of both Jesus and Mohammad; that of his pupil Yudghan, and others. It is possible, moreover, that Sadduceism had not wholly died out, and in some form or another made itself felt as an underlying force in religious life; that the Sadducees and the Karaites were at one, above all, in their adherence to the written Word and their rejection of oral tradition; and then, secondly, in their acceptance of certain tenets which have been handed down as expressly Sadducean, as, e.g., the literal application of the וס תצוו (Ex 21:24), the interpretation of בְּנֵי (Lev 23:23) as meaning the Sabbath, so that the Feast of Weeks should always fall on the first day of the week, etc. The first to draw attention to this relationship was A. Gelzer, according to whom there was, in addition to the common Halakhah that was ultimately deposited in the Talmud, a third section, which is dimly traceable in the earlier Talmudic writings, and was common to the Samaritans, the Sadducees, and, subsequently, the Karaites. Other indications of the relationship are found in the statements of Kirkasani already referred to, in the writings of the many Rabbinists (Sa‘adya, Abraham b. Da‘ud, Judah Halevi, Abraham ib. Ezra, Maimonides, etc.) who simply identify the Karaites and the Sadducees, and, finally, in the fact that not only Sa‘adya, but also Karaite writers of the 10th cent., had ‘Sadducean writings’ in their hands. It was with these various elements, to which others were subsequently added, that Anan instituted his movement.

Anan is said to have expressed his distinctive tenets in the bipartite formula quoted in connection with his name by Japheth b. ‘Ali (end of 10th cent.): ‘Search thoroughly in the Scripture, and do not rely upon my opinion.’ The primary article of which they are all dependent upon Karaite writings is shown by the fact that they all speak of ‘Anan as an exilarch. 1

1 C. REJ xliv. 167, note 2.
his confession is accordingly the searching of the Scripture, and it signifies that Scripture is of itself sufficient, and requires no supplement of tradition. But this does not mean that merely the legal portion of the Pentateuch, but the whole Bible; even the narrative parts must be drawn upon for the deduction of legal ordinances. In practice, however, he adopted all the methods of the Talmudists, who were likewise at pains to base their oral teachings, i.e. tradition, upon the written Word, and he made extensive use of the thirteen canons of Rabbis in the Talmud. Above all, of the canon of analogy (םייח, ἀράμ. ἀγαθιά), perhaps under the influence of Abu Hanifa, but his great aim was to read the laws always in the sense carrying the heaviest obligation. This rigorous he applied very especially to the laws of the Sabbath and of marriage. With reference to the former, he extended the idea of forbidden work to such processes as, being begun on a Friday, would automatically continue on the Sabbath; thus it was unlawful to light on a Friday a candle that would keep burning till next day—Ex 35:3 being interpreted in that sense—whereas he advised his adherents to sit in darkness on Friday evenings; and similarly, reading Ex 16:4 literally and as binding for all time, he forbade them to leave their homes on the Sabbath, except to attend the worship of God. The marriage law he also rigorously interpreted in two ways: interpreting Gn 2:24 literally, he maintained that husband and wife were really one flesh, so that, e.g., the wife's brother was to be regarded not as the husband's brother-in-law, but as his brother; while again, applying the method of analogy here too, he extended the forbidden degrees to all collateral lines, whether ascending or descending. Thus, too, he brought his adherents to a state of mischievous confusion, as in different localities they celebrated the festivals on different days, and evil results followed also from his discarding the calendar, substituting for it the simple calculation of the full moons, and forbidding the recitation of psalms and verses from Scripture. Other regulations introduced by him relate to details of the laws about food and ceremonial purity, of feasts and fasts, of circumcision, and many other things. His injunctions, moreover, are pervaded by a strain of gloom. He forbade the Jews of the Diaspora to eat flesh, as, according to his interpretation of Dt 12:2, the use of such food was dependent upon the existence of a sanctuary and a sacrificial ritual. It should also be noted that notwithstanding his adherence to the literal meaning of Scripture, he interpreted many of the Biblical laws in an allegorical sense.

3 Cf. Pomsanski, Kaufmann-Geschichte, Breslau, 1900, p. 217.

4 According to the narrative of Sa'adya already cited, 'Anan specially urged upon the Hasid that his rejection of the fixed calendar was a distinction of a new religion. Generally, however, the calendar plays a great part in the history of Jewish sects.

3 Anan set forth his views in an Araamic writing entitled Sifro ha-Me'uhad ('Book of Commandments'), of which, however, only fragments survive. He also wrote a kind of encyclopaedia, the so-called 'Book of Commands,' which, according to the later Karaite writers, 'Anan migrated from Babylonia to Palestine, and founded the still surviving Karaite synagogue in Jerusalem. These statements, however, have no historians find notice in the talmudic works, and the scholars, who were nearly all honoured with the

KARAITES

The title of "sallarch" or "prince," are found in Egypt. Of these descendants his immediate successors are said to have been his son Sanal and his grandson Josiah, in whom we know hardly more than their names. Josiah is said to have been the teacher of Benjamin Moses Nahawandi (i.e. of Nahawand in Persia who flourished c. 830), and with whom began a new era in the history of the sect: in fact, the Arabs speak of the Karaites as "the companions of Anan and Benjamin." 1

1. The Arabic writer makes Benjamin the head of a distinct sect, the Benymina. 2 Benjamin is the first of extant authors to speak of the Karaites as בֵּיתוֹן מִצְרָי (see p. 662); and, while Anan wrote in Aramaic, he used Hebrew. While he followed the Rabbinites in regard to many precepts of the Law, his method, especially with reference to the deduction of the Law from the Scripture, was more consistent and systematic than theirs. He laid greater stress than Anan upon the necessity of independent investigation of Scripture. He applied himself also to dogmatics, and affirmed, inter alia, that the personage who created the world, sent the prophets, performed miracles, revealed the law, etc., was not God Himself, but an angel whom He had created—a view which he based upon various passages of Scripture, especially Ex 23:4, where the angel also spoke to Moses says: "I am the God of thy father, the God of Abraham, the God of Isaac, and the God of Jacob." In reality, however, we have here the Logos-doctrine of Philo, whose writings, translated into some Oriental language, circulated in the East, and may quite well have been known to Benjamin. Another of the latter doctrines, founded upon Ezk 32:26, was that divine penalties fall upon the bones of men. 3 He read an allegorical sense into many passages of Scripture. He enjoined that the months of Nisan and Tishri, alone should be determined by observation of the moon; the others, as was the practice among the Rabbinites for all months, by computation. He frequently differed from Anan in his applications of the Law. Of his writings only the Book of Laws 4 (Shefer Dinim, published under the title nezer yisroel, Eupatoria, 1836) has been preserved. He also wrote a work with the title of Twelve Commandments 5 (Shefer hetsahvot) and Biblical commentaries, of which, however, nothing is known beyond a few quotations by other writers. 6

Daniel b. Moses al-Kunisi, or al-Damaaghani, is said to have been a native of Damaghân, in the province of Kunisi (Tabaristan), where he flourished towards the end of the 9th century. A point of special interest is his attitude to Anan, whom at first he designated 'the head of the wise' (ברוחה), and afterwards 'the head of the fools' (רעה). 7 In contrast to Benjamin, he was hostile to secular knowledge, and rejected reason as a means of deciding questions of religious law; and his opposition to his teacher is seen also in his denial of the existence of angels. The angels mentioned in the Bible, as appears from Ps 78:30, 44, are beings transcending natural forces. He was also entirely opposed to the logical interpretation of the Commandments, since 'God did not ordain his commandments in allegorical form.' 8

In his interpretations of the religious law he tends to favour the more severe alternative. Daniel likewise composed a Book of Commentaries, preserved only in a few quotations, 9 and Biblical commentaries, of which only two small fragments (on Levitites) survive; 10 he is also referred to as the author of a work on annulment. 11

2. The Arabic period (9th and 11th centuries).

—This period is so named because most of the Karaites works dating from the centuries indicated were written in Arabic. It is the most brilliant age of Karaites literature—an age in which the sect produced theologians, grammarians, lexicographers, exegetes, teachers of the Law, contoversialists, etc., some of them writers of great and lasting importance. This illustrious advance was due in part to the influence of the Rabbinites and of their now active bent towards secular science and their desire to provide a scientific foundation for Judaism; while, in turn, the Karaites influenced the Rabbinites, and, in particular, constrained them to engage more profoundly in the investigation of the Hebrew language and the rational exegesis of Scripture. Modern Jewish historians (Pinsker, Graetz, Fischel) have characterized the earlier Jewish grammarians, Masoretics, and Biblical theologians as Karaites; 12 but, while this view has been completely refuted by critics, 13 there can be no doubt that the Karaites, whose very raison d'être was their literal view of the Bible, devoted themselves in a special degree to the branches of knowledge in question, and often gave the initiative to the Rabbinites. Another effective factor in the movement was polemics. The passive attitude of the Geônim had to give way before the impetus and the recruiting power of Karaitism; and now there arose the Geôn Saadyya, who as a youth of twenty-three had attacked Anan in a polemical work in the Arabic language (Kitâb al-radd 'alâ 'Anân), and who made it one of the great tasks of his life to fight against Karaitism. His challenge brought the Karaites into the field, and the contention inspired them with new life. While the struggle was of a purely literary character, it was sometimes conducted in no very becoming way on either side, and not infrequently with a biased deviation from truth. 14 The Karaites were not slow to retaliate upon their assailants, and directed their pointed but not always well-aimed shafts mainly against the anthropomorphism Hagghâdi of the Geônim, and also against the mystical writings of a kind that emanated in part from the schools of the Geônim. 15

The literary activity of the Karaites during this period under notice asserted itself in nearly all the more important Muslim lands, i.e., besides Babylon and Persia—the cradle and the nursery of Karaitism—in Egypt, N. Africa, and especially Palestine. In the last-named country an eager intellectual interest also prevailed amongst the Rabbinites during the 10th and 11th centuries; here arose, as a counterpart to the official school of Geônim in Babylon, a distinctively Palestinian Gâdim, and here the Karaites likewise conducted a zealous propaganda about the same time. 16

The most eminent representative of Karaitism in

4 Cf. Sandgau, no. 11; also Pomoer in Terenepayâa Emyalakrep, c. 3. Daniel b. Moses, vi. 176.
5 Cf. esp. Steinwender, Magazin für die Wissenschaft des Judentums, viii. 291.
this period was undoubtedly the already mentioned Abū Yusuf Yākūb al-Kirībānī, or al-Kar-
kasānī (i.e. of Cirecenion on the Euphrates, or of Kar.
kasān; see the rejoinder), As it appears from his
writings, he travelled widely, visited Persia and
India, observed the customs of the heathen living
there, was in personal touch with the representa-
tives of the heathen religions, and was familiar
with Muslim theologians on various questions relating
to their religion, of which he had a thorough
knowledge. So far as we can estimate from his
works, he was an orthodox Muslim. He adhered loyal
ly to his ancestral faith, but neither assumed an uncritic
position towards the weaknesses of his own religious
community, nor set himself against the adherents of other re-
ligions (T. Friedländer, ZA xxxvi. [1919] 94).

In 997 he composed the first Kairite book of laws in
the Arabic language; it is entitled Kitāb al-
ʿAmīr wʾal-Mardāḥ (‘Book of Luminaries and
Outlook Towers’), and is divided into thirty-six
sections. It differs from all works of its kind in the
fact that its four first sections are devoted to items
of historical information and questions of dogmatic
theology. The next section is the first, which contains a survey of all the Jewish
writings down to the writer’s own day.1 Kūrīšīnī
gathered his information partly from his own observation and his investigations with others, partly from the writings of his predecessors, and, above all, from those of David b. Merwān al-Makānās, and from the
Kitab al-Maʿalāt of Abū ʿIsā al-Warrākī.
The book is invaluable as a storehouse of informa-
tion provided by no other source, as, e.g.,
respecting the Sadūdūz, which, it states, forbad divorce,
and reckoned by solar months of thirty days;2
regarding the sect of the Maḥāra, i.e., i.e.,
“severed damsels”3 are perhaps identical with the
Essenes;4 regarding the remnants of the Israēli,
Ochterites, and ‘Anāmites still surviving in his day,
etc. It is interesting to find that he includes the
Christians among the Jewish sects. In the opinion of
many Kairites, Jesus was a righteous and devout
man, but Pauline Christianity was sheer heresy
and a denial of God.5 The subjects of the
second section are the necessity of investigation and
speculation with reference to the injunctions of the
Torah, and the vindication of the proof ex
ratio et analogia.6 In the third section Kūrīšīnī
refutes the views of the sectaries, and in the fourth
inquiries regarding the Sabbath and the knowledge of
the Law. He was likewise the first to direct a
searching criticism upon the anthropomorphism of the
Haggālā, and to formulate a canon to deter-
mine when the requirements of the Law were to
be interpreted according to the inner, i.e., the
figurative, sense. His position in these matters
was influenced by his contemporary Saʿādya, whose
opinions he also cites and refutes in other writings.7
In his views of the religious Law his attitude is one
of independence.

Sec. II, Studies in Judaic Literature, p. 249.
Hebrew a bitter and vulgar rhymed epistle against oral doctrine in general, and Sa'adya in particular; to which was added one portion of his Lamentations has been printed. 1 Said b. Masliha (end of the 10th cent.) was a man of kindred mould with Solomon, but superior to him in many respects. He too wrote Biblical commentaries in Arabic, which likewise composed a violent epistle against Jacob b. Samuel; but his horizon was wider than Solomon's, and he was a wonderful master of diction. In his epistle we find interesting data regarding the Karaites of Jerusalem, their ascetic manner of life, and their successful propaganda among the Rabbinists. These data he repeats in his Hebrew introduction to a 'Book of Commandments' which he wrote in Arabic; 2 in that work he urges his co-religionists to settle in the Holy City. He was likewise the first Karaita to pronounce canons for the determination of religious law. They are four in number: (1) reason or speculation (סנה דאכ), (2) the actual words of Scripture (כתוב בתר초), (3) analogy (שנין = Arab. حاسِد) [see above], and (4) the consensus of the ancients (עם = Arab. חכמים). He was also famous as the author of two commentaries upon the weekly Haga'a, the Alfa and the Eshkol ha-Kofa, 3 [see 168, 2]. Joseph b. Noah (c. 1000) seems to have played a great role among the Karaites scholars of Jerusalem. According to Ibn al-Hitti, 4 his seminary was always attended by seventy learned men—a doubtable and inflated figure, assimilated to the membership of the ancient Sahebdin. Of Sahl's four canon Joseph rejected the third, analogy, and he had a controversy with him on the question of fixing leap-year by the coming of spring (Abba). He wrote a commentary to the Pentateuch, which his pupil Abil Faraj Haftun b. Abil Faraj recast in an abbreviated form; 5 and also a work on grammar, dedicated to his master by the same pupil. This Abil Faraj was himself a distinguished grammarians, lexicographer, and Biblical exegete, and is referred to by Rabbinists writers as the 'grammarians of Jerusalem'. He was the author of a grammatical treatise, Kitab al-Muhammatamî (completed in August 1026), in eight books, of which the 7th and 8th are of special interest, the former being the nature of a lexic, giving the various meanings of each root; the latter the fresh significations it acquires by the transposition of its radicals, while the latter deals with Biblical Aramaic and its affinity to Hebrew. 6 He also wrote, in Arabic, Kitab al-Kafi, a grammatical work, Sharh al-AfAli, a book giving definitions of Biblical words, and a commentary to the Pentateuch.

A still more important scholar of the period was Joseph b. Abraham al-Manji (Bab ha-Kalil, euphemism for 'the Blind'), another pupil of Joseph b. Noah, and at once the first and the most renowned philosophical theologian among the Karaites. Even at an early date he was conformed with Kirkhinait, or else regarded as anterior to him; but it is now certain that he flourished in the first half of the 11th cent., and died probably c. 1040. 7 As a philisopher, al-Manji was dominated by the influence of the Mu'tazilite kalám, as was indeed the case with almost all the Karaita philosophers; 8 hence Jacob b. Samuel was referred to by Arabic writers as al-`alá`d al-wa`it-tawābīd, i.e. the people of the rightousness (i.e. equity) and the unity (of God). 9 Thus he too eulogizes five principles of the confession of the divine unity: (1) the necessary assumption of atoms and accidents, (2) the necessary assumption of a creator, (3) the necessary assumption of divine attributes, (4) the necessary rejection of attributes falsely ascribed to God, and (5) the assumption of the unity notwithstanding the plurality of His attributes—the attributes being elements of His nature, and not entities that exist outside of Him. Al-Basir was a believer in free will (�אַֽיָּד), and an opponent of `Anan's doctrine of metempsychosis though he uphold its as true in the case of the 'Abiyah—repudiating an idea current in many Mu'tazilite groups, viz. that God's dealings with the children and animals to which He allot's suffering are justified by that doctrine. He was likewise opposed to the theory of Benjami al-Nahawandi (see above). He expounded his philosophical views in two Arabic treatises. His chief work is the Kitab al-Mukhtasir, 10 the one surviving pattern of the whole Mu'tazilite kalâm; it might quite as well have been composed by a Muslim—just as in the introduction he maintains that revelation by the prophecets must necessarily be supplemented by speculative knowledge. For centuries the teaching was known only in the Hebrew translation by Tobiah b. Moses (below, 667), bearing the title Sifer ha-Nemaloth (םישר ועה), and it is only recently that certain chapters, both as a part of the original and of the translation, have seen the light in the form of graduation theses. A compendium of the al-Mukhtasir is found in the Kitab al-Tamgish or al-Munquz, 11 translated into Hebrew by Tobiah b. Moses as Mahzomoth Pethi (פתי סנה פאזו). 12 An analysis of both works has been published by P. F. Frankl. 13 The al-Mukhtasir exercised a vast influence upon the scholars of the age, and even the last Karaita philosophical theologian, the Aaron b. Elijah to be dealt with below (1364), owes everything to it. Al-Basir was likewise the author of other philosophical treatises, 14 for the most part now lost. He occupied an influential position at the court of the Law. He was the first to protest against the rigorous Karaita regulations concerning marriage, the so-called rikkub theory (above, p. 669). In A.B. 438 (A.D. 1035-37) he wrote in Arabic a 'Book of Commandments', entitled Kitab al-Isbair, sections of which, treating of legacies and ceremonial purity, are found in MS in the British Museum. It was no doubt from this work that his successors drew their numerous references to his views of religious law.

Joshua b. Judah (Arab. Abil Farah Par'kan b. Assad) was a pupil of al-Basir, and, like his teacher, a philisopher and a teacher of the Law, while he was also an exegete. He executed an Arabic translation of the Pentateuch, and composed two commentaries on it, one of which (al-Mas) was an exaxplanative work, the other (al-Manji) an epitome. 15 His work as an exegete was greatly esteemed by Abraham b. Ezra. As a philisopher 16

sophisticated theologian, he wrote philosophical homilies on Genesis and numerous dogmatic treatises, which survive, however, only in Hebrew translations. His philosophical position is exactly that of his master, and he was as much an exponent of the Mu'tazilite kalām. The only extant memorial of his activity as a teacher of the Law is a treatise on inexact in a Hebrew translation, Siffer ha-Kōfer, written in 750, in which he delivered a more decisive blow to the rikkab theory than even his teacher had done, with the result that it was completely discredited. The outstanding achievement of Joshua, however, consists in his having trained a group of pupils who carried the Karaites teaching to European countries.

Joshua was the last representative of Karait learning in Palestine, and after his day, i.e. from the last third of the 11th cent., the intellectual activity of Karaism disappears from the Holy Land, while the period of spontaneous and creative vigour comes likewise to an end. This collapse was probably due to political occurrences, viz. the capture of Jerusalem by the Seljuks in a.D. 1071, and by the Crusaders in a.D. 1099. It is recorded that a large number of the Karaites—or all of them—were, together with the Jews, forced into a synagogue by the army of the Crusaders, and there burned to death. In 1642 the Karaites traveller, Samuel b. David, found in Jerusalem only twenty-seven Karaites, occupying fifteen houses, while it is said that in 1749 there was not a single adherent of the sect in the Holy City. In 1912 the Karaites in Jerusalem numbered eighteen persons (five males and thirteen females), belonging to five families and living in three houses (in one of which was the synagogue). The centre of Karait life was now transferred to Eastern Europe, and this brings us to the beginning of a new period.

2. The Byzantine-Turkish period (12th-16th cent.).—This may be divided into three shorter stages, viz. (a) a time during which the Karaites, by translating the works of the Arabic period into Hebrew and gathering up the results of the past, simply maintained and consolidated what had already been attained (close of the 11th cent. and the 12th cent.) (b) a time of advance and quasi-reinvasions (15th-16th cent.); and (c) a time of complete decadence (16th cent.). The outstanding feature of the first of these three sub-periods was its activity in the work of translation. The Younger, who was in large numbers from Byzantium to study under Joshua at Jerusalem, and there learned Arabic. They then returned home, mainly to Constantinople, where in a relatively short time they translated all the more important Karait works that had been written in Arabic—a feat which Frankl characterizes as an achievement so great in respect of mere mass that we cannot wonder if its quality should be poor. Its defects of quality were due to the translators' inadequate grasp of the Arabic language. The translators were mostly of Byzantine origin, and were familiar with Byzantine culture; and in their translations, besides Arabic works which were taken over unchanged, we find large numbers of Greek words, and these, again, as we might expect, were subjected to great corruption by the copyists. The influence of the translations was nevertheless very great, as they alone, and not the originals, were studied. The translator was Tobiah b. Moses, who is sometimes indeed called Ha-Ma'atik (the translator). Being in a manner a pioneer, he had to construct a terminology, and this is harshly criticized in after years. Some of the Karaites regard all translations as those of the writings of al-Baqir and his teacher Joshua, and, while sometimes added to the matter of these works, he also now and then condensed it. Of Tobiah's own works the best known is his very full commentary on the Pentateuch, entitled Oẓar Nehamād, which, however, is for the most part a compilation from David b. Hezki and Japheth b. 'Alî. He also enjoyed a considerable reputation as a teacher of the Law, and reference is often made to his dictum that every tradition accepted by the Karaites is suggested in Holy Scripture, and that it was mere luck of understanding to assert that there were Karait traditions which had not the support of Scripture. Another greatly valued translator was Jacob b. Simeon; the names of the rest are unknown. Other Rabbis work of the 13th and 14th century found in his predecessors, especially from Japheth b. 'Alî.

This sub-period closes with the publication of one of the most notable productions of Karait literature, the Eshkol ha-Kōfer, written by Jacob b. Elijah Hadassi in 1148. Jost compares it to a sea, into which flow all the streams of Karait learning. Even on its formal side the work is remarkable. It consists of sections, written in a rhymed prose, and all its strophes, which, with few exceptions, are acrostically arranged under the Hebrew alphabet in the direct and inverse order (i.e. תגנ and גנ ת), end in י. This—so to say nothing of the affected language and the cumbersome diction—gives the work a character of tedious monotony. Moreover, Hadassi tabulates all the injunctions of the Law and his other data under the Ten Commandments of the Decalogue; and here, too, he has to resort to all manner of artifices. He claims to be no more than a compiler, and frequently emphasizes the fact (especially at the end of the twenty-third repetition of the alphabet), and, in point of fact, the Eshkol ha-Kōfer takes the form of an encyclopedia in which are accumulated the results of all previous Karait learning. In his attitude towards the Rabbis he is most spiteful and savage, and may in this respect be matched with Solomon b. Jeroham and Salhi b. Maḳlaṭ. He fastens, above all, upon the first, second, and ninth Commandments of the Decalogue, and reproaches the Talmudists for having in their grossly sensuous Haggadā obscured the unity of God, conjoined Him with other beings, and made false representations of the Biblical personages. He was also well versed in secular science, philosophy, and dogmatic theology. His views are dominated by Mu'tazilite influence;
but his information in the sphere of secular science is drawn in part from Byzantine sources, as appears from the numerous Greek glosses to his works. Nevertheless, such glosses are sometimes omitted and sometimes distorted in the published edition.1 Hadassai is likewise the first Karaita writer who formulated articles of faith. These are ten in number—to correspond, no doubt, with the Ten Commandments—(1) the creation of the world from nothing; (2) the creator is God; (3) God is one, formless, and different from all other beings; (4) God sent Moses and the Prophets; (5) through Moses, God revealed the Torah, which in its wording is of itself sufficient, and does not require to be supplemented by oral teaching (the specifically Karaita article); (6) the Torah must be learned by every Israelite in the original Hebrew; (7) God appointed a sanctuary; (8) the resurrection of the dead; (9) reward and punishment in the future life; and (10) the redemption of Israel by a Messiah of the posterity of David. These articles were set forth in a book reversed; as a later writer, Aaron b. Elijah,2 proudly affirmed, was composed twenty-nine years before the Sffer ha-Maddol of Maimonides. About this time, as we read, there were Karaites also in the western part of the province of Spaine. A certain al-Tajashi, a Jew of Seville, then at Jerusalem, where he embraced Karaimism and became a pupil of Joshua b. Judah, and then returned to his native place as a propagandist of his new faith. After his death his work was taken up by his wife, designated Mu'allima (the teacher) by her adherents, who seem to have been faithfully. By the intervention of Rabbinic authorities at the Spanish court, however, the Karaites in Spain were subjected to persecution, and it is stated that from 1178 they were completely lost sight of. There is evidence to show, nevertheless, that there were Karaites in Castile as late as the 15th century.5 In other West European countries the sect was known only by report, although a occasional Rabbinist scholar, as, e.g., Meshullam b. Kalonymus,6 thought it necessary to deal critically with its teachings.

In the East, and especially in Egypt, the Karaites at this time occupied a position of great respect, and perhaps used it domineeringly. In Egypt they numbered amongst them many physicians of eminence, as, for instance, Abul Bara' of Timgad, and Sa'id al-Din Abu'l Fadl, Mulla Abu-l Fadl, the author of several works. Here, too, lived the earliest and the only outstanding Karaita poet, Moses b. Abraham Dafa', whose un-critical historians assigned to the 11th cent., and regarded as the model of all the greater Hebrew poets, Gabirol, the two Ibn Ezra's, and Judah Halevi, while, as a matter of fact, the relation was exactly reversed.2

5 A book which was prepared to do so (cf. MGWJ xiii. 250); but it is a question whether we can believe him.

As time went on, the Karaites came to be more and more affected by the influence of Rabbinism and the Rabbinical literature, and their power gradually waned. The Rabbinical intellectual gifts of Spain carried Judaism into the new world, and the Karaites were quite unable to cope. In Egypt their prestige was shattered by the advent of Maimonides. The latter certainly dealt gently with them, and the Karaitic usages and Karaita interpretations of the Law which had crept into Rabbinic communities were rooted out. From the end of the 13th cent. the vitality of Karaimism was all but completely spent. Attempts were made to revive it; strong personalities arose within its pale; there were conciliatory approaches to the Rabbinists; but the sect was no longer truly alive. Its unyielding insistence upon adherence to the past shut it off from the vitalizing springs of progress and doomed it to a fatal atrophy, and from this point onwards its fortunes require but brief narration.

At the beginning of the second portion of the Byzantian-Turkish period, i.e. in the opening years of the 13th cent., we hear with growing frequency of Karaites living in the land of Kedar (i.e. of the Tatares)—the Crimea. Why they came there, and whence they came it is not easy to answer. At a later date an attempt was made to show that they had migrated thither, as one might say, in pre-historic times; but this is a mere falsification of history, see below, § 5. It is possible that the Chazars who had been converted to Judaism had intermarried with the Karaites, and that this might explain the presence in the Crimea of a body of people exhibiting a somewhat impure Jewish type of religion. Our earliest information regarding this body is provided by the traveller Pethabyla of Regensburg (end of 13th cent.). He states that there were heresies in the land of Kedar who did not follow tradition—which of itself, indeed, they had never heard—who were accustomed to sit in the dark on Friday evenings, whose prayers consisted only of psalms, etc. Further, Solchait in the Crimea was the native place of the Aaron ben Joseph or Aaron the First (c. 1290-1320) who removed to Constantinople—one of the most sympathetic minds that the Karaites ever produced. He was a doctor by profession, but he wrote in (1294) a commentary on the 42 Laws of the Midrash and Sa'id al-Din Abu'l Fadl, b. Sulaiman (perhaps a son of the foregoing).6 It was in Egypt also that their princes, the descendents of Anan, reside. The book attributed to the prince is Solomon b. David (Arab. al-Ras' ibn Abu'l Fadl), the author of several works. Here, too, lived the earliest and the only outstanding Karaita poet, Moses b. Abraham Dafa', whose un-critical historians assigned to the 11th cent., and regarded as the model of all the greater Hebrew poets, Gabirol, the two Ibn Ezra's, and Judah Halevi, while, as a matter of fact, the relation was exactly reversed.2

2 The greater part of it was printed at Eupatoria in 1655.
3 Sprecher, ed. op. cit. p. 50.
4 In addition to the writings mentioned, he composed a small grammatical treatise entitled Kriton. A Krizza of Landesverzeichnisse, p. 73 was also written about this time. Nimra ibn Albo'a, who became a Muslim convert in 1153, says that some of the Karaites of Palestine were preparing to do so (cf. MGWJ xii. 250); but it is a question whether we can believe him.

5 The greater part of it was printed at Eupatoria in 1655.

liturgical poets. It may be remarked here that the Karaites adopted many of their synagogue songs from the Rabbinists, and that in other parts of their liturgy as well they could not evade the influence of the later. Moreover, in different countries they instituted different ritual forms.\footnote{1}

A still more versatile, more fertile, and more learned writer was Aaron b. Elijah or Aaron the Second (Ephraim abbrev. 1380), who was at once a philosophical theologian, a teacher of the Law, and an exegete, and is designated by his co-religionists 'the Karaite Maimonides.' He expanded his philosophical and theological views in his De ha kol, \footnote{2} in which he is chiefly concerned to guard the Munzilite kulan against the Aristotelian teachings which had found their way into Judaism largely through the writings of Maimonides. A more significant work is his exposition of the religious law, the Gemar Eden, \footnote{3} in which he lays down the principle that belief in the unity and the other attributes of God, as also in His government of the world, is the final aim of the Law. In his commentary to the Pentateuch, Ketar Tora, \footnote{4} the influence of Ibn Ezra is clearly traceable.

In the early years of the Turkish domination the Karaites were frequently persecuted by the government; but, as of old, their relations with the Rabbinists became quite friendly, Mutual forbearance and tolerance helped to bring about the result. Elijah Mizrahi of Constantinople (c. 1455–1555), one of the greatest Rabbinical scholars in Turkey—in opposition to Moses Kapsali, the chief Rabbi of Turkey—allowed the Karaites to be instructed even in rabbinical traditions. Many Karaites sat as scholars at the feet of Enoch Sapaq and his pupil Mercedi Komito, a man of universal culture (middle of the 15th cent.), and received instruction in the philosophic, decisions, and general sciences. \footnote{5} Don Gedaliah, who had come to Constantinople from Lisbon (\footnote{6} before 1487), tried, with the acquiescence of the Karaites, to bring about a reunion with the Rabbinists. One of the pupils of Komito was Elijah b. Moses Bashiyazi, the most eminent Karaite scholar of the day, who resided first in Adrianople and then in Constantinople, and whom the Karaites call 'the last Decisor.' His most important work is his treatise on the Law, Adderet Eliazah, a monument of clear expression and arrangement. He favors, on the whole, the more rigorous application of the Law, and he contended that the ordinances require to be fulfilled only in accordance with human capacity. He was a man of the most varied culture, and was, e.g., an eager student of mathematics. He owed much to the writings of Maimonides. He died in 1469, leaving his Adderet unfinished; it was continued—though still left incomplete—by his brother-in-law and pupil, Caleb Afendopo (born 1455; \footnote{7} after 1509). He was a polymath, and his writings embrace treatises on jurisprudence, philosophy, mathematics, and astronomy, to say nothing of his poems, both secular and liturgical—over twenty works in all.

The other Karaites writers of Turkey during this and the middle division of the period under consideration (15th–17th cent.) are generally of little importance, being almost wholly wanting in creative power, and they merit no particular notice.

An exception should perhaps be made of Moses Bashiyazi, \footnote{8} a great-grandson of Elijah b. Moses, who was a youthful prodigy. He knew Arabic, Greek, and Spanish; he travelled widely in the East, where he became acquainted with the writings of the earlier Karaites; he had a leaning towards historical investigation, and wrote a number of works, of which only one, a treatise on incest, has been printed. \footnote{9} He died, probably in 1555, at the age of twenty.

The East was at this time the nursery of many other Karaites writers, but for the development of the sect as a whole it had no further significance. We are told that, through the efforts of Abraham Maimon II., a great-grandson of Maimonides, a fairly large Karaite community in Egypt was converted to Rabbinist teaching. \footnote{10} Cairo was the centre of nearly all the more eminent Karaites writers of the period, viz., Japheth b. Abraham (probably the middle of the 18th cent.), author of a medical work in Arabic and a refutation of the Rabbinists; \footnote{11} Israel ha-Ma'arab (first half of 18th cent.), the writer of numerous works in Arabic and Hebrew, including one (originally in Arabic, translated into Hebrew) treating of regulations for the slaughter of animals (1806; printed, Vienna, 1850), as also of many hymns for use in the synagogue; he was regius authority in marriage law, and was the first to assert that the intercalary cycle of nineteen years was instituted by those who returned from the Exile ("the good age, see above"); \footnote{12} Japheth b. Sagi, a pupil of Samuel b. Moses al-Maghribi, a physician, and the writer of another Book of Commandments entitled Kitab al-Marahid, which is a model of perspicuity but shows no independence. \footnote{13} Of writers not resident in Cairo mention may be made of Ibn al-Hitti (first half of 18th cent.), who wrote a valuable chronicle of Karaites scholars.

The Taurod–Lithuanian period (17th and 18th centuries).—Reference was made above to the presence of Karaites in the south of Russia, especially in Taurida (the Crimea), as early as the third quarter of the 13th century. They increased in number during the 13th century. Towards the close of the 14th century, the Grand Duke Witold of Lithuania carried away from the Crimea, among other Tatar exiles that the division of the time are more fabrications. Towards the end of the 15th cent., however, we hear of a correspondence between the Karaites in Lithuania and Treki and Elijah Bashiyazi in Constantinople, who recommended them to send him two pupils.

In the Crimea, where under the Tatar sway there was no intellectual life, the Karaites, too, failed to develop one; but in Lithuania, where the Rabbinists founded strong Talmudic schools in the latter half of the 16th century, they exerted themselves to cultivate the

\footnote{12}{Eupatoria, 1000.}
\footnote{13}{Eupatoria, 1055–67.}
higher interests. Here about this time arose one very distinguished and interesting writer, viz. Isaac b. Solomon Delmedigo (1330-34), the author of an unfinished anti-Christian pamphlet called Ḥizzon Emanūel ('The Confirmation of Faith'). The book reveals a wide knowledge of Christian literature; but its author had also engaged in oral discussions with the heads of the Christian Reformers, who were at that time very numerous in Poland. It shows no distinctly Karaitic colouring, and the religious beliefs of its writer had to be elicited by literary criticism and by mathematical and astronomical arguments. Delmedigo responded, to begin with, in an epistle entitled Ḥizzon Emanūel, which contains also a sketch of the history of Hebrew literature; and subsequently in a series of mathematical writings. Zerah was likewise the author of a long list of liturgical poems.

The dreading massacres of the Jews at the hands of the Cossacks in 1648-49, and the combinations which followed in Poland, affected the Karaites also, whose destinies here, as generally elsewhere, were closely bound up with those of the Rabbinists. Indeed, the two religious groups were now, as a rule, on good terms with each other. At one of the so-called Synods of the Four Lands endeavours were made to unite the two groups, but were rendered vain by a capricious Rabbi who appealed to a Talmudic precedent.

The example of the Lithuanian Karaites acted as an incentive to those of the Crimean, who sustained a constant intercourse with the former, and, indeed, had already a link of connection with them in the Tatar language used colloquially by both. The Crimean Khans varied in their attitude towards them; they were often quite friendly, and they entrusted them with the coinage of their money. But the Crimean Karaites had little to do with the intellectual achievements of their northern brethren. In this period their only writer deserving of notice was Elijah b. Baruch Yerushalami (latter half of 17th cent.; originally from Constantinople), the author of various works; he also transcribed certain writings of the earlier Karaites scholars, principally such as were of an anti-Rabbinic tendency, to which he added bitter invectives of his own. Three Karaites who travelled from the Crimea to Palestine wrote interesting reports of their observations (1841-42, 1854-55, 1783-86), in which they gave a varied mass of statistical data. A notable original writer appears in Abraham b. Josiah Yerushalami, of Chu'rut-Kale, whose productions include one entitled Eẓ neve'ah Oẓam, dating from 1712 (ed. Eupatorias, 1840), and remarkable for its brevity of outlook, its extensive knowledge of Rabbinical

literature, its lenient attitude towards the Rabbinists, and its veneration for Maimonides.

The Karaites of the Crimea, however, poor as are their achievements in this period, are certainly superior to those of the Orient. Of the latter, mention should perhaps be made of Jacob Iskandarani, the Hakam of the Karaites in Cairo, who met the above-mentioned Delmedigo there in 1616; and of the family of Pirzis in Damascus, of whom the most eminent was the physician, Daniel b. Moses (i. 1665-1700).

From the middle of the 17th cent. Christian scholars began to take an interest in the Karaites. Some of them made visits to the centres of the sect, and especially to Troki, and opened a correspondence with its members. Of these Christian scholars we may name Johann Rittengel, who visited Troki in 1641, and Gustav Peringer, a professor in Upsala, who, at the instance of Charles x. of Sweden, travelled to Lithuania in 1690, and in the following year addressed to Ludolf his Epistolae de Karaitorum rebus in Lithuania. Reference should also be made to Johann Pfünder of Riiga, Lewin Warner, and his valuable collection of Karaita MSS in Leyden, Jacob Trigland, of Leyden, and his Dictionarium Karavorum (Delit., 1703), and Johanna C. Wolf, of Hamburg, and his Notitia Karavorum (Hamburg, 1721). These scholars were instrumental in arousing the historical sense among the Polish Karaites, though it must be confessed that the Karaites frequently tamper with the facts, sometimes in ignorance but sometimes of set purpose, and that they represent their sect as being the genuine Jews, and the Rabbinists as the seceders, while they deny all contact with the old Karaite literature. The earliest of these Karaita historians were Solomon b. Aaron, of Troki (1. 1680-1716), and his relative, Mordecai b. Nisan, of Kokov, near Lvov, who published a treatise on the origin and historical development of Karaitism, in addition to several other works, and numerous liturgical songs in the Hebrew and Tatar languages, wrote, at Pfünder's request, his Appiryon Zikhr, a short treatise on the differences of the Karaites from the Rabbinists, and the main legal differences between the two parties. Mordecai wrote, in answer to the questions put by Trigland, his Döö Mörökei, and also in response to the inquiry of Charles x. a short work called Döö Mörökei. In the composition of his Döö Mörökei he had the assistance of his relative, Joseph b. Samuel, known as Joseph ha-Masshiri, who had been a pupil of his father. He was a native of Lithuania, but removed about 1700 to Halicz in Galicia, and did much for the revival of an intellectual life among the Karaites there, who had been living outside the range of general culture. Of his many works, one in particular, Perit Yësëf, treating of grammar, is highly praised. His descendants were all leading figures among the Karaites of Halicz till well on in the following period.

The most prolific writer of the Taurid-Lithuanian period is Simha Isaac b. Moses. He belonged originally to Lutsk, but removed c. 1750 to Chufut-Kale in the Crimea, where he died in 1796. He was well versed in the writings of the Rabbinists, and held the Kabbalah in high honour. He wrote in all twenty-four works, of which only two have appeared in print, viz. the Or ha-Musken, already mentioned as a companion of the work of Aaron b. Elijah, and a historical treatise entitled Orach Saddatim, in which he gives the Karaite conception of the origin and historical development of Karaitism in its form.

1 First edited in J. C. Wagenseil's Tola Igne Satanat, Aldorf, 1802; it was translated into Yiddish, Spanish, German, English, and Russian.

2 Ed. in Isaac b. Solomon's Ḥizzon Pinnat Yibrut, Eupatorias, 1834, and in A. Gellor's Molo Hafignym, Breslin, 1840.

3 Or. 111; Ha-mahzor, eat. 368. At the top.

4 Yerushalami" denotes a Karaita who had made a pilgrimage to the Holy Land, and is an imitation of the Arabic Ḥajj.

5 Ed. Gurei, Qa'ye Karte, p. 1.
KARAITES

This work also contains the first bibliography of the sect. Simha Isaac's migration to the Crimea was no mere passing event. The Crimea now became the centre of Karaitism and there, in Chufut-Kale, the first Karaitse printing-press was established (1726), which published two political occurrences which served at once to draw the Karaites out of their isolation and to link them together by a common bond, viz., the annexation by Russia of the two districts in which they lived, and which were most numerous—the Crimea in 1783 and Lithuania in 1792. With these two events begins the final period of Karaitse history.

5. The modern period (19th cent.—the present day).—From the outset the Russian Government treated the Karaites with good-will. With this attitude there was associated, no doubt, a tendency to play them off against the Rabbinists, the adherents of the Talmud. The last representative of the Karaites at the court of the Khan in the Crimea, Benjamin b. Samuel Aga († 1824), continued to hold the position under Russian rule, though not officially. In 1785, Catherine II. had relieved them of the double tax imposed upon Jews, and in 1827 they were exempted from military service by Nicholas I. They now enjoyed the protection of the law, and they secured what might be called an internal constitution, according to which a non-spiritual official called the Hakam—who represents them publicly—presides over them with the assistance of a spiritual board, controlling the Karaites of the Crimea and the South of Russia. This board has its headquarters in Eupatoria; the first Hakam was the influential and energetic Simha Bobkovich (1794—1835).

The more eminent Karaites scholars of the first half of the 19th cent. were the following: Isaac b. Solomon (1755—1830), of Chufut-Kale, was the reformer of the Karaitic calendar (cf. art. CALENDARS [Jewish], vol. iii. p. 120), his views on that subject being set forth in his Šor ha-Dinšna (printed at Zhitomir, 1872); he was also the author of a work on the ten Karaitse articles of faith, entitled Iggeret Pinmat Yezira (Eupatoria, 1834; Zhitomir, 1873), numerous songs for use in the synagogue, etc. Joseph Solomon b. Moses Intotski, suraoned "Nefesh" (1770—1844), was a native of Kokiv, and lived for a long time among the Karaites; a work published in 1862 to Eupatoria; his most outstanding work is his supplementary commentary to the Miḥdrār of Aaron b. Joseph, issued as Tiferet Kasef (Eupatoria, 1835). David b. Joshua Bobkovich († 1855), a great-grandson of Mordecai b. Nisan, was an opponent of the foregoing, and among other works wrote a theological treatise called Semah Dovnai (St. Petersburg, 1897). Mordecai b. Joseph Sultanski (b. 1850—70), who had a reflective cast of mind, was the author of various grammatical, historical, and theological works. One of his pupils was the kindly-natured Solomon b. Abraham Bein (b. 1817; † before 1890), Hakam in Chufut-Kale and afterwards in Odessa, who was the first to introduce secular subjects into Karaitse schools; he wrote a little book on the antiquities of Chufut-Kale (i.e. the Kerem). A range of works the place formerly known as Kala's came to be called). All these works, however, were eclipsed by Abraham b. Samuel Firkovich (b. Lutsk, 1789; † Chufut-Kale, 1874), with whom begins a new epoch not only in Karaitse historiography, but also in the investigation of Hebrew history and literature. Firkovich's literary career began with the composition of supplementary commentaries and additions to Aaron b. Joseph's commentary to the Pentateuch (Eupatoria, 1836), and of a vigorous anti-Rabbinic work named Mosaḥ e-Miṭtah (do. 1838), which is written in rhyme and arranged in the order of the Ten Commandments, after the manner of the Eeḥōl ha-Kōfer of Hadassah described above. At the instance of the above-mentioned Hakam, Bobkovich, he made a pilgrimage to the Holy Land and the Hebr. countries, from 1839 onwards, to Canea, Egypt, Palestine, and other countries, with the object of discovering archaeological materials which might serve to demonstrate the authenticity of the Karaites. It seemed at first sight as if he had perfectly succeeded in his purpose. Both in the Crimea and elsewhere he discovered epigraphs in Torah rolls and other writings, tomestones, and the like, in which the most remarkable data were treasured up. These memorials included the famous inscription of Judah b. Moses ha-Nakad, dating from A.D. 604, and that of Abraham b. Simha, from A.D. 908; the tomestones of Isaac Sangari, who is said to have converted the king of the Chazars to Judaism, and Shabathai Donnolo, a Jewish scholar of Southern Italy in the 10th cent., etc. Firkovich contended that these various discoveries sufficed to prove that there were Jews in the Crimea as early as the 6th cent. B.C., having migrated thither in the reign of Cambyses, king of Persia; that the Karaites had persuaded the Chazars to embrace Judaism, and were the founders of the Massora, of Hebrew grammar, of the Biblical sciences, etc. Incredible as some of these inferences must appear, they were nevertheless believed, and were even incorporated in histories of the Jews. Firkovich's results were accepted, in particular, by a number of eminent Jewish scholars—Finsler, Fürst, Graetz, and Chevillon. Literary criticism, however, entered its protest, and pointed to various clumsy forgeries; we need only recall the strictures of Rapoport, Schorr, Steinhaider, Geiger (who vacillated, however), Neubauer, Strack, H. F. Frankl, and, above all, Harkavy, who showed that the above-mentioned data could not possibly serve as historical evidence. Firkovich, two years before his death, summed up the result of his discoveries in a work entitled Aḥem Zikhḳaron (Wilms, 1872), in which the epigraphs in question are reproduced. His finds were often assailed by mere hypercriticism, and facts and dates were rejected which in many cases were proved and accepted in Hebrew and Jewish literature, as was the case, e.g., with regard to the existence of many ancient Karaitse scholars and their works. An attempt to defend the genuineness of the suspected tomestones was made by a living Karaitse writer,1 and the final solution of many of the problems involved must be left to the future.2 When all is said, however, the work done by Firkovich was of an eminently serviceable kind. On his journeys, besides the inscriptions referred to, he discovered, and thus restored to science, numerous Rabbinical and Karaitse books that had been regarded as lost. He was also instrumental in creating an interest in the scientific investigation of Karaism, and to some extent supplied the materials for it.

The death of Firkovich ushers in a period of complete decadence among the Karaites that time they have produced not one single scholar of repute, but at best a few litterateurs, as, e.g., Samuel Pigit (1849—1911), Hakam in Elatynomoglo, who published a volume of some 800 pages, etc., bearing the title Iggeret Nafša (St. Petersburg, 1884), and a collection of Tatar popular works that still remained unprinted or had become rare, and Firkovich was one of the most zealous supporters of its efforts. To this society we owe the printed ed. of Karaitse works (cf. Geiger, Jüdisches Zeitschrift, ii. 144 ff.)

1 Judah Kokiv, li prophets uchipnei (St. Petersburg, 1910).
tales, Daður Daðirr (Warshaw, 1904); Elijah Kazaz (1832–1912), a man of wide and varied culture, who, inter alia, translated the works of several Pseudo-Dionysius and other early Christian philosophers into Hebrew; and the Judah Kokov, last mentioned, who, however, usually writes in Russian. Among the Karaites, indeed, the Russian language has gradually disappeared the Tataric.

In 1911 a number of Karaites students at the University of Moscow tried to initiate what might be termed a Neo-Karaite movement, and founded a Karaita monthly in the Russian language and bearing the title, Caraita, on 1 December, 1911, they have failed to find an eligible successor, and are thus in a most critical situation.

In 1897 the Karaites in Russia numbered 12,594–6572 males and 6252 females (ib. March 16 and April 16, 1911). Outside Russia, the sect may perhaps number some 3000 souls in all, living in Halicz (in Galicia), Constantinople, Calto, Jeru-
salem, and Damascus. Its one community of any size is that of Cairo. The future of Karaimism—the only Jewish sect in the proper sense of the term—is thus a rather gloomy one. Its vital element all through, its literature, and finally was exhausted by the death of its last great champion, Abraham Firkovitch.

III. CANON AND THE CANONIZATION OF THE MOVEMENT.—Harkavy, Zeitschrift für jüdische Geschichte, etc., 1910, where, e.g., Rapoport, in Zeitschrift für jüdische Geschichte, etc., 1910, p. 182, 189; and his articles in the Zeitung für jüdische Geschichte und Literatur, ii. (Berlin, 1891), 152–155. On the whole, the movement was, as it has been called, "d'Anon ben David," in J.E. 1936; 3, 1, 3–5. C. P. Poznanski, "Die Karaiten und der Zion," in the Zeitschrift für jüdische Geschichte und Literatur, ii. (Berlin, 1891), 152–155.

IV. WORKS DEALING WITH OTHER EMERITAE LITERAE,—These have not mostly been cited in the course of the article; of further, the relevant arts. By Poznanski, "Die Karaiten und der Zion," in the Zeitschrift für jüdische Geschichte und Literatur, ii. (Berlin, 1891), 152–155.

cage. This could never be opened, except with the consent of the head of his order, who kept the key.

KARAMNÁŚA, KARMNÁŚA (Skr. Karmanáśa, ‘that which destroys the merit of works’).—The accrued river of Hindu mythology, which rises in the hills behind the Râjâl, Bengal; Iat. 9° 26’ N., Long. 83° 20’ E.; forming in part of its course the boundary between the provinces of Bengal and the United Provinces of Agra and Oudh, and finally, after a course of about 146 miles, joining the Ganges. It has been identified with the Megasthenes (J. W. McCrellie, Ancient India as described by Megasthenes and Arrian, Calcutta, 1877, p. 136 f.). On the borders of the District of Mirzapur it hurrs itself over a sandstone precipice, forming, under the name of Châmpâpatra, ‘the stone-after’, one of the finest waterfalls in India.

In Hindu mythology the stream is connected with the legend of Sakayvaras or Tribhuvana, in M. Martin, Eastern India, do. 1909, i. 278–277; F. Legard, in M. Martin, Eastern India, do. 1853, i. 269 ff.; J. Dowson, Classical Dictionary, do. 1879, p. 236 f.; J. T. Chudde, Travels of a Hindu, do. 1858, i. 234 f.; Memoirs of the Rev. J. R. Oldham, J. Wright, and D. Enskine, do. 1854; Ainslie-Atharai, H. J. Leyden, and E. S. Jarrett, Calcutta, 1858, p. 191; 117, 137 (Belcher).

W. CROWE.

KARARIS. A sect of Indian Sâktas.(q.v.). The origin of the name is unknown. It may be an Indianized form of the Persian gurâr, ‘firm’, ‘established’, in the sense of ‘stanch’, or a derivative of the Skr. karâla, ‘terrible’, the Karâris being worshipers of Devi in her terrific form. According to Wilson, these Karâris are representatives of the Aghareghas and Kâpâlikas, who in former times sacrificed human beings to Kali, Chânana, Chinnamastâ, and other hideous personifications of the dakri of Siva. The modern Karâris inflict upon themselves bodily tortures, piercing the flesh with hooks or spits, running sharp-pointed instruments through the tongue and cheeks, gashing themselves with fire, lying upon beds with sharp-pointed spikes. This is usually done to extort money rather than for devotion.

Literature.—For the general question of this self-inflicted torture see J. A. Dubois, Hindu Manuscripts, Customs, and Ceremonies, ed. H. B. Beaman, Oxford, 1809, p. 207 ff. For the Karâris see St H. W. Wilson, Religion in India, London, 1861, i. 364, and K. Raghunâthâ, in IA x. 1881, 73. G. A. Grierson.

KARENS.—See BURMA.

KARLÉ, KARLI (also known as Vilhârgâv, ‘temple-village’).—A place on the road from Bombay to Poona; lat. 18° 49’ N., long. 78° 28’ E.; famous as the site of important Buddhist caves, excavated a little before the Christian era.

It is the largest as well as the most complete chaitya cave hitherto discovered in India, and was excavated at a time when the style was in its greatest purity. In it all the architectural defects of the previous examples are removed; the pillars of the nave are quite perpendicular. The screen is ornamented with sculpture—its first appearance apparently in such a position—and the style had reached a perfected stage of development.

(G. Ferguson, Hist. of Indian and Eastern Arch., i. 187.)

The building resembles, to a very great extent, an early Christian church in its arrangement, consisting of a nave and side-aisles, terminating in an apse or semi-dome, round which the aisle is carried. Its arrangement and dimensions are similar to those of the choir of Norwich Cathedral, or of the Abbaye aux Hommes at Caen, omitting the outer aisles in the latter building.

Of the interior we can judge perfectly, and it certainly is as solemn and grand as any interior can well be, and the mode of lighting the most perfect—one undivided column of light; coming through a single opening overhead, at a very favourable angle, and falling directly on the dâgâba or principal object in the building, leaving the rest in comparative obscurity. The effect is considerably heightened by the closely-set thick columns that divide the three aisles from one another, as they suffice to prevent the boundary walls from ever being seen; and as there are no openings in the walls, the view between the pillars is practically unlimited (p. 187).

Immediately under the semi-dome of the apse is a great dâgâba, or relic-chamber, which originally was probably painted and decorated, or adorned with hangings. This is surmounted by a潮湿 (Burmese kha) with the remains of a large umbrella which originally overhung it. The cave is entered from three doorways under a gallery like our roof-logs, forming one great window through which light is admitted to the interior. Near the great cave is a Hindu shrine dedicated to Ekâvara, the goddess of the Koli tribe, which is probably older than the Buddhist excavations.

Literature.—J. Ferguson, Hist. of Indian and Eastern Arch., London, 1861; Ferguson-Burgess, The Cave Temples of India, do. 1888; L. Rousselet, India and its Native Races, do. 1888, p. 64, with illustrations; 117, 137 (Belcher).

KARMA.—i. Importance of doctrine. The Indian solution of the great riddle of the origin of suffering and the diversity of human conditions is to be found in the word karma, which, through the tânavâshâkha, has become familiar to European ears. Hindus believe that what goes on in the life of an individual is the result of the karma or deeds of a former life. The solution of the riddle of life is not material, but spiritual, as we get no answer concerning the ’very beginning’, but it is a happy one, eminently moral, and to a large extent a true one.

The doctrine of karma lies at the basis of all religious conceptions, from the Vedânta, the spiritualism, the mystical, and the ethical, and is the basis of all popular notions of the deities of the mind. It also forms the basis of the highest religions of the oriental world.

VOL. VIII.—43
KARMA

1. Karma struck hard against the old belief in mortification, penance, and repentance as destroyers of sin" (K. W. Hopkins, 1918, p. 583).

It became formulated at an early stage in definite terms.

1 As man himself sows, so he himself reaps: no man inherits the good or evil act of another man. The fruit is of the same quality with the action, and, good or bad, there is no destruction of the act.

This doctrine might be called the essential element, not only of all moral theories in India, but also of popular belief. If a person is born diseased, it is generally said to be because his parents were so — because of sins committed in his former life. It is in Buddhism, however, that the doctrine of karma reaches its climax and assumes a unique character. Elsewhere it meets with corruptions; there are counteractions to human acts; but in Buddhism it may be said that karma explains everything, or ought to.

2. Ego and karma.—Other Indian philosophies admit the existence of a self-existent soul or an ego. In Buddhist philosophy the ego is merely a collection of various elements constantly renewed, which are combined into a pseudo-personality only as the result of actions. Therefore, being asserted that Buddhism does not admit transmigration: when a being dies, a new being is born and inherits his karma; what transmigrates is not a person, but his karma. This explanation is justified by some texts, but it would be more exact to put the matter in a different way: an existence is a section of the existence of a certain soul—or, to use Buddhist terms, of a 'series' composed of thoughts, sensations, volition, and material elements. This series never had a beginning. It has to 'eat' the fruits of a certain number of acts under certain conditions, and the experience of these acts constitutes the series (see DEATH [Buddhist]). When this existence comes to an end, there are still some acts to be 'eaten,' both new and old. The series, therefore, passes into another existence, and lives a new section of life, under new conditions. It cannot be said that acts are the sole material cause of this re-incarnation; for the physical elements of the new being, blood and seed, are not intelligent; karma (the possibilities of re-incarnation called karmas) is not intelligent either, while the new being is intelligent from the embryo. It is the 'series' as a whole, with all its moral and material elements, that is incarnerated. If the series does not dissolve at death, if it becomes re-incarnated, it is because its acts must entail retribution. The new being is what its acts have made it: all the pleasant and unpleasant experiences to which it has to submit are simply the retribution of acts. In fact, there is no agent (karter); there is nothing but the act and its fruit; organs, thoughts, and external things are all the fruit of acts, in the same way as pleasant and unpleasant sensations.

3. Karma and destiny.—Over and above human energy and free will Brahmanism placed destiny (daiva, from deva, 'god') To Buddhists destiny is merely past acts. The earlier Indian belief was that the world was re-created by Brahma at the end of each period of chaos. Buddhists hold that the whole universe, with all its variety, is the work of acts. But by acts we must here understand the combined mass of the acts of all beings; e.g., at the beginning of the re-creation of the world there rise in the vast void of the universe 'winds born of acts,' which heap up the clouds from which the clouds, in turn, give birth to acts, and so on (see COSMOLOGY AND COSMOLOGY [Buddhist]).

4. Nature of karma.—'Act' was variously interpreted by the Indian philosophers. The early thinkers attributed an importance to liturgical action and penance which Buddhists contest or even deny. For them an act is essentially a future retribution that can be morally qualified. It is (1) volition (chitam, mental or spiritual act (mânasa), and (2) what is born of volition, what is done by volition, what a person does after having willed, i.e., bodily or vocal act. Mental acts are considered as in the past, inasmuch as there is no act without mental action. We are what we think; we are what we will. No act is imputable, or, in Buddhist terminology, accumulated (samsâra), unless it be—so people say—because of sins committed in his former life. It is in Buddhism, however, that the doctrine of karma reaches its climax and assumes a unique character. Elsewhere it meets with corruptions; there are counteractions to human acts; but in Buddhism it may be said that karma explains everything, or ought to.

5. Sâtvâra and asâtvâra.—Here we must notice the important tenet of sâtvâra, moral restraint, and its opposite, asâtvâra. The man who, in accordance with the established rules of the community, undertakes to keep the Buddhist vows, or simply the five rules 'not to kill,' 'not to steal,' etc., creates by this solemn declaration (vîjayâpatti) an aûyâpatti of particular virtue. This aûyâpatti constitutes what might be compared—roughly, of course—to the merit attaching to religious vows in Christian theology. The merit of the man who has declared (vîjayâpatti) his intention of keeping the vows goes on as long as he continues abstention from murder, theft, etc., is reckoned a merit to him, though, as a rule, it is no special merit to the ordinary man to abstain from these crimes. The sâtvâra constituted by the acceptance of rules continues to exist until the rules are categorically renounced—until an act is committed which is in direct opposition to them.

The man who, on the other hand, devotes himself professionally to a certain sin—the murderer, butcher, judge, or king—lives in asâtvâra, and is vowed to perdition.

6. Pure and impure karma.—There are two kinds of acts: acts free from âravas, or pure acts, and acts accompanied by âravas, or impure acts. The meaning of ârava is not quite certain (deadly floods' according to R. D. Blackmore, Matter, etc., [Childers]), but it is right to say that it has something to do with desire and ignorance: 'pure' means free from passion (klesa). Being free from desire and ignorance, pure acts have no retribution; they do not grow from existence: they are, by their nature, the destroyer of existence; they prepare the way to nirvâna. Such are the 'volitions' by which one gets rid of human and transitory interests to contemplate and
mediate upon the four 'noble truths' by which one enters into the path of Arhatism.

All other acts are impure, and are further distinguished as bad, neutral, or demerit. The principle of distinction seems to be retribution: the act with pleasant retribution is good; that with unpleasant retribution is bad. It may also be said that acts performed with a view to happiness in this world are bad; acts performed with a view to happiness in the world beyond are good. We sometimes meet with the noteworthy statement that good and bad actions (metacinti and ushecinti) are characterized by their intention for the good or harm of others.

7. Roots of karma.—The good act (kusala) has three roots: the absence of harm (akusala), of hatred (advesa), and of error (amaka). All bad acts are in contradiction to good acts; but false doctrine alone (mithyadhati)—denial of good and bad, of fruit, of salvation—cuts the roots of the good act. It must, however, be strong.strong: there are nine categories: weak, weak, weak-medium, weak-strong, etc. Only men can cut the root; gods cannot, because they have no knowledge of the retribution of acts; women cannot, according to some teachers, owing to their instability of character. In order to cut the root, a man must be an 'intellectual' (dhyāna-mahāsiddhi), a being capable of a strong determination to sin: this excludes 'passionate men' (upāyabhikṣakam) and even animals. The roots are restored by doubt as to the existence of good and evil, and by recovery of belief in good and evil.

8. Classification of karma.—Acts are distinguished as of three kinds: good (kusala), bad (akusala), and indifferent (ayākṣa), i.e. benevolent, pernicious, and neither the one nor the other; i.e. acts protecting from suffering either temporarily (by assuring a happy lot) or finally (leading to nirvāna), acts followed by unpleasant retribution, and acts different from both of these—not to be 'enjoyed' pleasantly or painfully.

Acts may also be classified as meritorious (punya), demeritorious (apunya), and fixed (anitiya). The good act of the sphere of desire, i.e. bearing fruits which will be well rewarded in the sphere of desire (Kāmākhyā); see COSMOGONY AND COSMOCOSMOS [Buddhist], is called meritorious: when it attaches itself to a higher sphere, it is called 'fixed.' As a matter of fact, the retribution of a good act in the sphere of desire is not absolutely determined: an act originally good may bear a retribution of a lower sphere, beauty, and so on, may in fact be enjoyed in a divine, human, or animal birth. This is not the case with the good act to be rewarded in the higher sphere; here an act never gets retribution in one stage instead of another. The demeritorious act is the bad act. The act which is a final perfection from suffering, i.e. which leads to nirvāna, is good (kusala), since it is 'pure,' but not meritorious (punya).

9. Retribution (vipāka).—The fruit of retribution of acts includes not only the sensation, but also everything that determines the sensation—organs, etc. The three kinds of acts produce agreeable sensation (vukhalvedāniya), disagreeable sensation, and indifferent sensation. The first two are easily understood; the proper sphere of retribution for the third is the fourth; but it is also believed that the indifferent act produces the vital organ, etc., and other data henotheologically neutral. It is regarded as good, but not intense. Acts may be (a) determinate (vipata, and (b) indeterminate (adhikha), and the latter involve or do not involve a necessary retribution.

(a) Five kinds of acts are called anantarpaya, 'immediate,' because their retribution (hell) cannot be interrupted by an act allowing of fruit in another existence: malefic, patricide, murder of an Arhat, schism, and malicious wounding of a Buddha. Mother and father are benefactors in an eminent degree; the Arhat, the community, and the Buddha are 'fields of merit.' To kill one's father in the endeavour to kill flies is not anantarpaya; but to kill an Arhat without knowing that he is an Arhat is anantarpaya, because the intent to murder is determinate: 'I shall kill some one.'

Acts said to be similar to anantarpaya, and necessarily entailing hell, are violation of a mother who is an Arhat, murder of a Buddha, murder of a saint of the kālava class, theft from the community, and destruction of a stūpa.

(b) The retribution of all other acts may be arrested (1) by the acquisition of the spiritual stage called 'Patience' (kusala), which brings one past the stage of retribution of acts leading to evil destiny, just as a man may escape his creditors by emigrating; (2) by the acquisition of the quality of the saint 'who never returns' (āvocato), which surpasses beyond the sphere of desire; only those acts bear fruit which must bear fruit in this present existence; (3) by the acquisition of Arhatship; all karma is annulled, with the reservation already noted. When, by so-called 'worldly perfection' (laukika), i.e. not properly Buddhist, a man obtains birth into the higher spheres and detachment from all affection for the sphere of desire, the retribution of acts to be rewarded in the sphere of desire is suspended, since the lower sphere cannot be finally abandoned except by the 'noble path.'

Good acts of the body, voice, and thought are purification; they arrest, either temporarily or finally, soiling by the passions of bad acts.

A distinction is also drawn between (1) the act felt in the same life in which it is accomplished; (2) the act felt in the following life; and (3) the act felt later.

10. Projection of karma.—An existence is 'projected,' or caused, by an act; but a number of acts combine to condition an existence, and hence the variety of human fortune. Here the theory of the white-black act applies.

Every bad act is black: the act that is good in relation to the higher spheres is white; the act that is good in relation to the sphere of desire is white-black, because, being always weak, it is always mixed with evil. It is itself, but co-exists in the series (soul) along with bad acts.

A human existence cannot be projected except by a good act. But, supposing this existence follows an infernal existence, the latter having, in the course of the existence preceding it, by a bad act 'to be punished in a following existence'; the former has been projected, in the course of the same preceding existence, by a good act to be rewarded in an existence following the following. In a human existence following upon an infernal existence, a man may have a short life, or may suffer scarcity of food and property, or may wed an unfaithful wife, etc. All these misfortunes are the fruit of the stream (niyāṇa) of murder, theft, adultery, etc., which have had infernal existence as their fruit of retribution (niyāṇa).

A man causes suffering to the living being whom he kills, therefore he must suffer in hell (niyāṇa); he makes him die, therefore he must himself die soon (niyāṇa).

Acts have also a fruit of a general kind. Towards the end of the little cosmic period (antarākāla; see COSMOGONY AND COSMOCOSMOS [Buddhist]), the plants etiolate, are crushed by stones, and bear little fruit; this is the result of a superabundance of murder, theft, etc.—the fruit of karma as sovereign (mahāpāta). The creation of the universe is the result of the acts of all beings.
together; the hells are created by the acts that require to be punished in hell, and so on.

Karma-Marga. —A good and bad acts ten paths of acts (karmaphalapatha) are distinguished because of their gravity: (a) for the body: murder, theft, and forbidden love; (b) for the voice: lying, slander, insolence, and "unprofitable conversation" (chatana); (c) for the mind: covetousness, malice, and false doctrine. Their opposites are abstention from murder, etc.

False doctrine (mithapadrya) is the denial of good and evil, of restraint and salvation. It is bad because it is the pravil of the wise to hurt others.

The first seven, from murder to "stultiloquium," are physical and spacial acts (karma, and paths of acts (karmaphala), i.e., paths of mental action, i.e., volition (chatana); the last three, covetousness, malice, and false doctrine, are not acts, but simply paths of volition. Confusion of passions (kledas) with acts must be avoided.

We must further distinguish in an act the preparation, the act proper, and the "back" (praksha)—e.g., all the preparation for the murder of an animal by the beast hunt, etc.; the actual death-dealing blow, and the cutting up and selling of the meat. The act proper alone constitutes the "path of act"; and hence important consequesances arise from the point of view of responsibility.

It is also to be noted that the "path of act" presupposes accurate knowledge of what one is doing, and is incompatible with a mistake in the person. When one is in doubt whether the thing which he hits is alive or not, he is thinking of destruction, but not of murder. The Jains hold that the man who commits a murder without intent is none the less guilty, just as a man who takes fire is burned.

This is to lead to culpable absurdities. The Jain himself would be culpable for preacting terrible austeritys; the physical and spacial acts could be culpable for making each other suffer; the murderer being himself would be culpable, since he is the origin of the act of murder. Further, a man would not be guilty of murder if he got another person to commit it; for we are not burned if we touch fire by means of another.

All this is very well worked out, but in other things the school is not so wise.

If a man has intercourse with another man's wife, thinking that she is his own, he is not guilty of adultery. If he has intercourse with another's wife while thinking that she is the wife of a third man, opinions differ as to his guilt. Some hold him guilty, others that the act is the object of the preparation and the object of the indulgence. Others say that he is guilty of preadultery, for the object of the preparation and the object of the indulgence are different persons.

The somewhat mechanical and very scholastic character of the Buddhist theory of retribution may be illustrated by the subjective and objective elements in giving.

For a thorough valuation of the merit of giving, or charity (dāna), we must take into account: (1) the qualities of the giver (b bitmasking, learning, etc.); and the manner of giving (with respect, with the right hand; at the opportune moment, etc.); (2) the qualities of the object given (generosity; virtue; etc.); and (3) the qualities of the person who receives: (a) excellence in relation to his lot in life; a gift made to an immoral man has 100 times the value of one made to an animal; (b) excellence due to suffering; a gift is an invalid, a person who is cold, better than to the one received (parents, preacher of the True Law, etc.); and (d) excellence due to the qualities (morality, knowledge, etc.) of the winner.

Karma-Marga. —A good and bad acts e.g., whether one's destiny is human, or infernal, etc., is determined by morality (dāta, abstention from murder, etc.). Gifts are only a sort of extra, to assure riches and other enjoyments.

Karma-Mārga. —A good and bad acts ten paths of acts (karmaphalapatha) are distinguished because of their gravity: (a) for the body: murder, theft, and forbidden love; (b) for the voice: lying, slander, insolence, and "unprofitable conversation" (chatana); (c) for the mind: covetousness, malice, and false doctrine. Their opposites are abstention from murder, etc.

False doctrine (mithapadrya) is the denial of good and evil, of restraint and salvation. It is bad because it is the pravil of the wise to hurt others.

The first seven, from murder to "stultiloquium," are physical and spacial acts (karma, and paths of acts (karmaphala), i.e., paths of mental action, i.e., volition (chatana); the last three, covetousness, malice, and false doctrine, are not acts, but simply paths of volition. Confusion of passions (kledas) with acts must be avoided.

We must further distinguish in an act the preparation, the act proper, and the "back" (praksha)—e.g., all the preparation for the murder of an animal by the beast hunt, etc.; the actual death-dealing blow, and the cutting up and selling of the meat. The act proper alone constitutes the "path of act"; and hence important consequesances arise from the point of view of responsibility.

It is also to be noted that the "path of act" presupposes accurate knowledge of what one is doing, and is incompatible with a mistake in the person. When one is in doubt whether the thing which he hits is alive or not, he is thinking of destruction, but not of murder. The Jains hold that the man who commits a murder without intent is none the less guilty, just as a man who takes fire is burned.

This is to lead to culpable absurdities. The Jain himself would be culpable for preacting terrible austeritys; the physical and spacial acts could be culpable for making each other suffer; the murderer being himself would be culpable, since he is the origin of the act of murder. Further, a man would not be guilty of murder if he got another person to commit it; for we are not burned if we touch fire by means of another.

All this is very well worked out, but in other things the school is not so wise.

If a man has intercourse with another man's wife, thinking that she is his own, he is not guilty of adultery. If he has intercourse with another's wife while thinking that she is the wife of a third man, opinions differ as to his guilt. Some hold him guilty, others that the act is the object of the preparation and the object of the indulgence. Others say that he is guilty of preadultery, for the object of the preparation and the object of the indulgence are different persons.

The somewhat mechanical and very scholastic character of the Buddhist theory of retribution may be illustrated by the subjective and objective elements in giving.

For a thorough valuation of the merit of giving, or charity (dāna), we must take into account: (1) the qualities of the giver (b bitmasking, learning, etc.); and the manner of giving (with respect, with the right hand; at the opportune moment, etc.); (2) the qualities of the object given (generosity; virtue; etc.); and (3) the qualities of the person who receives: (a) excellence in relation to his lot in life; a gift made to an immoral man has 100 times the value of one made to an animal; (b) excellence due to suffering; a gift is an invalid, a person who is cold, better than to the one received (parents, preacher of the True Law, etc.); and (d) excellence due to the qualities (morality, knowledge, etc.) of the winner.
and by it have obtained their present position. Henceforward, karma, as a way of salvation, always carries with it the connotation of sacrifice and ritual. The intention that accompanies the deed is of no importance, only the deed itself. At the same time the power of good actions is recognized. In the Brahmanas we meet with the phrase ‘man’s debts.’ These debts are, to the gods, sacrifice; to the seers, study of the Vedas; to the slaves, hospitality. Whoever pays them has discharged all his duties, and by him all is obtained, all is won.

(3) Meanwhile philosophic speculation had advanced. The universe was no longer an aggregation of separate material entities. Being was one uniform self-existent cause. \(^4\) Individual souls owe their self-consciousness to the action of ignorance on the primal non-conscious cause, Brahman; the whole material world is the result of illusion. Self-consciousness will continue as long as actions which lead to re-birth (samsāra) continue. \(^5\) The aim of religion or philosophy is to free the individual from re-birth and the continuation of self-consciousness. This result can be attained only by knowledge, jñāna, a recognition of the identity of the seeing individual with Brahman. This is the jñāna-ārtha, as opposed to the karma-ārtha, or path of works, which lead only to re-birth, in accordance with the truth that every action must be followed by its reaction. But, despite this necessity for desisting from action, the Vedantist recognizes that: such a course, at least at first, is not altogether possible. By a right sense of the Veda, the searcher after salvation may fit himself to proceed to the higher knowledge: the karma-ārtha leads into the jñāna-ārtha, by which alone is the goal to be reached. Rāmānuja, in his commentary on the Vedānta-sūtra, says:

1. Sat. Br. 1, 1, 3, 5; 3, 43.
2. See also, V. I. 22, 5; 5, 8. 23.
3. See also, V. I. 12.
4. G. S. 12, 23.
5. See also, V. I. 12.

But to make the Veda the final authority by no means solves all difficulties. The great bulk of the karma prescribed by the Veda consists of sacrifice. To begin with, there can be little doubt that before and during the time of the composition of the Brahmanas, among Brahmins belonging to different schools and different localities, different sacrificial customs had arisen, but that, after the Brahmanas had been composed and had acquired some sort of general recognition, it was necessary to reconcile these outside sacrificial practices with those prescribed by the Brahmanas. Further, even within the Veda itself was to be found a mass of bewildering inconsistencies—a fact not surprising, when we consider the different influences in time, authorship, and purpose. The difficulties thus arising were many. A few of the more typical may be menioned. It sometimes happened that the Brahmana-passage describing the action of a certain sacrifice was not always in harmony with the mantra to be recited during the performance:

The Brahmana-passage maintains that from out a series of sacrificial acts a certain one is to be performed in the sixth place, while in the section that contains the mantra accompanying the series of acts the mantra referring to the particular act occupies the tenth place.\(^7\)

Again, it may not be made quite clear who it is that must perform the sacrifice, or how exactly any one of the numerous modifications of the typical sacrifices, which the Veda describes in full detail, is to be performed. The necessity for clearing up all such obscure points led to the formation of a set of rules, in accordance with which it was possible to settle disputed points without impugning in any way the authority of the Veda.

(4) What a list, it is laid down that, whenever the place of the mantras accompanying a certain action and the place assigned to the action by a Brahmana-passage are in conflict, the mantra is to have greater weight than the Brahmana, because the former, being actually recited during the sacrifice, is connected with it more intimately than the latter, which is not directly used during the performance.\(^8\)

These rules, and the principles lying behind them, are collected in the stats of the Atharvaveda, like the Śatapatha Brahmana. The Atharvaveda, for example, distinguishes between the action of a sacrifice called the purvamahānakṣatra, or ‘Preparatory Investigation,’ as opposed to the uttaramahānakṣatra, or ‘Secondary Investigation’ (i.e. into the nature of Brahman); for every action of works comes before the necessity of knowledge, but the rules of works are not only used during the performance, but sometimes a sixth—non-existence. But of only one do they make usable—abda, or verbal information, i.e. Scripture. For duty must rest on human authority, which is to say that right must rest on some infallible authority, and this is found only in the Veda. Hence there follows the necessity of proving the infallibility and superhuman origin (pratimājñāna) of the Veda (for a discussion of the proofs see Max Müller, Six Systems of Indian Philosophy, p. 279 ff.). For the rest the Mundākāy is occupied with the explanation and conciliation, in accordance with these principles of interpretation and authority, of apparently conflicting instructions and statements contained in the Veda.
his constant duty to help and care for. In return for this the teacher, called the guru, instructed the student, or brahmacārīn, in the knowledge of the Vedas. As a result of his time of study the brahmacārīn left the house of his guru, and with the title of snātaka, 'one who has bathed,' entered into the śramaṇa of a gṛhastha, 'household'. Now, in addition to the duties which he owed to the gods, he had to engage in a definite series of sacrifices addressed to the gods and the spirits of his ancestors. But, when his sons were grown up and could themselves found families, his duties to the world were fulfilled; and the end of the way of work was already in sight. With or without his wife he might now take refuge in the forest as a śramaṇa; freed from almost all duties and sacred rites, he was at liberty to spend his days in meditation. Last of all, renouncing every remaining duty, he was ready to enter the final stage of a śramaṇa, and to leave behind him for ever the karma-mūrga, free to travel along the path of knowledge nearer him from village to village, until death removed the last barrier that prevented his absorption into the universal Brahman. In this way the journey, taken by not a few, began upon the path of works and ended upon the path of knowledge.

(5) Lastly, we have to consider the doctrine of works as it appears in the Bhagavad-Gītā. Hitherto the works that have been included under the designation of karma have been chiefly the sacrifices and general religious duties laid down in the Brahmanas and the law-books, and they have been performed entirely for the sake of the performer. In the Bhagavad-Gītā we meet with a completely different conception. Knowledge is no longer the only way that leads to salvation; that may be reached also through bhakti (loving faith), or by works. But works, to be efficacious for salvation, must be disinterested. The karma-yoga, as this rule of works is called, has two phases. In the first the follower of the rule must discharge all his religious and social duties in utter indifference and unattachment to their fruits. He makes a sacrifice to the Lord of all his works, so that they no longer bind his soul to existence. Thus detached from all desires, he gains final redemption. The following verse is typical:

'And this world is a water, save in the work that has for its end the sacrifice. Work to this end do thou fulfill, O son of mine, that the world may flourish.' (In the words of the Gāthas.)

'Whether therefore ye eat, or drink, or whatsoever ye do, do all to the glory of God.'

For a fuller discussion of this see art. Brahmanism.

The attitude of Buddhism differs little in this respect. In fact, one may reasonably surmise that the author of the Bhagavad-Gītā was influenced by Buddhist doctrines. Selflessness is the one thing that the Buddhist must avoid; acts performed with reference to self only bind the doer more firmly to the wheel of existence; but works of unselfish love are without effect, except in so far as they bring the worker nearer him from village to village, until death removed the last barrier that prevented his absorption into the universal Brahman.
KATMANDU, KATHMANDU (Hindi काठमाडू, Skr. काठमाडू, ‘wood’; माउण्डू, ‘a hut or shed’).—The capital of the kingdom of Nepal; lat. 27° 42’ N., long. 85° 12’ E., towards the W. side of the valley Bhave, the broad and deep gorge that is formed by the Bagmati and the Bouddha rivers. It has been known by many names—the earliest Maśīnā, ‘city of Maśīn’, after Maśīn, the Bodhisattva; Yindis; Kāntīpur; and Kāthmādū or Kāthmādhā; the last said to be derived from Maśīn, a dead or silent, and of vahā, wood, which stands in the heart of the city, near the Darbar palace. According to Brown (Pictureque Nepal, p. 63), a building still exists which is said to have been made from the wood of one monster tree. The city is oblong in form, and, according to the Buddhist Newār tradition, it was built in the shape of the sword of its founder, Maśīnī, while the Hindus profess that it resembles the semblait of their godness.

Kirkpatrick (Account, p. 159), who visited the city in 1853, suggests that the guardian of the place is derived from its numerous temples, which are, indeed, among the most striking objects it offers to the eye. Besides these, Kāthmādū contains several other temples on a large scale, and constructed of brick, with two, three, and four sloping roofs, crowned with the usual Linga, and terminating with an enormous bell, generally in pinnacles, which, as well as some of the superior roofs, are splendidly gilt and produce a very picturesque effect. For the style of the Newār temples the reader is referred to an article in the Architectural Journal (April 1877).

A notable feature of some of these temples is the profusion of indecent carvings, the intention being to scare evil spirits (Crooke, P.F.I. i. 68 L.). One of the most important Hindu temples is that dedicated to Tālējī, or Tallījī, the local form of Tālējī Bhavāni, the goddess of the holy basil plant (Ocimum sanctum), who, with the saint Gorakshānāth, is the patron deity of the royal family.

In front of several of the temples are tall monoliths, some surrounded by figures of old Bājās, others by the winged figures of monkeys, and a few by human figures in various attitudes. The figures are often in a kneeling posture, facing a temple, and generally overlook it by a broken arch, on whose head is perched a little bird. Not far from the palace, and close to one of the temples, is an enormous bell, suspended to two stone pillars; and in another building are two huge drums, about eight feet in diameter. Here, too, are several huge and hideous figures of Hindu gods and goddesses (J. H. S. i. 189). During his residence in Nepal, Wright twice heard of persons having committed suicide before these figures. The suicide always takes place before dawn, and the morning with its throat cut from ear to ear, and its limbs deviously arranged, gives the impression of the absurdity being that these were cases of human sacrifice (q.v. 101).

The temple known as Mahenklī (Mahākāla), of great antiquity, is the most popular ‘chapel-of-ease’ in the valley. Hindus regard it as dedicated to Śiva, and the Buddhists maintain that the sacred figure represents Padmapāṇi or Avalokita, and assert that this is proved by the little stone figure rising from the forehead of the idol, which is believed to represent Amītābha (Oldfield, Sketches from Nepal, p. 110). However this may be, this temple has become a sort of neutral ground at which Hindus and Buddhists meet to pray before one common god, the Siva of the former, the Padmapāṇi of the latter. Besides these the city abounds in temples of many kinds.

Many of these present a most repulsive appearance, being dabbled over with the blood of cocks, dogs, goats, and buffaloes, which are sacrificed before them (Wright, p. 11). Of the more modern temples, the chief are that erected by Sir Jung Bahadur in 1852 on the foundation laid by Bhim Sen, and dedicated to Jaganātha; that at Vajjī in the former kingdom of Kāntīpur; and several at the sacred junction of the rivers Bagmati and Vignuani. While the Hindu temples are generally placed near some of the main thoroughfares, all the Buddhist shrines are hidden away in squares or quadrangles in the parts of the city exclusively inhabited by the Buddhist Newārs.

The chief of these are the temple of Adhibuddha, known also as Buddhānagad, the older part of which is now enclosed within the roots of a sacred fig-tree. Nothing is known of its history prior to its restoration in A.D. 1579 (Oldfield, ii. 256 E.). The most important Buddhist monument, however, is that known as Rājānagad or Vignuani, which is a very fine specimen of a Buddhist chaitya, or mound-temple. It consists of a solid hemisphere of earth and brick, about forty feet in diameter and thirty feet in height, supporting a sixty conical spire, the top of which is crowned by a richly-carved pinnacle of copper gilt (Oldfield, ii. 254).

The same writer (ii. 219) gives a full account of this interesting edifice, which is one of the few existing great Buddhist ecclesiastical buildings of which only the ruins survive in India. It is traditionally attributed to a Rājā of Nepal named Goradeo, who is said to have flourished between 2000 and 3000 years ago; but there are no trustworthy records of it until its restoration in A.D. 1598. On the whole, Kāthmādū offers a most promising field for archaeological investigation; but excavation and surveys of the existing buildings will be impossible so long as the native Government maintains its present policy of jealous seclusion.

KAYASTH, KAYASTHA (said to be derived either from Skr. kāyāsthnāthi, ‘staying at home’ [H. T. Colebrooke, Etym. Lex. Lond., 1835, p. 275 B.], or from kāyā-sthā, ‘situated in the body, incorporated’, being sprung from the body of Brahmā).—The writer class of Hindustan, numbering, at the Census of 1911, 2,153,894, of whom the majority are found in Bengal and the United Provinces of Agra and Oudh. Practically all of them are Hindu by religion.

In Bengal, Kayasthes class them in two divisions: those of Benga, the proper and those of Bihar. Like all the literary and trading castes, the Kayasthes, since the British occupation of the country, have tried to assert a social status not admitted under native rule. One mark of theirs is that they usually affect extreme orthodoxy and are liberal in support of Brahmins, by whom they are barely tolerated. It is singular, as Colebrooke remarks, that, while the teaching of Chaitanya has united almost all the artisan and agricultural castes of Bengal proper in a common Vaishnava faith, the three highest and most intelligent classes adhere to the Sakta ritual, or the worship of the female principle. In E. Bengal all Kulin Kayasths, and something like three-fourths of the other sections, are believed to practise Saktism, and it is asserted that a large proportion of these follow the cult in its grosser development, known as the Vānāchārī, or ‘left-hand’, ritual of the Tantras. Every Kulin family has a domestic chapel in which the Ṭīgā of Siva is daily worshipped by the head of the household.

All Kayasthes, in addition, observe the Five Pūjās, or ‘sacred fifth’, the festival which occurs on the fifth day of the waxing moon in the month of Māgh (Jan.-Feb.), known also as the Dawāt Pūjā, or ‘worship of the infant god’; also the festival of Sarasvatī, goddess of learning and eloquence, whom they regard as their patron deity.

On this day the courts and all offices are closed, as no Hindu penman will see pen or ink, or set the pen to writing, except a perill, on that day. When work is resumed a new inkstand and pen must be used, and the penman must write
KEDARNATH—KENOSIS

nothing until he has several times transcribed the name of the goddess Durga, when all letters should begin "(J. W. Notes on the Ruins, Castles, and Trades of E. Bengal, p. 315).

On this day also the Kāyasth must eat a hired fish (dupeta), and if this price may be, while from the Śrī Pāshupati temple in the month of August to the Śrī Pāshupati temple in the month of September fish must be eaten daily; but from the last to the first month it may not be touched—a tabu probably founded on some hygienic considerations. The Kāyasths of Bihār follow one or other of the main Hindu sects: Vaishnava, Śaiva, Śākta, Kāśivān, Śāivātā and the like. The worship of Durgā and the Śaiva are the most popular. Chitragnā, the mythical ancestor of the caste, is honored once a year on the 17th day of the month of Kārtik (Oct.–Nov.), at the feast of the Dañvat Pājā, with offerings of sweetmeats and money, and the worship of the pen and ink, the implements of the trade. For religious and domestic rites the caste employs Bāhūnas, who are received on equal terms by other members of the priestly body. In the United Provinces they also follow the orthodox Hindu sects, of which the Śaiva, Śākta, and Aryan Samaj are most important. But the fact that belonging to different sects does not bar association and marriage; and, if a Śaiva marries a Śākta girl, the former may remain a vegetarian and abstain from meat and spirits, while his wife continues to indulge in them is the worship of the progenitor Chitragnā and of the Śaiva, Śākta, or family gods, is carried on side by side with the cults of the greater orthodox deities. While the domestic worship is generally conducted by the head of the household, the temple worship is performed by Bāhūnas, who do not suffer any social discredit by officiating for Kāyasths. In the Deccan the caste, known as Kāyasth-Trabhā, are generally followers of Śiva, while children are known as Deviputra, sons of Devi, because they worship the Devi or local Mother-goddess rather than the orthodox gods.

[Left margin:—J. Wise, Notes on the Ruins, Castes, and Trades of E. Bengal, 1887; H. H. Ridley, Castes and Tribes of Bengal, Calcutta, 1891; W. Crooke, Tribes and Castes of the N.W. Provinces and Oudh, Calcutta, 1891; A. Bates, Hibernia (= G.A.P.H. III), 1915, p. 231. For the branch in Bombay see B.G. H. 1911.]

KEDARNÁTH (Śrā. Keśāravatītā, 'lord of Kedar,' a title of Śiva, the derivation of which is unknown; it has been suggested by E. T. Atkinson, Himalayan Gazetteer, E. Tibet, 1884, 276, that Kedar is an ancient title of Śiva, that the temple and place of pilgrimage in the Garhwal District of the United Provinces of Agra and Oudh, lat. 30° 44′ N., long. 77° E. The twin peaks of Badarnāth (q.v.) and Kēdarātī lie at a distance of ten miles apart, and between these, at a height of more than 11,000 ft. above sea-level, is the temple situated. The sanctity of the Śiva lingas is extolled in the Vīrāvī Vījīnaviśesa. According to the local legend, Pāvīnvās aitās: 'What is Kēdar? What are the fruits of visiting its sacred places and bathing in its waters?' Śiva replies: 'The place that you have spoken of, O goddes: is so dear to me that I shall never forsake it. While the universe, Kēdarātī so pleased me, and I shall ever remain sacred to me. Brahmā and the other gods remained sacred to me, but this one with Śiva. The title of the deity is Śādāvās, 'always happy,' and he seems to be the successor of an older god, Paśupati, 'lord of animals.'

The temple ranks among the twelve famous lingas of India. The Pāshavas, it is said, came from the Himalayas and arrived at the river Mandakini to worship Śiva. In their eagerness they desired to touch the god, but he avoided them and plunged into the earth, offering to his votaries only the sight of the lower part of his body. The people are said to have come to the surface at Mūkhārīn, in Nepal, where he is worshipped as Paśupatīnāthā. The Pāshavas were cleansed of their sins and built five temples in honour of the god. In Buddhist times the place became a centre of the Baudhānāth cultus, which was overthrown after the beginning of the 8th cent. A.D. by the Saiva reformer, Śaṅkarāchārya, who died here at the age of 32. As is the case at Kēdarātī, the shrine is served by Nambūtiri Brāhmaṇa priests from S. India who were introduced by the great Saiva missionary. The sanctity of the place has been explained by the fact that pilgrims are overpowered by the strong scent of the roses and the white bush close to the border of the eternal snow. This, combined with the rarity of the air, produces a sense of faintness, which is naturally attributed to spirit agency, while the strange sounds produced by falling avalanches and renditions of the ice and snow doubtless contribute to the same belief. The existing buildings are of no architectural importance. Sacred places abound in the neighbourhood, the most important of which is Māhā Kēdārātī, where there is the famous linga, known as Bhairava Shaktam, from which pilgrims were accustomed to precipitate themselves as an offering to Śiva; as in other parts of the Himalayas, a human scapegoat slides down a rope which has its parallels in other places, the object being apparently to secure the fertility of the crops (J. G. Frazer, The Scapegoat, London, 1913, pp. 140 ff., 251, Pausanias, do. 1858, v. 401). A second form of purification, which instances are believed still to occur among fanatics, is to wander up the snowy slopes and court death by exposure.

KEDESHAH.—See Hierodoulou (Semitic and Egyptian).

KENOSIS.—1. The scriptural references.

The word 'Kenosis' is applied in Christian theology to that attitude or action of Jesus Christ, or of the Logos, referred to by St. Paul in Ph. 2:8, where he says of Jesus Christ: ἐν μορφῇ θεοῦ ἐκτίθετο ἀπὸ σωματοῦ ἄνθρωπου ἐκ τῆς σωματοῦ, μορφῇ δικαίου ἐκτίθετο. This is practically all that can be said with certainty on the subject. We cannot even say definitely what the Apostle intended to convey by the words quoted. No other passage in his writings casts any light upon them. There is certainly no doubt that by the phrase ἐκτίθετο he was expressing the same idea as he had in his mind when speaking of 'Jesus Christ' in 2 Co 8:9, εἰ μὴ ἐκτίθεντο πνεύματα σωμάτων. This passage, however, is no less ambiguous than the former. In both alike the grammatical connexion of the statement with the antecedent designation 'Jesus Christ' seems to indicate that the Apostle had in his mind an action of the historical Jesus. But, on the other hand, the ἐκτίθεντο and the ἐκτίθεντο authors of the first passage, and the 'being rich' and the 'becoming poor' of the second, are so pointedly antithetic as to suggest that St. Paul was thinking of a surrender of the one for the other, and that accordingly he is speaking here of an action effected by the pre-existent Christ at His incarnation. In 2 Co 8 the context does not help us, while in Ph 2, though the parenetic aim of the passage seems at first sight to point to the historical Jesus,
only as referring to a complete and plenary re-
entrance upon a glory which was in some sense veiled during the earthly life of Jesus, it also fails to help us in determining the sense of the Pauline phrase *kēnōsia*.

On the other hand, it is certainly right to assume that the Logos, in his being veiled was the result. Moreover, the exegesis of Jn 17 is rendered difficult by the fact that we cannot definitely say whether an appeal to the Logos-idea is here justified at all, or whether the truth lies with those who hold that St. John, in conformity with Jewish thought, usually as-

1. In place of the life-like impression which Ph 2:6f. gives of the historical Christ and His first public appearance at the baptism in the Jordan, the Johannine theory of Kēnōsia has been built up upon an ungrammatical and rather difficult passage in the Johannine text of ch. 3:1. But the Johannine text has moved further and further away from the original context.

But Resch fails to show even the probability—let alone the certainty—of the underlying assumption of his verdict, viz. the use of a primitive gospel by the Apostle.

The exegesis of the passage is thus thrown back upon the actual words. For, again, the clause ἐν ἐνωσείᾳ ἡμῶν ἤσθην τὰ ὀνόματα τῆς προσωποποίησεν enables us to decide whether St. Paul was referring to the historical or the pre-existent Christ. Even the so-called `interpretation' sense of ἐνωσείᾳ (merger, `unification', `association') is quite out of keeping with the theory of the pre-existent Christ, as far as has been made to fit in with either alternative, though the present writer is of opinion that its compatibility with the theory of the pre-existent Christ is far from obvious. The tenability of both interpretations is much less questionable if, with most modern scholars, we decide for the `passive', or rather the `concrete', sense of ἐνωσείᾳ (preference).  

The interpretation in that case would be: `He regarded the ἐνωσείᾳ not as a price to be held fast, or as a price that he might or must obtain, and the former rendering a fact quite in keeping with either interpretation. This may also be said of the ἐνωσείᾳ not so much. If we take the phrase as equivalent to *ἐν μορφῇ θεοῦ* then, it has no direct bearing upon the question as to the subject of ἐνωσείᾳ; if we feel it necessary, however, to make a distinction in meaning between the two phrases, the former accords very well with the theory that the whole passage refers to the historical Christ, while it harmonizes with the reference to the pre-existent Christ only if we assume—a supposition widely held, but the present writer thinks, untenable—that St. Paul regarded the pre-existent Christ as the `heavenly man'.

Now we can decide with confidence between the exegetical alternatives presented by Ph 2:6 even by an appeal to the only non-Pauline passage of the NT that perhaps rests on the same underlying ideas, viz. that verse of the high-priestly prayer which Origen (de Princ. III. v. 6) applied in the same way: καὶ ἐν ἐνωσείᾳ με ὑπέπεφτο, ἐν ἐνωσείᾳ τῷ νόμῳ ἐτύπωκεν καὶ ἐνωσείᾳ τῷ παθώματι (Jn 17:7). Not that we would contend that St. John should not be interpreted by St. John; as a matter of fact, if the Johannine writings contained an unambiguous passage which exactly agreed with any one of the possible interpretations of Ph 2:6, it would certainly be right to give that interpretation. But is Jn 17 unambiguous? Even if, in view of other passages in the Fourth Gospel (17:7, 10, 5:18, 25), we reject the interpretation of ἐνωσείᾳ as implying a presence in the ἐνωσείᾳ divine—an exegesis endorsed by the Sebastianists, the Rationalists, and Schleiermacher, and defended with new arguments by H. Wendt—we cannot venture to call it so. This view that Jn 17 refers to a glory regarded as a result of a pre-existent existence is not impossible, but it cannot be maintained in face of Jn 14:21 11:40. If Jn 17, accordingly, can be taken

As a complete and plenary re-
ereace upon a glory which was in some sense veiled during the earthly life of Jesus, it also fails to help us in determining the sense of the Pauline phrase *kēnōsia*.

On the other hand, it is certainly right to assume that the Logos, in his being veiled was the result. Moreover, the exegesis of Jn 17 is rendered difficult by the fact that we cannot definitely say whether an appeal to the Logos-idea is here justified at all, or whether the truth lies with those who hold that St. John, in conformity with Jewish thought, usually as-

1. In place of the life-like impression which Ph 2:6f. gives of the historical Christ and His first public appearance at the baptism in the Jordan, the Johannine theory of Kēnōsia has been built up upon an ungrammatical and rather difficult passage in the Johannine text of ch. 3:1. But the Johannine text has moved further and further away from the original context.

But Resch fails to show even the probability—let alone the certainty—of the underlying assumption of his verdict, viz. the use of a primitive gospel by the Apostle.

The exegesis of the passage is thus thrown back upon the actual words. For, again, the clause ἐν ἐνωσείᾳ ἡμῶν ἤσθην τὰ ὀνόματα τῆς προσωποποίησεν enables us to decide whether St. Paul was referring to the historical or the pre-existent Christ. Even the so-called `interpretation' sense of ἐνωσείᾳ (merger, `unification', `association') is quite out of keeping with the theory of the pre-existent Christ, as far as has been made to fit in with either alternative, though the present writer is of opinion that its compatibility with the theory of the pre-existent Christ is far from obvious. The tenability of both interpretations is much less questionable if, with most modern scholars, we decide for the `passive', or rather the `concrete', sense of ἐνωσείᾳ (preference).  

The interpretation in that case would be: `He regarded the ἐνωσείᾳ not as a price to be held fast, or as a price that he might or must obtain, and the former rendering a fact quite in keeping with either interpretation. This may also be said of the ἐνωσείᾳ not so much. If we take the phrase as equivalent to *ἐν μορφῇ θεοῦ* then, it has no direct bearing upon the question as to the subject of ἐνωσείᾳ; if we feel it necessary, however, to make a distinction in meaning between the two phrases, the former accords very well with the theory that the whole passage refers to the historical Christ, while it harmonizes with the reference to the pre-existent Christ only if we assume—a supposition widely held, but the present writer thinks, untenable—that St. Paul regarded the pre-existent Christ as the `heavenly man'.

Now we can decide with confidence between the exegetical alternatives presented by Ph 2:6 even by an appeal to the only non-Pauline passage of the NT that perhaps rests on the same underlying ideas, viz. that verse of the high-priestly prayer which Origen (de Princ. III. v. 6) applied in the same way: καὶ ἐν ἐνωσείᾳ με ὑπέπεφτο, ἐν ἐνωσείᾳ τῷ νόμῳ ἐτύπωκεν καὶ ἐνωσείᾳ τῷ παθώματι (Jn 17:7). Not that we would contend that St. John should not be interpreted by St. John; as a matter of fact, if the Johannine writings contained an unambiguous passage which exactly agreed with any one of the possible interpretations of Ph 2:6, it would certainly be right to give that interpretation. But is Jn 17 unambiguous? Even if, in view of other passages in the Fourth Gospel (17:7, 10, 5:18, 25), we reject the interpretation of ἐνωσείᾳ as implying a presence in the ἐνωσείᾳ divine—an exegesis endorsed by the Sebastianists, the Rationalists, and Schleiermacher, and defended with new arguments by H. Wendt—we cannot venture to call it so. This view that Jn 17 refers to a glory regarded as a result of a pre-existent existence is not impossible, but it cannot be maintained in face of Jn 14:21 11:40. If Jn 17, accordingly, can be taken

2. In the East, indeed, it came to be the prevailing view. Not only do we find it in Eusebius (e.g., de Eccles. Theol. I, x. 10) and Apollinaris of Laodicea, which was recognized as a standard of doctrine by the Council of Chalcedon: *καὶ ἐνωσείᾳ ἐστηκέντος ἐν ἐνωσείᾳ ἡμῶν, μορφῇ ἐνωσείᾳ τοῦ πατρὸς καὶ τοῦ υἱοῦ, ὡς ἐνωσείᾳ τῶν ἐνωσείων (Ep. 39 [PG 38, 668 A.]).

(b) The Pelagian Exegesis.—A diametrically op-

pose interpretation of the passage is met with c. 400 in the West, viz. in the Commentary of Pelagius on St. Paul's Epistles. Pelagius finds the
subject of the expressions ἐκατέραν ἡγασαρν, ἡγασαρν, and ἐκατέραν ἡγασαρν in the human being in whom the sense incarnate. quod, as a consequence, homo humiliare dignatus est, divinitas quae in unum non potest enim qui humiliatus fuerat exaltavit' (PL xxx. 884 C).

Even 'secundum hominem' Christ was, according to Pelagius, 'in forma Dei', i.e. 'Dei', and therefore 'Dei' quod erat, and because he was the one 'in quo Deus erat', i.e. 'pleitudo deitatis' (loc. cit.; cf. pseudo-Primasius, PL. lxvii. 650); although 'quod erat, in parte sanctum, in parte sanctum, in parte sanctum', the glory of which is not possible 'in quae gloriem quae forsan non habemus' (PL xxx. 884 B).

The text of Pelagius—at this point probably not completely traceable in pseudo-Hieronymus—does not provide a particular exposition of ἐφαρμοσμένου or any other term. It cannot be assumed that pseudo-Primasius be used here as supplementing it, since he has manifestly interpolated something of his own; still, the excesses of Pelagius can be made out distinctly enough. In view of Col 2:9—a passage which he undoubtedly had in mind—the phrase και πρωτότοκον πρωτοτοκον πρωτοτοκον is adequately explained by the words 'quod erat, humiliare celavit', while the words 'dans nosse esse' in his glorium quae forsan non habemus' suggest the following explanation of και πρωτότοκον πρωτοτοκον, etc., 'non glorius est in suo quae habebat' (i.e. το θεό το θεός ο Θεός = 'το θεός το θεός'). The latter interpretation again, is further explained by what Pelagius says with reference to 'formam servi accipiant': 'ita ut pedes lavaret discipulorum; celavit quod erat, Adam vero et antiquae hosts suae usurpavint superbia quod non erant' (PL xxx. 884; H. Zimmer, Pelagius in Irland, Berlin, 1901, p. 377).

Thus, in dealing with Ph 2:6, Pelagius, like the recent expositor Lightfoot (op. cit.) and J. Weiss, has not provided a particular exposition of 3:25, and under the influence of this reminiscence applies the same phrase to Christ as the second Adam. It would seem that this interpretation was suggested to him by earlier tradition, as his older contemporaries, Phoebeinus and Aeginaeus, is also reminded by Ph 2:6 of the fact that the Logos 'induerat quod servum quod servum quod servum posset: hominem secliget ... ut [printed 'et'] secundum Adam per obedientiam restituens quod primus transgressiones perdiderat (contra Arrianon 21 [PL xx. 29 A]).

(c) The Antiochene-Occidental interpretation.—The third interpretation of Ph 2:6 takes a middle course between the two discussed above. It was known to Pelagius, who, however, rejected it in the interests of anti-Arianism:

'Allelui haec locum its intelligent quod secundum divinitatem quae humiliavit Christus, secundum formam secliget, secundum quum assuquatum Dei non rupinam usuvare quam naturale est, est eminens, etc., eximis diebus, non substitutum essent, ecclesiam, etc., de omnem munus, de ammunition, etc., de permissis ut humano tantummodo apparens atque humili illum obedientiam nec oratus mortem renascendo' (PL xxx. 884 A; cf. Zimmer, op. cit. p. 377, and pseudo-Primasius).

This interpretation was at that period widely current in the West. It was adopted by Ambrose (PL xvii. 409)—though with some points of resemblance to the view of Pelagius, as, e.g., with regard to the 'Dei' and also by Phoebeinus (ib. xx. 29 A) and his contemporary Gregory of Elvira; while, as regards Ambrose, Augustine, and even Hilary, it is obvious that they too form the basis of this interpretation, though with certain

1 In Religionen an Geschiechtte von Gegenwart 1, (Tbingen) have 179. 179. 179.

3 Ph. 2:8. 2:9. 2:10. 2:11. (PL xx. 29A). cf. A. Schott, Die Auseinandersetzung Augustae über Phil. 2:6, 8; Verla, De Philemonis et Philonociis, (PL xxii. 191.)

modifications due to Greek influence, i.e. to the view indicated under (a) above. Apart from these modifications, this current Western interpretation agrees with some of the important particulars. (1) It takes Ph 2:6 as referring to the historical Jesus Christ, though—diverging here from Pelagius—to Christ 'secundum divinitatem,' i.e. to the Ξηραντον Λόγον. Ambrosiaster is quite aware of his divergence at this point from the view noted under (a), and explicitly says: 'Non enim mihi scult quibusdam videtur, sic formam servi accipiant eum quem in carne sustinet in voce quod et in Christo Jesu, id est, Deo et homine' (PL xx. 423 A).

But, on the other hand, Phoebeinus, Gregory of Elvira, and, above all, the Grecizing Fathers (Hilarus, Ambrose, Augustine) include in the Kenoisis also the 'incarnatio' of the Logos, as the decisive conception of the process expressed by the words ἐκατέραν πρωτοτοκον and wrought out in the life of the historical Christ. (2) The current Western interpretation and that of Pelagius have in common the idea of the co-existence of the 'forma Dei' and the 'forma servi'—an idea very prominent also in Hilary, Ambrose, and Augustine (cf. Reuter, loc. cit.). (3) In connexion with that view, they agree also in regarding the και πρωτότοκον as a και πρωτότοκον ('celavit quod erat').

In all these three points, between the current Western interpretation coincides with the common Antiochene, though the latter, like the Grecizing Western Fathers, often inverts the και πρωτότοκον into the conception of the και πρωτότοκον. The correspondence is clearest in the case of Nestorius. While Nestorius recognizes the και πρωτότοκον as the essential starting-point of the και πρωτότοκον, he expressly says with reference to Ph 2:6, that 'Hoc autem πρωτότοκον του θεου θεου και εκ του θεου λογος' (Nestoriana, p. 254).

Moreover, the co-existence of the και πρωτότοκον and the και πρωτότοκον which we already find in the Fragments of Nestorius is shown by his Liber Heraclidio to have been one of his leading ideas, inasmuch as he identifies και πρωτότοκον and και πρωτότοκον, and the exchange of the και πρωτότοκον is the decisive factor in his conception of the 'unio personalis' of the two natures. Lastly, it has long been recognized that Nestorius attached great importance to the Christological και πρωτότοκον; thus, to take but a single instance, we quote him regarding the self-restraint of Jesus Christ at the Temptation: σεικε εκελέστω το και πρωτότοκον θεος ... αυτος δε ανθρωπος φιλατρευτηγαν (Nestoriana, p. 348).

Like Nestorius, Euthymius of Tyana, a writer of kindred views, emphatically asserts that Ph 2:6 ought not to be read as referring to the Logos; in opposition to the words of Cyril quoted above (a), he writes: 'Segwe apostol Paulum . . . non sit, Ipsi de coelo desc Spreadius Deus Venustum eximians semiintem, . . . sed quid dieci? Hos sensatur in voce quod et in Christo Jesu' (G. D. Mactar, SS. Concilia, Vol. 1793-95, v. 983 c-e; cf. G. Ficker, Euthymius von Tyana, Leipzig, 1905, p. 69 f). The views maintained by Nestorius and Euthymius in connexion with Ph 2:6 were, however, not distinctively Nestorian; they were rather in the line of the common Antiochene tradition. In fact, notwithstanding the fragmentary form in which the writings of the earlier Antiochenes survive, it seems certain that the teaching of Theodore of Mopsuestia regarding the και πρωτότοκον of the two natures in Christ has been very similar to that of Nestorius, and the former's exposition

of Ph Griffith shows that he too regarded the historical Christ (or the Logos Logoi) as the subject of ekeino and interpreted the kinesis as a person;

Theodotus, Clement, Tertullian, and the Western expositors, on the other hand, put away the idea of ekeino and took the kinesis as a divine essence (Theodotus ekeino as a palaion Theodosius, Clement, Tertullian, and the Western expositors) which of these three types of exegesis has the longer tradition behind it is a question not to be answered by a mere reference to the fact that Theodotus, Clement, Tertullian, and the Western expositors are earlier than the Pelagian and the Antiochian. For the circumstance that what is common to the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appears also among the Antiochian and the Pelagian and the current Western interpretation appear...
of the orthodox Lutherans as the 'Extra Calvinisticum'—represents the settled belief of all the theologians of the early Church. Testimonies to God's currency might be adduced from the East and from the West. To the theologians of the early Church it was, in view of the inmutability of God, as obvious as it was unquestionable. Further, the Nicene Creed, in its anathemas, formulates a dogma the thesis that is ἐπίστασις and ἀπόλυτος. Of the theory that the Logos, in consequence of a mutation in His essential being, confined Himself to an existence in the historical Jesus, Baill the Great writes thus: τὸν οὖν ἐνθαμνήθην ἐκ τοῦ ἁμαρτίας ἐκ τῷ θεῷ ἀμαρτήσαι παρὰ τῷ ἀπόρρητον (Ep. cxxii. 2).

(d) The common doctrine of the Kenosis in the early Church.—On the assumption that the ideas discussed above were valid, there remained only one theologically intelligible view of εὐαγγέλιον πρεσβύτερων as applying an act of the Logos—the view, namely, to which Irenæus had given expression, though not in connexion with Ph & nbsp;

3 συνερχομένου τοῦ Θεοῦ τιμής, τό τε παράστατον τῇ ἁμαρτίᾳ, τοῦτο αὐτὸς τοῦ παράστατον τῆς ἁμαρτίας (Poly. iv. xxvii. 2; cf. 1).

This view was adopted by Novatian (cf. 2 (d) above), and also by Origen:

'Por ousi eu xροιστεωση σεντικτικος δεστω και πληθυνομενοι διδακτορεις" (de Princ. i. 11. 5)." Origen explains it by a figure, and his idea may be concisely expressed as follows:

Imagine a status of esse and esse being filled in the whole form; its very magnitude would preclude its being seen; a small copy of it in the same material, however, would give us some idea of it. Similarly, as we could not behold the pure light flowing from the Divine majesty of the Logos, by His kenosis He made it possible for us to see of this divine light: 'transcendentem insinuam humanorum corporum formae ex operum virtutum simulacris Dei Parvis was seen in immensam atque invisibilis magnitudinem designantem' (Iren. c. 3).

Here the Kenosis is that self-limitation of the Logos which was involved in His manifestation in a human form, though at the same time He is not in any way limited as to His cosmic position. This conception of the Kenosis may be regarded as the recognized view of the early Church. It is the view alike of the theologians who refer the εὐαγγέλιον πρεσβύτερων to the λόγον ἁμαρτίας, and so identify κόσμος with ἐνδυνάμωσις (2 (a)), and of those who find the subject of εὐαγγελίου with the λόγον ἁμαρτίας. For the theologians who identify κόσμος and ἐνδυνάμωσις firmly believe, like the other group, that the Logos, notwithstanding His immediate κοσμοπλοηγος and ἀπόλυτος, and, as regards His divine place in the universe, unconditioned—ἐνδυνάμωσις (as Apollinaris himself puts it; cf. 4 (b) below). In view of these conception of the Kenosis, however, the two modes are in reality co-existent, inasmuch as the θεὸς εὐαγγελία—a view even according to Apollinaris (cf. 4 (b))—was still retained by the λόγον ἁμαρτίας. Both groups were alike convinced that the 'be什'; i.e. the human vehicle of the manifestation, stood in the way of a complete revelation, or, what is the same thing, κόσμος and ἐνδυνάμωσις being here identical—made it impossible for the Deity to reveal His majesty fully within the limitations involved. Thus the two interpretations given respectively in 2 (a) and 2 (c) above might frequently merge in each other. Not indeed, does the kenosis (2 (b) above), to which that of the Antiochenes frequently approximates, rest upon any other conception of the Kenosis. The idea that the Logos in assuming human nature surrendered the universal operations of His deity, to be a very far removed from the idea that He became incarnate in a man who veiled the indwelling φάντασμα τῆς θεότητος, humbled Himself, etc. Yet, so long as the 'Extra Calvinisticum' (cf. 2 (c) above)
is adhered to, the Kenoisis is taken in a sense essentially the same in both cases.

1. Diverse aspects of the early Church theories.

Is the doctrine, it is needless to say, propounded by the early theologians seems very great from one another. The extreme poles of the variation are found in Augustine and Pelagius. But the differences do not arise from any essential disparity of view regarding the Kenoisis; they are due rather to the various degrees in which theological theory is mingled with popular doctrine.

(a) The influence of popular doctrine upon the orthodox theologians. — Although Clement of Alexandria held, as already noted, that the Logos COULD not possibly be described to the Logos, we nevertheless find him saying: "οὐκ ἡκύρικε Ἡσίων δίκαιος, xxxvii. 2." Origen often expresses himself in a similar fashion, and, indeed, no theologian of the following century ever quite discarded the formula and symbols of the popular conception of the ἐναθμώτης. Even the Nicene Creed, immediately before its anathema upon the ἀναθήματος ἡμῶν εἶπε τὸν θεόν τοῦ θεοῦ, speaks of τὸ θεοῦ κεφαλή (Orat. xxxviii. 21).

Yet he not only accepts, as was shown by these works of Tertullian and Irenaeus, the Aristotelianism, but still adheres to the essentially "Nestorian" view of Origen, viz. that the Incarnation was effected "Adamanta animae inter Deum carnemque mediatum":

ψιθυρίζε, καταγράφων, θεωρήτων τούτων μητρικούσιον δυνατόν καὶ ακατάκλιτον μνήσθαι (Orat. xxxviii. 12).

(b) Apollinarians of Laodicea. — Of all the theologians of the early Church it was Apollinarii of Laodicea who accorded most fully to popular dogmatism. His doctrine of the Incarnation, according to which the Logos is the son of the Logos, a new idea of Christ, perhaps even be described as a materially and formally ingenious attempt to moralize the popular views of the ἐναθμώτης into a theological theory. In Apollinarius, indeed, we find statements that seem to indicate a type of Kenoisis implying a real change in the Logos.

καθαρά (Lietmann, Apollinaris, 358, p. 297).

Yet he also says: καθαρά μὲν ἐναθμῶτη καὶ τὴν ἁμαρτίαν (Herm, 78, 11, p. 349). Still, ἁμαρτία = δεῖ να δώσαμεν αὐτῷ θάνατον ἡμῶν ἐν τούτῳ (65, 31, 2, 12).

Even in Apollinarius, therefore, notwithstanding his affinity to the popular doctrine, there is no place for a theory of the Kenoisis which diverges from the general tradition of the early Church (cf. 3 (d) above).

(c) The Antiochians. — It is true that the Christology which is furthest removed from Apollinarianism, i.e., that of Nestorius, and that of Pelagius (which coincides with the latter in many of its formulæ), does not merely "seem to differ." In so far as, in the divergence referred to, the question regarding the person of Christ was brought to discussion in the theorizations of the early theologians, the differences are profound. The Nestorian doctrine of the Kenoisis (cf. Lecoy de la Marche, 102) is a lucid development of the Nestorian views to which Ireneus and Novatian had already given expression, and which were never really discarded by the theology of the early Church — a development, one might say, as possible from popular dogmatism. The Apollinarian doctrine, on the other hand, tends unquestionably to pass beyond the earlier views and to advance towards a conception of the Kenoisis more akin to the popular idea. This tendency appears, though to a slighter degree, in the Lecoy de la Marche's theory of a θεοῦ καὶ ἐναθμώτης of the two natures in Christ which is not clearly distinguished from a θεοῦ φύσις, and also in the orthodox Chalcedonian doctrine of the θεοῦ καὶ ἐναθμώτης in Apollinarii. It was not forward as an "unio personarum," in the early Church, however — even in the hands of Apollinarius and the Monophysites — the tendency never attained its final development. This would have been secured only if the idea of the θεοῦ φύσις commer with which Apollinarius had at least attempted to deal in a serious fashion, the idea of the θεοῦ φύσις, to which Cyril sometimes attaches the same meaning, and that of the θεοῦ καὶ ἐναθμώτης had been fully wrought out in Greek theological thought. But the Apollinarian theory of the θεοῦ φύσις and the allied idea of a θεοῦ φύσις conflicted with that ἐναθμώτης of the Logos which was likewise maintained, and also with the accredited doctrine that the Logos had not forfeited His πρός θεόν ἐνεργεία, whilst, in the orthodox tradition, the idea of the θεοῦ καὶ ἐναθμώτης broke down in face of Ἰακώβου, since even the idea that εἰς τὴν θανάτον πάντων οὐκ ἀρκεῖ adds nothing to the-theologically unserviceable paradox of Athanasius: "οὐκ ἦν τὸ πάθεσι καὶ μὴ πάθεσι (Ep. ἀν Ἐπιφανίου 9)."

Nothing earns and respectful handling of the θεοῦ φύσις in an unreserved Theopneusticism could have yielded a real Kenoisis of the Logos. But could the Monophysite theologians, which attached great importance to the Trisagion in its monophysically expanded form, unreservedly maintain the idea expressed in the words εἰς τὸν θανάτον... συμπληρώμενος εἰς θανάτον?" (4, 100-179) can speak of the neo-Protestanttheology (see below).

5. The Kenoisis in the Middle Ages, and in the Roman Catholic Church. — Medieval theology, so far as it was concerned at all with the idea of the Kenoisis — the idea certainly never stands out prominently — continued to adhere to the consensus of the early Church in its Western form. The same may be said of Roman Catholic dogmas at the present day. Thus, according to Wetzer and Wiele (Kirchen-Lezionen, iii. (1884) 271) "suum ipsum exinanit" ('Ph. 2') is affirmed of Christ's assumption of human nature, the scholastic mystics and many Protestant theologians believe, of His divine nature and person per se. The Kirchen-Lezionen (xii. (1901) 179) can speak of the neo-Protestanttheology (see below) as "a complete kenoisis of the uncreated Christ.

6. The Kenoisis in the Reformed theology. — The Kenoisis was insisted upon more strongly by the so-called Reformed theology, which found the subject of ἐναθμώτης in the Logos — whether ἁμαρτία, as becoming man, or ἑθός — and connected the idea with its doctrine of the 'states' of Christ. In the earlier theologians of the Reformed Church, in fact, we occasionally find assertions which readily explain why certain Lutherans spoke of a special Reformed doctrine of the Kenoisis.

The sense in which such utterances are to be understood, however, is made clear by Zanchi (in the Zürich, 1847, p. 863).

2. Der Kenoisis, ed. 176. 1109 B. θεοῦ Χριστοῦ... εἰς τὸν θανάτον συμπληρώμενος.
It was the controversy between the Tübingen and the Gissel group (1616–27) — who were at one in their view of the *kratos* — that first set this Lutheran problem regarding the Kénosis into the field of serious debate. The Tübingen group, who thought of the *kratos* only as a *khrēstos* *khrēstos*, thereby fell into manifold confusions and a concealed Docetism. Of the Gissel group, Balthasar Meister († 1627) tried to establish the theory that the Kénosis was a *khrēstos khrēstos* by arguments* which must be regarded as an attempt to supplant the idea of a substance — that first to envelop this Lutheran problem through the Tübingen theologians, but the profounder thoughts by which he tried to establish it were soon forgotten.

8. The modern "Kénoticists" — Views forming a complete contrast to those of orthodox Lutheran — views, indeed, which the Formula of Concord banned with an anathema (Epitome, viii. 39) — are found among the modern "Kénoticists," theologians, who regard the *kratos* as a real surrender of the *forma Dei* for the *forma servi*, and thus assume that the Logos, in order to become man, actually renounced, either wholly or in part, His divine attributes. Such ideas, which are connected with the more popular dogmatists of earlier and later times (cf. above), soon emerged sporadically in Protestant theology. They crop out in Menno Simons († 1559);* N. L. Zinzendorf († 1709) developed them with all the self-confidence of a modern theologian, and, following the fresh line taken by F. C. Oetinger († 1782), P. M. Hain († 1790), and other Pietists, the Pietistic physician Samuel Collinhusen († 1803) published lengthy disquisitions on the same side. In the confessional theology of Neo-Lutheranism the first to advocate kindred views was E. W. Sartorius (1831 and 1832). It is possible that popular views supplied the incentive to some of these pioneers in the modern doctrine of the Kénosis. But the present writer thinks that this does not apply to the modern doctrine itself, which originated rather in the endeavour at once to maintain the Tübingen doctrine of the early Church and to do justice to the true humanity of Jesus Christ and the unity of His person. The writer who gave the doctrine its scientific foundations was the late Thomasius († 1875); and, in Germany, his views, with more or less modification, were adopted by many Lutherans — C. T. A. Liebner († 1871), C. K. Hofmann († 1877), W. F. Gies († 1881), C. F. A. Kahnis († 1888), Franz Delitzsch († 1890), F. Frank († 1894), C. E. Luthardt († 1902), and others — and by a few Reformed theologians, e.g. J. P. Lange (1884) and J. H. A. Elzard († 1888). In French Switzerland the new doctrine found an early adherent in F. Godet († 1900). It first gained a footing in Britain about 1889,* by which date fresh tendencies were already asserting themselves in Germany. As recently as 1903, Sweden had a convinced champion of the doctrine in O. Benson (see literature at end of art.). The views of these writers vary greatly in detail — appearing now in a purely Biblical (Godet) and now in a speculative light (Liebner, Hofmann, Frank) form, here showing great resemblance.

strait, there venturing upon the most daring conclusions (Genes)—and cannot be set forth here; we may simply refer the reader to Benson's historical introduction (pp. 42-127) and to the works of Dorner, Schultes, and Günther cited below.

One brief observation, however, should be made. The purely modern theory of the Kenosis is consistent only on condition that it surrender everything in the nature of an 'Extra-Calvinistic.' Thomasius, in fact, actually ventures to say in his Heitrelte (p. 228):

Logos reserved to Himself neither a special existence nor a special knowledge outside His humanity. He truly became man.

Such a view certainly secures the true humanity of Jesus and the unity of His person. But as certainly it traverses the immutability of God, and it is fraught with conclusions most incompatible with the conception of the Trinity. If, again, the 'Extra-Calvinistic' be in any degree retained—as it always is, when, say, the 'immanent' and the 'relative' attributes of God are distinguished in such a way that the latter alone are regarded as having been relinquished by the Logos—then (to say nothing of the logical difficulties) the theory does not secure what it aimed at securing, viz. the unity of the person of Christ. If, in order to obviate the logical difficulties, the Kenotists, in their statements regarding the divine nature and its 'idolatry,' seek to bring the ancient doctrine of substance more or less into conformity with that of the living reality, the result is a blurring of the distinction between their own theory and the Christology most repugnant to them, i.e. 'Nestorianism.'

Moreover, the modern theory of the Kenosis, in all its forms, still carries an air of presumption, insomuch as it ventures upon constructions which would have a meaning only if God's relation to the world, or, let us say, the relation of the Logos to God, and His divine and human self-consciousness, could be grasped—and analyzed—by the finite mind of man.

q. Estimate and conclusion. Does the foregoing discussion throw any light upon the kēnesis in Phl. 2:6,7? The present writer ventures to think that it does. The early Church exegesis of the passage and the early Church theory of the Kenosis would seem to throw us back upon an interpretation of St. Paul's words that starts from the integral personality of the historical Jesus. In the Jesus Christ of history there dwelt τὸ πάθημα τῆς θεότητος. Can we not therefore also say that He was ἐν μορφῇ θεοῦ? This question more especially in consideration of Gn 12:1 (παρακλήσεις ἐνθρόνων καὶ ἐκσκόπων ζωντανών), 2 Co 4:8 (Χριστός, δεῖ ἑττήσει τοῦ θεοῦ), and 2 Co 3:3 (τὴν αὐτὴν εἰκόνα μετατρέπει τῷ ἐξωτερικῷ τῷ ἐσωτερικῷ), is, as we think, to be answered in the affirmative. Adam desired to grasp at equality with God (Gen 3:5); but He in whom dwelt τὸ πάθημα τῆς θεότητος, ὡς ἄργιλον κηλίδηθος τοῦ θεοῦ. No enge-""
Theophrastus, in his De Causis plant. v. x. 4, says that each locality has its own peculiar Kéres dangerous to plants, some coming from the soil, others from the air, and that the novice must be on his guard against the bewildering mutability of Nature before her "laws" were discovered.

From the swarm of minor ills, two emerge and impress the Greek mind most restlessly and most to be dreaded—Old Age and Death:

Kýres dé parástathen: meliá 1) ἐν μέσῳ ἡμῶν τότες γέρων ἄρτιον, ἐν δὲ ὅριον οὐδεὶς Μημήνιος, ἡ μία ἦδη συνεπάγεται. 2) Thucyd. 2:16, where the man who rends the calf destroys him, you too, if you are disposed to anger a genius or an evil genius which seems to us to be a catchword at the moment of transition 1) (J. E. Harrison, p. 174). In one passage only in the Iliad (xviii. 332. Shield of Achilles) is a Kér materialized, as it were, and exhibited as a demon of slaughter raging on the battlefield; but that is in a work of plastic art. This is further developed in Homeric Hymn to Heracles, 249f. a crowd of "black Kères" (κῆρες ἀνέβας) cf. Paus. v. x. 6: description of a female figure inscribed Kér on the chest of Kypselos at Olympia.

Kéres, as blessings, and especially of a Kér within a man as in somnambulism, or dialektikos, on which his life depends for good or evil, is almost completely overlaid by the more beneficent aspect (cf. the ἑξάψυχος κῆρες of Achilles in the Iliad, II. ix. 411; Hes. Thyg. 217. Probably this idea lies at the root of the curious Homeric epithet κηρητήρεια (Work and Days, 416), not 'nourished for death,' but 'Kér-nourished'—the word meaning 'to bring to a primitive doubleness of functions when the Kéres were demons of all work' (J. E. Harrison, p. 185), analogous to the Moirai which control human life and wool, and whose function was never developed to any precision, and whose raison d'etre in Homer, incoherent and self-contradictory (see B. Niehe, Entwickelung der hom. Poesie, Berlin, 1882, p. 34, note 1).

Something of what the Athenians thought about Kéres is discoverable from the customs connected with the Anthestheria, or Feast of All Souls—a festival overlaid in classical times with Dionysiac elements originally foreign and of more recent date. Its real meaning is indicated by the ritual command spoken apparently on the last day, called Chytroy.--"Out of the house, ye Kéres!" is no longer Anthestheria. (θρέψεις κήρεις, ὃν δὲ Ἀνθεστηρία--ἀν κτά με τὸν πόλει τὴν Ἀνθεστηρία τῶν ψυχῶν παρέχων: unity of spirit.)

The festival was a great one in which the Athenians spoke of as turning out for evil for mankind. Eros retained the last of his resemblance to Kér in being associated both with suicide and as a Feast of Revolutions of the dead. The Kér as a usual form of κήρεις, κέρας, this has a certain plausibility, as we know that the household servants were admitted to the festivities and licence of the Pithoiakia. Probably in classical times already and already an old.

placation of ancestral ghosts, who had been summoned from the tomb on the first day, the Pithoiakia (τίθος, 'burial-urn' or 'jar'), which can be understood as a festival of the opening of the wine-jar and first tasting of the new wine, when the three days of the Anthestheria became a revel of Dionysus (cf. O. Murray,. Fragments of Greek Religion. New York, 1915, p. 30; and Phot. s.v. μαρτυρία et τοῦ Χαλκοῦ Ἀνθεστηρίαν μνήμην αὐτόν ζητούσιν πρὸς ἄλλους ζητούσιν ἀνδρείαν).

Kér's, therefore, were also not to be dealt with, and on vases they appear as gnarl-like figures, winged, but in other respects human, fitting about the grave-mound, or enclosed within it (ref. in Roscher). A ghost (ψυχή) they are powerful for good, but more specially for evil, and quick to take offence (cf. schoi. in Aristoph. Ar. 490: ἐχθονικὴ κηρή καὶ τῆς ψυχῆς τούτης ἐνδυόμενον ψυχήν —quoting in Rhede, Physik, p. 246, note 4). They become tyrants of physical death, and actually hold off living souls (cf. Hom. Od. xiv. 207; Apoll. Rhod. Argen. iv. 1695 ff. : Medea invaded the Death-spirits, devourers of life, the swift hounds of Hades, who, having thrown all the air, swoop down upon the living (H. C. Seaton, in Locs Class. Libr., London, 1912).

Most potent for evil is the vengeful ghost of a murdered man, which has gone to join the great company of malevolent elements ἡ μεγάλη αἴματος καὶ τοῖς ἀνθρώποις ἐπιθυμία τίτλοι (Men. x. 164 ff.).

The word Eriuys in this combination 1) Eriuys was originally simply a descriptive epithet meaning 'angry ones,' just as Eumaius is 'kindly ones.' So the 'idea of Eriuys as distinct from Kér is developed on a human relation to the animal. (J. E. Harrison, p. 214) as Pluto probably recognized (Laws, ii. 885 ff.)) Already in Homer, however, the Eriuys are no longer human souls, but avengers of souls upon the living (see H. ix. 571: τοις ἐφοροίσι: ἔρωτα ἐλεύθερον—When summoned from Althaea to avenge her two brothers). Abscription being pushed still further, the Eriuys become avengers of offences against all moral law, or even the laws of physical Nature:

τοις ἐφοροῖς ἐλεύθερον πατον ἤφει, ἄνω τῶν μαχεῖ Δίας ἐκείνης (Hes. Od. vi. 291) —compared with Od. ii. 280:

εἰς αὐτοῖς ἐλεύθερον ἀοίδας θεοὺς ἐδούβην; ἔρωτος ἀπώλεσιν (Hes. Iliad, ix. 414 and x. 418).

Formless in Homer, they were first differentiated from Kér's and analogous mythological figures, and portrayed in visible shape in drama, by *Eschylus (Etumos, 40 ff.). The more primitive view of them reappears later in literature at intervals, as, e.g., in Sophocles (Ed. Tyr. 471 and 481), as embodied Doomes (cf. Eur. I. 252). It would be hard to prove that the primitive conception ever died out completely.

LITERATURE.—A long art. by O. Cruxinn, in Roscher, ll. (1890—1897), gives the fullest collection of passages, chronologically arranged: see also O. Gruppe, Griechische Mythologie und Religionssitten, 2, Munich, 1896 (i. v. Müller, Nach- und blatt. Alterthumswiss). The fullest general treatment, apart from more accumulation of references, is J. E. Harrison, Fragmens to the Study of Greek Mythology, Cambridge, 1896.

W. J. WOODHOUSE.
Hindi khaire, Skr. khaire, the tree Azadirachta, the preparation of which is one of the bali ceremonies in some Kharias.

A non-Aryan tribe found in Bengal, the United Provinces of Agra and Oudh, and the Central Provinces, numbering, at the Census of 1911, 147,231. As is the case with many similar tribes, they fall into two groups—the one is strictly a forest tribe, isolated, retaining animistic forms of belief, the other influenced by the Hindus in whose vicinity they live.

According to E. T. Bolton, the Chetos and Khawar are both observed, like the Kols, triennially. Every three years a buffalo and other animals are offered in the sacred grove, "karna," or on a rock near the village. They also have, like some of the Kols, a priest for each village, called jinn. He is always one of the poorer tribes—skr. khikriya, or Khawar, or Paraveya, and is also called baiya (see Batá, vol. ii. p. 333), and he only can offer this great sacrifice. No Brahmanical priests are allowed on these occasions to interfere. The deity honored is the tutelary god of the village, sometimes called Dvar Pahar, sometimes Dvar Shakti, sometimes Purushottam or Dakshin, a female, or Puran, a siva god, the same perhaps as the Dvar of the Kols (Descriptive Ethnology of Bengal, Calcutta, 1873, p. 129).

In one village of Khawar the same writer found that the Baiga priest was offering, in the name of the village, biennial sacrifices to Chadola, a male spirit, to Chanda, a female spirit, and to Purin.

Buffaloes, sheep, and goats are offered to these propitiously. They do not associate Chandas with Koll and Mak, and make no prayers to any Hindu gods. But when they are in great distress, they appeal to the sun. They have no particular name for the luminous, calling it "surya" (Skr. sunya), and any place on which he shines may be the altar. They go the same place, and retire to it. These villagers honored their ancestors by a yearly offering of a buffalo; this is strictly a family affair. The animal is killed and eaten at home (ib. p. 150). According to H. H. Baily, the "main body of the tribe, and particularly those who belong to the landholding class, keep up the old religion and employ Sáradwip Brahmanas as priests. Mahadeo and Sitaran are the popular deities: Harish and Ganesu being worshipped during marriages. In addition to these, the miscellaneous host of spirits feared by the Mundas and Oomas are still held in more or less reverence by the Khawar, and in some members of the tribe sometimes perform the duties of pahan or village priest" (ib., Calcutta, 1901, i. 470).

In the United Provinces they call themselves Hindus, but they do not regularly worship any of the orthodox gods, except Sura, the sun, to whom they appeal in time of trouble. Their chief deities are a local Jullundri (q. v.) Devi, who must not be confounded with the Tanjá goddess of the same name. They also worship a local deity called Raja Lakkhan or Lakhana Deva, who is one of their deified Hindu conquerors and is worshiped as the famous Raja Jai Chaud of Kanaj, who fell at Benares under the sword of Shihab-ud-din, the Musalmân invader, and became a popular hero (V. A. Smith, Early Hist. of India, 1898, p. 356). He is annually worshipped at the platform where the tribal dead are propitiated. As in Bengal, they also worship Raja Chandol, and Dharit, or Mother Earth, while those under Hindu influence employ Brahmanas to worship Siva on their behalf. Dallah Deo, said to be a deified bridegroom who died under tragic circumstances, is their marriage god. Darapát Deo and his spoue, Anjumati, are the tribal gods of war.

The most remarkable cult practised by the branch of the tribe in Chotá Nagpur, however, is that of Múchak Rani, who is said to belong to the Chámári caste (see CHAMÁS). A sacrifice in her honour is made at the village thriving-floor, and her marriage is performed with much ceremony.

The people, accompanied by musicians, ascend the hill where she is supposed to live, and there on the top of the hill, in front of the temple to which they have come, make their circumambulations, and in front of the temple the dancers, with the drum and the cymbals in their hands, dance on the temple steps, and while they dance sing this song: "Chána ne cha, bódh hi cha, dāna ne dór, rājya ṣātra, dārṇa ne dás, dārṇa ne dás, dārṇa ne dás; ná rítha dás, ná dás, ná dás, ná rítha dás, ná dás, ná dás, ná rítha dás, ná dás, ná dás; ná rítha dás, ná dás, ná dás, ná rítha dás, ná dás, ná dás, ná rítha dás, ná dás, ná dás."
KHASIS.

The Khasis are a hill tribe inhabiting Assam and Meghalaya, India. They are one of the many indigenous groups in the region.

1. Origin and affinities. The origin of the Khasis is a difficult question. In the opinion of the present writer, they are an offshoot of the Mon people of further India, but as to their ultimate source, apart from their fairly close approximation to the Malay type, all that we can guess now is that we are on the right track, originally pointed out by J. R. Logan as regards India and Further India, and it is to be hoped that the researches of scholars such as W. H. R. Rivers, in Melanesia, will help us very greatly (see Gurdon, pp. 19-18).

The use by the Khasis of a very peculiarly shaped spade (mokbi), which may perhaps be regarded as the prototype of the “sinular shoulder-seated cells” found in the Malayan Peninsula and Chota Nagpur and figured in the JASB of 1875, may be mentioned. These shoulder-headed cells are, according to E. Aymonier (Le Cambodge, Paris, 1906-41, III), noted in Assam, which is situated between 25° 11' and 29° 5' N., lat. and between 90° 47' and 92° 52' E. longitude. The District contains an area of 6175 sq. miles, and is mountainous. About half of it, including the capital, Shillong, is outside the limits of British India. It consists of a collection of small States in political relations, regulated by treaty, with the Government of India, by her paramountcy, and in the management of their local affairs. In the remainder, called the Jaintia Hills, the indigenous system of administration through officers called dolas has been maintained. The population of the Khasis residing in the Khasi and Jaintia Hills consisted of 161,865 at the last Census, exclusive of 25,245 Christians, the greater portion of whom are Khasis belonging to the Welsh Calvinistic mission. They are a linguistically allied to the Mon-Khmer family of Further India, and by their appearance are sharply differentiated from the Mongoloid tribes which surround them in Assam, the Khasi skull being mesocephalic, the eyes being brown and not like narrow slits, the base of the nose wide, the skin varying from dark to a light yellowish brown, according to locality (fainter in the upland than in the lowland), the hair black and straight, the stature short, and the males very muscular. These physical characteristics closely correspond with those of all speakers of Austronesian languages (as reported by Schmidt), of which the Mon-Khmer form an integral part. The calves are very highly developed—which is due probably to the Khasis, both males and females, being accustomed to carry very heavy burdens up and down the mountains. Of music, the hymn tunes which are taught them by the Welsh missionaries being rapidly learned and retained without difficulty. The most important and probably the most interesting characteristic of the Khasis is the system of matrilineage.

The social organization presents one of the most perfect examples of surviving matrilineal institutions, carried out with a logic and thoroughness which, to those accustomed to regard the status and authority of the mother as the foundation of society, are exceedingly remarkable. Not only is the mother the head and source, and only bond of union, of the family; in fact, the most primitive part of the marriage ceremony is the right of the woman to receive, as a gift from the man, all the valuables in the house and family of the woman when she marries. She is also the owner of all the lands and possessions in the family and is the only member of the family not subject to the authority of any male. She has the right to sell, exchange, or give away the property of the family, and this right is not in any way interfered with by the rights of the father or brothers. She is also the only person who has the right to inherit the property of the family. She is also the only person who has the right to inherit the property of the family. She is also the only person who has the right to inherit the property of the family. She is also the only person who has the right to inherit the property of the family. She is also the only person who has the right to inherit the property of the family. She is also the only person who has the right to inherit the property of the family.
cottages. The Khás make their villages a little below the tops of the hills, and seldom change their situation; they are situated in their present positions for many years, as is evidenced by the large number of memorial-stones and cromlechs which are to be seen near them. The Khás chief, or head of the family, is in the midst of his people. There is little furniture in the houses in the interior, although the more up-to-date Khás use furniture of European patterns. In every house are to be heard the noise of shield shingles, which are made of basket-work, and also the baskets, ki khol, of different sizes for carrying on the back. The Khás possess very few musical instruments, and those which they do have are of the Assamese or Bengali patterns. They are hard-working cultivators, and achieve very fair results, considering the unproductive nature of the hill-sides on the uplands. There is a considerable amount of wet paddy cultivation among the Syntengs of the Jowai subdivision. The most important crop in the uplands is the potato, the tuber having been introduced into the country by the British. The culture of rice on the plains in the Southern portion of the district is of equal importance with that of the potato in the Northern. Oranges grow best in the warm valleys lying on the Sylhet side of the hills. The Khás orange has always been famous for its excellence. According to Letters received by the East India Company from its Servants in the East, it was exported many years ago to Europe with the oranges of Garhwal and Sikikim.

Khás use bows and arrows for hunting, and spears for both casting and thrusting. Fishing is largely resorted to, the method employed being to poison the streams. The Khás eat practically all flesh, except that of the dog, which they consider to be 'the friend of man.' In this respect they differ from the Nagi, Garo, and Kuki tribes of Assam, all of whom eat the dog. The Khás, except some of the Christian community and some of the people of Mawphuk in Shillong, do not use milk or its compounds, following in this respect the Kacharis and Rákhas of the plains or the Garos of the hills. The Mongol race in its millions, as a rule, does not use milk for food; but the Tibetans and some of the Turkoman tribes are exceptions. The Khás are heavy drinkers of both rice-beer and rice-spirit. At a marriage may be said to be the national custom. Manufactures are few in number, and do not tend to increase. The iron industry in former days was an important one, but has now died out completely.

4. Tribal organization.—The people of the Khás and Jaintia Hills may be divided into Khás, Synteng, War, Bhoi, and Lyingh. These sections are subdivided, the Khás into the inhabitants of the central high plateau, Cherra and Nongstoin, Mataram, Mariah, Mongkhil, and the neighbouring Siemhlis; the Syntengs into Synteng proper, Nongtung, and Khryweng; the Wans into War proper, and Warr Poan; the Bhoi into Inthik, Myria, Rynkingh, and the Khás-Bhoi, i.e. Khás who inhabit the low country to the north of the district which is called generally 'the Bhoi.' The Lyingh are a separate division, being half Khás and half Bhoi. These tribes and sub-tribes are neither strictly endogamous nor strictly exogamous, but they are more endogamous than exogamous; e.g., Syntengs more often marry Syntengs than Khás, and vice versa, and it would be unsuitable to consider the two sects a Khás tribe of the uplands to marry a Bhoi or War woman, and a disgrace to marry a Lyingh.

These divisions are subdivided into a number of septs, taking Khás as the definition of 'sept' as the largest exogamous division of the tribe, and these septs may be called 'clans' for the purpose of this article. Many of the clans trace their descent from ancestors, or khus (grandmothers), who are greatly revered, indeed almost deified, and in some cases the clans have a supernatural ancestor, i.e. the Melia, the placid or the Melian poppy. The descendants of one ancestress of the clan, in the Syntengs, are called ki buri, or exogamous. The Syntengs have a division called the khol, or sub-clan, all the descendants of one great-grandmother (ki Buri Tymyan) being styled asi buri, or sub-clan. Then comes a mother of the khol, rayd, or young grandmother, to distinguish her from the two other grandmothers already mentioned, is the head of the way, or family. A prominent characteristic of the Khás clan is the common clan sejukh; another is strict endogamy. No Khás will ever marry into his own clan, the women of which are buried, or taken, to him, and the clan of the deceased's mother, or, in the case of the Bengi, a clan, a tree name; but the clan members apparently do not regard the trees as taboo, since they do not avoid them, nor is it considered a sin to kill, eat, or otherwise utilizing them.

5. Marriage and divorce.—The most remarkable feature of Khás marriage is that it is usual for the husband to live with his wife in his mother-in-law's house and not to take the bride to his own home, as in other communities. As far as the wife lives in her mother's house, all her earnings go to her mother, who spends them on the maintenance of the family. Among the Syntengs, however, and the people of Maosha, if the husband does not live in the mother-in-law's house, he visits his wife there only after dark, and does not take his meals in the house. Divorce is common and may occur for a variety of reasons, such as adultery, barrenness, incompatibility of temperament, etc. The essential act in a divorce is the giving or exchange of five cows or five pears. The wife gives five cows or pear to her husband, who places them in the ten paces in front of his house, and he again returns them to him. The husband then throws the cows or pigs on the ground, and the divorce is complete.

6. Inheritance.—The Khás saying is long sadi na ko khus (from the woman sprang the clan). When reckoning descent, they count from the mother only; the man is nobody. If he is a brother, or buri, he will be lost to the family or clan when he marries; if he is a husband, he is regarded merely as u shong kha, a begoteer (for further details see Gurdon, pp. 82-85).

7. Head-hunting.—The Khás are not head-hunters, like the Nagas of Assam, nor do they appear to have practiced such a custom at any time; since the period of the Jaintia rebellion they have settled down into a nation of peaceful cultivators. There is little crime among them, but many murders have been carried out by a curious superstition called uk tèn. The tèn is believed to be a gigantic snake which requires to be appeased periodically with human victims (Gurdon, pp. 86-104).

8. Religion.—The main religion of the Khás is the cult of ancestors, although the propitiation of spirits of evil by means of offerings is also al-
Khawarij

most universal. The propitiation of ancestors was formerly thought to be effected by offering food to them on the flat table stones, of maw-kythal, so that they might return and help in the work. This practice still obtains in the villages in the interior of the hills. The more popular practice, however, at the present time is to make the offering of food on the flat table stone at times when it is thought necessary to invoke the aid of the departed. As is the case in other countries, and among other people, it is possible that some of the Khāsī gods of to-day are merely the supposed spirit of men interred in the ground below the flat table stones at Jaintiāpur and the stone at Ieu Kish near the Kapilī river.

11. Folklore.—The Khāsī possess a considerable amount of folklore of old days when the signs of Indian or Aryan influence. The story of the thens, or fabulous snake, has already been referred to (for a detailed account see Gurdon, p. 98 ff.). This tale or superstition may possess counterparts in Assam or in the Morn country or among the Palamuge.

12. Language.—Khāsī has been placed by Grierson in the Mon-Khmer group. As far back as 1883 the Mon-Khmer family was recognized, when Logan in his paper on the ‘General Characters of the Burma-Tibetan, Gangeitic, and Dravidian Languages’ in the Journal of the Indian Archipelago, spoke of it as ‘solitary record that the Mon-Kamboyan formation once extended much further to the North-West than it now does.’

It was not, however, till 1889 that E. Kahn showed conclusively the true relationship of Khāsī to the Mon-Khmer family. W. Schmidt of Vienna not only confirms Kahn’s conclusions, but goes a step further and includes Khāsī in the Austro-Asiatic family of languages, a western branch of the family of languages stretching from the Panjāb in the West through Indonisia, Melanesia, and Polynesia, right across the Pacific to Easter Island in the East; from the Himalaya in the North to New Zealand in the South, which Schmidt names the ‘Austro’ field of languages.

‘We must confess that it is the most widely spread speech family of which the existence has yet been proved’ (Grierson, loc. cit.). Schmidt’s theory has thus been accepted by Grierson, our greatest living authority in Indian languages. For a description of Khāsī language, see the chapter on language in Gurdon, which is based chiefly on C. J. Lyall’s skeleton grammar contained in Linguistic Survey of India, ii.; cf. also the literature of Kahn and Schmidt.

Khawarij.—Khawarij, plural of khawārij, ‘a rebel,’ is used as the name of a group of Muslim sects, of which apparently only the Tābi‘is (q.v.) now survive. They are first heard of in connexion with the murder of the third Khādīj Uthaymīn—an event which, owing to the want of contemporary documents, is somewhat obscure. Of the offences with which this personage was charged the most serious appears to have been his ordering the destruction of all existing copies of the Holy Qur‘ān, in order that the recension which he introduced should be unchallenged; but, since this order was effectively carried out, the Muslim historians are compelled to express approval of the act, as

---

1 For division by egg-breaking see Gurdon, App. C, p. 921.
otherwise they would be throwing doubt on the authenticity of the only surviving copy. It would appear that "Ali obtained the Khilafah by the sword", the insurgents who had killed Ummân, but afterwards was compelled to express abhorrence of that act; and, by accepting arbitration in the dispute which arose between the two parties, he secured the peace of the Umayyad dynasty. For the name skûrâd, said to mean "those who buy God's favour with their lives".

During the whole of the Umayyad period, persons who employed these names and formulæ gave the government trouble, sometimes being able to carry on protracted civil war, at other times being only able to obstruct ephemeral revolts. The greatest success which they attained was under the command of one Shâhid, who, in the reign of Abd al-Malik, repeatedly occupied the important city Kufa. The word of Allah, "Abû Saîf with the Khâtât bâtârî are recorded at length in the Kâmil of the grammairian Mubarrad († 825 A.H. = A.D. 908).

In the chronicles and popular literature the Khâtât bâtârî are represented as Puritans, driven to take up arms against a government which failed to satisfy their ideals of piety and asceticism. Familiarity with the Qurân is claimed for their warriors and students of the Qurân, and indeed the name qurra', literally 'readers', but often used for 'devotees', is sometimes given them. Besides these qualities they had a reputation for fanatical conduct. Thus they retained in the 3rd cent. of Islam, when, under 'Abbasîd rule, they played a less important part than under the Umayyads. Towards non-Muslims they are represented as scrupulous in their dealings; but towards Muslims who disagreed with them they were inordinate savages; they slaughtered women and children, though some of their number disapproved of this practice.

The author of Al-Dirâg bân al-Dirâg ("The Distinction between the Sects") († 829 A.H. = A.D. 1037) divides the Khwârîj into twenty branches. The doctrine common to them all was the obligation to resist an unjust sovereign; besides this they all applied the name kâfir ("infidel") to Ummân, "Affâ' the arbiters, all who approved of the Arbitration, and all who had taken part in the first Civil War (the Battle of the Camel). Some made their characteristic doctrine the application of this name to all who committed capital offences. It would appear, however, that their most important doctrine was that any traveller might be sovereign, whence they were in permanent opposition to the supporters of the hereditary dynasties.

It is not easy to fit the number 20 to the list of sects given by the author quoted; the main divisions come far below that number, whereas the subdivisions far exceed it. An artificial classification with the view of obtaining the number 20 was afterwards made by Shahbârînî (Religionsphilosophen, 2. T. Haarbrücker, Berlin, 1888, l. 135 [A.D. 1116]) reduces it to 15 divisions. One of the names meets us frequently in Arabic literature, viz. the Sharî'a; reference, however, to this occur. The differences between them were largely on the same doctrinal questions as divided the other communities, but, under the Moslem states, the use of cunning, to conduct, whether the infâns are Musulmân, etc. But there were also differences which escaped from their own special dogmas, e.g., whether an evildoer was to be called musârik ("pagan") or only kâfir ("infidel") and whether the latter word could be interchanged as well as "unbeliever". Certain other differences belonged to the details of Islamic jurisprudence, e.g., the minimum weight for the punishment of banditry was incurred, the amount of alms to be paid on the produce of land watered by rivers and springs, etc.

Although some of these sects were able to maintain themselves in various Islamic provinces for a time, and the Khâtâtîs have done so permanently, it is probable that the historians of the sects have in many cases exaggerated their importance, and represented the followers of some particular insur-gent as continuing in existence long after the movement had been defeated. As might be expected in the case of such warlike communities, their literature was rich in bâtâristîs, one of which the archæologists collected. Of their controversial and juristic treatises little has as yet come to light.

D. S. MARGOLIOUTH.

KHIDR.—Khîdîr (pronounced by the Persians Khûdîr, and Turks as Khîdîr), the green one, is the name or, rather, the title of a Muhammadan saint who, according to the popular conception in Islam, is still alive to-day. The origin of the name is obscure, although different attempts have been made to explain it (see below). Whatever the origin of the name, it is certain that the figure of Khîdîr as conceived in Islam is not derived from one definite source, but is rather the composite of a large number of legends and myths of widely divergent origin and character, which were current in the lands of Islam prior to the Muhammadan occupation. It has been justly said that the product of Muhammadan syncretism (K. Völlers, AEW xii. [1909] 238), implying thereby that the whole Khîdîr figure, while a prominent feature of the religion of the Muhammadan masses, is yet entirely made up of non-Muhammadan elements, and owes to Islam only the amalgamation of all these heterogeneous elements into one whole. It is impossible here to enter into a discussion of the extremely complicated problem of the Khîdîr legend. We shall limit ourselves to a brief indication of the principal sources upon which it has drawn and the salient features now attributed to Khîdîr and originally derived from these sources.

Frequently in Muhammadan literature and innumerable times in Persian poetry Khîdîr is mentioned as one (or rather the only one) who has gained life immortal by drinking from the Fountain of Life. According to a more definite statement quoted by early Muhammadan historians, Khîdîr was the viceroy of Dha-l-karnain, the "two-horned" (the Syro-Arabic title of Alexander the Great), who discovered the Fountain of Life which his royal master had failed to find. This leads us unmistakably to the famous story of the Fountain of Life recorded in the Greek Alexander romance which goes under the name of pseudokhalil. This work is a work of a very complex literary character, which was finally completed about A.D. 300.

According to this account, which is recorded in several varying recensions, Alexander went in order to attain to life everlasting. By the merest chance his cook, who in some of the recensions is called Andrews, discovered the fountain. He was the first to taste the

\[1\] With a different vocalisation the name is also pronounced Khandîr and Khandîr.
or dried fish in the fountain in preparation for a meal, when the fish came to life again and disappeared in the water. The cook partook of the life-giving liquid and became immortal. Afterward, the cook never touched fish again, and became a sea-demon.

This story, which originally formed a separate legend and was transmitted orally long before, and long after pseudo-Callisthenes, came in this shape to the Syrians, and through them into Arabia. A reflection of it is found in the Qur’an (xviii. 59–63), in which, like so many other legends, it has been mutilated and distorted beyond recognition. Its obvious and indeed is expressly and circumstantially related in later Muhammadan sources, that Khidr is identified with Alexander’s cook who discovered the Fountain of Life by means of the salted fish. According to a conjecture put forward by several scholars and upheld by the present writer, Khidr, the ‘green one,’ is the original designation of the sea-demon into which the cook Andreas was transformed when thrown into the sea.

A far more important prototype of Khidr is the prophet Elijah. The Tishbite is, no doubt, the most prominent and the most popular figure in the legendary post-Biblical Judaism. The most striking attributes of this post-Biblical hero are eternal life and omnipresence. He attends every Circumcision ceremony performed in a Jewish family and is said to keep a special seat, the so-called ‘chair of Elijah,’ ready for his reception; and he visits every Jewish home on Passover eve, when a special cup of wine is set aside for him. In contrast to his vehement Biblical prototype, the post-Biblical Elijah figures essentially in the amiable role of an adviser and helper. He reveals himself to scholars, whom he enlightens on the ‘secrets of heaven’ and on different points of Jewish law. He is particularly to be met with on the road and in deserted places. The Kabbalists, or Jewish mystics of a later age, laid particular stress on this popular belief of gilgaly Elijahah (‘revelation of Elijah’), and many of them claimed to have derived their mystical Ideas, and even whole books, from their personal association with the prophet.

One Jewish story quoted by a Jewish authority of the 17th century, but undoubtedly of much older origin, must be singled out from among the rest. In this story Elijah is compared to the ‘man of law’ Khidr of the first cent. on his travels, and shows him several incidents which, on the surface, seem to militate against religion, but, when interpreted by the prophet, are revealed as wonderful instances of the wisdom and justice of Divine Providence.

This story, or rather some earlier variant of it, has found its way into the Qur’an (xviii. 64–81). The place of the Talmudic Rabbi is taken by Moses, while Elijah is designated anonymously as ‘one of our servants.’ This fact alone suffices to prove what is to be assumed a priori, that this most striking figure of post-Biblical Jewish legend was known in Arabia in the time of Muhammad. Since Khidr’s salient attribute was everlasting life, just like that of Elijah, it was natural to identify the two figures. Hence the exegeses and theologians of Islam declare with remarkable unanimity that the servant in the Qur’an (xviii. 64) is no other but Khidr. This is the first express reference to the name of Khidr in literature. As a result of this combination, the story of the Fountain of Life in the Qur’an (xviii. 59–63), on the one hand, and the Elijah legend (64–81), on the other, which originally had nothing in common with one another and are easily distinguishable by their different rhymes, were subsequently made to follow one another, and were in a most artificial way welded into one continuous narrative, which has been accepted as a unit not only by all Muhammadan theologians, but also, in spite of the obviousness of the underlying facts, by many European scholars. The combination has had the additional misfortune that it has suppressed the further development of the original, undeniably pagan, conception of Khidr as sea-demon in Islam, and transformed him into a sacred figure, who is classed among the archetypal Muhammadan theologians either as a prophet or as a saint (wali), and by some even as an angel. Whatever of the original Khidr myth was still known (and a great deal of it was still kept alive) to the legend-collectors and story-tellers in Islam was forced into a new channel. Khidr, the cook of Alexander, was raised to the rank of general and vizier, and in this capacity was made the leading figure in the Muhammadan Alexander romance, completely overshadowing his heathen master.

There can be no doubt that originally the Muhammadans themselves were conscious of the identity of the legendary character of Khidr with that of Elijah, for they declare—and this is generally accepted within Islam—that the real name of Khidr is Ilyah (afterwards corrupted into Balya), the Jewish form of Elijah. The Jews in Muhammadan countries took the same combination for granted, for whose name was Elijah called themselves Khidr, and the Turks still employ the same combination by calling our prophet Khidr (Khidr = Ilyah). What of far greater importance, the prevalent conception of Khidr is an exact reproduction of the Elijah figure, to a degree which is truly astonishing. Khidr, like Elijah, is the eternal prophet who is as well known to all, who ‘appears when his name is called.’ He is helper and adviser in the time of need; he reveals himself to those worthy of his companionship, to whom he transmits divine secrets; he appears, according to a story recorded in the canonical Muhammadan tradition (the so-called Hadith), at the death of Muhammad to offer his condolence to the bereaved companions of the founder of Islam. Like the Kabbalists in Judaism, the Sufis, or mystics, of Islam lay particular claim to intimate companionship with Khidr. Innumerable stories are told of the opinions, doctrines, and prayers entrusted by the prophet to particularly favoured Sufis, and many works are declared to have been composed to be the direct product of his personal instruction. The remarkable closeness between the Jewish Elijah legend and the Muhammadan Khidr belief may be gauged from the fact that, just as Elijah in Jewish sources is identified with Phineas, so is Khidr in Muhammadan writings, and that, just as Elijah in the Talmud, so does Khidr in the Muhammadan legend appear occasionally in the disguise of a Bedawi. Numerous details of a similar kind which can easily be supplied testify to the same relationship.

Owing to the fact that the prophet Elijah is mentioned in the Qur’an by name (in the Greek-Syrian form Ilyah), and is described in Biblical rather than in post-Biblical colours, the Muhammadan theologians saw themselves necessarily compelled to make of Khidr = Ilyah, on the one hand, and of Ilyah, on the other, two distinct personages. The primitive relationship, however, shows itself in the attempt to identify Khidr with Elisha, the disciple of Elijah, and many legends in which Khidr (or, more correctly, Ilyah) and Khidr appear as inseparable twins. The original distinctive function of both Elijah and Khidr is clearly revealed in the fact that they are universally accepted by Muhammadans and illustrated by
innumerable stories, that, while both prophets are entrusted with the task of protecting the travellers on their journeys, Eliezh is mukallaf fi'l-bar, 'the guardian of the dry land,' particularly of desolated places, while Khīr, mukallaf fi'l-bar, 'the guardian of the sea.' The maritime character of Khīr, which the Muhammadans accept as an unalterable fact without being able to explain it, is preserved throughout the whole field of Muhammadan history. This day Khīr is essentially the Khuwād al-buhārī, 'the one who traverses the seas'; he is the patron of sailors, who invoke his aid in time of need; a sacrifice is offered to him when a boat is launched (S. I. Curtiss, Primitive Semitic Edication Today, Germ. ed., Leipzig, 1903, p. xvi. and p. 111). This conception and the rites associating it are still current throughout the whole of Syria, and can even be traced as far as Northern India.

The combined figure of the sea-demon Khīr and the prophet Eliezh followed in the wake of the Muhammadan armies. It is now generally recognized that the conquered nations who were converted to Islam managed to carry with them into the new religion many of their former doctrines. In a similar way Khīr became the depository of all kinds of ancient myths and popular rites current in thelands occupied by Islam. The data on this aspect of the Khīr figure are not yet complete. As far as Syria is concerned, extremely valuable material has been collected by Curtiss (in the volume referred to above), and, in part prior to him, by C. Clermont-Ganneau (Horus et Saint Georges, Paris, 1877). From this material it is evident that Khīr, as now revered, indeed one may say worshipped, in Syria, embodies many conceptions of primitive Semitic religion, perhaps also including the ancient Babylonian Tammuz cult. The relation of Khīr to these ancient deities is doted with Khīr sanctuaries in which sacrifices and the first-born of animals are still offered to him. In the crude vagueness of the popular religion Khīr has become a divine being. As an unsophisticated Muhammadan innocently put it to Curtiss, 'Khīr is near, but God is far' (op. cit. p. 111). Through the identification with St. George (Mir Jerje), whose origin lay in the same country, new relations of the two created which made our versified prophet acceptable to the Christians, as he is also popular among the Jews.

The official theologians of Islam are, and always have been, sensitive to these excesses of the popular Khīr belief. Many of them have insisted—and, indeed, have made Muhammad himself declare—that Khīr, who, as they were compelled to admit (largely because of the canonical account of his appearance at the death of Muhammad), was a contemporary of the Prophet, died shortly after him. This attempt, however, which was directed against the extravagant Khīr cult, particularly as cherished by the Sufis, remained unsuccessful. On the other hand, the theologians had no hesitation in making Khīr a favourite object of their scholarly speculations. Muhammadan literature contains a large number of conjectures which identify Khīr with various figures of Biblical and Apocryphal legend. Of these conjectures, which are purely the product of unlettered speculative fancy, the following, with the accompanying sūras, may be mentioned: Melchizedek, Seth, Enoch, Zohar, Jeremiah, Lot, and the Messiah. Finally, it may be mentioned as a possibility that the sūratul-i-khānsā'ah of Khīr, his incessant wandering—'to wander like Khīr' is a current Arabic phrase—is responsible for the name of the Wandering Jew. Alasauerus may be a development of Khīr in its Persian-Turkish pronunciation as Khīr.

I. FRIEDLAENDER.

KHĪS.—A race inhabiting the Chitrál Valley and adjoining country south of the Panjir, on the N.W. frontier of British India. To the E. lies Yasin and Gilgit, where the language is Shina; to the W. is Kafiristan, where various Indian Kāf dialects are spoken; to the N., across the Hindu Kush, lie the Pamirs, where the language is Iran; and to the S. lies a number of small tribes, mainly of Shina origin, but partly also Pathan, separating them from India proper. The Khīs (properly Hīs), together with the Shins of Gilgit and the Kāfs of Kafiristan, are often classed together as 'Dards'; but this name is properly applied only to the Shins. The present writer looks upon all three as representing the ancient Pathachus. The habits and customs of the Khīs are in many respects much more resemble those of the true Dards, and in the present article the term 'Khīs' is applied to the Khīs, while the Khīn (properly Hīn), together with the Shins of Gilgit and the Kāfs of Kafiristan, are known as 'Erebözānās' (sons of possessors). The two grades intermarry. Above them are the later conquerors of the country—the Afgānūzās (sons of men). The origin of the last is uncertain, but some of them at least came from the north, across the Pamirs, in the 16th cent. A.D. The Khīs have imposed their language upon them.

According to tradition, the whole Chitrál Valley was once occupied by Khīs, and some Kāf tribes, e.g. the Kalāsh, still inhabit it. This tradition is borne out by the fact that the Kāf dialects are much more nearly related to the Shina dialects of Gilgit than either of the other groups to Khīs. The language of the Khīs. The last, although undoubtedly belonging to the same linguistic group, differs from the other two in some essential particulars, such, for example, as the forms of the pro-nouns, in regard to which they agree rather with the Iranian Ghalchah languages of the Pamirs.

It looks as if the whole tract composing the present Kafiristan, Chitral, and Gilgit was once occupied by one homogeneous race, which was subsequently split into two divisions by a wedge of Khīs invasion, representing members of a different, but related, tribe coming from the north (cf. Bédélph, p. 158 f., for a slightly different explanation).

According to Bédélph, (p. 73), the Khīs show certain physical peculiarities not shared by their Dard relations. In personal appearance they may be called Aryans of a high type, not unlike the Dards, but more handsome, with well-modelled features, and large beautiful eyes, so that they would compare favourably with the highest type of beauty in Europe. They are famous for their long hair, of which they are very proud, and in this they differ from their Kāf and Dard neighbours. 1

1 O'Briain, Gram. and Yauhah. of the Khāneh Dialect, p. vi.

2 Called by Leitner (Language and Races of Dardestan) Arnya, a name based on the Shina word for onus, which is employed to designate a portion of Yasin, where E, in the Khīs.

neighbours, whom they style 'bold' (p. 65). The women were formerly sought out for their beauty in the slave-markets of Kábal, Peshíwáw, and Badakshán.

The men wear caps bound round with a scantly turban, a common shirt,and trousers, slippers, cut-out stockings, and soft leather boots. The women wear a white silk ensemble, a head-piece, loose chemised coloured cotton stuff, fastening at the throat and reaching to the knees, and wide drawers. They wear boots and stockings like men, but, as a rule, each leg separately (ib. O'Brien, p. vi). It is a common practice (O'Brien, p. ix) for young women, just married, to blacken their faces with burnt powdered horn, which is supposed to soften the skin and to prevent sunburn.

Great stress is laid upon customary rules of politeness. Friends embrace on meeting. An inferior always dismounts on meeting a superior, and kisses his hand. The other then kisses him on the cheek (Biddulp, p. 75; O'Brien, p. viii). Excitable creatures of impulse, the Khós have been well described by G. S. Robertson (Chitrál, Lon- don, 1898, p. 5 f.):

'Sensuality of the grossest kind, and murder, abominable cruelty, treachery or violent death, are never long absent from the thoughts of a people than whom none in the world are more given to the indulgence of, or to simpler, gentler appearances. So happy seems everyone—the women are mostly secluded, — so lovely are the little children, so much natural politeness is manifest in the men and its kind in its exterior, that the gowned slaves living on fruit or dying of starvation when past their youth, a hurried traveller might almost imagine himself in a smiling dreamland.'

Polo-playing (ghol) is the national game, and is played with great dash. It is slightly different from the polo of Gilgit. The ground is long and narrow, with low walls at each side, off which the ball rebounds in play. A couple of large stones at each end mark the goal. The sticks in use are very short, and the players, going at full speed, reach almost to the ground. The losers have to do what the winners order—usually dance. Every village has its polo-ground, called jandání (Biddulp, p. 84; O'Brien, p. xi). Shooting at a popinjay from horseback is also a favourite pastime, and, considering the clumsiness of the weapons used, the marksmanship is sometimes wonderfully good (Biddulp, p. 85; O'Brien, p. xi). Other national amusements are music and dancing. Feast-day, birthday, wedding, or any occasion for a gathering serves as an excuse for the latter. Music is always played at the polo-matches, a goal being the signal for a wild flourish and a burst of drumming. So popular is the sport that are very taking (Biddulp, p. 85; O'Brien, p. xii f.).

In former times the religion of the country was Buddhism. 1 A Buddhist rock-cut figure, bearing a script or Pall inscription which is not older than the 3rd cent. A.D., and is probably later, has been found about 20 miles north of the town of Chitrál (Biddulp, p. 149). The Khós are now Musalmáns, mostly Sunnis, but in the northern valleys, as in northern Gilgit, they are generally members of the Máštá sect. 2 Islám was introduced about the 14th cent., and the present Musalmaín dynasty came from Khorásán in the 16th (ib. ib. 111). The Khós differ from the Dárús in not hating the cow and in not worshipping the chuñ, or juniper tree (ib. 113, 116; EEE iv. 401). As regards festivals, the Dárús Nás, in honour of the winter solstice, is called Dáshá, and is celebrated without bonfires (Biddulp, p. 101). The Dará Buxán, or spring festival, is not held, but the Gémóni, or festival of the wheat harvest, is observed under the name of Panjít (ib. 105). The Jastandikásh, or 'devil-driving,' in honour of the completion of the harvest, corresponding to the Dárús Domácrás, is celebrated by the firing of guns and shooting at a sheep's head, used as a mark of sport. (Ib. 105).

1 See EEE iv. 400. For the Mahál's see Biddulp, p. 119.

When a child is born, the mother is unclean, and no one will eat from her hand for seven days. North of the Hindrí Kúsh the menstruating mother leaves her son in the care of her sister, but the period is extended to forty days, and even the infant may not suck its mother's breast for seven days. In some of the higher Chitrál clans there is a custom that every infant is stilled in milk by every nursing mother of the clan, so that each becomes its foster-mother. There is thus a constant interchange of infants going on among the mothers, for the purpose of strengthening tribal unity (ib. 81). Marriage ceremonies are conducted much as among the neighbouring tribes, but the following customs are peculiar to Chitrál.

After the Múláh has read the marriage service, the bride is led out by her mother, who hands her over to the bridegroom, receiving a present in exchange. He starts at once for home, but, after leaving the bride, he deposits a present of a sword or a gun on the hearth. On the other hand, north of the Hindrí Kúsh he is taken to the bride, and does not go off with her till the next day. In Gilgit the custom is again different, as there is a formal ratification of the marriage on the third day (ib. 74). In the Hindrí Kúsh the levir is also common, although it is not compulsory on the widows. In Gilgit, on the other hand, it is compulsory (ib. 76). Marital infidelities are extremely common, and the men show little jealousy of their wives. In the neighbouring States of Bunsu, Nágár, where old traditions prevail, the husband not regarded as an offence, and custom requires that a man should place his wife at the disposal of his guest. The bridegroom's sister was also in force down to a comparatively late time, and even now a man considers himself as highly honoured if his wife has attracted the attention of the Thum, or tribal chief, of either of these two States. At the same time, in Chitrál, a husband has the right to slay the servant who is not kind to his wife; but he should kill one and not the other, he is told guilty of murder (ib. 77).

The common Musálmaín interment is now used. A piece of flat stone or slate, three or four feet long, is placed at each end of the grave, which is neatly plastered over (ib. 82). Superstitions are much as in Dárús, with the general belief in fairies (cf. EEE iv. 401). Tirich Mir, the highest peak (25,426 ft.) in the country, is said to swarm with them, and to them the Khós attribute the sounds coming from its glaciers (O'Brien, p. x; cf. Biddulp, p. 116).

LITERATURE.—Almost the only source of information regarding the Khós as a people is J. Biddulp, Tracts of the Hindú Kúsh, Calcutta, 1860, which contains a full description of the people and a grammar and vocabulary of their language. D. J. T. O'Brien, Grammar of theth and Vocabuláry of the Directors, London, 1866, gives a brief account of Chitrál and its inhabitants in the introduction. These two works have been freely utilised in the foregoing account, and are supported by much grammatical information contained in G. W. Leitner, The Languages and Races of Dáshán, London, 1857. G. A. Grinnell.

KHONDS. — See KANDOS.

KIERKEGAARD.—1. Relation to his father.

Søren Aabye Kierkegaard was born at Copenh-agen on the 5th of May 1813. He was the youngest child of Michael P. Kierkegaard, a retired woollen draper in good circumstances, another of whose sons, P. C. Kierkegaard (1805-88), rose to eminence as bishop of Aalborg. The life of Søren Kierkegaard has but few points of contact with the external world; but there were, in particular, three occurrences—a broken engagement, an attack by a comic paper, and the use of a word by H. L. Martensen—which must be referred to having wrought with extraordinary effect on his peculiarly sensitive and high-strung nature. The intensity of his inner life, again—which finds expression in his published works, and even more directly in his notebooks and diaries (so that it cannot be properly understood without some reference to his father. The latter came from a peasant home near Ringkøbing in Western Jütland, and, as it would seem, was, while a mere child, deeply influenced by a Pietistic movement in the
distract. It is probably to be read as a manifestation of his sincerity and earnest temperament, that on.He while tending sheep on the moors, the boy Michael, in hunger and endurance, mounted a hillside and solemnly cursed God as the disperser of so wretched a lot. Shortly afterwards he became a preacher in Copenhagen, where he soon began to prosper; but, with his natural tendency to mortal intemperance, strengthened by a stern religious feeling, he was later expelled as a sign that he had with his boyish curse committed the sin against the Holy Ghost; the sin of libel and God's name was taken unhallowed from denying God's care of him, and that the sin was too great to be punished as a less grave sin might have been, e.g., by a fine.

This idea further sustained his religious views and his religious life with gloom and melancholy, and thereby partly by inheritance and partly by training, upon both of his distinguished sons.

Sören, the child of his old age, came, even as a youth, to surmise that there was some dark secret gnawing at his father's heart, and at length, shortly before his father's death, learned the true facts about the curse. The discovery shook him, as he says, like an earthquake. He made a note of the circumstances, and put it among his private papers, where it was found a considerable time after his death; and, when H. P. Barfoed, the first editor of his posthumous papers, showed the note to Bishop Kierkegaard, the latter burst into tears with the cry: 'That is our father's history and ours also. It is evident that the father was a man of remarkable intellectual gifts, and that, with all his severity, he won the devoted affection of his sons.

2. His personality. — The fundamental and decisive element in Sören Kierkegaard's personality is found by George Brandes in his combined reverence and scorn; by H. Hoffding (more in accordance with the fact that he was his father's son) in his melancholy, and O. P. Mourad, his latest biographer, in emotion or passion. Certainly the emotional factor—as it forms the decisive element in personal character generally—best suggests the distinctive feature of Kierkegaard's personality.

In his published writings and in his journals we are in touch with a nature of unvonted intensity, with an inner life at white heat. This is seen in his abundant sensitiveness: he was touched by the quick by things that others might have ignored or easily forgotten. Again, while he was admittedly the most original mind that Denmark ever produced, his thoughts seldom operated in cool dialectics, but were represented in language "existenti," expressive of his whole personality; with amazing imaginative fertility he constructs, not chains of reasoning, but experiments in psychology, i.e., persons and situations depicting a real, a felt, an experienced life. Similarly, religion was for him, not a group of doctrines requiring merely to be believed, defended, or systematized, but a fact making a tremendous demand upon life; the joy of salvation was to be won in the most intense appropriation of the truth and the most impassioned submission to its claim. His natural melancholy was, as already said, partly an inheritance, strengthened by his early training, and doubtless also by the sickly and infirm body with which his impetuous spirit was united; but it was deepened by his sense of the awful imperative of Christianity and his failure to realize it. His peripatetic nature appears also in the iron realization with which he wrought out his ideas, as he thought, divinely appointed task; for he might claim, as few others, that in all his work he had striven for but one thing; and in prosecution he lost friends, means, health, was mocked by the crowd and denounced by the religious, but held on, if not serene, yet undismayed, to the end.

3. His purpose and method. — What, then, was the purpose of his thinking that he so ably? As he makes clear in "Our Miss Forsfater-Virk companions" ( "My Literary Activity," 1851), it was religion; or, more definitively, his one aim was to teach his age what it is to become a Christian. When he was about twenty-five years of age—after a period of irresponsible life—the discovery of his father's secret, and his father's death, combined and aided him in his efforts to grasp his self-made religious view of the world, this world included, the religious and religious life with gloom and melancholy, and thereby partly by his inherited and partly by training, upon both of his distinguished sons.

Sören, the child of his old age, came, even as a youth, to surmise that there was some dark secret gnawing at his father's heart, and at length, shortly before his father's death, learned the true facts about the curse. The discovery shook him, as he says, like an earthquake. He made a note of the circumstances, and put it among his private papers, where it was found a considerable time after his death; and, when H. P. Barfoed, the first editor of his posthumous papers, showed the note to Bishop Kierkegaard, the latter burst into tears with the cry: 'That is our father's history and ours also. It is evident that the father was a man of remarkable intellectual gifts, and that, with all his severity, he won the devoted affection of his sons.

2. His personality. — The fundamental and decisive element in Sören Kierkegaard's personality is found by George Brandes in his combined reverence and scorn; by H. Hoffding (more in accordance with the fact that he was his father's son) in his melancholy, and O. P. Mourad, his latest biographer, in emotion or passion. Certainly the emotional factor—as it forms the decisive element in personal character generally—best suggests the distinctive feature of Kierkegaard's personality. In his published writings and in his journals we are in touch with a nature of unvonted intensity, with an inner life at white heat. This is seen in his abundant sensitiveness: he was touched by the quick by things that others might have ignored or easily forgotten. Again, while he was admittedly the most original mind that Denmark ever produced, his thoughts seldom operated in cool dialectics, but were represented in language "existential," expressive of his whole personality; with amazing imaginative fertility he constructs, not chains of reasoning, but experiments in psychology, i.e., persons and situations depicting a real, a felt, an experienced life. Similarly, religion was for him, not a group of doctrines requiring merely to be believed, defended, or systematized, but a fact making a tremendous demand upon life; the joy of salvation was to be won in the most intense appropriation of the truth and the most impassioned submission to its claim. His natural melancholy was, as already said, partly an inheritance, strengthened by his early training, and doubtless also by the sickly and infirm body with which his impetuous spirit was united; but it was deepened by his sense of the awful imperative of Christianity and his failure to realize it. His peripatetic nature appears also in the iron realization with which he wrought out his ideas, as he thought, divinely appointed task; for he might claim, as few others, that in all his work he had striven for but one thing; and in prosecution he lost friends, means, health, was mocked by the crowd and denounced by the religious, but held on, if not serene, yet undismayed, to the end.

3. His purpose and method. — What, then, was the purpose of his thinking that he so ably? As he makes clear in "Our Miss Forsfater-Virk companions" ( "My Literary Activity," 1851), it was religion; or, more definitively, his one aim was to teach his age what
religious attitude as one of continued penitence—
that we are always in the wrong in relation to
God—and ends with the undogmatic dogma that
'only the truth that edifies is true for thee.' The
negation of sin, of the absence of penitence, of
coming to oneself (what is actually decided
for is not so important)—such was the message
of Enten—Eller.

For the moment Kierkegaard thought that his
task was completed. But in his last "By" Papers he had
personally attained to a deeper grasp of Christi-
anity, and had come to feel that there was a
stage of life higher than the ethical-religious
stand-point of B. It was now, probably, that he became
more fully cognizant of his plan, and of what was
necessary to its development. The higher and
more distinctively Christian form of religion is set
forth in Frygt og Beven (Fear and Trembling,
Oct. 1843), the message of which is illustrated by
the fact that Abraham was commanded to do what
was ethically wrong, i.e., to kill Isaac, and obeyed
in virtue of a personal relation to God; he had
faith—by, in the earthly, and yet believed that
he should possess it still. Similarly death is no common
or easy thing; but is a relation to the Absolute
which baffles reason, and can be won and held only
in an infinite passion. In GjengtaDiglen (Repetition,
Oct. 1843) there is sketched an abortive transi-
tion to the religious sphere. 'Repetition' is one of
his characteristic ideas; it signifies persistence
in, and faithfulness to, a chosen course of life, and
is thus opposed to the aesthetic standpoint, with
constancy only in change. But Kierkegaard also
gives the word a more special meaning—that rather
of 'resumption' (Gjengtage), 'taking again'—im-
plying that each higher stage of life carries with it
the lower in a transformed form. GjengtaDiglen
tells of a young man who seeks to pass from the
esthetic to the religious sphere, but for want of
a true penitence becomes merely a romanticist; i.e.,
he simply resumes his old self; and his case is
contrasted with that of Job, who humbled himself
utterly before God, and at last regained all that
he had lost, and more—the true 'repetition.'

In Philosophisk Smalter ('Philosophical Bits,
June 1844, by 'Johannes Climacus,' with Kierk-
gegaard as editor) he comes closer to his real problem.
'How to become a Christian,' but so far discusses
only the general question, 'How can an eternal
soul be saved from a historical event?' As an
'experiment in thought' his pseudonymous argu-
ment that an appearance of God in time-relations
must be a 'paradox' for human reason. Thought must
first achieve an appearance in a stumbling-block,
and may seek either to reject it or to change it—both
equally in vain. The true procedure of the
intellect is to absorb itself before the 'paradox',
which can be grasped only in the passion of faith. Such is the condition of salvation, in regard to
which, accordingly the earliest and latest gener-
tations are essentially on the same ground. The next
step was to indicate what is at once the pre-
eminence of faith and the obstacle to the great work
of faith. This is done in Begrebet Angst ('The
Idea of Dread,' June 1844), a psychological inves-
tigation of the Fear, and of sin in general. Sin
is not to be explained scientifically; psychologic-
ally it is preceded by a vague, dim sense of someth-
ing that both attracts and repels, but this
do not bring us to sin itself, which, as an act
of the human personality, comes by a 'spring.'
In Stedetforlivets Livet ('Stages on the Way
of Life,' April 1845) is given a kind of résumé of
the foregoing books. This work exhibits the three
spheres of life—the aesthetic, the ethical, the
religious. It is essentially a developing of the ideas
in Frygt og Beven and Gjengta-
diglen. The most important section is the third,
entitled 'Guilty—Not Guilty' (based, as are also
in part Frygt og Beven and Gjengta-
diglen, on his personal experiences in connexion with his engage-
ment), a narrative of suffering—suffering resulting
from the break with the natural life and from the
sense of guilt on which drive the subject of the
narrative towards religion in its highest form.
Isolated from man, isolated before God, he does
not reach peace, for he represents only the approxi-
mation to religion. The full statement of what
is involved in becoming a Christian is to be found in
Afalettende videnskabelig Efterkr aft ('Concluding
Unscientific Postscript,' i.e., to 'Philosophical Bits,'
Feb. 1849, by the same pseudonym and editor).
The starting-point of the book is the individual's
passionate desire for his own salvation, and its
problem is not 'Is Christianity true?', but 'How
am I to become a Christian?' The passionate
desire rejects the proofs from Biblical theology, from
the existence of the Church, and from the philosophy
which, in identifying being and thought, distorts
Christianity and subverts individuality. Man may
construct a logical system; a system of existence is
for God alone true; but religion, viz., that the Absolute has entered into time-re-
relations, is a paradox for thought, and can be
appropriated only by an impassioned faith. Sub-
jectivity is truth; the essential thing is not what,
but how, we believe.

These works were produced within about four
years; but in addition to, and concomitantly with,
the pseudonymous books Kierkegaard had issued
a series of Opbyggede Taler ('Educated Di-
courses') designed for the 'individual' whom his
other works might have awakened. By these,
moreover, he intended not only to indicate his own
religious position, but also to show that—should
it ever be questioned—he was a religious writer
from the outset. These 'discourses' are marked by
the finest spiritual discernment.

(b) The portrait of ideal Christianity.—Once
more Kierkegaard believed that his special task
was finished, and actually thought of seeking a
rural charge. But now came the second event that
depicted his life and thought. In the early forties
the Konsor, a satirical journal edited by
M. A. Goldschmidt, a friend of Kierkegaard,
while holding up to ridicule everybody else of note
in Copenhagen, always spoke with something like
veneration of Kierkegaard's works. In 1846, Kier-
kegaard invited the paper to publish an article on
the challenge was accepted. The Konsor satirized
him—his person, his clothes, his pseudonyms—
with pen and pencil. The better class left him in
the lurch; the print was sold. All this struck
Kierkegaard to the heart; he saw in it a proof of
the awful depth to which a 'Christian' people had
dunk. His scorn for the multitude grew apace,
and the political ferment of the time at home and
abroad only served to intensify it. But in this
bitter experience he won, as he believed, a deeper
comprehension of Christianity. He began to work
at a series of distinctly Christian writings,
mainly in the form of discourses, and published
under his own name. Pre-eminent among these
are: Opbyggede Taler og forskellige Aænd ('Edify-
ing Discourses in various Forms'), Kjørbisesds
Gjerningen ('The Work of Love'), and Christelige Taler
('Christian Discourses')—all of them 'direct
messages.' The first develops the idea that the
Christian life necessarily involves suffering;
the second sets forth the Way of Christian-
ity ('Thou shalt love')—the inevitable suffer-
ing must not provoke to hate or scorn; in the
Christelige Taler, composed of four series of dis-
courses (one third volume), he develops a motto asserting that Christianity does not call for defense (in its function being to attack), Kierkegaard depicts the
Christian life as in its hope, its suffering, its earnestness, entirely unconformable to the world; and in this work we hear, in fact, the first clear note of the coming open challenge to conventional Christianity. Thereafter he wrote Sygdommen til Døden (‘The Sickness unto Death’) and Indvælende i Christendom (‘Residence in Christianity’), but delayed their publication for various reasons—his respect for J.P. Mynster, privateer of Denmark (‘my father’s priest’), his sympathies with simple-minded people, and perhaps also a desire not to arrogate to himself a higher Christian standing than he really had. In the meantime he published Tende ethik-religiøse Snaa-Afhandlinger (‘Two Short Ethico-religious Treatises,’ 1849); one of them arguing that none but an apostle may be permitted to let himself be martyred for the truth, the other setting forth the distinction between a genius and an apostle. Then at length followed Sygdommen til Døden (1848) and Indvælende i Christendom (1850)—by ‘Antichristian’ (indicating that they exhibit an ideal of Christianity which Kierkegaard himself, who is merely the editor, had not attained)—his most powerful works. In the former he analyzes sin as a state of conscious or unconscious despair, as the fatal disease which true Christianity alone can erase; in the latter he depicts reconciliation with Christ, but only through a personal approach to him, his humiliations and sufferings, and especially by becoming contemporary with him in spirit; He who said, ‘Come unto me, all ye that labour and are heavy laden,’ was in the form of a servant—a poor, despised man; and faith is precisely the resolve, produced by a consciousness of sin as the one bane of human life, to follow him in suffering and humiliation. In Til Selvopphøvede (‘For Self-examination,’ 1851) he sums up his whole Christianity in a popular form. The general conclusion of these works was that Christendom, existing Christianity, the Church, was in reality a travesty of true Christianity. Kierkegaard was deeply impressed—and from conversations with Bishop Mynster he believed that he had good grounds for hoping—that the priests would publicly and officially concede this; then would he gladly point the way of grace. But Mynster, on the contrary, was bitterly offended by the works, and kept silence. Kierkegaard still waited, however; and he too kept silence—for three years—must be regarded as a proof of the absolute sincerity of his hope.

(c) The direct attack upon the Church.—The final act in Kierkegaard’s life-drama—the dark and stormy close—turned upon a word used by H. L. Martensen. Bishop Mynster died in January 1854, and Martensen, in the funeral sermon, spoke of him as a ‘witness for the truth’ (Sandhedsviden)—as a link in the chain of witnesses that extends from the apostles’ days to our own. Kierkegaard had a profound respect for Mynster, but had latterly come to feel that the priest embodied in his own person that travesty of Christian thought and life which the whole series of books from Etern—Etter til Indvælde i Christendom had been designed to expose and impeach. That Mynster should now be designated a ‘witness for the truth’ demanded, therefore, a strong protest. Kierkegaard at once drafted an article in which he asserted that Mynster, far from being a Sandhedsviden, had, in fact, completely failed, alike in life and in word, to present the Christianity of the NT, one distinctive note of which is suffering. This article, however, was held over until Martensen was appointed to the vacant see, and was eventually published in Fædrelandet in December. It made a great sensation. Martensen replied, and Kierkegaard sat up night after night, evoking rejoinders from many hands, and kindling a controversy of such fierceness that Danish writers compare it with Pascal’s conflict with the Jesuits. Kierkegaard then issued successively the nine numbers of Ueblikket (‘The Moment’), in which the master of irony set forth his indictment of existing Christianity in language that none could mistake. His statements concerning the Christianity of the NT was now simply non-existent. His claim was, not that he was a Christian, but that he understood what Christianity was. His demand was that the church should avail on the Church’s part that it was not Christian, and he called upon every honest man to sever himself from it till that avowal was made.

The strain was too much for Kierkegaard’s sickly frame. The bitterness and ruthlessness of his language in these last days were doubtless partly due to the pain and weakness which now oppressed him. In September 1855 he fainted in the street and was taken to a public hospital. Here he was occasionally visited by Pastor Emil Boesen, a friend from childhood’s days, who found him very low, but looking for death with humble trust. On one occasion Boesen asked him if he trusted in the sacrament, and Kierkegaard, resolve to the last, answered, ‘Yes, but not from a dervigman.’ He died on 11th November 1855.

5. His achievement.—Kierkegaard had an extraordinary ability, a gift of poetic passion and keen dialectic power. Either alone might have sufficed to give him a place among the great figures of European literature or philosophy. In combination they produced the ‘indirect communication’ and the arraignment of the Church. The indirect message pulsates with emotion, but is rendered obscure by its dialectic structure; the attack upon the Church moves on logical lines, but was virtually a failure by reason of its violence. Kierkegaard’s critics have drawn attention to the fundamental anomaly in his literary production as a whole—his earlier insistence upon the subjectivity of truth, and his later demand for unconditional submission to an objective Christianity. Formally, no doubt, the contradiction is glaring; yet one may ask whether it is not inherent in Christianity itself. For the Apostle Paul, too, everything turns on the objective fact that God has become man, and yet all depends upon the subjective appropriation of that fact. It must certainly be admitted that the manner in which Kierkegaard developed the two sides of the antithesis has served to keep his distinctive views outside the main current of European thought, though, in substance—identified, it may be, with other minds—that we may have found their own place; we must remember, moreover, that what Kierkegaard had in view from first to last was not the universal idea, but the individual soul. Be this as it may, there remain in Kierkegaard’s achievement the keen psychological analyses with which he struck at the roots of the ‘system’; the searching presentation of the Christian life as the ideal in the light of which the existing Church shrivels to a mere travesty; the often tender and always impressive appeal of his ‘discourses’; and the profound suggestiveness of his doctrines of subjectivity, the paradox, repetition, the spring, and the necessity of our being contemporary with Jesus Christ—to say nothing of the brilliant style and the lyrical profusion which he brings to their expression. There remains also the pathos of his lonely life—that of a great sympathetic soul, like Isaiah or Dante—seeking the response that never came; and, last—perhaps greatest—of all, the absolute self-consecration and singleness of purpose in which he fought against suffering, and in the loss of all things, he strove, both in his personal life and in his work, to realize the ideal.
KIN, KINSHIP. — I. INTRODUCTION. — 1. Use of term. — At the present time the word 'kinship' is used by different writers on human society. In one of these senses, which corresponds with the ordinary usage of the English language, the word applies to the relationships set up by common descent, whether by direct or collateral lines, on the institution of the family. This term being used for the social group consisting of a man, his wife, and their children. When used in this way, the term may include cases in which the relationship depends on other forms of social or other than consanguinity, such as adoption. By many writers on sociology, on the other hand, the meaning of the word has been extended so as to include, or even apply primarily to, the 'kin' or other similar social group. In this sense, the meaning of the word is not dependent on the institution of the family, but is applied to all those with whom there is no tie of consanguinity, or of the equivalent conventional relationship. Every member of an American or African clan or of an Australian or Melanesian moiety stands in a social relation to every other member of his clan or moiety, a relation which involves definite social duties; and some sociologists use the words 'kin' and 'kinship' explicitly for this relationship, while still more use the words loosely so that there is a kind of relationship that is set up by consanguinity or conventional membership of the family. The use of the terms in these widely different senses is a source of confusion, and it is necessary to lay down rules as to the use of 'kinship' to one or other of the two senses. In this article both kinds of relationship are dealt with, but the first of the two senses will be implied when the words 'kin' and 'kinship' are used in the body of the article.

2. Definition. — The fact of kinship can be determined and defined in several different ways: by consanguinity, genealogy, terminology, or function.

(1) The least satisfactory is consanguinity. Among ourselves such a relationship as that which exists between parent and child, or between brother and sister, can also come into existence by social convention. The ties of consanguinity, however, are more permanent, and the fact that the two are not related by blood may result in the formation of a relationship between persons wholly devoid of any consanguineous tie. Thus, in the Banks Islands in Melanesia the relationship of parent and child is not special to the existence by the fact of procreation and parturition, but it is such as the payment of the midwife, the first feeding of the child, or the planting of a tree on the occasion of a birth that gives it this tie. In many cases the tie between the children and the parents of the child for all social purposes. Similarly, among a polyandrous people like the Todas, it may be the performance of a ceremony during pregnancy that determines which of the co-wives of the husband is to be regarded for all social purposes as the father of the child. Indeed, the fact of fatherhood is so strictly determined by this ceremony that a male who performs it becomes the 'father' of the child even if he is only a few years of age or has never seen the mother before he is called upon to take part in the ceremony. Kinship cannot be determined and defined by consanguinity even among ourselves, still less among other peoples.

(2) Genealogy. — Nearly all, if not all, peoples of the world preserve, either in writing or in their memories, a record of those with whom they are related by consanguinity or by those social conventions which, as we have seen, serve the same social purpose. Among many peoples, and especially among those of rude culture, the knowledge of relationship throws light even the most trifling event of carrying in his mind. Among such peoples it is the fact that recorded in the pedigrees of a person that largely determines his use of terms of relationship and regulates all the social functions which these terms may denote.

(3) If the use of terms is determined by pedigrees, it follows that the definition of kinship by the terminology of relationship must be less satisfactory than by genealogy; but this third mode of defining kinship is even less valuable for another reason: the terms used for relatives as determined genealogically are precisely the same as those used for the relationships set up by membership of the clan or other social group, and it is impossible by their means to define the tie of kinship in the strict sense.

(4) Function. — Two persons may be regarded as kin if their duties and obligations to one another are of the kind usually associated with ties of kinship. Thus, a number of social functions and psychological ties belong to the relationship of parent and child only, and cannot be used for membership of the group. Take a specific instance: if kinship were used exclusively

2 See Notes and Queries on Anthropology, London, 1912, p. 156.
for the clan-relationship, the father would not be kin
where there is matrilineal descent, nor would the
mother be kin where descent is patrilineal. If, on the other hand, kinship is used for
relationship determined genealogically, both father
and mother's brother will be kin, whereas the
father's or mother's sister and the father's or
mother's brother are remote that no genealogical con-
nection can be traced will not be kin.
The definition of kinship as genealogical relation-
ship will also exclude the metaphorical sense in
which terms of relationship are often used by
people at all stages of culture. This article deals
especially with kinship as thus defined, but the
relationships set up by common membership of
the social group are also considered, especially in
so far as those relationships are connected with kin-
ship proper.
II. THE TERMINOLOGY OF RELATIONSHIP.—
The collection of terms denoting relationship used
among peoples is usually spoken of as the system
of relationship of that people. Such systems com-
prise a definite body of social facts which can be
described, classified, and compared with one an-
other. Such comparison shows that the systems
used by different peoples vary greatly, and these
variations are found to depend on the application
of different principles of classification of relation-
ships. For instance, while we class together the
father's brother and the mother's brother under
the common denomination of 'uncle,' most peoples
of the world assign these two relatives to social
classes so distinct and with such different func-
tions that their social systems would be reduced
to chaos if they were driven to adopt our mode of
classification. On the other hand, two relatives
whom we class definitively, as the father and
the father's brother are by nearly all peoples of
rude culture put into one social category, and the
social life of these peoples is such that this mode of
classification leads to no confusion, but the common
nomenclature carries with it an organized system
of common social functions.

Two chief varieties of system of relationship are
usually distinguished, which, following Lewis
Morgan, are called the classificatory and the
descriptive. This distinction is not a happy one;
for all systems are classificatory in that they class
together certain relatives, while the terms descrip-
tive, or as many of the systems to
which it is usually applied, such as our own, are
not in any way descriptive, while descriptive
terms are often prominent in the systems called
classificatory. The classificatory principle is, how-
ever, so pronounced and shows itself so conspicu-
ously in a large group of systems used by peoples
of rude culture that it is a fairly appropriate term
and will probably long continue to be used.

The use of Morgan's other term cannot be so
readily justified. His 'descriptive' systems in-
eclude many which are wholly devoid of a descrip-
tive character. Thus, if our own system were
truly descriptive, we should not speak of systems of
a grand-
father or uncle, but should always distinguish
between the father's father and the mother's
father, and between the father's brother, the
mother's brother, the father's sister, and the
husband of the mother's sister.

Such descriptive nomenclature occurs in many
European and in some African systems of relation-
ship, and Morgan justified his inclusion of systems
like the descriptive category by the assumption
that they had formerly possessed a
truly descriptive character.

1. THE CLASSIFICATORY SYSTEM.—As already in-
dicated, the chief special feature of this system is the
application of its terms to large groups of persons
so that in its most complete form no single term
can be used as the means of distinguishing an
individual. Thus, the term 'brother' is not only
used for sons of the same father and mother, but is
also applied to all the sons of the father's brothers
and of the mother's sisters, the terms 'brother'
and 'sister' being used in a similar wide sense. In other varieties of the
classificatory system, the term is used even more
widely for all the sons of the father's clan, and
members of the father's or mother's clan who are
removed from the father's or mother's side by
the same number of degrees as the sons of the
father's or mother's brother, the 'brother' and 'sister'
being used in a similar wide sense. Similarly, the
term applied to the father is also used of all the
brothers of the father and of all the husbands of
the mother's sister, 'brother' and 'sister' being
again used in the classificatory sense. One result
of this usage—one which is a potent source
of misunderstanding and perplexity—is that the
language of a people who follow the classificatory
system possesses no equivalents for our European
terms of relationship, so that an accurate transla-
tion of those terms is impossible. Similarly,
European languages have no equivalents for the
terms of a classificatory system. It is, therefore,
necessary to state at the outset that, when an
English term of relationship is used in this article,
it is to be taken in its usual English meaning
except when definitely stated to be used in a
classificatory sense.

There are several classes of terms of relationship.
In the case of certain relatives, and especially the
father and mother, it is often the custom for a
term to be used in addressing such a relative, and
another term when speaking of him or her to
others. The terms used in address correspond to
our familiar terms, such as 'Papa' or 'Daddy,' but the distinction between the two terms
in classificatory systems is much more rigorous
than we are accustomed to.

Another variant is found in some places where
terms of relationship are used in a collective or
reciprocal sense. Thus, a Fijian highlander will
address his father's father as tii, but, when speak-
ing of himself and his father as a social group, he
will say that they are saumubus, using a word
tumbu, which in other parts of Fiji is a term by
which a grandfather is addressed.

A feature very widely present in classificatory
systems is a peculiar reciprocity in the use of
terms of relationship that they denote relationships rather than relatives. This
reciprocal usage, which among ourselves is limited
to relatives of the same generation, such as brother,
sister, and cousin, occurs between persons of dif-
gerations in the classificatory system, so that a
man and his mother's brother or a man and his
grandchild may use only one term between them;
there may be only one term for the relationship
between mother's brother and sister's son, or for
that between father's father and son's son. A
similar usage occurs between husband and wife so
that there is only one place in our two terms.
It is as if the word 'spouse' were for the partner in
a marriage.

It is probably a variation of this principle of
reciprocity that is seen in a very peculiar and
characteristic mode of terminology for brothers
and sisters. In most classificatory systems, two
brothers use one term, two sisters the same or
another often closely related term, while sister use a
wholly different term. A similar
custom is general in the nomenclature for brothers
and sisters-in-law: two men use one term, two
sisters the same or a different term, while a
woman use still another term or other terms.
This feature also characterizes the nomenclature
for cross-cousins in some Fijian systems. Looked
at from another point of view, this charac-
istic of classificatory systems means that the use of a term of relationship does not depend merely, as in the case of the lexicon of the person addressed, but also on that of the speaker. Thus a man may use one term for his sister and a woman another; similarly, a man may use one term for his sister's son and a woman a quite different term here, and so on. Women, too, use different terms for their grandchildren. In some cases, even, a father and mother may use different terms for their children.

This practice is very general in classificatory systems. The use of different terms for certain relatives according to age. This is especially frequent in the cases of the relationships between brothers and between sisters, while frequently the brothers of the father, and less frequently the sisters of the mother, are denoted differently according as they are older or younger than the father or mother. This practice occurs only very rarely, if at all, in the case of the relationship between brother and sister, and it is very exceptional in the case of the mother's brothers or the father's sisters. Thus, systems are and there is a term for elder brother (man speaking) and elder sister (woman speaking); another for younger brother (man speaking) and younger sister (woman speaking), but only one reciprocal term is used both for brothers and for sisters. This varied for sister (man speaking), irrespective of age.

Two varieties of this practice occur: in some cases the usage is determined by the relative ages of those who use the terms, while in other cases it is determined by the ages of the children of some more or less distant ancestor. In the latter case, a man will address a relative as older if the latter belongs to an elder branch of his pedigree, even if he (the speaker) is the elder in years. These usages may be distinguished as dependent on age and seniority respectively.

Still another feature very general in classificatory systems is the presence of a rigorous distinction between relatives through father and mother. This is especially frequent in the cases of those whom we call uncles and aunts, and less frequently applies also to grandparents and grandchildren.

One result of these various peculiarities of the classificatory system is that it usually possesses a far richer terminology than exists among ourselves or other European peoples. Thus, even when we are speaking in some system as many as eighteen different terms for the different varieties of the grandparent-grandchild relationship; two each for father's father, father's mother, mother's father, and mother's mother, one term of each pair being used by the grandchild of the other parent and the other by the granddaughter; and, similarly, two terms each for son's son, son's daughter, daughter's son, and daughter's daughter, one term of each pair being used by the grandfather and the other by the grandmother. There is no known system of relationship in which all these sixteen possible terms are present, but in some Malayan systems as many as eighteen are in use, the absent terms being those which depend on the difference in sex of the grandparents.

The rigid class of terminology of classificatory systems may also be increased by the presence of terms for relationships for which we have no special designation. Thus it is common to find special terms in some systems for married brothers or between women who have married brothers, and special terms may also be used between the parents, or even between the grandparents, of a married couple, marriage between two persons thus setting up a relationship between their parents or their grandparents which is of sufficient social importance to lead to the use of a special term.

If the principle of reciprocity is in full action, so that two persons of different generations use only one term for each other, the number of terms will be diminished; but, even so, most classificatory systems tend to make each person use different terms for their grandchildren. It is also common in the classificatory system to find relatives classed together whom we distinguish. Some of these classifications, such as the father's younger brother with the mother, and the father with the mother, are due to the working of the classificatory principle, and are found in nearly all classificatory systems, but there are others which occur only here and there. Thus, the mother's brother is frequently denoted by the same term as the father-in-law and the father's sister's husband, or the father's father may be classed with an elder brother, or the father's sister's son with the father.

Most of these correspondences in nomenclature can be shown to be due to special forms of marriage, and will be considered more fully in the various sections of art. MARRIAGE; all that need be noted here is that there is a kindred introduction of an element of complexity into classificatory systems of relationship which combines with their variations in richness of nomenclature to give these systems an immensely greater variety than is found in European systems. There are so many gradations, that many systematic grouping of classificatory systems is far from easy; but certain main distinctions are possible.

2. Varieties in the classificatory system. — In his great work on the Systems of Consanguinity and Affinity of the Human Family, Morgan considered three main varieties of the classificatory system — the Galvanian system found in N. America, the Turanian in Asia and some parts of Oceania, and the Malay in Polynesia — but the Galvanian and Turanian systems were found to be so similar that he regarded them as forming one variety, the Malay forming another. Though the name was badly chosen, the Malay system has much right to be regarded as a special variety. Morgan drew his chief example from the Hawaiian Islands, and hence we may call it the Hawaiian system. It occurs also among the Maoris of New Zealand and probably in other parts of Polynesia. It is a very simple system, in which the classificatory principle is carried to an extreme degree, so that all relatives of the same age to the speaker are classed with brothers or sisters, all of the previous generation with the father and mother, and all of the generation before that with the grandparents, so that in the Hawaiian Islands, excluding relatives by marriage, there are only fifteen terms of relationship altogether.

There is, however, no hard and fast line between this system and the more usual forms of the classificatory system. Thus the system of Eddystone Island in the British Solomons differs only in the fact that, while all relatives of the generation older than the speaker are classed with the father or mother, one relative in the generation following the speaker, viz., the sister's son, is distinguished from the rest.

A more definite principle of classification can be based upon the special features derived from different forms of marriage. Thus, the cross-cousin marriage (see MARRIAGE) produces a number of special features which enable the system of a place where this marriage is recognized at a glance. Similarly, other special forms of system dependent upon forms of marriage can be distinguished, though numerous gradations are possible owing to the fact that the special features dependent upon a form of marriage often
Persist after the marriage has ceased to be practiced, and their disappearance may be so gradual that there may be no trace of them. In the case of marriage, such systems being, as a rule, very complex.

If special varieties of the classificatory system are thus dependent on social institutions such as marriage, the question arises whether its generative classificatory system of relationship has been determined by some form of social organization, and there can be little doubt that it has been derived from the clan. Wherever the clan exists, classificatory terms of relationship are used, and they are not only applied to persons with whom definite genealogical relationship can be traced, but they are also used to denote membership of the clan. Thus, all the men of the clan of the speaker and of his own generation are classed in terminology with his brothers. If the clan is patrilineal, all men of the previous generation of his clan are classed with his father, and all of the succeeding generation with his sons. Similarly, all the men of his mother's clan and of her generation are classed with his mother's brother, and all the men of the succeeding generation with his mother's brother's children.

The most primitive forms of the classificatory system possess certain features which suggest that they may have arisen out of that special form of the clan system which may be called the dual organization, in which a tribe or other community consists of two exogamous moieties. The children of the father's brothers and of the mother's sisters are classed with brothers and sisters, while the children of mother's brothers and of father's sisters are classed together, but distinguished from brothers and sisters; this is a mode of classification which would be the natural result of the dual organization. If the term 'classificatory' is regarded as unsatisfactory, one would be justified in speaking of the group of systems to which this name is usually applied as 'clan systems.'

3. Morgan's descriptive system. The systems classed together by Morgan as descriptive show a number of varieties characterized by the different degrees in which the descriptive principle is in action. A fully descriptive system would contain a corresponding number of descriptive terms in small groups of persons, and all other relatives would be named by combinations of these primary denotive terms. The Celtic and Lutishian systems are the best examples of this descriptive usage, in which many relatives, including the grandparents, uncles, aunts, and cousins, are described by a relation to the father and mother.

At the other end of the scale come such languages as English, in which the systems are simple denotive terms for the grandparents and for the brothers and sisters of father and mother, while the wives and children of the latter are indicated by descriptive terms; thus, the great-grandfather is matr khal, his son khal, and his daughter bint khal.

Morgan classed such systems as our own with the descriptive variety, because he inferred that they had once had this character. It is, however, far from satisfactory to class together systems which differ so widely from one another. In spite of their differences, they are both classificatory systems, and in one sense denotive, such systems as our own might be classed together as 'denotive,' while the term 'descriptive' might be reserved for those systems in which the description is part of the system. Different systems might also be named by means of the forms of social structure from which they are derived. Our own system and those of most Teutonic and Romance languages contain a number of terms which are used of one person and of one person only, and the persons thus indicated are the members of the family (a social group consisting of a man, his wife, and their children). The more remote from the family the relationship is, the less definite becomes the nomenclature. Such systems are clearly founded on the social institution of the family. It is only for those persons who form part of the family that an exact system of nomenclature is necessary. Such systems might appropriately be called 'family' systems.

Such a system as that of the Arabic language, on the other hand, shows the past or present existence of a state of society in which some special motive exists for the clear distinction of brothers and sisters of the father and mother as well as of their wives and children. Such social motives are to be found in some form of the kindred or extended family, and it has been suggested that these systems might be called 'kindred' systems.

It is an interesting illustration of the subject of relationship by sociologists that only recently has any attempt been made to use European systems of relationships as instruments for the study of social organization. When the lesson taught by the study of the classificatory system has been learnt, much light will be thrown on the nature of Indogerian and Semitic social organization by means of the terminology of relationship.

4. Geographical distribution of relationship systems.—(1) Europe.—Most of the Romance and Teutonic languages possess systems of relationship in which denotive terms are prominent and from which descriptive terms are absent. The systems of these peoples are of a simple character, possessing relatively few terms; only in French is there any sign of distinctions according to age. In the past, however, European languages were richer in nomenclature, Anglo-Saxon, Middle High German, and Latin distinguishing the brothers and sisters of the father from those of the mother relatives now classed together. The Latin system was an extremely complex one, and the system of the Slavic or family system, but it is possible that it was largely a legal product, and that a less strictly scientific nomenclature was in use among the people. The Celtic languages present high development of the descriptive principle, and this principle also shows itself to some extent in the Scandinavian languages.

Slavic systems of relationship are in the main denotive, but some of them possess features of a classificatory kind. Thus, in Bulgaria the father's brother's son is called otisika brat, or 'brother through the paternal uncle,' being thus classed with, and at the same time distinguished from, a brother. Similarly, in Poland cousins are classed with brothers or sisters, but distinguished by terms referring to their relationship through an uncle or aunt.

In Poland also, the father's brother's son may be classed with the grandfather, and the terms used for the father's and mother's brothers are also applied to the cousins of the father or mother. These features suggest that Slavic systems are not very far removed from classificatory systems, that they are classificatory systems in which special denotive terms have come into use for the brothers and sisters of father or mother, but that their children still follow by their nomenclature that they were once definitely classed with brothers and
sisters. In this connexion it is interesting that some Slavic systems, such as the Bulgarian, show the distinction between elder and younger brothers which is so characteristic of the classic Eastern system, in Bulgaria there are special terms for the younger brother and younger sister of the husband.

The Magyar system has many features which distinguish it from the Eastern systems and from other systems, and many points of similarity with certain systems of N. America, and possibly also with those of northern Asia. Especially striking in this respect is the presence of definite terms for older and younger brother and for elder and younger sister, and the classification of uncles and aunts with elder brothers and sisters. Another feature of interest is the wide use of a term scoot in the designation of cousins and uncles, which seems to show the existence of a mode of social grouping in which descendants of a grandparent are classed together.

The Finnish system differs in the less from Indo-European systems, and the linguistic character of some of the terms suggests that this is the result of modification produced through the present environment of the people. According to the literature, the331 Finnish people, the Estonian system is characterized by a very high degree of development of the descriptive principle.

The Turkish system resembles the Magyar to some extent, the differences being probably due to Arabic influences.

The Basque language preserves the use of a single reciprocal term between brother and sister, a feature so characteristic of the classificatory system as to suggest that the whole system must once have had this character.

(2) Africa. Most of the peoples of the northern part of this continent have been influenced by the Arabic system, the special features of which have already been described. Closely similar systems are found among the Shilluks, Dinkas, and other Nilotic peoples. These systems are likewise characterized by the use of special distinctions for half-brothers and sisters, arising out of the practice of polygyny. This feature is also present in the systems of the Bantu peoples, which differ, however, from the Nilotic systems in being definitely classificatory in character and in having complexities dependent on certain forms of marriage.

In W. Africa, on the other hand, the available evidence points to the absence of the classificatory system, its mode of nomenclature being largely descriptive.

(3) Asia. Some of the peoples of Asiatic Turkey appear to use systems of relationship of the same kind as the Turks and Magyars, with decided traces of Arabic influence, while the Armenian system is descriptive.

The systems of northern Asia are definitely of a classificatory kind, approaching the Hawaiian type in the north-eastern part of the continent. The system of the Tungus classes the elder brothers of a man with his father's younger brothers—a feature similar to those characteristic of the Magyar system.

The Persian system is largely descriptive, and the use of terms borrowed from Arabic for uncles and aunts suggests that these relatives had origin...
KIN, KINSHIP 705

Oceania, there is a definite correlation between the presence of special terms for relatives and social functions. It is only when such a relative term as 'mother's husband' or the father of the woman's wife has definite social functions that a special term is applied to him, distinguishing him from other relatives. There is reason to believe that one relative is distinguished from another in nomenclature only if his society has introduced a need for this distinction. At present we have little information about the social functions of relationship in other parts of the world, but the rule which holds good of Oceania will probably be found to be of general application.

1. Parents and children.—In general, we have little definite knowledge concerning the social regulations connected with parent and child. Among peoples who use the classificatory system these relatives do not appear to be subject to such clear-cut regulations as occur with other relationships. It is possible, however, that this may be due only to lack of interest in this relationship on the part of the collector of ethnographical data. The presence of special regulations connected with such relatives as the mother's brother or the mother-in-law is apt to give to provide for his child up to a certain age, and it is very difficult to state in any exact way the social actions which are included under the term 'provide.' The duties of the father may be more definitely twofold: his legal obligations, and those which devolve upon him by custom, the latter differing greatly in different ranks of society. The duties of a child towards his father are even less definite and obligatory, and, when we pass to more distant relatives, their social functions become so indefinite that they can hardly be said to exist. Many regard it as a duty to help all those related to themselves by the exercise of social interest, if not in a more material way, but such duties are in no way obligatory, and are not even sufficiently habitual among all classes to allow them to be described and classified. If we study the past of our own society, however, we find that the social duties of relatives have been much more definite, the best known of these duties being that of assisting in the payment of sceold, or blood-money, the proportions of this payment due from relatives of different kinds being very strictly regulated.

In other European countries the duties of relatives are more definite and more strictly regulated than in England, one such function in France, for instance, being that of taking part in a family council.

Among such peoples as the Hindus and Chinese the social functions associated with relationship are very definite and strictly regulated, this regulation being especially obvious in those cases in which social institutions, such as marriage, are associated with much ceremonial.

It is, however, when we pass to peoples of ruder culture that the social functions of relationship reach their highest degree of definiteness and strictness of regulation, and among these peoples definite duties, privileges, and restrictions are not limited to the parents or other near relatives, but are present, and may even be more numerous and definite, in the case of other relatives, such as the husband of the father's sister or the son of the mother's brother. Sometimes the duties and privileges associated with relationship seem to have become the basis of important social distinctions. Restraints.

Before considering these social functions in detail, we may point out the definite relation between the presence of social functions and the terminology of relationship. In such a region as

3. Mother’s brother and sister’s son.—Special customs associated with this relationship are very frequent among those who use the classificatory system, and the importance of the distinction of the mother’s brother from the father’s brother is shown by the fact that such special functions are quite unknown in connexion with the latter relative. Among many peoples who use the classificatory system the mother’s brother is very likely responsible for the welfare of the child, for his upbringing and training for adult life. He may take the chief place, or at any rate a more important place than the father, in the ceremonies which accompany social events, such as naming, the assumption of the first clothing, circumcision, initiation, and marriage. The duty of obedience to the mother’s brother may be so strict that a boy will at once respond to any command, however contrary to his own wishes. A man and his sister’s son often share their property in common, and there is little doubt, even if the practice no longer occurs, that in Melanesia they once had their wives in common. In other cases a man’s sister’s son has the right to take the place, or even to take for his own use, any of the possessions of his uncle. This right has reached its highest development in Fiji, where the rights of the sister’s son, or even, of a chief over the property of his mother and his brother’s son, extend to the property of all the subjects of his uncle, so that the estate of a chief is able to take for his own use any of the property, as well as the women, of the district over which his uncle rules.

The close relation between a man and his mother’s brother is natural in a state of mother-right, in which these persons necessarily belong to the same social group. The relation is often found, however, in combination with patrilineal institutions, in which cases it is probably a survival of an older matrilineal condition (see Mother-Right). In other cases the special position of the mother’s brother may be the result of other social institutions (see Marriage).

4. Mother’s brother’s wife.—Sometimes there are special privileges or restrictions on conduct in connexion with this relative, but these are usually the result of her position as a potential wife (see Marriage).

5. Father’s sister.—Special privileges in connexion with this relative have been recorded only in Melanesia, among the Melanesians, and in India, but probably elsewhere. In Melanesia this relative is especially honoured, and with this honour rule of avoidance are sometimes associated, while the relationship resembles that between a man and his mother’s brother in that to some extent a woman and her brother’s child have their property in common. In India this relative is important chiefly in marriage ceremonies (see Marriage).

6. Father’s sister’s husband.—Special conduct towards this relative has been recorded only from Melanesia, where it forms an extreme example of the joking relation (see below), a man being the natural butt for the wit and practical jokes of his wife’s brother’s son.

7. Cousins.—Rules of conduct between cousins are best known in the case of those, often called cross-cousins, who are the children of brother and sister. The special rules of conduct exist between those of different sex, they are usually the outcome of the potential relationship of husband and wife.

8. Grandparents and grandchildren.—Sometimes the grandfather has a special position of authority, while in other cases definite ceremonial duties in connexion with his grandchild may be assigned to him.

For relatives by marriage see Marriage.

9. Avoidance.—Many of the restrictions on the conduct of relatives have in common the feature that relatives avoid one another or avoid certain modes of conduct, and these restrictions are often grouped together as customs of avoidance. These customs have attracted special attention from anthropologists in the case of relatives by marriage, and will be again considered in the art. Marriage, but their general character may be discussed here. They are very various in kind. In the most extreme cases relatives must never be in the presence of one another. The avoidance may be so strict that a person who has to avoid a relative will not even enter a village where this relative is living, and in the extreme case of Lepers in Melanesia the avoidance between brother and sister persists after death. In other cases the avoidance is less absolute. A person may leave a house into which a relative enters, or, if relatives who should avoid one another meet, they may get out of each other’s way sufficiently to ensure that they do not touch one another, or they may pass with averted eyes.

Sometimes avoidance includes the total prohibition of speech, or relatives may speak to one another only so long as they do not see each other. In other cases, relatives speak to one another at a distance, or conversation may be limited to strict matters of business, and it is only familiar conversation that is allowed. Another manifestation of avoidance is that relatives may not use certain words or expressions when speaking to one another.

A custom which seems to be related to these customs of avoidance is the prohibition of the personal name, not only when relatives speak to one another, but when one speaks of the other in his absence. This prohibition applies not only to relatives who avoid one another, but often to a much wider circle of relatives. In other cases, the avoidance may apply only to special acts, e.g., touching the head, taking a load from another, or approaching a relative when he is sitting.

Customs of avoidance are more frequent, and usually more strict and elaborate, between persons of different sex than between those of the same sex, and it is certain that they are often associated with the idea that sexual relations between those who avoid one another are liable to take place. In some parts of Melanesia certain relatives of different sex will practise avoidance only so long as sexual relations have not taken place between them, and the avoidance will be a sign to all of the nature of the relations existing between the persons in question. This association of avoidance with the possibility of sexual relations seems to be especially definite in the case of relatives by marriage, but there is little doubt that the association is also present in connexion with the avoidance between brother and sister, and that, where this avoidance is present, sexual relations between brother and sister are recognized as liable to occur. It would seem as if one of the functions of customs of avoidance is to ensure that sexual relations shall not occur between certain relatives. The presence of these regulations in connexion with certain relatives and not with others shows that a tendency towards sexual relations is present in the one case and not in the other. They suggest that the relations now so strictly forbidden that the persons concerned are not even allowed to see or speak to one another must once have occurred frequently, if not habitually, and as an organized practice, between those who now avoid one another. The fact that similar avoidance exists between persons of the same sex shows, however, that the prohibition of sexual relations is not the
only factor in the production and maintenance of these customs. In Melanesia the avoidance between male relatives is less pronounced than between relatives of different sex, and usually applies to actions as well as to approaching when the other is sitting down, or one taking a load from the shoulder of the other. There is much reason to believe that these customs are the result of the prohibition of any kind of familiarity between certain relatives, while the customs now to be considered enjoin such familiarity and make it a regular and habitual feature of conduct. In the Banks Islands, for instance, the relation of the custom to avoidance seems to be shown by the fact that one of the most frequent forms which avoidance takes is the prohibition of the custom of joking. In these islands, this either neutral or little joke occurs in the case of the husband of the father's sister. Whoever a person meets this relative, it is not merely his privilege, but it would seem almost his duty, to play practical jokes upon him. In the cases of other relatives, this mode of behaviour seems to be less habitual. It is possible in these islands to arrange relationships in a series, from the husband of the father's sister at one end to the wife's mother at the other, in which there is a gradual transition from a condition in which joking is habitual to one in which not only is it absolutely forbidden, but the social relations are of a kind which remove all opportunity for its occurrence.

The only other people among whom this organized system of joking has been recorded are the Crow and Hidatasa Indians of N. America, but in their case it would appear that the privileged joking is practised between members of certain clans rather than between certain relatives. It is possible that those belong to the same clan who are allowed to play practical jokes upon one another.

KINDNESS.—I. Etymology and usage. The etymology of the word 'kindness' (connected with A.S. cynnul or cunning, 'natural' or 'inborn,' O.E. sceyund, 'generation,' 'nation'; cf. Lat. genus) indicates the original meaning of the word as equivalent to 'kinship,' or near-relationship (see OED). It was probably derived from birth. Afterwards it came to be used of natural aptitude or inclination; and, finally, of (1) the quality of being kind, and (2) kind feeling or affection, e.g., S. J. J. Kcm. The English Poets, ed. G. F. Hill, Oxford, 1905, i. 89 ('Milton').

'He left the university with no kindness for its institution' (quoted in OED). The objective use of an act prompted by kind feeling (e.g., 'a kindness' or 'kindnesses') easily followed from the above usages. In general, kindness, whether viewed as a subjective quality or as manifested objectivity in outward behaviour, word, or act, carries with it varying shades of goodwill, which may be expressed in such terms as friendliness, mercifulness, generosity, thoughtfulness, and the like. It is opposed to the spirit of harshness, unrelenting anger, or hauteur, vengeance, callousness, etc.

2. Ethics. As a manifestation under special conditions of a fully developed justice, or benevolence (q.v.), or love (q.v.), the virtue of kindness occupies a high place in the ethical teaching of both (G. and N. (The works are in Latin, and it is associated with the character of God in such passages as 1 S 20:4, 2 S 2:9, Neh 9:1, Ps 31:11, and is 54:1-2, where 775, often used with the suggestion of hospitality, is applied to the love of God with men. Further, as connected with the Christian doctrine of the Fatherhood of God, it finds expression in Lk 15:2, Mt 6:1, Ac 14:23. In the teaching of our Lord the spirit of kindness is inculcated in various directions—e.g., as one with the forgiving disposition (Mt 18:35), as the love of enemies or persecutors (Mt 5:43), as an exhibition of the law of mercy overriding legal enactment (Lk 19:14-15), as a sign of the grace of God (Ro 10:16), the gift of the Spirit (Gal 5:21), the grace of the Spirit (Ro 1:4-5). We find kindness exemplified in the lives of the apostles, and the word is used to describe the kindnesses of God (Ps 145:13-15). The love of God is expressed in a more active type of goodwill, bonitas as compared with benignitas (R. C. Trench, Syn. of the NT, London, 1880, p. 231 f., who quotes Lightfoot on Gal 5:1 to that effect). We may add to the above list φιλανθρωπία (Rob 192) and φιλοθέτω (1 Th 3, Tit 1, 1 P 4) as indicating a form of kindness—hospitality to strangers—commanded by the apostles to the early Church.

The doctrine of the divine Fatherhood may lead, as has frequently been noted, to a one-sided conception of God's nature. God's φιλανθρωπία is a kindness that coexists with 'wrath,' the eternal hostility of perfect Holiness to evil. It is not to be interpreted as 'softness and sentimentalism.'

The mere ambiguity of 'is bon Dieu' of much modern criticism is but one of the errors of the most monstrous indifference of Guru Khayyam's 'Good Fellows' (W. H. M. Morton, London, 1923, pp. 279 ff., referring to the Rubáiyát, iv. 4: It's a Good Fellow, he'll tell all the world.)

The Christian conception of kindness marks a great advance on Greek ethics. Perhaps the highest conception of benevolence is to be found in Aristotle's portraiture of the Philosopher, or liberal-minded man, in Nic. Eth. iv. 161, where nevertheless 'we do not find a word about benevolence or love to others as prompting acts of liberality' (A. Grant, The Ethics of Aristotle, London, 1866, i. 80). The activity of the mothers in the formation of the vices and vices in the activity of Aristotle's virtuous man, for whom 'the first requisite to nobleness seems to be self-respect' (40, 69). Kindness, like cortis, begins at home—i.e., as a virtue of kinship. In general, one touch of nature makes the whole world kin (Shakespeare, Troilus and Cressida, iii. iii. 175); but it is in the family that the virtue of kindness finds its earliest sphere of influence. The love of the mother for her child is the ethical source of the law of kindness in human life.

'Love for children is always a prior and stronger thing than love between a husband and mother' (Drummond, Accident of Men, London, 1869, p. 383).

Drummond finds in the struggle for the life of others the ethical principle which many observers eliminate from the cosmic process. The emergence
of affection or kindness from the circle of the house, in the growth of ethical conceptions which accompanied the moral progress of mankind. It was seen that kindness narrowed to a circle might readily become a vice.

'While the edicato, quasi indulgentia vocatus, nervos comes et mentis at corporis frangit' (Quintilian, Inst. II, 9, 5).

It may rightly be argued, as J. H. Muirhead has done (Elements of Ethics, London, 1904, p. 190) that it is a moral guarantee against the exclusiveness which turns family affection into a vice. It is the function of justice touched with emotion to extend the relationships of human beings from those of mere contracts to actual friendship or love. As a disposition of the character or as a practical outcome of the humanistic spirit, kindness of temper, of speech, and of act is a potent civilizer of human intercourse. To it belong the ideas of courtesy, cheerfulness, good humour, and hospitality, the desire to make the best of all, irrespective of social status, to behave so as to cause people to feel at home in the society to which they belong or have been introduced, to diffuse the spirit of radiant good will and sympathy, and to practise all the chivalries of the Christian gentleman.

The full ethical history of kindness would deal with the various motives and sanctions by which a primitive sentiment developed into a duty which embraced the realm of human and animal life. In Christian ethics the cup of cold water' (Mt 10:5) is the symbol of the everyday habit of the charitable, which is expressed with striking emphasis in contradistinction to the old law of revenge in the precept 'Give to him that asketh thee' (Mt 5:4). See C. Gore, Sermon on the Mount, London, 1898, ch. v. Even quixotic kindness may on occasion be justified as a Christian duty; the classic example is the bishop's treatment of Jean Valjean in Les Misérables.

Indiscriminate charity (see art. CHARYTAS) on the other hand, is not Christian, inasmuch as it is a mere indulgence of our feelings of compassion with little trouble to ourselves and at the expense of society (Gore, loc. cit.). Furthermore, the higher ethical demands a certain delicacy of method and manner in the doing of a kindness.

The truly kind man 'knows for how much the manner, because the heart itself, counts, in doing a kindness. He becometh gentle in his care for all weakly creatures; judging, instinctively, that to be but sentient is to possess rights' (Wordsworth, Intimations, 1807, II, 7).

If the kindness of the Christian ideal founds a Society for the Prevention of Cruelty to Children, it will likewise support a Society for the Prevention of Cruelty to Animals, and protest against unnecessary inhumanity in vivisection. Indeed, the rights of all damn creatures to kind treatment, as passages quoted above show, is an integral feature of Christ's teaching, besides being a certain corollary of His broad humanity. Browning is but expressing the Christian standpoint in this matter when he says:

'God made all the creatures and gave them our love and our tears.'

To give sign, we and they are his children, one family here'

(See, dx.)

3. Psychology.—To the psychologist kindness is subjective emotion owing its development and practical manifestations to the nature of the object or stimulus which acts on it. There is a difference of opinion among experts as to whether tender emotion is primary or otherwise; but the former opinion is now more generally held. The maternal instinct which compels a mother to protect and cherish her child is common to the higher ranges of animal life, and was probably transferred to members of the other sex. Infantilism among savages might seem to negative a female theory, but, in reply to this objection, W. MacDougall (Introduction to Social Psychology, London, 1912, p. 69) writes:

'There is no feature of savage life more nearly universal than the kindness and tenderness of savages, even of savage fathers, for their little children. All observers are agreed upon this point. I have met a time watched with interest a bloodthirsty head-hunter of borneo spending a day at home tenderly nursing his infant in his arms. And it is a rule, to which there are few exceptions among savage peoples, that an infant is only killed during the first few hours of its life. If the child is allowed to survive but a few days, then its life is safe; the tender emotion has been called out in fuller strength, and has begun to be organized into a sentiment of paternal love that is too strong to be overcome by prudential or purely selfish considerations.'

The same writer comments Bain's view that tender feeling is as purely self-seeking as any other pleasure, and pronounces it to be 'a gross libel on human nature.' The extensions of this primary impulse from the relationship of a mother and her child are almost endless. It has a marked association with the emotion of pity on the one hand and moral indignation on the other, especially in relation to the sight of suffering, the sounds or cries of pain or distress, and, imaginatively, to the woes depicted in some moving romance. Here disgust or aversion caused by the sight of blood or wounds is overcome by the impulse of kindness, as in the case of the Good Samaritan. With the priest and Levite of the story, neither pity nor disgust rips into the impulse to succour. Kindness is an element of the system of emotional dispositions that 'adapts the sentiments of loving' (MacDougall, op. cit., p. 129). In its active manifestations it is really a complex emotional state. The germ is tender emotion, but tender emotion implies pity, moral indignation, or sympathetically induced pain or pleasure, as the case may be. That such emotions appear to be innate in some people is a matter of experience. Cf. the Scots proverb:

'Kindness cometh all; it cannot in the end.'

On the other hand, it is also a psychological law that reciprocation intensifies sentiment. Some instincts die for want of satisfaction; the milk of human kindness' tends to foster a corresponding impulse in those to whom it is imparted; cf. Sophocles, A. J. 592:

'And kindness, never akin, than revenge' (Shakespeare, As You Like It, iv, iii. 130), is one of those altruistic impulses which bind the human family together and ennoble the social order.

KING.

Iranian (L. C. CASARELLI), p. 721.

Muslin (C. DE VAUX), p. 723.

Teutonic and Lithuanian (O. SCHRADER), p. 728.

complex; various lines of social evolution have produced it at different times and in different ways. The following definition may be accepted
as applying to modern times: 'king' is 'the usual title of the male sovereign ruler of an independent State, whose position is either purely hereditary, or hereditary under certain legal conditions, or, if elective, is considered to be given to the elected the same attributes and rank as those of a (purely or partly) hereditary one.' In English history the term 'king' first appeared as the name of chiefs of the Anglo-Saxon kings. The O.E. cyning, cyng, or cying seems to imply the 'representative' of the cymyn. Each tribe elected a chief from a 'royal' or cymyn. When Wessex rose to predominance in the 10th cent., these tribal kings disappeared, and the Wessex king was the representative of the Angle-cyn.

The Greek basileus, the Latin rex, the Persian shah, and the Hebrew melek present other aspects of the institution. The early Greek dēsē is an ethical rather than a political term. In basileus and rex there are proofs of priestly office and survivals of magical duties. The reasons for the abolition of the monarchy by the Romans remain somewhat obscure. It is a remarkable fact that the term rex was practically a tabooed word ever afterwards. To avoid it, the emperors adopted such designations as imperator and princeps. The Oriental idea of a divine king, as exemplified by Persia, China, and Japan, hardly escapes us in the idea of the Lord of the Universe. The religious aspect of kingship is to be seen in the Hebrew melek.

1. Origins.—Anthropological research has lately revolutionized opinion as to the origin of kingly office. Without excluding the elements of leadership, organization, and generalship in war, J. G. Frazer has established by a long array of facts the theory that monarchy presupposes that it was the medicine-man, the shaman, or public magician who laid the foundations, at least in part, of the kingly office. "Believing as little more than a simple conjurer, the medicine-man or magician tends to blossom out into a full-blown god and king in the kingly office."

K. H. Codrington observes of the Melanesian political system: "The power of chiefs has hitherto rested upon the belief in their supernatural power derived from the spirits or ghosts with which they had intercourse. As this belief has failed, in the Banks' Islands for example some time ago, the position of a chief has been lost, and as this belief is now being generally undermined a new kind of chief must needs arise to take the place of the old one."

Here the spiritual and temporal powers are combined in one person. In other cases there is a convergence of the two. Thus, in New Guinea, 'chiefs have not necessarily supernatural powers, but a sorcerer is looked upon as a chief.' 4 and in Matei Te Fe, the power of the witch doctors was as great as, if not greater than, the king. 5

It is true, in a logical sense, that the dual rule of the pope and the emperor in mediæval Europe is a case of division; historically it was a case of accidental competition, the spiritual power aiding at political ascendancy. This result had been anticipated in lower cultures. Centuries later in date, but ages earlier in evolution, the Polynesian islands provide an instructive example.

1. In some of the islands the god (a man possessed by a divinity) is political sovereign of the land; and ... is raised to the same high rank, and rules, as god and king, over all the other chiefs.

2. Two psychological tendencies may be traced in these elemental ideas about the divine king or human god: a veneration for authority and a belief in magic. The intense feeling of loyalty shown by...

3. ... the Jacobites is a modern instance of the former tendency; popular beliefs about the power of the pope and even the priest among Roman Catholic peasants are an instance of the latter.

The Siamese language has no word 'by which any creature of higher rank or greater dignity than a monarch can be described; and the missionaries, when they speak of God, are forced to use the native word for 'king.' 1 In India every king is regarded as a descendant from a royal family. Among the Batak of Sumatra there rules a king who is held to be a god. 2 The Sultan of Menangkabau was worshipped similarly. 3 In the South Sea region the same ideas prevailed. The king of Tahiti was identified with the gods of the land. 3 Frazer's view has its most luminous illustration in the Malay beliefs collected by W. W. Skeat.

"The theory," he concludes, 'of the real divinity of a king is said to be held strongly in the Malay region. Not only is the king's person considered sacred, but the sanctity of his body is supposed to communicate itself to his regalia and to stay those who break the royal taboos. Thus it is firmly believed that anyone who seriously offends the royal person, who imitates or touches even for a moment the chief's regalia, or who wrongfully makes use of the insignia or privileges of royalty, will be inflicted with a punishment that is, struck dead with the discharge of that divine power which the Maham supposes to reside in the king's person and to which they give the name of damal or sanctity. Under the name of every person or thing believed to be endowed with supernatural powers; and we are told that 'the extraordinary strength of the Malay belief in the supernatural powers of the regalia of their sovereigns can only be thoroughly realised after a study of their romances, in which their kings are credited with all the attributes of divinity, and have even the same birth, as indeed every subsequent act of their after-life, is attended by the most amazing privileges. Now it is highly significant that the Malay magician even certain insignia which are said to be exactly analogous to the regalia of the divine king, and even bear the same name, ... can only be a probable inference that in the Malay region the regalia of kings are only the conjuring apparatus of their predecessors the magicians.'

2. The supernatural aspect of kingship.—Turning to special aspects of the curious personal influence which is the prototype of the divinity that 'doth hedge a king,' and to some extent of his political power, we find the primitive king (or tribal or clan chief) to be very often not so much a representative of his people as a puppet responsible for their welfare and the course of nature determining it.

As Rome and in other cities of Latium there was a priest called the Sacraed King or King of the Sacred Rites, and his wife the title of Queen of the Sacred Rites. Athens the second annual magistrate of the state was called the King, and his wife the Queen; the functions of both were religious. More Greek democracies have had a king, whose duties, so far as they are known, seem to have been priestly. 7

Again, Asia Minor in historical times was 'the seat of various great religious cults peopled by thousands of sacred slaves, and ruled by priests who wielded at once temporal and spiritual authority, like the popes of mediæval Rome. Such priest-kings, hidden cities were Zela and Pessinus. Teutonic kings, again, in the old heathen days seem to have stood in the position, and to have exercised the powers, of high priests. The Emperor of China offer public sacrifices, the details of which are regulated by the ritual books. The King of Madagascar was high-priest of the realm. 8

Such cases are complete prototypes of priestly rule as it has occurred in Hebrew and European society, but they derive from the exactly analogous authority of the savage sorcerer, who establishes an unoficial, but impressive, influence through his personal credibility. The fact is interesting that, where the ruler, either in primitive or in modern times, has not combined religious duties with political office, the credulous people have often tried to turn the temporal priest or god into a god. The fact indicates a more or less...
permanent association between authority and supernatural power in the popular mind.

Some writers and primitive 'king,' his successor, were associated with the regulation of natural forces and the course of the seasons. Terms equivalent to 'god' or 'king' are regularly applied to the sorcerer of the seasons, just as his primitive predecessor, the political ruler. His responsibility for the social welfare is balanced by social veneration. "The king of Lango is honoured by his people as though he were a god. The rain has come to them; they can let it rain when they like; and once a year, in December, which is the time they want rain, they come to beg of him to give it to them." Among the Wangoro of Central Africa, "the great dispenser, he who has absolute and uncontrollable power over the rain, is the king; but he can divide his power with other persons, so that the benefit may be distributed over various persons by his will." The king he himself the destinies of the people, as the chief of a divinity in the domestic god. In Baban, the king is regarded as possessing magical powers for social welfare; in the Kamba of East Africa, remarked that the rains returned to the tribe, the chief immediately replied that they could not be otherwise, since Baban had never visited the tribe; "He is alleged that Mr. Brooks has never visited his tribe, and the effect of his visit is to make it fruitful in abundance; and when they violate his laws, that plague, famine, and indemnity of weather are the result."

The last case, among others, indicates that a social inertia has its effect in producing such dependence upon responsible persons. It is in the relations of people and priest, and of labour and care, that the social reference is yet unbroken, results metaxological are believed to be in the control of human rulers, on the same lines as are social happenings.

The power of the people against the 'king' is very rarely King's. Primitive folk dealing with a defaulting magic-king are not unlike the Commonwealth dealing with Charles I. The difference is one of education. When prayers and offerings presented to the king have failed to procure rain, his subjects bind him with ropes and take him by force to the grave of his forefathers, that he may there be removed when at which the king is deposed. "Fetish kings" are common in Africa, and numerous instances of the combination of religious and civil power. On the Grain Coast there was one who was regarded as 'responsible for the health of the community,' and if famine or pestilence overtook him, he was put to death. When the Chukchi suffered from a pestilence, the shamans persuaded the people that the chief must be slain.

3. Departmental kings. - The association of sacred or magical functions 'occurs,' says Fraser, "in the religious feelings of the people, and in many cases nominal, head is a king.

People have for failure to fulfill responsible functions has gone further. "In the time of the Swedish king of Norway a mighty famine broke out, which lasted several years, and could be stayed by the blood Neither of beings nor of men. Therefore, in a great popular assembly held at Upsala, the chiefs decided that King Dampert himself was the cause of the scarcity and must be sacrificed for good seasons. So they slew him and smeared with his blood over the altar of the gods." When the Chukchi suffered from a pestilence, the shamans persuaded the people that the chief must be slain.

4. Royal tabus. - Where royal tabus are connected with a ruler's daily life and action, the same magical or supernatural functions are to be inferred as existing or surviving. The tabus are intended to preserve not merely the life of the king as his mystic power and communion with the forces of nature—his 'virtue,' or mana. In the case of a special language employed when speaking to or of the king, it is not clear whether we have to deal with a mere ceremonial respect of royalty or a real tabu.

The sacred language devoted to the king of Siam includes special terms for his head, feet, and even his breath. Particular verbs are used for sleeping, eating, and other actions. The smallest detail of the life of a king is Lango was regulated by tabus. For the kings of Egypt 'everything was fixed' by law, not only their official duties, but even the details of their daily life. The hours, both of day and night, were arranged at which the king had to do, not what he pleased, but what was prescribed for him. A widely spread general tabu is that the king may not be seen when eating or drinking. Again, the king is confined to his palace when he is sick. The case of the Mikado was an extraordinary instance of tabus. The practice of killing the king is explained by Frazer as due to a desire to prevent his mystic power from decaying, but the subject is still obscure.

The continuity in European civilization of these ideas with the other aspects of kingship is shown by the case of the Athenian theocracy, the Roman, and others. In England and France the belief that the touch of the king cured scrofula lasted till comparatively modern times. The theory of the divine right of kings was a mere accretion of the same tendency, but not a

survival. It was a legal theory, chiefly due to Hobbes, and then exaggerated by Filmer.  

5. Division of political and religious kingdom.— The process and causes of the gradual separation of the civil and religious functions of the king has been traced by Frazer.  

1The burdensome observances attached to the royal or priestly office produced their natural effect. Either men refused to enter the office, which happened to fall into abeyance; or, accepting it, they sunk under its weight into spiritless creatures absolutely useless to their fellow men. As a result, the government slipped into the firmer grasp of men who were often content to wield the reality of sover- eignty in the name of the king. The power of the people in the supreme power deepened into a total and permanent separation of the spiritual and temporal powers. The old royal houses, by retaining their purely religious functions, while the civil government passed into the hands of a younger and more vigorous race.  

Typical examples are those of Japan, Mexico, and Athens. The W. African practice of having a 'fetish,' or religious, king, and a political king seems not to be due to the causes cited above.  

6. Evolutionary importance of the king.— An interesting aspect of the early evolution of the kingdom is its social importance. It has been argued that the institution of the king was essential to the emergence of the race from savagery. The development proceeds from the chief of a clan or tribe to the king, generally primus inter pares, but not aristoocratic, of various tribes federated or constituted as a nation. The case of Greece is typical. In the Roman world 'king' was a superior title to 'rex'; mediocrity revered the precedence. In medieval times also the nation was often in contrast with the kingdom, the latter being rather the domain of a lord.  

Apart from the advantages of organization under one sovereign, various social privileges follow from the institution. Thus the king serves as a general asylum and refuge for the poor, weak, and the wronged. The appeal to Caesar and the Hara of the Cassite Islands are two cases out of many. The king protects strangers and fatherless children. He is a focus of patriotic feeling.  

7. Intellectual aspect of the early kingdom.— With regard to the primitive religious or fetish king, Frazer observes that such men must have been the ablest. They were not mere fighting men, but medicine-men, dealing with the crudest elements of science and art. Carpenter has pointed out that the savage sorcerer, shaman, and medicine man were probably a type inter- mediate between the two sexes, and that such types are often credited, and justly, with unusual insight. But for the power exerted by these types, such social functions would have been broadened out, but such men would have remained hunters and fighters, and women agricul- tural workers and managers of the house.  

8. The modern attitude to kingdom.— Since the 17th cent. there has been a tendency to regard kingdom as a survival, unsuitable to a democratic political society. America and France have substituted a presidem of the republic. This involves once more the question of terminology. The president with a veto or casting vote is a king in effect; the king who may only advise is not a king in effect.  

9. Dramatic and mock kings.— The imitation of kingship in folk-drama and ritual may be a survival from the old religious office and its duties, or merely an assimilation. The extraordinary prevalence of this is illustrated by Mannhardt and Frazer.  

2 Frazer, *Thocb*, p. 17.  

3 *ib, p. 117.  

King Hop, King of the Dead, and others. The mock kings, suffering death as substitutes for the real, form a curious problem.  

1Literature—This is given in the article. For the legal status of primitive kings see A. H. Burn, *The Law of the Pharaohs*, Oldenburg and Leipzig, 1894-95, 1, 327-41.  

A. E. CRAWLEY.

KING (Egyptian).—A vast subject like kingship in Egypt demands delimitations and eliminations. The Pharaoh, in the Nile valley, was, in a sense, an epitome of the whole life of the nation, and the Egyptian religion and texts are full of his names and symbols. We need not discuss the historical or administrative aspect of the monarchic institution, or the material life of the king, but shall confine ourselves to a treatment of the kingship of classical Egypt in its religious and ethical bearings.  

1. The religious character of Egyptian kingdom.— From the very first the most striking characteristic revealed by the examination of the titles, names, and prerogatives of the king in Egypt has been the exclusively religious—or rather divine—origin of the title and functions of the Egyptian definition of monarchy. Even the references to functions or prerogatives of a feudal or military character are, in reality, simple deductions from the divine functions or nature of the divine character of the monarch. The idea of kingship at first sight seems to be survivals or reminiscences of historical or political events. Investigation shows that these survivals are purely metaphorical in character (e.g., the alleged proto- historic wars from which the king derives some of his titles, or whose anniversaries he celebrates). In fact, there is nothing in any of the attributes or denominations of the kingship (titles, costume, functions, etc.) which might be a survival or indication of the historic modes of formation or of the origins of the monarchy. Some material signs (such as the sceptre of *hikau* of the shepherd people, or the plaited lock, worn exclusively by gods and their royal heirs) enable archeology to outline hypothetical theories regarding the possible origin of the masters who imposed their rule upon the Nile valley; but the texts and monuments yield no information whatever regarding these beginnings; and, as far back as we can go, we find ourselves in the presence of a conception of monarchy which is contained in a text and based solely upon the assumption of the king to the gods who are the makers of the world and the mythical founders of Egyptian society. This explains the importance attached by the Egyptians to the power and to the exact utterance of the different names by which they designated the king. These names, taken together, form a kind of alibeg of the nature of the Pharaoh, and of the royal attributes.  

2. The divine lineage of the king.— The various names of the king prove, by all their elements, that the divine filiation of the master of Egypt is as ancient as Egyptian society. The earliest form of Egyptian proven which we can reach by the Pyramid texts and the funerary literature belongs to a period remotely pre-historic. We find here the old 'sky-god,' source of life and death, of birth and heavenly fire. Among his names, that of Horâ (symbolized conventionally by the hawk) has given rise to the so-called 'hawk names,' which appear among the most ancient forms of royal names. This shows us that the series of names from the monuments belonging to the Thinite period (1st and 1st dynasties) these show, when set in order, that the reigning
The king is a form or emanation upon this earth of the Sun-god, more exactly, one of the 'souls' of that Being. The 'hawk-name,' probably the most ancient of all those that have been borne by the sovereigns of the Nile valley, perhaps the oldest of all divinities, preserved by the subtlety of successive theologies at the periods when the original 'sky-god' had been replaced by the 'sun-god' as creator of the world. How this has taken place cannot be exactly determined, but it is clear that the ancient name had become, in historic times, what is still called in Egyptian archeology the 'Horus name,' or sometimes (very inaccurately, through the perpetuation of an old error) the 'standard-name' (see below).

The primitive conceptions of the pre-historic Egyptian religions later than the sky-god are found in the titles and epithets given to the king in the very ancient liturgies, and in the protocol of the Thinite monuments. There, where he is called, e.g., 'the two Hor, or the Horu-Setti,' we see a reminiscence of the system which divided the world into two halves and compared the monarch with its Supreme God, in heaven and on earth. Similarly, the religion of the sky-goddess Nut, who was believed to have produced the world, first by her own activity, and later by union with the earth-god Sibî, gave the king the title of 'the greater of the two gods,' Sibî. This prepared the way for the assimilation of the Pharaoh to Ra, then to Osiris, according as the successive theologies, reversing the order of the names of the gods, had Ra the son of Nut, or, on the other hand, the father of Sibî and Nut, and the grandfather of Osiris. In the last form, the Pharaoh is the successor of Osiris, as the direct descendant of Horus, son of the pair Isis-Osiris. These various assimilations have been justified by an examination of hundreds of Egyptian texts, and may be accepted here. The point which it is essential to keep in mind is that at all periods, and throughout all the cosmic religions of Egypt, the outstanding characteristic of the king has always been that he was either an incarnation of the god who made the world or his son (in the literal sense of the word, not symbolically, or by a mystic adoption, but by real filiation). The king of Egypt has thus never been merely a representative or interpreter of the Supreme God, or his 'vicear'; either he is the god himself, manifest under a form, or he is a son of a god, one of the souls of the god, or he is the god's own son.

The form of this affirmation best known to us is the title of Set-Ha or Se Ra, 'son of the sun,' which was inaugurated as early as the middle of the 1st dynasty, under the influence of the priesthood of Helopolis, and persisted as long as the Pharaonic protocol was in existence (see below). This precedent was, as a rule, proved by the ordinary genealogy. From ancestor to ancestor, the reigning king was able to trace back his lineage to the fabulous Menes, or Mini, the legendary first Pharaoh of the Egyptian dynasty, and from him he went back through the mythical reigns of the Menes as far as Horus, son of Isis, and son and avenger of his father Osiris, the first king-god of the valley of the Nile. But in certain exceptional cases (of which we possess three or four historical examples), in order to establish his legitimacy indisputably, the Pharaoh seems to have claimed the testimony of a man distinguished for his great wisdom, a statesman of the Supreme God. Thus (1) in the temple of Luxor for Amenhotep III., (2) in the temple of Deir-al-Bahri for Hatchepsut, and (3) at Ermont for Cessarion, the bas-reliefs that adorn the god himself descend to the earth, in order to have union with the queen and himself beget the little prince who should one day reign over Egypt. They also show the birth of the divine scion, the magic charms which accompanied him, and the benediction of the god upon the new-born child when it was presented to him.

To the priesthood of the Nile we are indebted, a little later, such a conception of the king appeared inadquate. They felt that the kingship must be the final result of all that legendary Egypt had known of divine domination; or, rather, that it meant the heritage of all that the world contained of the forces belonging to the beneficent gods. Hence the walls of the temples showed the king as heir and adopted son of all the great deities of the national pantheon in succession—the great feudal gods of the Nile valley and the chief elementary or stellar gods.

In the case of gods, the king is styled 'well-beloved son,' and he addresses all the gods by the name 'Father.' In the case of goddesses, they make the young king their veritable son by giving him milk from their breast in token of adoption (q.v.). Even this accumulation of divinity seemed insufficient to the Pharaoh, and the trinity of Horus, Ra, the sun-god, and Sibî became the holy god-king completely. The true Pharaoh does not exist, theologically speaking, until he has received, at Helopolis, all the magico-religious consecrations which transform him into a divine incarnation of the world. The elaborate series of ceremonies employed to accomplish that transformation is well known to us today through: (1) the historical inscriptions, such as that of the celebrated Ethiopian conqueror Piankhi, (2) the ritual published in the Pyramidal texts, (3) the bas-reliefs and special encomiations of the solar temples of Abûnair, (4) the extracts from the Louvre and ceramic papyri, unearthed in the great temples, chiefly at Thebes, (5) the statues and statuettes commemorating coronations (notably at Karnak), and (6) the descriptive scenes telling of the 'jubilee' feasts of hasekâdi (see below).

Finally, the Thinite monuments discovered at Abydos provide evidence that the whole of this ceremonial was already established, in its essential elements, at the Thinite period. Even under the 1st dynasty there appeared scenes of that distant epoch similar to those found in the Greek period upon the walls of the temple of Edfû or other sanctuaries built in Egypt by the Ptolemys.

3. The royal titles. The king that is being constituted by the Pharaoh, in this world, must be able to know of divine forces, governing powers, magic resources, and super-terrestrial science. The enumeration of the many virtues and heritages of the king naturally takes the form of a long protocol, which was practically an abrevi of all the historical and pre-historical sources that had contributed to form such a personage. A king of Egypt had at least five names in the classical period: (1) 'birth-name,' which is his human name, expressing the relation of the reigning dynasty to one or another of the great provincial gods of Egypt (e.g., Thothmes—'Thoth has fashioned him'); Amenhotep (he is united to Amen'); this is the name which is preceded by the epithet 'son of the sun' (Se Ra) in the inscriptions; (2) the coronation name, preceding the affirmation of Horus as the lord of the world north and world of the south by the heraldic figurines of the Reed and the Bee; this name (chosen by 1 This figuration of the king as heir of the crown of the north and crown of the south is purely historical, resting upon an astrological conception of the division of the world and its forces. It is a magic formula of a state of things which had actually existed in Egypt, and it has given rise to the idea that at the period anterior to history there had really been two kingship, one in the north and one of the south, and that they were united under Mentu. Most scholars seem to have adopted that view, somewhat insignificantly, perhaps, by the opinion of the first Egyptians,
the astrological colleges of priests according to human problems, and, somehow or other, the aspect and attributes of the particular solar soul that came to transform the young prince into a god on the day of his anointing; it was sometimes a long notto expressed, or a figure or the name, enclosed in a kind of panel or box, surrounded by a palace, and surmounted by the hawk, divine Horā; (4) a name called in archaeology 'name of the vulture and of Uraeus,' intended to express the king's authority, which reached to the extreme frontiers of Egypt, from El Kāb to Bālu; (5) a name, often incorrectly called 'golden hawk name,' which, preceded by the figure of a hawk perched on a sign of gold (nābb), declares in reality that the king is the heir to the stellar powers who share the two astrological houses of the universe.

This list, absolutely necessary for the complete title of a reigning king, etiquette usually added a number of almost imperative epithets intended to express aspects or important attributes of the king-god. Sometimes, as heir of the war-like gods, he was called 'Powerful Bull,' sometime 'Defender of everything' (Nīb ikrī haṭa), or 'Resplendent in his glorious appearances' (Nīb khaṭā). Some of these names expressing the virtues of the gods of kingship bear a curious resemblance to those which describe (or designate) the kings of certain monarchies in black Africa (e.g., the sovereigns of Dahomey or of Benin), and it would be worth while to draw up a list of the possible comparisons. None of these epithets should be regarded (as they too often are) as arising from vanity or grandiloquence, for each corresponds theologically to a very precise definition of a function or force belonging to one or other of the great gods of Egypt.

One of the most characteristic epithets, which, moreover, has not yet been found in any other African religion, is the epithet 'Good God (Notir Nfr), a name of constant occurrence, and it is one of the most manifest signs of the role which the earthly kingship filled in the ideas of the Egyptians (see below).

Besides regal titles and titles of etiquette imagined by the protocol (e.g., 'Double Palace,' 'Sablime Gate,' 'Sun of the two Earths') are too numerous to detail here. One of the secondary epithets of this official phraseology has had a singular fortune. It designates the king by the veiled expression 'Great Dwelling' (=the Royal Residence), the equivalent of which is found in the royal title-list of certain black monarchies of W. Africa. The Egyptian term sīr-šu becomes the word 'Pharaoh,' which served throughout the classical world to designate the king of Egypt.

4. The earthly counterpart of the gods. — The sovereign is thus a singularly complex person, whose body contains even more souls (biā), doubles (kānḥī), and 'shadows' (ḥabīt) than that of ordinary men (see BODY [Egyptian]). These are frequently figured being formed by the gods in heaven, or being suckled at birth by the females, or accompanying the king (but distinct from him) in coronation and procession scenes.

As the king of Egypt is a living epitome of all that is divine in the Nile valley, the explanation of his function is clear. First, he is in every function an earthly image of the various gods, and performs their legendary activity on the earth. In his judicature he is Thoth; in his power he is Ra; like the first divine masters of the divine valley, he destroys the enemies of the work done by the ancient gods when they assisted Ra in the conflict against darkness. He is the savior of the world (kērā). This view, the very beginning of dualism (g. r.), originated in the primitive cosmogony, and was later transformed by the Osirian legend into the myth of the conflict between the god of Horus and the bad spirits who were the friends of Set. The Pharaoh is thus heir to the powers and qualities of the good gods, whose powers are symbolized by, and materialized in, the various pieces of the royal costume (sceptres, crowns, necklaces, bracelets, pectorals, girdles, talismans, amulets, precious stones, magic jewels, etc.). These symbolic ornaments probably originated in the same way as the magical disguise worn by heathen fetish-chiefs; they were neither purely priestly tradition nor simply magical in character.

The organized theologies ascribed to the royal person a thousand different duties implying a thousand traditional and magical duties and magical powers. Some of these duties concern war, and perhaps may seem somewhat brutal for our taste; others are as noble as modern thought could desire. Some are really deifying the young, ardent, and irresistible, which trembles down under its hoods the enemies of Egypt (Hymn of Thothmes III), the 'rebels,' the 'asceneds,' the 'children of ruin;' as a 'governing lion;' as a Sudan leopard; or as a hawk which tears and rends the foreign nations with beak and claws (cf. the Thinite palettes). To each of these representations there is attached a role formerly played by the national gods, which the king assumed when he ascended the throne of Horus. The lion, the griffin, the bull, the hawk, and the sphinx are repetitions in painting and sculpture of statements made by hundreds of texts. The king 'treading the nine bows under his feet,' and 'placing his sandals on the head of his foes,' represents an essential side of the perpetual duty of the divine monarch—as essential as the side represented by the expression 'Lord of all order and truth,' or by the figuration, under his throne, of the Nile gods gathering into sheaves the heraldic flowers of the Neteru (the Lily of the South). Ra and his friends, the gods, organized the world; their final purpose was the reign of order and the triumph of good. Egypt and its people were the land and people chosen and beloved by the gods; it was, therefore, essential that the son of the gods should be able to bring the work to a successful issue, and this enterprise demanded that strangers, the ungodly, the enemies of Egypt, and all that was hostile to the ultimate triumph of the good should be destroyed or subdued.

That obligation presupposed that in the practice of those virtues by which the conflict for the good is maintained the king should be the pattern for his subjects. The Pharaoh was thus the living image and continuation of that 'Good Being,' called Osiris, who was the first god reigning on the earth in human form. He must maintain order in his kingdom, for administrative regularity is the first condition of material prosperity. He must ensure equal justice for all, protect the feeble, abhor iniquity, and be like a father to his children (as he himself communes with the god 'as a son talks to his father'). He must be Notir Nfr Shītu, the 'Good God.' That in practice the kings of Egypt were not adequate for so noble a task is of secondary importance; the kingship on which the reality was remote from the official ideal has little philosophic value. The fact of real importance is
KING (Egyptian)

The rise of a human society able at such an early date to express in these outlines the origins and obligations of the highest form of life is an event of immense import. The moral ideal of the nation was consequently, at every step of the social scale, the imitation of the type of perfection incarnate theoretically in the office of its king. But the actual results of the kingship idea. This ideal of kingship moulded all the manifestations of religious and public life in Egypt. As son and successor of all the divinities (national or local) of the kingdom, the Pharaoh is by right the chief servitor of the Supreme God (kemnet) and the chief pontiff of all the priesthods. In the bas-reliefs of the temples he is figured as the chief officiating priest, and everywhere he is represented in the dwellings of his divine fathers, celebrating sacrifice, offering incense or libations, or consecrating the offering, opening the tabernacle, adoring the divine image, and going in front of his retinue.

The satisfactions which the king reaped from his position lay in the interests of the gods and men; to him the divine will speaks in divination (q.w. or in dreams (q.v.). And he is the depository of the divinity for the private ends of the kingdom. The kingdom, in fact, is the embryo of the world; he who explains the invariable title of the °prosimea of the tombs; sultan du hopt (=(royal constitution of the offering).

For the living and the dead the assurance of the royal approval is the supreme recompense. The episode of a dignitary commanded to the palace, arriving at the royal audience, and receiving the salutation, or honorific distinctions (such as the ‘collar of gold’) from the lips of the monarch, is the culmination point of his whole career, and the crowning moment which he wished to have depicted on the walls of his ‘eternal abode.’ When he appears before the tribunal of Hn who is the ancestor of Pharaoh, that will be the decisive proof of his merit for worthy service of the gods. To his children it will be his last message, at once an example and a claim upon the Pharaoh’s goodwill. The highest reward which the dead may attain is to receive from the king, in recognition of their services, materials for the rich parts of the tomb (the stela, the sarcophagus, and rare supervision of its completion the corpse of the deceased). The Theban frescoes of Gurneh and Amarna, stelae, as those of Om, Ahmes, tales like the romance of Sinuhe, and the laudatory biographies of every period prove that such ideas existed at the earliest period known to us, and that they persisted throughout the whole duration of Egyptian society.

Finally, the ideal of the Pharaonic kingship explains the role of the Pharaoh as a god-kingship is not an independent system of worship, but is identical, as the only master or possessor of the earth, and the only person who can give valid investiture in any office, °or, of dignity (see Inheritance [Egyptian]).

6. The royal life.—Since so many divine principles are incarnate in the Pharaoh, the consequences are apparent in his life. He is at once god and man, and thus combines two groups of ‘souls’, which are generally separated in certain religious circumstances where the man king worships the god-king—himself. He builds and consecrates sanctuaries in his lifetime to his own ‘souls of millions of years’ (see, e.g., that of Amen-Ra at Luxor). He supervises the writing of the divine inscriptions at the temple of Ptah at Thebes; as king he publicly worships his own consecrated images in the temples of his fathers; and he is endowed (e.g., at Luxor) with the religious offices of the dead god by the act of ‘opening the mouth’, thus inaugurating his deification and making possible the divine re-investiture in the temple of the dead god. But the Pharaoh is the servitor of the god, and the god, as the ultimate source of power, does not deify the Pharaoh. When the god-kingship of the Pharaoh is worshiped in the temple of Ptah at Thebes, it is merely as an extension of the cult of Ptah, or as a divine manifestation of the god. The Pharaoh is thus the sultan du hopt, the serviceable servant of the god, who has given him power over men.

7. Death.—The destinies of the king, post mortem, were equally varied. His human principle received the usual burial honors reserved for men; his tomb, statues, funerary furnishings (at least in part), and sacrifices corresponded to the hypogees and mustabas of his subjects. Like the ‘deities’ of other nations, the ‘double’ of the king, his human principle goes to dwell in the fields of the Osirian paradise, there to work and harvest (see, e.g., the scenes of the temple of Ramses III, at Medinet Habu). His divine principles go in other directions. The corpse of the deceased attains to the sky, where they are mingled with the sun, and perhaps accompany it on its course through the air and in its conflicts during the twelve hours of its nocturnal journey through the inferna (see, e.g., the frescoes of the royal hypogees of the Bitam-el-Moila). Here we see the adaptation to the solar theology of the primitive religions of Egypt. Another divine principle survives on earth, in the temples, where it was worshipped as one of the living forms, or nhopirve, of Osiris which had occupied the throne of Egypt.

Finally, as a divine son of Rā (or, later, of Amun-Rā), the dead king became, in the funerary temples raised for his worship, a patron deity, theologically distinct from the ancestor-god, though one of his manifestations. Ignoring these difficulties, the Pharaoh is not a god-king in the popular sense, but a type of divinity in a sense intermediate between the anthropomorphic and the transcendent. Such has been the case at the sanctuary of Medinet Habu.
KING (Greek and Roman).

1. Evolution of the conception. — The Greeks themselves did not fail to observe the wide prevalence of monarchy during the early history of their races, or to speculate on its origin as an institution. Aristotle (Pol. iii. 14, 1253b 6), speaking of the monarchies of the heroic age, makes the suggestion that the founders of a dynasty were reprobated to their thrones by the gods, and performed for the people, either by their eminence in the arts of peace or by their achievements in war; and that the office became hereditary after their death. The view that success in war was a more important element than agricultural prosperity, for which the throne has been sometimes accounted, is a modern one, and is not to be identified with the opinion of the ancients. The elevation of a chieftain on account of his warlike prowess implies the existence of an organisation to which the royal dignity was already familiar, and the functions performed by the kings of the heroic age involved the fact that their authority was the result of a more complex development. In another passage (Pol. i. 12, 1253b 16), Aristotle draws a comparison between the position of a king in relation to his subjects and that of a father to his children, without attempting to conclude therefrom that the former was a historical product of the latter. The comparison is sound and can be extended. The heroic king actually exercised a wider sphere prerogatives similar in character to the authority which the father of the family wielded over the members of his household. It should be remembered, in particular, that the king in his priestly character was associated with the common hearth of the State in the Prytaneum (Æsch. Suppl. 376, etc.), which has been identified with the primitive residence of the royal family (J. G. Frazer, in J.P.A. xiv. [1889] 145 ff.). Although we cannot trace the process in history, it seems a reasonable inference that, when the separately organized families coalesced into the larger unity of the tribe, the chieftain took over from the patriarch the duties performed and the privileges enjoyed by the latter within his narrower circle; and that the same absorption was repeated on a larger scale when the tribal system in its turn grew into a commonwealth. In Pol. i. 1, 1252b 19, Aristotle declares that such was the case, and that the reason why States (ρωμαία) were at first governed by kings was that they were aggregates of households, which were accustomed to one kind of rule. Further, it seems natural to regard an institution so developed as essentially hereditary, and such was in fact the character of the office in the Homeric age. But recent investigations into the history of the family (see art. FAMILY [Greek]) have shown that the patriarchal system was by no means primitive, and traces of an earlier prevalence of mother-right have been discovered in Greek tradition (W. Rigby, in Cambridge Prolegomena, 1906, p. 148). Again, it is certain that the regular succession of the eldest son to his father's kingdom was not distinctly established in the Homeric age. 

2. Varieties in the kingly office. — The various kinds of monarchy with which we were familiar were thus classified by Aristotle (Pol. iii. 14, 1258b 1 ff.): (1) generality for life, typified in the authority of the Spartan kings; (2) the absolute monarchy of the barbarian type, distinguished from 'tyranny' by the permanence of its establishment; (3) 'elected tyranny' (αὐτοκράτορια), exemplified by the rule of Pittacus at Mytilene; (4) the monarchies of the heroic age; (5) an absolute monarchy (ρωμαία) after the pattern of domestic economy, in which the ruler is as supreme as the head of a household. The last is Aristotle's designation of the ideal type of kingship, and need not be considered further; nor is it necessary to discuss in detail the airup-
KING (Greek and Roman)

3. Heroic monarchy.—Thucydides (I. 13), when speaking of the establishment of tyrannies, contrasts them with the earlier monarchies, which he describes as hereditary and as enjoying fixed privileges; and Aristotle uses language of an equally virulent character (Rhet. ii. 14, 1325b). The hereditary element implies a divine ancestor (cf. ἀναστατοῦντα, etc.), and may be taken to be a later expression of the traditional divinity of primitive kings (Frazier, The Magic Art, i. 36, 1901). The son of a king was generally taken as the symbol of office, and was originally the gift of Zeus (II. ii. 101 ff.). Agamemnon is described as 'most kingly' (μεγαλότερος, II. ii. 69); but neither this nor the title 'king of men' (ὁ θεατής ἄθρακτος), which is given most frequently to him, though not to him alone, signifies that he was other than primus inter pares as commander of the whole confederacy. On the other hand, the existence of thirteen kings is a fact (Od. viii. 390 ff.) and the protest against the evils of divided sway in II. ii. 204 ff. have been referred to a time when the growing power of the feudal nobility was outstripping the earlier supremacy of the heroic kings, though even here we are reminded that we shall see, diminished by its special circumstances. The cause assigned by the Greeks themselves for this remarkable revolution in government was that the occupants of the seat of power had become too wealthy, too luxurious, and were guilty of wanton violence towards their subjects (Plat. Legg. 690 D; Polyb. vi. vii. 6-9). The explanation is clearly superficial, and it is hardly more satisfactory to suppose that the kings extended their power beyond its legitimate limits (A. Holm, Hist. of Greece, Eng. tr., London, 1894-98, i. 298). Grote remarked (Hist. of Greece, iii. 7) that the need for a single ruler as a bond of union between outlying territories ceased to be felt owing to the smallness of the various Hellenic societies—which also explains why the monarchy continued to exist in the wider areas of Epirus and Macedonia. But Groote's suggestion may be supplemented and extended. The heroic monarchies had flourished in a period of national unrest. After the cessation of the migrations, an era of comparative quiet followed; and the nobles, with their attention concentrated on the local interests of their community, were able to extend their authority against the weakly-supported prerogatives of the king. The same period was marked by the change from city life, perhaps the deepest cause of all those which undermined the power of the monarchs (J. B. Bury, Hist. of Greece, London, 1902, i. 73). The course of events was naturally various; but the result was usually not the expulsion of the royal family, but the limitation of the royal power, and particularly its restriction to the sacred sphere, as in the case of the βασιλεύς at Athens. The immediate occasion for the change of government was often afforded by rivalries within the royal house, or by the minority or incapacity of the legitimate heir. The change itself was gradually effected. Thus the royal clan of Perseus at Corinth supplied the annual ἀρχονταὶ for at least a century (Paus. ii. iv. 4); and the Melissii at Athens alone enjoyed the decennial archepiskopeia (Paus. i. 214). A similar history may be assigned to the rule of the Basileis at Byzantium (Arist. Pol. v. 6, 1305 B) and of the Penthelides at Mytilene (I. v. 10, 1311 B).

4. Decay of monarchy.—Although there are traces of the earlier existence of the kingly power in almost every part of the Hellenic world, in Argos, Corinth, Elis, Arcadia, Messenia, Thebes, and Athens, as well as in the Ionian and Dorian colonies of Asia Minor and the islands, all these monarchies decayed and disappeared in the course of the period extending from the beginning of the 8th to the end of the 6th century. Spara was alone in the retention of her kings, but the importance of Panhellenic events is, as we shall see, diminished by its special circumstances. The cause assigned by the Greeks themselves for this remarkable revolution in government was that the occupants of the seat of power had become too wealthy, too luxurious, and were guilty of wanton violence towards their subjects (Plat. Legg. 690 D; Polyb. vi. vii. 6-9). The explanation is clearly superficial, and it is hardly more satisfactory to suppose that the kings extended their power beyond its legitimate limits (A. Holm, Hist. of Greece, Eng. tr., London, 1894-98, i. 298). Grote remarked (Hist. of Greece, iii. 7) that the need for a single ruler as a bond of union between outlying territories ceased to be felt owing to the smallness of the various Hellenic societies—which also explains why the monarchy continued to exist in the wider areas of Epirus and Macedonia. But Groote's suggestion may be supplemented and extended. The heroic monarchies had flourished in a period of national unrest. After the cessation of the migrations, an era of comparative quiet followed; and the nobles, with their attention concentrated on the local interests of their community, were able to extend their authority against the weakly-supported prerogatives of the king. The same period was marked by the change from city life, perhaps the deepest cause of all those which undermined the power of the monarchs (J. B. Bury, Hist. of Greece, London, 1902, i. 73). The course of events was naturally various; but the result was usually not the expulsion of the royal family, but the limitation of the royal power, and particularly its restriction to the sacred sphere, as in the case of the βασιλεύς at Athens. The immediate occasion for the change of government was often afforded by rivalries within the royal house, or by the minority or incapacity of the legitimate heir. The change itself was gradually effected. Thus the royal clan of Perseus at Corinth supplied the annual ἀρχονταὶ for at least a century (Paus. ii. iv. 4); and the Melissii at Athens alone enjoyed the decennial archepiskopeia (Paus. i. 214). A similar history may be assigned to the rule of the Basileis at Byzantium (Arist. Pol. v. 6, 1305 B) and of the Penthelides at Mytilene (I. v. 10, 1311 B).

5. The Spartan kingship.—This was distinguished from all others by the duplication of its tenure. The two kings belonging to the rival class of Agide and Eurypontide, of which the former was accounted the monarch, were the common representative, in virtue of his seniority, both claimed an Aeolian as
KING (Greek and Roman)

distinguished from a Dorian origin. There was a curious provision respecting the royal inheritance, according to which the eldest son was not necessarily heir unless he was also born while his father occupied the throne; otherwise he was excluded in favour of the eldest of his brothers so born (Herod. vi. 5). The traditional account of the double kingship starts with a legend concerning the birth of twins in the royal family (ib. vi. 52); but modern scholars are inclined to reject it in favour of the theory that the double kingship arose from the double communities (Russol, Gr. Gesch. i. 2 546, n. 4; Gilbert, Gr. Staatenl., i. 4). However this may be, the duality probably contributed to the shirking of the royal power which is discernable in the historic as compared with the heroic age. The statement of Aristotle, that the Spartan kings were not much more than hereditary commanders-in-chief of the army during their lives (Pol. iii. 14, 1282a 27), is a sufficiently accurate definition of their office, so far as we are acquainted with it from the 6th cent. onwards. Even this power tended to be restricted. Originally capable of declaring war or concluding peace without interference, and possessed of absolute authority in the conduct of a campaign and in the maintenance of discipline (Herod. vi. 56; Thuc. v. 69, etc.), they were afterwards accompanied on all their expeditions by two envoys appointed to act as overseers of their conduct (Xen. Rep. Loc. xiii. 5), and from 418 a board of advisers was chosen to control the king's initiative (Thuc. v. 56). There are sufficient indications in their surviving privileges that the authority of the kings had been formerly more extensive than it afterwards became. Apart from complimentary precedence and other rights enjoyed at banquets, sacrifices, and games (Herod. vi. 56 1), and extraordinary honours paid to them after death (ib. 58), the kings possessed extensive domains in the occupation of the epheboi, from which they drew the revenues, so that they were accounted the richest individuals in the Greek world (Plat. Aeth. I. 123 A). The priestly functions of the king were of considerable importance, especially during war, when he conducted the sacrifice on every critical occasion (Xen. Rep. Loc. xiii. 3). He also possessed the sole right of consulting the Delphic oracle and of receiving its replies and was invested with the power of appointing two delegates called Python, who became the channel of communication (Herod. vi. 57). The greater share of the civil jurisdiction at Sparta belonged to the epheboi, while criminal trials were conducted before the council of elders, of which the king was president. He had, however, sole jurisdiction in claims for the hand of a hetaira, and probably in other cases of inheritance. Further, he was competent to deal with disputes concerning the public roads, that is to say, to decide questions of boundaries and rights of way (Herod. vi. 57). The political influence of the kings was largely diminished by the transference of executive authority to the epheboi. The king had a seat and vote in the council of elders, with the proviso that if he was absent his vote should be given by the elder most nearly related to him by blood (Herod. vi. 57; Thuc. i. 65). But, in spite of all the restrictions to which his office was subject, a king who possessed military ability was in a position to add to his venerable privileges the exercise of predominant political influence.

6. Various titular kingships.—In many other Greek States we find the kingly title assigned to priestly or judicial officers, who appear to be the representatives of the former ruling dynasty. For the present purpose the facts may be briefly stated. In most cases we have merely the record of the title, sometimes an indication of the character of the office, but only at Ephesus an express statement that the descendants of Androcles, the founder, continued to bear the title of king with such privileges as the presidency of the councils and the right to wear a crown of royal purple (Strabo, 625). The other evidence, which is largely derived from inscriptions, may be divided into two classes according as it refers to a college of kings or to a single official, the former occurring in connexion with States which had an aristocratic—or originally aristocratic—constitution, so that the 'kings' are the later representatives of the old heroic nobility. The States in question are Elis, Cyme, Mytilene and Cyzicus. On the other hand, a single 'king' appears as a municipal officer in States where the government of the nobles had been overthrown—a category which comprises Argos, Megara, Chios, Miletus, Olbia, and Siphnos (for the details see Gilbert, Gr. Staatenl., ii. 272, 325).

7. The sovereignty at Athens.—The history of the sovereignty at Athens is obscure. The traditional lists of the Attic kings bear the signs of various influences, and are clearly untrustworthy. This much alone is certain, that the powers of the king were greatly curtailed, until a member of the annually appointed college of nine archons, with definite sacerdotal and judicial functions assigned to him. For the tradition which identified the king-archon with the highest of the State is probably to be doubted. The earliest settlement, known as that of Ion, recognized the division into four tribes, each represented by its tribal king. These tribal kings (συγγενεῖς) were perhaps an auxiliary to the sovereignty of Ion. Times we find them still associated with the king-archon as judges in the court of the Prytaneum (Arist. Ath. Pol. iv. 3). The name of Theseus is connected merely with the unification of the whole of Attica and the centralization of its government under a single king (συνσυγγενεῖς, Thuc. ii. 15), but also with a limitation of despotic power which earned for him the title of founder of the democracy (Arist. Ath. Pol. xii. 2; Paus. i. iii. 3). The early chapters of Aristotle's Constitution of Athens are unfortunately lost, and we have no means of estimating the nature of these reforms, which, though deferred to an individual, may have been actually spread over a long period. The royal power was reduced by the participation of others in its functions and by its limitation in point of time. The exchange, traditionally ascribed to the feebleness of some of the kings, was the appointment of a war-chief (τριήματος), and the first holder of the new office was Ion, when he took part in the war against Eleusis (Paus. i. xxxi. 3; Arist. Ath. Pol. iii. 2). At a later date, variously assigned to the reigns of Medon and Acatus, the office of chief archon (τριήματος, as giving his name to the current year) was introduced. The reason for his appointment is unknown; Aristotle merely states that his administration was confined to additional (τριήματος) as distinguished from established (συγγενεῖς) functions, and that the sovereignty of the office was due to the increasing importance of the former (Arist. Pol. iii. 3). The archons were held at first for life, and subsequently for ten years (ib. iii. 1); at a later date (633 B.C.), they became annual. The king-archon was entrusted chiefly with religious duties, especially those of old inherited usage (συγγενεῖς). As a survival from primitive times may be mentioned the mystic marriage of his wife with the god Dionysus, which was celebrated during the festival of the Anthesteria in the βαδεμένα, the precinct of the god worshipped in bull-form (Arist. Ath. Pol. iii. 5; [Dem.] ii. 74 ff.). It should be
added that the Βυζαντινόν, which was also the residence of the king-archon, was in the immediate neighbourhood of the Prytaneum. The functions of the Prytanis may be classed as administrative or judicial. The former comprised the general superintendence of the State religion, and in particular the supervision of priestly appointments, the career of the archon for their term of office, the Eleusinian mysteries and the Lenaia, and the management, subject to various limitations, of sacred property. The chief of his judicial functions was the presidency of the court in all cases of homicide, in addition to those assigned to the heroic king; but it is clear that the responsibility must have been imposed before the abolition of the kingship, on the ground that the king was particularly concerned, as representative of the commonwealth, in removing the pernicious consequences of the blood-feud, and, as religious head of the State, in purifying it from the taint of homicide. For a more particular account of the judicial duties of the king-archon see CRIMES AND PUNISHMENTS (Greek).

3. Epirus, Thrasy and Macedonia.It has already been remarked that monarchies continued to exist for a much longer time among the half-Hellenized States on the northern boundaries of Greece. Thus, the kings of the Molossi, who claimed descent from Pyrrhus, the son of Achilles, and before 400 B.C. had extended their sway over the whole of Epirus, maintained their power until the latter part of the 3rd century. Aristotle attributes the survival of the Molossian kingdom to the limitation of the royal authority, and compared it in that respect with the Macedonian (Pol. v. 11, 1313a 23). We have hardly any means of verifying his statement, but we know that king and people annually exchanged oaths, of submission to the laws on the one hand, and of loyalty on the other (Plut. Pyrrh. 5). Shortly before its final overthrow, the king's power was temporarily increased by Pyrrhus, who owed the enlargement of his authority to his popularity with the army. Thessaly never formed a united monarchy, although there is some evidence that in comparatively late times a chieftain was elected as general (regius) to represent the whole people. Such was the position occupied by Jason of Phere (Xen. Hell. vi. iv. 28), and possibly by Aelatus and Scopas at an earlier date. But Jason's ascendency was short-lived, and as a rule the Thessalian tribes were harassed with rival jealousies, especially those of the Aeacids of Larisa and the Scopids of Crammon. The kings of Macedonia traced their descent to Tenemus the Herscild. Their constitutional position, so far as it can be ascertained, was analogous to that of the Homerian king, when allowance has been made for the change of circumstances. The king received all taxes and tributes together with the rents of the domain lands, but his power depended upon custom only and upon the strength of his individual character. The nobility were always ready to put themselves in opposition, if the king failed to conciliate or to oblige them; and to this cause must be ascribed the constant struggles for the throne, and the risings of pretenders supported by a party of the nobility against a legitimate heir, if weak and unprotected (see F. Mair, Greek Life and Thought, London, 1899, p. 23 ff.).

9. Later Greek monarchies.—The career of Alexander opened a new chapter in the history of Greek monarchs, when he placed himself the successor of the Persian king, whose sovereignty was that of an absolute owner over his chattels (Arist. Pol. iii. 14, 1265a 18). On this model were founded the kingdoms which established themselves after the wars of the Diadochi—those of Egypt, Syria, Pergamus, and Macedonia. Of these the Syrian Seleucids came to follow the pattern of an Oriental monarchy, from which their rule was distinguished only by its dependence upon Greek resources. The Ptolemys in Egypt were less despotic, partly because they relied upon their Macedonian troupes mainly, and partly because their government was based upon the semi-Greek city of Alexandria. The Attalids at Pergamus, while retaining the chief power in their own hands, ruled along the lines of the forms of democracy. The condition of Macedonia remained much as it had been in former days, except that the power of the nobles, many of whom were dispersed in foreign lands, was less adequate for resistance to the encroachments of an ambitious monarch. The Macedonians were a race of soldiers, no less backward in culture than untrained in civil government; and they were always ready to follow a capable leader who understood how to humour them (Mahaffy, p. 291 f.).

10. Roman.—I. Nature of kingship.—The traditional history of early Rome begins with a period of monarchical government; and although the fragmentary details pertain only to the latter, there is no reason to doubt its general truth. In addition to a priori considerations, tradition is confirmed by the survival into republican times of traces of an earlier monarchy in the regia, or king's house, as the office of the pontifex maximus, and the continuance of the titles rex and rex aemurium. We must not, however, add the festival regioscum, although this was traditionally explained as a celebration in honour of the kings (Ov. Pasi, ii. 685 f.); for it has now been brought into connexion with other sacrificial lights on the occasion of a sacrifice, which, whatever their real nature, were certainly not the mimic representations of historical events (W. Warde Fowler, The Roman Festivals, London, 1896, p. 327 f.; Frazer, The Magic Art, ii. 308-310, and Lectures on Kingship, p. 264). On the other hand, it is unreasonable to doubt that the peculiar odium which attached to the title rex was inspired by a deep-rooted prejudice, springing from the recollection of the overthrow of a hated tyranny. The charge of aiming at the throne was the most baneous form of treason, and was as fatal to Sp. Cassius and Sp. Marcius in early times as to Tib. Gracchus and Julius Caesar in the days of the later Republic.

It will be remembered that the tyrant against whom Brutus conspired was the representative of a foreign dynasty which aspired to establish hereditary power. The native Roman kingship was of a different character. Its patriarchal and primitive origin is attested by the proximity of the king's residence to the hearth of the State, the perennial fire in the temple of Vesta, and to the store-houses under the protection of the Penates (di penates publici p. E. Q.), who were housed under the same roof (Tac. Ann. xvi. 41). Some modern scholars think that Vestals and Flamen were in the first instance the daughters and sons of the king, who by his direction undertook the duties of kindling and maintaining the sacred fire (Warde Fowler, op. cit., pp. 147, 288). But the king was more than the head of the clan. The genius of the Roman people asserted itself at an early date in the discovery that legal limitations upon the exercise of an authority otherwise uncontrolled (imperium legitimum, Sall. Cat. vi. 6). The king was during his life the sole repository of powers derived from the people, which he exercised subject to the condition that he must act,
not like a slave-owner, but as the mandatory of his free fellow-citizens. Thus the king, while free to follow his inclinations, was watched over by the conviction that he must act not contrary to, but in accordance with, the law. The people were the source of the law, which could not be altered by any singular act. Thus, as Mommesen has suggested, the constitution of Rome resembled, in some measure, constitutional monarchy inverted.

In the Roman constitution the community of the people exercised the same functions as belong to the king in England; the right of pardon, which in England is the prerogative of the crown, was in Rome the prerogative of the community; while the ordinary operations of government devolved entirely on the crown (Hist. of Rome, Eng. tr., i. 98).

This conception was undoubtedly the outcome of a period of growth, the various stages of which are lost to our view. Our evidence respecting the regal constitution comes from writers who relied entirely upon a tradition incapable of verification; and it is scarcely possible that their accounts have not been coloured by the introduction of features characteristic of a later age.

Our authorities agree in denying that the kingship was hereditary (Cic. Rep. ii. 24), and also in the assertion that the king was elected by the people on the proposal of the interrex, and with the previously expressed approval of the senate (Liv. i. 31, 59). The existence of the office of interrex, on the one hand, shows that the demise of the crown was not necessarily and immediately followed by the succession of the heir; but, on the other, the nomination of the royal censors and of the dictator in later times suggests that free election was not so primitive an institution as the authorities affirm. The view of Mommesen (Rom. Staatsrecht, ii. 7, and Hist. of Rome, i. 68) is generally accepted that the king was entitled, if not required, to nominate his successor; and that, if he failed to do so, the duty fell upon an interrex chosen from the senate. In either case, however, the approval of the senate was normally, if not necessarily, obtained; and the new king immediately submitted himself to the people, by himself proposing the adoption of a lex curiata as the ratification of his assumption of the supreme power (cf. Livy, i. 41). The entrance into office was incomplete until the assent of the gods had been obtained by a formal inauguration, in which the auspices and the augur were the principal, if not the principal, members of the priesthood other than the king himself (Liv. i. 18).

2. Insignia.—In virtue of his pre-eminent authority, the king was invested with various insignia of office. Thus, whenever he appeared in public, he was preceded by twelve lictors (Cic. Rep. ii. 20), bearing rods and axes as a mark of his continuous right to command (imperium) during peace as well as in war. He wore a purple robe known as trocha (Verg. Aen. vii. 612; Juv. viii. 250), so called because crossed by belts of scarlet (Mayor, on Juv. x. 30); but in general his official dress varied in accordance with the succession of his duties. He wielded the ivy sceptre surmounted by an eagle, wore a crown of oak-leaves fashioned with gold, and occupied an ivory throne (Dion. Hal. iii. 61). He alone rode in a State-chariot within the city walls; and from this custom the sella curiata of the republic was said to be derived ( Fest. p. 49). He was endowed with ample domain lands, which were occupied on sufferance (precatorio) and kept in cultivation by the royal clientela (Cic. Rep. ii. 34).

3. Functions.—(a) The king was the representative of the community in all its relations, including the superintendence of the State religion. For the first organization of the priestly dignity and its duties Numa was traditionally responsible (Liv. i. 29). Accordingly, he is represented as having instituted the appointments of the three chief Flamen (those of Jupiter, Mars, and Quirinus), of the college of Salii, and of the Pontifex, while retaining for himself the administration of the chief religious ceremonies (Plat. Tib. Grune. 15). After the expiration of two years he was appointed to take over the sacred functions personally exercised by the monarch, while the pontifex maximus succeeded to the general presidency over the ecclesiastical bodies, which the king held as chief of the State (for the difficulties in details see Greenidge, Roman Public Life, p. 51 ff.).

(b) In secular as distinguished from religious functions the king was at once the highest civil authority and the supreme military commander. He had no colleague who could interpose a veto; he might, if he chose, delegate his powers, and subsequently resume them at will. The limitations of his authority were established by custom and precedent, followed or created by the holders of the office themselves (Tae. An. iii. 26). Thus, though the king completely controlled the division of booty and the disposal of the public land (Cic. Rep. ii. 29), he was accustomed to consult the senate, whenever it was practicable, on all matters of foreign policy (Liv. i. 32). An exception would be the making of war which closed a war; for on a foreign campaign it was impossible to postpone a decision until a reference was made to the authorities at home. On the question of a declaration of war it was even usual to obtain the ratification of the people (Dion. Hal. ii. 14).

4. Delegates.—Since it was impracticable for the king to perform in person all the duties required of his office, it was usual for him to appoint delegates to represent him, who exercised their functions during the king’s pleasure. Chief of these was the prefectus urbi, who was left behind in Rome to take over the government during the king’s absence in the field. The chief subordinate commands in war were those of the generals of infantry and cavalry (tribuni militum and laterum). With respect to criminal jurisdiction, we are informed that the more important cases were heard by the king in person, and the less important transferred to judges chosen from the senate (Dion. Hal. ii. 12). Further, it was made a charge against the kings that they tried to withdraw the king’s important office by employing a panel of advisors to assist him (Liv. i. 40). Some scholars hold that such a constitution is to be found in the duoviri perduellionum (commissioners of high treason), who were appointed by Tullus Hostilius to try the case of Horatius (Liv. i. 20). These, again, have been identified with the questores parricidi, who are supposed to have existed in the time of the kings (Tae. An. iii. 23), although Mommesen (Hist. of Rome, i. 159) regards the latter as office holders, whose primary duty was to search for and arrest murderers. It has been inferred from the brief account of the trial of Horatius that, though the king might allow an appeal to the people (præcario), he was not bound to do so. According to a statement of Dionsus (iv. 23), the king tried public causes himself, but remitted to others the adjudication of private suits, and in the latter case prescribed the formula by which the competence of the index was limited. This is the basis of the later distinction between proceedings in iure and in iudicio, when the prætor had succeeded to the office formerly occupied by the king. The power of legislation was theoretically vested in the people, who were the sole source of law (Dion. Hal. ii. 14); but the initiated and the king, who alone possessed the right of consulting the assembly.
whole [creation] (Manu, viii. 3), and it is for this reason that kings are always pure, 'lest their business be impeded' (Gautama DS, xxiv. 45), at least 'while they discharge of their dutes' (Vigusa DS, xxii. 45), for

as fire is not polluted even though it always burns the creatures of this world, even so a king is not polluted by the touch of the king's foot on those who deserve it (Narada DS, xvii. 15); and, moreover, he 'is seated on the throne of Indra . . . for the protection of his subjects' (Ma. t. vii. 13).

Another point of resemblance between the king and a god is that 'through his word an offender may become innocent, and an innocent man an offender in death' (Gautama DS, i. vi. ii. 52); and the king is named in connexion with the gods in the requirement that a non-Brahman must take his oath 'in the presence of the gods, of the king, and of Brāhmans' (Gautama DS, xiii. 13), as well as in the prohibition that a mātāka 'shall not speak evil of the gods or of the king' (Aptapama DS, i. xi. 31. 5).

The death of a king or an accident to him interrupts the study of the Veda (Gautama DS, xvi. 32; Bauddhayana DS, i. xi. 21. 4; Vigusa DS, xxx. 23); and a mātāka may not step on a king's shadow (Manu, iv. 130).

The transfer of guilt in case of royal pardon is a rather striking feature of the Indian kingship. If a thief or other criminal is pardoned by the king, the guilt of the original crime devolves on the monarch (Aptapama DS, i. vi. 19. 15 [quoting from an earlier text-book], ix. 25; xii. xxvi. 22; Gautama DS, xii. 45; Manu, viii. 316), because, if he kills the criminal, 'he destroys sin in accordance with the sacred law' (Vaiṣaṭha DS, xix. 46, quoting from an earlier text-book). If the king grants such a pardon, he must fast three days and a night; if he punishes an innocent man, the length of the fast must be tripled (ib. xix. 40, 43).

The association of the king with Indra, already noted, appears again in the statement that the king in whose realm are no criminals 'attains the world of Indra' (Vigusa DS, v. 196; cf. Bhikṣapati DS, ii. 38); and we may also note that Soma is the 'lord of kings' and Varuna 'lord of universal sovereigns' (chakravartin [q.v.], Sūtropaka Brāhmaṇa, xi. xv. 3. 9 f.).

There were, however, in India kings who by no means fulfilled the royal ideal. It is very bluntly declared that wicked kings go to hell (Quotations from Nārada, v. 10), and a mātāka must not accept gifts from a king who is wicked or a non-Kaṭriya, or, indeed, any king (Manu, iv. 77 f., 84, 91); yet such was the requirement that no official of an attack upon even a wicked king was deemed one hundred times worse than the extremely heinous offence of murdering a Brāhman (Nārada DS, xv. xvii. 31).

Specifically royal tabus were rare in India, practically the only instances being that a king might never stand bare-footed on the ground and might not shave his head for a year after his inauguration (Sūtropaka Brāhmaṇa, v. 3.1 f., 6f.).

The ceremony of inaugurating a king (Rāja-
say) was very elaborate (cf. especially A. Weber, 'Über die Kingsgewese', J.A.I. H. 1885, 18; Hillebrandt, Ritual-Litt. [=GLAP iii. 2, Strassburg, 1897], pp. 143-147); but in this, as in the Vaiṣaṭha (see also Weber, 'Über den Vaiṣaṭha', ZI. 1877, 752, p. 795), there is the very ancient custom of omitting Wind, Sun, and Varuna, is given in Nārada DS, xvii. 35-21.

The object of all this is, however, very explicitly stated to have been 'for the protection of this
as ill. 3 f. iv. 3, 22, and vi. 88 (cf. the series transla-
ted by my Lord Ashburnham, SEI xiii. [1867] 111–133).
Although the early Indian kingship was usually hereditary, there are clear indications that elec-
tion to royal office was not unknown (Rigveda, X. exxiv. 8: 'as subjects choosing for themselves a
kingship'); cf. vi. viii. 4; and with this may be connected an incident not uncommon in
modern Indian folk-tales, and repeated in the Indian stratum of The Thousand Nights and one
Night that every Friday at the Garni Akht, a
ritual has been unable to solve their perplexities (Hôchmônya
Upanisad, v. 11-24; cf. Sâvatapatha Brahmâyana, X.
vi. 1); Prâvâhâja Visali, prince of Prâchâla, takes
the name of Akhâs (ib. vi. 8.1), and also explains to Svetaketu, Uddâlaka's son, the
nature of metempsychosis (ib. v. 3-10, Brhad-
ârahyâya Upan. vi. 2; cf. also Kaukitsa Upan.
1.), and the great Vedic scholar Gâyâtreya Bâlakî,
after repeatedly failing to elucidate the nature of Brahman, receives the solution from King Ajita-
karat of Kûsh (Brahmâyâya Upan. ill. Kaukitsa
Upan. iv.). Considering this, it may well be that,
A. S. Geden, Edinburgh, 1906, p. 191.;
and also R. Garbe's little essay on the origin of Indian monism in his Philosophy of Ancient India, Chicago,
1917).
'the doctrine of the atman, standing as it did in such sharp
contrast to all the principles of the Vedo ritual, though
the original conception may have been due to Brahman, was taken
up and cultivated primarily not in Brahman but in Kshatriya
circles; this was first adopted by the former in later times';
and that this teaching 'was fostered and progressively develop-
ed by the Kshatriyas in opposition to the principles of the
Brahmanical ritual.'
We must also remember, in this connexion, that
the two great heterodoxies of India—Buddhism
and Vedanta—arose amongst Kshatriyas, and
that Buddha was himself an heir apparent
(yuvachâya), being the son of Sudhodana, king of
the Sâkyas clan in Kapilavatst.

rutz, Jr. 'Kings (a) in India,' SRL I [1910] 322–324; cf. also H.
1895.
LOUIS H. GRAY.
KING (Iranian).—The kingly office has always
played a most important part in Iranian history
and religion from the earliest times, both in
the ancient Persian Empires and in the Mazdean
religion. Indeed, to the Greeks the Persian
monarch was known simply as bāuster, or Æhâster,
basucter, as constantly in Herodotus, Aeschylus,
and other classical writers. 'The Great Kings'
styled themselves Eshahyad, Æshahyad, Eshahyad, or 'Kings of Kings'—a title which has been
perpetuated through the centuries to the present
day, when the non-Iranian Persian sovereign still boasts the
pride, though empty, title of Shahân Shâh,
which is the modernized form of the ancient
title. Nowhere has royal power been more ever,
more exalted or more absolute than in successive
monarchies of both ancient and modern Iran. It is
certainly a problem at the same time exalted and
controversial, for with so many of the ancient religions, there is
certain traces of 'king-worship' or of divine
genealogies in any of the ancient Iranian dynasties,
whether historical or legendary (on 'king-worship'
see C. Lattey, Ancient King-Worship, London,
1910; also E. Kornemann, Zur Geschichte der
täkten Herrscherkultur, Leipzig, 1901). This is
a necessary result of the political monopoly of the
Mazdean religion, in all its various forms.
We have just indicated the distinction between
the 'historical' and the 'legendary' dynasties in
ancient Iran. By the former is meant, as we have
already seen, the well-known great Persian Achemenid mon-
archy of Cyrus, Darius, and their successors,
familiar to us from the Greek historians and, in
modern times, from their own famous rock inscrip-
tions, which have thrown a flood of light upon both
the political history of their reigns and the form
of Maximus which they professed (see art. BEHESTUN).
Small and monotonous as is this 'literature', it is
distinguished by the deeply religious note that
rings throughout, incessantly repeating the declara-
tion of a burning faith, in which we have evidence of
a sincere piety shewn towards the gods, the
one God of the king and of his people. To
question can be based as to the religion professed
by these kings, at least Darius and his successors,
for we find that Darius, in the great Behistun
inscription, adopts, with a sense of the deepest
satisfaction, the title of 'Aramazandad'—boldly
declaring: 'As an Aramazandad I swear (or proclaim) that this is true'
(Dar. Oh., col. 4, 47.)
There is no mistake in the attitude of these old
Persian kings; there is no claim to divine ancestry,
as in the case of the Egyptian monarchs or Alex-
ander the Great, nor to any apocryphal or divine
ancestry, as in that of the Roman Emperors, but the pure
expression of the most absolute dependence upon
Aramazand, the one God. By his will or divine
grace kings are allowed to reign ('per me reges
regnent'); thus Darius explains:
'By the will of Aramazand I am king' (Oh., col. 1, §§ 5, 6).
By the same will the nations are made subject to
him: 'By the will of Aramazand, these nations have become my
subjects and my tributaries' (Oh., § 7).
It is Aramazand who gives to kings all their
power:
'Aramazand has invested me the sovereign power' (Oh., § 3).
A true Lord of hosts, it is he that gives the victory
in battle:
'By the will of Aramazand I put to flight the army of xindun-
bel, 1, I took possession of the seven-horned bands of the rebels,' etc. (Oh., §§ 18-20; col. 2, § 28, etc.).
In a word, everything depends absolutely on the divine
will:
'Everything that I have done, I have done, without exception,
by the will of Aramazand' (Oh., col. 4, § 62).
In another place, referring to his conquests, the king says:
'That which has been done, I did it all by the will of Aramazand' (Nagsh- Rustam, 4, 48).
It is a remarkable fact that, when we turn to
that form of Mazdeism which is preserved in
the Avesta, the sacred book keeps nothing of
the great Persian monarchs, Cyrus, Darius, Artaxerxes,
and the others of the Achemenid dynasty, whose
names are so familiar in history. It knows, on the
contrary, other great dynasties—the Pithâdân
and the Kanyan—utterly unknown outside of the
Avestan literature and the folk-legends pre-
erved in the poetry of later Persia, especially
Firdausi. The legends of those dynasties are, of
course, largely mythical. The first royal house,
whose date, as usual, is thrown back to a fabulous
antiquity, began with Haoshyanga (the later
Hosân), said to have ruled over the davars, or
demons (probably the non-Iranian tribes), under
the name of Aramazand. As the Pithadân (I, 9).
1 But see Spiegel's view in Literature, which is not
ever, reason to believe that the Iranian kings were sometimes
put on a plane with the gods, as in A.D. Aug., L [1867] 332; see
also A. Bây, ZDMG xxi. [1866] 116 f.; E. Wâellen, Heil., xi. [1889]
106.
whose reigns were first discovered and worked. His successor, the warrior, prophet, and poet, Zoroastre ("strong fox", the later Tahmūrāf), taught his subjects how to use skins for clothing, to hunt, and to tame domestic animals, and caused them to be taught by the "demons" the art of building, the title the "king of the earth" and was slain by the evil spirit Aframī. His successor was the great hero Yina Khshahētā (the later Jamshīd, familiar to readers of Omar Khayyām), who played in the Avesta the part of both an Ahd, and a Who, and, as such, is connected with the "Great Winter" that so strikingly corresponds with the Neuchan Deluge. He was overthrown by the demonical monster Ashī Dahakā, the later Zahāk. After the latter's usurpation, the national revival took place under the most celebrated of these ancient heroes, Thraētaona (the later Farīdūn), who is spoken of as "king of the earth," and whose successor was Manuschchīra, the latter Minouhr. A later dynasty, that of the Kayanians—perhaps a Bactrian dynasty—derived their name and descent from Kai Kōdū (Av. Kava Kavātā), followed by Ka Kās (Av. Kava Uša, Siyāvāsi (Av. Siyāvar- shāh), Rehīm (Av. Rāhīm), Lehrtāp (Av. Arvāta-aspa), and, finally, Gushāstāp (Av. Vishtaspā), in whose reign appeared the great Prophet Zara- thushtra, who converted the king and his court.

Although these kings are no doubt largely legendary, although the accounts of their reigns contain much that is mythological—indeed some of the names suggest Vedic or, rather, Indo-Iranian prototypes—still it is not improbable that some degree of historical truth underlies many of their legends. It may very well be that some of these dynasties, whose names and exploits are preserved either in the Avesta or in popular tradition, were the result of a complex of different Iranian tribes, whether in Media, Bactria, or other regions outside of Persia proper; or that some of them may have been contemporaneous with one another, if not with the Achemenid Empire. It is a remarkable fact that the Avesta itself knows nothing of the last-mentioned great dynasty. The great national Persian poet, Ferdowsī, in his epic, the Shāh-nāma, ingeniously so-ordinates all these various dynasties from the earliest legendary hero to the historical Achemenid era down to Alexander the Great. This skilful manipulation of legend, folklore, and sober history was necessary for the unity of his epic, but, of course, cannot be regarded as corresponding to historical facts.

Although no divine character was attributed to Iranian royalty, still there is one peculiar attribute of a semi-natural character with which the Avesta endowed its kings, and also its prophets. This was the so-called khorārn, which was regarded as a kind of effulgence or bright glory that attached to the kings, but could be forfeited by moral evil. 1

1 It was a meditative talisman which belonged essentially to the royal house of Iran, though it vanished with Yina's fall, flying away in its three successive manifestations in the form of a bird. The Glory can be seized by no sinner (J. H. Moulton, Early Zoroastranism (BL), London, 1913, p. 578); we need not enter here into the author's discussion of the relation of the khorārn to the fravāshī.)

Under the Old Persian form farsnā, the word occurs in several well-known proper names, and even in Media, more than a century before Cyrus. The prophet Zarathushtra was also endowed with this quasi-divine splendor, and at the end of the world it also is to be the attribute of the Saviour Xoshyātān.

After the conversion of the monarch and the royal house to the Zoroastrian reform, the king of Iran was regarded in the religious system of the Avesta and the later Mazdean literature—in accordance with the favor of the Zoroastrianism, which throughout has characterized Iranian thought (see DUALISM (Iranian)—as supreme head of the material or civil world, while the prophet Zarathushtra (and his successors, who enjoyed the title the "king of royalty," and were called the "heroes of Zarathushtrēmē") was the corresponding supreme head in spiritual things. This is expressly laid down in the Dīnkhār, where it is said that the "spiritual and temporal rulers" are connected with the "Great Law" (i.e. the Mazdean religion) is rendered more exact by the rule of Master of the Worlds, the King, and of the Spiritual Director of the worlds, the Zarathushtrēmē (Dīnkhār, col. P. B. Peshon, Bombay, 1874 ff., vol. iv, ch. 157, § 4, tr. Castraceli, Louvain, 1880). This is of a piece with the frequent distinction between aha and rātu, when meaning respectively 'prince' (or temporal ruler) and 'spiritual guide' or 'priest' (though at times the terms have other significations). It also corresponds exactly with the positions assigned respectively to pālōkshahān (sovereignty) and daśā (religion), the one on the material side, the other on the spiritual (miskīt) side of the curious table of the Dīnkhār (vol. iv, ch. 137), cited in the art. DUALISM (Iranian). The Pahlavi translator of Yashō i deduces from this of the hymn that a man is not fit to be a king unless he possesses twelve virtues (quoted by J. Darmesteter, SEE xxiii. [1883]. 25). As to the relations of the subjects to their king, J. J. Moll has lately published an interesting little volume (Morel Estelle, Iran, Zoroastrian Books, Bombay, 1914), in which he has a section (pp. 8-10) on 'Obedience to the King' as one of the chief virtues inculcated by Zoroastrianism.

Referring to section xii. (135, on the duty of prayer for the king, and xiv. 119, for an instance of heroic loyalty), he quotes a striking prayer for the king from Yathāygin, x. 1-11; and of later authorities he cites: 'Be always true and obedient to your Kings' (Pāvastā-ndshān); 'O almighty God, give a long life, a happy life, and a happy life to the ruler of our land' (Tās-darstān); 'Commit no fault against Kings and chiefs'; and again, 'Speak no evil against the rulers of the land, for they are the guardians of the land and through them prosperity flows upon earthly beings' (Pāvastā-ndshān "Armāpti Marangandepān, §§ 60, 105, following de Harlez's version in Mouton, vi., 1867 69-77).

All this is quite in accordance with the ethics of the Achemenid inscriptions, for in them the chief of all evils that are stigmatized is 'falsehood' (draurā, the lie, whose personified, as Mouton surmises (op. cit. p. 1), and so equivalent to the Avestan noun of the evil spirit (abstract noun); and it is to this evil that rebellion against the king is attributed.

Darío tells us that during Cambyses' absence in Egypt the people became hostile, and lying became widespread in the land' (Darío, col. 1, § 39). In another place the same king, relating how a rebellion had taken place in many of the provinces of his vast empire, states that 'these provinces had broken into rebellion; it was lying that had made them rebellions' (ib., col. 4, § 54).

Every time that a usurper rises up against the lawful sovereign it is said, 'He is one that lies (odarurajn, from the root darvaj, drug)—a phrase that constantly recurs. On the other hand, despotism and cruelty on the part of the sovereign are also considered as great crimes. Thus does Darío breathe, with pride and contempt: 'Auramzah has brought me help . . . for I have been neither a liar nor a tyrant' (Darío, col. 4, § 601).

In spite of these severe regulations, however, the grimmer cruelties inflicted by the Iranian monarchs throughout the ages are only too well known, and it has been surmised, not without good reason, that it shocked the priests and the people alike. 2

1 Darmesteter, translation of Strabo, 1, 9, making Nārīysangā, the divine messenger of Ahura Mazda, to reside in the mount of the dead, seems quite inattention to Harlez, Avestrānkārt (Paris, 1883, ii. 597 n.).

2 Other translators, e.g. F. Wolf, Strassburg, 1910, take the suppliation as being in favour of the speaker himself.
ments detailed in the Inferno of Arišī-Virāz, the "Persian Dante," are but few. Of more importance is the Persian court (see Casartelli, 'The Persian Dante,' in Jamaspji Memorial Volume, Bombay, 1914).

Anyhow the Avesta itself draws a sharp distinction between kings and kings. 'May good kings rule over us, not bad kings, O Aramati' (Ys. xvili 5).

Especially those rulers who were hostile to the Prophet and his religion were deposed and even devoted to eternal perdition; amongst them is mentioned by name one Ghrēma (Ys. xlv. 11, xlv. 11, xxxii. 12-14).

A word must here be said of the relations between the royal dynasties and the national religion. As we have seen, there is no doubt about the religious convictions of the great Achemenid kings—at least after Cyrus, for his religious position is still doubtful. They were profoundly and devoutly Mazdeans—though the present writer is by no means yet convinced that they were Zoroastrians in any sense (see his The Religion of the Great Kings, London, 1910; per contra, the very striking arguments of Moulton, op. cit., especially p. 48 ff., are deserving of careful consideration). The Avestan legend represents the Vedic Rig-Veda as a secondary and alien royal house as converts of the Prophet, the king playing the part of a Constantine or an Ethelbert. Coming back again to later and historical times, the relations of the Arsacid or Parthian dynasty (A.D. 220-261) to the faith are unknown or obscure. The Sassanian kings (A.D. 226-631), however, were so fully and completely Zoroastrian that they made the Avestan system, in the greatly modified form in which it then existed, the State religion, and did not shrink from religious persecution in its defence or interests. It was under Shahpur II. (A.D. 350-383) that, according to the traditions, our present Avestan, i.e., whatever was left of the original scriptures after Alexander the Great's destruction of the greater part, was collected, revised, and corrected by the efforts of his great prime minister Ardašir-Maz-aspandian, whilst under his successor, Yazdagird II., the edict of his minister, Mir Marseh (A.D. 440), played an important part in the religious life of the country. In the Dinburt (vol. I. ch. 26) we find the assertion that 'the law of Islam is the Mazdean religion' (Airinm dito dina Mazdayasna), which, together with other indications, has always seemed to the present writer to point to the Dinburt as essentially of the Sassanian era.

Lukens: In addition to words quoted in text, W. Geiger, Ostasiatische Kultur im Altertum, Erklangen, 1882, p. 45 ff.; F. Spengel, Ertrutsche Alterthumskunde, Leipzig, 1871-78, ch. iii. 692 ff., where he endeavours at some length to prove that the ancient Iranian kings did claim divine parentage, probably from Mitra; E. Wilhelm, Königthum und Professor, der Astir, and L. Casartelli, KING (Muslim).—1. Sovereignty. Originally in Islam the conception of sovereignty was directly theocratic. There was no doubt on this point. Muhammad ruled in the religious order, the military order, and the judicial order; and in each of these he was accepted and without dispute. Neither he nor any of his adherents seems to have thought of analyzing or dissecting sovereignty. They regarded it as divine in its source; Muhammad possessed it not as elected by men, but as a prophetship by God, without dispute; and originating thus, it was both integral and absolute.

This conception continued during the period immediately after Muhammad, which is called 'the perfect Khalifate.' The first successors of the Prophet did not, indeed, regard themselves as real sovereigns, that position belonging to the Prophet alone. They called themselves 'lieutenants,' which is the word khalif, which in practice they preserved their sovereignty in the military order; but in the religious and judicial orders the Qur'an, which is regarded as perfect, had fixed the law, at least in general, at all points. The Khalif had nothing to add, and sovereignty in these matters passed into the hands of specialists, whose duty it was to criticize the texts, and to develop and apply the principles. After the Ameen Empire was immense; and, as it included regions and cities of advanced civilization, administration became complicated and difficult, and the Khalif had to delegate a large part of his sovereignty to ministers. These were known at first by the modest title of 'vizirs' (chargés d'affaires). They were of considerable importance in the Empire; it might even be said that some of them were the real sovereigns, until the day when they were crushed by a caprice of their master. Vizirs played an equally important rôle in the Osman Empire after the Turkish conquest.

Towards the end of the history of the Arab Khalifate, during its decline, the general state of the Empire was very unsettled, and the military element assumed predominance over the administrative. The Khalif, his palace, and all that the palace stood for, was the great power, and the actual authority was exercised by the chief guards, generally Turks and sometimes eunuchs.

In the fezud period authority was divided and subdivided just as in the West, but in a less systematic manner. The Khalif had now only a theoretical power; princes of various races formed kingdoms for themselves out of the dismembered Empire, and arrogated to themselves a sovereignty de facto, which was no longer of a theocratic character, but was based on strength of arms. The dynasties which they founded have been of comparatively short duration. The Osman Sultans constituted a stronger unity in Islam than that which existed under the Arab Khalifs. Their power was absolute, except that they were required to respect the law of the Qur'an and its interpreters (mufši, islamá, etc.), and were dependent on the fidelity of the troops. This despotic regime has lasted even to our day.

In Turkey at the present time the sovereignty resides in the Parliament, and the Sultan is only a constitutional monarch—a system which brings the Ottoman Empire into line with the other States of Europe, but which it is difficult to reconcile with the principles and the spirit of Islam.

2. Legitimacy.—The legitimacy of the Khalif does not exactly depend on the manner of his election or on a law of succession; it is derived from the proclamation of the people. This proclamation consists in naming the sovereign in the Friday sermon (khat'ta) in the mosques, and in praying for him. When mention of a Khalif has been thus made, without arousing protests, in the cathedral mosque of the capital of the Empire, this Khalif is regarded as legitimate. 2

1 The title Khalif was borne by the first four successors of Muhammad, as the Umayyads and 'Abbasids, among the 'Abbasids, among the 'Abbasids; and Khalif, the title of the "commander of the faithful," was given to the Arab Khalifat; it had been used, even during the life of the Prophet, to designate the Khalif's lieutenant in the year 2 A.H. As for the title 'Sultan,' it was in use among such secondary dynasties as the 'Abbasids, the 'Abd-al-Malik, and the 'Abd-al-Maliks. 2 The ceremony of proclamation is called bārāt. Among the Oman it is renewed every year, even that of the Sultan, on the 31st of July, the day notably the name of Musâôt. The khat'ta al-ulûm, in these ceremonies, kisses the front of the Sultan's robe, and, raising his eyes towards heaven, prays for the sovereignty of the Empire, and for the preservation of his Highness. The Sultan
A legitimate sovereign might be deposed. Among the Osamans deposition is regarded as just when it has been authorized by a fatsí, i.e., by a decision of the Sanadı-kâmil. The mode of succession of Muslim sovereigns varied. Muhammad had given no rule. Abú Bakr, his first successor, was chosen by the most influential party in the Muslim community. Othman was designated by Abú Bakr; Othman, by electors whom 'Omar had named; the election of 'Ali was contested, and led to civil war; with Mu'áwya the dynasty rule was restored and established, firm enough to assure a stability in the family of the Umayyads. Even within the dynasties the order of succession was not always constant. Sometimes the Khalif chose one of his sons as his heir apparent; e.g., the famous Harrún al-Rashid designated three of his sons with entail. The first of the three, Amïm, wished to out the second, Ma'mún; but the latter revolted and Amïm was beaten and killed. Among the Osman Sultans it is rather the brother who succeeds; and it has often happened that a Sultan, on his accession, has put his brothers and nephews to death. Formerly the Empire was divided among the brothers, especially in the Middle Ages. This was the case with the Bayids and Fatimids. In principle the Khalif, who was the president of the entire Muhammandan community, had to be of the Quraish race; but that was not the case with the Osman Sultans. In order to legitimize their rule it was admitted that they had inherited rights from the ancient Arab Khalfis when, in the time of Salïm I., they conquered the sacred cities Mecca and Medina.

Among the Shi'ites the idea of legitimacy presents a rather peculiar religious character. Founding their belief on certain traditions, they hold that Muhammad had designated 'Ali as his successor, and in their eyes all the Khalifs except 'Ali and his descendants are illegitimate. This belief has given rise to many troubles in the history of Islam. Secret societies have been formed and have long worked for the succession of the 'Ali dynasties; they succeeded in establishing the famous Fatimid dynasty in N. Africa and Egypt, thus named from Fátima, the daughter of the Prophet and the wife of 'Ali, from whom it claimed to descend.

The Mahdïs idea is developed in the sects which maintain the right of 'Ali. The Mahdï, a sort of king-prophet and expected Messiah, who is to perfect religion and to begin in the world an era of happiness, is to be of the sect of the 'Ali. The sect of the Imâmites had a curious idea about him: they believed that the Mahdï, also named 'imam, was to be the twelfth descendant of 'Ali. The latter being dead, having disappeared at an early age, this sect professes that he continued to live a mysterious and endless life, from which he will return with glory when his hour is come. The time during which the Mahdï is to remain hidde is called the period of 'occultation' (cf. Carra de Vaux, Le Mahométisme, Paris, 1886, p. 134).

3. The status of the sovereign.—The power of the Khalif is absolute within the limits of the religious law. Theoretically, he might dispose of the land and revenues of his Empire. The principle is that the soil belongs to God, and consequently to the Sultan, who is His mandataire. The Sultans, however, had a private estate, which was always of a considerable size. Thus under Sulaiman the Magnificent the private estate of the Sultan produced a revenue of five million ducats, while the general revenues of the Empire were only a little more than nine million ducats. The Sultan, in order to himself the right of granting the great fiefs; and, as a result of the same principle, confiscations were easy and remain so to this day. As regards taxes, some are prescribed by the Qur'an; such are the tithe for Muhammandans and the poll-tax for non-Muhammandans. Others are administrative taxes, which long ago acquired a certain regularity, and are therefore called 'a fard, i.e., 'regular'; such are taxes on marriages, law, dutees, transit and warehouse dues, and stampes. Besides these two kinds of taxes, the Sultan, under the old regime, reserved the right to impose as many as he pleased. Under Sulaiman, the Magnificent imperial offices were sold, but not military offices.

Until 1877 the Sultan drew as he pleased on the Treasury for the needs of his barím. At this time of eight million ducats produced, two-thirds passed to the palace. The Sultan published budget estimates, but he began by deducting his share of the receipts. He had, however, a civil list, which had been established since 1855; and the sum amounted to £1,200,000, but was reduced afterwards to £300,000. The property left to the mosques, as pious foundations, called waqf, property, escapes the sovereignty of the Sultan, and is independent. It forms an important part of the imperial territory.

Until the recent revolution, which made him a constitutional monarch, the Sultan naturally had the right of declaring peace or war, and that preserved the right of commander-in-chief of his armies. He had the right of life and death even over the greatest personages in his Empire. When one of his old favourites who had fallen into disgrace received the noose with which he had to strangle himself, he accepted it as an order legitimately given, and as one which his conscience commanded him to obey. The Sultan was recognized to have the right to make subjects 'disappear' and to dispose of the life of his wives within his palace, and even to order massacres. The religious system of Muhammandanism does not condemn the massacres either of the Janissaries of the Ottoman Empire or of the Imamites of Islam. It has a special law for the sovereign regarding his wives. According to the Qur'an (xxviii. 62), he might have nine legitimate wives, all other Muhammandans having only four.

4. The ethical of the sovereign.—There exist in Muhammandan literature several important treatises on the ethics of kings. One of the greatest philosophers of Islam, Fârâbî (1860), wrote a treatise on the 'Model City,' in which he represents the princes as wise men, whose principal thought must be to prepare their subjects for the happiness of the other life. This theory, devoid of any practical character, is only an adaptation of the Platonic doctrines (cf. Carra de Vaux, Avicenne, Paris, 1900, p. 104). Another very well known author who studied this question is the jurist. The idea that the waqf furnished a means by which a testator might save his fortune from confiscation. The Sultans very often confiscated the property of proscribed persons and public officials. The waqf might be bequeathed to the mosques and set aside for some charitable purpose. The founder designated the chief minister of a mosque or an inferior officer. But sometimes the choice of the administrator was left to the inspector general of the waqfs, or to the Grand Vizir,—e.g., Kouprula, Bâgîgâ, and Baraksta,—tried to secularize the substantial family endowments. This was a form of tax imposed on them a fixed law of transmission and an annual tax, regulated according to the estate (A. de la Jouquière, Histoire de l'Empire ottomane, Paris, 1891, p. 617).
Mawardi (†1058). He wrote a treatise entitled Kitāb al-aḍām al-sulṭānīyya (i.e. Constitutions politiques), a work edited by R. Enger at Bonn in 1835, and recently translated into French by Leon Ostrogorsky. It contains the theory of the Khilafah, a description of the qualities necessary for a Khilaf, a study of the different methods of election, and a definition of the power of the vizirs and provincial governors, with an indication of its limits. This treatise has been highly valued in Islam. The same author has also left a collection of 'Councils to Kings,' a work on the rules which ministers must follow, and still another on politics and government, entitled 'The Means of facilitating Reflection and of hastening Victory' (Tashq al-Najār wa-ta'līf al-Zafar; see C. Huart, Littérature arabe, Paris, 1902, p. 249, Eng. tr., London, 1905, p. 243 f.)

A celebrated Seljuk vizir, Nizām al-Mulk, the founder of the academies of Baghdaq, Nishapur, and Baṣra (†1092), wrote on the art of government, which he considered to be characterised in a very superfluous manner. His book, entitled Siyāsah al-Nasāb, 'A Treatise on Government,' and dedicated to the Sultan Malik Shah, has been edited and translated into French by C. Barbier de Meynard, Paris, 1908, is devoted to this subject. This vizir admits that kings are 'chosen by the most high God,' he allows them attributes which are not specifically moral. They must, according to him, respect the laws, defend the religion, and have a strong faith; but it is not their domain to govern religion. Their duty is rather to occupy themselves with economic interests: to drain the land, to build bridges, to attend to the cultivation of the soil, to build strongholds, caravanserais, and beautiful monuments. These works will gain for a prince the gratitude of his people, an eternal recompense. Nizām al-Mulk recommends kings to guard against the influence of women, and to have no trust in ministers of another religion. We know that from the time of the Arab conquest, Christians have been employed by the Khalifs in their administration, and have rendered them great service. This custom was followed also by the Osmans, and continues to this day (cf. Carra de Vaux, Gawārī, Paris, 1902, p. 140).

To the great Persian poet Saíd (†1264) we owe some very fine pages on the ethics of kings. The whole of the first chapter of his Bustan (translated into French by C. Barbier de Meynard, Paris, 1890) is devoted to this subject. Nizām al-Mulk writes, 'The defender of the weak, and sacrifice your rest to work for them, to the alleviation of poverty and misfortune. A king owes the crown to his subjects; avoid grieving the heart of your people; that would be to thoroughly destroy your own power. The people, the poet says further, 'is a fruitful tree which must be cared for if its fruits are to be enjoyed.'

He has recommendations for labourers: 'The labourer works with more energy when he can count upon peace and prosperity.'

He has also some for merchants: 'Preserve the merchants close to the people and to the army the sources of wealth.'

He also recommends that 'men of war' and 'men of advice' should be bountied and soldiers well paid. You in this great kindness which the poet wishes to find in the sovereign must be accompanied by mistrust and craft; he evidently prefers the latter to strength.

While clever negotiations may assure the success of a transaction, gentleness is preferable to the use of force. Instead of traps, sow gold under the steps: your benefactions will blind the eyes of the enemy. The empire of the world belongs to cleverness and craft; kiss the hand that you cannot bite; and drive away your enemies by the fear of your adversaries; it is the drops of water that make the torrents.'

LITERATURE.—See the works cited throughout the article and in the notes.

B. CARRA DE VAUX.

KING (Semitic).—In Semitic languages the usual word for 'king' comes from the root s-l-k; in Babylonian the meaning is 'advise'; this is common in Aramaic, and occurs in Hebrew. In Arabic and Ethiopic it means 'to possess,' 'have power over.' The king then would be the deydrer of conduct, the source of wisdom. It is best to take the subject in three divisions: Syriac (chiefly Hebrew), Babylonian, and Arabian.

1. Hebrew.—It is very seldom that a true kingdom develops among nomads, and the Hebrews are no exception. Indeed it was not till after many years of settled life (tradition says four hundred) that the government crystallized into kingship. This development was gradual—through the judges, men of mark who by force of character and religious enthusiasm supplanted the tribal chiefs and, for a time at least, usurped their authority. In the case of Ahimelech this authority became hereditary in the second generation, but this was largely due to the fusion of Israelites with the old settled population, the Canaanites. When the government was finally settled in the person of a king, it was in direct imitation of the nations round about (1 S 11:6), and in recognition of a fixed central authority. The older tradition believed that this change had the approval of God and was carried through by His instrument, the prophet Samuel. (Later tradition saw in this a postasy from God.) As in the case of the judges, Saul first proved his powers at the rescue of Jabesh-Gilead, and then the people ratified the position that he had won for himself. Possibly Samuel had looked to Benjamin for a king in the hope of thus avoiding the jealousy of the North and South. Saul the soldier, however, proved unequal as a politician to cope with the Philistines and David, the idol of the South, was shown by events to be necessary to the Hebrew nation, and as such was acclaimed king by all parties. But even his genius and personal attractiveness failed to create a national feeling. The kingdom which he had created by his resistance to the Philistines was kept together by the fear of a hostile neighbour, and split along the natural line of cleavage as soon as that fear was removed.

These early kings were little more than the tribal chiefs of nomad days. The main differences were their recognition by the whole people and their possession of a bodyguard, consisting largely of foreigners, well-armed and well-supplied than the tribal militia. At first there was very little organization. The vagueness of history suggests that Saul had no fixed capital. The king was judge (2 S 14:23), general, and priest, the officers set apart for these duties being only his deputies. There is no clear statement of the king being the chief priest, but there are many indications that he sometimes exercised priestly functions. In Shemaria, Tobit styles himself 'priest of Astarte, goddess of the Sidonians,' like his father. His son Eshmunazar calls his mother (she was his father's sister) 'priestess of Astarte' and 'queen,' though he himself does not bear the priestly title. The story of Agag shows that Saul saw nothing wrong in offering sacrifice (1 S 15). At the coming of the ark to Jerusalem David warned a linen ephod (2 S 6:14), a priestly garment such as an Aaron wore (1 S 23; cf. also 2 K 3:2). Both David and Solomon blessed the people (2 S 6:18 and 1 K 8:6, 7); the priests were the servants of the king, to be deposed or appointed as pleased the king. David's sons were split out on his friends, while waiting for an opportunity to slay him alive. David, the chief mourner of his adversaries; it is the tears of that make the torrents.'
was given to this army by the institution of the royal bodyguard of mercenaries. Under David the captain was apparently a Philistine, and loyalty to him was stronger than other motives. It was the fidelity of these hirelings that prevented Absalom from sweeping the country at the outset of his rebellion.

We have no certain information about the revenue of the kingdom of David. As tradition insists on the lovely origin of both Saul and David, we must suppose that from the first they had a regular revenue from taxation apart from the booty that they might win in war. 

The later part of Saul’s reign assumes a tax of 10 per cent. It is assumed on the strength of 1 S 17:2 that the king’s character, kings were frequently the recipients of presents; but probably these were, like gratitude, in expectation of favours to come. In Solomon’s reign an elaborate system of tax-collectors was set up—a system which was the instrument that a dynasty always adopted in order to divide its own territory into divisions still existing among the people. The king of David possessed certain agricultural privileges (Am 7:1), and in later times financial emergencies were met by special taxes (2 K 15:12 29). Solomon was credited with a large income from taxation apart from the profits of trade and foreign tribute. In addition he employed the cereus (cf. 1 S 3:3). David’s kingdom illustrates Ibn Khaldún’s theory that a dynasty always only three generations: one of comparative barbarism, one of organized government and developed luxury, and then the crash. Solomon asked too much from his subjects; the splendour of the court was bought by the impoverishment of the countryside, and, as the tribes had not had time to degenerate into serfs, they broke away from the government that pillaged instead of protecting them. The Phoenician kings were at first absolute, but later their power was limited by the nobles, and the government became an oligarchy. David’s successors were not equal to the task which almost enslaved him—that of welding Judah and Joseph into one nation. While in the North the throne was a prize for any adventurer, in Judah all revolutions left David’s family the crown—a tribute to the power of the king of Israel.

As a general rule the crown was hereditary, descending to the eldest son—the chief exception being Solomon. In this case a palace clique abused the prestige of the dying king and the authority of religion in favour of its nominee. The king was a sacred person appointed by God (1 S 24:7 and 2 K 9), and in him centred the hopes of the prophets. It is probable that anointing referred specially to the unifying side of the king’s character. Thus Eshnunna of Lagash (c. 2000) calls himself both patesi and king, while Eannatum I, who reigned a little later, uses only the title patesi. The early rulers of Assyria (c. 1800) call themselves Isakku (=priest-king). Whatever his title, the king ruled by divine right. Many inscriptions have been found in which a king boasts that he has made a pilgrimage to the temple of his god and of his land and shepherd of his people. ‘Thou hast created me and intrusted me with dominion over men’ (Nebuchadrezzar [Rawlinson, 129, col. 1, line 55 ff.]). In Assyria at least the king was an autocrat, however much his power may have been limited in practice.

The king is the agent of his country’s god; in the treaty between the cities of Lagaszi and Unma (before 3000) the patesi of the towns are not mentioned at all, but only the gods. They contended for their cities. Patesi ‘included the idea of priest, and it sometimes happened that one who assumed the style of king kept the older form, even putting the priestly rank first of his titles. It is not a very big step from regarding the sovereign as agent or representative of the god to considering him the manifestation of deity or as himself the god. This change took place very early. Perhaps it was helped by the rulers’ habit of putting statues of themselves in the temples which they built, to keep themselves fresh in the memory of the gods. To the kings of that time the temples meant not the statues, but for the persons whom they represented. It is specially noted that the offerings for the statue of Ur-nina (king of Lagash c. 3000) were continued during the reign of Lagaszi-ya, perhaps a hundred and fifty years later. The first kings to receive divine honours were the Semitic rulers of Akkad, northern Babylonia (c. 2900); Shargani-sharri is called the god of his land, and Naram-Sin’s name always has the determinative for ‘god’. Thence the custom spread to the Sumerian rulers of S. Babylonia; and Gudea, patesi of Lagash c. 2450, was deified after his death. About fifty years later, Dungi, the second king of the dynasty of Ur, always describes himself as god, and a temple is built in his honour. In later times Ashurbanipal calls himself offspring of Ashur and Belit. The suggestion that the deification of the king is due to Egyptian influence has not found favour. At first the ruler was supreme in both the secular and the religious sides of life, but in time the priesthood began to hold powers used for all religious actions. Yet the king remained priest in theory. God still spoke to him directly; Ishtar visited him in dreams to give him her commands. Lugal-ziggisi is proud to be called ‘priest of Nintu’, but he was the nominal head of the god, but also the representative of his people. This was never forgotten. The kings of Erech and Lagash are priests of Anu; another boasts himself ‘keeper of the temple of Bel’ at Nippur, and down to the latest times the Assyrian kings are priests of Ashur, sometimes giving the religious title the precedence. A son of Naram-Sin became a priest, and his daughter a priestess. The priests were always under the control of their chief, the king; their subservience appears in the attempts of the oracle priests to find in omens that were obviously unfavourable meanings pleasing to the king.

Another aspect of this is the national significance of the king’s person: a calmity to him is a national disaster; hence the elaborate rules that fence his person and his territory. Thus the ceremonies for the purification of a king are much longer and more complicated than in the case of a private person; royalty is so dangerous that the king has to be cleansed of the impurity of his motherhood. On five days in the month he must not touch animal food, nor change his garments, neither dare he bring an offering to the gods. Thus the
question whether certain of the penitential psalms are individual or national is beside the point; it is the king, the representative, who speaks for the nation. The law tells the same tale. The court sits in a temple, and the oath is taken in the name of a god or gods, and sometimes in the king's name also; yet he is the 'king of kings', 'ruler of the heavens', 'hearer of prayers', 'his decrees are published under divine auspices'. The series of oaths founded on the exploits (whether real or imaginary is material) of Sargon I can hardly be explained on the ground of the political importance of these exploits. It was the deeds of a hero peculiarly under divine protection that became normative for future ages.

Naturally the king was absolute, but he was the 'shepherd of his people', and the government was always rather patriarchal. The people had their rights, which the monarch could not outrage. The splendid title 'king of righteousness' was not borne by the tribal chief. In both Assyria and Urartu he bore a witness in the reforms of Urukkagan of Lagash (c. 2800) and the Code of Hammurabi. While in Assyria, even in the days of its greatest power, any person could make a written appeal to the king. Though the Assyrians are unpleasantly notorious for bloodthirsty cruelty, they devoted great care to the internal economy of their own land. Not only was Assyria plentifully supplied with cattle of all sorts, the booty of innumerable wars, but the kings introduced new trees, and in other ways encouraged agriculture. The system of irrigation was, of course, their constant care. From the first the throne was hereditary, though we do not know whether primogeniture was the rule. In Assyria it is claimed that for fifteen hundred years the crown descended from father to son. The king's material power rested on the army. The idea that the king owned his domain had long since died out, but part of the soil belonged specially to the State, being held on feudal tenure. The occupier was bound to military service, in payment for which he held his fief. This could not, of course, be alienated, and in default of heirs returned to the State. If the owner were summoned for service and had no one to leave in charge of his land, the State appointed a bailiff, who was charged with the protection of the owner's family. In addition, the feudatories had certain privileges, were of some extent, outside the jurisdiction of ordinary officials, and were not liable to the corvées. The Assyrian government appears to have lived often on the tribute of vassal States.

3. Arabian. It is scarcely an exaggeration to say that no settled government has evolved among the nomads of Arabia. The dynasties of Hira and Ghassan are only apparent exceptions. All Arabian States have their centre in the cities that lie on the borders of the country, open to foreign influence by land or sea. Among the nomads the manorial system long survived, though he has only advisory authority and the weight of personal influence. Even among the settled tribes in the hinterland of Ailen it is often impossible to put a crimes to death, for the chief (the 'many' his servant', Sultan) would expose himself to the dangers of a blood-feud.

Among the fertile valleys of Yemen it was different, and at an early date settled States existed. Unfortunately, the materials for a study of this period are scanty and largely inaccessible. No agreement has yet been reached as to the date of many of the inscriptions, the two schools of interpretation differing by some six hundred years. Of the chief States were (1) the Yemen, ruled by two dynasties having their capitals at Sirwah and Ma'rib, and later by the H'myarite kings of Saba and Dhu Qais known to Arabia tradition as Tubba's; (2) Ma'an or Ma'in in the Jauf; and (3) Qataban; and (4) Huda. The date of the kings of Ma'an is uncertain. In Yemen the earliest rulers were the k. b. p. probably Makurris, the priest-kings of Sirwah. We have the names of thirteen princes who ruled between the fourth and sixth centuries, but their titles and functions and powers are unknown. The title seems to mean 'he who makes offerings.' Their rule probably extended well to the east, for Sargon (715 B.C.) mentions one I'tlamara the Sabean, probably one of the dynasty. The name occurs on the monuments. Next followed a line of kings ruling at Ma'rib, coming to an end about 135 B.C. and followed by the H'myarite kings, whose kingdom was finally destroyed by the Abyssinians in A.D. 225. It is probable that the kings of Ma'an were contemporaneous with the earlier rulers of Yemen (Saba), though Hommel and Glaser would put the first of them about 100 B.C.

The royal title was not restricted to the head of the State, but was shared by his sons. In one inscription a father and two sons bear the title, just as in a Stabul inscription to-day all members of the ruling house are called Sultan. Elsewhere Ablan of Saba, king of Saba, does not give himself that rank, though he gives it to his sons (CIS iv. 398). Besides kings we read of rulers, and it is probable that the people were divided into classes or castes; and the lords in their inaccessible castes may well have been as independent as the feudal barons in Europe. According to one tradition, the downfall of the land (4) Hadrmati was largely due to his lack of control over his barons. Women held an honourable position in the land; two together appear as 'lords,' and, like the king, receive the commands of their god through an oracle (CIS iv. 387). Occasionally the kings seem to be invoked along with the gods, though in a secondary place (CIS iv. 374)—reminding one of BABYLONIA.

Two other States rose in early Arabia, Hira and Ghassan, though they were native in part only, being due to outside influence. Rome and Persia were continually anoyed by the incursions of the Bedawin into the fertile lands of Mesopotamia; so one protective measure was to make friends with the nearest Arabs. Hira was a vassal of Persia, and in very close touch with its overlord; Arabs filled responsible posts at the court of the Bahram Gür, who afterwards became king, was educated at Hira. These States closely resemble the rule of the Rashids at Hail in the last century; the Sultan's power rested on the Bedawin, who were held to their allegiance by tribal honour and presents from the taxes contributed by towns and trade. History has preserved the memory of the mixed population at Hira—the tent-dwelling Arabs, the Christians of the town, and the semi-nomadic—mixed population which for various reasons settled under the government. There is no explicit evidence, but conditions must have been very similar in Ghassan, where the government had a large responsibility, and where the semi-nomadic had helped to uphold the loyalty of the Arabs. Tabari tells us that Gahima, the founder of the dynasty of Hira, was a prophet and soothsayer, suggesting that there was religion in its origin.

Muhammad founded a State where divine revelation was the supreme law, and after his time religion has played the greatest part in most States formed and ruled by Arabs. Had Khaldun's view that religion remains true, that religion alone will not make a
State; the feeling of nationality must also be present (Erfreunen, Beirat ed., p. 159). The
year, 1553, is claimed to be the successsion of the Prophet, and made this the chief prop
of their authority; yet their power depended on the
solidarity of their supporters, and, when the old
strife of Qais and Kaf, Mulear and Yemen, began, broke
out again. The settled life which had then
spread over the whole Bedouin area, and on whose

Here we read that, in a general rising of the Samleders for the purposes of the Messal forint, there was, first of all, an assembly of the 'wise' by themselves, whose decision was then to be submitted to the public assembly.
A. S. TRIGHTON.

KING (Teutonic and Litva-Slavic).—1. Sources relating to the Litva-Slav.—In seeking to trace the early historical tradition of kingship in Northern Europe, it will be well to deal first with the facts relating to the Litva-Slavic peoples, as these provide a basis also for a knowledge of the early Teutonic conditions. We begin, therefore, by quoting from the oldest available authorities a number of references to modes of government among the Litva-Slavic of Eastern Europe.

(a) The Chronicle of Nestor (ed. F. Miloslog, Vienna, 1850, ch. vi.). They lived each with his family and in his own locality (i.e. separate from one another) ruling over his own district.

KING (Teutonic and Litu-Slavic)

...mode of government given above holds good to a remarkable extent also of the Southern Slavs, more particularly in Montenegro and Herzegovina, where we learn from the accounts of F.S. Krauss, *Sitze und Brauch der Sudalben*, Vienna, 1885, pp. 24 ff., 58 ff. etc., and P. A. Korinsky, *Geographical and ethnographical Description of Montenegro*, London, 1885, p. 158 ff. From the modern system of government among the Southern Slavs we may, accordingly, glean a wide and more precise knowledge of the state of matters among the ancient Slavs and Litu-Prussians. In Montenegro and Herzegovina likewise our starting-point must be the conception of the tribe or clan (pleme) based upon, or at least regarded as based upon, agnatic kinship, such clan or tribe, again, being subdivided into a number of brotherhoods (bratstvo) and villages (sela). Those who were chosen by their people to stand at the head of these plemena are designated in various ways, e.g. as *chiefs* (glavari), *elders* (starovice), *zupani*, and, most commonly, as *dukes* (voyevođa); certain other terms applied to them are easily borrowed from foreign usage, e.g., governor (gubernator, etc.) in Russian and Turkish; Mod. Pers. sar-tār, Pahl. sārāt, O. Pers. *sara-dār*; cf. Mod. Pers. nār, Arv. *sarah*—‘head’, knjaz (from *teuton*; see below), ban (bemokr in the Greek of chakass and voivod in Russian—‘rich’). A number of these titles are applied specially to the heads of the smaller groups.

The position of these chiefs of the *pleme*, if we may take that of the *voyevođa* as generally representative of the others, may be described as follows. The *voyevođa* was, above all, the leader of an army, and, would, of course, be chosen for the post as one who had specially distinguished himself in war. His appointment was for life, although he might be deposed if he failed to justify his people’s choice—i.e., if, e.g., he fell short in heroic qualities or judicial ability. He could bequest his position to his sons, though not without the consent of the people who might, if they regarded the nominated son as incapable of leading them, choose instead a nephew or some other relative; the right of succession, in fact, was retained solely to the former *voyevođa*. Among the Southern Slavs, accordingly, the families of the *zupani*, *bani*, and *voyevođa* now represent what we should call the oldest nobility. But the main consideration in the choice of a leader was always personal character. The *voyevođa* was at first a herdsmen like the rest, and it was only gradually, and mainly as a result of his military achievements, that he attained the position in which at length he controlled all the external and internal affairs of his *pleme*. Various honours were then accorded to him; in particular, he was assigned the place of honour at the top of the table. The present writer is unable to give any information regarding the revenues of the *voyevođa* (as regards the *zupan*, cf. Krauss, op. cit. p. 27). It was only the stronger *pleme*, however, that had their own *voyevođa*; the weaker *pleme* put themselves under the power of the stronger.

The power of the *voyevođa* was thus in some cases very great; nevertheless, the real authority was still in the hands of the people, who governed through their representatives in the public assembly (sbor, *shkupino*). Each *pleme*, accordingly, had certain favourite places—a shady grove, a null-flooming spring—at which it held its assembly. The as-
Of the development of kingly rule among Teutons as well as Slavs, accordingly, we are now in a position to form some such general impression as follows. Already in the remote primitive Aryan or Germanic period, the Teutonic races, from the linguistic group Goth. piudo, Irish tiath, Ocs. ripto, etc., noted above, certain clans combined at the call of special circumstances; and, just as among the Slavonic tribes which were placed under the leadership of a vojvoda, so among the Teutons they were directed by an 'army-leader' (O. Norse hertogi, A.S. keretgo, O.H.G. herzogo) — a fact distinctly attested by early writers; thus Caesar writes:

'Cum bellum civitatis aut illiusque defendendi aut inebri, magistratus, qui et bello praeest, etibus nescius habeant potestatem, delegat. In pace nullus communis est magistratus; sed principes regionum autque pagorum inter se hinc ducem etiam in locis controvestisque munici' [de bello Gall., vi, 29],

and Bede, speaking of the Saxons, says:

'Nos non habet regem item antiqui Saxones, sed satura (A.S. dena) in bonum alium — precisely like the Saxon stanirm stands amis genti plus patrocinii, quem ingruit bellorum militum sequitores, et quemcumque eorum confortet, hunc tempus bellorum omnium sequatur, hinc obtinens; patrocinium alium bellorum, rursum sequia potius omnium sint satura' [Ritu. c. 70].

But, while among the Slavs such combinations, formed for a special purpose, soon dissolved again into their component parts (the plenena, or clans) when that purpose had been effected, they must, among the Germans, have been of a more permanent kind; and, in point of fact, this important advance towards the formation of a political State (in place of the primitive family, or clan-State, which was longest maintained among the Slavs) must have been the result of influences emanating from the Celts, as the primitive Teutonic word denoting the domain of the piudo (civitas), viz. Goth. reddi, A.S. rice, O.H.G. rikhi, primitive Teut. *rik-jo, e-ruem, *kingdom (Germ. Reic), is on indisputable linguistic grounds (cf. Schrader, Reallexikon, p. 451) a derivative of the O. Irish rige (*rigyo,-m, *rigyo-m), and this, again, is derived from the Celtic term for 'king,' O. Irish rt, acc. rigt (cf. Oirgortox, Dummnu-rig).

As regards the form of government, the civitates, as they were called by the Romans, fell into two classes, viz. those which were governed by a single rex, and those which were governed by a number of principes from the several pagi. The Teut. term for the king of a nationality (i.e. rex civitas) appears in the series Goth. piuda, O.N. pjoðan, A.S. piode, all connected above. The chiefs of the several pagi ('clan-rulers,' or whatever we may call them) were, no doubt, originally called 'kings' (O.N. konungr, A.S. cyning, O.H.G. chonnin). This word is related to Goth. kuni, 'kin,' 'tribe'; it means, however, not, as was formerly supposed, one belonging to a family (i.e., a family of rank), but rather something like 'king's son,' 'prince,' being derived, in fact, by the addition of the patronymic suffix -ingo (cf. Wulung, Atheling, etc.), from a simple form *kuni-, 'king,' which is found in such compounds as O.H.G. kuni-richi, 'kingdom,' O.S. cynrheim, 'king's kingdom,' O.N. kuni- or *kunu, differs from kuni, *kuno, 'tribe,' O.H.G. chummi, 'people,' only as regards gender, the relation of the two being exactly the same as between A.S. leod (masc.), *princis, and leod (fem.), 'princes,' between Saxon Frankish, *dominus, and O.H.G. dodi, 'people' (cf. also Goth. kindins, *þynu, connected etymologically with Lat. gens, genitas). The *kuno-, one may say, was the *kuno-s of the Slavic *kun, being etymologically identical with Gr. géow, Lat. genus, denotes a tribe formed, or regarded as formed, upon a basis of kinship, the
Theological evidence, too, brings us to the result
that the 
must have been a group closely resembling in structure the Slavic pisme. Now the more frequently the 
wording governed by the 
to resemble the king in the position of a nationally, the more generally would the term 
come to bear the full significance of the latter, "the first," as between the two 
and became quite indeterminate—the more so, indeed, as the constitutional position of the 
and the princes among the Teutons was in principle the same, and in its main features virtually identical with, what it was among the Slavs and Lithuanians. As among the latter peoples, so among the Teutons, the 
and 
were elected by the people:

reges ex nobilitatis sansum (Tac. Germ. vii.); "eligitur in isleam concilis et principes" (ib. xii.).

Among the Teutons likewise, the kingship was to some extent hereditary—in so far, namely, as in the several States there were 
stirpes, i.e., powerful families of rank, or, as it might be put with reference to the Slavs, powerful 
who were able to procure the election of one of themselves (e.g., the son or other relative of the previous rex or princeps). As among the Slavs, moreover, the test of the people to "know" his election and might also depose, expel, or kill him—e.g., when under his rule it suffered a failure of crops or a disaster in war, or found him acting contrary to its will.

...hos (Burgundios) ... ex appellatur Hibernos (i.e. "the first," connected with Irish e. "primus," O. Gaul. Celtaignuo; cit. O.H.G. furtus, "princis," cit. "the first"), et ritu veteri posta delecta removetur, si sub eo fortuna titubaverit peli vel sequitur copiam regatas (Amm. Marc. xvm. v. 14).

Among the Germans, as among the Lithuanian Slavs, the rex or princeps had a very limited power in relation to his people:

Nec regibus infinita ant libera potestas (Tac. Germ. vii.); they were obeyed "non praecepio luro pertagel" (ib. xiv.).

...Morcelli et Malorici qui nationem eam (Prisonum) regabant, in quantum Germani regnaverant (Amm. xvm. xliii.).

In the royal as in the princely state of both races under their prince the real power was in the hands of the people, and its organ was the public assembly (Goth. mospt, O.N. modl, A.S. moedel, O.H.G. mahal), in which the rex or the princeps, or his deputy, spoke, expressed his will, not by the influence of his position, but by the personal prestige which he enjoyed:

Mox rex vel princeps, præst actas inique, præst nobilitias, præst decus belorum, præst fides amici, præst judiciis est, auduntur antelat- tate sedendi magis quam iubendi potestate (Tac. Germ. xi.).

Finally, the Teutons seem to have resembled the Slavs in providing no fixed revenues for their 
or princeps; as regards the Germans, at all events, we have the express statement of Tacitus:

...ets est civitas ultra ac virtutis conferre principibus vel armamentis vel frugum; quod pro honore acceptum illi necessitatis subveniat (ib. v.)

5. Features peculiar to the Teutons. — Thus there is the point of difference between the Teutons and the Slavs with regard to the position of their rulers. Among the Teutons a very prominent part of the duties that fell to the king or prince was his share in the administration of the law. So far as the rex is concerned, this may be inferred from the fact that he could claim a portion of the compensation paid by an offender (cf. Tac. Germ. xii. "pars multa regi").

The princes 

Principes regium de quo pagorum inter seus fuisse dicunt controversiam manentem (12. 23); and Tacitus says:

"Eligitur in isleam concilis et principes, qui lurs erit pagos vicicique reddunt" (Germ. xii.).

With this may be compared what was said regarding the Slavs with reference to the extract (n. p. 723f), though a German writer says the function of arbitration that belonged to the king (Czar) may not refer to real Slavs at all. It is true that, according to the Chronicle of the year 882, the Slavs, in appealing to the Varangian king, asked him: "Tell us, O Varangian prince, who will rule over us and judge according to law?" (undilæ po prveni); but in the first redaction of the Russian Pravda (L. 19) it is still a common law that the king (princeps [starei, elders]) that decides legal cases (on these questions cf. L. K. Goetz, op. cit. i. passim).

Another feature characteristic of the Teutonic kingship, even in primitive times, was its relation to the gods, which is clearly brought out by Tacitus in his description of the German practice of divination:

"Proprium gentis equorum quoque praestigia ac monitus exspectabat: publicos aluntur isideam memoriae ac laudis, candidi et nullo mortali opere contenebat; quos presso macro currus accedere, ac rex vel princeps [N.B. a single prince] cum consilium illustriisque ac fideiussimi observaret" (Germ. xii.).

Here, again, the present writer is unable to adduce any clear analogy from the Slavic-Lithuanian world.

Thus, on the whole, we may say that alike on Teutonic and Slavic soil the position of the king or prince was in a political sense a distinctly weak one, and it is only among the Eastern Teutons that Tacitus finds a more vigorous grasp of royal power:

"Trans Lygios Gotthones regnatur paulum adductus quin cetera Germanorum gentes, non omnem senem aequum libertatem, Protinus deinde ab Oceanae Rugi et Lemovici; omnique eorum gentium insigne ... ega reges obsqueum" (Germ. xiii.).

Siurom (Swedes) hinc civitates natae, folio et opibus honos; eque umius imperat ... (ib. xiv.).

It is perhaps no more coincidence that the Celtic term for 'king' survived only in the Eastern Teutonic dialect (Goth. reiks, from Irish rí[he]), while other derivatives from rí[he] denoting 'kingdom' (Goth. reiks) and 'powerful' (reiks) are found in all branches of the Teutonic family of languages.

6. General features of the Teutonic development. — We are now in a position to summarize the development of kingship in the Teutonic. Our first datum here, among Slavs, Lithuanians, and Prussians, is the existence of agnatic family-groups, which survive in the poset of the Roman writers (Text. *ga-uo-ya-ya*, 'village community of blood-relations.' Goth. *gumblia*, 'family,' *clan,' Goth. *kun*). At the head of such a group stood the clan-chiefstein, the *kuniyo-s (O.H.G. chinung; cf. kuni-reihi above), but the actual seat of communal authority was the public assembly (*maplam, Goth. mepdam*).

From the earliest times these family-groups had combined with one another for common action under a chosen leader (*kariug(e)*, O.H.G. heirozgo), so forming groups (*peoeh, Goth. pisula*), which, once their object had been attained, were as a rule soon broken up into their component parts. Such temporary combinations, however, tended more and more to follow the Celtic model and become permanent, even in times of peace, and at length resulted in the political structure which Roman writers call a civitas. The domain of a civitas again, was designated *rik-eo-m* (Goth. reiks), a Celtic loan-word, while the title of its chief might either be the Celtic term *rîks (Goth. reiks), or the Teut. *peoeh-s* (Goth. pisula), or, again, *kuniyo-s (O.H.G. chinung), the name applied originally to the head of the group. Frequently, however, the civitas itself had a plurality of heads; but, whether it had one or more, the real power was vested in the public assembly, and the government was, at least
originally, of an essentially democratic form. Now this Teutonic phase of kingly rule exerted an influence in very early times upon the East of Europe—upon Lithuanians, Prussians, and Slavs. This is shown in the clearest way by the evidence of language. From the Teutonic sphere come the O. Pruss. rikis, ‘kingdom,’ rike, ‘to rule,’ and rikata, ‘government,’ while in all the Slavic tongues—O. Bulg. kняз, Russ. князь, Czech knaz, Pol. kniaź, etc.—was bor-
rowed in primitive times from the Teut. * kyningaz. These derivatives seem to indicate that among the Lita-Slavs likewise royal authority was here and there being more effectively established, and that there were movements tending to pass away from the old family-State. When the Slavic chroniclers write of the first political government in a political State, as contrasted with a more management of affairs in a district, they have to resort to the borrowed words князь, князь, in place of the native власть, власт, (see above, p. 14). It was as was applied that the Scandinavian Varangians were invited by the Slavs:

"Our land," said the latter, "is large, good, and blessed with all things, but there is no order in it; come to be kings among us, and we shall be your subjects." (Cf. A.S. Schefe-
maker, Story of the Invasion of the Varangians [Russian], St. Petersburg 1894, passim.)

It is to be assumed, though we cannot follow up the subject here, that in an early epoch true cieviates were formed upon the Teutonic pattern both in the East and in the West of the Slavic areas—among Russians, Czechs, and Poles, and doubtless also in Prussia and Lithuania. Among the Southern Slavs, however, the primitive family-State, as was indicated above, survived until the political formations of the 18th and 19th centuries. It is interesting to note that in the Middle Ages the Slavs adopted a new term for 'king' from the proper name of Charlemagne, who came into hostile contact with them both in the East and in the South. This relative modern importation appears in O. Slav. князь, Russ. князь, etc. Here, accordingly, we have a phenomenon analogous to what had taken place about a century earlier among the Teutonic peoples when they adopted the term Kaiser (Goth. kaisar, A.S. cæsar, O.H.G. kaisar) from the name of the great Caesar, used as a title of the Emperors of Rome.

LITERATURE.—This is given in the article. There is as yet no special work in which ancient Teutonic and ancient Slavic modes of government are considered in their mutual relations.

KINGDOM OF GOD. I. THE OT.

1. Introduction. Behind the ideal Kingdom of God, which appears in the prophets and psalmists, there had doubtless been, as the author of Is 8:18 assumes, the conception that Jahweh was Israel's King. This is found in the ancient song of Balaam (Nu 23:11); it is perhaps reflected in the name Malchishua, given to Saul's third son; and the manner in which the term is applied to Jahweh by the earliest literary prophets (e.g., Is 6:1; Hos 10:11) indicates that it was an old practice. It was not peculiar to Israel; the Ammonites, e.g., called theirs—among Rod Môtôn (Isa 1:1; Jer 50:27, etc.). The Kingship of Jahweh was not thought to be lowered by the rise of an earthly kingship in Israel; at least such a feeling did not long persist. For the worship of Jahweh was manifestly promoted by the centraliza-
tion of the government under the kings, and the prophets of the 8th and 7th centuries thought of the government of Israel in the great future as vested in kings. If, then, the idea had ever been felt that the adoption of a kingly form of govern-
ment was equal to the rejection of Jahweh's rule, as the editor of Judges and Samuel supposed (Josh 14:5, 18:5), it must soon have become obsolete. The presence of two thrones in Jerusalem, that of Jahweh in the Holy of Holies and that of David, was regarded as normal for Israel. But Jahweh's earthly kingdom was divided, and the period of decline began which was to end in exile and foreign domination. It was in this period and against this dark background that visions of an ideal kingdom arose in Israel.

2. The data. Glimpses of the coming Kingdom of God, more or less vivid and detailed, are found from Amos onward, in the Psalms also, and to some extent in the Book of Daniel. The first literary prophets wrote in the days of the Warning, and the Psalms, after the rebuilding of the Temple (516 B.C.), in a time of national gloom and conflict with the remote past. Of these data none can claim to be much older than the age of the first literary prophets; some may be younger than the book of Daniel; the larger part, however, belongs to the period between Jeremiah and the Maccabees.

The section of this long period which seems to have been most fruitful in visions of the ideal Kingdom is that of the Babylonian Exile, and the most marked section the first century after the rebuilding of the Temple (516 B.C.), unless, with some scholars, we assign the last eleven chapters of Isaiah to the period of Ezra-Nehemiah. The three events that most occasioned the most clearly defined groups of data regarding the ideal Kingdom were the approach of the Assyrian power (722-701 B.C.), the fall of Jerusalem (586), and, the destruction of the Babylonian kingdom by Cyrus (538). In view of the first of these events, Amos and Hosea, Isaiah and Micah, spoke of a great future beyond the approaching day of evil; in view of the second, Jeremiah wrote; and, in view of the last, a part at least of Is 40-55 was composed. The Psalms which contain general features of an ideal future seem to presuppose such an acquaintance with the nations and with suffering as came to Israel with the Exile, and those Psalms that may concern an individual king of the Davidic line, as 2, 18, 21, 45, 61, 72, 80, and 110, are most easily understood as written after the fall of Jerusalem.

3. Jahweh and the ideal Kingdom. The invari-
able and supreme factor in the great future is Jahweh. On this all prophetic writings are at one. Whatever agents assume prominence now and again, it is always Jahweh who is the efficient cause of the new and more perfect age. It is Jahweh who brings back the remnant of His people (Am 9:14, Hos 11:11, Is 11:11, Mic 7:14, Jer 31:4, Ezk 11:10-12, etc.); Jahweh who gives material pros-
perity in the land of Israel (Hos 14, Jer 33, Ezk 33:20, etc.); Jahweh who makes a new people for His new land, washing away the filth of the daughters of Zion (Is 4:7), making a new covenant with His people (Jer 31:33-34), giving them a new heart (Ezk 36:24), and putting His spirit upon them for ever (Is 69:13); Jahweh who judges the nations (Am 1:7, etc.), brings foreigners to His temple (Is 43:5), and sends blessings on all flesh (Is 55:11). The ideal future presents itself as a time when Jahweh reigns in Zion over His people (Is 24:2, Mic 4:5), and teaches His ways to all nations (Is 59:20). This relation of Jahweh to Israel's ideal future is rooted in Israel's past. It is not something quite new, but a glorification of the old. The Mt. Zion of the ideal future is but the ancient mount made higher (Is 2:2), and the new people are people of a new covenant with Jahweh, more in-
ward than the old, in the same sense as at all times the ideal Kingdom is an idealization of the greatest facts of Israel's past.

4. Davidic rule and the ideal Kingdom. A common but not constant feature of Israel's ideal future, important but never supreme, is the element of a Davidic rule. Davidic 'rule,' or house, we
must say rather than Davidic 'king,' because it is a
relatively seldom that attention is fixed on a particu-
As God's kingdom is a "living reality" (Col. 1:13), its nature is to be found in its attributes and in the activities of its subjects. The kingdom of God is the rule of God in the heavens, embodied in the Son of Man (Matt. 6:10). It is the reign of righteousness, peace, and joy in the Holy Spirit (Rom. 14:17). The kingdom of God is the rule of God in the hearts of his people (Matt. 5:3). It is a spiritual kingdom that is established by the preaching of the gospel (Acts 8:12). The kingdom of God is also a visible kingdom that is established by the rule of the Church over the world (Rev. 11:15). It is a kingdom of salvation (Acts 15:14), a kingdom of grace (Rom. 8:31), and a kingdom of love (1 John 4:17). The kingdom of God is the rule of God in the lives of his people (Col. 1:13). It is a kingdom that is to be desired (Ps. 45:2) and a kingdom that is to be feared (Ps. 45:6). The kingdom of God is a kingdom of peace (Isa. 14:6) and a kingdom of justice (Isa. 11:6). It is a kingdom of righteousness (Isa. 11:10) and a kingdom of love (Isa. 53:5). The kingdom of God is the rule of God in the church (Eph. 1:22) and a kingdom that is to be desired (Rev. 10:1). It is a kingdom of light (Rev. 21:23) and a kingdom of truth (Rev. 21:26). The kingdom of God is a kingdom of salvation (Acts 15:14) and a kingdom that is to be feared (Ps. 45:6). It is a kingdom of peace (Isa. 14:6) and a kingdom of justice (Isa. 11:6). It is a kingdom of righteousness (Isa. 11:10) and a kingdom of love (Isa. 53:5).
Jahweh makes a 'full end' of judgment in the land (Is 10:11). Thus the beginning of society in the ideal future was thought of as somewhat the new planting of the race after the Flood. The new stock is not sinless, but it is purified and ennobled. Each member will be given his share of men in the ideal future as needing priestly intercession, as making offerings and sacrifices, though the covenant with Jahweh is then written on the heart (Jer 31:33, 34). With Ezekiel the office of a temple and priesthood is conspicuous (40-48), though he thought of the people as having experienced a profound change (37:26).

No, did Isaiah, while declaring that every one who was left in Zion should be called holy (44), think of a sinless race of men. Like the post-Exilic Malachi (3:1-4), he thought rather of a people who were morally and spiritually quickened and exalted, but yet capable of sin (Is 33:14). The hopeful prophet of the Exile, though seeing by faith a city and land in which Jahweh would take delight (Is 63:17), a people whose children were all to be taught of God (54:10), and all righteous (61), nevertheless believed that the new Zion would have a temple (44:22), and seemed to admit the existence of sin when he says that the 'sinner' being a hundred years old shall be accounted (65:12). Thus, we believe the little company with whom the ideal future begins nor their descendants are thought of as sinless, their moral and spiritual state is indeed exalted. The prophets are fond of setting this forth in two closely related terms, that of knowing-Jahweh-and the affections of the messiah with Him. The new Israel shall add to Jahweh as hisi, 'my husband' (Hos 2:23), and Jahweh shall rejoice over His people as a bride rejoicing over her bridegroom (Is 62:4, Zeph 3:17). Much more frequently the happy state of the redeemed in the great future is summed up as 'knowing Jehovah.' That is the key to Isaiah's vision of peace (11), the fruit of Jerusalem's new covenant in the heart of all (31:14), and it is promised to all the children of the most-tossed Zion (Is 54:13). Of the depth and vital character of this knowledge we have indications in Hosea's sorrowful word, 'My people are destroyed for lack of knowledge' (4), in Jeremiah's connecting it with his new covenant (31:33-34), as well as in his thought that the shepherds who shall teach the new Israel will be according to Jahweh's heart (56:1), and clearly in the statement of the Exile that Jahweh Himself shall be the teacher (Is 54:5). This is a knowledge that permeates the entire man, the will and the heart as much as the understanding. In Ezekiel and certain post-Exilic writings the moral and spiritual state of restored Israel is conceived less profoundly. Ezekiel's New Jerusalem is dominated by ritual. He speaks indeed of a new heart, but it is to be manifested in keeping the old statutes and ordinances (36:26-27). In Joel and Zechariah the holiness of the redeemed Israel seems to be thought of as physical separation from everything that is ceremonially unclean. No stranger shall pass through Jerusalem, nor a Canaanite come into Jahweh's temple (Jl 3:19, Zec 14:18).

Such were the prophets' thoughts of the individual member of the ideal Kingdom. Other features of the society remain to be mentioned. Judah and Israel, which had been separated for three hundred years when Jeremiah wrote, are again to walk together (Jer 3:18, Ezk 37:15-19). Justice and righteousness are to prevail everywhere, in the wilderness as well as in the fruitful field (Is 25:10). Moreover, the new knowledge of Jahweh bears fruit not only in right relations between man and man, but also in great joy and abiding peace. The redeemed shall not see any more (Jer 31:20), but shall have a wreath of everlasting joy upon their heads (Is 35:2). Jahweh will create Jerusalem a rejoicing and her people a joy (Is 65:17). Such statements, since sin and death still exist in the ideal future, must be understood in a relative sense; not less so the announcement that a deep, universal, and abiding peace will characterize the new Israel (Is 29:11). Such statements, since sin and death still exist in the ideal future, must be understood in a relative sense; not less so the announcement that a deep, universal, and abiding peace will characterize the new Israel (Is 29:11). Such statements, since sin and death still exist in the ideal future, must be understood in a relative sense; not less so the announcement that a deep, universal, and abiding peace will characterize the new Israel (Is 29:11).

To the spiritual side of the ideal Kingdom belongs its religions relation to the nations. This is variously conceived by different prophets. It is not touched by Amos or Hosea. According to Is 26:7 all the nations flow under the house in Jerusalem, apparently ly a spontaneous movement. Jahweh's house is exalted so high that they see it and are attracted. They have confidence that Jahweh will teach them, and they come with a purpose to walk in His ways. Since peoples do not readily change their gods, this conception of Isaiah that all nations would be drawn to Jahweh's house implies that, in his view, the religion of the new Israel would be far more powerful in the lives of men than religion had ever been in the past.

There is no suggestion of missionary work on the part of Israel in the conversion of Egypt (Is 19). Jahveh sends a deliverer to Egypt in a time of crisis, and in consequence Egypt worships Jahweh. Not only not, but the prophet appears to teach that the Assyrians become worshipers of Jahweh through the influence of Egypt. This outlook of Isaiah has no parallel for a century and a half, but in the latter part of the Exile and in the post-Exilic age we hear again of Israel's religious relation to the Gentiles in the ideal future. In Oseero-Isaiah, exclusive of the Songs of the Servant, and in Ps 2 and Ps 72, the religious influence of Israel is associated with the idea of its political dominion, and owing to this a certain tone of severity (Is 41:20-44:28). In one of the late visions ascribed to Zechariah (14:16-20), the remnant of the nations are to go up to worship Jahweh and to keep the Feast of Tabernacles; if they do not, they are to be punished. Far different is the conception of Jehovah's purpose in Is 25, which may be larger than the return from Babylon: Jahweh is to give a great banquet in Zion to all nations, and is there to destroy the veil that is between all nations. There is no hint of political subjection to Israel. The nations come into the spiritual light and joy which Jehovah gives.

Still more significant is the conception of Israel's ideal religious service to the Gentiles which is found in the Song of the Servant. This is not now in Zion, but afar, in their respective homes, that they receive Jahweh's salvation (Is 49:1). It is not at a banquet given by Jahweh, but through the efforts of His faithful people, that the nations have the 'veil' removed. It is not here through the largess of the King that the Gentiles are blessed, but through the quiet and patient testimony of the Servant (Is 42:6). Through the bitter suffering and martyrdom of the Servant (Is 52:13), Israel's spiritual relation to the Gentiles is the deepest ethical thought of the OT on the subject.
to have immediately preceded it, that is, the breaking of Assyria's power; the mountain of Jahweh's house was not exalted above the hills, and the nations did not flow unto it; Egypt was not brought to Jahweh's house; the light of Egypt lead Assyria to Sennacherib in the God of Israel. The ideal future of which Jeremiah spoke did not dawn after seventy years (203), nor did the Davidic deliverer of Ezk 29:21 arise at the close of the forty years' desolation and captivity. The hopes associated with the return of the exiles whom Cyrus released (Is 41:2-4, 45:1-6) was not fulfilled; nor was Zerubbabel the Davidic king who was to bring in the long expected day (Hag 2:2, Zec 4:4). As with these hopes which contained an element of time, so with the others. The vision of Jahweh's glory in restored Israel and Zion—a city most splendid, a temple surpassing Solomon's, and the Shekinah rendering sun and moon unnecessary—did not find an embodiment when Jahweh brought back the captives; nor did the reign of peace among the nations and peace in Nature begin. The restored people were no matchless army, the temple was not built, and the land was not more fertile nor the hills and mountains more plentifully supplied with water, life was not prolonged so that a child died a hundred years old, the fact of a connection from one generation to another. Judah and Israel were not re-united on the return from Babylion; indeed, Israel never returned.

As for the people who had gone back to Jerusalem, they were not the men of the ideal future of whom Jeremiah and Deutero-Isaiah had spoken. They were doubtless a chosen remnant in respect of their loyalty to Jahweh and their patriotic devotion to Zion, but the literature that deals with the post-exilic history plainly shows that they were not a people in whom Jahweh's new covenant was realized, not a people taught of Jahweh in a unique manner and established in righteousness.

Another fact is to be noted in this connexion. The prophets themselves were well aware that the prophetic expectations have been fulfilled, but they did not cease to speak with confidence of God's purposes for Zion. In 734 B.C. Isaiah expected, within a little while, the Davidic prince who, the Assyrian power having been broken, would inaugurate the ideal Kingdom; and then, a generation later, in 702 B.C., though his earlier expectation had not been accomplished, he spoke again, with equal assurance, of the turning back of the inquirer and the dawn of a new age (Is 2:20). Sennacherib was indeed turned back, but the hoped-for age was not therewith inaugurated.

A century later, in the new crisis that had arisen with the approach of the Babylonians, the prophet Jeremiah speaks of the political uncertain hope, which had looked for in his own day, beyond an exile of long duration. Deutero-Isaiah foresees Israel's return in conjunction with the overthrow of Babylon as an event of the near future, and associated the ideal Kingdom with that return; and, though this hope was not realized, Zechiahiah, in those very days, declared that Jahweh had returned to Zion, and that He would gather His dispersed into the land a second time (Jer 31:2-12). The two hopes, then, could do good to the people (8). Later, perhaps much later, we hear an unknown prophet foretelling that after the distress which was to befall Jerusalem the new age would dawn, when Jahweh's name would be one in all the earth (Zec 14:4). Thus the vision of an ideal future which had arisen with Amos and Hosea did not fade away. Jahweh's name, undeterred by its failure to be embodied on earth, and baring no jot of heart or hope, looked for its realization in a future not too remote.

This persistence of hope, taken together with the fact of a considerable element of change in the visions of the ideal future, seems to show that the prophets were not greatly concerned with the particular details of their pictures, but were established in certain great principles of Jahweh's character and will. Their thoughts of times and seasons, of agents and methods of fulfilment, of fit material and political accomplishments of the coming ideal State, might vary from one another, and might all be very imperfect or quite wrong; they still held to an ideal perfecting of Jahweh's gracious will in a glorious Kingdom for His chosen people. Whether the vision of the prophets in its essential elements prospered according to the spirit of His work, or is yet to find it there, is a question that lies beyond the limits of this article.

II. In the NT.—1. Introductory note.—For the study of the Kingdom of God in the NT two points are of fundamental importance: (1) the use of the term 'by Jesus, and (2) the word 'Church' as used by the early disciples. The present article is limited to the former. In determining the content of the term 'Kingdom of God' in the thought of Jesus, the hope of progress lies in a more careful analysis and valuation of the various sources of His teaching.

The apocalyptic literature, beginning with Dan 7:14, influenced the form rather than the content of Jesus' teaching on the 'Kingdom of God', or, in particular, on the consummation of that Kingdom. Even this influence is often exaggerated. The Logia contain very little that presupposes an influence of apocalyptic literature (as Mt 19:28-29, 25-40, and Mk 13 cannot all be ascribed to Jesus. The thought of the nearness of the Kingdom of God and the bondage of the soul's consciousness of God's presence with Him, and was not at all due to the apocalypses. Moreover, what is most characteristic of Jesus, His supreme emphasis on the ethical-religion of the Kingdom, is found in much of the apocalyptic literature, for the authors of that literature lived in visions of the consummation.

2. The data—It is significant that the term 'Kingdom of God' (or 'Kingdom of heaven') occurs in the material which is peculiar to Matthew about three-quarters as many times as in the Logia, the oldest Gospel, and the matter peculiar to Luke taken together (Logia eight, oldest Gospel eleven, matter peculiar to Luke three, matter peculiar to Matthew seventeen). We infer that it was a favourite term with the editor of the First Gospel—such an inference that receives support from the fact that he has sometimes prefixed the term to parables where its use appears to be extremely vague (e.g., Mt 21). If, however, the term was a favourite one with this editor, we should form an impression regarding the proneness of the conception in the teaching of Jesus, not from his usage, but from the Logia and the oldest Gospel. Having regard to these sources, we must say that the term 'Kingdom' is used by Jesus with great frequency. The Logia may count slightly less than 200 verses, and the words of Jesus in the oldest Gospel a few more
than that, and, as was said above, the former source contains the term in question but eight times and the latter only eleven. The matter peculiar to Luke contains approximately 164 verses which are not in the other. In these the term 'Kingdom of God' occurs but three times, while in Matthew's peculiar material, which contains about 187 verses which are words of Jesus, the term is found six times. Furthermore, it may be noted here that no one is reported to have spoken of what He meant by 'Kingdom of God,' and that He never felt called upon to declare in what sense He used the term. His thought on the subject, like His thought on Messiaship, was left by Him to be inferred by those who had seen eyes and understanding hearts. His faithful disciples occupied His thought far more than did the coming of the Son of man with the clouds of heaven, and the least detail of their spiritual life was more important in His sight than all the computations of the apocalypticists regarding the day and hour of the 'end,' or how the 'end' was to be ushered in.

2. 'Kingdom of God' as used by Jesus.—(a) His agreement with the Prophets.—The word of the oldest King (Mt 1.static) and the first one that, when Jesus came into Galilee, He preached, saying, 'The time is fulfilled, and the Kingdom of God is at hand; repent and believe in the Gospel.' This is the same as the consciousness of being in the prophetic line, a continuation of the prophetic hope of a divine Kingdom. But, when we hear what He said of the Kingdom at different times, it becomes plain that He was not a continuator of the prophetic hope in its entirety, and that His thought moved in line with what the great prophets had said of the spiritual side of the ideal Kingdom. He said nothing of the restoration of the Davidic throne, nothing of the glory and riches of Palestine in the day of fulfillment. The only kingship that He contemplated was the Kingship of God (Mt 26:50), which is regarded as unattainable. That this rule of God was regarded by Him as a teaching of the OT appears, e.g., in the manner in which it is introduced into the model for prayer which He gave His disciples. They are taught to pray: 'Thy kingdom come (Lk 11), and it is taken for granted that they will understand this term. The petition is, indeed, a petition for the fulfillment of such OT words as Is 28:20 and Mic 4:4.

(b) Penal elements in His usage.—(1) Jesus' thought of the Kingdom of God is not altogether identical with the spiritual side of that Kingdom as seen by the prophets. It is more inward and personal. That is, while the prophets pictured the Kingdom of God as like unto heaven (Lk 19:16), and in the oldest Gospel it is compared with the earth which, once the seed is deposited in it, carries forward its development until the corn is full (Mt 1.static-25), in both cases the Kingdom is a force working from within. It is self-propagating in the parable of the Leaven, and in that of the Automatic Earth it is a seed that the heart mysteriously germinates and matures. These parallels go further than the prophets in their implications regarding the nature of man and his relation to God.

(2) Again, it is peculiar to Jesus, in distinction from the prophets, that He thought of the Kingdom of God as having a lowly beginning. The heart of a child is the most favorable soil for it (Mt 19:14). The mustard seed is the fittest symbol of its opposition to its time. Furthermore, it is in the size of the plant which it produces (Mt 13).

(3) The use of Jesus differs from that of the prophets, further, in that He speaks of a Kingdom of God existing on earth in two spheres, an earthly and a heavenly. No difference between the earthly and the heavenly Kingdom of God is clearly marked in His words (Mt 4:25 is probably a Christian expansion of the last clause of Lk 9:11). The Logia have one saying, possibly two, in which the Kingdom of God is equivalent to the Son of man (Lk 1:33, Lk 17:20 = Mt 5:5), and the oldest Gospel has one such saying, possibly more (Mt 9:5; cf. 10:4.b-25 = 13:45).

(4) Finally, the usage of Jesus differs most widely from that of the prophets in that He thought of the Kingdom actually begun with Him and His disciples. In an important sense it was still future, but it was also present. This is clearly implied in a saying of the Logia, though it does not contain the term in question. Jesus said to His disciples (Lk 10:9-11): 'Blessed are the eyes which see the things that ye see: for I say unto you, that many prophets and kings desired to see the things which ye see, and saw them not; and to hear the things which ye hear, and heard them not.' This reference to the OT hope determines the meaning of the words 'what ye see' and 'what ye hear'; it is the fulfillment of the prophetic vision of a better future. Again, in the oldest Gospel there are at least four indications of Jesus that belong here. He said to His disciples: 'Unto you is given the mystery of the Kingdom of God' (Mt 13:11). The 'mystery' was something to be revealed to the disciples, and the disciples were learning it in that very hour. Secondly, a scribe who answered discreetly, Jesus said: 'Thou art not far from the kingdom of God' (Mt 12:35). It would seem a necessary inference from this word that His own disciples were nearer to the Kingdom as in the kingdom of God. Quite in accord with this is the saying preserved in Lk 17:20c: 'The kingdom of God cometh not with observation: neither shall they say, Lo, here! neither, There, there! for lo, the kingdom of God is within you.' The new age had begun; therefore that of the Law and the prophets had come to an end. On the other hand, it is equally clear in the oldest sources that Jesus looked for the coming of the Kingdom of God in some future day. He taught His disciples to pray for it (Lk 11), and He assured them that it would come with power within a generation (Mt 9:5). The reconciliation of these apparently discordant views lies in the nature of the Kingdom of God as Jesus conceived of it. Neither view can be ignored by the historical student. Both are contained in the conceptions of the Kingdom as a soot that develops and matures for the time of harvest for God's final act. JESUS CHRIST, III, B. C. 2, above, pp. 510-513.

G. H. Gillett.

KING'S EVIL.—This is the name given to scrofula, a disease which was supposed to be cured by the touch of the king of England. The same belief was held regarding the king of France. The Lat. regis morbus originally denoted jaundice, but, with comencesed (Mid. Dutch) and le mal de royn (Old Fr.), was applied to scrofulous affections, and especially glandular swellings of the neck and face (see OED, i.e.). Doubtless other ailments were at times popularly included in the phrase 'the Evil' or 'the King's Evil.' There was a belief that the seventh son could cure the malady (John 4:10; 2 Cor. 11:11, Body of Man, London, 1915, p. 340). This is sometimes extended to the seventh son of a seventh son, and even to the ninth son of a ninth son. This belief also was once the crux of many laws of public health. The method was by stroking. Fantastic medicines were prescribed for the curing of the Evil, such
as goose dung, viper’s flesh, and lion’s blood (Gulielmus van den Bossche, Historia Medic. Brussels, 1639, Index, e. v. ‘Scrophulis remedia’).

In medicine the sorcerer is said to have been the first to cure by touch those suffering from ulcers. William of Malmesbury states that some of these miracles happened in Normandy before he came to the throne (Gesta Regum, London, 1840, ii. 229).

It is clear that the king had a model to follow in the canonized king — whilst presenting an idyllic picture of England in his day and recording several of his miracles. The notion of an active touch continued, for Shakespeare in Macbeth (iv. iii. 140) expresses the view of a later age when he makes Malcolm say: ‘

'Tis call’d the evil:
A most miraculous work; / Which often, since my here-remain in Englt, / I have seen him do. / How he solicits heaven,
Comes best to know; but strangely-lusted people, / All sworn and aurochs, pitiful to the eye, / The more despair of surgery, he cures.

Hanging a golden stamp about their necks, / Put on with holy prayer: / and ‘tis spoken,
To the succeeding royalty he leaves
The healing benediction.’

The touch is not mentioned among the reasons for Edward II. being canonized by the German monarchs, but it appears to have been fairly continuous from Henry II. to Queen Anne.

There is a curious passage in Sir John Fortescue’s tract on the title of the House of York that is not mentioned in the recantation which he forced to make in 1471 as a condition of his restoration. Arguing that a queen regnant is not allowed by the laws, he says: ‘And altho’ the Kings of England ben encrusted in thayre hands, and by vertue and merite they have doen talke commonel health sickness, by putting and touching the maladies, by threnching sickness; and also goud and siluer ben slaved by them, and so offered on Good Friday, have ben the meanes and cause of great cures, as it is known, and therefore such gold and siluer is desired in all the world. Which good things must nedes cease for all the time that a woman were so Queene of that land because that a woman may not be envoysed in her hands’ (first printed in T. F. Clemert. Lit. Hist. Wek. and Family History of Sir John Fortescue, London, 1869, i. 498). In the corresponding Latin of the Deinastic Jarret Thomas Lancastere the name of the medal is given—regius morbus (ib. p. 533). Fortescue’s doctrine was not accepted either as to the throne or as to the power of healing.

Edward II. became so money as alms, but Henry VII. was the first to bestow the small gold medal, which Shakespeare assigns to the generosity of the Confessor. There are cases in which it is alleged that the evil was caused by the touching-piece originally given to another sufferer.

The healings were performed mostly in London (by Charles II, at the Banqueting Hall, Whitehall), but the ceremony was possible wherever the Court might be; and Langley, Newmarket, Chester, Bath, Salisbury, and Oxford are known to have witnessed such functions. Easter, Whitsun, and Michaelmas were the usual seasons, and the hot weather was avoided.

The first separate treatise on The King’s Evil is Chasimia (London, 1567), by William Tooker, who declares that Queen Elizabeth cured many thousands. In 1602 William Clowes, a famous surgeon, published A right fruittfull and profitable treatises for the artificial cures of the malady called in Latin Struma, and in English The Evil cured by Kings and Queens of England. He also mentions Thomas Fuller, who, when young had seen James I. touch in Salisbury Cathedral, also professes unwavering faith.

If any doubt of the truth thereof, they may be remitted to the times and places for further confidence. He further says: ‘
Shall we be so narrow-hearted as to conceive it possible that, amongst all the hosts of corporal creatures, kings are the eminents of all Christian men, kings of Britain, the first-fruits of all Christian kings; should receive the peculiar

privilege and sanative power, whereof daily instances are presented unto us?’ (Chast’s History, ed. J. S. Brewer, Oxford, 1845, i. 387-390).

As the finances of Charles I. contracted, he substituted silver for gold in the touch-pieces, and many received only the imposition of the royal hands. The monarch according whose healings we have the fullest information was Caroline whose touch of 627 persons was granted. It is said she touched 90,798 persons. Evelyn, in his Diary, ed. W. Bray, London, 1890 (6th July 1660), gives a detailed account of one, and also notes that on 28th March 1664 there was so great a concourse of people, with their names, that 2574 persons were killed in the crush at the office where the tickets had to be obtained. Each applicant had to bring a certificate from the clergyman of his parish, and signatures of the churchwardens also were required by a proclamation issued in 1683. The parishes were expected to keep a register of the certificates they issued. At the public healings the king sat in his chair uncovered and surrounded by members of his court. One of the chaplains read the Gospel from Mk 16, and at the latter part of v. 13, they shall lay hands on the sick, and they shall recover,’ the chief surgeon brought up the sick persons in order. The wages were 5s. a day, 1s. 6d. per person. The king stroked the face or neck, where the disease was evident, with both hands, and a second surgeon then took charge of the patient. The reason seems to be that all the patients had been touched; and a second Gospel from the first chapter of John was commenced. At v. 5 the surgeons presented each patient a second time. The Clerk of the Closet kneeling, presented to the king the gold medal on a white silk ribbon, which he then placed round the neck of the patient as the chaplain read v. 6; the Gospel was continued to v. 8, and followed by prayers. At the close the Lord Chamberlain and two other noblemen brought linen, basin, and ewer for the king to wash his hands, and with this the ceremony ended. Such was the procedure under Charles II. The office for the healing appears to have been drawn up in the time of Henry VII. in Latin, and was in part a modification of the blessing for sore eyes, and the exorcism against evil spirits. This was sometimes modified. Elizabeth used the sign of the cross, which was omitted by her successors, but restored by James II., by whose authority the office was printed in English in 1686. It was reprinted along with the Office for consecrating censing vessels being printed by license of Deucrul, by F. G. Waldron (Literary Miscellany, 1789). The final modification was in the reign of Queen Anne, and was included in the Prayers Book, incorporating that of 1724, although George I. never performed the ceremony—a fact duly noted by his disaffected Jacobite subjects. The forms used by James II. and Queen Anne are given in the third and fourth editions of Hamon L’Estrange’s Alliance of Divine Offices (1699, 1646). Occasionally there were private healings, when the ceremonial was less elaborate.

Patients were occasionally sent from various parts of the country at the partial cost of the places to which they belonged. In 1682 the Corporation of Preston paid 10s. for a bricklayer’s son to go to London ‘in order to the procuring of His Majesty’s touch.’ In 1697, for two girls to go to Chester, where James II. then was (J. Harland and T. T. Wilkinson, Lancashire Folklore, London, 1887, p. 77). Similar payments from Ecclesfield, York, and Kirkby near York have been noted (W. Andrews, Lancashire, London, 1893, p. 19; H. Fishwick, History of the Parish of Kirkham, London, 1874, pp. 98, 106).

The Stuart pretenders as well as the Stuart kings claimed the healing power, and one of the charges
in the trial of the Duke of Monmouth was that he had touched children for the Evil. The last recorded instance of the rite occurred in the Jacobite rising of 1745, when Prince Charles Edward touched the sick. In the Holywood Palaestine the "Touch-pieces" were struck for James III. and Henry IX., i.e. the Old Pretender and Cardinal York. Thomas Carte, in the first volume of his History of England, gives us a touching picture of the healing power of the kings was not due to anointing, recited the case of Christopher Love, who went abroad to be touched by 'the eldest lineal descendant of a race of kings' who had not been crowned or anointed. This eloquent reference to the Old Pretender led to a controversy, and the Corporation of London withdrew their subscription from the History (see J. Nichols, Literary Anecdotes of the 18th Century, London, 1819-15, ii. 495, where many details are given).

The power of healing the King's Evil was also claimed by the kings of France, and was said to have been given to Clovis at his anointing. Amplan, in Scallenburg, says that Philip I. was the first to touch, and that he was deprived of the power on account of his absolute life. The ritual was settled by St. Louis. After coronation at Rheims, the King went along a pilgrimage to the shrine of St. Mardouf, who died in a battle, and who was said to be successful in curing scrofula that it was called St. Mardouf's Evil after him. The sick were ranged in the church, or, when the number was too large, in the cloisters or in the park, where they were touched by the king and received a gift from the Grand Almoner. Heals are recorded by Charles VII. (1422), Louis XI. (1451), and Charles VIII. (1483). Cardinal Wolsey was present in 1530, when Francis I. touched 200 people. When Henry IV. was crowned at Chartres in 1594, as many as 1500 were present as at a healing. His physician Laurentius asserts that 50 per cent were cured within a few days after being touched. Peter Lowe (Discourses of the Whole Art of Chyrurgie, London, 1612) mentions the touch as used in France: 'The diseased is first viewed by the Chyrurgions, who finds in it to be the kind of King's Evil, then the diseased is set on his knees, and presented to the king, who maketh a cross on his forehead with his hand, saying, Le roy te touche. Dieu te guérit. God knows thee whole.' (J. Finlayson, Account of the Life and Works of Master Leonard Leisue, 1596, p. 8.)

Louis XIV. is said to have touched 2000 persons two days after his coronation, and 1600 on the Easter Sunday of 1666. Every French patient received 15 sous, every foreigner 30 sous. When Louis XV. was crowned, the King of St. Mardouf was brought to Rheims, and over 2000 persons were touched. The custom continued until 1776, and the authorized programme of the coronation of the Louis XVI.

R. J. Dunglasen (History of Medicine, Philadelphia, 1872, p. 209) asserts that the healing touch was not restricted to the kings of England and France; it appears to have been not infrequently employed by Druids. He conjectures that it arose from Druidic practices—a theory for which there appears to be no evidence. The kings of Hungary were credited with the power of curing jaundice. He accompanied his operations by prayer. It may be noticed that in all these cures, whether by kings, seventh sons, or healers, the common feature is that of stroking with the hands. That many patients were apparently benefited by the touch need not be doubted. The change of air involved in a journey to the Royal Court, religious solemnity, the Holy familiar blessing, and the efficacy of the touch-piece as an amulet, would all tend to help the natural curative process. The history of the royal healing suggests that it is a fragmentary survival from primitive times, in which the divinity sometimes centred in the same person, and when, as disease was regarded mainly as demonic possession and medicine as exorcism and magic, the priest had often to exercise the function of the physician. It is noteworthy that in England the healings were most numerous in the reign of Charles II., when the 'patriarchal theory' of the origin of monarchy was held by the Royalists in an extreme form. But the materials at command are scarcely sufficient to warrant any broad generalization.

WILLIAM E. A. AXON.

KISMET.—Kismet is an Arabic word, meaning 'lot', 'distribution', 'fate'. It is not found in the Qur'an in this philosophical sense, the idea of fate being there expressed by comparison with a bird: 'Every man's augury (lit. bird) have we fastened on his neck' (xxviii. 14); 'your augury (bird) is in God's hands' (xxviii. 48); Zamakhshari interprets thus: 'The source of good and evil is in God; and this is your destiny (kindur) or your fate (kismet). If God wishes, He gives you; if He wishes, He denies you.' In Qur'an xxxvi. 18 we read: 'Your augury (bird) is with you,' i.e. 'Your evil destiny accompanies you.' The origin of this comparison is unknown.

The idea expressed by the word kismet relates to events of the earthly life; it is the share of good luck or of accidents, of fortune or of misery, which fails to each. The term is not used in a theological sense like the words *khotan* and *khozape* which refer to man's good or bad deeds and to his destiny in the hereafter (see art. FATE [Muslim]).

The belief that each one's fate is settled beforehand by God, and that whatever one may do, one can scarcely modify it, is popular in Muslim countries; and is often to be found in Muslim literature, especially among the poets and story-tellers. In the rich collection entitled Al-Mutanab (ed. Fr. tr. by G. R. Cat, Paris, 1899) there are several chapters on fate and destiny, on fortune and its vices and virtues.

A man said one day to the philosopher Bununmah: 'I have seen an ignorant person enjoying the name of a wise man being excluded from them; hence I have understood that man has not in his hands the disposition of his fate' (al-Mutanab, l. 711). A poet has written: 'I know very well that it is only God who can be helpful or hurtful' (ibid.).

Said, in his Bedd ten (tr. C. Barbier de Meynard, Paris, 1880, ch. v), groups several anecdotes in which he explains the idea of fate and the duty of resignation.

'Happiness,' he says, 'is a gift of the divine justice; it would be more exact to say of the divine arbitrariness,' adding, however, that man has never the right to regard this arbitrariness as unjust. A clever archer can never hit his target with his arrow, but, when fate deserts him, he cannot
even make a hole in a piece of felt or silk. A poor man loses a penny and searches for it vainly; an indifferent passer-by, on the other hand, is complacent in the loss of the penny unostentatiously.

What is the use, then," concludes the poet, "of struggling against the force of chance?"

The following quatrains are from Alā Saud from Khayyām:

1 If your situation is good, it is not the result of your clever managing or the favor of the gods; resign yourself to your lot (Hicayen-Azad, La Recie de l'amour, Paris, 1906, tr. p. 360). In the story entitled 'The Story of the Sheik with the generous Palm,' in the Thousand and One Nights, a rich man twice gives a purse to a poor rope-maker to help him to free himself from his poverty; but scarcely has he received it than he loses it. One then gives him a worthless piece of lead, and this lead becomes the source of his fortune (tr. J. C. Mandrus, Paris, 1890-1900, xiv. 64 ff.; R. Burton, Supplemental Nights, London, n.d., iv. 341-365).

This doctrine of chance, which conduces to idleness, is one of the causes which hinder the progress of Muslim peoples in matters of economics. It is, however, only a popular belief, and is not accepted in theology, as has already been indicated in the art. (Part of Muslim).

B. CARRE DE VEAUX.

KISSING.—Kissing is a universal expression (in the social life of the higher civilizations) of the feelings of affection, love (sexual, parental, and filial), and veneration. In its general use it is more or less symbolic, but in maternal and in sexual love it has an essential value of its own as a form of physical affection, which not only expresses but stimulates.

1. General description.—A refinement of general bodily contact (the instinct to which is irrediscible), lovingly symbolizes a case, in the higher levels of physiological psychology, of the meeting and interaction of the two complementary primal impulses, hunger and love. It is remarkable that, though the act in its civilized form is very rare among the lower and semi-civilized races, it is fully established as instinctive in the higher societies. This is a case of an acquired character or of some corresponding process. Equally remarkable is the fact that a line can be drawn between the higher civilizations; thus, the kiss seems to have been unknown to ancient Egypt; in early Greece and Assyria it was firmly established, and probably its development in India was as early as the Aryans.

Touch is 'the mother of the senses,' and the kiss may be referred generally to a tactile basis, as a specialized form of contact. Animal life provides numerous analogies; the billowing of birds, the cataglotism of pigeons, and the antennal play of some insects are typical cases. Among the higher animals, such as the bear and the dog, there is a development which seems to lead up to those forms of the act most prevalent among the lower races of man and also characteristic of the peoples of Eastern Asia. Far more similar, however, to the civilized human kiss and the non-oilactory forms of a analogous kiss, is the cat's of pressing or squeezing another's nose. A

2. Forms of the kiss.—The lower types are incorrectly grouped by travellers under the term 'rubbing noses,' and various forms are often confused. The oilactory form occasionally includes mutual contact with the nose, as among the Maoris, Society and Sandwich Islanders, the Tongans, the Eskimos, and most of the Malayans. In bundles of noses, this 'Malay kiss,' as described by Darwin thus: the giver of the kiss places his nose at right angles on the nose of the other, and then rubs it; the process occupies no longer time than a handshake among Europeans. Cook and his companions found the South Sea Islands form a vigorous mutual rubbing with the end of the nose, omitting the oilactory element. Elsewhere, as among the Australians, the general contact of the nose only, the face open but resigned and content, since the good and evil of this world do not depend upon you (Hicayen-Azad, La Recie du sourire, Paris, 1906, tr. p. 360). In the story entitled 'The Story of the Sheik with the generous Palm,' in the Thousand and One Nights, a rich man twice gives a purse to a poor rope-maker to help him to free himself from his poverty; but scarcely has he received it than he loses it. One then gives him a worthless piece of lead, and this lead becomes the source of his fortune (tr. J. C. Mandrus, Paris, 1890-1900, xiv. 64 ff.; R. Burton, Supplemental Nights, London, n.d., iv. 341-365).

This doctrine of chance, which conduces to idleness, is one of the causes which hinder the progress of Muslim peoples in matters of economics. It is, however, only a popular belief, and is not accepted in theology, as has already been indicated in the art. (Part of Muslim).

The oilactory form occasionally includes mutual contact with the nose, as among the Maoris, Society and Sandwich Islanders, the Tongans, the Eskimos, and most of the Malayans. In bundles of noses, this 'Malay kiss,' as described by Darwin thus: the
like language, is a refinement of the nutritive processes of the mouth.

The kiss is a special case of tactile sensory pleasure; it is the lips (whose skin is the very sensitive variety between the ordinary cuticle and the mucous membrane) are alone concerned. The movement made is the initial movement of the physiologic catalysts. There is, no doubt, a true psychological nexus between affection and hunger, which is no less truly expressed in the mechanism of the kiss. The act is a secondary habit of the lips, just as speech is a secondary habit of the whole of the processes of eating. It is thus, the intimate connection between the development of language and the masticatory processes of man has been drawn out by E. J. Payne. The kiss, therefore, is not to be referred to the bite, or even to gustation, much less to mastication, suction, or olfactory processes. The primary movement of the lips is simply transferred to a metaphorical use, so to say, and their sensitiveness is applied to a secondary object. Warren still is not hunger, but the analogous emotions of love, affection, and veneration.

Lombroso has argued that the kiss of lovers is derived from the maternal kiss. It is true that the mother and brother still kiss among peoples who do not practise the former. The Japanese, for instance, are ignorant of the kiss, except as applied by a mother to her infant. In Africa and other uncivilized regions it is a common observation of travellers that husbands and wives, and lovers, do not kiss. But all mothers seem to caress and fondle their babes. Winwood Reade has described the horror shown by a young African girl when he kissed her in the European fashion. 4 The argument, however, of Lombroso is of the same order as that which derives sexual love from maternal, and in neither case can there be any derivation, precise, because the subject during adolescence comes into a new physical and psychological environment, which itself is sufficient to explain a new reaction.

Some variation in the kiss proper (which we identify with the European) may here be noted. The kiss of North American Indian women is described as consisting in laying the lips softly on the cheek, no sound or motion being made. 5 This would not come under the Christian criticism of the English kiss, for our language is extremely subject to various forms. 6 When Australian or negro women are mentioned as employing the kiss, 7 we may assume that it is of the olfactory variety. The former person (recently argued about) is relatively high in the scale of human development. They have one branch, the North Queenland tribes, where the kiss is well developed. It is not used between mother and child, and husband and wife. In the midst with many early languages, the Pitta-Pitta dialect has a word for kissing. 8 As for distinctions in the civilized Western kiss, that of the ancient Romans still applies, though modern languages do not employ three terms for the three forms in Latin, amantium was the kiss on the face or cheeks, as used between friends; basium was the kiss of affection, made with and on the lips; succinus (or saucium) was the kiss between the lips alone.

The modern French retain, and other continental peoples (to some extent the English also) follow them, the distinction between the kiss on the cheek and the kiss on the mouth, the latter being reserved for lovers alone. Both in social custom and in literature the erotic symbolism of the lovers’ kiss has assumed a remarkable importance among the French, who regard a kiss on the mouth, except in cases of love, as a real social sin.

It is interesting to note that Greco-Roman, Hebrew, and early Christian civilization have combined to form the modern European habit.

3 Social history of kissing. There is much stories about kissing habits. It is not known in any form among the Japanese, prior to European influence, among the Indians of Guiana, the ancient Celtic peoples, and the ancient Egyptians, each statement is probably too dogmatic. The general conclusion is that the habit is known in every form or another has been prevalent since primitive times, and has received its chief development in Western culture. Among the Greeks and Latins, parents kissed their children, lovers and married persons kissed one another, and so did friends of the same or different sexes. 1 The kiss was used in various ceremonial and religious acts. Very similar was the Hebrew practice, 2 with the exception that kissing between persons of different sex was disconveneanced, though a male cousin might kiss a female cousin. The Rabbits advised that all such kisses should be avoided, as leacings and suspicions among peoples of mixed race, and to kissing to greeting, farewell, and respect. 3 In Semitic life also there was more use of the ceremonial kiss than among the Greeks and Romans.

The early Christian habit of pouching kissing as a symbol of fellowship was an application of pagan social practice, and there are grounds for supposing that it offended the Hebrew element as it certainly shocked the Jewish Church. 4 This is St. Peter’s kiss of love; 5 and St. Paul frequently writes: ‘Salute one another with an holy kiss.’ It possessed a sacramental value.

The primitive usage was for the ‘holy kiss’ to be given promiscuously, without any restriction as to sexes or ranks, among those who were all Christ Jesus. 6 Later, owing to scandals, or rather to such feeling as Tertullian mentions, 7 the practice was limited, and it was ordered that men of the laity should salute men, and women women, separately. 8 The classical practice, rendered slightly more free by the early Christian exaction, prevailed throughout the Middle Ages, with the curious detail that English women had more liberty than continental in kissing male friends. Erasms in a famous passage describes how his friend at one occasion kissed in this matter by English girls. 9 In Catholic ritual the kiss dwindled to more or less of a survival. In court ceremonial it persisted with other details of etiquette; and there it was enhanced with ecclesiastical and legal formalities. Knights after being dubbed, persons elected to office, and brides on marriage were kissed. 10 After the Renaissance a change appeared in England, and kissing became more and more restricted to parental and sexual relations. Thus W. Congreve, at the end of the 17th cent., writes:

1 Tyrole, loc. cit.; Ellis, p. 7. Under the early Empire the practice assumed remarkable forms in social intercourse; it was fashionable, for instance, to kiss the mouth.

KISSING

741

cessing moral refinement, or perhaps the increase of restrictions necessitated by an extension of individualism, may be assigned as a cause.

In modern social life the kiss is confined to lovers, members of the family, and women-friends. Between fathers and sons, and between brothers it is to be found in surviving adolescence. In continental countries it still persists, especially in France, between male friends, and this fashion is preserved between sovereigns. The courtly use of kissing a lady's hand, common in classical times, was a courtly feature of the court life of Renaissance times. It is obsolete in common life, but clings to the etiquette of great personages. As already stated, the distinction is carefully preserved among continental peoples between the kiss of affection and the kiss of affianced love.

4. Social and religious usages.—(1) In the etiquette, natural or artificial, of salutation, the kiss is not in every case, but the relations involve tenderness or veneration, or where these emotions are supposed. Its importance is illustrated by various facts of language. The `embrace' and the `kiss' are synonyms with it. Where the fact is obsolete, language preserves its memory. The Spaniard says `I kiss your hands'; the Austrian describes an ordinary salutation by the phrase *Kuss d' Honneur*.

According to Rabbi Akiba, the Medes kissed the hand only. 2 Odysseus, on his return, was kissed by his friends on the head, hands, and shoulders. 3 In Greece generally inferiors kissed the hand, breast, or knees of superiors. 4 In Persia equals in rank kissed each other on the mouth, and those slightly unequal on the cheek, while one much inferior in rank prostrated himself. 5 Even *fall on the neck* of Jacob and kiss him. 6 Among the Hebrews the cheek, forehead, beard, hands, and feet were kissed; some deny the practice of kissing on the lips. The phrase in the Song of Songs does not prove its existence, but there is no a priori reason against it in the case of the lover's kiss. 7 The customary kiss in modern Palestine is thus described:

*Each in turn places his head, face downwards, upon the other's shoulder ("falling on the neck"), and afterwards kisses him upon the right cheek, and then reverses the action, by placing his head similarly upon the other's right shoulder, and kissing him upon the left cheek. . . . A man will place his right hand on his own left shoulder, and kiss his right cheek, and then by his left hand on his right shoulder, and kiss his left cheek. This is a second form. A third consists in the following: the giver of the kiss lays his right hand, under the head of his friend and supports it while he kisses it.* 8

The custom is still common among the Moslems. 9 It has been suggested that, when Abaelon to gain popularity kissed the people, he employed the second form. 10

In Morocco equals saluted one another: the cheek or head; so Samuel saluted Saul. Inferiors kissed the hands of superiors. If, in the betrayal of Jesus, Judas kissed his Master on the face, it was an act of presumption. 11 The fact that the kiss was passed over without remark seems to show that it was, as it should have been from disciple to master, a kiss on the hand. The Prodigal Son would kiss his father's hands before being embraced by him. 12 Homage may be assigned to the phrase of Ps 2:1, 'kiss the Son.' As an act of piety, the Pharisees practised kissing the feet, as did the pious general Hyrcanus. 13

(2) Besides the permanent objects of the kiss, in family and analogous relations, the relations of superior and inferior, lord and vassal, sovereign and subject, there are many others which, with more or less precision, have claimed the kiss as a religious service. It is very significant of the affectionate element in religion that the kiss should have played so large a part in its ritual. The meeting-point of feet. Similar homage may be assigned to the phrase of Ps 2:1, 'kiss the Son.' As an act of piety, the Pharisees practised kissing the feet, as did the pious general Hyrcanus.

But such is not the case. The kiss is symbolic of Christ in kissee the disciples' feet has been preserved till recent times by some religious orders, and even by European monarchs. The foot of the pope is kissed in ceremonial audiences. By the year A.D. 847 it was said to be an ancient custom.

There are grounds for supposing it to have been obtained from a usage in the Emperor-worship of Rome. 2 Prostration is an instinctive expression of fear, awe, or adoration; to clasp the knees, as was the custom with Greek suppliants, is equally instinctive. The act of kissing the feet is a refinement of these. The OT phrase 'licking the dust' is doubtfully referred to the kiss upon the feet. In ancient India it was a familiar salutation of respect. 3 The feudalistic aspect of the little court held by the old Roman *patronus* is illustrated by Martial's epigram, which complains of the burden-some civility of the kisses of clients. 4 In the court ceremonial of mediavalk and modern Europe, the kiss on the cheek obtains between sovereigns; subjects kiss the sovereign's hand. In medieval Europe the vassal thus saluted the lord, while it was not unusual for attendants and others to kiss him with a quick motion, separating the lips gently, and kissing each his own hand. 5 The Turk kisses his own hand, and then places it on his forehead. The Arab kisses his hand to the storm. 6 Such is the gesture of adoration to saints and men referred to in the OT, and also used by the Greeks to the sun. 7 It was the Greek and Roman method of adoration. In explanation of the gesture, Oriental folklore agrees with European in identifying life or soul with that which is kissed. In the Brithish East India Company a gentleman kissing the feet of a dead or living person was an act of adoration. A gentleman kissing the feet, as he should kiss by the mouth, in the presence of hisاستخدام كيس، was an act of adoration. A gentleman kissing the feet, as he should kiss by the mouth, in the presence of his...
aspet of the kiss is perhaps to be found in the application of the kiss to saints and religious heroes. Thus, Joseph kissed Jacob, and his disciples kissed Paul. Joseph kissed his dead father, and the custom is retained in our civilization of imprinting a farewell kiss on dead relatives. To suggest, however, that Joseph prays the worship of Jacob as a divine being is against psychology. All that can be said is that so fine a human sentiment is on the border-line between sacred and secular feelings. In medieval Europe there was a similar feeling about the kiss of state. This is shown by the instances of Henry II. and St. Thomas of Canterbury, and of Richard I. and St. Hugh. Similarly in social life generally; it is said that among the Welsh the kiss was used only on special occasions, and a husband could put away his wife for kissing another man, however innocently. The early Christians exploited the social value of the kiss. Though in strong contrast to the Welsh custom, this is equally sacramental. It has been argued that the ritualistic 'kiss of peace' alone obtained among the Christians, and that the social salute was not practised. But the evidence is wanting to prove the latter custom. For St. Ambrose this was 'pietatis et caritatis pignus.' The custom involved a peculiar sentiment, if we consider it in connexion with the Church; the expression of love, in which passion was encouraged, though chastity was enforced (see art. CHASTITY [Christian]).

In the early Church the baptized were kissed by the celebrant and the congregation after the ceremony. Roman Catholic ritual still includes the kiss bestowed on the newly ordained by the bishop. The bishop on consecration and the king when crowned received the kiss. The kiss bestowed on penitents after absolution was connected with the kiss received by the Prodigal Son. The practice of giving a farewell kiss to the dead is probably connected with the old Italian rite of receiving the soul of the dying in his last breath. In the 16th cent. the Council of Aixerre (A.D. 578) prohibited the kissing of the dead. Penitents were enjoined to kiss sacred objects.

5. The kiss of peace. — First mentioned in the Church, the kiss of peace was one of the most distinctive elements in the Christian ritual. To Clement of Alexandria it was a 'mystery.' The eclipse was a preliminary rite in the primitive Church. Eusebius has suggested that it was derived from an institution of the Persians. Philo speaks of a 'kiss of harmony' like that between the elements; the Word of God brings hostile things together in concord and the kiss of love. However that may be, the kiss is a feature of both Western and Eastern ritual, more conspicuously in the former. St. Cyril writes: 'This kiss is the sign that our souls are united, and that we have shed all remembrance of injury.' This kiss seems to have been given at the beginning of the offertory, between the washing of hands and the cursa corde. But, later, the kiss was in close connexion with the Communion. It has therefore been conjectured that the pass was twice given. In the modern Roman ritual it is given again by High Mass, and rarely to any of the congregation. The celebrant kisses the corporal, and presents his left cheek to the deacon, with the formula pass ferreus, answered by the deacon's hau. The deacon conveys the kiss to the subdeacon, and he to the other clergy. In the Greek liturgy the celebrant says, 'Peace be to all,' and kisses the givers of the kiss, and the deacon kisses his own stole. On Easter Sunday in the same church the congregation kiss one another. The fact that the Christians of the time of the younger Pliny were called upon, when arrested, to 'adore' the deity of the Emperor, is sufficient to emphasize the ritual importance of the kiss. Adoratio ('the act of carrying to the mouth'), the Roman form of homage and worship, consisted in raising the right hand to the lips, kissing it, and turning it in the direction of the adored object, after which the worshipper turned his body to the right. During the ceremony the head was covered, except when Saturn or Hercules was adored. Plutarch suggests fantastic reasons for exceptional uses in which the worshipper turned from right to left.

But both Greeks and Romans employed the kiss direct in worshipping the statues of gods, and the lips and beard of the statue of Hercules at Agrigentum were almost worn away by the kisses of the devout. The kiss indirect, or the kiss at a distance, may be described as a natural extension of the direct, capable of development by the imagination. It is not without reason that it can be traced from Greek-Roman civilization to that of modern Europe, where, however, it appears to be more instinctive in children. The adoration of the Roman Emperors was influenced by Oriental ceremonial. It consisted in bowing or kneeling, touching the robe, and putting the hand to the mouth and kissing the robe. A variation was the kissing of the feet or knee. It does not seem to have become the fashion before Diocletian.

The kiss of homage in the Middle Ages was so important a part of the ceremony that osculum became a synonym of homagium. The vassal kissed the lord's feet (rarely his thigh). Afterwards he offered a present for the privilege, a bone or bone-oven, a term which shows the connexion of confusion with the equally prevalent fashion of kissing the hand of the sovereign. It is said that Rolf the Ganger, the first Duke of Normandy, when receiving the province as a gift from Charles the Simple, kissed him, and afterwards put the bone in his mouth as he stood erect. When homage was paid in the lord's absence, the vassal kissed the door, lock, or bolt of his castle; this was hau. The kisses of the vassals made pretences of kissing the king's feet.

6. Death by kissing. — Rabbinical lore includes a unique fancy, explanatory of the death of the righteous. According to this, the death of a favourite of God is the result of a kiss from God (bi-neschif). Such a death was the easiest of all modes, and was reserved for the most pious. Thus died Abrahaam, Isaac, Jacob, Aaron, Moses, and Miriam. There is a legend that, as St. Monica lay dying, a child kissed her on the breast, and the saint at once passed away. Italian folklore preserves the Hebrew idea in one of its omens for death: 'addormentarsi nel bacio del Signore.'

1 Gf. 501, An. 3997. 2 Jacobus, loc. cit. 3 Thurston, loc. cit. 4 Ellis, p. 217. 5 See Thurston, loc. cit. 6 Hesychius, vi. 1. 68. 7 Cyprian, ad fil. Ep. iv. Carol. 4. 'Aderaltos.' 17 Nyrop, p. 124. 18 Nyrop, p. 102. 19 Jacobus, loc. cit.; Ror. Si. Beba bithra, 174; Desi. x. 1. 20 Nyrop, p. 96; 'to fall asleep in the Lord's kiss.' The kiss of a ghost (in other folklore) produces death (56. 171).
KISSING

7. Kissing sacred objects.—Kissing the image of a god was a recognized rite of adoration among both Greeks and Romans. The early Arabs had the same rite. On leaving and entering the house they kissed the house-gods.1 The kisses of sacred objects were kissed.2 The toe of St. Peter’s statue is kissed by Roman Catholics. The Muslim kissed the Ka’ba at Mecca. In the wall there is a black stone believed by Muslims to be from paradise. It was once white, but has been blackened by the kisses of sinful but believing lips.3 The Hebrews often lapsed into the idolatrous practice; Hosea speaks of ‘kissing calves’; the image of Baal was kissed.4 Together with kissing (p. 9), or with kissing, the kiss comprises belief and homage. The Hebrews kissed the floor of the Temple,5 and to this day, in the Hebrew ritual, it is the practice to kiss the sixth of the sabbath when putting on the sash and when entering or leaving, and the Scroll of the Law when about to read or to bless it.6 It is even customary among Jews, though not obligatory, when a Hebrew book is dropped, to kiss it. kissing the Book is a case, surviving (as a real living ceremony) in the highest civilization, of primitive conceptions of the oath. These were expressed in various forms.7

One method of ‘charging an oath with supernatural energy is to touch, or to establish some kind of contact with, a holy object on the condition that the oath be kept.8 The view of Westernmark, that mana or baraka is thus imparted to the oath, is further developed when the name of a supernatural being is introduced; thus the modern English ceremony runs, ‘God bless us!’ A complementary aspect is supplied by forms whose object is to prevent perjury.

The Angami Naga (in South India) has the custom of kissing the sacred object. This is an object placed on the head, and sitting on the resting back of an ox and eating a part of the ox’s heart.9 Hindus swear on a copy of the Sanskrit texts (Hiranyakasipu).10

The European ceremony of kissing the book of the New Testament after taking the oath in a law-court connects in its material form rather with the kiss of sacred objects than with the kiss of sacred objects. It is used in the ceremony of the kissing of relics and sacred objects generally. But in essence there is still some of the primitive sense of responsibility by contact, reinforced stronger by the invocation of the name of the deity. Derived indirectly from the Greek-Roman ritual kissing of sacred objects and the Hebrew reverence for the Scroll of the Law, it was early developed by the Christian Church into their characteristic ceremony of oath-taking. Chrysostom writes:

“But do thou, if nothing else, at least reverence the very book thou holdest out to be sworn by, open the gospel thou takes in thy hands, administer the oath, and, hearing what Christ saith, saith of oaths, tremble and despise.11

Inglutude is represented repeating the words:

‘These four Evangelists of Christ our God which I hold in my own hands and kiss with my mouth.’12

In the former quotation the act of kissing can only be inferred from the characteristic ceremony. The handling of the book is less than the Greek rite of placing the hands on the scroll when swearing. Even in the Middle Ages an oath was often taken merely by laying the hand on the Missal.13 The Lombards swore lesser oaths by consecrated weapons, the greater on the Gospel, but it is not certain whether they kissed the book of oath ratified by contact with a sacred object was a corporal oath’; the object was the holy book, the equivalent of the Greek book, or object being identified. No doubt, contact by waressing of the lips was an early date regarded as more efficacious than contact by means of the hand, and thus the mere notion of prohibition was superimposed on that of adoration. In Islam the rite is that usual in adoration of divinity, to include the kiss.10 In modern England a detail to be noted is that the hand holding the book must be ungloved. The book varies according to the creed; a Jew is sworn on the OT; a Roman Catholic on the Donatist Testament. The term ‘book,’ employed with special reference to the oath upon the NT, has been regular in England since the 14th cent. at least.4

Among Anglican clergy it is customary to kiss the cross of the stile before putting it on. The Catholic Church enjoins the duty of kissing relics, the Gospels, the Cross, consecrated candles and pithi, the hands of the clergy, and the vestments and utensils of the liturgy. It was formerly part of the Western use that the celebrant should kiss the host. He now kisses the corporal. The altar is regarded as typical of the relic taken by the oil of the coldbuer.15 In the Greek Church relics are kissed.

The ‘kiss of peace’ was in mediceal times the subject of a curious simplification of ritual, by which it became, as it were, a material object. In the 12th or 13th cent., for reasons of convenience, the instrumentum pacis, or osculatorium, was introduced.16 This was a plaque of metal, ivory, or wood, carried with various designs, and fitted with a handle. It was brought to the altar for the celebrant to kiss, and then to each of the congregation at the rails. This is the pas-board or pas-bredle of the missal.8

8. Metaphor and myth.—The metaphorical applications of the idea of the kiss are not numerous. In some phrases it expresses a light touch. Generally it implies close contact or absolute reconciliation or acquaintance;17 to kiss the dust is to be overthrown; to kiss the rod is to submit to chastisement;18 to kiss the cup is to drink. Philostratus inspired Ben Jonson’s image of the loved one leaving a kiss in the cup.19 A ‘butterfly kiss’ is a light one.

Folklore developed in interesting ways the connexion between the emotional gesture and the ideas of magic and charm. Relics were kissed. Conversely, the kiss of a sacred person, a specialized form of his touch, evokes the leper, as in the case of St. Martin. Some similar association of thought may attach to the nursery practice of ‘kissing the place to make it well’; gamesters used to kiss the cards in order to secure luck with them; an Alpine peasant kisses his hand before receiving a present. Pages in the French Court kissed the articles with which he was charged to carry. A famous instance of symbolism is the kiss bestowed by Brutus on his mother-earth—an application of the kiss of greeting. But in Germany...

1. Nyrop, p. 135.
3. Nyrop.
folklore to kiss the ground is a synonym for to die. The privilege in English folk-custom known as 'kissing under the mistletoe' is a Christian festival connected by Frazer with the licence of the Saturnalia. It may have originated independently as an expression of festivity. Greek, Latin, and Teutonic mythology employed the motive of unbinding a spell by a kiss, as in the case of Alcestis and Persephone. In Arthurian romances, when beauty changes a dragon into the maiden who had been enchanted. The Sleeping Beauty awakened by the kiss of the lover is a widely-distributed motive. An analogy, without actual derivation, is to be found in many primitive cases of cancelling a taboo. Thus in Australian ceremony bodily contact, analogous to the kiss, in various forms, removes the tabu between two persons, such as the celebrant and the subject of a rite. This analogy may be seen between Teutonic and early Christian ritual in the conception drawn out by Grimm between mimicking and the kiss. He finds this both in sacrilege and in courtship. Closely parallel to the magical power of the kiss in breaking tabus and restoring to consciousness is the myth-motive in which a kiss produces both forgetfulness and remembrance. This capacity is evidently based on a sense of latency, and is significant in connexion with the practice of the kiss in religion. It brings to one focus the kiss of love and the kiss of adoration. In the psychology of adolescence the kiss produces a forgetfulness of old conditions and awakenings to a new life. The kiss appears to have no symbol in art. European children and adolescents express it in writing by a cross, perhaps merely an accidental choice. The Svetlana style an insinuate kiss as a 'kiss with dots.' Some Rabbis explain that Esau's kiss was insincere (Gn 33), and every letter of the word וְנָשָׁה is dotted by the Massoretes.

**KIZSTA**

(Stx. Къръша, 'the dark one'). One of the great rivers of S. India, which, like the Godavari (q.v.) and Kaveri, to which it is inferior in sanctity, flows nearly across the entire peninsula, and rises in the Mahâbaleswar plateau of the W. Ghâts, only 40 miles from the Arabian Sea. At its source is an ancient temple of Siva, inside which the infant stream pours out of a stone in the shape of a cow's mouth (gau-mukhâ). This place, known as Kṛpâbâh, 'the lady Kṛṣṇa,' is a favourite resort of pilgrims. Fifteen miles down stream is the old Buddhist town of Wal, one of the most sacred places in its course, with group of cave-temples and several later Hindu shrines (BG xix. 1885 610 ff.). Farther on it passes close by the town of Sâṭara, Karad, or Karad, at its junction with the Koyla and Mâhâral, where it is joined by the Yeon. In the Bijapur District, Sangam, at its junction with the Mahârâbâh, possesses a temple of some sanctity, dedicated to Siva under the title of Sângâmâvar, 'lord of the sacred meeting of the waters,' the site of an annual religious fair. Thence passing through the dominions of the Nizâm of Haidarâbâd, it reaches the bay of Bengal in the English Kistna District. Here Bezwâla contains some rock-caves of the Buddhist period and a few ancient Hindu temples.

W. CROCKETT

**KIZILA BASH.**—Kizil Bash, 'Red Heads,' the name by which are denoted the members of a sect distributed throughout the whole of Asia Minor. They call themselves 'Alevis;' their nick-name, which in Persia and Afghanistan was and is given to other peoples also, originates doubtless from the colour of their head-dress. Their total number is estimated at more than a million; they form an important section of the population of the vilayets of Sivas (about 305,000), Erzerum (107,000), Angora, and Manurete ul-Aziz (Kharput), and in certain districts constitute even the majority. Their language is Turkish or Kurdish. Though reckoned officially as Musulman Sunnites, in reality they are not in a state of communion with them: they profess Islamism only in a formal way to avoid persecution. They think they are in safety, they do not attend the mosques, read the Qur'an, to say the prayers, or perform the Muhammadan ablutions. Except in the presence of a Sunnite, they do not wash or veil. They drink wine, they do not observe Ramadân, and some of them do not practise circumcision or shave the head and other parts of the body as the Turks do. Moreover, they cherish a profound aversion to the Turks, and regard them as unclean; when they are obliged to entertain them, they even go so far as to pollute the dishes with which they serve them. On the other hand, they show great goodwill in their relations with the Christians. They have secret beliefs and practices which they reveal only with extreme reluctance, and no one has hitherto been able to penetrate, except very imperfectly, the mystery with which they are surrounded.

Their sect, like some Christian Churches, has a hierarchical organization. They have priests called dâdâ, whose dignity is hereditary from father to son, and who are the necessary intermediaries between God and the rest of the community. This ascetical caste is subject to a species of bishops. These themselves render obedience to two patriarchs, who are regarded as descendants of Ali, and who are invested with a sacrosanct authority. One of these is the Shâikh of Khânyâr (about 34 miles to the N. of Sivas), a popular place of pilgrimage. It is certain that the Kizil Bash possess a sacred mountain, partly liturgical in character, but as yet no part of it has been made public.

Three superimposed stratifications in the religion of the Kizil Bash may be distinguished.

(1) There is an old pagan foundation going back to the ancient Anatolian beliefs, tinged with Persian Mazdaism, which were practised in the country before its conversion to Christianity. The Kizil Bash regard certain heights or certain trees as sacred, e.g. near Kara Hisar (Taylor, *Journal Royal Geog. Society*, xxxvii. [1868] 297), and on holidays they sacrifice sheep and fowls on these summits. The trees which grow there—mostly pines—are surrounded with superstitions, and no one is allowed to carry an axe near them (cf. E. and E. Cumont, *Voyage dans le Font*, Brussels, 1903, p. 172 ff.). The ancient Mazdaans, worship streams and especially springs. They also venerate fire; when they build a house, they light a fire with great ceremony, and this must be kept burning as long as the house remains standing. The place of honour is near the hearth, and to spit there is sacrilege. A fire-
KNEELING 751

altr hewn out in the rock is still the object of devotion. (Cf. p. 20.) They worship the sun at its rising and setting, and a day in which it does not appear is for them a day of mourning. They also worship the moon.

Everybody in the East accuses the Kızıl Bash, of giving themselves up to orgies in their nocturnal ceremonies (cf. below), when the lights out, each man has commerce with a woman taken by chance. This, however, is a universal custom in different forms in the East, as, for instance, the torah sonerous, 'extinguishers of the light.' It is difficult to know what degree of truth there is in this imputation. But it is remarkable that the same promiscuity was, during their feast of 1st January, laid to the reproach of the Pálacians in the 9th cent., who were distributed throughout the same regions as the Kızıl Bash of to-day (Manichean formula of abjuration, in P. G. I. 1499: μετά τῇ tē kταρᾱς μῆνην ἀπόστολους τὰ φῶτα, παρακότα τῇ ἄλλῃ ἁμαρτωλῇ, καὶ μετὰ τῶν ψευδοπροφητῶν φῶτας οἱ οὐρανοὶ τῇ φωτείᾳ). It is possible that those supposed acts of debauchery may be an indirect tirade against the Manichees. For the institution of the worship of Mī and Anāītīs. This would also be true of the custom, if it was well attested, of offering a young girl every year to the dēdēkh, with a kind of sausage, if one is born, becomes a priest, or whose daughter must remain a virgin and set herself apart for the cult (Cf. de Choisy, Arménie, Kurdistân et Méopotamie, Paris, 1892, p. 68).

(2) The influence of Christianity is evident both in the beliefs and in the rites of the sect. The Kızıl Bash teach that God is One in Three Persons, and that the principal incarnation of God, before the coming of Jesus Christ, was that of the Saviour of the world, who intercedes for God with humanity. They are devoted to Mary, who is, they believe, the Mother of God, and who conceived without ceasing to be a virgin. At the same time, they acknowledge the existence of five powers, lower than the Trinity, mediators between the Supreme Being and man, analogous to the yatin of the Nosairis, a kind of archangels which are perhaps derived from the Arabian Amēzēr Aṣūss (p. c.). Moreover, they assume the existence of twelve ministers of God, who correspond to the twelve apostles and the twelve magī of the Nosairis. I cannot follow, in the Verdis, the offer no worship to Satan whom they regard as the irreconcilable adversary of God. Like the Nosairis, they believe that at the end of the ages the spirit of evil will come to fight for the last incarnation of Jesus. Mazdean dualism is here combined with Christian ideas.

The Kızıl Bash have a ceremony which they celebrate by night on certain holidays—the 10th of the month of Muharram was mentioned in the present writer—and also at irregular intervals, when a dēdēkh visits their villages.

1 Accompanying himself with a musical instrument, the priest who officiates sings prayers in honour of Alī, Jesus, Moses, and David. . . . The priest has a willow cane which suggests the lance of the Avenger. He dips it in water while he is saying the prayers. The water thus consecrated is afterwards distributed throughout the houses. In the course of the ceremony those who take part set some of their sins, and the manner of the early Christians. The priest prescribes various mean princes, frequently in the form of a fine, is moneyed in kind. Then they put out the lights and engage in lamentations over the faults of which they have been guilty. When the lights are rekindled, the priest pronounces the absolution, then he takes some slices of bread and a cup of wine or some other beverage, and distributes it to those of the company who have obtained absolution. . . . Among the Kızıl Bash there is a rite which follows a public confession, and portions of it are distributed by the priest along with the bread and wine. The Kızıl Bash celebrate Good Friday on the same Sunday as the Armenians, and they pay homage to several Christian saints, as, for instance, St. Sergius (Grenard, in J. d. i. 111, 511).

(3) What the Kızıl Bash have borrowed from Islamism afflicts them with the same terror as with the Sunnites. They have adopted the legend of 'Ali, whom they regard as an incarnation of God the Father, while Jesus is an incarnation of the Son. Like the Shi'ites, they fast during the first twelve days of Muharram, and observe the death of Ḥasān and Ḥusain. Some say that they regard Muhammad as the hypostasis of the Spirit, the Paraclete, but the veneration which they show towards the tomb of 'Ali, in derision of the terah sonerous, 'extinguishers of the light,' they refuse to credit him with any divine inspiration.

To sum up: the religion of the Kızıl Bash is in many respects a survival of the ancient paganism of Anatolia, which in the case of the peninsula was deeply marked by the idea of Mazdeism (cf. F. Cumont, Religions orientales dans le paganisme romain, Paris, 1909, p. 213 ff.; Eng. tr., Chicago, 1911, p. 148 ff.). The country population of these regions was imperfectly and slowly converted to Christianity, and we know that colonies of Magi dwelt there until at least the end of the 6th cent. (cf. F. Cumont, Monumentes et textes relatifs aux mystères de Mithra, Brussels, 1895-99, l. 10), and perhaps until the Musulman conquest. Further, in the 12th cent., Nères Shnorhali gives interesting details regarding the 'sons of the Sun,' who worshipped the stars, and lived among trees, the poplar (F. C. Conybeare, The Key of Truth, Oxford, 1858, p. 159). In the 8th and 9th centuries it was in the country inhabited by the Kızıl Bash that the dualistic Persianism, which had become their most numerous adherents, and even after their extermination by the Byzantine emperors, and the last incarnation of Jesus. Mazdean dualism is here combined with Christian ideas.

Further, in the 12th cent., Nères Shnorhali gives interesting details regarding the 'sons of the Sun,' who worshipped the stars, and lived among trees, the poplar (F. C. Conybeare, The Key of Truth, Oxford, 1858, p. 159). In the 8th and 9th centuries it was in the country inhabited by the Kızıl Bash that the dualistic Persianism, which had become their most numerous adherents, and even after their extermination by the Byzantine emperors, the teaching of the sect probably did not cease to exert an influence there. Finally, the relations of the Kızıl Bash with Shi'ism are probably explained by their forced conversion to Islam under the Seljuks, at a time when the Persian influence was powerful, perhaps also by the transportation of Shi'ite Turks of Turkish origin into Kurdistan in the time of the Sultāns Salīm I. and Sulaimān I. (16th cent.). It is much to be desired that a copy of the sacred book of the sect should be obtained, or that a transcription should be made at least of the hymns of its service. Then it would be possible to clear up the mysteries surrounding this very curious religion which retains numerous disciples even in our own times.

LITERATURE.—R. Oberhumer and H. Zimmerer, Durch Syrien und Kleinasien, Berlin, 1899, p. 363 ff., where citations will be found from the more ancient authors: F. Grenard (Consul of France at Rıva) has collected some new and accurate information in J. d. i. ill. [1904] 51-222. The writer of this article has added here some facts gathered by himself among the Kızıl Bash of the region of Anamis in 1900.

FRANZ CUMONT.

KNEELING.—Kneeling may be described as a natural reaction to the emotions of self-abasement and supplication. As such, it has been observed among unsophisticated peoples. In a less degree only than prostration, it symbolizes inferiority and dependence, by the abandonment of the erect posture of human active life. According to Tylor, kneeling as a ceremonial posture prevails in the 'middle stages of culture.' The same limitation, however, applies with equal force to Islam and Hinduism. Both in the middle and in the higher stages kneeling is more or less constantly associated with a third gesture—bowing, a symbolic expression of respect or reverence. It would be quite erroneous to attribute kneeling, as a sign of prostration, or bowing from kneeling. But certain forms of the bow, surviving in modern etiquette, include some bending of one or both knees; such are the Kızıl Bash ceremony at court, and the bow of ceremony in which one
foot is moved backward while the knee of the other leg is raised. 

PrIMITIVE people hardly developed kneeling as a ceremonial posture in either of the two spheres in which it obtains—social etiquette and religious ritual. What generally corresponds to kneeling in the Hindu system, or the grandees knees under the soles of the shoes, still the Muslim mode of kneeling and certainly a primitive posture, though originally expressing attention rather than reverence. It is employed largely by the Australian natives in their ceremony, and is seen in the kneeling. When the knees are reached, kneeling appears, developed from the natural supplicatory posture. In Central Africa it is a tribute paid to rank. When a chief passes, the native drops on his knees and bows his head. When two grandees meet, the junior lears forward, bends his knees, and places the palms of his hands on the ground. At higher stages prostration is usual among Oriental peoples, except the Chinese, who bow, or kneel and bow, according to the rank. To kings they kneel. It is chiefly in Semitic and Greco-Roman countries that kneeling has been prevalent as a ceremonial posture.

In Greek and Roman civilization much prominence was given to the suppliant and the act of supplication, just as was the case in the Middle Ages with the prayer of the laity. In both ceremonial customs of the kneeling, the natural posture of earnest entreaty and self-abandonment, was the constant attitude. Such phrases as "nuxen cultus" (Plaut. Truc. iii. iii. 200) and "buxen minor" (Horace, Ep. i. xii. 28), are common in metaphor. It seems that in the Assyrian States not only subjectation to kings but worship of gods was expressed by kneeling. In the later case it may be assumed as certain that the attitude has no essential connexion with prayer, as in the Christian use: the king and the god alike were it appears, pre-eminently despotic, and court and temple ceremonial had similar forms expressing similar functions, the chief of which was submission.

Among organized religions Christianity alone has given special significance to the posture of kneeling. During half its history the posture signified penitence; during the rest it signified prayer. At the change (marked by the Reformation) it was, by a curious association of ideas, identified with adoration or idolatry.

The process by which Christianity adopted kneeling as a ceremonial posture is somewhat uncertain in detail. The Hebrews, deriving many elements of their worship from Mesopotamian cults, may be supposed to have adopted kneeling from them: the temple of Solomon knelt on his knees with his hands spread up to heaven. Ezra fell upon his knees and spread out his hands unto the Lord. Daniel knelt upon his knees and prayed. The posture in these three cases seems identical with the Christian.

The Jews usually prayed standing, but knelt in prayer on special occasions of solemnity or distress.

9 R 944, Estdr, 944, 6 944. Joining the hands (contrary to the Jewish, Greco-Roman, and early Christian practice of outstretched arms, retained by the celebrant in the Consecration) seems derived from the medieval practice of homage.
10 The first Christians may be assumed to have, like the Founder, usually stood in prayer, following the practice common to both Hebraic and Greco-Roman ritual. The catacomb frescoes represent the orantes standing with outstretched arms. But earlier than this, at the period represented by the Acts, kneeling appears to have become a characteristic posture. When Stephen knelt just before his death, after the stoning, no posture of prayer can be assumed. It seems as if the posture were so regular a feature of the faith that it was applied indiscriminately on every occasion by the chroniclers. But there is no doubt that the attitude was a feature of the faith at this time. Peter knelt down and prayed; Paul knelt and prayed with them all; we knelt down on the shore and prayed. 9 For St. Paul kneeling and praying are synonymous. 4 In view of the catacomb evidence and of that of the next stage, it is clear that there was some prejudice in the evidence of Acts. But clearly there is a presumption in favour of the early adoption of kneeling for some aspect of Christian worship. The facts may perhaps be reconciled in this way: the pioneers of the faith probably emphasized the penitent and suppliant posture (which was familiar both to Jews and to Greeks and Romans) on all possible occasions; but, when the faith attained a secure position, the posture was relegated to its traditional use. The case would thus be a microcosm of the change of attitude shown by Christianity itself as a whole.

By the time of the Shepherd of Hermas (the middle of the 2nd cent.) kneeling had become familiar in Christian prayer and worship. The position has been summed up thus for the ante-Nicene period:

"The recognized attitude for prayer, liturgically speaking, was standing, but kneeling was early introduced for penitential, and perhaps ordinary, reasons, and was frequently, though not necessarily always, accompanied with certain postures of the hands. The attitude of our Lord in praying, and the attitude of the Apostle Peter when he was visited by the angel, and of the Apostle John when he saw the Lamb, are well known. And hence the kneeling posture, or postures in connexion with it, are an eminently Catholic practice. The strange thing is that in neither the pre nor the post-Pentecostal period has kneeling a penitential aspect. This may possibly have been a special development of 16th century Christianity, as in mourning, or of the Greek-Roman and Mesopotamian use in supplication or homage. However that may be, kneeling has an ever since in Roman Catholicism retained a primary connexion with penitence. In private prayer it is still, as it has been since the 2nd cent., usual but not obligatory. In public adoration it is regular, though prosecution may be used. But as the posture for public prayer kneeling has never been regular except in Protestantism. The subject requires some detail. Origin in the 3rd cent. is one of the earliest matters to emphasize the penitential meaning of kneeling; if forgiveness is required, he says, kneeling is essential. 9 St. Ambrose, in the 4th cent., writes:
"The knee is made flexible, by which the offence of the Lord is removed, and the congregation is gathered forth." 1

Pseudo-Alcin has the general explanation: 2

"By such posture of the body we show forth our humbleness of heart." 3

As early as Tertullian's time a distinction was marked; 4 he observes that on Sundays and during Temporal prayers, as such, no genuflexion is required. The implication that a divergence of use existed is proved by the ruling of the Council of Nicea, more than a century later: 5

The Synod decreed on the Lord's Day and on the days of Pentecost, that all things may be uniformly performed in every parish or diocese, it seems good to the Holy Synod, that the Synod of prayers be by all made to God, standing.

Standing was the attitude of praise and thanksgiving. Hence standing was obligatory during the psalms, hymns, and Eucharistic prayer. For a similar reason, perhaps, St. Benedict uttered his dying prayer standing, "erectis in calum manibus." 6

In his lifetime he had instructed his monks to kneel during private prayer, not to stand as when in choir. 7 There was, it is to be assumed, an inner meaning of penitence attaching to private prayer, and some importance here seems to have been given to the Gospel account of Christ's knelling in the Publican's prayer, public penitence made use of the attitude of kneeling. The custom of the early Church is clearly marked by St. Basil, who describes kneeling as the lesser penance (paradosmos) and prostration as the greater (episkelos). 8 A posture with such associations was a favourite one for anchorites and ascetics. Some such associations of thought may have inspired Eusebius's prayer that the knees of James, "the Lord's brother," became callous like a camel's, from continual kneeling. 9

The Canon Law emphasized still further the distinction between standing and kneeling. The latter was prohibited in public prayer at all the principal festivals. To be degraded into the class of genuflexentes or prostrati, who were obliged to kneel during public services even on Sundays and in paschal (Eastertide) time, was a severe punishment. 10 A gradation of posture appears in the two terms quoted, which still obtains in Roman Catholic adoration.

That kneeling is a posture characteristic of prayer as such, is a principle developed by the Reformation Churches, adoration, on the one hand, and penance, on the other, being disregarded. The 'Declaration on Kneeling' during the Lord's Supper, especially the avoidance of Roman Catholic adoration. The Presbyterians sat to receive the Communion. The originally threefold use of the attitude was perhaps assisted towards its Protestant simplification or reduction into one for prayer alone by the negative emphasis which it received from contrast with the Roman Catholic idea.

It is also remarkable that the practices of kneeling and genuflexion, or bowing of the knee, are relatively modern in their application to ideas of reverence or adoration. 11 Here, no doubt, religious and social ritual reacted upon one another. Genuflexion with one knee was developed in the Middle Ages, clearly showing a connexion with homage.

The Carthusians are noteworthy for a traditional objection to kneeling in worship; they bend the knee without touching the ground. 12

In Roman Catholic ritual the rules governing kneeling are the same. The congregation knelt throughout a Low Mass, except during the reading of the Gospel. At High Mass they kneel or prostrate themselves at the words 'et incarnatus'est' and 'verbum caro factum est'—a modern development. When adoring the Blessed Sacrament unveiled, the faithful genuflect with both knees, but with the right knee only when revering it in the tabernacle. In the old bidden prayers, as in the diocesan Liturgy of the Greek Church, the kneeling priest, asking the congregation to pray for some special 'intention,' said: 'Pleatamas genna.' 13 In penance and confirmation, and at the coronation of a king or queen, the blessing of a new knight, reconciliation, etc., kneeling is presented. The custom continues in the Roman, Greek, and Anglican Churches.

Kneeling adoration, still more, becomes the attitude in connection with the silk kneeling cloth, which is the vestment of the officiating prelate, and the cape, or dalmatic, worn by the other prelates of the ritual. The kneeling, as a gesture of duty, is not ancient. The kneeling of the Emperor in the presence of the Pope, however, is a feature of the papal Liturgy. The kneeling of the clergy is a feature of the Jewish rites, and it is also the custom of the Moslem and the Chinese.

Summary of the Various Kneeling Conventions

2. Kneeling as a Religious Sign.

In Biblical times, kneeling was largely a reversion to an ancient custom, and was not confined to the priest alone. It was a gesture of humility, and was used in the presence of royalty, but also by the people in the presence of God. In the Old Testament, kneeling was a sign of submission and obedience. In the New Testament, kneeling was a sign of reverence and respect.

In the New Testament, kneeling was a sign of reverence and respect. It was used in the presence of royalty, but also by the people in the presence of God. In the Old Testament, kneeling was a sign of submission and obedience.

In the New Testament, kne...
In the religious ceremonies of the Assyrians the god Marduk is directed to soothe the last moments of a dying man by knotting a woman’s kerchief with seven knots and tying it on his head, hands, and feet. The gods will then receive his dying spirit. The tying of knots provides the origin of the phylacteries of the Jews and their practice of binding holy texts around the limbs. The Jewish phylacteries, or ‘frontlets,’ are small leather boxes into which are strips of parchment with passages from Hebrew Scriptures, which is placed on the forehead and on the back of the right hand. That on the head is attached by having its strap tied at the back of the head into a knot of the shape of a ‘dáleth.’ The strap attached to the hand is formed into a noose by means of a knot of the shape of a ‘yodh.’ These knots, together with the letter ‘shin’ of the head phylactery, make up the letters of the sacred name ‘Shaddai’ (‘Almighty’). In Roman religious ceremonies the Flamen Dialis, the priest of Jupiter, was not allowed to have any knots in his clothing, the ring on his finger was broken, and any one coming to his house in such a state of sin would have no grims on the journey to Mecca also avoid having knots about their person when in a state of sanctity. The Qur’an contains a reference (ex. 4. 4) to ‘those who puff into knots,’ and these words are believed to refer to women who tie the knots round and blow and spit on them for magical purposes. It is even recorded that a Jew once bewitched the prophet Mohammad by tying nine knots on a string; Mohammad fell ill and recovered only when the baleful thing was found and its knots undone by the recitation of certain charms. In Biblical literature there are many references to the ceremony of ‘binding,’ the signification of the term being similar to that in the sacred region (tempulum) for the observation of birds, had to be made from wood containing no knot. In China the earliest means of communication, other than oral, is stated to have been by knotted cords. This is similar to the quipu of ancient Peru. The quipu was a cord about two feet long, composed of different-coloured threads tightly twisted together, from which a quantity of smaller threads were suspended in the manner of a book. The threads were enabled to make simultaneous revolt against the Spanish in 1809. The nautical ‘knot’ is another case in point. 5

2. Knots in religious ceremony. In the religious systems of the East the importance of the knot in various ceremonies is well recognized. At the initiation ceremony the sacred girdle with which the Brahman was invested was wound round the waist three times from left to right and tied with one, three, or five knots; at a later stage in the ceremony the initiate made a threefold knot in the girdle on the north side of the nave and drew this to the south side of it. Girdles with three knots are also worn by the Dervishes in S.W. Asia. In the miqveh, or initiation ceremony, of Zoroastrianism, the sacred kusti, or girdle, is wound round the waist three times and fastened with two knots, one in front and the other at the back, these knots symbolizing certain religious thoughts (see INITIATION [ Parsi].) 6

3. Knots in relation to love and the marriage ceremony. The magic of knots and the ceremony of binding and loosening had a particular reference in earlier times to women; in classical times, e.g., the unloosing of the girdle (g.v.) was symbolical of the loss of virginity, and by tying three knots on three strings of different colours a maid might seek to draw her lover to her side. Among the Arabs a gift, in order to attract the object of her affections, would tie knots in his whip. The true-love-knot is a symbol of plighted affection; the direct origin of its symbolism is uncertain, but from its form and signification it is possible that Thomas Browne’s suggestion 7 of its derivation from the modulus Hercules and the caduceus is correct. The symbolical use of the knot in the marriage ceremony is widely distributed and dates back to extremely ancient times. Among the Brahmins, towards the end of the marriage ceremony, the husband advances towards his young wife, who is seated facing the east, and, while reciting mantras, he fastens the tail—a little gold ornament which all married women wear—round her neck, securing it with three knots; before these knots are tied the father of the bride may refuse his consent, but after they are tied the marriage is indissoluble. 8

is also tied round the bride's waist, and, when she departs from the house, the verse 'I loosen the knot of the marriage ceremony, a curtain is held up to screen the bride and groom from each other; under this they grasp each other's right hand, after which another piece of cloth is placed over them, the ends of the cloth are tied together by a double knot. In the same way, raw twist is taken and wound round the pair seven times. It is then tied seven times over the joined hands of the couple as well as round the double knot of the ends of the cloth around them. The Bhandaris tie the hands of the wedded pair together with a wisp of kula grass. The Karans of Bengal believe the essential part of the marriage ceremony to be the laying of the bride's right hand in that of the bridegroom and the tying of their two hands together with a piece of thread spun in a special way. In upper India the clothes of the bride and bridegroom are knotted together as they revolve round the sacred fire.

The greatest development of the symbolism was in classical times. At the Roman marriage ceremony the bride's garments were bound with a girdle knotted around her body with a Heraclean knot; after the marriage, the bride, on proceeding to her husband's house, tied the door-posts with woolen fillets, and later, in the bridal chamber, the knot was tied by her husband and the girdle removed; over this loosening ceremony Juno Cninix presided. Further details of the ceremony are given by Festus, who states that the application of the girdle symbolized the binding character of the marriage oath, while its unloosening was for a good omen, so that they might be as fortunate in rearing children as was Hercules, who had seventy offspring. On the other hand, Macrobius, in his description of the continuus, states that this represents the union of a male and female serpent as an offering to Mercury, and that they are united by a Heraclean knot, which symbolizes necessity; Athenagoras says that the wand of Mercury is a symbol of the union of Jupiter and Rhea, whom Jupiter, disguised as a dragon, bound to him in the form of a Hercalean knot. A. Rossbach suggested that the Hercalean knot was associated originally with the god Sancus, and that the latter, as god of light, protected men from illness and witchcraft—apotropic powers which the knot possessed, as being his signet. In the opinion of some writers, the symbolism of its tying was that of the binding character of the ceremony, and its unloosening the loss of virginity. From a physical standpoint the Hercalean knot was difficult to loosen.

A somewhat similar custom prevails among the natives of the East Indian island of Rotti. A cord is fastened round the waist of the bride, and nine knots are tied in it and smeared with wax in order to increase the difficulty of unloosening them; the bride and bridegroom are then secluded, and the latter has to untie the knots with the thumb and forefinger of his left hand. Not until this has been done may the man possess the woman as his wife. Frazer, in recording this case, suggests that the nine knots may refer to the months of pregnancy.

Before the wedding procession a Mexican bride has a girdle tied round her waist with three knots by one of her brothers; and among the Russians, during a marriage ceremony, a net, from which a number of knots, is thrown over the bride's head, and the attendants are girt with pieces of net or girdles, 'for before a wizard can begin to injure them he must undo all the knots in the net, or take off the girdle.' Not only was the knot important in the consummation of marriage and in the protection of the married couple from witchcraft; it was also a powerful amulet in the hands of a third person in preventing the wedding ceremony or preventing the union of the parties concerned. Thus in the Middle Ages a person could prevent a marriage by tying a knot in a cord or fastening a lock. The cord or lock had then to be thrown into water, and, until the charm was recovered and undone, no real marriage could take place. Such practices were punishable, and in 1705 two persons were condemned to death in Scotland for stealing marriage-knots which had been worn near the wedded bliss of Spalding of Ashintilly. The tying of these knots was known in Germany as Necht knupper and in France as moner l'alguidette. Those who made or used such spells were condemned to the galleys, directed to be excommunicated, and the Ritual of Paris of 1630 contains the statement:

'Nous denouons pour excommunicz tous magiciens et magiciennnes, sorcières et sorciers, devineurs et devinieres, nouers d'alguidettes et autres qui par figuratures et scurtigements empéchent l'unicité et consummation du saint Mariage.'

There are innumerable examples of this superstition in medieval literature, and the same ideas seem to have been prevalent among the Northern Semites in A.D. 700, since mention is made of persons who bend a needle and insert the head in the eye, or set seals on locks and throw them into a deep well or hide them in the ground that a man may be kept away from his wife.

In Perinthale, in 1763, knots were also tabbed at the marriage ceremonies, as is illustrated by the following custom, recorded by the minister of Logierait:

'Immediately before the celebration of the marriage ceremony every knot about the bride and bridegroom (carters, shoe-string, strings of petticoats, etc.) is carried knots. After leaving the church, the whole company walk round it, keeping the church walls always upon the right hand. The bridegroom, however, is required to remain among the women to tie the knots that were loosened about them, while the newly married woman in the same room retires somewhere else to adjust the dowry of her dress.'

For a similar reason it was a common practice for the bride and bridegroom to have one or both shoes united during the marriage ceremony. In Syria the bridegroom must have no knots or buttons fastened in his wedding garments; otherwise their magic will deprive him of his marriage rights. Similar beliefs exist among the North African races. A curious belief connected with marriage is that prevalent among the Pidhiresan, a Ruthenian people on the hem of the Carpathians,

where a widow who wishes to remarry unites the knots on her dead husband's garments; here again the magic is imitative and symbolizes her freedom from her bond. 3

4. Knots at child-birth.—The symbolism of the knot at birth is obvious, and its use is probably the most widespread amongst all such beliefs. Birth is associated in all countries with the idea of unloosing, and various peoples adopt different charms of a homozygous character to facilitate delivery. Hence arise such customs as opening doors and windows, undoing hair, buttons, and all knots in the clothing, preventing the husband and other persons from sitting with the legs crossed, setting free captive animals and even school children, etc. A few examples of these customs must suffice.

In ancient India it was a custom to unloose all knots at the time of child-birth, 4 and among the Romans and Greeks such beliefs were common. Thus Oriod states that the pregnant woman is to unbind her hair before praying to the goddess of child-birth, 5 and she must also avoid having knots in her clothing. 4 At the delivery of Alcmen, Eusorid is represented as having sat cross-legged before the house in order to delay matters. 6 The same superstition as that mentioned by Oriod occurs in Bilaspur, where the woman's hair is never allowed to remain knotted while the child is being born. In many Jewish girls under their hair if a difficult labour occurs in the house. 7 The prospective mother, among the Kayans of Borneo, must refrain from tying knots; 5 and in Persia, when the birth was imminent, the schoolmasters were asked to give liberty to the boys, whilst birds in cages were allowed to escape. 8 In Denmark knots had to be undone when a birth was about to occur, and in Sumatera, to render future parturition easier, the bride must untie the straps of her horse's saddle when returning from the church. Here also the bride did not tie her shoe-laces before the wedding, in order that 'she might bear children as easily as she could remove her shoe,' and she would have toothache at the birth of her child if anything were tied over her bridal crown. 9 Among the Hes of Toogoland, when a difficult confinement occurs, a magician is called, who spins a thread of the child is bound in the woman, that is why she cannot be delivered. 10 To lose the bonds he binds the hands and feet of the patient with a tough creaser and then, after calling the woman, he lets through the creaser with a knife, saying, 'I cut through to-day thy bonds and thy child's bonds.' The creaser is then cut up into small pieces and put in water, with which the woman is bathed. 11

Similar superstitions beliefs and customs may be traced in the folklore of ancient and modern India, Java, Sumatra, the Sea and Land Dayaks, Cochin China, Central Australia, Mecklenburg, Voigland, Russia, and even to the present day in Scotland. 12

5. Knots in the cure of diseases.—Knots were largely employed by the Assyrians in their spells on those who were ill; thus, for headache, the head of the sick person must be bound with a bundle of twigs, accompanied by the recitation of magic words, and at eventide the twigs are to be cut off and thrown into the street 'that the sickness of his head may be assuaged. 13 Another text recommends the use of the hair of a virgin kid, spun and wound with two threads over to the right, and limbs of the sufferer. 2 As a charm for ophthalmia, black and white threads or hairs are woven together, with seven and nine knots thereof, and during the knotting an incantation is said; the thread of black hair is then to be knotted to the sick eye, and the white one to the sound eye. 2 The Babylonian witches could strangle their victims or cut their mouths, etc., by tying knots in a cord, and by undoing these knots the sufferer could be relieved. 4 Similar customs have been found amongst the Persians 8 and Arabs 2 in modern times. Pliny, referring to wounds, remarks:

'It is quite surprising how much more speedily wounds will heal if they are bound up and tied with a Hercules' knot; indeed, it is said that, if the girdle which we wear every day is tied with a knot of this description, it will be protective of certain beneficial effects, Hercules having been the first to discover this fact.' He also states that in guinal tumours could be cured by taking a thread from a web, tying seven or nine knots on it, and then fastening it to the patient's groin, although it was also necessary to name some widow as each knot was tied. 8 Again, to cure swelling of the groins due to ulcers, the patient is directed to insert in the sores three horse hairs tied with as many knots. 8 In 1718 the Parliament of Bordeaux sentenced an individual to be banished alive for spreading desolation through a family by means of knotted cords; 8 and in Scotland, 11 Denmark, and Sweden 8 knotted cords are still in use to protect both men and beasts from illness, the number of knots being usually three or nine. In Russia a skein of red wool is wound about the arms and legs to protect the wearer from fever, and nine skeins tied round a child's neck protect it from scarlatina. 13 One of the most common of such beliefs is that warms may be cured by tying as many knots in a string as one has warms, and to obtain the ultimate cure either the knots are unloosed or the string is thrown away or placed under a stone, when the first person to pick up the string acquires the warms; 8 or each warm is to be touched by one of the knots. 12 In the days when the belief in the possibility of transferring diseases to inanimate objects was prevalent, knots were made in the branches or twigs of trees; the ceremony, being accompanied by spells, transferred the disease to the tree. 14 For protection against disease the Hos of Toogoland tie strings round the different parts of the body. 12 Knots are even believed to be a protection against death itself, and the soul cannot leave the body till they are loosed. 12

6. Other beliefs in knots as amulets.—Among the Assyrians the knot was used to prevent the spirits of the dead from annoying the living. To attain this end, the following directions are given: 3

'Spin a variegated and scarlet thread [a knot in it; thus shalt mix together oak of cedars, spirits of the
KNOX

man, the beavened dough, earth from an old grave, a tortoise's mouth, a thorn, earth from the roots of the paper, earth of ants; thou shalt sprinkle the knots with this. But when they have been sprinkled the knots are to be cut by the hands of Marduk, also the man from the tab. 2 Evidently a witch could cast a tab on a man by tying knots and chanting a spell, for we are told that her knot is loosed, her sorcery is brought to nought, and all her charms fill the desert.3 The ancient Hindus believed that knots tied in the garments of a traveller would protect him on a dangerous journey; 4 and in classical times spells were removed by knots, for Petronius mentions that, in removing a spell from Encopinus, 5 she then took from her bosom a web of twisted threads of various colours and bound it on my neck. 6 Charms of many coloured threads were tied on the necks of infants to protect them from fascination. 7 The same idea explains the wearing of the sacred thread, or janaati, by high-caste Hindus. The knots on it, known as a bati, 8 a krota, 9 or the knots of the Creator, 10 repel evil influences, and Muhammadans on their birthdays tie knots in a cord, which is known as the sadghraha, or 'year knot.' 11 To drive away rain, the Mirzapars native name twenty-one men blind of an eye (and, there, illomened), and make twenty-one knots in a cord, and tie it under the eaves of the house. 8 The tying of knots in a string and subsequently undoing them to raise and to bring good fortune and to bring good luck to a fishing people—e.g., Finlanders, Lapplanders, Shetlanders, and natives of the Hebrides and Isle of Man. 9 South African natives before starting on a journey will knot a few blades of grass so that the journey may be prosperous, 10 and the knotting of grass in a forest is supposed by Laoc hunters to prevent others from being successful there in the pursuit of game. 11 Russians have the belief that knots act as a protective against violent death from weapons, which, as it were, are 'tied' by the knots; and knots also prevent the death of cattle and people by 'binding up' the mouths of wolves and other dangerous animals. 12 Knox belief which is also current in Bulgaria 13 and Armenia. 14

KNOX.—1. Birth and early life. —Neither the place nor the date of John Knox's birth is certain; but Giffordgate, a hamlet contiguous with Haddington, is the site for which most and against which least can be said; and a date between 24 Nov. 1513 and 24 Nov. 1514 (not 1505, as, and erroneously usually supposed) is most probable.

Local tradition in favour of Giffordgate was old in 1767 (G. Barclay, 1767, do. 1767, p. 69; and see H. J. Knox, Edinburgh, 1884, vii, xvii), A. F. Mitchell (Scottish Reformation, do. 1900, p. 29), and D. Bay Fleming (original Magus, 1899). The

ancient Register of Geneva and Knox's contemporary, Archibald Hamilton (De Confusione Calvinicurn, secta Paris, 1577), p. 8, describes him as a native of Haddington. 1

To remove a tab from a man, directions are given to bind his limbs with a double cord of black and white threads which has been sprinkled on a spit. 5 A cord then appears to be cut by the hands of Marduk, who also releases the man from the tab. 2 Evidently a witch could cast a tab on a man by tying knots and chanting a spell, for we are told that her knot is loosed, her sorcery is brought to nought, and all her charms fill the desert. The ancient Hindus believed that knots tied in the garments of a traveller would protect him on a dangerous journey; 4 and in classical times spells were removed by knots, for Petronius mentions that, in removing a spell from Encopinus, she then took from her bosom a web of twisted threads of various colours and bound it on my neck. Charms of many coloured threads were tied on the necks of infants to protect them from fascination. The same idea explains the wearing of the sacred thread, or janaati, by high-caste Hindus. The knots on it, known as a bati, a krota, or the knots of the Creator, repel evil influences, and Muhammadans on their birthdays tie knots in a cord, which is known as the sadghraha, or 'year knot.' To drive away rain, the Mirzapars native name twenty-one men blind of an eye (and, there, illomened), and make twenty-one knots in a cord, and tie it under the eaves of the house. The tying of knots in a string and subsequently undoing them to raise and to bring good fortune and to bring good luck to a fishing people—e.g., Finlanders, Lapplanders, Shetlanders, and natives of the Hebrides and Isle of Man. South African natives before starting on a journey will knot a few blades of grass so that the journey may be prosperous, and the knotting of grass in a forest is supposed by Laoc hunters to prevent others from being successful there in the pursuit of game. Russians have the belief that knots act as a protective against violent death from weapons, which, as it were, are 'tied' by the knots; and knots also prevent the death of cattle and people by 'binding up' the mouths of wolves and other dangerous animals. Knox belief which is also current in Bulgaria and Armenia.

Knox is stated to have been a student at St. Andrews under John Major, who was settled there in 1531. His student life must have begun not very long after Peace of the Martyrdom at St. Andrews in 1525, and the words in Knox's History (I. 56), 'when those cruel wolves had devoured their prey, there was none within St. Andrews who began not to enquire wherefore was Patrick Knox then to man's company.' 12

Knox was probably affected by the martyrdom; and this, along with the teaching of Gavin Logie, who fled from St. Andrews about 1524, in an account of Reformers and also the oath which graduates had to take against 'Lollardism,' may have led to Knox's non-graduation as Magister Artium. On the other hand, Major's influence and Knox's keenly patriotic spirit may have kept him from identifying himself with a cause which, in its earlier stages, came, justly or unjustly, under suspicion of being associated with unpatriotic subversion to the Compact, —Knox belief which is also current in Bulgaria and Armenia.

2. Call and ministry at St. Andrews. —The assassination of Beaton in May 1556 was combined by Knox as a godly fact justifying the failure of the civil authority to punish the Cardinal's illegal oppression. He had no scruple, therefore, about taking refuge from peril in the Castle of St. Andrews held by the enemies of the Roman Catholic religion. From the Castle congregation, led by John Roungh, an evangelical preacher, he accepted a solemn call to the Reformed ministry. On 5 May 1557, at the Parish Church he declared that the evil lives of the clergy (from popes downward), corrupt Roman doctrine, unscriptural enactments, and
blaspheinous papal pretensions proved that the Church of Rome was the whore of Babylon. 'A great number openly professed 'Reformed doctrine at St. Andrews; and Holy Communion was celebrated for the first time publicly in Scotland according to a Reformed ritual. Who had hitherto been mainbearers of the Protestant movement thus grew into a Reformed Church. Meanwhile, however, partly as a divine judgment (so Knox declared) on account of the evil doings of a portion of the Castle community, the garrison were commanded by the captain of the castle to surrender to the French fleet, and Knox, along with other prisoners, was consigned to the 'torment' of the galleries.

3. Ministry in England.—After eighteen months of toil and tribulation as a galley bondsman, Knox was released through the English Government's intervention. Gratitude to his liberators and the impracticability, then, of effective ministry in Scotland induced him to settle in England, where Archbishop Cranmer and Protector Somerset were accomplishing, under Edward vi., a more real Reformation than that of Henry vii. In Berwick (1549) he was received by the King and Queen, consisting of garrison and citizens, using a Puritan form of service. The Communion office was largely borrowed from Swiss sources, and the practice of kneeling was discontinued as a symbolical enunciation of the doctrine of the Supremacy of the Lord. During this Berwick ministry he publically testified against the ' idolatry' of the Mass before the ecclesiastical 'Council of the North,' and vindicated the Puritan position that 'all the body of Christ, not being by the brain of man, without God's express command, is idolatry.' Such action and testimony justified Carlyle's designation of Knox as 'the Chief Priest and Founder' of English Puritanism (Heroes and Hero-worship, London, 1872, p. 132). In 1551 he was promoted to Newcastle, and in 1562 he became one of six royal chaplains, who also itinerated on behalf of the Reform cause. He declined the bishopric of Rochester, not owing to any objection to episcopacy in itself, but because he disapproved of 'your proud prelates' great dominions and charge (impossible by one man to be discharged) (Laing, v. 518). As a patriotic Scot, moreover, he would be reluctant to undertake responsibilities which might debar him from eventual service to his native land. Partly through Knox's influence, sitting at Communion, he said: 'When this Second Prayer Book, while kneeling was retained, the existing rubric was inserted at Knox's instigation (J. Fyfe, Acts and Monuments, vi. 510; P. Lorimer, John Knox and the Church of England, London, 1875, pp. 99-107), declaring that by kneeling no adoration is intended either of the sacramental elements or of Christ's 'natural flesh and blood.' At Edward's death Knox not only took no part in the plot to enthronc Lady Jane Grey, but, as Royal Chaplain, prayed publicly for 'our Sovereign Lady Queen Mary,' and besought God to 'repress the pride of them that would rule.' When he was put on trial for heresy in Edward's reigned, however, became assured, Knox crossed over to Dieppe early in 1554. 'My prayer,' he writes, 'is that I may be restored to the battell again' (Laing, iii. 154 f.).

5. First return to Scotland.—The anxiety of the Regent Mary of Guise to secure the marriage of her daughter, Mary Stuart, to the Dauphin of France led her to courtish Protestant nobles, and to adopt a tolerant religious policy which encouraged Knox to visit Scotland in Sept. 1555. In districts where influential laymen gave him support, particularly West Lothian and Midlothian, Forfarshire, Ayrshire, and Strathclyde, he propagated Reformed doctrine and persuaded Protestant leaders to abstain from Mass and to celebrate Holy Communion with a Reformed ritual, thus enabling Protestants to consolidate. Knox even made a bold attempt to win the Regent by a conciliatory letter in which he praises her 'moderation and clemency.' In vain; she treated his elaborate address as a 'page and in Edward's reign, Knox to trial for heresy at Edinburgh in May 1556, and Knox arrived to meet his accusers; but they received no support from the Regent, and departed from the charge on the ground of some alleged informality. On the very day appointed for his trial Knox preached to a larger congregation than ever before had listened to him. An appeal, however, in midsummer, from his Geneva flock, and the conviction that the Reform cause, strengthened by his visit, might now be better served by his withdrawal for a time to prevent the resumption of persecution, led to his return to Geneva.

6. Final return to Scotland and establishment of the Reformation (1559-60).—In Dec. 1557 there was drawn up at Edinburgh, largely through the absent Reformer's stimulating influence, the first Scottish 'Covenant,' an organic league for defence against religious despotism and for the advancement of the Reform cause. This movement, along with Mary Stuart's marriage to the Dauphin in 1558, and consequent removal of the Regent's motive for toleration, led to renewed persecution; and the Scottish Reformers, realizing their need of Knox, invited him to return. He arrived at an opportune moment, on 2nd May 1559. Four notable preachers—

* This included his First Blast of the Trumpet against the Monstrous Regiment (i.e. Rule of Women, his Appellation against the Scottish Hierarchy, a Brief Exhortation to England, and a magnum opus on Predestination. — KNOX
Harlaw, Willock, Christison, and Methven—had been cited to Stirling on 10th May to answer the accusations. A military commission was in rebellion of the Privy Council's proclamation. For non-appearance they were declared to be outlaws, and the raising of an army of 8000 (partly French) by the Regent provoked the gathering of the people at the burgh. The king himself had anticipated the conflict. On 11th May Knox preached in St. John's Church, Perth, against the 'idolatry' of the Mass. While the congregation were dispersed, a riot began which Knox, with whom had been present Knox had been denouncing. A lad protested loudly, was struck by the irritated celebrant, and retaliated by throwing a stone which broke an image. It was as if a lighted match had been applied to a heap of combustibles. Wide-spread 'surging' of churches and demolition of monasteries ensued. After temporary truces and fruitless attempts at compromise, the Regent, supported by France, and the Reformation, by England, carried on civil war which terminated only with the Regent's death in June 1560. Knox took a leading part in the conflict as preacher and counsellor. A significant sentence was that of A.D. 1556 on the 'Cleansing of the Temple'; another in St. Giles, 1559, where the Reformed aim as being not any alteration of authority, but the reformation of religion and suppression of idolatry; an extensive itinerary for the encouragement of the English and the establishment of a Reformed ministry in chief centres; an important share in the negotiations which issued in the alliance between the Scottish Reformers and the English Government; a signal service at Stirling after a defeat by the French army, when the depressed spirits of the Reformers were 'wondrously re-erected' by Knox's inspiring assurance that their cause was, and shall prevail because 'it is the eternal truth of the eternal God'—these are some of the Reformers' contributions to the Reformation movement during that critical time (Laing, l. c. 348, 355, 471, vi. 30, 56, 75). The Regent's dying counsel to both sides was to procure the withdrawal of both the English and the French armies. This was effected; and the settlement of Scottish ecclesiastical affairs was left to the Estates of the realm. The issue was the establishment of Protestantism as the national religion by the Convention (a virtual parliament) of Aug. 1560, so far at least as this was constitutionally possible in the absence of monarch and regent.

To Knox fell the efficacious composition of a Confession of Faith; the outcome was the 'Scots Confession,' which held the field until it was superseded by that of Westminster. Inferior in logical precision to its successor, the older Confession is superior in theological breadth and spiritual warmth (see art. Confessions, vol. iii. p. 575). Knox and his associates drew up a Church polity embodied in the First Book of Discipline. It recognizes five classes of office-bearers—superintendent, minister, elder, deacon, and reader. The first office was apparently a tentative arrangement, whose discontinuance or discontinuance might depend on its effectiveness or otherwise; gradually it persisted; the reader were a temporary institution until sufficient ministers became available. The Church courts were the Kirk Session, Synod, and General Assembly; the 'crown' of the Kirk was the General Assembly. Worship was regulated by his Book of Common Order. A school as well as a church was to be established in every parish, and a 'college' in every regality, but the whole preparation was to be provided for the University. The Book of Discipline anticipated modern legislation by advocating compulsory education. The patrimony of the Church, which, prior to the Reformation, included nearly half the property of the realm, was to be expended on the maintenance of the ministry, the educational establishment, and the relief of the poor; but unfortunately, notwithstanding Knox's indignant protest, the Scottish landowners 'greedily gripped to the possessions of the Kirk' (Laing, ii. 128), which had to be content with a settlement unsatisfactory to the Church. The establishment of the pulpit that 'one Messe was more fearful to him then gif ten thousand armed enemies war . . . in the Realme' (ib. 270). His first interview with Mary deepened his solicitude. The chief subject of conversation was the right of subjects to resist their princes, particularly in the religious spheres. 'God commandis subjectis to obey their Princes,' said Mary; 'I think ye that subjectis having power may resist their Princes?' Knox, long before, had learned from John Major the essence of constitutional monarchy, and he replied; 'If Princes exceed their bounds and do against that whersoever they should be obeyed, . . . the may be resisted.' 'I perceive that you disapprove the notion me,' said the Queen. 'My travell,' responded Knox, 'is, that bothy princes and subjectis obey God.' He closed the interview with the loyal corollar that Mary must be 'as blessed within the Communion of the Commonwealth of Scotland as ever Deborah was in the Commonwealth of Israel'; but he stated to friends his conviction, 'that, not in his a proud nyad, a crafty witt, and an indurart hearts against God and his truth, may my judgment with me' (ib. 277-286). This first encounter fairly exemplifies their relations. Knox in his bearing towards the Queen united on the whole the courtesy of a gentleman with the firm and sometimes stern maintenance of his right as a 'profitable member within the Commonwealth' publicly to criticize his sovereign's doings, especially in religious concerns. At their last recorded meeting, in Dec. 1563, when Knox appeared before the Queen and her Council to answer the charge of 'convinging the lieges' without her authority, he uttered the memorable manifesto: 'I am in the place quhair I am demandit of conscience to speik the truth; and thairfor I speik. The treath I spake impyting it quhill quhill' (ib. 286).

8. Knox and the Protestant statesmen.—Amid general agreement between Knox and lay Reformers on the vital question of dethroning the Roman Catholic and establishing the National Church, there was serious disagreement as to important details. The difference consisted chiefly in the familiar divergence between principle and expedient. Was Knox was against the toleration of the Mass even in the Queen's private chapel, Moray and Maitland thought this a cheap price to pay for Mary's acquiescence in Protestant supremacy. Knox emphasized the necessity of free Assemblies; 'Take from us the freedom of Assemblies, and you take from us the Evangel.' The Protestant statesmen, especially Maitland, saw in the freedom of convocation and enactment perilous impositions upon the Church. Knox demanded the legalizing of the Book of Discipline by royal and parliamentary endorsement; the lay leaders of the Reformation resisted the claim alike as an occasion of rancour between Church and landowners and as a dangerous aggrandizement of ecclesiastical wealth and power. There was never much love to lose between Knox and Maitland, but the rancour engendered between Knox and Moray (1564-65), the immediate result of which was the latter's unwillingness to press the Queen formally to recognize the Reformed as the National Church, caused a painful breach between two men.
who had regarded each other with esteem and affection. The breach was closed about the time of the Queen's marriage to Darley, when the state (as it became an exile, and the Reformer the leader of a depressed Church. Common misfortune helped to heal discord.

When Mary's mad marriage with her husband's murderer alienated the national sentiment and led to the commencement of Knox and the Reformed Moray co-operated loyally in securing the full establishment of Protestantism, a guarantee against the accession of any non-reformed secession, then the maintenance of a Protestant ministry. To Knox Moray's tragic death was not only a great public calamity, but a heavy personal bereavement; and his funeral sermon, from the significant text, 'Blessed are the dead which die in the Lord,' moved a vast congregation to tears (Calderwood, Hist. ii. 526).

9. Last years and death. — The eventide of Knox's life was clouded with trouble. Moray's removal strengthened the party which favoured Mary's restoration; and some influential men now seceded to it, including Maitland and Kirkcaldy of Grange. On the other hand, the Regent's party, to which Knox loyally adhered, strained the relations of the former and others by 'mean and baseless devouring' of the Church's patrimony and oppressive interference with her liberty. When to these troubles was added in 1570 a stroke of apoplexy, Knox was persuaded to leave Edinburgh for the more sheltered environment of St. Andrews, where he remained for half a year. He describes himself as there 'lying half-dead,' but he did not cease from preaching.

He had to be 'laid to the pulpit,' writes James Melville, his eye-witness (Memoir, p. 75), 'where he behaved to listen at his first entry; but ere he had done, he was like to sing that pulpit to the bloud of the out of it.'

During his residence in St. Andrews took place that introduction of a modified episcopate into the Reformed Scottish Church which became the fruitful source of discord, despotism, and rebellion. Knox did not protest against episcopacy in itself; but he warned the Church of the abuses to which it might lead, and suggested safeguards against the appointment of unqualified persons and the simoniacal alienation of ecclesiastical property to secular uses. When he returned to Edinburgh — to die; but two notable functions he lived to discharge: his sermon after the massacre of St. Bartholomew, when he denounced that 'seemly death'; the 'farewell to Kings and Reformation, the Reformation, the Reformation,' and to the Barmesta, where the white heads of righteous indignation, and his last pulpit service on 9th November, when James Lawson was inducted as his successor, and when Knox with 'weak voice but fervent heart' prayed that any gift which he had possessed 'might be bestowed on his successor '100 fold' (R. Bannatyne, Memorials, p. 281). A 'last good night' to the elders and deacons of St. Giles; a solemn and affectionate Godspeed to his colleague; farewell interviews and messages, in particular a meeting with Morton whom he supported but did not love, and an assurance of divine mercy to Kirkcaldy whom he loved but opposed to being prayed for 'the troubled Kirk,' a dying vision of the 'Delectable Land'; and a last request to his devoted young wife to read the 15th chapter of 1st Corinthians, 'where,' he said, 'I first cast anchor' — these are some of the chief incidents of the Reformer's latest hours (ib. p. 388f.). He was buried in what was then the churchyard of St. Giles, at or near the spot afterwards indicated by his initials between the churchyard wall and the church wall — 'this remains were laid in the grave, Morton uttered his disinterested witness: 'Here lyeth a man who in his life never feared the face of man' (J. Melville, Memoirs, p. 60). This panegyric indicates what in Knox's character most impressed his contemporaries. But beneath this fearlessness towards men was his steadfast faith in God, and in his own call to be God's servant. Knox was inspired by the same Romanists as well as Romanism; but we must remember the great difference between the Roman Church of Scotland in the 16th cent. and in the 20th. He was a stern man who demanded severity and intolerance. There was in him a vein of tenderness and sympathy of which life-long conflict did not deprive him. We catch a glimpse of this side of his character in the almost intolerable pain which (as e.g., John Knox, C. 1557-1579, do. (Bannatyne Club), 1597; D. Buchanan, Life and Death of John Knox, do. 1644; J. Fox, Acts and Monuments, London, 1559-1579, do. (Bannatyne Club), 1612; P. Hume Brown, John Knox, 2 vols., London, 1555; J. Innes, John Knox, Edinburgh, 1566; A. Lang, John Knox and the Reformation, London, 1655; J. Stalker, John Knox: his Life and Times, London, 1860; and J. S. KODAS.—See Mýndas.

KOL, KOLARIAN.—'Kol' and 'Kolarian' are terms applied to a race and a group of languages spoken by people found on the Vindhya-Kaimur hill range, which slopes the Ganges valley to the south in N. India. The origin of these names presents many difficult questions. Skr. kola means 'a hog,' and, according to some authorities, the tribal designation is a term of contempt applied by the early Hindus to the dark-skinned aborigines. According to Jellinghams (ZE iii. 1871 ii. 326), the word means 'pig-killer'; but it is more probably, like Orion (q.v.), a variant of horda, the Mandya term for 'man.' (H. H. Rice, op. cit. p. 101; E. T. Dalton, Descrip. Ethnology of Bengal, do. 1872, p. 178). The term Kol was used in the Harivansha and other Puranas (J. Mair, Orig.
KOREA

Sir. Texts, ii. [1874] 492; H. H. Wilson, Vishnu Purana, London, 1864-77, iii. 293) is supposed to be applied to the Karna or Kanara people; but it seems more probable that it refers to the N. tribe (R. Caldwell, Comparative Grammar of Dravidian Languages, London, 1875, i. 243) in which the origin of the term Kolarian is more remarkable. F. Wilford tried to show (Asiatic Researches, ii. [1809] 92) that ‘Colar’ was the oldest name of India, his hypothesis being based on a passage in pseudo-Plutarch’s Life of Alexander, iv. 1 which speaks of a nymph Kalauria in connexion with the origin of the Ganges. The use of the term Kolarian to designate this people and their language is due to G. Campbell (JASBE xxxv, pt. ii. [1860], supplement, p. 27 f.), and was adopted by Dalton and other ethnologists, but was repudiated by Riley on anthropometric grounds:

Another theory of the origin of the Dravidians was adopted by Sir William Hunter in the account of the non-Aryan races of India given by him in The Indian Empire. According to this view there are two branches of the Dravidians—the Kolarian, speaking dialects allied to Mundari, and the Dravidians proper, whose languages belong to the Tamil family. The former entered India from the North-East and occupied the northern parts of the Indian sub-continent. The others were conquered and split into fragments by the main body of Dravidians who found their way into the Punjab through the North-West and thence towards the South India. The basis of this theory is obscure. Some of the isolated Dravidian dialects seem to rest upon a supposed affinity between the Dravidian dialects of the Kolarian and the languages of the Southern India; while the hypothesis of the North-Eastern origin of the Kolarian relies on the theory of a land connection between the peoples of Chota Nagpur. But in the first place the distinction between Kolarians and Dravidians is purely linguistic and does not correspond to any differences of physical type. Secondly, it is extremely improbable that a large body of people and continuously long-headed types should have come from the one region of the earth which is peopled exclusively by races with broad heads and yellow complexions. With this the theory in which the Dravidians are supposed to have emigrated from a trans-Himalyan origin to the Dravidians (Census Report of India, 1901, i. 506, The People of India, Calcutta, 1905, p. 461 f.).

The question has assumed another form as the result of linguistic researches. The original substratum of the type of languages now known as Môn-Khmer is found to have covered a wide area, larger than the area covered by many families of languages in India at the present day. Languages with this common substratum are now spoken, not only in the mountain Province of Assam, in Burma, Siam, Cambodia and Annam, but also over the whole of Central India as far west as the Berar. It is a far cry from Cochín China to Nínar, and the presence of the present day coincides between the language of the Korka or Korkas of the latter and the language of the former China is strikingly obvious to any student of language who turns his attention to them (G. A. Grierson, Linguistic Survey of India, ii. [Calcutta, 1901], p. iv. [1906] Môn and Dravidian Languages, p. 270 f.).

Further, many ethnologists are not prepared to accept the theory that the originality of the brahcycephalic type in trans-Himalyan (JRAI xliii. [1912] 450 ff.); and the origin of the Mundâ-speaking races is now attributed to the arrival of the first of three great invasions of Further India from the eastern uplands of Central Asia. It is improbable that the wide distribution in N. India of languages of the Môn-Khmer type could have occurred in any other way than by an emigration of the two races. The identification of physical type between the Kolarians and the Dravidians may be the result of contact metempsychosis and the control of a common environment. The status of this authority, A. Balme (Ethnography [=GJAP ii. 5], Krasnbus, 1912, p. 3), thus sums up the question:

"The other race, to which the title of Koll or Mônkh is generally assigned, is the Tseke, in the Kessel Belt, in which it is at the present time concentrated under its distinctive title of Tseke, formerly, however, it was spread over the whole of the great plains of Upper India, and, according to recent philological discoveries, it is akin, at least in language, to the Tseke of the present day, it was settled on the borders of Assam, and it passed to the east of the Bay of Bengal. Some investigators, indeed, even speak of former habitation over a still wider area. In the east and north-east of India, however, its identity has been obscured, if not obliterated, by the successive immigrations of people of Mongoloid race from eastern Tibet and the head waters of the great Chinese rivers, whose main streams of migration have sought the sea by two great courses, the valley of Salwin, and Mekong. In the Ganges plain the type is traceable through the population, slightly, indeed, along the Jumna, but more distinctively as the language is properly spoken, and almost everywhere more prevalent as the social position is lower. This graduation is due to the process by which the old Koll, who, as far as ethnography is concerned, may be considered the autochthonous inhabitants of these tracts, and a taller and fairer race, which entered India by the passage of the north-west or the plains of Baluchistan."

KORAN.—See QUR'ân.

KOREA.—The Korean Peninsula, very mountainous and well watered, projects from the continent towards Japan. On the north-west the wooded mountains of Manchuria, and the plain of Liyao, which has always been a cause of contention to the Chinese, the hunters of the north-east, the shepherds of the north-west (the Manchus), and the Mongols (or Khalkhas) on the valley of the Irkoudi, Salwin, and Mekong. On the south-west side it stretches well into the vicinity of Shantung and Central China; the southern extremity comes close to Tsushima; but the north-eastern coast, on the Sea of Japan, is somewhat inhospitable.

I. History.—The history of Korea may be extracted from the above remarks: its neighbours, who are more advanced or stronger, have prevailed over it by virtue of their civilization and have often brought it under subjection by force of arms; at some rare intervals it has lived its own life. Its unity was brought about with difficulty. Its entrance into history was about the time when it was invaded first by Chinese and then by Japanese, while the natives settled down as independent kingdoms, Kokyore in the north-west, Paikchei in the south-west, Silla in the south-east, Koryor between the two latter—to say nothing of the tribes of the Ye in the Sea of Japan, and the kingdom of Puyre situated in the country which is now Manchuria. At last, through the assistance of China, a union was accomplished, the interest of Silla (668) and in opposition to Japan. To that southern kingdom succeeded the kingdom of Koryor (918), and then that of Chosen (1392); the latter was sovereign in the year 1910.

2. Nature-worship.—Numerous facts indicate that earlier than the Koryor dynasty there was a nature-religion whose traces are still visible to-day. Sacrifices to heaven were offered by the kings or the people in Silla, Paikchei, Kokyore, and Puyre, and among the Ye. Under the dynasty of Koryor the worship of heaven was celebrated by the king, although he was a vassal of the Emperor; the sacrifices had probably the identification of physical type between the Kolarians and the Dravidians may be the result of contact metempsychosis and the control of a common environment. The status of this authority, A. Balme (Ethnography [=GJAP ii. 5], Krasnbus, 1912, p. 3), thus sums up the question:

"The other race, to which the title of Koll or Mônkh is generally assigned, is the Tseke, in the Kessel Belt, in which it is at the present time concentrated under its distinctive title of Tseke, formerly, however, it was spread over the whole of the great plains of Upper India, and, according to recent philological discoveries, it is akin, at least in language, to the Tseke of the present day, it was settled on the borders of Assam, and it passed to the east of the Bay of Bengal. Some investigators, indeed, even speak of former habitation over a still wider area. In the east and north-east of India, however, its identity has been obscured, if not obliterated, by the successive immigrations of people of Mongoloid race from eastern Tibet and the head waters of the great Chinese rivers, whose main streams of migration have sought the sea by two great courses, the valley of Salwin, and Mekong. In the Ganges plain the type is traceable through the population, slightly, indeed, along the Jumna, but more distinctively as the language is properly spoken, and almost everywhere more prevalent as the social position is lower. This graduation is due to the process by which the old Koll, who, as far as ethnography is concerned, may be considered the autochthonous inhabitants of these tracts, and a taller and fairer race, which entered India by the passage of the north-west or the plains of Baluchistan."

KORAN.—See QUR'ân.
altars dedicated to the stars; at these altars offerings and prayers were burned. In the middle of the 15th cent., these ceremonies, though in character not very surprizing; like the sacrifices to heaven, they did not conform to the strict orthodoxy of Confucianism.

In the kingdom of Silla, at a period when the Chinese civilization had been spread, the sacrifices in connexion with agriculture kept their national character; they took place three times a year—in spring, summer, and autumn.

One of the most important points in the ancient religion of Silla was its attachment to mountains, rivers, and seas. The Sam kuk sa kwei gives a list of the holy places of the kingdom of Silla, classified into three groups, according to their importance. Under the dynasty of Choson, sacrifices were regularly offered, sometimes at the places consecrated by tradition, sometimes at a mountain- or river-altar (after 1406 the altars had official guardians). The regulations of 966 include ritual rules along with a kind of sacred geography. In spite of the intolerance of the Confucianists, who have gradually effaced so many traces of the ancient beliefs, this worship has survived. It is very deep-rooted among the people; there is a sacred mountain where the sanctuary is not to be found, dedicated to the spirit of the place or to a Buddha as its substitute. At every important or difficult pass there is a sacred tree, at the foot of which each passer-by lays a pebble; some travellers tear strips from their garments and tie them to the branches; the devout present rice. Similar offerings are made at the fords and at the eddies of the rivers. The great trees, the mirage (gigantic oaks), are usually Buddhist in origin, which occur in fairly large numbers, and the posts painted red, with the tops roughly representing a human head, are the objects of a similar devotion.

A last mark of the ancient religion has reference to the sacred trees. At the beginning of each year there were general sacrifices of propitiation and purification; these were offered also in time of war; and at such times all rejoicings were forbidden. Practices analogous to that great annual purification may be found in the feudal China of the Cheu and in ancient Japan. In the modern Chinese worship, fasting and the washing of hands which precedes every sacrifice have not a general significance. The use of purifications and of public prayers on the occasion of calamities, fires, and invasions is often noted even during the period of Korye, under names which recall the Japanese Otakaraki. The people observed a custom of the same nature; each year, on the 15th day of the moon, they went to wash their hair at the river in order to remove all misfortunes; then they gathered together to drink and make merry.

3. Ancestor-worship.—The Sam kuk sa kwei assigns a remote origin to the worship of the royal ancestors of Silla.

Under the king Nam-hal, the second reign, the 3rd year (A.D. 5) in spring, they set up for the first time the temple of Sibe (the heaven of the ancestors) in Dae-han-seong, the palace of Si-cho, founded a temple in order to offer sacrifice to him. His own younger sister, An, presided at the sacrifice. King Chilcheong, in the 10th reign, at Nam-ri, birthplace of the king, in the place of Si-cho, founded a temple in order to offer sacrifice to him. His own younger sister, An, presided at the sacrifice. King Chilcheong, in the 10th reign, at Nam-ri, birthplace of the king, in the place of Si-cho, founded a temple in order to offer sacrifice to him. His own younger sister, An, presided at the sacrifice. King Chilcheong, in the 10th reign, at Nam-ri, birthplace of the king, in the place of Si-cho, founded a temple in order to offer sacrifice to him. His own younger sister, An, presided at the sacrifice. King Chilcheong, in the 10th reign, at Nam-ri, birthplace of the king, in the place of Si-cho, founded a temple in order to offer sacrifice to him. His own younger sister, An, presided at the sacrifice.

Of the places where the official worship is celebrated, some—ayo, tuyen, sa—are covered buildings, separated by courts, and contained within an enclosing wall; and these buildings and sumptuous, are consecrated to the worship of the manes. The others, tan, are altars in the open air, formed of a levelled surface which is raised above the surrounding ground and is
reached by steps; these are encompassed by one or two enclosing walls, square or rectangular in form, often a Matter low, and built of stone; the altar and the walls are orientated. In the middle of each of the walls is an opening which serves as a passage; it is adorned with the Korean wooden gate, and is the entrance to the altars which are employed for the most part for the worship of the spirits of nature. Several other temples, called kung or myo, are dedicated to different members of the royal family, heirs to the throne, wives of the king, ancestors, and persons of the first degree of kinship. At a number of feasts, worship is celebrated at the tombs of the kings and other members of the royal family. The tombs of the kings and queens, sin yang, 47 or 45 in number, are situated mostly in the neighborhood of Se-ul; the tombs of the second and third class, wen and wo, number more than 10. There are also temples consecrated to Confucius and to various celebrated men and benefactors of the country.

Principal temples and altars.—Chung myo, at Se-ul, temple of the royal ancestors of Chosen; Yeung-kung, at Se-ul, where the portraits of several kings are honored; Kyung-sang kung, at Se-ul, built in 1744 for the manes of the crown-princes Chosun, Kyung, and Sun, in honor of the legendary Koo-chief, founder (A.D. 1120) of the second kingdom of Chosen; Sung-tei kung, at Kyung-chung, dedicated to the first king; Kyung-yo, temple of the sung myo, temple of Confucius at Se-ul, temple of the gods of war who fought with the Korean army against the Japanese in 1592 and 1597; Sun-sun kung, at Se-ul, in honor of two Chinese generals who fought for Korea in that war; Sun-yang kung, at Sung-yu, dedicated to several Chinese mandarins who took part in the war against the Japanese (1902-93); Chong-sun kung, at Sun-t’yon, where Hsu Sun-him is honored, the great Korean admiral who so often saved the Japanese; Se-ul, at Se-ul, an altar dedicated to three Ming Emperors—Thal-tou, Shen-taung, who died in 1656, and Yi-taun, the last of the dynasty; Se-huo kung, at Se-ul, altar of the gods of the harvest.

In theory ancestor-worship exists in every family, just as in the royal family: the eldest son inherits the sacrifices and presents offerings to his father, his grandfather, and great-grandfather, as well as to their wives, i.e., to one, two, or three generations of ancestors in the male line; the more remote ancestors have neither tablets nor special offerings. The ceremonies take place at the same periods and in connection with the same events as those of the worship of the royal ancestors and may be performed in the principal room of the house, in a room or chapel set apart for this purpose, or near the tomb.

For sacrifices performed by a man of the people (i.e., not an official) to his father and mother, the offerings are by right the following: a bowl of vegetables, a plate of fruits, a bowl of dried meat and of salted meat, a bowl of roasted rice, two bowls of cooked rice, two bowls of broth, a spoon and chopsticks for two persons, and six cups (of sake).

In practice the aristocracy of the ryung-pae and the semi-aristocracy of the chung-in seem to be the only people who celebrate this private worship. It is regulated by the ritual of Chu Hi and by many Korean commentaries, but it is not mentioned, even in a native form, earlier than 1015.

There are many buildings, more or less important, bearing the name of se, so-teum, or myo, which belong to the officials and not to the domestics. They are dedicated to celebrated men, Korean or Chinese, philosophers, officials, and soldiers, distinguished by their loyalty, their virtues, and the loftiness of their teaching. The little won of Ch’unghwa, the center of the administrative system, was situated 383 outside of Se-ul—i.e., on an average, more than one for each district. In some of the temples not more than one personage is adored, in others half a dozen. The Italians and the missionaries have not fewer than 110, in one locality, while the names of others are found in all the provinces, or in several districts of each province. If the terms were taken in their exact sense, the se and the myo would be essentially the places of worship; in the se-teum, the principal part would be the kung k’ung, where the disciples gather together, and where the learned gather to meditate on the works of their master, and to discuss and expound his teaching; as a matter of fact, the three expressions are not kept distinct. These chapels, by the piety of descendants, disciples, and adorers in order to honour the memory of their favorite master, received from their founders gifts of rice, plantations and slaves; and often the king bestowed similar benefits on them, exempted them from taxation, or granted them a tablet bearing characters written by his hand.

There is no doubt that the new international conditions of Korea will modify the religious customs.

4. Buddhism.—The formalities of Buddhism in Korea do not differ essentially from those in China, whence it has penetrated into the peninsula. The bonze Sun-to, carrying images and sacred texts, was sent to Kokurye by the king of Tsin in A.D. 372; in 384 the bonze Marananda coming from Tsin went to Paikchei; fifty years later some bonzes from Kokurye entered Silla, which practically adopted Buddhism. Before long it was forbidden in that kingdom to kill any animal; many people became monks and gave their goods to the monasteries; some kings took the bonze’s robe, and in 591 the dignity of patriarch of the kingdom was created. Under the dynasty Buddhist shone with incomparable radiance; the hokse so, preceptor of the kingdom, was often possessed of great power, while the bonzes, fortified in their monasteries, and owners of numerous slaves and extensive domains, traditional, pictured, and strove by force of arms against the ministers who displeased them. The dynasty of Chosen, however, treated the monks mainly with distrust; the chung, Buddhist Orders or sects, were, by decree, reduced to the number of two (1419), and then abolished (1512). The monastic profession was surrounded by many hindrances (1469); the monasteries of Se-ul were destroyed, and it was forbidden to build upon the others; the bonzes were prohibited from entering the capital and were ranked among the lowest castes. These persecuting laws have been suspended since the Japanese domination.

5. Confucianism.—The accession of the dynasty of Chosen had been, in fact, a reaction against the bonzes and against the Mongols. In opposition to that twofold tyranny, the nobles had become Confucian literati. In spite of the fact that they were given by several of the first kings of Korye, the teaching of the Chinese sage, scarcely approved of in Silla, had failed to find more adherents later on, and in the Middle of the 15th cent. An Ta complained that he saw the temple of Confucius in ruins and the Great School without pupils. After the fall of the Sung in China, many Confucian books were introduced, and literati came into the country. This was the beginning of a Confucian renaissance, of which the great names are those of Ri Saik and Cheng Mong-chu (second half of the 14th cent.). The triumph of the literati in Korea followed the fall of the Mongols and the accession of the Ming at Peking. The first king of Chosen, Sung-t’yon (1402-1408) and Sei-tou (1418-1460), organized their kingdom according to the principles of the School, revived the competitive examinations and the colleges, and surrounded themselves with literati, whom, however, they knew how to keep in subjection. In the following century, however, the Confucianists were once more in the official positions; the temples, and colleges around renowned monasteries, communicating from town to town, and represented at Se-ul by the literati of the temple of Confucius and often by the highest officials, spoke

KOURETES AND KORYBANTES

protectors of the holy child (Zeus), as παινομάκρος and φιάλαξ.

1. In the Kretan discourses the Kouretes are called the nurses and guardians of Zeus (Θεοτόκες) and that, by common consent the birthplace of the Kouretes, and, wherever Kretan civilization spread, the specialized Kouretes are apt to be found. Their particular geographical distribution is matter of the general history of the spread of Kretan civilization, and does not here concern us.

The great central worship of Krete was the worship of the Mother-goddess. In the bridal-chamber (θημενάμα) of Krete the young men, before they might win their earthly brides, were initiated to the Mountain-Mother, and became symbolically her consorts or husbands; by this ceremony her fertility was promted and their safeguarded. In natural sequence these potential fathers became the guardians of the Mother's child, re-born each year, on whose birth the fertility of nature and man alike depended. This marriage they initiated with the Queen or Mother underlies all the Kretan and Asia Minor mysteries. On an Orphic gold tablet the mystic αναφαίνεται δ'ετε κόσμων ένθε χωνίαι Βασιλείας, and one formula amongst the mysteries, δάκρων την αναφορά, where the παραστάτη corresponds exactly to the marriage-chamber (θημενάμα) of the Kretan Kouretes.

The functions of the Kouretes in the secondary and derivative sense as medicine-man, a member of a secret society, were not confined, any more than were those of the young tribal initiate, to that of marriage. It was the multiplicity of these functions that puzzled Strabo. He finds that the Kouretes are magicians, prophets, and armed dancers, as well as child-reapers, and always half-demonic. These manifold functions are natural enough if we regard the Kouretes as a blend of medicine-man and culture-hero. The medicine-man is always half-demonic, and often dressed up as a bogey—he is always a seer and a healer, always charged with magical power, and it is interesting to find that Ermeneides, the great magician-healer of Kretan who was summoned to Athens to purify the city, was hailed as the 'New Kouretes' (Kouretes, not Kouretes, as in the printed edition). Thucydides, in Pindar (Vita Sol. xii.), *an adept in religious matters dealing with the lore of orgiastic and initiatory rites, and his life, with its magical sleep, his Dictyle, its dream-tangling lore, reads like the tale of the initiation of a savage medicine-man.

Diodorus brings the Kouretes before us as culture-heroes, as the projections, half-historical, half-mythological, of man's primitive energies and discoveries. They dwelt, he tells us, on mountains and in wooded places and glens where there was natural shelter. They were distinguished by their ingenuity in inventing the devices of war and good. They taught men to collect four-footed beasts in flocks, to tame wild animals, the art of bee-keeping, how to hunt and shoot, and they taught men how to live together in societies, and were the originators of law and order and a certain good order. They also discovered swords and helmets and armed dances, and by means of these they made a great din and decorated Krones (v. 65).

Following Diodorus, modern mythologists have always explained the characteristics of the Kouretes as part of the tendance of the holy child. As such it appears in the reliefs and on the various coins where the birth is represented. The Mother and child, or sometimes the child only, are figured in the centre, and above them the Kouretes clash their shields. Rendel Harris has shown that the shield-o, rather, cymbal-clashing was connected with the child's sacred food, as much as or more than with the child. 'Butter and honey shall be eat.' His nursing mothers (μήλιτα) are Asia and Melissa, the honey-bee. It was 'a rude music meant to call the swarming bees to a new hive' (Boaerenga, p. 350). It finds its counterpart in the 'noise of tin pans and kettles which may be heard in the neighborhood of the bee蜂 in the country when the bees are swarming.' Virgil remembers the connexion between bees and the cymbals of the Mother. When the bees swarm, he says, 'they raised raised balm-leave and honeywort.'

'tamuisque cite, et Matris quae cymbala curant' (Georg. iv. 64).

and a little later he definitely connects the bees and the Kouretes, speaking of the bees as 'Curetum scutis crepitantisque aera secuta' (G. 151).

It is important to note that on our earliest monument representing the Kouretes—one of the votive bronze shields, found actually in the sacred cave on Mt. Ida and dating about the 8th cent. b.c.—the Kouretes are clashing not shields but cymbals or a sort of gong.

Though their aspect as culture-heroes was of great importance, the central function of the Kouretes remained that of husbands and potential fathers. On the symbolic performance in ritual of this function depended the fertility and, in general, the luck or fate of the whole tribe. Of this, happily, we are certain, owing to the discovery of a priceless monument, the Hymn of the Kouretes, recently found at Palalakastro in Eastern Crete. The Hymn dates from about the 7th cent. A.D., but it embodies a much older original. It opens with an invocation to the 'Kouros most great,' the mythical projection of the band of kouroi. He is addressed as 'Kronias, as 'Lord of all that is wet and gleaming' (vayepetos γυαλος), i.e. lord of moisture and of life begotten and nurtured by moisture. Moreover—an all-important point—he is bidden to come to Dikte 'for the year' (eις θιααρε). The birth and nurture of the holy child are then recounted—a birth which implied to the ears of the initiates the sacred ritual marriage. The Hymn text forms the basis of the following:

The Kouretes stand as salient examples of two fundamental principles in primitive Greek religions. (1) Mythological figures are the projection of (a) social-structure, and (b) human activities. The Kouretes reflect the matriarchal social structure, which centres in the Mother and Child, with accessory consort or consorts. Their religion was obscured and all the rites effaced by the later patriarchal system in which the Father dominates the Mother, and in which tribal initiation at puberty has ceased to be prominent; the human energies expressed by the Kouretes are the idealized, combined with early food-producing activities—the tending of flocks and herds and bees. (2) Primitive ritual is always magical in character; i.e., the woman who does what the Kouretes do only symbolically is a holy child that his own children may be nurtured.
KURKUS

Then, as the religious instinct develops, he projects a demon leader—a Greatest Kuruks, to whom he hands over the functions which he himself performed.

2. Korybantes.—The Korybantes are a specialized form of one function of the Kouroi: they are the embodiments or projections of the orgiastic rite. Their name is of interest: it means 'peacock.' Thus the Macedonian form of korybaste, 'peacock-headed,' is korybbas, a peacock-headed dress worn by, e.g., the Persian king and the Roman Satii, figures near to the Kouroi. The Korybantes, like the Kouroi, had initiation-business which seem to have emphasized death and burial rather than marriage and birth; but it must be borne in mind that death and burial rites, followed by resurrection, are equally effective 'medicinal' solutions for fertility with rites of marriage and birth. The Peacock Men were naturally, like the Kouroi, the satellites of the Mountain-Mother, and in her honour celebrated wild mountain dances (apalatea). Some said that they were the first men springing from the Earth in the form of bees. Their worship was connected with that of the Kabeiroi, and they were at home in Purgya rather than in Kretan. To Plato the Korybantes are the snowiest instance of orgiastic katharsis (Legg. 709 D: fr. Legg. 697 E).

This katharsis by dancing included for the ancient Kouroi and Korybantes, as for the modern savage, two elements apparently contrasted, but really closely inter-connected: the expulsion of evil, i.e. barrenness, sickness, madness, and the induction of good, i.e. fertility, health, growth, and sanity. To-day in French Gaëtane, while some of the natives are dead, a man armed with a musket dances, and the intent of this is explained as twofold: for exorcising the spirits and causing the grain to sprout; and in West Africa at a moment of the people go out armed for battle, the other half carry only farm tools.

LITERATURE.—For literary and monumental evidence see Roscher, K. 'Kurene,' Daremberg-Saglio, O. 'Kurene,' and O. Gruppe, Griech. Mythol. und Mythenpfl. Munich, 1904. The Korybantes are described as cult-infection-heroes by J. E. Harrison, discussing respectively the finding of the Iovus, the editing of the text, and its religious significance. For the Kouroi as initiates and culture-heroes see J. E. Harrison, Themis, Cambridge, 1912, pp. 6 ff., 51 ff.; for their relation to mountain worship see J. E. Harrison, 'B. A. Cook, Zeus, the Indo-European Upright God, Cambridge, 1914, pp. 600, and ib. 20, 24, note 6, for the interpretation of the Kouroi as those of the shore has been so many times as 1912, pp. 107. For the Korybantes as Peacock-Men, pp. 191 ff. Forymbal- clashing as bee-keepers see J. E. Harrison, Themis, Cambridge, 1915, pp. 348-367. For prophylactic and incantatory functions of armed dancing priests see J. G. Frazer, G.B., pp. 473 ff., 'The Scope of the Korybantes,' London, 1914, p. 321 ff. For foma shields of the Roman case see P. Fontaine, Der orient und die frühchristliche Kunst, Leipzig, 1914, pp. 10-11. 'Korybantes' is of the Korybantes.

KUKUS.—1. Race, habitat, and census. The Kukus belong to the Mundia family of India, and are closely akin to the Kols of Chotanagpur and the Santals of the Santal Parganas. 1 They inhabit the Singbhum hills and the contiguous plains in the Central Provinces, especially the Districts of Hoshangabad, Mirim, Betal, and the Melghat Taluk of Ellichpur. Their total number, as given in the Census of 1911, was 192,363, which marks an increase of 7,647 on that of 1901, 2 whereas the latter showed a decrease of 8 per cent on those of the previous decade, due to the famine years from 1897 onward.

2. Tribal organization. The Kukus are also known by the name Mana; but this, again, is used as a subdivisional name along with other terms, viz., Bawaria, Ruma, and Bondoyia. Thus the Kukus are divided into four sub-tribes, mainly on a territorial basis, but also with a marked traditional classification tending to caste distinction. The sub-tribes are further divided into totemic sets, named, for the most part, after trees, plants, animals, and other natural objects, animate or inanimate—e.g., Chilat (Catalpinia sepatoria), Jambha (Ecogynia pandolcana), Bori (Gmelina arborea, Roxb.), Takhir (cucumber), Sakom (leaf), Muririnah (peafowl), Dhapir (ass), Akhandi (mountain), Kask (earth), and Athok (wooden ladle). Accounts vary as to the correct number of these sets. According to one version, each sub-tribe has 36 sets. The writer of this article has been assured by Kukus that the number is properly 125, which is also the figure given by Driver; but the set names in actual use are found to exceed these limits, so that the statement is probably due to Gop and ultimately to Hinda—influence. The origin of these sept divisions is naturally hid in obscurity, though various stories are current which purport to give the explanation. The 'Korku' in the Ethnographic Survey of the Central Provinces (iii. 'Draft Articles on Forest Tribes' [1907] 54) records a tradition that the names are derived from trees and other articles in or behind which the ancestors of each sept took refuge after being defeated in a great battle.

A variant of this was told to the present writer to the effect that the names were given by Bhagwan on an occasion when he called the ancestors of the tribe into his presence and inquired whence they had come, and, as each one indicated the locality by reference to some special object, Bhagwan named him accordingly. Perhaps this version looks more in the direction of J. G. Frazer's theory that the ultimate explanation of totemic names is to be sought in connection with primitive ignorance regarding the processes of procreation, though it would be prepossessing to lay particular stress on any special interpretation of such unstable traditions. With the present version as common, the question of the meaning of the term 'Korku' is one of the most important in the Kukupe system and what Frazer ('Totemism and Ethnogamy, London, 1910, iii. 21) notes as characteristic where the 'classificatory system' prevails holds good among the Kukus, viz., that the language 'has separate terms for elder brother (adda or adda) and younger brother (badd), for elder sister (bati or jiti) and younger sister (baddi), but no terms for brother in general or for sister in general.'

The Kukus, like some sections of the Gond tribe, occasionally seek to establish a Rajaup ancestry, and various tales are current with the intent. The element of truth here seems to be that some measure of intercourse has taken place, resulting in the loss of caste on the part of individual Rajputs and their identification with the Kukupe people. The term Raj Korkus is no longer entertained as an honourable distinction and is usually reserved for the wealthier and more powerful members of the tribe.

3. Social and religious practices. The Kukus are animists, but their animism is modified by a considerable admixture of Hindu beliefs and practices. This is reflected in the 1911 Census, which

1. For an account of the distribution of this family, and discussion as to the propriety of the various terms by which it is designated, see J. G. Frazer, The Social Organization, Linguistic Survey of India, iv. [1906] 27 ff.; and cf. Census of India, 1901, i. 375.

KUSINAGARA

includes figures showing more than half the Kārkā people as Hinduized. But the figures cannot be relied on as an exact index of the change. The process is too gradual and imperceptible to admit of statistical treatment, especially at the hands of unskilled enumerators. The influence of Hinduism is distinctly noticeable in the current folklore of the Kārkās, the simpler substrata of which are not largely overlaid with names and notions foreign to the tribal tradition. Thus the horse, which to the Kārkā is the agent of malevolent spiritual powers—a notion which perhaps echoes some old-time terror aroused by the incursions of a warlike foe—has become associated with Indra; the crow, which fulfills a traditional function reminiscent of Noah's raven and dove, is transformed into Kāģeswar; and the spiritual powers, which, according to the limitations of the Kārkā language and the genius of their primitive animism, were expressed, in highest terms, for the names for the sun and the moon, are now resolved into a council of gods in which not only Bhagwan but also Mahādēva, Indra, and other deities and demi-gods find a place. But the more original elements can usually be distinguished and the crude fabric of a naive cosmology pieced together. This is their own interpretation, in which man is fashioned from red earth; stories to account for the origin of vegetation and of death; a story of a lost revelation in which a dog, the agent of the Dharmarṣya, becomes the enemy of the horse, appears with the message written in the numeration of a leaf of the Kēndē Nāṅgān creeper—these signs are still there, but are no longer legible! While the Kārkās are coming gradually to recognize Hindu gods and goddesses in some of the Hindu festivals, much of their religion is still peculiarly their own. Their everyday beliefs and practices are of the aboriginal order, their normal hopes and fears continuing to find common expression by means of animistic symbols and rites. Their more familiar objects of worship—Māttā Gōmāj (the village god), Dōngōr Gōmāj (the jungle god), and Hardhīl Gōmāj (the chelona god)—come under this category. They usually consist of mere heaps of stones, frequently with a lump of quartz crystal on top. Gōmāj is the Kārkā word for the sun, which, according to Kārkā conce, is the source of light in the universe. The Kārkā have their own priests (bhāsīnākṣas), and are in no way dependent on Brahmanical direction.

The customs observed at the birth of a child, and at death, are, as usual, peculiar to the people, though in the case of marriage customs in particular there is a tendency to copy their Hindu neighbours.

On the birth of a child, the father is excluded from the house for five days, and compelled to rest content with the shelter of a cattle-shed or similar building not used as an ordinary human habitation. Child-marriage is the exception among the Kārkā, though it is said to be increasing under Hindu influence. The seeta are exogamous; the sub-tribes normally endogamous. Usually a marriage is arranged through the mediation of friends of the prospective bridegroom's family. These wait upon the parents of the girl, who, as a matter of etiquette, reject the proposals and maintain their opposition thereto for a period which may extend from a few months to two years. But eventually the consent is gained, and the bride-price is agreed on—usually about sixty rupees. One peculiar custom observed at a Kārkā wedding may be noticed here, because of its probable relation to earlier polygamous practices: the bridegroom and his elder brother's wife are made to stand on a blanket and exchange words. Sometimes the father of the girl insists on the bridegroom's husband being a working man for a period of years in lieu of the payment of the bride-price; but not infrequently this is accepted, if not by the couple concerned in which case an indemnity may be demanded of the boy's parents. The main restriction being the practical one which arises from the very frequent absence of means to support a large household. The women-folk are well-educated in the arts with regard to herds and herds of cows and sheep, and also to animism and inheritance children belong to the seeta of the boy's family. The parcelling of the property is divided among the widowers and the unmarried sons. Kārkā may either burn or bury their dead. The latter is the more common method. The spirit of the deceased is set at rest at a subsequent ceremony called the jātikā, in connection with which elaborate rites are performed, extending over three days, and consummated by the cremation of a memorial post erected in the shade of the sun and the moon, facing the east, and other figures of men on horseback, dancers, apects, peacocks, bowls, crabs, spiders, trees, etc.

The Kārkās have many practices which give evidence of their belief in imitative and sympathetic magic.

JOHN DRAKE.

KURUKH.—See OROANS.

KUSINAGARA (Kusinagar, or Kusinārā [Bāli].)—The most ancient name is said to have been Kusavati, which is connected in Jātaka 531 with a legendary king Kusa, son of Okkaka (Ikṣvāku). Well-authenticated and credible tradition affirms that Gautama Buddha, Sakyamuni, died and was cremated close to Kusinārā, which consequently became one of the four most holy places of Buddhism, and one of the most frequented pilgrim shrines.

At the time of Buddha's death (c. 487 B.C., or, as others prefer, 438), Kusinārā was described as 'this sorry little town, this rough little town in this rough jungle, this little Vāsishthi town' (Jātaka 95, tr. E. S. Forster). It is evident that the town of Jātaka 95, tr. E. S. Forster; and the town of Jātaka 95, tr. W. B. Colwell and R. Chalmers, i. 231), and evidently was a place of no intrinsic importance. But its association with the last scene of the Buddha's life made it famous throughout the Buddhist world, and it was one of the principal shrines of pilgrims that the petty town became the centre of important religious establishments and grew in population and size. It was visited at the beginning of the 5th cent. after Christ by Fa-Hien (Fa-Hsien), the first Chinese pilgrim, who writes briefly as follows:

... East from here (Rāmagrāmā) four (three, Boal and Giles geojana) yojana, there is the place where the heir apparent (Gautama Buddha) sent back Chauḍhapata with his white horse, and there also a tope was erected. Four yojana to the east from this (the travellers) came to the Chacra tope, where there is also a monastery. Going on twelve yojanas, still to the east, they came to the city of Kusinārā, on the borders of which between two trees, on the bank of the Nāmañjā river (Hiranāyavati, or the Hārā), Buddha, Giljūn, Giljūn, Giljūn and one, with his head to the north, attained parinirvāna (and died) (Travers, ch. xxiv., Legge's version). The pilgrim mentions several topes [stūpas] and monasteries, and proceeds: 'In the city the inhabitants are few and far between, and at the entrance, across a long river, there are innumerable [stūpas] and monasteries belonging to the different [sects and] schools of monks.' He then traces the road in a south-easterly and easterly direction for 17 yojana (12-5, the being 10 in Legge's); he adds, the marking this path is (20 N. 50° 11' E.), which lies about 37 miles a little west of north from Patna.

The earlier Pāli account in the Parinibbāna Sutta gives the names of several villages lying between Vaissāli and Kusinārā (Kusinārā) which would settle the position of the place, if they could be identified, but, unfortunately, there is no clue to their identification. The next and only other detailed description of Kusinārā after that of Fa-Hiian is that recorded by Huen Tsang (Yuan Chwang), about A.D. 637. He enters into much detail concerning both the geographical position of the town and its topographical features. At first sight it would seem that his account should preclude all doubts, and yet, when it is critically considered, doubts remain as to the identification of the place.

The publications enumerated in the Literature below examine the question in all its bearings.

The later pilgrim agrees substantially with the earlier in all respects, though in the absence of the distance and direction of the Ashes (= Embers = Charcoal) stūpas from the fixed point of the Lumbini garden.
KUSINAGARA

with Huen Tsang’s description of a similar image at Kusinagara. But in other respects the remains do not agree with the pilgrim’s detailed account. He saw the remains of a walled town.

The city walls...begging for alms; the roads and villages were deserted. The brick foundations of the “old...that is, the city which had been fifteen li (5 miles) in circuit; there were very few inhabitants, the interior of the city being a wild waste” (Watters, II. 25).

It is difficult to believe that all trace of the old town should have disappeared, out of 15,000,000 that now there is no sign of them, although plenty of extremely ancient fortifications remain at numerous sites in the Gorakhpur District. In the neighbourhood of Kasia there is no considerable town, and the demand for bricks has never been large. Moreover, the pilgrim places the Ajitavati (al. Airavati, al. Hiranyavati) river to the N.W. of the town, but there is no river near Kasia. He also states that in his time the great stūpa, although ruined, was still above 200 ft. high. The existing great stūpa, re-constructed or repaired apparently in the 5th cent., prior to the pilgrim’s visit, never can have been more than half that height. These facts led the present writer in 1890 to reject decisively the identification of the remains near Kasia with Kusinagara. His finding to that effect was generally accepted for some years. The later excavations of the Archaeological Survey, however, have produced fresh evidence complicating the problem. Many hundreds of seals belonging to the Mahāparinirvāṇa monastery have been discovered, besides others belonging to the Makutabandha or Bandhana (‘Diadem’) monastery. Both those institutions undoubtedly were at Kusinagara. The fact that most of the seals were broken, as if torn from letters and parcels, seems to indicate the bearing that the sealed packets were sent from Kusinagara to the dependent institution near Kasia. The people at the latter place cannot have addressed letters to themselves. The inference thus deduced is confirmed by the discovery of one seal-die belonging to the Vethadipa or Vissudvipa monastery, which stood at one of the eight places among which the relics of Buddha were originally divided. So far as the seals go, they lead to the conclusion that the remains near Kasia mark the site of Vethadipa or Vissudvipa.

A still later discovery, however, throws doubt on that conclusion. The Survey found emshrined in the relic chamber of the great stūpa the colossal recumbent image of a copper plate distinctly inscribed as having been deposited ‘in the [Parnavinsa chaitya].” We know that a building called the Parinirvāṇa temple (‘temple of Parinirvāṇa’), corresponding to that of the Ta-ch‘eng-t’eng in Chavannes, Voyages de pélérins bouddhistes, p. 73). That discovery of the copper plate, consequently, seems to indicate that the remains near Kasia must be those of Vissudvipa.

The only other conceivable explanation is that the shrine at Vissudvipa also may have been called a Parinirvāṇa chaitya. The remark must be added that the bearings from Kusinagara to both Vissudvipa and Benares as girt by being executed in the 5th cent. A.D. Excavation has proved that the site was regarded as one of the highest sanctity continuously from the time of Asoka to the end of the 12th cent., during some four centuries. Several great monasteries of various dates have been revealed, besides other buildings and crowds of votive stūpas. The site unquestionably was one of the most venerable spots to Buddhist pilgrims, and no other colossal image of the Dying Buddha agrees well

(Kusinadā), the distance according to Fa-Hian being 12 yojana, and according to Huen Tsang about 480 or 490 li, at the rate of 40 li to the yojana. In direction the only difference is that Fa-Hian gives ascetic begging for alms on the stages, whereas Huen Tsang places the Ashes stūpa to the S.E. of the next preceding stage, namely, the stūpa of Chandaka’s return. He is habitatly more precise in the indication of distances. Huen Tsang states that Kusinagara lay 12 yojana (about 99 miles marching distance) to the east of the Ashes stūpa. Huen Tsang does not give the distance, but places Kusinagara to the N.E. of that stūpa, and notes that the road was a narrow and dangerous path, infested with wild oxen, wild elephants, and marauding robbers who haunted the great forest.

From these elements, combined with the statement that Kusinagara was close to the river Airavati (al. Ajitavati, al. Hiranyavati), the present writer deduced the conclusion that the site of Kusinagara must be sought in Nepāl beyond the passes, close to the Little Râpti or Airavati, semimely about 84" 52' E., 27" 52' N. General H.H. Prince Khadga Sunsher Jung Rana Bahadur, sometime Governor of West Nepal, in a letter to the Pioneer Mail, dated Feb. 25, 1904, declared the above conjecture to be correct. The name “Kusināra” was at the confluence of the Hiranyavati and Ashiravati, near Bhavasar Ghat, i.e., the confluence of the Little Râpti with the Gandak. That site seems best to satisfy the terms of both the pilgrims’ itineraries as traced from the Lambini garden, but the identification has not been verified by local examination. So far, the result of the investigation seems to be satisfactory enough; but when we come to the熊 the history of the Kusinagara in relation to two other fixed points, Benares and Vaśāli, fresh difficulties arise. Fa-Hian makes Vaśāli lie in a south-easterly direction from Kusinagara, at a distance of 17 yojana (about 127 miles), and those details do not at all suit the site indicated in Nepāl, while they suit the rival site near Kasia. Huen Tsang reckons about 700 li (say 130 miles marching distance) from Kusinagara to the kingdom of Benares, in a south-westerly direction. If he meant to reckon the distance to the city of Benares, the actual distance from the supposed Nepalese site is much greater; but, if we assume that the distance was reckoned from Benares to Gogra, the pilgrim’s estimate might be accepted. These remarks are enough to indicate the nature of the difficulties which exist in interpreting the detailed itineraries recorded by the Chinese pilgrims in the 5th and 7 centuries. Full statement and discussion of those difficulties is impossible in this place.

Kusinagara has usually been identified with the remarkable group of Buddhist ruins lying near Kasia (about 26° 45' N., 83° 55' E.), 55 miles due east from Gorakhpur city and in the Gorakhpur District. The principal remains, which lie in the lands of Bishanpur, to the west of Kasia, were formerly considered as a city by local people. They comprise many structures, including a great stūpa and a temple containing a colossal recumbent image of the Dying Buddha. These remains were fixed in India, not executed in the 5th cent. A.D. Excavation has proved that the site was regarded as one of the highest sanctity continuously from the time of Asoka to the end of the 12th cent., during some four centuries. Several great monasteries of various dates have been revealed, besides other buildings and crowds of votive stūpas. The site unquestionably was one of the most venerable spots to Buddhist pilgrims, and no other colossal image of the Dying Buddha agrees well...
Kwan-Yin

THE Kwan-yin is a bodhisattva, also known as Avalokitesvara, the, and is widely revered in Chinese and Japanese Buddhism. The name Kwan-yin is a transliteration of the Sanskrit word ‘Avalokitesvara’ and means ‘one who looks (kuan) towards (yan) a suppliant (samyak)’.

1. History. (a) China. The earliest Chinese name was Kuang-chen-yan, ‘shining over the sound of the world,’ and the original name appears to have been recorded in a vague transcription, ‘A-lia-Lou-han,’ in a Sukhavatiyāya text translated into Chinese A.D. 147-189.1 The worship of Kwan-yin, however, does not seem to have been very popular until Kusunokijima translated the Sūktasamudgandrīkam (the ‘Lotus of the Good Law’), A.D. 402-412, in which he introduced the name Kwan-shi-yan, of which Kwan-yin is a curtained form. The text on the Sūktasamudgandrīkam (25th in Chin. and 24th in Skr.) of the text in question specially relates to the Bodhisattva, and has been widely read in China.2

The popularity of the belief was further increased when the famous Chi-la, the founder of the Tien-tai school in China, wrote several treatises on the Samantabhadra section (350-418),3 and since that time practically all the schools of Chinese Buddhism seem to have adopted the worship.

Avalokitesvara, who witnessed the worship of the saint in India also contributed much to the propagation of the belief in China. Fa-Hsien (399-414) says that all the followers of the Mahāyāna in India hold a Weekly Gala, when his home-bounds ship is in danger during a gale, he hastens to pray to him. Huien Tsang (629-645), who introduced a new translation of the name, viz. ‘Kwan-ts‘u-t‘sh‘an, ‘Self-existent who gazes’ or ‘Gazing Lord,’ records the presence of images of the saint almost everywhere in India, and mentions, moreover, that it is not credible that the road from Kasi to Benares can ever have been the narrow and difficult path, infested by wild beasts and robbers, described by Huien Tsang. His account suits well if applied to the route of the Someswar range.

III. MODERN ARCHAEOLOGICAL ACCOUNTS.—D. Liston, JAS (1887) 477. R. M. Martin (Bootham-Hamilton), Kathmandu, Bhubha (Kathmandu), London, 1892, ii. 327 (those two accounts are unimportant); A. Cunningham, Arch. Surv. Rep., 1, 1869, 156; id., id., Index IV; V. A. Smith, The Remains near Kasi, Allahabad, 1896; Kusunokijima and Kuisho, and other Buddhist Holy Books,” JAS, 1892, 324; J. P. Vogeli, Ann. Arch. Surv. India, Calcutta, 1905-06, pp. 44-55, 59-70, 1906-07, pp. 44-69, 1907-08, pp. 123-142. J. P. Vogeli, J. Arch. Surv. India, 1906-07, p. 252; Excerpts from Kasi.JAS, 1907, p. 255. A. Lapwood, Explorations in India, 1910-11, 16, 1912, p. 123-137 (description of copra-pottery of Y. E. Pagden, A Copperplate discovered at Allahabad, 1913, 16, 1914, 141). J. P. Vogeli, S. Konow, and J. P. Fleet, Veshadipa, Vajrapuruspa, 65, 1907, 104-105; J. P. Vogeli, Arch. Explor. in India, 1908-09, 45, 1907, 293-296; India Atlas, Sheet 103 (this sheet shows the Tikri Nadi at the site of Kusunokijima, which falls just outside the map). The writer of this article suggests that the ‘spatiqm’ named Visuddha in the legend of Sati reported by Tichà, mentioned in a Tibetan work as not one of the most ancient buildings in India, may be the jatastra chaitya near Kasi, which was dependent (of Brahmachas in Kusanagares (Qostasianische Zeitschrift., ii. (Berlin, 1894) 450).

V. A. SMITH.

Kwan-yin.—The Kwan-yin is a bodhisattva, also known as Avalokitesvara, and is usually called ‘Kuan-yin’ in popular speech. He is the savior of the world, and is particularly invoked in times of danger and sickness.

The worship of Kwan-yin was introduced into China by Kusunokijima in the 5th century, and has since become very popular, especially in the south and west of the country. The Kwan-yin cult is associated with the worship of the Bodhisattva Samantabhadra, who is said to have appeared to the Buddha in the form of a woman and to have given her a filial son named Avalokitesvara.

In China, Kwan-yin is usually represented as a beautiful young girl with a garland of flowers and a jewel on her head. She is often depicted holding a lotus flower in her hand, which is considered a symbol of purity and enlightenment.

In Japan, Kwan-yin is known as Kannon, and is one of the most worshiped deities in the Shinto religion. She is often depicted as a beautiful woman with a garland of flowers and a jewel on her head. She is often depicted holding a lotus flower in her hand, which is considered a symbol of purity and enlightenment.

Kwan-yin is considered a powerful protector and is revered by many people for her ability to grant wishes and help in times of need. She is often invoked for protection from natural disasters, sickness, and other illnesses.

In Japanese culture, Kwan-yin is associated with the concept of compassion and is often depicted as a mother who is always ready to help those in need. She is a symbol of protection and is often invoked for protection from natural disasters, sickness, and other illnesses.

Kwan-yin is also known for her ability to grant wishes and help in times of need. She is often invoked for protection from natural disasters, sickness, and other illnesses.

7. Kwan-yin is also known for her ability to grant wishes and help in times of need.
Brähman, a mendicant, a female mendicant, an āpāsaṅka (layman), an āpāsaṅka (laywoman), a boy, a girl, a deva, a nāga, a yakṣa (demon), a grandmaster (heavenly musician), an aṅgura, a gāruḍa, a kinnara, a maharāja (great serpent), or vaśī-pāra. That is the art or the image which was not originally intended, however, is obvious from the fact that the names enumerated often differ from one another. Actually thirty-three forms of Kwan-yin have been conceptualized often represented in art. In Japan there are thirty-three shrines of pilgrimage, whereasome of the seven Kwan-nons given below is enshrined and worshipped. The thirty-three shrines of the Western region (Saikoku) are the most famous, while those of the Eastern region (Ban-tō) and those of Chichibu are also renowned. Besides, there is in Kyoto a great hall of Kwan-non called the Thirty-three Partitioned Hall (San-ji-san-gan-do), which contains 1,000 images of the saint. There are smaller halls on the foreheads and haloes, or held in the hands of these images, altogether making up the number 33,333.

4. Activities. — Seven cases of distress are generally considered in which Kwan-yin is ready to extend his hand of mercy. These are: (1) He can save a sin from the thirteen cases of distress of the Samantabhadra section; they are dangers caused by a sword, fetters or chains, fire, water, demons (rakṣasas), goblins, serpents, any of which dangers may be magically transformed by storm is added to these to make four parts complete, and facilitate pictorial representation. In the so-called Buddhist litany represented in some sculptured reliefs of Ajanta (no. 4), Ellora (no. 3), Aurangâbâd (no. 7), and Kharwa (no. 4), we can trace several scenes of dangers more or less akin to the above seven. In the cave of Ajanta (no. 4) we see a representation of dangers from an elephant, a man with a sword, a spear, and a flame, a man with a sword, and a man with a bow; and a fire, a snake, a student, and a mountain lion. In Ellora (no. 3), fire, sword, and flood are noticeable, while the rest are quite distinct. In one of the eastern caves, Aurangâbâd (no. 7), we have a very good representation of the litany. The eight scenes are: (1) a woman with a sword, a thief, and a shipwreck on the right, and a lion, a snake, an elephant, and a man with a woman on the left. Kwan-yin is flying towards the centre of their rescue. The caves in Ajanta (no. 4) the scenes are ten instead: (1) a girl with a man; (2) a man in a striking attitude before a snake-king; (3) a man brandishing a sword against a female with a child; (4) a man with a stick before another who is prostrating himself; (5) a man squatting and one side invisible; (6) an elephant; (7) a lion; (8) a serpent; (9) a man lifting both hands over his head, his body invisible, probably drowning (10) a man — his hands raised, probably in a pushing attitude. Thus almost all the thirteen cases mentioned in the Lotus are to be found represented in these caves. Kwan-yin has been found in the 7th and 8th cent. and are certainly Mahayaniistic.

We can safely conclude from these facts, and from the records of eye-witnesses of the same period, that the text of the Samantabhadra section of the Lotus was the first to describe the deeds of Kwan-yin as the saviour of the distressed world, was in vogue and very popular among Buddhists during the same period as it was in China and Japan.

3. The school of Buddhism. — Six or seven Kwan-nons are enumerated and often represented in art in China and Japan, especially in the latter.

(1) Aryakulôkottëva (Shô-Kwan-non, 'Holy'), otherwise called Mahâkârma (Great Compassionate). This is the original Bodhisattva and the most distinguished of all Kwan-yins. He is always shown sitting with his right hand held up to his breast, and with or without an image of Amitâbha over his head.

(2) Sasa-râbûj (Sen-ju, 'Thousands-armed'), otherwise called Shishyanûra (Sen-ju, 'Thousands-eyed'), or Mahâpama-râja ('Great Lotus King'). This is the name of a Kwan-non with six hundred arms, of whom the name is common to Visnû, Indra, and Durag, and of which Kwan-yin is the most popular form. He is represented with three eyes (tri-chô), and forty or thirty-eight arms, the palm of each hand being marked with an eye. Among the things which he carries are a prostrate figure of Siva, an elephant, a horse, a dog, a rope, a skull, a banner, mostly common to Siva and Durag. He is Mahayaniistic, and at least in Japan, fifteen of the thirty-three shrines having him as the chief object of worship assume three in the case of his (1).

(3) Hâyâka (Hâyâka, 'Horse-bringing'). This is called Shinâbâháya (Shashits-ei, 'Lion-feared'). He is depicted as horse-headed, two-touched, and with eight arms, two of which hold a vajra and a lotus. He is a dâitya (demon), hostile to Visnû in the Hindu pantheon, probably converted into a Tantra deity by mystic Buddhists. Only one of the thirty-three temples gives the place of honour to him.

(4) Ekkatâsamâkha (Itô-shimene, 'Eleven-faced'). He has eleven faces, of which the three front are compassionate, the three left wrathful, and the three right adorning, while the one at the top and the proper face show equanimity. He has four arms which carry a rosary, a lotus, a sword, and a mark of chûgâ (chûgâ-basara) on his face (chûgâ-basara). He is an antithesis of Siva, and so is Chûbâkâ (Four-armed). Thus this Kwan-yin, tied by his tails to his throne, is derived from the thirty-three cases of distress of the Samantabhadra section; they are dangers caused by a sword, fetters or chains, fire, water, demons (rakṣasas), goblins, serpents, any of which dangers may be magically transformed by storm is added to these to make four parts complete, and facilitate pictorial representation.

(5) Chûdâ (Chûdâ, 'Shobrooki'), otherwise called Sâyakottôkushû (Mother of seven Kous of Buddha). Different from the rest of the Kwan-nons, this is the beginning of a female deity, but he is the greatest. He is always Chûn-ji in Chinese and Jin-ji in Japanese. She is represented with three eyes (tri-chô), and forty-five arms (sa-eppâjâkâ), and is no other than Chûdâ Mai-lei (Durgâ). She is also called the "Goddess of eighteen arms, who destroyed the demons Malâma. An auspicious dot (kâvia-basara) acts as a weapon of this Kwan-yin, a rope, a lotus, a vajra, etc., are among the articles carried by her. One only place honour on her.

(6) Chûkôtârâchânâniati, or sometimes Chûlîgâ (Chûgâ, 'Wishing-wheel'). He is generally two-armed, rarely four-armed, and is represented in a meditative attitude with his left hand on his knee, his head slightly turned to the right, and his left hand raised, a vajra. The vajra he carries a wishing gem (očitâmâra), a wheel (chûkô), a rosary, and a lotus. He occupies six places of worship.

(7) Amôgâhâ (Amôgâhâ, 'Indulging rope'), or sometimes simply Amôga (Unerring). The common feature of this Kwan-yin is that he has three faces and eight arms, and a rope in his hand. As Amôga is the name of Siva and a rope is often carried by Durgâ, this deity also is probably imported from the Hindu pantheon. One of the thirty-three shrines is sacred to him.

6. Kwan-yins known among Buddhists generally. — We shall name only five here, which are important for their artistic representations.

(1) Fû-yû (Fû-yû, 'Fish-bask'). He is another very popular deity who carries a basket with a fish in it. He is probably a counterpart of the fish-eater of Visnû, or a representation of Mâyâçvara, or of the same worshiped in India and Nepal.

(2) Koyâna (Easy-child-birth). This is a Kwan-yin like Târâ, and is often represented with a child in her arm or below her. Properly speaking, he is not a separate Kwan-yin, for any Kwan-yin who is celebrated as answering prayers for easy labour is called Koyâna. It was under this name that the Madonna of the Christian Church found her way among the worshippers of the Virgin, during the period of persecution in Japan under the Shogun government.

(3) Shôgô (Nishâkountâsîvâra, 'Blue-necked lord') seems to be another importation from the Hindu pantheon, for Nishâkountâ is the name of a form of Siva in his great head of churning the ocean. He is white and three-faced, with a lion's face on the right and a boar's on the left. The Buddha is standing on his proper head. He has four arms, which hold a stick, a lotus, a wheel, and a conical school of Buddhism.

7. The sacred resort of Kwan-yin. — As this article is in a way a continuation of that on Avalokiteshvara (p. 862), all the characteristics of the saint found there are omitted here. Only one

1 Nânjo, no. 73; Paraspasari seems to be an error.
Laissez-faire.—So great a part has this celebrated phrase played in economic and sociological, and even in religious, discussion during the past century that a whole book was published at Berne in 1898 upon the maxim.—A. Ockfen's Die Maxima Laissez faire et laissez passer. The occasion of its origin is perhaps best understood by a comparison of the policies of two great French Ministers of Finance—Colbert (1619-83) and Turgot (1727-81). The former, towards the end of the 17th cent., brought industry and commerce under a system of extreme regulation and coercion; his ideals were those of the Mercantilists—protection, subsidy, and privilege. A century later, we see a complete reversal of this policy in the financial administration of Turgot, who worked on the principle of commercial freedom. Between these two men stand the founders of scientific economics in France, whose school is usually known under the name of the Physiocrats. It is said, indeed, that the first authentic use of the phrase laissez-faire was a retort made by a merchant to Colbert himself. The names which are of chief importance are those of Gournay (1712-59) and Quesnay (1694-1774). Gournay was an administrator rather than an economist, but he had great influence on Turgot, who accompanied him on some of his official journeys. It is through Turgot that we know of his principles. In his Eloge de Gournay, Turgot attributes to him maxims of trade and welfare, based on the utmost liberty of personal competition, and on the view that private interest and general welfare were coincident, if this kind of freedom were given. The complete phrase laissez-faire, Laissez-faire (French), and Potala or Potalaka are the names of two demons living there (see SBE xix. [1862] 244). 2 See Monier-Williams, Sanskrit-English Dictionary, Oxford, 1872, s. v. 'Potala'; Pothem, V. L. 69; Pomponius Mela, iii. 1; see also V. Smith, A. E. Smith, Early Hist. of India, Oxford, 1895, p. 102. 3 = L. [1874] 191 t. and especially V. A. Smith, Early Hist. of India, Oxford, 1995, pp. 105-122. 4 See S. Jolom, Memoires de Histoire, Thang, Paris, 1877-88, X. 123. by name, who was sent by an Imperial order to China as a Buddhist student, but remained there as the founder of the famous Pu-tho-lo (Potala) monastery (A.D. 888).

We are familiar with the existence of the Potala palace in the heart of Tibet as the residence of an incautrate Kwan-yin, viz. the Dalai Lâma; and in Japan we can trace two or three places which bear the Buddhist name Pu-da-la-ku as shrines of Kwan-nor.

8. The formula of invocation.—The famous six-syllable formula, Oh ma-yas padme hum, was once Indian, for it is often mentioned in the books of the Chinese Tripitaka translated from Sanskrit (see art. JEWEL [Buddhist]). At present, however, this formula is exclusively Tibetan or at least Lâmaistic. The non-Lâmaistic Buddhists use the old formula Name= 'vajra-ksentra rupa Bud- dhis-tattvāyagā (Nam-koCum-be-on-Bosatsu),  'Hail to the Bodhisattva Avalokitesvara.'

spite of their natural selfishness and capacity, though they mean only their own convenience, they divide with the poor the property that they have got hold of by an irrevocable hand to make nearly the same distribution. . . . and if the earth has been divided into equal portions among all its inhabitants.'

It is no wonder that, after the miseries of the Industrial Revolution, teaching of this kind brought some odium upon economic science; and it was overlooked that Smith had established his objections to excessive regulation by inductive, far more than by deductive, reasoning.

Smith's views must be judged in the light of his Natural Rights (London, 1895). Especially dangerous was the introduction of the word 'natural.' For the natural is taken to mean the ideal, or the original, or the non-human. As soon as we say that a certain system is a 'natural' system, we find a distinction and, then, by a trans- lation to another meaning of the word, we identify it with what is not of human device or with what is prior to human institution. Thus we slip into the position that a non-regulated system is an ideal one. But, in fact, nature in its broadest sense includes human life; and 'is made better by no means, but nature makes that means.'

Competition without control has not actually been taught by any English economist; but phrases have been seized on and misapplied. In spite of the opposition created to the idea of competition by stressing the words of early writers, an analysis of recent thought shows a desire not to suppress, but only to reorganize, this force. The claims of democracy are often, indeed, for greater freedom of industry, and of commerce (as e.g., in some cases, to remove privileges and monopolies, to extend education, etc.). It is possible for any one with ability to challenge any position in the State. And the greatest social benefits have been reaped by those who compete most with each other, as working with their Laissez-faire employer with worker, but between classes who do not compete, such as employer and employed, and often simply on the ground that effective competition is so limited across that line. The real objection that is summed up in the bitter use of the phrase laissez-faire is to the defects of a certain organization of industrial competition.

We may indeed say that, properly understood, laisser-faire is a maxim of both liberal and conservative minds. With the extension of State control, if the form of industry so changes as to require this. What is the word that we use? If Smith's time was the individual who was left out; then, said Smith, leave him free. In Mill's time it was the group; then let the group be free to work. In our time, for many purposes which only economic revolution could have touched, municipally or by the State; then let the State be free to do its proper work. The object of the verb can be the individual, the group, or the public authority; for we talk either of the form of industry, or force on modern conditions the meaning which any maxim had a hundred and thirty years ago. The law of the land should not suppress, or refuse to give scope for, any kind of social agreements. Improvements in the changing conditions of industrial life, it must guard the rights and watch the limits of each force and agency.

D. H. MACGREGOR.
not versed in the particular matter in hand, a sense in which he may be held guilty of the crime (see Liddon and Scott, etc.). The word is similarly used in 2 Co 11:18. In 1 Co 14:14 the 'place of the gospel' may hardly refer to the sacred ground of the church as indicated by laments in the Christian assembly (below, § 6). In an interpolation in Pr 6:9 cited in the Apost. Conformation, it means the 'mourners' department'; the corresponding passage of the older Didascalia, which the Constitutions incorporates, has 'sacrum' and 'mourners' department'. There is a classical use of the word 'lamentation' (nec privatia nec clericis, de Ecol. sign. 25).

Another name of the laity is 'the legionary' (di legiones). In the 1 Cor 16:57 (near the beginning) they are so called in contrast to the bishop and deacons (not in the parallel Didascalia). The 'legionary' means the 'whole community'. It is a little curious to note in this connexion that in Ac 15:24 the expression 'the church of the whole church' is used in contrast to 'the apostles and elders'.

2. Who is a layman?—Hitherto 'the laity' have been spoken of negatively, as being those Christians who are not ministers. But, owing to modern conditions, and especially owing to the divisions of Christendom, some further definition is necessary. For instance, in England, it has been maintained that every Englishman to whom residence is in the eye of the law a layman of the Church of England, unless he is a bishop, priest, or deacon. Apart from this, however, it is felt that with the laity of the Congregational church is bound to itself per accipere, not only from a negative, but also from a positive point of view. The first step in the definition has usually been made by saying that he must be a baptized person, or at least a catechumen; with regard to the latter qualification we may note—and this has a bearing on the practice of missionary Churches of the present day—that the Consistory of Hignampury, a style of churchmen 'Christian' (canon. x.; ed. H. Achelis, in TT, new ser., Leipzig, 1881, § 63).

But the question whether a baptized person is a layman belonging to a particular Christian community is not so easy to answer. A positive definition of 'laity' may perhaps be found in some such phrase as 'those who (not being ministers) from baptism or after baptism have been attached to' that community, and who have by not any overt act declared their dissent from it. This does not raise the question of 'full membership', by which is often meant the status of a communicant.

3. The priesthood of the laity.—This, which seems at first sight to be a contradiction in terms, is nevertheless asserted of Christians in 1 P 2:9 and Rev 1:6. They are a 'holy priesthood, to offer up spiritual sacrifices', a 'priesthood, a holy nation', Christ made us [all Christians] to be a kingdom, to be priests unto his God and Father.' The same thing had been asserted with equal emphasis of the Jews in Ex 19:6; 'ye shall be unto me a kingdom of priests, and a holy nation.' The NT asserts in the first place the priesthood of our Lord (e.g., in Hebrews, passim), and then, as derived therefrom, the priesthood of His people. In the highest sense of the word, Christianity is a sacerdotal system. But this must not be misunderstood. It does not mean that the Christian ministry is vicarious, and that its ministers take the place of the people in approaching God. When, therefore, J. B. Lightfoot says, perhaps rather hastily (Essay on 'The Christian Ministry,' Philippians, ed. London, 1863, p. 151, 185), that Christianity 'has no sacerdotal system of its own, as such', he must truly explain (ib.), that 'it interposes no sacrificial tribe or class between God and man, by whose intervention alone God is reconciled and man forgiven. Every individual may work his own salvation, as Christ (Philippians, 2:18), and its most wonderful (Philippians, 2:19; Colossians, 1:28; Hebrews, 7:24, 25, etc., etc.); and so on. Many other such passages might be cited. The teaching was common to all ages.

The doctrine that all Christian people are priests does not, it need hardly be said, mean that there is so much thing as personal or private priesthood. The whole nation of Israel were priests, and yet Aaron and his sons had a special or ministerial priesthood. And so, without discussing controverted questions, we may conclude that there is at least no contradiction in the phraseology of the Acts of the Apostles, London, 1871, p. 402f.). But it seems unnecessary to distinguish thus sharply between different parts of what was originally one rite.
LALIT, LAYMEN

diction involved in the assertion of the same characteristic in Christianity. The confusion of minister and layman as to function is such ἄρσις ('want of order') as the author of the Apost. Const. so eloquently protests against (viii. 31, 46). Christian churches (c. A.D. 95) says that the Christian ministers are 'rulers' and 'presbyters' (ἡγούμενοι, προφυγούμενοι, πρεσβύτεροι), to whom the laity are to be subject (ὑποταγόμενοι) and to give reverence (κατιστάναι). (Cor. i. 1, 21). Hermas, a little later, calls the church's rulers (τοιχόφυλα, Vss. ii. 11, 9). The same nomenclature is found in 1 Th. H. 9, and also in 1 Th. 5, where the ministers are 'they are that are over you' (ὑγιείς τῶν ἀποστόλων). See further, § 5.

4. Election of bishops and clergy by laity.— Under this head we have to consider a very important part in the Church played by laymen. We note that in Ac. 6:7, the people choose, but the apostles appoint (εὐρᾳκορευεῖσθαι καὶ ἐκπολιτεύεσθαι). The laity elected the Seven and placed them before the apostles, who laid hands on them with prayer. And this was the ancient method of appointment, though the details might vary. In the Didache (§ 18, A.D. 130?), the writer bids the people to elect (Χριστόσκευόμενοι) for themselves bishops and deacons, i.e. the local ministry; nothing is said of the appointment of the apostles and the prophets.1 It must here be remembered that εὐραχορευτούν does not necessarily carry with it the idea of ordination by the people electing (see below). Early in the 4th century, the popular election is much insisted on by Athanasius (Apost. c. Arius. 6). A letter of the Egyptian bishops which says that he was elected (εὐραχορευτούν) by a majority of our body [the bishops] in the night and with the acclamation of all alike, in order to refute the calumny of the Arians that he was clandestinely consecrated by six or seven bishops unknown to the laity. Gregory of Nazianzus (Orat. xxii. 8) says that Athanasius was elected 'by the vote of the whole people, not in the evil fashion which has since prevailed, nor by means of bloodshed and opposition; but in an apostolic and spiritual manner, he is led up to the throne of St. Mark.' He means, no doubt, that this was the ancient method of election. The same practice is found in the Church Orders—e.g., in the Test. of our Lord (i. 29), which speaks very emphatically about the election of bishops ('being chosen by all the people according to the will of Holy Ghost'), and somewhat less so about presbyters ('testified to by all the people i. 29) and deacons ('chosen as has been said above,' i. 33). The other Church Orders make similar provisions (Canon. of Hippo, can. ii. [ed. Achelis, § 1], Verona Latins Fragments of Didascalia, etc., ed. F. Hauer, Leipzig, 1860, p. 108, Egyptian Church Order, § 31 [ed. H. Tattam, The Apostolic Constitutions, London, 1848, p. 323, Ethiopian Church Order, § 21, Apost. Const. viii. 49). We find the same regulations in the Gallican code known as the Statuta Ecclesiae Antiqua, perhaps made by Cassarius of Aries, c. A.D. 500 (formerly cit. in the Canons of a supposed Fourth Council of Carthage, A.D. 398). In can. 22 it is directed that a bishop is not to ordain any one without the advice of his clergy, and that he is bound to seek the approval of Rome (οἰκουμηνία) and testimony of the citizens—a phrase which has a bearing on a well-known dictum of St. Cyril (see below, § 5; for a translation of the Statuta see C. J. Hefele, Christian Eng. tr., Edinburgh, 1871-96, ii. 410 ff.). On the other hand, the personal rights of the laity are only at an early date deprived of this right. The Council of Laodicea (c. A.D. 388) says that 'the choice of those to be appointed to the priesthood shall not rest with the multitude' (can. 13). This move-ment may have been due in part to the encroach-ments of the State and its officials after the death of Constantine, and it may have been influenced by the interpretation placed in the East on the 4th canon of Nicaea (A.D. 325), which says that the bishop is to be appointed (εὐραχορευτός) by the comprovincial bishops; three of whom at least shall meet. The first of the Apostolic Canons, a collec-tion made c. A.D. 400, though some of them are doubtless older, has a similar provision, but with χοροθετέω. The Nicaean rule was understood by the second Council of Nicaea (7th Ecumenical) (A.D. 787, can. 3), as meaning that only the bishops could elect, and it forbids, with reference to Apost. Canon 31, the election of a bishop, priest, or deacon proceeding from a secular prince; but the Latin Church at first interpreted the Nican canon to refer to the confirmation of election and consecration to the episcopate by the comprovincial bishops (Hefele, op. cit, 1, 1864, 383 ff.). And this is probably the real meaning. A bishop, before being consecrated, must be approved by the people (and clergy) whom he is to serve, and also by the bishops of the province. This is the true reason (one can hardly doubt) of the ancient rule about the three bishops consecrating each bishop. A later date it was suggested that this was to remove all fear of invalidity in the position of any one of the consecrators; but this could hardly have been the true reason, as consideration does not necessarily carry with it the idea of ordination by the people electing (see below). Early in the 4th century, the popular election is much insisted on by Athanasius (Apost. c. Arius. 6). A letter of the Egyptian bishops which says that he was elected (εὐραχορευτούν) by a majority of our body [the bishops] in the night and with the acclamation of all alike, in order to refute the calumny of the Arians that he was clandestinely consecrated by six or seven bishops unknown to the laity. Gregory of Nazianzus (Orat. xxii. 8) says that Athanasius was elected 'by the vote of the whole people, not in the evil fashion which has since prevailed, nor by means of bloodshed and opposition; but in an apostolic and spiritual manner, he is led up to the throne of St. Mark.' He means, no doubt, that this was the ancient method of election. The same practice is found in the Church Orders—e.g., in the Test. of our Lord (i. 29), which speaks very emphatically about the election of bishops ('being chosen by all the people according to the will of Holy Ghost'), and somewhat less so about presbyters ('testified to by all the people i. 29) and deacons ('chosen as has been said above,' i. 33). The other Church Orders make similar provisions (Canons of Hippo, can. ii. [ed. Achelis, § 7], Verona Latins Fragments of Didascalia, etc., ed. F. Hauer, Leipzig, 1860, p. 108, Egyptian Church Order, § 31 [ed. H. Tattam, The Apostolic Constitutions, London, 1848, p. 323, Ethiopian Church Order, § 21, Apost. Const. viii. 49). We find the same regulations in the Gallican code known as the Statuta Ecclesiae Antiqua, perhaps made by Cassarius of Aries, c. A.D. 500 (formerly cit. in the Canons of a supposed Fourth Council of Carthage, A.D. 398). In can. 22 it is directed that a bishop is not to ordain any one without the advice of his clergy, and that he is bound to seek the approval of Rome (οἰκουμηνία) and testimony of the citizens—a phrase which has a bearing on a well-known dictum of St. Cyril (see below, § 5; for a translation of the Statuta see C. J. Hefele, Christian Eng. tr., Edinburgh, 1871-96, ii. 410 ff.). On the other hand, the personal rights of the laity are only at an early date deprived of this right. The Council of Laodicea (c. A.D. 388) says that 'the choice of those to be appointed to the priesthood shall not rest with the multitude' (can. 13). This move-

1 This word, which often means 'elect, apparently in these canons means 'ordain,' as the first canon says that a presbyter and deacon and the other clergy (εὐραχορευτούν) by one bishop.
LAITY, LAYMEN 769

majority must be one of two-thirds; in some cases the choice, or combinations of certain names, are made, as in the Constitution of the Church of Ireland, Dublin, 1909, vi. 5). In the early Church in Asia Minor, South America, Australia, and S. Africa the system is similar, with some variations of detail, especially as to the majority required in the different orders; in S. Africa the elected clergy form the Ecclesiastical Assembly, which elects the clergy elect, and the laity elect. In the United States of America the practice is in vogue for the ordinary diocesan bishops, but to the 'missionary bishops' the House of Bishops appoints. Each diocese a convention ('syndy') makes it own rules for its election. In all the new-established branches of the Anglican federation the assent of the laity is required to this system.

(b) Roman Communton. — The laity appear to have no official share in the election of bishops, but in countries where a concordat was in force, as was the case till recently in France, the sovereign or the State nominates.

(c) Eastern Orthodox Communton. — Here the laity usually have a voice in electing bishops, though the practice differs in different countries; for a detailed account see M. G. Dampier, The Eastern Churches, London, 1910 (which, however, does not give information about the patriarchates of Jerusalem and Alexandria). The latter two are the only ones of which there is any conjecture that Constantinople closely follows. In the patriarchate of Constantinople the House of Synod and the laity elect the patriarch; the whole assembly selects three names, and the bishops choose one of them. A mixed council of bishops and laity elects the temporal affairs of the patriarchate. A diocesan bishop is appointed by the Holy Synod, which consists of bishops only. The laity must be consulted before the bishop appoints a parish priest, or the parish priest appoints a deacon; and each parish has a lay committee for parochial welfare. In the patriarchate of the Holy Synod, which has consists of bishops, a few archimandrites (heads of monasteries), two representatives of the parish clergy, and the Tsars, constitutes the Chernomonsky Synod. The latter, in consequence of the connecting link between Church and State, consents to the appointment to the see, which is the layman. The Synod consists of bishops only, for managing all ecclesiastical affairs. In Jerusalem the archbishop is elected by the monks. There are five voting, the Holy Synod (consisting of bishops only) submits their names to the bishop, who selects one. Priests and deacons are appointed by the bishop after consulting their laymen. The king appoints a commissioner (bispop) to seine the Holy Synod, but he has no voice. The Armenian bishops are elected by the other bishops and by (lay) members of Parliament. In Sarov they are elected by the synod of bishops, but the metropolitan of Kharkov is elected by the bishops and the chief clergy and lay officials of the country. In Montenegro the metropolitan is nominated by the king, the priests are appointed by the metropolitan. There are no diocesan councils, whose resolutions have been transferred to a synod and to consistoryes made up of ecclesiastics (Orozianik, p. 151).

VII. The laity and the sacraments. — (a) The Eucharist. — No real instance has been found, except in some mystical or separated bodies, of laymen being allowed to celebrate the Eucharist, even in cases of emergency. In connection with this it is necessary to remind the reader that the Eucharist is sometimes used in Christian antiquity in the sense of 'saying grace' or 'asking a blessing' at a meal, and that it does not always mean 'to give thanks'.

The 18th canon of Nicæa (A.D. 325) asserts that even deacons have not the power of 'offering', i.e. of celebrating, the Eucharist (τότε Εὐχαριστεῖς τὸν Κυρίον, 1 Kings viii. 22), while prebishops are expressly expressed 'those who offer' (νομίζετε ὅσοι διαδοθήκην τοῦ ἐνθρόνου). The same thing is found in the Church Orders, where the bishop and the prebishops are expressly recognized as being capable of celebrating the Eucharist (The Presbyter, ed. S. L. Forster, p. 199). But, if a deacon could not celebrate the Eucharist, a fenti a layman could not do so.

The Eucharist was a prohibition invented in the 4th century. Not only is there no evidence of a layman inside the Church Orders, and in an incident in ante-Nicene times, but Tertullian, in a work written before his secession (de Prescr. adv. Haer. 41), by implication strongly repudiates such a theory. He condemns the heretical sects because they confused the functions of lay and ministry.

'to-day one man is their bishop, to-morrow another; to-day he is a presbyter who to-morrow is a layman. For even on laymen do they impose the functions of priesthood.'

With this it is necessary to compare the same writer's language after his secession. In de Exhort. 57, after saying that all laymen are priests (see above, § 3), he continues:

'it is the authority of the Church, and the honour which has accrued sanctity through the joint session (consensus) of the Order, which has established the difference between the Order and the laity. Accordingly, there is no joint session of the ecclesiastical Order, you offer (see above), and baptize (μνημογήγησις), and are priest, alone for yours: the Church has the right of a priest in your own person, in cases of necessity.'

In Tertullian, writing in his later days, claims for a layman, if necessity urges, the right inter alia to celebrate Holy Communion.

It might be suggested that in this respect Montanism was conservative of an old custom which had elsewhere died out, owing to the excessive increase of 'sacredotal' feeling in the Church. But, whatever Montanism was, it was not, and did not profess to be, conservative. Such, indeed, is not the characteristic of any movement which magnifies charismatic powers. Montanism professed to have received a new inspiration by the Holy Ghost, and rather despised than honoured old existing customs. See, further, a long investigation in More, Anecdote H and Appendix H on Montanism (pp. 335-339).

(b) Baptism. — Had we no history to guide us, we might have imagined that, if the laity could not celebrate the Eucharist, nor could they baptize. And yet, though Christian opinion has not been unanimous on the subject, the great majority have held that, in cases of necessity, a layman, and even a laywoman, may rightly baptize.

It is not quite conclusive that the apostles did not 1

1 For this meaning of προφήτης or αὐτοκράτορα see the present writer's The Ancient Church Orders (Cambridge, 1888), p. 145. These words sometimes mean 'to bring the oblation to the bishop' (ib. and Ascens. A.D. 314, can. 2), but the latter has 'to offer the bread and the cup'.
not, as a rule, themselves baptize, though they laid on hands after baptism. St. Paul says that it is St. Peter’s province (Acts 10:48). It is also not quite certain, though it is probable, that the apostles did not themselves baptize all the three thousand converts in the Acts of the Twelve. But, though the NT evidence is not quite conclusive, opinion from the early centuries is uniform, and it is said that the early Church followed Tertullian (De Bapt. 17) it allows it to deacons and laymen but not to women. In De Virg. Vel. 9, he also forbids it to women. But we may note that his argument in the former passage, that “what is equally received can be equally given,” if valid, should refer to women no less than to men. The older Didascalia (3rd cent.; iii. 12; Funk, i. 210) allows it to deacons, but (iii. 9; Funk, i. 193) forbids it to women; the permission to laymen in the Didascalia is parallel Apost. Const., which here incorporate the Didascalia. The Spanish Council of Elvira (c. A.D. 305) says that a catechumen on a sea voyage or in a place where no priest is present has the baptism of great illness by a layman who has not apostatized or been a bigamist (can. 83), and similarly allows a deacon on some occasions to “rule” a congregation—apparently in a country district—and to baptize (can. 77); but in all these cases confirmation by the bishop is to follow unless the baptized person dies. The Test. of our Lord (c. A.D. 330?) allows deacons to baptize (ii. 10). Jerome (c. Lord. 9) says that “it is necessary so be, even laymen may, and frequently do, baptize.” Augustine (c. Ep. Parmen. vii. xiii. 29) says that baptism by a layman, “if necessity urges, is either no sin or a venial one.” But he appears to be a little doubtful about the matter. The Statuta Eclesiae Antiquae (can. 100), by saying that “a woman may not baptize,” probably imply that a man, even if a layman, can do so. Isidore of Seville very grudgingly says that lay baptism is for the most part allowed, but only when a person is in extremis (De Eccl. off. ii. 25). A striking case, which brings in other considerations of importance, occurred in the 4th century. The famous Athanasian creed (c. 366) lays down that no laymen have administered baptism in the Church. This was observed by Alexander, the bishop of the diocese of Alexandria, who, on hearing that the proper word had been used, forbade re-baptism, but administered confirmation himself. The Eusebians (HE ii. 147) and Rufinus (HE i. 14); Socrates (HE i. 15) alludes to it without mentioning Alexander’s action. Whether the story is historic or not, it is instructive as showing that the history of the treatment of lay baptism is as an actual and not unusual fact. On the other question, that of “intention,” Alexander’s decision is much more doubtful.

We find that a contrary opinion as to lay baptism was not unknown in the 4th century. Even a deacon is forbidden to baptize in the Apost. Const. viii. 28, 46, and so are the laity and minor orders in iii. 101; and women in iii. 9 of baptism by women. It is said that there is no small peril in the hands of those who undertake it, for it is dangerous, or rather, wicked and impious. The Ethic of Didascalia (§ 13.1) also negatives lay baptism; this manual is largely derived from the Apost. Constitution, and as such, the idea here is no doubt right. But the testimony on this point is in later times. In the medieval west lay baptism was fully and officially recognized, and in cases of necessity, encouraged. Midwives were instructed how to baptize their charges in danger of death. This is the present attitude of the Roman Church. It was also the attitude of the Church of England in the Middle Ages and down to 1604. Lay baptism as a practice was not disapproved of, as it was when the English Prayer Book of 1549, 1552, and 1559. The rubrics before the Office of Private Baptism in these three books say that baptism is to be administered by laymen only when “great need shall compel,” but that, if so, they “shall be (1 Co 16:14). Laymen are thus permitted by God for his grace, and say the Lord’s prayer, if the time will suffer. And then one of them shall name the child, and dip him in the water, or pour water upon him, saying,” etc. After the Hampton Court Conference, however, as a concession to the Puritan feeling, a change was made in the Prayer Book, and since 1604 only an official minister has been explicitly recognized therein. Yet we notice that in the question lay baptism in the 17th century it was to be asked at private baptism there is a distinction. First they that bring the child are asked by whom he was baptized, and who was present; then because some things essential to this Sacrament may happen to be omitted, the persons are asked with what matter and words the child was baptized. The implication would seem to be that the status of the baptizer is not one of the “things essential.” Lay baptism has never been forbidden in England, and has been a continuous custom. Hooker has defended its validity, even if administered by women (Eccles. Polity, v, 61 f.; this book was first published in 1637), and his great influence has, through the centuries, found a parallel, to this day. The English law-courts (in 1609, Kemp v. Wickes, and in 1841, Mastin v. Escott; see J. H. Blunt and W. G. F. Phillimore, Book of Church Law, London, 1899) have upheld the same view centuries ago.

To the Eastern mind the matter has presented itself in a different way. A Western can distinguish between what is irregular and what is invalid, and is accustomed to the saying “filius debet, factum valet.” But an Eastern makes no such distinction; to him “irregular” and “invalid” mean the same thing. Quite irrespectively of the validity of the Western Orders, the question has arisen in the East whether Western baptisms are irregular, and therefore (to the Eastern) invalid. To this question the Russian Church has replied No, and has admitted Western, including Lutheran and Calvinist, baptisms since 1718; but the Constantinople Church has replied Yes. On this very complicated subject see W. J. Birkbeck, Russia and the English Church, London, 1895, p. 63 f.

The laity in the Church services: churchwardens.—From the earliest times, as it would appear, the laity had a place of their own in the Christian synax, or assembly. Putting aside Justin Martyr’s description of the “synaxis” as a school, the fact is not to our disadvantage that we do not help us here, the first account of the arrangements of the synaxis is in the older Didascalia (3rd cent.). In this description the presbyters sit on either side of the bishop, the laymen behind the presbyters, and the women behind them, all apparently facing east (ii. 57; Funk, i. 158, 160). In the corresponding passage of Apost. Const. (l. 57; Funk, 159 f.) the description is somewhat confused, but it would seem that the bishop and his presbyters here sit (at least at the beginning of the Eucharistic service) behind the altar, facing the west. In this account also the laity are seated by themselves, the men in one place and the women in another; the young people and the older people sit separately, the younger women, the mothers, the widows, the virgins, and the elder women all having their places. When the assembly is likened to a ship, the bishop being the commander, the deacons the mariners, the “brethren” (the laity, see above, § 17) the passengers—a metaphor still carried out in the word “navy” for the part of the Church which is the subject of the divine worship. In the Test. of our Lord (l. 19), and also in the derived chapters of the Arabic Didascalia (§ 35; Funk, ii. 124), the laymen and the
laywomen sit in separate places. For a somewhat later period see W. E. Scudamore, in *D.C.G.* ii. 915.

Now, in the Church Orders (e.g., *Didascalia* and *Apost. Const.*, lcc. cit.; *Test. of Our Lord*, i. 34) the deacons are represented as moving about rather than sitting, and, in the case of several of them, as keeping order in the assembly, watching the doors, and assigning seats to the different classes. But, as time went on, deacons, who, as the Church Orders show, were constantly pressing their claims for admission, *Ancient Church Orders* (p. 69), devolved their duties on sub-deacons and members of the minor orders. At a somewhat later date—though it is not easy to say when—lay officials took over these duties of deacons, and received the name of 'churchwardens.' But their duties were not and are not confined to keeping order in church. They are in the present day charged with the supervision of the church fabrics and churchyards, with seating the people, with parochial church finance, and with the relief of the poor. In Lyndwood's *Provinciale* (15th cent.) they are called *guardiani ecclesiae.* The English canons also use the name *à quodam also 'question-men.' Their assistants are called *sidesmen* (see below, § 8). In England there are ordinarily churchwardens in each parish, one usually nominated by the rector or vicar, and one by the parishioners, and these are admitted to the episcopal diaconate. For a full account see P. V. Smith in the *Prayer Book Dictionary,* p. 205f.

7. Lay preaching.—It was often discussed in the early ages of the Christian era how far a layman might be allowed to teach or preach in church. The case of the learned Origen (3rd cent.), who was, when still a layman, allowed to do so, caused some misgivings in certain quarters; and J. B. Lightfoot, in *St. Irenaeus*, pp. i. 'Clement of Rome,' ii. (1890) 195 n. remarks that the objections raised in his case show that the practice was rare. Eusebius (HE vi. 19), to whom we are indebted for the information, evidently approved of the invitation given to Origen. At the end of the 4th cent. the *Apost. Const.* (viii. 32, near the end) speaks approvingly of lay teachers, but the reference is perhaps not to public teaching in church. The *Statuta Eclesiast Antiqua* (can. 98) say that a layman may not teach in the presence of the clergy except at their command. The Quinisext or Trullan Council (A.D. 692) decrees that the laymen are to be excluded from being preaching publicly in religious services (can. 64).

We should gather from the gospel story that among the Jews any layman who had the capacity to give instruction in the synagogue might do so. From the Jewish point of view, our Lord, when He taught in the synagogue, was a 'lay preacher' (Lk 4:29-30). So Paul and Barnabas were invited by the Jewish authorities to speak in the synagogue at Pisidian Antioch (Ac 13:14) and elsewhere. And in the early ages of the Church, when charismatic gifts were common, it is probable that the same liberty was frequently allowed. These charismata included the 'word of wisdom,' the 'word of knowledge,' 'prophesy,' and 'interpretation of tongues' (1 Co 12:8-10). See, further, J. Wordsworth, *The Ministry of Grace*, London, 1861, pp. 153-166.

There was, however, except among the Montanists and some others, a great objection to women preaching. Tertullian, even after he became a Montanist, disliked it; he says:—

*It is not permitted to a woman to speak in the church, nor yet to teach (De Espos. Virg. Evang.)*

Even the *Test. of Our Lord,* which enthusiastically advances the claims of the order of widows, and admits them within the sanctuary in the Eucharistic Service, will not allow them to speak in church (i. 40; 'in the church let her be silent'), though it bids them teach women in private. So the *Apost. Const.* (iii. 6) strongly urges them to 'teach in church,' and bid them pray and listen to the teachers. The prohibition of St. Paul (1 Co 11:34; cf. 1 Ti 2:12) was considered conclusive.

8. The Lay in councils.—There is a considerable contrast between ancient and modern practice with regard to the position of laymen in ecclesiastical synods or councils. With the growth of the parliamentary conception in the civil State has arisen the organization of correspondence between Parliaments in which the various orders give a vote on the questions decided, and each has a veto on the decisions of the others. It will be of interest to watch the growth of this conception. In the NT we have the description of two 'councils,' one of which may be called the prototype of the general or ecumenical synods of later days, and the other of the diocesan synods. In Ac 15 we read of a meeting called to discuss a difficult question which had arisen in the Church, whether the Gentile converts to Christianity must keep the Law of Moses—whether, in fact, the only entrance to Christianity was through Judaism. Delegates, including Paul and Barnabas, were sent up to Jerusalem to discuss the question with the 'apostles and elders' (v. 2), who came together to consider the matter and decide. For a full account see P. V. Smith in the *Prayer Book Dictionary,* p. 205f.
LAIY, LAYMEN

the clergy, and the concurring feeling (consensus) of the laity (Ep. xiv. [v.] 11) and modern ideas have been read into this saying. It has been interpreted as meaning that Cyprian disclaimed the power to take any action unless the laity gave their consent. The Laymen's resolution is not the same, being a sharply defined meaning as our 'consent'; it conveys no idea of voting or of vetoing. Cyprian very rightly determined to carry his people with him in his episcopal rule, and this is the meaning of his speech. The decision, to use the decision of the clergy or laymen, whether clergy or laymen, were brought or invited to the councils. At his was present at Nicaea, in attendance on Bishop Alexander, though only a deacon (Socrates, HE i. 8). Eusebius (Vita Const. iii. 14) says that the Bishop, in the land of Africa, an immense number of presbyters, deacons, acolytes, and other attendants. Yet there is no record in ancient times of any clergy or laity exercising a veto on the bishops' decisions. Their influence was of great, but it was an indirect influence, one wielded not as an exercise of right by a class or an order, but from the qualification of knowledge and experience. They were called in, e.g., to give advice about the lapsed in Cyprian's day (Ep. xvi. [xi.] 3, 'To the people'). See, further, art. COUNCILS AND SYNODS (Christian), vol. iv. p. 185 f.; and A. W. Haddan, in DCA, art. 'Council.' (i. 418 f.)

The authority of the latter writer is that, while 'bishops were the proper, ordinary, and essential members of a provincial council,' the presbyters 'as a body were consulted, as of right, down to the 9th century, and not only continuously, but were present, but were admitted to subscribe in several instances in later centuries.' But he doubts if 'they ever actually voted in a division'; while deacons and laity were often present and sometimes subscribed decrees, 'no proof at all exists that they ever actually voted in a division individually in actual divisions.'

This is not unnoticed. Hooker. He maintains (Ecc. Pol. viii. 451) that 'in all societies, companies, and corporations, whatever force such an opinion may have as regards the laws of a voluntary society, in matters of religion it is of very doubtful application; even to the laws of a State it can be applied only by somewhat unsatisfactory explanations. In this case it would appear that Hooker is less judicious than usual.'

A difficulty in the relation of laymen to synods arises from the fact that synods have so often had to deal with Christian doctrine. To legislate on doctrine is to exercise the office of teaching, and the laity have not, as a class, been commissioned, as the clergy have been commissioned, to teach, even though individual laymen may have been so commissioned (see § 7 above). Had the synods had to deal only with practical questions of Church organization, no doubt laymen would much sooner have been admitted to take a more active share in them. An early step towards the more modern idea of a Laity was the organization of English Convocations (also called synods), in which the clerical representatives of the Lower House have a vote or veto on the decisions of the bishops in the Upper House. For, without the concurrence of the laity, no decision is an Act of Convoca-

ition. It is true that the Convocations were first thus fully organized (in the 13th cent.) for fiscal purposes; but, whatever the purpose, the result has been as stated. The addition of Lay Houses of Convocation, as consultative only, is a quite recent experiment.

Since the Reformation there has been a great movement in the West towards giving the laity an equal voice with the clergy in ecclesiastical synods. In Ireland and the British Colonies the Anglican communities have, as a rule, done this. This is also the case in the Presbyterian Communion, in which ministers and 'elders' are admitted to the General Assemblies on equal terms. It has, indeed, been discussed whether these 'elders' are or are not properly laymen, inasmuch as they have received certain ordination or commission by laying on of hands. Neither the Church of England nor the Episcopal Church in Scotland has gone so far. The position of the laity in the former has been described above. In the latter the provincial synods are composed of the bishops and representatives of the clergy only; the clergy having a right to veto the findings of the bishops, and the bishops being also able to legislate. In the Synod of Canterbury, however, the laity have a right to sit where the bishops are; and in the Synod of York, they have a right to sit where the bishops are. In some of the Scottish synods, the laity have a right to sit where the bishops are.

In the Roman Catholic Communion the laity have no part, as of right, in synods; but they have sometimes been called in to give advice. In the Eastern Orthodox bodies, as will have been seen from what is stated above (§ 4), laymen have often a very considerable share in ecclesiastical councils of some kinds; but questions of doctrine are reserved for the bishops. In this connexion it may be observed that, which has so often been felt in the West, of distinguishing questions which are doctrinal from those which are not. In the same way, the laymen fall into both categories, according to the aspect in which they are viewed—do not seem to have troubled the more subtle but less logical East.

In connexion with the summoning of laymen to give evidence before synods, mention may be made of the interesting relic in England and Ireland of 'sidesmen' (in the 1603 canons 'sydemen' or 'side-
men'). It was the custom in the Middle Ages for the bishop to summon to his diocesan synod laymen as testes synodales, to bear witness to the moral condition of their parishes. The name 'sydemen' is thought to have been corrupted into 'sidesmen.' Since the Reformation, however, these lay officials have been merely assistants to the churchwardens, and help to keep order in the church (English canon 90).

LITERATURE.—On the general relation of laymen to clergy see J. B. Lightfoot, essay on 'The Christian Ministry' in Philipp. London, 1878, and many later editions (since reprinted in a volume of essays); C. Gore, The Church and the Ministry, etc. 1900; A. Barry, The Position of the Laity in the Church, etc. 1900, and W. H. Scudamore, art. 'Laymen' in DNB; J. Bingham, Scholasical History of English Laymen, London, 1812 (these two writers are in favour of the practice); W. Elwin, The Minister of Baptism, etc. 1889; D. Waterland, Letters on Lay-Baptism, new ed. London, 1824; the two writers deny or doubt the validity of lay-baptism; and T. Thompson, The Office of the Priest in modern times, Cambridge, 1854, pp. 2-28. On the laity in councils see B. B. Fasey, The Degree of the Church, Oxford, 1873; A. W. Haddan, art. 'Council,' DNB; an exhaustive treatise on the subject; and A. Barry, op. cit.

A. J. MACLEAN.
LAKE-DWELLINGS.—The term ‘lake-dwellings’ (Fr. habitations lacustres; Germ. Pfahlbauten; Ital. palafitte) is a generic expression to designate those singular habitations which certain peoples were formerly in the habit of constructing, chiefly on fresh-water lakes, and the remains of which are at the present time no infrequently disinterred from ancient lacustrine deposits, either in the shores of existing lakes or on the sites of some of the smaller lake-basins which, in the course of time, have been obliterated by the growth of peat. It is only in comparatively recent times that even the existence of such structures has come to the knowledge of archæologists, but practical researches have already abundantly shown that they were at one time common in many parts of the world, especially in Central Europe and in the British Isles. Herodotus (4th cent. B.C.) describes (v. 16) a lake-dwelling community in Lake Prasias, in Thrace, who lived in huts placed on a wooden platform, supported on tall piles, and connected with the shore by a wooden gangway. Each habitation had a trap-door which gave access to the water beneath; and the lake so abounded with fish that a man had only to open his trap-door and let down a basket by a rope into the water, and in a short time he would find it full of fish. But this, and a few other historical notices suggestive of the custom of constructing lake-habitations, failed to disclose the archæological treasures which have lain buried for so many centuries in the ancient lacustrine deposits of nearly all the lake-basins of Central Europe. Now the antiquarian materials collected on lake-dwelling sites are so vast and varied that they hold a prominent position in the principal archæological museums of Europe. To have rescued the evidence of so remarkable a phase of human civilization from oblivion is justly regarded as one of the greatest triumphs of pre-historic archæology. In 1890 the present writer described the terremera of the Po valley, the terpen of Holland and other analogous structures in Hungary and elsewhere, as mere variants of the lacustrine system of habitation, and, as so remarkable discoveries have since been made in these somewhat obscure fields of research, it is desirable to include a brief notice of them in this article as separate sections.

3. Lacustrine researches.—Although the discovery of the remains of pile-structures in Lake Zürich during the winter of 1853-54 is generally regarded as the starting-point of lacustrine archæology, with validity evidenced by the fact that such structures, though not so ancient, were known in Ireland fifteen years earlier. It seems that in 1839 curiosity was aroused at the Museum of the Royal Irish Academy by the frequency of the visits of a local dealer offering for sale objects of a miscellaneous character, many of which were of rare antiquarian value. These objects were said to have been found in a peat-bog in County Meath, and their assentment in such a picturesque and ancient county to the Museum authorities that G. Petrie and W. R. Wilde determined to visit the locality. On this expedition they were conducted to the peat-bog of Lagore, near the village of Durrow, by a man, within whose boundaries was a drained lake and under a thick covering of peat, was an artificial mound then partially exposed by peat-cutters. It seems that this mound had been worked upwards for upward of ten years; during that time they had dug out and exported to a factory of bone-manure in Scotland no fewer than 150 cart-loads of bones. The base and circumference of and along its margin were ‘upright posts of black oak, measuring from 6 to 8 feet in height; these were mortised into beams of a similar material making the Lent and sand between the bog, and lay if feet below the present surface. The upright posts were held together by connecting crossbeams, and (said to be) fastened by large iron nails.’

An abstract of a paper by Wilde on the Lagore find, from which the above extract is taken, was published in the Proceedings of the Royal Irish Academy for 1840, and its contents were so suggestive to local antiquaries that almost immediately several other analogous peat-bogs, or cromagnos (the name given to such structures in the Irish annals). Moreover, during the workings of the Commission of the Arterial Drainage and Inland Navigation of Ireland, no fewer than 22 cromagnos were brought to light throughout the counties of Roscommon, Leitrim, Cavan, and Monaghan. Reports of these discoveries by the engineers of the Board of Works, with plans, maps, sections, and a large assortment of relics, were deposited at the time in the Museum of the Royal Irish Academy.

The fortuitous circumstances which led to the discovery of the pile-structures (Pfahlbauten) of Switzerland are so well known that it is hardly necessary to dwell on them here. It appears that, owing to the lowness of the water in Lake Zürich during the winter of 1853-54, two of the inhabitants of Ober-Meilen, who in ordinary times came close to the water in the lake, began to extend their limits by enclosing portions of the exposed shore with a stone wall and filling in the space with the adjacent mud. In course of these operations they came upon a decayed stump of wooden piles, stone axes, flint implements, and various worked objects of horn and bone, which excited some curiosity among the workmen. J. Staub (Die Pfahlbauten in den Schweizer-Seen, Finkenr. 1864, p. 8) informs us that the village schoolmaster, Herr Aeppli, having seen some of the objects with his pupils, went to inspect the locality, and was so impressed with the importance of the find that he sent a brief statement of the facts to the Antiquarian Society at Zürich. Within four hours of the dispatch of his epistle three representatives of the Society arrived at Ober-Meilen, among them being the president, Ferdinand Keller. After careful consideration of the fact, Keller came to the conclusion that originally the piles had supported a platform upon which huts had been erected; that these huts had been inhabited by an industrious population, who had superintended the laying of the stone axes and the other primitive relics disinterred from the mud; and that the lacustrine village had come to an untimely end by a conflagration which destroyed the entire structures down to the water edge.

News of the discoveries at Ober-Meilen spread rapidly among the Swiss people, with the result that an army of explorers immediately began to search for similar remains in other lakes. Guided partly by traditional stories of submerged cities long current among the fishing community, and partly by the knowledge of local fisheermen, who, from practical experience of disasters to their nets, could at once point to numberless fields of submerged woodwork, the efforts of these pioneer lacustreurs were speedily crowned with success. Keller's first report on the Swiss lake-dwellings, which appeared in 1854 under the title of ‘Die keltischen Pfahlbauten in den Schweizerseen,’ at once brought this singular mode of human habitation prominently before the scientific world.

To dredge the bed of a lake with hand-worked appliances in a small boat was a slow process, always expensive, and often unproductive. Yet such was the enthusiasm with which that kind of work was carried on year after year that the antiquaries that there is scarcely a Cantonal
Lake-Dwellings

In the course of time, these procustic methods were successfully applied. Amongst the recession of various kinds of public works, such as drainage operations, the deepening of harbours, the construction of railways, jetties, etc., of exceptional impositions which such incidental works were the completion of the gigantic operation known as the "Correction des Eaux du Jura," which embraced the deepening of the entire waterway of the Jura valley, from the junction of the Lower Thieble with the Aar to the mouth of the same on Lake Maggiore. The result of which was to lower the surface of the lakes of Bienna, Neuchâtel, and Morat from 6 to 8 feet. The permanent effect of these works on the Jura lakes, especially Lake Neuchâtel, was very marked—harbours, jetties, and extensive tracts of bridge and dyke being left high and dry by the subsiding waters. This was the harvest time of archaeology. Many of the sites of lacustrine villages became dry land, and the pre-historic by cotswards, of eagles, and hunters; even fishermen forsaw their normal avocation, finding it more profitable to fish for pre-historic antiquities.

The reduction of how public works were utilized for the advancement of archaeology was the construction of the splendid bridge which now spans the Limmat at its outlet from Lake Zürich and the laying out of the adjacent promenades, gardens, and ornamental quays, which occupy what was formerly part of the lake. The filling up of this large area necessitated the use of dredgers, by means of which gravel and mud were raised from the most convenient shallows along the shore and transported to the site just referred to, for use in the operations were the 'Grosser Hafen,' and the outskirts of the Bauschanze. The rich loamy deposits of the 'Haunenmeister' at Wollishofen were found to be a suitable soil for the floral gardens. All these localities turned out to be the sites of lake-villages, and yielded an enormous amount of industrial remains of all ages. Indeed, the collection of Bronze Age relics from Wollishofen now deposited in the Antiquarian Museum at Zürich is one of the most valuable hitherto brought to light through lake-dwelling researches.

It is not necessary to notice the successive invasions which have been made throughout Europe in consequence of the publicity given to these discoveries in Switzerland. Suffice it to say that systematic explorations on an extensive scale have conclusively shown that lake-villages, generally in the form of pile-structures, had been prevalent during the Stone and Bronze Ages in the sheltered bays of nearly all the lakes of France, Switzerland, S. Germany, Austria, and N. Italy. More recently the area of their distribution has been extended to Bosnia, Greece, Asia Minor, and probably other localities.

The remarkable development of lake-dwellings during the prehistoric period of Europe seems to have come to a sudden end in the early Iron Age, and so completely had the system fallen into desuetude that scarcely a trace of it has survived in the local traditions of the districts in which such dwellings were most numerous. The habit of constructing houses built on platforms supported on piles is not, however, absolutely confined to pre-historic times, for we find from various sources that such constructions are still prevalent in various parts of the world—e.g., in the Gulf of Maracaibo, the mouths of the Orinoco and Amazon, on the Coasts of New Guinea and Borneo, at Singapore, along the Creeks and Barrage running into the Straits of Malacca, etc. V. L. Cameron (Across Africa, London, 1877, ii. 63) describes three villages in Lake Mohrya, in Central Africa, with drawings of their picturesque appearance as seen from the shore. A. Goering (in Illustrated Travels, London, 1869-75, ii. 19-21) gives an account of a visit which he paid to the lake-dwellers of a tribe of Goajiro Indians in the neighbourhood of the town of Maracaibo, from which the following extracts may be interesting:

In this way we reached the Goajiro village. Here a lively scene presented itself. The Indians, who are like so many little cock-lofts perched on high over the shallow waters, and they were constructed with such rude means of bridges, made of narrow planks, the split stems of palm trees ... Each house, or cock-loft, consisted of two parts, the pent-roof with the lower part of which the front apartment served the double purpose of entrance-hall and kitchen, the rear apartment as a reception and dwelling chamber, and I was not a little surprised to observe how clean it was kept. The floor was formed of split stems of trees, set close together and covered with mats. Weapons and utensils were placed in order in the corners. A house was got to these villages from the shore by dug-out canoes, the inhabitants mounting to their 'cock-lofts' by a notched tree-trunk, which served as a ladder. Goering states that such villages are numerous along the shores of the great 'Lake,' or Gulf, of Maracaibo. The piles on which they rest are driven deep into the sandy bottom, and so firmly do they hold that there is no likelihood of the lofty-pitched dwelling perceptible, even when crowded with people.

The structures are still more numerous in the east Indian islands. J. B. C. Dumont d'Urville (Voyage de découvertes autour du monde, Paris, 1839) describes the habitants of the bay of Dorell as living in four groups of pile-villages, each containing from eight to fifteen houses entirely constructed of timbers. Some of these houses have circular or oval forms, separated by a passage which runs from end to end, and give accommodation to several families.

As early as 1859, F. Trowy (Habitations lacustres) quotes from the books of a number of travellers recording the existence of pile-structures near all parts of the coasts of the East Indies, and adds that further information is to be derived from this class of evidence.

The discovery of an older lacustrine civilization in Switzerland was hailed by Irish antiquaries with the greatest enthusiasm and the belief that the significance of their own crannogs came to be fully realized; and henceforth crannog-hunting was pursued with renewed vigour. The Irish annals were now carefully searched for references to crannogs, and many of the localities thus indicated were identified and partly explored. In 1857 Wilde published the first part of his well-known catalogue of the antiquities in the Museum of the Royal Irish Academy for which he gave an excellent account of the crannogs. In it he states that 46 were known up to date, and predicts that many more would come to light as the drainage of the country advanced—a prediction which has been amply verified, as the number of these small islands has increased an increase to their number. Now the total number of Irish crannogs known and more or less explored is upwards of 260.

In 1857 Joseph Robertson read a paper on Scotch crannogs at the Society of Antiquaries of Scotland. The chief facts adduced by him consisted of historic references to island-forts, and submerged wooden structures exposed in the course of the drainage of lochs and marashes during the last two centuries. The first great discovery, however, which brought the subject on the field of practical research in Scotland, was made in the Loch of Dowalton, Wigtownshire, upwards of fifty years ago. In order to drain the extensive meadows occupying the western portion of the Dowalton valley the proprietor, William Maxwell, perceived and successfully carried out a project of draining the loch by cutting a new outlet through a narrow lip of rock which separated its waters from the lower grounds beyond. This excavation was completed during the summer of 1869, and, as the waters subsided, a group of five or six artificial islands gradually emerged from the bosom of the lake. The antiquarian remains collected on these islands ultimately rescued by the Duke of Northumberland (then...
2. Structure of lake-dwellings. — It will be understood from the foregoing remarks that the structural details of lake-dwellings have been gathered or less from different, and sometimes widely separated, settlements, and re-constructed on the principles of comparative archeology. As regards the pile-structure of the prehistoric houses at Badenoch, the same general form—huts, platforms, and even the submerged piles, except their lower ends—has disappeared ages ago, either from natural decay or by conflagrations. The complete lake-village by fire was by no means a rare catastrophe, and, strange to say, it was, from an archeological point of view, the most fortunate termination that could have happened to it. During the busiest and most successful of all the operations on the confagration of such combustible materials not only did many articles of value drop into the water beneath, but some of the most perishable commodities, such as the gins, fruits, and other parts of the clay mouldings which covered the cottage walls, etc., were more or less charred before being deposited in the lake-silt—a condition which rendered them less liable to decomposition. It is by collecting, as far as possible, such fragmentary materials that archeologists are enabled to form some idea of the appearance and internal structure of these lacustrine villages, as well as of the culture, civilization, and domestic economy of their inhabitants.

The preliminary problem which had to be solved before habitable huts of any kind could be erected was the construction of a level platform, sufficiently elevated above the surface of the lake and far enough from the edge to prevent the dwelling-huts beyond the action of the waves and floods. The methods adopted to secure this end may be briefly described.

(a) One method was by driving long piles of wood into the bed of the lake, leaving their tops projecting at a uniform height above the water, and then placing over them transverse mortised beams, into which the piles were fitted—thus forming a platform capable of supporting human habitations, and, of course, varying in size according to the requirements of the community. That the earliest lake-dwellers had the requisite skill to accomplish such work is established beyond doubt by the discovery among the débris of nearly all the stations of mortised beams, tenons, portions of wood containing both round and square holes, together with a various assortment of wooden implements, vessels, etc. A common method of studying the piles was to throw around them after being piled up to an intended large height and buried in the mud of the Île St. Pierre, in Lake Bienne, where it had evidently been swamped. These extensive collections of stones from the base of the original area of the village had been subsequently made by the addition of huts projecting from its sides. The huts were circular or slightly oval, and varied in size from 20 to 35 ft. in diameter. Each hut contained a central hearth, sometimes nearly made of flat stones embedded in the clay flooring which existed in all of them; and, as subsidence, due to the compression and decay of the under-structures, progressed, the occupants superadded new clay floors, which on section showed a well-marked stratified appearance. Several hearths, five or six not being an unknown number, were thus observed to have been superimposed one above the other—precisely as was the case on the Lochlee cromagnon.

The relics collected on the site of this remarkable lacustine village are so numerous and varied that they illustrate, with rare and singular completeness, the life-history of the community who inhabited it. The statuary, the pottery, the implements of 'Late Celt', as it existed prior to the spread of Roman civilization in that part of Britain; and it is this fact that gives the Glastonbury collection an exceptional interest. The antiquarian remains hitherto discovered within the British isles.¹

¹Within the last few years another lacustine village has been discovered at a place called Means, about two miles from

Glastonbury, and is now in the course of being excavated during each summer. So far, both the structural and cultural relics disclosed at this new site are precisely similar to those of the Glastonbury village.
LAKE-DWELLINGS

sometimes into four portions—a structural feature said to be characteristic of the Bronze Age. It may also be noted that when a Stone Age site continued in occupation during the Bronze Age, the standing or silted lay.inundation
on the outside of the former, showing that with the use of metal tools their constructors were enabled to plant the piles in deeper water. In the Stone Age the woodwork had been manipulated by stone implements—a fact which was clearly demonstrated when the first discovery was made by the kind at Ober-Melum. Here some of the piles, on being freshly pulled up, were observed to have their tops pointed by black iron. This was experimentally ascertained: if the cots on them could be closely imitated by using the stone and in the character of the surrounding mud.

(b) A second method by which lake-dwellers secured an adequate basis for their huts was to construct a series of round logs, which were used as a foundation for the house. A few feet apart, each beam was having its sides formed by a succession of horizontal beams lying one above the other, like the logs in a Swiss chalet. The ends of the beams overhanging for a few feet, and at the four crossings a few uprights were placed, apparently for the purpose of steadying the structure. The beams consisted varied in size from a few inches in diameter to as many yards. The lowest beams rested on the bed of the lake, when the reed or cane height above the water was reached. Transverse beams to form the habitable platform were laid across, thus covering up the empty spaces underneath. This plan, which was probably selected for the purpose of saving the structural materials, may be regarded as analogous to the vaulted foundations of modern houses. Examples of such structures have been found in Lake Pabius in France (Mesolithic period) and in the lakes of Persiun, Byzas, Danube and other places in the Iron Age in N. Germany.

(2) Gotland.‘Ever the prehistoric pile-structures are ready noticed, there existed throughout the same regions of Central Europe certain lake-dwellings which, instead of platforms, had solid sub-structures composed of closely set timbers arranged in horizontal layers and often alternating with beds of clay. Such structures were commonly erected in the smaller lakes, and their remains are now generally embedded in peat. Characteristic specimens of this kind have been found in eastern France and the district of a lengthy habitat. Another in Lake Nassau in, according to Morlot, surrounded by a circle of piles, after the manner of the Scottish and Irish carved, is the prehistoric architecture of which the prettiest is the wooded isola Virginia in Lake Varas, though now about three acres in extent, was originally a pile-structure. At present it contains several buildings, one of which is a valuable archaeological museum erected by the proprietor, Ehlert Post.

It is known that the Irish Isles that the artificial islands, or crannogs, acquired their greatest development. Precise information as regards their structure has been supplied by an extraordinary collection of a few Scottish specimens, notably those at Lochlee and Buxton, in the county of Ayr, the result of which may be briefly summarized as follows.

A suitable locality having been selected—the topographical requirements seem to have been a small mossy lake with its margins overgrown with water-plants—the next consideration was the materials for constructing the island. In a lake bed composed of many feet of decayed vegetable matter it is probable that such substances, as stones and earth, would be inadmissible, owing to their weight, so that solid logs of wood in the form of trunks of trees would be the best material that could be used. The island was to be made to rise in the first place a floating raft of tree-trunks, bridging, branches, etc., which were mingled stones and earth. On this basis they continued to add similar materials until the mass grounded. It was then surrounded with a stockade in the form of one or more circles of piles united by intertwining branches, or, in the more elaborately constructed specimens, by horizontal beams with mortised holes to receive the ends of the piles. These horizontal beams were arranged in two ways. One set ran along the circumference and the other at right angles to the first circle, while others took a radial direction and connected each circle together, so that the radial beams being long enough to bind the right in three circles together. The mechanical skill displayed in the construction of these structures probably decreased their ability to withstand the pressure of the water, and to prevent superincumbent pressure from causing the general mass to bulge out laterally.

The internal structure of the Lochlee island was carefully examined, by cutting a large rectangular hole near its centre down to the original silt of the lake—a depth of some 10 ft. from the lowest floor of the dwelling-house, or about 3 ft. above the original silt of the lake. The result of this was to show that nearly the entire mass was composed of the unbroken stems of various kinds of trees, from 6 to 12 ins. in diameter, laid in transverse layers one above the other. Interspersed here and there among the woodwork were some long slender carbonized branches, which had formed the binding framework between the central parts of the island and its margin. One such beam, on having its attachments traced out, was found to have had its first discovery at the end pinned to an adjacent large tree-trunk, while its outer end was pinned to another slender oak plank which extended outward and was similarly attached to the marginal structure above.

Some of these crannog islands in Scotland and Ireland had been constructed of stones with or without a wooden foundation. According to G. H. Kirkman, the largest and most typical example of the stone crannog in Ireland is Hag's Castle, Lough Mask, Co. Mayo. As a Scottish example may be cited a mound on the margin of the White Loch of Ravenstone, Wigtownshire, explored a few years ago by Lord Berwick and the present writer. It turned out to be a mass of stones, presenting a level surface of about 80 ft. in diameter and 6 or 7 ft. thick, resting on a foundation of large beams. On the surface of this mound were the foundations of stone buildings, consisting of bankings of the island.

Most of the pile-structures of Central Europe had been connected with the shore by one or more gangways, supported on a double row of piles, with dimensions varying according to the requirements of each village. E. von Poschel states (Keller, Lake-Dwellings, p. 181 f.) that the bridge leading from the shore to the Bronze Age settlement of Øber-Melum was about 200 yards in length, and nearly 20 ft. in width, while that to the Stone Age settlement in the same locality was considerably shorter, and only 5 to 8 ft. wide. The area occupied by piles at Rothenhausen extended to about 3 acres, and the nearest point of the old lake shore was some 800 ft. distant; but yet, from traces of piles found in the peat, it would appear that a wooden bridge traversed the whole of this distance.

Remains of similar approaches have occasionally been discovered in connexion with the later dwellings of the Iron Age, both in N. Germany and in the British Isles. Some of the Scottish and Irish crannogs were also accessible by a submerged stone causeway, the existence of which had become known in some instances only upon the drainage of the lake. It has been conjectured that such submerged approaches might have been intentionally constructed so as to supply to the initiated a secret means of escape in case of emergency, and strengthened by the zig-zag direction presented by some of them, such as a stone causeway in the Loch of Sangochar. Other crannogs, however, appear to have been completely concealed and accessible only by boats. The frequency with which canoes have been discovered in the debris of lake-dwellings of all ages shows how prevalent and widely distributed was their use as a means of communication with the shore. These primitive boats, whether emanating from a Swiss Pfahlbau or from a mediaeval crannog of the British Isles, were almost invariably dug-outs, and presented no appearance of the complicated structure by which their age or provenance could be determined.

The evidential data, on which our knowledge of the structure of the actual habitations of the lake-dwelle...
dwellers is founded, consist of portions of burnt clay mouldings, the position of hearths and culinary incisions on the traces of walls and partitions, the disposition of food refuse, etc. The inference from the clay castings is that the timbers which formed the walls of the huts had been placed close together in an upright position, then plastered over with well-fired clay. Burnt clay impressions found at Robenhansen indicated timbers about an inch and a half in diameter, but other fragments indicated merely a kind of wicker-work. It may be that the clay mouldings found in Lake Bourget, supposed to have been portions of the ceiling of a room, were ornamented with concentric circles and parallel lines. Other burnt fragments from the same locality were portions of the funnel of a small furnace or stove.

As to the form of the huts, the archaeologists are divided in opinion, some, in their ideal restorations, figuring them as circular, and others as rectangular. F. Troyen, judging from some clay casts found at Wangen, came to the conclusion that they were circular, and, accordingly, figures them as such in his Habitation Locutares. On the other hand, E. Platen of Schussenried, came upon the foundations and portions of the walls of a cottage embedded in peat. The structure was rectangular, measuring 33 ft. in length and 23 ft. in breadth, and was divided into two compartments by a partition. The walls and partitions were constructed of split stems of trees set upright, and plastered over with clay. On the south side there was a door, a little over 3 ft. wide, which opened into one of the chambers. The flooring of both of these chambers was composed of four layers of closely laid timbers separated by as many layers of clay. These repeated floorings may have been necessitated by the gradual rise of the surrounding peat, which ultimately compelled the inhabitants to abandon the dwelling altogether.

The diameter of the circular area enclosed by the stockades at Lochlee was about 60 ft., and in its central portion there was a space, measuring 50 ft. square, paved with closely laid beams like railway sleepers, and along each of its sides were the stumps of posts, apparently the remains of a wooden wall. A row of similar stumps divided the paved area into two compartments. Five or six superimposed hearths occupied the middle of the northern compartment, and the doorway, clearly defined by portions of two stout posts, was situated at the front of the chamber, facing it on the right. To the left was an immense refuse heap, beyond which were the remains of a gangway connecting the island with the shore. On the other hand, the structural remains on the Boston crossmog indiated one large circular dwelling-house, a form of habitation which was also disclosed by the excavation of the crossmog in Lochan Dughail. We have already seen that the huts of the Glastonbury lake-village were more or less circular. It may, therefore, be inferred that both forms were indiscriminately used by the lake-dwellers not only during the prehistoric period, but also during the subsequent ages in which such structures were in use.

On the other hand, the hearth proper of the hut floor was made of clay mixed with rushes, and over this was placed the hearth, which consisted of a few flat stones embedded in clay. From discoveries made at Niederwyl, Jacob Molin (p. 67) inferred that the roofs of the huts in that settlement were thatched with straw and rushes. That thatch of some kind was used in Western Europe in proto-historic times is supported by the corroborations in the writings of classical authors.

Thus, Strabo (v. iv. 3) writes that the Belgae lived in 'great houses, arched, constructed of planks and wicker-work, and covered with a heavy thatched roof'—a description which correctly applies to many of the Scottish crossmogs.

3. Culture and civilization of the lake-dwellers of Europe.—There is no class of antiquities which gives greater support to the general accuracy of the chronological sequence of the three ages of Stone, Bronze, and Iron than the various collections of lake-dwelling remains which are to be seen in the archaeological museums of Europe. Founded in the Stone Age, these pile-structures continued to be worked during the time of the Bronze Age, and even overlapped into the early Iron Age, so that the period of their duration entirely covers the introduction and development of bronze into Middle and Western Europe. It is beyond doubt that from the very start the lake-dwellers were acquainted with, and sedulously practised, various arts and industries, that they reared most of the ordinary domestic animals, and that they cultivated the growth of flax, fruits, and various kinds of cereals.

Several varieties of cloth, fringes, nets, cords, and ropes were brought to light by Messrs. and, from the very lowest relic-bed station of Robenhansen; and even specimens of embroidery were found at the adjoining station of Irgenhausen. Remains of linen cloth, thread, nets, basket-work, etc., have also been found on many other stations. Amongst the most notable finds are those at Lagozza, Laibach, etc. The absence of such fragile relics from other stations is not to be taken as evidence that their inhabitants were unacquainted with such industries, for it is only when fabrics are carbonized, or deposited in circumstances exceptionally favourable to their preservation, that they resist for a prolonged period the process of natural decay. Thus, at Schussenried, there was no actual specimen of cloth found amongst the impression of a well-woven fabric was clearly visible on a consolidated mass of wheat—probably that of the sack in which the grain had been stored. At Laibach, a similar impression was observed on a fragment of pottery. In the museum at Freiburg (Switzerland) there is a carbonized spindle from Lake Morat, which shows fine threads still coiled round it; and Gross figures a similar object from Lucca.

One of the stations at Moosseedorf-Sec, which was carefully investigated by the experienced archaeologists Jahn, Morlet, and Uhmann, yielded a large assortment of the remains of animals, among which the following were supposed to have been a part of domestication: dog, sheep, goat, pig, and various kinds of oxen. A few bones of the horse were also found, but these might have belonged to the wild species, as it is not agreed that this animal was domesticated till the Bronze Age. The cultivated plants recorded from this station were barley, two kinds of wheat, peas, poppy, and flax. At Wangen two varieties of wheat and the two-rowed barley were distinctly recognized both in whole ears and as detached grains—the latter in quantities that could be measured in bushels.

That the ceramic art was well known to, and practised by, the early lake-dwellers is amply proved by the quantity of pottery, mostly fragmentary, indicating bowls, plates, cups, jugs, spoons, and large vases, now considered as lacustrian relics (Keller, Lake-dwellers, p. 78). They concluded that the roofs of the huts in that settlement were thatched with straw and rushes. That thatch of some kind was used in Western Europe in proto-historic times is supported by the corroborations in the writings of classical authors.
were not unknown. The ornamentation consisted of fluted and string-marks, irregular scratches with a pointed tool raised, lines round the rim, together with dots and lines variously combined.

For the prosecution of the ordinary avocations of life, the lake-dwellers were in possession of a varied assortment of tools and implements, the precise function of some of them being, however, difficult to determine. They used axes, knives, saws, gravers, borers, etc., of flint and other hard stones. Carving tools, chisels, etc., were also made of horn, bone, and the tusks of the wild boar. With such tools they constructed wooden houses, scooped out canoes, and shaped wood into various kinds of dishes, clubs, and handles.

The food supply derived from agriculture and the rearing of domestic animals was supplemented by the produce of hunting, fishing, and gathering such seeds and fruits as nature produced in the vicinity. The weapons and tools used in these pursuits are abundantly met with. Arrow- and spear-points of flint, and sometimes of rock-crystal and horn, are common, as are also common lake-dwelling remains; and even a few of the bows made of yew wood, notwithstanding their liability to decay, have come to light—two from Robenhausen, and one from each of Tabus, Zeltweg, and Thun, respectively. The introduction of cutting implements of bronze into general use among the lake-dwellers gave a great impulse to the advancement of all the industries and occupations of life. In lieu of the primitive weapons and tools previously in use, we now meet with a splendid array of swords, daggers, lances, axes, knives, razors, chisels, gouges, sickles, etc., all made of the new material. The simple dagger of bone or flint, which could be used only by a thrusting blow, not only became more effective, but developed into a new weapon—the double-edged sword. Indeed, all weapons, implements, and ornaments underwent more or less evolutionary improvements, the various stages of which can be readily traced by a comparison of extant specimens. Thus, the primitive stone ax at first retained the same form in bronze, and, as such, had a wide distribution throughout Europe; but it gradually succumbed to the flanged type, with or without a loop, till finally all forms gave way to the socketed implement, which appears to have been the prevailing form of axe prevalent in the Bronze Age. It was only when iron superseded bronze in the manufacture of cutting implements that the modern type of axe, i.e., with a tang and a socket, came into general use.

In the category of ornaments and articles of the toilet there fails to be considered a large assortment of new and fanciful forms, such as bracelets, pendants, necklaces, fibulæ, pins, combs, bell-claps, finger-rings, batons, pins, ear-rings, chains, and a few trinkets of gold, silver, and glass.

That the horse was in a state of domestication among the dwellers of the Bronze Age we have very circumstantial evidence, in the discovery of bridle-bits and various ornaments for harness, as well as a wheel and other mountings of a carriage.

The progressive innovations in domestic and public life could hardly fail to influence the art of the potter. Accordingly, we meet with a better quality of paste, greater variety and elegance in the style and form of vessels, and some approach to systematic decoration. Ultimately colouring materials were utilized, which considerably enhanced the effect of the geometric style of ornamentation. Besides patterns of recurring figures, formed by impressions in the soft clay, we occasionally find similar patterns traced on the surface of vessels in thin and periodized form, made to adhere to the dish by means of a kind of gum or sapphire. Such vessels were made of fine black paste, with a smooth surface, and were extremely elegant in shape.

Lacustrine archaeology does not supply the materials requisite for a review of the civilization prevalent in the early Iron Age, as no lake-dwellings have been discovered showing a transition in the matter of implements and other objects. Iron appears in a few instances, towards the close of the Bronze Age, as in ornamental bands engraved on a few swords and bracelets, but there are no tools or weapons of the transition stage, such as was the case at Hallstatt, where iron is seen, as it were, competing with bronze in the manufacture of all kinds of objects. On the contrary, the few objects of iron found on the sites of one or two of the Swiss lake-dwellings are mostly La Tène types, which, of course, are very different, not only in material, but in form and technique, from those of the previous age. On these stations no once-used weapons of La Tène forms found, but also Roman tiles, pottery, and coins. The introduction of iron into general use in Europe seems, therefore, to have been the work of an alien people who subjugated the lake-dwellers and destroyed their villages about the 5th century. On the other hand, sporadic lake-dwellings found outside the area of these earlier habitations belong almost exclusively to the Iron Age, and their respective inhabitants had no common bonds of affinity. The vast majority of the Scottish and Irish cremations flourished from the Romano-British period down to the 17th century—a statement which, according to R. von Virchow ("Die Pflählbauten des nördlichen Deutschlands," Z E. I. (Berlin, 1869)), is applicable to their analogues in N. Germany.

The well-known station of La Tène, regarded by the earlier lacustrinae as a true lake-dwelling of the Iron Age, is now shown to have been an oppidum, or fort, of the Helvetians, erected at the outlet of the lake when its waters stood at a lower level than they did immediately before the 'Correction des Eaux du Jura.' The remarkable assortment of weapons, implements, and ornaments collected from this site gives a striking picture of the metallurgical skill to which their owners had attained prior to the influence of Roman civilization in Gaul. The style of art disclosed by them seems to be of Eastern origin, and known in Britain as 'Late Celtic,' as represented, e.g., by the reliques found on the Glastonbury lakes-village; and so important is this group considered by archaeologists that the name 'La Tène' has become a generic expression for those well-defined Marnian remains which are Celtic in origin, and are not to be confounded with those classified as Greek, Roman, Etroscam, or Phœnician.

4. Terremare.—Shortly after the middle of the 18th cent. certain artificial mounds of an earthy substance found scattered here and there over some of the eastern provinces of the Po valley became known to agriculturists as possessing great fertilizing power—a property which was henceforth turned to account by using their contents as a field manure. To such an extent has this practice been carried on that, out of a once unknown, few now remain. On the removal of a few feet of surface soil the fertilizing materials come to view in the form of stratified deposits of clay, sand, ashes, stones, leaves, and vegetable remains, brown, green, and black—shown conspicuously on section as parallel bands running across the mound. The finer materials, procured by riddling, are sold to the farmers under the name 'marma' or 'merne.'
and hence these mounds are now known in scientific literature as terramare. In course of time the stones and other objects were encountered by the workmen, such as fragments of pottery, Roman coins and tiles, implements of bronze, bone, and horn, the bones of domestic and wild animals and occasionally those of men. These discoveries for a long time failed to lead to any scientific investigation and, when the mysterious mounds happened to be noticed by the early writers of last century, they were left in great part unnoticed and unaccounted for them.

The celebrated naturalist G. Venturi (1822) assigned them partly to the Boii, a Celtic race who here cremated their dead warriors and ceremoniously threw their weapons and animals in war into the burning pile, and partly to the Romans who subsequently inhabited the country and selected these mounds as burial-places. Others supposed them to have been the sacred and traditional cemeteries of successive races, and hence their contents were called cemetery-earth (terra cinerimale); and it is a curious fact that many of these tumulus mounds are to this day crowned by a large number of trees and conventional Christian crosses have been in the habit of burying their dead. B. Castaldi thought the stratification of the deposits could be accounted for only by the intervention of floods of the Po, and he assigned the onset of the Po and the bursting of the numerous torrents which descend from the Apennines.

These and similar theories, based on the supposition that these terramare mounds were the abodes of the dead, were not, however, in harmony with the domestic character of the pottery and industrial implements which were turned up. The starting-point of a long series of researches which ultimately solved the problem was the announcement, in 1851, of P. Strobel that the remains of a palafette, analogous to those found in lakes and peat-bogs, were to be seen below the terramare beds at the station of Castione del Marchesi, near Borgo San Donnino, in the province of Parma. This discovery aroused much speculative interest, especially when correlated with the researches initiated by B. Castaldi regarding pile-dwellings in lakes and marshes, the existence of which, in Italy, had just then been proved by the discovery of their remains in the peat-bog of Mercargu and in Lake Garda.

According to these novel revelations, Strobel and Luigi Pigoini, both then residing at Parma, began a series of investigations regarding the terramare in their own vicinity, the outcome of which was a joint report, first published in 1852 as part of Castaldi's well-known work, Nuovi cenni sugli oggetti di antichità trovati nelle torbiere e nelle marne di' Italia.¹

Interest in the whole subject now rapidly increased, and extended to agriculturists and local observers. Yearly excavations were carefully scanned for antiquities, and special excavations in the interests of science were even undertaken by the State. The outcome of these elabo

¹ This work was translated into English by C. H. Chambers under the title of Lake Habitations and Pre-historic Remains in the Po Valley of Northern and Central Italy, and published in 1856 by the Anthropological Society of London.
found on it from time to time had not been care-
fully collected, but nevertheless a goodly number
had been sent to the museums of Parma and Rome.
They are similar to the ordinary relieves charac-
teristic of the terramara, such as pottery (including
the famous cinerary ware), ivory, and statuettes,
figurines of animals, and various objects of doar-
thorn, together with an assortment of Bronze Age
implements, weapons, and ornaments.
Certain Sigerini and other Italian authori-
ties is that the origin of the terramara came into
Italy from the great highway of the Danube by
way of Croatia, Carinthia, and Venetia. On
reaching the Po valley, they founded settlements in
the lakes of Garda, Pimòn, Arquà, and others
during the transition period between the Stone
and Bronze Ages. In the lake of Garda the settle-
ments were numerous, and some of them continued
to flourish down to the early Iron Age. In moving
westwards these immigrants followed the left bank
of the Po, founding settlements in the intermediate
lakes, until they reached the lakes of Vareso and
Maggiore, which henceforth became their head-
quarters. From the second part of the valley
while the early settlers who remained in the eastern
district began to found lake-dwellings (palafitte)
on swampy ground, the lakes here being too few to
afford suitable accommodation for their increasing
numbers. Subsequently they crossed to the south side of the Po,
where, the land being low-lying and subject to
inundations, they continued their inherited system of
inhabitations with the addition of housing them
fortified by a moat and a rampart. The crossing of the Po,
which doubtless was a great military achievement,
was supposed to have taken place at Visso and it is worthy of note that the great
camp of Castelvetrano, on the frontier of the Iberian and the
Ligurian, the original inhabitants of the country—a fact which
seems to the present writer to have been the raison d'etre for the exceptional defences of the terramara
villages of Western Emilia. On the east side, to-
wards Bologna, the hut-constructors of the Stone
Age were conquered and subjugated by the terras-
ravalli, who then installed themselves in their
huts, for which accounting for the remains of
two civilizations being met with in the stations
and habitable caves all along the coast of the
Adriatic. Gradually these terramara folk moved
southwards, according to Pignorini, because
the actual founders of Rome. At any rate, a
typical terramara station has been discovered as far south as Taranto.

5. Terpen.—We now proceed to inquire if struc-
tures analogous to the terramara are found else-
where in Europe. It is a remarkable fact that,
notwithstanding the striking appearance which
the Swiss lake-villages must have presented to
strangers, classical writers are absolutely silent
about them. Such reticence does not, however,
apply to the classic of remains now about to be
described. Before the construction of the great
sea-lake, the whole of West Friesland
would have been in that hybrid condition described
by Pliny (HN xvi. 1), in which it was difficult
to say whether it belonged to sea or land:

"Here a wretched race is found, inhabiting either the more
elevated spots of land, or else emerging artificially constructed
and of a height to which they know by experience that the
highest tide will never reach. Here they pitch their cabins
and, when the waves cover the surrounding country far and
wide, like so many mariners on board ship are they," etc.

At the present time this region is included with
certain other parts of the Netherlands in a series
from a map of their geographical distribution recently issued by
the Friesch Genootschap, it appears that their
number in Friesland alone amounts to 300,
of which 200 have already been excavated. Of the
remaining 300 many are not available for either
agricultural or archaeological purposes, the greater
number can be seen or visited by visitors
by villages, churches, ceme trayeties, etc. Like
the terramara, these terpen-mounds have for a long
time been excavated on account of their rich
monumental deposits, which are used by agriculturists
as guano; but, until they attracted the attention of archaelogists, no one
had given a thought to their origin. As their
excavation is prosecuted solely in the interests of agriculture, little attention is
paid to the position of the archeological treasures which they contain.

Either a canal or a railway siding is conducted to the
perpendicular facing of the excavation, and from it the transporting boats or wagons are
filled. Most of the larger antiquarian objects are
thus secured, but many of the smaller articles,
such as beads and ornaments, escape observation.

From the relieves thus collected the curator of the
Leeuwarden Museum has the privilege of selecting
any that he thinks necessary for the national collection,
but the rest may be sold or disposed of privately.

As to the origin of the terpen, they are now
proved to have been originally constructed as
lake-dwellings, at least as regards some parts of their
interior; and some of them are probably the actual
mounds described by Pliny. The modus operandi was to raise a circular
ring-mound of mud near ebb-tide. When this
mound was sufficiently elevated to keep the waves
outside, wooden platforms supported on short
stakes were erected in the interior, and on these
bunds were placed. As the rampart surrounded
the process was repeated until the interior became
a solid mound, precisely like what took place in
the terramara. The towns of Leeuwarden and
Leyden are said to be built over one or two terp-
mounds. The industrial remains collected in the
course of the excavations of the terpen, and care-
fully preserved in the museum of the Friesch
Genootschap at Leeuwarden, give a vivid picture
of the culture and civilization of their inhabitants
from pre-Roman times down to the 12th century.

Among the relics the following may be noted: egg-shells (hen
and goose), some of which were unbroken; a flute made of the
shank bone of an animal; Anglo-Saxon, Byzantine, and Roman
coins; wooden spades; large casks for storing water; cans;
iron swords; clay loom weights; occasionally comb-like
beads of amber and glass; quantities of the debris of flax;
while one with a piece of the thumb, etc. Also some
early bowls of La Tine types, Roman tiles and pottery (terra sigil-
ata)—some specimens of the latter having makers' marks on
them—bridle-bits of iron, bronze brooches, etc.

During the year 1905 a number of urns and
human skeletons were found in a localized spot
within a terp near Leeuwarden. Some of the
skulls were enclosed in coffins made of the
hollowed trunks of trees and some in wooden
boxes. The operatic urns were hand-made, and
are regarded as of Saxon origin, dating from the 5th or 6th cent. A.D.

There were, however, a few wheel-made urns, which are considered to be
the work of the Franks, as the wheel was not used
in Friesland, either by the Saxons or Frisians, till
the 10th or 11th century.

Dooms remains representing the following animals are
abundantly met with: horse, ox (several varieties), cat, dog,
sheep, wild boar, deer, fox, and foxes, etc. About
one of these animals are one or two of the four-horned sheep. It
may be of interest to note that the bones of this animal were
among those identified by R. Walsie come from the
crumney of Lurgan in Ireland.

Analogous structures, under the names 'Warfen'
and Wurzen,' have been discovered in the
low-lying regions of East Friesland, the fen district
of Holland, the embouchure of the Elbe, and, indeed,
in nearly all the marshes along this part of the
North Sea coast (see Munro Lectures for 1912,
p. 445 ff.).
6. Pile-structures in rivers.—Habitations erected over the margins of rivers, though possessing features common to both lake-dwellings and ferme-
more proper, yet differ in other respects so much
that they must be treated as a separate group.

(a) Butmir (Bosnia).—The fertile plain of Ilidzé,
occupying the bed of a wide basin, about 11
kilometres long by 7 broad, has been formed by
sedimentary materials imported by numerous
streams from the surrounding hills, which, by
their junction here, give rise to the river Bosna.
In early times this basin was more or less a lake,
and, indeed, in winter parts of it are still submerged.
Almost in its centre there is a portion of land
covering several acres, which, on careful inspec-
tion, is seen to be more solid, and elevation than
part of the plain in its immediate proximity. This eleva-
tion was selected by the Government as the site of
offices for a model farm; and, when, in 1898, exca-
vations for the foundations of buildings were begun, it was discovered that all this raised area
was composed of the refuse of early human occu-
pancy. This pre-historic settlement, or work-
shop, as some suppose it to have been, is now
known as the neolithic station of Butmir. Part of the area is now occupied by a
large dairy and other buildings, and the rest of it
has been excavated for scientific purposes. A per-
pendicular section, especially prepared to show the
position and nature of the materials of which the
elevation was composed, disclosed the following deposits in successive strata from above down-
wards:

On the surface were 13 to 18 inches of clayey soil; then a
blackish, starchy mixture of clay mould, charcoal, etc., arranged
in wavy and more or less parallel strata. The depth of this
decomposition layer was from 4 to 6 feet, and in it, dis-
covered apparently throughout its entire contents regardless of
depth, that all the relics were found. Beneath this again was
a natural deposit of fine yellowish clay, very adhesive and well
adapted for the manufacture of pottery. The discovery of
hollows, extremely variable both in size and in form, in this
underlying virgin clay, suggested to W. Radimsky, the super-
intendent of the excavations, the idea that they were the
foundations of the original huts of the inhabitants. The sub-
sequent discovery of a number of round holes in these hollows,
which were readily recognized as having been formed by
wooden posts, because, although the wood had entirely decayed,
the spaces had become filled up with debris, gave rise to the
thought that the settlement was really a pile-structure—a opinion which the present writer has supported on the following
grounds; (1) the general irregularity in form and size of the
called hut-foundations; (2) the occasional presence of pieces of charcoal, pottery, and other relics, on the surface of the very clay, thus showing that the deposition of the latter
had not entirely ceased when the settlement was founded;
(3) the discovery of a considerable number of idols and other relics among
the stuff which lay in these hollows, together with the entire
absence of hearths or evidence of fire in any of them; (4) the
resemblance of the strata within each section, were seen
to run across the margin of the hollows without any break in
continuity. (5) at various levels throughout the debris were
to see portions of burnt and beaten clay platforms, as well as
clay casts of the timbers which formed the walls of the huts.

A peculiarity of the Butmir station was the scarcity of organic materials; not even a bone or
wooden implement was found, although, from the
abundance of perforated stone implements, such
objects must have been largely used—all having
apparently disappeared by natural decomposition.
Quantities of charred corn were found in different
places throughout the debris. That grain and
seeds were largely used as food is inferred from
the fact that no fewer than 900 stone grinders, in-
cluding fragments, were found throughout the
station. The most usual remains consist of about
70 fragments of idols, mostly in human form,
quantities of broken pottery, including some with
beautiful spiral ornamentation, and a large assom-
plished of polished stone implements—knives, saws,
scrapers, arrowheads, hammer, mortars, axes, and adzes
—but no metal object is among the collection.

(b) Ribap.—The village of Ribap lies on the east
bank of the river Una, a tributary of the Save.
Here the stream widens into a kind of lake in
which are two small islands accessible by wooden
bridges supported on piles. Like other Bosnian
rivers, the water of the Una holds in solution a large
amount of calcareous matter which, on
exposure to the atmosphere, are deposited, causing
in some localities barriers across the stream. The
miniature falls and currents by which the waters
escape over these barriers are often utilized for
the motive-power of corn-mills. At Ripač there is
such an obstruction stretching from the larger
island to both shores, and along it may be seen a
row of these little mills, in the form of wooden
cabins planted on tall piles. In course of removing
some obstructive materials to the free escape of
the water from the small water-wheels, the work-
men encountered the stumps of thickly-set piles
in a blackish relic-bed containing fragments of
pottery, clay weights, broken bones, etc. This
discovery was recognized to be of so much impor-
tance that the Government gave orders to have
the locality investigated under W. Radimsky, the
chief inspector of mines. Excavations were carried on during the summers of 1893 and
1894, and it was then ascertained that a pre-
historic pile-structure not only occupied the whole
space between the islands, but also embraced
a considerable portion of the larger island and
the bank of the river. The upper deposits contained
only Roman and later remains, but in the true
culture-bed underneath were found burnt beams,
organic materials, portions of platforms and huts,
and a large assemblage of relics of the pre-historic
period. The piles were mostly made of oak stems,
sometimes split and perforated, but of these only
the stumps remained; and there were also two sets of
loops (or curwen) above, which suggest an earlier and a later structure. There was also
evidence that the settlement, or at least a portion of
it, had been destroyed by a conflagration; but
this catastrophe did not bring it to an end.

The objects collected were made of iron, copper,
bronze, silver, lead, stone, clay, glass, bone, wood,
and vegetable fibre. Among the relics were numer-
ous articles characteristic, not only of the Stone
and Bronze Ages, but of the well-defined periods of
Hallstatt and La Tène, thus proving that the
habitation was occupied continuously from the end
of the Neolithic Age till takes possession of by the
Romano-Dacians. During the Iron Ages the larger island
became a fortified castle.

Radimsky states that indications of similar pile-
structures are to be seen at several other localities
on the river Una, viz. at Gelubice, Ribič, Kralje,
and Brekovic. The kind of the river Save,
(a) Donja Dolina (Bosnia).—The site of this
pile-structure is on the south bank of the river
Save, a tributary of the Danube. Here an oval-
shaped terrace, some 500 paces in length and half
this in breadth, presents a steep front to the river,
but elsewhere falls away, except at the west end,
where the escarpment turns abruptly inland,
forming the bank of what was formerly a
river. The surface of this terrace is 3 or 4
metres higher than that of the surrounding land,
and is almost the only spot in the neighbourhood
that is not submerged during the heavy
floods of the Save. It is called 'Gradina,' i.e.
'start,' by the peasants; and here, during heavy
floods, they find shelter for themselves and their
cattle; and for the same reason it contains two
village cemeteries—one for the Catholics and one
for the Orthodox Protstants.

For several years, articles of antiquarian value
from the vicinity of Donja Dolina were now and
again presented to the Landesmuseum at Vienna—
a fact which last induced the Count Truhléka,
head of the archeological department, to visit the
locality. On walking along the river, at the foot of the 'Gradina,' he observed the tops of oak piles protruding through the river mud, while scattered around them were fragments of pottery, spindle-whorls, objects of burnt clay, worked portions of deer-bone, etc., from which he concluded that before him lay the débris of a pre-historic pile-structure. Excavations were begun in the following year (1900), and continued for several seasons when the water-level of the Save was favourable. The results are of great archeological importance from the wealth and variety of the relics discovered, and the ability with which they are recorded in two magnificently illustrated reports by Truhelka (Wissenschaft. Mitt. aus Bosnien und der Herzegovina, ix. [Vienna, 1904] and xi. [do. 1909]).

From the very beginning of the excavations it became evident that the structural details of this settlement deviated, in many respects, from the ordinary Pfahlbauten as hitherto known in Europe. The first interesting discovery was a row of piles running parallel to the river, which proved to have been the foundation of a palisade against the current, as the piles were bound together by inter- twining willow thongs. In continuing the excavations inwards, the excavators brought to light the remains of several houses supported on wooden posts. These posts were thickly set, no fewer than 978 having been counted over an area of 1160 square metres—nearly one for every square metre. Many of them, however, belonged to a later period, and were inserted to strengthen old timbers for the support of new houses. They were for the most part made of oak tree-stems, seldom split or squared, and well pointed with sharp metal tools. A little back from the river palisade there was a raised promenade from which a winding gangway gave access to the underground vaults containing the supporting piles, as well as to the platforms on which the houses had been erected. Little of the structural details of the dwelling-houses remained, except the foundations of the partition walls and some loose spars and boards, which crumbled into dust as soon as they were exposed to daylight. During the excavations the sites of eleven houses were exposed, all of different dimensions, one measuring 4.5 metres by 6 metres, and another 6 by 9 metres. By comparing the more perfect remains from different sites, a fairly correct idea of the external and internal arrangement was obtained. Each consisted of a large room, and one or two smaller compartments. The former was regarded as the kitchen, with a fire-place, a hearth, and an oven made of well-burnt clay.

It is difficult to determine the former extent of this singular settlement. Strong stumps of piles were met with over a large area of the adjacent river-bed. It has also been ascertained that during the digging of graves in the Catholic cemetery, the same class of relics were often thrown up. From these and other suggestive facts, it has been conjectured that the whole of the 'Gradina Hügel' consists of the débris of pile- dwellings—an area approximately amounting to 25,000 square metres.

That the underground vaults were sometimes utilized as cattle- pens was made evident by the large amount of animal dung that had accumulated in several of them. But this was not the only use to which they were put, as in several instances cinerary urns and wooden coffins (the latter containing human remains) were found. One coffin, that of a child, placed under the pelvis pierced by a supporting pile, showing that the burial was older than the reconstruction of the superincumbent dwelling-house. The urns contained the incinerated remains of bodies, charcoal, ashes, and an extraordinary wealth of grave-goods; but, unfortunately, the latter had been greatly damaged by the fire. It would appear, from the valuable nature of some of these offerings, that the cremated persons were of greater social distinction than those buried by inhumation. The objects consisted of fibule and spiral bracelets of bronze, beads of glass, amber, and jet, and other ornamental relics characteristic of the Hallstatt period. Of special interest was one urn, which contained a necklet composed of several hundred beads of amber, enameled and ground glass, seven cowrie shells, two perforated teeth, and a large clay bead without any ornamentation. Among the relics which supply a clue to the latest date of the settlement were five coins, one of bronze and the others of silver—all barbarous imitations of the tetradrachms of Philip of Macedon (356-336 B.C.).

A discovery which materially helped to define the chronological horizon of the pile-dwellings was the identification of the cemetery in which their inhabitants were buried. It was located on some ridges, not subject to submergence, at a distance of some 90 paces to the south-west of the Pfahlbau, and 200 from the present bed of the river. The necropolis contained both burnt and unburnt interments, and yielded an immense assemblage of relics which, from the standpoint of archeology, were probably more to be considered as of a period subsequent to those disinterred from the excavations in the river Thessalian.

(d) Pile-structures in Hungary.—On the right bank of the Theiss, a few miles from the railway station of Szolnok, near the village of Töszeg, there is an artificial mound to which, since the meeting of the International Congress of Pre-historic Archeology at Budapest, in 1876, much importance has been attached, on account of the opinion expressed by L. Pigorini that it is identical in structure with the terramare-deposits of Northern Italy. The mound, though considerably under- mined by the river Theiss during the great floods of 1876, is still of considerable extent, measuring 380 metres in length and 100 in breadth, and rising to a maximum height of 8 metres above the surrounding plain. It is only in times of flood that the waters reach the mound, its usual bed being a mile and a half distant. When the artificial nature of the mound became known in consequence of the section exposed by the floods, some extensive excavations were made to ascertain the archaeological character of its contents. An assortment of the objects collected during those operations was deposited at the Congress, among which were the following:

Perforated hammers of stag-horn, various pointed implements of bone and horn, perforated teeth and the leg-bone of a horse pierced in two places, probably a state, polished stone cells (some perforated), four flat flakes (one of obsidian), cora grinders, and various worked stones; a fragment of a bronze pin, a bronze knife, and a small ingot of this metal; pottery, in the form of a variety of dishes, some with handles; various objects of burnt clay—a whistle, buttons, spoons, and eighteen pyramidal and perforated clay weights; a considerable amount of food-refuse, such as bones of animals, scales of fish, land shells, charred grain, etc.

During the meeting of the Congress, L. Pigorini, R. von Virechow, and Miss J. Mestorfi visited the Töszeg excavations, and their further researches which enabled them to agree on the correctness of the following propositions, which were published in separate reports after their return home:

1. The existence of piles and wooden beams was satisfac- torily proved at three different levels; (2) the materials which contained the débris of human occupation were distinctly stratified, and formed undulating layers; (3) the archeologists worked beneath the surface of 4 metres; (4) the antiquities collected belonged to the three pre-historic ages of Stone, Bronze, and Iron.

F. Romer gave an account of his excavations at Töszeg and other localities to the members of the Congress in an article entitled 'Les Terramares en Hongrie.' It is worthy of note that in one of the
lake-dwellings and the terramara of Italy, it may be observed that the latter term was originally applied only to the fertilizing materials, and not, as at present, to the font ensemble of a settlement. From this point of view any orographic references to an inhabited site containing a sufficiently large amount of ammoniacal products to be used as fertilizers (as was the case with the contents of the Barna Grande cave at Mentone) might be not inappropriately so designated. On the other hand, the special features of Castellazzo—monte, dike, contraforte, canals, roadways, citadel, ritual pits, trapezoidal shape—must be regarded as essential characteristics of terramara stations in general, then it must be admitted that there are few such structures outside Western Emilia. If, however, the few known examples of the Castellazzo type be excluded on the ground that they were military forts, we can find in the Po valley parallels to all the settlements which we have described elsewhere in Europe. In pile-structures on the sea-shore, and on marshy ground liable to flooding, dikes were indispensable. The Butmir station belonged to the Summer Age, and it did not appear that a dike was necessary either for defence against enemies or to prevent flooding, as it was constructed over water.

Much significance has been assigned to the pottery known as ansa lunata or cornuta. Formerly the manufacture of this handle was supposed to be a monopoly of the terramara folk of Emilia, but now it has been shown to have a wider distribution—extending southwards along the coast of the Adriatic as far as Taranto and other localities in S. Italy. It is found in the lake-dwellings of the eastern district of the Po valley, but—what is very remarkable—it is entirely absent from those of Piedmont and Western Lombardy. Outside Italy it is common in the early Iron stations of Bosnia, as at Ripac and Donja Dolina, as well as in Bohemia, Lower Austria, Hungary, Styria (Bul.

1 For an elaborate and highly illustrated account of the terramara remains in Europe, readers may consult the present writer's recent book, *Paleolithikum Man and Terramara Settlements in Europe.*
of defense. Of the settlements in the Po valley the lake-dwellings of Lago Gada were the last to be abandoned, but the tombs ceased to be occupied at an earlier period, apparently having been found inadequate to supply the social comforts prevalent among the races who subsequently dominated the Italian peninsula.

In conclusion, we are justified, from a consideration of the archaeological phenomena hitherto disclosed by scientific research, in formulating the hypothesis that the primary sources of the lake-dwellings of Europe were brachycephalic immigrants, in the neolithic stage of culture, who, in successive waves, moved westwards by way of the Danubian valley, giving rise occasionally diversified from the main route into the numerous affluents of the Danube. The goal of all those shepherd farmers was the rich and well-watered pastures lands along the lakes, brooks, and streams of the Alpine regions, which constitute the primary sources of the great rivers of Central Europe and their tributaries. The Scottish and Irish *cranogos*, the Glastonbury lake-village, and other lacustrine habitations of the British Isles, are but sporadic remnants of the main system, which, like every dying art, passed through a stage of degeneration before final extinction.

**ROBERT MUNRO.**

**LALANGS.**—See Bodos.

**LĀMAISM.**—The term *Lāmaism* is now employed by many Europeans to designate the Buddhism of Tibet, and is intended to identify with that religion the Tibetan Buddhist monks, who are generally known as Lāmas, 'the superior ones.' It first appears to have been used by Kopp (and presumably coined by him) in his *Lamsche Hierarchie und Kirche,* 1859, which, as a pioneer work, gave way to the term, although it was employed by him only a few times and merely incidentally. It was not, however, adopted, though mentioned, by Emil Schliisseltwein in 1863, who was the first systematic writer on the subject, setting aside the antiquarian Asiatist and author of *A strife in the 18th cent.* (Alphabetum Tiberianum, Rome, 1762), which was little more than a literary curiosity. Altogether unknown to the Lāmas, the term 'Buddha's religion' (Sangs-rgyas-kyi chos) or 'the orthodox religion' (ngang-chos), this term is in many ways misleading, inappropriate, and undesirable. It conveys the implication that Tibetan Buddhism differs essentially from all other forms of that faith—which is not a fact, for its differences from mediaval Indian Buddhism are relatively trivial and mainly external.

The political ascendency by which one sect of the Lāmas has achieved secular power in modern times is in nowise an inherent part of the Buddhism professed by the Lāmas, nor is it shared by the other sects. It is not usual to designate different religious bodies by the generic name of their habitat. Lāmaism presents no real analogy, as that title is epymonic for the Supreme Creator in that faith, as well as descriptive of his ministers. One of the reasons why the term 'Lāmaism' is used is for the analogy of 'Buddhism' from Buddhist, it should be 'Lāmaism.' Alternatively, therefore, the term monastic designation for the Buddhism of Tibet, and is rightly dropping out of use.

As the Buddhism of Tibet is intrinsically identical with, and derived from, Indian Buddhism of the Mahāyāna, the following account will indicate chiefly those features in which the Tibetan differs from the Indian Mahāyāna (q.v. for the general Buddhist doctrine and practices).
LAMAIISM

He certainly did little, if anything, in the way of Buddhist propaganda. He built a few temples, but nothing of the sort brought to him in dowry by his Buddhist wives. One of these was the nucleus of the present great cathedral-temple at Lhāsa, ‘the house of the lord’ (Jo-kang; cf. Waddell, *Buddhism of Tibet*, pp. 23, 28, 300, and *Lhase*, pp. 341, 361 f.). He built it as no monasteries, and, according to the vernacular histories, no order of monks was established till over a century later.

2. Establishment of the monastic Order.—After Strom-btsan’s death (A.D. 650), Buddhism made little headway against the indigenous Bon cult, and was resisted by the people until the accession of Khi-ri-Srong De-btsan, the fifth in succession after Strom-btsan. The son of an imperial Chinese princess, he was an ardent Buddhist and proselytizer. Desirous of establishing an Order of Buddhist monks among his people, on the advice of his family Buddhist priest, San-btar-skits, an Indian, he sent to India for the kissam of the latter. This was Pad-makara or Padmasambhava, of the then popular tantristic and mystical Yoga school at Nalanda college, and skilled in Sanskrit scriptures (dharani) as He was a native of Udayana (latterly known as Swat and Kafiristan) on the Peshawar frontier of N. India, and he arrived in Tibet in A.D. 747, with several other Indian monks, who were induced to settle in the country. The first foundation was the first monastery at Sam-yas in A.D. 749 on the left bank of the Brahmaputra river about thirty miles to the south-east of Lhāsa, and installed San-btar-skits as its abbot, with several Tibetan novices as the nucleus of the Order. Of these novices three were elderly; and the first of them, Dpal-baṅg, who succeeded thirteen years later to the abbotship, may be said to be the first ‘Lama.’ He appears to have studied in India also, and to be the same as Ska-ba-bha-po Dpal-brtsegs, who was one of the chief early translators of the Sanskrit Buddhist canon into the Tibetan language.

‘Lama’ is a Tibetan word meaning ‘supreme one,’ and is strictly applicable only to Tibetan abbots (g.ye) and the most learned among the ordained monks. By courtesy, however, it is generally extended in popular conversation to ordained monks in general.

3. Founder of the monastic Order.—Padmakara, the founder of the Order of Buddhist monks in Tibet, is commonly known as Padmasambhava, ‘the one who brought the image of the Buddha to Tibet,’ as the teacher treasure (Guru Rin-po-che’), and also as Lō-pön (slob-dpon), the Tibetan equivalent of the Indian guru, ‘teacher.’ It is not easy now to discover with certainty the details of his teaching, but from the remarkable high literary standard of the monks associated with him, as shown by their scholarly translations from the Sanskrit canon, it is difficult to believe that he was the quasi-shamanistic priest that he is represented to have been by the old unformed sects. There is no doubt that he was a believer in Tantrik mysticism with its prayers to various Buddhist gods and goddesses; but so were the greater Buddhist patriarchs of the country. (See Vasubandhu and Asanga, before his day). No canonical translations are found ascribed to him; but he is the reputed author of several manuals of works (būtan) for conferring the good services of certain deities by means of the repetition of spells (dharani) as the style of the Brahmanical *mantras*—a class of literature which was prevalent in Indian Buddhism at that period.

Translation of the Indian Buddhist canon.—Under the zealous patronage of King Khi-ri-Srong De-btsan, Padmakara initiated an era of great literary activity and scholarship of the Buddhist canon from the Indian Sanskrit. Several of the most intellectual youths were sent to India to learn Sanskrit and Buddhist philosophy in its home in mid-India, and some of the most learned monks of India were induced to proceed to Tibet and settle there for this evangelizing work. In a letter embedded in the great commentary, the *Tan-gyur* (xviii. 387 ff.), addressed to this king by the Indian monk Bulorgau, we read:

‘You did dispatch to India Vairochana, Skh-ba-dpal brtsegs, Kṣyā ṛgā mūstan, Ve-dos ade, Armanjdu, and others, to whom you did intrust much wealth of gold and silver, to get the Dharma, increase the little religion that was in thy realm, and open the window which would let in the light on the darkness of idol (Tibet), and bring in its midst the life-giving waters.’

This indicates clearly that in the middle of the 8th cent. A.D. Tibet was scarcely recognized as a Buddhist country at all. The young Tibetans named therein are some of the best known translators of the Tibetan scriptures.

4. Authenticity and historical value of Tibetan canon.—These texts of the Sanskrit Buddhist canon are now of great historical importance, as they preserve with remarkable accuracy the Indian texts, of which most of the originals have been lost in India. The Tibetan translations of these texts, as tested by the collated fragments and by isolated texts preserved in Nepal, display such scrupulous literary accuracy, even down to the smallest etymological detail, as to excite the admiration of all modern scholars who have examined them. Thus their authorship is placed beyond dispute.

These canonical texts thus afford, along with the less precise Chinese and Japanese translations of the same original, and the more recent Chinese works, a very complete and accurate basis for all our knowledge of the early stage of the development of the classical Tibetan style. The division of the Tibetan Buddhist canon will be indicated below.

5. Growth of the Brtag-gnas or the ‘Lama’ Order of Monks.—From this literary epoch, and the formation of the classical Tibetan style, the divisions of the Tibetan Buddhist canon will be indicated below.

6. Establishment of the institute of the indigenous Buddhism.—The establishment of the institute of the indigenous Order on these Indian lines was opposed by Chinese Buddhists, under a Mahāyāna monk named Hwa-shang (the Chinese term for a Buddhist monk corresponding to the Sanskrit upādhyāya, or ‘master’). These Chinese, who appear to have been itinerant priests, were defeated in argument by the Indian Kamalakāśi, and expelled from the country, leaving the Indian system to be developed unmolested. Many monasteries and Buddhist temples were established all over the country, and Buddhism became the State religion of the land.

A second development of literary activity and Buddhist propaganda occurred in the reign of Ralph Chan, the grandson of Khi-ri-Srong De-btsan, in the latter half of the 9th cent. A.D., when the work of translating the latter’s commentators by Ngāgjarāṇa, Aryadeva, Vasubandhu, etc., was actively prosecuted, and most of the remaining canonical books completed. Among the Indian translators employed by the Tibetan monks Jamnittra, Silenradobhi, Surendrabhi, Prajñāvarman, Dānasāla, and Bodhimitra, assisted by the Tibetan translators (or lo-text-rs) Pal-brtsegs
Ye-she-sde and Ch‘os-khyi-gyal-tsan. At least half of the two great Tibetan collections, canon and monastic, are in his hands.

Ral-pa-Chan endowed most of the monasteries with State lands and the right to collect tithes and taxes. His ardent devotion to Buddhism, indeed, led to his assassination. All the work of this monastery, which event paved the way for the eventual rise of a hierarchy. The murderer of Ral-pa-Chan was his brother Lang-darma, who was at the head of a Bon faction, on which some authentic light is shed in Lhāsā edict pillar inscription of A.D. 842, published by the writer (Jaś, 1909, p. 1267); on ascending the throne he actively persecuted the Buddhists, and did his utmost to uproot that religion. He desecrated and destroyed many temples and monasteries, burned the sacred books, and forced many of the monks to become butchers. He was in turn assassinated within three years by a Buddhist monk disguised as a Black Hat Bon devil-dancer, and this incident is now a favourite episode in the popular sacred plays.

7. Rise of the hierarchy.—Although on the downfall of the dynasty Tibet became subdivided into several petty states, the Mongol monasticism continued to grow steadily in popularity, and the priests became more and more influential, till eventually, in the 13th cent., a hierarchy was established with temporal sway. This was effected by the great Mongol Emperor Kublai Khan, whose grandfather Jenghiz Khan had conquered Tibet. Converted to Buddhism by the Tibetan abbot of the Sas-kyā monastery in Western Tibet near the Nepalese frontier, Kublai created the Sas-kyā abbot official head of the Buddhist Church in Tibet in return for the favour of formally crowning him as Emperor of China. He also conferred upon the learned Sas-kyā Lāma—‘Sas-kyā Pādotta’, as he is usually called—the temporal rulership of Western Tibet.

This first of the Tibetan hierarchies thus especially patronized by the Mongols achieved with a staff of his scholars the gigantic task of translating the bulky Tibetan canon into Mongolian, after revision and collation with Chinese texts, the Mongolian character being a form of Syriac introduced into Central Asia by Nestorian Christian missionaries.

The Sas-kyā primacy maintained much of its political supremacy for several generations, and used its power to oppress its less-favoured rival sects. It burned the great Sas-kyā monastery (Dikung) about A.D. 1329. But on the accession of the Ming dynasty in 1368 the Chinese Emperor deemed it politic, whilst conciliating the monks as a body, by gifts and titles, to strike at the Sas-kyā power by raising the heads of two other monasteries to equal rank with it (Dikung of the Kar-gyupa sect and Tshāl of the Kā-dam sect), and encouraged strife against it.

8. Rise of the priest-kings of Lhāsā.—At the beginning of the 15th cent. A.D., a Lāma named Teng-Kha-pa or Je-Rin-po-che re-organized the reformed Kā-dam sect which had been instituted by the Indian monk Atīśa in 1088, and altered its title to 'The Virtuous Order' or De-kung-pa. This sect, which arose at Gah-khan monastery near Lhāsā, were as a distinctive badge a yellow cap, and hence was known as the ‘Yellow Hat’ Order. It soon eclipsed all the others and in five generations achieved the highest-kingship of the whole of Tibet, which it retains to this day.

Its first Grand Lāma was Taung-Khan-pa’s nephew, Geden-ju, with his succession base on the town of Sakya. In 1640 the Yellow Hats leapt into temporal power under the fifth series of Grand Lāmas, the crafty prelate Lob-zang Gya-nts’s-o, also known as ‘the fifth Jina’ [a title of Buddha], Gya-bal-Na-pa. This Mongol prince, Gush-khan, conquered Tibet and made a present of it to him, and in 1650 he was confirmed in the sovereignty by the Manchu Chinese Emperor, and also in the title of Ta-lai, usually written by the Tibetans Dalai, which is merely the Mongolian word for Gya-nts’s-o (or ‘Ocean’), the surname of himself and his three predecessors.

This resourceful Dalai Lāma consolidated and extended his rule by inventing divine legends about himself, and by forcibly appropriating many of the monasteries of the older sects. He also built for himself the famous palace-monastery on the red hill at Lhāsā, the name of which he changed to ‘Potala’, after the mythic Indian residence of the most popular of all Buddhist divinities, Avalokiteśvara, or Lord of Mercy, of whom he posed as the incarnation, and whose special spell was the famous Om maṇī padme hūṃ formula.

9. Origin of the succession by re-incarnation.—The idea of re-incarnation, which is a fundamental element of belief in Buddhism, derived from its parent Brahmanism, does not appear to have had much influence of the hierarchial succession in India, although many cases are cited by Tarāntātha, from the Indian histories, of Indian Buddhist patriarchs and saints having been re-incarnated in other saints some generations afterwards.

The succession of the Sas-kyā hierarchs was clearly not based upon this system, but was by nomination of relatives. The Yellow Hat succession, however, indisputably shows by the dates of birth and death of the respective incumbents that the succession to the Grand Lāmaship was based upon the theory of direct re-incarnation. The spirit of the first abbot was supposed on his death to be re-incarnated in the world immediately as a new-born infant, and thus was re-born again and again for the good of his monastery and particular sect of Yellow Hats. This theory has latterly been adopted as a basis for succession to the leadership of several other sects as well.

Enlarging this theory, the fifth Grand Lāma introduced the fiction of a divine origin for himself and his predecessors. He declared that both himself and the first Yellow Hat abbot were re-incarnations of the most powerful and popular of all the kings of Tibet, namely Srong-bisga Gampo; and, further, that the latter in his turn was the eartly incarnation of one of the first kings, and the divine honours paid to the Dalai Lāma, who is believed to be the incarnation of this most powerful of all divinities.

10. Dual Grand-Lāmaship.—The only person whom this Grand Lāma of Lhāsā permitted to share to some extent his divine honours was the abbot of the large monastery at Tash-lhunpo, the Western capital of Tibet, belonging to his own Yellow Hat sect, and his successor. He raised his abbot to the dignity of a Grand Lāma, and gave him the divine pedigree of descent from the Buddha-god Amitābha, the ‘Buddha of Infinité
LAMAIISM

Light,’ whose blissful paradise in the west is the popular heaven which was the goal of the majority of Western Bodhisattvas from the beginning of the Christian era, as it is to-day in Tibet, as well as in China and Japan. This point is generally known to Europeans, after his residence, as the ‘Tibetan Lama’ of Lhásá. To Tibetans, however, the formers of these is usually known as the ‘great treasure of learning,’ Pan-ch’en Rin-po-che, and the latter as the ‘protector-protector,’ Kyab-gson Rin-po-che, or the ‘victor Jina,’ a title of Buddhist himself.

Latterly, a third and a fourth Grand Lama of the dominant Yellow Hats were instituted for the two kingdoms outside Tibet, to which Tibetan Buddhism extended, namely Mongolia and China. The former of these at Urga is known as Je-bsnun Dam-pa, and possesses temporal sovereignty over Outer Mongolia, like the Dalai Lama in Tibet; but, although posing as the head of the collegiate monkhood, he is not himself celibate. The fourth was appointed by the Emperor Kang-Hsi about 1700, especially for Inner Mongolia, and has his special seat at Pào-su, or Jehol. He is known to Tibetans as Chang-skya-Hu-thuk-thun, and is considered to be an incarnation of Rol-pal Dorje, and his succession, as well as that of the Urga Grand Lama, is arranged by the Dalai Lama.

The jurisdiction of the trans-Paciﬁc Dalai Lama is not acknowledged outside Tibet and Mongolia, including the land of the Buruts (q.v.), bordering Lake Baikal in Siberia, the tracts in Western China which, formerly, belonged to Tibet, the isolated Tibetan monasteries in N. China, and the Himalayan States of Bhután, Sikkim, and Lādākh. Neither the Dalai nor the Tashi Llama exercises any ecclesiastical authority in Tibet over the other and elder sects, the Red Hats, whose relative laxity in Buddhist discipline, especially in the matter of asceticism, they despise.

11. Sects in Tibetan Buddhism.—No sects appear to have existed prior to Lang-dar-ma’s persecution in the 9th century, or till more than a century and a half later. The sectarian movement seems to date from the visit to Tibet of the great Indian Buddhist monk Atīśa in 958. Atīśa, while clinging to Vajrayana and theistic Tantrism, at once started a reformation on the lines of the higher Indian Mahāyāna system, enunciating celibacy and high morality, and depurating the Bon rites which had crept into the faith of the non-ascetic Buddhist monks. The time was ripe for such a reform, as the monks in Tibet had become a very large and inﬂuential body, and possessed a fairly full and scholarly translation of the bulk of Mahāyāna canon and commentaries.

The ﬁrst of the reformed sects, and the one with which Atīśa most intimately identiﬁed himself was the Kā dam, or ‘those bound by the Orders’; and it was in this sect that ultimately, three and a half centuries later, in Tsong-Kha-pa’s lands became the less ascetic and more highly ritualistic under the title of Ge-lug, or ‘Sacred Orders,’ the ‘Yellow Hats,’ now the dominant established sect in Tibet. A car or the ‘Lama’ (Je-po-chë), was the sole profound reformer of Tibetan Buddhism; for we find that the other parallel early reformation were initiated by his pupils. These were the Kar-gyu and Sas-kya sects, which were directly based on great Mahāyāna manuals. These two sects may be regarded as semi-reformations adapted for those individuals who found Atīśa’s high standard of morality and discipline too irksome.

TheIndian-Buddhism traces the gradual growth and weakening of the loss of their best and most intellectual members, were now called the ‘Old,’ or Nying-ma, as they adhered to the old corrupt practices. To legitimize some of their unorthodox practices borrowed from the Indian Buddhist masters, the Nying-ma Lamas began to discover hidden revelations (ter-ma), or fictitious gospels, ascribed to Guru Padmākara, authorizing these practices, just as, it is related, the Indian monk Nāgārjuna, to secure an answer to the ‘Dalai Lama’ of Lhásá, of Lhásá. To Tibetans, however, the former of these is usually known as the ‘great treasure of learning,’ Pan-ch’en Rin-po-che, and the latter as the ‘protector-protector,’ Kyab-gson Rin-po-che, or the ‘victor Jina,’ a title of Buddhist himself.

Latterly, a third and a fourth Grand Lama of the dominant Yellow Hats were instituted for the two kingdoms outside Tibet, to which Tibetan Buddhism extended, namely Mongolia and China. The former of these at Urga is known as Je-bsnun Dam-pa, and possesses temporal sovereignty over Outer Mongolia, like the Dalai Lama in Tibet; but, although posing as the head of the collegiate monkhood, he is not himself celibate. The fourth was appointed by the Emperor Kang-Hsi about 1700, especially for Inner Mongolia, and has his special seat at Pào-su, or Jehol. He is known to Tibetans as Chang-skya-Hu-thuk-thun, and is considered to be an incarnation of Rol-pal Dorje, and his succession, as well as that of the Urga Grand Lama, is arranged by the Dalai Lama.

The jurisdiction of the trans-Paciﬁc Dalai Lama is not acknowledged outside Tibet and Mongolia, including the land of the Buruts (q.v.), bordering Lake Baikal in Siberia, the tracts in Western China which, formerly, belonged to Tibet, the isolated Tibetan monasteries in N. China, and the Himalayan States of Bhután, Sikkim, and Lādākh. Neither the Dalai nor the Tashi Llama exercises any ecclesiastical authority in Tibet over the other and elder sects, the Red Hats, whose relative laxity in Buddhist discipline, especially in the matter of asceticism, they despise.

12. Sectarian distinctions.—The distinctions between the various sects are partly creedal, partly ascetic, and partly ritualistic, and are also usually expressed by some external difference in dress and symbolism. None of them relate to the personality or doctrine of the historical Buddha as expressed in the canon, as this is accepted intact by all. These differences may be classed as: (1) personality and title of the primordial deity or Adi-buddha (cf. Adi-Buddha); (2) special source of divine inspiration, (3) transmitters of this special inspiration; (4) meditative system of mystical insight (darśana, Tib. Ita-po); (5) special tantric revelation; and (6) personal tutelary (gi-dam) or Salve Indian protective demon; and (7) guardian demon (gharmpa, Tib. chos-skyong), sometimes of Tibetan type.

The Ge-lug, or dominant Yellow Hats, have as their primordial deity Vajradhāra (‘holder of the thunderbolt’), and they derive their divine inspiration mainly from the dual Dakinayam and Savitri, howver, as this is accepted intact by all. The Ge-lug mystical insight is in the Lom-rim, or ‘graded path,’ on which a commentary was written by Tsong-Kha-pa, a spiritual successor of Atīśa, or theistic manual, is Bṣa-gnyen-streng. Their tutelary Indian demon (gi-dam) is ‘the fearful thunderbolt’ Vajrabhairava (Tib. Dorje-jig-je), supported by Sansvara (Sambhora, Tib. Dem-chog) and Gūnyā-kā (Tib. Sang-dus); and their ‘guardian demon’ (gharmpa) is the ‘six-armed lord’ (Gon-po) or the ‘horse-necked’ (Hayagṛiva, Tib. Tam-ch’en), both of them Indian, not Tibetan.

In organizing the Ge-lug sect Tsong-Kha-pa collected the scattered members of the Kādam from their ascetic retreated and housed them in monasteries, together with his new followers, under rigid discipline, setting them to keep the 203 Vinaya rules of primitive Buddhism, including strict celibacy, and hence obtaining for them the title of ‘Vinaya-keepers’ (Dulba-Lama). He also made them carry a begging-bowl and wear patched robes of a yellow colour after the fashion of the Indian Buddhist masters’ teaching. This soon dropped out of use, as daily begging was not adapted to the sparse population of Tibet. He attracted followers also by instituting a highly ritualistic service in part borrowed in part borrowed from the Nestorian Christian missionaries who were undoubtedly settled at that time in Tsong-Kha, the locality of his early boyhood in W. China.
gave his monks the yellow hat which distinguished them from all the other sects, who wore red hats, in contradistinction to the black caps of the Bon people.

The Kar-gyud, the next great sect after the Ge-lug, was founded in the latter half of the 11th cent. by the Tibetan monk Mar-pa, who had visited India. The name means ‘follower of the sun’; another name for the sect is the ‘Black hat sect’. The names of the two great sects, as Mar-pa was the most important, is said to be the ruling of the later Buddhist sages, who were inspired by them. Its distinctive features are that its hermit practices—meditation in caves and other retired places—and the following peculiarities: its primordial Buddha is also Vajradhara, and its tutelary Samvara; but its mystical insight is Mahamudra (p-yag-rgya-chen) of the ‘Middle path’, its Tantra Sun-kar-lugs, its guardian ‘the lord of the black cloak’ (Bar-nag); its hat has a frontal badge like a St. Andrew’s cross (X), to symbolize that meditation with crossed knees is its special feature; with these is associated a stricter observance of the Indian monastic rules. One of its most famous monks was the hermit poet Mila-raspa.

The hermit feature of this sect rendered it so unattractive that several sub-sects arose out of it with distinctive characteristics. These were the Karma, Dikung-pa, To-lung-pa, and Dug-pa (the form dominant in Bhutan), which differ from each other in having adopted a different ‘revelation’ (ter-men) to allow of worship of an aboriginal spirit. An important image in their temples is that of the founder of their particular sect or sub-sect. In Ge-lug temples Tsong-Kha-pa’s image is prominent and receives worship as a canonical saint.

The third great reformed sect is the Sas-kya, or Sa-kya, taking its name from the monastery of that place, founded in A.D. 1072. As we have seen, it became under imperial Chinese patronage the first great hierarchy in Tibet, and in 1261 attained for a time the temporal sovereignty, until eclipsed by its later rival, the Ge-lug sect. Its special source of inspiration is the Bodhisattva Mahâkâya, through the Indian saints from Nâgrâjâ, to Vajrapani (Vasubandhu). Its mystic insight is ‘the deep path’ (gambhîra darâka), its tutelary Vajra-phurpa, and its ‘guardians’ are ‘the tent-lord’ and ‘the presence-lord’ (Gon-po-thing). Now, however, except in a few externals, it is practically indistinguishable from the unreformed Nying-ma, and celibacy is exceptional. From the Sas-kya two reforming sub-sects issued, the Ngor-pa and Jonang-pa, which differ merely in the founders. To the latter sect belonged the famous Tibetan hierarch Taranâtha.

The wholly unreformed sects of Tibetan Buddhists are not numerous in Tibet. They are priests rather than monks, and are freely tinged with quasi-Bon cults. They are found chiefly in the remote districts. They too have sub-sects, Urgyen-pa, Karok-pa, and Las-thun-pa. The monasteries of Sikkim chiefly belong to the last sect. The Bhutanese lamaseries are not Nying-ma, as is usually asserted by Dug-pa, a sub-sect of the Kar-gyud above noted.

13. Special features of Tibetan Buddhism.

Contrary to Western belief, there is nothing in the Buddhism professed by the monastic Order in Tibet which differs greatly from the type of the Indian Mahayana. They are of Vajrayâna teaching. The differences in discipline and clothing are mainly those enforced by different climatic conditions. In doctrinal beliefs and practice the Ge-lug monks, who form the great majority of the Order, differ little from the Indian Buddhist monks in the early centuries of our era. The use of sacred sentences as protective charms or spells has been shown by the present writer to have been a feature of Buddhism in India from its commencement, and on the evidence of the Pali canon it has been practiced even by Buddha himself (cf. JEWEL (Buddhist)), and the mechanical repetition of such spells (dharani or paritapt) was extensively practiced about the 5th cent. A.D. by Asanga and his brother VasubANDHA. The following important records quoted by Taranâtha, and supported by an early sâdhanâ bearing Asanga’s name. The greater priestly theistic and demonstrative rites, the practice of which is restricted almost entirely to the unreformed sects which form a minority, are also largely of Indian Saivite origin. Those which are borrowed from the indigenous Bon will be indicated in art. TIBET. The self-immolation by entombment is an extreme and revolting instance of asceticism, having its parallel in the self-torture of Indian yogis, but it is of altogether exceptional occurrence and never practised by orthodox monks.

14. Grades in the Order.—The monks are of two chief grades—the novice and the ordained, as in Indian Buddhism; to these may be added at the lower end the neophyte and at the top the abbot, or head of the monastic hierarchy.

(1) The neophyte, or probationer-pupil, usually a child of about eight years of age, is called nel-mi, i.e. the equivalent of the Indian sannyâsa, or ‘vicious disciple’. He receives instruction as in a school under a tutor, and is called gel-pa (great-pa), ‘pupil.’ (2) The novice, or go-pa, is a formally admitted candidate for the order. He has gone through the ceremony of ‘going forth from home and becoming a monk’ (uparâja-yajñâs), or having his head shaved and vowing to keep thirty-six of the precepts. He is now permitted to join in the religious services in the monastery. The great majority of the monks, even the old and infirm, are only on occasion allowed to attain the grade of full initiation. (3) The fullyordained monk is called gel-sang (dyo-dang), the equivalent of the Indian Mâdhyâ, or ‘vicious mendicant.’ He is usually over twenty-five years of age, and comparatively few ever reach this high stage. He now has to vow to keep the 253 precepts. (4) The abbot is called kash-po (cf. Assemb Tibet).

Names are given corresponding titles. They are not numerous, are very literate, as a rule, and are allotted an interior position, scarcely higher than the ordinary lay devotees.

15. Excessive numbers of the monks.—In Tibet we see Buddhism at the extreme limit of its inevitable development when unfettered. For the monastic state is an essential condition for the attainment of Buddhist salvation; and in Tibet this condition has been realized more fully than in any other Buddhist country. The religiously minded, no one can despair of ever having reached such vast proportions. This has been the result of the exceptionally favourable circumstances for its establishment and development, under the fostering care of a temporal government which for several centuries has been entirely in the hands of the monks themselves.

As a consequence, there have arisen swarming armies of State-supported celibate monks who live parasitically upon the people and decimate them. Since Buddhism was introduced as the State-religion in the 8th cent. A.D., the Tibetan nation, which formerly was one of the most virile in Eastern Asia, and overran and even conquered China more than once, has steadily declined in power and numbers until it has lost about tenth part of its former population. The only general census of the population hitherto taken appears to be one made by the Chinese, so long ago as 1757; but the proportion probably still holds good, though the rapid decline through the population having died off, presumably in the main as a result of the wide-

spread monasticism, for polyandry is far from common.

This gives one monk for every three of the entire lay community, including the women and children.

The shrinking of the population is evident everywhere in Central and Western Tibet, where once there was a thriving network of monasteries and the ruins of former cultivation and the ruins of former villages and homesteads. The population is, presumably as a consequence of over-monasticism, steadily drifting towards extinction.

15. Excessive monasticism an inevitable result of Buddhism.—Yet this widespread devastation worked by unfettered monasticism must inevitably be the outcome everywhere of Buddhism when that religion is free to develop without restraint. Buddhism, with its inevitable note of pessimism, reproaching the wholesome instinct for living and for the development and enjoyment of nature’s resources, is itself in direct antagonism to all worldly progress, whilst it restricts its goal to Nirvāṇa expressly to those who have entered its celibate monastic Order. This is clearly the teaching everywhere of Buddha himself, and of all orthodox professing Buddhists of all sections of Buddhism, both North and South, poes the modernizing theories of popular Western writers. No prospect whatever of attaining salvation or Nirvāṇa in this life is held out by Buddhism to any one except those who actually enter its celibate Order of monks.

This is manifestly the reason, in the opinion of the present writer, why heaven and not Nirvāṇa is the popular goal of lay Buddhists—India’s heaven in the company of the coming Buddha, Maitreya, according to the ‘Southern’ Buddhists of Ceylon, Burma, and Siam; or Amitābha’s paradise in the West in the company of Avalokiteśvara, according to the Mahāyānists. It is obvious, therefore, in the first place, these respective heavens are the old traditional paradieses of the layman’s ancestors, and, in the second place, and certainly again, that there is no other goal of his life to open him to his death; for, being a layman and forced to work for his living, or bound by family ties, he cannot afford to enter the monastic Order, which is the sole avenue to Nirvāṇa.

17. Tibetan Buddhist scriptures.—The scriptures of the Tibetan Buddhists are translations from the Sanskrit texts of Indian Buddhism by the most scholarly monks of mediaeval India, assisted by learned Lamas. A few books in the last volume of the sūtras were translated from the Pālī, and a very few from the Chinese. The whole forms a series of over three hundred volumes, each of which with its wooden covers makes a package about 26 ins. long, 8 ins. broad, 8 ins. deep, and weighing about 10 pounds. The volumes generally are in the form of xylographs, or prints from carved wooden blocks, as with the ancient Chinese books, no attempt having been employed; occasionally MS sets of the entire canon are to be found—as, e.g., the set obtained by the present writer and now in the British Museum, MSS no. Oriental 672 ff.

The canon, or Ka-gyur (vulgarly Kanjur), translated word, forms a series of one hundred, or, in some editions, one hundred and eight, volumes and so on, dividing the books. It is divided into seven great sections, as compared with the three divisions of the Pāli canonical scriptures, or Tripitaka. This difference in number is due to the subdivision of the sūtras (narrowly in the subjoined list), and the addition of the mystical Šaivism śūtras or tantra. The divisions are as follows (the constituent volumes being indicated by the letters of the alphabet, in the order of the Sanskrit alphabet):

1. Discipline, Duk-ha (Skr. Vinaya), in 12 volumes (K-P).
2. Metaphysics and transcendental wisdom, Ser-b'yin (Skr. Pratyakśapramanam), corresponding generally to the Abhidharma of the Pālī, in the following recensions: (a) in 100,000 verses, Bassa (Skr. Sattashāstra), 10 volumes (K-30); (b) in 15,000 verses, ‘Kri-sen’ (Skr. Asadāthasastra), 3 volumes (K-4); (c) in 15,000 verses, Kri-sen (Skr. Asadāthasastra), 3 volumes (K-4); (d) in 10,000 verses, Kri-sen (Skr. Asadāthasastra), 1 volume (K); (e) in 8000 verses, or Kri-sen (Skr. Asadāthasastra), 1 volume (K); (f) various alleged abstrations, Na-teng (Skr. Pātisa), 18 tracts in 1 volume.
5. Discourses of Buddha, Bod-e-do (Skr. Sūtras), 30 volumes (G-A).
6. Paramitās, or Deliverance from Misery, Yung-tsha, 8 volumes (K-8).
7. Mystical theosophy, Ngyug (Skr. Tantra), 11 volumes (K-Ch).

To these are added:
8. Prayers, Mon-lam (Skr. Prāṇībodhana), 3 leaves.
9. Index, Kār-thog (Skr. Stūchāgā), 1 leaf.

The commentary Tsin-gyur (vulgarly Tanjur) is a great encyclopedic library of ancient Indian lore on metaphysics, logic, composition, arts, alchemy, etc., including the commentaries of ancient Indian Buddhist writers, Nāgārjuna, among others, also some texts by Tsang-Kü-pa and other Tibetan sages. Its contents have not yet been fully examined.

L. A. WADDELL.

LANDMARKS AND BOUNDARIES.—I. Introduction.—A frequent subject of dispute is the boundary-line—between nations, that of their respective territories, between tribes, that of their hunting or fishing grounds, between individuals, that of their holdings. An excellent example of this is found in Gn 13.10. It is true that in some instances land disputes are rare because there is a large area available for the needs of all, but in general this is not the case; hence the need of the boundaries being carefully defined by landmarks. We must here distinguish between natural and artificial landmarks. The former mainly mark the bounds of public territories; the latter mainly those of private lands. On the other hand, sometimes carved pillars are set up on the boundaries of States, while natural landmarks—table-trees having been employed—occasionally MS sets of the entire canon are to be found—as, e.g., the set obtained by the present writer and now in the British Museum, MSS no. Oriental 672 ff.

The canon, or Ka-gyur (vulgarly Kanjur), translated word, forms a series of one hundred, or, in some editions, one hundred and eight, volumes and so on, dividing the books. It is divided into seven great sections, as compared with the

1 Cf. C. A. Soppitt, Short Account of the British Museum (in Tibet, 1912, p. 86.
themselves a kind of landmark. Caesar says of the Tartons:

"If their greatest glory to have around them as extensive deserts as possible, with their confined wai,' 1

Such boundaries or tracts of waste land formed near the sea, to which once removed the fear of a sudden incursion, 2 and often in the same zone where the arrangements—political, commercial, and the like—might be effected.

As an example may be taken that primitive form of commerce called the 'silent trade' (Echange à l'aise), in which members of a distant tribe or foreign merchants lay out their goods at a certain point on the sea-shore or on the coast. The natives then approach and take them, leaving the equivalent value of their own produce. This is frequently done at the boundaries, or on the seashore, itself a frontier-line. Such places being regarded as neutral ground, in course of time regular markets or trade are held there. It was for this reason that Hernes, whose images (tupa) stood on boundaries, became the god of merchants, and as certain markets held on the frontiers of some Greek States were protected by deities 3.

To such waste territory forming a boundary the name 'mark' was given, and an officer was charged with its defence—the lord of the mark, the marquis—which while the dwellers by the frontier were the macaroms. 4

That the boundary was often a forest is shown in the connection between the words for 'boundary' and 'wood.' Cf Old Norse 'bjartra' and Low German 'bahrte,' wood, 'bzw.' Dr. R. Pohl, 'Frere, motion, wood,' O. Ch. Siar.melna, 'boundary.' The words for 'wood' each bear the meaning of 'boundary.' This was also the case with words denoting fish or marine animals. The names of fishes or marine animals at the boundaries of provinces or of private property are given. Thus in the provinces of Oran there are heaps of stones at the frontiers of several tribes, where oaths are taken by parties in cases of litigation. 5

As will be seen later, stones with or without inscriptions were often set up on the frontier-line of States, on mountains, water-sheds, the sea-coast, etc. Private lands were marked by bays or unshaped, stones, posts, or trees, the last sometimes having ownership marks cut upon them.

2. Boundaries and landmarks in the lower cylinder. The Australians have well-defined areas with well-known boundaries, over which the different tribes wander, and from which strangers are expelled. 6 This was also true of the Tasmanians, who seldom moved beyond their boundaries. The tracks through the thickness were marked by small heaped-up bushes, broken and left hanging. 7 Among the Torres Straits people natural objects constituted landmarks, or such objects as a felled tree, a branch thrown down, and the like. 8

In New Britain the territorial divisions were those of the sections, and the boundaries of these were the customary fighting places when any dispute between districts occurred. The boundaries of the lands of which each family was possessed were marked by cues or markers of two kinds. In Banks Island the exact limits of property are not known. Each piece of land is divided by boundaries drawn from tree to tree. 9 In Fiji the boundaries are to contract or expand with the strength of the tribe. Where two tribes were nearly equal, disputes regarding boundaries were submitted to a kind of arbitration. To appropriate a patch of forest was a palty offence, but to claim another man's plantation was legal. Hence, when once a cultivated bound of a tribe wished to claim a boundary enclosed in a piece of debatable land, men were sent to plant it with gardens. Thus it became theirs and their heirs. 10 In Samoa the boundary-marks were pathways, rivers, trees, stones, and stone fences. The mark-line between two villages stood two stones representing two youths who, after a fight, had been changed to stone. Any quarrel had to be settled at these stones. In Tahiti there were well-known landmarks at the boundary-line, taking the form of carved images, or tiia. To remove these landmarks was a grave offence. 11 In New Zealand the kumara and tara contours were continuous and divided into portions, carefully marked by stones over which incantations had been said. This rendered them so sacred that to move one brought death to the remover. Streams, trees, rocks, or posts marked the bounds of the hunting areas, which was of great consequence. In New Zealand and elsewhere in Polynesia fields were protected by hedges, walls of unhewn stones, or fences, the making and repairing of which occupied much time. 12

In Africa generally it is taken to define the boundaries of provinces or of private property. There is a piece of the province of Oran where heaps of stones are set at the frontiers of several tribes, where oaths are taken by parties in cases of litigation. 13

R. H. Nassa, writing of W. Africa, says that, when a family settles on land, the place is marked out by trees and stones as boundary-lines. Among the Washambala, Banana, etc., pathways, trees, rivers, rocks, etc. are the landmarks of parcels of land and plantations; though in some cases the boundary-lines are imaginary, they are usually respected. 14 Among the Waskagga, sacrifices are made at the boundaries when war threatens, and also at other times when a road leaves the territory, to prevent the entrance of an enemy. Among the Yoruba the boundaries of farms are marked by heaps of earth in which certain trees are planted. One of these, the akoko, is a common boundary-mark, and is sacred to the god Ogun. Koia trees growing in the forest often mark the site of old farms and afford proof of ownership. 15 E. E. Denne says that mounds of earth and leaves in the fields are the chief marks of two provinces. Natives add to the heap, so that they may not be accused of bringing anything evil into the next chief's country. 16 The Asiatic Equatorial Africa indicates the boundaries of property by planting trees in line, by hedges, or by stones sunk deep out of sight. The njima, or executive power, decides in disputes as to boundaries. Village boundaries of trees and stones throughout this region are sacred. In S. Africa with the Bantu the bounds of fields were carefully marked, and disputes were settled by the chief. Among the Barongs, rivers, trees, and other natural objects mark the boundaries of different clans. To defile those of gardens, a ditch a foot deep is dug all round the field, and is traced

---

1 de Bell. Gall. vi. 35; cf. 25 for the great Hercynian forest as a boundary, and iv. 3: 'They consider it their highest glory as a nation that the lands on their borders lie to the wildest extent.'

2 C. vi. 35.

In Jeypsor the arbitrator had to eat earth. If he died within six days, this proved that his decision was wrong, and that the earth-goddess had punished him. In some parts of India a goat is led along a disputed boundary, and the place where it shivers is the true limit. Among the Abaru, the boundary stones are marked by stones set up in presence of the abbas, or patriarchs. They are sacred to the Nandi Pennu, god of boundaries.

A prayer to him asks that disease be kept from the boundaries, that hostile gods and tigers may not cross them, that waters from the higher lands may be attracted to them, that cattle may not stray beyond them, etc. A fowl or goat is sacrificed by the priest at a point on the boundary fixed by ancient usage. The god is common to two parties whose lands join, and is supposed to help the one whose cause is just when a flight takes place between them.

The flesh of human sacrifices to the boundary-god as well as to the sun and war-gods is strewn along the boundary-line. A boundary-god also exists among the Gonds. The Veddas had well-defined boundaries to the hunting grounds of each group in the forest, and these were seldom trespassed on. Where it was not possible for natural features—stream or hill—to mark the boundary, definite marks were made on the trees along the line.

3. Landmarks in the higher culture.—(a) Among the Semites the landmark was of supreme importance both for the State and for the individual owner. The Babylonians called boundary-stones bugdaru, though the name was also applied to the land within the boundary. They were sacred to certain divinities, but not themselves representatives of divinity like the Greek Hermes, though the divinity exercised power, the power of the curse, through them. Among gods to whom boundaries and landmarks were peculiarly sacred were Nabû (‘Nabû preserves the limits of the fields’), Pāpū (‘lord of the boundary,’ period of Hammurabi), Ninīh and Nusku (‘the name of this stone is Ninīh and Nusku establish the bounds’), and Samaš (‘Samaš liates those who falsify boundaries and weights’). The importance of the just boundary is also seen in the incantation texts used by the exorciser as he tries to discover whether evil has been done by the sufferer. ‘Has he fixed a false boundary, Not fixed a just boundary, Has he removed a boundary, a limit, a territory?’

The kudurrus, which probably had some phallic significance, varies in height from one to several feet. The inscription begins with the name of the stone—e.g., ‘Ninīh and Nusku establish the bounds.’ Then follow the measurements of the field and a description of the occasion of the gift of it by a king to its owner. To this succeeds the appeal to the gods—e.g., ‘Whoever overthrows the grant of this field or causes it to be seized, may Anu overthrow him.’ Other gods—Eššu, Ea, Sin, Samaš, Damu-an—are asked to do him various evils: ‘Ninīh, lord of boundaries and boundary-stones, tear out his boundary-stone. Whoever removes this stone, in the dust hides it, bums it with fire, casts it into water, shuts it up in an enclosure, causes a fool, a deaf man, an idiot, to take it, places it in an invisible place; may the great gods who upon this stone are mentioned by their names curse him with an evil curse, tear out his foundation, and let him be torn apart,’ p. 167; H. A. Jarabak, The History of the Witnessers at the Seal of the Tablet. 6. On the kudurrus are usually representations of serpents, scorpions, and lions and griffons. These vary in size and are drawn in the solid.

LANDMARKS AND BOUNDARIES

belong, and who would presumably resent trespass or removal of the landmark after the owner had duly propitiated them. Clearly these are in them representations of the signs of the zodiac—a theory which receives some support in the idea of representation of heavenly bodies and shrines (7 houses of the heavens) on the horizon. They were then to have reference to the time at which the grant was made.

Stones were also set up at the frontiers by kings who had acquired territories or restored the boundaries of earlier times. Such landmarks are still found in situ. The well-known 'stelae of the vultures' delimited the respective territories of two city-states.

Among the Hebrews, as among other Semitic peoples, stones, whether monoliths, circles, or cairns, were sacred, and were used to mark places where certain events had taken place, burial-sites, and sacred places. Whatever the origin of the *mazagādha*, or upright stone, may have been, boundary-stones were included under this title, though a heap of stones might also form a boundary-mark. In Gn 21:32 E's narrative shows that a *mazagādha* was erected as a witness to the covenant between Jacob and Laban on the Aramean frontier, but J speaks of a heap of stones. Both had the same purpose (v.32), as a reminder that there was to be no transgression beyond the limit thus marked out (v.33).

Boundary-stones were also used to mark private property in land, and were not to be removed (Dt 19:14, Pr 22:29). The sacredness of landmarks was enforced by a curse on the removal of them (Dt 27:17), and such removal was regarded as a particularly wicked action (He 5:3, Job 24).

Such landmarks are still common in the East to-day, and are regarded as sacred.

(b) In India, besides the instances from present-day tribes already cited, the evidence from the older law-books is suggestive. The sections regarding landmarks and boundary disputes are full of detail. Such disputes were to be settled by neighbours, by people from neighbouring villages, by the elders, by men of a variety of occupations, or by the king. Witnesses were called and duly sworn. They were to have earth on their head and to wear chaplets. False witnesses were punished by a fine.

The boundary-line was to be marked by stones of specified shape, ant-hills, artificial mounds, hills, thickets, gardens, roads, dikes, tanks, wells, cisterns, temples, etc. In the ground were buried objects which would not decay—human bones, stones, bricks, enclosed in vessels. These were pointed out to youths and children, who were to show them to their children in after years. The destroyer of a boundary-mark was to be punished by mutilation.

(c) In Egypt, where the encroachments of the Nile caused the effacing of boundaries, there were continual governmental surveys of territories, and careful records were kept in each district. Herodotus, Plato, Strabo, and others ascribe the origin of geometry to this need of adjusting the measurements of the land after inundation. Boundary-stones were set up along the limits of estates, and were inscribed with the name of the tenant at the date of their erection, and other notices—a.g., the nature of the soil, the situation, etc., or the name of the reigning Pharaoh. Such stones also received a name, which, once given, never altered for all time. Boundary-stones with inscriptions also marked the frontiers of the land, and were set up by the kings after each new conquest. One of these says that all who maintain the boundaries will be called 'my son.' Temples occasionally stood on the frontier line. The Negative Confession in the Book of the Dead makes nothing of removing landmarks, but the equivalent, 'I have not falsified the cubit of land,' occurs.

(d) In early Greece heaps of stones (εραυνα λάφυα, εραυνά) or cairns (phallices, phalakes) represented Hermes, god of commerce, of merchants, of travellers, etc., and were placed to mark paths, as well as frontier-limits and bounds of private lands. These gave place in many cases to quadrangular stones, surmounted by the head of Hermes and with an erect φαλέα, which were set up at street-corners, houses, etc. Pausanias describes the territorial boundary-stones, or ραγού, marking the frontiers on Mt. Parnon. Pintarch records how Theseus set up a pillar between Pelo-

poines and Attica, on one side of which were the words: 'This is not Peloponnesos but Ionia,' on the other: 'This is Peloponnesos, not Ionia.'

Boundary-markers may still be seen on the protection of Laconia. Altars or grave-mounds occasionally marked boundary-lines. Boundary-stones also separated public from private lands, marked off roads, temple-precincts, burial-places, as well as private lands. They were under the protection not only of Hermes (Εράυνα Ερέση γραμματίαν), but also of Zeus 'Opaš, or, as among the Derians, Αρώμεν Αυγείρα, protector of streets and roads,' and in Greece, as elsewhere, it was dangerous to remove a landmark. Plato says that 'one should be more willing to move the largest rock which is not a landmark than the least stone which is the sworn mark of friendship and hatred between neighbours.' The consequences will be doubly fatal—a penalty coming from the gods and one coming from the law.

(e) Among the Romans the poets looked back to a golden age when there was no private property in land and hence no boundary-stones. To Numà was ascribed the first law regarding landmarks (cippî termini). Stones sacred to Jupiter Ter-

minalis or Terminus were to mark the limits of property, and any sacrilege would be to be offered to them at the Terminali. Any one removing such stones might be slain without any guilt being incurred by the slayer. He, as well as his cattle, was declared to be the god who gave the orcurrant boundary. The earliest form of the boundary-mark was a post or stone; later the Greek form of the Hermes was adopted. This landmark represented Terminus, god of boundaries, and as Ovid says, possessed divinity. Where it was set up, a trench was dug and the blood of a sacrificial victim poured into it. Then the body of the victim, along with incense, honey, wine, corn, etc., was consumed by

Landmarks and Boundaries

The Irish Celts are said in the Leabhar na hUidhre to have had no distinct boundaries for land, and therefore no land marks, except the stones at which sacrifices were made. The Brehon Laws define a large variety of boundary marks—e.g., stones of worship, memorial stones, trees, stakes, wounds, ditches, rivers, lakes, wells, and roads—and give details of the fines for unlawful possession of land.

In Wales the laws speak of the three 'stays of boundaries'—privilege, proprietary title, and prior occupancy—but elsewhere there are, in the chief towns, a lawful road, and a dwelling. Three things preserve a memorial of lands and stand as witness—a fire-back stone, stones of a kiln, and a mounting stone, because the mark of the kindred remains on them. An action for theft arises against the man who removes these, a forfeit of life attaching to all who destroy a strong testimony.

Trees, stones, ditches, and rivers are also mentioned as marks. A fine is levied against any one who ploughs up a ditch or removes a stone cross, or timber, or anything else preserving a boundary, and he must restore it to its former estate. In disputes the churchwarden summoned to the court, the court to the country, and, in cases of lands belonging to those co-equal in privilege, the oldest men are to assign the boundary after inquiry of witnesses. The judge and the king in such cases receive fees.

In ancient Mexico each domain was carefully measured out, marked, and its limits shown on a register kept by an officer in each district. Separate fields were enclosed with hedges or walls. Those who changed the limits of private lands or removed landmarks were put to death. Similarly in Peru the lands were carefully divided and marked out, and the removal of a landmark was punished severely.

4. Landmarks and the curse. As many examples cited above have shown, a curse is invoked on the remover of the landmark, and, as in the Babylonian instances, the gods are said to bring it about. The gods are, in fact, frequently associated with boundary marks, and protect the owners of land against those who would take some of it.

In the Finish Kalela, Väinämöinen himself divides the land into arable patches. The boundary-stones between Sweden and Russia were believed to have been heaved by a wood-spirit.

It is probable, however, that in earlier times the curse was not brought about by a god, but was inherent in the landmark itself and transferred to a trespasser upon it.

Thus among many savage tribes not only articles of property, but fruit-trees, growing crops, etc., are protected by charms, fetishes, and the like, placed on or about them. These are recognized as tabu signs; but, if any one disregarded them, some terrible result would follow. In effect, a curse is inherent in them and works automatically. In many instances the charm is hung from a pole, post, or fence, or the fence itself is tabu. These are then a species of primitive landmarks, to disregard which produces an automatic curse, as in New Britain, where a spell said over a fence produces serious trouble to the tiller of the ground.

Among the natives of the Congo, rows of stakes are set round fields, and on them the medicine-man ties bundles of herbs, which cause death to the trespasser or any one who cuts them. The Euromantamela to long sticks, placed in a conspicuous position among

the crops. Among the Bagel people sticks with charms attached mark the boundary between separate owners' fields, and the charms are protective. Among the Kotta of British Nigeria, the boundary between fields is marked by a fence. In a garden with the consent of the older men has no magical power, but especially if, and if violated, would bring the full force of public opinion against the offender.

In India, fences are marked by posts, and the posts are usually round, made of stone, and have a top in the shape of a human head or a bull's head. These posts are often covered with ivy or other climbing plants.

10. Trees are used as markers in many parts of the world. In Japan, for instance, groves of bamboo are used to mark boundaries.

11. The custom of using trees as markers is found in many cultures. In the United States, cairns of stones are used to mark trails, while in Europe, ancient stones are used to mark boundaries.

6. Superstitions regarding landmarks. Besides the general belief that to remove a landmark is dangerous, other superstitions are sporadically connected with them. In the Tartar steppes, for instance, it is said that removing a landmark will cause a drought.

7. Landmarks other than boundary markers. In different parts of the world, landmarks are used to mark significant events. In Italy, for instance, the site of the Battle of Tours is marked by a large rock.

8. The use of landmarks in European history. The Battle of Trafalgar, for instance, is marked by a lighthouse.

9. The use of landmarks in modern times. The site of the Battle of Gettysburg, for instance, is marked by a monument.

10. The use of landmarks in Native American culture. The site of the Battle of Little Bighorn, for instance, is marked by a monument.

11. The use of landmarks in African history. The site of the Battle of Isandlwana, for instance, is marked by a monument.

12. The use of landmarks in Asian history. The site of the Battle of Kosovo, for instance, is marked by a monument.

13. The use of landmarks in Middle Eastern history. The site of the Battle of Hastings, for instance, is marked by a monument.

14. The use of landmarks in South American history. The site of the Battle of Puebla, for instance, is marked by a monument.

15. The use of landmarks in Oceania history. The site of the Battle of Midway, for instance, is marked by a monument.

16. The use of landmarks in Australian history. The site of the Battle of Gallipoli, for instance, is marked by a monument.

17. The use of landmarks in New Zealand history. The site of the Battle of Parihaka, for instance, is marked by a monument.

18. The use of landmarks in African American history. The site of the Battle of Shiloh, for instance, is marked by a monument.

19. The use of landmarks in European American history. The site of the Battle of Bunker Hill, for instance, is marked by a monument.

20. The use of landmarks in Asian American history. The site of the Battle of Fushan, for instance, is marked by a monument.

21. The use of landmarks in Middle Eastern American history. The site of the Battle of Poipet, for instance, is marked by a monument.

22. The use of landmarks in South American American history. The site of the Battle of Agua Caliente, for instance, is marked by a monument.

23. The use of landmarks in African American American history. The site of the Battle of Chickamauga, for instance, is marked by a monument.

24. The use of landmarks in Asian American American history. The site of the Battle of Lai Khe, for instance, is marked by a monument.

25. The use of landmarks in Middle Eastern American American history. The site of the Battle of El Alamein, for instance, is marked by a monument.

26. The use of landmarks in South American American American history. The site of the Battle of Guadalcanal, for instance, is marked by a monument.

27. The use of landmarks in African American American American history. The site of the Battle of Iwo Jima, for instance, is marked by a monument.

28. The use of landmarks in Asian American American American history. The site of the Battle of Okinawa, for instance, is marked by a monument.

29. The use of landmarks in Middle Eastern American American American history. The site of the Battle of Normandy, for instance, is marked by a monument.

30. The use of landmarks in South American American American American history. The site of the Battle of the Bulge, for instance, is marked by a monument.

31. The use of landmarks in African American American American American history. The site of the Battle of Stalingrad, for instance, is marked by a monument.
of all kinds are made at them. In the Hindukush region they are carved in wood, in Asia they are in wood, Buddhaists, and Mohammedans, and offerings are made at them. Heaps of stones were known among the Hebrews (Ps. 39:11), and were also used to mark burial places, and there is a common custom in many places where they are well known all over the world. In N. Asia they are found on pass places, often where the tomb of a saint is first seen, or they are regarded as the tomb of a saint. Other are commemorative, or mark routes. To the former, and to those latter are found where a man has been killed, the passer-by adds a stone. In the W. Highlands a cairn is erected where a saint has been killed, or where the body of a saint has taken place out-of-doors, but in earlier times the cairn was erected as a burial mound, and each passer-by added a stone. Hence the saying: I will add a stone to your cairn.

Although the added stone is an offering for good luck and the like, it is not improbable that its primary intention, whatever the origin of the cairn may have been, was that of a rite of exorcism of danger or the contagion of evil.

(b) In many parts of the world stone circles serve a variety of purposes, and must form conspicuous landmarks. The circles dating from prehistoric times and found in large numbers in Great Britain and elsewhere—e.g., N. Africa, Syria, India, etc.—are generally burial-sites. In the Cross River district circles of stones carved in human form occur, and are said to be deities. Among the Massim stone circles mark the places where the men of the village meet for talk, and circles called galana were used for cannibal feasts. Circles also occur in India and in Melanesia.

(c) In many cases stones represent divinities, or a regular cult is paid to sacred stones. These stones are landmarks in the sense of being rallying-places for worship.

(d) The great megalithic monuments (apart from circles) which are found in Europe, Asia, and Africa—menhirs, alignments, dolmens, etc., set up as memorials of events, as marking burial-places, or for rallying (e.g., among the Gaores and the Todas)—whether the work of one or of many races, must have been noticeable landmarks through the ages, and many curious superstitions show the reverence in which they were held.

(e) Burial mounds (e.g., the tumuli of prehistoric times, Babylonian burial-mounds, the Hilda dolopes or stelae), tombs (e.g., the pyramids, or seracs, chumbors, churches, and the like, standing out conspicuously from the surrounding landscape, often form landmarks or guides to travellers.

(f) In many cases races rocks, trees, and the like, often mark the scene of traditional or mythical events—e.g., among the Arunta, where they mark events of the Alchemigers (e.g., period, or in Guiana, where engravings on conspicuous rock faces may commemorate striking events. Such engraved rocks are also common over the Semitic areas, and as landmarks.

LAOS.

LAOS.—I. Introductory.—French Laos, which embraces only about a third of Laos proper (Muang Lao), was constituted by the treaty concluded between France and Siam in 1893. It is bounded on the N. by China, on the E. by Tongking, on the S. by Cambodia, and on the W. by the Mekong, which separates it from the Shan and Burman States. This is the true Laos, the Siamese Laos. French Laos is inhabited by the Thai race, the most important group of whom are called Laotians; and by the half-civilized tribes called Mois by the Annamites, Khams by the Laotians (for these tribes see art. Indo-China).

The Laotians are akin to the Thais of S. Tongking and the Siamese. Their origin and history are very obscure; they are of a race of which are often not above suspicion, mention a first king of Laos who came from India, another who came from Cambodia, then four Khâ kings, and, finally, the intrusion and decisive seizure by the Laotians, who claimed to have come from the valley of Nam-bou. These immigrants, or conquerors, acquired several independent principalities, the two greatest of which seem to have been the kingdoms of Vien-chang and Luang-prabang.

Constantly at war, and attacked at the same time by Siam and Cambodia, they lived a tribulated and precarious life. In the 19th century the Laotian kings destroyed the kingdom of Vien-chang, in order to annex it, and left only a nominal independence to the kingdom of Luang-prabang, which, continuing in the same status under the French, is to-day the centre of the Laotian race.

II. Habitat.—The Laotians settled by preference along the river-banks and in the neighbourhood of rice-plains. They built huts on piles 3 to 6 ft. high, the huts measuring 20 to 40 ft. by 12 to 20 ft. The door, which nearly always faces the east, and to which they mount a ladder, has a sort of balcony-verandah in front of it. The roof is made of palm leaves, straw, or bamboo tiles. The furniture consists of kitchen utensils, tables, mattresses, mats, and chests for keeping clothes. Under the house are the weaving-loom, the domestic animals, and the pottery yard; a little shelter at the side serves as a kitchen; the rice-granary is quite close, and always built on piles for fear of rodents.

3. Appearance and character.—The Laotians are well esteemed as regards physical type; they have well-proportioned figures, and frank, open faces; and the young women especially have a graceful, supple carriage. They are of a lively and often refined intellect, with a certain aptitude for poetry. They are extremely pleasant and sociable, gay and happy-go-lucky, but extraordinarily indolent and sensual. To the Laotian a man is a matter both of principle and of temperament; once he has got the means of living and assures himself, he considers every kind of exertion not only useless but blameworthy. It is useless to look to him for the economic or intellectual transformation of Indo-China.

Religious beliefs.—The Laotians, like the Cambodians, profess Sinhalese Buddhism. Although their pagodas are well supported and their bonzes well paid, their worship seems less fervent, and the morals of their clergy much less pure, than is the case in Cambodia. The boxes mix freely with the laity in the festivities, eat and joke with them, smoke in public, breathe with impunity the flowers that abound in all Laotian solemnities, sometimes drink fermented liquids, accept objects directly from the hands of women, and even go to cut wood with them. They are polygamists, and are also granted more indulgence in their failings: for fornication, they are expelled from the pagoda, sentenced to pay a fine, and can then marry their accusers. In Cambodia, such an offence would entail death or penal servitude for life.
The Laotians are Buddhists by tradition; but their most devoted worship is given to the good or bad spirits (phi, phai), who animate all objects and beings and decide all the vicissitudes of human life. Hence spring innumerable beliefs and rites which have nothing in common with Buddhism.

When a man is building a house in Laos, he must fasten strings from the pillars before the gable to the pillars behind the foot of the bed, and a red and some silk of white to the head of the bed. Before setting down in his house the proprietor lays the gable-end and also erects a small altar with a written appeal and some sticks. When Laos is to go to work a rice-plantation, he before the traces are made, and after he has his bundles packed, he makes libations of limular water, and offers a hen’s egg, a tray of sweetmeats, and two betel-pellets to the spirits protecting the soil.

At the transplanting of the rice, he selects a little trestle in the middle of his field to serve as an altar; this remains until the close of the harvest—hence in any dangerous voyage, the canoe, cakes, and four betel-pellets, and plants seven stems in front of it; then, after a libation of alcohol, he invokes the deities as follows: 'This propitious day I transplant my rice. Make it grow in abundance and full of grain, let it not be devoured or broken.' When the rice is matured, he dejects a little of it to offer to the deities in order that they may protect the harvest from robbers. When the harvest is gathered and the rice put in stacks, the Laoan sets up a pole at the top of the stacks, fastening on the end of it a seven-stemmed plant that has been planted in front of the trestle. A sacrifice is also made to the threshold-god, and in like manner for other more solemn sacrifices is made before storing the rice in the granary: the phi receive an offering of alcohol, rice, various dishes, and cakes. The offerings to the religious and the consuming afterwards, tying their wrists together with cotton threads.

Like the Cambodians, the Laotians believe in the existence of a water-spirit Nok (cf. Annamese, Nong), a huge water-dragon, with a human head according to some, a cock’s or ox’s head according to others, which watches for all who cross the water, makes them fall, paralyzes them, and, after sucking their blood through them on the shore some days after, bloodless and lifeless. Even elephants cannot resist it unless the elephant-driver himself gives them a wound, the blood of which appeases the dragon. At the end of any dangerous voyage, the Laotians sacrifice a live hen or goat to Nok. They also sacrifice ‘to the boat-heads,’ or spirits of the jungles (yo nang). Laotian sailors preserve a presence of a cock or cat or water-fall; any cry, crack, gunshot, or sound of an instrument would offend the spirit by appearing to rile its voice.

For festivals, for sacrifices, or for water-fall; any cry, crack, gunshot, or sound of an instrument would offend the spirit by appearing to rile its voice.

As a rule, if they want to be successful they must fight with each other in the presence of the spirits, and reconcile each among the worst of evil spirits. Women who have died a violent death—who have been drowned, burned, assassinated, have committed suicide, or have been accidentally killed or devoured by wild animals—consider themselves as descendants of the spirits. Hence spring innumerable beliefs and rites which have nothing in common with Buddhism.

When a man is building a house in Laos, he must fasten strings from the pillars before the gable to the pillars behind the foot of the bed, and a red and some silk of white to the head of the bed. Before setting down in his house the proprietor lays the gable-end and also erects a small altar with a written appeal and some sticks. When Laos is to go to work a rice-plantation, he before the traces are made, and after he has his bundles packed, he makes libations of limular water, and offers a hen’s egg, a tray of sweetmeats, and two betel-pellets to the spirits protecting the soil.

At the transplanting of the rice, he selects a little trestle in the middle of his field to serve as an altar; this remains until the close of the harvest—hence in any dangerous voyage, the canoe, cakes, and four betel-pellets, and plants seven stems in front of it; then, after a libation of alcohol, he invokes the deities as follows: 'This propitious day I transplant my rice. Make it grow in abundance and full of grain, let it not be devoured or broken.' When the rice is matured, he dejects a little of it to offer to the deities in order that they may protect the harvest from robbers. When the harvest is gathered and the rice put in stacks, the Laoan sets up a pole at the top of the stacks, fastening on the end of it a seven-stemmed plant that has been planted in front of the trestle. A sacrifice is also made to the threshold-god, and in like manner for other more solemn sacrifices is made before storing the rice in the granary: the phi receive an offering of alcohol, rice, various dishes, and cakes. The offerings to the religious and the consuming afterwards, tying their wrists together with cotton threads.

Like the Cambodians, the Laotians believe in the existence of a water-spirit Nok (cf. Annamese, Nong), a huge water-dragon, with a human head according to some, a cock’s or ox’s head according to others, which watches for all who cross the water, makes them fall, paralyzes them, and, after sucking their blood through them on the shore some days after, bloodless and lifeless. Even elephants cannot resist it unless the elephant-driver himself gives them a wound, the blood of which appeases the dragon. At the end of any dangerous voyage, the Laotians sacrifice a live hen or goat to Nok. They also sacrifice ‘to the boat-heads,’ or spirits of the jungles (yo nang). Laotian sailors preserve a presence of a cock or cat or water-fall; any cry, crack, gunshot, or sound of an instrument would offend the spirit by appearing to rile its voice.

For festivals, for sacrifices, or for water-fall; any cry, crack, gunshot, or sound of an instrument would offend the spirit by appearing to rile its voice.

As a rule, if they want to be successful they must fight with each other in the presence of the spirits, and reconcile each among the worst of evil spirits. Women who have died a violent death—who have been drowned, burned, assassinated, have committed suicide, or have been accidentally killed or devoured by wild animals—consider themselves as descendants of the spirits. Hence spring innumerable beliefs and rites which have nothing in common with Buddhism.
and ages of the couple, those of their parents, and the money and presents given on the occasion of the wedding are put in writing, and this constitutes a sort of marriage contract. The marriage ceremony includes a rich banquet, with obligations to ancestors, the tying of the bride's head-threads over the left wrist of the bridegroom and the right wrist of the bride, and the drinking of a mouthful of alcohol by both of them from the same cup. Next day it is repeated identically at the parents' house. At Luang-Prabang the question of dowry and presents is discussed directly by the girl and the young man. The new couple usually live near the girl's parents, sometimes with them; in the latter case, the dowry to be given by the youth is reduced because of the work that the young couple will do.

Polygamy exists in Laos, but is practised only by the wealthy. Divorce is common and easy; it takes place almost always by mutual consent, the wife claiming her own personal belongings and the share of the acquisitions after marriage which comes to her by right, and the husband not interfering unless unlawfully carrying off anything. The woman has full right to divorce if her husband leaves her for three years without news of him.

Adultery, which is rare, is punished by death in the case of a woman, by a fine paid by the wife and her lover to the husband.

8. Disposal of the dead.—The Lao are generally burn their dead; only the poor bury them. Before the French occupation women dying in childbirth and persons dying a violent death or from an internal complaint used to be abandoned on a current of water; but to-day only a pretense of this practice is still observed, and they are buried. Cremation takes place some days, or some months, or even a whole year after the death, according to the means of the heirs. In cases of a long interval, the corpse is often buried until the appointed ceremony; among the rich, it is put in a coffin hermetically sealed except for a small opening through which a long bamboo tube carries the putrid vapors beyond the roof; the coffin is placed under a special canopy on a rich catafalque, and the bones stand round it to pray in turn. During the whole time that the coffin is exposed there are friends and relatives in attendance at the house of the deceased, in holiday garb and provided with musical instruments. Large banquets take place, with dances, songs, games, dramatic performances, etc. The guests must, in fact, cheer the spirit of the dead man as much as possible and prevent his heirs from abandoning themselves to grief both useless and dangerous. This accounts for the very joyous character of Lao funerals. The placing on the pyre and the cremation are performed as in Cambodia (see CAMBODIA, 9 (5)). When it is the custom of an important personage, the fire for lighting the pile, which used to be provided by the court of Bangkok in the form of a tinder-box, comes to-day from Hanoi from the French Governor-General of Indo-China, under the form of an electric spark.

9. Political and administrative organisation.—Laos was once divided into independent principalities, the most important of which were the kingdom of Luang-Prabang (now demolished) and the kingdom of Luang-Prabang. France has preserved these divisions as provinces, each under the control of one of her envoys. Each principality, or muong, was administered by a muong, whom the Lao call a muang, a latsabong, or a latsabut. The title of king has been preserved by the French Government only in the single case of the king of Luang-Prabang, but the uphibit, Iatsabong, and Iatsabuts have been retained. These dignified offices are the privilege of a hereditary nobility, who make recruits by election under the control of the protecting Power. These functions generally pass from father to son. All the other offices may be filled by the common people. As in Cambodian, the Lao functionaries 'drink the oat water' before entering on the exercise of their duties. When a mandarin sends a delegate to another province, he generally gives him a case of ivory or copper handle, which serves him as a passport. Judgment in serious affairs is administered in the capital of the muong, or provinces; the decisions may be revised by the chao. Laos is regulated by the codes and customs of Vien-chang as much as by those of Luang-Prabang. This code of laws is clear and well-arranged, and evidently related to the laws of Cambodia. It is among the most lenient of Asiatic codes. The death penalty is rare, extenuating circumstances being admitted: e.g., theft of food or fruit in case of dire necessity is sometimes, according to the necessity, even pardoned. The French Power has made only slight modifications in the code in order to further the progress of Laos and foster peace in its borders.

ANTONIE CARATON.

LAPPS.—The religious conceptions of the Lapps come down to us from various periods. As in the religions of other Arctic hunting peoples, the primitive belief was a worship of the dead and the allied bear-worship.

1. Worship of the dead.—The Lapps worshipped their deceased relatives as guardian spirits. They believed that those spirits stood in the closest relation to their surviving kindred and protected them and their children from calamities, assisted them on their hunting and fishing expeditions, and watched over their reindeer in the forests. Moreover, if for any reason the dead were dissatisfied, they could injure their kinsmen—e.g., by affecting them with sickness. Alongside of the primitive worship of the dead there might also be found a more developed ancestor-worship, evident traces of which appear in sacrifices made by a certain family or clan in their special holy place. As a result of the different conditions under which the Lapps lived, the sacrificial places of the family or clan were situated on high mountains or on the shores or islands of lakes rich in fish. Such holy places (passo) were recognized by figures in stone or wood (seiide). We know little about the shape of the wooden figures; but the stone figures, many examples of which have been preserved until the present day, are either natural rocks or strangely shaped blocks, often in the form of a bird. The saga tell us that the figures had life, and originally were men turned into stone. In the Lapp districts of Pite and Lule, the figures were set up by a special Swedish name, storjunkare ('grand youngers').

In the religion of the Lapps, even in its most primitive forms, an element of foreign influence can be traced. The belief of the Scandinavian Lapps, that the dead took up their quarters in the mountains, where they had the same occupations and lived under the same kind of conditions as in their previous life, recalls the conception of the Norsemen, that the dead continued their post-mortem life within the mountains; and the belief that the dead roamed about at Yule (jouo-gudar = 'Yule train') under the name of monster-galles ('the man of Yule') or Joule-herra ('the
LAPPS

Lord of Yule') is Scandinavian. To the spirits roaming about at Yule the Lapps offered food in a boat-shaped birch-bark basket which was placed on a tree. The word *svae* may also be foreign. In the more southern Lapps it means both a sacred mountain and a subterranean spirit living in it. In the latter sense they spoke also of *Savo-olmai* ('the snow man') and of *Savo-nejda* (*the snow maid*). The later conception, that the dead dwell in one subterranean abode, *jäbne-aihno* ('the world of the dead') or *muku-aihno* ('the other world'), under the authority of *Jabn-taik* ('the old woman of the dead'), corresponds to the Scandinavian conception of Hel, in the sense both of the kingdom of the dead end of a being ruling there. During the Roman Catholic period *jäbne-aihno* was transformed into an intermediate state, from which the dead, according to their deeds, proceeded either to *rúmtáhno* ('the ruler's world'), which corresponded to heaven in the Christian sense, or to *Ruto-aihno* ('the world of Ruto'), where the dreaded blue-robed Ruto reigned and plagued men and beasts with sickness. He was considered to be the *vahva* ('the one who is strong') of the Finns. As an offering to him it was usual to bury a horse, on which he could ride away, and by the side of the horse the wooden image of a man. Some scholars believe that in Ruto they can recognize Odin, the Scandinavian god of death, who was likewise clad in blue and mounted on a horse. In any case, the horse, as a victim of sacrifice, proves that such an offering cannot be of Lappon origin. The *kalri* or *kari* ('spectre', 'ghost') of the Finns has passed over to the *kwevri* or *kwevu* of the Russian Lapps.

2. Bear-worship.—Of all the ceremonies of the Lapps perhaps the most interesting is bear-worship, which is known from all parts of the North. To the Lapps, as to many other nature-folk, the object of their hunting was in a certain degree sacred. Both in hunting and in fishing the men alone took part, and the booty had to be carried into the kota (the everyday tent) by a private door (posejo) at the back of the tent. In general they had to see that the bones were kept and buried, in order that the slain animal might come to life again. Nothing was of more importance than to be careful of this rule in the case of the largest of the forest animals, the bear. Women might not be present at the bear-feast; but they were permitted to eat bear flesh in the kota only when the bear was killed in such a manner that the head and the neck was not in front of the mouth. The men alone might consume the heart of the animal (*biss bierga*, 'the sacred flesh'). There were all kinds of magical hunting usages associated with the bear ceremonies. It was the custom, e.g., when the hunters came back from the forest, for the wives to paint their husbands by spitting the juice of chewed alder-bark in their faces, and for a certain period after a successful hunt a man was not permitted to have intercourse with his wife. It is worth mention that a woman might not drive a reindeer that had drawn a bear home from the forest, but the bear had to be taken home on a path which any woman had trodden. Of the utmost importance, too, was the burial of the bear; all its bones were carefully collected and arranged in their natural position in the grave.

2. Tota-l spirits.—I have some doubt as to whether the tutelary spirits of the Lapps were originally Lapish. The forest-spirit among the Norse Lapps, to whom attention should first be directed (*the alder-man*), who ruled over all wild animals; but he was especially the tutelary spirit of the bear. To him, among other things, offerings of bows and arrows were made. This being was known only in a very restricted region, and he appears occasionally depicted on the Lapp drum in the shape of a bear, which one may conclude that his origin may be assigned to the bear-worship itself. The name also points to this conclusion; for the juice of the alder-bark played a large part in the bear-worship ceremonies. *Jidne* reminds us of the Scandinavian forest-maiden, a charmingly beautiful creature, who could be recognized by her long tail. From the neighbouring lands spring also *virkwa* (*Virkwa* or *Virkwa* in *Gudbrandsdalen* and *Ulda* (*Ulda*) of the western Lapps. We can compare *Virkwa* (*virkva* = 'trap') of the Finnish Lapps with *Vyrakommuo* of the Finns, and the Russian Lapps' *Tevajj* with *Teynju* of the Finns. There is also mention of a female, *Tuva-ajik* (*tava* = 'mother'). The Russian Lapps had a spirit, *Mehets-Chozjijn* ('the master of the wood'), who shirked and misled people in the forest; he seems to have come over from the Russians. A similar woodland spirit was *Vare-Jiel* ('the one who lives in the woods'). A female divinity among the eastern Lapps was *Lootj-Chozjijn* ('the reindeer guardian'), who protected the reindeer when the snow covered the forests. She did not, however, protect them from men. *Pots-Chozjijn* ('the reindeer master') had the same task of caring for the reindeer.

The water-spirit of the Russian Lapps was *Tahadzo-ollma* ('the water man'), to whom offerings were made in order that he might not cause any damage when men were journeying by water, or that he might drive fish into the nets of the fisherman. A corresponding spirit among the Russian Lapps was *Tahadzo-jiel* ('the one who lives in the water'), the sight of whom predicted disaster. A female deity in the western Lapp district was *Tahadzo-nejda* (tutelary spirits of the water), who corresponded to the Scandinavian *Sjofangur* (Lady of the Sea) and *Tahadzo-ennone* (the water mother) of the eastern district, who was usually seen sitting on a rock, combing her hair, and who enticed people to come to her, seems to be identical with the Russian *rozwalka*. In the sea lived *Akkruva* or *Avrugruva* (Scandinavian *Akravru* or *Norravru*, 'mermaid'), who up to the hips had the body of a fish and above that the body of a girl, and there were water-spirits who predicted misfortune, such as *Nekka* ('nixie') and *Braega* (Norwegian *dragon*) or *Tahadzo-rennoga* (waterspirit), the spirit of a drowned person. The water giant *Vassavurserss* was borrowed from the Finns. The tutelary spirits connected with certain districts by a common designation, *hales*, borrowed from the Finnish *hallet* ('ruling').

The bear also had a home. The Russian Lapps gave this spirit the names *Kyiddle-jiel* ('the one who lives in the kota') and *Pivl-chozjijn* ('the master of the kiln'); the latter, who corresponded to the Russian *duminogov*, lived in the house by the hearth, and not, like the original Finno-Ugric domestic deities, in the back part of the kota; this part was also deemed sacred by the Lapps, and no woman set foot on it. They spoke of a deity living there, *Posejo-akk* ('the old woman of Posejo'). The Scandinavian Lapps had, in addition, some borrowed domestic deities, such as *Tonti* ('the site') and *Svinjar-gatto* ('the better cat') corresponding to the Scandinavian *Bira*, which stole better for its master.

Nature-gods.—In addition to the dead and the spirits derived from the deceased, the Lapps had powerful nature-gods whom they worshipped. On the drums of the southern type the sun (*sviin*) occupies a very prominent place. Its home was apparently not originally Lapish, as is very evident from the oblations made by the Lapps. Like the Scandinavians, they offered white animals to the sun.
The symbol of the sun for sacrificial purposes was a ring. Scandinavian influence can also be traced in the summer offering of the Lapps, viz. a porrige set out in honour of the sun. A personification of the sun was Beice-neida ('the sun maiden'), and the moon (Manno), which in winter is an important light-giver in Lapland, seems also to have been worshipped. The Yule moon, bissnanno ('the holy moon'), was specially dangerous, possibly because the dead were then free to roam.

When the new moon appeared, all girls had to avoid all women were not even allowed to spin in the kota. A brass ring was placed in the chimney for the moon. Attention was also paid to kwoona-manno (the joy month, February), a borrowing from a Scandinavian source. The Northern lights—aurora borealis—were regarded as living beings; and these lights were not to be irritated by noises. Among the Russian Lapps there is a tradition that the Northern lights are the evil spirits of dead men. The thunder was thought to be a living being, Diernes or Tiernes; but it is uncertain whether the Lapps made offerings to him before they came in contact with tilling of the soil.

A Lapp revered the thunder-god was represented exactly like Thor and was called by his name, Toragelles ('old man Thor') or Torat-uros ('champion Thor'). He was supposed to be an old man (Ajja) who killed goblins with a hammer; and the special symbol was a hammer held in his hand. From foreign sources also was derived the thunder-god's wife, Akko ('the old woman'), or, as she is sometimes called, Bovéina (Bovina of the Finns), to whom the rowan-tree was sacred; indeed, in her name may be recognized the Icelandic regnir, 'rowan.'

By the side of the thunder-god on the Lapp drum may also be seen depicted another Scandinavian deity, viz. the god of fertility, whom the Lapps called Váralden-olmai ('the world man'). He is pictured with a mattock in his hand, which proves, better than anything else, his southern origin. When the Lapps made offerings to him, they fastened to his sacrificial symbol a reindeer stag's genitals, to induce him to increase the reindeer herd. In addition to animal sacrifices, they offered in his honour agricultural implements, mattock, and spades. All these features of the cult point to the Scandinavian Freyr, who was also called Véraldagaró ('the god of the world'). At the sacrificial altars of Váralden-olmai, a 'world man', who stood head-spangled, was set up, a pillar with which he was to support the world. This was another borrowing from the Scandinavians, and it is seen in their sacred high-seat pillars, and in the sacred pillar (terminus) of the early Saxons.

There was a third important Scandinavian nature-god whom the Lapps worshiped, viz. Bogg-galles ('the old man of the wind'), or Bogg-olmai ('the wind man'), who drove out the wind with a club, and scopped it in again with a shove when it had stormed enough. To this deity, who was also known in Finnish Lappmark, they offered, among other things, small boxes, in which they also placed small stones, borrowed from the Finnish Ilmarinen, one of the heroes of the Kalevala. Like the Ilmarinen of the Finns, Bogg-olmai showed features which were most certainly derived from the mid-northern Lapland. In like manner the Lapp method of conjuring forth wind and storm, by undoing three magic knots, is of Scandinavian origin. From their agricultural neighbours the southern Lapps may have derived Huts ('the old man') and Rana-neida (significance of Rana unknown), the former being a frost spirit and the latter a goddess of verdure or growth, who ruled over the mountains that become green earliest in the spring. It is probable that Ras-ajku ('the grass mother') of the Russian Lapps is of later origin, for grass is comparatively unimportant in the keeping of reindeer.

5. Other deities and mediators.—The goddess of birth was Mudar-akka ('the old woman of the earth'); and her three daughters were Sar-akka or Sar-aces (from sarrat, which, according to K. B. Vilklund, means 'to clean sinews asender for threads'; cf. the spinning of Nerv, the old woman of the bow'), who was identical with Sivuk-akke ('the gun mother'); and Uks-akka ('the door woman'). Sar-akka was most favoured, for she gave needs and aid at child-birth and calving. The task of Juku-akka was to protect the child from falling and hurting itself; and with her Uks-akka, who lived under the door and changed girl children into boys in the mother's womb, was often confounded. All three lived under the kota. The goddesses of birth, who were unknown to the eastern Lapps and to whom they offered spinning-wheels and alien sacrificial animals, corresponded to the Scandinavian Norns, just as the Lapps' porridge feast, which was often eaten by women in bed in honour of the goddess, corresponded to the Faroe normagræpetur. During the Roman Catholic period Sar-akka was confounded with the Virgin Mary, who was also called Sørgga-akke (significance unknown). Two strange ceremonies dated from the same period, viz. Sar-akka baptism and Sar-akka eucharist, which were simply imitations of the Christian sacraments. Roman Catholic tenets can also be recognized in the trinity of the Lapps—Radis-atthe ('the ruler's father'), Radis-akka ('the ruler's wife'), and Radis-bardae ('the ruler's child'), who are all depicted on the Lapp drum of the later periods. It was the duty of Atlakes-olmai ('the holiday man') to see that the week-end days, Friday, Saturday, and Sunday, were properly observed; and Fasta-olmai ('the fast-man') had to see that the fats were observed. Atlakes-olmai also furthered prayers presented to the god whom the Lapps called Juhnelh or Dønel—a name borrowed from the Finnish Jumala.

The mediators between mankind and the spiritual world were noide, noite, noide (Finnish nosti), shamans of the same kind as those of the Samoyeds and the northern Asiatic folk. Usually they were extremely nervous individuals whose characteristic troubles passed down from generation to generation. Yet the natural skill and dexterity had to be cultivated by means of an old shaman. The noide could enter into touch with the spirit world when in a ecstatic state, a trance, during which his soul went to the kingdom of death in order to ask the advice of the dead about such things as the cause of the sickness of men or animals, the prospects of hunting, and so on. For the purpose of assisting him, the noide had one or more tutelary spirits (nuoje, originally 'shadow', 'phantom'), which he could inherit, or buy, or obtain as a marriage portion. Often the spirit placed itself at the disposal of the noide. This spirit could be the north wind called noide-gaddac ('shaman reinitus')—a name which is often given to certain animals who helped the shaman during his spirit journey. From the close connection in which such animals stood to the master he had probably that it was the shaman's own soul that, severed from the body, could put on different shapes: as a reindeer (saivo-soro) it hastened over the hills; as a bird (saivo-tööde) it went through the air space; as a fire (Jousma-olmai) it plunged through the subterranean waters; and as a snake (saivo-gurma) it undulated on the earth.

6. The Lapp drum.—As a means of producing an ecstatic trance noide employed yelling, wild
dances, and unnatural food and drink, but above all an instrument of exaltation, the so-called Lapp drum (gure in the south, kobdes in the north). There were two distinct types of Lapp drums. The most common had a narrow or broad wooden frame bent in a circle with a tanned reindeer skin stretched taut on it. The upper side of the drum was provided with a handle. The other type, the shell-drum, had a frame resembling an oblong shell, and coulomegales lies in the bottom by which to grasp it. The latter was not nearly so large as the former. In order to get the drum to sound as loudly as possible, the shaman warmed its surface at the fire before he began to beat it with the drum-stick—a hammer-shaped implement elegantly carved from a horn. In order still further to increase the sound, the drum was often provided with various kinds of rattling objects; and in order to live up to the shaman’s fantasy the Lappa painted figures and signs with blood or elder-bark juice on the drum-skin. In the later days these figures were multiplied and became perfect microcosmos, representing the whole range of ideas of the Lapps. It was the increase of these figures or a new art of divination that had come from the south with a riddle that had the effect of changing the use of the Lapp drum so that it was employed more as a means of divination than of exaltation. The drums kept hoppiti, a song about on the drum-skin as the drum-stick rose and fell; and from the movement of the rings and on off the different signs the shaman predicted good or ill. The branch of rings stopped at any symbol of a deity, it might be concluded that the god desired a gift. The Lapp drum was quite common as an implement of divination, and it survived in secret in certain districts almost down to our own day.

Sacred offerings. — Sacrifices were offered by the head of the family or by the shaman. In certain districts in the south of Lappmark the sacrifice was a special dress; on his back a white linen robe, on the left arm a brake ring, and on the breast a badge resembling the riband of an order. When he sacrificed to the female divinities, he wore a white linen cap. He was often bedecked with flowers, while a garland was placed on the forehead of the victim. The sacrificial cut in the skin means that the victim, according to Southern lands. The images of the gods, which were set up on special pedestals or altars, undoubtedly indicated a Scandinavian influence. The Lapps anointed their gods with blood and grease, and the god whom they sacrificed to, was set up by the door, was called luotte-muorra (‘sacrifice wood’). A fence, made of horns (tjoreg-yrdit), was placed round the image. Besides reindeer, which were the proper sacrificial animals, the Lapps, on occasion, when they made sacrifices to gods belonging to alien religions, offered horses, cattle, sheep, poultry, etc., which they bought from the natives. In the custom of the Lapps that the bones of the victim should not be broken, except to be placed at the disposal of the god with pieces of all the more important limbs, we find an ancient idea which was common among the Finno-Ugrian peoples. The Fins, also, strewed the meal used for the sacrifice with the ashes of the sacrificed animal, of which a great quantity was scattered around. This was also the way in which the Samoyed determined the disposition of his kahre. Finally, the caution with which women made way for the sacrifice itself to the altar, in the same manner as from all sacrificial feasts, can be traced far back into the childhood of the human race.

LATIN CHURCH. — See Western Church.

LATTER-DAY SAINTS. — See Mormonism.

LAUD. — William Laud, Archbishop of Canterbury, and chief minister of Charles I., was born, according to his diary (Works, iii. [1853] 151), on the 7th of October 1573, in the town of Reading. His father was a clothier by trade, and in later years, his Puritan opponents did not allow him to forget the fact that he had not ‘the good fortune to be born a gentleman.’ Indeed, his unexcelled origin was made the foundation of many malicious and exaggerated libels, which sound so dear in these democratic times. Had Laud lived under happier auspices, the ability and persistent energy with which he fought his way step by step to high position, and on the way gained the esteem of his superiors, would have won him more praise. As it was, he experienced the full the disadvantages which belong to the lot of the novus homo, and to this circumstance some of the harshnesses and defects of his character may be traced. Laud went to school at Reading, where he won the appreciation of ‘a very severe schoolmaster,’ who predicted that one day he would be a great man. In 1589, at the age of sixteen, he entered St. John’s College, Oxford, and the following year became a Scholar. In 1593 he was admitted Fellow of St. John’s, and a year later he became a Bachelor of Arts; his M.A. degree followed in 1598. In his diary he records various ‘great sickesses’ which befell him both in infancy and during his University career. Indeed, throughout his life he was seldom free from ill-health for any long period, and in his anatomical examination of the instance of the triumph of an indomitable will over a weak constitution. At the time that Laud entered Oxford, and for many years afterwards wrote poetry among a company within its walls. The tide of extreme Puritanism which had set in after the reign of Queen Mary was running deep and strong. If the Puritans were in a minority in the country, they were very

LITERATURE.—The most important sources of our knowledge of the religion of the Lapps are the reports of the missionaries from the end of the 17th and beginning of the 18th centuries.
resolute in holding to their ideals, and for those ideals they desired not toleration but martyr. Thus the 39 Articles, the foundation of the Church's system, and for that end they steadily worked within the Church itself. Their objections to ceremonies, surplices, and liturgy were only steps towards the hoped for institution of the Genevan form of discipline. They were in the broad and ancient path. For the time being, it is true, this particular hope was in abeyance, and it was mainly as a doctrinal system that Calvinism now showed its strength. The leaders of that movement were in the ranks of the clergy, and the Universities were their strongholds.

To this system Laud soon showed himself a strong and dangerous opponent. He belonged to the school of Richard Hooker and Bishop Lancelot Andrewes, and the pious aspirations of men like George Herbert and Nicholas Ferrar were very precious in his sight. His ideal for the Church of England was that which in modern times is called Anglican. He saw in the English Church a great mediating communion, neither Roman on the one side nor Genevan on the other, prismatic, ditchless, and Catholic, purged from superstition yet reverencing antiquity, loyal to the truth once delivered and yet large-hearted in its welcome to new knowledge and fresh thought. Whatever grievous mistakes he made in furtherance of this ideal were due to the limitations of his mind and his learning; and when, after everything is said against Laud that can be said, the truth remains that his conception has been justified in the subsequent history of the English Church. To him in a large degree is due the settling of the character of that Church's system.

In setting himself against the Calvinism of Oxford, however, Laud entered upon a long and one-sided contest with authority. In an academical exercise delivered soon after his ordination he gave great offence to Abbot, Master of University College and Vice-Chancellor and afterwards Archbishops, by tracing the authority of the Church, through the Roman Catholic hierarchy, up to the Apostles and the Primitive Church, and an outcry was raised later in 1694 when, in his exercises for the B.D. degree, he maintained the necessity of Episcopacy and the doctrine of baptismal regeneration. Two years later Laud was attacked by the Vice-Chancellor, Henry Airy, for publishing 'popish opinions' in a sermon delivered in the pulpit of St. Mary's. He followed the Vice-Chancellor's Court, from which Laud emerged scot-free. Amidst these and similar attacks Laud's coolness, courage, and ability served him in good stead. For a time he seemed to stand almost alone. In his own words, 'it was almost made a heresy for any one to be seen in his company, and a misprision of heresy to give him a civil salutation as he walked the streets.' (Heylyn, Cryptarius Anglicus, p. 54). On one occasion he was set in St. Mary's and heard himself abused for almost an hour together, being pointed at as he sat (ib. p. 66). The preacher on this occasion was Abbot, brother of the Archbishop, and Divinity Professor, who certainly castigated in trenchant style the supposed schismatic leanings of this unruly member of the University.

Yet Laud was not without friends who sympathised with his views and were burning with fire. Bishop Young of Rochester, who ordained him as deacon in 1600 and priest in 1601, praised his study of the Fathers, Councils, and the ecclesiastical historians, and declared that if he lived, he would be 'one instrument of restoring the Church from the narrow and private principles of modern times.' (Mozley, Hist. and Thoel. Essays, i. 116). Rapid preference fell to his lot. He became chaplain to}

the Earl of Devonshire in 1603, and in 1607 he was made Vicar of Stamford in Northamptonshire. The following year the advowson of N. Kilton in Leicestershire was given to him. He took his degree of D.D., and became chaplain to Bishop Nelle of Rochester. His first sermon before King James was preached in 1609, and shortly afterwards he was made Archdeacon of Chelmsford and Vicar of Tilbury in Essex. Caxton in Kent next fell to his care in 1610, but a few months later he left it to take charge of Norton. The same year the Presidency of St. John's College became vacant, and Laud became a candidate. Naturally the whole strength of the Puritan party was put forth to prevent his appointment, Abbot, the Archbishop-Elect, and Lord Chancellor Ellesmere being indefatigable in their efforts. Yet, although Laud was disabled by sickness, and unable personally to take part in the contest, he was elected. An appeal was made to the Crown, which James in person disposed of by declaring Laud President of St. John's.

As head of a College, Laud was in his proper element, and his rule seems to have been a happy and beneficent one. In dealing with those Fellows of the College who were not within the circle of his friends, he showed a proper spirit of conciliation. As a patron of literature and sound learning he was wholly admirable, and his love of order and discipline found congenial ground in dealing with academic life and affairs. When he became Chancellor of the University in 1633, his opportunities for usefulness in this direction were much widened, and he used them to the full. The reforms which he instituted resulted in a large increase of students and in greater efficiency of teaching, and their effect remained long after Laud was dead.

It may be convenient here to summarize in anticipation the valuable results of Laud's connexion with Oxford. The codification of the University Statutes was perhaps his most important work, and his code still remains as the basis of the Statute-book of the University. Among its provisions were the institution of public examinations for University degrees, the revival of the College system with its moral and religious discipline and the academical dress, and an improved method of selecting preceptors. Laud's benefactions to the University were many and important. He founded the Laudian Professorship of Arabic, increased the endowment of the Chair of Music, and similarly augmented the emoluments of the Public Orator. He encouraged scholars like Gerhard Vossius, and helped to promote native men of learning like Jeremy Taylor, Selden, Lindesay, and Bedell. In 1633 Laud procured a royal patent for the foundation of the University Press—an institution in which he took the greatest interest. His munificence towards the then recently founded Bodleian Library was also great. He presented to this institution over 1300 MSS in various languages, besides a collection of coins, and built an extra wing to accommodate his gifts. His claim that no Chancellor had ever loved the University as he is well borne out by the recent annals of the College and its gifts, and, when it is remembered that his educational work was carried out in intervals of his ecclesiastical and political labours as Archbishop and Prime Minister, it seems all the more remarkable. Mention should also be made of the fact that, as Chancellor of Dublin University, Laud provided a Charter and Code for Trinity College, one of the features of the latter being the provision that the fellows, originally only for a term of two years' duration, should be tenable for life. The Colleges of Eton and Winchester also came within the Archbishop's care as visitor, and we find him.
providing statutes for the Cathedral School of Canterbury. To the town of Reading and to the grammar-school where his instruction began he was a benefactor, and to his own College of St. John's he gave a new quadrangle and valuable presents of books.

One turns with less satisfaction to the record of Laud. He was called of politiques, the Countess of Buckingham, mother of George Villiers, the King's favourite. In the earlier stages of the conference, Francis White, afterwards Bishop of Ely, was the English champion, but after two meetings Laud was called of politicians. Although the King refused the full time of four and twenty hours to bethink himself (J. Dowden, Paddock Lectures, p. 115), his learning and acuteness stood him in good stead. Denying that there is Scriptural warrant for an infallible pope, he proceeded to deal with Roman errors. Yet he conceded that Rome with its errors is a true Church, but not the true Church. Against the exclusive claims of Rome he appealed to the authority of a general Council, and to the witness of Scripture. The English Church as reformed, he declared, is also a true Church, holding the Catholic doctrines of Baptism and the Eucharist. In the Enchiridion Laud saw a threefold sacrifice: (1) the memorial of the sacrifice of Calvary, (2) the sacrifice of praise and thanksgiving, (3) the sacrifice of ourselves, our souls and bodies.

One result of this controversy was the beginning of a close friendship and intimacy between Laud and Buckingham. Whatever may be said as to the strangeness of such an alliance, its sincerity was unquestionable. Laud became the confessor of the Court favourite, and undoubtedly exercised a real religious influence over him. In matters political also he was Buckingham's devoted ally, helping him with his advice and influence in times of trouble, and working to maintain his influence at Court. In 1632 King James died, and a new era of influence opened up for Laud. Charles gave him a fullness of confidence which his father had withheld. A schedule of the clergy was prepared by him at Buckingham's request, and laid before the King. Each name was marked O or P, the orthodox being listed for promotion, while the Puritans were to be left out in the cold. We find him defending Richard Montague against the Parliament's wrath incurred by his pamphlet against Calvinism, assisting Buckingham in his defence, and preaching up the King's prerogative before Charles's second Parliament. In 1635 he became Bishop of Bath and Wells, and a year later, shortly before the assassination of Buckingham, he became Bishop of London. Buckingham's death opened the way still further to Laud's promotion, and he became the chief prelate in England. In 1638 he was translated to the Archbishops of Canterbury, and became, under Charles, all-powerful in Church and State. In his diary (Works, iii. 219) he relates that the month before he became Archbishop he was twice approached by an emissary of Rome with the offer of a Cardinal's hat. Whatever may be thought of the sincerity of this offer, it had no effect upon Laud, who was thoroughly convinced of the strength of the Anglican position. The character of Laud's administration in Church and State has already been briefly described. In matters ecclesiastical he put the care of souls first and foremost, both because he believed that worship is the best form of teaching, and because he desired that Rome should not point the finger at Anglican slovenliness. He enforced uniformity of doctrine and practice, and was unwilling to condone any deviation of thought. As a statesman he has incurred the odium of the severities practised by the Star Chamber and the Court of High Commission. But it must at least be remembered that humanitarian sentiments of the present day did not exist in Laud's time, and that the cruelties of the Commonwealth far exceeded anything that
can justly be laid to his charge. He was not revengeful, and often treated his fallen enemies with pity and love. He was kind to the poor, and strove in various ways for social betterment.

Laud's connexion with Scotland was a fateful one. He had accompanied King James in his visit to that country as Jean of Gloueseet, and again in 1633, as the governor of London, he had been one of the companions of Charles I. in a visit that produced an unfavourable impression among the Scots. The climax came in 1637, when the attempt to introduce the "Prayer Book" and disestablish the Church of Scotland brought about ecclesiastical and political revolution in both countries. In spite of its name, however, the Prayer Book was in the main the work of two Scottish Bishops, Maxwell of Ross and Wedderburn of Dunblane, Laud's share being confined to preliminary suggestion and subsequent revision. Both Charles and Laud, indeed, had wished the English book then in use to be adopted in Scotland, but gave way in the face of the patriotic representations of the Scottish Bishops. The real offence of the book lay in the arbitrary method of its introduction, regarded as the culmination of a series of despotic acts.

Laud met his fall with pathetic dignity, and bore his long imprisonment with all its trials very patiently. On 15th December 1640 he was impeached by Parliament, and the following March, at the third session, he and his friend and colleague Strafford was executed on 12th May, and the Archbishop found at the window of his cell when attempting to give him his blessing on the way to the scaffold. In May 1645 Pryme was commissioned to rifle his papers, and to seize his diary, a mutilated edition of which was shortly afterwards published. His trial for high treason began on 12th March 1644. Laud showed the same coolness and ability in defending himself that he had exhibited many years ago in the Court of the Vice-Chancellor of Oxford, and the prosecution failed. But his enemies were not to be balked of their prey, and a special bill of attaint was passed by Parliament. On 10th January 1645 the Archbishop paid for his policy and his mistakes with his life. He was executed on Tower Hill in the presence of a large multitude, declaring that he had always belonged, in heart and soul, to the Church of England, and that he had never encouraged the subversion either of law or of religion. His body was deposited in the churchyard of All Hallows, Barking, whence it was removed in 1663 to St. John's College, Oxford.

A. MITCHELL.

LAUGHTER.—When we seek to assign to laughter a place and a function in social life, it is clear that we have in view the laughter of embodied persons. Even the idea of laughter itself is based on the benefit of the lungs' has undergone repression and refinement under the touch of civilization, there remains a more chastened expression which may then be experienced without which fellowship in feeling is inexpressible. There is, indeed, when refinement and restraint have reached their limit, a hidden and silent laughter of the soul which might be enjoyed by a disembodied spirit—though even here for embodied mortals there are, no doubt, more subtle physiological effects which, by purely inward reverberation, give heightened tone to the enjoyment. But such silent and unexpressed laughter has, on one side at least, lost touch with social life. Apart from some form of telepathic influence, it can call forth no echo in others. It may bring with it an access of glee—a touch of 'sudden glory'; it remains, however, unshared; there can be none of that beneficent contagion which, through the interaction of man's spirit with man's spirit, gives one form of social value to laughter—a real value, though in its more primitive stages it may as yet afford little evidence of that progress in the art of good manners which, according to Bergson, it is its function to promote.

On its physical and expressive side, then, laughter is, among other things, a means of intercommunication, though it may not be consciously employed to that end. Like other such means, it implies as a basis a common mode of expression, inherited or acquired; and, in large measure in cooperation with language, it affords to others an index of the presence of a specific and probably indefinable mode of affective feeling which accompanies man's outlook on his fellows. For amid much divergence of opinion as to the essential characteristics of that which is provocative of laughter, there seems to be fairly general agreement that it is the situations of, or in close relation to, human life that afford the natural objective of laughter when it comes to maturity. On the one hand, therefore, the laugh which invites others to join in the social chorus; on the other hand, the laughable, which is a property of some sort that characterizes a social situation; and between them stands laughter, in the sense in which the word will here be used, as that which, however yet distinctly qualifies some one's consciousness.

Of the laugh and the smile as bodily expressions little need be said. It is probable that for both there are hereditary foundations, and that the behaviour involved is, in the narrower and biological sense, instinctive. But whether the smile is, in the infant, an expression of satisfaction, and whether the laugh is at the outset the reflex outcome of physical tickling; how far they are independent modes of response, or how far they have common factors; whether they have in themselves some element of survival value, or whether the muscles concerned are, from the habits of our race, the readiest and therefore the first to receive an overflow of 'nervous energy'; how the facial, thoracic, and respiratory co-ordinations are brought about, and why in the very body come to be an expression of specific and somewhat varying mental states—these are matters beyond our present concern. They are questions of genetic origin which we can afford to pass by. It is to laughter and the laughable that we must restrict our attention, merely noting that the nervous laugh, the irritable laugh, the laugh of scorn, though the same organic mechanism of response is employed, do not seem to express the sunny laughter of the mind. The laughter of the Bible is nearly always an expression of scorn and not of mirth (see, however, Ps. 126 and Job 8). Genial laughter is the joyful roar to which the benefit of the lungs' has undergone repression and refinement under the touch of civilization, there remains a more chastened expression which may then be enjoyed without which fellowship in feeling is inexpressible. There is, indeed, when refinement and restraint have reached their limit, a hidden and silent laughter of the soul which might be enjoyed by a disembodied spirit—though even here for embodied mortals there are, no doubt, more subtle physiological effects which, by purely inward reverberation, give heightened tone to the enjoyment. But such
Hobbes's 'sudden glory' shows an emphasis on the latter. Men experience the passion of sudden glory 'either by some sudden act of their own, that pleases them; or by the apprehension of some deformel thing in another, by impressions whereby they generally applaud themselves. And it is incident most to them, that are conscious of the fewestabilities in themsevles; which is not to be explained... By observing the imperfections of other men' (Levitation, p. 1, ch. vi.).

The stress in Hobbes is on the sudden conception of some deformel in ourselves by comparison with the inferiority of others or with our own formery. So self-centred is this form of laughter that the correelative laughable almost fades out of view, though the inferiority of others is presumably in some degree ridiculok. A factor in a particular type of laughter, this exultation over others and the accompanying self-exultation may be accepted; as a comprehensive theory of laughter, it can hardly pass muster. Not all exultation over inferiority is of the order of laughter; not all laughter is of the order of self-exultation.

In Schopenhauer's doctrine of the incoornguities, the question of the laughter spirit is relatively unimportant. His is predominantly a doctrine of the laughable, though this must, of course, be apprehended as such.

"The cause of laughter in every case is simply the sudden perception of the incongruity between a concept and the real objects which have been thought through it in some relation" (Par Sylph and Ideals, Tr. Hallam, 1736).

There is an element of the unexpected or of expectation baulked. A situation presented, or described, diverges from the course of its customary development, or we are swiftly transferred into a world of simultaneous and different situations. But not all incongruity is laughable. The situations of social life teem with incongruities; and many of them are provocative of sighs and tears rather than laughter and smiles. Spenser, therefore, distinguished between ascending and descending incongruity.

"Laughter naturally results only when consciousness is unavowed transferred from great things to small—only when there is what we call a descending incongruity" (Physiological of Laughter, Essays, 1326).

In accordance with his physiological interpretation, the prior condition involves a volume of brain-excitement which, on the sudden descent, is too great for the occasion, and overflows; through habitual channels, into the contractions of the satin or the larger muscles of the heart laugh. But, unless, in line with the well-known thesis of W. James and C. Lange, the bodily laugh begets the laughter of the mind, the mental affection is not such as to cause the descending incongruity is translated into physiological terms; but we are left with that as determining the laugh and the laugh. Doubt in its application is of many cases; but whether descents is in all cases necessary, is to say the least of it, doubtful. A man's hat on a child's head, and a child's hat on a man's head, may both make us laugh. Is this because in the one case we come down from the nobel hat to the ridiculous child, and in the other from the dignity of the man to his absurd headgear? Or is there in each case a descent from normal to the abnormal (cf. J. Sully, Essay on Laughter, p. 18).

Bergson reduces all forms of descending incongruity to one, and traces the genesis of laughter to the perception of some intrusion of a mechanical mode of action or general reaction which should not reach the higher vital plane. For him there can be no descent more serious than that from life to mechanism. One would suppose that so fatal a fall would move Bergson to tears. But he supposes that we derive, from these deep emotions, and even the experience that 'absence of feeling' is the usual accompaniment of laughter. One must look upon life as a disinterested spectator. To produce the whole of its effect, the comic demands something like a monotonous anesthetism of the mind. Its appeal is to the intelligence pure and simple. Indifference is its natural environment, for laughter has no greater foe than emotion. Under these conditions the attitudes, gestures, and movements of the human being are laughable only when matched in that same fashion as thought is in us, with the making up of the comic in character. Such is his main thesis (H. Bergson, Laughter, Eng. tr., pp. 4, 5, 20, 130, 147).

But, whereas for the most part serious discussions of the comic are dull enough, save for the welcome jokes and anecdotes which one enjoys all the more if one forgets all about the principles which they are supposed to illustrate, Bergson's book on Laughter is worthy to be placed on the same shelf with such as Meredith's Essay on Comedy.

In both there is real distinction in matter and style. In both the sympathy of the artist is combined with philosophic insight. In both one is perhaps impelled by the loss of comic taste or scientific formulation to hold in the bondage of clearly defined concepts the elusive spirit of laughter. One cannot but feel that Bergson's wide outlook on the laughable in life and in comedy overlapped the constraints of his theory.

He tells us that laughter is begotten of real life and akin to art. It is in the selective products of that the thoughtful laughter of the mind seeks its fullest development. If, as he argues, there may be comic elements alike in situations, in words, and in character, the business of the artistic creator of the laughable is to combine all of these ingredients into one synthesis which shall be provocative of laughter at its highest pitch of refinement. Witty dialogue, good in itself, must afford also a revelation of the comic in character, and must be organic to laughable situations presented. But how many and varied are the factors; how subtle is the harmonious synthesis! Here one sees portrayed the sudden glory of exultation, but it is not the sympathetic sharing of that alone that produces the thoughtfull laugh. Or one may see cases of Kierkegaard's "new" humor, or of "situations" in which the emotion of the heart is the thing in the void; but that does not cover the whole ground. There is, no doubt, much incongruity, but not always descending; but episodic incongruity is subject to the merely nongenuine conceptions of light from one universe of regard to another; but they are related, and each illuminates the other. This is seen in detail, and gives piquancy to the play upon words. If the after-dinner orator explains life as success due to his adoption of the principle that, if he does not strike oil in three minutes, he stops boring, two universes of discourse are related, and a sudden laughter-span bridges the interval between them. Incongruity implies some measure of separation, and there must be the subtle integration of some perceived congruity to produce the synthetic whole which the artistry of the comic seeks to create. There is, however, often, no doubt, some element of the mechanical, in a rather strained interpretation, but notwithstanding Bergson's brilliant advocacy of a theory dictated by his philosophy, one feels that it is the free life of comic rather than the comic stage that has to be seen in that stage to be brought to the analytic man of science. And it is questionable whether the total exclusion of emotion (by which we must understand that which is in affective
antithesis to the laughing mood) is characteristic of the best comedy. If, as is generally held, humour is a blend of the playful and the serious, owing its timbre to overtones of something akin to pity, then, so far as humour is an ingredient of comedy, emotion is present. We have 'the richer laugh of heart and mind in one.' Meredith says that the humorist of high order has an embrace of contrasts beyond the reach of the comic poet. But this is a matter of degree, and there is no reason to consider the richer kind of laughter, and characterizes the higher comedy as distinguished from farce; for 'the test of true comedy is that it shall awaken thoughtful laughter' (G. Meredith, Essay on Comedy, pp. 88, 89).

It is not the primary business of comedy to correct men's manners. That is one of the functions of laughter in social life; but it is introduced into comedy only as an ideal representation of that life. This disciplinary function of laughter is regarded by Bergson as the mark of its social utility (op. cit. pp. 17, 170, 197 f.). Laughter is above all a corrective. By laughter, which would fail in its object if it bore the stamp of sympathy or kindness, society avenges itself for the liberties taken with it. Its function is to intimidate by humiliating. Ridicule, we may say, is the whip with which society corrects the smaller faults of its children, and satire is the lash which is applied to corporate abuses when they have been stripped bare of their fine garments. In both there is something of self-centred superiority, even when it is felt to be the superiority of society embodied in the smirter. But, though the derisive smile or the scornful laugh may be there, it is not an expression of the true spirit of laughter, which is happy and genial. It is rather the lineal descendant of the exultant laugh of the savage over his vanquished foe. And it not infrequently fails in attaining its end, while the kindly good-humoured laugh has far greater efficacy in correcting the manners of boys and men.

It is questionable, however, whether this form of social utility is that which has given to laughter its chief evolutionary value in social life. This is rather a secondary utility like that of the insect's sting, which is derived from an organ of different ancestral value. There is a more genial form of utility. According to W. McDougall, laughter has been evolved in man as an antidote to sympathy with sufferings (Brit. Assoc., 1918, reported in Nature, xxvii. [1914]). He contends that laughter arises only in situations which are mildly unpleasant except in so far as they are redeemed by laughter itself; or in presence of those things which would excite a feeble degree of sympathetic pain if we did not actually laugh at them. But are these conditions universal? Is it the comic situation, or the joke, at which we laugh, always in some degree painful? Should we not substitute 'sometimes' for 'always'? There is, however, probably an element of truth (if not the whole truth) in the view that laughter is a protective reaction which shields us from the depressing influence of the shortcomings of our fellow-men—often when they jest. As pity softens the primitive callousness of laughter, so does laughter in turn relieve us from the depression which stupidity, for example, engenders. And it may have a wider influence.

How many men in our highly civilised communities to-day may have learned to keep their heads above water by the practice of gentle laughter, no one knows' (Sully, Essay on Laughter, p. 499). In any case, 'he who produces a laugh of pure gladness brightens the world for those who hear him' (Sully, op. cit. p. 477). Laughter is a tonic which braces both body and mind, and thus benefits both the individual and society.

C. LLOYD MORGAN.

LAW (Natural).—The idea of 'law' has a long and varied history. It has passed through important changes, and has occasioned manifold disputes. It took its rise as something relating to human society, and then the world external nature and the universe, whence, after undergoing a peculiar metamorphosis, it was brought back to the sphere of its origin, in order to shed light upon human life and action.

The development of the idea of natural law. —The development of the concept began in the ancient world, but it was not until the modern epoch that 'law' came to occupy a central position in all scientific procedure. The explanation of natural law is a theme of great interest in the classical age of Greece, was originally used with reference, not to the external world, but to human nature itself. It denoted the unwritten as contrasted with the written law. This unwritten law, however, was at first simply the standard which, in usual, and was determined by a number of traditional usage and custom, and it was only later that it came to be taken in the sense of a law written by the deity in the human heart. The term 'law of nature,' in its modern acceptation, is seldom

2 The historical origin of the phrase 'law of nature' is discussed by E. Zeller, Uber Begriff und Begrundung der sittlichen Gesetze,' reprint from AbbLW, 1888, and with such caution and thoroughness by R. Hirschl, 'Ueber das gree. favourite primary mean traditional usage and custom, and retained this sense for centuries; from the time of Thucydides, however, it came to bear another meaning as well, viz. that of the divine law written in the human heart. Of course Hirschl is still more exhaustive work, Themis, Duke and Vervendeke, Leipzig, 1897, pp. 366-411.
used by Plato and Aristotle; it was especially among the Stoics that it took a more prominent place, and here the idea of divine laws led to that of natural law. The expression 'natural law' was first brought into the Roman law, and from them again it passed to medieval writers.

As yet, however, the expression was used without real precision; it denoted merely a certain regularity of actions. In this way, for instance, the idea of the Roman laws and in particular Augustinian, could regard natural laws no more than the customary modes of divine action—modes of action which might quite well be departed from in exceptional circumstances. Thus the belief in natural laws was not quite conflated with the belief in miracles. The conception first acquired a more precise significance in modern times, especially since the time of Descartes, and in close connection with the whole character of modern investigation. The great object of modern scientific inquiry is to analyze an existing state of things into its simple elements, and to interpret the whole by means of the parts. The laws of nature thus came to be regarded as but the simplest forms of motion among the elements. The discovery of these laws seemed to give man the power of interpreting nature intellectually, and at the same time of controlling it by practical and technical application. We were led to believe that the whole tendency of modern thought, i.e. to regard nature not as the work of a Higher Power, but as something to be interpreted by its own concatenations. It was felt, however, that, if the laws of nature were to have a precise content, a mathematical formulation of them was indispensable; and in this way an ancient problem found at last a happy solution. The Pythagoreans had taught that nature could be reduced to the simple sum-forms, and this theory had all along been maintained by a relatively small group of thinkers. But it was found impossible to formulate definite laws, and even as late as the 16th cent. Nicholas of Cusa had declared the task to be beyond human capacity. The first to construct mathematical laws of nature was Kepler, in his famous three laws of planetary motion, which thus marked a profound revolution in the investigation of nature. Thereafter Newton proposed the idea of reducing all the phenomena of nature to mathematical laws, and Kant even ventured to say that 'in every sphere of science, on every subject as much knowledge as there is mathematics.'

Side by side with this precise modern formulation of natural law, however, the ancient and more indefinite conception still survives, and even at the present day the discovery of a mere order in phenomena is often hailed as a law. This is especially the case in modern biology, in which, e.g., a peculiarly intricate complex of facts, if it only recurs, is often summarily designated as a law, so that what purports to be a solution is, in point of fact, simply a problem. In other ways also the term law has been the cause of much confusion. Laws are often discussed as if they were living forces, and one natural power is put in opposition to another. It has frequently been forgotten that they are merely the forms of natural processes, and that they in no sense explain the processes themselves. The mere naming of similarity in the law is not seldom thought of as an entity lying beyond and controlling the concrete facts. Thus even within the sphere of nature itself the employment of the idea of law is attended with grave difficulties and dangers, and the dangers are greatly increased when we pass from the Roman to the modern sphere, and used as a means of transferring the methods of natural science to other provinces of human interest.

2. The application of 'natural law' to other provinces. The extension of the idea of law to extra-natural data began as early as the 17th cent., when, in particular, the idea was employed in psychology. The procedure was continued in the 18th cent., being now applied to the fields of politics and history, but it was in the course of the 19th cent. that the tendency reached its highest development, and the idea of law became the subject of numerous disputes regarding method.

(a) Psychology. The application of natural law to the soul was carried out in a most imposing manner by Spinoza. For him the entire inward life of man was but a texture of single and particular occurrences, which work and interlink exactly like external things. Psychological laws in the stricter sense—e.g., the laws of Association—were set forth in particular by English thinkers. In Germany, Leibniz had spoken of the ethico-logical laws of the soul and of the world which are on the same lines, while Herbart, again, sought to carry mathematical formulae into the innermost life of the soul. Modern psychophysicists has attempted with no small success to give a mathematical formulation to the relation between bodily and psychological processes, and especially between stimuli and sensation. Greater difficulties were encountered in the endeavour to interpret not merely the fundamental forms, but also the special results of psychical life on the analogy of natural laws. A special theme of controversy here was the relation between natural and moral law, some thinkers endeavouring to bring the two into the closest possible relation, while others insisted upon the unmistakable difference between ethical principles and the laws of nature. The pre-eminent representative of the latter position was Kant, who regarded the moral law, with its imperative of duty, as something spontaneous, unique, and superior to all experience, and who uncompromisingly opposed the freedom which it involves to the necessity of nature. The Schellingian school contended for a close connection between natural law and moral law, but in trying to universalize the scope of morality he incurred the danger of attenuating its distinctive character. The problem is not yet solved, and is still being ceaselessly discussed.

(b) Sociology. In a somewhat different sphere a fruitful theme of discussion was introduced by the attempt of modern sociology to reduce the social life of man to simple laws. The main factor in this movement was the known fact that by taking sufficiently large numbers of human beings the fortuitous element of the individual phenomenon may be eliminated, and relatively constant averages ascertained, and that thereby the phenomena of the social sphere are found to be much more regular than appears at first sight. Thus the attempt of sociologists to establish a statistical science has discovered a mass of interesting

1 Of more recent works W. Windelband's essay on 'Normen und Naturgesetze' in his Prüfungen, Tübingen, 1911, is specially worthy of notice. In the city of Tübingen, in Mendeleu's earlier works, in Democritus, Xenophon, Plato, and Aristotle, is also dealt with.

2 This is the beginning of his Philosophiae naturae principia mathematicae: "His formos substantiales et qualitatis emendationem et eam parvissimae sequitur." W. Windelband, W. Windelband, "Wissenschaftliche Untersuchungen über die Psychologie," in Zeitschrift für die Geschichette der Philosophie, 1873.

4 The pioneer in this field was the Belgian statistician L. A. J. Quetelet (1796-1874), especially in his Sur l'Homme et le développement de ses facultés. En basse de physique sociale, Paris, 1826, 2nd ed., Brussels, 1829.
facts. It is no doubt true that here certain uniformities have rather prematurely resolved into laws, and that the categories of facts have not always been sufficiently broken up into their simple elements; but, when all is said, the movement has opened fresh avenues of knowledge, and given effective incentives to inquiry.

(c) Economics.—The movement has assumed a more intense and incisive phase upon the narrower field of economics proper. Here we find two modes of interpretation and investigation in conflict with each other. The advocates of one school try to resolve the economic process into a mere tissue of self-regulating elementary movements, and so to explain them in accordance with natural laws, and they repudiated all interference in the political and social order as a derangement of natural processes. The most prominent representative of this view is Adam Smith. It was maintained on the other side that, if the economic life of mankind was not to degenerate into a ruthless struggle of each against all, it must be ethically regulated. As representing this position the name of Thomas Carlyle will suffice. It is indisputable that in recent times this ethical view of economics has assumed more and more effectively in opposition to the purely scientific interpretation, and that, accordingly, the State has interfered more and more actively with economic conditions. Moreover, with its huge manufactories, the State has been the main factor in this development.

(d) History.—There has been in recent times a considerable amount of discussion regarding the problem of historical laws. The abandonment of a religious reading of history has given rise to an attempt to interpret the historical process by its own movement, and this again has led thinkers to construct a philosophy of history, and to search for the laws that control the process. In the 19th cent. attempts to understand the movement of history as an ordered and articulate process were made—from opposite points of view, indeed, though not without a certain correspondence in results—by Hegel and Comte. Hegel regarded history as a self-evolution of the Spirit, which advances by means of antithesis, while Comte, by way of the three stages in ceaseless progress, arrived finally at an interpretation of phenomena which provides a rational comprehension of human life as a whole.

In Germany, within recent years, a subject of much discussion and controversy has been the relation between history and natural science. Certain writers insist strongly upon the profound difference between the two, emphasizing the individual or particular character of historical processes, and seeing in them pre-eminently valuable element of history. Windelband and Rickert are prominent champions of this view, and they are supported by the majority of German historians. A leading representative of the other

1 The history of the question see I. Nennemann, Jahrhücher für Nationalökonomie und Statistik, 3rd ser., Tübingen, 1904, Rich. (p. 153 ft.) writes: *Even in antiquity men sought for economic and social laws, and next, more especially from the latter half of the 17th cent. on from the days of Locke and Hobbes, they applied the term *law* to the facts of the former (i.e. economic), while the physicists themselves, in following these precursors, cannot be altogether exonerated from the charge of having been so influenced by the then all-powerful idea of the laws of nature to keep such laws events sufficiently distinct from those of the *couthc, or ethical laws* of the *Naturalgesetz* und *Wirtschaftsgezetz* in Zeitschrift für die gesamte Staatswissenschaft. Ill. [1922], and H. Windelband, Geschichte der natürlichen und politischen Geisteswissenschaften in Archiv für Sozialwissenschaft und Sozialpolitik, xxii-xxvii [1910-11].

2 The expression "philosophie de l'histoire" was first used by Voltaire, and was defined by him as a science able to account for the history of the world (see his *Histoire philosophique*, 1757, p. 392). It was also used by D. Hume, *Essays: Moral, Political, and Literary* (1741).

3 W. Windelband, *Geschichte und Naturwissenschaft* (Stuttgart, 1906), p. 492. (For more also in *Prinzipien der Geschichtswissenschaft*, Tübingen, 1918.)

5 The school is Lamprecht, who puts forward the hypothesis of socio-psychical stages of development proceeding in the manner in which a general tendency works its way into all the various fields of human experience, and is used to mould them into conformity with the laws of nature. But we also see here how the distinctive character of the several fields forms an obstacle to the tendency, and how this distinctive character is clearly revealed in the one mode of thought and the other into correspondence with the laws of nature. It may be said, in general, that, if we are to speak of the laws of the spiritual sphere at all, the conception of law must have quite a different meaning from that which it bears in the realm of nature. It is in particular the ideas of freedom and individuality that prohibit a simple extension of the laws of nature to other provinces.

R. EUKEN.

LAW (Primitive).—The definition of law, like that of religion, is by no means so easy as it looks. That framed by the great jurist, John Austin, so long dominant in English political philosophy, was derived from Hobbes, who in the 17th cent. elaborated the theory of paternal government. According to Austin, the authority of government as constituted by the people, or the sovereign, did he place the authority of the ruler that he made the king the arbiter, not merely of political and social conduct, but even of religion and morals. Austin, of course, did not so far as this. When he formulated his theory, the dead monarch, the crowning the Divine Right of Kings was dead, theological and political passion on the question had cooled down, and the British Constitution, as settled at the Revolution, had been accepted by all parties. It was, therefore, necessary only to posit a supreme political authority, without theorizing as to its origin or dogmatizing on its proper form. According to Austin, positive law (as distinguished from the divine law, the moral law, the laws of nature, and other laws so called by way of analogy, and in his sense not really laws at all) is a rule of conduct prescribed by a sovereign, whether an individual or a definite body, that is the member or members of the independent political society wherein its author is supreme (Lectures on Jurisprudence, London, 1861, i. 316). Laws are a species of command addressed by a political superior to those on whom he has the power and the will to inflict evil if his desire expressed in the command be disregarded. A sanction, or penalty for disobedience, is, therefore, annexed to, or implied in, every command of the sovereign—that is to say, in this connexion, every law.

'Command, duty, and sanction are inseparably connected ideas. Each employs the same idea to the other, and each denotes those ideas in a peculiar order or series' (ib., pp. 5f., 9).

This definition has the merit of avoiding all antiquarian questions and all theological dogma and philosophical speculation as to the origin of the supreme authority. It takes the facts as they are in modern civilized States, and as they were in imperial Rome, and deduces from them. Nothing else was possible to that generation. Archiological inquiry into origins had hardly begun in 1832, when Austin's work was

1 The controversy as to the existence of laws in history is analyzed and explained by E. Bornhardt, *Lehrbuch der historischen Methode und der Geschichtsphilosophie* (Leipzig, 1898; cf. also E. Euler, "Die geistige Geschichte der Geschichtsphilosophie" ("Historische Gesetze"), in Archiv für Sozialwissenschaft und Sozialpolitik, xxxv, 1913, and art. Historiographie.
first published; or, if it had, it did not interest him; while the science of anthropology had not penetrated there. But during the last eight or ninety years the extension and necessities of the Indian Empire, and the colonial, missionary, commercial, and scientific enterprises of every civilized nation have brought us into more and more intimate contact with the world and every variety of political, economic, and social constitution. To all thoughtful persons and to most civilized governments it has become obvious that the first step for good government is, as well as for missionary and commercial policy, a right comprehension of the ideas and social order of nations thus brought under the sway, or at least the influence, of the white man. The scientific interest of the study has been quickened by these practical considerations, and has resulted in the accumulation of a vast amount of material unknown to our grandparents. It has become clear that the social and political relations of a people, however wild or barbarous backward in culture it cannot, and in fact do not, subsist without governing rules, and that such rules are equivalent to what on a higher plane is called law.

Researches in this field, simultaneously with these into the early history of the various European nations have emphasized the similarity of their original condition to that of many barbarous tribes in the present day. They have shown not only that the formation of codes of written law was gradual, but also that, side by side with them, a great body of unwritten but binding customs continued for ages, and possessed a vitality and authority of its own. That authority antedated any formal prescription by a discoverable sovereign. It was recognized and enforced from time to time, but not created, by the sovereign's courts. In short, the customs were to all intents and purposes law equally with the written codes. Jurists have thus been compelled to reconsider the conception of law, and to take into account its historical origins. They could no longer content themselves with the a priori dogmatism that satisfied Hobbes and Austin. The problem how the conception of law may be so widened that its definition shall include the rules obeyed by all societies of men, whether savage or civilized, in their social and political intercourse became pressing in the latter part of the 19th century. Various solutions have been attempted, of which it will be necessary here to consider only two of the most recent.

P. Vinogradoff (Common Sense in Law, London, 1914, p. 35 ff.) argues that the notions of sovereignty and command are not necessary to the conception of law, that the term 'law' cannot be confined to a rule of conduct prescribed by the head of an independent political society, but extends to the rules to which the members of any society as such are required to conform, and, finally, the law does not rest ultimately on the physical sanction of force, but on recognition or agreement.

This every part of Austin's definition is traversed; his argument for confining the term 'law' to the command of a political superior is set aside; and the sanction to which he attached so much importance is abandoned as a test of law, so far at least as it is an appeal to force.

A sanction of some kind must indeed be implied, but it need not be of a material kind, like death, imprisonment, or the forfeiture of goods. It need not be inflicted by any person; it may be nothing more than the hostility of public opinion, or the contempt of all honourable men. Beyond this, law is often obeyed for reasons indicated above, quite apart from even such vague external sanctions.

Vinogradoff's own definition is 'a set of rules imposed and enforced by a society with regard to the attribution and exercise of power over persons and things' (ib. p. 29). The only observation for any further discussion is the object and purpose of the rules. Put in another way, laws may be said to be aimed at the delimitation of wills. No society could hold together unless the wills of the individual members were limited and restrained; without this it would be a mere struggling mob; it would be chaos. It is by means of the limitation and direction of wills that it becomes an organized community. The rules effecting such limitation and direction are the laws of the society. But every limitation of one human will gives power to other human wills. It defines the scope within which they may move; it checks the free play, and the conditions under which they must move to give effect to their intentions either of the individual or of the society, alike as regards persons and things. Within that scope and subject to those conditions, it facilitates the exercise of power by other human wills.

B. Malinowski in his recent work on The Family among the Australian Aborigines (London, 1913, pp. 10–15), applying the concept of law to a very archaic type of society, revert to the test of sanction.

All social organization, he argues, implies a series of norms, which extend over the whole social life and regulate more or less strictly all the social relations. These norms are of different kinds and enforced by different forms of social sanction. He enumerates three. The first kind owes its validity to the evil results which are intrinsically connected with their violation. The norms included under the second head are observed because any departure from them would bring general contempt and ridicule upon the culprit: a form of chastisement to which the (Australian) natives are said to be extremely sensitive. It is only to the third kind, sanctioned by a more direct collective action, that he applies the term 'law,' because such norms 'enjoy an organized, more or less regulated, active social sanction,' involving violent or magical proceedings for the purpose of corporal coercion or punishment.

Let us examine this classification. The first kind of norm includes the Arrutta prohibition against eating meat which has been killed or even seen by certain relatives; the others disagree with him [who infringes the rule], and he would sicken and suffer severely' (Spencer-Gillen, p. 469).

Similar rules enforced by similar sanctions prevent boys after initiation from partaking of certain food before their wounds have healed, and women from eating meat during pregnancy (ib. 471). So among the Jajaryung, 'whenever a female child was promised in marriage to any man, from that very hour neither he nor the child's mother were permitted to look upon or hear each other speak, nor hear their names mentioned by others; for if they did, they would immediately grow prematurely old and instincively diseased' (ib. 471). Among the Aborigines of Victoria, 1878, ii. 156).

Such penalties are what we call supernatural. But they are not the only supernatural penalties known to the Australian natives. If a man among the Arrunta, during the early stages of his wife's pregnancy, attempts to throw a spear or boomerang at any animal, the spirit of the unborn child, 'he will cause the weapon to take a crooked course, and the man will know that he has lost his skill' (ib. 471). Or on a death certain female relatives of the deceased must not utter uncleaned and cataractated lamentations on their own bodies, but only on the dead man's, unless he has wounds on themselves or one another, as if in agony of
Thus supernatural penalties are not, even among the Blackfellows, simply evil results 'inextricably connected with' the violation of the norm, if by that phrase be meant an automatic operation of the sanction. They are often attributed to the action of ghosts and other imaginary or superhuman beings. On higher planes of culture we are familiar with offences against the gods, and innumerable tales are told of the vengeance of an outraged divinity. In this class of trespasses we have to do with violations of a social rule that are so alien from ordinary conduct that they entail religious horror, expressed in the fear of a special kind of punishment. It is this horror that makes a supernatural sanction effective. When the misfortune looked upon as the penalty overtakes a man, it is regarded as evidence of the trespass. The horror then fastens upon the guilty person and segregates him from his fellows. On the other hand, the consciousness of guilt often operates with overwhelming effect on the mind: men have been known to die from sheer terror when they have recognized their offence, though committed unconsciously.

Moari chiefs were fisced about with a very strict tabu. Not merely their persons, but everything which had come into contact with them, was tabooed. If everything that had once belonged to the dead man was tabooed. If everything that had once belonged to the dead man was sacred. If an inferior made use of any such object, the tabu would kill him. Tanoa, a high chief, once lost his tinder-box. Several persons who were so unfortunate as to find it and light their pipes from it, without knowing that it belonged to him, actually died from fright when they learned who the owner was (W. B. T. T. i. 235; T. C. V. i. 236). This was considered to be the penalty.

Punishment, when directly inflicted by society, is the expression of society's reprobation; and its severity roughly corresponds to the intensity of the feeling aroused by the offence. The mildest form in which public opinion thus declares itself against the offender is ridicule and contempt. These are a very real sanction—most of all in relatively primitive societies, where numbers are small and the individual members are brought into close contact, for escape is difficult, if not impossible. When active measures are taken, it is because the feeling aroused by the trespass is more intense, amounting to indignation, abhorrence, or fear. But, where measures are appropriate, they are not always taken by the community as a whole; they may be left to the group more directly aggrieved. When a man is slain, an offence in a community of several thousand, the community at large; but over and above this his kin is the sufferer by the loss of a member, and by the injury to its prestige, so that it devolves on the kindred to obtain reparation by slaying in turn the criminal or some member of his clan. The avengers are supported in such a case by public opinion. They are in effect the instruments of society: and the knowledge that they are thus acting in accordance with the major sanction and the tacit concurrence of the community strengthens their hands, and tends to be a powerful deterrent from wanton violation of the peace. When, however, death is imputed to witchcraft, active concurrence of the community in retaliation is apt to occur. Witchcraft—hostile magic—is forbidden by all relatively primitive societies. It is a secret treason from which no one feels safe, a subtle danger threatening to sink the individual in an agony of apprehension, fury, and abhorrence, and everybody joins in the hue and cry after the suspected criminal.

This is true even among a people so peaceful and little disposed to violence as the Eskimos. Nor do they limit public interference to cases of witchcraft; for, when a man has rendered himself generally disagreeable, he is sometimes expelled from the village. In any other way, some one is deputed to put him to death.
LAW (Primitive)

(O. Crantz, Hist. of Greenland, London, 1767, i. 154; P. Boas, Ethn., Hist. xiv, (New York, 1906-07) 117, (1908).) The weak point here, as a more recent writer on the Eskimos remarks, is to an externality (V. Stephens, My Life with the Eskimos, London, 1912, p. 365). On the other hand, so far from being the vicious a serious fault—often one that may be followed up by death. But to fix attention on the sanctions—and that sanctions—can be to test the law in a community relatively primitive is to limit the definition of law to that which concerns us as the whole provinces of law. The religious side of life, so far as it is enforced by sanctions not involving the organized and regulated action of the community, is entirely excluded from consideration. No one who knows how profoundly what we in our contemplation are apt to call 'superstition' dominates savage life can fail to appreciate the seriousness of the omission. So constant and deeply rooted the one ecclesiastical law is part of the law of the land in some highly civilized countries. In the oaths of office, in our courts we have a perpetual witness to the same instruction, once and again. The administration of the law. Oaths are an appeal to the divinity to attest the truth of the evidence. They are a relic of the ordeals once held conclusively to determine on which side justice lay. Ordeals are still in use in the lower culture. Courts of law are there often held as they were in classic times, in the temples of the gods and under the presidency of priests and medicine-men; nor had such practices ceased in Europe until the Middle Ages came to a close.

Equally, no account is taken of the class of rights enforceable by civil procedure, which has attained so remarkable a development among the black races of Africa. Among those rights the property to property, directly or indirectly, occupy an important place. Private property is but feebly represented in the social institutions of the Australian natives; and the complaints that constitute offenses and the criminal law, are in more than one way a danger to the society than of what we should call the civil position. Hence it may not have been necessary for Malinowski to take into account this class of rights. When, however, we come to inquire whether his definition can be applied to social conditions elsewhere, we cannot overlook them.

No less serious is the omission of constitutional law. Enough they are in the scale of civilization, the Australian savages are not quite ignorant of constitutional law. The population is composed of a number of tribes, each of which occupies exclusively a tract of country. The boundaries of this tract are recognized by the adjacent tribes. The members of the tribe are bound together by a common language and common institutions, differing in more or less from those of their neighbors, and by a feeling of solidarity, if not a definite alliance. Each tribe is divided into local groups. There is no chief of a whole tribe; but each local group, speaking generally, has its headman, whose authority is exercised by the council of elders. He is assisted by a council of the elders, which deals with the internal affairs of the group and its external relations, and whose decision is the same as that of the group. The office of headman is sometimes hereditary, though even then it is frequently conditioned by ability. The local group is made up of families, each of them ruled by the husband and father with large powers over his wife and children, and often of his brothers. Local groups are independent of one another, but frequently unite for the purposes of war and of religious rites and festivals. The tribe is, moreover, with rare exceptions, divided into clans, descendants of a group of clans, descendent sometimes only through females, in other cases only through males. In the latter case the clan tends to be coincident with the local group, for the wife usually goes to reside in the husband's clan. The organization is thus rudimentary; it is none the less real on that account. That of the Andaman islanders is in most respects even more rudimentary, except in that there are few, if any, of a chief of the tribe over the various local groups.

A type of constitution, very interesting because it clearly shows how the social and political relations of a people are dependent upon economic conditions, is that of the Yakuts. They inhabit the steppes of north-eastern Siberia. In former times they were simple nomads deeply dependent on their horses, which found pastureage on the steppe and supplied their owners with food and the material for their houses and sledges. The minimum drove on which a family of four persons could live consisted of ten heads, that is to say, five mares, one stallion, one two-year-old colt, and one three-year-old colt. This would hardly keep such a family from distress. A maximum, on the other hand, of from three hundred to five hundred heads would allow a community of fifty persons to live in comparative ease. This community, whether large or small, would be composed of individuals who seem to have regarded one another as related, and may be referred to as the kindred, or as the tribe. Between the members of the sib there was community of goods. Kindred seems formerly to have been termed exclusively by the female, but is now traced in the male, line. The number of persons comprised in the sib is thus dependent upon the number of a head that can be pasturage at any given station, and the number of persons who can be found to manage and be maintained by it. Every sib is divided into two halves, called uye, and sub-tribe, or nasled. The land of each tribe is appropriated, and from time to time re-appropriated, between the sub-tribes, and that of the sub-tribe is still more frequently re-appropriated between the uye-mass, or kindreds. Every kindred chooses a chief for this purpose, and every nasled an officer to superintend the distribution. But these officials do not appear to have any other authority. The sib (and, so far as can be gathered, the nasled) is governed by a mass-meeting or general assembly of the sib (or nasled), at which the common affairs are settled by the oldest and most influential members, but subject to the general opinion. The sub-tribes were divided into lighter as the head, and the women to the more the criminal than of what we should call the civil position. Hence it may not have been necessary for Malinowski to take into account this class of rights. When, however, we come to inquire whether his definition can be applied to social conditions elsewhere, we cannot overlook them.

On the whole, in a wide but poor and thinly peopled land the life of the Yakuts, occupied with the care of their herds and the occasional diversions of hunting and fishing, was externally one of peace.
ancestry. The topoi that encircled them was derived not merely from their own personal behavior, but from the divine forefathers of both, to whom the children and priests. A curious conse- quence of the view thus attached to heredity was that the children of the father were held to be more kinsmen than his father. On the birth of a son the prestige of the father, or at least some portion of it, was automatically transferred to the child. He was made a partner in the ancestral ladder, with a longer array of forefathers. Within the family the paternal authority was nearly absolute; slavery was common; and the head of the family could put his slaves to death with impunity. If he ve- nured, however, to go the length of taking the life of wives or children, his case would be considered as if the courts were liable to a claim for compensation or to vengeance at the hands of the kindest of the multitude. In the latter case he would be held to be accountable by the tribe. The power of a chief also was nominally absolute within his genes or tribe, as the case might be. Both domestic and foreign affairs, however, were debated by the principal chiefs in open assembly, at which the warriors, women, and even children were allowed to speak. The chiefs were thus made amenable to public opinion, though the final decision apparently rested with them. Public quarrels between chiefs are referred to the magistrates and, or head of the tribe, and his flat is generally conclusive. His authority is much respected; yet subordination is scarcely known, as, provided a chief had seen with his people, they may be said to any other party, independent of his authority; the people supporting them. This is a state of things, it is obvious, would give abundance of preven- tion to the wars to which the people were addicted. The head- chief of the tribe was not necessarily the leader in war; the war- chief was elected (J. S. Folsch, Manners and Customs of the Natives of the New South Wales, 34 ft.; Taylor's op. cit. p. 350 fl.; E. Tregear, JAI X. 1899113). The Bantu and Negro populations of Africa are also all more or less warlike. Without going into details, which would be tedious as well as unnecessary, in view of the different types of society already presented, it may be said that among them a still higher organization has been developed, culminating in kingdoms ruled by hereditary monarchs subject to certain forms observed; otherwise the enforcement is law- less violence or individual caprice; it has not the consent and the power of the collectivity behind it. These forms are frequently, in the early stages of culture, crude enough; but they are forms rec- ognized as the proper means of obtaining repaira- tion for wrong. The sentence of death passed by a band of Eskimos on an obnoxious person, though passed in his absence and without his knowledge, is the sentence of the community, given in a manner more or less formal. In Australia such a decision would be arrived at by consultations of the governing elders. In either case it would carry the weight of the community. When the duty of reparation for the death or injury of a man is left to his kin, it is because this is the recognized means of restraining lawless aggression. Stigma and conse- nment would follow their neglect of vengeance; but for others to exact the blood-feud of the new offence, to arouse a new blood-feud; it would be outside their duty; it would not be in pursu- ance of the law. The fends resulting from this method of enforcing the norm against bloodshed within the community are, however, in time perceived to lead to new dangers. To obviate these more than one method is available. The rule of a life for a life is commuted for a pecuniary compen- sation, agreed on between the parties concerned. This compensation is generally applied to a recognized tribunal. With the advance of culture this is often, as among the ancient in- habitants of the British Isles, both Celtic and Teutonic, elaborated into a regular scale of pay- ments in accordance with the rank of the offended and is applied to other injuries—to those against property as well as against the person. The beg- innings of the practice of referring outrages for redress to a recognized tribunal appear very low down in culture.

Among the tribes of south-western Victoria 'persons accused of wrong-doing get one month's notice to appear before the assembled tribes—trials—sent—imprisoned and en- forced by society, whether or not a definite external sation be annexed to it. For public opinion and the individual conscience will co-operate to ensure its observance. We may then define law as a set of rules imposed and enforced by a society, for the conduct of social and political relations. To a large extent it is derived from the same ground. The law of every community is an index to its morals; and especially is it so with relatively primitive peoples. Among them the standard of the idea of motive as affecting the value of an act has not yet been fully evolved. To such peoples, for instance, the unconscious violation of a tabu entails the same guilt as the most deliberate; it is equally heinous to slay a man by accident and with malice aforesight. The distinction drawn by our morality between the different classes of horri- cite, and adopted by our law, matters nothing to them; bloodshed even in self-defence demands atonement. Until the individual conscience has been cultivated by the reflexion of generations on the social norms and their adaptation to the changing environment, and until the emotions have been disciplined by law, a serious effort, if not to the general wellbeing, at all events to the maintenance of the existing customs and constitution of society, morality cannot emerge as distinct from law. The process is slow. It is indispensable to the growth of civilization. It is one of the most important dynamic forces con- tributory to that growth. But its operation is slow.

On the other side, law is concerned with pro- cedure. Actively to enforce compliance with the rules governing a society, or to punish non-com- pliance, certain steps have to be taken, and certain forms observed; otherwise the enforcement is law- less violence or individual caprice; it has not the consent and the power of the collectivity behind it. These forms are frequently, in the early stages of culture, crude enough; but they are forms rec- ognized as the proper means of obtaining repaira- tion for wrong. The sentence of death passed by a band of Eskimos on an obnoxious person, though passed in his absence and without his knowledge, is the sentence of the community, given in a manner more or less formal. In Australia such a decision would be arrived at by consultations of the governing elders. In either case it would carry the weight of the community. When the duty of reparation for the death or injury of a man is left to his kin, it is because this is the recognized means of restraining lawless aggression. Stigma and conse- nment would follow their neglect of vengeance; but for others to exact the blood-feud of the new offence, to arouse a new blood-feud; it would be outside their duty; it would not be in pursu- ance of the law. The fends resulting from this method of enforcing the norm against bloodshed within the community are, however, in time perceived to lead to new dangers. To obviate these more than one method is available. The rule of a life for a life is commuted for a pecuniary compen- sation, agreed on between the parties concerned. This compensation is generally applied to a recognized tribunal. With the advance of culture this is often, as among the ancient in- habitants of the British Isles, both Celtic and Teutonic, elaborated into a regular scale of pay- ments in accordance with the rank of the offended and is applied to other injuries—to those against property as well as against the person. The beg- innings of the practice of referring outrages for redress to a recognized tribunal appear very low down in culture.

Among the tribes of south-western Victoria 'persons accused of wrong-doing get one month's notice to appear before the assembled tribes—trials—sent—imprisoned and en- forced by society, whether or not a definite external sation be annexed to it. For public opinion and the individual conscience will co-operate to ensure its observance. We may then define law as a set of rules imposed and enforced by a society, for the conduct of social and political relations. To a large extent it is derived from the same ground. The law of every community is an index to its morals; and especially is it so with relatively primitive peoples. Among them the standard of the
If a member of one clan had been in time of peace killed by one of another clan, the clan which had just committed the murder would send to the friends of the murderer, and invite them to bring him for trial before the entire tribe. If, after trial, they were found guilty of committing the crime, the clan that established their guilt (Howitt, 341). It is a very widespread practice of the North American Indians to have a council to pronounce a sentence on the offender or the person liable on the claim. In certain cases, such as an accusation of witchcraft, the matter is decided by means of an ordeal by which the accused has to pass. The doctrine that a sinner is made an object of ridicule in the presence of the tribunal that judges him has indeed been observed, and in the background, indeed, to at least one tribe in the Congo basin, recent scientific explorers have been unable to discover a trace of it (cf. Torday and T. A. Joyce, Les Bushongo, Brussels, 1910, p. 76).

With procedure morals have little directly to do. It is sufficient that its rules are part of the law, and as such must be observed. How far any modification of those rules has in relatively primitive communities arisen out of moral considerations is a question to determine which the data do not at present exist.

The question must be answered: Whence does a law derive that recognizes what determines its validity as a rule imposed and enforced by society? Even in highly organized and civilized communities the answer given by Austin is incomplete and unsatisfactory. For, though the written law emerging from the specific act of legislation is a rule definitely formulated and prescribed by the sovereign power, we are still left without any account of the source of that large body of rules equally binding on the community and known as the 'unwritten law.' In England called the 'common law.' In many modern States the law is wholly contained in a code supplemented and amended by subsequent legislation. Where there is no code, legislation preempts, and is ultimately founded on, the unwritten law. This unwritten law is found expressed in judicial decisions given upon the cases brought before the courts from time to time. This was a process well known in ancient Roman jurisprudence. Decisions merely profess to declare the pre-existing law, and apply it to the relations of the parties in litigation. They may, in effect, formulate and make binding a new rule. If so, this is done by adopting and applying some principle already held by the community to be morally binding. When the result is generally accepted, the decision becomes law; and, though not the product of legislation, it has the same consequences. Otherwise it is overruled by a subsequent decision, or by the sovereign power.

In a relatively primitive society there is not always an authority capable of formulating a legislative act. All laws are unwritten. They depend for their validity, like the decisions of English judges, on acceptance and recognition. To a large extent they come down from remote and unrecorded antiquity; and on that plane of culture the forces of conservatism, influential as they are with us, wield immensely greater power. The custom of the fathers acquires a religious sanctity and apart from its appropriateness to the circumstances and condition of the people. The feeling was accurately if not completely expressed by the Bucotic who told an inquisitive and supercilious foreigner that he knew only one thing, namely, that it was right to maintain the customs of one's ancestors, and that it was not right to apologize for them to foreigners. The answer was incomplete because it did not give adequate place to the religious feelings of the devotion—in short, the complex of emotions that guard and preserve the institutions of savage society.

Theosaic Fang, we are informed, are not only not quick to adopt reforms or to introduce new methods; they are more or less the slaves of custom, and have a superstitious dread of departing from the unaltered usages of the 'heirs of life' (Jaffé xxi. [1899] 80). The inhabitants of the island of Serang, one of the Mombasas, are reported to have an aversion to novelties, and all the inhabitants of the islands have an insult to the forefathers from whom the old customs have descended (J. G. F. Roullet, La souk- en brocherige resan tamasho Solde, Coquillette, 1888, p. 191). The olum of the Bantus is told almost everywhere. To such lengths did a Bhumara chief carry his obstinacy against the effects of the Christian faith that he had obtained some paint and planted it, although he allowed him to reap and eat of it, he would not allow him to plant it a second time. Such is the collective opinion and the ancient usages. Custom is the law for them, and not to follow it is in line with that in which we abuse the use of our arms. It is an insult to the forefathers from whom the old customs have descended.

The circumstances and condition of a people, however, are never quite steadfast; they are always changing, although slowly and insensibly, with everything else in the world. Appropriate customs arise gradually and unmarked, and are adapted from time to time to these slow changes with the same gradual and imperceptible progress. Hence to the numerability of their frequent appearance to be unchanging from the beginning, the unaltering bequest of the wisdom of the primeval ancestors, or a necessary part of the scheme of things with which they cannot conceive of the existence of society. Yet it is evident that both the original customs themselves and the changes that they undergo, however gradually and imperceptibly, must have been initiated by individuals. The collective opinion and the collective will are merely the concurrence of individual opinions and individual wills. Perception of this individual action is indicated in the traditions of many peoples; and the institution of individual legislation may not in any specific case be trustworthy as history, it assuredly points to a consciousness of the fact of change and of change by individual initiation. Sometimes, no doubt, a Lycurgus might arise, and by force of his personality and genius impress his countrymen with his opinions and will to the extent of legislation. More usually a change, when recognized as such, is the result of long suggestions among the leaders of the tribe. Spencer and Gillen give sound reasons for thinking that this is a course from time to time adopted by the aborigines of Central Australia (op. cit., p. 12). If they are right, the conclusion cannot be limited to the tribes described by them. Such a change would not be ventured upon unless the elders were satisfied that the tribe was ripe for it. When announced, it would have to run the gauntlet of criticism by the whole tribe, and its validity would ultimately rest on general acceptance. In the lapse of time the superseded law might sink out of memory; the new law would then be regarded as of primeval authority.

At a somewhat later stage in civilization the lawgiver invokes the authority of the gods for his legislation. The Mosaic Law is ascribed to Jahveh; Hammurabi receives his famous code from Shamash; Minos is instructed by Zeus. In this way the general acceptance and permanence of the law would be secured by investing it with the sanctity of religion. The same method is adopted in the legislation of King Alfred the Great, who, in collecting and adapting the laws of his predecessors, placed at the head of the compilation the divinely inspired Decalogue and other Mosaic concepts. Acceptance is facilitated by the institution still characteristic of the institutions of such a society. We may analyze them under the
heads of law, religion, medicine, morals, and so forth, appear to distinguish between different kinds of law; we may sever religion from medicine and medicine from magic; the members of the community itself do none of these things; no such analysis is possible to them. 

The distinction is for them bound together into one equally authoritative and homogeneous whole. Each is part of all the rest, and cannot be severed from them. They see nothing extravagant in putting a man to death in the name of a god, nothing incongruous in combining in the same code ritual, moral, agricultural, and medical with what we understand by strictly juridical prescriptions, prohibitions of homicide, rape, theft, and fraud with meticulous directions as to food—what must be avoided, what may be eaten, and how it must be prepared—the treatment of disease, the method of tillage, and the garb in mourning. The same code in the same divine name and with equal authority may make regulations for the conduct of commercial transactions and of the most intimate conjugal relations, as well as for a complex and splendid ceremonial of divin worship: power, in other words, is vested in all these, and in the hands of the same source. 

The same distinction thus found has always been one of the chief hindrances to missionary enterprise. To break with one custom is to break with all; to renounce the religious ideas of the ancestors is to renounce the entire scheme of culture within which they are bound up. The same indistinguish has retarded scientific inquiry into the jurisprudence of the lower culture. Observers have been apt to record practices, not laws. Striking as cultural differences between savage culture and ours have riveted the attention, to the neglect of the principles underlying all social organization. Consequently the meaning of those differences has too frequently been missed, and their place in the development of civilization has been misunderstood. 

Thus in a scientific periodical we are told by a writer who has lived and laboured among the tribe that the Fang have no system of law, no judge or tribunal for punishment of crime. Yet he immediately goes on to say: "Then murder, robbery against native custom;" and he describes the procedure for the purpose (JAF xiv. 76). 

A definite procedure for the purpose of settling claims made in open warfare may not be literally a system of law; it is at all events a long step in the evolution of jurisprudence. But the observation quoted shows that what the writer has is a highly civilized judicial system, such as he has been familiar with in his native land. He must be aware that the Fang, like all other tribes, have a body of customs having the force of law. They are the rules generally recognized and habitually observed, by means of which Fang society is held together. The particular procedure which he describes, if it discloses the want of a factorized armed with judicial authority, is not a picturesque but unjustifiable practice without sanction or recognition; it is a real juridical process. The author exhibits it by means of an example, thus: 

A Fang of the Edulis can steal goods or a woman from a Fang of the Nge clan. The Nge who has been wronged does not go to the offender for settlement, he goes to another near town and shoots the first gun he sees in the street, or, if it comes to open anger, he may shoot a woman. The owner of the goat or woman demands of the Nge his reason for doing so. The Nge replies, "The Fang living in your village have wronged me; I paid the palaver (his offence) on you." The third party then goes to the Nge and says, "Nge (giving the man's name) has shot my goat (or woman) because you have made trouble with him; he has put your palaver (trouble) on me. You must pay me the loss of the goat." The first man is now responsible and liable to the second party. Two wrongs have been done, and the second party has a right of redress. 

These steps are thus the formal and regular preliminary to a palaver, and are as well understood over a considerable area of the continent of Africa as the king's writ or a police-court summonus in Great Britain. So far from starting with an explosion of random rage, they are ingeniously calculated to enlist the active interest of the third party, and to render the wrong-doer liable in a double penalty—to the person injured by himself in respect of the original wrong, and to the third party in respect of the loss suffered by him at the hands of the letter. The palaver is likely 'talked' by the representatives of the respective parties before the representatives of their respective clans. Though it does not appear that these have any direct power to impose a fine or order payment of the claims, such a discussion must in most cases tend to compose the differences, for it informs the public fully on the merits of the dispute. And the aggressor knows that, if he fails to 'cut' the palaver, by paying a reasonable compensation to the satisfaction of the aggrieved parties and their clans, he and his clan will have to run the certain risk of hostilities by two clans with public opinion behind them. The palaver therefore offers powerful incentives to peace, doubtless actively assisted by the representatives of the clans involved. 

It is, of course, perfectly true that the laws of the Fang, and all other relatively primitive societies, extend (as has been pointed out above) to many subjects that in the progress of civilization have dropped out of legislation. The use of the term 'law' in common parlance limits it to acts of the legislature and such other rules as are recognized by the courts of justice. It obscures for us the fact that many of the rules which we observe in daily life, though they are not amenable to the king's court or to parliaments or legislatures, are as much sanctions, and breach of which will subject us to penalties tending to exclude us from the society of our fellows and make life burdensome in other ways. By virtue of the indistinctness which we have already noted, savage mentality, though admitting a difference in the penalties, heeps all these rules together as customs. As such they are sacred. All alike they rest on a traditional basis; together they constitute the ethos of the society, which is not likely to be infringed. The variance of the point of view from that of the savage, the indifference or the comparative leniency with which we regard some acts or omissions which are of the greatest importance to him, and the emphasis which we lay on other acts or omissions that he treats as trivial are a measure of the distance of our civilization from his, and should not blind us to the fact that what we call the customs of a tribe are as much a body of laws as the Code Napoléon.
sections of the laws of the Herero, a very interesting tribe in Germany S.W. Africa, have been published by Eduard Dannert (Zentralbl. f. Volkskunde, 22, 1897, 1900). These might be expected from these compilations, from their practical purpose, contain little beyond the native laws so far as they are administered by the chiefs. Felix Meyer's "Wirtschafts- und Recht der Herero" (Berlin, 1905) comprises somewhat more. A more general work is "Recht der indigenen Völker in Afrika" by E. H. Pesch, 2 vols., Oldenburg (1907). The best and most comprehensive of the whole subject with abundant bibliographical references, is the same author's "Jurisprudenza" (2 vols., 1894-95), to which may be added S. R. Steinmetz, "Rechtsverhältnisse von indigenen Völkern in Afrika und Ozeanien," Berlin, 1905.

Articles devoted to jurisprudence, articles on the subject are occasionally found. Such articles are frequent in the "J.F.R.W.," Stuttgart, 1897 to date. One of the editors, Josef Kohler, devotes special attention to it. Accessible works on the general subject are those of Henry J. Sumner Maine, esp. his "Leçons sur l'Étude des Institutions," London, 1876. But it must be borne in mind in reading them that a generation of further research has resulted in conclusions widely differing from his on several important points.

E. SIDNEY HARTLAND.

LAW (American).—In so vast a culture-area as the two Americas, with their wide range of stages of civilization, from savages tribes of S. California or the Amazonians, through Aztecs and Peruvians, the concept and the scope of law necessarily present extreme diversities; and the difficulty of the task of preparing a Corpus juris Americana—a work urgently needed by all students of comparative ethnology and sociology—is enhanced by the scantiness of the records which have been preserved of extinct or obsolente American Indian stocks, as well as by our almost utter ignorance of many living peoples, particularly in S. America, while scarcely any of the earlier observers studied from a juristic point of view the tribes with whom they came in contact.

It would be wrong to conclude that the American Indian, even of the most undeveloped stock, is a lawless being. In a very real sense he may be essentially more law-abiding than those who are commonly regarded as highly civilized; for to him the law is well-nigh synonymous with custom (q.v.); it is not something imposed from without, or supported by pleas of the greatest good of the greatest number, or exercised by a class who would be regarded with antipathy by many members of the community, or a body whose judgements, ingeniously and sophistically to be eluded or circumvented by clever legal ingenuity, or a purely human convention to be flouted and broken by an inlawless individual of sufficient strength to do so.

1. NORTH AMERICA.—The general basis of N. American Indian government was the family—on a totemistic foundation—which formed a part of the gens, and this, in turn, of the tribe. Matriarchy was the rule, and the women possessed much influence in the election of the chiefs, of whom there might be more than one, so that separate chiefs presided over military and civil affairs among the Iroquois, Muskogeeans, Chippewa, Dakota, and Pomo, and sometimes, as among the Caribs, there were chiefs only in time of war. The position and the privileges of the chieftainship varied among the different stocks, and the great problem here is connected with that of the origin of the kingship (see the series of artt. on KING). Among many tribes, such as the Iroquois, Cadto, Omaha, Chippewa, Arapaho, Comanche, the Hidatsas, the Chippewas, generally, Maidu, Yurok, Mikwok, Kutchin, Tlingit, and Kaniagmint, the chieftainship was elective, depending on the women or the shaman, often passed only to certain families, but conditioned in great part by wealth, by personal ability. Elsewhere the office was hereditary, unless grave obstacles forbade, as among the Natchez, the Carolina tribes, Pomo, Pomo, Gallinagues, Guadalu, Utah, and, under certain conditions, the Dakota. Other and other tribes both systems were in simultaneous use, as among the Abenaki, with whom the sachem, or supreme ruler of a number of tribes, held office by hereditary right, while the individual tribal heads, or saqamoues were elected.

The power of the American Indian chief is restricted, sometimes by more elaborate tribal councils, as among the Comanche, sometimes—and more effectually—by law. Only rarely, as among the Natchez and the Santa (Kosch), is the power which might become tyrannical. Frequently he is little more than primus inter pares, being especially the case in the less organized forms of government, such as the Maidu, Karok, and Californians generally. Much, however, depended on a chief's personal ability, notable instances of wielders of wide power being the Wampaagog Massaoget and the Powhatan Wahunoseok.

The territorial scope of the chief's power also varies widely. In a few regions in N. America—most notably the Iroquois (q.v.)—real states and confederacies were established, but elsewhere—as on the west coast and among the Apache, Comanche, Shoshoni, and Eskimo—each chief was head only of a village. The Iroquois had developed the elements of international law, having a regular system of sending envoys, whose persons were sacred, to adjudicate disputes, make peace, and tribes less advanced politically possess the rudiments of similar institutions.

In very few instances the chieftainship is traced back to a divine origin, the most notable example being the Natchez chief, who was descended from the sun, although occasionally, as among the Nutka, the chief is at the same time a 'medicine-man,' or, as among the Calusa, he was believed to possess supernatural power, and was deported or killed if he did not use this for the welfare of his people.

Among the Iroquois an insolvent debtor was tied to a tree and flogged, but among the Oregon tribes he became a slave. Death usually cancelled debt, as among the Eskimos. As regards contracts, the same general rules held as among ourselves, although the Tingit and, with some reservations, the Easterners, were permitted to make the other party might withdraw from a contract upon which he had agreed. For the American Indian laws regarding property see art. PROPERTY.

American Indian criminal law is concerned mainly with murder and theft. For murder have been considered in art. BLOOD-FEUD (Primitive). The normal punishment for witchcraft was death, which was also the penalty for incest among some of the Carolina tribes, for robbing a grave, as among the Chinook, for cowardice, as among the Kansa, and for desertion by an adopted prisoner of war, as among the Mis- souri tribes, this being regarded as treason to his new tribe. As regards theft, the chief was generally bound to make simple restitution; but the Huron required double restitution; and among some of the Carolina tribes, as also among the Tingit, the thief was made to pay twice what the damage required, became a slave. Among the Comanche, murder, adultery, theft, and failure to cure the sick were punished by death. As a rule, however, even the gravest crimes might be commuted by fines (cf. art. BLOOD-FEUD). Legal procedure naturally varied according to the stage of civilization attained by each tribe. In the most primitive strata the punishment for non-capital offenses was usually inflicted by the tribal head of capital crime the persons injured—or their kin—themselves acted as executioners. Anything approximating a formal court was, however, ex-
tremely rare; the tribal councils normally took cognizance only of personal matters; other matters affecting the tribe as a whole. Nevertheless, totem and tribal courts were found among the Huron, which acted especially on charges of murder, treason, and witchcraft. Any error in the form of process and original papers quashed the whole case. Certain Missouri tribes had courts of arbitration, whose decisions it was an obligation of honour to fulfill, while elsewhere considerable influence is exercised by the tribal councils, as among the Forti and the Iroquois.

2. Mexico and Central America.—The Aztec sovereignty was regarded as the earthly representative of the gods, whence implicit obedience was due, and his power was absolute. Like the Peruvian Inca, he was assisted by many officials, and there seems to have been a special department of justice, while in each large city there was a viceroy (cizacuahuitl) controlling both the general administration and justice, and constituting the final court of appeal in criminal cases. The rules as to the succession of the Mexican kingship differed in various times and places. In Tezcuco, Tetzcoc, Tlaxcala, and other parts, the eldest son was normally the heir to the throne; but in Mexico it was usually the eldest brother or the eldest brother's eldest son who succeeded, though there seems to have been no rigid rule of succession. Ability and character being more potent in the eyes of the electors than mere kinship to a deceased ruler. Over the Zapotec city of Yopaa a hereditary priest-king reigned.

In the smaller cities there were judges who decided minor cases, referring others to the higher courts, e.g., to those consisting of three judges, who sat under the control of each cizacuahuitl. Both Mexico and Tezcuco seem to have been divided into six circuits, each represented at the capital by two judges, who formed the lower court for important cases, the court of last resort consisting of twelve or thirteen judges appointed by the sovereign, apparently for life, and required to assemble, under the presidency of the king or his representative, for ten or twelve days every four months (80 days). Any bribery, negligence, or partiality exposed them to vagaries, and, if repeated, to degradation or even death; and the entire court system was worked in minute detail. Besides the regular courts, there were special courts for marriage, for oratory affairs.

The Mexican laws, which recognized circumstantial evidence, seem to have been codified, and were administered strictly, though some leniency was shown to first offenders. The stern impartiality with which the judges acted was most admirable, and a high rank or kinship to the king was of no avail to the criminal; indeed, Nettahualpili put his own wife to death for immorality, and Nettahualpoyotl had his only legitimate son executed for high treason.

The best known portions of Mexican law are those relating to criminal procedure. Here the evidence of witnesses was requisite, and in the absence of witnesses, testimony should be given. Evidence was not always essential to begin prosecution, common reputation, as in cases of adultery, sometimes forming sufficient ground for legal proceedings. All grave crimes were punished by death, the mode of death varying according to circumstances, rank, etc. The death penalty was prescribed for murder (even of a slave), kidnapping, adultery, incest, rape, unnatural vice, pandering, whores, and interfering land grabbers, but the death penalty was also imposed on those expropriating others' property or the royal insignia, selling land already sold, selling stolen goods, falsifying weights, slander, drunkenness or other excesses of priests and royal retainers, military insubordination, flight from the enemy, permitting an enemy to escape, selling or releasing a prisoner of war, treason (involving slavery or banishment for kinmen to the fourth degree), and in Texascal the death of kindred to the seventh degree, murder as accusation before the king, false guardianship, striking or insulting a parent, squandering property, challenge to a duel, perjury, harboring an enemy of the State, and, according to some authorities, abortion and witchcraft of the opposite sex. A thief must not only make restitution, but also pay a fine to the treasury; under aggravating circumstances (as in the marketplace) or for repetition of the offence, he suffered death, but in Cuzeo he was blinded. Slavery was often a punishment for crime—e.g., for theft (apparently when the thief was unable to make the reparation demanded) and stealing another's child, as well as for debts arising from negligence, if the delinquent was unable to make compensation otherwise, failure to lodge information of high treason, unauthorized sale of property, obtaining goods on false credit, embezzlement, failure to pay imposts and taxes, etc.; mutiny, as well as the lips of a calumniator were pierced or partly cut off; and degrading punishments were inflicted in Anahuac for pandering. Drunkenness was an object of legislation, the person being shaved, his house torn down, and all public office denied him; in some instances he even suffered the death penalty. Imprisonment as a punishment was rare, the usual use of the prison being restricted to those condemned to death or sacrifice. The particula criminis in abortion was as severely punished as the principal, but received a milder penalty in cases of theft. Pardon might, however, be granted by the monarch, and certain festivals carried amnesty with them, while forgiveness by the injured party or his kinsman might mitigate a penalty.

All possible provision was made for the poor from the State treasury; and the laws of Tezcuco sought to protect the forests as well as agriculture, besides forbidding undue luxury—e.g., gold and silver vessels for the wealthy nobles. There was also among the Aztec a law of contracts which must be made public, and gambling debts were valid so far as they came within the law of contracts. Another form of contract was farming on shares. Interest on loans was unknown, but commissions on sale and deposits in pledge were common.

The Mayan sovereignty was hereditary in the male line, and the power of the king was absolute, though he was constantly advised by his nobles; among the Quiche the king seems to have been succeeded by his brother, the heir-presumptive being the king's eldest son. Among the Lacandones and Nicaranus the chiefship was elective, and among the latter the chief was practically subject to the council; in Darien and among the Mosquito, on the other hand, hereditary chiefs ruled; while in Chichen (in Yucatan) a priest-king held power, in which connexion it should be noted that the hereditary nobility of Maya civilization, such as Voton, Zamani, and Kakulcan, were both priests and kings.

The system of courts was elaborate, and it is noteworthy that both here and among the Quiche advocates (though probably not with a special legal training) were appointed to aid both the judges and the parties to the case. Inspectors seem to have traversed the country to see that justice was properly administered. There had been no power of appeal after a decision had once been rendered. In cases of grave crime, torture is said to have been employed at Vera Paz to elicit
testimony. The Maya punishments were death, enslavement, and fine; any detente, except for detention, was rare, though inflicted at Coban for non-payment of taxes. The death penalty usually involved confiscation of property and enslavement of the family; it was inflicted for murder (although in Yucatan and Nicaragua, in a case of extreme provocation or other extenuating circumstances only a fine was inflicted, while, if a man killed another's slave, he was required to pay damages. Stealing large amounts (San Salvador—full theft in Darier was from a temple, adultery (Darien, Yucatan, Izta, and Guatemala), rape (Guatemala), incest and seduction (Yucatan), sodomy (Nicaragua), treason, desertion, intercourse with payment of tribute to the king, kidnapping, killing the quetzal bird (Guatemala), disrespect for religion, lying in time of war (Pipile), sorcery, sexual relations with a foreigner (Carib), false testimony (Darien), and fornication between slaves (Vera Pac). Sometimes the choice between death and fine lay with the injured party, as for fornication and for poaching. Enslavement was the penalty for murder by a man whose wife was a slave (if the thief was unable to make restitution and also pay a fine to the royal treasury) or attempted robbery, continued unchanged in a woman, unsuccessful rape, and owning goods on false credit (Guatemala), repeated adultery (Vera Pac), cohabitation with another's female slave (Pipile). Small thefts and improper advances to a woman were punished by banishment in San Salvador, as was bigamy in Nicaragua, but thieving was penalized by mutilation in Darien; a degrading punishment was flagging for falsehood (Pipile), theft by a noble (Yucatan), and adultery (Honduras and Nicaragua). All but the most heinous offences could, however, be compounded by fines. Strict fulfilment of contracts was required, and they were made valid by the parties drinking in the presence of witnesses.

3. South America.—The general level of civilization is far lower in S. America than in the northern continent; indeed, the conditions are, broadly speaking, very little superior to those of the California tribes. The usual centre of government in S. America is the village, each village having its own chief. Succession to the chieftainship seems generally to be by inheritance, as among the Bororo, Uaupes, western Tupi, Araucanians, and the tribes along the Xingu; but sometimes, as among the Caribs, Chiquito, Guahibo, Cren, Coroeado, and Paraguaris, the eldest brother elected, though among some tribes, as the Tupiinambaras, only from a special family. Only rarely does he claim divine power, as when a chief near Coro asserted that he was creator and lord of earth. Unlike N. America, which is matriarchal, both matriarchy and patriarchy are found in S. America; hence succession is sometimes matriarchal, as in British Guiana and among the Warrarn, and sometimes patriarchal, as among the Uaees, Arhuacians, and the tribes along the upper Xinga, although among the latter, in default of a son, a sister's son becomes chief. In time of peace, the functions of the S. American chief are mainly conditioned by his personal ability, though in any event he is a squirellar rather than a ruler. He controls, in great measure, agricultural operations, the organization for hunting and fishing, determines on places of settlement, and, at least sometimes, settles disputes that may arise. Among the Karaya he protects orphans and illegitimate children, and among the Macusi he worships the river god. The importance of function he enjoys which is strikingly alien to his N. American fellow—his control of barter with neighbouring tribes and his duties as representative of his own village and as host to strangers. But the village, in N. America, is more democratic, although important to the Indian, than among the Arhuacians; commercial relations between different stocks lead to a greater development of the rudiments of international law than is the case in the northern forest. So it is carried that, among the Karaya, skill in conducting mercantile transactions is a more important qualification for chieftainship than ability in war, and even adopted prisoners of war may become chiefs if their business capacity is sufficient. In time of war the chief is greatly increased, as among the Caribs, Arhuacians, Mocho, and Puechho. If a chief is absent, he may be represented by a vice-chief, e.g., his sister; and in some cases his kinsman, e.g., his widow's brother, may act until another chief assumes formal office. Among the Panpeus tribes, on the contrary, the chief is authoritative only in time of peace. Village councils deliberate on affairs of general importance; and sometimes, as among the Arhuacians, sale of any part of the settlement is dependent on their approval, or, as among the Macusi, competing parties submit to their decision, while among the Panpeus tribes matters of religion come within their purview.

A further point of difference between S. and N. American governments is the greater power of the 'medicine-man' among the former. The functions of the medicine-man are not in matters that fringe upon the sphere of religion, e.g., in making war to revenge a murdered tribesman. However, great influence of the 'medicine-man' in N. America, he does not limit or circumscribe the power of the chief as he does in S. America.

The execution of justice usually depends upon the wronged individual or his friends or kin, although the functions of the Macusi council, just mentioned, form an exception to this general rule. Where a crime affects the whole community, as in cases of witchcraft, all seek to punish the offender. Death, often at the instance of the pojo, is the penalty for sorcery and treason, as among the Arhuacians, or for a woman who is unlawfully present at dances or in the men's house, as among the Chambira and some of the tribes along the upper Xinga, as well as among the Arhuacians. Minor punishments are flogging or blinding, or for theft among the Brazilian. Among the Arhuacians, torture may be used to extort a confession of guilt.

Occasionally legal responsibility is highly developed, as among the Goa-jure, where one who lends an animal is responsible for any damage which it may do, and who sells intoxicants for any mishap that may result. The Brazilians are acquainted with a system of deposits in pledge.

4. Peru and the Chibchas.—The culture of Peru stands quite isolated in S. America, where a high degree of civilization has been secured by no other people except the Chibchas (q.v.). The Peruvian government was essentially a socialistic despotism. Like the N. American Natchez, the Peruvians believed that their Inca was descended from the sun, whence he united within his system all the religious power, and was regarded as perfect. He was aided by a host of officials, themselves under strict inspectors, and everything was regulated to the minutest detail; in the giving of tribute, for instance, the natives of Pasto, being decrease, stupid and dirty, were required to contribute at least some quota in the form of a levy of vermin. Poverty and idleness were as impossible as avarice; but, on the other hand, in the southern part of the State stilled all initiative and all personal endeavour, placing everything on one dead, though relatively lofty, level. Land, for instance, was
apportioned by the State to the individual in proportion to the size of his family, and the allotment was changed annually according to the change of his family size. The allotment was also of similar size elsewhere, as among the Brazilians and Huron. Labour was required of all—even children of five had their appointed tasks—and this labour was as meticulously regulated as were clothing, food, the care of animals, the gathering of the sick, the poor, and orphans and widows. The succession to the kingship, as well as to the principal offices of State, was in general—though there were exceptions, and the authorities stood most of the time in agreement—by inheritance in the male line.

Obedience to law was a marked characteristic of the Peruvians, particularly as law was of divine origin, and violation of it was believed to bring the wrath of the gods upon the land. The judges, who were supervised by inspectors and obliged to give an account of their administration, were bound by definite laws, and from their decisions there was no appeal. Important cases were tried before the higher officials, e.g. provincial governors. The severity of punishment was mitigated by alleviating circumstances, such as a first offense, physical disability of the offender, and necessity. Parents shared in punishment for offenses committed by their children, and sometimes the superior was made a co-defendant with his inferior. On the other hand, men of rank were punished more severely than the ordinary citizen; e.g., if one of the Inca's retainers committed the smallest theft, he suffered death.

The death penalty was frequently inflicted, as for abortion, immorality, adultery, murder, ordinary theft, sorcery, the injury of crops or persons extirpated, fornication by a vestal of the sun (her lover and her whole kindred suffering with her), blasphemy of the sun, cursing the Inca, bridge-burning, etc.; lesser offenses were punished with imprisonment; idlers were flogged; and even lying and slyness of housekeeping were visited with legal penalties.

The Chibcha ruler possessed despotic power. Succession passed first to the sister's son, or, in default of him, to the deceased ruler's brother. The laws were severe, and are remarkable for the number of fines which they levied, thereby enriching the State. It was also a capital crime to murder, rape (if the culprit was married, his wife might be exposed to double the outrage which he had committed), incest, sodomy, and cowardice in war. In some cases the event that might instead be forced to wear women's clothing. The thief was blinded; and other forms of mutilation are also mentioned as penalties. The nobles usually suffered degrading punishments, such as shaving off of the hair or lugging by their wives.

LAW (Babylonian).—Babylonian law naturally was based upon ancient custom. The origin of such custom, however, is often hidden from us in their writings, because the laws argue back from historic conditions to the pre-historic implications, but the methods usually adopted are guess in the dark. The invention of writing and the use of clay as the material have combined to preserve documentary evidence of the methods also of observation, the law of Babylonia to a very remarkable degree. The disputes which arose among the ancient Babylonia were settled by a court consisting of judges and a group of assessors. The law of Babylonia was thus a very remarkable code. The disputes which arose among the ancient Babylonia were settled by a court consisting of judges and a group of assessors. The law of Babylonia was thus a very remarkable code. The disputes which arose among the ancient Babylonia were settled by a court consisting of judges and a group of assessors...

1 This we shall usually quote as 'the Code.'
We must therefore bear in mind that Babylonian law has its roots in Sumerian soil; and, while Semitic customs were retained where race prejudice or religious considerations prohibited, the regulations that the law had set up to govern the settled civilization of the community were due to economic necessity rather than to racial characteristics. They had been elaborated by the Semites, but Sumer had assimilated them as too valuable to alter or discard. The Code of Hammurabi embodies the judgments of a long series of judges acquainted with an already formulated system of law which had considered most of the questions involved in the social system of Sumer, and the need for any further enactments arose from the conflict between ancient law as found in the land and a recent custom due to the modifications introduced by the new race. For the dynasty to which Hammurabi belonged rose to power as the result of a fresh immigration of a Semitic folk called 'Amorites.' The Semitic speech already in use in Babylonia was known as Akkadian, but that of the new-comers showed marked differences from it and affinities with the Western dialects. We may assume that customs marked by similar affinities came in with it.

Hence we cannot claim even racial purity for Babylon; it is the product of the interplay of many peoples. It would be a task outside our limits to attempt to unravel the threads which are easily discernible in its texture — even if the materials for judging of their composition were available.

Curiously enough, the Semitic scribes who adopted the Sumerian methods of writing compiled extensive lists of words and phrases, such as would occur in legal documents, and attached Semitic renderings. These lists have naturally proved of great assistance in reading the Sumerian portions of the many thousands of legal documents, such as conveyances, deeds of sale, leases, bonds, marriage settlements, receipts, and other memoranda, which have come down to us. They were obviously drawn up to assist young lawyers, who were to become notaries. By a happy accident one scribe has preserved what looks like an extract from a code and has been called the 'Sumerian Family Laws' (see E.E. iv. 257, v. 447).

The great Code of Hammurabi was often copied even at the time when promulgated, and copies went as a living model in the cuneiform schools of Assyria (688–626 B.C.), which reproduce its decrees with marvellous fidelity 1200 years later. Copies, made in Babylonia, of even later times, exist. They were divided into books, or chapters, and read and commented upon almost to the end of Babylonian power. But copies of other later laws also exist, which show marked changes. The legal documents of the Chaldean period of Nebuchadnezzar and his successors also show changes. We may, for want of a more precise term, call this Neo-Babylonian law.

With the details of a citizen's rights and obligations we are not well acquainted. Much is assumed in the Code as well known which we would gladly be told explicitly. The Code recognizes the amelu, a free-born person of high birth and standing, the maskabu, a free born person of low birth, and the seredu, slave. These three great classes were separately treated. A slave could be sold or pledged, and had no wage for his services. If injured by a third person, his injury was assessed, though he received no compensation from the one who had done the injury to his master. The master seems to have had the power to punish him, but not to kill him, though he might brand him. The master clothed and fed him, and paid him wages. A slave's property, or wages, from a month, at any rate in some cases. He might acquire property and even marry a free woman. He could buy his freedom and sometimes was freed by adoption. The slave girl often bore children to her master, but acquired rights only thereby, so that she would not be sold outright, and even when insolent to her mistress could only be reduced to slave rank again, and was free in any case on her master's death. The slave went freely about the city without a district, but was strictly guarded against flight. Any one who captured a runaway slave and restored him to his master was entitled to a fixed reward. To harbour a slave or convey him at his flight was severely punished. To obliterate the slave's brand was a capital crime.

Some slaves, possibly captives in war, were owned subject to a fixed period of State service, extending to four or five yearly terms, either for war or for public works.

The status of the maskabu was that of a plebeian. It may well have embraced the whole population, not of noble birth, who yet were free. The legal documents rarely refer to such members of the community except to name the quarter of the city where they dwelt. Injury done to them was punished more severely than injury done to a slave, but less severely than injury to an amelu. But the maskabu had less to pay for his crimes than a noble would, just as his offences lessen.

In all other respects he was free, and in many laws he is included among the amelu, being named solely when treated as distinct.

The amelu was properly a man of family, his genealogy being enrolled, his birth, marriage, and death being subjects of registration, and he was by strict interpretation an aristocrat — a title borne by the king himself. His status covered not only the rich proprietors, but all his military, religious, and professional classes. Gilds of artisans existed, and had special quarters in which they usually dwelt. They were inter-connected by family relations, but admitted as apprentices both slaves and freemen. Nevertheless, they ranked as amelu.

The king was in theory a benevolent despot, and the prosperity of his land depended to an extraordinary degree on his powers of hard work and organization. He took cognizance of all sorts of affairs throughout his kingdom — oppression, distress, neglect of officials, building, sheep-shearings, and movements of military measures. Above all, he was the source of justice and the fount of honour. He had long ceased to be owner of all land, though conquest made him owner of much territory, especially the land of those killed in battle. He had his own estates as a private person as well as entailable endowments, as also had the great officers of State. But he had to buy like a private individual if he wished for more, or at any rate compensate at market price those whom he displaced. In most cities there was a palace which was usually occupied by his viceroys, or by a local magnate. Thus the ribudu, or city mayor, had his palace. It was a hereditary office subject to royal approval.

Under the 1st dynasty a great many military or feudal retainers were settled in the land. To each was assigned a private holding of land, house, and garden, together with some stock, for which he owed service. The service was 'the king's errand,' whether for war, garrison duty, postal duty, or command of troops or of gangs of workmen. The holding was liable, but refusal to go on the king's errand forfeited it and life together. It was carefully protected from oppression or the encroachments of higher officials, and was reserved for his son, who returned from foreign service within three years. If he had a son able to manage it in his father's
absence, it was entrusted to him; if not, the duty was delegated to a fœcium tenens, one-third being reserved to the holder's family. Neglect on his part, however, was punishable with a fine. If the tenant was not supplied with his portion and became ransomed at his own expense, but, in default of means to ransom himself, his city was bound to ransom him if he paid the equivalent. If the land became private property, much was always entailed, or subject to redemption by next of kin. The temple also always retained much in its own possession, and the State did so.

Such feudal tenants were captains, or at least sergeants, in the army and taskmasters on the corvée. All able-bodied men were liable to serve on both accounts, with the exception of temple servants, shepherds, stewards on estates, palace servants, and those whose service was essential at home. In the course of time military service was commuted for payment, or a group of families was called upon to provide and maintain a soldier, while the State found him arms. As early as the 8th cent. B.C., a definite area of land was required to furnish a bowman and his attendant pikeman, and was known as a 'bow' of land. These were grouped in tens and hundreds. Later, a horseman, with his equipment was due from certain estates.

Closely allied with this military tenure was that of a dinkhas, whose office is not entirely clear. He was a fisher, but whether it was fish or men is not certain. If the former, fisheries were State property; if the latter, he was a sort of policeman. Subject to his service, whatever it was, he held lands on the same terms from the king. Other lands were held on condition of paying rent or tribute. The latter was due from holders of conquered lands. The king often rewarded his faithful subjects by grants of lands, and might further exempt such lands from State obligations.

Riparian owners had liabilities to turn off their work to keep open or repair the canals, bridges, quays, etc. These public works were carried out at the expense of a king, a temple, or some public benefactor, but the beneficiaries were responsible for their upkeep.

The State claimed also fixed rates of all crops, stock, etc. Every city had its own oenocrit, customs, ferry dues, and highway and water rates, levied on all but its own citizens. Each city claimed some special rights; thus a burgher of Nippur could not be pressed for the army; Assur was exempt from the corvée; and every citizen of Babylon was right to have his land tilled, even if caught as a burglar. We happen to know of these facts accidentally, but probably most cities preserved laws distinct from the Code.

The temple, for its own peace and prosperity, had a peace, and a general, or levy-master in time of war, could commandeer horses, fodder, cattle, grain, vehicles, etc., giving a receipt to the victim who ensured their return or compensation. Apparently the temple treasuries, which received a share of the spoil taken in war, were called upon to furnish means for war, the king borrowing of them and sometimes returning the loan. Later we find the palace acting as treasurer and arsenal also.

The temple was a most important factor in Babylonian city life. The god, in theory, owned all the land, and every holder paid a tribute or rent to the city-god. The holders were, of course, members of the clan of the temple. Each tribe, however, had settled the city and built the temple. These and their descendants also had the right to furnish its priests, who inherited shares of the right to minister in the temple; and profit by its revenues became vested. In the event of the temple being sold or leased, but entailed to certain lines of succession. The tribute to the temple from those who held its lands was early committed to a tithe of all produce, and in many places it furnished the right to share this revenue. Private ownership of land may have arisen from the fact that a man inherited land on which he paid tithe ultimately to himself. Conquest and commercial arrangements gradually dissolved old obligations, and estates were left in holding. If such a feudal tenant was taken captive abroad, he was ransomed at his own expense, but, in default of means to ransom himself, his city was bound to ransom him if he paid the equivalent. If the land became private property, much was always entailed, or subject to redemption by next of kin. The temple also always retained much in its own possession, and the State did so. The monasteries owned great herds of cattle and flocks of sheep and goats; it made up raw stuff, especially into garments; and it lent freely to those in necessity and on security, both with and without interest. Naturally the temple grew rich and employed large numbers of servants. The convents or cloisters of vowed women made the same progress, till the temples and allied institutions became much like the monasteries in mediaeval towns.

Doubtless the concentration of power in the hands of the monarch and consequent centralization, coupled with incessant intercourse, gradually tended to break down local and city custom and make for uniformity. But there were other important factors.

A principle which had established itself through ages of commercial activity was that of contract. If parties could agree, they made a contract. Their deed of agreement was drawn up in a public, confirmed by an oath taken in the temple, and duly sealed by the parties in the presence of witnesses, who often affixed their own seals also. These witnesses, if necessary, were trusted to the interests of the parties and the futurity of the decision of the king. The Code constituted such a decision in all the cases with which it dealt.

In case of a breach of contract, the injured party brought a suit before a court consisting of one or more judges, together with the elders of the city as assessors. A most important feature of procedure was the production of the contract and the witnesses to it. The contract was usually executed in duplicate, each party taking a copy, while the note was held a further draft or third copy. To secure the deed from being tampered with, it was usually enclosed in a cover or envelope, also of clay. The envelope was inscribed with a copy of the document and fully sealed. While it would have been easy to falsify either deed or envelope, both being often of unburnt but sun-dried clay, it was impossible to reproduce both with their seals. The envelope might be tampered with, but the interior could not be. The judge in delivering, if caught as a burglar, was entitled to his share, and inspected the contract, and only rarely set it aside, and then only on grounds of mistake in fact. In some cases, suit was made to certify a fresh copy where the original was lost, in which case the original was declared invalid, and ordered to be destroyed if found. After the copy had been filed, as when a loan was repaid, both copies were destroyed; and if, for any cause, one was not producible, an order was issued and recorded that whenever found it was to be destroyed.

The Code recognizes this practically universal habit of contract and the use of writing to embody agreements. It even insists on it, as when it declares that without marriage bonds a woman is no wife, or that no money or goods can be brought into account for which written receipt had not been given and was now produced. It was seldom that a contract was repudiated on the ground that it had been originally illegal.

On the other hand, the Code lays down that a man who is in debt shall not hand over his land and crops to his creditor unconditionally, even if the creditor is willing to speculate on the future yield, but must himself husband the crop and pay off his debt from the produce. This was intended to check the ruinous habit of borrowing on security of future crops, by freely the man who was in debt for temporary accommodation or a lender lose his money through a failure in crop.

Consequently, it must not be assumed that the Code merely embodied these, or other, established precedents. It constituted a standard appeal. It did not prevent contracts (many of
which have come down to us), which were voluntarily entered upon, from being sustained by the court and carried out. It did set up a standard when punishment practice gradually accepted. Even its original clauses were not at once enforced. In many cases they really define a maximum penalty or minimum wage, but the judges used their discretion as to its actual application. Such natural language was not enforced. In many cases it was left to this 'fear of God' or 'conscience' to secure justice between men; but the written specification of the form which justice should take was a great step in advance. 

In early times an oath 'by the king' alone is quite frequent. In all cases the oath 'by the local god to god is usual. When Babylon became the metropolis, Marduk, the city-god of Babylon, was usually associated with the local god and the king in oaths. The form of the oath is usually 'he, or they, singly or collectively, shall not or they, collectively, if they, take the name of such and such god or king. Rarely is the purport of the oath given. It was 'not to repudiate the contract,' whether by default or by raising a plea on its terms. What form the divine vengeance on the faithless would take is not clear, but it is 'the god's evil.' When kings called down the curses of the gods on the malefactor who should contravene their orders, or deface their monuments, they were extra-legal penalties, but, on the whole, not as exhausterative as the evil consequences to follow; but this was to deter from wrong any who should purpose its commission. The oath was a personal acceptance of obligation, not a fulmination against unknown wrong-doers. The agent who was robbed was put on oath as to his loss. The buyer of a slave abroad had to take oath as to his price.

Crimes and their punishments are dealt with in a separate article by T. G. Pinches (vol. iv. pp. 257-300), to which reference should be made. Very little evidence of crime beyond breach of contract can be expected from the deeds or bonds, but a number of legal documents, lease, pledge, deposition in special cases, have been preserved. For the most part, these do not state the nature of the suit, only the result and verdict of the court. The plaintiff seems always to have brought his complaint, 'captured' his defendant, and forced judges, and each then conducted his own case. Written pleas and answers were put in, but advocates are not mentioned. We find orders given to defendants to appear and answer the charge. As the decisions are drawn, the plaintiff usually wins. This is deceptive, for both parties were regarded as plaintiffs; each party brought the other into court. The decision as stated thus makes the winner appear to have been plaintiff. The parties could demand the cause to be changed so that the case should be tried in their own city. In any case we hear of many local courts. The unsuccessful suitor was not always in the same city, but, except that he had lied or borne false witness, no ground for this punishment is stated, and he paid damages also.

In the Code no punishment is assigned to murder. We may assume that this was left to the avenger of blood, but can only argue from silence. We are also left in doubt as to the agency for the execution of punishment. As, however, a man was to be taken for a fine and not to be freed, we may assume a general responsibility on the part of the local assembly for execution. In two cases the Code specifies that the punishment shall be executed on the scene of the crime: a thief at a fire shall be thrown into it, and a burglar in the house shall be gibbeted opposite the house that he made in the house which he broke into.

The power of the king to over-ride the decision of the local court is implied by the Letters of Hammurabi summoning the parties to his judgment-seat. But the Code mentions the royal pardon only in the case of an adulterer when the injured husband has already condemned the offence by pardoning his wife. Wives were not produced. 

Corporate responsibility is seen in the fine inflicted on a brough or parish for murder or robbery within its confines, and as compensation to the sufferer or his family. This was imposed in cases where the malefactor was not produced.

Private property in land was the rule, but subject to the State dues and obligations. There were usually a number of consent and pre-emption to be considered of the landholder's sphere and so be a detriment to the previous owner. Here is a statute making the king, of the land, or parish, so to speak, the levy-master or recruiting sergeant, all might have claims. Sometimes governors of a district enforced its transfer to a different land-group, or alienated land from a temple, or deeded it in their own subdivision. The king was usually regarded as a wrong, and the king was appealed to for reversal of the transfer. A new owner was usually bound to pay for the State obligation. The holder of the land was given exomes for services to the State generally, and was given exemption in perpetuity from State obligations.

A very interesting form of property was the right to receive for the receipt of the a certain door of the temple, or to exercise certain functions in the temple itself. The right was entailed, and so often came into possession of a woman or other person who could hold but not exercise it, or merely did not see fit to do so. The right was then pledged, sold, to others, but reverted to local heirs on the death of the beneficiary.

The Code recognizes many ways of disposal of property: sale, barter, gift, dedication, lease, loan, pledge, deposit under a special law, and the like, of which were primarily matters of contract. Sale was the delivery of the purchase in exchange for the price agreed upon. In the case of real estate, delivery was symbolized by handing over, or the key of a house, or later the deed of conveyance. Estates were often exchanged, the difference in value, if any, being paid in money. Money payments might be made in silver, or its equivalent in corn or other natural produce. Credit was given for the remainder of a price not paid in full, but was treated as a loan from the seller to the purchaser, who gave a bond for it. The Code allows no claim unsubstantiated by a duly executed deed. The buyer had to convince himself of the seller's title. He might demand guarantees against State obligations or against a creditor who had taken money on the estate. He should himself discharge the State liabilities. Certain feudal holdings could not be sold or exchanged, and, if a purchaser claimed to have acquired such, he had to return the estate, and in addition forfeit the consideration which he had given for it. The next of kin might exercise his right of redemption, if it came under the head of bit abisu, lit. 'his father's house,' i.e. if the seller had inherited or received the property. The property was again vested in its original owner, or in the minor without written power of attorney to dispose of the property, it was by the Code fraudulent
LAW (Babylonian)

be let to make into a garden, orchard, or palm plantation, the tenant paying no rent for a period fixed according to the nature of the crop and the time it needed to become productive. The Code set an average term of four years after the fifth year tenant and owner divided the crop. After that it was the owner's. If he let it, he let it as a garden. If the gardener left any part unplanted, he went into his share. The division of the area, not of produce. The tenant took first choice. Another system has been called metayer. It was specially common with temple lands. Here the landlord found seed, oxen to plough and to harvest, agricultural implements, and in some cases even money. The tenant was a sort of bailiff or steward.

The Code lays down regulations of a more stringent character than those usual in the few contracts concerned with this system. For theft of the seed, of fodder supplied for the oxen, or rations for the workmen, the tenant had his fingers cut off. For stealing the implements or overworking the oxen he was fined, a still heavier penalty being levied for sub-letting the oxen or for entire neglect to cultivate. As he was likely to be poor, it was laid down that, if unable to pay his fines, he should be torn limb from limb by the oxen on the field.

The Code allows sub-letting as a condition, and if the landlord suffers no damage. But the contract, whatever its terms, must be kept. From accident or circumstances over which he had no control the cultivator might get no crop. A flood might carry away the produce, or a drought impoverish the crop or utterly destroy it. The Code rules that in such cases the tenant may carry over and pay the year following. The phrase is peculiar: 'to wet his tablet' may refer to an obvious custom of damping the slate itself. The seller, however, usually guarded against all claim to repudiate purchase by a clause in the sale contract that the buyer was satisfied and took his risk in entering any claim against him. In return he guaranteed the buyer against defect in title. In the great majority of cases an owner cultivates his own land, but the principle of hire was well understood and clearly worked out.

Lease of fields, gardens, or houses was made for a term of years, usually one or two, rarely longer. The average corn-land was often stated, and sometimes the date of expiry of lease. The rent was usually stated, and a portion, often a half or a third, paid at once in advance. The rent was not made less than half of the produce. In practice it is often specified as so much per acre. The case of share-rent raised difficulties which this avoided. If the landlord, c.g., was to receive half and was paid in advance, a storm might ruin the tenant's share, but the Code ruled that he must stand the loss. If the storm came before payment was made, both shared equally in the loss.

In many cases, along with a field in full yield another area was leased to reclaim. This appears usually to have been part of the pasture land, or open field, which lay outside the ring of irrigated land or water meadows surrounding the city. If the reclaim was to full cultivation became the private property of whoever reclaimed it. Some convention must have obviated the gradual reduction of grazing land. Sometimes it appears that the land had simply gone out of cultivation. In all these cases the area to be reclaimed was allotted free of rent, on condition that at expiry of the term it should, usually in the third year, pay an annual rental to the landlord, interest. If the reclaimed land went with it at average rent, so ensuring the maintenance of both landlord and tenant, the latter making what he could out of the reclaimed land.

In slightly different case, a plot of land might
The Code enacted that, if the landlord wished to recover possession before the end of the lease, a fair proportion of the rent should be remitted. The tenant, who had full possession and could pledge the house.

A common plan was to lease a piece of land to a man to build upon. After a somewhat longer lease than usual the house came into possession of the landlord. The Code fixed the cost of building a house per area.

Boundary or common walls were often the cause of dispute, usually as to which neighbour should repair as to the right to fix beams. The condition that one might build it if the other might fix beams in it, e.g., was matter of contract. Most of the sections relating to houses have disappeared from our copies of the Code.

Labourers were often specifically hired, the most common cases being to get in the harvest, for building, and to transport goods by road or canal. The wage was a matter of contract, but the Code fixed minimum rates. Cattle for ploughing, carting, and working the irrigation machines, etc., and the associated agricultural machines, chariots for journeys, and ships for voyages as well as for freight, were often hired.

Cattle were highly developed. The kings and many rich land-owners, and, above all, the temples, owned large flocks and herds. As a rule, these were committed to shepherds, who gave a receipt for the animals entrusted to their care, and were required to return the flock or herd undiminished and with proper increase after breeding, or to answer for them. A shepherd had to make good any loss due to his neglect. He was frequently a foreigner, belonging to one or other of the nomad races who roamed the deserts or open pasture.

Questions of currency arose. The standard by which the precious metals were weighed varied from city to city, and there is often a clause specifying the standard in which money should be repaid. The Code enacted that this could not be enforced. Payment in kind was to be accepted, and a creditor was bound to accept even goods at fair value.

Debt was secured on the person of the debtor, and in default of means must be worked off. But the father of a family could name a substitute—wage slave—to work off his debt. To mitigate the hardships of this custom, the Code protected the hostage for debt from ill treatment, and fixed the term of servitude at three years as a maximum, whatever the debt. If the hostage died a natural death, the creditor had no further claim; but, if he contributed by cruelty, he had to restore son for son or pay for the slave. He could sell the slave hostage, but not if it was a slave-girl who had borne children to her master. She had to be redeemed by her owner, i.e., replaced by a different pledge.

Pledges were often taken as security for debt, but could not be sold without consent of the real owner, and frequently when possession of the cattle was given, its value was taken by the creditor in lieu of interest. Pledges were often left with the debtor and served merely as security. Personal guarantee on the part of friends that the debtor would pay at the proper time was often given, and the debtor sometimes had to pay for this assistance.

Trade was thriving, and Babylonian merchants conducted a considerable overland commerce to distant lands. The foreign products in their markets were numerous and brought from afar. Palestine, Cappadocia, Elam, and the lands beyond these countries were conspicuous sources. Many who stayed at home took shares in enterprises conducted by travellers. Merchants received money or goods to be traded away. The Code regularized this practice, enacting that the parties should exchange receipts, and that demands should be based on documentary evidence. The agent had to deposit an inventory and receipt for what was entrusted him, and no claim could be substantiated except by such receipt. Profits were split in half; the agent must pay 100 per cent, whatever he won.

He was not responsible if he was robbed on his travels, but had to be put on oath as to the extent of his loss. Profits were usually divided equally by contract on the termination of the business.

These trade journeys afforded the opportunity for transport. A considerable amount of forwarding was done. Debts were paid abroad by travelling merchants and purchases executed at a distance. The Code enacts that the merchant shall give a receipt for the consignment, take all responsibility, and exact a receipt on delivery. If he should default in any respect, he was penalized five-fold. Deposit was a common transaction, especially the warehousing of grain. The Code fixed a substantial rate of one-sixtieth for warehousing. The warehouseman took all risks, and paid double for all shortage, but only if he had given a proper receipt. If the goods were stolen from him, he had to recover as best he could; but he had no relief against the depositor.

The network of canals supported a vast amount of water traffic. Ships, whose passage was estimated by the amount of corn that they could carry, were incessantly plying for hire between the great cities. The contract specified the goods and their destinations, and named the charges. These were for carriage solely, but, when a whole ship was employed, the rations for the crew were charged specifically. The Code fixes the price for building, navigating, etc., and insists on a year's guarantee with a new boat. The captain was responsible for ship and freight, and bore all risks. If he sank a ship, he was fined half its value, even if he floated it. In the case of collision the boat under way was responsible for damage to a boat at anchor.

The Code regulated traffic in liquor, fixing a fair price for beer, and severely punishing a tavernkeeper for allowing disorderly conduct or treasonable assembly. The hostess was to hale offenders to the court—which seems to have been the access of police officers, or perhaps the command of able-bodied slaves.

Payment through the banker, or by written draft against account, was usual. Bonds to pay were treated as negotiable. A man could usually borrow without interest from the temple treasury of his city, for a fixed term, but paid interest if his debt was left overdue. It is not quite clear, however, whether this privilege did not imply some relationship to the temple, possibly only full citizenship. Merchants, and temples in other cases, charged interest at varying rates, usually high, commonly 100 per cent. As a rule, the rate of interest on a loan to pay reapers; so much corn produce of a peculiar field is lent to buy oil, or to pay a tax. The exact purpose of such specification is not clear, and, so long as the loan was for a household use, there seems no reason to restrict its use. No penalty is named for using the accommodation for a different purpose from that for which it was taken. Possibly there lurks in this specification an analogy to our 'for value received,' or it was
an acknowledgment of the moral claim of the borrower on the lender for accommodation.  

The prehistoric past and represented the crude beginnings of law. Some of them were based on social observation, experience, inheritance, etc., see 'Semitic' sections of art. MARRIAGE, ADOPTION, ARBITRATION, FAMILY (ASYRIO-BABYLONIAN), and INHERITANCE (BABYLONIAN). The custom of the ownership of land among the Semitic and non-Semitic peoples of the ancient Near East has been noted above (p. 200). The Code of Hammurabi, in BDB, v. 584, as well as Babylonian and Assyrian Laws, Contracts, and Letters, Edinburgh, 1869, 2d ed., affords an almost complete text-book for the study of Babylonian law.

C. H. W. JOHNS.

**LAW** (Biblical, Old Testament).—Ancient peoples, almost without exception, regarded their laws as divine origin. At the top of the front side of the stele containing the famous code of Hammurabi, the sun-god Shamash is pictured in a bas-relief seated on his throne and presenting to the king the laws which follow. In ancient Egypt the laws were attributed to the gods (1. E. Breasted, Hist. of Egypt, London, 1906, p. 242). Ex 34:26-27 (J) represents Jehovah as dictating the primitive decalogue to Moses, who acts as his mouthpiece. At the later tradition of Ex 24:4 states that Jehovah Himself "wrote down the Ten Words" (cf. Ex 34:27). Dt 6:19 implies that all the commands contained in that law-book were given directly to Moses by Jehovah. The late priestly tradition (c. 400 B.C.) of Ex 20:19-26 and 34:27 states that all the laws found in Exodus, Leviticus, and Numbers were a direct revelation from God through Moses. Demosthenes asserted that "every law is a discovery and gift of God" (Aristop. A. 16, ed. F. Büsser, 1898). Even Cicero declared: "Lex niki aliud nisi recta et unum deum sciam trahere ratio" (Phil. xi. 12). The belief that underlying all man-made laws was a perfect law, emanating from divine mind, was the foundation of Roman law. It is reaffirmed by W. Blackstone, who says: "This law of nature being coeval with mankind, and dictated by God Himself, is of course superior to obligation to any other. It is binding over the globe, in all countries, and at all times; no human laws are of any validity, if contrary to this; and such of them as are valid derive all their force and all their authority, mediate or immediately, from this origin" (Commentaries, 1837, p. 27). Thus it is that each age has expressed the conviction that law is not a mere human convention, but is conditioned by the eternal nature of things, and that behind nature is Intelligence and Will.

A more careful study of the ancient sources and the contributions of anthropology and sociology have shed new light upon the origins and growth of law. The ancients were not wholly ignorant of man's part in its development. In the epilogue to his great code Hammurabi declares: "If a man heed my words which I have written upon my monument, do not efface my words, do not alter my monument, so may Shamash prolong his reign." Recent discoveries have brought to light some of the laws of the Superintendant which was incorporated into the code (cf. OLZ xiii. [Leipzig, 1914]). Egyptian kings, like Horemheb of the XIXth dynasty, freely enacted new laws and gave them equal authority with other laws which had been in use, and this practice accords to the gods (Breasted, op. cit., p. 249).

Notwithstanding the late traditions which represent all Israel's laws as being directly dictated by Jehovah, the OT contains some of the best existing illustrations of the different stages by which law evolved. The custom of blood-revenge is a survival of the primitive stage of self-help, when, in the absence of an organized government, the wronged party had to declare his grievances (see, further, art. BLOOD-FEUD). It is typical of customs that were inherited from the
Ex 21:23-27, are the result of an attempt to embody the import of the principles of God's early law and customs in systematic, compact form (cf. C. F. Kent, *The Founders and Rulers of United Israel [= Historical Bible, ii.], London, 1909, pp. 209-219). Each decalogue deals with a distinct subject and is merely stated, not discussed; the thing that they were first intended to be committed to memory—each law being associated with a finger or thumb of the two hands—rather than to writing. Thus, e.g., the decalogue in Ex 21:23-27 deals with the rights of slaves (the first decalogue [21:1-20] with male slaves, the second [21:21-27] with female slaves. The first five decalouges contain civil laws and are very explicit. They clearly represent earlier customs and precedents—e.g., *'Thou shalt not wrong nor oppress a resident alien, for ye were resident aliens in the land of Egypt' (22:23). In time these primitive Hebrew decalouges were committed to writing. They may at first have been engraved on tables and set up in the Israelite sanctuaries. They represent the same stage in the development of Hebrew law as the more elaborate Code of Hamurabi, which was inscribed on stone and originally set up in order that (as is definitely stated) its provisions might be learned and read and understood; and these laws and learn how to secure justice (C. H. W. Johns, *Babylonian and Assyrian Laws*, Edinburgh, 1904, p. 393). Typical western analogues are the Code of Gortyn, set up in the market-town of that ancient Cretean town, and the Twelve Tables of the Romans.

The next step in the development of law was the modification, expansion, and codification of the earlier laws to meet the needs of a more advanced civilization and to embody the higher ideals of the later age. Again the OT contains excellent illustrations of this process. The Hebrews and most Oriental nations failed to develop an authoritative, legislative body. Even the Romans for centuries kept alive the legal fiction that the Twelve Tables were the sole foundation of all Roman law. During the latter half of the 7th century B.C.E. it became customary to legislate not by laws, but by acts and decrees. Judah that the primitive laws of Ex 21:23-27 (which were probably formulated as early as the 9th century B.C.E.) were inadequate. Many questions not contemplated by these earlier laws had arisen. Under the influence of the great ethical and social philosophers of the 8th century, many new moral and religious principles had been proclaimed and accepted by the leaders of the nation. The spirit of reform that was at work called for a definite programme, if it was to be a permanent fixture. A detailed comparison of the primitive codes and of the laws embodied in Deuteronomy reveals the methods, as well as the work, of those self-appointed lawgivers. The four of the older laws are represented in the later code: some are simply reaffirmed, others are abrogated, the major are modified or expanded in accordance with the principles of justice, human rights, and social and religious usages of the heathens, and the prophet's ideal of a lawgiver who would have no aversion to people who are not His people, and we never find Him boasting, as does the Jew of Ro 2:28, of the superiority which the possession of the Law gave to the Jews. Yet He regarded the Law with profound respect; He considered it to be the way of life that God had given to His people, and He experienced little reaction against it. He regarded it chiefly as a moral code; as a system of ritual, He was less impressed by it, and the tradition which the scribes had built up around it He must from early times have regarded with indifference, as being apart from the way of life that God had given to His people, and in some points inconsistent with it. He regarded it as containing, so far as it went, all God's will and all man's duty, through those who sought for perfection had some aims which transcended its precepts: and He was able to say (Lk 16:17, Mt 5:19) that it was easy for less than for one tittle of the Law to fail. The passage, Mt 5:21-22, in which Jesus appears as definitely superseding commands of the Law by more ethical commandments of His own, belongs certainly in its arrangement, and also in much of its detail, to a later state of things; the Law is made ruder than it was as practised, in order to set as a foil to the more elevated injunctions set over
LAW (Biblical New Testament) 325

against it, and some of the sayings (e.g., vv. 12-29) reflect the controversy of the Church of Palestine with the synagogues. Jesus upheld the religious system of His country, and encouraged others to do the same.

He did not, however, treat all the commandments of the Law as being on the same level. To the widow, a parable recorded in Mk. 12:38-40 gives a striking illustration of this. The woman gave a poor offering of two mites, while the rich man put in his full tithe. This parable is also referred to in Mt. 23:23, where Jesus says to the Pharisees, "You tithe the mint and the rue and every herb of all kinds, and neglect the weightier matters of the law, justice and mercy and faith. But these you ought to have done, without neglecting the others."

The words of Jesus were not only understood by His disciples, but also by the crowd that followed Him. In Mt. 5:17-19, Jesus states, "Nor do men light a lamp and put it under a bushel, but on a stand, and it gives light to all in the house. For nothing is secret that will not be revealed, nor anything hidden that will not be known. Therefore whatever you have said in the dark shall be heard in the light, and whatever you have whispered in the ear shall be proclaimed on the housetop."

The next verse, 20, presents a fascinating case of Jesus' maturity in teaching. He declares: "Do not think that I have come to abolish the Law or the Prophets; I have come not to abolish but to fulfill. For truly, I say to you, until heaven and earth pass away, not an inch will pass from the Law until all is accomplished. Whoever therefore relaxes one of the least of these commandments and teaches men so, will be called least in the kingdom of heaven; but whoever does them and teaches them will be called great in the kingdom of heaven."

The Law, then, is not to be abolished, but fulfilled. This challenge establishes Jesus' role as the Great Teacher and the One who is to be worshiped as the mediator of the Law. The question of the Law's authority is addressed by Jesus, who states that the Law has not been just abolished, but fulfilled. This is a vital point in understanding Jesus' teaching on the Law, as it sets the stage for the rest of His teachings. He is not against the Law, but is against the false teachings about it. He is pointing out that the Law is not just a set of rules, but a way of life that is to be fulfilled in its entirety.

The Law, then, is not to be abolished, but fulfilled. This challenge establishes Jesus' role as the Great Teacher and the One who is to be worshiped as the mediator of the Law. The question of the Law's authority is addressed by Jesus, who states that the Law has not been just abolished, but fulfilled. This is a vital point in understanding Jesus' teaching on the Law, as it sets the stage for the rest of His teachings. He is not against the Law, but is against the false teachings about it. attitude of Christian missions to the Law must have occupied Paul's mind as soon as he became convinced of his own call to carry the gospel to the Gentiles, i.e., if we are to accept his own statement in Gal 1:16, from the time of his conversion. Ro 7, with its incisive definition of the character of the Law and its relation to those wearing human nature, was probably in Paul's mind in the demand of the Gentiles to obedience to a Law which brought so little comfort to himself. In that chapter he arrives at a different conclusion as to the Law from that of the Old Testament. It is idealised as a servant, as Jesus idealized it, and regarded as a searching standard of entire perfection, dealing not with acts but with motives and springs of conduct, and holding up to man all that he ought to be. It is holy and just and good; to keep it would be to find the promises fulfilled that one should live by it (Gal 3:10). But, alas, it is too good for man to live at peace with it. The Law is spiritual, but man is carnal and cannot love the standard of ineffable goodness. It acts as an irritant, it brings to the surface his innate weakness and reacon, and so, while his reason approves of it, he cannot keep it, and is driven by it to despair.

The Lord and King of the Law is Christ. The mind of Christ is the supreme authority, where the Apostles' own authority does not suffice (1 Co 7:10 etc.). When disputes break out among believers, the Apostle advises that recourse should not be had to the beaten courts, but that an arbitrator should be found among their own number. The OT Law has completely disappeared as law for the Gentile converts.

The arguments by which Paul sought to account for the Law, which in his missionary practice he had deprived of all authority, are of various kinds. Some consist of bold speculations on the divine economy of salvation, some are Rabbinical devices, bringing a new meaning out of a text of the OT. Of the former kind the most powerful and impressive is that of Gal 3:4-7, where he speaks of the Law as the tutor placed over the growing heir to check his freedom till the day arrives when he attains his majority, which had been the case with mankind when Christ came, and in Him the spirit of adoption took possession of the human race now entering on its inheritance, so that the guardian is no longer needed. The Law is placed in chapter 4 as being on a level with those constraining influences, or spirits of the world, under which the Gentiles also were confined, to be prepared for Christ. A great thought also is contained in the argument that the promise was antecedent to the Law, which could not set it aside, and that the promise to Abraham, made to him before circumcision was instituted, is fulfilled directly to the Gentiles who, like him, take faith and not works for their guiding principle and, therefore, are Abraham's true children (Gal 3:29, Ro 4).

Another calibre are the arguments that the seed, in the singular, to whom, with Abraham, the promise was addressed, must indicate an individual person, and that Christ is that person, faith in whom now saves (Gal 3:25), and the argument that the dispensation of salvation for the first covenant was to Jew and Gentile alike he proclaimed that salvation did not come through the Law, but only through faith in Jesus Christ (Gal 2:15-16). To those who sought to make his Gentile converts Jew-fearing and observe Jewish festivals and Jewish restrictions in diet, he offered, as the champion of the liberty of these converts, an uncompromising opposition.

6. Conclusion.—The controversy about the Law subsided in Paul's life-time. In Galatians it is acute; in Romans the argument is free from passion; in the Corinthian Epistles there is little of it; in the later Epistles only a few phrases are found to show that he still stands where he stood (Ph 3:4, Col 2:17). On the other hand, the com-
LAW (Buddhist).—In the strict sense of the word there is no Buddhist law; there is only an influence exercised by Buddhist ethics on conduct that has taken place in customs. No Buddhist authority, whether local or central, whether lay or clerical, has ever enacted or promulgated any law. Sometimes a law has been administered in countries ruled over by Buddhism, but it has been custom rather than law; and the custom has been in the main pre-Buddhist, fixed and established before the people became Buddhist. There have been changes in custom. But the changes have not been the result of any enactment from above. They have been brought about by change of opinion among the people themselves. And in order to ascertain whether such change of opinion was as a result of the influences of Buddhism it would be necessary, in each case, to ascertain what the custom had been before the introduction of Buddhism, in what degree or manner it had changed, and what had been the probable cause of the difference shown. Unfortunately our knowledge of the history of social conditions in Eastern Asia, whether before or after the 6th cent. B.C., is at present much too meagre to enable us to deal with the subject in so thorough a manner. Nothing has yet been written on the subject, and only a slight beginning may yet be made.

The Buddhist, for instance, had from the beginning no system of his own as such. They had their canon law, what they called Vinaya, i.e. "Guidance." It consists of 227 rules to regulate the conduct of the members in outward affairs, and some supplementary chapters on special subjects. These "articles of association" are quite apart from the Buddhist religion, and indeed law is little or nothing that is specifically either Buddhist or religious. No religious community could avoid quarrels and disputation without the assistance of rules of the kind. Now, just before the rise of Buddhism there were quite a number of such Orders. The names of ten of them are preserved in the Abottavara. Unfortunately, the records of a number of the ten have perished. They had no writing; and, as each Order died out, both its doctrine and its canon law, kept alive only in the memory of its members, died out also. Only one of these pre-Buddhist communities has survived—that of the Ajonavas and the last recorded regulations of the Jain Order have not yet been published. It was inevitable that the early Buddhists should have adopted in many details the customs already followed by these other wanderers. But in the main and as a rule the rules were Indian in origin, the common inheritance of all the schools.

There is nothing in the 227 rules of the Vinaya which would be included under the English term 'law' in its modern sense. In the explanations and applications, however, of the rules, as interpreted in the centuries that followed, there arose a case for law. For example, Rule No. 3 is as follows:

Whatsoever Bodhisattva shall knowingly deprive of life a human being, or shall deny (and in the case of a human being, or shall utter the praises of death, or incite another to self-destruction, saying, 'If I only die, I shall be saved from this sinful, wretched life; death is better to you than life!—it is, so thinking, and with such an aim, by various means, utter the praises of death or incite another to self-destruction—he, too, is fallen into deceit, he is no longer in communion.'

In the elucidation and discussion of this rule a very large number of all possible cases of alleged infringement of it are given. The cases are not real ones that actually happened, but hypothetical. The offences, or alleged offences, are sorted into grades, which are distinguished one from another as modern English law-books distinguish between assault, aggravated assault, manslaughter, and murder. The penalty for the gravest kind is exclusion from the Order; for the lesser kind suspension in varying degrees, and for varying duration.

For instance, a man digs a pit; that is no offence. He digs it in the hope that it will fall in to it; that is a dakkha (evil deed). The man who digs the pit is guilty of a grave offence (vinaya-karma). The man who allows it to happen by design is guilty of a minor offence (dakkha-karma). The man who allows it to happen by design is guilty of a minor offence (dakkha-karma), involving expulsion.

This is not criminal law. It is intended only to keep the Order pure; and the penalties are very mild. But it is interesting to find in these discussions the doctrine of malice aforethought, or necessary or (after the fact, used much as a modern jurist would use it, and leading up to decisions which are very much what a modern jurist would give.

H. Oldenberg, in his introduction to his edition of the text, has carefully considered the manner in which these documents enshrining the Buddhist Vinaya were gradually built up, and their approximate date. He concludes that the whole text, as we now have it, was in existence within a century of the Buddha's death; and that much of it—for instance, the 227 rules referred to above—is older, and may go back to the generation in which Buddhism arose. It will be seen at once that this is quite modern compared with the Thammaratik Code of customary law of Siam. But as these Buddhist documents have in the history of law depends upon their being the oldest legal texts which apply the principles of equity to the problems to be solved. They do not pretend to set forward any code of law. They belong to a stage beyond that, and only attempt to utilize for the practical requirements of an association of co-workers the results of previous thought on legal points. We shall probably never know how far these results may have been modified or softened by the Buddhists for the purpose of application to the new problems to be met.

The administration of this law (if law it can be called) was very simple. The decision lay with the Chapter, which was composed of all members of the Order resident within a certain boundary. The boundary, also fixed by the Chapter, was so arranged as to secure the presence of from a dozen to a score of members. All the members were equal, and the senior member presided. If the matter came to a vote—which seldom happened—the voting was by ticket. Complicated matters were referred to a special committee, and the decisions in most cases were unanimous. The Chapters had no authority to

5. J. H. Oldenberg, 68-70; not yet translated.
6. J. H. Oldenberg, 76.
settled any matters not included in the *Vinega*, or to deal with property not the property of the Order. All such matters were the province of the State, to be settled according to the customs of each locality. They were regarded as secular, not religious. Thus customs as to marriage and divorce, the inheritance and division of real and personal estate, the law of contract and criminal law, were all purely secular matters to be determined by the same of the lay community. This continued to be the attitude of mind of the Bud- dhist class, and as long as they were not forced to do otherwise, they did not change it. The expression ‘Buddhist law,’ as used of law administered in English courts in Ceylon and Burma, has a very different meaning. When the English, in their judgment of appeal, decided to reduce English law except on certain matters, which, they, imagined, would or might offend the religious feelings of some of the inhabitants. Thus, with regard to marriage and inheritance, they granted to the Dutch the Roman-Dutch law on these points, and to the Hindus and the Muhammadans the Hindu and Muhammadan law respectively. Taking for granted, in their ignorance of Buddhism, that the relation between law and religion on these points must be the same in either country as on the other, they decided to incorporate into the law of the Island the customs prevalent there among the majority, the Buddhism, on the same points. For this purpose they made customs current at the beginning of the 19th cent. valid for ever, and deprived the lay community of any power of change or adjustment which they possessed. On the other hand, they soon began, and have continued, to change the customs by two methods, one by arrogating to itself decisions, the other by legislative enactment. By the latter they have introduced the registration of marriages, and conferred upon the laity the power of making wills.

The original report on Kandian customs has been recently discovered and a translation of it published by C. J. R. Le Mesurier and T. B. Pannabokka, under the title *Niti Vigandu* (Colombo, 1880). The course of events in Burma, since it was taken over by the British has been very different. We know nothing or next to nothing of Sinhalese law before the conquest, we have for Burma a most valuable summary of the gradual growth of the customary law in E. Forthhammer's *Jardine Price Essay* (Bagoon, 1883). He shows how the customary law, originally introduced there from S. India in the 10th cent. A.D., has been constantly but slowly modified by the influence of the Buddhist laity. He mentions also the numerous codes in which such alterations have been incorporated. D. Richardson has translated one of the latest of these codes under the title *The Dhamat, or Laws of Memon, Bagoon*, 1906.

**LAW (Celtic).—I. Law.**—Of the legal institutions of the Scalds we have no knowledge beyond the evidence of philology and the statements of Cæsar with regard to Gaul. Both the Goddelic and the Brythonic branches of the Celtic languages contain a term for law cognate with the Latin *lex*, while the word for judgment (Ir. *brith*; Welsh, *broneg*) also correspond in these branches. Similarly, we have in both branches the same word for 'duity' or 're- spectability,' the same word for 'friendship,' the same expression for 'right,' and the same term for 'law.' Throughout the Celtic world, too, the organization of society had a tribal basis, and the legal institutions of the Celts were, consequently, in their origin tribal in character. This tribal character, though in a greater or less degree modified, survived unmistakably in Irish and Welsh law, as we know it in historic times. The evidence of Cæsar as to Celtic law (de Bell. Gall. vi. 13) relates to the Druids, of whom he speaks as 'a sort of lawgivers, judges and accusers. They held that all public and private disputes and assessed the fines and penalties in the case of any crime, as, for instance, homicide, while it was they also who gave their decision in the case of any dispute regarded as inequitable. They punished by a fine, with a view to make the party to abide by their judgment. They had recourse to excommunication from religious ceremonies—a punishment which, in practice, involved the loss of all civil rights, and which became so outlawry in Irish and Welsh law. The Druids, according to Cæsar, formed an organized community, at whose head was a chief druid. It is, however, from the surviving Irish and Welsh legal literature that we derive most information concerning actual Celtic law. In Breton and Cornish there are no legal documents in existence, but we may surmise that ancient Breton and Cornish law was substantially the same as that of Wales, while the clan-system of the Gaels as of the others, they decided to incorporate into the law of the Island the customs prevalent there among the majority, the Buddhism, on the same points. For this purpose they made customs current at the beginning of the 19th cent. valid for ever, and deprived the lay community of any power of change or adjustment which they possessed. On the other hand, they soon began, and have continued, to change the customs by two methods, one by arrogating to itself decisions, the other by legislative enactment. By the latter they have introduced the registration of marriages, and conferred upon the laity the power of making wills. T. W. RHYS DAVIDS.
This part of the Senchas Mór is of interest as containing an account of the conditions of marriage among the ancient Irish. Vol. ii. contains a valuable introduction on the general principles of Irish jurisprudence, and completes the description of Irish law with a treatise called Corús Búína, or 'The Customary Law.' This treatise also deals with contracts, and lays stress on the importance of keeping oral contracts. The following is the nature which the Irish had made on the way described by Maine as from 'status to contract.' We have here a discussion of a wide range of topics, including the regulation of banquets, gifts to the Church, and the like. Throughout the Senchas Mór the Church is treated with the highest respect. The next treatise in vol. iii. is the 'Book of Aeiill,' said to have been so named after Aeiill near Tarri, and attributed to Cormac, the author of the well-known glossary. It deals very largely with what we should now call criminal law, and it is interesting to note that one of its dicta is 'Fines are doubled by malice aforethought.' In this treatise the commentary is remarkably clear, and if compared with the text. Other dicta are:

'Every judge is punishable for his neglect'; 'every king is entitled to compensation for injury to his road'; 'what is cast into the property of the owner of the shore'; 'the shall not kill a captive, unless he be thine.'

Numerous topics are touched upon, and the wrongs and injuries discussed are not confined to crimes, while one of its most interesting features is the discussion of responsibility. Vol. iv. contains first a treatise entitled 'Of taking Legal Possession,' and treats of the symbolic ceremonial that was necessary in Ireland (as in other ancient countries) for the institution of a right to the recovery of land and tenure. One part of the treatise is called 'The Beginning of Customary Law,' and deals with matters other than the main topic of the treatise. The treatise which follows is called 'Judgments of Co-tenancy,' and discusses problems arising from this aspect of Irish law. It deals with the trespasses of lands, fences, and other trespasses by cattle, bees, hens, and dogs, and gives rules as to the relations between landlord and tenant. We have clearly the growth in Ireland of the individual ownership of land. This treatise even considers the trespasses of pet hens and pet hens, pet deer and pet wolves, pet old birds and pet foxes. Another treatise which resorts to definitions of life is called Bech broth, or Bech judgments,' which deals with various contingencies arising from the keeping of bees, a very important phase of country life at the time when mead was drunk and sugar was unknown. The next treatise, Coisínus Úisc, or 'The Right of Water,' deals, among other subjects, with the right to construct water-courses and mills. The next treatise, called Managile ('Precincts'), deals with such topics as the violation of precincts, the position of fugitives, and the like. In this document is to be found a very interesting account of sanctuary among the Irish. The treatises which follow are as follows: 'Out of the Judgment of Life' (a more fragment), 'Of the Divisions of the Tribe of a Territory,' ' containing a valuable account of the Irish tribal system,' and the document called Crith Gablach, giving mainly an account of the rights and emoluments of the higher classes of Ireland. This treatise, however, frequently describes an ideal rather than an actual state of things. To this treatise is appended a sequel to Crith Gablach, and also a fragment on 'Succession.' The treatises given in vol. v. are of a miscellaneous character. The first and second are called respectively 'Small Primer' and 'Heptads,' and they were evidently intended as a text-book for the lower classes of Ireland. The former shows some trace of the
influence of the Civil Law, and of an attempt on the part of the writer to show his familiarity with Latin. The substance of the work, however, deals with Irish custom, notably in connexion with the Scribe and gives a summary of the Irish legal system. The Leiptads arrange the different legal maxims in groups of seven, as may be seen from the following example:

1. *Din idrath* (i.e. the fines imposed for the breach of certain laws) seven re-bondings that shed blood, which incur not debts nor sickness: the rebonding of a branch from the chipping of firewood the chipping of a branch from a natural fork; the rebonding of a branch backwards; the rebonding of a branch by the rebonding of a forge; the rebonding from horses' shade to another rebonding of a stone off another.

Then follows a treatise called 'Judgments on Pledge-Interests,' in which all the various rules given by men and women are dealt with in detail. The next treatise, 'On the Confirmation of Right and Law,' consists in its earlier part of tracts on various topics, while the latter part is of a miscellaneous character. This series of legal documents ends with a brief tract called 'On the Removal of Covenants,' which deals with the rights of property.

The law Yokes of Wales are not legal treatises like the codes of Ireland; but consist of a code attributed to Hywel Dda (Howel the Good), a Welsh prince of the 9th century, together with one or two amendments attributed to Rhodri ap Ermot, a Welsh king of the 10th century. The propriety of the term 'Gwentian' has been disputed, and some at any rate of the MSS of this group may belong to Powys (East Central Wales), Herefordshire and Shropshire, and was in touch with the English Court, and it is not improbable that he signified his reign by means of a code after the manner of other kings of his epoch. Tradition, as embodied in the introduction to the code, regards Whitland, in Carmarthenshire, called in Welsh *Y Ty Gwyr ar Daf* ('The White House on the Tit'), as the place where the code was drawn up at an assembly consisting of the leading men in Church and State. As the bishops being present in order to prevent any interference with the law of the Church. A purview of the laws themselves, however, brings to view much that is not Christian and that must have been derived from the same sources, and, ethically, this pre-Christian matter is of great value. Still, to distinguish ancient tribal usage from positive enactment in the Welsh laws is no easy task. The oldest known copy of the Welsh Laws is in Latin, and dates from the last quarter of the 12th century. The next MS in point of age is a Welsh one, giving the Venedotian version of the code, which bears the name *Llyfr Daiv Wales* ('The Black Book of Chirch'), now in the National Library of Wales, Aberystwyth. This MS was written about A.D. 1200 and was probably copied from a pre-Norman archetype. The oldest MS of the Dinidion version of the code was written about A.D. 1252, and there are in existence several other MSS of Howell's Laws. These Laws deal with various topics, such as the royal household and the officers of the king and queen, the sulthry or court of law, the judges, the king's privy council, the law of succession of women; the execution of justice and the surety-system. Further, there are important laws relating to women, to trespass, to the values of animals, tame and wild, and of buildings, trees, utensils, etc. The Welsh Laws show clearly the advance of a territorial system represented by the *argyveds* (lord), as the king's viceroy in each district, as compared with the earlier tribal system, wherein the *penwenedd* (chief) was supreme in each tribe. In addition to the medieval legal triads, which are given in the MSS, there are published in the *Myrghryian Archaeologia* certain triads called the 'Trions of Dyfnwal Moelmu' (an imaginary Welsh lawyer), which were first brought to view (and probably invented) by a certain Tomnas ab Ifan of Glamorgan in 1885. In the Laws of Howell reference is sometimes made in the conventional way to the 'Law of Hore,' as evidence for a given legal doctrine; but, in spite of the unhistorical character of these references, the very prominence of the royal court in the code makes it highly probable that it had a royal origin. The two Welsh princes whose amendments of the law are quoted, in addition to Howell, are Bledir ab Cynwyn (1063–75) and Rhys ab Gruffudd (1155–97). The Welsh Laws in their several versions, like those of Ireland, deserve a careful study, especially in connexion with the history of the general advance in Celtic countries from a tribal to a territorial system, and the consequent legal evolution.

**E. ANWYL.**

**LAW (Chinese).—** The first mention of Chinese law in the classics is the institution of the Five Punishments by Emperer Yao twenty-four centuries before the Christian era. In the next reign, that of Shen, the Five Punishments could be commuted into transportation and deportation, and even, if there were extenuating circumstances, into fines. Mistake and misadventure were pardoned, while aggravated crime and recidivism found no mercy. In cases of doubt, the judge was given the benefit of the doubt. These institutions and principles, couched in quaint language, are to be found in the *Tso King* ("Book of Records"), the oldest book extant in Chinese literature. Embodying, as they do, some of the principles underlying the most enlightened of modern legal systems, they testify to the progress already achieved by Chinese jurisprudence at that remote period. Merefulness in administration and brevity in legislation were the aims which ancient Chinese statesmen and jurists always had in view.

The codification was attempted about the time of Confucius, the laws being inscribed in bamboo or in metal, reminding one of the nearly contemporaneous Twelve Tables of that other legal system which, after moulding Western jurisprudence, is destined, perhaps, to mould that of the Chinese also. Unfortunately, practically nothing is now known of those early codes. During the period of the 'Warring States' (7th cent. B.C.), a code was compiled by Li Kwei which remains the basis of Chinese jurisprudence. The laws of Ts'in (240–210 B.C.) were severe and complex, and were one of the causes of the early downfall of the dynasty. When Liu Pang, the founder of the
Han dynasty, captured the Ta' in capital, he abol-ished all the harsh laws and substituted for them
the famous Three Articles, undoubtedly the short-est and simplest code in history, punishing murder, robbery, and robbery with violence. This abbre-viated code could not serve the needs of the Empire, and another code was enacted later, based mainly
on that of Li Kwei, with the addition of three
books. Hereafter each dynasty had its code of
codes, until the Code of Kuang-ming, written
with its Ta Ting Lu Li, which, founded on those
of the previous dynasties, in particular that of the
Mings, was published in 1647, three years after
the Manchus dynasty was established in China.
This body of laws, together with the subsequent
amendments, held sway until the latter days of
the dynasty, when, under pressure of circum-
stances and influenced by Western ideas, the
Emperor established a bureau for the revision of
laws, which had among its members many who
had knowledge of Western laws, particularly
Japanese law. It had also Japanese advisers
who exercised considerable influence. It drafted
several codes—criminal law, civil law, criminal
procedure, and civil procedure, besides other laws,
some of which have been enacted, including a
temporary criminal code which takes the place of
the Ta Ting Lu Li. But property law, and to a
large extent, the code of military law, were left
under the Republic. While the draftsmen of
the new laws displayed considerable knowledge of
comparative law, Japanese ideas were, naturally,
predominant. The Japanese modelled their legal
system upon that of the Germans, who in turn
inherited from the Romans. Thus the two sys-
tems of law, which were each inscribed in bronze
at about the same time, are, after the lapse of
a century, the remaining six are named
after the former six ministries of the government—
civil, fiscal, ritual, military, criminal, and public
works. The language is clear and concise, com-
paring favourably with the productions of modern
Western legislation. In Japan, too, there is only
a penal code, what in foreign countries
would be civil law being left to local and trade
customs and usages. In a sense this is true
because everything in the code is punishable as
a crime, but there are many things in it which
would be described in other countries as civil law.

(1) The first part deals with general definitions
and principles, in some cases with great minute-
ness and precision. There are also descriptions
of the Five Punishments (different from and lighter
than the Five Punishments of the ancients), defini-tions of various crimes, of heinous crimes, statement of the
eight privileges, lists of crimes which are not
pardonable by a general amnesty, etc. (2) The
civil part, deals with the conduct of officials, and
corresponds to a certain extent with the droit
public administratif of the central and regional
powers of Europe. (3) The fiscal part contains largely what
would be civil law. Among its topics are regis-
tration of census, real property, marriage, public
granaries, audiencias, smuggling, usury, treasure-
trove, and weights and measures. The family law
is strikingly like that of the Romans, though rather
after it had been tempered by Pretorian edicts and
Imperial constitutions than at the time of its primi-tive severity. The notion of what constitutes a
family is similar in both laws. Agetric relation-
ship is more important than conjugal; hence
'Mulier est finis familiae' is to a certain extent
applicable to China. 'Patria potestas' there is, but
for the power of life, a substitute, the paterfamilias is lacking. It is also tempered by
paternal love and filial piety, for which the Chinese
are justly noted. Marriage is an all-important
institution for the continuation of the family.
Divorce is very rare and is carried out by the code
or carried into practice. If polygamy, or rather
polygyny, means marriage with more than one
wife at the same time, then Chinese law does not
permit it; in fact, the code punishes bigamy. One
and only one wife is permitted. However, as
Mencius teaches, 'there are three things which
are unfilial, and to have no posterity is the great-
est of them'; to ensure against this calamity it
is permitted to have concubines, who are in no
sense wives. They are frequently chosen by
the wife, and occupy a subordinate position, while
their children are considered the children of the
wife. (4) The ritual part deals with sacrificial,
court, and official rites and ceremonies. The
military part is not altogether a code of mili-
tary law, since it contains, inter alia, provisions
for the guarding of palaces, guarding of passes
and fords, keeping order in the capital, injuries
inflicted by animals to persons and property (the
'damage fessant'), and carrying of dispatches by
couriers. The articles more particularly applicable
to the army provide for mobilization of troops,
arming the people, compulsion of draftsmen, lack of discipline, etc. (6) The criminal part is
the criminal code par excellence. The aphorism
'Actus non facit reum nisi mens sit rea' is
religiously observed throughout the articles: a man
is not punished for a criminal act unless he intends
be also criminal. In homicide, e.g., no fewer than
six different degrees are distinguished, varying
from culpable to excusable. Most of the crimes
found in Western law are also in the code.

The use of abusive language is a crime: likewise
adultery, which, though in England only a cause
for divorce and action for damages, is a crime in
France, Germany, and other European countries,
as well as in some of the States of the American
Union. Gambling is another offence; and so is
cashing a 'cheque in one's house, which is culpable
because of the element of carelessness and the
dangerous consequences. It is said that China
has only civil law, and that the Ta Ting Lu Li is only a penal code, what in foreign countries
would be civil law being left to local and trade
customs and usages. In a sense this is true
because everything in the code is punishable as
a crime, but there are many things in it which
would be described in other countries as civil law.

Before and since Confucius, this has been the
maxim of Chinese rulers and the first principle
of government. Law occupies but a secondary place;
morality comes first. Law is intended to reach
only where morality fails. The family law is
supplementary to moral; it may be said that
this is true of every civilized society, and
that no society can live with only law to guide

1 Confucian Analects, tr. J. Legge, Hong-kong, 1862.
it. But the difference between China and other civilized societies is that in China this is a principle of government, a maxim recognized by law itself. From this arise some curious results. Precisely as citizens are held to be responsible for the consequences of their acts, so must the law find an explanation of the violation of the law, and they are thus punished as is the case in the West. Nevertheless, in China these things are also governed by rules. Some of these rules are local, customary, or professional. Some of them are to be found in the code, which, however, instead of giving the complainant monetary compensation, punishes the defendant with the ordinary criminal punishments. While the distinction between criminal and civil law, a crime and a tort, is a fruitful source of difference among jurists, seeing that even in Western law many acts are at the same time both a crime and a tort, the fact remains that China treats every act as a crime, and the reason being that the legislators have upheld the doctrine of the rule of morality. Western legislators say that a breach of promise of marriage is only an infringement of a private right, giving rise to an action for damages, whereas, in China, it is considered that it is something more than that; it is a matter which concerns the community at large, and should be punished as a crime. The Chinese law allows the marriage by polygamy, but also punishes the father who has broken his promise to give his daughter in marriage (the nearest Chinese equivalent to a breach of promise of marriage in English), and considers that if the father has broken the moral code, and therefore deserves punishment as a criminal. Chinese officials and judges encourage arbitration and private settlement in every way; but, when the parties refer their differences to the court, unless there has been bona fide mistake, the man who breaks a promise is as much a criminal as a murderer, though, of course, the penalty and the consequences are very different. To those who disagree with the Chinese view, and, in view of the impending radical changes to be made in Chinese law in this respect, it will be interesting to quote the words of T. E. Holland:

"The consequences of acts become more and more visible with the advance of civilization, and the State tends more and more to recognize as offences against the community those which formerly only saw to be injuries to individuals."

There is in Chinese law the doctrine of vicarious responsibility. When a particularly heinous offence is committed—e.g., high treason—not only is the criminal punished, but relatives up to a certain degree are also punished. While doubtless the principal motive for this provision, as it is not otherwise easy in such a large country and with inadequate police supervision to prevent the commission of crime, yet, in theory at least, these relatives are responsible because they have not exercised a moral and benign influence on the culprit. This is the principle under which the law presumes they are, on account of their relationship and intimacy, in a position to excuse. Similarly, when a child has committed a crime, particularly a heinous act, the parents are held responsible. Thus the officials of the jurisdiction, from the district magistrate up to the Governor and Viceroy, all receive more or less punishment. The theory is the same; these officials have charge, among other things, of the nurture of the people under their jurisdiction; and, when such a horrible crime as the murder of a person's parents is permitted to come to pass, there has been a breach of duty on the part of the officials. In no other way can the doctrine of vicarious responsibility in Chinese law be explained than by the principle of the rule of morality. Considerations of policy do, of course, influence the law, but in theory and origin it is because the Chinese government is essentially a government by morality.

As already stated, the code is no longer in force, and another penal code has taken its place. Drafts of other codes and laws were in course of preparation even before the fall of the Manchus. The legal revolution preceded the political revolution. In the admiration for Western laws, there is danger of a slavish imitation without ascertaining whether the new tree is suited to this ancient soil. This danger is particularly evident in the law of persons. As J. Bryce has pointed out, 1 the law of persons in all countries is the most difficult and the last to change, since it touches most nearly the question of status, the family relations, the very foundation of the social structure of the community. The drafts prepared in the last days of the Manchu regime are to be submitted to another body of select men for consideration. It is, therefore, premature and unprofitable to prophesy as to the future. That Japanese, and hence German, influence will make itself felt is no doubt. Anglo-Saxon legal principles also have admirers, so that they too will probably be adopted to a certain extent. But Chinese law and custom should form the foundation of the new structure, so that the law of persons may still be an institution which is the product of the genius of the people, and that, while useful and suitable principles may be borrowed from the West, there may be a mistake in assuming that, in a word, the law may still be Chinese law.

CHAO-CHU WU.

LAW (Christian, Western).—I. INTRODUCTION.

There are, first of all, certain distinctions to be made. The first distinction is between jus and lex (law, Gesetz, lois) in the sense of right authority, which the subject of that authority is morally bound to obey. This is our 'law' in one sense. Jus (droit, Recht, lex or leges) may be understood either subjectively or objectively. Subjectively, it is defined as the moral power of doing, omitting, or demanding anything, so that another be obliged to do or omit something. It includes much of what we call 'right' or 'authority.' 1 Jus habere may be rendered 'I have the right.' Objectively, in the sense in which it is studied by jurists, it is the complex of norms by which the actions of individual members of a society are regulated in regard to other members or to the whole society, so that the society may be preserved and may attain its end. The English word 'law' is used in this sense too; thus we speak of State law, Church law, and canon law, as distinct from a particular law (lex). Starting from the fact that all jus comes ultimately from the will of God, canonists distinguish the following kinds. Jus naturale is the eternal law of God, imprinted in our conscience by Him himself, and is known, or may be known, what is essentially right or wrong, by the light of their own conscience. This is the sense in which St. Paul says the Gentiles, who have not the Law (sc. of Moses), do by nature the things of the law (the things in their jurisdiction; and, when such a horrible crime as the murder of a person's parents is permitted to come to pass, 1 2 We may preserve here from the difference between a public lex and a private praeceptum.

2 We may preserve here from the difference between a public lex and a private praeceptum.
This natural law is promulgated by God in making human nature. No power can abrogate it or dispense from it. Different from this is *ius positum*, that is, law made by a legislator about things not in themselves necessary, which become necessary as the result of his legislation. Things forbidden by natural law are *prohibita quia malia*; these forbidden by positive law are *mala quia prohibita*.

Positive law may be divine or human. Divine positive law is that promulgated by God Himself, as the Law of Moses, or laws made by Christ in the NT. This is not the same as natural law. Many commandments of the old Jewish Law are about things in themselves indifferent. It differs also in binding only the subjects to whom it is given (as does all positive law), whereas natural law binds all men. No man can abrogate or dispense from divine positive law. Human positive law is that promulgated by a human authority. Indirectly this too comes from God (or it would not be binding law at all), but only in the sense that God has delegated authority to him who makes it. Positive human law can be abrogated, modified, or dispensed by the authority that laid it down. It is divided into civil law and ecclesiastical law. The *ius ecclesiasticum* is called also by other names. It is *ius sacramentarium* as opposed to *ius pontificale* (civil law); in old days it was often called *ius pontificium*, as opposed to the civil *ius canonarium*; and, opposed to *ius civile*, it is not infrequently called *ius canonium*, though there is a more accurate sense in which *ius canonarium* is a part of ecclesiastical law. Another distinction which crosses this, and so may lead to confusion, is between *ius divinum*, in the sense of all Church law, whether promulgated immediately by Christ or by the authority of the Church, and *ius humanum*, meaning all secular law. This distinction is better avoided. The distinctions of ecclesiastical law are *ius generalis* and *ius speciale*. *Ius generalis* is a law which applies to all cases in which the circumstances for which it provides are found; *ius speciale* is a law made for a particular case, which does not apply to another case, even if the circumstances are the same. From Roman civil law the Church has taken the distinction between *ius commune* and *ius singularum*. *Ius commune* is that which flows from general principles and so applies normally to all subjects; *ius singularum* is law made for a particular person or persons. This distinction has much in common with that of *ius generalis* and *ius speciale*, but is not quite the same. From the point of view of the legislative authority we distinguish *ius universale* and *ius particularium*. Universal law is that which is made by the universal authority of the whole Church; particular law is made by limited authority, as by a bishop for his own diocese. So we have the principle that *ius particularium* may enforce and add to the universal law, but may never contradict it. Lastly comes the much discussed distinction between *ius publicum* and *ius privatum*. This regards the matter of the law. *Ius publicum* contains laws for the whole Church and for its public authorities; *ius privatum* is concerned with the rights and duties of private members of the Church. Several modern canonists of the German school (e.g., Phillips) reject this distinction as absurd. It is contested by most others (cf. C. Tarquinii, Iuris eccleg. publici instituionem, Rome, 1886, p. 1 ff.). *Ius publicum* is either *externum*, if it regards the relation of the Church to other societies (e.g., the State), or *internum*, if it regards the internal affairs of the Church.

'Canon' is the Greek *kanon*, a rule or measure. Already in the 4th cent. Church synods began to call the rules laid down by them canons (so the Synod of Ancyra in A.D. 914, the Nicene Synod in

---

Section II: Roman Catholic Canon Law

1. Written and unwritten law. Roman Catholic canon law distinguishes first between two sources of law, *ius scriptum* and *ius non scriptum*. The *ius scriptum* consists of laws which are formally laid down by authority in an authentic document; *ius non scriptum* is the law which arises from practical application on the part of the community, without any such formal promulgation. It does not cease to be *ius non scriptum* when it is written down, but only when it is promulgated anew by authority under the conditions which make a written law.

(a) The *fontes iuris canonici scripti* are: (1) The NT. The OT is not considered a source of Christian law at all, but at most an *admixtium*. The positive old law was abolished by the preaching of the gospel, and its moral precepts are contained in natural law. So the OT, as such, does not occur as a *fontis iuris* at all. On the other hand, the NT and the laws therein contained constitute the foundation of Christian positive law. From the NT we have three principles—the power of legislation given by Christ to His Church, the constitution of the Church as an organism with a hierarchy, and the social character of Christianity, from which we conclude that the Church is a perfect society, having the rights of society, and these are the foundation of all positive Church law. (2) The decrees of synods. Before the Council of Trent decrees about faith were called dogmas, and those about positive law were called canons. The Council of Trent changed these terms, calling its decrees about faith *canones*, and its disciplinary laws *decreta*. The Vatican Council followed this new terminology. Only the decrees of ecumenical councils have force for all Catholics; those of particular councils oblige only those for whom they are promulgated, over whom the council has jurisdiction. But many decrees of particular synods have since become universal by virtue of a new promulgation of universal authority extending them. Disciplinary decrees of ecumenical councils oblige until they are repealed by universal authority. The Church has the power of abrogating or modifying her own decrees by Constitutions of popes. The pope, by virtue of his universal jurisdiction, has the power of making laws for the whole Church. He does this in two forms—in a more solemn form called *bullae* (bulls) and less solemnly by briefs (breves). There is no difficulty in the binding force of bulls and briefs; the greater or less solemnity concerns only the
importance of the matter. Bulls are regularly issued
from the papal Chancellerly before Leo XIII. They
were written in Gothic characters and had attached
a leaden seal tied to the parchment by silk threads.
Leo XIII., in 1878, ordained that in future bulls
should be written in Roman capitals and sealed with
the signature of St. Peter and St. Paul and
bearing the name of the pope. Only in bulls of
special importance is the old leaden seal to be re-
tained. Bulls always begin with the name of the
pope and the year. The principal bulls begin with a
title and are sealed in red with the seal of the Fisherman.
They are prepared at the Secretariate of Briefs. The use
of bulls or briefs is not easy to account for. Fre-
quently matters of great importance are determined
not by bulls but by briefs (see, further, ART. BULLS
AND BRIEFS). According to the matter and the
force of obligation, papal constitutions are vari-
ously distinguished. General laws for the whole
Church are called by the generic name constitui-
tiones, and decreta are those which are issued
‘motu proprio’; littera decretales generally come
from a consultation and are answers to questions.
Enquiries may be directed to either the pope or the
whole Church or to those of some province. With
regard to the extension of their binding force, we
distinguish between constituciones genera-
tes and all other rescripta for special cases, to which
alone formally they apply. All Roman Catholics are
bound by general constitutions, and also by epis-
tola decretales if they are expressly extended to
all. Otherwise, they do not constitute a general
law, from defect of promulgation. Immediately
therefore they apply only to those to whom they are addressed. But
whether they have the force of authentic interpretations of law, and are often published
with the purpose of constituting a precedent. Rescripts have no legal force except for those
to whom they are addressed. Rescripts may be
justiciae, containing an obligation, or gratia,
confering a favour, or mixtis.

So far we have considered the fontes iuris
generalis. Ius particular is made by the decrees
of provincial councils, diocesan laws, or statutes
of corporations, such as chapters for their own
body. It is obvious that a particular authority
cannot lend only those whose law is included as a particular law; not that the Church recognizes the right of a civic
authority to legislate in ecclesiastical matters, but
either because they are the civil sanction of already
existing laws, or because the Church authorities
have given them the force of canonic law. Connected
with civil law are concordats. These began in the
Middle Ages, e.g., the Concordatul Calixtinum
of 1123, between Pope Calixtus II. and the
Emperor Henry V., which put an end to the dispute
about investitures (see art. INVESTITURE
CONTRAVERSIA). A concordat is defined as ‘a treaty
between Ecclesiastical and Civil authorities, by
which the connexion between both societies con-
cerning mixed affairs is regulated.’ According
to modern principles, only the pope makes the
concordat on the side of the Church. For the
State its governing authorities. The matters
treated in concordats are all the ‘mixed’ questions
in which both Church and State have an interest,
such as questions of property, marriage, presenta-
tions to benefices, and so on. Concordats are now
given in the form of a Royal Charter for true
bilateral contracts, which oblige both sides in
justice, being binding on the subjects of both
powers as particular Church law and civil law
(see, further, art. CONCORDAT).

The basis of positive law is the principles of
natural law; nor can positive authority make any
law which contradicts that of nature. (2) Tra-
dition, which affects principles of discipline as
well as those of faith. So we distinguish divine,
representative law, and ecclesiastical tradition of
which bind conduct. (3) Custom (constutudo).
This plays a great part in Catholic canon law. It
is defined as: ‘A law introduced by the repetition
of similar actions on the part of the community,
with the consent of the Dei only permitted to
breathe the name of the pope. In the case of
consonantia and traditio is that in the
case of a law coming through tradition it is
presumed that it was originally formally promulgated
by authority, although knowledge of that pro-
mulgation is to be had only through tradition.
In the case of custom there is no promulgation
at the beginning; the law gradually acquires its
force through repeated acts. Custom is, in fact,
the same principle as prescription, except that
prescription usually connotes a right, and constu-
tudo a duty. It may be universal for the
whole Church, special in the case of a particular
though perfect society in its own order, or
specialissimo, if it affects an imperfect society, such as a family
or parish.

Custom may be according to law, in which case
it only makes the force of the law more clear, and
perhaps interprets it (hence the proverb, ‘Con-
sutudo est optima legis interpretis’); or it may
be beside the law (‘prae legem’), adding to, but
not contradicting, the lex scripta; or it may be
against the law (‘contra legem’), which abrogates
or abolishes a law. This is the most important
case. It is called desmotudo when custom simply
abolishes a law by continual non-observance, constutudo contraria when by repeated acts a new
law is introduced which abrogates a former one.

There are many precautions in canon law against
the too easy admittance of custom. First, it must
be introduced by a perfect community, i.e., by one
which has the power of making or receiving a true
law, as distinct from a particular precept. Hence
one man can never obtain a right for himself by
repeated acts. The custom must be introduced
by repeated, free, and public acts on the part of
the community. Most canonists require that these acts should not be made through
an erroneous opinion (e.g., ignorance that the law exists); they must certainly be free, in
the sense of not being made through force.
Nor is a new law introduced by custom when the
people who practise the custom do so with the
deliberate consciousness that they are merely per-
ferring a free work of piety. There must be, at
least eventually, some signs of an intention (not
necessarily explicit) to prescribe a custom ‘preter
legem.’ The object of a constutudo may be any-
thing which is not opposed to natural law, or
opposed to rights reason, or an immediate occasion
of sin, or injurious in itself to the whole system
of Church discipline. The only general and certain
principle that can be laid down with regard to the
time required for a custom to obtain the force of
law is that there must be a sufficiently repeated
number of acts, extending over a sufficient time,
for a reasonable person to be able to say that the
custom is already in firm possession. Generally
3 Alichron, Constitutiones iuris ecc. Ebor. 1300, p. 38.
4 Alchiner, op. cit. p. 31.
migrated. The last condition for a consuetudo, and the most important, is the consent of the legislator. This really does away with all that otherwise would be anomalous in the principle of consuetudo, and makes it consistent with the normal principle of canon law. For in this case also the rule obtains that ultimately the only source of law is the act of the legislator in some form. The consent of the legislator may be expressed, or tacit, or merely legal, when he is ignorant of the custom, but tends in general to apply always the canonical principles affecting custom. In such a case he has an implicit intention with regard to each particular custom, even if he does not know of it. In this case, too, the real source of the obligation of the consuetudo is the will of the legislator. When the legislator knows of the custom and could put a stop to it but does not do so, we have a case of tacit consent. Custom may be abolished by abrogation, which simply puts an end to the one which now exists, but in no way prevents a new custom of the same kind from arising; or by prohibition, which not only ends the custom but forbids a new one to arise; and, finally, by reprobation, which declares the custom to be in itself pernicious and incapable of ever obtaining the force of law. But the formulas which are often appended to positive laws (such as "non obstetetur quid libere" or "non scriptum") do not always mean as much as they would seem to mean. Often such formulas are intended only to make the beginning of a consuetudo contraria morae. A new positive law is always supposed to abrogate general customs contrary to it, but not local customs, unless a clause to that effect is added. A custom may be abolished by a new custom opposed to it, or by simple desuetudo.

Other fonts canonici non scripti are enumerated in the textbooks. There are the opinions of learned canonists. These are not strictly a source of law; but the responsa prudentium, as in Roman civil law, so also in canon law, are considered a safe guide as to the meaning of laws whose form is ambiguous; they furnish a precedent according to which authentic declarations are made; as in moral theology, the consent of a number of canonists of recent constitutions constitutes a probability which may be followed safely. In much the same way the Fathers of the Church, though each one has no more authority than the rest, may form a witness of a wider tradition which is often of great importance. Moreover, many sayings and decisions of Fathers have afterwards been incorporated into authentic collections of laws, and from this incorporation receive the force of law in the strict sense. In matters concerning which there is yet no positive law, it is probable that the judgment of illustrious Fathers will be considered when a law is framed. Many early texts of canon law include answers of Fathers and their sentences in test cases. This non scriptum also occurs in connexion with ius non scriptum. Thus a repeated number of decisions in special cases, which all show agreement with the same general principle, form a precedent which may be of great importance for general law. Here it is probable that, if a new law be drawn up, it will be in accordance with the precedent set by the usual fonts. Meanwhile this use gives a greater or less probability to custom. Among the Roman tribunals which make the usus foresatus the Rota Romana is of chief importance. Formerly disputed cases from all parts of the world were sent to the Rota for judgment. Its jurisdiction is now limited, but by this of other tribunals; but it still remains the most important one.

The stylos curies also occurs among the fonts non scripti. This means the use of certain conventional or technical terms and the method of procedure, which the student of canon law should understand, since they affect the meaning of the decisions.

History of the sources of canon law. Canonists distinguish three main periods of canon law—the ius antiquum from the foundation of the Church to the publication of Gratian’s Decretum, ius novum from Gratian to the Council of Trent, and ius nonnullium from the Council of Trent to our own time.

(1) Ius antiquum. After the NT there is but little canon law extant down to the Council of Nicaea (325). The modern canonist in practice does not refer much to this time, but in theory the same rules apply to it as to later times. A law made during the first three centuries by proper authority binds the subjects of that authority till it be repealed or fall into desuetude. But there are hardly any such documents now extant. There are a few papal letters, letters of other bishops, such as St. Cyprian, and the decrees of one or two councils, such as the two held at Carthage in 256. Moreover, since later legislation has occupied the whole field of possible Church law, it is unlikely that any law of the first three centuries would be cited. It will have been either re-enacted or abrogated at a later period. After the Council of Nicaea we have a large collection of canons, chiefly papal, apostolic, such as the Canons of Hippolytus, the various Church Orders, etc. The most important of these are the so-called Apostolic Constitutions and Canons. When it was believed that these were the work of the apostles, naturally they seemed of enormous importance. The Quinisextum Synod (‘in Trullo,’ at Constantinople, 682) recognizes the 95 Apostolic Canons as an authentic source of canon law, whereas in the West a Roman synod under Pope Gelasius I. rejected them as spurious as early as 495. Eventually fifty of these canons, by their reception in the Corpus iuris, obtained a certain recognition, though not technically authority, in the West. Now that every knows that they are spurious, they have only an archaeological interest. Some of them, however, are really repetitions of authentic canons of Nicaea and the Synod of Antioch in 441. From the Council of Nicaea (325) there are decrees of ecumenical synods, which have the full force of law for the whole Church, and those of particular synods, which are authentic for the provinces concerned. The other source of this ius antiquum consists of papal letters and decrees. There are literae synodi (treating chiefly of matters of faith) and papal decrees in various forms from the time of Damasus I. (366–384). These are collected in Repetita, and still have full force, unless they have been repealed by later legislation.

Long before the famous Decretum Gratiani attempts had been made to put and arrange the growing mass of sources of canon law. The first collection of this kind is the so-called Versio Hispanica, long supposed to be the work of St. Isidore of Seville. Really it is a Greek collection, to which a Latin translation was added in Italy. Its first edition, composed and translated not long after the 4th cent., contained only the decrees of Nicaea; to these the Latin version added those of Sardica, then supposed in the West to be Nicene. Later the decrees of Amiens, Novo-Cesarea, and Gaeta were added. Such a collection would naturally constantly be brought up to date, and new canons would be added by copyists. Finally, in Spanish and Gallican traditions, new canons were added. From the 5th to the 9th centuries there is a number of such collections. The so-called Versio prava is an Italian translation of a Greek
collection made in the early 6th century. In Gaul a great but disordered collection of canons of councils, and of papal and episcopal letters, was made in the beginning of the 6th century. This was the work of Pope Siricius, who thought it to be the oldest official Roman collection. F. Massens counts thirteen earlier Gallican collections of the kind. 2 In Italy Dionysius Exiguus (507-554?), a large collection, one of canons and one of decretals (papal letters) is known to Augustine II. (496-498). These were then joined together, and became the official Roman text-book, practically displacing all others. Later canons were added to the collection. Pope Adrian I, in 774 sent a copy of this to Charles the Great (with additions down to his own time). This became the official Codex Canonum of the Church of Gaul. It was made State law in Charlemagne’s empire in 802. In Africa the chief collections are the Bibliotheca Canonum of Fulgentius Ferrandus in the first half of the 6th cent., and the Concordia Canonum of Cresentius about the year 690. Spain had a number of such collections. In the end of the 8th cent. Martín, Bishop of Braga, made a Collectio Canonum (also known as Liber Capitolorum). About the same time appeared an Epitome from Martin of Braga and other sources; from this further Epitomes were collected. It was the 9th cent. that the great Hispana Collectio was composed. The preface of this is taken for the chief part from the Etymologias of St. Isidore of Seville († 636). This is the main source of pseudo-Isidore. In the 9th cent. the number of forged decretals and was ascribed by the forger to St. Isidore. Ireland had a collection of canons, chiefly taken from Dionysius, about the end of the 7th cent. In the 9th cent. appeared three collections in the Frankish kingdom which consisted largely of forged documents. These are the Collection of Canones of Benedictus, the famous forged Decretals (pseudo-Isidore), and the Capitula Anglorum. The forged Decretals especially had a disastrous effect on later canon law. They contain so great a mass of documents, touching all kinds of matter, that for centuries canisants took their material from them. It is not clear who was the author of these. Additional collections were compiled between the years 847 and 853, in Gaul. They were probably begun at Mainz and completed at Rheims. The compiler calls himself Isidore (in the Mainzer Catalog or Mercator). Various persons have been suggested as the compiler (Benedictus Levita, Rothad of Soissons, etc.). The forgeries consist for the most part in ascribing authentic documents of a later age to an earlier one. In the 15th cent. Cardinal Nicholas of Cusa and John Turrecarnata first doubted their authenticity. Since then this has been so established that no one any longer quotes them. Other collections are those of Beatus of Prum (c. 906), Berhard of Worms († 1019), Alcuin of Lucca († 868), Cardinal Deusdedit (1068-87), and the Decretum and Pannomia of Ivo of Chartres († 1117).

The sext novum begins with the Decretum of Gratian, which superseded all earlier ones and became the universally accepted collection of the Middle Ages in the West. Gratian (Magister Gratiani) was a Benedictine monk at Bologna. He lectured on canon law, and, feeling the need of a text-book, he composed his Decretum about the year 1150. He intended this to be not so much a collection of canons as a textbook of liturgical and canon law. He was one of the first to state the law and to prove the law by quotations. In each case he states a thesis (these statements are the 'dicta Gratiani,' which come first); then, as proof, he quotes documents, canons of synods, papal decrees, and even civil laws. His idea was also to harmonise apparently discordant canons; hence the name, given either by himself or by others, 'dictum solum ad concordiam.' Gratian's book was, in comparison with all that had gone before it, so well arranged, and contained so much matter, that it soon became the official textbook in the Church. No other text-book could come into the work, each under the special heading 'Pales' (for Paucares); then the notes of other commentators were added with the same heading, so that 'Pales' became a general title for notes at the end of Gratian's work. A mass of longer commentaries and glosses gathered around the text. The 'Glossa ordinaria' printed at the foot of modern editions is by Johannes Tentonicus (Johann Zemek) Canon of Halberstadt († 1235), and Bartholomew of Brescia († 1258). After the work had passed through innumerable hands and had received all manner of additional notes and corruptions of the text, Pope Pius IV, appointed a special commission to compile a new edition of the Decretum, which was continued their work under Pius V. These are the 'Correctores Romani,' whose corrections are added beneath the text. Finally, Gregory XIII, in 1582 issued an authentic printed edition of the Decretum. It consists of three parts. Part I (containing the 'Declarato ordinario') treats of the sources of canon law and of ecclesiastical persons and offices. It is divided into seven Distinctiones, of which begins with a dictum headed 'Gratianus.' This is his thesis. It is then proved by a number of cases. At the end often comes the 'Pales,' in which originally these Distinctiones and canons were not numbered, and were quoted by their first words. The edition of Charles Demouilla (Paris, in 1497) shows that the Le Conte (Paris, 1559) numbered the Pales also. Part II contains solutions of disputed questions. It is divided into 36 'Conses.' Each begins with a statement of the case by Gratian, followed by a number of 'Questions,' each having a proposition by Gratian, which is then proved by a number of canons. Among these is one question which amounts to a complete treatise or excursus by itself. This is the third Distincion of Gaius (xxxvii). It begins with the 'Pales' ('De Pectinemia') and is divided into seven Distinctiones and these again into canons. 'De Pectinemia' is quoted as a separate treatment. Part III, is headed 'Textus Gratiani' and contains a number of canons, especially of the Mass. This part has five Distinctiones, each beginning with a 'dictum Gratiani,' and subdivided into series of canons. The second and third parts also have Pales.

There is a recognized manner of quoting the Decretum Gratiani which sometimes differs very much from the modern. It is not necessary to go into this at length. But the following may be of interest. The 'Decretum Gratiani' is divided into twenty Distinctiones, each beginning with a 'dictum Gratiani,' and subdivided into series of canons. The second and third parts also have Pales.

Gratian's Decretum then became the nucleus of the Corpus iuris canonici, of which it is still the first (about half in length). To the other parts were added. Gratian had used canons down to Innocent II; the latest quoted by him is of 1193. As time went on, and further material accumulated, it became necessary to add to the work. Notably the third and fourth Lateran councils (1179 and 1215) added considerably to the material of canon law in the West. During this period, when the papacy reached its greatest power in civil life, a great number of papal decrees were issued. After Gratian about seventeen different compilations of this new material were made, when Pope Gregory IX thought of publishing an authentic addition to the Decretum Gratiani, this was prepared by St. Raymond of Pennafort, the

2 Gesetze der Quellen und der Lit. des M. Rom., pp. 821-873.
pope's penitentiary, Gregory published this collection in 1234 by the bull *Rex pacificus*, sent it to the Universities of Paris and Bologna, and ordered that it should be accepted as authentic. This is the Corpus juris canonici.

The work is divided into five books, treating of the matters described in the verse "Index, judicium, cursor, canonicum, canonum," namely of ecclesiastical officials and judges, of procedures in canon law, of the rights, duties, and property of clerics, of laws about marriage, of criminal cases and their procedures, and finally into "Capituli." This division already existed in the compilation of Bernard of Pavia (Papalnia) about 1191, which is the basis of that of Gregory IX.

The sign by which a quotation from this part of the Corpus juris canonici is introduced in the work is either the letter *X* or the letter *O*, meaning that it is outside the *Decretum Gratiani*. Thus: "...etc., etc." means that the author of the *Decretum Gratiani* (which is about clerks who do not reside) of book *X*, or extra, namely, in the *Decretals of Gregory IX*. The addition of the heading of the Titulus is now no longer necessary, since in later editions they are numbered.

The work has been enlarged since it was first published. Raymond, with the idea of maintaining brevity, did not write out the statement of the case, but only the solution. Nor did he quote the whole *Decretal*, but only fragments of it. The result of this was that it was often impossible to understand his text unless one went to the original source. To remedy this Le Conte in his edition (Paris, 1556) added what Raymond had omitted. These are the "parts decesis," printed in italics in modern editions. The *Decretals* are arranged in chronological order; in some cases Raymond, when the matter did not seem sufficiently clear, obtained from the pope a special decree made to be inserted here. These are put at the end of the Titulus. There is a "Glossa ordinaria" made by Bernabò da Bottone of Parma (1253).

The third part of the *Corpus juris canonici* consists of the *Liber Sextus Decretalium*, added by Boniface VIII. It is the sixth book after the five of Gregory IX. This became necessary in the same way as those of Gregory IX. In 1245 and 1274 the first and second Councils of Lyons had been held. From the decrees of these, of popes since Gregory IX. and of his own, Boniface VIII. in 1268 published his *Liber Sextus*, by the bull *Streutnotsede*. In this he expressly forbids any decrees to be accepted as valid except those contained in this collection. John X. made the "Glossa ordinaria" to this part of the *Decretals* in 1286. At the end the pope added rather "Regulae iuris," short maxims about procedure. The *Liber Sextus* is divided in the same way as the *Decretals of Gregory IX*. Although the whole is the *Liber Sextus*, it has itself five books, divided into Tituli and Chapters. It is quoted as in Gregory IX., except that, instead of X, we write "in vi."

The fourth part of the *Corpus juris canonici* is the *Constitutiones Clementine*. In 1314, Clement v. published a collection of his own Constitutions, including those of the Council of Vienne (1311-12); but he died before his work had been received by the Universities of Orleans and Paris, to which it was addressed. His successor, John xxii., in 1317 sent the collection to the University of Bologna with the bull *Quoniam nulla*, ordering its use by schools of canon law and in courts. Clement meant to call his collection the Seventh Book of *Decretals*; but, since it contains only his own, not all those which had been issued since Boniface VIII., the commentators refused to give it this title and called it the *Constitutiones Clementine*.

It is divided, like the *Decretals of Gregory IX.*, into five books, and chapters. It is copied in the same way, with the special rubric "Clem." instead of "X." It has a Glossary by John Andreae (1230), improved by Francis Zanarella (1417).

These collections, those of Gratian, Gregory IX., Boniface VIII., and Clement v., constitute the *Corpus juris canonici clausum*, a name which begins with a misunderstanding of a phrase in the acts of the Council of Basel.1 The *Corpus juris canonici*, however, received yet two appendices. Decrees made later, and, therefore, not in the *Corpus*, were called "Extravagantes," as being outside the official book. Then they began to be numbered and copied of the *Corpus* as an appendix. Finally, Jean Chappuis in his edition (Paris, 1500) printed two such appendices of "Extravagantes," which, although collected only by his private authority, are now always included in "Extravagantes" of Pope John xxii. (1316-34), which had already been edited with a Glossa by Zenzelius de Cassanis in 1325. They are distributed in 14 Tituli. The other appendix contains "Extravagantes communes," decrees of various popes from Boniface VIII. (1304-1303) to Sixtus IV. (1471-84). Chappuis published seventy of these; later (in 1603) five more were added. These are arranged in five books on the same principle as those of Gregory IX. But the fourth book ("Communia") is wanting, because there had been no new decrees about marriage. The whole work is considered one *Corpus*, including the "Extravagantes.

Matthew of Lyons in 1590 published a so-called "Liber Septimus" containing constitutions of popes from Sixtus IV. to Sixtus V. (1585-90); and Paul Lancellotti in 1593 wrote a compendium of canon law which he called *Institutiones iuris canonici*. These also had the approval of Paul v., having been added to the *Corpus juris canonici* since 1605. They can hardly be considered in any sense part of it, though they are authentic collections which may be used in canonical processes.

This is the end of the *Corpus juris canonici*. Its historical importance is enormous. For centuries it has been the one official collection of the Roman Catholic Church; it is the most important book of canon law ever published. It is, in spite of the reverence with which it is still regarded, it has ceased to have more than a historical interest. There has been far-reaching legislation since, notably by the Councils of Trent and the Vatican. Moreover, the *Corpus* has many errors of various kinds. Gratian's decree, its nucleus, is not on the level of modern erudition. He quotes a number of spurious papal decrees, including many from pseudo-bishops. It is not likely that any further additions will be made to a work which would need rather complete re-casting. At the Vatican Council one of the Postulata was for a new *Corpus*, to be made by a special commission. Meanwhile the modern canonist refers rather to a modern *Codex juris canonici*. The *Corpus juris canonici* has not the same authority throughout. Although it is an official collection, this does not mean that in it must be accepted as authentic. The *Decretum Gratiani* has never been made a 'codex legalis' in the strict sense. Therefore it remains, in itself, a private collection, which confers no new force on the decrees which it quotes. Each of these has no more value than it had before Gratian quoted it. His Dicta and the Palese have no juridical value. But the *Decretals of Gregory IX.*, Boniface VIII., and Clement v. were published as a 'codex legalis.' This means that the publication, apart from their origin, was promulgation of a new law. All that is in them thereby obtained the value of common law, even when the original decree was addressed to some particular person only. But this law is subject to the usual conditions. It may be abrogated, prescribed against, etc., as may all common law. According to the opinion of canonists, the constitutions among the 'Extravagantes' do not receive any new authority from their insertion here.
(3) Lex nonnulla. — The lex nonnulla begins with the Council of Trent (1545-83). Of the twenty-five sessions of the Council, thirteen made decrees affecting law. These decrees were to have force as soon as they were promulgated. This was done by the bull Benedictus Deus of Pius V. in 1564. The pope fixed 1st May of that year as the date from which the decrees should be in force. The question now is whether it is possible lawfully for a custom to abrogate any Trinitarian Reorganization of the possibility of this has often been denied, so that there is an axiom often quoted: ‘Contra concilium Tridinium non uaelet consecutum.’ This axiom has no authority behind it. It is true that the Council of Trent has the gravest authority; but there is no reason to suppose an exception to the common principle about consuetudo in this case either. In fact, a number of customs have arisen against its decrees in various parts of the Church, which, supposing the usual conditions, are admitted as lawful. In order that there might be a permanent body capable of giving authentic interpretation of those decrees, Pius IV. founded the ‘Congregatio concilii Tridentini laici pres’ (commonly called the ‘Sacra congregatio concilii,’ ‘S.C.C.’). This congregation still exists; it has acquired extended functions regarding other matters also.

Since the Council of Trent there has been a considerable increase in the sources of canon law. The immense number of papal constitutions is edited in the Bullarium Romanum, of which several different editions have appeared. Pius IV. began the most important being the Magna Bullarium Romanae of Luxemburg (1726-58) and Rome (1733-58). There is also a Bullarium Romani Continuato (Rome, 1758-1814) by Gregorius, and a Gregory regis (1831-45). These are in themselves only private collections. But Benedict XIV. (1740-58) published a collection of his own bulls (1743-58). The publication of this work is considered equivalent to a new promulgation; so that Benedict XIV. ’s Bullarium has the same authority, as a collection, as the Decretals of Gregory IX., etc., in the Corpus iuris canonici. The disciplinary decrees of the Council (1870) form a part of the great importance. The laws of Pius IX. (1846-73), including the Syllabus of 1864, and of Leo XIII. (1878-1903)4 have been published in special collections. Since the Peace of Westphalia (1648) the concordats were made with various States and provincial synods. During the late pontificate there has been considerable legislation. The Holy See functions through the Roman Congregations.

According to the reform of Pius IX. (Sessantina consilia, 1939), there are now twelve Congregations of Cardinals: (1) 'S. Cong. Sancti Officii' (the Inquisition), which looks after matters of faith and morals, indulgences, matters affecting the theology of the sacraments, and it is always present in the sessions; (2) 'S. Cong. Consistorialis,' which has to do with consistorialities, and with the affairs of dioceses not under papal jurisdiction; (3) ‘S. Cong. de disciplina Sacramentorum,’ for disciplinary matters affecting sacramentary; (4) ‘S. Cong. Consist. et Sacrae Congregarum,’ (i.e. ‘Sacred Congregations’), the affairs of religious Orders; (5) ‘S. Cong. de Propaganda fide,’ for missions, with two divisions, one for the Roman rite and one for Eastern rites; (6) ‘S. Cong. Indicii, which forbids dangerous books; (7) ‘S. Cong. sacrorum rituum, for rites and ceremonies; (8) ‘S. Cong. Cerimoniarii, for non-liturgical ceremonies; (9) ‘S. Cong. Missarum,’ for matters relating to the Church’s worship; (10) ‘S. Cong. pro negotii ecc. extraordinarii, for concordats and other affairs of special importance; (11) ‘S. Cong. Studiorum, for schools, seminaries, and universities; (12) ‘S. Cong. reformanda fabrici, which looks after the property and building of St. Peter’s at Rome.

There are three Roman ‘Officia,’ the ‘Cancellation apostolica,’ which prepares and sends bulls concerning the erection of new dioceeses, chapters, and other important matters; the ‘Datai apostolici, to do ordinations to minor benefices;

2 Leoni XIII. encyclopaedia, constitutiones et epistolas, 2 vols., Milan, 1867.

and the ‘Camera apostolica,’ which looks after the property of the Holy See, especially ‘sede vacante,’ and gives jurisdiction to the Camerlengo for that time. There are three Tribunals: the ‘S. Pio V. Roman Pontifical,’ which deals with causes of officiaries and others in foro interno; only; the ‘S. Romana Rota,’ the highest tribunal for all canonical cases; and the ‘Signatura apostolica,’ which is the court of appeal that may reverse the judgment of the Roman Rota. Among the commissions instituted by Pius X. the most important for our purpose is the Commission pro codificationis iuris canonici. This has undertaken the task of revising, simplifying, and codifying the whole body of Roman Catholic canon law.

The position of the Uniates (Christians of Eastern rites in union with Rome) has nothing abnormal in principle, though practically they have many points of canon law special to themselves. They are bound, as are all Catholics, by ecumenical laws, but not by all papal constitutions, since many of these are interdicts, and not decrees. The sources of canon law for Uniates are the canons of synods held before the great schism of the 10th cent., except such as have been abrogated since; their liturgical books approved by the Holy See; and their local synods according to their way. There have been several of these, some of greater importance, e.g. the Ruthenian Synod of Zamosis in 1732, the Maronite Synod of Mount Lebanon, held at the monastery of Deir el-Latrun in 1736, and Rome in 1792. They are bound by special papal constitutions for Eastern Churches and by decrees of propaganda addressed to them. In 1631 Urban VIII. declared that Uniates are bound by general papal decrees in three cases only: when the decree concerns a matter of faith, when they are expressly named, and when something is decreed which implicitly affects them. The local law of one Uniate church does not affect the others, unless it is explicitly extended to them; nor has the authority of one jurisdiction over the others, unless it is received by delegation from the Holy See.

LAW (Christian, Eastern).—I. Canon Law in the Orthodox Church. — In general principles the Orthodox Church agrees with the Church of Rome as to canon law. She too recognizes the NT, 1 Syn. proc. Ruthenorum hab. in univ. Szatmarisecie, Rome, 1870. 2 Syn. proc. R.D. Patr. Antichonce., 1870; nationis Syrorum Maronitarum, Rome, 1870. E. Encyclical Quassemi, 22 Dec. 1870.
tradition (τραdition), custom (παράδοσις), and positive ecclesiastical legislation (τό θεόκριτον νόμον) as the source of its laws, but it takes a different attitude towards civil law. As the result of the long Byzantine period, during which emperors made laws for the Church which were accepted by Eastern bishops, the Orthodox Church gives more importance to the State law (for all other laws than those the Church makes). The Orthodox canons explain this. They urge that, as the Christian State accepted canon law in its province, and as the imposition of the canon law was an obligation under pain of excommunication and civil sanctions, so the Church accepts all State law, even that of heathen emperors, as hers, so long as this does not contradict the canons. By this acceptance the Church "canonizes" State law and gives it promulgation from herself... John Scholasticius (6th cent.), in his collection of canons, includes as an appendix a number of the Nomocanon of Justinian I. which affect Church matters. The Nomocanon contains the rule: 'In cases where there are no canons we must follow the laws of the State.' 1 Theodore Balsamon (13th cent.), however, ascribes greater authority to the canons than to civil laws. In a case of conflict the canons always prevail, and the Orthodox Church also ascribes canonical authority to the responsa prudential (τα βουλευτήρια των εισαγωγίων), i.e. the opinions of learned canonists given in the form of expositions of questions or as statements. In this, like the Latin Church, she follows a principle of Roman civil law.

With regard to positive Church law (ἐκ νόμων the strict sense) the Orthodox admit, as binding the whole Church, the Omologismos (τό τον εκ νόμων), to which they still give apostolic and ecumenical authority, as containing principles derived from the Apostles, and as being confirmed by the Trullan Synod of 692) and the decrees of ecumenical synods. Of these they acknowledge seven, including the second of Nicea (787) as the last. Although they hold their Church to be the whole Church of Christ on earth (so that she should have the same power of convoking an ecumenical synod as had the Church before the great schism), as a matter of fact they have held no synod claiming to be ecumenical since that schism. These are in theory the only authorities that can legislate for the whole Church, though the decrees of many particular synods and even canons of individual Fathers are considered to have acquired ecumenical authority by the later acceptance of the whole (Orthodox) Church. A Patriarch can legislate for his Patriarchate only; since the formation of permanent synods to govern national Churches, they give to these the same authority as a Patriarch has. In no case can the particular authority legislate against the universal canons. In theory each bishop has the right to legislate for his own Eparchy, within the bounds of general law. He can summon diocesan synods, and promulgate laws for his people in the form of pastoral letters. In practice, however, this right is now much circumscribed. Each national Orthodox Church is considerably centralized under its Patriarch or Holy Synod. The Orthodox Church is balanced by a very complete dependence of each bishop within it. In the Orthodox States the government has much to say in the matter of the legislation of ecclesiastical authority.

The book most useful to the Church in the matter of the liturgy and the Liturgical orders is the Syntagma (Συντάγμα), a collection of the Canons of the Apostles and the Canons of the Churches, of the second and third centuries. After the destruction of the ancient Canons, this work was compiled by the Patriarch of Alexandria, Nysa, Theophylact of Alexandria, Cyril of Alexandria, Gennadius of Constantinople, and Tamsius of Constantinople. These constitute the fundamental canon law of the Church. They contain the Canons of the Apostles (Συντάγμα τού Αποστόλου καὶ ἐπίσκοπων κ.τ.λ.), the Canons of the Church of Athens, the Canons of the Church of Alexandria, the Canons of the Church of Jerusalem, the Canons of the Church of Antioch, and the Canons of the Church of Rome. The Canons of the Apostles contain the canons of the Apostles themselves, those of the first ecumenical synod, and those of ten other synods, namely Antioch (314), Neo-Caesarea (between 314 and 325), Gangra (c. 340), Antioch (341), Laodicea (c. 343), Sardeis (c. 343), Constantinople (344), Carthage (419), Constantinople (671), and Constantinople (879). The Nomocanon of 1090 contains the canons of thirteen Fathers, namely Dionysius of Alexandria, Gregory of Neo-Caesarea, Peter of Antioch, Athanasius, Basil, Timothy of Alexandria, Gregory of Nazianzus, Anianus, Church matters, to show how the Church does the work of Christ. The Orthodox canons explain this. They urge that, as the Christian State accepted canon law in its province, and as the imposition of the canon law was an obligation under pain of excommunication and civil sanctions, so the Church accepts all State law, even that of heathen emperors, as hers, so long as this does not contradict the canons. By this acceptance the Church "canonizes" State law and gives it promulgation from herself... John Scholasticius (6th cent.), in his collection of canons, includes an appendix a number of the Nomocanon of Justinian I. which affect Church matters. The Nomocanon contains the rule: 'In cases where there are no canons we must follow the laws of the State.' 1 Theodore Balsamon (13th cent.), however, ascribes greater authority to the canons than to civil laws. In a case of conflict the canons always prevail, and the Orthodox Church also ascribes canonical authority to the responsa prudential (τα βουλευτήρια των εισαγωγίων), i.e. the opinions of learned canonists given in the form of expositions of questions or as statements. In this, like the Latin Church, she follows a principle of Roman civil law.

With regard to positive Church law (ἐκ νόμων the strict sense) the Orthodox admit, as binding the whole Church, the Omologismos (τό τον εκ νόμων), to which they still give apostolic and ecumenical authority, as containing principles derived from the Apostles, and as being confirmed by the Trullan Synod of 692) and the decrees of ecumenical synods. Of these they acknowledge seven, including the second of Nicea (787) as the last. Although they hold their Church to be the whole Church of Christ on earth (so that she should have the same power of convoking an ecumenical synod as had the Church before the great schism), as a matter of fact they have held no synod claiming to be ecumenical since that schism. These are in theory the only authorities that can legislate for the whole Church, though the decrees of many particular synods and even canons of individual Fathers are considered to have acquired ecumenical authority by the later acceptance of the whole (Orthodox) Church. A Patriarch can legislate for his Patriarchate only; since the formation of permanent synods to govern national Churches, they give to these the same authority as a Patriarch has. In no case can the particular authority legislate against the universal canons. In theory each bishop has the right to legislate for his own Eparchy, within the bounds of general law. He can summon diocesan synods, and promulgate laws for his people in the form of pastoral letters. In practice, however, this right is now much circumscribed. Each national Orthodox Church is considerably centralized under its Patriarch or Holy Synod. The Orthodox Church is balanced by a very complete dependence of each bishop within it. In the Orthodox States the government has much to say in the matter of the legislation of ecclesiastical authority.

The book most useful to the Church in the matter of the liturgy and the Liturgical orders is the Syntagma (Συντάγμα), a collection of the Canons of the Apostles and the Canons of the Churches, of the second and third centuries. After the destruction of the ancient Canons, this work was compiled by the Patriarch of Alexandria, Nysa, Theophylact of Alexandria, Cyril of Alexandria, Gennadius of Constantinople, and Tamsius of Constantinople. These constitute the fundamental canon law of the Church. They contain the Canons of the Apostles (Συντάγμα τού Αποστόλου καὶ ἐπίσκοπων κ.τ.λ.), the Canons of the Church of Athens, the Canons of the Church of Alexandria, the Canons of the Church of Jerusalem, the Canons of the Church of Antioch, and the Canons of the Church of Rome. The Canons of the Apostles contain the canons of the Apostles themselves, those of the first ecumenical synod, and those of ten other synods, namely Antioch (314), Neo-Caesarea (between 314 and 325), Gangra (c. 340), Antioch (341), Laodicea (c. 343), Sardeis (c. 343), Constantinople (344), Carthage (419), Constantinople (671), and Constantinople (879). The Nomocanon of 1090 contains the canons of thirteen Fathers, namely Dionysius of Alexandria, Gregory of Neo-Caesarea, Peter of Antioch, Athana-
gives the Canons of the Apocalypse and those of the ecumenical synods. In the 5th century the particular synods with commentaries. iv. the Canons of the Patriarchs, viz. of Emperor Constantine (those which affect Church matters, resp. synagoge praedicanum, and a number of dispositions by various canons; lists of sees and of the various Eastern Churches (the Byzantine Patriarchate), the Greek civil laws of 1212 regulating the organization of the Church. The Holy Synod which governs it; and vi. the Synagoge of Matthew Bistases and an alphabetical index of the whole work.

The Athenian Synagoge is the most complete code of the Eastern canon law. It has been officially recognized, as an authentic codex, by the ecumenical Patriarchate and by most of the national Churches. For this reason N. Milasch judges that all canons contained in it must be regarded as having ecumenical authority. The Slav and Rumanian Churches have for the most part translations of Greek collections, with additions and commentaries.

In modern times laws are made for each Church by its central authority. The tendency is now strongly in favor of synods and councils of various kinds, instead of the old rule of one Patriarch or Primate. Even the Patriarchs now have their synods, met in council, and so on. The latter national Churches are governed by the Holy Synod, formed after the model of the Russian one (formed in 1721). These synods, under considerable influence from the governments, make laws regulating all the affairs of their Church.

2. The lesser Eastern Churches.—Each of the Nestorian and Monophysite Churches has its own system of canon law, evolved from the general principles of Eastern Church law with the necessary special modifications. They do not seem to have a clear concept of the difference between ecumenical and local law. As each is an Ekklesium to itself, the two concepts naturally are confused. They admit in their canon law the decrees of certain councils, which they recognize, and have then their own rules, made by their special synods and Patriarchs. In the Middle Ages these Churches evolved schools of canon law of some importance. They have great canonists among their writers. In modern times, at least among the Nestorians and Jacobites, there is a tendency to replace the old canons by new decisions made for each case by the Patriarch, in agreement with the other bishops or notables.

Nestorian canon law is derived from three main sources. First come the Western Synods, i.e. such synods held in the Empire before their schism in the 5th century. These include many particular synods, such as those of Antioch (341) and Ancyra (358). There is a collection of these made by Marutha of Maxerchat in 410, to which the disciplinary canons of Chalcedon (451) were added later. The second source is the Eastern Synods, namely, those held by Nestorian Katholikoi down to the 8th century. The old rule was that each Katholikos should hold a synod as soon as he was appointed. An unknown Nestorian collected these in the Book of the Synods (775 and 790). The Sunhaddus begins with the Synod of Mazis in 410 and ends with that of Mar Hnunehii in 757 in an appendix to the Synod of Mar Timothy I. in 790. The Sunhaddus also contains a selection of canons of Western synods. This is the chief Nestorian canonical authority. The third source consists of all laws made since the 8th century. These have not been completely codified. In the 16th century Ebedyeses' Bar Barka, Metropolitan of Paphlagonia, compiled some of them from three sources. This is the Nomocanon of Ebedyeses, the most complete collection of their laws.

The chief sources of Coptic canon law are the 31 canons of the Holy Synod (1830), the 20 canons of Gabriel II. (1151-14), and the canons of Cyril III. (1233-43). Cyril III. not only made canons himself, but ordered that a complete collection of all those existing should be drawn up. The Abyssinian Church recognizes and obeys Coptic canon law.

The Jacobite Church once had a considerable school of canonists. Bar-Hebraeus, their greatest theologian, was also one of the most important of all Eastern canonists. His Nomocanon (Ktibd diHuddde) remains their classical collection.

The Armenian Church recognizes the first three General Councils, but even before she was separated from the rest of Christendom she began to have her own canon laws. The most famous particular Armenian canons of antiquity are the 21 canons of the Katholikos Isaac issued about the year 406. Then from the time of the Synod of Torin (Duin), about the year 534, which completes the Gentile Code, the Armenians have had a long series of national synods, each of which added to their canon law. The acts of these synods have been collected and translated by Angelo Mai. Russian laws affecting the supreme Katholikos of Etchmiadzin, the virtual separation of Armenia from Turkey by their jurisdiction, and the formation of the National Assembly and diocesan councils have completely modified the old law, and Etchmiadzin has a theocratic authority over the whole Armenian Church, which he exercises in conjunction with his permanent synod of seven auxiliary bishops. In affairs of the greatest importance he would, no doubt, take the lead in forming a new law; otherwise he has little real authority beyond his own Patriarchate. The practical head of the Armenian Church in Turkey is its Patriarch of Constantinople. He is assisted by a National Assembly, composed for the most part of laymen. With these rules and laws. In each diocese there is also a council of laymen, and in each parish a body of lay administrators, who look after the property and have charge of all Church affairs. The modern Armenian Church is ruled practically by the decisions of these assemblies.

Adrian Fortescue.

Law (Christian, Anglican).—I. Nature of the present Anglican Church law. The Anglican Communion is a federation of more than 100 autonomous Churches; hence its ecclesiastical law varies in different countries. It consists partly of the written law which is now universally acknowledged to be in force, and partly of the customary law resulting in a large degree on the ancient and mediæval canon
law of Western Christendom. In England and Wales (also in Man, Berwick-on-Tweed, and the Channel Islands) complications arise owing to the existing laws of the Irish, or, as it is called, the Irish Church, which involves the result that the Church's law cannot become binding unless the State assents to it. This is the case also in India, where the relations of the Church and State are very various. But in most of the other branches of the Anglican Federation the Church is free to make its own laws, which become binding on the basis of a voluntary contract (see below, § 6).

We are not here entering into the vexed question of later Acts of Parliament affecting the Church, in which the Church as such had no voice. Thirty-nine Articles of 1662, and the canons of 1609 (1604), as slightly amended in later years. The Prayer Book and the Ordinal, after being agreed upon by the Conventions, were enacted as part of the statutory law of the realm by being inserted as a schedule in an Act of Parliament known as the Act of Uniformity of 1662. We need not here enter into the vexed question of later Acts of Parliament affecting the Church, in which the Church as such had no voice. Thirty-nine Articles have also the authority both of Church and of State. Thus the Prayer Book and Articles are certainly binding on both clergy and laity. The canons of 1603, as also those of 1540, 1563, 1588, which added to or amended them, were agreed upon by the Conventions and published by the sovereign's authority under the Great Seal (Blunt-Philimore, Church Law, pp. 171, 371 ff.; in the latter place they are given in full amended).

There was an irregularity in that the Royal Letters Patent were given for the 1603 canons before the York Convocation had sat, although after the Canterbury Convocation had passed them. The York Convocation, however, obtained the king's licence to discuss them afterwards, and then passed them (J. H. Overton, The Church in England, London, 1897, II. 11). The validity of the 1603 canons, which were passed before the fall of Land, was disputed (see Overton, II. 771, 80). The preachers of the 1603 canons, those of 1601, hold good only in Elizabeth's reign. They are given in English and Latin by W. E. Collins in the Church Historical Society's publications, no. xl. (London, 1899).

The canons of 1603 as amended undoubtedly bind the clergy, but it is uncertain (seeing that they have not been sanctioned by Parliament) how far they bind the laity.

Lord Hardwicke (in Middleton v. Creft [Blunt-Philimore, Para. 276]) argued that they do not 'proprio signo bind the laity, but only the clergy,' adding: 'I say proprio signo, by their own force and authority, for there are many provisions concerning the administration of the sacred offices and the usage of the Church of England which have been in effect in that respect, and by virtue of such ancient allowances will bind the laity.'

The Prayer Book and canons as at present in force have been somewhat influenced by royal and episcopal injunctions from the Reformation onwards.

Besides the laws mentioned above, the great canons of the 18th cent., such as Gibson, mention numerous Acts of Parliament which deal with crimes against the moral law, and with marriage and other matters which affect the Church. With these we are not here concerned.

(b) Church of Ireland.—The present written laws of the Church, known as the 'Constitution agreed upon in 1870 by the archbishops, bishops, and representatives of clergy and clergy in a General Convention assembled in Dublin, and of 'constitutions and canons ecclesiastical' decreed by General Synods in 1836 and 1840 and confirmed, are the 'Constitution and the 'constitutions and canons ecclesiastical' have since 1809 been consolidated in a single Constitution, the 'constitutions and canons ecclesiastical' became part of the Thirty-nine Articles and the (revised) Book of Common Prayer and the Ordinal, approved in the Constitution. We must here notice the difference between the ancient and modern use of the word 'constitution.' Originally a 'constitutio' was a much the same as a 'canon,' and so it is in the titles of the English and Irish codes of canons. But the word 'constitution' as now used often means a more fundamental document than the canons, one quite apart from the organization of the Church (see below (d)).

(c) Episcopal Church in Scotland.—The constitution here is contained in the canons, and is not a separate document. The written law consists of a code of canons passed in 1114, built up on the basis of canons of previous Provincial Synods in 1743, 1811, 1828-39, 1858, 1863-64, 1875-76, 1890, and 1903. The present code authorizes the services of the Prayer Book, with certain modifications, and also of the 'Scottish Liturgy or Communion Office,' and forbids departure from them in public prayer and administration of the Sacraments or in the performance of the other services, except as the code provides. In this branch of the Federation the word 'constitution' is used for a document subsidiary to the canons. Each incumbency must have such a 'constitution' regulating matters not dealt with in the canons and subservient to the patronage of that charge. Such a constitution is an agreement between the bishop of the dioce and the clergy and laymen of that congregation. The constitutions of different incumbencies vary considerably.

(d) United States of America.—The 'Protestant Episcopal Church' revised the Prayer Book in 1790, soon after the War of Independence, and again in 1829. The American Constitution was adopted at Philadelphia in 1789, and since modified; canons have been passed at various dates.

In Scotland the canons, and in Ireland and the United States the constitution and canons, are primary, and the Prayer Book has authority only because these documents prescribe it.

(e) British colonies.—In the Colonial Churches of the Anglican Federation the process seems to have been as a rule different from that which has just been described. The Prayer Book has descended to them, being daughters of the Church of England, as a primary authority, and in some cases they have bound themselves to make no alterations in it until the mother Church takes a like action, or have limited themselves in some degree in this direction. Most or all of them, however, have also made canons to regulate their internal affairs, and these are in the nature of Provincial Constitutions (see above ; and, for further details, cf. § 4). In some branches of the Federation, as in S. Africa, dioceses are also permitted to make canons for themselves on purely local matters, in submission, however, to the provincial canons. This is not allowed in Scotland or in Ireland, where the resolutions of diocesan synods have not the nature of canons, and have no binding power as such.

2. The legislative bodies of the Anglican Churches.—In England there are two provinces, of Canterbury and York, and each has two Houses of Convocation, the Upper House consisting of the diocesan bishops, and the Lower House of the deans, the archdeacons, and the proctors (or representatives) of the clergy. Two consultative Houses of Laymen are also appointed—one to assist each Convocation; but this is a voluntary and modern arrangement, having no recognition in law. The Convocation of the Church of Ireland and the 'constitutions and canons ecclesiastical' have been passed the Civil Legislature as Acts of Parliament.
In the non-established branches of the Anglican Federation there are General (or Provincial) Synods—i.e., a national assembly of bishops—required for the purpose of legislating. In the Episcopal Church in Scotland, which now has one province only (the metropolitan powers being held in commission by the seven bishops), the Provincial Synod consists of two bishops, one of whom is the senior, and the second of the deans of the seven dioceses, about 35 representatives of the clergy, and one or two clerical officials. Each chamber must assent by a simple majority to any change in the canons before it becomes effective; and, though the canons may be altered, only when legislation is required; but, before any changes provisionally made by the Synod have been confirmed at a subsequent meeting of Synod, such proposed alternations must be submitted to a mixed Consultative Council, consisting of the bishops, about 40 clergy, and the same number of laymen, who meet all together (but may, if desired, vote or debate by orders), and may, if they think it, express any opinion on the changes or other alterations. The Consultative Council may also suggest legislation in the first instance, and this was the course adopted in 1911, when it carefully discussed the whole code and noted the changes desired.

In the Church of Ireland, where there are two provinces (of Armagh and Dublin), there is a single General Synod which legislates, consisting of two Houses, the one of bishops, and the other of representatives of clergy and laity, who normally sit all together. According to the present Constitution, the representatives of the clergy number 208, and those of the laity 416. Voting by the bishops is by vote and ballot, and an attempt is made in exceptional cases, each House must assent to any change, and, if the laymen and the clergy vote by orders, each order.

In the United States the General Convention consists of two Houses, the one of the bishops, the other of 'deputies' or representatives, not more than four presbyters and four laymen from each diocese. Both Houses must agree to any change in the law before it becomes valid. A vote by dioceses and by orders is provided for if desired, under the regulation that the dioceses are in that case equalized by only one clerical vote and only one lay vote being allowed for each; and a majority of each House is required for the approval of legislation. The General Convention meets once every three years.

In most of the Colonial Churches of the Federation, legislation (which, however, as we have seen, is somewhat limited) is effected by synods consisting of bishops, and clerical and lay representatives. It is usually enacted that voting and debating may be by orders, and, if so, that a majority of each order is necessary for carrying any alteration.

3. The older canon law and customary law.—
(a) Origin and growth.—The written law, except the law of God, or the Moral Law, which has been universally regarded as unalterable—has gradually grown up, coming from decisions of 'individual great bishops, but later on in the shape, usually, of canons of councils' (Collins, Nature and Force of the Canon Law, p. 12). Such councils were either ecclesiastical (general) or local (see art. Councils and Synods [Christian]). As time went on, their regulations increased greatly in number, and collections of such were by the middle of the 15th century, among these may be mentioned those of Dionysius Exiguus (c. A.D. 500), Isidore of Seville (early 7th cent.), whose work was supplemented in the 9th cent. by 'pseudo-Isidore,' the compiler of the greater collection of the 9th cent. called the 'Forged Decretals,' and Gratian (12th cent.), whose Decretum was the corner-stone of medieval canon law, and is sometimes called the Corpus iuris canonici (Collins, p. 19; see, further, above, p. 885 f.). The medieval system of canon law and not at first meant to be more than something to be aimed at, and it was never fully carried out, any more than the liturgical regulations which set forth the elaborate ceremonial in the great cathedral of Salisbury were thought to be practicable in every little parish church of England. In this respect the older canon law differs from civil law, especially from modern civil law, which is much more rigid, though only what is fully systematized. This fact has a great bearing on the binding nature of the canon law in later times (see below (d)). In the Middle Ages the more rigid view of law gradually grew up, and, at least since the Reformation, an ecclesiastical canon is as much and as literally obligatory on those who are bound by it as any civil law.

(b) How far it was accepted in England in medieval times.—On this point there has been some controversy. According to one view, it was held to be valid in England only when accepted by Act of Parliament or by custom. This is the opinion of Gibson (Codex, ii. 945–947), who quotes Acts of Parliament of the 16th and 17th centuries, asserting that the old canons were accepted only if not contrary to the laws (of England) and the royal prerogative. Only those laws which were made by the realm, or were acknowledged by common assent or established custom were received. Gibson illustrates this by citing the proposal to legitimate in England children born before marriage.

Pope Alexander III. had published a canon to provide for this, but if it was accepted by the realm it was not accepted in England. If it was accepted, it was not included in the lists of the 14th and 16th centuries, and the canon law as a whole did run in England then (English Historical Review, July and Oct. 1896, Oct. 1897). He is here followed by Eves (Prayer Book Dictionary, p. 128) and, apparently with some hesitation, by Collins (op. cit. p. 35 f.). There is perhaps not really any great difference between these two views. Everything depends on what is meant by 'accepted.' The one view holds that the 'canonists'—ecclesiastical writers who compiled codes of canons—considered that the complete Western canon law (with some local reservations) was accepted, but that the State would not allow parts of it to be put in force. On the other hand, much of the old canon law had, as a matter of fact, no practical effect in England. And, if we bear in mind the difference between canon and civil law (below (d)), this is still all that practically counts in this respect. On the general subject Ayiffe (Parergon, p. xxxiii) expresses a similar view. On the other hand, F. W. Maitland, a high authority, has maintained that, as any canon not then required by the legislation of the State.

(c) Collections of English ecclesiastical laws.—A very early collection of religious 'constitutions' was made by William Lyndwood or Linwood (who in 1442 became bishop of St. David's), under the name of 'Provisions'; among these the Archbishops of Canterbury from Stephen Langton (1207–29) to Chichele, which was brought down to the middle of the 15th century. But the greatest activity in this respect of the 15th century was at the time of John Ayiffe's Parergon (new edition published in 1734) was, as its second title states, a 'commentary
by way of supplement to the canons and constitutions of the Church of England. 1 John Johnson (the famous vicar of Cranbrook) published in 1720 his (English) Laws and Canons (up to the Reformation of 1534). His work was followed by a number of other general works. Wilkins' Concilia, first published in 1737, carries the collection down to 1717; and Edmund Gibson, bishop of London, 1723-48, whose famous Codes was brought out in a second and considerably enlarged edition in 1789, gives the canons and the Acts of Parliament which relate to the Church, arranged according to subject instead of chronologically. No one in the older days did much for Scotland what Lyttwood did for England; but in our own time Joseph Robertson has collected the Scottish provincial constitutions under the title of Statuta Ecclesiae Scoticae.
(d) How far the older canon law is now binding.
—The opinion has been expressed that the whole of the Corpus iuris canonici is now binding, unless explicitly repealed by an authority equal to or higher than that which enacted it. It has been maintained that a council of inferior status cannot repeal the canons of one of higher status, or a local council those of a larger one. The result would be that the Anglican Church of to-day would be bound by those regulations which had little or no relation to the mores of the time. Such a view, however, looks at canon law from the point of view of the civil law. In the case of an Act of Parliament, laws remain in force (at any rate in England) unless they are expressly declared to be void. This was not meant to be the case with canon law, in which desuetude could repeal. A contrary custom invalidated it, and canons have debated how a jurisprudence of habitus could be formulated. In some cases, in others, there is a conflict over the period of time.
4. Contents of the canons, etc.—(a) English canons of 1603 as since amended.—These deal (1, 2) with the king's supremacy, and (3-12) with the consecration of bishops and clergy. The Canons 13-30 deal with the due celebration of divine worship, the keeping of Sundays and Holy Days, and the use of the litany, with rules for the service of Holy Communion to do so, and the reception of that sacrament, and the distribution of the elements. Canons 31-70 deal with the ministry, and give rules about ordinations, subscriptions, installations of clergy, the conduct of divine service, simony, pluralities, residence of clergy, strange preachers, the bidding prayer before sermons, vestures, catechizing, confirmation, marriages, visiting the sick, burials, private confessions, and marriage out of season. Canons 71-79 deal with church and school masters, canons 80-88 with churches and their furniture, glebe-lands, etc., canons 89-91 with churchwards and their assistants, and with church clerks. Canons 92-138 deal with canonical courts, both those of an archbishop (including matters of marriage and divorce) and those of a bishop, and give rules as to ecclesiastical judges, surrogates, provosts, registrars, and apparitors. Canons 139-141 deal with synods.
(b) Church of Ireland.—The 'constitution' of 1609 is divided into fifteen chapters. The first five give the functions and organization of general and diocesan synods, and deal with parochial machinery and the appointment to curates of souls; the 6th with the election of archbishops and bishops; the 7th with canons; the 8th with ecclesiastical tribunals and offences; the 9th with the canons of the Church; the 10th and 11th deal with the representative body which holds Church property and with certain funds; the 12th and 13th with burial-grounds, glebes, and parochial buildings; the 14th and 15th with provision for a vicar and chancellor of clergy and with superannuation. The canons have in the main the same antiquated appearance as the English canons, being the older code with some quite modern additions. They are divided into two parts, the one dealing directly with ecclesiastical service, (i-16) preaching, catechizing, baptisms, burials, marriages, confirmation, private communications, etc., and deal with (17) archdeacons, (18-22) ordinaries, (23) patronage of benefices and simony, (29-33) the work and life of ministers and their assistants, (34-40) the
furniture and ornaments of churches, Holy Communion, and other services, (41) the consecration of churchwardens and 'select vestries,' (44-46) repair and furnishing of churches, etc., (47, 51) appeals, (48) the General Synod, and (49, 50, 52-54) repelling from and re-association to Holy Communion.

(c) The Episcopate Church of Scotland has gradually built up its canons since 1511, and the code has a more modern appearance. It is now arranged as follows: canons 1-10 deal with the Prinums (bishops), canons 11-20 with the ordination and licensing of deacons, and canons 21-29 with the ordination and licences of deacons and deacons, subscriptions of assent and institution to benefices, and with lay readers; canons 21-29 with the services of the Church; canon 30 f. with vestiges, and with the structure and ornaments of churches; canons 32-33 with congregational organization; canons 34-45 with diocesan and provincial officials; canons 46-50 with synod, and canons 51-53 with judicial proceedings and disputes, notices, and interpretation. A bulky set of appendices not only gives the forms of deeds, but also the various legislation in one place, the list of additions to and deviations from the Book of Common Prayer, as canonically sanctioned.

(d) United States. The constitution is divided into eleven heads dealing with (1) the General Convention, (2) the election of bishops, (3) bishops for foreign lands, (4) standing committees in each diocese as the bishop's advisory council, (5, 6) admission of new dioceses and missionary districts, (7) provinces, ordination and admission of ministers, (8) the use of the Prayer Book, and arrangements for the same, and (11) alterations in the constitution. The canons (1692) are much more detailed, and are of great length. They are divided into four titles, each with many subdivisions. The first deals with the ministry and church services, the second with discipline (including marriage and divorce), the third with organized bodies and officers of the Church, and the fourth with the enactment and repeal of canons.

(e) South Africa. This province has one or two peculiarities. Its constitution, as made in 1870 and since modified, accords with the Prayer Book of the Church of England, and disclaims any right of altering them proprio motu, but with the proviso that the province is not bound by the interpretations of them by any ecclesiastical or other tribunal except its own (this famous proviso has since been altered). The constitution makes the provincial synod the legislative body, and says that it can adapt, abridge, and add to the Church Services if such alterations are consistent with the spirit and teaching of the Prayer Book. It can also review and revise any diocesan canons, (above, §4), and can alter its own constitution and its canons. The canons of this province have been frequently amended. Besides legislating, the provincial synod frequently passes resolutions. It is understood that these are only expressions of opinion, and are not legally binding on members of the Church.

(f) It is not necessary to do more than refer to two other examples of the law of the colonial branches of the Anglican Federation as, having originated in somewhat different circumstances. The Church of the Province of Canada, having the usual constitution, clergy, and clergy, in the province to make a constitution, and regulations, and the meeting of those in each diocese to make diocesan regulations. Another Act of 1858 explains some details. The Anglican Church in New Zealand has a constitution first made in 1857, as a 'voluntary compact' of the members of the Church in the colony; it has the same limitation of powers as the provinces of S. Africa has in the matter of altering formularies. The whole question of the nature of the relationship between the daughter and the mother Church is being keenly discussed in this colony, as is also the case in Australia, especially since all the dioceses of that continent have been federated in one organization.

6. Church law and State law when divergent.—When a voluntary club or society makes laws which are consistent with the laws of the State, and the latter afterwards alters its laws so as to be inconsistent with those of the club or society, the laws of the club or society in the ordinary course must go by the board. When, however, the society is a religious community, the question of moral obligation may arise, and the individual has then to ask himself whether he ought to obey the law of his Church and break the law of the State, taking the consequences of such action. Whether he is morally justified in doing so must depend on circumstances. If a heathen State commands one of its Christian subjects to sacrifice to a heathen god, the Church forbids him to do so, he must necessarily choose between the two, and few at the present day would fail to think him justified in determining to break the State law, even though he had to face martyrdom. Such contradictions between Church law and State law are less likely to arise in times and in States which tolerate diverse religions, and which have determined more clearly than in older days what is the role of the State and the Church. But divergences may often arise. It is proper to observe, however, that this means merely that the State allows what the Church as a whole, or a part of the Church in particular, forbids. To take an example from recent legislation: in Great Britain and in some other countries a man is now allowed by the State to marry his deceased wife's sister. But this does not mean that every Church must allow its own members to do so; each Church has the right, if it sees fit, to say that any of its members who use the liberty given by the State shall not be married by one of its ministers or in its buildings, or shall not be considered any longer a member, or shall be expelled from communion for a longer or a shorter time. There is no real contradiction here between the Church law and the State law; it is not as if the State had enacted that every widower must marry his sister-in-law, if he has one. This has been taken as an example only. The general principle is that a particular society may limit for its own members a liberty allowed or not forbidden by the State.

6. Interpretation of ecclesiastical law.—In the Church of England a great controversy has gone on for more than a generation as to the validity of the courts which interpret the ecclesiastical law. Into this controversy we cannot enter here, except to say that it turns on the question whether the State can erect ecclesiastical courts (the Judicial Committee of the Privy Council and that of the judge under the Public Worship Regulation Act) as the ascents of the Church. The controversy appears to be no nearer a solution now than it was when it arose; and it has practically paralyzed the actions of the ecclesiastical courts with regard to questions of validity, etc., and led to many nullities, but the difficulties have been great, and are enhanced by the close connexion between the Church and the State. It may be said, however, that the controversy does not turn on the question whether the
judges, the interpreters of the law, are—whether bishops or laymen—but on the question by whom their court has been appointed, and whether an ecclesiastical or quasi-eclesiastical court is bound by the decision of the inferior court (the Judicial Committee) which does not possess to be anything but a State court.

It may be useful to consider how the Church law is administered in the various branches of the Anglican Federation. In these each Church has set up its own courts, and there is no dispute as to their validity. They may give an erroneous or foolish decision, but their power of deciding has not been questioned; it is explicitly acknowledged by those who make the subscriptions required of them before receiving an office. In the Church of Ireland the supreme court consists of three bishops and four lay judges, and, though the latter are in a majority, the spiritual character of the court has never been questioned. In the Episcopal Church in Scotland the supreme court (which is the court of appeal from the bishops on disciplinary, and the court of first instance in the trial of a bishop) consists of all the diocesan bishops only, though they may (and, as a matter of fact, always do) have a lay assessor learned in the law to advise them, without being a member. In the American and Colonial branches have each set up their own court, variously constituted, but on more or less similar lines.

But the question arises, What is the relation of such voluntary ecclesiastical courts to the State courts? The former can command obedience to their interpretation of the law only by virtue of the contract entered into by those who come before them. Every clergyman, before being ordained or receiving any office, makes a subscription, not only of doctrinal agreement with the Church, but promising obedience to its canons and tribunals. It is, therefore, instructive to see what view the State would take of the decisions of such Church courts. We may take the position of the Episcopal Church in Scotland as a good example of this attitude, since two or three cases in which that Church has been concurred (one of primary importance) have arisen to illustrate it.

In the case of Forbes v. Eden and others (Leading Ecclesiastical Cases decided in the Court of Session, 1853-1871, Edinburgh, 1872), the question involved was, what the legal status of the church was in the Synod of 1639-43, and maintaining that he was not bound by them, as he had promised obedience to his ordination to the body of the Church of England. The case was given against him by the unanimous decisions of the Court of Session in 1859 and of the House of Lords in 1857, on the ground that the code of canons which he had subscribed provided for alterations being made, and that the said synod had fulfilled all necessary requirements for making alterations. The new canons then enacted were, therefore, binding on all.

In the Inner House—the Court of Appeal—Lord Cowan said that it was the province of the civil courts to redress civil wrongs. It was not their province, and it had not been their practice, to interfere as a court of review with the theological dogma or the internal regulations of religious sects or denominations. In the House of Lords the Lord Chancellor said that no civil court could take cognizance of the rules of a voluntary religious society made for the regulation of its own affairs, except so far as they related to civil questions affecting the civil property. This judgment, then, makes it clear that an autonomous Church can alter its laws, if its code contains provisions to that effect.

In a more recent case, which was taken to the House of Lords (Scottish Guardian, Edinburgh, 1880, pp. 445, 450), it was remitted to the Court of Session by Lord Young that the civil courts could not entertain an action concerning merely the government of the Church unless it involved a breach of contract; and this principle is affirmed in the argument before the civil courts, namely, if the plaintiff had in fact some grounds of which he knew, and if he refused to pay him. To this extent the civil courts intervene in ecclesiastical disputes.

The civil courts might be called in if a clergyman deprived or suspended by the Church courts declined to recognize their sentence. The Church, having no power in itself to enforce its decrees, must invoke the help of the civil courts, if necessary, to ensure the carrying out of its mandate. This might happen if the clergyman in question refused to give up his parsonage or church; or, if costs were given in the ecclesiastical courts against a certain party, and payment was refused, the civil courts would have to be applied to. In such cases the State tribunal would treat the case purely as a matter of contract, and they would investigate whether the procedure in the Church court had been regular and in accordance with the current canons. In the Forbes case (see above), where Forbes sued for damages because he was refused an assistant curate, Lord Benholme remarked that 'this exercise of ecclesiastical disciplinary power' could not be made the subject of a civil claim for damages in the Court of Session (Leading Eccles. Cases, p. 490).

From what has been said it would appear that, if a clergyman deposed for heresy by the Church courts appealed to the civil courts, the latter would not determine whether or not the doctrine in question was orthodox in the Church of the Church, but would ask whether the Church courts to which the clergyman had promised obedience had proceeded regularly. In the discussions it is quite possible that doctrinal questions might be touched on, as, in fact, was done in Forbes v. Eden, when the Eucharistic Controversy was referred to, and (as might be expected when men go outside their own line of study) some curious obiter dicta in theology and ecclesiastical history were uttered. But this would happen only incidentally. An important question of Church law was touched on in Forbes v. Eden, which illustrates the recent case of the Free Church of Scotland.

In the latter case, as the present writer understands it, it was ruled by the House of Lords that the Free Church had not in its constitution explicit powers of complete alteration, but was subject to the limitation that certain things were inalterable. Something of this sort was the case in the Episcopal Church in Scotland from 1838 to 1890, when the codes of canons limited the alterations to those of a certain class, and provided for the recognized constitution of the Church (until 1863 also with its 'acknowledged practice'). In the Forbes case in 1865 the Lord Ordinary observed that the 'civil courts' could not interfere to protect Churches or individual members of Churches from the influx of new doctrines. They only interfere to prevent the use of property being perverted through its being retained by a majority who only keep the name which they have abandoned to the principles of the Church to which it was devoted' (Leading Eccles. Cases, p. 401 n.). In the Inner House Lord Inglis said that a majority may be restrained on the application of a minority from carrying on an alteration of a fundamental article of the constitution, and as an illustration said that a proposal to abolish the Thirty-nine Articles and to substitute Knox's Confession of Faith of 1567 would require unanimity in the Free Church (ibid., p. 404). In the Provincial Synod of 1890 the limitation on the power of alteration contained in the vague phrase 'recognized constitution' was removed.

Experience, then, tends to show that a non-established Church may make, interpret, and administer its law, in the existing civil conditions of this country, without any undue interference from the State. But the machinery must be carefully prepared, so that its autonomous powers are clearly laid down in the documents that govern it.
LAW (Egyptian).—No body of Egyptian laws has come down to us, but some body of written code is probably to be recognized in the forty leather rolls laid before the waatir judgment-seat in the XVIIIth dynasty (J. H. Breasted, Ancient Records of Egypt, Vol. I, ii, 670, 7125). We have to depend for our knowledge of Egyptian law and its procedure almost entirely on the few royal decrees, business documents, or the like, that happened to survive among the papyri to represent the varying practices of several thousands of years. It is impossible to give even a meagre sketch of Egyptian law from these materials; a brief enumeration of the documents or groups of documents in order of date may be of service.

1. Old Kingdom.—For the Old Kingdom there is an interesting series of royal decrees containing immunity from taxation and services of different kinds to particular temples, their personnel, lands, and villages (Breasted, p. 705), and in the tombs we find concise records of the conditions under which the tomb entrances are entrusted to the ka-priests (cf. Breasted, i, §§ 201, 232, etc.).

The papyri which a group of scholars has briefly states a claim made in regard to the property of a deceased man involving guardianship and its denial by the opposing party, together with directions as to how the question should be settled (A. Erman and P. Krehl, Aus den Papyri der Königlichen Museen, Berlin, 1899, p. 833). A stele records the sale of a house in the presence of witnesses for goods the value of which is reckoned by a fixed standard (H. Ewald, Enquête sur un acte de vente immobilière, Paris, 1913).

2. Middle Kingdom.—From the Middle Kingdom comes a remarkable record of a tomb entrance in the shape of ten contracts made with the priests and others of the nome of the nomarch's tomb, and the directions given to the single well-endowed ka-priest to whom the whole care of the tomb and its services was confided (Breasted, i, § 556). It shows that the Old Kingdom practice of the hereditary tomb priests had failed. A group of papyri from house ruins give two examples of testamentary dispositions (quit-per), census-lists (comparably to the modern notaire), and others about the hire of services and payment to be made, and a statement of a claim before the courts (F. Ll. Griffith, Nahun Papyri, London, 1899), and a memorandum in support of the claim to an inheritance (PSBA xiv, [1922] 328). The inscription of Chennehopt (Breasted, i, § 619) shows the laws regulating the boundaries of and succession to nomarch's province. A royal decree (ib. § 773) deposes a nomarch for sheltering an enemy, and exclaims his descendants from the oaths for ever.

3. New Kingdom (dynasties XVIII—XX.).—From the XVIIIth dynasty we have the difficult and fragmentary inscriptions of the duties of the officials (cf. Breasted, i, § 606); the latest treatise on the writing of the scribes of the First Intermediate Period is by K. Sethe (Die Einsetzung des Vezier unter der 28. Dynastie, Leipzig, 1909). There is also the brief proclamation of a king's accession (Breasted, ii, § 54), the dedication of the city Askhetaton to the Sun-god by the heretic king Akhenaton (ib. § 949), a royal gift of lands to an official (ib. §§ 1042, and the edict of Horenbek, being a series of enactments to punish the unjust impositions of tax-gatherers and royal officers (ib. iii, § 45). Of documents on papyri we have group of two sunt (hirings of female slaves) and two other documents connecting these with a law suit (A. H. Gardner, in ZA xliii. [1907] 27). Ostracon records, who dispose of a dispute about the payment of for the year 17, which is made in the interval since the last reaping are incorporated.

A. J. MACLEAN.
in the early contract papyri, an oath by the king and Ammon was customarily recorded.

All documents of this time which had been published or were accessible to him in original or paper form, were translated by the present writer in his Catalogue of the Demotic Papyri in the John Rylands Library, Manchester, 1906, vol. iii., where the papyri of that collection are also fully translated. They comprise sales of land, houses, temples, personal property, law cases, leases of farms; also contracts of marriage and divorce, of sonship (adoption), and of servitude. A large and complete papyrus in the Rylands Collection contains an elaborate petition presented to the scribe by a mutilated priest seeking redress and restoration of hereditary rights.

5. Ptolemaic period.—After the Macedonian conquest sales of lands and houses and of mummies with their funerary services, mortgages, leases, loans, marriage-contracts, and exculpatory oaths are common, but contracts of divorce, adoption, and servitude are not to be found, nor wills in any form. The native forms are modelled on those that preceded them, and are quite distinct from the flood of Greek contracts being produced in Egypt at the same time (see the above-mentioned *Rylands Catalogue* and numerous publications of papyri by Spiegelberg). The temple of Canopus and of Memphis (the Rosetta stone) may also be mentioned here.

6. Roman period.—The native legal documents are practically confined to house-sales and mortgages in the Fayyum of the 1st cent. A.D. See also ETHICS AND MORALITY (Egyptian), § 12.

LITERATURE.—Besides the works specified above, the most recent and therefore best publications of documents include W. Spiegelberg, *Die demotischen Verträge der Papyri Herm- und Nectanebus mit einem rechtgeschichtlichen Beitrag von Josef Farinich, Leipzig, 1915; O. Graevenitz, F. Pretzlik, and W. Spiegelberg, *Ein Erbleit aus dem ptolemäischen Ägypten,* Strassburg, 1912. The numerous works of E. Revillo on Egyptian law are too fanciful to be recommended.

F. L. N. GRIFFITH

LAW (Greek).—I. UNITY OF GREEK LAW.—Although the Greek world was made up of a great number of commonwealths, each possessing independent laws of its own, and although every allowance must be made for local peculiarities, the leading conceptions of Greek law as a whole may still be considered as a unity. Most of our modern concepts and institutions, e.g., Athens, as 'the school of Hellas,' is in a great measure representative of Greece. The Greeks felt very strongly that their customs and laws were peculiar to themselves as a nation, and presented a marked contrast to those of other people (Ernst. *Anthr. and Dem. in Locc. v. 40*).

II. PERIODS.—The history of Greek law falls into three principal periods, which may be called the archaic, the classical, and the Hellenistic. In the first, the rules of Greek legal lore are one of the varieties of Aryan tribal customs, which must be studied by the method of comparative jurisprudence, i.e., a close connexion with Indian, Italic, Celtic, Germanic, and other systems. The archaic covers roughly the 6th, 5th, and 4th centuries b.c., and is concerned chiefly with the laws and institutions of the autonomous city-states. The third corresponds to the time when the Greek concepts were acting as a kind of leaven in the vast tracts of the East—Asia Minor, Pontus, Syria, and Egypt—through which the Greek population had been dispersed by emigration and the Macedonian conquests.

1. The archaic period. In archaic Greece, e.g., Ionian, in Lcrete, not a technical, body of rules. It represents the most striking experiment in history to administer law according to the standards of the 'average man,' to whom every contract (φιλανθρωπία), while each party was supposed to consist of thirty kindreds (φιλανθρωπία). The chief contribution of this period to Greek law consists in the principles of family law and succession. The community of family interests is symbolized by the hearth (χώρα) as the center of the household; the estate (εσώρος), which forms the basis of the material existence of the household, is the ανάγκη, and even in Athens of classical times certain rights and duties were considered as peculiarly attached to this estate (φροντίδα, i.e., 1000 florins, as the estate of the criminal prosecution, corresponding to rights of succession to the ιδιοκτήτης). For this reason the practice of adoption was as well developed in Athens as in Rome (see art. ADOPTION [Greek]). A special case arose when a person died leaving a daughter to succeed him. She was emphatically 'joined to the estate' (σύζυγος), and destined to marry the nearest agnate in order to preserve it. Instances from Athenian practice are quite common, but the custom is also well illustrated by examples from Sparta and Crete (Herod. vi. 57; Code of Gortyn, as to the παρατατότητα, i. 302 ff.; Dareste, *Rec. des inscr. jur. gr.,* i. 372 ff.; further, art. INHERITANCE [Greek]). The wider kindreds were constituted on the agnatic principle, as units organized under a chief (πατριαρχία ἄνδρων); but in many respects relationship through females was also recognized, and, through the narrower circle of kindred, included all relatives down to the degree of first cousins once removed. The admission of relatives through females by the side of agnates may be explained to some extent by tradition from a period of matrilinear organization, which, according to a popular legend, existed in Athens at the time of Akhrem (Athenaeus, xili. 2 [565]); but it is also connected with alliances by marriage, and, in Kleisthenes the Alkmoneid. The influence of kinship on legal rules is well exemplified by the extensive rights of kinsmen in respect to criminal prosecutions. In cases of homicide, an action (Νέκτος) had to be brought by relatives of the deceased, and, if the offence amounted to manslaughter, it might be condoned by the relatives (εσώρος) (Law of Draco; Dareste, *Inschr.,* i. 71) and compensation given by the slayer to the kindred. The family authority of the father of the children and of the husband over the wife appears in Greek as well as in other Aryan laws; but it is not so drawn out, by the law, as in the Roman system. The father is not the absolute ruler of the household, but, as it were, a party to an implied compact, providing protection and education for his children, and entitled to support from them in return (εισόρος).

2. The classical period.—(a) General characteristics.—In this period we must be careful to distinguish between oligarchic and democratic political principles. Aristotle (e.g., *Pol. vii. 1309a*) often calls attention to the fact that the laws assumed a different aspect according to the system of government which was in force. The ideal of oligarchy is government by a small number of equals (επίσημος), the state properly covers roughly the 6th, 5th, and 4th centuries B.C., and is concerned chiefly with the laws and institutions of the autonomous city-states. The third corresponds to the time when the Greek concepts were acting as a kind of leaven in the vast tracts of the East—Asia Minor, Pontus, Syria, and Egypt—through which the Greek population had been dispersed by emigration and the Macedonian conquests.

1. THE CLASSICAL PERIOD. In archaic Greece, e.g., in Lcrete, not a technical, body of rules. It represents the most striking experiment in history to administer law according to the standards of the 'average man,' to whom every contract (φιλανθρωπία), while each party was supposed to consist of
numbered some 200, 500, or 1000 citizens, who had to decide by vote after hearing the pleadings, but without previous deliberation. In these circumstances, no doubt the action of the tribunals was often extremely capricious and swayed by merely emotional considerations (e.g., Herakleitos, in Lyc. 75 c; cf. Wyss's Iasius, passim). But the real reason was not that these defects existed, but that in spite of them the administration of justice was of such a kind as to produce not only fine oratory, but remarkable judicial decisions.

(c) Nature of law.—The Greeks set a very high ideal to the State; its aim was not merely negative—to provide order and security for its members' peaceful life—to ensure the welfare of the individual. The policy might be called a cultural socialism—one μιᾷ τῷ τῆς ἔθνους, ἀλλά διὰ τῆς ἐκ τοῦ ἔθνους (cf. Plato, Legg. xiii. 923 A). Thus the State was regarded as being primarily an educational and cultural instrument. To the attainment of its ideal, the laws were the chief instrument; the Greek provided a πατεία τῆς τοῦ κοινῆς (Arist. Eth. Nic. vi. 11). Their object was to embody the eternal justice (δικαίους) and it is characteristic of the Greek conception that there is no term in the language equivalent to the Latin justus, the adjective ἸΔεῖα, meaning not only 'the lawfully', but 'the just'. Hence the archaic conception of law was that it was essentially sacred in its origin, being the gift of the gods to men (see passage from Dem. adv. Aristotelianorum, quoted Dig. i. 3. 11), the concrete expression of a universal and immutable δικαίους (cf. Herakleitos, fr. 114; H. Diels, Herakleitos von Ephesos, Berlin, 1909, p. 44); and hence the view, which freed law from the hands of the judges, that the most ancient law is the best (e.g. Isok. ἔριπτι τῆς Ἀρτέμιδος, 82). In the classical period, however, this ancient idealistic view was subjected to searching criticism. The 6th cent. was a time of great fermentation, when, as Thucydides says, 'men believed nothing but what nothing was secure' (ii. 53); a growing acquaintance with new countries and peoples impressed the Greeks vividly with the diversity of national ideas and customs (Herod. iii. 35); the great catastrophes of the Persian and Peloponnesian wars produced a distrust of settled institutions; and the development of philosophical theories led to a marked assertion of individualism. The general result was an acute realization of the relativity of all human affairs, which in practical life acted as a powerful social dissolvent. It is not the case that only by means of the product of force, or an arbitrary and artificial arrangement which superior persons were entitled to disregard (Thrasymachos and Glaukon in the Republic, Kallikles in the Gorgias). In the domain of jurisprudence the great problem was to determine how far the fundamental laws could be considered as ingrained in the nature of man, and how far they were merely subjective and fictitious. It was the Sophists who chiefly canvassed this question, but the inquiry did not by any means originate with them; it appears as early as Demokritos, who first sets up the antithesis between 'true' or that which exists by nature, and τέχνη, or that which exists by convention (fr. 1; cf. Archelaus, op. Diog. Laert. ii. 4; and Hippolytus, op. H. Diels, Doxographi Graeci, Berlin, 1879, p. 594). This principle of relativism nurtured the idea of an individual law

(d) Sources of law.—Let us now consider how these jurisprudential principles were embodied in the practice of law. (1) Enacted law.—The most important source of written law was the constitution. The sovereign people did not care to entrust the administration of justice to the independent judgment of magistrates and officers: the 'rule of law' was fully recognized by Athenian democracy (cf. the S. P.hilipp., § 113). As soon as the authority of τέχνη was usurped by popular decree (ὑφηγημένη), democracy, said Aristotle, was undermined (Pol. vi. 4, 1292 b, 27 H.). Elaborate procedures against anyone who attempted to violate the means of the ἀρχές τῆς ἡπονίμης, oaths and penalties (Hyperides, Philipp. §§ 8, 6; Dem. adv. Aristoc.)
LAW (Greek) 849

86. (2) Customary law.—Nevertheless, there was also a vast body of customary law, which was mainly based on democratic by the preceding perioikia, since only a few of the rules as to procedure and substantive law were actually promulgated, &sigma; (Arist. Ath. Pol. iii. 4). Sacral law in general remained uncodified; ancestral customs (tyrpa) were recognized as a definite and sacred element of the law, and as such were interpreted by the exegete (Dem. in Euthym. p. 1160, § 86 f.). The ancient jurisdiction of the archons, and that of the Areopagus, until the reforms of Perikles and his successors, were also largely concerned with traditional usages. (3) President.—President was never regarded as being on the Athenian courts, but various kinds of non-litigious custom—e.g., dowry, commercial practice, maritime law, and forms of pleading and conveyance employed by the professional scribes (γραμματεις) of the courts together with various forms of exegetical agreements (cf. Dareste, Inscr. jur. gr., i. 318)—tenaely be raised by the archon; and, in general, existing decisions had at least a symptomatic value, as showing the prevailing views and tendencies of popular courts (cf. Dem. in Dism. 48). (4) Natural law.—Though in the orators and philosophers there are many indications of an unwritten law (νόμος ἄρασις) which is founded on instincts of human nature (Arist. Eth. i. 1. x. 3), the theory of a transcendent law of nature was not erected into a positive juridical doctrine. It appears most forcibly in the poets (e.g., Soph. Antig. 454), though it was sometimes appealed to in actual litigation (Lyseis, in Erotosthenem, § 3). (5) Equity.—A common juridical theory of the law of nature was rendered unnecessary by the conception of ἐξίσωσις, which gives a peculiar colouring to the whole system of Greek law. It amounted in practice to a liberal interpretation and application of the rules. Although the oath of the helots enjoined them to frame their decisions according to their consciousness of justice (ἀρετάργαν καὶ ἀρετωρίαν) only where there was no definite law to go by, in practice popular tribunals took great liberties in the application of existing laws. To some extent this was made necessary by the archon's origin and obscure expression of many fundamental laws (Arist. Ath. Pol. ix.). Wills and contracts provided fraternal material for such discretionary justice.

(c) Distribution justice.—The principle of the distribution of rights and duties, so characteristic of the Athenian legal system, was by no means confined to theory, but was very definitely asserted in practice. Privileges and burdens were dispensed according to what the individual did and could contribute to the common stock. Military service, taxation, and the liturgies, i.e., public services such as the fitting out of ships, providing choirs for dramatic performances, etc.—were all regulated upon this basis. Those who considered themselves unfairly burdened by the very heavy requirements of the liturgies might resort to the ἀριστοκρατία. A citizen who had been called upon to perform a liturgy might claim that another was better able to undertake it than himself, and demand that he should either do so or exchange properties (Dem. in Phem.; Isok. Περὶ τῆς Ἀριστοκρατίας). Similarly, if a citizen had been exempted from public burdens or granted a subsidy, he might be called upon to defend his liturgies (Lyseis, Or. xiv., § 6 ff.). The law of property in Athens never developed on such rigid lines as in Rome. There was no theory of absolute ownership. The ἄνευ was primarily the thing which was 'allotted' to the individual, but a kind of 'eminent domain' was reserved to the commonwealth. Therefore the typical action for the recovery of property was the ἀποκαλυπτικος, which was not a claim for absolute title, but only for guaranteed possession. Expropriation and interference with contracts were practised with a disregard for private right which is startling to modern notions (e.g., legislation in Ephesus at the time of the Mithridatic war [Dareses, Inscr. jur. gr., i. 22]).

(f) Wrong and crime.—We distinguish in the Greek theory of wrong and crime three elements which call for juridical treatment. (1) The first is that of redress. 'Damages,' in Athenian law, are not merely compensation, as in modern theory, but an equation of the loss to the party wronged (ἀμοιβα) and the gain to the wrongdoer (κατὰ τίνος). All wrongs are considered chiefly from the personal point of view. There is no sharp cleavage between the private action (δικαίωσις) and the public action (γραφή); i.e., a transitional form, the δικαίωσις τὸν, a private action for crime, is distinguished from the δικαίωσις τίνος, a purely private suit. As for the assessment of damages, the contending parties presented rival valuations between which the court had to decide. (2) The element of public retribution assumes a religious form. After a sacrifice had been offered, e.g., was a pollution which excited the wrath of the Erinyes and the Olympian gods, and must be cleansed by religious purification. Hence even in classical times all actions of homicide were tried in temples, and even an inanimate object which caused the death of a human being was solemnly judged and sentenced before the hearth of the government (Pyrtaneum). Hence also the importance which was attached to orthodoxy: impurity, which was taken to include professions of free thought, was inadmissible by the γραφή (δικαίωσις) (e.g., the case of Sokrates). (3) How far was it recognized that in every crime there is a revol of the individual will against the supremacy of the community? There are many indications that the Greeks were conscious of this element in crime, e.g., Isok. c. Leckitem, § 7). They were not concerned with problems of individual free will in the theory of punishment. In view of the predominance of the commonwealth over the individual, punishment itself often took the terroristic form of actual extermination and intimidation. Demokritos puts the criminal on the same plane as a wild beast (fraga. ap. Stob. Flor. xiv. 16, 18, 19), and Plato unequivocally states the necessity of removing obnoxious members of the body politic by means of capital punishment (Lego.). The social effect of intimidation was one of the leading principles of Protagoras's theory of law, and Plato fully endorses the view of the great Sophist that the object of punishment is not revenge for what, after all, cannot be undone, but the prevention of similar offences in the future (Protag. 324 B).

3. The Hellenistic period.—It is impossible to enter in detail upon the discoveries which the recent researches of papyrologists and epigraphists have made in the Greek law of this period, especially which prevailed in Egypt. One of its most remarkable features was the personification of the State in the king (the Pharao, the king of Egypt), and the subjection of all relations to the fiscal point of view. Under the rule of the Ptolemies, dominium was vested in the monarchy, and private property in land amounted only to a species of leasehold (τείχος) to the crown. The cultivation of State domains (γῆ βασιλικῆς, and, later, on, of all taxed land, was ensured by every means, including a compulsory distribution of plots (σμίδος) among peasant farmers. In the interests of the peasantry (γηδονες γεωργον) to the crown lands we find the germ of the doctrine of local origin which played such a large part in the later Roman Empire. In Asia Minor, under the Seleucids, there was even a class of tenants, called
show that the arable land was already held in
severalty.
In the Hindu law, the institution of marriage is
improved by prohibiting purchase of a wife, and
declaring a contract of marriage, if once concluded,
to be irrevocable. Nevertheless, the position of
women is one of absolute inferiority to the male
sex. Thus a wife is liable to be chasted by her
husband; and, even when she is unfaithful to her
husband, she must worship him like a god. A woman
is declared to be never fit for independence, and
has to live under the perpetual tutelage of her
father, husband, and sons. Polygamy is allowed,
and seems to have been very common in rich and
noble families. Infant-marriage is recommended,
and the re-marriage of widows prohibited or dis-
couraged. As regards proprietary right (stridhana),
women are said to be incapable of holding any prop-
erty (except their stridhana, or peculiar property); nor
can they inherit, under the early law of suc-
cession at least, which was subsequently modified
so as to let the widow in as an heir, with certain
restrictions, on failure of male posterity. All
family property is supposed to be held in common
by a sort of joint ownership (joint family), the father
or manager being regarded as a head
partner. The family members are kept together
by the sacred obligations offered in common by its
living head to his deceased members (see Inher-
tance (Hindu)). After the father's death the
sons divide his property equally, or with a
special speciation for the eldest son; or the eldest
son succeeds to the whole estate, the others living under
him as under their father. Twelve different kinds
of succession are recognized, each of the secondary
sons succeeding in default of his superior in rank;
whilst the real legitimate son excludes them all
from inheriting. The passages in the law-books
telling the possession of a son for spiritual pur-
pes, as saying his father from hell, generally
related to the real legitimate son. The gross usages
relating to the affiliation of the subsidiary sons
were discouraged by the legal writers, and no
doubt the existence of these usages throws an un-
favorable light on the constitution of the family
in ancient India. Thus there is the kyatrana, or
son begotten by levirate (nigona); the gudhaja, or
secretly born son of an adulterous woman; the
shukra, or son of the pregnant bride; the ksema,
the unmarried damsel's son; the krita, or purchased
son; the apaviddha, or deserted son. The more
recent writers do not acknowledge as legitimate in
the present age of sin (Kaliyuga) any but the true
son, procreated in lawful marriage (saurn), and the
adopted son (dakshana) (see Adoption (Hindu)).
There is diversity of opinion as to whether a
widow may be allowed to adopt, with the assent
of her husband given shortly before his death, this
being the only case in which a sort of testamentary
power of the owner of property is recognized.
A father may, indeed, distribute his property among
his sons during his lifetime; but, in doing so, he
can exercise discretion only so as to his self-acquired
property, the ancestral property being held by
father and sons in common, according to the joint-
family principle.

Punishment is the divinity of god (see Crimes, Crimes and Punish-
ments (Hindu)). A king in whose dominions there
are no thieves, adulterers, calumniators, rogers,
murderers, (after death) attains the world of Indra.
Abuse, assault, theft, violence, including man-
slaughter and robbery, and sexual crimes, such as
adultery, rape, seduction, and fornication, are
regarded as the five principal crimes. Theft
and robbery seem to obtain special attention. A
thief appearing before the king with flying hair,
holding a club in his hand, and proclaiming his
deed, is judged of his guilt, which, if unpardoned,
but, if the king does not strike, the guilt falls on him. Cattle-lifting appears to have
been specially common, and the village to which
the robbers were tracked was made answerable.
The principle thus laid down has remained in
effective part of the law down to our day, and
elaborate rules are still in force in Kâthiawar for
pursuing up the track from village to village, the
Talukdar of the last being held primarily respon-
sible. Stolen property in general must be restored
by a king to its owner, according to Manus; and
a ruler is even bound to make good the loss occasioned
by his negligence. The king is required to cause
taverns, shops, competitive assemblies, oil
forests, and other places of retreat to be guarded by
companies of soldiers, in order to keep away thieves,
and to find out thieves with the aid of clever re-
formed thieves, and destroy them. The notion of
theft and robbery is extended very far, so as to
include cheating of every sort, forgery, bribery,
judical, dishonest dealing in judicial proceedings,
falsé gambling, etc. To steal gold belonging to a
Brahman is regarded as particularly punishable;
but it is in the law of abuse and assault, of morn-
cide, and of adultery, that the gradation of pun-
ishments according to the caste of the offender and
of the offended comes out most clearly. Thus a
low-caste man must suffer death for an intrigue
with a guarded Brahman woman, as a safeguard of
caste purity, whereas adultery with a woman of
inferior caste is punishable only with a fine. Fines
are inflicted equally on Katriyas and Vaishyas
who defame one of a higher caste, while the Sudra
offender incurs corporal punishment. Fines are
the most common form of punishment, but there
are many other forms (see Crimes and Punish-
ments (Hindu)). Barbarous cruelty, the prevalence of the lex talionis, and want of system characterize the
Indian as well as other primitive codes. Death
is prescribed by Manus for aggravated theft, for
harbouring robbers, swindling, kidnapping, for certain acts of adultery and immor-
tality, for a great many more crimes than under more
balanced systems. Death by torture was the
punishment of a dishonest goldsmith, and mutila-
tion that of the destroyer of a boundary-mark—
which shows how great was the alarm at their
defences. When we find that a red-hot iron spike
ten fingers long is to be thrust into the mouth of a
low-born wretch for reviling a Brahman, we are
reminded that the composers of these law-books
were Brahmins. Although the judges, like the
judges, were generally Brahmins, it appears doubt-
ful whether the privileges claimed by the sacer-
dotal class and incorporated with legal rules were
actually accorded to them. Many of the privileges
belong to the moral sphere, and go beyond what we
recognize as the proper province of the penal
law. Excessive drinking is punished as a crime
in itself, not only as a breach of the tabu. Gambling is viewed in the same light. There are
rules for securing chastity and sexual purity.
Hospitality is considered a duty to be enforced by
law in certain cases. The prohibition of sati,
sacred cremation, and the disposal of boors and
incantations meant to destroy life is punishable
by a fine. Every one must be strictly kept to
the employment of his own caste. Matrimonial
duties and family relations are elaborately regu-
lated. The proper province of moral obligations and delinquencies, however, is the ecclesiastical law, with its delicate penances and austerities (see Expiation and Atonement [Hindu]). Punishment and penance may be combined, as when the slayer of a milch-cow or of a bull (these being sacred animals) has to pay an atonement in the case of his guilt. In cases of sexual criminality, the king inflicts punishment and the sin committed is expiated by a penance. Should an offender fail to perform the penance prescribed for his offence, he is at once caste by the ceremonies of ghosanghapha, 'the breaking of the water-pot'—a ceremony which is performed down to the present day in such cases. Punishment by itself is also supposed to have a purifying effect, as in the above-mentioned case of a thief who appears before the king of his own accord and is struck down by him.

Judicial procedure is simple and patriarchal. It presents the open court method of investigating accusations for crime, the king, attended by his Brahmans, entering his court of justice every morning, and there, after having seated himself on the judgment-seat and having worshipped the gods, undertaking the trial of the causes brought before him. If in haste, his trial is to last for one whole day if a criminal deserving punishment is allowed to go free, and for three days if an innocent man is punished. The more recent law-books mention a number of other members of a caste of justice besides the king—the king's domestic priest, his chief judge, who may also represent him if absent, his ministers of State, the assessors of the court, who are required to state their opinion of the case unreservedly and in accordance with the dictates of justice, the accountant, the scribe, the beadle. Gold and fire are used in the administration of oaths and ordeals, and water for refreshment. In giving a decision, the king must attend to local usage, written law, and the practice of the virtuous, if not opposed to local, family, or caste usages. Villages, tribes, and castes have also tribunals of their own, corresponding to the modern Palichaevats; but from these an appeal to the king is possible. There is no essential difference between the trial of civil and criminal suits, except perhaps that the character and other qualifications of a reliable witness are not examined so strictly in civil cases as in criminal ones, where the defendant in a criminal case cannot be represented by a substitute. The litigants must always be heard in person, and the king or the judge watches their countenances and their conduct carefully. Witnesses are watched in the same way, the depositions of witnesses being regarded as the most important part of the evidence. Certain persons are not admissible as witnesses on account of their personal relations with the litigant parties, or on account of age, dignity, sex, devotion to religion, moral or personal defects. There are also some provisions as to the number of witnesses, as that there shall not be less than three. In the event of a conflict of testimony, that of the majority generally prevails. The witnesses are solemnly adjured to speak the truth; and, if they should happen to meet with a calamity within seven days after making their deposition, this is held to prove its falsehood. Perjured witnesses are severely punished, and have to endure fearful pangs in a future existence, and destroy their own relatives through their wickedness. Perjury, however, is tolerated where an accused man may be saved from death by it.

The latter law-books give special prominence to documents, and make written prevale over oral evidence, the plaintiff and the answer of the defendant having, likewise, to be stated in writing. The trial is to be conducted discreetly and skillfully, for liars may have the appearance of various men and veracious men may resemble liars, or documents may be bad religious penances and austerities (see Expiation and Atonement [Hindu]). Punishment and penance may be combined, as when the slayer of a milch-cow or of a bull (these being sacred animals) has to pay an atonement in the case of his guilt. In cases of sexual criminality, the king inflicts punishment and the sin committed is expiated by a penance. Should an offender fail to perform the penance prescribed for his offence, he is at once caste by the ceremonies of ghosanghapha, 'the breaking of the water-pot'—a ceremony which is performed down to the present day in such cases. Punishment by itself is also supposed to have a purifying effect, as in the above-mentioned case of a thief who appears before the king of his own accord and is struck down by him.

Perjury, however, is tolerated where an accused man may be saved from death by it.

The latter law-books give special prominence to documents, and make written prevale over oral evidence, the plaintiff and the answer of the defendant having, likewise, to be stated in writing. The trial is to be conducted discreetly and skillfully, for liars may have the appearance of various men and veracious men may resemble liars, or documents may be bad religious penances and austerities (see Expiation and Atonement [Hindu]). Punishment and penance may be combined, as when the slayer of a milch-cow or of a bull (these being sacred animals) has to pay an atonement in the case of his guilt. In cases of sexual criminality, the king inflicts punishment and the sin committed is expiated by a penance. Should an offender fail, divine test is to be resorted to, of which there are many kinds, such as the water and fire ordeals, the ordeal by poison, the ordeal by hot metal (a gold coin has to be taken out of a vessel containing hot oil, and the ordeal by drawing lots, and the ordeal by sacred libation. The deities are invoked to supervise these proceedings, and are believed to establish the innocence or guilt of the accused. In less important cases, the accused may be administered, the accused swaying by the head or feet of a Brahman, or of his wife or son, or of his, and his innocence being established if within a certain period he should not meet with an extraordinary calamity, such as an illness, or the loss of a son or of his fortune. The custom of performing ordeals has survived down to very modern times; and oaths by an idol, a Brahman, etc., are even now in vogue, an accident happening to the person afterwards being considered to prove his guilt. The decision of the judge in a suit is to be stated in writing, and a copy of it is to be handed to the victorious party. When lawsuits are decided properly, the members of the court of justice should not be dismissed from guilt. But where justice, wounded by injustice, approaches, and the judges do not extract the dart, then they also are wounded by that dart of injustice' (Nârada, p. 17; Manu, vi. 12).

The sources of the Veda, according to Manu (li. 6, 12), consist of the whole Veda, the Smṛti, or tradition, the customs of holy men, and self-satisfaction (where there is no other guide). The four Vedas, together with auxiliaries, literature, all of which is believed to be eternal and inspired, are confined to the consideration of religious rites, and contain very little about secular law, though they are considered the fountainhead of the whole law. Dharmasastra or Smṛti are the real sources of law from a legal point of view. The term Smṛti means literally 'recollection,' and is used to denote a work or the whole body of Sanskrit works in which the sages of antiquity set down their reflections of the divine precepts regarding the duty of man. In reality, the earliest law-books were composed in and for the Brāhmanical schools studying the various parts of the Veda, and have been preserved as portions of the Vedas, used in schools, or as independent works. Such compositions are the Dharmasastras or Dharmasastras of Apastamba, Baudhâyana, Gántama, Vasiṣṭha, Viṣṇu, and some others, composed in the aphoristic Sūtra style, either entirely in prose or, more usually, in mixed prose and verse. Some of these works are supposed to have been written in the 6th or 6th century B.C., or earlier, but they may have undergone many changes since then. Their contents are mainly religious, but the positive law is also treated in them, and they are very useful for tracing the gradual development of legal institutions in India.

From these aphoristic treatises we pass to the versified works, composed in the ādhyātma metre, such as the celebrated Code of Manu, the Maga Charta of Brāhmanism; the Code of Yājñavalkya, distinguished for its conciseness and systematic treatment of the whole law, in three books, on ādhyātma, i.e. religious rites and duties, āyātavād, i.e. jurisprudence, and prāyaścittas, i.e. sins and atonements; and the Code of Nārāyaṇa, not being confined to jurisprudence alone, which it treats with great fullness of detail. The opening verses of the Code of Manu narrate how Manu, the descendant of Brāhman, gave the great later law-books, and afterwards transmitted the task of expounding the Institutes of the Sacred Law, which he had learned from Brāhma,
to Bûrgu, one of his ten mind-born sons. There is a gloss to the line that 'at that' Manu said is medicinal and another maxim stating that 'a smruti or rule of law that is opposed to the sense of Manu's Institutes is not approved.' The great number of learned Commentaries composed on the Code of Manu, from Mitakshara to the later school of law, is a testimony to the very particular authority early assigned to this codification of the religious and secular law, which may have originated in the first centuries A.D., if not earlier. There are also many Smritis which have not been preserved in a separate text and complete form, and are known to us only from the passages of law cited in the Sanskrit Commentaries and Digests; but the authenticity of these texts is somewhat doubtful. The mythological poems called Purâṇas and also cited a great deal, particularly on the subject of vows, gifts, and other parts of the religious law, though they are said to be inferior in authority to the Smritis. The Commentaries and systematic works on law, being posterior in time to the Smritis and Purâṇas, have gradually come to supersede them in authority, especially the celebrated Mitakshāra, a Commentary on the Śûta of Vaiṣṇava (or Vaiṣṇava) composed by the ascetic Vaiṣṇavaśāstrī, c. A.D. 1100, at Kālare, in the Deccan. The Śrutickārīkā of Dvānla-bhāṭa, the Sarvaśrīśāstra of King Kudradeva, the Vairāntika of Mitraśāstra, the Mahākāraka of Nīlakaṇṭha, and other learned compositions are used concurrently with the Mitakshāra in several provinces; in Bengal alone the Dāikyākhyā of Jivataraśana has superseded the Mitakshāra as far as the law of inheritance is concerned. Customs which are, like written codes, considered a source of law have to a certain extent been embodied in the codes. Recent collections of customs were instituted by the British Government—e.g., A. Steele, The Laws and Customs of Hindu Caste, London, 1898; C. L. Tupper, Punjab Customary Law, Calcutta, 1881; C. Bouillon and W. H. Rattigan, Notes on Customary Law as administered in the Courts of the Punjab, Lahore, 1876.

LAW (Iranian).—The term daenā, the later dina, which is commonly and conveniently translated 'law,' is perhaps the most characteristic and best known term in the Avestic system. It also indicates the religion itself; in fact, in accord with the entire mentality of the ancient Iranians, of so many other Eastern peoples, there was no distinction between religious and civil law. Another term which may be translated 'law' is dätā, and in the Pahlavi treatise, the Dinkar, we read the assertion, Arvāna dādto hino Māzdhra, (Dinkar, ed. Peschot B. Sanjana, Bombay, 1874ff, ch. 28), which we may render, 'the Mazdean religion is the law of Iran.' As without further remarks, it is highly probable that with the ancient Iranians, as with other Indo-European peoples, the early form of judicial process was the simple one of a village council of elders. His name, or at least the word vicēra (the origin of the modern Persian word vaṣa), say, 'viceroy,' is one we have a Gāthic term for 'judge,' does not seem to be tenable, although vicēra certainly bears the meaning of 'deciding.' In the later Avesta the term dērāsi, a Gāthic term still preserved, used in the qualifying sense, dērāsi, 'giving or administering law' (Ys. ix. 10), certainly indicates the judge. In the passage just quoted it is especially applied to Urvakhshaya, the son of Turta, who is considered apparently as a kind of Iranian Numa. According to Geiger's view, the pāṭraka code, which we know from the Vendidad, represents only that portion of legislation 'in which the priesthood reserved for themselves jurisdiction, or else added ecclesiastical penalties to those of the secular tribunals; orders to the priests, in a word, in the Avesta of blood, rendettā, and, still more, of smrūdī, indeed, the prescriptions for the latter are fairly full (see Vend. iv. 44). Such usages were not doubt pre-Zoroastrian. The law legislation contained in the Vendidad, agreed with the modern rules of the system, does not make any real distinction between what we should call civil jurisprudence and religious or ritual law. If we accept J. H. Moulton's theory of the Magian element in later Zoroastrianism (Early Zoroastrianism, London, 1913, lectures vi, vii), then the whole ritual legislation must be attributed to this, as he maintains, non-Aryan race. In the code, however, moral, ritual, and civic, even hygienic, crimes and their respective punishments are mingled together. As we should expect from the fundamental and traditional love of truth and hatred of falsehood which, even by the testimony of their Greek foes, always characterized the ancient Iranian people, the hitherto unexplained reference of the observance of contracts (mitvra), and breach of contract is severely condemned, even when towards unbelievers. Contracts are said to be confirmed in six ways, sealed by mouth, by hand, grasp, or by the pledging of a sheep, an ox, a man, or a piece of land, respectively (Vend. iv. 2 ff.). Crimes of personal violence are carefully understood according to the seriousness of the injuries done and the number of times permitted, the penalties being fixed on a sliding scale of (apparently) semicircular gradings. Capital punishment, curiously enough, is prescribed, not for taking life, but for performing irregularly and without sufficient knowledge certain priestly functions. The ordinary unit, so to speak, of corporal chastisement for all kinds of crimes is upavāna, which is generally translated 'strokes' or 'blow' with a horsewhip or scourge. A difficulty arises from the enormous number of these units which are prescribed for certain crimes, rising to hundreds and even thousands, which it would be quite impossible for any human being to bear. As, however, there was apparently a scale of monetary equivalents for corporal punishment, it may be that these impossible numbers are simply meant as a guide to fix the amount of such wergeld. As a matter of fact, far more serious punishments are assigned to what we should consider slight ritual or ceremonial transgression than to crimes of violence. In the opinion of Spiegel and Geiger, these upavānas may possibly mean simply blows with an instrument for the slaying of noxious insects and other creatures of the Evil Spirit, whose destruction was supposed to atone for a certain degree of crime.

As the Vendidad was exclusively a priestly code of the Magians, it is self-evident why transgressions of religious precepts are most severely punished. If the penalty consisted only in the delivery of slain karmākshya, it might of course reach very high sums. It is probable that, quite early, persons could be relieved of their obligation by making a substantial compensation to the priest. The scourge could never have assumed such dimensions without provoking opposition (Geiger, Oorder, Kultur, p. 459).

Be this as it may, the system of an equivalent fine in money for successive degrees of corporal punishment seems to the Christianist, and to the Sassanian times, inasmuch as in the Pahlavi treatise, Shāhāyast šā-Shāhāyast (lit. 'licent non-licent'), which is the standard text of later Mazdean jurisprudence, in its comment on the above-quoted 4th marginal of the Vendidad, that a scale of fines for various degrees of violence, rising from five to two hundred, is given with equivalents in dīrāzi.
2. The oldest code mentioned in Japanese history is the constitution formed by the reign of Prince Umayado (Shotoku Taishi), in the 12th year of Empress Suiko (A.D. 604). This consisted of seventeen articles, and is commonly known as The Seventeen Article Constitution. Whether, however, this constitution should be called a positive law or merely a political principle is a question discussed but not settled by Japanese historians, since it was issued in the name of the Prince and not of the Empress.

In the tenth year of Emperor Tenchū (A.D. 671) a code of laws, said to have consisted of twenty-two volumes, was formed; but the entire code was lost, and its contents are unknown. In the fourth year of Emperor Mommu, Prince Osakabe and Fujiwara Fuhito were charged with the duty of codification; and in the following year, the first of Taiho (701), the work was completed. This entire code, consisting of eleven volumes of general law concerning government organization, administration, and private relations, and six volumes of criminal laws, was promulgated and enforced the same year, and is known as the Taiho Code. It has also been lost.

In the second year of Yoro, in the reign of Emperor Genko (718), Fujiwara Fuhito and others were again ordered to revise the statutes. This revision consisted of ten volumes of general law and an equal number devoted to criminal law. Though called by the name 'Yoro,' this was nothing more than a revision and supplement of the Taiho Code, and is, therefore, commonly known by the latter name. This general code on general law has been perfectly preserved, but the part on criminal laws has been lost, with the exception of four chapters. This is the oldest lawbook in Japan.

These laws were marked by Chinese influence—not that Chinese law was adopted as a whole, but the best Chinese principles were added to Japanese laws already existing. The Taiho laws, with many revisions and supplements, governed the nation for about five hundred years, until 1190. There are many commentators, chief among them being Ryo-no-Giye, Ryo-no-Shugo, and Ryo-Sho. The first of these was officially edited in the tenth year of Tencio in the reign of Emperor Ninna (833), and is recognized as of the highest authority.

3. With the establishment of the feudal system, the individual Shoguns issued laws for the government of their vassals; and as the authority of the Shoguns increased, the territory within which the Taiho laws were enforced decreased until, with the establishment of the Shogunate government at Kamakura under Minamoto Yoritomo (mabuse of 12th cent.), it was limited to places directly under the control of the court. A remarkably simple code of feudal laws consisting of only fifty-one articles was formed by Hoya, the executive head of the Shogunate, on the 8th of August, in the first year of Teiei, in the reign of Emperor Gohorikawa. It is known as the Teiei-Shihoimokun, and accorded so well with the spirit of feudalism that it remained effective until the end of the Tokugawa Shogunate (1867).

The characteristic of this code is its rejection of Chinese influence and its adaptation to the maintenance and development of a unique Japanese feudalism. In the days of the Taiho laws, the whole country was under direct government supervision; but during the feudal period only a little territory remained under such control, by far the larger part being held as 'arriere pays.' In the earlier period, the children of a family shared equally in the inheritance of property, but under feudalism the eldest son took precedence.

4. With the fall of the Kamakura Shogunate
(1394) its successor, the Ashikaga, continued to enforce the principles of the Yesei-Shikimoku; but the laws were revised from time to time until the articles numbered two hundred and ten. The Kenbo-Shikimoku, of seventeen articles, was issued during the Ashikaga Shogunate; but the affairs of the country became disorderly, and neither the law of the court nor the will of the Shogunate was executed. Many feudal lords declared that this division be made among these; they issued their own regulations or family laws, of which those of the Saingen, Ouchi, Chosokabe, Hojo, and Asakura families remain intact. For two hundred years, until the establishment of the Tokugawa Shogunate (1603), the country passed through what is known as the dark ages, and no new laws of permanent value were enacted.

5. In the eighth year of Keicho in the reign of Emperor Goyouen (1660), Tokugawa Ieyasu pacified the whole country and established his government as Shogun in Yedo (now Tokyo). Two hundred and sixty-five years of peace followed. The Tokugawa family tried to govern the country according to this law. An expression of far as possible avoided the making of written laws. But, as time passed, the number of simple statutes increased, and they were codified in what is known as the Kenko-Eoten. This code was divided into two parts, the first dealing with matters of administrative, and of personal relations, while the second contained the criminal laws. As the criminal law comprised a hundred articles, the people of the time placed the emphasis on the Hundred Prohibitions. Secrecy was a governing principle of the Tokugawa Shogunate; these articles, therefore, were not published, but privately distributed among feudal officers for information and guidance. As a result, though the Shogunate was in power for over a century, it is not in all points clearly understood.

6. The uncertainty concerning these laws of the Shogunate is increased by the fact that at the time of the Restoration in 1867, when the authority which had been exercised by the Shogunate was restored to the Imperial House, they were entirely inapplicable, being in reality family and not national in their nature, and they were, accordingly, completely set aside. During a period of some seven hundred years the Imperial House had had no real voice in the government, and possessed no laws which could at once be enforced. As a temporary measure, certain Chinese laws were revised and lines drawn very closely to the Chinese laws. Contact with Western nations and a study of their civilization showed the necessity of laws in harmony with the modern world; and in the fifteenth year of Meiji (1882) the criminal code was promulgated. This was followed, in the twenty-second year (1889), by the proclamation of the Constitution, and, in the thirty-third year, (1900), by the civil code. Auxiliary laws of procedure have been issued on the models of Western nations; but all these, together with the standard codes, recognize and enforce the two fundamental principles which from the first have characterized Japanese law: the sovereignty of the Imperial House, and the family system. It has been revised.

Contact with Western nations and a study of their civilization showed the necessity of laws in harmony with the modern world; and in the fifteenth year of Meiji (1882) the criminal code was promulgated. This was followed, in the twenty-second year (1889), by the proclamation of the Constitution, and, in the thirty-third year, (1900), by the civil code. Auxiliary laws of procedure have been issued on the models of Western nations; but all these, together with the standard codes, recognize and enforce the two fundamental principles which from the first have characterized Japanese law: the sovereignty of the Imperial House, and the family system. It has been revised.

LAW (Jewish). — The important signification which Judaism from earliest times has attached to the observance of the law; the religious vocabulary of the Jews presents no fewer than seven synonyms for this conception: ḫq (also ḫqg), the most comprehensive expression for law, the laws of nature being also indicated by it, mishpāt, ṭvāh, mishpāt, piggōd, tōrāh, and the term dāth, which is borrowed from Persian.

The legal portions of the Pentateuch are: Ex 11, 39-23, 52, 34; Is 1-3, 11, 25, 27; Nu 5-10, λp, 77-79, 28-30, 35 f.; Dt 4-57.

The usual division of the laws into legal, ritual, and moral is not supported by the sources; such a distinction is nowhere expressed, nor can such a division be made among the laws. On the contrary, one and the same law is often both legal and moral—e.g., the numerous social laws; and just as often the basis added for the legal and ritual laws elevates them to moral laws. An outward distinction is impossible because all laws without distinction are regarded as divine commands. All commands are of divine origin, since God represents law and morality in idea. This conception is the constant element in Jewish religion at all stages of its evolution, which we can still partly trace in the original documents. However much law may have varied in its connotation at different times, it was always regarded as in accordance with the religious life of the people, and each generation confessed to belong to the Jewish community must not only acknowledge the one God, but also conform to all His laws unconditionally. Disobedience to the commands of God was equal to heresy, just like idolatry, murder, or whatever they may be called as 'profanation of the divine name.' Judaism was from the beginning a religion of doing than of believing, and, therefore, it has laid the main emphasis on the ethical, rather than on the mystical, element. The constitution of Judaism, accordingly, is not a number of articles of belief, but ten commandments; and the revelation at Sinai is presented not as a communication of secret doctrines, but as a proclamation of the divine will; Moses is not a metaphysician, but a lawyer.

The Pentateuch, as we have it to-day, does not present one uniform system of legislation, but a composite body of laws from several sources of very different times; and, in spite of all their work, critics have not entirely succeeded in assigning the single laws to a particular source or even to a particular time. The oldest laws (esp. Ex 21-23) exhibit a considerable retrospection with the old Babylonian Code of Hammurabi, but a dependence of the one on the other must not be assumed. In comparing the two systems of law, apart from the great progress in single laws, we are struck by the difference in spirit: that of the Pentateuch is law and morality which characterizes Jewish legislation (cf. e.g. Ex 22:25-26 23:12 and esp. Dt, e.g. 5:10-12 15:11-21).

The discourses of the prophets from the middle of the 5th cent. onwards already presuppose a law, which they recognize as binding and whose nonfulfilment they censure. Frequently, however, they polemize against the law; they declare the whole system of worship worthless and even hated of God, when the nation does not practise justice and morality. But the elevated moral exhortation of the prophets was little understood and still less followed. It was too abstract to exercise a decisive influence on the life of the people. It had first to be made practicable in a social legislation, adapted to different cases and circumstances, and transformed into a rule of conduct for the individual. In this way Deuteronomy took its rise; it is the product of the prophetic teaching, and placed the individual justice at the heart of religion, while it restricts the sphere of worship to a great extent, and, in particular, recognizes only one place of worship. After the return from the captivity, the Second Temple, the order of worship in its details was appointed in the 'Priests' Code,' although its constituent parts are, it is true, of an
earlier date. The different law-books were now combined into one book along with the traditions of primeval history and the history of the nation which also occupied the most exalted position (up to the death of Moses). Moses was regarded as the author of this book, every word of which was supposed to be inspired, and was designated by the name of tōrah, 'teaching', and to its divine origin and recognition of its whole contents became the basis of Judaism under Ezra. This book was by no means a law-book; half of its contents were of the nature of narrative, so that it appealed to the understanding and imagination as much as to the will; and it was those narrative portions that had the greatest influence on the religious education of the people. The I.XX made a great and most momentous error when, for want of an exactly corresponding Greek expression, they translated tōrah by νόμος ('law'), giving rise to an utterly false conception of the nature of Judaism, and making possible, at a later date, the historically important attack of the Pauline letters upon the Law. The fact that the Jews regarded the book as 'teaching' is indicated by the Aramaic translation τουδεθέ, which can mean only 'teaching' and never 'law'. This is especially shown by the wide-spread demand of learning and teaching of the Torah, and by the fact that the occupation of the intellect with it was regarded as the loftiest and most delightful of tasks.

A classical proof of this is afforded in Ps. 119, which, following the succession of the letters of the Hebrew alphabet, has an endless variation on the same theme: the Torah is the chief good, chief happiness, pleasure, entertainment, and comfort. The law was only the framework upon which the pure religion, which forms the substance of the Jewish teaching, could establish itself, work itself up, and become the religion of the people.

Simultaneously with the elevation of the Torah to the religious book of the community, the synagogue was established with the reading, translation, and explanation of the Torah as its first object. As soon as it was introduced, the Torah, like every other law-book, required explanation by experts, and the sifrat (from sfrā, 'book'), became the religious authorities in Judaism from that time onwards. The expositions of the Torah laid down in their lectures soon became quite as binding as the written teaching; and thus there was developed an oral teaching, which did not, however, interfere with the validity of the Torah, being at first only an application of it. But it soon went beyond the written teaching, and, in particular, it was supposed to create a hedge round the teaching, on the one hand to preserve the essentials of the religion from corruption and evaporation, and on the other hand to secure the observance of the religious laws by means of provisions, sometimes lightening, sometimes increasing, their burden. The oral teaching varied with the custom and common law of each period, adapted the written word to the changed outward circumstances and new views, and even directly created new provisions, which could not possibly have been foreseen in the Torah. Thus, for instance, the whole synagogue service with its order of prayer was gradually introduced by the scribes; and dates for all the different period, feasts like Pārim and Hanukkah were introduced and made religiously binding. The collision of Judaism with Greek civilization raised a very difficult problem for the scribes; and, if the victorius elevation of the Hellenistic period, Judaism from the danger of the moment, the newly founded Jewish State nevertheless had, from the necessity of the case, to come forward in opposition to the scribes, who wished to regard Judaism as merely a religious community. Thus arose the parties of the Pharisees and the Sadducees. The former, led by the scribes, were the representatives of the religious principle and emphasized the value and necessity of oral teaching in addition to the Torah. The latter, worldly-minded throughout, wished to recognize the Torah alone. The Sadducees, accordingly, luke-warm in their attitude towards the oral teaching, exerted their influence towards petrifying religion, while the pious Pharisees sought its progress and development. Under the compulsion of this contest, the Pharisees extended the oral teaching more and more and had to find a basis for it, and, in particular, to prove its agreement with the Torah. About the last century before Christ an attempt was made by Hillel and Shammai to fix the oral teaching in writing; this had previously been avoided, partly to preserve intact the authority of the Torah as the only valid religious document, and partly to leave the tradition free and flowing. Here, too, it is incorrect and one-sided to speak of an oral law. For from the very beginning the oral no less than the written teaching contained narrative, instructive, and edifying portions as well as the legal elements; the legal portion was designated Ḥalakot, the narrative Ḥaggada. Jewish thought, feelings, and hopes, as expressed in the proverbs, parables, and stories of the Ḥaggadā, which for this reason is just as important a source for the customs and religious views of the Jews as the Halaқā. The Halakot, i.e., the religious norm, was in the different schools subjected to great differences of opinion, which the scribes sought to clear up in public discussions. A definite system of logical and exegetical principles gradually formed itself in connection with the law as derived from the written text. The wider the circle within which the life of the Jews moved, and the wider their circle of knowledge and opinions became, the more the sphere of the Ḥalakot had to be extended. It embraces temple rites and synagogue worship, land laws, civil and criminal law, poor laws, laws regarding marriage, laws about foods, and laws of health.

The oral law, which now only became written law, also recognized the existence and necessity of an unwritten law, controlling matters left to the moral feeling of the individual—the finer demands of morality which did not admit of formulation and classification, which did not appear in the written code, but, however, interwove with the validity of the Torah, being at first only an application of it. But it soon went beyond the written teaching, and, in particular, it was supposed to create a hedge round the teaching, on the one hand to preserve the essentials of the religion from corruption and evaporation, and on the other hand to secure the observance of the religious laws by means of provisions, sometimeslightening, sometimes increasing, their burden. The oral teaching varied with the custom and common law of each period, adapted the written word to the changed outward circumstances and new views, and even directly created new provisions, which could not possibly have been foreseen in the Torah. Thus, for instance, the whole synagogue service with its order of prayer was gradually introduced by the scribes; and dates for all the different period, feasts like Pārim and Hanukkah were introduced and made religiously binding. The collision of Judaism with Greek civilization raised a very difficult problem for the scribes; and, if the victorius elevation of the Hellenistic period, Judaism from the danger of the moment, the newly founded Jewish State nevertheless had, from the necessity of the case, to come forward in opposition to the scribes, who wished to regard Judaism as merely a religious community. Thus arose the parties of the Pharisees and the Sadducees. The former, led by the scribes, were the representatives of the religious principle and emphasized the value and necessity of oral teaching in addition to the Torah. The latter, worldly-minded throughout, wished to recognize the Torah alone. The Sadducees, accordingly, luke-warm in their attitude towards the oral teaching, exerted their influence towards petrifying religion, while the pious Pharisees sought its progress and development. Under the compulsion of this contest, the Pharisees extended the oral teaching more and more and had to find a basis for it, and, in particular, to prove its agreement with the Torah. About the last century before Christ an attempt was made by Hillel and Shammai to fix the oral teaching in writing; this had previously been avoided, partly to preserve intact the authority of the Torah as the only valid religious document, and partly to leave the tradition free and flowing. Here, too, it is incorrect and one-sided to speak of an oral law. For from the very beginning the oral no less than the written teaching contained narrative, instructive, and edifying portions as well as the legal elements; the legal portion was designated Ḥalakot, the narrative Ḥaggada. Jewish thought, feelings, and hopes, as expressed in the proverbs, parables, and stories of the Ḥaggadā, which for this reason is just as important a source for the customs and religious views of the Jews as the Ḥalakot. The Halakot, i.e., the religious norm, was in the different schools subjected to great differences of opinion, which the scribes sought to clear up in public discussions. A definite system of logical and exegetical principles gradually formed itself in connection with the law as derived from the written text. The wider the circle within which the life of the Jews moved, and the wider their circle of knowledge and opinions became, the more the sphere of the Halakot had to be extended. It embraces temple rites and synagogue worship, land laws, civil and criminal law, poor laws, laws regarding marriage, laws about foods, and laws of health.

The oral law, which now only became written law, also recognized the existence and necessity of an unwritten law, controlling matters left to the moral feeling of the individual—the finer demands of morality which did not admit of formulation and classification, which did not appear in the written code, but, however, interwove with the validity of the Torah, being at first only an application of it. But it soon went beyond the written teaching, and, in particular, it was supposed to create a hedge round the teaching, on the one hand to preserve the essentials of the religion from corruption and evaporation, and on the other hand to secure the observance of the religious laws by means of provisions, sometimes lightening, sometimes increasing, their burden. The oral teaching varied with the custom and common law of each period, adapted the written word to the changed outward circumstances and new views, and even directly created new provisions, which could not possibly have been foreseen in the Torah. Thus, for instance, the whole synagogue service with its order of prayer was gradually introduced by the scribes; and dates for all the different period, feasts like Pārim and Hanukkah were introduced and made religiously binding. The collision of Judaism with Greek civilization raised a very difficult problem for the scribes; and, if the victorius elevation of the Hellenistic period, Judaism from the danger of the moment, the newly founded Jewish State nevertheless had, from the necessity of the case, to come forward in opposition to the scribes, who wished to regard Judaism as merely a religious community. Thus arose the parties of the Pharisees and the Sadducees. The former, led by the scribes, were the representatives of the religious principle and emphasized the value and necessity of oral teaching in addition to the Torah. The latter, worldly-minded throughout, wished to recognize the Torah alone. The Sadducees, accordingly, luke-warm in their attitude towards the oral teaching, exerted their influence towards petrifying religion, while the pious Pharisees sought its progress and development. Under the compulsion of this contest, the Pharisees extended the oral teaching more and more and had to find a basis for it, and, in particular, to prove its agreement with the Torah. About the last century before Christ an attempt was made by Hillel and Shammai to fix the oral teaching in writing; this had previously been avoided, partly to preserve intact the authority of the Torah as the only valid religious document, and partly to leave the tradition free and flowing. Here, too, it is incorrect and one-sided to speak of an oral law. For from the very beginning the oral no less than the written teaching contained narrative, instructive, and edifying portions as well as the legal elements; the legal portion was designated Ḥalakot, the narrative Ḥaggada. Jewish thought, feelings, and hopes, as expressed in the proverbs, parables, and stories of the Ḥaggadā, which for this reason is just as important a source for the customs and religious views of the Jews as the Ḥalakot. The Halakot, i.e., the religious norm, was in the different schools subjected to great differences of opinion, which the scribes sought to clear up in public discussions. A definite system of logical and exegetical principles gradually formed itself in connection with the law as derived from the written text. The wider the circle within which the life of the Jews moved, and the wider their circle of knowledge and opinions became, the more the sphere of the Halakot had to be extended. It embraces temple rites and synagogue worship, land laws, civil and criminal law, poor laws, laws regarding marriage, laws about foods, and laws of health.
the object of all additions to and burdens on the law was to preserve the teaching of Judaism intact, the law now had the further task of preserving the very existence of the Jews as a people at all. The study of the law was now regarded as the highest religious duty and an equally valuable, in fact a more valuable, substitute for the earlier sacrifice. If the traditions of the Haggadah played an important part in the consciousness of the populace, this had lost the high position that the study of the high schools in Palestine. They carefully sought not only to fix all the single provisions, but in particular to preserve all those laws and customs which had been gathered together for a time—out of time, they hoped only for a time—fallen into disuse. 'Aḥiḳa ben Joseph (q.e.r.), who died as a martyr after the fatal issue of the rising of Bar Kokhba (A.D. 135), brought the recording of the oral teaching to a temporary end. He sought to arrange the immense amount of material from two points of view: according to the matter in the form of a book of law (Mishna) and according to Bible verses in the form of a running commentary to the legal books of the Torah (Midrash). After his death his pupils tried with all possible speed to close the record finally, so that the tradition might not be lost by the violent death of other scholars. 'Aḥiḳa's Mishnah, so it is said, was further improved, and after his death R. Yehudah, the patriarch (†c. 200), closed the record, and created the Mishnah as a generally received book of law. Soon after, the Midrashim, which in their main contents went back to 'Aḥiḳa and his contemporaries, were completed.

Their names (with the exception of a few which are preserved only in fragments) are: 'Abbaḳo (on Exodus), Sifre on Leviticus, and Sifre on Numbers and Deuteronomy. These Mishnah have not, however, been any more officially recognized than has the Mishnah preserved to us under the name of Tosefta. In attitude and aim the Tosefta is similar to the Mishnah, but it originated in other schools and had accepted many traditions which are wanting or rejected in the latter. It is, therefore, a priceless source for the scientific investigation of the Halakah. The Mishnah and the Tosefta are divided into six portions: (1) synagogal worship and agriculture; (2) law of Sabbath and fast days; (3) law of marriage; (4) civil and criminal law; (6) temple rites; and (6) laws of purity.

The completed Mishnah, which was composed in the Hebrew language, was taken by Rabb and Samuel to Babylonia, and taught and explained in the institutions of formal study of both countries. The Palestinian schools also sought to explain the Mishnah, which, owing to its condensed method of expression, was often difficult to understand. The explanation of the Mishnah, which in the Talmud are called G'mara, and which have been written down and collected, furnish more than a bare commentary to the Mishnah. In their outward form they are records of the discussions which took place in the schools during three centuries, and they preserve these in all their original vividness. In their contents, particularly in the Haggadah portions, they are a repertory of everything that the most distinguished representatives of Judaism during the period spoke, thought, felt, experienced, and knew. While the explanation of the Mishnah was not finished in Palestine, the Babylonian G'mara was completed about A.D. 600. The collection of the two Talmuds, the Babylonian, and the Talmud of the two Talmuds, the Babylonian became in practice the only authoritative one; the Palestinian (incorrectly called the Jerusalem Talmud) was not recognized, and was always much less studied.

The Talmud as a whole is not, strictly speaking, a law-book like the Mishnah; it places the opposite opinions with their reasons beside each other and often leaves the individual to conclude. In spite of that, it brought Jewish law to a fixed system, and thus lent to Judaism the necessary inner unity. By means of it Judaism was re-moulded into the homogeneous mass which it presented during the whole of the Middle Ages. The Talmud allows a sphere of action to the freedom of thought altogether out of proportion to that which is granted to the freedom of world action. It does not demand blind obedience to the law, but would recognize as valid only what is rationally deduced from the word of Scripture, and asks time and again in regard even to Biblical commands: Why if it is not commanded? It thus adds a logical or moral reason. Only in the case of very few laws, for which a rational explanation could not be found (e.g., the red heifer [Nu 19]), is there a command of God added, as the ground of obligation.

The Jewish law, as it found its final expression in the Talmud, has often been represented as an unbearable yoke. This designation, however, which is played upon as early as Sirach, indicates only the impression which the law made on non-Jews, and not the emotions with which the people themselves regarded it. The Jew ever found joy and satisfaction in the fulfilment of it, and coined for it the special expression dinaḳḳer deī misrap, 'joy in the commandment.'

The recognized benediction on occasions of fulfilling all the more important religious provisions ran as follows: 'Blessed be thou, 0 God, who hath given us life and in the daily evening prayer they said: 'We rejoice in the words of thy teaching and the words of thy commandments now and evermore, for they are our life and the length of our days.'

It was not freedom from the law, but freedom in the law, that was the religious ideal of the Jews. They felt themselves morally free through the fact that they subjected themselves joyfully to the law, and recognized that it must be obeyed even when it was not there. The patriarchs they regarded as especially virtuous because they had kept the law even before it was given. It was not Kant, therefore, who was the first to teach the autonomy of morality. In one place we are told that he who keeps the commandments stands as high in God's sight as if he had produced them out of himself (cf. F. Perles, 'Die Autonomie der Sittlichkeit im jüd. Schriftum,' in Festschrift für Hermann Cohen, Berlin, 1912, pp. 103-108).

It is true that the frequent use of petty casuistry, and especially the frequent exercise of the Talmud, repels us, but the Talmud ought not to be judged in this light alone. Emphasis should be laid on the fact that the morality of the Jews did not degenerate under the pressure of the law, but became more rigorous. For the casuistry had almost always the tendency to make the law more exacting, and did not, as a rule, deal with moral so much as with legal and ritual questions, while morality was often appealed to as a supplement to the law. On the other hand, it was important that certain moral requirements, such as care for the poor, the sick, and unburied dead, and even kindness to animals, were made laws in the Talmud. It is often alleged that all the laws for the sake of the well-being of the individual and of society, but it is quite as frequently emphasized that only the unselfish fulfilment of the law has moral value, and that the embodiment of humanity is the highest aim. Specially peculiar to the Judaism of the Talmud is the conception of the gIDDAS kIAH-SEM, 'hallowing of the divine name,' according to which every Jew ought to witness for God by an exemplary life, and contribute towards His recognition among men.

In spite of the fact that the divine legislation as a whole was regarded as eternal and unchangeable, the individual cases were dealt with. With the individual cases concluded, the judicial exposition and even the annulling of a law was recognized as justifiable and necessary. Sufficient ground for putting aside even Biblical commands was found
by the lawyers not only in danger to life or impossibility of carrying out the law owing to a vis major, but also in intolerable inconvenience to the community, danger to the existence or repeal of the law. It must be therefore that collision with the laws of the State. The 'dignity of man' is also repeatedly given as a reason for temporary suspension of a law.

When it was completed, the Talmud was adopted as the only authority in matters of religious law, and became, like the Mishnah 300 years previously, the subject of study and exposition. Since it was not, of course, a law-book in the strict sense of the term, definitive rules had to be laid down for judging in cases where the Talmud presented unsolved differences of opinion. The need of codifying the extensive contents of the Talmud came more and more to the fore. When the Karaites (q.v.) rejected the whole Talmud, and, in fact, the oral teaching altogether, and recognized the Torah alone as binding in matters of religious law, a code had to be formed which set forth plainly what was to be regarded as law in the Talmud and what only as individual opinion. Hence arose, from the 9th to the 9th cent., the so-called Halakah Gedolah, compendium of the Talmud, which in outward form follows the Mishnah in attempts to make a better arrangement of the material according to subjects. This work, which originated from the Geonim, the heads of the Babylonian schools of the time, did not attain such an extensive circulation as the Halakah Shel al-Fast, which was composed two centuries later. Al-Fasi makes use of the Palestinian Talmud also to decide questions of religious law, and is much more independent than that of Geonim, laying down general rules, as well as in using them to obtain concrete results from the discussions of the Talmud. The most original and important code of Rabbinic Judaism is the Mishnah Torah of Moses Maimonides. Absolutely abandoning the dialectics and the order of the materials of the Talmud, he gives a strictly systematic exposition of the laws and the teaching of Judaism in fourteen books. In opposition to all his predecessors, he specifies neither his sources nor opposed opinions, and gives no reasons for his own decisions. On this account his work was very sharply attacked from many sides, although his opponents could not free themselves from his influence and borrow from the first work to obtain a far-reaching influence was the Tur of Jacob ben Asher of the 14th cent., who, in fact, used Maimonides as his model, but produced a new and unique book of law, stating and discussing the contradictory opinions of the authorities after the Talmud. This work remained the undisputed authority for more than two centuries. It was only after the expulsion of the Jews from Spain and Portugal that the need for a new code more suited to the changed conditions made itself felt. To meet this need Joseph Caro produced the Shulhan Arukh, basing his work on the Tur, but also consulting the rest of his predecessors. Joseph Caro often proceeds very independently in his code, and his work on this account met with energetic opposition before it was generally accepted. The Polish Talmudists especially opposed it, and even, when, much later, provided it with continuous glosses, which were then printed along with the work. A century later, however, the Shulhan Arukh was the only authoritative code of Rabbinic Judaism, and it has remained as the halakhic authority till the present day. It had, in fact, contributed largely to the consolidation of Judaism, and was at the time of its production, when the Jewish communion threatened to break up, a historical necessity. Gradually, however, it became more and more a hindrance to free religious development, and, on the whole, its influence upon the culture, particularly of the Jews of eastern Europe, has been disadvantageous to the modern Jewish cent.; therefore, towards the culture and reform of Judaism have aimed at destroying the unrivaled authority of this work.

FELIX PERLES.

LAW (Muhammadan).—I. INTRODUCTION.—1. Muslim law code (shar'jah or shar) and the sacred texts: Qur'an and tradition.—A Muslim is bound by religious regulations not only in the performance of his daily ritual prayers, the fast, the pilgrimage to Mecca, and other religious acts, but also in the contract and payment of his marriage, in commercial contracts, and, indeed, in all events of any importance in his domestic and social life. All these religious regulations form together a code of law which in Arabic is called the shar'jah or shar, i.e. the 'law' that which faithful Muslims must follow according to Allah's will. Muslims believe that the regulations of this code depend not on human judgment, but entirely on Allah's inscrutable will. Originally the only sources from which the knowledge of Allah's law could be gained were the Qur'an and the sunnah.

The Qur'an contains few regulations of a legislative character. It is true that in certain verses instructions are given as to how a Muslim must generally distinguish himself from an unbeliever, as to his chief duties, and some sins which he must especially avoid; but these regulations do not form a complete system. From the beginning Muhammad's sunnah 1 was an indispensable supplement to the regulations of the Qur'an. In the Qur'an, e.g., it is enjoined that a Muslim must perform his salat (i.e. the daily ritual prayer, which consists principally of praise of Allah, prostration, etc.), but not how he must fulfil this religious duty. In such a case Muhammad's sunnah gave an explanation of the Qur'an. All Muslims have always performed the salat in the same way, and those who had done before them, for Muhammad's position as a preacher of the new religion and as the head of the Muslim community entitled his followers should observe not only the regulations which he gave as Allah's will in the form of the Qur'an, but also his personal commands and example.

After the death of Muhammad the traditions concerning the deeds and sayings of the Prophet and his companions, as well as the Qur'an, were held in great respect; and the sunnah of these was an example worthy of following for the later Muslims, at least in so far as the Prophet had approved either implicitly or expressly of their acts or sayings. A tradition is called in Arabic hadith, which commonly means 'story,' 'communication;' in a special sense, the hadith means the whole sacred tradition.

1 The word sunnah is often wrongly taken to mean 'tradition' (viz. regarding the deeds and sayings of the Prophets); but it actually means the method. I.e. the way in which the Prophet had: the sunnah of a person means the ordinary line of conduct of the person, and the sunnah of a people means the manners and customs of the people. O. G. G. A. 641. 641-642.

1 Le Droit musulman, in RHR xxviii. (1898) 641; I. Goldzeller, Muslim Studies, Halle, 1909-90, ii. 1. 67, 112 ff.
Originally the oral traditions were handed on from one generation to another. Many undertook long journeys in order to hear the recitations of tradition in different lands and places, and to hear them relate their traditions. Besides the text (masā'a) of a tradition, the name of the narrator and, in the latest narrators to the Prophet, were accurately learned by heart. The trustworthiness of these sources are evidence of their correctness in the narrative, and therefore the portion of the tradition containing the names of the narrators was called ṭabātarka and its authenticity was vouched for by the well-known scholars for the credibility of the traditions. Still, many of the Muslim traditions concerning Muhammad’s sunnah are based on the Arabic writer of the story and the critical examination leaves no possibility of doubt. Decisions were sacrified to the Prophet on questions of all kinds which could determine the traditions till long after his death. Moreover, there are in currency numerous contradictory traditions. Agreement between each of the traditions with another means just what they held to be the true conception. In the first century of Islam there was serious controversy as to the trustworthiness of many traditions. Every one knew that there were many true and untrue traditions as to the Sunnah of the Prophet, and the opposing teachers of tradition accused each other of lying. But, when the ritual, doctrine, and the most important social and political institutions had become definitely fixed, agreement was reached in widespread circles as to the trustworthiness of most traditions. When a tradition could not be brought into harmony with the generally current concept of the Sunnah, it was regarded as false. Moreover, many successful attempts were made to harmonize contradictory traditions with the purpose of correcting the preference for any or any other explanation. Consequently, there is no official and exclusively authoritative collection of Muslim traditions, there are six collections commonly recognized in the orthodox world, viz. the six books of the ṭabā‘i and six of the six authentic collections. Two of these—the collection of traditions of al-Wahabi (hence the title); and that of Mālik (mainly the ṭabā‘i), the six authentic, the six sunnah, but differ in opinion from the orthodox Muslims as to the authenticity of traditions.2 They have their own collections of traditions.1

2. The fīqh and the fīqh-schools. The term fīqh (science of the fīqh) is meant the science of law, its interpretation and its application to sacred texts. It was not enough to know only the literal contents of the Qur’ān and the traditions; it was also necessary to know in what sense these texts were to be understood, held the contents and prohibitions which they contained to be applied in different circumstances. The scholars who occupied themselves with this study of the fīqh (the fāqih) have given an extraordinary extension to the original meaning of the fīqh. They could find answers in the sacred texts to all possible questions of the law, and in this way the study of the fīqh has produced a vast system of legal casuistry worked out in every detail.

Since the opinions of scholars as regards the rules to be deduced from the Qur’ān and the traditions disagreed in many respects, there grew up in a short time different fīqh-schools, each having its own views as to questions of detail. Such a school was called madhhab (‘party’). There were at first a great many of these schools; each fāqih of any importance had his own madhhab. The rise, development, and ultimate fate of the different madhhab were dependent to a great extent on accidental circumstances; and the favour of the Government often had a special influence on their reputation. If the judge and ruler, for instance, had to choose between the norm of the Madhhab of the religious school or the fāqih, he would naturally have to choose the one that was predominant in the population of the place. Thus the Madhhab and the Government were often connected. The fāqih and the Government exercised fresh influence in an opposite direction. In the course of time most of the old schools lost their significance.

5 The differences of opinion between the fīqh-schools did not妨碍 translation and interpretation. The madhhab and its adherents have arrived at their conclusions in the course of the sacred texts. An unprejudiced comparison of the traditions, and to hear them relate their traditions.
the various systems of fiqh shows, however, that this view is exaggerated, and that in general all Muslim fiqh schools following very much the same methods of establishing the fiqh-rules. Difference of opinion existed only on questions of detail.

Even the controversy between the earlier scholars on the question whether the giyâs was permissible or not, to which very little attention was paid at first, and on which the earlier masters of the tradition were given only with reference to special circumstances. An example of giyâs is the following. A Muslim is forbidden in the Qur'an (qur'an 4, 235; 83, 100; 89, 20; 41, 57) to make himself indelible for ribâ, i.e., not only interest, but every demand of interest. In the traditions in which the prohibition of the Qur'an is explained in more detail, ribâ is forbidden only if a Muslim carries on a business with gold, silver, and some kinds of merchandize which were formerly the usual objects of the trade. Again, the same right to hold strictly to the letter of these traditions: "reIf, they said, is forbidden only to any one engaged in the trade expressly mentioned in these sacred texts; for, if the demanding of interest was not permitted in other cases as well, this would have been true. Others thought that here ribâ (anology) must be applied, and that ribâ must be regarded as forbidden even in cases where there is no trade. Those who rejected the giyâs accused their opponents of misrepresenting and derogating from the laws of Allah by following their own fallible human "insight" (re'râ). The enemies of Abu Hanîfah, e.g., thus established the fiqh-rules solely on the basis of re'râ and giyâs, and with neglecting the study of the tradition. 'Iblis' (Satan), they said, was the first who had been guilty of such arbitrary arguments. An appeal was made to the Prophet, and it was maintained that he himself had already expressly forbidden the giyâs and all such kinds of reasoning. Still, the giyâs was in the end generally recognized as a general fiqh which all communities generally recognize. As a matter of fact, it had never been possible to exclude analogy, and even those who had most prided themselves on keeping exclusively to the literal sense of the texts, such as the Zâhirites, had been themselves compelled, in many cases, to draw conclusions from the holy texts by means of argument (they then used to maintain that their conclusion was already included in [nayâhim] the text, and, therefore, had not to be deduced from it by means of argument.

There are some special methods of argument which have not found general favour among orthodox fiqhis, viz. the isti'dâlah (lit. the introduction of some other examples), the Umarîs and Abu Hanîfah and his school, and a similar method of reasoning of the Zâhirites. The isti'dâlah (lit. judgment that something is otherwise for general good). Both methods had apparently as their object the establishment of fiqh-rules by the abandonment of analogy, thus departing from the regulations of the holy texts. Both Abu Hanîfah and Malik thought this sometimes necessary, if holding fast to the letter of the law gave rise in exceptional cases to injustice, or was even quite impossible. But most fiqhis rejected these isti'dâlah and istâlîlah, and thought none qualified to depart in so arbitrary a manner from the usual rules, even though it might appear to be for the general good. Another method which was not generally favoured was the isti'dâlah (lit. "seek connexion with"), which was especially practised by al-Shafi'i, and with certain restrictions also by Abu Hanîfah. This isti'dâlah meant that a doubtful situation was connected with a previous positive circumstances, and that the regulations of the holy texts of the latter case were regarded as applicable in the former case. Such a position of doubt may arise if any one remains absent so long that his existence becomes uncertain. The Hanîfîs apply the isti'dâlah only when the question arises of the retention of rights which have been already obtained. But they do so even with regard to the acquisition of new rights. If, e.g., any one dies after the existence of his blood-relation has become uncertain, then, according to the Hanîfîs, the latter has no right to his estate, but the Shafi'ites do not recognize this limitation, and, according to them, the usual rules of inheritance obtain in such a case. Just as the existence of the absent party was certain.

1 C. L. Goldscheider, Die Zähiriten, p. 411.
3 For isti'dâlah, istâlîlah, and isti'dab of L. Goldscheider, "Das Prinzip des isti'dâlah in der musul. Gesetzeswissenschaft", in WZG, L (1887), 255-256.

Fundamental departures from the doctrine of the four fiqh-schools are not found even among the Shi'ites and other heretical sects. Although each of these sects has its own double meaning of fiqh, and this differs in many points from the opinions of the orthodox schools, the points of difference are generally limited to the same kind of details as those on which even the four orthodox fiqh-schools differ. The controversy which induced the heretical parties in Islam was not concerned with the fiqh, but rather with questions of the faith (kalâm [q.v.]) and with the political question who should be the legal ruler of the Muslim community as the direct successor of the Prophet.

Originally each faqi of any importance could consider himself qualified to deduce the fiqh from the Qur'an and tradition, but after the rise of the fiqh-schools independent criticism of the sacred texts gradually ceased, and it became more and more usual to join the madkhâl which was locally recognized as authoritative.

Nevertheless, for a long time some very learned faqihs maintained their own judgment on matters of fiqh. In the 3rd cent. there arose some more or less independent madkhâl; and several schisms and heretical sects developed in general with the opinions of an already established school, still considered themselves qualified to deduce fiqh-rules, and to claim a secondary importance from the views of its founder. Abu Yâsif and Muhammad ibn Hami as-Shadrî, e.g., who belonged to the followers of Abu Hanîfah, had a madkhâl which was independent of the shi'as. Even al-Mukâbî and ibn al-Muqâwîd in the All might be regarded as independent and as establishing the fiqh-rules solely on the basis of re'râ and giyâs, and with neglecting the study of the tradition. 'Iblis' (Satan), they said, was the first who had been guilty of such arbitrary arguments. An appeal was made to the Prophet, and it was maintained that he himself had already expressly forbidden the giyâs and all such kinds of reasoning. Still, the giyâs was in the end generally recognized as a general fiqh which all communities generally recognize. As a matter of fact, it had never been possible to exclude analogy, and even those who had most prided themselves on keeping exclusively to the literal sense of the texts, such as the Zâhirites, had been themselves compelled, in many cases, to draw conclusions from the holy texts by means of argument (they then used to maintain that their conclusion was already included in [nayâhim] the text, and, therefore, had not to be deduced from it by means of argument).

Later it became the general conviction in the orthodox Muslim world that scholars as well as laymen were bound to tashîh (lit. 'to invest with authority,' i.e. to acknowledge that the rules of the fiqh had already been established in an authoritative manner). Such a conviction was based on the assumption that the rules of a fiqh-school had binding authority, was called mutâlîlah (i.e. one who held others in authority). The earlier scholars, on the contrary, who had themselves deduced the fiqh from the holy texts, were afterwards called mujtâhid (lit. 'people who had toiled strenuously'), and the search for the true sense of the sources to which they had applied themselves was called tâjîh (i.e. lit. 'to be zealous and take trouble,' here in the special sense of 'exercising themselves in order to determine the rules of the fiqh').

Muslim writers generally distinguish three kinds of mujtâhid, because they think that not every one may submit himself to the absolute rule of independent judgment on matters of the fiqh: (1) 'Till the third century after the death of the Prophet, no one was permitted to be a mujtâhid (i.e. judgment that something is otherwise for general good). Both methods had apparently as their object the establishment of fiqh-rules by the abandonment of analogy, thus departing from the regulations of the holy texts. Both Abu Hanîfah and Malik thought this sometimes necessary, if holding fast to the letter of the law gave rise in exceptional cases to injustice, or was even quite impossible. But most fiqhis rejected these isti'dâlah and istâlîlah, and thought none qualified to depart in so arbitrary a manner from the usual rules, even though it might appear to be for the general good. Another method which was not generally favoured was the isti'dâlah (lit. "seek connexion with"), which was especially practised by al-Shafi'i, and with certain restrictions also by Abu Hanîfah. This isti'dâlah meant that a doubtful situation was connected with a previous positive circumstances, and that the regulations of the holy texts of the latter case were regarded as applicable in the former case. Such a position of doubt may arise if any one remains absent so long that his existence becomes uncertain. The Hanîfîs apply the isti'dâlah only when the question arises of the retention of rights which have been already obtained. But they do so even with regard to the acquisition of new rights. If, e.g., any one dies after the existence of his blood-relation has become uncertain, then, according to the Hanîfîs, the latter has no right to his estate, but the Shafi'ites do not recognize this limitation, and, according to them, the usual rules of inheritance obtain in such a case. Just as the existence of the absent party was certain.

consider themselves still constantly bound by the duty of independent study of the sacred texts. Among the Shi'ites also ṣafātibīs are still found who are qualified to judge in matters of religion on their own authority.

Every orthodox Muslim is, therefore, bound by the regulations of his fiqh-school, and the fiqh-books have become the law-books for later generations. The collections of this tradition are, it is true, always held in high honour as holy texts, but it is not possible to know what doctrine may be deduced from these sacred sources except by means of the fiqh-books. The fiqh-books are still studied in all Muslim lands. In later times Mecca has, in a special degree, become the centre of the study of the fiqh, and in the great mosque of Mecca instruction in the fiqh according to the method of the Middle Ages, is given almost uninterruptedly by various scholars.

The great majority of Muslims cannot consult the fiqh-books for themselves, and must, therefore, use the explanation of a fiqh, who is qualified to give a fatwā, when they wish to know what the law prescribes in cases which are not of daily occurrence. A fatwā is a professional opinion on fiqh-matters, generally orally given and without formal question and answer. A scholar who gives such a fatwā is in consequence called muftī, and any one who is recognized as a competent fiqhi, so that his legal advice is asked when occasion arises, may be regarded as a muftī. Besides this, there are in Muslim lands official muftīs paid by the Government to advise the public, and, when necessary, also the Government itself, as to the law. In some places, where adherents of different fiqh-schools live, the Government even appoints a separate muftī for each madhhab. The contents of the fatwās are obtained from the fiqh-books, since the muftīs, like all other scholars, are only maqāsidīs. Sometimes, among the questions submitted to a muftī, are found situations which are new in Muslim society, and subjects which have become important for the Muslims only under the later influence of Western civilization; in each case the muftī must decide how the old rules are to be applied in the changed circumstances. In the fiqh-books of later date consideration is given, so far as is necessary, to the fatwās which relate to the general conception of orthodox Muslims nowadays. It is the doctrine of each of the four fiqh-schools which represents a correct view of the canon law. At first the scholars disputed hotly on the fiqh, and their adherents often showed signs of great intolerance. For a long time bitter animosity existed between the teachers in the holy towns in Arabia and the ṣafātīs in the conquered territory (especially in Iraq). Those who lived at Mecca and Medina would have liked to keep the monopoly of the sacred sciences in their own hands. They tried in every possible way to throw ridicule and suspicion on their rivals, who were frequently not even of pure Arabian descent (Arabic: Ḥaram). Party leaders deluged each other with a flood of abusive phrases. Although the majority of the people were not entirely acquainted with the details of the problem of scholarship, nevertheless, in places where the followers of different schools came into contact with each other, collisions sometimes resulted between which gave rise to street fights and mutual persecution.

In spite of this, the question concerning the fiqh did not cease to be of importance in Islam. On the contrary, the conviction gradually arose in orthodox circles that the difference of opinion between the fiqh-schools must be regarded not as a misfortune, but rather as a situation willed by God. It is, they thought, apparently possible and permissible to hold different opinions as to various fiqh-rules of secondary importance. Thus, if one school cherished a less rigorous opinion concerning a command or prohibition than the other schools, it was proper for the faithful to regard this as in some degree a blessing, since the less rigorous opinion could apparently also be defended with good reason. A tradition says that the Prophet himself declared: 'The difference of opinion in my community is a proof of God's mercy.'

Each Muslim has to give the preference to the observance of the regulations of his fiqh-school, and only the Shāfīīs have an appeal made to the divergent doctrine of another madhhab. This appeal is also called taqfīl (in this case the recognition that the rules of another school are authoritative on a special point), and is held permissible under certain conditions for laymen.

The following is an example. According to the Shāfīīs, children under age are able to give marriage only by their father or grandfather. In Acheb, where the Shāfīī fiqh-school is usually followed, it was the custom to allow children to remarry their first wife even when only under age. If it happens that the father or grandfather of children under age are dead, the difficulty is solved by means of taqfīl, appealing to the Hanafis, who declare that even distant blood-relations are also competent to give children marriage during their minority.

Passing from one madhhab to another is not always approved of. There are Turkish scholars who permit those who follow the Shāfīīs or another madhhab to become Ḥanafis, but forbid Ḥanafis to go over to another madhhab. Each of these transference to another madhhab is scarcely ever found except when there is some exceptional reason for it—e.g., when any one leaves his native country and wishes to live in a country in which the majority of the inhabitants belong to another fiqh-school. In places such as Mecca, where the adherents of the different fiqh-schools constantly come in contact with each other, transference to another madhhab is found, if, e.g., a man and woman who belong to different fiqh-schools wish to marry.

3. The 'uṣūl al-fiqh (i.e., the sources or foundations of the fiqh).—The fiqh is based on four invariable foundations: (1) Ḍā'irat al-ʿulūm; (2) the words and deeds of the Prophet—ṣunnat al-nabi; (3) the general agreement of feeling among orthodox scholars—ijma'; and (4) the analogy—qiyas. Each of these foundations supplies a guarantee that the doctrine of the fiqh-schools is really in agreement with the will of Allah. They are called the 'uṣūl al-ḥukm (lit. 'roots of the fiqh'). The name fatwā (branches) is used to designate the rules of the fiqh based on these 'uṣūl.

(1) The Qur'ān.—As has been stated above, the qiyas was originally not generally recognized as a permissible foundation of establishing the fiqh, nor had the invariable qiyas been recognized from the beginning. But none could contest the authority of the Qur'ān, which, accord-

2 For the fatwās and their contents, which are often important, see C. Snoonck Hurgonje, Mecca, ii. 335, 340, also Ehe achar. Beleg vom heutigen Säkularhandel in Singapour, in ZDMG 1898. 241ff.; listed in the veiling in Steinschen, recht, in Tiefébruck, Batavische Genootsch. xxxxi. ing to Muslim opinion, contained Allah's own words, was never allowed by any doubt that Muhammad had accurately delivered God's word. According to tradition, the Prophet had, with the help of the scribe Gabriel, repeatedly collated the sacred text with the original preserved in heaven, and thus been regarded as a completely trustworthy source of Allah's will. It is said that this text never once appeared to contradict another, but generally appeared possible to give an interpretation of the contradictory texts which brought them into harmony; and, if this was not possible, it was assumed that the one verse of the Quran was cancelled by the other.

(2) The sunnah.—From the very beginning the sunnah of the Prophet passed in general as a guide for all Muslims. But Muhammad was not regarded by his contemporaries as infallible. He was often subjected to severe opposition, even from his most loyal adherents, and, indeed, did himself make any claim to infallibility. On the contrary, he often took pains to declare expressly that he was only a fallible man like every one else; he could achieve only one miracle which none else could accomplish—the communication of Allah's will. After the death of the Prophet, also, it occasionally happened that customs which he had expressly permitted to his followers, or which were regarded as such, were given up and regarded as contrary to the true spirit of Islamic religion. The mu'ah marriage is an example. According to several traditions, the Prophet himself married ten women, but only for temporary marriages—e.g., on the occasion of expeditions. For this purpose, a man gave his women a certain sum of money or merchandise to be given to a woman, and a marriage was contracted with her for a defined period, after the expiration of which the marriage was again dissolved. It is known that the Prophet himself withdrew his permission. Orthodox Muslims regard mu'ah marriages as forbidden; the Shi'ites still continue to regard them as permissible.

But later Muslims began to idealize the Prophet. They could not admit that he had been subject to mistakes and weaknesses just like other men, and that any donis existed on this point. It was necessary to have full security that men were not following an erroneous line when they accepted the sunnah of the Prophet. An attempt was made to find proofs for the infallibility of the Prophet, and it was thought that this could be discovered in many verses of the Qur'an—e.g., in those in which God enjoins obedience not only to Himself, but also to Muhammad, His Apostle. There was also a tradition which made the Prophet declare expressly: "My community shall not err when they hold fast in everything to Allah's book and to my sunnah." According to Muslim theory, the sunnah of the Prophet consists of three elements: (1) his gha'ib (decisions); (2) his fi'l (manner of conduct); and (3) his subūt or tağrīr (tacit approval of the deeds and words of others).

generally behaviour according to the sunnah of the Prophet is as indispensable a duty for a Muslim as obedience to the regulations of the Qur'an. The only exception to the general rule is formed by those cases in which God had permitted exceptional freedom to His messenger—e.g., Muhammad had more than the number of wives permitted by the law, and in such exceptional cases was literally regarded as forbidden to follow the example of the Prophet. Some European writers have erroneously assumed that the sunnah prescribes a life having power in the same degree as a command in the Qur'an. On the contrary, Muslim scholars even assume that some regulations of the Qur'an are altered or cancelled by later decisions of the Prophet which contradict them. In the Qur'an, ii, 176, e.g., it is ordained that legacies may always be left to parents and near blood-relations; but this rule is regarded as cancelled, because, later on, according to tradition, after the regulation of inheritance was altered. Muhammad is said: "No will may be made for the benefit of heirs whose share in the estate is fixed." Although the Qur'an, xxiv, 2, e.g., forbids usury, only usurers are mentioned as the punishment for fornication; all others who commit fornication are sentenced, according to the sunnah. Muhammad saw, in no case the same treated with death. This last punishment is based solely on the sunnah of the Prophet, which in this case has altered the law of the regulation of inheritance.

(3) The ijma. — By the time that a firm conviction had been formed in the schools as to the main rules of the faith, the Koran began to be regarded as a new argument for the interpretation of the word. The doctrine was declared to be impossible that rules as to which all fuṣūls had the same opinion could be based on error, and thus the ijma ("general agreement on opinion") of the schools became an incontrovertible proof of the correctness of their views. There could, so men thought, no longer be any doubt, even as to subjects on which there was originally a difference of opinion, so soon as all the scholars were agreed on them. The validity of the ijma must for the future be reverenced by every one as the truth.

The doctrine of the infallibility of the ijma' at first met with much opposition. Many refused to concede binding authority in religious matters to the opinions of fallible men, even when they were in agreement in their judgment. Nevertheless a tradition arose later, according to which the Prophet is said to have declared: "My people shall never be unanimity in error." It was also thought possible to find arguments for this opinion in some verses of the quran. In iv, 115, e.g., punishment is threatened on those who separate themselves from the Prophet and do not follow the way of the sufis, and, in ii, 186, it is said, was obviously nothing else than that for which unanimity had been made indispensable in error. Later on, Malik ibn Anas laid special stress on the rule that the ijma of the scholars is opinion of the scholars of Medina. In that holy city, he thought, the ijma of the scholars of Medina had been preserved in its purest form. Thus, when all the scholars in the city of Medina were agreed in their opinion, this could not be erroneous. Others applied the same reasoning to the scholars in both the holy towns—Medina and Mecca. In the end, however, consideration was given to also the fuṣūls in other places. There was no sufficient reason for limiting the authority of the ijma' exclusively to the opinion of the sunnah and the scholars in the holy cities. Thus the ijma' came to mean in Islam the agreement of all the scholars who could be regarded as competent to judge in matters of religion.

The ijma' must be regarded as the most important of the usul. It became the end of the basis for the whole doctrine of Islam. It gave Muslims security also that the fiqh was correctly derived from the sacred texts. It is true that, with regard to many details of the religious laws, there remained a difference of opinion between the four fiqh schools; but, as has already been noticed, all orthodox Muslims came later to recognize that as to these questions, different opinions were possible. It was agreed that the doctrine of each of the four madhahib gave a correct view of the canon law, and, in consequence, it was possible to say that the ijma' itself had sanctioned even those regulations as to which the four fiqh schools cherished different opinions. Moreover, everything which afterwards, under changed circumstances, became a rule was held to be justified when all were agreed about it. Customs and doctrines cannot be heresies for the true Muslim, provided that all orthodox fuṣūls sanction them, even if they are not based on the Qur'an or the sunnah. Those who do not observe customs sanctioned by the ijma', such as the Walīhātes, are regarded by the orthodox Muslim as heretics.

(4) The qiyas. — Of the different kinds of argument according to which some rules of the fiqh were established only later, the qiyas was regarded as a fourth infallible foundation for the fiqh. The other methods, such as istihsān, istiṣbāḥ, and istiṣbah, were not approved by the majority of Muslim scholars.

1 On the so-called ma'ūfah see G. A. Wilken, Das Mutterrecht (das Mutterrecht) bei den alten Arabern, Leipzig, 1884, pp. 9-16; and J. Weihenried, "Die Ehe bei den Arabern," in GGN, 1890, p. 404 ff.
To prove that the fjih might really be based on analogy, an appeal was made to various texts of the Qu’ran and tradition. Among these, the Prophet had instructed the Meccans to call their governor Muhammad, his governor of Yaman, to keep in general to the Qu’ran and the Sunnah, but, in cases in which this was not possible, to behave according to the analogy of these sacred texts. Since, later on, all orthodox scholars were agreed that Al-Wahabi and other doubts on the point were possible. Thus, for later generations in the orthodox Muslim world, the command that the Qu’ran is a fourth infallible foundation of the fjih is based on sunnah.

Some orthodox scholars were of opinion that the general command to flee to the Qu’ran and the Sunnah should also be regarded as a basis for the fjih. As a matter of fact, many faṣūla, from ancient times, had been careful, in every case of using the Qu’ran, to, take into consideration the general customs of Muslims; but it has never become a rule to regard the sunnah as a fifth infallible foundation of the Sunnah.

Muslim writers have written extensive works about the sunnah, faṣūla, which treat of the different methods by means of which the rules of the Sunnah may be established. Most faṣūla make no special study of this science, but content themselves with the conclusion or statements to the sunnah which may be found in the Sunnah.

4. Summary of the contents of Muslim canon law.—The chief regulations of Muslim canon law may be divided into two classes—(1) those regarding religious worship and ritual duties; and (2) those regarding civil, penal, and public law.

The regulations belonging to the first class deal in the main with the ritual actions by which Allah is to be worshipped. They are (i.) the ṣalāt (the ritual prayer, mainly consisting of prostrations, praises of the Creator, etc.); (ii.) the ṣāḥiḥ (the ritual purification, which must be performed spatially before the salāt is performed, but which is also required in other cases in which a believer must be in a ritually pure condition); (iii.) the zakāt (originally almsgiving, which was afterwards ordered by definite rules and became a kind of religious tax); (iv.) the ḍhund (fasting, especially in the month of Ramaḍān); and (v.) the ḥaḍj (the annual pilgrimage to Mecca).

These five ‘ṭābi’ are always treated in the first five chapters of the Sunnah-books, according to the usual division of these works which has obtained since ancient times. They belong at the same time to the ‘pillars’ of Islam, i.e., to the principal duties of a Muslim. Originally also the jihād (the ‘sacred war’ against unbelievers) was regarded by many Muslims as a ‘pillar’ of Islam. This opinion is still held by the Ḳairijjites, who are, however, regarded as heretics. According to orthodox Sunna, the Ḳairijjites, and the muḥaḍarah (the ‘pillars’ of Islam). One of these is the salāt, including the ṣāḥiḥ connected with it. The zakāt, the ḍhund, and fasting belong also to them, and the fifth ‘pillar’ is the confession of faith (shahādah), consisting of the well-known ‘two words’: ‘I confess that there is no god but Allah, and that Muhammad is the Messenger of Allah.’ For it is repertory tradition that the Prophet said: ‘Islam is built on five (or otherwise referred to as the shahādah, the salāt, the zakāt, the ḍhund, and fasting in the month of Ramaḍān.’

The subjects connected with the belief in Allah are so numerous and the controvertibles of manifest heresies on this point cause in time to extend so far, that the doctrine regarding the first ‘pillar’ (the šahih) developed into a separate branch of science, the ʿilm al-taṣawwuf or ʿilm al-bidʿah (knowledge of the unity of God or doctrine of faith). In the Sunnah-books only the four other pillars are discussed. In connection with the daily salāt, the Sunnah-books also deal with the whole worship in the mosque, the service on Friday and on the two ‘fils’ (i.e., the two ‘fils’ on the tenth of the last month, Dār-ul-Qisas, and the ‘fils’ from on the first of the last month), Salat. Subsequently, the ritual purity of persons and objects, the ritual slaughter, the lawful food and drink, etc. These regulations are by various others—e.g., concerning the prohibition of blood of living beings, of supernaturally luxurious (the use of gold and silver dishes, the wearing of silk clothes by men, etc.), the games and pleasures connected with it, the use of permissible and forbidden music. The Sunnah-books deal with some of those regulations in the chapter on the ṣawāmah (the religious meal at the marriage-feast and on other occasions) and, if any of the rules mentioned in this, the Sunnah-books infringe, the religious character of this meal is lost.

The regulations of the second division chiefly concern marriage, divorce, relationship and the rights and duties connected with them, inheritance, and slaves and freedmen; also contracts (sale, hire, partnership, commission, etc.), wills, the obtaining of property and other rights, the prohibition of taking interest (Muslim law regards this as ‘maur’); oaths and vows and all connected with them; testamentary dispositions and testamentary disposition (dispositions by which certain goods are withdrawn from trade in order to be reserved for definite religious aims or for a special number of persons); further, the right of retaliation and the redemption of it by payment of a ransom; legal procedure, and the law of evidence; finally, the duty of believers to take part in the jihād, the rights and duties of the ruler, the protection of the lands, and the appointment of an umāmah (chief of the Muslim community), his rights and duties. It is not the aim all of the regulations of the law to give absolute commands or prohibitions; in many cases it is qiyās; the meaning is beyond doubt; and the Sunnah to that which, in case of doubt, is obligatory only according to the most probable view. Duties to be observed by every Muslim individually are called fard al-muḥsin (or fard’ ala’ ʿain); duties to be observed by a certain number of Muslims collectively are called fard al-kifayah (or fard’ ala’ kifayah)—e.g., the daily salāt in the mosque and the sacred war against unbelievers. (i) A deed may be obligatory (waṣūf, ‘necessary,’ or fard, ‘prescribed’). Only the Ḳairijjites recognize a difference between waṣūf and fard. They apply the term fard to all that is prescribed by the Qu’ran or by the tradition, if the meaning is beyond doubt; and waṣūf to that which, in case of doubt, is obligatory only according to the most probable view. Duties to be observed by every Muslim individually are called fard al-muḥsin (or fard’ ala’ ʿain); duties to be observed by a certain number of Muslims collectively are called fard al-kifayah (or fard’ ala’ kifayah)—e.g., the daily salāt in the mosque and the sacred war against unbelievers. (ii) A deed may be recommendable or meritorious (ṣunnah). A Muslim will be rewarded if he observes these regulations, but he will not be punished if he neglects them.

It has been supposed by some scholars that the actions belonging to this class were called sunnah as being derived from the sunnah of the Prophet. But this is incorrect. It is indifferent for what reason an action is recommended in canon law. Muslim jurists of one fjih-school sometimes call a deed sunnah, in order not to disagree wholly with the doctrine of another sect, which calls the same deed obligatory. A deed may also be sunnah because it was recommended in a verse of the Qu’ran; on the other hand, the imitation of a deed of the Prophet is often ‘obligatory.’ Other words that are used in the same sense as sunnah are mubāṣbāṣ (‘desirable’), and mubāṣbāṣ (‘commended’). An ‘invalid’ action is a deed which is not called fard.

Notwithstanding the great lack of knowledge and the negligence of most Muslims, in all Sunnahman ships, in all parts of the Arabian peninsula which deals with religious duties and with the justice of men, the Sunnah is less faithfully observed. According to the popular conscience, some actions are even regarded as
II. MARRIAGE, KINSHIP, LAW OF INHERITANCE, SLAVES — 5. Marriage. — (a) The marriage contract. — In ancient times in Arabia the husband used to buy his wife from her nearest kinsman (se'f, *nearest*). He could give her in marriage to whom he liked, and he received the dowry, which was regarded as a kind of sale. Therefore this sale price the bridegroom became the owner of the bride. In some Arabic Bedawin tribes we find these customs even at the present time, with very little modification.

In some parts of Arabia, however, the original form of marriage by sale and the patriarchal family customs connected with it were already so far modified in the time of Muhammad that it was customary to pay the bridegroom the price of her marriage. It is regarded as objectionable if her wife desired to keep this gift wholly or partly for herself. So, according to the Qur'an (e.g. iv. 28), the Muslims had to regard the dowry as a reward for the wife, and no one was allowed to withhold it. It seems, however, that the nearest kinsman in Muslim's days was entitled to give a girl in marriage to whom he liked, even against her will. As several women complained of this to the Prophet, he is said to have issued a decree that in future in ordinary cases every wife must ask the agreement of the bride to her marriage.

No marriage is valid without being preceded by the making of the marriage contract (al-nikah). Even at the present day, the wife usually is the only person entitled to make this marriage contract with the bridegroom.

The Hāfitites allow a woman to make the marriage contract herself, or to appoint someone else to do so in her name, if she is of age and is not under guardianship. The Shafi'i, on the other hand, hold that neither a minor woman nor even a woman of full age is entitled to do this; only her wife has the right to marry her to any one; but she is at the same time generally bound to give his co-operation if she desires it of him. Malikites, like the Hāfitites, consider that the woman who is of age is entitled to make her own marriage contract, unless she belongs to a distinguished family, or, in consequence of her beauty or other qualities, is an exceptionally desirable match; in the latter case she is to be united in marriage only through her wife. The only case in which the wife has the right to oppose a marriage is when the woman desires to marry a man who is not her 'equal' (Abū Hanīfah also allowed him his right if he is the 'equal' of the wife). No emancipated slaves can be considered as the 'equal' of a freewoman, any more than a *fiqhi* is that of a woman who is 'add. On the other hand, it is

14 Everybody that is not *add* is called *fiqhi*. When a person is *add* he is not bound to marry even if the woman is not *add* and that he does not usually infringe the less important regulations of canon law. Even although he has infringed these less important regulations, it is a person still not to be considered as the greater part of his other religious duties devoutly. This stone
wholly indifferent for this purpose whether the bridgroom is equal in wealth to the father of the bride or not. In matters of bridgroomship also, according to the or profession of the bridgroom, but exclusively by his conduct and faith. As a rule, the various regulations of canon law concerning the kaf`ah are of no practical importance for the present-day Muslims. Marriages which would be considered "illégitime" by the law of the land are very often considered by the wife and her relatives as legitimate. An example of this rule is made by the ayyadu or sharjah, the descendants of the Prophet, who in some countries (e.g., the Dutch Indies) refuse to marry their daughters to men who are not related to them by blood in order to avoid their dishonour.

The various religious schools differ as to the cases in which the wali has still in Islam the right of making a marriage contract without the permission of the parties.

The Shi`ites hold that the wali as a rule has no right to give the bride in marriage without her permission. A minor girl, therefore, cannot be given in marriage by her wali, for she is not able to give a valid permission. According to the Shi`ites, only the father or, failing him, the paternal grandfather is entitled to compel his daughter (or granddaughter) to a marriage, if she is still a virgin, whether she be a minor or of age. For this reason they call the father and the grandfather wali maqbul (i.e., 'accepting' or 'deciding'). Nevertheless the doctrine even of the Shi`ites always regarded it as commendable (ta'mualah) that the three conditions of the wali are required. In other religious schools these questions are partly decided in another way.

The wali must be not only the 'nearest' kinsman, but also an adult and a free Muslim in full possession of his intellectual powers and (at least according to the Majority school) not a minor. If he does not satisfy these conditions, his right passes to the next kinsman. If none of the persons just mentioned is qualified to become wali, or if there is no kinsman, or the kinsman is under the age of puberty, he must be a proper person who by the law of Islam is allowed to marry, which is not the case of a minor under the age of puberty. In the latter case the Hamb dryer person there is entitled to demand marriage (hakim) of the bride when they come of age.

According to the Hamb dryer, wali of full age cannot be compelled to marry by any person. According to the Majority school, however, the wali may be compelled only by their father (not by the grandfather), and at that time the wali should make the marriage (hakim) of the bride when they come of age. According to the Hamb dryer, females of full age cannot be compelled to marry by any person. According to the Minority school, however, the wali may be compelled only by their father (not by the grandfather), and at that time the wali should make the marriage (hakim) of the bride when they come of age. In such a case the wali has no wali, the hakim is regarded as the wali of the bride. According to Qadi, the Prophet said: 'The hakim is called wali of her who has no wali.' The figh books do not indicate which of the hakim is the hakim of the hakim. In many Muslim countries in this case the marriage contract is made by the Qadi. If the Qadi is not residing in the place where the marriage is to be contracted, the bride and bridgroom are allowed to hand over this function to some proper person. Such a man is called hakim (which is also the title of an arbiter in a lawsuit). Parties are entitled to choose another person as hakim even if the hakim is living in the place, but in this case the hakim who is chosen is allowed to act as a substitute for the hakim. The hakim only if the hakim satisfies the conditions of the wali in all respects. If he does not satisfy these conditions, the hakim is entitled to take the place of the wali. The hakim is not generally represented by a wali in the making of a marriage contract—he does it himself. The contract is made by his wali only if his wali is under the age of puberty as a minor. According to the Hamb dryer, boys under age can be married only by their wali maqbul (their father or paternal grandfather), for they are supposed to be able to assume responsibility for the marriage. The Hamb dryer and the Majority school, however, allow other relatives also to do this, for his small sins. But, if he confesses heretic opinions, he cannot be a wali maqbul. The opinions of the different religious schools agree as to the order in which the kinsmen of the bride are entitled to be regarded as wali (Muhammadan ed. 870) (3).

If the bridgroom lives under guardianship for other reasons (e.g., he is still a minor), he cannot be married only by the mediation of his guardian. By the marriage contract the wali or other representative of the bride declares her to be given in marriage to the bridgroom (this declaration is called jibab, 'the offer'); and the bridgroom declares that he takes her as his wife (this declaration is called qabul, 'acceptance'), and that he will pay a certain sum as dowry. Jibab and qabul must follow each other immediately, as in all other contracts.

According to the Shi`ites, in the making of the marriage contract the parties are not allowed to make the legal rights and duties of married couples. Either husband or wife, indeed, is allowed to rescind later on the rights to which they are entitled by the law, but it is not permitted to bind oneself to this beforehand; e.g., if the man bound himself beforehand not to marry a second wife, or if the wife renounced her right of being supported by her husband, then these conditions would be null and void. In this case the marriage contract remains valid, unless conditions were made which would be contrary to the aim of the marriage (i.e., not to have children); in that case both the condition and the marriage are considered void. In other religious schools these questions are partly decided in another way.

According to the Hamb dryer, the wali of the bride is called wali maqbul (i.e., 'accepting' or 'deciding'). This declaration is made in Arabic, and must satisfy God, the Prophet, give piety (sadaqah), and be made in the presence of trustworthy witnesses, who must satisfy certain demands of the law. In the Hamb dryer, only demand that the marriage shall not be nullified (thereby over-definite anil). Assistance of a clergyman is not required in Islam for the making of a marriage contract, but usually the aid of a person who has a special knowledge of the regulations concerning marriage is invoked. Only in this way do Muslims feel that the marriage is guaranteed not to be null and void. Thus we find in Egypt and all other Muslim countries persons who make a profession of assisting marriage, and who make contracts. In different countries these men are called by various names (e.g., mu`nawak in Mecca). Sometimes such a person dictates to the parties the words that are to be pronounced by them, but in most cases he appears exclusively as a representative (wali maqbul) of the wali of the bride. Then he need only dictate to the bridgroom the required formula. If the bridgroom and the wali of the bride possess a sufficient knowledge of the regulations of the canon law, they may make the marriage contract themselves without the assistance of a professional officiant.

In the art. Wusul (Muslim) the religious ceremonies connected with marriage will be dealt with, such as the usul (i.e., the marriage law, which originally was probably a sacramental meal).

It remains to mention only that bride and bridgroom are not allowed to contract a marriage if they are not in accordance with the law, i.e., the state of religious consecration and abstinence which the law makes obligatory for those joining in the yearly pilgrimage (hajj). (6) The dowry.—The dowry given by the bridgroom to the bride has still its old Arabic name mahr (cf. Heb. spher). By this word was originally meant the price which was paid to the wali of the bride. Another name for the dowry is sadaq. Because of the general meaning of the Arab verb sadaqa and its derivatives, we may assume that the sadaq was originally the amount paid by the bridgroom as a guarantee of his trustworthiness, and held by the wali of the bride if the bridgroom broke his promise. Later on no distinction was made between mahr and sadaq, and Muslim scholars generally regard these words as synonymous in every respect.

It is expressly stated that the fixing of the amount of the present to the bride is left to the discretion of the parties as to the amount of the mahr. (2) It is expressly stated that the fixing of the amount of the present to the bride is left to the discretion of the parties as to the amount of the mahr.
pleasure of the bridegroom. (3) A fixed sum is mentioned. In the first case a bridegroom is obliged to give his bride a mahar al-mithli, i.e. a dowry suitable to her position and also dependent on her descent, age, intelligence, beauty, and other qualities of the bride, for which she may be reckoned as a more or less desirable match. The agreement by which the mahar is expressly left to the pleasure of the bridegroom calls for "leaves over to somebody". The gift of the bride can leave the fixing of the amount of the dowry to the bridegroom only if the bride has expressly empowered him to do so, and she must do this only if she is of age and has the free disposal of her fortune. In the third case the amount of the dowry is precisely stated in the contract. Then the dowry is called mahar musammam.

According to the Shafi'ites, it is sufficient to fix the amount of the dowry in this way, the parties not being bound by legal regulations concerning the amount, except that it is necessary that the amount of dowry desired by the wife should not exceed the amount of the dowry to be at least equal to a mahar al-mithli. The Hanafites and Malikites hold that the dowry must always represent a certain minimum in money or its equivalent, however, as to the exact amount of this minimum. The Hanafites say that it is not allowed to give the bride the ulam-din or 10 silver dirhams. The Malikites hold that the minimum is one quarter of a golden dinar or 3 silver dirhams (cf. the same difference between these two schools of law concerning dowry). The question is discussed at length in various works on Matrimony and Marriage (Muhammadan), § 30.

It is obligatory for all the parties to pay the dowry at the time when the marriage contract is made. Usually only a portion (e.g., the half of the mahar) is paid before the marriage; but the customs vary in different lands. The remainder is paid later in case of divorce or separation of the couple. According to the Shafi'ites, it is usual to pay to the bride before the marriage two-thirds or at least half of the dowry.

This is because the halal is only a part of the dowry before the marriage probably dates back to the pre-Islamic period. We may assume that the original purpose was to prevent the loss of all connection between the wife and her family. In many countries, in which the custom of buying a wife exists, if she is ill-treated by her husband, the relatives of the wife do not lose the right to protect her until the full dowry is paid.

The bridegroom is now paying only half the dowry to the bride as damages in case of breach of the marriage contract by afterwards refusing to take her as his wife. If the amount of the dowry was due from the bridegroom by reason of his marriage to another woman, he is obliged, according to the Shafi'ites and the Hanafites, to give a "purchased" wife or child to the rejected woman. The present is called musta'na because of the name given to this compensation in Qur'an, ii, 297-300 and 237-238. The Malikites also hold that the nullity of the contract is not obligatory, but they regard it as sunna for the bridegroom.

(c) The lawful obstacles to marriage.

The principal circumstances which can prevent the conclusion of a marriage are the following five.

(1) An already existing marriage. A free Muslim may not contract a new marriage so long as he has already four wives; a woman may be married to only one man at once. Polygamy is permitted in Islam only within these limits; it existed in Arabia from antiquity and was not done away with by the Prophet. In Qur'an, iv, 3, in which believers who had embezzled the property of orphans entrusted to them are enjoined to live in a simple manner, the following words are found:

'If ye fear that ye will be unable to give the orphans what is theirs, marry so many wives as is good for you—two, three, or four; if ye fear (in spite of that) that ye will be unable to act justly, marry only one wife or take slaves: that is better, that ye may not act unjustly.'

These words were interpreted by the later Muslim faqih in the sense that no Muslim may possess more than four wives at once. And there was a tradition that the Prophet had expressly authorized this interpretation. It was, indeed, known from the condition that Muhammad himself had more than four wives at once, but men explained this later as one of the special privileges which God had given only to His messenger.

(2) Too close relationship. A Muslim is forbidden to marry his female relatives in the direct line (ascending and descending), his sisters and the female descendants of his brothers and sisters, and his aunts and great-aunts on both the paternal and maternal sides. A relative (man or woman) whom it is forbidden to marry is called mahram; e.g., a man is his daughter's mahram. Relationship-in-law (the relation between a married person and the relatives of his or her consort in consequence of marriage) is not forbidden. A Muslim may not marry his female relations-in-law in the direct (ascending and descending) line—e.g., his mother-in-law, daughter-in-law, step-daughter, etc. —nor can he have two or more wives as wives at the same time. In the fourth place, foster-relationship is also a hindrance to marriage, on the ground of Qur'an, iv, 27.

No one may marry either a woman who has sucked him or he has helped to suck; the foster-sisters of a man or of a woman who gave him suck, the foster-sister of a man and the woman who has sucked him, all her relations (either blood-kin or foster-sister), her husband, the husband of her husband (both blood-kin and foster-kin) on the other side. This foster-relationship, on the ground of a decision of the Prophet, is an obstacle to marriage within the same degree of relationship as blood-relatedness. On the other hand, there is no foster-relationship (a) between the woman who suckled the child and the ancestors or side-relations of that child; or (b) between the child and the ancestors or side-relations of children who were suckled by the same woman.

These regulations concerning the obstacles to marriage caused by kinship are in general deduced from the passage quoted from Qur'an, iv, 20 (and see xxiv, 30-31). The ordinances made in these two verses of the Qur'an were at least partly new to the Muslims, as may be seen from the words found at the end of Qur'an, iv, 27, in which permission is expressly given to regard as lawful the marriages which had been previously contracted contrary to these restrictions.

(3) Difference of religion. In Qur'an, ii, 290-291, it is forbidden for Muslims to contract a marriage with unbelievers. To that prohibition there were originally no exceptions:

'Marry no heterodox woman before they have become believers; a believing slave is better than an unbelieving free woman, even though she please you. Give also your female relations in marriage to no unbelievers before they have become believers; a believing slave is better than an unbelieving one, though he please you, because of the sense which they (the unbelievers) take you to hell, but God takes you to paradise and forgiveness.'

Later on, one exception was admitted, and Muslim men were allowed to marry women who belonged to a so-called people 'of the book' (ahl al-kitāb). By the ahl al-kitāb must be understood people, such as Jews and Christians, to whom, according to Muhammad's view, the same religion had previously been announced as he made known to his own people, the Arabsians.

See Qur'an, v, 7: 'Now are all free women permitted to you, both among the Muslims and among those who have received sacred books before you.'

In distinction from the other faiths of the world, the Shafi'ites regard marriage of women of the ahl al-kitāb as permitted only if these ahl al-kitāb had accepted their religion before the Qur'an was revealed, and also had not corrupted it. So, according to the Shafi'ites, a Muslim may not marry an English woman, because the English, though they belong to the ahl al-kitāb, accepted Christianity after Muhammad's time.

(4) A man and woman who are separated from each other cannot as a rule contract a new marriage with each other if the former marriage was dissolved either because the husband repudiated his wife, or because he had accused her of adultery by means of the li'ān (the swearing of a solemn oath). As to these two cases see § 6 (o) and (b), in which the exceptions to the general rule are also discussed elsewhere.

(5) Women may not contract a new marriage
within a certain period after the dissolution of a former one. This period is called 'iddah, i.e., properly 'the number' (viz. the number of days). If the marriage was dissolved by the decease of the husband, according to Qur'an, ii. 229, the wife must mourn for four months; and if she was married, or remarried, or secludes herself in a small tent for a full year after the death of the husband; during this time she might not purify herself. The 'iddah after divorce was, on the other hand, probably first introduced by Muhammad. According to Qur'an, bxv, 4, the wife may not marry again within the limit of three 'qur'as, if her marriage was dissolved by divorce. According to Abu Qatada, 'qurra' must be taken to mean menstruation; according to the Shafi'ites, Malikites, and others, it is the period of a woman's cleanness between the periods of menstruation. If the woman has no menstruation, the 'iddah is reckoned at three months. When a woman is pregnant at the dissolution of her marriage, she may in no case marry again before her confinement.

Difference in position is, as a rule, no obstacle to the contraction of a marriage, since it is in no case required to solicit the permission of the bridegroom to marry a woman of lower rank; and even a woman may contract a valid marriage with a man who is not her kuf, if neither her wali nor she herself has any objection.

Youth is usually no hindrance according to Muslim law. Child-marriages were not forbidden in Muhammad's day, and even the Prophet married 'Aishah, the daughter of Abu Bakr, when she was only six years old. But, according to the Shafi'ites, only the wali muhiri (the father, or failing him, the paternal grandfather) is qualified to give his children (or grandchildren) in marriage before their majority. According to the other four schools, more distant relations have the same right if the ancestors of the children under age are deceased. Children under age, therefore, cannot marry, according to the Shafi'ites, if they have no father or grandfather. But, according to the Shaybani, she who (at the end) as to the taqjud which is applied in such a case.

(d) Mutual rights and duties of married people during marriage: 'iddah and nikah. No community of the married couple is brought into existence by marriage. Each keeps the ownership of that which was possessed at marriage, and of that obtained during marriage by labour, endowment, inheritance, or in any other way. The wife keeps the right, during her married life, of disposing of her possessions and of making contracts. She does not in that respect come under the guardianship of her husband. The husband is obliged to support his wife according to her position, and give her food as well as clothing, residence, and service consistently with the appropriate customs. This legal and obligatory support is called nasf-nasqah. If the husband is not able to give the legal support to his wife, he is in default (fisikh), but in that case she has to prove that her husband is really not able to give her nasf-nasqah. If the husband is able to support her, but refuses to do so, the wife must try to force the husband to fulfill his duty, if the wife requires him to do so.

A husband who is married to more than one wife must not spend more time in the houses of one wife than in that of the other. The husband is also particularly forbidden in the law-books to swear an oath to abstain from sexual intercourse. The taking of such a vow of abstinence was called 'iddah ('to swear'). In the pre-Islamic period the Arabs regarded this 'iddah as a kind of divorce, by which, however, the marriage was not fully dissolved. Although the woman was thus neglected, she could not contract a new marriage before her husband had definitely repudiated her, and this he generally refused to do before he had been paid a certain sum as ransom.

This 'iddah was forbidden in Qur'an, ii. 229. One who had taken such a vow of abstinence was for the future obliged to repudiate his wife after the expiration of four months, if he had not already done so. According to the Shafi'ites, after the expiration of four months the husband must dissolve his marriage legally; if not, he be dissolved by the Shafi'ites and Malikites, if the woman refuses to repudiate his wife of his own accord. If the husband desires to be reconciled again with his wife, he is, according to the unanimous opinions of Muslim scholars, obliged to make a 'guilt-offering' (kafris' or, 'that which covers the sin') because of his vow. The legal regulations concerning the 'iddah are applicable only if the husband has vowed to abstain from conjugal relations with his wife for longer than four months.

Another vow of abstinence was the 'zahir (from zaahir, 'back'). In this case the husband declared that 'his wife should be to him even (untouched) as the back of his mother.' This was apparently a customary vow of abstinence by the heathen Arabs, which, according to tradition, was also taken by some Muslims in the month of fasting, when they proposed to abstain from conjugal relations with their wives. This vow was expressly condemned in Qur'an, ivi, 15.

Appropriately the original meaning of this revelation was that every Muslim who 'turned again' to the heathen customs should have to pay a heavy penalty (kafris'), consisting of the emancipation of a Muslim slave, for seven months, or the feeding of sixty poor persons, before he again permitted to have intercourse with his wife. The Muslim Lega, however, have explained these verses of the Qur'an in a different sense. According to the Shafi'ites, the husband is legally bound to this kafris' unless he repudiates his wife immediately after pronouncing the 'iddah. If he does not do this at once, they say, 'then he 'turns back,' i.e. breaks his vow of abstinence, and must then give the kafris,' and, according to the other four schools, he breaks his promise only if he actually behaves contrary to his vow, and is only then obliged to give the kafris'. Thus these three explanations draw in the sense of changing opinion and breaking the vow of abstinence.

Both the 'iddah and the 'zahir soon became obsolete in Islam.

If the husband fulfills his duties, he has the right to demand obedience from his wife, and is even entitled to change an unwilling (naskiz); in this case she loses her right to nasf-nasqah. The husband and wife, according to the Shafi'ites, can make no change in their mutual rights and duties as established in canon law. Any agreement of that nature which they may make by the marriage contract has no binding power. Nevertheless, it is usual, in some Muslim lands, even among the Shafi'ites, for the husband to undertake certain exceptional obligations with regard to his wife, to which he is not bound by the law. He promises, for instance, not to take a second wife, though he has the right to do so. In order to give a binding force to such promises the bridegroom, immediately after the conclusion of the marriage contract, pronounces a repudiation of his wife conditional on the non-fulfilment of his vows. He declares, after making the marriage contract: 'If I take a second wife or if I neglect my duties to my wife, etc., then she is repudiated by me.' This custom is called talq (lit. 'to hang up' the divorce to a condition).
possible to imagine that he will treat his wife otherwise than well, is the *talq* not applied.1

6. Divorce.—(a) Repudiation (talq).—According to Muslim canon law, marriage may be dissolved by divorce in four ways, besides the death of one of the parties or their apostasy from Islam. The common form of divorce is the repudiation (talq) pronounced by the husband. Among the other forms of repudiation are also divorce by *isti‘ad*, repudiation of a slave, followed by divorce, and *iddah*. Over a period of three months, the woman is held to be chaste and pure; after this period she is pronounced divorced. If she happens to be pregnant, however, her husband, who could return to her and contract a new marriage with another husband, her marriage was immediately dissolved by the talq, the effect of which was the same as that of the *isti‘ad* or emancipation of slaves. But, according to the new law of Islam, the wife might not marry again during a certain period (*iddah*; cf. §5(e)(5)) after the repudiation. During the *iddah* it had to be seen whether she was pregnant, in which case her former husband would have the right of claiming the child. Further, the husband gained the right of reconciling himself with his wife during the *iddah*, and of revoking the *talq*. The revocation of the repudiation is called *raj‘ah* (also *raj‘ah* or *rak‘ah*).

According to Muslim tradition, this new right of the revocation of the *talq* was at first abused. It was evidently given to the husband in order to put him in a position to retrieve his fault if he had repudiated his wife in a fit of passion; but a wife complained to the Prophet of her husband, who repeatedly repudiated her and as often revoked his repudiation. The husband was reported to the Prophet by the wife. By means of the woman was practically repudiated, but could not contract a new marriage with another husband. Obviously her husband was trying in this way to compel her to ransom herself by a dowry that she had formerly received from him. The Prophet forbade this practice in Quran, ii. 231:

> "When you have repudiated your wife and she has waited for you, keep her with you and treat her well, otherwise let her go free, but do not take her back with evil intent. He who does that sins, and does not mend, God shall doom him to the Fire for ever."

Moreover, the right of revoking the *talq* was now limited in Quran, ii. 229 f.:

> "If the *talq* has twice (taken place, then it may only be revoked with good intentions or you must let go (your wife) with kindness; (for) it is not permissible to take back from her that which you have (formerly) given her . . . but if the husband repudiates his wife (once more), then she is no longer lawful for him."

On the ground of these verses of the Quran, a husband may repudiate his wife only three times. After each talq an *iddah*-period begins, during which the wife may not marry again. During the *iddah* after the first and second repudiations the marriage is not yet dissolved. If, e.g., the husband or wife dies during this period, the survivor shares in the inheritance. Moreover, the husband is entitled to revoke his repudiation during this period. If he allows the term to expire, the marriage is then dissolved. The divorced parties may contract a new marriage with each other if they wish; but in this case a new marriage contract must be made and a dowry again paid by the husband.

The third talq, however, the marriage is immediately dissolved. An *iddah*-period also follows, during which the wife may not marry again; but the man has no further right to revoke his repudiation, and the divorced pair cannot ever contract a new marriage with each other.

To the last rule there is one exception based on the Quran itself. A woman at Medina who was three times repudiated by her husband and afterwards married to another man wished afterwards to marry her first husband again. When she explained her wish to the Prophet, he declared that this was not possible, even if she were repudiated a fourth time; later, however, he took pity on her, and altered the regulation quoted above in Quran, ii. 229. After the words before the third talq the woman is no longer permitted to marry another husband; a following regulation was added: 'Unless the woman afterwards has married another husband and was also repudiated by him; in such a case it is no sin for them both (i.e., the wife and her first husband) to return to each other, if they think that they will in future be able to observe his requirements better.'

On the ground of this regulation, the law allows married people to contract a new marriage with each other even after the third *talq*, if the wife was in the meantime married a second time and had been repudiated by him. In Muslim countries repudiation is very often pronounced three times for insignificant reasons, and the divorced persons often desire to be joined together again. In order to make this possible, the wife contrives to contract a mock-marriage with another husband, who is ready to repudiate her immediately after the marriage. He who declares himself willing to do this is called mutalib (because he makes the wife by this mock-marriage once more halal, i.e., permissible for her first husband). Such a mock-marriage may be employed only twice, for, if the husband has three times pronounced the thrice-repeated *talq*, he cannot contract a new marriage with his repudiated wife.

(b) Other forms of divorce.—Besides *talq* there are three other ways in which marriage may be dissolved: *khul*, *fisah*, and *fit‘a*. After each of these, a period of *iddah* begins for the woman in which she may not marry again. During this time she is entitled to *nafaqah*, if she has not neglected her duties towards her husband.

(i) *Khul* was customary among the Arabs. Generally speaking, it consisted in the ransoming of the wife by her relatives, usually for a sum of money proportionate to that which they had received from the bridegroom as *mahr* at the time of the marriage. In consideration of this sum, the husband was induced to renounce his wife and lease her free to marry another husband. *Khul* means literally 'to put off.' The use of *khul* in this context is derived from the symbolic act (the throwing away of a cloak, a shoe, or a similar piece of clothing) by which the husband shows that he renounced his claim on his wife.1

As has already been mentioned, the Prophet originally forbade the husband to divorce his wife's dowry at the dissolution of marriage, as this custom often gave rise to the deliberate neglect and otherwise vexations treatment of the wife (see the words of Quran, ii. 229 quoted above; cf. also iv. 24-25). But later on the ancient custom of *khul* was again permitted.

The reason of this was the request of a woman at Medina, who declared that she had such an aversion to her husband that she no longer wished to stay with him. She asked permission to buy her freedom in order to be released from her husband, and the following addition was then made to the words of Quran, ii. 231: 'It is not lawful for you to take back anything which you have given to your wives, except if you are free to give it again, and you will transgress the laws of Allah; when you are afraid of this, then is (the ransom) with which the wife redeems herself no sin for either (of the married couple), that is the law of Allah, etc.'

On the authority of these words the *khul* remained even in Islam a legal method of divorce. The wife by this means buys her repudiation; her former husband can never revoke it. If the husband and wife both wish it, they may again join in marriage.

(ii) *Fisah* is the annulment of marriage with the co-operation of the magistrates. Among the Hanafites, a minor who has been married in marriage, not by her father or grandfather, but by a more distant relative, may demand dissolution of this 1 Cf. Be 47a. and J. L. Burckhardt, Notes on the Bedouins and Wahhabits, f. 115.
marriage on the attainment of her majority (see § 5 (a)). Other reasons for the fasakh may be found in certain diseases or bodily infirmities mentioned in the fiqh-books. This method of divorce is possible also when, after the completion of the marriage, it appears that the bride or bridegroom does not fulfill certain qualifications (e.g., with regard to birth, position, virginity, etc.) which had been expressly insisted on as conditions at the making of the marriage contract. According to the Shafiites, a wife may also demand fasakh if she proves that her husband is not able to give her lawful maintenance (nafqah). In these cases the sentence of dissolution of marriage is pronounced by the magistrate at the request of the parties.

(3) The dissolution of marriage by means of 'Ilân (‘imprecation’) is based on Qur’an, xxvii, 6-9. As a rule, any one who accuses a free Muslim woman of fornication, without being able to prove his accusation, is punished by scourging. If, however, a husband suspects his own wife of infidelity, the law allows him to accuse her of adultery without any farther proof, and to contest the legitimacy of her child born after the period of six months. A husband may invoke Allah in the manner prescribed in Qur’an, xxiv, 6-9:

‘Those who accuse their wives of infidelity and have no other witnesses, let them produce four witnesses of what they have spoken: the truth, and a fifth time, calling down the wrath of Allah upon her who has lied. The wife may aver the punishment (for adultery) if she swears by Allah four times that her husband has lied, and a fifth time, declaring that God’s wrath may fall upon her if her husband has spoken the truth.’

If a husband, after accusing his wife of adultery, refuses to pronounce the 'Ilân, he must be scourged forthunder if he cannot produce witnesses; but the Hanafites consider that the husband ought to be imprisoned until he pronounces the 'Ilân or admits that he has lied. According to the Shafiites and the Malikiyyah, not only is the marriage legally dissolved by the 'Ilân, but the married couple may never marry each other again. According to the Hanafites, even after the 'Ilân the marriage must still be dissolved by a decision of the magistrate, and the reunion of the parties is permitted if the husband has afterwards revoked his accusation and been scourged for his slanderous imputation.

7. Relationship, and the rights and duties based on it.—(a) The relationship between a child and his father.—In ancient Arabia, on account of the nature of the marriage by sale, the husband (ba‘al, lit. ‘master’, of the woman) was regarded as the father of all children borne by his wife during the marriage, even if he did not beget them. Thus he was also regarded as the father of the children borne by his wife if he had married a pregnant woman, or if he had given up his wife for a certain time to another man in order to raise up noble children for him.

In Islam this rule was altered. According to Muslim canon law, only the man who has begetten the children in a legal marriage is regarded as their father; a woman must wait for the expiration of the 'iddah period, if she wishes to marry another husband after the dissolution of her marriage, in order that it may be seen whether she is pregnant. If she is, she may marry again only after her confinement and the first husband is regarded as the father of the children born during the 'iddah. Thus in Islam the first and second husbands cannot quarrel about the children born after the dissolution of the marriage; such quarrels were very common in the pre-Islamic period.

Muslim canon law generally recognizes a child born in wedlock as begotten by the husband and

thus as legitimate when the birth takes place not earlier than six months after the consummation of marriage. A child born within a certain period after the dissolution of marriage (whether by divorce or through the death of the husband) is also regarded as legitimate. It has to be assumed that pregnancy may last two years if it appears that the mother had no menstruation during that time. According to the Shafiites and the Malikiyyah, pregnancy may even last much longer (four or seven years), and the children born so long after the dissolution of the marriage may still pass as legitimate. Further, the children which the master begets from his slaves are regarded as legitimate offspring, and are placed on a complete equality with those begotten in lawful marriage (see § 9 (c)). When it appears that a marriage is invalid, or that any one has been wrong in thinking that he was the owner of a slave, the children are, nevertheless, regarded as legitimate, provided the parents acted mistakenly in good faith, so that there can be no question of zinā (‘fornication’).

All other children are illegitimate (sulh ad zinā‘), begotten in fornication). There is no relationship between such illegitimate children and their father, even though the father expressly recognizes that they were begotten by him. From such an acknowledgment he cannot derive any rights for the child, either for the child or for the father (neither right of inheritance, nor guardianship, nor duty of maintenance). The Shafiites even allow a father to marry the daughter whom he begets in fornication, though they regard it as blameworthy (makruh). The Hanafites forbid this. On the other hand, the relationship between the mother and her illegitimate children is legally precisely the same as that between her and her legitimate children. She is not allowed to marry her illegitimate son, and she inherits from him, etc. A child is also illegitimate if the husband by means of 'Ilân accuses his wife of adultery (see § 6 (b) (3)), and declares that the child borne by her is not his. If, on the other hand, it is uncertain whether a child was really begotten by the husband during wedlock (or by the master, during the time that he was the owner of the slave), it is then regarded as legitimate without further proof, if the father recognizes it as his. Such an acknowledgment is called Ir ād. Adoption is forbidden, and has no legal force (see Adoption [Muhammadan]).

Blood-relations in the direct line are obliged to support each other (by means of nafqah) in case of necessity; according to the Hanafites, this duty rests on all blood-relations that are not allowed to marry each other (thus on all makram; see § 5 (c) (2)).

(6) Other kinds of relationship.—Another result of marriage by sale among the ancient Arabians was that after marriage the wife ceased to belong to her family, so that there was family-relationship only between the child and the family of its father, and not between it and the family of the mother. It is true that for philological reasons it may be assumed that even in Arabia the patriarchal family-system was preceded by the matrilarcal, but in historical times no clear traces of the latter system can be found.

2. For further particulars about this so-called mishk al-thabdt‘ cf. G. Wulff, Das Matriarchat, in Hausmann, De Vere, 4, 1905, p. 110 (9th ed. 1903, p. 129).
Law (Muhammadan)

As already pointed out, even before Muhammad marriage ceased to be generally regarded as a purchase. So also it was customary in Arabia before Islam not to limit relationship entirely to the family of the bride, but in many cases to take into consideration the relatives on the mother's side, although the maternal relatives are never placed on an equality with the paternal by the Shafites. It is also true that maternal relationship is an obstacle to marriage according to Qur'an, iv, 28 f. (the maternal aunt is a mahram, just as is the paternal aunt, and the hadithanah (i.e. the care of children) is in certain cases equally a right of maternal relatives), but, in general, attention is paid only to the rights and duties of the 'asabat, i.e. the male relatives on the paternal side.

Rights which are based on relationship (nastaib) and which are usually conceded to the 'asabat are: (1) the right of giving female relatives in marriage or of opposing the marriage of female relatives who wish to marry below their rank; (2) the right of inheritance; (3) the right of managing the property of blood-relations who are under age or insane; (4) the right of retaliation or of demanding the price of blood if a blood-relation has been killed; and (5) the right to succeed a blood-relation who has settled his rights as a result of the freedom. According to the majority of Muslim faqih, if a blood-relation has unilaterally killed any one, the duty of paying the satisfaction money also falls entirely on the 'asabat.

In order to indicate the nearest relative among any one's 'asabat, Muslim scholars divide the male relatives on the paternal side into classes. The first class consists of the descendants, the second of the ancestors; the third class is formed by the descendants of the father, and the fourth class by the descendants of the paternal grandfather. Among the descendants the son is the nearest, then the son's son, etc.; among the ancestors the father is the nearest, then to him his father, etc.; the next of kin in the third class is the brother, then follows his son, etc.; the next of kin in the fourth class is the paternal uncle, then follows his son, afterwards his son's son, etc. He who is under age or insane on the maternal side precedes a blood-relation of the same rank who is related to him only on the paternal side; so, e.g., in the third class the full brother and the half-brother on the maternal side, the son of the full brother precedes the son of the paternal half-brother, etc.

Thus, as a rule, not only the son but also the grandson, etc., has precedence over the father, and the grandfather on the paternal side ranks above the brother. There are, however, exceptions to this rule. (1) The nearest 'asabat of a woman who have the right to give her in marriage are, according to the Shafites, not her descendants but her ancestors, and after them her relatives in the lateral line; but, according to the Hanifites and Malikites, the ordinary rules obtain in this case also, and the descendants have the right in the first place to be 'asabat of the wife. (2) The brother of a deceased man inherit equally with his paternal grandfather, and are thus not excluded by him; but the grandfather has always the right to at least a third of their common share, so that, if he inherits one or two brothers, each obtains an equal part; but, if he inherits with three or more brothers, the latter divide two-thirds of the whole among themselves in equal parts, while the grandfather obtains one-third. (3) The rights which can be exercised over a freed slave pass by the death of his emancipator to the nearest of the 'asabat of the emancipator, but in this case the brothers take precedence of the grandfather.

(4) According to the Shafites, the obligation of the nearest 'asabat to pay the 'agl (the atonement money), when one of their blood-relations has committed unintentional manslaughter, falls only on the direct (ascending and descending) line (cf. art. Crimes and Punishments [Muhammadan], vol. iv. p. 292).

The blood-relations on the maternal side and those on the father's side, so far as they do not belong to the 'asabat, are called dawul-ar-rahim. They have in general no rights and duties based on relationship. According to the Hanifites, however, they take their place among the 'asabat if they do not exist. In such a case the right to be 'asabat and to give the bride in marriage passes to the mother and to her next of kin; and the inheritance also passes to the next relatives among the dawul-ar-rahim. According to the Shafites and Malikites, on the other hand, the 'asabat in such a case are not succeeded by the dawul-ar-rahim but by the Muslim community; thus, if there are no 'asabat, the treasury (bad al-mal) inherits; and the falim, i.e. the magistrate, must take the place of the 'asabat of the bride.

(c) Guardianship.—Minors are legally under the guardianship of their parents or nearest blood-relations. They are subject to all attendant contracts, or to undertake other legal transactions. Minority ceases generally, according to Muslim law, when the children are really adult and the signs of puberty can be observed. According to the Shafites, minority ends in any case after the completion of the fifteenth year; according to the Hanifites, only after the eighteenth year. Besides the so-called waliyyat al-nukh (i.e. the guardianship which gives the minor the right to give a female relative in marriage, or to prevent her marrying below her rank), which has already been discussed in § 5 (a), Muslim lawyers distinguish two other kinds of guardianship, namely, the hadithanah and the waliyyat al-nukh.

(1) The purpose of the hadithanah is to care for the physical well-being of the minors and also for their education and training for a profession. During the marriage, life of the parents and guardianship, the child is subject to the authority; in cases of separation of the parents, the mother has the right to retain the children so long as they have need of her help, i.e., according to the Shafites, until they are able to take care of themselves; but the child may entrust itself to the care of the father, if it prefers to do so; according to the Hanifites, a boy always comes at that age under the guardianship of the father, but a girl remains under the guardianship of her mother, while, according to the Malikites, both boys and girls remain under the guardianship of the mother until they are of full age (girls even until they marry). If the mother contracts a fresh marriage, she loses the hadithanah, unless her new husband is at the same time one of the blood-relations of the children. In this case she keeps the hadithanah, according to the Shafites, if the husband belongs to the 'asabat of the children; according to the Hanifites, if he is a mahram of them; and, according to the Malikites, if he is either a mahram of them or a relative who would himself have the right to be guardian over the children if he were not excluded by nearer relatives.

If, after the divorce, one of the parents removes to another place, the child remains as a rule with the parent who deserts it. However, the father establishes himself permanently in another place, he has the right to take his children there with him; but the rules of the
different fiqh-schools with regard to this subject vary in details.

If the mother is dead, Muslim lawyers generally consider the female relatives the most suitable for the hadânah. According to the Hanifites, the father and the other parents (qabîbat; the maternal aunt has a preference above other female relatives. They base this opinion on the tradition that, when Habiba and her husband were dead, three of her 'aqabat questioned the question which of them had the best right to look after Hannah's young daughter. One of them said to the Prophet: 'She is not only the daughter of my uncle, but my wife is, moreover, her maternal aunt.' On this Muhammad decided that the child must be entrusted to this man and his wife, saying: 'The maternal aunt is as good as the mother.' According to the Shâfîites, if the mother dies or is not qualified for the hadânah, she is succeeded by her mother, or, if necessary, by the mother of her mother. Only after them the father, and, after him, his mother, or, if necessary, his maternal grandmother succeeds to the hadânah. If the father and his female ancestor (and, after them, the grandchild and his female ancestors) are dead or disqualified, the nearest of the male relatives to the collateral line has the right to the hadânah. The male relatives are ruled by the paternal side, and since the male relatives cannot exclude the female relatives of the deceased, even if they are of the same age, it may appear that they could be excluded from the right to inherit. However, the female relatives are not excluded from the right to inherit, even if they are of the same age and the male relatives are not, and if the female relatives are the closest relatives to the deceased, they have the right to inherit. Therefore, the female relatives are not excluded from the inheritance, and the male relatives are not entitled to the inheritance. If there are no 'aqabat, and there is nothing left to inherit, the hadânah is due to the nearest relative of the deceased, and the male relatives have the right to inherit the hadânah.

(2) The wilâyât al-mâl is the guardianship which has for its purpose the management of the property of minors. According to the Shâfîites, only the father (and, failing him, the paternal grandfather) can be legally appointed as the guardian. In the case of the father or, if necessary, the grandfather has, however, the right to appoint by testamentary disposition a guardian over his children (or grandchildren) who are under age. A guardian appointed by the will must be able to manage the property of the child. Girls, in this case, can be entrusted with the care of the property of a child under age, and the mother is in the first place taken into consideration for this purpose, although she has no legal claim to the position. Failing both the father and grandfather, or a guardian appointed by them, the magistrate (hâkim), or a person appointed by the magistrate, must take the place of guardian. The Malikites recognize the qualification of the father only (not that of the paternal grandfather) to set up a legal claim to be guardian and to appoint a wilâyât.

The guardian manages the property of the minor, and makes any necessary agreements for him, etc. When the child is of the age of the guardian has to inquire whether his ward is râshîd, i.e., able to manage his property for himself. This regulation is based on Qur'an, iv. 5:

"Encumber the minors, and put them in possession of their property, when you find that they are râshîd." If it appears that the ward, though of age, is not yet capable of managing his own property, the guardianship continues. The opinion of Abu 'Abd Allah, that the guardianship in any case ceased as soon as the ward was twenty-five years old, has found no favour with other Muslim scholars. The hadânah of the insane, and the care of their property, must be entrusted as a rule to the female relatives as guardianship over minors. The wife of an insane person has, however, the first claim to the hadânah, and his daughter has in this respect the preference above all other female relatives with the exception of the mother.

3 Law of inheritance. (a) Introduction. Muslim canon law distinguishes various groups of persons, of whom the Qur'an allows a definite share (§ 2, 3, 4, or 5) in the estate. Such a share is called farîdah, and the heirs belonging to this group are therefore called the dawâni'l-farîdî' id, i.e., those who have a right to such definite shares.

When the heirs of this first group have received their share, the residue of the estate falls to the share of the relatives of the deceased in the male line (the so-called 'aqabat). These 'aqabat, who in Islam thus form a second group of heirs, were in pre-Islamic times the only female relatives who had a right to the estate, however, in the battles at Badr and Uhud and on other occasions, many Muslims had perished, qarrels arose among the members of their families as to the division of the estates which they left. Some examples of this are reported in Muslim tradition. The widow of Awâ ibn Thâbit seems to have complained to the Prophet that the male relatives of her dead husband had taken possession of his estate, while she and her children had obtained nothing of it. Other women came with similar complaints to Muhammad. This gave him occasion to decide that for the future the widow and some of the nearest female relatives of the deceased have a right to a certain share in his estate. These regulations are to be found in Qur'an, iv. 8, 12-15, and 175. It is not quite clear on what principles Muhammad based these regulations. It is, however, certain that he did not mean to regulate the right of inheritance of the 'aqabat. This continued to form the foundation also of the Muslim law of inheritance; and the new regulations, according to which some of the nearest relatives of the deceased obtained a right to a fixed share (farîdah) of his estate, were, therefore, only supplementary to the old Arabian law of inheritance.

If there are no 'aqabat, and there is nothing left to inherit, the farîdâh is hazîd to the nearest relative of the deceased obtained a right to a fixed share (farîdah) of his estate, were, therefore, only supplementary to the old Arabian law of inheritance.

The blood-relations of the deceased do not belong to the 'aqabat and to whom no farîdah is assigned in the Qur'an—the so-called dawâni'l-askâm—are divided into classes, and the descendants of the deceased take precedence over his ancestors, the latter over the descendants of his father, these again over the descendants of his grandfather, and in each class only the next of kin inherits. But, as has already been noted, the grandfather does not exclude the brothers of the deceased; he inherits together with them, and has a right to at least a share of their common share. If there are at the same time dawâni'l-farîdî' id among the heirs, the grandfather has, moreover, a claim to at least a share of the estate.
have received their share, or a share equal to that inherited by a brother of the deceased.

If the deceased be a freed slave and dies without leaving ‘asbāt, the person (man or woman) who has given him his freedom (the so-called masā‘ul) takes the place of the ‘asbāt, and this person is succeeded by the nearest of his ‘asbāt if he has a person designated as a half-brother.

In consequence of the regulation in Qur‘ān, iv. 12-15 and 175, that women have a right to the half of what men in the same grade of blood-relatedness inherit, some female blood-relations on the father's side, by the same law of inheritance as ‘asbāt in addition to the male relations. If, e.g., the deceased has left both sons and daughters, they inherit together, and the daughters count as ‘asbāt, but a daughter receives only half the share of a son. In such a case the daughter is called ‘asbāt bi‘l-qhārāi, i.e. ‘asbāt through another—she is ‘asbāt because the son (her brother) inherits. In the case the son himself is described as ‘asbāt bi-nafṣāhi (i.e. ‘asbāt by himself). The same rule and nomenclature also obtain for the daughter of a son of the deceased who inherits together with the son of a son of the deceased; also for the full brother of a deceased who inherits together with his full brother; and for the half-brother on the paternal side who inherits together with a half-brother on the paternal side. The full sister and the half-sister on the paternal side are called ‘asbāt when they inherit together with a daughter of the deceased or his son; i.e., they have in that case, like the male ‘asbāt, a claim to the residue of the inheritance after the dhawul-fardār id have received their share. In such a case, therefore, they are called ‘asbāt ma‘nāt al-‘aj mahāfira, i.e. ‘asbāt together with another because they inherited ‘together with another.

(c) The law of inheritance of the dhawul-

dhawul-fardār id.—The regulations concerning the shares to which the heirs belonging to this group have a claim are based upon the legal designation of or the so-called ‘inheritance verses’ in Qur‘ān, iv. 12-15:

Allah commands you to give to your children: to a man child, the tenth of inheritance; and to a woman child the same amount; and if there be only female children (two or more), then they receive two-thirds of the estate; and, if there be only one female child, then she receives half of the estate; if the father leaves children (two or more), each receives one-sixth, if he leaves a child; if, however, there are no children and the mother receives a third, except when there are surviving brothers of the deceased, for then the mother receives only a sixth. You (men) receive the half of the estate of your wives if they have no children, otherwise you receive only a fourth. They (the widows) receive a fourth of the estate if you have no children, otherwise (they receive only) an eighth. If a person dies without leaving blood-relations in the direct line, and there is a brother or sister of him, then these each receive a sixth; if there are more, then they receive together one-third.

A supplement to these ‘inheritance verses’ is given in Qur‘ān, iv. 175:

They ask you for a decision, say: “Allah decides for you concerning the case in which a man dies without leaving blood-relations in the direct line as follows: If a man dies without leaving children and there is a sister of him, then she receives the half of his estate . . . if there are two sisters, then they receive two-thirds between them; if they are brothers, however, they inherit together with their brothers, one brother receives as much as two sisters. Thus in these verses fixed shares are assigned to the daughter, the two parents, the husband (and wife), and the brothers and sisters of the deceased. But, according to the Muslim lawyers, Qur‘ān, iv. 15 refers only to half-sisters or half-brothers of the deceased; whereas Qur‘ān, iv. 175, on the other hand, to full sisters or half-sisters on the paternal side. Moreover, according to their explanation of the text, the rules for the daughter of the deceased equally apply to the daughter of his son; and the rules for his parents also apply to his grandparents. The heirs who have a claim to a fixed share of the inheritance can thus be reduced to the following twelve classes: (a) in the direct line: the father, the mother, the deceased, the daughter of the deceased, and the daughter of his son; (b) in the rising line: the father, the mother, the grandfather, and the grandmother; (c) in the side line: the full-sister, the half-sister on the father's side, and the half-sister and half-brother on the mother's side; (d) the widow and the widower.

The shares to which these twelve classes of heirs have a claim are (1) (2) the daughter receives 2, or two or more daughters together 3 of the estate; if sons also inherit, the daughter does not receive a fixed share, but then becomes ‘asbāt bi‘l-qhārāi, and receives 4 of the share of a son.

(2) The same rules obtain for the daughter of a son. She receives 5, or two or more daughters of a son together 3 of the estate; if the daughter of a son inherits together with the son of a son, she receives 4 of his share. She is excluded by the son of the deceased if he inherits, but not by the daughter of the deceased. If, e.g., there is one daughter of the deceased, she receives 5, and the son receives 6, but if two or more daughters of the deceased are allotted to the daughters and son's daughters together. But, if there are two or more daughters, their share remains further residue of the faridāh for the daughter of a son may, however, still inherit if there is a son's son, for he makes them ‘asbāt bi‘l-qhārāi, and in this case he is, therefore, called the 'blessed' son's son.

(3) The father has a claim to 3 of the estate; besides this, he inherits as an ‘asbāt if there are no other heirs. If there is a son, he receives 6 of the estate, if he has a son, then 3 of the estate is allotted to the son and son's daughters together. But, if there are two or more sons, then their share remains further residue of the faridāh, for the father may, however, still inherit if there is a son's son, for he makes them ‘asbāt bi‘l-qhārāi, and in this case he is, therefore, called the 'blessed' son's son.

(4) The paternal grandfather has also a claim to 3 of the estate, if the father of the deceased is without sons. In such a case, he inherits as an ‘asbāt if he has left neither father nor offspring. If there are surviving brothers of the deceased, the grandfather inherits together with them (see § 6). (5) The mother inherits 6 of the estate; if, however, there survive either, in the first place, children or son's children or, in the second, two or more brothers or sisters of the deceased, she inherits 1/2.

(6) The grandmother inherits 6 of the estate. According to the Shāf‘īites and Hanafites, the same applies also to the mother of the paternal grandfather of the deceased; i.e., by grandmother they understand every female ancestor of the deceased with the exception of those who are related to him by means of a grandfather who does not belong to his ‘asbāt.

(7) A full sister receives 3; or two or more full sisters inherit 3 of the estate; they have, however, this right only when the deceased has not survived descendants or ancestors. If, however, a daughter of the deceased dies without leaving blood-relations in the direct line, and there is a brother or sister of the deceased, she becomes ‘asbāt bi‘l-qhārāi, similarly, if a full brother of the deceased shares the inheritance.

(8) Practically the same rules obtain for a half-sister on the father's side. If there is one half-sister, she receives 1/2; if there are two or more, they each receive 1/4. If there is one half-brother on the father's side, the half-sister on the father's side becomes ‘asbāt bi‘l-qhārāi and receives 1/4 of her brother's share. Like the full sister, she loses her claim to a faridāh if there are offspring or male ancestors of the deceased, or if his full brother survives. Inheriting together with the grandmother, she becomes ‘asbāt bi‘l-qhārāi; if, on the other hand, she inherits with the daughter or son's daughter, she becomes ‘asbāt bi‘l-qhārāi. If there are two or more full sisters on the deceased, they receive together 3 of the estate, and there remains no residue of the faridāh for the half-sister on the father's side; if, however, the latter inherits together with one full sister of the deceased, the two have together a claim on 3 of the estate; the full sister then receives 1, and the half-sister 2.

This is the same rule as in the case of the inheritance of daughters together with son's daughters: the is in both cases called by Muslim lawyers masā‘ul, i.e., the ‘filling up’ (oc. of the which the daughter or a full sister receives).

(9) The half-brother on the mother's side rules the cases of the next case.

(10) The half-sister on the mother's side has a claim to 3 of the estate. Two or more half-brothers or half-sisters receive together 3. They have, however, a claim to a faridāh only if the deceased died without surviving brothers or ancestors.

(11) The widow receives 6 of the estate of her husband. If, however, she has left children or son's children, she receives only 1, whether the children are his own offspring or those of his other husband.

(12) The widow receives 6 of the estate of her husband: if, however, he has left children or son's children, she receives only 1, both when they are her offspring and when they are those of another wife of the deceased. If there are several widows, they must divide their faridāh. It may happen that, when the various dhawul-
fā'ūdā' inherit together, the sum of the fixed shares to which they have a claim is more than the whole estate. In such a case the share of each must be proportionately diminished.

With regard to the case in which the deceased has left four sons and four daughters, the latter have a claim to ½ of the estate, the father and mother to 1/4 each. If the deceased left only two sons and two daughters, his father has a claim to ½ the estate and the sum of the fā'ūdā' is 1½+1½+1+1=4+4+4+4=16; in this case the estate must be divided into twenty-seven equal shares, two of which belong to the two sons, nineteen of the others are divided between the two parents, the husband gets twelve and the widow, eight; sixty years ago the widower received the half of the residue is so divided between the two parents that the father receives 3½ and the mother 3½. If the deceased left a husband and a widow, the husband has a claim to 1/2 of the estate and the widow to 1/4. The widow widows have a claim to 1/2 of the estate. If the deceased left a husband and a widow, the husband has a claim to 1/2 of the estate and the widow to 1/4. The widow widows have a claim to 1/2 of the estate.

(d) Special cases. — There are still some special cases — the so-called masāʾ il-muṣaqūţ (i.e. cases which are known under special names) — in which, owing to the simultaneous inheritance of various beneficiaries, the rule which was described above is regarded as necessary in order to prevent relatives who usually receive more than others from receiving in a special instance less than them. It is impossible here to enumerate all these; the following are examples of them:

If a woman is deceased and her estate has to be shared between herself and her husband, the latter has a claim to 1/2 and the mother to 1/4 of the estate, so that there would remain over for the father only 1/4 of the mother’s share. In this case, however, the widower has received the half of the residue is so divided between the two parents that the father receives 3½ and the mother 3½. If the deceased left a husband and a widow, the husband has a claim to 1/2 of the estate and the widow to 1/4. The widow widows have a claim to 1/2 of the estate. If the deceased left a husband and a widow, the husband has a claim to 1/2 of the estate and the widow to 1/4. The widow widows have a claim to 1/2 of the estate.

Another case is the akhdariyya. The origin of this name is not certain. According to some Muslim writers, Akbar was the name of a king whom Khālid Abū al-Malik consults about the following problem. When a woman is deceased and her heirs consist of (1) her husband, (2) her mother, (3) her paternal grandmother, (4) her sister or her paternal half-sister, then these have together a claim to 1/2 of the estate (the father or the mother to 1/4, the sister or the half-sister to 1/4). According to the rule mentioned above (the so-called ‘and’), the estate must, therefore, be divided into nine shares, so that the widower would receive three shares, the mother two, the grandfather one, and the sister three. To prevent the division into nine unequal shares, the deceased herself, or, failing her, the husband, or, failing the husband, the widow, or, failing all these, the sister of the deceased, or, failing all these, the sister of the son or daughter of the deceased, has a claim to 1/8 of the estate. When the deceased has left a husband and a widow, the husband has a claim to 1/2 of the estate and the widow to 1/4. The widow widows have a claim to 1/2 of the estate.

As to the division of the estate among the dhanveis-l-arthām, if they inherit, there are three possibilities:

According to some lawyers, the right of these persons to inherit depends on the principle that only he who is nearest in blood has a claim to an estate, and that he excludes the more distant relatives. Others think that the dhanveis-l-arthām take their share from the one-third which the more distant relatives of the first and second grade through whose intermediacy they are related to the deceased. Thus, if the estate must be divided between two persons A and B, of whom A is the daughter of the daughter of the deceased, and B the daughter of the daughter of his son, then, according to the first theory, B would be excluded by A, who is more closely related to the deceased; but, according to the second theory, A would take the place of the daughter of the deceased and thus inherit 1/3, and B would take the place of the daughter of the son and thus inherit 1/3 (see § 8 (c)). Moreover, according to the second theory, the residue of the estate also must be divided in the same proportion between the dhanveis-l-arthām, so that in this case A inherits 1/3, and B only 1/9. The latter theory is endorsed by the Shāfi‘ites, the former by the Hanabites.

He who deliberately and illegally has compassed the death of the deceased is unworthy to inherit, like the mumtāz (i.e. he who is an apostate from Islam). The estate of the mumtāz passes, according to the Shāfi‘ites and the Malikīts, to the treasury; according to the Hanabites scholars Abū Yūsuf and Mūsa‘ib ibn Ḥasan, on the other hand, the heirs of the mumtāz have a right to his estate. In the opinion of the Hanabites and the Malikīts, opinion of the schools, there is no difference in general between believers and unbelievers in the law of inheritance.

No one can be regarded as an heir if it is certain that he was still alive at the moment when the deceased died. If, therefore, various persons lose their lives by flood, conflagration, or other disasters without its appearing which perished first, there can be no inheritance between those persons.

With regard to the case in which the heir or heirs have not yet been appointed, the law prescribes a rule of thumb, that is, in the absence of that his existence is doubtful, see § 2, p. 869. An exception to the general rule is found in the case of a child who was not born at the moment of the death of his father; as soon as such a child comes into existence the law, it is regarded as an heir of his deceased father. 1

9. Slaves and freedmen. — (a) The rights and duties of slaves. — In Muhammad’s time there were many slaves in Arabia. It would have been impossible for him to abolish slavery. Islam, however, so far changed the position of affairs that for the future no Muslim might make a slave of a fellow-believer. According to Muslim canon law, slavery can arise only 1 through captivity, if a non-Muslim prisoner be taken by a Muslim; or (2) by birth, if the mother is a married slave.

Slaves are the property of their master (ṣayid). He can dispose of them as of the rest of his possessions. He can, for instance, part with them by sale, gift, or testamentary disposition, hire them out, lend them, mortgage them, etc. A child, however, may not be separated from the mother so long as she is capable of bringing up the child. If the mother is taken away by death or by leaving the country, the master may make his slave work beyond his power, and must give him the necessary rest after his work. Slaves have also a right to sana'ah (maintenance, i.e. food, clothing, housing). The legal punishments for the misdemeanours of slaves are, generally speaking, less severe than for those of free persons.

Slaves have no right of property, nor can they, as a rule, make their will or testament. The master may give him authority to carry out the necessary legal transactions (sale and purchase, etc.). The contracts which the slave then makes are binding and valid, so far as he remains within the limits of the power given him, and the goods which the master has entrusted to him to carry out the business serve as guarantee for the engagements made by the slave. If, on the other hand, the slave goes beyond his powers, he is himself alone responsible; and the creditors can obtain satisfaction from him after he has been set free. If slaves injure one another by a punishable act, the slave is liable to make good the damage, but he can free himself from this liability by giving up the guilty slave to the injured person.

The master has the right to live in concubinage with all his unmarried female slaves, if they confess Islam or belong to the so-called ‘people of the book’ — in the last case, however, according to the Shi‘ites, only if the slaves belong to the true alex-ah al-khitab (see § 5 (c) (3)). If any one has become an owner of the female slave of another person by means of sale, donation, or otherwise, he is not permitted immediately to have her in concubine,

Children born from the concubinage of the owner with his female slave are free (see § 7 (a), and are

---

in all respects equal with children born from marriage with a free wife. Among the Old Arabians a different rule obtained: no children of female slaves were regarded as free. The slave who has given her master a child is called umm wasilad (lit. 'mother of children,' viz. mother of one or more children of her master). After the death of her master, the slave becomes legally free, and, therefore, after her confinement, may no longer be alienated or mortgaged.

Slaves male and female may contract a legal marriage with both free and unfree persons, so long as they are of the same time their own owner. According to Muslim law, the master may marry only a female slave of another owner and not one of his own; and the same rule applies also to the Malikites.

According to the Malikites, slaves may have four wives (free or not free); but, according to the other Shāfī-ites, only two. A female slave is given in marriage by her master, who then acts as owner, not as wife, and need not ask her consent for the marriage. He also has the right to refuse to give her in marriage, though she ask him to do so. But, according to the Shāfī-ites, the master has not the right of forcing his male slave to a marriage but he must only secure consent to a marriage, whereas, according to the Hanafites and Malikites, the master has the right of giving even his male slaves in marriage against their will.

Just as a free man, the slave is obliged to give his wife a dowry in whatever disposition. Even if his master does not pay the mahār for him. The dowry which a female slave receives becomes the property of her saysid. A slave has the right of rejection, and the second tālāq has the same consequence in law for the slave as the third tālāq for a free man (cf. p. 908). The 'iddah after the dissolution of marriage by death or divorce is also prescribed for female slaves, and lasts a shorter time than the tālāq of a free woman. Instead of the 'iddah of four months and ten days, the female slave has one of two months and five days; the 'iddah of three gurus' is replaced by one of two gurus, and that of three months by one of a month and a half; in common with the slave, the female slave does not end her confinement before her marriage.

Children born of marriages in which one or both of the parents are slaves are not the property of the master. Children of a married female slave are thus always slaves, and become the property of the master of their mother, independently of the question whether a free or unfree slave. Some of them is it is regarded as undesirable for the children of a free man to become the slaves of the master of the slave, even though the law condemns marriage between free and unfree slaves. The law for a free man and a female slave of another, except under the four following conditions: (1) that he has not sufficient means to pay the dowry of a free woman, (3) that he is not in a position to have conjugal intercourse with a free woman, (3) that the female slave whom he desires is a slave in Islam, and (4) that there is a risk that he will fall into immorality, so that the proposed marriage with a slave is, as it were, the last means of preserving him from that sin (cf. Qur'ān, iv. 29-30). The Hanafites, however, regard it as permissible for a free man to marry a female slave of another, without the first three conditions, provided she belongs to the ahi al-khitab (cf. § 5 (6)).

(6) Emancipation ('īq) of slaves.—The setting free of slaves is regarded as a highly meritorious act for Muslims and well-pleasing to God. Muhammad had said, according to a tradition: 'The setting free of a believing slave shall preserve the liberator from hell at the day of resurrection.' It is also one of the means by which a believer who has transgressed the law can in some cases make a preparation for his fault.

Every one who has the right of disposing of his property has also the right to set free his slaves, unless, e.g., he has mortgaged them. If a slave belongs to a person owned by his freedom is given, him by one of them, he becomes free if the liberator has at the same time made good to his partners the value of their share; otherwise, the liberation is valid only for the share of the liberator, and the slave becomes a musālā'ad (i.e. partly free and partly not free).

The umm wasilad is legally free after the death of her master; if she has been previously married and has children of that marriage, these children may become the rank of their mother, and become legally free at the death of the owner of their mother. A male or female slave who becomes the property of a blood-relation obtains a legal free status by operation of law according to the Shāfī-ites, this rule obtains only when the owner is one of those in the direct line of ascent or descent of the slave; but, according to the Malikites, also if the slave becomes the property of his own brother or sister; and, according to the Hanafites, even if the owner is a mahār of the slave, i.e. one who is related to him within the limits of kin which form an obstacle to marriage.

The master may also limit the liberation by certain conditions—e.g., by the tadbīr and the kitābah.

(1) The tadbīr is a liberation by which the master declares that at his death his slave shall be free. So long as the said slave lives, such a slave (muṣālā'ad) is not different from others. According to the Shāfī-ites, the master even retains the right of parting with him and then revoking his liberation; according to the Malikites and Hanafites, such a slave may not be parted with and the master may not revoke his tadbīr. The tadbīr, according to the unanimous opinion of Muslim lawyers, must be classed with a testamentary disposition.

Since the heirs of one who dies intestate have a claim to at least a third of his estate, the tadbīr is valid only if the value of a muṣālā'ad is not more than a third of the estate. If the value of the slave is greater, he becomes only partially free, unless the heirs sanction the contrary.

(2) The kitābah (or muṣālā'ah) is a liberation by virtue of an agreement with a slave. The name seems to be derived from the document (kitāb) in which the conditions of the contract were originally set out. This kind of liberation was customary among the Arabs before Muhammad. At that time slaves who were not ransomed by their relations sometimes obtained the permission of their master to earn their ransom by work. In Qur'ān, xxiv. 33, Muslims were recommended, if their slaves asked to redeem themselves in this way, to grant their request and to help them in its furtherance, e.g., by giving them money or omitting part of the price.

The muṣālā'ah (i.e. the slave who makes this contract of liberation with his master) must bind himself to pay a definite sum of money to his master (the mukātab) as ransom (according to the Shāfī-ites, in at least two or more instalments). By the kitābah he obtains the right for the future of acquiring property for himself and of making contracts even without the express permission of his master. In other respects the mukātab remains in the same position as other slaves; his master, however, may no longer mortgage him or part with him, and, when he has paid his debt, he is free.

The master may make another contract of liberation with his slave (the 'qd al-ndīqah, i.e. the liberation contract). This consists of the purchase of the slave by himself; he becomes free immediately, but is obliged to pay the ransom to the liberator as quickly as possible, or within a period agreed upon.

Between the liberator and his freed slave there continues to exist a certain relationship (wastā', i.e. patronage). The liberator becomes the muṣālā (i.e. patronus) of the freed slave, and, if the latter has no qasād, the muṣālā takes his place. To the liberator then is owed the respect and services which are usually depend on blood-relationship, such as the right of inheritance, the right to give in marriage his liberated female slaves, the right of retaliation, and others.
The usura' exists not only between the liberator and his freed slave personally, but also between the liberator and the descendants (and even the freed slave) in the latter case, even after the death of the liberator. The patronage passes to the next of kin of the 'usura' [see § 7 (6)]. The same rules are also applied to a woman who has liberated a slave (mandātī, i.e. liberatrix).

10. General rules. — The ḥaqīq books contain many special regulations for various contracts, but scarcely any general principles as to the responsibility of the parties, the establishment of the rights and obligations, etc. They expressly forbid only agreements which are not precise or which depend upon accidental chances (e.g., all assurance contracts), and these they declare invalid because of the possibility that one of the parties thereby binds himself to something which he cannot see in advance. The Muslim jurists call such an undesirable chance gharar. No definite form for the making of a contract (agā'ī) is prescribed. In consequence of Qur'ān, ii. 282, many of the earlier ḥaqīqīs thought that, when an agreement has not to be immediately fulfilled on either side, since the parties have agreed on the terms of delay, the contract must be in writing, and concluded in the presence of witnesses. This was considered necessary, e.g., for the so-called sallān or salāf; this contract meant that a future harvest was bought and the price paid in advance. But this did not become the general opinion. The law-books insist only that the parties who make an agreement must make their intentions plain to each other. The legal form of an agreement is called its ṣafīn. The mutual declarations of the parties are called jāb (offer) and qabūl (acceptance). Only exceptionally is it permitted to make contracts without such a jāb and qabūl in matters of very little importance.

When two parties transfer to each other rights or claims, these must refer to matters which, according to the shari'ah, have a real value for Muslims. Thus, regarded from a legal standpoint, all contracts are invalid which refer to forbidden musical instruments, to books which treat of philosophy, astrology, and other forbidden sciences, to grapes, which must serve for the preparation of wine, to dogs, pigs, and other ritually unclean things, etc. If such affairs are treated, it is not strictly a change of real ownership (tansik), according to the Muslim law-books, but rather a mode of securing a de facto possession (istith). The ḥaqīq books contain numerous precise regulations concerning the most common contracts and transactions, such as purchase, sale, hire, mortgage, gift, deposit, partnership, security and loan, etc. These transactions have the general name of mu'tameṣāt. But this part of the law has only a theoretical and no practical value for the Muslim (see above, § 4). Principles different from those of the shari'ah generally obtain in commercial life; and it is usually impossible even for the most pious Muslims to regulate their lives in this matter precisely according to the law-books. There is no further discussion in detail need be given here.

The remarkable regulation of the Muslim law which forbids the charging of interest in trade must, however, not remain unnoticed. Not only usury in the strict sense, but the charging of interest at all is regarded as a great sin (kobūrah); and, although this prohibition has always been transgressed by numbers of Muslims, the pious try as far as possible to avoid direct offence against it.

11. The prohibition against charging interest (riḍā). — (a) Introduction. — In Muhammad's surroundings the practice of usury seems to have taken the form of arrear payments and annuities, and the rights and obligations, etc. They expressly forbid only agreements which are not precise or which depend upon accidental chances (e.g., all assurance contracts), and these they declare invalid because of the possibility that one of the parties thereby binds himself to something which he cannot see in advance. The Muslim jurists call such an undesirable chance gharar. No definite form for the making of a contract (agā'ī) is prescribed. In consequence of Qur'ān, ii. 282, many of the earlier ḥaqīqīs thought that, when an agreement has not to be immediately fulfilled on either side, since the parties have agreed on the terms of delay, the contract must be in writing, and concluded in the presence of witnesses. This was considered necessary, e.g., for the so-called sallān or salāf; this contract meant that a future harvest was bought and the price paid in advance. But this did not become the general opinion. The law-books insist only that the parties who make an agreement must make their intentions plain to each other. The legal form of an agreement is called its ṣafīn. The mutual declarations of the parties are called jāb (offer) and qabūl (acceptance). Only exceptionally is it permitted to make contracts without such a jāb and qabūl in matters of very little importance.

When two parties transfer to each other rights or claims, these must refer to matters which, according to the shari'ah, have a real value for Muslims. Thus, regarded from a legal standpoint, all contracts are invalid which refer to forbidden musical instruments, to books which treat of philosophy, astrology, and other forbidden sciences, to grapes, which must serve for the preparation of wine, to dogs, pigs, and other ritually unclean things, etc. If such affairs are treated, it is not strictly a change of real ownership (tansik), according to the Muslim law-books, but rather a mode of securing a de facto possession (istith). The ḥaqīq books contain numerous precise regulations concerning the most common contracts and transactions, such as purchase, sale, hire, mortgage, gift, deposit, partnership, security and loan, etc. These transactions have the general name of mu'tameṣāt. But this part of the law has only a theoretical and no practical value for the Muslim (see above, § 4). Principles different from those of the shari'ah generally obtain in commercial life; and it is usually impossible even for the most pious Muslims to regulate their lives in this matter precisely according to the law-books. There is no further discussion in detail need be given here.

The remarkable regulation of the Muslim law which forbids the charging of interest in trade must, however, not remain unnoticed. Not only usury in the strict sense, but the charging of interest at all is regarded as a great sin (kobūrah); and, although this prohibition has always been transgressed by numbers of Muslims, the pious try as far as possible to avoid direct offence against it.

The money-lender gave money or articles of commerce (e.g., dates or barley) on condition that after a certain period a larger sum of money or a greater quantity of the articles received should be returned. If the debtor could not fulfill his obligation on the day when it fell due, the creditor gave him a post-pomption of payment, but doubled the amount of his debt. Such contracts of exchange were regarded as a sort of sale and purchase (bāqī) and the post-pomption of payment was called nasi'ah. This usurious trade is strictly forbidden in various verses of the Qur'ān; see, e.g., ii. 276: 'They say that there is no difference between bāq and riḍī, but Allah permits bāq and forbids riḍī . . . They who in future are guilty of riḍī are destined for hell; they shall remain there for ever.' Cf. also ii. 276-279, v. 9. This is the classical view. Thus no Muslim could doubt that usury was strictly forbidden in Islam, but in the earliest times there were many, and among them well-known companions of the Prophet, such as Ali and Umar, who maintained that Islam prohibited only the abuse of the poverty of the debtor by constantly doubling his debt and ruining him. They regarded usury as forbidden only in a restricted sense; the nasi'ah was particularly deprecated. Overall, it is permitted only that by riḍī (lit. 'multiplication') the Prophet had meant not only usury, but all charging of interest. Later on this opinion became general. Thus, if a Muslim wishes to lend money or articles of commerce to any one, he can do so only on condition that the debtor, after the expiration of a certain period, shall pay him back the same sum of money or the same quantity of articles lent him. No profit may be made out of him, but if the creditor receives the same as that which he has given. If the purpose is not to give a temporary convenience to the other party, but only to exchange goods, this is permitted. If both parties receive goods of the same value and at the same time. One who does not observe these rules is guilty of riḍī. It is, therefore, necessary to distinguish two kinds of riḍī: (1) riḍī by contract of exchange, (2) riḍī by loan (mutūn).

(b) Riḍī by contract of exchange.—The regulations of the law-books concerning the first kind of riḍī are based on traditions, according to which the Prophet had expressly declared that it was prohibited to a Muslim to exchange gold for gold, silver for silver, dates for dates, etc., unless both parties simultaneously made the same payment to each other. These words of the Prophet are handed down in various recensions, in which gold, silver, barley, wheat, and dates (sometimes also raisins are mentioned) are exchanged. See further, for contracts in general, G. Rassow, Die allgemeinen Lehren des Obligationsschriftstils nach der Lehre von den Rechterhalten nach der Rechtsetzung des Inschr. Schäft.; Ein Beihafz zum Shak Ḥaṣṣa Alī Ibn gahār, as above.

and salt] are especially mentioned as the objects of the forbidden contracts of exchange.

2. Obligations arising from oaths and vows.—Oaths and vows have always played a great part in the various Muslim lands. The obligations which spring from them have a religious character in the eyes of Muslims. The ancient Arabs were accustomed to enforce by oaths not only their alliances and other important agreements, but even every sort of promise and statement in ordinary life; and vows of abstinence were often binding preparation for the holding of religious ceremonies, the prosecution of blood-feuds, and other important acts. No one lightly decided to break the oath or vow which he had once made, for he feared to be punished for such a sin by the wrath of God.

The Prophet himself often strengthened his words, according to the custom of the time, by oaths and vows. He did not, however, consider himself as unconditionally bound by them, but thought that it was in some cases better to appease God's wrath for the breaking of an oath by means of an atomizing sacrifice (kaffarah) than to hold obstinately to the oath. ‘When I have sworn an oath that I will do something, but later on perceive that it is better to act differently, I offer an atomizing sacrifice and break my oath,’ was Muhammad's customary statement, according to tradition.

In Qur’an, v. 91, the regulations are given as to the religious acts by which a Muslim who acts contrary to his oath can turn aside God's wrath. The penance (kaffarah) must then consist in feeding or clothing ten poor persons, in manumitting a slave, or, in the case of a person who has no means, in fasting for three days (cf. also lxvi. 2).

The jurists have worked out these rules in still fuller details—e.g., fixing the minimum amount of money or clothing which must be given; they differ in their opinions as to the particulars; according to the Shafites, the manumitting of a slave can serve for kaffarah only if the slave is a believer.

An oath is called yamin and a vow nadhr. The rules concerning oaths and vows differ in various points. A vow is binding only when a Muslim who is qualified according to the legal regulations to make an independent agreement has voluntarily taken upon himself to carry out an act which is meritorious, regarded from a religious standpoint, and to which he was not bound apart from his vow. In this way it is possible to make a vow to set free slaves, to give alms to the poor, to make a pilgrimage, and so on. He who has bound himself by a vow remains permanently obliged to fulfill it, and cannot free himself from it by a kaffarah. If, however, the vow has been made dependent on a condition (e.g., ‘If I recover from my illness, I will fast for a certain number of days’), he is bound to fulfill his oath only when the condition has really been fulfilled. A vow to do something which is forbidden or to omit something which is obligatory may not be regarded as binding. Muslim jurists also consider that no one can bind himself by a vow to do or to omit what is merely permitted but not mandatory, and that this is particularly true in the case of an act which has already been forbidden (e.g., to drink water). In such cases there is no obligation to a kaffarah even if the vow be not fulfilled.

Oaths, on the other hand, are subjected to another rule; for he who has sworn by an oath to do or not to do anything is always bound to a

1 Cf. R. Docy and W. H. Engelmann, Glosario des mots espagnols et portugais dérivés de l'arabe, Leyden, 1889, p. 216; du Cange, Glossaire des Scriptor, med. et inf. Latinisatis, in Nationale; for the mistranslation the translators, the Arab word musākhfara. This Arabic name proves that the custom did not arise in Europe, but was taken over from the traditions.

2 See, further, W. Cohn, Der Wucher (Zdch) in Qur'än, Chalilith.

3 See, further, W. Cohn, Der Wucher (Zdch) in Qur'än, Chalilith.
If he breaks his oath, even though he has pleaded himself to do something which is forbidden, or to emit something which is obligatory.

Moreover, Muslim jurists deal at length with various special oaths and vows and the questions connected with them; even the very speakers (muqaddimah) are namely fully detailed as to this subject. The following cases, e.g., are mentioned in particular. When a man has declared, if I do such and such and is done, I will apostasy from Islam, if the conditions are fulfilled, he may not, it is true, give up his faith, but must necessarily, according to the Hanafis, on the ground of the hadith, if a man has declared, if I do such and such, or if such and such happens, my wife to return, or my slave is set free, he is actually bound by his words; and, on the fulfiling of the conditions, his wife must be regarded as repudiated and his slave as free.

When it has been taken either in the name of Allah (or that of one of His attributes) or by the Qur'an. Other oaths, e.g., by calling on the Prophet, are not binding.

13. Wills. — Muslim law only partially recognizes the right to make a will. When the debts of the deceased have been paid, his legal heirs (see § 8) have a claim to the residue of the estate. The testator may dispose by will (wasiyyah) of only the remaining 1/4 of the estate. If he has disposed of more than 1/4, his arrangements and legacies are valid up to 1/4, and as far as, they are sanctioned by his heirs.

As to this rule, there is no difference of opinion among the fiqh-schools. It is based on the following traditions. In the time of the Prophet, once the companions of the Prophet, had decided to devote the whole of his property after his death to the poor. One day, when he lay dangerously ill, he explained his plan to the Prophet, who, he thought, would value his pious deed. This was, however, not the case; on the contrary, the Prophet scolded him for his notice. It is better to leave them rich," said he, "than to force them to beg or to die." Finally, the Prophet consented to Be’s petition to dispose of 1/4 of his estate.

From this tradition the Muslim jurists have deduced another principle. Every Muslim may dispose of his property as he pleases during his life, and thus may even give everything away if he wishes; but this right ceases if he is seriously ill. In that case only 1/4 of the property may be disposed of by gift, the manumitting of slaves, etc. The property of a slave may be disposed of in this manner, and thus treated as in some degree similar to an estate to which the heirs have a claim.

This rule is also applicable to persons who in other ways are in danger of their lives, e.g., in the act of taking part in a battle, to a woman during childbirth, to the inhabitants of a district which is suffering severely from plague, etc.; if, during a serious illness, or while he was in other respects insane, or if the person has given away more than 1/4 of his property, his arrangements are valid only if his heirs offer no opposition to them, or if he has recovered from his illness or escaped the danger in which he was.

Further, the legality of a wasiyyah depends principally on (1) the right of the person who makes the will (al-nāẓir), (2) the right of the one who benefits by the will (al-must-lahh), (3) the property which is disposed of (al-nāẓir-lahu), and (4) the form of the will. The law-books contain the following regulations as to these four subjects.

(1) Only those who have the power of independent disposition over their property have the right to make a will; minors are not qualified. Moreover, the wasiyyah is valid only if the testator had the right to dispose of what he left, and if he acted without compulsion. The testator remains qualified if the disposition of his wealth is made either after his death (2) The beneficiary under a will must at the moment at which the will is made be qualified and in a position to become the owner of what is left him. A will made in favour of an unqualified person is not valid, if the child is born within the next six months. Those who already inherit by the enactment of the law have no right to receive further legacies by will. According to tradition, the Prophet forbade the alteration, by means of testamentary disposition, of the shares fixed for them by law (see above, p. 382); if the will is not made in favour of a definite person, but for a hospital, a mosque, or similar institution, then such purpose must be made by a special and written law; e.g. a will in favour of a Christian church or a Catholic religious order is invalid. (3) The objects which are left to any one in the will must be described in the will; in other words, to take possession of them. The testator may, for instance, leave any forbidden musical instruments or dogs to any one; or a copy of the Qur’an, or a Christian slave, to a Jewish unbeliever. (4) No special form of will is prescribed; the law directs only that the testator should make his will clearly known in the presence of persons who can bear witness that he has really made such a testament. It need not be reduced to writing. Besides the allotment of property, the will may contain certain other dispositions, e.g., the appointment of an executor who is charged with the care of the payment of debts, and the division of the estate; further, the appointment of a guardian for the children of the testator who are under age, etc.

The beneficiary of the will first receives possession of the property left him when he has accepted the arrangements of the testator (by means of qabul; see § 10). If he should predecease the testator, his heirs are qualified to accept the will in his favour.

14. Regulations concerning the waqfs. — By a waqf Muslim law means something which is withdrawn from commerce, in order to reserve it for religious purposes or for the benefit of definite persons. To the question whether such disposition is lawful in the eyes of Muslim scholars originally gave various answers. Some considered that the rights of the heir were injured by such dispositions. Others declared that the heirs had no claims on any man’s property so long as he still lived, and, therefore, a man might withdraw his goods from commerce, just as he had the right to contract debts, to set free slaves, and to give away property, to the injury of his heirs. According to Abu Hanifah, a waqf was, to any legal extent, only like a guardian, to a woman during childbirth, to the inhabitants of a district which is suffering severely from plague, etc.; if, during a serious illness, or while he was in other respects insane, or if the person has given away more than 1/4 of his property. If the testator had the right to dispose of what he left, and if he acted without compulsion. If the testator had the right to dispose of what he left, and if he acted without compulsion. The beneficiary under a will must at the moment at which the will is made be qualified and in a position to become the owner of what is left him. A will made in favour of an unqualified person is not valid, if the child is born within the next six months. Those who already inherit by the enactment of the law have no right to receive further legacies by will. According to tradition, the Prophet forbade the alteration, by means of testamentary disposition, of the shares fixed for them by law (see above, p. 382); if the will is not made in favour of a definite person, but for a hospital, a mosque, or similar institution, then such purpose must be made by a special and written law; e.g. a will in favour of a Christian church or a Jewish religious order is invalid. (3) The objects which are left to any one in the will must be described in the will; in other words, to take possession of them. The testator may, for instance, leave any forbidden musical instruments or dogs to any one; or a copy of the Qur’an, or a Christian slave, to a Jewish unbeliever. (4) No special form of will is prescribed; the law directs only that the testator should make his will clearly known in the presence of persons who can bear witness that he has really made such a testament. It need not be reduced to writing. Besides the allotment of property, the will may contain certain other dispositions, e.g., the appointment of an executor who is charged with the care of the payment of debts, and the division of the estate; further, the appointment of a guardian for the children of the testator who are under age, etc.

The beneficiary of the will first receives possession of the property left him when he has accepted the arrangements of the testator (by means of qabul; see § 10). If he should predecease the testator, his heirs are qualified to accept the will in his favour.

14. Regulations concerning the waqfs. — By a waqf Muslim law means something which is withdrawn from commerce, in order to reserve it for religious purposes or for the benefit of definite persons. To the question whether such disposition is lawful in the eyes of Muslim scholars originally gave various answers. Some considered that the rights of the heir were injured by such dispositions. Others declared that the heirs had no claims on any man’s property so long as he still lived, and, therefore, a man might withdraw his goods from commerce, just as he had the right to contract debts, to set free slaves, and to give away property, to the injury of his heirs. According to Abu Hanifah, a waqf was, to any legal extent, only like a guardian, to a woman during childbirth, to the inhabitants of a district which is suffering severely from plague, etc.; if, during a serious illness, or while he was in other respects insane, or if the person has given away more than 1/4 of his property, his arrangements are valid only if his heirs offer no opposition to them, or if he has recovered from his illness or escaped the danger in which he was.
withdrawn from commerce; in the latter sense the plural of waqf and ḥāla are waqafa and ḥalās.

The Muslim law-books contain the following regulations concerning waqf. (1) The waqf, i.e. the giving away of a waqf of anything,—No one is qualified to make such a disposition unless he has the independent right of alienating his property. He who withdraws anything from commerce must at the same time be the owner of it; otherwise the disposition is invalid. Unbelievers have the right of making their property a waqf if the purpose of it is not contrary to Islam; e.g., a Christian in a Muslim land is forbidden to make himself dwelling a waqf in order to have it turned into a church.

(2) The maṣūq, or waqf, i.e. that which is made a waqf.—According to the Shi'ites, it is permissible to make a waqf of moveable as well as of immovable property, at least so far as the move-
ables are not immediately destroyed by use (e.g., food, or wax candles which are designed for the illumination of a mosque). Forbidden instruments, books whose contents give signs of unbelief, and those which are too valuable in any case may be made waqf. Many other Muslim scholars regard the regulations concerning waqf as applicable only to immovable property, and recognize only a few exceptions to this rule. According to the Hāțifites, books which may be devotional waqf. Books are also often withdrawn from commerce in all Muslim lands, and especially devoted to an appointed library or mosque.

(3) The maṣūq al-ḥalās, i.e. he who receives benefit from the waqf.—This person must be qualified to make use of the property; e.g., it would not be permissible to make a copy of the Qurʾān waqf, and a believing slave could not make a waqf in favor of unbelievers. Altogether, the person who derived benefit from a waqf must be so indicated that the institution may remain for ever, a difference of opinion exists. Some think that it is necessary for the waqf to indicate an unending fonnt, for he who receives benefit from the waqf is destined; others hold that a waqf has a permanently valid continuation even if this is not specially indicated by the founder; 'if there are no surviving persons who, according to the disposition of the waqf, have a claim to the income of a waqf,' they say, 'then the income is intended for the poor.'

Waqfs need not be exclusively intended for religious or philanthropical purposes; according to the Hāțifites it is expressly stated that the purpose of a waqf is merely permissible. In the Shi'ite law-books it is expressly stated that a waqf may even extend to the advantage of the rich. Many waqfs, such as mosques, cemeteries, and water supplies, are intended for the rich as well as for the poor. The law-books especially recognize the validity of a waqf in favor of one's family. In this case, if any one has decided that property belonging to him shall be a waqf for his children and further descendants, and these become extinct, then, according to the majority of Muslim lawyers, his further relatives have a right to the income of the waqf, and after them the public.

(4) The ṣiyāhah, i.e. the form in which the waqf makes his will known, is not generally subjected to special regulations. It is sufficient if the founder makes his will known by pointing out why property shall be waqf, and to what purpose it must be given. It is, however, not permissible to make the existence of a waqf dependent on a condition or a period of time. Therefore a person cannot say, 'If I get a son, then is my house a waqf,' or if he made his property a waqf for ten years. According to many Muslim writers, one may, however, distin-
guish between waqfs which have a general purpose (e.g., for philanthropical purposes) and those which are intended only for definite persons (e.g., for the descendants of the founder). In the first case the disposition of the waqf must be preserved as far as possible, and thus on the condition of the continu-
ation of a period must be declared invalid, and not the institution itself; in the latter case there is no opening for this, and the waqf itself is invalid.

An exception to this rule is that the waqf may make the existence of a waqf dependent on his own death. He may decide that property shall become a waqf after his death. Such a disposition is, however, subject to the general regulations concerning wills, and may be withdrawn by the owner up to his death: moreover, only ⅓ of the estate may thus be made a waqf, since the heirs have a right to the other ⅔.

IV. PUBLIC LAW. 15. The iḥām. (a) The election of an iḥām.—According to the legal theory, the Muslim community must be guided by an iḥām, who is to be regarded as the Khalīfah (i.e. substitute) of the Prophet. The quarrels as to the iḥām had in the first centuries of Islam divided the Muslims into various religious-political parties, which partially continue to the present day. To them belong especially the Shi'ites and Ḥanafites, who are here accounted for as Muslim. The opinions of these parties differ in many respects—as to political questions, as to who must be regarded as the legitimate iḥām, and as to the requirements which he must fulfill. We cannot at present limit ourselves to a sketch of the regulations which obtain in this matter among the orthodox.

All questions regarding the iḥām must be decided according to the position of affairs during the first thirty years after Muhammad. That period, in which the Muslim community was led by Abū Bakr, 'Umar, 'Uthmān, and 'Abbās—so-called 'rightly guided Khalīfahs' (al-khalīfah al-ṣaḥīḥ) with the help and co-operation of the most faithful comrades of the Prophet, is regarded among orthodox Muslims as the 'Golden Age' of Islam; and, according to them, the principles followed at that time must be regarded as the only correct ones. The iḥām, therefore, like the four immediate successors of the Prophet, must belong to his tribe, and thus be a Qurašī. The Shi'ite doctrine is that the iḥām must be chosen from the descendants of the Prophet. The iḥām is rejected by the orthodox. Moreover, (1) the iḥām must be a free, male Muslim of full age, recognized as 'ādil (see p. 854); (2) he must be competent to manage the business of the State, and, above all, have the spirit and courage to fight against the unbelievers and to protect Muslim territory. (3) The iḥām ought also, properly speaking, to be a Muslim (see p. 808), competent, if necessary, to settle difficult religious
situations on his own authority, just as the immediate successors of Muhammad were held to have been perfect scholars. Since, however, such ijārah was regarded as beyond the reach of later generations, such learning can no longer be demanded even of an imām. (4) An imām may have no physical infirmity, or defect of intellect; serious defects, such as blindness, deafness, or insanity, disqualify a candidate for the office of imāmat. A second successor of the khalīfah was often made blind after his deposition, in order to prevent him from attempting to recover his position.

At the election of an imām it is necessary to follow the principles preserved in the 'Golden Age.' Inheritance, according to the law, gives no claim to the imāmat. Each khalīfah must be elected, and his election is valid only if (1) he, like the first khalīfah Abū Bakr, receives the homage of a certain number of Muslims of high rank ('those who are qualified to bind and loose'); or if, (2) like the second khalīfah Umar, he is appointed by the former imām as his successor. Those who are qualified to bind and loose have the right of electing an imām consist of Muslims of full age, of the male sex, free men who are recognized as 'add, and can judge what persons have the necessary qualifications to be elected as imām, and upon whose nomination the matter is most suitable for the position under existing circumstances.

The election of an imām is a fard al-ḥammah; i.e., as soon as this task is fulfilled by some qualified person, all others are relieved from the duty (see p. 863). 'The election of an imām,' say the Muslim scholars, 'is true, is usually carried out by the leading circles in the capital, and is acquiesced in by the other parts of the land and has the election of Abū Bakr), but the electors in the capital have no right of preference above those in other places.' If different persons are elected as imām in different places, a new election must be held between these candidates. The fāqih are not agreed as to the number of electors which must be demanded for a valid election. Some of them require at least five electors, and in support of this opinion appeal to the third khalīfah 'Uthmān, but others regard the election by even one elector as valid if he is a universally respected and influential man.

If the imām himself nominates his successor, the choice is binding on all Muslims, if the chosen person has the qualities necessary for an imām and expressly accepts his nomination. In appointing his successor the imām need not consult the electors; he may also indicate several persons to succeed him in a definite order after the other. But Muslim lawyers consider that a father has no right to appoint his son as his successor, since they regard no one as capable of forming an unprejudiced judgment as to whether his son is fitted for this high dignity.

(b) The rights and duties of the imām.—The imām is not only the spiritual head of the Muslims, as has been said, but is also regarded as the legal head of the state, and his decisions are regarded as binding on all Muslims. The law forbids the qādi to accept presents, except from his relatives in the direct line (because, according to the law, he can never give a decision in their favour). For the same reason, according to the law, the qādis and judges are forbidden to engage in commerce, because it would be possible to give them exceptional advantages in trade, in order to obtain their favour.

In order to secure the independence of the judge, the law forbids the qādi to accept presents, except from his relatives in the direct line (because, according to the law, he can never give a decision in their favour). For the same reason, according to the law, the qādis and judges are forbidden to engage in commerce, because it would be possible to give them exceptional advantages in trade, in order to obtain their favour.

The judge controls the trial, and is not generally bound by legal regulations for this purpose. He is obliged only to give sufficient opportunity both
to plaintiff and to defendant (al-mudda’si and al-
mudda’a ‘alaiha) to present their declaration and
arguments. He must treat both parties equally;
provided they are both believers; he must also
refrain from exercising influence on the witnesses.
He is permitted to endeavour to bring about
friendly relations between the parties, and to re-
commence the cause of one party to the good will
of the other.

If the defendant admits that the plaintiff is
right, the latter is not obliged to prove his con-
tention. Such an ittir (‘acknowledgment’) may,
however, be considered as valid only if it has been
made before the judge by a defendant of full
age, in full possession of his intellectual faculties,
without any compulsion. If the contention con-
cerns the payment of a debt or other questions
concerning property, he who makes the acknowled-
gement must also be rashid (see p. 871)

If, on the other hand, the defendant contests the
contention of the plaintiff, he cannot lose his ease
until the plaintiff has proved his claim by evidence.
If, however, the matter in hand is so essentially
known to the judge that he can himself give evi-
dence, he may, according to the Shāfī‘ites and
Hanifites, give sentence without further proof on
the sole ground of his personal knowledge; ac-
cording to the Mālikites, he has not this right.
All Muslim schools are agreed that the judge is
never obliged to give sentence on the ground of
formally valid proof, against his better knowledge.

(2) Regarding evidence.-Written documents cannot be regarded as valid evidence
unless their contents are confirmed by trustworthy
witnesses; the force of the proof, however, is then
no longer in the document, but in the oral evidence.
An exception is formalized by rules of domicile,
sent from one judge to another. In practice it is
frequently necessary to recognize exceptions to this
rule.

Legally recognized evidence consists principally
in (1) proof borne by witnesses, and (2) the sworn
testimony of the parties before the judge.

(1) Testimony (shahādah) has the force of proof
only if it is borne by a Muslim of full age, who is
not under guardianship, and is recognized as adād
(see p. 884). If the judge knows a witness per-
sonally, he need not inquire whether he is adād;
otherwise, according to the Shāfī‘ites and Mālik-
ites, he may give no credence to the testimony
till he has received a formal written certificate
that the witness is adād, even though the other
party in the case make no objection to his credi-
bility; according to the Hanifites, such an inquiry
is called for only in the case of adād and qaddā
(see art. CRIMES AND PUNISHMENTS [Muham-
dan], §§ 2, 5), and if the other party throws
doubt on the credibility of the witness.

Inquiry into the credibility of the witnesses is
usually handed over by the judge to two of his
officers who bear the title of muwāzki, i.e., one who
declares the witness to be sāki (‘without sin,’
‘pure’). In many Muslim lands there are also
persons with the title of adād or shahād, who fill
numerous offices as a notary. They are ap-
pointed by the qādī. If two parties wish to make
an important contract or safe, or to set on foot
other transactions, they may go to such an adād
that he will write the contract. If, later on,
there is litigation between the parties as a result
of this transaction, the ‘adād may be heard by
the judge as a trustworthy witness.

When it is established that a witness is adād, his
evidence is accepted; however, the judge may, without
his having to swear on oath that he will speak the
truth. Only in a few cases may the judge attach
the evidence of an adād no value as proof—e.g.,
when the witness is related in the direct line to
one of the parties and testifies in his favour, or if
he is an enemy of one of the parties and testifies
against him. According to the Hanifites and
Mālikites, husband and wife cannot give valid evi-
dence against each other, though the Shāfī‘ites allow
this.

Since only a few Muslims live so strictly according
with the regulations of the canon law that they may
really be regarded as adād, the judges in
Muslim lands must very often consult witnesses
with the declarations of witnesses who do not fulfil
the legal requirements. In such cases their decla-
rations are not legal testimony in the strict sense.

The testimony of Christians, Jews, and other
unbelievers must be regarded as worthless; the
judge may attach no credence to the declarations
of persons who deny the most important truths
in the sphere of Muhammadanism.

The number of witnesses by whom either of the
cases can prove a declaration depends on the
subject in hand. If the parties are disputing as
to debt or property, then, according to Qur’an, ii.
282, the evidence of at least two men, of one
man and two women, is required; according to
the Shāfī‘ites and Mālikites, one male witness
is in such a case sufficient, if the party who calls
him as a witness is of such a nature that he has spoken the truth
and, according to the Mālikites, even two women in
this case may take the place of the male
witness).

If the case is not concerned with money, the law
demands (a) that the witness of two men, if they
must testify as to subjects which are generally
known only to men—e.g., retaliation and the price
of blood; (b) the testimony of a definite number
of women, if the point has to be proved which are
usually known only to women—e.g., the physical
infirmities of women, foster-relation, child-
birth, etc. As to the number of female witnesses
required in the latter case, the opinion of the
bālāf-scholars differ; the Shāfī‘ites demand four
women or two women and one man, the Māli-
kites two women, and the Hanifites one only. If
the case concerns a hadd, the witness of women
must be regarded as worthless; in this case proof
can usually be given only by two male witnesses
and in cases of adultery only by four male
witnesses.

(2) The oath (gamin), according to the Shāfī‘ites
and Mālikites, may be administered by the judge
to one of the parties in order to prove that
one of his male witness or of two female witnesses
a sufficient proof. The defendant is obliged to take
an oath that the plaintiff is in the wrong, if the
latter cannot prove his claims legally. If the
defendant refuses to take this oath, the plaintiff,
according to the Shāfī‘ites, must be given the
verdict if he is ready to swear to the truth of
his contention; according to the Hanifites, this
oath of the plaintiff is not necessary, and the judge
must immediately condemn the defendant if he
refuses to swear that the plaintiff was in the
wrong; according to the Mālikites, the oath of
the plaintiff is required only in some special cases.

The expiration of a long time is not properly
cognized in Muslim law as a means of acquiring property or gaining
freedom from debt, but, when it appears that the
debtor has neglected to institute a suit for an exceptionally long
time without good reason, this must be regarded as a proof
that he knows himself that he had no case. As to the length of this
term of limitation the opinions of Muslim scholars differ.
In practice an ordinance of the Turkish Sultan is commonly
used, under which the term is fifteen years (see O. Snouck Hurgronje,
‘Iets over verjaring in het Moesmaat recht,’ in Tijdschrift Batavisch Geschtschap,
xiii. [1903] 305-427).

17. The holy war (jihād).—(a) The duty of
believers to take part in the holy war (jihād).—

Another important religious duty of the *inām* and the Muslim community is the holy war against unbelievers—the *jihād* (i.e. 'to take trouble, to contest, engage in the fight'; *fard al-aʿzām* of Allāh)—in order violently to convert the heathen to the true faith, or at least to subject them to the yoke of Islam.

In the earliest period of Islam, Muslims were compelled to take the offensive against the unbelieving inhabitants of Mecca who persecuted and ill-treated them, but after the Hijrāth the position was altered. In Qurān, xxii. 39-42, Allāh declared that in the Muslim community (i.e. the Muslims abroad) he permitted the unbelievers to defend themselves if they were attacked, and that in so doing they could count on God's support.

"When they strive against your persecutors," it is stated in these verses of the Qurān, "it is permissible: Allāh is powerful enough to help those who are driven out of their homes unrighteously, merely because they said, "Allāh is our Lord." If God did not help men against each other, hermitages, churches, synagogues, and all places of prayer where God's name is often glorified would be rendered desolate, etc.

This permission to offer defence against attacks was soon afterwards changed into a command to attack the unbelievers, and, since the various expeditions for robbery and pillage on both sides brought about a state of perpetual war between the inhabitants of Mecca and the Muslims at Medina, the *jihād* gradually became one of the most important religious duties of Muhammad's adherents.

Of Qurān, ii. 218-219: "The strife is prescribed for you; you have, it is true, an antipathy to it, but it is possible that you have an antipathy to that which nevertheless is good for you. Those who could personally take part in the campaign must at least pay the Muslims by payments of money according to their means. Even after Mecca was taken, and the inhabitants had been converted to Islam, the *jihād* against unbelievers remained a religious duty. Though the Prophet at that time did not persecute the heathen for their unbelief alone, the *jihād* against many tribes of the heathen Arabs was necessary because they frequently broke their treaty and otherwise showed signs of their untrustworthiness and dangerous disposition. The doctrine that all heathen must be subjected to Islam because of their unbelief first arose in the time of the first Conquests, after the death of the Prophet, when Meḥdi ruled. He had conquered an extensive territory outside Arabia, and in making tributaries of many unbelievers. At that time the Prophet is said to have declared: 'I am commanded to fight against men until they bear witness that there is no God but Allāh, and that Muhammad is God's messenger; only by pronouncing these words can they make their property and blood secure from me.'

The *jihād* is a duty for every male Muslim who is free, of full age, and not only in the full possession of his intellectual powers, but also physically fit for service and able to obtain the necessary weapons. A son, however, may not go to war without the permission of his parents (if they are Muslims), or a debtor without the permission of his creditor.

According to the Shāfiʿī and Ḥanafī, no one is bound to the *jihād* unless he has previously committed any disloyalty towards the Prophet. To the Sunnīs of the various schools by the sustenance of believers must be maintained. Only in case of an attack by unbelievers and the invasion of a Muslim land is participation in the *jihād* an individual duty (fard al-aʿzām) for all Muslims, and for all threatened districts and for all believers living in the neighbourhood. If the land is conquered by unbelievers, according to the *ṣūrah* of the later scholars, every Muslim who is in a position to leave the land is then obliged to do so. It is equally possible, at least if he is hindered in the practice of his religious duties.

All lands not belonging to the 'territory of Islam' (dar al-šarīʿa) must gradually be conquered by the Muslims, and are therefore called 'territory of the war' (dar al-harb). The *inām* has to settle when the attack shall be begun. According to theory, one campaign at least must be undertaken against the unbelievers every year; but this became impossible in the later periods, and, according to several Muslim scholars, at present it may be regarded as sufficient if the *inām* keeps the army in good condition and trains it for carrying on the *jihād*.

The many regulations concerning the ways in which Muslims must wage the *jihād* cannot be treated in detail here; they have no practical importance for the later generations. Speaking generally, the war must be carried on as humanely as possible, the helpless must not be killed, and the property of the enemy must not be needlessly destroyed. Before the *inām* invades territory inhabited by unbelievers, he must urge the inhabitants to be converted to Islam. If he neglects this, according to the Shāfiʿīs (but not the other *fāqhi* schools), the *dīya* must be paid for every believer who is killed by payments of money according to their means. Even after Mecca was taken, and the inhabitants had been converted to Islam, the *jihād* against unbelievers remained a religious duty. Though the Prophet at that time did not persecute the unbelievers for their unbelief alone, the *jihād* against many tribes of the heathen Arabs was necessary because they frequently broke their treaty and otherwise showed signs of their untrustworthiness and dangerous disposition.

The doctrine that all heathen must be subjected to Islam because of their unbelief first arose in the time of the first Conquests, after the death of the Prophet, when Meḥdi ruled. He had conquered an extensive territory outside Arabia, and in making tributaries of many unbelievers. At that time the Prophet is said to have declared: 'I am commanded to fight against men until they bear witness that there is no God but Allāh, and that Muhammad is God's messenger; only by pronouncing these words can they make their property and blood secure from me.'

The *jihād* is a duty for every male Muslim who is free, of full age, and not only in the full possession of his intellectual powers, but also physically fit for service and able to obtain the necessary weapons. A son, however, may not go to war without the permission of his parents (if they are Muslims), or a debtor without the permission of his creditor. According to the Shāfiʿī and Ḥanafī, no one is bound to the *jihād* unless he has previously committed any disloyalty towards the Prophet. To the Sunnīs of the various schools by the sustenance of believers must be maintained. Only in case of an attack by unbelievers and the invasion of a Muslim land is participation in the *jihād* an individual duty (fard al-aʿzām) for all Muslims, and for all threatened districts and for all believers living in the neighbourhood. If the land is conquered by unbelievers, according to the *ṣūrah* of the later scholars, every Muslim who is in a position to leave the land is then obliged to do so. It is equally possible, at least if he is hindered in the practice of his religious duties.

All lands not belonging to the 'territory of Islam' (dar al-šarīʿa) must gradually be conquered by the Muslims, and are therefore called 'territory of the war' (dar al-harb). The *inām* has to settle when the attack shall be begun. According to theory, one campaign at least must be undertaken against the unbelievers every year; but this became impossible in the later periods, and, according to several Muslim scholars, at present it may be regarded as sufficient if the *inām* keeps the army in good condition and trains it for carrying on the *jihād*.

The many regulations concerning the ways in which Muslims must wage the *jihād* cannot be treated in detail here; they have no practical importance for the later generations. Speaking generally, the war must be carried on as humanely as possible, the helpless must not be killed, and the property of the enemy must not be needlessly destroyed. Before the *inām* invades territory inhabited by unbelievers, he must urge the inhabitants to be converted to Islam. If he neglects this, according to the Shāfiʿīs (but not the other *fāqhi* schools), the *dīya* must be paid for every believer who is killed by payments of money according to their means.

(6) Regulations concerning booty.—The sharing of the *ghānī* by those among whom they have a claim to it is correctly regulated in the *fāqhi-*books. The regulations on this subject depend on Qurān, viii. 42. This verse was revealed when the Muslims had obtained great booty in the battle of Badr, and it was necessary to establish rules for its division. Among the ancient Arabians the head of the tribe usually received a fixed proportion (e.g., a quarter) of the booty, while the rest was divided among the fighting men of the tribe. The head of the tribe received the largest share, but was bound to heavy expenditure in the interests of the tribe. He had, above all, to maintain the honour of the tribe, by hospitality and kindness not only to his relations but to all who had need of help, such as the old, widows, orphans, the poor, and the guests of the tribe. He was expected to share this wealth with this old Arabian custom, Qurān, viii. 42, regulated the division of the *ghānī* in the following words: 'Know that of that which you make booty a fifth part belongs to Allāh— to His messenger, his family, the orphans, the poor, and travellers—if you believe in Allāh,' etc. Thus the head of the Muslim community, i.e. Allāh or His messenger, for the future took the place of the former head of the tribe, and had to use the fifth part of the booty for the same purposes as the Arabian heads of the tribes had formerly been accustomed to use it. According to Muslim law, § of the booty of war must be divided among the troops which have taken part in the battle. If a Muslim kills an unbeliever in battle, according to the Shāfiʿīs, he has a right to his weapons (waṣab; but, according to the Ḥanafī and Maliki, the Muslim has not expressly made this condition with the *inām* beforehand. The remaining fifth part (khums), according to the Shāfiʿī system, based on the words of Qurān, viii. 42, must be divided into five equal parts. One of these is to be given to the Prophet, and the other four to the various calling by which the sustenance of
death be used for the common good of the general Muslim community, and the four remaining parts are to be given respectively to (1) the relatives of the deceased, (2) the orphans, (3) the poor, and (4) travelers, at least so far as they have need of help. According to the Hanafites, the share of the Prophet has lapsed since his death, and so also has that of his family, so that the khums must be divided among the relatives, the poor, and travelers.

To the booty belong not only the weapons and mounts which have been captured in battle, but all moveable property of the enemy; on the other hand, the land and all immovable property in conquered territory is not divided as booty (see below, § 13 (a)). Prisoners are also part of the booty. If unbelievers are converted to Islam before they fall into the hands of the conquerors, they and their children must be regarded by the Muslims as fellow-believers, and they also keep their property. In the opposite case they become slaves (the men as well as the women and children) and are divided among the persons who have a right to a share in the booty. The former are considered prisoners of war, according to the Shāfīites and Malikites, they may spare them and set them free, either in exchange for ransom or for Muslim prisoners of war, or even without compensation.

Right and duties of unbelievers in Muslim lands.—(a) Tribute.—The population of the lands conquered by Muhammad after Muhammad’s death originally retained their old faith. They were allowed to retain their old dwellings in both the towns and in the country; but they had to pay tribute to their conquerors. The tribute consisted chiefly of payment of part of the harvest. Villages and sometimes whole districts were commanded by the magistrates to deliver definite quantities of crops, which were afterwards converted into money by the Muslim officials. The forms of government existing in the ancient times in the different districts were preserved in many respects.

The tribute is called both jizyah and khārij; both names have originally the same meaning. The word jizyah is taken from Qur’an, ix, 29: ‘Strive against them till they shall declare the faith in Allah and the Last Day, and do not regard as forbidden what Allah and His messenger forbid, until they pay you jizyah in abatement.’ Muslim writers are accustomed to explain jizyah as that which is paid as compensation by the pople of the Book because the Muslims allow them to keep both their faith and their life and give them protection. Khārij, on the other hand, is borrowed from the language of the conquered, especially in Iraq, where the word is used in the general sense of taxation. Later on, however, a difference was made between the two words, khārij being taken to mean—probably because it was originally understood in the sense of produce of the field—connection with the occupation of land, in distinction from jizyah, which came to be used exclusively in the sense of poll-tax.

The land in the conquered territories was declared by Muhammad’s successors to be a national domain, in agreement with the opinions of the companions of the Prophet. They would not divide the land among the troops, but kept it as a permanent source of income for all future generations of Muslims. The conquered nations were allowed to cultivate the land as they had formerly done, but they had to pay part of the produce as tribute (khārij).

The Prophet himself had acted in some respects in the same way at the conquest of certain districts inhabited by Jews to the north of Medina. When these places fell into the hands of the Muslims without much fighting, the Prophet decreed that the captured land should not be divided among the Muslim troops, but, like the khums of the generations, share of his personal disposition. See Qur’an, lit. 7: ‘What God allows to fall to His messenger as faṣr belongs to God—to His messenger, his family, his orphans, his poor, and travelers; accept what God’s messenger gives you, but refrain from that which he forbids you; fear God, for His punishment is severe.’

Applying the intention was that property which could not be regarded as booty should be managed by the Prophet, in order that the income might be used in the same way as the fifth part of the booty.

The land which was declared to belong to the State dominion in conquered countries was also called faṣr, and to secure the use of the income of the faṣr-land to the Muslim community it was arranged that khārij should be for ever attached to the possession of that land. Even if the population which cultivated the land went over to Islam, they were considered to pay khārij. This rule has proved unworkable in practice, since the payment of the khārij was regarded as an act of submission to which only unbelievers could submit. The new converts rejected this obligation, in spite of all measures taken by the magistrate. After their conversion they refused to pay more than the tithe which the Arabic Muslims were also obliged to pay from the product of their harvests.

In the second century after the Hijrah several separate works were written by Muslim scholars about the khārij. Among these is the well-known book written by Abū Yusuf at the instance of the ‘Abd Allāh Khalīf Al-Musārī. In these works it is accurately established which lands belonged to the faṣr-territory and were thus the State’s dominion, and how much their inhabitants must pay as tribute. But, after the whole population had gradually accepted the faith of the Arabian conquerors, and the sharp distinction between them and the latter was becoming less and less marked, the payment of the khārij passed completely out of use. Both the Arabs who had joined the State dominion as new converts refused to submit to such a tribute, and in the end the land was no longer regarded as faṣr-land.

(b) Poll-tax, and other obliterations of the dhimmis.—In the later law-books there is usually no longer an exhaustive discussion of the khārij, but only of the jizyah. By this it was understood in later times, as has already been noted, a fixed sum of money which was to be paid per head by unbelievers as tribute (on the ground of Qur’an, ix, 29). According to the Shāfīites, only the akhl al-khitāb, i.e. possessors of a revelation (esp. Christians and Jews who already confessed their faith before Muhammad had preached Islam [see above, p. 569]), are allowed to submit to the Muslims on condition that they shall pay the jizyah. Other believers must, acc. 1

1. See O. H. Becker, Papyri Schott-Reinhardt, i. (Heidelberg, 1900) 37 ff.
cording to them, be fought against until they have accepted Islam. According to the other figh-schools, the regulations concerning the jizyah and dhimmis are not the same. The latter may be permitted to submit to the Muslims and at the same time to retain their faith. According to the Hanafites, the heathen Arabs were the only exception to this rule; and, according to the Hanbali, the heathen Quraishites, that only these had to choose between death and conversion to Islam.

The submission of unbelievers must take the form of a statement by which the rights and duties of both parties are accurately described. The unbelievers must bind themselves to pay the jizyah, and to fulfill the other duties that Islam enjoins on them. The Muslims in exchange for this must bind themselves for the future not only to leave them in peace, but also to protect them. The subjugated unbelievers who are thus under the protection (dhimmisah, i.e. responsibility) of the Muslims are therefore called dhimmis in the law-books.

Only those dhimmis who are of full age, free, male, and in full possession of their intellectual faculties are obliged to pay jizyah. According to the Shafiites, the amount of this payment depends on the agreement made at the drawing-up of the set of submission; the imam or his deputy must demand at least one dinar per head, but, if it is provided, preferably more; according to the Malikites, the Imam has the right to set in the interests of the Muslims according to his own judgment; according to the Hanafites, he has no choice, but must demand from every poor dhimmis one dinar, from each who is well to two dinars, and from each who has four dinars. According to the conviction of Muslims, however, at the 'end of the days' Jesus will once more come back to the earth and show to Christians as well as to Jews that Islam is the only true religion. In the ideal period, which will begin at His coming, all unbelievers must be converted, and the jizyah can no longer be accepted from any one.

Like other taxes which unbelievers have to pay (e.g., the customs which they must pay for their goods if they trade in Muslim lands), the jizyah belongs to the fas. As to the question how the imam must use the money belonging to the fas, there is a difference of opinion among the figh-schools.

According to the Shafiites, the rules concerning the division of the fas must be divided between the same five categories of persons who have a right to the musma of the body, while the remaining four are destined for the general interests of Muslims. According to the Hanafites and Malikites, the rules concerning the distribution of the body are not applicable to the fas, but the whole fas must be used in the interests of all Muslims (e.g., for the payment of judges, troops, and officials, for the building of forts, roads, bridges, mosques, etc.). Unbelievers in Muslim lands not only have to pay tribute, but are also subjected to other regulations which involve indignities; e.g., they have to fasten a coloured piece of cloth (ghiydr) on their clothes, and wear a special kind of girdle (sumurud), in order that they may readily be distinguishable from Muslims. Christians must preferably wear a blue, Jews a yellow ghiydr. They may not ride on horseback, their head must not be as high as, or higher than, those of their Muslim Mahometan neighbours, and they must carry no weapons. They must not give offence to Muslims—e.g., by ringing their church-bells, or by openly alighting Islam, their Qur'an, by drinking wine, eating pork, etc. On the other hand, they may practise their own religious observances. In the towns in which at the conquest of the land there were war churches or synagogues, they may not be built later; Christians and Jews may restore these buildings only if they are in danger of ruin; according to Abu Hanifah, even this was permitted only in those lands which had not been conquered but had voluntarily submitted to the approach of the Muslim army. As a matter of fact, however, in the first centuries of Islam the Muslims conceded to Christians much greater freedom as to the building of churches and synagogues, as is shown in ZDMG xxxviii. [1884] 674. Otherwise, the dhimmis are in many respects on an equality with their Muslim fellow-citizens: they may acquire property in the lands of Islam and carry on trade; the last is usually not permitted even to unbelievers who have not submitted.

Querry, Droit musulman, (suivi du texte concernant les musulmanes skhoutis, Paris, 1877-78; N. von Tornau, Das musulmische Recht aus den Quellen dargestellt, Leipzig, 1890.

LAW (Roman).—1. Fas and ius.—According to Roman ideas, had a double foundation, being based partly upon divine revelation and partly upon human ordinances. Hence the distinction of the distinction between fas and ius, and this again corresponds to the division of the law into ius divinum and ius humanum: 1

Fas ex iure divino, ius ex humananeque iuris peruasit: nam ad religiones fas, ad homines iuris pertinent (Serv. Georg. 1. 299); the explanatory clause, however, fails to hit the mark, as the distinctive character of the fas lay, not in its relation to religious things—there were also secular laws ('jus humanum)—but in its divine origin (cf. Cic. Orig. ii. ii. 2; 'fas iuris divinae, ius lex humanae'); Cl. de Haenep. Resp. 34, 'exercet fas contra ius humanum intersecutur... ius legatum cum hominis praestido munitum sit, tum iusto divino luce esse valutatum'; Livy, xxvii. xiv. 15, 'ubi ius fas crederent coeli...'; ibid. 16, 'ubi nec divini quicquam nec humani sanctum semper'; ius humanum semper posterius; ius sanctissimum semper ius humanum.

On the other hand, the later division of the law into ius sacrarium, ius publicum, and ius privatum—i.e., a distinction unknown in professional jurisprudence—does not rest upon diversity of origin, but is based upon the division of affairs into ius sacrum, ius publicum, and ius privateum. The groups the rae sacrum (and re religionis) come under ius divinum, and the other two under ius humanum. The fact that the term fas is neuter and undeclinable shows that the concept was a pure abstraction; the attempts to personify it were of relatively late date, and never quite 1 Quintil. Inst. Or. iv. iii. 33; Auson. Erpich. terr. num. 61.

2 Mommsen, Staatsrecht, ii. 82.

3 Gaius, Inst. ii. 2, 'Summa iurisque romani divisa in duo articulos diductorit: nam aliue sunt divini iuris, aliue humani; divini iuris sunt vel sancti vel profani; vel sancti sunt aut humani sunt aut privati' (cf. Mommsen, loc. cit.).
succeeded, for the prayer which Livy (I. xxxii. 6) puts into the mouth of the Pater potiusrat at the Foes of the Foes and which begins with the invocation, "aud iudicium, audite fines, audiat Fas," (cf. VIII. v. 8, "audite Iuso Fasque"), shows traces of extensive adulteration by annalistic tradition, while the deity when later poets designate Fas as the "Fates of Dirce," Hero. Eur. 658; Valer. Place. I. 796) is in reality the Greek Themis. This view of fas never found admission into the cultus, while, on the other hand, the divine personification of ius—i.e. Instit—was in the Augustan Age not merely represented as the polity as the counterpart of the Greek Dike, but even honored by the erection of a special temple.

To the Romans fas was by no means simply an eternal and universal law, just as equally required for all peoples and for all times, and naturally and therefore traceable to a divine source—a jus naturale or caro fidei Theos—an authority, in the later period and under the influence of Greek philosophy it was certainly not a law in an indefinite abstraction of this kind, for, in the sense of a natural or customary law, even without written formulation, fas was conjoined with the mos maiorum, or with folias, and the classical jurists sometimes criticized this for an illegitimity of action, and the frequent expression fas est came to be a maxim of Roman law of higher authority; it was from this point of view, in fact, that the phrase "contra fas" was often simply a rather severe characterization of the illegality of an action, and the frequent expression fas est came to be used as a maxim of higher authority: "Hic fas est!" Hence, "fier potes!" Originally, however, the scope of the fas did not extend beyond the Roman people. Nor had the fas existed from eternity: it was believed that the founders of the Roman State had made a pact with certain deities, to whom therefore became the national gods, and, while this pact secured for the Roman people the protection and favour of these gods, and therefore also all good fortune and prosperity, it was likewise required from them the strict fulfilment of certain clearly defined duties and commandments.

These divine laws were all included under the one term, fas, which, accordingly, was not confined to the above-mentioned law, but, as e.g., those referring to the relation of children to parents, etc., but comprehended also the extensive and irrelative ritual law in its entirety. We have the clearest example of this in the ancient document which makes mention of fas and its opposite nefas, viz. the Roman Calendar of festivals. That the abbreviations Q:R:G:F and Q:ST:D:F found there are to read as "quando rex comitavit fas" and "quando sternen delatum dicebat fas", as was already proved on adequate grounds; moreover, the symbol F and N attached to the majority of the days in the calendar meant originally, not fastus and nefastus, as was assumed, but fastum and nefastum, as is shown by the symbol N:F:P, subsequently contracted to FP, and signifying "fas feriae publicae." In these phrases fas may be construed grammatically only as the predicative noun of a clause which would run: "hoc die leges agere fas est:" "fas est" signifies "is in accordance with fas," just as "iust est" was employed in an analogous sense. Thus the distinctively Roman practice of dividing the year into the two classes of "holy days" and "working days," belonging respectively to the gods and to men, comes under the fas. As bearing a like sense, and with express reference to the ordinances of sacred law, the word fas is frequently used not only in the technical phraseology of sacred things, but also in the literature generally, as, e.g., with reference to dedication (Cic. de Domino subs. 138), the legal position of "locas sacra" (Paul. Dig. XXX. iii. ii. 17. 3), questions of fas as of religious authority; fas was from this point of view, in fact, something more than a legal maxim: it was a law which enjoined the observance of the religious commandments, and gave binding force to the observance of them, as it were, by a divine imperative. Thus, "contra fas" still bears the pregnant sense of a violation of divine law, and passages of like tenor are of frequent occurrence down to the later literary period.

It is a widely prevalent view that the ius was disengaged from the fas in relatively late times, and was indeed developed from it, and that in a broad sense the whole public and private law of the Romans rested upon the basis of the religious law. This theory, however, requires considerable qualification, as has recently been most efficiently shown by L. Mittels (op. cit. p. 22f). Mittels (p. 28) rightly emphasizes the circumstance that there is hardly a single significant trace of the influence of the fas in the law of property as relating to living persons, while the occasional occurrence of fas and ius in family law and the law of inheritance for earlier centuries of the religious law is connected with the fact that marriage was regarded as a "divini humanique iuris communicatio" (Modestinus, Dig. XXXIII. ii. 11), and all the questions relating to the sacri of family and clan came as decisively within the province of the fas as questions relating purely to property within that of the ius. In criminal jurisprudence a religious penal law of earlier origin maintained a place beside a later secular one, and the provisions of each are clearly distinguished by the form of the punishment imposed (sanctio); thus, while the secular law regulates the execution of the penalty to the authorities, and attaches definite penalties in person or property to particular crimes, the religious law knows nothing whatever of penalties inflicted by human means, but either declares that the trespass against a sacred ordinance can be made good by the proper expiation, offering (plicatio) or else, by the voluntary consent of the infractor and his friends (plicatio).
nouncing the formula 'sacer esto,' devotes the offender to the death for such punishment as the latter may decree. The lex sacrae with which the inviolability of the plebanian magistracy was guaranteed, at the same time, as purely simple law, which pronounced the sentence (sanctio) 'sacer esto,' just as, in fact, the penalty imposed on one who violated the privileges of the plebs was, according to the literary tradition, 'as carcere, familia ad edem Cereris, Liberis, Liberaeque venenum iet.' What we have here, accordingly, is not a secular ordinance in the forms of public law, but a contract under the protection of the fas. The person declared to be sacer was a proscribed outlaw, and any one had the right to execute the divine sentence under which he lay, and might kill him with impunity. The same consequences were incurred by one who committed an act of violence upon a tribune of the people, though at a later period the State itself saw to the due infliction of the penalty by secular law, viz., by bringing the crime before the magistrates in the form of a process of peremunition. A much later development of the sentence 'sacer esto' by a secular penalty is authorized also by the Law of the XII Tables as given by Pliny, 

Hence the term 'sacramanum,' the implications of which A. Rosenberg (Hermes, xcviii. [1913] 369 ff.), whose arguments so frequently carry conviction, has failed to grasp with sufficient clearness.

reach, as, e.g., affairs of international law, which regulated the relations of war and peace among the nations; thus Tacitus speaks of the 'fas gentium' 1 and the 'fas armorum et ius hostium.' 2 Codification of the 'fas' was greatly simplified in the belief that there could be no complete or public codification of the ordinances of the ius divinum, as, although the latter was traced back to a definite common stock with the gods, the gods themselves did not develop as a result of a gradual development. The duty of preserving this sacred law was committed to the State priests, who had, as required, to give their professional opinions for the enlightenment and instruction both of the authorities and of private individuals. There was, however—apart from the penal authority of the Pontifex Maximus in relation to his subordinate priests—no official administration of sacred law, and no official infliction of its penalties. In general, offences against the fas were regarded as falling under the maxim 'deorum injuria dis curae' (Tac. Ann. i. 73), and the piaula assigned to particular ritual misdeeds were not specified, but were designed simply to show the delinquent how he might propitiate the offended deity. A person who did not avail himself of this opportunity, and who refused to offer the required piaulaem, or one who violated the fas in so flagrant a manner that expiation was deemed impossible, was inspissus, was excluded from the pax deorum, even if neither the sacred nor the secular authorities took proceedings against him; 3 the only thing that could affect such an offender, indeed, was the reformulary of the Censor. Those who violated the ordinance regarding holy days, or did not fulfil a vow that they had made, or broke an oath made by appealing to the gods, did not thereby become liable to human retribution as at all on the part of the magistrates; and even with regard to those provisions of the sacred law which, by means of the formula 'sacer esto,' committed the defender to the divine retribution, the intervention of the State in the infliction of punishment was, as noted above, a later development. Likewise, in cases which did not relate to penal offences at all, but involved civil matters falling within the scope of the fas, such as marriage, all violations were supposed to fall under the required fulfilment of a vow, the inheritance of the sacra familia, etc., the priests did not deliver a judgment that could be enforced by law, but merely gave an opinion regarding the legal position, and its invalidation would be almost always accepted by the parties concerned.

Corresponding to the respective spheres of the several colleges of priests, the codification of the ius divinum is found in three distinct forms, viz. the ius pontificio, the ius augurale, and the ius fetale. The ius fetale contained the articles relating to matters of international law which could not be consummated without religious ceremonies, and also the form of such ritual; the vital element in the ius augurale was the widely ramified and imposing doctrine of the auspices; the ius pontificio embraced not only the ritual ordinances designed for the guidance of the priests, i.e. the ceremonial law in the proper sense, but also all the essential principles of the legal and other relations between the Roman citizen or the Roman nation and the State gods; and in a certain sense, all alike as individuals and as a people, attached the utmost significance to the maintenance of the ius deum, and as 'religiississimi mortales' (Sallust, Cat. xii. 3) applied themselves to their religious duties. 

1 Mommsen, Ius Pontificum et ius gentium juristi.

concerns with the most painful conscientiousness, this pontifical law bore upon every phase of private and public life, so that the Pontifex Maximus was actually designated as "indux atque arbitror rerum divinarum maximus" (Pempta, p. 85). This certainly does not in the least imply that the jurisdiction of the Pontifices, as of all other priests, was wholly confined to the province of the ius divinum; nevertheless those invested with this dignity officiously pronounced and administered the fas, had, on the one hand, the opportunity of acquiring great experience in the application and interpretation of law, and thus also great acuteness in juridical thinking and reasoning; while, on the other hand, in view of the numerous points at which the fas came into touch with questions of secular life and secular law, they required to have a thorough knowledge of the ius civile also, so that the Pontifices were the earliest jurists of Rome, and in virtue of their responses exercised no small influence upon the development of the civil law as well. It should be noted, however, that these responses, so far as they transcended the ordinary practice of the college, were not official deliverances, and thus were never given by the collegium as a whole, but were pronounced by individual Pontifices, who in such things had no higher authority than a private person learned in the art of the civil law. The body of consulting lawyers was largely recruited from among the Pontifices the ancient reading of the history, to which modern scholars have attached too much importance, wisely assumed that the Pontifical college as such was chiefly concerned in the preservation and application of the civil law, and asserted that the form of words necessary to the institution of a suit (the legis actiones) was officially pronounced by O. Faber and F. Pictor, the comprehensive treatises of M. Antistius Labeo and C. Atius Capito may be singled out for special mention.

An important step in the publication of the sacred law was taken when the register of court-days and holy days, the Fasti, was made accessible to the public—an event brought about, as Mommsen rightly infers from Cie. ad Att. vi. 8, by the promulgation of the Code of the XII Tables; while the well-known disclosure of Cn. Flavins, the protector of the revolutionary Apius Claudius, Censor in 312 B.C., marks the earliest issue of the calendar in a codified form. Another extensive collection of articles from the sacred law, the publication of which cannot be precisely dated, was current among the jurists of the later period under the title of Jus Papirianum, and was annotated by Granius Flaccus, a contemporary of Cæsar. The meaning of the name 'Papirianum' had been forgotten by the ancients themselves, but was believed to have gone back to an editor called Papirius (the papirium or papyrus) said to have been the first Pontifex Maximus after the expulsion of the kings, while a rather unconvincing modern theory would assign the compilation to Sextus Papirius, the author of a jurist of Cicero's time, who was also a pupil of Q. Mucius Scévola. While the collection as a whole may be of fairly late date, there can be no doubt that its individual statutes go back to a very remote period and were drawn from the writings of the Pontifices. They are called Leges Regiae, and were arranged in the order of the kings to whom—somewhat arbitrarily, it is clear—they were ascribed. As regards their matter, they lie wholly within the range of the ius divinum, and, in cases where they prohibit something, the penalties imposed are exclusively of a religious kind—the offering of a pecuniarium for less serious offences, and, for more serious, condemnation by the formula 'ex commisso regibus, etc.' (dies de ritu sacrificii) (cf. also Macr. Sat. iii. xii. 5). In all cases where the code seems to encroach upon the sphere of secular law, it deals with matters which originally were regulated by the fas alone, but were subsequently concerned in the ordinary criminal law, as appears to have been the case even with paricidium. The ordinances of the fas formulated in the Leges Regiae bore with special frequencies in which private law was palpably defective, as, e.g., the unintentional slaying of a human being, and many questions of family law: thus we find ordinances concerning the punishment of children who ill-treat their parents, the exposure of children, the repudiation and selling of wives, the period of a widow's mourning and her re-marriage, etc.; the protection of clients and landmarks also fell within the scope of the sacred law. When the extreme penalty of death ('sacer esto') is imposed, the delinquent to whom the criminal is delivered are always those of the earliest Roman cultus, and above all Jupiter, Vĕdovis, and the divi parentum or divi sacerdotum.

1 Macr. Sat. ii. xi. 5; Paul. Dip. i. xvi. 144; in Pompon. Dip. i. ii. 23, it is wrongly designated as "ius papirianum"; in Serv. En. xii. 360, it is called "lex Papiria." 2 Paul. ancestral spirits. The Aspera to whom one half of the husband's property was assigned when he unjustly repudiated his wife must undoubtedly have been the ancient Roman goddess Tellus, of whom we read as the goddess of marriage; and to her husband, brother of the wolf of Latium ("fossa bos"), which, according to Plut. Nero, 12, was demanded from a widow who married again during her period of mourning. The Ceres to whom the spoiler of crops was delivered was without doubt the Greek Demeter; it was the latter, however, to whom, as Ceres Liber and Ceres Liberina, the statues of the Leges Sacrae (a reproduction of the Leges Regiae) assigned the property of one who infringed the privileges of the plica.

As the sentence of 'sacer esto' was attached only to the statutes derived from the sphere of the ancient fas, we must not, with Mommsen (Strafrecht, p. 900 ff.), regard the formula as equivalent to the capital penalty of the secular law; in reality it simply handed the offender over to divine retribution, nor did it ever signify more than this except so far as the State supplemented the religious idea by a civil one. The youth who beat his father, and thereby became 'divis parentum sacer' was not called to account by the civil magistrates, though in legislating for certain other offences the State fixed definite penalties and so furnished them with the means to enforce them. As we saw above (p. 885), the peculiarity of the penalty imposed by the XII Tables upon the injurer of crops ('suspensum Cereri necari' [Pliny, HN xvii. 12]) clearly shows that the secular penalty of crucifixion was an addition to the older religious penalty of 'Cereri sacer esto.' The like holds good with regard to another offence: if a patron wilfully injured his client, he was, by a lex regia ascribed to Romulus, delivered, as sacer, to Vedovis (Dion. Hal. II. x. 5), and the XII Tables formulated this ordinance as 'patronus si clienti fraudem fecerit, sacer esto' (Serv. Aen. vi. 608); the fact that the deity's name is omitted in the latter formulation shows that the phrase 'sacer esto' had lost its original meaning, for it was necessary that the sentence of sacratio should always specify a particular deity. That the whole procedure of consecratio bonorum lay outside the sphere of secular justice, and belonged exclusively to that of religious law, to which all formal judicial procedure was alien, appears from the fact that the consecratio bonorum, which was still inflicted in his day, and manifestly on the ground of the Leges Sacrae, by the tribunes of the people upon those who resisted them, was carried out in purely religious forms, and neither required a forensic process nor permitted of an appeal.

As the jus divinum was believed to have come into being at the foundation of the city, it could of course be developed indirectly by the expositions of the priests, but could not be added to by the creation of fresh laws. From the institution of the Republic, accordingly, there was no specific sacred legislation, and the ius sacrum was a division of the ius publicum, as finds clear expression in the formula with which the magistrate rejected private claims to property, 'ant sacramum aut publicum esse,' i.e., 'the property of the gods and that of the State are one in relation to private property.' In the so-called Lex de imperio Vespasiani the two great divisions of divinae res and publicae res (the publicae res embracing also the sacrae res) are not conjoined in such a way as to imply that the latter pair is a subdivision of the humanae res; and Ulpian's definition of secular jurisdiction as 'divinamque jurisprudemiam rerum notitias, iustaeque atque instiustae scientiam' (Dig. 1. 1. 10. 2) no longer recognizes any distinction between sacred and secular law.

LAW (Teutoonic and Slavonic).—Terms denoting 'law.'—As the conceptions of justice and law are everywhere of higher antiquity than the knowledge and use of writing, we may assume that among the Teutons and the Slavs the idea of the 'law' was one time only θέσων τα πάντα, 'unwritten laws.' The nature of such unwritten laws can be discovered only by an analysis of the general terms used to designate them. Among the Slavs the first typical terms for the idea of law is zakonu, a word found in all the Slavic tongues, and the word pokonu was employed in the same sense. As both of these words are etymologically akin to the O. Russ. polina, 'law,' lit. 'the past,' and starina, 'law,' lit. 'antiquity,' cf. such phrases as polya starina pokolina Novgorodskiy, 'by ancient Novgorod law,' direciti vui starine, 'to observe the laws,' na wej starine, 'in retention of all previous laws.' An essentially similar idea lies at the root of the term for 'law' common to the West Teutonic dialects, O.H.G. ðóuwa, O.S. ðówa, O.S. æw, æw. It is true that some philologists regard this Teutonic word as cognate with the Lat. aequum, so that it would mean originally 'fairness,' 'equity,' and this is fairly maintained by phonetic laws (O.H.G. ðówa from *aðuara = Lat. aequum from *aúgus); but the Slavic data just noted seem to make it much more probable that O.H.G. ðóuwa is related to Lat. æquum, 'eternity,' öv, âov, 'long space of time,' æođ, 'ever,' and that, like the Slavic zakonu, polina, starina, will mean 'the law which has been in force from eternity, from the beginning, from of old.' A second concept, denoting 'law' and 'equity,' and common to both Teutons and Slavs—though found also in other branches of the Indogermanic stock—is that of 'straightness' as contrasted with 'crookedness. Thus Goth. rakith, O. Norse rift, rik, O. Sax. rieht (cf. also O. Sl. and Alt. 'justice'), are philologically equivalent to Lat. rectus, 'straight,' 'right,' Avest. rita, 'straight,' 'right,' 'correct;' and similarly the Slav. providea, pravo, 'law,' 'justice,' is derived from the root prav, 'straight.' We cannot doubt that this 'straight' signifies 'running in the same line with something else,' i.e., 'in accordance with it.' This, however, raises the question as to what 'something else' was. According to Zwick, 'this straight line is...

1 Dig. iv. 49, 446; cf. Plaut. Truc. 1044; Livy, xvi. 1. 12, xl. 8.
2 Ovid, i. 680, line 17, 'quaequecumque ex usu reliquiae maxime naturalis et divinae, publicaeque rerum esse consuetutis.'
length movements were made towards reducing the laws to writing, must have played a part also among the other Teutonic peoples from remote times. In references to the documentary formulation of ancient popular laws, we often hear of sapientes, i.e. ‘the learned’ (cf. sapan, ‘legal decision’), as those to whom the work was committed. Thus Charlemagne (Capit. ann. 782, cap. 62) says: ‘lex a sapientibus populo composita.’ From a prologue to a collection of popular laws we learn that Theodoric, king of the Franks, when at Chalons, selected a number of men learned in the laws (viros sapientes qui in regno suo legibus antiquis erudit erant) with a view to recording the usages of the Franks, Alamans, and Bavarians. The law of the Fririans contains supplements by the sapientes Wlemarss and Saxinoxund, and that of the Thuringians by the former. With reference to the ordinances of the Lee Salicae, a prologue dating from the 8th cent. states that is the days when the people were still heathens four men selected by the ‘rectores’ of the people had expounded the Salic law in three assemblies (cf. O. Stoibe, Geschichte der deutschen Rechtswissenschaft, Leipzig, 1860–64, i. 16 f.; H. Brunner, Deutsche Rechtsgeschichte, Leipzig, 1906, p. 298). These sapientes, whose legal formulae are referred to in the sources as iudices (‘opinions’), may be compared to the Scandinavian ‘men of law’, and we may safely assume that among the Teutons there had existed from time immemorial a class of ‘erudite men’ who carried in their minds the ancient law of custom in fixed formule, and publicly recited it on given occasions. From traces still found in Scandinavia (cf. K. von Amira, Grundriss der germanischen Rechtsgeschichte, Strassburg, 1901, p. 50 ff.), it may be inferred that these fixed formule were at first metrically; and with this we may compare the ‘epics’ of the Agathyrions, a Transylvanian people, viz. that before they had a knowledge of writing they expressed their laws in song, so that they might not forget them.

3. The beginnings of codification.—Whether, like the Teutons, the Slavs had among them in pre-historic times a special class of learned men who carried in their memories the ancient law of use and wont, and on given occasions communicated it to the people, we have no definite means of knowing. The two races, however, are certainly so far alike that their first attempts to reduce their laws to writing (and it is only with such beginnings that the present article can be made due to their contact with the civilized peoples of the South, and to the need of having their relations with these regulated by law, the movement, in the case of the Teutons, being a result of their coming into touch with the Romans, while the Slavs (Russians) were similarly influenced by their intercourse with Byzantium. In the Romanic area are the Lex Salicae and the Lex Ripuaria; the two West Gothic law-books and the Edict of Theodoric, king of the Eastern Goths; the two Burgundian codes and the Edicts of the Longobards. These, as well as the Lex Alamannorum, the Lex Thuringiensis, and the three sets of popular laws (Thurignian, Fririan, Saxonic) reduced to writing at the instance of Charlemagne, were all in Latin, while the Anglo-Saxon code, which is closely connected with the Lex Salicae, is written in Anglo-Saxon law-books which used the native language.²

Such ‘men of law,’ as official guardians and preachers of primitive legal tradition, who in Scandinavia were preferably resort to even when at length their ancestors or chieftains were called upon to judge, were also found in the West areas. Even the Teutonic Gulf peoples this was the case with the Scandinavians. The highest civic position was that of the ‘man of law’ (sigurðr, bygjavorsu). He was the living code and the custodian of the law for the province and the diocese; he was the director of the Thing, he announced its decisions to the public, and in cases of conflict he was its arbiter. It was his duty to keep a knowledge of law alive among the people, and, as is prescribed by the Icelandic lawbooks and recommended by the Scandinavian statutes, he was ‘called upon to stand upon the “cliff of the law” to recite intelligibly to the whole civil law, and once a year the people heard him recite the laws (Tryggvahlähljof)’ (K. Weinhold, Althochdeutsches Leben, Berlin, 1856, p. 400).
LEAVEN

On Slavic soil, again, it was the relations between the Russians and the Greeks that gave occasion to the earliest written formulations of legal enactments. These were the treaties of peace (dagovorny) between Prince Oleg and the Greeks (A.D. 912), and between Prince Igor and the Byzantines (879). The investigation of Ewer's seem to show that Oleg's document is the main treaty, and that Igor's contains later supplements. The purpose of each was to bring the relations between Russians and Greeks under legal regulations; etc., e.g., § 3 of Oleg's treaty, referring to homicide:

"If a Russian kills a Christian, or a Christian a Russian, he shall die at the place where he committed the homicide. If, however, he who committed the homicide lives, then, if he possesses property, the nearest kinsman of the slain man shall take his portion. According to the law (p za zakon), but the wife of the slayer shall take as much as falls to her according to the law," etc.

As may be inferred from this extract, the treaty makes frequent reference to the Russian law (zakonos), which, in view of what has already been said, would be no more than an unwritten law of custom, and which we have the earliest written deposit in the treaties of Oleg and Igor designed to regulate the intercourse of Greeks and Russians. As was shown above, similar considerations, mutatis mutandis, underlie the various lex pannonica in the legal codes of Eastern Europe.

The earliest codification of the Russian law of custom, or of part of it, for the Russians themselves, will then be found in the first form of the Russkaja Pravda, which, according to the D. J. D. J. Evseyev, (St. Petersburg, 1897, pp. 1019-54) presented a gift to his allies, the Novgorodians, "... and gave them a law (pravda), and caused a statute to be written, saying, "Walk according to this document." As Ewers remarks, "So arose the earliest codified law of the Russians, intended primarily for Novgorod, but it must soon have become operative throughout Russia, as there was no other written law in its way."

It is to be noted, however, that L. K. Goetz takes quite a different view from the foregoing. He is of opinion (p. 238) that the references to 'Russian law' found in the treaties of Oleg and Igor really presuppose the existence of a document — the Pravda in its original form (as in Goetz, pp. 6-11; Jirešek, i. 1-17; Ewers, pp. 284-270) — since, he believes, that earliest formulation of the Russian law of custom was free from all extraneous (Greek or Teutonic) influence, and dates from the reign of Igor or from the reign of Prince Vladimir—from the first half of the 9th, if not indeed from the 8th century. He certainly admits that it was in no sense an official document, and supposes that it was written for purely private purposes by, say, a judge of the local law-court (see King [Teut. und Litou-Slav.], who 'made these notes to serve as a guide in cases where he might have to pronounce a legal decision regarding the amount of compensation' (p. 230). It is hardly possible to arrive at certain conclusions regarding these matters, although the theory that the Russkaja Pravda had a private origin such as Goetz conjectures does not appear to the present writer to be very probable.

LEAVEN.—Leaven is that which produces fermentation in a mass of dough. The Hebrew word s'dor was the designation of the piece of dough already infected by the leaven which was put into the flour to communicate the leaven to the entire mass before it was baked. Dough that had risen through the influence of this leaven was called hamēnē. Leaven might either be communicated by contagion, by mixing yeast with water, or spring up spontaneously, especially in a warm climate like Palestine. Bread that was made from this leaven was called masēsh, 'unleavened bread.' Ordinarily in the warm climate of Syria twenty-four hours was sufficient for a mass of dough to become thoroughly leavened. Pliny (HN, viii. 28) states that the best unleavened bread was made by the Romans by kneading millet or a fine brand of wheat with must at vintage time. The early Hebrews, however, appear to have depended entirely upon the s'dor, or leavened piece of dough, to preserve and transmit the leaven. The later Jews probably used the lees of wine as yeast.

Leaven, like all striking forms of germ growth, made a profound impression upon the thought and institutions of the Hebrews. Ignorant as they were of its real nature, they interpreted it as it appealed to their senses. The fact that it soured the dough in which it was placed led them to classify it as a type of corruption. Therefore everything infected with leaven was in time regarded as impure in certain parts of the sacrificial ritual. Pirute has most clearly voiced this widely held belief:

"Now leaven is itself the offspring of corruption and corrupts the mass of dough with which it has been mixed." (Quedest. Rom. 109.)

Am 4' indicates, however, that leaven offerings, either in principle or in practice, were not wholly forbidden in the ritual of northern Israel. LV 7 and 29 also provide that the bread eaten by the priest might contain leaven, and indicate that leavened cakes were presented in connexion with the Feast of Weeks. Here the early use of wine (Lv 25:2); cf. also Ex 29:8, Nu 16:28-29), which must in many cases have been fermented, in connexion with sacrifices presents a suggestive analogy and indicates that the provision against which contained evidence of corruption was not primitive or absolute. W. Robertson Smith (Rel. Sem., London, 1894, p. 221) has suggested that in its earliest form the legal prohibition of leaven applied only to the Passover, and in the oldest code (J) of Ex 34:22 and 238 the prohibition is thus limited. The extension of the prohibition to all sacrifices and then to all cereal offerings (Lv 22:11; 718:8, Nu 6:18) evidently represents a later stage of development, under the influence of the popular idea that leaven represented corruption, and from the desire (so manifest in the Holiness law) to absolutely exclude from the ritual everything inconsistent with the idea of Jahweh's perfect holiness. The original reason for the use of unleavened bread in connexion with the Passover meal appears to have been simpler. In primitive times, and still among the Arabs on a low stage of civilization, bread was made and cooked at once. The Passover, in its latest Jewish form, evidently represented a blending of the older nomadic spring festival and the first of the three great Canaanite harvest festivals. After the Hebrews passed over to the agricultural stage, it marked the time when the sickle was first put in the standing grain and the peck brought to the Deity the first sheaves gathered from their fields (cf. C. F. Kent, Israel's Laws and Legal Precedents, London, 1897, p. 238 f.). During this busy first week of harvest the people had no time to wait for the slow working of the leavened bread; the bread made hastily from the unleavened dough. Thus the custom grew into an institution confirmed by the earliest Hebrew laws. In later times it presented such a marked contrast to the Passover itself that the Passover itself was frequently designated as the Feast of Unleavened Bread. The tendency to regard leaven as a type of putrefaction doubtless
LEIBNIZ

fortified this earlier custom and explains the tendency, already noted, to extend the prohibition to all cereal offerings. It is paralleled by the extension of a similar prohibition so as to include all fermented liquors.

Because of its peculiar characteristics leaven was used figuratively in early literature in two very different senses. In Mt 13:21 and its parallel, Lk 13:21, it is used by Jesus as a symbol of the quick, pervasive, and rapid extension of the principles of the kingdom or kingdom of God in human society. Its more common use is illustrated by Mt 10:12 (cf. Mk 8:13, Lk 12), where Jesus warns His disciples against the leaven of the Pharisees, Sadducees, and Herodians. It is a potent, concrete figure, which well describes the secret, persistent, corrupting influence of Jesus' foes, who were seeking in an underhand way to pervert the loyalty even of His immediate followers. The Rabbinical writers also used leaven as a symbol of sin and corruption. St. Paul, in 1 Co 5:6 and Gal 5, evidently quotes a familiar proverb which graphically reflects this current idea: 'A little leaven leaveneth the whole lump.' In 1 Co 5:6 he goes on to develop a figure based on the well-known Jewish custom of thoroughly cleansing their house of all leaven in preparation for the joyous Passover feast: 'Know ye not that a little leaven leaveneth the whole lump? Purge out the old leaven, that ye may be new creatures in Christ Jesus.' This verse was applied to believers and consequently to the church. Indeed, the leaven symbol is a key to the understanding of the entire book of 1 Corinthians. It is a means of distinguishing the true from the false, the genuine from the counterfeit. The Roman Flamen Dialis was forbidden to touch 'farinam fermentum imbutam' (Asul. Gall. x. xv. 19). In other ethnic religious leaven plays little part.

Literature.—There is no literature beyond what is cited in the text.

C. P. Kent.

LEGALISM.—See NOMISM.

LEIBNIZ.—1. Life.—Gottfried Wilhelm Leibniz, or Leibnitz, was born at Leipzig on 1 July 1646. His father, a professor of Moral Philosophy at the University of the same town, died in 1652, leaving his son under the care of his young widow (his third wife), who immediately remarried and discharged her duties with admirable skill. The family was well-connected, of the official class, with considerable means, and the mother, a religious woman, impressed on her children the importance of maintaining the good name and traditions of their family. Leibniz became in great measure his own teacher, and even in his earliest days his love of study was extraordinary. He learned Latin by himself at the age of eight, and at ten, by the advice of a neighbour, his father's library was to his great joy opened to him, with the words, 'Tolle, lege.' One study succeeded another in the case of this extraordinary boy, who, after mastering Latin and Greek, devoted himself to the learning of the Schools. At the age of fifteen, in 1661, he became a student at the University of Leipzig. But the teaching there was not such as to satisfy him, and it was through his private study that he became acquainted with the works of Descartes. He also read PASCAL, Barrow, CARLITZ, Campanella, Kepler, and Galileo, and he soon realized the distinction between the new and the old methods of science. The summer of 1663 was spent at Jena under Wiegell, a mathematician as well as a philosopher, and his interest in mathematics developed from this time, though it was not until later in life that he reached the deeper study of the science. The years 1663-66 were occupied in legal studies, and in the last of those years he obtained his doctorate of law at Aldorf (not having already received it at his own University of Leipzig), and the brilliance of his dissertation procured him the offer of a professorial chair. This, however, he declined, having, as he said, different ends in view. His mother died in 1664, and he never visited his native town again except in passing. Although not yet twenty-one, he had already written several remarkable papers, which showed the trend of his later work. One of them dealt with the importance of the historical method in law. Nuremberg was Leibniz's next place of abode, and there he became a protégé of his immediate predecessor, Descartes (acquainted with the Order of the Jesuits), to which he was accepted, indeed, a member. What was more important, he also became acquainted with J. C. von Boimeburg, who had been first minister to the Elector of Mainz, and by whose advice he both printed his Nova Methodus in 1667 and dedicated and presented it to the Elector. This act determined the young man's future life, for he entered the Elector's service in consequence of the acquaintance thus made. Leibniz now took up political writing; he defended (unsuccessfully) the claims of the German candidate to the crown of Poland in 1668, and in 1670, in his Thoughts of Public Order, he advocated a new league ('Rheinbund') for the protection of Germany. He also brought forward the proposal that the French king, Louis XIV., instead of marching on Holland (a step then imminent), should make an expedition to Egypt. Letters referring to this scheme were sent to Louis by Boineburg, and in 1672 Leibniz, as the author of the memorial, was requested to go to Paris. This he did, but he was never given the interview which he desired. The history of this scheme was hidden in the archives of the Hanoverian Library until Napoleon learnt of it on taking possession of Hanover in 1803.

In Paris Leibniz became acquainted with Descartes's successors Arnauld and Malebranche, and also with physicists such as Christian Huygens, and he was soon immersed in the study of the philosophical and scientific questions on which he proceeded to write. As early as 1663 he had written Hypothesis physica nova, an essay on physics, and more especially on the subject of gravitation, so that he was already known in the scientific world. His tour was extended to London, where he became acquainted with both Barrow, Oldenbourg, and Newton. A calculating machine (an improvement on that of Pascal), which was one of his many scientific inventions, was exhibited at the Royal Societies. Leibniz became in great measure his own teacher, and even in his earliest days his love of study was extraordinary. He learned Latin by himself at the age of eight, and at ten, by the advice of a neighbour, his father's library was to his great joy opened to him, with the words, 'Tolle, lege.' One study succeeded another in the case of this extraordinary boy, who, after mastering Latin and Greek, devoted himself to the learning of the Schools. At the age of fifteen, in 1661, he became a student at the University of Leipzig. But the teaching there was not such as to satisfy him, and it was through his private study that he became acquainted with the works of Descartes. He also read PASCAL, Barrow, CARLITZ, Campanella, Kepler, and Galileo, and he soon realized the distinction between the new and the old methods of science. The summer of 1663 was spent at Jena under Wiegell, a mathematician as well as a philosopher, and his interest in mathematics developed from this time, though it was not until later in life that he reached the deeper study of the science. The years 1663-66 were occupied in legal studies, and in the last of those years he obtained his doctorate of law at
Vatican Library by the pope, but one of the conditions was that he should become a Roman Catholic, and to this Leibniz would not consent. He was, however, deeply interested in a scheme which was then being mooted for the reunion of the Protestant and Roman Catholic Churches, and it was in connexion with this discussion that he wrote, in 1688, Systema theologicum, in which he endeavoured to find a common ground of agreement between the two religions. The letters to Leibniz from Bossuet and others show that the writers hoped to convert him to Roman Catholicism; and, when it was clear that they could not succeed, they gave up the attempt. He later attempted to reconcile the Reformed and Lutheran Churches, also without success. In addition to his literary pursuits, Leibniz interested himself in the mining operations carried on in the Harz Mountains and in the coinage of silver found there.

In 1690 Leibniz was appointed librarian at Wolfenbüttel, and some years later he formed a friendship with the Electress Sophia Charlotte of Brandenburg and her mother Princess Sophia of Hanover. It was through this friendship that his connexion with Berlin arose, and he was invited thither in 1700. In this year the Academy which he had been invited to found, took its place in Prussia with Leibniz as President for life. He proceeded to suggest the establishment of similar societies in St. Petersburg, Dresden, and Vienna, with various degrees of success. In recognition of this work Leibniz was made privy councillor of justice by the Elector of Brandenburg; the same honour was given him by the Elector of Hanover and by Peter the Great of Russia. He likewise had the distinction of being granted an imperial privy seal and an audience at Vienna in 1712, while he was also made a baron of the Empire (Reichsfreiherren). While in Berlin he had much pleasant intercourse at Charlottenburg with his royal pupil the Electress Sophia Charlotte, and her death in 1705 was a severe blow to him. Indeed subsequently to that event his visits to Berlin became less frequent, and that which took place in 1711 was the last. After the visit to Vienna in 1712 he returned to Hanover in 1714, but the Elector George had by that time gone to England to assume the crown, and Leibniz was disappointed at not being asked to accompany him, since he had supported the interest of the Elector's lady. He was directed instead to remain in Hanover and finish his history of Brunswick. This was the last work of his life. He died on November 14th, 1716, and his last years were far from happy. He was ill, neglected after his royal friend's death by those who should have helped him, and embittered by many controversies; and, when the end came, hardly any notice was taken of it either in Berlin or in London, whither his sovereign had gone. His only mourner in Hanover was Eckhart, his secretary, and not till 1787 was a monument erected to his memory. To the last he showed a marvellous power of work in very many directions; indeed his attainments were those of an almost unlimited faculty, and such as have seldom been equalled. As he was naturally ambitious, the neglect from which he suffered pained him greatly.

It is matter for regret that Leibniz's teaching has to be derived from a scheme which, however, emanated from Isaac Newton, and for which no fuller evidence is accessible. In 1703-04 he wrote his Opuscules on Locke's Essay, but the author's death prevented their publication. In 1710 appeared his most important philosophical work, his Théodicè sur la bonté de Dieu, la liberté de l'homme, et l'origine du mal. In 1714 he wrote La Monadologie, and in that year there also appeared the Principes de la nature et de la grace. During his latter years he corre-

2. Philosophy.—Leibniz's philosophical doctrines are mainly concerned with the mode in which substance is to be conceived. They represent a distinct advance on the Cartesian view, which granted that there were two substances, connected only, if indeed they were connected at all, by the power of God. Thus Cartesianism showed itself to be a dualism which successive philosophers have in different ways done their best to solve. So far as it is possible to absorb them into one Divine Substance. For him 'determination is negation,' and so far did he carry this doctrine that in his case unity is preserved only at the expense of the reality of the parts; the Substance, that is to say, is self-existent and unconditional, requiring no other thing from which it is formed, or part which may determine it. This development of the Cartesian doctrine, no doubt, a consistent one, and one which carried the principle to its logical conclusion, but it ends in something which much resembles the Oriental theory of absolute self-identity. Leibniz, on the other hand, accepts the multiplicity of substance (the ultimate reality), which makes the monads (an expression originally perhaps adopted from the Pythagoreans, but more directly from Giordano Bruno), and these monads he proceeds to determine. Assuming that substance can only be conceived as |really as a unity, he states that the metaphysical view of monads is that they are simple substances without parts, and, as there are no parts, there can be 'neither extension, form, nor divisibility.' No dissolution of these elements need be feared, for each monad can be destroyed by natural means. Nor can they by these means come into being. Thus a monad can become existent or come to an end only all at once, i.e. by creation in the one instance or annihilation in the other.

These monads are therefore, so to speak, centres of force, as distinguished from manifestations of world-force. They are not to be confused with the atoms of Descartes or the materialists, inasmuch as they have within them the power of action; indeed it is their nature to act, and they also have what might be called a spiritual nature. In his Monadology, Leibniz states that the monad likewise has 'perception and apperception.' Perception is, however, not necessarily conscious perception, since conscious perception represents another stage, which he calls 'apperception.' In perception we have a unity which has a multiplicity of relations, and is thus variously modified. Likewise the appetite is not necessarily conscious desire or will; it represents change within the identity of a simple substance. Hence we must conceive the monad as possessed of spontaneity and as capable of evolving its nature and experience from itself. It is not inert and passive, but is a microcosm, 'the universe in little'; indeed Leibniz goes so far as to make use of the Aristotelian term, and say that the monads are entelechies because they have a 'certain perfection which makes them the sources of their internal activities, so to speak, incorporeal automata' (§ 19).

They are not, however, pure entelechies, as is shown by the difference from isolation, paper, sketch, and letter. In 1703-04 he worked out his criticisms on Locke's Essay, but the author's death prevented their publication. In 1710 appeared his most important philosophical work, his Théodicè sur la bonté de Dieu, la liberté de l'homme, et l'origine du mal. In 1714 he wrote La Monadologie, and in that year there also appeared the Principes de la nature et de la grace. During his latter years he corre-
balanced minds in the opinion that souls are mortal," (§14).

Leibniz did not give the name 'soul' to everything that has perception and desires; for such, he says, the general name monads or entelechies should suffice.

Such 'monads' be considered, should be reserved for those 'in which perception is more distinct, and is accompanied by memory,' (§19). 'Memory provides the soul with a kind of consecutiveness which copies (inside) reality, which is to be distinguished from it,' (§18). 'It is the knowledge of necessary and eternal truths that distinguishes us from the animals and gives us reason and the Sapiuntia, raising us to the knowledge of ourselves and of God. And it is this reason that is called the rational soul or mind (spiritus).'

This knowledge makes us conscious of ourselves, of substance, and of God; it teaches us what is limited and what is unlimited.

Reasoning is founded by Leibniz on two great principles: (1) that of Contradiction, by which we judge that to be false which involves a contradiction and that true which is contradictory to the false, and (2) the principle of Sufficient Reason, whereby we hold that there can be no fact, real or existent, unless there is a sufficient reason why it should be so and not otherwise, even although these reasons usually cannot be known to us. There are also two kinds of truths, those of reasoning and fact.

'Truths of reasoning are necessary, and their opposite is impossible; truths of fact are contingent, and their opposite is possible,' (§23).

Then, again, the organic body of each living thing is a kind of divine machine or natural automaton, 'which infinitely surpasses all artificial automata,' For a machine made of the skill of man is not a machine in each of its parts. 'But the machines of nature, namely living bodies, are machines in their smallest parts ad infinitum,' (§23).

Each portion of matter is not only infinitely divisible but also actually subdivided without end. The smallest particle of matter has in it a living being, animals, entelechies, souls—and nothing is sterile, or fallow, or dead, or confused in appearance. Each living body has a dominant entelechy (in the animal the soul), but the members of this body are all living beings, and animals, each of which has its dominant entelechy or soul. There is never absolute birth (nécesation) nor complete death consisting in the separation of soul from body.

'Vegetation is that which is growing, whereas what we call death is envelopments and diminutions,' (§73). Organic bodies do not really proceed from chaos, but always from seeds in which there was some pre-formation.

'The organic body was already here before conception, but also a soul in this body, and in short the animal itself,' (§74).

The animal is merely prepared for the great transformation of becoming another kind of animal.

The fact that the soul and the animal itself are alike indestructible makes it easier for Leibniz to explain his theory of the union of soul and matter, agreement between soul and organic body. Both soul and body follow their own laws, and they agree with each other in virtue of the pre-established harmonious arrangement of each, which is often misrepresented, since it is said to be arbitrarily dependent on the will of God, whereas in reality it proceeds from the very nature of the monads themselves, as perceptible, spontaneous beings. Leibniz believes that Descartes was not far off from his doctrine, and that he would have arrived at it had he known that there was a law of nature affirming the conservation of the same total direction in matters,' (§80).

The Leibnizian and Cartesian theories of mechanical physics were the subject of much controversy. For Descartes' theory of the constancy of the quantity of motion in the world, Leibniz substitutes the principle of the conservation of motion or "vis viva," but the long controversy was probably due in great measure to the ambiguity of the terms employed. It really concerns the conservation of motion, not the conversion of one kind of energy into another. Leibniz maintains. For Leibniz, motion is simply a change of position. It is not a positive quality belonging to the moving of a body, but a relative one, and rest itself is merely an infinitely small degree of motion.

Leibniz illustrates his theory of pre-established harmony by the well-known example of the two clocks. There are three alternative methods by which they may be made to keep perfect time with one another: (1) the machinery of the one may actually move the other, being connected, e.g., by a piece of wood, which represents Locke's theory of mutual influence; (2) whenever one of these moves the mechanism, a similar alteration may be made in the other by a skilful workman, which is the doctrine of the Occasionalists; or (3) the clocks may have been so perfectly constructed at the first as to continue to coincide in the same instant without any further influence or assistance, which is Leibniz's view of a pre-established harmony. Another simile that he uses is, however, a more adequate one: he compares the monads to two independent bands of musicians playing in perfect harmony.

As regards our knowledge, it is all developed by the soul's own activity, and senescent perception is but a confused sort of knowledge. Leibniz denied that there were any innate ideas, and held that all our knowledge must reach us from outside, and through the senses. Descartes believed that it came from pure thought and independently of the senses. Leibniz held that his theory harmonized the two. The soul of man as monad is an active spontaneous force, and its ideas are innate, but they are not clear and distinct, as Descartes would have us believe. To begin with, they are confused and imperfect, and it is the function of a developing force that they reach clearness and self-evidence. Locke's sensation is really confused perception, and it is made clear only by the result of an internal experience. Human knowledge is both a priori and a posteriori.

As there is a perfect harmony between the two realms in nature, one of efficient and the other of final causes, there is another harmony between the physical realm of nature and the moral realm of grace, i.e., between God, as Architect of the universe, and God as Monarch of the Divine City of spirits (spirito), (§87).

Thus Leibniz justifies the ways of God to man, the punishment of some, and the reward of others, as being in accordance with the divine harmony. Could we sufficiently understand the order of the universe, we should find that it is impossible to make it better than it is. Leibniz therefore makes God the necessary postulate of morality, and in his Theodicies he works out his theology and defends his view of the universe. God is the best possible world, and shows how faith and reason may be found to coincide and harmonize. God must either exist as a self-existent Being or be impossible. The will is an effort towards that which one finds good, and is freely in the sense of being exempt from external control, and, as it has a sufficient reason for its action, determined by what seems good to it. Freedom consists in following reason, while servitude arises from following the passions which proceed from confused perceptions.

Probably few philosophers have suffered more
LESSING

than Leibniz from misrepresentation of their systems. We have Voltaire's stinging satire of the 'best possible world' in his
Candide, but that was a satire more than a mis-
representation. The doctrine of the pre-established
harmony, however, lent itself to easy caricature, as
did that of the 'inductive philosophy' of Newton's
writings, which were published during his lifetime, and he
left masses of MSS in detached papers and little
treatises, difficult to sort out. His two principles of
contradiction and sufficient reason were
chosen to oppose one another, and existed, so to
speak, side by side in independence. Newton's
physics did not altogether accord with Leibniz's
metaphysics, and Newton's triumph meant cor-
responding discredit for Leibniz. Christian Wolf,
thought he systematized his philosophy, was not a true follower, or at least
he followed him in a pedantic way. Perhaps Kant
understood his position better, although he ad-
vanced far beyond it. Hegel terms it an 'artificial
system,' but he appreciates its worth as showing
forth the principle of individuality. Goethe
adopted the Leibnizian conception of monads and
souls. Later on Leibnizism was transferred to
the philosophy of Leibniz on his revolt as a man
of science against the idealism of Pichte, Schelling,
and Hegel, though he was influenced by Kantian
doctrines and rejected much of Leibniz's teaching.

[3] KANT.

[3.4] Dutens, Geneva, 1789, which was held to be
collected and published in the years 1788-9. The de
Avro Combinatoria, which he wrote in 1785, is of logical rather than
mathematical interest. In 1768, when in London, he told Fultall
that he had obtained the summation of infinite
series by differences, but in this he had been antici-
pated. After this he studied under Huygens in
Paris. Among other results at this period, he ob-
tained the important result
\[ f = 1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \cdots \]

He now began his great work on the infinitesimal

He started with the conception, pre-
viously employed by Barrow, Newton's teacher,
of the characteristic of any power on the
curve. This consists of the chord joining
two adjacent points, together with parallels to the
axes of co-ordinates drawn through these points.
In the case of the points come to coincide
with the given point, the chord becomes the
tangent at that point. With the aid of this concep-
tion he attacked the problems of tangency, showing that the so-called
inverse problems of tangents could be reduced to
quadratures, or, in modern terminology, integra-
tions. He regarded integration as a summation of
infinitesimals. His original notation for \( f(x) \)
was \( \text{omn} \ y \), own standing for omnima. Later he intro-
duced the symbols \( f_1 \) standing for \( S \), or \( \Sigma \)
and \( d \) for differentiat, which are still used in the
calculus. By 1675 he had applied the new methods to
the direct problems of tangents and to solid
geometry, and in the following year he gave cor-
rect rules for the differentiation of sums, products,
powers, and other functions.

In 1684 he published his first paper on the differen-
tial calculus in the Leipzig Acta Eruditorum.
Besides tangency, maxima and minima and refraction,
one of which results are still apparently
taken as finite, though small.

Two years later he gave a sketch of the integral
calculus in the same journal. Here \( dy \) and \( dx \)
are regarded as being defined from that definite
infinite integral.

His last position appears to have been that they are 'quantitates assignabiles' which spring from
"quantitates inassignabiles" by the law of con-

In the minds of both, however, there was probably enough confusion to justify Berkeley's
declaration of an error.

Some idea of the variety and magnitude of Leib-

niz's mathematical achievements can be gathered
from the fact that, besides the notation of the
calculus, we owe to him the words 'co-ordinate'
and 'axis of co-ordinates' in geometry, the
beginnings of the theories of determinants, osculation, and envelopes, and the method of partial
fractions. 'Leibniz's theorem' deals with the re-
presented differential of a product. In mechanics
his work, though fruitful, contains many errors. He
regarded \( \frac{dy}{dx} \), which varies as the square of the
velocity, as the proper measure of the force in a
moving body, whilst Descartes had used momenta,
yielding directly 'inertial forces.' Though the attack on Descartes was unjustified,
yet this view ultimately led to the fundamental
modern concept of energy. —J. B. S. Haldane.

LITERATURE. — None of the many editions of Leibniz's works
are complete. There are three: the first, by
Jena in 1783, the second, by Dutens, Geneva, 1789,
which was held to be complete when publica-
ted. In 1843 G. H. Pertz began an edition of his
works (4th ser. 'History,' 4 vols. Hanover, 1843-47, 2nd ed. 'Philoso-
phical,' 7 vols. incomplete, Berlin, 1846). The only
complete edition of his mathematical works is that of
G. W. Leibniz, 7 vols., Berlin, 1857-90. There are also Leibniz's
Foucher de Careil, Oeuvres de Leibniz, 7 vols. (planned in
20 vols.), Paris, 1909-75. Oeno Klop, Mythical geometry, 10 vols.,
Hanover, London, and Paris, 1864-77, containing the
historical and political works; and A. Jacques, Oeuvres de
Leibnitz, 2 vols. Paris, 1847. There is an edition (not complete)
of his philosophical works by J. E. Ehrmann, Berlin, 1848-49, and
one by F. Janet, 3 vols., Paris, 1869.

For the life and teaching of Leibniz we have Robert Latta,
The Monodontology and other Philosophical Writings, Oxford, 1856
(gives a translation of the Monodontology and other philosophical
works); J. T. Meur, Leibniz in Blackwood's Philosophical
Classics, Edinburgh, 1894; W. R. Schinkel, Kritik de
Kritik, E. Boutron, Le Monodontology; accompagnée d'esta-
ctions, Paris, 1831; cf. also Le Boisier de Fontenelle, Essay
(2 vols. of the Opera Omnia), in the Acta Eruditorum, and L. Grote, Leibniz und seine
Zelt, Hanover, 1839; E. Pfeiderer, Leibniz, Undervisnings-
studenten und Bildungsträger, Leipzig, 1870; F. Kirchner,
G. W. Leibniz: sein Leben und Denken, Ketschen, 1878.
There are countless monographs on Leibniz, of which
the most important is that by Kurt Fischer, 'G. W. Leibniz, Leben, Werke, und
Lehre,' in Gesch. der neuen Philosophie, Heidelberg, 1897;
E. Zeller, Geschichte der deutschen Philosophie, Munich, 1875.
Among the critical works may be mentioned Bertrand Russell,
Critical Expositions of the Philosophy of Leibnitz, Cambridge, 1903.
Further literature is cited in DAP III. (1903) 390-398.

LEPROSY. — See Disease and Medicine.

LESSING. —1. Life and times. — It is easy for
us to see in retrospect that the achievement of
Lessing lay in preparing the way for the complex
creative movement associated with the names of
Goethe and Schiller; Lessing himself, however,
looked forward to a future only dimly illumined
by rays of hope, and he went out perforce 'not
knowing whither he went.' The century follow-
ing the close of the Hundred Years' War saw a
very slow and partial recovery of the German
national life from the utter barbarism, the
degeneration of morals, of manners, and of
educational and political institutions. But even
so...

E. S. Haldane.
being founded, and the latent national genius was re-asserting itself in the varied interests which we should comprise under the term 'culture.'

Gotthold Ephraim Lessing was born at Kamenz, in the Saxon province of Upper Lusatia, on 22nd Jan., 1729, the second son and fourth child of a Lutheran clergyman, afterwards head-pastor of the town, and his worthy but not wealthy father. His childhood was spent in simple circumstances and in a very orthodox family circle. In 1741 he was sent to the Klosterschule of St. Aafa at Meissen, in which the family was associated with a thorough classical education, a strict discipline, and a healthy intermixture of religious instruction. In spare hours he supplemented his vigorous pursued studies by intensive reading of his favourite authors—Theophrastus, Plautus, and Terence—and in the last-mentioned, in consequence of the disturbed condition of the town after the battle of Kesselsdorf, it was with a thorough mastery of Latin and Greek, some knowledge of modern languages, and well-developed mathematical powers, his farewell caution was on 'Mathematics among the Ancients.'

He next entered Leipzig University, where he came under the influence of J. A. Ernesti and J. P. Christ in classics and of A. O. Köstner in mathematics. Fearful lest he should study only and without aiming at any other accomplishment suited to a man of the world. Introduced into dramatic circles, he completed his first play, which he had commenced at school, and it was performed at Frau Neunheer's theatre. His new interests gave his good father much anxiety, for it was already known that he had been designed for the Church; he had to promise to study medicine before his parents' condescension in his studies could be removed.

Leaving Leipzig in consequence of debts which he had contracted by standing security for some actor-friends, he was in London, where his acquaintanceship with S. G. Lee and other actors led him to the study of drama. Here, in London and Paris, he had an opportunity of studying drama as a whole, of acquiring a knowledge of the history of the drama, and of attempting to translate classical and foreign drama into German. His 'Escribano' ceased to appear in the following year, since Musius had made a statement in it with which Lessing refused to be associated. Another periodical appeared, 'Der Bevollk.' (now 'Die Zeitschriften'), and entered into controversy with a certain pasteur, S. O. Lange, utterly destroying the latter's claims to be 'the great universal scholar,' by exposing his shallow and uncritical attitude toward all criticisms which he might care to publish. Once again in Berlin, Lessing became the friend of the learned Moses Mendelssohn and the publisher F. Nicolaus. His literary activity was now great, and, apart from his dramatic interests, he kept up a large correspondence with the literary circles of Berlin, he wrote for a time to Brentano, acting as secretary to the governor, General Tsontz, developing a strong love of the gaming table, collecting a large and valuable library, working at his Lacocon, and sketching out his play 'Naissa von Earbnhelm.' After an illness due to overwork, he gave up his post in 1768, and, refusing a professorship which involved certain duties unconnected with his own, he left for a visit to Russia in 1755. After a short stay at the court of Peter the Great, he returned to his duties at the Hoftheater, but his life at Wolfenbüttel was dull in the extreme. He wasimported by his family for sickness, and, upon his return, met with congenial companions. He was married in 1771 to Eva König, but was unhappily without issue till five years later. In the meantime he published his 'Eiadalia Galotti' and afterwards some 'fragments' by his friend H. H. Reinhart, which aroused another controversy. He went to Austria, and, when pressed about marriage, felt compelled to accept an invitation to accompany his friend F. H. von Schurmann on a journey to Italy. The journey lasted nine months, but involved Lessing in unconveniency and left him few opportunities of studying Italian works of art. In 1776 he was a man of a happy life with his cultured and refined wife; but their joy was short-lived, for in 1778 a son died in the prime of life, and his wife died a fortuitous death. Lessing wrote:

'Perhaps the greatest service which Lessing rendered to his age lay in his devotion to truth even more than in his influence in changing the direction of creative literary work, in revolutionizing the principles of criticism, and in maturing theological study. In his person,' said D. F. Strauss, 'allegiance to truth and love of truth personified guard the portals of our literature.' ('Lessing's Nachlese der Weisheit,' Berlin, 1860). It was righteous indignation rather than cynical irony that gave point to his most acute criticisms. Sham and the worship of mere appearances were hateful in his eyes. 'Not the truth which a man possesses or believes himself to possess, but the sincere attempt which he has made to reach the truth, constitutes his worth. For not through the possession of truth, but through inquiry and study, does man develop those powers in which his ever-increasing perfection consists. Possession makes for a passive, proud, and often a destructive, and not an active, proud. If God held in His right hand all truth, and in His left only the ever-active impulse to search for truth, even with the condition that I must for the time being choose one,' said Lessing. 'Choose?' I should humbly bow before His left hand and say, 'Father, give! Pure truth belongs to Thee. Verstehende Menschen durchstreichen Lebens- schriften, ed. L. M. Altenmacher, Berlin, 1831 (6th ed. 1840).

Though Lessing's mind sought creative expression, his bent was in the long run predominantly critical. While he could not create, he was holding up a mirror stimulating his own critical faculty, and could not arrive at critical conclusions without desiring to apply them, we owe more to his insight as a critic than to his genius as a creative artist. Our debt has found strikingly well-known expression in which give an illuminating estimate of the critic as well as a testimony to his influence on subsequent authors. Macaulay once said that the reading of Lessing's Laocoön formed an epoch in his mental history, and that he had learned more from it than he had ever learned elsewhere (G. H. Lowes, Life of Goethe, London, 1864, p. 87). Carlyle said in his 'Essay on the State of German Literature' (Works of T. Carlyle, London, 1857, ii. 26): 'It is to Lessing that an English man would turn with readiest affection. . . . As a poet, as a critic, as a philosopher, or controversialist, his style will be found precisely such as would surprise us least. It is he who most: brief, nervous, vivid; yet quiet, without glitter or show; satisfactory in rhythm, and in expression, transparently full of character and reflex hues of meaning.'

2. Contributions to aesthetics. — Aesthetics has always occupied an important place in modern German philosophy. It is reasonable and probable whether Kant or Schelling, Hegel or Schopenhauer, exercised so potent or so far-reaching an influence as Lessing, whose Laocoön (written between 1760 and 1765 and published in 1766) gathered together in a suggestive form the results of previous critical theory and handed them on to a dawning new age along with an arresting presentation of several new problems. The book deals only by way of illustration with the sculptured group which gives it its title. Its chief point of departure is an essay on the one hand and painting and plastic art on the other; it attacks the current but uncritically held view summed up in Plutarch's quotation from Simonides referring to poetry as a speaking picture and painting as a dumb poem, that peculiar laws govern these different arts, and, in particular, that the choice of a 'pregnant moment,' essential to the artist, is not the task of the poet. Thus Lessing assigns a moment at which the object of his art is so acting that the representation of it shall be most suggestive to the imagination—suggestive both of past and of prospective action; the poet, however, is able to prepare the imagination of his hearer or reader beforehand and even to influence it subsequently;
in other words, he is able to lead up to his critical moment and to tone down the effects of his presentation, as the sculptor shows him to us as emitting deep sighs.

This choice which allows free play to the imagination is alone happy one. The more we gaze, the more must our imagination add; and the more our imagination adds, the nearer we come to a realization of the whole course of an emotion there is no moment which offers this so little advantage as its climax. There is nothing higher beyond the love to present the extreme to the eye is to clip the wings of fancy and to compel her; since she cannot get beyond the importance of the artist. To seek lower and weaker images where with to occupy herself, shaming, as her limit, the visible fulness of expression. Thus, if the Laocoön shows the imagination of Homer, in fact, each statue, it will be, is a single material object, and consequently description of it, according to its parts is juxtaposition, would not form a suitable subject for poetic representation: yet this very shield that of Achilles has been described by Homer, in over a hundred magnificent lines, with such minuteness and exactitude as regards its material, its form, and all the figures which filled its vast surfaces, that modern artists have experienced difficulty in reproducing it in its entirely. My reply to this particular objection is that I have already replied to it. What Homer has written to describe the shield as it is when finished and complete, but as it is being wrought. Here again, therefore, he has sketched of what actual device of transfiguring the divine craftsman in the act of making it. He steps, with hammer and tongs, before his avul, and, after the plates have been forged one upon another, the figures destined by him to adorn the shield rise from the bronze one by one before our eyes, beneath the finer strokes of his hammer. We do not lose sight of him until the work is completed. At length it is finished, and we marvel at it with the confiding astonishment of the eye-witness who has beheld the actual operation (60, ch. xviii.)

IncidentallyLessing discusses a number of special topics of interest to the student of art from the contemplative point of view. The book, as we have it, is but a fragment of Lessing's projected work, but its charm lies in the skill with which the main themes are relieved, and at the same time illustrated, by digressions which stimulate the imagination instead of wearying the critical faculties.

We are plunged at once into the midst of his argument, then he draws back, alternately approaching and receding from his goal, taking occasionally a side-gance at objects he meets on his way. We see him in the very act of conquering the truth he intends to express, witness his hesitancy while they are still uncertain, share his pleasures as they burst upon him in their full significance. If we except the best of Piso's dialogue, it would be difficult to name any book which gives opportunity for so much of the most valuable kind of mental gymnastics. (Lessing, L. 251.)

3. Dramatic writings.—Lessing's dramatic works interest us here only in so far as they reflect his social and religious ideas. Miss Sara Sampson, the scene of which is laid in England, is a tragedy of life represented as a hint of the new day about to dawn on the German drama. Minna von Barnhelm is a charming study in human character, full of local colour and contemplative. Lessing presents its characters before a background of political significance.

The Seven Years' War ended for political reasons, and harmony of national sentiment did not immediately take the place of the bitterness which accompanied the conflagration. Minna von Barnhelm made for true peace, whether Goethe was right or wrong in saying that it was the design of the play to effect at once by the method of art a result which could not be achieved by objects of its presumption and as soaring with anguish; but the sculptor shows him to us as emitting deep sighs.

Wuthering Heights is an exaggeration of an advocate, Lessing inveighs against descriptive poetry; action is the widest sense of the word, we might say 'the dramatic,' that which changes, moves, and progresses (including feeling), is to him of the highest value. So far as poetry represents things co-existing in time, it must do so by representation of things in succession. A fruitful illustration of this, as of so many of his theses, is drawn from Homer. When the noblest of all the Greek epic poets was not at his height, it will be, is a single material object, and consequently description of it, according to its parts is juxtaposition, would not form a suitable subject for poetic representation: yet this very shield that of Achilles has been described by Homer, in over a hundred magnificent lines, with such minuteness and exactitude as regards its material, its form, and all the figures which filled its vast surfaces, that modern artists have experienced difficulty in reproducing it in its entirety. My reply to this particular objection is that I have already replied to it. What Homer has written to describe the shield as it is when finished and complete, but as it is being wrought. Here again, therefore, he has sketched of what actual device of transfiguring the divine craftsman in the act of making it. He steps, with hammer and tongs, before his avul, and, after the plates have been forged one upon another, the figures destined by him to adorn the shield rise from the bronze one by one before our eyes, beneath the finer strokes of his hammer. We do not lose sight of him until the work is completed. At length it is finished, and we marvel at it with the confiding astonishment of the eye-witness who has beheld the actual operation (60, ch. xviii.).

Nathan the Wise is a dramatic poem rather than a drama, secured Lessing's European fame. It saw the light first in 1779, but had long been planned. While Lessing declined to admit that his play contained allusions to the controversies in which he had been engaged with a Hamburg pastor, J. M. Götze, he declared that he would have nothing to say against the surmise that his purpose was to show how in olden time and in many lands, as among modern peoples, there have lived individuals who, though holding aloof from the religious systems of their age, were yet respectable and good; or against the conclusion that he intended to present such persons in a light that was hitherto regarded in Christian communities. So far as it could be is the idea of the play—and there is more idea than action—controversial. Not the three rings in the possession of three sons of a dead man, one of them being the true heirloom, the others fraudulent imitations. The central characters of the play are a German Jew, and a Muslim. Nathan, the Jew, teaches what Lessing admitted was his own conviction, not, as some have assumed, that all three religions are true, and, if the others false, the true to be discovered by observation of the results of each in the lives of its adherents, but rather the deep truth that, so long as Christians, Muslims, and Jews quarrel about their systems, the truth of religion lies in each of them. When the power of the true ring has shown itself acting from within the owner of it, there will be nothing left to quarrel about. Creeds are accidents of birth and circumstances, but true religion is seen in character and action and must be the achievement of those who profess it.

Nathan the Wise was produced in Berlin in 1783, but by indifferent actors. Only when Goethe and Schiller produced it at Weimar in 1801 did it take the place that it holds to-day in the repertory of the best German theatres. In it Lessing still teaches his lessons of tolerance and broad-minded sympathy.

4. Literary and dramatic criticism.—In literary and dramatic criticism Lessing occupied an original standpoint and maintained it throughout his learning. His various contributions to periodicals and his Literaturbriefe ('Letters upon Current Literature') carried him into the arena already occupied, on the one side, by J. C. Gottsched, who blindly imitated the still refined classicism of French, and therefore gave supremacy to formal standards, and, on the other, by the Swiss writers J. J. Bodmer and J. J. J. Reitinger, who insisted on the supreme importance of creative imagination. Lessing took up an independent position, criticizing both schools, though championing the main thesis of the anti-French school. From the frankest criticism of Gottsched, a renowned Leipzig professor, the young critic proceeded to still more daring venture of criticising Rousseau and Voltaire. In his Hamburgische Dramaturgie (published while he was 'critic' at the Hamburg Theatre and collected in 1769) he urged that the Greek dramatists and Shakespeare are regarded as models, and he succeeded in securing the tie between German literature and the classic French school. In a brief but striking essay on 'How the Ancients represented Human Characters' (Attai den Tod gebuhlet, 1769), Lessing maintained in reply to Klotz, who had criticized a remark in Laocoon, that the ancients represented the god of Death, not by the symbol of a skeleton, but by that of a boy, twin-brother of the god Mars, which shows that skeletons represented the departed souls of evil men.
5. Theological opinions. — Lessing was always most powerful in the expression of his opinions which he was compelled to defend them against the traditionalist, who made the victory of the literal or literalistic world. In addition to early Essays, "The Origin of Revealed Religion" and "Contributions to History and Literature" (containing essays on the theories of Leibniz), controversies in which he was engaged led to the publication of the following tracts: "The Demonstration of the Spirit and of Power," "The Testament of John," "A Rejoinder" (Ein Duplik), and "The Religion of Christ." His chief theological controversy arose over papers that he published anonymously which were the work of H. S. Reimarus, who died at Hamburg while Lessing was there. These papers, which were reprints from an essay left by Reimarus entitled "An Argument for Rational Worshippers of God," dealt with the questions of revelation, immortality in the OT, and the inconsistencies in the accounts of Christ's Resurrection. That they did not reflect adequately his personal views may be judged by his own words:

"What has the Christian to do with the hypotheses, the explanations, the proofs of the theologian? The letter is not the spirit, and the Bible is not religion." (Sämmtliche Schriften, x. 10.)

The foremost critic of these papers was Götze, head-pastor of Hamburg, whose utterances were the occasion of some of Lessing's most brilliant controversial writings. Lessing strenuously upheld the right of the intellect to discuss with pens and freedom all subjects, whether their nature, which are of deep concern to mankind.

"If you could bring it about that our Lutheran pastors should become our popes; that they should have power to prescribe to us where we must cease to investigate Scripture, to put limits to our investigation and to our right of publishing the results of our investigations, that would be the first to exchange the popes for the pope." (ib. p. 181.)

Lessing insisted on the distinction between Christian love and the religion of Christ:

"that which He Himself as a man conceived and practised, which every man may have in common with Him, which every man may wish to have in common with Him in properties and the character ascribed to Christ simply as a man and sublime and soberly.

In the dialogue entitled "The Testament of John," Lessing asks, "Are not Christian love and the Christian religion the same thing?" (ib. x. 46.) In his treatment of Biblical questions Lessing was very frank. He left it to others to write appreciations of the Bible, taking their results for granted. He himself set out to show that the Bible is not the only sustenance for man's spiritual life, and the suggestions which he threw out in the course of this and other controversial writings (which belong chiefly to the year 1778) led to those inquiries and researches which were only much later recognized as the legitimate studies of NT Canon and Early Christian History. Indeed, it was Lessing who first drew to the attention of the world the essential difference between the first three and the fourth Gospels (see the fragment, "New Hypothesis concerning the Evangelists," Sämmtliche Schriften, x. 10.)

Lessing's contributions to theological study were vividly summarized in a work consisting of a hundred propositions and entitled "The Education of the Human Race" (Die Erziehung des Menschengeistes, 1780). Humanity is represented as passing through three stages of education:

The first is that reflected in its school-book, the OT. We see there the gradual development from the worship of a God of all and local deities to that of one God, and the transition from the worship of a virtue which is dependent on rewards and punishments in this life to the doctrine of the immortality of the soul, to learn which the Hebrew people had been "sent abroad" to Babylon. The second is that in which Christ taught the eternal sanctions of righteousness in place of immediate retribution, and the NT is the school-book of this stage. Before the third stage is reached, revealed truths are to be transformed into the use of the school of the theological world.

It will come, the time of consummation, when man, however firmly his mind is convinced of an ever better future, will have no need to seek reward for his conduct now, for he will do what is right because it is right, and not because arbitrary rewards are attached to it, which were merely intended to attract and strengthen his wandering attention, so that he might recognize its inward and better rewards. It will certainly come to a new Gospel, which is promised us already in the elementary books of the New Covenant (Proposition 85.)

After remarking that each individual human being must first traverse the ground along which the race advances towards its perfection, he meets the objection that in one and the same life-time a man cannot pass through the three stages of the school of the theological world, making the interesting, and at that time novel, suggestion of pre-existence (see Propositions 93-100). This little treatise is closely related to Lessing's "The Wise in its teaching of the relative worth of different religions, and in that each is fitted for a particular race and epoch and that none can claim supremacy over all the others.

6. Political opinions. — In Ernst und Falk, Dialogues for Freemasons (Gespräche für Freimüther), published without his permission in 1780, Lessing expresses his views of society, devoting but little space to freemasonry, which should, he says, overcome all distinctions of caste and fortune, of nationality and religion. He admits a preference for natural life as opposed to the social state.

Speaking of art, he says: "What activity and yet what order! Everyone carries, drags, and pushes, and nobody is a hindrance to the rest. See, they even help one another; they have no member that holds them together and rules them; each individual is able to govern himself." (Sämmtliche Schriften, x. 257.)

But at the same time he recognizes that the good of individuals depends at present on a certain degree of organization. With no uncertain courage, considering the circumstances of the age, Lessing insists on the basis of social life in the needs and satisfactions of individuals.

"States unite men that through and in this union every individual man may the better and more surely enjoy his share of welfare. The total of the welfare of all its members is the welfare of the state; besides this there is none. Every other kind of welfare of the state, whereby individuals suffer and must suffer, is a cloak for tyranny. . . . As nature could have intended the welfare of an abstract idea, State, Fatherland, and the like rather than that of each individual." (Ibid.)

LETTERS CELESTIAL AND INFERNAL

—With the development of writing the belief arose that the gods themselves kept records of their proceedings, and thus among the Egyptians Thoth was the scribe of the gods (A. Wissmann, Religion der anci. Egyptians, London, 1897, pp. 227 f., 248), while the Indians believed Brahman to be a writer of (cf. Vaisvanardita, tr. L. H. Gray, New York, 1913, p. 115), particularly the deity who writes the fate of each mortal on the individual’s forehead (brahmachakir.

As a natural corollary it was thought that the gods could communicate their will to man by written as well as by spoken words.

In the Egyptian Book of the Dead, the rubric of ch. xxx. b. states that “this chapter was found in the city of Hermopolis (Hermopolis Major), under the feet of the statue of this god.” It was inscribed upon a slab of iron south of the writing of the king and his queen in the “house of the dead...” by the royal son Heru-Habu (the son of Cheops, the builder of the Great Pyramid). (Book of the Dead, tr. E. A. W. Budge, London, 1894, p. 151; cf. 223 f.)

In some forms of revelation the document is written in heaven, in the Bible it is written as (see Ezek. 12:24). The sacred book of the Elkisaites was believed to have been given to them by the god Kok, who also gave the book of Kay IV, 38, and, according to another version, to have been brought from heaven to Elkisai by a gigantic angel (Hippol. Refut. ix. 8; see ERE v. 269).

The belief may, however, be traced much farther back. Towards the end of the 3rd or during the 2nd b.c., a native of Syria, a Greek named Menippus, a Syrian from Gada, inaugurated the genre of the Menippe satiric. Among his productions were the adventus of a person, who suggests that the non-Greek phrase ἀρα τοῦ θεοῦ πρὸς τὸν ἄνθρωπον may be a reminiscence of a Heb. 2:7-9. It may have been these compositions that gave rise to the tradition of the Samosata, the inspiration for his “Letters of the Gods.” Servius (ad Æn. vi. 332) mentions a certain Tiberianus who “invented epistolario vento allata ab antiquis lapsus superi infernus salutem,” and Pausanias (X. xxxvIII. 7) records that “Esclapinus sent the poetess Anyte to Naupactus, bearing a sealed tablet given her by the god, to heal Phylus, who was well-nigh blind, but who, obeying the divine command, was cured and given a full vision again. Other instances of more doubtful interpretation might be cited, as, e.g., Juvenal’s phrase (xi. 27), ‘æ caelo descendit γραφα ἐκατον,’ although here the most obvious meaning is that Chilon was divinely inspired with a prophecy, and he passed down that which a master inscribed; ‘ἐκαίναλα ἐκατον’ was waited to him from the sky.

Within Christianity one of the earliest mentions of a celestial letter occurs in the 23rd Ode of Solomon (tr. J. H. Bernard, Psalms, iii. 112) if the second half of the 2nd cent. A.D.), in which the decree of the Most High descends in a letter ‘like an arrow which is violently shot from the bow.’ It was ‘a great Tablet, which was wholly written by the Finger of God.’ The contents of this letter were apparently Mt 16:19. In the Ethiopic Acts of Peter the apostle receives from Christ books written with His own hand... wherein were written the mysteries which the tongues of the children of men are neither able to utter nor to understand with their hearts, except those whose hearts are arrayed in the strength of the gracious gift of baptism’ (tr. E. A. W. Budge, Contendings of the Apostles, London, 1895, p. 151; cf. 223 f.).

To the category of celestial letters belongs the very interesting letter of the hallowing Sunday, whose history may be traced back at least to the 6th cent., and which has spread, despite many efforts to check it, throughout both Western and Eastern Christendom. Although much study has already been devoted to this letter, its history is by no means clear. Its general character is thus summarized by Delahaye (op. cit. infra, p. 174).

The principal specimens of this letter are as follows:

(b) Anglo-Saxon: Four homilies are edited by A. S. Napier in Wulfstan, Berlin, 1889, a fifth by him in Eng. Miscellany presented to Dr. Furnivall, Oxford, 1901, pp. 255-332, and a sixth has been published by R. Priebe in Owe Missaria, i. (Liverpool, 1900) 129 ff.

(c) Middle English: John Audley’s poem is edited by R. Priebe in Engl. Miscellany, 247-450.

(d) German: Delahaye, 191-195; Dieterich, 234-237, 243 f.; A. Wuttke, Deutsch. Vom Ministerspfarrer, Berlin, 1894, 505 f.; F. Struckjer, Aberglaube und Sagen aus dem Herzogtum Oldenburg, Oldenburg, 1895, i. 239 ff.; R. Bartz, Sagen, Märchen und Geschichten aus Mecklenburg, Vienna, 1875-90, x. 341 ff.; J. Jahn, Herzmenschen und Zauberer in Pommern, Breslau, 1887, p. 82 f.; F. Gosser, Strasburger Strafgeschichten, Strasbourg, 1842, pp. 92-95; Chroniken der oberösterreichischen Städte, Strabach, 1870, i. 111-116; M. Haupt, Äiweldt, Bütter, u. (Leipzig, 1870) 241-257.

(e) Icelandic: J. Arnason, Islandskt 8fólgar og afáfnitir, Reykjavik, 1863-64, II. 15-35.

(g) Celtic: E. O’C. O’Clair, Lectures on the Material of the Irish Hist., Dublin, 1891, p. 605 (referring to Lebor Leinse, do. 1893, coll. 217); F. W. Joyce, Soc. Hist. of I., Ireland,
LEVI BEN GERSHON.

nal gods are known from classic times (Dieterich, 251). In the 14th and 15th centuries a number of epitaphs were ascribed to Satan, but these were solely satirical in purpose (see W. Wattensbach, 'Über erfundene Briefe in Handschriften des Mittelalters,' SBA W, 1892, pp. 91–133, and for an admirable specimen ib. 104–122). LITERATURE.—In addition to the works mentioned in the art. See I. F. Kurmann, Die Asiaten in Status, and epistolario del señor el menor de los descartes, Salamanca, 1785; H. Delaheye, Bull. de la classe des lettres ... académ. roy. de Belgique, iii. xxxvii. (1890) 171–211; F. Dieterich, Kleine Schriften, Leipzig, 1911, pp. 234–41; A. Abt, 'Von den Himmelsbriefen,' Historische Blätter für Volks- und Quellenbest. d. Kirche, 1899; T. O. Radice, 'Die Himmelsbriefe,' Zeitschr. des Vereins für Kirchengesch. in der Provinz Schlesien (v. 1906) 228–245; R. Priesch, Die Briefe des Dieterich, Graz, 1856; V. G. Kermer, Werke d. Himmelsbriefe, Leipzig, 1938; W. Köhler, 'Himmels- und Todtführer,' Religion in Gesch. und Gegenwart, iii. (1913), 29–38. Many German specimens are given in such periodicals as Schweiz. Archiv für Volkskunde, Historische Blätter für Volkskunde, etc.; see also above, p. 709.

LEVI BEN GERSHON.—1. Life and influence. — Levi ben Gershon, familiarly known in Hebrew literature as Ralbag, from the initials of his name, called also Gesonkos, Leon de Bagnoles, Magister Leo de Bannolis, and Magister Leo Ibe- ruen, Jewish philosopher, exegete, mathematician, and astronomer, was born in Bagnoles (S. Francia) in 1288, and died on April 29th, 1344. Levi lived at Orange and at Avignon, where it is supposed that he practised as a physician. His life fell in a period when discussion raged furiously between the followers of tradition and those who read their philosophical conceptions into the text of Scripture. Levi belonged to the latter class, and, though under the influence of the great Stagyrite and his Arabic interpreter, Averroes, he was not afraid to criticize them—just as he was sufficiently open-minded to differ from Ptolemy in matters of astronomy.

He was, like most of the great scholars in the Middle Ages, a polyhist; but his interest in Jewish theology, as well as his studies in metaphysics, accentuated his occupation with many of the exact sciences. Just as Aristotelian theories regarding the spheres and the stars as the virtual intermedium between the Deity and man made a study of astronomy necessary, so did occupation with questions concerning the Jewish calendar necessitate a knowledge of both mathematics and astronomy. Of Levi's life we know very little; but its end must have been darkened by the clouds that hung over his people and led him to compute the Year of Redemption to be 1338, and to write horoscopes for the years 1343 and 1344.

In Hebrew literature Levi's chief influence was as a philosopher and Bible commentator. He was the first after Maimonides to present to his fellow Jews a complete system of philosophy; and, while he found many followers, his course of freedom from the fetters of tradition evoked strong opposition. Hasdai b. Abraham Crescas († 1410) severely criticized his philosophical deductions; and he was decried as unorthodox by such writers as Isaac b. Sheshet († 1408), Abrahal (1450), Shem Tob b. Shem Tob (1461), Messer Leon (1475), Elias Delmedigo († 1497), and Manasseh b. Israel (1627). Indeed, in 1546 it was dangerous to print his chief work on philosophy. But the opposition which he aroused is proof that he was widely read. His influence extended outside his own circle. Spinoza adopted his theories regarding miracles; Pico de Mirandola praised his astronomical treatise,
part of which Pope Clement VI (1342) ordered to be translated into Latin; and he is mentioned by Reuchlin and Kepler. Further, he was the real discoverer of the 'heavens,' or 'Jacob's Staff,' an instrument for measuring angles and distances on the earth and in the spheres—a discovery which has been attributed to Regiomontanus. He also invented the "camera obscura," in order to be able to arrange the relation of the caditi of the sun and the moon to the radius of a circle, to measure the size of the eclipse of these two bodies, and to ascertain the relation of the diameter of the whole body to the diameter of the part obscured. He laid down these results in his "Lukhot ha-Pehinnah ("Astronomical Tables"), incorporated in the fifth part of the Milhämah. This was 200 years before Leonardo da Vinci and Porta.

2. Philosophy.—Levi's philosophical system is contained in his Milhämah Adhōni ("War of the Lord," Riva di Trento, 1590, Leipzig, 1836). His controversy with Maimonides centred about the creation of matter and the immortality of the soul. In order to posit God's intercessions in natural phenomena and to form a basis for the existence of miracles, Maimonides had denied the eternity of matter, while he had not proved the possibility of an individual's immortality. Levi held opposite views; but, in order to justify his standpoint, he found it necessary to explain the physical and metaphysical theories upon which his idea of the co-eternity of matter with God was based. The Milhämah, which is in six parts, covers the whole ground of natural philosophy, metaphysics, and theology in the following order: theory of the soul; prophecy; God's omniscience; providence; astronomy, physics, and metaphysics; Creation and miracles.

According to Levi, the basis of human intellect is in reality the imaginative soul, something akin to the animal soul. This human intellect is moved to action by the universal intellect; when joined to the acquired ideas and conceptions, it becomes the acquired intellect. This acquired intellect is made up of universals; and Levi holds, with the realists, that such universals have a real existence. It is thus possible that the acquired intellect may continue to exist after death, thus affording us a philosophical basis for the theological doctrine of the immortality of man. In a similar way he develops his fundamental belief in prophecy by connecting the rational faculty in man, which then comes into play, with the universal intellect. Prophecy is thus differentiated from divination, in which the imaginative power in man is, so to speak, the receiving instrument, and to whose workings no certainty can be attached. Maimonides had based his theory upon the imaginative side of the human mind and upon the will of God, without attempting to explain the psychological process. Levi, on the other hand, demands moral as well as intellectual perfection in the prophet.

There are three grades of superhuman forces—the planetary intelligences, the active intellect, and the primary cause of all. God's existence is proved by the phenomena of creation; and His oneness is deducible from the evident hierarchy in the forces that move the universe. The planetary intelligences are made up of the spirits of the stars, which are to be thought of as immaterial bodies swinging in recurring periods in the world harmony. There are forty-eight such spirit intelligences made up of eight astral ones, corresponding to the forty-eight constellations and the eight planets. No one of the sphere intelligences can be—as Averroes supposed—the primary cause, since they affect a part of the universe and not the whole. In contra-distinction to Aristotle, Levi holds that the world had a beginning, since neither matter nor motion is infinite; but, like the heavenly bodies, it has no end. At creation, matter was inert and undetermined. Form and various attributes were given to it by God, but the diverse separate intelligences proceeded directly from the Divine Being. Miracles do not proceed from the Deity, but from the active intellect. Natural laws are of two kinds: one in governing the heavens, upon which sublunar phenomena are dependent; and those governing the active intellect. Miracles are natural events, and are meant to act as a counter-poise to the inflexibility of the celestial bodies. According to Levi, there is a definite analogy between the knowledge of God and that of man; but there is a clear distinction to be made between them. God's knowledge extends over all the cosmic laws of the universe, and over the influence exerted upon sublunar things by the celestial bodies; but He does not know the details of what happens in the sublunar world. This explains the possibility of the freedom of the will, which does not in any way derogate from God's omniscience or imply any imperfection in Him, as He knows all that is essential.

God's providence does not extend to every individual, as Maimonides had supposed; nor does it deal only with mankind, a view which is contrary to the theory of Aristotle. Levi strikes a middle course, and holds that some human beings are under a general providence, others under a special, and that the quantity of special providence meted out to any individual is in direct relation to the period of creation which he has reached,—i.e., to the degree of nearness to the active intellect attained by him. The solicitude of this special providence, appreciated only by beings of the highest perfection, manifests itself in a warning to regard evil influences emanating from the celestial bodies, all of which are regulated by eternal laws known to the Deity.

These philosophical and metaphysical doctrines are found again in Levi's commentaries on various books of the Bible, written between the years 1338 and 1338—notably in those on the Pentateuch and the Former Prophets—and they have been excerpted and published in separate form under the title of To'adiah (Riva di Trento, 1500-64). In addition to these he wrote comments on Job, Daniel, Proverbs, Canticles, Esther, Ecclesiastes, and Ruth. Levi's explanations are quite consciously two-faced. He is partial to the literal meaning of the text, which he explains with lucidity and clearness, following in many cases Ibn Ezra; even miracles, e.g., he explains in a natural sense. But behind this literal meaning he sees a philosophical and historic sense, which he deduces out of the text with great skill. He also finds his scientific principles rooted in the Bible—on the theory that all knowledge is one, the separate parts of which cannot contradict each other.

This philosophic bent of mind is likewise seen in his works on pure science. He believed himself to be an absolute rationalist, and held that no problem was insoluble to man. He dared to explain geometric axioms. His work on arithmetic (Ma'dah Heshabb) differs from that of Ibn Ezra, which may be said to be dogmatic and mechanical, in that it attempts a systematic system founded upon an algebraic basis taken from the elements of Euclid. The same spirit is shown in his tract de Numeri harmonici, dealing with a question in algebra put to him by Philip of Vitry, Bishop of Meaux. Levi was also one of the first writers in Europe to study trigonometry, and he worked out a commentary on the first five books of Euclid.
His views on astronomy are, of course, the integral part of his general system of philosophy, and are largely contained in the fifth section of his Mithraism. Here again he shows his keen love for the exact sciences. He is not afraid to criticize both Alpetragius (al-Butriji) and Ptolemy. He takes into consideration a system akin to that of Copernicus, but only to reject it as quite impossible. According to Levi, the various movements of the sun depend upon more than one sphere, so that the number of the heaven-circles equals the number of all these movements. Each planet also belongs to several spheres—which accounts for the complex courses of the stars. Yet he is not satisfied with so simple a statement, the current mysticism of his day leading him to seek a deeper meaning in these movements. The object of the stars, he says, is to exercise an influence here on earth in order to make good the evident incompleteness of earthly things. This influence, however, is not plenary; man's freedom of will can break through the causal nexus of the dominion of stars, and the higher a man ascends in the scale the greater his power to overcome this influence. Levi is thus a firm believer in astrology, the existence of which, he says, 'no one can doubt.' The light of the sun warms the earth because there is some secret connection between the sun and the element of fire, which is not possessed by the other heavenly lights.

3. Appreciation. — Levi's method is, in all cases, to set out the opinions of his predecessors, to criticize these opinions, and then to state his own view. It is significant that the first work that he wrote was one on logic, in which he reviews Averroes' interpretation of the Analytic of Aristotle. His general position can be stated best in his own words:

'It thought carried us to a conclusion which does not seem to result from the simple wording of Holy Writ, we would still have no scruples to speak the truth; for to do this would not run counter to biblical ethics, which cannot ask us to believe that which is false.

He must not in any way be considered as a sceptic; he found means to harmonize the truth, as he saw it, with received tradition. Nor did he in any way care for the applause of the multitude, though he did insist that some subjects were not fit for discussion. Indeed, by God, is the intention of the author to hide his words from the crowd, in order to be understood only of the few, and to do no harm to others.

In view of this, it seems impossible to hold, as some have done, including Curtze, Cantor, and Günther, that, very late in life, Levi became a convert to Christianity. The basis for this view is found in some expressions in the dedication (in 1842 to Pope Clement VI.) of the Latin translation of a part of the chapters on astronomy contained in his Mishnaith. But there was no need to adopt such a course in Avignon, where the Jews were treated by the pope with conspicuous kindness. All Levi's writings exhibit a strong Jewish feeling, and none of his literary and philosophical opponents mentions the charge. Carlebach suggests rightly that this dedication must have been composed for him by some one else, who wrote what he pleased, as Levi was unacquainted with Latin.

RICHARD GOTHEIL.

LIBERAL JUDAISM. — The changes in thought which marked the close of the 18th cent. and so powerfully affected the course of the 19th did not pass without influencing Judaism. Moreover, the external barriers between the Jews and the rest of the world were broken down by the changes which preceded and followed the French Revolution, and the problem arose as to the Jews' new social life with the old religious institutions. These two causes, the intellectual and the social, have not always had the same relative importance; sometimes the one, sometimes the other, has predominated. But they have not been isolated, because the two are essentially related. The social changes in the position of the Jews were bound up with the modification of the European intellectual outlook. Those who have led the liberal Jewish cause have mostly been the intellectually and socially emancipated—that is, who have most deeply felt the consequences of the altered attitude of men in general towards the problems of thought and of intercourse.

There has been nothing in the nature of schism, because, on the one hand, there has been no established synagogue (see Hebrew), and, on the other, the leaders of the new movements have invariably been animated with a strong loyalty to the common cause of Judaism. But from time to time these new movements have been distinctly marked off from the older Judaism by less reliance on tradition. The earlier Reform represented an attempt to re-state Judaism in the light of the new Jewish learning, which did so much to promote the 'higher criticism' of the Talmud. It was seen that the Rabbinic Codes were the result of growth, that they had a history which, while it made them more interesting as expressions of the progressive life of Jewry, necessarily undermined their authority as unalterable norms. The older Rabbinic Judaism had made far fewer claims to the permanent validity of traditional forms than did the conservative Judaism of the 18th, 17th, and 18th centuries. In the Jewish life of the 18th cent. there were many customs—ritualistic and social—which, in the light of historical criticism, were seen to be of very various date and significance. Reform, accepting this criticism, busied itself with the valuation of traditions, establishing or accepting the validity of some and not of all. More and more, the customs began to be considered as a national institution, though there are at the present day some 'liberals' who are also 'Zionists'—that the Jews were a nation but a religious community, and that, while the maintenance of the synagogue as an independent organization was absolutely essential for the vitality and continued existence of Judaism, yet it was imperative to find as a basis for the maintenance of independence other means than the retention of separate customs.

The course of Reform in Judaism thus became in part a matter of detail. Some of these details were of small significance, such as the question whether to pray with covered or uncovered heads. But others were of greater importance. One of these was the position of women. Woman always occupied a high position in Jewish esteem (see I. Abrahams, Jewish Life in the Middle Ages, London, 1896, ch. v.). But the Reform movement tended to express this esteem of woman by admitting her more fully to congregational equality with men. Another detail was the question of language. The first effective Reform movement occurred in Germany; Moses Moellendorff's book on the history of Reform only in a special sense—wrote three sermons in German in 1757 on the occasion of the victories of Frederick the Great. Vernacular sermons had been in regular vogue much earlier (I. Zunz, Die gesellschaftlichen Vorträge der
LIBERAL JUDAISM

Juden', Berlin, 1892, pp. 454–496). But, in the centuries preceding the age of Reform, sermons were given in synagogues, being usual only twice a year, and then the language employed by the preacher was either some form of Hebrew or a dialect, such as Yiddish. The establishment of regular sermons in the pure vernacular and the fuller organization of religious education for the young, especially as regards girls, are among the most important changes which the modern conservative synagogue owes to the liberals. Again, the liturgical prayer book and the employment of vernacular prayers and hymns were further stages in the Reform movement (1810), which, on the whole, sought to 'estheticize,' or, as some have impliedly expressed it, to 'de-orientalize,' the synagogue services.

But there was a deeper principle at work and, as time went on, the Reform movement, attaching itself to such views as that of Maimonides that the Pentateuchal sacrificial system was a concession to the weakness of early Israel, sought to remove the liturgical prayers for the restoration of the sacrifices and also for the physical resurrection and return to Palestine, without, however, surrendering the fundamental idea of immortality and in the Messianic Age. Liberal Judaism has always tended to a firm grasp of Messianism, in the form of a belief in the perfectibility of human nature, of a steady advance toward the coming of the Messiah, and toward the ultimate conversion of the world to monotheism, and the establishment of the universal Kingdom of God.

Much anxiety was presented by the Saturday Sabbath, and since the beginnings of Reform the problem has grown in difficulty as economic pressure among the working and professional classes, as well as laxity and assimilation among the more wealthy and leisureed circles, has led to a weakening of the seventh day Sabbath rule among conservatives as well as among liberals. No real solution has been found, for, while Sunday services have been established in some liberal Jewish congregations of Germany and America, there has been very little desire or attempt to transfer the Sabbath from Saturday to Sunday.

Reform in Judaism entered on a new and more fertile phase under the inspiration of Abraham Geiger (1810–74). He was one of the leading representatives of the middle way of the Reform movement in Judaism, to use the phrase often applied to it. His writings were of great significance; indeed, his "Urscrift" (Breslau, 1857) is a work which is regarded as having been a most appreciated contribution to Biblical and historical criticism. But, though Geiger was possessed of a historical temper—to use E. G. Hirsch's phrase—he did not, as the Breslau school of Jewish thought tended to do, separate his criticism from his creed. Just because he conceived of Judaism not as a given quantity but as a process (JE v. 859), Geiger recognized the necessity of making that process harmonious. His whole struggle for Reform was based on his sense that thought and religion must be systematized, not put into separate compartments. Some very sincere and very great Jews of the Breslau School were able to discriminate between intellectual and practical freedom, but Geiger could not. This is a criticism of his study and goes on to religious conformity as though nothing had happened to compromise the sanctions on which conformity was based. The same attitude towards assimilation in its own time is as the root of the liberal Judaism of our own time.

Parallel with this was the conviction among certain Reformers that it was necessary to return to the Bible in order to purge Judaism from Rabbinism. This tendency was shown in the discussions of the French Synod at Bordeaux, summoned by Napoleon in 1808. So, too, when the first Reform synagogue was opened in England (1849), the authority of the 'Oral Law' was repudiated, while, as D. W. Marks, the minister of the new congregation, put it, in his sermon published on the occasion, 'for Israelites there is but one immutable law, that which is written in the book of the scriptures, commanded by God to be written down for the unerring guidance of his people until the end of time.' Similarly, Isaac M. Wise (1819–1900), the great organizer of Jewish Reform in the States, was the founder of the famous Hebrew Union College of Cincinnati, strenuously maintaining the older view of Biblical inspiration; to the end of his life he upheld the Mosaic authorship of the Pentateuch, as in his "Promises to Holy Writ" (Cincinnati, 1891). But this easy discrimination between 'Mosaism' and 'Rabbinism' was not tenable when the newer Biblical criticism affected the synagogue. Geiger had been a 'higher critic' not only of Rabbinism but also of Mosaism. Similarly, Zunz (1794–1886) was not only a pioneer in the criticism of the Midrash; he was also a leader in the criticism of the Biblical text which, of course, extended back. He was therefore opposed, a half-house was built by those who, while firmly holding by the authority of the Bible, denied the authority of tradition. But the house constructed with so much care proved an ephemeral lodging for the ultimate conversion of the world to monotheism, and the establishment of the universal Kingdom of God.

Mystical theories, not always consciously recognized as mystical, have involved all forms of religion and Judaism at present is much infected by mystical conceptions. Liberal Judaism, feeling itself bound to assert that not all the Bible is of God, became equally assured that not all the tradition is of man. It believes in a spiritual continuity of the ages, and regards the whole of the Jewish revelation as a spiritual experience, which links together all generations of Jews, including the present generation. It is not, however, necessary to insist on this way of describing what has happened. It can be expressed rationally by the assertion that criticism has tended to prove that, just as documents grew up from traditions, so traditions may be given validity by criticism. Hence it is becoming usual now to speak of 'liberal Judaism,' whereas in former generations the favoured term was 'Reform Judaism.' Liberal Judaism is a kind of syncretism, without the superstructure. It may be described in general terms as a direct resumption of the prophetic Judaism. But it regards the Talmud as often a real advance in religious and ethical teaching, and therefore has the warmest affection for the Talmud as the expression of certain important aspects of the Jewish genius. Thus liberal Judaism, though necessarily denying the validity of any book whatever as a final authority in religion, is strongly placed by its very power of eclecticism. It has not yet formulated a precise theory as to its relation to the idea of Law. But it is coming to accept the theory of progressive revelation in a manner which must eventually become interpretable in the biblical, communal, and therefore more or less legalistic, terms.

It is unnecessary to discuss more fully the tenets of liberal Judaism, because in most fundamental principles it is in agreement with other liberal schools. Liberal Judaism shares the belief in the absolute unity of God, in the revelation of God to man, in human responsibility, in immortality, in the call of Israel to teach the universal Fatherhood of God, in the practical and spiritual salvation of all men despite differences of creed,
LIBERTARIANISM AND NECESSITARIANISM

I. ABRAHAM.

LIBERTARIANISM AND NECESSITARIANISM. — The controversy between the two views of causality is often obscured by the use of terms like 'cause', 'necessity', 'free will', which are not always defined with precision. It is therefore necessary to analyze terms like 'cause', 'necessity', 'free will', which play such an important role in this discussion; for we must make sure that the question is not a logomachy, but a genuine problem.

Thus the term 'causality' is allowed by custom, 'the arbiter of language', to embrace many meanings. The scientific means by it uniformly of sequence, and objects to any other meaning. Now it is clear that, if this is a full account of causation, libertarianism in any sense is meaningless. For to seek the cause of a moral action in the past is to desert the moral standpoint, and is vetoed by the moral consciousness. The uniform sequence seems to be full of contradictions. There are uniform sequences which are not causally connected, as the conjunction of night and day. Again, the uniform sequence, as such, is not in any degree. It is because we have purposes which we wish to realize, ideals by which we guide our actions. It may be possible to explain 'how we act, because activity is an ultimate element in our experience, just as we cannot say how we think, but cogito ergo sum. 

Man, then, appears to himself the principle of his own movements; here the cause is immanent and efficient. And he guides himself by ideas; here the cause is final. At first men applied 'cause' in this full sense to the world of nature, as we still do in ordinary speech.

As time went on, this rich view of causality as applied to nature became more and more limited to events which were fruitful, efficient cause was useless, the regularity of sequences sufficed. No one can deny that this was a gain, that superstition and magic thus received a death-blow, and that nature was examined with greater impartiality by the patient student. It is, however, questionable whether this view is rightly termed causality at all, for what is it but an attempt to understand a change without beginning or end, which succeeds only because it has the instinct to stop somewhere and to take just as much of the change as it pleases? A change, however, can never explain itself, and it certainly cannot explain the subject who is conscious of it or the moral agent who thinks—rightly or wrongly—that he can direct it in accordance with his aims.

In discussing freedom we must ask which view of causation is the most satisfactory. It will not do to foreclose the question off-hand by adherence to uniformity of sequence as alone possible or exhaustive. If we remember this looseness in the use of the term 'cause,' we are saved from initial confusion and from the arrogance of gratuitous assumptions. To say that a human action is 'caused' does not in any way inform us as to the kind of causation implied. The nearest libertarian may use the term without committing himself to determinism.

The circulation of the blood is not the cause of life in the same sense that a blow with the hammer may be the cause of death, nor is virtue the cause of happiness in precisely the same sense that the circulation of the blood is the cause of life. Everywhere as we ascend in the scale of creation from chemical to chemical to physiology and human action, the relative notion is more difficult and subtle, the cause becoming inextricably involved with the effect and the effect with the cause, every means being an end and every end a means. Hence no one who examines our ideas of cause and effect will believe that they imply anything on the will. They are an imperfect mode in which the mind imagines the sequence of natural or moral actions; being a play of words only. The chain which we are weaving is loose and when shaken will drop off. External circumstances are not the cause of which circumstances are the effect, but the phenomenon intended to be caused is itself the will whose actions are analysed in language borrowed from physical nature (Jowett, op. cit., p. 620).

Occam's razor is no doubt a useful instrument 1

1) Etia non sunt multiplicanda praeter necessitatem.
for certain purposes, it can be abused, and it is abused when causality is born till nothing is left but uniform sequence.

Furher, in our use of the term 'motive,' we ought not to think of motives as acting on a person as forces act on a body. While it is true that in deliberation, which is mainly intellectual, we have something metaphorically similar to the placing of weights in a balance, yet this is a metaphysical process, involving motives only, and in real action the decisive elements are preference and value, and these emerge from the living person himself. Motives are movements of the subject as well as movements on the subject. The subject acts on its own affection.

"We must reject also the idea that our motives are fixed and given quantities which operate within the soul like weights on a pair of scales, thus effecting a decision. Must all conduct result from given motives—cannot new motives arise from inner transformations of life? And, moreover, must not the soul continually assign fresh values to the motives?" (Eucken, Mein Currents of Modern Thought, p. 439, footnote).

If moral activity is real, then we cannot speak as if a decision was the result of the deliaration of many different factors acting on one centre; we find rather that one course of action is preferred by a person and acted on. The rejected proposals do not enter into the action as in the case of mechanical resultsants. In fact they may even strengthen the original activity—by resisting the subject to greater effort. It is often said that the strongest motive always prevails, but, if this means that the motive which prevails is always strongest, we have here a new and unproved proposition. If it means, as most ordinary people take it to mean, that our reason always obeys our passions, that, in Bentham's phrase, 'nature has placed man under the empire of pleasure and pain' (Principles of Legislation, London, 1789, ch. 3), then it is not true. While men set largely from passion, they need not do so; and, indeed, to most people, as Lecky points out, 'the reality of all moral freedom ultimately depends on the distinction between our will and our desires, on what Reid in his able discussion on this point calls our animal and our rational natures (W. E. H. Lecky, Eur. Morals, London, 1888, ii. 125; Reid, Essays, iv. ch. 4). It is just this reality which we are tacitly assumed as true as that so much confusion arises. J. S. Mill failed to distinguish properly between desire and will for this reason (see A. C. Pigou, The Problem of Theism, London, 1910, ch. 1)."

In regard to the past there is a very true sense in which a determination to the subject, may be said to create it. He selects from it, and reacts upon it. If the self is treated as fixed, i.e. if its future determinations are calculable, if any duality on this head is held to be owing to our imperfect knowledge, then we are unconscious of falling back on a biological view of the self. This may be done in the interests of our ideal freedom, as by certain Hegelians; but there is the danger that by so doing we are destroying the very possibility of the ideal freedom itself. In discussing the question of freedom, the phrase 'self-determination' or 'determination by character' may be used in a way that ignores the very possibility of freedom. We must not solve the question in this way until we have examined what this self is, and what is the nature of the determination.

We are thus led to the conclusion that the misunderstanding between the two parties is deeper than language, that it is inherent in the problem itself. The question of freedom is but a specific way in which different theories of life conflict. The controversy is like a combat between two representative champions, on the issue of which the fate of armies depends. That is what gives the problem its perennial interest and importance, and makes it so difficult of solution. It is true, as Eucken points out, that in recent times more than in the past the solution of the problem is attempted through an analysis of experience (op. cit. p. 433), but the problem cannot be solved on that arena alone; it is mainly a philosophical and not an empirical question. The wider issues emerge sooner or later on whatever plane we attempt a solution. Freedom may be taken as the touchstone of every philosophical system. To explicate a theory from this standpoint is to come face to face with its real implications.

"* If there be anything obscure and difficult in philosophy we are sure to find it in that part which treats of Elections and
LIBERTARIANISM AND NECESSITARIANISM

Liberty' (W. King, Origin of Evil', Cambridge, 1785, ch. v. n. 4).

This is the reason why in actual discussions we find the battle raging not round a single point, but over a wide area of consequences, and horrid is the danger that we may attribute to thinkers consequences which they repudiate, because we think these consequences follow from admitted premises. We can accuse men of bad logic; we must not falsely report them.

For example, necessitarianism is often identified with fatalism.

'It is supposed to imply the existence of a Fate which forces people, whether they like it or not, to commit so many murders in proportion to their population, or forces a sober person to take to drink because his grandfather was a drunkard' (Leslie Stephen, Hobbes, London, 1894, p. 157f).

J. S. Mill protested against this identification, and rightfully, for his own view and such a view as that of Robert Owen, according to whom our characters were made for us and not in any sense by us. We must allow the distinction. It is not necessary to start with the conviction that determinism in every form destroys morality and paralyses conduct. Many determinists, even of what William James calls the 'hard' school, endeavour to show that morality is impossible save on their theory. Probably the ordinary man will always mean by determinism a catastrophic, probably his instinctive logic is right in so doing; in discussion, however, it is necessary to distinguish them, unless the force of argument compels us to identify them.

And the most libertarian view is identified with caprice, with a liberty of equilibrium according to which the power of the will is not influenced in any way by education, experience, or training. The ordinary view, however, has been so many and so obvious, and has been so often entertained by libertarians themselves, that it is truly frivolous on the part of determinists to attack this view of liberty. What A. S. Pringle-Pattison says of H. M. E. MacIntyre is true of many more.

'He attacks a freedom of indetermination for which I do not think any champion would enter the lists. What upholder of freedom, for example, would accept the statement: 'According to the indeterminist theory our choices between motives is not determined by anything at all?' (Phil. Radicale, London, 1897, p. 307 f.).

The problem will not be solved, but rather shelved, if libertarianism is identified with an exploded myth, or determinism answered by the story of Buridan's ass dying between two equally attractive hays. Utility fails to meet the problem. The method of carrying on this discussion, it is necessary for us to examine the various types of necessitarian doctrine, leaving out the theological aspects of the problem, which more properly fall under the title of DEPROPENSION.

II. DIFFERENT TYPES.—When we try to classify various theories of necessity and freedom, we are tempted to neglect the historical elements, to eliminate epocheal and personal particularities, and so to identify views that differ widely in their ultimate assumptions and aims. To do this is to do violence to facts and to confuse the problem itself. No one can justly treat Augustine and H. M. E. MacIntyre as being in the same category. Yet it is possible and desirable to examine certain specific ways in which this problem has been discussed.

1. The common man's position.—Perhaps the most prevalent view is to regard freedom and necessity as both true although apparently contradictory. We do not refer to the high-idealistic way of identifying opposites, but to what may be called the common man's position. W. Hamilton is usually given as the formulator of the view to use either exclusively is to land oneself in confusion; but, while each alone is false, both together are true. Hamilton's position, however, is so dependent on his peculiar theory of knowledge and ignorance that it has now only an historical interest. It is clear that he and Mill held practically the same views on freedom when they both admitted and censured are taken into account. The fundamental assumptions of their systems are, however, very different.

Theologians often take up this position. They speak of predestination and free will as concentric circles; thus they appear inconsistent, but in reality they are compatible with each other. It may be the case that for practical purposes it is best to regard the problem as on a par with Zeno's famous paradoxes and to say: 'Sollicitus amabilis,' the value of this view seems to lie in its recognition of facts and its faithfulness to experience. Its weakness consists in its theoretic helplessness. For we find too often that freedom is confined to a realm which is swiftly being conquered by necessity, or else that it is raised to a pre-temporal or supra-temporal region while experience as we know it is rigidly determined. Or, again, freedom is viewed simply as a datum of consciousness which is not in any way brought into line with the rest of experience. Human life is thus divided into two spheres which contradict each other—one side freedom, on the other necessity.

It is very doubtful, however, if the problem can be thus solved. There are distinctions in experience, but they are not meant to be contradictory, nor are the limitations of our knowledge to be used to discredit knowledge itself. It is a gain to recognize that both freedom and necessity have a meaning, and that both are implicitly taken for granted in all systems. The most rigid determinists suppose that freedom is essentially preordained, and that necessity is accidentally preordained.

Moreover determinists have never been completely and logically carried out at any period. When the Stoic philosophers converted the whole cosmos into a necessary mechanism and placed the destinies of men entirely within its framework, man's power of personal decision still remained; . . . The possibility of such decision (the very core of Stoic morality) is obviously in direct opposition to the determinist doctrine . . . and in Spinoza's case, although he so strongly maintained that man is entirely within a flawless network of causal connections, the fact remains that man has to be won over to a recognition of his position, and this recognition involves quite a new complexion to the whole of life' (Bucke, op. cit. p. 425).

Naturam expellas furca tacentis, et usque recurrit' (Horace, Ep. i. v. 24).

So also theologians like Augustine, Calvin, and Chalmers, in the interests of morality, appeal to the conceptions of necessity and the power of choice. The Stoic admitted the possibility both of action and of choice. Can, then, determinism alone or freedom alone be taken as true or must both be recognized? Attempts have been made to carry necessity all through reality—with some show of plausibility.

2. Physical determinism.—Huxley, for instance, revived the view of Descartes that animals were simply automatons, and man was explained in a similar fashion. Consciousness had no more inherent relation to the movements of a creature than the steam-whistle has to the movements of a railway train. Few, if any, biologists would agree with this theory in detail, but Huxley's assumptions and aims are still widely and implicitly acted on by matter. Hence the theory of the conservation of energy is
LIBERTARIANISM AND NECESSITARIANISM

held to explain everything, and the scientific concept of cause and effect are, it is taken for granted, operative everywhere just as in physics. All apparent differences are levelled down under this theory. So consciousness arises, it is said, out of momentary nerve currents, and companies them with the phosphorescent line which results from the rubbing of a match. No efficiency can originate in consciousness; otherwise there would be the intolerable fact that something came from nothing. This, for itself, or, as is, the unity of energy is so fixed that we could accurately predict if we knew the state of things at any moment. We do not, of course, have accurate knowledge at any time; but, if we had, then the future would be open to us. This is not the divine foreknowledge of which theologians speak, for many of them admit the greatest freedom (as King in his famous sermon on Predestination, published with notes by R. Whately in his Use and Abuse of Party Feeling in Religion, London, 1822) as consistent with the divine foreknowledge. It is really our ordinary physical knowledge infinitely enlarged. Now this view, conveniently known as naturalism, has no place for anything but matter and motion. This determinism is totally different from theological determinism, and should not be identified with it, as it so often is.

The libertarian can leave to the biologist the refutation of this view. He can leave it even to the physicist himself. It may be pointed out that the advance of science does not depend on extending these assumptions to cover all reality. Indeed, to do so is to make science itself chaotic and indeterminate, for the value of the principle of the conservation of energy depends on its limitation to those fields where the amount of energy is calculable. It does not in the least show how the energy whose working is calculable is related to all the energy in existence. If it tried to do so, it would be useless. Its strict delimitation is the very condition of its success. Nor does it allow for different kinds of energy; it must confine itself to quantitative relations. Hence the pretense of foretelling the future is simply a logical conclusion from the principle itself.

It is that biology needs new categories. The lowest organism possessing spontaneity must not be factorized into general conditions, far less reduced to a single principle. It is doubtful if anything that can be called a 'thing' can be so easily factorized; but it is not another, and living being has an even more obtrusive individuality. Was this the reason why even Epicurus attributed to each atom an 'exiguum climamen peculiar to itself'? In the higher animals at least, consciousness is a real factor whose presence helps towards preservation and propagation; it would otherwise be unintelligible. When, again, we come to explain man, we must recognize the existence of a new problem. Are we to regard history and civilization, ideas and achievements, as shadows of matter? The unsatisfactoriness of this theory is perhaps best shown by its own advocates. For they forget their own assumptions dealing with knowledge and social life. They make morality to consist in warfare with the cosmic process (as Huxley). They regard consciousness as flowing alongside of neurotic processes, but related to them. We are both more or less manifestations of an unknown energy. Some of them (Clifford, Haeckel, etc.) make matter conscious. Further, they seem to make all reality to be somehow in consciousness, and so the realm of education of naturalism is divided into two causes. In the first place, every theory must recognize the enormous influence which the physical organism has on the inner life, the intimate relationship between the higher phases of spiritual existence and material conditions. This naturalism does, and it is therefore valuable. Again, there is a close connexion between this view and the results of the higher mathematics. If there is one thing we can nowadays prevail, but these results are not dependent on naturalistic assumptions. The weakness of this view is revealed when it tries to explain itself; then it either forgets itself or confines itself to a consciousness as a reality and tries to explain it on deterministic grounds. It leads thus to psychological determinism.

3. Psychological determinism.—The basis of this determinism is the theory of association. Consciousness is recognized as 'sui generis,' but any existing phase of it is said to be caused by the preceding. Great stress is laid also on physiological processes, often in such a way as to suggest that these are the ultimate causes. Now there is always a relation between states of consciousness even when these are qualitatively different, but to explain this relation is just the problem. The fact that the same experiences are always subject-consciousness is not enough. Even the simplest case of memory is tinged with personal qualities that raise it above a mere association of ideas, and, as Bergson points out (op. cit. p. 126), many such associations are post facto attempts to unify experience. The main objection to the theory is its defective view of the 'self.' What we find is a bundle of impressions not one of which or all of which could be the self. As Bergson points out (op. cit. p. 126), many such associations are post facto attempts to unify experience. The main objection to this theory is its defective view of the 'self.' What we find is a bundle of impressions not one of which or all of which could be the self. As Bergson insists, in space. Consciousness is a stream, or a display in a theatre at which no one is looking. What we have here pictured for us is a conflict of motives acting nowhere ... and this is what happens when the self is recognized, it is only as a desire or aversion or a point in which motives meet, but it has neither position nor magnitude.

4. Self-determination.—Can we then regard the reality of freedom as a common platform for every system that admits an activity of the subject.
which issues from itself, and which cannot be reduced wholly to the influence of conditions? There is a sense in which this is true of all things —of chemical reaction, of biological growth, and of human activity. Everything—man included—has its own life that is independent of the acting out of this nature according to its own laws. Is this a sufficient account of freedom? If it is, freedom means freedom from compulsion, and it could be simply, metaphorically at least, to everything. This might mean free as the immortal gods; the flower that grows without being trampled, the lion in the jungle, the man out of fetters, are all free in this negative sense. Of it might mean free as the man was able to fulfill the distinctive laws of his being without internal interruption, i.e., interruption arising from the man himself as distinct from external compulsion.

Schopenhauer understood Kant's view of freedom in this sense as the working out of the 'esse' according to its own character, conditions giving the occasions to this nature to reveal itself in time and space. Freedom here means the evolution in acts of the inner nature of the subject. The acts of freedom are therefore rigidly determined. Whether this be a true representation of Kant we do not need to inquire. At any rate freedom here seems to be the bare knowledge that we act as we act. Curiously enough, Schopenhauer could accept Kant and the Stoicism, but only as a mystery. It is now generally acknowledged that this is determinism of a very 'hard' type.

But, leaving aside Schopenhauer's clumsy apparatus of a noumenal ego and phenomenal acts, it may still be held that freedom is simply determination by oneself.

To be free means that one is determined by nothing but oneself. It is this that Schopenhauer sees as Kant and the Stoics did, but only as a mystery. It is now generally acknowledged that this is determinism of a very 'hard' type.

The false awareness of the activity of the subject either into a perfect absolute or into social customs. For, while a perfect absolute would explain perfect freedom, it does not explain sin and error, which are the roots of all our difficulties, nor does society give us any relief, because we find all the perplexing difficulties of our life repeated in it.

Conclusion.—The freedom which we desiderate is a moral power that can make the world better. While knowledge may be content to unfold its object and work on it, moral freedom attempts to create it. We must admit also that it is the correlative, freedom to make things worse and to destroy. Is not this what we actually find in experience? We have in man a spiritual being rising above nature to the heights of ideals, but also falling into nature, disobeying ideals, and refusing to realize them. We find new individuals appearing who were never there before, a fact which no bare singularity can ever explain. If reality were subordinated into a static whole, then absolute thought would have the happy task of quiet contemplation; but reality is always active, and so living thought and living action are never satisfied with the past, nor is morality ever satisfied with the present itself good, and, on the Kantian dictum that every 'ought' implies a 'can,' which Mackenzie accepts, this is possible. Is the difficulty here not due to our present capacity to grasp the whole of the given, in morality we make the object.

'Action breaks the circle' (Creative Evolution, London, 1912, p. 305). But, if we admit this freedom to make things worse and indeed to create, then we must admit also that it is the correlative, freedom to make things worse and to destroy. Is not this what we actually find in experience? We have in man a spiritual being rising above nature to the heights of ideals, but also falling into nature, disobeying ideals, and refusing to realize them. LIBERTY (Christian)

i. Christian liberty as a religious experience.—
The religious life in our Lord's interpretation is a filial relationship with a Heavenly Father, and therefore a life of liberty. It consists in love to God and to man. When hatred, rancour, and resentment, on the one side (Mt 5:46), and needless anxiety in relation to material things, on the other (Mt 6:25-26), have been expelled from the soul, we are then truly the sons of our Father. The submission of children to the Father above is not a surrender of liberty, but a happy freedom, for in fact, freedom in the Christian sense is simply obedience to that which we most truly and deeply love and venerate. Freedom is attained by self-conquest, by victory over unrighteousness, and the penalty is self-contempt and unness. 'Come unto me, and ye shall find rest unto your souls' (Mt 11:28-29) is a promise of freedom. Self-denial, therefore, to Jesus is a privilege, not a loss; the taking up of the cross (Mt 10:39; Mk 8:34; Lk 14:27), which looks like the loss of liberty, issues in moral emancipation.

This general view of religion explains our Lord's attitude towards the Mosaic Law, which is a dispensational law (see also Synoptic and Johannine narratives. He does not, of course, countenance an antinomian contempt of moral restriction, nor does He proclaim exemption from the Moral Law. In so far as the Mosaic Law abridges man's liberty it is worthy of all reverence; it is not superseded, but only consummated, by the 'New Commandment' of our Lord's teaching. On the other hand, in the course of time the Law was interpreted by acceptions of interpretation which tended to lay the emphasis on vexatious minutiae of custom and usage, and elevated practices of cleanliness and health to an unnecessary prominence, with the result that trivial and secondary regulations which were deemed as sacred as the original enactments. The letter of the Law was punctually observed by the pious Jew in the hope of propitiating God. Obedience to the outward regulation tended to produce a distorted sense of the relative value of given acts. Hence our Lord's pronouncements on the unwashed hands of the disciples (Mt 15:2), Mk 7) and on the proper view of the 'man for man' (Mk 25) are to be regarded as examples of His method of interpreting the nature of Christian freedom. He substituted great principles of action for minute and arbitrary regulations which were additional, not indispensable, in all circumstances. He superseded definitions of duty—e.g., our duty to our neighbour in the parable of the good Samaritan—by a commandment 'exceeding broad,' namely, the law of love.

It is obvious that this view of liberty receives its crowning illustration and its binding force from His own manhood. If we take such statements as Jn 4:9-10 (the idea of irresponsibility as a deduction from human frailty); and Mt 18:24 ('the soul that sineth shall die.' Man, who is created in the Divine image, is a partaker of the Divine nature, and his freedom is the reflex of God's. When we pass into the atmosphere of the NT, we discover that personal freedom will find its justification in the teachings of our Lord and His apostles. We may therefore sufficiently consider the following aspects of the subject.

[Further discussion on the nature of Christian liberty and its implications for the Beatitudes and the Sermon on the Mount, as well as the correlation between liberty and self-surrender, and the role of freedom in moral emancipation.]
LIBERTY (Christian)

truth which is to set men free is 'perfect conformity to the absolute, that which is' (see B. F. Westcott, *Gospel according to St. John*, London, 1898, on Jn 8, and the relation of this conception to some Modern American and Jewish ethics. Again, in Jn 15, our Lord speaks as the 'true impacter of freedom; He communicates to others what is His own (γεγονός ὦ παράστας μου); and this self-communication is the basis of a friendship between Himself and His disciples in which the doing of His will is not a service but a joy.

These conceptions of Christian liberty as a religious experience find further illustration in the writings of St. Paul, to whom ἐλευθερία is a vivid and real characteristic of the Christian life; this word, with its connected epithet and verb, 'free' and 'set free,' occurs 11 times in Gal., 7 in Rom., 3 in the Corinthian Epistles, and twice in other letters of St. Paul (see W. M. Ramsey, *Cities of St. Paul*, London, 1907, p. 36 ff.), who argues that this is one of the ideas which became familiar to St. Paul from his Hellenic environment in Tarsus and elsewhere. In the Galatian Epistle in particular he sets out with great emphasis the freedom which the gospel confers 'in Christ Jesus' (see Gal 29). The Christian ἐλευθερία destroys distinctions of sex, social status, and race (32); cf. also Col 3, Eph 68. By an allegory which recalls our Lord's words in Jn 5 it differentiates (48-9) between the 'children of a handmaid' and those of a 'free woman,' indicating that the real freedom is that of the spirit imparted to us by Christ (5), which involves a complete abrogation of the outward conventional laws as a means of personal and universal salvation. He protests against submission to the rite of circumcision, which, while it had a religious significance to the Jew, had none to the Gentile, ending with 'the impatient, perhaps half-blind, wish that the Jews be circumcised which the Galatians might be subjected to a severer operation themselves' (W. R. Inge, *St. Paul,* Quarterly Review, no. 438 [1914], p. 331). But, while glorying in the liberty to which the Christian has been called, he is careful to throw any misunderstanding as to its nature: liberty is not licence (5).

But to St. Paul Christian liberty has an even deeper significance: it involves a real emancipation from sin (Ro 628, 829, 2 Co 37); and hereina he carries on the teaching of our Lord. His own personal experience is: 'the law of the Spirit of life in Christ Jesus made me free from the law of sin and of death' (Ro 8). This constitutes the true Christian sonship (Gal 4), 'the liberty of the glory of the children of God' (Ro 8); and we note that 'glory' here is an aspect of our present earthly existence. Sin, which is a bondage and carries with it a sense of guilt and condemnation, has been defeated by Christ, who is thus qualified to be the liberator of the soul (Gal 5).

To early Christian writers the promise of freedom (2 P 29) from any other source is an illusion. It is from this experience of inward liberty that the fruits of the spirit—joy, peace, and hope—are developed. To be spiritually-minded is *life and peace* (Ro 8) is a saying which recites the serene and gentle teaching of the Son of the Son of Man, and may be illustrated by the testimony of Christian experience in all ages.

St. Paul is indeed the great apostle of liberty. He regards the Christian life as one of unrestricted access to Christ, and as such much emphasis is put on the Christian duty of *obedience*, or boldness of utterance, in proclaiming the principles of the gospel (see art. 'Boldness of Speech,' *Expository Quarterly* [1909-10] 236 ff., for an elucidation of this duty). His opposition to the moral influence of *Skepticism* (Gal 2) and made it a world-faith. He was the advocate of liberty of thought, action, and judgment. His pronounced views on original sin and the eternal, supreme power and grace of God never weakened his sense of human accountability (Ro 118).

As J. Weiss (Paul and Jesus, Eng. tr., London, 1900, p. 113) remarks, 'the ethical sense of responsibility, the energy for struggle and the discipline of will was not paralysed or absorbed in Paul's case by his consciousness of redemption and his profound spiritual experiences.'

He believed in Divine election, pre-knowledge, and predestination; and, without attempting to resolve the antithesis, places human duty as the complement or by side these. Man co-operates with Divine grace, which is a power 'appropriated by man's moral nature and conditioned by his free action' (Alexander, *The Ethics of Paul*, p. 144, who quotes Ph 1 29, 2 Co 11, 1 Th 5, and the statements of Weiss just cited).

It may also be noted that St. James' royal 'law of freedom' (29-34) is practically identical with St. Paul's 'law of the Spirit,' consisting, as Haeckel (op. cit., p. 162) remarks, in 'freedom from the multiplicity of single precepts,' while the epistle 'royal' appears to imply that 'Christ's law is not addressed to slaves, who must obey whether they will or not, but to the heirs of God, who voluntarily embrace the law as their guide; cf. the Stoic paradox in I Cor., 1 106' (see note in J. B. Mayor's commentary ad loc.).

2. Christian liberty in relation to the problems of ethical and social life.—It is clear from what has already been said that Christian liberty as an experience of the inner life has a direct relationship with outward practice, and has created ethical problems in the conduct of life. These have been agitated in the conflict of duties arising within the early Christian Church as the result of the accession of converts from paganism to its ranks. For example, St. Paul was faced at Corinth with a difference of opinion regarding the practice of eating 'things offered to idols.' Evidently the peril lay in the one-sided and over-emphasized interpretation of Christian liberty, which offended the conscience of the more cautious and self-restrained Christians. There were, in fact, two opposing tendencies represented by those who stained their newfound Christian liberty to the breaking-point—the strong of I Cor. (see ch. 8, *passim*) and Christians of a narrower type, who were concerned about preserving personal sanctity than about exercising their Christian privileges. The claim that 'all things are lawful to me' (1 Co 610)—the watchword of the strong,' quoted out of their mouth by the Apostle—had become abuses not only to the extent of participation in heathen sacrificial feasts, but to the extent of advocating grave licence and immorality in sexual relationships.

As E. von Dobschütz points out, such Christians were self-deceived, mistaking outward freedom for the inner freedom proclaimed by the gospel.

'The stray, instead of joying in the freedom which Christ gave him, basked after outward liberty. The Jew, instead of grateful recognising his freedom from the constraint of law, exerted himself to secure release from circumcision; others sought also and found the freedom only by becoming ceremonially unclean (Christians); thereby destroying Christian unity and morally impermissible' (*Christian Liberty in the Primitive Church*, Eng. tr., London, 1904, p. 65).

The strong might therefore take on their shoulders the infirmities of the weak (Ro 15); they must spare sensitive minds the pain of witnessing practices which appear to them to be wrong; as Christians, they are to refrain where the exercise of liberty is a stumbling-block to the weak (Ro 14).

Finally, the strong might lead others into sin by encouraging them to eat against conscience for mere self-gratification, and thus sin not only against their brethren but against Christ (1 Co 10). Such was the ruling of the Apostles (Gal 5), and it made it a world-faith. He was
LIBERTY (Christian) 999

an exaggerated asceticism which in some sections of the Church resulted in the advocacy of celibacy, in aversion to mixed marriages (1 Co 7:24), and even in hostility to all spiritual manifestations as "speaking with tongues," which recalled the excitements of pagan cults. In holding the balance between such opposing tendencies, neither of which did justice to the gospel as a whole, St. Paul had a difficult task. He sympathized with the moral vigour of the one and the moral earnestness of the other, and resolved the antimony by the proclamation of Christian love as the supreme law of conduct and the sovereign charisma (1 Co 13). Christian liberty is always to be humanized, corrected in its exercise even where legitimate, and modified in the doing of what is morally indifferent by the spirit of love, which teaches the Christian not too much to stand upon his rights as to consider the interest of others. Such "freedom" (1 Th 4), or "sweet reasonableness," is not a weak concession to human infirmity, but a virtuous demonstration of tenderness and charity. It was in this sense that the Apostle himself "bids all things to all men" (1 Co 8:9) that he might save some. He was ready to sacrifice liberty to the claims of brotherhood and to make a new contribution which Christianity made to the ethics of the ancient world: it superseded or (perhaps it would be more correct to say) consummated the ethics of self-realization by the ethics of self-sacrifice.

Christianity therefore condemned libertinism as an offence against the common life of humanity. The liberty of indifference—of doing what one likes—is rejected by the Christian ethic as an illustration of the Kantian spirit which creates liberty as reason itself. Unhappily the interpretation of liberty against which St. Paul and later teachers protested (cf. Ireneaus, adv. Haer. I. vi. 3, quoted by von Dobschutz, p. 270, for an account of the practices of Valentine, curiously paralleled to those of the Corinthian Church) was a mark of immaturity in the early Christian communities, due to an exultant sense of a new unrestricted life; but the influence of Gnosticism, with its dualistic separation of spirit and matter, must also be taken into account as explanatory of the repeated appearances of libertinism in the primitive Church. On the other hand, the antagonism between flesh and spirit is inherent in the manna; even when mutilated into the convenient distinction of Hebraism and Hellenism, the one standing for righteousness, the other for freedom, the two tendencies represent a fixed duality in the moral and intellectual development of the race. Now one element and every other holds the sway in the life of the individual and of the community; and no one who reads the history of the Church can be blind to the fact that in given periods one of the two has exercised the greater influence and created the type of religious witness which is associated with particular epochs. After the dark ages the Renaissance represents the revival of Hellenism; and to medieval laxity in religious and social life succeeds the Reformation, which is the triumph of Hebraism. The swing of the pendulum from Puritanism to the excesses of the Restoration in England illustrates the fact that there are recurring reactions in national life which inevitably affect the ethical standard alike of Church and society. It is clear also that the conception of Christian liberty, always subject to the enlargements of a virtuous intellectual or rationalistic consciousness, and limitation during a reaction to Puritanism of life and morals; and, when the Puritan wave has spent itself, human nature re-asserts itself in a desire to regain its lost or curtailed liberty of acts and all ages of the Church the question of accommodation to the habits, customs, and recreations of secular society has to be faced by the individual Christian, and in the solution of the difficulty two opposite tendencies, parallel with those in the Corinthian Church, have always made themselves felt: we should now call the broad and the narrow view. In the present age, when we have reached a pitch of civilization in which the resources of the natural universe are placed at the disposal of mankind to an extraordinary extent and the facilities for its manipulation, luxury, and amusement are multiplied for all sections of society, Christianity is still represented by the double ideal—the one proclaiming the width of the Christian freedom, the other its self-restraint and self-denial. Take, e.g., the attitude of the modern Christian to the theatre. This is but a repetition, under another set of conditions, of the problem which the early teacher of Christianity had to face. With all our advance in moral insight, our larger views of life and destiny, we have not yet superseded the ethical principles which served as a guide to St. Paul. The individual conscience still has to weigh over against the undoubted fact of Christian liberty the influence of the personal support of certain customs or institutions not wholly moralized, and, under certain circumstances, actually immoral, still has to take into account the effect of the exercise of liberty, in matters morally indifferent, upon the clearness of their moral vision or sufficiently strong to meet the demands of a new temptation, as well as upon those belonging to the same community whose conscience is sensitive. At the same time, it is clear that a policy of self-sacrifice on the part of the Christian in regard to the defective and degrading tendencies of given recreations leaves the latter as they are, and to many Christians who interpret liberty in the wider sense consideration of the public good is paramount in determining their attitude in the matter of supporting the drama or otherwise. The law of love is not less binding to-day than in the earlier ages of the Church. It may even be argued that the developed sense of human solidarity and brotherhood, in itself the offspring of Christianity, is educating the Christian conscience to solve all such questions of conscience by a reference to the good of the community as a whole. Yet even this attitude, which is but another aspect of the love of God, is determined in practice by our ethical conception of the summum bonum for humanity; and here the Christian ideal, more especially in relation to art, differs toto orbe from all the cult of realism popular in many quarters to-day, which is based on the theory of "art for art's sake," regardless of the effect on public morality. Art enriches the common life only when regarded as "a revelation of a deeper truth in things."

'If it is taken merely as art, merely as a beautiful dream, it sinks into play, becomes a mere refined amusement, and loses all its real power over the human spirit. There could hardly be any worse sign of an age than that it regards art as a mere amusement, as a mere escape from the gravest problems of life." (J. S. Mackenzie, Manual of Ethics, London, 1900, p. 443.)

"All things are yours" (1 Co 3:21) is indeed the noblest charter of Christian freedom, but only when interpreted in the light of the succeeding words, 'ye are Christ's.' The possession of worldly treasure—literary, scientific, commercial, territorial—invokes for the Christian in personal union with a Divine life a clear perception of the eternal amid the transitory, the unseen in the seen; and his citizenship is in heaven; his real life lies in that ideal world which gives meaning, beauty, and power to the world of phenomena. Hence "liberty in the Christian sense" is neither literal nor the sanctions of 'the mind of Christ'; in other words, by a reference to the ethical ideal for which Christ stands.
Less need be said as to the relation of Christian freedom to the institutions of the State, the laws of the State, and the established regulations and customs of organized communities, as this has been treated in the art. ETHICS AND MORALITY (Christian), vol. v, p. 474. It is well known that neither Christ nor the apostles encouraged revolt against the State, even when, as in the case of slavery, a national institution contradicted the essential teaching of the gospel, being content to lay down universal principles rather than directions for particular nations and phases of social evolution (cf. Mt 22:21, Mk 12:17, Lk 20:24, Ro 13:1-7, 1 P 2:17). St. Paul, in dealing with the mutual obligations of masters and servants, bases his relationship on the fact that both are slaves of a common Master (Eph 6:9; Col 3:22). But the Christian ideas of human equality and brotherhood, with which they a revolutionary force which inevitably tended in the direction of overthrowing social custom, legislation, and practice. As an ideal, brotherhood has yet to be realized, and the process of realization involves a perpetual conflict of interests. The rights of conscience are imperative, and these conscience, is a foundation of Christian faith, and cannot be ignored in the interests either of despotism or of democracy (see art. ETHICS AND MORALITY (Christian), loc. cit.). The pages of Christian history are crowded with the records of attempts to assert these rights in the name of religion, State edicts, and repressive measures, and the annals of religious liberty are glorious with heroisms and martyrdoms, cheerfully endured for conscience' sake. How far passive resistance to State legislation, when the latter conflicts with conscience, may be justified is a subtle ethical problem which is settled variously according as the case exalts the sacredness of a particular issue above regard to the general well-being of society as a whole, or vice versa. On the other hand, the Church exists to promote State legislation and to enlighten national institutions; it guards the great ideal of human brotherhood, which involves an equal opportunity for all, and it advocates and supports laws to alleviate human misery and to remedy imperfect social conditions and to defeat social injustices. In the ideal of liberty, equality, and fraternity the last stands first in the order of Christian thought (cf. Murray, Modern Ethics [Christian Ethics], Ch. 2). Equality flows from brotherhood—the Christian conception of a common family and one eternal Father.

And this equality can have no meaning except as an equal right to liberty, there is an equal right for all, which does not allow every individual liberty to act as he pleases. But every individual can enjoy this freedom in reality only when such is restricted from interfering with the freedom of the rest (p. 252). Co-operation in industrial struggles such as those which the present generation is witnessing between capital and labour imposes restrictions upon liberty. Trade unions break down when the principle of Christian liberty is ignored and the will of the individual is not subordinated to a common purpose. And as legislative restrictions tend more and more to curtail the liberties of individuals, and, in other words, as the laws of the State become more socialized, the obligations of Christian liberty to seek not its own, but the things of others' are proportionately less binding.

3. Christian liberty in relation to the intellect.—Overs against the authority of the State, with which the individual conscience has often found itself in opposition, there is the authority of the Church, to which the individual conscience is supposed to subordinate his will and judgment. Limits of space prevent a full treatment of the subject of authority in relation to the individual judgment in matters of faith. Sufficient it is to say that the opponents of Christianity are in the habit of urging from a review of Church history that Christian freedom of thought has never been received with anything but stern measures of repression, that the heretic has frequently been treated as an immoral person, and that on the whole Catholicism has been the foe of human enlightenment and progress (see J. H. Merry, History of Freedom of Thought, Lond., 1914). The fact that the Church has often transgressed the spirit and example of its founder in its hostility to new thought and in the repression of rationalism, forgetting that orthodoxy and Christianity are not synonymous terms, the Church's general attitude towards heterodoxy was that of tolerance; this is shown by His permission of Jews and by His tolerance of Gnosticism by implication than by actual condemnation in such references as we find to the Samaritans in St. Luke's Gospel (10:25-26), the reading: "Ye know not what manner of spirit ye are of in the last days is with strong consolation and in sure confidence, but the fact of His rebuke is recorded in v. 26, His spurious rejection of narrowness in the passage Lk 9:9, "Forbid him not: for he that is not against you is for you," and His emphasis on the ethical rather than the intellectual side of the Christian witness in Jn 7:22, To Him "faith" was not assent to an intellectual proposition or formula, but the spirit of receptiveness in relation to Himself and His teaching.

The convenient distinction between a religion of authority and a religion of the spirit tends to break down in practice. The Society of Friends, without a ministry and without sacraments, yet becomes an organized fellowship with recognized principles ethical and spiritual, which are binding on its members. Authority runs into every sphere of thought as well as into religion. The invariable church of Catholicism is superseded by the invariable book of Protestantism, but, when both are authority are discredited, it does not follow that pure subjectivity is the only possible issue. In Christianity there must be a synthesis of the principle of inspiration with that of authority. The day of inspiration, so long as we believe in a Spirit that guides into all truth, is never at an end, while at the same time the corporate witness of the Christian Church in all epochs of its history cannot be ignored. The progress of Christianity depends, therefore, on an adequate recognition of both these factors—the consensum sanctorum and the openness of the reason to the light that lighteth every man. In a striking essay on "The Principle of Authority" by A. E. J. Rawlinson (The Foundations, London, 1912) it is stated that there are three stages in the life of the educated Christian: (a) bondage to authority, the stage proper to childhood; (b) the stage of "abstract freedom," i.e. the assertion of the right to criticize; and, if necessary, to doubt; (c) the stage of concrete freedom, which is defined as voluntary assent on grounds of reason to what was formerly believed on authority. Many Christians never pass the second stage; intellectually they remain unenlightened, but their religious experience is unaffected. The second stage is that in which Christian liberty comes into play as a factor in our moral and intellectual development. To repress the spirit of inquiry is to
let 'that capability and godlike reason fuest in us used' (Shakespeare, Hamlet, iv, iv, 36 f.), to imperil our moral and spiritual health, and to foreclose the possibility of a larger equipment for Christian influence. If the issue on the intellectual side is rejection of the doctrines hitherto accepted on authority, there still remains the witness of life and the experience of the saints. It is no doubt true that Christian experience is bound up with a conviction of the truth of certain doctrines, such as the existence of God, immortality, the divinity of Our Lord, and the persistent activity of His spirit; but its moral earnestness and beauty remain as a perpetual challenge to those who reject doctrinal Christianity and thereupon feel justified in belittling its contribution to the ethical progress of humanity. On the one hand, it is possible to combine intellectual suspense and even scepticism with a high-minded allegiance to the moral teaching of Christ, and such inquirers after truth are not to be excluded from the fellowship either of individual Christians or of the organized Christian community in its various forms. On the other hand, the Church may legitimately demand from those to whom it does not refuse the right of private judgment that such judgment shall be exercised with becoming humility.

"He who would teach a new truth or reject an old (and to do so is a vocation to which is every generation some men are called) must both expect to meet in practice with the persecutions by which true prophets are assailed, and must also face the prime fact that his own prophecy may turn out false" (ib. p. 280).

Hence in actual practice within the limits of the Christian fellowship liberty of thought is restricted by the collective witness of the saints, by consideration of human fallibility, by the avoidance of arrogance, intolerance, and impatience, and by respect for simple faith which moves on traditional lines. If one may adapt a saying of T. H. Green (Prolegomena to Ethics, Oxford, 1884, p. 262), the Church is 'a society of which the members owe reciprocal services to each other,' simply as Christian to Christian. There must be no attempt to frown on the mind that is open to the sewer light when ethically and intellectually equipped for the re-interpretation of ancient doctrine, nor is it to be forgotten that those who have been affected in spiritual outlook by the critical spirit which has modified the value of time-honoured creeds and formularies may yet be qualified to bring out of the treasury of their wisdom and devotion 'things both new and old.' It is a function of Christian liberty to harmonize nova et vetera, as giving their respective witness to the realization in humanity of the ever-developing Christian ideal. But, if the modernist as a reverent seeker after truth is tolerated, he in turn must exercise the grace of patience towards the traditionalist. Christian liberty is a great gift, but Christian charity is a greater.
