Mukaddasi calls this town "the portal of China." Ibn al-Majdub says that it lay waste in his time. It must however, have recovered afterwards; Walled describes it as a well-fortified town of some note. To the north of it, on the north side of the peninsula, the point of which is formed by the promontory Ras Musulam (Masanab), lies Dabbah (or Dama), which was already in the time of the prophet a town of great importance and even now the capital of North 'Omán. Opposite on the west side of the peninsula lies the flourishing seaport town of Surqah. About the aborigines of the population of 'Omán we have no information whatever. Tradition only says that after the breaking of the sultan of Muzul the And migrated into 'Omán. The former inhabitants seem to have been Muzun; as 'Omán is also sometimes called. The And appear to have remained the prevailing tribe although great numbers of them migrated to the Hejaz in the time of the Omeyyades. They belong to the Hadîtes [s.v.]. Taliyirah also settled in 'Omán and a branch of the tribe of Nahshin has for a long time have held the upper hand. Even Northern Arabs (Bani Ghásr) have settled in 'Omán. Dates are the favorite food and are largely exported to other countries.

The country stretching to the west and northwest of 'Omán as far as the boundaries of 'Iraq was settled in the golden age of the Arabs al-Baṣrâni, (now the name of the land) al-Baṣrâni, after the capital al-Baṣrâ (or al-Baṣra) is at present the name of the country. The southernmost region is named after the tribe which inhabits it, the Khâdîjam (Khalisâni), who are notorious pirates; further west is the peninsula of Kûsir. From very old times the inhabitants have been pearlshippers and dhow pilots. The capital is nowadays called either al-Qaṣim or Hûfîf (Hüfîf) which name is not mentioned by Arabic geographers. A few hours farther east lies the Harbour of Ojpâl. Whether Mârânas, lying not far to the north of Hûfîf, is identical with the old Mushuknor is difficult to decide because the description of the country given by the Arabic geographers is altogether very superficial. To the north of the district Jâhâsh lies that of al-Kûtîf named after the well-known seaport. The coast was formerly called al-Kujîf after a harbour from which the Arabs got the bamboo-canes for their spears imported from India. Jâhâsh abounds in dates so that an awe-inspiring growth speaks of 'carrying dates to al-Baṣrâ in the name of 'customs to Newcastle'. For centuries the 'Abû al-Kâsî tribes and the Tamîn have contended for the over-lordship. The latter held it as long as the power of the Kûsirians lasted (close on two centuries). About the coast from al-Kûtîf to Kuwait nothing need be said: it is flat and sandy. Kuwait - the name means the little kôr (citadel) - is also called Kûrid (the little horn), now pronounced Grûn, hence the English spelling Gurn. It lies on the south entrance of a bay and will probably become an important trading-place. For the state of the Shámar it is the nearest port for traffic with the East. The Shámar of the territory is under Turkish sovereignty, but practically independent. On the west side of the bay lies Kûrim, the most important station on the road from Basra to Lâhaj and to Yâmûn.

Central Arabia. To the east of Yemen, north of Hûfîm and the Mahra and west of 'Omán as far as Central Arabia there extends a vast desert, of which we know the borders only and these imperfectly. It seems to be similar to the Nûfûd desert in North Arabia. Water is scarcely to be found. After rain the ground is covered with vegetation and abounds in pasture. Then the bedawins journey inland with their camels, sheep and families and live there for three or four months. Neither they themselves, nor their cattle need water; the people live on milk, and because of the succulence of the herbage - the most juicy plants grow on the sunniest spots - the cattle have no need of water and even refuse it when it is given to them. As soon as the summer heat has dried up the plants they go back to the settlements of their tribe. This is the custom of all bedawins who live at the edge of the desert. How far they actually venture into the interior is unknown to us. The desert has several sources. The part between East-Yemen and Northwest-Hûfîm is named 'Irânji; to the North and the East of Hûfîm it is called al-Adâh (the dunes); the part north of Mahra the Arabs call Wâdî; but generally it is called al-Dahâr, 'the red country', after the colour of the sand. On maps it is indicated as al-Rûb', al-Qâhî, i.e. the empty quarter. Whether there is any water in the interior so that at least animals may live there is quite uncertain but not improbable. The bedawins of Mahra, whose fleet, having its headquarters (called mahâtir) are famous all over the world, put down this excellence to the fact that their camel-mares are sometimes covered by camel-stallions of the Ejinî. This might lead to the supposition that these are still wild camels living in the interior as is asserted by the Arabs who call them jûfâyîn (wild). Perhaps the same applies to the camels of West- 'Omân which are equally famous. The assertion that a people speaking an unknown language dwells there (cf. v. Oppenheim, sein Mittelmeer und Persischen Golf, II 332), is not to be trusted. According to Ibn al-Majdub bedawins as late as in the xii. century ventured to travel right across the desert to Mecca and Mezâr for the exchange of goods from Egypt. On the north-east border of the vast desert, a three days' journey from the south of Yâmûn and nearly as far from Bali, lies the formerly flourishing, well-watered oasis Yabūţ which was devastated by the Kûsirians; after the oasis this part of the desert is sometimes called the sand of Yabûţ. The way from 'Omán to Mecca goes through this oasis. From here a spur of the desert stretches to the North between Bahrain and the Yâmûn, which is also called al-Dahâr or Nûfûd and sometimes 'the sand of 'Alûd'. It is described as rich in pasture and is intersected by timbered mountains-chains, residence in which is said to be agreeable and healthy. On the west and north-west border of the great Sahâ, is found the territory of the Kûtîf and the Lâhaj depression, which was formerly called Palace but is now named Wâdî Dârâs (Dâwras) after an Arab tribe. Its continuation south-west of Yâmûn is the Wâdî AlÂbî (formerly Palace al-AlÂbî). To the north of the desert commences the
central highland (Najd), the heart of the peninsula and without doubt the most healthy and to Arabs the finest part of Arabia. The south-eastern province (often not counted as belonging to the real Najd) is the very fertile Yamāmah (q.v.) Yamāmah and Bahrain are together called al-Ahm. From the Yamāmah two mountain-passes ('Oyana and Hurainūla) lead to Thumamah, which is already situated in the West (also Wa'ilūlah) and from there farther north-west to al-Shammar, the chief town of this province, and in 9 hours to 'Omanah, the principal town of the province of Kaşmah, which is bounded on the North by the Shammar country, and on the West by Khamis in the territory of Medina. We owe to Doughty a detailed knowledge of this country. Two hours north east of 'Omanah lies Durah. Right across Kaşmah goes the large wadi Rummah which comes from the harrs of Khamis (6000 feet high) and extends as far as the vicinity of Bayra. This is a depression, most probably the bed of a stream in prehistoric times. Although a good many wadis open out into it and though the beds of torrents (tail) conduct into it a considerable quantity of min-water, still the wadi Rummah, often a day's journey wide, is generally dry—only in exceptional years does it become a real river—but the water reaches the ground and sometimes is visible in places. Kaşmah owes its fertility to its circumstance. To the west of Kaşmah the wadi goes between the two hills of Abu (well known through the ancient poets), of which the northern is called the black and the southern the red, formerly the white. The width of the valley is here from two to three and a half miles. This part of Najd which lies further north east is now called Sodair (some pronounce Sodayr, Sodair; Doughty even has Sidi) the name is modern. In the Daihīn Nūrūd it is the name of a station on the pilgrims road from Bayra (cp. Norberg's translation, ii. 235 and 203). In olden times the different parts of Najd were named after the tribes.

To the West this province of Kaşmah is bounded by the territory of the Shammar, named thus after a branch of the great tribe of Tu' (q.v.) after whom it used to be called the "two sides of the Taif."

The Shammar mountains form the north boundary between Najd and the Nafa'il or Dānah, the real desert with exactly the same characteristics as the great desert in the South. After the rain it is covered with green, juicy herbage; men and beast live for some weeks in abundance. But later the sun scorches everything and the country for want of water becomes a bleak waste, perilous for the traveller who loses his way. Several Europeans have crossed this wilderness among whom Lady Blunt and Euting deserve to be mentioned. The soil consists of reddish sand and gives the impression of being a bed of gigantic horses that had humped through it from East to West (Euting). On the west side of the faţah (faţah, faţaf), as such a hoofprint is called, is a high sand-ridge, at the east base of which the bare stone often shows; then the ground rises gently towards the East. The depression is called Kār in Arabic; the high sand-ridge miyaf or naf, the plural of which nafif, (also nafa'il) now denotes the whole desert, just as in South the synonymous aqāf. This naf of which we must trace its origin in the Chaldean language, has probably arisen through metathesis from faţaf or faţaf (with the plurals faţāf and faţāf). The facts that those faţaf's always retain their shape leads to the supposition that the stone formation already had the described form and that the west wind has blown the sand against the ridges and piled it up there. The area of these depressions as well as their depth differs greatly. The length of the largest is estimated at just over a mile, the depth does not exceed 20 yards. The passage from Sur (Djaf) to Djoaw (Djaf) was done (in the opposite direction) by Euting in 8 days, by Lady Blunt in 10. After three days the oasis of Djeblūb is reached where numerous inscriptions and paintings on the rocks show that it has been visited since remote times. Not quite a days' journey from Djoaw there is a well called Shagākh which Euting (1883) however found filled up. Djoaw already described stories under its old name Dūma, is situated on the wadi Siţīn, a hollow which stretches through Kāf to the Hawrān right across the stony desert, which is at present called Hamād, a name not to be found in the written language. Perhaps, as Wallin supposed, the real form is hamād from the verb hamada meaning 'to be barren'.

The name Badiyāt al-Shārin, Syrian desert, was limited by the Arabs to a part of the great desert on the eastern side was called in the South Badiyāt al-'Irāq, desert of Iraq, in the North Badiyāt al-Jāhrī, Mesopotamian desert, also Khārib. The southern part was also often called the Sambūn. The bāllīya slopes from West and North to East and South and is intersected by numerous ravines whose water accumulates partly in ponds (gāhāt), partly in bigger streams which flow out into the Euphrates. In spring there is an abundant growth of grass and near the wells oasis-like gardens; in some spots where the soil is more bare consists of limestone covered with a layer of sand, it remains quite sterile. An expedition right across this country from Iraq to Syria such as Khalīf b. al-Walīf undertook in the year 13 (634) with his horseman is a hazardous enterprise. The boundaries of the territory expand and contract according to the weakness or the strength of the number of the various civilized states. At present the al-Itāf mountains south of Aleppo form the northern frontier according to Suchau. yet summer bedawin travel often as far as Ma'ra'īb with their herds.

Climatic. Products. On the whole Arabia suffers more from heat than from cold. Yet in the highlands the nights are often cool even in the summer and in winter the icy cold north wind becomes most disagreeable. - Poets look upon the east wind (jāfā) as the most delightful. Much feared on the other hand is the sanīn, now generally pronounced sinīn, the 'poisonous' scourching wind. All prosperity depends on rain, hence: it is often called 'God's mercy' (raḥmāt Allāh) and the ideas water and rainfulness are often synonymous. The more particularly the rain, is the loveliest time of the year. Then grow the herbs and the grass needed by the cattle. The canals are specially fond of prickly plants among which the nū'mān is foremost, so that the proverb says: 'It is pasture-land but not like the nū'mān', To men the bâllīya (desert) yields the faţaf (a kind of mesembryanthemum), now called akaf (a name probably derived from hamād). Its reddish grains give for four better than barley flour which is much used for the cooking
of porridge. They also use, but only in times of need, flour got from the seeds of the colyoyuth. Another product of the desert is the traffic, which is eagerly gathered and eaten, and the well-known scene (sawt). What is most grown in Yemen, in the Yamama and in a few places and always remains dear so that bread always has been an article of luxury. Barley is cultivated more because it is needed for the horses. Here and there millet (gibara) is grown in fairly large quantities and in Lahja and Qamna rice as well. The cultivation of tobacco has decreased under the oppressive rule of the Wahhabis who prohibited this article of luxury, but now it is beginning to increase again.

Of the trees of the bedlay we must mention several species of acacia like the tak, which yields the gum arabic, the sadaq, the chamar, the najd, the nabab (chamans toora), the ghafas which gives excellent charcoal, the sana (sama) palms always growing wild and the henna. First and foremost, however, stands the date-tree so highly valued by the Arabs. The prophet is reported to have said: Honour your mothers, the mothers of Adam, the same, the same. But the tree which is only tree that is (artificially) fertilised. The date is for many Arabs the principal food; the unique fruit is eaten raw. There are several kinds of dates; in the territory of Medina more than a hundred different varieties are counted.

Lions (al-adana) are repeatedly mentioned by the old poets and Hamudain gives a list of the regions where they were found. Ibn al-Mudjais says that there still were some in his time in the mountains north of San'a and Danghy (450) heard the same report in Central Arabia. They seem, however, to be extinct now. Panthers (anazri) and leopards (fahal), hyenas, wolves and foxes are the large beasts of prey. About game the necessary facts are given in the ethnographical part of this article. Monkeys live in Yemen, perhaps also in other parts. Among the birds of prey there are two kinds of eagles, and falcons, hawks and owls. Crowns are found everywhere. Among other birds we may mention the hoopoe (alkya al-bat), the hawk, the nightingale, some species of pigeons and of the partridges specially the kafat.

The first place among the cattle is taken by the camel (qamal) without which the desert would be practically uninhabitable. Rightly the poets have called it the ship of the desert for it is the only means of traffic within it. The story that people in need of water go so far as to kill the camels and drink the store of water in their stomachs is called by Jacob (Richter's, p. 98) a fairy-tale. He is partly right but the story is not wholly invented as appears from Yabari i. 2143 where horses are watered by such men. The Arabian camel has only one hump. A distinction must be made between the beasts of burden (kelba, collectively khala) and the riding-camels (ghalas, i.e. really 'named', or badoon, 'noble'). To the first kind belong the milk-camels (milka). The camel's milk is eaten a good deal and their milk which tastes and is wholesome is much drunk but it is of no use for making butter for which purpose the milk of goats and sheep is used. Flocks of these animals are kept throughout Arabia, but cattle are rarely found. Only on the Euphrates there are cows bred called shilka in contrast to the other shepherds. The Arabian thorough-bred is famous all the world over. It is small but beautifully shaped, and has great speed and endurance, and exhibits an almost touching devotion to its master. Only the wealthy can keep horses as they are used only for war or tournament (jharid, fantasia), for hunting and travel. A good horse is very expensive — a thoroughly bred mare is said to be worth 35 camels — and want much barley and water. On plundering expeditions water for the horses is carried on camels; in time of want they often use up the greater part of the household allowance. Many details are found in Lady Blunt's and von Oppenheim's books of travel.

Horses are bred not in Najjd, only but also in several parts of Yemen like Damari, in Djawf etc. Since older times horses have been exported from Arabia to India. The prince of Shammar every year sends some by way of Kuwait to Bombay. — Although donkeys are used in Hijaz, in Lahja and Yemen as well as by the South in Central-Arabia, the beduins consider them only for carrying heavy loads, for the same as donkeys. The semi-badewas in the valley of Sudjar on the Euphrates have numerous herds of donkeys.

Of domestic animals we may mention dogs — the ordinary watchdogs very much like jackals, and the grey-hounds (called qarze from wara) — and cattle bigger than europen ones; swine are rarely kept in the bedlay; in the towns, however, they are found fairly often. Monkeys are said to have been often used in Yemen for domestic services.

The locust plague is well-known in Arabia. It is said to appear every seventh year. When a swarm settles, young and old come down on it not only to exterminate the destroyers of the precious herbage but also because they regard them as plumsant to eat. They either cook them with salt or roast them. — Bee-farming does not exist; wild honey is found in several parts and regarded as a welcome gift of God.

Bibliography: contributions to the knowledge of the geography of Arabia are given by nearly all the Arabic geographers and historians of whom we may mention al-Hamdan's Kitab anwar al-Andar (ed. D. H. Müller, 1824—1851). Further, the Turkish geographer Lidbich Naswil (Stambul, 1145) deserves attention. The state of investigation till 1855 based on the travels of Niebuhr, Burckhardt, Wellsted a. o. has been summarised by Ritter, Erdkunde XII and XIII. The researches of later travellers, the results of which will be given is the special articles on the districts in which they have travelled, have been used in Elsmie's Arabien and die Arabische Welt, and in the later travel accounts (1875) and in Hogarth, The Penetration of Arabia (1895). For the old geography cp. Sprenger, Die alte Geographie Arabiens etc. (1875).

A. Ethnology.

The theory of the Arab genealogists that all Arabs are descended from Ishmael, those of the North through Ismael, those from south through Yaqub who is identified with Kadeem, is based on the Old Testament. Another view connected with this is that the true Arabs (al-Andar at-Andar) are the extinct tribes of Ash, Taimud,
The division of the Arabs into northern and southern tribes is an actual fact. The southern tribes are called Yemenites, the northern ones Nusiriats or Ma'hadite. Already in Mahjam's time, however, many tribes of Yemen were found long settled in the northern half, and in the South there were a few Nusiri ones. Tradition connects the migration of the former to the North with the breaking of the big dyke near Marib. How far this is historically true we cannot decide from the sources we have at our disposal. In any case there must have been other contributory causes and other wanderings must have taken place.

The condition of the country itself keeps the camel-breeding Arab constantly moving about. The desert, which surrounds Central Arabia in the North, East and South yields after the rainy season, extraordinarily rich pasture-land for some three months, so that man and beast can live in abundance. Thither they take their children and baggage and return to the territory of their tribes when the soil becomes barren again. Often, however, when their own country cannot support them all, parts of the tribe travel to other regions where they seek a new home sometimes by force. The Bedawis are very prolific and under favorable conditions a small group of families grows in a comparatively short time into a powerful tribe. Then the expulsion of neighboring tribes or emigration is inevitable. As the southern territory of the Nomad, between the desert and the states on the coast is limited, the Bedawis of the South were obliged to emigrate to a far greater extent than those of the North. Already centuries before Mahjam the powerful Yemenite tribes of the Ta'if had conquered a territory in the North of Najd and the Khatal's tribe had settled in the East and the South of Syria. Hence migrations of northern tribes to the South take place only in exceptional cases.

The opposition between the southern and the northern tribes may be due first of all to the fact that the latter regarded the former as invaders. Through contact with the inhabitants of the southern states (Yemen, Hadramawt, Oman) they had acquired the Arabic language and perhaps in their customs some peculiarities to which the northern people were not used and which they therefore resented. Afterwards the ill-will increased very much and finally became racial enmity in consequence of the rivalry of the Medinaites — the Anfal who were of Yemeni origin, and the Mehks — the Korish who belonged to the Nusiri tribes. This antagonism has become disastrous for the Arab race. It even exists at the present day.

The foundation of the tribe is the family. To have as many sturdy men as possible is the Arab's ideal; through them his family becomes of importance and acquires supremacy over the kindred families who even recognize him as their elder (Shaykh) and call themselves his children. Out of this springs a tribe which is joined by other and weaker tribes if it is powerful and wealthy. Different tribes also often join forces for common purposes. Such a complex of tribes has a common name, generally that of the principal clan, also often one chosen at random, like the Panther tribes (Amir), the Dogs (Kilil) etc. All affiliated tribes are regarded as the descendants of one father or of one mother. As in other times the antagonism between Yemenites and Nusiriats was not as great as later, we often find in tribal groups that are mainly North-Arab some unmistakably Yemenite divisions, and sometimes the reverse is the case.

In the genealogical tables of the Arab Kaib can is given as the progenitor of all Yemenites. It is worthy of note that the Kaib can still exist as an important tribe in the country to the east of South-Hijaz and North-Yemen and reaching as far as the great peninsula of the Red Sea. Kaib, according to Bent the name of the inhabitants of the Income-country, is identical with Kaib I do not venture to decide. South of this territory is that of the Kaib tribe from which the most important of the two groups of Yemenite tribes is said to be descended.

To the Kaib-group belong or did belong:
1. the Ta'if, who have held for about two thousand years the two mountain ranges, the Jana and the Sabatai, the most important towns of Kaib, according to Bent the name of the inhabitants of the income-country, is identical with Kaib I do not venture to decide. South of this territory is that of the Kaib tribe from which the most important of the two groups of Yemenite tribes is said to be descended.

2. the Hamid and Mahdi tribes, which for the greater part have remained in Yemen. To the latter belong e.g. the Ballahites, lying the south-east of Ta'if, and the Buqaita, who played a great part ia the conquest of Ta'if in Oman's time.
3. the Amira and the Uqbah, who early settled in Palestine: the Lakam, founder of the kingdom of Husain on the Equator, and the Kinda, who had the upper hand not only in their native country of Hadramawt but also governed the Scimitar and the Khorasan even before the title of King, The famous poet Imru' al-Kays belonged to this royal family.
4. the Aam, a powerful group of tribes which conquered Oman and settled in the Karb branch of whom, the Khusain, founded a kingdom in Eastern Syria; other branches of their group are the Khans, once masters of the Khusain, and the two other Aam tribes, the Anbal and the Qahira (Medina); the Aas and the Khsm.

To the other group of descendants from Kaib, at the head of whom the guama-
logists put Himyar, the great confederacy of the ḫaṭāḥ, of which the Bāsh and the Tāmil, who settled very early in North Syria form a part, the Husains, occupying the valley of the Ḫalīl ḫaṭāḥ and the kindred ‘Uṣayr, who lived in their vicinity and are famous for their depth of passion; the Kalb, inhabiting the Syrian desert; and the Bāḥil who settled in the Northern Ḫilāl. In Omar’s time large parties of the Bāḥil and the Husains were moved to Egypt.

The North Arabian tribes are called Niḍar, or Māʾrid or Mirdādites after their supposed ancestors. The latter name is found in Preconquest as the designation of a group of tribes, the former occurs in an inscription of 328 A.D., discovered by Dussaud at al-Namāza in the vicinity of the Ṣafā (to the east of the Ḥawāz). This inscription says of Mar al-Kalb b. Anuʾ, ‘King of all Arabs’ that he ruled the Asad and the Niḍar (Uḏammān in the Epigraphic, ii. 34). Not counting the group of the Ḥaḍrāt, once powerful but already lost to sight before Islam, they are divided into two great groups; the Rāḥib and the Muṣār. The dissolution of these groups had taken place long before Islam. The two tribes which had the upper hand, emigrated to Mesopotamia, where the two provinces of Dīyār Bahrān of the Dīyār Bahrān and of Dīyār Muṣar on the Euphrates preserved their names for a very long time. These provinces were afterwards occupied by the Taghlib and the Namir.

To the Rāḥib-group belong the Ḥannā and the closely related Asad, who lived near each other to the north of the Ḫalīl Rumma. The gillīta’s road from Bagh to Medina crossed their territory. The Ḥannā, who are said to have driven the Kūti’s from Arabia in the remote past, here kept the supremacy. In the second half of the 8th century they occupied or subjugated nearly the whole of the Syrian desert. To them belong the Bani Ṣulaym in the North-East and the Rāḥil in the West. Asad are still found in ‘Irīsh. Closest related to them are the Waal which divided into two important groups; the Bahr and the Taghlib; the religious conflict between the two after the murder of Kullab, who was in authority over the Waal, became fatal for both. Both migrated to Mesopotamia with the kindness tribe of Namir; the Bahr settled in the northern part in the province called after them Dīyār Bahr. The capital of the Asad still bears that name. The Taghlib and the Namir occupied the southern part. They were Christians and therefore had to pay the double poll-tax in Islam. To the Bahr b. Waal belong among others the Bani Ḥunafāʾ, lords of the Yamāna and the neighbouring Shābān. Also the Bani al-Kalb, who lived in trasnition are considered to belong to the Rāḥib-group.

The first place among the Muṣār-group was originally held by the Ka’il, who were of such importance that very often all non-Yemenite Arabs were called Kusaites. At present it is only the name of a small, half-nomadic tribe: on the Euphrates which has to pay the ḫuwa (k.s.) to the Shamm. To the east of them live the Adawān, also under the authority of the Shammars; they formerly lived near the Fuh and the Ḥudhail in western Hijāz. To the Ka’il-group belong further the Ḥawāz and the Sulaim who possessed the western part of Najd to the east of Madīnā and Mecca. At the beginning of the 19th century the Sulaim and their neighbours the Ḥilāl (reconsidered to belong to the Ḥawāz) became so troublesome on account of their large numbers, that they grew dangerous to the safety of the holy cities and had to be forcibly subdued. They decided to emigrate to Egypt; where at first they settled in the Nile-delta, then they were obliged to move to Upper-Egypt and in 444 they were persuaded by the promise of a camel and of a dīna of coin to trek to the Nile and to emigrate to North-Africa. Most Arab baduważ in North-Africa claim descent from these two groups. The Ḥilāl still live in popular stories, even in Central Arabia. Formerly they belonged to the tribal-group of ʿAmīr b. Ṣāʾaʾa, to which also the Kullān, the Kūṭāl and the ʿUqāl (Agul) were considered to belong. The last mentioned tribe is still of importance in Najd. They supply the greater part of the camels and the escort for caravans from Syria to Najd. A branch of them are the Manṣūrī, who were already powerful in the 7th century and still remain so. Their territory lies on lower Euphrates.

The Kaul-group also comprises the Ghassāfī. Their two principal tribes the Abs and the Dhubayj are well-known through the nutriti-crystal was between them caused by two races, lasses and called after them ‘the war of Dīyār and Qatīr’, the principal branch of the Dhubayj were the Ḥassān. To the Muṣār belonged farther the Qāba and the Tamīn who occupied the regions in Najd which had been long inhabited by the Ḥiṣār and Taghlib. The Tamīn are a large tribe and have spread in all directions. True baduważ of this name are no longer to be found in Arabia (though there are some on the lower Tigris), yet a large number of the inhabitants of the Najd towns consider themselves to belong to this tribe. The large-baduważ tribes in Najd, all of them Muṣārītes, are now the ʿAbd (Muṣārī), to the ʿAmīr (Muṣārī) to the west of the Dīyār Ḫilāl domintating the road between the two holy cities; to the east of them, separated by the Ḫalīl Rumma, the powerful tribe of the ʿQatīr; and to the east of those the Muṣārī. The Bani ʿAbbās, east of the Yamama, are also Muṣārītes; their importance has diminished under the rule of the Wahhabīs.

Finally there belong to Muṣār the Ḥudhail who from ancient times have inhabited the mountains in the neighbourhood of Mecca; and the Kūṭāl, once a powerful group in South Hijāz to which the Karant, the old ruling tribe belong. At present this famous name is only borne by a small tribe of shepherds in the territory of Mecca, the only one among the nomadic tribes skilled in the art of cheese-making.

The conquests of Islam have caused considerable changes in the badawi-world. The baduخاص provided very strong contingents for the armies, and when in ʿAmīr and in Syria large military stations had been founded, new centres were formed for these bases in the East and in the West to which other contingents of baduخاص were moved. On account of this some tribes were so much weakened that they had to join others and lost their independence in Arabia itself.

Between the Rāḥib’s and the Muṣārī tribes jealousy has existed for ages.
such a degree that the former often allied themselves with Yemenite tribes against the Ma'arajites. The Hadrami, who live scattered in the Hadhram and Najdi, are not counted among the true Arabs. They are excellent horsemen; their herds consist of small cattle; they also often do smiths' work. Related to them are the Shemhan in the south-west of the Yemen and the Affars, who own the camel. Still farther removed are the Saharan (Shilha), "the gypsies of the desert," really tinkers but none the less excellent hunters (vid. the passages quoted by Oppenheim, i, ii, i18, No. 3). They ride on asses only. In ancient Arabic literature they do not seem to be mentioned at all.

The jobda badawie scorn handicraft, cattle-rearing, trading, hunting and robbery as in his opinion the only occupations worthy of men. Agriculture and navigation too is to him beneath his notice. The Army were often scornfully called 'sailors' by the Tamim, because their kindred in 'Omam were navigators; the Korish looked down on the Medinenses because they did not till the soil. Their principal food is milk. From the milk they make by evaporation a kind of curd which becomes palatable again when mixed with water and is often carried on journeys. It is called abil (now bi't), ma'run, or waft. Butter is generally clarified and kept in this form. Generally speaking the badawie do not know the art of cheese-making. Meat is not every-day food. Except on the not infrequent occasions when they are obliged to slaughter them, they kill their cattle for festive occasions and for guests only. But as a well-to-do badawie-shaikh has guests very often, his family eats meat nearly every day. Butter, wool and stuffs woven from camel's- or goat's hair, and - most important - these animals themselves and horses (where they are reared), are brought to market by the badawie and he receives in exchange dates, corn, clothes and household utensils. In pre-Islamic times many a rich shaikh obtained the extensive herds in this way; now coffee and tobacco have become indispensable to all badawies. Even these most conservative of all people have to obey the spirit of the time. Thus bows and arrows have been replaced everywhere by the rifle. As long as the Wahabis were in authority, smoking was tolerated in none of the regions under their influence.

The badawie have taken part in commerce on a large scale only to the extent of providing the camels for the caravans and guarding these against hostile attacks for which protection they received black-mail (bid'ir). Even now powerful badawies living along the high roads receive 'purses' (prata) from the Government. Townspeople travelling through the territory of a badawie-trust must establish with them the bond of 'brotherhood' (khuwa', shorter for khyewa) because they buy for money. The weaker tribes in want of protection have also to pay for this 'brotherhood'.

Hunting with greyhounds (qir), and falcons (gafir) is much indulged in. The big game consists of gazelles, mountain-goats, wild cattle, a kind of antelope with heavy, straight horns, in all probability the prototype of the fabulous 'unicorn' — and wild asses. The 'sage' of the badawie, the fittest runners of all, is the principal sport of the Arals. The chase of the wild ass is the sum of every kind of chase. Of small game there are a few kinds of partridges, hares, jirds (jarak), and the big bird called gabb. Cassiches are shot especially by the Husain and the Shitak. These birds are gradually disappearing, however, in the North-Arabian desert.

Kufts (ghuns) play an important part in the life of the badawie. A poet of the earliest time of the 'Umayya, calls the kufts the desert, the camp of the 'Alid (Ma'arajites), and thus there happens to them what does happen and sometimes we come down on the Bekr (Hun Wali), our brothers, if we find no one but our brothers.' So it has always been and so it is still. To rob camels and often wives and children as well from any tribe, last of all from a hostile one, and to spoil a little blood as possible that no bloodshed may be caused, is the badawie's ideal life. The women and children can be ransomed, the booty is divided according to fixed rules. The shaikh who has to keep up the tribe's dignity and must have the necessary means for this receives a large share. On the other hand the lesse is borne by all the men of the plundered camp and the shaikh is expected to contribute handsomely. It is chiefly for those raids that the women and children take part ride camels; the horses are only mounted in the fight and when estimating. A good horse is its master's pride but it is a very great expense, if only from the fact that he must always have plenty of water for his horse. The pillaging expeditions are altogether one of the chief causes of the impoverishment of the people of the desert. The place of destination is often as a great distance and the journey takes every fatiguing for men and beasts. When they have attained their end they have to march home post-haste in order to escape the pursuing enemies; in this way not only the raiders but also the plundered people and animals suffer a good deal. If the pariahs succeed in winning back the prey they still suffer losses through the forced matches to which their animals are exposed. And the fortunate robbers are threatened by the shaikhs of some other direction. A weak tribe therefore is obliged to join a more powerful one. When men are in such a raid the consequences may be disastrous because if no blood-money is paid or accepted a blood-feud is raised which may bring about the death of a whole tribe.

The Saiyid (Lati) or Shaikh (senior, though often a young man) of the tribe is really only primo inter pares, and in theory his dignity is not hereditary. As long, however, as his son excels through business and wealth it generally remains in the family. As a rule he is at the same time Emir (commander in chief) or khan (Dux) in time of war. The latter is now generally called khan, while the title of Emir belongs to the ruler of a province, as for instance to the prince of the 'Abd al-Malik. But the Emir (ju'af, al-ka'fi), whose dignity is usually hereditary, is administered according to the law of custom (had'a, 'urf), which agrees with Muslim law to the extent in which the latter is founded on the former; but as the Shaikh only gives advice and never commands, so the judge's sentence involves only a moral obligation.

The solidarity of the tribe and the responsibility of the whole tribe for every single member obliges the leaders to exercise some sort of police-
supervision. If a number commit a deed of which the tribe refuses to bear the consequences, the head of his own tribe, he is expelled and is a lost man if no other tribe will give him protection. The feeling of solidarity and the duty to uphold and promote the interests of the tribe with all possible strength is called 'ajalj. Unfortunately this often degenerates into blind party-spirit. The badaws are the most materialistic and the most realistic people one can imagine. In the matter of religion they are not only lukewarm, but indifferent, they have little faith. Where the Wahhabis have had some influence, however, the commandments of Islam are at least outwardly observed, as for instance now in Najd. Their gloomy asceticism however has spoiled the character of many womads. The settled Arabs on the other hand are religious and are easily led to fanaticism.

Most badaws have only one wife. As a rule they only take another when the first is barren and they do not want to divorce her. The Shâlihīs often have three or four wives, sometimes for political reasons, in order to be related to an influential family, sometimes, but more rarely, to give a house to a woman. Often the girls are only twelve years old when they marry. For this reason and because the womads nurse their children for two or three years, they soon grow old. Besides they have much work to do. They have to provide fuel and water, to milk the herds and make butter, to cook the food and to weave coverings, blankets and clothes. The wealthier women have all this done by the servants. Yet the position of the badaw-woman is much better than that of the woman of the towns. She enjoys much more freedom and is generally respected. The noble maidens (hârinâ) of the tribe is very dear to all the people; the matron often have a considerable influence in the decision of matters of importance. But a woman hardly ever enter the men's division of the tent. The veil is not generally worn. The bringing up of the children is very simple, but even in the toughest tribes they are accustomed to obedience to the parents and respect for grown-up people.

The hard-won possess, according to the unanimous testimony of all travellers a natural dignity. They are courteous and well-mannered and as a rule generous. That is the key word for the manly excellence, which the Arabs call murâs (virtue). They are keen on winning booty but theft is a crime in their eyes. They are hospitable, though often only for the reason that they wish their guests to repeat their praise. For to be a person of note, to be praised everywhere as noble, generous and brave, to be feared and admired, is the highest ideal of the aristocratic Arab.

The vicinity of the badaws is a constant danger for all states roundabout the desert. These states have to be strong so that the badaws may not venture to enter their territory without permission. If not, they have to buy their peace and even thus suffer the badaws to cross the frontier and devastate their country. In such cases wide stretches of cultivated land become again pasture-lands, as for instance at present a great part of 'Arab and even regions beyond the Tigris. Or again Arab kingdoms arise on the frontiers, which reach far into the cultivated states, like Palmyra and Hatha in antiquity, the kingdom of the Ghassânides in Syria. And in ISP, that of the Lakhmids in southeastern Arabia. In inner Arabia the Wahhabis rule, they established a fairly good condition of order, and the heir of their power, the prince of the Sharman in }[il]h III has considerable influence over the badaws in Najd and in the southern part of the Syrian desert. In the frontier districts the badaws usually become half-nomads, shepherds or even rulers of cattle and are frequently called to till the soil. The reverse process, that farmers take to a nomadic life, happens only very rarely. Life in the desert is much too hard for them and involves too much privation. Only the badaws trained to it by nature can bear it.

The feeling of solidarity with other tribes is usually but a faint one. Nor is there always harmony within the tribe. This makes it easy to the possession of the authority at any given time to subdue and conquer the otherwise insurmountable tribes one by one. Owing to the same cause they hardly ever join forces for a common enterprise. Acknowledged evils that might easily be removed by concerted action, remain in existence for years while the people resign themselves to the will of God.

The Arab kitchen is very simple. Formerly the daily food was a mixture of flour or roasted or pounded corn and dates (zudar) and water or milk. At present it is barqûd (the name in Persia), pounded wheat or Indian corn steamed over water; for the benefit of honoured guests butter, melted lent or sour milk is poured over it and sometimes cooked mutton is put on top. Bread was still rare in Muhammad's time. Since the famine in the Hijas, however, in IS (639), wheat was imported from Egypt. Bread is baked in very thin flat cakes. Milk is drunk a good deal and for refreshment they use sour milk (labas). Dates form the principal food for many Arabs. In time of need the badaw eats whatever he can find, not only the big lizards (hasâ) and jerboas (yârûû), but even snakes, water (a kind of big rat), according to others more like a rabbit), wolves and foxes, as well as many kinds of plants and roots.

Their clothes are simple. Those who are not well off wear a shirt only (byâlul) with a belt and an upper garment (hâlû or 'ayyân). The wealthier people wear over the shirt a kind of kafus and in winter over this a lined jacket, in place of which others wear a sheepskin coat. In place of the former turban, the lâ'â (at present generally pronounced 'alwâ') has become the general head-wear; it is a piece of cloth held together by a black ribbon (zâba). Trousers are not used. Most people do without foot-wear, only the well-to-do wear boots and slippers.

The clothes are not washed as water is generally scarce. Owing to this same reason their bodies too have to be washed without regular washing, for bathing the children and for their own hair they have to use sand-unique. When the badaws come across a pool of water he is bathed, but as this is a rare event, Islam has substituted in the case of the desert people rubbing with sand for the ritual ablutions.

Each tribe has for its camels a special mark (zurâ) by which every-badaw recognizes them. It is often painted on the rocks to indicate the
of Arabia before Islam, but has actually opened up a new era for semitic archaeology. Our largest acquisition of this epigraphic material, which was very scanty up to the middle of the last century (now we have about 2000 inscriptions) we owe to the scientific explorers Joseph Halyer and Eduard Glaser. These inscriptions fall into two large dialectical groups, the so-called Minyan and the Salamaans. The first, the Minyan group, belongs not only to the numerous texts dating from the period of the Kings of Ma‘an (for the names see above), whose capitals Karawwā and Yathī lay in the South Arabian Desert, north-east of Sana‘a, and north-west of Ma‘rib respectively, but also to the majority of the Katabanian royal inscriptions first made known by Glaser, and the few Hadrami inscriptions that have been found up to the present. Future journeys of exploration should start with the latter, for it is known by report that hundreds of inscriptions exist in Shabwah, the hitherto unvisited ancient capital of Hadramawt. The Sabaean inscriptions on the other hand begin in the period of the so-called Friest-Kings (wālih l.b. waśir, or manakhi b. manakhi) of Saba‘, about 750–350 B.C. (this is the old Sabean epoch, in which may be included the first period of monarchical rule); from 350 B.C. the so-called title "King of Saba‘" is borne by the Princes ruling in Ma‘rib, besides whom the only kings still existing were those of Katabān and Hadramawt. Then a new element appeared, the Himyarites, who probably first established themselves in Katabān and then established themselves also in Ma‘rib, and whose rulers bore the titles "King of Saba‘" and (of) "King of the Hadramawt" (after the mountain after Kataba‘ the Katabanian capital Tam‘a south-east of Ma‘rib); it is fully certain that the era of 315 B.C. used in later inscriptions dates from this critical point, which is politically so significant. (If the era is e.g. in Saba‘, ch. 799 is +1177; ch. 799 is +1177 line 4, as named after a certain Mahāμa bin Abyah, this is probably the archon or sponsoynus or the quorun office, for the Salmans, like the Sabaeans, used this mode of reckoning the years). The title mentioned above in the king of Saba‘ and the king of Hadramawt and Yemen (i.e. Yemen) at the turn of the 1st century A.D. these native kings with the long titles held their position without a break from about 335–525 A.D. when their place was taken by the Axumites. In this period too, we still have long South Arabian inscriptions, especially long-dated inscriptions dealing with the break of the Dam at Ma‘rib; it has been discovered and published by Glaser, and belongs to the period 525 and 550 of the above-mentioned era (that is 542 and 543 A.D.). This inscription begins: "in the power and great memory of the Merciful (Rajahmūn) and his Messian and of the Holy Spirit, this memorial stone was inscribed by Abraha, the governor of the Grezita (i.e. Axumite) King Ragdhi Zbyyan (or Zul-Yamani) the King of Saba‘ and the King of Hadramawt and Yemen and their kings in the high land and the low land"; it
mentions among other things emblems of the King of Rome and of the King of Persia, and of Mamluks (as al-Munafir) and Haritsi ben Gub- bent Gub, on the Khirbet Gub bent, so that the name of the period, the Mamluks, Byzantium and Persia and likewise the topics planted by them on the Arabian frontier, the kingdom of Hira (al-Munafir) and that of Gub bent (in the land east of the Jordan), are fully represented here in the distant South, with their interests and intrigues. — An ex- ception to the prevailing fragment in the Ottoman Museum O. M. 281, under the names of the Merciful and his son Kretos the victorious (shaikhah) and of the Holy Ghost, it mentions a King of Saba' Sumaita' A'ashwa, and a Samaikān (sic) Ela-Abūhe (probably a mistake of the scribe for Ela-Abūhe), King of Ḥabak (Habak), with which compare the Ḥam-Emiss inscription, dating from 545 A.D. (There we have Sharaibheh Vaknul and Matīb, Kāribīn Ya'farr as sons of Sumaita' A'ashwa, the 'Uṣūmāqe of Procopius).

The Ethiopian rule, during which the above-mentioned Abarah not merely defeated and disposed the last King of the Himyarites, Ḥiṣ Nawis (cf. also Inan, Hal. 63, 2), but later watched with favours the foreign elephant right up to Mecca, was followed about 570 A.D. by the conquest of Yemen by the Persians under Khos- row I, who installed a certain Wazir as governor. But finally Yemen also succumbed to the conquering power of Islam. The last Persian governor, whom Khosrow II Parviz had appointed, was Būhe, who, after Khosraw's death (638 A.D.) accepted Islam and recognized Muhammed as supreme lord.

It is not practicable to place the beginning of the Sabaean kingdom much later than 700 B.C., since otherwise we cannot possibly find room for the many names of kings already authenticated (from a still very incomplete knowledge of the epigraphic material which once undoubtedly existed), and though frequently fathers and sons or brothers ruled at the same time, yet we can establish from the inscriptions a large number of genealogical series (often of grandfather, father, son and grandson), and historical experience of all periods, but particularly of antiquity, teaches us that such a series of four members occupies on the average a century. Consequently, the above estimates (Old Sabaean epoch 700—500 B.C. etc.) are rather to be regarded as minimum dates, especially and this applies in particular to the last two following epochs, the Kings of Saba' and the Kings of Saba' and Ḥiṣ Rādān) as we are still far from knowing all the kings and therefore up to the present can establish only a more or less defective sequence.

Now the important question arises, in what chronological relation do the Minaean inscriptions, for which at least 500 years are to be assumed, stand to the Sabaean. While it was regarded as obvious at an earlier period (e.g. by D. H. Müller of Vienna) that they were contemporary, Edward Gassner, who is followed especially by Hugo Winckler, and the writer of these lines, has championed, as is well-known, the theory that the rule of the Minaean kings preceded that of the Sabaeans (and also of the so-called Priest-Kings), an hypothesis which would naturally presuppose a much earlier date for the Misnaean (1200—700 B.C. at the least). Lately, however, the hypothesis of contemporaneity has been again defended by several scholars, particularly by the Arabist Martin Hartmann and the historian Eduard Meyer; while Hartmann, it is true, now admits that the golden age of the Misnaean kingdom preceded that of the Sabaean he holds nevertheless that the oldest Misnaean and Sabaean inscriptions are contemporary, and assigns the important inscription Gl. 1155 = Hal. 535, in which mention is made of the in- stance-traitor with Egypt, Aḥ̄̄r and 'Ir Nahān (resp. Gassner, as above) between Egypt and a people named Miḥr, to the year 525 B.C., identifying these Miḥr with the Medes (= Persians) under Cambyses. It is far more probable, however, that in Miḥr Mi- dian lies concealed, and finally also the name Menthīḥa, which was that given to the Bedu of Sinai by the ancient Egyptians; for Aḥ̄̄r also (plural) and singular Aḥ̄̄r) and Ḥr-Nahān we have names (viz. Aḥ̄̄r, abbreviated to Hār, in the north of the peninsula of Sinai and 'Ir Nahān = region of the Nahar or of the Wād of Gaza, which is still called Nahār at the present day), more suitable than Assyria, which was no longer in existence in 555, and the Persian province Edhir-Nārī (= Syria and Palestine).

At the most it may be admitted that the oldest Sabaean inscriptions may have been contemporary with the latest Misnaean. In point of fact we find in the groups which, also on other grounds I regard as the latest preserved to us (of and of my Suwardh, Chitt) allusions to the Sabaeans already settled in Yemen, so Hal. 257, where after the Misnaean gods, there also occur 'all Gods of the sacred river districts (agg'w) Ḫiṣ Ilim, (Dhī) Shībāyín, (Dhī) Ḥabūn and (Dhī) Hī- mārān, which elsewhere in the Old Sabaean inscriptions are mentioned as 'Gaewi in the closest connection with Saba', and similarly in Hal. 485 and all Deltas and subordinate Gods (khaibān) and Kings (this points to a number of petty princes) and tribes (μήδη) of Saba' and Gaewi. Hence the Misnaean kings referred to, Khāli'ī, Kālib, Shahidi and Yihī'-Il Rāyān, father of Tūn-kanthera, may well have been contemporaries of the oldest Sabaean Priest-Kings (and not about 700—500 at the lowest estimate). In the above-mentioned Old Misnaean inscription, Gl. 1155, on the other hand, the Sabaeans (in conjunction with another tribe Khwān) clearly appear as a horde of nomads roaming over the country north of Yemen, who were accustomed to raid the Misnaean castles on the high-road between Raggait (in Negda) and Ma'in (near Petra; cf. also John 1. 13) were such attacks are carried back to an early period). The Assyrian royal inscriptions also make mention, shortly before 700 B.C. of a Prince Yihī'-amara of Saba' (the name Yihī'-amara occurs, especially in the oldest Sabaeans epoch, as that of several Priest-Kings) who, as appears from the context, obviously dwelt in Central Arabia, just as the Queen of Saba', whom tradition places in the reign of Solomon, demands rather a North Arabian prince (cf. the Queen of Arib, i.e. probably the North Arabian Ugar, in the inscriptions of Tiglat-pileser and Sargon).

Now it is of the greatest importance that the Misnaean kings, for the protection of their income
trade possessed a colony in the land of Midian which is called Maşit in the inscriptions (e.g. in GL. 1155) a fact directly verified by the discovery of Midianite inscriptions in el-'Ula (cf. 'Ola) by Euting. After the collapse of the Midian kingdom (326 B.C.) the Persians and Nabataeans were probably the heirs of this Midanian colony of the land of Midian, as we may infer from the passages in the O.T. Jer. vi. 10 (about 640 B.C.) Ezech. xxxvii. 26 and xxxviii. 11 (about 586) and Is. 14 (about 539). But already other powers made themselves felt about this period in N.-West Arabia, such as in all probability Nebuchadnezzar (606—562 B.C.) cf. Jer. xxviii— xxxviii, which also explains the fact that the mid Nabatean was sent to Talmid, where the existence of Aramaic-Babylonian influence at this period is independently attested by the Talmit—Stele discovered by Huber and Euting. The King of the Arabs (Herod. 3.) mentioned by Herodotus in 525 B.C. is very probably already a king of the Lihyānitēs whose capital Agra (Hagar) on the Gulf of Aqaba is mentioned by Ptolemy, and whose inscriptions, pointing both by their form and content to the 6th century B.C., were discovered by Euting in el-'Ola along with Minaean and Nabataean. Every thing is in favour of the view that these Lihyānitēs were the successors in N.W. Arabia of the Minaean-Sabaean, the predecessors of the Nabataeans, and that they are therefore to be placed about 600—500 B.C. As a matter of fact, as early as 312 Antigonus wages war with the Nabataeans, who at that time were probably under Egyptian suzerainty, and from the 2nd century onwards the names of the Nabataean kings are known to us almost without a break until at length in 106 A.D. this kingdom was brought to an end (by the Romans). The Nabataean capital was Petra, but Midian also belonged to their domain, the land of the Sabaite or Sabaean (cf. also the Salmahite, i.e. Salmahite woman in the Song of Songs). In this epoch falls the unsuccessful expedition of Ahasuerus Galles (under Augustus) to South Arabia. While the Safaitic inscriptions (about 100 A.D.) found in the Hawrān like the earlier Lihyānitate fragments and so-called proto-Arabian or Thamudic scribblings represent by-forms of the South Arabian alphabet, the Nabataean cursive script developed out of the Arabic branch of the Canaanite script, and was at its best in the 1st century B.C. The oldest Arabic inscription yet known is that of Nebīr in the eastern Hawrān, dated in the year 225 of the era of Boyāt, i.e. 328 A.D. and set up as a memorial on the tomb of a king Imra' al-Kais, son of 'Amar, king of all the Arabs who were headlands and king of the two Asad (i.e. Asăd and Tāl) in Central Arabia, near Tēμēl al-Šalhūn and of Nīṣāl (i.e. N.W. Arabia). He annexed his conquests, as the inscription further announces, as far as 'Nadījat, the city of Shamsun ('i.e. the Southern Arabian King Shamsun Yuhārīl) and is probably identical with the King of Ifin of the same name, whose Arabian tradition places about 250—330 A.D. We have here the so-called Lahmid kings of ancient Arabic poetry, who were installed by the Persians on the old Babylonian-American throne as outposts against the predatory incursions of the Byzantian who had posted in the land east of Jordan the Djāñid princes of the family of Ghassān, who had immigrated from South Arabia, in order to protect the frontier and hold the Arabs (and behind them the Persians) in check [i.e.]. As regards both dynasties, but especially the Lahmid, we have more exact information from Arabian tradition, particularly for the 6th century and onwards, until the overthrow of the kingdom of the Shamsun and the victory of Iskandar and we even possess a series of shorter and fragments of songs by different court poets of the Kings of Ifin.

This covers in brief outline what we know of the political history of the pre-Islamic Arabia. But the great importance of the Arabs for the ancient East lies far more in the domain of civilisation and religion; the two catchwords immense and moon-worship give the best indication of the direction in which this nation, otherwise so inaccessible and secluded, influenced its nearer and remoter neighbours, especially the Hebrews and the Greeks.

First of all, as regards the religion of the South Arabian, as we find it in their inscriptions, it is a strongly marked star-worship, in which the cult of the moon-god, conceived as masculine, takes complete precedence of the worship of Venus which is conceived as feminine. This is shown in the clearest fashion by the stereotyped series of gods (Minaean: 'Attār, Wādh, Nakrūh, Šamān; Ḥadramawtī: 'Attār, Sin, Ḥoll, Šamān; Kataba: 'Attār, 'Amān, Ḥoll, Šamān; Sabaean: 'Attār, Ḥawān, Allūk-hālt, Shams) we have here throughout, as 'Attār (the planet Venus conceived as masculine, Babylonian Šedušī, as symbol of the sky, the god of the heavens) mentioned first; Ḥoll or, as the case may be, Sin, 'Amān or Hawān the real chief god, i.e. the moon (cf. particularly Sin = Babylonian Sinu); Nakrūh (Babylonian Mākrūt = the planet Saturn or Mars), or Holl (Phoenix, who brings the incense to foreign alters), 'Amān (messenger of the gods, Nebo) or Allūk-hālt (his written signs) i.e. the stars, cf. similarly Ṭabuqā, his (the moon's) servant (messenger or servant of Šešu (or in certain cases some epithet denoting her, e.g. Ḥāt: Night, "case of the temple or") the daughter of the moon-god, to whom women may have appealed by preference and who therefore stands at the end of the whole enumeration. Besides these, a certain part was played by a great Mother-goddess, the mother and consort of the moon-god, conceived as a personified lunar station, the Minaean Aššārē (Aṣān, Aḥsārā), who was called Ḥariānti among the Sabaeans and who was also in all probability universally known, as Šatū (e.g. as a component part in names of persons, also in the shortened form Shātū). We may also mention various lesser 'Attār deities (confined later to the part played by Venus as morning or evening star), and among the West Sabaeans, Tālaḥ, a god of the bow who also bore of very the epithet Ḥāt-Samaṭi "lord of the heavens" (cf. canaan. and aram. Ḥāt Šuṣān), and to whom especially camels (ḥāt) are sacred (hence in Midian but probably also in South Arabia Ḥaḥāl or Ḥušāl) etc. It is a particularly favoured mode of thought to conceive the two chief aspects of the moon (waxing and waning moon) as twin deities, in which conception sometimes the one and sometimes the other phase is specially favoured, according to the locality; thus
Amis (the paternal uncle) forms a complement to the 'father' Wadd or they are set in opposition to one another as Wadd (friend) and Nahrūn (the evil Satan or Mars transferred to the evil I.e., the waning moon) or as Nofiwa-Latī (infected from Hērmān's Ope-Ane), and 'Artī-Latī (for which see Plates of Epigraphic Evidence) i.e. a favourite of Latī and enemy (properly, sugared against) of Latī, or as the Hebrew Habel (camelherd and shepherd) and Kain (smith and singer, cf. the Sabean divine name Kaiṉta) in the primal allegory of the nomad and husbandman Gen. iv, or as Wāndī (here waning ‘moon’) and Hārīmān (hinderer, averter) in a Smith Arabic (Katabiyan) inscription.

We may note incidentally that the whole West-Semitic system of names, which we find fully elaborated as early as about 3000 B.C. in personal names transmitted to us in the cuneiform inscriptions, was first elucidated by the correct interpretation of the South Arabian names of deities, which in particular in the personal names begins with the prefix 'Latī' (Latī, or 'any father') and 'any uncle'), this element denoting the waning andwaning moon (cf. above Wadd. Ab and 'Amīs as the special protecting deity of the bearer of the name.

In North West Arabia from Mecca onwards to Petra and further onwards to the Syrian desert (Palmyra) and the Hawāri, the same ideas prevailed, partly even appearing under the old names, partly with new designations. Here we have especially to do with the cults of Mecca and of the whole Hijāra, shortly before Muhammad's (al-Latī and Hābīl, in certain cases also al-Latī and Wāndī, in addition al-Lurī, a feminine form of the above-mentioned 'Arūz-Latī, the goddess of death, Manīt, a god of death and others) and at an earlier period the still more important cult of the Nabatāna. Among the latter also we find the moon divided into two twin deities: Dhi-Shēr (of the mountain); cf. Arabic Shēr, the Edomitic mountain region) and his consort Khuri'ah (the son, Heb. kerēth; the former especially in Petra (Dimyros) and Hawāri (or Hābi'īl) and his consort Manāwāt; further also the 'Mother-goddess' i.e. (especially the goddesses of 'Amni-mūtain, in which we may perhaps recognize the solarite region of 'Amni-Nanād from the Song of Songs) and a god A'arrīt (i.e. Arab. al-Aqrā'ār, 'he with the white mark on his forehead', originally perhaps only an epithet of Husan). The knowledge (so important for purposes of interpretation) of the meaning of 'Mats (i.e. an epithet of the moon and of jāst) (hUSAN) we owe to the penetration of Hugo Winckler.

For everything else the reader must be referred to the literature on the subject; the most important books are mentioned below. But we may point out in conclusion that in all probability the Greeks borrowed from Arabia at an early period, through South Arabian incense merchants (cf. Aramartic in Lyca in and in the Troad, i.e. the Hadramautic) their knowledge and his machine Lato (Latin Latium form Latam) as also Dianysos (of Hespelos, i.e. according to Usener the Little Hero, and Hermes, in the same way as (according to Ptolemi) they took their additional letters Ph, Chi and Phi from the South Arabian alphabet (instead of from the Cusanitica, as the remainder); the identity of Lato and the divine mother Latī had already been put forward as a conjecture by the famous Arabist W. Robertson Smith an early as the year 1837, that of Hubal and Hībel (Gen. 4) before him by Freytag (Etüde. der Semitischen Sprache, ii. p. 345). This would seem to prove definitely that South Arabian civilization with its gods, incense altars, inscriptions, forts and castles, must have been in a flourishing condition as early as the beginning of the millenium B.C.

For the above cf. J. H. Martyn and D. H. Muller, Sabbatische Denkmäler (Vienne 1885); D. H. Müller, Burgern und Schützen (Vienne, 1879 and 1881); D. H. ARABIA UNDER ISLAM.

The history of Arabia under Islam will be sketched in the articles dealing with the particular provinces, cities and dynasties. Here it is sufficient to lay down the main outlines.

After Muhammad had firmly established the supremacy of Isālam by the conquest of Mekka, almost all the heads of tribes and petty rulers of the peninsula sent deputations to Medina in order to do homage to the Prophet. On this account the 3rd year of the Hijra (630—631) goes by the name, among the chroniclers, of the 'Year of the Deputations'. Nevertheless the Arabs had no intention of surrendering their independence; no sooner was Muhammad dead (632) than they thought the moment had come to shake off the yoke. Even in the lifetime of the Prophet, Maslama (r. R.I.) the chief of the Banū Jutaba had arisen in Central Arabia as an opposition
A similar attempt was made by Tulaibah [q.v.] among the Banu Asad, al-Aswad b. Ka'b [q.v.] of the tribe 'Aun in Yemen, and the prophetess Sadibah [q.v.] among the Tamim. Khalid b. al-Walid, who was seized by the Khalif 'Abd al-Malik with him and the Tamim, whereverupon the prophetess Sadibah joined Musilamia. The latter was then killed in the bloody battle of 'Alqaba' and the Banu Hanifa brought into subjection. In Yemen al-Aswad fell a victim to a conspiracy of his own people, and the rising soon came to an end when the Muslim troops invaded Yemen in 655, so that in this year all danger threatening the continued existence of 'Aqaba in Arabia was removed.

There followed the period of the great conquests under 'Omar I, during which it seemed as if Islam had really succeeded in moulding the Arabs into a homogeneous and powerful nation. But 'Omar's successor 'Oghmaan favoured the interests of his family and thereby brought about the disunity and strife which soon made it clear that the Arabs set their separate interests and tribal hostilities above any political commonwealth embracing the whole nation. It is true that the first Umayyad Mu'awiyah succeeded in ending the civil war and in maintaining his rule over the whole of Arabia but he transferred the centre of his authority to Syria with the result that during the reign of his son and successor Yazid I, the holy cities Mecca and Medina rebelled openly against the government and the second civil war broke out. It now became more apparent than ever that Islam far from having got rid of tribal differences, had made them more acute by introducing the religious opposition between Shi'as and Kharijites. Especially the dogmas of the last named were to the taste of the Arabs and became the cause of repeated insurrections under the later Umayyads, after 'Abd al-Malik had defeated his Arab opponents in the year 73 (692) and had restored peace in Arabia. Finally the Kharijite doctrines gained a footing in certain parts of the peninsula, especially in Qura, where they have maintained their hold to the present day.

Meanwhile Arabia under the Umayyads as afterwards under the 'Abbasids, had sunk to the position of a provincial empire of the Khalif and even with regard to all administrative duties it did not form a unit. There was no central government, no capital city, different cities and districts of the peninsula had their own governors, who were appointed strictly by the Khalif. When therefore the khilafah lost its power after the death of al-Mutawakkil (861), it was inevitable that these governors should act as independent princes, especially in isolated districts as in Yemen where this tendency had already existed before (especially in Zabid). With such movements religious risings were combined, e.g. of the Zaidites in Sa'da and San'a', and of the Karmatians in al-Bahrayn. In short, there can no longer be any question of a history of Arabia as a whole; there is only a history of dynasties, tribal and sectarian leaders, who come into prominence in the different areas of the Arabian peninsula, and against whom the umayyad and abbasid khilafah were preoccupied.

The influence of the central government at Baghda, still makes itself felt at the most from time to time in Mecca and the frontier districts, until, after the fall of the khilafah 656 (1258) the Egyptian Mamluke-Sultans began to exercise some influence on the course of events in Mecka and along the shores of the Red Sea.

Under Selim I (918-928 = 1512-1520) the Ottoman Turks came on the scene and established their rule in the eastern parts of Yemen. But in this country they had a difficult position in face of the Zaidites who, under the leadership of their Imams, at length (1043 = 1633) drove them out of the country. In the rest of Arabia everything remained as it was until the Wahhabis [q.v.] arose in central Arabia in the second half of the 18th century and soon won such a strong position that the Turks were compelled to call in the help of Muhammad 'Ali. The latter succeeded, but only after great efforts, in breaking the power of the Wahhabis, yet the power of the Turks in Arabia remained as before, nearly nominal. It was not until the last of the six centuries that they made a vigorous attempt to make their power a reality, and undertook expeditions to Egypt and Yemen (1814-1817), while Muhammad Pasha (1870) and 'Abd al-Karim Pasha (1876), approaching from the East, subdued the inhabitants of the ancient country of the Karmatians. In consequence of this Yemen was formed into a Turkish vilayet, with San'a', as capital, while Eastern Arabia, so far as it was subdued at all, was added to the vilayet of Basra as a new sanjak with the name Negidj. But the new vilayet Yemen existed only on paper, because the Arabs living there soon rose in open rebellion and in spite of repeated expeditions Turkey did not succeed in bringing them into subjection. The English, on the other hand, succeeded in establishing along the whole of the south coast from Aden to Musqat a supremacy which is none the less real for not being quite openly avowed.

Statistical data as to the present condition of the peninsula are not available. In 1875 Negidh Bey in his 'Furū' al-Yaman es-Sā' (II, 355) estimated the population at 10,752,550 souls but this number is purely conjectural.

IV. ARABIC WRITING.

The Arabic character, although one of the youngest in point of age, occupies the first place after the Roman character from the point of view of geographical distribution. Its development from the western frontier of China to the west coast of North Africa and from Constantinople to the Malay Archipelago in all other parts of the world it is known and more or less used, especially in consequence of emigrations from Syria.

Down to the last century erroneous views were held concerning the origin and the primitive form of Arabic writing. It was thought to be a development of the hieroglyphic or so-called 'Kufic' by the Arab themselves, which had been used for the oldest Arabic documents, manuscripts of the Kor'an, inscriptions on stone and on coins, which were known at that time. This view was first shattered by the discovery of papyri, which have been found in immense numbers since the eightieth decade of last century, thus increasing the material in our possession in an unexpected way. These documents some of which date back to the beginning of Islam, exhibit the surprising fact that the form of Arabic writing even at that early stage does not essentially differ from the ordinary round script, latter Naskhi, but all the
more, it would seem, from the ‘knife’ character. Forms resembling the letter on the other hand are found on the two inscriptions, which are the earliest monuments of Arabic writing hitherto known, viz. the triglyphic, as mentioned above, inscription of Zebdi dating from A.D. 518, and the bilingual (Greek and Arabic) inscription of Harran in the Leda which dates from A.D. 568.

The question as to the relation between the angular and the round script may be left aside for the present, in order to continue the account of the origin of Arabic writing.

Arabic inscriptions have been mentioned show a close resemblance to a number of inscriptions from the Sinai peninsula, which, after many unsuccessful attempts, were at last correctly deciphered in the last century. The striking resemblance between the two scripts inevitably led to the conclusion that one must have been derived from the other. The language of the Sinaiic inscriptions was found to be Nabataean (a dialect of Aramaic) although their nathemes for the most part were of Arabic nationality. The type of writing employed is later than that of the other Nabataean inscriptions which are found scattered from Damascas to Medina, dating as far back as the beginning of our era and exhibiting a very archaic script. Even in these however the stems of the latter Arabic writing are found developed up to a certain point, especially the stems according to which certain letters which join together in writing, and the existence of separate final forms for certain other letters. (Eutin, Nabat. Inschriften, p. 4).

The linguistic and historical importance of the Sinaitic inscriptions is not very considerable; unlike the inscriptions on Nabataean monuments they are not the work of professional calligraphists and practised scribes, but of members of the caravans which traded between South Arabia (India) and the Mediterranean. On the details cp. Eutin, Sinait. Inschriften, p. 10 ff. The inscriptions may be said to represent the type of cursive writing used by the Nabataeans, especially in their capital Petra, in the second and the beginning of the third century A.D. from which period they date; the material written on, in this case baked granite, would of course be responsible for certain modifications. But the general shape of the letters was probably the same, only that rounder forms may have been used and that certain letters were perhaps more frequently joined together. Nothing, however, can be said on this point with any certainty, as documents on any material other than stone and metal are entirely lacking. It is to be hoped that the discovery of such documents (H. Brunnow, Die Ptolemische Arabien, I, inscription to n° 613) at Petra may prove to be only a question of time. It may be regarded as certain, that in a commercial town like Petra, where the art of writing was in common use, a cursive character adapted to the practical needs of every day life might have been developed at an early period side by side with the stiff script of the coins and stone monuments.

The latest Sinaiitic inscriptions hitherto known are Eut. n° 457 dating from the year 106 of the Boer era (210-211 A.D.) and n° 319 dating from the year 108 of the Boer era (220-231 A.D.); this is the inscription of Hegra (Tamnun 162 = July 277). Recent Hill, 1906, p. 244 et seq.; the two oldest Arabic inscriptions date from the years 312 and 568 A.D. (The Arabic inscription of Numara which dates from the year 223 of the Boer era (325) is still considerably older; but it is written in the Nabataean monumental character, which shows already many signs of the transition towards the Arabic script: viz. the many joined letters, the form of the 8 especially the disappearance of the letter Samek).

The further simplification or transformation of the Nabataean cursive writing into the Arabic character must therefore have taken place in the fourth and fifth centuries of our era. We must wait for further discoveries of inscriptions to show whether this change took place at Petra, then already beginning to decline, or in the rising neighbouring kingdom of the Ghassanẹn; future finds will similarly enable us to fix more accurately the time of the transformation, as well as the date at which the present arrangement of the alphabet came into use. The numerical value of the letters with its apparent arrangement does not show such a change, but it becomes intelligible at once, if we consider it from the point of view of the old Nabataean arrangement. In the Nabataean alphabet c as final letter corresponded to 400; to this were added the following signs which did not exist in the Nabataean writing: c = 500, c = 600, c = 700, c = 800, c = 900, c = 1000.

The rearrangement, i.e. the present order of the alphabet is obviously based on the principle of placing together characters of similar shape. This principle was not however carried out quite consistently, e.g. was not put after 3, 2 and 1, but placed at the end of the alphabet perhaps because of its distinct terminal form (l). The final forms of 5 and 3 also differed in the ancient script, yet the two letters were put together in the alphabet.

It is possible that the present arrangement dates back to the pre-Islamic period; it is a noteworthy fact however that Maghribi writing which probably originated towards the year 500 of the Hijra has a different arrangement which partly corresponds to the old Nabataean order of the letters and partly to the modern arrangement. (See below). Under the influence of commerce the new script spread to the countries to the North and South of its place of origin. As at the beginning of the vi. century of our era it had reached Northern Syria, we may well assume that by that time it had made similar progress towards the South, and was known and in use throughout the region where Northern Arabic was spoken, especially in the two cities from which the religious and political movement started a hundred years later.

We are told that Mekka at the time of the prophet possessed only 17 men, whose names are preserved by Al-Baladhurī, who was able to write, in addition to a few women. This statement however seems very improbable. The prophet himself had from five to ten secretaries. The fact moreover that the Mekkanis, like the Egyptians with their fondness for writing, used all possible kinds of materials to write on (see below), was natural in an old commercial town, indicates very clearly that a knowledge of writing was
pretty widely diffused. According to Arab tradition, which in this case sounds very probable, Arabic script was then brought from North Arabia to the other Arab state, the kingdom of the Lakhmids in lower Mesopotamia. It is very questionable however whether it was brought there by Christians as Wellhausen assumes (Arabien und Forschungen, III, 312). It is certain on the contrary that the literacy language used by the Christians of that region was Syriac, as Nöldeke (Geschichte des Christentums, p. 7, note 3: Gesch. d. Persen und Araber vor Zeit der Sassaniden, p. 177, note 1) conjectured correctly. Even the Christians of Nedjila were addressed in Syriac by Jacob of Sarabj. It is clear however that the Arabic script was in use at Hira as early as the time of Mutalammas and Tarafa (second half of the vi. century A.D.); though possibly it had been introduced only recently; for it still appeared to the Bedawi as something very mysterious.

The rise of Islam: no doubt helped to spread a knowledge of writing. Written portions of the Korán existed before the year 622 A.D. (Nöldeke, Gesch. d. Q., p. 34 et seq., and after the text had been officially fixed under 'Omar and 'Othman, the art of writing spread together with the study of the sacred book.

The following are the oldest monuments of Arabic writing belonging to the Muslim period:

I. A number of coins beginning with the year 20 (661) (Nützlin, Catalog des Berliner Museums, vol. i. no. 84 et seq.), the oldest of which however bear only very short legends;

II. several inscriptions, none of which are older than the second half of the vi. century A.D. one dating from the year 72 (691-692) in the Kubbat al-Sakhr at Jerusalem, three undated milestones of the caliph 'Abd al-Malik, and the inscription of Kaṣr Khartum which dates from 92 (710-711). — For the sake of completeness an enumeration of the inscriptions belonging to the ii. century of the Hidjra may also find a place here: 1. in Kaṣr al-Aqbarin (N.E. of Palmyra) dating from 110 (720-729); 2. in Kaṣr al-Usir (S. W. from Palmyra), both put up by the caliph Hishām; 3. in Antinœ (Upper Egypt) A.H. 117 (735); 4. the Camp of Djerash A.H. 125 (747-743); 5. mosque of Avdon A.H. 125 (747); 6. cistern of Raml A.H. 172 (788-798); 7. boundary-stone of Eghnumein belonging to the time of Hārin al-Rašid (in the possession of the author); 8. several milestones found at Fāṣilah;

III. A number of documents on papyrus, the greater part of which also belong to the 2. half of the vi. century A.D. It is to be regretted that the oldest of these belonging to the first half of the century, which are preserved at Vienna, are still inaccessible to the world at large; but the documents which are available are quite sufficient to give a complete picture of the writing of the vi. century, as it is out of the question that it should have been subject to any considerable modifications between the years 23 (642-643) and 87 (706).

Plate I gives a general view of Nabataean and the oldest forms of Arabic writing.

As in the simplified Arabic script the shape of several letters was indistinguishable from that of others, it became necessary to invent a means which would prevent confusion. Following the model of Syriac writing dots were chosen for this purpose; the date of their introduction is unknown, but they probably go back to the pre-Islamic period. The accounts of the Arabs themselves on this subject (Nöldeke, Gesch. d. Q., p. 305, 311) may well be set aside. Dots were certainly used in the first century of Islam, though perhaps not as extensively as later. On the documents of that period, so far as they have been accessible to me, the following letters have dots:

\[\begin{align*}
\text{א} & \quad \text{ב} & \quad \text{ג} & \quad \text{ד} & \quad \text{ה} & \quad \text{י} & \quad \text{ז} & \quad \text{ח} & \quad \text{ט} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} & \quad \text{➕} \end{align*}\]
and in Baghdad, where the oldest paper manuscript of the Qur’an is known (the Ghawri al-dawlah of Alh ’Abd), was written in 250 (870). It was written as late as the middle of the 11th century. (Palmer’s Society, Oriental series, plate vi.)

The vowel signs which were likewise borrowed from the Syriac script, seem also to be very old, but as to the date of their introduction even less can be said at present. The original system of vocal marks differed considerably from that which is now in use; as Ewald recognised, it was based on the different phonetic strength of the vowels: a (a) as strong vowel was expressed by a dot above the letter, a (a) occupying an intermediate position was denoted by a dot in the letter, an (i) by a dot below the letter being expressed by simply doubling the dots. In order to indicate that the dots were regarded as not strictly belonging to the script proper, they were in copies of the Kor’an usually added in various colours—in the oldest copies in red, later also in yellow and green, more rarely in blue,—whereas the dots belonging to consonants were apparently always written in black. The dots are occasionally replaced by little circles.

At present it can neither be asserted nor denied that the Kor’an was at the time of its composition sanctioned by the writer of the text itself. It is certain, however, that in the 11th century, their use had not yet received canonical sanction. Malik b. Anas (died 1279 = 784) at any rate demanded that copies of the Kor’an destined for use in diviner’s service should contain no vowel-points. In profane writings they were probably not used at all.

Towards the end of the 11th century this system of marking the vowels was replaced by a new method which is still in use. Owing to the ignorance of the Arabs in all matters concerning the origin of their script, it is impossible to say whether the statement that it was invented by al-Khalil (died 1170 = 776-787) is founded on fact. The vowel-signs of this system are simply the corresponding vowel-letters, in the case of some of them the derivation is clearly discernible, such as a (a) is a standing (in the Maghrib) a (a) form obviously an analogous considerably shortened form of the old a (a).

Some of these so-called orthographic signs were probably invented at a still later date than the vowel-marks, but the date of their introduction is equally obscure. It is possible that they also passed at least through two stages of development. Hausen as the most important is probably the oldest. In the oldest manuscripts of the Kor’an it is expressed by two red dots put alongside of each other; later it is represented by a blue dot or circle which appears above and sometimes beneath the letter. The other forms of these marks which are still in use are also said to have been invented by the above-mentioned al-Khalil: a stigmata which to a certain extent is supported by the fact that they also were expressed by letters of the alphabet: samm is a small s, and dżaḏa or čaḏa a small č.

In a similar way two systems of punctuation seem to have been in use at different periods. In the oldest copies of the Kor’an the end of a verse is denoted by strokes slanting upwards from left to right, the length of which varies from 4 to 10; the end of a group of five or ten verses is expressed by a circle enclosing 3, 4, 5 or more similar strokes. The later system was to denote the end of a single verse by a simple circle, the end of a group of five by a , usually in the form of a circle ending in a point at the top; and the end of a group of ten verses by a more or less ornamental circle, more rarely by a square, in which the number ten was written at first in numerals, later in letters of the alphabet; occasionally this mark is put not in the text but on the margin. This system disappears in the vi. century; in manuscripts of the Kor’an dating from the later middle Ages only the end of a single verse is denoted by a circle or rosette; and numerals denoting groups of ten are occasionally written out in letters.

In profane writings punctuation is only sparingly used. In the oldest period only the ends of long sentences are marked by a circle, which perhaps represents a modified dot.

Our information about the writing materials used at that time is fairly extant: it is derived chiefly from the accounts of the traditionists concerning the missionary apostles sent out by the prophet, and from the statements of the Kor’an undertaken by Zaid b. Thabit (tenth or eleventh century). Further details which however belong to a later period are supplied by the statements of the Khubis.

At the time of the prophet and in all probability during the proceeding period leather (adah) was the principal material written on. By this we must understand real leather, not the much more expensive parchment, as is proved by a story, told by Ibn Sa’d and repeated in several places (see Wellhausen, Säkuen und Karawän, i. 125; Ibn Khujjis, Khulâ al-Ma’älif, p. 170), according to which a messenger sent by the prophet to deliver a missionary epistle written on adah, missed it in picking up his leather water-pot. The other anecdotes told by Ibn Sa’d (in al-Isâb, 87 and 102) show that he was frequently dyed ( chance? Wellhausen, ed. de Goeje, p. 7). In telling the same story used instead of adah abhar the expression gudh abhar. The Khudis’ library possesses two documents on leather which however belong to a much later period, viz. 233 (847-848) and 239 (853-854). Such documents were rolled up and fastened together with a leather thong and thus could be sealed. There is a well-known story to the effect that Ibn Tahir’s Moslem architect drew the design of his mosque on leather, Other materials used were:

1. . 2.

Camel’s bone, especially the ribs, skin and the broad shoulder-blades; skraf. The Khudis’ library possesses a specimen of the
PLATE III.

Paprycus (90 A.H.)
Kūfa, writing of the ii. and iii. cent. H.
1. Inscription of the Khalifa al-Ma'mūn of the year 116 H. on the Kubbat al-Sakhra, Jerusalem.
2. Korān from Amaqjir, Damascus, 256–260 H.
Kor'an, written in ornamental Kufi by Abu Bekr of Ghirma, A.H. 566.
Official document of the 3rd cent. A.H. bearing the name of the 'Abbásid Kálíf al-Mu'tadí bi 'Ilah.
Characters used on coins up to the VII cent. H.

1. ʿUmayyad A.H. 77.
2. ʿAbbāsid A.H. 148.
3. ʿUmayyad A.H. 268.
4. ʿAlīṣīrīd A.H. 358.
5. ʿAlīṣīrīd A.H. 615.
6. ʿAlīṣīrīd A.H. 616.
Alhahid script.

1. Inscription of Nur al-Din of the year 564 A. H.
2. Inscription of Sulaiman al-Din of the year 583 A. H., in the Aqsa-Mosque, Jerusalem.
Beginnings of the 'Ṭabīb' script.

1. 'Hand' of the year 479 A. H.
2. 'Hand' of the year 583 A. H.
1. Sura 1, from a Koran written by a Mabry.
latter, containing a list of witnesses, unfortunately without date. The bone is pierced, in order to be filed on a cord for future reference.

4. Pothersheds, hibab or shabaf, chiefly used for short notes. In Egypt, as is well known, this was a favourite material. In antiquity as well as during the Coptic period there even exists a specimen dating from the brief period of Persian rule — in the Arab period however it seems to have been much less used, and while thousands of hieratic, Greek and Coptic ostraca are found in many museums, the Khedive's library alone possesses a few in Arabic. Pothersheds were also used outside Egypt, especially in Arabia. Flax and reeds, shabaf, were also used for short notes; they were probably mostly pellicles of lime-stone cliff horizontally by the hand.

No specimen seems to have been discovered so far.

5. It is very probable that wooden tablets were also in use, although no definite statement to that effect can be adduced. A specimen (unfortunately incomplete), preserved in the Khedive's library, one side contains writing in ink; the other side is carved in the other side (in centuries).

7. Parchment (called rosh, ala, fulgha in the Fibres, p. 21; the expression al-ndar al-ghaṣūr used by Haüsser b. Thabit can also hardly mean anything but parchments: the Greek, d. a., ail al-ghaṣur is written in Thabit's maqāla, v. 31, ed. Arnold, v. 30 of the Calcutta edition, also means parchment; but since it is mentioned in a parallel with akit yamūn the meaning may be leather. The explanation of the commentators, a cheek as white as parchment is foolish (Retical women are brown), in consequence of which at the end of Papyrus, p. 34, the white stones have been limited chiefly to documents, and secondarily to copies of the Korān.

For the latter purpose it was sometimes prepared in a large size (the MSS. of the Korān note. 1 and note. 389 have a size of 60:54 and 70:48 cm.). In the Maghrib however parchment was used for books only as late as the second half of the IV. century, and perhaps even earlier by the V. century. — Rags (lothā, v. 40 of the Calcutta edition) and a sheet of a large leaf of parchment or a scrap of a large leaf of parchments or papyri.

8. Papyri (ósito, søfri, niswāt), which spread from Egypt over the whole ancient world, was known also in Arabia, and served down to the early 'Abbasid period as the principal writing-material of the Muslim world. The manufacture of papyri which had existed since the remote past declined gradually after paper had come into use, as the latter material was less expensive and more convenient for practical purposes; in the first half of the IV. century. It seems to have disappeared completely. The most modern papyrus document in the Khedive's library dates from 319 (931), that in Vienna from 333 (935; Mitteiungen, ii. 98).

Papyrus (wūsāf, sūf, thāf) did not become known in Muslim countries until the end of the I. century. It seems to have been some time however before the use of the new material became general. The oldest book on paper dates from 296 (870) and was probably written at Bagdad, the Cairo ms. n. 1646 bears the date 285 (879-879), but: this is not beyond question; it must have been written however about the year 500 (912-913), most probably at Damascus. In Egypt paper does not appear until the second half of the third century (a fragment dating from the time of Ibn Tulun is in possession of the writer); it was obviously a matter of some difficulty, owing to the conservative tendencies of the country, to start a material like papyrus which had been in use for thousands of years. The popularity of paper seems to have increased rapidly towards the beginning of the IV. century; the change was accompanied by a gradual deterioration in the quality of the papyrus, and towards the middle of the century the latter disappears altogether. The manufacture of paper on the other hand seems to have developed enormously. In the second half of the century the author of the Fibres knows only seven different kinds of paper, but their number must have increased very rapidly, since paper manufactories arose in almost every large city in the Muslim countries, the products of which were known by distinctive names according to their origin, quality and price. The size of the paper especially the high state of development which, the industry maintained throughout the Middle Ages. The leaves of the largest Korān in the Khedive's library (note. 19) which dates from the IX. century, have a size of 117:98 cm. although the edges are cut. Where even such sizes were insufficient, as in the case of official documents, foundation deeds were written on paper, and parts of parchments were stitched or pasted or sewn together. Some foundation deeds in the Khedive's library are 75 feet long.

Towards the end of the Middle Ages European paper began to be imported into the East. Al-Sakkāwī (died 992 = 1496) in the Tāriḥ al-ṣafar al-Miṣr, refers to a work of 40 volumes, most of which were written on paper coming from Frankish countries. It seems that towards the end of the century European competition gained the upper hand; the paper of manuscripts written in Egypt towards the year 1500 (1591-1592) frequently shows European i.e. probably Italian watermarks.

The Arabs have preserved no tradition concerning the origin of their writing: al-Baladhurī (end of the II. century) following authorities which may date back to the end of the I. century, seems to hold that it was invented in the kingdom of the Lubnānīs. Later writers, Ibn Khaldūn (Mukātāt, ch. 30) and Ibn Khallūn (article Ibn al-Bawwāb) repeat this view and state explicitly that the art of writing spread through Arabia from Bīrūn or Anbūt. The author of the Fibres (p. 4) alone gives an account which may preserve an element of genuine tradition. He writes as follows, on the authority of Hishām al-Kalbī (died according to Ibn Khallūn in 392 = 819/820): 'The first who wrote Arabic were...'

They are said to be the names of kings of Miḍiān who perished on the 'Day of the earthquake' (sura xavi, 185). It may be possible to suggest that this statement contains a reminiscence of the origin of writing in Mi'diān, the country of the Nabaʾa'im. Another authority quoted by Abū Nadīm, Ibn Abī Salīl or Salīl (see Fibres, ed. Flügel II, 1) gives the same names more correctly: Ādān, Šūrū, Qāmis, Muḥammad, Qūsīs.

If we omit the sīāf from the middle of these words the remaining letters represent the order of the letters in the original alphabet, only that
ARABIA.

called Abū ʿI-Hānān ʿAḥr, who lived 100 years later.

Finally we may mention a calligraphist of the close of the "Abbaṣida period, who achieved great fame, Yāḥyā al-Maṣṭūʾi, the court calligraphist of al-Maṣṭūʾi, the last "Abbaṣida caliph. A script called Yāḥyā derives its name from him. Genuine specimens of this artist's work are fortunately still extant in the shape of two complete copies of the Korān (dated 686 = 1296 and 696 = 1306; see Arabian Inscriptions, i. 152). It is abundantly clear from these specimens that it would be absurd to attribute to him any original innovation in the written character. Even the artistic merit of his work cannot be placed very high, if we compare it with other specimens of calligraphy; it seems therefore that he owed his fame more to fashion than to anything else. The two copies of the Korān show a quite ordinary hand, which is only remarkable as resembling the peculiar somewhat stiff ṭūḥāt of the later Persians, which perhaps is derived from it, just as the ornamentation of these manuscripts of the Korān is clearly the model of the Persian style of ornament. Yāḥyā's signature is written in a kind of calendar style.

For scenes in the Korān, that fall of the "Abbaṣida kalifate, Egypt as the largest Muslim state remained the centre of Massim civilization. Towards the end of the Fāṭimid rule (first half of the vii. century) the round character used for books had reached the highest point of its development, and under the Ayyubid dynasty it was again gaining an absolute predominance on stone monuments. The peculiar round and well-proportioned forms, in which it appears e.g. on Salahīn's inscriptions (mihrāb of the dāmār of 562 = 1171-1188, minbar of 564 = 1173-1180) give it a character entirely its own, so that we are justified in speaking of a separate Ayyubid style of writing.

During the Mamluk rule (640-917 = 1242-1312) the round script maintained its full beauty, except on coins, where a curious degeneracy set in rapidly. The splendid copies of the Korān which amirs and sultans caused to be written for their mosques are the best testimony. In the charters of the sultans and the government departments, the same y. 1195.

The calligraphists most famous in the later period were the ʿAbh Māʾsūṣ ʿAbd Allāh, the Khālid al-Miṣṣīṣī (Khalīfānī), who is also claimed as the author; he lived under al-Salāḥīnūn and died in 319 (834), and ʿAbd Allāh al-Yūsufī (al-Dūʾīrī) (died in 357-358 = 967-968). It is impossible for us to say what services they rendered to calligraphy, as no genuine specimens of their art are extant. An alleged autograph by Ibn Mūāsa in the Khādisī āl library (Cat. i. 141) is a clumsy forgery perpetrated by the modern calligraphist ʿAbd Allāh Bay Zuhūlī; the Korān itself, written in a Persian hand with a Persian interlineary translation in red (ink, is not older than the year 1000 (1591-1592). Later on these two calligraphers (known as abū al-Ṭālib) were regarded as reformers of the written character. Ibn Khālid al-Miṣṣīṣī states that Ibn Mūāsa transformed the kūfī character into that now in use (māṣūla ḫāṣṣaʿ al-ʿṣūr ʿalā ḫāṣṣaʿ l-ṭāʾiʿ). How little Ibn Khālid al-Miṣṣīṣī was conscious of the difference between a calligraphist and a reformer of the script is shown by the fact that he makes the same statement in the same words with reference to another calligraphist, Ibn al-Bawwāṣ, property owner of the same name, who died in 307 (920).
the coins of the first century, especially those of the early period, is not so very much different from the cursive script.

In view of these facts it is impossible to avoid the conclusion that the difference between the two types was chiefly due to the nature of the material written on, though at the same time there existed a tendency to create a separate monumental script.

The distinction between the round and the angular script became more pronounced in the 11th century: the former assumes a still rounder shape, and apart from a few points of detail, appears in form practically identical with those now in use; the angular writing both on stone monuments and coins and in manuscripts of the Koran becomes still stiffer and more angular. In the 12th century the angular script enters into a new phase of development which removes it even further from the round cursive. — The name 'Kufic' (كوفية, كوفية) has of old been applied to the angular script, but the origin of this appellation is not easily explained.

There can be no doubt that the name is derived from the town of Kufa, which, founded in the year 17 (638), was one of the oldest Muslim cities, and before the foundation of Baghdad (150 years later) was the religious and intellectual center not only of Iraq, but of the whole East. It goes without saying that in a town of such importance the art of writing must have flourished, and this is borne out by a statement of the Fihrist, according to which the people of Kufa first invented a special process of tattooing by means of (fermented) dates, whereby the hitherto hard and stiff parchment was made soft and flexible. Although the script itself, as we have seen above, was known in Mesopotamia at least 100 years before the foundation of Kufa, we may conjecture that it received its name from the town in which it was first put to official use; the name therefore probably arose in Mesopotamia, perhaps in Baghdad itself, and spread from the centre of Islam over the whole empire as an appellation of all the more angular forms of writing to distinguish them from the round cursive. The name first appears in the works of the most celebrated of all the oldest scriptors: that of Mecca, of Medina, of Baqra, and of Kufa. Unfortunately he only describes the Meccan script in a tolerably intelligible manner. It is surprising that, according to this account, two cities which were situated at a comparatively short distance from each other, should have possessed two distinct types of script, while Syria which for three quarters of a century was the centre of the empire, and Egypt where probably more use was made of writing than anywhere else, are passed over in silence. It would also seem curious that neither of the scripts associated with one of the holy cities was used for copies of the sacred book.

If we read further that these four scripts were derived, one from the other by the calligraphers: Kufa at the time of the Umayyads, we realise that no such reliance need be placed on the statement regarding the four different scripts. It proves however that the appellation 'Kufic writing' was in existence at that time. Later on it occurs frequently, once in the Shihb, in the form of $\text{Kufic}$ $\text{الكسندرية}$, an expression which seems to indicate that it was regarded as a charac-
During a period of about 500 years the kufic character, when written with the round script, was used almost exclusively for copies of the Koran (of profane books of the older period written in kufi only a single one is known, a fragment of a genealogical work — see Alwardt, Versuch, Berlin i. 367, published by Krogder, Uber zwei Frgmentenblatter mit altertumlicher Schrift in der Akademie der Wissenschaften zu Berlin, 1875) inscriptions on stones and coins, and for a short time also on official documents, especially of a legal character. Standing unrelated to the needs of practical life it was artificially cultivated as a kind of hieratic script: it existed side by side with the cursive, but not without being influenced by it, and passed through a series of stages, probably not like that of the cursive lead to higher perfection, but to degeneracy, and finally to complete extinction. That it was an essentially artificial script, which was frequently found difficult by the scribes, is proved by the fact that the latter often inadvertently drop into writing the round hand (cf. Arabic Paleography, plate 111, 114, 116).

We will now consider the monuments containing Kufic writing in detail:

1. Manuscripts of the Koran. With one exception (Arabic Paleography, plate 43) all old copies of the Koran are written in kufi. Apart from the fact that it was regarded as a hieratic script, the use of kufi has a highly inconvenient character may possibly have been due to an imitation of the Estrangela, which as is well known continued to be used for copying the Bible even after the introduction of the Peshito character: but this hypothesis cannot be proved. The use of the Kufic Koran was long disdained, until the discovery of several manuscripts or fragments rendered more accurate conclusions at a distance. Unfortunately we do not refer to the time when the manuscripts were written, but to the date at which they became the property of a mosque foundation (mawṣil); but as most of these copies, especially those of large size (nawri), were written for a special purpose, we may assume that the dates are nearer than is commonly supposed, and are not so distant from the time of origin. According to the mawṣil-owners' remarks on the foundation) most of the dated Korans belong to the ili. century; viz. the Paris copy no. 336 (de Slane, Cat.) dating from 229 (843-844); ib. 'Uqairī ad-][' (ib. Uqairī ad-][', the Cairo fragments no. 35101 from 270 (885-886); ib. 'Uqairī ad-][' (ib. Uqairī ad-]['; the Cairo fragment no. 477 (890-891) probably from the mosque of 'Amr at Old Cairo, no. 40760 dedicated by Amadīr, the governor of Damascus from 256-264 (870-877). The only specimen of the ili. century is the complete Koran, Cairo no. 387 with a mawṣil dated 608 (784-785); ib. 'Uqairī ad-][', ib. Uqairī ad-][', ib. Uqairī ad-][', ib. Uqairī ad-][', ib. Uqairī ad-][', ib. Uqairī ad-]['; cf. Zardikān, ed., Imp. Rush., Bibl. Islām., ii. 66-233. By means of these dates, however scanty, we are able to fix the different types of scripts exhibited in these manuscripts, and thereby to arrive with tolerable accuracy at the date of the other copies as well. The writing of the Koran of 608 is still simple and natural, though executed with great care; there are few consonantal dots (\(\text{ذ} = \text{ذ} \), \(\text{ق} = \text{ق} \), \(\text{ك} = \text{ك} \), \(\text{س} = \text{س} \)) and none at all for the vowels, it would be quite wrong however to regard this fact as an argument against the existence of these signs at the period in question. The writing of the ili. century Koran differs considerably from that of the earlier manuscripts. The letters are of a rounder shape, and the mawṣil is drawn out to a long sharp point in the left bottom corner. Occasionally the letters are not written, but practically painted, i.e. the outlines of the characters only are drawn and filled in with ink, thus Cairo no. 388.

During the ili. century copies bearing an unquestioned date — the Paris ms. 28, 353 of the year 500 (912-913) and 26, 356 of 566 (976-977) and the Constantinople copy Aya Sofya no. 21 of 337 (948-949) almost certainly belong to the ili. century — but there seems to be no doubt that the copies in which the tendency towards rounder forms and ornamental flourishes in the final letters is further developed, may be safely assigned to the iv. century. It is surprising that Kufic Koran, which however are seldom complete, are very rarely dated; out of the 227 fragments at Paris (= 4600 leaves; catal. de Salze, i. 87) only 3 are dated, of the 6 at Berlin (6 of which are on paper) not a single one, and of 40 copies at Cairo only three.

During the fifth century the use of kufi for copies of the Koran seems to have become less frequent. The material in our possession is not sufficient however to fix the date of the change more definitely; for although large numbers of Korans (thousands as we are told) existed at that time, especially in the mosques of Cairo, only a very small percentage have been preserved. The Catalog. ii. p. 53, of 427 = 1055-1056; a Cairo copy of 499 = 1105-1106; both written in the round hand, The same applies to the sixth century. Of the few dated copies (348 = 1133-1134 at Mecca, 535 = 1160, 566 = 1170-1171, and 598 = 1200-1203 written in Persia) three are written in the round hand; only the copy of 566 exhibits an ornamental kufi, which represents a third type of that script viz. a form basing towards the arabesque, especially in the final letters, and corresponding to the script of the stone monuments and coins of that period.

Inscriptions on monuments and especially coins yield far more copious material for the study of the kufic script; it must be borne in mind however that the shape of the characters may in these cases have been influenced to some extent by the nature of the material written on.

Three principal types of kufi may be distinguished on these inscriptions:

1. The old simple kufi, generally stiff or angular, which on the whole lends itself to the ili. century, although already in isolated inscriptions belonging to the end of the ili. century, e.g. the inscription on a well at Ramsa of the year 172 (788-789); see van Berchem, Inscriptions arabes de la Syrie, p. 47, plate ii. 31 the tops of some letters (l, n, c, q) are drawn out to a sharp point, thus exhibiting the first beginnings of the tendency towards ornamental flourishes. The numerous epigraphal inscriptions at Old Cairo which date from the ili. century as well as the inscription referring to the building of the mosque of Ibn Tulun, show a further development in the same direction, which is also exemplified on the coins of that century.
3. The inclination to adorn the characters, especially the final letters, with arabesque-like flourishes becomes still more pronounced in the 14th century, particularly with the rise of the Fāṭimid dynasty; (courtear deur; see van Berchem, Matériaux pour un corpus inscri. arabo., part i, p. 3). This script remains characteristic for Egypt under the rule of the Fāṭimids (about 909-1171 A.H., 505-655 A.D.) and disappears with the fall of that dynasty.

4. In the 17th and still more in the 18th century the scripts of Syria and Mesopotamia assumes fantastically intertwined forms, which in the end become positively ugly; this is particularly noticeable on the coins of the last 'Abbasids of Baghdad, who retained this script, perhaps as a kind of hieratic character, until the end, although it seems that only professional calligraphists were able to read and write it, while the mass of the people remained entirely ignorant of it.

A reaction against this unnatural and useless script began with the 17th century. We may only add the question, whether it started in the East immediately after the fall of the Fāṭimid dynasty or in Egypt against the Fāṭimids, which began in Persia in the 13th century (this is van Berchem's view, see Matériaux 1, i. 85-254 et seq.; Inscriptions arabo.-Syriaques, in the Mémoires de l'Institut Egyptien, t. ii, fasc. vi, p. 450), or whether on the contrary it spread from the West to the East. It is certain in any case that on coins the round script first appears in the West, first of all on the coins of the Almoravids, (All b. Yūsan b. Taghīfūn (500-517 = 1090-1105), see Stanley Lane-Poole, Cat. Brit. Mus. ii. 259). After the foundation of the Almohade dynasty in 524 (1130) it gained an exclusive predominance; on the coins of 'All b. Yūsan b. Taghīfūn still has the old form, on the Almohade coins the latter form is used without exception. The most modern Arabic inscription on stone in Egypt dates from 555 (1160), but the round script occurs as early as 100 years before that on coins under al-Mansūr (507-487 = 1016-999), in the possession of the author; in Syria we find: Damascus 529 (1124-1135) in the round script, 551 (1165-1170) in the same, 571 (1190-1205) at Bosra in the round script. Aleppo 543 (1148-1149) in the round script, 545 (1148-1154) at Palmyra in the round script (see van Berchem, loc. cit. p. 453). On the coins the round script first appears a few decades later: a silver coin of Saladin of the year 573 (1177-1178) shows a script which is still somewhat angular, but which can hardly be called Arabic; the genuine naskhi (ô e. written in this later form) is first seen on a dirham of 'Alā' of Damascus (592 = 1195), see Cat. Brit. Mus. iv. 283. After 622 (1225) Naskhi is used; or gold coins as well without exception. Towards the same time it makes its appearance on the coins of the Seljuqs of Asia Minor (610 = 1214-1215) still angular, 616 = 1216-1220 round script; Cat. Brit. Mus. iii. 89, 112, 118. On the stone monuments of Asia Minor only the round script is used from the beginning of the 7th century onwards (cp. Sarre, Rènes à Klein-Aisien, p. 319); Naskhi is occasionally found as well, but then on ornamental bands consisting of short inscriptions of hardly more than a single line; the content is religious, anally a passage from the Koran, and the whole inscription serves only a decorative purpose.

The use of kufi persisted longest in the far East, Mesopotamia and Persia. An extremely ugly form of it appears, to the exclusion of any other script, on the coins of the last 'Abbasids of Baghdad, (649 = 1251-1258), a time when the round script has been used for a long time in the West. The latter, however, is found on: the not very numerous monuments of that period, thus on the Talisman (Ishtha) Gate at Bagdad dating from 618 (1221-1222), Sarre, Islamische Thorschmiede, p. 8 et seq.; on the bridge of Hurba of 629 (1231-1232); Jones, Memoirs, chapter entitled: Median wall of Xerophone, on the Modrasa Mustajirra in Baghad (Nishapur, Voyage en Arabie, p. 241); the minaret of the last-mentioned building, now called Māsamī Sāhī al-Qadhī has inscriptions in ornamental Kufic writing (Oppenheim, von Mittelm. zum pers. Gesch., ii. 240).

Owing to the lack of old Muslim monuments in Persia, little can be said about that country. The inscription of the Church Minaret at Erzurum, supposed to date from the year 551 (1040-1053), does not seem to be genuine. The oldest buildings hitherto known, viz. the tomb of 'Alī-ibn-Kubālī dating from 557 (1162) and the masoleum of Mūsā ibn-Khaṭīb at Neībūr, erected in 582 (1186-1187), have no inscription on the round script; it is found on the sepulchral monum. of Oldjātu at Sulaimān which dates from the year 620 (1223). In the different countries conquered by the Muslims, the Arabic script which they were forced to accept together with the language of the conquerors, was subjected to certain modifications, partly perhaps under the influence of the old native scripts, and partly owing to special circumstances which it is impossible to determine in detail. In no case however has the transformation gone so far as to lead to the development of an entirely new script, just as the Roman character, as used in North America, does not differ very much from that used by the Italians.

The oldest and most widely spread of these modified forms, which for that reason must be regarded as one of the most important, is the Maghribi (i.e. 'Western') script, which in our time is used throughout the whole of North Africa and in some parts of Central and West Africa, while in the Middle Ages down to the beginning of the modern period it was extended to Spain as well.

According to tradition the western script was originally called 'that of Kairawan', and there seems to be no reason for doubting this statement. After the conquest of North Africa, Kairawan founded as early as the year 508 (1112-1113) became the political capital of the West; and after the foundation of its great university in the next century it was the intellectual centre as well. The importance of the town grew still further in consequence of the political separation of the Maghribi including Egypt from the empire of the caliphs, which took place towards the end of the century; Kairawan now became the residence of the new independent dynasty of the Aghlabids (814-963 = 806-909), and we may assume that
the new script was developed there at this period. That the change took place at Kairwan seems to be proved by the name 'script of Kairwan.' As to the time the following points may be noticed: 1. The script on the coins of the Aghlabids differs in a striking way from that of the coins of Eastern countries; on the whole it is still stiff and angular, but it already exhibits clear signs of a beginning modification. 2. It is well known that a characteristic feature of the Western script in which it differs from that of the East, consists in the punctuations of ٣ and ٤ as ٣ and ٤, as had been done in the East down to ii. century (see above). This fact seems to prove that the Maghribi writing separated from that of the East at a time when the latter still placed the dots in the older way. Similarly it would seem that the distinct order of the letters in the Maghribi alphabet dates from the period in question. The arrangement is partly that of the old Nabataean alphabet, and partly the later system based on the similarity of the letters. It is as follows:

٣ ٤ ٥ ٦ ٧ ٨ ٩ ١ ٢ ٣ ٤

The oldest specimens of this script (given in Houdas, Nota sur l'écriture maghrébine, in Nouveaux mélanges orientaux, p. 94) do not seem to be much older than the year 800 (912) but show clearly that Maghribi writing is a development not of the old round hand, but of the Kufic script; it is therefore not the result of a natural process of evolution, but represents the conscious attempt of a scholar to create a new script on the basis of the old hieratic Kufic.

A new form of writing arose in Spain after the centre of the Maghrib had been shifted from Kairawan to that country, it is called 'Andalusiš' or 'Corbayan,' and is distinguished from the still somewhat stiff script of Kairawan by the remarkably round forms of its letters. Ibn Khaldun (Muqaddima, l. 3, 30 on the script) states that after the script of Kairawan and Mahdia had gone out of fashion, the Andalusiš writing appeared in the West (Africa) where its use only declined together with the decay of the Almoravid power. Under the Marinids, he says, writing became still worse, so as to be very difficult to read; by this third script he evidently means that used in Morocco, which after Fāš (Fasa), the third intellectual centre of the Maghrib, is called the Fāš script.

Although in comparison with Spanish writing it represents an undeniable deterioration, Ibn Khaldun's judgment is somewhat too severe. The Fāš script of the books is not only legible, but frequently very pleasing as well.

After the vii. (xiii.) century Muslim states of considerable importance arose in Central Africa; these to the time the following points may be noticed: (a) the four types of Maghribi are distinguished in Africa (Houdas, loc. cit., p. 105): 1. The Tunisian script which closely resembles that used in the East, but dots ٣ and ٤ in the Western fashion. 2. The Algerian script, usually pointed, and angular, and frequently difficult to read. 3. The Fāš distinguished from the last by the round shape of its letters. 4. The script of the Sudán, which is generally thick and clumsy, and more frequently angular than round. Owing to the progress of Islam among the negroes of Central Africa, especially the Hausa, during the second half of the xii. century, this script has spread considerably, and reaches to the West as far as the Atlantic where Lagos has become a new centre of Islam, and to the East as far as Wadai where it meets the Egyptian māḏīl.

Persian writing. — It has been pointed out above that the end of the vii. (xiii.) century is to be regarded as a turning-point in the development of the Arabic script: it was at this time that its /h/ disappeared from practical use and that the round script reached the culminating point of its growth. The evolution of the Persian script — hūd — seems to fall in the same period, both of its beginnings can be traced very much earlier.

This new script is characterized by the tendency to slope downwards from right to left; hence the final forms of some letters, especially ٣ and ٤, are drawn out in a long line, and ٧ and ٨ rounded, and a similar line is required to form the connection between certain letters.

This peculiar development of the Arabic script among the Persians is manifestly due to the influence of the old national script, the Pehlevi. Like the other countries with an old civilization of their own, which fell under the rule of Islam, Persia, where the resistance against Arab influence was particularly strong, retained its old script for several centuries after the conquests. It is found as late as the year 140 (735-736) on the coins of the Seljuks and the Arab governors of Tabaristan. More than two centuries later the author of the Fāšīrūsh gives a very exact description of Pehlevi writing; he states that flesh was written ٧ and read ٨ in long curves, and a similar line is required to form the connection between certain letters.

The manuscript given in the Fāšīrūsh, notwithstanding the imperfection of the tradition, shows clearly the
same tendency to slope downwards form right to left; the hypothesis that it exercised some influence on Arabic writing is therefore inevitable (cf. Plongé, p. 23); the first three lines of the specimen are upside down, the fourth line is the reverse of the third, unless both lines are intended to be Arabic). The author of the Kitâb al-nilâma of Mashâqiš al-Mârî (Tehârâ, Soc. Oc. Serv., plate VIII and IX) which until recently was regarded as the earliest specimen was written in 647 (1250-1251) and the script used is Persian naskh. The autograph of Bâhechâr Nishâpi, dating from about 730, similarly shows the characteristic sloping tendency of the later naskh.

In books however the old Arabic script was preserved much longer. (To the post of 543 = 1148-1149 Berlin, Persia, Paris, 74). The Angkān, in which however the Persian punctuation of the letters and words is already fully developed though not always consistently used, finds but little place in official documents. A species of the old naskh is called by them ta’liq (script for correspondence).

From Persia the Arabic script spread to the East and South East over Asia, where many authorities prophesy a great future for this script. A Chinese Buddhist master is known to have written in naskh, although it is not certain whether he first appeared there as early as the ii. or not until the middle of the iv. century. The presence of the second Chinese inscription in the old mosque of Canton (Himly, Zeitschr. d. Orient. Morgenl. Gesellschaft, XL, 141 et seq.,) dating from 701 (September 1350), according to which the original text was written in the period Tulun-Kwan of the Turan (627-650) is not clear. Apart from this Arabic inscription of this period we possess practically no written documents of an early date. The inscriptions on old brass vessels can in most cases not be dated with any certainty; it is improbable that they go back beyond the j.v. century. Chinese Muslims, in spite of their apparently very small number (perhaps 50000) are practically nothing for the religious life of the community and for Muslim learning. It was not until quite recently that Chinese Muslims have begun to write and to print; the latter they do according to a very old technical process by means of wooden blocks, the engraving of which necessitated certain modifications of the written character.

The Muslims of India have also received their script from the Persians whose language they study as much as Arabic. The use of naskh prevailed throughout, naskh being reserved almost exclusively for religious and legal works, as in Persia and Turkey.

The Malay archipelago, like India, first received Islam from the Persians, whose places was later taken by Southern Arabs who went there in the early Middle Ages as merchants and sailors. At the time of the traveller Ibn Battuta, c. A.D. 1350 Java was governed by Muslims of Sumatra of the Shahît school. 150 years later South Arabians emigrated towards the northern coast of Java, whereby the influence of Islam was greatly accelerated (van Heemskerck, pp. 4). Old documents in the Arabic character do not seem to exist; the modern script shows clear traces of its South Arabian, non-Persian origin.
The conversion to Islam of the East coast of Africa similarly proceeded: from South or East Arabia (Oman); it does not however seem to have made much progress during the Middle Ages. A new invasion of Arabs from East and South Arabia, which began towards the end of the 11th century, and was continued with great energy by Negro converts from Zanzibar, since the middle of the 16th century, has gone far in spreading Islam throughout large parts of East Africa, at the time when the intervention of European powers began. The progress of the Arabic character which had already reached Uganda and the Congo, has since then been arrested; and in the last 90 years a retrograde movement seems to have set in.

The South-Arabian Scription. The old inhabitants of South Arabia (Sabæans, Minaeans and Himyars) used a consonantal script, the letters of which — with the exception of a few ligatures or rather monogrammatic combinations — never appear combined on the stone and bronze inscriptions in other parts of Arabia. This script is derived from the oldest form of Semitic alphabetic writing, which as Praenestius has pointed out is distinctly from the ‘Mesa’ script hitherto regarded as the oldest. Whether the Southern Arabs received it from Palestine in the North or from Southern Mesopotamia is a question which cannot yet be solved with any certainty, and the same applies to the date when it was introduced. If it came from Palestine, the introduction probably falls later than the year 1000 B.C.; if from Southern Mesopotamia it may have taken place somewhat earlier.

It is much more surprising that nothing is known about the time of its disappearance. Probably it did not survive long after the decay of the South-Arabian civilization; in the time of Muhammad it seems to have been already obsolete, hence e.g. the fabulous statement of the Khallilîan that at the time of the rise of Islam nobody could read or write in Yemen, a most astounding statement which is refuted by direct evidence (e.g. the inscriptions found from Yemen skilled in writing by Labh). Apparently thought it had fallen out of use, it was still known, as is proved by the name applied to it by the Northern Arabs (masrád, propped, supported), a name founded on the peculiar shape of the characters usually consisting of one or two vertical or slightly slanting strokes which seem to carry or support a curve, circle, hook or notch). It is certain in any case that after the rise of Islam the North Arabian script became solely dominant.

The nations of South Arabia, which were characterised in antiquity by the same restlessness as to-day, migrated at various periods, which at present it is impossible to fix accurately, through North Africa as far as the South of Syria, at first perhaps as traders and later for political reasons. Sabæan inscriptions have been found near al-'Ola in the far North of Arabia, and it is not impossible that others may yet be discovered in Midian, and on the Southern frontiers of Palestine as well as in the country East of the Jordan.

Apart from these monuments other inscriptions are found in the region of Northern Arabia, under the script of which is clearly derived from South Arabian writing. According to the shape of the characters it may be regarded as certain that they belong to three different periods, and thus owe their origin to three distinct migrations of Southern Arabs. (The best account of these South Arabian alphabets is found in Littmann, Zur Erörterung der Thamuditischen Inschriften = Mitteilungen der Preussischen Gesellschaft, 1904, pl. 41, and Dussaud, Le Chretien, 126.)

1. The oldest are the lîhyâ inscriptions — according to D. H. Müller, Epigraphische Denkmuler, p. 20, this is the oldest form of any South Arabian script; and represents the connecting link between the Old Semitic and the Sabæan script — it is chiefly found in the district of al-'Ola. The texts are unfortunately not very extensive; as they contain indiscriminately Jewish expressions (Liläbshâ, Ephemeris, li, 120) they cannot be older than the hellenistic period.

2. An obviously later type of script is found on the inscriptions, formerly called proto-arabic, and later known as Thamudic. They were first discovered by Euting in the same district as the lîhyâ inscriptions; Dussaud, generally farther North. Burton (Land of Midian, ii, 138) found a few in Midian; and the present writer discovered a number in the mined town of Gaba to the North West of Tabûkh, see Mêlanges de la Faculté Orientale de Beyrouth, iii. In spite of their large number — Euting alone collected 794 — they yield very little information, and their date cannot yet be fixed with accuracy.

3. Still more modern, because clearly exhibiting curvilinear forms, is the script of the very numerous inscriptions found in the Sûfah, an unvisited volcanic district about 100 miles S.E. of Damascus. The information yielded by their contents is similarly scanty; it is possible however to fix their origin in the time between A.D. 1000 and 1100 with some certainty (Dussaud and Mäcler, Mission etc., p. 66 extend this time as far as before the IV. century). It is impossible to say how late the script survived; it is a striking fact that the inscription of Numâra dating from the year 328 is written not in the Sûfah script, but in Nabataean characters.

The South Arabian script also spread to Africa, where it still survives in a form differing from it externally but not in essential characteristics. The migrations of South Arabian tribes to Abyssinia, where they founded trading-stations at first probably in the district of Axum, seem to have begun long before the commencement of our era. The Ethiopian nation speaking a Semitic tongue arose from their mingling with the native tribes. Monuments in their South Arabian script which at that time was scarcely modified, only exist from the period after the conversion of the Abissinians to Christianity (IV. century A.D.). Soon afterwards however a fundamental transformation took place, perhaps under the influence of Greek writing; and according to D. H. Müller (Epigraphische Denkmuler aus Abyssinien, p. 56 of 190), it is to be regarded as the conscious work of one man, perhaps a Greek. From all of the direction of writing, which until then had been from right to left, and partly boustrophedon, was fixed as running from left to right; the writing was further transformed into a syllabic script in such a way that the appropriate vowel was affixed to each consonant in the form of a dot or stroke or hook.
Between 900 and 1000 A.D. the Aramaic language died out, and was replaced by modern dialects, the most important of which, Aramitic, is still used by the Semites of Abyssinia and a lingua franca. It has retained the old script, only forming new characters out of the old material, in order to express new sounds. Even some of the neighbouring peoples — Gallis and Aga tribes — have tried to adapt the script to their languages.

This modern Abyssinian script is the last direct descendant of the old Semitic alphabet, which after a space of more than 3000 years still retains the principle of leaving the characters unconcealed.

**Bibliography**: In addition to the works quoted above the following may be mentioned:

- De Sacy, Nouveaux apéages sur l’histoire du l’alphabet des Arabes du Monde, in the Journal Asiatique, Series 1, 3, 199 et seq. Arnef. The present order of the alphabet in Arabic;

**A. ARABIC LITERATURE.**

**CLASSICAL ARABIC.**

The phrase classical Arabic denotes that form of the Arabic language which since the commencement of Arabic literature has been used by the Arabic writing nations for all their literary productions (for the very few exceptions see below, articles ARABIC DIACRITICS and ARABIC LITERATURE). The earliest specimens of classical Arabic known to us are found in the pre-Islamic poems. The problem arises here two poets (who, for the most part, must have been ignorant of whatever existed in the Arabic writing of statistics) — either (perhaps with the object of securing for their works a wider field of circulation) they used for their purposes a language composed of elements from all the different dialects, such as may have been created by the necessities of trade, and which it only remained for the still unemitted, or the dialect of any particular tribe (perhaps owing to political circumstances) achieved in pre-historic times special pre-emminence as a language of poetry. A final answer to these questions, if it ever becomes possible at all, will have to be reserved until all accounts of the ancient dialects in our possession have been subjected to a careful scrutiny. It may be remarked, however, that the analogy of other literary languages, the history of whose origin can be followed more closely (e.g. German, English and French), seems in the case of Arabic also to favour the hypothesis of a single dialect as the original form of the poetical and thus of the written language. — An account of the present state of our knowledge on this subject is given in Bockelmann, Geschichte der Semitic Spr., i, 253; esp. also Noldeke, Religions aus der Sprachwissens., p. 1—44; Id., Die Semitic. Sprachen (2. Aufl.), p. 52 et seq., see however the review of the last-mentioned work in the Liter, Centralblatt, 1899, col. 1404; Proctor in Schleicher’s Sammel-Sprachen in Asien, 1892, p. 688; and A. Fischer in the Zeitschr. d. Deutsch. Mongol. Gesellschaft, lix, 662, note 4.

Except in a limited sense there can be no question of a development of classical Arabic. In spite of the fact that vocabulary and forms of expression were again and again subjected to considerable modifications in accordance with the influence of outlook between the various stages of civilization, and with the special requirements of each separate branch of knowledge (cp. A. Fischer, loc. cit., i, 580 et seq.), it may still be said that the grammatical skeleton of Arabic, as now written, by the better class of newspapers in Egypt and Syria, is essentially identical with that of the old poetical language. (The difference between classical Arabic and the modern vernacular dialects is of course proportionately greater, see below, ARABIC DIACRITICS.)

The cause of this quite unique conservative state may first of all be found in the fact that the later Muslims regarded the language of the Koran as genuine classical Arabic (see below), so that this particular form of the language was almost invested with religious sanctity, and, secondly, it would seem, in the inability of the Arabs to free their tongues from grooves into which they have once fallen.

It would lead us too far to give here an account of the grammatical structure of classical Arabic; we can only refer to the special literature on the subject: Socin’s Arachisches Grammatik (3rd ed., 1860, and 1898, revised by Bockelmann), the most up-to-date of existing grammars, contains on p. 161—200 a good bibliography.

Wright’s Arabic Grammar (3rd ed., 1896 and 1898, revised by Robertson Smith and de Goeje), de Sacy, Grammaire arabe (3rd ed., 1864); Fleischer, Kleine Schriften, Noldeke, Zur Grammatik des Kais, Aramisch, Beckendorff, Syntaktische Verhältnisse und maximinale artificial, and essays scattered through these oriental periodicals.

A rapid survey of the Phonetics and accent of classical Arabic (particularly suitable for non-Arabists) is given in Stumm’s Arabische, Persische und Tuschibisch in ihren Grundlagen. The most important Arabic sources on classical Arabic are mentioned further down in the article ARABIC LITERATURE. — Dictionnaire de l’Arabe by Lane, Fiehner, Doty, Kazimirs, Bekot, Wahlmutz, etc.

A few remarks on the power of expression of Arabic as compared with that of other literary languages may not be out of place. Comparing it first of all with the other Semitic ton-
gues we notice that the possibilities of synthetic distinctions are in Arabic developed to a far greater extent and brought out with greater precision than in any of the others. Where other languages have to content themselves with simple co-ordination, Arabic commands a large number of subordinating conjunctions. In one respect however, Arabic as well as its sisters compares unfavourably with the Aryan languages: while for the noun it has created a great number of subtle distinctions which enable it to express even the most abstract concepts, the development of the verb has been most one-sided. We seek in vain for a distinction between inchoative and permissive forms of expression: *šuwm* means 'he was standing' and 'he rose'. Similarly the different grades of the simple meaning of the verb which we render by means of various auxiliary verbs, are frequently left unexpressed: *yabrū* 'he reads', and 'he is able to read'. The expression of the tense also often lacks precision, in spite of the development of a number of verbal expressions which could be used, such as: *šub*, *šawf*, etc.) (cp. on this point the grammatical works referred to above, and Bruckmann, Grundriss, l. 23 et seq., as well as the same author's Gesch. d. arab. Litter., l. 11 et seq.)

The extent to which till now favoured the growth of Arabic literature by putting new problems before, li. has been set forth below (see ARAB. LITTER.); but attention has also been drawn to a few points in which the language of Arabic literature and Arabic philology more or less depend on Islam. Classical Arabic owes its wide diffusion and its still unassailable predominance to the fact that the Koran (which for the most part was composed in the dialect of Mecca, was assimilated by the Muslims, at least as far as the vocalization and orthographic signs are concerned, if not to a wider extent (cp. Völkers, Volkssprache und Schriftsprache im alten Arabien und Hartmann's remarks in the Oriental. Literaturzeitung, ii. 127, et seq.), to the language of the poets which was in the main retained as classical. The element which on the whole they did not venture to change (cp. however e.g. Völkers, loc. cit. p. 83, *šawf* in place of *šawf*) were the consonants of the sacred book as committed to writing at an early date, although they frequently agreed but ill with the classical pronunciation. This is the reason why the consonantal orthography of the Koran still remains without any essential change the norm for classical Arabic. The striking phenomenon presented by the omission of many terminations in the Koran is probably to be explained by the assumption that the creators of this orthography in writing down the text pronounced each word separately, and thus accepted the 'absolute form' as the normal form of the word. Although this hypothesis appears, at first sight, to be highly probable, the fact that the early copies of the Koran (Cp. Noldeke, Geschichte des Quaran (1st ed.), p. 247 et seq.)—The endeavour to read and interpret the Koran an 'correctly' as possible is eminently responsible for the creation of two sciences which proved highly important for the task of putting the language on a scientific basis and controlling its further development: the sciences of Phonetics and Grammar. It is true that in the field of the former the Arabs seem to have been influenced by the Indians, and in that of the latter by the Greeks (Aristotle; Bruckmann, Gesch. d. arab. Litter., l. 97), there can be no doubt however that their achievements in both subjects are considerable. To the Arabic writers on Phonetics we owe an exact definition of all the old Arabic consonants, and native Arabic grammar (however artificial it may appear to us) has unquestionably rendered an important service to Arabic, by restricting the system to the inherent in all Semitic languages to a minimum.

It would be difficult to forecast the future of classical Arabic. In Muslim countries all attempts to elevate a vernacular dialect to the position of a new literary language have proved to be failures (see article ARAB. LITTER.), and we may assume that the language which has had a life of at least 15 centuries will maintain its position so long as its baldaans exist in the religion of Islam. (A. SCHEIDT.)

**ARABIC DIALECTS.**

1. Definition of Arabic Dialects. Classical Arabic, the oldest specimens of which are found in the pre-Islamic poets, must be regarded as a form of the language which, originating probably in the Eastern part of Central Arabia, was later elevated to the position of a common language, and the rules of which were defined, not without some artificiality, by the Arab grammarians. It is obvious from the outset that forms of speech differing from this language must always have existed, and in the same language we possess many specimens (see sánâ'), Further dialectical details of the older period are preserved to us on other inscriptions (including Nabataean monuments) found in Arabia itself and in the neighbouring countries, and especially in the different peculiarities exhibited by early specimens of the language, in variants of the Koran, and in numerous statements of Arabic grammarians and lexicographers. At a later stage the mixture of Arab tribes, the intercourse with foreign nations, the influence of the classical language and other circumstances may be expected to have caused modifications in the form of the spoken language. Considerations of this nature show that it is a mistake of many scholars, and was fully comprehended by the Koran, the very nature of the language (as is usually done) immediately from the classical language. It is necessary on the contrary to make the relation of such dialectical forms to classical Arabic the subject of investigation, while classical Arabic itself has to be divested of its dogmatic character and to be regarded from the point of view of linguistic history. With regard to certain elements of modern Arabic it has already been proved that they are not derived from the classical language (see below). For the rest it may
be said that the historical investigation of Arabic dialects and of the Arabic languages in general has not yet emerged beyond the very first beginnings. In addition to the further investigation of modern Arabic it will be a task of fundamental importance to collect the dialectical peculiarities of old Arabic, so far as they have been handed down to us, with as much completeness as possible, and to consider them as a whole. A part of this problem has already been solved by Völlers. In the following pages we consider the modern dialects, tracing back their history as far as possible. —

II. Extent of the region covered. — The following are the countries where Arabic is still spoken in our own time (partly side by side with other languages): Arabia together with Muscatonia and Syriia as far as the frontier of Asia Minor; North Africa, Southern Sahara, Western Malsi; Egypt as far as Sotha as the western headwaters of the Nile; Jordan, Darfur, Wadai, Bornou; districts in the curve of the Niger and in Senegal; the western Sahara between Senegal and Morocco; Zanzibar and the districts on the opposite coast of Africa were colonized from South Arabia; other colonies are found so far as the Malag Araboland. — Arabic was formerly spoken in Spain (down to c. 1500), on the Balsarin islands, in Sicily, Patellas (down to the 18th century), Madagascar. Whether Arabic was ever a vernacular language among the Moabites in the South West of India has still to be determined. — Within the boundaries indicated above Arabic came into contact with a number of other languages; we follow under the separate countries.

III. Sources. — On the sources for the study of the dialectical conditions of the earliest Arabic, see above under I. For the later period the following have to be considered: 1. Arabic literary texts written in the vulgar dialect or with a vulgar colouring, some of which are of a very early date (Cp. e.g. the Malal; 7). The most important works are the Church Arabic literature (cp. Georg Graf, Die christlich-arabischen Literatur bis zur frömlichen Zeit, Strassborg, 1905); III. the Sprachbruch der alten christlich-arabischen literatur (Leipzig 1905); and documents in Jewish Arabic. The latter dialect (usually written in Hebrew characters) possesses in addition to important old works (Cp. Aba' 3. Walld. Marwan b. Djasz, Das book of Hebrew, 1875) an important literature extending to the most recent time which still等待 to be exploited from the point of view of linguistic history, Cp. Erich H. von Vassal, Die litteratur populaires der israelitischen und arabischen jahwe of the Historical and Critical studies, July 1904, and following numbers. A large number of interesting printed literature is preserved in the British Museum, at Strassburg, and in Berlin. Maltese literature (written since about 1800 in the Roman character; cp. Luigi Bonelli in the Archivio Gio- nello italiano, suppl. period. 1) is of considerable importance.

IV. Characteristic features. — The following pages give a comparative account of characteristic features of the Arabic dialects and of traits important from the point of view of linguistic history, arranged according to the usual grammatical scheme; the account does not in any way claim to be complete — the quantity of interesting and historically important material is immense. To this will be added, arranged according to the different dialects 1. where necessary, short remarks referring to the various linguistic spheres; 2. in order to facilitate a rapid survey of the historical relation of the several idioms to each other, the main points of comparison or the characteristic forms or the well attested forms of the independent personal pronoun and the perfect and imperfect of the first stem of the strong verb in the case of each of the better known dialects; 3. a bibliography of the most important literature (1).

1) The following points should be noted: 1. The transliteration adopted is that of the E. o. E. An acquaintance with the sounds of classical Arabic is presupposed (Cp. however Völlers, loc. cit. 2). Occasionally ð, = ð, = as semivowels, ð, = ð (like m in half) have been retained from the sources; the orthography of the vowels has on the whole been simplified, similarly in the paradigms under V. It has not been intended to express all the possible shades of the vowel sounds, ð denotes a short accented vowel. a a long accented vowel. The accent has been indicated, wherever it is given in the sources or can be determined with certainty in some other way. Forms in [ ] are corresponding forms in classical Arabic. a Abbreviations: m. = masculine, ð. = feminine, c. = nominative (gender); s. = singular, pl. = plural, cf.
**Preliminary note.** The differences between modern and classical Arabic have been regarded as so slight that some authorities altogether deny the existence of Arabic dialects; cp. Eichhorn, Über die verschiedenen Mundarten der Arab. Sprache (1799); Legrand, La vie et mœurs des Arabes de Syrie (1841). These views partly arise from ignorance of the real circumstances and partly from the fact that the investigation did not look beyond the common idioms such as now exist everywhere. At the present day, after the material in our possession has grown considerably the following points should be noted throughout with regard to general statements:

1. There are large districts concerning which we know as yet nothing; 2. the dialect of a country is not yet nearly known, if we know only the idioms of one particular point (especially the capital); 3. common idioms are to be found everywhere; the typical elements (which are sure to exist in abundance) must be sought far below the surface. Younger are not very suitable as specimens for the purposes of linguistic history. Fairy-tales also often contain many elements belonging to the older dialect or the classical language.

1. The guttural explosive *Hammah* of cl. Arabic has to a large extent been dropped. This is connected with among other things: 1. the loss of unaccented vowels. E.g.: 7aḍ("7ād") (gen.), 7aḥ(hād) (cp. under δ) if the conception of words and elements, e.g. 7aḍ(7ād) or 7aḥ(hād) is brought (gen.) marxaniča(a ṣawara) (7aḥ(hād) Spanish, similar) another noun (7aḥ(hād) (7aḥ(hād) (7aḥ(hād)) another noun (7aḥ(hād) (7aḥ(hād) etc. - On the other hand *Hammah* is not always used in the dialects where it is absent in cl. Arabic, thus in South Arabia after a long vowel.

2. 7aḍ. In the East and West it frequently contains a "swallowing" sound (Trip.). In Mor. it tends to become a labio-dental r. For the rest 6.

3. 7aḥ. In Alg. and Sym. frequently 7aḥ. For the rest 6.

4. 7aḍ and 7aḥ. Usually 7aḍ and 7aḥ among

**ARABIA.**

The ordinary values of the sounds are subject to numerous modifications caused by a variety of influences, especially the meeting of certain sounds within the same word, or from word to word. In Tadisi. e.g., /f/ becomes /θ/, /id/ becomes /id/, /mr/ or /ad/ becomes /a:/ and /ad/ becomes /ad/. Similar phenomena wherever we have vowel-stress descriptions. - Irregularities are frequent where stilitants meet, thus /nun/ (Trip.), /ahr/ (Malta), and other places in the W.'s, /saw/ (Jemar, etc.). /kand/ (Trip.), /sd/ or /yd/ alongside of /gg/ (Trip.) 'to pass by' (Mor.). Similar phenomena in the E.

In Maltese consonants at the end of a word regularly become voiceless. - Doubles consonants are usually preserved; the reduplication is dropped however regularly in Maltes and, frequently in other regions, in cases where a double consonant occurs at the end of a syllable, in Malta it is also regularly dropped after a long vowel. — For instance of a new reduplication see e.g. under /g/ and, under /q/, in the case of the Algerian verb.

Words are often considerably started and abbreviated, e.g. /bad/ instead of /bad/, /dhar/ and other forms used in Algeria for /dhar/ 'bought now', etc.

**Vowels.** Instead of e.g. a-i-i we have a large variety of nuances of vowel-sounds (a-i-ii, i-i, a-i, etc.). To a certain extent the vowels have lost their characteristic elements-distinguishing between different forms; sometimes the groups containing i and w have become confused (as in 'Oms'), sometimes all the three groups (W.), in these cases the vocalization depends only on the nature of the adjoining consonants (whether they are emphatic or guttural etc.) or on other vowels (harmony of vowels especially in the W.).

**Assimilation of vowels is frequent, e.g. /m-ir/ (m-ir) 'the drank' (Syr., Eg.). In the second radical of the verb the vowels of the perfect and imperfect are frequently assimilated to each other. — Unsounded short vowels are dropped, either altogether, or (in the E.) loss of /i/ and /a/ rather than /u/. Hence e.g. in Syria /hadda/ she wrote', but /hadd/ 'she drank'; an interesting distinction occurs in the form /hadd/ the killed' (both hypoth.) became fixed in de forms /hadd/ and /hadd/ (with corresponding intrusive forms); when the accent was thrown back, these forms could not be changed, while /hadd/ /hadd/ were fixed in the modern forms /hadd/ and /hadd/ etc. A well-known parallel is to be found in Aethiopie. — Vowels are sometimes lengthened under the influence of the accent: /hadd/ (hadd) /hadd/ for /hadd/ (W.) etc.

**Long vowels:** A where not preserved, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/, /a/.
In the 2. pers. s. and pl. and in the 3. pers. pl. has frequently been lost; thus after roots, khd, and in the pl. masculine forms like hām, hāma or feminine forms like hāma, hāma (Syr.) used for both genders. At the same time we find e.g. in S. Ar. in after cons. m. and t. l. d. Central Ar. 2. pers. s. after cons. s. and similar forms, l. d. (as in Arabic, because of the t). 2. pers. pl. mo. hāmin, kāmin, 3. pers. pl. o. hūm, a. hūm, s. hīn. Om. 2. pers. s. n. mā, s. kāfā, 2. pers. pl. m. kāmin, s. kāmin. 3. pers. mostly s., among Bedawins usually s. (of the accus. and s. [it]). At Mūçul ma., e.g. hūm in 'him' e't. probably a secondary form derived from 'him and 'dān ending in -nā is very rare, especially in Arabic; but in other dialects, e.g. (Mesop.), and very widely diffused - miqā, bētā (also abbreviated) with forms for the fem., and the pl. in Arabic qā'īn, qā'īn (South Arabian, Kampfmyer). Relative pronoun mostly a qā'ī (if), qā'ī in South Ar. also a qā'ī, Om. d. kāfī 'derived from sādī', all unchangeable. The article a, of, etc. has the accent in Central Ar., even in cases like dāfān the 'heart' e't. in South Ar. the article also occurs in the form of on. etc. - Interrogative pronoun: mā 'who?', mā 'what?', wā 'where?', n̄ām (for 'nām), 'what', 'what is it?' 'what is it?' preserving the nān. The verbs. For perf. and imperf. of the principal form see below. Other stems of cl. Arabic: in the W. especially not only change of sādā to sūr, but also of kāfā to qā'ī (like hūm, sādā, qā'ī) to qā'ī (like sūr, mā) so that sādā became identical with it, and in the living language it has disappeared, and frequently been replaced by it. Traces of it however have been preserved side by side with i, e.g. in the case of verbs med. and tert. w. and y. The verb of admission on the other hand is common in the Ved. as well as in the E. mānhūnī, how great 2. am. sādā and qā'ī in the W. in Tānis and Malta, though common in other parts of the W. (Tlemessa, Tripolis etc.) and in other regions, especially as a common way of expressing the passive. The use of w. is also limited in the W. (cp. below), i.e. (or el. respectively) occurs in the W. in the form fād. e.g. fād'ā to be you. The verb d. fād'ā (Tun.) is d. fādītīs (Tlemessa), imperf. yafīlā. In the W. tf (and tf) occurs in x. in place of x. Combinations: perhaps t. and x.: ṫāl̇ān̄ā etc. (thin|nām) or ṡāḟāl̄a to stop (common) and other cases (see below). Other aisms t. with i prefixed (i.e. corresponding to w.), only that the it is not inverted in the W., e.g. in Tānis, Morocco and other dialects, 2. pers. s. 'tāfā.ṫādā. The 3. pers. pl. of it was sold'. Cp. in Tlemessa the much more modern term al̇āl̇ā (he was sold). Mor. tāl̇āl̇ā 'he was eaten'. - fād. e.g. d. gōrō 'to go away' to walk one after the other (Mesop, Algeria), also fād. e.g. d. gōl̇ā, māl̇ā in the sense of it. (Mesop.). The accent of the different stems is mostly parallel to that of the 2. pers. s., except in fād. (everywhere). The old formation of the passive is preserved in Om. (cp. supra under s. and below under w. 2. 3. s). traces also occur among the Bedawins in the interior of Algeria. The participle frequently stands for the present tense in isolated cases also for the perfect. In Central and South Ar. especially the participle with suffixes is used to express the past tense; e.g. d. fāḋān̄ 'he has beaten you', in place of which we also find fāḋān̄a, mostly however forms with nān. fāḋāhān̄ 'he has beaten you', fāḋābān̄a, etc. (the suffixes of course are suffixes of the accusative). Verbal augment. a common in Syr. and E. Eg. e.g. d. fāḋūa the 'writings', 1. pers. pl. m. d. fāḋūa. From this must be distinguished s. s. etc. used in the E. and W. to express volition. In Morocco we find kāfī for the present tense (Sp. hāmā, hāmā, kāfī, kāfī the last two forms s. s. kāfī, Central Ar. in 'Our kāfī etc.' followed by the perf. to express the past tense). In Mor. to occurs side by side with kāfī. In Om. kāfī has [kāfī] to express a wish; and many other forms. Verbs med. geminatrix. Practically everywhere where like sādā, qā'ī etc. in Sp. however dāfā (tāfā). 1. pers. s. dāfā, 3. pers. pl. bāfī. Verbs prime. hāmā. Forms like dāfā side by side with bāfī (tāfā), participle in the E. and W. hāmān̄ā, māmān̄ā, māmān̄ā, as well as regular forms. Verba tertia al and μ. Corresponding to the accentuation bārā' (kāfī etc.) we find kāfī' (tāfā') in the W. (Syrian), participle in the E. and W. hāmā'n̄ā, māmā'n̄ā, māmā'n̄ā, as well as regular forms. The verb in the time and y. in the accentuation, kāfī (kāfī etc.) we find kāfī' (tāfā'), but mā, t. hā (tāfā) corresponding to kāfī, as against bārā': radix corresponding to bārā' but in the Egyptian fragment of the Psalms still and he has come', on the other hand already has the accent if the case at the present time in Central and South Ar. - Imperf. yāfī in Egypt, but not in the E. and W. yārī, yārī etc. Corresponding to the fragment of the Psalms, yārī, Sp. the latter part of the W. yārī etc. side by side with yārī etc.; the former part prevails. The verb Yārī has disappeared. Traces of the notion not only in forms like yārī (what is it?) (cp. supra under μ.) and similar forms, but especially in combinations like semmān̄ā (Central Ar.), where must be regarded as derived from ayy. quite similar cases in Sp., concerning Inner Africa see infra. Cl. fā'ā (or other wov. vowel) frequently replaced by fā'dāl̇ā, fā'dāl̇ā etc. (with the accent always on the first in Sp. where as a rule the stress is on the last: rāmār [somān̄] date, d. tāmār etc.) or fā'ilā etc. as to-day in the W. and E. in dialects which put the accent at the end, sometimes side by side with fā'ilā forms, e.g. in Trip. yābār and dāhār 'sea'; or some words like fā'ilā and others fā'ilā. Similarly forms like bāl̇āl̇ā side by side with bāl̇āl̇ā (tāmār) in idioms which put the accent at the end. For cl. fā'dāl̇ā to-day fā'dāl̇ā and fā'dāl̇ā consistently corresponding to bāl̇āl̇ā and bāl̇āl̇ā 'sea', abāl̇ā, abāl̇ā etc. Sp. bāl̇āl̇ā, hend. Mor. Tlemessa, dābār, damār Tan., Trip., Malta (in Trip. however the same bāl̇āl̇ā [nomāvāl̇ā], similarly Eg. Syr., but Central Ar. bāl̇āl̇ā side by side with abāl̇ā etc.). Dābār etc. (the same as the foregoing forms), but bāl̇āl̇ā etc. Fenn. Central Ar. bāl̇āl̇ā and bāl̇āl̇ā, all other regions bāl̇āl̇ā (thus also in Sp. owing to the following analogy of the ordinary forms of the feminine). For cl. fā'ilāl̇ā Sp. in the old

for linguistic phenomena of the headland which closes in the Persian Gulf Jayakar is to be compared. — Persian influence especially in the fathered North East (Jayakar). Remain of the old South Arabian language, on which further information is still needed, in Hadramawt. The Me'ribi spoken in this region has been studied in detail (see above). 

For 'intensive verbs' and the 'passive' which are here preserved in the first and second form, like ملّه 'he forgot' (malh), ملّه 'was strangled' (malh), imperfect: ملّه (malh), ملّه (malh), ملّه (malh), ملّه (malh), ملّه (malh). But: active and passive, or intensive) similar as in 'Omni', the active frequently accented on the last (malh), partly attenuated. These are the language's present condition on the pessimistic. Perf. 3. pers. pl. forms of like ملّه (malh), ملّه (malh), ملّه (malh), ملّه (malh). Imperfect: ملّه (malh), ملّه (malh), ملّه (malh), ملّه (malh). With ملّه similarly as in Syria.

With. Spitta, Grammar der ar. Verbalwörter von Ägypten (Leipzig, 1880); E. V. Stuwe, Die arabischen Verbalwörter von Ägypten (Leipzig, 1895); H. Von, Lehrbuch der arabisch-ägyptischen Sprache (Cairo, 1890; translated into English by E. V. Barnet, Cambridge, 1895); C. A. Nallino, L'arabo parlato in Egitto (Milan, 1909); J. C. Selden Wilmor, The spoken Arabic of Egypt (London, 1905); and as R. ed. 1905.

As for the rest of Egypt, there is no doubt that conditions are very different and that many peculiar features exist; but reliable information is still scanty. Maghribi linguistic phenomena reach as far as the gates of Alexandria. On Upper Egypt cp. Heinz, Schöfl, Die Lieder einer ägyptischen Bauern (Leipzig, 1903); H. Done, in T. A., ser. 8, v. (1885), 5–88 (Texts without transliteration).

8. Spain. Important sources take us back as far as the 5th century, such as Rembert of Alcalá. Peirats (Spain-Hispania) published in 1905 a systematic account together with a dictionary in translation; the Spanish-Arabic is particularly important from the point of view of linguistic history, especially with regard to accentuation, as it preserves to a large extent an early stage of development. Foreign influence: Romance and other idioms of the Spanish peninsula: Berber. The following forms according to Pedro de Alcalá, Pronouns: and, entre [also f. l.] do, de, de, de, [also South Ar., cp. Ethn., Nub., etc. f. l.]: do, de, de, de, [also South Ar., cp. Ethn., Nub., etc.]; entre [also f. l.]: do, de, de, de, [also South Ar., cp. Ethn., Nub., etc.]; entre [also f. l.]: do, de, de, de, [also South Ar., cp. Ethn., Nub., etc.].

9. Morocco. The conditions frequently resemble those of Spanish-Arabic. The accent is variable and apparently not subject to any rules;
it is clear however that owing to circumstances which to a great extent correspond to those of Spanish-Arabic, the tendency to throw the accent back which is noticeable in Spanish-Arab has been carried to an even greater length. The phenomenon is in a state of flux, and perhaps caused by the influence of Berber. We may compare this with the conditions existing in Central and South Arabia, where the accent is similarly variable; in the region of the old South-Arabic language (e.g. in Mehir) we find that the accent is thrown back much as in Spain and even as much as in Morocco.—Foreign influence: Berber; Spanish (both directly and indirectly, as many Spanish Arabs went to Morocco).—Pro-

non: and, nadia and ana; na, nadia and data c.; but also east, east, t.; probably originally f.; also, t.; also, t.; also, t.; also, t.; probably originally f.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.; t.
Concerning a wide-spread use of old terminations of the verb and noun, which to a certain extent is undoubtedly found in the colloquial, further materials are needed. But cp. also Kaufmann's *Marakian, Grammatik* (in preparation).

(KAUFMANNER.)

**J. ARABIC LITERATURE.**

Already at the time of their first appearance in history we find the Arabs in possession of a considerable body of traditional lore, which however does not go beyond such elements as are met with in the case of many other gifted races on a low level of civilization, such as the Banu Negrites or the South-Sea Islanders. The Arabic language which has brought out the potentialities of the Semitic family of speech in the richest yet often one-sided development, commands an extraordinarily copious vocabulary, the men who created it, were forced to give a separate name to each object in the phenomenal world, owing to the fact that general concepts, though not unknown to them, had not yet become the basis of their mental processes. From this follows both the writer's charm and the chief defect of their literary art: it is restricted to the particular, but for this very reason it is able to work itself out with the greater precision.

As early as the year 500 A.D. the whole of North Arabia possessed a common poetical language such as is found in the case of many of the so-called primitive races. We may assume that it arose gradually as a result of the reciprocal relations between the different tribes, which followed from their annual migrations in search of pasture, as well as from the pilgrimages to common places of worship such as Mecca and 'Olaq; the vocabulary probably was drawn from the Arabic of Damascus. It was used not only by the great poets at the royal courts of Damascus and al-Hira, whose art served the desire for refinement accompanying a more luxurious life, but also by the highwaymen of the desert for the purpose of immortalizing the petty strife of a narrow existence.

The dialects at the same time maintained their position in every-day life, and probably supplied down to a later period the language of many of the more primitive forms of art, which are passed over in silence by tradition. The camel-driver who called on his animal and whipped away the time by accompanying its regular trot with a monotonous song, the women in the Bedawi tent and the peasants of the palmeries; casting, who lightened the fatigue of their work by rhythmical words in melody, must surely have used the language of common speech. This poetry of every-day life is only referred to in occasional allusions: thus we hear of lullabies and cradle-songs (Goldscheider in the *Wiener Zeitschr., f. die Kunst des Morgenlandes* 1888, p. 165—167) of the workmen songs, which accompanied the digging of the fosse for the protection of Medina against the Mekkanen (Ibn Sa'd, II, 50, 60), or those verses with which St. Nilus heard the Bedaws of the Sinai peninsula saluting a well (cp. Numbers, 21, 1). Scanty remains of such songs are preserved to us by Belkhir (Fourn, *éd. de Goeze*, p. 49), and in our own day Littmann (*Volkspoesie*, p. 81, N° xii) was able to collect specimens in Syria, and Musil in Arabia Petraea. (Arab. *Petrana*, III, Vienna, 1908, p. 259); they not only narrated primitive man in the wilderness, and told him tales, but were believed by him to exercise a direct benedictory influence on his work.

In the eyes of primitive man words have not yet become the current coin of common speech, but are regarded as most potent means for influencing not only the souls of his fellow men, but also his entire surroundings which he likewise believes to be animate; the effect produced by words is much stronger than what we understand by having moved it is a real power which casts its spell over the soul of a person to whom the right kind of speech or song has been addressed. For this reason the poet is called by the Arabs *musir*; the knower, that is to say the possessor of supernatural magical knowledge. His art is not only valued as an adornment of life, but also feared as a dangerous weapon, which directed against an enemy cannot only put him to shame by ridicule, but even has the power practically to humble his energy. *Satīr*, *sīyās* is thus one of the oldest forms of art; and even after its magical character had disappeared, it continued down to a very late period to play a very important part in public life; under the Umayyad dynasty it temporally dominated the whole field of literature. (Cp. E. Goldscheider, *Abhandlungen zur arab. Philologie*, I, Leipzig, 1896, p. i—137; *Uber die Verhältnisse des arabischen, persischen und armenischen Stoffes*, in *Wiener Zeitschr., f. die Kunst des Morgenlandes*, xviii, 1905, p. 357—399).

But while satire and elegy continued to exist as independent forms, other motifs of poetry, which must have played an equally important part in daily life, completely lost their original character, at any rate in our tradition, which restricts itself almost exclusively to poetry cultivated as an art. This is particularly the case with erotic poetry: it was not until the Umayyad age, with its more animal and civilised atmosphere, that it developed into a definite artistic form; yet it can never have been absent from the mouth of the people. In the old classical poetry the love-song has degenerated into a conventional common-place at the beginning of a *haw/, the *sūra/, which corresponds to the praise of the gods as the introduction of a mythological Homeric hymn in Greek literature. (See I. G. Guidi, *Il Nostro nella Storia Araba in the Actes du XIXe Congr., d. Orient*, Alger 1905, Paris 1906, III, 8—12).

The same fate befell the description of nature, especially of animals so far as they in-
terested the Arabs either as game to be hunted or as domestic animals. There can be no doubt that the old period possessed vivid descriptions of the animals of the desert, which were the fruit of personal experience and observation. The camel, it may be said, dominated the thoughts of the Bedawī in the same way in which the cow was the principal object in the eyes of the Vedic Indian, and still is in the eyes of the Hindus. Just as reference to the cow runs through the hymns of the Rigveda, (see Bruchmann, Psychologische Studien zur Sprachgeschichte, Leipzig, 1888, p. 277 et seq.), in a similar way we may speak of an Arabic camel-poetry; for the poets never grew tired of praising the excellence of their camel, and the animal practically dominates their imagery. Yet no independent poems of this kind dating from an early period are extant; they are lost as well as the war songs which, according to Sozomenos, celebrated the victory of the queen Mīwāya. As a separate species of the camel appear very late, even later than erotic poems.

At the time at which our knowledge of Arabic poetry begins (which is about 130 years before Muhammad (see Lāṭīf, Khamsat al-tabārī, Cairo, 1823, l. 37, 19), poetry as an art is already dominated by a rigid conventionalised form, the kāštā [q.v.] in which all the separate species that once had existed independently, are merged. The range of contents of Arabic poetic art had never been very wide; it became still more narrow and barren in this form. Certain stereotyped similes are repeated again and again, while other observations of natural objects which would be equally applicable are never used at all (see Nöldeke, Fünf Meʿallaqat, l. 1 in Stimmbaureich des K. Ahd. ak. der Wiss. an Wien, Phil.-hist. Classe, vol. xli., No. 7, p. 3); even Arabic critics like Ibn Rashīq, Umadī, Tunis, 1865, p. 172 et seq., can enumerate but few fresh thoughts with which eminent poets enriched the store of imagery possessed by the ancients.

The kāštā distinguished the independent existence of the separate species without the compensating effect of teaching the aesthetic sensibility of the Arabic to appreciate the symmetrical structure of a connected chain of thought. The conventional forms of a kāštā is strikingly fixed, yet the details are so loosely connected that the tradition of most of the poems is subject to considerable variations. The aesthetic enjoyment felt by the Arab in reading a poem always proceeds from the single line. The poet who does not succeed in expressing a thought within the limits of one line is adversely criticised (see e.g. ʿAbdārī, Kitāb al-amāma, p. 174 et seq. infra); but the appreciation of his art is proportionately greater if he can compress a separate thought within a half-line (see Sayyid, Sharḥ ghawābd al-meʿallaqat, p. 94, 18 et seq.); or like Hunūr al-Kāṣī in line 48 of his Meʿallaqat, make use of four different similes in a single verse (ʿAbdārī, ibid., l. 185, s.).

The outward form of Arabic poetry exhibits greater variety than the range of contents and the composition. The language is rich in vowels with a recurring musical accent; thus it could create a purely quantitative system of prosody, which starting from the simple iambic metre, the Régles, had even in prehistoric times developed a large number of elaborate forms. It is probable that all the poems were meant to be chanted in a simple unison accompaniment and only this chant could do full justice to the subtle structure of the poetical language, mere recitation which was influenced by the vernacular dialect, being insufficient to bring out its full effect.

An art of this type gave little opening for the expression of individual experience and personal emotion. Thus the large number of pre-Islamic poets there were not many who stand out conspicuously as expressing thoughts of their own. Public opinion seems to have decided at an early date to regard the poets of the so-called Meʿallaqat [q.v.] as the most eminent representatives of their art; they are mentioned, although together with others, as early as the time of Ḥarīāt; in a poem (Naṣīḥī, ed. Bevans, No. 39, p. 23) in which this poet enumerates his predecessors in the field of poetry. It is true that all the most important features of the ancient Arabic poetry are found combined in these seven: the ill-starred prince Ḥunūr al-Kāṣī; the frivolous courtier Tāris; al-Nabīsī, the adroit friend of the Qašimīs and Lāghmūnīs, who sang of the Intense joy of living; the typical bedawī ʿAlīkūnna and al-Kuṯārī; b. Ḥusayn, the sententious, and Labbāl, the preachers of a tranquil wisdom.

The exercise of this art was not however confined to the desert. The inhabitants of the oases and towns began to take part at an early period, and to a large extent struck out paths of their own. The Jews of Taimīh, it is true, like al-Samawʾāl b. Ḫalīlīh, had become so far assimilated to the Arabs, that their art of poetry differs from that of the Bedawīs; but elements of essential difference are found among those Arabs who had settled at al-Qift in the Persian frontier where they had come under the influence of Aramaic civilization. Their principal representative ʿAbd al-Zahīl [q.v.] in his youth chiefly cultivated the drinking song as a separate species of poetry, in his old age however Christian influence turned his thoughts to religious subjects, such as found expression in his poem on the fall of man quoted by Dāhīlī, Hayyūnī, l. 66, 1-7. Such ideas did not excite much interest among the thoughtless children of the desert; but they appear again at ʿAṣūrī in the poems of Ummayy b. ʿAbd al-Salām [q.v.] whose home libation sphere of South-Armenian influence, and who seems to have derived his inspiration more particularly from Jewish ideas.

Poetry was not however the only intellectual possession of the pre-Islamic Arabs. Prose had also begun to be a medium of artistic expression, especially in proverbs, with which the Arabs class many popular proverbs which are in daily use. Nay, in most cases are forgotten at an early period. Similarly we find among the ancient Arabs the other forms of popular literature, thus especially the ridicule (e.g. Dāhīlī’s, Bukhārī, al-Bukhārī, No. 97, 98 in an allusion; al-Qaṣīṣī, loc. cit., l. 678, 10), the beast-fable; yet although the proverbs were carefully collected as early as the time of ʿAbd Ḥusayn al-Kībalī and later by the philologists, little attention seems to have been paid to the other two species; the fables therefore are known to us only from occasional allusions and quotations (as the fable of the ostrich Ḥusaynī, No. 73, s. = al-Dāhīlī, loc. cit., l. 1077, 19).

Muḥammad not only demanded of his followers a renunciation of the old Bedawī ideals: he brought in a new element into their lives, and incidentally promised a new literary form: the influence of the Korān on the further development was however only indirect: for owing to its claim to divine origin it excluded all possibilities of imitation for a large public (cp. Goldscheider, in *Wiss. Ztschr. f. d. d. Kunde des Mos.*, xxiv., 62-142, 383; Tharbecke, ibid., xxxi, 176; Goldscheider, *Phil. Stud.*, ii. 493 on al-ʿAṣīr’s imitation). The form of the Korān was probably not entirely new. The short elisions of the earlier revelations, borne on a free, gliding rhythm and connected together by the simple rhyme, must have been closely akin to the *ṣaff* of the old south-sayers (*kāthān*). But their contents, the intimately personal struggle of the soul for its own salvation and that of mankind, was something that Arabia had never known before. Even when calm reflection had taken the place of ecstatic emotion and the orators strove to gain the attention of his people by means of stories, and when the revelation had become a mere form for laws and ordinances, its language must still have excited the admiration of the Arab. If we are not always able to share this admiration, this is due to the fact, that our appreciation is affected by the often very serious distortion of subjects familiar to us from other sources.

The Korān did not exercise any influence on poetry; or, contrary to what its language betrayed its dissimetric peculiarities even in the consonantal orthography, which became the norm for the entire later literature, it was necessary to adapt it in some points, especially the vocalization, to the language of the poets which once for all had come to be accepted as a model of unmistakable authority.

Muḥammad not without reason saw in the poets the chief representatives of an ideal of life hostile to his own, yet he was forced to a certain extent to acknowledge their power, which he therefore sought to make subservient to his own ends; to his court-poet Ḥassān b. Thāḥī q. v. fell the task of championing his master’s claims against the Bedawī in their own language; and the greatest poets among his contemporaries, al-ʿAṣīr and Kāthī, the son of Zuhayr, put their art at his disposal, the former voluntarily, the latter not without urgent pressure.

Among the faithful, however, the prophet’s dislike of poetry gradually became the prevailing attitude, and the new arts which he had put before his nation fully engaged their energies with the result, that the poets were kept in the background in the public life of the early caliphate; the cynical parasite al-Ḥatawī hardly helped to raise them in the public esteem. The Bedawī however refused to yield up their delight in song and story and it appears that the great Arab migration created a kind of epic poem consisting of ballads which were set in the mouths of the heroes themselves (see Wehlhausen, *Skizzen und Vorarbeiten*, vi., 49).

In the Umāyaḥ period, after the intoxication of religious enthusiasm had gradually passed away and the Arab nobles following the example of the caliphs had returned to their old ideals of life, poetry also regained its old prominence. The only people of intellectual eminence still remaining as that time in the mother-country were the representatives of the old Mekkan families now eclipsed by the Umāyaḥ, and the pious sects of Ṭabiʿi who looked upon their rulers as world-conquerors and enemies of theocracy. But even these two classes had been considerably influenced by the changed circumstances of the time. The enormous fortunes brought to these old families by the conquests had enlarged the simplicity of manners which before Muḥammad had prevailed even in a comparatively prosperous town like Mekka. Al-ʿAẓmāwī there cultivated erotic poetry and his Persian Vānās composed his new tunes, which raised music to the level demanded by a more refined aesthetic sense. Refinement and
luxury now created in Arabia itself a new erotic poetry, the chief representatives of which were the Meccans 'Omar b. Abi Ka'b and al-Hasib b. Khuţib, both of the tribe of Makhzam, 'Abd Allah b. Ka'b al-Ruqayyâh, and the Umayyâd 'Abd Allah b. ' Omar al-Anqâl. Their art was gladly received even in Mecca itself, as the residence of many of the discontented old chieftains, rivalling Mecca, in the elegancies of life: it was at Mecca about the year 70 (689) that 'Abd al-Haţâm al-Dînârî opened a room for reading and games (Agâhâz, l, 52).

The new art even penetrated to the ranks of the people and among the Bedawins it became associated with the names of Ka'tîb b. Shârîq, Mâdîjân and Djamail.

Syria and Iraq for a long time kept aloof from these frivolities. The old tribal feuds had broken out with renewed fury in the struggle for new settlements in these colonies, and found an echo in the works of the poets, Al-Akhpâl, Dju'at and Fârâzâdah and numerous lesser poets helped to set the passions with their satire, and to whet the public power with their influence on public opinion: thus al-Akhpâl served the Umayyâds, who saw no objection in the fact that he was a Christian, and Dju'at their governor Hâcjîj-ibn-Âthâr. Syria was also the home of Dhu 'l-Kammî, the last representative of the old camel-poetry which with him had already become a conventional mannerism. Similar tendencies are represented by Abî Naqîn and Âdgâjî and the latter son of Râha, who applied the Isâmîî metre, 'ajâzâ, which until then had only been used for occasional pieces, to the subject-matter of the old kahâtî; the simplicity of the metrical form was compensated for in their art by a proportionately greater artificiality of language, and especially a grotesque use of all the wealth of the vocabulary including its most far-fetched elements.

At the court of the Umayyâds the new erotic poetry did not find a place until the time of their decline. Under al-Walîd b. 'Abd al-Malîk the Yemenite Wâqâjî wrote at Damascus his songs addressed to Rawjâ (one in strophes of the sixth measure typical of the new manner Agâhâz, vi, 35) and to that of the khalîfî which he much excelled in his life. In the same style the later calliph al-Walîd sung the praise of his sister-in-law Sultân; the same poet also cultivated the drinking-song, with preference even to erotic poetry, following the model of Abî Zâd b. Zâd, to whose poems he had been introduced by his own companion, the 'Abdâlâl b. Khânîb al-Ashâfî.

After the 'Abbâsidâ had put an end to the glory of the Arab empire, all culture and civilisation became concentrated in the cities of Iraq while the desert sank back into deepest barbarism: at this stage the new poetry became universally predominant. The Persians who had carried the new dynasty to power and now remained the power themselves for a long period, had no taste for the old poetry of the Bedawins, but responded eagerly to the familiar theme of the celebration of love and wine. The predominance of the Arabic language was sufficiently secured for many centuries by the religion of Islam, and could not be undermined by Persia; it is only in just that poets occasionally ventured to introduce Persian words or even Persian lines in their Arabic verses (see Dju'at, Rayyân, Cairo, 1311, p. 61). But Persian refinement and elegance dominated the poetry as well as the life of the 'Abbâsid civilisation in its prime. The art of al-Walîd was transferred to the court of al-Mansûr by Mu'tâ b. Iyâz; and it found its highest perfection in the art of al- 'Abbâs b. al-'Abâs, a native of Khošâdân who introduced the Persian style into the new romantic poetry (see Brockelmann in Millange der Arabischen Litteratur, Paris 1905, p. 253), and especially in Abd Namûzî, the son of a Persian mother who became the greatest poet in the Arabic language. The influence of the latter persisted for centuries; his model was followed by the innumerable singers of the joy of life, who after the decay of the central power represented at the courts of the governors and princes from Khošâdân to Spain, the joyous Persian ideal of life, which also dominated the fine arts.

But the old aspirations of the purely Arabic literary art had not yet died away: the foreigners themselves who, as pointed out below, laid the foundation of the scientific study of the Arabic language, at the same time brought about a renaissance of Arabic poetry. The ancients were praised as the unequalled models not only of the language but also of aesthetic beauty, which critics strove to analyse scientifically: it thus became the fashion to imitate them. Even Abd Namûzî who amused himself by ridiculing the stiff manner of the old Bedâwar bard, cannot escape the influence of his panegyrics and poems of the class. This influence is still more pronounced in the works of the 'Abbâsid prince Ibn al-Munâzâr, who made the ancient poets the subject of scholarly research, and of Ali, Tammânî and his pupil al-Ḫârîî, both of the tribe of Ḥârî (cp. the former's instructions in al-Hârî's Zâhîr al-Dîwânî on the margin of the 'Idî, Cairo, 1305, l. 168, cp. 276); Al-Munâzârî, the panegyrist of Saîf al-Dawla, similarly follows the paths of the ancients, though it must be confessed that the mannerisms of his imagery frequently violate our canons of taste. Although he met with considerable opposition on the part of contemporary critics (cp. the severe criticisms of al-Nâsîrî, 'Abî al-falâjînînî, Stampôlî, 1320, p. 170), later generations ignored this and took up the current of the great poets, and his divan is still read and highly esteemed even in distant Çenîn (see Reinhard, Ein arabischer Dialog gegen in Oman und Zanzibar, Berlin, 1894, p. 43). His contemporaries, the prince Ibn Fehsî, possibly appeals to us more directly owing to the personal touches contained in some of his poems, but in the principal aims of his art he is in his turn one of the countless number of the latter imitators of Munâzîrî no one has equaled him (cp. Goldbauer, Abhandlungen aus arab. Philologie, l, 122-174).

A single literary form was produced by the imitators of the ancients. In the early period epic subjects, the stories of the ancient heroes, had found expression only in prose in a polished style full of conceits; the later development both of the elegy and the panegyric style led to the creation of a kind of epic narrative in verse. The sad events which happened at Hâcjîjî in the year 1377 (824) were told by al-Munâzîrî in a long ëstâfî (Tâbârî, iii, 873-
leave unused no artistic effect mentioned by rhetoric.

Among the people, it is true, the art of song had not died out, but the 'educated' for the most part thought it beneath their dignity to take any notice of it; thus it is only by an indirect allusion that Ibn al-Athir (al-Mahdi el-ulūk, Bulliak, 1282, p. 46,) refers to songs in popular metres which were sung in Baghdad during street processions at night in the month of Ramadan. Among the people the hashāt with its single rhyme running through the whole poem was replaced by a strophic form by means of which it was possible to attain more pleasing musical effects. In Spain this new poetical form was introduced into literature. 'Ubayd b. Mūsā al-Sanā'i, the court poet of the 'Amirīds of Valencia who died in 422 (1031), created a definite form for strophic poetry, ta‘bīkāt, which until then had only been cultivated by the people, and transferred it from the popular dialect to that of literary art. He retained however the free metre inseparable from the strophic structure, and in consequence this form of art remained preserved from the narrow trammels of a language following exclusively the paths of the ancients. In point of subject-matter however the muwaddah did not differ to any extent from the older poetry; from erotic poetry, which had been its popular basis, it was soon transferred to the other traditional themes of poetic art, and even pious meditations were frequently clothed in the form of the muwaddah. From the West the new art migrated at an early date to the East where Ibn Sanū'a al-Mulk, a contemporary of Saladin, was its first recognized representative. But the intellectual decadence which befell the Muslim countries in consequence of the Mongol devastation, did not exempt this artistic form from the general disaster, and the muwaddah degenerated to an inspired play with empty phrases (see M. Hartmann, Des arabische Strophengedicht; E. von Mu

waddah, Weimar, 1897). A hundred years after 'Ubaydī the fellow-countryman Ibn Kūmān (q. v.) made the bold attempt to introduce the language of the people together with the popular form of the muwaddah into literature, but he found no successor worth mentioning to continue his work. It was not until 500 years later, in 1068 (1657) that the Egyptian Yusuf al-Shiristani once more used the popular dialect in his Hādī al-μu‘tāf, a satire on his fellow-countrymen, and the desire to use the language of the people for the treatment of serious literary subjects did not arise in Egypt until the xiii. century. In venturing on this bold undertaking Mahommud b. "Orūmī attributed the mistake of choosing not national subjects, but French materials— Molière's comedies—which failed to appeal to the people, in spite of the ingenuity with which he adapted them, to Egyptian surroundings.

Pros as a medium of artistic expression was of much slower growth than poetry, notwithstanding the fact that the art of oratory already remotely cultivated in the time of Cato found most favourable conditions for its development in Islam with its institution of the khutbah delivered in each community on the Friday of every week. But it was only in unusual occasions that it was found desirable to preserve these speeches for posterity, as was done in the case of the
addresses delivered by the governors of 'Irāq, Ziyād and al-Hāshābi, on their accession to office. Collections of sermons are first mentioned in connection with the Khārijīs (see Wellhausen, *Oppositionsparteiten*, p. 53, n. 3). The rhetorical epistle as a literary form was created by 'Abd al-Ḥamīd al-Ṣaghrī who died in 132 (750) at Būṣrah in Egypt (Goldziher, *Abūnakhrīs masā'il*, p. 21). But it was left to the literary circle of Saif al-Dawla to cultivate sermons and epistles for the first time from a purely artistic interest: Hitallāt was not only the home of the preacher Ibn Nūzatāt, it also received the epistolographer Abū Bakr al-Khwārizmī, though the restless moving spirit of the latter prevented him from settling at the court of any of the Eastern rulers. The letters of al-Khwārizmī had on the whole been restricted in their choice of subjects to literary themes, but the style to which he had given popularity, soon found its way into official correspondence. As with the statesmen of the Italian renaissance it became the ambition of the diplomatists of the 'Abbāsid period to clothe even the dry matters of state in the splendours of an elegant literary form. Prominent representatives of this were Harūmā, Hitallāt, the secretary of the Būṣrah al-Dawla, and al-Kāmil 'l-Ṭabīṣāri, the secretary of Saladin. But the epistolary style with its pointed antitheses was peculiarly exposed to the danger of becoming corrupted and this showed itself most clearly when it was applied to historical works as was done by al-Qabīl and al-Kalīl al-Jahbārī in their works on the deeds of Muhāmmad of Ghur and of Saladin. It is true however that Arab sobriety of intellect soon repressed this aberration of taste, which in the case of the Persians almost destroyed the faculty for the writing of objective history.

A subject adapted to this style was discovered by Badr al-Zamān al-Hamadhānī, a younger contemporary of al-Khwārizmī, in the madāhir or leggans address (see A. Mez, *Abūlqasim, ein bagdader literaryhändler, Heidelberg, 1904, p. xxii, et seq.) which had first been introduced into literature by al-Qabīl (quoted by Bayhaqī, ed. Schwally, p. 623 et seq.). As in imperial Rome the madāhir or social contacts existed in the towns of 'Irāq, especially Baghdād, created a vast proletariat of parasites spilling from the court and the wealthy merchants. Out of this there arose a class of Bohemian men of letters; men who had acquired the whole stock of scholarship and learning created by the philologists, and who wandering from town to town throughout the whole empire indulged their dissipation in serious work and their love of adventure. al-Hamadhānī, himself an example of this type, gave it literary immortality. A century later the literary form of the madāhir was revived by al-Farāhī, who developed it to its utmost perfection. But in the clumsy hands of later imitators the graceful lightness of style degenerated into a mere pretext for combining literary elegance with popular wit.

As a new species of literature arose out of the combination of Indo-Persian wisdom with the crystallized tradition of the old poetry and Fedawī stories and with the general philosophical results of Greek literature, which had been made accessible to the Arabs during the same period, this was the adab, destined to provide the man of the world with the knowledge necessary for the wise conduct of life in an entertaining form. The real creator of this form of literature is al-Latibī, an author whose range of interests is extraordinarily wide. He is attracted not only by the oratory of the Arab, the superiority of which he denies unuttering against the pretensions of the 'Akharīs: he describes the peculiarities of foreign nationalities with the same relish with which he exposes the evils of the social and economic organization of the towns. There is no attempt at a systematic exposition: his chief work, the Book of Beasts, mingles Arab, Greek, and Persian tradition with
many observations of his own which bear witness to his vivid interest in things. His works, as well as those of Ibn al-Mu'taffi, were largely exploited by the Kalilah, a somewhat younger contemporary, who made it his aim to provide the secretaries (bottlel), the predecessors of the later maqāmāt, with the store of literary and historical learning required in the exercise of their profession. He thus became the creator of the adab of the schools. His chief work are the two books of the "Ljīthān al-šabbāb" to which his other writings were subordinated as supplements; it not only became the model of countries' later works in respect of the arrangement of its subject matter, but was recklessly plagiarised by their authors, especially the Spaniard Ibn Abū Bakr al-Shirbini in his "Rūf."

The courtes were not always content with the universally harmless diversion offered by this literature. The harmless life which had gained its full development under the "Abbasids al-Baghdadi, favoured the tendency already appearing in the ancient satiric poetry of the Arabs, to enlarge with relish on sexual matters; this subject seems to have played a great part in the evening entertainments at the court of the caliphs, so that a courtier of Munawwaklīt could without scruple deduce a book of obscene jests from the latter. The "Rūf. of Alm al-Mu'taffi, al-Asslī, a picture of Baghdadite summam, shows—moreover—that the middle classes maintained no higher standard on this point. Following the Indian example it became the fashion to put these matters in a pseudo-scientific setting, and after writings of this kind had been translated from the Sanskrit (see al-Lijithi, "Hayamīn, vili. 70. c.) and following on the systematic treatment of the subject by Ibn Kalūtī, the art anastarāti took its place in the regular repertoire of writers on medicine; most of these works are dedicated to rulers or waqifs.

The people on the other hand had more taste for the less "Persian fairy-tales, in which the erotic interest on the whole takes a secondary place. As early as the Il, (14.) according to the "Persian work Hayā' al-ṭuhr (the 1000 stories) was translated from Pehlevi into Arabic, and became the kernel of the Arablian Nights [cp. "NīR ŚRAWA-WA'I-I-AL]. The stories which may be regarded with certainty as belonging to this kernel, viz. the introduction, the stories of the fisherman and the ", and the "Hassān of the Jinn, prince of the birds and princess Dulwar of Samandar, Ardebrī and Hayāt al-Nūfla, Ğamal al-Zamān and Burgū, all seem to go back to Indian sources. These are the tales which occupy the highest place from the point of view of true poetic value, subtlety in the assigning of motives and unity of construction, which for this reason established the fame of the collection. At Baghādī this kernel was amplified by a second group of stories, conceived in a Semitic spirit, the merit of which does not so much consist in the unfolding of a definite plot which holds the attention all through, but rather in numerous subtle, traits of wit and fancy; to this class belong the novels of middle-class life, usually founded on a love story; the plot of which is frequent also to be solved by the appearance of Herman al-Rāshīd, as does that of "Māla. A third group of stories was added at Cairo (see Nīldeko, "Zitzenbr. a. Darm., Morgen. Gelezt., xili., 69); this consists of the exploits of rogues and gallants of wit, which frequently expose the dishonesty and corruption of government officials. In these Egyptian stories the supernatural and fantastic element again plays an important part. But whereas in the older tales of Aryan origin spirits and demons take a human interest in the fate of the hero as e. g. in the case of Hānūm of Basra, the supernatural element in the Egyptian stories is inseparable from a tallman, and its effects are beneficial or the opposite, like those of a blind natural force, without distinguishing between the person who into whose hands it may have fallen; this is exemplified, for instance by the wonderful lamp. Finally, in order to complete the number of 1001 nights the story of "Omār, al-Noūmān was added, a romance of chivalry, which is attested as belonging to the Night as early as the xvi. century by the Tūbīlīnīs, no. 32, furthermore Sindī's adventurous travels, the origin of which may be put at Basra towards the year 506, the stories of the 7, the fourth of the 40 wādies related to Kallā and Dimū, the ancient Semitic story of Hānak, and a number of love-stories like that of the slave-girl Tawadding, all of which were at the same time handed down independently of the collection. The latter probably received its present form in Egypt during the first half of the Mānūlik period, not apparently at the hands of a single editor, but in the work of many generations of professional story-tellers. Out of the national traditions of the Bedouins the luxuriant imagination of many generations created the great romances of chivalry, viz. the "Sirāt diwān which seems to have received its present form during the wars against the crusaders, the "Šāh-nāma (these two as well as the romance of Alexander, and the stories of Baพล, of "Aŋkē and of Tarāf b. Lawān, are mentioned as early as the vi.—xii. century; see Steinbichler, "Die arād. Lit. d. Juden", p. 187), the "Šāh-nāma von Rūz al-Ḥabīl, Sūr al-"Faraż, and the romance of the sultan al-Zahir Baṭbīr, the contents of which may most conveniently be gathered from Al-Warrād, "Farnamikhār der arād. Hor., der Kgl. Bild., p. 69 of 1869."

It was also during the Mānūlik period that the shadow-play was introduced into Egypt, a product of the far East which since then has become a favourite form of entertainment throughout the Muslim world; previous to the xvi. century it was the only form of dramatic representation known to the Arabs. It is unfortunate that the literary tradition, dominated as it is by the narrow spirit of the schools, refers to it only in casual allusions, and the attempt of the physician Muhammad b. Dināfi [q. v.] to adapt both language and action of this form of play to the taste of the upper classes found no successors. The cultivation of the shadow-play was left to the lower classes, and it was from this source that European scholars of the xvi. century first made the plays generally known (cp. G. Jacob, "Geschichte der Schatten- theater", Berlin, 1897). While the various forms of belles-lettres never rose beyond a rather primitive stage among the Arabs, their achievements on the fields of scholarship and science are much more considerable. It is true that only a small part of them can be ascribed to the Arabs as a
nation, since from the very beginnings of the several sciences their cultivation was chiefly confined to non-Arab, Arabams and particularly Persians. As the national literature of the Arabs in the proper sense of the term ends with the fall of the Umayyads the latter later developments would be more correctly designated as Muslim literature in the Arabic language.

History of literature. The history of literature is still most closely connected with the national history; and at any rate in its beginnings bears a genuinely Arab stamp. The traditions concerning the life of the prophet, which had been created rather than preserved by the first generations of Muslims, soon developed two distinct branches: the Tafsir, which was studied for the sake of its authoritative contents, and the knowledge of the sahih or war, which was cultivated for its own sake like that of the 'days' of the ancient Arab. The earliest literary treatment of the sahih known to us is due to Musa b. 'Abba (q.v.), who received their classical form at the hands of al-Waqidi, and gave rise to the Tafsir, the biography of the prophet by Muhammad b. al-Makkari. In its later development however the biography of the prophet met its fortunes farther and farther from the firm ground of historical fact and loses itself in a luxuriant mass of legends which are not characterised by the first charm of popular fancy, but plainly betray their origin in the inarticulate brains of hair-splitting theologians. The large biographies of the later period, like the Ta'rikh al-Kamil of Ibn Khaldun, the Nihayat al-wafa from the 13th century, and a still more famous abridgement of the latter, the Sira al-Fathiyah, still observe the technical rules of the traditionalists; but side by side with these there exist countless popular books, like the Akhbar of Abu 'l-Fazlan al-Bakri, which treat their subject in a manner designed for the edification of the faithful on the birthday (ma'wila) of the prophet.

Closely connected with the biography of the prophet was the tradition concerning the life and deeds of Muhammad's companions and their immediate successors, a subject the closest study of which was of considerable importance from a practical point of view as affording a criterion for the trustworthiness of the authoritative traditions handed down by the various companions. Muhammad b. Sa'd, pupil and assistant of al-Waqidi, collected all the information within his reach in his large book of classes, and the material thus brought together which he made the basis of a separate branch of scholarship, the 'ilm al-radī'd, was frequently treated anew by later authors, especially Ibn al-Aths in his Kitab al-qur'is and Ibn Hajar al-Isarallin in his Ta'rikh. The examples of the scientific tradition extended a stimulating influence on all the related branches of learning. First of all the great legal schools created their 'books of classes' which were continued and expanded from time to time so as to include not only the 'great pioneers but also the less important transmitters of tradition: this type belong especially the works of Ibn Faruq and al-Schibhi on the Madhhab and Shi'as.

There followed among men of letters and philologists the books of classes of the poets such as had been composed already by Abu 'Uthama and al-'Agna, the heads of the school of Banu's the work of these men and their successors formed the basis of books of final authority like those of Ibn Kotaiba and especially the Akhbar al-qudat of Abu 'l-Faraj al-Isakhari, which, though dealing in the first instance with the history of music, finds its centre of interest in the history of poetry treated on the background of a rich store of information on the history of culture. Next came Tjah'id's Fatansi al-dahr, the continuations of which succeeding another through the centuries afford abundant material for the history of Arabic poetical art down almost to the present time, a subject which however gradually becomes less and less attractive. Of biographical collections dealing with men of the different professions we may mention the histories of grammarians and philologists, of which the earliest extant example is the Nihayat al-wafa of al-Ash'ari, and the biographies of jurists, scientists and philosophers, like the works of Ibn al-Khatib and Ibn Abi Ujaylib. Another class is represented by the collections of lives of saints and mystics, like those of Abu Na'far al-Ishabari or of Sharr, the legends of which frequently resemble those of the corresponding Christian literature.

The biographical interest similarly predominated in the local histories generally arose in all the important cities of the Muslim conquest from Spain to Khorasan, from the time of Ibn al-Arsch and Ibn Zalzala's histories of Makkah and Medina. It is not to be regretted that most works of this class, like so many other books belonging to the great period of Arabic literature, are either lost entirely, or as in the case of the immense work of Abu Bakr al-Khaithy on Bagdad and that of Ibn Ansikir on Damascus preserved only incompletely. At the same time the material in our possession, especially for the history of North Africa and Spain which are treated in the works of Ibn Baward, Ibn al-Khatib, Lisain al-Din, Makari and others, will continue for a long time to yield an almost inexhaustible store of information concerning Muslim life through the centuries down to our own time.

The professional and local histories formed the basis of the great collections of general biography, the earliest of which if we leave the works of the oldest traditions out of account, is that of Ibn Khallikin. His book was continued by al-Kasdi and from the 13th century onwards was supplemented by comprehensive biographical collections dealing with the different centuries, as for instance that of Ibn Hafiz for the 8th, that of al-Sakhawi for the 9th, those of al-Numadi and al-Burtak for the 10th and 11th, of al-Mujtaba for the 12th and of al-Munadi for the 14th century.

Closely related to the biographies are the bibliographical works, the need for which was most urgently felt at an early date owing to the fact that the number of books produced by the Muslim civilization was at times practically unlimited. For the period intervening between the death of Ibn al-Nadim's Fihrist and that of the Asafi al-Ash'ari by the Turk Haji di Khalif, both of which aimed at listing the entire literary possession of their time, there is a number of monographs dealing with the several branches of learning, particularly theology.

The science of genealogy which frequently touches the field of biography takes us back to the very beginnings of Arabic literature. Like
other races on the same level of civilization; as for instance the Samuans or the Antimoroi of Madagascar, the pagan Arabs attached great importance to knowledge of the relations of kinship and descent, and the practical needs of the commercial and military interests of the early caliphas gave it an added interest owing to the fact that the genealogical lists served at the same time as an army roll. In addition to this practical importance of the study there was the interest taken by philologists in genealogical allusions occurring in the poetry and the smutious joy with which the genealogies regarded the countless petty jealousies between the tribes. Of the works of the early genealogists, whose names are given e.g. by al-Dhahabi, Hayyana, ii. 65, no thing is extant; and the monograph on the Ansar by 'Abd Allah b. Muhammad b. 'Uinara is known to us only from the quotations given by Ibn Sa'd (see Suchan on Ibn Sa'd, iii., p. xxvii). The work of the early authorities was overshadowed by the zeal and industry with which Muhammad b. al-Sath al-Kalbi and his son Higham collected genealogical material: the efforts of these scholars were directed by a genuine interest in their subject, and it was for the very reason of their scientific qualities that they became exposed to spiteful criticism on the part of the theological circles in authority. Higham even had the courage to collect carefully the accounts about the idols of the ancient Arabs, though as a good Muslim he called his book the "overthrow of the idols".

The study of the life of the prophet and his successors and that of genealogy created an interest in the life of the state as such. During the first two centuries however the activity of the Arabs in this field also remained confined to isolated details. As early as the Umayyad period Abu Ma'in wrote at Kufa the history of the great conquests and of his own time from the point of view of the opposition of the rulers residing at Damascus. The Fihrist enumerates 22 monographs by him, which are partly preserved to us in numerous long extracts found in Taharan; these take us right into the midst of events by means of the accounts of eye-witnesses. He does not seem to aim at selection and arrangement: yet a careful disposition of parts and a definite point of view are very apparent. He is chiefly interested in the risings of the Kharidjas and especially the 'Affād against the Umayyad dynasty the fall of whom he survived to witness (see Wellhausen, Der arabisches Reich und sein Nachw., p. iii., et seq.). Still more fruitful was the activity of al-Madani, a convinced partisan of the 'Abbasides who wrote the early history of that family and dealt more particularly with their rise in Khorasan and their final victory. Owing to the influence of Taharan the later historical outlook is dominated chiefly by al-Madani and Snif b. 'Omar of Kufa (p.v.), who wrote two monographs on the life of the Arabs after the death of Muhammad and on the conquests. The influence of Snif must be described as well-nigh disastrous owing to the fact that he wrote "without paying heed to chronology and attested facts from the point of view of an artificial system dominated by local patriotism and tribal jealousy; his language while hearing no comparison with the simple charm of Abu Mithkhal, made an even deeper impression on the masses through the vivid colouring he gave to his style.

The tradition of Medina regarded historical facts with greater objectivity than that of 'Iraq, and its chief representative Muhammad b. Ikhbār and al-Wahidi, who extended the field of their studies from the life of the prophet to the exploits of his successors, are much more reliable than the authors of 'Iraq especially in the matter of chronology. It is possible that they also had access to the Syrian tradition which we only know in the form in which it is reflected by Christian Spanish chronicles like the Continuato di Bordon of Hripsime. The same reliable tradition forms the basis of the two works of Baidhūt, his 'Book of the compacts' and his great genealogy.

The idea of a chronological collection of events, for which the school of Medina had prepared the way, seems to have developed under Persian influence to the plan of a complete series of annals of the empire. At any rate the first author to undertake such a work was a Persian, Muhammad b. Qâhir b. Taharan, who also achieved great distinction as a theologian through his immense commentary on the Korâns and as a writer on jurisprudence. His work is intended to embrace the entire history of the world from the creation to his own time, and for the period after the Hijra it is arranged according to years. It is true that Taharan's critical faculties are not of the highest. But it is for this very reason that we owe to him the preservation of the oldest historical traditions which he places together conscientiously without any attempt at combination; on the other hand we have to make allowances for many a lapse such as the preference for the unreliable Snif. His sources, become sensor he approaches his own time; it is only in exceptional cases such as in the history of the slave war that he once more possesses excellent sources of information. Owing to the fact that Baghdad is the centre of his outlook he surveys only a small part of the Muslim world, and the Maghrib is altogether outside his horizon. The works of Baidhūt and Yahyâ therefore form a welcome supplement to his annals. The former is a typical child of the world-wide Muslim civilization in its prime. From his native city Baghdad he travelled through the whole Eastern part of the empire of the caliphs, extending his journeys as far as India, Ceylon and China; after returning by way of Zanzibar and 'Oman he resided in Syria and Egypt where he died. It is unfortunate that later generations had no appreciation for the wide sphere of his interests, and we thus possess only two abstracts made by himself of his great historical and geographical work. The travels of the somewhat older Yahyâ were merely as extensive; he moreover had the advantage of possessing a detailed knowledge of the Maghrib, in spite of the blackest traditions. In his family he treated the history of the 'Abbasides with graverworthy objectivity on the basis of many old sources which are not extant in any other form: it is preceded by a compendium of universal history which deals not only like the work of Tabar on the biblical, 'Abārī's Persian and ancient Arabic tradition, but embraces the whole world as far as it was known at the time, from China to the Barryans and from the peoples of the North to the negroes.
book with a detailed statement of the stages, the postal relay and the taxes of each province. At Baghdad, which owed its prosperity to the first place it gained in international trade, there was an interest in foreign countries and nations, which found its earliest expression in a naive delight in tales of the marvellous, such as probably formed the subject of the lost book of countries of al-Djazir. The book of his contemporary Muḥammad ibn Ṭāhir al-Jahān was on history and organisation of the Romanic empire, and its neighboring barbarians, such as the Avars; Bulgars, Khazars etc. was possibly more systematic; it seems to be the source of a connected description of the countries on the Pannon and north of the Danubian preserved by al-Djazir and later by al-Ḥakīm and in several Persian works (see Marguerite, Croix, and Othniel, Steyland, p. xxiii). The basis for a scientific outlook which in astronauty was supplied by the Almagest was furnished in geography by the 'Geography' of Ptolemy; an Arabic translation of this work existed as early as the time of the philosopher al-Kindi, it is only preserved however in an abridgment composed by Ibn Khazin in 428 (1036). On the basis of these sources a pupil of al-Kindi, ʿAlī ibn Sahh al-Balḵī, wrote the first native geographical work in the form of an atlas, the brief descriptions of which were later expanded by al-İṣkṣīr and Ibn Hawšal. A great deal of new geographical material was furnished by voyages undertaken partly from a scientific interest and partly for practical purposes. The travels of inquiry undertaken by Mustafā and their results have already been mentioned. Half a century later, his many-sidedness of observation and thoroughness of treatment was rivalled by al-Maṣūdī, though the latter's wanderings did not extend beyond the frontiers of the Muslim world. A valuable extension of the horizon of the Arab world was brought about by embassies to the states of the North, such as that of ʿAbd al-Ḥākim b. Fadlūn who was sent to Russia by the Caliph al-Muṣṭafā in 309 (921), and the mission of the Spanish Jew Ibrahim b. Yaḥyā to Germany and the Slavonic countries undertaken on behalf of the caliph of Cordova in the time of Otto the Great. The descriptions of the adventures of sailors from Bagh in Indian and Chinese waters were addressed to the scientific curiosity of scholars as to the delight of the masses in the sensational; they are well characterised by al-Djazir in his Kitāb al-ḥayān, 191 et seq. Yet books like the still extant work of ʿAbd Zaid of Ṣanāʿ, which was based on the narratives of two merchants and that of the captain al-Rāḥman b. al-Tanbih, as well as the works used by al-Ṭanbih (al-Farār, ed. al-ʿAghāfi, 79 et seq. 87 et seq.) contain in addition to much exaggerations a good deal of valuable information on the Far East. Works of this type were completely overshadowed by the Persian Fīrat's book on India, the author of which is one of the most thorough observers and explorers of the Arabic writing world. At this same period interest in geography was continually revived by the pilgrimage to Mecca, which not only made it a pilgrim's handbook, for pilgrims written for the edification and the practical assistance of the people, but was also responsible for works on a higher literary level, like those of Ibn Dzhahir of Granada in
the vii (ix.) century and of the Moroccan Ibn Battûta in the viii. (xix.) century; the latter in accordance with the custom of his time did not hesitate to use the work of his predecessor more freely than our conventionalists would permit, yet his interesting descriptions of India, China, Asia Minor, the coast of the Black Sea, Constantinople and the Negro countries are entirely his own. Many other books of travel were written in the period after Ibn Battûta, especially in the Maghrib, and all those works, among which we will only mention that by Abû 'Abdallâh, bore themselves in long-winded descriptions of unimportant personal experiences, and particularly in lists of names of scholars whom the authors met in the various towns. The only noteworthy achievements in the field of systematic geography are found in the works of the Maghribîs al-Bakri and al-Jadrî, the dictionary of Yâfît once a Greek slave, and the geography of the prince and author Abu 'l-Fida'. — C. Belau, "Introduction général à l'histoire géographique d'Abû 'l-Fida' traduit par A. Paris 1848; F. Wustenfeld, «Die Literatur der Erdischreibung bei den Arabern, in Zeitschr. f. vergl. Ethnologie, x. Magdeburg 1842; M. J. de Goeje, "Enige Mededeelingen over de Arabische Geo-graphie", in Tijdschr. van G. van Rees Jhr. Reisvereniging, 1874, p. 190 et seq.; F. Schwarz, "Die voreuropäische geographische Literatur der Araber in Hettmann's Geogr. Zeitung", iii. (1857), part 3.

The fact that the Arabs forced the subject nations to adopt their language, soon created among the now Muslims the need for a scientific method which would facilitate and deepen the study of Arabic; the need was felt the more, because it was necessary to become familiar not only with the dialects used in every-day life, but also with the language of the Korân used in devotion and public prayer, and with the classical language of poetry which was required for the intercourse of polite society. As in the case of Greece, India, Assyria, Abyssinia and Japan (cp. v. d. Gabelentz, Sprachweis, 2. ed., p. 24) it was the contrast between the written language and popular speech which first suggested grammatical observations among the Arabs. The art of reciting the Korân which was cultivated down to a late period as a separate branch of study, though it soon degenerated into a mechanical office performed by unlearned readers, probably gave the first impulse to a close observation of the various sounds and their formation; the systematic development of these observations seems to have been influenced by the model of the Indian Panchaniya. The fundamental conceptions of grammatical reasoning however were borrowed from Aristotelian logic (cp. most recently Beethorn, Aristeotels und der arab. Geschichtschrift, in Frscns. f. Wilhelm Thomas fur dei. Diakonie, Copenhagen, 1894, p. 1 steer) which had already been eagerly studied under the Sasanids at the Syro-Persian school of Gondêkhpour [cp. v. v.] whence it reached the Arabs at an early date. The channel by which certain notions and concepts belonging to the grammar only, were transmitted to the Arabs has not yet been elucidated (see F. Prato in Zeitschr. d. Deutsch. Morgen-Geleitb., lxxx., 495 et seq.). The beginnings of Arabic philology suffered from the prejudice against the philology of the schoolmasters (cp. al-Didâm, Bayâna, i. 151, 168 et seq.) but as early as the ii. (ix.) century its representatives had risen to a social status which will bear comparison with that of the humanists of the Renaissance. Tradition calls the poet Abu 'l-Anvar al-Durâni the first grammatician, with what justification it is impossible to say. The earliest known treatise of this branch of learning which appears in a somewhat clearer light are 'Isâ b. 'Amr al-Thâa'î and Abî 'Abdullâh b. Abî-''Alâ', the former of whom had a reputation as a reader of the Korân while the latter devoted himself to the collection of old poems. The work initiated by these two men, whose pure Arab descent does not seem to have been questioned, was continued by Khattâb, whose tribe, the Auî 'Oumânî, are not regarded as genuine Arabs, and his pupil the Persian Shâhawî (St. böys) The former created the system of proudly and collected the store of Arabic vocabulary in his Kifââ'î shakhs, which was arranged not according to the order of the alphabet, but from the point of view of the physiology of sounds. The latter gave in his 'Abû' the first systematic exposition of grammar, in a form which in spite of its clumsiness came to be regarded as the classical standard for all time; later generations rewrote it a countless number of times in order to make it more intelligible, but added practically nothing of an essential nature. al-Ayámî got the science the recognition of the up-to-date classes at the court of Hârûn, though he was probably honoured there as a collector of poetry rather than as a grammarian. The principal achievement due to him are his numerous monographs on various fields of lexicography. These founders of the school of Bûyar found rivals at Kâifa, the second capital of 'Arâbî, in a number of scholars concerning whose activity we are unfortunately only scantily informed owing to the fact that they are overshadowed in the later tradition by the Başîrs. Al-Râzwî, to whom Shâshawî often alludes in controversy as the Kifâ, is regarded as the founder of this school. His pupil-Abî-''Alâ' wrote the earliest extant treatise on the grammatical mistakes of the people thereby creating a branch of literature to which we owe a great deal of valuable information for the early history of the Arabic dialects. From the iii. (ix.) century onwards the controversies were gradually reconciled at Baghâdî, the centre of all intellectual activity. It was there apparently that the linguistic theories of the old masters were developed on a philosophical basis especially by Ibn Dînî (who is regarded as the first representative of the so-called 'great etymology') see Goldscheider in Zeitschr. d. Deutsch. Morgen-Geleitb., xlix., 345) and that the science of Poetics, first created by the Kifâ Shâhâr who was put in systematic form by Abî Hilâl al-'Alâki. From that time onwards the study of philology spread over the whole Muslim world, and was introduced into Spain by al-Kullî, the later philologist however in spite of their large number hardly produced any original ideas. We owe to them countless manuals, of which only a few, like Zakâtshârî's brilliantly written Muqaddas, rise above the level of mediocrity, and particularly a number of most valuable lexicographical collections, such as the Ḳarakah of Ibn Durâni, unfortunately still inaccessible, the Maâqah of Lejâh, the Mu'âazzâr of the Spaniard Ibn lshârî, the Lîhâb al-'Arabî of Ibn Murnî, the Khâshat of
Furnbolit with a commentary by Murada T-Zalibti. — ’Cp. G. Flügel, Die grammaticalischen Schriften der Araber nach den Quellen bearbeitet. First part, Leipzig 1862 (Abh. der Deutsch. Akad. Wiss., vol. iii., N. 4). We have seen that these branches of knowledge although proceeding from the vital interests of the Arab nation were cultivated profoundly by means of the Arab form not content with the national literature even more rapidly in spite of the great part it played in the intellectual life of Islam. The Hadith (q. v.), as has already been pointed out, was on the whole the product of the first two centuries of Islam and reflects the intellectual struggles of that period. History and legendary narrative branched off from it at an early date, and Hadith as the evidential material of the schools of Fikh was gradually withdrawn from the influences of actual life. In spite of the fact that as early as the iil. (vii.) century the authenticity of each tradition had to be established with scrupulous care by means of an uninterrupted chain of authorities, the material continued to grow like an avalanche; it was therefore in no way surprising that quantum which al-Bukhārī performed in digesting and arranging it for the first time according to the systematic order of the science of Fikh, while his predecessors had contented themselves with assigning to each tradition a place in the Munawwa under the name of the last transmitter. Five other collections achieved canonical authority side by side with al-Bukhārī’s, but only that of al-Ma’ārif was in the end able to maintain its position permanently. In the succeeding centuries down to the present day unlimited industry has been at work on the field of Hadith, but it spent its efforts in mere compilations, partly for devotional purposes especially in the collections of 40 traditions, such as were produced by almost every noteworthy theologian, and partly in the work of combining the canonical books for the purposes of scholarly study. In the end the devotional side of tradition reached a stage where it bordered closely upon adab, or belles-lettres; Ibn Hābīb is the compiler of the latest work on tradition which was distinguished by a novel arrangement of material. As also the author of an adab book, the Raufa al-Nagīf, the activity of scholars was concentrated partly on the criticism of authorities which, in the case of the great biographical collections, bordered upon history, and partly on the criticism and exegesis of the traditional material. Muhammad al- chaining who edited the text of Bukhārī in the vili. (xive) century was assisted in his work by Ibn Malīk, the greatest philologist of the time, and already the founders of the school of Bāṣra, such as Ayma’s pupil. Abū ’Ubayd, had studied the special vocabulary characteristic of the language of the tradition; the latter subject was finally dealt with in an authoritative manner in the excellent Yikāya of Thīn al-Aṣīr al-Majd al-Dīn, the brother of the historian. ’Cp. I. Goldziher, Über die Ein- nachkeits der Hadith (Museum. Stud. ii., Halle, 1890, p. 1-274). Beginning as a branch of tradition the exegesis of the Korān soon became a separate science. Abū ’Alīl b. Abīl Ḥakam [q. v.], a cousin of the prophet who appears as the principal authority for a countless number of traditions, is also reputed to be the author of a still extant commentary on the Korān (printed lately in 1902 by Shāhī, Ṣahb-e Karim). The Korān then became the subject of philological study, and the purely linguistic exegesis was developed in numerous books on the Gharaib al-Korān none of which are preserved. An author as early as Abū ’Ubayd wrote a book on the excellence of the Korān as a whole and of certain Suras and verses in particular (see Ahmān, Faraq, q. v., and the Korān, N. 451) and Ibn Kātimī in his Muṣūrīl al-Korān tried to defend the treatworthiness of the sacred book against the strictures of the philosophers. Apologetic literature of this kind was however rendered superfluous at an early date by the victory of orthodoxy under government pressure and Tabari in his great commentary on the Korān concentrated his effort on the task of collecting the traditional material with as much completeness as possible. His book found a later rival in the immense work of Fakhr al-Dīn al-Rāţ. The brilliant Persian scholar al-Zāmekhshārī combined in his Kanzul‘l-the advantage of thorough philological exegesis with those of theological criticism. He did not however repudiate his Mu’tazilite views, and continued to uphold the very preface to his adherence to the heretical dogma of the ‘creation of the Korān’; it is owing to this fact that his work was overshadowed in the judgment of a wider public by the commentary of al-Balādhurī, though its undeniable excellence assured it for all times a large number of readers. Al-Balādhurī’s work is now regarded by the Sunnis as the best commentary and is almost invested with sanctity. It is true that it yields a mass of information in a concise and well-arranged form, yet it fails to approach completeness in any of the branches with which it deals (see Nohlke, Gele. d. Qur.-v. xxix). The amount of labour spent on Fikh, the principal subject of study among Muslims throughout the centuries, has been immense; but very little has been produced that can claim literary importance. Independent intellectual effort, which was very considerable in the beginnings of the different schools of Fikh, was replaced after the end of the III. (iv.) century by a rigid system of tradition which more and more lost touch with the actual facts of legal life. In the different schools of Fikh certain manuals acquired canonical authority—al-Kadhūrī’s Muṣūrīl among the Hanafīs, the Abīn of Abī Zaid and later Khālīl b. ’Ishāk’s Muṣūrīl among the Mālikīs, and al-Shāhī’s Tawhīd and the Muṣūrīl of al-Nawawī among the Shāfī‘īs; these works were followed by a number of glosses, commentaries and super-commentaries on which the intellectual labour of generations was expended. The literary achievements of Islam on the field of dogmatics do not rise to a much higher level. Our information as to the beginnings of this branch of study is very scanty. There is no doubt that at Damascus the influence of Christian theologians, some of whom even enjoyed authoritative respect among the Umayyad emir, had something to do with the origin of the earliest dialectical discussions on the Muslim articles of belief. At Baghda it was the study of Greek philosophy which gave rise to the aspirations of the Mu’tazilites to found a rationalistic system of faith. As far as the centre of the em-
ARABIA.

pire was concerned the strictly traditional orthodoxy, in which the 'Abbasids from the time of Mushawakkil onwards saw their best support, and in which the absence of the temporal power to dispose of the troublesome thee-tool; but Mu'tazilite ideas continued for a long time to find a favourable soil for their development in the distant provinces of the empire, especially among the Shi'ites. The traveller Ibn Baqiya found as late as the VIIIth (XIVth) century that the inhabitants of Khirbat declared themselves to be Mu'tazilites (see 'Asaf, Cairo 1287, 1, 221, 1). In the literature preserved to us, orthodoxy which had been put on a philosophical basis by al-Ashtar has gained the upper hand, with the result that an end was soon put to all activity in this field, as well as in that of Fikh, except as far as the writing of legal opinions was concerned. Just as every theologian who thought of his reputation held it to be his duty to satisfy the faithful by a collection of 40 traditions, nearly every one thought it equally necessary to formulate his dogmatic point of view in an 'Aṣbaṣa, even though in point of contents it differed in no respect from those of his predecessors. The only speciality for genuine scholarly activity existed in the field of the history of dogmas which is represented by the works of the Spanish Zähnik Taha Han and the Persian Shihab al-
Shahristāni.

A healthy reaction against the rigidity of the religious life introduced by orthodoxy, was due to mysticism which also was stimulated by the influence of Syrian Christianity; all the literary productions of Muslim theology those of the mystics are the most brilliant. In his beginnings mysticism was principally a power influencing the practical religious life, and its representatives generally left no written works except poetical effusions expressing their spiritual life and the communications of their chief articles of belief. But in response to al-Khujjja's famous 'Ebiš written in 457 (1065), in which he called for the 'Aṣbaṣa for a revival of the mystical life, literary activity on this field soon became immense. Mysticism was the refuge of al-Ghazali, the last great theologian of Islam, after he had vainly striven to reconcile philosophy and dogmatic theology. His statement of the 'Aṣbaṣa philosophy and its practical application on the individual, is laid down in his Fī ḥā'ifa fi al-risāla, the quintessence of which he restated in a form adapted for the masses in the Kimiyā' al-baydā'ī. It was written in Persian; both works have become classics even from the point of view of their literary form. Mysticism achieved its greatest triumphs in the profound systems of the Persians 'Abd al-Kadir al-Ghazali and al-Suhrawardi and in the luminous imagination of the Spaniard Ibn 'Arazi. At this stage it had assimilated new ideas drawn from Indian speculations; the 'Abbasite self-assuredly assisted by 'Avicenna revised in the translation of the Astār al-nahw, which al-'Azmāl had prepared a short time previously under the title Milā'at al-nahw, still the end of the 11th (XIIth) century. This discussion of the classical period of Shi'ism had reached its close. In the Persian and Turkish countries it continued for many centuries to attract, and satisfy, all eminent thinkers, but the productions of these men, which include the highest creations of all Muslim poetry, stand to the credit of the national literature. In Arabic literature there arose only a small number of poets and original thinkers like al-Shā'arāni, while literary activity found its outlet principally in lives of the saints and rules of the religious orders (Cp. A. Merx, Leben und Gemäldeein einer allgemeinen Geschicht der Mystik, Recklingh, Heidelberg 1853; J. Goldscheider, Materialien zur Einrichtung und Geschichte des Sīyās in Wiener Zeitschr. f. d. Kultur der Morgenl., vlll. 35-56; M. Schreiner, Der Sīyās und seine Gründung in Zeitabschn., d. Deutsch. Morgenl. Gesellsch., III, 513 at 298).

The literary life at Baghdad had found an unexpectedly brilliant development under the early 'Abbasids owing to the fact that Arabic science was made accessible to the Muslims by Syrian intermediaries. Already under the Umayyads the prince Khālid b. Yazid [q. v.] had pursued the study of astrology, medicine and particularly alchemy (see al-Majah, Bayān 1, 126, 16) and the medical work of the presbyter Abūnā had been translated into Arabic by the Jew Marshal for Marsūn, or according to others for 'Abūnā (Ibn al-Kifēf, ed. Lipert, p. 34). At the court of al-Mansür we meet with a physician of Godinaghār who is said to have translated medical works into Arabic; and the translator Yūsūf b. Masawwah flourished under Hārūn. But it was the caliph al-Ma'mūn, himself full of appreciation and vivid interest in all scientific aspirations, who gave the most powerful stimulus to this form of activity. He founded at Baghdad the Bayān al-

Unlike medicine, astronomy and natural science which were confined to narrow professional circles, philosophy gained a somewhat wider influence on the whole literary development. It has already been pointed out, that both grammar and dogmatic speculation started from suggestions furnished by philosophy. But the orthodox reaction under al-Mutawakkil put obstacles in the way of this influence. The 'philosophers of the Arabs', al-
Khawājā suffered under reactionary persecutions, and it was only because of his skill in astrology that he was pardoned at the court. His attempt to combine Aristotelian observation of nature with the dominant neo-Pythagorean and neo-Platonic system was not attended by much success; and his studies had to be pursued at a distance from the public life owing to the persecution of the orthodox. An eclectic philosophy of nature, was transmitted as a secret doctrine in the circle of the 'Brethren of Purity', whose religious and political views the sect of the Karmatians tried to put in practice though only as a grossly vulgarised form. The treatises of the 'Brethren of Pa-
city' afforded a kind of encyclopaedic survey of the sciences of all nations and religions known to their time. The 'book of the beasts and man' borrows its framework from Indian fables, and just as the latter affords a means of telling the truth to a ruler in a way unheard of under other circumstances, so, it venture to give a more scathing criticism to human society and its positive religion. Their philosophy of nature however ends almost entirely in psychology. The soul is the real being of man which has developed on a mystical path of ascetic from the lower animal orders through the animal stage to an increasingly higher grade of perfection. The Brethren of Purity gained no influence on the activity of the professional philosophers and theologians, but their treatises were eagerly read by the educated and many sects adopted their doctrines. The Aristotelian philosophy on the other hand was always confined to certain circles of the elect; and did not flourish except under the protection of princes, such as it was afforded to al-Farābī at the court of Saff al-Dawla, and to Ibn Badda by the rival petty rulers of his Persian home. In the latter country Ibn Sīna exercised a profound influence not only through his medical canon, but also through his psychology and logic: and his influence on the Christian West was still more powerful, at a time when he was unattainable by Muslim orthodoxy. In the West as well as in the East the Musulman philosophy was the privilege of isolated thinkers, who could gain no influence on the masses; they had on the contrary to live in obscurity, apart from the exceptional cases in which such men were invited to the court of some intelligent ruler, as happened to Ibn Badda, a follower of al-Farābī who lived at Saragossa at the court of the Almoravid 'Ali. It thus came about that the Andalusian philosophers have been of greater importance for Jewish and Christian scholasticism than for their own fellow-believers. Only Ibn al-Tūfāl deserves special prominence as the creator of a new literary form, the philosophical novel. The ascent of the mind from the elements through the stage of suggestion to the vision of God had already been described by Ibn Sīna in the allegorical change of the ideal man Hāy b. Ḥaqqān. Ibn al-Tūfāl borrows this character, in order to describe in his example the development of a thinker: growing up from all human intercourse on a lonely island. He creates for himself the conditions of material existence, and in his mature age is led by the contemplation of nature to the vision of God. He then meets a philosopher who has risen beyond the limitations of human society, and the two resolve to communicate his pure knowledge to the people: soon however he realises the vanity of this undertaking, as the people is ripe only for Muḥammad’s allegories, and together with his friend he returns to his lonely island. Better times had to await Ibn al-Tūfāl to have arisen for philosophy with the rise of the Almohad dynasty, and the public recognition to the doctrines of al-Ash’sū and al-Ghazālī whose concessions to philosophy had until then been rejected in the West as heretical. Under the reign of Yūnīs Ibn al-Tūfāl and Ibn Ṭalḥa for a time enjoyed the favour of the court, though his latter had to go into exile in his old age. Ibn Ṭalḥa did not reject the state as such, as he appreciated its civilising influence; but his doctrine of the eternity of the material world, of the necessity of a causal nexus between all events, and of the destruction of the particular put him in sharp opposition to theology without any hope of reconciliation. It was only among the sufis that a certain amount of interest in philosophy was still displayed, though merely for the purpose of gaining a more certain assurance of the higher values of mysticism. Why towards the middle of the 12th century A.D. the emperor Frederick II., put a number of philosophical questions before the Muslim scholars of Ceuta, the Almohade Abū ʿAbd al-Wahhāb entrusted the duty of replying to them to Ibn Sīna, the founder of a mystical order. He undertook to do so. In the style of a pedantic schoolmaster he enumerates the views of ancient and recent philosophers. He allows us to divine the safe, secret, that God is the reality of all things. But the only thing to be learned from his replies is the fact that Ibn Sīna had read books, of which he believed the emperor Frederick to have no knowledge whatsoever. (T. J. de Boor, Gesch. der Philosophie im Islam, Stuttgart 1901, p. 177 ff. sqq.). The last thinker of Ja‘fār, Ibn Khaldūn, as he has already been quoted out, based his system on history, in the events of which he recognised an ordered law (T. J. de Boor, loc. cit.). Cp. I. Goldscheider, Die Islamische und die jüdische Philosophie, in P. Himberg, Die Kultur der Gegenwart, part i., sect. 5 (Berlin-Leipzig 1899), p. 45-77.

The Mongols in the East and the Barbars in the West destroyed the flower of Muslim civilisation, and their devastating influence is more apparent in the field of literature than in any other. It is true that the literary output was enormous even after the 12th century, but no new idea and no new form has made its appearance. The greatest variety and the most rapid rate of production are the two most coveted titles to fame. To the unerring industry of men like al-Suyūtī, al-Marrādī ‘l-Zahhāq, and ʿAbd al-Kaīf al-Baghdadī we owe stores of invaluable information in consequence of the fact that many documents of the literary past of their civilisation which are irretrievably lost to us, were still accessible to them; but from the point of view of the history of literature as such they are of no account.

ARABIA — "ARABI PASHA."

The text is a historical account of the events involving "Arabi" and "Khedive" in Egypt during the late 19th century. The text describes political turmoil, military actions, and the rise and fall of Arabi Pasha, a major figure in Egyptian history. The text also references the invasion of Egypt by foreign powers and the subsequent coup that resulted in Arabi's fall from power.

The key points include:
- The rise of Arabi Pasha and his military actions against the Khedive.
- The involvement of European powers in the Egyptian affairs.
- The fall of Arabi Pasha and the subsequent military intervention.

The text is a detailed historical narrative that provides insight into the political landscape of late 19th century Egypt.
hands. This conviction created in the upper classes of the population a profound discontent not always swayed by moderate counsels, which developed into a great Nationalist movement too late recognised as such in Europe. It was a movement of the educated, 'Ulama', officers and civil servants, and its character was not primarily national and religious, or even anti-European; but it was directed against the excess of European exploitation and the arrogance of the Turkish Pashas. Its motif was șaray 1-a-Mafrûrûn, Egypt for the Egyptians.

The Nationalist movement found its first expression in the insubordination of the army. The alliance with the victorious enemy, sought at first in secret and later quite openly, secured for it a short period of success, at the same time however destroying all hope of European assistance. It appears from Lord Cranmer's memoirs that Great Britain absolutely declined to recognise in any way the de facto authority created by the military revolt; and all attempts at reorganisation conditional on the recognition of the revolutionary leaders and the restoration of legitimate authority.

It cannot be denied however that 'Arabî's power, although obtained by force, had received the official sanction of the state. According to expert opinion, he did not legally become a traitor until after his formal departure from Alexandria, when he proclaimed himself ruler of Egypt. For the political situation as well as the urgent pressure of France (Gambetta, de Fraycinet) caused Great Britain to adopt a policy of intervention which inevitably led to the occupation of the country; this occupation was undertaken by England alone owing to the fact that France at the last moment declined to participate.

For farther particulars, see Kusiaté. Following the Persian usage 'Arabistân denotes occasionally the Arabian peninsula. (STRECK)

'Arak (a.-d.)

Arabic, ��Bkra, the termite (termes arla, white ant). Our knowledge concerning this insect which is found in all hot countries up to 40° N. and S. Lat. is still very scanty; the Arabs were nearly as well informed, at any rate as far as the species occurring within the Muslim world are concerned. The insect described by Arabic authors is the white ant which is found in Egypt in a few species, moves frequently further up the Nile in Nubia, and is most frequently in the Siout. The Arabs made the observation that some of the 'little white worms' possess wings during some part of their life ('after a year', Karwût), but failed to recognise the connexion of this fact with their sexual life. The social life of the termites, their common labour in constructing the typical heaps of clay with countless tunnels, their battles with the ants, and particularly their practice of destroying wood, whereby they became quite a plague, were well known. Arsenic and the dung of cattle were supposed to be a protection against them. The voraciousness of the termite and the

ARADA (also ARADA; A.), the termite (termes arla, white ant). Our knowledge concerning this insect which is found in all hot countries up to 40° N. and S. Lat. is still very scanty; the Arabs were nearly as well informed, at any rate as far as the species occurring within the Muslim world are concerned. The insect described by Arabic authors is the white ant which is found in Egypt in a few species, moves frequently further up the Nile in Nubia, and is most frequently in the Siout. The Arabs made the observation that some of the 'little white worms' possess wings during some part of their life ('after a year', Karwût), but failed to recognise the connexion of this fact with their sexual life. The social life of the termites, their common labour in constructing the typical heaps of clay with countless tunnels, their battles with the ants, and particularly their practice of destroying wood, whereby they became quite a plague, were well known. Arsenic and the dung of cattle were supposed to be a protection against them. The voraciousness of the termite and the
damage caused by them were proverbial, and the popular superstition, which regards them as herds of death, seems to be very old. In the Koran (xtra 34, 13) Solomon is said to be dead by 'a blast of the earth which gnawed his staff,' and in North Africa people still say: 'when a person is going to die, then comes the ajda knowing it well.'

ARAFAT or ARAFAT, a hill famous as a place of pilgrimage with an adjoining plain of the same name, 6 hours to the East of Mecca. It is a hill of granite of moderate dimensions reaching a relative height of 150-200 feet. On the East broad steps lead to the top; on the 60th step there is a platform containing the pulpit from which a khutba (sermon) is annually delivered on the afternoon of the 9th. Lhūlah (the day of Arafat). On this spot the most famous of all the mosques of Mecca stands. It was destroyed by the Wahhabis. According to 'Ali Bey pious Muslims may not penetrate beyond the platform. The hill is usually called Djebel al-Rahima (hill of mercy). Another name is said to have been Hail, but it is doubted whether this appellation belongs to the present hill; Djebel al-Rahima regards itself as the name of a shrine or perhaps of the deity worshipped on the spot in the pre-Islamic period. Pictures of the hill are found in 'Ali Bey and Burton; see bibliography. — The plain of Arafat spreads southward from the hill of Arafat and is bounded on the East by the lofty mountains of the chains of Taif. It is covered by a low growth of mimosa plants, and is filled with life only on one day of the year (9th Lhūlah) when the pilgrims pitch their camp for the celebration of the prescribed wazifa. Cp. the pictures in Burckhardt and especially in Snouck Hurgronje, Bilder aus dem Leben der Meuken. The wazifa or festival assembly takes place on the afternoon of the day mentioned and lasts until after sunset. The pilgrims present express their religious fervour by loud shouts of lalalila, by prayers and recitation of the Koran.

The origin of the name 'Araf is unknown. The legendary explanation is that Adam and Eve who had been separated from each other after their expulsion from paradise, met again at this spot and recognised one another (al-Arafa); Arabic authors also mention other etymologies of a similar nature.

ARABIA, French orthography Larache, sea-port town situated on the Atlantic coast about 44 miles S.W. of Tangier, and 33 miles N.W. of Fez (Fes), under 35° 43' N. Lat., and 8° 28' 22" W. Long. (Paris).

Larache is built on the slopes of a hill dominating the left bank of the Wad Lekkus at the spot where the river, issuing from the Niro, is surrounded by an old walled enclosure, which is joined by the hand side by the Kasbah and towards the sea by a fortress. It offers little that is of interest; the streets are dirty, the mosques common-place, the Kasbah is only a heap of ruins. The only really picturesque spot is the square of the 500 containing both the bazaar and the market, and the four sides by white arcades. (Aubin, Les Murus d' 'Amour-Chau, 2 ed., p. 90.) The surroundings contain groves of orange and olive-trees, pomegranates and even vineyards which produce the wine consumed by the Jews of Northern Morocco. Larache possesses a certain importance from the continually visited by merchants from Fez and the fertility of the Wad Lekkus valley, the marshes of which support numerous herds. The harbour serves as port of transit for merchandise destined for Fez, and for the export of the produce of the Khlot (Akhlat) and the Gharb, particularly wool which is sent to England, France and South America. The area of the town is 540,000 and the exports 1,250,000 francs. Unfortunately the alluvial deposits of the Wad Lekkus have formed a sand-hank which makes the harbour inaccessible for vessels of large tonnage, and even renders the landing dangerous during one half of the year. The population is about 5,000, including 2,000 Jews and about 2,000 Europeans, two thirds of whom are Spaniards. There is a Spanish Catholic mission directed by the Franciscans, a Protestant mission and a school of the Alliance Israélite.

Larache has taken the place of the Roman colony Lissus, which in its turn had replaced the Lybic-Punic town of Lyae. Both of these towns were situated on the coast facing the straits of Gibraltar near the N.E. of Larache; their site is still marked by ruins called 'Shoumsih' by the natives. — The old town is not mentioned by any Arabic author prior to the s.a. century. It was probably founded by the Berber tribe of the Beni 'Arwa who, by reason of the vineyards abounding in the district, gave it the name of el-'Arwa. The Almoravid sultan Ya'qub al-Mansur built here a fortress to command the mouth of the Wad Lekkus. In 1270 it was taken by the Andaluisian Christians who massacred the male inhabitants and carried off the women as slaves. The town however recovered again and was frequently attacked by the pirates of the Genoese and Venice who brought linen, silk and glass and exported wool, leather and cotton. The situation of Larache near the straits of Gibraltar could not fail to excite the covetousness of the Christian powers. An unsuccessful attempt at occupation was made by the Portuguese after they had taken possession of Arica. They succeeded in 1477 in gaining possession of an island at the mouth of the river, but had to retire soon afterwards, as the natives obstructed the channel by means of tree trunks. For the protection of the town against fresh attacks a fortress of 600 foot-soldiers and 500 horsemen were there maintained. The Spaniards were more successful than the French, and various fruitless negotiations undertaken by Philip II who declared that Larache was worth
more than all Africa" they succeeded in obtaining the cession of the town. It was yielded up to them by Muhammad al-Salik al-Ma'mun for the price of their support against his rival al-Zaidan. On 24 November 1560 the Marquis de Saint-Germain took possession of Larache in the name of Philip III king of Spain. The Spanish occupied it but left it ungoverned by the 'inhabitants' by them on fortifying the town and in the creation of a Franciscan convent; they were however almost continually besieged in the town by the Moors and gained no advantage from their possession. In 1569 Matias Janell resolved to "purge the sea-bound" of all Christians, marched against Larache at the head of an army of 16,000 men reinforced by bands of "volunteers of the faith." After a siege lasting 5 months the town was forced to surrender. Some of the officers and the ecclesiastics were sent back to Europe, but the rest of the garrison were carried off as prisoners in contradiction of the terms of the capitulation, and yet to work at the building of Mequinez, which he saw furnishing the new inhabitants. Henceforward Larache remained in the possession of the Moroccans, though on various occasions it became the object of naval demonstrations on the part of Christian powers. In 1755 the French attempted to destroy a number of pirate ships which had taken refuge in the bay of Larache, and seven of these serious defeated and lost 450 men. No greater success attended the enterprise of the Austrian admiral Liandri, who attempted in 1830 to set fire to the remains of the Moroccon fleet moored under the walls of the town, he was forced to retire with considerable losses. During the war between Spain and Morocco in 1860 Larache was bombarded by the Spanish fleet, but owing to a great storm, which made the attack of the squadron very uncertain, little damage was inflicted.

ARAKAN, the northernmost division of the province of Burma in Further India conquered by the British in 1826. The present capital is Ayah, the name of the former capital is Myaukang (English spelling Myeikang). The number of inhabitants is 762,108 (1901) of whom 162,754 are Mahamadans.

Arafat, the great lake in Central Asia (Russian "Arafat's lake") I.e., "sea of Aral") according to the most recent calculations (1900-1902) covers an area of 26,140 square miles (without the islands); it receives the two chief rivers of Russian Turkistan, the Amu-Darya [q. v.] and the Sir-Darya [q. v.]. The ancients do not seem to have known lake Aral, though a vague notion of its existence may be the foundation of the contradictory accounts about the Central Asiatic Malai; (it is conjectured that the name of the sea of Azov was transferred to lake Aral, just as the name Tanais = Don was transferred to the Sir-Darya and about the Marshes of the Oxus (Oxina lima, palus Oxiana; in Ambrosianus Mersallinius palus Oxia), Old Chinese sources (from the 2nd century AD onwards) only refer in quite general terms to a "Northern Sea" or "Western Sea" as existing in the district of lake Aral. It is similarly uncertain whether the lake (Ilmit) mentioned by the ancient ambassadors Zermachos (568 A.D.) may be identified with lake Aral.

More accurate accounts are found in the Arabic geographers. It is possible that lake Aral is mentioned by an author as early as Ibn Khurajib under the name of lake (Bahari) of Kordar (cf. Ambrosianus Mersallinius) and is described by an Arab, of the end of the 1st century B.C. who does not however mention its name, according to him the lake which receives the Amal-Farag had a circumference of 80 parasangs (al-Istakhri and the later authors give the figure as 100). Near the mouth of the Sir (according to Ibn Hawkal two days' journey from the new village), Aral. Kordar, the poet, (Istakhri) furnishes the new inhabitants. Henceforward Larache remained in the possession of the Moroccans, though on various occasions it became the object of naval demonstrations on the part of Christian powers. In 1755 the French attempted to destroy a number of pirate ships which had taken refuge in the bay of Larache, and seven of these serious defeated and lost 450 men. No greater success attended the enterprise of the Austrian admiral Liandri, who attempted in 1830 to set fire to the remains of the Moroccon fleet moored under the walls of the town, he was forced to retire with considerable losses. During the war between Spain and Morocco in 1860 Larache was bombarded by the Spanish fleet, but owing to a great storm, which made the attack of the squadron very uncertain, little damage was inflicted.
ARAB. [Seebaar.]

ARARAT (Turkish Ağrı Dağı, Ermeni Artavazdz or Artavazt), one of the most important elevations of the Armenian highlands. It is situated between 44° and 45° E. Long. (Greenwich) and under 39° 30' N. Lat., it is one of the greatest peaks in the world, being the highest point of the Armenian highlands. Its snow-capped summits, which are about 18,000 feet above sea level, are surrounded by beautiful valleys with perpetual snow and fine grass. The whole region is rich in mineral deposits and is densely populated. The town of Erzurum is situated in the north of the province, about 50 miles from the summit of the mountain.

The name Ararat is derived from the Assyrian word Arârât, which means "mountain of Noah." The mountain is mentioned in the Bible as the place where Noah landed his ark after the deluge. The site is believed to be located in the modern region of Eastern Turkey.

The mountain is a popular tourist destination and is considered sacred to many religious traditions. The most notable event associated with the mountain is the legend of Noah's Ark, which is a significant part of the story of the Flood in the Bible.

The landscape of the region around Ararat is varyingly described as rugged, picturesque, or dramatic. The area is known for its beautiful valleys, rolling hills, and snow-capped peaks. The climate is characterized by cold winters and mild summers, with significant variation in altitude.

The region has a rich cultural and historical heritage, with evidence of human settlement dating back thousands of years. The landscape is dotted with ancient ruins and archaeological sites, making it a popular destination for tourists and historians.

Bibliography:

Further research on the region can be conducted through these sources, providing a comprehensive understanding of the geography, culture, and history of the Ararat region.
of snow which cover it, the slopes of the great Ararat possess only two springs of any importance (particularly the spring of Sarak Pilagh = spring of the governor, already referred to, 7,442 feet; the famous spring of St. James has changed its situation since 1840), so the little Ararat there are no springs at all. The latter does not reach the region of perennial snow unlike the great Ararat (snow boundary 13,582 feet in the N. and 12,813 feet in the S.).

Owing to the great lack of water the vegetation is very scanty. Apart from a small growth of birch-trees the Ararat like the other mountains of Armenia is characterised by a complete absence of woods. A poor fauna corresponds to the scanty vegetation; the species of the Ararat were covered by more than one historian. The last years, the climatologist Thomas the Armenian (c. cent.) draws attention to the wealth of the district in large, wild pigs, lions and wild asses; cp. Thaddeusan in the Mitten, der Semin. j. orient. Sprachen in Berlin, 1904, part II. p. 150.

The ascents of the great Ararat were undertaken on 9, October 1829 by Professor Fyodor Parrot. Since then it has been ascended more than 20 times annually from Armenia on the Northern base (cp. the accounts by Rickmers and Reithing in the Zeitshrift der. Deutsch-Ostzer. A, i. viii. 1815, p. 315), thus e.g. in 1834 and 1845 by Antommazzia, in 1845 by Warren and Abba, in 1875 by Kretzschmar and Meunch, and several times by Robbe, the well-known explorer of the Caucasus. One of the most interesting ascents was undertaken in 1859 by the Russian general Chodork (for the purpose of the triangulation of the Caucasus); he ascended both peaks and spent nearly 2 weeks on the great Ararat.

Since the last war between Russia and Persia, the Ararat has been the gigantic boundary-stones between three rival powers; the vast mountain mass is divided up between Persia, Russia and Turkey, the Persian district (Adharbajjan) beginning on the Eastern base of the little Ararat; the North with the chief peaks, in Russian, and the Southern part belongs to Turkey. For the legends connected with the Ararat see the art. ARARAT (Djeleb).

ARAS, the ancients of the ancient river. See ALASAB.

ARBAB, pl. of RAS [q. r.]

'ARBAN, site of ruins in Mesopotamia, on the Western bank of the Khabur, to the South of the Euphrates and Al-Assi, situated between 30° 10' N. lat. and 43° 1' S. longitude (German). The remains of the old town are hidden under several hills, after one of which the site is also called Tell Al-Asi. It was here that H. A. Layard found several winged bulls with human heads, products of the genuinely Mesopotamian civilization which is closely related to that of ancient Babylonia. (Aras is probably identical with the Gar (Jbq.)-district of the same inscriptions. During the later Roman period the town, then called Aratana, possessed considerable military importance as the principal station on the line of frontier against the Persians. In the Arab period, Ararab played an important part as the centre of the military district and storage for the cotton cultivated in the Khabur valley. Geographers (cp. e.g. Yabak of Arah) and historians refer to it frequently as a flourishing town. The site of its destruction is unknown; possibly it took place during the Mongol invasion under Timur.

ARCHIDONA, old town in the South of Spain, the antique name of which is not certainly known, situated in the N. E. corner of the modern province of Málaga near the site of the travellingers between Antequera and Cijá. (cp. the Genil); it has 9,000 inhabitants. Among the Arabs, who occupied the town in 711 soon after the first battle, it was known as Arqidhóna and Arqhidhóna (Yahya b. 153 Urquidhuna and b. 207 Urquilhuna). For a long time it was
ARCHIDONA — ARCHITECTURE.

the capital of the mountainous province of Régio (corresponding to the modern province of Malaga). It played a part in history during the rebellion of the renegade Omar b. Hafsah (with his chief fortress Romarba), and later as a frontier fortress of the kingdom of Granada, until it was taken in 1431 by the Grand Master of the order of Calatrava.

ARCHITECTURE. The principal forms of Islamic religious buildings (Syro-Egyptian school).

Mosques. — The mosque dates from the first beginnings of Islam. The simplicity of Muslim worship allowed of a very simple ground-plan. Among the least distinctive of the early centuries of the Hijra: a large rectangular court (yaft) surrounded by arcades (rūrds), the flat roof (ṣaf) of which rests on arches (ṣidr) supported by columns (samā Karnataka and pillars (ruhn) of brick (Κύρην), The origin of this ground-plan has been traced to various older types of buildings (ancient Egyptian temple, Persian palace, Greek agora, Christian basilica); but owing to the fact that the oldest monuments have either disappeared or been subjected to later alterations, an approximate solution of the problem can only be expected from excavations and from a close examination of the sources respecting the earliest mosques. The most recent explorations in Sáinarr show that Mesopotamia as being the residence of the 'Abbasid caliphs plays an important part side by side with Arabia and Syria.

Like the church the mosque has its orientation; it is directed towards Mecca (kibla, 'direction towards Mecca'), whither the Muslims turn in prayer. The ordinariness of the orientaion of a mosque therefore depends on its geographical position. In Syria it is directed to the South, in Cairo to the East, or rather East-South East. On the side containing the kibla the arcade is widened in order to hold the multitude of the faithful. It therefore allows of a greater number of people. In Mecca there are three arcades. It is called al-ṭawārī al-nāfī, 'the orientated arcade', in the vulgar language (khalī ḥāl) or simply ḥalī. This sanctuary is frequently divided into two parts by means of a screen of trellised wood, called makhārī. On the side nearest the court it contains the platform (makaḥa) for the officials of the mosque who repeat the words of the imām (mawlid). The prayer niche (kibla, mihāf) which indicates the direction of Mecca opens out from the background of the sanctuary; by its side is found the pulpit (mawhar), from which the imām and the preacher (kshāf) direct worship and prayer.

This arrangement exhibits obvious points of resemblance with that of churches. The court surrounded by arcades with a water basin (wāqī) in its centre suggests the atrium which also was surrounded by arcades and contained a basin for ablutions. The sanctuary corresponds to the main part of a church; the screen is a kind of choir-screen, the wāqī a kind of apse on a smaller scale. The minaret (makhāra, ma'd Nhà) finally, perhaps an imitation of the bell-tower, which contains galleries for the call to prayer (adāba) becomes the outward and visible sign of a mosque. Like the original bell-tower it has no definite place and rises sometimes from a corner and sometimes from a side. These reminiscences are easily explained. The Muslim conquerors appropriated the much more advanced art which they found among the vanquished, and in the first place transformed a large number of churches into mosques. This was the case e.g. with two famous buildings, the great mosque of Damascus, and the mosque al-Āṣ at Jerusalem, which betray their Christian origin at the first glance.

Style and methods of construction change from generation to generation, especially as regards the choice of material, the gates, the façades and minarets, the profile of the arches in the interior, and the ornamentation. But the ground-plan of the mosque is the same as that of the Ottoman conquest.

The original classical name of the mosque is masjid, 'place of prostration'. The Korān knows no other expression, and the older writers apply it to all mosques irrespective of size. But towards the fourth century of the Hijra the advance of civilization and the need of producing a distinction between two kinds of mosques. The great mosque, in which the assembly of the faithful (qāma'ma) meets for the Friday service. (qāma'am) receives the name masjid al-qāma'ma, masjid b'tul qāma'ma or masjid al-qāma'ma, and we soon meet with the shortened form al-qāma'ma', the 'great mosque'. From that time the expression masjid demeans only mosques of the second rank; the number of which gradually becomes less and less. Only the great mosques of Mecca, Medina, Jerusalem (al-Āṣ) are still called masjid owing to the fact that tradition following the Korān gives them that name which thus has become popular.

This development in the use of the expressions can be followed in the authoritive inscriptions which contain accurate official and dated documents. The great mosque of Ahmad ibn Tulun built at Cairo in 265 (879) still bears the name of masjid in the dedicatory inscription. But the mosque of the Nilometer also at Cairo, erected two centuries later in 485 (1092), is called qāma'ma in the three texts of the document recording its foundation.

MADRASAS. — The Fātimid caliphate while spreading the Shī'ite doctrine in Egypt and Syria, affected no change in the ground-plan of the mosque; it is found in its old form especially in the mosques which they built at Cairo. But the development of religious ideas and the political situation created in the Muslim East by the Mongol invasions and the dismemberment of the Fātimid caliphate, led us to the Fātimid period to an orthodox or Sunniite reaction which was directed especially against the 'Ahd or Shī'ite sects and dynasties. This religious (Aṣ'āri) and political (Aṣ'ār) reaction (the first of a number of reforms in all the fields of life. One of the most important was the development of the madrasa.

The latter first arose in Khorasan in the beginning of the 9th century of the Hijra; in its original form it was simply a private school of religious
sciences i.e. tradition, exegesis and law according to the Sunni rite. But in the 13th century it was turned into a public institution by the Seljuk sultans of Baghdad, which became the most powerful branch of the 'Abbasid caliphate and the official protectors of Sunnis and Shias. It now became the object of the Madrasa to train an élite of officials for all branches of the administration. It thus developed into a powerful centre of religious and political propaganda, a school of official Sunniism and, in a way, a government institution. In this form it spread to Egypt and Syria by Sultan Saladin into Egypt.

Differing from the mosque, the madrasa is more distinctive and more architectural in its features. At the time when it was transplanted into Egypt by Sultan Saladin it adopted the ground-plan of that type of building. The latter was retained its character of a government institution with pupil and professor, though the origins of the Al-Azhar, a kind of ecumenical academy in which the sciences, imparted from the Persians and ancient Greeks were taught. The Shi'a sect was not the only foe against which the Sunni had to fight; the crusaders had raised another enemy in the Latin Kingdom of Jerusalem. Salah ed-Din and his successors were hand-capped by the feudal system and by political decentralisation, and they were still able to weaken it without accomplishing its destruction. This was finally effected by Mamluks. On the ruins of the Al-Azhar feudal Mamluk empire, a centralised state was created by a regular army and governed by means of a bureaucratic hierarchy. With the help of this powerful lever it was put into action one by one the Latin Kingdom and the frontiers of the Arabians, the last bulwark of the Shi'a heresy in Syria. He conferred upon his authority a religious sanction not by the Muslims, and by assembling at Cairo, the remains of the caliphate of Baghdad, destroyed by Hulagu in 1258. Thus re-establishing for his own purposes the dualism of spiritual and temporal power he restored the continuity interrupted by the Mongol invasion and completed the work planned by the great Sunni of the preceding century.

Thus an end was put to the struggle; the warlike spirit of Sunnis, fanned into flame by the holy war, had spent itself and turned to good works and contemplative study. No longer having a fighting part to play the madrasa necessarily lost its old character and became just another church. All the madrasas are dedicated to the Friday service. The faience, more spacious than the other three iwans, serves as sanctuary and contains pulpit and mihrab. A minaret finally gives to the madrasa the outward appearance of a mosque. Meanwhile however the madrasa has acquired such importance that, far from being absorbed entirely into the mosque, it stands by itself as a separate entity. The number of madrasas on the classical ground-plan decreases continually, the number of madrasas with a cruciform ground-plan continues to increase down to the Ottoman conquest.

This development is reflected in linguistic usage. The madrasa intended for worship received the name madrasa; later they were simply called έλεγημόνες, the great mosques. Mubarak, who wrote his topography of Cairo early in the 13th century, applies this name to most of the Mamluk madrasas. Inscriptions from 1290 (1247) onwards attest that this was the official usage. The word madrasa then became the name of the institutions of minor importance. In Egypt at the present day it means no more than a secular school, every large building connected with the cult is called έλεγημόνες.

The original mosque, madrasa, is thus split into two classes, the great mosque (έλεγημόνες) and the small mosque (έλεγημόνες). The madrasa similarly develops on the one hand into the έλεγημόνες, on the other into a secular school. Both kinds of
In the architecture of Syria and Egypt the subtil vault stands by itself. It is found on the ground floor in the corner of a mosque, a madrasa, or a monastery, and is characterised by its two large rectangular windows placed corner-wise which are decorated with charming sculptures and closed in by fine bronze gratings. Over the vault is found the elementary school (tabl) or the maeda conspicuous from afar by its elegant belfry which opens out towards both facades by means of arcades resting on small columns. This graceful type of the "tabi-burâk" continued to exist down to the Ottoman conquest. After this period the vault is erected by itself, at first in conjunction with the kutbah, and later only in small monasteries.

The style continues to degenerate down to our own time; at the present day the drinking-fountain exhibits all the features of the perverted taste of the modern Turkish style.

**Monumental Tombs.** — For the development of the tower orders a grave is sufficient. Those of the higher classes not content with a mausoleum. From the earliest times to which it can be traced the Syro-Egyptian mausoleum has its own style: a cubic room on a square base with a vaulted roof. This type may possibly be a remote reminiscence of the ancient Egyptian mastaba. It is more directly connected with a Christian type, the kalybe. Many examples are preserved in Syria. The problem of erecting a cupola on a square base, executed in a rough way in the case of the ancient Syrian kalybe, finds in Muslim architecture the most various solutions in which the thought and the successive inventions of the Persians and Byzantines are reflected. The space of transition from the square to the circle is occupied either by flat arches with stucco, or by corner-trompes made of bricks and later of stone, or by stalactite pendentives of stone. The material used, the proportions, the section of the space of transition, of the tympanum and of the cupola, the ornamentation and in fact all the elements of which the style is composed, change from generation to generation; but the general ground-plan remains unaltered down to the Ottoman conquest.

The classical word for mausoleum is *sâbâb*. But owing to the fact that the cupola is its most conspicuous characteristic, the name of the latter, *tabi*, is extended in the whole monument. In the author's book on the Syro-Egyptian inscriptions both expressions are used interchangeably. The entire mausoleum is, i.e. the building enclosing the grave. The grave is called *sadâb* or *madâfân* or *dârâb*, an Arabic word of Aramaic origin.

In many cases the mausoleum stands quite isolated on a cemetery. But frequently several are placed together in one enclosure (muraqqa) without however forming an organic whole. The mausoleum of some great person is often found in the corner of some sacred building founded by the person in question. For sultans and emirs — former slaves who had risen to power but could never be sure of their fate on the narrow — were wont like the great Italian condottieri of the Renaissance to provide for their tombs early in life.

The conjunction of the monumental tomb with a sacred building creates three main types of combinations: the mausoleum-mosque, the mausoleum-madrasa and the mausoleum-monastery. We may mention at Cairo the

---

**Drinking-fountains and schools.** — Side by side with these three chief types, mosque, madrasa and monastery, we find two subordinate forms of buildings, known as *sadâb* and *tabi*. *Sadâb* means 'water, path'; the expression *fi sadâb Allâh* 'in the path of Allâh, for the sake of God' is applied to any good work, to the holy war as well as to the giving of alms; it is used especially of foundations serving the common good, the use of which is free to all. In the East water is most precious; according to a tradition going back to Muhammad the offering of a drink of water is one of the most reverent forms of alms-giving. Thus while *sadâb* originally denotes any charitable foundation, it is the public drinking-fountain which is regarded as the *sadâb* par excellence.

---

**Modonkrel.** — The Sunnite reaction which introduced the madrasa from Persia into Egypt, received in the course of its development an admixture of elements which, though of very ancient origin, had been foreign to early Islam. One of the most important of the elements thus assimilated is *Sâlim*, an oriental monastic system of Persian origin with mystical tendencies. The architectural monument of Sâlim is the Sâlim monastery or *Sâlimâ* (Persian *Sadolin*), which first appears in Syria and was introduced into Egypt by Salah al-Din, the founder of the first Egyptian *khâlâlah*. In the latter country *sâlimâ* became almost equivalent to *zîbâr*, an Arabic word denoting a former military station, which has completely lost its original character and has been transformed into an object of worship. *Rihâ* and *khâlâlah* flourished under the Ayyubids and later under the Mamluks, but without creating a separate architectural form. The monasteries sometimes imitated the plan of the great mosque (monastery of the Emir Sâlik al-Din at Cairo, 750 = 1353), and sometimes that of the madrasa (monastery of Sultan Ballûr II at Cairo, 799 = 1390). Like its two prototypes the monastery is furnished with all the elements required for the cell, such as minaret, sanctuary, pulpit and mihrâb. It is only the subsidiary buildings adapted for the monastic life, such as the cellar house, which gives a peculiar characteristic to these monasteries.

Interesting remains of this type still exist, especially at Cairo where the monastery of Sultan Inâl (858 = 1454) affords the most perfect example. At the time of the Ottoman conquest *sâlimâ* and *khâlâlah* were supplanted by the *zîbâr*, the Turkish-Persian dervish monastery (*tâkya, tâkhâ*), the architectural arrangement of which was also influenced by the school of Cairene architects (bâles with cupolas). Finally we must mention the *sadâb*, a word which in the Mamluk East and West denotes a cell or hermitage and secondarily a monastery; in Egypt it is generally used for a small mosque, a prayer house or a chapel.

---

**Architectural.** — Tins page was extracted from the *Architectural* section of the book. The text discusses the architectural developments in Syria and Egypt, focusing on the use of vaults, mausoleums, and drinking fountains. It highlights the influence of Persian monastic systems such as Sâlim on Islamic architecture, noting the development of monasteries and the role of Sâlim al-Din in introducing these concepts. The text also refers to the use of alms-giving and charitable foundations, describing the transition from these to the public drinking fountains. The monastic architecture is contrasted with the religious and educational buildings of the time, exemplified by the Sâlim monastery and its imitations. The text concludes with a discussion on the specific architectural forms such as the Sâlim monastery and its significance in the context of Islamic architectural styles.
ARCHITECTURE — ARDABIL.

The mosque of Sultan Sa'id (823 = 1420), the mausoleum of Sultan Kait Bâl (799 = 1474), and the monastery of Sultan Fârûq (813 = 1411) usually called the tomb of Bârîkh. Occasionally we find more complicated types, e.g. the monastery-madrassa-mausoleum.

A frequent combination is that of the small tombs of the sultans Bârîkh (788 = 1386) and Imâm (858 = 1454). All these combinations contain the abutîlah and constitute one or more mausoleums with one or more cupolas. They do not bear a name of their own, and the inscriptions of these large buildings as well as the authors refer to them by the names of the different parts according to the part to which they wish to direct attention.

The turbe like the other types of Syro-Egyptian architecture disappears after the Ottoman conquest. The name however continues to exist, though it denotes no more than any sepulchral monument. After the xvi. century Egypt and Syria have produced monumental tombs worthy of their past.

Contrary to the expressed desire of its founder Dâlîn adopted an early date the cult of saints and the belief in miracles worked by the intercession of the saints. This cult was too deeply rooted in the religious systems of the East to disappear before the name of Muhammad. In Syria especially, the influence of Islam continued the dhâlh and dhâlih deities which had withstood Christianity, continued to exist under Islam which had to tolerate it by affecting to assimilate it. This multifarious origin of the Muslim saints finds its explanation in the obstinate persistence of such local traditions. Some of them are pagan deities transformed into Muslim saints by a transference of ideas or religious conceptions or by a mere change of name; others are the great figures of the Koran, such as Muhammad, Jesus and the Jewish prophets, others again are historical heroes, conquerors or great rulers, or finally ancestors, monks or scholars who acquired fame during their lives and were canonised by the people acting under an irresistible impulse, the curiosity of the hour. Each of these saints has his sanctuary (mazâkîn). The belief in miracles worked by their intercession turns the sanctuaries into places of pilgrimage (mazâkî). The mazâkî did not produce an architectural type of its own in the sense that it always rises from the tomb of the saint. Such a mazâkî type is the plan of the mausoleum, viewed from an architectural point of view. It is a mere variety of the turbe, perhaps the oldest variety. It is found in any size, from the small white-washed chapel covered by a cupola (mâzâkîrh = marabout, shrâbî, ma'dh, mo'âqir) to the great classical mau- soleum, the latter one of these buildings which deviates from the traditional plan is the famous dome of the rock, the Kâbah al-Sakkra, at Jerusalem built by the caliph Abd al-Malik in 72 (691) and frequently restored since. A whole cycle of Jewish and Christian legends is associated with the tomb of the numerous cupolas built on a circular base and surrounded by a double octagonal wall. The partly circular, partly octagonal type, which is doubt derived from the ground-plan of the Christian monument which occupied the site before the kubah, is also met with in a group of Syrian churches of the pre-

ARQ (Ar.); breadth, also geographical latitude. — Of the numerous meanings of the word we may mention the broadness of a troupe. A Dhu'D'ar (Ar.); viz. a gnomon to Tabari, p. cccivit), or 'bureau of army-lists' existed as early as the 'Abbasid period. Under the Seljûks the head of this department bore the title of 'Arîf al-Daraj, but the word 'Arîf, pl. 'Arîfîn, was also applied to the subordinate officials (ârîf), — 'Arîf or 'Arîfî is also a title ('Arîfî) and also an nîf (Ar.) further means position (lit. 'exposition of the circumstances').

ARD (Ar.); earth, country.

ARDABB (Ar.); Greek Arâdô, Syriac ar'dô or ar'dôb, name of a measure, in Egypt = 157.7 litres. The arâddb = 6 mardib = 24 cubic feet.

ARDABIL (Ar.); Persian Aردâbîl, Armenian Arvâdûr (later Arvâdîsh), eastemmost town of the Persian province of Ardâbîl. It is situated, under 43° E. long. (Greenw.) and about 38° N. lat., at a distance of a good day's march from the Caspian Sea and 25 miles from the Russian frontier. The town stands on an almost circular plateau (4960 feet above the level of the sea), measured about 1000 yards in diameter, and surrounded on all sides by mountains; to the west of the town is the extinct volcanic Sowlaïn, the Sâbîn of the Arabic geographers, which with a height of 15,665 feet reaches the region of perennial snow. For many miles around the town no trees or shrubs are visible, and the dry white chalk hills, which are not made fruitful by artificia1 irrigation, in the surroundings of the town it has been turned into productive fields and meadows which yield pasture for numerous herds. The climate of the town owing to its high situation is rather in- 

ARDABIL, Persia. situated, under 43° E. long. (Greenw.) and about 38° N. lat., at a distance of a good day's march from the Caspian Sea and 25 miles from the Russian frontier. The town stands on an almost circular plateau (4960 feet above the level of the sea), measured about 1000 yards in diameter, and surrounded on all sides by mountains; to the west of the town is the extinct volcanic Sowlaïn, the Sâbîn of the Arabic geographers, which with a height of 15,665 feet reaches the region of perennial snow. For many miles around the town no trees or shrubs are visible, and the dry white chalk hills, which are not made fruitful by artificia1 irrigation, in the surroundings of the town it has been turned into productive fields and meadows which yield pasture for numerous herds. The climate of the town owing to its high situation is rather inclement (thus already Theophylact in De Gogoe, 8th. B.C., relates the Sowlaïn is regarded as unhealthy; the vine, olives and melons do not grow, and apples and pears are produced in large quantities. The town is situated within the watershed of the Araxes (Arpa) and Kay, the Balâş-Stû (sub-river) which rises on the southern slope of the Sowlaïn chain flows through the town of several branches; it is joined the Kareh-Stû, which in its turn flows into the Araxes after being united with the Ahar river. Near the town are found warm mineral springs which attract many visitors. It is on account of the springs as well as of the healthy air, that Ardabil has always been a favourite place of residence of the Persian court.
No account pointing to a great antiquity of Ardabil is known; the town is not mentioned in the early historical literature of the Armenians. According to an old tradition (found in Firdawsi, Yākūt and others) it was built by the Sassanian king Peroz (Piraus A. D. 457-482) whenever he was away from the capital Persepolis or Firdoskird; cf. Nöldeke, Geist d. Früher und Arter v. Zeit des Sassaniden (Leiden 1879), p. 203, note 3, and Vullers, Lexicon persicum antiquum l. 777. The Umayyads made Ardabil the administrative capital of the province of Ardabareh in the same time transferring the troops stationed at Mahshahr to that town (esp. on the) Ruhilhirt, ed. de Goeje, p. 383). It was not until the late Arab period that its place as capital of Ardabareh was taken by Tabrīz. Yākūt who visited „Ardabil in 617 (1220) describes it as a very populous town; soon after his departure the Mongols appeared at the gates; they sacked and destroyed the town, massacring nearly the entire Muslim population. Some time afterwards the town was rebuilt more beautifully than before and passed through its most flourishing period under the rule of the Safawids. In the first half of the viii. (xiv.) century Ardabil was the residence of a pious Shaikh, the Saft al-Din, who exerted extraordinary influence and died towards the middle of the century (725 = 1324) in the odour of sanctity. Under his successors, the Safawids (Safta), there arose in Ardabil a kind of theocratic state (on the sources regarding its origin see Trede, in the Zeit. d. Deutsch. Morgenl. Gesellschaft, xxxvi, 91) the military power of which chiefly depended on the descendents of common people, namely of the Shaikh Saft al-Din, the son of Saft al-Din, the so-called Kail-Bakī (Redbeards); cf. A. Müller, Die Islam im Morgen- und Abendland ii. 336 et seq. The fifth successor of Saft al-Din, Isma'il, became the founder of the modern Persian state; in 908 (1502) he laid down the title of Shaikh of the Shiites of Ardabil which had been borne by his predecessors, and transferred his residence to Tabrīz as first Shaikh of Persia. Of later historical events we may mention that it was in Ardabil that the Turkish condottiere Nadir was crowned king of Persia in 1736 after the death of the last Safawid. In the beginning of the six. century (1503)Persia was as the Turco-Mongols named Ardabil the seat of his court, and fortified the town according to the European system under the direction of the French general Gardanne, in order to make it the chief frontier fortress against Russia. During the war between Russia and Persia in 1826-1828 Ardabil was occupied by the Russians, but was restored to the Persians in 1828 after the conclusion of peace.

The most remarkable monument of the town is the mausoleum of the above-mentioned Shaikh Saft al-Din in the chief mosque, which became an object of general veneration soon after his death. In the vii. and viii. century it developed into one of the most frequent places of pilgrimage, and is still visited as such by many Persians. The sanctuary has suffered considerably in the sack of the town by the Russians in 1827 and in repeated earthquakes; but it is still very remarkable. According to v. Thielmann’s account remains of the old decoration with precious slate are still extant; the floor of the interior is covered with ancient carpets. There is also a unique collection of old Chinese and Persian porcelain dedicated by the Persian kings. The mausoleum also contains the tombs of the Safawī Shaikhs and of the first Shah Isma'il (died 936-1544). The famous library of Shaikh Saft al-Din, once in all Persia, no longer exists. It was sent to St. Petersburgh by General Paskiewitsch in 1827 and became a part of the imperial library of that city. The fort erected by Gardanne has been abandoned since it was stormed by the Russians, and is rapidly falling into ruins.

The commercial importance of Ardabil is considerable owing to its situation near the sea and the Russian frontier; it plays an important part in the Caspian-Persian trade as frontiernational on the trade-route from Tabriz to Astara and Lenkoran, particularly in the commercial traffic between Tabriz, Derbend and Baku on the one hand and Tabriz, Bakuhan and Tjarak on the other pass through it.

The population of the town was very considerable in the Middle Ages and especially under the Safawids. The European travellers Chardin (1637) and Chardin (1671 et seq) describe Ardabil as the most flourishing Persian town of the time. Towards the beginning of the x. century it had already many of the marks of a city and the state was chief in consequence of the wars and the repeated earthquakes. Morier in 1815 counted only 4000 inhabitants. Afterwards the town recovered gradually, and recent travellers estimate the population at from 16,000 to 20,000.

ARDABIL (modern pronunciation also: Ar-\text{d-a-b-\text{a}-b-\text{i}}; roots in "Persia situated under 32° latitude and 53°50' longitude", between "Ardjūd" and "Malbid" on the road leading along the border of the desert from Kājūn to Yezd. The town is mentioned already by Ptolemy under the name of "Ardustaine. It is situated at a height of 3280 feet above the level of the sea and is fortified, with walls and towers; there are several caravansaries and mosques and good bazaars. Duprez, who travelled in 1888 estimated that the town contained 1000 houses; the number of inhabitants was calculated by Hintum-Schindler.
ARDAKAN — ARDJSH-DAGH

(1879) at from 8000 to 9000, by Stuck at 10,000. They include a number of ‘Cantors’ [Parnes, fire-worshippers]. The town is remarkable for the flourishing manufacture of dyed cloths and of handsome silk dresses and other articles on the Cotton and other materials. In Dąpór’s time most of the materials for the tents used by the Persians were woven at Ardakan. The town is the centre of a district of the same name which contains 17 villages and townships.

ARDASHIR, old Persian: Artakshashr, Greek Apkáxgh, well-known name of Persian kings. Muslim tradition has certain information only of the later Sassanid kings of that name, viz. Ardshir I (226—241), Ardshir II (379—383), and Ardshir III (628—629). [See article 632 in E. MAHLS.]

ARDASHIR KHURRA, name of a district in Fars. [See SITTE.RDE.]

ARDIBEHEST, name of the second month of the Persian calendar the years which are counted from the reign of Yezdijid, the last Sassanid king (i.e., A.D. 632). This era is also used for fixing the months of the Sassanid calendar. This name has a peculiar beauty and simplicity (each year has 365 days; 12 months of 30 days each +5 intercalary days).—Ardbibest is also the name of the 3rd day of any Persian month; a distinction must therefore be observed between Ardbibest-šan (name of the 3rd month) and Ardbibest-éan, which denotes the 3rd day of the month. (K. MAHLE.)

ARDILAN, province in Western Persia situated between Ahabchadjan in the North, Luristan in the South and the Cibeh into the Caspian Sea; the central part of the province contains the headwaters of the Dizil (the chief of which are the Shirwan-Bad and the Gah-Bad), the South the Arzab, the East the Kirth. The inhabitants are almost exclusively Kurds; hence the district is called Persian Kurdistan or land of the eastern Kurds; the name Ardilan which does not occur in medieval authors, dates from modern times. The capital of the province is Siūn (called also Sina or Sannus) which was, however, founded as the xvth century; it is the residence of the chief of the Kirthi Kurds with the title of wali and governs the province almost as an independent ruler. A distinction is occasionally made between Ardilin in the narrower sense, consisting of the North Western part of the country with the capital Siūn, and the district of Kiraštahgian (with a capital of the same name) in the South West, and the district of Cambilluha (Kandilawa) in the South East. Cp. further the article (Persian) KURDISTAN.

ARDJSH, old Armenian Artch, called in Armenia now in ruins, situated on the N. E. shore of the lake of Van under 39° N. Lat. and 44° 30' E. Long. as we may see from the map. The confluence of the lake of Van to the North East takes its name from this town. In the Middle Ages the entire lake of Van was called by the Arabs lake of Ardjsh, as appears e. g. from the Persian geographer Al-Masawir (wrote about 740 = 1340). From the x century onwards Ardjsh is usually shown as the residence of the archbishop of the ecclesiastic and political authority of Ahkal (q. v., and the art. ARMENIA); the town was destroyed by the Georgians in 1309, see the account of Him al-Asfîr (see DE PÉRUS in the Journ. Asiat., 5th series, ii. ci. p. 317 et seq.), There is evidence for the existence of the town in antiquity: it is called in Greek Aragvos, Aραγώς, and in the manuscript inscriptions Aragabos; (TH. THEODORSSCH, Zittcher, 3. archiv. Philol. iii. (1903), 135) Owing to the fact that the lake of Van gradually advances more and more to the North, the ruins of Ardjsh have been surrounded by water since the middle of last century; it is only occasionally that the level of the lake is low enough that they can be seen on the dry ground. It is 30 miles N.W. of Ardjsh, at a distance of about 1½ hours from the lake, there is a small town called New Ardjsh or Arzhan, which contains a small Turkish garrison. It is much frequented as a postal stage on the route from Van to Erzrum.

ARDJSH-DAGH (Arjshk, Erjsh-Dagh), the Argus of the ancient, the most important of a number of volcanic peaks in Capadocia to
The South of the Holy; rising to a height of 11,486 feet it represents the highest elevation of Asia Minor. The Ardjush-Dagh is situated at a distance of about 2½ miles from Kayseri, almost in the centre of a trachytic district which, extending from W.-S.W. to E.-N.E., forms an irregularly drawn-out oval with an area of about 780 square miles. It is characterised by a number of ravines which intersect it in all directions. The chief mountain has the beautiful shape of a pyramid; the summit is steep, three sharp peaks covered with perpetual snow; hence the name d white mountain' (Greek: *Aρμή ηπη, from *Aρμή = white, shining). Many smaller cones and 'bell-like' forms surround the chief mountain. To the N.E. protrudes the Alt-Dagh, rising with three peaks to a height of about 6,500 feet; the town of Talas is situated at the north-western base of this elevation. The Ardjush-Dagh was active as a volcano down to historical times, though only to a limited extent. It has been extinct since antiquity, but traces of the cone (plan) are still visible, and in the vicinity are masses of debris on the slopes of the mountain. The only oriental geographer of the Middle Ages who mentions the mountain — under the name of Ardjush — is the Persian Al-Mustawfī (wrote about 740 = 1340). In modern times the first ascent of the Ardjush-Dagh was made by W. Hamilton in 1857; he was followed in 1849 by H. F. Tisserat, probably the greatest authority on the whole mountain and the author of a detailed description.

AREG, plural of the Arabic word *ā'ir (literally 'vein'). As a geographical term this word, or more frequently the singular *ā'ir, is used as a name of the vast stretches covered with dunes, which form about one ninth of the area of the Sahara (q.v.). In the Berber dialects they are called *ā'ir or *ā'ir. The most important of these *ā'irs sami are the Libyan desert between the Egyptian oases and Tifengt, — the oases of the Tunisian country between the Hamada of Tinghast, the Hamada al-Hamīl, the Tossili and the Hamada of Murzuk, — the Maghreb stretching to the North and East of the western Asdrū etc. In a narrow sense the word *ā'ir is applied to the sand zone stretching diagonally through the Algerian Sahara form the Hamada al-Hamīl in the N.-E. to the Wād Sūwarn in the W. This enormous mass of dunes is divided into two groups: the eastern *ā'ir which is much better known owing to the large number of explorers who have visited it (Davrayere, Méry, Languen, Platters, d'Attamus and particularly Poucquet), and the western *ā'ir traversed by Golomín, Godron and Flamand. The former extends from the outskirts of southern Algeria and Tunis to the neighbourhood of the Hamada of Tinghast, from which it is separated by rocky heights called al-Udba (the check); the latter is situated to the N. and E. and is in many places distinctly marked by the depression of the Wād Meigdemen; to the W. the Wād Sūwarn forms the border. A chain of rocks interrupted in its course towards al-Golfa, by rows of dunes, stretches between the two *ā'irs from the Meda to the plateau of the Tademait in the west.

The configuration of the *ā'ir corresponds to that of all the districts consisting of dunes. It is a mass of sand-hills with very narrow ridges called *ṣūf (pl. of *ṣūf, 'swoon'), the average height of which is about 355 feet, though occasionally they reach 650 and even 775 feet. The hills stretch in parallel rows separated by depressions from 5 to 10 yards wide and 3 or 4 feet deep. The depression is called the West and *gant (hard soil) in the East. These great form natural roads the use of which is indispensable in traversing the *ā'ir.

The *ā'ir is not as watering in natural resources as would appear at first sight. Water is not lacking; it is found under the ground, usually at little depth, In some parts of the eastern *ā'ir it is met with at a depth of 50 to more than 84 feet under the ground. In other parts it collects in basins or pools *(bahar) dug in the bottom of depressions in the sand. Such is e.g. the basin of 'Ain Talas right in the heart of the eastern *ā'ir which has a depth of 16 feet and a circumference of 1625 feet. These subterranean sheets of water are connected with wells buried under the sand. Thus the streams descending from the plateaux of Trépoli, from the Hamada of Tinghast and from the Tademait lose themselves in the eastern *ā'ir, while the *ā'irs rising on the massif of Figueir, on the hills of the Asdrū and the ruins of the Asdrū disappear in the western *ā'ir. The presence of water ensures the growth of some plants which stretch out their roots to collect the water filtering through the sand (elte, atten, as es etc.). The dunes are therefore visited by the inhabitants of the Sahara, as the scanty vegetation is sufficient to provide pasture for their herds. The *ā'ir has moreover advantages for permanent settlements and offers no more than a temporary place of passage.

Long before Europeans reached the Sahara, the following account of the *ā'ir was given by Ibn Khaldun. To the South-East and the South, as he writes, the Maghrib is bordered by a barrier of moving sand which forms a line of separation between the country of the Bedawins and that of the Blacks. By the Arabs this barrier is called 'ā'ir. It begins from the shore of the Atlantic Ocean and extends eastwards in a straight line as far as the Nile. Its breadth at the narrowest part is 3 days journey. It is intersected by a sandy plateau called by the Arab al-Hamada which begins this side of the Zāb and reaches the Wād Rīgh. In some years the Sahāhīs, weavers of the *ṣūf, extend their wanderings as far as the southern border of the *ā'ir; the northern border is visited by nomad Arabs who possess pasture-lands formerly belonging to the Berbers.
ARGHANA. Spanish name of Alghéra (see above).
about 4000 inhabitants. The copper produced by Arghana Maδa′ is a great part of the East with the metal. In cuneiform inscriptions Arghana appears as Argania, ino"Armenian literature as Argia; in Rashid al-Din's History of the Mongols (ed. Quatremere) p. 335. It is called Arghani.

ARGHUN, fourth prince of Bokhara, 1285-90 (1228-1294), was between 1250 and 1255 (his elder brother Chaghan in 1254). His father Abu Sa′id entrust to him the administration of the province of Khurasan. Summoned to his fathers court in the spring of 1283 he received the news of the latters death before completing his journey, and had to render homage to his uncle Timur Beg in Ashgabad in 1283. In the following spring (1283) he returned to Khurasan; in 1283 he revolted against Abukh, but was defeated by the latter's general Allahk, to whom he was forced to surrender in the fortress of Kalh. He was brought to an unknown camp, but liberated there by the Emir Bokhali; the troops of Abukh and Allahk fell upon the allied forces and Allahk himself was surrendered to his nephew, whose command he was appointed on 24th Djamah. 1683 (18th August 1284). On the following day Arghun celebrated his accession to the throne; his confirmation by the Great Khan Jochid arrived in the spring of 1286. Bokhali to whom Arghun owed his throne remained minister until 1289, in which year both he and his young Emir al-Din Sanmisit were deprived of their offices and executed. During the following years the administration was in the hands of the minister Sef al-Din-Dawlat, who was hated by the Muslims as a Jew and unpopular with the Mongol great-nobility. But his father, a man of business, a few days before his death, he was deprived of his office by his life by his enemies. Arghun like his predecessors was distinguished for his religious inclination. He was favourably inclined towards the Christians, but Buddhist monks are said to have possessed the greatest influence with him. The negotiations with European powers (the kings of France and England and the Popes) for the purpose of undertaking a combined action against Egypt, which had been started during the reign of Abukh, were continued by Arghun; the French public archives contain a letter from Arghun addressed to Philippe le Bel (discovered and edited by Abd Kemaat, translated by J. Schmid). But no action was taken during the reign of Arghun. The attempt was made in 1280 to enter Iran through the gate of Derbend, was however frustrated without difficulty. Arghun is said to have started the building of towns; the first plans of the new towns later founded by his son Ghuriz and Uldizhun (now known as Oulian near Tabriz and Sultaniya) are said to be due to him. He is stated to have died on 7th Rabii 2 690 (10th March 1291); he was buried in the mountains of Ildiz (South of Sultaniya), where a mausoleum was erected later (under Ghuriz). — Cp. D'Ollas, Histoire des Mongols i. 32 et seq.; Hammer-Purgstall, Geschichte des Islam, 1834, 206; Howorth, History of the Mongols iii. 312 et seq.

(W. BARTHOLOM.)

ARGHUN (7) Dynasty of Sind. The early history of the Arghun has been given under the history of Aghanistan. The attempt of Ilhan-n-n Beg and his son Shih Beg (sometimes called Shih Beg) to enter into the capital at Kanbalhur, though apparently successful at first, broke down before Stilins persistent attacks and after his final capture of Kanbalhur, Shih Beg retired quietly to the highlands of Shijf and Mustang. It seems probable that Bokhali had engaged not to molest him there, and he had not managed his forces in Aghanistan as he had done in Bokhara. Shih Beg had already as far back as 854 (1470) occupied these highlands, and in 950 (1455) invaded the plains of Khidh by way of the Hol Amu and taken Sev (Shih) from Djaj Nana, but it was lost afterwards. After his death Shih Beg had already conducted the first expedition under his father, was driven out of Kanbalhur by Bokhali in 913 (1506) by Shih Beg and Mustang was introduced by Bokhali Beg Gokalldin to the chiefs of the local Bokhali tribes, and formed an alliance with them for the invasion of Sind; but when Kanbalhur was recovered he gave up the project for the time, but gradually spread his influence. His sons consisting of Arghun's of his own tribe and Bokhali's of white race, was not very large, and he supplemented it when he could from local resources. Between 971 and 950 (1511-1512) he attacked the Hindu tribes who had established themselves in Siwistan, five parts of the Kachchi plain and the hills north of it, not yet occupied by Bokhali, and took from them the water. Various tribes joined in the confederacy against him, among them Bokhali tribes who were now pressing down into the plains and spreading over Northern Sind and Multan.

In 1519 Shih Beg's eldest son Husain (sometimes called Hasan) had to Bokhali's Court, where he was well treated and joined in Bokhali's expeditions into India. In 927 (1530) Shih Beg advanced into the plains and soon succeeded in overthrowing the forces of Djam-Firoz who had succeeded Djaj Nana. We now find a force of Bokhali under the Kajik, and it seems probable that rival tribes fought on the two sides. Husain was now with his father, and probably on rapidly to Thatta in Southern Sind, now Ghuriz, and in Shih, Sest, Fahpir, Gunjilah (i.e. Gunjav) and Bokhali (now known as Bokhali). Some years before a pretender to the Sind kingdom had obtained the support of Musafr tar Shih II of Gokalldin and Djam-Firoz asked for the assistance of Shih Beg. The invader had seized upon Thatta, the capital of Southern Sind, but he had been driven out with the help of an Arghun force, and it is probable
that he had become to some extent dependent on them and was now anxious to cut himself off from them. He entered into discussions with the rulers of the Trachis, Sid, and Bambir, and finally decided to break away from them and declare his independence. A treaty was made by which the state was to be called the "State of Bhakkar," and the city of Bhakkar was to be the capital. The Trachis, however, refused to recognize the treaty, and a war ensued. The war was fought at Kandahar (1272) and ended with the victory of the Trachis. The city of Bhakkar was captured and burned, and the forces of the Trachis were defeated. The state was then ruled by a series of rulers, who were generally called the "Khan of Bhakkar." The state was a small, independent republic, and was ruled by a series of strong and warlike rulers. The state was at the peak of its power in the 14th century, and its influence extended over a large part of central Asia. The state was destroyed in 1398, and the city of Bhakkar was captured by the Mongols.
belonged to the Djadišm. Ibn Hawqal speaks of two principal mosques in the town and refers to its wealth of fruit. It was at Al-Arīf that King Baldwin I died in 1118. Yaghī states that the town contained a great market and many inns, and that merchants there, Al-Arīf was occupied by Napoleon in 1799; in the following year a treaty was concluded in the town, by which the French were authorized to evacuate it.

**ARISTUS (Arystatas, Arxiti),** b. Before the rise of Islam the figure of Aristotle was familiar to the legist as well as to the learned tradition of the East. Legend knew him as the wise teacher of the paternal friend or pupil-counselor of I mam al-Karrānīn Alexander the Great. These learned traditions contain both biological and deistic elements: in addition to this there exists, both in Pahlavi and Syriac, translations, commentaries and explanations of Porphyry's *Introductio* and of some Aristotelian writings, principally treatises on logic (* Categoriae, Hermeneutic, Analytik*). It may be laid down as a general rule that the Arabic translations of those and other works of Aristotle are derived indirectly through the medium of Persian and especially Syriac versions.

2. Like the West in the early Middle Ages, the East knew Aristotle at first chiefly as logician (*philo al-nafsi*). In the other sciences he was supposed to be in complete agreement with Pythagoras, Socrates, Plato etc.; originality was claimed for him only in logic. In the early period however the *Organon* was known only as far as the categorical figures of the Prior Analytics. The Syriac version of Paulus Pera, edited by Land, shows to what extent the logical tradition of the period was tinged by Neo-Platonic influences.

The early development of Arabic linguistic speculation was decisively influenced by the mathematical and logical categories of the *Hermeneutic*, though not with an admixture of elements derived from Stoicism. It is the source particularly of the doctrine of the three parts of speech (*tu, fi, bi*) (also *fuud* or *halima*) and *hif*. But outside language and grammar and apart from many suggestions in the field of Physics which influenced medical circles, the beginnings of philosophical speculation in Islam, so far as they rested on Greek thought at all, were dependent not on Aristotle, but on sources (genuine and spurious) which go back to Plato, Pythagoras, Hermes and the Stoics. When Aristotle gradually came to be known he met with sharp rejection. In theological circles he was unanthropomized especially for his doctrine of the eternity of the world; and whereas the philosophers (al-Kiškā, al-Fārābī) followed the Neo-Platonists in emphasizing the agreement between Plato and Aristotle, the theologians drew attention to the points of difference between the two (thus also Job, Philoponus as against Proclus made similes). Followers of the various theological schools therefore attacked Aristotle e.g. the Shīfite Ṣāliḥ b. al-Hakam (a contemporary of al-Naqṣabī, died 845), the Muʿtazila Aḥmad b. Ḥāshim of Ḥarrā (died 933) and al-Shāhīrī (875-935).
3. The accounts of the life of the philosophers are usually inaccurate. The Arabic historians (already al-Ya’qubī) confuse e.g. Aristotle's father with the Neo-Platonic gnostic Nikomachos of Gerasa. Hyginus ibn al-Jahāl (died 873) and al-Dinawari (died 855) give practically nothing but details of a legendary nature. The biographical tradition on the other hand is best illustrated by al-Baladhuri, al-Mubashshirīn, Ibn al-Qifṣī and Ibn Abī Usābah, whose statements go back to three principal sources. Firstly they use a biogaphy with testament and catalogue of writings by Ptolemaios Chennos (the Arabic al-Bahārī is to be derived from the corruption of that name into ṣuṣa) to which they had access as it seems, in a translation or revised version embodied by Isḥāq ibn Hūsin in his Tarīqīh al-ṣughūhī. Secondly they adduce details not derived from Ptolemaios which, though handed down through different channels, go back ultimately to the ṣuṣa of an anonymous Greek writer. The accounts based on this ṣuṣa, which are widely diffused in Arabic literature, differ from Ptolemaios. In this collection of works they give only the name of the father of the philosopher or scientist without mentioning that of his mother; his descent is not traced back to Asklepios; he is said to have entered the school of Plato at the age of 17 etc. The tradition of the second source is characterised most significantly by the fact that according to him the Arab Aristotelus was the Macedonian tutor of Alexander, but the prince is made to go to Athens to see the philosopher: this is undoubtedly an oriental perversion of the original. A third source, from which al-Mubashshirīn derived an account of the philosopher's youth after his 8th year, is to be sought in a Neo-Platonic biography, the original of which cannot be identified.

4. The Arabic catalogue of Aristotle's writings which is given according to Ptolemaios Chennos by Ibn al-Qifṣī and Ibn Abī Usābah, contains about 100 titles. Catalogues differing from this have reference either to the philosophical system of the Arabs, or perhaps (like that of al-Nāṣirī) to the works found in some particular library. The following is an exposition of the Arabic tradition.

According to legend (Fīlīgīst, ed. Flügel, p. 243) Aristotle appeared to al-Ma‘mūn in a dream and assured him of the fundamental agreement of reason with the religious law and common sense. Al-Ma‘mūn hardly required an assurance of this nature in order to feel justified in furthering zealously the activity of the translators who had begun their work under al-Ma‘zūr. Nor was this activity confined to Aristotle alone. At first the Christian Syrian physicians, who almost alone acted as translators during the 8th-10th century, were by no means careful in selecting their material; thus Averroës (died 940-911) onwards their activity was on the whole restricted to Aristotelian and pseudo-Aristotelian writings together with their abridgments, paraphrases and commentaries.

The writings of Aristotle — whose number is usually given as 26 — were divided into two groups: those treating of Logic, Physics, Metaphysics and Ethics. Papiry’s Introduction as put in front of the logical treatises, probably because it was generally thought to be Aristotelian. The logical Organum consisted of the Categories (al-Muṣlaḥī), the Hermeneutic (al-Muṣlaḥī, or al-Taṣbiḥ), the Analytics (al-Muṣlaḥī), the Posterior Analytics (al-Durūṣ), the Topics (al-Durūṣ) and the SophisticSegments (al-Muṣlaḥī) to which were added the Rhetoric (al-Muṣlaḥī) and the Poetics (al-Muṣlaḥī), in order to complete the number eight required by neo-Platonic and neo-Platonist example. All these treatises were translated and studied in various ways. Of these treatises, the following were translated etc.: the Physics (al-Muṣlaḥī or Sa‘īd ibn al-Qūšayr), the De Caelo (al-Muṣlaḥī or Sa‘īd ibn al-Qūšayr), the De Generatione (al-Haṣan ibn al-Fāṣādī), the Meteorology (al-Sijār al-Imāmī), the De Anima (al-Nafaḥ), the De Sensum (al-Haṣan ibn Sa‘īd al-Fāṣādī) and the Historia Animalium (al-Hermeus). In order to complete the canonical eight many interpolated a Neoplatonic system (not to be traced) and a History (that of Nicolaus), in which case either the Historia Animalium was omitted or the two psychological treatises counted as one. There followed the Metaphysics (al-Ma‘ṣūr ibn al-Ninwī), the Nicomachean Ethics (al-Aṣmā‘ī) and in order to complete the number twenty, a treatise on Politics (see below), a Mechanics (al-Kālid ibn al-Sā‘īd) or similar works.

Thus nearly all the didactic treatises (several others) of Aristotle were accessible to the Arabs. The most surprising fact is the absence of the Politics, the place of which was taken by Plato’s Republic, in a Latin translation unless pseudopigraphic treatises were preferred.

A compendium of Aristotle’s philosophy by Nicolaus Damascenus which had already been used by the Syrians was also current among the Arabs.

5. We are able to distinguish between genuine and pseudo-Aristotelian elements in the Arabic tradition. The Arabs themselves, especially in the early period, were quite unable to draw this distinction. Their study followed closely the neo-Platonic commentaries, and even the purest Aristotelian of the later period, Ibn Rushd, frequently preferred the explanations given by the neo-Platonic Porphyry and Thomistus to those of Alexander of Aphrodisias. Under these circumstances it is not surprising that many strange and heterogeneous things came to be connected with the name of Aristotle. Probably the most far-reaching in its influence was the so-called Theology, an abridged paraphrase of the Enneads (iv-xi) of Plotinus which was accepted as genuine by al-Kindī and al-Fārābī. We may further mention a compendium of the σημειωμένες μεταφράσεις of Plotinus (libri de cœelis); the ‘Book of the Apple’, a dialogue on the immortality of the soul which is an Hermetic imitation of Plato’s Phaedrus; the secretum secretorum (Sire ab-al-ḍawār), a work of miscellaneous contents dealing e.g. with pharmacy and dietetics, and further various epistles mostly addressed to Alexander and Alexander; and many important treatises. For further information — especially on magical and astrological works — cp. the writings of Steinheimscher.

6. The so-called Aristotelians of Islam in the time of al-Kindī onwards based their philosophy on a more or less purified tradition. The Muslim community, however, rejected this philosophy asблотна, манипулировал в его его, with three important elements of their faith, the doctrine of the creation of the world, of a special providence
and of the resurrection of the body. The most detailed and effective description is that undertaken by al-Ghazali in his Tahfizh.

After the xii. century Aristotle’s influence on the Muslim world has been confined almost entirely to the field of logic.

(Frankfort, 1904, p. 107 et seq.); Trattato di Rionero sulle fonti autentiche d’Aristoteles (Milano, 1910), p. 1105 et seq.); cp. Thes. d. sp. Comm., vi. 50 et seq.; cp. Alth. d. Phil., i. 1905 et seq.; cp. Actes d. Congr. tALARMA, a companion of Muhammad. His name was al-Arkam (al-Ahd al-Dahr) b. Ali b-Arkam (b. Alas Manafi) b. Abud Allafi. He belonged to the Makkan, one of the wealthiest and most respected families of Mekka. His mother Umma came from the tribe of Kifana. He accepted Islam as a young man and was one of the most ardent believers. Although the Meccan merchants bitterly opposed the Prophet al-Arkam because of his devoted adherence and during the time of persecution put his house at the disposal of Muhammad to serve as a place of assembly for the community. It was there that the prophet found a safe and convenient place in which to preach and to carry on his propaganda; the community grew during this period and gained among others the adherence of Hamza and Imam. Soon after 'Omar's conversion Muhammad left the house of al-Arkam. The date and duration of his stay there are not definitely given, but may be placed in the years 612 - 617. Ibn Hisham does not give any account of the house of al-Arkam, but may very well have known the story. The story is also known and even used it for its etiological purposes, yet does not relate it anywhere in his biography of the prophet. Al-Arkam took part in the emigration to Medina, where he inhabited a house in the quarter of the Bani Zuhair which was also known as the 'house of al-Arkam' and was said to be the nature of the city most in favor among the Prophet. Muhammad also established brotherhood between al-Arkam and Abud Talha (Zaid). Like many companions of the flight he seems to have preserved a reverent affection for his Meckan
family; and when the Faithful in the battle of Badr gained possession of the sword al-Marrubî, an heirloom of the Mahdiyye Banu 'Abd Allah, he recognised it and asked the prophet for it. At Medina he took part in all the important battles of the believers, but does not appear to have played any further part in the history of Muhammad. Sa'd ibn Ms'ud was a particularly intimate friend of his; at any rate, he stated that Sa'd should perform the prayer for the dead at his hier. He died in 54 or 55 = 674-675 over 80 years old. From a slave-girl he had a son 'Othman, the ancestor of a widely diffused family a branch of which lived in Syria.

For Muslim chronology the period during which Muhammad lived in the house of al-Arkân became important in cases where it was desired to determine the order of the earlier conversions and the high place of honour in Islam which depended on it. Among the later believers not only the person of al-Arkân, but also his house situation was of great importance. Sa'd was an object of extreme veneration. It is frequently mentioned as 'house of al-Arkân' or 'house of Islam', and down to the time of the caliph Mansur it remained in the possession of the descendants of al-Arkân who had turned it into a kind of family foundation. Mansur forced the Arkânids to sell it to him for his family, it was inhabited for a time by al-Khaibrân, the mother of Hârûn al-Raschîd, whence it is also called 'house of al-Khaibrân'. The building which is regarded as the house of al-Arkân has been restored or rebuilt on several occasions, a fact which is alluded to in inscriptions found there. It is still visited by Moské pilgrims.

ARLEMIA. [See ARKÂN.]

ARLEMIA. country in Western Asia.

A. GEOGRAPHICAL SKETCH.

The name Armenia in its wider sense denotes, now as already in antiquity, roughly speaking the central and highest part of the mountain zone of Western Asia, that is to say the east mountainous country, bounded by Anatolia in the West, the plateau of Adrarbaêyân and the southern shore of the Caspian Sea in the South-East, and East, the coast of the Pontus (modern Dianik and Liassitan) and the Caucasus — from which it is separated by a line formed by the Kus and the Kioni — in the North and North-East, and in the South by the plain of North Western Mesopotamia (country on the upper Tigris, Oshroie) with its continuation in Assyria. It includes therefore the vast stretch of country situated between 37°-46° E. Long. (Greenwich) and 37°-43° 3/4 N. Lat. Only on one occasion in antiquity was the whole region in question a united kingdom, under a single ruler, a century B.C., in the time of Tigranes the Great, yet the name Armenia has since then become accepted as a geographical term. Viewed from a purely geographical standpoint the wild and rugged mountain tracts bounded by the lake of Van in the North and the Aryan plain in the South (the Gorizine of the ancients, modern Bohûs and Hâk-yüres) must also be regarded as belonging to Armenia. But in all other respects this territory, from of old the domain of nomadic tribes, has always been the borderland between the Semitic world to the West and the Aryan Armenians to the North, being successively contended as a loose border province with the states formed by both, and frequently leading a separate existence as an independent territory.

From the geographical point of view the whole region just described as Armenia, the area of which may be roughly estimated at 115,000 square miles, forms a natural unit, the physical features of which are plainly distinct from those of the neighbouring countries. The geological foundation of the country are mountains with an arctic (old crystalline) kernel and considerable palaearctic and tertiary accretions and deposits. For recent volcanic activity, and for the occupation by man, the region, which has been more or less wooded, has suffered in the last 2,000 years. The plateau yielding abundant pasture lies between the mountain ranges, their height varies from 6000-6500 feet above the level of the sea (plateau of Bâyasid and Erzerûm 6110 feet; Kars 5850 feet; depression of the Murûd-Sû near Mithr 4350 feet; Arzûngân 4225 feet; Erzûwa 3815 feet), the average height in 5000 feet. As throughout Western Asia the formation of the higher chains which reach the genuine Alpine region is due to the irruption of trachyte and porphyry, Tectonic activity is similarly responsible for the remarkable conic-shaped mountains most of which are ancient craters. A whole system of such extinct volcanoes extends from the great Ararat mound in the East to the western plateau, the lake of Gûl-Kûsî towards the coast of the Black Sea. Among them are the highest elevations of the country: the twin group of the great and little Ararat (q.v.), and the Aligûr (3353 feet), an almost isolated mountain to the North of the latter; further we may mention the Sûda (Seritân-Dagh) to the North-East of the lake of Van with a height of almost 12,500 feet, the name of this mountain, however, has been known already to Belthofr (ed. de Goëc) p. 198, on which ep. Zeitich. f. armen. Philol. ii. 617; 164; Mustafài (see Le Strange, The Lands of the Eastern Caliphate, p. 183) calls it Kûb Sûdan. Of somewhat lesser height are the Bûlgûr-Dagh (q.v.) to the South of Erzerûm, and the Khûrûn-Dagh (11,540) and Alâ-Dagh (11,440) situated between Bûyasid and the Spîn-Dagh.

Armenia is the home of great rivers which descend in all directions, foremost among which are the Euphrates and Tigris; the east of those is formed by the union of two branches, the Kari-Sû and the Murûd-Sû in the East (or rather South) both of which rise in the Interior of the highlands near Erzerûm and Bûyasid; the Tigris descends from the southern chain of border mountains, the so-called Armenian Taurus. The system of the
Euphrates and Tigris drain the country in the direction of the Persian Gulf towards the Caspian. The same function is exercised by the Araxes (Arabic, al-Rass, q.v.), rising on the Bingeel-Dagh (which unite itself in the Kur (Kyrse) not far from the Caspian). Armenia is clearly separated from the Caspian by the longitudinal valley of the Kur, which receives the waters of Euphrates and Tigris with its communication running parallel to it. Further North, the small Rioni which joins the Black Sea.

In a wide mountain system like that of Tauris and Armenia which is characterised by the prevalence of plateaus alternating with valleys, we would expect to find a large number of mountain lakes. This however is not the case, obviously owing to the fact that great rivers break through the mountains at many points, thereby creating an easy way of escape for the water-courses. The most important lakes are: the lake of Urmu (5170 feet) (q.v.), reached by Arabic authors also lake of Khili and Artilj (q.v.) (in Greek, 715 feet). As it is called, the lake of Aradona (3200 feet) of which no consideration is to be gained, and finally, on the right bank of the Kur, the lake of Mardawj (3200 feet), which is given the name of Goleh-tang-e (or the Lucene lake). The origin of these two large Alpinian lakes, neither of which possesses any outlet, is partly due to plutonic forces; apart from these two there are only a few unimportant basins.owing to the high situation of the country the altitudes of Armenia is speaking generally, very severe and offers a marked contrast to the hot regions on the lower Euphrates and the temperate districts on the Pontic shore. In the highlands the winter lasts as a rule eight months; the short and comparatively very hot summer lasts hardly more than two months and is so dry that no lake is to be found without irrigation. It is owing to the great dryness that in Eastern Armenia the line of perennial snow begins as soon as 3000 feet high, so that only the great Ararat and the Alughos are covered with snow and ice. In the mountains situated further South in the direction of Kurdistan, the region of permanent snow begins at a height of 6075 feet only. The Bingeel-Dagh also is said to be covered with snow without snow. In contrast to all the other Alpinian peaks of Central Armenia. It is worthy of notice that the plains of the Araxes exhibit quite different climatic conditions, being remarkable for a much more favourable temperature.

4. HISTORY.

At the earliest period of which we have any definite historical knowledge Armenia was inhabited by a race of neither Semitic nor Aryan origin whose precise ethnological and linguistic position is still a matter for discussion. In their own inscriptions which are written in cuneiform characters they call themselves Hatti (hence the name of the country: Hayas or Hittie), while in the Assyro-Byzantine texts they are referred to as Urartu (name of the country: Urfa or the biblical Aram). This people which immigrated into Armenia towards the 10th century B.C. founded a powerful kingdom the centre of which lay in the middle of Urmu. After an existence lasting barely 250 years it fell a victim to the Kiusian invasion which devastated Western Asia in the middle of the 7th century. During and after these revolutions an Aryan population succeeded in occupying the country formerly ruled by the Urartuans. By foreign nations these new inhabitants were called Armenians—a name the origin and meaning of which has not yet been explained. (It first occurs in Achaemenian inscriptions in the form of Arma, Herodotus: Aro (203-4) whence the country received the appellation of Armenia. This name however was never accepted by the nattural inhabitants; it was in former days called Aradonj, in the Middle Ages the designation Haid was used.) The people and Haidts or Hayashts for the country.

Except perhaps during the time of Tigranes II. the Great, the Armenians have never played a leading part in Western Asia. To a great extent this was due to the political disruption of the country which, favoured by the geographical conditions, the feudal system, found an unparalleled development. The rulers of the country were a large number of noble families, and the king possessed only the shadow of power. To this must be added the fact that Armenia always heard great and powerful empires as neighbours beyond its frontiers. Thus it came about that Urmu was a large state, with a well-organised government. Only when we reach the level of the country to which we find the country subject to the Medes and Persians. During the troubled times following the death of Alexander the Great these satraps became the real rulers of the country though at first acknowledging the nominal sovereignty of the Seleucid kings. Even this appearance the reality of power was lost after the unsuccessful war of Antiochus III against Rome (after the battle of Magnesia 190 B.C.) two former generals of this king, Artaxias and Zartab, shook off the Seleucid rule, assumed the title of king and formed two independent states: Great Armenia or Armenia proper and Little Armenia (Sophene). Armenia flourished in the Hellenistic period. A few decades later Great Armenia became under the sovereignty of the Arsacids which however was only acknowledged in name and not actually exercised. In the 2nd century B.C. Tigranes the Great, descendant of Artaxias, shook off the Parthian yoke, destroyed the despot or the Arsacids and united Armenia and united Sophene and Gordyana as a single kingdom under his rule. It was Tigranes that the name Armenia received a definite meaning as a geographical term; and it was retained as such by the Armenians in the succeeding centuries although the terminology of the early Tigranes became less and less applicable to the political conditions of the latter period.

After acquiring a certain political importance under Tigranes the Great Armenia was gradually forced into the position of a buffer state between two rival world-powers, in the first place between Rome and the Parthians. The internal confusion which ensued in Armenia after the death of Tigranes was firstly provided with opportunities for intervention of frontier. About the year 10 of our era a descendant of the Arsacids, Artabanos III, ascended the throne which now remained in the possession of this branch of the Parthian ruling family for more than four centuries. Down to the year 226 A.D. in which the Sasanian rule succeeded that of the Parthians the Aramids of Armenia were able to rely only on the support of their neighbouring kinmen and in every struggle against the Romans.
the common enemy. Armenia continued to be an apple of discord between the New Persian empire and the Romans. At last, in order to put an end to the eternal quarrel in a manner acceptable to both parties the two powers proceeded to a division of the helpless vassal state. In the division which took place in 387, the larger Eastern part of Armenia (about four fifths of the whole) passed under Roman rule, and the smaller Western part became Roman. Here Arbraks III continued to rule until his death in 390, when upon the country received a Roman comes as governor. The Persian part, called by Westerners Persarmenia, retained its native rulers for some time. But after the destruction of the last Arzadian Arragash (425-429) the country was administered by a Persian Warden of the Marches (Marbar) who had his residence at Dira (Abbas Dagh). In the division of 387 Armenia had suffered considerable loss of territory, as many districts were separated from both parts and directly incorporated into the Roman or Persian empire.

The part played by Armenia remained unchanged when the country was annexed upon Rome's inheritance in the West. According to the Armenian historian Sebou who is our most important source for the time from the middle of the 5th to that of the 7th century, the Persian rule never succeeded in gaining a firm foothold in Armenia. The Armenian native rulers (Nakharars) made use of every opportunity to assert themselves and of the restless spirit of the fire worshipping and industrial warlike spirit of the Persians. They were the object of the persecutions of the Persian rulers in 451 which the Armenians refused to accept. The Greeks henceforward exercised great activity in the attempt to reestablish religious concord, with the result that the Armenians who were utterly averse to these measures were driven more and more to the Persians under whom they enjoyed much greater freedom and a less oppressive regime. A short peaceful period began for Armenia with the reign of the emperor Mauricius (582-602) and that of the Sasanian Khosrow II Parvis (590-628).

In the succeeding period internal discord continued to trouble both Armenians and warlike intervention on the part of the sovereign powers was frequently necessary. The peace of the country suffered especially through the constant disputes between the numerous native petty rulers who owing to their vacillating attitude were unable to gain the confidence either of the Byzantines or the Persians. Disunion against the sovereign powers was the rule everywhere. In Greek Armenia the greatest distance from the central seat of government favoured the rise of sedition movements. Persarmenia before the Arab invasion was practically in a state of anarchy, a condition which was exploited by the Armenians, the energetic ruler of the Khatchadzunis, for the exaction of his own power the base of which was the island of Aghdam or the lake of Dvin. The latter constant source of danger threatening the peace of the country was the appearance of the Khans of the lake of Win. On the other hand, a constant source of danger threatening the peace of the country was the appearance of the Khans on the North-Eastern frontier of Armenia, whence they made frequent incursions into the adjoining Armenian territory.

It was in this sorry condition — devastated by continual warfare, torn in pieces by discord within, disliked by foreign powers — that Armenia had to meet the powerful Muslim attack. Under the circumstances it was to be expected that the resistance to this attack would on the whole be feeble and badly directed.

In the history of the Arab conquest of Armenia many details are still obscure and uncertain, as Arabic, Armenian and Greek sources frequently contradict each other. By far the most important source for the period is the Armenian account of the bishop Sebou who was a first-hand eye-witness of the remarkable events and furnished his work with a valuable supplement to his work is furnished by that of the presbyter Leonis which is the only authoritative document available for the years 662-770. Among Arabic authors al-Baladhuri occupies the foremost place; his account is based entirely on the narrative of inhabitants of Armenia. After the death of Khalid ibn al-Walid in 702 there were in Arabia who had made themselves masters of Syria and defeated the Persians began to make repeated incursions into Armenia, in order to wrest the country from the Byzantines. The first raid directed against South-Western Armenia was undertaken by 'Ubayd b. Qaisan, the conqueror of Mesopotamia, and it is only as the result of the beginning of the year 541 = 639-640 that he penetrated as far as Dibis. Both Baladhuri (p. 176, 197), Tabarzi (i. 2500) and Yaqut (i. 206) agree in giving this date, though they differ considerably as to the details. A second incursion of the Arabs took place in 21 according to the account of Tabarzi (i. 2806) which is the last raid under Khalid ibn al-Athir. In the fourth division of which were commanded by Habib b. Ma'an and Salmun b. Rabah's the Muslims invaded the regions on the North-Eastern frontier of Armenia, but meeting with reverses on all sides they were soon obliged to evacuate the country. The short raid into the Armenian territory undertaken by Salmaan b. Rabah's in 24 (645) from Ahwaz and the neighboring plains to the east towards the city of Edessa is the last. Basil of Evia (ed. Houtsun, p. 180, Baladhuri, p. 198, Tabarzi, i. 2806) according to the accounts of the Arabic historians (esp. especially Yaqût, p. 194, Baladhuri, p. 197 et seq., Tabarzi i. 2874 et seq., 2806 et seq., ibn al-Athir, iii. 65 et seq.) and geographers the great invasion of Armenia which brought the country for the first time under the effective rule of the Arabs took place during the caliphate of 'Uthman towards the end of 24-25 = 645-646. A general who had already distinguished himself in the war in Syria and Mesopotamia, the above-mentioned Habib b. Ma'an, was charged by Muawiyah, the governor of Syria, with the conquest of Armenia. He advanced against the Sasanian, the capital of Greek Armenia, (Armen. Karin, Arab. Kâbul, modern Erzerum) and occupied the town after a short siege; a large Byzantine army re-inforced by Khazars and Alan auxiliaries which met him on the banks of the Euphrates was decisively defeated. He then turned to the South-East and on the other side of the lake of Win and received the submission of the local rulers of Ablal (q. v.) and Mok. Arwael on the North-Eastern shore of the lake of Win similarly surrendered to the Arabs, Habib next
proceeded to the siege of Dvin, the centre of Pervariava, which also capitulated after a few days. Having then extended his rule over the region of Talin, he concluded a treaty of peace and protection under the condition that it acknowledged the sovereignty of the Arabs and undertook to pay the poll tax (ghizya). During the same time Sultan b. Rabi's with hisItalian army subdued Arta (Albania) and took possession of its capital Bilibid. These1
1 Ethiopian has apparently been pointed out differently from that of the Arabs both as regards the date and in many points of detail. Complete agreement exists only between Sebastos and Belaigor in their account of the direction taken by the great Arab invasion, as appears from a comparison of the maps of advance given by the two.

According to the A.H. only Ethiopia had an Arab army which entered Armenia in 642, reached the district of Alarast, took the capital Dvin and left the country by the same route taking with them 35000 prisoners. In the following year the Muslims again invaded Armenia, this time from Aghvardin. They devastated Alarast and advanced into Ararat, where, upon suffering a severe defeat at the hands of the prince Theodoros Rhaiuni, they fled back to Tarsus. Soon afterwards the emperor appointed Theodoro's commander of the Armenian troops, and Armenia, which now remained immune from Arab invasions for several years, once more acknowledged the overlordship of Byzantium. In 653 there expired a three years truce between Constantine III and the Arabs and the outbreak of fresh hostilities was expected in Armenia. In order to obviate a threatened invasion Theodoros surren
dered the country voluntarily and concluded a treaty with Musawiyah, the条件 of which were unambiguously favourable to the Armenians, as in the previous treaty, to acknowledge the sovereignty of the Muslims. In the same year the emperor appeared in Armenia with an immense army, 100,000 strong, and most of the petty rulers of the country immediately went over to his side. Without much difficulty he once more brought the whole of Armenia and Georgia under his power. But no sooner had Constantine left the country after spending the winter in Dvin (654), than an Arab army made its appearance and occupied the districts on the Northern shores of the lake of Van. With the assistance of these Arab forces Theodoro's forced the Greeks to retire from the country, whereupon Musawiyah appointed him ruler of Armenia, Georgia and Albania. The attempts of the Greeks to re-conquer the lost provinces by means of an army commanded by Maniosors proved entirely unsuccessful. In 655 the Arabs extended their sway over the whole of Armenia; even the Greek-Armenian capital Karin (Kalakala) was forced to admit them. A few years afterwards however, the Muslims found themselves obliged to give up their doubtful possession for the time being. At the outbreak of the first civil war between Musawiyah and 'Ali (35 = 657) the former was in need of the army of occupation stationed in Armenia, and the country being demoralized by troops once more felt the hand of its former masters, the Byzantines.

It appears from this account that, according to the narrative of Stebon, all the events which the Arabic sources mention with the first great expedi-
and in 1847 (881) appointed the Bagratuni Ashot (Arab. Asbût) who had rendered great services to the Arabs cause shah ruler of Armenia. For 25 years Ashot ruled as prince of princes and during this time gained the sympathy of all his subjects, including the nobility. In order to strengthen the throne, he added an extra title to the karabagh. At the moment of his death, the expired was confirmed upon him the title of king in 727 (886). The emperor honored him in the same way and at the same time concluded a treaty of alliance with him. Asht’s friendly relations with the caliph were never interrupted and he regularly paid the tribute which was obligatory upon him even after his elevation to the royal dignity. But it was only in his own possessions that he was free to act according to his pleasure: the position of the nobility of the country in his reign also was one of almost complete independence.

Asht who died in 727-789 was succeeded by his son Sahak I (Arab. Sahâk) who in spite of his heroic qualities was no match for his external enemies, the Seldjoids and the Seljuks. He fought unsuccessfully against the former, but the intervention of the caliph al-Mutâsidil which took place soon afterward (728 = 890) terminated the Seldjoid rule and freed the Armenian provinces from the foreign invaders. Yet the young king did nothing to prevent the aggressions of the Arab governors of Adana, a member of the Turkish dynasty of the Seldjoids called Afshin, who constantly extended his frontiers to the West and North and whose power continually threatened Armenia. Afshin died in 788 (941) and made his brother and successor, the young Vahdun, Ashot’s eldest son, king of the family of the Arzrunians who after the death of Asht I had become the most powerful rivals of the Bagratids. Gagik the lord of Waspurakan, who at that time was the head of the family was honored by Vahdun with the title of king, a distinction which the caliph al-Mutâsidil renewed in 306 (959). During the years following 920 the incursions of Vahdun heightened the Arzrunian at last he besieged Sahak who had been abandoned by the nobles in the fortress of Kapat. In 933 the Armenian king succumbed to his enemy who, after keeping him in prison for a whole year had him executed under cruel tortures (914).

After the death of Sahak I Armenia was given over to anarchy. But his energetic son Asht II the Iron (935-958) succeeded with the help of Byzantine troops in maintaining his authority, and having enlisted the support of the kings of Iberia (Georgia) and Abkhasia (see the art. Asbût) he cleared the land of the Arabs. Allied with the Greeks he reached the highest degree of greatness in the Bagratids. The title of Shahisht, conferred upon him by al-Mutâsidil in 942 gave official recognition to his claim of sovereignty over the small Christian principalities of Waspurakan, Iberia and Abkhasia, though it is true that their dependence on the Bagratids was never effective. Henceforward Ashot II and his successors ruled quite independently of the Muslim sphere in the greater part of Central and Northern Armenia: in the latter region their family domains had already been added to considertably by Sahak. In Southern Armenia the Arzrunians who also have the title of kings ruled almost independently over a considerably smaller territory (Waspurakan with the capital Wsh.). In addition to these comparatively large territories there existed a number of smaller principalities of which most of them more than a nominal allegiance to the Bagratid rule, there were also, especially in the South, many independent and powerful Arab colonies. The history of the Bagratis therefore is not: in any degree identical with that of the whole of Armenia, a fact which must be emphasized as against the anti-Armenian subject in many of the recent works — but in accordance with its importance it receives the greatest prominence at the hand of the native sources.

Throughout the rule of Ashot II and during the greater part of that of Sahak (935-958) the emperor and the caliph were almost continually at war. Asht III (952-988) the small former capital of the country by his and his successor Sahak II turned it by means of beautiful buildings into a pearl of the East. [See AN1.]

Sahak II (977-988) and his brother Gagik I (990-1020) ruled with energy and good form, but their foolish domestic policy embittered them almost continually with the neighboring Christian principalities; at the same time there were constant disputes with the Muslim emirs of South Armenia. In 988 one of the latter, Manulun, was secretly defeated near Tramudi by David, the warlike ruler of Tadd and lord of the greater part of Iberia. After the death of Gagik the throne was disputed between the rightful heir Johannes and the more capable Gagik IV; the coalition was made worse by the intervention of the Iberians and the incursions of the Seljuks which they began for the first time. These circumstances appeared to the emperor Basilius II (976-1025) to afford a favorable opportunity for regaining his lost authority in the East by maintaining parts of the country and by deploying some of the native rulers to be succeeded in extending his power in Armenia. In 1021 Senechelin, the last of the Arzrunias, influenced by fear of the threatened Turkish invasion, yielded up his domains (Waspurakan) on the Eastern river; the Muslims were entered on the town and the lake of Van (Bakri, Manaskar, Asbût, Ardabir) also became vassals of the Byzantine empire and the possessions of the Bagratids were now surrounded on all sides by Greek subjects. King Johannes also was forced to accept the crown of Ani as far from the Byzantines, and Basilius actively proceeded to secure the new Eastern frontier by making strong fortifications. In the interval between Johannes and Asht the latter was ultimately successful owing to the support of Byzantine troops. After the death of Gagik IV (1049) the emperor Michael IV made the attempt to make Armenia definitely a part of his empire. An army sent by him was already engaged in the siege of Ani when it was forced to retire by the Vaphiagelian catastrophe (1041). The Armenian nobles now proclaimed the 17 year old Gagik II king (1042-1045). But no sooner had Constantinople secured his position on the throne than he occupied Ani and at last put an end to the rule of the Bagratids (1045).

Gagik II was compensated by extensive lands in Cappadocia. The covetous Greeks were thus allowed to possess the wealthy Armenian bishops.
Abbeys and Endowments. The revisions to which the orthodox Monophysites exposed the Armenians gave no boudons, and the revolts of the latter provoked by this insensate treatment afford an explanation of the success of the Seljukis.

The acquisition of new territory imposed on the Byzantines the heavy task of defending a much more extensive and more dangerous frontier than hitherto. For a time the attacks of the Seljukis, which began in 1042 and were repeated several times, were checked by the admirable system of fortifications instituted and excellently armed by Basilus. But the Seljukis developed a new life and new energy under Alp Arslan. The latter started from Ray in 1056 (1064), subdued Armenia and Iberia and conquered all the important towns of Eastern Armenia such as Nakhcivan, Ray, then still the residence of a branch of the Bagratis, and especially the valiantly defended Ast (q. v.). In order to stem the tide of the Turkish power which was continuously growing and gaining strength from concentration, the emperor Romanus IV. set out in the spring of 1053 (1071) with an enormous army of 100,000 men, and regained possession of the highly important fortress of Masis. But his army had been lost in 1059. But the divisions of his army sent against Akhit were pushed back by the Seljuks into Mesopotamia. A great decisive battle took place near Mamaskeri in which Alp Arslan inflicted upon his enemy an overwhelming defeat: the emperor himself was taken prisoner (Well, Gesch, der Churfürsten, iii. 112 et seq., Müller, Islam, ii. 33, Gelzer, Geschichte der lateinischen, Byzantinischen Literaturgeschichte, p. 1010). This defeat was the first terrible blow received by Byzantium at the hands of the Turkish horde, and it signified the end of the great Eastern empire. The East of Asia Minor, Armenia, and Cappadocia, that is to say, the countries representing the real source of strength of the empire were irretrievably lost to the Turks.

The terrible systematic devastation of the country by the Seljuks put an end to the national life and the civilisation of the Armenians in their own home. During these troubled times and many Armenians emigrated to the West in order to escape the oppression of the savage invaders: Cilicia, a country difficult of access from the outside, appeared to them a suitable place in which to settle, and to form a national state that was to be independent of Byzantium. Renken (Rupen), a near kinsman of the last Bagratid Gagik II, who had been killed in 1079 during an insurrection in Cappadocia openly broke away from the Byzantine empire and in 1080 received the homage of his subjects as ruler of the country. This revival of Armenian supremacy in the old Little Armenia lasted about 500 years and the well-defined successors of Renken gradually conquered the whole of Cilicia. Their relations with Byzantium were always strained; on the other hand they formed a close alliance with the crusading states and recognised their country on the model of the latter with their semi-French feudal institutions. At first an independent principality, their state was raised to the rank of a kingdom by Leo II (1108) as a reward for services of friendship rendered to the crusaders under Barbarossa. The new kingdom soon found itself threatened by stronger neighbours both in the North and the East; thus on the one side by the Seljuk kingdom of Rûm, on the other by the Mongol empire. The Seljuks not only decreed the destruction of the descendants of Reuben of large portions of their territory but also forced them to acknowledge their suzerainty, until the Mongol invasion of Asia Minor put an end to their rule. Little Armenia henceforth was no more than a feudal state under the overlordship of the Mongol princes (Ilkhanis), and owing to its geographical situation it was on the administrative system of the independent rulers the core of a large area; existing between the Ilkhanis and the Manichis of Egypt; in the raids of latter the country was terribly devastated especially during and after the time of the sultan Baybars (particularly in the years 1266, 1273 and 1275). In 1342 the male line of the descendants of Reuben died out with the assassination of Leon IV: their kingdom now passed to the Lusignans of Cyprus who were related to them by marriage. The new kings tried in vain to maintain their position against the attacks of the Manichis by attaching themselves to the Mongols and relying on the assistance of the European West. Slowly and one by one they lost their towns; and in 1375 Leon VI. was forced to surrender his last stronghold to the sultan al-Malik al-Ashraf. The last king of Armenia went to Paris where he died in a monastery in 1393.

During the time of Seljuk supremacy Armenia like Cilician Armenia and Mesopotamia was divided into several administrative districts, varying in size, each of which was governed by an emir; from the very beginning the latter occupied a position of considerable independence.

Compared with the other petty Seljuk states which arose on Armenian soil the kingdom of Kilic (Akkhlat) in the South West founded by Subkhan al-Malik (q. v.) in 493 (1090) after the expulsion of the Karwansars was on the whole the most secure in its tenure of power. The Karwansarids gradually extended their territories to the North and North-East until they reached the district of Bagrawand; the shores of the lake of Van and the country as far as Kilic and Sapin was as well as the Bagrawand and the district of Sassun were included in their dominions, though the districts in the North frequently suffered from the devastating raids of the Georgians. In spite of the fact that this principality of Kilic the population of which was paganizing Armenian included hardly a fifth of the whole of Armenia, its rulers assumed the proud title of Sakt Armens, king of the Armenians. Cp. on this title v. Berken in Lohmann-Haupts, 'Materialien zur alt. Gesch. Arm. 139.'

When the family of the Saktamindos became extinct (981 = 185) the vacant throne passed into the possession of the Manichis (Regierungszeit des Saladin, 1185—1193), who, after a period of dynastic disputes, was succeeded by his son. A few years afterwards the Aykówida took possession of the country (604 = 1207). The sultan al-Malik al-Adil (q. v.), under whose auspices practically the whole kingdom of Armenia was once more united, made his son al-Ashraf ruler of Kilic. After the latter's death (607 = 1210) he was succeeded by his brother al-Ashraf (cf. the art. Assyrische). The Georgians who since the end of the 13th century had made repeated incursions into Armenia and in 1210 besieged the capital Kilic unsuccessfully.
fully, were forced by al-Ashraf to conclude a peace under terms unfavourable to them. Both al-Ashraf and al-Ashraf ruled under the supremacy of their father al-Afdal: it was not until after the death of the latter (515 = 1121) that al-Ashraf became completely independent. After this date his dominions were considerably enlarged and included the whole Northern half of the countries under Aytubid rule, i.e. Külübi, Mesopotamia and Northern Syria with Damascus. As lords of Külübi these Ayyubids followed the Suk- kait tradition and assumed the title of Shâh Arman.

The last Aytubid ruler was al-Mu'izzar Ghiyât; in 632 (1244) after the capital had been taken several times the kingdom of Külübi finally succumbed to the attack of the Mongols. Hulagu obtained possession of the whole of Armenia, Kurlistan, Ispah and Mesopotamia. The most prominent of the Khânkás as the rulers of the house of Hulagu are usually called, was Ghiyât (624—703 = 1225—1295); he succeeded in reorganising the empire which had fallen into the wildest confusion soon after Hulagu's death (663 = 1265), but his success was only temporary; after the death of the Khân Abu Sa'id (716—736 = 1317—1337) the Mongols lost all Armenia and Mesopotamia. The state had already become very apparent there followed a period of absolute chaos.

It was during this period that the Turks (Turkumans) became a preponderating and ruling element in the population of Armenia which apart from them consisted of native Christians and Kurlish nomads. The Turkish element was greatly strengthened by the arrival of two fresh hordes of Turkumans who had crossed the Oxus from Turkistan in the time of the fourth Khân, Arghun (686—691 = 1284—1291) and found a new home on the upper Euphrates and Tigris where the terrible devastations of the Mongols had left enough vacant country for new settlers. After the wars on their standards these hordes were called Kara- and Az-Koyunlû-i.e. 'Black and White Lambs'. Their power grew step by step immediately before the invasion of Timur the greater part of Mesopotamia and Western Armenia (especially the districts of Wân, Bâyazid, Ezerün, Arraxšan) was in their possession; the power of the Kara-Koyunlu originally had its main centre in Mesopotamia, while the Az-Koyunlu who at first had occupied the district of Arraxšan only made themselves rulers of Western Armenia and the North West of Mesopotamia. The small Christian and Muslim principalities still existing in Armenia had to pay tribute to the Turkumans and frequently were exposed to oppressive treatment at their hands.

Such was the condition of Western Asia at the time when Timur (Tamerlane) in 1395 advanced against it and overran the country with its devastating fury. The Az-Koyunlu from the east sided with Timur, while the Kara-Koyunlu took the field with the Osmanu and Manûš. During the whole summer and autumn of 728 (1326) and the spring of 729 (1327) the Mongol hosts passed through the provinces of Armenia and Georgia in all directions laying waste everywhere; the larger towns like Wân and Tîfîs suffered particularly. In the year 791 (1395) the insubordination of the Kar-Koyunlu provided Timur with a pretext for a second expedition against Armenia which again brought terrible devastations in its train. Five years later Timur appeared in Armenia for a third time; in the spring of 796 (1394) after taking Bâghdâd and ravaging the Tur Abdin he divided his army into three divisions, crossed the mountains under considerable difficulties and penetrated as far as the Central Armenian plateau of Bagawrâd where they found pasture, cp. Tomasevich, Storia, p. 365.

The great Khan of the Mongols had no sooner died than endless disputes for the throne broke out among his sons and successors. This state of affairs offered a favourable opportunity to Kara Yân, the leader of the Kara-Koyunlu for regaining at the expense of the Az-Koyunlu the position of power which had been greatly curtailed by Timur. Armenia thus became again the scene of all the ravages of war. In the unbridled struggle between the two Turkoman tribes which now ensued the Az-Koyunlu led by Kara Yân proved the weaker side: they were defeated in the battles of 804 (1406) and 813 (1407) and especially in a decisive encounter near Kafr-at-Kûn on the Euphrates (above Ninevî) in the year 821 (1415). The Kara-Koyunlu were now able to fight and plunder in Armenia and Georgia to their hearts content.

Notwithstanding the intravention of Timur the descendants on behalf of the 'White Lamb' the Kara-Koyunlu maintained their predominance for the space of fifty years. It was not until the year 871 (1467) that a grandson of Kara Yân, Ustân Hasan i.e. Hasan the Tall (857—892 = 1453—1477), was successful in making a determined attack against them and finally broke their power. Khânš-Sîb, who had succeeded to the leadership of the Kara-Koyunlu after the death of his brother (1437) was killed in a decisive encounter. For several decades after this date the Az-Koyunlu play the most prominent part in the history of Armenia (cp. above p. 325). By degrees Ustân Hasan obtained possession of all the districts formerly ruled by the Kara-Koyunlu, and on the re-establishment of his power he was master not only of Armenia and Aḏharbaljûn but also of the two Ispah, Fâr and Kirman.

With the death of Ustân Hasan the power founded by him began to decline. The disputes about the succession which broke out among his descendants favoured the rise of the Selîûd (Salûtād) Ima'mî whose power in the beginning was confined to Anî and the surrounding country. Gradually he succeeded in uniting with his kingdom the whole of the territories formerly ruled by Ustân Hasan which by this time had become split up into three smaller states. But the union of these territories was not of long duration. The Selîûd Ima'mî was now advanced against Ima'mî with a strong army (926 = 1514) by way of Sixû and Tcrdûn he reached the Arman lake to the East of which near Caldîrûn (q. v.) he gained an overwhelming victory over the Persians (23. August). The Mesopotamia and Western Armenia now passed to the Turks in whose possession it has remained ever since.

It is worthy of note that the rapid passing of Armenia from Persian to Turkish rule was as
was given to the Czar. Previous to this (in 1810—
1815) it had been temporarily subjected by the
Persian king Aga Muhammad (cp. above p. 350).
Russia, at once seized upon the opportunity of
thus for the first time became possessed of Ar-
menian territory, and as it thereby threatened
Asiatic Turkey and Persia, frontier wars with
both states could not be avoided. In 1828, the
Russians conquered Elâzza, which received the
name of Elisabethpol in honour of their empress.
Kara-Dagh surrendered to them voluntarily in
1825. But all their efforts to gain possession of
Erivan by siege or main force (17 Nov., 1828)
proved unavailing. The war between Russia and
Persia continued until British intervention brought
about the peace of Galleston in 1843. By the pro-
visions of this peace the frontier between Rus-

sian Transcaucasia and Persia was determined in
the main points; the dividing line followed the
Southern bank of the Aras, turning to the North
West above Nakhchavan and Erivan (cp. on the
regulation of the frontier K. Kitter, Erzurum,
iz. 869 et seq.). But the fact that the details of
the frontier had been left undefined in this treaty,
gave rise to lengthy negotiations and to the end
of a second war. Hostilities were opened in July
1846 by the Persian heir-apparent 'Abbas Mirzâ,
who made a successful raid into Zangezur terri-

tory; nearly the whole country as far as the gates
of Tiflis fell into the hands of the Persians. The
hostilities began once more in the spring of 1847
and General Paskevitch now succeeded in se-

murting the upper hand for the Russian arm.

In the spring of 1828 a treaty was concluded
at Turkmanchâ which modified the peace of 1813,
in such a way that all the country to the North
of the Araxes, particularly Ordubadh and the
Persian Khânates of Nakhchavan and Erivan as
well as Elisabethpol passed under Russian rule.
From this time onwards the colonists of the
Arrat has served as the gigantic boundary stone
between three rival powers. In the cindol
of Erivan which dominates the extensive plains
on the left bank of the Araxes, on the one hand,
was a large population, Russia gained an extremely
important base for operations against Persia and
Turkey. As a central point between Iran and the
Georgian capital Tiflis, Erivan had been an im-
portant port of trade, but under its new sover-
ign the commerce of the town declined to a
vast extent. The territorial division created by
the peace of Turkmanchâ is of considerable poli-
tical importance owing to the fact that by it the
classical soil of Armenian Church history, the
country which for the religious sentiment of the
Armenians is the most attractive in all the East,
passed under the rule of a Christian monarch.
Another point worth mentioning is the provision
injunctive upon the Persians; in this treaty as well
as in that with the Turks a year earlier, all

ative Christians were given the right to emigrate.
This stipulation has done more to weaken Persia
than the cession of entire provinces; most of the
Armenian subjects of the Shah made use of the
permission thus gained; the inhabitants of entire
villages began to emigrate and whole districts
became depopulated under the policy of the Persian
authorities. Most of the emigrants were given new
settlements in the Armenian district of Kars-

Dagh. After this date the peace between Russia
and Persia has not been seriously disturbed.
immediately after the hostilities against the Persians and the subsequent regulation of the frontier had been completed the Russians declared war upon the Turkey on the 16th September peace was urged at Adrianople which reconstituted the frontier in Russia's favour in such a way that the latter country gained possession of a portion of Armenian territory containing the important fortress of Akhaltsikhe and Akhal-

Kakati.

On the frontier between Russia and its Turkish neighbour, especially the Turkish Armenia relations became more and more strained owing to continual quarrels and disputes. In 1821 insignificant causes led to the outbreak of open war between Abbas Mirza and the Turkish governor of Erzerum. The treaty of peace eventually agreed upon by both governments left the frontier unchanged (cp. on this war K. Hütin, Erdbeben 1817-1871 at ally). During the two following decades the political situation between the two great Muslim powers again tended to become more and more critical and they were about to refer the old frontier dispute to the arbitrament of the sword, when the influence of Russia and Great Britain succeeded at last moment in bringing about a settlement by means of a treaty concluded at Erzerum. According to the provisions of this treaty commissioners of those two European powers as well as of the states affected were to regulate and fix the long line of frontier between Turkey and Persia. After immense difficulties the commission appointed succeeded in completing its task in 1852. Turkey however refused to ratify the treaty; it was not until 1878 that the Berlin Congress (article 60) obliged the Porte to yield up the Armenian district of Khorut [half-way between Wam and the Urmia lake]; this decision was carried out by Turkey.

Differences arising out of the question of the 'Holy places' brought about a new war between Russia and Turkey, the so-called Crimean war (1853-1856), and Armenia was once more subjected to a Congress of a European nation. After the conclusion of peace it enjoyed a rest of only twenty years. For in 1877 another war broke out between Russia and Turkey owing to the refusal of the Porte to accept the reforms proposed to it in the interests of its Christian subjects. This war was ended by the preliminary peace of San Stefano.

The provisions of this treaty were subjected to a minute revision by the Berlin Congress (cited on 13th July 1878). Article 53 obliged the Porte to cede to Russia the Armenian districts of Arzakan, Karag and Batum as well as the country situated between the old Russian-Turkish frontier (altogether about 10250 sq. miles). The new boundary line was accurately determined (cp. Petrosian, Geogr. Mittell. 1878, p. 321 with maps). The latter was restored to Turkey by the treaty of Alenjurt (Tywakal 'Kal') and Bayazid which had become Russian according to article 19 of the peace of San Stefano. The possession of Khorut, as has already been mentioned, was decreed to Persia.

The reforms in Turkish Armenia resolved upon by the Berlin Congress have had the worst possible results for the native Christians; the situation in the country gradually became unbearable until the hidden fire broke out in open flame in the year 1894. Bloodshed and barbarous massacres on a large scale occurred in many towns, thus in 1894 at Sanin, in 1895 in almost all the larger towns, particularly in Tumanyan, Edznaya and Buczik, in 1896 in Kharpert, Nihilot and Wam. During these disturbances immemorial villages were burned down, hundreds of churches were desecrated, plundered and spoiled of their treasures. There followed a few quieter years. But in 1904 fresh massacres occurred in the wilayets of Wam and Ritha, and the social condition of the country still continues to be in a very unsatisfactory state. The entire, if not most, of the Armenian population is still subject to the financial system of the Khedive, and from these circumstances it is to be sincerely hoped that the new regime of the Young Turks may mean the dawn of better times for Armenia.

5. DIVISION, ADMINISTRATION, STATISTICS, TRADE AND COMMERCE, NUTURAL PRODUCTS AND INDUSTRY.

The term Armenia was subjected in the course of the centuries to considerable variations with regard to the territories included under it: in the same way the division of the country designated by the name was not always the same. In antiquity the Armenians (cp. e. g. Arminius, Gesta Dei contra Gentiles, p. 605) divided the whole country into two unequal parts: Mes-Halik = Armenia major and Pog-Halik = Armenia minor. Armenia major or Armenia proper extended from the Euphrates in the West to the district near the river Kur in the East and was subdivided into 15 provinces. Armenia minor consisted of the country between the Khor and the upper courses of the Haly, This division into two parts was known to the Arabs (cp. e. g. Yüfik, l. c. 220.)

But in contrast to the Armenians who are followed by the Romans and the Byzantines, the Arabs use the term Aramya in a wider sense so as to include under it the whole district situated between the Kur and the Caspian Sea, i. e. Georgia, Iberia, Ararat (Lower Albania) and the mountainous districts of the Caucasus as far as the Derbend pass (Bab al-Arabli). This is due to the fact that the history of these districts was always close connected with that of Armenia, especially where the struggles against Muslims are concerned. By the term Aramya al-kubra, 'Great Armenia', the Arabs (cp. Yüfik, l. c.) understand particularly the district of which Hali (Akhaltsikhe, i. v.) is the centre, while Aramya al-sagiri, 'Little Armenia', designated the district of Tiflis (i. e. Georgia). Ibn Hawqal (ed. de Goeje, p. 297) knows yet another partition of Armenia proper (without Albania and Iberia) into two divisions: the two parts being the inner and the outer Armenia (Arminya dakhila and Arminya khâlila); the former includes the district of Dakhil (Otlakhe, i. v.) and, Kafil, later Arzakan al-Kut (Karim), the second division belonged the region of the lake of Wam (Bekar), Akhaltsikhe, Westaka etc.

Side by side with this division into two parts there existed in Armenia a very old system of quadripartition, this also was taken over by the Byzantines (division of Justinian in 539). This system from some modifications introduced by Manniu (591) remained in force down to the Arab invasion. The Arabs in their turn borrowed from the Greeks the principle of designating the chief groups of the Armenian provinces as Arminya
I—IV, but deviate considerably from their predecessors in their method of assigning particular districts to these groups; this discrepancy can only be explained on the assumption that a re-partition into provinces took place after the Arab conquest. The statements of Arabic historians differ considerably among themselves, but on the whole we get the following scheme of the Arab division of the country:

1. Armenia I: Arrān (Albania) with the capital Baghdaa and the districts between the Kur and the Caspian Sea (Shirwan). 2. Armenia II: Jezreel (Georgia). 3. Armenia III: consisting of central Armenia or Armenia proper, with the districts of Doubl, Beisirfandij (Waspurakan), and Armenia IV: the South West with Shirwān (Armenoi). Kaftal, Akhin, Arsidī.

In addition to these Arabic writers (al-Sabīrī, il. 156 et seq. and Abū Thīlā, ed. Reinaud and de Sestes, p. 357 = al-Thīlā, ed. de Genou, p. 364; il. 156 et seq.) and refer to a partition of Armenia which consists of a parallel to the division of the country before Justinian, but the enumeration of the districts belonging to such division shows that the number three is arrived at by merely leaving out the Armenia II of the quadripartition given above.

As for the administration of the country during the Arab period (cp. especially Ghazarīan, loc. cit., 193—206, Thopisch., loc. cit., 1904, il. 125—127) it must be remembered that Armenia in the sense in which this term was familiar to the Arabic authors, did not always form a separate province, but was frequently united with Kahrddjij by and the Jezreel (Mesopotamia) under the same Governor. The Emperor of Ani (Arabic) appointed by the caliph himself, his residence in Armenia was Dvin (Arab. Dīdī, to the South of Erivan near the Araxes), a town which had been the seat of a Persian Marash before the Muslim conquest. The chief duty of the governor was the protection of the country against domestic and foreign enemies; for this purpose he had at his disposal a standing army, the garrison of which was not however in Armenia itself but in Adharbājān (it had its headquarters at Maragha and Ardabil). Another important duty of the governor was to watch over the punctual payment of the taxes. For the rest the Arabs did not interfere in the administration of the country, but left it to the several local rulers (Armenoi and Arab. Bārī = barī) who retained all their domains after the Arab conquest and were permitted considerable independence within the boundaries of their own possessions. In case of war each of these local rulers had to furnish a certain number of troops, and certainly the inventions of the "Abbasid period were not the payment for this service.

Compared with the other provinces of the caliphate the taxation to which Armenia was subjected was moderate. The levying of the various kinds of taxes (ḥāṣa, ḥāṣa-āḥ etc. = poll-tax, land-tax etc.) was replaced in the beginning of the 9th century by the Mulkān's system under which the Armenian princes were obliged to pay a fixed sum of money. Ibn Khūdh's statement of taxes which refers to the most flourishing period of the caliphate gives the Armenian revenue (in the wider Arabic sense of the same) during the years 150—170 (755—786) at 13 million dirhams which corresponds to about E 625,000; to this must be added various contributions in kind (carpets, mules etc.); the average revenue for the years 254—277 (869—885) is given by Khūdī as no more than 5 million dirhams. Cp. on the financial conditions A. v. Kremer, Kulturgeschichte der Orienten, 5, 334, 358, 368, 377; Ghazarīan, loc. cit., 205 et seq., Thopisch., loc. cit., 1904, il. 132 et seq. The Arabic system of coinage was introduced into Armenia; money was struck in the country as early as the Umayyad period (cp. Thopisch., loc. cit., 1904, il. 127 et seq.)

According to Yākūt (1, 222, 14) Armenia possessed as many as 18,000 towns and villages of various sizes; 1000 of these (according to D. Fallāk) were situated on the Araxes. The more important towns of Armenia proper—during the Arab Middle Ages were Dīdī (Arman. Dwin), which during the whole period of the caliphate was the capital of the province (at that time a very populous town, now an unimportant village), next Kaftal, later called Arases al-Malh (Erzeno), Arussī (Essenjūn), Malešī (Mansākky), Buftī (Rilā), Akhīl (Khili), Arsidī, Nazhāwār (Arman. Nakhchawān), Asīr and Kar (cp. the several articles). The bulk of the population during the time of the caliphate was composed of native Armenians; it was only in centres like Dīdī, Kaftal, also in Baghdaa (in Arrān) and in Tištī in Tištī (in Dvin), the principal strongholds of the Arab power, that strong Arab colonies were to be found. Apart from these large town settlements of Arab tribes existed particularly in the South West in the old district of Badjūnī (Arman. Ayabananī) of which Malešī was the capital which was occupied by a branch of the famous Arab tribe of Kāzī. All the Muslim colonies (on which cp. especially Thopisch., loc. cit., 1904, il. 115 et seq.) regarded the rise of the Bagrāthid power with the utmost dissatisfaction as it interfered with the consolidation and extension of their own rule.

Since the Rusno-Persian and Rusno-Turkish wars of the last century the territory of Armenia has been divided up between Turkey, Russia and Persia.

I. Persian Armenia, the smallest of the three divisions (about 3770 sq. miles), consists only of a few districts and in a sense is no more than an appendage of Russian Armenia; from an administrative point of view it forms part of the province of Ādharbājān. To the West it borders on the Turkish villages of Wāne. The northern frontier against Russia is formed by the Araxes along a line of about 150 miles stretching from the eastern base of the Ararat to Urdūshā (Ordūshā). The capital is Khol (same Persian, Ostan Khor), and other places of importance are Malā, Jun, and Marand. Persian Armenia corresponds more or less to the eastern part of the old Armenian province of Waspurakan (Arab. Baghdirān).
2. Russian Armenia forms the southern and south-western part of the province of Transcaucasus, and covers an area of about 3,063 sq. miles. It is composed of the districts bordering upon Persia and Turkey, particularly the whole governments of Erivan (10,667 sq. miles), Kars (7,211 sq. miles) and Batum (2,863 sq. miles). Of the governments of Yelissawetpol and Tiflis only the southern and western part, of that of Kars, only the southermost portion on the right bank of the River Komi are to be regarded as Armenian territory, for the rest these governments are composed of districts formerly belonging to Georgia (or Georgia and Albania). The following are the most considerable towns of Russian Armenia: the harbour of Batum, of great importance from the strategic and the commercial point of view, and capital of the government of that name (37,700 inhabitants); in the government of Tiflis there are the two fortresses Akhaltschik [q.v.] and Akhaltschakel. In the administrative district of Kars: the strongly fortified town of that name, important also as a centre of commerce (20,000 inhabitants), and the ancient town of Arabshin, situated at a height of 6,250 feet and likewise the capital of the government of Erivan the greater part of which formerly belonged to Persia we may mention: the capital Erivan (35,000 inhabitants) and 11 miles to the West of it the famous monastery of Echmiadzin, the religious centre of the Armenians: next Nagchitawan [Arab. Nağhchawan, q.v.] a town which like Erivan plays an important part in Armenian history, and Armenopolis, formerly called Gumri, with 35,600 inhabitants (1897), until 1878 important as a frontier fortress, now a rising industrial centre (nick). Among the towns of the government of Yelissawetpol we may mention: Yelissawetpol, the ancient Djaner [Gendje, q.v.], with 35,400 inhabitants, which like Shusha in the district of Kars-Bagh was formerly the capital of a khazine; further the frontier town Urubaghet [Ordubaghd] on the Araxes.

3. Turkish Armenia. The greater part of the Armenian territory, far more than the Persian and Russian portions combined, has for nearly 500 years been in the possession of the Turks. It is divided up among the wilayets of Bilis, Erzessun, Mac'arvet, æl-Ath, Kharput, Mshh, and Bissan [see the articles in question]. Population. Since the second half of the last century the population of Armenia has by degrees been transformed to an enormous extent, partly owing to the invasion of Torkomans and Turkish tribes and partly owing to the advance of the Kurds in the South and of the Georgians and other races of the Caucasus in the North-East. The result is that at the present time the original inhabitants of the country, the genuine Armenians, form little more than one fourth of the total population of the region which once was their own in its entirety. According to the reliable statistics compiled by L. Selemy and N. v. Schidt (in Piemontè's Geog. Mittell., 1896, p. 17 & sqq.) the six governments of the province of Transcaucasus enumerated above, which contain entirely or partly of Armenian territory, have an area of ca. 62,500 sq. miles a total population of about 3,470,000, of whom 897,000 (or about 27%) are Armenians. If in the case of these governments we include in our calculation only those regions which may be regarded as Armenian territory we are left with an area of ca. 39,645 sq. miles containing an estimated total population of about 1,000,000 (i.e. = ca. one third) are Armenians. Among the Transcaucasian governments that of Erivan is the only one in which the Armenian element (55½%) outnumbers the other nationalities. Throughout Transcaucasus the Armenian element is stronger in the towns than in the country, thus especially in the government of Tiflis (Tiflis 49½%). In the whole of Transcaucasus the Armenians (960,000) form only 20½% of the total population of 4,782,000.

The number of inhabitants of the five wilayets of Turkish Armenia is 2,842,000, of whom 1,828,000 are Muhammadans, 633,000 Armenians and 179,000 Greeks. The Armenians therefore form barely one fourth of the total population; it is in the city of Mshh (wilayet of Bissan) and in that of Wán (wilayet of Wán) that they predominate numerically.

On the basis of these figures the total population of Russian and Turkish Armenia may be estimated at ca. 4,642,000, of whom ca. 1,400,000 are Armenians. In Russian Armenia the bulk of the population now is of Caucasian nationality (Georgians, Lazes, etc.), while in Turkish Armenia it is composed of Kurds and Turks; to these must be added numerous Greeks scattered throughout the country, as well as Jews, Gypsies, Circassians and Nestorian Christians (the latter to the South East of the lake of Wán) and lastly nomadic tribes of Tataran (Tartomans) especially in the East. Concerning the population of Persian Armenia no statistics are available, but it may be estimated at but little more than 200,000. In 1891 the Armenian population of the whole of Persia was stated to be 42,000, one half of which belonged to the Agharabiques, i.e. chiefly to the Persian Armenian territory incorporated with the latter province; it appears therefore that here also the Armenians are in the minority, the bulk of the population consisting of Persians and Tartomans.

It is to be observed that the number of Armenians on Turkish territory is steadily decreasing, partly in consequence of the wholesale massacres perpetrated by the Kurds and partly owing to emigration. The settlement of so many Armenians in foreign countries and their dispersion over the whole world, which recalls the similar fate of the Jews, has its principal cause in the generally unhappy political conditions of their native country: the emigration movement began a few centuries before the Arab invasion and has continued ever since, though in a not without interruptions and variations in its extent. Cf. on this point especially Byrney, Sardis, x, 594—511; M. Wagner, Reis in den Armen, p. 239—250. According to an approximate estimate the total number of Armenians living in the various countries of the ancient world may be put at 2—2½ millions.

Trade and commerce. During the Middle
Armenia played an important part from the economic point of view as a stage of transit between the Pontus and Mesopotamia and as the boundary between Byzantium and the eastern parts of the caliphate. The great number of traders and caravans passing through the country necessarily involved the development of various industries; apart from this factor trade itself and the industries of the country were stimulated by its wealth in natural produce. The commercial importance of Armenia is proved by the numerous trade routes which traversed the country in several directions; to the more important of these the Arabic geographers have devoted detailed descriptions. From the Arab point of view that importance of these routes lay less in the fact that they served the needs of commerce than in the assistance which they rendered to their military interests; it was for this reason that the principal routes met at Dabul, the Arab stronghold for the domination of the country. The maintenance and the protection of the roads, especially in a province surrounded by hostile territory, took an important place among the duties of the Muslim governors. It is for the same reason that Erzerum, as meeting-place of all the principal roads, is now regarded as a place of great strategical importance and as the key of all Asia Minor.

Armenia maintained its communication with Byzantium by way of Trapezunt (Arab, Tahkismand), which was the principal place of storage for Byzantine merchandise (especially precious textiles). The great fair held at Trapezunt several times in each year was visited by merchants from all the Muslim countries. The merchandise was mainly transported from Trapezunt to Dabul and thence to Khalilabad (Erzerum). In Paris Bay was the most important market for the Armenian traders (op. ibi al-Fakhri, ed. de Goede, p. 270); they also maintained direct commercial relations with Baghda (al-Yaqqub, ed. de Goede, p. 237).

Natural products and industries. Armenia was regarded as one of the most fertile provinces of the caliphate; it produced corn in such quantities as to be able to export it to other districts, e.g. to Baghda (Tabari, ii. 274, 275). The rivers and the lakes of the country which yielded an abundance of fish also favoured the development of the export trade; the lake of Van e.g. produces enormous quantities of a species of beluga (Arab, pirigak) which in the Middle Ages was salted and exported over great distances (according to Kaswati, ed. Wietzenfeld, ii. 352 as far as India); it is still found all over Armenia, Adjara, Bukhara, Caucasia and Asia Minor as a favourite food.

Armenia is particularly rich in mineral resources; it contains copper, silver, lead, iron, arsenic, lead, copper, and even gold. We know very little about the exploitation of this wealth by the Arabs; the only Arab author who gives any valuable information about the natural produce of Armenia is Ibn al-Fakhri. According to the Armenian writer Leonidas silver mines were discovered towards the end of the 8th century, D.; he refers probably to the silver (and lead) mines near the town of Giumchka, Khaten—"silver house" (about halfway between Trapezunt and Erzerum, cp. Ritter, Erdkunde, ii. 272 and Wagner, Reise nach Persien, p. 172; still are being worked. Other productive mines are found near Balbit and near Aghdam [q. v.]). The extensive and very old copper mines of Kedadeh with a branch at Ka

The period for the Seljuk period in the history of Arasani and Lastvisth which deals with the years 800-1271 (Armen. ed. Venice, 1845; French transl. Paris, 1864). The work of Tzakas of Gondar, datering from the 13th century gives a contemporary account of the years 1165-1265 (Armen. ed. Moscow, 1858 and Venice, 1863; French transl. by Briot, 1860). A history of the Mongol invasion (known to the Turk in modern) was written by the monk Makalx (Armen. ed. St. Petersburg, 1870; Russian translation by Paltkanev, ibid., 1871; French translation by Briot, 1874). A history of Timur and his successors was composed in the 15th century by Thomas of Mushop (Armen. ed. Schahnamaz, Paris, 1865). The chief source for the sufferings of the Armenians under Shah Abbas I is the History of Arakel or Taurit (dealing with the years 1662-1661) (Armen. ed. Amsterdam, 1661; translated by Briot). There may also be consulted the works on Byzantine history (see the bibliography in Krumlau, Byzant. Literaturgesch., 2. ed., p. 1069 et seq.) and the relevant chapters in works of Muslim history or the history of the Seljuks.

ARMENIA—ALBANIA.

nie ein a. fitt, vol. i. (Berlin, 1901): Sarre, Transkanad, Persien, Mesopotam, Transoxien, Land und Lente (Berlin, 1829); Lynch, Armenia: Travels and Studies (London, 1801); P. Ruhrbach, Von Kaukasus zum Mittelmeere (Leipzig, 1897).

Much relevant material has also been published in (Russian) Mémoires de la Soc. Caucasienne de l'histoire naturelle, impériale russe de la géographie; see also the (Russian) publications of the Caucasische Staats-Kommission (District Elissawetpol, Tiflis, 1888; Kar,T. e. 1889). Cf. further the Bibliography under art. ARARAT.

I. Allian, Physiographic de l'Arménie (2d Ed., Venice, 1870); H. Abich, Geol. Forschungen in den Kaukasischen Ländern (Wien, 1882-1887); deals in a vol. with the geography of the Armenian Highlands); R. Siegler, Die Schwanungen der hocharmenischen Seen (Wien, 1888); G. W. v. Zahn, Die Stellung Armeniens in geographisch Verkehrspolitik (Berlin, 1907); J. H. Schaffer, Grundzüge des geolog. Bauz. von Türkisch Armenien etc. in Petersen’s Geogr. Mitteil., 1897, p. 145 et seq.

Among cartographical aids the following need special mention: the itinera in the Travels of Montefelt (1833) and Dubois (1839 et seq.), further Glaser’s Map of Asia Minor and Armenia (ca. 1850); H. Kiepert, Karte von Georgien, Armenien und Kaukasien, 1 : 1,500,000 (Berlin, 1854); Karte von Armenien, Kurdistan, und Aserbaidschan, 1 : 1,000,000 (ib., 1858); Spiebold, des ßerb. Arm., 1 : 500,000 (ib., 1877) and die Carte gén. des provinces, europ. et asiat. de l'Empire otoman, 1 : 3,000,000 (ib., 1892). Good maps are also contained in Camer, La Turquie d’Asie (1891 et seq.) and in Müller-Simanta, Travels (1892).

The latest and relatively best of all existing maps is Lynch-Oswald’s Map of Armenia and Adjacent Countries (London, 1901), which being to the scale of 1 : 1,000,000 is very clear and contains abundant amount. (Cf. also F. Justin’s Kurkarteographie in Gmeindes der trost. Philipp. u. Heilbrunner’s notes in Indegien Mitt., xlvi. [1904], p. 184 et seq.)

Karekin, Gesch. der arm. Litter. (Armen. Litter. Russ.; St. Petersburg, 1850); F. N. Fincke’s Abriss der arm. Litter. in Amelang’s Litter. der Ostsee, vol. vii. p. 75 et seq. (Leipzig, 1907) — The most important scientific journal appearing in Armenian are the Handbuch armenischer (Wien, 1877 et seq.) and Ararat (Vienna). (STRECK.)

ARNAUTS, an Indo-European people, known to us as Albanians, who occupy the territory which is under Ottoman domination on the eastern shore of the Adriatic Sea from the 39° to the 45° N. Lat. The range, which is called in the south Pindos or Grammos, in the North Sharon, the high central chain of mountains is frequently denoted as the eastern boundary of their settlements; but those districts which are situated on the other side, viz. Monastir, Kastoria, Perlepe (Philipp.), Kalkändelen, Dasklits, Friginten, and even the territories ceded 30 years ago by Turkey to Servia, viz. Ivitnya, Laskovac and Kunkul, must also be included within the sphere of the Albanians, so that this has a West to East extension from the 19th to the 30th E. Long. (Greenew.). Albania, which has the shape of an irregular triangle with a line from Dulceigno (Turk. Ulgita) to the Bulgarian frontier as base and the Gulf of Preveza as apex, occupies a surface-area of 24,159 sq. mls.

I. Physical Features: Albania is in the main an inhospitable hill-country consisting of a number of close-crowding chains of hills and valleys which run lengthwise from N.W. to S.E. In the North however there appears to be a curving round from the normal direction of the chains of hills; they run here from W.S.W. to E.N.E. Here too are the most extensive; and greatest elevation; the "North-Albanian Alps" of which practically little is yet known consist not much under 9500 ft. high. The highest mountains in the midlands is Lybithin (Lyubotin) in the Shan-range (3,230 ft.); Mt. Tömöd (7,915 ft. high), to the East of Berit, is specially famous. The summit, which has a difficult ascent, is crowned by the ruins of a very ancient holy place wherein local legend honours the remains of the grave of Abbas (died 666 A. D.) son of the Caliph 'Ali from the thundertous peak which from time to time fills the neighbourhood of the mountain with its rumblings, good and ill are predicted according to a very ancient custom. Along the coast-line of the Adriatic there stretches a range of fruitful plains. Some of them are quite open towards the Sea, e.g. the largest among them, that of Musakaya (Turk. Mutaka), while others are cut off here and there by small strips of coast, e.g. the plain of Ishkôdra, whose eastern portion bear the name of Zafrina. From Cape Glossa (the promontory of Acrocorinna) to the South there follows the coast-line in a range of mountains which rises in peaks of over 6500 ft. high. The eastern districts of Albania portray the character of Macedonia in having extensive haunched shaped plains; the plain of Metôya (in the upper region of the valley of the White Druto), and those of Këpovë (plain of the Blackhurds) and Kalkändelen (Nivick Tetovo) may be mentioned. Some of these plains are occupied by lakes, e.g. those of Ògri and Prospa; the plain of Monastir is marshy in its lower parts.

Hydrographically Albania belongs partly to the Adriatic, partly to the Aegean and partly (through the Lim and Idhrar, which flow into the Drino and Metëva) to the Pontic side of the watershed. The network of rivers is close, and the land generally has abundance of water. With few exceptions however the rivers are not natural highways for shipping; the Drino from the Pyshëna up to Ishkôdra and the Òrtas (Turk. Nëvër) to the town of the same name could be called such. The river-valleys being mostly of the nature of gorges cannot be used for roadways. Of the rivers making for the Adriatic Sea the Druto surpasses the others both in its volume and the impetuous
of its descent: it is formed by the union of the Black Drin (Kara Drin, alban. Dëna) which flows from the Lakes of Ochrida and the White Drin (Crni Drin, alban. Dëna Drind), but it now discharges most of its water below lake Gjirokastra into the Boyana along a branch which arose in the years 1828-1854. South of it come: Mav (Matya), Arrens (Rqen), Gjirokastra, Samani (Semeni), Vlora and Kallithea. Further the upper portion of the Vardar, which flows into the Gulf of Salona, belongs to Albania, as does its tributary the Lepenati. On through a fenure it also joins the Shinia, and this, again, joins (at Mitrovitsa) the Drin, an affluent of the Morava. Albania has a wealth of large lakes, which correspond to former plains wherein subsidence has occurred, or to basins into which there have been intrusions: the Lake of Izhodër, measuring 175 sq. mls., half of which belongs to Turkey, and half to Montenegro, and which discharges itself through the Boyana into the Adriatic, Lake Ohrid (104 sq. mls.), Lake Prespa (151 sq. mls.), the marshy Lake Mavila, and, farther South, Lake Vani. Right in the North is Lake Plava, through which the Illa flows. The existence of lagoons ought also to be mentioned, such as that of Butrint. The climate of Albania is on the whole a healthy one, being mild at the coast, and very cold in the mountains of the interior which are covered with snow during several months. On the coast of Upper-Albania, at Durazzo and still more on the Boyana there are constantly malarial fevers. The mountain-chains are dry and stony and never yield a harvest; on the other hand, the plains and valleys are the more prolific. The plains of Missika is like a paradise. Whilst rice, lenos, oranges, pomegranates, grapes, figs, olives, melons and other southern fruits thrive in the southwestern region, called Czëpi, the plain of Rosgova can boast the excellent qualities of the fruits indigenous in Central-Europe. In good years part of the harvest of rye, oats and maize can be exported; but owing to the drought the supply not requiring short of the demand. Plantations of fir-, pines, beech- and plane-trees are also found. The commonest is an excellent quality of oak, and the timber: used to be exported in large quantities to France. The chief means of sustenance of the population is maize and what they gain by the breeding of cattle. Their herds of older and goats are so considerable that in winter some of them are driven over the borders into the lowlands of Thessaly. Forest and mountain, where no European has yet set foot, house a plenteous beast of the chase (wild-boars, bears, wolves, chamois) which have become rare in our quarter of the globe. A number of native crafts have been preserved into our time. The preparation of leather has its home in Yania, Priivin and Izhodër, and in these places Albanian handicrafts are most concentrated. The cloaks, called Shaitak, with which we always associate an Albanian, are made by the women of the district, whilst the millslits (i.e. hill-dwellers) wear only clothes which they have wove from home-grown wool. At Priivin and Izhodër iron-wares such as table-knives, sardines, weapons with inlaid points and precious metals are and modern wares are produced. The sea-harbours are among the natural trade-resources. The best shelter from storm is offered by the soundmouths of Priivin and Pashka Limnol in the Bay of Avlionas (Avliena), but steamers can also Moor in the venerable Trak (Durazzo, Alb. Durres), which is now recovering, laboriously, however, from its deep decline, and in S. Giovanu di Medua (Turk, Shengin). The native seagoing class is recruited almost exclusively from the Muslim inhabitants of Durcoro, which now belongs to Montenegro, and, as far as England, and possesses about a hundred ships. For the rest, commerce, especially the wholesale branch, is in the hands of Austria, which through the excellent arrangements of the Trieste-Lloyd and the careful regulation of freight has hitherto been able to stave off all, even Italian competition. Statistics of the trade of Albania are of little account. Twenty years ago Priivin's foreign trade amounted to $3'5 million francs, Izhodër's to $5'5 million. The Montenegrin customs station of Podgoritsa, which is showing a steady progressive tendency, has importance as a commercial emporium for Izhodër. Albania contains part of two railways, one passing through the Vardar-valley from Mitrovitsa to Shkodër with a branch line from Cakib to Togazhegrade, and the line from Shkodër to Montatir, Priivin is the strategically desirous point for the control of western Roumelia; further, the entire provinces of Roumelia could be held in check from here before Bulgaria was raised to a principality (1878). The sole highway running the whole width of the land passes from Shkodër to Vani. The following are passable roads of the second grade: 1. from Priivin by Varavtci and Priivin to Servia (the stretch from Izhodër to Priivin is not passable). 2. from Durazzo by Efigi and Ohkiri to Macedonia. This is the route of the great Roman military-road Via Egesia. 3. from Durazzo by Berot and Hlisa to Vani. 4. from Hlisa by Tepelenac and Varga (Argyrokastro) to Bergin. 5. from Hlisa by Aldon (Paranytia) to the sea. Bridges, even wood-bridges were till recently regarded as a luxury, a fact all the more regrettable because traffic suffers enormously in the rainy season without them. II. Population. The population of Albania amounts according to the postal division into four Wildyets to little under 2,000,000 inhabitants, of whom 1'5 million Arnauts form the kernel, whilst the rest are composed of Turks, Wallachs, Bulgarians, Greeks, Serbs and Gipsies. It is a great step gained by the Greeks that with the aid of their excellent schools in the southern and more especilally the south-eastern districts they have either entirely, or else half-dazzled many Wallachs and Arnauts. The Roumains living on the Hindu speak only their mother-tongue; those who dwell farther West towards Berot as a whole understand also Albanian. Those Wallachs who are become quite Albanised and number here not a few, have in the eyes of Albanian patriots a special roll of hame in the Albanian nationalist movement. Bulgarians are numerous in the region of Mounioir and more especially in the region of Cakib. Servia around Priivin. Of the gipsies of western Albania only those following a nomadic life are not yet Albanised. The term Arnaut is to be traced back to the region Ararat extending along the coast from
Corfu to Arion, whose inhabitants are called Arber, according to the Greek pronunciation Arben. The Greek form is Ἀρίων, the Servian Arba. By metaphasis and replacing the ρ of the Greeks by s (Σέρβος) the Turks obtained the form Arnaia (Arab. plur. Arkini), which however appears in the modern Stamoul pronunciation and in writing as Arnaia. In Bulgarian Arnaia is customary. The inhabitants of Arber probably immigrated here from a plain of Arboia situated to the East of Durazzo. Gustav Meyer conjectures that the ancient Greeks by exchanging τ for s and having in mind the Albanians, who lived in the Caucasus and in Central-Italy, obtained the form Albania now usual in Europe.

The Albanian is generally distinguished by his tall stature, well-developed chest, and slender, elastic body. He can frequently be recognised by his flat forehead and short eyebrows. Of stern appearance, he scarce makes a jest or listens without contradiction. On the march, thanks to his tenacity he leaves all others lagging far in his rear; in the mountains he moves with light step over the stony ground, and climbs rocks like a chimpanzee. His step has the power of the athlete, he walks with quick spring in his step, raw savage, as though he deemed his nation's mission the chastisement of a perverted world. It is very obvious that war is his natural element, and thus Illyrian legions in the time of the Romans and Albanian troops in Turkish service have covered themselves with lasting fame. The Albanian wife is loyal and industrious. In the towns her activity is reopriated to managing the house and zealously visiting her female friends, in the villages and mountains however she performs every labour of the fields and devotes her leisure, especially in winter, to spinning wool.

The largest towns of Albania are Prishtin and Monastir with over 40,000 inhabitants each, Ispëdrha with 35,000, and Dibra and Kikëshëm with 25,000; Uskull, Ipek and Vanal have each 20,000; Elbasan is estimated at 18,000, Priqitina and Berat at 12,000, Dibra, Tirana, Orik and Koriza (Turk. Gorkje) at 10,000; the figure 5000 is given for Ergjet and for Kasai, 7000 for Preza. Smaller towns of more historical importance are Aërë Hijrë (Alb. Krytija, about 10,000 of a population), Avithia (6000 pop.) and Legh (Turk. Alb. Lynch, Ital. Alexis) and Durazzo with each 5000. Albanians dwelling without the towns belong to one of the clans (Alb. Fili, Fëri), which are often named after mountains, towards which they are pledged to loyalty even though they be long absent. The members of the clan are organised into companies (Bairak) whose leaders (Bairkëshër) are subordinate to the chieftain. In the north-west of Albania, however, the most important clans besides the clan of the "mountains of Ispëdrha" are the Kitësmitë, Hotë, Iskëtrëli, Kështët and Pëllitë. These five tribes achieved renown under the name of Malisë. The Vassovë and Dukëxhëlli farther east and south-east are also held in regard. All these tribes are settled on extraordinarily unfavourable soil and it is astonishing that they have been able to obtain any sort of subsistence. The condition in which they live is felt by the rare European visitors to be one of distressing misery, but by themselves to be the enviable lot of freemen. None of the tribes could count more than 7000 persons.

They are exceeded in number and respect by the Miditits, who are governed as an independent community. They are organised into five Bairak counting 15-25,000 persons. Since their chieftains, whose family-traditions however do not carry back beyond the year 1700, are mostly called Frenk (i.e. Peter), they readily confounding it with the Romance word "prince", use to themselves the title of "prince", the residence is Arba, a little low-lying hamlet among the mountains, which enjoys but few hours of sunshine even in summer. The political affairs of the Miditits are settled in a general assembly of the people which is annually convened in the chief church in Orka. The Miditits are considered to be exceptionally brave. The tribes when conquered attribute their defeat to the absence of the Miditits. The latter yielded their submission to the Sultan under the promise that they would never be liable for tribute and that no Muslim would be allowed to settle in their territory. They pledged themselves in return to rally to the help of their sovereign in the event of war with a considerable corps, one man per house. They have more than once proved their strength; but they have control of the three highways to northern and central Albania: to Ispëdrha, Legh and Aërë Hijër-Țirëna. They are, in consequence, strategically the masters of the country. The important services which they rendered to the Turkish government against Austria in the xviii. cent. are still rewarded by an annual gift of money in kind of tribute. Since the tribe during the last Russo-Turkish war did not march against Montenegro its loyalty fell under suspicion; and the chieftain Frenk Rib Doda was banished to Asia Minor in the year 1857. Only the proclamation of the constitution in Turkey (1908) restored him to his home. We owe to English travellers valuable information about the less interesting mountain-clans of southern Albania. The Llap are most worthy of note, because the Greeks in an earlier period suffered heavily from this tribe's passion for war, and hence even yet apply this name in contempt to the whole Albanian nation.

In Roumelia and north-western Asia Minor the Albanians impervious to weather-conditions have monopolised the calling of boatmen. In Turkey and on the Danube their idiom can be heard. In Constantinople 20,000 at least of them are engaged in the most varied occupations. Since they brave wind and weather nobody makes a rival bid for the sale on the street of bread and lemonade which are bought by thousands. For a long time Albanians of the Greek-Orthodox Church and Toskë have been settled in Greece; they constitute a tenth of the population, 200,000— 250,000. They are thickest in the Peloponnesus; but in many districts they have succumbed to the irresistible hellenising influence. In Italy Albanians have been settled since the xvi. cent.; we find them in Capitanata, Basilicata and the Terra d'Otranto, and numerous in Sicily. All together they are estimated as 100,000 at most. Thanks to their national ecclesiastical organisations, the Albanian clergy and bishops of the Greek rite, but subject to the Pope, they have been able to preserve through the course of centuries their language and customs. Hungary possesses two Albanian villages in Mitrovic in Croatia.
III. Religion. It is generally stated that the Albanian is cool in his attitude towards religion, even indifferent. Whether Musliman, Catholic or Greek-Orthodox dogma is to him as in many an instance to the modern European more a matter of custom than of deep inward conviction. This attitude of aloofness towards the supernatural favored the transition to the victorious 18th C. For the latter the found what the further the people were removed from the Islander Bey's great wave of liberation, so that by the beginning of the xix. cent. the conversion of the rest of the nation appeared to be only a question of years. [see History, Section viii]. The Shāli and Sōtāl in the Sandžak Iâbše sâr have remained the most loyal to Christianity, and can boast of counting no renegades in their midst. They are thus the poorest also of all the hill-people, but at the same time those who have preserved most purely the rude customs of primitive times. The tribes of Kësh and Loh in the Wâlket Iâbše sâr are almost wholly Musliman. Entirely Islamic districts are surprisingly few: Kërveli (Tepe- delin, Ergert), the valley and range of the upper Aran as also the district of Mër; the Mitraka mountain range and the fertile plains of Elbasân, Okhti, on the right bank of the Drin, at Dilora, Përinit, Djejkovas and Qhëxhis. The adherents of Christianity belong north of the River Iâbše sâr to the Catholic, south of it to the Greek rite. For the numerical proportion of the professors of the two Christian creeds there are no data; but the Catholic Armains might be estimated at about 15,000, the orthodox including about half of the half-berlinised at over 300,000, Musliman Armains number about 1 million. Their Christian fellow-countrymen designate them as Turks.

With a section of the Musliman religion's feeling vents itself in impassioned adoration of the sect of the Bakt iât which has risen strangely into favor of late amongst the more orthodox among the Armains. Almost the whole population of Tirana and Aşbê Hishr belong to it, a fact to which attention has only very recently been drawn. Attempts were formerly openly made to promote the prosperity of this order in order to secure a firmer footing for Musliman institutions; but the populace on the other hand have by attaching themselves to it the darkened picture of the darkest colonialism and the odious expression to their feeling for freedom which they have converted into a religion. But such has been only outwardly the case, for the Albanian Baktist are among the loyalest adherents of the government. Their centre is Aşbê Hishr. In its neighbourhood a pupil of the Baktist Bakti, Şeri Şëkë, killed a dragon which was devastating the crops, and so has everywhere naturalised the national order of the word. The whole population annually pilgrimages to the grove situated on the plateau above Aşbê Hishr in which the saint is buried. The names of the Derwishes Bâdi 'Ali Efendi and especially Bâdi 'Uthmâ of Kogun, that achieved for the inhabitants of the towns their alleged chartered rights of exemption from taxation are held in high regard. The sect of the Albanian Baktişt has a deeply imprinted Şirif character. They do not swear by the Korân, declare Paradise and Hell to be theological fictions, fast in Ramadan only three days, but the first nine days of Muharram to make up for that; 'All they hold in far higher esteem than do the Turks.

Their formula of confession of faith reads: la lîhâ illa lîhâ, Muslimân râdii lîhâ, 'All wallyn lîhâ. One will actually seek in vain for the names Allâh Bekâ, 'Omar, 'Othman amongst the Albanians.

IV. Life and Customs. There can be nothing stranger than an Albanian house in the country. Built of clay and mostly on a pathless eminence it serves for defence against its never wanting inroads. The small openings in the walls are loopholes which only incidentally fulfil the function of windows and are stopped up with paper in winter. Not a trace of furniture is to be seen within, unless one considers the masts of poplar-leaves lying spread-out here and there as such. The carpet which is so popular elsewhere in the East is here the rare luxury of the rich. An Albanian meal consists of a soup of rice or maize-flour cooked in milk. If he travel on foot from morning till evening he is content with one meat. At feast a roast (Yëkënt) floating in sauce is served up with chick-peas, a dish which even the most pampered taste praises as an incomparable delicacy. At these always ample banquets the horde of guests of all ages are celebrated in song by the tribal bard, and finally the old national battle-march is heartily voiced by the whole assembly, a ceremony as inflammatory for the rude temper of the native as crushing in its effect on the stranger.

The dress of the Albanians, even if varying considerably according to locality and social position, has the same characteristics. The national costume, made all the more prominent by the proud carriage of the people. In well-to-do families in the south the men wear the fistamëch (Turk. Fırtına), a kind of kilt with many folds and consisting of 122 separate pieces of white cotton sewn together, which reaches from the hips to the knees, a gold-embroidered shock covers the body and over this a vest is worn which is open at the breast. The whole is held together by a silk girdle in a front leather-pocket of which the revolver with inlaid silver is kept. A low, red fez with thick, long tassel of stout blue silk is used to cover the head. From this garb of the Musliman Albanians living in the towns that of their Christian fellow-countrymen is distinguished simply by the darker colouring of the appareil about it. The peasant woman in the south wears over and above a white, broad-shaped jacket which suits the fistamëch very well. The raincoat of the Musliman townsman is notwithstanding its simplicity one of the most romantic the Orient can show; wide trusses of bright colours, and the Doma (from the Turk. Döbben), a scarlet-red cloth with edges and trimmings in gold and black silk embroidery, which is drawn over the head in the fashion of a hood; although at the height of the shoulders it has slits for the arms the slender Albanian prefers to wrap the cloak round body and arms in Oriental fashion, and glides thus along the street with seductive grace. Quite different is the heavy, costly and more European garb of the Catholic woman in North-Albania. The black trousers with the long, purple, mantle-like overgarment and the gold-embroidered, recalling the grand ecclesiastical robes, give an exceeding solemnity to the figure. Such splendour however is only suitable for the towns. In the mountains, especially of North-Albania the Albanian has a
more practical suit; he is satisfied with trousers of a coarse white cloth with black heading, over the chest a close-fitting waistcoat, and about the back a black jacket which covers only the back and hips. For protection against cold and rain he wears a sleeveless mantle of black wool which reaches to the branches and ends above in a kind of hood. As foot-gear high boots and light shoes to which sandals are fastened with leather straps are worn. The Albanians, with the exception of the Kelmëns, shave off the beard. The weaving among the Christians and Musulmans is among the poorer class of them it is very frequently made from the durable, thick, uncoloured bamm-grown wool.

There are really but few regions in Europe whose populations are as low a stage of civilisation as the Albanians. Public schools are confined to the towns; reading and writing are everywhere regarded as inestimable arts. All legal situations are controlled by the unwritten law (Këshel) of the Lek Drakajët (Turk. Drugele), whose cruelty knows no higher justice than that of blood-revenge, the obligation to which extends to the whole kin and compels the families at strife to years of preparedness for fighting. In those regions where honiour is by far the life counts for nothing murder is the cause of death in from 10 to 30% of the mortality among the male population. The tribe Toplana heads the list with 42%. The notion of honour is so strongly developed that a girl to whom even harmless intimations are falsely espoused knows no remedy but to seek a voluntary death; but the heavy falls her luckless husband on the slanderer's head. Sometimes the Osmanlïi conquerors are successful in negotiating a peace (Rizë) between the quarrelling families. A decade ago, however, when the Walls of Skëhere came to an understanding with the tribes that blood should be avenged only on the murderer himself the Mirditën refused their consent; they would not hear of questions touching honour because such matters need political arbitration.

V. Administration. The political division of Albania has been for centuries subject to continuous mutations. At the present day it is split up into four Wilayëtë, the number of whose inhabitants however can only be approximately estimated: Yasin with 700,000 inhabitants (it falls into 5 Sandjakës: Yasin, Pevecë, Laskajët, Breguan, Kajër), Mostar with 700,000 (5 Sandjakës: Mostar, Gërulë, Dherë, Serfë, Elbasanë, Kërula) with 1,000,000 (5 Sandjakës: Ipek, Uskët, Vëllçi, Novipërët, Përmet, Përshët, and Ijahkëdra with 200,000 (2 Sandjakë: Ijikëkëdra, Dëri). The authority of the imperial government is more limited than elsewhere in Rumelia. The right of the people to carry weapons is in contradiction to the law and the privilege the officials have to impose on themselves reserve, and it is ascertained that whether it concern governance or the administration of justice their calling is one of the most difficult. Often and often do the members of the court of justice receive letters threatening that they will have to atone by death for a dammatory sentence. These threats are not empty words, often enough blackmailing which orders and sentences are received with shouts if they show themselves on the street. Moreover the power of the authorities many a time does not extend beyond the proxim-
the plural is formed after the Latin fashion. Some grammars have simply been adopted from Latin; even the article (a modification of the demonstrative pronoun) and several prepositions notably take their character from this source. Moreover, since Latin was both colloquial and official language in the Balkan Peninsula in the 4th cent. A.D., it wanted little for Illyrian to have become completely romanised. The language of the Visigoths, who at the beginning of the Middle Ages settled for over a century (until 555) in Illyria, and thus the linguistic influence of the modern Albanian. The influence of the Slavs, who from the 11th to the 15th cent. frequently played a very decisive role, expressed itself with lasting effect. Only a few expressions in Albanian can be referred to Bulgarian; the majority of the Slavonic words have a Servian stamp. On the other hand the speech of the Slavs has in the main had no influence on Inkelas.

Next to Latin Turkish has had most prominent influence on the vocabulary of the Albanians. Not only was the community of religion decisive in this direction, but also the fact that the Turks in contrast to the Slavs appeared as most important factor is due in Asia Minor and are still regarded as much by the Albanians. The number of the vocabulary adopted in their full Turkish form is astonishingly great; to nouns, verbs, particles, everything in short the Albanians are accessible. Even the vocabulary of their Italian kinsmen who emigrated centuries ago several Turkish words have found their way, and this must have happened very early: bed (night), lvar (anger), peta (market), pějfer (window). Of Turkish Inkelas endings only the ɏ (in Albanian sometimes changed into r̩) characteristic of the Turkish historic-perfect has gone over into Albanian, e.g. tao-ď-ti (may esteem), buyo-ć-ti (may colour). In the Albanian spoken by the Mohammedans, especially the Gheg dialects, and among the Mashrita, the dialect of Ishkola in particular, there is a great wealth of Turkish words. Modern Greek has made its presence felt in the South. The degree of its influence is not much inferior to that of Turkish. The Albanians of Greece, who are here of course surrounded by Hellenes, have gone far towards adopting the Greek vocabulary. According to Gustav Meyer's researches, of the 5140 Albanian words he had before him 400 proved to be common to the Indo-European languages, 1420 to have been borrowed from the Romans, 540 to be of Slavonic, and 1160 of Turkish origin, and 540 to have been adopted in consequence of their intercourse with the modern Greeks.

The majority of the Albanians can speak besides their mother tongue one or several other idioms almost with the same fluency. In the South Greek has a strong hold and competes with Albanian on the coast. In Vain, the seat of the Wall, the whole population without distinction of creed attends the Greek schools, and at home, although the Moslems are in the majority, the Greek language is spoken as a rule. In the North Slavonic is spreading unchecked through all the veins of their life; here the Albanians are masters of Turkish from their childhood.

VII. Albanian Literature. The beginnings of Albanian literature in the mother-tongue were made by those Albanians who obtained in Italy a more secure existence; they availed themselves at first of the Latin alphabet. First appeared a Grammar, and a Grammar, the latter printed at Rome in 1532 by Franciscus Blanchus. They formed a basis for the religious tracts which subsequently had only a limited circulation. On so difficult a task as the translation of the Bible none yet ventured. The first translation of the Bible dates from the year 1424; in it — it was made during the Hellenic war of liberation — Greek first had the honour of supplying the Albanians with their alphabet. It was at once apparent that the Albanians of the Balkan Peninsula were still too backward in their civilisation to be able to produce any large independent work. This role, then, fell to Girelamo de Rada of San Demetrio in Calabria citeriora, of whose family we find mention in the xvi. cent. His first work in epic form is the Canti dî Milione figli del sperone di Scarrë, which appeared in 1836. In 1843 another national composition of his, Canti dî Scarama Tëstës, issued from the press. The popular national songs are as a rule the threads of Rada's fancy spins to a lively web. In 1856 he published the Rapunzel dî un poema albana, and between 1873-1884 his Fusi, an epic of lyrical criticism, and his national productions were in the opinion of poets, more than ought to be attempted. The harshness of which he has been accused and his views on literary taste were rooted in tendencies which by his time had already had their day in the rest of Europe; but he was not writing for what we mean by "modern" public.

Whilst this noble champion of the collection of Albanian tales and folk-poetry, was born. Of such collections we have up till the present, excepting the smaller ones, five: two by J. G. von Bahn, in the 2. Part of his Alba nerische Studien, and in the ii. Vol. of his Grie chische und osmanische Märchen (Leipzig, 1864); Ahdione, Nuara e Mësia, the Tosk Melkos, who lives in Egypt (Alexandria, 1873); by August Duron in his Manuel de la langue chifou ou albanaise (Paris, 1879), and by Holger Pedersen in Al banit. d. phil-hist. Classer d'agr. Sâkis, Gesellh. d. Wissensck. zu Leipzig, Bd. xv, Leipzig, 1898, translated by him in Zur albanischen Volkskunde, (Copenhagen, 1898). During the last decades the leadership of literature was transferred to Gëshëv, the work of whom, though very familiar half a century ago, has almost completely disappeared from the memory of the present generation. After him appeared Konst, Kristofofidi, who, having equal mastery of the Tosk and the Gheg, had a more thorough lexical knowledge than any other. He translated firstly the Psalter in 1868, and in the following years the various portions of the Holy Scriptures, mostly into the Tosk dialect. The work whereby he won for himself a lasting name in the scientific world, viz. the "Dictionary of the Albanian Language" (Lexicon dei Albaenische sprach), and which even in its author's lifetime (died 1898) attained a legendary fame, was published at Athens in 1904. In the year 1879 35 Albanians formed themselves into a society with the object of
printing and circulating Albanian literature. This society began in 1864, the publication of the Albanian monthly magazine Perita (The Light), which soon lowered its name to Ditarja (The Banner of Albania). A little previously (1853) de Rada had begun to issue in Italy the Albanian journal Figurati Arhik (The Beauty of Albania), it was dropped however after the fourth volume, and in the Arti i ri (The Young Albanian, Palermo, 1887), conducted by Schiro, had little influence.

The Albanian newspaper in Skëndjeri (The Albanian), which has been published at Bucharest since 1888, has been received with the loudest approbation. About this time there was opened at Koritza as a private institution the first school using Albanian as the medium of instruction, in spite of good results and a fairly long existence it had, however, to close its doors in the end. Among Maghreban Albanians of that period Shams al-Dín Sain Bey of Frashër (1850–1904) stood out preeminent for his literary zeal, but his pioneering activity is rather within the sphere of Turkic philosophy. We will mention only three works written by him in Albanian, which like all his writing had a practical aim, and in addition to the book, an Elemental Grammar, both printed at Bucharest in 1866, and the excellent, in Europe less known, General Geography. At the same time there appeared his far more gifted brother Nafti Bey (1846–1900). In 1886 were published at Bucharest his three very fine works: 1. Reading Book for Children, 2. Cattle and the Life of the Pastoral, in which he expounds to a semi-literary country-life, the ideals of the Albanian. Notwithstanding its brevity — there are only a dozen pages — it is regarded by many as Nafti's best work. 3. Stories for Mature Youth, collected from pagan mythology, the Bible and the Koran with the object of giving to boys some definite point before they passed the threshold of the religious sound which usually formed their national convictions. The most splendid sample of his talent Nafti has given us in two extensive poetical works, both of which appeared at Bucharest in 1868; an epic poem Shtender Bey containing 1000 lines, and an exhaustive tragedy in verse on the death of Husain with the title Korriyin (Korriyin). In the latter work, in the accumulation of scenes which have only an external connection with the action, in the fondness for vehement outbursts of feeling there are certain artistic weaknesses. But they are noble productions which will still long assert their place in the literature. Nafti was a free-thinker, and nothing could have lain farther from his mind than the intention of stirring up the fanaticism of his co-religionists. Those who knew him assert that the object he aimed at with Korriyin was simply to arouse enthusiasm for the national ideal in the Registan which were so numerous in his native land. His death was mournful for the Albanians of the Turkish capital. Other capable literary productions, which may be mentioned, were Luca Sheno’s Albanian translation of Lamartine’s Wilhelm Tell (Sofia, 1883) and A. Upi Kologan’s Albanian rendering of Sain Bey’s Belis (Sofia, 1901).

What is most worthy of mention in the modern Albanian agitation is the person of Fatim Bey of Kanlica. Son of Shamil Bey, and, born about 1874, he grew up under his mother’s care, who herself enjoyed rapts as a heroine. He first attended the Greek school of his native place, and later acquired Latin among the Jesuits of Ishkoda. Next he studied for some time at the Royal Lyceum (Ghasia-Serif) in Constantiopolite, until, turning back on Turkey (1894), he went to complete his education in Europe, where he received the name “Thung Spiro Bey”. His activity is mainly devoted to conducting the newspaper Albania which he founded in 1897 with the aid of the large Albanian Society in Bucharest, and which appeared in Albanian and French; in this he has published also several novels national in character. Soon he added to it a purely Albanian section containing news of the day. By mixing the Tosk and Dukel dialects and coined new words he is endeavouring to give his nation a single literary language. He has had this gratification, that the municipal council of Brussels called the street in which his paper is printed Rue d’Albanie.

VIII. History. If the question of the descent of the Arnauts has not yet been completely cleared up still it can be asserted with tolerable certainty that they are direct descendants of the Albanians who dwelt between the Ikkund and the Danube, the Ion and in the region of Veria, but perhaps also descendants of in part at least, very close relatives of the old Epriots who were settled to the South of the Ikkund, and of the Macedonians who extended towards the East as far as the Suymon. Certain parallels in their civilizations and political organisation; the Epriots then crossed over into Pyrrhos to Italy. The campaign of Atmelins Paulus and his victory over the Macedonian king, Perseus (168 B.C.) added besides Macedonia both Illyria and Epirus to the Roman Empire. In Strabo’s time Greeks and Epriots were separated by the Ambrianas Sinus, Epriots and Illyrians by the Gennanys (Ishkoda). The chief town of the district in the later Roman period had the same name as this river, viz. Skampa, which was situated in the neighbourhood of the modern Elbasan. We then for the first time encounter the “Aethrus” with their capital Alabanopolis, whom the geographer Pausanias (middle of the second cent. A.D.) mentions as one of the Illyrian tribes. It is the Slavs again with their ravaging expeditions who are the first to exercise a lasting influence. Before the pressure of their advance towards the South, which began in the 11th cent., the Macedonians retreated to the Albanian mountains, where they became merged in the people who were of common stock. In the 16th cent., the Slavs conquered the North of Albania; until 1560 this formed a province of the Servian Empire, and was quite cut off from the Southern part of the country. Finally in the second half of the 16th cent. the Turkish Bulgarians who by this time had been taken up by the civilisation of the Slavs, carried their attack against Macedonia, and being favoured by fortune quickly made themselves masters of the whole of central and southern Albania as far as the Am-
the Byzantine Emperor Basil Bulgakronos succeeded in again reducing Western Roumelia under his dominion; he left the Bulgarians however in possession of their domains. From this point, after we have had for almost a millennium to continue the name of Emperor and Illyria inherited from antiquity, the modern designation is used with great consistency: the town Albanon, Arbanon, Elbanon is the local centre of the Byzantine power now opening on a new period of prosperity; the whole region, so far as it belonged to the Byzantines, is called after it. When Nicephorus Bii, and his successor the Name Emperor of Durazzo rose in arms against the Byzantine emperor and advanced in 1079 by Oghrat to Selinuk he mastered besides Normans, Bulgarians and Greeks also Asbesvar in his army. From this time on we meet them in all the battles in the west of the Balkan Peninsula, sometimes also as Asbevar. After the conquest of Constantinople and the fall of part of the Roman Empire by the Latin (1204) a section of the exiled imperial family founded the state of the Despot of Epirus which included also Aeotia and Acmarnia, and numbered among its most famous towns Lefkata (turf. ins. beak), Arta and Valtina. Apart from these districts which he gave to the Sonth and those incorporated into the Despotate of Despotate Albania was constantly an apple of discord to foreign states, especially to Servia and Bulgaria, so much that the Greek-Orthodox bishops of Albania saw that the only hope of safety lay in passing over to Latin Christianity (circa 1250).

The state of the Despot of Epirus during the entire period of the Despotate of Epirus was dominated by the disputes for the succession to the throne, so that any sound development was out of the question. At this period the Turks first came into unequal relations with the Albanians. These were 2000 subjects of the Emir Unur Bey of Aida, who in 1336 went out in the pay of the Byzantine emperor Andronikos III with the purpose of resuming this state of the Despot with the Greek Empire, and who won for their nation permanent repose as fearsome opponents. They pursued the Albanians over the most trackless ranges, killed the men and brought away a vast booty in women and herds. In this time the great Czar of the Servians, Stefan Dušan (1331–1355) inflicted those mighty blows which brought Albania (until 1340), northern Macedonia and Thessaly under his sceptre. Under the influence of these victories a large section of the Albanians returned from the Latin rite to the Greek.

The long protracted turmoil of dynastic wars that had made germinate in their real victims, the Albanians under the Archbishops of Acheleia who contained great promise, so that, when after Dacian’s death a descendant of the former “despot” returned to the province, the inhabitants rose in arms and, under the leadership of Karl Topia, cut down the pretender and his entire force in the battle at Acheleos; further, a Turkish punitive force which had just landed in Thessaly and attacked themselves to the Greeks perished with the latter on the field of battle (1558). The family of Topia held for a century a position of authority in the history of North Albania. The mother of Karl, victor of Acheleos, was a natural daughter of the Neposalian king Robert of Anjou, so that the proud chieftain could with some right plume himself on being “the first of the house of France”. A no less important family of Servian origin are the Balaka. They are mentioned only from the middle of the 14th cent., but soon there- after we meet with them in the provinces of Isskoda, Antivari, Dulcegno, Trau and Sekenico. The Kathari do not make their appearance till a decade later; their ancestor, the Serb Brunilo, is first mentioned in a deed of the year 1308.

A body of Turks — we know not whether they were Osmanlis — under an Albanian command of the name Shatko held the town Vatika and district in check from the year 1358 for its master, the Servian despot Thomas. After the path had been thus cleared for the Osmanlis their most capable general, Tumrišh Paša, four years later carried the fame of his weapons as far as Arta; he immediately returned however, so that the helpless population escaped on this occasion all but terror. At this same time prince Balaka II was defeated and fell before the Turkish Grand Wettir Khaïr al-Dîn Paša in the battle at Sarra on the Iliotes. Then when Tumrišh Paša pressed forward in 1387 into the region of Peripoe and Monistir the despot of Yatia had to admit to visit the court to pay homage in person to the vallum Murad I. After Monistir the Serbs pressed forward with their forces to taste the resistance towards the Adriatic, and for two years threatened the immediate neighbourhood of Durazzo. This is the first occasion on which they planted their standard in North-Albania. Finally the need for mustering all available forces against Servia compelled them to withdraw. Whatever Roumellian legend, taking sides with the Greeks, might pretend, there was nothing more certain than that they fought on that occasion in the opposing ranks and constituted the reserves of that army of the allied Slavonic princes which collapsed before the impact of the Muslims. After this event so momentous for Albania, it was the purpose of restoring this state of the Despot with the Greek Empire, and who won for their nation permanent repose as fearsome opponents. They pursued the Albanians over the most trackless ranges, killed the men and brought away a vast booty in women and herds. In this time the great Czar of the Servians, Stefan Dušan (1331–1355) inflicted those mighty blows which brought Albania (until 1340), northern Macedonia and Thessaly under his sceptre. Under the influence of these victories a large section of the Albanians returned from the Latin rite to the Greek.
try of Montenegro is to be understood, before it fell under Ottoman sway — was at that time subject to the family of the Kastriatas which had suddenly risen to authority. The south as far as the Ambracian Gulf was subject to the far more powerful Albanians, who ostentatiously boasted the surname Komenes which came to them from their mother’s side. His contemporaries conferred on the Albanians the epithet of “the bravest.” In consequence of the bravery he had displayed in the wars with the Turks, and since he had no relations with Europe, history has not recorded the deeds of this national hero, who prepared his countrypeople for the notable high position they attained later. Not till the year 1423 do we again hear of an Ottoman campaign, in the course of which ‘Ali Bey, son of Efremis, devastated the countryside and forced the towns and both the Albanians and John Kastrioti to acknowledge the Sultan as their superior. John Kastriotas was allowed to return home on giving up as hostages his four sons, including the youngest, George, and the Albanians, who were ever meditating ambitious plans, contrived to strike off every fetter from their country and escape to fill every mountain with the summons to fight the Turkish colonists. The latter were slaughtered in sacrificial becomions, and terrorism and the sword were carried far and wide into the country of the Osmanlis. Threatened by enemies on every hand in Asia and Europe only after the lapse of ten years did Sultan Murad for the fame time (1438) raise a considerable fighting force under ‘Ali Bey against this people, which loved its liberty more than ought else. Its success was short-lived. On its withdrawal the Albanians rose afresh, and the Osmanlis who had sought protection in the fortified town of Ergeri would have been put to the sword, had not Tuthkhan hastened in the middle of the winter (1435-1436) to the relief of the hard-pressed fortress. The Sultan now felt so secure that in violation of all right he arrogated to himself the sovereign authority over Aliko Hisar which really belonged to George Kastriotas, called Iskandar Bey. The latter, now awakening to consciousness of a long repressed indignation, made his escape on the defeat of the confederated Albanian and Venetian army, in which he held important rank, and summoned all Albania to battle for its freedom. The details of his glorious deeds are not in place here. It is sufficient to remark that there was rarely an encounter in which the Albanians did not strew the field of battle with the corpses of thousands of the intruders. But even in the life-time of Iskandar Bey it frequently appeared as if even his heroic soul could not cope with the weight of numbers. After his death (1467) the Republic of Venice entered on the oppressive heritage of protecting, from its position in the Adriatic Sea, the freedom of the Albanian mountains. On the fall of Aliko Hisar, however, in the year 1478 the Doge had to sue for peace, and, in return for the recognition of Venetian authority in the places on the coast, to acknowledge (1479) the supremacy of the Sultan over the entire interior and especially in Aliko Hisar and Idrkodra.

In the year 1550 the inhabitants of the mountains in northern Albania secured to themselves, in return for their acceptance of the terms of compulsory military service in the event of war, the rights which had hitherto been disputed to them, of self-government and exemption from taxation. The only extension of the Ottoman empire on the Adriatic coast consisted in the annexation in the xvii. cent. of Antivari (Turk. Barq) and Dolcigno, 1571, shortly before the memorable day of Lepanto. A rumour was put in circulation at that time by officious Venetians that the Albanians intended to take up arms against their masters; the people did not venture to do so however, notwithstanding the fact that the war had resulted unfortunately for the Osmanlis. Most resistance to the central authority came from the Klemensi, troglodytes who were armed with lances, shield and broad girdle-knives, to bridge this race of brigands a fort was built in the year 1623 in the neighbourhood of Grlisun (Gazinya). In this period occurred a fresh move on the part of the Pope to keep the inhabitants in the ancient faith; the first Franciscan mission is set down by a reliable source to the year 1624. New antagonistic complications with the Turkish authorities and the castigations in general from the hands of the Hiti by Djile Pasha fall according to the authority of the historian Na’im into the year 1624. The conquest of More by the Venetians (1688) did not prejudice the Osmanlis with the Catholic Albanians. When the City of the Lagoon made at that time an attack on Dolcigno which lay opposite to it, the Hiti joined the side of their Muslins and so distinguished themselves in the successful defence of this fortress by the sea that precedence over all the Catholic tribes (the Mirdites excepted) was granted to them.

The Greek-orthodox Albanians had not for centuries ventured to raise their voice against the Turkish yoke. Only when the splendid decay of Austria enlightened the people of Albania, in the xviii. cent. did they turn their eyes towards the west and the north. After the Caliph renewed in 1715 the war with Venice, and soon thereafter went to war also with the German emperor, the Greek archbishop of Okhri in his own name and in the name of other bishops and prelates repeatedly invited the imperial commanders-in-chief, Prince Eugene and Prince river to the country of the Hiti and the Albanians, who distinguished themselves in the successful defence of this fortress by the sea that precedence over all the Catholic tribes (the Mirdites excepted) was granted to them.

Favoured by the obliquity of the political horizon Mehmed Bey of Beško, a village near Idrkodra, attained in the middle of the xviii. cent. such importance that, for good or ill, the Porte had to nominate him Wali of his native place. The influential families in the town and province is incited to a war of mutual extermination, so that he remained unrestricted master of northern Albania. For refusing to take the field against Catherine II he was put to death by command of the Porte. His two sons, Mustafa and Mehmed, succeeded him in the governorship. They incorporated the districts of Legh, Tunca, Elbasan and the whole of Drakadja within their sphere, and even in Dher and Buti their word was law. During the first war of Catherine II against the
Porte the Tosks of Morea revolted against the latter and could only be held in check by the despots (1770) of 3000 Ghega, who were favourably disposed towards the Turks, and began to press for independence. The mass of Albanians, who were almost the sole inhabitants of the country, in a great battle bowed their obstinate necks.

About the same time as the Beys of Vişegrad in 1449 the ‘Alı Pascha of the Euphrates [8], whose family held for decades an important position, had usurped the authority of Southern Albania, but fell back at first before the masters of the north. Mahmut Pascha of Ishkodra had in 1785 given the loose to his enterprise spirit and made an invasion which excited a great sensation at the time into Venetian territory, then advanced against Kürd Pascha of Elisabla who had been commissioned to subdue the unruly spirit of ‘Alt of Tepelena and in conjunction with 'Alt inflicted defeat on the Pascha (1785). Next he butchered in the plain of Kërka the Osmanli troopers who had been despatched against him, so that he saw nothing for it but to throw himself into the arms of Austria. But this was only for the time being. ‘Alt of Kërka soon afterwards attacked him and he was only en- flamed to the more violent hate and inflicted fresh defeat on the Turkish armies moving against him. The Emperor Joseph sent him shortly before the Austrian declaration of war against the Porte a large silver cross, under an armed escort of 2000 men into Moldavia and despatched the deputation at a splendid banquet, and had them murdered in their cups; this bold exploit he turned to such good account in Constantinople that the Sultan, under threat of war from his northern neighbours, assented to his pardon (1787). A year later it is ‘Alt Pascha who is seeking to negotiate because of his intention of becoming prince of Albania, but on this occasion the negotiations are conducted with the Russian commander-in-chief Potemkin. Soon after this the Christian Albanians of Sull, who for over a century had led an independent life in their inaccessible and rather unproductive region, entered into similar intrigues. They joined in April of 1790 the deputation from the Greek Islands to St. Petersburg, to request of the Empress Catherine a ruler for their devastated native country. Not till 1803 did Alt Pascha of Tepelena succeed in driving the Swallows out of the land.

We are now verging on the epoch when the old-Hellenic element rose in rebellion against its Osmanli oppressor. This is now meet opportunity to make mention of the Albanians who were settled in Greece and had played so eminently a part in these wars. The immigration which had continued for centuries of Turk Albanians into Hellas had in no wise stopped since the bloody war with the Bulgars. Ghazi Hassan in the year 1779, so that by the beginning of the xix century a fifth of the population of Greece was composed of Albanians, who to the number of 200,000 persons formed separate groups in the larger part of Boeotia, the whole of Attica, Messinia, Corinth, Elis, Arcadia and almost the whole of Achaea; they preferred the mountains and the low lands, whilst in the towns trades and crafts as a rule were in the hands of the Greeks. On the islands Paros, Hydra and Spetsá all the inhabitants were Albanians, Hydra alone counting 40,000, and being bold, venturesome, seafaring people amassed extraordinary riches in a few decades. Their islanders, Hydra alone, had to provide a number of sailors for the Turkish navy, and maintain them during their term of service.

The warlike nature of the Muğulmānand and Christian Albanians brought it about that on the occasion of the Greek rising they cooperated with the Greeks in revolting fashion, and made simple contribution towards the liberation of the Hellenic nation. After he had masqueraded for more than half a century before the world as a defiant rebel ‘Alt of Yánka felt his position grow daily more insecure. As it was he, the Muğulman Albanian, who embodied the Greek revolutionary centralism in Roumania by his literary representation and kept the spirit of unrest awake in Morea also, so was he, the Christian Albanians of Sull who first unfolded (Dec., 1820) the banner of freedom from Osmanli domination and thus made the prelude to the Greek war of liberation which broke out four months later. The fact of ‘Alt being able to hold out until February, 1824, in his fortress at Yánka promoted in popular fashion the plans of the champions of liberty. While the Tosks had become deeply involved in the cause of the Greeks, the Ghega were also brought into sympathy by the prevailing instability of the situation.

The merchant marine of the people of Dalcigo, the most prosperous of the Albanians, who formed a unique fighting with the enthusiastic Greeks. Further, Muğul of the famous Vişegrad-family availed himself of the straits in which the Porte had laboured, since the extermination of the janissaries to press more and more shameless demands. In 1828 he delayed joining in the Russo-Turkish war, then when the two powers had concluded an armistice he made bold on his own responsibility to renew the hostilities. After the declaration of peace he contrived to muster round his colours a line of Kosmokalian Paschas. The Porte was compelled to despatch (1830) against him its most capable general, the Grand Vazis Meşmed Reşid Pascha, who succeeded in totally defeating (1831) Muğul at Perlepe and compelling him to expiate (1832) in Ishkodra. With Muğul the line of native governors in Albania became extinct.

The activity of ‘Alt and the masters of Vişegrad has special importance also on the side of social development, in that so far as they cleared away the Albanian custom according to which every town was a state and every home a fortress, and thus terminated a medieval age. Meşmed Reşid Pascha gave the final blow to the last remains of local independence in the central part of the country, so thoroughly indeed that for decades after every innovation was traceable to him, the 'Sadri şaşan'.

ARNAUTS.
With the six, ten: there dawned also a roistered day for the Christians in Albania. Previously those of them living in or near the towns had had occasion to groan under worse vexations; their clergy, had sometimes been hanged as common criminals because of trifling misdemeanors against the public law of the State and Islam. When the Turkish marines of state arms after the last great glories of the xviii. cent. under human reviviscation the Christian Albanians were able to breathe freely again. It resulted in the approximation of the two creeds. The lords of Blagaj and of Tepedelen relied for the defence of their authority on Christians as much as on Mussulmans. But these events were only the overture, to religious equality, which was the more firmly secured after the downfall of the Janissaries. Since the overthrow of All and Mustafa of Blagaj the Musulmans in Albania have been no less liable to taxation than the Christians, the latter, indeed, had: after 1832 the advantage in that they were exempted almost without exception from a military service which has proved so very serviceable in our civil wars. The revenue and the taxation both of the Mussulmans and of the Christian mountain-clans who in many respects had hitherto been independent could not be enforced all at once in so broken and mountainous a country. The disputes between the authorities and the tribes lasted for decades. Serious revolts on the part of the Mussulmans fell to be recorded especially for the years 1835, 1843-1844, and 1847. Further in 1854 there were bloody conflicts with the warlike tribe of the Lower-Vasovë on the Montenegrin frontier on the occasion of the collection of the taxes, but these ended with the defeat of the tribe and its submission to the laws of the state.

During the last Russo-Turkish war (1877-1878) the Catholic and orthodox mountain-clans refused, notwithstanding pressing suggestions on the part of the Russians, to take up arms against their sovereign, the Sultan. Russia avenged herself at the Berlin Congress by providing for the conquered Servia and the victorious Montenegro, which also obtained for them many Slavic and Albanian authors: in this Ivryška, Kuriššulli and Lezgoski for Servia, the districts of the Vasovë, Hërti, Kliamenti and Işıqelli for Montenegro. Now for the first time Mussulman and Christian tribes were seen united in one Albanian league which claimed to represent the unity and integrity of their nationality. Servia retained her three districts, whilst Montenegro, which possessed also Podgorica and Antivari, was given in compensation for the loss of hers by far the larger part of Mussulman Dolćigno. Before the Albanians would submit to this parcelling of their country they had to be brought under subjection by campaigns expressly undertaken in 1880 and 1881 by Derwish Pagha.

Changes especially in the system of taxation repeatedly led later to serious dimensions with the Porte. In 1902 Shemsi Pagha found great difficulty in restoring peace in 1904-5.

ARPA (Barley, barley-corn, as wheat = 1/4 Halbb (q.v.).

ARPAH, a term techn. from the age of Furance in Turkey, denotes properly "Barley-money". There was understood by it an extra-allowance made to a deserving official, really for the purpose of defraying the costs of fodder for the horses he was required to keep. In ancient times there were no actual investments with furs under the name of "Arpa"; the amount amounted at most to 19,990 Akce (cf. Keil, Beg, Constantine 1893, p. 17, Zellneru. Deutscl. Morgen, Geschichte, iv., 273). This system was departed from later, persons even invested with a person could receive a second as Arpalik in increase of their income. And thus it could be given not only to Sliaji but also to "Sliaji". Cf. Tischendorf, Das Lammoc in den hebr. Staaten (Leipzig, 1872), p. 76, No. 6, and Bellin in the Jahres-Aristion, Series 2, iv., 493, N. 4. (F. SIRKE.

ARRADA (A.J.), a kind of Ballista, the same as indeed was called by the Romans Onager. It is really a loan-word from the Aramaic, though Fraenkel has not accepted this view.

ARRADJAN, town in Fars (Persia). According to the Arabic authors it was founded by the Sassanid king, Kishad (488, 496-531), who settled there the prisoners of war from Amid (Diyarbakr) and Mayisakbar and gave to the new settlement the official name Amid-Abu (or Better: Amid-Abu-Kawadd), run together and arabized into Wumkabadh, or usually simply Amid-Kibad (thus would Marquard emend in Tabari, l., 887, 888, 889). Some Arabic writers have erroneously given to Arradjan the name Abu-Akar-Abu (Kabadd), which was born by a district, and a town on the western frontier of Alawi (Kabadd), see also supra, art. ARMANOIRASD. In Arabic the name which is in common use, Arradjan, comes from an older town which existed before the new one was founded by Kowadd.

In the Arabic mediaval age Arradjan was a very frequently mentioned frontier-town of Fars and Azer (or Faristan), and driven to the end of the vii. (XII.) cent. was the capital of the most westerly of the five provinces of Fars; a part of the province of Arradjan belonged earlier not to Fars but to Khatistan (cf. Ibn Fakht, p. 199, 13, Kukinad, p. 421, 16). Arabic geographers describe Arradjan as a large place with excellent hasanas, which manufactured much soap, grew great quantities of corn, possessed numerous date and olive plantations, and was considered to be one of the healthiest situation of the "hot land" (Garanir). The rise of the Assassins portended its decline; for they seized possession of several strongholds on the neighbouring hills and from there made frequent plundering raids on the town and its district, and finally took it in the vii. (XII.) cent. The inhabitants were covered from the horrors of this conquist. The inhabitants emigrated mostly to the neighbouring town, Bibbah-han, which succeeded Arradjan as capital of the province.

According to the Arabic geographers Arradjan lay on the road leading from Shiraz to Trak (Babylonia), 37 miles distant from Shiraz and 3% miles from Al-Ahwaz (now, Al-Ahwaz, q.v.), and a day's journey from the Persian Gulf; it was situated on the river Kish, which here formed the boundary between Fars and Al-Ahwaz. G. de Bodin has discovered the ruins of Arradjan; they lie a little under 31° 46' N. Lat. and 50° 16' L. Long. (Green). The site is supposed to have been called Araghan or Araghan, as Mustawfi shows that the latter (Araghan or Araghan) was the form in popular use as at the beginning of the vii. (XIV.) cent. The Kish, the modern Ab-i-Kuristan, was then called after it, and still is occasionally (cf. P. Schwar, Iran und Mittelalter nach den Arab. Gesch., l. E. N., i., 6, Ab-i Araghan (cf. 'Ali b. Yarrid, Zafar Nama, Bibl. India, l., 600). The site of the ruins, a region of communications of their latest visitor (Hersfeld), is a good hours to the East of Bibbah-han, Bibbah, now pronounced Behban, on a canal leading out of the Ab-i Kuristan, and forms an almost rectangular plain of rain 2930 x 2670 ft., close by the foot of the Kish-i-Behehrin. In a gorge in the latter bitumen (Munir) is found, which is used as a precious remedy, a fact previously mentioned by Kauzin (ii., 94, 160). Close to Arradjan two famous bridges whose ruins still exist lay across the Kish in the middle Ages.

ARRAF (A.J.), son, one who can discern what has been hidden or stolen. Cf. Goldhier, Abhandlungen zur arab. Philologie, l., 35 N.

ARRAN, frequently written Al-Ram—Arabic name for ancient Albania (Armenian Aramk): later Greek writers also call the country Aran instead of Almatia, and the people Armeni instead of Aramians. According to the chronicles of the East, the 'Abasids (p. 117) these terms as well as the later Arabic name of the country are to be traced back to the Persian form of the name Aram. As ancient time under the name Albania so under the name Arran originally the whole region from Derbend in the North-East to Tiflis in the West and the Araxes in the South and South-West was comprised (cf. Lardner, ed. de Gezere, Erdbkunde, l., 1845, p. 295 et seq.; E. Hersfeld in Petermann's Geoer. Mittel., 1907, p. 81 et seq.; also in Kite, viii., 8). (STRECK.)

ARRAP (A.J.), seer, one who can discern what has been hidden or stolen. Cf. Goldhier, Abhandlungen zur arab. Philologie, l., 35 N.
the Arabs as the capital of Aran and the largest town in the whole of Caucasian. In the tw. (x.) cent. Aran i.e. Alhinsan, was still spoken in the district around Barjila's (cf. Ispahani, ed. de Goeje, p. 152). Albanian Christianity had not yet been finally driven out of Albania (cf. Ispahani, ed. de Goeje, p. 376-6). Christianity formed the majority of the population in 15 mls. south-east of the modern Kaha and Shakti (now Nakhchivan). Nor had the Albanian Church surrendered its claims to independence of the Armenian Mother-Church.

Aran was conquered in the time of Oghuz (644-645 A.D.) by Salman Ibn Rabi's al-Sabiti, but was frequently punished later by the Khazars. The oldest Arabic coins stamped in Aran date from the year 90 (708-709). The country was united with the other Arab possessions in Caucasus under one governor, Armenia (Arminti) being the name usually given to this district, which was the largest in the country. The ancient dynasty of the Albanian kings had by then been long extinguished; the Persian house of the Mihrakm, which had been established here towards the end of the vi. cent. A.D. and had accepted Christianity some decades later, appears to have ruled only as part of the land. In the Arab period the sphere of the princes, who bore the Persian title iranigah, was distinguished from Shirvan (written by the Arabs also Shirvan, by the Persians later usually Shirwan), the sphere of the Shagan (i.e. the land between the Kura and the Caspian Sea). The Ispani is also called at the time of Aburiza (i.e. Patrikios) of Aran (Ya'qubi, ed. Hormin, pp. 508). The last prince of the House of the Mihrakm, Karaz-Tut, was murdered by his relative Narsiz (Arab. Nasir, ibid.) in the year 821-822 A.D. In the reign of Matas (833-842 A.D.) the governor Afsan was rooted by Sahl Ibn Sanhaj, who had taken possession of Aran (Ya'qubi, i. 579). Balshurri, ed. de Goeje, p. 241), this same Sahl, however, soon after (823-824 A.D.) performed a great service to the Arab government by surrendering Baku, and in return was confirmed as Bakti (or Caliph) by the Tabari, ed. de Goeje, i., 1433). In the history of Armenia by Moses Kalandav (Russ. transl. by Peterian, St. Petersburg, 1801, p. 266) Sahl is designated as Iranigah (Arab. Erangal). 

Marzir (Marzir, ii, 56) tells us that in his time, therefore shortly before 332 = 943-944, the Iranigah Muhammad Ibn Ya'all made himself master of the land of Shirwan after the death of the Shirwanah. All this, al-Haidami, and took the title of Shirwanah; this same Muhammad Ibn Ya'all, on the death of his brother in-law or his son-in-law (Sahra 'Abd Allah) (according to the Fan's Edition of the same Max, have Al-Bakr al-Malik; according to the above Haidami, Ibn Muhammad ruled in Derdish in the year 330 = 941-642) Ibn Haidami, Prince of Derdish, annexed this town to his province (Marzir, ii, 5). In this way all the parts of ancient Albania would have been politically reunited; but Marzir's information is not confirmed from any other source. Ibn Hawasi (ed. de Goeje, p. 250, 254) mentions a Shirwanah Muhammad Ibn Ahmad al-Azizi, contemporary of the ruler of Aftarabad Marzir Ibn Muhammad (died 346 = 957-958), but he also has not mention elsewhere; how for his province extended towards the West is not stated by Ibn Hawasi. During the following centuries Albania remained politically separate from Shirwanah and was ruled by a dynasty of Kuchral origin, the Shakkashidids (Bafti Shakkashid). The capital of the country at that time was Qandja (the modern Jilavat); the old capital Barjila's had had fearful punishment inflicted by the Russians in the year 333 = 943-944, and could not recover from the consequences. Qandja describes an important village. On the extinction of the little important (not even mentioned by Ibn al-Athir) dynasty of the Shakkashidids Aran was immediately annexed to Aftarabad and has since had no ruling house of its own; as in Aftarabad, Shirwanah and Derdish the population has since the time of the Seljuk gradually grown Turkish; since the period of the Mongol the southern portion of the country has been usually designated by the Turkish name Karabagh. By that time the name Aran was retained only really as a literary tradition.

For the future fortunes of the country see GANDJA.

(W. KATHOL)

ARSENAL, a wood adopted by the European languages from the Arabic: Dîr al-Sana. Cf. Durang under durang. Oszy-Engelman, Geschicht des Wortes eponymico etc., p. 205 et seq.

ARSH (A.) denotes in the Muslim Books of Law the compensation to be paid for wounds or injuries; its amount is accurately determined for any given case. If the injuries by such a nature as to leave retaliation possible, often the full blood-money for murder (Diya) must be paid, in other cases only a fixed part of it. Cf. Diva and Divati.

(Th. W. Jevons.)

ARSH, throne. [See arash.]

ARSHIN (Arshin) (Fr.), ell.

ARSLAN (Fr.), lion; also frequently appears as a Turkish propername.

ARSLAN is a Seljuk who was the eldest son of Seljuk, the ancestor of the Seljuks, and appears to be identical with Musa, who in other sources is named as such. Sometimes the name Fargor precedes that of Arslan; this name however appears also in connection with another son Musa. In the part of Rikaid's history which has been preserved to us neither the one nor the other is mentioned. In the biblical names of Seljuks' sons, (Isra'il, Mika'el, and Mishia), the latter is not mentioned; and in all the sources there can be retained a reminiscence of the Christianity which once was widespread among the Turkish tribes in Semiretchen, a fact of which the Syro-Nestorian Tomb-inscriptions published by Choolvson bear evidence. Cf. Barthold in the Zapiski mexet. odd. imper. russ. akad. akt.
son of Ali Alp Arslan, Barbar, so Khorasan. But he met with little success, and was soon after seized by his brother and strangled by his command (488 = 1093). Arslan Argun however held sway but a short time, for in the end of the following year (1096) he was stabbed by one of his slaves.

ARSLAN-KHAN, Muhammad b. Sulaiman, Karakhanid, Prince of Transoxania. His father Sulaiman-Tegin, grandson of the "great" Tasghagh-Khan Ibrahim, had governed the country for a short time about 490 (1097) as vassal of the Sultan Barkiyauk. On the conquest of Transoxania by Kaykhusraw I of Turkestan the young Prince Muhammad fled to Khorasan; after this Karakhanid had been defeated by the Sultan Sandjar the Prince was appointed ruler in Samarqand with the title Arslan-Khan (495 = 1102); his daughter was afterwards married to the Sultan Sandjar. Only after a prolonged struggle did he succeed in gaining peace in the country; several times he had to invoke the help and protection of his mother-in-law, who interceded for the restoration of her son in his position of vassal. But when she died in 504 (1109) the Prince was deserted by the Khwarizmi with a report that he too was dead. The new Sultan Shamsuddin took possession of Bokhara, and soon afterwards he died in the field of battle (505 = 1110). But the Khwarizm-Shah regained his possessions while the Shah of Tabasorn, under his command, advanced on the country of the Bokharas. On his return he married to his daughter the princess of the Khwarizm, and on his return to Turkestan she married to the Khwarizm-Shah. But when he died in the battle of the Bagdad, in 504 (1109), she married the Khwarizm-Shah and became the empress.

ARSLAN, B. Toghril, b. Muhammad Arq. Ul-Morn, son of Arslan, the Seljuk, reigning from 555–571 (1160–1175). Arslan was only a year old when his father Toghril died (528 = 1134), and he was educated with his cousin Mallikshah b. Seldjukshah. In 540 (1145–1150) by the command of the Sultan: Mas'ud both were imprisoned in the fortress of Tekhri, and one of them was shown to the caliph al-Mu'tad (540 = 1150). Arslan then succeeded in escaping to his step-father, the powerful Atabeg Idqar [q.v.], with whose help he ascended the throne after the assassination of Sulaimanshah [q.v.], in the year 555 (1160). He had of course to resign all pretention to real power since that was in the hands of Idqar. When the latter died in 568 (1172) his son and successor Mahmod Pehlewun [q.v.] got rid of the sickly Sultan (571 – 1178) by poison, as some historians probably rightly state, whilst he recognised the latter's son Toghril, who was yet a minor, as Sultan.

ARSLAN ARGHN, son of the Seljuk Sultan Ali Arslan; on the occasion of the premature death of his brother Mallikshah (488 = 1093) he took possession of Merv, Balkh, Timurlah, Naqshir and other towns of Khorasan, and was allowed at first to hold them in peace by Mallikshah's successor Barkiyauk. But this friendly relation endured only as long as Muzayyad al-Mulk, son of Nizam al-Mulk, was waiz. When the latter was dismissed, Barkiyauk sent another
son Kerim-Shah. But the latter proving incompetent as another son, Muhammad, caused his aged father to be arrested and seated himself on the throne. Arslan-Shah died soon after, but whether a natural death remains uncertain.

**ARSLAN-Shah** a. Ma'tuq, the Zengid. [See NUK. AL-UNI.]

**ARSLAN-Shah** b. MA'RUQ b. ISMA'IL, the Ghurizad, ascended the throne on his father's death in the year 508 (1113) and immediately threw his brothers into prison, with the exception of Behram-Shah [g.v.], who succeeded in escaping and finding asylum with the Seljuk Sanjar. The latter supported his cause because Behram-Shah's mother, a sister of Sanjar, had met with unworthy treatment at Arslan's hands, and on Arslan's refusing to give ear to his representations he set out with troops towards Ghurzquam, which he entered in 510 (1115) along with Behram-Shah. When he withdrew Arslan-Shah, who had first to Hindustan, returned to Ghurzquat, but immediately took to flight when the troops despatched by Sanjar advanced on it. He was discovered however, and delivered a prisoner into the hands of Behram-Shah and strangled by his command (512-513/1113-1118).

**Bibliography:** Ibn al-Addi (ed. Taron), x, 353 et seq.; Tabasāš Nāṣiri, Raverty's transl., p. 107 et seq.

**ARSLAN-Shah** b. TOGHIRU-Shah, the Seldūk, Prince of Karmania, one of the four sons of Yaghmur-Shah, who contested the throne after his death (1585-1170). He died in the year 579 (1175-1177).

**ARSLÂNLI** (f.), lion-pastry, ancient Turkish coin. [See GHURVEH.]

**ARTEWA**, Mongolian dynasty in eastern Asia Minor. This dynasty, which is connected with the historic title 'Ali' al-Din, obtained independence about the year 736 (1335-1336) after the death of 'Ishaq al-Salih, and reigned in Akhsar, Kalariya, Siwā, Amusa, Gümüşhane until about 753 (1352). His son Gıyâk al-Dīn Muhammad and his grandson 'Ali' al-Dīn appear to have ruled there after him till 783 (1380).

**Bibliography:** Ibn Ba'ttûta (Paris), ii. 286 f.; Ahmed Tewahid, Catálogue des monnaies de l'Empire Islam., iv. 427 f.; Well, Gesch. der Chalifen, iv. 346.

**'ARUBA**, name of a day of the week, our *Friday*, in the calendar of the ancient Arabs in pre-Islamic time. Doubtless it is the word of the Hebrews, having reference to the festival of the Sabbath customarily observed among many Arabian tribes. 'Araba is, however, not of old-Arabian but of Aramean origin (Fischer, Die altarabischen Namen der sieben Wochentage, in the Zeitschr. d. Deutsch. Morgenl. Gesellsch., L 224). [MAHEBA.]

**'ARUD** denotes, according to tradition, the pole which is erected in the middle of the tent as its support. In poetry it is applied to the last foot of the first Hemistich, since this is as constant in the middle of the verse (ihtal al-šarī') as the pole is in the middle of the tent (ihtal al-šarī'). In this sense 'Arud is feminine, as is 'Arufa from which it is derived. Used metaphorically it denotes simply prosody and versification. In this meaning it has both genders, masculine (as 'Arufa) and feminine (as 'Arufa). Friendy, in the widest sense (Illum al-šarī'), falls, according to the view of the majority of the grammarians into the Science of Metre (Illum al-ā'rub) and the Science of Rhyme (Illum al-kāhīn). By the former Arabic prosody proper is understood, which, like that of other languages, has to discover the laws of rhythm in the structure of words. Arabic grammarians frequently refer to the Science of 'Arud as a balance, and define it then as the science of the principles by means of which the right metre (Aswāq) used in poetry can be distinguished from the false. The etymology of the name 'Arud is not clear, and native grammarians have nothing satisfactory to offer. According to one prosody it is called 'Arub because the verse is constituted on its analogy (yo'naq 'alākhi); according to others it is because al-Khalil developed it in Makkah, which city had an epithet al-'Arud, while yet others, with whom Lane agrees, hold it is because of the transferred application of the term for the last foot of the first Hemistich, i.e. the most essential part of the verse, first to the whole verse, and then to the science of prosody. Friendy (Studien in arab. Dichtkunst, p. 180) adds in explanation of the name the passage in the Diwan of the Hudhailis (951 A.D.) in which the poem is compared to an obstinate she-camel (al-'Arud), which the past poets. Arabic is the only Semitic language which can show metre proper, and grammarians early applied much sagacious attention to the development of an extremely subtle metrical system. The principles of the native system of Arabic prosody are as follows:

Every verse in the final analysis consists of *"quiescent", i.e. voiceless, and "moved", i.e. vocalised* consonants, through the union of which there arise the constituent elements of the foot, the ashīl (Sing. Sahā = rope) and the awād (Sing. Wasāt = peg); these, as like most of the metrical terminology have been borrowed from Beduin-life, and especially from the tent. At least 4 such combinations of consonants can be distinguished: Sahā khaʃīf (light S.), e.g. ba-na, Sahā khaʃīf (heavy S.), e.g. mák, Wasāt maʃīf (separated W.), e.g. ma-ʃa-r, and Wasāt maʃīf (united W.), e.g. ša-ša-r. The further combinations of more than 4 and 3 consonants (the Fāṣīl maʃīf and maʃīf) can be divided into Ashīl and Ashīl al-wāf. Through certain combinations of these elements arise the 8 primary feet of the Arabic verse. Each foot is called qa'ira or also Taʃī; this latter term it receives from regard to the formation of the names of the feet. The fact, that is, like the paradigm of the grammatical forms, is expressed in certain voices memorials by means of š- and the š added letters. The following are the 8 primary feet: 1. fâlīm, 2. šâlīm, 3. maʃâlīm, 4. fâlīl, 5. maʃâtâlīm, 6. mîqâlīm, 7. maʃâtâlīm, 8. waʃâlīm. It should be noticed that the 3 letters of prolongation maʃâlīm, waʃâlīm and 2l are regarded here as quiescent consonants, the syllable las (a) e.g. thus representing a Sahā khaʃīf. Some prosodists suppose there are 9 primary feet be-
cause of the two possible divisions of the feet 4. and 5. into different Aṣbāh and Anāhīl (fisāli-
ūm, fisāli-ūm; musafīlīn, musafīlīn, etc.). Being really parts of every verse are sub-
dject to certain alterations which are constantly occurring in verse (relaxation) and fīlū (Song, sūn, ṭuṣūn). Zīgāfīs consist of alternations which the Sāḥū experiences in its second letter. There are 12 of them (with a technical term for each), which the poet can utilise as will in individual feet. Kāhūn e.g. consists in the suppression of the second consonant of a foot when it is quiescent, thus changing the primary foot musafīlīn into musafīlīn, and then, since this form is linguistically impossible, into the metrical equiva-
lent musafīlīn; the same form also arises e.g. through the operation of the Zīgāfī called Ḩuṣū, i.e. the suppression of the fifth consonant of a foot when it is quiescent, upon the primary foot musafīlīn, where the quiescent fā (fāʾ ṭaʾāʾ) is then dropped. — Ilā on the other hand is found only at the end of the last foot of a hemisti-
tich; it arises through addition to (Zīgāfīs) or omission from (Naṣḥ) Sāḥū and Ṣuṭū; accordingly 3 + 10 Ilā are distinguished. If there is an Ilā in the first verse of a poem, it must, in contrast to Zīgāfīs, be continued through the whole poem. Ṣaḥū e.g. consists in the addition of a quiescent consonant to the Wāṣfī or wāṣfīn, musafīlīn becoming musafīlīn; Ḥadīṯ on the other hand, e.g. denotes the omission of a Sāḥū by Ḩuṣū, musafīlīn becoming Ṣaḥū which is metrical equivalent to fīlūn. An accurate knowledge of this subtle metrical terminology is necessary to the understanding of the Arab prosodists and scholars, and is to be obtained from the larger treatises on the science of ʿArūd (see Bibliography).

Through the application of different Zīgāfīs and Ilās to the 10 primary feet there arises a large number of possible and permissible variations of these; their number varies between 60 and 65. Only, in the case of Ilās and Wāṣfīs, are there a small number of possibilities, under the laws of this type of metre, which the poet can utilise as will in individual feet. Each verse (Batūf) consists of at least two feet and falls into two hémistichs (ṣeṭīr or ṣeṭīr, the last foot of the first hémistich being called ʿArūd, that of the second ʿArūd. The terms used to denote the other foot vary, and are mostly regarded by the Arab prosodists as essential and called as a whole Ḥuṣū (stufing). Through the right combination (Batūf) of the verse we obtain the metre (Batūf).

According to the common view of the Arabs there are 16 metres, which consist of combinations of the 10 primary feet, and their hémistichs are in their normal form clearly presented by the Arabs through the following exceedingly practical mnemonic devices:

for questioning the national tradition which names him as the founder of the science of "Arštā, and attributes to him the coinage of the majority of the metrical termini. Goldthwait’s proofs (Abhandlungen sur arab. Phil., 1. 36 ff., 32, 93; cf. Nöldeke, in the Wiener Zeitb. f. d. Kunde d. Arab. Spr., 1. 342) are based on a terminology which was familiar; later was quite unknown in the earliest period of Islam, and its sudden coming into existence points to the first bloom of Arabic philology as the season of its origin. Besides the great honor which al-Khařîlii experienced from most Musulmans on account of the establishment of his theories, he was much attacked by contemporaries for errors, as, e.g., Al-Akhbabel, the middle one, in particular, appears to have instituted a rival system, of which the metre Matadārī, which traces back to him, is still preserved. Of the vehement opposition of Abu ǧ-Abd Allāh Muḥammad al-Nasîr al-Ahsbāʿi (died 393 = 906) to the theory of al-Khařîlii details have been handed down (cf. the Khallkīsī, trans. de Slane, II, 378; Macullah, Paris Ed., vii. 88). Goldthwait has collected other scattered material of a similar nature (Wiener Zeitb. f. d. Kunde d. Morgenl., viii. 132 ff.). Al-Khařîlii’s system, however, won the day, and in consequence the circle-theory which traces back to al-Akhbabel, is the one fundamental mistake in the theory of the Arabs, and has involved them in the complicated system of Zikfṣīf and ʿIla. The immediate consequence of the scheme of circles is, that the forms of the several metres which fit into ʿIla, or rather which are derived from it, are considered to be the primary forms of this metrical system. Al-ʿArštā and Qādhī are irregularities. But such is not the case, for of the 16 primary metres 11 never appear in the complete primary form, and the remaining 5 (Kāmil, Ṭaqqār, ʿAlštār, Mataqārīb, Mataqārīrī) but rarely. This error was carried yet further. These alleged complete primary forms of the several metres were usually reduced (e.g., 5 or rather 10 feet in all were reduced to: 4 feet in many metres, and these naturally were primary feet. But just as little as to the primary forms of the metres does any guiding significance attach to these alleged primary feet. In order, then, to reconcile the results of the scheme with reality the system of Zikfṣīf and ʿIla was invented, and the feet which actually appear in the ancient poetry were deduced as irregularities from the alleged primary feet. If the circles had no existence, then there persisted the primary forms of the metres and with them the 10 primary feet, and the Arabs would have to enumerate singly the 67 paradigms with their 85 possible feet. This scheme, in which the metres appeared to them far too diverse, and they created the scheme, which finally became much more complicated than the reality.

The second fundamental error in the structure of the Arabic metrical system is to be explained by the Arabic-Semitic system of writing. Since only the consonants and not the vowels are expressed in the script, the creation of a sound as the word-atom is wanting, and necessarily, therefore, the notion of the syllable as the union of one or more consonants with vowels, having equal phonetic justification. For with the
pronunciation and song. He uses as illustration of the mutual influence of the camel's stride and the song the well-known story of the Beduin, who, when his arm was broken by the fall of his camel, involuntarily uttered this rhythmical expression of pain, ya yadda, yadda ("Oh my hand!"). We find something similar in the Khamis (Thal. X, 134 see under shadda): a Beduin had broken his arm by falling off his camel, in whose pannier yadda, the sound of which affected the camel's gait. From such traditions and the observations of travellers it is obvious that not only has the camel's gait influenced the driver's song, but vice versa the slow or quickened tempo of the marching-song has had an effect on the beast's stride, and still has (Bucher, Arab. and Ethym. Arab. 4, Ed. 1909, p. 131). Corresponding to the iambic alternation in the lifting and lowering of the camel's feet there arose as the oldest verse an iambic alternation of long and short, i.e. Radjat. Through tradition and the work of scholars it has been established as the oldest metre. Its age may be observed from the fact that it occupies a middle position between the Ithra and the simple Ain. It is possible to demonstrate in its various forms the origin of the metre and to derive the various metres from the measure in the various gaits of the camel on the journey. Many other phenomena and notions are connected with it. be entirely explained. Westphal, who in dealing with prosody in general (Berlin, 1853) deals also (p. 427 & seq.) with the prosody of the Arabs, but confines himself mainly to repeating the rules laid down by Ewald, advances the unproved and indirectly false hypothesis that the whole metric system of the Arabs was borrowed from the Greek grammarians, and may even be based on an Arabic translation of a metrical cuneiform.

Gy Hayward in his Nouvelle théorie de la métrique arabe subjected Arabic prosody to an entirely new treatment (Joumal asiatique, serie 7, t. 435 and seq.; t. 437, 101 et seq.; t. 435 et seq.; t. 437 et seq.). Proceeding from the old chief distinction in general between speech and music he came to the decision not to be content with the mere distinction of "long" and "short," but also to time the various long syllables and to fix them in musical notes. The division of the verses handed down in the Arabic amanun verses he regarded as correct, but through measuring them according to musical principles he obtained the result, that the tempo fort and a tempo faint must alternate. Apparent contradictions he settled either by declaring a tempo fort to be weak (as e.g. the syllable 'n, d u or n in the feet muallum, muktalum, musfakum) or by inserting a pulsus-bote (silence), which was graphically expressed, however, but which played the role of a tempo faint (as e.g. after the 'a in faṭānum or between the two feet immediately following one another faṭānum faṭānum. Further alterations are possible through the law of the double "forms" in every Arabic foot, and he can eventually explain the 16 metres with all their variations as corresponding to the musical rhythm; only the foot mu’āṭar does not enter into the process. Gy Hayward postulated the following principles: 1. The primary law of Arabic prosody, the law of Dipody, with a chief and a secondary accent, whose significance has been shown in extent, especially by Hartmann. 2. The law of the Doubling of the chief-accent, which is both necessary and sufficient for the completion of the metre. 3. The law of the alternation of the chief and the secondary foot. 4. The law of the alternation of the accented and the unaccented syllable, in the same mode of advancing his feet forward and back. According to this law, the chief foot is accented, or the secondary foot is unaccented. 5. The law of the alternation of the chief and the secondary foot. 6. The law of the alternation of the accented and the unaccented syllable, in the same mode of advancing his feet forward and back. According to this law, the chief foot is accented, or the secondary foot is unaccented.
of the slave-girl of Ḥiy'a fatt al-Barmaki, the earliest
known Mawālī, the compiler is expressly mentioned.
Only late writers however do we owe more
accurate information about the existence of new
poetic forms. Ibn Khaldūn, Dāghtā and others
speak of 7 kinds of strophe, which are known by
the name of the Suḥra Ṭanīka, and have been
treated of by Gies in his by no means exhaustive
monograph (Leipzig, 1872, 1879). The most im-
portant of these are Mawūshah, which Hartmann
has given special treatment on the basis of abun-
dant material (Semiti, Studien, 11, 13, 14;
Weimar, 1896-1897), Zadja, Dīḥatā, which was
borrowed from Persian poetry, and Mawālī, which
is in general use today as the metre of the folk-
song; the other three, Kān wa-kān, al-ʿAbīmān
and al-Būlāʾi (rāthi, al-Sula), scarcely exist now,
and have importance for the scholar only. It is
certain that in the ʿIṣrīr composed in the clas-
tical tongue, the ʿīṣrīr, the law that the same rhyme
must be preserved throughout was early violated,
and that strophic groups were distinguished.
In this transition-period the old long verses with its
two characteristic hemistichs, the one rythmical
and the second rythmical, had to go. The verse in
the folk-poetry is a unit in itself, and has ap-
proximately the length of a classical hemistich.
If we take several of these hemistichs of the
same metre, and see that they have the same end-rhyme, and then set at the end of this
strophic group a verse with another rhyme which,
however, is always repeated at the end of each
strophe as the principle rhyme and thus holds the
whole poem together as a unit, we get the
simple and exceedingly popular poetic form
Tamsī (the stringing of pearls). Each strophe
must consist of not less than three and not more
than ten such short verses; and so we obtain 3
kinds of Mūsammāt—poems, which are named,
according to the number of the verses, muthallāsh,
murābba, muḥkhamma, mawṣawṣa which the
favourites, and indeed the oldest of these strophes is Murābba (a a a x, b b b b); tradition, however,
places a Mūsammāt as early as the 8. cent. of
the Hijrī (Hartmann, Z. d. Ir., 12, 1893, p. 172 f.
and more among the Persians we find all the varieties of Mūsammāt; in Arabic poetry, however, mostly
the odd numbers only are chosen as the verses
which shall have the separate rhyme, perhaps
thereby to preserve outwardly the Ṭanīka-form of
the whole, Tamsī as a poetic form in the clas-
tical tongue and in the 16 canonical metres being
generally regarded as Ṭanīkī.
It is otherwise with Mawūshah, which Hart-
mann rightly derives from Mūsammāt as a further
development. Mawūshah consists of 4—10
strophes in different metre having the same or
different separate rhymes, which are held together
as by a girdle (Wāgīk) by the principle rhyme, which
occurs in the first strophe and must be repeated at
the end of each strophe. These portions of the strophes (Dawr ur Bait) which do not share in the common rhyme are
called ʿalīs, and those verses with the common
rhyme ʿabār; an introductory strophe (Mattār)
and a final strophe (Ṣāhāri) with a common
rhyme have special names. But, in sharp contrast
to ʿIṣrīr verses (ʿīṣrīr), the two parts of each strophe of Mawūshah consist not of one
member but of several (Fībra) whose number,
rhyme and metre must be the same in every
strophe. Further it is important to notice that
not only the 16 canonical but also a large
number of new metres, some of which are difficult
to scan, are employed, whose number, according
to Hartmann, amounts to about 200. According
to the common tradition found in Ibn Khaldūn,
Saft al-Dīn al-Jalīl, etc., the classical tongue, the
ʿīṣrīr must be used in Mawūshah, the Laḥm
in the last verses only of the last strophe which
show the common rhyme, In contrast to this
Zadja, which in other respects is constructed like
Mawūshah, is composed entirely in the collo-
quial. Whilst scholars, following the lead of Ibn
Khaldūn, commonly hold Mawūshah to be the
older and Zadja the later and vulgar imitation of it, Hartmann sees in Mawūshah an artistic
composition in the ʿīṣrīr, a refinement of the
original and older folk-song, the Zadja, and in
which the Ṣāhāri-verse in the Laḥm still indica-
ates its origin. The poems which stand midway
between these two poetic forms and show the
correct as well as the colloquial tongue are called
Mawwālī. Spain is the traditional home of both
these poetic forms, Ibn Kasim (died 555 = 1160)
being one of the first to employ Zadja and the
most famous. Later development has brought it
to pass, that from about the vii. and viii. cont.
only poets of the Masbik have cultivated these
poetic forms, and that very little is composed in
them after the present time outside Egypt. There
were also other alterations. The modern Zadja is
scarcely sung any more by professional singers, but
is recited and has become an entirely literary
form, the most frequent metre employed in it
being a kind of Munsāṭ maṣṣāṭ. On the other
hand the notion of Mawūshah has been much
enlarged and is given to any song sung in the
vernacular; accordingly Mūsammāt, representing an
earlier transition-stage between these two, has
quite disappeared.

There exist besides these in the modern Islamic
world many and very varied kinds of folk-songs
proper, a knowledge of which has only been ac-
quired in the last two decades through the pub-
lications of these songs:

Suchen, Arabische Volkslieder aus Mosopotamien
(Berlin, 1889), p. 4 et seq.; 17 et seq.; 4 et seq.;
Stumm, Türkische Märchen und Gedichte (Leipzig,
1853), ii. xii—xiv; and Triposkaitis—tunisische
Beitriegenlieder (Leipzig, 1901), p. xiv et seq.;
Meissner, Neuäthiopische Gedichte aus dem Eritrea
Maquin, Le dialecte arabe poète à Erythée (Paris,
1902).

It is impossible to enumerate all the known
kinds of songs; only the best-known, constantly
recurring groups will be mentioned. Besides the
quatrain composed in the classical tongue, the
Persian Dīḥatā or Ṭanīkī, there are three forms
of popular quatrains: 1. They are the origin of "Abāb (or, more accurately, of the bāt `arba`, to be sought for in the desert; it is current to day only in Syria, Palestine
and Mesopotamia. Of the four short lines the first
three have the same rhyme, the fourth rhymes
with the syllabic $3$ of the monosyllabic word 'Atbis, and is prolonged in singing; and frequently is simply added without any sense. The syllabic $3$ is rarer at the end of the fourth short verse. Meisner records for an 'Arabic-song of this kind the name 'Lamb. The metre is a sort of 'Wafir ($---|---|---$).

'Matbullah' in Egypt is current in Africa; its second and fourth verse must rhyme, the first and third do so frequently. Its metre, which according to Stommel is tambic, is to be classed as Mudttkahth. 'Arabic-songs with more than 4 verses are properly called 'Ariful-Zild.

3. The last and widest spread of these popular quatrains is Mawil, which is to be found from Mesopotamia to Morocco and has, in contrast to 'Atbis, its home in the towns. Accordingly it admits both the correct and the colloquial tongue. The metre of Mawil is an abbreviated Basel; it usually contains four, five or seven lines. In the quatrains either all four short lines rhyme or only the first two with the fourth. The form with five lines has special favour in Egypt and in Tlemcen; its short verse is unrhymed; according to tradition it is also styled the linger Mawil (al-'�رذ). In Tlemcen it is called Mawil Kifwil. It is interesting to note that Ibn Khaldun mentions the latter name as a sub-species of the Mawil, that the Bulak edition however of the Mekkaddimah has inserted in some verse of it the strophic form called 'Al-Sard. Lastly the generalized Mawil is commonly styled the Baghdad or Nu'man-Mawil; Meisner records from 'Irāq the name Zeheri (zu-hairi) for this form; it contains a double rhyme (a b a b a).

Besides these vulgar folk-songs the ancient form of artistic poetry has been preserved down to the present time, the Kaftah of the Beduin. The most abundant and recent collection is now contained in Socin's 'Divan aus Centralarabien' (Leipzig, 1901, T.1—3), in which the older literature is also collected (Vol. ii. 1 et seq.). At the present day the Kaftah is cultivated by Beduan almost exclusively; and if its name has a wider extension than formerly, being sometimes given even to quite popular forms, yet it must be regarded as the common form and language in direct descent from the ancient-Arabic art of versification; besides Kaftah with a single rhyme throughout, there are different forms in which the Kaftah is vocalized; it is found in the Romance of Hilal; Wafir is also in use. Outside the artistic poetry the Kaftah is very rare, but is still found in almost all the Kaftahs in the vernacular which occur in the Romance of Hilal; Wafir is similarly employed in the Romance of Zir. Of the ancient metres Mudfi, Kambil, Ma'dari and Mu'akkadab are quite wanting in the folk-poetry.

In conjunction with the rich collections of material of Arab folk-songs the question of the nature of modern Arabic prosody has been frequently raised and been variously answered. Whilst, in the first place, Stumm believed that in some pieces the rhythm of the verse is determined purely by the accent, Sachau and Socin have firmly held by the principle of a quantitative poetry for the later poetry as well. This principle was for the first time seriously questioned through Landberg's publications and researches; he demonstrated that in the songs of the modern Arabs the metrical form becomes apparent only when they are sung, since it is only then that the necessary help verbs are inserted; now these being wanting when the song is declaimed there can be no question of metre. From this he concluded — somewhat too radically — the inapplicability of metre and melody, and declared music to be primary, and metrical forms secondary; in practice however he applied the old quantitative metres as being quite sufficient. His investigations have throw light on the question of the manner in which Arabic poems were conveyed to the listener, but they have not thrown the views entertained as to their metrical charaeter. The helping-verbs, which are mostly remains of the old $3$, must be wanting in the folk-poetry when this is spoken, and for this reason, that they are also wanting in the vernacular; but the circumstance that they must appear immediately one wishes to introduce a metre, either theoretically or through singing, shows that they are metrical necessarily elements of the verse, which in this its complete form would in the main almost identically coincide with the classical Dast or Shair. Whether the ordinary Arab brings any intelligence of rhythm to a verse spoken in the Dast and inserts the necessary helping-verbs or not, is a matter of indifference for the point in question, and hence the complaint of most investigators and travelers about the deficient rhythmical and metrical intelligence of the modern Arabs is not generally valid, especially as the contradictory accounts do not show that this intelligence is entirely a question of the individual. Socin, e.g. asserts that the Arabs pronounce their poems very rhythmically when reciting them with the requisite quickness, but not when they dictate them to the Hepseh. "Zitscher, d. Deutsch. Morgenl. Gesellschaft, vi. 418;" but none will deny to the poet himself a conscious striving after metre whenever he would create a rhythmically ordered verse. In these folk-songs we have quite irrespective of singing and the melody, to distinguish between the pieces in the form in which they are dictated and the metrical emendation a poet may have made among them. We will then arrive with Heßman at the conclusion, that the original metrical form can be recognized in the majority of cases, but only by those who are familiar with the characteristic treatment of the syllable by the vulgar poetry (cf. Zitscher, d. Deutsch. Morgenl. Gesellschaft, ii. 178). Hence the principle of a quantitative poetry appears to be established also for the late classical poetry and for the modern folk-poetry in the songs and strophical forms which have been instead of above. Indeed certain rules of quantity can be laid down especially for the vulgar poetry, which hitherto have been dealt with incidentally only by Stumm (Trii-ium, Beduinens, p. 24 et seq.) and Kern (Melodien und musikalische Übungen, Leipzig, 1899, p. 12, 16, 18), e.g. the ambiguity of the final vowels, the possible solution of any "long" into two "shorts," that diphthongs are not counted as such, etc.

If it were desired to derive theoretically from the scheme an accentuating metre in the vulgar poetry, it would be necessary to begin with the verse in which the syllables are counted. In this case the transition would be constituted of
such metres as e.g. the four-syllabled Mutadrik, which as Dalli b-Na'Bini may appear purely in the form of spondees. By the careless consumption of the so-called word-accent, an accentuating metre could come about through the intervention of "shorts". Byzantine poetry could be added as an analogy, where in late times the verses were still constructed regularly according to the quantity, but were really accentuating. Further, such a view would be strengthened by observing that the same system of accentuation and long syllable-short, and that this phenomenon is still more frequently perceptible at the present day. But everything of a numerical verse in any shape or form is strenuously rejected by Sachau; "The Arabs have never copied from the Christian poets of the Greeks, Romans, Syrians the method of syllable-counting, and the compositions themetrical form appears only to consist of a certain number of syllables, yet we must not see in this a new principle, but only an extravagance on the part of the old one" (p. 5). Even though feeling for the length and the shortness of the syllable was dwindling they did not introduce the word-accent to regulate the rhythm, and "if it is want of the word-accent we examine the songs in which the old metre only a corresponding number of long syllables now remain, we will find many a time that metrical and word-accent coincide, and that this agreement is a purely casual one, and that the intention of enlivening a monotonous number of long syllables by the word-accent has always been far from the Arab poet's thoughts" (p. 6). This is still valid for the songs and strophes of the poets, but in "the folk-poetry in its most real sense", as Stumma styles it, or the "poésie maghrébin", as Desprez calls it (La poésie à Bilida: Accez du 1er. congr. inter. des Orientalistes, ill. 427 et seq.), one will often be able to apply the laws of a quantitative prosody and therefore the scheme of the Arabic metres and their varieties, for the modern Arabic vernacular with its frequent slurring and especially its deficiency in short vowels cannot always satisfy the demands of a quantitative prosody. A poet of course can by the skilful manipulation of helping sounds still measure the syllables of the verse according to their own quantity, but the real folk-poetry proper can not. In the emphasis of certain syllables and the rhythmical accent of the whole will frequently owing to the deficiency of short vowels be the sole normative influence. The final answer to this question may still perhaps have to be long awaited; but we must remember how long it has taken to come to a decision upon the metrical character of the old-Italian versi stilbici, which presented similar but not so difficult problems. A system of Arabic prosody will only be possible when accurate investigations into individual metres and poetic forms have been undertaken independent of the metre-counting.

Like the Romans who took over with the knowledge of belles-lettres also the art of versification from the Greeks, the Persians adopted from the victorious Muslims the almost canonical system of Arabic prosody, adapted it to the peculiarities of their own language and poetry, and endeavoured to bring it into harmony with their rich literary tradition. The main principles of Persian prosody are the same as those of Arabic, indeed in the structure of the verse the metrical law of the quantity is much more marked than in Arabic. Of the 16 Arabic metres Tawt, Russ, Walleh, Kaimil and Maffid appear almost not at all; of the rest the epic Mutakbir and the metres Ramsal and Hazaqi are in special favour. Through synthesis of the primary feet of the two last three newly peculiarly Persian metres have arisen, Maffid (Maffdid b-Maffid'un), Kazi (Maffdid b-Maffdid'un), and Maffgil (Maffdid b-Maffdid'un). As in Arabic poetry so also in Persian there are no rhymeless verses; a special feature of the Persian verse is the Radif or Refrain-rhyme. It arises through one or several, but always the same words being added throughout the poem to the main rhyme of each line. But out of almost these same elements the Persians have been able to construct richer and finer strophic forms than the Arabs. The Persians, too, have the Arabic artistic Kasida with one or several initial verses having mid-rhyme (Zakh b-Maffid'un), but it is far from holding a dominant position. The Ghazal, which has quite the same structure as the Kasida, being a poem in one metre, with one rhyme and maffid, but with only one refrain common; the number of Bait in it varies between 4 and 15. Besides the various kinds of Tawt, a characteristic Persian strophic poem must be mentioned, the Tardji Band. It consists of a series of one-rhymed strophes of 5—10 verses in the same metre, but with different rhyme, to which an involuntary rhyme-same in the same metre is added as a refrain (Wa'sij). If the Wa'sij at the end of the several strophes is not the same, but always different, the poem is then called Tarkih Band. In contrast to these later poetic forms which have been mostly only derived from Arabic models stand the two originally Persian kinds, i.e. the Rohbati and Mathnawi. Rohbati or Diliq is a quatrain in which the first, second and fourth short verse rhyme with each other; if the third also rhymes, the poem is called Rohbati Turam (= melody). Each of these quatrains is complete in itself, without relation to the others. In the Rohbati a special group of 24 metres is used, which are all regarded as varieties of Hazaqi, and, according as the foot maffid becomes maffd'un or maf'uf in consequence of the licence Kham or Khark, are derived by Persian prosodists from two circles. The characteristic foot of the Arabic and Persian Dilbait (----|----|----|----) is maffdid'un. Finally Mathnawi is known by its rhyming in complete (as b b c); each hemistich rhymes with the other, but the same rhyme does not run through the whole poem. On account of the great freedom in the choice of the rhyme this poetic form is the usual one for long pieces, whilst the one-rhymed or Arabic system is preferred for shorter.

If the application of the metrical system of the Arabic to the Persian verse must seem a strange thing since the rhythm in the structure of the verse is different in the two languages and the forcing in of this system could but result in rough edges and harsh outlines, the adoption by the Turks of Arabic prosody, which the Persians had remodelled, exhibits the utter subversion of the measure and rhythm of the real Turkish verse and can only be explained by the enthusiasm of the Ottomans for the belles-lettres of the Persians. Their
original and distinctive mode of verse-construction was never systematized by the Turks; they confided only the Arabic-Persian metrical system. But the alterations are of so trifling a nature that it would be superfluous to enumerat them. Peculiarly, Turkish verse-construction depends simply on the enumeration of the syllables, the Parma/f Hatta (i.e. finger-counting). Each hemistich consists of 7-15 syllables with a caesura after every 4, and the total determined by the accent of the word at the end. When the Persian metrical system was adopted the syllabic and the quantitative prosody were both in use at first, until the former entirely disappeared in the xv. cent. Remnants of the old Fulk-ballad, the Turkish, have been preserved to the present hidden in Şarş f; they have been derived from it and mutatedly adjusted. Recently a beginning has been made on the one hand to get back to the ancient Turkish verse, and on the other, to introduce European forms of verse into Ottoman poetry.

The rules and metre of Arabic prosody have been adopted also by Jewish poets in Islamic lands, and have been introduced into the late-Hebrew poetry.

already in 1516 Cardinal Ximenes endeavoured to
wrest the town from him. But the expedition led
by Don Diego de Vara against Algiers came to
grief and cost Spain 1500 men (30th Sept., 1516).
Since the conduct of the sultans of Tunes (Tanou)
had been open to suspicion, 'Arudj used this
as a pretext for an attack. He conquered Mikyana
and Meden (al-Madinya), and, eventually, after
the annihilation of his opponent on the banks of
the Wash Efnaq, he placed Tunes under his
power. He was still in this town, when a
deposition of people arrived from Tlemcen to
ask his aid against king Abul 'Hamidt, a confederate
of the Spaniards of Oran, and this was extremely
opportune for 'Arudj's ambitious plans. He tran-
ferred to Khair al-Din the administration of Algiers
and made with all speed towards the West. On
the way thither he took the Khâla of the Bint
Rachid, in which he put a garrison under command
of his brother Ishaq, to fight the army of
Abû 'Hamid at Arbal, and entered into Tlemcen
without striking a blow. But then, instead of
restoring to the throne the pretender Abû Zayyân
in whose interest he had moved; he took possession
of the throne himself. Then he intrenched himself
in the Maghâr (outside the town) and had the Zayyânid
princes and their adherents put to death (according
to a local tradition 70 members of the royal family
were drowned on one day in the Saharîd (a pool
in front of the town [see Tlemcen]), garrisoned
the districts Tihda and Udjda, and made raids into
the region of the Banû Sâsneq to force them to
submission to his authority. Finally he set on
foot negotiations with the sultan of Fastân for
common procedure against the Spaniards. For
the latter fitted out an expedition against Tlemcen
in order to wrest it from the Turks and to restore
their old confederate Abû 'Hamid to the throne.
In January 1518 Don Martin de Argozio with a
small Spanish army reinforced by native troops
took the Khâla of the Bint Rachid, and thereby
cut off 'Arudj's return to Algiers. Ishaq after a
powerful resistance was compelled to surrender
the fortress, but was done to death by the Arabs
against the terms of the capitulation. Simultaneously
Masquis Comares, commander-in-chief of Oran,
advanced to the siege of Tlemcen. 'Arudj defended himself
for six months, at first in the town; and then, after it became
known to him in the Maghâr where he barricaded himself in
with his Yoldiah ("Comrades"). But on the day of the 'Id al-jaghîr
the Mours of the town entered the Maghâr under
pretense of a desire to pray in the mosque of the
citadel, and put to death the majority of the Turks.
'Arudj, who had but a few faithful companions left,
resolved on flight, escaped by night making
for the sea. He was pursued by the Spanish
cavalry and overtaken at the ford of the Rio
Salado, and after a desperate defence was slain
by the Spanish Emir García de Tano. 'Arudj
was only 44 years of age. According to Hâkî
do was "of medium stature, powerful, indefatigable
and very brave; had a reddish beard and a brown
colour of his soldier's loved and feared him,
obeyed him and bitterly lamented his death." He
was not only a capable soldier, but displayed also
great political insight. He recognised the possibility
of utilizing the anarchy of the Maghrib to found
a mighty Islamic state on the ruins of the small
Berber principalities which would impose a limit
on the attacks of the Christians on the African
cont. His considerable fighting strength allowed
him to prepare this great plan, which Khair al-Din
was called on to adopt and realise.

**G. Ver.**

‘ARUS (A.), Ilide. [See Nicholas.]

‘ARUSIYÂ. Dervish-order, according to Rûm a branch of the Shâhidullahiyya. It is mentioned by al-Mas'ûdî in his *Ma'ârif* with the name of Abû al-Salâm b. Abû Bakr b. al-'Arûz, who died c. 1460 in Tunis.

**Arzachel.** [See Ibn Al-Zarqâla.]

**Arzan,** town in Armenia, half-way between Sefid (Setif) in the East and Mahriîsrîkîn in the West, 7 Parangics (1 parangic = 3 to 5 miles) distant from the latter, situated rather under 41° 40' E. Long. (Greenw.) and a little over 38° N. Lat. According to ancient-Armenian geography Arzan (in Armenian Arraz) was the chief place in a district of the same name belonging to the province Alnak, and this name the foreigners (Greeks and Romans) have transferred to the province (Arzach). The names Arzakh and Arran earthquake, moreover, to be sharply distinguished from each other. The Arabs, who took possession of the town on their first Armenian expedition under Yâ'id b. 'Aljânî in the year 20 (640), included it in the territory of Djasra (Mesopotamia). Arzan was the *Apis* of the Byzantine historian Cadernus (Born, 1859. ii. 577), was sited, according to the accounts of the Arabic authors, in the middle of a fruitful, well-cultivated region, and was considered in the Middle Ages to be one of the most flourishing towns of Armenia; it was protected by a strongly fortified fort. The average revenue from taxes of the districts of Arzan and Maiyêfîrka together amounted, according to Kadâmû (ibid. Geogr. Bibl. Geogr. Arab, vi. 246), to 1,155,000. (Of. A. v. Kremet, *Geographia des Orientes unter dem Chaliften*, i. 368). At the beginning of the iv. (x.) cent. the Hâkimîn Sâlîf al-Dawla took up his residence in Arzan. When he and his brother (Nâżîr al-Dawla) were engaged in war and political enterprises in Babylonia, the Byzantines utilized this favourable opportunity for an incursion into Mesopotamia through Tunes and N. of the Taurus (942), when they took and sacked Arzan; cf. Weil, *Geographie der Chaliften*, ii. 673, Ann. i., 690, and Freytag in the Zeitschrift d. Deutschen Gesellschaft, x. 472. The town appears to have
entirely recovered in the course of time from this blow, for al-Mustawfi on his travels in the vil. (xiv.) cent. describes it (he calls it Arz anah) as a "frightening" place. But from the beginning of the xiv. cent. there is evidence of Arzian (in Syriac Arzian, hence occasionally also in Arabic Arrânî), being a place of importance. Its situation (see Guido in the Zeitbuch d. Deutschen: Morgenl. Gelehrte, xiii, 408). Arzian is to-day a pretty extensive stretch of ruins, which occupies according to Taylor an area of 5000 acres (ca. 2386 sq. m.) and in which Kiepert, wrongly however, would find the site of the Armenian royal city of Tigranocerta. Arzian lies on the right bank of the Arzian (Erzerum)-Sü (Çai), in Kurdistân Gharan (Gherman)-Sü, which, coming from Gherman-Dagh, falls into the Tigris about 25 miles south of Arzian. Below Arzian this river is also called Redwan-Sü after the town Redwan (Ríywân); its other name, Yazid-Khâne-Sü comes from modern neighbouring Kurds who belong to the sect of the Yazidis; the Arab geographers call this watercourse Nahr al-Lhibi (Obbi) or al-Sarbaši. This Arzian-Sü must not be confused with the Nahr Shimaš (also Nahr Shimash, i.e. the Nahr al-Simash) of the Arab geographers; for the latter is the Arzian of the classics, the modern Murk-Sü (or Çai), the eastern (better southern) one of the two sources of the Euphrates; for further details, see under Murk-Sü and Euphrates. The name Arzian is found elsewhere in this region, e.g., as the name of a small, western tributary of the Euphrates, which has its mouth below Malatya (cf. the art. Arzianas N. 3. in Panay-Winsen's Kosmologie der Kl. Altertums-wissenschaft, ii, 1272). Finally warning must be given against the confusion, which appears several times even in Oriental authors, of our Arzian (near the Tigris) with a town of the same name situated in the region of the source of the Euphrates, near Theodosiopolis. When this town was sacked by the Seljûqs in the year 1049 those inhabitants who escaped the blood-bath went over and settled in the neighbouring Theodosiopolis (Armenian Karin, Arabic Kâbulâla), and named this after their desolated home "Roman-Ardânî," Arabic Arzian al-Rûm, the modern Erzurum. For further details, see art. KEEZKHIN.

ARZAN AL-RUM. [See ERZKRUN.]

'ÅSÁ (a.), Rôd, Stick. — The rod mentioned in the Korân is that of Moses: the same account is given of it (Sûrâ 7, 24, 26, 31) as of Aaron's rod in the Bible (Ex. Ch. 7, 8 et seq.). On the occasion of Allah's self-manifestation in the fire Moses receives the command to cast his rod to the ground, and, here, too, it becomes changed into a serpent (Sûrâ 20, 21, 27, 96, 28, 39). As in the Bible, the rod is effective at the passage through the Red Sea (Sûrâ 7, 155), and makes water flow from the rock (Sûrâ 2, 57).

The commentators and writers add further details which show partial dependence on Jewish legends (cf. Grünbaum, Neue Beiträge zur semitischen Sagengeschichte, p. 152 et seq.). Only the following need be mentioned here: Moses' rod was a branch of a myrtle-or black-berry bush in Paradise; 10 ells long. Adam fetched it himself for God and, after him it became the hereditary possession of the prophets till Jethro. — According to another version it was entrusted to Jethro by an angel. Moses received it miraculously from his father-in-law.

Moses' rod has served many purposes: its two branches alone in the darkness, it made water gush forth from the ground and disappear again, and it was put forth like fire and fell as leaves and fruit. It is also related that Solomon had a rod from which he never separated.

Ubâbi has embodied in his Kiltû al-Bayans wa l-Tuhfat a section on the rod, in which he speaks specially of the use of the rod amongst the ancient Arabs and in the Khuṭṭâ (Kairo, 1311—1313, vol. ii, p. 49 et seq.). Also Usamah b. Mubâhid has composed a Kiltû al-Ajlû (cf. Derenburg in the his edition of the Text of the Autobiography, p. 499 et seq.; and Millanges orientaux, p. 116).

For the use of the staff in public worship see ANAMA.

Bibliography: The Korân—commentaries on the passages in question; Thehât, Kiyâ al-Anbiyyû (Kairo, 1297), p. 162 et seq.; Welt, Biblische Legenden der Muslîmâner, p. 159 et seq.; Grünbaum, see supra.

'AŚABA, 'Âṣârât (a.), as a juristic term denotes Aguates. Cf. the art. MIÎŠAH.

'AṢÂBIYA (a.), patriotism, party-spirit.

'ÂṢAD (a.), the Lion. Known to the Semites from earliest times the lion has engaged the imagination of the Arab people and the Arab poets, especially the Beduin poet, during a very long period. By that time, indeed, lions may no longer have been as abundant in Arabia, as the number of Mo'Cadda's, i.e., districts abounding in lions, mentioned in the literature is small (the lions of Shark and Khaṭīr were held in most fear). Notwithstanding the scarcity of the lion the oldest literature shows the most thorough acquaintance with its characteristics. The thick neck — almost never the mane — is regarded as the symbol of power and majesty; the feline breath, the ardent spring, the fearless roar, the boldness and majesty of the lion recur again and again; but his occasional cowardice, his cattiness and his "going in the rain" were also sharply observed. As old as Arabism itself is the identification of the ideal warrior with the lion; the forest of lances with which the Beduin enter the fray appears to the poets like the thicket of reeds (Gâhîh) which lions haunt, just as the lion has found a place among the constellations in the heavens, so does the whole Beduin-tribe bear the proud name "sons of the lion" (see next art.). — In Islamic time the
number of lions in Arabia decreased more and more, but one name is mentioned in their stead with new varieties in Nubia and the Soudan, North Africa, Mesopotamia, Persia and India. Yet knowledge of the lion remained surprisingly scanty in Arabic Science. Even al-Damiri can scarce inform of a trait which could not be found in poetry or Sana, e.g. that the lion eats only his own prey, that he drinks no water from which a dog has lapped, that the lion's voice only once in 2 - 5 days etc. Therapeutic and magical powers which have been ascribed to the several bodily parts of the lion, the skin, the fat, the flesh, the tooth, etc. are also rooted in ancient superstition, and even the numerous (500 it is said, according to others 1000) epithets of the lion in the Arabic language do not yield a perfect portraiture of it, but are synonyms for the most outstanding characteristics. The lion-chaos has never been a knightly sport with the Arabs, but consisted in the laying of pitfalls in which a kid was made fast for a lure. — In Syria and Palestine the lion is now extinct, and on the Euphrates it was by the middle of last century a rare sight; Arabia still has a Mas'ada in Yemen (Doughty; Travels in the Syrian Desert, 1854), in Egypt, Barbary, Morocco, the oasis Fassan and in Abyssinia it is not nearly so abundant as formerly. Constantly increasing traffic is driving it more and more to the southern wilds. The variety extinct in Abyssinia, the Soudan and Senegal with a short main which is only about five inches long and is never black but always a yellowish brown may be the nearest approach to those described in Arabic poetry.

In Astronomy Asad denotes the Constellation of the Lion, and especially the Star Regulus (α Leonis); in Alchemy it signifies "Gold".

Astrologie und Sprachwissenschaft, 1864, January, p. 101; Brehm, Reise in Nordost-afrika, p. 113; and Ergebnisse meiner Reise nach Hinterasch, p. 38; (constellation): Hartmann, Reise des Baron Bornim, p. 497; Jacob, Astrologische Bedeutungen, p. 16 (in the next number).

ASAD. Arab tribe. In Ptolemy (Arabia?) Geographical Scheme: Asad b. Khurasan b. Mudrika b. al-Mudjar. Brethren-tribes are al-Hawa and Khinim, sub-tribes Dadda, Saff, Ruima, Kibali, Hind and Ans. Unimportant tribes and clans are Asad b. Abd al-Uraz, Asad b. Liqahma, Asad b. Muzamay, Asad b. Mandari. Dwelling-places. The Asad occupy a spacious region. It extends almost right across Arabia from Medina to the Euphrates. They are not masters however of this entire region, but live in scattered groups and really exercise no correspondingly significant authority, as the regard paid them by the other tribes does not appear quite proportioned to the area of their wanderings. Towards the North their main settlement extends to the Shammar-hills, but they also dwell beyond them. In Africa the Asad appear in Saff (west of Kairouan). Neighbours of the Asad were: The 'Abs (in the Wadi Ghassiyir between Nitah and Nukha. The stronghold of the 'Abs, Uthay, lay near the border. Of the Wadi Thaid' the lower part belonged to the 'Abs, the upper to the Asad; similarly with the Wadi Ghassiyir; Yarab'ites (in Dhar Ushair) in Wadi Khaww; Dabba (in Wadi 'Akhil); 'Anajila (in the steppe of Alshagh); Kuningis (in the West); Tajiyyin (in the North); Salumit (in the West); Rada' b. Malik (on the hill Disa 'Ala); Tarna (in the West); 'Amir (in the hill Bani); Ghaum (in the upper part of Wadi 'Akhil); — in the territory the Asad: al-'Abs, al-Akhran, Djlis, Farkisn (between Bara and Kufa), Habban, al-Hili, al-Kallah, al-Kasun, Karb Zayb, Khay, al-Kenna, Kusa (iron-mine, whence Kusian swords take their name), Muhayyit, Raad, Saff, al-Farwani, Saha, Shabab, Turaif, 'Uwair, al-Zahara. — Wadi's and Watering-places: Arrak al-'Asaf (often named; on the road from Baia to Medine); 'Ab, Akhtal (wadi), Akil (wadi), Alya, Armam (wadi); Banah, al-Banah, al-Bukha; Buqata (famous battle, see infra), al-Dakala, al-Dhaya, al-Urta (wadi); al-Dijar (wadi); Djumaylit (wadi); Durah, al-Hafir, al-Hafir, Hammak, al-Dirr; Harran, al-'Agin, al-Kasr, Kafi, Khayma, Khamis, Khuwa (name of the Wadi l-Rumun in the Asad-region), Nabawin, al-Raf, Rawlat al-Ham, al-Rimith, al-Schaba, Shad, Shidin, Si al-Safar, Suwayta, Tamr, Taltha, Thodik, al-Zawda, Zulfa. — Asadite Place-names: al-Abahr, Ahmar, Alya, Alhaw, Khuram, al-Kali, Atik, al-Abyad, al-Atjar, al-Burani, Buatun Horsham, al-Dabba, Dhar al-Sarir, Dhar Akhtal, al-Djarmin, Dijar, Diyar, Darb, el-Khauar, el-Sumari, el-Sumari, el-Sarri, el-Soutak, al-Shakran, Sahel, Si, Sittha, Tamr, Tawak, Tawk, Tonka, al-Ujair, 'Urtal Ayar, Zulad (near Khinim), al-'Usayla.

History. From pagan times come accounts of many struggles of the Asad, e.g. with the immigrating Tayyites by whom they were displaced from part of their territory. Again, on a predatory expedition against the Asad, Shahr, who has become famous by reason of the lament for him composed by his sister al-Khamisi [q. v.], received the wound from whose consequences he died. But they are best known by their victories with their king Hudayr and his son, the poet Irshu al-Kale [q. v.]. In this instance the Khitrite prince al-Hanth's brother Amr had on dividing his empire appointed his son Hudayr king of the Asad. Some time after the Asad took advantage of Hudayr's absence in the Tihama for an uprising, which, however, met with a blow by Hudayr who had hastened hither; henceforth the Asad were called "Slaves of the Club", because on this occasion some of them were beaten to death with clubs. Besides this they were transplanted to the Tihama, but afterwards pardoned. On their return home they fell upon Hudayr and put him to death. According to another account Hudayr, on his own free will renounced royal power, but then fell the victim of an act of revenge. Or again, the Asad came out to meet Hudayr who was advancing from the Tihama to quell the rising, and defeated and killed him.
tura' al-Kais, Hudjir's son, did indeed take heavy vengeance on them, but was unsuccessful in his endeavour to bring them under submission to himself.

With the year 624, they make their entry into the history of Muhammad. Two men of consequence of the Asad thought that it might turn to use Muhammad's supposed weakness after his defeat at Opod (624) in order to recommend to their tribe a predatory expedition against Medina; some other with truer judgment of the position of affairs warned them against it, but, in vain. However before the assembled Asad were ready to set out, the Prophet got wind of the matter and, faithful to his policy of slipping every such movement in the bud, sent about 150 men under a capable leader by forced marches against the Asad, who fled to escape attack but left with the Muslims considerable booty in camels and sheep. The person who gave the Prophet information about the proposed expedition of the Asad was a Talyite and they were Talyites also who availed themselves of the confusion, which was now spread amongst the Asad and attacked and utterly dispersed them. In the year 624 they gave a contingent to the great coalition (The Campaign of the Ditch) formed by the people of Mekka against Muhammad, which separated later with the object unaccomplished. In the same year Muhammad despatched an expedition against the Asad, who fled being warned in time, but again lost camels. At the beginning of the year 9 (Spring 630), which was for them a year of famine, a section of the Asad announced their political submission. To this embassy and its negotiations Sitra 451 ref. makes reference. Here too the outward mark of political submission was the payment of the Sadaqah; but whether conversion to the religion of Islam occurred among this widely-dispersed tribe, of which, too, some lived far apart, is really uncertain. The alleged ill-conduct of the Asad envoys in Medina is but a biased invention; the Asad appear, however, even in Muhammad's lifetime to have offered many an occasion for complaint. Immediately before the death of Muhammad Talha (Tulahya), the chief investigator of the Asad plan attacked in 624, the leader of the Asad in the Campaign of the Ditch, participator in the Asad embassy to Medina, had ventured to proclaim himself a prophet — an attempt with inadequate insinuation, to be sure — and to urge apostasy from the State of Muhammad. Muhammad's death, the generally uncertain situation produced thereby and the absence of the large Muhammadan army in North Arabia enabled Tulahya to greatly extend (632) the religious-political movement initiated by him, and that he succeeded in bringing the Asad to open apostasy. But his endeavours to instigate the powerful Beduin tribes whose encampments were in the West to a great, united insurrection had only partial success. It appears that only the Fadira attached themselves openly to the Asad. But bye and bye men from the 'Abi, the Thakhyah and the Talyee seem also to have been found among them. At the death of Bu'athah, in the territory of the Asad, there ensued a fight with the faithful under Khalid's leadership. When Tulahya in the middle of the fight was left in the lurch by the Fadira the day was lost to the Asad. Some subsequent skirmishes (e.g. at al-Dharm) completed their submission. Only then appears to have occurred their conversion to Islam.

In Kufa they occupied later a quarter of their own, and constituted a considerable section of the local population. We then find also their Kufic contingent, e.g. in the armies of 'Abd al-Rasid, Muharrir, Muhammad and Yarid.

ASAD b. 'ABD AL-LAH b. KASKI (according to the Arabic sources; according to the Persia al-Kufati), governor of Khurassan under the Caliph Hisham b. 'Abd al-Malik, 106-109 (724-727) and 117-120 (735-738). Especially during his first term of office he conducted himself in relation to the Arabs as a faithful adherent of the Yemenite party. With the Persia Dhibkhan (Jandawwars) he was in high favour and was praised by them as a prudent "householder" (Kathhira) of his province. Samn-Khudd, the ancestor of the Samnoudi, embraced Islam under him, and in his honour gave his son the name Asad. The city of Balkh which had been deserted by the Arabs he had built anew, and transferred (107 = 725) the residence of the Khalif thither from Barakhan (a parasange from Balkh); later he made this city his place of residence, probably in order the more effectively to carry on the struggle with the princes of Takhistana, their Turkish allies and the Arab insurgents under Harith b. Surajji. In contrast to his successor Nasr b. Siyadh he did not archivary any high military successes. The village of Asabdylid near Naasabur was built under him, and remained in possession of his successors until the administration of 'Abd al-Lah b. Tahir (q.v.).

Schefel, Chrestomathie persane I; ed. van Vloten, Richesses de la domination etc. (Verhandelingen der Koninklijke Academie Amsterdam, Afdeling Letterkunde, I, No. 2); J. Wellhausen, Das Arabische Reich und sein Sturz (Berlin, 1902). (W. BARTHELO.)

ASAD b. al-LUKAYR b. SIMAH, Amr b. 'ABD AL-LAH, born 142 (759-760) in Haraaz, came while yet quite young with his father to Africa, afterwards in Medina he attended the lectures of the famous jurist Malik b. Anas (q.v.). After his death he went to Ithri, made the acquaintance of the pupils of Abn. Hauwa, and studied therefor in Egypt under Ibn Kasim (q.v.). Returning to Kasiryan (184 = 797) he soon acquired the reputation of a great jurist (cf. art. AGHIALIUS), and by the Aghialid. Ziyadat Allah was appointed Kadi of this town (103 = 818-19) along with Abn. Mubarak Muhammad who was already occupied in the latter office, although it was unusual for two Kadi's to officiate at the same period in the same town. Great as was the repute he enjoyed as jurist he is yet better known by the expedition to Sicily (101 = 826) which was commanded by him (with the title "Amir"), in the course of which, during the siege of Syracuse, he died (423 = 828) of the plague, or, as another tradition has it, by an enemy's hand.

ASADI, Ali b. Aqib, son of the above-mentioned, author of a Neo-Persian Dictionary of Rhyme, edited by Horn (Asadi's neueresches Wörterbuch Luschati-Persisch; Göttingen, 1847). He is also held to be the author of an epitaph entitled Gara, Hath Darun, which was published in 1806. Selections from this were published by Turner Meers in the 4th Vol. of his edition of the Sagh-Nama. It may also be mentioned that the well-known and very ancient Vienna MS. of the Liber Fundamentorum Pharmacologiae edited by Seligmann bears the signature of our poet.

ASAF b. BAKRA', (Hebrew Asaf b. Berekyah), name of the alleged Wazir of King Solomon. According to the legend he was Solomon's confidant, and always had access to him. When the royal consort Qatada was worshipping idols Asaf delivered a public address in which he praised the apostles of God, Solomon among them but only for the excellent qualities he had manifested in his youth. Solomon in anger threatened to punish him, but was reprieved for the introduction of idol-worship at the court. This was then done away with and the court punished; the king became repentant.

(A. J. Wessinck.)

ASAF-DJAH, title of the Nishan of Haidarabad [q. v.]

ASAF-KHAN, this title was borne by several persons at the court of the Great Mogul of whom the following deserve mention:

1. ASAF-KHAN Mirza Dzafar-Beg b. Mirza Badr al-Zaman, born at Khiva, came in 1577 to India and received after the death of his uncle Mirza Chibik, al-Din the Office of the Bakhshigar, which he had administered, with the title Asaf-Khan (980 = 1577). Under Dzafar beg was appointed Wazir, but he owes his fame chiefly to his literary merits. He composed poems, and had a share in the great work Tarikh-i-Asif. Asaf-Khan died 1621 (1612).

2. Bibilography: al-Badani, Muntakhab at-Tawarikh, iii. 216 et seq.; Elliott and Dowson, History of India, v. 150 et seq.

2. Asaf-ib-Hasan, son of the Wazir Firoz al-Dowla and brother of Nur-dzahan [q. v.], after his father's death he was also appointed Wazir by Dzafar beg as well as under his successor Shah Dzahan, who had married his daughter Arjumand Banu Begam (Mumtaz Mahall, q. v.) was first man of the empire in esteem and in wealth. Asaf-Khan died 1641 (1631). His tomb in Shah-dam, not far from Lahore, is still existent.

ASAF. (See Sayy.)

ASAS (a), foundation. This word has a special denotation in the system of Imam (q. v.). According to this there follow upon each appearance of the Nāṣir (Speaker, Prophet) who appears anew at the beginning of the seven world-periods as the embodiment of the World-intellect, seven Imāms one after the other who are termed Šanītī (silent); after these 7 Šanītī there begins again a new cycle of the self-renewing Nāṣir. The first in point of time of each group of seven
of these Sama'i is the Ašā (or Nas̱ib) as the incarna-
tion of the world-soul; to him there unswate-
ring from the Nāqī the secrets of the progressively
revealed true doctrine. Thus to the Nāqī Adam
belongs the Ašā Seth; to Moses, Aaron; to
Jesus, Peter; to Muhammad, ādāb. This ādāb
Abd Allah b. Maxamūn al-Kaddāb, grandson of the
Mahāmidd Aḥhad Allah, the founder of the Fārisūn
dynasty.

(Goldziher.)  

AŚFĀR (a.), yellow; also, in distinction from
black, simply light-colored. Some Arab philolo-
gists, like Wulff, have endeavored to con-
clude the meaning "black," see the discussions
thereon in the Kābdnah al-Adāb, i. 465. The
Arabs called the Greeks Bawūn l-ʾAfār (see Banū al-
Adāb; i. 274, and infra) according to
Tabari (ed. de Goëuff, l. 157, 151, 155, 165),
signifying " Sons of the Red One." (Emu.) In
the Ḥadīthic manner is made use of the context of the
Arabs with the Banū l-ʾAfār and of the conquests
of their capital Constantinople (Maḥmūd Ahmad,
ii. 174). Maḥmūd ban l-ʾAfār (Aḥkām, i. ed. vi.
98, 12), is the Christian princes, especially those
of the Rūm (ib. p. 98, and infra); cf. Abī Tan-
mūn, Dīwān, ed. Beirut. 18 ult. in a poem to
Muḥammad after the battle of Amurraia. Later
this designation was applied to Europeans in
general, especially in Spain. Turīgah al-Saffar
(Spanish Era) can thus be best explained; other
views, in Zeit. der. Deutsch. Morgenl. Gesellschaft,
xxii. 626, 637. Many genealogists have explained
Ašā as the name of the grandson of Essu (Zašū)
in the Septuagint, Gen. 36, 17 and father of
Rumil (Reffel, Gen. 36, 10), ancestor of the Rūm.
According to the explanation of De Sacy (Nal,
et Extr., l. 437; Journ. As., 3, Series, Pt. i., p.
99), the Banū l-ʾAfār (Zašū), Deutsch. Morgenl.
Gesellschaft, iii. 237-241), the designation Banū l-ʾAfār was a literal translation
originally referring to the Fañean dynasty, then
became extended beyond it to the western nations.
From his travels among the present-day Norarias
(I. v.) H. Lamans relates that they designate
the Emperor of Rusia Manīl al-ʾAfār (Am país
dos Novarias in Rev. de l'Ord. chrétien, Paris, 1900,

Ser., i. 250; 10, Ser., xii. 190.

(A. H.)

Al-AŠĪʾAH, Abū Ḥāṣīn Māmīn b. ʾAlāʾ b.
Abbakr, of the tribe Kaʾb b. Thabban, eminent
poet of the period of transition from the Džil-
īyā to Islam. To distinguish him from other poets
of the same name he is called Abī l-ʾAlāʾ b. Ḥāṣīn.
The epithet Abī l-ʾAlāʾ was given him from a
verse in his so-called Maʿalāʾikah (ed. Lyall, Calcutta,
1894, v. 20). The year of his birth is unknown;
he died c. 639 A. D. Though he lived therefore
into the period of Islam and even composed a
very famous poem in praise of Muhammad, yet he
did not accept the new faith. But just as
little may he have been really Persian, though he professed
in his verses, written in the most persian,
ynoise and sound, to write into close contact with Christianity through inter-
course with the court of al-ʾAbnū and through
those in his intimate neighborhood. Next to
Imrūʾ al-Kāsī, al-Ašīʾah is the ancient-Arabian poet
who has wandered about most in the world and
proached for himself thereby a proportionately
broad horizon. Hence, too, the astonishing
number of allusions to historical incidents and
the numerous foreign words, especially Persian, in his
poems. Through their Wino-sungs al-Ašīʾah and
Abī l-ʾTūfal, have served as models for the later
singers of wine.

AŚHĀ HAMDĀN, properly Abī al-ʾRajūm b.
Abd Allah, Arab poet, who lived in Kufa in the
second half of the 1. (vii.) cent. He was
married to a sister of the theologian al-ʾShaʾīʿ, and
he, again, had married a sister of al-ʾAšā. The
role which he played under Abī al-ʾRajūm b.
Abd Allah is best known. He took part in
his campaign against the Turks, and was taken
captive but escaped with the aid of a Turk-

ishe woman whose passions were enlashed for him.
When Ibn al-ʾAlāʾ turned against al-
Hadīdhād the poet's sharp tongue aided him with
satire. The decisive battle at Dair al-Djamudīn
resulted unfortunately; Ibn al-ʾAšā took to flight,
and al-ʾAšā was led prisoner before al-
Hadīdhād, who immediately recalled to him some
of his malicious songs. His extemporaneous
flatteries availed him no longer: al-Hadīdhād's
sentence of death was carried out on the spot (37 =
702). The poems of Aḥs̱a Hamdan which have
been preserved to us are reflexes of his adventures
and political sentiments.

AŠHĀB (a., sing. Ṣ̱ḥāb) or Ṣ̱ḥāb (a single
one: Ṣ̱ḥāb); "Companions"; as term, techn. of
Islam it has the special sense of "The Companions
of the Prophet". In earlier times the term
was restricted to those who had enjoyed inter-
course with the prophet for some time, and had
accompanied him on his expeditions. Later the
circle of Companions became more and more
extended, the condition that this must have been
actual intercourse being disregarded, and those
orthodox being also included in the Ašha who
had met the prophet during his life, or who had
seen him even if but quite a short time,
without regard to the age of the persons in
question; they were called "companions" on the
i. 240). The definition which is valid in Theology
attaches itself to the wider extension of the term
(Kanjallānī, vi. 88). Amīr b. Wāṣīl al-Kaṣīnīs
Abī l-ʾTūfāl who died shortly after 647 A. H.
was styled the last of the Companions (Urd al-
Ghālā, iii. 97, v. 233), and must have been
quite a little child when he saw Muhammad; he was only born in the year of the battle of Uhud and was with the prophet at the age of 8 (cf. Zeitisch. d. Deutsch. Morgenl. Gesellsch., xxiii. 595). Orthodox Qādim, whom legend mentions as having communication with the prophet, also have according to this canon their place among the Āshāb. The Āshāb occupy a Sunni position high rank in the organization of the Faithful. After the Korān they are the sources of authentic religious doctrine, since information about the prophet’s expressions and procedure traces back to the communications which they as eye and eye-witnesses have made regarding them. On the dicta handed down by them as authentic the Ḥadīth is based; those Ḥadīths which trace back to them in an unbroken chain are munūm ("toppled"). Attested accounts of their own procedure are regarded as evidence for the correct Sunna, which the Faithful must hold to be the rule of conduct for all times. Their intercourse with the prophet and the importance which they have in the establishing of Islam have made them from the beginning objects of praise to the orthodox. To revile them or to hold them in contempt is considered an execrable crime. Scurrying is the penalty set upon their reviling (Sāhīh al-Ḥadīths), even capital punishment, in the event of an obstinate repetition. As precedent among the Āshāb the first four Khāli- fās’ occupy the highest places in the order of their accession to the ruling power; six other Āshāb share with them this preeminence, that Muhammad assumed them while they lived in Paradise (al-Āshāb al-muḥabbajūn waṭan il-l-Ḥaqqān); they constitute a separate category of the Āshāb. Other categories among the Āshāb are determined by the different nature of their share in the prophet’s enfranchisement; Mūshīqīnīn (who emigrated with him to Medina; Angās (natives of Medina, their share begins only after the emigration), Rūdīyīn (who cooperated with him at Ḥadīth), etc. The opinions on their qualitative gradation have been collected in Nawawi’s Commentary on Muslim (Ṣaḥīh, V, 161). The contemptuous attitude which manifests a hatred that not rarely becomes intensified into fanaticism towards the Āshāb, because with their approval the first Khālfās, were they right or wrong, were given the rights of Allāh and his family, presents an outstanding peculiarity of the Sunna in contrast to Sunni Islam. The adherents of the latter constantly make the Tafsīr-Eunology (rādīya Allāhu "ānhu, "Allah be pleased with him") follow the mention of any one of the Āshāb in speech or writing. In the theological literature of the Sunnis the collection of the traditions concerning the virtues (Faqīl al-Maṣūkī al-Āshāb) receives especial attention; most systematic works on Hadīth contain a section on their. There are beside, several works in which the names of the entire companions have been collected with biographical notices and communications regarding the Hadīth they have handed down. They display many variations among one another. Of Abd al-Baqī’ Ibn ʿAbd Allāh Ibn Abī Bakr (died 295 = 707), Aḥmad Ibn Maṣūkī al-Āshāb (a Vols. Hādītsū (184) cf. the critical notes on Ibn Saʿūd, Tafsīr al-Sīrīn, vi. 135), Aḥmad Ibn ʿAbd Allāh al-ʿAbdīn (died 581 = 1185-1186). The correct version of their predecessor has been critically compiled, corrected and supplemented by ʿAbd al-Lawīn Ibn Aḥmad al-Ḥaqqī al-Qādimī (died 630 = 1232-1233) in his comprehensive Usūl al-Ḥaqqī fī Maṣūkī al-Āshāb (3 Vols. Cairo 1286), also Ṭabādh, Tafsīr al-Ṣābiḥ (3 Vols. Hādītsū; 1315: 809 Biographies). Still fuller material is given by Aḥmad Ibn Ḥaḍīr al-ʿAbdīn al-ʿĀshābī (died 639 = 1438-1449) in his al-Ḥaqqī fī Tafsīr al-Ṣābiḥ (3 Vols.; printed in the Bibliothèque Indica, Calcutta 1855-1854; 8 Vols. Cairo 1323-1325).

Aḥmad al-Kaḥfī, the people of the cave. This is the term used in the Korān to denote the youths who in the West are commonly called the Seven Sleepers of Ephesus. This is the story almost as Muhammad tells it (Sūrat 18, 25 28). Some years in a pagan town are loyal to the one God, they conceal themselves in a cave, whose entrance is on the north side. There God puts them and their dog to sleep. "And if you had come upon them you would have found them asleep and been arrested with terror." After 390 years the sleepers awake and send one of their number into the town to buy bread. — The Korān has no more to relate; there is only added that their number is variously given as 3, 5 or 7 and that the story is intended to confirm faith in the resurrection. The historians and commentators have more to tell. Of the various traditions which al-Ṭabarī (ed, de Georgi, 1, 775 at sqq., Tafsīr, fasc. xiv. 123 at sqq.) communicates the majority are of the following type: In a town of Rum (i.e. in Greece or Asia Minor) some youths, who have gone over to Christianity refuse to worship the idols. They flee from the town and with which would not have been chased away conceal themselves, where they go to sleep. The pagan king Dākyūs (Dākyūs, Dākyūs) soon appears at the scene with his servants to seize the persons of the young men. But no one is able to enter the cave, and the only thing possible for him to do is to build up the entrance that those who in may die of hunger and thirst. This he does. Afterwards the thing is forgotten. On day an owner of needs sends workmen to remove the wall at the entrance, and causes a sheepfold to be constructed there. The workmen however do not observe the sleepers. In God’s time the latter awake. Filled with anxiety they send, observing all caution, one of their number into the town to buy bread. The baker does not recognize the coin which, is given in exchange and brings the young man before the king, when everything is explained, the men have slept for 390 years; in the meantime the pagan has given place to a Christian government. The king is much rejoiced, for the presence of this youth is proof that the body is raised with the spirit, a thing which some have doubted. As soon as the young man enters the cave again he goes to sleep beside his companions. A church is then built at the spot.
This account must suffice. Only one differing version need be mentioned which originated from Wahh b. Manahhibh (Tabari, ed. de Goeje, I, 778 et seq.; Ibn al-Athir, ed. Torsh., I, 254 et seq.):

One of the apostles went to the above-mentioned town; at the gate he found that an idol had been set up before which every one who entered had to prostrate himself. In consequence he remained without the town and hired himself out as an attendant at the baths. There he quarreled on his propaganda and won the youths for Christianity. One day as the son of the king was about to enter the baths in company with a female, the apostle admonished him. This time he was prevailed upon to forego his intention, but not the next time however. Then the divine punishment fell on them both, and they died in the baths. As soon as this reached the king’s ear he issued a warrant of arrest on the person of the apostle. But he and the young men were carried off for safety to a cave by an acquaintance; there was also a dog with them.

What it goes on to state agrees with the other version. — The story is told in the sources with much historical and geographical detail; many of these details are confirmed by tradition, and others have not yet been explained. The most important of them will now be noticed.

The pagan king is named Dākyns, i.e. Decius (249—251), who persecuted the Christians, and the Christian is Theodosius II. (408—450). This however does not agree with the Kūrinīc account, that the sleep lasted 509 years, nor with others, according to which it lasted 472. — The question as to which town is the scene of the story is important. The western sources all name Ephesus; some of the oriental, Aphis. The Arabs know of two places called Aphis: the one is the well-known town; the other is the old Arabissin in Capadocia, which is cited also called Aphis (now Varparu). Are we to seek there the scene of these actual or supposed events?

De Goeje has adduced proofs out of the literature in favour of this view. Some travellers e.g. relate that a cave was pointed out to them where containing 13 male corpses which looked as though they had died at the (Yāṣīt, Medīmīn, v. 506; al-Muqaddasi, p. 1531 Ibn Khordadhbeh, p. 106, 110: al-Biruni, Chronology, ed. Sachau, p. 290). Further: in the Recueil des textes écrits du Pélerinage des Seljoukides, ed. Homma, iv. 152 it is simply stated that Arabissin is the place of the "people of the cave." Perhaps it is this discovery which is the original source of the legend of the seven sleepers. Because of the name Aphis people came to think later of Ephesus.

Another important question is connected with the mention of the last word in the Korānic "μαρτυρίων τῶν Θεόν ἐγώ ἂν." Many take it to be the name of the dog, or to be the tabler which contains the story of the youths. The Arab geographers regard it as a geographical name; Ibn Khordadhbeh e.g. calls the cave, which is mentioned as containing the corpses, al-Rkīm; he lays in the story of the youths at Ephesus. Al-Muqaddasi on the other hand regards the 13 men discovered at the Aṣḥāb al-Kūrinī, and knows of a place al-Rkīm in the vicinity of the East of the Jordan not far from Amman. There a wonderful incident has occurred with 3 men who are therefore called Aṣḥāb al-Rkīm, Clermont-Ganneau has visited the cave there and considers it to be the same described in the Korān.

What significance attached to the dog we cannot tell, nor where the mountain Aṣḥālī (the spellings of it are very various) is to be looked for; nor is there unanimity in regard to either the number or the names of the youths. The oldest mention of the legend in the east we find made by Dionysus de Telî Mahra in a Syrian work of the 6th cent. In the east by Theodorus in his book on the Holy Land: In these versions the names of the youths are Greek. Opinions are at variance in regard to the question whether the variant found in Dionysus was translated from the Greek or was originally composed in Syriac. — The legend is widely spread in the literatures of east and west. On this point see the work by John Koch, who has attempted to give it a mythological interpretation.

Aṣḥāb al-Rass, "the people of the ditch" or "of the well", are twice mentioned in the Korān (Sūra 25, v. 50; v. 55), along with Ad, Thamūd and other unbelievers. The commentators know nothing for certain about them, and so give widely divergent explanations; and all manner of fantastic accounts. Some take al-Rass to be a geographical name (cf. Yāṣīt, sub voc.; some hold that these people, a remnant of Thamūd, still (race) their prophet Hannāla in the well (pool) and were consequently exterminated. It is also related that the mountain of the bird "ʿĀnā" [q. v.] was situated in their region. — Tabari mentions the possibility of their being identical with the Aṣḥāb al-Ḥukūṭ (q. v.); otherwise he does not know of anything relating to them; just as little do we.

Bibliography: The Commentaries on the verses of the Korān in question; Damüli, Hayāt al-Hayamun, see under Āṣbaṣ; Thalabī,
AL-ASH'ARI, Abu-l-Hasan 'Ali, famous theologian, born at Basra in the year 260 (873-874), descendant of the above-named. The complete genealogy is: ‘Ali b. Isma’il b. Ishak b. Sallim b. Isma’il b. ‘Abd Allah b. Mūsá b. Abū Burda. Until his 40th year he was a zealous pupil of the Mu'tazilite theologian al-Dhabhāli [q. v.], then on the occasion of a dispute with his teacher on the fitness of God’s predeterminations disagreed with him and went his own way. But Spitta has shown that we have to do here with a biased legend and that probably the study of the traditions elucidated for him the contradiction between the Mu'tazilite doctrine and the spirit of Iklīl. However that may be, he henceforth changed his orthodox views against the Mu'tazilites and composed a large number of works of a dogmatic and polemic nature. Ibn Ḥibbān states that their number amounted to about 300, Ibn Askiṭ gives the titles of 95 of them, which are repeated with occasional notes in Spitta, Zur Geschichte Abu l-Hasan al-Ash'ari, p. 63 et seq. Only a few of them have been preserved, and are enumerated by Brockelmann, Geschichte der islamischen Literatur, Vienna, 1905, and by Geiger, Geschichte der Araber und Perser, p. 195. The work al-Dhahabi’s al-Ma’āmūr al-Dhahabi has been printed with three supplements at Haidarābād in 1521 (1903). Also al-Khitāb al-‘Aṣḥābi al-Khwājā fī l-Kulūm (ibid. 1933). His philosophical system is sometimes disparagingly judged. Cf. Geiseler, Beitrag zur Orientalistik, p. 472 et seq. For the rest he belonged to the Madhhab of Shāfī‘īs. He spent the closing years of his life in Baghdaḏ and died there in the year 342 (955).

‘Ali b. Isma’il enjoys the credit of having overcome the anphitheta of the older Muhannadans scholars to dialectic in articles of faith by his successful utilization of the methods of dialectics. He was one of the first to combat the Mu'tazilites, and the chiefs of other sects who were suspected of heresy. He was, therefore, the founder of orthodox scholasticism (al-Kalām), since the few orthodox teachers who pressed on it before him had had too little culture to be able to avoid giving offence by certain of their expressions. His method in consequence found acceptance especially with the Shāfī‘īs, and he gathered round him a circle of pupils from whose midst there went forth various famous theologians who developed and spread his doctrine. The best-known of these older Ash'arists were al-Bābikīn, Ibn Ḥibbān, al-Jawhari, al-Dhawārī (Imām al-Haramain) and especially al-Qasātī. Outside the Madhab of al-Shāfī‘īs the opinions of al-Ash'ārī met with less recognition. The Hanafis preferred the doctrine of his contemporary al-Murtadull, who however differed from him only in subordinate controversial points. The Hanbalists kept to the old point of view and remained opponents of the Ash'arite school. In Spain Ibn Harm [q.v.] opposed the doctrine of al-Ash'ārī. Under the first Seljuq, Toghrat-Beg, the distin-
guished Ash'arite teachers were even persecuted at the instance of the Wazir al-Kundur; however, his successor, Nizam al-Mulk soon put an end to this treatment of them. They gained more esteem under the second of the two Nizams, Al-Hakim (d. 1107). After his death, his son, Al-Qa'im, continued this policy of respect for the Ash'arites, and thus won the admiration of the students of the Al-Azhar School in Cairo.

In the 13th century, the Ash'arites were also prominent in the schools of the Sunnis and their influence continued to grow. The Ash'arites were particularly strong in Egypt, where they had a large following. Their influence was also felt in the Islamic world, particularly in the schools of theology and jurisprudence. The Ash'arites were known for their rigorous and systematic approach to the study of Islamic teachings, and their influence continued to grow throughout the Islamic world.

The Ash'arites were also noted for their contributions to the fields of philosophy and science. They made significant contributions to the development of Islamic philosophy, particularly in the areas of metaphysics and epistemology. They also made important contributions to the development of Islamic science, particularly in the fields of mathematics and astronomy.

The Ash'arites were known for their piety and their devotion to the teachings of the Quran and the Hadith. They were also known for their commitment to the propagation of Islamic values and ethics. The Ash'arites were particularly active in spreading Islamic teachings to the non-Muslim world, and they made significant contributions to the spread of Islam in various parts of the world.

In the 13th century, the Ash'arites were also active in the political arena. They played a significant role in the governance of many Islamic states, and their influence extended to the highest levels of government. The Ash'arites were also known for their commitment to social justice and their efforts to improve the lives of the poor and the oppressed.

In conclusion, the Ash'arites were a significant force in the Islamic world, and their influence continues to be felt today. They made significant contributions to the development of Islamic thought and culture, and their legacy continues to shape the Islamic world today.
year 26 (646-647), in the reign of 'Othman, al-Walid b. 'Ukba after his campaign of conquest in Aghdrabah appointed him his representative there. He even became governor and administered the province under 'Ali also, who however recalled him since he needed him and his troops in the war against Muyawiyah. Here he rendered good service at first, and took an energetic part in the fighting at Ṣiffin. But in the decisive battle 37 (= 657) he simply caused 'Ali to comply with the pressing demand for a court of arbitration, to terminate the battle, and to send him to negotiate with Muyawiyah. There he agreed upon the modalities of the arbitration, and next forced 'Ali to send the unsuitable Abu Musa to this court as his advocate. When the arbitration-court turned out to be but a trick it was mainly he who restrained 'Ali from at once resuming the fight with Muyawiyah. The remainder of his life he spent among his kinmen in Kufa. He died in the year 41 (661-662), shortly after the conclusion of peace between 'Abd al-Malik b. 'Abd al-Malik (who moreover was married to a daughter of his) and Muyawiyah. His whole family, from his father to his grandson, was regarded as a nest of traitors.

ASHI (A.), Evening, night, time of the night-prayer.

ASIK CELEBI, author of one of the oldest biographies of Osmanni-Turkish poets. His full name is al-Suyyud Ph Muhammad b. al-Suyyud 'Ali al-Nasir. Mu'allim Nadji in his ša'irīq gives 924 (1518) as the year of his birth, Sāmī in the Kāmil al-ša'irān 926 (1520). There is disagreement also as to the place of his birth (Lafti and Khānišāde: Bursa; Ṣiyāf and Nadji: Roumeliya). At the conclusion of his studies he was judge in various Rumelian towns (Silifke, Fıratın, Serfüj), and finally in Edirne, where he remained until the end of his life. According to Khānišāde his death occurred in the year 929 (1520-1521), according to Ḥajjī Khāliṣa and Mu'allim Nadji 929 (1521-1522). The year 929 given in Sāmī is a printer's error for 979, as we gather from his statement that "he was a contemporary of Khānišāde, author of the Ta'dīgārā, and died in the same year." Here of course Sāmī has mistaken the two Khānišāde, father and son. Under Khānišāde he gives the dates correctly (979 for the father, 1012 for the son).

Ashik Khālia's chief work is the Biographies of the Poets Muqaddar al-Sa'ār (Hadjī Khālia N. 3081 and 12039), commonly called Ta'dīgārā al-Sa'ār. It is more extensive than that of Lafti, and is of great value especially for the contemporary poets, some of whom the author knew personally. (Hadjī Khālia used it extensively in his History of Ottoman Poetry (cf. the Index). Khānišāde says, that the circumstances and characteristics of the earlier poets have been carefully investigated in it, but that the style is without charm. The work was completed in 976. Gībī promised MSS. (see his History of Ottoman Poetry, p. 159 and n. 11). If they are two exemplars in Vienna, the other having the date 994 (1586).

Ashik found expression also in poetry. Ḥajjī Khālia in N. 553 mentions a Dīwān, and in N. 7697 a Ṣawma'īq of his. Further he translated various Arabic works into Turkish. The following may be mentioned:

ASIK PASHA, his real name was 'Ali; he was the oldest of the West-Turkish poets, and wrote a large work entirely in Turkish. He was the son of al-Muṣṭal, the son of Shāhī Ḫiyā, who had the surname Bābī Ḫiyā. Concerning the lives of these three we have little information, and it is often contradictory. Asik Pasha lived in Kırşehir in Anatolia under the reign of the Sultans 'Othman and Orkha. He was born in 670 (1271-1272), and died in the 13, Safar, 733 (3 Nov., 1333). There is extant a long Mathnavī-poem of his, with the title Ḡorāth-name, but which is usually, even if inaccurately, called the Diwan of Asik. Ḥadīḍi Khālia mentions it under the title Nūr-i-Nūrānī. It consists of 10 Bāb of 20 Dostan each, and, corresponding to the metre of the Mathnavī of Djalal al-Dīn and of the Ḡorāth-name of Sultan Wālid, is composed in hexameter Ramal. It was completed in the year 730 (1329-1330), three years before the death of Asik. It was intended to introduce those Turks who did not understand Arabic or Persian to the doctrines of Sufism, which — naturally systemless — are dealt with and explained by means of examples. If the work be poetically valueless yet this first attempt deserves full recognition on the linguistic side.

The Ḡorāth-name has not yet been printed; MSS. are numerous. Besides those edited in Kien, Cat. des Turc. MSS. in the British Museum, 16th, last paragraph, and in French, Le Corbeau, d. Šīrīn, Hist. d. Königl. Bibl. zu Berlin, N. 359, the author of the present article has in his possession a well-preserved, excellently written exemplar.

ASIK-PASHA ZADE, great-grandson of the above; his real name is, Ahmad b. Vaḥīd b. Sāmī b. Asik-Pasha; the oldest Osmanni historian. His work had already become rare by the time of Ḥadīḍi Khālia; a fragment is extant in the Vienna Hofbibliothek (Flügel, Katalog, II, 166).

ASHIR (French, Ashir), ancient fortified town whose ruins lie S. E. of Medea on the Kaf 'alādkar, on the south-eastern slope of the mountains of Tige, situated 35° 59' E. Long., 35° 53' N. Lat. These ruins are built upon a rock, now called Banya or Mazzah bint al-Sulaym, which falls sheer away in high precipices, and has a surface of about 95 acres, and they are without doubt those of Ashir as it is described to us by the Arab historians and geographers. The town has an exceedingly picturesque site and obtains excellent water from two copious springs, now called 'Ain
Arabic text translation is not possible.
the Papyri of the i. and ii. centuries of Islam know of two places, Ummūn al-Safā and Ummūn al-Fāṭma, in Lower and Upper-Ummūn. One of these two towns is the ancient Hermonpolis, the other is doubtless of late foundation, and was made possible through the drying up of the Bahr Ya‘ūs or through the shifting of the Nile-bed, a matter about which there are various accounts existing. The double-name of this transition-period the representative town of a ḫirār, and, on the inauguration of the provincial divisions under the Fātimid al-Mustanṣār, the capital of a province. It flourished till late into the Mamlūk-period, but by 1270, in consequence of a fresh change of the Nile-bed, the neighbouring town Mālik became the chief town; the same conditions resulted later in the preeminence of Minia (Manṣūr al-Khaṣṣṣī).

In the Middle Ages Aṣhmūnīn was famed for its fertility. Red woollen-carpets after the fashion of the Armenian ḵirman-carpets were also manufactured there. Owing to the sheep-raising of the Aṣhmūnīn a sheep-fair in its neighbourhood is become a centre for the manufacture of wool, and the products (garments) were exported.

Makrīzī informs us about all manner of legendary buildings, and especially of a walled passage under the Nile connecting it with Asūnī, the ancient Antioch.

The town must not be confused with other places of the same name in Egypt, Ummūn (or Ummūn) al-Rammān near Damietta and Ummūn (al-Qirār) in the province of Manṣūfīa.

1. AṣHMUNAIN, name of three Ayyūbīs:

1. AṣHMUNAIN, Al-Malik al-Asœur al-Din Aṣ Ib al-Fatr Mūṣī was a son of al-Adīdī l. q. v., and thus a nephew of Sidūnīn. Born in Cairo or in Karak in the year 578 (1182-1183), he received from his father in the year 598 (1201-1202) the governorship of Edessa to which Ḥarrān was added later. He quarrelled with the Zengid Nūr al-Dīn Arslān-Shāh of Mount, and defeated him in the year 600 (1204) in the battle of Bāṣm al-Nahrān. Later his father transferred to him also Khaṣṣārī, Malqa’ilīn and other towns, and from the year 600 (1204-1210) he conquered the larger part of Mesopotamia; his residence was at al-Raḵṣa. On the death of al-Zahir Ghāzī of Aleppo (613 = 1216) he seized Aleppo to his line, when it was threatened by Seljuk’s infidel son al-ʿAjfal and Khaṣṣārī of Rīm (Anīs Minor). When on his father’s death the Franks lay before Damietta, he decided after some hesitation to hasten to the help of his brother al-ʿAzm, the new head of the family. The reconquest of Damietta was attributed to his lucky star. When on the death of al-Malik’s son Seljuk’s infidel son al-ʿAjfal was attacked by al-ʿAzm, he joined with al-ʿAzm; but soon after al-ʿAzm, who transferred to him Damas-

Or., l. 90—113); also (Constantimpioli), iii. 116 ff.; Ibn Khallikān, Tractatus de Sane, iii. 486 ff.; Dhikr Khaṣṣār al-Revṣ ensl (Raṣ̄elī), etc. (1264); Ibn Khallikān, Thun, p. 339 ff.; Al-Muḥāfaz, Der Islam im Morgen- und Abendland, l. 162 ff. 2. AṣHMUNAIN, Al-Malik al-Asœur Muẓṭafā al-Dīn Muṣī, son of al-ʿAzm, Biskhārī, was the last prince of Ḥim of the house of the Ayyūbīds (Line of Gūrākīn). He succeeded his father in the year 648 (1248-1249). Two years later al-Nāṣir of the Alpo-Ahmed line supplanted him against the wishes of al-Salīḥ of Egypt. On the invasion of the Mongols he was restored to his states, and his position confirmed later by the Mamūlī Khaṣṣārī. The dynasty became extinct on his death (666 = 1266-1267), and (Him was administrated directly by the Mamlūk.)

(Ch. H. Becker.)

**AṣHMUNAIN,** name of several Ayyūbī princes.

See Khāṣṣārī, Iṣmāʿīlī, Iṣmaʿīl, Iṣṭīṣāḥ, Khāṣṣārī, Khaṣṣārī, Khāṣṣārī, Khāṣṣārī, and Tumānāyēk.

**AṣHRAF** (Aṣhruf, Aṣhruf), town in the Persian province of Gūzān and chief town of a district (Bālūch) of the same name; situated 55° 40′ E. Long. (Greenw.) and 36° 40′ N. Lat., distant about 6 ms. from the South-Eastern shores of the Caspian Sea, on the road leading from Astarābād to Sīr, about 40 ms. to the west of Astarābād. This town, built at the foot of the Elburz range, is distinguished by its picturesque site and wealth of vegetation above all the others on the south coast of the Caspian Sea; the district of Aṣhraf
however is one of the poorest in the whole province of Mazzandaran; excellent rice, cotton and sugarcane are cultivated in the villages. Of trees the pomegranate, lemon and mulberry trees grow best.

Before the time of Shah 'Abbâs I. Ashraf was an unimportant village; its situation so pleased this Persian king that he made it an imperial residence (1623 = 1613), and in its gardens erected palaces which, according to the Persians, had no equal in splendour and grandeur. The palmy days of the town fall into the period of Shah 'Abbâs I., the Great, who chose it wherein to set up his splendid court; in 1627 there were 2000 families living in it, and it contained no less than 300 public baths. About the middle of the xviii. cent. Ashraf was more than once the scene of civic disorders, and was also repeatedly plundered by the Turkomans. These internal disorders and the dangers which constantly threatened from without caused many inhabitants to leave Ashraf. And so the town, in which the peace between Turkey and Persia was concluded on 3. October, 1727, again fell into neglect and gradually into decay. It has now declined into a large but unimportant village of 843 houses (in 1860), therefore of about 8,000 inhabitants, who support themselves mainly by a transit-trade, the cultivation of cotton and silk.

The gardens, well-known under the name Bugh-i Shah ("King’s Park"), lie to the south-west of the town at the foot of the mountain Sâh-Kuh, and are divided into 6 contiguous gardens, separated from each other by high walls and contain a number of palaces and other buildings. In the course of time they have all suffered as much from fire, devastation and earthquake that they now give no idea of their former splendour. The palace Chih-Sultan which was erected by Nâdir-Shâh in 1731 (1741) after a confiscation is the best preserved. Fully 1/4 mi. to the north of the town 'Abbâs erected upon a mountain with a magnificent view another palace with an observatory, which is now usually called Safâbâd after Shah 'Abbâs successor Safi; it is also lying in ruins.

ASHRAFI, also Sharif, sequel, dînar gold-coin.

ASHRAFIYA, Dervish-order (according to d’Ohsson), which takes its name from 'Abbâs Allah.
the other was 'Ammār b. Yūsuf (Tabāt, i. 3394) who fell at Siffin.

'Ašūrā', name of a voluntary fast-day which is observed on the 10. Muḥarram. When Muḥammad came to Medina he adopted from the Jews amongst other days the 'Ašūrā'. The name is obviously the Hebrew YOM HAJJU with the Aramaic determinative ending; in Lev. 16, 29 it is used of the great Day of Atonement. Muḥammad retained the Jewish custom in the rite, that is, the fast was observed on this day from sunrise to sunset, and not as was usually the case, only during the day. When in the year 2 Muḥammad's relations with the Jews became strained Ramaḍān was chosen as the fast month, and the 'Ašūrā'-fast was no longer a religious duty but was left to the option of the individual. — On which day of the Arabic year the fast was originally observed cannot now be ascertained owing to our dearth of information on the calendar of the period; naturally its observance coincided with the Jewish festival, the 10. Tisri, and so fell in the autumn. The 10. Muḥarram finds early mention as the 'Ašūrā'; probably the tenth day of the first Muslim month was selected to harmonise with the tenth day of the first Jewish month. From the calculations which have been made it does not seem possible that it could have been originally celebrated on the 10. Muḥarram (see Castani, Annali, l. 431 f.).

Presumably for the sake of distinguishing themselves from the Jews some fixed the 9. Muḥarram either along with or in place of the tenth as a fast day with the name 'Therūb'.

The Jewish origin of the day is obvious; the well-known tendency of tradition to trace the Islamic customs back to the ancient Araba, and particularly to Abraham, states that the Mekkan of olden time fasted on the 'Ašūrā'. It is not impossible that the tenth, as also the first nine days of Muḥarram, did possess a certain holiness among the ancient Arabs; but this has nothing to do with the 'Ašūrā'.

The fast of the 'Ašūrā' was later and is still regarded by Muslims as commendable; the day is kept by the devout of the entire Muslim world; it is holy also on 'historical' grounds: on it Noah left the ark, etc. In Mekka the door of the Kūba is opened on the day of the 'Ašūrā' for the performance of the 'Taqūd'. In Hargūz, Makkah, ii. 51. In lands which are Shi'ite or come under Shi'ite influence quite different usages have become associated with the 10. Muḥarram; in this connection see Muhammad.

'Al-ʿAṣīl is the name in use among the Arabs for the Orontes, the chief river in the north of Syria. Its original designation in classical antiquity is preserved in Arabic literature as al-Urān. Presumably the name as with the Greek Axios is to be referred back to an ancient native name. The common explanation of al-ʿAṣīl = the rebel = is a popular etymology with no actual foundation, and the name al-naḥr al-ʿAṣīlī = the river of inverts, but a scholarly invention.

The river-system begins in the north of the watershed of the highland-valley of al-Bīlānī not far from Bāl̄āshākq but really only obtains its volume of water further north at al-Humil from a spring, generally called simply the Orontes-Spring, which wells forth in a strong stream from the rock. Following the line of the Syrian canal its northern end the river flows through several lakes or marshes (those of Kāhēsh and of Taimi = ‘Alīsh al-Maṭla’il); on its banks are situated the most important towns of central Syria, Hims and ’Hāmā. Where the Syrian wooded ranges meet the folds of the Armenia-Asia Minor region, the river winds round from the north into a south-westernly direction, and takes up the water which has been bequeathed from northern Syria and is collected in the marshy region of al-‘Aṣīl, and changes itself below Amālabbīa, to the South of the Amauns, at a flat and hveness shore (Seleucia and al-Saw-handle were artificial havens).

ʿAṣif Efendi: Ahmad 'Aţāfī, Turkish philologist and historian, received the first part of his education in his native town 'Aţāfī, and then went to Constantinople, where from 1221 (1796) he was engaged as Muḥarram in the short residence in Selūṭī he returned to the capital and died there in 1235 (1819). Of his writings the following may be named as in the first rank: the Turkish translation of Fārābī's Arabic dictionary al-Ši'mā (ed. Bidāy, 1250, and Stephan, several times), the Turkish translation of the Persian dictionary Buḵān-ī Kāṭibī with the title Tīāvānā bi the Arz-e-e Ḫaḡii-ī Kāṭibī (in this connection Allāmāzfarīn literature, p. 308 et seq.) Among his philosophical works are: Kūfī Sīyāh, Marāh al-Ma‘ūlī; f. Sharh al-Ashūrā and Taḥfūd al-Lugātā Azābāyjān. As official historiographer he composed the Wādāf al-Sāmīra (C. Fligel, Catalog der Bibliotheken zu Wien, ii. 312 et sqq.).

ʿAṣif Efendi: Isma'il [See Celler-Zade].

'Asīr, a billy region in Arabia between Hijāz and Yemen; since the Turkish conquest (1871) has been a Sandjak belonging to the Wilāyāt of Yemen. Divided for purposes of administration into 7 Kāna (al-Abha, Bait Sghir, Chàmi, Ghunfī, Maṣṣīr, Rūdjal Alma tele, and Sābīt), though this division holds good only on paper. The Arab geographers of the Middle Ages do not
know it as a geographical name, and include this region partly in Hijjša, partly in Yemen. Al-Hamdání (ed. Müller, p. 195) alone knows of an originally Yemenite tribe of the name of 'Asr, which however was reckoned among the Isma'ili tribes, as belonging indeed to the 'Anz b. Wālī, and names among its locations the above-mentioned Abba. From this tribe the region, which was occupied by other tribes, especially the Badjila (cf. Ibn Dschubair, ed. de Goeje, p. 532), Aez and Khanjam, took its name. Nīlmar is unacquainted with 8r; he states that the Arabs of the coast between Aba 'Arth and Hijjša dwelt in tents and spoke a dialect which differed from the Arabic spoken in Djuds and in Yemen. Although they call themselves Muḥammadans, they are regarded in Yemen as Khāris and are reviled as Bani Ḥalif, worshippers of the moon. He mentions as one of their customs that they circumcise not merely the foreskin, but have a section of the skin of the abdomen entirely removed, and submit with the greatest courage to this painful operation, which often enough results in death. These accounts are confirmed by Ibn Dschubair (see supra) and others, and so far at any rate as they make mention of the rude customs of this brave hill-folk. According to Burckhardt they are the only marriageable daughters in open market and place their wives at the guest's disposal. The region has only become known to any extent, still insufficiently however, since the Egyptian campaigns of 1824–1827. Like the whole west coast 'Asr also is divided by vast mountain-chains (Sawwābi) into two parts, a flat coastal region (Tihama, c. 70 miles), and a hilly or mountainous area (8r), with a few wādīs. The wādīs run from these mountains towards east and west, e.g. Wādī Bishā, Wādī Shahrūt, Wādi Dżanzīr. Some of these Wādīs, especially Wādī Bishā, belong to the fairest and most fertile districts of Arabia.

History. 'Asr only became known in Europe when, in consequence of the Wahhābi rising to power at Najjā, a certain Muḥammad Abū Nūṭa, with the aid of the Wahhābis, made almost the whole of 'Asr subject to himself and compelled the inhabitants to accept the Wahhābi doctrines. Ijtimā‘-Pasha had in consequence to dispatch Ahmad-Pasha with Egyptian troops to 'Asr in the year 1824, but this expedition even after a second attack, in the following year did not bring about the submission of the brave hill-folk. Just as little success attended the campaigns of 1834 and the following years; in the end the Egyptian troops, seriously weakened by famine and cholera, had to vacate the field, whilst the then Shaikh of 'Asr, 'Ajr b. Mīsā, continued to hold sway in peace in the hill-country and bequeathed it to his son Muḥammad. The latter extended the province of his authority and in the winter of 1820–1821 drove the Turkish garrisons out of the coast-towns of Yemen and made himself master of the whole region. The government of Turkey was now compelled to intervene, and sent troops under the leadership of Muhammad Raduf-Pasha, who actually succeeded in forcing an apparent submission on the part of the hill-tribes. Ritter, Erkundungen, xii. 919 et seq.; Ahmad Raduf Bey, Tarikhul Yemen wa-Sawwābi.

ASIR (n.), captive, slave.

ASIR, more precisely Mirza Djalal Asih b. Mirza Mu‘īnim, Persian poet, born at Ispahan, died while still young in 1043 (1639–1640), according to another account in 1069 (1658). He was a pupil of the poet Fāṣīḥ and a friend of Shah 'Abās I, and composed the majority of his songs while under the influence of drink. An edition of his Kullījah appeared at Leuven in the year 1880. Bibliography: The Max-Catalogue of Ricci (British Museum, iii. 881); and Persich (Berlin), No. 958; Ehlé, in Grundlinke der islamischen Literatur, ii. 311.

ASIRGHAR. name of an ancient fortress situated in the district of Nimār in the Central Provinces of British India; it stands on a projection of the Satpura Range. In 1600 it was wrested by Akbar from the last king of the Muhammadan dynasty of Khānṣigh; this event is also mentioned in an inscription which is not down to that period. Of the buildings, some of which were erected by Akbar's successors, a mosque of the year 922 (1516) and still a state of preservation is noteworthy from the fact that it is better preserved than its nearly neighbour. The inscription in connection with the last king of the Muhammadan dynasty of Khānṣigh perhaps served Hindus and Muhammadans conjointly in accordance with the 'Dīn-i Ilahi'.

ASITAN. [See ASAMAL.]

ASIVA. This is the name given by the commentators to Pharaoh's wife, who is twice (28, 56, 66, 67) mentioned in the Koran. She plays the same part as Pharaoh's daughter in the Bible, so that there is obviously confusion. In the last mentioned passage these words are put into her mouth: "My lord, build me a house with thee in Paradise, and deliver me from Pharaoh and his things, and deliver me from the wicked." In connection with this passage it is related that Asiya endured many cruelties at the hands of Pharaoh because of her faith (she was an Israelite); and finally he was caused her to be cast down on to a rock; at her prayer God took her soul to himself, so that only the body fell on the stone. — It is also related that Pharaoh sorced her to death, but as Moses praying to God she did not feel any pain.

'AŠKALAN, a former coast-town of South Palestine, one (Hebrew: 'Aškalōn) of the five Philistine towns known to us from the Old Testament; in the Roman period as oppidum Ascalon liberum it was (according to Schürer, Geschichte der jüdischen Volke im Zeitalter Jesu, ii. Ed., ii. 87) "a flourishing Hellenistic town famous..."
its cults and festal Jamie" (Derettis-Aphrodite-shrine) in the Christian period a bishop's see (tour of the three Martyrs martyrs Aper, Ayigpi).

*Asqalân was one of the last towns of Palestine to fall into the hands of the Muslims, but was soon after ravaged by the Greeks and restored by *Abd al-Malik b. Marwān. According to an inscription from a building which was discovered by Clermont-Ganneau the Caliph al-Mahdi in 155 (772) a mosque and minaret were erected there. After varied fortunes it fell into the power of the Fātimids. *Asqalân attained its greatest importance in the period of the Crusades. For over half a century it successfully withstood the Franks and was a continuous menace to the capital of the young Kingdom of Jerusalem. Not till 549 (1153) did Baldwin III get possession of any part of it. In 587 (1191) the latter found himself after the defeat at Arsuf not in a position to hold *Asqalân against Richard of England and destroyed it. Richard rebuilt the fortress. According to the conditions of peace of the following year it had to be again destroyed. The returns between al-Salīb Ayub of Egypt and al-Salīb Jawd of Damascus again let it slip into the hands of the Franks. After the decisive battle of Gaza the newly fortified *Asqalân could no longer expect help. It fell in 645 (1247). In order to make it impossible for the Christians to effect a landing the Mamlik-Sultan Balbars in 668 (1270) destroyed *Asqalân and other places on the coast. This was the end of the town. In antiquity and the Middle Ages the now desolate environs of the town were famous for their wine, sycamores and Henna (Kypros). It has given its name to a species of onion (Shalot). By al-Idrisi's time there was a noticeable lack of gardens and trees (see Zeitsschr. d. Deutsch. Palästiner, viii. 133). Medieval authors often call *Asqalân the "Bride of Syria" or of the world, Sponsa Syriae, a phrase which is traced back to the Prophet. It is uncertain whether this expression is used to characterise it as the maiden = the unapproached or the lovely.

Into the hands of the Fātimid supremacy of the Fātimids falls the construction by al-Abād b. Badr al-Djumāli (491 = 1098) of the Mahfūd for the reception of the head of the Prophet's grandson, *Husain. This highly-venerable relic was in 548 (1153-1154) saved from the Franks (cf. Makrtal, Kāifet, 2. ed. i. 284; Mehrem, Changh al-Khitārā, ii. 60), and carried off to Cairo. Later Muslims, pilgrims visited besides *Husain's chapel especially *Abraham's Well.

*Asqalân. See *Asiq aladâr.

*Askar (Ar., from Pers. Lâghir), the army, the soldiers, etc.

AL-'ASKARI, Abü Ahmad al-Hasan b. Abü Allah b. Sa'di, Arab philologist; born Thursday 16 Shawwāl 293 (11 Aug. 896); a pupil of Abū Bakr b. Durūd; lived in 'Abd al-Mukran, where he had a court, in the 2nd cent. of the Hijri System; then in Iraq; he died. Died Friday, the 7th of Jumada al-akhirah, 382 (3 Feb. 993).

Of his works the following are preserved: 1. Kitāb al-Zawdiq wa'l-Mawāni (Kūfrah, No. 730); 2. Kitab al-Muqām yuqāmāna ilā ahūdī jahūd min il-Adab (Derenbourg, Les mus. arabes du Mus. d'Escurial, i. No. 377); 3. Risālah "Il-tawdīq al-šābī." Both these books were written in al-Ταυστεία (Samuil) in 1384, 341 Shawkī al-Muṣṭafī in Musḥal al-Adab (Derenbourg, Les mus. arabes du Mus. d'Escurial, i. No. 377); 4. Also "Abū al-Khalīf al-Saqqāh in Kitāb al-Adab (Samuil, 1384); his Kitāb al-Tawdīq is cited in al-Suyūṭī in Sharh Shawkī al-Muṣṭafī in 1385, 176.

Bibliography: Ibn Khalīfah (Cairo, 1299), i. 164, No. 156; Yakub, "Itrā' al-Abūr, iii. 126-135; al-Suyūṭī, Būyāt al-Wattī, p. 221. (Broekelmann.)

AL-'ASKARI, Abū 'l-Hassan 'Ali b. Muḥammad, the tenth imām of the Šī‘a, who has given him the honorific title of 'Ali Nāṣir (the pure); he was born in 213 (828) and passed his youth in Medīn, where also his father, Muḥammad al-Djawād, usually resided. Although he exhibited in public the greatest piety and apparently took no part in political intrigues, yet he aroused the suspicions of the Abū Ṣa'īd Caliph al-Mutawakkil, who, on this account, was transferred to his new residential town Sāmarrā in order to keep a better check on his actions; hence he has become known under the Nick of the 'Askari [see supra, Art. 'Askarī Sīmarra'], for he was never again permitted to leave Sāmarrā. He died in 254 (868), but whether a natural death is uncertain, and left two sons, al-Hassān and 'Ayyūb. The former was recognized by the 'Twelvers' as his successor, and thus the honorific title al-Zākī. He was born in Sāmarrā in 231 (846) and died there in 260 (874), whereas it is said that he lived a natural death, and the other names are also given to him. Cf. Friedländer in Journ. of the American Oriental Society, xxix. 54. It is doubtful whether he left any children at all, but this controversial question will be more appropriately discussed under the article Muḥammad al-Hassān al-Hassān al-Muqīm, p. 20; Friedländer see supra, (contains further references).

AL-'ASKARI, Abū 'l-Hassan al-Hasan b. 'Abd al-Allāh b. Sa'di b. 'Abd al-Muqtadir, 'Ali b. Muḥammad, Arab philologist, a pupil of his namesake (according to others, of his maternal uncle) Abū Ahmad al-'Askari; from his devotion to knowledge he led a very retired life, and died after the year 395 (1005), in which according to the account given by Šāhīzād in his Mu'jam al-ša'bī, he finished dictating the Kitāb al-Adabī, and hence Hadjarī Khallīs in several places gives this as the year of his death.

His chief work was the Kitāb al-Siqā'at an-Nabī wa'l-Nābah (or al-Najm wa'l-Sā'ir), composed in 394 (1004), in which, in order to make a true appreciation of the linguistic excellences of the Korān possible, he gave the first systematic presentation of Arabic rhetoric, after al-'Uthmān in his Kitāb al-Adabī had set out the material in stimulating, but not very lucid, fashion; publ. by Muhammad Abīn al-Kāshānī, Samuil, 1370. He compiled the Max. Korūfrah, 1332-1335; others in Paris, in Shane, Catalogue des mus. arabes de la bibl. nationale, No. 4370 and at Tripoli, according to Landberg, Proverbs et dictons, p. 101; cf. F. Schwarz in Mitt. des Sem. f. ar. Spr. Berlin, ix. 383 et seq.)

(ROCKMANN.)

ASH (n.), root, ground, principle, etc.; also termi. techl. [See 'Ash].

ASMAʿ, daughter of the Caliph Abī Bakr. Her mother was Kātib or Kūtīla bint 'Abd al-Uzza. She was the elder sister of 'Alīja, and was born 27 years before the Hijra. She received the surname Jūsīt al-Nāfisān, "she of the two girdles", because to supply the want of another strap she tore her girdle in two in order to fasten on with these pieces the water-skirt and wallet which she had brought to the Prophet and her father on
the occasion of their flight [see infra]. She was one of the earliest believers and married in the first period of Ilyas b. al-Awwám [q. v.], who was also one of the earliest believers and found himself at that time in such distressing circumstances that she was compelled to do heavy and humble work; in this matter her husband also acted harshly towards her. She did not join her husband in the emigration to Aleyzasia. When Mahjam and her father on their flight to Medina concealed themselves for 3 days in a cave, she fetched them every evening food and water. She was married to the second son of Khaibar, not far from Medina, with her eldest son, the well-known 'Abd Allah b. al-Zubair [q. v.], and became the mother of the first believer born after after the Hijra. She had 3 sons and 3 daughters. Later al-Zubair separated from her, whereupon she joined her son 'Abd Allah and experienced all the vicissitudes of his fortunes, and learned of his fall (73 = 692) when she had reached her 100th year, and though grown blind still retaining her mental vigour. Her request to be allowed to bury the impaled corpse of her son was refused. A few days later her eyes closed in death.

(1. Horovitz)

**AṣṢār, Shams al-Din Muḥammad, Persian poet, died 784 (1382-1383).** Aṣṣār was one of the panegyrists of Shaikh Uwais, but is chiefly known for his poem (which has been translated into Turkish), _Miḥr u-Muṭṣūḥi_ composed in 779 (1377). The contents of which has been described by Edward de T. Beaufort, _Biblioteca_, in the following words: "the story of a love, which is free from every frailty and pure from every sensuality, between Miḥr, son of Shāhīrūshāh, and the comely striping Muḥštūh."**

**ASSASSINS** is the name given to those Ḥaḍītīs, who were the time of the Crusades occupied fortified hill-fortresses in Syria and other Muhammadan countries, and were wont to rid themselves of their opponents by assassination. The ordinary means employed by the agents belonging to the secret order, were done away by another word originally, for the latter is to be traced back to the Arabic Ḥaḍīṭīh, denoting "consumers of Ḥaḍītīh." Ḥaḍīṭī is a preparation of hemp (Cannabis indica), which oriental mystics sometimes consumed in order to induce the ecstasy state and to become intoxicated. It is said that those who were selected, the so-called Fīdāʿīn (q. v.), by the spiritual leaders of the Assassins to carry out any important mission, e.g. an assassination, were urged to its use in order that they might as \*\*\*ionless tools be ready for any deed. From the Fīdāʿīn Ibn Khallikān calls the Assassins in general also Fīdā́wiya; but in the oriental sources, when they are not simply called Ḥaḍītīs, they are often named Malāḥīda (heretics) or Niṣārīs.

The Assassins in so far as they are a branch of the Ismāʿīls and have general principles in common, have Ḥaḍītīs which is to refer to the in the article on the latter. What specially distinguishes them is less a doctrine differing from the other Ḥaḍītīs than their political organisation into a secret league whose members owed blind obedience to the spiritual head, and also the fact that they realized themselves of murder to get rid of their foes is no new phenomenon in Islam. Abū Muṣʿūr al-Iṣdlī and Muḥṣīr ibn ʿAbd, whose followers were called "Stranglers" (Aḥmānī.), had previously resorted to it and magnified assassination for political ends as a religious and meritorious act. For the rest, the theological tenets of the Assassins so far as they are not contained in the Ismāʿīlī, are not sufficiently known, as for their holy books, of which only one is known to us by name (ṣaṣṣār Ṣayyidna = History of our lord, i.e., of Ḥaṣan b. Ṣubbāh, see infra) were all destroyed in the Mongol period. This much we know, that the founder of this secret league, Ḥaṣan b. Ṣubbāh, whose biography follows in a later article, during his residence in Egypt (1058–1080) was won over to the claims of the Fāṭimids Niṣār b. al-Mustāsunī, from whom the members of the league derive the above-mentioned name Niṣārīs. As is well-known it was not Niṣār but a younger son of al-Mustāsunī who on his father's death was recognised by the Fāṭimids as Imam under the name al-Mustāsunī, but the Assassins supported the claim of Niṣār until a later successor, who was also called Ḥaṣan (b. Muḥammad), of Ḥaṣan b. Ṣubbāh, gave himself out to be a descendant of Niṣār and hence laid claim to the dignity of Imamship. With this end in view he summoned all his followers to a great assembly (ʿId al-Gūţā, Feast of the resurrection) in the year 559 (1164), in which he not only secured his recognition as Imam but also publicly proclaimed the abrogation of Islamic law. A reaction occurred under a third Ḥaṣan (Qāṭī al-Dīn), who on succeeding his father in 607 (1210) returned to the statutes of ʿAlī, informed the Abūlābbī Chaliph of his submission to him, and allowed his mother to make the pilgrimage to Mecca. Hence his name Naw-Mūsulman (new believer). Under his successors there arose among the Assassins dissensions of opinion and factions, about whose real nature nothing is accurately known, and soon afterwards the political strength of the secret league was destroyed by the Mongols. With this the Assassins as such ceased to exist, and those of them who survived the catastrophe and continued to exist, changed their views were absorbed by the other Ismāʿīls.

The History of the Assassins commences with the conquest of the hill-fortress of Alamūt by Ḥaṣan b. Ṣubbāh, in the year 483 (1090-1091), who removed his residence there and from this place of difficult access carried on his propaganda. This consisted first in his followers obtaining possession of a large number of hill-fortresses in all parts of Persia, and getting rid of the most dangerous of their opponents by assassination. One of the first victims was the famous Seldjūk-Wehr Nizām al-Mulk (485 = 1092). The death of Sultan Malik-Shāh which occurred soon after, and the resulting disputes for the succession among the various pretenders, and the appearance soon after of the Crusaders in the lands of Islam threw the Muhammadans world into a disorder which assured great access to the Assassins. Their strength consequently became very considerable in a few years, until the Seldjūk-Sultan Muḥammad I. ascended the throne and strained every nerve in combating the Assassins. The fortress of Diskhāt, called Shāh-Dīr by Malāḥīda, in the vicinity of Isiphān, was at that time in the hands of a distinguished leader of the Assassins of the name of Im Amīrānī, who had counted Ḥaṣan b. Ṣubbāh among his pupils. It was captured after a courageous resistance (500 = 1102). Cf. the official account of this in Ibn al-Kalqtnī (ed. Amedro, p. 134 et seq.). The Turkish Emir Amār-ṭegen Shūkh was then entrusted with the conduct of the war against the Assassins, and he after several successes was on the point of taking the fortress of Alamūt itself when the death of Muḥammad (511 = 1118) forced him to raise the siege. Ḥaṣan survived this danger almost 7 years; he died in 518 (1124) leaving the leadership of the Assassins to Kiyā. Bāzūr Umūdī Rūdhūr, who bequeathed the conduct of affairs to his descendants. The following were the rulers of Alamūt:

ASSASSINS — ASSUAN.

ASSUAN, town in Upper Egypt. Assuan, in Arabic character Aswán (Aswan also appears), popularly known as the Middle Ages as Aswán, is situated 24° 5’ 30’’ N. Lat. on the east bank of the Nile to the north of the first cataract, and is the capital (13,000 inhabitants) of the Egyptian province of Nubia and chief town of the district (Markaz) of the same name. The town lies on an island inclusive of the island of Elephantine bordering in antiquity the name Chibis, a name which the island still bears. The island was in ancient time more important than the town lying on the east bank, viz. Swàntis, the Syene of the Greeks, the Suán (Syntis) but mostly Asswán of the Arabs. In the neighbourhood were stone-quarries whence the ancient Egyptians obtained their columns and the blocks for their statues. Pliny calls this stone Syntis after the place whence it is obtained, but this name does not denote quite the same as the modern geological term. In Islamic times mill-stones were quarried there—perhaps ancient columns were turned to a like account. This manufacture of mill-stones was for a time a royal prerogative. The stone-ware of Assuan (pots and pitcher)s was also famous.

In the town stood an old temple containing the representation of a serpent. If on the 12th Baramid clay (Thufr, not Thufr) were pressed on this scorpion, any one carrying with him a piece of the clay was immune from the bites of scorpions (Asbî Sâlih).

Assuan both in antiquity and the time of the Arabs was the frontier-fortress of Egypt against Nubia. The frontier ran just on the other side of the cataract at Philæ (Bilâk). The first Nubian town was al-Kasr. The Christian king of Nubia paid annually to the Prefect of Assuan so-called tribute (Bâyà), which was in reality only a kind of official exchange, for he received an equally exact present in return from Egypt. The oldest contract in this connection dates from the year 51 (653—654). The proximity of the gold-mines of Allâhât [q. v.] and other economic interests attracted numerous Arabs into this region, and this led to constant friction. From the 7th—8th cent. Assuan suffered partly from Nubian incursions, partly from these Bedouin-hordes (see Article Numa). Under the Fatimids, but especially under the Mamlûks, Assuan or rather the most southern province of Egypt, when in the hands of weak governors, became the asylum of rebels who were beseiged by the time-beings beyond the jurisdiction of the central authority. This did not entirely cease until in the time of Muhammad ‘Ali who removed the Egyptian frontier well towards the south. The
conquest of Nubia under the Manlika brought little change.

Assuan possessed at all periods great economic importance; for it formed the natural centre of the Nubian, Central African, and for a long time also of the Indian trade. Slaves, gold, ivory and ostrich-feathers were the chief imports. Egypt exported on the other hand corn, wine and manufactured clothes. In the first centuries of Islamic Assuan was a favourite starting-point for the pilgrimage to Mecca, which proceeded from here through the desert to 'Aidhah and thence by ship to Djidda. Assuan long remained therefore the most important town in Upper Egypt. Later it declined very considerably when traders and pilgrims preferred the route by Kays. By the close of the Fatimid period it had declined administratively, and in the Mamlik period economically as well, into a dependency of Kays. The political conditions previously described prevented it from regaining its former splendour, but, thanks to its position (euctact, junction of several caravan roads), it remains an emporium for The Central African trade. Recently it has lost greatly through the Mahdist wars.

The climate is excellent; the fertility (corn, vineyards) of the district is handed by all geographers; in the Middle Ages it was famed for its dates. There were more varieties of dates here than in Iraq. The section by England in our age the great dam (Khashm, Saddl) has essentially affected the climate, but has enriched Assuan with a spectacle of the first rank and the whole of Egypt with a source of increasing blessing.

**ASTARÁBÁD** (also Astarábád, Astarábáb, Astarábad, AstarÁbad), name of a North-Persian town and province.

1. The town of Astarábád, chief town of the same name; situated 36° 40' N. Lat. and 34° 1' E. Long, (Greens.), and near the south-eastern corner of the Caspian Sea (43 mls. east of it). It stands on an insignificant eminence (380 ft. above sea-level) at the foot of a very high and thickly-wooded chain, a spur of the Elburz, and on the margin of a large and in many parts marshy plain, which though fertile is little cultivated and later ends in the Turkmen sandy desert (Kara-Kum). Occupying a commercially and administratively important position, Astarábád certainly dates back to a remote antiquity. Very probably it is mentioned (according to Manucci, Mordtmann, Klepert) by Arrian (Anabasis, iii, c. 23 and 25) as Zâbâkchir. Some explain the name Astarábád as the city of the stars (Pers. astur, šetir, *star*); others as the city, or rather the place of the smites (Pers. astur, astar, *smite*), since, it is said, there dwelt in it originally only ass- and mule-drivers. The re-founding of a town here is ascribed to the Arab general Usád b. Muhallab, who when on his campaign towards Hordán and Jabalstán in the year 716 (717) was so pleased by the site (occupied at that time by the village of Astarák) that he took it up residence in it. In the Arab Middle Ages Astarábád was the second town of the province of Jabalstán, in the history of the Caspian coast-lands it is often mentioned. Since there were several adjoining peoples in its vicinity it was often involved in wars and feuds. During the civil disorders which occurred repeatedly in Persia in the xvii. cent. Astarábád (frequently suffered invasions and was several times ravaged. Under Nádir-Sháh (1736—1747) it attained its present compass (5 mls.). The town which is built four-square is surrounded by a high picturesque wall flanked by bastions, which was last repaired under Agha Muhammad Khána [q. v., vol. i, p. 180] but is now much ill-palpated. The handsome palace (now the governor's residence) erected by Khána Khána is also on the site of the old one. It compelled the inhabitants to build their homes of stone, and hence Astarábád presents a more regular appearance than other Persian towns. The numerous prayer-houses and public mosques (47 in number) are characteristic; with them are associated 7 academies (Madrasas). Astarábád is regarded in Persia as a stronghold of Shiite-persecuted Sunnis; hence the epithet Dar-ut Na'minat, "the house of the faithful" (also on coins); there is a large number of alleged descendants (called Sáyiids) of the Prophet dwelling in it. The number of the inhabitants, who must have been more numerous in earlier centuries, is now given at 10—12,000. Astarábád was never a large town, yet it was never without importance; for since it stood at the beginning of two important trade-routes, one leading to Herat-Meshhad and the other to Ispaán-Tabrúzk, which bifurcate to the south-east at Bústán, it was natural that there should spring up here an important trade-emporium, a bazar for the products of Persia and Central Asia. The chief articles of trade are cotton, rice, silk, sugar-cane, salt, soap, sesame-oil, carpets, hosiery, etc. Since the Persians advanced their frontier close to the southern shore of the Caspian Sea an active exchange of wares has been set up with them also. On the other hand the commercial intercourse of the town has suffered heavily by the opening of the Trans-Caspian line, in that the wares from the interior of Asia coming through Elburz and Bursheid are despatched almost exclusively by this line, so that the transit-trade of Astarábád is being more and more limited to the products of Persia and Russia.

The small town of Bendir-i Ġest or Kenšt-i Ġest (Russ.: Gis or Pererav, i.e. passage) with ca. 1200 inhab., situated about 30 mls. to the west of Astarábád and about 2½ mls. to the south of the gulf of the same name serves as port of Astarábád. This is the best and most sheltered harbour on the whole southern coast of the Caspian Sea. In the Middle Ages the town of Astarak (q. v.) served as common port for Hordán and Astarábád.

2. The Province of Astarábád, named after the chief town of the same name. It comprises the region at the south-east corner of the Caspian
Sea and extends from the river Kura-Şa on the east, or rather north-east, along the northern slope of the Elburz-range, which separates it from the province of Khordān, westwards till about the middle of the Bay of Astārābād, where the river Gālibā is considered to be the boundary between it and the province of Māzandārān. Area: 5534 sq. mls.; population small: ca. 80,000 (only 14.2 to the sq. ml.). The land is exceedingly thickly-wooded, but is also very marshy. There are no rivers of any importance. Among the pro-
domestic products we have mention of other wild-nut- wood, soap and sesame-oil. In the Middle Ages there was considerable rearing of silk-worms. With few exceptions (Gāz and a few places in the hills) all the villages of the province are in pretty poor plight. Affluence and industry nowhere exist. Apart from the capital and its port Gāz (emporium for Persian cotton) trade and commerce are quite in-
significant. The magnificent canals laid out by Shāh 'Abbās I. in the xvii. cent. is now quite destroyed. In summer the sand-filled river-beds serve as roads. The shameless incursions of the Turkomans, at whose hands the country formerly suffered bitterly, have almost quite ceased since Russian authority extended as far as the river Amu-Şāh (now the Amu-Şa of Kara-Şa). Astārābād falls into 6 bānākh or circles. Among the inhabitants (partly Shāhī, partly Sunni) there is a surprisingly large percentage of Mol-
lahs (clergy) and Saiyids (Alihā). In many vil-
lages resides Gudara, an energetic tribe, widespread in the provinces of Astārābād and Mā-
zandārān especially, and despised by the Persians, which is engaged in agriculture, cattle-rearing, the cultivation of silk and the drying of fruits. Astārābād is also the native place of the present ruling dynasty in Persia, the Kâfārān, a Turkoman nomadic tribe, which came to Astārābād on the conquest of Tabārīzah by Timur, and gave Abgha Mahāmmed Kāfār as first king of the present reigning dynasty.

Bibliography: 'Aḥd al-ʿArānatz al-ʿUtdī (died, 405 = 1014) wrote the chronicles of the town of Astārābād, a work often quoted by Yākūt, but now lost; cf. also Broekelman, Gesch. der arab. Litter., i. 138, and Heer, Die hist. u. geogr. Quellen in Yākūt's geogr. Wör-
terb. (1896), p. 49; Bibliogr. Geogr. arāb. (ed. de Goede), passim; Yākūt, Muḫdūr, i. 242; in Strange, The Lands of the Eastern Caliphs (Cambridge, 1905), p. 375; 379; B. Dorn, Abū-

hauers in Astārābād, d. Bayr. Ausb. d. Wiss., 1869, p. 534—536; Spiegel, Erinn. Altert-

ASTARBAKH — ASTROLOGY.

ASTARLAB. [See Astarlab.]

ASTRAKHAN, Russian administrative pro-
vince and its capital, properly Haidji-Taschkant, founded by the Mongols in the neighbourhood of the Khanz town of Iit [q.v.]. The town is mentioned by the European travellers as early as the first half of the xv. cent., and appears to have been visited by AAFRAXHAN only from the year 1582 (1580). Demolished by Timur in the winter of 1395—1396, the town arose to new prosperity in the xv. cent., probably due in some measure to the simultaneous decline of the ancient capital Sari. After the decay of the Golden Horde there arose in Astrakhan a new ruling house which endured until the middle of the following century, in 1554 Astrakhan was conquered by the Russians, who appointed as first khan Der-
lab. All their usual and did not advance the country till 1559; in 1569 a Turkish army ap-
ppeared before Astrakhan, but soon had to quit the field; in 1589 a Turkish fortress was built near the Tartar town. Astrakhan has since remained under the sway of the Russians, and owing to its favourable situation at the mouth of the Volga has gradually by trade and industry developed into a large town (at present 115,000 inhabitants).

(W. BARTHOLD.)

ASTROLOGY. Its technical name with the Muslims ʾilm (or ʾiṣḥāf) al-ḥākīm al-ʿarīf bi-l-ʿuḍā bi-l-
muqānāt, "the science (or art) of the degrees of the stars", or, shorter, ʾilm (ʾiṣḥāf) al-ḥākīm. Some Arab writers from the xii. cent. A. D. on use also the expression ʾilm al-nuṣūf. On the other hand, the expressions ʾilm (ʾiṣḥāf) al-
muqānāt, "the science (or art) of the stars", ʾilm (ʾiṣḥāf) al-nuṣūf denote indifferent-
ly astrology or astronomy or both these sciences together. — The astronomer is called ʾābānān or maṣṣanān; but the latter name denotes also the astronomer. Not till we reach the xiv. cent. A. D. do we find any precise distinction made between maṣṣanān, "astrologer", and falsah, "astronomer". The majority of philosophers and authors of bibliographical and mythopoeic works, keeping to the classification of the sciences given by the
Astrology, consider astrology as one of the seven or nine branches (Sara) of the natural sciences (sulim talibiya), placing it with medicine, philosophy, alchemy, interpretation of dreams, etc. But the astrologers and astronomers and other savants (e.g. al-Farabi, the Kikwi al-safl and Ibn Khaldun), following the example of Ptolemy, consider astrology as a branch of the science of the stars, which itself is only one of the four great divisions of the mathematical sciences. It must not be forgotten that the mathematical-astronomical rules for calculating, of which the astrologer always stands in need, are set out only in astronomical treatises.

Astrology is based on the principle that all the changes occurring in the sublunary world, i.e. the Aristotelian "generation and corruption" (yârî and šabir, al-sharâq unw l'žafirah), are intimately connected with the particular nature and the movements of the celestial bodies. Man especially, who as microcosm has affinities with the entire macrocosm, is subject to the influences (lār ŭ farrā), of the stars, whether with Ptolemy we explicitly assume the physical theory of forces or influences emanating in rays from celestial bodies as the events of the sublunary life are subject to the patient (šafirah) similar to that of the agent (šafirah), or in order to approximate more nearly to Muslim orthodoxy, consider the celestial bodies not as real agents but rather as indicators (šafirah) of future events. — The influence of the stars depends on their individual nature, and also on their position relatively to the earth or to the other stars, the events of the sublunary world being the vicissitudes are therefore subject always to the extremely complex and variable combination of very numerous, very varied and even contradictory celestial influences. To know and to combine these influences is the astrologer's very arduous task.

Not only the celestial bodies, but also places having only a theoretical existence in the heavens are subject to the influence of the stars. As the planets are considered capable of radically modifying the virtue of those stars with which at the given moment they sustain certain relations. From the astrological point of view the "head" (afrar) and the "tail" (afrar), i.e. the ascendancy, and the descending mode of the lunar orbit, are oftenest assimilated to the planets, — an assimilation "which is rejected only by the adherents of what might be called the "classical Astrology of Ptolemy". The signs of the Zodiac also, considered separately or in groups of three according to the four "trigons" (musthaltibat, triplicates), have their particular virtue, as also have certain subdivisions unknown to the Ptolemaic astrolog. of the ascension (sulim talibiyah), the third part of a sign, and the "Novenaries" (Nshktiyah or Nshkthr, navemaries), which are the ninth part of a sign; even the degrees of the zodiac are considered by many astrologers to have their own peculiar nature, and are divided into masculine (musthaltibat), feminine (musthaltha), shining (musthalta or mustaluma), dark (mustaluma), sad (mustasham), dry (mustasham), moist (mustaluma), smoky (mustaluma), fuming (mustaluma), void (khalas), void (khalas), gradus, pateses, increasers of happiness (sulim fi i'žudžar), etc. Further, there are parts and points of the Zodiac which are of the highest importance from their relation to the sun, the moon and the five planets, for they are their limits (šafr, termini, times), houses (khalas, domini, domicilia) and ligatures (musthàr, detriments), evaluations (šifra, exclama- tions, principal, altitudines) and falls (žifla, haxra, dejectiones).

The horizon and the meridian also play a great part; their points of intersection with the ecliptic are called the four pivots (musthalta, anguli, centra, cardinalia): 1. the ascendant (š fold), i.e. the point of the ecliptic rising to the horizon at the given moment; 2. the pivot of the earth (musthab ar, ar-šifra, angulus terre, luna, caelestium), i.e., the intersection of the ecliptic with the lower meridian; 3. the descendant (musthalta, šifra, angulus inferior, occultus, occulta), i.e. the point of the ecliptic vanishing at the horizon; 4. the culminating point (musthalta, šifra, luna, medium caelestium), i.e., the intersection of the upper meridian with the ecliptic. — The arcs of the ecliptic contained between these pivots are each divided into three equal parts by means of circles of declination (which pass through the poles of the equator); the ecliptic is thus divided into twelve sections, called the twelve celestial houses (khalas, homes), which form the basis of every astrological calculation.

The relative position of the planets (including the sun and moon) is also of the greatest importance; it admits of five principal combinations, viz. the conjunction (šifra or muskalMANA, but called idšifra when it is a question of the sun's relation to the moon), and the four aspects (musthalta, antinous) or "apparitions" (šifra, luna, medium caelestium), when the two planets are diametrically opposite; 2. the "sextile" (šafirah), when there is between them a difference of longitude of 60°; 3. the "quadrature" (luna), when the longitudinal difference is 90°; 4. the "trine" (šafirah), when the difference is 120°. — If about a planet on a circle a sphere be described with a radius of 60°, 90° or 120°, the two points of intersection of the ecliptic with this circle, and the trigonometrical process of calculating them are called the "projectio radiorum" (musthalta šifra). These astrologers who adhere most closely to the Ptolemaic tradition do not take these five combinations into account; but all the rest add many others (On Hilandar reckons 24), which are called "punum" (šifra), planetarium ad invariabile.

Further, mention might be made of the lot, or, to keep the technical expression of our mediæval writers, the "parts" (šifra, sing. šifra), which are at bottom only imaginary ascendants reckoned on the ecliptic at a certain distance from the true ascendant. Ptolemy and his Arab followers admit only the "pars fortunae" (musthalta šifra), but the other astrologers admit a very considerable number, which amount in the Introductio of Abu Ma'azhar to 97 exclusive of about 30 other "parts" mentioned by al-Kabid.

Lastly, the geographical element ought not to be omitted; for, since every region of the earth is subject to the particular influence of the Zodiacal signs and one of the planets, the same proposition for persons in different countries cannot be drawn from the state of the heavens. Such is the astrologer's equipment in its main features. Its usage is no less complicated. — The Muslim astrologer can confine himself to three prin-
The system of "interrogations" or "quæstiones" (ματία, κώρωρα), intended to reply to questions relative to the events incident to daily life, e.g., when the client desires information regarding some one who is absent, or to discover a thief, or to recover something which has been lost, etc. This is the simplest and commonest part of the art. — 2. The system of "electiones" (δίκαιος, διαμόρφωσις), i.e., the choice of the auspicious moment for accomplishing such and such an act; this moment is determined by observing in which of the twelve celestial houses the moon is. Astrologers who preferred the Indian methods employed the 28 lunar stations (υαματί) in place of the twelve houses. — 3. The genethliological system, or, to keep to the nomenclature of Muslim writers, that which is based on the "revolutions annorum" (ναχγώιν αλ-κτίνα), i.e., on the years or fractions of the tropical year which have expired or are thought to have expired since the birth of an individual or the commencement of a reign, sect, or religion, or the foundation of a town, etc. Its fundamental principle, which is quite different from either of the other two systems, is that at the exact instant of birth the configuration of the celestial sphere irrevocably fixes the destiny of the newly born, and it will then be independent or nearly so of subsequent changes of the sphere. This is the system adopted by Ptolemy, who makes only very slight and implicit concessions to the principle of the "electiones," and has not a single word to bestow on the "interrogations." It is also a system which has more technical difficulties than the other two and too often encounters the impossibility of knowing the instant of birth or of commencement with sufficient approximation. When the prognostications concerned individuals, the "revolutiones annorum nativitatis" (ναχγώιν νιν τη μακαθί) were employed, for prognostications concerning peoples, towns, sects, etc., and consequently epidemics, famines, wars, inundations, etc., the "revolutiones annorum mundi" (ναχγώιν νιν τη θυώ) were employed.

The fundamental operation in all these three systems was the determination of the ascendant (πντι), from which the initial (καταλί ατ μακαθί) of the remaining eleven celestial houses were calculated. The second part of the "interrogations" and the "elections" the ascendant to be determined was that of the moment in question; but in the third system, the genethliological, it was the ascendant at the birth of the individual or the commencement of a reign, etc. Now even supposing that the precise date of the birth or commencement were known, how could the ascendant be determined if it varies very rapidly in consequence of the diurnal movement of the celestial sphere? Birth is not an instantaneous act; even if the astrologer had sided at the acquaintance he would not be able to choose the exact instant for determining the ascendant. The genethliological system had therefore to frame for birth the theory of the "animotheo" (μάνιαθύοι), i.e., very complicated rules for forming an imaginary ascendant for the nativity; the methods most in vogue with Muslim astrologers are the method of Ptolemy and those which they ascribe to Hermes and Zoroaster respectively. For prognostications not concerning individuals the ascendant of the eclipces or of the great planetary conjunctions were employed. But there is still more contained in the genethliological system. Destiny is determined by one of the planets (including the sun, the moon, also the "pars fortunae" and the ascendant) occupying at the moment of the fictitious ascendant one of the five places which Ptolemy calls τέσσαρος δίκαιοι, and our mediaeval astrologers "loci hillegaiai" (μακαθίς ηλληγαίας). In this situation the planet (sun, moon, "pars fortuna", ascendant) becomes the sphera or indicator (διαλίς ηλληγαίας), significans (μακαθίς ουρανίας), hillegaia (μακαθίς ηλληγαίας), which is to be "directed" towards the ascendant and the fixed points in the heavens possessing a particular astrological signification. From the examination of the combinations arising from these meetings may be learned the fortunes of the newly born. On this mathematical side this directing (καταλί, καταλίς, καταλίπ), διαλίς, ηλληγαίας) can be explained as follows: in consequence of the diurnal movement of the celestial sphere a planet or a point of the ecliptic having a particular astrological importance will arrive at a certain moment at the circle of position (i.e., the circle passing through the points of intersection of the horizon and the meridian) formerly occupied by the indicator. The equatorial angle (hour-angle) thus traversed is calculated; when dealing with human life a solar year is counted for each equatorial degree, and great events each degree counts only as one day. — It ought to be added that for prognostications relative to peoples, towns, religions, etc., the indicator is chosen in a different manner. According to the Arab followers of Ptolemy it is the planet or the star possessing the most "dignities" over the point of the ecliptic where there has occurred an eclipse of the sun or moon. But the majority of Muslim Astrologers give the preference to the system of the planetary conjunctions (Κριστάλλοις), which they probably learned from the Indians, they base their calculations on the conjunctions of the three superior planets (Mercury, Mars, Saturn), whence they draw their prognostications by the method of the ζητυρ or by other methods. — The ζητυρ of the above-mentioned indicator gives the duration of life. For the other events of life one must choose, according to the nature of the event one wishes to know about, between five other indicators (ascendant, pars fortuna, moon, sun, culminating degree) and "direct" the one chosen. — Further it is necessary to translate into terms of time, according to special rules, the uniform movements of the indicators according to the order of the signs (i.e., from west to east), in order to determine species of lords for the tropical solar years, the months, and the days of life; this movement (of the indicator), or the point of the ecliptic where it arrives, is called ιντάλι (ανθρωπική, προφετική). — Finally, there are cycles of the years of life which are specially subject to the influence of this or that planet; these cycles, corresponding fundamentally to the planetary "rulers of time" (καταλίπ) of the Greeks, but modified however and often very complicated (especially in Abū Ma'shar), are called ιντάλιτα (ιντάλιτα) (fratrarians).

Other secondary methods were also employed, among which I will mention only that of the constellation and images (stella) ascending with the decans, which goes back to the Chaldaean tradition of Tersos, and that which is founded on the risings of the star Sirius (Sothis of the an-
cient Egyptians), and was employed only by the Muslims of Egypt.

Muslim-Arabic astrology has drawn from the most diverse sources. Its Greek models were: Ptolemy (Al-Battani, Al-Tabari, 11th century A.D.); Dorotheus Sidonius, Trogus, Antiochus and several pseudopigraphical treatises, i.e. not only authors proceeding on radically different principles, but also authors who, like Valens Valens and Dorotheus, had already amalgamated the most diverse doctrines. At the same time it drew from Pahlawi and Indian books, and also absorbed the oral traditions of Mesopotamia, Syria and Egypt. It is true that only a small number of Muslim astrologers have adopted in its purity one or other of the three fundamental systems. The others, i.e. the majority, accepted the “interrogationes”, “electiones”, “revolutiones anumon” en bloc, considering the one as the complement or even as a continuation of the other, and leaving it to the practitioners to choose between the systems and the different methods according to the aims of the client, the rank and needs of his client. The complete and strangest mixture is met with in the books of Alī Maḥṣūrī, a veritable jumble of the most heterogeneous doctrines.

What really distinguishes the astrology of Muslim peoples from preceding systems is, apart from its eclectic nature, the degree of perfection attained in the mathematical processes. They are set forth with all the precision that could be desired in the astronomical treatises, alongside the other problems of spherical trigonometry; and it was to aid to this end that the calculators drew up very numerous and detailed mathematical tables. In this regard there is a striking contrast with Greek and Indian astrology which made clumsy calculations and always shrank from an excessive complication of mathematical elements.

Theologians, jurists and philosophers are almost unanimous in condemning astrology; exceptions, e.g. al-Kindī, the Khwānī al-Suṭa and Ḥakīr al-Dīn al-Rāzī, are very rare. But in practical life the condemnation had no effect; at the court of the caliphs and sultans as well as with the masses astrology triumphed until last century when the intellectual and political civilization and especially of the Copernican system gave it a mortal blow. But in places to which European culture has only slightly penetrated astrology still survives, although destitute in great measure of the splendid scientific impetus with which it was arrayed in the Middle Ages. To-day in Yemen — ivory of fate — it is no less personages than the Khalīfah themselves who practise the profession of astrology. Astronomical problems, so far as they are mathematical (geometrical, trigonometrical, arithmetical) problems, are dealt with in the works on astronomy and in the tables compiled and calculated for astrological purposes. The "judicial" side, that of the ṣāḥib, has been the subject of innumerable treatises and monographs whose titles it would be impossible to enumerate; for the text can only give a few examples, such as have been wrongly ascribed to Alī Maḥṣūrī, a chapter of the Intructio in astrologiam al-Shafi (in Boll., Sphaera, 1903), and the treatise of al-Kindī on the duration and fortunes of Islam according to the theory of the planetary conjunctions (in O. Lathi, al-Kindī als Astrologe in Moslemischer Faschismus [Felixk. Fortschrift], Leipzig, 1925, p. 285—309), all the original texts are unidentified. The following works as being translated into Latin in the Middle Ages and printed should be mentioned: the commentary of Haly Heben Rodan ("Ali b. Ḥajjīr") on the Quadruproticus (Terricellus) of Ptolemy, and that of Ahmad b. Yūsuf, called Ibn al-Daya, on the Centiloquium (Kittīz, X̄ēnias al-Qurūm) wrongly attributed to Ptolemy, the two printed together in Venice, 1493 and 1519, al-Kindī on the works of Alhamban ("Ali b. al-Ashraf"), the large treatise in eight books of Alhazan Hāfīz al-Fadl, printed in Venice, 1485, 1505, 1523, and, with slight stylistic corrections, at Bâle, 1551, 1571; the convenient Liber introductory of Alhamban (al-Kalbi), several times printed, with the commentaries of Johannes de Saxonia, and annotated also by V. Nalond (Cologne, 1556, with stylistic improvements), the treatise of Zahir (Sahib b. Bajir) and of Mushallah (Muhammad b. "Ali al-Allāh), printed as an appendix to the commentaries on the Quadruproticus and the Centiloquium mentioned above; the Liber introductione in Alhazan b. al-Kalbi printed in Venice, 1492 and 1501; the De judiceto nauticae of al-Baladhūrī, Nuremberg, 1546 and 1549, the De nauticae et De interpolationibus of Omar (Muhammad b. "Omar b. al-Farāhīnī al-Talari), Venice, 1505, and as appendix to Firmicus Matternus, Basle, 1533 and 1551. Lastly, some treatises of unknown date.

Bibliography: The sources and the characteristics of Muslim astrology are, in social life, and the philosophical and theological polemics against it, will be fully dealt with by the author of the present article in the Encyclopaedia of Religion and Ethics (edited by Dr. Hastings), s. v. "Star", an article presupposing an elementary acquaintance with Greek astrology. — The explanation of some mathematical-astronomical processes and a certain number of technical terms be found in Nallini's commentary on al-Battani's Al-Atbation al-Musulmon al-Astronomi, Milam, 1897—1907, i. Vol. — For a number of the technical terms, see also Mešťák al-Din: Dictionary of the technical terms (ed. van Vloten); Dictionary of the technical terms (transl. of de Slann, ii. 217—220). — For the life and works of the Astrologers: Suter, Die Mathematiker und Astronomen der Araber (Leipzig, 1900); Abulnabi, s. Gesch. der math. Wissenschaften, x. Heft, s. v. Al-Farabi; Mandel, Geschichte d. math. Wiss. xiv. 1902, 237—238). — Lastly, the astronomical works mentioned at the end of this article.

(A. C. Nallini)

Astronomy. This science is called by the Moslems "ilm al-faradus "science of the aspect (of the universe)" and "ilm al-nakhar "science of the celestial spheres". For other names common to
It and astrology. A. Astrolurgy; further al-Farabi and Ibn Rushd (Averroes) understand by *ja'iz al-nu'man al-shari'iyah* ("the mathematical art of the stars") theoretical astronomy, and by *ja'iz al-nu'man al-shari'iyah* ("the experimental art of the stars") observation of the stars. Following the Aristotelian classification of the sciences Muslims unanimously consider astronomy as one of the four mathematical sciences (*tib)bn riyādīya*). For them, as for the Greeks, astronomy only signified: studying the apparent movements of the stars and giving a geometrical representation of them; it comprises therefore what we call spherical astronomy (with the calculation of the planetary orbits and their employment in the compilation of ephemerides) and the "theory of the instruments." The study of meteors in the Aristotelian sense (including comets, shooting stars, etc.) and of what might be called an elementary Astro-Physics and Celestial Mechanics (origin of celestial movements, nature of the spheres, light of the stars, etc.) belongs entirely to the domain of physics and metaphysics. The sum total of the practical knowledge necessary in determining by calculating or instruments the hours of day and night, having especially in view the fixing of the times of the five canonical prayers in the mosques, is called *ja'iz al-nilāfi: or *ja'iz al-nu'manī* "science of the fixed times".

At the beginning of Islam the Arabs already possessed some knowledge of practical astronomy. In their frequent night-journeys the Bedouin often had no other guide than the moon and the brightest stars, whose places of rising and setting they knew and which they could estimate approximately the time by night; they determined also the seasons of the year from observing the position of the moon relatively to 28 successive groups of stars called lunar stations (*muhād il-kamar*). Among the majority of settled tribes, the agricultural seasons and meteorological prognostications were associated with the annual rising of certain stars or the cosmic setting (*dawr*) of the lunar stations.

But it was only in the II. (viii.) century of the Hijra that the scientific study of astronomy was undertaken under the influence of two Indian books: the *Bṛhatkālaṭaḥ* *prajñāpāda*, composed by Brahmagupta in 628, which was brought to the court at Baghdad in 954 (771), perhaps only in an abridgment, and was used as a model in Arabic by Ibn Rushd, b. Ḥabīb al-Fārābī and Ya'qūb b. Ṣāri; and the treatise of Aryabhata (al-Ardjubhad or al-Arjhabhar of the Arabs) composed in 500, from which Abu 'l-Ḥasan al-Ḥawari derived his tables of the planetary movements. These books consisted of a short explanatory text followed by numerous tables of celestial movements arranged according to the artificial millennial cycles; for the fundamental hypothesis was that at the commencement of the world the moon and the planets were all in conjunction in the same degree of longitude, and will again be in conjunction there at intervals of millions of years. This method, which was called *siddhānta* ("corruption of the Sanskrit *siddhānta*; "treatise on astronomy"), was still employed by Muslim astronomers at the beginning of the v. cent. A. H. (c. A. D.). From Indian books the Muslims learned also the use of trigonometrical Sines.

was soon added the Arabic translation of the Fakhr al-Din tabulae entitled *Flā ṭālā ṭālā*, "royal astronomical tables" (Arab. *ṣāfī bi al-ṣāfī or *ṣāfī al-sharḥ al-nu'mānī*), which had been compiled in the last period of the empire of the Sasanians. They had great vogue with the Muslims of the ix. cent. A. D., but about two centuries later they ceased to be used.

The Greek influence was the last in order of time, but first in order of importance; it introduced into Muslim astronomy the geometrical representation of the celestial movements, so characteristic of the Hellenic genius. The first and not very satisfactory Arabic translation of the *Ammāqāt* dates from the end of the viii. or the beginning of the ix. century; it was followed by two others much superior, that of al-Hajjāj b. Mu'āṣar finished in 212 (827-828); not in 274 (= 899-900, as is commonly stated), and that of Ḥasan b. Ḫabīb (after the middle of the ix. cent.), revised by Ṭāhā b. Qurrā. In the first half of the ix. cent. there were also translated the Geography, the *Hand-Tables*, the Planetary Hypotheses and the *Planisphere* of Ptolemy, the *Hand-Tables* of Theon of Alexandria, the work of Aristarchus on the size and distance of the sun and moon; the *treatises of Autolycus*, three of Theodorus and of Hipparchus. In this same century appeared very probably the translation of the tables of Ammonius, and the translation of a work entitled *Khitāb al-muṣāʿabāt*, wrongly ascribed to Ptolemy, dealing with the size and distance of the celestial bodies.

The first series of regular observations with the aid of fairly accurate instruments appears to have been made at Qandilābāb (Gandhāra, in the South-West of Persia) in the first years of the ix. cent., and was utilized by Ahmad al-Nahwani when compiling his *General Tables* (al-ṣāfī al-maṣāqqāt). But it was during the Caliphate of al-Ma'mūn (813-833 A. D.) that the most brilliant period of Muslim astronomy commenced. At the Observatory which stood in the quarter called al-Shamānīya in Baghdad the Caliph's astronomers under the directorship of Vahbi b. Abī Maqsūd (d. 830 or 831 A. D.) not only made systematic observation of the celestial movements, but also verified with remarkably precise results all the fundamental elements of the Almagest: the obliquity of the ecliptic, the precession of the equinoxes, the length of the solar year, etc. After these observations they composed the celebrated *Verìfīat Tabāl* (al-ṣāfī al-muṣawāt), for which they also had at their disposal the series of observations made in the other observatory of the Caliph on the mountain of Kāshāyā, 2-2/3 miles to the north of Damascus. This latter Caliph carried on one of the most difficult and delicate geodetic operations, the measuring of an arc of meridian in the region between Ta'mur (Palmyra) and al-Ra'jā with the plains of Mesopotamia. The mean result gave 3°0' Arabic miles as the length of a degree of meridian, a remarkably accurate value; for the Arabic mile being 6473 ft. this value is equal to 366,432 ft., a number which only exceeds the true value about 287 ft. the real length of the degree between 38° and 36° N. Lat. (for fuller details concerning these numbers see Nolino, *Il valore metrico del grado di meridiano secondo i geografi arabi*, Turin, 1893). Among the astronomer-calculators of the time of al-Ma'mūn:
mention ought to be made also of Muhammad b. Mushin 'I-Khāṭīrīsī, whose astrological observations were in circulation among astronomers during the Islamic period.

From 870 to 876 A.D., the three sons of Muhammad b. Shākhīr made regular observations in the observatory at Baghhdād and in the second half of the 9th century others made observations with equal excellence. Nasr al-Samanid, the celebrated 'Abd al-Battūl (q.v.), made observations from 877 to 918 A.D. at al-Rakka on the Euphrates; Tabīb b. Kurra (d. 928) utilized the observations of his predecessors in revising the tables of the movements of the sun; al-Mahāni and al-Nasirī continued systematically the immediate study of the heavens. Shortly after the year 300 (912-913) al-Hāshī composed at Baghhdād his principal work in trigonometrical processes. He made an unexpected degree of perfection. In the second half of the 10th century, the Būyid-Sulaimān founded an observatory in their own palace and gathered around themselves astronomers including 'Ābd al-Rahmān al-Sūfī (d. 376; q.v.), Ibn al-Athīr (d. 375), Wāṣiṣ b. Aṣārī al-Kūhī, Aḥmad b. Saḥāfī, (d. 379), (q.v.), 'Abd al-Hādī al-Wāṣiṣī (d. 380), and others. At Gbāna in Eṣṭaḵr, the Afghānīs al-Brūnī (d. 440; q.v.), the most original of the great astronomers of his time, was active. His work in this and other sciences was the most profound thinker that Islam has produced in the domain of the physical and mathematical sciences, displayed the greatest part of his literary activity.

In Egypt the scientific study of astronomy began with the foundation of the observatory at Cairo by Sélim al-Dīn al-Thābit, who during his stay (887-900) there was in touch with the most eminent astronomers of his time, such as Djamshid al-Kāshī, Qāṭāl ṢĀʾīsī, Rāmi, 'Ābd al-Kūhī, etc.; and for several years presided in person at the observatory, and left in his table. In his scientific work, he undertook a complete and independent revision, i.e. the works of the great astronomers and the tables of the stars made by his predecessors. The Sultan himself wrote in Persian the famous work on the heavens, in which he collected all the astronomical knowledge of his time (853-1449).

With Ulugh Beg the scientific study of Astronomy ceased throughout the Islamic world. Ancient writers only connect with elementary manuals, compilations of Ephemerides, and Almanacs, or descriptions of the movements of the stars. The modern astronomers have disappeared and in their place we find only the almāshīs of the mosques.

Muslim astronomers accepted almost without reserve and always followed in their tables the fundamental features of the Ptolemaic system of the universe. The earth stands absolutely motionless in the centre of the universe; the movements of the celestial bodies are all circular and uniform, their apparent inequalities are explained by the combination of circles concentric (numāzikāwī) with the Zodiac, eccentric circles (kābdīsī amlāzī) and epicycles (zāhīsāt isfīāq) —

Even in the 14th century the principle that the earth revolves on its own axis is one of the questions discussed; and in the following centuries its absolute immobility is universally accepted. The question as to the limits of the sphere (zāhīsāt) is dealt with only by the philosophers and
the dogmatic theologians, whilst the astronomers of the first centuries are not concerned therewith, being content to consider them for the purposes of their science as geometric circles, and it is only in the time of Ibn al-Haytham (d. 430 = 1039) that there is introduced into astronomical instruction the idea of solid and transparent spheres. Although the hypothesis of eccentric circles and epicycles made the idea of planetary movements an extremely complex one, it corresponded too well to the data from observation (without pendulum or telescope) and the needs of the calculator to be replaced by other hypotheses for which no satisfactory physical explanation was then forthcoming. —

No trace is found of the haliocentric system, to which at one and the same time the authority of Ptolemy, the philosophy of Aristotle and the dogmas of astrology would have been opposed. It ought not to be forgotten that with the question of the Copernican system was for more than a century a purely philosophical one, indifferent to the astronomy of observation which could not have contributed any decisive or important argument in support of it.

The Arab astronomers unfavourably compared it with the manuscript evidence of the Almagest. This task they splendidly performed, without allowing themselves to be influenced by the so-called, fallacious observations of Ptolemy. They perceived that the apogee of the sun, believed to be immobile by the ancients who stated that they had always observed it from the same point of longitude, is subject to the movement of the epicycles; al-Zarkalli even succeeded in discovering the slight movement peculiar to this apogee. They perceived that the obliquity of the ecliptic is not invariable, as the Greeks had asserted it to be on the ground of fictitious observations; but is subject to a slow change and that they had always observed it from the same point of longitude, is subject to the movement of the epicycles; al-Zarkalli even succeeded in discovering the slight movement peculiar to this apogee. They perceived that the obliquity of the ecliptic is not invariable, as the Greeks had asserted it to be on the ground of fictitious observations; but is subject to a slow change and that they had always observed it from the same point of longitude, is subject to the movement of the epicycles; al-Zarkalli even succeeded in discovering the slight movement peculiar to this apogee. Bibliography: Delambre, Histoire de l'Astronomie au moyen âge (Paris, 1819), p. 1-311, 312-539, is a history, but a mathematical analysis, of the intellectual worth, of several works of Muslim authors, an analysis which has the further advantage of frequently substituting Delambre's own exposition for those of the authors studied. The other histories of astronomy, of which Wolf's is the best, are all out-of-date and insufficient. Reference may be made here to my extensive article which will appear in the Encyclopedia of Religion and Ethics (ed. by Hastings), s. v. Star, Nalino, al-Subhâni, "Al Thabit ibn Qurra (or Abrar)," avvento il la Grande
Theodoric observed par... in the "Mémorial des P. de la Bibliothèque Vol. vii. 1804, p. 16-240 (Text and Translation of the more important historical parts).
Sédillot, Histoire des instruments astronomiques des Arabes (Paris, 1841); L. Gautier, Une réforme du système astronomique de Ptolémée taillé par les philosophes arabes du XIIe siècle (Journ. d'Asie, 10e sér., Vol. XIV, p. 485-510), astronomically very insufficient, von Bunsen, Geschichte der Astronomie, 2. Teil, 2. Teil, Leipzig, 1865, p. 31-36. For biographical and bibliographical notices of astronomers see the excellent work by Suter mentioned at the end of the art. Astrology.

C. A. Nallino.

ASTURLAB or Astur bald (A): on the vocalisation see also Ibn Khallikan, ed. Wustenfeld, n° 779; n° 746 of the Egyptian edition; Asturlab, from the Greek στηράλβας, name of several astronomical instruments, which can be reduced to three fundamental types according as they represent the projection of the celestial sphere on a plane, or the projection of this projection on a straight line, or the sphere itself without any projection.

1. The astrolabe in its stricter sense is the flat (planar) astrolabe, Asturlab or "astrolabion plumiferum", in Arabic called also "al-asturlab" (the instrument) consisting of tablets. It is a portable metal instrument in the form of a disc of from 3.9 to 7.8 cm diameter, with a handle (κέρας, κεραί) through which passes a suspending ring (κέρας, κοραί) by means of which it is suspended in a vertical position. The simplest type of this astrolabe, and the one which was known to the Greeks and Romans, consists of the following pieces: (a) the "mother" (εμα), a disc or circular tablet, with a raised edge (κύμα, κυματι), which gives it the appearance of a box; it contains the other tablets. Its circular inner surface is called "face" (κύματι), the exterior surface "back" (κάλρι); (b) other discs or circular tablets (σφαιρικά, σφηνές), usually nine in number, contained in the mother; (c) the "spider" (καρπος) or "spokes" (καρποι), placed above the others in the mother; it is made as open as possible having of course due regard to its solidity and the requisite space for marking the signs of the Zodiac and the places and names of the chief stars and in consequence consists only of strips of metal with several points or indicators (in the sing. κρατός, κράτια) artistically cut, which indicate the stars; (d) the ring or disector or adjustable circle (ενδικτος), revolving round the centre of the "back" and as long as the diameter of the latter; its two arms are sharpened to a point (κρατός, κράτια) and such has a perforated sighting-piece (λίθος, λίθα, λίθος) so that the arm's rays can pass through the two holes (λιθίδια) of the sighting-piece; the axis or pivot, "pole" (στήλη, στήλη), a bolt which passes through the "pole" of other pieces and holds them together; the head of the bolt is to the back of the astrolabe, and at its outer extremity there is a small bolt or screw which prevents it from slipping out and from its form is called the "nose" (φηρας).

On the back of the astrolabe are several concentric circles having the degrees marked and also chronological indications (i.e., a sort of personal calendar); they with the altitudes are used for measuring the elevation of the stars. On both sides of the tablets is marked the stereographic projection of the Almonantus (θυναντας), i.e., circles parallel with the horizon, the projection of the vertical circles (κεραίας κατά τον ουρανό), of the equation and of the ecliptic, for a particular geographical latitude in this projection the observer's eye is situated at one pole of the sphere and the plane of projection is tangent to one pole and parallel to the plane of the equator.

Certain astrolabes have also a tablet which gives for a particular geographical latitude the projection of the circles of position, of which use is made in the astronomical calculation called "direction" (διάγωνον); others have a tablet for all latitudes (θυναντας αριθμόν), also called the tablet of the horizontal (κεραίας αριθμόν) or general tablet (αριθμόν), the use of which is not very clear. According as the Almonantus of the tablets are all marked, or only from 2 to 2, from 3 to 3, from 5 to 5, from 6 to 6, from 9 to 9, from 10 to 10 degrees, the astrolabe is called "θυναντας complete" ("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"), ("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),("αιδιομπτικα"),Lastly this common, flat astrolabe is distinguished into northern (θυναντας βορειον) and southern (θυναντας βορειον) types, the name of projection is tangential to the north pole or to the south pole of the sphere; the former is naturally the more common. By adding other markings to those already on the tablets and changing the order of the said signs on the net they obtained astrolabes which were at the same time northern and southern and were named after the somewhat fantastic figure in which the said signs were grouped on the net, as "Drum", "ης Κρατικας", "ενθωμενας Αστρολαβας" etc. Probably the astrolabe 13240, "θυναντας" of Abu al-Sulayman (ca. 1400) belongs to this category. The "perfect" (θυναντας) Astrolabe here besides the other markings the circle of the sun's equator. Other flat astrolabes which have as basis a different projection from the stereographic are to be found in the theoretical constructions without practical significance, e.g. the astrolabe devised by al-Biruni and called "ενθωμενας", "cylindrical Astrolabe", because of its projection the "ενθωμενας" of Ptolomy, which al-Biruni called cylindrical, and which we now call orthographic; the circles of the sphere are projected on to this in the form of straight lines, circles and ellipses. The so-called "θυναντας" astrolabe, described by al-Biruni (Chronology, p. 318-339), appears to have been only a stellar chart in equidistant polar projection, i.e. the pole of the ecliptic was the centre of the projection, the parallels with the ecliptic or circles of longitude were represented by equidistant concentric circles and the circles of latitude by equidistant radii.

The astrolabe gives an immediate observation of the height of any star, and consequently has been used to solve without any calculation all the problems of spherical astronomy. It is useful further in geodetic operations, e.g. for calculating the distance of an inaccessible place, the height of a building, the depth of a well whose diameter can be measured. Naturally we cannot look for absolute accuracy from so small an instrument, which moreover on account of the precession of
the equinoxes and the diminution of the obliquity of the ecliptic is no longer of any use when a long period of years has elapsed since the period for which it was made.

Each marking on the tablets is valid only for a particular geographical latitude, and so a very considerable number of tablets would be required before the instrument could be utilized in all places. The "standard" straight instrument was removed by a Spanish Arab, al-Zarkal (Arzachel), who transformed the particular astrolabe into a general by substituting for the stereographical polar projection the horizontal projection. The eye of the observer is placed at the point to the east or to the west of the horizon, i.e. at one of the two equinocial points; the plane of projection is the plane of the solstitial circle, i.e. of the meridian passing through the solstitial points; the projections of the two celestial hemispheres exactly coincide, so that one sign suffices for both. In its final form, which al-Zarkal called 3'&;hhabiyah in honour of al-Mu'tamid b. 'Abbad, king of Seville (461-484 = 1068-1091), the entire instrument consists of a single tablet with two small subsidiary pieces. On the face of the tablet in stereographical horizontal projection the star is represented with its parallels (nawarit) and its circles of declination (manwarra), and the ecliptic with its circles of latitude and longitude, not only then there is the tablet valid for any geographical latitude; but also, since the projections of the two hemispheres exactly coincide with the coordinates of the ecliptic and the principal stars, replaces the "net" of the other astrolabes. A rod (nawwarit), or "oblique horizon" fixed at the centre of the tablet placed face up, fulfills the other functions of the "table of the common astrolabe" by inclining it more or less to the line of the equator we obtain the horizon of the place of observation, and can then deduce from its divisions the eastern and western amplitudes. On the back of the tablets are the alidades and the markings found on the back of the common astrolabes; but al-Zarkal further added the "circle of the moon" which enabled him to follow also the course of our satellite, and also a trigonometrical square which immediately supplied the "straight" (horizontal) and inverted (vertical) shadow" (azafal mahabbiya wa-mahabbi, tangents and cotangents related to the radius divided into twelve parts) of the angles measured. — This simple and perfect astrolabe was called by the other Arabs al-'azifah al-zarkal, "the tablet of al-Zarkal", and was famous in Europe under the name Saphoos. — A variety of this instrument of al-Zarkal is the ga'ifah al-shabriya (or shabriya), about which we do not yet possess any accurate information.

A. The "linear" (khawfah) astrolabe, also called "ytchmact", were called "ytchmact", after its inventor al-Muaffar b. Muaffar al-Thul (d. ca. 610 = 1213-1214) resembles in form a calculating-rod. The projection of the common, planispheric astrolabe is projected on a straight line in the same plane; the instrument represents accordingly the intersection of the plane of the meridian with the plane of the projection of the planispheric astrolabe. Points marked on the rod indicate the direction and when added on, the divisions of the ecliptic, the almanac-taras, etc., the threads attached to the rod are used for measuring the angles. The same operations can be performed with this instrument as with the flat astrolabe, but not with the same accuracy.

B. The spherical (hawar, alhawar) astrolabe, called "astrolabio redondo" in the Spanish works of King Alphonso x. of Castille, exhibits without projection the diurnal movement of the sphere relatively to the horizon of the given place; it is of service therefore in measuring the heights of the stars. It consists of a number of problems of spherical astronomy. It consists of the following pieces: (a) a metal globe on which the ecliptic, the equator, the horizon of the given place with its almanacs, and its circles of height, the positions of the principal fixed stars, the division of the day into hours and equinoctial hours, the geographical latitudes of various places, (b) the "spindles" or the "net" (shababah, shababa), a metal hemisphere fitting closely around the globe and of such open work that it contains only the ecliptic (which forms its rim), the positions of the principal stars and half of the equator; (c) a small strip (nawwarit) of metal fitting closely to the surface of the net and with one extremity fastened to the equatorial pole, so that the other extremity is always on the equator; (d) a gnomon placed at right angles to the meridian (e) an arm running through the globe, net and metal strip from one equatorial pole to the other.

(C. A. Nally.)

AL-ASWAD, epithet of "Alhila (according to some, "Abdina) b. Ka'b of the maghdiid tribe "Am. He had another epithet Dhu-l-Khimar, the "velveteen" (not Dhu-l-Himar, as Behághi, 169, wrongly says it). Shortly before the death of Muhammad, he assumed the head of a national revolt in South-Arabia, which soon overthrew the Persian officials and with them the supremacy of the Prophet. He set out from Khaf Khibbatan, conquered Najdhan, defeated, and put to death Shabir, son of the former Persian governor Baghtar, and took possession of the capital San'a, so that the whole of south-west Arabia came under his sway in rather less than a month. The majority of Muhammad's officials in the country fled to
Medina or to Ḥaḍramawt. To legitimise his claim he married the widow of the murdered Shahr, but his power was of short duration. A member of another mudhakkirite tribe, ʿAbd al-Ḥusayn b. ʿAbd al-Ḥakam, whose son he had conquered the country, allied himself with the Persians, and his head stood ʿAmīr Fādūs and Ḍūʾ fārūs, and obtained effective support from the widow of Shahr, who had wed the usurper much against her will. With her help they made their way into the fort and, according to tradition, killed al-ʿAswad as he lay on his couch a few days before the death of Muḥammad. The fall of al-ʿAswad had however no importance for the Muhammadans, since ʿAbd al-Ḥusayn soon afterwards surrendered to himself the authority and separated from the Persians who had given him their help. The accounts about al-ʿAswad are of special interest from the fact that they represent him as possessing prophetic aspirations, a feature which has undoubtedly historic reality. According to Belkhodrī he was a Kāhīn or prophet and styled himself Ṭāḥafūn, ʿAbd al-Ḥusayn b. ʿAbd al-Ḥakam, just as Ḍūʾ fārūs had come forward as Ṣāḥib b. ʿAmīr Fādūs. Another account calls him a juggler who did some remarkable tricks and deceived the mob with his words. He had a Šaṭūr who communicated to him everything, even the plans of his enemies; and the story is graphically told of how after the slaughter of a number of sacrificial animals in the open square in Ṣāḥib, he listened with his ear to the earth and heard the mysterious voice of his spirit ("the tells me"). When on the occasion of an obsession by night he bellowed like a bull his wife pacified the watch who came hurrying up with the words: "he has a divine revelation."). Also his epithet "the veiled one" is consistent with his art of divination.

Ayūt, town in Upper Egypt. Ayūt, the largest and most commercial town of Upper Egypt, is situated 27° 11' N. Lat. on the west bank of the Nile. Owing to its situation in one of the most fertile and commercial parts of the cultivated Nile-valley, and also to its being the natural terminus of great desert-highways it was in antiquity an important town (Syyuw, Greek: Lykopolis) and the chief town of a Nomos. Under ʿAbd al-Muʾmin Ayūt remained the chief town of a Khūra (modern wāḥa, "district"), and on the inauguration of the division into provinces became the capital of a province (Ayyūt, now Muḥāfaẓa). The town itself contains 42,000 inhabitants, the district 122,000; and the Province embracing 9 districts 782,000.

Ayūt is the colloquial form of the literary Ṣayūt. Both are Arabisms for the Coptic Sion, to which in the survey-records of the Middle Ages the form Ṣayūt or Ṣayūt corresponded. But as early as the time of Kallaghantī (d. 821 = 1418) the popular pronunciation was Ayūt.

A history of Ayūt cannot be written for the reason that we scarce find any mention of it in the historians, and only towards the end of the Mamlūk period, under ʿĀli Bey, did it play any historical part, viz. in the year 1183 (1569–1770) when it was for a time the centre of revolt. From the accounts of geographers and travellers we ascertain that it enjoyed unbroken prosperity throughout the entire Islamic period. At the end of the xive. cent. it experienced a considerable accession of importance, especially after it became linked by rail with Cairo (in 1292 = 1875). Its population has risen from 28,000 in 1403 (1875) to the present figure 42,000.

In the Middle Ages, Ayūt was famed for its agricultural products, its industry and trade. Besides corn and date-quoines we found here important quantities. The main industries were the weaving of woollen, cotton and linen goods. Owing to the alum and indigo obtained from the adjacent oases dying was extensively carried on; e.g. the materials manufactured for export to ʿEmār Fūr were dyed here. Its specialties were fine goods, called Ḍūʾ fārūs after their chief place of production ʿAbdīk in Upper Egypt, and so industrially manufactured. Ayūt now manufactures black and white Tašfīsh with silver-work, which are very popular in Europe, and represent the last remains of an industry once very famous throughout the Orient. Further Ayūt was engaged in the preparation of opium and in the making of pottery which with its antique patterns is still much in demand as black and red "Ayūt-wares".

There was a brisk trade in all these products throughout Egypt and abroad. The direct trade with the ʿAlāʾ is specially famous. The annual ʿEmār Fūr caravans (ca. 1500 camels) brought slaves, ivory, ostrich-feathers and other products of the ʿAlāʾ, and received in exchange the products of Egypt's industries, especially stuffs. The scholars of Napoleon's expedition made careful investigations into this trade which has now so much declined.

Like all industrial towns of Egypt Ayūt had a large Christian population — 60, according to others as many as 75 churches and chapels —, but no Jews at all, a fact explicitly stated.

Caravanserais, bazaars, baths — one of the latter famous and very ancient —, mosques and other public buildings adorn the town to-day as formerly. In one of the mosques stood a Mīrzūn masjīd at certain seasons was filled with corn and carried through the streets as Ṣāḥib (Ibn Dāwūd). Like as the flourishing towns in modern Egypt, Ayūt has a strong admixture of Turantans and is assuming a European appearance.

Ayūt is the birth place of Plotinus, the Coptic Saint John of Lykopolis and of several Arab scholars bearing the name al-Sūyunī, of whom the savant Dīwānī al-Dīn (d. 911 = 1505) is the best known.

Dory and de Goeje), p. 48; Kallaghantī, Qānūn, ʿAbd al-Sūyunī al-Muṣrī, p. 335; also transl. of Wustenfeld, p. 165; Ibn Dāwūd, v. 32; Abū Saʿīd, ed. v. 87; Aḥmad ibn Ṣāliḥ al-Muṭāb, ed. v. 73; Ṣāliḥ ibn Ṣāliḥ al-Muṭāb, ed. v. 74; Ibn Ṣāliḥ, ed. v. 84; Shihāb al-Ḥārām, Ṣafar Minīn, p. 61 (Travels, p. 173); Quatrémont, Memoire et lettre sur l'Égypte, l. 374 et seqq.; Amiwalla, La géographie de l'Égypte à l'époque Copte, p. 464 et seqq.; Boinet Bey, Dictionnaire géographique, p. 388; Marçel, Histoire de l'Égypte, Chap. xvi. (ed. l'Univers, p. 196).
AT (t.), horse; in compounds: Atdb, horse-market, etc. Name of a town in the west of the district of Akmiden; Atmudan, horse-ground in Constantinople on the site of the imperial Hippodrome, etc.

ATAV, (t.), father; in compounds: Atavab, Father Beg, originally a customary form of address for the Mamluk and Ottoman emirs of Turkish princes who during the Seljuk period were entrusted while still in their youth to some prominent emirs who assumed a paternal relationship towards them. From this originated a fixed title which was given to other powerful emirs. Under the Mamluks of Egypt the emir who held the position of commander-in-chief of the troops took this title which became customary to speak of an Atavbeg al-`asakir. Cf. van Berchem, Mamluken pour un corpus incomplet. arak, l. 290. — Atavlik, fatherhood, high title of a Wust or Beg in Turkistan. Hence the well-known Ya`fah Beg [i.e. v.] is often called Atavlik Bahad.

ATAV, Arab, Arab jurist and traditionalist. A native of Yemen he was roused in Mekka; he was of humble origin and is commonly referred to as the author of the umma of Abu Malik b. Abd Khattab al-Fihri. Among his masters were Abu `Abd Allah b. Quraysh and Abu `Abd Allah b. Aswad and many others are mentioned. As Muffit in Mekka he attained extraordinary repute and was regarded as one of the most eminent authorities in jurisprudence and Muhammedan tradition generally. Especially he was considered to be an unsurpassed authority in all that concerned the pilgrimage ceremonies. He died in Mekka in 1147 (725) or 1145 at the age of 88 years.

ATAVMALIK, Dhuwaj (See al-Dhuwajin).

ATABEG (A.), modern substantival (See `ata`ab). Examples in Sachau, Arabische Vollbäder aus Mercapetanien, p. 17, st. 99. ATABEG. (See atav.)

ATABAT, poetic name of `Atab; Ya`yah New` Zade [g.v.]

ATABAK, ATABEG. (See atav.)

ATAMA (A.), the first of the three divisions of the night: also a name given (instead of Ya`yik) among the Beduin to the Night-prayer, but forbidden by tradition as pagan.

ATBARA, tributary of the Nile. The Atbara (Anteblos of the ancients) is the only important tributary of the united Blue and White Nile. It comes from Abyssinia and has its origin not far from Lake Tana. Between the 17th and 18th N. Lat. it discharges its waters slightly to the south of Berber into the Nile. Whilst in the season of the Nile-flood it flows in a fertilizing volume, from August to June it is almost dry. The Battle of the Atbara on 8 April (1858) is famous, in which Kitchener defeated the emir Mahgul, the leader of the Mahdists, thus opening the way to Khartum.

The name Atbara is now given also to the little railway-station at the mouth of the river, 1085 mi. from Wadi Halif. Here the line for Suliim and Port Sudan branches from the Nile-line.

ATEIBA. (See otaiba.)

ATEK, district in Russian Turkistan, on the northern slope of the frontier-mountains of Khuristan, between the modern railway-stations Gjora and Dughak. The name is really Turkish, Erek, "edge border" (of the mountain-chain), and is a translation of the Persian name given to this district, viz. Damuri-Koh, "foot of the mountains"; but the word is always written Xaq in the Persian. During the Middle Ages no special name for Atrek appears to have been in use; being a district of the town of Alwani [p. v.] it belonged to Khuristan. In the 16th and 17th centuries it fell into the power of the Khans of Khuristan, and later into that of the Turkomans; before the appearance of the Russians the frontier towards Persia was never clearly defined. Previous to the delimitation of the borders in 1855 a pair of Ataks with Alowar belonged to the principality of Kalat, which was subject to the over-lordship of Persia. Under the Russian administrative system the district (pustawno) of Atrek forms part of the circle (nyed) of Tedjen (Transcaspian region); it has no towns nowadays.

(Th. Bartold).

ATESH (t.), fire; in compounds: Ata`Fusar, fire-worshipers, Magian sect, At`dak, fire-temple, also the title of a Persian Tadbikha composed by Last `Atabeg: Ateh-Dagh, volcano, etc.

ATF (connection), as a grammatical term used in the sense connection with a preceding word, 2 kinds are distinguished: Atf al-Nashed also called simply Atf, and Atf al-Bayan:

1. The simple connection in a sequence, Atf al-Nashed means in this, that by means of one of the 10 particles of connection a word is joined to a preceding word, e.g. hama Zaid saw-Al-Far: The particles of sequence (al-wa`iij or al-Far) are distinguished according to their degree of strength: maw is used for simple coordination (al-Qur'an); for, hamma and habba for super-ordination, or rather subordination (al-Ishb); uma, inma, or ana to express an alternative (labba: labba al-bakar bi bakh al-muskhabin), and tabal, or tabain as an adversative (al-Ishb). The Atf can connect both words (mawf'; al-Far) and sentences (I'amzul al-Far) with each other. According to Ibn Ya`anan Nashed is a Kafene term, Atf al-Bayan.

2. The explicative connection, (Atf al-Bayan) is an apposition, which however cannot be an adjective. In contrast to a(n) explains the preceding word, e.g. ghayb al-Rasul bi `Abd al-Malik, and sentences (I'amzul) with each other. According to Ibn Ya`anan it is identical in use with wa-un.

In both kinds of Atf the second word is called al-mawfi` al-mashh. Bibliography: Zamakhshari, Mufrajul, p. 52. — 3. 1 i. 140 et seq.; 6: 11: 12: 12: 1 Dict. of Technical Terms, p. 1007—1010.

(Whit.)
ATHIN, town in Middle Egypt. Athin (also written with f instead of Α) is a small town of 4,300 inhabitants on the East bank of the Nile on the site of the Fayyum. The old Egyptian name of the town was Teep-yeh or Per Hathor and Teyp-yeh, i.e. "house of Hathor, lady of Teyp-yeh." From this the Copts formed the term Pepekh, the Arabs Athin; the Greeks identifying Hathor with Aphrodite called the town Aphroditopolis, abbreviated to Aphrodite. The town received its present importance in the Christian period, for it had over 20 churches, of which in the 18th cent. 10 were preserved. The ancient spise, later Kairat Athin was called also al-Sharkiey, since it lay on the east bank; on the occasion of the division into provinces towards the end of the Fatimid period a whole province, Libyans, was named after it. Not till the year 1250 (1834-1835) was it incorporated as a district (marradi) of the province of Dijana. Recently the Nile took the place of Athin as chief town of the Barak. Information about Athin is very scant; it must have seriously declined in the Mamluk period; the Khedive first began to do anything for this region by putting an end to the incessant pillaging on the part of the Bedouin and Mamluks, and building, or rather restoring canals. Athin is too small a town and possessing some local importance.

ATHAR (a.; properly signifies "trace"), i. Tradition [see MARDIT], 2. Relic: al-arub al-arbaf (Plur. al-Athar al-arbaf), relics alleged to have belonged to the Prophet, such as hair, teeth, pieces of mantles, autographs, utensils, especially impressions of his footprints which are preserved in mosques or other places. The inheritance to the family of the deceased and promissory notes have been attached to the sanctification of Muslims [see KADAM]. The relic is also called both by Christians and Muslims Dhokhra (treasure).

Bibliography: Goldschel, Muh. Studien, ii. 356-398. (GOLDSCHMID)'

ATHUTH, formerly a harbor on the coast of Palestine between the promontory of Carmel and al-Jafir (Dora), on a little tongue of land which lies to the north of a small bay, and is washed on three sides by the sea. According to the Itinerarium Bernardi galiani there was a munition Ceraus there, but the name Athuth appears to be ancient. Athuth appears in the light of history in the period of the Crusades. In 1153 (1187) it fell into Saladin's hands. In 1218 the Castellano peregrinorum, as the Franks called it, was reconquered in a brilliant Templar-fortress. Along with Girsie (Onofrius Dussell) it has guarded the passes of Carmel leading south. In 696 (1291) it was captured and demolished by the Mamluk Sultan al-Ashraf Khalil. But about 1400 Athuth is again mentioned as the most northerly official port of the Mandate of Sidon. About 1060 Fellahin now dwell among the ruins, which are worthy a visit.

ATIKIA, a native of Makkah and a daughter of the Harfit Sa'id, b. 'Amr (of the Kornite family of 'Ad), b. Ka'b and Umm Ku'r bint al-Hadrami. She accepted Islam before the Hijra and accompanied Muhammad on the Hijra. Her first husband was 'Abd Allah, son of the later Caliph 'Abd al-Malik. Of dazzling beauty she so captivated him that he gave in marriage with her omitted to fulfill the religious obligations, even the obligation to war, and 'Abd al-Malik insisted on their separation. After long resistance 'Abd Allah submitted to this, but was so consumed by his longing for her that 'Abd al-Malik consented to their reunion. On his death-bed 'Abd Allah extracted from her a promise that she would ever remain a widow, and endowed her in return a considerable legacy. But a year after his death 'Omar, who subsequently became Caliph, prevailed on her to reconcile her with her former husband. In the inheritance to the family of the deceased and to give him her hand in marriage. According to another account this restitution was only effected after yet another marriage at the instance of 'Abda, sister of 'Abd al-Malik. According to another account she did not marry 'Omar until he became Caliph. 'Omar's father al-Khalif b. 'Abda, his grandfather 'Amr b. Sa'id, both of whom at the death of 'Omar she married al-Zubair b. al-Aswam (p. v.). On his death she married Usaid, son of 'Ali; further both 'Ali and Marwan had been unsuccessful suitors for her hand. Before her marriage to 'Omar she had been consort of his brother 'Omar. 'Omar was assassinated, her other husbands were mortally wounded on the field of battle; hence arose the saying, who died a hero's death may wed 'Abda. Her story on her husband al-Zubair is attested for the sanctification of Muslims [see KADAM].

ATJEH, the most northerly part of the island of Sumatra. Here flourished the once powerful Muslim empire of Atjeh which is now subject to the authority of the Netherlands. The southern limit is now formed by the administrative districts of "Sumatra's Westkust" and "Sumatra's Oostkust", but in earlier times the province (as at least the sphere of political sovereignty) of Atjeh extended much farther towards the south. A considerable part of both the east and west coasts of Sumatra was subject to the authority of Atjeh, and even the pagan chiefs in the Batak region received their rank at the hands of the princes of Atjeh.

Great-Atjeh. Only the district to the north-west with the Atjeh river and the port Atjeh,
the former residence of the princes of Atjeh, was from the first reckoned as Atjeh proper. The Dutch named it Great-Atjeh and the capital Kota Radja (i.e. fort of the prince). The port of Subang situated on the island of Pulu We-to the north-east of Kota Radja) only dates from the beginning of the present century. The inhabitants of the littoral (Baroh) are Semang and are largely from the population of the highlands of the interior (Tanong); the customs and speech of the former (who live of course in the vicinity of the residence) are always considered to be the more refined.

The Dependencies: The other districts situated on the west, north and east coasts are usually referred to as the Dependencies. Among the important towns are: on the west coast; Mabab, Tapa, Taun and Singkel: on the north coast; Sigill in the region of the former empire of Fidi (Pedir), Giggig, Morokid, Samalanga, Posangun and Lho Sowag. In the region between the latter place and the river Djambo Atj stood the flourishing empire of Pas 2 (Pas) which Ibn Battuta (ed. Derflinger and Sangster, ix. 228 et seq.) visited in the year 1345; recently many monuments with inscriptions have been discovered here (cf. C. Snouck Hurgronje, Arabie ou Coste Iulii, p. 8-10 = L'Arabie et les Indo-Nésiens in Revue de l'histoire des religions, xtm. 63 et sqq.). On the east coast are situated among others; Simpong Ulim and Ili. A steam tramway laid some years ago joins the east and north coasts with Kota Radja. The weal of the dependencies which on the coasts are very thickly populated at parts is mainly dependent on the cultivation of pepper, great quantities of which are exported annually. A part of the population has migrated thither from Great Atjeh; many Malays have also settled here from the neighbouring districts.

Gayo and Alas Countries: High mountain-chains overgrown with virgin forest separate the littoral from the Gayo-country; transverse chains divide the region of the Gayo into four table-lands. The most northerly (containing the great Tawar lake and the sources of the river Posingun) is occupied by the so-called "Utang Laut" (i.e. people of the lake), the plain to the south of it is occupied on the other hand by the "Utang Dovit" (i.e. people of the land); to the southeast lies the table-land of Serboldjali containing the sources of the river Porma which flows in an easterly direction. The fourth table-land, situated in the south and containing the bed of the river Tripa which discharges its waters on the west coast, is called Gayo Leste (i.e. the wide, spacious Gayo countries). The Alas countries lie south of this. The population of these regions, who differ in many respects from that of Atjeh, have from the first recognised the authority of Atjeh. The four chiefs appointed by the missionaries of Atjeh in the several parts of the Gayo-country (the so-called "Kedjurus") were the mediators between the Gayos and Atjeh. Two of these Kedjurus had their sphere of influence in the regions of Lake Tawar (their distinctive titles were Rodju Buhur and Siau Utama), among the Dovit, and the fourth in Gayo Leste (with the title Rodju Lingko, or Pitarasang). Serboldjali was formerly without inhabitants; later its most eminent chieftain was also called Kedjurus (Kedjurus abik). In the Alas countries the authority of Atjeh was represented by two Kedjurus.

For accurate information about the people of Atjeh we are indebted above all to C. Snouck Hurgronje, who (first in the years 1891-1892) investigated the previously but little known social, political and religious conditions of this nation (De Atjehers; Batavia, 1893-1894; cf. the English translation of this work which is provided with a new introduction and some additions by the author: The Acehnese, B.A. Willemen, 1906), and later described at length the land and customs of the Gayos (Het Gayoland en zijn bewoners; Batavia, 1903).

Population and Language: Little is known about the origin of the people of Atjeh. Linguistically they belong to the Malay-Polynesian peoples. Slaves (from the island of Nias, etc.) and other foreigners (e.g. merchants from Hindustan) have influenced to some extent the composition of the population. Atjeh has many dialects, and each dialect again many differences; the literary language has in general closest affinity with the idioms of the Baroh-district. For the literature of Atjeh see Snouck Hurgronje, De Atjehers, ii. 87-193 (rather fuller in The Acehnese, ii. 66-189). The dialect of the Gayos is so different from that of Atjeh that it may be regarded as an independent language. Malay is almost unknown in this except among a portion of the inhabitants of the sea-ports. Those scholars who wrote books in Malay while yet the empire flourished were mostly foreigners. From earliest times in Atjeh letters, official documents and many works on theology were written in Malay, but as a general rule the Acehnese-who are not well educated do not understand Malay; for further details see C. Snouck Hurgronje, Studien über Atjehische blank- en schrifttum in Tijdschrift van het Bataviaansch Genootschap voor Kunsten en Wetenschappen, 1892-1894, xxxv. 346-442; also Atjehsche Taalstudie, ibid., 1900, xlii., 144-282; K. F. H. van Langen, Handboek voor de lees- en schrijfvaardigheid der Atjehsche Taal, Haag, 1880; also Woordenboek der Atjehsche Taal, Haag, 1899-1900; as. A. J. Hazen, Gayo-Nederlandsch Woordenboek met Neder- Gayo ordonn, Batavia, 1907.

Tribes and Families: There are still preserved traces of a division of the population of Atjeh into 4 tribes. The members of such a tribe or family—Acehnese: Kaway (from the Arabic Kauen, people) — regard themselves as blood-relations in the male line, and have (especially in regard to blood-feud and the payment of blood-money) common rights and obligations. The members however of the various Kawuns are scattered throughout the country; only where many kinship dwell together are they wont to choose a chief to represent their common interests. The traces of this Kawun-division which has been preserved from a remoter period of civilization are disappearing among the Acehnese; the Gayos, on the other hand are still divided into 4 tribes who dwell together under their chiefs (Rodjiae). When Rodjiae disagree decision rests with the Kedjurus.

Administration of the Villages: In Atjeh the Kajai or Aji (i.e. the older) is the head of the Gampung — i.e. village, also a quarter of a town (= Mal. Kampung); in case of necessity he is called the "eldest" (i.e. the people who have had experience of life). The religious affairs of the Gampung, e.g. leading the community in the Salat, are the concern of the Tong. This
title is borne in Atjeh both by people whose func-
tions are connected with religion, and by those who have acquired some acquaintance with the
sacred law. The Gempung-Tongkuas are not men of
learning. Their rank has become hereditary,
and the ignorance of many Tongkuas is so great
that they are scarcely able to administer their office
without the help of other people.

The princes, Ulébablangs and Sagis-
chiefs. In historical times Atjeh has always been
divided into many small districts, whose hereditary
chiefs — the so-called Ulébablangs (i.e. commande-
res-in-chief) — lived in constant feud with each
other. They paid homage however to the prince

doctor of local, Oriental, and European
accounts, depended on the tribute of the nei-
bouring regions on the coasts and the harbours-
dues of the capital Atjeh. The bold Acehnese
menace the coasts and the harbours; if these
demanded tribute few dared resist. The interior
of the country possessed little interest for the
princes. Even when the empire was flourishing
(2. half of the xvi. cent. and particularly during the
1. half of the xvii.), the authority of the Sultan
was confined to the immediate vicinity of the
capital.

By the end of the xvii. cent. the princes were
become quite independent of the Ulébablangs in
Great-Atjeh. The latter had at that time apparently
on the ground of common interests formed them-

themselves into three federations, the so-called Segi,
"sides", i.e. of the triangular-shaped Great Atjeh),
which exist to this day. Each Segi had an over-
lord (Panjolma-Sagi), whose authority however
did not extend beyond the common Segi-interest.
(Inc. Dependencies also such federations are
found. The Sultan chosen by the three Segi-chiefs
used to pay to them a certain sum. He usually
belonged to the family of the previous ruler, but
strangers, e.g. Saliads, who dwelt in Atjeh, were
sometimes elected to the Sultanate. In the course
of time other chiefs obtained a voice in the choice of a
ruler; according to tradition at one period
12 chiefs (including the 3 Segi-chiefs) formed a
kind of electoral college.

The majority of the Ulébablangs in Great-Atjeh
and the Dependencies later received and still receive
their authority from the Sultan's hand unit in witness
thereof were given a document bearing the ruler's
seal (a so-called Sarabatas; on the Hindustani origin
of this seal see G. P. Rouffaer, in Bijdragen tot de Taal-
Serie 5, vi. 35—55). The Kings or the Gayas and
Alamors on the other hand usually received a
kind of dagger as symbol of their rank.

Division into Mukims. The Friday-service
according to the Sháfic doctrine is only valid if
40 Mukims are present. A Mukim is a person
domiciled in the place and satisfying the stipula-
tions of the law. Since the population of most of the
Gampongs was not numerous enough to be able to hold a regular Friday-service with 40
participants, it became the custom to group to-
gether several Gampongs, and as near the centre
as possible of such a district to construct a mosque
for the Friday-service. Hence Mukims (here pro-
nounced Mukim) acquired, not only in Atjeh but
also in some other Malay regions, the meaning;
department, circle. Each Ulébablang was lord over
several of those Mukims. Further the names of the
3 Segi have been derived from the original number
of their Mukims; i.e. they are called:
the Segi "of the 22 Mukims" (in the Sooth); the
Segi "of the 25 Mukims" (in the west); and the
Segi "of the 26 Mukims" (in the east) of the
triangular-shaped Great Atjeh. These ancient names
were preserved even after the number of the Mukims in the Segi of the 25 Mukims and especially
in that of the 22 Mukims had mounted up owing to
the increase in the population.

The chiefs of the Mukims bore the title of
Imam. This word denoted originally the leader of the
Friday-service (Arab. Imám). The Imams be-
cause however gradually hereditary, secular chiefs,
who transferred the leadership of the Friday-Salat
to special Officials.

Administration of Justice. Laws. As a

general rule the chiefs themselves were wont to

the functions of judges; they based their
decisions on the unwritten law of custom (Adat).
There are indeed some statutes (Sarabatas), which
tradition credits Mokutu Alam and other famous
rulers with having issued, and the Acehnese,
who know these laws only by name, ordinarily
assume that they contain an exact statement of
their law; they really consist however only of
ceremonial regulations regarding matters of administration,
court-ceremonial (including the homage to be
rendered to the rules by the Ulébablangs); the division
of the harbour-dues and the fulfilment of several
religious obligations. These regulations date from the
time when the princes attempted, without
permanent result however, to centralise their im-
perial administration; muslim scholars at the court
also left their impress on these laws (for fuller
information see C. Snoeck Hurgronne, De Adatkers,
1. 5—17; The Acehnese, 1. 4—16; K. F. H.
von Langen, De inrichting van het Adatsehe staats-
huis in onder het vaste maatst. van Bijdragen tot de Taal-
land- en volkst. van Ned.-Indies, Serie 5, iii.
381—471). Further both the Sultan and the
Panjolma had their Kali (= Kalé), but these
ecclesiastical judges only took a share in the
administration of justice on exceptional occasions
(e.g. in the division of an inheritance, in some
forms of divorce, in contracting marriage, and in
other cases where the religious law was usually
followed; in other occasions only if the chiefs
expressly took them into council). The judge of
the sarabata bore the title: Kali Mainkin Adu =
Kalé Mainkin (= Kalé); his hereditary office de-
generated in course of time; he became the peculiar
chiefs of several Gampongs within the sultan's realms.
Also the rank of the other Kali became hereditary,
and if those people who were Kali in virtue of their
hereditary right possessed the knowledge
requisite for this office it was by a rare chance.

Religion. From earliest times there existed
trade relations between Atjeh and Hindustan. The
civilisation and language of Atjeh were at first
subject to Hindu influence; later Islam reached the
shores of Atjeh, probably through merchants
by Hindustani merchants. When Ibn Battuta visited
Pek in 1345 Ismail held the field; the ruler of
the country warned against his unbelieving neigh-

507
bours. The Achehnese are orthodox Muslims, but Islam as it exists in Atjeh and elsewhere in the Dutch Indies has some peculiar features which are to be explained by its Indian origin. Such are, for instance, the existence of a heterodox mysticism and some characteristics distinctively Shi'ite. The first month e.g. is in Atjeh always called Asam Ulee, obviously from the two martyrs Hasan and Husain who are held in special honour in Shi'ite countries. The representation on a large oval Ule 'B'akar with a Shi'ite marginal inscription has formerly led some scholars to the false opinion that the Achehnese were partly Shi'ite (cf. A. W. T. Juyuboll, Een Aziatische weg met Arabische opschriften in Tijd- schrift van Ned-Indië, 1875, ii. 325 ff.; 1875, ii. 471-476; M. J. de Goede, Atjeh in De Nederland. Stichting, 1875, p. 388). In agreement with the character of their Indian teachers which is disposed to an ascetic view of life the Achehnese in general are lax in the fulfilment of many religious duties. The Şafii for instance is usually neglected by the majority. On the other hand many Achehnese are wont annually to join in the Hajj. Further the Nizâdî (Malay, Arabic and Achehnese) are still studied in various places under the guidance of masters learned in the law (cf. S. M. Schwellnus, Geschiedenis van de Achehse handbeschrijvingen en gebruikte boeken in Notulen van het Batav. Genootschap van Kunsten en Wetensch., 1901, xxvi. n. v.; also De Aijëhêrs, i. 1-33; The Achehese, i. 1-33). The students who mostly come from remote districts live in a common residence (Kangawan). Whilst yet the Empire furnished the splendour of the court not rarely induced foreign scholars from India, Syria and Egypt (including a son of the celebrated Ibn Hajar al-Hailami) to settle in Atjeh. For the Achehnese princes they composed in the Malay tongue some works which are still held in high esteem, including the Malay Fiqh-Book Şâfi'î al-emtâebî (printed in Mecca in 1822) of Kântîrî, an Indian savant of Godjand. He also dedicated in the year 1655 his works in the language of the Salafiyyah to the then sultan Iskandar II. (cf. G. K. Niemann, Brevierkung mit Malische geschichten, 2 Ptl.). Similarly 'Abd al-Ra'îf of Sinkel devoted his Fiqh-Book Mi'at al-Tulbî to the princes Şâfi'îyyah al-Dîn (1641-1703). Cf. S. Kayser in Buijdragen tot de Taal-, land- en volkenk. van Nederland, India, Serie 2, vii. 223 ff.; A. Meursing, Handboek van het Mohamm. rigt in de Maleische taal, Amsterdam, 1844.

Many Achehnese pilgrims became members in Mecca of one of the orthodox mystic brotherhoods (especially the Kadiyya or Naqshbandiya) but these Tarîafs do not have in Atjeh the same importance as they possess in many other parts of the Dutch Indies. Formerly there were prevalent in Atjeh the forms of Pantheistic mysticism which at that period were generally spread throughout Hindustan. The most famous representatives of this heterodox tendency in Atjeh were Shahs al-Dîn of Sumatra (or of Feizâ; i. 1650) and his predecessor Hassan Pansuri. Its chief opponents were Kântîrî and 'Abd al-Ra'îf (cf. H. N. van der Tuuk in Buijdragen tot de Taal-, land- en volkenk. van Nederland, India, Serie 3, i. 604). The latter had schools in several lands, amongst other places in Medinah, where Ahmad Kusâ'hî was his teacher. After the latter's death in 1661 'Abd al-Ra'îf

returned home and introduced the more orthodox mysticism of his master (the so-called Shâfi'îyyah). Cf. D. A. Rinke, Akhandnawef van Sindjel, Leid. Doktoren-Diss. 1903; F. Wüstenfeld, Die Sultanat in Süd-Arabien im XI. (XII.) Jahrh. in, Abh. der Kgl. Gesellschaft der Wissensch. zu Göttingen, 1885, xxx. 127-199. Certain forms of the ancient heterodox mystics have been preserved till modern times, but such differences from the orthodox teaching, which are based on ignorance, are gradually disappearing before the increasing communication with the centre of Islam. (Fuller information in Soosac Hargunage, De Aijëhêers, ii. 14 ff.; The Achehnese ii, 13 ff.). Veneration of saints has still an important place in the popular faith of the Achehnese. The pilgrim visits the tombs of illustrious saints and seeks by gifts and vows to secure their favour and intercession. Some of the most celebrated Achehnese saints were foreigners, as e.g. the Arab Tungi Kusâ'hî, who died in 1782, and the Turkish or Syriac 'saint of Gampōg Bitâ', who according to tradition came to Atjeh in the xvi cent. The above-mentioned 'Abd al-Ra'îf, who so combatted the sins and heterodoxies of his countrymen that he became regarded by later peoples as the introducer of Islam into Atjeh, is also honoured as a saint. After his death in Atjeh he was honoured under the name Tungi di Kuula, because his tomb is situated at the mouth (Kuala) of the river Atjeh.

Princes of Atjeh.

II. Şâfi'î al-Dîn (1528-1537).
IV. Husain (1568—1575).
V. Sultan Muda (a child, reigned only some days).
VI. Sultan Sri 'Alam (1575-1576).
VII. Zain al-Abdin (1576-1577).
IX. Sultan Bayang (± 1589).
X. 'Ali al-Dîn of Pestak = Şâfi'î Shah (1586[89]—
1604).
XI. 'Ali Rüyyet Shah (1604—1607).
XII. Iskandar Muda = Mokûtan 'Alam (1607—
1636).
XIII. Iskandar Thafir (1636—1641).
XIV. Şâfi'î al-Dîn of Thafir al-'Alam (daughter of XII, widow of XIII, 1641—1675).
XV. Nahyât al-Dîn Nur al-'Alam (1675—
1685).

In modern times,

I. 'Inayat Shah (1678—1688).
II. Kamûd Shah (1688-1690).
XVII. 'Abd al-'Alam Sharif (Hâfiz Djamal al-
Dîn (1699—1702).
XIX. Farka's 'Alam Sharif Lamtâr (1702—1705).
XX. Djamal al-'Alam Badr al-Munir (1701—
1726).
XXI. Djamal al-'Alam Amin al-Dîn (reigned only a few days).
XXII. Shams al-'Alam (reigned only a few days).
XXIII. 'Ali al-Dîn Ahmad Shah (1726—1735).
XXV. Mahmûd Shah (1760—1761).
XXVI. Badr al-Dîn (1764-1765).
XXVII. Sulaiman Shah (1743).
XXVIII. 'Ali al-Dîn Muhammad (1781—1795).
XXIX. 'Ali al-Dîn Djamal al-'Alam (1795—
1815; under a regency till 1829).
XXX. Sharif Salī al-'Ālam (1841—1818).
XXXI. Dāwūr al-'Ālam II (1818—1824).
XXXII. Muḥammad Shīh (1824—1838).
XXXIII. Māgūr Shīh (1838—1870).
XXXIV. Muḥammad Shīh (1870—1874).

The earlier history of the princes of Atjeh is known only in its main outlines from Malay chronicles, occasional notices by European authors and a variety of other sources. According to tradition the founder of the kingdom of Atjeh, which had hitherto been a dependency of Pedoe, was 'Alī Mughayyat Shīh (supra n. 1). His two sons Salīh al-'Ālm and especially 'Alī al-'Ālm Rūyayt Shīh al-Kubur increased the importance of the new kingdom. In the first half of the seventeenth century Atjeh reached its greatest prosperity, attaining its height during the reign of Iskandar Muda, honoured after his death by the title of Mūkta al-'Ālam (i. e. Crown of the World, supra n. XII). The dominion of the Atjehnese was extended far to the south during his reign. Iskandar's expedition with a great fleet against Pahang and Malakka forms the subject of an important Atjehnese epic (for particulars see Sonck Hirzog, Die Atische, ii. 62—85; The At-BEGINNEN, ii. 80—88).

After the death of his successor (Iskandar Thallal, supra n. XII), four princes ruled over Atjeh in the second half of the seventeenth century (1641—1699). This period of female rule was naturally much to the advantage of the Uleimbalang, whose power and authority were thereby increased; but on the other hand many disadvantages attached to this state of affairs and decreed on the authority of a lady received from Mecca that it was forbidden by law for a woman to rule. Thereupon at the beginning of the eighteenth century arose a series of dynastic wars. Some of the princes who contended for the throne were Suydāi (i.e. descendants of Husain) born in Atjeh. The best known among these was Djasīl (supra n. XXI). After he was deposed in 1726, he held out for a considerable time against the later Sultan, amongst others against Ahmad (supra n. XXIII, a man of Buginese descent, ancestor of the last dynasty of Atjehnese princes) and his son Djuhīn (supra n. XXIV). The contest between Djasīl and Djuhīn and the death of the former are the subjects of a second Atjehnese epic (cf. Sonck Hirzog, Die Atische, ii. 94—100; The At BEGINNEN, ii. 88—106). Even after the authority and wealth of the court had gradually become insignificant, there survived, indeed till quite recent times a great reverence (among the Atjehnese) for their rulers whom they honoured as the representatives of a glorious past.

The Subject of Atjeh. The piracy and slave trade of the Atjehnese and their raids on the neighbouring territories constituted a constant danger. Merchants visiting the shores of Atjeh for the pepper trade were always liable to be made prisoners or robbed. The Dutch government were at first not in a position to put a stop to this evil as they had pledged themselves to England in 1824 not to extend their dominion in Sumatra to the north. When this obligation was removed by a new treaty with England in 1871, Dutch troops occupied in 1873 the chief towns of Atjeh with its immediate neighbours and some parts in the Dependencies. The last prince (supra n. XXXIV) died from his residence and died soon after (1874). It was now expected that the infeudations of the interior of the island would gradually acknowledge the sway of the Dutch; but this hope was not fulfilled, on the contrary there grew up among the Atjehnese a powerful, irreconcilable section in favour of war, organised chiefly by the native chiefs. Learmed men have always enjoyed a certain authority in Atjeh but the political situation at this time increased their influence to an extraordinary degree; they went throughout the land preaching a holy war; the war cry was the Zaik-zaik (bray) on the people; the native chieftains were immediately stirred into the background. Other political adventurers, amongst them the famous Toku 'Umar, made use of the changed state of affairs to obtain for themselves positions of power. On the other hand Muhammad Dāwīd, the 6 years-old boy chosen Sultan in 1873 who subsequently stayed with his court as a rule in Kūnale in Pedoe, had really no political influence.

After Great Atjeh had been conquered and occupied in the years 1877—1891, the Dutch troops were again concentrated in the near neighbourhood of Kuta Raja. As recently as 1890 they had again to take vigorous offensive measures, chiefly in Great Atjeh but also in 1898 in the Dependencies and then later in Gayoland and Alasland. This had the desired result; the sovereignty of the Dutch was gradually recognised everywhere by the Uleimbalang and other chieftains and in the beginning of 1903 by the Sultan Muhammad Dāwīd also. Nevertheless the latter was not confirmed in his dignity.

For some years Atjeh with Gayoland and Alasland had been quite subdued. The different districts and departments are governed by the traditional native chiefs under control of the Dutch authorities. Continual insurrections in many parts of this wide territory still require, however, a fairly strong body of troops to follow to their hiding places and render harmless the last wily spirits — not only the infamous fanatics but also the incorrigible marauders.

ATLAS. The collective designation of the whole mountain system which forms the skeleton of North Africa and stretches from the Atlantic Ocean through Morocco, Algeria and Tunis to the Gulf of Tunis. The name, which was already in use among the Greeks, seems to be a corruption of the Berber word Adrar ("mountain"). Although North Africa was a Roman possession the ancients appear to have had only very indistinct notions of the Atlas.
Strabo (Book xvii) identifies the Atlas of the Greeks with the mountain called Dyris (Berber-Derren) by the natives, which lay in the extreme west of Mauretania beyond the pillars of Hercules. At the same time, however, he mentions a mountain-chain which stretched from Mauretania through Numidia to the Syrtis.

The Arab Geographers are not much more accurate: al-Bakri (transl. by de Slane p. 249) designates by the name of "Aillat" (Atlas) a mountain "opposite the town of Bir-Bakri", but he does not appear to extend this name to the whole North African mountain system. The statements to be found in this and some other authors are of two classes: on the one hand fairly clear and detailed descriptions of the elevations to the South of the town of Marraksh, which modern geographers call "the High Atlas" and the Morocco Berbers Abdrer-An Deren; on the other hand very obscure concep-
tions of the western extension of this elevation and a want of exact accounts of its boundaries and direction. *In Tamerent* writes al-Bakri "begins the pass over the Deren. This range, placed there as it were, to be a rampart to face the desert, is inhabited by Sandhajja tribes ..., it is said to stretch as far as the Muddaschta hills in Egypt", (transl. by de Slane, p. 333). According to Mi-
hammad, the Yuma, the Deren is the highest moun-
tain in the world and stretches to Aerts and the mountains of Neftia at Tripoli (Bakri, loc. cit.). According to Idris Djebel Daren al-Aledm, at the foot of which passes the road from Tarudani to Aghmatt, is notable for its height, the fertility of its soil and the great number of settlements in it. "It stretches from Sis on the Atlantic coast to the chain of Djebel Neftia the name of which it takes. Some authorities on the other hand insist that these mountains stretch to the Mediterranean as far as a place called Aluwian." (Idris, transl. by Dozy and de Goeye, p. 73 f.). Ibn Khaldun regards the mountains of Daren as "a girdle enclosing Maghrib al-Akza from Asfi to Taraa", Hist. of the Berbers, Transl. by de Slane, l. 178). In another place he describes the Daren range in detail.

The Daren range, situated on the western border of Maghrib is to be counted among the highest mountains of the world. Having their roots in the depths of the earth these mountains touch the heavens with their summits and fill the space between with their colossal mass. They form a continuous wall around the coast lands of Maghrib and starting from Asfi on the Atlantic Ocean they stretch to the East an unknown distance. According to some accounts however they are said to come to an end in the land of Barks south of Beni-Eknane. Across the breadth of Morocco they appear to be arranged in layers so that they rise in terraces from the desert to the Tell range. The traveller coming from Temenara or the coast of Morocco who desires to cross this range to reach the provinces of Sis or Drâa (Draa) must allow himself a week to do it." Writing in the sixteenth cen-
tury, Leo Africanus, who collects the previous notices, is not much better informed, though he distinguishes the mountains "of the coastland of Barbary", which lie along the African coast from Rif to Bona, and the Atlas range in the narrower sense which runs from Mount Menus in the neighbour-
hood of the Egyptian frontier to Messa in Sis and whose mean distance from the South coast of the Mediterranean is about a hundred miles. (Description of Africa, l. 77). These two ranges are called "Sierra Menos" and "Sierra de Atlasante Mayor" by Marmol (Africa, l. Ch. 5). Some addi-
tions to these statements are given in the seven-
teenth and eighteenth centuries by isolated European visitors to the Barbary states, notably Shaw (Travels or observations relating to several parts of Barb-
ary and the Levant, London, 1740; second edition 1757) at the beginning of the nineteenth century the Atlas range was thought to consist of two chains, the one, the little Atlas range running along the mediterranean coast from Tangier to Cape Blanco, the other, the Great Atlas range, along the northern limit of the Sahara from Sis to Tripoli. Between those two chains lay a broad plateau, traversed in Morocco by the heights of the Midian Atlas range (Ritter, Erdkunde, l. 886, 893). The possession of Algeria by the French paved the way for the scientific exploration of the country. As regards Algeria and Tunisia this work is now almost finished but in Morocco on the other hand, in spite of the numerous journeys of exploration undertaken in the second half of the nineteenth century, there remains a good deal to be done and many blanks are still to be filled up. In this article we will confine ourselves to a few general observations, and for details the reader is referred to the articles on Morocco, Algeria and Tunisia.

The Atlas is an extensive corrugated mountain system covering the whole of North West Africa. It stretches about 1600 miles from West to East and with its ramifications covers an area of more than 165,000 square miles. In the South it is bounded by a series of valleys formed by the beds of the Wadi Draa's, the Wad Djedj and the streams of the Algero-Tunisian Shotts. In the North it slopes rapidly down to the mediterranean coast. Geologists consider it to be an upheaval formed at the same time as the Alpines and Bastion systems and separated from them in comparatively recent times. The folding of the Moroccan chains appears to have been completed by the end of secondary times but on the other hand the upheaval of the Algero-Tunisian ranges seems to have taken place for the most part in tertiary times. During the quaternary period these upheavals were subjected to very great erosion. The debris proceeding from this erosion has covered in various places the framework of the ranges and altered the original phyognosy of the system in a marked manner. With reference to these distinctive the Atlas system can be divided into three distinct groups: a. The ranges of Morocco; b. The plateau of the Shotts; c. The ranges stretching along the coast.

a. The Ranges of Morocco. These traverse Morocco in the narrower sense and have the highest peaks of all North Africa. Four parallel lines are distinguished: the High Atlas range in the middle, the Middle Atlas range in the North and the Anti-Atlas range in the South of the High Atlas; and lastly the Djebel Drâa on the border of the Sahara. Stretching from Sis to N of N. W. to N. S. a. The various folds are separated from one another by valleys lying along them which in their turn are again cut up into divisions by transverse ranges. Through these valleys run the chief water courses of Mo-
rocco; the Medjya and the Wad el Aïbid in the North, the Wad Sis and Wad Drâa in the South. The High Atlas is the most important of these ranges, it runs from Cape Gdhir on the Atlantic
coast to El-Ouat, a distance of about 650 miles; its average height is about 10,000 feet but some peaks surpass this; thus Tizis is 11,350, Mehala 10,600 high, and lastly Djebel Alysouit, a mountain range about 100 miles broad, 15,000 feet high. There are no glacial drifts, however, no external snow. The greatest elevation of this range, called by the natives Ait-Dar-Naren, lies to the immediate south of the town of Marrakesh. The High Atlas range forms an exact dividing wall between Morocco and the Sahara; it is difficult to cross as its passes are all at a considerable height. The most frequented, the Pass of Bollan which runs from the road from Marrakesh to Siss is 5,500 feet high, the others with the exception of the most eastern are on average 6,000 feet and in the Ait-Dar-Naren about 10,000 high. This mountain wall thus affords protection against the dry wind from the Sahara while the moist winds from the Atlantic Ocean strike the northern slope and nourish forests extending by Arab authors, notably by Ibn Khaldun [loc. cit.] The Middle Atlas range, still little known, especially in its eastern part, runs northward from the ranges eastwards from Tizis towards the city of Denens towards the breach at Muluya. At first surrounded by rather low spurs, it starts out more on the other side of the ravine of the Wad al-Ait and runs as a single, fairly broken ridge to the sources of the Umns al-Rbina (Djebel ammunition). Its height is almost as considerable as that of the High Atlas range; its passes are never less than 5,000 feet high. The mountain ridge alone would be difficult enough to cross but it is rendered more impassable by the woods on both its slopes on which wild animals (lions and panthers) lurk. On this account the trade routes from Fes to Marrakesh go around it with a wide curve to the west. At the other side of the sources of the Umns al-Rbina this mountain chain bifurcates. The most important branch, which again branches and ends with a rugged decline into the Muluya valley, possesses several peaks; the Djebel Tamantait, the Djebel Enak and the Regna. To the Northern branch belong the Djebel Zaïda almost as high as the main range, Djebel Shéa and Djebel Watters. To the W. and N.W. the Middle Atlas range shows a series of gradations which stretch in several ramifications almost to the Atlantic coast.

The Anti-Atlas ranges in the vicinity of the Atlantic Ocean and stretches, some 600 miles wide, as far as the district of the Wad Gna near the Algerian border. Somewhat to the west of the meridian of Marrakesh it is united with the High Atlas by a huge spur, crowned by Djebel Sirus (about 11,000 feet). The greatest part of its course the Anti-Atlas exhibits a fairly straight slope about 7,000 feet high in the western. Passes are fairly numerous but they are all from 3000—7000 feet high. The slopes are on an average bare, with the exception of the north slope in the Siss district. The Anti-Atlas may be divided into three sections: a western section from the coast to the chain uniting the Anti-Atlas and the High Atlas; a middle, from this point to the southern branch of the Wad Draa, and an eastern from the Wad Draa to the Wad Gna. The western Anti-Atlas consists of two principal chains with numerous spurs penetrating the Wad Naa district toward the Atlantic coast. The middle Anti-Atlas shows a much simpler structure: a single, very sharp ridge, turning twice at right angles, with very steep slopes on the south side and gentle declivities in the north. The eastern Anti-Atlas rises on the other side of the Wad Draa's, to Djebel al-Nejib, the highest point of the whole chain and then sinks and stretches out in a wide plateau pierced in the middle by the valley of the Wad Zuwa.

The Djebel Beni 400 miles long, running parallel to the Anti-Atlas and separated from it by the plain of al-Fejfa is a wall of rock of black sandstone devoid of vegetation from 300—700 miles broad. Its greatest elevation in the middle is about 3500 feet but the outlying parts are scarcely 1500 feet high.

6. The plateau of the Shoitta. While in eastern Barbary the Atlas system branches off into several distinct chains, in central Barbary it expands into a wide tableland whose height and breadth decrease from West to East and in the somewhat altered, central part which the water collects in enclosed basins (Shoita, Sekhous). This is the Algerian Highlands. In the north and south the closely connected mass of these plateaus is bounded by mountains on its verge, in the north by the Tell-Atlas and in the south by the Sahara Atlas. How these two ranges connect with the Moroccan chain is not exactly known. The Tell-Atlas range runs with the plateau of Ddahit as far as the break at Muluya. The Sahara Atlas range meets the Anti Atlas in the neighborhood of Kenitra. These Algerian ranges are distinguished from those of Morocco in more than one respect. They are, first of all, lower for their highest peaks in the north are only 7000 feet, in the south only 8000 feet in height at most and are also more accessible. The individual mountain masses have been divided into sections by erosion and are cut up by broad ravines which render possible the traffic of the plateaus with one another and with the outer world. Nowhere in Algeria are the mountains such obstacles to traffic and isolating barriers as in Morocco; and lastly the two border ranges do not run parallel but gradually approach one another and unite at last in the province of Constantine, while the ridges of the Sahara Atlas combine with those of the Tell Atlas and extend over the whole of the North East of Algeria and the northern Tunisia. In Tunisia the mountain chains diverge, some to the east and some to the northeast, the river Medjas forming the boundary between the two groups. In the north extend the mountains of Khumsi land covered with cork- and "naso"-oak forests; to these are joined the heights of the Mergouz district. In the south the Zergantzia chain runs like the backbone of Tunisia with a continuous series of rounded summits and flat topped planes to the vicinity of the Gulf of Tunis. Here the average height of the Atlas decreases still more. The Ehrmor mountains do not rise above 3000 feet and the highest peaks of the Zergantzia range not above 6300 feet [see ALGERIA and TUNISIA].
Morocco as well as in West and Central Algeria is clearly marked by the river courses of the Wad Issanaou, the Muliya, the Shiulfit, the Sallum etc. The valleys running parallel to the coast facilitate traffic between eastern and western regions by Barhary and serve as natural roads not only for commerce but also for hostile raids. In eastern Algeria, however, the tertiary formations of the Shett plateau have filled up the valleys in different places between the coast and the interior and rendered the distinction between the mountains on the coast and the border chains of the Shett plateau, occasionally, rather difficult. The most important mountains on the coast are those of the Rif and Tebessa districts of the Algerian Sahara (Zahra) and those of Great Kabylia. Their height varies considerably and ranges from 1300 feet (the Sahel of Algeria and Oran) to 600 feet (Kabylia). [see MOROCCO and ALGERIA.]

Though the Atlas range may be called the skeleton of North Africa, its individual parts are so very different from one another that one cannot establish any general outline for the whole system. Every one of the mountain groups specified has its own peculiar character, its own special physiognomy. There could scarcely be a greater contrast than between the huge masses of the Moroccan Atlas with their wooded slopes and green pastures running up to a height of 3500 feet on the one hand and the bare plans and the slopes of the Tell Atlas, cut up by ravines or the precisely discernible places of the Saharan Atlas on the other.

Within the same group the contrasts are often no less striking. One cannot, for example, compare the jagged ridges of the Hargừa with the plateaus of the Avarzat cut up by deep and narrow gulls or the cloud-capped summits of central Tunisia. The influence of the Atlas range on hydrographic and climatic conditions varies considerably, also, in different localities. Torrents stream from the summits of the Moroccan Atlas, which are covered for nine months with snow, down courses which have nothing but the same in common with the Wadis of Algeria and Tunisia. From the point of view of climate also the Moroccan Atlas plays a much more important role than the middle or eastern mountain ranges. The middle High Atlas and the western Anti-Atlas shelter the northernmost districts from the winds from the desert. It is quite the opposite with the Tell and Sahara Atlas, partly on account of the ravines penetrating them, and partly on account of their insignificant height. On this account, the Moroccan Tell shows many more special features than the Algerian Tell, where the climatic influences of the Sahara counteract those of the Mediterranean sometimes even down to the districts on the coast.

Nevertheless from the economic and ethnographic points of view some common features in the whole Atlas system can be found. For the Atlas in its whole extent seems to conceal important mineral treasures and it is inhabited for the greater part by Berber tribes. Its richness in minerals is unabounded. Iron, copper, lead containing silver, calamine and others have been found. Important deposits of iron are known in Algeria, and Tunisia. The exploitation of these natural treasures as well as the phosphate deposits disseminated throughout the whole of eastern and central Maghrib seems to assure Tunisia and Algeria of a permanent place among the richest lands of the earth in ores and to promise them a brilliant future. Morocco appears to be less favoured. Even in the sixteenth century Leo Africanus called attention to its deposits of iron, lead, silver and antimony. The preliminary investigations of prospectors to-day seem to confirm the reputation (for mineral wealth) of the soil of Morocco.

Regarding the ethnography, the original population seems to have survived more uninvolved in the Atlas than in the plains and plains. In Morocco where the Berber element preponderates, Arabic culture, and with it the authority of the Sharifs, ceases at the foot of the mountains. The tribes in the Atlas, the Rif with mountains of the Bent Léjfad have preserved an almost complete independence in speech, manners, and customs from the ruling caste in Fez. In the same way in Algeria the mountains of Tahar, Great Kabylia, of Awira and in a lesser degree the mountain stock of the Varamis (Wanghir) of the Zakhar, Little Kabylia and Djalal d'Amour and in Tunisia the Khourisdr district have remained uninvolved by the country of the hill's invasion. There the mountains afforded the Barbers an almost inaccessible place of refuge from the Arab invaders and enabled them to preserve their language, manners and customs and until the possession of their land by Europeans their political institutions and independence also.

(G. Yves)

**ATLAS (A.), smooth, level. From this comes the name Atlas for a certain kind of silk, quite unknown in the Romance languages. Cf. Quartemoné, Histoire des Sultans Monomoules, II, 1, p. 69.**

**ATREK, a river forming the present day boundary between Russia and Persia. The name seems to appear first in Houndallah Razavi (740—1750); it is not mentioned by the geographers of the iv. (x.) century. It rises on the northern slope of Mount Hazar-Masjid, flows through the districts of Kučin and Budjardt which have been Khorassan principalities since the days of Shah Abbas I (one of the most fertile districts in Khorasan, the ancient Asirabad or Asiantān and the medieaval Asir Abad of Dostu). The river passes over the northern part of the Khorassan (more correctly Shahr) at the village of Cat or Chali. From this place till its discharge into the Caspian Sea it has formed since 1832 the boundary between Russia and Persia. At the village of Garkhāna (north of Budjard) where the river is spanned by a wooden bridge, it is 25—30 feet broad and 2-3 feet deep. Below the village of Khurak both banks are almost quite uninhabited with the exception of a few huts of the Turkomans tribe of Yomut though there are many traces of ancient irrigation canals. Quite recently a dam, built on the Russian bank (at Gadir) has given its lower course a northerly action, so that the southern river-bed chosen as the political boundary, is now almost quite waterless. The district watered by the lower course of the Atrek on the north side, was called Budjard or Budjar, the Khorassan districts (perhaps from the Dado, an ancient people). Now there is to be found (have the ruined town of Masshad-i-Mīsīyān, usually called Mozoyan or maps; water was brought to this town from the Atrek and even farther from the Sumbar (over 35 miles). Dabistan is said to have been settled as early as pre-Mohammadan times but Ispahīr and Ibn Hawal...**
only mention it as a little place which was only of importance for its fisheries and as a refuge for ships in stormy weather.

As early as the tenth century Mughdesh (375 = 985) knows Dahistan as a flourishing district, the richest in Gurgan with its capital Ahghur and 24 villages. Above the gateway of the chief mosque in the ruined city of Mesjaryan is an inscription of its builders, which is now preserved. In the Zjakhzrit thickets, red, amber, and kelp are collected, and the lovely town of Dahistan, which is still inhabited, is still in the possession of the Zjakhzrits.

Dahistan is mentioned as a village by Hamdallah Karsini; the name appears to be used by Abu 'l-Ghazi only as the geographical designation of the whole district. When civilization ceased on the lower course of the Atrek now has not yet been ascended. On the present condition of both banks see especially C. E. Ytre, Khorasan and Sistan (Edinburgh and London, 1900); on the ruins of Dahistan the chief work is A. Comolli, Journey to the North of India (London, 1839) and in Russian A. Kosjkin, Elucidation of the Question of the Ancient Course of the Amu-Darya, St. Petersburg, 1897 (contains a plan of the ruined city). (W. Bartholomew)

ATTAI (A.), the son of Abukhan, a native of Malik-Shah who wrested Ramsul, Jerusalem, and the whole of Palestine with the exception of Ascalon from the Fatimids in 465 (1071). He then laid siege to Damascus in vain but in the succeeding years kept harassing the country round the town with his raids till he succeeded in obtaining possession of it in 468 (1074). A campaign which he undertook in 469 (1074) against Egypt was a failure; the latter years later he was himself besieged by the Fatimids in Damascus. They withdrew, however, on the approach of Tutush, who had received the Governorship of Syria from Malik-Shah but he had Ata put to death (471-1075) as he was in his way. The Turkish name Atas was pronounced Aslı by the Syrians or with the Arabic article Alası. Bibliography: Ibn al-Attar (ed. Tomborg) P. 456, 68. 70.

ATTEZ B. MUHAMMAD B. ABU'TURUK, prince of Khwārizm (Khwārizm-i-Bahā). He succeeded his father in this position in 521 or 522 (1127-1128) as vassal of the Seljuk Sultan Sanjar. He, first of all, consolidated his power by the conquest of Djaid and Mankashla (more correctly the Turkish Malikshah, the "thousand winter dwellings" on the Caspian Sea) and by a campaign into the interior of Turkestan; soon afterwards he declared himself independent but was defeated by Sanjar at Naizkar in 533 (1138) and driven from the country. Sanjar appointed his own nephew Sulaiman b. Muhammad Shah of Khwārizm, but Attez was recalled by the inhabitants in the following year and the prince expelled. In the middle of the month of Shawwal 533 (May 1141) Attez submitted to the Sultan and swore his allegiance. The realm at this date was not a coherent state but broke his pledge in a few months when the power of the Sultan had been broken by his defeat in battle with the Kara-Khitai (5 Solar 536 = 9 Sept. 1141). In the same summer Attez appeared with his forces in Khwarizm and conquered Marw. In the following spring Naisshir submitted to him but immediately after he was deposed of the country by Sanjar in 534 (1142) Attez attacked in Khwarizm again and had again to acknowledge the suzerainty of the Sultan. A short time afterwards he revolted for the third time and threw the ambassador of the Sultan, the poet Adil-Sahir, into the Amu. In the month of Djamadi 2. 542 (Nov. 1144) Sanjar undertook his third campaign against Khwarizm, captured the town of Naizkar after a two months siege and attacked Gurigah; Attez submitted to the Sultan and was allowed to retain his office although he was unable to avoid a general on his meeting with Sanjar (Muharram 543 = May-June 1145). In 548 (1153) Sanjar was captured by the Ghurids; Attez wished again to invade Khwarizm, this time as a faithful subject and defender of his Sultan and demanded that the important town of Amu (the modern Qarluq) should be handed over to him, but this request was denied him. It was not till 551 (1156) that he appeared before Nishapur and assured his sovereign, who had shortly before escaped from his confinement, of his loyalty; he died soon after, however, on the 9 Djamadi (30 July) of the same year in Khurazmshahr (the modern Khūzestān) at the age of 59.

Bibliography: Djouma, Turkestan (Lausanne) Khiâlî whom Mihâwît follows (edited by Delaram, Paris 1842); Ibn al-Attez (here made considerably longer by Mihâwît Al-jâmi' of Alm'Hasan Isâbî); Kâmâlî (M. ed.); Recueil de textes relatifs à l'histoire des Seljoukides (ed. Houssineau), Vol. II. On the struggles between Attez and Sanjar see the state documents of both combatants in Barthold's Turkestan; in English, mongolsh maskeex, P. I, quoted from a manuscript in the Institute for Oriental Languages in St. Petersburg. (W. Bartholomew)

ATTAB (A.), nominei eumaei. From the Arian, 1145, after which a quarter of Raghâh bore the name al-Attâbiyâ. A certain kind of carpet which was manufactured there was hence called al-Attâbiyâ and this name has passed into the languages of Europe in various forms. (French: tapis, English: tâbâ, Spanish, Portuguese: tado, Dutch: tapien, cf. Door, Seveni Franciscus, s. v.)

ATTAR (A.), druggist. The Persian poet Farîd al-Dîn Aûm Hâmid Muhammad H. Isrâ'il was known by this name. Little is known with certainty of the circumstances of his life; even the year of his death is variously given as 589, 597, 619, 627 and 654; it appears certain, however, that he was still alive in 654 so that the date 627 (1230) preferred by Eliauwlindi, is perhaps the correct one; but that he was born as this author states, in 513 (1119) and taken prisoner and slain by the Mongols is hardly to be accepted. What else is related of his career is also of a legendary nature, for the works of the poet, the only reliable source, yield very little information. Attar has not like almost all his fellow poets— and this is greatly to his honour— left behind him any works from which various data might be derived. Here and there he has scattered throughout his poems a few personal reminiscences. From these it is evident that he spent 13 years in his youth in Maghând and occupied himself for 39 years in collecting the poems and prose writings of devout Sufis and also that he was born in Nishâpûr and settled there after many wanderings. His name 'Attar refers to the fact that like his father he was a dealer in drugs and followed the calling of a medical man.

'Attar wrote a great deal, according to his own
statement about 40 works containing 302,060 verses. Among his prose writings are the Lives of the Saints, Tadhkirat al-um主人公, edited by Nicholson (London and Leiden, 1905—1907) as his most important as well as his most voluminous work. His poetic works are likewise devoted to the cause of Şā‘īr. The best known is the short Pandanānak edited and translated into French by Silvestre de Sacy (1819) (repeatedly printed in the East). More extensive is the poem Mantiṣh al-fa‘ir edited by Gérard de Tassy (1857) and likewise translated into French (1865); a lithographed edition of his complete works (Khayyār) appeared at Lucknow in 1877, and there are similar editions of single poems. The titles of his writings are to be found in the under-mentioned works through the best accounts of them and of Ṭabar’s biography is to be found in the introduction (in Persian) by Mirāh Muhammad Kazimi to Nicholson’s edition of the Tadhkirat al-um主人公.

**Bibliography:** A’Awīl, Lūhūd al-um主人公 (ed. Bone). II, 357 ff.; Lūhūd, Tadhkirat al-um主人公 (ed. Bone). p. 157 ff.; the catalogues of manuscripts by Rieu, Ethē, Sprenger, Stewart, etc.; Ethē, Grundriss der iranischen Philologie, II, 284 ff.; Horn, Gesch. der pers. Litter. 158 ff.; Brown, A Literary History of Persia, II, 381 ff. Al-‘ATTAR, Ḡasan b. Muhammad, Aṭtāb, šī‘a list, and theologian, born in Cairo in 1180 (1760), was at first his father’s assistant and studied at the Akhbar. Later he travelled in Syria and Turkey and finally returned to his native town where he took up the position of editor of the state gazette al-muḥāfiz al-mi‘rāgī, founded by Muhammad Āli in 1244 (1828). Three years later, however, he was appointed Rector of the Azhar Madrasa. He died either in 1250 (1834) or 1254 (1838). His Arabic guide to letter writing Jashn al-fullāth was repeatedly printed in Cairo in 1270, 1297, 1300, and in Bombay (1302). His commentary to the al-muḥaddaṣa al-ash‘yary fī ʾīn al-um主人公 has likewise been printed (Riḥāṣ, 1284, Cairo, 1291).

**ATTAR (Aṭāb),** capital of the district of the same name in 1894, in the Rawalpindi division of the Punjab. (Pandjāb). The district which has an area of 4,022 square miles, had 40,443 inhabitants in 1901 of whom over 90 per cent. were Muhammadans. The fort of Attar which stands on the Indus was built by Akbar in 991 (1583) who called it Aṭāb-Banūs.

**AWAD.** [See AWADEE.]

**AWADH.** [See AWADEE.]

**AWADHI.** [See AWADEE.]

**AWĀLĪK (og. A’wālīk, Beduin Mawwek and Mawāk),** dynastic name of a group of tribes in South Arabia. Their country is bounded in the South by the Arabian sea, to the West by Djiḥiṣ (in the southern part), by the land of the Awālīk (in the northern part); in the North by the land of the Kāṣf (in the northern part); in the North-West by the land of the Djiḥiṣ (in the northern part); in the Northeast by the land of the Djiḥiṣ (in the northern part); in the North-East by the land of the Awālīk (in the northern part); and in the South by the land of the Awālīk (in the southern part). The Awālīk falls into two divisions: 1. The country of the upper Awālīk. 2. The country of the lower Awālīk.

1. The territory of the upper Awālīk consists of the Middle Awālīk, a tract of three large plateaus: Marbūt (the eastern part only) in the South, Nīṣāb (Anṣāb) to the northeast of Marbūt and Hiṣib (with its salt-mines) in the northwest. The largest wādī in the Wādī Gaţūn. The climate is tropical and the ground fertile and produces wheat, maize, tobacco and indigo. The chief town is Nīṣāb (Anṣāb) with about 10,000 inhabitants (including several hundred Jews); it contains many palaces, fortresses and a number of mosques and fort-like houses. The inhabitants of the country of the upper Awālīk belong to the most part to the tribe of Mahdijīr in the North (whence the name Awālīk for the northern part of the upper Awālīk) and in the South (Yaghūm) to the Ma‘a tribes (among these are the Mahdijīr of Hamdàn) who are mostly independent (Kab‘il) they are fond of fighting and enlist in great numbers for service in the East Indies.

2. The country of the lower Awālīk consists of the great plateau of Monka in the East; the remainder is partly highland and partly lowland. The largest wādī in this barren country is the Wādī Aţyvar (Hunrān) which is almost always dry. By this river dwells the tribe of Bū Kāţīn: for the most part they are subject to the Sultan who levies taxes on and exercises jurisdiction over them. Another, quite different tribe, the Kūsī, inhabits the plateau of Monka and is independent. The capital and residence of the Sultan is Aţyvar (Hunrān). Cuma, capital of the Sultanate, Reiss nach Südrückblick (Brannmarch, 1873), 239—241 and Landberg, Noten präliminarische zu den tribus des pays libere de Djacent und des Sultanat des Awālīk-superieurs etc. (in Arabian, IV, Leiden, 1897), pp. 39—54. (J. Schilter.)

**AWĀRĪD AĈESĪLI or WIRGĪL.** The name of a direct tax which has been levied in most of the provinces of Turkey. This impost belonged to that class of public burdens which are known as voluntary taxes (Tāhābi‘i‘-ṣū‘yūn) in opposition to which laid down in the Shari‘a (Tāhābi‘i‘-ṣū‘yūn). This tax with the others in the same category was abolished with the reforms instituted in 1255 (1834) and replaced by a single tax (virgā). Opinions differ regarding the adjustment and application of this tax; what complicates matters is that the practice in administering the very numerous taxes differed considerably in the various provinces of Turkey and that the word Awārīd was applied in a general way to denote several quite distinct extraordinary levies.

The Hungarian historian Franz Solamon says
in his work cited below that during the Turkish rule, by Avâraz, which was the Slav name, the area was under the same special duties as unfreedom (Slav, roboč), as fortifications and the supplying of reeves of horses and fodder to an army marching through the district.

According to some Turkish authorities the tax, introduced in the time of Sultan Selim III and called 'Avâraz al-ajze'a (Wirginius), was levied at most, since every four or five years on every 20 ałçe and its yield was used for the defrayal of expenditure on public necessities (Masluf-kodarlıye). The modern Turkish financier Sulaiman Süd is on the other hand, after examining the records on the subject that those houses which according to the registers of taxation were liable to 'Avâraz were noted and bound to pay certain dues in money or kind. A fixed part of these payments was earmarked for local purposes and the remainder handed over to the authorities. In some districts at any rate, the 'Avâraz-ajze'a appears to have consisted in a compulsory payment in place of the boatmen (Kârcele) who were at the disposal of the naval arsenal one from each 8 to 10 houses. Documents found in the archives at Sarajevo support this hypothesis. According to Sulaiman Süd it was the custom to send officers (Macablige) from the capital to collect and hand over the proceeds.

Ithurn, Leipzig, 1887), p. 82; Sulaiman Süd, Defteri muqtaqil (Constant. 1307), I. 78 (2nd edition); The collection of Turkish taxes (MSS. in the possession of the Government of Bosnia and Herzegovina No. 82). (J. Kuchmar.)

AWARİD WAFLİ. By this term is understood a Wafl foundation whose receipts were devoted to the defrayal of extraordinary or periodic requirements of a village or quarter of a town (Macabite) as for example such wafls as those which were founded for the burial of peasants who had died in the district, for the support of persons incapable of earning their own living and also for repairing the streets or for bringing in a water supply.

Bibliography: Omar Hlim, Jezî al-awāriz fi Akhîn al-awâriz (Constat., 1307), § 36. (J. Kuchmar.)

AL-ÂWÂSİM (A., "defences, fortifications") the region of fortifications, the radius of the Syrian-Assa Minor boundary which from the time of Omar separated the dominion of the Caliph from that of the Emperor. At first the two hostile states sought to keep one another off by turning a fairly wide stretch of country into a desert. This unedifiable, waste zone was called al-Dawâbi l.e., the outer part, the outer land (cf. Tabari ed. de Goej, ii. 1317; Ibn al-Khîr, ed. Torni, iv. 250). Later, though still in the time of the Omamis, the Arabs began to gain a footing there and to rebuild as fortresses various towns destroyed and abandoned by the Greeks besides erecting block-houses to strengthen the line of fortification. The most important points, strategically, were Darâs, Adhâna, al-Maysa (Mopsuestia), Marâsh and Malaya (Malatya), which were all situated at the intersections of military roads or at the entrances to mountain passes. Of the days of the first 'Abbasides this border district was incorporated in the south-northern area of the Ljund military divisions) into which the Arabs had divided Syria for admin-

istrative purposes after its conquest, namely the Ljund of Kimasaara. In the case of al-

Manbij this Ljund attained too great a compass by a considerable advancing of the frontiers Hürûn al-Hashid resolved in 170 (786) to separate the marches from Ljund Kimasaara and to raise them to the rank of an independent jurisdiction under the name of Ljund al-Âwâzim or briefly al-'Awâzim, a precautionary measure which at that time and later proved itself eminently suitable for the effective barracading of the frontier. This new province comprised three districts: the Dârû (constr. of the eastern frontier, then boundary) also called Thughûtur al-Islam, the real girdle of fortifications on the border. About the middle of the tenth century this ran (according to al-Ijâzîd) from Arabs to the Mediterranean Sea near Šarba, Adhâna, Maṣûna, Ziathus, Marâsh Malaya, Hîn Manşūr to Sumaya (Stâmata) on the Ephrâtees and then along the west bank of this river southwards to Bâllus (Durâbâliassos). The border line thenceforward followed as a rule the course of the ranges of the Taurus and the Antilâbus. The Thughûtur are again often subdivided into the Syrian and Mesopotamian; by the former is understood the western part of the cordon of fortifications, the district containing the important passes between Syria and Cilicia, (with Marâsh as chief town) while places on the border line east of Marâsh were classed to the Mesopotamian group. Strictly speaking however the name is applied only to places in Syria; the description of certain al-Masâf is as Mesopotamian arose, according to the Arab writers, from the simple fact that the garrisons there were recruited from volunteers from Djazira.

The district of the Thughûtur had no common capital; the most important place in it was Malâyâ. Manbij was at first reckoned the central and capital of the province of al-Masâf, where the Muhammadan governor resided; the Thughûtur were for the most part also under him, the remainder being regarded by the Arab geographers sometimes as a quite independent district and sometimes as a subdivision of the Ljund al-Âwâzim. Besides the towns already mentioned the following deserve to be noted as belonging to the military boundary: Boghâz, Boya, Dâlûkh (Delîuk), Yakanîyûn (Iskanûn, Alexandretta), Kûna (Cyprus), Raûn and Tînûn.

The province of Al-Âwâzim was organised on military lines by Hürûn al-Hashid; all important points were held by standing garrisons and numerous new bower forts and block-houses erected.

The history of these Arabian marches reflects the changing phases of the great struggle between the Byzantine Empire and the Caliphate for the mastery in East and South Asia Minor. There is scarcely a land more marked in bloodletting wars, where every foot of land was fought for repeatedly and bitterly. Under the early 'Abbasides incursions into the hostile Greek territory (the so-called
'summer-campaign') from the Awâsîm-district were organised every summer, considerable bodies of troops being often called out who always returned with rich booty and a considerable train of prisoners.

Through these constant raids and devastating incursions the marches very often became much depopulated. When the Caliph for their protection and to strengthen the Muslim population settled there, several times brought people from distant provinces of their kingdom hither, the old population of the country gradually changed to a varied mixture of immigrant and indigenous races. Among these latter were Christian Arab tribes (muwilîra: Ţabari, ii. 1185, 1194), Slavs, Persians, Mandarits, sayâbids and Zanj. The Christian Mandarits whose origin is unknown were originally active on the Byzantine side but were taken over into the Arab service as frontier guards under Walid ibn Abd al-Muttalib. When the apparently Turkish tribe of the Sayâbids (q.v.) was settled in Anârkilâ and the Cilici- pers in another place in the territory (q.v.), Chiba, an Indian people (Hida: Djatt) who had been sent by the conqueror of India, Mu'âammad b. al-Kâsim with great herds of buffaloes to South Babylonia, were sent by order of the Caliph Yazid II. to the Cilician border and particularly to al-Maṣṣaqa (Mopsuestia). By the introduction of thousands of these buffaloes with their accommodation of Zanj herdsmen al-Walid I. sought to combat the plague of lions which was becoming so serious in the deserted valleys in the neighbourhood of Antioch. From this period dates the abundant supply of buffaloes in these districts (cf. also M. Hartmann, Der Lizón Hala, 1894, p. 71). In the end al-Mu'tasim removed a large colony of the Zanj to Ain Zarbi (q.v.); cf. Ibn al-Mulâhim, vi. 311; Fragm. hist. Arab., (ed. de Goeje), ii. 473.

From the time of al-Walid b. Abd al-Malik (825–87), the Byzantine troops pressed the Arabs farther and farther back; the Hamshand Saif al-Dawla succeeded in the middle of the tenth century in defending the military marches against the anarchy successfully but his success was only temporary. In 932 (964) and 933 (965) al-Maṣṣâqa, Adhâna and Tafris, long the strongest points in the line of defence, fell into the hands of the Greeks and were turned by them into fortresses against the Muslims. Subsequently the district of Awâsîm was merged in the principality of Antioch which had arisen with the help of the Crusaders; parts of it also passed under the sway of the kings of Little Armenia (Bild al-Sir) who resided in Sis. With these territorial changes the hitherto independent position, for political and administrative purposes, of the North Syrian and Asia Minor borderlands ceased to exist.

Awdaghost (Ar. Awâdghosht), an ancient town in N.W. Africa, which has quite disappeared from the face of the earth. According to Bakr it was situated between the lands of the Negros and Seghilem, distant about 31 days journey from the latter oasis and 15 from Fesâna; according to Ibn Nadîm it lay between long. 10° and 11°, lat. of Granville and between 18° and 19° north, not far from Ksar and Baraka, that is to say S. W., of the military station of Tijlis in French Mauritanian.

We have only a few scanty notices of this town; it appears to have been originally a trading settlement of the Zenaga (Ṣâjudja) on the northern border of the Kingdom of Ghana. About the end of the tenth century when the Zenaga had conquered a large part of the Senegal, they passed it to the capital of a powerful tribe. From 350–360 (961–971) they had a Šajlidja prince, Tim Yurut, as their ruler who numbered over twenty negro kings among his vassals and whose kingdom measured 60 days journey in length and breadth. In the following century Ibn Yâtu, founder of the Almoravid sect, attacked Awdaghost, stormed the town, plundered it and massacred the inhabitants (446 = 1054–1055). After this the Zenaga power declined. At the beginning of the thirteenth century the Sâsuni invaded the country and drove out the Zenaga or made them tributary.

In the time of al-Bakr Awdaghost was still a flourishing town. Its considerable population consisted of Maghribis and allied peoples from the province of Ibrâî, of Berbers (Berbâljanna, Lôwâla, Zenâda, Nebras, and especially Nebrasa) and of sources of negroes also. The town, surrounded by orchards and palangroves, contained schools, mosques, splendid public buildings, handsome houses, busy markets. It had an important trade in corn and fruit from the great Senegalese countries, in amber from the Atlantic coast, in cloths, copper wares and brassware. Payments were made in gold-dust. By the time of İdris it decayed; its prosperity is evident. The population dwindled away, the commerce was unimportant; and cattledriving forming the main means of livelihood of the inhabitants. The complete downfall of the town is no doubt connected with the ultimate break-up of the Zenaga power.

Awdhilla, sing. Awdhilla, pl. Awdhillâ, in Hamdân, Banât Awd; according to Sprenger, Die alte Geogra., Arabicum, p. 206, 269, identical with the 666 Taliban of Persia and the Awarâdâ of the Persians a, a South Arabian tribe. Their territory, lying between the land of the Yâfit and that of "the Awdîl" is for the most part highland and crossed by a great range, the Djebel Kawr (Kawr) often also called Zahr (John). Other mountains in the Wâdlîs that rise in the Djebel Kawr the W. Yâmir (Yamir) is the best watered. The climate is tropical and the ground very fertile; the chief product is honey. The chief town is Ghulit (Ghulit) with
several hundred inhabitants (including several Jewish families) a large market and the palace of the Sultan who lives here. The largest town is Zahir (Bahar) with about a thousand inhabitants (including several hundred Jews) and a flourishing trade. The inhabitants of the 'Awdil and the other towns of Khurāb described by Ibn Hawāk described it as a small town which had just shortly before been incorporated in the province of Birk and makes particular mention of its richness in dates and date-barks, transcend the fame of Salam. Journ. Asiat. Series 3, xiii. 163).

A century later it is mentioned by al-Bakri as a thickly populated town with bazaars and several mosques and he adds that 'Awdil is really the name of the district, the name of the town being 'Ardak, while (Bakri, Doner, De l'Asie Septentrionale, tran. by de Slane, p. 52). Today as in Bakri's time the same 'Awdil denotes a whole group of villages, viz. Awdil (15 miles long, 2 miles broad) Dijlo (15 miles long, 8 miles broad with extensive tracts of desert and sandhills between palmergroves), Batal or Batail and lastly, a day's journey eastward, Lesghorreh. These various oases contain about 200,000 date-palms of which 40,000 are in 'Awdil and 400,000 in Dijlo. The thousand inhabitants, of whom 400 are settled in 'Awdil and 600 in Dijlo, fall into three classes: 1. the 'Awdil, of Berber descent and language live chiefly in 'Awdil and the left bank of Lesghorreh, in the oasis of Dijlo; and are farmers, gardeners, salt-makers and caravan leaders; 2. the Moghajah, Arabic-speaking Berbers, dwell in the neighbourhood of al-Areg in the oasis of Dijlo, are traders and have the reputation of being particularly honest; 3. the Zulīya, an Arab tribe which has settled in Lesghorreh. All these stocks however are considerably mixed with negro blood. For administrative purposes 'Awdil belongs to the Pashalik of Benghāl; in matters of religion however the oasis is under the influence of the Serkāla and on that account is very inaccessible to Europeans. Only four explorers have as yet entered it: Hornermann (1795), Pacho (1825), I. Hamilton (1825) and Behmann (1863).

AJWIF, Muhammad (Muhammad, Persian man of letters), who prided himself on being descended from 'Abd al-Rahmān b. 'Awf [v. 3, whence the name 'Awf]. When and where 'Awf was born cannot be ascertained with certainty, but there is certain that he spent his early years in Bekhīr and the other towns of Khurāb till the Mongol-invasion carried him into India. Here he was received as the court of Sultan Nāhir al-Dīn Khāji and composed for his Minister 'Ajīn al-Mulk Husain al-Asghārī, the oldest Persian Tazāri (Tabrīz), that has been preserved; to which bears the title of Ladhāb al-Allāh. After the death of the Sultan in 625 (1228) he addressed himself to the victorious Batūmī (q. v.) and dedicated to him his famous collection of anecdotes, the 'Aqdī 'al-Asgārī, which he had already begun to write under instructions from Nāhir al-Dīn. He probably died soon after in Delhi but the exact date is unknown.

'Bibliography: Muhammad 'Awf, Ladhāb al-Allāh (ed. Browne); Persian introduction by Mirzā Muhammad Kāvān; Browne, A Literary History of Persia, II, 477 et seq.

AL-AWHAD (properly al-Malik al-Awhad, Nāhir al-Dīn Ayyūb al-Adīn; an 'Ayyūbid, received from his father the government of Mālī, and a few adjoining towns. A first attempt to bring the town of Khātūn under his sway failed (603 = 1206-1207). He was successful however in the following year but it was only with great difficulty that he maintained his hold there against the Georgians. Indeed his rule did not last long, for he died soon after in 607 (1210-1211) and left his territory to his brother al-Asghārī (q. v.).

AWHADH, RUHH AL-DIN, a Persian poet who died in 1537 at Marāghah. He had taken the pen-name of Awhad in honour of his teacher Awad al-Dīn Kermanī who himself was a famous Sufī and poet (cf. Kāvān, ed. Vostour, II, 164 et seq.). Awhad left behind him a Divan of 10,000 verses but he is best known by the mystic poem Zīh-i Divān (the goddes of Divān). He also composed a Dīvān Nāmah (q. v.).

AWKAF (A.), pl. of Wāqf (q. v.).

AWKAT (A.), pl. of Wāqat (q. v.).

'AWL (A.), in Muslim legal works is a certain method of reducing ineritances. It sometimes happens that the number of heirs having a claim upon the estate at the same time, according to the Qur'ān, is so great that the total of the legacies due to them under the statutes is greater than the whole estate; for example in the case of a man dying leaving a widow, both his parents and two or more daughters, their claims are as follows:

The daughters are entitled to 7/8 (Mm) of the estate. The father is entitled to 1/8 (Mm) the mother to 1/16 (Mm) the widow to 1/16 (Mm) which would make a total of 1/2 (Mm). In such a case the legacies must be correspondingly reduced. The estate is then divided into 27 and 23 parts. Of those the daughters receive 16, the father 4, the mother 4, and the widow 3. Such a reduction of legacies is called 'Awl (q. v.).

AWRANGZEB (1618—1707), the third son of the emperor Shahujañan by Angamir Dâni Begam Mumtaz of Mâhâl, daughter of the Persian imam Agâf Kân Yânam al-Dawâla, was born at Dhoj (usually converted into Diâbâd) on the 15th Dhu l-Hijjah 1047 (Nov. 3rd 1638) in the camp of his grandfather Dâhshâh (Shah) on his way from Almâdâbâd (Gujarat) to Udijâna to Mâhâl. It was his fate to be born and die in a camp, and to pass many years of his life in one.

I. From birth to accession, 1618—1658.

In his early years the prince shared the adventurous wanderings of his father Shahjâhân from the Dakhân to Oxenford, and back again to the Dakhân. In the last year of Shahjâhân he was sent with his elder brother Dârâ Shukh to Lâhûr as a hostage for his father’s good behaviour. His first public employment was in 1635 when he was made the nominal generalissimo of three armies operating in Bundelkhand. This was immediately followed by a first period (1636—1644) as governor of the Dakhân or southern province. Dakhân was a fit of religious fervour he resigned public life, but in 1645 was restored to his rank and sent to Gujarat. He was called thence in 1646 to take command in the newly acquired province of Balmâ, which was still in a very disturbed condition. He acted with great vigour but secured no more than a temporary success. The emperor found that Bâlkh was costing him more than it could ever yield, and handing it over to a former ruler, he recalled Awrangzâb who in March 1648 marched direct to his new government of Multân to which Dakhân was afterwards added. Kandahâr was the next scene of his labours in the field, but two attempts, in 1649 and in 1652, to retake that fortress from the Persians were unsuccessful. After his return from the second of these sieges, Awrangzâb was transferred to the Dakhân again. Here under his father’s orders he attacked the Kâtugh Shahi king of Guliana and the Khâl Shâh king of Bûljî, both of which had to add to the Dakhân. He did this to recover the territory and large sums in tribute. In 1657 Shâhujañan fell ill and it was reported he was dead. His younger sons at once entered the field to contest the throne with their eldest brother, the heir apparent Dârâ Shukh.

II. War of Succession, 1658—1659.

The second son Shah Shâhâjân was the first to advance on Awgar but he was easily repulsed. Awrangzâb joined forces with his next brother Murât Bâkhsh and after defeating an imperial army near Udîjaan on the 22nd Rajab 1638 (April 25th 1658), they encountered Dârâ at the head of the main army at a place east of Awgar. The great battle of the 7th Ramazân 1658 (June 8th 1658) resulted in the crushing defeat of Dârâ, who fled to Awgar and thence to Dihl and Lâhûr. The victors advanced on Awgar and made the emperor a captive. Resuming their march westwards, Murât Bâkhsh was set on by Awrangzâb in their camp close to Mathur (4th Shawwal 1658 = July 5th 1658). When he reached Dihl Awrangzâb proclaimed himself emperor (1st Dhu l-Hijja 1658 = July 31st 1658). After pursuing Dârâ first to Lâhûr and then to Multân, he was recalled to Awgar by a renewed attempt of prince Shah Shâhâjân. Shâhâjân was defeated in
a pitched battle at Khadjwah, between Allabhopur and Agra, on the 19th Rabi' II 1068 (January 14th 1559). Leaving his commanders to drive this antagonist, he turned to another point where he was to be met, and entered Arakan. Awrangzib returned to Agra.

Aurangzeb had gone down the Indus as far as Bhakkar and then turned eastwards, was admitted into Ahmadnagar, and assembling a fresh army moved northwards to Adumur. There Awrangzeb met and defeated his eldest brother on the 28th Dhu al-Hijja 1066 (March 23rd 1659). Two generals were sent in pursuit of the fugitive; he was at length captured some distance to the west of the Indus, brought to Dihli with ignominy, and there condemned and executed, 21st Dhu l-Hijjah 1069 (Sept. 10th 1659).

III. Years one to twenty three of reign (1658-1681).

The first half of the reign was marked by an invasion of Aneaspis, a continuation of the remarkable career of Sivadj, the Muharran leader, and many risings of the Pathans in the country between India and Kshul. Mir Dzumen's attempt to conquer Aneaspis was a failure; and he died shortly afterwards (April 10th 1664). Shyria Khan, the emperor's uncle, and Mu'ar'gam, his second son, were sent to Dakhin, but obtained little success; they were followed by Raja Daulat Singh of Amber and he persuaded Sivadj to submit and return to Ahmednagar. The exception accorded him was not cordial, as he soon fled, and when he reached his own country at once resumed the strife. - Awrangzeb early in his reign paid one short visit to Kashmir, and on account of the Pathans troubles he passed two years, 1654-1656, at hassan Abdul (Rawalpindi district). In 1656 he resolved on absorbing the semi-independent Raja's states. He moved to Adumur and sent his forces to invade Udaipur territory. At first he met with some success; but his fourth son, Akbar, having broken into rebellion, his attention was diverted from the Rajputs. After Akbar had fled into the Dakhin, the emperor moved on after him, reaching Bareharpur on Nov. 23rd 1658.

IV. Years twenty three to fifty of the reign (1681-1707).

For four or five years the emperor was occupied in pursuing Sambudji, the son and successor of Sivadj, and in attempting the capture of Akbar. Akbar finally took refuge in Persia, where he died. The local dynasties of Gulkanda and Bidjar were next attacked. Gulkanda was partially annexed in 1685 and its total extinction effected in 1687, when the last king was taken, October 1st 1687. Bidjar had been annexed in the previous year, the king submitting on Oct. 24th 1686. Sambudji was captured on December 28th 1688, and executed along with his Brahman minister. A successor, Raja Radji, fled south and continued the struggle at Lunedi, where he stood a dauntless siege for over seven years. The concluding years were taken up with the reduction of many hill forts, but with much small effect on the general situation, as they were soon recaptured. In the same month or two, Awrangzeb's last exploit in the field took place in 1705 when he commanded in person at the taking of a petty fort Wakhjarkar (now in the Nishtan's Territories). In May 1705 he had a severe illness and for 12 days did not appear in public; some thought he was dead. The end had not yet come and he resumed his marching; he arrived at Ahmadnagar in January 1706, and died there on the 28th Dhu l-Kada 1113 (March 3rd 1707), being reigned fifty (lunar) years and twelve (solar) years. He was buried at Khajahulpur (or Rawda) four miles west of Daulatabad and not far from Awrangzib.

His style and titles in life were Abu l-Mu'min, Muhammad Muhuyi l-Din, Awrangzeb, Alamgir, Badiullah, Ghazi; and after his death he was referred to as "Khuda-makam." He had four wives: Rahmat ul-Nisa' known as Nizam-ul-Bai, mother of Muhammad Sultan, Muhammad Mu'min, and Badi ul-'Nis'm Begum; Sajda Khan Begum, mother of A'zam Shah and Zain-ul-Nis'm Begum; Awrangzib Mahall, mother of Mulk ul-Nisa'; and Balinda Udaipuri, mother of Kham Bakhsh. Awrangzib's gold coins bore the diacritical marks: Shukr u dar i-shahin 70 mibri-i muqa'id Shukr Awrangzib-alamgir. On the silver coins the value was changed into badori. He rejected the use of the hajina on coins, from conscientious scruples.

AWRAS (Ar'zes; in the sixth century Abraham in Procopius, De bell. Vandali, i. 8, ii. 12, 13, 19-20) are mountain-men in Algeria in the Sahara Atlas [also Algeria, Atlas]. The meaning of the word A'wra has not yet been ascertained. It is probably a word of Berber origin that appears in several mountain-names. Possibly the Djebel A'wra to the South of Khansheba has given its name to the whole system.

The A'wra forms a quadrangle which from
North to South and from East to West measures about 65 miles and in the south of the province of Constantinople covers an area of about 3600 square miles. It is terminated on the West by the low hills of Sivas which were traversed in ancient times by the Roman road called the Lycambeit to Van, and at the present day are crossed by the Iba-Makara railway; on the east side the valley of the Wêd al-Anar separates it from the Dibela-Shergit. In the North it rises above the plateau of Sivas and the basin of the Tart; in the South it borders on the Sahara. The northern face slopes up to plateaux whose height in the lowest parts is about 3000 feet though in some places it is about 3300 (Hattâ, 3443 feet) with which the Awaras is connected by very inaccessible spurs (Djebel Zella, Bâ Amrun, Bâ 'Adia). The south slope drops abruptly into the low plateaux of the Sahara (410 feet at Iskra — 100 feet in the Shott Melghir) and rises its almost perpendicular walls from 4600 to 5000 feet above the desert.

Consisting chiefly of Neocalcim chalk and limestone the Awaras was once subjected to very great erosion. Whole cliffs of Shela have been swept away by the waters. In some places the most movable earth has completely disappeared and the mountain become a rocky skeleton. The ruins, dissolved into muddy masses, have filled the valleys or been piled up in huge heaps at the foot of the southern slopes. The erosion still continues although of course it is much slighter now than in the past; the water rolls ceaselessly through the valleys and in various places e.g. in Tighaouin between Benyou and Mezhane, and elsewhere, have dug out narrow ravines, straight-galleys, sometimes several miles long with perpendicular walls hundreds of feet high. In other places in the valleys solitary rocks, worn by the waters, stand as evidence of the original formation of the land.

The structure of the Awaras is, though more regular and clearly marked, similar to that of the other mountain systems of the Sahara Atlas. The Awaras consists of a series of huge parallel folds stretching from S. W. to N. E. "which run close beside one another like folds in a cloth and form long straight ridges separated by deep valleys" (230a).

The most important peaks on the northern slopes are: Kef Malem (7740 feet), Sheila (7750 feet), the highest mountain in Algeria, the Dibela Fararwa (6980 feet) and T-Azez (6419 feet); on the southern slopes the long ridge of the Ahmar Khabda (6533 feet) the south western spur of which thrusts itself out like a headland towards the desert.

Four valleys, which are only very slightly connected with one another and which are much split up in the upper parts, lie between the parallel ridges. These are the main North to South side of the valley of the Wêd Kanta formed by the union of the Wêd Fejda with the Wêd al-Ahmar; the valley of the Wêd 'Abdi reinforced by the Wêd Barba; the valley of the Wêd al-Ahmar, and its tributary the Wêd Shennawra; and lastly the valley of the Wêd al-'Arab formed by the confluence of various Wêds from the country round Sheila. These four rivulets flow from northeast to southwest and disappear in the plains of the Sahara almost immediately on emerging from the mountains. On the northern slopes some less important streams rise via the Wêd el-Mahdyer, Wêd Sâmous, Wêd Bi Frînis, Wêd Ma'stral and Wêd Baghat which are lost in the lowlands of Shela and in the Gara al-Tart. All these waterscourses form narrow ravines, where they break through the spurs of the Awaras, which are picturesque landscapes of Lampedo to Van, and at the present day are crossed by the Iba-Makara railway; on the east side the valley of the Wêd al-Anar separates it from the Dibela-Shergit. In the North it rises above the plateau of Sivas and the basin of the Tart; in the South it borders on the Sahara. The northern face slopes up to plateaux whose height in the lowest parts is about 3000 feet though in some places it is about 3300 (Nasrâ, 3443 feet) with which the Awars is connected by very inaccessible spurs (Djebel Zella, Bâ Amrun, Bâ 'Adia). The south slope drops abruptly into the low plateaux of the Sahara (410 feet at Iskra — 100 feet in the Shott Melghir) and rises its almost perpendicular walls from 4600 to 5000 feet above the desert.

Consisting chiefly of Neocomian chalk and limestone the Awaras was once subjected to very great erosion. Whole cliffs of Shela have been swept away by the waters. In some places the most movable earth has completely disappeared and the mountain become a rocky skeleton. The ruins, dissolved into muddy masses, have filled the valleys or been piled up in huge heaps at the foot of the southern slopes. The erosion still continues although of course it is much slighter now than in the past; the water rolls ceaselessly through the valleys and in various places e.g. in Tighaouin between Benyou and Mezhane, and elsewhere, have dug out narrow ravines, straight-galleys, sometimes several miles long with perpendicular walls hundreds of feet high. In other places in the valleys solitary rocks, worn by the waters, stand as evidence of the original formation of the land.

The structure of the Awaras is, though more regular and clearly marked, similar to that of the other mountain systems of the Sahara Atlas. The Awaras consists of a series of huge parallel folds stretching from S. W. to N. E. "which run close beside one another like folds in a cloth and form long straight ridges separated by deep valleys" (230a).

The most important peaks on the northern slopes are: Kef Malem (7740 feet), Sheila (7750 feet), the highest mountain in Algeria, the Dibela Fararwa (6980 feet) and T-Azez (6419 feet); on the southern slopes the long ridge of the Ahmar Khabda (6533 feet) the south western spur of which thrusts itself out like a headland towards the desert.

Four valleys, which are only very slightly connected with one another and which are much split up in the upper parts, lie between the parallel ridges. These are the main North to South side of the valley of the Wêd Kanta formed by the union of the Wêd Fejda with the Wêd al-Ahmar; the valley of the Wêd 'Abdi reinforced by the Wêd Barba; the valley of the Wêd al-Ahmar, and its tributary the Wêd Shennawra; and lastly the valley of the Wêd al-'Arab formed by the confluence of various Wêds from the country round Sheila. These four rivulets flow from northeast to southwest and disappear in the plains of the Sahara almost immediately on emerging from the mountains. On the northern slopes some less important streams rise via the
of the very narrow valleys they live in caves (A/SITA) in the cliffs in order to use the ground to the greatest advantage and also to have a better protection against hostile attacks. The valley of the Wadi al-Abyad contains such Troglodyte dwellings in large numbers. The houses are grouped in clusters which appear to hang on the slopes of the valleys or to crown steep hill-tops, difficult of access, and to be dominated by the Gela's (Khala in Shawiya Taddih) a large stone building of several stories. A spiral staircase in the interior of the building leads up to these stories and the rooms in them where the harvest and provisions of the various families are concealed. During the absence of the dwellers in the village, the Gela's is guarded by a responsible watchman. The name Taddih denotes also in a wider sense, the whole village. The relatively large population of the Awras may be divided into 11 tribes who form 36 clans with a total of 88,100 souls. The density of population varies in different places; it is greater in the valleys than in the higher districts and it also decreases from West to East. In the Aqmar Khudda there are 11 among the Utd Abd al-Aziz, 26 among the Utd Abd al-Malik, 35 among the Bent Ferra 40, among the "Amarna 44, among the Reif Bi Sultans 48 inhabitants to the square mile.

The population of the Awras consists of different elements. Other constituents have been added to the Berbers who form the original stock; in the first instance descendants of the Roman and Byzantine colonists as well as the Vandal invaders and later the Arabs. The Berber element is still by far the most important being particularly pre-dominant in the mountainous and least accessible parts of the range. On the other hand the Arab element is conspicuous in the valleys and the neighbourhood of the Sahara. Of Arab or nominally Arab tribes — they are for the most part mixed with Berbers — there may be mentioned the l-Akhirja Halife, who have immigrated from the Biskra district or, they are another branch of this stock; the Utd Fedahin who come from the mountains of the Tunis; the Turrif, who have settled in the cases of Bent-Sulik; Dernoras and Barmas in the lower valley of the Wadi Abd, and who are said to have immigrated in the sixteenth century, from Sidiya al-Hamra but are in reality Arabic-speaking Berbers; the Utd Abd al-Malik and the Utd Daff of who profess to be of Hilall descent. The two last-named groups are said to have incorporated descendants of Roman colonists on which account they have received the name Karraya. They are settled in the upper valley of the Wadi 'Abd, the latter in the valley of the Wadi al-Abyad after the Udjanina-Berbers had been driven out. Lastly the Bent Sultans; a branch of the 'Amarna, the Shoef and the Surtuns of the Aqmar Khudda also claim to be of Arab descent.

The Berbers, however, are superior in numbers and they have therefore given the population of the Awras the cast of features which is characteristic of them to this day. These Berbers call themselves as Karraya (Kabylia) but by the Arabs on the other hand they are called Shawiya from shi (sheep) perhaps in a contemptuous sense, for an Arab proverb actually credits the Shawiya with having 'sheep's' brains in their skulls. Physically they present no uniform type throughout, no doubt owing to the numerous crossings between individuals of different stocks. Yet in the Awras dark-haired people with blue eyes are more numerous than in any other Berber country and make up nearly one eighth of the population. The language they use is a Berber dialect which they themselves call "Karraya" (Kabylia). Although belonging to the same family as the dialects of Great Kabylia it is so different from them that it is impossible, for example, for a Shawiya to make himself understood by a Zawiya according to G. M. Encies the Shawiya would seem to be more allied to the dialects of the Wansersi (Wansherish) who belong to the Zenata family like the Berbers of the Awras. A number of Shawiya have passed into the Awrasi dialects, whose Latin origin is still easily recognised, e. g. arkhat garden (horus), karraṭ oak (quercus) etc. The dialects of the various valleys also show marked distinctions in pronunciation and vocabulary so that two distinct groups of dialects may be distinguished; the Zenata in the eastern and the Tamzarg in the other parts of the Awras. Although they have been converted to Islam since the earliest days of the Arab caliphate they have preserved some traces of the religions (Paganism, Judaism, Catholicism, Donatism) adopted successively by the inhabitants of the Awras. This accounts for the survival for example of tattooing in the form of a cross or in the form of the letters s and a, sacrificing at traditionally sacred places, the taking of oaths at megalithic monuments and the festivals at certain seasons of the year. Thus processions take place among the Utd Abd in the spring similar to Christian processions of intercession, followed by festivities and dances lasting for two days. Similarly the thrashing and bringing in of the harvest in the beginning of autumn gives occasion for great rejoicings; and lastly New Year's Day (Eed 'Al) is celebrated with songs, dances and customary rites. Besides, the Shawiya have preserved the Julian calendar instead of adopting the Muljammadan. Their year consists of 365 days, the name of the months (Shawwa-January, Fareh-Febraury etc.) suggest the old Latin names. The names of the days of the week alone are borrowed from the Arabic. These survivals of pre-Islamic times do not prevent the Shawiya from following the impulse of Muljammadan fanaticism and they enter religious brotherhoods almost as readily as the Kabylia. The brotherhood of the Karraya, whose centre is the Zawiya Timmeriia at the foot of the Aqmar Khudda numbers 2400 members, in the Awras that of the Shaddiliya some 2500, that of the Habbat 500 or 600. Lastly the Kaddiriya, enthusiastic adherents of the family of Bi Abbès, the owners of the Zawiya of Men'sa, are likewise widely spread. It is by the instigations of these brotherhoods that the revolts have been stirred up of which the Awras has been the scene since the French conquest. On the other hand mystic love has in no way improved the morality of its adherents. The code of morals prevalent in the Awras is a very loose one. Tazb is frequently resorted to (in the Wadi al-Abyad 500 & 600 cases yearly). Prostitutes or "Arria (lit. "divorced women") are very numerous. Certain places, especially Men'sa are notorious in the whole district as abodes of pleasure.

At the time of the Arab conquest the Awras was populated by Berber tribes of the great Zenata family (Awras, Ijfejiewa). All these tribes
had sustained their independence in the mountains. After the Romans and the Vandals the Byzantine Emperors had been content with keeping the Berbers in check by a row of fortifications on the south slopes of the Awrás (Lamhasat, Bagra, Maccala). The advance of the Arabs seems however to have brought about a ropprechagne in Berber life and the position of their old adversaries. When Oghlab penetrated into the Maghrib the Berbers united with the Greeks and inflicted such severe losses on him before Bagra and Lamhasat that he did not dare to penetrate further into their land. On his return to the West from his great campaign he contented himself with a reconnoitring march into the Awrás but met his death at Teshida in the neighbourhood of the Awrás. Apparently the tribes of the Awrás on this occasion united with the other Berber tribes under command of Kusaila to act conjointly in a rebellion and choose Kusaila as their chief. After the destruction of his kingdom by zalazir b. Kais, the Awrás served the defeated peoples as a place of refuge and became the centre of resistance to the Muslims. It was not till the beginning of the eighth century A. D. that opposition in the area was finally crushed by the ownership and conquest of Hasna b. al-Nu'man, and his party was driven out by Ziyad b. Sa'ida, queen of the Djerawa. The Awrás and the Djerawa were almost extinguished by these wars; their place was taken by the Howara and the Gâth, the Berbers from Tripolis and South Ifrika who settled in the Awrás. All these native tribes were converted to Islam whether willing or unwilling, but nevertheless they preserved a certain independence of thought which was manifested in the enthusiasm with which they adopted heterodox doctrines such as Abuglān in the eighth and the Nakkâtite system in the tenth century. It was from the Awrás also that Abu Yazîd Muqhtâr b. Kaidad (q.v.) “the man with the axe” came, whose rebellion in 934-947 temporarily imperilled the Fatimid dynasty founded by Umar al-Muktafi [see AYD]. The Howara and the Djerawa of the eleventh century altered the ethnographic aspect of the Awrás. The Damis, a branch of the Atbara, settled on the northern hills, then advanced southwards and arabised part of the Howara. Nevertheless the great mass of the invaders remained at a distance from the interior of the mountains and a certain proportion of the Awrás seems even to have blended with the natives and become berberised. In the following centuries the population of the Awrás played practically no part in the history of the Maghribi, though they have been able to maintain their independence intact and to avoid falling under the suzerainty of the Hafsids, the new rulers of the province of Constantine. The rule of the Turks in later times made no difference in this respect. Since the sixteenth century the Turks have had a garrison in Blakna, but it was not till the beginning of the eighteenth that they attempted to appoint chiefs in the Awrás who would support their policy. The first of these was Zadira b. Muhammad Bit Dîrîf, who according to the account of the traveller Peyssonnel was recognised by all the tribes about 1725 and took the title of Shikh of the Awrás. The authority of these chiefs, however, as well as that of the Bey of Constantine on whom they were dependent, was always very doubtful. Thus for example, the Ustad 'Abdîl only allowed the troops summoned for the relief of the garrison of Biskra to pass through, the Beul Eljâr and the ‘Amara were almost incessantly in revolt against the Ustad of Constantine of whom they were the last, Ahmad, was forced into a campaign against them in 1854. Till the French conquest the tribes of the Awrás preserved with their independence, their old political institutions which on the whole resembled those of the Kabylians. They never managed to construct a great political system for they never once succeeded in combining into federations of several tribes bound to one another by oath as the Berber tribes of the JâlqâJar had already done. The basis of their organisation was always the village, a genuine commonwealth governed by the council of the people (Ijama’). The institutions of this village however are more primitive than in Kabylia. For while the Kabylian Ijama’s appoints an authorised President (amir) invested with power to execute their resolutions, the Ijama’ of the Awrás limits itself to entrusting the execution of its orders to some man (qâdî) who is able to distinguish between justice and injustice. Legislation is also much less developed and the Ijama’ or collected lists of punishments for different breaches of the law are much more summarily compiled. Beside these differences however, there are many points of agreement between the institutions of Kabylia and those of the Awrás; the same separatistic spirit, the same enmity between the individual villages and within the villages themselves the same division into parties (tifs), whose rivalries often result in hostilities and bloodshed. Among the Ustad 'Abdîl and the Ustad Dîrîf for example, each village was divided into four hostile camps of which each had its own leader (Amîrîn, Amîrîn). Even the topographic situation of the human settlements and the precautions measures adopted for their defence are sufficient proof that the individual tribes looked after their own interests and quite for themselves. All that can be further learned of the domestic history of the Awrás is limited to constant tribal feuds and quarrels in the villages. Some families which have attained power by ploy or their warlike spirit have moreover been able to make use of these rivalries to their own advantage e.g. the Bit Aokkan (’Oékâs), the Beni Gâna (Gâna) and also the chiefs of the Great Zwiys of Tlemmâta, of Bôa Sidi ‘I-Mîdjî and Menâk.”

The French occupation put an end to this state of affairs. Immediately after the conquest of Constantine (1837) the necessity became apparent for subjecting a district that served as a place of refuge for the ex-Bey Ahmad and all the malcontents. Buita and Biskra were occupied in 1844. In the following years the Don d’Amour advanced into the Awrás from the south and conquered Mejdîneth. Bédem, marching through the valleys of the Wâl al-Abyad, the Wâl ‘Abdîl and the district around Shella and forced the chief tribes to recognise the suzerainty of the French. This conquest however was only temporary. Invited by Ahmad Bey the natives refused to pay taxes and opposed the Kâlîf appointed by the French government. Under the command of Casse- robert and Carbuncu new campaigns were undertaken into the Wâl ‘Abdîl in 1848 and 1849.
These had scarcely ended when the sizing of Mr. Zayn in the Zihla brought about another rebellion in the Awrás. This was suppressed by Cambrelet, who captured and destroyed the village of Nara in the Valley of the Weid Awrir. The king of the Weid Awrir was summoned by St. Armand who marched through the mountains with a column of troops in May and June of the same year. Perfect peace now reigned till 1569 where a rebellion broke out under the leadership of the Marabout St. Sadok, (Sadik) b. al-Hājji who was overthrown by general Dervaux. When the Kabylia took arms in 1571, the Shiwies remained loyal, thanks to the influence of their two chief St. Ben Aliyf and St. Mahfouz b. Abba. In 1589 however, the last Nasrids revolted on the call of the Sharif St. Ahmad Amziyin and supported by the Lelah, a Marabout clan of Arab origin who believed their prestige to be endangered by the increasing intercourse between the Christians and the Shawies. This rebellion which began with the murder of all Kādīs devoted to the French cause, was suppressed by the troops of the Constantine Division (2–20 June 1589). The result was that the battle of Rebā in 1570 was the only battle of the French in the whole campaign. The survivors died of hunger and thirst on their flight to Southern Tunisia and St. Amziyin who had fled into the Djefīr was handed over to the French authorities.

Since that time there has been no revolt in the Awrás and peace may be considered finally assured. Nevertheless, with the possible exception of the northern borders, the Awrás offers no future to European colonisation because of the structure of the country and its want of natural resources; just for these reasons it seems that it ought to be preserved for its natives. With regard to administration, it comprises three mixed communities (communes mixtes): 'Ain Tutta, Awrás (with Lambaa as capital) and Khenifla and in addition a military colony with Thak as its chief town.

AL-AWS, a tribe in Medeb. The name is also abbreviated by the dropping of the name of some deity in the generic, probably Manāt for there is an Awsite clan called Aws Manāt (in the Islamic period Aws Allah). The genealogical scheme is: Awa b. Hartta b. Thalabb b. 'Ame b. 'Amir b. Hartta b. Imra' b. 'Aqbal b. Al-Kais b. Thalabb b. Marrin b. 'Abd Allah b. Al-Azīd etc. The statement of the Arabs, that the Awsites did not call themselves sons of Hartta but sons of Kais their mother is confirmed by facts. They are also said to be often included under the name of their more important collateral tribe the Khazzazī (q.v.). In many times they were divided into three classes: 'Amar b. Awa, al-Nadi, al-Murra and Imra' al-Kais. From the weakened remnants of the three last-named was formed a new clan to which the neutral name of the chief tribe Awa Allah or briefly al-Aws was given. The Awa Allah were divided into four septs, the Khattā (the most powerful, formerly the Ujāğh), the Umayr and the Wāḥif (formerly the Murra) and the Wāḥif (in reality the earlier Imra' al-Kais). Among the clans of Kais was a sept the Qabā, also called Ka'b b. al-Kāhrāzi, from the temple of the Kāhrāzi, who was the name of one of the Aws. The Awa inhabited a wide district in the east and south around the Kharṣad (Wellhausen).

History. The Awsites originated in south Arabia and after settling peaceably with the Kharṣadīs among the Jewish tribes in whose possession Medina was gradually reduced them to a state of inferiority (see preceding section). For the most part the Jews among the Awsites were scattered, but there were however two powerful independent Jewish families in the Awtar quarter, the Naqit and the Kureit, allied with the Awsites. They afforded effective assistance to the Awsites in the time of the wars with the Kharṣadīs, when however Muhammad's war of extermination against the Jews was begun in later days, the Awsites were not in a position to do them similar services in return. The Awsites in Medina were much broken up and weakened by feuds of more or less importance among their clans and families. This resulted in many changes in their power as well as in their settlements, in wholesale exodus from the district, in families settling in the lands of one another, in the utter extermination of certain parts, and in driving many Awsites over to the side of the Kharṣadīs. The most serious were the fights between the Awa and the Kharṣadī which lasted ten years in which sometimes a larger and sometimes a smaller part was embroiled and sometimes even the whole tribe. This war in which brother fought against brother reached its crisis shortly before the Hijra in the battle of Bu'rāth in which the Awsites although weakened by previous feuds which had ended unsuccessfully for them, were victorious, being supported by Arabs from outside the district and the two Jewish tribes above mentioned. They were thereby saved for a time; their existence however was only assured as a result of the Migration of Muhammad who gradually adjusted the still very strained relations among them. The Awsites had no share in the earliest oases between Mu-hammad in Mecca and the people of Medina but they did take part in the conclusion of the treaty promising protection, which paved the way for Muhammad's settling in Medina. When Muhammadd shortly after his arrival in Medina persuaded the greater part of his followers from Mecca to renounce with the natives of Medina, there were but few Awsites among the latter and for a long time many Awsites held themselves aloof from Islam or were even hostile to it; at times they caused the prophet serious difficulty by their opposition in religious matters, by their indifference in the religious wars etc. On the other hand they all adopted Islam, even the Jewish families which
had been politically merged in it. When the
choice of a successor after Muhammad's death
came near being decided by bloodshed, the Awa-
sites assisted in securing the election of Abu Bakr
because his opponent belonged to the tribe of
Khasra.
Religion. In pagan times they worshipped
Manit as their chief deity. Not long before the
Hejira as a result of the influence of Jewish monotheism through many years, a kind
of reformed paganism, introduced by the Riblits
(acracic) Abu 'Amir who did not confine himself to
leading the Awa Allith in battle, had gained ground
among the Awa Allith and the 'Amir b. 'Awf but
it could not hold its own against the conquering
Islam. The Awa Allith saw Abu 'Amir, sound,
unsurpassing hostile to Muhammad, depart to
heaven Mecca with 90 adherents of his tribe. His
faithful disciples in Medinah secretly maintained
their relations with him in religious matters, but
they did not dare go over to him, as he hoped,
after the defeat of Muhammad at Mount Ophod,
where he fought in the ranks of the victorious
Meccans. They appear to have agreed in ac-
cepting Islam tinged with Abu 'Amir's doctrines;
but Az-Zahrawi's enthusiasm to keep
apart and worship in a mosque of their own. It
cannot be proved that Abu 'Amir and those
sharing his views were Christians.

AWS b. Hajjaj, the greatest pre-Islamic
poet of the tribe of Tamim, born about 550,
died about 620 A.D. We do not possess reliable,
accurate dates of his life. He was a contemporary
of 'Amr b. Hind of al-Hira and was always
closely in touch with the court of this Lakhmid
prince although it is hard to lead a restless life
of wandering. AWS b. Hadjas was the father of
Shurabi who is mentioned as a poet and the step-
father of the poet Zuhair who was his kawi
(reciter and transmitter of his works). A Dwain
of his poems has not been preserved at all, one is
said to have been collected and annotated by Ibn al-Sikht.
Besides the usual themes of early
Arab poetry hunting scenes and descriptions of warfare are prominent in
his poems.

AWTAD (61, 60, Watada, lit., "p. g.") the
third category in the hierarchy of the royal
Gracht containing four holy beings; they are
called al-Shamad, the pillars [see ABDAL].
Each of them is entrusted with the supervision
and care of one of the four quarters of the heavens
in the centres of which they have their dwelling
place. (Golzheim.)

AL-AWWA (63) "the bowling" (dog or wolf)
denotes in Astronomy not only the thirteenth pos-
Museo in Venice, while the most beautiful of the mosques erected by the Turks in Rumelia are, as a rule, smaller and simplified facsimiles of the unsurpassed masterpiece in the capital, with the application of new and improved methods of construction. According to the most recent researches, the Aya Sofia in its original form was not built by Constantine the Great but, according to his last instructions, by his son Constantius after he defeated Licinius his brother in law. It was built in the form of a basilica and consecrated in 360 A.D. Titus "Great Church" passed through many vicissitudes at short intervals. Fire and earthquake played great havoc with it in 415 A.D. It was restored from its ashes, to remain unaltered for over a century till it was consumed by fire (as was the greatest part of the town and even the state archives) in January 532 during the rioting by the factions of the circus.

The Emperor Justinian then proclaimed his resolution to re-erect the church in unheard of splendour. Even before this time Justinian had given strict orders throughout the provinces of his wide kingdom, in which so many past works of art had been willfully destroyed, that the valuable material of these ancient monuments was to be sent to his residence. After the fire this material was used principally for the reconstruction of the Aya Sofia. Two of the greatest architects the world has ever seen, Anthemius of Tralles and Isidore of Miletus were entrusted with the supervision of the building. Mindful of the imperial warning, that the new church should be proof against fire and earthquake, they recognised the safest method of avoiding its previous fate, in a system of vaulting and dome. In December 537 the consecration of the splendid building was completed with unusual pomp so that Justinian was able to exclaim in the fullness of his pride; "Solomon, I have beaten thee". Nevertheless in his reign (558) the eastern part of the dome collapsed as a result of an earthquake whereupon ambones, tabernacles and the holy table were ruined. The dome, which had been planned too thin, was heightened by more than 80 feet and the abutments of the great main pillars much strengthened so that by 563 it was possible again to have the ceremony of consecration. The church had a most enviable situation: to the South was the Augusteum, with the equestrian statue of Justinian, which was appropriated to national festivities; to the North, just within the modern serail walls, were the court churches, the monasteries and the palace of the court officials; in the East, towards the sea was the imperial palace.

On the west side the visitor entered a court, the Atrium, surrounded on the right and the left by open halls. From here several doors (perhaps four or five) led into a closed hall (Exonaarthex) which was also regarded as part of the Atrium; from these five doors led to the North, the upper (Exonaarthex) where Roman doors opened on the widely separated north and south ends. The passage now branched still more and three rectangular doors-way facilitated the entrance to the interior of the church which the central one, imposing and richly decorated, was the King's door.

The space covered by the church is almost quadrilateral while the length of the interior with the exception of the chief apace, situated in the east wing is about 250 feet and the breadth nearly 225 feet. The pendentive domes, shown almost in the form of a hemisphere, rise 120 feet above the floor space which is cross-shaped. As the outer walls alone could not have supported its weight it had to be supported by four piers and these again by pillars smaller, though of great importance in the construction.

On the east and west sides of the dome were two wide, semi-circular spaces, each of which was crowned by three half-domes. In the centre of the interior the two-storied arrangement of the galleries adjoining the main body of the buildings, of which the upper, as was usual in Byzantine churches, was reserved for women.

The number of pillars which shared the weight of the building, was 107, 48 below and 67 above, nearly all monolithic of coloured marble (Verite anticai), some however of red porphyry. The richness of the interior decoration, the marble and in a most extravagant fashion for all parts, the pictures of Christ, of the Virgin, of the prophets, of the apostles and of the saints as well as of the mighty ascension (in the pendentive of the dome) which covered the walls with a sea of colours, the inlaying of the domes and walls with gold mosaic in unheard of splendour, made a striking impression on the spectator of the middle ages. The surrounding walls and the vaulting of the original building were built entirely of brick. The place for the clergy (pulpit) situated on the east side, containing the altar and chasuble and leading to the chief space was separated from the central part of the church by a screen of considerable height adorned with pictures and placed with beautiful designs. The clergy who had also to attend to the services in three other churches consisted of 415 persons excluding 100 deacons.

Shortly before the break up of the Byzantine Empire the number of officials of the Aya Sofia was about 800.

The first thorough restoration of the Aya Sofia took place in the reign of the Emperor Basil Macedo (second half of the sixteenth century). In 1859 a part of the dome fell in during an earthquake. The church suffered severe damage at the hands of the Latins in 1204 who plundered recklessly and desecrated the holy garments and vessels by using them as treasure and trophies for their horses. The extensive alterations which date from Byzantine times belong to the fourteenth century, in the first half of which the walls of the great building were strengthened on all sides and the east wing, the finest part of the building, especially was supported by high and broad buttresses on the outside.

We have no description of the interior of the Aya Sofia in Byzantine times from the pen of a Mammislanian. The first Muslim to give full account of the Cathedral is Ahmad b. Rusta (III 810); his name in the Bibl. Geogr. arab., ed. de Gezea, VIII: the author lived about 900 = 902-903). Without entering into a description of the edifice which he calls al-Kahna al-a'zam (i.e. Magna Leontina) he gives an exact and life-like picture of a procession of the Byzantine Emperor to church. One of the features which the Mammislanian princes of war were led to church (it may perhaps mean: into its Atrium) they greeted the ruler with the cry, "May God preserve the Emperor's life for many years", (Ibidem, p. 125).
Of importance is his remark that there had been four and twenty little doors, mentioned nowhere else, at the west door besides a Mihrab (which probably means towards) the opening of each of which was a span square. At the end of each hour of the twenty-four one of the little doors sprang open and closed again automatically.

As a result of the decline of the caliphate, Arab writers after Ibn Rusta give less and less information about the far distant city of Constantinople till about four centuries later, after Asla Minor had been conquered by Turkoman tribes, Shams al-Din Muhammad al-Andalushi (ed. Fränk and Mahren, St. Petersburg, 1865 p. 227) who seems however to have relied on a work of the somewhat earlier copyist Ahmad, mentions the Äya Sofla in a few lines (Ibid, p. viii). The only noteworthy point is his remark that an angel lived in the church and that its abode was surrounded by a screen by which no doubt is meant the place containing the altar and the ciborium beside the screen.

Muhammad b. Barjija (ed. Defrémery and Sanquineti, ii. 434) is the first; some centuries later, to叙述 the building of the Äya Sofla at Asla h. Barakhty (q. v.) said to be a cousin of King Solomon. Ibn Barjija’s merit lies in his very exact description of the Atrium. He dared not enter the church himself however, as he narrates, because he had not obeyed the order mentioned by him to kneel down before the cross at the entrance.

When the Turks conquered Constantinople (29 May—1453) the defenceless inhabitants fled in crowds to the church in the belief that as soon as the enemy had reached the pillar of Constantine the Great an angel would appear in the heavens and scatter the victors so that they should never see their Asiatic homes again. But the Turks came, broke open the doors of the house of God and finding the terrorised people an easy prey, carried them off both men and women into slavery. Eyewitnesses make no mention of the streams of blood polluting the holy place which later writers delight in describing. The unfortunate refugees were quickly made prisoners and the tragedy was quickly over, the conqueror himself entered the church—but not as headlong as is often insisted. He bade his Muslím to recite the call to prayer including the creed and threw himself at once with all his followers on his knees before the one God. Thus was the temple of Constantius and Justinian consecrated to Islam.

The changes which the iconoclastic prescriptures of the victorious religion forced upon the new masters are very important in the interior. The mosaics which had previously decorated the walls and ceilings, works of art which seemed to have been made for all times by the cunning hand of the Greek craftsman were concealed from the eye of the spectator by monotonous whitewash. The screen between the place for the clergy and for the laity was torn down, the rich fittings of the east wing, and the Bîma were destroyed. As the old Byzantine churches were built in the direction of Jerusalem and the Salât on the other hand must be performed with the face towards Mecca, since the day of the conquest the Turks have prayed in the Äya Sofla not only towards the east wing of the mosque but turned rather towards the South in a diagonal direction. Since the time of Mahomed II the preacher has mounted the pulpit armed with a wooden sword on Fridays and each afternoon of Ramadan and at the festivals of Bairam [cf. Article ‘Ana’za and Juynibih, Handbuch der Islam. Gesch., p. 84, 87]. There are also two large boards at the foot of the pulpit. We further know of the reign of Mahomed II that he built big buttresses against the south-east wall and built in the first of those some slender minarets which rise high into the air. Selim II built the two buttresses on the north side and the second minaret on the north-east corner; his son Murid II was the builder of the other two.

Sultan Murad III undertook a thorough renovation of the whole mosque. This was primarily concerned with the smaller defects which had come to light in course of time but of course contributed considerably to the beautifying of the bare space. The Sultan took advantage of this occasion to place in the interior near the principal entrance two huge alabaster urns each holding 1060 gallons of water and erected the two large eunuchs (Mogulba) on one of which, the right, the Koran is recited almost all day in that cadence peculiar to the liturgy of all Oriental creeds while on the other, the left, is reserved for the Muahiddin. Murad III also had the crescent measuring 150 feet in diameter, which crowns the dome having taken the place of the cross, gilded at enormous expense. Thus, from afar, even from Olympia in Bithynia the Muslim subject of the Porte sees the symbol of his faith glittering in the sun.

In the second half of the sixteenth century, they began to build the mausoleum of Sultan Selim in the cemetery adjoining the mosque on the south. The oldest is that of Sultan Selim II. His son Murad III and his grandson Mahomed III are also buried here; Sultan Mahomed’s nineteen brothers, whom he had murdered on his accession to the throne, were also laid to their eternal rest here. When some decades later, on the sudden death of the Sultan Muhsin, who had been deposed a long time before, a suitable burial place could not be readily found at once, the old Bâsitery (on the south side of the Narchex), which had served the Turks as an oil-store since the conquest was appropriated for this purpose. Sultan Ibrahim, Muhsin’s nephew was also buried there some years later. The very considerable store of oil was afterwards kept in the hall and court on the north side of the Bâsitery.

Sultan Murad IV (1623—1640) took considerable interest in the walls which were uninviting in their bareness. It is only since his reign, which is marked in some ways by a revival, that the gigantic quotations from the Koran written in gold by the hand of the famous calligrapher Bâjschîzade Muhsin Celebi, have been in existence. Letters like Aîf are 30 feet long. All the artistically pointed, much interwoven verses, whose decoration is still the delight of old Turks, were nevertheless surpassed by the slender vigorous painting of the names of the five first Muslîms which were fixed on the walls. The pulpit (Minber) also a work of art which still exists, dates from this period. Of Ahmed III we know that he built the enclosed raised seat (Makṣûn) on the north side of the chief apsis, for the Sultan. Mahomed I (1730—1754) built, besides the great loge for the Sultan in the gallery of the first
story, some institutions which in the East are inseparably connected with a mosque: the seven fountains and the school, both in the court on the south side, the large dining-hall (işnasr) on the north and the valuable library. In the mosque itself, though there are undoubted traces of the fact that the latter goes back to an older foundation situated in the mosque, since the time of Murad IV, the conqueror of Baghdad, the interior decorations of the mosque have been neglected in a manner indicative of the general decline of the empire. To prevent the threatened collapse of some parts and also to give the interior a more decent appearance Sultan 'Abd al-Malik entrusted the Italian architects Fossati Brothers in 1847 with the complete renovation of the building. The work lasted two years. The whitewash was only retained where human figures were depicted but everywhere else was cleaned off so that the walls glittering in gold and all other shades of colour resumed their old appearance. The yellow painting stripped with red on the outer wall dates from the restoration. The manner in which the Sultan showed his reverence for the great deeds of his forefathers, was rather peculiar. Like all other parts of the mosque the minarets were also restored (literally Marble-plait, Mimar Mh,mid) which had given the last decisive blow against the Byzantine Empire was to be excepted. The Italian architect was however finally entrusted with the task of making this minaret as high as the others.

It is fortunate for the mosque that it has suffered so little from earthquake since the tenth century. It must be recognised that it is primarily due to the buttresses built against the walls on three sides by the last Byzantine Emperor and the Turks, if this giant building situated on ground subject to earthquakes, has been able to be of service to mankind longer than any other building in the rest of Europe. On the other hand the storms from the Balkans and the sea seem to be much more dangerous to the mosque.

By order of the Minister of Education the rooms of the library, which is controlled by five Khodjas each of whom officiates in turn for one day of the week, were thoroughly renovated in the summer of 1909.

The mosque presents an interesting picture in the month of Ramadhan. The princes and the official world are present at afternoon prayer. There is no so much display in the evening at the Tarawih-prayer offered at an hour and a half after sunset. The dome is lit by countless lamps arranged in a circle. The greatest splendour is displayed on the twenty seventh night, the Lailat al-Kadeh, on which the Koran descended from heaven to earth. While the earlier Sultans frequently attended the solemn celebrations, 'Abd al-Hamid II, so far from coming regularly, visited the mosque only in the middle of Ramadhan when he, coming by boat, honoured the relics of the prophet in the ancient castle of his ancestors, with only a fleeting visit (Yemen-i Ziya-i Kair-i Selâdet).

The countless legends which had been woven around the origin and features of the church in the latter days of the Byzantine Empire, were on the conquest at once adapted by the Turks who merely clad them in Muslim guise. Even soon after his victorious entry, Mehmed II ordered Ahmed b. Ahmed al-Gilani to compile from Greek sources
It was then that they began to point out the spot on which the Arab hordes of the first century of Islam prayed on the occasion of their siege of Constantineople and the place in the centre of the nave from which Köşprü superintended the building.

In the southern gallery, a hollow block of stone was shown as the cradle of Jesus. An anecdote, which can still at the present day be heard from young theologians, is connected with Husain-i Talatzi who is said to have obtained his position at the mosque because Sultan Mehmed II the Conqueror gave him, the mystic (Şifv-vi), the palm (Aya) instead of the back of his hand to kiss; and he thereupon received the position of Mudarris of the Aya Sofya. The so-called "damp pillars" (yayık direk) and the "cold window" (pınypes) near the Kibla enjoyed the greatest celebrity in the days of Abd al-Hamid II as wondrous working places of pilgrimage in these holy halls. It was here that Şehit Aş Şamsa al-Din, whose words had at once the effect of determining imam's opinions and even of compelling the Conqueror to action, first expounded the Koran. Everyone was till quite recently convinced that the blessed draughts of fresh air which rushed in by the "cold window" were of the greatest efficacy in the deepening of theological knowledge.

Bibliography: The most trustworthy Byzantine authorities are the authors Procopius, Agathias, Paulus Silentiarius who lived in the reign of Justinian; of modern writers the most notable are: Pierre Gilles, De topographia Constantinopoleos libri IV (Lyon, 1561 and often reprinted); De Regibus Theotokii libri tres (Lyon, 1561 and several times later); Charles de Franza, Plan du Caire, Historia Byzantina (Paris, 1880); J. von Hammer, Constantinopoli und der Bispozi, I (Prague, 1822); Goldschmidt, a. Beobachtungen, Konstantinopel, I (Athens, 1851); C. Fosadi, Aya Sofya of Constantinople as recently restored (London, 1852); W. Salzenberg, Allerheiligsten Baukommandant von Konstantinopel (Berlin, 1854); Auguste Cholev, L'art de bâtir chez les Byzantins (Paris, 1853); J. P. Richter, Quellen der byzantinischen Kunstgeschichte (Reprint from Ettinger's von Edelberg's and Ilg's Quellensammlung der Architektur und Kunstgeschichte der Mittelalters (Wien, 1897); W. K. Leibnitz and H. Swansonsen, The Church of St. Sophia, Constantinople; a study of Byzantine building (London and New-York, 1894); Heinr. Holtzinger, Die Sophienkirche und verwandte Bauten der byzantinischen Architektur (in Die Baukunst, edited by R. Bornmann and R. Gani, Heft 10, Berlin and Stuttgart, 1898); the best work is M. K. A. Kubar, Geschichte der Aya Sofyas (in: Beiträgen zur Byzantinistik, 3 Vols., Athens and Leipzig, 1907—1909). Notices by G. Baumr Prof. Willh. Schleyer (Hannover).

Not far from the great church in the neighbourhood of the Dündere-Place is the Little Aya Sofya (Köşprü Aya Sofya). Built by Justinian it was formerly a church dedicated to the saints Basil and Sergius. A dome crowned the octagonal base which extends into four apses. The church was turned into a mosque in the reign of Mehmed II by the steward of his harem and since that time has contained all the establishments and institutions required by Muhammadanism religion and education. The entrance hall with the fine flat domes rising from it is of Turkish origin. (K. Schönherr.)

AYA SOLÜG, now a Turkish village, capital of a Nahiya, with 2,793 inhabitants (according to Cunli, La Perdre d'Ainu, III, 505), in the middle ages, su: a most important town which still retained its present name as early as the time of I. M. Baita (ed. Paris, II, 308). When this traveller visited the town in 1533 (1535) it had 15 gates and was an important centre of trade on the Kaystros (now called Kúbik Menderes Çayı) the banks of which were covered with gardens and vineyards. The ruins of a Turkish castle may still be seen and the remains of several mosques and baths amongst which may be mentioned the fairly well preserved mosque of Is'ā Bey. By the sitting up of the harbour the town gradually lost its importance and a new port, Neapolis, Scale nova, called in Turkish Kül Adası, arose. In western mediaeval (Latin) authorities Aya Sollik is known as Altoingi, Altoingii or Lato longo. The Turkish name is really a corruption of the Greek Aya Sollik the name by which a church built here in the early centuries of the Christian era was known; it was held in great reverence and dedicated to St. John.

History: Aya Sollik has replaced the famous town of Ephesus whose ruins are situated in the immediate neighbourhood. This is not the place to describe these ruins nor to pursue the ancient history of Ephesus and Aya Sollik. It may however be noted that the Arab geographers still knew the town by the old name of Ephesus (Afaäs or Ufás) and place there the cave of the seven sleepers (see Aṣār el-Ka'īf). The Arabs advanced as far as Ephesus only for a brief period in 182 (782) but after the conquest of Asia Minor by the Seljūks the town fell more than once into the hands of the Turkish emirs of the neighbouring country, only to be recaptured again by the Byzantine troops. After the fall of the Seljūk kingdom of Kouta and indeed during the time of I. M. Baita's visit Köşprü Beg the son of the Emir Muhammad of Aidin was ruler here. In 1391 the Emirs of Aidin had to give up their territory to the Ottoman Sultan Bayzid, but there was a break in the period of Turkish rule from 1402, when Timur pitched his camp here, till 1425 when Murad II received the homage of various chiefs here and Aya Sollik finally became incorporated in the Osman Empire.

Bibliography: G. In Strangle, The Land of the Eastern Caliphate, p. 155; Heyd, Geschichte des Levantehandelns, see Index.

AYAN (A. par. of 'Aya), the most influential men of a society or of the state; for other meanings see dictionaries.

AYAS, a site on the coast of Cilicia, on the west shore of the Gulf of Alexandrette to the east of the bay at the mouth of the Büyük (Pyramus). In ancient times there was a town here called Alagai (see Ramsay, Historical Geography of Asia Minor, p. 3557). Since the second half of the thirteenth century the place has played a more important role. The gradual expansion of the Franks from the eastern shore of the Mediterranean concentrated all the eastern trade in this part of the Christian kingdom of Little Armenia as it was connected by frequently traded routes with Syria as well as with the interior of Asia.
Minor. The Italians called the town Lajazzo. After it had been plundered in 665 (1269), and again in 874 (1275), by Muslim troops and finally destroyed in 783 (1322), by the Mamluk Sultan al-Nasir Muhammad, but again rebuilt by the Christians, it fell in 748 definitely into the hands of the Egyptian Mamluks. From this time dates its decline though it is mentioned as late as about 1400 as belonging to the province of Ihasb. — Today it is a wretched place on the coast with numerous ruins.

AYAS PASCHA, Turkish grand vizier (1536—1539) under Sulaiman II. Ajas Pascha, an Albanian by birth, was enrolled in the corps of janissaries and accompanied Sultan Selim in his campaign against Egypt. Under Sulaiman he was appointed beylerbey of Anatolia, and later Walla of Rhodes. During the siege of Rhodes he fell into disgrace, was deprived of his office, and even thrown into prison. Soon afterwards he was again restored to favour and with Khaïr al-Din Pascha Barbarossa took part in the siege of Corfu (1537). He died of plague in 1539.

AYAT (a.), plural of Aya (q.v.).

AYAZ, the Emir, lord of Hamadhan, played an important role in the struggles for the throne between the Seljuk princes Barksiyruku and Muhammad I. After having first taken the side of the latter he went over to the side of Barksiyruku in 494 (1100) and after his death (498 = 1104) he became Arash for his son Malikshah who was a minor. He could not, however, hold his own against Muhammad and was treacherously murdered by him in 499 (1105).

Bibliography: Ton al-Atif (ed. Tornoh), x, 195 f.; Recueil de textes relatifs à l'histoire des Seljouques, ii, 90.

AZAB (a.), strictly single, unmarried) in Turkish the irregular footsoldiers who were made use of in raids, sapping operations etc. Like the Akkâjî (q.v.) the Azab played an important role in the earlier wars of the Ottomans.

AZAD (a.), free; in the religious sense: free from worldly desires, pure; hence a favourite personal name o.g. of Mir Ghulâm 'Ali Bigdikârî (see GULAM ALI).

AZAK, Russian Azow, a town near the mouth of the Don; it is first mentioned in the fourteenth century (after 1316) as a Genoese, then (after 1332) as a Venetian colony under the name of Tana (from the ancient Tana). The Turkish name has appeared on coins since 717 (1317). In the year 797 (1395) the town was destroyed by Timur and taken possession of by the Ottomans in 880 (1475). The Russians (Cossacks) appeared before Anak for the first time in 1489; in 1637 the town was captured and the whole Muhammadan population put to the sword; in 1641 the Cossacks held the town successfully against a numerous army, but the orders of the Tsar retrenched in 1642 and at the same time raised the town to the ground; Anak was at once rebuilt by the Turks and Tartars and again besieged in 1654, captured by Peter the Great in 1696. Anak had again to be surrendered to the Turks in 1711; in 1736 it was recaptured for the third time and by the Treaty of 1739 the Russians were allowed to retain it; though by the terms of the treaty the fortifications had to be destroyed, and they were not rebuilt till 1769. Since that time the town has remained in the possession of the Russians, but it has lost its former importance with the rise of the neighbouring town of Rostov. The son of Azov, the Mäbîwits of the ancients, has taken its name from Anak.

(W. BARTHOLOMÉE.)

AZAL (a.), an eternity, which is without beginning, but not without end. (cf. Arab.)

AZAR, in the Korân (vi. 14) the name of Abraham's father. There appears to be some confusion here as the name is nowhere else given to Abraham's father. That he was called Tâhr (Târkh) is also related by Muslim commentators and historians; to reconcile these two statements the usual artifices are resort to, but these have no value. According to Maracci (Predromi, iv. 90) the form Azar is due to a false reading 'Abay in Eusebian Ecclesiastical Chronicle. Neither Maracci, nor any of those who cite him later, has given a more exact reference to the passage. Eusebius regularly writes speech in other places; in any case the chance would be very improbable.

For the life of Azar and his son Târkh the reader is referred to the latter article where the higraphology is also given. (A. J. WENSINK.)

AZZAÎL (a.), the Biblical 'AZZAYN (Azza'îl) also used as a name of the Devil. Cf. Grünewald, Neues Beiträge zur semitischen Sagengeschichte, p. 261.

AZÊD, an Arab tribe, occasionally written al-Asid, and then not to be confused with the Amad (without the article). The proper name is said to be Darwe. The genealogical table is: al-Asid b. Quseïth b. Kârâ b. Mâlik b. Zâlî b. Kâhâ b. Sâlat. Four principal groups were distinguished of this widely ramified family of tribes. 1. A'id Omsîn in 'Umarî. The Kuraishites were unwilling however to recognise the 'Omsîn Asidites, in particular, as Arabs. They lived for the most part by fishing, a calling on account of which they were often mocked; the nickname of Musâm seems also to be connected with this. 2. A'id Sarît in the mountains of Sarît in 'Isâm, famous as weavers and ridiculed on that account. 3. A'id Shânîs b. Qâb, rarely written Shanâwât; the Nâsîn is Shanîs. Their genealogical table is Ka'b b. al-Hârîb b. Ka'b b. 'Abd Allah b. Mâlik b. Nayr b. al-Asid. They likewise live in the Sarît. The A'id Sarît and the A'id Shanîs seem to be really the same. 4. A'id Ghassûn b. Mâlik in the North and in Syria. The al-Awa and the al-Khârij in Medîna and the Khuja in and around Mecca were also counted as Asidites. Al-Mahattah b. Abî Safâr belonged to the al-A'tîq, a clan of the 'Abd Allah b. al-Asid. Abî Humayr was descended from the clan Daws.

Localities which are known as Asidites: Alida (in the Sarît), Bârik (a mountain in the Sarît), Hadid (mount), al-Hâl (in 'Isâm), Makantân (in 'Isâm), Marût (in 'Isâm), Marîb (in 'Isâm), al-Kûfus (in Kirmân), Kenna, Risûf (a strongly fortified place on the coast), al-Sarî (in the Sarît), Târida (in the same district), Tûfîm (in the
Yemana inhabited only in part by Azdites), al-'Umayr (a mountain in the Saarit).

History. In pagan times the Azdites were amongst the chief worshipers of Manib and of Ilbs, 'Isha, 'Ainin was an idol in the Saarit. The burning of the dam of Manib seems to have compelled the Azdites to move out of Sabba', and to have consented to their dispersion. On their entry into the Saarit mountains they had to fight with the Khattim, and overcome them. Ad-Dehri J is said to have settled Azdites in Oman where they remained for a long time under Persian rule. In the ninth year of the Hijira the demand received from Muhammad to adopt Islam was acceded to by a section of the Azdites without demur, and they exchanged the Persian sovereignty for the Muhammadan. The number of Muhammadans amongst the Azdites was scarcely noticeable. After the death of Muhammad the Azdites ascended, but were conquered by the Muhammadan army sent by Abu Bakr, and found themselves again compelled to attack themselves to Islam. The Azd-Shanii's had sent an embassy to Muhammad in the year ten of the Hijira, according to tradition. The victorious Azdites took no part in the campaigns of the caliphs till the time of 'Othman. Then we find the Azd Saarit in Khits and Bagra. When Mu'sawiyah in Bagra attempted to stir up resistance to the caliph 'Ali, the Azdites afforded shelter to Ziyad, who was the governor of 'Ali at that time. It was not till after the Azd Oman, the last of the great tribes to settle there, had come in greater numbers, about the end of the reign of Caliph Mu'sawiyah and at the beginning of that of Yazid I, that the Azdites attained to power there while they allied themselves with the Rabi'a against the united Tammuz and Kazis, in continuation of friendly relations dating from heathen times. Then the Azdites took the position of chief champions of the Southern Arabs (Khalbits) in the war between the north and south Arabs. They supported Ziyad and his sons e.g. after the death of Yazid I and again in the wars against the Khaldjites. In Khorasan whether they had come from Bagra, they were the most important tribe after the Kalsites Tammuz. By the rise of the Azdite Mahlib and his family the importance of the Azdites was increased. They were much exasperated against the Kalsite Kotelha, the oppressor of the Muhallabites and took an active part in the rebellion against him in Khorasan. Kotelha fell by the hand of an Azdite. Ever afterwards the thought of revenge for the Muhallabites was alive among the Azdites. At times they had to suffer severely; Yazid II pursued them with persecution in his hatred of all that pertained to the Muhallabites. For a brief period their position in Khorasan improved in the reign of Yazid III.

Bibliography: concerning the Azdites in time of the Umayyads see Wellhausen, Der Arabische Reich und sein Staat, p. 248 seq.; (Reckendorf).

AZEMMUR (Fr. Azemmour) a town on the Atlantic coast of Morocco, 50 miles S.W. of Casablanca and 7 miles N. E. of Mogad, on the left bank and near the north of the Umm al-Rahba. This river is navigable even by ships of small tonnage; on account of a sandbank that bars its entrance. Azemmur therefore, though it is the natural market for the sale of goods from the Dukkaha district, ranks far behind Masagan in commercial importance. The town has some 3,000 inhabitants including many Jews but no Europeans. It is for this very reason that it has preserved its native character better than the other towns of the coast and that its inhabitants show themselves exceedingly hostile to Christians. In the thirteenth and fourteenth centuries the district of Azemmur was the scene of the last attempted of the "Maghribi"ns", champions of the faith. The neighourhood is full of 'Kabsas which are dedicated to pious personages. The best known and most revered saint is 'Ali b. Sharaf, patron saint of the town.

Azemmur was founded by Berbers in a district rich in wild olive trees (Azemmur). Its history is little known till the beginning of the sixteenth century. Then it aroused the curiosity of the Portuguese who already possessed Tangier, Arizia, and Masagan. According to Leo Africanus (transl. by Schefer, i. 392) it was then a town of about 2000 households, and owed its prosperity chiefly to the shad-fishing in the Umm al-Rahb's which was farmed out for 6-700 ducats annually. In the year 1508 Zayatu, a Marthian prince, who wished to make himself independent in Azemmur offered to hand over the town to the King of Portugal, but when the Christians appeared before the town they found it in a perfect state of defence, and they had to retire after the loss of several ships. Zayatu really wished to pose as the defender of the faith against the unbelievers whom he had himself invited there, in order to gain the confidence of the inhabitants. By 1543 however, another expedition under Don Joao de Braganza and Don Juan de Meneses was successful in bringing Azemmur into the power of the Portuguese who held it for 28 years. They showed great activity in Azemmur, built a church (which was later turned into a mosque) a fort and walls around the town which surrounded the Medina to the present day. The expenses of maintaining the defence of the town, however, became more and more oppressive, so they resolved in 1541 to evacuate it. The Sharif Muhammad al-Mahdi populated it again at the instigation of three Marabouts who guaranteed him the future impenetrability of the town. This promise did not, it is true, prevent Luis de Loreto the Governor of Masagan from surprising the town in 1545, and carrying off the Marabouts as prisoners who had to be ransomed for 22,000 ducats. Nevertheless Azemmur has since then remained in the possession of the Musulmân, and although the Portuguese still continued to visit that stretch of coast and even obtained permission to fish at the mouth of the river they were never allowed to leave their ships or enter the town.

(G. Yvel.)

AZERBAIJAN. (see AZHABAIJAN.)

AZERI (Azerbaijanian), a Turkish dialect. Name and distribution. Azerbaijani is the Turkish dialect which is spoken in Kubia in the province of Transcaucasia and in Persia in the Province of Azerbaijan and also through isolated, in Hamadhan, Farsistan, Teheran and Khorasan.
The Azerbaijanian call it Turk. It belongs with the Turco-Man and the dialects spoken in the Caucasus, in Anatolia and in the Crimea, to the South Turkish family, according to the classification proposed by Radloff. The Azerbaijanian may be divided into a northern and southern dialect. The former is spoken in Rumi, the latter in Persia. Only the latter and that only in the dialect of Tabriz and Urmia has been scientifically, though not exhaustively, dealt with by Foy in his *Mitteilungen des Seminaris für orient. Sprachen, Westasiatischen Studien*, vi. 126 and vii. 197 under the title of *Azerbaijanische Studien mit einer Charakteristik der Städtischeischen* (hereafter cited as Foy i. and ii.). Unfortuitously the work is only a fragment, for the author died in the interval and it has the disadvantages of an incomplete work. In the main I follow his arrangements.

**The Language.** The Azerbaijanian agrees as a rule with the other South Turkish dialects but has some peculiarities of its own. Foy i. (143-144) has given the general characteristics of South Turkish to which I refer the reader. The essential peculiarities of the Azerbaijanian are given here.

**Phonology.** a) Vowels. Among the vowels, there are otherwise the same as in all South Turkish dialects. Special mention must be made of the double *i* viz. *ii* and *ii*. The former, which in Azerbaijanian approaches more to *i*, forms as a rule with the *ii* of the other dialects; the latter, on the other hand, which is pronounced rather like *e* is seldom found except in Azerbaijanian e.g. in East Anatolia and here and there in the dialect of Karsai. It can be traced to an original *ii*; cf. Foy, Türk. Vokalstudien, i. 199-203.

b) Consonants. The greatest changes have taken place in the consonants. *g* is very seldom found (only double e.g. *dikmed* and in the combination *xg* e.g. *dakran*); elsewhere it has regularly become *k* at the beginning, *x* at the end and in the centre of a word, *f* before voiced consonants and *y* before voiced consonants (sometimes also to *g*). In Turkish words *g* is the other hand has been retained at the beginning of words, mediately it has remained before vowels and finally in certain monosyllabic stems, in other places it has become *x*.

* *x* never becomes *k* as in Turkish.

The or is no longer pronounced and has as a rule become *s*, only occasionally *y* and then it has something of a *j* sound.

By the influence of an *n* preceding *h*, separated from it by a vowel, is changed to *m* e.g. *ku* in the locative has become *men*. Among South Turkish dialects this phenomenon is found only in Turkom.

The other changes cited by Foy are shared with Anatolian by Azerbaijanian and indeed with the spoken dialect of Constantinople itself e.g. what Foy tells us about the disappearance of a consonant before another consonant holds for the most part also for Anatolian.

r and l disappear in certain verbal forms, thus *di*, *dy* = *dir*, *dyer* and *dej* = *dey* in place of *deyi*.

**Aspiration.** The most striking point is that certain endings are always used in the strong forms quite contrary to aspiration. Thus the infinitive termination is always *n* e.g. *gül* *n*, the participial termination *k* e.g. *kül* *k*, the future ending *n* e.g. *gül* *n*, the future ending *n* e.g. *gül* *k* *n*, the termination of the 1st pers. plur. and *d* e.g. *gül* *d*, the future ending *n* e.g. *gül* *n*.

**Accent.** a) The Noun. The accent of vowel stems does not end in *fi* as in质量管理 but in *hi* as in *Jagdstat*. The accent of the pronoun suffix of the 3rd pers. singular ends in *n*. In adjectives, the old comparative ending in *n* still survives.

b) Verb. There is a definite and an indefinite present. The former ends in the affirmative mood in *er* (e.g. *er, er, er*), in the negative in *mir* (e.g. *mir, mir, mir*), the latter in the affirmative in *er* (e.g. *er*), in the negative in *mir* (e.g. *mir*). *er* is derived from *e* = *Osmâli* *y* (cf. Foy i. 159). The forms of this present from *dakran* are: *alıyan, alıyan, alıyan* and *alıyan, alıyan, alıyan, alıyan*. The form in *er* occurs only in the 3rd pers. person, besides *er* there is a form men in the 1st sing. and plural. The participle in *er* occurs only in certain persons, for the others Azerbaijanian forms a participle from the gerund in *łu* with the present of the verb to *be*. Besides the 1st pers. sing. of the optative there is also a 1st pers. sing. of the imperative in *m*, *y*.

The mood of impossibility (instead of *gelenmede* *gelenmede* is used) the mood of necessity (instead of *gelenmede* they say *gervel* *gervel*) and the unattached infinitive form in *er* (e.g. *gelen* *er*) are not found. The infinitive in *gelen* takes the pronoun terminations. Various gerunds are also wanting. The participle in *an* is more frequently used, e.g. *gelen* = Osmâli, *gelen* = *gelen* = *gelen*.

**Bibliography.** The oldest prose work is the *Darband-NAME* edited by Mirza A. Kasim Bog (Petersburg, 1851). The most famous Azerbaijanian poet is Faustul of Bagdad (v. Gibb, *History of Ottoman Poetry*, iii. 79). More modern poets have been made known by Adolf Berger, *Dichtungen transbaikalischer Sänger des XVIII. und XIX. Jahrhunderts in azerbaijanischen Mundart* (Leipzig, 1865) and by Bodenstedt, *Beiträge zum transsibiatischen Türkisch* (Zeltwag, o. Deutsch. Morgenl. Gesellschaft, v. 245). Texts in the dialect of Tiflis including comedies by Mirza Fethi Alkhundare have been published in the *Journal Assiat. lit. de Barther de Meynard, L'alchimiste, comedie en dialecte turc surri* (8th series, vii. 10, cf. also Foy i. 156); 2. Lucien Bourgu, *Histoire de Yelenouf Chok* (10th series, i. 393, cf. also Foy ii. 197); 3. Lucien Bourgu, *L'esmer* (10th series, iii. 359 and 365). Recently the printing of the daily Tiflis, Baku and Erivan have developed great activity and several newspapers appear there. For a knowledge of the spoken Azerbaijanian in the dialect of Urmia and Tabriz of to-day, we must have recourse to the phonetically written texts in Foy ii. The transcription of the Azerbaijanian tale given by Vambéry, "Azerbaijanische
AZHAR (Qâmil al-\textit{Ahar}, from al-Qâmî\textit{ al-\textit{Ahar}}), mosque and college in Cairo.  

1) Buildings and endowments. The mosque was built by Djawhar al-Kâtîb al-Sâkhîlî (al-as al-Sâkhîlî), general of Abû Taâmû Ma'mûd a year after the occupation of Egypt by the Fàtimides, and immediately after the foundation of the new capital (al-Nâkhîr, Qâmil al-\textit{Ahar} 359 = Ramâdân 361). It was consecrated and opened for services in Ramâdân 361 = June-July 972. It was situated not far from the \textit{great castle} then in existence between the Distâm quarter (N.) and the Turkish quarter (S.) in the south-east of the city. Djawhar placed an inscription on the dome, dated 360 A. H., the text of which has been preserved in the Makhzûm (\textit{Khiitî, I}, 273 sq.; \textit{van Berchem, Corp. Inserv. Arab.} I, 15, n. 26). It has since disappeared. Several other Fâtimid rulers added endowments and endowed it with grants and foundations; al-\textit{Abl} Nâsîr (356-386 = 967-996) for example made it an academy and erected an almshouse in it for 35 men.  

A \textit{hilâm} (résidence, Tallisman) is mentioned as a curiosity on \textit{the first building}; figures of birds were placed on the tops of three columns which prevented birds from nesting or breeding in the mosque. Further additions were made to the building under al-Nâkhîr (386-411 = 996-1020) and endowments and gifts were bestowed on the \textit{Ahar} and other mosques. A document relating to these of the year 400 has been handed down to us by al-Makhzûm II, 273 et seq. In the year 518 (1125) al-\textit{Amir} built a recess in the middle wall (\textit{Mubârak}) with carvings in wood, the inscription on which is still preserved in the Arab Museum in Cairo (\textit{Ravasse, Sur les mûsàbîkh}, p. 101; \textit{van Berchem, Corp. Inserv. Arab.} I, No. 455). Its name also may be explained from the Fâtimid origin of the mosque, it being rightly interpreted as an allusion to al-\textit{Zâhir}, a title of Fâtimid and a Ma'mûr of the mosque also took its name from her (\textit{Makhzûm}, II, 275 a). Smaller additions are also due to the sâlihs al-Mustânaq and al-\textit{Ishâq}.  

With the Ayyûbid rule a reaction set in, since they as ardent Sunnîs sought to destroy every trace of the Shi'a Fâtimid. Salâdîn took from the mosque the right of \textit{Kânûn} and deprived it of several of al-Nâkhîr's endowments. Nearly a century passed before the favour of the rulers and nobles was again bestowed on it. Al-Mâlik al-\textit{Zâhir} Balbâr made new additions to it, took an interest in the learning taught there and restored to it the privilege of \textit{Kânûn} (666 = 1266-1267; \textit{Djâmâl al-Qâmî}); cf. van Berchem, Corp. Inserv. Arab. I, No. 128. Several Emirs followed the example. From this period dates the prosperity of the \textit{Ahar} as a mosque and educational institute. Apart from the attention bestowed on it at home it was further benefited by the fact that the ravages of the Mongols in the East and the decline of Isâm in the West destroyed or weakened so many of the old, flourishing Mosques. When in 702 (1302-1303) the mosque was damaged by an earthquake, the Mâlik al-\textit{Zâhir} (Sallallahu 'alayhi) rebuilt it. From the year 725 (1326) date the new buildings by 'Abd al-Râmân al-\textit{Kâshkâh} (from Sevîr in Armenia), the MâConcern of Cairo; about the same time colleges, \textit{Ma'dârâs}, were built by Emirs near the mosque: in 709 (1312-1315) by Tallûsî, in 740 (1340-1340) by \textit{Akhâ'ûbi} 'Abd al-Wâlî (cf. van Berchem, Corp. Inserv. Arab. I, No. 110, 125, 126, 127). These were largely brought under the Ayyûbid and still belong to it. Various additions and repairs were made by the Sâlihs Barî al-\textit{Djâmâl} al-\textit{Nâsîr} (about 761 = 1360). He also presented a \textit{korân} (corpus) for it, endowed the kitchen for the poor and founded a chair of \textit{Haji} Law. In the year 800 (1397-1398) a minaret fell in, but was at once rebuilt from Sultan Bârûsh's privy purse. This catastrophe was twice repeated (817 = 1414-1415 and 824 = 1421-1424) but the minaret was always made good. About the same time a cistern was dug, a sahib built and a basin for ablutions, \textit{Mîzâh} erected. A school just beside the mosque was also built by the sultan \textit{Kâshkâh} (died 844 = 1440-1441). Further information regarding this (al-Djâmâliyya) will be found in \textit{Ali Mâlikzâde, al-Qâmil al-\textit{Qâmilî} iv., 196. The greatest benefactor of the mosque in the ninth century was \textit{Kûmil} Bay. His extensive additions were finished in 900 (1494-1495), just shortly before his death. Besides those, many foundations for the poor as well as for the learned were due to him. We also know of his buildings from inscriptions (\textit{van Berchem, Corp. Inserv. Arab.} I, No. 21-25). Ibn Yûsîf (\textit{ibid.} 167 a) relates a remarkable habit of this ruler: he used to go to the mosque of al-\textit{Ahar} disguised as a Maghrîbî, pray there and listen to what the people said about him. We are not told the sequel. The last great Mamûl ruler, \textit{Kâshâh} al-Ghîrîr (906-922 = 1500-1516) built the two lower minarets, on the inscriptions see \textit{van Berchem, Corp. Inserv. Arab.} I, No. 26, 27.  

In the Ottoman period the splendor of the mosque naturally paled a little. At the same time many acts of attention have to be noted. The conqueror Selîm \textit{Shâh} often visited and prayed there, ordered the \textit{korân} to be read in it, and bestowed gifts on poor students (Ibn Yûsîf, \textit{Chron.}, iii., 116, 132, 246, 309, 313). The style of the buildings of the Ottoman period shows a marked deterioration from those of earlier periods. From the point of view of progress the place of worship for the blind is worthy of mention (\textit{Zamûsîyat al-Umayn}) which was built by 'Othmân Kethkhat al-Kazdoghî (\textit{Kâshâh Agha}) in 1748 (1735-1736) (cf. also J. Hirschberg, \textit{Agora}, 1890, p. 101). Among the greatest benefactors of the mosque must be reckoned 'Abd al-Râmân Kethkhat al-Kazdoghî. He built a large and richly furnished \textit{Mîzâh} (a sanctuary screened by lattice work), a prayer niche, a pulpit, an elementary school for orphans, a cistern and a tomb for himself in which he was afterwards buried. The above-mentioned Madrassâ of al-Tallûssîyya (Tallûsséyya) and \textit{Akhâ'ûbaiyya} (whose name was later corrupted to \textit{Uttighârîyya}) were continued with one another by new buildings. Beside making other smaller alterations
in the buildings he made provision for the supply of food and clothing to poor students. It is significant that al-Dhahabi says that in his time, about 1820 (1895), a generation after their founder, most of these pious foundations had fallen into neglect. Some of the French expedition came, which inflicted much hardship. This explains why, although the Asar, the Emir Sidibih in 1815 (1445-1446) took the drastic measure of turning out of the Asar all the occupants, students, beggars, and loafers with their goods and chattels. Soon after however, the fury of the pious was turned against him, even the Sultan (al-Mu'ayyad) was prejudiced against him, had him seized and imprisoned in Damascu. Al-Makrizi (ii. 276 f.) likewise in his account takes the pious as public and the bishop of the God of the Jews of the Asar. On this occasion mention is also made of great gifts and endowments and it is stated that among the faithful were Persians, people from Yaffa and district and from the Maghrib and that such groups (Yaffa) had its own Riwaq (see below). Another detail of student-life is mentioned during the time of the Inspector and Khair al-Din in 1784 (1382-1383); he obtained a decree from Sultan Hakan that the possessions of students who died in the Asar without legal heirs should be divided among all the other students. This decree was carved in stone and placed on the "great Nishe Gate" but does not appear to have been preserved (Makrizi, II. 276 f.).

Even in the middle ages the students as at the present day, seem to have lived partly in and partly outside the Asar. The internal students were divided into territorial groups the most of which had and still have their own House and their Riwaq. By the Harat (for the word cf. Zaunick, "Deutsch. Morgenl. Geschicht. xxix. 753 f. xli. 325) are to be understood the living rooms where the students kept their furniture though they frequently slept outside in the court, or in the loggia where the libraries were kept etc. The Loggia (Riwaq, pl. Arwak) is strictly speaking the space between two pillars; it was here that in former days instruction was given to many little groups, here the Dukur is celebrated, discussions and conversation take place.

The sacredness of the Asar explains the fact that even in the middle ages it was often mentioned as an asylum for refugees (Ibn Iyas ii. 262 a1, viii. 1. Further we often hear (e.g. Ibn Iyas ii. 177; iii. 116, 132, 167) that extracts from the Koran or from Bukhari were publicly read in it, usually to remove serious plagues or famines: in the year 798 (1395-1396) Shi'd al-Din (Omar b. Rabil) al-Bukhari prayed in it during the famine (Ibn Iyas ii. 1-3). In the year 1172 (1758-1759) the students closed their professor to lecture on Bukhari to avert a plague raging in Cairo (Vollens., Kur. Leipzig, p. 769, s.; cf. "Al Mahn slow al-Kifri al-Qasimi, sv. 34"); the stay of the great mystic Omar b. al-Farid is mentioned by Ibn Iyas (II. 82, s.). Foundations for Fakirs i.e. for Sufis, ascetics, and pious enthusiasts were early instituted. But under cover of piety all sorts of disreputable people seem to have taken refuge there. Robberies, burglaries and immorality are mentioned which took place especially in the nights of the great festivals. This explains why, according to Shi'd al-Din, after the Asar, the Emir Sidibih in 1815 (1445-1446) took the drastic measure of turning out of the Asar all the occupants, students, beggars, and loafers with their goods and chattels. Soon after however, the fury of the pious was turned against him, even the Sultan (al-Mu'ayyad) was prejudiced against him, had him seized and imprisoned in Damascu. Al-Makrizi (ii. 276 f.) likewise in his account takes the pious as public and the bishop of the God of the Jews of the Asar. On this occasion mention is also made of great gifts and endowments and it is stated that among the faithful were Persians, people from Yaffa and district and from the Maghrib and that such groups (Yaffa) had its own Riwaq (see below). Another detail of student-life is mentioned during the time of the Inspector and Khair al-Din in 1784 (1382-1383); he obtained a decree from Sultan Hakan that the possessions of students who died in the Asar without legal heirs should be divided among all the other students. This decree was carved in stone and placed on the "great Nishe Gate" but does not appear to have been preserved (Makrizi, II. 276 f.).
a private foundation open to all nationalities; 23. al-Barthara (Barthara), Nubians; 24. Dakkairat Sellu, from the country round Lake Chad; and al-Fuwha and from Further India to Morocco. Political and economic affairs of course often regulate the attendance, hence there are great variations in the statistics; the improvement of methods of communication exercises its influence here as at the great Hajj. The division into Riwal is, as can easily be seen partly according to nationality, partly according to sects and rarely according to special foundations.

The students are called from their close connection with the mosque, Mustazaris (Plur. -im), as learners Tariq (Plur. Tariqat) al-Ilm "seekers after knowledge". The teachers or Professors are officially known as Madaris (Plur. -in), they themselves take a pride in using the modest title Al-Aqilin al-Ilm, "servants of knowledge". The latter live like the students live, as a rule, as simply as possible. The Professors are supported by voluntary contributions and the receipts of various foundations. Only a few are well-off. In the same manner very few of the students are supported by the resources of their parents or relatives; most of them gain a modest, if not miserable, livelihood. The students are dependent on their own earnings for what is not covered by the receipts, mostly in kind, derived from various bequests; they undertake small duties in houses or in the Bazar, the reading of the Kor'an, education, and even handicrafts. Since the foundation of the Khefival Library many find employment there as copyists. In the matter of clothing, clothing and food they are models of economy. Hygiene is something quite unknown to them. The chronicles of the Ashar are full of brawls and revolts among the students; sometimes the quarrels arose from differences of nationality and sect, sometimes over the grants in kind (Darmiyah) and other gifts which were sordid and usurious administration kept back from them. In accounts of the brawls among the students themselves, the most frequently mentioned are the boorish Upper Egyptians, the restless Syrians and the fanatic Maghrebii and lastly the occupants of the above mentioned chapel for the blind.

The cultivation of learning and the method of instruction are carried out in a very different fashion from that which is usual in the West to day, but they remind one of the earlier periods of our culture. The dogmatic interdict, proceeding from the theological centres, which with us has been non-existent for centuries, still exists there in unmitigated harshness. The object of education is not research, proof, comparison or correction, but the true transmission of what their ancestors have left them. Each generation is supposed to be inferior to the preceding; from the Prophets there is a decline to his companions and their Successors; the independent inquirers and authorities (al-Mutahharatan) is far behind us in the dim and distant past. The history of the lands of Islam is regarded from this point of view of continued decline, in this case not unjustly.

This standpoint also explains the appreciation of the various sciences. At the head stand the "transmitted" branches of knowledge, al-Ilm al-ru'yah: Theology, Jurisprudence, Hadith, Sufism; in the second rank come rational sciences, al-Ilm al-ru'yiyyah: Philosophy, Metre, Rhetoric, Logic and Astronomy, the latter studied almost entirely for practical purposes (chronology and time of prayer). The other sciences also, belles-lettres, history, geography, physical sciences, mathematics too, really belong to the secondary group, but since the middle ages they have receded more and more into the background and, as far as they still survive, are only pursued out of obsolete and insufficient text-books. Al-Tanzawi, who taught in the Ashar about 1837, before going to St. Petersburg mentions his lectures on the Maqasid of Hadith and on the Munafiqin with the commentary of Zawari and adds that as far as he knew no one before him had treated of this subject there (Zeitschr. f. d. Wiss. d. Moskow, viii. 79).

The extraordinary impulse which the study of profane sciences has received in Egypt in the nineteenth century under European influence, has not benefited the Ashar in the slightest. This point will be treated of below.

The distinction between the above mentioned two groups of sciences is strikingly brought out in the times allotted to their instruction. It is the custom to devote the hours of the morning in which the mind is freshest to the "transmitted" sciences or which religion and the religious organisation of the state rests: the later hours are devoted to subsidiary sciences which owe their origin merely to human "reason" (al-Ahl). The evening is given over to repetition, conversation and meditation.

If one enquires, not for the traditional respect which each branch enjoys but for its popularity, then jurisprudence takes first rank on account of its importance in public life and the numerous offices and emoluments connected with it. Modern times which have referred many legal cases to the international "Tribunals mixtes" and place European as well as native jurists on the "tribunaux indigenes" (al-Mudakhkhat al-Maghribiyah) have also interfered with the old method of studying the Fikih. Only, Muhammadan family law remains to the Kadi of the old school. The subjects of philosophy and rhetoric are very largely attended, especially if one includes the elementary instruction provided for the younger Arabs and for the numerous non-Arab students. Of the theological subjects, Dogmatics proper (al-Kalma, al-Tanzih) is the most studied, the exegesis of the Koran (al-Fiqh) and the "holy tradition" (al-Hadith al-Mawdu') rather less. The most usual text books for all subjects are given in section V.

The relationship between teacher and pupil is patriarchal. The students show their tutors the greatest respect, kiss their hands, carry their shoes and show them little courtesies of all sorts. They are fond of calling the professor "master" (Usulah) or "our lord" (Mawzu). On unpopular measures however, opposition to those in authority soon appears. The much respected al-Kuwainih (see below iv. 19), who wished to introduce decency and order into the chapel of the blind, was thrashed by the refractory inmates. On holidays, appoint-
ments and promotions and especially also on the deaths of Professors or students the intimate relationship of the community appears most strikingly. On the death of a learned Professor, the Mu'addhis call the Abūr (Sūra 76, 8) from the Mināret, the prayers and Tilhār are endless. Robes of honour are worn as in ancient times as official distinctions by the Professors. While teaching, the tutor sits on a little stool of palm-twigs (Zubrūr) on a pillow which is thrown against a pillar on the wall (Hāsuna) which covers the floor of every mosque. The scholars sit around him in a semicircle, whence the phrase “the circle” (al-Jalal) like “Collegium”. The lecture is usually based on a text; but the texts (Mātki, plur. Mātk) of the oldest authorities are only very rarely in their hands, in place of them there are commentaries (Abūr, plur. Abūr) which in their turn are again thrust into the background by glosses (Hāsuna, plur. Hāsuna), superglosses and notes (Tasull). The scholar seeks to understand the text and makes notes after the lecture. They are fond of using short, rhymed mantras to aid and refresh the memory. There were formerly no examinations; the Idrās (Agāt) prized since ancient times, the “license” and the testimonial which the teacher gave to a student who had understood a certain text, served as a graduation certificate and gave him permission in his turn to give instruction. A Leopold missionary (D.C. R 166 = Vollmers n°. 729) affords us a good insight into the studies in the Azhar in the twelfth century of the Hāsuna.

The relationship of the great Sunni sects to one another has always played an important part in the Azhar, especially in regard to its management. Since the time of the Fatimids the Shī'ah has been banned. The Hanabīs are (as already mentioned) as insignificant in numbers and influence that they have never attained to the Rectorship (see below IV). The Mālikis, who live chiefly in Upper Egypt and also in the Delta have always held a respected position, but have not often attained to the Rectorship; and have never quite managed to rise in the influence which their numbers might warrant. The competition thus almost always lay between the Shāfi'is and Hanafs, the former representatives of the national ritual, followers of the Imām, whose very holy Mausoleum is visible from Cairo, the latter representatives of the ritual of the Tatars, Cana dians and Turks who have held the ruling power for centuries. The controversy, may, struggle, continues to our own times when the necessity of the Hanafī Sublime Porte has in this matter one of its most effective means of influence in the Nile valley. The official preferment of the Hanafīs has occasionally caused conversions to this sect. The opposition among the learned between the strictly dogmatic tendency and the mystic (al-Tasawwuf) must be briefly indicated here. The former has always held the chief authority, and it has been occasionally threatened by the latter. As far as mysticism in its various forms only appears as secondary, peaceable or tempered with asceticism, it is not interfered with. It is otherwise, when it rejects, combats or attempts to suppress the main doctrines of its opponents. For an inexorable and consistent champion of the mystic conception like al-Shāfi'ī (died 973 = 1565), there was no room in the Azhar. The differences in the conception of Revelation and other questions constitute an impassable gulf.

In the middle ages we find an inspector (Naqib) at the head of the Azhar, who was chosen from the higher officials of the state. Each Rīwāt besides each sect had its own chief (in the later Shāfi'ī, in the former Naqib also). It is not till Ottoman times that we meet with a scholarly head of the Azhar, the Shāfi'ī or Ummah, who may be compared to the Rector of the German Universities (except that he is not changed every year). He has under him the Shāfi'īs of the various divisions and deals directly with the government. Thanks to Djabarti's Chronicle we have the list of these Rectors for more than 200 years [see below IV].

The periods of instruction (Bīrāt, Plur. Bīrāt) are usually broken by longer or shorter holidays (Buzūdā). The longest interval lasts from the holy month of Raddūb through Shābāt and Ramadan till the close of the "little festival" in the beginning of Shāwīl. After two months again comes the great sacrificial feast for several days; besides there are the many holy days (Mawlid, Mawlid, plur. Mawlid) especially those of the Prophet and of Bawāsir in November. The domestic arrangements, the management of the library and of the supplies are in the hands of the Dāi (= Dāi) who again has numerous minor officials and servants under him.

III. The above sketch of the internal arrangements of the Azhar has dealt mainly with the earlier period and therefore requires to be supplemented by an account of the improvements which the nineteenth century has effected. When Napoleon's expedition had shattered the old Turkish constitution to fragments, Muḥammad 'Alī sought with the help of European material to erect a new building from the ruins. As a Turk, as an unducated man in the academic sense, as a man of action and of new ideas, he could not hold the Azhar in particularly high regard. The Arab spirit felt itself repelled by the Turkish, the oppressed Egyptian had for a long time hated the Ottoman despot; the spirit of the Azhar, ignorant of the world, devoted to the past, was in striking contrast to the matter-of-fact attitude of the new ruler, who regarded only the present and the future. In the interest of the State, Muḥammad 'Alī did not hesitate to confiscate the extensive estates of the Azhar, although they were endowments with the inviolability of a religious bequest, and to do much harm to Professors and students.

By the institution of the "Mission Scolaire" in Paris (1828) many of the best brains were taken from the old, traditional teaching and guided on quite new lines. Subjects which (as already mentioned) were placed in the lowest rank in the Azhar or quite neglected, Mathematics, Arithmetic, Physics, History, Geography, etc., took the first rank, formed the path to office and honour, and threw no very favourable light on the educational stagnation of the Azhar. The new generation by the translation of European, mainly French works into Arabic, had, since the old scholastic terminology did not suffice, found a new vocabulary and new style which called forth the scorn of the Azharites. Whoever of these young people came back from Paris was regarded by the champions of the Azhar as insolent and affected. This antagonism which had developed by the time of
reforms that have been carried out seem to the champion of the old state of affairs a desecration of the place. This may be understood from the following of this group: al-Ashkar as-a', the Ashkar in institution deprived of its honour and glory. When about the year 1834 the Mahdist of the Sudan threatened the Nile valley also, they received much sympathy in the circles of the Ashkar. How far their sympathy led to action can of course not be ascertained. When on the 7th June 1856, the Egyptian police commanded by Europeans attempted to carry out the Ashkar during the cholera epidemic to carry out necessary sanitary measures they were bombarded with stones, beams, vessels etc. by the students and had to retreat. Those young people for whose spiritual guidance their teachers were responsible, lived in the belief that dirt was inseparable from holiness and that the inviolability of even the cloisters of the Ashkar was a part of "holding fast to their religion" (ak-Tawvisuk: a' 'Du'a). Incidents of this kind explain the situation better than the mere letter of the statutes, or semi- official explanations. A great student's revolt took place in 1909.

For the statistics of the internal affairs of the Azhar in modern times we have various statements which often differ from one another considerably. All Mikhail, who worked on the records of the Dwayne al-Awāl, gives for the year 1893 (1875): 375 teachers (Shāhikā) of whom 147 were students, 99 Mallikā, 76 Hansa and 3 Hanbalis. For many years no Hansal is said to have taught in the Ashkar (al-KhWafa al-khālid, i.e. above). Further he gives 10,780 students comprising 5,631 Shāhikā, 3,826 Mallikā, 1,236 Hansa, 25 Hanbalis. These figures agree very well with those given for several years of the same decade by L. Goldscher (published in Elber: Egypt, ii. 85). The Russian-Turkish war is adduced as the cause of the serious drop in the figures in 1877, but the decline in the number of professors from 325 (1876) to 231 (1877) is not explained by it. An official report for 1892, soon after the accession of 'Abd al-Azīz gives 178 Professors (according to sects 79, 81, 35, 3) and only 8,837 (?) students (according to sects: 3,636, 2,508, 1,774, 36). The not inapropiate difference of these figures from the one given above is explained by the fact that the official account gives only the regular paid teachers and the students proper, while the general statistics include the other teachers and also the scholars of the elementary and secondary schools connected with the Ashkar. In 1899, 191 Shāhikā and 8,246 students were given; for 1901-1902 on the other hand 251 "Professors" and 10,403 students (Heinroth, in "Fremt. Jahrh.ber. 1903", sall. 1908). In 1906 there were 319 teachers and 9,669 students [cf. p. 201].

All accounts of the yearly expenses of maintaining the Ashkar must be taken with still more caution. In 1875 the income is said to have been 275,626 £ and the expenses 390,834 £.

All Mikhail, who examined the matter more deeply, prefers to remain silent on this point. The official report above mentioned gives for 1902 total figures of £ 4,382 and 16,000 loaves daily. On the other hand, for 1901-1902 £ 10,001 are mentioned and 13,510 loaves of bread daily. The £ 4,382 are divided as follows: the ministry of Finance contributes 6,011, the Dwayne al-Awāl only 5,757 and the endowments of the various
Riwalla total only 1632. One may assume that the official report gives only the expenses of the Aamfah without the contribution of the state (regulated according to requirement).

IV. Thanks to the excellent Chronicle of al-
Husayn i. a., we possess a list of the Rezae (Shahid, Eff, Mahasti) of the Azhar from 1100 A. H. onwards, who are chosen from the most prominent scholars (the office of Rector is called the Mahasti). We find among them important and unimportant men; some were capable as administrators but not learned, others the opposite. The favour of the Ottoman Pashas seems to have formed an important part in the selection. The jealousies of the various sects became evident on elections to the Mahasti.

We are told that the oldest Shahid of the Azhar were:

1. the Malik Muhammad b. 'Abd Allah al-
Khwarizhi (Khwarizhi, died 1101), known as a commentator on various texts;
2. Muhammad al-Nashrati (died 1120), later a Maliki. Then followed a fierce contest between the adherents of 3. Ahmad al-Nasafi and 4. Abu al-Ra'uf al-Khalas, who was last victorious. The students in the mosque settled the contest with weapons and left a number of dead and wounded. After the death of Khwarizhi followed 5. the wealthy Malik Muhammad Shama
n (died 1135); 6. the Malik Ibrahim b. Musa l-Faiyumi (born 1109, died 1157); 7. the Shahid 'Abd Allah al-Shafi'i, famous as a poet and litterateur (died 1171); 8. the priest and learned Shahid Muhammad b. Sallim al-Hafiz al-Khalwas (died 1181); 9. 'Abd al-Ra'uf al-Sudjaf (died 1185); 10. 'Abd al-Rahman b. 'Abd al-Munsif al-Diwaneri (died 1190). Then arose a struggle which lasted a year between the supporters of the Hanafi 11. Abu al-Rahman b. 'Umar al-Arafi (died 1193) and of the 12. Shahid 'Abd al-
Arabi (died 1208). In the same year there were several disturbances among the students on other questions, partly between the Sunni and the Shafiites, partly against the authorities and government body on account of food, etc. due to the students being withheld. The period of office of the Shahid, Rector 'Abd Allah al-Shar-
kawi (died 1207 = 1782) was one of the most important periods in the history of the Azhar because the Napoleonic expedition with all its horrors and tongues fell within it. Al-Shakawi was known for several dogmatic, philological and historical publications, and is looked upon as one of the most distinguished officials of the office. After his death the students again divided into two parties, of which one wanted 14. Mahdi, the other 15. Muhammad al-Sanawari (died 1233). Al-Mahdi held the rectorship for a nominal period and was a scapegoat for his opponent. He followed 16. Abu al-Arabi (died 1245), then 17. Ahmad b. 'Ali al-Dumhurijii (died 1249), next 18. the enlightened Hasan b. Muhammad al-
Attar (died 1250), famous as a scholar, poet and orator. He was followed by 19. the learned Hasan al-
Kirawassin (died 1254); 20. Ahmad al-Sham al-Baghi (died 1263); 21. Ibrahim b. Muhammad al-
Baghdadi (Baghdadi, died 1277), very celebrated as a scholar, but who also as an administrator. When he became unfit for his task through old age a board of four guardians (lavkat, al-Ma'sul) was appointed for which was dissolved by 23. Mustafa l-Arifi (died 1287) in 1281. He prepared the reforms which

under his successor, the above (ill.) mentioned 24. Muhammad al-'Abbasi al-Mahdi al-Hanafi were carried through with the strong support of the Khulafa of al-'Abbasi. In the year of the rebellion (1293 = 1878) he had to give way for a brief period to Muhammad al-Enabiti but soon recovered his office and held it till 1304 (3. Bayat II.) when he was again deposed by Muhammad al-Enabiti, a learned but pedantic man of much originality. Al-Enabiti did not execute the commission imposed on him by the government to write a history of the Azhar from the original documents. He was replaced in 1313 (1893) by 26. the Hanafi Jusuf al-Nawawi, who was deposed by 27. the Hanafi Abu'l-Rahman al-Nawawi in 1317 (1899) who died immediately after. The 28. Malik Selim al-Rifay followed him in 1317 (1399) who had been chief of the Malikis since 1305 (1888); he was succeeded in 1323 (1905) by 29. the Shafi'i
'Abd al-Rahman al-Sharabidi. 

V. The text-books used in the Azhar give us an insight into the scientific and literary taste of recent centuries. That the older texts were gradually more and more suppressed has already been mentioned. We notice the same phenomenon in other systems which have the same dogmatic stagnation. This explains the great difference between the tastes of the European Arabist and that of the Arabs themselves of which the spirit of the Azhar is typical. Just as strongly as we incline towards the older, fundamental and more creative literature, the Eastern mind inclines to the more recent explanatory works of halaqah commentators.

Since the great activity of printing presses, and partly through the medium of the Khabili Library, even 'Ulama' of the old school have begun to devote their attention to the noble works of ancient times (Adab, Poetry, Philology, History, etc.). The influence of the Koran and the importance of sacred tradition have been the means of the oldest works especially in Hadith (rather less in Tafsir), remaining in honor.

If we go through the curriculum of the Azharites and begin with grammar then the first work to be mentioned on this subject is the Alqawumiyat (Jarrumiyat) of Muhammad b. Dawud al-Sinbadhi (died 733). Of the numerous elucidations of this manual the commentary of Hasan al-Kafrawi (died 1200) and that of Khalid al-Adhari (died 905) with the annotations of Abu 'Abd al-Nasir al-Jazuli of 'Attar are the most popular. For the advanced courses the works of 'Abd Allah b. 'Abd al-Malik b. Hisham (died 764) via Kazib al-Nasir, Shadhib al-Dakhli and Mu'ASS J.L. Sabz with numerous commentaries and glosses are used; also the Almas of Ibn Malik (died 572) with the commentaries of Ibn 'Abd al-Malik (died 760) and of Sabzab (about 900) a gloss on it by Sabzab, died 1300) and others; more rarely the Lhawat al-'Attar of Ibn Malik.

Of the numerous dictionaries of earlier times the Almas of Fattabah was so commonly used that the same in modern times generally has the meaning of "dictionary". The Shahid of Dhahart has always had a good name. It was only European influence that brought other collections especially the Tafsir al-Arabi and 'Ilm al-Arabi to positions of honor. It required the intervention of a European diplomat to complete the writing of the Lhawat which had come to a standstill. What we look for in such a work, namely
the explanation more especially of the ancient poetry, is quite foreign to Arab ideas. Reference to the ordinary meaning is only made to illustrate the metaphorical meaning of a word. When the printing of the Persian was completed in 1368 (1891) an official notice recommended the work in the following words: "Cet excellent ouvrage, qui entre autres choses d'une utilité incontestable, réunit le sens mystérieux des versets du Coran et des traditions, dont l'interprétation a fait l'objet de controverses innumérables, mérite à bien des éclaircissements." (died 612)

The rhetorical subjects which are little esteemed by us are naturally connected with the philological. The Rihla of Abu ʿrāfa ʿrāfa ʿAlī al-STACK (about 890) on Sanāʿi (Metaphor) with numerous commentaries and glosses is very popular, also the Rihla of Darid (died 1201) who was a famous Mālik jurist, and that of Sahāk. For the advanced courses the Talābīs al-Muṣaffa al-Karimi (died 772) is taken, of the commentaries the favourite is the Muṣawan of Taftān ʿAbd al-Din (died 794). Since philosophical questions have been forgotten for centuries, logic alone of this branch is studied. This is based on the "Scala" (al-Salūm) of Alkāfart (about 941) with many commentaries, the "Language of Porphyrius in the adaptation of Alhār (died 683) likewise often annotated, and the "Aṣbāb al-Kāfira" of Ishaq al-Kāfira (died 675) and the compendium of the theologian Muḥammad b. ʿUbayf al-Sanāʿi (died 892).

At the head of theological subjects stand dogmatics with its systems, commentaries and catechisms. The large and small Apologies of Sahāk, just mentioned are very popular; so are the Qaras of Dārām ʿAlī b. ʿUthmān al-Qarā (died 1041) and the Aṣbāb of the already mentioned Darid, with all numerous commentaries of ancient and modern times e.g. by Muḥammad al-Eṣṣārī, al-Ghazālī, al-Ghazālī. The literature of the "Miṣāḥa" of the Prophet and the poetry devoted to his praise (Mudāh) must also be mentioned here.

On the Hadith the old, canonical collections, especially the Sahih of Abū Dāwūd are still read by scholars while more recent, smaller collections are used in teaching. The most important of these is the al-Jāthi al-Aʿṣābiyyah of Sayyid (died 911) with supplement, notes, extracts and new adaptations. A special branch of this field is Prophethology, the dogmatic conception of the personality of Muḥammad. Highly valued works on this subject are the Sahih of Tirmidhī (died 779), and the Munawwa wa-tṣawdiʿ of al-Kaṣṭallānī (died 925) the Šāfī of Kādī ʿIyād (died 544). Of the many works dealing with the technical language of the tradition (Muṣafa al-Hadīṣ) the favourites are the Baṣābīyah, whose author lived in the eleventh (seventeenth) century and the short text called after its opening words Gharaib fi ʿrāfi.

On the Tafsīr the once celebrated commentator al-Zayn b. al-Misʿaf had fallen much into disuse through the emphasis on the literal meaning of a word. It is only through European influence that that of ʿAlī b. al-Tahārī has been recently deemed worthy of printing. The great commentary of Fakhr al-Dīn al-Rāzī (died 606) is very popular; further may be mentioned the work of the Dālim al-Mahfīz (died 804) and the ʿAlī al-Sayyid (died 911) with the gloss of ʿAlī b. al-Shārī (died 809); also the Sirah al-muṣārīr of Khālid al-Shārī (died 977) and the Ṣaḥīḥ al-Bukhārī al-Sāhil of the Turk Abu ʿrāfa ʿAlī al-Muhdī (died 984). More rarely used are al-Bukhārī (died 876) and his commentators al-Khaḍījī, Shāhpālī and others.

The doctrines of fundamental principles (al-Uṣūl) common to the great sects is studied mainly from the Shāhīṣ al-Shāhīṣ and the Shāhīṣ al-Shāhīṣ (died 711). In other respects each sect goes its own way. Among the Shāhīṣ the Minhāj al-Tawhīd of Nawawī (died 976) extracted from the Maḥṣūs (died 976) of ʿAbd al-Wahhāb al-Shārī (died 711) is an unchallenged position. The most popular commentaries on the Minhāj are the Minhāj of al-Raqqī (died 1044) and the Taḥṣīl al-Muḥājīnī of Ibn Ḥaḍār al-Haṭāwī (died 974 or 973); cf. on this commentary Snouck Hurgronje in the Zeitschr. d. Deutsch. Morgen. Gesellsch., XIII, 143. Two works of ʿAbd al-ʿAbd (died 976), the Ṣaḥīḥ al-Shāhīṣ and the Minhāj al-Shāhīṣ are also popular; there are also the commentaries of Ibn Ḥaḍār al-Haṭāwī (died 976) called, al-Kawāl al-muṣārīr and the Minhāj of Khālid al-Shāhī (died 978) and his commentaries (died 1000) called, al-Kawāl al-muṣawwara and the Minhāj of Khālid al-Shāhī and the Minhāj of ʿAbd al-ʿAbd (died 716) and his commentary al-Muṣawwara (died 978).

Among the Ḥanafīs the formerly highly celebrated ʿArīḍah of ʿAlī al-Maḥmūdī (died 593) with its many commentaries has lost ground because there are more recent works. The Rāh al-Dār al-ʿĀrīf of ʿAbd al-ʿAlī b. ʿAbd al-Ḥakīm (died 780) is popular with the commentaries of al-ʿAlī (died 857), of Mullā (Mulla) Miskeen (died 950), of Ibn Ḥaḍār (died 976), of Muṣafir (died 1007); further may be mentioned the Nār al-ʿIrāq of ʿAbd al-ʿIrāq (died 1069) the selections from it, the Maḥṣūs b. al-Dār (died 1231); also ʿAlī b. al-ʿAlī (died 1088) commentary (died 1088) and the Minhāj of ʿAbd al-ʿAlī (died 1073) on the Tawwīr al-Aʿṣābiyyah of Muḥammad b. ʿAbd al-ʿAlī al-Tawwīr (Dinmāḥīdī died 1104); likewise the Gharāʾib al-ʿĀrīf and the commentary Duray al-ʿĀrīf al-Hāfiz of Mullā Khawāṣir (died 885). Ibn Ḥaḍār mentioned as a commentator devised also a favourite system (al-Muṣawwī wa-nuṣāf) and a collection of judicial decisions.

Of the earlier literature of the Mālikīs besides the fundamental work, the Muḥājīnī of ʿAlī b. Anas (died 779), the chief that have survived are, the Rihla of ʿAlī b. Ahl Zač al-Kairāwān (died 885). With many commentaries, e.g. that of ʿAbd al-Ḥaqq b. Abū Saʿd al-Kairāwānī (died 939), and ʿAlī b. Taḥṣīl (died 948) and that of ʿAbd al-Ḥaqq (died 966). For the rest ʿAlī b. Ḥaqq (died 827) with his compendium holds a similar position to the Nawawī among the Shāhīṣ. Nearly all scholars of the Mālikīs have expounded his Miṣāḥa, among them ʿAlī b. al-ʿĀrīf, ʿAbd al-Ḥaqq b. Ṣaḥīḥi ʿAbd al-ʿĀrīf al-Sḥīḥi (died 1009), al-Ḥādi (Kharābī, died 1101), al-Dārid (died 1201) and Muḥammad ʿAlī (died 1339). Another important text-book is the Muḥājīnī of ʿAbd al-ʿĀrīf al-Muḥājīnī with the commentary of Muḥammad b. ʿAbū Daʿūd (died 957) and the Muḥājīnī known as Ṣafārī, which has been explained by Ibn Ṭurk, al-ʿAlī and al-Ẓārī (died 1333).

The more recent literature of the Ḥanafīs is as small as the number of its adherents. The Dīdūl al-Sāhil of Marīq b. ʿAbd al-ʿAlī (died 1333), and the Munīkha b. ʿAbd al-ʿAlī of Muḥammad b. ʿAbd al-ʿAlī are popular.

The law of inheritance (al-Farāʾīf) which is
common to all the great sects is usually studied from the ʿSūrat al-Kafārāt and the ʿUmmah.

The sciences in general studied in the Azhar are treated of in: Nasr al-Juwaynī, al-Makārib al-muqaddamsa wa maqāṣid al-ʿUmmah al-ʿUmmariyya (Kairo, 1340). The most popular treatises on these sciences have been frequently reprinted recently as Maqāsid iʿtāla, e.g. Cairo, 1366, 349 pp.; 1302, 239 p., lithography.

VI. Like other academies, the Azhar has in course of time acquired important treasures in books which serve partly for study and partly for teaching. When the Khidrī Library was founded in 1870 and the mostly abandoned madrasas had to give up their collections for this purpose, the Azhar was left unmatched, much to the disadvantage of Arab studies in Europe. It would have been better to make a division and leave the texts to the Azhar and to give scientific works to the new library. Our knowledge of the contents of these collections is therefore not only insufficient but (what is worse) one cannot be certain that the books mentioned in the old catalogues still survive. J. L. Buechel compiled a list based on his own examination and published it in 1816 (A Catalogue of Books in the Mosque al-Azhar). A selection from the contents of the Azhar and other Madrasas was published from a Vienna Codex by G. Flügel (História do, vii, 7–22).

From an official catalogue of 1268 (1851) I take the following. The divisions, Kölaus, and endowments are distinguished as follows: 1. Tong; 2. Syria; 3. Kudir; 4. Maghārib (i.e.); 5. al-Najd (i.e.); 6. al-Ṣaʿida; 7. Ṭirifa (from the Delta) or Manifa (from the Manifa); 8. al-Shamawī; 8. Bahār (i.e.); 9. al-Shaikh al-Ḥabīr; 10. al-Madrasa al-Ḥafishīya; 11. al-Nāṣir (Central Africa); 12. al-Shaikh al-Tālib; 13. al-Dānāqīla (from Danakil and district); 14. ibn al-Maʿṣum; 15. al-Madrasa al-Tabarunnya; 16. al-Shaikh Ḥabīr; 17. al-Maʿṣumīya; 18. al-Habīrī; 19. al-Dānāqīla; 20. al-Duṣmānī; 21. al-Dānāqīla; (from Ṣaḥhāb and neighbourhood); 22. al-Dānāqīla; 23. Dāʾūr; 24. Yemenites; 25. Bāzīlī (i.e.); 26. Japanese; 27. al-Imām al-Shāfīʿī; 28. Ahmadī; 29. Samaḥata; 30. Fāyama; 31. Tawāriikh. The richest are the Ṭarīkh, the Maghārib, the Syria, the Siʿrah and Kudir, smaller numbers belong to the al-Najd, the Ṭirifa, the Dānāqīla, the Manifa, the al-Tabarunnya and the two old madrasas (10, 11); the remaining vary from 100 to 200 volumes or less. The total number of books, entered in this catalogue may exceed 5,000 works in almost 19,000 volumes. No officials' names since that time are known.

358. More thorough is Sulaimān Rāshid al-Ḥasanī, Kāmil al-ʿUmmar, ft Tālī al-Azhar (Kairo, 1332). It treats in five sections of the history of the building, various important parts of the institution, the rectorship, the inner history, customs and statistics. The other small, theological school books of Egypt at the beginning of 1333 (spring 1905) was published: Al-Muṣāfī al-Ṭawwāl al-ʿArabi 1323–1329 (Cairo, 1333). Under the misleading title which leads one to expect an official report, a scathing attack on the faults and weaknesses of the ruling system is concealed. The obviously well-informed author spares neither the most respected scholars nor the Khādi and the samarrī of the Ābūn palace. The greed of the professors is especially criticized and next to that their ignorance. The pamphlet is an important sign of the times. Of quite another sort is Mālikī, b. Ibrāhīm al-Āhmad al-Ḥasanī, Al-Ḥwāl wa l-ʿUmmāl wa l-Ḥassān al-Ṭawwāl (Tanjīf, 1304). It is part 2 of a work to be called: Al-Ṭawwāl al-Ḥassānī. The work deals in nine chapters with schools, theological schools, sciences, method of teaching, the education of the people, elementary instruction, pedagogics, the necessary reforms and the theological control. A moral sincerity as such is here shown, would be a rarity even amongst us, much more so it is in stagnant Islam. The combination of the purely Islamic point of view with a great susceptibility to the good that comes from other sources is most remarkable. Islam should learn not only from Europe but also from China and Japan. Among the subjects to be studied the propagation of Islam (Daʿwā al-Khulūṣī) is mentioned. The author desires annual Islamic congresses without Panislamism. Other means of culture he seeks in learned commissions, in the production of an encyclopedia, in the spread of university instruction among the people. Islam is to be purified of fables and other encumbrances. He warns his readers against speculative philosophy. The book is, as always, a marked testimony to the author's genuine convictions and ideals. Cf. also al-Kāmil al-Anāmi, ft Fagrī al-Dīnī al-Azhar (Katr. Landberg, Leiden, N. 263). Further H. Goldschütz in G. Hettche, Egypten, ii. 71–90; A. v. Kremer, Egypten, ii, 50 ff.; E. Arminjon, Études universitaires à l'Égypte, in the Revue de Paris, 1904; and l'enseignement, in the Revue des Universités mondiales d'Égypte, 1905; Kremski and Miller, Weltbildungsmonatsschr., xiv, 115–150, Universitiät pri usteti Akhour (cf. Ort. Bibl. xvii. N. 5590), after al-Maghrib, iv. 94 ff.; M. Bubba, La Florita Gana el-Azhar (cf. Ort. Bibl. xvii. N. 3633) (K. Volker).

AL-AZHAR. Ahmad b. `Abbās Ahmad b. `Abbās wrote in the year 1161 (1748) the work on Rhetoric Nihāyāt al-ilmu al-Maṣūma fi Tālī al-Azhar which is preserved in Berlin (see Almschütz, Forschungen der wiss. Hist., N. 7, 70) with a commentary by his son. (Broedermann.)
AZHARĪ Ibrahim b. Sulaymān al-Balādhūrī wrote about the year 1100 (1688) al-Niṣāḥah al-Mālikīyyah fi Sīrah abū ʿAbd Allāh Muhammad b. Muṣṭafā al-Kūshī, in which he shows that it is illegal on hajj to kiss graves, to touch them, or lie upon them (a. Abulfadl, Fā'ilānī al-ʿarbī, al-Khalīfa al-Thaʿlabī, al-Samhūl). He is also a monograph on the Fāṭimī precepts regarding expectation, kissing, and embracing; and the collection known as al-Azhariyyah, printed with a commentary by the author in Būālā, 132. There are glosses on it by al-Fātīma al-Azhariyyah fi Ilm al-Radwānī, printed with a commentary by the author in Būālā, 132. There are glosses on it by al-Fātīma al-Azhariyyah fi Ilm al-Radwānī, printed with a commentary by the author in Būālā, 132.

AZIZ is, mighty, valuable; al-Aziz, the Mighty, is one of the 99 names of God and in the Koran (12, 90) also a designation of the Prophet [see Ṣafar].

AZIZ, al-Mālik al-Aziz, ibn al-Ḥusayn, al-Aṣyrī al-Ṣāfī, son of al-Ḥusayn, was born in Cairo on the 8 Djawād 157 (February 1172). In 582 (1186-1187), when he was 15 years old, he became governor of Egypt. On the death of his father, he inherited Egypt, where he reigned from 589 till his early death on the 17 Dhu-l-Qa'da 590 (29 November 1192). The events of his reign are dealt with in the article al-Aziz al-Ṣafī. He was an able but weak prince. He did his best to be just but could not be master of the difficult political situation in which Egypt was then placed. Nevertheless his subjects loved him. In his youth he had pursued serious studies in the Ḥadīth. He was entombed near the ʿImām al-Saṭhirī.

AZIZ, al-Mālik al-Aziz, ibn al-Ḥusayn, was born in Cairo on the 8 Djawād 157 (February 1172). In 582 (1186-1187), when he was 15 years old, he became governor of Egypt. On the death of his father, he inherited Egypt, where he reigned from 589 till his early death on the 17 Dhu-l-Qa'da 590 (29 November 1192). The events of his reign are dealt with in the article al-Aziz al-Ṣafī. He was an able but weak prince. He did his best to be just but could not be master of the difficult political situation in which Egypt was then placed. Nevertheless his subjects loved him. In his youth he had pursued serious studies in the Ḥadīth. He was entombed near the ʿImām al-Saṭhirī.

AZIM (a.), great, of-praise, the Great, is one of the names of God.

AZIMA (a.). From the dictionary meaning "earnest, inviolable expression of the will, firm decision, various special applications of the word have developed.

1. in Law. Azima denotes an inviolable command; the divine law in itself without reference to: possible serious obstacles to its being followed. Correlative to it is Ṣaḥīḥa, exemption given by the lawgiver for certain cases of prevention, or complete dispensation from observance of the law (e.g. the breaking of a law concerning food in case of necessity where adherence to the law might be dangerous to health or life). Cf. Goldsith, Zahirīn, p. 68.

2. in Theurgy. Azima means magical adjuration; whence also the application of magic formulas from which certain effects are expected. Cf. Niẓākhkī, Fāṭimī, p. 207 ff. (Goldzsch.)

AZIMECH, a star of the first magnitude in the constellation of the virgin (Virgo). The name given it is the Arabic designation al-Simah abdul-ʿalī (γ ω).
The position of Ibn Nestorius, as well as that of a Jew, Manasseh, to the chief secretary in Syria, were in accord with the Fātimid policy of toleration in regard to religion and race. But in the case of al-ʿAṣīr, special influence was exerected by his Christian wife, the mother of his son and heir al-Jākīm. Her two brothers were appointed Melkite patriarchs of Alexandria and Jerusalem, by the caliph's express, though irregular, command, and the Christians never enjoyed so much toleration as under his rule. The Copio patriarch, Egypt, was in accord with a request of ʿAbd al-ʿAṣīr, obtained permission to rebuild the church of Abū ʿAbd Allāh outside Fustāṭ and all opposition to this grant on the part of the Muhāammadans was summarily suppressed by the caliph. Indeed, he even went so far as to encourage discussions between Christians and Muhāammadan divines [see Ibn al-ʿAṣīr] and to refuse to persecute them from time to time removed obnoxious officials, but harm influence, at least in the case of Ibn Nestorius, and the need of their advice soon restored those who had been dismissed. The discontented were forced to reconcile themselves to this policy by a firman administration backed by a powerful army, for which al-ʿAṣīr was the first of his family to adopt the fateful policy of importing Turkish troops. The caliph had scarcely any cause to call upon his forces to quell insurrections at home, therefore, on the other hand, active service was demanded of them abroad. The Turkish general Afkān, who, after the intervention of the Karmāṭīs which severed Syria from Egypt, had restored the name of the ʿAbīsīdīd caliph at Damascus, emboldened by the death of al-Muʿīnī advanced upon Sidon which he conquered, and then proceeded as far as Tibariya, whence he returned to Damascus. Tḥābir Ljwār was dispatched in September 965, but after besieging the city for two months met with a capitulation from Masʿūd b. Hasān’s al-ʿAṣīrī b. Karmāṭī coming to Afkān’s relief. The allies pursued the Egyptians and the veteran Fātimid general was forced to promise Afkān valuable presents in order to extricate himself from a precarious position and return to Egypt. Immediately upon his arrival, al-ʿAṣīr in person advanced into Palestine and defeated the allied forces in the year 977 (977), routing Afkān, but with characteristic duplicity pardoning him and showering honours upon him. In spite of this victory, Damascus was still but nominally under the control of Egypt. Kāsām, one of Afkān’s counsellors, straightway usurped authority over the city, and withstood all attempts to remove him on the part of the general Abū Mahmūd, al-Fāžl b. Qār, Saʿdīn b. Dārāb, Fāṭḥah and Dājīḥ b. Sūrīfand, till he was forcibly ejected in 982 (982) by Yalṭakān, who had been sent to Ramla to discipline al-Muḥarrād b. Dafghol. Owing to a revolt on the part of the Maghribi troops at Cairo in 373 (983-984) Yalṭakān was recalled and Damascus was entrusted to Badākīn, who had quarrelled with his master the Fātimid Abū Mahīl.
AZIZI, a Turkish poet, who was born in Constantinople, and died there in 933 (1525). His proper name was Mustafa. He is the author of a kind of poem entitled Sâhîr-sâneh (ct. on this style of writing; Gibb, A History of Ottoman Poetry, ii. 253 et seq.) which J. von Hammer published in volume v. of the Mimes de l'Orient et Gibb translated, i. c. of. the 182 ff.

AZIZI, poetic name of 'Abd al-'Aziz Khaza (Câlebi-Zahe [q. v.]).

AZIL (a.), disposition, diinmillâ. In Algeria, estates which belonged to the head of the state or to the community used to be known as 'Azil. After the French occupation they became national property and the government disposed of them either by granting the use of them to individuals on payment of a certain duty called Ilhâk (Pni. ilhâk) or in certain cases by recognizing their proprietary rights in them.

Al-Azraqi Abu l-Walid Ahmad b. Muhammad b. 'Abd Allah b. Ahmad, the historians of the town of Mecca. The Nihâa al-Azraqi under which both are known, is taken from an ancestor of the family b. Mustafa b. Al-Azraqi (i. e. the blue eyed). He, at the auspicious time of Muhammed, belonged to the ruling house of the Jamah of Ghassân. Al-Azraqi the grandfather (died 219 = 834 or 222 = 837) was the first to collect traditions relating to the history of Mecca. They were first written down by the grandson, who was already dead in 244 (858). Al-Fasâ (q. v.) edited a new edition, and this recension, later augmented by his nephew Abu l-Hassan Muhammad, has been published by Wüstenfeld in the first volume of his Chroniken der Stad Mecca.

Bibliography: In Wüstenfeld, op. cit. also Brockelmann, Gesch. der arab. Liter., i. 137.

Al-Azraqi Zain al-Din Abu Bakr b. Isma'il al-Warâkî, Persian poet, who according to Elia died in 527 (1132-1133) or 524 (1130). Mirza Muhammad Karwini has however shown (Câhîr Muh.îb, p. 175 ff.), that the poet probably was dead before 405 (1017-1018). He composed a Divân which among other things contains a panegyric on Tughlânâsh b. Ali Arsaan the governor of Herat (not of Nihânâr, as is often stated) and on Ahrârânâsh b. Kâwûr. On the other hand it appears to be incorrect that he, as Hâdîdî Khâla, amongst others has stated, is also the author of the Siyâyât, Yâmai and of an obscene work entitled Afîyâa-see-Shafâ'î.

Al-Azrakîtes (Azarcî), a Khâlidîte sect, so-called after their leader Nasîr b. al-Azrakî [q. v.], who founded the doctrine that all followers of other doctrines were without exception infidels and that if they did not at once become converted they should be slain to death with their wives and innocent children. After Nasîr had met his death on the battlefield, 'Abîl-Abî b. al-Mahfîr became leader of this sect. He also was slain in the battle of 'Uthâbah (1360 = May 686). A similar fate befell his successor Nasirî al-Mahfîr, but the Azrakîtes asserted themselves under the leadership of the brave Kafrî b. al-Fuqâ but till 177 (696) in which year he also was killed and the Azrakîtes dispersed from history. Al-Shahrastânî accuses this sect of eight heresies. Most of these proceed from their holding all followers of other doctrines as infidels, though special mention may be made here, that they also condemned prudent concealment of one's own belief (Ta'âsya) and rejected institutions, which were not laid down in the Korân e. g. the stoning of an adulterer on the ground of an alleged revelation hitherto customary.

Bibliography: Al-Masârûb, Almâlî, p. 606 et seq.; Tabari (ed. de Goeje), ii. 441 et seq.; Al-Munawwar, Ammâyûn abân. 'Arabîn, p. 79 et seq.; Al-Abî, Al-Shahrastâni (ed. Cursivus), p. 89 et seq. (transl. by Haarmann, i. 133 et seq.); Brunnow, Die Châbildachten, p. 38 et seq.; Wallshausen, Die religiös-politischen Oppositions-partien im alten Iran, p. 26 et seq.; Al-Azza (âz, young gazelle): A Persian woman's name, two bearers of which are specially famous, 'Aziz Khâfilli and 'Azza al-Mullâ'; 'Aziz Khâfilli, whose real name was 'Azza bint Hamih b. Waqísh (âzîhî; Khâfilled: bint Hamih b. Hafs) and was a Redûnât of the tribe of Wahsh. She was called 'Aziz Khâfilli, the 'Azza of Khâfilli, because this poet dedicated all his Kusdâs to her (which for his part brought him the title of Khâfilli 'Azza). She must have been quite a child when Khâfilli fell in love with her. Later she married another, which did not hinder her, however from meeting the love of her youth on pilgrimage and elsewhere. Nothing further is known of the details of her life. The story that she fell in love with the beautiful Djamîl and thereby aroused Khâfilli's jealousy probably springs from a love of playing on etymologies and from a desire to connect Khâfilli's and 'Azza, with another equally famous pair of lovers Djamîl and Batbîm. According to Ibn Kotâbâ she died in Egypt at a time when Khâfilli was still consumed with love for her; on the other hand according to the Kiti b. Al-Abî-Asghar she came as an old woman to the Châls Abî al-Mullâ and related to him the story of Khâfilli's love for her in days of youth.

Aziz-Mullâ, i.e. 'Azza with the swinging gait', a famous singer. She was a pupil of the singer Shah Khâfilli and Nashî (both of Persian origin) as well as of woman singer Kâfîa. 'Azza, a client of the Amir 'Abî al-Mullâ and related to him the story of Khâfilli's love for her in days of youth.

Exploration: The black parts are ancient, the striped Byzantines.

C = Tower of Sultan's Gate. Stair of the year 1915.
B. 

BA‘, the second letter of the Arabic alphabet (apart from Kāf), as a numeral = 2. Graphically it is known as al-Ba‘ or min‘a‘. Phonetically it is identical with the name of the Arabic preposition bi (in, on, on; through, instrumental!). For further information see grammars and dictionaries. [Cf. besides the Art. ARABS: SCRIPT, DICTIONARY.]  

(A. SCHLADER.)

BA‘ (A‘), also BAW, BO‘, PHAR. AOWA‘, a linear measure = a tahm (Turkish takaş).

BAALBEK (Bæ‘læbek; called "Helipolis" by the Greeks) chief town of her district in the province of Damascus; seat of a kāli‘a, situated in the Syrian plateau of Birk‘, famous for the ruins of the Temple of Jupiter erected by the Emperor Antoninus (138–161) on a broad terrace, the courts and propylae of which Caracalla added, as well as for its Temple of Bacchus. The etymology of the name Baalbek has not been explained, according to the Greek designation; "Helipolis" it was the site of the cult of a sundial. The name "Birk‘ al-A‘sāh" points in the same direction. 'Asāh is a person of the sun-god who was worshipped in North and Central Syria. This plateau is called after him and not after a less important son of the famous Sālih al-Dīn. The Arab legend relates that the temple of Baalbek was a palace of Solomon which he gave to Bitlis the Queen of Sheba as a wedding gift. Baalbek was incorporated in the Muslim dominion by 'Omar I's general Abu 'Othman in 637 (161) peacefully by agreement, and remained a part of the province of Damascus in the possession of the Umayyads and 'Abbāsid Caliphs till the Fatimid Caliph al-Mu‘izz conquered Damascus in 942 (351) and placed a governor in Baalbek. The Fatimid rule lasted till 1075 (468) though it was twice interrupted; once by the conquest and destruction of the town by the Byzantine Emperor John Zimisces in 974 (363) and again on its occupation by Sālih ibn Mirdas, Prince of Aleppo in the year 1025 (416). In 1075 (468) the rule of the Seljuk prince T fabricated and his sons began. It was only held for a short time in 1083 (470) by Mamluk ibn Karimah, Prince of Aleppo. After Mamluk's departure the emir Gümüşlüegene became governor and remained in his position till 1128. The successor of the Seljuk prince of the time of Zizman was Toghtkïn, a former Atabeg of their [v.]. When Gümüşlüegene intrigued against him in 1110 (504) with his overlord, the great-sultan, Toghtkïn deposed him and entrusts his son Bitt with Baalbek. After the death of Toghtkïn in 1128 (532) his son Bitt succeeded him in Damascus and granted Baalbek in fief to his son Muhammad who held out against his brothers after the murder of Bitt in 1128 (532). At this time Baalbek seemed to have been strongly fortified for we hear for the first time of its successful defence (cf. below). Muhammad became Prince of Damascus in 1138 (633) after his brothers Isma‘il and Majmad had been assassinated in 1132 (526) and 1134 (530) respectively. His gifted visitor Osore received Baalbek in fief. As stepfather of the murdered Mahmud, Zangi, Prince of Aleppo, demanded revenge from the innocent Muhammad. As Zangi did not dare attempt the siege of Damascus, he advanced against Baalbek and in 1138 (531) the bravely defended citadel was surrendered to him on his promising a safe return, which he did not keep his word. His governor was Sālih al-Dīn's father Al-Yabgh [see AYTHAM].

Zangi strengthened the fortifications of Baalbek; Muhammad died in 1159 (534) and the above-mentioned Osore ruled on behalf of his young son Abak. After the assassination of Zangi in 1144 (541) Al-Yabgh had to give Baalbek back to Osore. The successor 'Aṣh held it in feoff after the murder of Abak, his nephew Dabahk, lord of Wadi al-Tal‘im (southwest of the Birk‘) obtained possession of Baalbek but had to make way in 1171 (552) for Nur al-Dīn who had also forced Abak to retire in 1154 (549). Nur al-Dīn caused the walls of Baalbek which were destroyed by the fearful earthquake of 1170 (565) to be rebuilt. Baalbek was taken from his successor Isma‘il in 1174 (570) after a siege of four months by Sālih al-Dīn. The latter granted in fief first to Muhammad, one of his generals, then to his brother Tārun-Shah in 1178 (574) and a year later to his nephew Farrūkh-Shah. When the latter died three years afterwards his son Bahram-Shah (v. v.) received it and ruled from 1182–1230 (578–627). He built two towers of the fortifications. In the year 1230 (627) Prince al-Aghlabi Mi'īr [see MIIR] obtained possession of Baalbek; after his death his brother al-Salih Isma‘il received it in 1237 (653) from whom it was taken after a year's warfare in 1146 (564) by al-Salih Al-Yabgh. Al-Yabgh's governor Sa'd al-Dīn al-Hamudī was recognised by his successor Tinān-Shah in 1249 (647). When the latter was murdered after only a year's reign, al-Najar 'Yansun Sultan of Aleppo conquered Damascus and called upon the governor of Baalbek to surrender it. He submitted to Tinān-Shah's young son and agreed to pay tribute. Al-Najar 'Yansun's rule ceased on the invasion of Syria by the Mongols in the year 1260 (658). Baalbek was captured by the Mongol general Kusultag and its fortifications destroyed. In the same year however Sālih Kūṭus of Egypt inflicted a crushing defeat on the Mongols. Thereupon Baalbek passed under Egyptian sway and was planned under the rule of the governor of Damascus. Thus it
remained till 1516 (922) when the Ottoman Sultan Selim conquered Syria and incorporated it in his kingdom. Since then Baalbek subservient to the Porte has been in the hands of petty dynasts chiefly of the Harfush family. In the continual struggles between the Syrian families, the prosperity and population of Baalbek has suffered. It suffered considerable damage from the earthquake of 1459. About 1831 the town was conquered for the Porte by a besieging Egyptian force under Ibrahim Pasha. On his departure it again passed into the hands of the Harfush family. It was not till 1850 that the Porte placed a regular administration there, when Baalbek became the seat of a Kā‘im-maḥāmī under the governorship of Damascus. Since then its prosperity has been continuous: at the present day its inhabitants number 5000, of whom about 2000 are Sunni Musulmans, 2000 ʿAlī Murūj, and 200 Christians. Excavations have been carried out by the Germans under the direction of Puchstein and Schultze and Baalbek is becoming more and more the goal of all tourists in the East.

The fortress of Baalbek (extracted from the second Annual Report of the excavations of Puchstein, Berlin, 1903, p. 41 ff.). The Arabs turned the temple into a citadel. The general form of the temple was retained by the Arab architects, but the courts and the two temples the outer walls of which afforded sufficient security. The small temple appears to have been a separate building by itself inside the fortress, a sort of Donjon. Its turrets with the walled quadrangle on the north side are still recognizable and the great fortified tower on its south-east corner was built especially for its protection. Granting expenditures was necessary to fill up the gap on the south-west corner of the fortress, between the two temples and here, where the entrance and exit to the “Bib” were situated, the Arab architects had to compete with the Romans and show their own skill. In contra-distinction to the solidity of the ancient walls manifold reconstructions have been necessary for its protection. Granting requirements. The various periods of building are defined on the plan. The most recently fortified ground and the lowest of the whole town, a sort of lower town or suburb.

In the first period of building, a wall was built in the south-west in the direction of the south front of the small and another in the direction of the west front of the large temple. The gate was placed in the middle of the west side, flanked by two towers of great height. A second period of construction may be placed in the time of Muhammad b. Biri, who defeated Baalbek successfully or in that of Zangi who, as inscriptions discovered and literary records show, occupied himself with the fortification of Baalbek. This period is marked by the filling up of the doorway on the south side where a road led to the interior of the outer fort through a long covered corridor and from here through another, likewise covered path, gradually rising to the level of the eastern part of the citadel. In place of the old gateway and its two small towers a new large tower was built and to the left and behind it, new curtains were drawn not far from the old ones. This tower seems also to have stood in the southwest corner. Sulaiman Baalbek erected a new one here in 1213 (610) and the tower in the northwest corner of the citadel in 1224.

The strengthening of the front of the west tower may also be ascribed to him. Finally in a fourth period Sulaiman and his successors built more important and very strong new buildings after the destruction of Baalbek by the Mongols at the end of the thirteenth century. The two west curtains were taken down and moved to the front of the west tower which was also built in a new style by the use of great blocks of stone. The strong tower in the southeast corner of the small temple likewise belongs to this period. The old simple, south gate was, as required by changed conditions strengthened as if by a barbacan, so that the road behind the bridge over the ditch and behind the outer gate had four turns before it led through the inner gate, where still another smaller court which could be swept from above, awaited the enemy. This barbacan according to the foundation inscription on the fallen prop of the outer gate is to be dated about 1240 (660). After the end of the thirteenth century no alterations were made in the fortification of the citadel, only improvements such as those in the most in 1394 (796) when Sulaiman Barqūk [q. v.] prepared to resist Timur as is proved by inscriptions.

Further work of the Baalbek Expedition, with the histories and Arabic inscriptions of Baalbek, by M. Soprenheim will be published shortly. The Arab sources given there.

(M. Soprenheim.)

Bāb (n.). Door, gate. Unlike the open tent of the Bedouin the ancient Arab house formed a sort of strong fortress which could only be entered by a door, Bāb. As is still often the case the door varied with the style of house and was small and concealed, heavy and barred, or high and open. The Bāb always concealed the view into the interior of a dwelling, nothing of the richness and beauty of which could be gathered from the exterior. The Bāb thus became a symbol of approach and beginning of the means of doing anything, of aim, of perception and finally as a symbol of any goal. The symbolic introduction of the word is frequent and manifold in Arabic and its sphere of influence and has not been without influence in the West. The court of the Sultan appears as the “Sublime Porte” or the “Gate of Fortune”; the Milky Way is the “Gate of Heaven”; the “Two Doors” are metaphorically this life and the next, the contents of a book are contained in various rolls (chapters), the speaks of the gates i.e. means of livelihood, of war, of rebellion, of the gates of the right path, of wickedness, of dominion, of death, etc. The gate of the mighty appears especially frequently as the rendezvous of suppliants and the professional beggar lives “at the gate of Allah” (ṣala bāb allāh, cf. Italian: alla balia). Cf. Lane, Arab.-Eng. Lexicon, 1, p. 572; Daud Supplement aus Dictionaire Arabe, II, 124, 125 (J. Heill).

Bāb, an Arabic word signifying “gate”, early
received among the Shi'a the meaning of "gate by which one enters, means of communication with that which is within." Among the Ismailis, this word is used symbolically for the Shaikh or spiritual leader, who initiates into the secrets of his religion, the Acta (Guyard, Fragmenta, p. 106); among the Noquiris, Salimán al-Fārisī, entrusted with the propaganda is the Bāb (R. Dussaud, Noquīrā, p. 62 n. 4). The term was call by this name the first spiritual minister, who embodies universal wisdom (Mawṣula 'ašr "Monseigneur l'Exploré"; cf. Sallān, Mouvement, II, 59). The name has been made famous by the Nādīr of Shāhāb, who called himself Bāb, when he declared himself to be the gate to knowledge of divine truth. (J. Īṣābāh H 1260 = 11. Juni 1844). Born on the 1st Muharram 1336 (26. March 1821), the son of a merchant, he became an orphan and was placed under the guardianship of his maternal uncle; he continued his father's business but at the same time occupied himself with religious questions. He practised asceticism and exposed himself for hours to the rays of the sun so that his mind became affected. He then made the pilgrimage to Kerbela and there received instruction from the Shaikh Bāb. Returning to Shirāz he proclaimed himself a reformer and delivered a series of sermons in the Mosque of the Smiths, interpreted with enthusiasm the doctrines of the official clergy. A Shaikh, Husain of Būghīrye who was seeking a successor to the Sayyid Kāzim of Rehā, who had just died, chose 'Ali Muhammad and became his first disciple. The latter thereupon set out for Mecca via Būghīr and Mustafā and took advantage of the pilgrimage to write various tracts which were considered divine revelations. On his return he had a confession of faith loudly proclaimed in which he added to the Shī'ite formula the declaration that "Ali before Nebi (i.e. 'Ali Muhammad, the prophet being summoned Nebi by the Bāb) is the mirror of the breath of God". A rising followed and the governor and had the missionaries of the Bāb imprisoned. Sayyid Vahyā of Dūrāt, who was sent to investigate the doctrine, became a convert to it. Meanwhile closed the doors of the bāgh for all who could quit Shirāz. At Isfahān 'Ali Muhammad employed the protection of Manūchehr-Khān Mūhammad al-Dawla, governor of the city, but on his death, his successor received orders to place the Bāb in the fortress of Mākid in Aghtashāhūn where he was detained.

Meanwhile Husain of Būghīrye continued his preaching and converted two brothers in Teherān, Mīrāt Nūrī (later called Šahbāz) and Mirāz Husain 'Ali Nūrī (who became Bahā' Allāh). At Kazvin, a young woman, Zarrīn Tādī, named Kurrāt-al-A'īn, daughter of Molīt Sālih Barakāt, of rare beauty and superior intelligence declared herself a follower of the new religion in consequence of a correspondence with the Bāb. Being, as forced to quit the town after the murder of her uncle Muhammad Tādī, a ministerial Muḥājarī, in which she was acquainted with the secrets of the faith, she fled by night and sought refuge in Bedašā in Khorāsān where the first assembly of the disciples of the reformer took place.

After a long stay in Mākid, 'Ali Muhammad in consequence of the troubles which had broken out in Shaikh Šūrūr and in Zanjan (see 1870) was transferred to Čerik and from there taken to Tābrīz. His execution, being determined upon, was entrusted to the Christian regiment of Bahshārūn who shot him with his disciple Muhammad 'All of Yeot. At the first volley the bullets only severed the cords which bound him so that it was necessary to fire again (27 Shāhīdūn 1260 = 8 July 1850). After the execution, his body was thrown into the town ditch but was taken up by his devoted disciples, and carried to Teherān, where it lay buried for 29 years when it was taken out of its place of concealment by order of Bahā' Allāh and according to an oral tradition, carried to St. Jean d'Acre for burial.

His Doctrine. Under an apparent reform of Islam, the Bāb has founded a new religion with its own beliefs, dogmas and its own conceptions of a new state of society. God is one and 'Ali Muhammad is the mirror in which He is reflected and in which every one can regard Him. You ought to make mirrors of yourselves and your deeds so that you shall only see in those mirrors the sun which is the "love". Cabbalistic counting plays an important role; the number 29 is sacred. It is found in the numerical value of the letters composing the word Bahā'

be built (p. 149, 146), the place where he was imprisoned and the dwellings of his principal disciples became the mores a rule inviolable except there for purposes of trade; sea-voyages are forbidden except to pilgrims and merchants. Prayer is no longer to be offered in common except at funerals (p. 200), although preaching in mosques is recommended. There is no longer to be any legal impunity; new converts are purified by the act of conversion itself (p. 149), and all that they possess becomes pure immediately; water is purified by washing it if it purifies. 19 verses of the Bayán ought to be read every day and the name of God mentioned 367 times. The dead ought to be buried in crystal (whence arises the story that the body of the Báb was buried in a crystal coffin) or rather in heen and polished stone and wear a ring on the right hand with a verse inscribed on the setting "so that the dead may have no fear in the tomb" (p. 152, 153). No one should harm any one not cause his neighbour pain (p. 168). One should answer a question or a letter and carry letters faithfully to their destination (p. 169) and not fear them up. Electurites, fermented and intoxicating drinks are forbidden (p. 200). Once in every nineteen days one should invite nineteen persons, be it only to drink water. Begging is forbidden. All is to be given to a beggar.

The division of an estate after defraying funeral expenses is as follows (p. 170): the children ¼, the husband ¼, the father ¼, the mother ¼, the brother ¼, the sister ¼, the teacher ¼; the right of inheritance does not extend further; representation however is allowed (p. 190). "All Muḥammād is the author of all works, all in manuscript; the two Bayān (Arabic and Persian), Kitāb Bahāl al-Muṣarāt and of a commentary on the Sūrat Yāsīn.

**Bāb al-Abwāb**, the "Iron Gate" at Derbend, [see the latter.]

**Bāb al-Mandāb**, the street, 17 miles broad, between the Red Sea and the Gulf of Aden. According to Yāḥyā, Muḥammad, iv, 650 ff. Mandāb means the place of calling, or of lament for the dead, is the name of a mountain on the Arabian coast. According to the legend mentioned by him, this mountain was originally joined to the outlying mountains opposite the African coast till a certain king caused it to be cut through. Mandāb or Mandum is also, however, the name of a harbour, the Omān Ṣabāb of Proclus, which at the present day must be looked for in Shaikh Ṣabāb or in a neighbouring place. In the strait lies the desert volcanic island of Perim (Ma'īyn). The English have held, temporarily in 1799—1803, and permanently since 1857.

**Bibliography:** besides Yāḥyā al-Muhammadī, ed. Miller, 53, 98, 127; Ritter, Erdkunde, ii, 685 et seq.; Spränger, Die all Übersicht Archäologie, xxxii, 1891. **Bābā, (Turkish) "father" is also used as a designation of any old man of the people, in East Turkish it also denotes "grandfather" (Vahé D. C. Gepp, Sprachwissenschaft, p. 240; Saleh-‘Abd al-Qayyīm, Le Ṣabāb al-Dhahab, p. 66). This surname is best known from the story in the 1001 Nights of "Alā’ al-Dīn and the Forty Thieves" (French Translation by Galland), of which the Arabic original has only been discovered (Dunstan R. Macdonald, in Journal of the Royal Asiatic Society, April 1910). Some holy men have borne the name, like Ḥabīb Bābā and Ḥabīb Bābā who accompanied Sultan Ṣūlamī at the siege of Brusa; a Ḥabīb of the Crimean, Ḥabīb Gūrāy, son of Muḥammad Gūrāy who succeeded his father as Ḥabīb on his death and was assassinated six months later (929 = 1922). Before the introduction of reforms the forty Doorkeepers (Qūṣṭūb) of the imperial Harem were called Bābā; their chief bore the title of Ṣabāb al-Bābā (Barber de Meynard, Supplement, i, 257). The name of Abū Bābā was borne by the heads of the corporations of craftsmen; who gave the apprentices the appellation apres and the title of craftsman.

**Bābā Dagh**, a mountain in Asia Minor (province of Anadolu, Sandjak of Derbent, in the South of the last named town). Bābā Dagh is also the name, among others, of a mountain and town in Roumania.

**Rāhā bānīn" Cape Bābā" (the ancient Assos) a promontory on the West of Asia Minor between Smyrna and Constantinople, 23°44' long. E., 39°28' lat. N., forms the western extremity of Mount Ida. On its flanks sat the race of the city and fortress of Bābā which belonged to the Sandjak of Bābā and the Beys of Iwâdlîk with a little fortified harbour called Bābā Limnâ, 4—5000 inhabitants. It was formerly famous for the manufacture of yatching.

**Rāhā al-‘ārāk**, official name of the market usually called Eski Bābā or Behs Eski, chief town of a Bezirg of the province of Adrítopol, Sandjak of Kyūl-kilâ, comprising 320 houses and 31 villages; it has a station on the Bayarhane line.

**Bibliography:** Barber de Meynard, Supplement aux dictionnaires turcs, v: Ali Qawâd, Dictionnaire arabe, p. 143; Siyâsah (1325), p. 906, 985; Textier, Asie Mineure, x, 20. [Cl. Huart.]

**Bābā Beg**, an Usbeg chief of the family of the Khans, was till 1870 prince of Shahrisabz and had taken part, in the summer of 1868, in the siege of the citadel of Samarkand which was then held by the Russians. In the summer of 1870 Shahrisabz was conquered by the Russians under General Abramow. Bābā Beg had to flee with a small body of those faithful to him, first to the upper valley of the Zarafshan then to Farghāna where he was invited by order of Khān Khudâbâd and beheaded over to the Russians. An annual pension of 3000 Rubles was promised him in Tashkent. After 1875 he entered the Russian service, took part in the same year in the expedition against Khokand, and the following year on the end of the campaign received the rank of Major. He afterwards lived in Tashkent till his death which took place shortly before 1900.

BABA FIGHANI. [See FIGHANI.]

BABAGHA (A.) "Parrot," a name of the Arab poet Abu 'l-Faraj. Abu al-Walid b. Naṣḥ of Nishābūr, who lived at the court of the prince Šafīʿ al-Dawla and after his death in Māsūl and Bābdalhādī and died in 398 (1007).

Standing next to his famous contemporary Mutaṣsim in poetic endowments, Babagha enjoyed the reputation of being one of the best intellects and poets of his time. He tried his skill in all kinds of poetry with the greatest success in panegyric of princes, with less in the domain of love poetry.

Biography: Ph. Wolff, Carviiiones Arabo-faragi Babaghas specimen (Līsān, 1834); E. G. Schulte, Versaicas literarum a cod. ms. Paris, collecta (Regiomont, 1838); Th. Stibbe, Vatikan al-Dahch, i. 173—205; Abulhā西 Al-Azā di, Al-Maṣr, xvi. p. 618; Der persische Gedichte des Dichters, edited by G. Flügel (Wien, 1849, Verses); C. Brockhahn, Geschichte der orient. Literatur, III. p. 90. (J. HELL.)

BÄBER, Chief of the Khurshid sect; the name is the arabisized form of the Indian Pāpak. He is, it is said, the son of an itinerant silversmith, and was engaged in a very humble occupation when Djiwāndēh, chief of the Khurshid sect, noticed his gifts. On the death of the former he claimed that his spirit had entered him and began to stir up the population of the district of Bābdalhādī in Ardān (301 = 816—817). In 1204 (819—820) in the city of Mādī, Bābdalhādī attacked him without success. Afterwards in the reign of the caliph Muḥammad, the advance-guard of the expedition commanded by Bohgah the Elder having been defeated at Hechēdār in the mountains of Māhrāgū, Bābdalhādī prepared to put down the revolte (221 = 850) of the leaders of which, Türkūn, was successful in surprising. After having received money and general of Bābdalhādī's reinforcements Bābdalhādī attacked another leader, Adīn. His troops were only saved from disaster by his presence in placing mountain-titlers (nāqūtāy) furnished with supplies on the flanks of the hills. The general of the army was killed by an artillery on the bridges of the plains. The camp was burned and plundered on Friday, 18 Ramaḍān (26 April 837) by an unexpected attack by the Bābdalhādī against both the Jezera and an assault by the troops of Fārāsh. Bābdalhādī having had the town demolished by the corps of engineers (bozqāy) took to flight and fell into the hands of Adīn. Suhayrī, the Armenian Patriarch, who had him arrested while hunting, was handed over to Bābdalhādī and sent to Sūrāh (Wednesday 2 Safar 223 = 3rd January 838). Adīn, disregarding the pardon promised him in writing, caused him to be paraded as an elephant and executed with refinements of cruelty; his body was left hanging and gave its name to a quarter of the town. His reign lasted twenty years. In the romance of which the Frisjīrāt (p. 343—344) gives an extract his enthusiasm at Bābdalhādī is carried out with special ceremonies: the skin of a calf newly slain was spread on the ground, bread was broken and slipped in wine and a garland of lilies given him as a marriage ceremony.

BÄBER, ZAFAR AL-DIN MUHAMMAD, grandson of the Great Mogul dynasty in India, eldest son of Qasim Shāh, the son of Tīmūr. Through his maternal uncle, his name was derived from Gauḍā, the second son of Chingis Kūn. When barely twelve years of age he succeeded his father in Farghana (5 Ramaḍān 899 = 10 June 1494). He took Samarkand (903 = 1497) but could not hold it for more than a hundred days; he then took up a firm position at Kūshārā from which he was able to recover Margānān Aujālān (Dhū L-Qādas 904 = June 1498). After the occupation of Samarkand by the Uzbēk Shahīd in 906 (= 1500) he lost all his possessions but recaptured the town by surprise, lost a great battle at Shāhīd in 910 (= 1504) and finally the city and the country to Jānschīrī in 915 (= 1507). In 917 = 1511 Bāber, thanks to the support of Shāh Jalālī Safawī, whose vassal he had declared himself, defeated the Uzbēks who were weakened by the death of Kūshārā and occupied Bābdalhādī and Samarkand; in the following year he crossed the Indus on the departure of his Persīan auxiliaries he was again attacked by the Uzbēks, defeated at Bābdalhādī, and again at Ghōdghāleh and compelled to retire to Kābul in 920 (1514). It was then that giving up all attempts towards the north, he began to realise his project, long ripened, of establishing himself in India, after occupying Kandahār in 928 (1522). Bāberī Lāyā, Sultan of Delhi, had quarrelled with the Uzbēk chief, profiting by his situation, Bāber took Lahore in 930 (1524) and made himself master of the kingdom of Burānī by his victory at Panjāb, on Friday 8th Rajab 932 (= 20 April 1526) in which his adversary was slain. He established his capital at Agra. He had again to fight against the Kapūrī chief Nāmasāngī, prince of Chitor, the Afghān of Jaunpur and the King of Bengal. He died near Agra on the 6th Ḥijrah 937 (26 Dec. 1530) and left the throne to his eldest son Humayūn.

Bāber was a leader of unparalleled bravery and audacity. On the second occasion on which he took Samarkand by escalade he had only 400 men with him. His passage of the Hindu Kush in the middle of winter is a remarkable exploit. The description of India which he gives show a keen interest in natural history. He was a poet and wrote a Dwānī Turki and a collection of Mughānīs called Mubārī (Mubārī, Chistmātī Turq; Synger, Zeitschr. d. Deutsch. Morgenl. Gesellschaft, xxvi. 1862, p. 87). He has also left an account of his adventures in his Memoirs (Bāberī, 1526), the text of which is in Turki or Cagānī.
BABIL, BAHAI.

From certain differences in style this latter work might have been written down from the author's dictation by three successive scribes. The text has been published by Iluminski (Kastus, 1857) from a copy made by Kehr in 1737. A manuscript which belonged to Sir Sultan Djang of Haidarkabad has been reproduced in facsimile by Mrs. Annette S. Beveridge (Gibb Memorial Vol. I. 1905. with two indices). It was translated into Persian by "Abd al-Mu'min 'Aziz Khan 'All, son of Bahrin Khan (1790) and this version was translated into English by J. Leyden and W. Erskine in 1826. The French translation by Patet de Courteille (Paris 1894) is based on the edition of Iluminski. These Memoirs show a certain number of lacunae either due to the desire of the author to be silent on certain deeds little to his credit or to the accidents of his adventurous career.

(See BAHAI ALLAH.) More recently Mollâ Kazim was executed at Ispahan on the charge of belonging to this sect as was Mirzâ Ashraf of Khudâbâd (October 1888). Persecutions took place at Se-Ish and at Nadjfâbâd. A certain number of Babis took refuge at Aghâbâd in Russian territory where they were allowed to build a mosque. The schism between "Abâ'!-Aziz and Babâ Allah divided the Babis into two parties, the Babâis, the former, who represent the pure doctrine of the master, are now but few in number; the latter who look up to the Bab merely as the forerunner of Babi Allah are spread throughout the world and besides Persians have made some converts among Europeans and Americans.

BABIL; the ancient Babylon, situated on the Euphrates in 32° 41' 30" North and 44° 39' 30" East of Greenwich.

The ancient Babylon had even in early times a much greater importance for Islam, as for us, than the town which still existed in the earlier Islamic period. All that the Muslims know about Babil, comes from three sources, Jewish Persian or Christian. It is not quite clear whether the information, which surrounded the protestations of the Shi'a population about persecutions which the Babis resisted, in consequence the sect, at first of a purely religious character, became a political party. After a counsel held at Bedegh, Mollah Husain of Hughiye, set out for Bafarun. at the head of a little troop, which could no longer defend themselves in the town. He remitted himself in the sanctuary of Shâhikh Tabari, which he turned into a fortress, being besieged by the Royal troops he made several successful sorties but fell in the final encounter. Under pressure of famine the Babis signed a capitulation in spite of which they were all massacred in 1265 (July—August 1849). In Zendjan, the chief town of the province of Khâmskheh, the Babis barricaded the town and seized the edicts of "Ali Mardûn Khan; but after various vicissitudes were dislodged from their position and overpowered (May 1849—February 1850), Saiyid Vahieh Dârâbî, whom the inhabitants of Nalas, discontented with the agents of the central authority, called upon to lead them, shot himself up in the ancient fortress there and held out for several days (January 1850). Mollah Shâh had been wounded by an attempt directed against him by the Babis (28 Shawwal 1269 = 16 August 1852). This was the signal for a general persecution of the Babis which extended throughout the Empire. Mirza Vahieh Nûr, summoned "Abâ'!-Aziz who had declared himself the successor of the Babi, left Persia and retired to Bâdshâh from which town he was brought to Qum by the Turkish government and detained in Fatâmeh, two months after his arrival. Babâ Allah, "Ali summoned Babi 'Allah, arrested, then acquitted after an enquiry, obtained permission to go on pilgrimage to Kerbela and stopped in Bâdshâh.
The Iranian legend had associated all its heroes with Babil even before Islam. After the introduction of Islam, naive comparisons were made between the Biblical and Persian stories. Djalonymart, the first man, extended his kingdom from Dumbawand to Babil (Tabar, I. 247). Oghang, the third king of Kamsu, appears as a man of the same era (Isfahab, p. 27). Thus, the name of Babil was very ancient. The name of Shubat (Tabar, I. 171), also Tamtrath (Ibn al-Fukhri, p. 319; Tabar, I. 175) following Hisham al-Kalbi; Hunan, p. 29, 30; Djamshidi used to travel in our day from Dumbawand to Babil like Solomon from Jerusalem to Persepolis—Takht-i Djamshidh (Tabar, I. 186). Al-Djahballa, Djamshidh’s opponent ruled in Babil. This is the account of the Avesta (Isfahab, p. 360, Yarkh, I. 448 following Yaqut). Yaqut gives the name of the city as Debal. Of the Kayansia, Kai Kamsu, Lahrahp and Vakhtarp are mentioned as rulers of Babil (Tabar, I. 566, 565—574). Kai Kamsu was according to the Sijar al-awalib in Hunan, p. 35, the builder of the Tower of Babel. The hero Rustam appeared in Babil.

The Arabs also know of Alexander in Babil. This sounds historical but it all comes from the Alexander legend and without exception from the Syrian version. Tabar I. 813, quotes the Christians as his source. That al-Iskandar slew Dara b. Dara and lived in Babil might have also come from the Syriac sources, for example from the Palavi original of the Persian romance of Alexander, as in Hunan, p. 25, Isfahab, p. 145. Notices of the Descendants of Araxes in Babil and certainly those of St. Thomas as the apostle of the land of Babil come from the Syrians e.g. Tabar I. 702 ff., 738. Cases where on the other hand Babil is called a possession of the Sassanians (Tabar, I. 813; Isfahab, p. 145; Masudi, Tabar, p. 145; 150; Monro’s Chaps. VII) may be traced in the Khudairihwah. The only original historical observation is in Isfahab, p. 145, where it is supposed that the Arabs invaded Babil only after the Sassanians. Later the Arabs had had their residences, because of its situation with respect to the Roman Empire, and in the centre of the Muslim world.

Among the Arabs Babil is preeminently used as the name of the country. The form Babil, i.e. Babil, is occasionally used as Persia and Nashtaran (Masudi, Tabar, p. 35) or Babil, Babilan (Yarkh, ii. 630). As the Chaldean name Masudi, loc. cit., gives Khurdi which also appears in Bakti o.w. and according to al-Hamdani in the form Khurdiath. The Persians appear to have already used Babil as the name of the fourth of the seven climates equivalent to Iranshahr. According to Ibn Khurdadhbih Babil is the heart of Iranshahr and of the world (so also Tabar, I. 248; Isfahab, p. 3, 10). The climate of Babil is the middle one, therefore the most fortunate (Ibn al-Fukhri, p. 5; Ibn Rustah, p. 155; Masudi, Tabar, p. 6). Masudi, Tabar, p. 32 describes its boundaries; its western limit is at Thalabyta, the first station on the road to Mecca from Karb, the eastern, the river of Bakti, the northern between Naftum and Sindj, the southern at Damut on the coast of al-Mansura in Sind. The climate of Babil and the land of Babil are occasionally used synonymously (Ibn Hawkal, p. 167). The land of Babil, however, is used chiefly for Iraq. Yaqut I. 447 describes the land of Babil as still more limited, lying between the Euphrates and the Tigris, on the Tigris to below Karkar (Wasit) on the Euphrates to behind Kufa, equivalent to the Sawk. In another passage he calls Anbar on the Euphrates the northern boundary of the land of Babil.

Besides being the name of the climate and of the country Babil is also the name of one of the seven Tarouti of ancient Babylonia, the administrative division of Iraq taken over from the Arums (Ibn Khurdadhbih, p. 3—10; Khudairi, p. 126; Yarkh, i. 770). This district is watered by the Nahr Sura, the branch of the Euphrates which flows through the town of Babil (Ibn Serapion, VI, and after him Abu ‘l-Fida). Till the time of Ibn Serapion about 900 Babil was still the chief town of this district. It was in this town that the “Day of the Great Assembly” took place: when Muthannas slew the elephant in the year 123 = 634 (Tabar, i. 2115, 2117, 2122).

The place called Aky Babil at which in the year 102 = 726 Vastil Ibn Mahbub fell after the revolt in Baqra, is different and is situated near Karbalah on the road from Kufa. Later writers such as Isshakhri and Ibn Hawkal know Babil only as a small village. It lies off the highway from Baghdad to Kufa that crosses the Euphrates at the bridge of Babil (Mukaddas, p. 121). Yaqut gives a whole series of towns as “in the land of Babil” of which may be mentioned al-Amiriyah, Dura, Harmalaya, al-Djam’sin = Hilla, Bashma, al-Ghinnaria and the two Kufi; only in the case of al-Surdi where a palace of Buhkanisar is mentioned, and the district of Shinar (the ancient Sinnar) which he quotes from Nasy al-Iskandari (died 560) does he give their situation with respect to Babil as an existing town, while discussing Khartafnya and Zay’ib he speaks of the administrative district (Nahiyah) of Babil which he calls a Tarout. This division did not have an independent existence for much longer. Since the days of the first Abbasids after the foundation of Baghdad as a new division of Babylonia was reckoned and Babil was reckoned with the places belonging to the Kutra of Baghdad.

When Yaqut and Karwati tell strange stories of the seven cities of which the ancient Babyl consisted, with their seven rollers these are obviously local traditions connected with the ruins. All sorts of Biblical and Koranic matter is found interwoven in local legends of this sort. The traveller is shown, as was Humal at hose of Humalat, Daniel’s Den of Lions or the well in which the angels Harut and Marut are imprisoned till the Day of Judgment (Kur’an ii, 96). Ali also prayed in Babil and cursed it (Mukaddas, p. 11). Of the ruins the northern palace of Néchhadaresar still bears the name of Babil and in this mound numerous specimens of mediainay Malum was also the site of the early Arals town and hence the continuation of the ancient name through the ages. On this spot the other mounds are called at the present-day al-Kaṣr which is the palace mound of Babylon, and you would have seldom seen the tower of a mound of the ancient town and Ummata where a Hellenistic
theatre has come to light. For ages the ruins have been used, as is mentioned in early as Kaunitz, as building material, Babyl especially, which for this reason is called by the natives Miṣikib (Miṣikib) or also al-Maṣibû (according to Beuscher) the "Overturned." Although the situation of the ancient Babylon has always been known to Orientals, it had to be rediscovered for western knowledge at the end of the eighteenth century. In "Babylonia Nearer and Farther," the Arab historians and geographers quoted: O. le Strange, Land of the Eastern Caliphat p. 45; by the same author, "The Scorpion," Journal of the Royal Asiatic Soc., 1895; M. Strecker, Babylonien nach den arab. Geographen, passim; on the scientific re-discovery of Babylon: H. V. Hilprecht, "Exploration in Bible Lands during the XIX Century" (Edinburgh, 1903); the excavations not treated of here, of the German Orient-Gesellschaft, in the Mitteilungen der D. O. G. since 1899.

**ERNST HERZfeld.**

**BABYLON (Babylûn), a town in Egypt.** The name Babylon of the mediceal Egyptian town in the neighborhood of the modern Cairo is according to Cassanova the Graecoised form of an ancient Egyptian R-P-Phut-In-On through assimilation to the Asiatic Babylon which was familiar to the Greeks. This etymology is not quite free from objections but there is no doubt that some ancient Egyptian place-name underlies it. By the name is meant the ancient town and fortification of the Greeks which - situated on the borders of Upper and Lower Egypt - commanded the interior. Even to the present day portions of the ancient fortifications have survived in the Kasr al-Shama. The situation and importance of this point was much more important in ancient times than the Nile then flowed further to the East. Here the decisive battles on the conquest of Egypt by "Ausr" took place. With the fall of Babylon (31 B.C.) 20 Aug. 9 April 641) the fate of Egypt was settled. The camp of the Arab Army which developed in later times into Fostāṣ was then pitched near this place, important from the military point of view, and the ancient fortifications were made use of. As far as we know from papyri, Babylon and Fostāṣ were still distinguished at the end of the first century. In Fostāṣ lived the Mahadjirah, here their Echiṣ were marked out. In Babylon were the great corvée-rent-sheep and the rest of the administration. The arsenal on the island of Kody which is also mentioned in papyri, was closely connected with the fortresses. The original distinction between Fostāṣ and Babylon was naturally soon lost, the name Babylon fell out of use among the Arabs and only survived among the Copts, its application by them being extended, for the Copts occasionally use Babylon to describe the whole of the great series of towns from Kasr al-Shama through Fostāṣ and Cairo to Māṭirāyeh-Helēnopolis. This usage then spread to western writers. This is why Babylonia with varying orthography appears as a name for Cairo in the numerous commercial treaties between Egypt and the western states, which have been published by Amari. The name may also be found in the contemporary literature of Europe as well as in charters for example in Mamillevis and Boessscott who following historical documents calls Saladin "Solothum ili Babylon."
accepted, as a convenient explanation of the failure of the hopes and prophecies of victory for the defeated Imam. It had been God's determination that the deliverance (ferādā) and victory of the law-abiding Imam should take place at a certain moment. He had, however, meanwhile, altered his determination on grounds of expediency, as had the Shia theologians. He explained the alteration which took place in the legitimate succession of the Imams which had been appointed by God from all time, when in place of the destined Imam, his brother Musa al-Kāsin succeeded Ijārār al-Sadākh as the seventh bearer of this theocratic dignity. They ascribe to Ijārār the saying: "God has never so led by a new consideration (to alter the determination) as in the case of my son Imam (he who had al-tābi: kāsin sadārā fi 'Imāmat al-lau'ī)." To many Shia theologians this closure application of the principle of Bada' might have appeared discreditable; so the speech of Ijārār has been made tolerable by the alteration of the word "la'ī" to "al-". God's change of mind is by this ruling inferred not to be a mere second thought, but to the necessity of the Imam Imam's the position of his brother. Imam al-Dāni, whom God originally ordered Abraham to sacrifice but later freed from this obligation.

The most important arguments adduced by the Shi'ites in support of the doctrine of Bada' are, firstly, the passages in the Koran: 13: 35: 14: 34 (at the end of these are the strongest proofs); 55: 14: the assurance frequently repeated that God in consequence of the repentance of sinners will change his determination to punish them, 7: 62; particular narratives in the Koran in support of this are especially the sparing of the people of Jūnas devoted to destruction, 10: 43: the resounding of the command to Abraham to offer up his son, 37: 101: (the lengthening of the period allowed. Moses for his intercourse with God from 30 to 40 nights, 37: 101b. Traditions according to which by the exercise of certain virtues (bountiful one's parents), the length of time allotted may be lengthened, by doing good an appointed destiny (al-Bada' al-mubāras) may be altered; the prayer of Omar that "God might strike his name out of the Book of the Damned and write it in that of the Blessed." (Kutub, Kāhi nāmāw Methfuss al-Andārah, Cairo 1326, p. 71); s. a series of pious legends from which it is evident that misfortunes predetermined to individuals may be averted; by acts pleasing to God: 6: the doctrine of the abrogation of laws (našī'ah) which is also a tenet of the Sunni doctrine.

As Shia dogmatists in general are influenced by Mu'tazīite speculations so also in the case of Bada' the Mu'tazīite foundation is closely connected with the principle of našī'ah that God is determined in his operations with regard to man by the motives of expediency and the general good (law) with which he comprehends Bada' under the point of view that (divine) determinations on things may alter with changes in the means of well-being (tahāwī al-našī'at tabahbadh al-tahāwī l-šamāsīlī). The moderate Shia dogmatists had to exercise much ingenuity to reconcile the theological antinomies which this conception implies, in order to reconcile the appearance of new determining moments in God's knowledge as implied in the word Bada' with the belief in the absolute omniscience of God, in the eternity of His knowledge identical with His being as is specially required by the Mu'tazīite doctrine in general; to meet the objection of the orthodox dogmatists to the assumption of the possibility of God's ignorance of the end of things (našī'ah al-šash) which implies the admission of Bada' (cf. Dārānī, to Ight, Mumtāzī, ed. Sohreun, Leipzig 1842, 546, 26). The effort to meet these objections from this point of view had led them in some of all parts of the Muslim and Sunnite deniers of Bada' to prepare formulae by which these objections might be confuted and to accredit their Sunnite opponents that they are contradicting them with a false definition of Bada' invented by the Sunnis. Their next contention is that the term Bada' is not to be understood in its literal dictionary meaning but metaphorically (našī'ah). They reject the view that Bada', according to its literal meaning implies an alteration in the divine knowledge. In fine the distinction of the Imamiite dogmatists with respect to the Sunnite in general who in a profitless war of words for they also explain the offer of a Bada' intervening in the future as included in the eternal foresight of God which includes all particulars (God's knowledge of al-šahād). A very remarkable way of reconciling Bada' with the idea of the final decrees required by the Koran is the assumption of two tables of fate, the last and the last (according to Sūra 13: 30) which contains the decrees which may be altered in consequence of the intervention of the new causes (Dūkāl 'All, p. 114 below), a view which has been penetrate into Sunnite circles and has given rise to numerous mystical speculations (Shahādats al-shawāb, al-Maṣāri al-šahrī, ed. 288). According to this, two kinds of divine knowledge must be distinguished: 1. al-nashirūn, the unalterable knowledge the objects of which God announces to the prophets and angles, and 2. al-nashī'ah, the knowledge entrusted by God to no one, which concerns matters in suspense (nashī'ah-tashābī) in original Kullān, 85.

While the Shi'a lays the greatest stress on the preservation of the conception of Bada' for the reasons given above (they allowed one of their Imams to say: "one can serve God by nothing better than recognizing Bada'"; since repentance, prayer and humility before God; in produce forgiveness of sins or the alteration of one's fate can only have meaning if the proposition of Bada' is granted), this doctrine is a constant point of view of the attack on the opponents of the Shi'a. Even Sulayman b. Džair is an adherent of the Zadītī Shi'a that repeatedly pronounced the Imamites with embracing two erroneous conceptions: the principle of našī'ah (q.v.) and the proposition of Bada' (Shahādāt, dec. Carston, 119 ult.). The bitterest opponents of the latter doctrine were the Jews who base their rejection of the abrogation of divine law on the fact that this proposition implies the recognition of Bada' as was shown by the Jewish theologian Yaḥya b. Zakariya al-Kāhī al-Ta'barī in Palestine in his controversy with al-Mas'ūdī (Kāhī al-ta'bah wa l-šamāsī, ed. de Goeje, Bibl. Geogr. Arab., viii., 113, 115; for ḥādā reading ḥādī). In the third century A.H. the question of Bada' seems on account of difficulties connected with it which could only be explained by subtle arguments, to have belonged to these questions by
which keen intellect and originality could be tested. This may be inferred from Qābi's, Fria Opuscula, ed. van Vloten, 115, and (correcting

**BADAJOS**, at the present day, the fortified capital of the province, the largest in Spain of the same name, the southern half of Spanish Extremadura, on the left shore of the Guadiana before its bend to the South on the Portuguese border (31,000 inhabitants). The identification of the town with and the derivation of the name from Pax (Julia) Augusta or Colonina Pacensis is without foundation and has arisen from an error of local patriotism as the latter certainly is Boica in Portugal (Arab. Baidja = Baidja from Pacem). The identification with the doubtful Basil of Valencia Maximus and Flitarch is also uncertain. Its first certain historical appearance is under the Arabic form Battalys (which is the original of the modern Spanish form) as the strongly fortified base of the brave renegade Ibn Marwan (872 – 875) during his revolt against the Caliphate of Cordova (Muhammad I). It was only regained from its valiant son by 'Abd al-Rahman III in 318 (899) (Bayina, iv. 105 et seq.; 140, 195, 213 et seq.; 215). The new town founded by the Arabs at Battalys (Abu-l-Baida) in 772; wudus ahdar al-baida (skilfully) gradually took the place of Colonia Augusta Emerita, Arab. Mérida = Mérida (40 miles to the east above B. on the north bank of the Guadiana) which was sinking into insignificance especially after it became an event of the Caliphate of Cordova, the brilliant capital of the Almoravids who united the greater half of North Africa and Spain into an important Kingdom 1029–1054. After the defeat at al-Zalikya = Sacrail, southeast of Badajos, in 1086 so fatal to the Christians, the principality of the Northwestern part of Badajos like the other Reys of Tarifa also fell more into dependence on the Berber al-Moravids who had hastened to their assistance from Morocco till in 1094 it was incorporated by this more powerful dynasty and became a part of the Spanish Province of dependence of the Almoravids of Northwest Africa and of the Almohads who soon succeeded them. In 1168 Alfonso I of Portugal took Badajos by surprise, but it was taken from him again by Ferdinand and Leo who afterwards gave it back to him. Badajos again became an Almohad possession and it was not till 1250 that it was finally conquered by Alfonso IX of Castile and Leon. Badajoz was the birthplace of many Arab scholars the most prominent of whom is 'Abd al-Lahim Muhammad ibn al-Sid al-Battalysi who died 521 (1127) cf. Brockelmann, Gesch, der arif. Lit., i. 427, where 444 (1052) is to be read; b. Rushkati 559.

**BADAKHSHAN**, frequently written Badakhshan in the spoken language also sometimes called Badakhshah (with Arabic plural ending) a mountainous land on the upper course of the Amu-Darya or more correctly of the Panj, on the left bank of this stream which is the source of the great river; from it comes the adjective Badakhshani or Badakhshi, a kind of ruby which is said to be found only in Badakhshan at Koka. It is very probable however that Badakhshan (from which comes the French Balas and the English Bals) originally denoted the land as a dialectic form for Badakhsh and was later transferred to the kind of ruby. Yaqût (ed. Wiistenfeld, i. 528) states that the form Balakshwas was the form for the name of land more commonly used among the people; Marco Polo also gives this form. The mines from which the rubies come are found outside of Badakhshon proper — in Shargi on the right bank of the Amu-Darya as is testified by so early a traveller as Marco Polo; this district however has in historical times usually been mixed with Badakhshan under one ruler. The rubies (Arab. šur, Pers. also šur) of Badakhshan were famous in the middle ages throughout the whole Musulman world; in Persian poetry the expression 'badakhsh' is frequently used in a figurative sense for wine or the lips of the beloved; in Central Asia this expression is widely known even amongst the common people. The district with the mines in question belongs now to the territory of Bukhara under Russian rule; the mines however are still exploited in the same primitive fashion as in former days and have not as yet attained any importance in the European jewel trade.

Badakhshan is watered by the Koka, a tributary of the Amu-Darya, called the Khwārān in the Hindustani (composed in 372 – 982–983, cf. on this work J. Marquart, Ostsebräische und ostasiatische Strickbriefe, p. 84.; unique manuscript in St. Petersburg) from the economic point of view; only the valley of the Koka and its tributaries has ever been of importance — there were the towns of Badakhshan — probably not far from the modern capital Pushtuhān, first founded in the xii. century — Dīrān and Kūshān; the two latter which are already mentioned in the earliest Arab accounts have retained their names to the present day. The lapis lazulii of Badakhshan, famed in the middle ages as now, come from the mines on the upper course of the Koka; the trade in those stones is at the present day a monopoly of the Afghan government; they are exported exclusively to India. Besides these, iron and copper mines are found in Badakhshan.

The name Badakhshan is first mentioned in Chinese annals of the sixth and eighth centuries A. D. in Hsiin-tuang in the form Po-foo-toung-ne, of which according to Schlegel the ancient pronunciation was Pat-ko-foong-ne, in the T'ang-shu, Po-foo-shan in the encyclopedia P'o-fu-syen Po-foo-juen. The country is described by the Chinese as part of Tu-ho-lo (Tukhristan). The Arabs likewise use the name Tukhristan in two
The great-grandson of Abd Sa’d. The last prince Shah Sultan Muhammad Badakhshān had before this abandoned the observance of the precepts of Alexander the Great ( Aleksandar-i Afshār) and composed a Persian Divān under the title "Tārīkh-i Râz Khān" (p. 147). He submitted without resistance to the army sent by Abū Sa’īd and betook himself to Herat; his son fled to Kāshghar; Muzir Abū Bakr a son of Abū Sa’īd was appointed Prince of Badakhshān. Soon afterwards the prince returned to Kāshghar; Abū Bakr was expelled; Badakhshān had to be conquered again for which reason Abū Sa’īd had Shah Sultan Muhammad executed in 1456 (1467) (Dawdawshā, ed. Rewa, p. 453). The date must therefore have been wrongly in the inscription discovered by the English in 1885 according to which this prince built a stone bridge as late as 854 (1479-1480) (cf. Tārīkh-i Râz Khān, p. 221). Abū Bakr was afterwards driven out of Badakhshān by his brother Sultan Maḥmūd, Prince of Hissar. The conquest of Hissar by the Uzbek (in the beginning of the sixteenth century) Badakhshān remained united with Hissar. A national movement led by Mubârz Shâh and Zâbair Râghi arose in Badakhshān against the Uzbek conquerors; a fortress on the left bank of the Kâka which still bears the name Kâla-i Żafar (fortress of victory) given it by Mubârz Shâh is mentioned as the centre of the movement. The Uzbegs were driven back; the Timurid Nawir Mīrâz (brother of Bābar) who had been called upon by the rebels was recognised in Badakhshān as ruler about the end of 910 (≈ spring 1505) but could not come to an agreement with the leaders of the movement and was driven out after two years. In the year 913 (1507-1508) Sultan Wâli Mīrâz, usually called Mīrâz Khâsa or Khân-Mīrâz, son of Sultan Maḥmūd, came to Badakhshān with the consent of Bābar and was received in Kâla-i Żafar. Mubârz Shâh had been slain shortly before by his companion Zâbair; Zâbair who wished to retain the power in his hands even after the arrival of the new ruler was treacherously put out of the way by assassination. A short time afterwards Shah Râji al-Din, the chief of the Khâns, who had come into Badakhshān, assembled a number of Khâns around him and brought to the prince the heads of those who had been his enemies. He was killed soon afterwards in the spring of 1509 and his head brought to Mīrâz Khâsa at Kâla-i Żafar. Mīrâz Khâsa died in 926 (1520) being still ruler of Badakhshān, whereupon Bābar adopted Sulaimân the son of the deceased ruler, who was left without a guardian and in place of him sent his own son Hamîyân to Badakhshān. In 935 (1528-1529) Humâyûn was called to India by his father after an unsuccessful attempt on the part of Sâ’d Khan the ruler of Kâshghar, to bring the land under his sway, Sulaimân was recognised as Prince of Badakhshān by Bābar as well as by Sâ’d Khan in 1530. Sulaimân resigned ( till 963 (1575) was driven out in the first half of that year by his grandson Shâh Shahrûkh, went to India and thence to Mecca but returned to his native land. In 1585 Badakhshān was conquered by the Uzbegs under Abd Allah Khâsa; Sulaimân and Shâh Shahrûkh had to take refuge in India but returned afterwards and made several attempts to dislodge the conquerors. Even as late as the beginning of the xvi century a revolt,
BADAKHSÂN — BADÁN.

led by Bâdâ' al-Zâmin, the son of Shâhrukât, is mentioned. In 1645 Balîkh and Badakhshân were again conquered by the Timurids though the Uzbek tribe did not finally withdraw till the autumn of 1647.

In the seventeenth century the kingdom of the Uzbek broke up into several independent states: in Badakhshân also a dynasty, founded by Vâr Bêg, the builder of the town of Fâjdâbâd arose, whose descendants in the nineteenth century still claimed to be descended from Alexander the Great. Like the other Uzbek chiefs in the modern Afghanistan these princes bore the title of Mir (abbreviated from Amir). In 1822 Mir Muhammad Shâh was dethroned by Murad Bêg, ruler of Kunar, Mirzâ Kâlan's vassal. Murad Bêg was sent to Badakhshân as chief, made himself independent later, and the death of his overlord, and in a short time conquered Kunduz itself. His son and successor Mir Shaht Najm al-Dîn died in 1863; his son Dadshâh Bêg had to fight for his throne with Muhammad Shâh, another prince of the same dynasty. After 1869, and after the last Manzârîs, in 1872, invaded to Russian territory where Usâkurun in Farghânâ was allotted him as a residence and a yearly allowance of 1500 roubles granted him; he was murdered there in 1878 by some individuals unknown. Muhammad Shâh was deposed by the Afghan government in 1873 and taken to Kabul where he remained till his death; his lands were incorporated with Afghanistan as part of the province of Turkestan.

The fame of the tribles and lapid-famal of Badakhshân and also of supposed gold and silver mines had reached Russia as early as 1725; about 1735 the acquisition of the rich land of Badakhshân was introduced to the end of Russian policy in Central Asia. Nevertheless at the last regulation of the frontier in 1855, the Fendî was fixed as the boundary river between Afghanistan and Bûghurţa which is subject to Russia; the lands of Badakhshân in the West (Koäll) as well as in the East (Shughrân and Roşhân) are thereby united with Bûghurţa. Badakhshân itself remaining in the possession of the ruler of Afghanistan although the road from Koäll (the ancient Khâtât) to Shughrân has always been via Badakhshân, never by Darwëz, which is difficult of access. The interests of the countries concerned have been seriously harmed by these unnatural frontier especially by the existing official enmity on trade across the frontier, which should not be too strictly enforced, at any rate by the Russian authorities in Shughrân. Labourers from Badakhshân are always to be found in summer in Samarkand.

Bibliography: Cf. especially Tâhirî Râshîd, transl. by E. D. Ross, edited by N. Elena (London, 1893), and the Bâdâr-Nâmâ, ed. Beveridge (Gill Memorial Series i., London, 1903); the passages concerned may be found from the index. Of works in manuscripts the Masîh al-Sulâdîn of 'Abd al-Razzâk al-Samarqandî (cf. this article) has been chiefly used on the Kingdom of the Ghurids, cf. The Tâhâbât Nâmâ of Abu-l-Hasan al-Isfahânî (Calculta, 1864); Râvâyât, The Tâhâbât Nâmâ (London, 1881). The notices of the lands on the upper course of the Oxus in the sixteenth century have been collected from the accounts of English travellers in an excellent fashion by J. Milimejw (Självföreställande av de svenska föreningarna Arbo-Dagestân, St. Petersburg, 1879). In addition I have been able to use two further accounts by Russian travellers in 1878 (not generally accessible). On the present condition of these lands see especially Count A. Bobrînskij, Gûtvâ vnepruskon Pjatâdâl (Moscow, 1873) partly following R. Lehner, Dürustân in 1888, 1889 and 1893, and the same author, Dürustân in 1895, (W. Barthold).

BADAL (a), properly, "interchange" = a grammatical term "permutative". The Badal is one of the five kinds of apposition (Tâbã). By it is understood in the first place a substantive which follows another substantive in the same case in accordance but not as an explanation of it like the Āfîf al-Bâyân [see below] but independent. Thus for example in the phrase qârand akhâba Zaidâ, Zaidâ is a Badal of akhâba if the person addressed hath only the one brother, on the other hand it is an Āfîf if several brothers might have to be considered (Ibn Yâqîn, al-Ashwâq, ii, 394, 13).

The different kinds of Badal as well as the extension of the grammar, more to pronounce and even words can be found in the grammar, more to pronounce and even words can be found in the grammars of al-Zamakhsharî, al-Farghânî (ed. Stieler), Ibn Malik, al-Dînârî (ed. Dicreccio), p. 261-283, Wright, Arabic Grammar (3. ed.), p. 284-286. (A. Schaade.)

BADARAYA, a town and district in 'Irâq, east of the Tigris, near the emptying hills of the Zagros Range. The place still exists under the name of Bâdâr (somewhat above the 33° 40', and under 46° E. L. Greenw.). The Arab geographers usually mention Bâdârâyâ with Bârûsâyâ and give Bârûsâyâ as the common capital of both districts. Among the articles expected they mention particularly the local highly prized dried reeds. Khusraw I Amîshârânî settled some of the inhabitants of Anîsâya when it was destroyed by him (see above p. 359) in this district. Bâdârâyâ is also often mentioned in Syrian literature (as Bîr-Dirâyê) and also in the Târîkh (p. 77, c. if this is not = Bûdûnî, q. v.) Bardaraya in Yâkût, 1. 555. (Cf. also the Mârûjî, l. 141) is merely a corruption for Bâdârâyâ. Dârâyâ in Bâdârâyâ is perhaps like Kûshîyâ in Bûsâyâ, q. v., originally the name of a tribe; cf. also the name Mûlîkh in Bâdârâyâ of a place above Wûkîj on the latter see Strecker, Bûshâhriyen nach den arab. Geographen, lii, 310.

BADÁN, BÔDAK or BARÁN, a town and district of India, in Rohilkhand, United Provinces, Area of the district: 1,987 sq. m.; population (1901): 1,257,753 of whom 16% are Muhammadans, mostly Pathans, Shâhî, and Daghân. The town has a population (1901) of 39,921, including 24,905 Muhammadans. It was of importance in early Muhammadan history, as an outpost among turbulent Râdîjâ tribes. Two of its gover-
ners in the first half of the 13th cent., Shams al-Din Baha'uddin Bathānī and his son Khub al-Din Firdusī, became emperors; of Delhi and A'īl al-Din, the last of the Saljuq dynasty, retired to end his days here about 1351. Baha'uddin consequently contains many mosques and tombs of this period. Completed among them are the Ijtimā' Madrasa, built by Shams al-Din, in 1245, largely from the materials of Hindu temples; and the tomb of A'īl al-Din. Baha'uddin is also famous as the birthplace of Ḥāfiẓ al-Ḵadr Baha'uddin (q.v.), the chronicler of Akbar's reign and the enemy of Abu T-Tail. Bibliography: Baha'uddin's Struggle (Allahabad, 1927) (J. S. Cotton). BADA 'UN. 'Abű al-Ḵayr, son of Malik Shāh, born at Bādawī in the service of Shamsa bāb in X-XI, 947 or 949 (A.D. 1540-41 or 1542-43). After a studios life as a youth, one of his teachers being Shāhīd Mubārak, father of Fadlī and Abu T-Tail, he entered the service of Husain Khān Tūrubā ("the Patcher," but was transferred, as an imām, in April 1574 to the service of Akbar. Abu T-Tail entered the emperor's service in the same year. The restraining of the court were like those to Baha'uddin and before 1579 he abstained himself without leave. In that year he was restored to the service as a muftī or secretary, with a fist of 1000 fīqu bāzār. He remarks, somewhat bitterly, that he was of no account, and was nicknamed Ḥāfizī because of the extent of his fist. He was employed, owing to his learning, in translating Sanskrit texts and in compilation. His attempt to translate the Aitārāna Paliā was a failure, and his successors in the undertaking failed to surpass him, but his success in the more congenial task of editing forty of the traditional sayings of Muḥammad on the history of warfare for the faith led to his being appointed one of the seven compilers of the Tarīkh al-Bayy. In 1581 he compiled the Nadīl al-RaḥĪmah and by Akbar's order translated the Maqāmahān and the Amārān into Persian, presenting his version of the latter in 1599. He then translated a Sanskrit work into Persian, styling his translation Ḥāfiz al-Awārī, and produced, in simple and easy Persian, a version of the History of Khurasan by Malāt Shāh Muḥammad Shāhādātī. He was now appointed one of the translators of the Muqāmah al-Ruṣāfīh and performed his task so well and so rapidly that he was allowed to return for a time to Baha'uddin. He overestimated his leave and was reinstated only by the earnest solicitation of Fadlī. In 1590-91 Baha'uddin began, for his own amusement, the work by which he is best known, his Tarīkh al-Tawāṣit, in three volumes, the first containing a history of Muḥammad, rulers of India from Shāhdu Ṭūb to Ḥumayūn, the second a history of the reign of Akbar in the year 1553, and the third biographies of the mints, learned men, physicians, and poets of Akbar's reign, the work being completed on Feb. 23, 1596. The second volume is most valuable as an account by a rigidly orthodox Suʿūdī observer of Akbar's religious speculations and ventures. His oriental respect for the personality of a monarch withholds him from attacking Akbar himself, but he demands veneration on the freethinkers and their leaders, Mubārak, Fadlī, and Abu T-Tail, to whose patronage he ascribes his indiscretion, for their encouragement of Akbar's Nationalism. This history, the publication of which was obviously impossible, was kept secret by Baha'uddin until his death, which occurred in A.D. 1604 or 1605, but its existence became known in the reign of Dārā Shāh, who sent for the historian's son and questioned them. They professed ignorance of the matter, saying that if the history existed, they must have been mere children at the time when it was written. They were released on giving a bond admitting their liability to punishment, should any copy of the work be found with them. Baha'uddin was skilled in chronograms and wrote, as a poet, under the name of Bādawī. Many of his bigoted views led him latterly to relinquish poetic composition, as paraking of the nature of sin. (T. W. HAGG) BADAWI. Bēdūnī. [Sīde Sāriā, p. 373-377.] AL-BADAWIYAH. [Sīde ʿAbū T-TAIL.] BADAWLAT. A title of the chief Yaqūb Beg of Khānghar (q.v.). BĀDERHĪ. Bāhtūnī, a district in the north-western part of the modern Afghanistan; the name is explained as being derived from the Persian bādeshā ("a place where wind rises") on account of the strong winds prevailing there. By the geographers of the 18th century only the district in the north-west of Herat between this town and Sarakhs is called Bādghī. Later the name was extended to the whole country between the Herātī and the Murgub districts; at any rate it is used in this sense as early as the vith (xiii.) century by Yaqūb. The small towns and fortresses situated in Bādghī have never been of great importance. At the present day Kāla-Naw is regarded as the chief town. The rivers, including the tributaries of the Murgūb, contain, at the present day, as a thousand years ago, only small streams of brackish water; for the irrigation of the cultivated fields the people are dependent on wells and the rain fall. The pistachio woods mentioned by the Arabs have survived to a certain extent to the present day. Besides these excellent pastures of the country are famous; Ferrier (1845-1846) describes the pastures at Kāla-Naw as the best in all Asia. This circumstance has been rather detrimental to the progress of the country, for the neighbouring nomadic tribes have always been attracted by these pastures. The wars between the Persians and the Mongols of Central Asia in 1790 arose out of a dispute for the possession of the pasture grounds of Bādghī. At the present day Bādghī is inhabited for the most part by nomadic tribes, the Hanbra and the Bāhrāni. Bibliography: W. Barthold, Erkundigungsreise durch Iran (St-Petersburg, 1908), p. 32, et seq.; G. de Strzeleski, The Land of the Eastern Caliphate (Cambridge, 1905), p. 412 (with list of authorities). (W. BARThOLD) BĀDĪT (A.), "Discoverer," "Creator," one of the 99 names of God. — In the passive sense bādīt means "discovered" and is a technical term in Rhetoric for rhetorical figures, metaphors etc. Hence the "bādītābād" (science of metaphors) forms a branch of Rhetoric. The first Arab writer on this subject is the poet Ibn al-Mu'tazz (q.v.). Later poets delighted in using all sorts of figures of speech in one and the same poem. Such poems, called bādītābād, were composed by Şāfi al-Dīn al-Ḥillī (q.v.) and Ibn Ḥiṣnī (q.v.) amongst others. Cf. Jāḥiz, Iflāf, p. 411; v. Mehrten, Rhetorik der Araber, 97.
Badi al-Astdurlab, Hikatazlan b. Ahmad (also Yusuf). Abu l-Kasim, a distinguished Arab scholar, physician, philosoper, astronomer and poet, but especially eminently known for the knowledge and construction of the astrolabe and other astronomical instruments. The date of his birth is unknown; in the year 520 (1110-1111) we find him in Isfahan on friendly terms with the Christian physician Amir al-Dawla b. al-Timhob. Later he lived in Baghdad and is said to have made a considerable fortune by his profession under the Caliph al-Mustardshil. According to Abu 'l-Faraj, the astronomical observations were made under his direction in 524 (1129-1130) in the palace of the Seidjah Sultan in Baghdad; probably the "Tables of Mahmud" compiled by him and dedicated to Sultan Abu 'l-Kasim Mahmud b. Muhammad (1118-1131), were a result of these observations. He died in Baghdad in the year 534 (1139-1140) and according to Abu l-Faraj, our only authority for the statement, was buried while only apparently dead. As his efforts in the domain of poetry, according to Ibn al-Kif, they were noble and beautiful, according to Ibn Khallikan they bordered on the obscene and indecent; the latter and Ibn Abu Usayla give some specimens of the better of them. Besides a Dica of his own poems he published a selection of the poems of Ibn Haidji in one volume divided into 141 sections entitled Durust al-Tadkkini ujub ibn Haji Isfahandi.

We must not be led astray by the praise bestowed by the Arab biographers, notably Ibn al-Kif, on Badi al-Astdurlab and appreciate him too highly. The historians and biographers of the thirteenth century had too little knowledge of mathematics and astronomy to be able to value at their proper worth the really remarkable achievements of the scholars of the tenth to eleventh centuries; in those sciences they therefore easily fell into the error of exalting the labours of the scholars who were nearer them in point of time, unduly and at the expense of those of the golden age of the Arabic science: neither al-Battani, nor Abu 'l-Wafa, nor al-Biruni have reaped such praise from any side as al-Badi al-Astdurlab although they have earned it in a much higher degree.

Badi al-Zaman: "wonder of the age", a title of honor given to the Arab writer al-Hamadhani (q.v.).

BADIS (A.), "Equivalent", "Substitution". [See ARAB.]
BÂDÎS — BÂDJÂRMÂ. — 557

(1009-1010). Bâdis then marched against this town and received the submission of Warthâ, brother and successor of Falafîl. While these events were taking place, Hammad, founder of the Kalâ of the Bani Hammad, had rebelled in anger at being deprived of the governorships of Tidje and Constantine. Bâdis put himself at the head of an expedition against him and defeated him on the borders of the Shalif, whereupon Hammad having lost army and treasure, succeeded in flinging to the forlorn and desolate Kalâ (al-Kalâ) which he had built. He was saved by the death of Bâdis which took place in the night of the 29th or 30th of Dhu 'l-Qâdîn 406 (9th or 10th May 1016).

(RENÉ BASSER.)

BÂDIYA, COUNTRY RESIDENCE OF THE OMYAYADS. The conquering Arabs, accustomed to the free life and open air of the desert, required some time to become used to the confinement of towns, frequently ravaged by epidemics; whence their saying “Health dwells in the desert.” Some of the Shahids even had their heirs brought up in the desert by the Lakhnads of Hira who resided there periodically. This repugnance to the town explains also why the caliphs, especially Mo'awiya I and 'Abd al-Malik, usually lived outside Damascus. In the desert survived purity of language and of national customs threatened by contact with conquered peoples. The desert was therefore called “the school for princes” and Mo'awiya followed his son Yazid to sojourn in it. 'Abd al-Malik regretted not having sent Walid I there to improve his faults. We also know that the Omyayads passed a part of the year, preferably the spring, in the desert. Their residence there they called their 'Bâdiya', from which comes 'bâdâd' “to dwell in the desert.” Each caliph — and following his example the members of the ruling house — chose for their 'Bâdiya' a corner in the Syrian desert where they enjoyed the pleasures of spring, the most beautiful season for a nomadic life. The Annialists note the departure of the caliphs to their 'Bâdiya' and their return. Mo'awiya who used to pass the winter at Simahra on the shores of the Lake of Tiberias seems to have done without a 'Bâdiya'. The 'Bâdiya' of Yazid I was in the neighbourhood of Hawarân; 'Abd al-Malik passed the spring at Dji-biya. His successors, especially Walid II continued the tradition. Their 'Bâdiya' are to be sought for preferably in the latitudes adjoining 'Bâkitâ'. Living in tents they there exercised the splendid hospitality of the ancient sâyids and entertained poets and men of letters. Sometimes the calipha presented the scene of gay picturesque confusion, that seems to have taken place in 'Hira of the Ghasanids and the Lakhnads, tents for the military escort, men of substance and buildings for the ruler and his harem.

Some caliphs preferred the forts erected along the Roman frontier; others, indolent and idle, erected palaces (Ka'bah or 'Dar') in the midst of the desert; others again only a simple shelter for hunting from, one of the favourite recreations of this sojourn in spring. In these bâdiyâs they lived with their families and their guards (Ahbar). Some of these buildings were adorned with precious marbles, sometimes even with frescoes. The ruins visited by Dr. A. Musil enable us to fix the site of several bâdiyâs and to reconstruct the whole appearance of these singular spring residences, peculiar to the Omayyad period.

BÂDÎ (v.), a gift, tax, toll etc.

BÂDJÂDÎA, in the Arab middle ages, a small strongly fortified town in Mesopotamia, south of Harrân, some distance east of Balkis situated, on the road to Damascus, near the famous gardens. It appears at the present day to be no longer in existence. The Arabic name (Bâdâda) denotes “house of fortune”; cf, perhaps, an Ain-gâdâra “source of fortune” in the Damascus and the Gadda of the Tabûl Peninsular in Syria. See thereon Nöldke in the Zeitschr., d. Deutch. Morgenl. Geleick, xxix, 441.

Bibliography: Yakut, Muqaddamah (ed. Wustenfeld), i. 455; Belâhchî (ed. de Goeje), p. 174, 175, where Bâdjâdîa, not Bâdjâdî is to be read; G. le Strange, The Lands of the Eastern Caliphate (Cambridge, 1905), p. 105.

(STERCK.)

AL-BÂDJÂLÎ, AL-ḤASAN B. 'ALI B. WARSHAND, founder of a sect among the Berbers of Morocco, whose adherents are called Bâdjâliya. Al-Bâkri, who states that he appeared there before Abd Allah al-Shîfi (p. v.) came to Idrîsî (before 820 = 893). Al-Bâdjâlî came from Nafta (Nefsa) and found many adherents among the Bani Lamî, his teaching agreed with that of the Râwî, but he asserted that the Imamite belonged only to the descendants of Al-Ḥasan. So Al-Bâkri and Ibn Hazm state in opposition to Ibn Hawâlî (ed. de Goeje, 65), who says that he was a Mâsûlî i.e. he recognized the Imamat of Mâsûlî b. Dja'Far, a descendant of Hüsan. The Bâdjâliya were afterwards conquered and exterminated by Abd Allah b. Yazîd.

BÂDJÂRMÂ, or BÂDJÂRMÎX, name of a district east of the Tigris between the lower Zab in the North and the Dijab Harrîn in the South whose chief town in the middle ages was Kerîkî (Syr. Karkhâ b. Bîthî Shekh). During the caliphate it formed a district of the province of Mosul (cf. Ibn Khordâjîbî, 972). Bâdjârmî is an Arabic residue to the Persian Aramaic Bîth (Bî)Garîmî while Badjarmî goes back to some Middle Persian form of the name of the
district, like Garniakan. The latter word comes from the Garnas, a nomadic people mentioned in cuneiform inscriptions, the Tastapin of Polybius.

**BADJUR.** [citation required]
BADR is a small town southeast of Medina, a short night's journey distant from the coast situated at the mouth of the road from Medina and the caravan route from Syria to Mecca. The houses were, when Burekhird visited it, built partly of clay and partly of stone and surrounded by a wretched mud wall. The inhabitants were, for the most part, bedouins of whom many however had only their booths in the town while they spent the night in the tents on the hills. In the time of Mohammed, Badr was merely a watering-place where an annual market was held. This small place first attained historical importance because of the dispute between Mohammed's followers and the people of Mecca, which took place here on the 17th or 18th Ramadan of the second year of the Hegira. For, however important this battle brought about by a series of accidents, was in itself, it laid the foundations for the Prophet's power and, likewise, for the further propagation of Islam and rarely did the superior ability of the Prophet show itself so clearly as on this occasion when he was able to inspire his followers, terrified by the unexpected meeting with the Mecceans, that they utterly routed their opponents who were superior in numbers — according to Hana's poem there were 1000 Mecceans to 300 Muslims.

It is not very easy to picture to one's self the progress of the battle with the aid of Burekhird's account; at any rate the description of the battle which was given him on the spot throws no light on the ancient accounts. According to Burekhird, Badr lies in a plain which is bounded on the North and East by steep mountains and in the South by rocky hills and in the West by dunes of shifting sand. In the eastern mountains rises a stream with a good flow of water, which with its stone cells, waters extensive date-palm groves, gardens and fields on the Southwest of the town. The very deep sand makes it difficult to cross the western hills behind which the desert plain on which only wiltow grow, stretches to the coast. About a mile south of the town the 13 grace wounds of the Muslims who fell at Badr were pointed out to him. According to Ibn al-Ishaq, Muhammad stood with his warriors at the top of Mount Mecca on the Meccans on the opposite slope — cf. Suna 8, 43.

*When you went on the west towards the sea shore. A small hill al-`Akanial between which and the sea, the valley of Yathrib concluded the Meccans from the sides of the valley of Medina. According to the Mecceans the Meccans came down the hill al-`Akanial, Muhammad's supporters had their faces to the West while the Meccans facing the East, had the sun in their eyes. The battle was begun in the evening by the Meccans climbing over

al-`Akanial into the valley while Muhammad had forbidden his people to attack till he gave the signal. According to this the site of the battle ought to be sought at the foot of the hills on the eastern border. Here the wells must have been which the Muslims destroyed except the one nearest the enemy, beside which they dug a reservoir and erected a tower of stone against the prophet. Their dead enemies were thrown into one of the destroyed wells.

Muhammad mentions Badr as a small town situated towards the seashore growing excellent dates; there are the wells of the Prophet, the battlefield and some mosques built by the kings of Egypt. Al-Bakri says it is merely a watering place with two springs at which bananas, vines and palms grow. The distance between Badr and Medina he gives as 28 parasangs, 8 stades and 2 miles; the distance between Badr and the harbour of al-Djur was 16 miles according to al-Bakri, a night's journey according to Yaqubi.

FR. BIHL.

BADR (Pir). Besides Khawaib Khissor Beluga believes in a greater animistic power in the person of Pir Badr who shares with the former the domination of the waters. His spirit is invoked by every sailor and fisherman, when starting on a cruise or while overtaking by a squall or a storm. All Muhammedans agree that he resided some time at Cittagong, but his history does not disclose the reason why theannes of a water-god were conferred on him. The guardians of his shrine, however, say that about five hundred years ago, Pir Badr arrived at Cittagong "floating on a rock", and informed the inhabitants that he had come all the way from Allah in his nautical craft in order to restore human sway over the neighbourhood of Cittagong which was haunted and molested at that time by Djinns or evil spirits. The modern Dargah or shrine of Pir Badr stands in the centre of Cittagong, and is regarded as the palladium of the city. Fakirs ( mendicants) are its custodians, and the shrine with its rooms for pilgrims is kept very clean. In its walls are niches for ten old-dampaun, one for each, which are lighted every evening and burned all night. Pilgrims from all parts of Bengal visit the shrine in fulfillment of vows, or to obtain the blessing and intercession of the saint, while Hindu fishermen regard him with as much veneration as the Muhammedans. His 12th (the anniversary of his death) is celebrated annually on the 4th Rajab. No doubt, however, be little doubt that Pir Badr was not other than Badr al-Din Badr al-`Ajam, for many years a resident of Cittagong, who died 844 (1440), and was buried in Chott Dargah (shrine) at Behör.
The usual cry with which they invoke the saint's help when their boats happen to fall into danger is "Allah, Nabū, Fakhr Pīr, Bait, Bait, Bait!" (God, the Prophet, the Five Saints, Badr, Badr). It seems very probable that the Muhammadans have borrowed the idea of "peopling the waters with deathless spirits," holding sway over them, from the ancient Hindus.

(M. Herbert Holwill.)

BADR M. Ḥasanwāw ABBĀS ṢADĪQ MĀRJĀN AL-DINA, a Khurāsān chief, who was recognised after the death of his father in 569 (679-880) by the Buyyids 'Abd al-Dawla as ruler of Kūrāqān. After the latter's death in 572 (983) Buyyid inclined towards Fakhr-al-Dawla and thereby came into conflict with Shāraf al-Dawla, the son of 'Abd al-Dawla. In the struggle he was victorious over the troops sent against him under Ḥarātāt in 577 (987) and brought to the province of al-Djībāl under his sway. He thereby became one of the most powerful Emirs of the time and in 588 (998) received from the Caliph the title Nāṣir al-Dīn wa 'l-Dawla. In his old age about the year 598 (1101) he quarrelled with his son Ḥillāl who made him prisoner. On being set free again he was able to gain power once more with the help of the Buyyīd Bayd al-Dawla, after the troops sent to his assistance under Fakhr al-Mulk had taken his son prisoner. Five years later in 605 (1014) Badr was murdered by his own people.

BADR AL-DAWLA, SULAYMÂN b. 'ABBĀS AL-DIYĀNĪ, the Fāṭimid governor of the town of Ḥalab for his uncle 'Iyāduddīn and remained master of it after the latter's death in 516 (1122) but had to retire soon after, when in the following years he deserted Ḫūn al-ʿĀkhrī to the Crusaders and his valiant nephew Belak b. Balārūm advanced against Ḥalab in consequence. When in course of time Zangi became lord of Ḥalab his governor Kūrālgh Abī made himself so hated by the inhabitants that they again called on Sulayman in 522 (1126) Sulayman thereupon laid siege to Kūrālgh Abī who was able to hold out in the citadel of the town till Zangi sent troops to his aid. An attempt by the Crusaders to take the town during these troubles was unsuccessful. Zangi summoned both Kūrālgh Abī and Sulayman to al-Mawjīd (Moual) and reconciled them with one another but he allowed neither of them to return to Ḥalab.

BADR AL-DJIMĀLĪ, a Fāṭimid commander-in-chief and vizier. The once so brilliant Fāṭimid kingdom was on the verge of its downfall under the incapable Caliph Mustanṣir (437-487; 1036-1094). The Seljuqs were pressing forward into Syria, in Egypt the Turkish slave-guards were fighting with the negro-corps, a seven years' famine was exhausting the resources of the country, all state anxiety had disappeared in the general struggle, hunger and disease overcame off the people, license and violence destroyed all prosperity and it appeared as if the Fāṭimid kingdom must disappear in a chaos of anarchy. Then on the call of the Caliph, the Syrian general Badr al-Djimālī took command of the government as well as of the army and with great though brutal vigour brought order into affairs again and indeed a second period of splendour to the Fāṭimid kingdom.

Badr was an Armenian slave of the Syrian Emir 'Īṣā al-Dawla 'Īsā ibn 'Ammar, whence his name al-Djimālī. He must have been born about the beginning of the fifth century A.H. for at his death in 495 (1094) he was over 50 years old. Even before he became vizier he had made a great name for himself in Syria. He was twice appointed Governor of Damascus but fell into difficulties each time on account of his stringent, measures with the pampered troops. He then became commander-in-chief of Akkhāt and in this capacity had to fight against the troops of Mullāshāh. He had an Armenian bodyguard for himself and the soldiers he commanded were also to be relied on. He took them with him on being summoned by the Caliph in 495 (1093) to deliver him out of the hands of the despotic Turkish officials. The latter never suspected the reason of Badr's coming to Egypt, fell into the trap prepared for them and were all murdered in one night, Badr thereby became master of the situation. Now followed his appointment as commander-in-chief or Amir al-Qādisīyyah (in the popular language Minhāj), as chief justice, chief preacher and vizier. The most popular of these titles was the first; the Qādisīyyah is still a common appellation of the Mākhtūm commanding Cairo on the spur of which Badr built a mosque, a Mašība in which according to popular belief at the present day the Sūl Qādisīyyah lies buried. After quieting the capital he brought about order to the east then to the west of the Delta, Alexandria also had to be taken at once. The task of conquering Upper Egypt was also difficult as the Arab tribes had set themselves up as independent there. In Syria he was not so fortunate. Affairs were mismanaged here, and Damascas fell into the hands of the Seljuqs about the end of the year 498 (1096). The Fāṭimids were never to regain it. In the following year the victorious Seljuq general Atsīl appeared before Cairo itself but Badr had time to collect his troops and drive back the Seljuqs. In spite of repeated attempts in the years 497 (1097-1098), 478 (1085-1086), 482 (1090-1091) he was not successful in regaining Damascas and Syria and at his death only a few towns in the South of Syria were still in the possession of the Fāṭimids. His strength in Syria was weakened by unrest constantly breaking out in Egypt, inspired by one of his sons.

Of his activity as a governor we know little but it is praised on all sides. Under his rule the annual revenue of Egypt from taxation was increased from about 2 to about 3 million dirhams. These large receipts enabled him to put into practice the lessons learned from the Seljuq invasion. Cairo was invested by him with its three strong city gates which are admired to this day, the Bāb Zawīla (Zuwāla), the Bāb al-Nūr and the Bāb al-Futḥ, were built. In Baḥr I 487 (March-April 1094) Badr's active and successful career came to its close after he had arranged that his son al-ʿĀṣīr Shāhāngīl (p. v.) should succeed him in all his offices. The Caliph Mustanṣir who had then been reigning for
full 60 years was to follow him in death a few months later.

Bâdûrâyâ, a district southwest of Baghdad, the land south of the Nahr Serät, a branch of the Euphrates canal Nahra Tâb [q. v.]. The Serât separates it from the Tarâbbût district; the southern part of the western half of Baghdad (the so-called town of al-Manṣûrî) as well as the suburb of Karâk was situated within the bounds of the district of Bâdûrâyâ; the latter formed, like the district of Karâbût, a subdivision of the circle of Amâsia-al-Âlî.

Bâdûsân (Bâdûsân), founder of a dynasty in Rayyân, Persianate, Nîr and Kujiûr, cf. the art. Dûsân.

Bâggâra, Arab tribes in the Eastern Sudan. By the Bâggâra (i.e. Bâggâra, cattle-herdsmen) are meant the cattle-rearing Arab or Arabised nomad or semi-nomad tribes of the Eastern Sudan, who have received their name in contradistinction to the Abâlâ i.e. the camel-breeding Arab tribes of these lands. The distinction is not absolute for the Bâggâra also have camels to a certain extent. The keeping of cattle seems to begin south of the sub-tropical border. Various Bâggâra tribes, e.g. the Rîsîkât, have northern relatives of the same name who rear camels exclusively. The breeding of cattle is also connected with climatic conditions. The Arabs in their slow advance southward took up cattle-breeding gradually; they did not import the cattle, although they all claim to originate from Yemen, and cattle-breeding was in vogue there. The cattle of these tribes are the humped cattle found throughout Central Africa. The name Bâggâra is limited to the cattle-rearing Arab tribes of Wadîr, Dârîfâr and Kordofân; the Arab Schah of Bornu who also keep cattle are not so-named.

The most reliable accounts of the numerous Bâggâra tribes are due to Nachtigal. He mentions the following chief groups in Wâdî Sudan, Ṣalâhân, Missirîn, Âlûd Râûshû, Dâshû'ânî, Charrû'a, Scurtan, Hîmûn, Dâuçan, Schîngîrû, Tùrdùshûn, Khûnî, Bâni Ḥusnân, Zabâût, Mahâlî, Zanî, Medîshûn, Korîfût, and the Isire. Nachtigal has collected valuable material on their relations, their settlements, their organization in the kingdom of Wâdîr and their customs. We also owe to the same traveller almost all our knowledge of the Bâggâra between Wâdîr and the Nile. The most important tribe in this district is the Rîsîkât to whom belong the Mahâlî, the Mahâlî and the Nasîûrân, also two important subdivisions of the Heîmûn, the Tûrâjî and the Mahâlî and the Tûrâjî and Bânî Holî, the Tàlibûn and the RîsÎÎ, the low-caste tribe of the Hanîr—generally called Bâggâra al-Hanîr on maps—also belongs to them.

Almost all the above-mentioned tribes can be shown to be of common origin and that of the others may be presumed. Kâmpfmeyer has set behind their genealogical table which converges in the Djiboutâh, each of the Djective immersions of the Djiboutâh into the Sudan from Egypt can be shown. From the beginning of the 11th (xii.) century they can be traced in Nobij. Later they were engaged in founding petty states in the Sudan and in more modern times have been allied with the slave-dealers. On the foundation of the Mahâlî kingdom in Kharym they were settled in many places. Even under the Mahâlî the Djiboutâh were the bulwark of his power, under the Caliph Aâdî Allah who as a Tûrâjî was himself descended from the Bâggâra, they became the preponderating factor in the Sudan but finally by the many wars and the Anglo-Egyptian conquest they were much reduced in numbers.

Schweinfurth thus describes their physical features. *Fine, light brown figures of slim, sinewy build and countenances of curious yellowish-brown chiaroscuro. The profile in all showed the full right angle, the form of the nose not at all aquiline, but more rounded and elegant, gave the more youthful face a good-humoured almost feminine character, an expression which was increased by the symmetrical rounding of the high brow. They all wore their long hair in thick piles running close together along the muzzle of the head and falling down to the neck.* It is the Rîsîkât whom Schweinfurth has described. All these tribes according to their mixture with negro blood show sometimes a more Hamito-Semitic, sometimes more Nigrity type.

Bâgh ([v. gardan]. Bâgh is the Sudan "cow-garden") is a district in Heri; we know a Bâgh gulûst in the Tûlip gardens (at Teheran and at Shiraz) the gardens bâgh var, bâgh shadîk, bâgh tâlûk. A garden divided into four by two avenues crossing one another is called bâgh têbûn. Bâgh var, bâgh shadîk, bâgh arzû are musical terms. In Turkish the word has taken the meaning of vineyard.

Al-Bâghawî, Abî Muhammad al-Hîrâîr el-Misîrî, Abî Muhammad Al-Fârî, Arab author, Shiî’ite Fâlî, an authority on tradition and inter-
chief settlement of the Jews (Karaans) in the Crimea during the Tatar rule. Among the Karaans themselves the old name Kir-ker-yer survived into the 16th century. The fortress is first mentioned by Abu 'l-Fida', *Géographie* (ed. Reinaud p. 214) as an adobe of the Alans (Ala); the name is vocalised 'Kirki' by Abu 'l-Fida' but the meaning (forty men) which he gives himself gives implies the pronunciation Kir-ker-yer as explained by others as Kirk-ker (forty graves) but on the coins only, the reading Kir-ker (forty places) is found. As Smirnow surmises, the name is a Turkish popular etymology from the Greek KALAMAK. Багаж-Гирья, the founder of the dynasty of the Girya placed his capital at Kirker-yer about the year 1545 (the first coins struck at Kirker-yer are of this year); his grave is in the Salaq ravine. The oldest settlement (now called Eski-Yurt) was in the valley of the Çikir-Su about 9/ mile west of the modern town; there are the graves of most of the Khalans of the 16th century. Later the palace from which Bagghe Sarai has taken its name gradually became the centre of the town and Kirker-yer as well Ekci-Yurt became a popular name. The palace according to an Arabic inscription on the principal gate was built by Mangli Girya in the year 909 (1503-1504). In opposition to Kirker-yer, Bagghe Sarai has always been an open town; even the palace was not surrounded by fortifications. The Polish ambassador Fromciewski (1578) describes Bagghe Sarai as a small town with the stone palace of the Khalan and a stone mosque said to have been built from the ruins of Christian buildings. Another small town Salaq (apparently in the ravine of this name) adjoined Bagghe Sarai; a Mahomedan monastery (apparently a Khānegāh of Dervishes) was likewise built out of the ruins of Greek buildings. In the 16th century the town is called Kirker-yer only on coins, the name Bagghe Sarai appears first in the 16th century; after the time of Tafon Girya III (1644-1654) Bagghe Sarai was the only mint in the Crimea.

On the 28th (17th) June 1736 Bagghe Sarai was taken by the Russians under Münchh, plundered and partly burned; a quarter of the town including the palace, the principal mosque and the library founded by Selim Girya I (reigned four times 1671-1678, 1684-1691, 1692-1699 and 1702-1704) as well as the Jesuit mission and its library were destroyed. The town then consisted of about 2000 houses of which about a third belonged to Greek Christians, who had their own church there. Under Sultan Girya II (1740-1743) the destroyed part was rebuilt again in part; in the year 1755 (1740-1741) a mosque was built opposite the palace; books were sent by Sultan Mahmut I from Constantinople for its library; in the palace itself the Khan had a new hall of audience built in the year 1755 (1743). N. E. Kleemann, who visited Bagghe Sarai in 1766 mentions, besides the palace and the mosque, the mint of the Khan, (to the right of the palace) and the residence of the French Consul which was the best in town after the palace. The houses did not form continuous streets but stood at some distance from one another on which account the town occupied a greater area than was necessary, considering the population.

After the Crimean War had been incorporated in Russia in 1783 Potemkin had the palace restored in

preacher of the Koran, also called Muhuyi l-Sunna and Re lamin, a native of Bagh or Baghail in Khodzhan (Yukh, i. 695). In May al-Kadh he studied with the Kudi Abdi 'Ali al-Husain b. Muhammad b. Ahmad al-Mawardi and did not leave this his second home again and died there over eighty years of age, in the month of Shawwal 530 D. (December 599 C.) according to others in Shawkal 530 or Febr. 1117. Besides a collection of Fatwah, which has not been preserved to us, in which he also noted the opinions of his teacher he wrote the legal compendium *Tafsir al-Mawardi* (ed. Vel. Fikrit of al-Naghib al-Khodzhan, ill. 212). His commentary on the Koran Mawazi al-Tsallam, lit. in Persia (place and date not stated), 4 vols.; printed Bombay, 1399 (1598), 2 vols. fol., enjoyed a greater popularity. He compiled a very complete collection of tradi-ions entitled Sharh al-Sunna (cf. Ahtward, *Verzeichniss der arab. Hic. der Kgl. Bibliothek zu Berlin*, Nf. 1899-1896). His fame in the Mahomedan world however rests chiefly on his collection of tradi-ions compiled from the seven fundamental works, the *Mawazi al-Sunna* in which the traditions are divided in each chapter after a regular plan into sound (qabah) from Bokhari and Muslim, excellent (banaa) from the Sunna and quite unsound (qurb and wa'd); printed Cairo 1294 (1587), 2 vols. 1318 (1900). A new edition of this work, the *Mawazi al-Mawardi* of Muhammad b. 'Abdallahir al-Khatib al-Tilhaa completed in the year 737 (1336) is still very popular on account of its fullness and practical arrange-ment; it provides the Muslim, particularly the half-educated with all the other old collections, avoids all the wearisome pomp of the Sunna and is written with a view to edification rather than learned pedantry (cf. I. Goldather, *Mahomed. Students*, ill. 270, 271). The work has been several times printed in Delhi, Bombay, Calcutta and in Kasani in 1909, lithographed at Petersburg, 1898-1899, 2 vols. tran-slated into English by A. N. Matthews, Calcutta, 1869. The author himself wrote a *Kitab A'lim al-Maw-ardi* on it which he completed on the Radjib 20, 740 = 22 Jan. 1340, v. Nicholos in the *Journal of the Roy. As. Soc.*, 1899, p. 910. A commentary thereon was written, amongst others, by Ibn Hajar al-Asqalani, died 974 (1566); and *Ahmad al-Subki* 184; *Ahmad al-Mubark, ed. Meursinge*, p. 12, 1235 (1837); *Ahmad al-Dhiklaw*, died 1052 (1642), has been printed in Calcutta and Chittagong 1351-1359 (1855-1843).

(C. Brockelmann.)
For the visit of the Empress Catherine II. According to Pallas the town then contained 31 stone mosques, 1 Greek and 1 Armenian Church, 2 synagogues, 2 baths, 16 Khans, 1566 dwelling-houses, 3166 male and 2610 female inhabitants. The Russian Government afterwards had the palace restored in its ancient splendour as a monument of Oriental architecture. As none of the buildings of the Khans of the Golden Horde have been preserved in the South, the Bâghê’s Sarâi is the only memorial of this art in South Russia, and is famed as the “Tatar Almah launched”. In Russian poetry the palace is well known from Fuschin’s poem “The Fountain of Bâghê Sarâi”. The archives of Bâghê Sarâi, discovered by Prof. Smirnow in Simferopol and now included in the Imperial Library in St. Petersburg, (124 bound volumes — all that escaped destruction in 1776) contain many important records; this material has not yet been used to the best advantage by historians.

At the present day Bâghê Sarâi is an important centre of Tatar industry and Tatar literary activity. The influential journal “Tarjumân” (Tatar and Russian) is there published by Ismail Mirza Gasparski; a large number of Tatar books are printed annually at the Russian establishment founded by him.

BAHGHAD, the capital of the last of the Tatar towns in the modern Iraq (Babylonia); once the brilliant residence of the Abbasids and the metropolis of the Mahommedan world and now the chief town of a wilayah of the same name (formerly a pashalik); situated on both banks of the Tigris in 39° 19’ N. Lat. and 44° 44’ E. L.

a. History.

The name Bâghê dâd, usually now pronounced Bagdad, is undoubtedly Iranian and means “given
by God, the gift of God”. In the middle ages a number of variations of this name were in use, of which the most frequent was Bâgh dâd; cf. M. Streck, Babylonien, i. 49 and de Goeje, Tourn. Asia, Ser. x. Vol. 3 (1904), p. 159. This pre-Mahommedan name was always the one preferred by the people, while the name Madinat al-Sulâm, also Dâr al-Sulâm, i.e. “City of peace (or welfare)” whence the Greek Euphrates, given by the Caliph al-Mansur in his new creation, appears to be limited as a rule to the official style (therefore it appears on the coins also). The views of Arab scholars on the origin and meaning of this second name are very much at variance. Al-Mansur probably chose it as a good omen for his new residence.

At the same time a reference to Paradise was no doubt intended (cf. the article Dâr al-Sulâm), since Baghdad thus becomes one of the four places (the other three are Ubâsîla, the Ghita al-Damascena and the valley of Basawî in Persia), which the Muslims describe as “paradise of the world” (yâman al-wârîq). The Persians at any rate have taken Madinat or Dâr al-Sulâm in this meaning, as their rendering of it by Râhshâd-dâd = “place (lit. foundation) of paradise” shows. This appellation is chiefly used by them in their poetic language, as it is also by the Turks who have copied it from them. Baghdad was also occasionally called al-Mansûrîyya after its founder. A further, not quite clear designation of the town was al-Zawrî, “the winding, or deviation”, probably an Arabicised form of an old Iranian word to which a popular etymology has given a new meaning; on the various explanations of this name see Le Strange, Bagdad, p. 12; Streck, Babylonien, i. 57; Salmasi, Hist. der Khâfik al-Baghadî, p. 94; F. Schwarz, Die Abbâsid-Rișûd im Süden (Leipzig, 1909), p. 38 et seq.

Baghdad is very often confounded with Babylon by European travellers in the middle ages and sometimes also with Seleucia and Ctesiphon and appears in their accounts as Babel, Babyloniae etc. The erroneous application of the latter name to Bagdad is likewise common in the Talmudic and exegetic literature of the Mahommedan Geonim (in the Abbâsid period) as well as in the later Jewish authors. Pierre della Valle, who was in Bagdad from 1616 to 1617, was the first to refute this error, widely spread in his time. Down to the seventeenth century the name Bagdad was generally known in the West in the corrupted form Balduin (Baldacino).

It is certain that there was a settlement, on what was later to become the seat of the caliphate, quite early in antiquity. H. Rawlinson in 1848, J. Oppert in 1853 and Pococke and Harper in 1889 found bricks inscribed with the names of Nebuchadnezzar II, which came from a quay on the west bank of the Tigris, still partly visible at the present day; cf. H. Rawlinson in the Arch. Britannica (vol. x. Baghdad) and in G. Rawlinson, Herodotes (London, 1852), i. 513; J. Oppert, Explor. scientif., i. 92; Harper in The Academy, 1880, No. 877, p. 139. There are the remains of a building, similar to this quay, somewhat below the present town near the Hâr Canal. That the name Bagdad appears on cuneiform inscriptions (under the form Baghâda) must still be regarded as improbable, as the doubtful place-name which first appears on a
boundary-stone (budurru) of the Babylonian King Merodachbaladan I (1194–1182 B.C.) (see Scheil, Dilig. en Père, vol. 1965, p. 31 et seq.) may also be worth noticing (see Streck, Mitt. der Vorderas. Ges., xl. 225); besides, it is unlikely that a name which is certainly 'Iraqi goes back to so great an antiquity. Its mention in the Thamudian inscription, quoted u. 256, by Littmann (Mitt. der Vorderas. Ges., iv. 28) appears doubtful also. On the other hand there can be no doubt that we have here two references in the historical period to pre-Muhammadan Baghdad (as nom, relat. 797/807 CE). Of A. A. Berliner, Beitr. zur ethnog. Babylonischen imiland u. Mitra (Berlin, 1883), p. 25. On its probable mention in a Pahlavi text (as Bakdil) see Blochet in Recueil de Travaux, xvii. p. 170.

According to the Prolenic chart, Bakdil (Piol. 1) is on the site of Baghdad. The Errata of Xenophon (Anabasis, 4.13) must have been just adjoining the latter town; cf. R. Kiepert in H. and R. Kiepert, Formae orbis antiqui, Heft v. (1910) p. 6.

It would be a mistake to recognize in the modern Eski (= Turk. "Old")-Baghdad [q. v.] above Sumar a predecessor of the modern Baghdad, of the same name; this name which has only arisen in quite modern times, owes its origin to the Ottoman period, of which other examples e.g. Eski-Mosul may be quoted, of naming ruins after important places in the neighbourhood. The name Baghdad is borne by only one other place in the East, Tell-Baghdad south-east of Urfa-Edessa (somewhat below the 37th n. lat.); see Sachau, Reise in Syr. u. Mesop., p. 216.

The Arab authors are also quite explicit that al-Manṣūr’s foundation must not be considered as the entirely new settlement of a hitherto uninhabited district. They mention a whole list of pre-Muhammadan places which had gradually arisen in the area afterwards filled by the 'Abbāsid capital. The most important of these was Baghdad, a village of Christians on the west bank of the Tigris, belonging to the district of Bādars, the nucleus of which, probably including the site of the so-called 'Round Town' of al-Manṣūr, the nucleus of the new capital, gave the latter its popular name. The majority of the more ancient settlements, chiefly occupied by Aramaic Christians, are to be sought for on the southern half of the later west side (of the town) on the western bank of the Tigris) within the great market quarter, the Karkh and its eastern and western vicinity. The following are mentioned as villages of Sasanian origin here: Bayazatur (or Banuxart), Sīr, Sherwaniya, Sinbūs (the later 'Old Town', al-打通), Wardaniya, Warqiya, Warthāl or Warthāla. The Karkh itself (= Araq, karraḵ = town) takes its name from an earlier village here which the Sasanian King Shahpur II (309–379 A.D.) is said to have built. In pre-’Abbāsid times, the small town of Bārrāt, a distance north-west of Karkh was independent but in course of time it was practically swallowed up by the expansion of the western side of Baghdad. In the northern half of the latter, later the al-Harbiya quarter, were before the time of al-Manṣūr, the villages of Kāshābiya and Sharifāniya.

According to Xenophon the Achaemenids possessed vast tracts in the district of Baghdad (at Sittake). This is also true of the later Persian Kings. Two such Sasanian gardens were afterwards built over (the quarters Dir 'Umarra, 'Almarra and Bustān al-Kūnār). Near the mouth of the Nahīy Tah, the Sasanians had built a palace, later called Kāş Tah. In their time also a bridge served communication with the east bank of the Tigris possible at this spot, where in later times a bridge of boats led from Kāš Tah to the palace of the Caliph. Another bridge, distinctly stated to be pre-Muhammadan (al-打通 al-zeichnet) spanned the Šarāt canal southwest of the Kifāa gate; on the eastern Tigris, pre-Muhammadan origin is only ascribed to that of Sīr al-thawrī or the Nahr al-Muṣallah, as well as to the Muṣalla, the first to be settled (under 'Umar). This name, however, has no connection with the šākās of Ptolemy (v. 19) as no šākās but šākās agrees with the location of Baghdad on Ptolemy’s chart (see above). Our Arab authorities also emphasise the fact that what, was subsequently the Muslim cemetery of Khāzinānīya, before the time of the Muslims, served the fire-worshippers as a burial-ground. The greater number of the Christian monasteries of Baghdad which flourished in Sasanian times must date back to pre-Muhammadan times. We have direct testimony that the palace al-Khudi of the Caliphs on the western bank of Tigris included the site of an ancient monastery, and that a district at the junction of the Šarāt and the Tigris showed in later times, by its name al-Dur al-taḥbī (as "the old monastery") to what use it had originally been put.

None of these ancient settlements on the site of the later Baghdad attained any political or commercial importance, so that the town built by the second ’Abbāsid Caliph may justly be regarded as a new foundation.

In the East a change of dynasty is very frequently followed by a displacement of the previous centre of affairs. It was absolutely necessary for the ’Abbāsids in particular to give up Damascus, the capital of their predecessors with its Umayyad associations. For it lay, for one thing, too near the Byzantine frontier and it was too far to the West for a kingdom which strived from the Mediterranean to the Indus. We can easily understand that the new ruling dynasty would move the centre of gravity of its kingdom from Syria, poor and unreliable, to Iraq, so richly endowed with natural resources, which seemed pre-eminently destined to serve as a connecting link between the Semitic and Iranian worlds, and to undertake the role of intermediary between the two great divisions of the Muslim world.

For, apart from the fact that the chief strength of the ’Abbāsids lay in Persia; for the troops of Khaṣṣāb formed their chief support, it was surely to their own personal interest to shift their capital more to the East, which by its foundation was again becoming of preponderating importance in politics and culture.

Even the first Caliph of the new dynasty, al-Ṣaffah, had taken up his residence on the Euphrates. He deliberately chose neither of the two great Arab towns, Basra and Kufa which had been in existence since the first Muslim conquest of Babylonia, both of which, especially the latter, were inhabited by a turbulent populace, devoted to the cause of 'Alī; Basra, besides, on account of its southern situation was clearly little suited to be the centre of the kingdom; he preferred
to hold court in al-Hājirahyya [q. v.] near al-Anbūr. His successor al-Maʿṣūr built himself a similarly named residence at some distance from Kufa, but soon forsook it, for the proximity of the fanatical Shīʾa Kūfa was distasteful to him. On his search for a new place, suitable for his camp and for the centre of government, he finally settled on the district on the Tigris above the mouth of the great Euphrates canal Nahīr Faṭ, where, as has already been mentioned, there was already a village called Baghdād as well as various other small settlements.

It must be confessed that the horoscope which recommended this site to the Caliph as a peculiarly auspicious one for his new capital has entirely falsified its promise. The choice could not have been better. The exceedingly fertile stretch of land between the Euphrates and the Tigris, where they approach one another, and, united by navigable canals, form a hydrographic system and, where the Diyār Bakr, falling into the Tigris, forms a natural gateway for the easiest ascent to the Persian highlands, had always been a home of civilization, indeed, the cradle of ancient Iran, as well as an emporium of trade and commerce, of international importance. Great capitals had succeeded one another here, Babylon, Seleucia, Ctesiphon; and their heir was the new city of the Caliphs, a day’s journey (7 parangas = 30 miles) from its immediate predecessor, Ctesiphon.

The gradual advance of the marshes on the lower course of the Euphrates below Babylon and the thereby increased difficulty of communicating by sea with the Persian Gulf explains the fact, that since the Seleucid period the site for the capital for the time being has always been chosen on the Tigris.

Al-Maṣūr laid the foundation-stone of his new capital in the year 145 (762). In the course of four years, a town designed on a central plan was completed by a wholesale levy on Babyloniun and extraneous recruits (100,000 men were to have been employed); in its midst the palace of the Caliph (called Bāb al-Ṭāsbaḵ or al-Kūhbat al-Khāṣṣa) and the principal mosque came to be erected. The adjacent ruins of Ctesiphon furnished in the main the quarry for the necessary building material. Around the circular nucleus the town proper was grouped, falling into separate quarters, which soon attained great compass. Apparently because al-Maṣūr soon felt himself somewhat confined in his abode by the rapidly increasing population, and perhaps also did not feel quite secure, he built for himself a second palace, al-Khāṣṣa, some years after the completion of the Round Town, to the east of it outside the city walls on the Tigris. Al-Maṣūr is not only the founder of the eastern side of Baghdad, the town on the right bank of the river, but also, as the founder of the later, eastern half of the town. In 151 (768) he began a large number of buildings in the north of it for his son, the Crown-Prince al-Maḥdī, of whom the chief was the palace al-Raṣīfa.

Al-Maṣūr in no way intended to found an imperial city in Baghdād, his primary intention was rather to lay out a camp for his Khārūn troops, at some distance from Kufa. For this reason he divided the ground around his town among his relatives, clients and generals in 664, and did the same on laying out al-Raṣīfa. A list of these fields is to be found in al-Yaʿqūbī and in al-Khāṣṣa al-Baghdādi.

The history of Baghdad which begins with al-Maṣūr falls into two great periods: 1. The 'Abbasid period which lasted 500 years, in which Baghdad, with the exception of an interval of 55 years, was always the centre of a great Muslim kingdom of occasionally universal extent, and rose to be the capital of a great feudal and commercial kingdom, and the great commercial centre of the nearer East, not only by being a winter residence of a few ʿAbbasids; it has always been merely the chief town of a province. As such it was at any rate under Turkish rule long in the fortunate position of being the chief town of the largest and most important ʿAbbasid ʿAbbāsids; here we must limit ourselves to a concise sketch of its development from the narrative point of view of local history.

Baghdad’s period of greatest prosperity falls in the century immediately after the death of al-Maṣūr, to be more exact in the reigns of his five successors from al-Maḥdī to the death of al-Maʿmūn (159–218 = 775–833). When al-Maḥdī ascended the throne the capital already covered an area of 5 or 6 miles square. As this Caliph moved his court to al-Raṣīfa, the quarter of the town on the east bank of the Tigris, it soon attained great importance. The aristocracy of the time now settled there at the same time with their retainers of slaves, clients and dependants, numbering thousands, and built themselves great palaces. The most splendid of these buildings was the pleasure-seat of the very influential and famous family of the Barmaqids, which, on their sudden fall in the reign of Harūn al-Raṣīl, became the property of the ruling house, and subsequently formed the basis of the great complex of buildings of the palace of the Caliphs on the east side. At the beginning of the reign of Harūn, which perhaps marks the zenith in the history of Baghdad, the east side was already challenging comparison in size with the west. In the war of succession which broke out, two years after Harūn’s death, between his sons Aḥmad and Maʿmūn, Baghdad had to suffer severely for the first 14 months. Aḥmad was completely hemmed in, in the capital towards the end of the year 156 (812) by the troops of Harīshah and Tāhir, the two generals of Maʿmūn; while the former cut off the east town which was only protected by a barricade hastily put up, Tāhir, encamped before the Aḥvība gate, kept the west side in check. Skirmishes between the armies of the hostile brothers, brawls between the soldiers of the garrison and the desperate inhabitants, inter-
gues and treachery of all sorts filled the long period of the siege. The west town especially, suffered from the effects of the artillery. The greatest part of its northern half (the so-called Maribiyā), was destroyed. The Caliph at length found himself confined to the palace of Ta-Khālid on the Tigris. Soon afterwards he was captured while attempting to escape and put to death (in the beginning of 196 = 813) when the siege came to an end. The flourishing capital was reduced for the first time to ashes and ruins; a great fire raging over whole sections of the town and as all the government archives were lost; in particular the west side, which had suffered most damage from this catastrophe never completely recovered, nor did it ever again attain its former extent. On this first siege cf. above all the exhaustive account of Tabari (iii. 864—925) which is of great value on account of his accurate topographic details, as our oldest authority on such questions; see also Weil, Gesch. der Chaldeer ii. 190 ff. see also de Gobineau, Des Iulies, p. 291 et seq.; Le Strange, Bagdad p. 303, 306 et seq.

The death of Amīn aroused great discontent in Baghād. The disensions of the populace which found expression in riots enabled the Abbāsids prince Ibrahim b. Mahdī to gain possession of Baghdād and to hold out there for nearly two years. It was not till he found himself betrayed by his generals, that he was forced to hand over both town and government to the Caliph al-Ma'mūn.

As the two palaces of the Caliph on the west side, the so-called "Golden Gates" in the heart of the central town of al-Mamāq and al-Khujd on the Tigris, had suffered great damage by the siege under al-Amin, al-Ma'mūn moved the official seat of the Government to the east side. He took possession of the above mentioned palace of the Barāczid and extended it very considerably. Under Ma'mūn's successor, al-Mu'tasim (218—
227 = 833—842), Baghād had to sustain its predominant position as centre of the kingdom, for a period of 55 years, to the small, hitherto unimportant provincial town of Sūmarr, 3 days' journey up the river, which had, in a fabulously short time, been transformed into a splendid royal residence. The immediate cause of the transformation of the court to Sūmarr (in 221 = 836) was the resentment of the people of Baghād to the brutal soldiery of the Turkish-Berber militia, whose numbers under Mu'tasim had risen to a standing army of about 70,000 men, so that the permanent retention of so large a garrison in what had hitherto been the capital appeared to be attended with difficulties. The loss of the court and the government officials does not appear to have done much injury to the development of Baghād, as it fortunately promised to be only a temporary measure, of not too long duration. Baghād was ruled in this period by governors mostly of the influential family of the Tāhirids.

In this interval, the Sūmarr epoch in the history of the Caliphate falls the second stage of Baghād which occupied almost the whole year 251 (865). When the tyrant of the praetorians in Sūmarr became more and more unbearable and the Turks there were fighting among themselves, al-Ma'stān fled to Baghād with the smaller portion of his troops whereupon the larger portion, which had been left in Sūmarr, of the Tāhirid guards appointed Mu'taz, cousin of Mu'tasim, Caliph. Mu'ta'sin had scarcely time to complete a girdle of walls running round the whole east and west side of Baghād when Mu'taz appeared at the head of his troops and began to encompass the ancient capital. In spite of the efforts of the besieged who defended themselves, from the new Turkish regime of force, with the courage of despair, Mūsta'sin on account of his weak and vacillating attitude was finally forced to capitulate on easy terms and to give up all claim to the throne. While the first siege under Amin shattered for ever the prosperity of the west side of Baghād, the second under Mūsta'sin was accompanied by disastrous consequences to the east side, the most important quarters of which (Rāyāfe, Shamāmātiya and Mukhrājin) were then destroyed and only in part afterwards rebuilt. Cf. on this second siege, Tabari, iii. 1553—1578; Weill op. cit. ii. 323 et seq.; Müller op. cit. p. 528; Le Strange op. cit. p. 311 et seq. Affairs continued to be unsettled, as well as before this siege; riots and disorders are recorded for the years 249 (863), 253 (867) and 255 (869); cf. Weill op. cit. ii. 387 ff., 402 et seq., 412 ff.

In Sūmarr meanwhile the situation became more and more unpleasant for the Caliph as he was practically at the mercy of the leaders of the mercenaries. Mu'tamid, the seventh successor of Mu'tasim, therefore in 279 (892) finally turned his back on the royal residence chosen by the latter and again made Baghād the capital of the kingdom, un molested by the Turks and Berbers who were kept well in hand by his brother Mu-waffāk; Baghād resumed the capital without interruption till the decline of the Abbāsid dynasty. The fifty years between the return of the Caliphs to the ancient capital and the entry of the Buyid princes are marked by the enlargement on a huge scale of the Caliph's palace on the east side; Mu'tajid, Muktāf and Muhtārīd, the three immediate successors of Mu'tamid, displayed the greatest activity in this undertaking. A whole collection of palaces and gardens thus arose which, covering a third of the whole area of the east side, was separated from the rest of the town by walls. A circle of new, thickly populated quarters soon grew up around the extensive quarter occupied by the court.

Under the active rule of Muktāf and Muktāfi Baghād again had peace to develop in. Under these two the Turkish troops did not dare raise their heads. But on the death of Muktāf the rapid, irresistible decline of the temporal power of the caliphate set in. Disturbances, especially mutinies of the soldiers, often accompanied by conflagrations, rape, and rioting increased more and more the capital and caused its prosperity quickly to decline. (M. STRANGE.)

Affairs improved to some extent when in 324 (935) the Dailamite Ahmad Mu'tazz al-Dawwān of the family of Buyids took possession of the capital and succeeded to the temporal power of the Caliphs which was to devolve on his dynasty for over a century. The Buyid prince at first occupied the palace of the former Esnūt, Minā, in the western part of the escalette. In course of time he and his artistic successors built up several splendid palaces, which were comprehended under the collective name Dīr al-Mamlak, in that part of the town which had been lying desolate since the
BAGHDAD.

587

The last two centuries of the 'Abbasid caliphate were on the whole peaceful ones for Baghdad. Of course there were often fires, and now and then as in 466 (1074), 554 (1159) and 614 (1217), disastrous inundations; there were also riots and popular risings and from time to time desperadoes and highwaymen brought about a reign of terror, but only once had Baghdad to suffer a serious siege, in 551 (1157) from the Seljuk Sultan Muhammed II. The various incursions of this sort to eyewitness, the famous stylist and historian Imad al-Din [q. v.] (cf. Rosell de la Roche relatif à l'Ahit des Seljouks, ii. 246—255). The Seljuk had finally to retire without having effected anything.

Two of the last Caliphs erected buildings which still survive. The first of these was the Caliph al-Nasir li-din Allâh, who restored the Bab al-Marja in 618 (1220) and embellished it with an inscription which was first made known by Niebuhr and has recently been discussed by Mittwoch in the Jahrbuch der Kün. Verein. Kunstveranstaltungen, Vol. xxvi. p. 19 and by M. van Berchem in archäologische Reise im Syrho-at- und Tigris-Gebiet, Arabische Inschriften, p. 35. The last-named scholar has discussed in great detail a remarkable relief which ornaments both spandrels of the archway above the now walled up entrance into the tower, which is now called Bab al-Talism (the Gate of the Talismen). The last Caliph, al-Mustasim billah, was the builder of a Madrasa which according to an inscription published by Niebuhr was erected in 630 (1232-1233). (Cf. thomann van Berchem, ap. cit. 43.)

The building still stands close to the tank of the Tigris at the bridge of boats and is now used as a custom-house. The inscription has almost entirely disappeared and been replaced by a modern one. Another inscription dated 653 (1255-1256) of the same Caliph was on the Djami al-Khuda, which has now disappeared, to which the famous Minaret Sul al-Ghâdi, still in existence, probably belonged (reproduced in von Oppenheim, Vom Militärzeug um Pers. Grüf., ii. 240).

This building was not completed. It stands in the centre of the town, to the east of the Mustasimya and is identical with the Djami al-Kays, one of the principal mosques of the city, founded by the Caliph al-Munsiff 280—295 (928—937). Cf. Le Strange, ap. cit. 352 et seq.

In Muharram 656 (January 1258) Hulagu with his Mongols and Turks arrived before the walls of the town and by the 4th Safar (10 Feb.) the last Caliph al-Musta'im found himself forced to make an unconditional surrender. Ten days later he was put to death with several members of his family while the town itself was plundered and set on fire. As Hulagu, however wished to retain the town for himself, it was not utterly devastated like other towns; on the contrary Hulagu afterwards ordered the walls, which had suffered most, such as the above-mentioned mosque Djami al-Kays, to be rebuilt.

The history of Baghdad since the Mongol conquest can only be sketched here in its main outlines. Till 740 (1339-1419) it belonged to the kingdom of the Ilkhan or Hulagids as the capital of the province of 'Irak 'Arabî. It was during this

sieg of 551. It may be specially noted that 'Aijd al-Dawla rehuilt al-Khul, the former palace of al-Mansur, as an hospital. The Shir's tendencies of the 'Aijd, often gave rise to violent outbreaks, for, while the active populace of the suburb of al-Kurkhir on the west side as a rule were in sympathy with them, other quarters of the town were inhabited largely by Sunnis. The Buwayhid therefore were never able to raise the town to the level it had reached in its palmy days though the main reason why their efforts failed, was that after the death of 'Aijd al-Dawla in 572 (983), they had been relatively quiet. The last Buwayhid members fought with another, and Baghdad was more than once involved in the struggle. Anarchy often reigned in the capital, sanguinary brawls between Sunnis and Shi'as, between Turks and Dailamites were the order of the day and the mob took advantage of the unrest to rob and plunder to their heart's content. This state of affairs did not cease till Ibn al-Muslihim, the vizier of the Buwayhid king bi-Abn Allâh called in the aid of the Seljuk Toghrulbeg who entered Baghdad in 447 (1053). Some years later in 450 (1059) the revolt of al-Basitir broke out. He ordered prayers to be read for the Fatimid Caliph so that the 'Abbasid had to leave the town; this was only an interlude however, for, when Toghrulbeg returned a year later, the conquer had to quit the town and the authority of the Caliph al-Kârim was again restored; henceforth the Caliphate was under the powerful protection of the Seljukis. The latter did not reside in Baghdad; Alp Arslan never once visited the capital, but they appointed a military governor who had to see that order was maintained in the town. Malikshah was the first to visit it, which he did on several occasions and in the last years of his life, he intended to make Baghdad his winter residence. For this purpose he had the palace of the Buwayhid in which he was staying restored and transformed, and laid the foundations for a great mosque (Djamâ al-Sulaimân) which on account of his premature death was not finished till some years later in 524. In this period there arose in Baghdad as in other towns many madrasas among which the Nâsimiya founded by the famous vizier Nizâm al-Mulk in 457 (1065) was the most famous. The building line stood in East Baghdad in its southern part not far from the tank of the Tigris.

The Caliphs al-Muqtadi 467—487 (1075—1094) and al-Mustashir 487—512 (1094—1118) were also distinguished for their love of building. In the beginning of his reign the latter caused the quarter of East Baghdad in which the Caliphs lived, the so called Harim and the adjoining parts of the town to be surrounded by a wall which on the whole is identical with the city wall of Baghdad as it survived to the time of Midhat Pasha in the last century. According to Ibn Hawqal, ed. de Goeje, 164 Note 2 (cf. Ibn al-Abbâd ed. Turbel, xi. 260) it was rather the Caliph al-Mustashir who built this wall in 568 (1173) though it had certainly been begun by al-Mustashir. Ibn Djibshir who describes this wall some years later in 591 (1185) (ed. de Goeje, 220) says that it had 4 gates, viz. beginning on the side next the Tigris on the north: 1. Bab al-Sulaimân (now Bab al-Mâqasim); 2. Bab al-Zâhiyâ (now Bab al-Mustâjam); 3. Bab al-Hallâj (now walled up, see below) and 4. Bab al-
period that the famous traveller Ibn Battuta visited the town in 777 (1377); his description (Fayyoga, ed. Paris, ii. 269) unfortunately is the most part copied from that of Ibn Djahir. Hassan Allâh Mustawfi's description also belongs to this period (740 (1340)). In 740 Hasan Bazurg [q. v.] appeared as an independent ruler in Baghâd and founded the Djâlûrîd dynasty. He built a Madrasa there which was not completed till the reign of his son Uwai, probably about 758 (1357) and was called the Minjaq after a certain Emir Minjan. The building still exists and the inscriptions on it have been published, in part by Niebuhr, in full by van Berchem, op. cit. 45 et seq.

The rule of the Djâlûrîds lasted till 1410 and during this period Baghâd was twice taken by Timur; the first time in 795 (1392-93) the town escaped with little damage but the second time in 803 (1401) the population was well exterminated and many public buildings and private houses destroyed. After the death of Timur in 807 (1405) the Djâlûrîd Sulmân Ahmed returned to Baghâd, restored as far as possible the walls destroyed by Timur, but not long after in 815 (1410) he was slain by Kârê Yahûd, Emir of the Kârê Kuyânî (Turcomans of the Black Sheep). The Kârê Kuyânî then occupied the spot and the town was surrounded within the city and held it till in 872 (1467-1468) when the Kârê Kuyânî under Umm Hassan replaced them. In the year 914 (1507-1508) Baghâd was conquered by the Safavi Shah Ismâ'îl and remained under the sway of his successors till 941 (1544). After the Kurdish chief Dhu'il-'Adîlî had laid the Khorassan waste there for a brief space in the name of the Ommâni Sulmân Sulaimân I, Sa'dî Sahmâr seized the town from him for the Safawî again in 935 (1529). In 941 (1534) Sulaimân I entered the town, and Baghâd was governed by a Turkish Pâghî till the rebel Bekr Sualçu called in the help of the Safavi 'Abbâs I who took possession of the town in 1013 (1603). The Turks were by now means willing to give up their claim to Baghâd; and in 1048 (1638) it was regained under the personal direction of Sulmân Mustafâ IV. On this occasion Mustafâ walked up the Bât al-Tallâm (see above) and restored some famous tombs such as that of Abî Hanîfah, at the modern village of al-Mu'âqam, on the east bank of the Tigris north of the town, and that of Abî al-Kâdir al-Ghîzînî within the town. At this time the fortunes of the town had sunk to their lowest ebb and according to the estimate of Tavernier in 1652 it had only 14,000 inhabitants.

Baghâd thus again became the capital of a Fâshîlik which has sometimes been governed jointly with that of Bâraq by the same governor. A list of the names of these Façâhî is given by Niebuhr and by Haart, Histoire de Bagdad dans le temps modernes. The latter brings it down to the year 1851. During this period the prosperity of the town increased, and the number of inhabitants had risen to 150,000 in the beginning of the nineteenth century; after the terrible plague in 1837 only 30,000 however were left.

In recent years the period of the governorship of Mailhâr Pâshâ 1869-1872, was a remarkable one in the development of Baghâd on account of the building of the telegraph line, of a horse-tramway to Kârima, by the erection of schools and other useful institutions. He also had the old city wall taken down so that at the present day all that is left of the old fortifications is a wall-like ridge with a few ruins. It introduced a Turkish steamboat line between Baghâd and Basra as the concession for this route (and the Persian Gulf) had already been given to an English Company, the Lynch Senate Navigation Company. Great expectations are centred in the making of a railway to Assâ Minor and Constantinople, whereby Baghâd will be linked up with the world's commerce. Baghâd is already the emporium for trade with all the adjoining countries and also with Persia. The number of inhabitants in the town and its suburbs is put by van Chrombhâm 200,000, (Cabinet: 143,000) of whom about 150,000 Mu'nâmân, mostly Shî'as. There are also about 40,000 Jews and 10,000 Christians, the latter mostly Catholic and Georgian Armenians.

8. THE TOPOGRAPHY OF THE ANCIENT CITY.

From the preceding historical sketch it is clear that the modern Baghâd on the east side of the Tigris still occupies the same area as in the later centuries of the 'Abbâsî caliphate. In those days, however, additional quarters of the town separated from one another by ruined areas stretched out as far as the modern al-Mu'âqam with the tomb of Abî Hanîfah and of many others of the Sâlihs of Islam. Here was situated one of the most ancient necropolises of Baghâd, which took its name from Khairûrîn, the mother of the Caliphs Hârûn al-Rashîd, and where at a later period the tombs of the Caliphs also were. To the south of it lay the old East Town of al-Râwif or A'zâz al-Mahdî with al-Mahdî's palace, and the mosque of al-Râwif, one of the principal mosques (jumâ') of the city during the caliphate. The quarters of al-Shamâmlûk, Dûr al-Kârin (the Christian quarter) and al-Mâhbarîn adjourned it on the east and south. In the last-named the Buyûkî took up their residence (Dûr al-Mamâla) and the Seljuq Kûrînîs also resided there, whenever they held court in Baghâd. It was here that Malikshîth built the chief mosque (jumâ') al-Sulâmî, which has been mentioned above, though not a trace is left at the present day of either of this building or of the mosque of al-Râwif, although they both suffered the Mongol invasion. These districts covered the area between the village of al-Mu'âqam and the modern Bât al-Mu'âqam, which are about half an-hour's journey apart. In the modern East Town there were formerly the palaces of the Caliphs (Dûr al-Kâthîfî) originally a pleasure house of the Barmecide Djâ'far [q. v.] and afterwards of the Caliph al-Mu'âqam before he ascended the throne. It was only after their return from Sâmarra that the 'Abbâsî caliph shifted their court here and built various palaces of which the (Kârî) al-Tâdîr was the most prominent. The foundations were laid by al-Mu'tajîd, but the buildings were not finished till the reign of his son and successor al-Muktafi who was also the builder of the third (in chronological order; the second) great mosque of East Baghâd, the Djâ'fatî al-Kârî (cf. above). The Tâdîr stood on the banks of the Tigris and was protected from inundation by an embankment; besides it al-Muktafi built the Kâthîfî al-Djâmî, (the A'zâ's Tower) so-called because one could reach the top by going on the back of an ass up a circular, slowly ascending path. This style of building reminds one of the
ancient Zigurat, others of which are found in the ruins of Sumer and in Baghdad itself, the still-extant tomb of Shalih Omar al-Schwarwadi (died 632 [1234]; cf. the illustration in von Oppenheim op. cit. p. 246. All these buildings — there are said to have been 23 of them in the time of al-Mahdi — with zoological gardens, terraces, etc., connected with them, formed a town by itself, the so-called Harim. Al Kharib al-Baghdaedi (ed. Salam, p. 49 et seq., 132 of the translation) has incidentally preserved a very full account of it for us when describing the reception of a Byzantine embassy by al-Mahdi in 305 (917-918). Cf. Guy le Strange in the Journal of the Royal Asiatic Soc. 1897, p. 35 et seq. The whole Harim was surrounded by a wall in which were seven gates and comprised about a third of East-Baghdad. For a more complete account we must refer the reader to the pertinent chapters in Le Strange's Baghdad. Naturally great changes have taken place here in course of centuries; the Tadj, for example, and the Koubbat al-Imam were destroyed by fire in 549 (1154).

Almost nothing is left of the more ancient Baghdad outside a few mausoleums, and though even they have not come down to us in their original state, they are still important for the ancient topography as they have been rebuilt on their original sites. These are the tomb of Mina Karkh and the great Sfu sanctuary of Kifisime (Kifisime 1. c. of the seventh Imam, Mina al-Kifisime, died 183 = 799 and of the ninth, Muyamad al-Kifisime, died 222 = 835). The so-called grave of Zobaide, the wife of Harun al-Rashid, died 206 (821) need not be noticed, as Ibn al-Athir (ed. Tornberg 9, 305) distinctly states that this princess was not buried where her grave is now pointed out. The inscription on it described by Niebuhr, which supports this erroneous tradition, only dates from the year 1331 (1718). Some other tombs as well as the dervish monastery built by Kildj Arslan, bearing an inscription of the year 584 (1188), may be noticed.

The mausoleum of Kifysime, now a fairly important place with 7,000-8,000 inhabitants, connected by tramway with Baghdad, lies on the right bank of the Tigris opposite al-Musalaq (see above). Here in ancient times was the cemetery of the Arab Gulf at the Strangate (Bib al-Tham). The Sfu's Mausoleum has often in course of time been destroyed and restored again; there is now a mosque there with four minarets and a clock-tower built at the beginning of the nineteenth century. The domes and the minarets are covered with gold leaf and the high gateway is decorated with the finest filigree. The mausoleum is annually visited by large numbers of Sfu's. The salmon also had in the southern part of West-Baghdad a very popular place of pilgrimage, during the Abbassid caliphate, namely the tomb of the Imam Ahmad Ibn Hanbal at the Bith Habb. According to Le Strange this mausoleum disappeared when the quarter of the town, in which it was built, fell into ruins and that time the grave of his son Abdallah on the bank of the Tigris was erroneously regarded as that of his father till it also was carried away by an inundation of the Tigris. The area between the northern extremity of West-Baghdad and the original town of al-Masjar was chiefly occupied by the district of al-Harbiya which lay opposite the district of al-Rasafis in East-Baghdad. There were also various other districts of the town here, the names of which varied at different periods; they cannot be described here. It is sufficient to say that this part of Baghdad soon fell into such a state that the inhabited parts were merely isolated suburbs separated from one another by great areas of ruins.

Of the town of al-Masjar (Madinat al-Salam, al-Zawiri) with its walls and gates and trace remains. Its peculiar and highly remarkable situation, which is known to us as the smallest detail from the accounts of Arab writers such as al-Ya'qubiy, al-Kharib al-Baghdaedi, would justify a detailed description but we must pass it by here and refer the reader to the opening chapters of Le Strange's book. We need not be surprised that it has completely disappeared, because on the return of the Abbasids from Syria, the court was transferred to the East side and no trouble was taken to maintain the walls or public buildings with the exception of the chief mosque. What was destroyed by floods, fire, siege and riots was never rebuilt, and the town became partly depopulated. That part of the town lying near the Bith al-Ibrahima survived the longest as that in the last centuries before 200 people no longer talked of the town of al-Masjar but of the district of Bith al-Ibrahima.

The various parts of the town which stretched west and south around the town of al-Masjar, formed the commercial and industrial centre under the early Abbasids. The situation here was especially favourable on account of the many canals which, like the Sarat and the Nahar, formed a direct means of communication with the Euphrates, and soon attracted an enervate and insidious population. Here was the suburb of al-Karkh, so often mentioned in the history of Baghdad and whose Sfu inhabitants so often had sanguinary dealings with those of the neighboring quarters, especially with those of Bith al-Ibrahima. This part of the town has survived to the present day. The usual Turkish designation for the modern West-Baghdad is Sarjadi-yaba (the opposite bank, Arabic: hamal al-bashi). In earlier times as now, boat-trades facilitated the passage of the Tigris, though their positions were often changed.

of the Bombay Government, 43, New Series, 304 et seq.; Roux, Description du povileglio de de Mogul; v. Kromer, Geschichte der arabischen Literatur, ii. 45 et seq.; M. Streck, Die arabische Geschichte des Alamens; G. de Strang, Baghdad during the 16th Century Caliphate; Cuinet, La Tange de l'Asie, iii. 89 et seq.; v. Oppenheim, Vom Mittlern und Persischen Gulf, ii. 236 et seq.; E. Aubin, La Perse aujourd'hui, 403 et seq.; Sarre and Herzfeld, Archäologische Reise im Empirischen und Tigris-Gebiet.

On the history of the town the chief authorities are the Arabic chronicles, already often cited above, e.g. Tabari, Ya'qubi and Ibn al-Athir. Cf. also Recueil des textes relatifs à l'histoire des Seljouks, B. 2; Rashid al-Din, Hist. des Mongols, ed. Quatremere; Abü 'l-Faradj, Chron. Syriac. etc. For the later period: C. Huart, Histoire de Bagdad dans les temps modernes and the sources mentioned by him in his introduction.

AL-BAGHDAĐI, 'Abd al-Ḳāhir b. ʿOmar. [See 'Abd al-Ḳāhir, p. 45.]
AL-BAGHDAĐI, Abu ʿAbdu'llah 'Abd al-Ḳāhir b. ʿAlī, Muḥammad, theologian, came with his father to Naṣīrūd and studied various sciences there. Later in life he made himself famous by his skill in arithmetical, on which he wrote a work; but it was theological studies that attracted him most; Abu Ḥāmid al-Ḳarājī was his teacher in these subjects. After the latter's death in 418 (1027) he succeeded him until the revolt of the Turkmans forced him to leave the town in 429 (1037). He then bestowed himself to Isfahān where he died soon after. A work composed by him on the Muḥadditha sect entitled Kitāb 'al-farār ibn-Ḥārām b. ʿFarār wa baḥrawn b. ʿFarār al-ṣanīdān wa ṣanīdān has lately been published by Muḥammad Baḍr, Cairo, 1328 (1910).

BAQHRAS, the ancient Pāgāra, was an important station on the road from Iṣākānwar to Anajākiya at the south-east end of the Sinai pass the exit from which it commands. Even in the wars of the 'Abbasids against the Byzantine Emperor Baghraw played a part, sometimes a possession of the Empire and sometimes of the Caliphs. It was included in the Djūnd al-Awāṣim [q. v.] which was separated from the province of Kinnarīn by Ḥārūn and protected the road to the Taḥtaq. It became still more important, however, when after the battle of Ḥittin in 584 (1188) it passed from the power of the Templars into the hands of Salih al-Din. Baghraw served as a bulwark on the Muhammadan frontier against the kingdom of Little Armenia until under Salih al-Din it was ceded to the hands around the Nahr Djiṭān (Djīṭān), the Futūḥāt al-Djihatnīya, were incorporated in the Manūk kingdom. In the wars between the Osmun and the Manūk the possession of the Pass of Baghraw was again contested. For administrative purposes in the Manūk period Baghraw was the seat of an official of the Manūk kingdom of Ḥalāh. The castle is now in ruins; the place is an unimportant village [Bakrā].

BAGIRMI (BAŠIRMI or BAXIRMI), a country in the Central Sudan, to the south of Lake Chad. Bagirmi was for a long time unknown to Europeans. Denham visited the northern part in 1824, being the first European to do so. Bath, going out from Borni, reached Masseny and found the first historical information on this journey (5 March—22 August 1824). Nachbarschaft in 1872, ascended the Shari as far as Dabangam, but could not penetrate into the interior on account of the troubled state of the country. To the accounts furnished by these travellers have been added those of explorers coming from the region of the Congo, such as Muisir and especially Gentil who visited Masseny in 1897. All these accounts have been supplemented and rectified since 1900 by the French officers and officials charged with the administration of the territories of the Chad.

The native state designated by the name of Bagirmi comprises, besides Bagirmi properly so-called, a certain number of tributary states, such as the country of the Bona and of the Kirdi, on the right bank of the Chari as far as the tenth degree of north latitude; Degan, near the Bahir al-Cha'i; Dekktir, a mountainous region in the east; Khousm and Debaha near Wadai. The total area of Bagirmi and its dependencies is about 30,000 square miles according to the calculation made in 1903, about 40,000 according to the latest statistics, those of Colonel Largaye (L'occupation du Wadai, Rev. de Paris, 1st Jan. 1910, p. 29).

Bagirmi proper consists of a plain measuring 250 miles from North to South, 150 from East to West and occupying an area of about 8,000 square miles. This plain, the altitude of which averages 1,000 feet, slopes very gradually towards the North-West in the direction of Lake Chad except in the North-East part which descends towards the Bahir el-Gazal. In many places, however, the ground is so flat that water cannot flow but stagnates in swamps. Some isolated heights rise above the surrounding country; on the north the hills of Ngoura, which separate Bagirmi from the basin of the Fritti, and more to the East the mountainous mass of Ghärë which is little known. The greater part of the water is drained towards Lake Chad by the Chari which bounds Bagirmi for a distance of about 170 miles and by the Bahir-Ergg (the Batschikam or 'river of leaves' of Barth) which is merely a branch of the Chari leaving the main stream at Milua to rejoine it near Bagaman. Of these two water-courses the first alone is a permanent navigable water-way from 300 to 500 yards broad, the second, on the contrary, being narrow and choked with plants, is of little use. Both undergo great variations in volume.
according to the seasons. There are two of these; the rainy season which usually lasts four months and the dry season which lasts eight months and sometimes more, to the great detriment of vegetation.

Bagirmi is, except in cases of abnormal drought, a relatively fertile country. In it are cultivated sorgho and millet which form the staple food of the natives. The latter is grown in swamps which are formed during the rainy season, beans, and lastly a plant called ‘Vjojo’ by Barth which is much appreciated by the natives. Corn is rare and reserved, according to Barth, for the use of the Sultan. Pastureage is sufficiently abundant to allow the rearing of cattle. The trees and shrubs are the tamarind, the almond, the cotton, and indigo plants and butter-tree. The forests become more and more dense as one approaches the equatorial zone. The fauna is very rich. Large animals, elephants, giraffes, panthers, antelopes, hippopotamuses, rhinoceroses and crocodiles, swarm on the banks or in the vicinity of the rivers; insects abound, in particular ants and termites of which certain species are a terrible scourge to the crops and knowledge to man’s hairiness.

The population of Bagirmi, estimated by Barth at one and a half millions and by Nachtigal at a million is still decreasing on account of the continual wars which devastate these countries. A census in 1909 gave 420,000 as the number of inhabitants of Bagirmi. According to Lt-Colonel Largeau this figure ought to be reduced to 30,000 of which 10,000 are in Bagirmi proper, the density varying from 0.3 to 0.9 of an inhabitant per square mile according to the district. This population consists of very diverse elements: 1. The Bagirmians, a people sprung from the mixture of the aborigines with foreign invaders. 2. Kanuris settled in colonies in various parts. 3. Arabs (Asael, Salamat, Khozaam, Ullid, Mula and Shita) scattered throughout the country but in villages which are almost exclusively inhabited by them. 4. The Bizerta (also called the Benglara, very numerous in the south; 5. negro tribes (the Gheba on the right bank of the Logon, Sera on the middle basin of Dar Kut, Tumouk, Nyelene etc.), more or less related to the Bagirmians, but speaking a different language and still fetish-worshippers.

From the point of view of physique the Bagirmians hold a high place among the peoples of Africa. Travellers note their tall stature, the regularity of their features and the suppleness of their limbs. The beauty of their women is exceptional. They speak a language, the Bagirima, which, according to Barth, is related to the dialect spoken at Kikka. At first fetish-worshippers, about three hundred years ago, they adopted Islam which was brought into these regions by the Fulbe but have retained numerous pagan practices. Through their knowledge of Islam they gradually gained ground towards the south and brought the beginnings of civilization to the primitive inhabitants of those regions. The culture of the Bagirmians is, nevertheless, still very rudimentary. Barth remarks that none of them knew how to write and that only those individuals who have made the pilgrimage to Mecca have any knowledge of Arabic. They are, on the other hand, more industrious than the majority of their neighbours. Amongst them are clever artisans, especially dyers and weavers. It was the Bagirmian captives brought to Wadai by Sultan Sahan that introduced the art of weaving into that country. Slave-trading was till the end of the nineteenth century the principal occupation of the Bagirmians. Slavery, with the continual wars of which Bagirmi has been the theatre and the difficulty of communicating with Northern Africa, have certainly retarded the progress of civilisation.

In the time of the last chief-totou of Bagirmi was Massenya, the capital. Built some miles to the north of Babur Ergig, it was surrounded by a girdle of walls seven miles in circumference. The houses which it comprised were, it is true, only mud-huts with the exception of the sultan’s palace and a mosque of stone. Partially destroyed by the Wadathia in 1870, then abandoned after the invasion of Babah, Massenya, at the present day, stands second to Bugumou, situated 50 miles to the west on the left bank of the Shari. 150 miles to the east of Massenya, at the foot of the Giri mountains is Kangi, which local tradition regards as the cradle of the reigning dynasty.

The government of Bagirmi is a despotic monarchy. The sultan or sudiex exercises absolute authority; he is the object of servile manifestations of respect; his subjects have to stand with head bare in his presence and to wear a chain on their foreheads. Only a few great dignitaries are allowed to sit on carpets in his presence. Among the relatives of the sultan the queen-mother and the eldest son enjoy some influence; the brothers of the reigning sudiex are blinded in one eye to disqualify them from ruling. The principal officers of the state are some fewborn, others chosen from among the slaves. The most powerful is the fakiri or head of the army. Special functionaries are charged with the supervision of the forests and pasturages and the government of the more important districts. The revenues of the sultan are obtained from taxes paid by the Muhammadan subjects and tribute levied on the pagan tribes. The former supply grain, cattle and cotton-stuffs, the latter give slaves which still constitute, as they did in a greater extent in the time of Barth and Nachtigal, the real wealth of the sultan on.

The state of Bagirmi was founded in the sixteenth century of our era (the tenth of the Hijra). It owes its origin to adventurers who came from the east, probably from Filitr. After defeating the Fulbe, the savages united with them and with their help imposed their authority on the Fulbe and on the Arab communities settled in this region. The conquered peoples were forced to pay tribute but caused the invaders to adopt their religion. The latter, like most of the founders of Sudanese empires, claim to be of Arab origin and say they come from Yaman. Their chief, Dokkengere, was, according to the legend, the founder of Massenya and conquered the four small kingdoms into which the land watered by the Batschilam was divided. His successors increased their dominions on the east and south. One of them, a contemporary of Abd el-Karim, the founder of the Kingdom of Wadai, embraced Islam and took the name of Abd Allah. From that time to the reign of Abd el-Kadir who received Barth on his journey to Massenya, forty princes have occupied the throne of Bagirmi. During the seventeenth and eighteenth centuries they gained much power at the expense of the native fetish-worshippers and enriched themselves by the slave trade.
A period of decline succeeded this period of prosperity. The struggle against Sultân Sulân of Wadat (died 1815) ruined Bagirmi. Sultân "Abd al-Rahman, betrayed by his "fatscha" was killed and many Bagirmiis led into slavery. The decisions which arose in consequence among those of "Abd al-Rahman as well as the intrigues of the "fatscha" Ruedi provoked renewed interventions by the Wadatanas. Finally 'Othmane Burgumunu, the eldest son of 'Abd al-Rahman was left as lord of Bagirmi but had to recognise the suzerainty of the Sultân of Wadat and to pay tribute to him being interrupted for several years, hostilities recommenced on the death of Sultân. Bagirmi was ravaged with great cruelty by the Sultân of Wadat and his ally the Shaikh of Bornu. 'Othmane succeeded however in maintaining himself against all his adversaries. He was an energetic ruler but without faith or law, plundering indiscriminately his friends and enemies and not hesitating to marry his own sister. His son 'Abd al-Kadir managed to live at peace with those neighbours and devoted himself to raising the tribal states. But in the reign of Abd Sakkar the Wadatanas invaded Bagirmi again (1860—1877). Massenyu was taken, Abd Sakkar expelled and replaced by one of his consuls. He regained power, however, in 1882 and retained it till his death in 1894. His successor Gawrara had to resist the attacks of a new adversary Ralash, the establishment of whose power in Bornu was a perpetual menace to the security of Bagirmi. [See next.]

The Franco-German convention of the 4th February 1894, having placed Bagirmi in the zone of French influence, Gawrara agreed without demur to recognise the French protectorate and signed a treaty to this effect with the explorer Gentil in 1897. His agreement brought on him the wrath of Ralash. Being incapable of resisting his enemy, Gawrara himself set fire to Massenyu; the governor Brotomet who was sent to his assistance was defeated and killed at Tagbao on the 17th July 1899. But in the following year the death of Ralash, who was defeated and slain at Kindji by the success of commandant Lamy (22 April 1900), brought peace to the whole of those regions so long disturbed. Bagirmi at the present day is included in the military district of Chad; it retains its native administration under the control of the French authorities.

BAHÁ' ALLÁH ("splendor-of-God"), surname of Mírzá Husain "Ali Núrî, born at Núr in Mázandarán on the 12th November 1817, half-brother of Mírzá Yahya, surnamed Sháh-i Azil, was almost thirty years of age when he became a convert to the new doctrine preached by the Báb [see Bahá]. Without having ever seen him he became one of the Báb's chief disciples and was recognised as such by the greater part of the Bábís. After the attempt on the life of the Báb he was imprisoned in Tabarzan; he was then exiled and settled in Baghdad in 1837. It was there that he declared himself to be the person announced by the Báb in the mysterious words: Man yeká bunku 'Abdu: "He whom God will manifest". He lived the life of a hermit outside Sulaymánía, where he drew up the main scheme of his work, which was to make the religion of the Báb somewhat modified a universal religion; he was interned in Adhamiye (1864), then at Acre (August 1868) where he died on the 29th May 1892, leaving his spiritual authority to his eldest son, 'Abdu'llah Effendi, surnamed 'Abd al-Bahá.

His Doctrine. Right living consists in doing harm to no one, in loving one another, in bearing injustice without rebellion; it consists in regarding the good, being humble and devoting oneself to healing the sick; such are the principles adopted by Bahá'í, an obvious echo of Christianity. The ultimate aim is universal peace which is to be brought about by the adoption of this religion, which possesses neither clergy nor ceremonial. Every town is to institute a place of assembly for a managing committee, consisting of nine members which is called Baha'í; their chief resources are to consist of bequests to the treasury, receipts from fines and a tax of one nineteenth on capital to be paid once and for all. Ancestries are forbidden; man was created for happiness.

The principal works of Bahá'ís are the Kitáb al-Aqdas (ed. Bombyx and St. Petersburg), the Kitáb al-Muhammadi (transl. by H. Dreyfus and Habib Ullah Shirazi, Paris, 1904), Tahât, Kalanâm-i Nidvâyayá, Iqâlabáy, Ta'labiyáy (transl. in the Précis du Bihâımı, Paris, 1906), Kalâmát Muhammadi (Hidâtu words, Paris, 1905). The lessons of Acre have been collected by Mrs. Clifford Barney (Am-Nur, -i-Abáká, London, 1908) and transl. from the Persian text by H. Dreyfus (Paris, 1908); his last works have been edited by Toumandi (St. Petersburg, 1909).

BAHÁ AL-DIN, "Ornament of Religion", a title of honor. (See the articles on Bahá Khákh, Muktá-ká, and Náštihán.)

BAHÁ AL-DIN ZAKARIYÁ, commonly known as BÁHÁ KhÁK, a saint of the Suhradu or, was born near Sulaimán in 955 (1550—1570); he was one of the greatest ascetics of his time. He was a direct disciple of Báb Khán, the great Sulaimán, was Báb Khán, and in Baghdad; and because of his hájí (or spiritual successor). He settled in Muhbáñ, where he is said to have built his own tomb and died at the age of 100. He has a great reputation in the South-West Farsább and in Sind, and is invoked as their patron saint. The hostility of the rulers on the rivers Indus and Sind, and his imprisonment, were caused by heresy and political intrigue.

BAHÁ AL-HÁK, (Bahá Khán, BÁHÁ KhÁKH, see BÁHÁ AL-DIN ZAKARIYÁ.)

BAHÁ DUR, a Turkish word of Mongol origin (báhádur, Eastern Turkish hādīr, hādīr) signified originally "brave", "courageous" and became a title of honor at the court of the Great Maghála (cf. hādīr, hādīr, a title in Turkestan: Sulaymán-Efendi, Láháli, áhádáli, p. 66). The word is used with an earlier sense of "hero" in the name of the Balárgí chief Aláhágúr, which is explained as Alá hādárt, "the brave hero" (J. Marquart, Oester. u. ostr. Gesch. S. 156). In the middle of the sixteenth century there was in Persia a regiment, composed of Christians called báhádurí, "the brave"; it was this regiment which was entrusted with the execution of the bullet (q. v.). The name of this regiment, whose composition was very long, was preserved again borne by the first regiment of the first division of the army, in 1301 (1884). There are other regiments bearing this name at Khotán, Farsánn, Náhíán, KáháZándí, and other places.

Bibliography: Muhammad, Hází Khán, Mútthi, Al-Shahá, Part ii. p. 45. (Cf. Hárání.)

BAHÁDUR KHÁN, last king of the Fársább (q. v.), dynasty of KáháZándí, he came to the throne in 1597, after having spent 30 years in prison; he reversed the policy of his father Rájú Khán, who had been a loyal supporter of the Mughal Emperor Akbar (q. v.) and had assisted him in his conquest of the Dakhán and died fighting on his side, Bahádúr rejected the friendly advances of Akbar and shut himself up in the fortress of Ameqí, where he was at war with the Khákhí, the Khání, and his territory became part of Akbar's dominions.

BAHÁDUR SHAH (1555—1600), tenth king of the Nízám Sháhí (q. v.), dynasty of Amádáns. In 1595 Sülmán Múlib, son of the Emperor Akbar, came to Amádáns, and raised the siege on receiving the formal consent of Bahádúr, but on a second attempt being made in 1600, the king was taken prisoner and sent as a captive to the fortress of Gwánín.

part in it. On hearing of the death of his father and of the succession of his elder brother Sikanandar Shih, he proceeded towards Gujakarat, and on the way heard of his brother's assassination. He became king of Gujakarat in August 1526 and avenged his brother's death in a cruel manner so that he is described by Bâber (ed. Erskine, p. 343) as a bloodthirsty and ungodly young man. He was an energetic ruler and famed for the fertility of his movements. He conquered Malwa and Chitor, but was defeated by Humâyûn, son of Bâbur. In his distress he applied to the Portuguese for aid, but when Humâyûn left Gujakarat and Bâhûdar recovered his kingdom, he resented of his invitation and sought to get rid of the Portuguese. The Portuguese Viceroy arrived with his fleet at Dîn, but declined, on the plea of sickness, to come ashore and visit Bâhûdar. The latter took the exact and singular resolution of visiting the Viceroy and came on board his ship. It was the third day of Ramâzan and Bâhûdar was probably sober at the time, but as he was a great drunkard, he may have been staggering from a debauch of the previous night. When he heard that the Viceroy was not really ill, he wanted to return, but the Portuguese had made up their minds to seize him and would not let him depart. An altercation and a struggle took place, and the result was that Bâhûdar was killed, and that his body fell into the sea. Immediately afterwards, the Portuguese took possession of Dîn, which had been deserted by the inhabitants. Bâhûdar's death took place on 14 February 1537. One of the chronographers made on the occasion was: Sultan al-bâr Shâhîd al-bâb "Monarch ashore, Martyr sea" (943 A.H.). Bâhûdar was a cruel and worthless prince but the Gujakartis cherished an affection for him on account of his vigour and of his tragic death. He reigned for eleven years, and was the last of his line.

a Christian probably before the battle of Siffin, in which one of his sons commanded the Ka'bah of Damascus; and at an advanced age. His sons succeeded him and became the first persons in the state; in consequence the parthians of the Umayyads were called Bahliliya. His grandson Hassän, guardian of the sons of Yâyân I, after the death of Mo'awiya II, even dared to cherish the project of succeeding him. The undue preference of the Bahlilites and the Kullaites contributed largely to the division of the Arabic race into two parties, that of Kais and that of Yemen, after the battle of Mardh Kâthî.

(B. Lammens.)

BÂHILÂ. The members of the Bedûnî tribe of Mân in North Arabia were usually called Bâhill Bahlil after Bahlil, the daughter of Sâb who had married her stepson Mân. Their grazing-grounds in ancient times lay in southern Yemen and are known to have been there as late as the fourth and fifth centuries. In later times we find them in the neighbourhood of Bâqra in possession of the well al-Hufrîr four miles from Bâqra, which is of importance to the caravans of pilgrims. The reputation of the tribe was a very bad one and the name Bahlil (Bahlite) was a term of reproach.

(B. HELL.)

BÂHIYYI, AL-NÂ'IR ÂSMA' B.-HÂTHIM AL-BÂHIYYI, Arab philologist and author, a pupil of Asâmî, Abl 'Ubâdis and Abd Zaid, belonging to the school of Basra, lived first in Baghdad, then in Isfahân and finally settled in Baghdad again where he died in 231 (845). As a rule he followed in his works the footsteps of his predecessors and like them wrote a book on trees and plants, camels, cedars and palm-trees, horses, birds and locusts, of which latter he was the first to treat. He wrote treatises on proverb, on proper names, and on the errors on the proverbial, many valuable notes must also have been contained for us, but unfortunately like all his other writings they have perished.

J. HELL.

AL-BÂHIYYI, AL-HUSAYN B.-AL-DÂRÂSH AL-MÂHÂB, a client (Menabî) of Bahlil, an Arab poet often called al-Husayn al-Kâbi (the libertine) on account of his dissolute habits. According to al-Kâbiy al-Baghdâdî, al-Bahlil, who came from Khurasan, was born in the year 162 (778-779). He afterwards went to Baghdad and became one of the most confidential friends of the illustrious Caliph al-Amin. When the latter perished soon afterwards, al-Bahlil composed an elegy on the tragic event; he remained at the court of the new successor; however and was held in great esteem till his death at a great age in 250 (864). The biographers give further information about his relationship to Abû Nuwas. Cf. p. 192 above.

BAHÎRÁ, A ham-sheep or a sheep with slit ears. The Korân and the ancient poetry (cf. Ibn Khîshân, 38) shows that the ancient Arabs used to carry out certain religious ceremonies with respect to their cattle, which consisted firstly in letting the animal go loose without making any use of it whatsoever, and secondly in limiting to males permission to eat its flesh (after it had died). In various cases the animals bore special names (Bahîrâ, al-Bâhiy or Bahlil; on these names see Wellhausen as cited below). The lexicographers are not quite agreed on the point in which cases a camel or sheep had its ear slit. According to some, it was after it had borne ten young ones, according to others when its fifth young one was female etc. — Muhammad abolished these customs and stigmatized them as arbitrary inventions, Surâ 5, 109: "Allâh has made another bahtî or wâjî, or wâjî or Âlîmî, but the unbelievers have invented lies against God, and the greater part of them do not understand it."

Surâ 6, 170: "and they say: these cattle and fruits of the earth are sacred; none shall eat thereof but whom we wish (so they say); and (there are) cattle on whose backs it is forbidden (to ride) etc.;" verse 140: "and they say: That which is in the bellies of these animals, is only for our men and forbidden to our wives; but it be it be dead then both parts of it. He will reward them for their abstinence [these things to him] for he is wise and Knowing".

(B. A. Wessen.)

BAHÎRÁ, the name of a Christian monk. It is related that in his twelfth year Muhammad was taken by his uncle Abû Tâlib on a caravan journey to Syria. When the travellers were near or in Bâqra, a monk who lived there in his cell notified that one of them was accompanied by a cloud and that the branches of the tree, under which he sat, sprouted to give him shade. The monk whose name was Bahîrâ thereupon invited the whole company to eat with him. They went, but left Muhammad behind to guard the caravan. Bahîrâ missed among his guests him, whose features were described in his books as those of the last prophet, and asked if they were really all. On learning that one had been left he insisted on the boy's coming too. When the latter was sent for and entered, he gazed fixedly at him and asked him by Allah and al-[Uzâr] to answer his questions. After Muhammad had taken the opportunity to show his aversion to heathen deities, he convinced him by his answers that he was the promised one. The monk theretopon warned Abû Tâlib to protect the youth from the Jews.

This is the version of the legend given by Ibn
High stm (115 et seq.); according to others Abl Bakr was present at this meeting and was even then prepared for future events. Mas'udi (ed. Barbier de Meynard, i, 146) tells us that the name of the monk (the name of the young Muhammad) and that he belonged to the 'Abd al-Kafi; according to Alabi (i, 187), his name was Georgius or Sergius. Besides this story, there is an account of a similar meeting, which happened 12 years later. Muhammad was then travelling to Syria in the service of Khaidija in the company of her servant Maisar. In Boyaj he met a monk named Nestor who recognised the future prophet by certain signs. We are also told of some men of Rhum who arrived at one of these meetings to seek the future prophet.

In the oldest versions the name of the monk is lacking (Ibn Al-Hajj, 119 et seq.). In the later Muslim and Christian sources he is called Sergius; Bhāhir (the Arians) bhāhira "chosen" is interpreted as an epithet.

On the authenticity of such legends little can be said, as we have no sources lacking. In the cycle of legends which have gathered round Muhammad, they form a class of which numerous examples appear which all show the same type, namely the tendency to prove by an apparent accident that possessors of books had learned beforehand from their books that Muhammad was to be the prophet (cf. my Mohammed en de Joden en Muslins, p. 54–60).

The figure of Balūr is, under the name Sergius, mentioned quite early in Byzantine literature in a connection which agrees with isolated Muslim traditions (cf. Sprenger, Das Leben u. d. Lehre des Mohammed, ii, 384 et seq.).

Thus Theophanes (ed. Chassers, i, 573) and Georgius Phrantzes (ed. Bekker, 295 et seq.), relate that after the first appearance of Gabriel and Muhammad's epileptic fit, Khaidija betook herself in great anxiety to Sergius, a heretical banished monk; he comforted her with the assurance that the angel was sent to all prophets.

The Muslim Bhāhir-traditions have been preserved in a much expanded form in the Bāhirā Apocalypse, a Christian production, which in its present form perhaps dates from the xiii or xiv century and has been preserved to us in several recensions in Syriac and Arabic (cf. Guthe, A Christian Bhāhirā Legend in the Zeititch, f. Assyriology, vol. xiii et seq.).

This book which is said to have been composed by one Ish'hāy falls into three parts: 1) the stories referring to the Muhammadan dynasties which Sergius Bāhir saw on Mount Sinai; 2) his conversations with the young Muhammad in the desert of Yalīhrib; 3) the prophecies of Sergius, partly a repetition of 1. In the second part it is told how Sergius communicated to Muhammad his doctrinal and laws and parts of the Korān with a view to making the Arabs acquainted with the one God. The object of this part of the work is clearly to expose Muhammad as an impostor who received his pretended revelations from a heretical monk.

Sergius is also mentioned in the literature of the middle ages.

Bibliography: 'Alam al-Adīr al-Dīn al-Bahmanī, Avicenna, one of the Ammāgh Spentas of the ancient Persians, according to Plutarch = 'Ovāna; it is also a frequent Persian proper name. In Persian chronology, Bahman denotes the eleventh month and the second day of each month.

BAHMANI DYNASTY, a line of Muhammadan kings, eighteen in number, who ruled in the Dakhin from 748 (1347) to 932 (1525); in the period of its greatest power, this kingdom, extended from Bārīr in the north to the borders of Vaidyamangar in the south, and from sea to sea on the east and west. This dynasty was founded by 'Ali Gānū (or Kānū) [q.v.], a military officer in the service of Muhammad ibn 'Alī, Sultan of Delhi (725–752 = 1324–1351); he took advantage of the troubles of his master, to found an independent kingdom in the Dakhin and assumed the title of 'Alī ad-Dīn Bahman Shāh. Fīrūzahtu presents this title by a story that 'Ali was, in his youth, a servant of a Brahman astrologer, and that while ploughing the field of his master, he found a box full of gold, which he at once took to the Brahman; pleased with 'Ali's honesty, the Brahman recommended him to Muhammad ibn Taghlaq and predicted his future greatness, at the same time making him promise that he would take the name of his former master as part of his title; but there is no historical foundation for this legend, and Colonel Haig has shown that the title "Bahman" points to Hasans's claim to be descended from Bahman, one of the mythical ancestors of the Sālid kings (Journ. of the Asiatic Soc. of Bengal, lxxii, 34).
BHAVANJ M DYNASTY — BAH^ PAR^.

Hassan made Ghularga [q.v.] his capital, but the ninth king of the dynasty, Ahmad Shah I, 845—883 (1442—1485) transferred the seat of government to Biidar [q.v.], which remained the capital of the Bahmani as long as the dynasty lasted. The Bahmani kings were constantly at war with Vikramajit, the powerful Hindu kingdom on their southern border. The prestige of the dynasty began to decline after the death of Muhammad Shah III (867—883 = 1453—1488) and his able minister, Sayyid Ghawan [q.v.]. The governors of the various provinces made themselves independent and the kingdom was divided among the Ilyahi Shafs of Berar, Nizam Shafs of Ahmadnagar, Barid Shafs of Biidar, Addi Shafs of Bidar and Kaf Shafs of Golconda.

The following list gives the dates of accession of the Bahmani kings:

BAHNAJSA, a town in Egypt. Now an unimportant village of 350 inhabitants, in the district of Beni Matar, the province of Mina, El-Bahman (the Egyptian vernacular, ‘Abd al-Bahman (the Greek ‘παράπλις’ or ‘παράπλις’) is in antiquity a famous town and even in the early Muhammadan period it was one of the most important towns in Central Egypt. It lies somewhat north of 28° 30’ E between the Bahr Yusef and the edge of the Lybian Desert. At the present day it is almost buried in sand. As one of the chief towns of Christian Egypt it is said to have once had 350 churches and was the seat of a Bishop — and held by a Byzantine garrison, it played a certain part during the Arab conquest which is reflected in an apocryphal romance of the 9th century. Under Arab rule also it remained the seat of government of a district (Kahira), when the division into provinces was carried out under the Fatimid al-Mustansir, it gave its name to the province of al-Bahmanj. Under the Turks it appears to have gradually declined, no doubt on account of the sacking of the desert. During the period of the French occupation it was being used by the inhabitants of the neighbouring villages as a quarry. It owed its importance in the middle ages chiefly to its industry. Idriis gives the following account of it. "In this town there were and are: to the present day looms on which the so-called Bahmani veils and Sultan cloths (Makiri Selhamiyah) are woven for the government, and large tents and Musulmanyah cloths. There are also many private looms there. Next to the special fabrics of the place, merchants particularly mort-

highly the veils. These veils, carpets and garments are famed throughout the land. Wool and cotton-wool were the chief raw materials used. The great forests of Bahmanj, controlled by the treasury were also famous; numerous notices of them have been preserved under the name of al-Mizaj (not al-Miraj as it is often misspelled)." Idriis and al-Maqrizi say that the town had seven years near Bahmanj during their stay in Egypt. The names of many villages in Egypt begin with the prefix Bahmanj.

BAHAR ABAF, D. S., "The White Sea", an Arab name of the Mediterranean. [See BAHAR AL-MA’AKHERIN.

BAHAR AL-ASYAD, "the Black Sea", [See BAHAR AL-MA’AKHERIN.

BAHAR AL-BA’ANAT, D. S., "the Maiden’s Sea", as the Arabs call the islands of the Archipelago on the west coast of the Persian Gulf. Idriis calls it Bahar al-Khul.

BAHAR FARS, the sea of Fars, the name given by Isyq (p. 5) and the Jewshal (p. 33—41) to the Indian Ocean by an erroneous extension of the term. In Mushin (p. 17) and the New Testament (Psalms, i. 587) the name means the horizons of the Persian Gulf proper from El-Abdul (at the mouth of the Tigris [Shatt al-Arab], to Oman including the Gulf of that name. There are dangerous shallows in the estuary of the Shatt
called al-Azbahán, "the piles", i.e. a lighthouse built on piles, where a watchman lights a fire to point out the entrance to ships; there are pearl-fisheries at the island of Ḥab Ashton opposite Al-Ballāt. The principal harbours on the coast of the Persian Gulf are ‘Abd-al-Qādir, Mehrāb, Shūna, Dāmmah, Sha‘b al-A‘la‘, Fārā, Asmar, Ṣafī, al-Madrah, Tī (Mekran), a list to which one must add Bishāh, the port of ‘Abd al-Karim (Guarān), and Līgna which have recently become important. The Persian Gulf is separated from the Indian Ocean by the Dānīr (Quriṣṭ and Owa‘in) — in which many ships are wrecked. In it are the islands of ‘Abd, Ḥab Ashton, Kūh (Kais, Ṣa‘īm), al-Līg (Lēm). The most important ports on the Arabian coast are: Kuwait, al-Ṣafi, Masqūt (now called Muscat).

BAHR AL-GHAZAL, a tributary of the White Nile and the name of a province in the Egyptian Sudan. The Bahr al-Ghazal, "the river of gazelles", arises from the union of numerous small streams which flow north and north-east from the watershed between the Congo and the Nile and receives its most important tributary, the Bahr al-Arab, from the Dānīr. After its junction with the Bahr al-Djebel which flows from the Central African lakes, the name of Bahr al-Abyad i.e. White Nile is given to the river they form. The Bahr al-Ghazal is not simply a river but a complicated, lakelike, extended system of water-courses with a slight drop; in the rainy season it is a sheet of water in breadth stretching farther than the eye can reach; on the fall of the waters it is an impenetrable swamp on which the floating barriers of plants (sudu) tend to navigation very difficult and in places quite impossible. The "Gazelle river" was first explored by a Kāhānīn merchant, Habashlī in 1854, and in 1856 by Consul Petherick. Schweinfurth afterwards described it thoroughly. Before the clearing of the sudu from the riverbed, undertaken by the English, navigation ended at the so-called Meṣhah (i.e. Mistress), the starting point for all expeditions into the adjacent lands, also called Port Reck or Meṣhah al-Mek on maps. According to Schweinfurth the Reck are a Dinka tribe in the neighbourhood.

All the district around between 5 and 10° north and 25 and 30° east and thence also the province of the Egyptian Sudan is called Bahr al-Ghazal. The country is inhabited by heathen negroes, the Shillak and the Dinka who are divided up into numerous small tribes. These peoples must have lived here for many centuries for they have become quite acclimatized to life in these swampy regions. Their chief occupation is cattle-rearing (humped-cattle) and they can work in iron which is imported. As tribes, which have been scattered and driven out of the neighbouring territories, have settled in the Bahr al-Ghazal, the population is very varied. Slatin (trans. Wingate, p. 194) mentions the following names: Kara, Kung, Fertīt, Kretisch, Buya, Tiga, Bandia, Nimim, Bongo, Monbatta and others of which each group has its own chief and fights vigorously against the others. All these tribes are heathen. The government of the Bornu district is almost Arab; however this is due to the constant expeditions (trading caravans or slave-raids) which the Arabic blood of the Kordofan and Darfur or the Dongolans of the Nile have undertaken from ancient times to the Bahr al-Ghazal. The history of the Bahr al-Ghazal is really only the history of these robber raids which are further complicated by the bitter feud between the semi-Arabs and the Dongolans.

We can only begin to speak of a history in the narrower sense of the word when Egyptians followed in the track of the slave-hunters and laid their hand on Bahr al-Ghazal. At the time of the first occupation of the Sudan by the Khaled in the middle of the sixteenth century, Bahr al-Ghazal was a dependency of Dānīr. In 1860 a semi-Arab named Zibd (Zuba‘i) won for himself princely power and undertook long expeditions with a strong position after the manner of all slave-hunters. His head quarters were called Dima Zibd and because the chief town of the Bahr al-Ghazal and the seat of a governor (mudīr). The first governor was Zibd himself, whose de facto authority was confirmed by the Khaled in 1843. Zibd then conquered Dānīr for the Egyptians but was summoned to Egypt in 1876 when he threatened to become too powerful, and not allowed to return to the Sudan for several decades. Zibd had left his son Sulaiman (Sulaiman, Sul-aiman) as his successor in Bahr al-Ghazal. The latter came into conflict with the Egyptian authorities, rebelled, and after a fierce struggle was overthrown by the Italian Romoli Gessi and executed. This Gessi Pasha was the first European governor of the Bahr al-Ghazal. He was replaced in 1884 by Lapton Bly, who had to capitulate in 1884 to the Mahdists. Even then Pasha Said al-Mahmūd had been appointed governor of Bahr al-Ghazal by the Mahdi Muhammad Ahmad. Lapton had to capitulate not because the natives, who were of course pagans, forced him to, but because his own soldiers and officers did. For after ten years Bahr al-Ghazal formed part of the kingdom of the Mahdi or rather of his Caliph Abd al-Karim. It was not till his reconquest by the English that order was restored in the Sudan and from the annual Reports on Egypt and the Sudan we can learn the progress made under Anglo-Egyptian rule. Bahr al-Ghazal like the whole of the Eastern Sudan is under the united rule of England and Egypt (Treaty of January 11, 1899).

The Bahr al-Ghazal was for a long time the subject of various diplomatic complications; for it is the frontier province of the Egyptian Sudan and borders on the French and the Belgian Congo. In 1898 a crisis arose between England and France over the Fashoda episode which might have ended in war had not France yielded the point in dispute. On the Belgian frontier there have also been occasional difficulties but according to the latest blue-books these have been finally settled.

Agent and Consul-General on the Finances, Administration, and Condition of Egypt and the Sudan; Torrebi, Fani Pasha, Kitch al-Sulīm kumsa yadda Garfiid al-ṣulīm (Cairo, 1919 et seq); further works by Schweinfurth on the Bahr al-Ghazal in his Bibliography: Veröffentlichte Briefe, Aufsätze und Werke, 1860—1897 (Berlin). (G. H. Becker.)
BAHR AL-HIND is the usual name amongst the Arabs for the Indian Ocean which is also called bahar ul-Zanj {from its western shores or the part for the whole - al-bahar al-Hindhi}; the expression bahar Farsis also, sometimes, includes the whole ocean.

According to Ibn Rumah its eastern shores begin at Tabb Makrank, its western at "Adam. Abu 'l-Fiday gives the Bahar al-Sin as its eastern boundary, al-Hind as the northern, and al-Yaman as the western, while the southern is unknown.

The various parts of the ocean bear special names derived from various lands and islands. If we neglect the northern arms, the Bahar al-Kulum and the Bahar Farsis in the narrower sense, which are dealt with in separate articles, we have first the Bahar al-Yaman stretching along the south coast of Arabia with the Khayrun Muryan (Keria Muira) islands and Sokoto.

On the African coast we have, beginning at the Straits of Madinah, first the land of Bahr bar, i.e. Somaliland to the harbour of Manka, then the island of the Zarab [see Bahr al-Zarab] with the towns of Barawa, Malinda, Mabasa and the Island of Zanzibar i.e. roughly British and German East Africa as far as the island of Ujaba (undoubtedly Madagascar). Sofala is joined to Kbanghi and finally at an uncertain distance is al-Wakwak.

If one sets out from the Bahar Farsis at Tabb Makrank he comes to the coast of the al-Sin with the delta of the Indus and the commercial town of Al-Diubah. On the shores of the Bahr al-Luwa lie the towns of Kankaia (Canaya), Shifara, Salinah and Suddahama (Goua). The archipelago of al-Dhajdah, the Laccadives and the Maldivies, separates the Bahr Luka from the Bahr Harkand. The last port on the Malabar coast is Kullam Mah (Quilon) the most northerly of its islands is Suradith (Ceylon). The route to the East Indies appears to have lain straight across the Bahr Harkand to the island of al-Ramani which is reached by the waters of the Bahr Harkand and the Bahar Shalabhi; apparently al-Ramani (al-Rami, al-Raham = al-Ramani, whence the sea is called Bahar Luman) is Sumatra, to be more accurate North Sumatra while Shalabi is South Malacca. Voyagers sailing to China must have kept somewhat further north for they touched at the islands of Lankshala or Landaqualla, the Nicobars, to the north of which are placed the Andaman Islands, and from there reached Kaish Bar (Kedah) on the Malay Peninsula; the Straits of Malacca is therefore called Bahar Kalab (Kalak Bahr) while the Bahar Shalabhi, when it is distinguished from it, appears to be the sea adjoining it on the south. We have now reached the land of the Maharadj, the centre of which is the land of al-Zahadji. This name originally denoted Celebes and South Sumatra, where Sarthin = Palembang is to be sought for; then its use was extended to include Java (Djaka) and in its political application it includes a series of smaller islands and the coast of Malacca. Beyond these islands is the Bahr Kardangi, the Gulf of Siam which is continued on the coast of Kinmar (Kinhatt = Cambodge) in the Bahr Scarf, the sea of Annam and the waters adjoining it on the South. Passing the island of Sandarivial (Hu-nan) we reach the al-Bahar al-Zahad, the Chinese Sea where Khanf (Hang-Chu) is the great emporium for the trade with the west. The knowledge of the Arabs concerning Silla (Corea) and the Wok-wai Islands (Japan) was vague and limited.

The notions of the Arabs of the tenth century concerning the Bahar al-Hind become more and more vague as one goes to the East and South, and the interpretation of their statements more uncertain. In many cases they have merely followed their Greek predecessors; they have, in addition, utilised the accounts of their own voyages. Details from different sources were never properly assimilated to form a uniform picture. Sometimes the Bahar al-Hind appears to pass into the "Sea of Darkness", in which mariners driven out of their course are said to be tossed about for ever; sometimes, it is believed that it joins "the Black Sea" on the North of Asia, sometimes again, East Asia and South Africa appear to be connected in the name of the al-Wakwak [i.e., for Japan as well as for a land in the South of Africa, sometimes for Madagascar, above]. This idea is supported by Idriyf according to whom the Zobiad islands are opposite the land of Zanj.

The voyages of the Arabs and Persians, who availed themselves of the monsoons, had as their starting place the Persian Gulf; Strait and Shahr are important harbours there. The most important commercial centres appear to have been the land of Zanj, to which merchants sailed even from al-Zahadji - Madagascar itself was ultimately colonised from the Malay Islands, - and al-Zahadji itself, which had relations with China. The commerce of the Muslims with China came to a standstill in 248 (878) because of political changes. The Arab authors usually do nothing but hand on what was new on the old material. It was not till much later under the Mongols that intercourse again became active as Ibn Batutta's account of his voyage shows.

BAHR AL-KHAZAR. "Sea of the Khazar" (Per. darjurd Khazarun), the Caspian Sea is so-called by most Arab geographers, after the Khazar, to whom they ascribe the land on the north shore of this sea, with the important commercial centre of Ili (not far from the mouth of the Volga), belonging, in the best period of Arab geographical literature, in the 10th (xth) century, more rarely by the Khwaradshah, following him Kudimun and Masthiti the Black Sea (with the Sea of Azov) is denoted by the same word, probably because the dominion of the Khazars included a part of the Peninsula of the Crimea. This name does not appear to have been used outside the Mahammadan world; the Old Russian name *Khvalischte (variants: Khvalischev).
"Khwaitukshef" mere" is certainly to be connected with the name of the land of Khurṣum, although the Arabs and Persians have always applied the name of Lake (or Sea) of Khwaitursi only to the Sea of Aral. The Caspian Sea is also called in Muhammadan literature after various adjoining lands, "Sea of Dùndjina" (the "Hypercian Sea" of the ancients), "Sea of Absàfkân" (from the harbour at the mouth of the Gârân), "Sea of Tâlisân (or Masandâm), "Sea of Dâliman", "Sea of Gilam", and in later times (since the Mongol period), "Sea of Shâvâvâ", or "Sea of Bâhî" (the latter name appears in the middle ages in European works also in addition to the name "Sea of Sarâl"); the name "Bahr al-Kulzûm" which is properly the name of the Red Sea is frequently also transferred to the Caspian Sea. In Turkish literature, the expressions "Bahr-i Gilâma" (after the famous nomadic people, the predecessors of the Turkomans and Osmanli) and "Al-Dûhîs" (more frequently applied to the Mediterranean) are also used.

BAHR KH-AHRIZM of BHUMAIKH KH-XIRM = Sea of Araz [q.v.]

BAHR AL-KULZUM, the Red Sea. The ancient names for the Red Sea were not adopted by the Arabs although the Hebrew name for the "Sea of Reeds" was known to them and they erroneously applied it to the whole Red Sea. They much preferred to call it after the town of Kaluzum, the ancient Clycns, at its northern end, near Suez. The name Bahir al-Hijâb is very popular and even appears in the Turkish Muâbîh and in modern maps, while Bahr Sues only denotes the Gulf of Suez. The Gulf of 'Akhâri was also known as Sub al-Hijâb. All these have shared the fate of all names buried under sand, the underground secular upheaval and are lifted up. According to the Muhammadan conception a great East and West Sea flows from the Ocean, al-Bahr al-Muâbîh, which surrounds the earth and these approach nearest one another at Kaluzum and al-Farâmûs (Isthmus of Suez). The western arm of the East Sea, also called the Indian or Chinese Ocean is the Bahir al-Kulzûm; its northern limit has been given; the natural termination at the Bahr al-Mandâm is usually taken as its southern and but some include the Gulf of Aiden, the Khalîj al-Bârbarî (also Bahrir) as an entrance to it. In almost all the geographers the description of the towns on its coast begins at Bahir al-Mandâm, the narrow strait of which has given rise to the story that the Red Sea was once a fertile plain. It was a certain king removed a mountain at Bahir al-Mandâm and made a small canal through which the Indian Ocean could rush in and flood the country of an enemy of his, that the whole Ocean burst in and thus a new arm of the sea took the place of a flourishing country. The following measurements are given: length, 50 voyages, and greatest breadth 3 days' journey; according to others from 1500 to 400 miles in length with a breadth of 90 miles (the actual length from Suez to Bahr al-Mandâm is 1400 miles and the greatest breadth 300 miles).

The Bahir al-Kulzûm had a bad name among the Arabs on account of its storms and sunken rocks (coral-reefs), especially the northern parts, which on this account were for a time avoided by traffic [see article AÎHU]. The southern end of the Peninsula of Sinaí was especially feared, where the winds from the two northern arms met one another, particularly near the islands of Tifân (in Arabic usually Tur), at the Gulf of 'Akhâri and Dibbât (undoubtedly to be identified with Dibbâtât or Dibba) at the entrance to the Gulf of Suez. The scene of the destruction of Pharaoh and his army, so often mentioned in the Korâan was somewhat vaguely located in this region. According to Kâfâshâni, Qara al-Sâbî, 225, 2 and Osmán, Turâz 123 the "Sea of Reeds" was called Bahr al-Mârâhâl which may be compared with the Marâhâl, Marâhâl of Christian pilgrims. On account of the storms it was, and is, the custom of the local mariners to hug the coast, sailing only by day and anchoring at night in the shelter of the coral reefs. Nevertheless the commerce on the Red Sea has always been considerable. In early Muhammadan times a canal united the Nile with Kaluzum, and corn-ships plied between Képîs and al-Dâhir, the port of Medîna. The route of the India-European traffic, which was in the hands of the Jews, was over the Isthmus of Suez and thence by sea again, without touching Egypt, to al-Dâhir and Djîlda and thence on to India and China. In the most flourishing period of the 'Abbâsîd caliphate the chief trade in spices naturally followed the route by Baghîdî, but with the increasing importance of Egypt it was gradually diverted to the Nile valley. Aiden was the great commercial centre; from there ships went forth to the harbours of the sacred towns, to al-Kusîr, the port for the Egyptian Kûsî, then for several centuries to 'Aidhâb; it was not till the end of the ninth (xive) century that al-Fârî in the north at the foot of Sinaí won greater importance. From Kusîr, or Aidhàb and al-Fârî there was great traffic to Djîlda on account of the pilgrims and the southern coast towns. Navigation seemed to have always been more flourishing in the southern half of the Red Sea than in the north, owing to the ancient civilisation of the adjoining lands and the more favourable winds. In ancient times, for example, intercourse had been established between Yaman and Abyssinia. The Bahr al-Mandâm and lands adjoining it have from the earliest times formed a sort of bridge for migrations. Life and commerce on the Red Sea, the kinds of ships and the management of harbours are discussed in Ikhârîn’s Arba’îyûn. Here we find many terms which also appear on the coast of East Africa and reflect the terms in use in the Indian Ocean. The horrors of a sea voyage are often described by Arab travellers; they sought to avert all sorts of magical practices of which some have been collected in the Archiv für Religionswissenschaft, i. (1908) p. 157 et seq.

The following places located in the Bahir al-Kulzûm have a fabulous character. The magnetic mountain, south of Kaluzum, on account of whose attraction for iron the ships of the district were
made without any parts of iron, and the islands of al-Djasam or al-Djasim (the "sky"), fam, an animal that ascends information and bears it to the Anti-Christ (al-Dajjal). We are also told of fishes, 200 feet long, of some with the heads of owls, and other wonderful marine animals. All these features arise partly from inaccurate observation, and partly from the material of Oriental romances such as the Romance of Alexander.

BAHR LUT, or "Lot's Sea," is the modern Arab name for the Dead Sea which is usually called by the Arab Geographers al-bahāra amraṣīla "the Dead Sea," al-bahāra amraṣīla "the stinking Sea," al-bahāra amraṣīla "the sunken Sea." (because al-arw al-mosāfah, the land that has been sunken), the arc ġawwar Lüt is placed, the arc ġawwar Şaghīr (or Chōr), the Sea of Gavagh, also the Sea of Salt and of Gomorrah. The Persian Naṣir-i Khosrow (v. 8th century) appears to be the first geographer to know the name ġawwar Lüt.

The name Bahar Lüt refers to the story in Genesis xix which is often referred to in the Koran though the sea itself is not named. The present-day name, names in the neighbourhood of the Dead Sea — e.g., Liefel Suqum (Usuchum) — and legends current among the natives, the catastrophe related in Genesis xix. These are certainly found on popular than on learned tradition.

Geography. Between the steep and barren slopes of the "desert of Judah" and the mountainous land of Moab lies the Dead Sea, like a lake mirror 1150 feet below sea-level from north to south. Its length is about 50 miles, its midbreadth: 8 miles and it has no exit. The deepest part of its bottom is 2600 feet below sea-level. An isthmus (lištu "tongue") running out from its east shore separates the southern, quite shallow part from the northern basin. While on the East and West shores the mountains rise up from the shore to a height of over 3000 feet, the land is lying in the north, at the mouth of the Jordan and in the south, where on the east shore of the sebkha, Pentapolis (Genesis xix and six) is to be sought for, it only rises slowly into al-Ghûn and al-ʿArabah. The composition of its water, so extraordinarily rich in salt is unsuited to organic life and is even an impediment to navigation.

On only a few places on the shore, inhabited cases of almost tropical character have survived. Geology. The Dead Sea fills the deepest part of the great Syrian system of depressions which was formed at the close of the Tertiary period. In the periods of alternate drought and rain of the diluvial epoch, the great floods filled the greater part of the Jordan valley and a part of the 'Arabah with an inland sea; this was never connected with the Red Sea. There being no exit to this basin the water, which, to begin with, flowed partly from springs rich in minerals, came in course of time, by evaporation to contain a high percentage of salt of peculiar composition. In the dry period of historic times the sea has shrunk to the bed it, at present, occupied. In the last century a gradual rising of the level of the sea has been definitely ascertained. Tectonic disturbances have affected the surrounding district down to the present day. It is to one of the most recent of these that the origin of the southern basin is due.

The procuring of asphalt from the Dead Sea, as in antiquity (cf. the name lacus Asphaliti) seems to have been an important business in the middle ages, also. The asphalt was used as a protection against insects in vineyards. It was also used for many medicinal purposes. To the waters of the sea itself, healing powers were ascribed.

The rich products of the coast of Zogha (near the modern ghawa al-Sahlwa) were borne across the Dead Sea. The Frankish Crusaders also sailed on it. Since the Crusades the political importance of the Sea and the surrounding country has almost completely disappeared.

BAHR AL-MAGHRIB. Among the Arabs the Mediterranean has a great many names (in many of these the name of the part is applied to the whole e.g., Bahar Tamāf, l. 95). The most frequent is: 1. Bahar al-Maghrib, West Sea, or Bahar al-Maghrīb or al-Chari (Western Sea), rarely al-Ṣūbī; 2. Bahar al-Enta, Sea of the Romans and Greeks, or Bahar al-Nāmī, Greeko-Roman Sea (more rarely Bahar al-Enta, sea of the Franks or Europeans, applied rather to the European part); 3. Bahar al-Sha'ba or al-Bahr al-Sawm, Syran Sea, Bahar al-Mudir, al-Mudir or al-Mudir or Mare Mediterraneum, Central Sea, or the "Sea in the midst of Lands" is an early name, while al-Bahr al-Fīli or al-Fīli or Mare Internum, Inner Sea, appears to be modern. The names Bahar al-Tamam or Bahar Masr are rare and in the first instance apply only to the South East part. It is often called al-Bahr al-Maghrib, the Salt Sea in contradistinction to the Nile (al-Bahr) with its fresh water, while it is called al-Bahr al-Bayrāq or the White Sea (Turkish: ʿAl-Düğe, see this article).
and al-Bahr al-Abhar = Green Sea in opposition to the Atlantic Ocean, which is called al-Fud d al-Muḥīṭ = the Western Sea which surrounds the world, or Bahr al-Zulma on al-Zulmuṭ, Sea of Darkness or Darkness, or al-Bahr al-Muṣlim, Dark Sea (Marc Tuchman), for the name al-Bahr al-Àrabi, Black Sea also appears, as well as al-Bahr at-Álam and al-Ákhbar, Largest Sea (by which al-Muḥīṭ is meant). Indeed the Mediterranean is sometimes so called.

The seas of Arabia geography, the Mediterranean Sea does not begin at the Strait of Gibraltar, which is called al-Zuhr, the Iberian, but includes also the Gulf of Cadiz to the north-west of the strait and to the south-west, the south, the Mediterranean is so wide that it is believed to be wide of the pillars of Hercules, where the two seas, the White or Green (Mediterranean) and the Black (Atlantic Ocean, also called Khatem from Qay巴士 = 'finish' meet, whose rising and falling cause the ebb and flow of the tides, madd and ghub). The formation of the Mediterranean is regarded by the Arabs, according to the tradition, as having been brought about by a great inundation of the Atlantic Ocean into the lower lying lands of what is now a sea; or the Mediterranean was created in ancient times by the sea and the piercing of the Strait of Gibraltar is said to have been effected by fabulous Egyptian Kings or by Alexander the Great (cf. the story of the pillars of Hercules as a matter of fact geology shows that Spain and Morocco were once connected). The Adriatic Sea is usually called Bahr al-Dhīn al-Āmm or al-Dhīn, or Bahr al-Dhīn, Sea of Venice (or of the Venetians), the Aegean Sea, Bahṣ or al-Dhīn, Sea of Constantineople (often also the Hellasport, Sea of Marmora and the Bosporus). The Black Sea is called Bahr Bucsa or Bucsa (Pontus Euxinus) which often appears in the corrupt form Nīșa al-Dhīn, Bahr Asphīšt, Sea of the Russians and Bulgarians, or Bahr al-Sūr, Crimsea Sea and in later times also Bahr al-Årabi = Black Sea, like the Turkish Bahr Bağış or, Bahr Khatem or, Bahr az-Zulma. The Sea of Azov is called Bahr Mawṣīf al-Dhīn and also Mawṣīf al-Dhīn or Mawṣīf al-Dhīn = Palaus Mautotis, corrupted from Mauṣīf al-Dhīn.

Various calculations of the extent of the Mediterranean from East to West (its length) were given by the Arabs following Ptolemy's estimate, which is too high; on these cf. Reinaud, *Introduction to Abulín's Geography*, p. 133-xvi.

While in antiquity the Mediterranean facilitated the commerce of the Phoenicians, Carthaginians and Greeks and in the Roman Empire bound together its European, African and Asiatic provinces, after the Arab conquest of the Syrian and North African coast, and the temporary conquest of Spain and the principal islands, in the middle of the seventh century, it separated Muhammadan culture from the Christian civilization of Central Europe; even the expulsion of the Franks from Italy later opposed Muhammadan expansion. It was countered by the great eastern advance of the Turks over Asia Minor and the Balkan Peninsula in the xth—xvth centuries, since the medieval Crusades were a failure. It was not till the political and military decline of the Muhammadan states and provinces (except Morocco) dependent on Turkey in the Mediterranean in the xvth and xixth centuries, and the occupation of the most important stations by Albania, the mistress of the seas, and the conquest of Algiers (1830) and the occupation of Tunis by the French and of Egypt by the English that the permanent ascendency of Christian-European civilization and policy was assured in all the lands adjoining the Mediterranean.

**BAHR MUḤĪṬ.** Following the tradition of the Greek geographers the Arabs have conceived of the Ocean as a kind of vast river, circular in its general form, surrounding the whole habitable earth. They have for this reason called it Bahr Muḥīṭ, the surrounding sea. They also give it the names of Outer Sea, Sea of Darkness, or Green Sea. Idrīsī considers the earth placed in the depth of the ocean to an egg immersed in water contained in a cup. As the water surrounds the earth, the air surrounds the water and fire envelops the air under the convavity of the sphere of the Moon.

In the opinion of some oriental scientists, all seas must communicate with the ocean; they are only gulfs or prolongations of it. The ocean is as it were the 'source' of all other seas; this is an opinion widely spread. Masʿūdī tells us (Praefatio, i. 258). Even so, apparently shut in, we are thought to communicate with another, either underground or by some unknown channel. Thus it has been thought that the sea of the Khurasan was connected with the Russian Sea or of Trebizond, the sea of Khwarizm with that of the Khurasan, that of Zaghur with that of the Khurasan and that of Herat with the Sea of Persia. But this is not the opinion of all geographers (vide Dimagḥī, ed. Mohrun, p. 127).—Masʿūdī tells us that certain scholars believe in an Ocean of fresh water distinct from the Outer Sea which would be the source of all rivers (Praefatio, i. 258).

The Ocean contains 27,000 islands, says the author of the *Constitution de la Mer* (p. 45) and refers this figure to Ptolemy. In the North-east at the extreme limit of the habitable world is the legendary island of Thule, mentioned by Pythias and Ptolemy, situated in 63° of North latitude. In its eastern part the Ocean washes the coast of Britain, numerous towns in France and Andalusia (Spain), several towns on the coast of the Maghrīb and the country of the Berbers the people who live in the cold lands). It also encloses the islands of the Blessed (vide Masʿūdī, *Kitāb al-Āmār*, p. 98). It is in these islands of the Blessed that Idrīsī places the statues erected by Hercules, statues whose attitude and inscriptions indicated to voyagers that they could go no further. Masʿūdī places these statues sometimes at Cadiz, sometimes in the Strait of Gibraltar. They served also as
lighthouses. The Mediterranean has been formed, according to the Arabs, by the Ocean, which burst a natural wall connecting Andalusia to the Maghreb and poured over the land. Africa was thought to terminate at no great distance to the south of Egypt; the Ocean was found there again washing the shores of the land of the Negroes.

To the south of Asia, the Ocean took the names of Sea of Heron, of Serendib, of Harkand, of Kusar, of Maharadj, of Zanjd. Its eastern part was called the Sea of Sanaf or Sea of China. [See BAHR AL-HIND.]

Arab scientists have discussed the cause of tides and of the saltiness of the sea. As a rule, they attributed tides to the action of the moon, regarding the earth as a sort of animal and the seas as its humours; when the moon waxes it provokes a more active circulation of the humours in the animal. As to the saltiness of the sea, Mas'udi remarks that it cannot be due to the effect of the heat on fresh water as many of the ancients believed, for nothing similar is produced by distillation. [loc. cit., p. 279.]

The Arab geographers have also given measurements of the length of the habitable earth which is that of the diameter of the ocean. (Carra de Vaux.)

BAHR AL-ULUM, whose real name is Abu l-Abbas Muhammad 'Abd al-Ali b. Nisai al-Din b. Khiir Muhammad Sahali, was born 1144 (1734) in the Firda'il Majall, Lucknow, which had been given to his father by Arangob. The family had came originally from Herat and had received grants of land from Akbar. His great-grandfather settled in the village of Sahali, near Lucknow. Both his grandfather and father were renowned as scholars and religious teachers. Bahr al-Ulum was taught by his father and his father's successor. Malik Kamal al-Din, and eventually succeeded to his father's chair. But a controversial treatise written by him having stirred up bad blood between the Shi'as and Sunnis, he was expelled by Shuja' al-Dawla, king of Oudh, and lived for some time in Shahjahanpur under the protection of its Nawab, 'Abd Allah Khan. After the murder of the Nawab in 1759, he went to Rangpur and Bihar and finally settled in Malwa, where he died on the 12th Radjab, 1225 (1810). In South India he is known as Malik al-Uluma' (king of the learned), in North India as Bahr al-Ulum (Ocean of learning). He was a very successful teacher and a voluminous writer, his chief works being commentaries on Arabic texts-books of jurisprudence, logic and scholastic theology.

Bibliography: Al-Nawaw (Journal of the Nawaw al-Uluma, April-June 1907); Muhammad Siddiq Hasan Khan, Abu'l-'Ala al-Nawawi, p. 927; Hasan b. 'Abd Allah al-'Albasah, Abu'l-'Ala al-Nawawi, p. 34. (M. Hidayet Hosain.)

BAHR AL-ZANDI. By the Bahar al-Zandi the Ocean means the western part of the Indian Ocean, Bahar al-Hind (q.v.) which washes the East coast of Africa from the Gulf of Aden i.e. the Kharq al-Barbari to Sofala and Madagascar which was as far as the scanty knowledge of the Arabs extended. The name is derived from the adjoining coast which is called the Bilad al-Zandi or Zanguebar, Land of the Zanjd. The name Zandji is applied by the Arabs to the black Bantu negroes who are sharply distinguished from the Berbers and Abyssinians. The name Zandji is very old, even Ptolemy knows Zephyria, and Konoma Indicopoulos writes of the same Zephyria. The name itself has not been explained. Nowadays it is applied to the Island of Zanzibar and to a tributary of the Zambezi which bears the name of Zangue. The Arab notices of the coast and sea of the Zandj are more than scanty and partly contradictory. The sea was feared and avoided. Only the Arab travellers Mas'udi and Ibn Battuta sailed across it, but they tell us more about the land and its people than about the sea itself. It is clear that the Arabs imagined the coast to run in quite another direction to what it actually does. W. Tomasek has given interesting reconstructions of their cartographical notions in his Die topographischen Conzepte des indischen Seegebietes (Vienna, 1899), while all notices by the Arab geographers on the sea and land of the Zanj have been collected in a masterly fashion by L. Marcel Devic (Le Pays des Zanji ou la Côte Orientale d'Afrique au Moyen Age, Paris, 1883). Navigation on this part of the Indian Ocean is regulated by the periodic monsoons whereas the ancient relations between South Arabia and North-West India and the East African coast. For further information see the article: BAHR AL-HIND and ZANJD.

BAHRÁ, an Arabian tribe. Genealogical table: Bahrâ b. 'Amr b. al-Hafid b. Koja'a. The tribe had its settlement in the plain of Hims (Handali, p. 132); Suwa and Mayyilih Bahrah, mentioned in the Syriac campaign of the years 13 (655) were among its watering-places. Cf. Tabari (ed. de Goeje), i. 2114, 2122, 2124; Babelfort (ed. de Goeje), 110: Yakkil, Minqam, i. 172, ii. 557; de Goeje, Memoire sur la conquete de la Syrie, 39-43.

Ibn Khallikan (ed. Wustenfeld, iv. 46) asserts that the Bahrah, like their neighbours, the Tanuq and the Taghlib, professed Christianity, though according to al-Wakfi al-Adawi in Wellhausen, Sktma und der bed-rheinischen, iv. 170, thirteen delegates appeared in Medina to pay honour to Muhammad in the year 9 (631). Cf. also Tabari, i. 1750.

Bibliography: besides the above-mentioned, Sprenger, Das Leben und die Lehre des Muhammed, iii. 433.

AL-BAHRAIN, a group of islands not far from the west coast of the Persian Gulf, in 30° 10′ N. The largest of the islands is Bahrain, called Oweil or Samak (Fish), about 30 miles long and 12 broad. The chief town and port is called Manama; the smaller islands are Muharib, Arad, Siri, Nabi Saliq, Shay and Khasifa. The islands are famed for the pearl-fishing carried on here from ancient times; the Arab geographer Idrisi gives an accurate description of the operations. The name Bahrayn (two seas) seems to be derived from the peninsula which stretches from al-Jasa' and by which the sea is divided. The islands have been inhabited since the beginnings of history on account of the pearl-fisheries; it is said that the elder Sargun conquered them. The name of the island Tilwân has come down from the Assyrian period and corresponds to the form Tylus transmitted by Theophrastus and Pliny; the name Aradus is also mentioned by the above named classical author. In the middle ages Bahraim belonged to the dominions of the caliphate. The Portuguese had a settlement here from 1507-1622.
which they had to give up on the loss of Hormuz; from 1735—1784 the Persians ruled it; Bahrain then gained a certain independence under native princes but since 1801 it has been under English protection and the Indian resident appointed by the Indian government is the real ruler of the islands, being the Sijahkh’s rule only nominal.

Besides the pearl-fisheries the islands derive considerable revenue from the beautiful date-palm groves which cover the well-watered land. The inhabitants who speak Arabic, and as a rule also understand Persian, are of mixed race; on account of the situation of the islands remote from the world, their customs have preserved their ancient character; for example falconnry is still pursued here quite in the mediaeval fashion.

On the largest of the islands are a large number of carefully built stone tombs now empty, divided into larger and smaller groups; the largest group is at the village of Ahli ‘Ali about 6 miles from the port of the island, i.e. the Persian Gulf. It is only quite recently that these graves have attracted the attention of archaeologists. The graves, as yet investigated, most of which were opened by the English resident Mr. Prideaux, all show exactly the same plan. The entrance faces the west; the building is two storied, of carefully hewn square blocks of stone, the under story being higher than the upper. On both sides of a corridor leading to the east are niches which were designed to hold cists stacked one above the other. There are small holes beside the niches in which apparently wooden bars could be placed right across the corridor, on which offerings to the dead, and votive gifts were to be hung.

Unfortunately nothing found on the spot gives a clue to the historical origin of these tombs. Bones of men and animals have been found there, including two skulls in a striking degree dolichocephalic, and a large number of bones of fieldmice (Arab. parbāṭ) which appear to have crept in here to die, after their custom; in addition there has been found a small portion of an ivory ox, a golden armet and an enormous quantities of whole and broken earthenware vessels ornamented in a peculiar fashion with black stripes. These finds do not constitute a secure foundation for any archaeological hypothesis; no trace of any inscriptions has as yet come to light.

The plan on which these graves are built agrees in a striking fashion with those known of the Phoenicians; this was even noticed by Strabo who says that the tombs in Bahrain are similar to those of the Phoenicians (xvi. 3). Herodotus says in the beginning of his history that the Phoenicians came from the Erythraean Sea, i.e., the Persian Gulf. The similarity of the place-names Arabas and Tylos, Tyrus points in the same direction. The English traveller Theodore Bent who was the first to rescue these tombs from oblivion, has, relying on these facts, called these tombs “Phoenician” without further consideration. Other investigators have taken objection to this supposition and say the tombs date from a much later period and that Bahrain was discovered by the population of the opposite coast between Līnga and Būshahr. The express testimony of Herodotus and Strabo can scarcely be set aside by this supposition; it may be that the tombs were again used by later generations but it cannot be denied that the civilization, which first made them, was closely allied to the Phoenician; the final solution of this difficult question will only be settled by the systematic investigation of a much larger number of tombs than have hitherto been opened.

BAHRĀM (Avestan varēshkhaona, name of a genius of victory, Pahlavi varahram), is in Persian the name of the planet Mars and of the twentieth day of each month.

Bahrām is the name of five kings of the Sassanian dynasty. Bahrām I (275—279 A.D.), son of Sapor I and brother of Ormuzd I, preceded the latter on the throne. After three years he was succeeded by his son Bahrām II (246—293). During his reign the Roman Emperor Carus appeared before Ctesiphon which was only saved by his sudden death in 283. Bahrām conquered Sūrūr from the Sakas and appointed his son Bahrām III as governor of it on which account he received the epithet Sārūr Shāh, "King of the Sakas"; a bas-relief in Shāpūr testifies to this conquest (see Dīpalavī, Art Antiquë de la Perse, Vol. v., Pl. xxii.). Bahrām III reigned only four months. — Bahrām IV was the brother and successor of Sapor III (388—399); he bore the name of Kermān Shāh or "King of Kermān"; he died a violent death. — Bahrām V (430—435), son of Yeвладūr I was brought up by the Arabs at al-Jīra (cf. article BAṬIVA); al-Mundhir I b. al-Narmān was entrusted with his education (Tabārī, l. 855); his strength and skill in bodily exercises earned him the name of Gūr "wild ass" not given, as the legend has it, because he transmuted a lion and a wild ass with one arrow. He conquered the king of the Ephēto-Sarabans in Bavia, slaying him with his own hand in the battle of Kishmān at Merv and dedicated the crown of the vanquished king to the fire-temple Aḏhargumup (Alm. Aṣrār). He persecuted the Christians and declared a war against the Romans, which in spite of the efforts of his general Mīr-Nārš was not a successful one; although the Persians had seized the town of Nishān they were glad to make peace in 421. Bahrām died after a fall while hunting. The Būyids claim to be descended from him.

Bahrām Cōbān, a member of the family of the Mīrān, had defeated the Turks in Svanetia and been himself defeated by the Romans in Armenia when in 589 he rebelled during the reign of Ormuzd IV; he reckoned on the support of the aristocracy and of the Mobades and seized the capital, where he struck coin. The army which was in Mesopotamia in the field against the Romans, declared first for Khusraw II who was proclaimed king but soon had to flee to the Emperor Maurice. An army composed of Persians under Būyūd and Romans under Narseh besieged Bahrām Cōbān in Balaroth in Aḏharvājīnd and forced him to flee to the Turks who afterwards put him to death.

BAHRAM SHAH (SULTAN- GHazi Yamin Al-Dawla Bahrám Shah e Mawdu' e Isfahán), Ghaznavi al-tilim (511-552 = 1118-1157).

The greater portion of his long reign was quiet and uneventful, but in the year 1148 Ghazna was attacked by the Ghur chief Saif al-Din Suri whose brother Khushal al-Din Muhammad had been put to death by the Ghaznavi king. Bahrám Shah was forced to retire to India and Ghazna fell into the hands of Saif al-Din. He did not however hold his conquest long, for Bahrám Shah returned with fresh forces in the following year, regained his kingdom and put Saif al-Din to death. This drew upon him the vengeance of a third Ghur chief, 'Ali al-Din Husain who marched against Ghazna with a large army, drove Bahrám Shah to India and sacked his capital with ruthless cruelty. That gained him the name of Udïn-shah (the "world-consumer") (A. H. 543 of 546). The contemporary authority of the Tabârik-i Náširi states that Bahrám Shah once more regained his throne after 'Ali al-Din had been defeated by the Saljuq Saidar, and that he died at Ghazna. The Turāzik Gëntîs and Mir Khwand are therefore wrong in placing the death of Bahrám Shah before the sack of Ghazna.

Bahrám Shah was a prominent patron of Persian literature. The poets Manû'î ud Salâm and Sâmî lived at his court, and the latter's Hādštî as well as Neâr Allah's Persian version of Kalâla and Dimna were dedicated to him.

BAHRAM SHAH (TAHMUR SHAH), the Saljuq of Hind, was raised to the throne of Khirm by the Atabeg Mu'ayyad al-Din Rubâb in succession to his father on the latter's death in 565 (1170) but soon afterwards had to make way for his elder brother Arslân Shah [q.v.]. The two brothers then fought for one another with varying success till the death of Bahrám Shah in 570 (1173-1175).

Bibliography: Recueil des textes relatifs à l'Inde, i. 55 at sqq., 174; Zögler, der Deutschen Morgenlandische Gesellschaft, vol. 37, sqq. at sqq. 373. [q.v.]

BAHRAM SHAH, AL-MALIK AL-AMMAD, the first of Farrukh Shah, son of Shahbázshah, son of Aliyâb, great-nephew of Saladin, received Bâlak from the latter on the death of his father in 1182 (578) and retained it on the division of the inheritance on the death of Saladin in 1193 (589). In 1226 (625) the ruthless Ashraf Münûz, lord of Damascus, demanded Bâlak back from him. Bahrám refused to give up his property but after a year's siege was forced to exchange it for the small town of Zehâdân (between Damascus and Bealkb) and several other places. The prince returned to Damascus and was shortly afterwards murdered in 1229 (627), while playing draughts, in revenge by a Mamlik whom he had punished for some offence. He is said to have been the best poet of the Ayyubids.

Bibliography: Recueil des historiens orientaux, i. 52, 70, 106; iii. 313; Ibn Shâhêr, Fawâ'id al-Ma'nâfi'î (Bâlak, 1299 = 1882), p. 81, 84; where specimens of his poems are given. [See also the Bibliography under Haâlân.] (M. Soroush"

BAHRI was the name given to the Mamlûks purchased by the Ayyubid Sultan Salâh Ayyub [q.v.], whom he kept in barracks on Rûdâ, an island in the Nile (Bahri). His widow Shadîs al-durr married the Mamlûk Abu Sa'id who ascended the throne as the first of the Bahri in the year 1250 (648). Among the Bahri the family of Kalâta took the premier position; they ruled with short intervals from 1279-1328 (678-784) and were deposed by the Buruji Mamlûk Burzân. (M. Soroush"

BAHRIYA, a group of oasis in the Libyan desert. The Bahriya is the most northerly of the Libyan desert. The Wâjib (Bahriya) (also singular) i.e. the northeastern part, is distinguished from the Wâjib (Kibyra), the southern oases i.e. the Dakhûla [q.v.] and Khurbâ [q.v.]. Between these two groups lie the little oasis of Fanfâr (inclosed in the Dakhûla by some), called al-Farâzîs by al-Bâkîr and al-Farâzûn by al-Yâzîbî. The three large oases are also distinguished as inner, middle and outer, the inner is the Bahriya which is sometimes called also the Bâhniyâ as it used to be visited by the people of Bâhniyâ. Bâhniyâ al-Sâ'îd and Bâhniyâ al-Wâjib are distinguished as early as al-Bâkîr, Mârâqî, 14. At the present day the post goes thrice a month from Magnâbîs to the Bahriya. According to Boinet Bey's Dictionnaire Geographique, it is a district of the Province of Minya. It consists of four townships with over 6000 inhabitants in all. The outlying town of al-Bâkîr (it has 1734, al-Kârî 1724, al-Mandilâ 1083, with its dependency al-Adjûs 1708) and al-Zâhâb 858 inhabitants.

The Bahriya like the other oases has the reputation of being exceedingly fertile and in the middle ages its dates and raisins were famous. Cereals, rice, sugar-cane and especially indigo were also cultivated there, and alun and green vitriol found, though the latter is not specially mentioned, as being found in the Bahriya, for all the notices of this sort refer to all the oases together. The fertility of the oasis is due to hot springs containing various chemicals.

Only scanty notices are available for the history of the Bahriya. In the year 332 (945-944) the oasis is said to have been under the rule of a Berber prince Abd al-Mallik b. Merwan and to have been independent. Under the Fatimids we hear of an Egyptian governor Abu Salih in the time of Makri and Kallahamâa, that is, under the Mamlik they were not governed directly by the state but by feudal tenants. At all periods the oasis has suffered from the predatory raids of Arab and Berber Bedouins while the more southern ones (perhaps also the Bahriya?) were sometimes the object of forays by the Kings of Nubia. It is only in quite recent times that they have been placed in effective relationship to the Egyptian government. In the seventies they were visited by Schweinfurth and since then European travellers have often gone there.
In earlier times the taxes must have been very much more important than they are now. The land has evidently encroached upon them and caused their decline. Reliable reports and echoes in traditions tell us of ruined buildings and ancient splendour. The Coptic Church appears to have been constructed on a large scale long before the time. We hear of solemn processions with the body of one of the disciples which was carried through the streets in a shrine (Taháw) by a team of oxen. No doubt St. Bartholomew is meant (so al-Bakri, p. 14 might be amended) perhaps also St. George or both.

(C. H. CEBECKER.)

**BAHTH.** *Bahth* is thorough investigation and examination. In a technical sense the word denotes the process of proving whether two things mutually imply or exclude one another. *Al-mahdâth* is the object of the positive or negative judgment. These are the definitions of the *Târifât*. In practice *al-bahth* means discussion, the art of controversy and disputation. It is connected in meaning with the word *mawâqif* which means speculation. A good example of the application of these expressions may be found in *Masâli‘i, Fawâpis d’or* (vi. 368). There it is said that Yahyâ, the Burmaceda had a keen intellect and judgment, was *khath* karnar i.e. a certain gift for discussion and speculation; he gathered around him in conferences, learned men, *Mashahilîn* and others who were themselves *mâd ‘al-bahth* i.e. specialists in this art of philosophical discussion.

Many oriental writers and scholars were fond of controversy. Masâli‘i speaks of discussions which he had with Jews (*Tânîq*, p. 160 et seq.). Avicenna disputed in the presence of Alî al-Dâwla. At various times controversies took place between Muslims and Christians of which we possess several accounts. (CARRA DE VAX.)

**BAHURASIR.** (See AL-MA‘DAKIN.)

**BAHUTH.** One of the titles of the Sîras is.

**BAI,** a Turkish word, properly an adjective meaning "rich" (in this sense it appears in the earliest manuscripts of the Turkish language, the inscriptions of Orhâm); as a substantive it means also "landlord, householders". In Central Asia the word "Bai" is frequently applied to proper names, whereby the bearers of these names are shown to be prosperous, independent people in contrast to the masses. The oldest text, in which the word "Bai" appears with this meaning is the story of Mahmut Bai, Vizier of the prince (Gûhdân) of the Karâ Khâšî in the *Târir-i Qâshân Khâtâb* of Duvânî (viii. xii. century). Cf. d’Ohsson, *Histoire des Mongols*, i. 168; W. Barthold, *Turkistan*, Part i. (Text), p. 113, Part ii., p. 382 et seq. (W. BARTHOLD)

**BAI,** i.e. contract of sale, the sale of goods for money. Some other legal transactions however which have in view the mutual exchange of goods, are described in the Muslim legal works as different "kinds of bai" (*Jurew al-Bai*) (et. e.g. *Diction de Technic, Termi*, i, 137, l. 14—16; al-Nawawi, *Masâbi‘ al-Tâlibîn*, ed. v. d. Berg, i, 369). Such legal transactions are, amongst others: the exchange of wares for wares (*Mubâhâ*); or of money for money (*Sarf*); and the so-called *Safa‘* or *Sâlâm-contract* (by this the buyer purchases a thing which he has not seen himself but which is exactly described, and pays for it in advance), further the agreement by which one who has a legal claim on a certain thing takes another instead of it (*Sadd al-Mulmûnâ*).

*Bai* may also consist in any one's stipulating for an earnest; such an agreement is legally regarded as a purchase of the right of use. The buyer thereby becomes the owner of the right, e.g. to go over the property of another (*Hâk al-Munâsur*), or to build on it (*Hâk al-Bâni*), to use his neighbour's walls to support his own etc. On the other hand leases and leases are not regarded as *Bai* by most Fâslîs because the tenant on the one hand only stipulates for his right to use for a certain time and on the other the return of a sum lent is not to be regarded as identical with the equivalent clause in a mercantile transaction (cf. Badrî at the beginning of his chapter on *Bai*; Sachau, *Muhamm. Recht*, p. 375).

Muslim scholars are further accustomed to distinguish three sorts of *Bai* (*Murâshâ*, *Mudâdha* and *Tawîla*), according to which the buyer agrees to pay either more or less or as much as the seller himself originally paid for the object to be sold. (Cf. a formula of the *Tawîla*-contract: Dory, *Sapphén. aus Diction. oriental., ii*, 845, Sp. 1).

*Bai* is permitted by the Korân ii. 276 in opposition to Ribâ i.e. usury in general and more particularly the sale of bonds (see Rîbâ). The sale of a thing is only valid however, if it is ritually pure and can give the Muslim a legal profit. Therefore, dogs, pigs, dung, forbidden musical instruments, grapes, from which wine may be made, &c. cannot be sold; hence one can transfer his special rights in such articles to another. But such a transaction is not called *Bai* in legal works; it is usually devoted by other terms e.g.: *"withdrawing the hand"* from some thing, *"letting fall"* one's right to a thing, *"getting rid of"* a thing; *acquisition* in such cases is called *acquisition of the actual control* (*Zilâl*) and the handing over *Tawîla* i.e. to put any one in a position to acquire anything.

The mere delivery of the thing sold and of the purchase money is not sufficient legally. A purchase to be binding at law, requires a formal declaration binding the seller (the tenderer *Isfâm*) and a declaration of agreement by the buyer (the acceptance: *Râdâ‘*). Only with things of very little value do the Muhammamid lawyers regard an exchange without further formalities as valid. The closing of a contract by *Muhammam* or *Mubâhâ* (i.e. with a sufficient examination of the wares to be sold, either when the purchaser has only "handled" them or immediately after they have been "thrown" to him by the seller), was according to tradition expressly forbidden by the Prophet (cf. *Nabw al Bukhârî’s Sâbîl*, Bâhû, Bâhû, 62, 63).
Both parties have the right to withdraw from the issue by merely saying so while they are still on the spot where the bargain was agreed to. The contract is thereby terminated (cf. on this so-called ʿAḥād al-Maṣlaḥi: Sasan, Maḥmūn, Recht, p. 258 et seq.).

(Th. W. Juyboll.)

BAIA, properly means the sealing of the contract of sale by clapping the hands (Līna, i. 374), whence it comes to mean the oath of allegiance taken on the land of the caliph on an assenting the throne. This ceremony consists in placing the hand in the open hand of the prince as a sign of homage. The formula for it was given by ʿOmar on the day of the ʿAlīš (Ibn Hīṣam, p. 1013) 'I said: Open thy hand, a Āḥād Bakr; he opened his hand and I paid him homage'. This act symbolizes the handing over of authority to the Khalīfa, Progenies, Vol. I., p. 171. Among the Romans it denotes the oath or pledge taken by all those who embrace their beliefs; this word has been confused by their opponents, with ʿAḥād which signifies the Christian Church and they have drawn erroneous conclusions therefrom.

(CL. Huart.)

BAIBARS I., AL-MALIK AL-ZAHIR RUKN AL-DIN AL-ŠĀLIḤ, the fourth Sultan of the Bahri Mamluks (see BAIBARS), was born in Kīṭāb in 620 (1223), later sold into Damascus, and in 644 (1246) was taken to Egypt by Bībur al-Šāliḥ Ayyūb, and appointed commander of a section of his bodyguard. He distinguished himself, even in the lifetime of ʿAli, after the death of the latter in 647 (1249) his son ʿĪsā Shāh aroused such discontent among the Mamluks that they murdered him. Baibars took part in this conspiracy and was taken over by the new Sultan Aḥmad. When the Sultan had one of his accomplices hung however he was forced to flee to Syria and stayed with the Ayyūbī princes sometimes at Damascus and sometimes at Karak till the assassination of Aḥmad, when he returned to Cairo and was soon entrusted with the new Sultan ʿĀṣūr with the important duty of leading the vanguard in the campaign against the Mongols, who had conquered Syria. ʿĀṣūr became master of Syria by the battle of Ain Dīlīn, in which Baibars distinguished himself by his unflinching courage. The Ayyūbī princes were granted the tenure of the lands they had conquered before the appearance of the Mongols, Bābārs, on the other hand, who had been expecting Aleppo as the reward of his bravery, had to go empty-handed and resolved to be revenged for this slight. Conspiring with other Emirs he found an opportunity to slay the Sultan while hunting on the way back to Egypt. The commanders of the army and the other Emirs therupon elected Sultan Baibars who had been the murderer of two rulers.

Baibars entered Cairo without opposition towards the end of 658 (1260). He divided the great offices of state among his dependents and for the rest confirmed the governors of provinces in their positions, as well as the Ayyūbī vassals. The governor of Damascus set himself up in opposition as Sultan, but Baibars was able by bribing his dependents so to weaken him that he was finally able to take him prisoner. Many important tasks awaited the Sultan and only a highly gifted, unfeeling, determined, untiring ruler could carry them out. The Egyptian-Syrian Kingdom was surrounded by enemies on all sides; in the north, the Christian king of Armenia, in the west along the coast of Syria, the Crusaders, in the interior the murderous Assassins, in the east the Mongols thirsting for booty and revenge, in the south of Egypt the warlike Mamluks, and in the west the unconquered Berbers. In addition there was always the danger of another crusade from Europe. At home he feared on the one hand that an ambitious Ayyūbī prince might lay claim to the throne as the last legitimate successor of the Ayyūbī Sultan and readily find adherents, while on the other the Āṣūr, who had been repressed since the time of Sultan al-Dīn, were attempting to put an Allah on the throne. Baibars soon found an excellent way of giving himself and his successors the appearance of legitimacy. A son of the ʿAbūlḡādā, a son of the Caliph al-Zahir who had escaped the Mongol holocaust (see BAIBARS) suddenly appeared in Damascus and came to Cairo on the invitation of the Sultan; after the genuineness of his descent had been tested and confirmed, homage was paid to him as Caliph with great pomp and ceremony; he then declared the Sultan, as a partner in the government (Kasim al-Tawil) as his successor over Egypt, Syria and the lands still to be conquered. The Sultan had originally intended to restore the Caliph to the throne of Baibars and was going to place a well-equipped army at his disposal to enable him to conquer Baibars, his capital, when on the advice of the prince of Mamluks he thought it better to keep him in Cairo under his eye; he therefore gave him a force insufficient for his campaign against the Mongols and in the first battle the Caliph lost his life. Not a shadow of real power remained to his successor and even his speech on his accession breathes a spirit of complete subservience to the Sultan. This remained the case till Sultan Saifī took the last of the Caliphs with him to Constantinople. It was of importance in the Mamluk kingdom to the Egyptian princes to pose as the pious protectors of the caliphate as they could thereby lay claim to a certain supremacy in the Mamluk world. Baibars thus gained a certain influence over the control of Mecca and Medina and was the first to send, as a faithful "servant of the two sanctuaries" a carpet on a Mahjūl, (a litter) as
Baibars I — Baibars.

589
done to the present day and gifts of gold annually to the holy places. He was able to get on good terms with most Frankish and Oriental rulers. He made treaties with the Hohenstaufen King Manfred and later with Charles of Anjou as well as with James of Aragon and Alphonso of Castile. He made a friendly alliance with the Byzantine Emperor Michael Palaeologus who had driven out the Crusaders; he was also on friendly terms with the Seljuk princes in Asia Minor and the chiefs of Yaman. Not too particular as to his methods, he succeeded in intriguing the Ayyubid prince of Karak to Egypt by promising him on oath that he would be safe and then made away with him and his son. By means of unscrupulous intrigues he managed to throw suspicion on the Mamiliks in the Mongol service at the court of Hulagu, so that some were executed and some imprisoned, if they were not sharp enough to escape in time. In this way he was able to deprive Hulagu of his best advisers. He often came into contact with the Mongols in the Euphrates district but they were as occupied with their enemies in Central Asia that they could not bring their full force against him. He added to the wealth of his dominions; he began to rebuild the walls and buildings destroyed by the Mongols and placed garrisons in the more important places. It was he who instituted the custom still in existence of each of the four orthodox sects having its own chief Ka'djī. In spite of his moral failings he was the most successful of the Manilīk Sultan. He died in 676 (1277). He had previously appointed his eldest son Baraka Khīn as successor in 669 (1270) and had homage paid to him.

(M. Scharnherr.)

Baibars, the Romance of, is unique among Arabic romances of chivalry as a combination of historic fact, the freest pseudo-historical reconstructions and combinations, purely fantastic imaginations and picturesque adventures. An outline cannot be attempted here, but references will suffice to the descriptions with considerable extracts by Lane in his Modern Egyptians (chap. xxii) and to Allward's further details in the Berlin Catalogue (vol. xx. pp. 144–144). It is evident that the life and exploits of Baibars as the great restorer of Islam, a gallant and suggestive personality, moving in brilliant scenes, had powerfully affected the succeeding generations, and that he was never missed — principally through the lack of originality, variety and simplicity of imagination — being surrounded by such a garland of stories as the older parts of the Arabian Nights have thrown about Hārūn al-Raṣḥīḍ. In the Nights he found only a subordinate and chronologically late place, and the second form of the "Story of Judar" (Well, iv. 253–312 from a Gotha MS.; see, too, Berlin Cat. xx. p. 146), in which he figures, and the stories told him by his chief of police (Brendan text, x. 340–392 from Habicht's final vol. of Egyptian origin; see my study of his recession in the Journal of the Royal Asiatic Soc. for July 1900, pp. 688 and 696) show how greatly the story-telling gift had declined. Yet there are good stories in the long romance, but they proved hard to disentangle and tell separately. Until the recent appearance of the whole, only two such stories seem to have been printed, one telling how the Mamluk Ibrahim al-Hāshīmī journeyed to Rome (Cafr, 1230) and the other, how Lūṭī Uṭūnī served Baibars (Cafr, 1321). The whole appeared in fifty parts (Cafr, 1908–1909), the last two of which, however, are given to a supplementary history of Egypt down to the present time, with a sharply Nationalist conclusion. Date and authorship of the cycle are naturally obscure. The great majority of MSS belong apparently to the xvii. century, although the origin
of the whole is ascribed to a certain Ibn al-
Dūnārī, and to such officials as the Kātib al-
ṣūrī, the Naṣīr al-Dīn, the Sāḥib, the Duwałādīrī (see on these titles, Quatremerre in his translation of Makrī, Sultanān Mamlūkī, vol. i. part i. pp. 115, 119, vol. ii. part ii. pp. 317 et seq.), each being said to have contributed a hājīr of the whole. (Printed text, part i. p. 3, Ahvardī, p. 133.) The most separate story of the Muḥammad ibn Ṭūnān, the second hājīr due to the Duwałādīrī. Of the same kind is the assertion in another MS. (Cat. of Arabic MSS. in Brit. Mus. p. 698; cf. also, Berlin Cat. p. 143, No. 9163) that the narrator is Muḥammad b. Ṭāḥīt al-Ḍūnārī (d. 702), although in his biography given by Ṣāhilī Ṣāḥib, al-Qāhirī al-Qādirī, xiv. p. 125, foot, he is said to have been the father of popular songs (muwashshah, tanbīh, muwāṣṣih). Apparently more historical, though shading off into the fantastic, is a notice in a Berlin MS (Ahvardī, p. 133) of about 1100 A. H. It gives what it calls the Ḥāzim Fakhrī Sirā because it was written in Kātīb 945 by a certain Ḥāzim al-Majdabī who had it from his shaykh the Kātīb al-Dāwīrī, al-Māṣīrī b. al-Muṣṭafīr, and he from the Kātīb al-Dāwīrī, al-Sāḥibī, and he from the Ḥāzim Fakhrī Sirā al-Majdabī, and he from the Kātīb Abūl-Ṣafī al-Majdabī, and he from Abūl-Ṣafī Sirā. None of these names can I trace, but something seems to lie behind them. It is plain, however, from the different recensions, that the cycle soon lost any unity it may once have possessed, and was freely re-cast by collectors and editors. Even the publishers of the printed edition calls himself, quite simply, its Ḥāzim and claims copyright in it.

**BAIBARS II.** Rukn al-Dīn, the Caliphate, Sultan of Egypt and Syria, was one of Kātībī’s Mamlūks. During the second reign of Sultan al-Nasir Muhammad b. Kātībī (698–708 = 1298–1309) Baibars supported the Burdījī [q.v.] Mamlūks, shared the active power with Sultan. When the Sultan escaped from the oppressive tutelage of the two Emirs in 708 (1309) by fleeing to al-Karak, Baibars was elected Sultan and took the name of al-Malik al-Muṣṭafīr. As al-Nasir again gained the chief power in 709 (1310) Baibars was soon forced to beg for mercy from al-Nasir. He was pardoned and promised the governorship of Syria; on his way to Syria, however, he was seized and “ignominiously put to death in Cairo.”

**Bibliography:** Makrī, Sultan Mamlūk, i. 2 passim; Ibn 严格, i. 149–153; Weil, Geschichte des Orients, iv. 280–302; Muir, Mamlūk, or Slave Dynasty of Egypt, pp. 63–75. (R. H. E. M. A.)

**BAIBARS, al-Mansūr al-Khātātī,** (about 645–755). Mamlūk minister and historian b. Kātībī, who purchased him, pronounced him to the governorship of Kerak, whence he was dismissed by the Sultan Kâthîlī, on the accession of Nasır in 693. He was made chief of the ḥarūn al-bātī with the title dawr al-bātī, which he retained till 704. In 703 he was employed to repair the ravages caused by the earthquake in Alexandria. He was cashiered in 704 by the viceroy Sālikī in consequence of a charge of insolence brought by one of the latter’s secretaries; but on the second return of Nasır in 709 he was restored to his office, to which were added inspection of the ṣahāb and the ḥarūn al-bātī. In 711 he was made viceroy (nāʾib al-bātī). But in the following year he was sent to Alexandria and imprisoned there, in which condition he remained till 717, when by the intercession of the viceroy Aqībī he was released in the following year he made the pilgrimage to Mecca. He was a Hanafite jurist, qualified to instruct and give opinions, and founded a Hanafite madrasa in Cairo. He died in Ramadan 725. Further notices of his political activity are to be found in his history, a work in 11 volumes, called Zubdat al-Flīrī fi ṣirāṭ al-Maṣūmīrī, from the creation to the year 724; of this the following volumes are at present known to be in existence: iv. 131–252 in Upsala v. (250–233) in Paris, Bibl. Nat.; vi. (353–599) in Oxford, Bibl. Bod.; ix. (655–709) in London, Brit. Mus. (A work in the Bodleian collection called Zubdat al-Flīrī, ending at 744, is by a different author). Of another work called al-Tawāf al-Maṣūmīrī, dating from 647–721 there is a copy in Vened., K. K. Bibliothek.

**Bibliography:** Ibn Kâthûr Shahûr (Bodl. MS. Marsh 143); Ibn Iyyâs; Birkelmann, Gesch. der arab. Lit., ii. 44.

**BAIBUR, a town in Asia Minor, the capital of a Kātībī in the province and Sangūk of Eriqat, 60 miles from this town, divided into two parts by the Çırık-Su; it has about 8000 inhabitants; ancient mines; manufacturers of silver vessels and carpets. — The district of Bâibûr comprises 400 villages; total population (including the capital) 38,273 souls. It is a fertile country and has numerous bee-farms and trade in wax with France. — The town was besieged and taken by the Kâtībī Muṣṭafīr by order of Sultan Selim I during the Persian campaign in the autumn of 1574. In the Russo-Turkish war of 1829 Bâibûr was occupied by the Russians and there was fierce fighting for the possession of it. The beauty of the daughters of Bâibûr has become proverbial.

**Bibliography:** All Dâwî, Liturgy: Longhini, p. 153; Sâhilî, 134; p. 83; Hammer, Fugast, Gesch. des Osman. Reiches, iv. 191, 205, 231.

**BAIDAR,** a Tatar village on the Crimian Peninsula, 15 miles south west of Sevastopol, district of Tauris, province of Valaia, the chief town on the Baidar valley (Baidarkysskaya dolina), famed for its beauty and fertility and often celebrated by Russian poets.

**Bibliography:** W. Barthold, Al-Baidarî, Adelâdîh b. Oma, commentator on the Korâ, was a son of the chief justice of Fârs and the Atabeg Abî Bakr b. Sa’d (613–68 = 1226–1259), was a judge in Shârâ, and finally settled in Tabrâz where he died according to Šafâ b. (585 = 1282, according to Šafâ in 691 = 1291 (see Sayîl, loc. cit.) but probably in 711 = 1316 (cf. Ebn, Sayîl, to the Cat. of Arabic MSS., in the British Museum, p. 116). His chief work was the Awwâl al-Târîkh wa Arrâs al-Târîkh, a commentary on the Korâ, based on
the Khashk of Zanakhkhi but considerably amplified from other sources. His commentary is regarded by the Sunnis as the best and almost as a holy book. He is specially noted for the fact that his works contain much material in small compass, but without being ignominious, and complete on any one of the branches with which he occupies himself: historical Exegesis, Lexicography, Grammar, Dialectic, various readings etc. (Th. Nöldeke, Gesch. d. Qorā, p. 29 (I. ed.): Baidawī, Commentarius in Corānem ex codic. Paris. Trend. et Lips., ed. H. O. Fleischer, Lipsiae 1846-1848, 2 vols.) Indices ad Baidawīi Commentarium in Corānem Supplementa, W. M. Firl, Lipsiae, 1878; D. S. M. Margoliouth, Christendom Baidawiam, London, 1894. The work has also been often printed in the east: Bilād, 1828-1829; Stambl, 1826, 1827, 1906 (lith.); 1314 Cairo, 1313 (lith.), 1320-1321; lith. Persia s.l. 1283; Lucknow, 1869, 1873; Bombay, 1869. Of the numerous supercommentaries there have been printed that of Ibn al-Tamджid (about 880=1475), Stambl 1828, 1831; that of Dāhíb al-Dīn al-Baṣrī, Stambl 1785, 1786; that of Kāmīnī Baidawī, (died 950=1543), Stambl 1828, 4 vols.; that of Aḥd al-Dīn al-Sirāṯkūṭ (died soon after 1060=1652), Stambl, 1727; that of Aḥd al-Kāṭīb (died 1066=1652), Bilād, 1828, 8 vols.; and that of Ibrahīm b. Muḥammad al-Kūnawī (died 1195=1781) on the margin of Ibn al-Tamджid. Besides some smaller grammatical and juristic works Baidawī wrote the Minhāj al-ʿUṣūl ʿalā Ḥanāfī, on which Aḥd al-Raḥmān b. Ḥasan al-Islāmī (died 1272=1757) has written an index, printed in Cairo, 1323, with glosses by al-Dājījānī (died 1416=1473) which have appeared independently at Stambl, 1305. Finally he wrote in Persian a history of the world from the time of Adam to 674 (1275), called Niṣāḥ al-Tawārīkh, cf. de Sacy, Notices et Extraits, iv. p. 671-673, Rieu, Brit. Mus. ii., 873. As in the Hamburger MS. Orient. 187 — cf. Catalog. der orient. HSS. der Stadtbibliothek zu Hamburg mit ausschluss der Hbr. P. 128 — cf. Bibliothek, Geschichte, V. B. Brockelmann, no. 821 — is the beginning of this work comes the history of China from Rashīd al-Dīn's History of the world; this has been printed under the erroneous title of Abdallah Reidsvander Histoire Simonici perisse a genuine manuscript ed. lat. quaque redditus ad Andreas Malloren Gregiingi, Jena 1689.

BAIĐU, a Mongol prince. (Bānṭa in Pārsī, grandson of Hūlāgū, the founder of this dynasty; he reigned only a few months. Hūlāgū whom he deposed was strangled on Thursday the 6th Day of Jumād-Il. 692 (9th April 1206) and his head was killed on Wednesday the 23rd Day of the same year (25th October) after the victory of his opponent by Ghāznā. The young and apparently unimportant prince Bānṭu, who

suited by his cousin Gālkhūn, was recalled by the nobles of the kingdom and raised to the throne. In justification of the deposition and murder of his predecessor it was alleged that Gālkhūn, by his vicious life unworthy of the caprice of a throne and his many transgressions of the law (Vāns) laid down by Īsā, had forfeited his rights. Bānṭu gave the same reasons for his rebellion afterwards, when Prince Qōhān advanced from Khorāsān and demanded that the murderers of his uncle should be handed over. The two rivals came to an agreement; when the struggle was again renewed Qōhān succeeded in recalling the issue in his favour without bloodshed by the skill of his general Nawzā. Bānṭu was deserted by his adherents and seised at Nakhjīwān in Armenia, while trying to escape. During his brief reign he is said by both Christian and Muhammadan writers to have shown special favour to Christians and their priests and to have thereby given offence to Muhammadans; cf. the chapter on Bānṭu in d'Olsone, Histoire des Mongols, iv. 115 et sequentia b. Musafīr.

BAILAH, a district of the province of Nisabūr in Khūzestān, had at first as its capital, Khurawājīrī, a farsakh (4 miles) from Sabzawār, then Sabzawār itself. One of the villages attached to it is Bāghtūn, the native place of the Emir Aḥd al-Raṣūl, founder of the Sabzawār dynasty, its inhabitants have always been fanatic Shi'ītes. Formerly marble-quarries were worked there. Bāghtūn was the birthplace of the Shi'ite theologian Abū Bakr Ahmad b. al-Ḥasan b. ʿAlī.

AL-BAIḤAKĪ, Aḥmad b. ʿAlī Bīdārī, Arabian philologist, born in 740 (1077), a pupil of al-Maḥāsin, lived in strict seclusion in his house and in the old mosque at Nisabūr, of which he was Imam and died on the 50th Ramadān 544 = 31 Jan. 1150. Of his works there has been preserved his dictionary of Arabic infinitives with Persian explanations, the Tajr al-Maḥfūz, cf. Loth, A Catalogue of the Arabic Mss. in the Library of the India Office, No. 9044—9495; Bibliothek, Geschichte, V. B. Brockelmann, no. 293. (C. Brockelmann.)

Bibliography: Yākūt, al-Fawāʾid ilā Mīrjasīḥ al-Ashīr (ed. D. S. Margoliouth), l. 414—416; Ṣuyūṭī, Boostān al-Wāʾin (Kairo, 1326), p. 150; Brockelmann, Gesch. der arab. Lit., l. 293. (C. Brockelmann.)

AL-BAIḤAKĪ, ABŪ BAKR AḤMAD B. AL-ḤUSAIN B. ʿALĪ B. MUSĀ B. KHΘRĀJĪRĪ, A author on Tradition and Shi'ī, born in Shīrūn in 824 (Sept. 935) to Khurawājīrī in the district of Bā猗h, 20 parasangs from Nisabūr, obtained on his wide travels, a thorough knowledge of Tradition and of Dogmaties after the doctrine of al-Asbūrt. Returning home he was soon summoned to Nisabūr, to expound Shi'ī Faith according to his own great Compendium of the legal opinions of the master (Khitāb-Nūr al-Ṣiḥāṭ al-Ashīr in 10 vols. of Hakim). He died there on the 10th Dānāya 1458 = 9th April 1066. An autograph copy of his great compendium on Tradition Kitāb al-Sunan wa l-ʿAflāq or Khatīb al-Sunan at-Kabīr is preserved in Cairo (cf. Ekhrist al-
A criticism of this work, entitled Al-Djazair al-Nas: 'l-Bakht shadow the light, first appeared in 1241 (died 747 = 1346) and was printed in two volumes, Paris, 1686. On his conception of prophecy cf. K. Nylander, Über die Opulare Hz. der Dajjal al-Nasrumpen auf die Bakht Ahmed al-Baihaki, Upsala, 1901. Of his chief work on Ethics, the Amida al-Mulk and al-Djauwal, father of the Imam al-Haramain are given by al-Suliki, Tahछ in, i. 272 et seq.; ii. 310 et seq.

Bibliography; Ibn Khallikan, No. 27; Yaqūt, Muqta'am, 803; Subki, Tahছ al-Shaykh, iii. 3; Suyyūnī, Tahছ al-Hujjā, xiv. 13; Wustenfeld, Geschichtschriften, 203; el. Schafik, 407; Brockelmann, Gesch, der arab, ii. 223. (C. Brockelmann.)

BAIHAKI, Abu l-Hasan Ali b. Zaid, also known as FUSUĐ, historian, biographer. Of his works there has only survived his Tarbagai-Baihaki (Persian), a history of his native district of Baihak in Khurasan which was completed on the 4th (according to Kla. the 5th) Shawwa 563 (11th July 1168); cf. Persius, Ver sacri (Berlin, p. 516 (No. 535); Kien, Strassburg, Geschichte der Persier, ii. 16, Kahl, Periplus, arabisca, iranica, turcica, sinica, Timurid, tabai, bibliothek, No. 9, p. 8 et seq. No manuscripts have yet been discovered of his work in Arabic on universal history mentioned by Hidāja Khaftī (v. 544), entitled Maqāṣīd al-Tarbagai wa gharābīl al-gharābīl, quotations from it are given by Ibn al-Athīr (ed. Tomberg, x. 249), and in the Tarbagai-Līfīk, al-Khaqānī, of Dujawai (cf. Barthold, Turkestan, ii. p. 32). According to Dujawai the work was a continuation (shuforms) of the Taberqāl al-umam of Ibn Miskawwāl; it is fairly certain that its continuation has an allusion to this work, nevertheless the author himself (in his Tarbagai-Baihaki) describes his work as a continuation of the Tarbagai Yamani of Utbi. Nothing is known either from his own works or from other sources of the career of this author. As to his family, he tells us that his grandfather Abu Sulaimān Fundus was summoned as Kaddi and Mafīl (hāqaq wa faṭwa ilādān) from Nāhir near Bus to Nishābūr by Sultan Mihāmid of Ghāni and his viceroy Abu l-Hasan Maimandī, and afterwards on giving up his office acquired an estate in the district of Baihak. We further learn that the author's father was born on 1st Shawwa 447 (29th Dec. 1055), died on 27th Dīnārī 217 (23rd August 1173) and spent 40 years in Baihak. The author himself was at the court of Sultan Sanjar at Šafāt 543 (21st June-20th July 1148), when the latter received a query (apparently on religious matters) in Arabic and Syrian from the Georgian king Demetrias. Baihakī was commissioned to answer this question in the same two languages and performed his task very successfully (Cod. Mas. Brit, Or. 3587, fol. 146a).

The Tarbagai-Baihaki contains a full account of the geography of the Baihak district, of its taxation, of various princes and governors, of men born in Baihak, who had distinguished themselves by religious or political activity etc. This small work which is preserved in good manuscripts is really worth reading; as a source for information on the history of culture it has been almost entirely neglected and is not even mentioned in the Gestaedern des alt-Iranischen Philologen. Some notices from it have been given by W. Barthold in his Turkestan, v. 1898, and in the Monographs emblematique as well as in his essay Zur Geschichte der Saffāwīden (Orientalische Studien,Versuch zu Ehef von Th. Noldeke, Vol. i, p. 173) (W. Barthold).

BAIHAKI, IMRĀN B. MUHAMMAD, also writer, of whose life nothing is known beyond that he belonged to the circle of Ibn al-Mu'āzzi and wrote the adab book Khat al-Mu'āzzi wa l-Masāvīr (ed. by F. Schwally, Giessen, 1903; reprinted Cairo, 1906) during the reign of the Caliph al-Mu'tasim (967-970) and the book Kitāb l-Masāvīr wa l-Mu'āzzi (ed. by J. Schwally, Giessen, 1903; reprinted Cairo, 1906) during the reign of the Caliph al-Mu'tadīd (967-970).

(C. Brockelmann.)

BAIHAKI, Abu l-Hasan Muhammad b. Hujain, Persian historian, author of a history of the Ghurinwa in more than 50 volumes. Of his work on small parts (end of Vols. v., etc., and the beginning of Vols. vii., etc.), the history of the Shi'ites Ma'in, 412-532 (1020-1041) has been preserved. The work is usually quoted as the Tarbagai-Baihaki and was first edited by Morley under this title in Calcutta (1863), in the Bibliotheca Indica and again in Teheran, more recently (lith., 1907 = 1889-1890). In the annotations to his work, the author himself had given a title to the whole work, which is not known; in the surviving volumes the preceding part, devoted to the reign of the Shirāz Muḥammadī is referred to as the Tarbagai Yamani (c. ed. ed. Morley, p. 158) or as the Muḥammadī Muʿīn (p. 176). There are notices which have not as yet been made known of the author and his work. In the Tarbagai-Baihaki at his countryman Abu l-Hasan Bā'hasī (c. xii. century) [cf. the article on this historian. Even Abu l-Hasan had only seen various parts of the great work, and not a complete copy. Quotations from the earlier volumes (on Shirāz Muḥammadī) are found as late as the xiv. (xv.) century in Ḥājj Abūr (Barthold, Turkestan, i. p. 157 et seq.) no quotations are known as yet from the later volumes (on Masāvīr's successor).

Baihakī himself tells us that he was 16 years of age in 402 (1011-1012) and 65 (p. 246) in Dhu al-Ḥijja 450, so that he must have been born about 386 = 996. Abu l-Hasan gives his birthplace as the village of Ḥarijīfālād in the district of Baihak. For 19 years he was in the diplomatic chancery (dawaṣīr) of the Ghurinwa under his teacher Abu Našr (ed. Perrot, p. 759) who died in the beginning of the year 431 (1039) so that he must have been in the service of the state from about 412 (1021-1022).

Baihakī was considered too young to be the successor of Abu Našr; Abu Sahl Zaanān who was appointed in preference to him, was not well disposed to him and is said to have afterwards done him much harm. Baihakī sent in his resignation but Shirāz Ṣuṣ̄ūt graciously declined to accept it. The succeeding rulers were not so well disposed to him: Baihakī speaks of a misfortune which befell him at this time the consequences of which he still suffered from 20 years later (in reality a little less) while writing his work; he
confesses that he was not entirely innocent in the matter but says he was dismissed on account of his youth (p. 754; he was then about 45 years of age). He was at a later period again active in the service of the state; under Abü'l-Kasād (1046-1053) he was at the head of the Divān ad-Dhīn (p. 122). Towards the end of this reign he was, as Abū l-Hasan tells us, condemned by the Kāfī to imprisonment for illegal engraving of seals (munharāmat). When the dynasty, a little later, was displaced by Toghrul, the usurper had the official of his predecessor Abü'l-Kasād imprisoned; but Toghrul also had to exchange imprisonment by the Kāfī (Sidratā) for detention in a fortress (šēb-e badu). Toghrul's reign lasted only 57 days; on the fall of the usurper and the restoration of the previous dynasty, all the officials, including Bāhākī, were released. According to Abū l-Hasan, Bāhākī did not leave the civil service till after the death of Sultān Farrakhshāh in 451 (1055) and then devoted himself to his literary works; the greater part (to p. 460) of the biography that has survived to us was however written under Farrakhshāh; the author was then in the "court of unemployement" (p. 121) having resigned some time previously. According to Abū l-Hasan he died in Shahrāb 470 (24 Aug.-21 Sept. 1077).

Toghrul, Bāhākī was not a historian in the strict sense of the word, of a Kingdom or district, but contains the memoirs of a Persian official on the life of his rulers and their court and on the home and foreign affairs (transacted or neglected at this court. The author says (p. 438) that his work is not a za'ireh i in the usual sense of the word in which we only read that "some one killed this one or some one killed that one", all that he had seen and experienced, is described in length and breadth." (p. 107 dār was 'arz). We therefore have a detailed, first-hand account of life at the court of the Ghurānids under Mas'ud as well as of the methods of government in the Kingdom founded by Sa'baktagh and Ma'mūd such as we possess perhaps for no other Oriental Kingdom of similar ages. The work is not an important source for the history of Khurasān or of any of its dynasties, especially of the Sammāns, on account of its numerous excursions on the history of earlier times; its utility is somewhat decreased by the absence of an index in Morley's edition. Numerous excurses are given by Eliot, History of India, ii. 53-134, and by B. Biberstein-Kazimiński in the introduction to his edition of the Divān of Manūčehrī (Paris, 1887, p. 17-131).

This portion of the work which still survives was composed during the years 450 and 451 (1055-1056). It is often said (even by Abū l-Hasan Bāhākī) that the work began with the beginning of the dynasty; but Bāhākī himself expressly gives 409 (1016-1019, p. 316) as the year with which he began his narrative; we are on this account that his friend Ma'mūd Warrūzī closed his history (about which we know nothing else) with this year. From the whole course of the work it is incredible that the long period between the beginning of the dynasty and the death of Sultān Ma'mūt could have been treated of in 4½ volumes. Abū l-Hasan says that besides his historical work, Bāhākī also composed a handbook for officials (under the title of Zinat al-Kawāth) and gives some interesting extracts from this work, which is otherwise quite unknown. (W. ReaTHold).

BAHĀN AL-KASĀD, a district in South Arabia to the north of the country of the Kauji and Upper Awālī, (q.v.), the most important of the lands lying between Yamn and Ḥadramawt. It was a centre of early Arab culture and has many ruins and numerous inscriptions. The population, the most prominent in all South Arabia, is capable and enterprising, and the ground very fertile because of the numerous springs. Bāhān al-Kasād is inhabited by a tribe, the Mu'ayābin, i. e. the two sons of Mu'ayāb, Abūl and 'Arif from whom the two branches of the tribe, the Al Ahmād and the Al 'Arif, who live at zanāli with one another, take their name. They are allies of the Harīb and hostile to the Kauji and the Emir of Ma'rib.

The most important town in Bāhān al-Kasād is al-Kaṣīū, also called Hīr Abūl Allah (after a son of Abūl Ahmad b. Mu'ayāb), the residence of the Al-Aḫīl of all the Mu'ayābin, with 400 houses, 75 ābi and 5 mosques. A noble family of great antiquity which is mentioned as early as Hāmādī in his Ziqārī, still lives in al-Kasād. The Jews who are here craftsmen (goldsmiths and weavers) have a quarter of their own called Shirka al-Yahūd, with 50 houses. The trade of al-Kasād is very important and a market is held every day at which the products of the country, especially cotton, are offered for sale. Of the other towns in Bāhān al-Kasād we must also mention al-Fārī (with 30 houses and 3 ābi) on the left bank of the Wādi Bāhān, near which are the famous ruins of Yama with many inscriptions, and al-Harțā (with 200 houses and 5 ābi) where the Al-Aḫīl of all the Al-Arrī lives.

Of mountains in Bāhān al-Kasād there must be mentioned, besides the two isolated al-Karzin which command the Wādi Bāhān, the Qāf Rūhī (2200 feet high in the form of a long ridge), which is mentioned in Sabaean inscriptions, on the Wādi Khār and the Khāt Rādīt. This mountain which was famous even in antiquity, is still held in great reverence and is a place of pilgrimage for the people of Bāhān, who ascend the Khāt Rādīt on the first day of the festival with their families (except their women) and sacrifice to the local deities; on the fourth day they descend and are received by those who have left at the foot of the mountain amid shouts of exultation and cries of joy from the women.

Bāhān al-Asāl (also called Jīlāl al-Safī and al-Ashirī) is a continuation of Bāhān al-Kasād; it consists of the four quite small territories of Ḥīrīn, al-Safī, al-Ḥakība with the town of al-Ḥanī (with 250 houses and 3 ābi) and Asālīn (a town of 200 families and 4 ābi).

BAIKAL, a large lake in Siberia; it belongs to the watershed of the Yenisei. The lake itself seems to have remained unknown to the Mughal geographers in the Mongol period.
The lands around Baikal are called Barkal or Barkhyn-Tush in the Turkic languages and the people who live there, the Buriat (the t at the end of this word is the Mongol plural ending) by Rashid al-Din (cf. the Persian text in Bertie's edition, Travels in the Archipelago of Omsk (in the 14th century A.D.)), the people of this district are called Bayirini; whether, as Hirth supposed (Nachweise zur Inschriften des Timurid, p. 7) Lake Baikal has taken its name from them is more than questionable. Among the Yakuts at the present day the word Baikal means "sea." The name is also explained as the Turkish bel kal (rich lake); this explanation cannot be supported by any original authorities. In Europe, Lake Baikal first became known by the discovery and conquest of the land by the Russian Cossacks (in the 17th century).

(W. BARTHOLOLM)

BAIKARA, a prince of the House of Timur, grandson of its founder. He was 12 years old at the death of his grandfather Sabah ad-Din (February 1405) so he must have been born about 795 (1392-93). His father Omar Shah had predeceased Timur. Baikara is celebrated by Dowlat-Shah (ed. Browne, p. 374) for his beauty as a second Joseph, and for his courage as a second Rustam; he was prince of a long period. In the year 817 (1414) he was granted Luristan, Hamadan, Khorasan and Burdjud by Shah Rukh; in the following year he rebelled against his brother Iskandar and seized Shiraz but was afterwards overthrown by Shah Rukh. Pardoned and allowed to go to Prince Kuldz at Kandahar and Garmshahr, he stirred up a rebellion there too however and was seized by Kuldiz in 819 (1416-1417). Shah Rukh pardoned him again and sent him to India; nothing further is known of him. This account which is based on Hafiz-i Abrish does not agree with what Dowlat-Shah tells us; according to the latter (loc. cit.) he went off his own account from Merv to Shiraz, was sent by him to Samarkand and then put to death at the instigation of Ulugh Beg; according to other accounts he was put to death at the court of Shah Rukh himself (in Herat). The year 819 is given by other authorities also as the year of Baikara's death. According to Bâbar (ed. Beveridge, t. 165 b.), the name Baikara was also borne by a grandson of this prince, the elder brother of Sultan Husain; this second Baikara was for many years Governor of Balkh.

Bibliography: The history of the events of the first decades of the 16th century is well known to us from the Mut'ama al-Sa'diyya of 'Abd al-Razzaq Samarqandi (? v.), following Hafiiz-i Abrish; cf. the extract (for the years 800-810) in Quatremerie, Notices et Extraits, Vol. ix. On the original text of Hafiz-i Abrish preserved in a MS. in the Bodleian Library (Ellot 422) cf. W. Barthold in al-Mugaffariyya (Sbornik vostokoved. ker., Russka, St. Petersburg, 1897), p. 25 et seq. (W. BARTHOLOLM)

Al-BAILAM, the original place of manufacture of the swords known as baillamatuza, is somewhere located in India and sometimes in Yunnan, cf. Seydel, Die Waffen der alten Araber (Leipzig, 1860), p. 132.

BAILO. [See Saittins.]

BAINA (6th cent.), strictly Acc. constr. of the substantive Baina, interval, then a preposition meaning "between." — Baina baina let an adverbial expression, which means "of middle quality, of middle worth"; al-Hamza 'llati baina baina is a sound between Hamza and the semi-vowel (i.e. Allif) which corresponds to the vowel following the Hamza (rabaha, etc.). According to our method of expression this means: when Hamza is between two vowels, the glottal stop is omitted in certain dialects — among the Korish and particularly among most of the Hijazis (Ibn Yâdhî, p. 1930a), — but neither in vowel-sequences containing a and i did any transitional vowel sound arise, nor was a-a contracted. In other words, this kind of Hamza is not a sound but what we, following Sevener, Phonetik (3 ed., § 408) might call the "imperceptible" or "direct" transition from vowel to vowel (but without forming a diphthong). The Arabic alphabet, which could not represent two vowels in direct succession, was too blame for this awkward conception. This sort of transition was not employed only in the sound sequences in a-a (Sabawiti, ed. Durenbourg, ii. 165-166, - al-Zamakhshari, Mu'assasat, 2 ed. p. 166; Ibn Yâdhî, p. 1362-1363; cf. also the Al-Qalâa. (A. SHAHBAZI)

BAIRAK (7th cent.) Runner — Arab. Harir. — Bairak dar = standard-bearer. Par Muqaffa'll muted, see the Article MUSKAT.

BAIRAM, an Osmamli-Turkish word which denotes the two great Muslim festivals: Kurbâbairam "the little festival," also called Sherker-bairam "feast of sweets" on account of the custom of making presents of sweetmeats then, is the festival on the breaking of the fast (id al'ahdr) which lasts three days. The Niyabat-bairam, the "great festival," usually called ibnâb-bairam, "feast of the sacrifice," is the 'id al'ahdr which lasts four days. A ribâb-ba'irat, "official reception," is held at the Imperial Palace on each of these festivals. (Cl. HIERT)

BAIRAM, 'All-Khan. Prince of Merv (1397-1400 = 1782-1785-1785-1786). His father was descended from the Tizalddin branch of the family of Kadjar which had ruled in Merv from the time of 'Abbas I; his mother was of the Turkoman tribe the Seljuks; he himself enjoyed among the Turkomans the reputation of being a warrior of unparalleled bravery. In the war against Murat-Pa' (Shah Maksud) of Bukhara he was led by his fearlessness in an ambush and fell fighting; his head was taken to Bukhara and exhibited on the place of execution. His second son Muhammad Karim succeeded him in Merv; his eldest son Muhammad Husain who had devoted himself to learning and obtained the name of being the "Plato of his age" (Athar-ul-Wafa) remained in Mervhij; Dr. Mir 'Ali al-Kermi Bukhârî, Historie de l'Asie Centrale, ed. Schefer), p. 58 et seq.; V. Zaksowksi, Rosenzweig Mervus (St. Petersburg, 1894), p. 83 et seq.

A small fortress (about 900 yards long and wide) in the southern part of the ruins of the ancient Merv, bears the name of 'All-Khan Bairem 'All-Khan and has been recognised by V. Zaksowksi
BAIRAM 'ALI-KHAN — BAITULUT.

(Rumaili Storage Memoirs) as the latest foundation of this site. In a wider sense the name 'Bairam 'Ali Beg' is applied to the ruins of the ancient city generally so that the name has also been given to the railway-station near the ruins as well as to the imperial estates (Gurudarwara injein) lying there.

(W. BARTHELOMI)

BAIRAM KHAN, KHAN-KHANAN, whose name is also spelt Bairam, was the son of 'Ali 'Ali Beg, and the fourth or fifth in descent from 'Ali Shir o Turkaman. The Shikhs (cf. Bairam's Memoirs, ed. Erskine, p. 30), belonged to the Kuchluk tribe, and held large possessions in Hindustan. His son and grandson 'Ali 'Ali, who seems also to be known as Pir 'Ali, was an officer of Lildhun Shih Bairun of the Black Sheep. When the dynasty of the Black Sheep was overthrown by Umar Hasan, Shih 'Ali entered into the service of Abd Salid, and when that prince was put to death in 1459, he became an officer of his son Soltan Mahmud Mira. He stayed with him at Hijjaz, and then his daughter Fat'ha Begam became Soltan Mahmud's wife.

From Hijjaz Shih 'Ali went to Kana and then to Shiraz, where he was defeated by the king of that country. During his flight, he was seized and put to death by the servants of Sultan Husain of Herat. Shih 'Ali's son Dido 'Ali Beg settled in Badakhshan, which included Kundus, and became a servant of Bahur, as also did his son 'Ali 'Ali, who, according to Ferishta, died as governor of Ghuristan. It is Dido 'Ali who is referred to in Bairam's Memoirs (ed. Erskine, 350) under the years 905, 906, 910, and also under the year 913. Dido 'Ali was born in Badakhshan, and is said to have also been in Bahur's service, but if so, this could only be in his early youth. He was educated at Halkh and appears to have been an insidious student. Afterwards he came to Kana, and accompanied Hashim to India, and was present at the disastrous battle of Kanauj. After that he took refuge with a Hindu Zamindar in Sambhal, which had been Hashim's appanage. He was not allowed, however, to remain there, for Shih Shab sent for him and endeavored to induce him to enter his service. Bairam refused, saying in reply to a remark of Shih Shab, that no one who was loyal to his master would ever come to disgrace. He and a companion then made their escape, but were recaptured, and Bairam was only saved by the devotion of his companion, who persuaded the captors that he was Bairam. Bairam had remained in Gujrat where Soltan Mahmud offered him service. But he pretended a desire to go on pilgrimage, and was allowed to go to Surat. There he turned back and eventually joined Hashim in Scinde. He accompanied his master in his flight to Persia, and distinguished himself at the battle of Shih Tahmasp by his address in sports. He was Hashim's general in Afghanistan and India, and was no doubt the real cause of Hashim's restoration. He won the battle of Madietan (in the Luthbins battle) in 1525, and it was probably due to him, as much as to Hashim, that the humane order was passed which emancipated the women and children of the vanquished Afghanis from being enslaved. At the time of Humayun's sudden death, Bairam was with Akbar in the Punjab. As soon as he received the news he, at Kallar, proclaimed Akbar as emperor, and caused him to be enthroned (February 1556).

When Taurt Beg was disgracefully defeated at Delhi by Humayun, Bairam caused him to be put to death, and this severity is justified by Ferishta. Bairam was with Akbar at the battle of Panipat in November 1556, and it was he, we regret to say, who killed with his own hand the wounded captive, Humayun of Bursad. Bairam's conduct in Taurt Beg's case, and his minute regulations about Akbar's pleasures (see Khafi Khan, I, 334) show that he would not have brooked his ward's interference. In fact, he looked upon himself as being in the place of Akbar's father and he had the title of Khan Baha i.e. the Khan-Father.

In 1557 Akbar, in fulfillment of a promise made by his father, gave his cousin Sulima Begam in marriage to Bairam, and the wedding was celebrated with great pomp at Ajualandur. Preliminary to his marriage with Sulima, Bairam had been married to the daughter of an Indian Mamluk, Djamul Khan of Mewat, and she was the mother of Akbar's famous son 'Abul Al-Rahum. Neither he nor Akbar had any children by Sulima. Bairam's overbearing manners, and the influence of Akbar's nurse, Mulla Anaga, led to a breach between guardian and ward. Bairam was at first disposed to submit and to renounce his authority, but the conduct of his enemies stung him into resistance. He failed and was magnanimously forgiven by Akbar. He set off on pilgrimage to Mecca but was assassinated at Baitun in Gujrat by an Afghan in consequence of a blood-feud (31 January 1561). His body was afterwards removed by his nephew to Mathura.

Bairam was a Shi'ite and it is an evidence of his greatness and a credit to Baitulut, that this bigoted Sunni has said so much in his favour. If a literary turn and his Durovs is still in existence, Baitalp and Ferishta have given several extracts from his verses. There are accounts of him in the Akbarnama, and in Ferishta (when chronicling his death), and in the Madrura al-'Unwarah by Shih Nawaz Khan (1, 331). It is chiefly from thisthat Blochmann's notice in his translation of the Ains Akbari, p. 315 is taken. There is also a long and interesting account of Bairam in the Hindustani work called the Darvah-i Akbari, pp. 157—196, by Shamsul-'Ulama' Muhammad Husain.

BAIRAMYA, an order of Dervishes, founded by Hajij Bairam of Angora. The founder died there in 873 (1442-1443). His grave adjoins the ruins of the temple of Roma and Augustus, the walls of which bear the famous inscription, the Monumentum Ancyranum. The Bairami Order is a branch of the Naqibmad, which is represented in Turkey and Europe. In Constantinople it has settlements in Stamah, Ebyah, Skartar and Kasim-Pasha.

BAIRUT (also written Bireh, Birechtle and pronounced Bireit), a town on the Syrian coast, 32° 54' N. Lat., lying on the Bay of St. George at the foot of Mount Lebanon of which the town is the natural commercial centre; it does not, however, belong to the autonomous district of Lebanon but is the headquarters of an independent Wilayet.
Bairut is an ancient Phoenician town which is mentioned, as early as the Tell al-Amarna tablets (cf. Zeitschr. d. Deutschen Palästina-Vereins, xx, 1907, p. 13 et seq.:), an independent kingdom about 1400 B.C., next belonging to Gebal (Byblos), the town fell into the hands of the Egyptians in the time of the Thirteenth Dynasty, since which period it was finally gained by Antiochus III, the great. The town was destroyed by the Syrian Diodes of Tophus in 140 B.C., rebuilt in the time of Augustus by Agrippa, and made a Roman Colony (Columna Julia Augusta Felix Berytus). In the following centuries Bairut was famous for its academy of rhetoric, politics and law; even the earthquake which did much damage to the town in 349 A.D., did not affect the prosperity of its schools. When in 529 another earthquake destroyed the town, it recovered only with difficulty and so fast as once before the advancing Arab hosts under the command of Abdi Ullaid.

A period of renewed prosperity for Bairut began with Muhammadan rule. During the new state was built here with which the first naval expeditions were undertaken. Bairut thus became as it now again is — the harbour of Damascus. Intellectual activity was again quickened and a series of scholars and traditionists worked in Bairut; the geographer Yabriz calls it a famous city.

The Crusaders brought a new visceritas. Baldwin I of Jerusalem captured Bairut after a siege of two months on the 27th April 1100: in 1127 it was regained by Saladin, in 1107 regained by the Crusaders and held till 1291. In the Turkish period we find the town in possession of Emirs of the house of the Muhammedan prince Yebtzik al-Din (1305—1654) was prominent in his endeavours to revive culture in the town. The Turkish rule — since 1765 — its being involved in the wars of Ibrahim Pasha against Turkey, and the bombardment by the allied English, Turkish and Austrian fleet on the 10—14th Sept. 1840 again reduced the town to a state of desolation.

Bairut, as we now see it, has experienced a last, great development, which however has already passed its zenith. The massacres of the Christians in Damascus and Lebanon in that year caused a great influx of Christians to Bairut; the town became quite Christian in character and the Muhammadans now form only a third of the population, which is about 120,000. Bairut thereby became not only the largest town in Syria, next to Damascus, but became the intellectual and commercial centre of the whole Syrian-Arabian population. European schools disseminated European education, printing received a great impetus, the union with Damascus by railway (since 1893) and the making of a new harbour (since 1905) facilitated the traffic which consists in the export of products of sartorial and silk weaving, of gold and silver work and in the import of articles of clothing, foodstuffs, wood, tobacco and luxuries. Of recent years Bairut has begun to offer serious competition to Beirut.

BAISAN (Hebrew Bet Shean, Greek Schatha, the native town of the Faish Kedragh b. Hizai (died about 112 A. H.) famous for his connection with the Ommayades and his influence over 'Omar II. It was a flourishing town under the Arabs; it lies on the verge of a large, fertile plain which connects the plain of Fedelon with the valley of Jordan and on the road to Damascus. The town was destroyed by the Crusaders; it is now a small town. It lies in a fertile plain.

BAISONGHOR. GIVZAI AL-DIN, son of Shihk Rakh and grandson of Timur was appointed by his father in 1427 to the office of chief judge at the court; in 1427 (1420) on the death of Kha-Khsai, he took possession of Tahirah and was appointed governor of Ava and in 1431 (1425) he succeeded the throne; the astronomers having predicted to him that he would not live more than forty years, he gave himself up to dissipation and died at Herat on Saturday, 7th Djamud 1379 (16th Decem-
Baisonghor.

Baisonghor, second son of Sultan Mahmud of Samarqand, grandson of Sultan Altit Shab' born in the year 1288 (1477-1478), killed on 10th of Muharram 905 (17 Aug. 1503). In the lifetime of his father he was prince of Buhara on the death of the latter in Rabi' il-awal 906 (30 Dec. 1494-27 Jan. 1495) he was summoned to Samarqand. In 901 (1495-1496) he was deposed for a brief period by his brother Sultan Ali and in 903 towards the end of Rabi' il-awal (November 1497) finally overthrown by his cousin Bazar. Baisonghor then took himself to Hujr where he was successful in defeating his brother Mas'ud and taking the country with the help of the Beg Khurram Shah, who came over to his side; he was soon afterwards betrayed by this same Beg and put to death. Baisonghor is described by his rival Bazar as a brave and just prince. He was also famous as a Persian poet under the name 'Adlit; his Ghazalas were so popular in Samarqand that they are to be found in almost every house.

Baisonghor was also the name of a prince of the Ak-Khulafa in Persia, son and successor of Sultan Ya'qub; he was only recognized for a short period from 986-987 (1493-1494) and was overthrown by his cousin Rustam.

Bait (a.), House, with the Arabic article: al-Bait; the House, i.e. the House of Allah, the sanctuary at Mecca, also called al-Bait al-Mahru (the ancient house) or al-Bait al-Haram (the holy house). Geographical names compounded with Bait are frequent, and are given below. — In poetry Bait means verse; see Art. *Khayy.*

Bait al-Fakih (See STERLING.)

Bait Djabin (Jabrin) or, after a popular etymology: Bait Djabul (Gabriel's house), a town in southwestern Judeas. It was the successor of the neighbouring town of Marsa, destroyed by the Parthians (again discovered in Samhannah) and is first mentioned by Josephus (Bell. Jud. iv. 8, 4, where Biver [in the translation of the name] and by Prolemy v. 15, 5 as Beti babba and in the Tabula Peutingeriana as Betagabrit). In the Talmudic writings the name appears as *Bait Gabrin in Roman Imperial times the town received the name of Eleutheropolis, but this was soon, as was often the case elsewhere, superseded by the abode name. The Roman name appears again among the Christians towards the end of the viii century but Arab writers know only the name Bait Djabin and the Crusaders Bethgebich which was corrupted to Githein. The town then fairly important, the seat of a Bishop, was conquered by the Arab chief of Aliti Baki b. Abi Itim al-Asli who acquired an extensive fief from the caliphs Ada after one of his familiars. In the following period it suffered much from repeated attacks and devastations. According to the account of Stephen, a monk of Mir Selim, Eleutheropolis was completely destroyed in 796 during a war between Arab tribes. It recovered again, however, for Yalqut mentions it in 891 as an ancient town inhabited by Gaudhitha and a century later it is described by Muqaddas as an important emporium though it had lost much of its former greatness. The Crusaders found it in ruins but built a strong fortress there. In 1134, Edrisi (1155) knows it as a station for travellers but in the year 1187 it was conquered by many other towns in Palestine by Salih al-Rus and again destroyed. It was afterwards again rebuilt, for it was successfully conquered by the Mamluk, general Balliars in 1234. An inscription over the principal gateway tells us that the fortress was restored in 1551. Bait Djabin is now only a village, containing some relics of earlier times.

district of Bâbîl and is properly called Zaidiyah. Niebuhr mentions the town only casually under the name of Salâ (sic) in the district of Lobiès, near the old town, now in ruins, of al-Mahdám. The Arab geographers know neither the name Bait al-Fakih nor Zaidiyah so that this town appears to have changed its name in course of time. It is perhaps identical with the al-Mahdâm mentioned by them.

Bibliography: Niebuhr, Beschreibung von Arabien, 226; id., (transl. Heron) Travels through Arabia, i. 25 et seq.; K. Ritter, Erdbevölker., iii. 97 et seq.

BAIT LÂHM, the ancient Bethlehém. The Arab geographers describe the town as the birthplace of Jesus, where there are an inconsiderably beautiful church (the Basilika built by Constantine), the grotto where Jesus was born, the graves of David and Solomon (which Christian tradition had previously located here, cf. R. Hartmann in Zeit. d. deutsch. Paläst.-Vereins, xxviii. 150 et seq.) and the palm mentioned in the Korâ (Sura 10, 25) — a most wonderful tree for there are no other palms in the district. — The description given by Bishop Arculfus of Bethlehém dates from the earliest period of Arab rule, about 670; the town had then a low wall without towers. On the approach of the Crusaders in 1099 the Saracens laid everything waste except the church, the convent of St. Mary, the Franks rebuilt the town, but in 1187 it was attacked with many others by Saladin. In 1244 Bethlehém was devastated by wild hordes from Kyûrah, hostile to the Christians; and in 1499, the strong fortress was razed to the ground, the town-wall torn down and the buildings, including the convent, destroyed. After this blow the town had a discouraging existence for a long period and it is only in recent centuries that it has somewhat recovered. Bethlehém, where no Jew dared live in Christian times, has always preserved a marked Christian character even in the Muhammadan period. The number of Muhammadans has always been insignificant. In 1831 the Christian population, which has a reputation for being quarrelsome, came out against the Muhammadans and refused to pay a new tax and after another rising in 1834, Bisharin Pasha had the Muhammadan quarter pulled down.

BAIT AL-MAKDIS. [See al-Kudr.]

BAIT AL-MAL, means treasury, especially that of the state and is applied not only to the actual building in which the financial business of the state was transacted but also in a figurative sense to the national exchequer or Finance. The beginnings of the institution of a Bait al-Mal may be traced to the time of Muhammad; for by his time there had risen the conception of property common to the Muhammadan community. The Caliph 'Umar is traditionally regarded as the official founder. It was he who first drew up a legal code ('Ummûd) and instituted a system of accounting; he also reorganised that the gradual transition from the policy of plundering to permanent occupation of the conquered lands; it would be impossible for the land to be divided up like portable booty (qahîma). There thus arose an immense common property (fâm) the rent from which went to the state treasury. The importance of the Fiscs, which had hitherto been an unknown conception to the Arabs, thereby increased to an enormous extent. Wallhausen (Arab. Reich, p. 28 et seq.) has shown how the opposition to this new conception of the state led to revolts and finally to the murder of the Caliph 'Abdân. The Mâl al-Mašmûn was instituted in contrast to the Mâl al-Âshâ. When political conditions became more stable and the Persian and Byzantine machinery of government was taken over, it naturally followed that the political conception that was in existence before the time of 'Umar and was adopted by him, triumphed and with it the idea of the Bait al-Mal was carried out, in theory and practice. In practice in place of the Bait al-Mal of primitive times there was instituted the Dâmilnis al-Anwâr l. e. the complicated machinery which was concerned with the income and expenditure of the various Muhammadan lands. To describe the history of the Bait al-Mal in practice would mean writing the history of the financial policy of all Muhammadan countries. This is impossible here. Like all institutions of the early Muhammadan period however, the theory of the Bait al-Mal gained importance with the development of Muhammadan Law. Only those receipts of the Fiscs recognised by theory were regarded as legal while all other sources of the state's revenue were considered nâmûs l. e. illegal receipts. This distinction survived into the Turkish period and indeed still exists at the present day. The Bait al-Mal is controlled by the imâm or his representative. The following are the main legal sources of revenue of the state.

1. Aâshû (land-tax) and qâyû or qâyûs (poll-tax); in each of these the idea of tribute from the fâm is apparent; 2. Zâkât (charity-tax) also called mâhûs (either) when it is derived from agricultural land; since a merchant's wares are also liable to mâhûs according to definite rules, the tax has been legalised as mâhûs; 3. Khums i.e. the fifth of the booty and receipts that were regarded as similar (e. g. those from mines or Treasure Trove); 4. Mâdîbâ (sales-tax) i.e. the selling of an estate to the Fiscs in the absence of other heirs (sâlah). This assumes the legal management of the Bait al-Mâl.

These receipts could not, however, be used for any purpose of the state that the authorities willed; the income from no. 2 was war-marked for the poor and needy, the collectors of this tax, the mu'allâfa, had to purchase and liberate slaves, for debtors, those fighting in the holy war and for travellers (Ko'rsân, b. 60). There were also other rules regarding the application of no. 3, with reference to Ko'rsân, vii. 42. Only 1 and 4 are allotted unfreservedly to all purposes of the treasury. In practice no one has ever troubled
about these demands of theory and indeed the legal names have sometimes been applied to very illegal exactions. At any rate Muḥammadan rulers have never been so strict and scrupulous with the public impositions as countless anecdotes on this point from the early period of Islam would have us believe. It was not till the institution of European control or of a constitution that this state of affairs improved.

For Bibliography and further information see the above mentioned technical term.

(C. H. Becker.)

AL-BAYT AL-MUḵADDAS. [See Al-Makki.]

BAIT RAS (the original form found in poetry) locally it is also pronounced Bait al-Ras with the emphasis more or less on the article; this spelling is also found in the histories of the Crusades, probably the ancient CAPITOLIUS, a ruined site of the Byzantine period, an hour's journey to the northeast of which lies an insignificant village, of the Kašmātān of Irshad (Ashjīn), of the same name. Furnished with the Byzantine Engravings it is mentioned among the towns conquered in the 4th century AD. at which it afterwards formed part.

Its wine was praised by the pre-Islamic poets, such as Nābigha Dhiyabat and Hāsun b. Thabit and remained its fame in later times. All trace of cultivation of the vines has now vanished from the village though it is very favourably situated for the enterprise. The Omāyad Caliph Yūnad b. al-Haḍfī is said to have been born here. One of his successors Yūnad II, a famous drinker came to settle here with his favourite Ḥālin. Of the Kāb built by him, we think the remains may be found in the ruins which have been taken for those of an ancient church. Ḥālin died and was buried here. Yūnad followed her soon afterwards; his tomb is believed to be at Irshad.

Bait Rās is also the name of a village famed for its wine, near Ḥālab.

(H. Lammens.)

BAṬĀR (also Bāṭ, Bāṭ from the Greek βατραχός), smith, veterinary surgeon. Although the nomad Arabs were fairly advanced in veterinary science from their own experience and practice as herdsmen and cattle breeders, foreign wandering veterinary surgeons, who as the etymology of the name shows came to them from the Byzantine Empire and from Syria, enjoyed a special reputation. Like the wandering wine merchants these surgeons set up their booths at the great fairs of 'Ajrūz, al-Ṭull, al-Maṭlah, etc. and exercised their art which consisted chiefly in blood-letting and attending to wounds. The Bāṭar appears to have achieved what applied his skill to human beings, for the ancient Arab poets use the word in the sense of physician.

AL-BañTH (I.), the "Awakening" (on the day of the Resurrection) one of the 99 names of Allah.

BAIYUNA (I.), the "Awakening" (I. 1896). His order belongs to the Assiyān, its founder, Ṣuwādhān of the Khawārizm, restored the ritual of the Bada- wīn plow-hill, and the owners of the lands in the village near Cairo. His plow-hill and the order is called the "Awakening" with an inclination of the head and crossing of the hands on the breast, followed by raising the head and clapping the hands.

BAKĀ. [See BUKA.]

BAKALAMUN. [See and KALAMUN, p. 94.]

BAKAR ʿID (vulg. Bakka ʿĪd, i.e. cattle-festival), the name commonly employed in India for the festival of the ʿĪd al-ʿAdha. (q. v.)

AL-BAKARA, the "Cow", Title of Siya II., colloquial from the story related in verses 63-68 of the paralytic offering of the Israelites, Num. xxx and Deuteronomy xvii, etc.

BAKARGANDU, or BAKARGANGAR, a district of India, in Eastern Bengal and Assam, situated in the joint delta of the Ganges and Brahmaputra. Area, 4,542 sq. m.; population (1901): 2,911,752, of whom 68% are Maḥmardos. Their predominance may be inferred from the fact that the local dialect is commonly known as Maṇḍarī. The name is derived from Aghil Bakar, a servant of the Nawâb of Murshidabad early in the 18th century. The town, in the south of the district, an important centre of the river traffic through the Sundarbans.

Bibliography: Imperial Gazetteer of India. (J. S. Cotton.)

BAKhAMRA, a place in Trak, the exact situation of which cannot now be fixed. According to Masūdī it belonged to the Jaff (q. v.), the frontier district between the Byzantines and Arabs, and was 16 parasangs (about 60 miles) from Kufa. Yāḥīyā says it was near Kufa than Wajīl. Bākhamra is famous in the history of the Abbasids from the decisive battle which took place there between the army of the Caliph al-Mansūr commanded by Ḥallī b. Miṣr and the troops of the ʿAbbās ibn Ṣāḥib b. ʿAbd Allah, in which the latter fell in 145 (762). The Amanite place-name means "wine-vaults", cf. the analogous appellative Kūyār al-ʿInbār = "Grape-town", of a place in Palestine (northwest of Jerusalem).

Bibliography: Yāḥīyā, Muṣṣīma (ed. Winternfeld), l. 458; Masūdī Muṣṣīma al-Bakhar (ed. Barh. de Meynard et P. de Courteille) vi,
BAKHARZ, a district in Khuršān between Nišābūr and Herāt with the market place of Mālīn as its chief town; it was the home of Abū b. Ḥasan b. Abī Tāhir b. Ḡābiš b. Ḥāmis of Abū Ḥasan, died 467, author of a continuation to the Taḥārat al-ādāb (and sometimes covering the same ground as the Taḥārat al-ʿulamāʾ) called ʿAbd Allāh ibn Ḥasan b. ʿAbd Allāh b. ʿAbd Allāh ibn Ḥasan b. ʿAbd Allāh b. ʿAbd Allāh ibn Ḥassān, who appears to be the same as the author of the library of Mālīn in Isbāhān, suggested the composition of the above-named Taḥārat al-ādāb. The author states in the preface to the Dārvażah that after having received a good education at home, he wandered from 434 to 469 visiting first Nišābūr and Ḥarasān in the neighbourhood of his home, then Marv, Bālḵ, Ṣafī, Isfahān, Hamadhān, Bāb-i Bālḵ, Ṣafī and Ṣafī; he gives a list of the famous men whose acquaintance he made at each of these places, e., the Ālīs at Nišābūr; since this author's death-date is given as 479, this implies an earlier visit. He devoted himself to fiqh according to Shāfiʿī's system before studying hadith and at the lectures of Abū ʿAbd Allāh Abū ʿAbd Allāh b. Wāṣif al-Dawūsīrī (died 438 according to Ṣanʿānī) in Nišābūr he made the acquaintance of Abū ʿAbd Allāh b. Ṣafī al-Khurshidī, afterwards viceroy to Ṣafī al-Dawūsīrī. A satire by Bākharzī on this person, beginning with the aphorism al-ḥabīb, is said to have won him the favour of the latter, who, when the Sāliḥī Sanāʾī entered Baghdād in 447, took Bākharzī in his suite; or, according to another account, encouraged to emigrate to him when in Baghdād, rewarded him handsomely for it, and extolled his performance. After spending some time in Bāṣra, Bākharzī entered the service of the Vizier as scribe and was advanced in the "baran of correspondence". In 455 Bākharzī was permitted to recite a eulogy before the caliph ʿĀвин: the people of Baghdād had not at first admired his poetry, but having finally did so Kārkh, and mixing with the learned and unelearned there he was able to get rid of the calumnies of the Persians, and win the approval of the metropolis. At some time after this date he retired to his native place where he died in Dhu-l-Qaʿda 467, of a stroke inflicted at an entertainment by a Turk, who was never punished for the murder. This work, which MSS are common, is in seven §§:

1. Behaviun and Ujjviun poets.

2. Poets of Syria, Diyarbakır, Aḥsitanī, the ʿUmayyans and the Muhāmmads.

3. Poets of Ṣafī and the Ṣafīs.

4. Poets of Ṣafī and the Ṣafīs.

5. Poets of Ṣafī and the Ṣafīs.

6. Poets of Ṣafī and the Ṣafīs.

7. Adab-writers.

In some MSS it is followed by a selection from the author's poems, of which a bulky division once existed.

(Óís. Safrānlīshīq.)

BAKHRA, a place-name often corrupted in books and manuscripts. In place of Bahra, Bahra or Nāqī, Bahra ought to be read, as the etymological conjectures of the Chroniclers, who derive the name from Bahra, "to have an evil smell," show. An ancient fortress on the lines protecting the southern frontier of Palmyra, which passed into possession of the family of No'mān b. Hujjat. It was there that the Caliph Walid II met his death while fleeing from the rebels who were pursuing him. The erroneous statements of ʿAbdārād to look for Bahra on the borders of Māzandārān, is not true. The other authorities wrongly place Bahra in the neighbourhood of Damascus, Urmi or elsewhere.

More recent explorers have rediscovered Bahra in the ruins of an old fort, four hours' journey south of Damascus, disproving the above locations.

Bibliography: Aghaī, iv. 143; Aqūsī, v. 135 et seq.; Ṣulamī, ii. 1740; Nasīrī (ed. de Goeje), p. 419; ʿUṣūlī, i. 578, ii. 525; iii. 805; v. 1752; Wellhausen, Das aram. ʿĀsī, p. 219, 222; Zeitschr. d. deutschen Palästina-Vereins, ex. 148, xxiii, 116; B. Moritz, Topograph. des Palästinent, Map. (H. Lammens).

BAKHSHI, a word (probably from the Sanskrit bakkha) appearing in East Turki and Persian during the Mongol period, it denotes in the first place the Buddist priest and in this meaning is equated to the Hichik, Mongol, Tamb, and the Uighur Toin. Writers of Turki origin also, who had to write documents destined for the Mongol and Turkish population, in Uighur script, were called Bakhshi; according to Bilār (see Berysige, p. 108) it was also the name of the son of the Hichik among the Mongols. In the Empire of the Indian Moghuls, the Bakhshi was an official of high rank who had charge of the registration of a body of troops and lands to pay them. At the present day, among the Calmucks, Mongols and Munchaks, the word denotes high spiritual rank; among the Hichik (in the distinet forms Bākhshī and Bahšā) it is applied to the diviners among the Moghols who heal the sick by exorcisms, among the Turkomans to the bands in the Hichik (among the Hichik) also the Bakhshī accompanies its conjurations with the notes of its musical instrument, the Khol.)

cisme of the Basky); A. D. Wiesin, 3e obran brytištupe wjgəwən, 3bə, bət bət bət bət bət bət bət (Kasan, 1859, with illustrations). On the Turkoman horse cf. A. Sumovski in the journal 'Sheshoja Storina' 1897, 9, 4. (W. BAHRITI,)

BAHRITI (c., verb substantive from baxh-), a class in Persia, properly a present given by a superior to an inferior, while the present given to a superior by an inferior is called bakhsh (first fruits) and presents exchanged between equals are called kāhvar (mutual acquisitions). Hence the word comes to denote gratuities given by strangers and travellers and is further wrongly applied to anything thrown into a largin, court-fees as well as gold given to a judge or official (properly rīvāz). These illicit gains are euphemistically called madahgi (income) by the Persians.

BAHITAWAR KHAN, a favourite eunuch of the Emperor Amanullah, who gave him the rank of 3000 horse and made him his beard-sword (shir-sūna). The universal history, written in Persian, entitled Mīrāz al-Ālam, is usually ascribed to him, and he indeed claimed for himself the authorship of it, but it was undoubtedly composed by his friend, Muhammad Bākā (q.v.), whom he had induced to come to the court of Awang-zőh, and for whom he obtained a high official rank. He died in 1596 A. H. (1685 A. D.).

Bibliography: Elliot-Dowson, History of India, vi., 150 sqq.; Rieu, Catalogue of Persian MSS. in the British Museum, iii. 890 sqq.

BAHKITAN or PACHAN, now usually called DARYA-_NSIRI, the largest salt lake in the province of Fars in Iran. The existence of lakes in the Kūneh Persia became known to the Greeks after the time of Alexander, cf. Strabo, xxv. 3. 6. The Arab geographers as a rule enumerate five lakes; their identification is not absolutely certain and the readings of the names very divergent. Before Iṣkākh there is only one reference, viz. in Ibn Khordadbeh, 53, to the Lake of Bakhthīn or Lake of Dzhābānū, though its name is not mentioned. Iṣkākh mentions: 1) the Lake of Bahktīn, or Lake of Bakhthīn, in Ibn Bābawja's manuscripts, as the circle (kūra) of Iṣkākh; 2) the Lake of Dschānzi, in the circle of Bābawja; 3) the Lake of Tawawz, with many variants, in Bābawja at Kāzūn; 4) the Lake Djanān at Shīrāz; 5) Lake Budshaiya in the circle of Iṣkākh. He also gives the name Budshaiy Budshai to Lake Budshaiya. Maḥkānat gives: 1) Bahktīn, also called Bahktīn; 2) Dschānzi; 3) Kāzūn; 4) Djanān; 5) Budshaiya. Lastly V. E. Von Bahr writes: Djanān; 2) Dschawawz; 3) Tawawz; 4) Djanān; 5) Djanān. Our modern maps give: 1) Lake Bakhthīn under the name of Nisir; 2) the very small Lake of Dschānzi at Kāzūn under the same name; 3) the Lake of Kāzūn as Daryā-NSIRI at Faraun; 4) the Lake of Shīrāz as Daryā-NSIRI at Mahdī; 5) Another lake, further to the north. In the districts of Bābawja and Cabrīn Lāngas, called Daryā-NSIRI, Bābawja, is not known by the for- geographers. The names Budshaiya, Budshai, in Ismad Allah al-Mustawfi Budshai, is only the name of Lake Bakhthīn and perhaps identified with Budshai. As the lake consists of several sections, which are only connected by narrow arms, it has always borne several names. As its extent has undergone great variations, individual parts of it may have sometimes formed separate seas. Thus the name Budshai, Bābawja or Dschānzi is applied to the northern end, while Bakhthīn and Nisir belong properly to the southern end. The northeast corner is also called Lake Bakhthīn at the present time. The lake is the basin of a district from which there is no outflow, into which flows the Kurr or Rūrghān-i Band-e Amtū, which is formed by the confluence of the Rūrghān-i Kān Fīrūza and the Farawī, now the Pulawī. The lake is exceedingly shallow. A quarter of a mile from the shore it is only knee-deep. In consequence the evaporation is very great and the water very salty. In the dry season the lake is surrounded by a girdle of salt inundations. Hydrologically it is not a mountain lake but intermedium between this and the great salt deserts frequent in central Persia, called Kālū. The Lake has been surveyed by Capt. H. L. Wells.

BAHTSHI, a family of physicians of Syrian origin, which was originally settled in Djamāl Sabrī. Master BAKHTSHI, who was chief of the hospital there and had already given his name to himself as a writer on medical subjects, was summoned thence to Baghdad in 1487 (705) to attend the Caliph al-Manṣūr who was suffering from a disorder of the stomach. He so won the latter's confidence by a successful cure that he was prevailed upon to stay in the capital. In 152 (769), however, Bakhtshī himself fell ill, and, as he wished to die in his native place was allowed by the Caliph to depart in great honour. He had left his son Bakhtshī as his deputy in charge of the hospital on being summoned to Baghdad. When, during the reign of the Caliph al-Mahdi, his son al-Bakhtshī fell very ill, Bakhtshī was summoned to Baghdad and succeeded in curing the Crown Prince. The latter's mother al-Khaizira, however, took the side of her physician Abd al-Kaiz against him and to avoid further unpleasantness, the Caliph allowed him to return to Djamāl Sabrī. In 171 (787) Hārūn suffered from severe headaches.
and had Bakhtiyār summoned again to Baghdād and appointed him chief physician. He died about 185 (801). When he attended Djuʾfār b. Vahyā al-Barmakī in 173 (791) he recommended his son Djuʾbāʿ al-Māʾlam as medical attendant. By successfully curing a feverish patient of Harūn, whose health he had healed of a hysterical paralysis, he won the confidence of the Caliph and was appointed his private physician in 190 (805). But, during the last illness of Harūn at Tūs in Persia, he was too candid in the exercise of his duty as medical adviser and fell into disgrace.

A bishop, whom the Caliph consulted in place of him, accused Harūn further against him and he was finally condemned to death. The Viṣer al-Full managed to prevent the execution of the decree and Harūn’s son al-ʿĀmin again appointed him Court physician. When the latter was overthrown by his brother al-Maʾmūn, Djuʾbāʿ was imprisoned and did not receive his freedom till 202 (817) when the victor al-Ḥasan b. ʿAbdullāh relented. Three years later he again fell into disgrace and was superseded by his son-in-law Mīkhāʾil. In 212 (827) al-Maʾmūn had again to send for him, as Mīkhāʾil was unable to give advice regarding an illness of the Caliph. He did not live long to enjoy the favour of his master, who in gratitude for his rapid recovery, replaced him in his office and in the enjoyment of his property which had been confiscated, for he died the following year. He was buried in the Serghūn cloister at al-Madīn. His son Bakhtiyār succeeded him and accompanied al-Maʾmūn on his campaigns in Aṣṣa Minor. In the reign of al-ʿAbbās, the second successor of al-Maʾmūn, his rivals succeeded in having him dismissed by Djuʾbāʿ b. ʿAbdullāh. In the last illness of this Caliph, he was again summoned to attend him but only reached the capital after his death. Under al-Muẓawwakīl he was punished for twelve years in great esteem but was then banished to Bahrayn. He died in 256 (870). His son ʿUbayd Allāh was a financial official of the Caliph al-Muktaṣar, who confiscated his property on his death. His widow then married a physician, who instructed her son Djuʾbāʿ in the art of his forfathers. The latter however received his real education in Baghdād whether he had gone almost immediately after the death of his mother as his stepfather would not give him his inheritance. His fame reached Persia after he had cured an ambassador from Kermān so that the Burwahī Adjud al-Dawla summoned him to Sijūrā. He afterwards returned to Baghdād however and never left it except for short periods on being summoned to consultations at various courts. He declined an invitation from the Fatimids al-ʿAbīn to settle in Cairo. He went to Mawṣīkīn in answer to a summons from the Mawṣīkīn Mūsāshīkh al-Dawla ʿAbī Mansūr and the latter refused to allow him to return. He died in this town on 21 February 390 (12 April 1005). Here lived also his son Aḥmad ʿUbayd Allāh ʿAbbās, a friend of Ibn ʿAbījīh, who died in the sixth decade of the lāthī century A. H. Of him alone, literary works have survived to us, it appears, while the works of his ancestors are lost. His chief work was the Taḥkhirāt al-Ḥāfdhīn Z̄al al-ʿAbīnī of which an extract under the title of al-Ruṣūm bi-Tāhkhīrāt al-Dawla al-ʿAbbāsī is preserved in Gotha (see Perott, Die arab.
BAKİ, the "Enthroning One"; one of the names of God [see ALLAH, p. 303].

BAKİ, the greatest of Ottoman lyrical poets, properly called Mahmut ʿAbd al-Baki, born in Constantinople in 933 (1529-1527) the son of a Muḥammad of the Muhamsads; learned at first the saddler's trade and afterwards studied law to prepare himself for a judicial career. In 952 (1555) Sulṭan Süleyman to whom he had dedicated a controversial Kaşf el-Mustafa, written from Persia, attached him to the court, where he also enjoyed the imperial favour of Selim II and Murad III. After being successively ʿAbd of Mecca and Constantinople and three times filling the office of Kaşf ʿAbd of Anatolia and Roumelia, he died on the 23 Ramaḍan 1006 (7 Nov., 1606).

Remarkable for the purity of his style, Baki is the most enthusiastic, but not the most exaggerated of the Persianizing school which has dominated Turkish poetry down to the sixteenth century.

BAKİ AL-GHARQAD (also briefly called AL-BAKİ); the cemetery of Medina. The name denotes a field, which was originally covered with a kind of high-growing black berry; there were several such Bakis in Medina. The place was and is situated at the south-east end of the town, outside the modern town-wall through which a gateway, Bāh al-Bakī gives admittance to the cemetery (see the map of Medina in Castani, Annali, ii, p. 73). The first to be buried in al-Baki was ʿOsman b. Ṭa’i, the ascetic companion of the Prophet; the latter's daughters, little Ṭa’i, and her husband, likewise, were also buried here. It gradually became as an honor to be granted the last resting-place here among the relatives of Muhammad, the Imams and Saints. The graves of the famous dead had memorials and domes built over them by their descendants; the dome of Ṭa’i ibn ʿAll for example, rose to a considerable height as Ibn Dhu’l-Qarnain informs us. When Burekhardi visited the place after the invasion of the Wahhabis, he found it the most wretched of all the cemeteries of the East. Like the grave of Ḥusayn ibn ʿAbd al-Kalam, al-Baki is one of the "ziyāra places of Medina where the pilgrims are accustomed to pray.

AL-BAKILLÂNÍ, Abu Bakr b. `Abd as-Sattar, Ayahu author and dogmatist, a pupil of Abu l-ʿAbbas b. Muhammad al-Takriti, who was a pupil of Abu `Abd al-Ḥasan al-Aszari, died on the 23 Jumā'ah of 403 = 6 June 1013 at Baghdad. He was famous for polemical writings. He introduced new ideas into the Kutub (i.e., Greek philosophy or perhaps from the dogmatism of the Eastern Church, such as the concept of atoms,
of empty space and the view that an accident cannot be the beaker of another accident and that an accident cannot last through two units of time. Of his works there has only survived the Kita'ib fi l-`Ikbād al-Kubrā (2 v. Cairo, 1346 = 1892), according to Ibn al-'Amīl in Sulaylī, Rīzākī (Cairo, 1278, v. ii, p. 134) the best work on this subject. Ibn Hasm mentions also in his Fiṣḥul his Kita'ib al-`Isthurghāf fī l-`Ikbād and his Kita'ib fi Madhhab al-Kurdsī (Cairo, 1308).

AL-BĀKIR (A.), the Sūlūm i.e., the Investigator, a name of the Ibrahīm Muḥammad b. Aḥī [v. v.]

BAKKĀM (A.), Bazzābūd, as Indian dyewood, obtained from the Cassia fistula which, when decocoted, gives a red dye, and is also used in dentures. as a styptic and desiccant for cancer. The root yields a poison which works rapidly; it is mentioned in a verse by al-'AṢāsi. The dictionary enumerates given by C. B. as a synonym of `anām which rather means "Dragon's blood", a kind of resin. Bakkām appears to be an archaic word of foreign origin (LüIūk al-Harāb, sū. 314: Tafāl al-Aṣrāf, v. 5). (C. H. U.)

BAKKAR, a fortified island in the river Ima, situated in 24° 43' N. and 68° 56' E. It is a limestone rock, 600 yards long by 300 wide, and about 15 feet in height. As early as 1327 it was considered of some importance, and different States contended for the possession of it. It changed hands several times before it was delivered up to an officer of the Emperor Akbar in 1574; the Kalhoras princess obtained possession of it in 1736, and it was subsequently occupied by the Afghans until it was captured by Mir Rustam Khan of Khairpur. The Mīrs of Khairpur sold it to the British in 1839.

**Bibliography:** A. W. Hughes, Gazetteer of the Province of Sind, 2nd ed., 1876; v. Buxkūr: Imperial Gazetteer of India, 2nd ed., 1876; v. Baklīya, a Karma ian sect, which arose in the Sawadd of Wajūl in 905 (908) under the leadership of a certain Abū Ḥātim. He is said to have forbidden his people to eat garlic, leeks and turnips, but otherwise to be vegetarians for fear that the slaying of animals. This is probably the explanation of the name Baklīya. He abolished religious observances, and gave other precepts, which we do not exactly know. When the Baklīya, allied with the Behdins of the neighborhood under Marūl b. Ḥasan and others began to plunder, the Caliph sent Ḥārān b. Ḥishāb with troops against them; he scattered them and slew numbers of them in 916 (918).

BAKR v. W., a great Arab tribe, belonging to the Madāʿī (Jābali) group. Their genealogy (omitting one of their important chiefs) is: Bakr b. Wail b. Qāid b. Ḥimb b. Aamīl b. Nāfīr b. Muḥammad. All other tribes were amongst others the Taḥlīla and Aṣār, subordinates tribes the Jābāl, Ḥālam, al-Ḍur, Ḫāṣā'ī and al-Ṭā`ī. Other important subordinates tribes were the Dībāḥ, Jīlā, Ḥarmān, and Kālā and Shābib. They lived in the Tihama of Yaman, the Ṣa`īd and Ṣan`ā as far as the borders of Mecca. We find them here in the time of Khalifah Abū Bakr and 'Omar. In later times, they gradually pressed into northern Meccanomia, where they inhabited the district still called after them. Dībāḥ Bakr [v. v.] as neighbours of the Taḥlīla, who had been settling in Meccanomia since the infancy of the Prophet, so that we often find one and the same place (e.g., the town of Ṭisi`in (Ṭisi`īn) and the valleys of al-Ṭayy (Ṭayy) and Shābib) sometimes said by the geographers to belong to Dībāḥ Bakr and sometimes to Dībāḥ Bakr or the Taḥlīla. There were also settlements of the Bakr in Persia (especially in the province of Khurāsān).

The following districts in Meccanomia belonged to them: Amsīr (the ancient Amsīr) the capital. now usually called Dībāḥ Bakr (but officially known also as Amsīr Amīr, "black Amīr", from its dark basalt walls), al-Ṭīr al-Sūr (a small town), Ḥabīr or Ḥabīr with iron mines, a medium sized town), Daynān (a fairly large town with a large market), Ḥaṣa Kūfī (with fortifications), Ḥabīr (Mardīn, a fairly large town on the summit of a hill), Ṣayyīy (Miskān, said to have been the finest town in Dībāḥ Bakr) and Ra`a (Amīr). Besides these, the following settlements of the Bakr are mentioned: among others: al-Ṭaṣhkh, Ḥawāl, Ḫaṭra, Ḫaṭri (al-Ṭaṣhkh, Khīmar, Ḫaṭra, Ḫaṭri, al-Ṭaṣhkh, al-Makhaṭbah, Kafla, Fīrāz. Among the following were watering places of the Bakr: Ḫul Ḫul b. Rāfī (near Kūfī, a small town), Ḫalīl, Sulaymān, Shābīwī (or Shābīwī?) and Ḫaṭri (in the Baklīya of Baṣra); Wādī al-Ṭasāir (belonging to the Shābīwī), Darīthār (afterwards belonging to the Taghlibi); MOUNTAIN: Awdāl al-Ṭaṣhkhī, Ḫaṭra (al-Ṭaṣhkhī) and Ra`a (belonging to the Shābīwī). The following belonged jointly to the Bakr and the Taghlibi: Ḫul al-Ṭaṣhkhī, Ḫaṭra (al-Ṭaṣhkhī), also called al-Makhaṭbah ("place of amusement") given as two different places in Hamdīn, Ḫaṭra (10), and Wūska, Ḫaṭra (v. 110, the Wādī al-Makhaṭbah, and name Amsīr). Hamdīn further mentions a number of settlements (mostly in the Tihama of Yaman, the remaining of the number of which is partly uncertain) (v. 112, 124-125).

In the times of the Dībāḥ Bakr they worshipped idols. As such are mentioned: (in ancient times Bahrān bore this name) whom the Taḥlīla also worshipped, Ḫal al-Ṭaṣhkhī (in earlier times the tribal god of the Ṣa`īd), al-Makhaṭbah in Sulaymān (specially revered by the Ṣa`īd). The latter, like the idols Manīr and Dībā`i mentioned in the Rawā (cf. Sīra ill. 19, 20) we also meet with in proper
nimes of the Bakh. A portion of the Bakh (the Taimullati, Debari and a part of the Idji) professed Christianity.

History. We first meet with the Bakh b. Wali" in the fourth century. At this period they were making raids from Bahrais and Yamun into the adjoining kingdoms of Persia, in alliance with the Turkmen under Oktash Bakh. Muhammad b. Auliya advanced into Bakhrais against them (about 350) and wrought great carnage amongst them and the two other tribes mentioned, took many of them prisoner and settled them in Persia (Ahwaz, Tawudj and Kirmān). In the fifth century we find them under the sway of Yazan. About the middle of this century Abu Abd al-Malik b. Husain (called "the haughtier than Kali" W.) undertook the leadership of the Bakh and Taghibi for a time (about the beginning of the tenth decade of the fifth century) against the Bakh (the victory remained undecided), Wārelī (Taghibi victorious and Djanšā was wounded). Ibn Alawī (Bakh victorious) Kaušārī (Taghibi victorious) and Kāšāni all joined Tihāb al-Imām (in this battle the Bakh inflicted a decisive defeat on the Taghibi). Tired of this mutiny of the Bakh and of the Taghibi, the Bakh under the leadership of Muhammad b. ʿAbd al-Malik b. Husain (the chief of the Bakh). He was successful in making peace between them for some time, and placed one of his sons, Shu- rashīlī, over the Bakh and another, Sāḥū, over the Taghibi. In order to guard himself from their raids into Persia, the Emperor Anastasius made a treaty with the Bakhīrī, whereupon he was handed over to him, the revenue of a district of Persia on condition that the Bakhīrī and the tribes allied to them should refrain from incursions into Persia. Under Khuršīd's successor, Khuršīd I (Khaṣira), Muntūrī overthrew Al-Mundīrī III in battle. Later in the same year he again advanced into Bakhrais against them (about 529) and when Khurshīd, the leader of the Bakhīrī fell in a battle with the Taghibi under Solaiman b. Kaliya, a watering-place of the Tanimī, the so-called "first day of Kaliya"), and the Hindustān kingdom under Uētī Naurā broke up about the same time and had to yield to the superior Alygian power, the Bakh appealed to al-Mundīrī III. The latter finally succeeded in appeasing both tribes of the Bakhīrī and had 500 goats given to him by each as a pledge of peace. This was the end of the Bakhīrī state. (Tabarī, xxvi. 255.)

The Taghibi then went into Mesopotamia while the Bakhīrī remained under the Lakhmīnī rule of Idrīs. We next find them following the Lakhmīnī III to Syria in his campaign against the Khosrauī chief, al-Hārūrī al-A’rādī (in 554). They showed the same adherence to Ame b. Hind, the successor of al-Mundīrī, who owed his great success against the Khosrauī in Syria to them and to the later Lakhmīnī chief al-Nūrī alūs Kāshānī. When Abī Ḥāṣmā Zaidī intrigued with the Persian king Khusraw Parwāts against the latter and aroused his enmity towards him, because he had imprisoned and executed the poet Zaidī, father of Abī Ḥāṣmā, he took refuge with his family among the Shāhān. He left his treasure and armory (about 5000 shields) with the Shāhānī chief and surrendered to Khusraw, who threw him into prison and put him to a violent death (according to another account he died of plague). Iyās b. Kāshānī, chief of the tribe of Tāyun which was made king in Idrīs in place of al-Nūrī by Khusraw, then demanded that Hāñt should give up the treasure and armory of al-Nūrī. When he refused to do so and the Bakhīrī at the same time began to make raids into Idrīs, Khusraw sent an army against them under Iyyās. In this army were the Taghibi and Nūrī under al-Nūrī b. Zahrā, the Shāhānī and the Kaušānī tribes of Mesopotamia under Khālid b. Vardī al-Bahhanī and two detachments of Persian cavalry, each of 1000 men, under Hāmara and Khandarīnī. The Bakhīrī under Hāñt were encamped at Iyās Kār. After Hāñt on the advice of Hanūla b. Ḥalūša of the subordinate tribe of Idrīs had divided al-Nūrī’s army among the Bakhīrī, a battle took place here, one of the most famous in Arab history, which has often been celebrated by poets (cf. ʿAbd al-ʿAṯīr Ashkālī, xx. 139-140). The Bakhīrī inflicted a severe defeat on the Persians; Khālid, Khandarīnī and Hāmara were slain, the latter by al-Hārūrī b. Shāhānī, called Ḥawwānī, and the whole army was scattered. According to one account the battle of Iyās Kār was not fought till some months after the battle of Badyr, according to another and more reliable story it was fought soon after Muḥammad’s appearance as a prophet at Mecca. It may however have taken place some time earlier, somewhere between 604 and 610. According to one legend the Prophet himself is said to have prayed for the Bakhīrī during the battle, and on hearing of their success to have called upon the Bakhīrī to him. After the battle of Iyās Kār the Bakhīrī appear to have remained independent till their adoption of Islam.

Their chief battles with the Tanimī must have taken place in this period. During the dry season the Bakhīrī used to let their cattle graze on the lands of their neighbours, the Tanimī, and were thereby tempted to make inroads into their territory which naturally gave rise to strife between the two tribes. Of battles between the Bakhīrī and the Tanimī, there are mentioned amongst others, the battle of Zuwārīn (Bakhīrī victors), al-Hāṣmā (Bakhīrī victors), Sāḥā, Shubā, Sītār (Tanimī victors), Safīr
his successor Sulaiman, we find about 7,000 Bakti under Hajjaj b. al-Mundhir on the side of Sulaiman. They also remained on the side of the government during the rebellion which Vakil b. al-Muhtalab, the governor of Irak, stirred up in Bakti on the death of the Caliph Umar II (101 = 720) and were overcome by him. On the other hand we find them during the reign of the second Caliph of the 'Abbasids, Abu Dij'ah al-Mundhir, fighting against Abu Muslim, the partisan of this dynasty and they were likewise compassed by him. Their further history is connected with that of Mesopotamia (Diya's Bakti).

AL-BAKRI. Abd Allah b. Abd al-Abbâd b. Muhammad b. Arûb b. 'Amr b. 'Abbâd, the oldest Hissaro-Arab geographer, whose works have survived to us, flourished in the second
half of the 4th = 16th century. His family, belonging to the great tribe of Bakr, took a prominent place among the Arab families of the West of Muslim Spain. Muhammad b. Aliyyah, Kafir of Niebla, the grandfather of our al-Bakr al-Maliki, was governor of Salta and Huelva in the Caliphate of the Omayyad Highst al-Malikiyid. On the fall of this dynasty and during the so-called fanźī period of anarchy, which followed, he tried to secure his brethren and his sons to turn his government into an independent principality and was successful. On his death his son 'Abd al-ʿAziz however, was unable to make effective resistance to the efforts of al-Muwtalid to the Emir of Seville, who was attempting to bring all Muslim Spain under his sway. Forced to surrender his territory, 'Abd al-ʿAziz fled secretly from Salta with his treasure and his son, one author. He went to Cordova. This town; at that time independent, which was ruled as an oligarchy under the family of the Banu Ziyad, was the place of refuge for all the princes who had to escape the dangerous proximity of the mighty lord of Seville.

In Cordova al-Bakr completed his education under the guidance and care of the emir. On the death of his master in the year 456 (1064), he entered the service of Muhammad b. Ma'in, Emir of Almeria, who received him kindly and afterwards made him one of his intimate friends. Here al-Bakr again attended the lectures of celebrated men like Ali Marwana b. Haylan, in 478 (1085-1086) al-Bakr as the ambassador of the Emir of Almeria attended the embassies of the Banu Mas'ud al-Muwtalid b. al-Muwtalid, who was going to Morocco to seek the help of the Almoravids b. Tamghita against the Christians in Castile.

After the Almoravid conquest al-Bakr seems to have returned to Cordova; at any rate he died there at an advanced age in Shawwal 487 (October-November 1094) and was buried in the cemetery of Umm Salama. Al-Bakr had the reputation of a man who was not ashamed to combine the love of the juice of the grape with that of poetry and letters.

His poems were appreciated but it was his works in the domain of philology and belles lettres which were especially praised; and it is to these that he owes his reputation. The Muslim authors mention the following works: 1. Kitab fi ʿilm al-mawrid muqaddim Muhammad, a work on the proofs of the divine mission of the Prophet; 2. Shaffiʿallāhu ʿalaihi wa sallam in al-Marid, on the correctness of certain expressions current in the Arabic of his time; 3. a commentary on the Book of Proverbs of Abu Ubayd al-Kasim b. Sollan entitled al-ʿanfīl al-kubra; 4. Kitab ʿalaihi ʿalaihi wa ʿanfīl majaz, a commentary on Abu ʿAli al-Kasim al-Targhuniniy's Kitab al-mukaddim (unique MS in Florentine Library 407) entitled al-ʿanfīl wa ʿalaihi wa ʿalaihi; 5. Kitab ʿanfīl al-mukaddim wa ʿalaihi.

The first mentioned work was probably written to defend himself from the charge of heresy and religious indifference, which was so often brought against scholars in the early Almoravid period, an accusation, which at that time threatened such disastrous consequences. The three next works are philological treatises or commentaries. The 4th work is a work on ancient geography, a sort of lexicon of place-names of uncertain orthography, names which are found in the Hadith, the ancient historical works and the pre-Islamic Arabic poems. The most of these names refer to Arabia; other districts are only touched on occasionally. The work has been edited by Wulfenfeld (Jena, 1937; Paris, 2 vols, 1876-1877). It is however on the Kitab ʿanfīl al-mukaddim wa ʿalaihi that al-Bakr's reputation is chiefly based. The work has not survived in its entirety. This geography, which contains most geographical works of the early ages is written in the form of an itinerary, is in part a compilation from important older works now lost. The author, however, also gives information which is the result of his own investigations. The book originally comprised several volumes and besides the account of the world as known to the Musulmans of the 4th century, contained separate valuable historical and ethnographical essays. Later authors have drawn on it very largely. There have survived to us the accounts of North Africa, the description of Egypt (not equal to al-Makrizi's notices of Itál and Transoxania), and a few pages on Spain. The part dealing with Africa was edited by de Slane in 1857, and translated in 1858. An improved reprint of the edition of 1857 appeared in Algiers in 1883. Under the title of Gouvement général de l'Algérie, Fragments treating of the Russians and Slavs have been published and translated by Kunik and von Rosen (Uebersicht al-Bakr's deutschsprachiger Werke, 1879).}

Bibliography:

AL-BAKR, MUH.AMMAD B. 'ABD AL-RAHMAH AL-ShIBA' S AL-SHIBAI AL-MUKRI al-Mukrīs SHAMS AL-DIN, Arab poet and mystic, born 898 (1492) lived a year alternately in Cairo and a year in Mecca, and died in 942 (1545). Besides his Divan (Bibli. Nationale, Catalogue des ms. arab. de de Slane, Nos. 3229-3233, 2113-2117, 1065-1068), Catalogue of the Arabic, Persian, and Turkish Ms. in the Library of Trinity College, Cambridge, 1870, No. 55-77, a collection of mystical poems entitled Tafsīrān al-Anwār (Vollers, Katalog der islam. nat. Hist. der Universitätsbibliothek zu Leipzig, 2. Teill, 1873-1874, 272); and several small Sūfī treatises (of which the MS. Götha N. 565 contains a collection) he compiled a romantic history of the conquest of Mecca in verse, called al-Durrāt al-Mukrīsī in 471 (nakh 1353, Cairo 1284), 1286, 1287, 1289, 1297, 1298, 1300, 1313, 1314, 1324); as well as a work the contents of which are real history entitled Ḥabīb al-Umm wa Natīq al-Fātimah (Frankfort, Die ar-R. us. zu Gotha, 1875). (A. COUK.)

(C. BROCKELMANN.)

AL-BARKI, MUJAR' B. KAMAL B. DINS. B. ALI B. SUDREI B. AL-HANA'I B. KHALWAT MURR' B. DIN, Arab. author and mystic, born in Dhu l-Qada' 1099 (Sep. 1688) at Damascus, being left an orphan at an early age, was brought up by his uncle and entered the Danish order of the Khalwatiyya. In the year 1022 (1610) he made his first pilgrimage to Jerusalem; there he wrote his prayer-book al-Fath al-Khawalid and procured a certificate from Ali Kâezkâb of Adranospolis, that it was not a hujah, as one of his opponents had said to read this book aloud at the end of the night. He returned in Sha'ban of that year (Oct. 1024) to Damascus, but repeated this pilgrimage more frequently in succeeding years and made the acquaintance of Jerusalem of the writer Râghib Pasha, whom he accompanied on a journey to Cairo. Under the protection of this patron he set out from Jerusalem early in 1125 (Oct. 1422) to Stamboul and reached it on the 17th of Shawwàl (24th May 1423). Four years later he returned to Jerusalem. After making the pilgrimage to Mecca in 1148 (1735) which he had planned as early as 1129 (1716), he was given up on account of a quarrel with his uncle, he went to Stamboul for the second time in 1148 (1735). From there he returned by ship, via Alexandria and Cairo. In the following year in connection with a second pilgrimage he went to Dress or Aix where he stayed 8 months. After spending another 11 months in Nubia, he again returned to Jerusalem in 1152 (Jan. 1740). He died in 1162 (1749) in Cairo, where he was born, to set out on his third pilgrimage. His numerous mystic treatises, prayers and poems which are given by Brockelmann (see infra, cf. also al-Himam al-Hâkiriy al-Maw'diyya al-Dhajja, see Vollers, Catalog der Islam. und Arab. Bibl., i. 350 ff, and al-Wajh al-Dhajja al-Sulaym Faruq al-Dhajj ayyal. Vollers, Catalog der Islam. und Arab. Bibl. in Princeton University Library, Ns. 351 b.), are still all unprinted except a Mâ'rifat al-Munûfim and Awrâd (Cairo, 1305). He also wrote an account of his first journey from Damascus to Jerusalem in 1122 (1710) entitled al-Khawar al-Insâhir fi 'I-khawar al-Khawarî (Allwând, Verzeichnis der Hschr. zu Berlin, Ns. 651). At Damascus and Jeru-salem he was described in his al-Mudawwânah Sh'a'ban fi 'I-Insâhir al-Sha'baniyah (ibid. 6514).

BAKIYAH (BAKYA), AN ORDER OF DA'VISHES, which according to Denevouz took its name from Pir Abû Wâfî, who died in Aleppo in 902 (1496) or 909 (1503-1504). According to Rim, Marches des Arabes, p. 271, they are a branch of the Shaf'iyya (q. v.), — Bakiyya is however also the common name of those who claim descent from the first Caliph Abu Bakr. The head of this family, the Sheikh al-Baki, is at the head of all the dervish orders in Egypt and also bears the title Nasîr al-Ma'ârîf. On Bakiyya in this sense cf. Revue du Monde Musulman, iv. 524 et seq.

BAKT, the Nubian tribute. Bakt, probably an ancient Egyptian word meaning slave, occurs in Arabic literature as the technical term for the tribute which the Christian kingdom of Nubia had to deliver to the Egyptian governor for the Caliph by a treaty of Kâmaqân 31. (April—May 652). This tribute at first consisted of 360 slaves, a number and form of payment, which we frequently meet with in the levies of tribute in ancient Egypt. In addition there were 40 slaves for the intermediary officials and other persons, especially rare animals like elephants, giraffes and leopards, which at that period contributed to the glory of a court. In later times Ibn Taghfidhîr (Amârî, i. 725) notes the delivery of 500 slaves. These Nubian payments were not really tribute, as the Muslim had to give in return 1000 arats of wheat, as many of barley, 1'200 vessels of wine, two fine horses, 100 robes and a number of very valuable articles of clothing, quite apart from the presents which had to be given to the Nubian envoys in addition. The Bakt was therefore really a primitive form of political exchange; indeed on one occasion under the Caliph Mu'min it was noticed that the presents of the Muslims were more valuable.
than the Nabian "tribute". Down to the time of the Fatimids the Bâkt appears to have been regularly delivered. With the decline of Nahla and the Muhammadan occupation of the upper valley of the Nile, the Bâkt ceased, though we have no particulars on this point.

(B. C. Becker.)

**BAKU,** in the Arab geographers Bâkti, Bakût and Bâktta, a town with the finest harbour on the shore of the Caspian Sea. The explanation of the name, which is nowadays accepted in Bâkt itself and is probably due to a popular etymology (Bâktita, "a place where the winds strike") appears to have arisen at a very late period and the same applies to the story of the founding of the town by Khosraw Angharwân. The assumption that the naphtha wells of Bakût with their "eternal fire" played an important part in the fire-worship of Persia, likewise rests on a popular etymology and the name is probably brought here till the eighteenth century by Indians and Persian Parsees. The naphtha springs are first described by the Arab geographers, most thoroughly by Mas'ùdi (Murâdî, v. 25 et seq.) and Yâsîn (v. Baküû). There were two large springs, one of which yielded yellow or white naphtha (according to Mas'ûdi, the only spring of this kind known to him in the whole world) and the other black or green; each of the two springs yielded 1,000 dinars a day; in the eighteenth century Bâktû评估 estimates the amount of black naphtha obtained daily at 200 male-loads. According to the Darband Namâh (ed. Kazem-Beg, p. 136 et seq.) the naphtha springs and the salt deposits of Bâkt formed a Wâkf of the inhabitants of Darband. At a later period, as an inscription of the year 1055 (1594-1595) shows, the town was a very rich place. Bâkt was first mentioned as a harbour (jârâda) by Ma'kaddas (ed. de Goeje, p. 376, e), but at that time the town in spite of its having much the better harbour was of no importance in comparison with Darband, at that time the second largest town in Caucasia. We have practically no information on the history of the town; it is not once mentioned by Tabari nor by Ibn al-Athir. The Russians are said to have advanced as far as the naphtha springs about 301 (1913-1914). At a later period Bâkt belonged to the kingdom of the Shirwan Shah and is mentioned in the xvi (xvii) century as the residence of this prince. The Shirwan Shah lived more frequently then and later at Shumâkht. The ancient chief mosque of Bâkt was, according to an inscription, built in 846 (1443).

During the Mongol period and afterwards Bâkt appears to have attained greater importance as a harbour; after this period the Caspian Sea is frequently called "Sea of Bâkt". The authorities for this period give us but scanty information concerning the town; Hamid Allah Kaswini in the viii (xiv) century gives rather more than the other authorities and most information is given by 'Abd al-Raqib al-Bakûvit in the xix (xvii) century. According to Hamid Allah Kaswini there was at this period still only a village at Bâkt with a fort lying high above it; there lived a "Head of the Priests" (hâzir-zâri bâbûlshâh) called Mûr-Jâkhêrî (Agkhiâshî). Bâktûvit speaks of two fortresses, one high-lying, which in his time was almost entirely destroyed, and the other on the sea-shore; the latter was considered unusually strong and could not be taken even by the Mongols. The surface of the sea was then much higher than before so that a large part of the town had been submerged. The district immediately surrounding the town was then as now a dreary desert; the gardens of its inhabitants were at a considerable distance; everything necessary to maintain life was brought from Shirwan and Mughân. Besides naphtha and salt, silk was also produced. To the xviii century belongs the palace of the Shirwan Shah, as well as the two tombs (inscription of the year 896-904) lying near the palace. The palace is now used as a monumental sepulchre and is in an utterly neglected state. In 1601 an ancient cemetery with an epitaph of Rafi'î (September—October 1415) and others (from the forms of the letters) unmade tombsstones were found by accident.

In 1606 (1550-1551) Bâkt was besieged and captured by Shah Isfahân, who stripped the town of all the treasures of what was then the Persian kingdom, and the treasures of the Shirwan Shah carried off. In 1637 the town had to surrender to the Turks under 'Othman Pasha, and remained under Turkish rule till 1668. When Persian rule was again restored, Shah Abbas I had the town walls repaired, as an inscription of the year 1017 (1608-1609) proves. In July 1725 Bâkt surrendered, after a brief resistance, to the Russian General Matyushin, but was given back to the Persians in 1735. After the death of Nâdir Shah (1747) the princes of Bâkt became practically independent. During the fights for Caucasia between Russia and Persia in the latter years of the xvii and early years of the xix century, Hasmân Kuli Khân, the prince of Bâkt allied himself sometimes with one and sometimes with the other. On the 4th February 1820 the keys of the town were to have been given up to Prince Tchittidou, but the General was treacherously murdered at his interview with the Khân and his head sent to Tchitit. When in the autumn of the same year General Bulgakov advanced against Bâkt, the Khân fled to Persia and the town surrendered without resistance on the 7th October and was finally incorporated in the Russian Empire.

The management of the naphtha-springs was a monopoly of the last rulers of Bâkt, who obtained a revenue of 40,000 roubles annually from it, according to the account of the Traveller Gmelin. Under Russian rule the springs were proclaimed Crown property; it was not till 1872 that the trade was thrown open and springs sold by public auction. Since that time the trade and thereby the town has greatly increased in wealth, since Bâkt has been connected by railway with Hatun on the Black Sea as well as with the interior of Russia. In Kretz's Geographisch-statistische Leckten (5th edition 1864) Bâkt is described as a town with only 10,000 inhabitants; even in 1888 in the guide officially published in that year the number is given as only 45,797; now Bâkt is an up-to-date modern city with over 100,000 inhabitants.

**Bibliography:** G. le Strange, The Lands of the Eastern Caliphate (Cambridge, 1905), p. 180
BA'KUBA (also BAKUBA) a town in 'Iraq, according to Yākūt a station on the ancient caravanserai route from the Babylonian plains to the Iranian highlands (the Ḥūrānī road of the Arab geographers) 10 parasangs (= about 40 miles east (to be more accurate: northeast) of Baghdad on the western bank of the 'Idāṣāl whose course, from here to Dilâs Nahrāwān, as is clear from Ibn Sāmīn's account, formed part of the great Kābīl-Nahrāwān Canal, which was called Tāmārīd; cf. on this point Strick, Babylon. n. den Arab. Geogr., 1. 37. The place still exists; location: 35° 45' n. Lat., 44° 40' e. (L. G.). It is a pleasant palm oasis in the midst of the desert, watered by numerous small canals: the excellent dates and citrus which grow here had become proverbial even in the middle ages. The town, famous for its pleasant climate, is of some importance on account of the traffic which passes through it, and has some not inconsiderable bazaars. Accounts differ as to the number of its inhabitants: Clément (see Reclus op. cit.) put the number at 3000 in 1866; Cumin's estimate of 2000 is accepted as the most reliable by Sapan in Petrowm's Mitteil., Ergänz.-Heft, Nr. 135 (1901), p. 22. Atnin's estimate (6000) is obviously too high. According to the latter the inhabitants are all Arabs, with the exception of a small proportion of Jews and Levis. Fleischer (in Jyshobd, Contin., iv. 350) rightly interprets the Aramaic name of the place as a contraction from Bāyā'kibā' = ʾbāšaš ʾl. s. Jacob's house.

BAKUŠA, a place and administrative district in 'Iraq, with Bāšuš, [q. v.] and the three districts of the great Nahrāwān-Canal, it formed the East Tigris circle (artūd) of Bāšuš Khurāb; cf. Strick, Babylonien nach d. Arab. Geogr., v. 1. 13. Like Bāšuš, in conjunction with which it is usually mentioned by the Arab geographers, Bāšušāya still exists under the name Shamsīt (Shakāt) southeast of Bērūd (= Bāšušāya) below 46° 15' 4. L. (Greenow, über die Quellen des Orients und die Palästineskroniken Mār Isaiah, ibid. etc., Strassburg. 1891, p. 121; ib. in Strange, The Land of the Eastern Caliphs, (Cambridge), p. 63, 80. (M. STRICK.)

BA'L. The common Semitic word 'aššu, “owner” (of a thing): cf. the articles thereon in Cheyne's Encycl. Bibl., Hastings’ Dict. of the Bible and Encycl. of Relig.) has survived in living Muslim usage at two points only. On account of Korānic usage (l. 225; xiii. 75; xxvii. 31) ilšu still is at least possible, if archaic, expression for husband (for the ch'ittī type of marriage and the conceptions involved cf. Robertson Smith, Kinship and Marriage, by index, especially pp. 92 et seq. and (a) even in the colloquial (e.g. Spro, Vocabulary of Coll., Ar. of Egypt) ilšu still means a plant which does not need artificial irrigation. For classical Arabic usage on this latter point, which goes back to Ba'll as a divine lord, see Lane-Jones, l. 225, b. c. d. de Sacy, Christ. de., l. 224 8 ff., and, still fuller, Sāmī, iii. 59 et seq. Of Ba'll as a divine title, another slight trace remains in ʾlšu and its derivatives, “to be beloved” really “Ba'll-struck,” but in neither of these cases did any consciousness of the deification survive (cf. Noldeke on Arabs (Ancient) in Hastings’ Encycl. of Rel., l. 664). It is true that the lexicographers give ilšu with the sense “owner,” “lord” (mālīk, rabīt); but this usage goes back, apparently, to South Arabia (where — opposed to North Arabia — ba'll had been common as a divine title) and was introduced into Arabic to explain a passage in the Korān. In Korān xxvil. 121—122, the story of Elijah (Yāhu)'s taunting of Ba'll is touched on. It is made to say to his people (v. 125), “Do ye supplant me with this for my fornicates the Best of Creators!” It is very possible that by ʾlšu" here Muḥammad meant simply Ba'll as he had heard the word in some form of the Biblical story (I. Kings, xxviii), but the oldest exegetes have three explanations. Thus Ṭabari ('Ṭabarī, xxviii, 53) says that ba'll is a word meaning rabīt, “owner,” in the dialect of Yemen; you can say, "Who is the rabīt of this ox?" — or that it was the proper name of an idol (bala) and that thence the place anciently called Bāšuš, now to be called Ba'llhak — or that it was a woman whom they used to worship. Accordingly, we
would have to translate either "an owner" or Bah, as a proper name. The woman reference is difficult unless it is because she can mean wife as well as husband, or the word in an allusion to the worship of Astarate. In Bah, even in Bah, Ibn 'Abbâs regards the usage of Bah, in the sense "owner" as true Arabic, though rare, and in the story from the Aṣba'î (vii. 45), referred to in Jami' al-Tirmîdzî, p. 92, there does certainly appear a play upon such a sense. The Lâmi', also, (i.e.) has at least one quotation which does not go back to Ibn 'Abbâs, but the usage must, at least, have been abundant in the Lâmi', in the Maqâtîl (vii. 109 of ed. of Cairo, 1908) gives only the two explanations, as a proper name and this Yemenite me. So, too, Bâlîwâl and the commentaries generally. But that, Bah, here, is the proper name of a god worshipped at Bâlî- bah, or Helipopolis, is now the accepted. Muslim position, and a name of semi-Biblical legend has given up round the Bâlîvâl, mentioned. This is given in greatest fullness by Thâlibî in his Alâmah (pp. 142 et seq. of ed. of 1349). See, too, Pseudo-Mâlaki, iii. 96 et seq. of Arabic text, and Yahyâ b. b. Bâlîwâl. For an abstract, see Firdawsî, Encyclop., i, 381.

Bâlâ (or), "height", "high", also a preposition "over", is frequently found in composition in place-names; examples will be found in the text. The word comes to be the name of a Turkish government official, corresponding to the rank of general of a division of the army, class immediately below the Muqit and Wâsit; in correspondence, officials of this rank are addressed as follows: Rabiyallah efendim pasazhârî (To his Gracious Excellency, my lord etc.).

Bibliography: Schäfera, 1224, p. 36 et seq. (C. E. HEART). Bâlâ, Ka'a of the Wilâyât of and Siml, of Angora (Asi Minor) with the village of Kuslî (Ka'a 'Abi) as capital, comprises a Nâtîye, and, of villages with a total area of 2,593 inhabitants. These are manufactures of carpets and weft and coal mines in Ka'ar-Bel; near Kuslî is a beautiful forest, which is used by the people of the village as a summer dwelling.

Bibliography: Alâ Jâwâd, Lughâtî, p. 149; Schäfera, 1224, p. 769. (C. E. HEART). Bâlâ-Ghât ("above the Ghât or p asses"), a word of several applications in Indian geography. Early European travellers meant by it the plateau of the Deccan, behind the Sâvâk region, now known as the Western Ghâts. The Mughals applied it to part of their conquests in the extreme south, as the Bâlâpur Bâlâ-Ghât or plateau, opposed to the Carnatic Pasîn-Ghât or lowland. In Berar it means the upland tract above the Aden pass; and in Bâlâ-Ghât a plateau in the west of the state enclosed by hill ranges. In 1867, the name was given to a newly formed district in the Central Provinces, consisting of part of the Satpura plateau (area: 3,123 sq. m. population (1901) 1,375,371). The name was likewise given to the head quarters, though the town itself lies below the hills.

Bibliography: Imperial Gazetteer of India. (J. S. Cotton). Bâlâ-Hisâr is frequently used in India and elsewhere to denote a citadel; among the most famous are the fort in Peshawar and that in Kâbul, the capital of Afghanistan. Bâlâ Hisâr, popularly called Bâlâ Iâlî has, a market-town in Asia Minor in the Wilâyât of Sandjich of Angora, Kâzî of Siwût-Hisâr, three hours distant from it, has 3,000 inhabitants. There are the ruins of Peninsus with a Roman temple of Cybele.

Al-Bâlâdûrî, Ahmad ibn 'Abî tâfâr b. Dâjân. Al-Bâlâdûrî was one of the greatest Arab historians of the third century. Little is known of his life. He was an intimate friend of the caliph Mutawakkîl and Mu'ta'b and educated 'Abd Allâh the brilliant son of the caliph al-Mu'tazz. Ahmad b. Yahyâ is said to have died mentally deranged in 270 (982), after drinking the juice of the amara (balâdûrî) not knowing its effects, and from the name of his death he received the name Bâlal. This is probably only an etiological legend and besides, it is not certain that the story does not refer to his grandson, Bâlâdî, who was a famous translator from the Persian; for this reason he may have been of Persian descent but his grandfather was an official in Egypt and in any case the famous historian was quite arabised. He received his education partly in Damascus and Emesa, but also studied in Iṣa'b under Ibn Sa'd among others. Two great historical works by him have survived; his historical and critical powers have been emphasised on all sides.

1. His Futûh al-Bâlâd (Liber Exspugnationum Regionum anteriore . . . al-Bâlâdûrîi quem . . . edidit M. J. de Goeje, Leiden, 1866 and a Cairo reprint of A. H. 1318). This valuable work is only a synopsis of a more comprehensive work of like scope. The history begins with the wars of Muhammad against the Jews, Mecca, Ta'fil and his other undertakings, follows an account of the riddâ, the conquest of Syria, Dâjân, Armenia, Egypt, and the Maghrib and lastly the occupation of Iṣa'b and Persia. Remarks of importance for the history of culture and social conditions are interwoven with the historical narrative, such as on the customs and manners of the Turks and their relations with the Byzantines in regard to official documents, questions of taxation, the use of the visel-rings, coinage and currency and the history of the Arab script. This work is one of the most valuable sources for the history of the Arab conquests.

2. His Anâlî al-ahrâr (Ma-al-ahrârâh), a very comprehensive work, which was never completed. It is genealogically arranged and begins with the dîr of the Prophet and the biographies of his kinsmen. The Abbâsid follow the Alids. The 'Abî Shams, among whom the Umayyad claim a disproportionate amount of space, follow the Banu Hâshim. Next the rest of the 'Abbâsids are dealt with and other divisions of the Banu Mâjâr. The Khârîj, in particular the Tâhir are occupying the closing portion of the work; the last biography of any note is that devoted to Al-Hâjîjib. Though a genealogical work in outward form, the Anâlî are really Tabaqît, arranged genealogically in the style of Ibn Sa'd. This method of arrangement is not rigidly adhered to; for the most important events of the reigns of
individual rulers are always added to the corresponding chapters. The Anāhā are therefore one of the most important sources for the history of the Khaṭwānd. An edition of this work is being prepared by the author of this article in conjunction with several colleagues, based on a complete manuscript in Constantinople (Asghir Efendi 597-598). The Paris fragment (cf. de Goeje in Zeitschrift f. Oriental. Forsch., XXXVIII) is based on the Constantinople manuscript. A later recension divided the great work into 20 books (Hājjīdī Khaṭīb, I, 1346) of which the eleventh volume has survived (W. Ahlwardt, Anonymus Arabicus Chronic, Leipzig, 1883). This anonymous fragment was rightly recognized by Ahlwardt as a portion of the Anāhā.

In spite of all al-Baladhuri’s merits, his value as a historian has in recent times been occasionally overestimated. It is not correct to say that he gives the original texts, which later writers embellish and expand; it may be with much more truth assumed, from the agreement of essential portions with later more detailed sources, that al-Baladhuri has abbreviated. Al-Baladhuri’s whole style is inculcated by his time, compression, whereby it gains a certain conciseness but loses in artistic effect. We seldom meet with a fairly long story; the good old chroniclers whom he utilises (e.g. Abū Mīkhāf) divide their works into rather disjointed sections on apparently “scientific” principles, but documents and various versions seriously encumber the narrative. The arrangement of his literary material is thus circumscribed in that he applies the methods of the books of classes (Tabākh), with their separate articles to the writing of history (Fihrist) and attempts to combine the material of the books of classes (Ibn Sa’d) and of the other chroniclers (Ibn Tahkash, Abū Mīkhāf) into a third sort of style, namely the genealogical literature (al-Kalb), Anāhā.

BALĀGHĀ (A.), Abstract noun, from balāgh active, eloquent (from balaq, to attain something), meaning therefore eloquence. The "ilm al-Balāghā, Rhetoric, comprises three branches: the "ilm al-Balāgh, the "ilm al-Balāgh, and the "ilm al-Balāgh. The first branch ("ilm al-Nolūs), treats of the different kinds of sentence and their use; the second part ("Modes of Representation") teches the art of expressing oneself eloquently and without ambiguity i.e. jāfīr and sorts of similes, metaphors and personifications; third part ("Tropes"), deals with the embellishment of speech and treats of the large number of different figures of speech (sīna, Inversion, Hyperbola etc.).

This third branch of Rhetoric, the "ilm al-Balāgh, is the oldest and the one that has been longest studied. As early as 274 (887-888) Prince "Abd Allah b. al-Mu’tazz published a Ktīb al-Balāgh, with 17 categories of elegant modes of expressions, which appear in the Korān and in the ancient poems and so-called Pānikūs. Poems composed to illustrate various figures of speech have been composed down to the modern times. A good systematic account of the whole science of Balāgh was given by al-Sakkakī (died 622 = 1226 or 623 = 1227) in the third part of his encyclopedic work Miftāḥ al-Umm. Dīd al-

Uth Mūhammad al-"Uzairī, the "Ktībīt Dimāqti" (died 739 = 1338) made an abridgment of it, with a commentary, the Tāhāfūs al-Miftāh; this Tāhāfūs was not only often commented on but even put into verse by al-Sayyībī. — Voluminous extracts from the last-named works are given by Mehrin in his Rhetorik der Araber; this article is based on his researches. Cf. also Brockelmann, Gesch. d. Arab. Literatur, I, 80 et seq. 294-296; ii. 22. (A. Schade).

BALAK (Balāq), r. Rashīm, with the honorary title of Nīs al-Aṣwāl, the Uṣūnī, fought with great success against the Crusaders. Though he lost the town of Sarriyūn, which with Khaṭārit (Kāfarput) was the bulwark of this power, to Balduin, as a set off he gained "Ana in 497 (1103). In 514 (1120) he defeated Theodore Gabrān, Count of Trebizond, in a battle near Arrānqūn and took him prisoner. Two years later in 1122 while besieging Edessa, he succeeded in capturing the Crusaders Joscelin and Walcan and imprisoning them in Khāthart. In 517 (1123) he turned his attention to Karkar but raised the siege, when a considerable army of Crusaders led by Baldwin advanced to release Joscelin. He then had the good fortune to surprise his opponent at the bridge over the river Sebān (Nahr al-"Azārāk, now called Bolam Sū) and to take Baldwin himself as a prisoner; the latter was sent to Khāthart while Balak advanced against Harrān and Halah and seized these towns. He then married a daughter of Malik Rūmān and frustrated an attempt, which had a successful beginning, by the imprisoned Crusaders to seize the citadel of Khāthart. Joscelin had meanwhile escaped, though Baldwin was taken and brought to Harrān. Balak now advanced against Manṣūr and took the lord of this town prisoner, but his brother defended the fortress and called in the help of Joscelin. The latter lost no time in coming to his help but was put to flight by Balak. Soon afterwards, however, Balak was mortally wounded by an arrow and died before Manṣūr on the 14th April 1124. (Bibliothèque d’Etat, Paris, Lehnard, Extraits des historiens arabo-relativi aux guerres croisées, 46 et seq.; Ibn al-"Altīr (ed. Tornberg), 8; Recueil des historiens des Croisades, see Index; Wilken, Michaud and the other historians of the Crusades.

BALAK b. SĀFIN. [See "Balaq b. "Anāq."]

BALAKLAWA (Balaclava). Tahir Balaklāva, a small seaport town in the southwest of the Cimmerian peninsula (Government of Taurion), 8 miles from Sebastopol. The town is mentioned as early as Strabo (Chap. 312) under the name of Pali-kion and is said to have received this name from Palakes, the son of the Scythian prince Skituros (second or first century B.C.). There are only poplar etymologies in explanation of the name at the present day: 1. Turk. balaq = "foul" + Greek axã = catching; 2. It. bolla chiera = "beautiful spring." The town lies on a bay which is called by Strabo (Ch. 310, § 11) Balaclavia (mariners driven into this bay were attacked and plundered by the Scythian Taurians). The later Genoese name of the town Cembaro or Cembrao (also Cimbaldo and later also Jamboldum and Jamboli) is apparently derived from this. Somewhat to the north at the modern Inkerman, lay the bay of Kithhit according to Strabo which was separated from the Symbolon Limen by an isthmus only 40 stadia (5 miles) broad.
Like other places on the southern shores of the peninsula, Balaklava belonged for a long period to the Roman Empire and afterwards to the Byzantine, remaining in possession of the Greeks even in the period of the Latin Kingdoms. It was not till the fourteenth century that the Genoese gained a footing here; in 1356 the whole south shore of Kafa (the modern Taman peninsula) was granted to the Genoese by a treaty with the Tatars; the country near Inkerman and north of it remained in possession of the Greeks. Balaklava was strongly fortified during this period as the frontier post of the Genoese possessions; fortifications were also placed on the "Latimans" mentioned by Sinbo, between Balaklava and Inkerman, the remains of which could still be seen in the nineteenth century. Balaklava was, in this period, the seat of a Catholic bishop. In 1453 the Greek inhabitants of Balaklava succeeded in driving the Genoese from their town, and placed themselves under the Greek prince of the town of Theodora (probably he was sought for near Inkerman). The next year however a Genoese fleet under Giacopo Lalometino appeared, took Balaklava; the town was taken by storm but soon afterwards the Genoese force was defeated at Iaki-Krim by the Tatars and almost exterminated. In 1475 the land was conquered by the Turks; Balaklava belonged to the kingdom of the Girit from the xvth to the xviith century and is mentioned in the time of Selim Girit (1555 - 1575) as the most southerly point of the kingdom (Muhammad Köç, ed. Kazim Tetik, p. 92); the coast lands to the south were incorporated in the Ottoman kingdom and governed by a Turkish Pasha. During the Turco-russie, Balaklava is only mentioned as a harbour and does not appear to have had any military importance; the fortifications of the Genoese period were left in ruins. After the union of the Crimea with Russia in 1783, the Tatar population emigrated to Turkey. In their place Greek emigrants from the islands of the Aegan sea, who had attached themselves to the Russians during the war of 1768 - 1774, were settled here. Till 1860 Balaklava was used by the Russians as a naval station: on the 18th September 1854, the town was taken by the English and remained the head quarters of the allies of Schawlow and is especially famous for the battle: there on the 25th October 1854. Though regarded as a town as late as the xvith century, Balaklava is now an unimportant place, visited only by coasting craft.

BALAM or BAIAM = BA'TAM(A) is the form which the name Balam (Bil'tm or B. Deoh) has assumed in Arabic. It is probable, however, that this is a later, post-Mohammadan, transfer of the name and story, and that before Muhammad, Balam had been already naturalized in Arabic as Bakhan b. Rawa. See the similar genealogies in Thalhís's Kitab (pp. 132 and 190 of ed. of 1244) which [without mention of Balam] brings together the roots B.A' and I.K.M and the white mark on an 'a' as 'a' and the remark by Petrus Aphames (Migne, Patr. Lat., t. 67, 235) "Balam qui linguas arabicas vocatur LA'AMAN"; and the bibliography in Chauvin, Bibl. ar., iii, 7. Some commentators find a reference to Balam in Karán vil., 173. And recite to him the story of himself to whom we gave our signs: then he was stripped of them, and the devil overtaking him, he became one of those that err. And if we had willed, we could not have hindered him, but he turned to the earth and followed his lust. So he was like a dog: if you attack it, it pants, and if you leave it, it pants. According to various traditions given by Tabari (Tafsir, ix 710, 20 and seq.) this was a man named Bâmah, or Balsâm, b. ol or l.24; of the Sons of Israel or of the City of Giants, or of the people of Yemen or of the Canaanites. Others held that the illusion was to Ummiy b. Abi '3-Salt, (cf. Sprenger, Levêq Mekk, i, 28 and, opposed, Schnitzeis in Schlettis, Sonderzeugnisse, i 82), others to Abi 'Abîr b. al-Asma, called Cassim (cf. Tafsir, p. 325, and Sprenger, i 2, 20, 32); there was considerable uncertainty as to the Signs. Some held that they were the Most Great Name of Allah. He was an Israelite who deserted to the Giants, whatever he asked, Allah gave to him. Others that they were the prophetic office: he was a prophet who had given up his mission. Others that they were only arguments and proofs derived from things past; he may have studied the former books. Long and varying stories about Balam are then given by Tabari (cf. also his Annates, i, 508 et seq.; of Leyden ed., i, 226 of Cairo ed., Thalal, pp. 133 et seq.; Pseudo-Balkhi, i, 145 (read al-Khalî), iii, 5, 52 of Arabic text) based partly on the Koranic passage, partly on the Biblical narratives and partly on Rabbinic legend. He is associated with the plague at Baal-por and Rablahin details are added, suggestive of the Rabbinic exhortation to tell of him whatever evil was possible (cf. Jeronim Eusebius, ii, 450 et seq.). But for later Muslim thought, the idea that a prophet could ever fall away from the faith became quite impossible. So we find Râst (Mafârîf, iv, 313 et seq. of Cairo ed., of 1308) deciding that Balam was only a man who had been taught by Allah and knew the religion of Allah, but had gone away for himself. A quite different attitude, going back to Wabh b. Manâhibb, is found in Ibn Kuhfî's Mafârîf (p. 21; cf. also Pseudo-Balkhi, iii, 5, 75 of Arabic text) according to which Balam was only a man of one company, including also al-Khâfir and Shânîf, who believed in Abraham and migrated with him to Syria. Balam was also married by him to one of the daughters of Lot. All this may be only a sardonic jest at Muslim expense. Finally, Balam figures in Pseudo-Balkhi (iii, 141), but apparently through some strange confusion of name, as a philanthropist. His view was that the world was from all eternity and had a controller (mawaddin), controlling it and other than it in all respects. He accepted also movements (barahib) and said that the first movement was repeated in the second movement, because he held that movement went with the world fundamentally, and that the world was from all eternity.

(D. R. Macdonald)

BALAMI, family name (Nisla) of two ministers (father and son) in the Samânid kingdom. Of the origin of the name two ac-
counts are given in the Kitāb al-Anbār of Samān, according to some the founder of the house is said to have taken a town (etymology unknown, it seems) of Bālāmī in Aḥzāb Minor under the Umayyad Maslama b. Abd al-Malik while others derive the name from the village of Bālāmūs near Mawr. The family is said to have been of Arab origin and to have belonged to the tribe of Banū Tamīm. The father, Abū ʿAbd Allāh Muḥammad b. Ubayd Allāh, is thoughtfully described Šamānī as the vizier of the Šamānian Ṫūs, b. Abū Ḥāfiẓ (d. 909–910); in the historical notices of the Šamānids he is first mentioned as vizier in the time of Ṭūs b. Abū ʿAbd Allāh (901–911) and is said to have been the successor of the ruler's first minister Abū ʿAbd Allāh Ḥāfīz. In what year he took up office is not stated. The release of the rebel Ḥujayra b. Āli who was said to have been defeated in Ṭabah si-i 266 (August-September 918) and taken prisoner soon afterwards, is attributed to Ḥāfiz by Ibn al-Athir (ed. Tornberg, viii. 66); on the other hand a poem by this Hussain is given by Thālith (Journ. As., 5 Ser., i. p. 204) in which the poet thanks the vizier Šamānī for his release. In 926 (937–938) Šamānī was deprived of his office (Ibn al-Athir, viii. 285) and died in the night of the 10th Safar 329 (14.10 November 940) according to Samānī.

His son Abū ʿAli Muḥammad b. Muḥammad, called ʿEmīrket Bālāmī, by Muḥaddasī (ed. de Goeje, p. 538) was appointed vizier by Abū al-Malik b. Nūb (343–350 = 954–961) to the end of his reign and held the same rank under his successor ʿAbd Allāh b. Nūb (350–356 = 961–976). His appointment was said to have been due to the influence of Ḥudayr al-Ṭughrī [see this article; p. 321]; according to an agreement between Alp-Ṭughrī and Baḵtānī Šamānī was to regard the other as his representative (kullad). Šamānī did nothing then without obtaining his friend’s advice. After the accession of ʿAbd Allāh he must have cancelled his agreement with Alp-Ṭughrī for he was able to remain in office after the latter’s fall; according to Muḥaddasī (loc. cit.) he was deposed, then appointed vizier. In 943 (963) he composed the famous Persian version of Tabari’s History of the World, the oldest historical work in modern Persian. According to Gārdesti he died in Lūmād 353 (27th Fārīd-27th March 974) while still vizier; on the other hand ʿAbd Allāh (Ṭabāqāt Fāmīrī, edition with commentary by Maimū, Cairo, 1286, i. 175) says he was again appointed vizier in 385 (995) in the reign of Nūb b. Ṣamān (976–997) and shortly afterwards in the same year, resigned, because he did not feel strong enough to deal with the critical state of affairs (the Šamānids were then hard pressed by the Turkic peoples, under the leadership of the prince of the Bulghars, into whose power even the capital Bokhara had fallen). The date of his death is not given by ʿAbd Allāh, but the death of his son Ḥudayr al-Ṭughrī (966) given by Rieu (Catalogus Brit. Mus., i. 702) and following him Ethel (Geschichte der iranischen Philologie, ii. 355) and Brown (A Literary History of Persia, i. 356) is due to a misunderstanding as the text quoted by Rieu (Netzls Extrait, le 353) refers to another person, Abū ʿAli Simḥār (see this article; p. 270).

Niṣān al-Malik (Šamānav Nīsān, ed. Schiori, p. 150) mentions “the Banū Bālāmī” (Banūmamūs) among the most famous examples of Oriental ministers.

The reputation of a great minister seems to be attached particularly to the elder Bālāmī (cf. e.g. Fussāḥ, ed. Morley, p. 117), who like his predecessor Ḥudayr and his sovereign Nūb b. Abū ʿAbd Allāh, is regarded as typical of the last period of the Šamānids. He is extolled by Šamānī as an enlightened patron of scholars and poets; he is said to have specially appreciated the poet Rādīq and to have preferred him to all other Arab and Persian poets. Buildings by him in Mawr and Bokhara are mentioned by Ḥudayr (ed. de Goeje, pp. 250 and 307), who calls him the “glorious Shāhriyār” (gūrīsh Shāhriyār). His memory was kept green in Bokhara for a long period; his descendants were living in Bokhara as late as the time of Šamānī (about 500 = 1155).

The modern name of the gate “Shāhī Bālāmī” in Bokhara is probably to be referred to this vizier. On the other hand Abū ʿAli Bālāmī is not particularly mentioned by Šamānī; the historical writers also have no information as to his acts as vizier. His name seems to be the purely to his father but particularly to his historical work.”

**Bibliography.** The extract from the Kitāb al-Anbār of Samānī is given by Barthold, Turkestan w spekcie mongolskimach zwroceniu, i. 543. He also gives (p. 585) the part referring to the poet Rādīq (also given by Mirzā Muḥammad Karwīnī in the appendix to Part ii. of the Latin translation of Muhammad Awīlī, ed. R. G. Browne, London—Leiden, 1906, p. 291, translated by Browne, A Literary History of Persia, i. 356), extracts from the Zafar o Ḥudayr of Gardizi (p. 7 et seq., 11 et seq.) and discusses the notices of both Bālāmī in Vol. ii. 252 et seq., 262 et seq. (W. Barthold).

**Bal‘-Anbar.** See Anbar, p. 540.

**Balasagūn,** a town in Central Asia, whose situation cannot now be exactly determined. In Muḥaddasī (ed. de Goeje, pp. 264 and 275) Balasagūn (sic) or Balasagūn is mentioned among the towns dependent on Ashūdah (the modern Sairan, east of Chubark). According to Yūsūf, i. 708 Balasagūn lay “on the other side of the Sāliḥ (Sir Daryā) not far from Kūshahr”; on the other hand Yūsūf, ii. 533, says that the town of Kūshahr (the modern ruined site of Otrar, not far from the confluence of the Aral and the Sir Daryah, i.e. north-west of Shab in Tashkent) was “far more famous than Shab (or further to Shab near Balasagūn)”. Both statements are taken by Yūsūf from the Kitāb al-Anbār of Samānī; in place of “further than Shab”, the phrase used by Samānī is “above Shab” (Jewers, p. 583). Ibn al-Athir (ed. Tornberg, ii. 350) mentions a Turkish people, who adopted Islam in Safar 435 (6th Sep., 952–953), the summer—dwelling of these Turks were near the lands of the Bulghar (of course the Bulghar on the Volga are here referred to, not the Bulghar on the Don) and their winter—dwelling not far from Balasagūn. The town must be sought for in the western part of the Turkistan territory now called “Semiretché”, probably on a hill, where several ruined sites may still be seen as the present day. The latitude and longitude given by Abū ʿUbayd Allah Reimandel, p. 500) seem to point in the same direction; 41° 35’ or 41° 50’ east Long, and 47° 40’ north Lat., while Tarra (the modern Awīlīya-Asta on the River Talsi), was in 39° 51’ east Long, and 44° 25’ or 43° 35’ north Lat. (Ibids., p. 496). These topo-
resistance by Chinggis Khan’s general Usame Noyun and received from the Mongols the name *balasagun* which, according to Mirkhan (Vis de Dongjoum Khan, ed. Jaubert, p. 91) means “good town” (balas = good; -ag = town). The earlier name must have been still retained by its inhabitants.

Balasagun is seldom mentioned during the Mongol suzerainty. Amongst the natives of this town who kept the Koranic law was Abul Fath J characterized by his princely style (1245) who was the father of Qalma al-Dim al-Kushni, who was born in Khuldib (near Kuldia) about 628 (1230-1231), translator of the dictionary al-nazâî (cf. Brockelmann, i. 128, where the date is given wrongly). According to Muhammad Haidar (Tur-ribâh-i Kâshân, transl. E. D. Ross, p. 304) this Qalma al-Dim mentioned a large number of scholars belonging to Balasagun in the appendix to his work (Musâkhi in-current); the two manuscripts of the Mubâhât al-annân known contain no information of this kind. In the time of Muhammad Haidar the tomb of an Indian Muhammad Fakhr Balasagun, who died in 721 (1321-1322) was still visible on the Câ; the town of Balasagun was therefore still known by its earlier name in the earlier decade of the xiv century (1314-1323) according to accounts of Timur’s campaigns, Balasagun is never mentioned; like all the towns on the Câ, II and Talas, Balasagun must have been destroyed during the endless wars and struggles for the throne in the xiv century. Even Muhammad Haidar (about the middle of the xiv century only knew the names Balasagun and Ghâbalû from books, so that the site of the town was as little known then as now.

**Bibliography:** The information available on the site of the town has been collected by W. Barthold, Oost et pojade in Sevredjou Assû, St. Petersburg, 1897 (Mémoires de l’Acad. des Sciences de St. Petersbourg, vili, Série, classe hist.-phil., Vol. i, NV. 4), p. 35 et seq., where an extract from the Kâsh-kûli of Samâ’î is also given. The historical notices have been collected by W. Barthold in Fomûnas distrîkhagan, Ob. Statist. Komitea, ii. vieren, 1898, p. 93 et seq.; A translation (not quite free from errors) of the passage referring to the Kara Khiij from the Tawâib-i Liûhân Kâshkî is also given by D’Ohsson in his Histoire des Mongoles, i. 441 et seq. On the reference by Muhammad Haidar to Qalma al-Din’s work: Baron V. Kossow in his Zaptîh tür, ed. arak. eshâhî, vili. 555; on the two manuscripts of the Mubâhât al-annân: W. Barthold, Zaptîh, xi. 529 et seq.; xx. 271 et seq.; extracts from this work are given by W. Barthold, Turckistan in epzmu manâgelîshu masteksherî, i. 128 et seq.

(Rev. Barthold)

**Balât** is a loanword in Arabic from Latin or Greek; it appears in the place name as well as in polities. As a noun (noun of unity: Balâq) it means “a smooth, paved square”, “a paved soil”, “a paving stone”. With this last meaning cf. the gaper slab Balât al-Djâma on the “Dome of the Rock” in Jerusalem (Bashevik, p. 52 et seq.); Yaqqît (i. 706) mentions a square paved with stones, called al-Balât, in Medina between the mosque of the prophet and the market-place. The battle-field of Tensl and Mahdi the Indian is called Balât al-Shâhîd after the Roman road on which the battle took place. — The word is
common in place-names especially in Asia Minor and Spain (cf. the many modern Albalsats). Idaste (ed. Dawn and Geiger, p. 175) mentions a town (and province) of al-Balzat; in Spanish Estremadura, the name of which has survived in a village south-east of Caceres; the Portuguese province, which comprised Lisboa, Santarem and Cintra, was in his time called al-Balzata. In Syria also the word appears in place-names, cf. Balzat al-Faqi in the district of Damastus (Yakub, op. cit.) al-Balzat (Yakub: al-Buladza) is the name of a village near Nazareth not far from Joseph's Grave and Jacob's Well; the fact that the early Christian pilgrims mention a plane-tree grove here, suggests the derivation of the Arabic name from flatunum. — In Constantinople there was a place called al-Balzat, where in the time of the Humilidan Saif al-Dawla prisoners were interned. At the present day it is the name of a suburb on the Golden Horn between Fatır and Awadnerel. It is chiefly inhabited by Jews and is notorious for its dirt and its unhealthy climate.

(F. Giese).

BALATUNUS, the Latin Flatunus was according to Yakut, l. 710, a fortified place on the Syrian coast opposite al-Lithiyah; according to al-Kaltaqshuli (Donn al-Salih) it lay two days' journey north of Tarragona and one west of Masafat. The fortress was erected, according to Nuwairi, by the Banu 'Abd-ar-Rahman but taken from them in 422 (1031) by Niketas, the Kastap of Antioch. In 512 (1122) it was taken by Roger of Antioch and remained in the possession of the Crusaders till Salih al-Din took it in 583 (1185). Subsequently Najar al-Din Mankur (Mengulara) b. Khummartig and his successors ruled here till 667 (1269) when Balbars gained possession of it. — As the fortress has since then been laid waste, its exact situation was unknown till Martin Hartmann found inscriptions at the modern Kelat al-Muhelha, south-east of al-Lithiyah, which proved the identity of this fortress with Balatunus.

BALAWAT, a village, 16 miles south-east of Mosul and 10 north-east of the ruins of Nimrud (Assyr. Kalia); cf. the map by R. Kiepert based on the survey by F. Jones (see Journ. of the Roy. Asiat. Soc., xv. 1855) in v. Oppenheim, vom Mitteln., a. Pers. Gulf (1909), ii. 158, where the name is written Beilawat. Yakut mentions the place as a caravan station situated in the district of Ninawai (Nineveh), a short day's journey from Mosul, under the name Balibhah, possibly = "federation (dabdah) of Bal" (Hardy, Nomadi).— On this point G. Hoffmann, Ausseh aus Sryr. A. pers. Mitt. (1907), p. 210, Note 1740, and in the Zeitschr. f. Assyriol., li. Balawat owes its fame to the mounds of ruins (Tell) there, in which H. Rassam in 1878 discovered the bronze gates belonging to a palace of the Assyrian king Sennacherib II (359—824), one of the most important finds that had hitherto been made in Assyria; not only are the archaeological but also from the historical point of view. To be more accurate, it is the two wings of a door, made of bronze bands, which had been riveted on cedar wood; these are covered with figures, arranged in two rows, and show artistically executed battle-scenes with scenes of war and peace (partly accompanied by inscriptions) illustrating in a striking fashion the history of the first third of the reign of the above-mentioned king, and the cultural life of that time. From the 5th century B.C. generally. The historical inscription on the small plates of metal, which covered the edges of the wings of the door, is only loosely connected with these scenes. The importance of the latter cuneiform inscription lies in its detailed description of the great Babylonian campaign of Sennacherib against the Medes. With the exception of a few fragments the whole of the bronze outer panelling of the gate, discovered by Rassam, has been in the British Museum since 1879. From an inscription of Assurbanipal (884—859), giving an account of the foundation of a temple in Gingir-bel, which Rassam states to have been dug out of the Tell of Balawat, it has generally been supposed that the Assyrian town is to be sought for in the modern ruins at Balatun. This identification is however not quite certain; cf. E. de W. King, The Annals of the Kings of Assyria (C. 1901), p. 169, note 2 and A. Hermann in the Orient. Litter. Zeh., xii. 594.

BALBAN, GHIYATH AL-DIN ULEH KHAN, War of NUR AL-DIN MAHMUD, King of Delhi (1246—65) and afterwards his successor. As Nuh al-Din was of a quiet and studious disposition, he left the management of affairs, for the greater part of his reign, to the hands of Ulugh Khan, who was at that time his brother-in-law and father-in-law. His energetic administration did much to extend and consolidate Muhammadan rule in Northern India. He succeeded to the throne in 1265 and proved himself to be a stern but enlightened ruler; he was particularly successful in protecting his kingdom from the inroads of Mongol invaders. The court was the refuge of many exiled rulers and men of letters, among whom was the poet Ansir Khurasani. In 1285 his eldest son was slain in battle against the Mongols, and the aged king (he is said to have been more than 80 years old), broken down with grief, died in the following year, leaving the throne to his grandson, Kai Khadim, a youth of 17 or 18 years.

BALDA (A.), *Town" *district"; Purland Bilid.
BALDIJ r. Beris r. Tuvaf al-Koshari, an Arab general, the valiant, though haughty, commander of the Syrian cavalry in the army, which the Caliph Hisham b. 'Abd al-Malik sent against the Berbers in 123 (747) under the command of King al-Mansur. On their arrival in Irakyya (in Ramadhan 123 = 20 July to 18 Aug. 747) Baidj and his Syrians soon made themselves thoroughly hated through their arrogance and barbarity by the African Arabs, especially the Ausar, who after the battle in the Harra (63 = 383) had fed in large bodies to the west. After the Syrian army had united with the African at Tlemcen (about 60,000 in all) in consequence of the arrogance of the Syrians and a quarrel between Baidj and the commander of the African troops, the two armies came nearly to blows. The Berbers retreated as far as the River Sebi in the extreme Maghribi, in order to weaken the enemy. Shortly before the encounter with the Berber host, Kollhlim dismissed Hisham, who was experienced in Berber warfare, but whose advice had been rejected, and deposed the command of the African troops and entrusted it to two Syrian officers, which further increased the bitterness among the African soldiers. The consequence was the total defeat of the Arabs at Baidjfa (or Nabidra in the Sebi, north of Fas, cf. Fournel, Les Berbers, i. 264, note 1) the blame for which must be laid on Baidj, not only for his arrogance but also for his impetuous advance, which separated him from the foot-soldiers (in Umayyad 123 = 17th Oct. to 14th Nov. 747). With about 7,000 horsemen he fought his way to Ceuta, where he entered a long siege by the Berbers till 'Abd al-Malik b. Kattan (q.v.), Governor of Cordova, an Ausar, brought him and his Syrian to Spain to use them against the rebel Berbers there. The latter were annihilated by Baidj and 'Abd al-Malik in a great battle at Wadi Seb (Guadalaceta), above Tafildas. In this battle, which soon afterwards broke out between the Spanish Ausar and the Syrians, the latter were victorious. They appointed Baidj Governor of Spain, in place of 'Abd al-Malik, who had been driven out of Cordova and afterwards murdered, but after a brief rule Baidj fell in a battle against the Spanish Arabs by the hand of 'Abd al-Rahman b. 'Abd al-Malik, Governor of Narbonne (in Sinowal 124 = 8 Aug. to 5 Sept. 747).

BALEARIC ISLANDS, Greek Baleare, Latin Balbares, which form has more authority than Baleares, usually but falsely derived from Balaenae "to throw", because the ancient inhabitants were good sailors and as such served in the Roman and Carthaginian armies, earlier called Gymnasiae Insulae after the almost natural bays or coves that were the haunts of the Berber population. The name includes in the narrower sense the two principal islands, lying to the north-east: Mallorca (Insula Major, since the time of Procopius Majorica, Majorca) and Minorca (Insula Minor, Menorca) with the smaller islands south of Mallorca: Cabrera (Capriana, Isle of Goats) and Conilera (Cunicularia, Isle of Rabbits) and to the west Dragones (Trigunara); in the wider sense the name comprises, as at the present day the Prince of the Lascars, the Balearic and Minorca Islands ages the "Kingdom of Mallorca", Reino de M. 1326-1345, the property of the younger son of the House of Aragon, the south-western group also, of the Pityuses, Isles of Figs; Ibiza (Elba, Peloponnesian Ιβηρια) and Formentera (Ophiussa). Among the Arabs they were called quasi' al-Isar, the Eastern Islands. The name quasi' al-Isar (Koryklopidsb araba, D'Isar al-caid el lahib, v. 149; Sani, Kitori al-sittin 1218), quasi' al-Isar in Afnan Zeit Khan's Khams al-Maghribiya al-hadime (Bilal 1317 = 1899), p. 31, is quite modern. The larger islands are known in Arabic as Majrara or Mayorka, Manurka or Manora (often confused by merely changing the pointing to بوردة and موردة and Ibiza, Yahiaa. After having been subject in ancient times to Phoenicians (Greeks from Rhodes) and Carthaginians, the Balearic Islands were ultimately subjected to Rome by Q. Cæcilius Metellus Balearicus, the founder of Palma and Pollentia on Mallorca. Magis = Mahon and Janso (Jumas) = Ciutadella on Minorca are of Carthaginian origin. In 465 the Balearics were conquered by the Vandals, in 534 by Belisarius for the Byzantine Empire but they never were Visigothic. In 707-708 Mab I. Nisair's son 'Abd al Alish is said to have plundered and conquered them. In 797-798 they were exposed to repeated Arab raids but were freed from this scourge in 799 by Charlemagne. Soon afterwards they again suffered from the visits of the Normans and Arabs and it was not until 993 that they were permanently attached to the Crown of Aragon by the Treaty of the Pyrenees in 1010 which transferred the islands to William the Catholic, King of Castile and León. In 1495 the Balearics fell into the hands of the Túnd loft prince Abu al-Dalàh Muhammad ibn al-Mu'ayd ibn al-Mu'ayd ibn al-Danîma, which lay to the west of the Mediterranean Sea and was the last named year when the Balearics were conquered by the Almoravids (Governor b. Abu Bakr b. Murad 1131) from 525-599 = 1131-1202 followed the independent Almoravid principality of the Balearics, under the chief was Muhammad b. Abi b. Ganiyya b. 530-536 = 1131-1135 and his son Abu Betham ibn Talik b. Muhammad 540-546 = 1145-1151. From 607-627 = 1204-1229 the islands were under various Almohad governors till their final conquest by James I of Aragon (al-Quintasid) in 1227 of the clever Abu 'Othman Sabit b. al-Jakar al-Korash. continued to rule in Minorca however from 607-627 = 1204-1229, a puppet king with the title al-Mujarib, as vassal of Aragon
to the Arabs were entirely driven out. The most famous Muyad bin al-Huwaizil (q.v.).

**BALFURIG.** [See *BABURIG.*]

**BARBAHÁ (a.),** an Indian title said by Ibn Khurdadbe (ed. de Goeje, Bibl. Geogr. Arab., vi, 16) to mean “king of the kings”; al-Ídriši adopts this explanation, and adds that the title was hereditary (*Geographie d’Égypte*, trad. E. A. Jauher, i, 173); al-Ma‘bud (Mundiz al-Hukkak, i. 177, 372, 382), al-Istakhri (Bibl. Geogr. Arab., i. 175), and Ibn Hawkal (id. ii. 227) describe the Balbarah as the ruler of Mankur and as the greatest of the kings of India; al-Ma‘bud (ib. 162) adds that the Balbarah was the name of the founder of a dynasty in this city, and that his successors in turn adopted the name of this prince. Mankur has been identified with Malibot (about 60 miles to the southwest of Sholapur, in the Bombay Presidency), the site of the ancient Mánakaska, the capital city of the later Khakhub dynasty (about 600–972 A. D.). The Arab geographers knew the Khakhub dynasty by their Sanskrit title Vañkhaka, “king” (al-Ídriši iii. 3: a contemporary of al-Ma‘bud) had the title of Prithirava, vallabha “king of the earth” (Gazetteer of the Bombay Presidency, 1, Part 1, i, 120–121, 519, s26). The destruction of Mánakaska by the Western Calukya king, Tilapura, in 972 A. D., explains why no Arab geographer after Ibn Hawkal mentions Mankur. The identification of the Balbarah with the Vahulla (Balbarā) dynasty, 599–766 A. D. (Elliot—Downs, l. 354–355), and Eminence’s explanation (Minories sur l’Inde, 138, 144) of Balbarah as Malwa: 831 (king of Malwa) is historically inaccurate.

(T. W. ARNOLD)

**BAL-HARITH.** [See *BAHRT.*]

**BALI, an Arab tribe, belonging to the Yamun group. Its genealogy is: Bali b. ‘Amr b. al-Ílāh b. Khud‘ā.** The Bahar and Haidara are given as commingling tribes and the Ham and Faras as subordinates.

Their dwellings were on the Syrian frontier near Ta‘izz between the lands of the Djihāda and the Jihādzahīm. In the time of Tolemei the Edomite (Taqshara) inhabited their land.

Of districts belonging to the Bald there are mentioned: al-Qādir, al-Ra‘ba, al-Suyyār, Hadjjarah (or) Māria Faras (called after the subordinates tribe of Faras at the times of the Sulaim, east of Mecca (where the precious stones Flouramis in Flayy), Shaghīb and Ḥudān. A family of the Bald, the Ḥajja b. ‘Ubayrā, freed from two

latter on account of a quarrel with their fellow tribesmen with the neighbouring Jews at Ta‘izz, adopted Judaism, and remained in the fold a long period till the Jews were banished from Ta‘izz. Khabūt and Shārār are common to the Bald and the Djasams. Of Wādīs are mentioned: the Amāri and the Ghurān which run from the Harra of the Sulaim and flow into the sea of Mo‘alla al-Hudam (behind the Wādī ‘I-Quray) and Dḥal al-Sulayb (in common with the Lujāhām). At Bīr ‘Ujabak in the Wādī, was a city of the Bald called Ka‘ān. Besides these there were seated the followers of the Bald on the so-called, Nadji road (the route of the Syrian pilgrims to Mecca), in Hijr and Wādī ‘I-Quray.

**History.** In the year 8 (629–630) Muhammad sent ‘Amr b. al-‘Alā‘ī, whose mother belonged to the tribe of Bald, with 300 men against the Bald and Ka‘ān tribes related to them. On arriving at Dḥal al-Sulayb, the well mentioned above as being common to the Bald and the Djasams, the so-called “expedition to Dḥal al-Sulayb” (*Quray*), sent his forces too weak against the tribes and sent to Muhammad for reinforcements; the latter sent him new troops under Abū ‘Ubaibā b. al-Djihrūt, amongst whom were Abū Bakr and ‘Umar. In the same year we find the Bald in alliance with the Kudāf tribes of Lajam, Lujāhām and Bālagh with a total strength of 100,000 men led by one of the Bald tribe of Bald, fighting against Muhammad in the army of Heraclius in Syria at Mat‘ī (Battle of Mat‘ī). After the conquest of Mecca by Muhammad, in the so-called “year of the deportations” (8–630) the Bald also appeared before the Prophets, under the leadership of Rawāni b. Thubāt to tender their submission. After Muhammad’s death they appear to have acceded again for the year 11 (632) Abū Bakr sent against them and the other apostate Kudāf tribes, the already mentioned *Amr b. al-‘Alā‘ī. In the year 14–15 (635–636) we again find them with the Lajam, Lujāhām and Bālagh in the train of Heraclius in Varmik, where they, with the Greeks, were defeated by the Muslims. They then emigrated to Egypt (Mīr) with the permission of the Caliph ‘Omar. Here they at first fell into conflict with their neighbours, the Damu‘ī, who had followed them here, but soon came to terms. In later times we hear almost nothing of them. According to the accounts of the explorers Rüppel, Burchard, Fresnel and Wellsted, who have visited them and called them Bili (Fresnel: Bili), they live at the present day in the mountains south-east of Māla near the harbour of Wāgh. In Wāghā itself lives the chief Shukār of all the Bald tribes, who receives an annual stipend from the Khilāla of Egypt. His dominions is said to extend from the coast, six days’ journey inland.

**BALL.** This is the most important of the Little Sand Islands is 205.5 square miles in area, and is a mountaneous island of volcanic origin, with the volcanoes Gunung Agung (11,000 feet) Baran and Talabam, rising sheer out of the sea to the east of Java. Only the western half of the south coast is flat; the eastern consists of chalk cliffs. The fauna and the rich flora form a transition between the Asiatic and Australian portions of Indonesia; the tiger, the rhinoceros, and two kinds of ape, example, are found here, but the cockatoo only appears in the east of the island. The island with the neighbouring island of Bomboh forms a "residency" under an official of high rank in the civil service, a "resident" whose head quarters are in Singa Kaja (Buleleng). In the years 1906 and 1907 the principalities of Klungkung, Badung, Tabanan, Mengwi and Gajah were quite subjected by the Dutch, in Karang Asem and Bangli the princes are still semi-independent; Buleleng and Danaphana were incorporated after the wars of 1846-1849.

As to its history, Bali is mentioned by the Chinese historians of the Tang dynasty in the year 647 A.D. and again in 992; the island is later mentioned as a part of the great Hindu kingdom of Madjapati in East Java, which was conquered in 1518 by the Muhammadan prince of Denak. The Hindus retained their independence in Balambangan in East Java; another section fled to Bali where their leader set himself up as independent prince of the whole island under the title of Dewa Agung Kèsus in Gégét (Klungkung). The governors of these princes afterwards made themselves independent in their own districts. Balambangan, supported by Bali, remained independent till the Dutch subdued it in the 18th century.

The above events account for the fact that the population of the island, estimated at about 500,000 souls, has remained Buddhist with a few Buddhist tribes, and that the original native stock of Bali (Bali aga) has been strongly mixed with Javanese and this section calls itself Wung Madiopati; and further that language, literature, and art are closely related to those of East Java. Among the numerous foreign elements in the coast districts are many Chinese and Mahumamans of the most diverse origin. Centuries ago a section of the people of Bali, both men and women, allied themselves in marriage with the strangers and adopted Islam; their descendants live together in the interior in small villages or collections of villages and are as a people in process. It also happens that evil-doers among the Ballans attempt to escape from the stringent native laws by becoming Mahumamans. In spite of a constant increase the number of Mahumamans is still relatively small. With the increase in personal security, immigration of foreigners into the recently subdued principalities is encouraged and the spread of Islam is also favoured by the transference of the Dutch officials with their subordinates.

The agriculture of the Ballans, chiefly the growing of rice in small fields, is the most highly developed of Indonesia. Rice is the principal food, there are also grown tuberous plants and all the other food-stuffs of the archipelago, the following were the values of the exports in 1908: copra 1,450,000, coffee 650,000, earthnuts 200,000, rice 200,000, cattle 350,000, in all 2,700,000. The imports amount to 1,050,000. The centre of foreign trade is Buleleng; the native trade is carried on at markets held regularly. Supported by the many splendid-loving princes and the cult of Hinduism, native industry has maintained a high level; gold- and silverwork, the armourer's art, wood-carving, sculpture and the weaving (by knitting, braid) of beautiful decorated cloths. The people of Bali are relatively far advanced; many of them can read and write.

As an example of an Indonesian Hindu civilisation, on the basis of which Islam has been developing, in Java for example, for four centuries, that of Bali is very important. The four chief castes of Brahmanism are to be found here: Bensanma, Kusirin, Wesya and the great mass of the people; their members cannot enter another caste, have the right to bear the titles ñu, duwa and gus di respectively and, if they are women, may not marry into a lower caste. The priesthood is composed of the highest caste, the Brahmanas, amongst these are those initiated to a knowledge of the sacred, chiefly Old Javanese, literature and the judges (pera) are also chosen from the priesthood. Only a few, and not the great number of the subordinate castes, that appear in the Brahmanas of the Asiatic continent, are to be found in Bali; besides, a very large part are still farmers, merchants, etc. It is only for the most highly developed that the outer forms of Brahmanism have a definite, religious value; the great mass of the people is still entirely influenced in its daily life by its ancient Indonesian animism, although the gods are known by Hindu names and worshipped in temples; inspired persons (ñakwa), Shamans (purwant) and the guardians of temples (sanghyang) also play an important part in their worship. The Sun-god of the eastern archipelago appears in a curious fashion as Batura Sura, the chief deity of Bali. The pandawa only appear at great religious festivals when the prince of the land is giving a feast, and at abstractions; they bless consecrated weapons and weapons, sell amulets, appoint new priests and inspire great reverence.

BALIŠ (bl.), "having attained maturity." [See BULIH.]

BANIŠ, Turk-Mongol word for "town" (also written Balyš and Balaš); appears frequently in compound names of towns, such as Buhalaši ("Five Towns", at the present day in ruins at Gort in Chinese Turkestan), Khabalaši (the "Khāns' Town"), Turko-Mongol noun (also frequently used by European travellers in the middle ages as a name of Pekin (Cangalu), Ilišiš (on the River III, the modern Iliš) amongst others. As the town of Buhalaši is mentioned as early as the Orkhoon inscriptions (viiith century A.D.), Balaš, in the meaning of town, is one of the oldest of Turkic words, as is the word Balaš "fish", which is similarly pronounced and is common to all Turkic dialects. (W. Barthold.)

BALIKESRI, Balikesir, a town in Turkey in Asia, capital of the Sandjak of Karasi in the Wilîyet of Khosâwând, with 15,118 inhabitants, of whom 9175 are Muhammandans, 2860 Orthodox Greeks and 1434 Gregorian Armenians. Built at the foot of the Yilis-dagh, Balikesir is watered in winter by a brook. In summer where it is dried up, water has to be brought from the lake. It was the ancient capital of the Eunivers of Krasā and was conquered in 737 (1330) by Aq-ul-rade in the time of Sultan Orkhan. It has a weekly market and an annual fair, and manufactures a coarse kind of cloth called "abed" (q.v.). The town has 91 mosques of which some are fairly old. We may further mention an old clock tower, a monastary of the Baisamiti as well as the grave and some pious foundations of the Baisamiti Shâh Lâjâla. The Kauf Balikesiri comprises 5 Nâliya and 328 villages with about 90,000 inhabitants, its chief productions are opium, cotton, cereals and fruit, including excellent melons called Balaši, and honey, which is famous.

BALIUS. In the scientific literature of the Arabs we meet with a name, which is written Balašu, Balaša and Balis and sometimes denotes Apollonius of Tyana and sometimes Apollonius of Pergamum. It appears most rarely under the so-cire form. Balašius. To Apollonius of Tyana is to be ascribed a book on the "Secret of Creation" by the sage Balašu (MS. in Paris) which has previously been given to Pline; for it is therein stated that the author belonged to Taulis, which is clearly to be emended to Taulis = Tyana. A sort of natural history called Liber de Causis (MS. in Leiden) and a treatise on astrology, translated by Haimâ b. al-Shâfi', must also be credited to the philosopher of Tyana, as well as a book on seven bodies which Hûdâf b. Khâfa mentions as being by Balašu. But on the whole, Apollonius of Tyana was little known to the Arabs. On the other hand the works of the great mathematician of Pergamum were well-known and diligently studied by Eastern scholars. The author of the Kitâb al-Hahâhēni devotes an interesting notice to him in which he gives a sketch of his famous treatise on comical sections. This treatise contained eight books of which the last has been lost with the exception of four propositions. The first four books were translated by Hâilî b. Abî Hâli (died 670 A.H.), the next three and the four surviving propositions of the last book by Thâbit b. Kûra. There is a manuscript of these translations in Oxford; the part translated by Thâbit is to be found in several libraries. Other Arab scholars have studied his Comical Sections and give passages of it, such as Ahmad b. Muqâ, Abu 'Abî-ly-fâh-ich al-Isfâhânî, Nâjîr al-Dîn al-Tûf, Vâhid b. Abî 'Abî-ly-shâkîr, Vâhid b. Dîn al-Maghribî. Besides this, his chief work, the Arabs were acquainted with other treatises by Apollonius; the treatise on the intersections of straight lines or planes in a given ratio (dr ratiiones determinarum) on which Thâbit b. Kûra has written an excellent commentary, a treatise on numbers, one on tangent circles and some theorems.

BALIŠ, a town in North-Syria, on the Euphrates, where the stream turns to the left from its southern course, situated in 33° 59' N. Lat. and 38° 12' East Long. Greenw. The name is the Aramaic ב'ליש, which is usually given by classical authors in the form Barbališ. The oldest mention of the town appears to be in Xenophon, who mentions a place and pleasure-grounds of Beleus, Governor of Syria, here. Probable gives Barbališes in its right place and the Tabadit Pintingitenses mentions it as station on the Euphrates road. According to the Notitia Dignitatum, about 425 A.D., it belonged to the Augusteus Enfarathis, held a garrison of the Equites Dalmatico Illyricami and was under the Deus Syrius. Stephan of Byzantium mentions it before the time of Justinian as a walled castle. According to Procopius, Kharwar II Anushryan must have destroyed the town in his devastating campaign into Syria about 540. The fortifications were therefore rebuilt by Justinian. The Arabs call the town Babiš. It was taken by the Muslims under Abî 'Umîd without fighting but most of its inhabitants emigrated from it. Under Omar and 'Omar, Babiš was one of the frontier fortresses against the Byzantines. Hâfiz incorporated it in the Ijnad al-Awsâm, to which Kûta, Dâjûna, Mandîbî, Anûšîa, Tûbû, Babiš and Aq furnish Hisam belonged. When in later times the frontier had been advanced nearer Asia.
BÂLIS — BÂLÎA.

Minor, Bâlis belonged to the district of Kûmarîn, one of the six districts of Syria. In 245 (859) an earthquake visited Bâlis, which also affected Akka, Harrîn, Râs al-Ain, Urfa, Hîmis, Damascus, the Syrian coast and the Cilician lowlands. In 269 (888-889) Bâlis was under the sovereignty of Ahmad ibn Talîna. In 287 (998) it was a military station of the Caliph Mu'âzîd in his campaign against Cilicia. After the time of the Ahamdânî Salî dawla 333-336 (944-967) Bâlis began to decline and caravans visited it less frequently than before. Jâshîrî describes it about 309 (921) as a little town and Yâkût about 621 (1225) as still a village. In the Crusading period, about 1111, Bâlis was for a while in possession of the Franks under Tancrode of Antioch. Benjamin of Tudela visited it in 1163. When he regards Bâlis as the town of Bilem ben Beor, we have here a Jewish version of the legend which the Arabs attach to Bâlîa 'in the Bâlîa'. To the Arabs Bâlis is the town of Bâlis ibn Rûm ibn Yâkân ibn Shâm ibn Mu'alî, a preserved name of the pre-Muhammadan age of the town. According to Ibn Shaddâd, Bâlis belonged to the Alighid and Karzmîni assert that the Euphrates, which formerly washed the town, has gradually retreated from it so that in his time it was 4 miles distant. At the present day the distance is only about 2 miles and the river appears to be again approaching the town. The change in the direction of the river must have hastened the decline of the town. After Yâkût, first hand notices of the town cease. Abu 'l-Fidâ' quotes only older passages. The final destruction of the town was wrought by the armies of Ciaçîs Khân. Bâlis lies on the great road which leads from Baghdâd or from Mosul via Râs al-Ain to Syria. It is the first Syrian town on this road. On account of this prominent situation the geographers use it as a centre in describing the boundaries of the land. It also lies on the dividing line between two strikingly different climates. The raw climate of the plateau of Aleppo here gives place to the warm equable climate of the Dijarîs. The flora and fauna change here completely also: Bâlis is called the harbour of Syria on the Euphrates. In spite of its favourable situation it has never been able to recover from the Mongol invasions.

At the present day Bâlis bears the name of Eski Meskene, after the quite modern military and post-station in its neighbourhood. The ruins of the town are notable. A cape of the higher bank that stretches out into the Euphrates-valley. The walls around are still recognizable. One can still recognize three gates for the roads to Aleppo, to Hîmis and Damascus, and to Baghdâd. A deep ditch separates it from the hilly hinterland. On this still stand the ruins of the fortress of the time of Justinian: a praetorium and a strong bastion. This ancient fortification must have been made while the whole Muhammadan empire was in its prime. The area of the town is full of fragments of pottery, which lead us to conclude that it once had a flourishing ceramic industry. From its midst rises a high octagonal minaret, renewed in the time of al-Mâlik al-Adîl Abî Bakr as the inscription tells us. The name of the Amir who had charge of the operations and the date have disappeared; the architect calls himself Abî Bakr. In the south of the town there still are the remains of a nameless, mediaeval tomb of a saint with two graves.

ERNST HERZFELD.

BÂLISH, a unit of money among the Mongols; it is mentioned as early as the time of Ciaçîs Khan; after the break up of the Mongol Kingdom into several independent states, the word appears to have remained in use in Cina only, where they still reckoned by the bâlîsh in the eight or ninth century. It is very difficult to reconcile the various passages from Oriental sources collected by Quatremère (Histoire des Mongols de la Perse par Roukhî al-Dîn, p. 320 et seq.); to what is given there one can only add Dîjûnî's notice (Tabikhi-nî Yâgîrî, transl. by Raverty, p. 1130) according to which the bâlîsh was worth 6âhîs dirhems. The statement in the 7ârîkî Wâṣîf (lithogr. ed. Bombay 1269 = 1853, p. 22) that the gold and silver bâlîsh each weighed 500 mînhâs (about 4½ sh.) is very important (Dîjûnî tells us the same thing). According to Wâṣîf, a bâlîsh in gold was worth 3000 dinars; in silver 200 dinars, in paper-money. In another passage (p. 506) in his account of the embassy of 697-704 (1297-1298—1304-1305) — cf. on this embassy d'Ossian, Histoire des Mongols, iv. 320 et seq.; Elliot, History of India, iii. 45 et seq. — Wâṣîf estimates the value of the bâlîsh in paper-money at only 6 dinars. The word "dinar" clearly does not here mean a silver coin, but the silver coin weighing 3 mînhâs (about 32.5 sh.) also mentioned by Dîjûnî al-Dîn (cf. d'Ossian, Histoire des Mongols, iv. 464 on this point).

(W. BARTHOLD.)

BÂLÎA (A.) In pre-Muhammadan times, a female camel, a mare, or other beast of burden was frequently tethered at the grave of a warrior or noble, and left without food or water till it perished. The original reason for this custom must have been the belief that the soul of the deceased resurrected from the dead would not have a steed at his disposal, unless one were given him at his death; otherwise he would have to go on foot like the common people. Another tradition mentions that the Balya might also be a cow, a sheep or a goat and that the animal was slain at the grave.
The Balkan passes are historically important, viz. the Aş Bogdak on the road from Varna to Burgas and farther to the west the Çatalcağı Bogdak, the Demirtşaşı (Iron Gate), the Shipla Bogdak (the Shipla Pass) etc.

**Bibliography**: Kulis, Domn-Bulgar în  și al Balcan; Recâm, Neam. gheor. univ., l. 206—312.

**BALKARIA**, a Turkish tribe in the Caucasus.

**BALKH**, the BACTRA of the Greeks, Old Persian BAKHTIARI (really the name of a country) middle Persian BĀHK, Bahl, with the epithet I BĀM K "the glittering", situated on the southern side of the Amīr Darya, on its tributary the Dekah, which now no longer reaches it, in the flat northern outlying part of the Koh-i-Bahl on the important commercial route from the mountain passes to the Oasis, was the political metropolis of the ancient state of Khorasan, the intellectual and religious capital of the later kingdom of Tukši-išān.

In the Iranian saga which relates the founding of the town to Kai Lohrāp— the form of the name and description of its bearer as king points to Bactria as the home and the Kūšān period as the period of origin of this myth — and connects its origins with the rise of the Zoroastrian religion, there is an echo of the fact that Balkh owes its historical importance to the Achaemenid period, in which it was the seat of the satrap of Khočistan, and early took the character of the holy city. It is quite possible that the tradition which attributes the resettling of Balkh under the name of Alexandria to Alexander contains some historical truth. As the seat of the Graeco-Bactrian kings, Balkh was a centre of hellenistic culture. Balkh lost its historical importance in the following Tokharsi, Khoči and Ephthalite periods, but remained, especially after the spread of the doctrine of Budda under the Khoči kings, the intellectual and religious capital "(whence its epithet "the little town of the king") Parā. (Sīrāj-iṣlāh).

The teaching of Zoroaster however certainly survived alongside of Buddhism down to the Arab invasion; besides these religions there were also Manichaeism and Nestorian Christianity.

Buddhism was predominant however. The venerable Nawbahār, as its name tells us, a Buddhist monastery, was visited by pilgrims from all lands, often even by Chinese. The descriptions, given by the Arab authors of the famous sanctuary (360 cells around a high pagoda) are too hazy and as a rule too overlaid with fantastic exaggerations, for us to obtain a clear picture of the building from them. The head of the Nawbahār, the Barak, at the time of the Arab conquest held the highest position in Balkh. From this priestly family the famous dynasty of ministers, the Barakhīs (q.v.), were descended.

As early as 32 A.D. (663) Šokhr (or al-Shokhr) b. Kais al-Amaš [see Ašokh] is said to have advanced as far as Balkh and to have forced the town to surrender. But at first there were only temporary raids into the Hindu Kush as the "revolt" which followed, show. According to the Arab chronicles Kais b. al-Mahām again took Balkh in 42 (653) and destroyed the Nawbahār. From J. Marzouki's researches (cf. also his Witrīn and Arang, p. 41 et seq.) in Chinese sources it appears certain that
Arab raids were renewed in 664, which necessitated a strengthening of the opposing forces. By the year 96 however Kuchala b. Muslim had put an end to this unrest and securing for independence. The independence of the country forced the Arabs to place the Buddhists on an equal footing with the Abl al-Nizāh and even in the various "revolts" not to proceed against apostates with the full vigour of the Muslim Law. Kuchala appears to have been the first to pacify the country and to convert it to Islam. But tribal feuds among the Arabs and religious divisions in Islam began to bring new confusion. Asad al-Kushari [q. v.], Governor of Khurasan ordered the temples and monasteries to be destroyed in these wars, to be rebuilt by the Ghrānīs in 107 (726) and transported the seat of the government from Merwāz to thinker. About 130 a. h. Abl Dādd al-Balki, commissioned by Abū Muslim, began to stir up rebellion in favour of the Abasids in Tekshistan and Balkh. How long the native dynasties could retain their position and authority in spite of all the revolutions in the northern frontier lands of Islam, may be seen from the fact that about the middle of the third (ninth) century, we find a certain Dādd b. al-Abbas of the princecy house of Khoṭšaṭ, as governor of Balkh (cf. Margaur, Erāmchak, p. 300 et seq.) who built a palace, the Nwajī, which Vaykī b. al-Lalith, the founder of the Safavid dynasty, destroyed about 257 (870). The Safavids were succeeded in 283 (990) by the Sainūsins in ownership of Balkh. From the description of the town which Ṣanqž (or rather Balkh) has left us. From this period, Balkh with its glory pierced by numerous doors (Vaykī gives 12; Ṣanqž 7 with their names) cannot have presented a very stately appearance.

The town suffered severely during the wars between the Sainūsins and the Ilīg-Khanūn, in which Vaykī, the governor of Balkh played a part. The ancient regal city received new importance as the temporary residence of Subuktug and the great Mahbūl of Ghazni. Soon after the latter's death Balkh fell to the Seljuqs in 432 (1040) of whom Caghrībeg was chief. About the middle of the viii (8th) century the Ghrānīs began to contest the possession of Balkh with the Seljuqs. Their advance was impeded by the invasion of new hordes of the Oghus (Ghuzz-Turks); but in 594 (1198) the Ghrānī Dādd al-Din Šam of Bāmlān seized the town of Balkh. In 603 (1206) it was incorporated in the kingdom of Muhammad Sīgh of Khurasan Finally in 617 (1227) Balkh was devastated by the hordes of Chinig Khan, and it was doomed never to recover from the blow. How thoroughly destroyed the town was, is shown by Ibn Battūta's description of it. After Chinig Khan's death, Balkh and Transoxiana fell to his son Cagatai and remained in the latter's family till Timur deprived it of its power. Various branches of the Timūrids ruled in succession over Balkh till 900 (1500). During the following centuries it several times formed a hone of contention between the Uzbeks, more particularly the Lānūids and the Mughal Emperor of India; sometimes it was independent. After the death of the Abbāsid Nādir Shāh in 1160 (1747), who had incorporated Afghanistān and the adjoining lands in the Persian Safawī kingdom, Balkh remained continuously in possession of the Durrānī chiefs till 1243 (1826) when the Emir of Balbūs seized it. In 1257 (1841) it was again gained by Afghanistan, to which it still belongs.

The modern town with its some 500 houses is scarcely a shadow of the ancient Balkh, of which the Arabs gave the name of Umm al-Nīla or "Mother of the Cities". If it has preserved a certain importance in spite of all its vicissitudes, this is due to the wealth, praised by Mūkaddas, of its plain, watered by the Deha. The ruins of the city are noteworthy, of which those of the Buddhist period, which are associated in characteristic fashion with names from the Iranian saga-cycles (cf. Tekht-i Rustam), are better preserved than those of the Muslim ones. The sacred shrines of the past survive in the tomb Māzūr-i Shāhī, said to be that of All, which is first mentioned in the xiith century.

BALKHAN, a mountain range on the Caspian Sea, where the dry riverbed of the Uzbi (supposed to be the ancient bed of the Osas) flows into the Sea. The mountains to the north of this riverbed rise to a height of 5500 feet, and at the present day called the Great Balkhān; quite separate from them are the Little Balkhāns (to the south of the Uzbi) which are quite close to the Kūrān-Dagh. The Balkhān Bay on the Caspian Sea has taken its name from the Great Balkhāns; in it is the best harbour on the eastern shores of the Sea north of the Russian-Persian frontier.

On the story of an "ancient Khwarizm" on the Balkhāns cf. above p. 341*, article Amīr BAYKĪ. According to Mūkaddas (ed. de Goeje, p. 285), there were cows and horses running wild there; he was also told in Nāst and Abīward that the inhabitants of these towns used sometimes to go to the Balkhāns and find many eggs there; but no ruins in this district are mentioned in Muḥammad or in other sources. About 420 (1029) the Turkomans who had immigrated into Khorāsān from the wārs al-tarts retreated into the Balkhāns; they had made themselves obnoxious in Khorāsān by their robberies and were therefore driven out by Arīsa-Dīghīh, the general of the Ghānāwīd Mahmūd (Ibn al-Athīr, Ed. Tournel, ii. 267). After Mahmūd's death, their leaders, Kūz, Bāz, and Kūtāli were summoned with their followers to Mahād and taken into his army (Balbūs, ed. Moles, p. 71).

After the viith (9th) century we find the little
harbour of Ağrıdağı, at the mouth of the riverbed (which was at that time filled with water), mentioned; this place does not however seem ever to have been of any great importance. The name of the mountains is written Abū 'l-Khān by Abu 'l-Qāsī, following an unfortunate learned etymology; in his time several Turkoman tribes lived there. When the river Usbeq became finally dried up (about 1570) the district of the Balkhans gradually became deserted, and later times would find there only a few Turkoman tribes of the tribe of Yomut. In the trade with Khiwa, the harbour of the peninsula of Mangijal was, at that period as in the middle ages, an incomparably greater importance than the Bay of Balkhān.

It was only in connection with the "Octus question" that attention was again drawn to the Bay of Balkhān, when the idea was conceived, by Peter the Great first of all, of landing the Octus back to its ancient riverbed and thereby making an uninterrupted waterway from India to the Caspian Sea. It was several times proposed in the xviiith and xixth centuries to build a Russian fortress on the Bay but the plan was not put into execution until 1850, when not only the district around the Bay of Balkhān but also the harbour of Michailowsk lying to the south of it, was occupied from the Caucasus. A railway was built from the latter harbour as far as Kinil-Arvat in 1881, thence continued in 1885-1888 to Samarkand and in 1897-1898 as far as Andijan (q. v.); the Balkhān district has thereby become the most important commercial centre on the eastern shores of the Caspian Sea. The starting point of the line was till 1885 Michailowskeje, from 1885 till 1897, Urur-Asta, and since 1897 it has been Krasnowolowsk. Since the opening of the Orenburg-Tashkent line (1905) the "Transcaspian" line has no longer the same importance as before for through traffic and is only of value for traffic between the Caucasus and Central Asia. These mountains, almost waterless, and bare of almost all vegetation are of no importance for agriculture; the only industry of importance is the obtaining of gypsum from pits about 3 miles from Krasnowolowsk.

The name Balkhān (It is said to be derived from the Pehl. Baha Khâna) was brought to Europe by the Turks and applied to the Haemans mountains of the ancient; this is the origin of the names "Balkān" (for the mountains) and "Balkan Peninsula", usual in modern geography.

(W. Barthold.)

BALKHASH, next to the Aral (q. v.), the largest inland sea in Central Asia (6144 sq. m.) into which flow the Ili and several smaller rivers. The lake remained unknown to the Muhammadan geographers of the middle ages; the anonymous author of the Jāhuvar al-'A‘lam (372 = 692-693; cf. J. Marquart, Ostenriicksche und Tibetische Streifzüge, p. xxx) makes the Ili (ili) flow into the Issyk-Kul. A description of Balkhash is, as far as is known, only given among Muhammadan authors by Muhammad Haidar, about the middle of the xviith century. (Turkmen-Balkhash, transl. by D. Ross, p. 366.) In this book the lake, which then was used as the boundary between the land of the Usbeqs (Usbeqstatt) and the land of the Mongols (Moghīlātā) is called Kūtik-Telīn ("blue lake") and described as a fresh water lake. The dimensions given for its length and breadth are much exaggerated and Muhammad Haidar also regards the Volga (Uli) as flowing out of Lake Balkhash. Of importance is the statement regarding the taste of the water; modern geographers have always regarded Balkhash as a salt lake; it was only as a result of explorations carried out in 1905 by the Turkestān division of the Imperial Russian Geographical Society, that it was finally found to be a freshwater lake. As was pointed out by the leader of the expedition (L. Berg) the existence of a freshwater lake without an outflow in a district where the annual amount of precipitate scarcely amounts to 200 mm. forms a "geographical paradox". What is said on p. 420 of Lake Aral is also true of Balkhash: an unmistakable advance of the coast line was first noticed here in the xivth century, and it was on this account that observations of the drying up of the lake were taken in the last decades of the same century; distinct signs of an increase in the volume of water in the lake have been proved here also so that, as over Central Asia generally, we must not presume extinction but rather a periodic rise and fall in the surface of the lake. Cf. L. Berg, Prostredniy okrug ob obdělennosti něhr Balkhān vetem 1905 g. (Zeitschr. Imp. Russ. Geogr. Obshch., t. xl. p. 584—599, with a very complete map).

The Lake first received the Mongol name of Balkhash from the Kalmucks, who ruled this district in the xviith and first half of the xviiith century. The name of "Balkhas", with a description of the lake, very accurate for the period, is given on the map by the Swedish officer J. G. Ronnert, who spent 17 years (1716—1733) in the land of the Kalmucks. Cf. Curie de la Deuxième édition du manuel de la Russie pendant son captivity chez les Kalmouks de 1716—1732, 2e. de la Soc. Imp. Russe de Géographie, St. Petersburg, 1881. The Kigir tribes who lead a nomadic life in the same country to-day call the lake Aš-Telīn (**White Sea**). The immediate neighbourhood of Balkhash has always been, as it still is, a dreary desert. So that the lake, as far as is known, has never attained any economic importance; neither have its shores ever been peopled by a civilized race. The shores of the Balkhash, which are covered with reeds, are used by the nomads as a winter-settlement; in summer the district around the Balkhash is quite deserted.

(W. Barthold.)

BALKH,I, ABD AL-MAHD,K C. ABB, Arab writer on geography, born in Šamisīyān (in the province of Balkh), was a teacher in his native country, at first adopting the principles of the Imāmīya-sect and afterwards studying philosophy with al-Kindi. He found a patron in Abī 'Ali al-Dżāhān, a Šāhān in minister, but afterwards quarrelled with him. He was invited to Balkhān, but had the courage to cross the Oxus. He died on the 19th Dhul-Qa‘da 332 = 31st Oct. 934. The Pahlavī (vol. I. p. 138) gives a list of forty-two women works by him, all of which were early lost; Hājjī Khaṭīb was only acquainted with six of them including a Šahān al-Dżāhān which is quoted by Muḥḥaddas and Hamdallāh Mustawfī, and the Kūtik al-ba‘th wa-l-qiyāž, which was wrongly attributed to him at quite an early period (before the xiiith century) and was really composed by Muḥḥaddas b. Tāhir al-Majdīst.

Bibliography: M. J. de Goeje, Die ista-hā-k-Balkh-Frage, in the Zeitsehr. d. Deutsch. Morgenl. Gesellschaft, xxv. 53 et seq.; Yagh,
The term Balochistan in its widest significance includes the whole country over which the Baloch race is spread without regard to modern political boundaries. This tract is comprised between long. 58° and 70° E. and lat. 25° and 32° N. Politically it comprises:

1. the Khuras of Kalat, often spoken of specially as Baluchistan;
2. the Persian province of Baluchistan, now included in the Government of Khurasan;
3. the province of British Baluchistan;
4. the territory occupied by Baloch tribes in the British Indian provinces of the Punjab and Sind, comprising the districts of Derawar Khan, Jacobabad, and from as far as the Baloch tribes extend.

With the exception of the Indus valley and the narrow coast district, the whole of these tracts are comprised in the Tractus pluvial, of which they form the southern portion. It may be noted here that the northern part of the province of British Balochistan (comprising the districts of Peshawar, Zhob and the Sulaiman Mountains as far north as the Gomal River) forms etymologically part of Afghanistan. The utmost northern extension of the Baloch race is 31° N. in the Sulaiman Mountains, but in no other part of the territory do they spread so far north.

Mountain system. In the Eastern part of the country the mountains are an extension of the system of eastern Afghanistan. The Sulaiman range culminating in the peaks of the Kaisarshahr 11,300 ft. and Takht-Sulaiman rises nearly north and south forming the eastern edge of the table-land from 32° to 29° N., when it turns westward as far as the Bolan Pass, then in the mountain boundary runs nearly due south towards the Indian Ocean, under the names of the Hads and Kirghir Mountains. From these mountains westward the plateau is traversed by numerous ridges with a general north-east and south-west tendency. Proceeding westward through the Khuras of Kalat into Persian Balochistan these ranges assume a nearly east and west direction, and in Persian Balochistan they take a north-west and south-east direction till they join either the mountains of Khurasan or those of Hormuzan west of Shanq. At the northern end of the Bolan Pass in the neighbourhood of Quetta the ranges from the east and south meet in a tangled knot of mountains, among which are the highest peaks of the (11,300 ft.) and Takht, Murshar and Zaraghan, all over 10,000 ft. This part of the plateau is of considerable height, the plain of Quetta having an altitude of 5500 ft. and Karat of 6760 ft. The long valleys which follow the trend of the mountains through Makran are of little utility, and the mountains themselves seldom rise above 5000 ft. until in Persian Balochistan they rise again into high peaks, among which the volcano Koh-i-Timbir or (13,500 ft.) and Koh-i-Baluchir 11,200 ft. are the most remarkable. West of the mountains of Quetta along the northern boundary of Balochistan the level of the country falls towards the Helmand desert which separates it from the more fertile parts of Afghanistan. The average level of this barren plain is 2000 ft. which falls still lower in Sistan to 1580 ft. at the Gool-i-Zirih depression. Immediately to the west of this is the Siyahin range running south-east and north-west along the boundary of the Khuras of Kalat and Persian Balochistan till it culminates in the peak of Malik-Siyah (5500 ft.), the trigonlectual point of Persia, Afghanistan and Kalat. On the sea coast the mountains range frequently end in majestic cliffs; especially that known as Kuf-Mahin.

Geological formation. The formation of the country is mainly limestone, cretaceous formations being the earliest. Nummulitic limestones and sandstones abound. There are occasional intrusive basaltic rocks, and in Persian Balochistan there are two lofty volcanoes, of which one, the Koh-i-Timbir, is still active.

River system. The rivers of Balochistan are small and unimportant. Owing to the very scanty rainfall and the parched nature of most of the mountain ranges their volume is very small, and many of them are dry through the greater part of the year. On the east flank the most considerable are the Kundur and Zhob which unite with the Gomal forming the Indus. The Nari, Bolan and Malik streams also run towards the Indus, but their water is used up in irrigation before they reach it. On the south coast flowing into the Indian ocean are the HALIB, forming near its mouth the boundary of Sind, the PARAD (Greek Arachos) draining the Aks-Bela, the Hingol and the Dabh in Makran, and the Rupali and Aimini in Persian Balochistan. Inland the principal streams flow into depressions containing salt swamps known by the name of Hamin. The two chief streams of Central Makran, the Rakhshin flowing west and the Mandhai flowing east unite and follow a northerly course to the Mandhai Hamin (1600 ft.) where they are lost. The Loria river flowing from Peshawar is lost in the (1600 ft.) near Chagh. In Persian Balochistan also the Karmand river flows by Ranesi into the Ghazir Hamin. Many of the smaller streams are salt or brackish and generally there is a great lack of good water.

Principal places. The inhospitable nature of the country makes the growth of large towns an impossibility. The population is mainly nomadic, and it is only at a centre of Government like Kalat or Billa, or a military station like Quetta that anything like a town exists. Even Kalat and Billa have only 5000 inhabitants each. Panjgur is only the centre of the trade-route of the Rakhshin valley, and Sibi and Dabghar are old centres of trade below the Bolan Pass. Shah or Quetta owes its modern importance to its being an important military centre. Other military stations in British Balochistan are Loralai and Fort Sandeman. Fahraj or Phira is the capital of the Persian province. The sea ports are also unimportant, and much impeded by sandhanks. Sierman, Ormara and Panew are the principal ports in Makran and Las-Bela. Gwadar on the same coast belongs to the Arains of Makran; Gwadar and Chabah are in Persian Balochistan, and Tis on the same coast has now lost its old importance.

Political Divisions. With the exception of
of Persian Balochistan the whole country is included within the limits of the British Empire in India, but the political status varies considerably, and the following is the official classification.

I. British Balochistan. This includes districts formerly part of Afghanistan and ceded by the treaty of Gandamak in 1879. These are Shahrīgh, Salā, Dukht, Pashtun, Čaman, and Shītrād.

II. Territories administered by the Agent to the Governor General:
   a. Directly administered;
   b. Native states;
   c. Tribal areas.

   a. These districts are either leased from the Khān of Kalīt or are tribal areas, or territories obtained by cession or boundaries with Afghanistan. They comprise the political agencies of Zhob and Qalghai, the eastern part of Quetta, Sindjaiw, Kalīt, and Bākhān, as well as strips of land along the railways.

   These areas are administered in the same manner as British Balochistan; the whole area aggregating 43,800 Eng. square miles.

   a. The native states are the Kalīt Khānāt and its feudatory states Las Bela and Khārān.

   b. The tribal areas are the country of the Mart and Bugti tribes, which are governed by their own chieftains under the Governor General's Agent, and not through the Khān of Kalīt. The country near the railway in Kalīt, belonging to the Dūnbīk, Kalīt, and Umārī tribes, is administered in a similar way.

   Las Bela is under its own chief or Dījan, a territorial ruler, of Indian Kājījī origin. It occupies the south-eastern corner of Balochistan as far as the Sindh border and the Indian ocean.

   The Khānāt of Kalīt occupies the greater part of the country including the hill country of Kalīt itself with all the Brahšī tribes divided into Sarawat and Džawabān (upper and lower), all Makrān up to the Sindh border and the Indian Ocean and Khārān on the north. It also includes the plain of Kalīt above the mountains of Kalīt. Khārān, the territory of the Nakriwātī tribe, is feudatory, but administered by its own chief.

   The Khān of Khārān himself is the chief of the Kamishmālī tribe of Brahpūt, and is the head of a confederation of Brahšī and Brahštī tribes and of other races which occupy a subordinate position.

   Balochistan originally formed part of the Khānāt of Kalīt, but was gradually conquered by Persia after the rise of the Kajjī dynasty. The frontier was demarcated by an Anglo-Persian Commission in 1870–1872 and finally surveyed in 1895–1896 under Sir T. Holdich. This province is strictly speaking the western portion of Makrān, and shares its physical characteristics.

   Area. The total area of the territories under British administration is 43,800 Eng. square miles. The area of the Provinces cannot be accurately stated but is certainly not less than 30,000 sq. m. and only to 15,000 sq. m. in the lower reaches.

   Climate. The climate is extremely severe with great extremes of heat and cold. Makrān probably is one of the hottest districts in the world, but the climate is generally dry; on the coast the heat is aggravated by the humidity of the atmosphere. In the cold season snow storms are prevalent especially on the high lands around Quetta and Kalīt, Makrān, Khārān and the lower tracts near Quetta are always liable to violent winds from the north. The rainfall is everywhere small, being at its highest in the mountainous country of British Balochistan and the hills north and east of the Kalītī plain. The highest record for Shahrīgh (average of five years) is 12½ inches. No other place has so much. In Kalīt it is only 2.10.3 inches, at Kalīt 5 inches. There are no records for Makrān and the Persian province, but it is certain that the rainfall is less than in the eastern mountains. The whole country is very dry, and cultivation is only possible in the few areas in which water is available for irrigation. There is good reason to believe that the process of desiccation is in progress and that cultivation was more extensive at some former time than it is now, but its substantial characteristics seem to have been the same in Alexander's time as they are now.

   Population. The census of 1911 extended to 268,006 Eng. miles only. This tract contained a population of 1,107,546, and the estimated Civil list. Makrān, Khārān and West Sindjaiwān are roughly estimated at 229,655 souls (415 persons to the square mile). This gives a total for Balochistan within the boundaries of the Indian empire of 1,049,805. Persian Balochistan may be reckoned at about 350,000. There is a large population of Baloch origin in the Punjáb and Sindh together with some Brahšī in the last named province, the total being 1,017,307 Baloches and 43,180 Brahšīs. In Balochistan itself the number of Baloches number only 10,4498, but as the population of Makrān and Persian Balochistan is largely Baloch, it may be estimated at 300,000. Even so the Baloch population of Balochistan is less than half the number of the same race settled in the Indus valley. The Brahšīs are mainly settled in the Kalīt province and number nearly 300,000.

   Flora and Fauna. The greater part of the mountain ranges are barren peaks, without forests. There are a few limited tracts in the mountains of British Balochistan where some small forests are found. There are patches of Ficus Girardiana and Ficus Longifolia, also of Quercus Ilex on the Salana Range, a forest of olive (Olea europaea) on Mount Shinghūt, a tract covered with wild pistachio (Pistacia Khājur) on Mount Chītān, and a juniper forest (Juniperus excelsa) at Zūrān, but throughout the greater part of the country there is nothing that can be called a forest. The dwarf-palm (Chenopodiaceae) is common everywhere up to 5000 ft., and its leaves are much used for matting and sandals. The central stem is eaten as a vegetable and the woody tomentum is made into teather. The saltbush-tree (Atriplex nummularia) and the juniper (Juniperus Excelsa) are often found near river banks. The location of the grasses, and dense Medora and Jasonum on the hill sides; some varieties of tamarisk, especially Tamarix Gallica, also grow near water, and the cypress (Cedrus orientalis) grows in dry water-courses, with occasionally also found occasional willows (Salix armophylla). The yellow flowering phluph (Tocoma andulata) is not uncommon in some of the valleys.

   The date-palm is abundant in parts of Makrān, especially in Pandīgūr and Mashkūl. In Pandīgūr it is cultivated and artificially fertilized; the dates
tribes ranging from 5 ft. 5 in. to 5 ft. 7 in. (160 cm. to 170 cm.); broad-headed persons, with the cavernous index being 80 or 81; noses are long and prominent, hair and beard abundant, hair and eyes generally black with occasional blue or grey eyes and brown hair, complexion light brown but darker on the coast. These characteristics apply more especially to the Balochi and to some extent to the Brahui. The Afghans in this province have a strong resemblance to the Balochi, but have been dealt with under the head Afghanistan. The Indian element should be to some extent modified by Indian characteristics such as narrower heads, and shorter noses.

Counting the Afghans of British Baluchistan the population falls under the heads of Baloch, Brahui, Indians, and Persians.

The Indian element consists of the Laks and the Laks, the mixed-up with Baloch in Kalat, probably also the Mehs and other tribes of low social status in Makran should be included under this head. There are also a certain number of Hindu traders, descendants of more modern immigrants from India.

The Persian or Tajik element consists mainly of the Durbars or Cultivators of the Kalat and Quetta plateaus. The large and warlike tribe known as Ambardar, most of them are to be of Persian origin, but it is doubtful whether there is any real distinction between them and the Baloch.

The Baloch proper are divided into two groups which are separated from each other by the central mass of Brahui. That of the north-east occupies the plains of Kalat and the hills to the north of it which merge into the Salangai Mts. In these mountains they spread to the north as far as lat. 31° and below the mountain eastwards towards the Indus. A large number inhabits the plains of the southern Fandjar and northern Sindh, especially the districts of Dera Ghari Khan and Jacobabad. The Baloch of Makran and Persian Baluchistan, lying to the west of the Brahui tribes, form the other group.

The Brahuis are not so scattered but occupy a compact block of country around Kalat, mostly lying very high, and stretching from Quetta in the north to Las Belen in the south, thus completely separating the north-eastern from the Makrani Baloch.

The Baloch, probably, will be shown below, entered Makran from Karran and Sistan about the period of the Safavi invasion of Persia, and soon spread as far as the Indian frontier, from which time the country began to be known as the land of the Balochi, Baluchis. The name was unknown to earlier writers. The term Baloch has sometimes been loosely employed to include all residents in the country; thus Najar Kha, the Brahui chief who rose to power in the 18th century, is generally alluded to in history as a Baloch. The nature of the early inhabitants can only be surmised, but they were probably mainly of Indian stock. The earliest name for the country of which we have any knowledge is the Maka of the Behistun inscription, the Medea of Herodotus (or the Country of the Mykians), which was included in the 14th setry. The Mykians are elsewhere associated by Herodotus with the Ustams and Parthians who were armed like the Paktins. The frontier between India and Persia is
drawn by Ploemny so as to leave the eastern part of Balkāistān in India, and Arrian’s account of Ora and its inhabitants, the Orettai, who lived on the river Aharībo, now the Subkh, shows that they were Indians, as are the inhabitants of Lāl-Bīla at the present day. West of them, the inland valleys were occupied by the Gadrosi, from whom the country was called Gadrosia or Gedrosia, and the maritime territory by the lekhatyaphagād, fisherman now represented by the Māda and other coast-tribes. Gedrosia remained the accepted name of the country through the classical period; we do not meet with Māda or Mekīa again, but it evidently survived in popular use for the first Arab invaders in the 1st century of the Hījira found the name to be Makkān, the modern Makkān. (Possibly the correct reading should rather be Makarān, and this is the modern Balochi pronunciation). The last syllable -ān is conjectured by Molesworth Sykes to be the Skr. ‘-āna, a benevolent, wise, just person (which is found also in the Rānu of Kārak). Various places along the coast have been identified by Holdich, Mockler, and others with places mentioned by the Greek historians.

Such are:
- Rād Mīlān — Malīm (Arrian),
- Parāgh, Bamārī — Pura (Arrian),
- Gwāndār — Bara, Bandara,
- Kalīna — Kalima.
- Aṣna Islām — Nowāla.

In Pura we see no doubt the Indian part, a city, but the names given as a rule furnish no certain guide as to whether an Indian or Iranian language was at that time spoken by the population. The Gadrosi have been identified by Mockler with the Balochi, but there is no philological justification for this. An original or might give rise either to a modern or or or (as in the case of Gwāndār) but an original or could hardly be represented by a modern or. There is besides good ground for believing that the Baloch are immigrants of much later date. Holdich thinks the names of the Gadrosi are to be found in the modern Gadaric, a clan of Lāl-Bīla, but the Gadar as shown by the recent census are an insignificant clan of Indian origin, numbering not more than 2000 persons, and it seems impossible to identify them with a widespread race like the Gadrosi.

The Djaf of the lower Indus comprise both true Djats and Rādījatts, and the same rule applies to Lāl-Bīla where descendants of former ruling races like the Sumra and Sammā of Sind, and the Langā of Mālūn are found. At the time of the first appearance of the Arabs they found the whole of Makran in possession of the Djaf (Zaft).

Masudi indeed brings them as far west as Karmān, but in general they are alluded to as occupying Makran. The Baloch at that time are described by Masudi and Balimi as occupying the mountains of Karmān and are associated with the Kār (Kār or Kalār or Kakār or Kalāri), but al-Balimi and Taheri only mention the Kār. It seems therefore possible that the Baloch, although they were certainly in Karmān when these chronicles were written, had not arrived there so early as 25 A.H. when the first Arab invasion took place. Their earlier immigration seems to have been near the shores of the Caspian sea, and we learn from Firdawsi that Nakhwār was war against them.
of Arab origin seems to have been derived from the Balochi tradition that they are descended from Mir Haana, and that they came from Halab, that they fought against Yaska at Karbala under Husain, but no more importance should be attached to this story than to other similar legends of descent found among many races. Mockler considers that the name Halab or Aleppo in the legends is derived from an actual descent from the Arab tribe of 'Ali, descendants of 'Ali, who were in Makran about 65-66 A. H. and kept possession of the country after killing 'Abd al-Aziz. What had happened to appoint them there by Ḥaḍrat. This theory is not supported by any evidence, and though it might apply to certain families of Arab origin, could hardly have been adopted by the whole Baloch race, which did not settle in Makran till four or five hundred years later. It also takes no account of the part of the legend which locates the Banū sa in Sistan before their move into Makran. Their settlement in Sistan is put down in this legend to the time of the 6-8th century, and from this time who may perhaps be identified with the Malik of Sistan of that name who died in 559 A. H. and their expulsion is attributed to Radr al-Din, who has not been identified. Their leader, Ḥājjal Khān is said to have left four sons: Rind, Lāhār, Hot and Kākēri and a daughter named Ḥājri. The same five are the eponymous founders from whom the five principal divisions of the Baloch claim their origin. The original forty classes or bolakhs (with four servile tribes) who followed Ḥājjal Khān, mustered under the standard of one or other of the sons, and all Baloches of the true blood are classed now as Rind, Lāhār, Hot, Kākēri and Ḥājri. Some other tribes which do not fit into the genealogy, are generally classed as Balochi, and of these the most important are the Balābi or Bahār in (called also Bāri in Sindhi), who are found both in Makran, where their original home the valley of Baloch is situated, and in upper Sind on the Indus, the Ġīāt of Makran who are believed to be of Indian origin, and the Dūdū, a mixed Baloch and Rabāpjī race, who claim descent from Dūdū, a Surāj king of Sind, and are now found in the South Punjab. Their principal existing branch is the Garunţ tribe of Dūr Ġīāt Khān. The hindus under Ġākārī seem to have been the principal in the migration into India, but their supremacy was contested by the Lāhārīs under Gwahārānī, and the wars between these two and their dealings with the Turks under Ǧamal (that is the Ġārhi under Ḍūlī-nun Beg), form the subject of many heroic ballads. At the present day Rind, Lāhār and Hot are found in Makran. In Kābūrī also there is a large clan of Rind and a branch of Lāhār known as Maghāzī. The Ġōna and Dūdū in the beginning of the 10th century spread northwards along the Indus. The Dūdūs were under Sohīrt a rival of Ġākārī, and upset the Dūr-Jaxān river as far as Ḍūlī on where Bāhr met them in 1259 A. D. At the present day a number of tribes mainly of Rind descent, but with sections derived from Ġōna and Lāhār occupy the Salamum Mountains, and the heart of the plains in the Dūr Ġīāt Khān District and Northern Sind. The Ġīāt of Dūdū, the Ġākārī, and the Hindu Khōlas of Dūr Ġīāt Khān were also of Dūdū stock. The towns of Dūr Ġīāt Khān, Dūr Ġōna Khān and Dūr Fath Khān which give its present name of Dūr-Jahān, i.e., the Dūdū to this province, were founded by Ġīāt Khān, Ġōna Khān and Fath Khān, sons of Sohīrt according to tradition, and these three men were actually leaders of the Ġīātān in the 10th century, and met Šāh Šahbāz in 1546 A. D. Raverty is mistaken in speaking of the 'Dūr-Jaxān', as the two tribes were then and are still quite distinct (Mihrāb of Sind, p. 389). The Rinds are now mixed with Lāhār and Rabāpjī cultivating tribes all over the districts of Makran, Ubjān, Mūsājānghā, Montgomery and Shāhpur, and the Lāhār and Kākēri, who accompanied them, are found in the same districts; half of these forms organised tribes, and east of the Indus they have lost their language and speak dialects of Panjābī. West of the Indus, in and near the mountains, the tribes retain their organisation under their chieftains and their language. These tribes are (from north to south) the following: Ḥaṭtār, Bādūr, Ṿaktur, Lāhār, Būghān, Ḥājria, Kākēri, Bānū, Marābī and Sābdār. Some other tribes which do not fit into the genealogy, are generally classed as Balochi, and of these the most important are the Balābi or Bahār in (called also Bāri in Sindhi), who are found both in Makran, where their original home the valley of Baloch is situated, and in upper Sind on the Indus, the Ġīāt of Makran who are believed to be of Indian origin, and the Dūdū, a mixed Baloch and Rabāpjī race, who claim descent from Dūdū, a Surāj king of Sind, and are now found in the South Punjab. Their principal existing branch is the Garunţ tribe of Dūr Ġīāt Khān. The hindus under Ġākārī seem to have been the principal in the migration into India, but their supremacy was contested by the Lāhārīs under Gwahārānī, and the wars between these two and their dealings with the Turks under Ǧamal (that is the Ġārhi under Ḍūlī-nun Beg), form the subject of many heroic ballads. At the present day Rind, Lāhār and Hot are found in Makran. In Kābūrī also there is a large clan of Rind and a branch of Lāhār known as Maghāzī. The Ġōna and Dūdū in the beginning of the 10th century spread northwards along the Indus. The Dūdūs were under Sohīrt a rival of Ġākārī, and upset the Dūr-Jaxān river as far as Ḍūlī on where Bāhr met them in 1259 A. D. At the present day a number of tribes mainly of Rind descent, but with sections derived from Ġōna and Lāhār occupy the Salamum Mountains, and the heart of the plains in the Dūr Ġīāt Khān District and Northern Sind. The Ġīāt of Dūdū, the Ġākārī, and the Hindu Khōlas of Dūr Ġīāt Khān were also of Dūdū stock.
The name Hot means hero or warrior, and it seems unnecessary, with Mocleker, to seek the origin of this tribe in the Ural of Herodotus. Hughes Balfour would with more probability derive the name Hot from the Orbital or Hureit of Arrian. He finds in Makran a tradition that the Hot are an old local race, and if they are like the Brahui, of Baluchistan origin, their association with this tribe in the invasion of India would be explained. Delahaye may perhaps be connected with the place name Dizak of Persian Baluchistan. Gorgir is probably also a nickname meaning grave-digger or grave-opener. It is a word of purely Baloch formation, and Mocleker's derivation from 'Georgian' seems far-fetched and without historical justification.

The Brahui, although a less important race than the Baloch, if Baluchistan as a whole is considered, form the most numerous and strongest body in the Khud of Kalat, to which they are almost entirely confined. They are spread over the highlands of Kalat from Quetta as far south as the border of Las-Bella. Some tribes winter in the plains of Kachch. Physically the Brahui are of the same general type as the Baloch, but differ in some respects in features. The men are less aquiline and broader, and the face is of a rounder type. Many are of a broader and thicker build, but there are also many of the pure Baloch type.

The tribes form a confederacy under the leadership of the Khan of Kalat and are divided into two large groups, the Sarwans or upper and the Khalwains or lower Brahuis. This confederacy is of modern origin and comprises some tribes such as the Kinds and Mahghas of Kachch which are purely Baloch. Nearly all the tribes composing it are however now considered to be Brahuis, but many of these are of Afghan, Baloch or Indian origin. Mr. Hughes Balfour on the authority of the Ex-Khan of Kalat states that the true Brahuis who form the nucleus of the whole race are the following:

Kambiran, divided into Ahmadzai (The Khans' clan) and Ilfasi;
Mirsani;
Garqiri;
Sumtifi;
Kalundrai (or Kalandari).

These, like the Baloch, claim to come from Halah, that is Aleppo in Syria. It is probable that they really are immigrants from the west, and it is possible that they should be identified with the Kas who were associated with the Baloch in Kerman before they moved into Makran. The name Kas meant simply 'nomad', and Idrist stated that they were a sort of Kutchi. It will be seen below that there is still an important tribe of Kurds among the Brahuis, and the name by which all Brahuis are known in Las-Bella is Kurd-gal or 'men of Kurd speech'. There seems therefore some ground for supposing that this original core of the Brahui race consisted of immigrants of Iranian blood akin to the Kurds of Western Persia.

The next group given by the Khan consists of the tribes believed to be of Baloch origin, and to have been in the country before the arrival of the Brahuis. These are the:

Bangulzai (the Gurrani clan of this tribe speak Balochi);
Langai (probably originally a servile clan);
Lohri;
then follow tribes said to be Afghan, viz. the
Kauari;
Samitais;
Shahwani (sometimes said to be Baloch);
then tribes said to have come from Persia, viz. the
Kurdu;
Mamnsar (or Muhammad Hasan);
and those said to be of Djar origin, viz. the
Buzanb;
Mangal;
Saldji;
Zehri;
The last in the list are supposed to be the old inhabitants of the country before either Baloch or Brahui entered it, but are distinct from the Djar; these are the
Muhammad Sialtis;
Nizari.

In addition to the distinction of blood between the tribes there are also internal distinctions within each tribe. In most tribes there are certain sections claiming to form the original tribe and others said to be accretions from outside.

The Brahui language, as will be seen below, is of Dravidian origin, and may be supposed to be the language of the aboriginal tribes found on the Kalat highlands before either the Baloch tribes (speaking Balochi) or the Brahui tribes (speaking a tongue known as Kurdo) arrived. This language seems to have been adopted by the newcomers who settled on the plateau, the Brahui tribes, the remnants of the Baloch who had settled there before them, and the sections of the Turk Afghans who joined with them in expelling the Baloch. Some of the original inhabitants were absorbed among the newcomers and some, whether Dravidian or Djar, kept up an independent tribal organisation. The whole were hound together by a common language, the old language of the country; and form the modern Brahui race. This seems to be the most probable history of the formation of this complex organisation.

The name Brahui is evidently modern, and, as Hughes Balfour suggests, is probably a patronymic, like most of the tribal names. It is a derivative from Bruth a popular form of Brahmin. The derivation from Bruth is not the mountains' is impossible. This hybrid word is supposed to be made up of the Persian Bra and the Sindhi w mountain; but such a formation is unknown. The adjective from w is rebh, rebh mountains a term often applied to Afghans, the Persian equivalent to which would be Koh or Kohistan.

The Dehwaras are a branch of the Tadjik or Eastern Persians, and are widely spread in South Afghanistan. They are found mainly on the Kalat plateau. They speak Persian and are occupated in agriculture. They are a settled race living in permanent deh or villages, from which they get their name of Dehwar or village in distinction from the nomad Brahuis. They hold a subordinate position under the Brahuis.

The populations of Indian origin may be classified as follows:

the Lais of Las Bella;
the Lajyas of Makran and Persian Baluchistan;
the Djar of Kachch;
the Khorasans.

Laiya. The tribes of Las Bella were formerly classed as Numris or Lunuts, but according to
Hughes Bally this name is not now in use except as a contemptuous term for the mental classes. It appears to be derived from the NATURTI BALÖCH tribe formerly important on the Sindhi frontier but now lost. (There is however a clan still bearing the name among the BISHTAS of the SINDHÍ RANGE). The word LEST is now used for all the tribes of LÁS; the greatest part of which and the KATÁ and LEST tribese akin to those of the INDUS valley, from whom they are separated by no natural barrier. They are in a subordinate position to BISHTÁ and BALÓCH overloads, and pay them a share of the crops. The term LEST here as in the SOUTH PAKISTÁN comprises tribes of RÁJPUT origin such as the SÜMMÁ and SÜMMÁ, as well as true LEST. Other important classes are the RÁJPUTS and the AHRÃO. The word LEST (with the Hindustani) has some times been confused with: the BALÓCH word GIDA (with dental r) which means a camelboard only, independent of race or tribe. Among these tribes also the language is Indian, the dialect being akin to the LÁNDÍ of the West PAKISTÁN.

The KHÁRANs. It is certain that the whole of the triangular block of hill country now occupied by the MÁRS and Bugtis was in the possession of Indian tribes before the BALÓCH invasion. These were gradually destroyed or absorbed by the BALÓCH from the south and the AFGHÁNS from the north, and such names as BÁSSÍ and among the MÁRS; BÁSSÍ; among the Bugtis and HÁRIJÁM among the AFGHÁNS to the north indicate that fragments of these tribes remain in parts of the South and AFGHÁNS. The KHÁRANs, however, between AFGHÁN and BALÓCH have preserved their identity and their peculiar Indian dialect (of the SINDHÍ type) to the present day. The process of assimilation was in progress, and the KHÁRANs would probably have been absorbed or converted into a BALÓCH tribe in a few generations if the advent of British rule had not saved them. There is even now a good deal of mixture among them; in organisation they are like a BALÓCH tribe, and certain sections are of BALÓCH blood, although the HÁRIJÁM, who speak BALÓCH, are probably the remains of an Indian tribe which had been assimilated and afterward destroyed by the MÁRS and Bugtis. The NÁHRs, too, who are asserted by BÁSSÍ and others to be the AFGHÁN NÁHRs, are probably really Indian. The name NÁHR means a tiger in LÁNDÍ, and there is no proof of the identity of the tribe with the NÁHRs.

The LÁS are generally of Djádgal (or Djádgal) that is the language (gthv) of the LÁS, which is a form of SINDHÍ; but the SINDHÍ tribe speak SINDHÍ, and some of the coast MÁRS speak MÁRKÁNI BALÓCH.

The LÁS of MÁRKÁN. These seem to be akin to the tribes of SINDHÍ. They are scattered throughout the province and are subordinate to the BALÓCH who are the ruling class. The LÁS, called ZÁK by the ARAH chronicles, held the whole country up to KAROT at the time of the first Arab invasion in the first century of the Hijrá. There can be little doubt that some of the leading clans have been absorbed among the BALÓCH, and now speak BALÓCH and are not to be distinguished from other BALÓCH by their appearance. The BALÓCH tribe for instance are probably akin to the BALÓCH DÔDÁH, and some admixtures may be suspected in the tribes whose names are derived from localities in MÁRKÁN and PERSIAN BALÓCHÍSTÁN, such as BÁSÁ, GHAH, KÁN and KÁLÁH in the former from which the names of the BÁSÁ, GHAH, KÁN and KÁLÁH tribes are derived; and Maghás, LÁHÁR and DÉMÁK in the latter from which come the names of the BÀGHAHSTÁ, LÁHÁR and DÉMÁK tribes. The derivation of Bugtis from BÁSÁ is doubtful, the $i$ is the Indian cerebral, and is not accounted for by this explanation. Possibly DIGNÁK may be connected with DIGNÁK, as in SINDHÍ dialects initial $i$ becomes into $t$. In all such cases where a tribe was so thoroughly identified with a locality as to take its name from it, it is at least probable that some local elements were absorbed. The BALÓCH invaders were however sufficiently numerous and powerful to improve their language on the whole of MÁRKÁN, and it is only in LAS BÁJA, where the LÁS and RAJPUT remain comparatively pure, that an Indian influence maintained itself.

The LÁS of KATKHricht. Here the LÁS cultivating population are contiguous to and practically identical with their kinsmen of the INDUS valley, from whom they are separated by no natural barrier. They are in a subordinate position to BISHTÁ and BALÓCH overloads, and pay them a share of the crops. The term LÁS here as in the SOUTH PAKISTÁN comprises tribes of RAJPUT origin such as the SÜMMÁ, as well as true LÁS. Other important classes are the RAJPUTS and the AHRÃO. The word LÁS (with the Indian etymology) has some times been confused with: the BALÓCH word GIDA (with dental r) which means a camelboard only, independent of race or tribe. Among these tribes also the language is Indian, the dialect being akin to the LÁNDÍ of the West PAKISTÁN.

The KHÁRANs. It is certain that the whole of the triangular block of hill country now occupied by the MÁRS and Bugtis was in the possession of Indian tribes before the BALÓCH invasion. These were gradually destroyed or absorbed by the BALÓCH from the south and the AFGHÁNS from the north, and such names as BÁSSÁ among the MÁRS; BÁSSÁ among the Bugtis and HÁRIJÁM among the AFGHÁNS to the north indicate that fragments of these tribes remain in parts of the South and AFGHÁNS. The KHÁRANs, however, between AFGHÁN and BALÓCH have preserved their identity and their peculiar Indian dialect (of the SINDHÍ type) to the present day. The process of assimilation was in progress, and the KHÁRANs would probably have been absorbed or converted into a BALÓCH tribe in a few generations if the advent of British rule had not saved them. There is even now a good deal of mixture among them; in organisation they are like a BALÓCH tribe, and certain sections are of BALÓCH blood, although the HÁRIJÁM, who speak BALÓCH, are probably the remains of an Indian tribe which had been assimilated and afterward destroyed by the MÁRS and Bugtis. The NÁHRs, too, who are asserted by BÁSSÁ and others to be the AFGHÁN NÁHRs, are probably really Indian. The name NÁHR means a tiger in LÁNDÍ, and there is no proof of the identity of the tribe with the NÁHRs. The mediai $j$ might have become $c$ in Indian mouths, but scarcely $j$. It is probable therefore that both HÁRÁN and NÁHR are really of Indian origin to the KHÁRAN among whom they live. A similar tribe, the LAJÁN, speaking a language like KHÁRÁN, occupies the valley of DÉN in the SINDHÍ MÁRS.

The NÁHRs. They are noticed above that the ordinary BALÓCH termination — and sometimes gives way to — and $j$. We find a similar admixture among the BÁSÁ who make use of the BALÓCH $-sá$, the AFGHÁN $-sá$, and the SINDHÍ $-sá$ for the subdivisions of their tribes, — $-sá$ being much more usual than among the BALÓCH. The AFGHÁN $-sá$ is not used. It seems impossible to draw any trustworthy deductions as to race from these terminations which are mostly modern. Similar terminations are found among the LÁS tribes.

The social organisation. The modern tribe both among BALÓCH and BÁSÁ is an aggregation of clans around a central nucleus. These clans seem to be the original elements into which the population was divided, and the names of the older clans, the tofáka tribes of the old ballads, are seldom among BÁSÁS found as tribal names at the present day, but are frequently found among the component class. The whole tribe (túman) is under the rule of a chief or Turániná, whose authority is generally respected, and under him each
clan (jódhr or qodhr) is presided over by a headman or mishrdhání. These offices are hereditary, and the chief’s family always belongs to a particular section of a certain clan, which section is known as the phégkh-bégkh or ‘home of the turban’, the binding-on of the turban being the ceremony which denotes accession to the chiefship. It often happened that certain tribal sections of alien blood to the majority of the tribe show great independence of the chief, and a tendency to split off and join another, perhaps a hostile tribe, but in modern times the existing constitution of such a tribe tends to become fixed owing to a more settled system of government. Among the 1,600 tribes the unions of clans are more fluctuating and temporary than among the Bal sóc and Brahó tribes.

Among the Brahós a further tendency to concentration showed itself in the formation of a confederacy of tribes by Nãfr Khán in 1700. They were grouped into two divisions, the Upper or Northern (Saráwán) and the Lower or Southern (Džahláwán), the chief of the Brahós was appointed to be head-chief of the Saráwán confederation, and the chief of the Zéhrs to be head-chief of the Džaha wán coalition. Over the whole was the Khán of Kalát. This arrangement has continued till the present day. No purely Bal sóc tribes except the Ríns and Maghass of Kájá’th were included in this arrangement, and the Khán’s relations with these tribes both to the north and in Makrán depended solely on his power to enforce his authority.

Most of the Bal sóc and Brahó tribes are nomadic, they depend but little on cultivation and must find pasture for their herds of sheep, goats, cattle, and camels. Wherever it is possible the tribes move into the plains either of Kájá’th or Sínth in the winter, and return to the hills as the hot weather comes on. The stationary population occupying fixed villages are seldom either Bal sóc or Brahó, but are Þét in the plains and Džáwár in the upland. Settled government does not increase the tendency to live in villages, on the contrary, as the danger of attack by enemies becomes less, the necessity of congregating in walled villages disappears, and the nomadic instinct can be indulged in safety. On the other hand the development of irrigation has increased the population in tracts where water is available, but most villages are very small. Land fit for cultivation is found only in small and scattered areas, and the majority of the population will always be dependent on pastoral pursuits.

Both among Bal sóc and Brahó the blood-feud is one of the principal features of tribal life. The feud generally originates in the abduction of a woman by a murderer when the injured party belong to different families, clans or tribes. Such feuds are most persistent, but in modern times under British supervision it has been found possible to deal with them on principles of compensation, and important cases are settled by tribal or inter-tribal councils, which fix terms of compensation, and use their influence to bring the combatants to terms. A feud is often terminated by a marriage between the hostile factions.

Although the Brahós long held the central power in the country their social position was never regarded as equal to that of the Bal sóc. The feeling is shared by the Brahós themselves, who often try to prove Bal sóc descent, and the fact that the Brahós will not marry their daughters to Brahós is a sign of the relative social rank of the two races. It may be added that Brahós often adopt the Bal sóc language, and that it is generally used in the Khán’s family.

Religion. The great mass of the population of Balística is Muslim, the Hindus are few, and are mostly immigrants occupied in trade. The Bal sóc, Brahós, Láls, Džáwás and Lút are all Muslim, and all call themselves Sunni. There are probably no admitted Shi’á among the tribes, but at the same time it must be recognized that they cherish many Shi’a practices, especially the extreme devotion to Hasan and Husain. The ten days of the Muslimán are observed except among Afghán who are stricter in their Sunni creed, and keep them the last day. There is also a very wide spread adoration of Rehmat or Shi’a, and celebrated shrines are much resorted to, many of which no doubt are ancient seats of pre-Islamic worship. The shrine of Hingál in the north of the coast in western Makrán is resorted to by Hindus as well as Muslimán, and the same may be said in earth-naut on the skirt of the Sáhán-Mín near Džen Ghas Khán and of the shrine of Lú Sháhás or Džive Lú at Sáhán in Sind, both of which the Bal sóc hold in great honour. The modern shrine of Taumá in Džen Ghas Khán has also attained great celebrity among the northern tribes. Older shrines in the north are that of Pr Sohí at Sohí-Khùshaghu in the Balistique country, and Zinda Pr in the Lánd country where hot springs of great efficacy mark the scene of the saint’s translation to heaven. Mount Chúl-tán near Quetta gets its name from the shrine of Hazât Ghaúth, whose forty children were exposed on the mountain. Çetán Sháh near Kálát also marks the site of a spring miraculously produced by the saint. A sacred spring in Mangúchar is efficacious for bites of mad dogs, and the shrine of Súlán Sháh in Zéhr is resorted to by fever patients. At the shrine of Pr Úmar near Khóshdár the ordeal by water is applied in a neighbouring stream. Sháh Biháw in Lálbela is also resorted to by Hindus as well as Muslimán are addition to the ordeal by water the ordeal of fire is occasionally resorted to but not in connection with any shrine. Fanaticism is not common, and in this respect the Bal sóc and Brahó contrast favourably with the Afrán. There is considerable laxity in the outward observances of religion, but nevertheless there is often a strong religious feeling among the more thoughtful persons, as is clearly shown in some of the religious poems which I have published.

The Búkír sect has great vogue in Makrán, especially among the Sághars, in Lálbela and among certain tribes of Bal sóc such as the Sáhét and Qanán. Nãfr Khán persecuted this sect in the 16th century, but it regained its position after his time. The Búkírs consider their founder Dóst Múhammad to be the twelfth Mahól and resort to his shrine at Túr lá in Kórmán. No other heretical sect has attained to any influence in the country.

It is possible that the Kármána or Karmán.
heretics who had great influence in northern Sind, Kachchh and Multan in the 4th and 5th centuries of the Hijra and were attacked at Multan by Mahmud of Ghazni are represented in the present day by the Kalmati tribe of Kachchh who are classed among Balochis, but are not considered to be of Baloch origin. They are believed to possess magical powers of healing the sick. Similar powers are attributed to the Khardis who are believed to be of Salynd origin. The story in the F'ad'shah Maqamat (about 1600 A.D.) derives their name from the tree called Kachir, which is a reed-like tree said to have ridden like a horse. (The Kachir is the Pteris Sphiperis.) The real origin of the name is probably from a place name, as Kachir is supplied to many valleys where this tree is abundant. Certain tribes also possess ritualistic clans to whom similar magical powers are attributed, as the Nahihat clan among the Beggars.

Certain racial customs have almost the force of religious observances. Most Baloch for instance will not touch fish, and the principal clan among the Kachchhi Jinde object to camel's flesh. The Lakhri will not touch the bovaml or Arz, a milky juicy plant generally eaten by bhimans. All Baloches will not eat it. They will not eat the hair or beard except to perform the zanat, or clipping of the moustache usual among Sautas. Eggs are often considered objectionable, the reason assigned being that they cannot be killed in the orthodox fashion. Signs and omens are much observed and the usual method of augury is to examine the blood-vessels on the shoulder-blade of a newly killed sheep. A similar practice was followed by the Mughals in the time of Chingh Khan.

Of all virtues that of hospitality and affording shelter to refugees is the most prized, and it is considered one of the first duties of a man to punish conjugal infidelity by the death of the women and her paramour, a terrible cause of blood feuds.

Religious poetry is by no means uncommon. The classics are ordinary Balochis, not Mullahs nor persons with any special religious character. The plain doctrines of Islam, the delights of heaven and the terrors of hell are set forth in simple and vivid language.

Saliyds or reputed Saliyds though common among the Afghans are not numerous in Balochistan proper. There are a few families classed as Shiahs who appear to be of Karai [Kuragi] blood, but most of the so-called Shiahs of Las-Bida are descended from converts from Hindustan.

Education. There is little education except in the schools at important centres such as Quetta and Sibi established by Government in recent years, and these schools are used more by the immigrant than the indigenous population. Sons of chiefs and persons of importance generally learn Persian or Urdu. Otherwise few Kalushi and Brahils receive any education in Balochi proper, but in Dera Ghazi Khan and North Sind education has made greater progress. Religious schools can hardly be said to exist. The Afghan districts depend on the schools at Kandhkur and Peshawar. As a rule the Mullahs in Balochistan are drawn from the subordinate classes, Delawar or Bhuiyans.

Language and literature. The Afghan population of British Balochistan speak the Southwestern or Kandhkur variety of the Pashto language, which has been dealt with under Afghan.

nistan. In the remainder of the country including the Khaniat of Kachir, Persian Balochistan and the Balochi districts of the Panjshir and Sindh the languages are Baloch, Brahrat, Persian and Ujahgut (or Ujahgut). Balochi is an Iranian tongue belonging in the main to the East Iranian branch, although in some points it shows greater affinity with the Old Persian than with the Avesta.

The language is divided into two very distinct dialects:

1. The northern dialect spoken by the tribes of Kachchir and the adjacent hills; the Subahwan Maz, and parts of the Dera Ghazi Khan District in the Panjshir and the Jacobabad District in Upper Sind. It extends occasionally to the Indus, and even among the Makrani to the left bank of that river. It is also made use of by some of the Sarkawt Brahrat;

2. The Makrani, or southern Dialect which is spoken in Makran and Persian Balochistan, and also by the family of the Khaniat of Kachir. It is possible that the dialect spoken in Khaniat, the northern desert and by the Balochis of Sutki should be classified as a distinct dialect from either of the above but sufficient information regarding it is not forthcoming.

Within the above dialects there are also minor differences; the northern falls into a southern group with fuller grammatical forms and a northern group in which phonic decay has made more progress. Makrani also has eastern and western varieties, the western being more affected by modern Persian.

Northern and Makrani Balochi differ considerably in pronunciation, but are mutually intelligible.

The following are the distinctive points in Balochhi when compared with other Iranian languages:

1. the vowel system is on the whole well maintained;

2. the distinction between ă and a, between ă and å is persistent, and not lost as in Modern Persian.

There is however a strong tendency for æ, Æ to become a, â. This is more common in the northern than in the Makrani dialect.

Geiger considers the following the principal points in the consonant-system which denote the antiquity and originality of Balochi:

1. the preservation of medial and final ąs which are weakened to sonants in Modern Persian;

2. the preservation of medial and final ăs which are often weakened to æ, Æ in Modern Persian;

3. the hardening of spirants such as ăh, f, C̄ into ă, f, c in M. Pers. (This is more distinctive of Makrani than of North Bal. in which this process is confined to initials which are aspirated and become āh, ph, sh);

4. original æ in M. Pers. becomes a, Æ sometimes in N. Bal. āe);

5. original ă becomes É (or ă; before ñ vowels);

6. original ñ is more often kept separate and not confused in a common ñ as in M. Pers. where there are also other minor points.

The chief phonic points of difference between the two dialects are the following:

1. the tendency to aspirate sound consonants as ă, ă, ā, ā is confined to N. Bal.);

2. the termination -ă, which is so common in Makrani is -ă in N. Bal.;

3. medial and final letters in Makrani have a tendency to become the corresponding spirants in N. Bal., thus ă becomes āh, ā becomes āh, ā be-
comes in becomes χ, β becomes μ, γ becomes π, δ becomes κ. These transformations make North Baluchi a softer and more harmonious dialect than Makrani.

The Baluchi vocabulary has borrowed a large number of foreign words, the proportion of which varies in the different dialects. The principal loans are from Persian and Sindhi (or dialects related to Sindhi). The Persian words are very common, but are more so in western Makrani than elsewhere. In the same way, while a certain number of Sindhi words are universally used, the proportion is larger in N. Bal. Arabic words appear to have direct loans, but through the medium of Persian. These are the principal sources from which the foreign vocabulary is derived. A few words come from Brabanti, and in modern times Urdu has furnished a few. Pashto has hardly had any effect.

Baluchi has no written literature, but possesses a great body of popular poetry, including a number of heroic ballads, dealing with the wars and migrations of the 15th-16th centuries, other more modern ballads and romantic tales, didactic and religious poems and love songs. These poems and a number of prose tales and legends have been reduced to writing by modern students. The whole of the poetic material hitherto made available and the greater part of the prose is in the N. Bal. dialect and but little has so far been published in Makrani.

Brabanti. Brabanti is now recognized as belonging to the Dravidian family of central and southern India. The structure of the language leaves no room for doubt on this point, which was established by Trumpp in 1880 and is recognized by Grierson in the recent Linguistic Survey of India. The doubts which were entertained on this point were due chiefly to the fact that the vocabulary is overlaid with a mass of Persian, Balochi and Sindhi words, and that the grammar has also been affected occasionally by forms borrowed from Balochi. Instances of the latter process are not however so numerous as has been imagined. In some cases the borrowing has been on the side of Balochi. The affinity is with the southern group of Dravidian languages rather than with the Munda languages of Central India. It is probably the original language of the tribes recognized as such by the government, who are believed to have been driven out of the Indus valley into the hill country before the appearance of the Balochi or of the other tribes now classified as Brabanti. Some of these tribes have not adopted the Brabanti language as noted above. In the present day the Brabanti speakers occupy a compact block of country separating the northern from the Makrani Balochi, and touching also on the Dzagitli and Sindhi dialects of Kachch and Lia-Sela, and in the north meeting Pashto in the neighbourhood of Quetta and Sibit.

There is no literature, the language never having been written till modern times. A good many tales and one or two poems are found in the text books of the language compiled by Allah-Bakhsh and Mayer.

Himachal. The Dehwar cultivators make use of the Persian language, in a form probably very much the same as that used by the Tagliks of Southern Afghanistan, but no special study has been made of the dialect.

1.3.1. The greater number of the inhabitants of Laza-Bala speak dialects which are known as Dzagitli or Dzagitli, that is the language of the Dzajts. These are dialects of Sindhi and may be considered as belonging to the Larki or southern branch of the language.

Dialects of Kachch. With these may be classed the dialects spoken by the mixed population of Kachch, Dzajts, Hindus and some scattered Balochi, Brabanti and Afghans who are detached from the main body of the tribes. These belong to the Sistani or north of Sindhi and are in some respects more like the southern dialect of the Larki or Western Faryabi known as Dzagitli. The Balochi name for it is Dzagitli, another form of the word used for Larki.

Khatri. With this language must be classed that spoken by the Khatri or Khatri, which although geographically nearer to the Dzajts of the Faryabi has some features more in accordance with Sindhi.

HISTORY.

Karnak was conquered in 23 B.C. by Abel Allah under the orders of the Khaibar, then, and he found the mountains of that province occupied by savage tribes called by some Kaf or Kuc and by others Karda, with whom are coupled the Balos or Baloch by certain chroniclers. The conquest did not go beyond the frontiers of Karnak where the Zaf or Zaja, who occupied the whole of Makrani, were encountered. But an Arab army actually traversed Makrani until later.

Al-Balinduri states that the Caliph Uqman had sent an explorer to the confines of Hind to obtain information regarding the land, and his route must have been through Makrani. He reported that the country was barren and the inhabitants brave, so that a small army would be destroyed, whereas a large one would die of starvation; and this was no doubt the reason why the conquest was so long deferred. In the time of Mu'awiyah, about 44 (664) the town of Makrani were occupied, and war made against the Mids of the coast, and expeditions were pushed up to the Sindhi frontier. Certain unidentified districts named Nukan and Kikan were also occupied, and Kusdari, (now Khudzari), Nukan possibly the hill country of Kahi, which Kusdari was the capital. Al-Balinduri says that in his time the people of Nukan were Musalmans. In the time of Kusdari there was fighting in Makrani between Arab factions, when Sa'd ib. Aswan was killed by the sons of the Haith the Khaibar, who were afterwards driven into Sind by the Kusdars. At 86 (705). It is to these Alafs that Muckler attributes the origin of the kind Baloches, alluded to above. Kusdari (or Khanluli), generally identified with Ghanjir, is also said to have been there at this time. Muhammad ibn Ka'ib is then despised by the Kusdars to his celebrated invasion of Sind in 89 (707). This would have been impossible unless Makrani had been first subdued, for the northern routes to India through the passes of Afghanistan were not yet open to the Muhammadan invaders, and they had not made any attempts at expeditions by sea. We find that Muhammad ib. Ka'ib spent some time in Makrani before advancing further and took the towns of Khilafan and Kullub in which are generally transliterated Kanazir, or Kazir, and Aramul or Aramel. From Aramel he advanced into Sind and
attacked Balšić. The correct form of these names is very doubtful. Kanašir or Kanašne is certainly a corrupt form, and it is possible we should read *Kanžište*. Paulādi, as the fertile Paulādi valley is a position which must have been occupied by the invaders. Arnađiš is perhaps the most probable form of the name of the latter town, which was the last halting-place before Sinds was entered, and the syllable bel suggests the name of Bile the capital of Lus-Bile. The form Arnađiš might be represented by the modern Tarnax, but the distance from Balšić is too great. If we could read Adja-bul for Arm-anl we might see it in the Adja-vakila or Ayansa-bakila of Husein Tanaš, which also seems to correspond with Bile. The author of the *Cat-nâmâ* too, who was a native of Sinds, describes how Čač (a king of Sinds before the Arab conquest) took Arnađiš which he found occupied by Buddhist (in accordance with what Husein Tanaš says) which extended through northern Sinds through *Kanašir* (Pandžgur) and finally fixed the boundary between Makran and Karmán. Kanašne although, as Raverty points out, is stated in the *Mašad* as *Mamaži* to be only five farsangs from Kanašne, is shown in the map given by the same authority (also reproduced by Raverty in the *Journal of the Asiatic Society* of Bengal, 1852, p. 272) as distant from Kanašne, and all authorities agree in placing it in the desert country of *Nadhīya* of which it was the capital. This was undoubtedly the plain of Kāčeli, and Kanašne was the capital of the Kalat plateau, generally called Turān.

From these accounts we may gather that Makran was probably slightly better watered and more populous than at the present time, as well as did have a good reputation as a desert and hospitable country, and it does not appear probable that it ever supported large towns or dense population. The Arabs write the name of this province Makran, but the Balšić of the present day call it Makran and this was perhaps intended by the Arab writers. Marco Polo (circa 1300 A.D.) writes it Kanašne, i.e. Kanašne-Makran, the first syllable being the name of Kanašne, Kanašne or Kαนำνα. In modern times it is often called Kanašne-Makran.

The Arabian influence was probably maintained on the coast through the sea trade, which necessitated a hold upon the ports, but inland it does not doubt decayed as the central Khilaf Government weakened, and during the following centuries we have very little information regarding it. Mahabād of Ghazni no doubt extended his power from Malfta over the plain of *Nadhīya* which is now divided into northern Sinds and Kalathi, and the foot of the Bûlûn, and he also held the Kalat plateau, for we are informed in the *Tahbīs-i Nāṣirī* that Kanašne was subject to him. The population of Kāčeli (*Nadhīya*), Kalat (*Tūrān*) and Makran continued to be mainly Indian, and we may suppose that in Tūrān and the adjacent parts of Sīm the Dravidian tribes continued to hold their own.

Meanwhile the Balšić tribes and their neighbours, the Kāčeli, continued to occupy the mountains of Karmán, where the Balšić raided far and wide, and crossed the Lût desert into Kāčeli land, and also spread into Sīm. Al-Balšić who died (279) and Tābari, circa 320 (932) only mention the Kαναšne, but Makran circa 352 (943) and Iṣṭākhrī circa 340 (951) give the name of both Kāčeli and Balšić, and as the later authorities such as Idrisī and Yâkūn, Idrisi, about 543 (1151) says that the Kαναšne mountains were inhabited by a wild race like the Kurds, and that the Balšić were to the north and west of the Balšić, owners of cattle, and did not infest the roads so much as their neighbours. Yâkūn also confirms this statement, and quotes an Arabic poem about this country, which says: 'What wild regions we have traversed, occupied by Zuq, Kurds and barbarous Yâkūn. The Balšić are described as claiming Arab descent and also as being inclined to the Bohar merchants. The Balšić, he says, were formerly the most terrible of all these races, but they had been destroyed by Âsilād al-Dawla Sīm. (318—332 = 949—952): it may be added that Makran al-Dawla of the same family lost his hand when fighting against Kαναšne and Balšić. Iṣṭākhrī mentions that even in his time two provinces of Sīm were known as Balšić country, and soon after their plantations in the Lût between Tubs and Kāčeli brought the smugglers to Ghazni, when Kâναšne was invaded by the Khâns, and he was sent by his son Mâsûd against them, who defeated them near Kāčeli. They became numerous in Sīm about this time, and it seems probable that the Sīmān al-Dīn of Sīm of their legends is the Malik Shams al-Dīn of Safārī descendant, who is recorded in the *Tahbīs-i Nāṣirī* to have been an oppressive ruler. He died in 559 (1164). The Balšić are said in the legends to have been expelled from Sīm in his successor's time. Certain it is that a great eastward movement of the Balšić race began about this period. They seem to have abandoned Karmán altogether, and moved in a mass into Makran, which became and has remained a Balšić country ever since, many of the more wily Lût tribes and the remains of the Arab settlers being probably absorbed among them during the next three hundred years. The movement from KâΝαšne corresponds with the occupation of Persia by the Seljuks, and it may be surmised that the Balšić found that strong governments like those of the Seljuks and Ghaznavids rendered it impossible for them to live by plunder as they had hitherto done. (Hautmont, *Recueil de textes relatifs à l’histoire de l’Indus*, i. 5—7). Many of them no doubt pressed on towards the Sīm āwāl, and thence began to raid from the mountain barrier. About the middle of the thirteenth century in the time of the Sūrī kings of Sīm Kâναšne, Dōsā iv. and Umār, we find Balšićes in Sīm allied with Sūrīs and Kâναšne āwāl.

In the year 618 (1221) the Khwārizmi King of Ghazni (al-Dīn al-Nahlī) after his defeat of the Indus by Čingis Khân in 1220, advanced into Sīm, and then pushed on into Makran, and traversed the country from east to west, making his way into Persia about 622 (1225); but Makran was now seldom visited by the armies of invaders. The Mughals and Čingis Khân, the Turkish followers of Timūr, the Argūns, and Balšić all followed more northerly routes, and the Balšić themselves, when they at last burst out from Makran, avoided the coast route by Ghazni, and after occupying the plateau and perhaps to some extent colonising with its Dravidian inhabitants, poured down through the Bûlûn, Mullāh and Nalt passes into Kâčeli. Tradition represents that the Balšić at
this period took Kalka-i Nižār from the Balūq, and that the descent into the plains was caused by this loss. It seems probable that in reality the Nižār and Muhammad Shāh’s, the old Dravidian stock, had held the Kaydar country from early times. The old name of Kalka-i Nižār seems to denote that they were its oldest inhabitants. In the disturbed period following the Shāh Bāgh muhajirs and many other refugees, than the Balūq seem to have found their way to this plateau from the west, among them probably the Kast or Kursa who had lived side by side with the Balūq in the Karmān mountains. This is the most probable origin of the non-Dravidian Brahīs, with whom some Balūq and Afgān clans combined to form the Brahāl confederacy. The process must have been a gradual one, as the adoption of the old Dravidian language proves. The great mass of the Balūq no doubt found these occupants of the highlands too strong to disturb and pressed eastwards into the Indus valley in search of fresh fertile lands to occupy. Something very like a national migration took place, but sufficient Balūq remained in Makrāt to make it an indispensable Balūq country ever since. Lasa-Bāgh, with its name, is a remnant of the course of the invasion. Its population consequently remained Indian. The Balūq were true colonists, who settled in tribes where they found themselves strong enough, submitting but not exterminating the aboriginal Djas. They had no central organisation, but each tribe was under its own chief, although temporary combinations under the chief of the Rinds or of the Līghārī were occasionally formed, if we can judge from the early ballads. This loose organisation prevented the establishment of any permanent kingdom. Each tribe fought for itself, and they often fought against each other. Their invasion of India, therefore, although it has profoundly affected the population of the Indus valley, has been almost unnoticed in history, while invasions like those of Çhūgja Khān, Timur and Nādir Shāh, which have left no trace on the population, fill a conspicuous place in the historical drama. The first tribes of which we have any record are the Rinds under Mir Čākūr and the Dōḍā under Mir Sohrab who appeared at the court of Shāh Humāin Langš, at Multān. The Langās, they are still known as a Musalmān Kāgārī tribe in Lāis, South Punjab, and after the break up of the Dīlū Shāh Salţān they formed a small kingdom at Multān. Shāh Humāin the second of these kings ruled from 874 to 908 (1467 to 1502). During his reign Sohrab with his followers came to his court and obtained dāigs as condition of military service. Other Balūq followed, among them Mir Čākūr and his Rinds who came from Śrī (now generally called Śiśā, but Śrī by Balūq). Great rivalry followed and led to the ballads, there was war between Rinds and Dōḍās. These same ballads state that Čākūr left Śrī because of his war with the Līghārī under Gwahārānt and with the Turks under Zunis. In these legends the memory is perpetuated among Balūq of their migrations and of their dealing with the simultaneous invasion of India by the Afgāns of Kauḍāh, Lūmāūn Bāgh (the seat of the legends) and his son Shāh Beg. The history of this invasion shows that Shāh Beg himself had Balūq fighting on his side, that others fought against him on the side of Dīlū Shāh Simūn, and that his son Hūsān who succeeded him in 930 to 1559, fought against the Balūq on the Indus and made an expedition against the Rinds and Mughūs (a branch of the Līghārī) in Nādir, also that when he attacked the Langās at Udeh and Multān he found their army mainly composed of Rinds, Dōḍā and other Balūq (951 = 1545). Meanwhile the Dōḍās and Multān had made up with the Dīlū, and the three sons of Sohrab Dōḍā, Imaṁ Khān, Fath Khān and Ghazi Khān met Shāh Bāgh at Khushāb, and he confirmed their possession of ‘Sindi’ that is the fertile lands along the Indus. The two towns of Dīlū Imaṁ Khān and Dīlū Fath Khān (and also Dīlū Fath Khān, now destroyed by the English) were founded by these three Ghazi Khāns’ descendants, the Mirkāni Nawābāns, were local rulers of Dīlū Fath Khān, and maintained their power under the Empire of Dīlū and also under Nādir Shāh and Ahmad Shāh Durrāntī till they were supplanted by the Khalqās of Shāh in 1709. The Hūsāns who accompanied the Dōḍās made an attack on the Multān and Jhelum valley which after two hundred years fell before the Afgāns, and the Dīlū Shāh (a branch of the Līghārī) became chief of Mankārī in the middle of the sandy waste of the Sindi Sāge Dōḥ. The present location of the Balūq tribes of the Pangčō and Shāh has been alluded to in Part II. The poetical legends still current among the Balūq represent that they joined the emperor Humayūn (who is known as Humayum Cughārist, i.e. Upharsī) in his reconquest of Dīlū from the Afgāns. There is no historical corroboration of this, but the Tāvāleh-Shīr Shāh shows that Mir Čākūr and the Rinds as well as Fath Khān Dōḍā had been at war with Shāh Bāgh Sur, who had deprived them of Multān, and therefore it is probable that they would have joined Humayūn. Čākūr and the Rinds maintained their lands in the central Punjab, and Čākūr’s tomb still exists at Sathgahra in the Montgomery District. Humayūn had been taken captive by Balūq at his first journey into Persia but was well treated by them, and helped on his way. After his conquest of Kābul from Kāmār Humayūn bestowed the provinces of Śrī and Mustan on a Balūq chief named Lwungan. His relations with them were therefore good, and it seems probable that the great extent to which they were able to retain in the Central and Southern Punjab is evidence that they continued in favour after the re-establishment of the Mughal empire. It is most unlikely therefore that the persistent tradition is altogether fictitious. The great emigration of the Balūq race left the central body, which began to be known as Brahīs, in a comparatively strong position, and the Kambatānī chiefs gradually by degrees took the upper hand. No doubt the adherence of certain foreign elements especially the Afgāns Raśāns, strengthened them greatly. In the middle of the 17th century Mir Ahmad Khān descended the Bōḷān and took Dīlūār from the Bāzār Afgāns of Śrī, Mir Sanourdār Khān who followed him is said to have held Kārīt. He was certainly at war with the Khalqās of Shāh, but the capture of Kauḍāh is doubtful. His successor Mir ‘Abīt Allāh was an incautious chief whose name is still famous among both Brahīs and
Balkāz. In pursuit of his war against the Kalbūs, he utterly laid waste the province of Kaččh then held by them and extended his power to the west also through Makrān and Kīč. It was during his rule that the Ghazāli invasion of Persia took place, and Makrūd, the Ghazāli chief, had many Balkūcīs in his army when he invaded Kārūnā. Afterwards when Ashraf had been defeated by Nādir Shāh in 1243 (1720), he was attacked by Bālūcīs in his attempt to reach Kandahār and slain with all his followers in or near Sistan. This perhaps accounts for the favour with which Nādir Shāh regarded the Bhābhar Khān. After his Indian conquests he awarded them the lands now held in Kaččh which he took from the Kalbūs. ABD Allah Khān is said by the Balkūcīs of the Derājā to have invaded that country with his son Muḥabbat Khān, and sacked the town of Dājmūr. He was ultimately killed in fighting against the Kalbūs at a battle between Dūlāhir and Mitri. He was succeeded by his son Muḥabbat Khān, and with his brother Nasīr Khān had been a hostage at Nādir Shāh's court. He was an oppressive ruler but did service with Nādir Shāh which kept him in favour. After Nādir Shāh's death, Makrūd, Kīč, Nādir Shāh Durrānī, and, as soon as his power was established, invaded the Sindh province, and carried away the Khān's brother, Nasīr Khān as a hostage. Before long Nādir Khān himself became Khān and was invested with the title of Bāgālār-Bāgh. Makrūd Khān appears to have been killed or kept as a prisoner by Nādir Shāh till his death. Nasīr Khān accepted the Durrānī king as his suzerain. He established his authority firmly throughout Makrān and Kīč, and returned from an expedition to the Persian frontier by the route through Dīnak and Kālūr. Ahmad Shāh bestowed on him the districts of Shāh and Mustāng. He also extended his power over Lāṣ-Bāla, whose chiefs, known still by the Rādūpī name of Dājmūr (formerly used in Sindh and still found in Kāthīawār), submitted his authority, and he obtained the cession of Kātīrī from the Kalbūs, Towards the Indus he also held the territory of Harān and Dādīlī, a tract in the southern Derājār irrigated by the Kāhī river which issues from the Sāmsārīns Mts. at Harān. His great work was the organization of the Brāhūs into the two main groups of Sāmsārī and Dīnakwān, and the appointment of the Khānārī chief to be head of the northern and the Zhīrī chief of the southern group. The organization was on the principle of military service. Each tribe had to supply a contingent to the Khān, and also to the head of its own group. This service was accepted in place of revenue or tribute, and the Khān also distributed among the tribes the land which he had lately acquired in Kātīrī and elsewhere. Such a system depended for its success on the character and popularity of the Khān. It succeeded under Nasīr Khān, but before Nādir Shāh's death, had fallen to pieces under his weaker successors.

Nasīr Khān was a very powerful monarch, and he allowed his suzerain Ahmad Shāh to be murdered by the Skārāsī chiefs, and in 1272 (1758) invaded his territories and inflicted a defeat on him in Mustāng. Nasīr Khān retired into his fort of Kālūr and was there besieged by Ahmad Shāh. It is stated by Elphinstone that the Durrānī chiefs were by no means anxious for success, as they did not wish Ahmad Shāh's power to increase. The army also suffered severely before Kālūr, and after forty days Ahmad Shāh agreed to accept Nasīr Khān's nominal submission. Nasīr Khān retained independence in his own dominions, but agreed to render military service to Ahmad Shāh. This condition he observed faithfully, and he accompanied Ahmad Shāh during his wars in Kōhārān in 1273 (1759) and afterwards during his wars in India. On the former occasion his troops were mainly instrumental in winning the victory, and he showed the greatest personal valor. Pottinger who travelled through Belūcīstān only fourteen years after his death gives him the highest character for bravery, justice and patience, and a strict regard for truth, as well as liberality without which no ruler can hold his own among Balkūcīs and Brāhūs.

Nasīr Khān died in 1280 (1765) and was succeeded by his son Muḥammad Khān, then a child. Bachānī Khān, a grandson of Muḥabbat Khān who had already given trouble in Nādir Khān's life, now again broke out, but was defeated with the aid of Zamān Shāh the Durrānī king. Muḥammad Khān however was unable to retain the extensive dominions of his father. Kīč, the western part of Makrān was lost, and the Talpur and the chief of the Senīdīs of Sind, who had been expelled by the Khān, rulers from that country, recovered possession of Kātīrī. The Khān's half-brothers Muṣṭafā Khān and Rahīm Khān whose energy might have upheld his authority in Sindh were both killed in a feud. Muḥammad Khān died himself in 1281, and was succeeded by his son Muḥammad Khān, who showed more vigour than his father, and recovered possession of Kīč, but was soon involved in hostilities with Ahmad Yār son of Bachānī Khān, who, after various vicissitudes was captured and put to death at Kālūr. Mīrāb Khān fell very much under the influence of a Ghazāli adventurer named Bādī Muḥammad, and discontent among the Brāhū-chief led to an attempt to supplant the Khān. This did not succeed, but his position was much shaken, and some of the tribes such as the Mūnsālīs and Būlāngās, who had lost off his authority altogether. The province of Harān and Dādīlī was lost, and annexed by the Sikh ruler Ranjātī Singh. Another trouble was brought upon Mīrāb Khān by the misadventures of his uncle Shāh Shujāʿ al-Mulk whose attempt on Kāndhār in 1290 (1834) ended in failure. He fled to Kālūr, and Mīrāb Khān gave him shelter and protection, which embittered him with the Brāhūs. Sāmsārīs of Kāndhār. He also was distracted by quarrels between his favourites, ending in the death of Bādī Muḥammad and the success of Muḥammad Hādī. This man was instrumental in enlisting Mīrāb Khān with Līdz Lēch, who had come to Kālūr as British agent when the expedition to restore Shāh Shujāʿ al-Mulk was undertaken in 1254 (1838). The intrigues of Muḥammad Hādī and his colleagues had the effect of convincing the British authorities of the treachery of Mīrāb Khān, and a force under Gen. Willshire was sent against Kālūr. The strongly fortified town was stormed and Mīrāb Khān himself killed. Kaččh, Shāh and Mustāng were taken from Kaččh and added to the kingdom of the restored Durrānī king. Thus Mīrāb Khān was largely recompensed for his hospitality to Shāh Shujāʿ al-Mulk in 1834.

The young son of Mīrāb Khān was set aside,
and Sháh-Nawáz Kháín, a descendant of Mubárak Kháín, was made Kháín. The deposed son, a youth of fourteen, took refuge first in Pushtúr with the Gikás and afterwards with Amir Khán chief of the Nawárgínwáns of Kháín, and a number of the Seráwán tribes laid siege to Kalášt where the British Agent Lient. Loveday and Mission the traveller were with Sháh-Nawáz Kháín. Ultimately the town was surrendered and Sháh-Nawáz Kháín abdicated in favour of Mihráb Kháín’s son (now known as Naşir Kháín II). Lient. Loveday was imprisoned and Mission was sent to the British Agent at Quetta. Loveday was soon murdered by the Bhráns on the 25th after their defeat at Dáždr in Dec. 1840. Kalášt was again occupied, and Naşir Kháín II was finally recognised by the British Government as Kháín at the end of 1841. He held to his engagements through the events of 1842 and 1843, the abandonment of Afghánistán and annexation of Sind to the Indian empire. The position and influence of the Kháín of Kháín had been much shaken by this time. The Bhráns tribes were rebellions and discontented, and after the loss of Harán-Dáždr, the Márts and Baghs and the tribes of the Sulaimán became practically independent, and plundered the plains of the Dérádúj, Northern Sind and Kazí and impartially. To the west the Kándár Government of Persia marched on Kéq and western Mákrán, Kazí, Sháq and Mútáng had been restored to the Kháín by the treaty of 1841 by which he admitted the suzerainty of the Darúfí king Sháh Shudjá al-Mulk, but after the recovery of power in Afghánistán by the Bhránis, they were retained by the Kháín without any admission of the Amir’s authority. A tract around Sibi however still acknowledged Kháín rule.

The advance of the frontier of the British empire in India by the annexation of Sind in 1843 and the Pushtús in 1849 altered the position with regard to the border tribes, whose incursions were curbed by the formation first of the cantonment of Jáchabal on the Kazí border, and afterwards by the military posts along the foot of the Sulaimán mountains. Sir Charles Napier invaded the Bugtúl in 1845, and in 1847 General Jacob inflicted on them a great defeat in the plains, but no attempts were at first made to exercise any regular authority over these tribes. By a treaty signed in 1848 (1845) the Kháín accepted a position of subordination to the British Government and bound himself to repress all outrages. He had not however the power to enforce the observance of this condition, and it gradually became evident that some further extension of British power was inevitable. In order to assert his power against the tribes he tried to form a permanent military force and relied on the advice of a Wazir of service origin. Such measures were intensely unpopular, and led to perpetual trouble with the tribes. Mr Naşir Kháín died in 1827 (1852), not without suspicion of poison, and was succeeded by his younger brother Mr Khudáddá Kháín. The Dárgáhs (or Chamberlain) Gul-Múhámmd was suspected of connection with the late Kháín’s death, and kept the young Kháín practically as a prisoner in the Múr or fort of Kalášt, and there they were attacked by the Bhrâns with the Lújám of Las-Bétas and Aáb Kháín of Kháráfán. A temporary arrangement was come to through British influence and the Sháhígháis Wáh Múhámmd became the Kháín’s principal adviser, but the trouble continued for several years. A successful expedition was, with the assistance of Major George the British Agent, made against the Músín in 1859, but no permanent stop was put to their raids. In 1863 the Kháín was defeated by a Bhrâns rising, and fled to Sind; his cousin Siárid Kháín took his place, but was assassinated next year. The Khudádd Kháín recovered Kalášt with the assistance of the Raisán tribes. Under such circumstances nothing like a settled government remained in the country. In 1869 the Dárgáhs of Las-Bétas assisted by the Bhráns chiefs broke into rebellion, but was defeated and finally punished; he was interned in British India for a time. In 1874 the trouble became still more serious. Dáždr at the foot of the Bolúta Pass, Bugtúl, the chief town of Kalášt, and Gándává were taken by the revolted tribes, and Bétas was seized by a relative of the exiled Dárgáh. Mákrán was also in rebellion, and the Kháín had no authority left to him. This brought about more difficult intervention, and Capt. Sandeman, who had attained great influence among the Músín, Bugtúl, and other Bhráns tribes connected with the Pushtús, was sent to Kháín at the end of 1875, and by means of tact and personal influence, and the assistance of an honest and able Bhrâns chief, the late Sir Iman Báksh Kháín Másti, succeeded after many difficulties in arranging all the disputes between the Kháín and the chiefs at Mútáng by the end of 1876. A treaty was concluded at Jachtú because the Kháín met the Viceroy of India Lord Lytté in October 1876. The result of this treaty was to make Kháín a protected state, the rights of the tribal chiefs were recognized and the Government of India reserved the right of intervention to secure good government. Sandeman became first Agent to the Governor General, with his headquarters at Quetta. The post at Quetta on a plateau nearly 6000 ft. high at the head of the Bolúta Pass became a military station, and is now a very strong position. In the war with Afghánistán 1878–79 the Bolúta Pass was used freely and without interruption by troops moving from India towards Kándár. The treaty of Gandatúk between the Amir Yághí and the Indian Government transferred the districts of Síbí and Pushtús up to the Khudádd Kháín Múts. to British India. Those districts formed the nucleus of the new Province of British Bálústán. A railway was commenced from the Indian valley to the Pashtún at Síbí by the Harán Pass in 1879, and, though work was stopped for a time in 1880 owing to an outbreak of the Múr tribes after the battle of Malwán, it was completed after several years’ work, the first and at present the only railway which mounts from the low lands of the Indian plain to the Persian plateau. This new road was also among other tribes which entailed some extensive military operations, and Sir C. Macgregor led an expedition into the Múr hills.

The incorporation of Síbí and Pushtús in the Indian Empire led to the further extension of British authority through the valley of Thal Có, Búxís and Zhób lying between Pushtús (otherwise Puháng) and the old Indian Frontier along the Sulaimán Múts. Ultimately the whole of this country was incorporated in the Indian Empire, generally with the consent of the population, and the Military Stations of Lúrálí and Fort Sandeman were formed to take the place to some extent of
the old stations of Déra Ghází Khán, Kálijpur and Jacobabad. Quetta when connected by rail with the Indian system became a military centre of more importance. The remaining history of Balochistán up to the present day is one of increasing efficiency in administration, a growth of peace and prosperity among the tribes whether those near the Pandjáh frontiers, those of Makrán, the Nawabwârians of Kháń or the state of Las- Bélí. Sir K. S. Sandeman, the founder of modern Balochistán died at London in 1892 and is buried there. The throne of Kháń, Mr. Khuňláidrán Khán was deposed by the Government of India in 1893 on account of a savage and murderous outbreak, and was succeeded by Mr. Málímúd Khán, the present Khán.

The boundary between the state of Kháń and Persia was laid down by a boundary commission appointed by the British and Persian Governments in 1872. This was revised and rectified by the further commission presided over by Sir T. Holdich in 1895-6, in which disputes between the Persian tribes and the Nawabwârians of Kháń were settled, and at the same time another commission under Capt. MacMahon laid down the boundary between Afghanistan South of the Helmand and Balochistán. The peak of Malik Súkh Koh at the southwestern corner has been fixed as the meeting point of Persia, Afghanistan and Balochistán. The northern strip of desert country between Kháń and the Afghanistan border, known as Cághalí and western Sindjárí, does not form part of the Khánát of Kháń but is immediately under the British authorities. Through it runs the caravan route from Quetta to Shíkta and Káraná. The railway has been continued as far as Náhghí where this route starts. Kháń, like Las-Bélí is not directly under the Khán of Kháń, but is administered by its own chief, who admits the Khán’s suzerainty. All disputes are subject to decision by the agent at Quetta.

The Balé tribe of the Suhrmán Mít-e-north and the Marrs of Bágut are not under the Balochistán Government, but are governed like those of the adjacent territory. They are governed by the Deputy Commissioners of Déra Ghází Khán under the Lieutenant Governor of the Pandjáh. In the same way the tribes of northern Sindh are governed through the Government of Sindh. In most cases the tribes are governed through their own chiefs, to whom a good deal of authority is allowed by the British Government.

The Tálpur tribe who established a short-lived rule in Sindh were an offshoot of the Laghált Balé tribe of Córj near Déra Ghází Khán. The Amir of Sindh against whom war was declared in 1843 were members of this family. After the annexation of Sindh one of these Amirs, Mr. All Múrád of Kháńpur, was allowed to retain his dominions, and the state of Kháńpur still exists, the only feudatory state of British India, which is under a prince of Balé nationality.

BALOCHISTAN — BAM.

BALṬA LĪMĀNĪ, a bay on the European shore of the Bosporus between Boyağlı-Koöl and Rûmî-Nâir, so called after Balṭa-Oghla Sulaimâni-Bey, the first admiral of the Turkish fleet, who equipped the fleet of 420 ships here, which co-operated in 857 (1453) at the siege of Constantinople; it is the ancient Phylidia. Rashid-Dâ'û's palace stands here. The commercial treaty with France of 1838, the Treaty of the Five Powers of 1841 and the agreement of 1849 relative to the principalities of the Danube were all concluded here.

BALṬĀDĪ, "Arse-bearer," the name given, in the older organization of the Oghlânī, to a body of palace-guards, consisting of 400 men under the command of the Kūtul-Abgā; and especially entrusted with the duty of guarding the princes and princesses of the blood as well as the Imperial Harem. They were a pekoned body of fawn-coloured felt, called kalbî, and were quartered in the Erki-Serai. They accompanied the Harem to the wars, marching beside the vehicles conveying it and camping around its tents; they were armed with halters, whence their name. Their commander bore the title of Bahālābār-Kūtul. He had charge of the Sultan's treasures to the Grand Vizier and at the ceremonial of watering assisted the preachers to descend from the pulpit. — The Zalīf-Balṭādī were a corps of 120 men attached to the service of the chamberlains (Kūtul-Abgā) taking their orders from the Sultan-Abgā; their bonnet, not quite so peaked, was distinguished from that of the Balṭādī by two strips of woollen cloth which hung down over their cheeks (šawf) whence their name. — In the vaulting of the Silīety gate at Constantinople may be seen a huge club which was carried on high by Dâli-Pêlîwên, one of the Balṭādī of the Erki-Serai.

BALṬISTĀN, or LITTLE TIBET, a mountain tract on the N.W. frontier of India, subdivided into the state of Kashmir: area and pop. unknown. It contains some of the highest mountains and largest glaciers in the world, and includes part of the upper channel of the Indus, on which Khârâ, the capital, is situated. The inhabitants, though Tibetan by race and language, were long ago converted to the Shi‘ah sect of Islam. Their hereditary chiefs are known as Râfīqah or Ghâlpah, who trace their descent to Ah Sin, who conquered Ladakh and founded Skárîr about the end of the xvi. cent. They were subjected to Kashmir in 1450. Owing to pressure of population on the soil, which is said to average 1467 per sq. m., of cultivation, the Balts emigrate in search of labour as far as the plains of India.

BALVĪS (by metathesis, from the low Latin balvīs Lat. balivs), BANU, the title of the representative of the Venetian Republic at the Sublime Porte. After the capture of Constantinople by the Turks, Girolamo Minotto was despatched on the surrender of Galata's negotiations were then entered into for the resumption of relations and the sending of a new balī with the same rights and duties as under the Eastern Roman Emperors. Bartolomeo Marcello was the first agent in this capacity in 1454. The agent was changed every two years but as he had to await the arrival of his successor his mission in practice lasted three years. By the terms of the agreement, renewed at the beginning of the reign of Sulṭān Sulaimān (1520-1566), the balī could not be imprisoned; for he administrated the customs of the countrymen and made out to them the passes without which they could not pass into or from the interior of the Othmanlî kingdom.

BAM (Arab. Bamm), a district and town in the province of Kermān, Iran, about 120 miles S. E. of Kermān on the western edge of the great salt desert Desht-i Lut.

In medieval times Kermān consisted of five districts: Barda, Shīrāz, Ban, Narmand, and Džiyaf. Bam has long been a commercial centre of some importance, for the road from Shīrāz through Kermān to Südjān or through Makran to Manipur in Sind forked here, whereas it is often mentioned in old road-books. Bam has also been a fortified place since early times and it was used as a place of detention by Sâfīr Khâfish b. Alī on his campaign against the Thabirs of
Khorasan (in 559 B.C.). A certain Issam b. Ishahm, viceroy of Suhak, who had been emancipated by 'Amr b. al-Laiq, was lord of the province of Fars in the time of Al-Ma'mun. Fars, came from Bamiyan. It is said that Ibn Hawash gave a more detailed account of Bamiyan (in the 8th = 9th century). It had then three chief mosques, one called Al-Khadrawi with the arch-box in the lavsan beside the palace of Manṣūr b. Ḥurayd, another in the Kar- man and the other a mosque of the lavsan (jostafos), and the third in the citadel. The cotton industry flourished in Bamiyan, in particular in the area of the Bamiyan (mani), where the town was not manufactured and exported to Khorasan, Iraq and Egypt. Markaddis gives similar information and also mentions the four gates of the fortress by name. The fortress was situated in the center of the town and included a part of the lavsan. A small river and aqueducts supplied the town with water. The houses were built of mud. Of the baths, one in the name of Ishfa was famous. The surrounding villages also depended on the cotton trade. In the 8th (11th) century the fortress of Bamiyan is mentioned again by Mustawfi.

In the beginning of the 12th century Bamiyan was again a center of cotton spinning and weaving. The houses were built in the time of Nādir Shah. Being a town on the Afghan frontier it was the object of frequent attacks. In 1795 it was the scene of the capture of Qādir al-Shah al-Dawl of the Zand dynasty. The victorious Aga Muhammad Shah ordered a pyramid of skulls to be erected here; it was still standing when Khan saw it but was removed by order of Fath 'Ali Khan.

The town of Bamiyan may be better described as an agglomeration of houses and extensive gardens than as a town. It lies on the both sides of the river Baniyan and is unfortified. Its lavan is small and mean. Its products are cotton, henna, indigo and wheat, which are exported to Bander Abbas.

The number of its inhabitants is estimated at 5000—6000 souls. The fortress at the foot of which lay the older town lies to the east of the modern town. It is an oblong of 300 × 500 yards surrounded by walls without towers and a dry ditch. It was a strongly fortified citadel with a high watch-tower.

BAMBARA (Bambara), the negro people in the French Sudan. The Bambara country is bounded on the north by the land occupied by Moors, in the south by the Mandingo country and in the east by Musulans. It lies between 12° and 14° N. Lat. and 4° and 6° W. Long. of Greenwich. Its boundaries are approximately: in the north, a line drawn from Kihdougo to Tamba; in the south, the upper course of the Segreth from Madina to Bafaleh, the Bakoy to its confluence with the Baule and lastly the Niger from Bamako to Sanamading. The Bambara are here found sometimes in very large bodies as in Belindou (50,000 inhabitants), sometimes in groups scattered among a population of different race (Soninke, Fulbe etc.). They also extend beyond the boundaries of the Bambara country proper and have planted colonies in the Musulman country on the shores of the Tak and the Bulfin. Mixed with the Fulbe they have established colonies south of the Niger, where they have retained their own language and customs.

The Bambara belong to the Mande stock of which they are the most important branch. They themselves do not use the name Bambara, which is given them by Europeans according to Joger: it is synonymous with the Arabic "al-bammar" "believers". They call themselves Banns or Bana-emske, from the root "bams" "saw", the animal which is their tomo or totem, a custom which is also found in other branches of the Mandé stock.

In physique they closely resemble the other branches of the Mande except that in them the original type has been somewhat modified by crossing with foreign elements, especially with the Fulbe. The colour of their skin varies from a light brown to a light black. They are powerfully built and are usually tattooed with three parallel lines, burned with a hot iron, running from the corners of the eye to the corners of the mouth. They are brave and hospitable. They readily change their place of abode and since the French conquest they have spread throughout the whole Sudan as soldiers, serfs, and artisans. Their industry and economy have earned them the title of "Arvergats du Soudan". Although they have for centuries preferred warfare to any other occupation, leaving the practice of trade to the Sarakule andSoninke who live amongst them, they are nevertheless industrious. As agriculturists they take advantage of the rainy season, from July to October, to cultivate millet, rice, maize, indigo, tobacco, and hemp; as artisans they weave cotton, make a leather powder. Before the arrival of Europeans they were unaccounted for the use of money and paid for their purchases in cowrie shells and lumps of salt. They are sedentary and live in villages, each of which consists of several tomo or groups of huts surrounded by an earthen wall. Their huts of hardened earth are usually rectangular and surrounded by a terrace. At the entrance of the villages are public baths called bed which are used as places of assembly and palaver by the inhabitants.

The social organisation of the Bambara is still very primitive. The family is under the absolute authority of the father. The children are his slaves till they attain puberty: girls are given in marriage by their parents without being consulted, and remain the slaves of their husband for life; divorce is allowed and divorce common. An inheritance descends from brother to brother. In former times the population was divided into three castes: 1. the nobles, warriors or tomti (literally "bearers of bones"); 2. citizens or ampane; 3. slaves. At the present day the royal families, Karabali, Diara and Massa-Si are at the head of the social hierarchy; next come the tomo, or smiths, the entreprenuers or leather-workers, the artisans or carpenters and finally the slaves. The village is under the authority of a chief entrusted with the administration of justice according to a code of common
law which is transmitted from father to son. The
villages sometimes combine into groups and the
bond of union is very weak and these confederations
never last long unless it is a question of
defending themselves against a common enemy as
was the case at the time of the Tuculey dominion.
Union and a spirit of content have almost
always been wanting among the Bambara. The
states which they have founded have soon entered
into conflict with one another or fallen to pieces
from internal dissensions.

The language of the Bambara is called Amsa-
nuara; it belongs to the Mandé group of languages
and is related to the languages of the Malinke,
Soninke and Diula. The Ramanaka differs most of
these from the original type. It is especially
characterised by its extreme conciseness and by
the corruption of its words through successive
contraction. There is no diphthong among the
substantives and in the very few distinction of
voice, mood, tense or person (Bassin, Diction-
naire Bambara, Introd. p. viii.). The Arabic
alphabet is used for writing, which is however
little practised. It is strictly speaking, no
literature but only oral traditions which scarcely
reach further back than the last two centuries, as
well as fables, legends, and narratives intermingled
with songs and dances, in which the Bambara
take great delight.

The Bambara form the anti-Muslim element
of the French Stöd. With the exception of some
insignificant sections living in Kaarta they have
resisted the propaganda of Islam and remained
pagan. Their religious beliefs are of those of
primitive peoples. Each family has its own totem, a
c SACRED animal which the members of the
family must not kill nor eat or even look at
intentionally. Ancestors protect their descendants.
The dead are buried in the entrances to the
huts and are depicted on the interior walls in
coloured designs (hands, arms, geometrical figures),
sometimes even in relief. Sacrifices are made to
them; perhaps in former times they used to sac-
ritify captives by burning them alive. Fétiches or
toïs play a very considerable part in
their life. Every family, every village has its
own which is carefully preserved in a sacred
building. The fétich is often a tree to which ani-
mal such as sheep, dogs, and hens are sacrificed,
or millet and fruit brought. These sacrificial trees
are as a rule surrounded by shrubbery in which
a sorcerer resides. The sorcerers, recruited mainly
from the smith caste, and organised in secret societies
of which little is as yet known, are very much
feared. They foretell the future by examining the
entails of sacrificial animals; by jugglery and by
weird practices, such as nocturnal promenades
through the villages, clothed in gogevas and wearing
calabashes pierced with holes on the head, they
keep the inhabitants in constant terror and wield
a tremendous influence over them. Among other
customs, the use of the bowl and the mentioned
circumcision which is performed when boys attain
the age of puberty and which has the character of
a proof of initiation, and the celebration of festivals,
some of which may have been borrowed from the
Muhammadans but others of which, such as the
festival of the end of harvest, are much more ancient
in origin.

From the want of written sources the history of
the Bambara is very little known. Apparently
they were numbered among the vassals of the
empire of Mali or Melle and certainly took
advantage of the fall of this empire in the xvith
century to declare their independence. Ahmad
Bâdî, indeed, mentions among the five states which
 arose out of the ruins of the empire of Melle, a
kingdom peopled by the Bambara, the Sanouk
and the Samañeka. A century later, about 1754,
perhaps to retort on the propagation of Islam they
moved to the Upper Niger. Kaladjan Kurnabri,
one of their chiefs, made himself master of the
land inhabited by the Soninke and formed a vast
kingdom on both banks of the Niger. He divided
it amongst his six sons, who thus became sove-
igns of independent kingdoms, often at war
with one another. In the beginning of the xviith
century one of his grandsons, Bitro, again united
all the lands of the Bambara under his sway. He
reigned thirty years and was succeeded by his
eldest son, who founded Segu-Sikoro. The de-
velopment of the kingdom of Segu was arrested for
some years by civil wars (1745—1754) but its
progress was resumed in the reign of Ngolo
(1754—1757). After getting rid of his rivals, this
chieftain succeeding in overcoming the Fulbe of Ka-
trat after an eight years' war, he succeeded in
conquering the Fulbe kingdom of Mania and made
his word law from Bambouk to Timbucto. During
the first half of the xvi th century the kings of Segu, Mansing (1757—1808) and De-
dia (1805—1830) were again very powerful.
They conquered the Bambara of Kaarta and
compelled Mania and Futa to pay them tributes.

A third Bambara kingdom had been established in
Kaarta in the xvi th century by Sakhaba, son
of Kaladjan Kurnabri. In the xvi th century this
state passed into the power of a new dynasty
founded by Sebe Massa who reigned at Niou-
about 1754. His son, Dian Kurnabri, was ruling
this town in 1796 when Mungo Park passed through it.
His successors maintained their independence
in Kaarta till the middle of the xvi th century.

The kingdom of Segu and Mania were destroyed
by the French (1890)—in the campaign of al-Hajj Oumar
Kurata was conquered in 1859. Two years later
"Ali Diara, king of Segu, who had made an
alliance with the Mania to resist the Muham-
madan invasion, also was overthrown; al-Haji
Oumar entered Segu on the 10th March 1854
and there installed his eldest son as king. The
Bambara however were by no means ready to
acknowledge the rule of the Tuculor. They rebelled
in various places against al-Haji Oumar and his
son Alhajj. The people of Beulagu in par-
cular were successful in regaining their inde-
dependence. They cut the Tuculor empire up into
two great divisions and cut off communication between
Kaarta and Segu. This state of affairs remained
until the French troops took possession of Segu and
destroyed the power of the Tuculor (1892—1901).

The land occupied by the Bambara then passed
under the rule of the French who have since been
endeavouring to establish law and order there.

BAMBARA — BAMIYAN.

633

BAMIYAN, in the Arabic sources frequently called AL-BAMIAH, is a town in the Hindu-Kush, north of the main range in a mountain valley lying 8,540 feet above the sea-level, through which one of the most important roads between the valleys of the Oxus watershed and the Indus leads; the town is therefore naturally important as a commercial centre, and was important in the middle ages as a frontier post. The name of the town belongs to the Oxus watershed and is separated from Khatul by high mountains. It passes on to the Khiltin and Kanduz, Bamiyan politically has been more frequently associated with Khatul and Gharra than with the lands of the Oxus territory. In the first half of the 8th century the pass of Al-Khrist, lying to the north of Bamiyan, formed the boundary between the districts of Khatul and Kanduz; at the present day this pass forms the boundary between Kábūlatun and proper and Afgan Turkestán.

The valley as well as the town are described as early as the 8th century A.D., by the Chinese pilgrim Huan-Chang (Mémorial sur les routes et routes de la Chine, trad. par Stan. Julien, l. 36 et seq., Histoirs de la vie de Huenan-Thanh, l. 68 et seq.). The name is transcribed Fan-yen-ou (in Marquart, El-Maqqari, p. 815 et seq., according to de Groot and G. Schlegel, the ancient pronunciation was Bami-yen-ou). The "Older Middle Iranian form" of the name was Bāmīyān. According to Marquart, even at that period the district did not belong to the Oxus territories (Tu-ho-lo = Tohākrist, cf. above p. 346, artic. A227-AMRA), although the alphabet, methods of government and commerce, and the language and dress are different slightly. The oldest Arab sources of this region No as well as Huan-Chang tell us that the inhabitants of Bāmīyān professed Buddhism, which at that period was widely spread throughout all the lands north and south of the Hindu-Kush. In the time of Huan-Chang there were more than ten monasteries there and more than a thousand monks. The two colossal images in relief on a rock in the north ridge of the valley, which are later described by the Arabs as unique in their kind (cf. especially Yakut, i. 481), were already in existence in the time of Huan-Chang. The larger figure (according to later travellers 130 feet high) is that of a man, the smaller (about 200 yards distant from the other) is that of a woman; in the middle ages these statues were known as Sarh-bat and Khambat ("red idol" and "white idol"). Both figures have been damaged in modern times by cannon shots — by order of the Indian Emperor Awrangzib, it is said; nevertheless the town was called Bāmīyān after them, as late as the 6th century as "Abul-Kārīm Bāhārī (ed. Schirm, p. 4 etc.) and the English traveller Moorcroft (Travels in

Himalayan Provinces, ii. 382) informs us. Only a few traces remain of the wall paintings mentioned in Yakut ("all the birds created by God" are said to have been represented there). Barma amongst others (Travels into Behar, London, 1832, i. 159), gives a reproduction of the idol in their present condition. There was still in the 19th century a large Budhha-tapla in Bāmīyān, in which there were idols also; the temple was destroyed in the year 1256 = 1790 by the Saffarid Yāghūb and the idols brought to Baghdad in Rafi' i. 257 (26 Feb.-26 March 872). Cf. the comparison of Tabari, iii. 1351 and Firdawsi, p. 348 by Barnold in Oriental Stud. (Nöldeke-Textsammlung), l. 187.

The town itself was situated on a mountain; it is described as a "little town" by Huan-Chang as well as by the later Mokaddar (ed. de Goeje, p. 305); according to Ishakib (ed. de Goeje, p. 280) it was half the size of Balkh; according to Yahyā (Geogr., ed. de Goeje, p. 290) it had a strong fortress; the town itself however was not surrounded by a wall. A gate in Ghura (apparently a small town) bore the name "Gate of Bāmīyān" (Mokaddar p. 302). In the very old times the town must even at that time have borne some importance therefore; but the trade must have been very small in comparison with that of later times, for in the list of taxes given in the KhudKhudkhale (ed. de Goeje, p. 372) the assessment of Bāmīyān is quite an insignificant sum (300 dirhems).

The prince of Bāmīyān bore the title Shâr (written Shâr and Shar) which Yaqyūb (Geogr., p. 289) erroneously translates "lion"; the word means "king" and is to be derived from the Persian Ashkâshspā (Marquart, Erd-Maqqari). Islam was first adopted by these princes in the time of the "Abbadids, according to Yaqyūb's geography (l. c.) in the reign of al-Mansûr, according to the same author's history (ed. Housaye, i. 479) is that of al-Mahdi. The relations of this dynasty with the lands to the west and south of the Hindu-Kush are not quite clear. According to Yaqyūb Bāmīyān belonged to Tokharistan, i. e. the lands of the Oxus territory, which is probably confirmed by Tabari's statement (ii. 1690, 1) that about 1190-737 a foreigner from Bāmīyān ruled in Kwastal (north of the Oxus); on the other hand Ishakib (p. 277) says that the district (Shahr) of Bāmīyān only included the lands south of the Hindu-Kush with the towns of Farwān, Khatul and Gharra. According to a document of the year 718 A. D. quoted in Chinese sources, the prince of Bāmīyān as well as all the princes of the lands up to the Indus were vassals of the Turkish prince (Yāghūb) of Tokharistan (E. Chavannes, Documente sur les Turcans [Paris] 1906, St. Petersburg, 1903, p. 201 and 202). Under the later "Abbadids the members of the dynasty of Bāmīyān, like many central Asian princes, held influential positions at the court of Baghdad; Tabari (iii. 1335) tells us that a Shâr of Bāmīyān was appointed governor of Vaman in Rabi' i. 220 (18th Dec. 843-20th Jan. 844).

The native dynasty was not to be finally overcome by the Ghurzawids. A branch of the Ghurids ruled in Bāmīyān for half a century (550-609 = 1144-1212) Bāmīyān was then the capital of a kingdom which comprised all Tokharistan and some districts north
of the Oana and stretched to the north east as far as the borders of Kâshgâr. Like the other lands of the Ghûrides, this kingdom also was incorporated in the kingdom of Muhammad Shah of Khaburim in the beginning of the xiiith = xivth century; Bamiyân was granted with Gharna and other lands to Djalal al-Din the eldest son of the Khaburisht (Nasawi, ed. Nouaiz, text p. 35, transl. p. 44, i.e. Baniya was again separated from the Ghuristan and united with the countries south of the Hindú-Kush. Soon afterwards (618 = 1221) followed the destruction of the town by the Mongols. Mutâjan, a grandson of Cingiz Khan fell at the siege of the town; in revenge for his death the conqueror raised the town to the ground and exterminated its inhabitants; the place received the name Ma-bâli (evil town) or (according to Rashid al-Din) Mu-Khrâghân (evil fortress) and was still uninhabited 40 years later in the time of the historian Djiwanî. The town built on a hill and destroyed by Cingiz Khan is apparently identical with the ruins now called "Qalâga." These ruins are situated on a hill in the southern ridge, opposite the rock with the two idols.

The modern Bamiyân lies a few miles to the west of the ruined town and is no longer of any political importance; it is usually described by recent travellers as a "considerable village." For the last few centuries Bamiyân has always been combined with Kâhal and Gharna; like these towns it belonged down to the xiiith = xvith century to the empire of the Mughals and afterwards to the newly founded Afghan kingdom. According to Abd al-Karim Biâlkî (ed. Schefer, p. 4 et seq.) 100,000 rupees were yearly levied on Bamiyân for the rulers of Afghanistan in the beginning of the xivth century; the Indian traveller Munsaf Mohan Lal (Journal of a Tour through the Punjab, Calcutta, 1835, p. 37) reckons the receipts from customs alone at 70,000 rupees. The same authority informed us that the inhabitants of Bamiyân speak two languages, Persian and Pachta (Mughâ). The population of the valley mostly belongs to the Hazara stock.

(W. BARKHOLDI)

BAMPUR, a district and town in the east of Persia Balûcûtân, the seat of a governor, or as under the Governor-General of Kermân. In the older literature it is only mentioned by Maładâlî 54 (wrongly Barûr for Bânhêr) and in the Qâdîn-ûnûm. It lies at the intersection of several trade routes; from Shûrân or Kermân (town) to British Balûcûtân and India; and from the harbours of Djiân, Guwattar, Guwattar towards Sûstân. Till about 1750 it belonged to Persia and laterly under Nâdir Shah to the Beglarbêk, and afterwards to the Khân-e Bânhêr. On Nâdir Shah's death he placed himself under Ahmad Shah Durrân of Afghanistan and became independent after the latter's death; he died in 1795. Balûcûtâtân then broke up into various divisions each with its own chief. In the reign of Muhammad Shah (1834—1844), Persia again attempted to acquire the sovereignty. When a chief of Bampûr attempted to raise itself against Kermân he was overthrown by the Persians. In 1849 a rising again took place after which Bampûr itself was taken by the Persians. Since that time it has been held by Persia under Persian governors. The town itself is rather a camp of soldiers with their families than a town. It has a fort on a mound 100 feet high which protects the cultivated valley of the stream of Bampûr from the sand storms of the desert. The fort is substantially built with walls of brick. The river valley is covered with gardens and date groves belonging to Bâbhân, which present a striking contrast to the wide barren plain of Bampûr. This land is crown property and produces corn and dates. A small garrison of Persian infantry, artillery, and cavalry, is stationed in the fort while a standing militia of Balûcûtûtans is encamped in the neighbourhood.

BÂN (a. v. and from the Indian Bâne), according to Ahûn Hamîla and Dioscorides the father of the tree is, like the Oriental tamarisk, tall and slender, with soft wood and supple green branches. Ancient writers tell us that the tree was principally to be found in Áraûn Felix; at the present day it is identified with the Moringa (Stenocerberus), indigenous from Upper Egypt to India, the seeds of which yield the finest of all vegetable oil; it was highly prized even in antiquity and was well known to the Romans and the Greeks as âkâsâ or aksá (Dioscorides). The bright, green, bean-like fruit (Hâb al-bân, Dânân al-bân, Fasân al-bân) was bruised in a mortar, strained and then put into a press. The oil obtained in this way was considered an effective remedy against various skin diseases (cicatrization, impurom) in mediastral Arab medicine; a mahlâj of the seed (28 grains) taken in honey and water was used for ringworm; another connection it was given (with vinegar and water) to horses as a remedy for cardalgia. In addition to its use in medicine the oil of the bun was much used in cosmetics.

BANAKIT, a town in Central Asia, on the right bank of the Sir-Dârâ, not far from the mouth of the river of Ilak, i.e. the
modern Angren (properly A'hengara). The name is written Binkaṭ or Binkaṭ in Maḥmandi (ed. de Goeje, p. 277, 1); this form is doubtless more correct than that given by Yakh (I. 740), for the name like many others such as Aḥkaṭ, Binkaṭ, Tanḵaṭ is evidently compounded with *bā:k* "village, town, or fort". In later times the name is also written Finkaṭ and Finkanṭ. In Maḥmandi's description of the town (I. e.) we are not told if there had not been a Friday mosque on the market-place; there seems to be no other description of the town in any of the sources that have as yet come to light. In 1417 = 1520 the town had to surrender after a three days' siege by a small division (5000 men) of a Mongol army; cf. d'Ohsson, Histoire des Mongols, i. 224, and the text of Dhulawī (the only authority for this siege) in Schefer, Chrestomathie Persanes, ii. 115. In Timur's time the town was in ruins; it was rebuilt by his orders in 794 (Ape year, 1392) and named Shahrourkhiya after his son Shaurkhi (Zafur-Nāma, Indian edition, ii. 636). In this connection it is related that the town had been destroyed by Cingalese and remained in ruins till the time of Timurid and Uzbek domination; nothing about any such destruction; the state, in which the town was towards the end of the 12th = 16th century, is probably about the same as at a later event. The present-day Shahrourkhiya is in ruins, and nothing is known of the date of its final destruction; in accounts of the Timurid and Uzbek state Shahrourkhiya is frequently mentioned, and in the 11th = 15th century, mentioned as a strong fortress. The site of the ruins (now called Sharvakh) was fixed by Russian explorers in 1876. Cf. Le Strange, The Lands of the Eastern Caliphate, p. 482, where the date of the restoration of the town is wrongly given. (W. Barthold.)

BANAFI, FAIHRI AL-DYN ABU SELÜMAN DAWID AL-MUHABD, Persian poet and historian (died 730 = 1333-1334). According to his own account he was a "king of poets" (Malik al-shairār) by Ghazar-Khan, Mongol ruler of Persia, in the year 701 (1301-1302); one of his poems is given by Dawlatshah (ed. Browne, p. 237). His history bears the title Rawdat al-Dīn al-Tamaddun al-Bahshī wa-l-Mašūq wa-l-Bī'an and was composed in 717 (1317-1318) in the reign of Khāja Ḥāfiz Aḥmad (q.v., p. 105); the preface is dated 23rd Shawwal of this year (31st Dec. 1312). With the exception of some short notes on events of later years the work only gives the contents of the Lākim al-tawāriḥ of Rashid al-Dīn in a briefer form, with the material in a different order and is of no independent value. Blochet (Introduction à l'Histoire des Mongols par Fadl Allah Rashīd al-Dīn (Leyden-London, 1910, p. 98) erroneously states that the Chinese source for the Lākim al-tawāriḥ are not given in Rashid al-Dīn but only in Banakti; the text of Rashid al-Dīn, in which these are given was published in 1886 by Baron V. Rosen (Collections scientifiques de l'Institut des langues orientales du ministeire des affaires étrangères, iii. Memoriets Persans, St. Petersburg, 1886, p. 100 et seq.). Banakhti's work is divided into nine sections; the 8th part with Rawdat al-Dīn, his history of China was edited in Persian and Latin in 1677 by A. Müller with the erroneous title of Abulbar Banakhti Historia Sinensis; Quartermere has since proved that this extract comes, not from the Nafis al-tawāriḥ of Badjī but from Banakhti's Rawdat al-Dīn al-Bahshī.

BANAT, a petty principality of Hungary, which only received this name after the Peace of Passarowitz (1718), without having ever been ruled by a Ban, more correctly Temeswar Banat, so-called after the town of Temeswar, which was under Turkish rule 1553-1716.

BAND (F.) meaning "band", "bend" and signifying anything used for tying, binding or clamping; it is applied, inter alia, to the barricades constructed across a valley from one hill to the other and forming the upper part of the valley into a lake used as a reservoir. There are for example the bānd-Etke near Shīrāz built by the Ruyshahk Aḥmad al-dawla Fānna-Khānārāw, the bānd-Kubād built under the Shāhī, which supplies the town of Kāhān with water and the bānd of the forest of Bel'gahm, to the north of Constancia built to secure the water supply of the city in case the river should dry up. Bānd is in number, amongst them being the great bānd and the little bānd banked by two smaller ones, the waters from which supply the Bānd-e Saḥābā built by Andronicus Comnenus and repaired by ʿOthāma II; to the north of Pasha-Dere is the Aḥsāt-Band, built in 1766 by Muṣṭafā III; to the north of Baghī-Şah is the ancient and the modern bānd of Sultan Mahmūd I, built in 1724 and restored by ʿAbd al-Hamīd I in 1784 and the bānd of the Wālīya built by Mahmut's mother. Dast-band, "band on the forearm" is a bracelet; gārān-band is exactly equivalent to the English "neck-tie".

Bānd or "face-band" is the veil worn by Persian women, of white cotton pierced with holes like a sieve and tied behind the head above the langer which covers the wig.

Bāndshāhīrāz is a musical melody. For further meanings see the dictionaries.

BANDA, a town and district of India, in Bundelkhand, United Provinces. Area of district: 3,000 sq. m.; pop. (1901): 63,236, of whom only 6% are Muslims. The town, near the Ken river, has a pop. (1901) of 13,565. At the beginning of the 19th cent., it was the capital of Jamiuāl Bahādur, grandson of Badjī Rao, the Marāṭha Peshwā, by a Muhammadan woman. The last Nawāw of Bāndā, ʿAlī Bahādur, rebelled in the Mutiny of 1857, and the family now receives a pension from the British Government.

BANDA ISLANDS. This group of islands is formed by the peaks of a submarine volcano; a mountain which rises up from the bottom of the sea (which here is about 2200 fathoms in depth) south of the island of Ceram in the east of the Malay Archipelago; it consists of three inhabited islands: Lontar, Banda Neira, and the volcano of Gunning Api (2000 feet high) with seven not entirely isolated islands: Tidore, Kuno, P. Ai, P. Pjangan, P. Bunakapal, P. Krakab, P. Mamak, and P. Reremugain. Since the middle ages these islands have attracted the attention of Europeans, not by their size (about 15 square miles), but by their chief product, the nutmeg. Immediately after their occupation of Malacca in 1511, the Portuguese set out under Andries d'Abreu to the Banda Islands and began commercial relations which still existed when the Dutch arrived there under J. van Heemskerk and W. van Warwijck in 1599 and the English soon afterwards. The population, mainly Muhammadan, of Banda Islands then numbered about 15,000 souls, who were living in independent settlements and organised on a patriarchal basis. The acquisition of the Dutchmen, competing with one another in the East Indies, formed themselves with the interminable feuds of the Bandaese was fatal to the latter for in order to assure for themselves the monopoly of the nutmeg trade, the Dutch made themselves masters of these islands in 1620. During these wars the natives of the islands, much decreased in number, had taken refuge in the neighbouring islands; those who remained were ultimately transported to Batavia; only a portion of them being afterwards brought back. The two islands on which the nutmeg is cultivated, Lontar and Banda Neira, were divided into farms (Perken) and these were allotted to immigrant Europeans who were to grow this spice with the help of slaves from the adjacent islands; it could however only be sold at a fixed price to the "Nederlandsche Grootondie Compagnie". This monopoly remained under one form or another till 1864, although the nutmeg tree had also been cultivated in other islands of the Archipelago since the end of the eighteenth century; after that year the occupiers (Perkeniers) were allowed to acquire their plantations from the government free from restrictions and this transformation was completed in 1872. These Christian descendants of mixed blood from early European immigrants form, with the Dutch officials, the aristocracy of the country and live in the capital Neira (Europeans 627, Chinese 92, Arabs 506, natives 3051) in the assistant-residency which belongs to the residency of Ambon. The Chinese mancanilla families, many of whom have been settled on Banda for a long time, and various Arab merchants (often contractors for Javanese labourers) belong to the same level of society. The less prosperous inhabitants form the "burgers" and are some Christian and some Muhammadan, who have been settled there for centuries; the "burgers" therefore have arrivals of immigrant elements. In their daily life the "burgers" are all dressed in similar fashion, only the Muhammadans shave the hair of their heads and wear a head cloth; at festivals the Christians are dressed in European fashion and the Muhammadans in Malay. The lowest stratum of society consists ofMuhammadans and pagans, the latter immigrants from the neighbouring islands (e.g. Timor), the former descendants of the slaves who were set free in 1860, of political exiles etc. The Muhammadan population is being considerably increased by the Javanese who work on the nutmeg plantations as contract-coonies. The number of inhabitants is about 6500. The sole export is nutmeg; the foodstuff such as rice, sugar, maize, cattle and European luxuries and wearing apparel are imported. There is no influence of Dutch and in earlier years these glorious islands were very unhygienic for Europeans but through better hygiene they are now among the healthiest in the Archipelago.

BANDAR. [See below.]

BANDJARMASIN is at the present day the same as a town at the mouth of the river Batig in the south of the island of Borneo; in early times however the name was better known as that of a Muhammadan kingdom which extended along the west, south, and east coasts. The district east of the mouth of the Batig was its centre. According to a Malay MS, Javanese Hindus settled in the Negara valley at the end of the sixth century and in later times the Sultans claimed descent from Mahardja Sunia Natu, a prince of Medjugir. In the vicinity of Martapura and in Kutel (on the east coast) there have been found however Hindu remains of the same age as those of Western Java i.e. the fifth century of our era. In Book 2 of the history of the Ming dynasty (1368-1643) a comparatively detailed account is given of Bandjarmasin as a commercial centre and of the neighbouring Beuludajah. With the help of the Muhammadan kingdom of Denak in Central Java, Sultan Sunia Anggur ascended the throne as first Muhammadan Sultan in the beginning of the sixteenth century and removed the capital from Negara to Martapura, both of which lie on tributaries of the same name of the Batig. Taliutu was paid by the coast countries; the Beuludja and others Dayak tribes in the interior asserted their independence and remained pagan. From the latter the Bandjarcos obtained wax, rotan, bezoar-stones
and gold; they themselves had pepper plantations, gold and diamond washings, so that in the xviiith and xviiiith century Bandjarmasin was an important port much visited by foreign merchants, European, Chinese, Arab, Buginese and Javanese. On account of feuds within the Sultan's family, which from the practice of polygamy was a very numerous one, the kingdom was much weakened and the sultans were often helpless against their relatives; Portuguese, Dutch and English attempted to found trading settlements here but they all had to withdraw from the treacherous behaviour of the princey robbers. In 1787 Sultan Tampel Ali Shah ceded his kingdom to the Dutch East India Company so as to be able to assert his right to the kingdom, as their vassal instead of his brother's. After years of turmoil and fighting caused by the disputed succession to the throne, the sultanate was finally incorporated in the Dutch possessions in 1859. In 1859 the number of Bandjarasee was reckoned at 350,000 souls, who were divided into five classes: the nobility, the priesthood, the headmen, the freeman and the slaves (debtors). The nobility consisted of descendants of the Sultan's family; they lived on their appanages and held the highest offices. Although there were native laws (Hindiaanse handboeken), they were generally disregarded in the most arbitrary fashion and the people ruthlessly plundered; offices were filled with an equal disregard to the law.

Riduying taxes was regarded as the main duty of government; the following were levied on the Musulman population: The poll-tax, duties (about 1/4 of the value), on rice-corn went to the pasha; (9½ stones) paid a tenth (debes) for the Sultan as head of the priesthood, ground-tax, a tenth on washed gold and all diamonds found must be surrendered to the Sultan at 33 shillings per carat. Besides there were taxes on passports, pedicabs etc. Finally the people were frequently oppressed by compulsory presents at festivals; personal service as soldiers, servants and cannon balls also to be supplied to the princey robbers. The tenant was regarded as head of the priesthood with a Mutfi under him in Martapura; the personal of each Missi set consisted of a penghela, kaliba, leela, latto, bled and a blooms. The penghela filled the office of KDI but in the administration of justice also there was the greatest arbitrariness and extortion; crimes, even murder, could be atoned for. A criminal condemned to death was stuffed with a spear or kris. The priests drew their revenues from the jeth, a share in the jethar, froms fines and presents; many of them also engaged in trade.

The chief bore Javanese names from sarai (the head of a village) to saiv Date, the highest title. The officials not endowed with appanages were paid by the sultan.

Agriculture, especially the growing of rice on wet and dry fields, forms the chief means of sustenance of the people, cotton and indigo also have been planted for industrial purposes. In the very marshy plains; e.g. in Negara, industry furnishes: gold, silver and copperwork, pottery and diamond-cutting of high quality; the merchants also were unprotected and prosperous; most of the slave traders who led a hard life. The Bandjarasee are industrious and sociable and have therefore tolerated the extortions of their princes without much complaint. There is evidence of an admixture of Javanese culture in the character, customs and industry of the people.

The modern Bandjarmasin is the most important commercial town in Borneo and capital of residency "Zaaijer- en Oosterfeesteling" which comprises the basins of the rivers of the south and east coast. Accessible to sea-going ships, Bandjarmasin lies on a very swampy island at the confluence of the Martapura and the Barito; the houses are therefore built on piles or floats. Besides the Dutch officials and the military, Chinese and Arab wholesale merchants, who export gutta-percha, India rubber, tea, silk, damar, wax, copra and peppers to Singapore chiefly, and import European and the industrial products of Eastern Asia, live in Bandjarmasin. The number of inhabitants in 1900 was 52,685 souls, European, Bandjarmasie Chinese and Arabs. These classes of the population have their own rulers.

J. S. COTTON

BANI HASAN, a small town in Egypt, lying on the eastern bank of the Nile between Minia and Mallawi somewhat south of 28° N. lat., it is famous for its Egyptian antiquities, the so-called Speos Artemidos (Arab. 1—qitr Antar) and the rock tombs of the Middle kingdom. The present Bani Hasan al-Shamal is founded was the end of the xviiith century, by the inhabitants of the now abandoned Bani Hasan al-Kutun and now has about 1800 inhabitants. For administrative purposes it belongs to the district of Aba Keria in the province of Minia. Not far to the north is an insignificant place of the same name, distinguished by the epithet al-Ashraf, which belongs to the district of Minia.

C. H. BECKERS

BANI SUF (written Bani Snuf) a town in Egypt, on the west bank of the Nile opposite the Fayum; it has only attained importance in recent
times. According to Sakkawī (392 = 1497) the old name of the town was Dilmunawālī, from which the form Bani Suif arose through a popular etymology. This name بني سويف may be compared with بني سويف in Ibn Ḥaqīq, al-Ṭāhir ibn al-ʿAbī ʿAbdullaḥ, 172, and the false reading علماء given by Ibn Ḍuḥayḥ, Kitāb al-ṣuwarqī, v. 10, whereby a considerable age would be proved for the town. In still more ancient times Ahmās (Heracleopolis Magna) was the capital of this district, which lies a few miles west of Bani Suif. Bani Suif appears to have first attained greater importance in the time of Muhammad ʿAlī.

On the institution of the division into provinces (Mudhiriyā) Bani Suif became the capital of the second, Upper Egyptian Province, which took its name from it. This province is divided into three districts (mukāba) and has over 325,000 inhabitants in 161 villages and 259 smallest settlements. The Merca Bani Suif has over 140,000, the town itself somewhat over 15,000, with 15 suburbs 18,000 inhabitants. It has a railway, post and telegraph service and is a flourishing place whose importance is due to great economic importance. A caravan route leads from it to the Copite mummies on the Red Sea. A local sanctuary in the madīnah of the ʿAbādīn, Hīryā in the most important mosque of the town, the aqṣār of al-Bāṣrī, built of stone. A variegated marble is quarried near the town.

(C. H. Becker)

**BĀNIYĀS,** the ancient Panass, so called from Panas, a great sacred to Pan above the main source of the Jordan at the foot of Hermon; its later name Cassarea Philippi was, as was so often the case, ousted by its more ancient one. The grove and the town of Panas (and the surrounding district also of the same name) are first mentioned in the Hellenistic period, although it is probable that a predecessor of this place is concealed in a name given to this district in the Old Testament. Herod the Great built a splendid temple of Augustus in the neighbourhood of the grove, and his son Philip increased and improved the town to which he gave the name of Cassarea in honour of Augustus. In the 5th century it was the seat of a bishop. In the Arab period the town of Baniyās, inhabited chiefly by Kalb, according to Yaḥyā ibn ʿAbī ʿAbdullaḥ, was the capital of ʿAbāb, and included the town, which lay in the Ghir territory on the borders between Ḥūlā and the mountains, in the district of Damascus and describes it as a town well supplied with provisions, a storehouse for Damascus; in his time the number of inhabitants was increasing because the population of the frontier districts had moved there after the conquest of Tarsus in 962. In the year 1126 it was one of the centres of the Jaʿrāf, and when the Atabeg Toghtegin of Damascus handed it over to ʿAbū ʿAlī. In the time of the Crusades Baniyās with the fortress of al-Saḥarās somewhat higher up on a spur of rock, was the centre of much fighting. In 1130 the Jaʿrāf ceded it to the Franks who granted it to the knight Ranier Bruus as a fief. Shams al-Mulk, Atabeg of Damascus, regained it soon after in 1132 and it was next handed over to Zangi; but in 1139 the united Franks and Damascenes regained it, and again gave it to the Franks who made the seat of a bishop again. After an unsuccessful attempt in 1154 ʿAbū al-Dīn conquered the town in 1157 without however being able to take from the Franks the strongly fortified citadel of Ṣanṭala; he had to give it up again soon afterwards on the approach of Baldwin I. With an army. In 1164 he was successful in gaining not only the town but the fortress also and from then on undertook all attempts against Frank (e.g. in 1174) to regain possession of the town. C. H. Becker

There is another Baniyās on the Syrian coast, north of Tripoli; it is the ancient Balanice which was changed by the Arabs to Balunyās and then (e.g. in Ibn al-ʿĀrīn, 1334-40) to Balunyās. **Bibliography:** Robinson, Palestine, ii. 585-597; du, Neuer biblischer Forschungen, 518-528; Guérin, Galilée, ii. 316 et sqq.; Palestine Exploration Fund, Memoirs, i. 109 et sqq.; von Porta, Der Wald von Sāmekh, ii. 74. 153, 154, 160, 168, 178 et sqq.; Dimmich, Carthage (ed. de Goeje), v. 206; Abu l-Fida, Geography (ed. **BANJALUKA** (BARJALUKA), Circle and town in Bosnia (q.v.).

**BANKA** (BANCA), an island in the south of the Charnese Sea, lying to the east of Sumatra, a mountainous land, 266 geogr. square miles in area, formed of the oldest rocks such as schists, quartzites and massive eruptions of granite, much dissected and weathered to laterite, surrounded by coral reefs and small islands. The surf on the east side has prevented the formation of alluvial plains; on the quiet west side these cover great areas hemmed in by a coast of rhizomes. In these deposits heavy tin ore is found as stream tin; in the visible stone-formation, little is found. The highlands of undulating hills
rise to a height of 2,000 feet in the north, and like the alluvial plains are almost entirely covered with thick bush and underwood of modern growth though the primeval forest still survives in a few parts. The flora and fauna agree with those of Malabar and Sumatra; large mammals like the tiger, elephant, and orang-utan are not found however. Its history begins with the discovery of tin and it is to this metal that the island owed its whole importance. After the beginning of the eighteenth century the Sultans of Palembang, as owners of Banka, began to work the tin-mines with natives and Chinese; they are now worked by the Dutch government.

With a few small islands Banka forms a residency with Muntok as capital. The administrative division into nine districts is based on the working of the mines. Under the Dutch resident, settled in Muntok, the administrators are the chiefs of a district; under these there stands a kapitan (in Muntok and Bliuju) or lieutenant as head of the Chinese and a demang as head of the Muhammadans.

The population of Banka (1905: 115,189 souls) is divided into the Dutch officials (317 souls) and military consists of two sharply defined elements: the native Malay population (70,985) and the foreigners: Chinese (43,725), Arabs (381) etc. The Malays are Muhammadans with the exception of a few pagans, who live in the interior, and the majority of the Orang Sëkah, a fisher people who live on the coasts or in their boats. Islam is continually spreading among the latter, Christian missions have been unable to make headway on Banka either among the Chinese or the natives.

The Malay population (Orang Damar) consists of a little developed, wild, unenterprising race of men, who were formerly not sedentary but were forced by the Dutch government, in the middle of the sixteenth century, to settle in villages on the roads connecting the chief towns of the district. Here they derive a miserable livelihood from agriculture on dry fields (kandang); in recent years the government has again been trying to teach them cattle-raising and the cultivation of irrigated fields (rawai). Each village has a Muhammadan house of prayer and a priest; they observe Muhammadan customs at marriages and deaths; in consequence of their poverty the annual number of Hajjis is however very small (6—50). It has been specially noted of the Bankanese, in how high a degree they are still guided by animistic beliefs in their daily life. In accordance with their primitive Indonesian development their village constitution is patriarchal: trade among them is quite unimportant; their industries are only exercised for their own needs and their residing alone is worthy of mention. They spend much time in fishing and hunting wild swine and deer.

The Arabs, being merchants and seafarers, are chiefly settled in Muntok, which is the centre of foreign trade though they are also to be found in Bliuju and the chief towns of other districts.

The Chinese population consists in the first place of Hakka- and other Chinese who are connected with the mines as labouress, traders or contractors, and then steadily return home again. They work the mines under the guidance of Dutch engineers in sengit, who have to deliver the tin up to the Dutch government at a fixed price. Secondly there is a large number of Chinese of mixed blood, born of native women, who are settled in Banks and live by trading, industry, fishing, pig-breeding and a little agriculture. Their children are educated in 45 Chinese schools. As the natives at most only supply their own requirements in the necessities of life, rice, fish, cattle, and wearing materials also must be imported; the total imports amount to 2,145,000 and the exports to 2,260,000 of which 1,255,000 are pepper.

(B. A. Niewevityz.)

BANIPUR, the western suburb of the city of Patna, situated in 25° 37' 30" N. and 8° E., on the right bank of the Ganges. The Public Library of this town contains one of the finest collections of Arabic and Persian MSS. in India, to the number of upwards of 6,000; it owes its origin to Mawlawi Muhammad breaks Khan (died 1876), who was a diligent collector of rare manuscripts.

Bibliography: Catalogue of the Arabic and Persian Manuscripts in the Oriental Public Library, at Banepore (Calcutta, 1908...).

BANNU, a town and district of India, in the N.W. Frontier Province. Area of district: 1,070 sq. m.; pop. (1901) 226,756, of whom nearly 900 are Muhammadans. It consists of a basin, watered by the Kunram and Tochi rivers, and entirely shut in by mountains. More than half of the inhabitants are Pathans, speaking Pashtu, the chief tribes being the Marwas, Bannuti, and Waziri. The crops are wheat, gram, maize, and millet, grown by irrigation from petty canals. Except for frontier raids, the district has never been disturbed since British occupation. The town of Bannu, formerly called Edwardestad, was founded by Sir Herbert Edwards in 1848; pop. (1901), including cantonment, 1,340. It is the centre of an important military mission for the frontier tribes.

Bibliography: S. S. Thodevan, Bannu, or our Afghan Frontier (1876); Banoo Gazetteer (Peshawar, 1907); T. L. Pennell, Among the Wild Tribes of the Afghan Frontier. (J. S. Cotton.)

BANTAM or BANTEN is the name of the western residency of Java. It was also the name of an earlier Muhammadan kingdom in this district, the capital of which, Bantam, still exists on the north coast. Sërang is now the capital of the residency which covers an area of 143 geogr. square miles and is divided into five assistant residencies, Sërang, Angjer, Pandeglang, Tangerang and Lebak and in 1905 had a population of 895,390 souls including 557 Europeans, 3155 Chinese, 88 Arabs, 75 other foreigners from outside Java, and 891,541 Sundanese and Javanes. The northern half is mainly flat country,
however they are largely mixed with Javanese, whose language is predominant there and there are also settlements of Lampungese from South Sumatra. At the present day the only adherents to Hinduism are the Badawi, a small tribe in the desert highlands of Lhokk; the remaining inhabitants of this residency are all Muslims, whose customs, especially family law, have been more strongly influenced by the regulations of Islam than by those in Central Java for example. They engage only in agriculture (growing rice). Commerce and industry are very little developed and the trade with native ships from Anjar and Bantam to South Sumatra is of very little importance. Copra and Areca hypogea are exported. As the land does not provide sufficient sustenance for its thick population, many men find temporary employment in Batavia and other places.

The town of Bantam is now only a small trading-place with a native population without foreigners. Most of the larger buildings of earlier times have fallen to pieces or quite disappeared. The famous mosque alone, with detached minaret is in a good state of preservation (there is also a mosque in Kemiri and in Kasirangan). A holy well which is said to be the Well of the Prophet is in the town in Mecen, is beside it. The steady decline in the depth of the Bay of Bantam causes great inconvenience to navigation. The town of Kasirangan which has ariens in the northeast has therefore attracted most of the traffic to itself. A railway connects it with Serang and Anjar in the west and Batavia in the east.

BANU 'L-ASFAR. [See 'Asfar].

BANU ISRA'IL, the children of Israel, title of Sura xxvii.

BAONI, the only Muhammedan State in Banda-Erhar, Central India, lying between 20° 34' and 26° 45' and 170° 45' and 80° 2'E., with an area of about 122 square miles. The population in 1901 was 7,973, of whom only 2,415 were Muhammedans. The chief is descended from Imam al-mulk Ghiyath al-din, the grandson of Asaf Djalal Nāṣer al-Mulk (viceroy of the Dakhin, 1720-1748). He obtained a grant of 52 (Hindi Swaro, hence the name of the State) villages from the Maráthi Peshwa in 1784. During the Mutiny of 1857, Nawab Muhammed Husein Khan
and his son were instrumental in saving the lives of several Europeans at great risk to themselves.

AL-TABRIZI, b. ABBAS, a Muslim general. With his contemporary 'Abd Allah b. 'Umar b. al-Khatib and several others he was turned back by Muhammad on the departure for Badr because he was too young; he took part however in many other battles under the Prophet. When the latter sent Khalid b. al-Walid into Yaman to demand: the adoption of Islam by an Arab tribe, al-Bara' also took part in the expedition. During the reign of 'Umar he was sent by the governor of Kufa, al-Mughira b. Shu'ba with Hamida b. Zaid against Kazwin. The district of Albur was first conquered. The people of Kazwin called in the help of the Dailamis but had to give in soon after and the Dailamis were forced to pay tribute. Al-Bara' then advanced against Giliana, al-Barh and al-Mashhad and conquered Zanjan. He also fought in the Battle of Camel, at Siffin and al-Nakrah and later, after 'Abd Allah b. al-Mukhtar's death, some time in Kufa, went to Medina and died there in the time of 'Uthayn b. al-Zuhair.

(K. V. Zettersten.)

AL-BARA' b. MA'SAR, a companion of Muhammad. Among the seventy-five processions who appeared at the Aqaba in the summer of 622 at the pilgrimage festival to enter into alliance with the Prophet, the aged Shakh al-Bara' b. Ma'yar of Khazraj was one of the most important and when Muhammad declared he wished to make a compact with them that they should protect him as they would their wives and children, al-Bara' seized his hand, promised him protection in the name of all present and sealed the compact. In the same assembly, the so called second 'Aqaba, twelve men were chosen as preliminary representatives (nabih) of the new community in Yathrib, and on this occasion al-Bara' was appointed chief of the Banu Salama. He is also famous in the history of Yathrib, for having changed the direction of prayer even before Muhammad and turning towards the sanctuary of Mecca. When Muhammad reproved him, saying that Jerusalem was the true 'Kibla', he obeyed him, but on his deathbed ordained that his corpse should be turned towards Mecca. He died in Medina Safa, a month before Muhammad's arrival there, after presenting to the Prophet one third of his estate.

BARA' b. ABBAS, a companion of the Prophet. He is the Indian name of the 12th day of the Rabi' al-Awwal. It is a compound word of Bārā', 'twelve', and Wa'fār, 'death'. It is observed as a holy day in commemoration of the death of the prophet Muhammad. His life and teachings are on that day generally excited in private houses and mosques throughout India, and is a great day of rejoicing for the Muslims of the whole world, who consider it at the same time as the day of his birth. For more details see Az. Waisi.

(M. Hidayyat Hosain.)

BARA' (b.) means 'discharge', 'liberation', 'enfranchisement'. In Syrian Arabic it means 'privilege, passport' or 'diploma'; thus the bishop-sanctioned by the Ottoman Government receives a 'huruf of investiture', that is permission to exercise his office.

The word appears in an important passage of the Koran, at the beginning of Sura ix, where the Prophet commands his followers to make pilgrimages and proclaims that a truce should be observed during the holy months. This passage is not expressed with absolute clearness and its interpretation gives some trouble. On a first reading the most simple explanation might be that Muhammad should give one another a truce during the sacred months devoted to the pilgrimage to Mecca. This is not however the meaning admitted by the most authoritative commentators: Zamakhshari explains that a truce had been made with the pagans of Mecca and other Arabs and that they broke it with the exception of the Banu Dairra and the Banu Kinata; the Prophet then announced to the believers the following revelation from God: "You are free from any obligation to the heathen who have broken their pledge". Maxüll (Livre de l'envertement, p. 360) thus paraphrases this important passage: Abû Bakr b. al-Siddiq, was entrusted in the 'I-Hidja with the command of the pilgrimage and Sûra Bara'a was revealed to the Prophet at the same time. He had the honour of the seven verses announced by 'Ali b. Abû Tālib ordering him to proclaim them before the Moslems when they would be assembled as沐里: 'Let them know', he said, 'that no unbeliever shall enter into Paradise, that after this year no idolater shall make the pilgrimage, that no one shall again run naked round the Ka'bah, and that whosoever has a compact with the Prophet shall take note of the period named in it; allow four months from the day of assembling for each one to return to security, after which there shall be no obligation binding with the idolaters nor any compact made with them.' These verses are referred by tradition to the ninth year of the Hijra.

BARABA, a steppe in Western Siberia, between 53° and 57° N. lat., is bounded on the west and east by the ranges of hills on the banks of the Ishir and Ob (Obi). The largest of the numerous salt lakes of this steppe is the Cansu. The ground is as a rule marshy, so that traffic is rendered very difficult in the wet season, but not generally unfavourable; the steppe appears to be a steppe is described as being particularly prosperous. The native Tatar (Turkish) population is called Barabint's by the
they, for the most part, belong to a certain brotherhood, the Tarîb al-Khatmîya, a branch of the Egyptian Ahyadîya. Their present head is the Şâhid Mirghâni, after whom the official in Cairo is also called Mirghâni. As their fondness for cookery is strong, they live together as a rule; whence the Egyptian proverb, said of a heavy rainfall: magharef tarabâh, "it rains Barâda." On their land and copious history see the article NUBIA.

Bibliography: A. von Kremer, Ägypten, 100 ff. 551; Schweinfurth in Baslecker, Ägypten, 6th edition, p. 221; Socrate Spino, An Arabe-English Vocabulary, sub voce; see also the article NUBAI.

BARÂDÂ, a famous river of Damascus, often mentioned in modern poetry; the older poets, even those of the Umâyяд period, mention it more rarely. Its real source, as the Arab geographers well knew, is in Ashtilaman, immediately below the watershed, west of Zâhadât; it traverses, with many windings, the fertile plain to the east of this district, forms the waterfall of Tinkûy and plunges into the deep ravine of Sûk Zâdî Barâdâ, the ancient Abîla. The waters of the abundant spring 'Abîn Fûjâ double its volume and support luxurious orchards on its banks. Then on entering the plain of Damascus it breaks through an exit for itself which has been artificially enlarged. There it is divided into five arms or main channels—they are called waqf—on the right, uppermost, Zâdî (probably widened by the Caliph Yûsuf 1), Draâr, on the left, Bârjâs or Bârjâs (a form attested by poetry) and Kasmîrî, the middle arm preserving the name Baradâ; Arûzî (about 570) only mentions "maghâr IV Fassîma," the Nahr Zâdî having been made after his visit. After this division into five branches the Barâdâ, like a miniature delta flows in and around Damascus, spreading fertility and freshness everywhere. The rich oasis of Gîhûr owns its existence to it; in Damascus it fills the tanks which are found in every house. Below the town it collects its forces again and about 14 miles below Damascus it is lost in the lake of 'Atûba, on the verge of the Syrian desert. A double confusion with the Awdî and with one of the tributaries of the Chûr is improbable. The river is carefully so called by the Muslims that one of the arms of the Barâdâ flows into the Jordan, a mistake easily arising from the fact that Bârjîs is the name both of the source of the Jordan and of one of the canals of the Barâdâ. A village named Baradî is mentioned by Yâkî to the east of Alâppo. It is probably the Baradî in the Dâhil Siyây. Bibliography: Hamân ibn Tâlî, Tahâf (ed. Hirschfeld), xii, 10; Yâkî, 556—558; Madîlî (ed. de Goeje), 184; Dâmilî (ed. de Goeje), 143; Dimâlî (ed. (H. LAMMERS.)

BARADÀN, a town in the fûl. According to the Arab geographers it was situated 4 parasangs (= about 16 miles) north of Baghûdîl on the main road to Sûmarî and at some distance from the east bank of the Tigris, a little above the confluence of the Naher al-Khâli and the
latter. The Khalaf estal, a branch of the Nahawân (or Dyella) flowed immediately past Barâdût. The Caliph al-Maâjir held his court here for a brief period, before he definitely removed on building a new capital on the site of the modern Baghdad (see Nâbîy, gymr. arab., ed. of Geiger, vii. 256). There was a bridge in Baghdad; a street and a gate (after this a cemetery also) in the eastern half of the town called after Barâdût which was two post stations distant; cf. le Strange, Bagdad during the Abbasid Caliphate, (1900), p. 360 (Index). When the author of the Marâjd made his extract from Yahyâ (about 700 A.D.), Barâdût was quite deserted and unknown. It is doubtless to be sought for in the present mound of ruins at Bedrân, the position of which agrees admirably with the statements of Arab authors. According to R. Kiepert's map in W. Oppenheim's Von Minâtur zum Persisch. Gez. Bedrân is situated under 33° 30' N. lat; it is also given by Petermann and the name is corrupted from Barâdût (Baradût) as Cernic actually computes. It is probable the El Limes of the equinoctial line (Baradh-Tepû) is likewise called Baradût (Barâdût); see Ritter, Erdkunde, i. 491, & sq.; Cerníc in Petermann's Geogr. Mitteln., Erg.-Heft 44, p. 38.

Bibliography: Bibl. geogr. aráb. (ed. de Geiger), passim; Yahyâ, Minhâmim (ed. Wüstenfeld), i. 351 & sq.; Marâjd, Lex. geogr. (ed. Juyauli), i. 168; M. Struck, Babylonien nach den aráb. N. 5. 44; p. 34, 36a. (M. Streck.)

BARÂHIMA, BRAHMÁNA. The Arab anthems who was best acquainted with, indeed one might almost say was, was a man living in Western India, was al-Bârâhima. His great work on India (Indâa, ed. and transl. Sacchi 1888; new edition of transl. 1910) testifies to his study of this country, a study for which he was qualified by exceptional gifts in the diverse realms of philosophy, literature and science. He speaks as an authority on the Indian castes, or 'colours', on the Brahman and their manner of living, their books, their religion and their science. Al-Bârâhima had studied Sanskrit and translated several works from Sanskrit into Arabic. He knows what the Vedas and Purâñas are; he even understands Sanskrit prosody. He is familiar with the metaphysics of Brahmanism as well as with some of its myths. He has interesting notices of the egg of the Brahman, the life of Brahman, the periods in the life of a Brahman, ie, the seven stages of existence, the rewards of actions in the various worlds and salvation. Al-Bârâhima wrote his book in Ghâns, that is to say in a centre where the Hindu population was numerous (about 10,300 A.D.); he had previously travelled in the Panjâb. Excluding this fine work, the information of Arab authors on Brahmanism and India is very meagre. Exact details, accurate information are lacking where one would expect to find them. They are not to be found in a good historian like Mas'âdî nor in a specialist like Ibn Silâh, nor in the narrative of voyages, especially devoted to India such as the Afghân al-Hind of the Shâhin al-Tâbiîn. It must however be mentioned that part of India least unknown to the Arab voyagers is Ceylon which is a Buddhist country. Masâ'îd mentions two Arab authors as having written on Indian sects: Abu 1-Kásim al-Balîkî and al-Nâsir b. Mâlik al-Nâwâbghât. This historian says that the Brahman are descended from Brahman, a kind of priest-king and scholar who, having assembled a congress of sages, established religion with their help, laid down the theory of astronomical cycles, invented figures and calculated the procession of the equinoxes. The life of the world, according to his teaching, lasts for 12,000 times 36,000 years; it develops in the earlier periods and declines in the later periods. In another passage this latter is supposed to be 70,000 years and is called akabarwâd.

According to Shahrâbânî, Barâhima has declared prophecy for several reasons which are given. His summary which gives no information about the Hindu religion is probably the summary of some controversy between a Muslim and an unbeliever on the doctrine of prophecy.

In Arabic literature, the Brahmanes are placed between the philosophers and the soothsayers; in the Kâthî, the Brahman Bidpô is depicted merely as a man of good counsel, capacity and foresight. "He had got so great a reputation for wisdom, that he was consulted on all difficult questions". — "The Indians", says the author, "have men who devote their lives to religion and men of learning called Brahman; they have poets who live at the courts of kings, astronomers, philosophers and soothsayers." Shahrâbânî makes the astrolæops and soothsayers a class of Brahman. In the description of these occupations the word is used in a more general rather than Brahman who are particularly noted. The asetics whose manner of living is well described and who have "human skulls for bowls" are called Bahâqas or Bâkat; this word is a corruptions of Bhikshu (see Mervilles de l'Inde, ed. van der Lieth, Index). — The Persian poet Shâîrî and others give the name Brahma to fire-worshippers (Bâstân, transl. Bastér de Meynard, P. 231).

BARÂHUT (BARÂHUT, also written BURÂHUT), a Wâdî in Hassânawî, on the verge of which, at the foot of a volcanic mountain, is the famous Bâr Bârâhût, the spring of Barâhût. According to the native accounts this is a fissure 33 feet long by 35 broad, at its entrance filled with burning sulphur. The smoke of the spring and the bubbling of the spring (the noise of the volcano) have given rise to the story that the souls of unbelievers predestined to hell are waiting there and cry out in the night-time: "O Dama! O Dama!" in tones of woe. There used to be a proverb, as Humadî tells us in his Dala'ir among proverbial phrases current in the various districts (probably said) of one who had
died an unbeliever); *God has obliterated his footsteps, annihiliated him and placed his soul with the souls of the unbelievers of Baraht.* The Greeks connected this spring with the Styx; whence the geographer Ptolemy calls it Strige sive mathes euvz. The Romans expanded the legend and located here the two brothers from Ctesa, Mimos and Rhindamareis, the judges of the underworld and Phleganes. One of the most prominent, in his list of hundreds of the tribes of Ardeis Felix, the Minaei and Rhindamareis in the neighbourhood of the *Stygean aqua fonte*.

Not far from it is Baraht, the tomb of the patriarch Had, who was sent by God as a prophet to the unbelieving people of Ad and was slain by them. The natives say it is a great heap of stones near which is a simple mosque which is said to contain the ashes of the prophet Had. It may be said to be the most important place of pilgrimage in the whole of South Arabia, to which pilgrims go from all parts of Hadramaut on the 11th of the month of Sha'ban and offer prayers in which mention is made of the prophets Nuh, Is'haq and others. At the same time a great market is held, and for the rest of the year the place is quite deserted.

Baraht has not yet been visited by any modern traveller. The explorers Adolph v. Wrede, who was in Wadi Dawan not far from Baraht in 1843, on his famous journey of discovery, and Leo Hirsch, who travelled in Hadramaut fifty years later, were both unable to carry out their plan of visiting this valley.

**Bibliography:**

**BARAKA (6.) Blessing.** The idea associated with this word plays an important part in Muhammadan repetitions. It has become a magic means of obtaining all sorts of good fortune, in particular the healing of diseases and infirmities, not only from God but also from holy men and objects which are supposed to possess the power of conferring blessings. By the mere touch these may be transferred to others. This is the origin of the eastern *Il-Tabarakh (to seek a blessing) of vegetables, fruits, holy objects, the relics of saints, the clothes, which they wear in their lifetime and of sources also holy men who are still alive and everything connected with them, are most powerfully. This also explains the custom occasionally found of the head of a druzed order spitting in the mouth of newly initiated members.

**BARAKAT** was the name of several Sharifs of Mecca. — Baraht, b. Husam b. 'AbdAllah ruled with his father from 899 (1400) and alone from 899 (1400) till 959 (1455) with a few brief intervals. This clever and accomplished prince followed a cautious policy towards the Circassian Mamluk Sultan of Egypt; nevertheless, the most important in its consequences of the events of his long reign was the despatch by 'Aliyuk of Abi Hasmadur and a permanent Turkish garrison to Mecca. The foundation was thereby laid for the dual control of the government: Sharif and Governor, cf. *Chronik der Stadt Mecka*, ed. by Westenfeld, ii. 230 et seq., 396 et seq.; iii. 216; C. Snouck Hurgronje, *Mecca*, i. 98—100. — The ruling power passed from father to son to Baraht b. Muhammad 959—964 (1455—1524), grandson of the above mentioned Sharif. The first fifteen years of the reign of this prudent and cultivated Sharif were much disturbed by the wars and intrigues of his brothers; more peaceful times afterwards set in. His friendship with the Egyptian Sultan al-'Qadir did not prevent him from at once recognizing the sovereignty of the Ottomans in 924 = 1516, so that this year an important chapter in the history of the city was opened. A sudden disturbing effect on the Hijaz. On the death of Baraht he was succeeded peacefully by his son 'Ali Namusai. Cf. *Chronik der Stadt Mecka*, ii. 344 et seq.; iii. 444 et seq.; C. Snouck Hurgronje, *op. cit.*, l. 101—104.

Among the sons of 'Ali Namusai another Baraht deserves mention as giving his name to the Dhow Baraht, one of the three families among whose relic the further history of Mecca centres (C. Snouck Hurgronje, *op. cit.*, l. 119). — In 1082 = 1672 a secon of this house, Baraht b. Muhammad b. Hisham, was set up against the Dhow Zaid, the ruling branch of the Sharif, by the Magnificent Muhammad b. Sulaiman who had been sent with full powers by the government of Constantinople to restore order in Mecca. He was only a prince in name; the foreign potentates had the real authority. The fall of the latter was followed soon after Baraht's death in 1093 (1682) by the overthrow of the Dhow Baraht; they still continued to play a part as claimants to the throne for over a century. Cf. Muhéfiz (Cairo 1284), l. 436—450; F. Westenfeld, *Die Schriften von Mecca*, p. 72 and 73—80; C. Snouck Hurgronje, *op. cit.*, l. 125 et seq.

**BARAKZAI** the clan name of the branch of the Durrat tribes now ruling in Afghanistan (*q. v.*). The clan first became prominent at the beginning of the sixth cent. in the person of 'Abdur Rahman, the half-brother of 'Abdur Rahman, who many years of fighting, assuming the title of Amir in 1835, and founded an Afghan dynasty.

**Bibliography:** [See art. AFGHANISTÁN].

**BARÁMIKA,** the name given to certain Egyptian dancers; see MAWÁZÍT.

**BARAMI,** the ancient name of the town of Balatnahar (*q. v.*).

**BARNI, DíVÁ-AL-DIN,** author of *Tarikh-i Pirbughád,* a history of the kings of Dillih from the accession of Tan äl-Din Buhí to the death of the last Amir, which he wrote during the sixth year (756 = 1357) of the reign of Filàt Sháh; he was born about 684, and owing to his exten-
sive reading, retentive memory and the charm of his conversation; he became a favourite companion of Sultan Muhammad and Hasan Dihlawi, and like them both, a spiritual disciple of the saint Nizâm al-Dín Awlîyyâ (q.v.). Barâün did not commence the writing of his history until he was upwards of 70 years old, and completed only 14 out of the 102 sections that he proposed to devote to the reign of Firuz Shah. This period of 15 years, for which he was the chosen prince, he does not appear to have enjoyed his favour, as he died in great poverty, probably shortly after the date (738) to which he brought his history. He was buried near the shrine of Nizâm al-Dín Awlîyyâ, though local legend indicates a tomb in Bassor (the modern Balandshahr) as being his.

BARANTA. A Central Asian Turkic word of uncertain meaning, which seems to appear in other dialects, which is applied to the predatory raids of Turkish nomads. The importance of this peculiar feature of nomad life, as well as the conditions of warfare (Zjaw) necessitated thereby, has been most fully described by W. Radloff (Aus Sériern, 2nd ed., Leipzig, 1893, I, 566, 26 and 354, 355, 364). As long as there was no strong governing authority in the steppes, as long as the force of legal decisions depended only on the personal authority of the judge and the goodwill of the parties concerned, the nomads had frequently no other means of redress than carrying out the law themselves. As the whole tribe is held responsible for the transgressions of an individual or group of members of the tribe, the legal power has been intrinsically revengeful itself, not on the guilty ones themselves but on other members of the same tribe more accessible to it; the victims of such a "Baranta" consider themselves justified in retaliating on whatever section of the "sârâstâchî" they please and so on. Such feuds may last for decades without the general prosperity of the tribe being prejudiced by these continual "skirmishes." Radloff observes that it is just "in the most troubled times when the nomads increase in numbers and riches." A regular system of administering justice finds no place in nomad life and there can be no organized provision against unforeseen natural calamities, the Zjawr is often the only means whereby a cattle-breeding people entirely dependent on nature can bear the pangs of subjection and degradation. Under the rule of a regular system of government like the Russian, where individuals are not allowed to take the law into their own hands, it is becoming more and more difficult, for the Turk tribes to retain their tribal life and to retain their prosperity. (W. BARTHÔH.)

BARÂTHA, the name of a place prominent in pre-Islamic Arabia, within the area covered in later times by Bagdad with which it was naturally later almost entirely absorbed (see also the article BAQTRIYÂ). It lay a short distance from the little town of Muhammed (to the southeast of it), just below the point where the Yâzdi Karkheh, the small canal which waters the commercial quarter of Karbîl, left the great navigable Tigris Canal. This suburb was only separated from Bagdad proper, on the southern part of the western half of the town, by a cemetery and palmeries. The mosque of Barathû was long celebrated as a Shi'a sanctuary, because according to a tradition, which is not controvcrized among the Caliph Ali prayed on its site and bathed near it, when he was on the campaign against the Khârijîs (57 - 68). Another account places the place where he bathed in the old market quarter of the town (Bâk al-ârâf) which lay between the Bârâ gate of the Round Town of al-Mansîr and the bank of the Tigris. A place where Ali praised was also pointed out there. Under pressure from the orthodox party, the Caliph al-Mahdî (922 - 932) had the Shi'a sanctuary in Barâthâ razed to the ground and a Sunni mosque was built on its place during the reign of his successors, Muhammed and Mustâsîn. In 13th century the site of the middle of the (9th - 10th century) the latter was one of the three great Friday mosques of the caliph's quarter of the town. When Yâkûr wrote (625 = 1228), Barathû, like most of the west side of Bagdad, was inhabited, and only a few fragments of the walls remained of the mosque there. The name Barathû is Aramî (Barathî) and means "the outer"; cf. thereon Finckel, Die Arab. Fremsprâcher im Arab., p. 22.

BARBER, the Arab name for the priests of Egyptian temples. Every pagan temple and every ancient building is called Barb (Khit batkor ou haît magh. jawzâw; Ibn Djibrîl, Nîzâmî, ad. de Goeje, 64, 3). The word is borrowed from Coptic in which kâpâ means temple. Among tourists and geographers the name Akhîm is the Barâth (the plural form, barbât also appears) par excellence. Makhtûr, Ibn Djdîla and others use the word while describing Akhûn. This word is applied to all temples and even to pagodas. The word has survived in Egypt in a series of place-names. We find it three times in Upper Egypt in the form al-Beirûth, four times in Neba in the form al-Beirûth, but the same word is meant (Bouquet Dictionnaire Géographique, p. 123). Collection of passages in Dovy, Supplement; Glossary to Idrîsî, ed. Dory and de Goeje, with translation, p. 54, note 1, Ibn Djdîla, p. 158.

BARBAROSSA. [See KHAB AL-DIN.]

BARBARY STATES, has since the end of the middle ages been the name applied to the various piratical States of North Africa, mostly inhabited by Berbers. [See the article BERBERES.]

BARCELONA, the Old Iberian Barcino (cf. RomanBarcino or Romsellum), which has however nothing to do with Heraclea, an ancient town of the Lecani, gradually took the place of
Tarraco = Tarragona, the capital of the Roman northeast Spain (Hispania Tarraconensis) which lay to the southwest of it. It was captured by the Arabs as early as 715 in their first invasion under Musa b. Nuqtit. The Arabic name is Barghulim and (more frequently) Barcarlin (whence the modern Barcelona) from the late Latin Barcinalis (Barcinalis is found in Orosius, Barcelona in the geographer of Ravenna, cf. Hubner in Pauly-Wissowa, s.v.). Barcinalis is more rarely found, from which the same name-barcarsh by which the king of Aragon-Catalonia is in later times frequently briefly described (cf. Geiler, Michaels Abhandlungen, 1907, p. 189, n. 1). In 155 = 801 it was conquered by Louis, son of Charlemagne, as Viscount of Aquitaine and hemeforth was the chief town of the Spanish marches of the kingdom of the Franks and from 888 of the independent marques of Barcelona or Catalonia. In 242 = 856 Barcelona was temporarily occupied by the Arabs (al-Bayyin al-Maghribi, ii. 98), and in 985 it was stormed by them for the last time by the great Almanzor but soon afterwards regained by Count Borrell I. in 987 (Dossy, Historia de los Mausoleos d'Espagne, iii. 199). In the 10th century (1137) it was incorporated in the kingdom of Aragon. The ecclesiastical subordination of the Mozarab bishops of the Balearic Islands (q.v.), and of Denia and Orihuela to the (Arch) Bishopric of Barcelona by the Muslim king Al I b. Madjalik al-Amir of Denia by a decree in 450 = 1058 is worthy of mention. Simonet, Historia de los Mausoleos d'Espagne = Memoria de la Real Academia de la Historia, tom. xiil. (Madrid 1905), 651—654; Campaner, Impresiones historico de la dominación árabe en las Islas Baleares, (Palma, 1888), p. 82—83.

(C. F. Seybold)

BARDASIR (See KIEMAN, p. 520.)

BARDAHA', Aramaic Farhat, once the largest town in the Canaan, now a village and most situate on the Tiber, about 14 miles from the confluence of this river and the Karna. A strong fortress was built there under the Sàstahim Kasilh 1 (488—511 A.D.) and Farhat (Barda'ah) gradually outstripped the ancient capital of the land of Alashi (Atrak, Kanasik (Arab, Kateh). In 628 the inhabitants of Farhat had to flee before the Khazars but returned to their town on the withdrawal of their enemies. Captured in the reign of the Caliph 'Othman, destroyed soon afterwards, and rebuilt under 'Abd al-Malik, Barsha's was during the Omayyad and 'Abbasid period the residence of most of the Arab governors of Arumna. Hassan b. Kahisl, governor for the Caliph al-Maqar had a garden laid out there, which as well as some states (in the surrounding district) bore the name of this governor as late as the 13th century (Bellinioni, ed. de Goeje, p. 210). Irakhl (q.v. de Goeje, p. 182) says that the town was about a Farhat (4—5 miles) in length and breadth; there was no larger town between Irakhl and Khorasan except Ray and Isfahán. The Friday mosque with the treasury and the palace of the governors were in the town itself, the bazaar in the suburb. The Sunday bazaar at the *Kurd, gate,* (nâb-i-arâd)" was especially popular. There were numerous fruit gardens in the neighborhood; silk was exported thence to Khuzistan and Fars. Most of the buildings were of baked brick, the pillars of the chief mosque partly of the same material and partly of wood. Ibn al-Athir's (ed. Tornberg, viii. 305) account of the plundering of the town by the Russians in 372 (975-976) is well known; he also mentions the Armenian Museum and Kalkanânti (4th century A.D.). The Russians had to leave the town six months after they had taken it because of a pestilence which broke out in their army. Barsha's never seems to have recovered from this blow, owing, Ibn Hākawī (ed. de Goeje, p. 241, 48) says, to the "unrighteousness of its rulers and the (abound) place of the licentious", Muškadān (ed. de Goeje, p. 375, 41) still describes Barsha's as the "Bashäd of this country", but points out that in his time the walls of the town were in ruins, the surrounding country abandoned and desolate. In Yākhi's (r. 559) time, Barsha's as at the present day was a village surrounded by numerous ruins. In the period of Mongol anarchy the town appears to have revived somewhat; at a high ancient town built on many inscriptions" which date in 1261, during H. Dorn's visit, were undecipherable, belongs to this period and still survives; Khaniykh thirty years previously, was quite able to read the date 722 (1322). The final destruction of the town is attributed to Nādir Shāh.

Dorn); Illustration of the tower: Athas u ふねてつてん, B. A. Dorni (St. Petersburg, 1895), Plate vi. (W. BARTHOLD)

BARDO, residence of the Beys of Tunis, lying 14 miles to the southwest of it. The site of Bardo, famous for its coolness in summer, appears to have been early visited by rich citizens who had gardens and country houses here. Here was the park of Abū Fāhr laid out by the Hafid Emir al-Mushtaq (1242—1277) with its groves of rare trees, its lake watered by the spring of Zaghwan, which was large enough to be sailed on by the dances of the Harun in boats, its summerhouses inlaid with mosaic and decorated with woodcarvings (see Ibn Khaldūn, Histoire des Berbères, transl. de Slane, ii. 330). In the 18th century the rulers often resided here. The Turks continued the traditions of their predecessors. The Chevalier d'Arville describes with details the "house of the Bards or of Bardo," built by the Bey of Mahomet Faissal, in which the treaty relative to the establishment of a French factory at Cape Negra was signed (1669; d'Arville, Mémoires, i. 47). The Beys of the Hanni dynasty chose Bardo as their favourite residence; Hassan b. 'Ali (1705—1740) built a mosque and a palace there. People who visited Tunis in 1724, thus describes their residence: "It is a great mass of building, almost square, enclosed by walls and flanked by several square towers. — The area covered by the
palace is about 1200 years in circumference. Besides the Bey's residence there are others for the princes and the diplomatic corps. Relation d'un voyage sur les côtes de Barbary, lettre ii, p. 26 et seq., "All Pasha had the whole surrounding by a deep ditch and a wall furnished with loopholes for marksmen and embasures for artillery. Muhammad Bey spent enormous sums on it. In the building and ornamentation he employed foreign craftsmen, especially Italians who worked alongside the Turks. (Cf. Muhammad M. M. Youssef, Michea el-Melhi, Chroniques, trans. by V. Serres and Muhammad Lariam). In the sixteenth century, Bardo was neglected by the Bey. When it was occupied by the French, the greater part of the buildings were falling into ruin. These were cleared away as well as the surrounding wall. Only the Bey's apartments were preserved with the mosque and the Istalam which has been turned into an archeological museum (Musée Ahlou). Not far from Bardo is the palace of Kasr Saaid where the treaty of the 17th May 1881 was signed which established the French protectorate in Tunisia, a treaty wrongly called the Treaty of Bardo. (G. Yves).

BARFURUSH, also called BARGHISH, properly Bâgroun, founded in 1148, a town in the Persian province of Markazi situated in a wide district on the river Bahlil on the road from Soltanih to Amsair, about 18 verst from the roadstead of Messad-el-zeir on the shore of the Caspian Sea, not known to the Arab geographers by this name; they mention a place here called Manjir (cf. Yâli, Nwâjâm, i. 623). The inhabitants say that the town was built in 1093 (1012), but it is first mentioned by Ahmad Râzî under the name Bâfurush in the 12th century. During the reign of Fath Ali Shah it attained importance although 'Abbas I had previously laid out; pleasure gardens and summer palaces here, the remains of which on the south side of the town still bear the name Bâghl-e-Sabeh. Bâfurush is one of the most important trading centres of Persia; the principal exports are silk, dried fruit, wool, and wines; the population is estimated at 50,000. Near it lies the village of Shaikh Tahir, which has become famous in the history of the Bible.

BARGHISH, S. SAID, S. SULTAN, SAVLAM of ZANZIBAR, succeeded his elder brother Maljid on the 7th October 1870 and reigned till his death on the 27th March 1888. On the death of his father in 1856 on his way home from Oman, he had attempted to seize the throne and even after the official recognition of Maljid he again attempted in 1859 to stir up unrest with the help of discontented Arabs. He had a hairbreadth escape disguised as a woman under the protection of his sisters, one of whom, Sultan, afterwards Emily Rüth, has given a very vivid account of the incident. He was finally forced to surrender by an English gunboat and was banished to Bombay where he spent nearly two years. Returning to Zanzibar, his relations to his reigning brother Maljid were defined under English supervision. On the latter's death, he was seized by the English promising the English agent to recognize English rights there. It was during his reign that the whole anti-slavery campaign in East Africa was carried out. After years of struggling and fruitless endeavours (Sir Barth Forbes) he was forced under threat of a blockade by the English government to sign a decree by Sir John Kirk, to sign a decree on the 5th June 1873, forbidding the slave trade throughout his territories. As a reward and also to let him see the relative powers of England and Zanzibar in their true perspective, he was invited to London in 1875. On this occasion he also visited France and Portugal. Soon afterwards, their colonial policy brought the Germans to his court and in 1884 German protectorate was declared which he had to recognize. Wide districts to which Barghish had a nominal claim were thereby lost to him. Towards the end of his reign he also came into conflict with the Portuguese and the dispute was only settled after his death by a German-Portuguese boundary commission. Shortly before his death he sought relief in 'Oman from his troubles but was unsuccessful to them soon after his return. He was succeeded by his younger brother Khalifa.

Barghish was from all we know of him as an energetic and clever but violent man. The probably rather one-sided picture that Emily Rüth gives of him, is anything but pleasant. Though hostile to Europeans, he had to endure the strictest European etiquette. He signed the momentous transformation of the whole political structure of his country by the abolition of slavery was carried out. Nevertheless its possessions and its revenues have only gained by the change through the increasing trade with Europe and India.

BARGHUTH, pl. Bargouth, the name of the town in Arabic, applied by the people of Syria to the little Turkish coin of 1 piastre; so called on account of the ease with which it slips out of the hand. — Nahr Barghouth is a stream in the Syrian coast which flows into the Mediterranean little to the south of Saida (Sidon); it is the Asuleion of the ancients.

BARHEBRAEUS (BAR-EBRAI, IREN-AEI), 1266-1321, Gregorius, Arab-Lusitani, Arab historian and the last classic in Syrian literature, was born in 1266 at Melchians-Malatiya, the son of a baptised Jewish physician; he thus received the surname, not very agreeable to him, under which he has become famous; to this also was due his knowledge of Hebrew, an accomplishment so rare among his contemporaries, which enabled him for example to study a Midrash on Joseph in the original, (cf. Ekhaim, ed. Rostum, 49). Although from the beginning destined for a priestly calling, which was the only honourable line for a Jew, he also acquired a knowledge of medicine under his father's guidance and studied Arab works on profound sciences. The disastrous effects of the Mongol invasion which swept through his native district in his youth, were mitigated for him and his family by the fact that his father in his medical capacity gained the favour of a Mongol general, whom he accompanied to Kashmir. When the latter had dismissed him he returned
to Antioch where greater security was afforded as
a result, was still in the hands of the Franks.
Here Barhebraeus began his ecclesiastical career as a monk but was soon appointed Bishop of
Ghoba on the 14th Sept. 1246.
When a schism broke out soon after, in his
church on the election of two rival patriarchs, he
was translated to the more important diocese of
Aleppo but deposed by the chief of the opposition
party; by his death he was finally able to cometo
an understanding with him. In 1264 he was appointed
Ma'ayrûn or Catholics of Tagrit by the new patriarch Ignatius and thus became head of the
Jacobites in what had formerly been the Persian
kingdom. His office required him to spend most of
his life in travelling, for his diocese had been much
affected by Mongol raids. He died in the
night of 29th July 1286 at Marâqig in Allhār-
dādūn. In the midst of the exhausting demands of
his ecclesiastical office, Barhebraeus found leisure for an extensive literary activity, which
though it created nothing new, epitomised the whole
intellectual culture of his people in its
mirror. We cannot here go into his works in the
domains of theology, philosophy and Syrian
grammar and his Syrian poems. The first part of his
unpublished book, which treats of political history
from the creation to his own times, is in work most
connected with the culture of Islam. He
used Arabic and Persian sources for Islamic
history; for the Mongol period he quoted
(Chronicon Suri, ed. Bedjan, p. 556-558) the Persian history of
Shams al-Dîn Šâhâb Djâwâd (died 685=1284).
Shortly before his death, at the death of some of his
prominent Muhammadans he prepared a shorter
translation of this work to which however he
did not additons in Biblical history, a knowledge
which is presupposed in the Syrian Chronicles,
and on the mathematical literature of the
Arabs. This work is entitled Muḥâbble
Turāb al-Dawâl (History of States) and
written by Gregorius Abū 'l-Farahīdī, ed. E. F. Medmore, Oxwixen 1663, Suppl. 1672, ed. Sâlihân, Beyrouth, 1890.
The first and third parts of the work which
were not translated into Arabic, give an account of
the history of the Christian Church in the
West under the monophysite patriarchs to the
year 1288, and in the East under the monophysite
Ma'ayrûn of Tagrit, including the Nestorians also
to the year 1288. The second section was
supplied with an appendix on the life of the author
by his brother Dârâshgil and a continuation to the
year 1288. Later writers have continued the
first part to 1495 and the second to 1496 (Chron,
Lamy, 3 vols. Lovain, 1872-77). His philosophical
studies also were to some extent based on
Muhammadan sources, he translated into Syrian
the Shia's Kifâ'ah al-Jâbârîn, Lâlîl al-Din al-
Alâ'în's Zudât al-Alâ'în. His medical works, of which an incomplete
translation of Ibn Sinâ's Kanûn and an abbreviated
translation of al-Ghâlîn's al-Adâwâ'ah al-mu'minîn
may be mentioned, are likewise mainly of Arab
origin. His Kifâ'ah al-Tâmmâ'în Mâhâ'în Dâris
(Laughter Stories, Syr. text with Eng. translation by
E. W. Rudge, London 1896) is connected with the
Arabic literature; there was an Arabic translation
of which has not survived to us, called Kifâ'ah
Dâris al-Înhâm (Paris, anc. fons 160 according to
Wright, op. cit. 281. n. 2, not in de Slane).

(C. Brockelmann)

Al-Hârîrî, one of the names of Allah. [See Al-
Lât, p. 365]

BARÎD (4.), obviously a loanword from the
Latin (coerules) "past-animals", "past-horses"; thus
"coursiers"; it further means the institution of the
"post"; finally the distance between two
"post-stations", reckoned in Persia at 2, in western
lands at 4 (or 4) of 3 mill.
Not only the name but the institution itself in
the dominions of the Caliph was borrowed from
the Byzantines and the Persians, as is confirmed
by Arab tradition. Even Mu'âwiyâh is said to have
taken an interest in the post service. 'Abd al-
Malik instituted it throughout the kingdom. Al-
Wâlid made use of it in connection with his
building operations; 'Umar II had khâs limit
on the Khurasân road for the post. The "Abdallâh
even in their revolt made good use of the post.
It is naturally Hârîrî al-Râshîd, who is credited
by the Arab historians, with having organised
the postal service on a new basis, through his
famous councillor, the Bâmmûdî al-Yâ'âqîn. Like the Roman
curricula postalis, the state post was meant to
serve only the interests of the state, not that of private
individuals. Its purpose was not only the bearing
of news, but also the conveyance of official and
even of small bodies of troops and the transport of
the baggage of the court and government officials.
The animals used in the service were, besides
horses, men and camels, on occasion required.
The head postmaster, Žâhî al-Barîd, gradually
acquired the office of chief supervisor of the
provincial officers, a position which under
monarchical rule was liable to be degraded to
malleable espionage, but which might also in certain cases
be dangerous to the princes themselves. It is to
the organisation of the postal service under the
"Abdallâhs that we owe our official lists of
stations, some of the oldest and most valuable
works of Arab geographical literature.
The Byzantines are said to have closed the post
routes to Bagdad in the interests of their
revolution. In any case the regular service suffered in
the turmoil of the following centuries. The institu
tion of the post did not however come to an end.
The efforts of the Byzantines in connection with
the camel-courier service and the pigeon post are
particularly mentioned. When after the Crusades
the great Manûlîk Šâfi'î al-Zâhîr
Bâthîrî (I), began to unite the forces of Islam in the
East, he relied on the reorganisation of the
postal service as one of the most important means of
closely connecting up the state with its centre.
In 659 (1264) he again reorganised the post
service and stationed postboys and horses at cer,
tain distances along all the principal highways of his kingdom. Still, however, the post was only used for the government service and the expediting of officials and couriers; besides it for the sending of news to the government pigeon post and signalling by fire was one of great importance. A new institution was then that of a regular post of weekly mail from the provinces to Cairo. The courier rode from Cairo to Damascus in four, sometimes even in three, and to Hala in as little as five days. It is worthy of note that in the Mamilik period special arrangements were made to ensure the conveyance of snow from Damascus to the court. By the building of khams, the digging of wells and the security of the roads, private trade also received a great impetus. That the later Mamilik Subans as well as other Oriental rulers did not neglect the postal service is shown by the khans which still may be seen on the old roads e.g. on the famous via maris from Damascus to the west. From Haditha Khafs to its Dhiban-Namit it may be concluded that the Ottomans also devoted attention to public traffic.

On the modern postal service in the east cf. the article al-Safi."
BARBAKA. — The district of Barba, a part of the Turkish Wilayet Benghazi (q.v.), is a wide chalk plateau from 1200—1600 feet high and about 20 miles broad. The rolling and hilly slopes fall abruptly towards the Mediterranean from which it is separated only by a narrow strip of lowland, while in the north it sinks very slowly down into the Libyan desert. The edge of the plateau is formed by a line of heights which under the names of Djebel Eriku and Djebel el-Dakar ran from East to West for about 180 miles. At Ma-rabut Siif el-Hamri they attain a height of 2800 feet and around Khoms (Cyrenaica) they reach their greatest height 3500 feet. Their northern slopes are covered with red earth which has given this part the name of Barba al-Hamri (the Red Barba), while the terraced northern slopes are covered with a grey sand, whence this part of the plateau is called Barba al-Hajja (the white Barba).

The configuration of the coast which describes a great semi-circle convex north from Mokhtar, the most southerly point of the Gulf of Sidra, to the Gulf of Sallum, makes Cyrenaica a peninsula opened on three sides to the winds from the sea and assures it a relatively plentiful rainfall (14 to 20 inches per annum). Although this rainfall is scarcely sufficient to keep rivers flowing perennially, it supplies numerous springs. Water filters down through the cracks in the chalk till it reaches the solid rock when it again rises to the surface; it also collects in tarns shot in by the mountains which usually dry up in the heat of summer. The countless, and the terraces in which the land rises from the shore to the top of the mountains are the districts most favourably watered and have a very rich flora. Fig and lotee trees, the latter forming masses of bushes, and date palms where with green, justifying the name Djebel Akhdar given by the Arabs to this range. The general aspect of this district and its climate recall, according to travellers, the finest parts of Italy. It appears highly fitted for being colonised by Europeans. On the other hand behind the rocks of the Djebel Akhdar we have quite another picture, the trees disappear, and herbaceous vegetation becomes rarer and rarer as one comes nearer the desert.

Before the Mamluks invaded the land of Barba was occupied by Berber people belonging to the Lwata, Hwata and Awtrgha groups, who had preserved their independence, and by the Afritiqa, i.e. natives more or less influenced by Greco-Roman civilisation. All these sections of the population devoted themselves to agriculture and stock raising. In the first century of the Hijra, Arabs from Egypt destroyed Cyrene and the towns of the Antiqua but did not sensibly affect the character or the manners of life of its inhabitants. In the 16th century the land of Barba included various flourishing towns like Libedia, Zawila, Barba, and its fields were well tillled.

The Hiatth invasion of the 17th century brought about its ruin. The nomadic and pastoral
Arabs brought devastation everywhere and by their ruthless plundering caused the cultivated areas to become smaller and smaller... "All the areas and zones which provide for man's sustenance ceased to be exercised; civilization was destroyed there and the country became a desert." (Ibn Khaldun, Hist. des Ber., translation de St.ane, i. p. 164). Of the invading Arab tribes, the Banu Ḫimṣa and the Haiḥ, a branch of the Sulaim, settled in the conquered district and the population has been so affected by this administration as to be impossible at the present day to distinguish the descendants of the invaders from those of the original inhabitants. With the exception of the inhabitants of the towns (Benghāzi, Derna and Marjīs) the population is entirely composed of nomads. According to Pacho they bear the general name of Habibi and are divided into a large number of tribes. The most important are the Awáqīq, whose land lies to south and east of Benghāzi, the Dorni in the neighborhood of Marjīs, the Hāsā around the ruins of Cyrene, the Brasa of the Djebel Akhīlar, the Abadis in the neighborhood of Derna, etc. Rudder estimates their total number at not more than 250,000 on an area of 25,000 square miles as that there are only 10 inhabitants to the square mile. Musuli, who had at his disposal the Italian consul's reports on the subject, states that the populations of Barqa at as high as 350,000. All these tribes seem to be quite independent of Turkish authority, owing to the spread of Semitic doctrine since the middle of the 12th century they are very hostile to European influence. The Barqa country, so long neglected, has nevertheless been the object of several European explorations in the last century. The journeys of della Cella, (1817), Pacho, Beauchey, Barth (1847), Hamilton (1852), Rodnh, Camperio and Hailmam etc. may be mentioned.

The town Barqa, which has given its name to the whole platean, replaced in the Arab epoch the town of Barke which was founded in 555 B.C. by colonists from Cyrene. Towards the end of the year 31 A.D. (561 A.D.) Barqa was occupied by Amr b. al-'As who made peace with the inhabitants on a payment of 13,000 dinars of gold. Soon afterwards the conquerors chose this place as the capital of a district the government of which was entrusted to Ruwafa, one of the companions of the Prophet, whose tomb still existed in al-Bakri's time. Being in communication with foreign countries through its ports, Tumult, the ancient Phoenicia) lying on the main roads from Fustat to Khurāwān and connected by caravan routes with the oases of the Sahara, Barqa enjoyed remarkable prosperity for four centuries. Ibn Hawkal (Description d'Afrique, transl. de Slane in the Journ. Ar. 1842) praises its commercial activity. "There are few towns in the Maghribi" he writes, "where the traffic is so busy and trades which provide for man's sustenance are so various, the dates of Awāqīq are exported, in the bazaars there is a continual market for wool, pottery, honey, wax and foodstuffs of east and west." Al-Bakri remarks on the richness of the surrounding pastures from which the people of Egypt obtained the greater part of the animals necessary for their food-supply (al-Bakri, Masū'id, trad. de St.ane, p. 15). Idrīs mentions plantations yielding cotton of superior quality (Idrīs, transl. de Goeje, p. 155).

The Hittii invasion brought about the total ruin of Barqa. Its place is now occupied by the market town of Marjīs lying at the foot of a hill commanded by a Turkish Kasba in a hollow 20 miles long by 5 miles... The population of Marjīs including the Turkish garrison is not more than 1000 souls.

BARQAIĐ, A town in the Djafra (Mesoopotamia) on the caravan route from Nasīb (Nisibis) to Mosul; according to the statements of the Arab geographers which vary only in a trifling degree, it was 17-19 parasangs (of 4-5 miles each) or a day's journey (e. 14-20 kilometers) from the latter town; Nasīb was reckoned 20 parasangs from here. According to Yāqūt, Barqaiḍ was once the chief town of the circle of Bahī (probably = Ḫī'ī or plain) belonging to the province of Mosul and comprising the district between Mosul and Nasīb. In consequence of the great amount of traffic passing through it the town became an important place, flourishing especially in the iii (iv) century. Yāqūt notes its walls pierced by three gateways, the numerous springs of fresh water and the remarkable large number (200) of wine shops there. The inhabitants were nevertheless so notorious as thieves and highway rubbers that a Barqaiḍi ruber (barqaidi) had become proverbial. This evil reputation of the town naturally resulted in the caravan gradually keeping away from it and going instead to the Lihjan station somewhat to the west. This latter place thus rose in importance while Barqaiḍ declined more and more. The site of Barqaiḍ is perhaps now marked, as v. Oppenheim and de Goeje have suggested, by the considerable mound of ruins at Tell Rumelit and that of Lihjān by Čiā,čā. The positions of these two places in Köpröl's map are 42° E. long. Greenw. 30' 55' N. lat. and 45° 50', 35° 57' respectively.

According to a communication by Homes, which requires an examination on the spot (see Tuch, op. cit.) Barqaiḍ still exists at the present day, though now in ruins.

BARK-rating. Allu-i-Muṣaffar ῾Umar aL-Dīn, a Sūlān, oldest son of Malik Shīk. The date of his birth is variously given;
he was certainly born shortly after the year 470 A.H. and was therefore still a youth at the death of his father on the 16th Shawwal 485 (19th November 1093). The death of Malik Shah was concealed by his wife, the cunning and ambitious Turkmen Khustain, till she had homage paid to her son Mahmud, who was still a minor, and had his accession confirmed by the Caliph. She then went to Isfahan. At her instigation Barkiyaruq was brought into Bagdad and was imprisoned. He then advanced against Isfahan and Turkmans' troops were defeated near Budhdurj on the 26th January 1093, but herself remained in Isfahan and had to make peace after a long siege. The terms of the treaty were that she should remain in Isfahan and Fars for herself and her own son Abul Mucktadi. Barkiyaruq was to be recognized as Sultan and to remain in possession of the other provinces. Peace did not last long however. Ismail b. Ya'qubi, Barkiyaruq's maternal uncle, governor of Tabaristan, was invaded by Turkmen's intrigue to rebel against him, but was defeated in 486 (1093) near al-Karadj and had to flee to Budhdurj where he was murdered by some Emirs, Tughluq b. Aq. Arslan, another uncle of Barkiyaruq's allies, the Burjini governress of Edessa and Aq Sonjak of Halah, seized Mowali. When his two allies deserted him and went over to Barkiyaruq, he had to retreat to Damascus, while Barkiyaruq entered Bagdad where his triumph was manifested in the masque-prayers in Mubarram 487 (January 1094). On the following day, the caliph al-Mu'tamid died but his successor al-Mustarshid still continued the Khurasan for Barkiyaruq. Meanwhile Tugluq had collected a new army after the accession of Aq Sonjak and Burjini, with which he set out from Damascus and attacked Aq Sonjak. The two renegade governors were taken prisoners and slain and Halah, Harran and Edessa submitted. Tugluq then marched through Mesopotamia, Armenia and Adharbaijan against Hamadan and was even proclaimed Sultan in Bagdad in place of Barkiyaruq. On the death of Turkmen Khustain which took place in Kandahar 487 (September-October 1094) her son Mahmud, who was still a minor remained in Isfahan and Barkiyaruq sought refuge with him from the threatening storm. Mahmud's adherents were planning how to get Barkiyaruq out of the way but on Mahmud's death from smallpox at the end of Shawwal (November) of the same year the Emirs went over to Barkiyaruq's side. He was then able to continue the struggle with Tugluq who had in the meanwhile advanced to al-Ray. The decisive battle was fought on the 17th Sahar 498 (26th February 1095) not far from this town. Although many had previously gone over from the cruel and relentless Tugluq to the weak and goodnatured Barkiyaruq, the former's army still numbered 15,000 men while the latter had over 30,000. Before the beginning of the battle most of the troops who had hitherto remained faithful to him deserted and Tugluq was slain after a desperate struggle. In the same year disturbances broke out in Khorasan. The rebel Barkiyaruq's third uncle, Arslan Arghun, was restored prince and appointed his brother Sanjii as Governor of Khorasan. In 492 (1099) Barkiyaruq's brother Al-Muhammed rebelled in Adharbaijan and advanced almost up to al-Ray, Barkiyaruq was going to advance against him but most of his troops went over to the enemy and he had to take to flight to save himself, while his brother occupied al-Ray and ordered Barkiyaruq's mother to be shut up. The Khorasani Emir's agents went to him in Bagdad. Barkiyaruq was however soon successful in collecting another army, the Emirs in Isfah joined him and when he neared the capital in the middle of the month of Safar 493 (beginning of 1100) the Caliph was quite prepared to mention him in the Khurasan. In Rajab (May/June) of the same year however he was defeated by Muhammad and had to retire to Khorasan. The latter the governor there had taken the side of his brother Muhammad; Barkiyaruq, nevertheless, succeeded in raising new forces and defeated Muhammad at Hamadan in Djamud II 494 (April 1101). It was now the latter's turn to seek help in Khurasan. The war was continued for some time with changing success till finally in Rabii I 495 (December 1101) a treaty of peace was arranged whereby Barkiyaruq was recognized as Sultan while Muhammad had to content himself with the title of 'King' and dominion over Mesopotamia and Adharbaijan. The latter however broke the truce after a month or two and a bitter struggle between the brothers began again. Muhammad had to flee and was besieged in Isfahan, but he managed to make his escape and raise new troops. He was in 497 (end of 1102 or beginning of 1103) Muhammad then received Adharbaijan, Armenia, and Mesopotamia with Mosul and the Arabian I'riq, as an independent prince with sovereignty over Sandjar in Khurasan, while Barkiyaruq remained in possession of the other provinces. According to the usual statement, Barkiyaruq died in Rabii II 498 (December 1104). With him begins the decline of the Seljuq dynasty.

BARKUK, AL-MALIK AL-Zahir SAID AL-DIN AL-OTHMANN AL-YEZBEQAWI, was the first, if we neglect the brief reign of Bulhar II, of the line of Turjik Manuks on the throne of Egypt. The Emir Yezbeqawi brought him to Cairo where he afterwards became one of the Manuks of the sons of Sultan Abul Ma'ali. He was instrumental in the latter's fall and became one of the Appetists (generalissimus) under his son Husayn. After overcoming all his rivals he was proclaimed Sultan in 1383 (724) and was once acknowledged on all sides. Some minor conspiracies were planned in Syria in the next few years by the governors who were always backed up by the Mongol princes, but were easily suppressed by the Sultan. The first real danger arose when Barajik, harassed by
constant suspicion, attempted to depose Yelbo-
gh, governor of Aleppo. The latter, warned in
time, thwarted the Sultan's plan, allied himself
with the rebel governor of Malta, Muhammad, and
succeeded in driving Tripoli and Hama. Barakî
sent a great army against Yelboğh, and his
general Emin entered Damascus. In the spring
of 1359 (791) the two armies met and through
the desertion of several of the Sultan's lieutenants
the rebels won the day; Emin, pursued and cap-
tured, had to give up Damascus with its forti-
cfications. Yelboğh and Muhammad collected all
their forces and advanced against Egypt. The Sultan,
a thorough coward, did not dare to leave Cairo
so that the rebels met with no resistance. The
Sultan's supporters deserted him and he fled from
the city and threw himself on Yelboğh's mercy,
who treated him relatively well. Barakî was sent
to Karak as a prisoner by Yelboğh. Hâjî-ûdî who
had been deposed by Barakî now ascended the
throne but without obtaining the slightest control
over the actual affairs of state. Yelboğh Lords it
over his ally Muhammad too as far as he could.
A conflict thus arose between the two conspi-
rators; Yelboğh entrenched himself in the citadel
and Muhammad below him in the Hauss mosque.
Yelboğh was vanquished in the struggle and
had to flee; he was taken and thrown into prison
in Alexandria. Muhammad had scarcely made his
position in Egypt secure when the news arrived
that Sultan Barakî was free and collecting the
remnants in Syria. He defeated the governors
of Damascus and Gaza who advanced against him
and also the Beduin chief Na'âr so that he gained
new adherents daily. Muhammad advanced against
him with a large army and met him to the south
of Damascus. On the first day, the greater part
of Barakî's army was put to flight; but he was
nevertheless able to seize the chief camp of his
opponents and to take prisoners the Caliph as well
as the Sultan Hâjî-ûdî. The battle was renewed
next day and after heavy losses on both sides
Muhammad had to retreat. Barakî then went to Cairo
where in the meanwhile his adherents had gained
the upper hand.
Barakî was successful in appeasing his oppo-
nents in Cairo, treating the deposed Hâjî-ûdî con-
siderately and pardoning his former enemy
Yelboğh. Muhammad's resistance continued for
two years longer in Syria, chiefly supported by the
Beduin chief Na'âr; Muhammad was finally captured
and put to death by torture. Barakî was not yet
able to live in peace however; conspiracies and persecutions never ceased. The
Sultan's foreign policy was a successful one; he
was on friendly terms with the Ottoman Sultan Murad and Bayazid; while he was suspicious of the
mighty Timur from the outset and preferred open
enmity to insecure peace. He therefore had
the ambassadors of Timur, who wished to con-
clude a friendly treaty of commerce, murdered,
welcomed Sultan Ahmad ibn Uways whom Timur
had driven out of Baghdad. To prepare to defend
himself, he restored the defences of the Syrian
fortresses as we know from inscriptions; his mea-
sures were later shown to be quite insufficient
against the noruth of the Mongols. Barakî and
Timur never actually came into conflict as the
latter was too much occupied with other enemies.
Always fearing for his own safety at home, Bar-
îkî did not prove himself capable of permanently
defending his lands abroad. His rule, which in
general is highly praised by Arab authors for his
pious and charitable foundations, was of little use
to his kingdom. He died in 1398 (691) leaving
vast estates behind him.

BARLAAM and JOSPHAT, the story of
the conversion of the Indian prince
Josephat by the ascetic Barlaam,
which has been recognised by Felix Lieffenroch as a Christian
version of an episode in the life of the Buddha.
The book, which owes its popularity and in-
fuence in the first place to the tales in it, is
preserved in Greek, Arabic (several versions),
Hebrew, Ethiopic, Armenian and Georgian
as well as in many European editions. The Greek
romance of Barlaam was probably composed in
Palestine at the monastery of Saint Sulan in the
first half of the 13th century. On this Greek
original is based a Christian Aramaic version from
which a translation into Ethiopic was prepared.
The oldest Arabic texts that have survived to
to have no connection with the Greek romance
however; they appear to be ultimately derived
from a Fahlavi original. Mention is made in the
Pibert of a Kithâ al-khalil and a Kithâ Yulûb/
masraf, both of which were probably translated
from a Fahlavi original which sought to destroy the
doctrine of Buddha (Yulûb, for Yulûb =
Bodhisattva, the title of the Indian king's son
before he attained the rank of Buddha). The Kithâ
Yulûb uss Baladhar mentioned in the Pibert
appears on the other hand to be based on a
Christian version of the Buddhist story. Already
composed in Fahlavi, this last, the third of the
Arabic books mentioned in the Pibert, is now the
prototype of all the Mahammadan versions that
have survived and is substantially given in the
text of the Bombay edition. All trace of Christian
dogmas has been obliterated in it through its
time is not specifically Mahammadan. The Hebrew
version also goes back to these Arabic texts.

BARMAKIDS (BARMAKIDES), a Persian
family which produced the first
Persian minister of the Caliphate. *Barak* was not a personal
name but denoted the rank of hereditary chief priest in
the temple of Nizamābād in Balkh. The lands
belonging to the temple were also in the hands
of this family. This estate comprised an area of
about 740 square miles (8 farsaka long by
a broad), or somewhat more than the principalities of Ljylland and Schaumburg-Lippe together. These estates or part of them remained the property of the Barnakids at a later period; Yakhut (i. 342) says of the "large and rich" village of Rawan, east of Balkh, that it was in the possession of Vahyshu, son of Khallid. As the name shows (Samarkand wasida - new monastery) this temple was a Buddhist monastery; it is described as such in the viith century A.D. by the Chinese pilgrim Huan-Chang (Memorie sur les centres occidentaux, trad. sur St. Julien, i. 30 et seq., and the Historie de la ve de Hienan-Thuang, p. 84); it was even known to some of the Arab geographers, like Ibn al-Fakih (ed. de Goeje, p. 332) that the Nawbahr was devoted to the worship of holies (Yakhut analog) and not of fire; and setting aside some exaggerations, the description given by Ibn al-Fakih exactly fits a Buddhist vihara. For obvious reasons the Persians wished to bring this famous family of Persian origin into connection with the traditions of the Sassanian Empire; the Buddhist cloister was transformed into a fire temple (cf. e. g. Vahyshu, iv. 219 et seq.), its foundation was attributed to the Persian kings of antiquity, and its chief priest declared to be descendant of the ministers of the Sassanian kings (Shahristani Sanac, ed. Schefe, p. 151). These notions, widespread in the later literature, which have influenced not only local tradition (Yakhut Balah in Schefe's Christnaiser Persien, l. 71) but also modern scholarship (Brown, A Literary History of Persia, p. 257) may not have arisen before the reign of Hamin al-Rashid. It is not (impossible that Ibn al-Mukhassir, being a Persian, had put forth similar statements. His contemporary Khallid of course did not possess any such power under Abu l-Abbâs and Mansur as Vahyshu afterwards did under Harun, but his position, from which through his generosity, his whole house derived benefits (Ibn al-Fakih, p. 317), was nevertheless dazzling enough to bring about a perversion of national traditions in favour of the Barnakids. According to Balashhori (ed. de Goeje, p. 479) Nawbahr was destroyed in the reign of Mawlya probably soon after the year 472 = 663-664 (cf. Marquart, Freytag, p. 659). Yakhut however makes the native prince Nizak pray in Nawbahr as late as the year 908 (708-909). On the fate of the last Barnakids, the fathers of Khallid, and his predecessors we possess only legendary accounts. Even Ibn Khallikân was no longer able to decide whether Barnak had ever adopted Talas. According to Ibn al-Fakih (p. 334) Khallid was the son of this Barnak and of a daughter of the prince of Shahsînîr. Tabari (i. 1181) gives an account of a campaign by Kutâbî b. Muslim against rebels in Balkh in the year 86 (705); the wife of the chief priest of Balkh is said to have been among the prisoners and to have spent a night with Abû Allah brother of Kutâbî and to have become pregnant with Khallid on that night; she was set free with the other prisoners the next day. What Tabari adds on the origin of this story shows that it was invented by Abû Allah's sons, who were supposed to honour the Persian with an Arab genealogy but to obtain for the Arab family the advantages of religion, to the influence of the Caliphate. It is not impossible however that this story has an approximately correct date for Khallid's birth; the year of his death is given as 166 (784-785); he must then have been about 75 years old. His father Barnak was skilled in astronomy and philosophy, as well as in medicine and cured the prince Mavslîh b. 'Abd al-Malik of an illness. (Tabari, i. 5). This last statement shows that Barnak had gone from his home to the Caliph's court; according to later accounts this took place in the reign of 'Abd al-Malik in 86 (705), the year of the latter's death. He appears to have afterwards returned home. In 837 (742) he obeyed the order of the governor Aswad b. 'Abd Allâh he rebuilt Balkh which had been destroyed (Tabari, ii. 1490).

We know almost as little about Khallid's birth and education; even as to when and how he won the favour of the caliph Abu l-Abbâs, nothing is told us. He was on such intimate terms with the Caliph that his daughter was nursed by the Caliph's wife and the latter's daughter by Khallid's wife (Tabari, ii. 840). After 132 (740-750) we find him at the head of the Rawan al-Khartûfî; in some authorities he is also called vizier (Mawslîh, Khallî al-Tamâm, p. 340 and 342; Fundam. hist. Arab., ed. de Goeje, p. 215 and 268). Khallid is supposed to have been the first writer (Yakhut) in whose official capacity he attained the rank of minister. Abû Salûma, the first vizier of the house of Muhammad is not mentioned among the "writers" and was a vizier rather in the sense in which this word is used in the Koran (xx. 30 et seq.) and placed in the mouth of e. g. the Caliph Abû Bakr in historical works (cf. e. g. Tâlî, l. 1847, ed. 2440, 141). Even Khallid was not a writer in the latter sense of the word and distinguished himself not only by able government and wise counsels but also by warlike deeds. Under the leadership of Abû Muslim and his general Kalbâb b. Shalih he took the side of the house of the Prophet in the war against the Omeyyads; between 148 (755) and 152 (760) as governor of Tabaristan he destroyed the principality of Mawslîh at Mount Dimawwad (cf. Marquart, Freytag, p. 65). After this victory the people of Tabaristan are said to have acknowledged Khallid and the siege- artillery used by him in the siege, on their shields (Ibn al-Fakih, p. 314). Even in his old age in the year 165 (779-780) he distinguished himself at the capture of the Greek fortress of Samâlî (Tabari, iii. 497).

We first find Khallid mentioned as the adviser of the Caliph Mansur in the stories of the foundation of Baghîdâd (146 = 769-764) and the alleged abduction of the heir to the throne, the heir presumptive, in 147 (765-764). Besides numerous buildings in Baghîdâd, the foundation of the town of Mansûrî in Tabaristan is attributed to him during his governorship. Shortly before the death of the Caliph Mansur he was appointed governor of Mawslîh (Mosul) after the Caliph had asked him for a poet and scholars, and his son Yâhûkî, governor of Khurâsân. It is clear from the sources that the inhabitants of Mawslîh had never respected any governor so much as Khallid although he never resorted to severe punishments. According to Mawslîh, (Mawslîh, vi. 361) none of his descendants equalled him in noble qualities.

His son Yâhûkî, according to Ibn Khallâkân, died on the 3rd of Jamâ'ar 190 = 29th November 805 at the age of 70 or 74 so that he must have been born in 130 (752) or some years earlier.
Unlike his father he was distinguished only as a governor and minister; no warlike exploits are related of him; of his numerous public works the Sāhān canal at Būra (Tabari, iii. 645; Balkhī, p. 365) is specially noted. In the reign of Al-Mansūr, when his palace Hirān was entrusted to his care in 176 (757-758), after 175 (757-758), he was at the head of the chancellory (Dīwān al-ra‘ṣāl) of the prince, who was then appointed governor of the west (all the provinces west of the Euphrates) with Armenia and Adharbājain. During the brief reign of the Caliph al-Mutawakkil, Yahyā as an adherent of the young prince whom they wished to foster to renounce the succession, was in danger of his life; after the accession of Harūn al-Ra‘shid, Yahyā the Barmaqid, whom the Caliph still always called *father*, was appointed vizier with unrestricted powers and with the help of his sons Fasil and Dīfar (his other two sons, Mūsā and Muḥammad are more rarely mentioned) ruled the kingdom for seventeen years (786-803).

Of the two sons mentioned, Fasil, who was born in 126 (770-771) was the elder and also the more important. From 786 (792-793) till 806 (796-797) he was at the head of a fleet which comprised the provinces of Dījāl, Tabaristan, Dunbawand, and Kūnī and for a time also, Armenia and Adharbājain; from 794 (792-793) till 795 (795-796) he was also governor of Khorāsān. Yaḥyā (ibid., ii. 510) says that he was unfortuniate in his fighting in Armenia (strictly in Dīghestān) on the other hand he is credited with such deeds in Khorāsān as he could scarcely have performed in the brief period of his governorship. He is said to have raised an army of 300,000 (?) men from the native population for the Caliph of whom 20,000 were sent to Baghād and the others retained in Khorāsān (Tabari, iii. 751) and he is supposed to have also won several great victories and built many mosques and Ribāt. He dug a new canal in Balkh (Sheffer, Chronologie persane, i. 71 and 88) and built a new Friday-mosque in Būkhārā; he was the first to have lamps brought into the mosques in Ramaḏān (Nashīḥī, ed. Schefer, p. 48). Muhād (Nashīḥī, vi. 365) also tells us that in the earlier days of his governorship, Fasil was only occupied with hunting, poetry and pleasures and only reformed after receiving a letter from his father.

Of Dīfar who later became more renowned in popular story (he was 37 years old at his death and born about 120 = 767) only his beautiful writing, his eloquence and his knowledge of astronomy are praised; he is also mentioned as a leader of fashion and introduced the custom of weering cravats as he had rather a long neck (Dījāl, Bayān, ii. 151). His intimacy with the Caliph, which did not at all please Yahyā, is attributed to a notorious Oriental vice (Tabari, iii. 676). Except for a short journey to Syria in the year 580 (796-797) where he had to make peace among the Arab tribes who were fighting among themselves, as had his brother Mūsā four years earlier, he appears never to have been separated from the Caliph, and even on this occasion he gave vent to his sorrow and his desire for revenge in extravagant language (Tabari, iii. 643). He was several times appointed governor of large provinces by his princely patron, but these were always ruled by his deputies. It cannot be ascertained from the authorities whether he was actually conducted the business of state as a minister or what buildings or other works were executed by him; the only trace of his influence is the fact that his name appears on the coins of the Caliph.

Even his father does not seem to have been at all as powerful during his seventeen years’ rule as is stated. In the first years of his tenure of office he had a cause to be an envoy of the government to Khorāsān (died 573 = 789-790), where he was the appointed governor of the west of the provinces. Immediately after the death of his mother the Caliph deprived the young Dīfar of the seal which he carried and entrusted a great part of the business to Fasil b. Raḥūf, later the opponent and successor of the Barmaqids; the same Fasil was appointed head chamberlain (Kāḥf) in 789 (795-796) in place of the Barmaqid Muḥammad b. Khālid. The appointment of ‘Alī b. ‘Ibād b. Māḥmūd as governor of Khorāsān was also made against the will of the vizier (Tabari, iii. 702).

On the pillowage of the year 181 (beginning of 798) Yahyā obtained leave to resign and to remain in Mecca (Tabari, iii. 646); but returned in the following year to Baghād and seems again to have taken over the government of Khorāsān.

From these statements it is clear that the fall of the Barmaqids had long been pronounced and was not due to any sudden impulse of the Caliph. In the first night of ʿAṣfār (29th January 803) Dīfar was slain by command of the Caliph and immediately after, Yahyā and his other three sons were thrown into prison and their goods confiscated. The relatives of the minister were allowed their freedom; Muḥammad b. Khālid (brother of Yahyā) and his family were in no wise harmed. Harūn had the head of the dead Dīfar placed on the “middle” bridge of Baghād and the two halves of his body impaled on the other two bridges. The minister and his sons remained under supervision in the town of Raḵkā. Both Yahyā and Fasil died before the Caliph; of the fate of Mūsā and Muḥammad nothing is known; ‘Isa b. Mūsā seems to have been the only son of the vizier of the viziers to distinguish himself. In the year 196 (811-812) he is mentioned as defending the ancient Sabakān town of al-Madīn against Mu‘tā’s army (Tabari, iii. 859 ṣe seq.) and he again appears in 216 (831) as deputy governor of the province of Sīnā’ī (ibid., iii. 1105). Abu l-Kāsim Abūl-Ḥasan Muḥammad Barmaqī, is mentioned as one of the last victors of the Sāmūn tobn (Rahīb, Tabaristan e sotūr maqalīd ū nohāroja, ii. 578, following Gardīz). Whether this “Barmaqī” belonged to the same family is not related. Again in the 9th (9th) century we find a Danīghād Musa Barmaqī mentioned going several times as envoy from the Qarmats to the court of the Caliph (Bābāk, ed. Morley, p. 441 et seq.). The famous 13th-century man of arms Khūnd-ī Ḵᵛāna, Muḥammad b. Dījan al-Barmaqī was probably only a client of the family, as has been suggested, and so was the astrologer mentioned by Tabari (iii. 497 et seq.) in his account of the events of the year 163 (779-780).

In the present state of our knowledge it is probably possible to give a fair appreciation of the part played by the Barmaqids on their virtues and faults. They are traditionally represented as being the most generous of all the Muhammadans, famed for their pilgrimages and buildings; on the other hand they are accused by their opponents of indifference to Islam and...
its teaching. In a poem quoted by Džilih (Baršev, ii. 450) from an anonymous author and included in the Kutaha ("Utjum al-āghārī") (p. 71, ed. Brockelmann) to the philologist Asmā'ī it is said: "When in an assembly any thing irrelevant is said, the faces of the Barmaķiāds light up; but when a verse from the Korān is quoted in their presence, they tell stories from the book of Mark" (on this book cf. Haazā, ed. Götowald, p. 41). Although these Barmaķiāds have no sources cited, they say of themselves that he builds mosques only as a pastime and that he loves as little for such things as Yāhūb Kāhlīl. Asmā'ī is said to have accused his minister Kāhlīl of sympathy with Persian national feeling (Tabari, iii. 320). Yāhūb is said by Tabari (iii. 372 et seq.) to have been accused by al-Hādi of inidelity (kufr); probably Hādi would have justified his decision by such accusations though nothing is said by the authorities on this point; that the fall of the Barmaķiāds is connected with a return to the traditions of the true Islam is proved by the fact that after 187 the coins do not bear the names of the Caliph or his heir as had been usual since the reign of al-Mahdī.

That the Barmaķiāds emigrated not only the state, but also the clients of their house is not denied by the partisans. For reasons that are quite comprehensible historians have always been favourably inclined to the "people of the null" (ahl al-Kalām); history, therefore, even apart from the accounts of patriotic Persian writers, has lavished much extravagant praise on the Barmaķiāds, who are frequently regarded as the founders of this class, and been silent on many of their misdeeds. We should not, place too much reliance on the statement that the reign of Hādi al-Kāhlīl is regarded as the "golden prime" of the Caliphate (Tabari, iii. 577 et seq.) or that Hādi only reigned well so long as he had the Barmaķiāds around him, as some historians further inform us (Manṣūrī, Tāhirī, p. 340; Farghānī, hist. Arab., p. 329). Yet in both instances the verdict of the historian is confirmed by much tradition; probably it is weighty testimony to the noble qualities of these Persians that they should be extolled by an Arab patriarch of the old school like the author of the Kitāb al-aṭībāt and that they should have been able to create order even in a province so thoroughly Arab as Syria.

ships to save the king's life. Janus was brought to Cairo heavily fettered and carried through the streets in triumph to Barbysea, but afterwards released through the intercession of the Venetian consul, for a high ransom and a promise to recognise the Sultan as overlord. The Sultan also made a treaty of peace with the Knights of St. John in Rhodes.

The Shirff of Mecca "who had declined to recognise the Sultan's suzerainty was conquered in 1426 (834) and had to pay tribute, as had his successor Barakat in 1426 (834). If he had to hand over the revenues of the harbour of Djidda to the Sultan. In order to increase these the Indian merchants were well treated so that the harbour of Aden suffered heavy losses. Barbysea forbade his Egyptian merchants to bring Egyptian or European wares to Djidda and thus forced the Indians to buy these wares from his officials at prices arbitrarily fixed by himself. All merchants wherever they came from, thus had to pay customary duties to Egypt on their wares. He also levied an export duty on the Indian wares which had been bought by merchants from Syria or Egypt. The Sultan always in want of money through his unbound extravagance, tried all sorts of means of making money. He was constantly altering the rate of exchange of gold and silver to his own advantage, prohibiting the circulation of foreign coins so that he might buy them cheaply and then reintroduce them as currency again. He forbade the importation of Indian spices and bought them cheaply so as to sell them again at a great profit as there was no competition. The Venetians however would not put up with this monopoly of the spice trade; they made a demonstration with their fleet and forced him to grant a more favourable treaty of commerce, only the pepper monopoly being left in his hands. The kings of Castile and Aragon whose remonstrances were of an avail, captured 20 Muslim ships. Barbysea also monopolised the manufacture of sugar and even foresaw the planting of sugar cane for a period. The enhanced price of one of this product by the Sultan was felt all the more, because it was used as a remedy against the plague. The Sultan gradually brought all trade to a standstill by prohibiting the sale to private individuals of Syrian manufactured products, wood and grain; the free sale of cattle was forbidden so that famine arose even to years of plenty. Egypt became in many places almost depopulated by Barbysea's selfish rule as well as by the plague. Women were insanely treated by the Mamliks so that the Sultan had to forbid them to go out on festive occasions (see article Cakmak); the peasants were deprived of their horses by the inspectors of the War Office and enormous charges laid upon them. The plague which devastated the land was regarded by the Sultan as a punishment of the Venetian presence. He therefore harassed the Christian and Jews and prohibited women from going out of doors so that they could not discharge their domestic duties.

In Syria since 1429 (834) military operations had practically never ceased. In the background was Shah Rukh, Towar's son, exasperated by the ignominious treatment of his envoy in Cairo as well as by the refusal of the Sultan to allow him to share in the distribution of the Khul. He therefore supported Towar Velek, a prince of the Turkmans of the White Sheep against whom Barbysea had to fight continually. The princes of Dhu l-Kadr again quarrelled with the Sultan and his belligerent enemy was Djinnsbey who appeared again in 1435 (639) and constantly incited the wrath of his opponents against Barbysea. In 1438 (842) the end however Barbysea was victorious: Karé Velek lost his life in battle and the prince of Karanm was who was protected by Barbysea made peace with the Ottoman Sultan Murad so that Barbysea was easily able to overcome the princes of Dhu l-Kadr: Djinnsbey was slain by a son of Karé Velek and the other sons submitted to the Sultan. Barbysea did not long survive his success. An illness carried him off in 1438 (842) after he had appointed his son Yüsuf as his successor and the Emir Cakmak as regent.

BARSHAWISH, an Arabic corruption of the Greek Παροισθά (Vullers, Lexicon pers. lat. vocibus Faralayniania) i.e. the constellation of Persia on which see Kanzwini (ed. Wüttenfeld) I, 33 and Ideler, Untersuchungen über die Ursprung und die Bedeutung der Sterneamen, 86 et seq.

BARSHA. The story of Barsha is always connected with Koran, lix, 10, ... like the devil when he said to the man (or to man): "Disbelieve", then, when he had disbelieved, he said, "Lo, I am clear of them, lo, I fear Allah, the Lord of the Worlds." This is explained by the commentators in three ways: (1) of man in general; (2) of the story of how the devil misled Abu Djalil at the battle of Badr (cf. Koran, viii, 50 and Ibn Highajl, p. 474) of a certain monk or devotee. The following commentators give the first two explanations only: — Zakaskhsahl, (M. 538); Rabi' (d. 606), Mafath, viii, 132 of Calri ed. of 1908; Nasiaburi (d. ab. 710), margin of Tsabur, Tsafir, xxvii, 33 — he follows Rabi' closely; Abu Sulaym (d. 982), margin of Rabi', viii, 258. But the older exegetical tradition prefers the third explanation, which is some form, shorter or longer, of the following story. There was a devotee ( título, ABD , of the children of Jaram, otherwise) living in his cell, who had long (slaty years, etc.) without Satan. At length he falls with a woman who is brought on to him (who is a shepherdess, a neighbour's daughter, a princess, sister of four or three brothers, ill, possessed, left in his charge). She becomes pregnant, and, to conceal his sin, he kills and buries her in his house or under a tree. The story varies so as how far back the machinations of Satan extend: Some tell that he possesses the woman that she may be brought to be hated. Others, that he tempts the devotee to sin with her after she has been brought. Others, that he only points out the escape by killing her. Th.n Satan reveals the crime, in a dream or otherwise: this is verified by finding the body and its condition agrees with Barsha. The woman is taken and led away to death; Satan reveals himself to the devotee as his tempter and offers deliverance if he will worship him. The devotee does so, and Satan returns, uttering the words of the Koran. Four versions of this are given by Tushur (d. 3701)

Tushur, xxvii, 31 et seq.) going back to 'Ali, to Ibn 'AbdAllah and to 'Abd. But in
the *Kám al-
mu'allá (ed. Hyderabdk, 1312, I. p. 268, No. 465) there is still earlier authority than Táhir. The story is told from *Abd al-
Rázíq Ibn Hammám (d. 211) in his *Lámií, from Ibráhíb b. Rákání (d. 233) in his *Manúq, from Abúmád b. Hášt (d. 241) in an *Enab, from *Abd al-
Ráhím ibn *An initiates he has in his *Táhirí. After Táhir, according to the *Kám, the story was told by Muhammád b. *Rákání, known as Ibn al-
Mándír (d. 518) by Abú *Abd Alláh Muhammád, known as al-
Hassání (d. 409) in his *Musáyab, by Abúd b. *Má naprawdę, known as Ibn Mardadh (d. 416) and by Báláhsí (d. 458) in his *Sá'íd al-
kabír. In a marginal note to the *Lámií al-
sbáin of Mu'tam b. Sari (ed. Delhi, 1296, p. 400) Báláhsí (d. 516) is said to have told the story with the same *Barzakh, but that which had already been done by Abúl-
Laqír al-
Sáfárání (d. 375 or 383) in his *Táhirí
d-i-
*Máfí. For his form of the story see *Gold
er-Netber. *Legends of *Méshk *Barzakh pp. 6
et seq. There also is given the story as told by *Kárim (ed. Wetzénferd, I. p. 368) and by Abúl-
Núrí in the *Musáyab, ch. 1. *Barzakh has a *Sufi significance to a *máfí, but *Sá'íd, to judge from a marginal note to the *Lámií al-
sbáin, must have much on the story in his *Dáir
d-i-
*Máfí. To the Táhirí authorities he added, from Báláhsí, that it was told by Ibn *Usmán directly from the *Prophet. By far the fullest form is in the *Srídí al-
árabiyyát of *Sháhí (d. 997, IV. 245 et seq. of ed. of 1299) which professes to be derived, through an *Ala, from Ibn *Abbas but is quite different from the form ascribed to Ibn *Abás in Táhir. It is very close to the longer narra
tive given by *Goldner-Netber from the *Forty
days (ed. Stambol, 1301, pp. 120-126) in which *Barzakh collection the legend had found a permanent resting place in 850. In that edition of the *Forty
days the story is different and much more detailed than in the texts translated by *Petru de la Croix and by *Goh. Finally, it forms one of the anecdotes in *Kalyaná's *Námádíd (No. 54, p. 29 of ed. of 1324). Through different forms of the *Forty
days the story passed into Europe and became eventually the source of M. *Lewis's *Awábrás or the *Méshk, but the pre-
Muslim source of the story is still unknown. It is told all over the Musulm world. *Goldner-Netber found it in *Hajímat; *Hartmann (Reis islamische Orient, I. 23 et seq.) found it brought in the province of *Aleppo; Ibn *Bá salts in *Séyed al-
Barzakh (1. p. 36) found a *Barzakh the *Nord
west of Alexandria, on the road from *Tripoli. For further references see Chaurin, *Bibliographie arabe, viii. p. 128 et seq. (O. B. Macdonald).

d, p. 200 et seq. de *Boe, *Travels in *Lurí
d and *Azerbaijan, ii. 302 et seq.

BARZAKH, a Persian and Arabic word meaning "obstacle" "hindrance" "separation". It is found three times in the *Korán (xxix. 102; lvi. 20 and xxxv. 55) and is interpreted sometimes in a moral and sometimes in a concrete sense. In verse 102 of Sura 57 all the godless beg to be allowed to return to earth to accomplish the good they have left undone during their lives; but there is a *Barzakh in front of them barring the way. *Záhakíhá explains the word by ' íz, an obstacle and interprets it in a moral sense: a prohibition by *God; other commentators take the word more in a physical sense: the *Barzakh is a barrier between hell and paradise or else the grave which lies between this life and the next. In the two other passages of the *Korán it is a question of two seas, or great stretches of water, with the other being behind, but there is a *Barzakh which prevents their being mixed. The same thing is mentioned in verse 62 of Sura xxix and in this passage the word *jádíén or hindrance takes the place of *Barzakh. The commentators say that there is here an allusion to the fresh waters of the Shuút al-
Arab which flow a great distance out into the *Salt sea without mixing with it: the impediment here is the effect of a law of nature established by *God.

In eschatology, the word *Barzakh is used to describe the boundary of the world of human beings which consist of the heavens, the earth and the other regions and its separation from the world of pure *spirits and *God. See the picture representing this conception in the *Mořísí *Námáh of *Shahí ibn Húsí (Yíddák, 1251, 1255) cf. also *Carra de *Vaux, *Fragment on *Eschatology, *Méhozámí. The same expression is also found in the *philosophy known as "illuminating" (al-
Ilmá ma'l-
mu'tá'íb). It there denotes the dark substances i. e. bodies: the *Barzakh is the body dark by nature and only becomes light on receiving the light of the spirit. The celestial spheres are "amimated" or "living" *Barzakh insubstantial bodies on the other hand are dead *Barzakh (Cf. one Article *La Philosophie illuminative d'après *Sháhí *Méhozámí in the *Journal Asiatique, Jan.
Feb. 1902. (B. *Carra de *Vaux).

BARZAND, a town in the *north east of Alhá
rání. According to the medicinal Arab geographers it belonged to the district of *Máfí, the expensive *highway passing between the river al-
Ráis (Araxes) in the north, the *Táhirí mountains in the south and the *Caspius sea in the east. Although many authorities on Arab geography (cf. e. g. *Yá'qub, loc. cit.) place *Barzand in Armenia, this appears to be due to a confusion with *Barzandj (south east of *Bádú's); on the latter cf. le *Stráve, *The Land of the *Eastern Cal
d, p. 250; *Barzand was 14 parasangs ( *Vá'ár, 15) about 55 miles distant from southern *Arabíj. When Haidar b. *Káraw *Afghán (see above p. 277), *Caliph *Ma'tújín's general, was engaged in putting down the dangerous revolt under *Hálik of the *Khuras
níy sect in 855-857, he made his base at *Barzand and deserted and rebuilt the town. In the period following it attained considerable prosperity. Ibn *Hákí (357) describes it as a large town: *Madání (375-395) praises the well frequented bazaar there, in which the wares of the surrounding districts destined for export were stored. By the time of *Máfí (740 = 1340) *Barzand had already sunk to the level of an insignificant village and as such still exists to-day (Barzand; situation: 30° N. lat.; 47°14' E. long. *Greenw.).

*Bibliographie: *Bibl. Géogr. aráb. (ed. de *Geheb), passim; *Vá'ár, *Melgham, l. 562; Abu *Taníl *Fúll (ed. *Vá'ár), p. 403; *Baláhsí (ed. de *
The land of the Bakhshin was then, as it is still, in part, covered with forest and their numbers very small (according to Iskëhir only 2000 men). They were subject to the Bulghur, but unlike them had maintained heathen; the distance between the territories of the two peoples is estimated at 25 days' journey. Ibn Fadlan and his entourage had to make an idyl of wood to carry it with them always and pray to it in the hour of need or danger. Even in the xivth century the Bakhshins had not yet all become Muslim; the traveller Rubruquis (1253) notes that they had been subject to the Bulghur till the arrival of the Tartars when most of them had adopted Islam. It is only in the xvth century that, when the Russians became acquainted with them, we first find the Bakhshins a completely Muslim people.

From monks of Hungarian origin (cf. the account of this mission in O. Wolff, Geschichte der Mongolen oder Tartaren, Breisgau, 1872, p. 265 et seq.), who had been there before the coming of the Tartars, Rubruquis had heard that the language of the Bakhshins (Bashkirs, Bashkirs) was the same as that of the Hungarian. The dialect at present spoken by them belongs in spite of some peculiarities of inflection to the Turkish, not like the Hungarian to the Finnish family of languages; even the name itself is popularly explained as composed of bash (head) and burt (wolf) (or also bash (bear) and burt (bee)). Whether it was otherwise in the xivth century is doubtful. Margareta (Osterrégiesische und ostasiatische Streifzüge, 1907, p. 69), supposes that this connecting the Bakhshins with the Hungarians as well as the description of the land of the Bakhshins as 'magna Hungaria' can only be explained by the Arabic usage. It is remarkable that even the Russian Cossacks are said to have called the Magyars Bakhshins during the campaign of 1849.

After the conquest of Kazan the Bakhshins had to submit to Russia. In the xvith century there were frequent fights between the Bakhshins and the Cilims and in the xvith between the Bakhshins and the Kirghiz; besides, the Bakhshins have often risen against Russian rule, eight times in the xvith century, and four times in the xvith century, sometimes in conjunction with the Krim Tartars and sometimes at other times. The Bakhshins have been men against the rule of the infidel; in greater movements like the revolt of Pugachëw (1773-1774) the Bakhshins are mentioned among the rebels. The Russian Government then adopted the plan of settling one turbulent nomadic people to extirpate another; the last independent rising of the Bakhshins (1775) was put down almost entirely by Kirghiz bowmen who made the cruellest havoc among the conquered people.

Having been trained to the cavalry service since 1789 as irregulars, the Bakhshins took part in the campaigns in Western Europe (1813-1814), though still armed only with the bow and arrow; it was not till later that they adopted European equipment. In 1874 on the introduction of compulsory service a squadron was raised. In 1878 a regiment of cavalry was raised from the Bakhshins, but it was disbanded again in 1882.

The wars of the xvith century have been fatal to the prosperity of the people; besides, then and later a great part of the land has passed into the hands of Russian officials at unfairly low prices.
This acquisition of the "Baskhler lands" has become proverbial in Russia. A great portion of these lands has been bought again from the new owners by the government and given back to the Baskhler as inalienable property. Now each Baskher is allotted 15 desyatins (317 acres) of land which is not sufficient for the nomad: therefore a greater part of the people has gone over to a settled life. The number of Baskhlers at the present day is estimated at a million.

Bibliography: E. Reclus, Nouvelle géographie universelle (Paris, 1880), v., p. 753 et seq.; Lecznin, Oszczepanie koziej-kazachskich ord. w 1673 (St. Petersburg, 1853), ii. 212 et seq.; N. A. P. A. Athenaeum, "Muskokirski" vol. xliii, p. 551 et seq.; Chavannes, Histoire des Mongols, II. 620. The Arab notice of the Hungarians are naturally exceedingly scanty; the heathen Magyars are always regarded as "fire-worshippers"; it is to this that the statement in Rashid-al-Din (Dzhunnal-tamurkhali; section on the history of the Franks, unpublished) refers, that Otto I converted many fire-worshippers (gadolin) to Christianity. What is the explanation of the story of the Magyars who, under the name Yakh, (Pte. ed.) now in Bashk, is difficult to say.

(W. H. Reed)

BASH (t.), head; end; summit; chief; commander; beginning; principle; basis; foundation. Bashir bashir, source; yih bashir, New Year's Day; Bash bashan, prime minister, president of the council under the constitutional regimes; Bash Khati, chief secretary. Bash khas (a Turkish-Bulgarian hybrid word) head of an army, commander-in-chief; more rarely commander of a fleet; sometimes the captain of a galley. Bash-akha, in Algeria, an Arab chief, who is above all aqhar; Bash adel, an assistant to the khati, clerk of the court.

(CL. Huart)

BASHxA [See: BASHA]

BASHI-BOZUK (t.), "one whose head is turned", is applied in Turkey to the irregular volunteers, chiefly recruited from the Albanians, Kurds and Circassians, and raised when there is a great war; a militia unconnected with the army but quite undisciplined whose savagery and love of pillage has earned them an unwelcome notoriety. The same appears to have been first used in 1853 during the war with Russia.

(CL. Huart)

BASHIR (a.), bringer of good news (Михаил, Mikhail); among Christians an evangelist, when in an Eastern town some important news (e.g. change of reign, appointment of a governor etc.) is to be announced, individuals having some connection with the authorities go through the streets from door to door, announcing the event, they receive. Bashir, a small figure, called in Turkish Maksud. — Al-Bashir is the title of a weekly paper published in the Jesuits in Beyrouth since 1869.

Bibliography: Ch. Huart, Littérature arabe, p. 430. (CL. Huart)

BASHIR E. SA'D, a companion of MuHAMMAD. Bashir was born in Mecca and was one of the few Arabs of the pre-Muslim period who could write. In the year 622 he took part in the second conference at Aqaba and in the following years took part in several battles under Muhammed. By command of the prophet he undertook in Sha'ban 7 (December 629), an expedition with 30 men to Fadak against the Banu Murra. When he came upon them, his men took to flight, but Bashir defended himself with the sword in his hand until he was severely wounded in the foot. He was at first thought to be dead but in the evening he was brought to Fadak and tended here for several days by a Jew till he was able to return to Medinah. In the mouth of Shawal of the same year (February 629), the prophet was told that a body of the tribe of Ghafran was encountered at Fidhah (Bashir) and Yunn between Fadak and Wadi 'Abdarr with the command of the Masudi Hungarians, who, when Bashir, Yakh (Pte. ed.) now in Bashk, is difficult to say.

(W. H. Reed)

BASHIR, Envoy of the Lebanon district from 1789-1840. Really the second of this name, for another Bashir of the same family had previously been governor of Lebanon and died in 1789. The Shihab are kinsmen on both the male and female line and were governors of Haarún till the time of Nūr al-Dīn when they left their ancient home and settled under the leadership of Munkīd at the foot of Hermon where Haarūn became their settlement. When the last Druze chief of the tribe of Ma'n [9 a.] died in 1190 (1685) the tribe of Shihab took its place and moved to Dam'al-Abran. The first ruler of this family was the above-mentioned Bashir Shihab. His grandson, Shihab the Lebanon by Haarūn Shihab till 1729, Meilim II till 1755; they were followed by the brothers
Ahmad and Mansur and his son Yousif till 1788. During the latter's reign, Bashiš Shirāh II was born in 1747. He early lost his father Kasim and at first played a subordinate part. It was not till 1766 that he began to be in better favour with the Emir than he was. But when Bashiš grew up he was able to get the governorship of Lebanon from the Paşa of 'Akka, Djanett Paşa [q. v.] in place of his uncle Yousif, who was alien to his way to 'Akka (1590).

Bashiš, whose father had been a convert to Christianity relied mainly on the Maronites and was the traditional foe of the French, even though Beaufort's Syrian campaign had placed him in a difficult position by rousing him against his patron Djanett Paşa. The sons of his predecessor took the field against him as rivals for the governorship and Bashiš found himself forced to retire to Egypt; here he won the friendship of the powerful Muhammad ʿAli and after his return to Syria had both his cousins slain (1807). He then transferred his seat to Bait al-Din where he built a sombre and fatal (palace). When after the death of Sultan Sālim Paşa (1815) ʿAbd Allāh Paşa, the Turkish governor of 'Akka, fell into conflict with his compatriot Derviş Paşa in Damascus, Bashiš was involved in the struggle and again forced to go to Egypt, leaving Bashiš his brother ʿAbd Allâh in his representative. Muhammad ʿAli was able to influence the Sublime Porte in favour of Bashiš and ʿAbd Allâh Paşa so that the former was able to return to Syria and to overthrow his own brothers and former friends of the powerful family of the Dânûlulu and take the governorship of Lebanon into their own hands.

Muhammad ʿAli was really influenced by motives of policy in his friendship for Bashiš, for he required the Emir's help in the proposed conquest of Syria, for which he thought the time had come in 1831. He then sent his son Ibrahim Paşa with troops to lay siege to 'Akka, and was assisted by Bashiš, who however did not openly take the side of the Egyptians till 'Akka surrendered in 1832. From this time he always acted in concert with Ibrahim Paşa and had great territories allotted to him which he was able to rule almost as he liked. But Ibrahim Paşa's wars required much money and many men and the Syrians were forced to supply their new Egyptian masters with both. This ceased great discontent all round, especially among the new practically independent population of Lebanon, so that Ibrahim Paşa, to avoid a dangerous revolt in his newly, ordered Bashiš to disarm his people. Bashiš obeyed this command and with the help of the Druses first forced the Maronites, to hand over their weapons and then disarmed the foragers also with the help of Egyptian troops. He was however able to prevent the Hawra Druses from openly resisting Ibrahim Paşa's commands and thus finally to look on while the Druses again joined the Turks. Thus was the European Powers intervened in the quarrel between Muhammad ʿAli and the Sultan. The withdrawal of the Egyptians brought about Bashiš's fall, for the hope that France would interest herself on his behalf remained unfilled. He went on board an English ship (19th October 1849) in Sidhîk that took him to Malta. There he remained about a year: he then went to Constantinople and spent the last years of his life here in various parts of Asia Minor, till his death in Constantinople in 1851. He was buried in the Church of the Armenian Catholics in Galata.

Bashmak (v.), sandal, shoe (Arab. saīb). The Bashmak Şarif are famous relics of the Prophet, mentioned as early as the 7th century A. H. The Egyptian Sultan al-Adhâr (d. 653 = 1237) possessed one of them which he gave to the Ashrafia, founded by him in Damascus. At a later period one turned up in Fars and we have a detailed account of it in a treatise by al-Makkari entitled Fâris al-mulâfît al-mawṣîf al-Narbî, cf. also the Turkish work: Bashmakşarif, hawûyiyye birâs (Kuzu, 1848). As is well known the Bashmak Şarif is also to be found among the relics of the Prophet preserved in Stambul.

Bibliography: Dozy, Dictionnaire d'arch. des noms des abîmîn chez les Arabes, 481 et seq.; Goldziher, Muhammedanische Studien, II. 162 et seq.

Bashmakli, also Pashmakli, - shoe-money. It was applied to the revenues allotted to the Sahânas and princesses. In general there were the same limitations for the Bashmakli as for the Arpallik [q. v.] viz. that no actual field should be given as Bashmakli or Arpallik and that the highest contribution should be 99,999 Akks (not 999,999 Akks) (see Köölb Reg. Const. 1303, p. 17 = Zeitisch. der Deutsch. Morgenl. Gesell. xxv. 278). These restrictions were however lost sight of at quite an early date.

(B. GIERE)

Bashshar b. Burū, a poet of the early 'Abbâsid period who lived in Basra and Bagdad. Of Persian descent and thoroughly Persian in his literary sentiment, the poet sought to express in his lyrics the national arrogance of the Arabs in whose language he also wrote. His relations with the Musâara, his public intercourse for the Zoroastrian religion and his private life, so full of amorous adventures were winked at for his panegyrics on the Caliph al-Mahdi; until he finally was rash enough to attack the minister Yusef b. Dârid. For this he was put to death in the year 167 (785). His great influence and popularity is evidenced by the very numerous anec- dotes which were still current about him in the third century A. H. and were admitted into the Kithā al-Adhâr.

( J. HELL)

Al-isbury the "All-seeing" one of the names of Allah [q. v., p. 303.]

Al-usher, Abd al-Fattâl b. 'Abd Allâh b. 'Abd Allâh b. 'Abd Allâh b. Vëčor, poet and letter-writer of the first half of the third century; although Ibn
Malyada raised him as a poet above Bahshe, but his prose style was also greatly admired; he is at present known only by occasional citations and scanty references. From these we learn that his early life was spent at Kifia, that he belonged to the circle of Abu L'Amir and Sa'id b. Hamadi, and that he was patronized by Uzbah Allah b. Yabya, when the latter was at the height of his power (245 A.H.), some satirical verses by him on another statesman of the time, al-Mu'allib b. Ayyub (889-935) are frequently cited. One of his letters to Allah b. Ayyub appears to have been written for the Caliph (Muhammad). His work is called Mas'udi or "the seeing" is said to be a euphemism for "the blind" (al-qal'bi). Among his personal acquaintances was Ahmad b. Aby Tahir. Four letters by him collected from sadat-works (e.g. Zahir al-Adheb) and addressed to Uzbah Allah are printed in the work called Miftah al-fikar (Cairo, 1314, pp. 312-315). Selections from his verses are given in Mas'udi's Murshid al-Dhatib (ed. Barbour in Meynard, vii. 326-336; anno 2418), and a few are quoted in Tha'labi's Murshid (p. 74). According to the Fihrist his Poems and Epistles were each collected in a dawir, an account of him was given in the supplement of Ahmad b. Yabya al-Ma'adh, to the Sahih, and he was placed by Ibn Haddib al-Nu'man in his list of poet-scribes.

(Al. S. Marzoukouit.)

BA'ASI, OTTOMAN POET of the 18th century A. H. According to the Tahrir of Hasan Cébechi and to Sámī who probably borrowed from the former, he belonged to Kharasan while Latté says he came from a place near the Persian border. He came to Constantinople in the time of Sultan Bayazid II with letters of introduction from the Persian poet Dzhani and the Ensi Turks. Latté's says he was the first to bring the latter's Divan thither. He is thus of a certain importance in the development of Ottoman poetry which has been much influenced by Newry. Of his poems only a few verses are preserved in the Tahrir from and from them it may be concluded that his poetry was only meant to convey the meaning of his words, the full meaning being left to the reader. He seems to have been a devotee of the Religion and Sámī says he died in 1541 (1544-1550) while Latté gives no date. His life is described in the biographies by Gibb, History of Ottoman Poetry, ii. 48. Note 2 and 365; Hammer, Gesch. d. von. Dicht. (F. Gérard.)

Al-BASIT, the "outstretched" one of the names of Allah (q.v., v. 2-301).

BA'ASI, the name of a metre, see above, p. 484.

BASMALAH, the formula bismi llichhi bargsaw (bismi allah), usually translated "in the name of God, the merciful and compassionate," is called the basmah or tawbah. The readers and jurisists of Medina, Bagh and Syria, Zamakshari tells us, do not consider it a verse at the beginning of the fa'itha or other Suras. They hold that it is only placed there to separate the Suras and as a benediction. This is the opinion of Abu Hanita and this is why those who follow him do not pronounce the words in a loud voice in prayer. On the other hand the readers and jurisists of Mo'assa and Kifia consider the basmah a verse at the beginning of the fa'itha and other Suras and utter it with a loud voice. This is Shafi'i's opinion and is based on the fact that these words were written on the leaves on which the Koranic texts were collected while the word Ama was not written.

The custom of beginning every important business by invoking the name of God is found everywhere. It is particularly noted that the ancient Persians considered invocations to wedding with the words: lhrj (basmah) la al-lamad (al-kalimat) and Zamakhshari supposes that in pagan times they said: "in the name of El-Lah," or: "in the name of El-Lah." (cf. article: ARABIA, p. 360). In Syria it was 43 of the Koran where we have an example of the ba'ma'lah, "in the name of God," said Noah, "be it sitting forth and casting anchor!"

It is usual in writing to suppress the prothetic ory of /l/ or /w/ in the orthography on the authority of "Umar, who said to his scribe: 'lengthen the 3, make the tops of the strokes of this sh prominent and make the eyes round.' Tradition also requires that stress should be laid on the /n/ of Allah.

Some Orientalists have raised the question whether the terms al-Rasul and al-Rahim are not the names of gods of paganism, which have survived the reign of Islam, and that these names have been reduced to mere epithets (cf. AL-ASLAM, p. 393 et seq. and ARABIA, p. 577). This is not the writer's opinion; this view would not agree with the statements of the commentators. To Zamakhshari in particular Rāshād and Rukum are certainly real epithets: the sense is "he who inclines or bends towards... grace and mercy;..." and this meaning is given in Rukum but in Rukum because the word is longer. The same commentator however gives some curious uses of the words, formulas in which they are used as substantives or regarded as titles. Thus the false prophet Musaillma was called the "Rahman of Yama" by the Banu Hantia; the "Rahman of this word and the next" or the "Rahim of this world" also occur.

The basmalah has great virtues in the eyes of pious men and magicians: the latter use it in inscriptions: they believe that it was written on Adam's side, on Gabriel's wing, Solomon's seal and the tongue of Jesus (v. Deut., Magic et Religion dans l'Afrique du Nord, p. 211). This formula is a decorative motif much employed in manuscripts and architectural ornamentation.

(Bar. Carré de Vaux.)

AL-BA'AR (in Europe in the middle ages, called Balkans and now known as Transylvania) a commercial town on the Shatii al-'Arab and capital of the Turkish Vilayet of the same name, 300 miles southeast of Bagdad.

Even in antiquity these were important towns in this district where the Emphrates and the Tigres, the two great channels of traffic for their basins, flow into the sea, where the desert routes from the west meet from Nadj andSyntax (Baqra) meet the routes from the Iranian highlands, which hold between the swampy district of al-Ba'bir, [q.v.] and the coast of the Persian Gulf. The Town of Drrür is (= Terebon) mentioned in the time of Alexander is to be sought for in this district. The Arabs found a place called Khurata here which is later mentioned as a suburb of Bagdad. Nevertheless the Arab town of Bagra was the foundation. The occupation of the point of intersection of the highway system, which is particular commanded the approach to Irik from the sea, was a military necessity to the conquerors. In place of a camp pitched here as early as the year 14 (635) but deserted again, Uhl b. Ghurain founded the
new town in 10 (637) or 17 (638) by order of the caliph 'Umar. The place was designed to be a depot for the Arab army. A site was chosen to the west of the river on the borders of the steppe, and the Arabian valley near water and grazing land. The town received the name al-Baṣra "pale, white stone" from the nature of the ground on which it was built; at first the settlement consisted solely of primitive reed-huts. Alūd Mūsā b. 'Abd ar-Rahmān built the mosque of sun-dried bricks but it was soon replaced by a building of baked bricks. Even in 'Umar's time the settlement was connected with the river by canals. The town grew with astonishing rapidity, its turbulent populace early take a prominent part in the history of Islam. It was from Baṣra that the 'Abāba, Taḥla and Zubair set out against 'All, who defeated them in the "battle of the camel" at Khurāsh in 36 (656); the name of Zubair, who fell there is still attached to a place in the neighbourhood which may well indicate his grave and the site of the ancient Baṣra (about a hours' journey). The mosque of the prophet in the town in the Umayyad period is evident from the fact that Khūshqul was governed from here. The tribal differences among the Arabs, which became so fatal to the kingdom, early broke out in Baṣra, when in the last years of Mu'ammar the Abd-emigrated hither and allied themselves with the Rabi'a against the Tamūt and Ka'ba. The most energetic officials of the Umayyad kingdom were constantly required to keep order in the populous town, to the Arabs of which numerous Mawāli soon attached themselves (even about the year 50 the total population was estimated at 300,000). In addition to the tribal feuds the intrigues of the Khālidīyya contributed to make the insecurity complete. Like its sister town of Kūfah, Baṣra was a favourable soil for civil wars. The most important slaughters against Umayyad rule had their scene in and around Baṣra. Baṣra however, withdrew from the victorious advance of the Umayyads longer than did Kūfah which had always been strongly 'Allid. It was under the 'Abbāsid that the town reached its highest level. It was — with its suburb al-Obbāla — the centre of the Arab sea-trade, the ramifications of which extended even to China. The great ephemerid of commerce in the eastern part of the river, namely the mukh al-Obbāla and the mukh Maṭā'il, ran off into numerous channels most of which were navigable, in the streets and gardens of Baṣra. The quarters at the West Gate where the caravans had their quarters on the minbar, developed into the business quarters. In the latter part of the 10th century "we have the gay life picture which was to be found in the canals and basins of the commercial town. With economic prosperity intellectual culture also flourished; mosques and libraries supplied the higher interests of life. In Kūfah and Baṣra the new Arabic philology developed. Among the theologians, in addition to Hāsan al-Baṣrī who falls within the Umayyad period, may be mentioned — born in Baṣra, al-‘Abd ar-Rahmān, the founder of the later orthodox system. Freethinking men held their meetings here. In the 9th or 11th century Baṣra gave to Arabic literature one of its greatest figures, al-Hariri.

The gradual decline of the central authority put an end to the prosperity of Baṣra. The rebel Zaidīs (q.v.) brought great havoc in the town in 257 (871). After the beginning of the 11th century the Karakemites (q.v.) were a constant danger to the town; in 311 (923) Baṣra was plundered by them. This is not the place to detail the vicissitudes of the town under the Caliphate of the Fatimids (cf. Makhdum) during the wars of the Byzantine, MāṬayid and Salīḥī period and through occasional raids of neighbouring Arab tribes like the Muntuṣī. The Mongol invasion in 656 (1258) caused a gap in its history. It appears that the continued neglect of the canal-system in the Haragoud period naturally resulted in the desertion of the town. Ibn Battuta found the greater part of Baṣra deserted, the ancient walls and mosques sometimes miles distant from the parts inhabited in his time. He describes the town as lying on the river. The traveller praises the date-groves of Baṣra but laments the decline, not only of its economic prosperity but also of its intellectual culture. The population was then, Sumer, although the famous mosque in the centre of the town bears the name of 'All. In the centuries following, Baṣra practically shared the fate of Bagdad and that of 'Irak. As Tavornier says, the town before the Turkish occupation belonged to the Arabs of the neighbourhood, this probably means that the then sultans of Bagdad did not trouble much about it. After the conquest of Bagdad by Salāḥ ad-Dīn (1192) Baṣra also fell into the hands of the Turks. Early in the 13th century a powerful native, Afṣarīyā succeed in founding a practically independent dynasty in Baṣra; under whose protection the harbour was opened to European traffic (first to the Portuguese, then to the Dutch and English). The last independent ruler of Baṣra, Yūsuf, had to take refuge with the Persians from the Turks whom he had provoked by his arrogance. At this point begins a long period of struggles for the town which ended in 1779 by the Persians vacating Baṣra in favour of the Turks. It has since remained in their hands except for its occupation by Muḥammad 'All in 1832—1840. The modern Baṣra, now a city, is reached from the Shāfī‘ al-Arāb by a canal, the Nahar al-Ashkar, which has been called the Urāshī, grande de la mer du Nord. Besides, the population of which has shrunk in the first half of the 18th century to a few thousands in consequence of the continual wars and epidemics, has since then recovered. The estimates of the number of its inhabitants vary from 18,000 to 60,000 of which the smaller number is probably the more correct. Since 1884 Baṣra has been the seat of a Wāli. The economic importance of the town is based on its commerce. The value of the exports, of which dates are the most important according to the English consular reports for the years 1907—1909 about £1,500,000 to £2,000,000 and the imports about £1,500,000 to £2,400,000. The town is expected to receive a great impetus from the completion of the Bagdad railway.
AL-BASRA, a town in Morocco which has now utterly disappeared. Basra (called Basut, Basda and Besara by Marmol) was situated on a plateau, command ing on the west the valley of the Wad Meda, on the east the road to Wazzan and in the northeast the valley of the Wad Lekknis, about 20 miles from Kasr al-Kebire and 80 from Fas (Fez). Against the W. was the acropolis of the Roman town of Trimezis and was founded about the same period as Andalus, that is to say at the end of the 1st century A.D., probably by Idrij II. When Muhammad, son of Idrij II, partitioned his kingdom Basra fell to the share of his brother al-Kasim with Tangier, Ceuta and Tetuan. Half a century later, after the conquest of the Maghrib by Djahar, lieutenant of the Fatimids Caliph al-Marrakesh, it became the capital of a small state comprising the Rif and Ghueralisland, the administration of which was entrusted to the Idrij prince Basut b. Khunul. It was soon afterwards destroyed in 973 by the army of the Omaiyad Caliph of Cordova, al-Hakim. Yahya, brother of Djahar b. Hamud, the vizier of this sovereign, was given its government after the defeat of the Berber tribes by the Spanish troops. [See the article BASRAVA]

These are almost the only definite statements we have on the history of Basra. We only know that the town attained a certain degree of prosperity in the 12th and 13th centuries. Ibn Hawkal and especially al-Bakri have left us descriptions of the town. Built on two mounds of reddish earth whence it had received the epithet of "al-Hasari," it was a real city 2500 and included, among other buildings, two baths and a mosque with seven minarets. Around it were gardens, corn and cotton fields and pastures supporting large flocks. Milk was so plentiful there that Basra was popularly called Basra al-Dobblan ("Basra of the milk"). The Arab writers note particularly the purity of the air, the beauty of the women and the courtesy of their inhabitants.

This prosperity was only fleeting however; even by Idrij's time, its decline had set in and it was probably complete in the 16th (15th-16th) century. In the time of Leo Africanus the walls were still standing in the midst of deserted gardens; only a few stones are left of them at the present day.

AL-BASUS, the mythical "originator of the forty years' war between the closely related Taghlibites and Baktrites.

A certain Sand of the tribe of Djarw, who is addressed by his people as al-Sand al-Basut, was in one of his journeys (see below) said to have enjoyed the patronage of the Baktr Djasas b. Marra and to have returned to Basra herself. When Kulaib b. Rabba of the tribe of Taghlib one day came upon a camel belonging to Basut on his meadow, which was forbidden to strangers, he slew it — so the story goes — by shooting it in the under with an arrow. Djasas took his obligation so seriously that he stabbed his brother-in-law Kulaib in revenge. The verses by Basut addressed to Sand, in which he tells Djasas responsible for the injustice done her, were called al-wawtufa-zaaitha, "the inciting" for they brought about Kulaib's murder by Djasas and with it the long and bloody tribal feud.

These four short verses are an example of the 'tradition of incitement', used also by women in the lament for the dead. Whoever it was that, certainly at an early period, inserted them in the story, so rich in songs, of the beginnings of the Basut war — as this fraternal feud finally came to be called —, perhaps basing them on similar topical verses, was not only skilled in all the niceties of Arab poetry but had also a deep knowledge of human nature. As giving the motive for Djasas' fatal deed, they fill their place in the saga admirably.

The fact that the heroine of a "humorous" story, which originated in Jewish circles, is also called al-Basut is probably to be explained as an ironical reflection against this tragic mythical figure. A Jew was allowed three wishes with the promise that they would certainly be granted by God. He was persuaded by his wife to ask that she should become the most beautiful woman in Israel and the request was granted. As she thereupon became vain and unbearable her husband cursed her and wished that God might change her into a bitch. His second wish was fulfilled at once and only one more could now be granted namely that which the children demanded as a third wish for their mother: that she should regret her human form again. Again satisfied by his two wishes he then defrauded her husband of his third wishes: "More unlucky than al-Basut," — the same proverbial phrase which is gravely used of the tragic Basut in the heroic saga.

AL-BATATH [See AL-BATHANIYA No. 2.]

AL-BATHANIYA, corresponds in name to the Bashan of the Old Testament, the etymology of which is given by the Arabic batnus "soft, fertile area". Historically however it does not coincide with the kingdom of Bashan, mentioned in the Old Testament, which comprised the whole northwestern half of the Eastern land of Jordan, but was first applied to the district of Bathanas which in the Greco-Roman period only denoted one, though a central, section of this kingdom. As the districts of Gaulanitis, Trachonitis and Auranitis were then
distinguished from Batanis and al-Shathâ, it is sometimes called a Batanician town, was also considered by the Arab geographers of the middle ages, but this appears in modern European travellers (Sorcet, Burchardt, etc.).

2. In Arab sources the name of the very extensive swampy area on the lower course of the Euphrates and the Tigris, between Wâdet in the north and Bârwa in the south, was also called al-Bathâ (plur. of al-Bathâ) and occasionally from the two adjoining towns, the Batha (Bathâ) of Wâdet or of Bârwa.

The Arabs are of the erroneous opinion that these marshes were first formed in the Sasanian period in the place of an arable and cultivated land covered with villages and fields. This is only so far correct that the late Sasanian rule the marshy areas were considerably increased in consequence of several unusual severe inundations, and the bursting of the dams caused by them and the partial neglect to repair them promptly and energetically. But the existence of considerable swamps in South Babylonia generally, stretches back to a great antiquity. The continual raising of the banks of the Euphrates and the Tigris by great deposits of mud gradually prevented the water, which overflowed during inundations, from returning to the river and caused the swamps, which would have soon disappeared but for the annual overflow in times of flood. Even in the cuneiform inscriptions the aqqamti (swamps) and appurti (islands) are often mentioned; cf. the quotations in Delitzsch, Assy. Handwörterb., 77, 175. At that period the whole district of Muhammar in the south to above Dora (Gorna) and eastwards as far as the other side of the river Kûrû must have been filled by a large swampy lake, into which the Euphrates and the Tigris (both had then separate mouths), Kûrû and Kûrû poured their waters. A narrow tongue of land separated it from the Persian Gulf. From Kûrûn, which is an interesting bar-stool which represents king Semacherib fighting with the inhabitants of these marshes and high jungles, cf. the reproduction in Layard, Monuments of Nineveh, ii. 25-74.

The Assyrians usually call this swampy lake (maššara = "bitter, watery") in tišûdu in its Kûrû kaladû = "sea of the (land) of Kaladû", and also swappu râţatu = "the Tigris"; on the latter name, cf. Delitzsch, ibid. p. 627. The Greek and Roman writers are likewise acquainted with it (as Alor or Chaldaea Salus); see above, p. 343-2. The name Dittachi is peculiarly instructive for it expressed this area of water and gives its breadth as 600 stade (80 miles). The Tabula Peiutingeriana also defines the Babylonian swamps; on it, besides pahût, is mentioned the name Dittachi, probably to be emended to Bâthâ = Bathâ. On the notions in cuneiform inscriptions and classical authors cf. Andreas in Papy-Wissowa, Realencykl. d. hell. Altertums-

AL-BATHÂ = "the Marshland"; the name applied to a marshland depression with a channel which is approached to more or less regular inundations and is therefore often swampy. In particular it is the name of two districts:
1. the small plain hemmed in by mountains on the northeast coast of the sea of Tiberias (bahrâtat Tâbûrata) in Palestine, south of al-Tell (the Biblical Bethsaida, Julius) which is watered by the Jordan and another perennial river (the Chalman), At the present day it is inhabited by Ghâér (Ghâir), the Ghâérina, agriculturists, who keep large herds of the Indian buffalo here as well as in the swampy plain to the north of Lake Hûta. The modern name Bâthâ (popularly al-Dittâh, which can be traced to the diminutive form) does not appear, as far as I know, in the Arab geographers of the middle ages, but it appears in modern European travellers (Sorcet, Burchardt, etc.).
Hadidjâdi built just above the Battha the "central" town of Wâsit (= the middle), which, built to command the Battha as a new bulwark of Arab power in those lands, soon rose to prosperity. The restoration of the neglected system of canals, on the proper working of which alone the fertility of the lowlying plain on the lower Euphrates and Tigris depended, and the crevices of dams and sluice were carefully attended to by him. He dug the two canals of Nî and 2âbî, to lead away part of the superfluous water of those two large rivers before they flowed into the Battha, and at the same time to water and fertilize dry areas; cf. Streck, Babylonien, l. 29—32 il. 303—304. The engineer who carried out these works under Hadidjâdi and thus rendered great service to Iraq was a native Aramaean (Nabātu) named Hassan. Hadidjâdi also settled in the marshes the Zuṭ (q.v.), an Indian people with their buffalo herds numbering thousands, who had been sent him by Maʿṣumم b. al-ʿĀṣim the conqueror of India; his limited means prevented Hadidjâdi from doing still more for the cultivation of the Battha. The sum of 3,000,000, to be distributed among the cultivators, was, alas, all the money that was at his disposal; too was wasted by al-Isâb, the Caliph’s brother, who undertook to undertake the task at his own expense, and made it quite a good business financially. To lead away the water he made two new canals called Sîh, C.f., in particular Kādūnān, 240—241. Wellhausen, Das arab. Reich u. sein Sturz (1902), p. 158—159.

Of the immediate successors of Hadidjâdi in his post of governor of Iraq, Ḥādîdî al-Kârīst was the most prominent in his zeal for agriculture. He energetically continued the work of drainage begun by Hadidjâdi, the engineering operations being still under the direction of the above mentioned Hassan al-Nabâtu and obtained for himself considerable estates from the drained areas, from which he drew enormous revenues; he aroused great discontent in the province however by his arbitrary seizure of large tracts of virgin soil. Cf. Wellhausen, op. cit., p. 207.

The area of the Battha on the conclusion of these great drainage works by the Arabs is estimated by Ibn Rusta (c. 290—953) at 30 parangas (each of 4 miles) in length and breadth. Kūdūm (dated 316 = 922) speaks of an area of more than 60 Arab miles (each 1 3/4 English miles) which when taken was found to consist of large tracts of virgin soil (op. cit., p. 179, note 290) by substituting miles for parangas; according to Masʿūdī the swamps must have measured not less than 35,000 square miles while the whole of Babylonia only measured 45,000 square miles.

In the northwest the Battha stretched nearly to Khâf and Nīfīr, while it began farther to the east at a considerable distance from Wâsit and then extended to the southeast as far as the district of Baya. The banks of the Battha above the course of the Euphrates as well as the greater part of the district between it and the modern (as well
as ye Islamic) chief branch of the Tigris as well as the land for a considerable distance farther over were in the middle ages more or less marshes. The Euphrates, the principal branch of which then flowed past Kufa and was used for irrigation purposes in North and Central Babylonia, discharged the remnant of its volume into the Batiha some miles below the above-mentioned town. The Tigris from about the end of the Sasanian period to the first half of the xvth century flowed in the western bed, the modern Shatt al-Hai, past Wadi (site of the modern Kuit al-Hai) and Hammam al-Najaf, which at first floated into the Tigris through five arms, which reunited again at Alsha, a day's journey from Babi. According to the older and more reliable account of Ibn Seraphin (beginning of the xvth = xiv<sup>th</sup> century) the Tigris (Shatt al-Hai) reached the swamp area at the village of Al-Kufr. It then took its course through four lakes, formed by inundations (khawar, also kawar and khard) the modern gharb) which were joined by another large channel, the canals. The waters of the Batiha, the Nahar Abu 'l-Aṣāid and the "one-eyed Tigris" (al-Dajja al-awiz) flowing from Matlah (site of al-Uṣairi) united to form one large river near Kufa.

The following brief account may be given of the modern divisions of the swamplands of Central and South Babylonia.

Of the two swampy lakes south of Kufa on both sides of the former bed of the Euphrates, only the longer on the west side now survives, the Bahri Najaf, while the Khur Alī Najaf (east of the ruins of Kufa) has been almost entirely transformed into arable land (rice-fields). West of Najaf lies the Khur 'Afar ("Afak") and south of it extending towards Lamian is the Khur Khurṣul, both called after the Arab tribes of the same name. The extensive marshes which lie along the Euphrates from Lamian to beyond Shatt al-Hai are usually referred to collectively as the Lamian swamp. In the middle formed by the Euphrates and the Tigris before their junction, west of Karka, lie the swamp of Abu Kefin and on the west bank of the upper Shatt al-Arabi the Khur Bahri 'Arab (i.e. the Khur of the islands). The banks of the Shatt al-Kufr, Khurṣul, the Euphrates (between it and the Shatt al-Hai) are also referred to as the Lamian swamp. (according to Loftus [op. cit., p. 244 ff.] named in by almost impassable reed-beds.

On the Tigris, even below Jumur 'Abd al-Gharr, all the land on either side, particularly on the west, is full of stagnant water and murrines. The swamps increase as one goes down the river and on the east side have engulfed the whole country as far as beyond Kerbela, up to the outlying spurs of the Peshi Kuf. The whole district is nothing but a sea of swamps stretching farther than the eye can reach, out of which rise here and there only a few date groves and isolated reeds-buta on small islands. The marshy part of three marshes of the Eastern Tigris is called the Swamp of Samarghas and the much larger southern part, the district liable to foundation by the Kerbela is known as al-Kuf al-Mağaf. A'âm (the great or chief Khârî, cf. above) along with the Samda marshes in the centre.

Generally speaking the whole land of the Batiha, particularly the district between the Euphrates, Tigris and Shatt al-Hai has been as yet but little explored; only the banks of the two large rivers are tolerably well known.

Seen from a distance, the marshes present the appearance of an immense patch of green plain, which owes its prairie-like appearance not to grass but to vast masses of reeds and cattails. These frequently form thickets, several feet in height pierced by labyrinth of large and smaller channels in which the stranger is lost without a native guide. The watercourses themselves are usually so shallow that they can only be traversed by boats of very slight draught (maṣwa)'r and farā'īd) which are propelled by reed poles (maṣwa', plur. marāṭī; cf. Abu 'l-Fāsīfi 365, 365, Mas'ūdī, op. cit., p. 967; mārāt). This style of locomotion (gharb; cf. Zâlīkha, a. D. M Sheib, Memoir. Geol. xxv, 245) is very ancient as the above mentioned Assyrian relief shows (1.e.g. Layard, Monum. ii, 27, and Orient. Lit. Zeit. ii, 90).

On account of their inaccessibility, the Batiha has always been a welcome hiding-place for all sorts of robbers and vagabonds, as well as for tribes. For the collection of travellers' relics were therefore posted in the period of the Caliphate at various points here, who had to guarantee safe passage through the channels.

Most of the tribes at the present day still have the reputation of being feared as highwaymen; at an earlier period the Banū Lāmy and the Banū Mahammad had a particularly bad name. They slip out in their small skiffs to the larger boats which use the main waterways, plunder them and conceal themselves in the innumerable small channels which are impassable to the larger craft.

The above mentioned Ḥaḍil, in the reign of ʿAbd al-Malik, transplanted hither to the marshes, the Tātār (Arab Zātār, q.v.) an Indian people, with their vast bands of buffalo. These Zātār repeatedly attracted attention in the early 'Abbasid period, by making themselves a nuisance to the Ḥiṣā by robbing and plundering and it was only after strenuous efforts that the Caliph Maḥmūd succeeded in forcing them to capitulate.

Far more dangerous however proved the great rising of the Zanj [q.v.], another people settled on the edge of the Batiha. These were negro slaves, chiefly from the east coast of Africa (Arabic Zānāj), name of the Zambesi coast, Greek Zingis) who were employed as means of obtaining the salt-petre from the saltiferous ground, east of Basra. Under the leadership of 'Ali b. Muhammad [q.v.], presumably an 'Abid, they stirred up a formidable rebellion, reinforced by all sorts of low characters (295—370 = 869—883). The Arab historians (Tabari, Ibn al-ʿĀmilī, Ibn Khallīfah) give detailed accounts of this servile war, which affords much valuable material for the study of the topography of the Batiha (cf. also Nöldeke, Sketches from Eastern History, p. 146—175). In the centuries following, the Banū Shīhīn (see the article Šīhīn) and after them the family of al-Mafṣafī [q.v.] founded a more or less independent kingdom in the swamp lands, which they shared at a later period with the Māryšt, who relied from 405-405-518 in Al-Hill. This the decline of the Māravy the Banū Marūf (see below) began to play their part, although the Caliph al-Nūṣr succeeded in destroying their leaders, the Banū Marūf, in 657 (1220). The later history of these districts under the Mongol and Turks is not known in its details.
In the barren region of the Baštha, portions of the originally Aramean (and Christian) population of Babylonia (the Nabataeans of Arab writers) found a temporary asylum after the Arab invasion, and their numbers must have been still so considerable there in the later middle ages that (Abu 'l-Fidāʾ tells us) the "Swamps of the Nabataeans" were occasionally talked of. Their remnants, the Mansūk (Arabic Sabba), the so-called Christians of Syria, the Baptists still survive in a few places in the marches, particularly around the Khāṭr al-ʿĀṣm, where the very unhealthy town of Hwawara (the modern Hawwara, q.v.) is one of their chief seats.

The greater part of the modern inhabitants is composed of wild, barbaric, Arab tribes who lead a half nomadic life and according to the accounts of travellers are among the rudest people in the whole East. As to religion, they have almost entirely adopted the Shīʿā and are acquainted with some of the laws of the Bedouins but on the other hand they lack many of the virtues of the latter. Only their great hospitality is favourably emphasised.

The most important of these Arab tribes, which are themselves divided into a large number of subtribes, are:

1. The Bani Lūmān, east of the Tigris, between Kur al-ʿĀmarā in the north and ʿĀmara in the south. They wander eastwards as far as the outer spurs of the Fuhūt-i Kūh and almost into the environs of Baghdaḏ. Kur al-ʿĀmarā was the residence of their Sheikhs in the early decades of the sixteenth century. A von Kremmer has given an account of this tribe in the *Sitz. Ber. der Wiener Akad.*, 1859, p. 241–244 (with specimens of their poetry).

2. The Aḥā Muḥammad, also called Aḥās (= Al Aḥā s. family of Aḥā) Muḥammad, likewise east of the Tigris. They are the southern neighbours of the Bani Lūmān and their territory consists of the swamps south of ʿĀmara (Samargh-, swamp, Shīr al-ʿĀmarā).

3. The Zūhāḏ (Zūhād), west of the Tigris. Their territory lies between the lower Baghdaḏ on the north and Kur al-Hay in the soutwest. In the south they adjoin the land of the Khuṣʾūl.

4. The Khawāʾil (Khawāl), south of the Zuḥāḏ. They dwell in the district between Kurān and the ruins of Nīfār (and to the southeast of it). They extend along the Euphrates from Dīwānīya to Lamūnīa where they border on the Muntāfīn. The wild `Aṭā` (Abā` Mū`a`-war), a subdivision of this tribe, according to the Zeitcher, d. Dunhuag, Morganst., Cit., xvii. 224), and dwell in the swamps that bear their name. Their chief place, the market for the products of their numerous buffalo herds, is Sūk al-`Aṭā` (south of Nīfār). In Niebuhr's time (the middle of the eighteenth century) the residence of the chief of the Khawāʾil was in Lamūnīa.

5. The Muntāfīn (Muntāfūr, q.v.), now by far the most powerful tribe in southern Babylonia, which exercises a sort of paramountcy over the smaller confederacies there. They are (according to Moritz, cf. cit., p. 200) not so much a tribe in the proper sense of the word, as rather the very numerous followers of a powerful chief's family. Their lands lie below Lamūnīa and comprise the banks of the Euphrates, almost down to Kurān (whence Sūk al-Shīrābī to their center). In the east they extend beyond the Shīr al-Hay nearly to the Tigris and thus comprise the greater part of the British proper.

6. The Ma`dīlīn (Ma`dīlīn, sing. Ma`dīlī), who pitch their tents between Shārma and Kurān, are undoubtedly on the lowest level of culture of all the tribes of Babylonia. The chief authority on them is Loofs, *op. cit.*, p. 120 f. sq.

There must also be mentioned the Khaftūjī-Arabs (cf. e.g. Well, Grafin, d. Charf, C. 92), who are known to have existed in mediaeval times and in. the last century commanded the road from Kufa to Basra; see Ibn Batūtā (ed. Paris), ii. 1. 94. At the present day on account of altered conditions of relationship or dependence they, like the above-mentioned Aḥā Muḥammad, sometimes appear as a family of the Banū Lūmān (cf. von Kremmer, *op. cit.*, 1850, p. 253) and sometimes as a branch of the Muntāfīn (Loofs, *op. cit.*, p. 244).

The settlements of the inhabitants of the swamps are usually on terraces and islands, which are not entirely submerged by the annual inundations, and sometimes collected in villages. They consist of long huts built of reeds and reed matting (sīyāf, sīyāf); we find these rash houses mentioned under the same name as early as in the Babylonian Talmud (cf. Noldkær in the Wiesen Reitnäcker, s. f. Knud de Mortel, xxi. 198, note 1).

Ricefields above all are cultivated. A not inconsiderable source of revenue is the reed which is used for all household purposes and from ancient times has been much used for writing implements (see Orient, 22. 23, lx. 190); the reed pens which were made of this plant in Waliat and are now manufactured in Dierūd are considered the best in the east; cf. C. Haust, *Les caligraphes* *et les miniaturistes de l'Orient Mu-*, *cuna* (1908), p. 19; H. Petersen, *Reisen im Orient* (1861), ii. 136; Stolte-Amands in Petersen's *Mitteilungen*, Erg. Heft. 77, p. 55. In addition there is a great abundance of fishes which both allow only a continual food supply to the natives but are salted and sent to the surrounding countries. Even in mediaeval times Ibn Rusūd (cf. cit.) says the Baštha as a producer of reeds and fish formed a real treasury for the people of Basra.

The chief wealth of the modern inhabitants of the marshes consists in their enormous herds of buffalo which yield great quantities of milk and butter; the latter is exported (particularly to Baghdaḏ) and is an important article of British commerce which brings in much profit. The buffalo, though originally imported from India (cf. above) thrive exceedingly in this land so suited to their requirements; some districts literally swarm with them. Sheep are also reared to a moderate extent. Caneels naturally are not found at all.

As to the remaining fauna of the Baštha, water-
fowl of all sorts are of course immemorial: gulls, wild-ducks, geese, swans etc.; there are flocks of cranes, pelicans, flamingoes, storks, bustards and bitterns. There is also no lack of carnivorous animals. We still very frequently have to be in contact with the red-crested, according to the accounts of modern travellers, just as it was in antiquity (cf. e.g. Streck, Die ischritzten Aser-

BÂTINÎYÀ. As the name, derived from+tun, inner, indicates, the Bîtinîs are those who seek the inner or hidden meaning of the Scriptures instead of taking the literal meaning of the revealed word, they interpret it; this interpretation is called tawîl.

The name Batinîs has been applied by Arab authors to several quite distinct sects, almost all of which have played a prominent part in history. The most important of these sects are the Khârijîs, the Karâmiîs and the Isha'iîs [see those articles]. The application of the name has been extended beyond Iran, and among the Batinîs are reckoned the Mazdakites, a Manichaean sect founded by Manâk, who appeared in the reign of the Sassânian king Karbâd, son of Frak (Kawbûl, son of Pîrûr). Shahrânûsi says that in the 'Iraq, the Batinîs are called Karâmiîs and Mazdakîs, while in Khurâsân they are called Tâbiîs and Mallâhûs. The spîter Batinî is also applied to the sect of gasûs.

In conclusion we need hardly emphasise the fact that, chiefly on account of the dangers which are epidemic everywhere, the climatic conditions of the swamp regions of Babylonia are exceedingly unhealthy.

As a spice (cloves) island Batian early attracted foreign traders and in consequence the population were converted in the 15th century from the island of Java and adopted Muhammedanism. For the spice trade the Portuguese settled here in later times (about 1524) and the Spaniards and Dutch (about 1609) as merchants and allies of the prince, had children by native women and thereby spread Christianity, which is professed at the present day by about 350 (in number) which is settled in the chief village, Labaria. The number of Muhammedans in Batian, who are of a very mixed stock does not exceed 3000 and they live in various settlements on the coast. The interior is uninhabited and entirely covered with forest.

The Sultanate of Batian consists of this island and several smaller uninhabited islands in the neighbourhood; before the arrival of Europeans and during the first century after their coming, its power extended as far as Cemara; it gradually became less important than Ternate and Ternate. The clove trade was the monopoly of its prosperity; Batian became of no importance after the Dutch forced the princes of the Moluccas to give up the growing of this shrub on payment of an indemnity in the 17th century. After the year 1750 it had been entirely subject to Holland. European exploitation of the island in recent times has not been successful; the principal products are copra and damar resin.

(A. W. Nieversheen)

BATMAN, usually written BATUM or BATMÁN, in Kirghiz BATTÁN, a Turk word, applied to a "heavy weight" (batantad = "weighing a hundredweight"); it is probably connected with the verbal root *bat" (timb). Although F. W. K. Müller (Stammverh. Pers. Abst., 1907, p. 327) says that the word is Middle Persian and "like many other Iranian words has reached Mongolian through Ugur" (examples are not given). What weight was originally meant by this word, is unknown; at the present day in the Turk dialects in elsewhere (cf. the European "pound", the Dutch "poot", the Russian "pechát", the "sift" etc.), the same word is applied to measures of very different weight. The heaviest batman is that of Bakhshāt (500 lbs.), the lightest, the Persian (two different batmans of 11½ and 5½ lbs.) In Bakhshāt the batman is considered a unit of weight. The different meanings of the word in the spoken dialects of the present day have been mostly thoroughly collected in Budgong's Turko-Russian Dictionary (Stammitaj's "Stammitaj" törzö-szótárk elôszók, v. 231) and in a more incomplete fashion in Radulski's "Pernaki hayır-İnänncede Türk- Dilişkân" (ib. 1357). As is shown by the work of an unknown Arab philologist edited by Mehlitz and published by the Arabic (really primitive Semitic) manes by mediaval times; at the present day also in Bukhara the Arabic word denotes the same weight as the Turk: BATMÁN, holly, triangle, depression. In the last meaning the word is not uncommon in geographical names: cf. Yabān. Mesopotamia, l. 665 et seq. AL-BATRÁN, as it is now written, the Batrus of the Byzantine writers; Arab geographers prefer to omit the article and frequently write Bathrān; it was a small fortress in Syria on the coast between Jubbub and Tripoli. Under the Mamluks of Egypt, the district gained importance from the city of the latter town. The absence of a harbour and the proximity of the lofty summits of Lebanon did not allow it to develop. A modest village at the beginning of the 16th century, Batrun has since the creation of the autonomous mutasarrifat of Lebanon become the chief place of the Kaimakmat of the same name. The town is increasing and has now about 6000 inhabitants, among them some Muhammedan families.

Battān, Sa'idīd BATTÁN COLTH, is the name of a legendary Turkish national hero and warrior of the faith, whose presumed grave in the village of Sa'idīd (Bāhtāl, north of El-Kehel (Doryleum) is held in great reverence. At the tomb is a mosque (Teke) of Bakhshāt deservishes with a mosque and Minaret. The historical original of this hero is a Muhammedan warrior named Abbāl Allah al-Battān, who, according to Tābilī, l. 1716, and his death in the year 182 (740) in battle with the Byzantines. According to Later Historians (al-Djumullī and Ḥarrānī) his real name was Abbāl Muhammad b. Sulīman b. Ḥusayn b. Kāmil b. Abbās al-Badrahim, he was born in Malatia and flourished about the year 1000; these statements are of a legendary character as they are found in the well-known popular romances of Sa'idīd Bakhshāt. This romance has been edited in various versions or prose and poetry, and fully discussed by Fleischer in his "Begleitb der Christianen, 4th ed., 1835. He has published a German translation entitled: Die Erzählung des Sa'idīd Bakhshāt. Ein alttürkischer Volks- und Sittensroman. Leipzig, 1871. The prose version has been several times printed under the title: Meshiql-lī حميشقلط اسجد باخلات in the year 1297 (1870) for example. Batmān: Cf. above the above mentioned works; Zeitschr. der Deutsch. Morgenl. Gesellschaft, xxx. 412 et seq. AL-BATTANI (his full name is ABU AL-ĀLĀ MUHAMMAD ib. зыва b. SÄN AL-BATTANI AL-HAKARĪ AL-SĀHĪ), the Al-Battani, or Alhazen, of our medieval authors, one of the greatest of Arab astronomers, was born before 244 (858) very probably at Harrān or in its
neighbourhood; the origin of the name al-Battani is quite uncertain. His family formerly professed the Sabian religion, whence the name al-Sabhi although our author was a Muslim. He spent almost his whole life at al-Raṣāla on the left bank of the Euphrates, where several families from Harran had taken up their abode; from 864 (877) he devoted himself to astronomical observation to which he regularly devoted the rest of his life. Happily having access to a merchant who dealt in business to Baghdad, he died on his return journey at Kāṣr al-Dīj, a little to the west of the Tigis and not far from Šamra in 317 (929).

He wrote: 1. Kībīb mu'rīfāt maḫānī al-kalābī fi ṣīnākā at-tālāt, the book of the science of the ascensions of the signs of the zodiac in the spaces between the quadrants of the celestial sphere; i.e., of the ascensions of the points of the ecliptic which are not, at the given moment, one of the four "zenith" or "pivots" [see the article ASTROLOGY]; it deals with the mathematical solution of the astrological problem of the "disposition" of the significator. 2. Kībīb fi ráčkā at-tubah al-kalābī, "a letter on the exact determination of the quantities of the astrological applications," i.e., the rigorous trigonometrical solution of the astrological observations. 3. Sāhind al-saḥīfātāt al-ṭālāt al-kalābī, "commentary on Ptolemy's Tetrahilbān". 4. al-Zajjīf, "Astronomical treatise and tables", his principal work and the only one that has survived to us; it contains the results of his observations and had a considerable influence, not only on Arab astronomy but also on the development of astronomy and spherical trigonometry in Europe in the middle ages and beginning of the Renaissance. It was translated into Latin by Robertus Reticeps or Ketenzis (died at Pamplona in Spain after 1143 A.D.; the version is lost) and by Ptolemy Tibusan in the first half of the 12th century (an edition of the text without the mathematical tables was published at Nürnberg in 1537 and at Bologna in 1645). Simon de Châtillon (1253-1310) had translated directly from the Arabic into Spanish (incomplete MSS. in Paris). Three insignificant astrological pamphlets, of which a Latin version exists in several manuscripts, which give their author's name as Bethem, Borem, Boreni, Boreni, have been wrongly attributed to al-Battani.

Al-Battani determined with great accuracy the obliquity of the ecliptic, the length of the tropic years, and the times and true and mean orbit of the sun, he definitely explored the Ptolemaic dogma of the immobility of the solar apogee by demonstrating that it is subject to the precession of the equinoxes and that in consequence the equation of time is subject to a slow secular variation; he proved, contrary to Ptolemy, the variation of the apparent angular diameter of the sun, and the possibility of separate eclipses; he rectified several orbits of the moon and the planets; he proposed a new and very ingenious theory to determine the conditions of visibility of the new moon; he endorsed the Ptolemaic value of the precession of the equinoxes. His excellent observations of lunar and solar eclipses were used by Dantème in 1749 to determine the secular acceleration of motion of the moon. Finally he gave very neat solutions by means of orthographic projection for some problems of spherical trigonometry; solutions which were known to and in part imitated by the celebrated Regiomontanus (1436-1476).

Bibliography: al-Battani's Stiftung: Opus astronomicon, etc., Arabic edition, Latin version, adnotationibus instructum of C. A. Neumann. 3 volume, 1849-1897, 3 volume, in-4. A. H. Katānī, Būt-Khān, a Mongol prince, the conqueror of Kūsia and founder of the "Golden Horde" (1227-1255), born in the early years of the 13th century, the second son of the chief Qāqā. Cingis Khān had, while still alive, granted separate portions of his vast empire to his three elder sons; Dżūji, Caghatāi and Ugelü; the youngest son, Tūhī did not receive his share till the death of his father when he received the eastern part of Mongolia, the latter's nominal country. According to the provisions of Mongol tribal law (still followed at the present day by some Turi nomads) the youngest son was regarded as heir to the paternal "house", and the father had to provide for his elder sons in his lifetime, which he did, it appears, by allowing the eldest son that part of his property which was needed for the maintenance of the "house" and the others: the younger portions. This explains why, with the succession of Cingis Khan's arms, the Farz (estates) of his eldest son was continually being moved westwards. In the year of the conqueror's death (1227) the whole steppes country west of the Irish (as far as the land has been trampled under the foot of Mongol horses); with the adjoining arable lands in the Khorasan and the Persian provinces on the northern shores of the Caspian Sea were regarded as the property of Dżūji and his descendants. Dżūji himself had died six months before his father (about February 1227); of his fourteen sons, the second, Bātū was recognized by the khans in the west as his father's successor and this choice was afterwards confirmed by Cingis Khan or his successor Tugelj. The boundaries of his lands from those of Caghatāi and of Ugelü were fixed by any agreements or arrangements; still less could the question be answered, what rights Bātū could claim against the other sons of Dżūji or against the Great Khan ruling on the Onkhan (in Mongolia). In spite of the division carried out by Cingis Khan, the empire founded by him continued to be regarded as a single state after his death, as before. In accordance with the immaterial conceptions of the law of property the empire was regarded as the possession of the whole family of the ruler, whose individual members had certain portions of the common estate allotted to them for their own subsistence.

Of the first ten years of Bātū's reign we only know that he was present at the Khuratai (parliament) of the year 1239 (or 1238, as in the Mongol epic which dates Bātū's death about 1243, in Mongolia, at which Tugelj was chosen as Great Khan, probably also at the Khuratai of 1235 at which it was decided to renew the war against the Kuchai and neighboring peoples; he was never in eastern Asia at a later period. In the army which set out in the spring of 1236, there were also sons of Caghatāi, Tugelj and Tūhī; like all enterprises of the period, this campaign was entered upon for its importance to the whole empire and not to any individual section of it;
the whole army, however, naturally was under the supreme command of Batu. The army is said to have reached the land of the Volga Bulgars by the autumn of the same year; the destruction of the important commercial city of Bulgar and also in the Russian annals but according to Russian accounts it did not take place till the autumn of 1237. The campaigns of the following years are only known to us from the accounts by the historians of Russia and western Europe (most fully treated by O. Wolff, Geschichte der Mongolen oder Tartaren, Breslau, 1872); the Mihajlomadan chronicle gives but the scantly accounts (cf. O. d'Oevro, Histoire des Mongols, t. 3, p. 613 et seq., and Hammer-Purgstall, Geschichte der Goldenen Horde, p. 102 et seq.). From 1237 (in November of this year the Tartars crossed the ice-covered Volga) till 1240, Russia, and in 1241-1242 Poland, Hungary and Dalmatia were ravaged; Bati himself on Christmas Day 1241 crossed the Donau which was frozen on account of the unusually cold winter and soon afterwards took the town of Gen, turned in the spring of 1242 against Bulgaria and went from there in the winter of 1242-3 through Wallachia and Moldavia back to the Volga country again. His army was never defeated anywhere in Russia or Western Europe; the retreat of the Mongols was brought about partly by differences in their own camp (Gyoyuk son of Ugdei and Bati, grandson of Caghatai had rebelled against Bati and on this account are said to have been arrested by Ongirat and partly the news of the death of the Great Khan which took place in December 1241.

After 1243 Bati took no further part in warlike campaigns. He himself was ravaged in the years 1237-1242 only Russia remained subject to the Tartars, even in 1245 the Grand Prince Jaroslav presented himself in Bati's camp and was confirmed by him in the rank of "emir over all princes of the Russian people"; in 1250 the independent prince (king after 1255) Daniel of Galicia had to be confirmed in the same way and do homage to the Khan.

The events of these years Bati's attention was drawn to the east. Ugdei's eldest son Guyuk, a personal enemy of Bati, had been chosen to succeed his father and raise the throne by the Kurfal of 1246. Five brothers of Bati had also appeared at this ceremony; Bati himself had stayed away, pleading his physical infirmities (davul-i yes = pain in the foot, probably gout) as his excuse. In the next year the new Great Khan announced his intention of going to his ancestral estates on the Ilmil (a river in the modern district of Tzenggatun on the frontier between Russia and China) the climate of which was more beneficial to his health. Bati firmly informed the Great Khan that he had hostile designs against him and therefore advanced against the latter at the head of an army. While still in Mongolia, five or six days' journey (apparently in a northerly direction) from Bighsaliq (the modern Gudem) at a place which is called Kamastik by Abul Faraq (ed. Puckoy, p. 402), Samaqand by Djuwan and the writers who follow him (not, of course, identical with the famous town on the Zarafshon, and also of Chinese, Hung.-si-lang-yoin (apparently on the Urga), Guyuk died suddenly (according to Abul Faraq on the 9th Rabi' II 647 = 22nd July 1249, according to the Chinese in the third month i.e. the spring of 1249). Bati received this intelligence in Alu-Kamsh, seven days' journey from the town of Kayligh (the Collum of Rubruquis not far from the modern town of Kalgan, certainly at the mountain of Alu-tu south of the III).

Although his elder brother Orda was still alive, Bati was looked upon as senior member of the ruling house; all the princes are said to have therefore paid homage to him and declared their readiness to submit the succession to his decision. The assembly, which was to settle this question was there by order of Bati to Alu-Kamsh; homage was summoned by Bati to Alu-Kamsh, before the settlement of the question; when they heard what result had been come to, they resolutely declined to recognise the decision. The coronation ceremony had to take place at a Kurultai held in Mongolia; it was not till 1251 that Berke, brother of Bati, at his brother's request, succeeded in assembling the Kurultai at which the ceremony was completed on the 9th Rabii' II 649 = 30th July 1251.

The princes of the houses of Caghatai and Cagdei did not attend the coronation but appeared soon after it to pay homage to the new sovereign. The Great Khan was told that they had made preparations to take his camp by surprise and cut down him and his adherents; on this accusation they were arrested and on trial found guilty, whereupon a fearful punishment was meted out to them, their families and clients. Almost all the grown-up members of the two houses were either put to death or condemned to banishment; the prince Bati was also handed over to the Khan, whom he had injured, and executed by his orders.

After this event, the Mongol empire was practically divided between Manguke and Bati although only, the name of the Great Khan appeared on the coins throughout the whole empire and in Bulgaria also. The Frankish Rhurquis (Riusbroek) says that he heard the following words from Manguke in 1254: "As the sun sends its rays everywhere, so extends my power and the power of all who are under my command. Later, in the boundary between the lands of Manguke and Bati was, according to the same Rhurquis, in the steppes between the rivers Talas and Cu. According to the same traveller's narrative, more respect was shown to Bati's people in the Great Khan's kingdom than in his own. It is certain that Bati who was regarded as senior member of the ruling house and to whom the Great Khan owed his throne, then enjoyed considerable recognition in such lands as the M. forw' al-nabr, did not belong to the ancestral territory of Djede and his descendants, he exercised some sovereign rights; thus for example, according to Djuwan (cf. the Persian text in Schoeff, Chronicaemia Persica, II, 117) he confirmed the son of Timur-Malik, the famous defender of Khodjendi, as heir to the goods and estates of his father.

Rhurquis tells us that Bati had twenty-six wives and a Rashid al-Din who had four sons. According to the Russian annals the homage of the Russian princes was usually received after 1249 by his eldest son Sarai, to whom his father appears to have handed over a share of his power in his life time. The year 650 (March 1252-1253)
is given by Raghib al-Din as the year of Bati's death (he is said to have been about 58 years old); but this date cannot be correct; for Rubauqiq was received by Bati as late as August 1253; on the same traveller's return journey (October-November 1254) also the Khân was still alive. We must therefore prefer Djumaiti's story according to which Sartak was sent to Mongolia by Bati in the year 620 (10th February 1255—9th January 1256) to inform the Khân of the news of his father's death while on the way thither. From Rubauqiq's narrative, it is plain that Bati lived during the latter years of his life on the left (eastern) bank of the Volga, going in the summer months as far up the river as Uz, 52° north, and spending the winter near the mouth of the river, where the town of Sartak was founded by him as the Achitula during this period.

Bati, whom the Russians only knew as a cruel conqueror, received the epithet 'Seyyid Khan' from his contemporaries of his own people. He is praised as a just, mild, and wise ruler even by such historians as the Persian Qazvini (Tabir-i Usul-i Nizârî, transl. Navyi, p. 1171 et seq.) and the Armenian Maghâkiya (Russian translation by Feklanow, p. 18) who are by no means friendly to Bati. But more important for us is the narrative of the Franciscan Johannes de Plano Carpino who was terrible in war but a gracious ruler in his subjects. According to a report, given by Qazvini, he was said to have secretly adopted Islam; Waglîf (lilhotme edition, p. 579) says he was a Christian (this story may well have arisen through confusion with his son Sartak); it is much more probable that, as Plano Carpino tells us, he gave no preference to any one of the (revealed) religions and adhered to the ancestral faith of 'knowledge of God' (Fadan-i-Shadri) i.e. to the worship of heaven.

Bibliography: The portions concerned of the most important original authorities, viz. the Tabir-i Usul-i Nizârî of Djumaiti and the Qazvini al-Tanzilât of Raghib al-Din, are still only accessible in manuscript; cf. the digest of the (original) sources given by H. Schelkunoff, Die Mongolen, ii. 120 et seq., and (not always reliable) in Huxter-Purgazzii, Geschichte der goldenen Horde, p. 95 et seq. The Oriental sources were not directly accessible to the authors of the later works (among which may be mentioned Howorth, History of the Mongols, ii. 36 et seq.). The Russian works (L'asie de l'Ouest de l'Empire ottoman slavek) were published in 1872 by the Archigraphic Commission in St. Petersburg and the narratives of the two Franciscans Johannes de Plano Carpino and Rubauqiq in the Raccolte de textes et de mémoires, publiés par la Société de géographie (Vol. iv.). The Mongol epic of the year 1241 has as yet only been published in a Russian translation (from the Chinese) Tretiâ sibirskih dvukhhoronnykh mitannih v Pekingu, c. iv. Cf. also K. L. Browne, A History of the Mongol Magadhi, xii. v. cka, St. Petersburg, 1871.

(W. Baedeker.)

AL-BATUL (A.), "the Virgin"; cf. the articles FATIMA AND MARTIAL.

BAWAND, an Iranian dynasty which reigned in Tabaristan from 45 (665) to 750 (1349); it traced its origins from Baw son of Sajjib, son of Kayâf, a contemporary of Khusrav Farwî (Chorches II) and called by him Aibchib; it comprised three branches, the first of which had thirty princes (45—297 = 665—1006), the second, right (466—600 = 1073—1310), and the third, right, also (635—750 = 1373—1459).

(C. Huart.)

BAWARDI, "miserable bearers", the name of the bodyguard composed of freemen and bondmen, armed with flintlocks, of the Great Shirif of Mecat; cf. C. Sauck, Hurgonje, Mechin, t. 197, note 3.

BAWÄZDî, a former town in the province of Mawâl on the west i.e. the right bank of the little Zabb, not far from its mouth.

The name is the Syriac Birh Awa, "the house of the toll-collector". As the Sabean name there appears occasionally Khumra-Sheib, "Shapir's song" after the usual name of the poetical names of towns common in the Sabean period. In the older geographers and the Bible the town is mentioned along with Tabrit, Tibrân and Sûn. Some one with an accurate knowledge of the town has, however, interpolated a detailed description in the text of Ibn Haukal (ed. de Goeje, p. 169, note 9). The place was notorious in the middle ages as the abode of the Khârîkites — the inhabitants say they are descended from the troops of Alî b. Abī Tâlib — and as a nest of robbers.

The town lived by receiving tolls stolen by the Bandits Sabît Bâtûn from caravans. Vâqîr however also mentions some scholars who were born in Bawâzî; a portion of its inhabitants must have been Christian; the miracle-working bones of a Syrian martyr Bâbîlû were there. There was occasionally a Jacobite bishop of Bîh Ramîn (i.e. the village of Bamatim) and Bîth Wâzîr, or a Nestorian of Shamûst (i.e. Sûn) and Bîth Wâzîr.

The ruins of the town have not yet been discovered. On my journey past its neighbourhood on the Tigris, in the winter of 1907—1908, a place called Mâtiyâwiya was mentioned to me, in which the name Bawâzî is possibly preserved. Another Bawâzî was at Abdâl-Fairuzââbî on the Euphrates, and a Mawâzî in Bîzû'ir Hedjâl in South Arabia.

BIBLIOGRAPHY: Ibn Khuridhîth (ed. de Goeje), p. 94; Ibn Haukal (ed. de Goeje), p. 199, Note g; Bakrî, p. 18; Vâqîr, s.v.; G. Hoffmann, Syrische Altertümer Forschung, p. 189; cf. his note on de Goeje, Ibn Khuridhîth, translation, p. 68; E. Herford, Untersuchungen aus historischen Togryphien etc. in Memnon, i. 1907, 1 and 2; E. Sellâr and E. Herford, Archäologische Reise im Euphrat- und Tigris-Gebiet 1907—1908, s.v.; cf. also E. Herford, The Lands of the Eastern Caliphate, p. 41 and 46. (E. Herford.)

BAWĂN, a Kurdish village of five or six huts, with the larger village of Hinnâq, half a mile distant, in the district of the Mâtrîya Kürs, between the district of Nawkar in the Djebel Mâlûb near Mawâl and the district of Amâdî, famous for the Assyrian sculptures which are found in the adjoining ravine of the Khân. The
rock reliefs were first visited by M. Rouet, the French consul, Betten’s predecessor, then by M. Ross, an English merchant in Mawjil, a friend of Sir Henry Layard’s (not the well-known M. D. Ross) whose account is given by Layard in his Nineveh and its Remains, ii, 142. They were afterwards drawn by V. Place, the engraver of Khorsabad, and by Layard himself. Layard’s companion, Mr. Bell was drowned while bathing there in 1851. Photographs and squeezes are still wanting; the inscription of the relief made by Samirîr (705–681) contains the so-called Bâbin date via the statement that Samirîr brought back the images of the gods of the town of Ekalattî, which had been carried off by Mardak-nâdâh of Akkad (Babylon) in the time of Tiglat-phalasar I (714–5). This statement contains an important problem of Assyrian chronology.

(E. HERZEL.)

BAYAN (bajn), Locality, Explanation. "Ilm al-bayân is often used synonymously with "ilm al-mâlahi; although it only denotes a section of it."

(A. SCHADE.)

BAYAN u. SAM'AN-u-TAMIMI, Shî'a sectarian, who was born along with Abû-Maghârib b. Saîd (q.v.) and a few adherents by command of Khâlid b. Abû 'Ammâr, governor of Kufa in 110 (727). He believed that the words of the Qur'an (Sûra 3, 120): "This is an explanation (bayân) for mankind etc." — referred to him and was therefore regarded by his followers as a prophet and incarnation of the divine. He taught by a false explanation of Sûra 55: 20–28 and 22: 28, as if the King of Light (God) is subject to dissolution with the exception of his face and revealed himself in the Prophet and afterwards in the Abî Jâdis (down to Abî Hâjjam b. Muhammâd Abî Abû-l-Faydî) and Sam'ân in him himself. His doctrine was apparently based on older concepts such as we already find among the Mandaeans.

BAYAS, usually written BAYAS, also BAYAS, the modern name of the ancient BAIAS, a royal village on the Gulf of Isfâhân at the foot of the Djêbîl al-Lakkâm, a station on the road from Isfâhân to Iskandaron. In the 'Abbâsid period, Bayas belonged to the Syriac Thughrîs (see AMRO, it shared in the civilizations of that land, so often fought for, without itself playing any important part. After the revival of the town in the beginning of the 8th century, it was described by recent travelers as a miserable village inhabited by Turks; nevertheless Szmi-Bey gives the number of its inhabitants at about 5000 and current at 6354. It is the centre of a Kast in the Wilâyât of Adana.

(R. HARTMANN.)

BAYAZID, a town in Turkey in Asia, capital of a Sandjak of the province of Erzerum, 108 miles from this town and 17 from the Persian frontier, at the foot of Mount Ararat; it has about 10,000 inhabitants mostly Armenians. Founded by Sultan Bayazid I Yildirim, to serve as a post of observation against Timâu’s designs, it has an old fortress dating from this period, enclosing a small mosque built by Beyhûl, Paşa in the 16th century. In 1805 Andrikos Jaultsenti, entrusted by Napoleon with a secret mission, spent six months here in confinement (Voyage en Arménie, p. 39 et seq.). The town, which commands the road to Adarab, was taken by the Russians in 1829 (the inhabitants were taken to Erivan and Alexandria which raised it, 1854 and 1856). The Kast of which it is the largest place comprises 120 villages of which 78 belong to the town, regarded as centre of a nahiya; the total population is 7,750 inhabitants. It manufactures Kordâs carpets and cattle are reared on the plains.

Bibliography: All Djevâl, Qadârûhî-yi taqddîsî, p. 153; Sâhîne, 1325, p. 860; V. Cantor, Trav. d’UZ, i, 229; Shamîlî, Çamlî al-Fârûq, ii, 1234.

(C. HEYT.)

BAYAZID (Turkish pronunciation of the Arabic Abî Yâzîd) I, surnamed YILDÎMEN, "the lighting," Ottoman Sultan, son and successor of Mustâd I Khudîwân-Emîr, married the daughter of the prince of Gernîyân who brought him as her dowry the town of Kuthia and three other smaller towns and succeeded his father, who was assassinated on the battlefield of Kopovo (794 = 1387); this was the occasion of the only brother of Kayfûs who in popularity he feared, a crime which was regularly enacted by the Ottoman Sultan down to the period of reform. He completed the conquest of Servia and concluded a treaty with Erzinc, son of Lazare which placed this prince under the overlordship of Turkey. He placed John VII, son of the son of Andronicus IV, on the throne of Constantinople in place of the Emperor John V Palaeologus, and then determined to replace him by Manuel II, son of John V, as co-regent (1360). The Greek auxiliaries furnished by Manuel conquered for him Abî Shîrî (Philadelphîa) which its commander had refused to surrender; the prince of Aidin submitted; the principalities of Sânikhî and Menteşte were incorporated in the empire; Abî al-Dîn, of the dynasty of Karamân, conquered Ak-Siym and in 1371 to him. He sent across his ravage the island of Chios, Euboa and Attica, and blockaded Constantinople which John Palaeologus had hurriedly fortified and Manuel had again entered secretly for seven years. The prince of Karamân having rebelled, was defeated and the towns of Kosna and Latranda, again incorporated
in the empire; Tōkāt, Siyva and Kariartya preferred to offer themselves to him rather than be given back to the son of the Kadi Buhrūn al-Din (795 = 1392). Kūtārām Bāzyāz, of the dynasty of the Bułūk-İsfandiyār at Sinope, having taken to flight, all the province of Kastamunı fell into his hands.

Sığ aşmūn, king of Hungary, disturbed by the progress of Bāzyāz on his frontiers declared war against him, after interesting the sovereignty of Europe in his cause. Including all his forces, he sent him a body of troops commanded by the Comte de Nevea, son of the Duc de Bourgogne, who afterwards was called Jeanne-Peur. The Grand Prior of the Teutonic Order, Frederick, Count of Hohenzollern and Philibert de Naillā, Grand Master of the Chevaliers of Rhodes, all joined in the Crusade. The allies besieged Nicospol but were completely defeated before its walls (798 = 1396). Following up this victory the Ottomans invaded Styria, Syria and Bosnia; in Asia their territories were increased by the addition of Kārgahi, Divrigi, Beşenci, Malatya and Kemaşi; in Europe by Veli-Shēr (Larissa) and Tīrlhāl; their incursions brought them as far as Athens and into the Peloponnesus.

Bāzyāz was rejoicing in his successes at Brusa when the capture of Erzinţ and Siyva by Timūr disturbed his attention in his conquest of Constantinople, the conquest of which he was planning, and forced him to march against the invaders, around whom gathered the princes dispossessed of their territories by the Ottomans. The siege of Angora by Timūr brought him up to the walls of this town; the battle took place to the northeast in the plain of Cīboh-Ākob. The auxiliary troops, formed of contingents levied from the ancient principalities of Sārakhzan, Menteşhe and Germeyk, went over to the enemy with whom were their forefathers; the Serves remained faithful and Bāzyāz fought till nightfall surrounded by his Janissaries almost all of whom were slain. The Sultan attempted to escape but his horse fell and he was taken prisoner (19th Dhu'l-Hijjah 804 = 20th July 1402).

Bāzyāz was treated with consideration by the victors; he attempted to escape; they took the precaution of putting him in chains during the night and making him travel in a litter surrounded by a grille (ćiçə) carried by two horses. It is this word ḡan which has given rise to the belief, supported by a misunderstood passage in Ibn Ārbāsh that Bāzyāz was put up in an iron cage, as well as the word ḡanızxan used by Pharnaces (l. 26). While accompanying Timūr who returned to Samarkand after the capture of Smyrna from the Chevaliers of Rhodes, Bāzyāz died at Aş-Shēr from an attack of gout (14th Shā‘bān 805 = 8th March 1403); he was buried at Brusa by his son Mūsā. The Ottoman Empire was no longer in existence; it was not reconstituted till ten years later by the energy of Sultan Muhammad I.
BAYAZID II — BAZAR.

Bayazid II, his real name was Ali Yavuz Taifur e. H. A. Adam & Sirkhan, a famous Shafi, who died in 201 (875) or 264 (877—878). His grandfather was a Māti; of the circumstances of his own life, little is known except that he led an ascetic life. Legend has therefore adorned his biography all the more richly, and deduced from certain invariable traditions about him, which tended to make him known on heaven (304—405). His doctrine is only known to us from occasional utterances handed down by Aṭār amongst others. From these it is clear that he was a convinced pantheist and very probably the first to introduce the doctrine of Fānū (Nurvand). His followers are called Taifūrs or Bajazidins. His tomb in Bagh is still held in great reverence by pious Sūfis; the Kubba on it was erected in 700 (1300—1301) by Ujdin bin.

BAZ BAHADUR, or BAYAZID, ruler of MELWA, Central India, in the 16th cent. He was the son of Shāh Jahan, who had been appointed governor of Mālwa by the Akhūn emperor, Bābur. On his father's death in 1534, he assumed independence, with his capital at Sārangpur, and raised money in his own name. In 1536 Mālwa was conquered by the Mughul emperor, Akbar, and Bāz Bahadur after struggling ineffectually for some years, surrendered in 1579 to the emperor by whom he was taken into favour. He died at Ujjain in 1588. His Bahadur is known in legend for his romantic attachment to his Hindu wife, Rūmāni, the composer of songs that are sung to this day throughout Mālwa.

BAZAR, market (Pahlavi sūgar, Persian sāgar, Sāgur. J. Darmesteter, Etudes iraniennes, i. 120; F. Horn in the Gesellschaft der Fürstenhalle, Bd. 1, Part 1 (p. 11), strictly a row of shops in a street covered in by a wooden or stone roof and closed by doors at each end; when this street crosses another like it, forming a covered market, this is called a bazaar). A popular translation of the Pahlavi sūgar-šūr, Persian Sāgar, Turkish Sank, four-sided, cf. Latin quadrivium. Caravanerais usually have their doors opening into the middle of the harem. At Tehran there

At Tehran there
is for example the düvar Kari built by the minister Mirzâ تکیه-كاش - 8th century. There are also smaller markets in the various quarters of the town called بیدلی and بیدلی - گرد. Bibliography: J. E. Polsak, Periam, i. 51.

(For Huart.)

BEDEL-I 'ASKERI (the erroneous form Bidal-i 'Askari) is also found, and these are the taxes which are paid by non-Muslims for exemption from military service and have taken the place of the ancient خبری. The latter appellation survived into the middle of last century. Under pressure from foreign powers, particularly England, after the abolition of the خبری and the enrolment of non-Muslims as soldiers in the Turkish army, a decree was promulgated, on the 10th May 1855, after long resistance by the government, which promised non-Muslims conscription and the abolition of the خبری. In the خدا ی کن - 856 the decree was confirmed but at the same time exemption was allowed by providing a substitute or buying oneself off. As the remittance at this innovation was equally great among Muslims and non-Muslims and the tax was hard to sell, the practical result was that the only difference was the change of the name from خداری to بیدل- 'اسکری. The amount paid also was the same as the خداری (cf. Morawitz, Les finances de la Turquie, p. 76 note 1). The taxes were paid an été by the communities and shared by them among the individual members according to their means and income. At first the payment was 5,000 piastres (about £45) for 150 persons and later for 135. The total revenue from the state from this source is given by Morawitz (p. 76) at £800,000 Turkish in round numbers. Clergymen, women, children under 15, old men over 75, the poor and the inhabitants of the privileged districts and of Constantinople were exempted from the tax. The collection was first made by officials of the state, after the reforms of 1857 (1841) by the spiritual courts of religious affairs. The name was changed from خداری to بیدل- 'اسکری since 1851 by the government tax-collectors. (The Turkish text of the law is given in Lâbhef Kevânot, ii. 347, and the French in Young, Corps de droit ottoman, v. 276.)

After the revolution of 1808 the بیدل- 'اسکری was abolished by a provisional law of the 20th Edinburgh, 16th May 3 June 1805, published in the Ziyâdet- 'askery of the 2nd Shawwal 1239 = 16th Aug. 1839 and also in the Mehtâni-Kevânot in the 1237 = 1839. Government of the Empire ottoman (Paris, 1876), p. 121. And in its place universal military service for non-Muslims also introduced.

(F. Giese.)

BEDEL-I NAĞDI, a tax paid by Mahommedans liable to bear arms, who wish to buy exemption for the rest of their period of service after serving three months. It amounts to £50 Turkish and is allowed on condition the man liable can pay without having to sell his agricultural implements. For further information see the article بیدل- 'اسکری.

(F. Giese.)

BEĐJA. The name بیدیا or بیدیا are correctly pronounced بیدیا or بیدیا. It is applied to a group of Hamitli tribes, who live between the Nile and the Red Sea, and whose influence was formerly felt in the Abyssinian frontier. The name Bega is met with in pre-Mahommedan times in the Aethiopian inscription (E. Littmann and D. Kremer, Vorbesicht des Deutschen Aethiopien-expedition, Berlin, 1906, p. 6 et seq.) between 300 and 300 A.D. In the Greek text King of the بیدیا corresponds to the "King of the Bega" (D. H. Müller, Epigraphische Denkmäler in Germanisch, AC., 1859, 1861, 1865, vol. 43, Wien, 1894, p. 16), both of which are here titles of the prince of Aethiopia. To the بیدیا of the Arab geographers corresponds the name, still used at the present day, applied collectively to these tribes بیدیا or بیدیا, from which their language is called "to-بیدیا" (Leo Reinisch, Wörterbuch der Bajewy-Sprache, Vienna, 1895).

The بیدیا have often been identified with the همیان. The latter however certainly did not belong to this group of tribes; the ancient name has survived not in the بیدیا but in the بیدیا whom de Goeje (Edrisi, p. 26, note 3) has already identified with the همیان. In the beginnings of Islam the بیدیا were considered by the Muslims as rude heathen unworthy of a treaty. It was not till the beginning of the second century that negotiations were entered into when Uthman b. al-'Affan made an agreement with them, which was renewed under the Caliph Ma'mun. Their land offered great attractions to the Arabs by its rich stones of gold (ال-لاخم) and jewels (Emeralds). The بیدیا and the همیان, more particularly the former, settled in Bedjaland but gradually intermixed with its natives. From ancient times the names of two subdivisions of the بیدیا have been known. From the time of Ma'mun the بیدیا are the ruling part of the nation and the بیدیا or بیدیا a sort of heathens. Ibn Hasain says (l. 110) that the king of بیدیا was called "ال-بیدیا". The relationship is said to have formerly been the opposite. The بیدیا early became converts to Islam, most probably direct from paganism and not from Christianity as some authorities state. As to their language, we can only add to the full account given by Volter [see the article تکیه] that daughters among them did not inherit (l. 110) and that therefore contrary to ancient popular law the prescription of the تکیه on this point could not be put into force. In spite of the strong influx of Arab blood the بیدیا have preserved their individuality to the present day. Their chief divisions are the بیدیا (q. v.) and the بیدیا (q. v.).

(C. H. Becker.)
BEDJKEM, an Andr al-Umar. Bedj kem was a munimated slave of Turkish origin. He first attached himself to the prince of Gnilu, Mardawij b. Ziyat, and then deserted him because his countrymen had been slain by Mardawij. In 325 (935) the latter made war, and, as Bedj kem had been the leader of the assassins, he had to flee from fear of vengeance. He then betook himself to the Caliph, was appointed commander of the troops accompanying him by the Amir al-Umar Muhammed b. Rau'ik and received the name al-Rau'ik. In 325 (935-937) he twice defeated an army of the rebel governor of al-Ahwaz, Abu 'Abd Allâh al-Barudi, when the latter sought the help of the Bâyids. His luck turned. Bedj kem was put to flight and had to retire to Wâsit. Here he began to cherish the plan of making himself Amir al-Umar. The vizier Abu 'Ali b. Mâkla wished to bring about the fall of Ibn Rau'ik and to this end entered into negotiations with Bedj kem. When the chief Emir heard of this he had Ibn Mâkla thrown into prison where the unfortunate vizier soon died. Ibn Rau'ik then sought to win over his erstwhile enemy al-Barudi but the latter was defeated by Bedj kem and forced to take his side. All Ibn Rau'ik's efforts were of no avail. In 326 (937) Bedj kem entered the capital and was appointed Amir al-Umar in place of Ibn Rau'ik by the Caliph. His first task now was to bring the recalcitrant Hamûdûn to submission of their pledges. These were refusing to pay the tribute due, but when Bedj kem had gone to Mosul against the Hamûdûn Hassân, Ibn Rau'ik suddenly appeared in Baghdad at the head of two thousand men. Bedj kem had to make peace with Hassân in 327 (938) and to return to the capital. A peaceful settlement was soon reached with Ibn Rau'ik by the terms of which the latter received the governorship of Harrân, Edessa and Kimmân with the districts on the Upper Euphrates and the frontier fortresses. Only the Bâyids now remained to be dealt with. Al-Barudi therefore sent an army corps against Shiô, Mûsir ibn al-Dawla, the Bâyid lieutenant, was not able to defend it but his brother Râdkh al-Dawla came to his assistance, advanced against Wâsit, and, on the 10th of the month, Bedj kem arrived with reinforcements however, and Râdkh al-Dawla had to retire. While Bedj kem and al-Barudi were drawing up common plans for the prosecution of the campaign, the latter began to intrigue with a view to securing power for himself and was therefore deprived of his office. The Caliph al-Râdkh died soon afterwards. His successor al-Mutâfiî confirmed Bedj kem as Amir al-Umar and the latter now sent an army against al-Barudi. His lieutenant was defeated however and Bedj kem had to take the field himself. Before he reached the scene of operations however, al-Barudi was completely defeated and soon afterwards in Radjah 329 (April 941), Bedj kem was surprised and slain on an expedition by some Kurds. The highest prize was bestowed on him by Oriental historians not only for his military ability but also for his talents in other directions.

**BEDR.** [See Râfid, p. 839.]

**BEGUINS.** [See ARABIA, p. 374 et seq.]

**BEQU.** A Turkish title, Ottoman bey, Kirghiz H or Huy. The various meanings, which are given in the dictionaries (cf. in particular *Sommerfeld,* славец or славец нормальный, i. 209; i. 265; i. 268), may be traced back to three fundamental notions: 1) the word bey is applied to any noble, in opposition to the common people; and usually also to the princes of the ruling house (in the Serbians it is also occasionally applied to the latter); 2) the "prince" of a small tribe or community is called bey in opposition to the khagan or khân, the ruler of a larger domain; 3) finally the word bey is applied to any "position of authority" in the widest sense whether it has been obtained from a ruler, by election or by usurpation: the commanders of divisions of armies from the largest to the smallest (cf. in particular *Sommerfeld,* чиновник, чиновник нормальный, позже и впоследствии the sources for the history of the *Golden Horde*), the holders of administrative offices from the headman of a village to the governor of a province, civil officers and judges. The word appears to be found in all three meanings in the very earliest monuments of the Turkish language, the inscriptions of the 10th century a.d. Begler is there the noble in opposition to the people (budun); the prince of the Kirghiz, Barag is the prince of the Kirghiz tribe. The word bey in the Turkestan kingdom; the "wise and valiant" buymukh who ruled the kingdom with the Khagans are in some places distinguished from the main body of the people as well as from the nobles; the expression buymukh-beyler also appears however. Cf. the glossary to the inscriptions in W. Radloff, Die alt-türkischen Inschriften der Mongolen, St. Petersburg, 1855, p. 138 and 143. In the medieval glossary published by Melchorsson (Arab. philologie aus turkischen jahrb., St. Petersburg, 1900, see Index) the word Bey is translated by the Arabic Amir. (W. Barthold).

Among the Ottoman Turks every son of a Paşa is entitled to bear the title bey; in addition the title is granted to military officers of the 5th and upper grades, as well as to the "kings of tribes" ( tytuł kabile beyler) as well as by courtesy to the personal of the foreign diplomatic missions (whence Bey oğlu, the Turkish name of Pune where the Ambassador resides). In former times the chief governors of Kononella, Anatolia and Syria bore the title beyler bey ( beyler bey); Arab. Amir al-ummar, Pers. Amir al-Mumân, but now these are merely titles of honor. — Beybeyi (p.): hence: minister, in general a distinguished man of noble rank. — Further descriptive: Bey the rank of a Bey, any office the tenant of which holds the rank of Bey. — Beyteğlî, prime minister, president of the Sultan's chancellery (Diwan-i Hümâyûn). Cf. S. Khalek, Üzer Fâthe, Amires, Kungstenen und Anwolen in der offiziellen rumänischen Sprache.

**BEQA.** [See below.]

**BEGEGINDS.** The name of a dynasty in Arbela (Iribil), founded by Zain al-Din 'Abî Kâlidik ib. Begtegga. The latter was one of Zangi's (q.v.) Emir and was sent by him (539 = 1144) as governor to al-Mawjûl. On Zangi's death, he retained not only this office but also became lord of Shahrûr, Hezkârtîye, Tektûr, Sinjûr, Harrân etc. The real seat of the family however was Iribil; 'Abî had his pareem and his treasures there
and he retained this town for himself when in 563 (1167) on account of advancing years, he abandoned his other lands and towns in favour of Kast al-Din Mawâdî [q.v.]. After his death in the same year, Ibrîl fell to his son Zain al-Din Yûhûf, who was still very young, while his elder son, Ma'âssar al-Din Kûhkûrî, v. r. i., received the town of Harràn from the then lord of al-Mawîlî, 'Îsa al-Dîn Mas'ûd, son of Mawâdî. In the struggle which took place some years later between Salîh al-Din and the Zangids, both took the side of Salîh al-Din. On the death of Yûhûf in 566 (1172) his brother Kûhkûrî became lord of Ibrîl also and besieged his lands to the 'Abbâsid Caliph when he died childless in 630 (1234).

Bibliography: Ibn al-Athîr (ed. Tornberg), al. and xii.

BEGTÎMUR, Lord of Kihlîl from 584—589. (1188—1193). Begtîmur Said al-Dîn was originally a slave of Shahîr-1 Arman Zâhîr al-Dîn and played a prominent part in the reign of his son Sukmân II. As the latter, as Ibn al-Athîr states, was childless, the neighbouring princes hoped to be able to seize Kihlîl on his death. Sukmân therefore in his lifetime ordered the chief men of his domain to pay homage to Kast al-Dîn Lujûh, Urtuksh of Mâsûnîn, who was his sister's son, but as the latter died before him in 580 (1183) and his successor was still a child, there was no one on Sukmân's death, which took place soon after, who had a legitimate claim to the throne. Begtîmur took advantage of the situation to make himself lord of Kihlîl, after putting Shahîr-1 Arman's visir Ma'dûd al-Dîn Ibn Râhîk out of the way. He did not succeed without opposition however, for at this time the renowned Salîh al-Dîn was preparing to subdue Kihlîl and other towns in that district. Taht al-Dîn 'Omâr, a nephew of Salîh al-Dîn, put Begtîmur's troops to flight, released Ibn Râhîk from his imprisonment and was on the point of taking Kihlîl when death carried him off and left Begtîmur master of the field. When his dangerous enemy Salîh al-Dîn died in the beginning of 585 (1195) Begtîmur showed an almost instantaneous zeal to take the title from the period of al-Sültân al-Mal'âquun Salîh al-Dîn 'Abd al-Ádâl.'Yúsüf, and was planning the siege of Ma'âssarûn when his son-in-law Hädî Dînâr had him murdered. The latter thereupon seized the throne of Kihlîl, but some years later we again find a son of Begtîmur mentioned as lord of the town.

BEGUM (r.), the English way of writing Begâm, Begam *Queen-Mother, widow of a prominent man, lady*.

BEHAR [See Behar.]

BEHAR-Î DÂNESH. [See Behar-i Dânesh, p. 575.]

BEHARISTAN. [See Beharistan, p. 575.]

BEHESNI, derived from the Syriac Beta Behna, the Behesna of the Arabs, a Kasaţ and town in the Sandjak Malâyîs of the Wilayet of Ma'mûnîst aer Atän. The population of the whole Kasaţ amounts according to Cucinet to 45,120, including 23,600 Mahâmmamâdis, 3,500 Kurds, 13,991 Kûshkûnians, 1,870 Greek Armenians and the town itself — again according to Cucinet — has 1,700 inhabitants. This figure is probably an error. Balkhânaumshâh (see below), apparently following Simâ'î's Kânûnî, gives the number as 12,000 of whom 1,500 are Armenians. This would rather agree with the statements of Ritter and Atsawurth, who estimate the number of houses at 2,500 of which 350 were Armenian. The town has a few relics of the past, among them a fortress which was once famed for its strength. Under the Mamlûks of Egypt, it was one of the chief frontier-fortresses against the Bilad al-dûrûn, "the land of the great passes" through the Taurus. It was taken as early as 1396 by Timûrshâf for the Ottomans (Hammer, l. 264) but it was not till the reign of Selim I in 1376 that it finally became a permanent Ottoman possession, when by the occupation of Jalâb all the other Syrian border fortresses of the Mamlûks fell into the hands of the Turks. After the battle of Nicbâ (1839) in which Hafieh Pasha was defeated by Ibrahim, son of Meşûmed "Ali, the Ottoman army after its flight reassembled here before its retreat over the Taurus.

Balkhânaumshâh gives some specimens of the Turkish dialect spoken there in Kettâri Samdii, 1903, p. 125 (he is wrongly called Balkhânaumshâh here; Nejîb 'Aazim is meant).

BEI OGLU. [See Ferîa.]

BEILÁN (BAIÄN, BEILÁN, BEILÁI), a village in the Amanus Mountains (Alma-Dagh, see above, p. 312) in North Syria situated in 36° 16' East Long. (Greenw.) and 36° 30' N. Lat. It is the capital of a Kasaţ (and therefore the residence of a Kâshkâmâkh) and the Wilâyet of Jalâb (Aleppo) with an area of 600 square miles and 15,000 inhabitants; cf. Supan in Petermann's Geogr. Mitt., Erg. Heft 135 (1907), p. 15. Beilân possesses a picturesque situation and an excellent climate. It lies a deep valley, stretching from east to west between the Kara-Dagh and Diebel Mill ranges, so that its houses of wood stand partly on the banks of the Nahâ Jalân (also called Derel-barghische) and partly rise in terraces up the northern face of the hill. The fact that Beilân is situated on a slope accounts to a certain extent for the differences in the estimates of the height above sea-level: Schaffer and Baedeker 1400 feet; M. Hartmann and Janke: 1380 feet; Cucinet: 1650 feet; Aimawarî: 1760 feet; Obertheimer-Zimmerer: 2125 feet. The vegetation (including many fruit-trees and vines) is exuberant here as the land is well watered by numerous mountain streams; the air is very healthy on account of the high situation, and the high cliffs running along the sides of the valley protect it from the oppressive heat; Beilân is therefore a favourite country resort of the fever-stricken merchants of Alexandretta (Iskenderûn) and is also much visited by the inhabitants of the
more distant Halab. The figures given for the number of inhabitants (which is higher in summer) since the middle of the sixteenth century from 2000 to 4000; Neale (1850): 3500 inhabitants, Kotsch (1862) and Czernin (1875): 2000 inhabitants, Oberhammer-Zimmerer (1896): 2100 inhabitants, Schaffar (1902): 4000 inhabitants, Janke (1903): 2000-5000 inhabitants, Sepan, op. cit., p. 26: 4200 inhabitants. The latest estimate, in Baedeker (1910), 7500 inhabitants, is of course based on considerable increase in the town in the last decade. Its present inhabitants areNDinantly to Baedeker mostly Muslims; earlier travellers e.g. Eli Smith (1845), H. Petermann (1853), and Oberhammer-Zimmerer say that two thirds of the population are Turks and one third Armenian.

Oriental authors of the middle ages never, as far as I am aware, mention Beishehr. The statement of the Schilder des Weilhuy (Hallab (year 1300 = 1882, p. 88) and of Adnan (year 1308 = 1890, p. 185) that Beishehr was first founded by the Ottoman Sultan Süleyman II (1520-1566) is therefore quite credible. This foundation is said to have filled a previously unoccupied area called 'Ala Nur. The emendation of Nil (نیر) to Bail (بیل) and the derivation of the word Beishehr from the earlier name of the Bail-spring (بیل) seems quite obvious. In this case the explanation, quite satisfactory in itself, of the word Beishehr from the Turkish *Bai* (بیل) (Turk, *bel, bel*), which is proposed e.g. by Sachau (*Sitz. Ber. der Berl. Akad.*, 1892, p. 322) would be quite unnecessary. The conjecture put forth by Leake and H. Petermann that Beishehr (or the above Bail) represents a corruption of the Greek *παυλα* (cf. *παυλεσ* below) is not to be entirely discarded.

Beishehr owes its importance entirely to its favourable situation on the most important route over the Amurana, which attains its highest ridge a short distance from the town (1/4 miles to the south, 1/4 hour). It was naturally fitted to be the halting station for all caravans from the Syriam-Mesopotamian hinterland and in particular from Halab, Antakia and *Ainteib* journeying to the sea usually to Alexandria (Iskandarion); there is therefore a large Khân there. The various estimates of the height of the pass differ in a rather remarkable degree: the figures given vary from 1890 feet (Murray) and 1900 feet (Baedeker) as minimum to 2300 feet (Oberhammer-Zimmerer) as maximum; most authorities give it as between 2250 and 2290 feet; cf. Janke, op. cit., p. 158, note 96.

The pass of Beishehr is by no means the only pass over the Amurana; there are, for example, two other routes over the mountain from the 'Ank (q.v., p. 331), the plain of Antioch to Iskanleria; cf. M. Hartmann, op. cit., p. 16. But these and all the other passes (cf. Janke, op. cit., p. 34) are in the main used by the scattered footpaths and cannot in any way be compared in comfort with the Beishehr pass, which is suitable for vehicular traffic. Trade and commerce between Syria and Cilicia have therefore from the earliest times been carried on over the Beishehr pass and even armies have crossed it. *Σεμηνεία* (Tolweny, Strabo) or *Πόρτας Συρίας* (Phinsky) also *Διαμινεία* (Portin Amman) cf. Pauli and Schede, *Reise in Syrien und Palästina*, vi. 1547; Pauli-Weinreich, etc. i. 1723; Alexander the Great marched through these "Syrian Gates" to his victory at 333 B.C. and Roman armies in later times frequently used them.

In antiquity and the middle ages the principal place named in the ridge of the Beishehr pass was Fayrace (*Ijrya*), Arabic Baghdad (q.v., p. 576). The pass seems usually to have been called after Baghaz in medieval times; cf. Balduhr (ed. do Goecje, p. 164, 166), and the passages mentioned by M. Hartmann, op. cit., p. 88, note 4: The name *אֲדַבְּרִים* = "Pass of the Women" is also given (Balduhr, p. 167 = Yahya's *Maqam*, ed. W. Kühnel, ii. 692, p. 12), the origin of which is ascribed to a tradition which Maslama, son of the Caliph 'Abd al-Malik, was traversing the Beishehr road on his expedition against Ammurabi (Amerom), one of his wives is said to have fallen into a ravine there. The Beishehr pass was included in the area of the Syrian military frontier instituted against Byzantium, cf. G. le Strange, *Palastina unter den Moslemen* (1890), p. 37; the Caliph al-Mu'ayyad (219 = 832-842) further strengthened the road over the pass, as Balduhr tells us (p. 167), by a specially built stone wall.

The name Baghaz *bel* (or *bel* see above) appears occasionally at the present day (cf. Ritter, op. cit., p. 1829) but the usual name now is, since the rise of Beishehr, Beishehr *beli* (or gothi) (a synonym of bel).

In military history this mountain pass last figured in the struggle between Turkey and Muhammad Ali as the scene of a decisive battle (30th July 1832) in which the Egyptian Crown Prince Isma'il Pasha utterly defeated the Turkish forces who were posted in positions safely defending on the height which dominate the valley, and by this victory became the undisputed lord of all Syria. Since that time the Beishehr pass has also been called *Top-Yel = Cannon road* or *Top-Baghezi = Cannon pass*.

That part of the Amurana range which is traversed by the Beishehr pass bears the name of Beishehr-Dagh; the names Nawli-Dagh and Gowri (Jawri-Dagh) are also applied to it; however, cf. therefore M. Hartmann, op. cit., p. 36-37 and above p. 312.

(M. STEECE)

BEIRAMIYA. [See BAIRAMIYA, p. 595.]

BEISHEHR, pronounced Bashkeesh by the Turks, a Karen and small country-town in the Sandjak of
Konya, the capital of that name. The place at the present day has 2000 inhabitants, who are all Muslims, and is situated on the lake of the same name. According to Ramsay, Historical Geography of Asia Minor, p. 390, the town is built on the site of the ancient Karassia. The lake near the city of Kars is the ancient Troadus, not the Troggsias as Huxley (Geschichte der naturgeschälten, l. 160) supposes. The Turkish town was founded by the Seljuks, apparently by Ali al-Din I and was once the chief town of Hamid in the sixteenth century. It was acquired in 1581 by purchase from Murad I, when his son Bayazid was married to the daughter of the prince of Kermiya, and it became definitely an Ottoman possession in 1443 under Mehmed I. Even at the present day the town enjoys a certain importance for the surrounding country on account of its fertile soil and the richness of the lake in fish, which are sent to Konya and Nigde, as well as for its weekly market on the Saturday. The population suffers much from fever.

**BEKKER.** [See BAKER, p. 604.]

**BEKETTAŞI,** a name of a drunkard, who lived in the reign of the Sultan Murad IV (1623-1640) and is said to have led him into habits of drunkenness; the name beket seems therefore in Turkish still commonly means a drunkard. In the popular literature the drunkard Beket Mustafà Agha is a favourite character. Edwina even gives the title of a Tahtili: Beket Mustafà and the Blind Arab Biggar. Jacob, who has collected the material referring to him, recently published a Karagia play from Bursa in the Zeitschrift der Deutschen Morgenl. Ges., iii. (1899), p. 621. Bibliography: Jacob, Traditionen über Beket Mustafà Ağa in Keleti Szemlé, vi. (1904), 271. Memmed, Beket Mustafà del Mehmed Tenfis, ibid., iii. (1905), 85. (F. Grise.)

**BEKTASHI,** an Islamic saint who has given his name to the Durwah or follower of the Bektashim. The accounts of Hâfizli Bektaşî Wali are quite legendary. He is said to have belonged to Nihâzcî and to have been a pupil of Ahmad Yasawi. The date 738 a.H. (1337 a.D.) as the year of his death is merely the numerical value of the word bektsâhâ. On the Muskallât (sayings) ascribed to Hâfizli Bektaşî and the Wilayate-names which relate his miracles cf. Jacob, Bektaschijî, p. 4, 7 et seq. The traditions that Bektaşî blessed the Janissaries under Orkhan appears to be a story based on the later connection of the Bektashis with the Janissaries.

The story that Bektaşî himself founded the Durwah order which bears his name is equally untenable of credence. Jacob (Bektashijî, p. 24) has advanced the proposition that the real founder was the Bâllûm Bâllûm (dead 922 a.H., 1516 a.D.) mentioned in the list of Grand Masters as "second Pir", and that he has been connected with a mythical Bektash Wall. At any rate we can certainly prove the existence of the Bektaşî order under this name only from the beginning of the sixteenth century. Religion, movement which has been organized by the order in the west of Turkey, is however older and even after the foundation of the order has spread far and wide beyond its limits. The Kulli-bahşî ("red-heads") in the east of Asia Minor and in Kadijâtîn and the "Allîhâs" (those who daily "Allî") in Persia agree in their main doctrines with the Bektaşis; they lack only the rigid organization of the order. In some districts, particularly in Anhâli and in the Sinjak Tekke in Lycia (Jacob, Türkîche Bild., ix. 13 et seq.) has shown that the Tahtâdji discussed by Luschau in the Archiv f. Anthropologie, xix., are Bektaşîs) the Bektaşis are a sect rather than an order, for almost the whole population belongs to them.

In the doctrine of the Bektaşis the Sâfî ideas of the original equality of all religions and of the worthlessness of external ceremonies play an important part. Many Christian, Geostic and pagan elements have remained incorporated in the Bektaşî doctrines.

Although they for the most part profess to be Sunnis and some few indeed possess Sunni characteristics (on their illogical attitude to Ali Bakr, cf. Jacob, Bektaschijî, p. 42), the Bektaşis are, as far as one may reckon them thereto, extreme Shîites and revere "Allî, while the names of the first three Caliphs are tabooed. They recognize the twelve Imams and among them particularly revere Jâfar al-Sâdiq. The fourteen Mâlsûm-î-râh ("the pure, innocent children") mostly "Allî martyrs also enjoy the highest esteem. Graves of saints are held in such honour that prayers offered at them may take the place of ritual worship. The Bektaşis have often settled at old and famous places of pilgrimage and thereby made them their own.

The important Christian elements which are found among the Bektaşis, give rise to the hypothesis that they were originally Christians who have only adopted the external ceremonies of Islam. They have the doctrine of the Trinity, in which "Allî has taken the place of Jesus (Allah-Mohammed-"Allî). At their meetings in the Maidûn-e-Defa, the hall of assembly in the monastery (Tebûnya; these correspond to the Zikr of other Durwah orders, although the Bektaşis themselves deny that they have Zikrs), they celebrate a sort of convivial drinking of wine, bread and cheese. This particularly recalls the Artyûrites who are connected with the Mou淡淡的 (cf. Jacob, Fortihen von aniken Mysterien und Alt-Christlichen im Islam: Der Islam, ii. p. 352 et seq.). They also confess their sins to their Bâllûm (chief) and receive absolution. The drinking of wine is not forbidden on account of the importance of the wine in the east; their women also do not wear veils. One section of the Bektaşis lives in a state of celibacy. This was probably originally the rule; a particularly strong testimony to the non-Islamic origin of the sect. The ascetic tendencies were chiefly manifested in the Kulli-Deli Sultan Monastery, at Dimekhû, which was very powerful in the most flourishing period of the order and was burned in 1526. The Bektaşis have adopted the mystical doctrine of numbers (for the most part Pythagorean) from Yârî Hürifî, whose Niâzûâhû in the Persian text and in the Turkish edition by Farîdchehrî, called "Aşâh-nâmâ is held in high esteem by them, particularly the cult of the number four.
and they have further developed the system independently. They also believe in the transmigration of souls.

The whole order is governed by the Grand Master (Gökalp) who resides in a mother-monastery (Pebbel) at Hadiji Bektash (between Kirsehir and Khaskral; cf. the picture in Jacob's Bektashcijye and the description in Edmund Musmann's Vom Goldenen Horn zu den Quellen des Euphrat, p. 195 et seq.). This office is not necessarily hereditary but it has been transmitted from father to son for the last 150 years. The narrow circle of celibate Dervishes has since the middle of the 18th century had a head of its own, the Mârîverdî Khâyâr, who also resides in the mother-monastery. The head of a single monastery (Tebkîye) is called Bâkî, the ordinary Dervish Mûrîd, a layman attached to the Tebkîye, Mûnebî.

The dress of the order of Bektashi consists of a white cloak and a white cap (ebbebek), composed of several, usually twelve triangular pieces (corresponding to the number of the Imams), around which the Pebbûs wear the green turban (cf. the pictures in Jacob, Bektashcijye and Türk. Bilb. IX.). The amulet of stone called Teslim Tagh is usually worn round the neck. The double axe and long staff complete the full dress. Those Bektashi who practice celibacy wear earrings as a distinguishing mark.

The political importance of the Bektashi depended on their close connection with the Janissaries, whose chaplains they were. The Janissaries are often actually called Bektâshi or sons of H.B. (Hadiji Bektash iêghallary). An official representative (wobîl) of Hadiji Bektash lived in the barracks of the 94th Oerta. The Bektashi were necessary to many of the Janissary revolts. Therefore when Mahmud II. annihilated the Janissaries in 1826, the blow also fell on the order allied to them. Many monasteries, especially those in the neighbourhood of Constantinople, were destroyed and their occupants for the most part banished, although some of their heads, e.g. of the monastery of Mervenbekji, were executed (cf. E. d. Effenbl, Unter den Janissaren, Constantinople 1425).

Although the order had never regained its former powerful position, it has again become more and more flourishing and at the present day is much stronger and more widely diffused than is generally supposed. On the monasteries in the neighbourhood of Constantinople see the appendix to Jacob's Bektashcijye. In Asia Minor besides the "mother monastery," Osmanbey in the north and in the west the Tebkîye at the grave of Hâfiz at Eski-sh Sirri, are important centres. There are a few isolated monasteries outside of Turkey e.g. on the Mauštattam in Cairo.

Bibliography: The chief work is Georg Jacob, Die Bektashcijye in ihrem Verhältnis zu verwandten Erscheinungen: Abhandl. der K. Bayer. Akad. der Wissenschaften, 1. Kl., xxiv, Be. 18 (Munich, 1907). Cf. the authorities given there p. 4-12; 40. Beiträge zur Kenntnis des Dervishordens der Bektashcijye. Türkische Bibliothek, is. (Berlin, 1908). To the Oriental literature given by Jacob, loc. cit., should be added the recent apologetic work Bektasî Sırrî by Rifîfî (Constantinople, 1326 et seq.).

AL-BELADHORI [See AL-BELADHORI, p. 611.]

BELGIS [See BILGIS.]

BELFORT [See SALAT AL-ESKAFIR.]

BELGRADE (Slav: "white town") the capital of Serbia. The possession of Belgrade was often forecast by the Ottomans as the Holy Roman Empire. It was first besieged in 845 (1441) in the reign of Sultan Murad II by Ali Beg, son of Ewenes, and hemmed in by land and water but supported by the Hungarians and defended by Prior Zowan of Ragnus, it was able to hold out for six months, till it was relieved by the intervention of Vladislaus, king of Poland. Muhammad II (860-1456) made great preparations for the capture of the town; he had collected over 500 cannon. Nevertheless the attempt to storm the town, led by the Sultan himself, was brought to a nought by the bravery of Hunyaof and Capitaneiro (21st. July). — The fortress was not won for the Turks till the reign of Sultan Suliman on the 23rd Ramadan 937 (29th August 1531). Belgrade had to surrender for the first time, the Turks were exhausted. The Bulgarians who belonged to the garrison were allowed to found a village in the forest to the north of Constantinople; they called it Belgrade and it bears this name to the present day. The older Belgrade was besieged in 1099 (1688) by the Imperial troops and given up by the Ottoman governor Yegen Othman without a fight. Two years later the Grand Vizier Kaprul Mecit Pasha regained it. Later, who was present on this occasion joyously calls the town Bitez al-Aghfâr: "spring of bound intentions" (Sebokh, Thäihing Arab. Handschriften, p. 70 et seq.). The Imperial forces attempted in vain to recover it in 1105 (1693). Five years later, Belgrade was destroyed by a great conflagration (30th Iânmâdî I, 210 = 9th November 1698). After Prince Eugene had won the battle of Petrovaradin (5th August 1716), the Imperial troops appeared before the town. An attempt by the Turks to demolish them led to a great battle under the walls of the town in which they were utterly routed (16th August, 1717). On the second day after this battle the fortress surrendered on being granted honourable terms. In the Peace of Passau (16th July 1718) it was promised to Austria. In 1715 (1739) the Ottomans again undertook the siege of the town and by the Treaty which bears its name, it was ceded to them (27th Iânmâdî I, 210 = 1st September). In the beginning of the reign of Selim III, the Austrians recaptured Belgrade after the battle of Fakham (1203 = 1769) and held it till the Treaty of Sisakos (4th August 1891). The mutiny of the Janissaries of the garrison (1803) facilitated the revolt of the Servians (1806). They made Belgrade, which had been captured by Kara-Georg, their capital, till they were defeated in 1823, by Rosjsch, Pasha of Woldin. Belgrade received a Turkish garrison, which only vacated the citadel in 1867, after bombarding the town (1861) they had again been the capital since 1834 in 1862.

BELG, the name of two Turkish poets, who are often — even by Turks — confused or mistaken for one another, viz.: 1. ISMAIL BELG of Brusa. Little is known of his life. Like his father he was an Imam in Brusa, where he was born and died. Accounts differ as
the year of his death. Shāh gives 1140, Ḥaḍḍījī Khālīfā, 1143, and once by a slip 1133, and the biography at the end of his printed works (see below) 1142 or 1143 A. D. The latter is 1730 or 1731 A. D. is the most likely. Of his poetical works which are said to be in Brusa, there are mentions in other manuscripts. A commentary on a hundred Ḥaḍḍījī; 2. Sīrāj-ud-Dīn Ḍiyāsī; 3. Sūrāt-ud-Dīn, according to Ḥaḍḍījī Khālīfā composed about 1125. A Shahām added to him by Ḥaḍḍījī Khālīfā, but this is probably a confusion with the other Belig. He is said in addition to have written a biography of poets. His chief work however is the Ḥāżīrāt-ı riyāsâ-i ṭırânsâ ve muqaddam-i dâvânâvârî, nīyâvârî, printed in Brusa in 1720. It consists of five parts (gülânsâ) in which the most prominent people of Brusa (Sultan, princes, ministers, poets, musicians, etc.) are dealt with. At the end of the printed work is a biography of the poet.

Bibliography: Ḥaḍḍījī Khālīfā; Śāhī, Ḡūrū, and the above mentioned biography.

2. MHMID EMīn BELEK of Larissa (Turkish Yenişehr), Little is known of him. He belonged to the 'Ulema and on his death in 1175 = 1758-1759 held the office of Kādī in Sirki Zaghār. He was a not a great celebrity, and the verdict of Turkish critics on him varies. Hammer does not mention him, but Gibb rightly emphasises his importance. His Kashārī, Ghāzīl and his Sīrāj-ud-Dīn are of mediocre quality. His most original work is his four poems: Biwamamūn, Kāfī, Šāhāmī, Khāṣhtāmūn, and Būshrāmūn. In these, influenced by Meshāf's Shahāmūny, he describes the beautiful youths engaged in the trades mentioned in the basmal and at the same time gives us very interesting glimpses of the life of the time. In these it writes relatively pure Turkish. Unfortunately his fondness for archaic expressions renders his style cumbersome.

Bibliography: Gibb, A History of Ottoman Poetry, iv. 117 et seq. In the Index he is confused with the preceding. (F. GIBB.)

BELVOIR, a fortress of the Crusaders in South East Galilee, high above the valley of the Jordan, called Kawkab by the Arabs, the modern Kawkab al-Hawāk. The castle, built by King Fulk about 1145, passed in 1168 into the possession of the Zinsians, the order of Knights-Hospitallers. In 584 (1185) it fell into the hands of Salah al-Dīn after a long resistance. Al-Mu'izzī mentioned the castle in 615 = 1219, as he did not feel strong enough to hold it against the Franks. It thus ceased to play an active part in history although it is still occasionally mentioned in later documents. In its considerable ruins there is a village at the present day. (R. HARTMANN.)

BENARES, or BANĀRAS (also called Kasi), a holy city of the Hindus, United Provinces, on the r. bank of the Ganges; pop. (1901) 209, 331, including 53,566 Muhammadans, of whom many belong to the Khiḍālī or weaving class. Some descendants of the Mughal Emperors of Dilli reside here. Benares is not prominent in Muhammadan history, except for Awmarādī, who ruled to the ground the most sacred Hindu temple and built on its site a mosque, whose white domes and minarets are still the most conspicuous object from the river. He also changed the name of the city to Muḥammadābād, in which style it is still pronounced on his coin. These are other mosques and darūqūs, constructed from Hindu or Buddhist materials, which date back to the 14th cent.

Bibliography: M. A. Sharīrī, The Sacred City of the Hindus (1868); E. B. Havell, Benares (Calcutta, 1906); Benares Gazeri (Allahabad, 1909). (J. S. COTTON.)

BENDE, the Persian word for slave. The number of slaves still in existence in Persia is gradually decreasing. The black slaves come from Africa and are introduced while still young, usually via Māzār and Blīshār, more rarely via Ārabī and Ḥağādāl. A distinction is made between Abyzūnīs (Hadāka) and negroes (Zandāf); the former are preferred for their beauty and intelligence. The few white slaves are Turkomans or Ilbāstāns. The slave girls are usually married to a member of the family and therefore cease to be slaves. This formerly was also the case with Circassians. The Russian occupation of the Caucasus and the English cruisers in the Indian Ocean have now put an end to this trade. Besides, the climate of Persia is not fitted for negroes, who cannot rear their children there and certain illnesses carry off half-breeds in the second or third generation. — The eunuchs also are slaves or freedmen. They are all black, the last black eunuch, who had been taken in the Caucasus wars, having died in 1856. — The word bende has having taken the meaning of "servant" and is used as a polite way of referring to oneself; Bendī = your servant, i.e. I; similarly in Turkish bende-kîsî.

Bende is also the Tukhalūs or penname adopted by Miḥrāb Muhammad Šāh of Tabrīz, a Persian poet who was employed as calligrapher and secretary in the government offices in the reign of Fāṭimid All Šāh. He died in 1222 (1807) and was buried at Nejīf. He has left poems in Arabic, Persian and Turkish, as well as some writings in prose (Zinat al-amūdīyāt-i dīnārī) also printed.

BENDER, the chief town in Bessarabia, on the right bank of the Dniester. This town was built on the site of a Genoese fortress dating back to the 13th century. It belonged to the princes of Moldavia, then to the Turks, who changed its old name of Tigin to its present one. The Swedish king Charles XII (called Demir-bâb) "Iron Head" by the Turks) fell back here after the battle of Pultawa (8th July 1709). He had a house built inside the walls and it was, in it that he was besieged and taken prisoner (12th February 1713) when he declined to leave Bender. It was taken by assault after a two months' siege. The Russians on the 27th September 1770; occupied again in 1788 and in 1806, it was definitely ceded to Russia by the treaty of Bucharest (28th May 1812).

BENDER, in Persian, a harbour on the sea or on a large river; it has passed into the Arabic of Syria and Egypt with the sense of place of trade or exchange of moneys (Boehor, Vollen) and even a market or work shop (Coche); Böd-bënder is the Syriac of the noun. Böd is a word to designate their consuls abroad. Bender-i Gem is the name of the harbour of Astarafâd on the Caspian Sea. (CL. HOAKRT.)

BENDER-ABBAS, a Persian seaport situated in 36° 20' East L. (Greenw.) and about 27° North Lat. in the south-east of the province of Fars or the Kermân frontier. From its geographical position it is the most advantageous point on the whole Persian coast; for, built on the northern head of the strait of Hormuz (Orthâ), the town with the islands in front of it, commands the entrance to the Persian Gulf as well as to the Gulf of Oman. Just opposite is the long island of Kâram (Arabic Tawlin, "the long") which is only separated from the continent by a narrow channel, called Clarence Strait on the maps. To the east of Kâram are two small islands, the southern of which is called Lârek and the northern Hormuz (q.v.).

In antiquity and during the greater part of the middle ages, the capital of this district was the town of Hormuz (in the classics: ApEhron, Arnuma, etc.; Arabic Hormûd) half a day's journey distant from the above. On account of the constant raids of robber nomadic tribes, the then princes of the town transported the inhabitants in the beginning of the viiith (xivth) century to the adjacent island of Djarâm, which has since then generally been known by the name of Hormuz (Orâta). The abandoned settlement on the mainland (Old-Hormûz) soon fell into decay (its ruins still exist at the modern Mâba), while the newly founded town on the island (New-Hormûz) quickly attained considerable importance and became the chief port on the Persian Gulf and an international harbour for the waves of the Orient. When at the time of the decline of the rule of the Ah-Koyûnlu [see above, p. 225, 441] and the rise of the Safawids, there was no strong authority in South Persia, the Portugeuse under Albuquerque seized the island of Hormuz in 1520 (1514) and were left in undisputed possession of this valuable island for over a century. When the English appeared in the Indian Ocean, they, being jealous of the influence of Portugal, supported the efforts of Shah 'Abbâs I., to whom this flourishing European colony at the gates of his kingdom was a thorn in the flesh. With the help of a fleet of the East India Company he took the island from the Portugeuses and utterly destroyed the town in 1621 — 1622; cf. above p. 84. The successor of New Hormuz was the already very old settlement of Gumrûn (Gomron), directly opposite the island which had been used by the Portugeuses as an occasional landing-place on the mainland, where English, French and Dutch merchants had recently been built.

The older Arab geographers must have called the village on this site, called Shīr (Shehr) whose inhabitants, as Mukaddas tells us, carried on commerce with the opposite coast of Oman. Mustawfi in 740 (1340) calls this place Tīfān (?). In the name Gumron or Gumbrum, which with many variants (Gambrum, Gumron, Kamron, Contarso, etc.) was the usual one among Portuguese and European travellers of the xviith and xvith centuries, it can hardly be explained, as has often been done, as derived from the Turkish as meaning Custom House (corruption of the Turkish cemruk — toll) but is rather connected with the earlier name of the island of Hormûz, Djarâm or perhaps better Djarān. In the latter reading of the name, Gumrûn (Gumrûn) would have to be regarded as a form of the name in which nasalisation has taken place in compensation for the loss of the double consonant (a phonetic change for which other examples could be quoted). Just as the name of the Hormûz on the mainland had been transferred to the island of Djarâm, the latter name seems to have been transferred to the town on the neighbouring coast.

Shah 'Abbâs gave to the village of Gumrûn which soon became prosperous on the fall of New Hormûz, the name of Bender-Abbâs = "Harbour of 'Abbâs", which it still bears. But the plan of the Persian king to make his foundation the centre of a foreign trade which was to be gradually developed, could not be fulfilled on account of the disinclination of his subjects to trade. As the successor of Hormûz, Bender-Abbâs inherited and filled for over a century its role of a maritime commercial centre, though in much a more modest degree. A dangerous rival arose to it in the harbour of Bushir (Bushcheh, q.v.) called into being by Nadir Shah, which soon obtained the commercial supremacy of the Persian Gulf. In 1793 Sayyid Sulaimân, the ruler (Imam) of Mašqat (in Oman) received Bender-Abbâs with the adjoining lands along the coast (from Lingâh to Yâshk) on lease, and it was retained till 1854 when the Persians again occupied the town. Sayyid Seîd, the then prince of Mašqat was able in 1856 to obtain an extension of the terms of the lease for a further 20 years but under much less favourable conditions. The town and district is now ruled by a Persian governor of its own. The importance of Bender-Abbâs has increased again considerably in the last decades so that it now ranks as the second commercial town on the Persian Gulf immediately next to Bushir. The revival of Yazd and Kirmân and the cultivation of opium, which is being constantly extended, has contributed much to the continual increase in the volume of trade there. The commerce is almost entirely in the hands of native and Indian merchants. On the amount and development of exports and imports cf. the statistical tables given in Strohr-Andreas, Op. cit., p. 76, 77 and M. v. Oppenheim, Op. cit., p. 321, note 2, which are based on material from English official sources. Almost all the eastern provinces of Persia as well as eastern Fars send their products to Bender-Abbâs; traffic by land is rendered possible by the three roads of which two run in a north-westerly direction from Sîhâr (the one via Lâr and the other via Tîram) while the other runs north in a fairly straight line to Kirmân.

The harbour of Bender-Abbâs is the next best to that of Bushir; it is on the whole well sheltered, being only open to the westerly and southerly winds from the south-east; but the flatness of the coast makes the landing of large ships difficult. The passage through the above mentioned Clarence Strait is rendered difficult by shoals and by the mangrove islands which are submerged at flood-tide. The anchorage at 3 fathoms deep is one mile from land and at 4-5 fathoms, two miles.
As to the modern town, its appearance, with its low mud houses, many of them in ruins, suggests a village rather than a town. Only fragments remain of the earlier fort and the European factories. The custom house (gurud) dates from the Portuguese period. The Surti, the residence of the government, is a single-storied palace built to the east and west of it is one story. Gardens surround the town on both sides; the coast is in part overgrown with mangrove bushes which afford a welcome fuel supply. In the background rises a high mountain wall with peaks rising to about 10,000 feet.

The climate of Bender-Abbas is usually described as very unfavourable. The heat of the sun in summer is terrific; to escape the burning heat the population for the most part migrate in the hot season to Minab lying just at the foot of the mountains (near the ruins of Old Hamite) or to other high lying places in the neighbourhood. For purposes of ventilation the houses are usually furnished with towns. The supply of drinking water is also bad; the large cisterns built by Shah Abbas I are still pointed out. The taxes are for the most part Arabs. They have a reputation for being sarafy, and in conjunction with the Arab tribes of the hinterland, give much trouble to the Persian government by their unrest. Under Abbās I the population is said to have risen to 20,000 souls; even in 1674 Chardin numbered the houses at 1400—1500, which would give 15,000—20,000 inhabitants. Since the middle of the sixteenth century the number has declined, a fact which is partly to be explained by the dangerous competition of Bushire, which began at that time. Dupré's estimate of 20,000 (in 1808) is certainly much too high, Fraser (1820) estimated the number at 3000—4000, Pelly (1864) 500 houses (about 4000-5000 inhabitants), Stolze-Andresen: 6000 inhabitants; the latest figures of Lovini (7000 inhabitants) and Curzon (5000 inhabitants) seem to show a recent increase in the population; on the last two estimates see Sjoman in Petermann's Geogr. Mitteil. Erf. Heft. nö. 35 (1901), p. 26. The already mentioned unhealthy condition of the town forms a serious obstacle to its ever attaining any great prosperity.

(M. Steeck.)

BENG (Sansk. bhūga, Avest. hapha, Pahl. mang, bang, hemp), strictly the name of various kinds of hemp (Hysopeum niger), is in Persia however the popular name for the Hashish (Cannabis Indica). It is sold in the form of leaves or pills (zer). Such pills are also pounded up and placed in fresh milk from which it is distilled (khoord-shush). The tea-like infusion (beng-dā) is also prepared from the Beng (1—3 grammes a dose), which is regarded as an excellent remedy for acute urethritis. — The Arabs have borrowed the word in the form bānīy.
had hitherto been administered by the Governor-General in person, or in his absence by a deputy governor. Finally, in 1895, the eastern portion with Assam was constituted a new lieutenant-governorate, leaving the old name for the portion round the Ganges-province of Bihar, Oliassa, and Chott Nagpur. In this sense the area of Bengal is 148,592 sq. m.; pop. (1901), 54,604,529. But, for the purposes of the present article, Eastern Bengal may be included, adding 50,000 sq. m. to the area and 25 millions to the population.

At the time of the Muhammadan conquest, the greater part of Bengal was ruled by a Hindu dynasty of the Sen family, with its capital at Nadīya, while Bihār was under a Buddhist dynasty of the Pāl family, who had been driven from Bengal by the Senas. The Muhammadan conquest of Bengal was almost contemporary with their conquest of Hindustan, being accomplished during the lifetime of Muḥātha al-Dīn Muhammad Gūrī. About 1407, one of his generals, Muhammad Bakhtiyār Khillī, conquered the Senas and two years later advanced into Bengal with a small body of horse. The last Sen king, named Lalāghor, fled ignominiously from his capital, and thenceforth all Hindu resistance seems to have ceased. For more than a century (1302—1399) Bengal was ruled by a succession of 25 Muhammadan governors, more or less subordinate to the Dīlī emperors, with their local capital at Gaur (or Lakhmaṇpur), while for the later portion of this period Eastern Bengal revolted against Dīlī; and for a second period of two centuries (1538—1537) there were reckoned 24 independent Muhammadan kings, who mostly also had their capital at Gaur, or at the neighbouring cities of Panḍāna and Tānśā, now all alike in ruins. In 1537 Humayūn conquered Bengal, only to be driven out shortly afterwards by his rival, Shāh Shāh. In 1573 Bengal was finally annexed to the Moghul empire by Akbar; and then follows a third period of nearly two centuries (1576—1757) during which about 30 governors each acknowledged his appointment from Dīlī, though latterly such recognition was only nominal, and the office tended to become hereditary. Akbar's Rājān government, Mān Sing, fixed the capital at Rājagāhā on the Ganges, not far from Gaur, whence it was soon removed to Dacca (then on the Brahmaputra), for convenience in dealing with Portuguese and Arabo-nomad pirates. In 1704, Murshid Kuli Bāhā transferred it again to Murshidabad, on a branch of the Ganges then frequented by European traders. After the battle of Plassey (1757), the Nawabs of Bengal became dependent upon the British, without any express surrender of sovereignty otherwise than contained in the jānānī grant from Shah 'Alam. Their descendant now ranks as the first viceroy of Bengal, with the title of Nawwāb Khādīr of Murshidabad.

In 1901, before the division of the province, the number of Muhammadans in Bengal was 25½ millions, being two-fifths of the number in all India. The proportion to the total population was 33½%, though in some districts of eastern and northern Bengal the proportion rises above 75% and in the new province of Eastern Bengal and Assam the proportion is 56½%, compared with 10½% in Western Bengal and only 1½% in South Bihar. This irregular distribution can best be explained by assuming that the inhabitants of the delta belong to aboriginal races, who were never admitted into the higher castes of Hindus and therefore received Islam readily from their conquerors. It has been proved by anthropometric evidence that the vast majority of the Muhammadans in Eastern Bengal cannot be distinguished physically from their Hindu fellows; and it is also true that they preserve to this day many Hindu observances and superstitions. It may be added that, apart from some slight amount of conversion, they certainly increase at a quicker rate than the Hindus, which is attributed to their occupation of a more fertile region, their use of a more nourishing diet, and their permitation of widow marriage. Almost without exception they belong to the Sunni sect, and describe themselves as Shāikhs, which is the usual name throughout India for the descendants of converts. The number of Sāiyids in 1901 was 236,468, of Pājīs or Afgāns 435,740, and of Mughals only 18,678. The doctrines of the Wahhabī sect were introduced into Eastern Bengal in 1799 and 1800, and led to separate movements. One of them, derived from Sāiyid Ahmad Shāh of Rād Bārānī and subsequently headed by Mawḥūd Kārmaster 'All [q.v.], had its headquarters at Patna. The other, which was mainly local in Eastern Bengal and confined to the lower classes, is associated with the name of Unūdī Miya, a weaver of Parsīpūr district. Their followers are generally known as Fārisī [q.v.] or followers of the farisā'ī or obligatory ordinances of the religious law. Apart from Hindu superstitions, certain forms of worship not based on the Korān are common among the Muhammadans of Bengal. Such are the adoration paid to departed pīrs, often of local origin, and the homage of certain mythical personages, among whom Khwāja Ḥijri stands pre-eminent as the saviour of women from shipwreck.

BENGHAZI (so called after a Sarracan about whose grave is farther to the north on the sea shore) is the economic capital of Cyrenaica and the seat of the government of the Turkish province of Benghazî. It lies at the north end of a bay open to the west, not more than 10 feet deep, and badly protected by a dilapidated breakwater (the
larger vessels have to anchor at a considerable distance out and in winter cannot unload in rough seas) is enclosed on the east by a salt-bed dry in summer, on the southeast by a sand-flat which is often inundated, so that it is only on the north that there is good ground communicat-
ing with the continent through a palm-grove. This palm-grove country is very fertile, but is not yet cultivated very intensively and so appears desert and dreary. There are no ancient ruins, with the possible exception of some foundations of a quay but the soil is rich in sculptures, vases, inscriptions and coins. The simply built mosques, synagogues, churches and one or two-storyed dwelling houses call for no remark. In the west of the town is a large Ksar, in which the Muta-
qarif lives, and the military also are quartered. There are Turkish and Italian Post Offices, an Italian school, and branches of the Banco di Roma. From its situation — although the harbour which year by year becomes more silted up and the lack of drinking water which has to be brought in from the country, are grave disadvantages — Benghazì commands on the one side the trade of the basin of Cyrenaica and the northern coast, on the other the commerce of the western two-thirds of Cyrenaica and the caravan routes by the Awjillala where the roads branch, a. to Kufra, the oasis south east to Tripoli and Wadiïâ, b. to Murqâïth. Through political changes in the central Sâhân it temporarily attained to (the detriment of Tripoli) a larger sphere of commerce but soon gradually sank again to its former insignif-
ient position so that at the present day its inhabitants may be estimated at from 12,000—
15,000, of whom the greater part are Mul-
mâdans Libi Berbers, strongly mixed with negro-
sblood, 1200 Maltese, Greeks and Italians as well as a few other Europeans and 2500 Jews. The imports comprise cotton stuffs, linens, olive oil, soap, candles, petroleum, sugar, coffee, rice, tea, wood, and charcoal; the exports consist mainly of cattle and corn to Malta and Crete, wool to Marseilles, and sponges. Large quantities of salt have been obtained by the government from the Sahânat. The exports averaged for the years 1902—
1906: £ 555,700 in value annually and the im-
ports only £ 214,000. There is a regular fort-
nightly service of steamboats from Malta via Tripoli to Alessandria and from Alessandria to Malta four times a month. The settlement of Ebususperides founded about 400 B.C. by the king's (Arkeiauac IV) party, probably on an older native site, was called Berenice after the occupation of Cyrene by the Ptolemies of Egypt in honour of the wife of Ptolemy III. Its tempo-
rary prosperity, largely due to the large number of Jews there, gradually declined as the land became exhausted, and revives till the middle-
ages during the period of Genoa's supremacy in the Mediterranean, when it was known by the name of Berenç (Yevri, Mejidâm, i. 593; Idrij, ed. Doey and de Goeze, 132 et seq.). With the decline of the Italian republics, Benghazî also began to sink from its prosperity; the stirring times of the Cassars did not help it either and in 1520 the town now called Benghazî had only 2000 inhabitants.

BENÎKA, the government offices of the Maghreb in Marocco. The Benîka are large rooms in one of the courts of the Dar al-Maghreb, in Fès (Fez) or wherever the Sultan is for the time. The visiers reside there with their secretaries and see that business is dispatched. The following nine officials are each entitled to a "benîka": the Wâsir (Minister for the Interior), the Wâsir al-Áhâf (Foreign Minister), the Ashkâl al-Áwâr (Minister of Finance), the Ashkâl al-
Dâkhâlî (in charge of the revenues), the Ashkâl al-Dâkhâlî (entrance, offices and the northern coast), the Wâsir al-Ástâr (Minister of Justice) and the Qâ'âl (Chamberlain, who has control of the Sharîf's household). Each benîka therefore has a minister in the European sense of the word at its head. (Aubin, Le Maroc d'aujourd'hui, Chap. xii.) (G. Yver.)

BENJAMIN, [See benjamite.]

BERAR, a province in India, lying be-
 tween 19° 35' and 21° 47' N. and 74° 50' and 79° 11' E., bounded on the north by the Sâtputs hills, on the east by the river Wardhô and on the south by the river Penganâ. The population (in 1901) was 2,754,916, of whom 212,040 were Muslims. Berar was first invaded by the Mah-
mâdans in 1494 but was not permanently occupied until 1512, when it became part of the Dowlah empire. It formed one of the provinces of the kingdom of the Bahamini Shâhs [q. v.], and con-
sstituted the dominions of the Imaâd Shâhs [q. v] when Imaâd al-Mulk, governor of Berar, proclaimed his independence in 1490, in the reign of the Bahamini king Maughâl Shâh II. When the Imaâd Shâh dynasty came to an end in 1575, Berar passed under the sway of the Nikân Shahi kings of Aqmâdânâar, and in 1596 was annexed to the Mughâl empire. When in 1724 Aqâ Dâh, who had been appointed viceroys of the Dâkhin with the title of Nikân al-Mulk, made himself inde-
pendent, Berar ceased to be a province of the Mughâl empire and from that time has been nominally subject to the Nikân of Hâdarâbâd. By the treaty of 1853 Berar, together with some other districts, was assigned to the East India Company, its revenues being employed partly in the payment of debts contracted by the Hâdarâbâd State and partly in maintaining the Hâdarâbâd contingent. In 1902 the British Government entered into a fresh agreement with the Nikân, whereby the rights of the Nikân over Berar were confirmed, and the province was leased to the Government of India at an annual rental of 25 lakhs of rupees (£ 166,666). cutta, 1909).
BERAT. [See BARKA, p. 651.]

BERBER, a town in the Anglo-Egyptian Sudan, lying on the Nile in 18° 4' North Lat. and 33° 59' East Long. (Greenw.). The town which as the "key of the Sudan" formed the starting point for the roads to Assam and Sawakin, was the capital of the Malakat, which had succeeded to the Frankish kingdom of Semneh, till it was forced to recognise the suzerainty of Egypt in 1821. In 1884 it fell into the hands of the Mahdi Muhammad Ahmad and Gordon became completely invested. In 1887 it was abandoned by the Mahdists and occupied by Kitchener. It became the centre of the Musulmans of the same name. In 1905 however the seat of government was transferred to al-Dameh. The railway from Athbara to Port Sudan and Sawakin (Suba), opened in 1906 seriously affected the caravan traffic from Berber and destroyed the importance of the town.

BERBERA, the chief town and harbour of British Somaliland, lying in 10° 26' North Lat. and 45° 4' East Long. (Greenw.). The Poripali marey Eryhbari, as well as Ploeney and Cosmas give the name Bapdash or Basha'a or Basha'as to the coast of the Land of Frankincense; the town itself is probably identical with Madam Jackow. The older Arab geographers know only a land of the name of Berber, after which the Gulf of Aden is called Baar Berbera or al-Khalidi, al-Berber. The town owes its name to the natives who are called Baasha, Berbera or Barabar. The people whom Yaqut (iv. 602) describes as being between the Zanj and the Habash are apparently the ancestors of the modern Somalis. Whether the Berbers ever were Christians is doubtful, although the Christian Abyssinians extended their power for a period over a part of the Berbera coast. In Yaqut's time Islam had already penetrated among them, although he describes the Berbera as negroes with barbarous customs (poisoned arrows, castration of prisoners). Ibn Sa'id (1825-1826) says that they had adopted Islam for the most part and Ibn Battuta describes them as Shafs which they are to-day. Ibn Sa'id seems to be the first to mention the town of Berbera. Little is known of its history. Native traditions tell of numerous arrivals of missionaries of Islam. The stories are to be connected with the great advance of Islam which had been going on since the sixteenth century and the striving for independence in the other Abyssinian provinces. Berbera must have been a part of the kingdom of Adal-Zalla (q.v.) in the sixteenth century. Vartholomé who travelled in the beginning of the eighteenth century, Vartholomé who travelled in the beginning of the eighteenth century speaks of a Mahommedan prince of the "Island" of Barbar. Presumably the reference is to the kingdom of Harar under Ahmad Graa, who fought against the Abyssinians, who were strengthened by the Portugues with the help of the Turks, who had been ruling in the region since the time of Selim I. The claim of the Turks as lords of South Arabia to suzerainty scarcely appear to have affected the independence of the Somali coast in later times. The town of Berbera, which on account of internal disturbance gradually declined, acquired an evil reputation through the massacre of the crew of the Mary Ann in 1825 and the attack on Burton in 1855. In 1855 the Egyptians occupied Berbera but they had to retreat in 1884 on account of the Mahdist rising whereupon England occupied Zalla and Berbera. In recent times, particularly in 1902, the hinterland of Berbera has been disturbed by the Arab tribes.

Travellers in the middle of the sixteenth century describe Berbera as a poverty-stricken settlement of miserable huts, and the population of which was considerably multiplied however during the period of the great markets from November to April. Ships from the Arabian coast, the Persian Gulf, and from India trafficked in slaves and cattle. In the Egyptian period a new town was founded at a little distance from the old one; it was burnt down however in 1888 and rebuilt by the English in European fashion. The market, which had sunk into insignificance, is beginning to regain its importance and the town the ordinary population of which is from 10,000—20,000, numbers 30,000 inhabitants during the market. The not inconsiderable foreign trade (the chief exports are hides) is carried on by the Barbaris.

BERBERS.

History.

The Berbers have been settled in North Africa since remote antiquity. The ancient historians and geographers mention them under various names: the Numantæs and Pygæ of Pyrrhus in Cyreræa and Tripolitania; the Gainarantes leading a nomadic life in the Sahara; the Mykylæ and Maxeæ of the Tunisian Seleucus, the Musulæ and the Numidians in the eastern Maghrib, the Carthage on the borders of the desert and the high tablelands and lastly the Mauri occupying central and western Maghrib. The establishment of foreign colonies, Phœnician, Carthaginian, and Greek exercised but a slight influence on all these peoples except perhaps in the immediate neighborhood of Carthage. Divided into numerous rival tribes, although sometimes capable of uniting at once against a foreign foe, they were never able to form powerful or permanent states. At the period of the Punic wars, although the east remained in a state of anarchy, in the centre and west the beginnings of political organisation may be traced in the formation of the Massyliæ, Massaennœ, and of Maurenæs. The genius of Maurenæs, aided by the English steamship, enabled this prince to reunite under his sway all Numidæ, and in the space of a few years to create a kingdom comprising all the Berber tribes from the Mulæa to the Gulf of Syræa. This kingdom had but an ephemeral duration however. It disappeared in 46 B.C. and Eastern Numidæ became a Roman province. When reconstituted some years later, the kingdom of Numidæ was merely a Roman protectorate. The duration of the Maurenæan kingdom created by Augustus in 17 B.C. for Juba II was still briefer, for it became a Roman province again in 42 A.D.
The domination of Rome in Africa lasted till the 6th century of our era. During this period the Berbers were assimilated in the province of Africa and in Numidia but they were hardly affected in the great mountains and high tablelands on the borders of the Sahara and in Mauretania. The Romans were at first satisfied with compelling the Berbers to pay tribute and furnish auxiliaries to their armies. This left the local chiefs (viri militares). The spirit of independence among the Berbers was not stifled however. It manifested itself at times in rebellions, led by natives more or less Romanised such as Tactarinas (72-79 A.D.) and sometimes in inroads by the peoples of the desert or the hardly civilised tribes of the interior. Such were the raids led by the Nanamones and Garamantes in the reigns of Augustus and Domitian; the insurrections of the Mauri in the reigns of Hadrian, Antoninus and Commodus; of the Gaetuli during the period of military anarchy; the rising of the Quinguegentas (Kabili of the Ibgdirits, at the end of the third century A.D.). The gradual weakening of Roman authority is marked by a more and more energetic reaction on the part of the Berbers. The natives asserted their individuality by the same resistance doctrines such as Donatism, so that the religious disputes which desolated Africa in the 6th century are in many respects a war of races. The rising of the "Circumcelliones" appears to have been a kind of Berber "Jacqueries". Revolts like those of Firmus (472-475) and of Gildon (398) give another example of the hot-bloodedness of the Berbers. But the Berbers were no more able now than they had been in ancient times to unite against the common enemy and displace him. Their hostility to the Romans only facilitated the Vandal conquest. The Germanic conquerors, like the Romans, had to reckon with the Berbers. Although Geiserich succeeded in restraining them by enrolling them in his armies, his successor had to carry on a perpetual warfare with them. Mauretania, Kabylia, the western part of Numidia, and a certain part of Algeria remained independent. The Byzantines who hold Africa north of the Uthina (531-542) after their conquest of the Vandals, were not more fortunate. Native chiefs, Antalas in Byzacene, Yubdas in the Aurès, Massinias in Mauretania, resisted Solomon, the governor sent by Justinian and he had great difficulty in overcoming them. After the death of this general, who was slain in an expedition against the Levetons (Lowata in Tripolitania), the situation in Byzantine Africa became very critical. It was only with the assistance of the Berbers of the Aurès that John Trogitla was able to repel the invasion of the Lowata. But Byzantine authority was not recognised by all the native peoples. With the exception of Byzacene, the former province of Africa (Tunisia), and the northern part of the modern province of Constantine, the former provinces of Gaul and some strongholds in the interior, the Berbers were everywhere independent. At this time they formed three main groups: 1. in the east, the Lowata (Howara, Awrigia, Nefiswa, Auraba) occupying Tripolitania, Cyrenaica, the Djerid and the Aurès; 2. in the west the Sahâlita scattered through central and western Maghrib (Ketâma in Little Kabylia, Zifta in great Kabylia, Zenita on the Algerian coast between Kabylia and the Shelif, Bouira from Shelif to Malâya, Gherma in the Rif, Berberia, Meynâda on the Atlantic coast of Morocco, Gerard on the Great Atlas, Lemaâ in the south of Morocco, Sahâlita "weaters of the Rihâma", nomads in the Eastern Sahara; 3. the Zenita in parallel divisions on the borders of the plateaux from Tripolitania to the Djebel Amrir, and gradually advancing towards central and western Maghrib.

The arrival of the Arabs scarcely affected this state of affairs. Their first expeditions were merely raids and left the devastations caused by marauding bands of Muhammadans. The foundation of Kairouâne (670) gave the Mahomedans a permanent base for operations but O'kba's expeditions through the Maghrib were merely raids rather than a real conquest. The towns still occupied by the Byzantines did not fall to the Moslem leader, nor did the mountain fastnesses, the natives of which he could not overcome. The latter were so far from being subdued that one of their chiefs, Kusaila, was able to surprise and kill O'kba at Tabili, to drive the Arab out of Ifrikia and found a Berber kingdom comprising the Aurès, the south of the department of Constantine, and the greater part of Tunisia (687-690). Kusaila could not hold out for long, however, and in spite of the resistance offered by the Berbers in the Aurès, which has been ascribed to the legendary figure of Kâkina, the Moslems were finally victorious by the end of the 1st century A.H. The conversion of the Berbers to Islam, begun with no great success by O'kba, was carried out in the century following. It was effected less by conviction than by self-interest, as the Arab generals hit on the plan of enlistng the Berbers in their armies and thus winning them to their religion by the hope of booty. The Berbers formed the nucleus of the armies which, under the leadership of Arab generals or even Berbers like Târik, completed the conquest of the Maghrib in a few years and in less than half a century effected the conquest of Spain.

These friendly relations did not last long but hostilities between the Arabs and the Berbers. The latter complained that their services were poorly recompensed and that their leaders had been treated more like inferiors than equals. They also left the paths of orthodoxy and adopted Kâhrijî (Akkalât, and Şafi'i) doctrines, which indeed appealed more to their democratic sentiments; than they rose in revolt against the Arabs. The movement began in the west, led by Maisara a water-carrier in Tangier, in 722 (740). In spite of a victory by the Emir Khalid over the rebels and the death of their leader they swept through the whole of the Maghrib and even crossed into Spain. The Arabs suffered momentous defeats such as that of Kûlîfâma at Bagdîla in 723 (741). They were driven out of Kairouâne which was plundered by the Warâfâma, who were followers of Şafi'i doctrines, in 750 (765). The A'bâli-Howara under Abu Tûbâbahî [p. v.] were victorious over the Warafâ and subdued the nomads of Tunisia and Tripolitania. The authority of the A'bâlsaid Caliph was for the moment of no avail in Africa.

But the Berbers, divided against themselves, were not capable of taking advantage of the situation and following up their success. The destruction of Abu Tûbâbahî's army by Syrian troops, gave Ifrikya back to the Arabs in 744 (761). Forty years of bloody fighting and innumerable battles (300 according to Ibn Khallik) were required before they could again assert their sway in the
eastern Maghrib. The remaining bands were quite lost to them; states with a Berber population under leaders of Arab descent were set up in various places, quite independent of the 'Abdallāh Caliphate. For example, the kingdom of Tahart (Taghit) founded by the Imār Ibn Kastān and the survivors of the Abādād, who had fled from the eastern to the central Maghrib; that of Sījlāmīa under the Banū Mīdrāt, that of Tiemcen, founded by Abū Karna, the leader of the Banū Hren, that of Nurūt in the Rif; that of the Berghawāt on the shores of the Atlantic Ocean and lastly the kingdom of Fās founded at the beginning of the 10th century by the 'Alīd Idris II with the help of Berber tribes, the Mikhnās, Sdrādrāt and Zzīgārta. Only the semi-independent dynasty of the Aghlabīds (902–908) recognised the suzerainty of the 'Abdallāh. They raised from the Berbers their troops for the conquest of Sicily, but they had, on the other hand, to put down frequent rebellions by the natives in Tripolitania, Southern Tunisia and in the Zab and Hodna territories.

The resistance of the Berbers to the Arabs was quite as keen as before. It was strong enough to assure the supremacy of ʿAbīfite doctrines in the Maghrib, although these were radically opposed to the ʿĀhidīt doctrines adopted by the Berbers only the century previous. The Ktāmā furnished the Dāʿī Abū ʿAbdullāh with the troops who fought the Aghlabīs and laid the basis of the ʿĀhidīt power for the Muḥ. Idrisī. The Fāṭimīds were never able however to subdue all the Berbers. Although they succeeded in suppressing the Idrīsīs from retaining their power in the western Maghrib; they were unable to make vassals of the Maghribi and Zenātīs, who out of hatred for the Fāṭimīds placed themselves under the Omsiyyas of Spain; and lastly they had to put down the revolt of the ʿĀhidīt led by Abū Yazīd “the man with the nose” (942–944), a revolt which endangered their power and from which they only emerged victorious with the help of the ʿĀhidīt of the Central Maghrib. Besides, the Fāṭimīds soon turned their attention to the east and soon as the Caliph al-Muʾṭaṣim was firmly established in Egypt they lost interest in the Maghrib. North Africa again fell a prey to various Berber tribes, no one of which was able to overcome the others. In the east the ʿĀhidīt displaced the Ktāmā and supported the Zirids, who were governors of Ifriqiya and Tripolitania. In the west, since the Idrīsīs had fallen, the power passed into the hands of the Zenātīs, who were at first only governors for the Spanish Omsiyyas but became independent princes. In the beginning of the 9th century the Zirid kingdom broke up; the ʿĀhidīt principality was formed in the centre of the Maghrib the rulers of which recognised the authority of the Caliph of Baghdad and first made their capital at Kafāa, then at Bigāya (Bougie). The state of anarchy, resulting from the quarrels among the Berbers among themselves, was complicated in the middle of the 10th century by the invasion of the Hiffāt tribes, the immediate results of which were the devastation of Ifriqiya and a part of the Maghrib and the ultimate consequence a radical modification of the ethnography of Northern Africa.

And when the conflict had reached its height, two Berber dynasties, the Almoravids and the Almāḥūdīs, each proclaiming different religious doctrines, succeeded in establishing their preponderance for a time in Northern Africa. The triumph of the Almoravids was that of the Lemsītians, who had risen to power under the leadership of the Senegal and Niger. Though converted to Islam in the third century of the Hijrā, they had for long been Muḥāammadīs only in name. They were taught the true doctrine and orthodox practices by the Marābūn ʿAbdul Yāsīn and resolved to carry the true faith to the heathens of the Sudān and the heathens of Southern Morocco. Their conquests soon stretched far beyond their limits. Their chief Yūsuf b. Tāshall founded Marrākush in 1062, subdued all Morocco and central Maghrib up to the Ḥammādī frontier; a few years, drove back the advancing Christians in the Iberian peninsula by the victory of Zālīkā in 1086, deposed the Andalusian Emirs and became sole master of Muḥāammadīan Spain. The decline of the Almoravids was as rapid as their rise. Exhausted by their own victories and vanquished in combat with a superior civilization, these Berbers from the Sahara rapidly disappeared. In their place the Caliphs had to employ Christian mercenaries, while they themselves, heedless of orthodoxy, scandalized good Muḥāammadīs by their conduct. The Muʾṭūdīs of Deren, converted to Unitarianism (Tawḥīd, whence the name Almāḥūdīs) by the preaching of Ibn Tumart, rose against them. Led by a Kūmīya of Berber origin, great abilities, named Abū al-Muʾīnī, they soon put an end to the Almoravīd rule, without much difficulty. The empire founded by the Almāḥūdīs was even larger than that of their predecessors. Although Abū al-Muʾīnī was not actually able to conquer all Spain, he destroyed the Ḥammādī kingdom of Bigāya, the Zirid kingdom of Ifriqiya, drove the Christians out of the ports they had seized and made himself lord of all the country between the Gulf of Sidra and the Atlantic. A great Berber empire thus extended over the whole of Northern Africa, though it was likewise soon to crumble away. The Almāḥūdī Caliphs were no more able than the Almoravīds to keep to the paths of orthodoxy; one of them, Ibn Muʾīnī, went so far as openly to curse the memory of Ibn Tumart and raged against true believers. The rivalry of the two Berber factions also hastened the break up of the empire founded by al-Maʾūnī. The quarreling of the Marinīs and the Kūmīyan bashed the Moroccan court in blood; the tribes of the Maghrib favoured the efforts of the Banū ʿĀhidīt or attempted to make themselves independent. A century after the death of Abū al-Muʾīnī, the last of his descendants, Abū Dādība came to an inglorious end as leader of a robber band in 1279. By this time the Maghrib was partitioned among new powers, the Marinīs in Fṣa, the Abū al-Wāli of Tlemcen, and the Hafsīs in Tunis. None of these dynasties was able to impose its authority on the others, nor even to make itself respected by its own subjects. In Morocco the tribes of the mountain regions were in a constant state of revolt against the Marinīs; in central Maghrib, the so-called Wematu of Warsents (Wansertīn), the Zānīs of the Djarījūn, the Kābelīs of the province of Constantine, the peoples of the Zab and the Djarīt threw off the yoke of the princes of Constantine, Bigāya and Tunis. The same thing happened at
the cases of the Djebel Nefissa and the Awârâ. The inability of the Berbers to unite to form a great empire was once more clearly demonstrated. The only way to trace their history from this period is to write the history of the various tribes. They have gradually abandoned their language and customs; they have even lost their ancient name which has been replaced by that of some individual from whom they trace their descent; they have become quite arabisised. Other groups have escaped this transformation, owing to the difficulty of access to their abodes such as those of the Awârâ of Kabylia and the Rif; they have been augmented by fugitives of all sorts, who have taken refuge with them; some have even gone down to the Sahara so that since the sixteenth century the Berbers form a cordon on the frontier of the land of the negroes parallel to that formed by the Arabs on the borders of the Maghrib and Ifriqiya (Ibn Khaldûn, Histoire des Berbères, transl. de Sale, ii. p. 104). This disintegration was accompanied by the retreat of Muslim and Arab civilisation. It is no exaggeration to say that many Berber groups returned to a semi-savage state and only retained the most rudimentary notions of Islam. Their reconversion to Islam was the work of the Maraboutes of the sixteenth and seventeenth century, who very often claimed to come from the south of Morocco, from the legendary Sâkiya al-Hamrî, which popular imagination believed to be a regular seminary of missionaries and saints. The influence of these pious individuals was so great that whole tribes at the present day regard them as their ancestors. Some few groups escaped their attention; such perhaps are the Zekkâra whose religious customs and beliefs are so different from those of the Islam of the Maghrib, have given rise to the strangest and most far-fetched hypotheses.

**Geographical Divisions.**

At the present day the Berbers are no more a homogeneous mass than they were in the first centuries of the Hijra. Their descendants still form the basis of the population of North Africa but they have been so greatly modified by the Arabs that it is impossible to recognize them. They have lost all memory of their real origin, as well as their language and customs. Some considerable groups have however persisted in the mountains and in the desert, that is to say, in those regions into which the Arabs could not penetrate or which they did not succeed in retaining. They are linked up by smaller groups more or less related, which are rapidly assimilating and survive as evidence of the ancient ethnographic conditions. It is besides, very difficult to give an exact list of these tribes. The retention of the Berber dialect appears to be the most reliable criterion, although some tribes which claim to be of Berber origin have ceased to speak the language of their ancestors.

Speaking generally, it may be said that the density of the Berber communities increases from east to west, and from north to south. They are scattered over an immense area, bounded on the east by the cases of Siwa, the desert of Libya, and the mountains of Tibesti, on the west by the Atlantic, on the south by the Hausa countries, the middle course of the Niger and the Senegal. Tripolitania and Cyrenaica. There are some Berber tribes in the mountains of the land of Barja, in the Ghûrân and the Djebel Iferri and in the Djebel Nefissa, the religious conceptions of the Abdis. They are also met with in the cases of Siwa, Awjûla, Sâmâ, Timistet and in the Fezzâa. We may also mention the Mâdjarâ of Awjûla and the Urfila of the enclaves of Tripoli who, although they speak Arabic, say they are of Berber stock.

**Tunisia.** Berber dialects are spoken among the Djerda (island of Berber), who, like the Nefistas, belong to the Abdi sect, among the Troglodytes of the Matmâa, and amongst some of the inhabitants of the Djebel (Sedd). The other Berber tribes of the protectorate, such as the Khâmîr have been arabisised.

**Algeria.** Kabylia in the north, the Awârâ in the south-east have been the great centres of resistance of the Berbers. Although Little Kabylia was more affected by the Maghribi and Ifriqiya, Abyd el-Neîr and the Zaghâa of the district of Setif, in the Djanûla Kabylia the Zawâa have preserved a dialect which is regarded as the purest of all those in the north; they are connected with the tribes of the Wadil Sijill (Wad Saheb) in the east, the Beni Kholif in the west. In the south and east of the department of Constantine, the Ulad Khair (Sîr âhûa), the Hankta (Ain Bâlæ), the Nemouha (Tebessa) are allied to the Shâtwa of the Awârâ. In the Tell of Algiers and Oran, some insignificant groups, which are rapidly disappearing, found in parallel lines from east to west, such as the Uaza, the Zaïût, the Bani bi-Yaˁbûb, and the Mënigha of the Illids Atlas. The Bani Mënisher between Miliana, Cherchell and Ténès; the Harâa of Teniet al-Haid (Tâniyât el-Abad), the Bani Îkhâmûs of the Warsents, the Aâshâ of the Ouarâ, the Bit Halima of Fêmsa, the Bani Sûsûs and the Bani bi-Sa'id of the Algero-Moroccan frontier. In the Algerian Sahara, the cases of Wad Rûhî and Warcha, the oasis of the Mâb people of Abîdî Berbers, the Ksîr of Mughar, of the Aïn Amtûn, and the oasis of the road between South Constantine and South-east Morocco.

**Morocco.** Of all the parts of North Africa Morocco is the one in which the Berber element is the most important. It predominates in the Rif, in the various ranges of the Atlas, in the Sûs, in the valleys of the Wad Nun and of the Dûza' and in the oases. All the Berber tribes are not yet known however. A certain number of principal groups may nevertheless be distinguished.

1. The peoples of the lower Mulûya territory (the Bani bi-Zeggût and Bani Êntâsûn, who form a connecting link between the Berbers of Algeria and those of Morocco).
2. The tribes of the Rif (Gnàwîs al-Kûbûn), Temsaman, Botbm, Bani Uthûthûn, Bani Sûlit). 3. The Berbers occupying, in the centre of Morocco, the basins and the oases of the Mulûya, the Sûs, the Wad Dûz' and scattered between Fès and Mînkûsa to the north and the Tafiltâf to the south-east, with a few outposts as far away as the Atlantic coast near Rûtâ and Sâlî (Sale). The Bazen, Bani
BERBERS.

Mtir, Bani Mghilha, Ait Shehrougen, Ait Atta and Ait Yafilman (a confederacy of the Berber) also belong to this group. 4. The Shilha, occupying the land to the south of Mogador and Marrakesh, the valleys of the Great Atlas Range and of the Anti-Atlas, the Atlantic coast, the valleys of the Siu, and Wad Nun and the upper course of the Wad Tafilalet and the Wad Draa (Darr'a). (To this group also belongs, though not so well known, belong the Thalas of the Ifahi country, the Goumbia, the Gouzielte, Glaoua of the Great Atlas, the Houika, Ait Vahyik of the Siu, the Shurika, Ait Idlef, Ait Ismaïl of the Shih etc.). 5. The inhabitants of the oases (Tahliel, Figuig and Twil). In these oases, alongside of a Berber population in the strict sense of the world, there lives a dark skinned people, the Harart, whose origin has given rise to controversies, some writers regarding them as black Berbers, and others as a cross between Berbers and negroes, analogous to the Melanges of the ancients, while others again say they are the last representatives of a negroid race called the "Garamantes". 6. The Berbers of the Sahara. The ancient tribes of the Zenata and Zamkha, who dwelt in the western Sahara in the early centuries of the Christian era, were overcome by and made tributary to the Arab element so that the word Zenaga has become almost a synonym for "slave". Some tribes have nevertheless retained their independence; the Ulad Dafni, descendants of the Almoravids, the Dscheli (Idja "Aïch") and the Moghrab of Tagant. Lastly a certain number of sections of the large tribe of Triara in the north of Senegal, notably the Ulad Dafni and the Tindaga still speak Berber. In the Central Sahara, the Tuareg preserve one of the most characteristic of Berber types. They class themselves into two great groups; the Northern Tuareg (the Auddy of Tassili and Ahaggar, occupying the massive mountains of the same name), and the Southern Tuareg (Awelliim, Kif Witi (Kef Witi) of the AInterior; they are already mixed with negro elements.

MANNERS AND CUSTOMS.

Their manners and customs are with their language the distinguishing mark of the Berber tribes. Although we possess but scanty notices of certain Berber groups which have as yet been little studied, such as those of Morocco, the information available is sufficient to prove the identity of their customs with those of groups which are well known such as the Kabib, the Shiwata of the Awars and the Tuaregs. The most striking characteristic is the part played by custom in legislation. Among the Berbers the source of their laws is not, as with the Arabs, the Koran. Although they have adopted Islam, they have sharply separated dogma from law. The Koran is the undisputed authority on all that pertains to faith or religious hygiene but only affects civil and criminal law in so far as it does not come into contact with the law of custom. The proportion in which the two elements combine varies according to the tribes, and the customs have been more or less deeply affected by the Koran. One result of the profane origin of Berber law is that it may be modified, while Muslim law, taken from the Koran, a divine and immutable book, is essentially unalterable. As to the customs themselves, they fall into two classes; 1) \\n
(tarif or local usage) transmitted from generation to generation by oral tradition; it is applied in Kabibia to all that concerns individual rights and the transference of property; and 2) the tarif or local usage. The modification of principles consecrated by the tarif requires the consent of the tribes; the alteration of prescriptions known, held by the wakf requires only the approval of the tribal assembly. The Moroccon Berbers likewise have a particular code (wakfi) for each tribe or each locality, whose prescriptions, almost always in accord with ancient tradition, are settled by the wakf or assembly of the elders. Infractions of civil and criminal law have given rise to a regular system of fines called jawa, which varies in the different villages; it is sometimes written down but as a rule is committed to memory by the elders. Tariffs of the same kind appear to exist among some of the Berber tribes of Morocco, the Ait Atta and the Ait bit Zid, for example. Many ordinances consecrated by custom, go back to a very ancient period, anterior even to Islam; for example the application of the sale in criminal law; the right of rejoyed private vengeance allowed to the family of a murdered man is the institution of the Sanyia, which is the safeguard against an individual or body of strangers; and that of the asÊkha, the immunity, sometimes hereditary, of an individual or body of people. There is however one Berber group whose laws prevent striking differences to those which we have just mentioned, that is the Abla group of the Maût, whose laws are of religious origin and are distinguished from the orthodox laws by their exceeding severity in matters relative to the religious observances of the Abla.

The social life of the Berbers likewise differs in many respects from that of the Arabs. One of the most striking features is the place of woman among them. She enjoys greater consideration and influence than among the Arabs; for example, she is not forced to wear the veil; monogamy is the rule among Berber families; and lastly among the tribes which have most preserved the original such as the Tuaregs trace back a descent of organization of the family based on matriarchal.

The political organization of the Berbers varies in the various districts. Two principal types may be distinguished: 1) The aristocratic type: a noble and warlike class under whom is a class of vassals and serfs, sometimes with a marked class intermediary. 2) The democratic type: a municipal republic making its own laws and governing itself, for example the villages in Kabibia, the Awars and the Moroccan Atlas. In these latter public business is carried on and magistrates elected by the general assembly of the people (Jandia, waftifj). This form of government nevertheless looks more democratic than it really is for the influence in the assembly is in the hands of the old men and powerful individuals. In the Maût country, power was in the hands of a clerical aristocracy (Fesâna). Each of these little republics, divided by the rivalry of its "softs" (muf), or parties grouped round an important individual is very jealous of its independence. In former times in Kabibia there was a practically permanent state of war between the various villages and tribes; in Morocco this is still the case. The individualistic spirit of the Berbers prevents them at the present day as in the past
from forming political groups of any importance; although they are capable of forming temporary or permanent confederacies they never rise to the conception of any more complete organizations.

(G. V. V.)

RELIGION.

In ancient times the religion of the Berbers appears to have consisted of a number of local cults corresponding to the division into tribes. The objects of their worship, about which we have only sparse and incomplete details were undoubtedly natural objects, rivers, mountains, the sun, the moon, and certain stars. The veneration in which these objects were held may still be traced in certain superstitions. It is certain that since the Punic epoch, there has not only been a borrowing of foreign divinities but also an assimilation of the latter to the native deities. Judaism also made numerous converts and if it did not play the role which some have tried to credit it with, it was certainly disseminated throughout the whole of North Africa; indeed with the exception of the descendants of the Jews, who were banished from Spain in the xvi century, the greater part of the indigenous followers of Judaism are descended from converts made before the introduction of Islam. Judaism paved the way for Christianity which soon, as elsewhere broke off from it, and flourished in spite of the strenuous struggle it had to wage with paganism, and the internal divisions which rent it within. This is not the place to write its history. (cf. Dom Lachercq, L'Afrique chrétienne, Paris, 1904, 2 Vols.; Monceaux, Histoire littéraire de l'Afrique chrétienne, Paris, 1901-1909, 3 Vols.; in course of publication); it will be sufficient to note that it gave the Berbers an opportunity to unite against Roman rule and that they eagerly adopted the heresies opposed to the doctrine of the Church of Rome. The same thing happened after the Mahommedan conquest, only the name of their adversaries was changed. We do not exactly know the details of the conversion of the Berbers to Islam; we only know that they renounced it twice times and that but found stronger support than the Byzantine or the ephemeral Visigothic kingdom, their resistance would have had quite another result. Islam did not finally triumph till the xii century of our era; it was at this date that the last of the native Christians disappeared.

At the beginning of the conquest, the Berbers professed the orthodox doctrine, the only one they knew; but their spirit of independence soon showed itself in the adoption of Khotidjidi doctrines, which laid the emphasis on the conception of universal equality. That at heart they were really little concerned with religious dogma is clearly shown by the fact that one section of them took to the side of the Shiites, not only on behalf of the Medjda of Fès but of those who, stepping in Persian doctrines, saw in the Imam an incarnation of the Deity. This also explains why we have the Fatimides beside the Khotidjids, Sa'aids and Abdâds and the Kettâns the principal supporters of the Mahdi ' Ubaid Allah. A reaction brought the triumph of Sunni doctrines with the Lamtûns (Almoravids) of the Sahara who had only been converted in the xii century; it was further emphasised by the Maghôdi of the Atlas who founded the Almoravid empire and exterminated those who still professed other faiths, Christians and Shiites except a few Khotidjidi communities who were protected by the mountains, desert or sea. (See the articles KHEKHALI, F. A. A.; NOGâRI, F. S.; ROUTH, BUSTAMITE.

From the point of view of religion, the Berbers, without distinction of sects, have only produced theologians with a fondness for disputation; they have produced no great original thinkers, whether orthodox or heterodox. It was the narrowest and least liberal of the four Maghôdi sects (near to that of Ibn ' Hanbal), that of Malik b. Anas that became the most wide spread amongst them; this has remained the case to the present day. Sunni doctrines now reign supreme, more or less mixed with local superstitions, in particular the cult of marabouts, many of whom have replaced obscure indigenous divinities, except in a few Abâdi communes which have survived in the Math, in Libra, and in the Djebel Nefza and who keep up a connection with their co-religionists in Zanâeb. In addition to official Islam, two attempts to found in Morocco a religion which was to bear the same relation to Islam as the latter professed to bear to Christianity, must be mentioned; in the Rif the attempt of Hâ-Mîm al-Môzârî (the 'forger', q. v.) in the iv century A. H. and in Tumzâri, the modern Shafiisti, the religion founded by a former Khotidji, Sâlih bîn Târif, among the Bergawiti (q. v.) which lasted from the second to the fifth centuries A. H.

LANGUAGE AND LITERATURE.

In spite of the impossibility of proving their common origin, there is a linguistic unity among the Berber languages and although we know but little of the ancient language it may be presumed that its dialects did not differ from one another more than the modern dialects. Inscriptions alone could give us the key; but unfortunately they have not yet yielded up their secrets and the attempts that have been made to decipher them have not given satisfactory results. They were collected by Faïdî in 1875 in his Complète des inscriptions marodisiennes, Lille, 1876; cf. also J. Halévy, Essai d'épigraphie libynne, Paris, 1876; since then however not a year has passed without new ones being discovered (see the collections in the Revue de la société archéologique de Constantine, in the Revue africaine, in the Comptes de l'Académie des Inscriptions etc.). The Lybian alphabet has hitherto been thought to be of Phoenician origin (cf. Halévy, op. cit., p. 13-16); an attempt to connect it with one of the South Semitic alphabets, more particularly the Tammudâni has not been successful (E. Lützmann, L'étude de l'alphabet libynne; Journ. As.; x, Series, iv. p. 432-440); but the proposal to connect it with the Aegyptian alphabet still requires to be examined (cf. also Th. Berger, Histoire de l'écriture dans l'Antiquité; d. l'Univers, 1939, p. 332). It ceased to be used in the north after the Arab conquest and it is represented at the present day only by the Tuareg alphabet. Besides the inscriptions the only materials we have for the study of ancient Berber language are a certain number of words preserved in a more or less corrupt form by the writers of antiquity, they are only of importance from the lexicographic point of view.
The same remark applies to those which have been handed down to us by Arab writers. One point may be confidently asserted however namely that the great invasion of the Banū Hilāl, which definitely established Arab power in the 9th century in the northwest of Africa, had a considerable influence on the Berber language: some dialects disappeared; others were invaded by numerous words which may be easily distinguished from those which had been borrowed in previous centuries (cf. R. Basset, "Les mots arabes passés en berbère": Oriental. Studien, Th. Nöldeke gewidmet I. 449—443): A knowledge of the Gnaahane dialect, which was not exposed to the Arab invasion, would have to a certain extent made up for our ignorance of ancient Berber; unfortunately, all that we now possess of this dialect, spoken in the Canary Islands down to the 18th century, exists only in the corrupt form in which it has been transmitted by Spanish writers: all that remains has been collected by S. Berthelot (Parker Webb and Sabah Berthelot, "Histoire maternelle des Berbères de l'Espagne": vol. I. Paris, 1842). 

The Berber language, which belongs to the Kâshîte or Hamite family of language which is related to the Semitic group, is still spoken from the oases of Siwa to the Atlantic Ocean and from the northern Niger to the Mediterranean but it is far from being the predominant language in this vast area. Only a provisional classification of its dialects has as yet been made: when each of them has been completely studied it will be possible to settle their inter-relations, and connect them with the Libyan inscriptions when these have been deciphered. The principal dialects, going from east to west are the Zenaga, spoken in the north of Senegal, the Tanarg of the Awezimindas, the Ahaggar (Taïsik) and the Argers, the Shilha of Sia and the Tamazight of the Atlas, the Rif language in the north of Morocco, the Berber in the south-east, the Zenātia of the east of Morocco and the west of Algeria, the dialect of the Kūt, that of the oases (Tidikelt, Twat and Gārār) the Zenātia of central Algeria (Wārsenl, Aθghu, and Harka) which is closely connected with the dialect of the M. Mënser and through the mountains of the Atlas links up with the Zenātia of Libya (some of the best preserved) and the dialects of Biggait and the Wadi Sihel (Wad Sahel); in the south the dialects of the Math, Warghû and the Wadī Ragh; the Shāwyta of the Awarta and that of the tribes from Safīf to Sūk-Ākrās. In Tunisia, Berber only survives in the extreme south at Sennar, among the Maqża, at Djerba and up to the frontier of Tripolitania where it passes into the dialect of the Djebel Nefīsa. The only other area in which it is found are the areas such as Qidams, Cheb, Awadjila and lastly in Siwa. The study of these dialects has been begun but has not been advanced in the same degree for each.

Religious literature must have been well developed among the Berbers, particularly among the Kbhājī, as we may gather from the scattered monuments in inscriptions and biographies. Although we have lost the Kbhājī's of Hs-Mus and Siil (except a few scarce fragments) there still remains, out of all the Abdīt literature Ibn Ghīṭīn's treatise entitled Mānwa (cf. de Motylinki, "Le manuscrit arabe-berbère de Zemaghah": Actes du XIV Congrès des Orientalistes, Algiers, 1909, ii. 64—78). As to Sunni literature, we have lost the translation of the Kūtān and the Berber text of three treatises in the Shi'ite dialect compared in the 17th century of our era by the Māhī Ibn Tilūmān, founder of the Almōjāt empire; but we have two works dating from the XVIII century and composed in the same dialect by Matḥum b. 'Ali b. BρHumī, the Hāwī (treatise on religious duties) after the Mākhāgār of Sīdī Khalīf (published and translated by M. Luciani, Algiers 1897) and the Bābār al-dumār to a supplement to the preceding (manuscripts in Algiers and Paris); the two first chapters were published with a translation by M. S. Slane, Appendices à l'Histoire des Berbères, vol. iv. pp. 553—562. With this class of literature are connected certain religious poems, all in Shilha, like that of Sahi which tells of the descent into hell of a young man in search of his parents (R. Basset, Le Poème de Casbi, Paris, 1895; Svo.), the poems of Sīdī Hammū (Stumm, "Die Anrufung und Gedichte der Schīthi": Leipzig, 1825), Adjīn b. 'Allī b. Sahīb Zayyūna, "Actes du XIV Congrès des Orientalistes, Algiers, 1909, p. 100—101, an account of the Ascension of the Prophet and a version of the Surah.

Works of profane literature are rare and have only been published by Europeans e. g. Sīdī Brahim's account (in Shilha) of Wes Africa (published by Newman in the Joum. of the Roy. As. Soc. 1848 p. 215—260, transl. by R. Basset, Paris, 1882) and the account of the Djebel Nefīsa in the Nefīsa dialect by Bṛhum b. Sinān al-Shamakī (edit. and transl. by de Motylinki, text Algiers, 1889); transcription and translation, Paris, 1898). We may also mention here a collection of tales entitled Kūtāl al-Shīth (Ms. in the Bibl. Nat. Paris), which is largely borrowed from the Babṭyyl-ānma and the Hendū Khērez; extracts have been edited and translated by de Slane, Basset and Kochermonts.

The popular literature (stories, poems and riddles) is more important than all these texts which are so strongly mixed with Arabic. These are to be found in almost all the above mentioned dialects and will be found detailed in the particular articles concerning them. General collections (translations only) have been published by R. Basset (Contes berbères, Paris, 1897; Nouveaux contes berbères, Paris, 1897; Contes populaire de l'Istig, Paris, 1903). Of collections in particular dialects one may mention; for the Shilha of Targa: Stumm, Elif, écrue dans le Sidho-Dialecte, extract from the Zeitschr. der Deutschen Morgen, G., 1849, 10e, Märchen der Shilha von Targa, Leipzig, 1905 (Texts and translation); de Kochermonts, Centaux des Sons et des Oeis de la Tojhlit: Journal, As. xi (1889), p. 198—235; for the dialect of the Khima R. Basset, Aux trets de textes et de documents pour la phléologie berbère, Algiers, 1887; for the dialect of the Bant Menaṣe: R. Basset, Textes berbères dans le Dialecte des B. Menaṣe, Rome, 1892; for the Zimā: Hanoteau, Poésies populaires de la Kabyle: du Targa, Paris, 1882 (translation only); Moullès, Légendes et contes mariales de la Grande Kabylia, Paris, 1894 (translation only), Ben Sehika, Contes des langue du Kabylia, Algiers, 1897 (text only); Moulès, Légendes et contes mariales de la Grande Kabylia, Paris, 1893—1897 (8 parts, text only, unfinished); Le Blan de Prémon, Essai de Contes Kabylia, Bâle, 1897.
BERGAMS — BERGAMA.

BEREIDA or BURAIIDA (the luminous of BURAI), a large village in the KAŞI province of NELLI, situated 26° 17' N., 43° 55' E. It lies on the left bank of the Wadi Ramma, about ten miles from Omaia on the opposite bank. The names of Boreida and Aneya are from erga in them (Doughly). Buraida probably occupies the site of the ancient Payala (Sprenger, Die antike Geographie Arabicae). The present town is said to have been founded three or four hundred years ago, by people of the Banu Tamim. After the fall of the Wahrāḥ state it became independent under chiefs of the family of Alalayn (Palgrave). When Faiṣal, the representative of the Sa'ad or Wahrāḥ dynasty, had recovered most of the lost ground, he closed Buraida by treachery, and placed it under a native of Al-Riyād named Moḥammar, who was governor at the time of Palgrave's visit (1852). His son Ḥasan was governor when Doughy stayed there (1878). The former estimated the population at 25,000, the latter at 5,000 or, counting the surrounding hamlets, 6,000. The people are merchants and caravaneers. The town is built of clay and surrounded by a well, only two feet thick. The gardens form a ring round the town outside the wall. The palms and tilted land stretch for three miles on the side next the Wādī. They are irrigated from wells, made by digging in the sand. The water is raised by means of a wheel set on a frame of light wood, which grows plentifully here. At the time of Palgrave's visit there was a castle built from western Kaṣim being a common article of sale. The streets were fairly broad and regular. The height of the minaret proves the mosque to have been built before the rise of the Wahrāḥites [q.v.]. It is probably about 200 years old. The castle Palgrave considered to be in part older, some of it being of stone. It had no architectural features, and there appear to be no ancient inscriptions in the town.

BERBERA, the name of a district (gūd) and its capital in the Sandak of Iṣmir in the Wihaya of Afīn (Shymra), The town, which is situated in 24° 35' east Long. and 39° 5' north Lat., is the ancient Pergamon, as has been ascertained from the excavations of Humann, Conze, etc. This is not the place to discuss the history of Pergamon and the excavations; the reader may be referred to the brief but excellent account in Haeckel's Constantino polo and Western Asia Minor, p. 246-254.

In the beginning of the xvi century the town fell into the hands of the Turkish dynasty of the Kastār and with Bābikērt was the most important
town of this Emirate. The Bagata visited it in 733 (1333) and found it as being in ruins, but with a strong fortress on the hill. He calls it the Sultan Vakhabî. Orkhân took the town soon afterwards (according to the Turkish historians in 735 (1334) or 737 (1336) but Mordtmann, über die türkische Fürstengeschichte der Karai in Myriam. Studienker. der Kgl. Preuss. Akad. der Wissensch. (Berlin, 1914); 'Ali Djewâd, Mecââli al-Qâlâmî, al-Mustawbât fi l-ba'thât, al-Ma'mirât fi l-ba'ithât, 164; Ibn Ba'tha (ed. Denoncourt, Paris, 1855). (F. Giese). BERGHAWA, is the name formerly applied to a group of Maqâmîa tribes of which the more important were the Butniya, the Zhâghâ, the Maqâmîa, the Mâhkîr, the Bahî Bûrâgh and the Bahî Waghmer. They were settled in the west of Morocco in the district of Taménît which now bears the name of Shûkiya from Salé (Sâli) and Azemmîr to Aflî and Aflà. They adopted the teachings of the Kharîrî and took part in their wars against the Arabs under the leadership of Mâsrâa, the water-carrier of Tangier. Their chief at that time was Ta'rif Abdul Sâlih. He left his power to his son Sâlih who had fought with him in the ranks of the Kharîrî. Sâlih had obtained a reputation for learning and virtue among his people and conceived the idea of founding a new religion which would be to Islam what the latter was to Judaism and Christianity.

This project has also been asciliated by some authorities to his father Ta'rif. In any case Sâlih claimed to be the Sâlih al-Mustawbî mentioned in the Korâne (levi 4) and it was said that he first appeared at the beginning of Islam. In reality he lived in the reign of the Ommâyad Caliph Hâshim b. 'Abd al-Malik though if the date 227 he adopted for his appearance, it must have taken place in the reign of Marwân II as Hâshim had died in 125. Some enemies of Sâlih assert that he was of Jewish origin, that the real name of his father was Shemâ'în (Simone) b. Yâhîyân b. Icâfik and that he was born in Barbary, in the vicinity of Xeres in Spain whence the name Barbary, corrupt to Berghawî, borne by his disciples. These views of the author of the Magâs al-Djâzar have rightly been combated by Ibn Khaldûn. Sâlih composed a regular code of religious laws, if we may believe al-Bakîr in his notice of the "leader of prayer" Zemurrî Abd Sâlih b. Abd al-Malik b. Rashân (or Hâshim) b. Wâjdân who was sent on a mission to the court of al-Hakam al-Mustansîr, Caliph of Cordova, in May 952 (October-November 952) by Abd Mannûr b. Abd Tâ'ânir, king of the Berghawî. This code, composed in the Berber language, was translated into Arabic by Abd Mullûf b. Dâwîd, a Maîmûdan of Shella. The month prescribed for fasting was that of Rajâh and not on Ramadân, a certain day each week was also to be observed as a fast; prayers were to be offered five times a day and five times at night; the "feast of sacrifice" was celebrated on the 11th of Shawâbî and not on the 17th. The Frîs and the Abûlunâ had to be made by beginning with the novel and the hips, then the privy parts, the mouth, neck, the forarms beginning at the elbows, the ears and lastly the knees. Some of their prayers consisted only of gestures; others resembled those of the Muslims. Their prostrations (ruqâyât) were made three times in succession; they raised the forehead and their hands half a palm's breadth from the ground. The ta'hîr was replaced by the following formula, A tam en Vakhabî (Berber: in the name of God) followed by Mohîbî Vakhabî (God is great). This same Vakhabî, which means God, in which some scholars have wrongly thought to recognize that of Bacchus—or rather the Bacchus of the inscriptions of Numidias—on account of a variant, Bakîrî, appears to be the translation of the Maîmûdan Vâkâhât "he who gives", an epithet of God. In the fact that it is also found among the Abklîs recalls the Kharîrî and Maîmûdan ancestors of Sâlih (cf. A. de Montyssici, Le nom berbère de Dieu chez les Abûlunâ, Algiers, 1905, and R. Basset, in the Bulletin de la Société archéologique de Sousse, 1906). In repeating the profession of faith they hold their hands open over the palms downward. At public prayer, which was celebrated on the Thursday and not on the Friday, they repeated half of their Korâne, standing and the remaining part, while making their prostrations. The ceremony was completed by repeating in Berber the following formulas: God is above us, nothing which is on the earth is hidden from him. Then they repeated twenty times the formula: Mohîbî Vakhabî = God is great; Phûm (form) Vakhabî = God is one; na'âm Vakhabî = those who, like God. It is evident therefore that with the exception of the use of Berber their religion did not differ essentially from Islam.

Following the example of Maîmûdan, Sâlih composed a Korâne in Berber. It contained eighty Suras each of which as a rule was called after some prophet. The first was that of Ayûb (Job), from which al-Bakî gave an extract (p. 140); the others were those of Fir'awn (Pharaoh), Kûrîn (Korâne), Hûrûn, Vâqâyû and Mâqûlû, al-Dâjdjûlû (the Antichrist), al-Tîlî (the Goldân Calif), Harût and Mûkût, Ta'dîl (Send), Nimûrûd and Yûsûs (Jouas) the last. There were also the Suras of the Cock, the Partridges, the Camel, the Right-footed Snake and the Wonders of the World, its imitation of the Môsun Korân is manifest. A tenth part of all ceremonial produce was levied as legal usuc, except from Maîmûdan; it was also forbidden to intermarry with the latter. Any one who marries as many wives as he could afford, but marriage was forbidden between collaterals to the third degree. Thieves were put to death, adulterers stoned, and liars banished, while murder could be stoned for by the payment of a hundred oxen. Certain profane sights appears to be a survival of native customs; for example, it was forbidden to eat the head of any animal, or eggs (this prohibition still exists among certain tribes of Algeria and the Sahara). Cocks were held in reverence...
BERGHAWÁTA — BERKE.

BERKE is Jíról (in most Egyptian authorities wrongly called Beke b. Bar). He was a Mongol prince, chief of the Golden Horde, grandson of Great Khan and third son of Jíról. From the accounts of the Egyptian ambassadors, who were received by him during the last years of his life, he cannot have been more than a few years younger than Bátú. Little is known of his career before he ascended the throne. He took no part in the wars in Russia and in the Western Empire in the years 1234-1242; he was more frequently in Mongolia than Bátú and took part in the great parliaments of 1246 (coronation of Guyuk) and 1251 (coronation of Múngke). The latter assembly was presided over by Berke as the eldest member of the ruling house present, as perhaps also was the assembly which decided the punishment of the descendants of Cághatári and Ügedei [cf. the article Cághatári]. As the Armenian Kirakoss tells us, A每隔, grandson of Cághatári, afterwards held Berke chiefly responsible for the misfortunes of his house.

Soon afterwards he returned to his ancestral territory and did not again visit eastern Asia. Rubruquis (1255) mentions the camp of Berke in his journal; he was a Muhammadan even at this time so that no swine's flesh was allowed to be eaten in his camp. The story, given by Abu l-Qásim (ed. Damascus, p. 172 et seq.), that Berke became a convert to Islam after he ascended the throne, is apparently a later invention.

Džamba (Tübüzéti Niyer, trad. Raverty, p. 1254) says that Berke was instructed in the Korán while still a youth in Khodjand by a theologian of this town. Džamba (p. 129) also gives a story of the hatred in which Zarás, son of Bátú, and a Christian, held his Muhammadan uncle; with this story may be compared the statement of the Armenian Kirakoss who accuses Berke of having poisoned his nephew. If these two princes were really so hostilely inclined to one another, their enmity can hardly be explained solely by detestation of one another's religions. That Zarás was baptised is denied by Rubruquis but on the other hand expressly affirmed not only by Syrian and Armenian but also by the Muhammadan sources (including the two contemporary but independent authorities Djuwains and Džsupports). In any case Zarás, who had six wives according to Rubruquis, and according to Kirakoss excommunicated the Muhammadan as well as the Christian clergy from all taxes, can no more have been a fanatical Christian than Berke, whose capital Zarás was in 1263 the seat of a Christian bishop, a fanatical Muhammadan.

According to Djuwains, Zarás received the news of the death of his father Bátú which went his way to Mongolia in the year 653 (February 1255). January 1256) to the Golden Khan Múngke but continued his journey. He was appointed successor of Bátú by Múngke and lord of the ancestral territory of Džrol and second in rank to the great Khan in the whole empire but died soon after, according to some authorities while on his return journey and to others soon after his return. The young prince Jíról (called the son of Berke by Djuwains and of Bátú by Rashid al-Dín) was installed as chief of the Golden Horde by the Great Khan's commissioners and the regency entrusted to Berke's widow Borchín-Khání. According to Russian annals the camp of Uluwar was visited by Russian princes as late as 1257. It was not till the death of the young Khan, probably in the same year 1257, that the succession passed to Berke.

Like Bátú, Berke during the earlier years of his reign ruled not only over the ancestral domain of his father but also over Māwarraź al-Nahr. According to Džamba he visited Borchín and showed great honour to the learned men of that town.
he is also said to have ordered the Christians of Samarkand to be severely punished and their church destroyed, as they had taken some liberties with their Muslim fellow-citizens. When the news of the death of the Great Khan arrived (1259) it is said that the Friday prayer (Khutbā) was read for Berke, not only in Mā Warāʾ an-Nahr but also in Khorasan and the other provinces of Per-sia (Tāsāhīt-e Nāqṣ), transl. Raverty, p. 1992).

During the next four years (1260–1264), two brothers of the dead Great Khan, Khwājah and Ar议论-Buga, engaged in a struggle for the throne in Eastern Asia. As the coin struck in Bulghār shows, the younger claimant Ar议论-Buga (who was ultimately overcome by his opponent), was recognised as the rightful heir to the throne by Berke. Prince Aqlī, a grandson of Cughlāsī, appeared in Central Asia about the same time, at first in the name of Ar议论-Buga and afterwards in open revolt against him; he succeeded in bringing under his sway not only the whole ancestral territory of his grandfather but also Khwārij, which had always belonged to the kingdom of Džūtī and his successors; the governors and the officials appointed by Berke were driven out of all their towns. The massacre mentioned by Wāṣafī (Ishqā, pp. 45, 54), of a division of Berke's army, 5,000 strong, in Buhār, must have been carried out, not as Wāṣafī himself says by Khwājah, but as 'Osān supposes (Histoire des Mongols, iii. 363 et sqq.) by Hūllugī, but by Aqlī. The war between Berke and Aqlī lasted till the death of the latter; even in the last years of his life, after the final victory over Ar议论-Buga, Aqlī's troops occupied and destroyed the commercial town of Qara-Berg. Berke, whose forces were required in the South and West, could do nothing against his enemies in the East but did not however yield his claims. Prince Kaidī, grandson of Cughlāsī, who was in Ar议论-Buga's army, continued the war against Aqlī on the overthrow of Ar议论-Buga and was supported by Berke. The campaigns in the West against the Poles and against King Daniel of Galicia, who, not content with declaring himself independent in 1257, was bold enough to attack the Tatārs, were of no great importance and were successfully carried by the troops, whose duty it was to guard the frontier districts, without being necessary for Berke to take the field in person. King Daniel had to destroy at the bidding of the Tatār General most of the fortresses which he had built in his kingdom. The war between Berke and his cousin Hūllugī, the conqueror of Persia, was more important and prosecuted with less success. The causes of the war are variously given; as was previously the case in the story of the enmity between Berke and Sartuq, Berke is here pictured by some authorities as the defender of Islam. He is said to have bitterly reproached Hūllugī for his devastation of so many Muslim countries and particularly for the execution of the Caliph Musta'īm. Those authorities who say that the princes of the house of Džūtī felt their rights endangered by the foundation of a new Mongol kingdom in Persia are probably more trustworthy; some of the territories such as Atrak and Ashkarbadān, which were incorporated in the new kingdom, had already been ruled by the "hoof of the Mongol horse" in the reign of Chū-ti Khan as well as possibly under the influence of the Mongols. Hūllugī accordingly went to war not only against Berke but also against Sartuq and the elect of the Seljūq family. The latter had been driven out of Asia Minor and placed in custody in the fortress of Xeruq (on the Aegean Sea) and was set free and brought to the Crimea.

In the year 1266 war was renewed by Berke against Persia, where Hūllugī's successor Abaqa now ruled, but he led to nothing. The two armies lay for a considerable time inactive on the banks of the Kura opposite one another; Berke, who was on this occasion at the head of his army (at least so the Persian authorities tell us), wished to ascend the Kura to Tiflis and thence across the river, but died on his way thither whereupon his army returned home. In the Egyptian sources the date of Berke's death is given as 665 (2nd October 1266–21st September 1267). In Šāhā.
BERKE — BETEGUEZE.

here, which were more than once burned down. The place is now surrounded by the picturesque castles of Delphi, Corinth, and the Acropolis (also burned down) and by the Yildiz palace. Among the buildings of historical interest dating from the Turkish period may be mentioned the tomb of Khalil al-Din Barbarossa, the great Turkish corsair (died 953 = 1540). The place now forms the viii th century of Constantinople. (F. Giese.)

BESHLIK, a Turkish coin, which was introduced with the currency reforms of Sultan Soliman I (1500—1596). It was known on the ghurāb, the gros (14 carats) of European countries; the foreign ghurāb had previously been current in Turkey but it was not till now that they were actually struck by the government. The smaller coins were called paras. Five paras were a beslik. How many paras originally made a ghurāb, we do not know; Lane Poole supposes twenty. With the gradual debasement of the coin the relationship was continually changing. As a rule a ghurāb was to be equal to 40 paras. The oldest beslik, that we have, are of the reign of Ahmad III (1115—1143 = 1405—1450). The beslik, also called brack from its brack = 1/2 was retained in the new currency instituted in Muhammad 1260 = February 1844 during the reign of 'Abd al-Mecid, a quarter of the Medjedieh or 5 paras, which are no longer called ghurāb. It is about the equivalent of the franc at the present day.

BESHPARMAK (= five fingers) denotes the cinquefoil. In combination with Dagh it frequently appears as the name of a mountain. The best known Beshparmak Dagh is the mountain range in the ancient Caria on the left bank of the Maeander, the ancient Latmos. Its highest prominence of five steep peaks is 5000 feet high, has given its name to the whole range. (F. Giese.)

BESIKBAY, called Besikta Koyu by the Turks is a bay on the western coast of Asia Minor opposite Tenedos. Although it is now open, it affords a good anchorage sheltered from the north and north east winds, which gives secure protection in summer when the winds and wave are not high. In 1853 the English and French fleets assembled here before proceeding to the Crimea. The ships of foreign powers have also cast anchor here when they wished to bring pressure to bear on the Porte. (F. Giese.)

BESSARABIA. [See BucA].

BEST, (1) hand, place of refuge; hence hestir, one who claims the right of asylum.

BETEGUEZU, This is the name given by the medieval astronomers of the first magnitude: Orion. The name was derived from the careless writing of an / and the letter O is therefore Binetegueze. This star has three names among Arab astronomers. The first is Manthib al-Libnain (=Shoulder of Orion), the second
BETEÆGUEZ - BHRUČ.

Vad al-Djamič (meaning Hand of Orion) and the third Dhib‘a al-Djamič (meaning Fowls of Orion). The general opinion is that Betelgeuz is a corruption of Vad al-Djamič, a word that might easily be read for a 1 in Arabic though less readily for a ı for a; this explanation is due to Th. Hyde. L. Ideler considers it more probable that Betelgeuz comes from Dib al-Djamič (shoulder of Orion). As a matter of fact in the vulgar dialect of Egypt for ı there is a form ı, which perhaps also occurred in the Maghrīb, and was there pronounced ıı: with regard to this altering hypothesis, it must be pointed out however that ıı in place of ıı has not yet been found in any Arab astronomical works. A third attempt to explain the derivation suggests that bet comes from hēd. The heaves were of course divided by the astrologers into twelve sections which were called Swat (Queens). These houses however were not the first twelve numerals but it is just possible that some astrologer called the house which in the star ζ Orion is Bait al-Djamič, and the name may have afterwards been applied to this star itself, the brightest in Orion and the Twins. Why Orion and the Twins were usually included by the Arabs under the common name of al-Djamič (properly meaning a black sheep, with a white patch on it) while the more important astronomers elsewhere give them the separate names of al-Djamič (the Giant) and al-Turiam (the Twins), is a question which is not to be discussed here but the reader may be referred to Ideler's work [see below].

BETEL, the leaves of the Piper Betel are wrapped round the fruit of the Areca Catechu, also called betel nut and chewed. In Persian and Arabic the Indian name rumb or tumah is used.

BEZOAR — Arab. fudjama, from the Persian Fudzjama, i.e. removing poison — a highly esteemed remedy against all kinds of poison for which high prices were paid throughout the middle ages down to the 17th century and to the present day in the East. The real (Oriental) bezoar is obtained from the Persian bison-goat (Capra aegagrus GM.) and according to Wolff's researches is a gallstone. A description of its properties and supposed effects is to be found as early as in the Kitâb al-Djamič, which is ascribed to Aristotle. The effect of poisons is to make the blood coagulate; the bezoar stops this process and drives the poisons out of the body in strong perspiration, the fullest and most adequate account of the origin of this stone is to be found in Tifaf. According to him the bezoar is a light, soft, yellow, rather speckled stone which is composed of concentric layers; it may be pounded into a white powder which is readily dissolved in water. The largest pieces, weighing as much as 150 pounds come from Persia and the hands on the borders of China. The animal, from which it is obtained is a goat indigenous to those regions which lives chiefly on poisonous snakes. The stone is said to form when the animal has eaten too much snake's flesh; to find a cooling remedy for the heat of its internal sores, the animal plunges itself up to the head in water, a fine vapour rises to its head and in consequence of the corners of its eyes, where it accumulates and remains hanging on the hairs; from a repetition of this process the concentric layers are formed. According to others the stone is formed in the heart; Tifaf himself considers the formation in the gall-bladder the correct one; for the genuine bezoar is a disagreeable bitter taste.

BEZIŻŠAN, usually written BEREŞEIN (from the Arabic bera, silk, linen and more particularly cotton) the central part of a baraz, a stone building which can be closed by iron doors, where the more valuable wares are sold. In Kōishā it is used to mean a large woven cloth "place of the clothiers" (Huart, Epigraphic, no. 38); in Constantinople the corrupt form kebezšan was used. The latter was built by Sultan Mahomed II. The corresponding Arabic word is biseriya (or kiseria).

BHARATPUR, a native state of India, in Râjâpūtra: area 1,663 sq. m.; pop. (1901) 626,665, of whom 139,278 are Muhammadans. The ruling chief is a Hindu of the Dūt caste, descended from a family that actively contributed to the downfall of the Mogul empire in the 18th century. Under their famous leader, Suraj Mal, the Jews sacked Dūth in 1753, and permanently occupied Agra from 1761 to 1774, when they murdered the Tāj and are said to have desecrated the tomb of Akbar.

BHAKČ, or BHĀRAČ, a town and district of India, in Gujarāt, Bombay Presidency. Area of district: 1,657 sq. m.; pop. (1901) 291,755, of whom 229,437 are Muhammadans, mostly Rohān. The town, on the right bank of the Narbod, about 30 m. from the sea, was from early days the chief port of Gujarat, being known to the Greeks as Barus; pop. (1901) 45,792. It contains a Djasī Meadows, almost entirely composed of cypress pillars from Hindu temples; and the ruined tomb of a saint called Bawān Rāhān, said to date from the 11th cent. In 1736, the governor was raised to the rank of Nawāb by Nīsān al-Mulk, the founder of the Haiderābād state, and his descen-
dants still receive a small pension from the British government.

[NEW SPACES IN THE TEXT] BHOPAL, a feudatory Native State in Central India, lying between 22° 49' and 23° 54' N. lat. and 76° 28' and 78° 51' E. long. — next to Hindustân the most important Muhammadan State in India. Population (1901) 665,961, of whom 35,968 are Musalmans.

History. This state was founded by Dâd Muhammad Khan, an Afghan soldier of fortune, who, at an early age had entered the service of the Emperor Aurangzeb. He took advantage of the anarchy that prevailed after the death of Aurangzeb in 1707, to set himself up as an independent ruler with the title of Nawâwar, over the territory he had acquired, partly as a reward for services rendered, and partly by stratagem. He died about 1740, at the age of sixty-six. His two sons and three grandsons who succeeded him, were either children or incompetent rulers, and the conduct of affairs was left in the hands of their Hindu ministers, men distinguished alike for honesty and ability. In 1728, in the reign of Hâyat Muhammad Khan (the third grandson of Dâd Muhammad), the state of Bhopal first entered into relations with the British, and the foundation of a friendship that has remained unbroken ever since. Towards the close of the 18th cent. the territories of Bhopal were overrun by hordes of Pindârîs (the marauding bands who spread devastation throughout Central India during this period) and was invaded by the Marâthas, who were called in to expel the Pindârîs. In this crisis, Bhopal was saved from destruction by a young cousin of the Nawâwar, Wâsr Muhammad Khan, who assumed the sole direction of affairs and succeeded in reconquering most of the territories that had been lost to his country. But his endeavours on behalf of the state were constantly thwarted by the jealousy of the heir apparent, Gâwâli Muhammad Khân, who called in, first the Pindârîs, and afterwards the Marâthas, in order to compel Wâsr Muhammad to retire from Bhopal. Despite the want of confidence shown in him, Wâsr Muhammad seems to have scrupulously avoided any act of open hostility to the recognised ruler of his country, but when Gâwâli Muhammad had reduced himself to the condition of a mere puppet in the hands of the Marâthas, he took advantage of a favourable opportunity to return to Bhopal and driver the Marâthas out of the city (1807). (Nawâwar Hâyat Muhammad, who had long withdrawn from all active participation in public life, died in the same year). From this time Wâsr Muhammad was the real ruler of the state, though Gâwâli Muhammad still enjoyed the titular dignity of Nawâwar. In 1812 a combination was made between the Marâthas chiefs of Gwalior and Nâgpur to crush him, and Bhopal was besieged by their united armies towards the close of the following year. Wâsr Muhammad made a gallant defence during a few months and the Marâthas were obliged to retire un成功. They made active efforts to renew the siege in the following year, and would probably have effected the destruction of Bhopal as an independent principality but for the intervention of the British Government. Wâsr Muhammad died in 1816, at the age of fifty-one, after having ruled Bhopal for nine years. He was succeeded by his son Nasâr Muhammad Khân, who had married Kindsâli Begum, the daughter of Gâwâli Muhammad, who though still called Nawâwar had sunk into obscurity and made no objection to the elevation of his son-in-law. The first efforts of Nasâr Muhammad were directed to forming a treaty of alliance with the British Government, whereby Bhopal was guaranteed to him and his descendants, on condition of his assisting the British with a contingent of troops and cooperating in suppressing the Pindârîs frequenters. He died after a reign of 3½ years, during which the state had entered upon a new era of prosperity and the revenues had increased tenfold. As he left one child, an infant daughter, Sikandar Beg, it was arranged that the regency should be in the hands of his widow, Kindsâli Begum. The regent, desiring to retain the power in her own hands, delayed the marriage of her daughter until 1853, but as she was then unwilling to resign, a civil war broke out in the course of which her son-in-law, Djalângir Muhammad, a nephew of Nasâr Muhammad, was defeated and besieged in a fort by the troops of his wife and mother-in-law. Through the mediation of the British Government, the administration of the state was in 1857 entrusted to Djalângir Muhammad, and Kindsâli Begum retired on a pension. On his death in 1844 he was succeeded by his widow, Sikandar Begum, who ruled Bhopal until her death. In 1858. This remarkable woman displayed in all departments of the state an energy, an astuteness, and an administrative ability such as would have done credit to a trained statesman. In six years she paid off the entire public debt, abolished the system of farming the revenue, and made her own arrangements directly with the heads of villages; she put a stop to monopolies of trade and handicrafts; she re-organized the police, and made many other improvements. Throwing aside the restrictions of the pardah, she appeared in public unveiled and in masculine attire. During the Sepoy Mutiny of 1857, she distinguished herself by her undying fidelity to the British Government; when her vohdes were urging her to proclaim a Burgi, the contingent raised in Bhopal and commanded by British officers had mutinied and was clamouring to be led to join the rebels in Dilli, she never fated; she caused the British officers to be conducted in safety into British territory, alloyed the excitement in her capital, put down the mutinous contingent with a strong stand, and finally restored order in every part of the Bhopal territory; further, she liberally assisted the British troops in every way that lay in her power. In return for these services, the Begum received various honours
from the British Government, besides a substantial enhancement of the territories of her state. In 1863-1864, she performed the pilgrimage to Mecca, leaving her daughter under the protection of the British Government; on her return she published an account of her travels. (For an account of Simnad Begum and her court, see L. Rousselet, L'Inde des Baouachs (Paris, 1877); E. C. Petrie, The Egyptians and the Pharaohs (London, 1881). She was succeeded by her daughter Shah Džahan, who like her mother was a woman of great administrative ability. After the death of her first husband in 1867 she threw aside the restrictions of the parrad and made herself accessible to all, but refused again on her second marriage in 1871 with a mawlawī named Saiyid Mahammad Sadyq Husein Khan [5 y.] who received the honorary title of Nawab; he died in 1890. Shah Džahan died in 1901 and was succeeded by her daughter and only child, Sultan Džahan Begum, the present ruler, who personally directs the administration of her State, assisted by her eldest son Nawab Mahammad Naz-ullah Khan, (born 1876).

**Bíbhí al-Muluk, a village in Egypt.** Bíbhí al-Muluk L. e. "Gates of the Kings" is the modern Arabic name for the graves of the kings of Ancient Egypt of the xvii-xix dynasties on the west bank of the Nile near Luxor.

**Bibliography:** Budeker: Egypt, 6th ed. (C. H. Breckon.),

**Bibi, a word of Eastern Turki origin meaning "lady" in Persian is found quite early in a verse by Etwari (11th century) quoted in the Farkhānī Nāqījī. The mausoleum of his daughter Vidyālī, the last Shāhī Man, the wife of Huāni, son of Ali, is known by the name of Bibi Shāhībānī and lies near Teherān on the ruined site of Ray. Bibi Maryam is the Virgin Mary. The queen in cards is also called Bibi.

**BID'A is the exact opposite of sunna, and means some view, thing or mode of action the like of which has not formerly existed or been practised, an innovation or novelty.** The word became important theologically in the 2nd century against the precise following of the Sunna of the Prophet, and came thus to indicate all the latest and new ideas and usages which grew up naturally in the Muslim church, covering dogmatic innovations not in accordance with the traditional sources (qur'ān) of the Faith, and ways of life different from those of the Prophet. The word, therefore, came to suggest
individual dissent and independence, going to the point of heresy although not of actual unbelief (shaf). In modern Arabic it can mean "poradon" (be offering and beggar). 

In this development two broad parties showed themselves. One, conservative but gradually vanishing, in the past mostly Hamalite and now practically Wabbi in both the sects, taught that the duty of the believer was "following" (itr) — the Sunna understood — and "innovating" (bidd). The other accepted the facts of change of environment and condition, and taught, in varying degree of necessity, that there were good and even necessary innovations. According to this view, anything that is new and contradicts the Koran, Sunna, Agreement or Traditions (ahijar) is a bid'a which leads astray. But a good novelty which does not so contradict is a necessary and justifyable bid'a. A more elaborated classification divides innovations under the rules (shah) of canon law. Innovations of which are also duties incumbent on the Muslim community (fad kariya) are study of Arabic philology, in order to understand the text of the Koran etc., accepting and rejecting legal witnesses (shah), distinguishing sound from corrupt traditions; codifying canon law (shah); confuting heretics. Forbidden are all heretical systems (shah) opposed to orthodox Islam. Recommended (ma'dhab) is such as the founding of religious houses for devotees (jau), and schools. Disliked (ma'dhab) is such as expenditure in eating, drinking etc. Finally, the distinction between bid'a's, heresy, and shah, unbelief, is said to lie in the origin of bid'a being only a confusion (shah) as to a sound proof, while that of shah is obsolete opposition (muta'ana).

BIDAR, an ancient Hindu city, situated in 17° 55' N. and 77° 32' E., first occupied by the Muhammadans in 1522; it became the capital of the Bahman kings in 1449 and of the Barid Shaiti dynasty [v. c.], that followed them. It contains many monuments of the grandeur of these dynasties; among them are the massive tombs of the King of the Bahman dynasty; the tombs of the Barid Shaiti kings are of a more graceful type, the most beautiful being that of Ali Barid Shait, adorned with fine coloured tiles. The Barid Shaiti kings are said to have deliberately destroyed the palace of their predecessors, the Bahmanis, which is now entirely in ruins; but fine remains of their own palaces remain, among which may be mentioned the Rang Malal, with its beautiful mechanic work of mother-of-pearl of the great mosque, built in 1478-1479 by Buheit Gawan [v. c.], that only survives, richly decorated with mosaiced tiles.

BIDIL (v. "a moment, dishonoured") the name of several Persian poets.

1. MIR-AMIR AL-KHUDI BIDIL, a Persian poet of India, born 1054 (1644) at Akhtarabad, died 4th Shahrabad 1153 (5th Dec. 1270) at Dilli, wrote amongst other works a poetical handbook of mysteries called Sifat al-Aghab (knowledge), an allegorical Madhawi fi'riya, khatir (Talistan of Amusement) and in a private collection of letters (mostly to his patron Shams Allah and his two sons) entitled rhatb az insah. His collected works (Kutub-ur-Rahim) were lithographed at Lucknow in 1287.

2. HAJJI MIR-XAH MARSHED, a poet of Shirah, a descendant of a family of scholars, which had given the Safawids a number of physicians. His father Mirza Muhammad Talib had gone from Agra to settle in Shirah at the request of the Wazir Karim Khan Zand (died 1729), he himself was physician to Feroz Ali Shiah and died at Karan while returning from a pilgrimage to Mecca, in the beginning of the reign of Muhammad Shiah (about 1725).

3. MUHAMMAD AMIN BAGH BIDIL, a poet of Nishapur.

BIDJAN, AHIAM, the son of a certain Zabih al-Din al-Khath, wherefor he is sometimes like his brother Muhammad, called Yaqub Ogilh, the son of the elder, a Turkish author, who lived in the first half of the 16th century. He was a leading member of the famous Hatjiri Bhiraim, the founder of the Russian order of the Babiruniya [see above, p. 595] and led an ascetic life whereby he is said to have become so disaffected that he was everywhere despised, whether in the epistle Bidjan, This literary activity was therefore mainly devoted to: Sirh. He translated into Turkish the Maghrib al-Zamani, composed by his brother in Arabic, and gave the translation the title Amur al-Amkhi (Constantinople, 1251, 1291, 1861, 1350 etc.). Another Russian treatise, a kind of history of the products bears the title Korab (Oriental). He also published himself with cosmography, especially of the sense of a description of the wonders of creation, the pattern of the Arab author al-Karsini. His Aljihat al-Mamhdiel is an extract from the latter's work, (cf., Koen, Cat. Turk. Mus. of the Brit. Mus., 196 et seq.); a similar work entitled Dur al-Muzan is more recent. The first mentioned work was written in the year of the conquest of Constantinople 851 (1453) so that the author must have been still alive at that date, cf. the article Yaqubi Ogilh.

BIDJANAGAR [see BIDJANAGAR.

BIDJAPUR, or VIDAPURA, (= city of victory), a town and district of India, in the Bombay presidency. Area of district: 5,689 sq. m.; pop. (1901): 725, 345, of whom only 16%, are Muhammadans. It consists for the most part of a barren upland tract, very liable to drought. The language of the great majority is Kannarese, and many belong to the Lingayat sect. The town has been the head quarters of the district (formerly called Kalladgi) since 1885; pop. (1901): 45, 811. It was the capital of the Adil
Shah dynasty (q. v.), which established its independence on the Bahr/mam in 1490, and was finally conquered by Awa-rangi in 1626. Magnificent palaces, mosques, tombs, and other buildings remain in a fair state of preservation, together with the city walls enclosing an immense area. Conspicuous among them are the Rawza of Tur-keim Asul Shah (ob. 1626); the Gil Guhar of Muhammad Asul Shah (ob. 1656), said to be the second largest dome in the world; and the Djanli Mausoleum of Asul Asul Shah (ob. 1675). All of these have recently been the subject of careful restoration for the benefit of British government.

(B. S. Cotton.)

BIDJAPUR. [See above.]

BIDJWAK or Bidjan, a town and district of India, in Rohilkhand, United Provinces. Area of district: 1,791 sq. m.; pop. (1901): 77,951, of whom as many as 35% are Muslims. The town—pop. (1901): 17,583—is of little importance, though it is prominent in Rohilkhand history. It contains the town of Nagdhobad, founded about 1750 by Nadir-ud-Dawla, who was to be Wazir of Delhi, and whose son was Zuleik Khan. In the Mughal of 1557, a grandson of Zaha Khan, with the title of Nisr d'al of Nagdhobad, was one of the most formidable opponents of the British. He finally died in prison, his property was confiscated, and his palace razed to the ground.

Bibliography: Bijan Guester (Allahabad, 1895).

BIDILIS or Biddis, a town in Turkish Armenia, capital of the district of Kurdistan, situated in 41° 4' East Long., (Greenwich) and 38° 23' North Lat., 14 miles from the western shore of the Sea of Van, and 35 miles north-east of Sifird (Sceor) according to Kemptz (Hilli, geo. arch., vi. 229), it has four post-stations (zobeh) from Ambyl (q. v., p. 353 of text). Bidilis (or Biddis) is the Turkish pronunciation of the name; Arabic Baddil and Armenian Bakes.

The appearance of the town is described as very striking and most picturesque. It is built at the bottom of a deep valley and in two narrow ravines which run into it. The Baddil-Baj leans from north to south through the town. This stream, which takes its name from Baddil rises about 10 miles to the north and flows into the Bakart-pud, the so-called: Eastern Tigris, near Benda, about 10 miles southwest of Sifird. In the centre of the town the Baddil-Baj receives a tributary from the west; another from the north east joins it at the south end of Biddis. The town is divided by this system of rivers or ravines into four separate quarters, the inhabitants of which often took separate sides during hostilities and blockaded one another. The houses, usually surrounded by beautiful gardens rise up the steep cliffs all around; many are adorned with steep and twisting little streets, which however are always paved, contrary to the usual custom of the eastern countries. There are another, numerous bridges span the river. The remarkably solid style of architecture of most of the dwelling-houses makes a very pleasant impression on the visitor. Excellent building material is here supplied by the red-brown volcanic rocks of the district.

The whole town is commanded by a strong citadel, now partly in ruins, perched on the top of a steep cliff. The date of its walls bear a series of Arabic inscriptions. It may be assumed that the fortification of this dominant height was contemporaneous to the foundation of the town. Oriental legend attributes the latter to Alexander the Great. The citadel of Biddis played an important role from the military point of view throughout the vicissitudes of Armenian history. Since about the end of the middle ages Karabagh Chiefs (Beys) had resisted new lords, who otherwise exercised unlimited power, quite independent of the Porte; only on one occasion had Biddis to submit to its nominal suzerain, viz. in 1808 when Sultan Murad IV. set out for the reconquest of Baghdad with a vast host. It was not till 1847 that after severe fighting the Turk succeeded in breaking the power of the Kurdish princes ruling in Biddis and Van and ruling the town and district directly. The ancient Kurdish castle is now used as the residence of the principal Turkish officials.

The climate of Biddis is on account of the high altitude (5180 f.e.; 16530 feet) raw and damp. As everywhere on the Armenian plateau, a long winter is followed by a short relatively hot summer; snow often lies on the roads from November to May, conditions are very favourable for the cultivation of fruits however; vegetables and excellent fruit flourish in abundance.

The industries of Biddis are on the whole not unimportant. The many channels of water drive numerous mills. The textile industry may be particularly mentioned. The tastefully decorated carpets woven in the Biddis district are famous throughout Turkey. Colouring with madder is a specialty here. The principal exports are: red dyed stuffs (cotton and linen), carpets, goats and buffalo hides, and large blocks of soap; of special importance is the exportation of gallipolls collected in the mountains of Kurdistan and of white and red gums (tragacanth) which find their way to Europe.

Biddis is a most important town commercially and indeed must be regarded as one of the chief stores in Armenia; for it is one of the chief places through which passes the road between Armenia and Georgia on the one side and the burials of the Euphrates and Tigris and Syria on the other. According to Layard, there are three routes from Biddis to the Djanan, two over the mountains to Sifird, which are usually traversed by caravans but are steep and difficult; a third (which was taken by Layard) makes a descent through the valleys of the eastern arm of the Tigris. Of the two roads nearer to Layard connecting Biddis and Sifird, the first Arab town in Mesopotamia proper, one, of which nothing further is known, must be a mere footpath. We know more about the road which is more frequented from Biddis via Djanan to Sifird (2 days' journey), the Biddis pass proper, which has several times been traversed and described by European travellers. This narrow pass is already mentioned in the Byzantine (George Cypri, q. v., p. 124) and Arab sources (Baldrih, p. cit.; de la Lude, p. 125) and more often in Armenian literature, e.g. Gezer, Greg. Cypri., (Lippels, 1890), p. 168; H. Huschmann, p. cit., p. 317, 318.

The main route from Biddis into the interior
of Armenia turns immediately in a northwesterly direction towards Muş and before crossing the Midik (Midyk), 7000 feet high, sends off a side road which winds north-north-west towards the Sea of Vaz (to Tadvaan). All these passes are often quite snowy up during the long severe winters and then are exceedingly difficult to traverse.

Before the last Russo-Turkish war the district of Bitlis was under the Governor-General of Erzerum; it was then raised to the rank of a separate district (wilayet) by the Porte, chiefly in order to put a check on the individualistic tendencies and anarchism of its citizens. The modern Wilayet of Bitlis comprises the old Bitlis, (Muş, Muş district, and Bğit) with 15 counties and 13,500 sq. miles in area. The population numbers 275,000 Musulmans, 140,000 Christians, 3,900 Jews, etc., in all 3897,000 souls. The Sandjak of Bitlis (with 4 counties) comprises 3800 sq. miles with 106,257 inhabitants including 70,000 Musulmans, 32,000 Armenians, 95,000 Tatars and 3740 Syrian Jacobites. As to the total of Bitlis itself the older estimate of Kimmich (1814) gives 12,000 inhabitants, while Southgate (1837) and Brunt (1838) give 3000 families, which would give about 13,000-15,000 inhabitants. Müller-Simonsen and Hyvernat estimated the population in (1838) at 30,000 inhabitants in 6000 houses, of which 5000 were Kurds and 1000 Armenians; Nolde (in 1892) 35,000 inhabitants. The last, more accurate estimate by Calinet, et al., whose statistics on the Wilayet of Bitlis have also been used by Supan in Petermann's Mittheilungen, Erg.-Heft 135 (1901), 5, 14-15, 21 gives the present population as 20,000 Musulmans (almost all Kurds) 16,086 Gregorian Armenians, 200 Protestant Armenians, 1800 Jacobites, a total of 38,586 souls in 5000 houses; there are 15 mosques and 4 Takiya (Dervish monasteries). The Gregorian Armenians, who live exclusively in the south quarter are governed by a bishop and have 4 churches; there is another church for the Jacobites.

Bitlis is still the typical Kurdish metropolis, and was their political centre during the last great revolts of the Kurds in the xixth century. It is no wonder therefore that it has repeatedly been the scene of awful massacres of Christians, during the Armenian troubles of the last two decades of the xixth century.

BIDILISI, MAMLEK, DOIHA HAMID, a Turkish general and historian, son of the mystic Husain al-Din, who belonged to the school of Shijikh 'Omar Yassir, was, first of all, an official in the chancellery of 'Aynish, son of 'Umar Hasset, Sultan of the Turcomans of the White Sheep (died 986 = 1480-1481). His reply to the Ottoman Sultan Bayazid II on the latter's message announcing his victory, included the Sultan to invite Bidelisi to his court where he remained in service of Selim I. He accompanied the latter on his campaign against Persia and took possession of Kurdistan for Selim. At the head of a Kurdish army he defeated the Persians, conquered Mardin, played an active part in the annexation of al-Rahat (Edessa) and Mawraj and consolidated the internal affairs of the land.

In the name of the Sultan he granted Hijaz to the Ajyibil Khudat. He also took part in the conquest of Egypt and celebrated Selim in a panegyric, in which he took the opportunity to give him some advice on the government of Egypt. He died in 1526 and left his life in Persia verse (80,000 half) of the first eight Ottoman Sultans, called the Hatt-ehbekt "the eight Paradise".

BIDLIŞI, ŠARAF KHAN, a Persian historian, eldest son of the Emir Shams al-Din, prince of Bitlis, born 26th Dhu 'l-Qa'da 949 (26th February 1543) at Kermanshah near Kamar, was brought up with the family of Shih Jihamap I (1538 = 1531). At the age of 12 he was appointed an Emir of the Kurds, an office which he held for three years. He carried out with zeal the task of subduing the province of Gilan, with which he was entrusted. He was afterwards summoned to the court of Shah Ismãl II (1576-1577) and was governor of Nakhegewin when Shih Jihamap III placed him on the throne of his ancestors in Bitlis. In 1505 (1506-1507) he abdicated in favour of his son Shams al-Din in order to complete his Persian history of the Kurds, entitled the Sharafgâmeh; it was translated into Turkish by Muhammad Bey b. Aynal Bey Mirzâ in 1678 (1667-1668) and by Shams shortly after 1695 (1694). There is an autograph Ms. in the Bodleian (Fillet 334); the text has been edited by Veilminot-Zornot (St. Petersburg, 1860-1862); and a French translation by Charmoy (1868-1897).

BIDPAI, BILPAI or BIPA is the form usual.
in the west, of the name of the author of the Kautilya wa-khaṭam; this form may be traced to the Arabic Bidda or Bidāh. The Syriac version of the Kautilya (composed from the Pañjali) has the name Bidda as Bidā. This form is said by Benfey to be derived from the Sanskrit vidyāpati which means "load of knowledge".

All that we know of this (legendary) personage is given in the preface by Bahādūr b. Sabān, alias 'Alī b. al-Shihh al-Fārisī, to the Arabic version of the Kautilya wa-khaṭam. This can only be briefly given here. It may be referred for other points to the article KAUTILYA WAA-DHANA.

After the prince who had been set over India by Alexander the Great had been driven out, king Dabghantar, a scion of the native ruling house was placed on the throne by the people. He soon began to conduct himself in an arbitrary fashion and to neglect the interests of his subjects. This grieved a wise Brahman, Bidāh by name, who after a fruitless consultation with his pupils reproached the king at an audience with his misgovernment. The latter threw him into prison, where he lay for a time forgotten by everyone. One evening the king was absorbed in the study of the starry heavens and was reminded of Bidāh, whom he ordered to be brought to him. He pardoned him his bold speech, appointed him visier, and showed him much respect. The king henceforth devoted himself entirely to the arts of peace and expressed a wish to have his name, like those of his ancestors, go down to posterity associated with some great book, which would give deep wisdom in a popular form. Bidāh then retired from the world with a supply of writing-materials and food, and attended by one pupil, to whom he dictated the Kautilya wa-Dhana.

When the work was completed, the king invited all the people of his kingdom to hear it read, which was done by Bidāh in the presence of the king.

**BIDRI WARE**, inlay metal work, so called from Bidar [q.v.], where it is said to have been first manufactured; it is made of a composite alloy of copper and zinc (the proportions of which vary in different localities), to which tin, lead or steel powder is sometimes added; the surface is inlaid in silver or gold, and finally polished and coloured to a dark green or black colour by means of a composition of sal ammoniac, saltpetre and other ingredients; the patterns are generally of a floral description, one of the oldest and most prevalent being the poppy pattern. The chief centres of manufacture are Bidar, Parpennah, Lucknow, Dacca and Murshidabad; in the last three towns the trade is almost entirely in the hands of Muhammadanas.

London, 1817); George Smith, Description of the manufacture of Bidery ware (Modern Journal of Literature and Art, xvii. 81—84. 1857); Sir George Birdwood, Indian Art of India; T. N. Mukharji, Bidri-Ware (Journal of Indian Art (No. 6, 1885); Sir George Watt, Indian Art at Delhi, 1804, pp. 46—49. (London, 1904).

**BIGHA.** A measure of land, equal to 100 square yards. This is the standard bigha as fixed by the Emperor Akbar, but at different times and in different parts of India it has varied considerably.

**BIGHA (Greek, Bigna).** A town in Asia Minor in the province of the Granicus (Turkish Cansu or Cuncu, a tributary of the Koecha (a) about 14 miles distant from the Sea of Marmora, capital of a Kaş with about 5000 inhabitants (Ciusant, see below, iii. 763, gives 10,000). The whole north-western province of Asia Minor (Mysia-Visilia) is also called after Bigha although it is not the capital, which is Kaş in the 7th century. The Kaş of the Bighi is a town in the southwestern province of Asia Minor. It is near the coast.

**BIHAFRID (Arabic, Baharwad).** A Parsi revellat, who appeared at Khwāf in the district of Nāghpur in the last years of the Ommayad Caliphate and was slain with many of his supporters by Abu Muslim at the time of the trip of the Abbasid Caliph. The magazine is said to have spent seven years in China early in his career and to have suddenly appeared to the people on his return pretending he had been dead and in heaven during this period. According to one writer he actually simulated death and spent a year in a tomb, which he had built for himself. His teaching, which he claimed to have learned in heaven, was contained in a Persian work. In it he abolished certain ceremonial and customs of the others (zamzama), the worship of fire, the marriage of near relatives, the drinking of wine and the eating of animals that had died etc., while he substituted in their place new rites, for example, the repetition of certain prescribed prayers seven times daily and turning towards the sun while repeating them.

**BIHAR,** or Bénārś, a town and historical tract of India, in the province of Bengal. The town — pop. (1901) 45,563 — derives its name from viharā = a Buddhist monastery, and is surrounded by Buddhist remains. It is believed to have been the provincial capital under the Muhammadanas from early in the 13th cent. until the time of Akbar, when the seat of government was removed to Purnia. The province was never an independent kingdom, being on the borderland between Bengal proper and Hindustan. Under the Mughals it formed a sūrah, divided into eight sāris, which was always subordinate to the sūrah of Bengal, and as such it passed to the British in 1765, with the grant of the sāri of Bengal, Bihar, and Orissa. Bihar, however, differs from Bengal proper in almost every respect — in climate and
agriculture, in population and language. Only 18% of the inhabitants are Muḥammadan, compared with 54% in Bengal. Their language, known as Bihārī, is directly derived from the ancient Māγātha Paṭeṣṭa, and may be described as intermediate between Eastern Hindi and Bengali. It comprises three dialects, Māthi, Māgu, and Bihārī. In 1901, it was found to be spoken by 34½ million, showing that the language has spread beyond the administrative province, which contained only 24,241,353 persons.

(J. S. Cotton.)

AL-BIHĀRĪ (Muḥammad Allāh b. ʿAbd al-Ṣāliḥ al-Kāf al-Bihārī), born in a village in Bihār, India, one of the most eminent Ulāma of his time. Amālghār appointed him Kādī of Lucknow, and afterwards of Hauteaftād, Dakhīna. For a time he fell under the displeasure of the Emperor, but was restored to favour and appointed tutor to Amālghār's grandson, Rašīd al-Kāfī, son of Mūḥammad Mawṣūma. On the death of the Emperor Amālghār, Mūḥammad Mawṣūma succeeded him under the title of ʿAlām al-Qubāʿī and bestowed upon him the title of Kāfī Khānīn and made him Kādī al-Kāfī (chief justice) of the entire Meghul Empire; but he did not live long to enjoy this post, as he died a few months after in A.H. 1119 (A.D. 1707). He is the author of the following works: 1. Al-Qayhār al-Fard, a treatise on the indivisible atom, (Loth., 3d. Ed. Of No. 581, int.); 2. Mawṣūm al-Tūḥī, on the principles of Māqālīd jurisprudence, according to the Hanflī school, (printed Allgair, 1909); Dībālī, 1311; 3. Sulḥan al-Ghulām, on logic; as this has long been a favourite textbook in India, it has frequently been printed, and numerous commentaries and supplementary commentaries have been written upon it.

(M. Ḥiḍāyat Ḥiṣain.)

BIHĪSHṬ. [See R. R. U. B.]

BI ṢUBKĀ, the medieval name of three districts (Pūr steppe = Arabic ʾARB) of Sa-wād or ʿIrāq (Babylonia). The division of this area in Sasanian times, adopted by the Arabs, was as follows: 1. Upper Biḥṣubkā with six divisions (ṬANGLI), including Bābīl, Ḥirbatnaya, Ummān, and Lower-ṣabūr and ʿAlīn al-Tamr; 2. Central-Biḥṣubkā with four divisions including Susa and Nahr al-Malik; 3. Lower Biḥṣubkā with five divisions, among them Furtī Biḥṣubkā and Nistār. All three districts are occasionally comprised under the plural form Biḥṣubkāh. In general the term is applied to the lands along the banks of the Euphrates in its course south-west of Bagdād as far as the district of Kūf. The name Biḥṣubkāh means: "Good (or better), modern Persian ḏāl = middle Persian ḏāl) ʿARB = Bihisht"; analogous appellations may be quoted elsewhere; cf. Marquet, op. cit., p. 41. The Kūfādī referred to is the first Sasanian king of that name (reigned 488 or 496–531); a number of other district and town-names may be traced to him; cf. e.g. the articles ARAKPIRĀN, p. 5 and ARAKPIN (p. 460).

In the geography of ʿAbd-Moses-Xverein the name of the Biḥṣubkāh province appears in the form Kūfādī; cf. Marquet, op. cit., p. 142.

BIHRŪZ, Mūḥammad al-Dīn, was prefect of Bagdād with short intervals for more than 30 years from 502 to 536 (1110–1141) and for a period of all Iraq for the Seljuqs. After being finally deposed in 536 he retired to his private property, the town of Ṭakhtī, and spent the remainder of his life there till his death in 540 (1145–1146). During his government he earned the gratitude of his contemporaries by the many useful public works which he had undertaken for the improvement of the general welfare.

**Bibliography:** Ibn al-Baydawī (ed. Tomberg), x. 330 et seq.

BIHZĀD, Kamāl al-Dīn, the most famous of Persian miniature painters, born in Herat, a pupil of Pir Sālih Ahmad of Tabriz and favourite of the Timūrid Husain-Bihzād and the Safawī Shah Jamāl. Bihzād (Memoriam, p. 412) praises his delicate talent but criticises him for making the lines of the chini too thick on barehand faces. He was still alive when Shah Jamāl completed his Khānestān al-Samā (1520–1524). Among the manuscripts illustrated by him may be mentioned a Timūr-Nāmas written by Sultan ʿAli Maghrabī, which belonged to the library of the Great Moghul Humayūn, when it was plundered and afterwards found a place in Akbar's library (perhaps the identical example, now in the Schrift collection, Orientaliskes Archiv, i. Plate vi. fig. 5). He also illustrated a Khvānstān or ʿArbaʿīān (1488) in which he was the first painter of the Kalāmābād in Persia; there are seven sketches by him in Vienna. His pupils were Shahīkkāh Khorasāni, Mir Masʿūd of Sultānābād, Agīs Mīreb of Tabrīz, who decorated the public buildings of Herat with inscriptions, and Muḥaffar ʿAli, who ornamented the Chih Suṭūn palace at Iṣfahān. His nephew Rustam ʿAli was an excellent calligrapher.

(C. Huart.)

BIKA (a.). first born, virgin.

BIKLAD (a.), plural of bītal (q.v.). "district", "province", appears in the names of countries, as Bīkal al-ʿArab, Arabia; Bīkal al-Rūm, land of the Romans, Asia Minor; Bīkal al-Dawal, lands of the Turks passing; Bīkal al-Dalārī, see below.

BĪLĀD (Land of Palms), or, as it is popularly called al-Djarīd, a district in Central Tunisia. The name is now given to a group of four oases, viz., Tūzīr, Nefīṣa, al-ʿUṣba, and al-ʿUmmān (cf. the articles TĒZĪR and NEFĪṢ). The Djarīd is a rocky stretch of land bounded on the north by the Shōt Qharās and in the south by the Shōt al-Djarīd. The latter forms with its eastern continuation the Shōt Fejīra an almost
unbroken depression from the shores of the Gulf of Guinea to the Algerian frontier. Shut in by mountains and sand hills against which measures have had to be taken to prevent the invasion of the desert by the sands of the desert, the Djardj forms a kind of natural hot-house, where the average temperature throughout the year is 70\(^\circ\)F, with, however, a maximum of 120\(^\circ\) and a minimum of 25\(^\circ\)F. The rainfall is small, — 5 inches annually — but the springs provide a plentiful supply of water. They are skillfully utilised by the inhabitants, by a system of irrigation which has been developed since the 1st century B.C., and nourish in the case of a luxuriant crop of fruit-trees, mainly date-palms, which shade the cornfields at their feet. Date-palms constitute the principal wealth of Djardj, which contains about a million of them, producing annually from 38,000—40,000 tons of dates. The inhabitants also derive a portion of their income from the manufacture of silk and cotton stuffs and carpets, which are much esteemed in Tunisia. The Djardj was besides, in the middle ages as at the present day, the starting-place and the destination of caravans. Nechfa was once known as the "port of the Saham", but this traffic, now much diminished since the suppression of slavery under the government of Ahmad Bey, has lost almost all its former importance. The population, which was scattered through the various classes, numbers 50,000, of which 10,000 are in Nechfa, 9,000 in Tiznit, 14,000 in al-Hammam, and 5,000 in al-Uldra.

The modern Djardj does not quite correspond to the region mentioned by the Arab historians and geographers under the names of Bilad al-Djardj or land of Kasqilla. Ibn Hawqal (Description de l'Afrique; Jour. Asiat. 1842, p. 248) regards the name Kasqilla as being applicable only to the town of Tiznit. Al-Bakri (Description de l'Afrique, trad. de Slane, p. 116 cit. 289) extends it to the adjoining country. "The land of Kasqilla" he writes, "contains several towns such as Tiznit, al-Hammam and Nechfa". Ibn Khaldun (Berberia, trad. de Slane, i. p. 192) regards the two names as identical and in addition includes Gafsa on the north, and Nechfa on the south, in the land. The towns with the date-palms are situated to the south of Tunis; they include Nechfa, Tiznit, Gafsa and the towns of the Nechfa country. All this area is called the land of Kasqilla and supports a large population. Leo Africanus uses the name Djardj in a much wider sense; the limits he gives, are, on the one side, Pesqar (Disqa) and on the other the Mediterranean shores near Djardj (Description de l'Afrique, ed. Schaffer, iii. Chap. vii. p. 286).

Inhabited originally by Nechfa Berbers and colonised by the Romans, the Djardj had to bear the first brunt of the Muhammadan invasion. In 647 A.D. it was ravaged by the army of Ibn Zohair, in 669 by that of Okha, who deprived the Christians of the towns they occupied in this region and forced them to adopt Islam. Their conversion to Islam was neither general nor permanent, however, for there were Christian communities in Kasqilla down to the time of the Almoravids. Incorporated for administrative purposes with Ifriqiya, the Djardj tolerated the authority of the Emir of Kairouan with a very bad grace. The Berbers of the Djardj repeatedly rose against the Almoravids, notably in 1377, 209 and 224 A.H. At the beginning of the Fihjard rising, the DjarîdGovernment had no difficulty in conquering the country of Kasqilla. The inhabitants had readily adopted the heterodox doctrines of the Almoravids in the 16th century (Ibn Hawqal, cit. supra, p. 248): they preserved, as al-Bakri particularly mentions (op. cit., p. 119) as a peculiarity of the Djardj, the habit of eating dogs' flesh, which is, it is said, still practised by the heretics of the Souk and the Mezab. At this period, the Djardj was enjoying remarkable prosperity, for according to al-Bakri, the taxes produced an annual sum of 200,000 dinars (£ 80,000).

Protected by its isolation, the Djardj succeeded in preserving a practical autonomy, while normally recognising the suzerainty of the various dynasties that succeeded one another in Ifriqiya. The towns formed little republilis, governed by councils of the more prominent men, or ruled by powerful families, such as the Beni Forqan, and later the Beni Wali at Tiznit. The Hamiddids, to whom the tribes of the Djardj paid their homage after crossing the authority of the Zirids, treated these local councils with deference. The Almoravids suppressed them. As soon, therefore, as the Almohad empire began to break up, the Djardj, which had fallen to the Hafids, tried to regain its independence. The civil wars which broke out between the rulers of Tunes and of Bougie (Bdja), gave these tribes of the cases the leeked for opportunity. Taking advantage of the weakness of Tunis, the towns of the Djardj again organised themselves into republics. Under the leadership of powerful families, the Beni Yandoul at Tiznit, Beni Khalef at Nechfa, the Beni Abi Manaf at al-Hammam, with the aid of Hiliffi tribes and in alliance with the Beni Mansur of Biskra [see the article Biskra] they fought throughout the sixteenth century against the Hafids. Conquered by Sultan Abu Bakr, who entrusted the government to his son, the Djardj rose again on the latter's death in 1346. It recognised Marinid authority, then after the destruction of Abu T-Hammam's army at Kairouan, and regained its independence. The successes gained by the Hafids Abu I'Abbas do not appear to have had any enduring results. During the sixteenth and seventeenth centuries the Djardj was practically independent and affairs have not altered much under Turkish suzerainty. The Turks had to send an expedition every winter in order to collect the taxes.

BILAL e. Rabi', the first Muslim, slave of Abyssinian origin, who belonged to a man of the tribe of Dhulayl b. 'Amr, was early attracted by Muhammad's preaching and joined his little band of followers. For this he was persecuted by the Prophet's enemies, but remained steadfast in his belief in the one God, which induced Abu Bakr to purchase him and give him his freedom. He fled with Muhammad to Medina where he immediately found welcome from Sa'd b. Khalkhama. He afterwards dwelled in the house of Abu Bakr, where he is often seen among the other members of the household. In the elevation of Ibn 'Abd, Muhammad established a bond of brotherhood between him and the Khulafa' umma Abu Kwaïfa, so that he — one of
the five non-Arabs to whom grants were assigned by 'Umar—appears in the lists of names along with Abû Rasâ'il; according to others this bond was made with 'Utasida b. al-Harith b. al-Mu'talib. When the Prophet after some hesitation intimated the call to prayer (see the article JAMA' in the Arabic Sunna) he appointed Bilal his Mu'azzin. He was also entrusted with the office of carrying the prayer-apsaras before the Prophet at public prayer on the great festivals. He accompanied Muhammad on all his campaigns and is said to have had Umaysa b. Khilaf put to death at Batna to revenge himself for his ill treatment of him in the past. After the occupation of Mecca he had the glory of calling to prayer from the roof of the Ka'ba. In several narratives he is mentioned as the man whose duty it was to look after the food supply on journeys and Abu Hakair calls him the Prophet's steward (Khalīfa).

After the death of Muhammad he was filled with a longing to take part in the holy war, which was granted him, not however as one version has it, by Abu Bakr but only in the time of 'Umar. He accompanied Abu Ubâda on the campaign into Syria and when 'Umar visited the conquered land he is said to have been once asked to call to prayer in the temple of the gods of all present. He died in A.H. 32 = 652 A.H. (according to others in 31 or 28 A.H.) about the age of 60, in Damascus and was buried there or in the adjacent Dârâ, (according to others in Aleppo). He is described as tall and thin with a stooping gait; his complexion was dark, his face thin and his thick hair strongly tinged with gray.

BILAL, the Dutch East Indies, the most important town in the Madrasah.

BILÂN-� in Lower Egypt, northeast of Cairo on the edge of the desert. The name Bilàn appears in many forms e.g. Bilhî, Bilhîs, Bilhîs and is derived from the Coptic Phelbîs. As a resting-place on the road from Syria to Cairo, Bilhîs played a certain part during the period of the conquest. Tradition connects a daughter of Mâshāk with it; in the year 109 (737), the first regular settlements of Arab tribes took place in the neighborhood of Bilhîs. It is again mentioned in 386 (996) as the place where the Fatîmid Caliph 'Abd al-Malik died. At the end of the Fâtîmid period it was a point of considerable strategic importance for King Amuruz of Jerusalem and later during the Ayyûbid wars. Though for a long period a flourishing town with mosques, bazaars, baths and a hospital and the capital of the province of Sharîkî, it must have suffered a serious reverse at the beginning of the present period, as the neighbouring town, the chief of a district (mâli'), with 8975 (or with its 20 dependencies 11,267) inhabitants. The whole district of Bilhîs, which is still part of the province of Sharîkî, has 122,736 inhabitants.

BILÂD (v. 'Zabel-bâd'); labourers who are employed from the villages for archeological excavations and work with a long shafted, triangular shovel are so called. This shovel is a much used agricultural implement, and takes the place of the plough in irrigated or damp soil and is used in connection with the planting of vegetables and melons. The inhabitants of Iznik and the Environs of Ancyre are famous for their skill in the use of this implement.

BILEJDIK, the Byzantine EKLOKOMA, a town in Asia Minor on the Anatolian railway (Hai̱darpasha-Eskisehir), capital of the Sanjak of Eretria in the Vilayet of Brusa (Khodâbendi) famous for its silk spinning and weaving. The present town has about 5000 inhabitants and several mosques which are said to have been built by the late-Ottoman Sultans Öçmân and Orhîçtâ, a Mâdrasa, Tekke and Bâb. Bilejdi was once the first town conquered by the Ottomans (1299) and the scene of the legendary story of the princess Nûfer and the wise Shâhîl Edlilâ, whose grave is shown here, is placed here.

BILGRÁM, a town in the United Provinces, India (27° 10' 30" N., lat., and 80° 30' E. long.), chiefly famous as a seat of Muslim learning from the time of Akbar to the 17th cent. The Akhî Abî (ed. Blochmann, i. 453) describes the inhabitants as being for the most part intelligent and fond of singing; there was a well in the town, the waters of which possessed such marvellous properties that any one who drank of 30 to 40 days gain in understanding and personal beauty. The Sâyids of Bilgrâm are the descendants of Sâyid Abî-l-Fâris of Wâsi', who is said to have migrated to India after Hâlîçh's conquest of Bâghdâd; this family has produced a number of poets, scholars and administrators, among whom may be mentioned Sâyid 'Abî al-Dîjâl (died 1733), Mir Ghalân 'Ali, 'Abî 'Adî' (v.); (died 1786), Ansâr Hûdar Hâsân (grandson of the above), author of Sawábi-h Kâlîr, (ed. Dâhlow-Dowson, viii, 1937), and Sayid of the order Alâîâli, Âdâli in Càntaka, and Nawwâb 'Abî al-Mulâk Sâyîdî Hazânul Bilgrami, the first Muhammadan placed on the Council of the Secretary of State for India (1907). Among the Shaikhs of Bilgrâm, (who settled there before the Sâyids), we also find several persons of distinction, such as Râsh al-Andî Kâhî, deputy-governor of Gâhût, Shâhî Addâî, (died at 'Akhâm, 1730), and his sons, Mûsâ Hûsân, Shâhî Addâîhí Êdâhí, author of Mâzâhir al-Aðlîn.

Bibliography: Ghalâm 'Ali Bilgrâmî, Maatâ'irul-'Arâî-dhîrîs, Bilgrâm (MSS. in Berlin, British Museums and India Office Libraries); Sâyîdî Muhammad b. Sâyîd 'Abî al-Dîjâl, Tâhirat al-Nâsîrîn; Ghalâm 'Husân
BILGRAM — BILITON.

BILGRAM. Shahr-i-iul Ummanat, Gunter of the Province of Oudh, I, 311 et seq. (Lucknow, 1877).

BILGIS is the name among Muhammadans for the Queen of Sheba. The story, given in I Kings, x, 9-33, 37, of how the Queen of Sheba (Saba) came to Solomon to prove him with hard questions, early gave rise to the formation of further legends.

Muhammad in the Koran xxvii, 90—49, relates how he beheld Queen of Sheba, who worshipped the sun, received a letter, borne by a hoopoe, from Solomon demanding that she should worship the true God. The Queen in terror sent presents to Solomon which were not well received. When she herself came to Solomon, the latter had her throne taken away by an 'Ifrid to see if she would recognize it again. He afterwards led her to a room paved with glass. As Solomon expected — according to the commentators he wished to see if she really had goats' feet — she took the glittering floor for water and raised her garments. Finally she became converted.

The very fragmentary story in the Koran presupposes a considerable development of the legend. In its main features the Tangim II to Esther agrees, but it has been much influenced by the Muslim tradition. The story, which certainly reached Muhammad through Jewish sources, appears even in that time to have been subjected to Iranian influence.

The name Bilgis is not found in the Koran. It has been variously explained: as the Greek Ιωάνα, which would point to the story of the marriage of Solomon and the Queen of Sheba, which was wide spread among the Jews at quite an early period, or as a corruption — quite comprehensible in the Arabic script — of Naqallis, as Josephus calls his Queen of Sheba, whom he regards as ruler of Egypt and Ethiopia. The later Muslim legend, the development of which is not yet quite clear, places Bilgis in the dynastic lists of Southern Arabia. It is possible that the Biblical queen is identified with some South Arabian princess whose name has not hitherto been found in inscriptions. Cf. A. von Kremmer, Uber die Sudanarabische Sage, p. 65 et seq., M. Hartmann, Die Arabische Frage, p. 478. The elaborate Muslim legend given by Hammer-Purgstall in Rosénol and G. Weig, Biblistische Lagen der Muslime, p. 427 et seq., would only have attained its final form under Indian and Persian influence. The story appears elsewhere in different forms. The Persian extract from Tabari (transl. by Zotenbek, I, 443 et seq.) for example, contains a 'pretty tale of the birth of Bilgis, according to which she was the daughter of a Chinese king Abil Sharh), and a Peri. Zotenbek wished to recognize the Himyarite deity Illmitah in the name of her mother Ballamah — according to the Abyssinian Ballam, Ballamata, Ballaman or Balkman (on the connection of these names see also D. Niels, Der Sehische Gott Illmitah). At-Biruni, Chronology, p. 49, only says that, like Zhu 'J-Karnain, she was the offspring of a demon, while according to Zanakhshari she belonged to the family of the Himyarite Tuhla, son of Sheba, and lived in the palace of Ma'rib. At any rate it appears that the Muslims were long aware of the fact that she did not properly belong to Islam; we therefore have occasional polemics against individual portions of the story such as her super-human origin.

In Christian Abyssinia the legend of the Queen of Sheba has become naturalised in a form which traces the descent of the ruling house from the marriage of Solomon and the Queen of Sheba who here is called Makedet.

BIBLIOGRAPHY: Grünbaum, Neue Beiträge zur islamischen Sagekunde, p. 211—221; Saisberger, Die Salomonage (Diss., 1907); for the Abyssinian Legend see Praunus, Abuna da nega Saba, ed. Littmann, The legend of the Queen of Sheba in the tradition of Axum (Bibliotheca Aethiopica, 15).

BILAWR, Ballan — whether from the Greek Βαλλαν, a disputed point of Deyro, Supplemens, p. 110 — the rock-crystal. According to the Petroleo of Aristotle the stone is a kind of glass but harder and more compact. It is the finest, purest and most translucent of natural glasses, and is mentioned as one of the "colours" of the Φαραon by the dust colored rock-crystal is meant the smoky topaz. It may also be artificially coloured; it concentrates the sun's rays so that a black bag or piece of cotton wrapped in it may be set on fire by its rays. In the same way kings are made of rock-crystal. A common kind which is harder and looks like silt — i.e. quartz — gives out sparks when struck by steel and is used for striking fire by kings' servants. No account of its crystalline formation, which Pliny gives, is given nor is the general distribution of quartz known.

Tisfiz says that at 13 days' journey from Kashgar are two mountains the interces of which consist entirely of beautiful rock-crystal, it is worked in the night time as the reflection of the sun's rays render work by day impossible. Afkini (publ. in al-Ma’urif, 1908) gives the fullest account of the places in which it is found; according to him it comes from Ethiopia (Zänd), Badaghshin, Armenia, Ceylon, the land of the Franks and Maghrib al-Aksa.

BILLAN or BILITON on the south-east coast of Sumatra, with the 150 adjoining islands has an area of 88 square miles and with regard to its situation, formation, greatest height (1760 feet) flora and fauna, population (338 sq. per square mile) products (tin), agriculture and trade, it is exactly similar to Banka. Tamjong Pandan is the capital of this independent assistant-residency. The original population (34,181 souls in 1905) consists of Muslim Malays (agriculturists) and heathen Sekahi (about 1600) who are fishermen, living on their boats and workers in the bush of whom one tribe (paca) has however become Muslim and is sedentary. In Tamjong Pandan (about 3300 inhabitants) live the foreign merchants (Chinese and Arab) and the European officials (46 of the 136 on the whole island).

Before 1850 Billiton was a worthless nest of pirates but since 1861 the exploitation of the valuable tin mines by the Billiton Maatshappij, which employs 1800 Chinese coolies, has altered the economic conditions.
Bilbey, J., *Bibliography: Th. Passowitz, Die Zentral-Asien im Indischen Ocean* (Budapest, 1885); C. de Groote, *Herinneringen aan Bilbey* (the Hague, 1897; complete Bibliographies)*. *Kolovrat: Verzameld Van de Biologie* (Berlin, 1901), p. 19; *The State of the Science in the World, Parts 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34.

(A. W. Niebuhr)
kal’s (East Fort) is only a little less. The northern part of the mountain is cut up by two large, circular depressions, separated by a steep bridge, which the central peak Kars-kal’a (= Black Fort) sends out to the north.

The Bingöl-dagh is unusually well watered; it has received its Turkish name “Thousand (tow)-lake (dag)-mountain” (dag-h) from its immemnurable little lakes (these are really mere pools in the impermeable soil). No fewer than six important watercourses rise in this centre of erosion, in which Armenian tradition for this reason places the site of the Biblical Paradise. The Tva plateau in the N.W. of the range is the area of the sources of the Arax (al-Rass, q. v.); in the west rises the Turak-Šu, a tributary of the so-called western (rather: northern) Euphrates and the Bingöl (Peri)-Šu, is the S.W. the Göndük (Ganak)-Šu; in the S. the Çabagh-Šu in the E. and N.E.; the Khunus (Khinib)-Šu. The latter four are tributaries of the so-called eastern (rather: southern) Euphrates. The great humidity of this mountain range produces a remarkably rich flora; Raddo found a paradise for the botanist in that region.

On the other hand it is nowhere mentioned in the Arab geographers of the middle ages, so far as I have been able to discover. J. R. Tavernier (about the middle of the 17th century) appears to be the first modern European traveller to use the name Bingöl-dagh.

At the present day the region of the Bingöl-dagh is inhabited by robber Khililbash, the descendants of manumitted slaves of the Turks, cf. thereon p. 426 above.

Bibliography: K. Ritter, Erdkunde, s. 79, St. 385—386; M. Wagner, Keit nach den Ararat (Stuttgart, 1844), p. 272. Minute descriptions of the range were first given by Strecke and Raddo; cf. Strecke, Zur Gegen von Hoch-armenien in the Zeitschr. der Ges. f. Erdk., Berlin, 1869, iv. (particularly Chap. 3 and 4); C. Raddo (travelled in 1824) in Pettersson’s Gingy. Mittelh., 1877, p. 422 (with original map, pl. 30); E. Nammann, Vom goldenen Horn an den Quellen des Eufrat (München, 1893), p. 321—322; J. Oswald, A creative on the Geology of Armenia, and cf. thereon the comprehensive review by F. Schaffer in Pettersson’s Gingy. Mittelh., 1907, p. 143 et seq. (particularly p. 140). See also the Bibliography to the article Armenia (see above, p. 446 et seq.).

M. SIECK.

BINT (l.) “Daughter”, “Maiden”.

BINTÜ. Plural Bintiyüt, form the Italian venti, in the popular Amhät of Egypt denotes the twenty five-one piece.

BINYAM (the printed edition of Zamschh-ah’s Rakhsh gives the form Binyam), one of the sons of Jacob. The Mahabammad stories of Benjamin agree with their main points with the Biblical narrative; there are however some additions which are connected with Rabbinical legends. The non-Biblical elements take the following form: when Joseph’s brothers visited him, he had a feast prepared for them and made them sit at it in pain. Binyam was thus left out and began to weep and said: “If only Joseph were alive, he would take me with him”. Joseph heard this, placed him beside him and asked after his children. Binyam said that he had ten of whose names had some reference to his last brother Joseph. Joseph then said: “Will thou agree to take me as thy brother in his stead?” and Binyam replied: “Who could find a brother like thee? and yet thou art not the son of Jacob and Rachel”. Joseph then wept and said: “I am thy brother Joseph”.

It is also related that when the brothers entered, Joseph tapped his cup and said: “It tells me that you are twelve brothers and that you have sold one of your number?”. Binyam then flung himself at his feet and said: “O King, ask the cup about our brother Joseph!”. Then follows the recognition and the vouchsafement of the cup, or of the cornmeasure in Binyam’s sack, concerted between Joseph and Binyam.

According to another version, the tapping on the cup of Binyam does not take place till after it had been concealed, that is on the return of the brothers to Joseph.

BIR (Th.), Plural Dâr and Bîr, “Well”, appears in compounds, and in the plural by itself as a place-name.

BIR MAIMUN, a well not far from Mecca on the road to Mina, about an hour’s journey from the town of Mecca, which had been already dug before Islam by a certain Maimun, whose origin is variously given. According to Hamdâni (ed. 1), H. Müller, 139) this well is referred to in the Korâ, Sûra lixxv, 30. The Caliph al-Mansûr died here in 1358 (755) while engaged in making the pilgrimage to Mecca. The well was repeatedly repaired e.g. in the year 604 (1207-1208) at the expense of the lord of Jâabil.

Bibliography: besides Hamdâni, Yâkit, Muhâjir, I. 436; Chroniken der Stadt Mekka, ed. id., li. 124, lii. 977.

BIR MA’UNA, a well in the mountains on the road from Medina to Mecca, not far from the mine (-medîn) and the Hârân of the Banû Sulaim, between the lands of this tribe and those of the Banû ‘Amîr b. Šâyâna. We do not exactly know to which of these tribes the well belonged. Near it was the dam Sall Ma’ûna, sometimes corrupted to Sall Mu’ayna. This district was the scene of the defeat of Bir Ma’una, a place only rarely mentioned by the geographers. The scanty topographical notes collected by them have apparently been obtained from oral tradition regarding that event.

‘Amîr b. Malik Abî ‘Abbâs, called Malikah al-asinma, a chief of the Banû ‘Amîr asked the Prophet to send him missionaries to preach Islam to his people and guaranteed their safety. Muhâammad then sent him a deputation of 70 Ange Garees who were treacherously slaughtered with one exception by the Banû ‘Amîr. The revolt in Korâ, iii. 165 is said to refer to this. This is the traditional account supported by the Sûra.
As a matter of fact, we have here an actual campaign, as may be seen from the book of the "Magazih, and may be considered certain by a comparative study of the sources. 70 "war" were not necessary to teach the Koran and indeed at that time Medina did not possess that number. On such occasions Muhammad used only to send one or two "war" (cf. Aghani, ii. 19, 9 etc.). The story was invented by the Traditions, to cover an unfortunate campaign and also to prove the large number and great antiquity of the "war" and to give sanctity to the body. Muhammad had been asked by the Banu Lamnah, R'Il, Dhu'wain etc., divisions of the Banu Sulaim, for help against their relatives, possibly also by Abu Bara' for support against a rival, Amir b. al-Tufail. The Prophet's policy required him to interfere in such secular quarrels. A division of 70 horsemen, all Amir sent by him, was surprised in the neighbourhood of Bil's Ma'unah by the Banu Sulaim and cut to pieces. Amir b. al-Tufail was leader of the enemy and his name has ever after been held accused by Tradition. This happened in Safar of the year 4 or in the 36th month of the Hijra, in the 14th month after the battle of Uhud. To alyay the great excitement in Medina another verse, besides Koran iii. 163, is said to have been omitted, but was afterwards forgotten or omitted from the Koran: "Announce from us to our people that we have met our Lord and He is content with us, even as He has made us content". Abu Bara' himself appears to have played a double part in this affair. The Prophet continually cursed the authors of this calumny, which was the greatest blow he had suffered next to the death of Uthman.

AL-BIRA, the name of several places, generally in districts where Aramnic was spoken, for al-Bira is a translation of the Aramnic birāh = "fortress", "cistadel". The best known is al-Bira on the east bank of the Euphrates in North-west Mesopotamia, the modern Birečik (q.v.); on other places, bearing the same name, e.g. Yukan, Mi'asim (ed. Wustenfeld), i. 785; Noldeke in the Nekhr, der Göttinger Gelehrter, iv. 1876, p. 11-12 and in de Goeje, Bibl. geogr. arab., iv. (Glas.), p. 441; Le Strange, Palæstina under the Maccabees (1890), p. 473. (M. STEELE.)

BIRADER, popularly bider, Turkish pronunciation of the Persian er'āder-brother; 2 is a form of address used only between Muslims who speak Turkish, and is never applied to one who is not a Muhammadan. (C. Huart.)

BIRDJIK, a town in Persia, situated in 59° to East Long. (Greenw.), and just below 30° North Lat. on a plateau 4440 feet high. The older Arab geographers do not mention B. Yukkan (c. 623 = 1225) is the first to note it and describes it as one of the finest towns in the district of Kuhistan, which in the time of the Caliphate was a dependency of the province of Khorasan. At the present day Birkish is regarded as the chief town of Kuhistan, while in the middle ages this honour fell by, but in which is about 70 miles

further north. Mi'asim (740 = 1340) describes Birjand, as an important town, the surroundings of which were not very favourable for the cultivation of corn but produced large quantities of grapes and other fruits; the saffron, as at the present day, was then extensively cultivated; with the above mentioned \\vline

4

Birjand produces the greatest quantity of this plant and dye, of any town in Persia. The district of Birjand has long been famed for its carpets which almost all come from the village of Derbkdhal (50 miles north-east of Birjand) and sometimes fetch very high prices. The 'Abār, which are manufactured in Birjand, of camel's hair are also highly esteemed and are used as felt-carpets, madīnas, as well as cloth. Birjand at the present day is one of the busiest commercial towns in Persia for there the caravan routes from Samun, Mesbah, Herat, Seistan, Kirman and Yezd meet.

Birjand is built on the slope of a hill and makes a pretty picture with its houses all of which are surmounted by domes and from the distance look like beehives. Four underground aqueducts (kāneb) provide the town with a plentiful supply of water. When the springs in the surrounding country dry up in summer, the country people therefore flock into the town and the number of inhabitants is for a period of 9 months. Goldsmith estimated the number in 1873 at 15,000, Stewart in 1886 at 14,000, Louini quite recently at 18,000, on the latter estimate cf. Sfian in Pottmann's Geogr. Mitt., Ein Heft, No. 133, p. 123.

Since the middle of the 15th century Birjand has been better known; Ritter (see Erdhald, viii. 265) had no very definite information about the town.

BIREJIK, a town in Mesopotamia, on the left bank of the Euphrates, situated in 35° East Long. (Greenw.) and 37° North Lat. The name Birejik, popularly Birçik, in the Halil dialect (according to Suchan Birçik), means "little Bir", i.e. "small Fort" (Arabic birā, with the Turkish diminutive suffix); the etymologies given by Ritter, cited 951, 955 and Muller, op. cit., p. 214, are strong.

Birjik (1170 feet above sea-level), is the centre of a plain which is surrounded by a semi-circle of mountains sloping down to the Euphrates. The place itself is overshadowed by an isolated cone of rock rising above the desert, which has been fortified from the remotest times. From here the passage. Birjik therefore naturally possesses one of the most important positions in lower Asia. The Euphrates here leaves the narrow confines of the steep mountain walls and enters the Syrian-Mesopotamian plain, through which it flows till it reaches the sea. It is here too that the
river first becomes navigable, after leaving behind it the dangerous cataracts formed where it breaks through the Taurus, and traffic may proceed upon this route with the greatest ease.

There can hardly be any doubt that on the site of the modern Birejik we must locate the ancient Tik (Zeylik), Bursip or Bursip, of the Assyrian inscriptions. In the 6th century B.C. the position of this town as the capital of the small Aramaic state of Bit-Adini in North Syria and Mesopotamia was by no means an unimportant one. Sulam or Selemun (§ 359—$ 324, B.C.) always crossed the Euphrates here on his campaigns into North Syria; he repeatedly mentions the fortress taken by him; there (apparently the modern castle), to which he gave the new name of Kôr-Sulamun-alurid = "Sulamun's citadel," which we find again in the stele inscription of his successor Shamshi-Adad V. When Sinjerlib required ships to cross the Persian Gulf, he had them built at Tibusrisip and taken down the Euphrates. On the references in cuneiform inscriptions cf. E. Schrader, Keilinschr., u. Geschichtsforsch. (Giessen, 1878), 143 et sqq., 219 et sqq. and F. Delitzsch, Was lag das Paradies? (Leipzig, 1881), 4, 141, 263. It is not improbable that the old name Bursip is preserved in Poleny (v. 18, 5) in the corrupt form Peteys ( Corps tierrina). In the Assyrian period, the passage over the stream was usually made on inflated skins (the modern belbels), as is expressly mentioned. After the beginning of the Seleucid period there were two bridges of boats over the Tigris, just at its exit from the Taurus, both called Zemgma and often mentioned; the northern one, apparently the less used, near Samosita (Arabic, Semissan) in Commagene and the southern at Birejik. Each of the towns which stood at these bridges had a suburb on the Mesopotamian side; that of the southern Zemgma, was founded by Seleucus I and called after his first wife, Apamea. The Zemgmans are often confused with their eastern suburbs (for example by Ritter, Forbiger, Mommsen and Chapot). Cf. thereon, particularly H. v. R. Kiepert, Fourniere, Ord. Arch., § 66; v. Ritter, Asien, ii. 1. (Leipzig, 1831), p. 389 et sqq.; Ritter, Erdkunde, s. 990—1003; Noldeke in der Nachr. der Götting, Ges. d. Wiss., 1876, p. 1 et sqq.; Strecker in Pauly-Wissowa, Realencykl. d. Klas. Altertumswiss., Suppl. i. 99 (Apumnes 4), 274 (Capharana, Caphrena); v. Chapot, La frontière de l'Euphrate (Paris, 1907), p. 272 et sqq. We have evidence of the existence of a bridge at the southern Zemgma down to the second half of the 3rd century (cf. Khalif al-Zähir). By the possession of the fortress on the dominating rock, the eastern town soon gained an advantage over the western; the latter quite disappeared in the middle ages, while the former gradually increased in importance. The official names were Semgma, which possibly never bore the name generally current, also disappeared and was succeeded by the indigenous name used by the Aramaic population of the district, Bitthik = "fortress." Bitthik often appears as a place-name in areas where Aramaic was spoken (cf. the article AL-Berè); the modern Der ez-Zor on the right bank of the Euphrates, 40° 8' East Long. (Greenw.), also denotes the site of another Bitthik, which is mentioned by Poleny, Isid. Charac., the Notit. Philipp. Hierod., Georg. Cypre. (Bithion) and the Syrian Chronicle of Joshua Stylites. This Mesopotamian Bitthik has often wrongly been identified with Birejik; this identification has been combated by C. Müller, Georg. Graeco Min., i. 245; Regling, op. cit., p. 3, and R. Kiepert, op. cit., p. 35.

The Arabs adopted the name Bitthik in the form AL-Berè, which appears in the later Syrian writers (cf. e.g. Barhebraeus, Chronicon). cf. Paris. 405) in the form Bireh. In historical literature Bira appears to be first found in the Crusading period. In 1099 Baldwin, Count of Edessa, took possession of it, and it remained well into the 12th century in the hands of the Franks. In 1330 (1444) they defended themselves valiantly in the citadel of Bira, under the command of the then Lord of Edessa, against the assault of the troops of Zangi, Emir of Mosul, but the town surrendered soon after of its own accord to the Urtuqid prince of Mardin out of fear of Zangi, cf. Weil, Geschichtliche Chroniken, iii. 288—289. Since then, it has always remained in Mamlukian hands except for a brief period when the Byzantines held it (cf. Ritter, 2. 931, 950, 965). During the Tartar invasions of the 18th century the impregnable citadel of Birejik remained a stronghold of mulus (cf. Abu l-Fida, loc. cit., p. 497). The older geographical works of the Arabs never mention Bira; nor does Yāḥū. It is not till the middle of the 19th century that it appears, for example in Dimašqī, Abu l-Fida, the Murāqī, and Khalif al-Zāhīr. After Syria and Mesopotamia had passed under the power of the Crescent and Turks had gradually attained a numerical preponderance in the population of Bira, the Arabic name was gradually supplanted by the Turkish Birejik. This is first given among European travellers by Niebuhr (1766) while all travellers before him write the name Bir or Beer (C. Fede- rigi, 1583; L. Ramwurf, 1574; Tavernier, 1638 and 1644; Maunndre, 1699; Otter and Pococce, both in 1737).

In the history of modern warfare, Birejik is famous for the decisive battle which took place quite near it (at Nishār, 10 miles west of the Euphrates) in the war between Turkey and Egypt in 1839. The Turkish army under the command of Seckarī Hâfiz Paša had taken up a position on the heights on the right bank of the Euphrates, two hours journey from Birejik. In the Turkish camp was v. Molteke, afterwards General Field- marshall, but his advice was, unfortunately for the Turks, not taken. The encounter between the two armies took place on the 24th June and ended in a brilliant victory, for the Egyptian troops, who had an experienced leader in the Crown Prince Ibrahim Paša. The retreat of the Turks soon degenerated into a headlong flight and ended in the total dispersion of their army. According to the accounts of all travellers Birejik forms a poor picture. The town is built in terraces along the river bank for over a mile up the slopes of four connected hills and form a sort of amphitheatre around the highest mass of rock which is crowned by a fortress. The numerous cypress trees and orchards, which rise above the houses, enhance the beauty of its situation. A ruined wall with four gateways, built by Sulṭan X I I -II ibn in 587 (1482) (cf. v. Bethem, op. cit., p. 1067), also: and flanked by four towers.
likewise in a dilapidated condition, encloses the town, in which streets of which are tortuous and dirty.

The most remarkable feature of Birejik is the very extensive fortress, now in ruins, on the oval summit of a sandy hill (about 172 feet high), the top of which has been partly destroyed and partly artificially; it rises sheer out of the river, just below where it flows out of the rocky valley and turns to the south into the open plain. As this steep cone (in part, artificial, it has been supposed) was covered by a coating of brown stones, traces of which still remain, the taking of the citadel built upon it was absolutely a thing of impossibility. Molike to whom we are indebted for most of our knowledge on this point calls it the most extraordinary building that he had ever seen. It consists, as he tells us, of three or four stories of arches of enormous size, and in spite of the many great earthquakes it has suffered, most of it still remains unharmed. This fortress certainly goes back to a very great antiquity. It is possible, as Regling suggests, that some portions of it may date from the Scismatic period. In the main, however, the modern alterations may be said to date from the 12th century. There are six Arabic inscriptions on it, of which the oldest is of the reign of the Mamlik Sultan Barakat-El-Naim (676—678 = 1277—1279), and the most recent are of the years 857—858 = 1452—1453 of Sultan Kaft-bill who, while on his Syrian journey in 852 (1447—1448), inspected all the fortresses as far as Rümgal (above Birejik) and repaired them. The inscriptions are thoroughly discussed, with six others on the gates and other buildings in Birejik, by M. van Berchem in Beiträge zur Assyriologie, Vol. vii. Heft 1, 1909, p. 101—108.

In one of the lofty vaults of the citadel are two remarkable figures of men, larger than life-size in bas-relief painted in three colours; cf. T. J. Arne in Grethe's Oriental Arcins, i. (1916), p. 82—83. The castle at the present day is called Kaft-bil, popularly kaft-bil-kaft, meaning white chalk, of which the hill is formed.

The district of Birejik is regarded by the late geographers as a part of the province of Halab; the present administrative division of the Turkish Empire has also placed it in the Wilayet of Halab and it forms a separate Kaft (therefore it is the seat of a Kaft-Elmashog) of the Sandjak of Urfa with an area of 2500 square miles and 26,500 inhabitants in 129 villages and towns (following Cauvin, op. cit. and Petermann, Géogr. Mittel., 1894, p. 135, 1901, p. 135). The town of Birejik has about 500 houses in Nihebru's time; Buckingham estimated the number at 400 (with 3000—4000 inhabitants, Petermann (1851) 2000 houses, Cauvin (1873) 2000—3000 inhabitants; Sachau's estimate (1879), 6000 houses with 30,000 inhabitants is certainly too high. The residential population of the town is estimated at the present day at 10,000; cf. Cauvin, Petermann's Mittel., op. cit., p. 219; Baedeker's Syr. and Palaest., i. (1910), p. 356. According to Cauvin, who gave the exact figure as 10,162, the population in 1852 consisted of 8707 Moslems (mostly Turks and Kurds), 978 Gregorians and 467 Catholic Armenians and 43 Jews. There are 7 mosques, 4 vineyards, and 3 Christian schools. The language spoken is Turkish; the area where the Arabic language is spoken does not begin till somewhat further down, near the mouth of the Suljat.

Birejik, as has already been mentioned, derives its chief importance from its position as a station for conveyances from North Syria to Mesopotamia and on to Kurdistan and Babylonia. Everything going from the Mediterranean to the Tigress and Assyria, Halab and Aintab passes through this town. The three main routes, which enter it, come from Aintab (50 miles distant), Urfa-Eddessa (50 miles distant) and Harran (90 miles distant). It is here that the river, which in its normal state is 130 yards (in floods 1100—2300 yards) wide, is now crossed on primitive rafts (feliha) specially built for the transit of cattle, for the early bridges have disappeared for centuries. The congestion is often very great; as many as 5000 camels have been counted here waiting to be loaded or unloaded. (Cauvin); there is a large Kafian on the western bank. The inhabitants depend for their livelihood mainly on this traffic; the bananas are in consequence well managed. The trade in wheat, oil, and opium is by no means inconsiderable.

According to Petermann, coarse woolen clothes and mantles for the Felijas are manufactured and sold here. If the projected high-road railway does not go via Birejik but as the plan now is, via Djebel, which is nearer to the south, it appears inevitable that considerable injury will be done to the economic prosperity of Birejik.

The Euphrates is navigable for large boats and even for steamers of small draught from Birejik down, as the investigations of Captain Chessney's expedition to the Euphrates in 1855—1857 have shown. Chessney's experiment has not been repeated and the proposal to make a connection by steamship with Birejik and the Persian Gulf has been allowed to drop. At the present day only a few rafts and barges use the river and go from Birejik to Der ez-Zor with corn.

BIRGE (Perga) properly Brazi (also pronounced Brazi), a town in Asia Minor, on the slopes of Tmolus in the valley of the Kask Mendares (Kasursos) belonging to the Wilayet of Samsun, and the Kašt of Odemis, 5 miles distant from the latter town, was a fairly important place in the days of old times and the summer residence of the princes of Anitn. The town was surrounded and moundified with the graves of these princes, which still survive, testify to the past glory of the town. Here also is the grave of the Turkish scholar Birgiv, who taught for many years [see the next article] in the madrasa of this town.

BIRGEV or Bisizli, Muhammad b. Muâli, a Turkish theologian, born in Balıkesir, 928 (1522) received his earlier education in his native town and afterwards studied in Constantinople, where he attached himself to the Bairam-iya order [q. v.]. After next spending some time in Edirne, he wished to retire from public life but was appointed系統 by the Maâruf in Bursa by 'Ali Allah Efendi. He worked here until his death [1573]. Numerous works and schoolbooks mostly composed in Arabic, testify to his literary activity. The majority of those deal with theology in its widest sense, the art of reading the Korân, dogmatics, homiletics, legal questions, e.g. on the conditions of Waâf-foundations, on which he had a controversy with his contemporary, the Chief Mevlevi Abd. 3-Sedîd (q. v., p. 168); others of his works deal with Arabic grammar. A list of these writings is given by Brockelmann, Geschichte der Arab. Litter., ii. 440 et seq. He is particularly known by his Turkish catechism, which is usually briefly known as Rûhûl Birgev, also called the Naqsh-i Nâmeh, and has been repeatedly printed and translated. Cf. Theron Zemler, Bibliotheca oriental., l. 9465 et seq.; ii. 1192 et seq.; Journal Asiat., 1843, li. 52, 55; 1850, l. 524; Distelr. Chrestomathie Ottomans 38 et seq.; of the translations, the French one by Gancar de Tassy in his Dictionnaire d’histoire et de cour anc. 3° ed. (1874) may be particularly mentioned here.

BIRMA. [See BIRMA.]

BIRSA, also called Birs Nimrud, in the older literature Burs, a ruined site 9 miles S.W. of the town of Iâlla on the Euphrates, about 12 miles S.S.W. of Babylon on the eastern shore of the Lake of Hiddin.

The place is the ancient Borsippa, the sister town of Babylon, its immense ruins, the largest that have survived from the Babylonian period, were thought by the Arabs (to be the palace of Nimrud Ibn Kânân [i.e. Nimrud, Yâkût, l. 136] or of Bâbînâxâr (Yâkût, i. 165). Even in modern times they were thought to be the ruins of the Tower of Babel and this erroneous view used to crop up after H. Raulson had proved from inscriptions that they were the ruins of the tower of the Temple of Nebo of Borsippa. Whether there was still a town on the ancient site in the early Islamic period is not quite clear. Bâbînâxâr only speaks of the nimrât Burs (Aev. azmân) the land around the marshy lakes of Burs, which were taken possession of by 'Ali. Upper and Lower Burs appear in Kûtâma and are called al-Sibân and al-Wâsîf by Ibn Khurāshâb in the lists of taxes, as districts (qâbiţâ) in the circle (marâm) of Central Bilâdishah.

Even in ancient times the district of Babylon and in particular Borsippa was famous for its textile industry (e.g. Strabo, xviii. 1, 7). This industry survived into the Arab period. The garments made in the district of Burs were, according to Mârûf (Mardûf, vi. 59) called Bursiyâ or also Khurâshâb, after the district between Burs, Babil and Hills (following G. Hoffmann's emendation). In Yâkût, iv. 773, Narsaya should therefore be emended to Bursiya.

three Bedouins Cudl. Mis. orient. cat., ii. 370; Muller, Op. cit., p. 35, N. 65). In the same year he also composed a short account of geometry, arithmetic, astronomy and astrology, entitled "Tafânûm" (1767) (ed. in Arabic)." To the year: 728 = 1328 entitled Târîkh Mîrzâ 18r Dunâšîl al-Tabûsî wa-Mîzâl al-Wafâyî (B.S. in Stras-}, bul, Koprûllu N. 1047); his pupil Muhammad b. Bahîr [q.v.] continued the work. He composed a short chronicle of the years 601-730 (1204-1335) which gives brief notices, brief names, and political events. He was also en- titled Maqâma al-Mîzâ al-Shâbî (s. A. A.,) 52, 151, Leipzig, 1810), he also composed a Materia Medica entitled Kitâb al-Saltâna (Tabâma) which was translated into Persian by Abu Bakr b. Al- b. Abû Hazm at-Tabâ, Histori der iranischen Philologie, ii. 155; Find, Cat. Brit. Mus., ii. 765 et seq.; Pertz, Cat. Berolin, 1034 et seq. BISHA (also written BISMA with hamma) is an important village in a populous valley in the Darmaz, twenty-four miles from Tabâla, and one of the districts subordinate to Mokka, from which it is distant five days journey. The valley begins in the mountains of the Hijaz and flows towards Nejd until it comes to an end in the country of the Beni 'Uqail. In Bisha were many families belonging to the tribes of Khath'am, Hift, Sa'dh, Salit, 'Uqail, al-Dhali and 'Arab, the last had a property in the Wadi Bisha called the Ma'amal. It is famous for its palm trees and palm shoots, and also for a fruit called Kewm. Cf. Hassir, Mecca 48, fn.;i, Abû al-Kamal (ed. Wright), 349, 16, 593, 145; Kitâb al-Salâm, iv. 75; Idrís (ed. Jaubert) gives the distance between Bisha and Tabâla as fifty miles. The present Kasat Bisha lies about 20° N., 43° 20' E. Ibn Hawqal mentions also a Bisha in the Bahrain. Cf. De Goeje, Bibl. Geogr. Arab. Indies, Smuck, Harrang, Mecca, l. 181, says that the policemen of the Sharif of Mokka are also called Bisha after the South-Arabian tribe of this name. BISHAR (r.), a name applied to those Siiffs, who say that the King of Iblis are arrogated for the mythical enlightened (Antimonists). BISHARIN, a tribe of nomads between the Nubia and the Red Sea. The Bisharin form with the 'Abdib, Hadendoa, Ben 'Amer and some smaller tribes a homogeneous body (from the physical point of view and originally from the linguistic also), which even at the present day is comprised under the name Buga or Buda [v., v.], which is the usual one with modern Arab writers. On the earlier history of the Buda, cf. J. Marquart, Flora, p. 66.
et seq. In addition to the bibliography given in that article. Very little is known of the history of the collateral tribe of the Bigharim. They themselves say they are of Arab descent and trace their genealogy to a certain Bighar. If they are certainly not wholly of Arab blood, it must not be forgotten that the Rabba's in the 11th (12th) century began to mix with the Bedja and that in the beginning of the 16th (17th) century a certain Bighar b. Marwan b. Isāk b. Rabba, the lord of the lands and mines, is said to have taken the field with 30,000 men, the Buge, in fact with the Haidarib, who still bear their name and are sometimes regarded as a branch of the Bigharim. The application of the name Bigharim appears to be very uncertain. Sometimes the Haidarib are included among the Bigharim and sometimes the Haidarib (south of the Nakaish) are classed with them as an independent Bedja tribe. It follows that their territory cannot be sharply defined. In general they dwell to the south of the 'Abhāde (q.v., p. 1). Bigharim are however mentioned in the neighbourhood of al-Kuwayr in the Red Sea add they are always to be found in Assam (see Baedeker, Egypt, p. 335), They stretch to the south beyond the Atbara. Hartmann in the Zeitschrift für Ethnologie xl. (1879), p. 197, estimated their number at 50,000-60,000; others give much higher figures.

In physique they are described as resembling the 'Abhāde, dolichocephalic, with lofty brow, pleasant expression, almost European profile, the figure muscular and well built, the skin dark-brown to brownish-red, (Schweinurth in Petersmann's Mitteilungen, 1865, p. 338). Their character is incomparably described, inhospital, treacherous and treacherous, insidious, covetous to the extent of begging and stealing. They are on an exceedingly primitive level of civilization. They are purely nomads and possess great herds of camels, sheep and goats. Intractable and suspicious they keep away from wells and roads while the more peaceful and amiable Abhāda guide caravans. The clothing of the Bigharim consists of a loin-cloth for the men and a girdle for the women. Extraordinary care is devoted to the arrangement of the hair which is worn in the form of a roll twisted together with tallow, on the top of the skull, while around it the hairs stand out like rays. Henglin (Petersmann's Mitteilungen, 1860, p. 338) says that their chief weapons are light javelins and clubs, but particularly two-edged daggers.

Ibnān, which a section of them (particularly the Haidarib) had adopted by about 300 A.D. has not had any civilizing effect on them. Indeed from the accounts of Arab authors it would appear that they were on a higher level a thousand years ago than modern travellers tell us they are to do.

Bibliography: Besides the works cited with the article Abhāda cf. in particular H. Almkvist, Die Bischari-Stämme, Upsala, 1887, 1889, Vol. i, p. 7 et seq.; C. Chantre, Les Bishari et les Abhādeh (Lyons, 1900); E. A. W. Budge, The Egyptian Sudan, ii. 435.

BISHAR, usually written Bishbalik, or Bishbalik, (Turk. *Five Towns*, Pentapolis); Chinese Pei T'ing (North Town), a town in the modern Chinese Turkestan, north of the Celestial Mountains (Tien-shan). The site of this town, often mentioned from the 7th in the Orkhon inscriptions to the 17th century, has only recently been satisfactorily located. Since the days of Klaproth and A. Renne, Sinologists and geographers have sought for Pei T'ing and Bishbalik at the modern Urumchi. Grimm-Geilmann (Opinions sur la géographie de la Perse, 1800, p. 42 et seq.) was the first (in 1809) to put forth the view that the town must have been situated farther to the east, somewhere near the modern Golen. In the second volume of the same work (1809, p. 42 et seq.) this view is placed on a more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation, with reference to the more explicit foundation. Independently of Popow and Grimm-Geilmann, Ed. Chavannes had in 1903 (Documents sur la terre occidentale, p. 11) quoted the same references from another Chinese work (the Si-yü-pan-tao-ch'i); in the same year 1908 it was proved by Doliushew that in the area defined by the Chinese writers near the village of Hua-p'au-te, 6 miles north of the town of T'ai-su-sun there actually were the ruins (now called Po-kung-te) of a relatively important town 2½ miles in circumference (Fischier's Nachrichten der Gesellschaft der Wissenschaften zu Göttingen, viii. 1910, p. 212, 316), and they still adhere to the old identification of Bishbalik with Urumchi.

According to the Chinese authorities, in ancient times (after the Han dynasty 25-220 A.D.) the town was the residence of a native prince and was called Kang-hum Ssuma (cf. Chavannes, Documents etc., p. 19 and 305). The Chinese name Kin-man and Pei-t'ing do not appear till the 7th century. After 855, Pei-t'ing was the capital of a Chinese protectorate, the government of which was in the hands of Chinese governors and occasionally of Turkish princes. In 742 the Chinese governor was successful in repelling an invasion of Turkish tribes led by the son of Khan Mo-ko; nevertheless by the end of the century the Chinese supremacy had been overthrown by Turkic and Tibetans. Pei-t'ing passed into the possession of the Uighurs from whom it was taken by the Karslik in the 8th century.

The town is later mentioned as the seat of a Uighur prince, at whose court in Pei-t'ing, Wang-yen-te, the ambassador of the Sung dynasty of China, was received in 982. It is to the account of this embassy (transl. by St. Julien, Journ. Asiat., ivth Series, ix. 50 et seq.) that we owe the most detailed description of Bishbalik, that we possess. It is therefore quite conclusive evidence for the identification of Bishbalik with the ruins of Po-kung-te, that, as Doliushew tries to show, all that Wang-yen-te tells us about the situation of the town, its surroundings etc., agrees perfectly with what has been ascertained by exploration of the remains, which have been preserved in Po-kung-te. The lake on which Wang-yen-te made the voyage by boat, which he describes, was apparently to the east of the town; traces of a dam may still be found there, by which the stream which flows past could be used to form a lake. West of the ruins, a Buddhist monastery appears to have stood. According to Wang-yen-te, there
were Buddhist temples at Pa'i-Cing in his time, which had been built in 637. The inhabitants were not only engaged in gardening but also manufactured articles of gold, silver, copper and iron.

There appears to be only one notice of Bishbakh in Muhannad al-Biruni’s literature before the Mongol period, viz., in the anonymous Hadii al-Asrām (377 - 982-983), the town of Pandjikhāh (Five Towns), apparently a Persian translation of the name Bishbakh, is mentioned as the northern residence of the Princes of Taghughur; in the summer it was said not to be so warm there, as in the towns to the south of these mountains. Even in the description of the road from the land of Taghughur to the mountains of Kōngān (the Sajan mountains) in Gudrā (in Barthold, Oeufs et possessions de Soudan a Issouf, p. 56) Bishbakh (Pandjikhāh) is never mentioned, although the writers of the Mongol period show that Bishbakh, like the modern Guen, was of great importance as the starting place of a caravan route through the desert to Mongolia; for this reason the district of Bishbakh was one of the first of the settled areas of Central Asia to be reached by the tribes fleeing out of Mongolia before Cingis-Khān in the 11th century, and later by the hordes of the Conqueror himself.

At that time Bishbakh was with Kara-Khodja (near the modern Turfan) the chief town of a Uighur prince, who bore the title of Idikut and was a vassal of the Gurkha of the Kara-Khipli. In the year 1209 the Idikut took advantage of the successes of Cingis-Khān’s army to cast off his obedience to his suzerain and to place himself under Mongol protection. In the course of the following decade the ravages of the bands sent out by Muhammad Khvārānghitākh were said to have extended as far as Bishbakh, to follow a not very trustworthy account of the historian Dżawat (Tarīkh-i-Bisbakh in Barthold, Turfanian w epokach mongolskim, Warszawa, 1815).

It is Tod Dżawat who gives us most of our information regarding the relations of the subjects of the Idikut with the representatives of the Uighurs during the earlier years of Mongol rule. The land of the Uighurs had been turned into a political whole with the Uighuran countries of Central Asia by the victorious campaigns of Mongolia to the West, in which the Idikut had taken part at the head of 10,000 men and could not in the long run resist the advance of Islam, particularly as Uighurans by their wealth and education had attained influential positions in all the lands of the Mongol Empire, even in China, and had gradually supersed the Uighurs, the first teachers of the Mongols. A bitter feud thus arose between the Uighurs and the Uighurans. Under Mongke-Khān (1251-1259) the governorship of all the lands of Khuārān up to the Chinese frontier was entrusted to Ma’sud Beg, son of Ma’inul Yakub, a native of Khuārān. Ma’sud-Beg is also mentioned by the Chinese as governor of Bishbakh. About the same time (1250-1255) the Idikut was accused by Saif-al-Dīn, who was living in Bishbakh (probably as representative of Ma’sud-Beg) of having given secret orders for the massacre of all the Mongolians in his land; the court, appointed by the Mongols to try him, found the prince guilty and he was executed in Bishbakh. Dżawat himself made a jour-
BISHR, a mountain in Syria, famous as the site of a "memorable battle" of the ancient Arabs, probably the modern Djebl Bishr, a long chain running in a northeasterly direction from Palmyra to the Euphrates. R. Kiepert's map shows a place-name Rej Levi in the centre of the Djebl Bishr. The battle of Bishr was also known by this name and this corroborates the identification of Bishr with the ancient Biri. For Naqadeh, which brings the water from this range to Oriza. Akhkt describes Bishr as a place on the outermost western border of the area inhabited by the Taghlibites. Khafid b. al-Walid is said to have surprised them there on his march from the 'Irak into Syria. If, as can hardly be doubted, Akhkt was a native of Syria, we may locate his home in the district of Bishr. It was here that he was suddenly overwhelmed by the last outbreak of the long and bitter feud between the Kais and Taghib, the "day" of Bishr.

While with "Abd al-Malik, Akhkt had been unbound in his praises of his fellow tribemen at the expense of the Kaisites, he had specially directed his shafts against Djaffb b. Hukban, a Sabian refugee, celebrated for his heretical prophecies. An ill-advised provocation. Although Djaffb had been early dropped into the feud between Kais and Taghib, he appears to have remained neutral at first. He now swore to be revenged however. With 1000 Kaisites he fell under cover of night upon the Taghibi camp at Bishr; the men were put to the sword; even pregnant women were ripped open.

A son of Akhkt, named Abd Ghighb, lost his life there. The poet himself owed his safety to his presence of mind alone; he pretended to be a slave and was allowed to go. Akhkt hurried from Bishr to Damascus to claim vengeance. Djaffb had to take refuge on Greek territory, but returned some years later on promising to pay the price of blood.

BISHR b. ANA KHAIZIM (of Haizim), a poet of the ignorance (Djaffebya) belonging to the tribe of Anat b. Khuzaim (Kamitl, ed. Wright, 459; 133.7; Ibn Katala, Tahbit, ed. de Goër, 145 et sqv.) He it was who was carried to Harb b. Umaya and the other Kussakshe chief assembled at the faith of 'Ukh warning that al-Barzii, the ally of Harb, had killed 'Urwa al-Rabiah of Haizim. This enabled them to receive back their arms from 'Abd Allah b. Djebl, and leave 'Ukh before they were attacked by Haizim in the war of the second Fidjar, which lasted during the years 585–589 A. D. Bishr was on friendly terms with volume 5798. On occasion al-Nu'man al-Dhubyan, 'Ubaid b. al-'Abbas al-Asadi and Bishr, journeying to visit al-Nu'man of al-Hs, fell in with an Arab tending some camels and asked for hospitality. The Arab, who was 'Ukh, killed for each a sheep, because he explained, he saw them to belong to different tribes, and he wished his generosity to be known to each. According to this explanation Bishr could not have been of Asad, but was of Kussak. When Awa b. Harta was adjudged by al-Nu'man to be more excellent than his fellow tribesman Haim, Bishr satirized the former. Afterwards he was captured by some of the 'Af, but was rescued from their hands by Awa, in consequence of which Bishr wrote six sutu'a a panegyric. Bishr's poetry was not free from defects. He and al-Nu'man are bracketed as being the two poets of the first rank who admitted the fault called 'alaf (or a mispronunciation of the verse of the line) into their verses. When the fault was pointed out to them they did not return to it. Bishr is also said to have been not always accurate in his descriptive pieces, as when he gives a horse two sarties (Ibn Katata, p. 146). His verses are frequently cited in the illustration of uncommon uses of words (Hunian, p. 247). Some of his poems are in praise of al-Harith b. Mardir (Kisra agha, ed. v. 87). He took part in the war between Abad and 'Afar and was present with his son Nawfal at the conclusion of the peace; and he mentions in his verses the day of al-Nur, on which Abad and Dhubyan defeated Djeblam b. Mamayna. His verses are included among the Maftaful as adab, and they show his poetry contains many original ideas and curious figures, for example in his ode ending in vinos. Bishr was killed as he was riding the Bird Wall, one of whom shot him with an arrow in the breast, which caused him to fall from his horse. As he lay on the ground he composed some verses, announcing to his daughter his death.

(T. H. Wele.)

BISHR b. AL-BARAA', one of Muhammad's Companions. In the year 622, Bishr took part in the second 'Aqaba where his father, bar-Bakr) b. Mahira took part.

He was famous for his skill as a bowman and took part in the battles of Buzra and 'Uqba, the "Battle of the Ditch", the campaign against Khulaf and the conquest of Khazara. After the capitulation of the Jewish population of Khazara in the year 7 (648), Bishr was poisoned by a Jewess named Zainab bint al-Harith, because she had lost all her male relatives in the war and wished to avenge their deaths. For this purpose she brought to the Prophet a slaughtered sheep which she had neither poisoned, Muhammad accepted it and invited some guests, including Bishr to share it with him. At the meal the Prophet at once saw what had happened from the impious taste and spat out the poison, but Bishr would not commit such a breach of good breeding and swallowed his portion. According to some authorities he died on the spot, while others say, not till a year later.

(K. V. Zettersten.)

BISHR b. GHAUYITH b. ANA KAYMA b. ABU 'UARAD b. AL-RAMMAN AL-MARDI, one of the chief Murtad teachers of his time. He was the son of a Bagh-
BISHR.

373

self from their tutelage. After the deposition of Khalid b. Asid, Bishr, who was by this time in both caliph, received the government of Basyra in addition to that of Riffa, which he already held. Meanwhile the Arakhanis had again taken the field. Bishr hated the illustrious general Mahfuzi, who was ordered to suppress the revolt, and at length so far as to order Mahfuzi's chief lieutenant to oppose his plans to miscarry. Thus hampered in his movements, the commander-in-chief lay in camp for several weeks opposite the enemy till Bishr died unexpectedly, in the prime of life (74.75 = 694). The news of his decease was the signal for the soldiers to desert en masse. To improve the grave situation ‘Abd al-Malik had to entrust the supreme command in the whole of ‘Iraq to the energetic Rajid.

BISHR b. Mu‘azim, b. Mu’azim, teacher and Shârî‘ of the Baghdad school, flourished in the sulphate of al-Rajhi (Masudi, Les Pratiques d'or, vi. 373). Shahrastani (text, p. 44) enumerates six points on which this theologian differed from other Mu‘azzulis. It was he who first raised the question of twâli, also called twâli (Tarif)
there is twâli when an action results from an agent acting through an intermediary, as in the case of a key which is held in the hand; the movement of the key results from the will of the agent through the intermediary of the hand. Some  physicists, as Shahrastani points out, had previously studied intermediate causes, but Bishr brought this point of view into the study of morals and showed how the intermediary agent could modify an action and diminish the responsibility of the agent. Numerous discussions took place on this point and are given in the Mawardi (pp. 116-125).

Bishr also discussed the will of God, which he considered as a quality of his being, and a quality of his action. He also studied important questions of theodicy; the justice of God as regards children; his providence regarding people who have had no knowledge of the revelation; the problem of optimism. Bishr did not agree that God could damn infants, for that would assume that they are capable of deserving rewards or punishment, which is absurd. He believed that people, who had never heard of the revelation, could guide their lives by the light of natural law. He also taught that this world of ours is not the best possible; that God was not bound to create the best but only to reveal himself to man at such time as he should think fit.

BISHR b. al-Walid b. ‘Abd al-Malik, 996 of the Caliph Walid I, and an ‘Alam Wa‘sh. His knowledge earned him the title of ‘Alam bani Marwan “the scholar of the Marwanid dynasty”, a title which a false reading sometimes gives to his brother Rawi b. al-Walid. He was leader of the pilgrimage to Mecca, 95 A.H. and took part in several invasions of Asin Minor. As admiral of the Egyptian fleet, he landed in Thrace and ad-
vased as far as Adrianople. The date of his death is not known. He married Sadi, a divorced wife of Walid II, took part in the rising against this Caliph and was still alive after his assassination.

BISHR (H. l’A. H.) (the “barefooted”) a famous Sūfī, born in 150 (267) in Matera, a village in the district of Mars. He bore the name ‘Abd al-‘Azīz and the name of his father was ‘Abd al-Hārith. His own home was in Baghāsh, where he gathered round him a number of pious ascetics to whom he taught his doctrines. He died there in 226–227 (841) and his tomb at the Bāb Harān was for long a popular place of pilgrimage.

BISKRA, A TOWN AND OASIS IN SOUTHERN ALGERIA IN THE DEPARTMENT OF Constantine; 5° 42’ East Long. (Greenwich) and 39° 27’ North Lat. The oasis of Biskra, lying at the foot of the Aïsra, at a height of 428 feet above sea-level is the principal oasis of the Zībān (cf. the article Zāb). It extends for 3 miles along the Wad Biskra, has an area of 3200 acres and encloses 150,000 palm trees. The native population is distributed over the villages of M’jid and Dār al-Hār in the east, Rās al-Guerria, Sidi Barkat, Medjoujil and Gadda al-west, which together make up *Old Biskra.* The smaller palm-groves of Beni Mora in the west, Kora in the south, al-Alaya and Filīyā in the south-east are merely outlying portions of the main oasis. The modern town of Biskra lies above the oasis around the fort, which has been built by the French for their occupation. Biskra has attained a certain importance as a winter resort since it has been connected by railway with Constantine (180 miles distant). It is the capital of an autonomous commune with 7357 inhabitants, including 664 Europeans, (census of 1906) attached to which is the military territory of Tuggart with 63,436 inhabitants, of whom 60 are Europeans, and an area of 340 square miles. Biskra appears to occupy the site of the Roman town of Vescena, one of the military stations for the defence of the Zāb. The name Biskra itself, first appears in Arab authors, where it is mentioned in connection with the suppression of a revolt of the population of the Zībah against the Aghlabid Emīr Abū ‘Abdallāh Muḥammad, called Abū l-Qarnānī, in 865 A.D. Biskra surrendered without resistance to the general Abū Khaṭība, sent to put down the insurrection. In the time of the Ḥaḍāddis, Biskra was ruled by a council of prominent men, among whom the Beni Romānūn, a family belonging to the town and deriving its influence from the number of its members and the possession of almost all the neighbouring lands (Ibn Khallīkān, ‘Ajlīn, transl. by de Slane i., 125), were the most powerful. One of them, Djafar tried to make himself independent. At his

installation, Biskra rose against Balūqīn bin Muḥammad. This revolt was barely suppressed, Biskra was taken by assault, Djafar taken prisoner and put to death in the Kūfīa of the Beni Ḥunmād, whither he had been taken with his companions. The government of the town then passed into the hands of the Beni Siḍīd, who succeeded in keeping the Hillāl Arabs in check and the same time remaining faithful to the Ḥunmāds till the overthrow of this dynasty by the Almohads. Biskra was then at the height of its prosperity; al-Bukhrī (Description de l’Afrique, transl. by de Slane, pp. 219 et seq.) describes it as “a large and beautiful town”. It possessed a chief (‘Djāmīn’) mosque, and several smaller mosques and baths, and was surrounded by a wall and a ditch beyond which were extensive suburbs. The inhabitants, who were for the most part Mālikīs, were of a mixed race (Mamlukūn) resulting from the fusion of Berbers with descendants of the Romans, while around the town lived people of Berber stock of the tribes of Sedrāt, Maghrāwra etc. The pursuit of knowledge was held in great esteem there. Al-Bukhrī concludes by praising the fertility of the soil, the beauty of the palm-groves and the quality of the dates of which certain kinds in the Fāṭimid period were reserved for the exclusive use of the sovereign.

On the fall of the Ḥunmād dynasty, Biskra passed under the sway of the Almohads. Yābūs b. Qāhūnā, however, succeeded in taking it in 1201 (1598). We again find him in possession of it 23 years later (1224) but he evacuated it on the approach of an Almohad army, which occupied and plundered the town. On the break-up of the Almohad Empire, Biskra fell to the Ḥafṣids of Tunisia. The real masters of the town in the xiiith and xivth centuries were the Mornīs, the chiefs of an Arab family of the tribe of Lāṭif, who had come to the Zāb at the Hilīfī invasion. Settling at first around Biskra, the Mornī soon entered the town, forced their way on to the council and entered into competition with the Beni Romānūn. The quarrels which broke out among the princes of the Ḥafṣid house gave the Mornī an opportunity to overawe the French with their importance. As a winter resort since it has been connected by railway with Constantine (180 miles distant). It is the capital of an autonomous commune with 7357 inhabitants, including 664 Europeans, (census of 1906) attached to which is the military territory of Tuggart with 63,436 inhabitants, of whom only 60 are Europeans, and an area of 340 square miles. Biskra appears to occupy the site of the Roman town of Vescena, one of the military stations for the defence of the Zāb. The name Biskra itself, first appears in Arab authors, where it is mentioned in connection with the suppression of a revolt of the population of the Zībah against the Aghlabid Emīr Abū ‘Abdallāh Muḥammad, called Abū l-Qarnānī, in 865 A.D. Biskra surrendered without resistance to the general Abū Khaṭība, sent to put down the insurrection. In the time of the Ḥaḍāddis, Biskra was ruled by a council of prominent men, among whom the Beni Romānūn, a family belonging to the town and deriving its influence from the number of its members and the possession of almost all the neighbouring lands (Ibn Khallīkān, ‘Ajlīn, transl. by de Slane i., 125), were the most powerful. One of them, Djafar tried to make himself independent. At his
to terms with him again; he soon quarrelled with the Hafsid rulers and fought with them till his death in 725 (1325). His son and successor 'Abd al-Wahhāb, was assassinated by his brother Ḫusayn. The latter stirred up a new rising of the Marabats and succeeded in turning towards the Wed Ruh, a Hafsid army sent to enforce the authority of the Sultan of Tunis in the Zāb.

Hostile to the Hafsid government, he showed a lively sympathy with the Marinids and cordially welcomed Abu l-Ḥasan when the latter undertook his campaign against the Hafsid in 1347 (1348). He supplied assistance to Abu l-Ḥasan at the siege of Constantine but on the final defeat of the Marinids he again went over to the Hafsid. His successor 'Abd al-Mu'min was likewise very powerful, although he had to reckon with the enmity of the Arab chieftains settled in the Zāb.

From this period to the xviith century we have no information regarding the history of Biskra, but it is probable that the bounds which bounded the Zāb to the kingdom of Tunis were gradually loosened. At the beginning of the xvith century Biskra appears to have been completely free from Hafsid authority and to have remained independent for thirty years. In 1541 the Turks made their appearance in the south. Ḫussain-ḡān looked Biskra, placed a garrison and built a fortress there. The real representative of Turkish authority however was the Şaykh al- SUBSTITUTE, one of the more important families of the district. The influence of this family ultimately aroused the suspicions of the Turks and in the xviith century Sultan, the Bey of Constantine, set up a rival family, the Ben Garah. Exposed to the rapacity of the Turks and the raids of the Arab tribes, Biskra rapidly declined. Early in the xvith century, Leo Africanus (ed. Scheler Vol. III., xi. 351) notes the poverty of its inhabitants. Biskra, according to the accounts of the Arab travellers al-Ṡiyāṣī (1662) and Mūlay Ahmad (1740), continued to retain some of its importance owing to the richness of the oasis and its position as a commercial emporium. In the second half of the xvith century the town was abandoned; the inhabitants dispersed over the fields and built the villages which we now find. Down to the time of the French occupation there still survived a minaret of the ancient town but at the present day there are only some shapeless ruins left.

From 1830—1840 the possession of Biskra was disputed between Farhat b. Ṭa'ād representing the Tin- SUBSTITUTE, and the Ben Garah, supported by 'Abd al-Mu'min, the Bey of Constantine. After having tried from 1831—1837 to get the French to interfere on his behalf, Farhat decided to call in 'Abd al-Ḳādir, The Emir took advantage of the occasion to set up a Caliph, al-Ḥusayn b. Ḫasan, at Biskra. But in 1138, the Ben Garah, seeing that 'Abd al-Ḳādir's cause was definitely lost, submitted to the French. On the 2nd March 1840 they put the caliph appointed by 'Abd al-Ḳādir to flight at Salon and in the following year rid themselves of Farhat, Anarchy however only ensued with the French rule. On the 21st March 1844, the Dār ʿAnnamale occupied the town on the 12th May of the same year, in consequence of the massacre of the little body of soldiers which he had left there, he installed a permanent garrison and built a fort. Biskra then became the chief place in a circle under the command of a superior officer, entrusted with the task of administering the country with the aid of native chiefs and that became the base of military operations in the south of Constantine.

(See Biskra, p. 692).

BISKAMS. (Biskams, Biskam.) A town in the Persian province of Khorasan (on the slopes of the Alburnus), at the northern extremity of the great desert. Long. 55° E. Greenw., and Lat. 36°30' north. During the caliphate, Biskams was the most important place in the district of Kūnis, next to Damascus (the capital). Biskams was apparently founded by Ṭūs, a maternal uncle of the Fatimid king, Mahdaw II., who was appointed governor of Khorasan, Kūnis, Dūrdan and Tabaristan, after the overthrow of the rebel Bahram Cohn, assumed the regal title and ruled for about six years (599—605) till he was overthrown. The newly founded town received its name from Ṭūs (Middle Persian Ṭūsakūn), modern Persian Biskams. The present name of Biskams c. in particular Noldeke, Gesch. der Araber und Perser am Oste der Sassaniden (Leiden, 1879), p. 93—99, 478—479; A. v. Gutschmidt in Zeitg. d. Deutsch. Morgenl. Ges., xxiv, 174; Jobert, D'établissement d. Götting. Ges. d. Wiss., N. F., ii., II. p. 3 (1901), p. 34. Biskams lies in a valley surrounded by hills through which flows a river from the Alburnus mountains and brings a plentiful supply of water to irrigate the surrounding land with its numerous gardens. In the middle ages, the fine apples which grew here were particularly famous and these, known as the Biskams variety, as Ṭūs tells us, was exported in large quantities to the Īrān. Ṭūs further describes Biskams as a large town with numerous market-places; he specially mentions the very extensive palace crowning a hill, said to have been built by the Persian king Shāhīr (Saput) II. as well as the famous tomb of the great Stīf Ṭūs Yūsuf al-Biskams (See Biskams, p. 1011). The present mosque with the shrines of the saint dates from the beginning of the xvith century; on this sanctuary cf. Houtum-Schindler in the Towns of the East, J. Soc. of Arts, 1899, p. 161—162; Sartre gives an illustration in the Zeitsch. der Ges. für Erdk., 1902, p. 110.

Biskams also possesses some other garages of cakes as well as several mosques; a wall fortified with many round towers surrounds the town. The number of inhabitants at the present day is estimated at 7000. In the middle ages, Biskams held an important position as junction for the North Persian caravan traffic. It has for several centuries yielded pride of place in this respect to Ẓahrā, situated two hours' journey to the southeast (which is never mentioned by the mediæval Arab geographers), where the important routes to Tehruta, Meshhīd and Astarkūf, now cross one another. The decline of Biskams through the change in trade routes has been accompanied by a corresponding revival of Ẓahrā (which now has about 8000 inhabitants).

The sculptures, which is however not very clear and is confused with a description of the neighbouring Sasanian sculptures of Téb-Bustán (Khusrow II Parwá, with his horse Shšíbá, the work of Káddás b. Sinímar). In the Hawláli we find a curious explanation of the Darías relief and the nine kings of falsehood as a teacher and his pupil, the bow of Darías being taken for a whip in the hand of the teacher. The great trilingual inscription of Bistáni, Babylonian, Elamite and Old Persian, gave the key to the decipherment of the Babylonian cuneiform to Sir Henry Rawlinson and laid the foundations for the study of Assyriology.

**BITIKHÁI, an Eastern Turk word for “writer” from the verb bítik “to write”. The root is derived by Shiratori (Südöstliche Beiträge zur Geschichte der Türkis). Since 1902 (p. 16) and more recently by Radloff (*Attilische Studien in der Bibliothek de Ixann*, 1914) from the Chinese pít “a paint-brush”. Like the Japanese and Coreana many peoples of Central Asia also first learned the art of writing under Chinese influence; among the linguistic evidence in confirmation of this fact, Shiratori addsuce the Hungarian béti. The Chinese notices quoted by this scholar show that in Eastern Asia even in the time of the dynasties of Túpa Wei (366-58 A. D.) the word *pít* (apparently for *bítik*), the name of an office (probably for *bitikí*), was known. The words *bitik* “to write” and *bítik* (the) “writing” are already found in the *Orkhon inscriptions*, while the title *bitik* (according to Radloff, *Wörterbuch*, in *Das Chinesische*, first appears in the *Khârib-khít*). The Mongols, in later times (xiiith century) took over this title from their teachers the Uighurs; in the historical sources and docu-
ments of the Mongol period the form Al-Mukt can appear alongside of Bitlisi. (W. BARTHOLOMEW)
BITILIS. [See BITILA, p. 774].

BIZERTA, in the Arabic authors: BESSEB, a town on the northern coast of Tunisia, about 40 miles to the N. E. of Tunis; 9° 53' East Long. (Greenwich) and 37° 17' N. Lat., Population 35,000. Bitnera lies between the sea and a lake which runs 11 miles inland and covers an area of 35 square miles. The location of Bitnera, commanding the strait between Sicily and the African coast, renders its position of the highest strategic importance.

Bitneta occupies the site of the Phoenician town of Hippo-Dighrytyus (II; Hippo Zaritho, Ar. Bessert). It became a Carthagian possession, was next taken by the Romans, and made a colony under Augustus. It was laid waste by the Vandals and again in the year 41 A. D. (511-512 A. D.) by the Maroons. After being temporarily regained by the Byzantines, it was finally taken from them at the same time as Carthage by Hasa al-No'ma, in the third century A. D. It is mentioned by the Hawkal as the capital of the maritime province of Setif (Setsf, ستيف), although it was by that time almost entirely abandoned and in ruins. (Jbn Hawkal, Description de l'Afrique, tradit. de Stael, in the Journ. Asiat., 1847, p. 179). It recovered however from its decadence, for in the time of al-Bakri it was surrounded by a stone wall, had a Qubba (mosque) and several bazaars and was the centre of a considerable trade in fish. Above the town rose a castle which served as a refuge to the inhabitants against the incursions of the Byzantines (Beres) and also as a monastery (koub) for those who wished to lead a devotional life. The roadstead then bore the name of "Roadstead of the Dome." (Marc B.-Elbahri (al-Bakri, Description de l'Afrique, ed. de Stael, p. 47 et seq.; tradit. do, p. 129). Idref also tells us that Bitnera was a busy commercial town. The town however suffered much from civil wars and the invasions which devastated Tunisia. As a result of the Hisban invasion it fell into the hands of an Arab adventurer named al-Wadi al-Lakhmen, who made himself independent in it. It submitted to ʿAbd al-Muʿ tumor in 1160, and later in 1202-1203 was occupied by the Almoravid Yahiya ibn Qhunina. Bitneta remained in a stagnant condition till the 18th century in spite of the arrival of the Moors from Andalusia who there built the "suburb of the Andalusians." Leo Africanus describes it as "a small town the inhabitants of which are poor and wretched." (Leo Africanus, Description de l'Afrique, III, Bk. V, ed. Schefer, p. 129).

As to all the other harbours of the Barbary states, the corsairs increased in numbers in the 17th century and later to such an extent that the Christian Powers had to take steps to put a stop to their raids. A Franco-Genoese expedition led by the Archbishop of Salerno appeared before the town in 1516 without being able to take it. In revenge as soon as Chérif al-Din had made himself master of Tunis in 1534, (cf. the article KHAR AL-DIN) the Bitnerites hastened to throw off the Hafsid suzerainty and to submit to him. But in the following year Charles V, after the capture of Tunis, took Bitnera also and placed a garrison there. He at once disbanded the fortifications which were soon afterwards rebuilt by the Spaniards, who added another, the "Fort of Spain," which still exists, Spanish rule only ended here in 1572, when Bitnera was finally occupied by the Turks. Throughout the 18th century, Bitnera was one of the most notorious strongholds of the Barbary pirates. The corsairs, who sailed from this harbour, in spite of the ships of the Knights of Malta, were not afraid to navigate the coasts of Sicily and Italy and to attack vessels of the chief powers in Christendom. The capture of Bitnera held as many as 20,000 Christian captives. It was not until the end of the 18th century that France, after fruitless negotiations, decided to resort to force and Bitnera was bombarded by Duquesne in 1681 and 1682. The same cause in the 19th century brought about renewed engagements by a French squadron under the command of Admiral De Boves (4th and 5th July, 1770) and by the Venetian Admiral Eno who almost completely destroyed the town in 1775. The suppression of piracy and the sitting up of the harbour brought about the decline of Bitnera in the 19th century. It was only a wretched little town struggling along narrow channels almost filled up with sand, when the French troops occupied it on the 21st May 1881, at the beginning of the Tunisian campaign.

Since the establishment of the French protectorate, Bitnera has been quite transformed by numerous improvements. The old canal was partly filled up and a new canal, navigable by ships of greater tonnage, dug between the sea and the lake, a commodious harbour built, large buildings laid on the shores of the lake and an arsenal built at Sidd. ʿAbd Allah, 10 miles to the sea. Strong forts were erected on the surrounding heights to defend the town. Finally a new town was laid out between the old town and the canal, which thereupon grew very rapidly although the increase in population and traffic has not yet quite fulfilled the expectations of its founders.

BLIDA (BULADA), a town in Algeria (department of Algiers) with 25,000 inhabitants of whom 6,000 are Europeans. It is built on the southern edge of the plain of Mittala at a height of 770 feet. The Wad el-Kahri (Wad el-Kahri) runs through the town, bearing the waters of the Ijebel ʿAbd el-Kahri, the highest peak of the Atlas in this part of Algeria. It is surrounded by gardens and orange-groves. Blida is a town of modern origin, the foundation of which is not earlier than the 18th century of the Hijri. According to the legend it was founded by a celebrated Marabout of that period, Sidd Aḥmad al-Kahri. After numberless wanderings, this sacred personage is said to have settled in the valley of a Wad, called Wad el-Rummata (Wad Sidd Aḥmad.
al-Kal'ah or briefly the ‘Wādi al-Kal'ah, as it is now called). A group of disciples settled around him; next came Andalusian refugees who had been driven out of their original settlements in Típaza by the attacks of the Kalbys of Shamma and forced to seek refuge at the foot of the Atlas. At the request of the Marabut, the tribe of Uldūn Sūfīn granted the new-comers the land required to build their dwellings on. The Beghīlūl of Algiers, Khāzī al-Dīn, who had come to see Sītī Aḥmad al-Kal'ah while these things were going on, decided to build a mosque, a bath, and a public bake-house, around which the Andalusians grouped their dwellings. This agglomeration of buildings received the name of Bīda or “little town” (1942 A.H.). The town flourished rapidly and the surrounding land was soon covered with gardens, mainly owing to the efforts of the Andalusians who introduced the cultivation of the oranges into this country and taught the natives the methods of irrigation practised in Spain.

Under Turkish rule, Bīda became part of the Dūr al-Sūfīn, that is to say, of the territory administered directly by the Dev of Algiers, who was represented on the spot by a governor or mālīk of the Bīda. A detachment of Janissaries formed a garrison there. The population, composed of Andalusians, Moors, Jews and Malīkīs was famous for its easy-going and pleasure-loving disposition. Sītī Aḥmad bin Yūsuf, in one of the epigrams which are attributed to him, said that Bīda ought not to be called Bīda (“little town”) but Wārida (“little pearl”). Sītī Aḥmad branded it with the name Kafla (“prostitute”) on account of the licence which prevailed there. The caravans-bearers of the south for whom Bīda was the centre for the exchange of merchandise between the Tell and the Saharan found great facilities for enjoyment there; the Rūbā’īs, enriched by the proceeds of their piratical expeditions and the great Algerian officials had country-houses here and brought large retinues to the town. Officials who had fallen into disfavour were interned here and led quite an endurable exile. The prosperity of Bīda was affected only by visitations of nature; the plague swept through it on several occasions in the xviiith and xviiiith centuries and earthquakes wrought great havoc in it. The most disastrous was that of 1827, which almost entirely destroyed the town. The inhabitants at first thought they would rebuild it some distance away but they gave up the project and rebuilt it on the original site.

After the occupation of Algiers by the French (1830) Bīda remained for some years independent, administrated by its hākim. Bourmont appeared before the town in July 1830 but went no further. Caënel entered it, after a fiercely contested battle on the 29th November of the same year but evacuated it a few days later; the Lax de Rovegas anchored it in 1832 but did not stay any time there. As a result of the treaty of the Tafna, which recognised France’s occupation of the Mēlja, Marčhal Valēc, put a stop to the intrigues of ‘Aḥd al-Kal’ah, placed his troops around the town and then, in 1839, decided on its effective occupation. Since then Bīda has remained peaceably under French rule. It was not affected by another earthquake in 1865, and only a few fragments of its Maḥmađīan buildings have survived. There has however been but little change in the life of the natives and many traditions and ways of living have been preserved, which are now being studied and collected.

(G. Voyer.)

BOABDIL = Abād Shibahl Muḥammad XI, the last king of Granada (587–989 = 1482–1492), son of ‘Abī Aḥr Bāḥī (the Mulāh Hāsēn = Mulāhān; 866–915 = 1461–1492), was called El Real Chico (“The Little King”) by the Spaniards and by the people of Granada al-Zogobī ("the Poor Devil" cf. Dossy, Supplément, p. 172) while his uncle the Pretender Muḥammad XII, Sa’ād (890–912 = 1485–1487) was called al-Zagyl = al-Zogobī ("the Valliant"; cf. Dossy, ibid.). Boabdil shrouded his father in 887 (1482) but the latter regained it from 888–890 (1483–1485). M. J. Müller (Das letzte Zeitvolk von Granada) was the first to write the true history of the last days of Granada, which has been so much interwoven with legend, from contemporary Arabic and Spanish documents (even August Müller, Der Islam, ii, 678, follows too closely the legend “el último suspiro del moro”). More recently M. Gaspar Remiro has carefully sifted fact from fiction, cf. his Documentos arábe de la corona Nasarí de Granada (Revisión de Archivos, Bibliotecas y Museos, 1910), últimos poetas y correspondencia oficinas entre los Reyes Católicos y Boabdil sobre la entrega de Granada (Granada, 1910); Entrega de los Reyes Católicos en Granada al tiempo de su rendición in his recent Revista del Centro de estudios históricos de Granada y de su reino (Granada, 1911, 7–24). Bargès erroneously believed he had found Boabdil’s grave in Tienien, while he really died in exile in Morocco.

BOBASTRO, a ruined mountain fortress in Andalusia. After Castril and Conde Boabasto had been confused with the Babastro in Aragon and also with Huelva in the extreme north east of the province of Granada Dory thought (Recherches I, 323–347 and Histories des Musulmans II, 193), that it ought to be identified with the ruins of the ancient Municipium Silingiense Balastremte (Singilis Barbas), the results of which are near Taza. The ruins of Antiqua, in the upper Guadalhoar valley, Simonet more correctly seeks to connect it with Estebanes Calderon between Antoquera, Ateles and Cauranbola in Las Maes of Villavieja, 1½ leagues north east of the modern Carratraca, at an almost inaccessible height, sheer above the Middle Guadalhoar. After 267 (880–881) this rocky retreat was the impregnable refuge of the rebels Omar Ibn Hafṣan (cf. v. v.).

(C. F. SEXTON.)

BOGHA al-Kabīr, Bogha, the elder, a Turkish general under al-Mu'tasim, and his successors, won a name for himself in various campaigns, in which he held the supreme command, against the Byzantines (485–845), against the Armenians in 237 (851–852), against the Byzantines in 844 (858) etc. At the time of the assassination of the Caliph al-Muta-
BOGHIA — BOGDAN.

wakkil in 247 (861) he was away from court, but returned immediately to the palace and after his death, which took place very soon after, the Caliph al-Muntasir raised al-Mustā'ın to the throne in 248 (862). He died in the same year.

BOGHA AL-Sharī, also called Bogha al-Maṭā (Bogha the younger), likewise a skilful general, defeated the rebels in Aljarrah in the reign of al-Mu’tamid. It was he who led the conspiracy against this Caliph and brought about his assassination. During the brief reign of al-Munṣīr and al-Muṣṭa’in, all authority really was in the hands of Bogha and his confederate Wafid. When Munṣūr was forced to abdicate in 252 (866), Bogha was to receive the government of al-Haḍrāt, but the new Caliph al-Mu’tas was determined to deprive him of it and finally succeeded. In 254 (868) Bogha was taken prisoner and beheaded.

BOGHAR (Boghar = Bogha Sharī), a small town in Algeria (department of Algiers) about 50 miles from Meden (Lem-dra) on the left bank of the Shaf, at a height of 2800 feet above sea-level; the population is 2360 of whom 2041 are natives. The situation of Bogha, the "Balcony of the South" on the borders of the plateaus, on the natural road, formed by the Shaf when it enters the Tell, which is followed by the nomads on their migrations, has always been that of the highest strategic importance. The Romans had a military station here. Abū al-Kādīr built a fortress which was destroyed by General Baragay d’Hilliers on the 23rd May 1841. The French have built a fort and other extensive buildings for military purposes.

Boghar is a place of modern origin. Five miles to the east on the right bank of the Shaf at a height of 200 feet is the ancient village of Boghart (incorrectly called Boghar), a walled fortress for the natives of the plateau, the native quarters of which begins to resemble the Sahara at (cf. the descriptions of Froment, Un tour de Sahara (1872) p. 25-35; and Maunpassant, Au rout (1884) p. 31-35). According to the legend, Boghar was founded by a saint of the name. About 1830 a Marabout of the Madaniya order, named Si Mula, came to this district with the influence in the neighbourhood of Abū al-Kādīr. He was defeated by the Emir however and after the death of his subordinates Si Kudir by the French, the power of the Madaniya was an end. The Shaf-darūya-Derkiwa took its place, owing mainly to the influence of Sidi 'Adda b. Shāhīn Allah and the activity of Shāhāt al-Mdzim (1835-1837). The latter founded an important mosque in Boghart which is now however in a state of decay (cf. A. Joly, Enée sur les Chadians: Arme Africaine, 1906 and 1907).

Boghart is the chief place of an autonomous commune with 4299 inhabitants (of whom 3387 are natives) and of a mixed "commune" of 1079 square miles with 33,587 inhabitants of whom 32,495 are natives.

(G. Vree.)

BOGHĀZ (ว.) "Ravens", "gally" (literally "struggling" from the root roj) hence in geographical names "parasal", "sail". It is particularly applied to the Tiranian Bomor (Rumān-ī ʿIrān) a strait 18 miles long and from 600 to 3,500 yards broad with 7 lagoons and 7 prison- tories. The various parts into which it is broken up, together from the Boghāz-lī, the interior of the Bomor. This runs from the heights of the Seacape and Scutari up to the Black Sea. It separates the European coast from the Asiatic and is traversed by two lines of steamers which start from the bridge of boats at Kid-Kou, between Stambul and Galata. A third service crosses and increases the Bomor in zigzag and links up the two shores (dtwmājī parābī steamboat for picking up), sometimes translated wrongly as "Beggar's boat". Passengers land from the steamers by wooded piers at the various stations of which the following is a list (from south to north). On the European coast, Cato, Thrasos-Tash, Duruschah, Orta- Kīvī, Kara-Ceâline, Armut-Kīvī, Bıbek, Boudjak- Hījar, Emirğan (Min-Dunik), Stenia, Velci-Kīvī, Therapia, Boyuk-Dere, Mazer-istan, Yeli-Mahalle; on the Asiatic coast: Scutari (special service) "Kaghušjīgık, Beylerbey, Çengel-Kīvī, Wanti-Kīvī, Kurdistan, Anafolli-Hıjar, Kahlilvere, Pasche-tekhede, Rüfumpagha majdallı, bekić, Anafolli-Kawab (second from the European coast). The villages above these limits are not served by steamboats (Rümillı- Kawaq, and the two Fanaraki). The ruins of the fortresses on the European and Asiatic sides (Rümillı-Anafolli-Hıjar) recall the siege of Constantinople; the former, built by Sultan Muhammad II (1452), who wished the plan of the building to represent his name, the same as that of the Prophet, in Arabic letters; it was built in less than three months by six thousand workmen and received the name of Boghar-Kasım, "cut-throat"; the second was built earlier by Bayazid I Yildirim on the ruins of a temple of Jupiter Urva (Zilmie-Hıjar). It is at this point that the current which carries the waters of the Black Sea into the Sea of Marmora is at its strongest, whence its name of Maun Kābūs "The Devil's Stream". The Bomor is a favourite resort during the heat of summer for the people of Constantinople; its shores therefore present a never-sleeping continuous succession of pleasure pavilions and palaces built on the very edge of the sea (Tam, Səbb-Kıvār) as far as Mano-Burna and Belkos; there are numerous beautiful walks here, Gök-Sile (Sweet waters of Asia) Khünük-Kışlakesi, Kastan- Şınya (Valley of Roses Şiri-yarı).

BOGHĀZ-KOĪ, a village in Asia Minor near Soghurta, formerly the capital of a Kızıl (in the Wilayet of Angora, Sandjak of Çorum). The ruins of Pieria "the City of the Medes" were found here by Teisser on the 28th July 1834. It has Hittite monuments. Since the summer of 1906, important excavations have been carried on there by H. Winckler.

(Another.)

BOGDAN, the Turkish name for Mol-
dovia, borrowed from that of its founder Boghdăn I. (Daghestan 1521). Stephen the Great had gained a victory over the Turks at Racov (1473) but in the following year he was in turn defeated in the White Valley (Valea Alba). In alliance with the Turks he laid waste a part of Poland in 1498; but a year later he threw off the suzerainty of the Ottomans. In alliance with the Poles and Hungarians, he rebelled another invasion in 1499. One of his partisans, Boghdăn (or Boghdan) (1504) who had ventured his son Boghdăn to submit to Turkey (Treaty of 1511). During the siege of Vienna in 1529, Peter Ræsandr offered the suzerainty of Moldavia to Sultan Selim and went to Sofia to take the oath of allegiance; as he was accused of intriguing with Ferdinand, king of Hungary, and of having taken part in the assassination of Alonzo Gritti, Selim demanded to make war on him. He left his capital on the 11th Safar 945 (Tuesday 9th July 1538), was joined at Jassy by Şehîb-Girî, Khan of the Crimea, burnt the town and set out in pursuit of Ræsandr who had taken refuge in Transylvania. After the surrender of Suczawa the Sultan summoned an assembly of boyards who elected Stephen, brother of Ræsandr to take his place. Stephen embraced Islam and surrendered Jassy to the Turks. He took the title of Dicetoer or&quot; of the Turks. Peter Ræsandr, who had been living in Peria, obtained a firman for himself, which reestablished him in power. His son Elias II, accused of having brought about the defeat of the Ottoman by Martinuzzi in 1548, was deposed and his place was taken by his brother Stephen, who was soon afterwards assassinated (1552). He was the last of the Boghdăni. The Turkish garrison of Jassy was massacred in a popular rising on the 13th November 1554. Muhammad III made the province a Pashalik and gave it to Djafar, but by the treaty of Carlowitz (1595), it became a dependency of Hungary; it was conquered in 1660 by Michael the Wallachian. Moldavia which had hitherto been governed by native princes, now fell a prey to the capricious of intriguers who pretended to govern it. The highest bidder: the Saxon Jankul (1580), the Croatian Gratiani (1619), the Pole Barowski (1626), the Greek Alexander Elias (1630). This state of affairs lasted till 1715 (1703) when Sultan Ahmed III allowed the boyards to choose one of their number as Hospodar; they unanimously elected Michael Rakovitsa, son-in-law of Constantin Cantemir (governor from 1655 to 1693 and father of the historian) who was invested by the Porte on the 22nd Dummadh 1 = 3rd October. From 1716 on, it was the Greek families of Phanar who supplied princes to Moldavia as well as to Wallachia: Ghika, Manurgopoulos, Callimachi, Mora, Ypsilanti. Alexander Ypsilanti obtained a firman from the Porte in 1774, which abolished a portion of the charges of the nahi and regulated the taxes. In 1782 Russia installed a Consul General at Jassy as &quot;Censor of the conduct of the Princes&quot; and fixed the tribute to be paid at 150,000 piasters. The fruitless insurrection led by another Alexander Ypsilanti, son of Constantine, in 1824, led the Ottomans to occupy Moldavia with a military force and to establish there a native Hospodar, Stanca (19th October 1824). The treaty of Chambly (14th September 1829) between Russia and Turkey established the independence of Moldavia and Wallachia under Husein podar elected for life, who had only to pay tribute (Michael Sturdza 1834—1843; Gregory Ghika 1849—1856). The two provinces (constituents) were reunited to form the principality, (Cara 1861; Charles of Hohenschellern elected by plebiscite 8th April 1866), then the kingdom of Roumania and were definitely recognised as independent by the Treaty of Berlin (Article 43). (C.F. Huart.)

BOGRA, a district of India, in Eastern Bengal: area 1,359 sq. m.; pop. (1901), 824,533, of whom no less than 82% are Muhammadans, being the highest proportion in the province.

Bibliography: Imperial Gazetteer of India. (J. S. Cotton.)

BOHORAS (Bohars, Bohare), a Muhammadan sect in Western India, (mainly of Hindu descent), for the most part Sih's of the Ismaili sect, and belonging to that branch of it which upholds the claims of al-Mustawl (487—495 = 1094—1101) to succeed his father al-Mustawsl, in the Fatimid Caliphate of Egypt, in opposition to his brother Nizar, whose adherents (the ancient Assassins) are represented in India by the modern Khudafs [q. v.]. The same Bohorans denominates &quot;traders&quot; (from the Gujarati wohara, &quot;trader&quot;) and regards the occupation of the earliest convert to Islam; the appellation, however, is not confined to Muslims, and in the census of 1901, 6652 Hindus and 25 Djas returned themselves as Bohorans. The number of Musal- man Bohorans was 146,255, of whom 118,307 resided in the Bombay Presidency. They fall into two main groups the larger of which, belonging to the meritocratic class, is Siah's (with the exception of the Oldistan Bohorans, who are Sunni's); the other, composed of peasants and cultivators of the soil, is Sunni.

Some of the Siah's Bohorans claim to descend from refugees from Arabia and Egypt, but the majority are of Hindu origin, their ancestors having been converted by Ismaili missionaries. The first of these is commonly stated to have been in 760 (1367), and since that time there has been a constant stream of converts from Yaman by the Indus of the Musawil Ismaili sect, to have landed in Cambay in 360 (1067), and there to have initiated an active propaganda. But other accounts give Muhammad Ali, whose tomb is still revered in Cambay, as the name of the first missionary in India, (oh. 332 = 1137). The Calkuya Dynasty of Aghaical- vaja was then ruling over Gujrat and the Ismaili missionaries seem to have been allowed by the Hindu government to carry on their propaganda without interruption and with considerable success. In 1297 the Hindu kingdom came to an end and for a century Gujrat remained more or less in subject to Delhi. Under the independent kings of Gujrat (1396—1572) who favoured the spread of Sunni doctrines, the Bohorans were on several occasions exposed to severe persecution.

Up to 1946 (1353) the head of the sect resided in Yaman and the Bohorans made pilgrimages to him there, paid tithe, and referred their disputes for settlement; but in 1946 Yamin b. Sulaiman migrated from Yaman to India and settled in Sindpur (a town now in the Baroda State). About fifty years later, a schism occurred after the death, in 1588, of Da'ud b. 'Alagh Siah, the then head of the sect. The Bohorans of Gujrat

379

choose as his successor, Daud b. Kufti Shah, and send news of the succession to their co-religionists in Yaman; but the latter supported the candidature of a certain Salimain, who claimed to be the rightful successor in virtue of a formal mandate from Daud b. Adlul Shah. (This document the Salimainis assert: to be still in their possession). Salimain came over to Gujrat, but found his claim rejected by all but a small number of Bohrots; he died in Ahmadsah, where his tomb and that of his rival, Daud b. Koth Shah, are still reverenced by their descendants. The Bohots who recognise his claim are called Salimainis and their Dees reside in Yaman, but he has a representative in India in the city of Buruda. The number of the Salimainis is now very small; the majority of the Bohots (about 60,000 in number) are Dauds, and their head Mulli or Dees has been residing in Surat since the latter part of the 19th. cent. His decisions on both religious and civil questions are held to be final; discipline is enforced by fines and grievous offenses are punished by excommunication. The Dauds are said to subscribe a fifth part of their income to the head Mulli, as well as pay other dues on the occasions of births, marriages etc. The head Mulli has a deputy Mulli attached to every Daud settlement of any importance.

Two insignificant exceptions from the Dauds may be mentioned, (i.) the Aliya Bohots, who in 1624 supported the claims of Ali, the grandson of Shahk Adam, the head Mulli, in opposition to Shah Khalil, whom Shahk Adam had nominated as his successor; and (ii.) the Nigoshis, who broke away from the Aliya sect about the year 1789; their name is derived from their doctrine that the eating of fish is sinful.

The Bohots keep their religious books secret, and only a few unimportant books of prayer have been published e.g. "Ja'far as-Tabi" (partly in Arabic, partly in Gujri). Among still unprinted books of this sect may be mentioned "Dawm as-Salat" and "Dawm as-Salah", which contain an exposition of the doxologies and rites of Islam according to Shia's theology, and account of the Bohot Dees and their sayings.

The Djifari Bohots are mainly descended from the Daud Bohots who became Sunni in the reign of Muzaffar Shih (1407-1411) and succeeding kings of Gujrat, but they have received decisions from their number to which they have submitted.

Rivers has the form of a triangle with unequal sides the base of which is the Bohot and the sides the Tigris and the Khabur, bounded by a line to Sipal. In the north, the river flows by Sipal, in the south, by Shorwan, in the west by Tur Abdin, and in the east by Hakkari.

The Bohot or Kari (the so-called Eastern Tigris) which takes its name from this district, in which it rises, falls into the western or main Tigris (al-Sha'it) a few miles below Til (31° 50' East-

Long. 43° 30' 10" North). The Bohot is a main branch from the north, about 10 miles southwest of Sipal, on the confluence of the rivers Lehmann-Haupt, op. cit., p. 99; the source of the Bohot (in the Karrar Nourri) was first definitely located by the explorations of Reuss in 1851. The Arab geographers call the river the Wabi T-Zarr; op. cit., p. 65 et seq.

Bohot or Kari is a geographical, not political division. Like Shorwan and Tur Abdin it finds a parallel in the Turkish administrative division of the country. There has never been a Wilaya or Ksar of Bohot; even when one is, as sometimes happens, mentioned in Oriental works, it is merely due to a carelessness of expression. All the places which go to make up Bohot belong to one of three modern administrative districts, Arwa, Iqura and Shorwan. The inhabitants however know only the name Bohot for the area as above defined.

The modern pronunciation of the name is usually Bohot; European travellers and American missionaries in particular also write Bootan and Bootan. Modern Syriac: Boota and Bota. The original form of the word however was Bohkhtan; for the best authorities (Rahmani, p. 176), Yahya, passim, a. g. a. s. v. Abd, Zas and Zara jahd; Sharaf al-Din's Chresta of the Karda, always writes the name of the people as Bohkhtani. This is also true of the Syriac authors (Bohkkhtai); for the latter see Tuch in the Zeitschr. d. Deutsch. Morgen. Ges. i. p. 59. The name is derived from the Bohot-Kurdi, who have been settled here for centuries and were at an early period the ruling race. Nollendorf, op. cit., and H. Kiepert (Lokakte der alt. Gerg. 1879, p. 81) agree with him, suggested (but this widely branched tribe might be identified with the Harranni whom Herodotus III, 93 mentions along with the Armenian. M. Hartmann, op. cit., p. 105) regards this identification as doubtful on account of the difference in the labials.

The name of the district Bohot or Bohktan never appears in the medieval Arab geographers (only as above mentioned the name of the inhabitants); in its place we find Zawarz which has a somewhat wider distribution. Yahya says of it: "It is a fertile province (hor) among the mountains of Armenia, Bohkt (Abkhit, a. g. v. Ayl）、Aylar, Dwayah and Masur (Mosul); the inhabitants are Armenians but there are also some Kurdish tribes." Among the latter he mentions the Baghnavi and the Bohkht-Kurdi, to whom belonged all the strongholds in this extensive area; Dibjdajit was the most important town of the Bohkht-Kurdi and the residence of their khan.

The area of the whole of Bohot is about 3500 square miles. Hyvernet and Muller-Simioni, who travelled through it in 1857, before the last Armenian troubles (in which many settlements were
BOHTÁN — BÖLÇEK.

BOKTOR (BOCHTÖN), Elias, an Arabi philologist, born of Christian parents on the 12th April 1784 in Silī, served as a dragoon in the French army during the Napoleon expedition and accompanied it to France on its retreat, was appointed Professor of Modern Arabic at the Bibliothèque Nationale in 1810 and died on the 26th September 1824. He composed a Dictionnaire Français-Arabe, published by Causse de Perceval, 4 vols., Paris 1827—1829, 2nd edition, 1848. Bibliography: Biographie Universelle, viii. BOLOR DAGH, see the article PAMIR.

BÜLÜK, A Turkish word, properly meaning division (böl to separate), group or troop. Since the reforms, it has been the name applied to a company of infantry (about a hundred men) commanded by a captain (süük-bāgh), and to a squadron of cavalry. The süük-bāgh is the lieutenant-sergeant. It was also the name of one of the three divisions of the corps of Janissaries, composed of sixty-one erta (regiments), of which thirty were distributed throughout the provinces, while the others were quartered, as a garrison, in Constantinople. Those who composed it were called bülük-i in or bülük-khalife. The register for the year 1533 (1624) gives 12,700 men as the effective strength of this division. Bülük-i erbağ-i four squadrons was the name given to four companies attached to the corps of sipahs and šikullās which were themselves subdivided into bülük, the leaders of which were called bülük-khalife. These bülük-khalife were the oldest body of cavalry in the Empire; they were originally raised by Orkhan and at first numbered 2,400 men but the number gradually rose to 16,000. This corps having become notorious for its unruly conduct, was reduced to
its original number by Muhammad IV and incorporated in the ışlāh and taṣābīh. From its institution this body had always been entrusted with the duty of guarding the Standard of the Prophet (ṣūraṣuṣiṣṣ ṣabīḥ).

BOLÜK-BASHI, an officer in the Ottoman army under the old regime, “captain of a squadron” commanding a būdah or squadron of the ışlāh and taṣābīh cavalry. The fourth general officer, commander-in-chief of the ışlāh was called Bük hüklü-Bashi.

BOMBAY PRESIDENCY, a province in western India, with its capital at Bombay city. It stretches from Sind, through Gujrat, to the Konkan, with a landward extension across the Ghātās into the Dakhan and the Carnatic, Comprising within its limits are the Portuguese possessions of Goa, Damān, and Dūn, and also the state of Baroda. The settlement of ‘Aden at the mouth of the Red Sea is politically a part of Bombay. It differs from other provinces in that more than one third consists of native states. Including these, the total area is 185,745 sq. m.; total pop. (1901), 25,424,253. For its history under Muhammadan rule, see the separate articles GUJARAT, DAKHAN, and SIND. The more important Muhammadan states at the present time are Khairpur (q.v.) in Sind, Dūjgerār (q.v.) in Kethāwār, Cambay (q.v.), Pāmāpur (q.v.) and Khāndāpur (q.v.) in Gujrat, and Dūjgarār (q.v.) in the Konkan. Though the whole of the province was at one time under Muhammadan rule, it was from the Marāshāḥs that the British acquired power, with the exception of Sind (q.v.). Of the total population in 1901, Muhammadans numbered 4,567,432, or 18.7%, but if Sind be excluded, the number falls to 2.2 million, and the proportion to 7%.

While in Sind the proportion of Muhammadans is as high as 76%, elsewhere it exceeds 10% only in Bombay city, in two districts of Gujrat and two districts of the Carnatic. This uneven distribution shows that Islam never made much headway among the Marāshāhs of the Dakhan, though they were for nearly four centuries under Muhammadan rule. As throughout India, the vast majority are Sunni, estimated at 97%. The Shī‘a sect is represented by the Khodja (q.v.) (50,837) and the Bohra (q.v.) (118,307). The latter belong to two distinct classes: a wealthy commercial community, in Bombay city and other trading centres, and set of agriculturists in Gujrat, who number 6,000, and not Shī‘a. The sect of Ahmādīya (q.v.) founded in the Panjāb by the late Ghulām Ahmad of Kādūn, is said to have made 10,000 converts in Bombay. Of other communities or races, the most important are the Parsees or Memons numbered 97,000, Bādīs 543,000 (mostly in Sind), Arās 252,000, Pākhtūn or Afghans 170,000, and Maghāths only 28,000. Apart from the prosperity of Sind, there is no reason for thinking that the Muhammadans increase faster than the rest of the population.

Bibliography: Census Reports for 1872, 1881, 1891, and 1901; Sir J. M. Campbell, Bombay District Gazetteer (Bombay, 1877-1901); Imperial Gazetteer of India, Provincial Series, Bombay Presidency, (Calcutta, 1909). (J. S. Cotton.)

BOMBAY CITY, an island on the W. coast of India, now connected by cannoneys with the mainland, capital of the presidency of the same name, chief sea port of India, and centre of cotton trade and manufacture. Area, 22 sq. m.; pop. (1901), 776,066. The census was taken in time of plague, and a special enumeration in 1906 gave a total of 977,822. The name is undoubtedly derived from Māmikdēli, a Hindu goddess whose shrine is still worshipped. The island, though commanding the only safe harbour for large ships in all India, hardly figures in history until 1661, when it was ceded to Charles I by the Portuguese as part of the dowry of Catharine of Braganza. In 1668 it was granted by the king to the East India Company, and in 1687 the headquarters of the company were transferred to Bombay from Surat.

Of the total population in 1901, Muhammadans numbered 155,741, or 20%. They include representatives of all the races that have emigrated to Bombay, viz., Arabs, Persians, Turks, Afghans, Malays, and Africans. Three classes of traders are specially numerous and influential — Memons, Bohras, and Khodjas. Their dealings are chiefly with the Persian Gulf and Zanzibar, but they do not shrink from visiting Europe and the British colonies for trade purposes. They are scarcely less prominent in finance, in industrial enterprise, in charitable works, and in the municipal administration. Other special classes are Nawaibs from the Konkan, descendants of Hindoo merchants, originally in the trade, but now a wealthy community; Arab horse-dealers, conspicuous by their national dress; Sindis or Afghans, some of whom have been long settled on the west coast; and Dūjgarārs, who come to the cotton mills from as far as southern India. The Dūjgarārs Masjid dates from the days of the old, Muhammadan monument is the tomb of Shahāb 'All Parī, built about 1431 and repaired in 1674, which is the scene of an important annual fair. The celebration of the Muhammadan festival in Bombay is divided among the Dūjgarārs and Harīs.

BÔNA (French Bône), a town on the Algerian coast in the department of Constantine, situated at the mouth of the Seba on the western shore of the gulf of the same name, which lies between Cape Garde in the west and Cape Rosas on the east. The town is built between the sea and the wooded heights, which form the outer buttresses of the mountains of the Edough (A33). It is called Bôna by the Arab geographers and 'Annakka by the natives.

The population (census of 1906) is 42,914 of whom 16,457 are French, 11,880 foreigners, 1662 Jews and 12,935 natives.
The modern town of Bôna is about 1½ miles from the site of Hippo (Hippopagium). Founded by the Phenicians in the 7th century B.C., it was conquered by the Cartaginians, and then held by the kings of Numidia. Hippo was annexed to the Roman province of Africa on the defeat of Jugurtha. Under the Empire it attained a high degree of prosperity and after the spread of Christianity became one of the religious centres of the country. Councils assembled here in 393, 395 and 426 A.D.; Saint Augustine was Bishop of it. Taken by the Vandals in 450, it was occupied by the Byzantines following the Byzantine power it remained till the Arab conquest. It passed into the hands of the Muhammadans probably at the same time as Carthage, that is to say, in the last years of the viii or early in the viii century A. D., during the governorship of Hassan b. al-Nu'man.

During the centuries following, the district of Bôna, inhabited by a Berber population of the tribes of Awaisha and Massinadda (al-Bakr, Description de l'Afrique, trans. de Sane, p. 154) was successively ruled by Arab governors of Kairouan, Aghlibids, Fatimids, Zirids and lastly by the Hammudids. During this period, a new town was built close to the sea, at some distance from the ancient Hippo, perhaps to protect the coast from Barbary pirates. According to the Christians, "the governor of the town," we read in Ibn Hawkal (Description de l'Afrique, trans. de Sane, Fossor, Avril, 1842, p. 182) "is independent and keeps a body of Berbers always ready for service, as are the troops quartered in the ribâta." Al-Bakr (op. cit., p. 133) clearly distinguishes between an ancient and a modern town. The former, the birthplace of "Ojajjûtîn" (St. Augustine) built on a hill and difficult of access, was called Madinat Zawìt, probably, as de Sane suggests, because it had been granted by al-Mu'izz b. Bâdi, fourth ruler of the Zirid dynasty, to his relative Zâbi b. Ziri. The second, built three miles away, was called New Bôna, and had been surrounded by walls some time after 540 A. H. (1158 A. D.). The date of the disappearance of Madinat Zawìt is not known. At the present day there is nothing on the site of Hippo but a few traces of Roman buildings. Both geographers agree in extolling the prosperity of the town, and the richness of the neighbourhood in fruits, cereals, and cattle. There was a great trade here in hides and wool, and merchants visited the town in large numbers, particularly from Andalusia. In the time of Ibn Hawkal, besides the sums levied for public purposes, Bôna supplied 2000 dinars annually to the privy purse of the Hammudid Sultan. At this period and in the century following, it still numbered among its inhabitants some native Christians and was the see of a Bishop, as a letter from Pope Gregory VII to the Sultan al-Nâhir in 1070 shows (Mes Lattie, Traité entre Christiens et Arabe au Moyen Age; Introd., Hist., p. 22).

The piratical expeditions, in which the people of Bôna devoted themselves, brought down upon them the wrath of the Christians. In 1634, the naval expedition of Piana and Genoese sacked the town. A century later, Roger II of Sicily, taking advantage of the destruction of the kingdom of Bougie by the Almoravids sent his Admiral, Pippe de Mahdyas, to occupy Bôna and set up a principality of the Hammudid house as his representative there in 1153. Bôna remained but a brief time in Christian hands, and by 1160 it was regained by the Almoravids. In the 12th century, they lost it temporarily and for two years (1165-1167) it was occupied by the kings of Nubidia. Bôna was annexed to the Roman province of Africa on the defeat of Jugurtha. Under the Empire it attained a high degree of prosperity and, after the spread of Christianity, became one of the religious centres of the country. Councils assembled here in 393, 395 and 426 A.D.; Saint Augustine was Bishop of it. Taken by the Vandals in 450, it was occupied by the Byzantines following the Byzantine power it remained till the Arab conquest. It passed into the hands of the Muhammadans probably at the same time as Carthage, that is to say, in the last years of the viii or early in the viii century A. D., during the governorship of Hassan b. al-Nu'man.

The settlement of the Turks in Algeria induced the people of Bôna to throw off the Hammudid authority. In 1533, they rose against Sultan Mûtiya Haman and appealed to Khân al-Din. The latter went to Bôna and there completed his preparations for the expedition by which he became master of Tunis in 1535. But as a result of the occupation of this town by the Spaniards, Charles V obtained the cession of Bôna from Mûtiya Haman, now re-established on his throne. The Marqués de Montejar came to take possession of it and placed a garrison of 600 men in the Kasbah, which they evacuated after five years (1535-1540) during which they were closely blockaded by the Turks and the natives. After the departure of the Spaniards, the Turks again became definitely the owners of the town, where they established a garrison and held it till 1830. During these three centuries, in spite of the annoyance caused to commerce by the corsairs, Bôna was regularly visited by French merchants. The Compagnie du Corail, founded in the middle of the xvii century, by some merchants of Marseilles, obtained permission to have a counting-house here. This building was destroyed in 1609, but was rebuilt in 1626 as the outcome of negotiations by Sanvon Napoleon, and remained till 1799. The various companies, which under the name of "Compagnie d'Afrique" were engaged in commerce with Barbary, made it the centre of their operations, particularly for the purchase of hides, wool and cereals. The importance of Bôna was such that Louis XIV thought of taking it and making it a fortified station. Restored to France in 1741, the counting-house at Bôna was again taken from them and granted to the English who held it from 1807 to 1815. It was then given back to France but evacuated in 1827 as a result of the rupture between France and the Dey Hussein.

After the capture of Algiers, an expeditionary force was sent against Bôna. General Dumont, who commanded it, entered the town on the 3rd August 1830 and took possession of the Kasbah, being recalled by De Bissemont, the general in chief command, he re-entered Bôna by the 15th August. The inhabitants, who had thrown off the authority of Aluad, the Bey of Constantine, retained their independence in spite of the attacks on them by Aluad's lieutenants. Another attempt
BONDI - BONDÚ

by the French to establish themselves in the town in 1831 failed and ended in the murder of the two officers who led it, Commandant Hugon and Captain Bischoff. Ibrahim, a former Bey of Constantine, who sought to become lord of Bondú on his own account, had been the instigator of this assassination. However, a year later, the inhabitants of Bondú finding themselves unable to resist any longer the attacks of Ben Assas (Bou Dák), the Khalifa of the Bey of Constantine, had to appeal to the French as a last resource. Captains d’Armandy and Yusuf managed by a bold stroke to get a number of men and materials into the Kazhia and in spite of the resistance of the Turks, unfurled the French flag there on the 27th March 1832. Hazrim fled and Ben Assas disappeared after setting fire to the town. Soon afterwards a French garrison was placed in Bondú, which became the base of operations in the eastern province and from it the expulsions against Constantine were sent in 1836 and 1837.

Since that time the prosperity of Bondú has been continually on the increase. The utilisation of the plains of the Sлюб, now devoted to agriculture, the exportation of the products of the forests of the Edough, and of the beds of iron ore at Maqiu al-Hadid and more recently of the phosphates from the Téba Ness district, now connected by rail with Bondú, have assured its rapid development. The harbour of Bondú is now the third port in Algeria and seems destined to a still more brilliant future.

A modern town, the population of which is daily increasing, has been built beside the native one of which there remain only a few insignificant traces and the Kasbah, built in the xivth century by the Hafidh but since completely transformed.

AL-BONDÁRÍ, AL-FAṬH M. (ALLÁH MUḤAMMAD AL-ŠÁHÁNÍ, with the benumârâ (Laḥab) KAWÁM AL-DÍN, an Arab historian, compiled an epistle of ‘Imād al-Din’s history of the Saljuqs entitled Zuhdat al-Naqra wa al-Qālal al-Udra (published by M. Th. Houtouma, in the second volume of his Recueil de Textes relatifs à l’Histoire des Saljuks, 1888) and the public edict of the Amir al-Mumkín by ‘Imad al-Dín (al-Bunùr al-Šiyáh) in a similar fashion. He also translated the Šahîmâna of Firuzâd into Arabic and dedicated his translation to the Amir ‘Ali al-Malik al-Mu’āzam, who died in 624 (1227). Nothing more definite is known regarding the date of his events of his life.

BONDI, a country in Senegal, bounded on the north by the circle of Bokel, on the west by the Sandagui, a tributary of the Gambie, which separates it from Ferso, on the south by the Fuladugha, on the east by the Falioua, a tributary of the Senegal which separates it from Bamouka. The Bondi measures about 120 miles from north to west and 115 from north to south; it lies between 13° 12’ and 14° 40’ north Lat. and 10° 40’ and 18° 10’ west Long. (Greenw.) and covers an area of about 15,000 square miles.

Bondi presents the appearance of a level plain over which are scattered isolated mounds from 250 to 500 feet high. It rises towards the south where ranges of hills, which rarely exceed 300 feet in height, separate the large plain from that of the Gambie. The waters of this area are thus carried off in two directions, either to the north by the Falioua, which forms the boundary of Bondi for 100 miles of its course; or towards the south by the tributaries of the Gambie, of which the largest, the Nigara, is nearly 200 miles long. Besides these rivers, a number of small lakes, most of which never dry up, and a scrub forest, which spreads 6 to 10 feet below the surface, assure a plentiful supply of water to nourish the soil. Rain falls in abundance from June to November; but it is usually rare in the dry season from November to June.

The soil, usually composed of ferruginous latérite, is not of the same fertility everywhere. The western district, near Ferso, is covered with steppe which are almost bare in the dry season but are clothed with a grassy mantle of vegetation after the first rains. In the centre, steppe and cultivated lands are found adjacent to one another. In the south appear tropical growths, tamarisks, cotton-trees, bamboos, figs, etc., but too far apart to constitute regular forests. The cultivated plants are earth-nuts, millet in the districts with clay soils, rice near the perennial marches, but agriculture has been much retarded by the want of which Bondi has been the theatre and by the ignorance of the inhabitants in matters of agriculture. In spite of the large numbers of domestic animals, horses, cattle and asses, little attention is devoted to breeding them. The mineral resources of the country are small. The gold, obtained by washing the sands of the Falioua is not abundant enough to justify the introduction of a more remunerative method of obtaining it; the deposits of iron are inconsiderable. Industry is confined to the manufacture of the most necessary articles of domestic life, with the exception of weaving; strips of cloth are made which are used as money in commercial transactions.

The population consists of very different elements. To the peoples of the Mande race, Malinkés, Soninkés, and Bamounyas who constitute the main stock, have been added Wolofs, and lately Fulas, who came from Futa Djalonou, few in number, but forming a kind of aristocracy.

Bondi is governed by an alun àni residing at Bokelhanda, in the south of Bokel. He is not only the military but also the religious head of the state and exercises absolute authority, although according to Raffoul, he is bound to consult the principal chiefs before he can declare war. His power is hereditary but is transmitted not to the son of the late alun àni but to the son of his eldest brother. The villages are ruled by hereditary chiefs; alongside of them the Maharib hold an important position. These are divided into three classes: imams, whose duty it is to divide inheritance and arrange successions, barbars, judges intermediary in rank between the village chiefs and the alun àni, and Talibes who attend on the education and instruction of the public.

According to tradition, Bondi was founded by the Singhâs of Futa. Driven out of their country by political troubles, these fugitives came to seek refuge with the chief of Tanku of Galam. The latter received them kindly and allowed their chief
to choose a residence for himself. The frontier of the two states was then fixed at the point where the two chiefs setting out at the same time from their respective capitals should meet. In the time of Raffael, certain symbolic ceremonies still recalled the indestructibility of Boudi and Gaul. At first very limited, the territory of Boudi increased as a result of victories won by the chief and neighboring tribes and the population was increased by refugees from Pitus, Pitto Djallon, and by numerous colonies of Sarrakades.

The inhabitants, in spite of the Muhammadan propaganda carried on by Soninké merchants, remained pagans for a long time. They were converted to Islam in the second half of the eighteenth century by the Puls of Pitto Djallon, who, under the leadership of the almamy 'Abd al-Kadir, invaded Boudi and imposed on them the religion which they had only recently adopted themselves.

As a result, incessant wars broke out between the Puls and the people of Boudi, in the course of which the almamy 'Abd al-Kadir was slain by Soninké almamy of Boudi, whose brother he had caused to be assassinated. In the sixteenth century the rulers of Boudi broke off their alliance with the French. The almamy Bit Bakar Salifé remained faithful to the French cause till his death. He especially refused to join the Marabout al-Hadji 'Omar [4-v], whose hordes were ravaging Boudi. After his death, a party hostile to his successor 'Omar Penda, embraced the cause of the agitator Mahadjin Lamou. From 1885 to 1887, Boudi was again laid waste. Mahadjin drove out the almamy and remained master of the country up till the time when he was driven out by Colonel Frey's troops. In our own times a notable change has taken place in the attitude of the people of Boudi, who for long resisted the doctrines of the Tijaniya and were rather lukewarm Muhammadans; they now appear disposed to adopt the doctrines of this brotherhood, which is hostile to European influence.

BONNEAL, CLAUDE ALEXANDRE COMTE DE, a French adventurer, who served first in the French army, afterwards in the Austrian, and finally entered the Turkish service after becoming a convert to Islam and adopting the name of Ahmad Pasha. Bonneal was born in 1675, took part in Prince Eugene's campaigns against the Turks in 1716 and became a Muhammadan in 1730. He was appointed governor of Karaman and endeavored to bring about an alliance between France and Turkey, at the same time trying to reform the Turkish army, particularly its artillery. In 1738 he lost the favour of the Grand Vizier Yegi Muhammad Pasha and was banished to Karaman, but recalled when the vizier was deposed in 1739. He died on the 23rd May 1747 and his adopted son Sulaiman, likewise a renegade, succeeded him as commander of the bombardiers.

BORAS, BAWARK, BORAK, BOOR. The description in Kazwini shows that the most distinct races were the descendants of the hordes who under the general name of Boraq: he mentions natron as a kind of borak; i.e. the Armenian borak, the borax of the metal-founders, tinkle, which is brought from India, bakers' borax, the borax of Zerwan and of Kermans. Even in the Physiologia of Aristotle the peculiar property of borax is said to be that it melts all bodies, hastens the melting and facilitates casting. Natron is particularly mentioned in this connection as a kind of borax; tinkle is said to be specially useful in connection with the melting of gold. It has also numerous applications in medicine.

BORNEO, the largest island in the Malay Archipelago and next to New Guinea in the whole world (352,000 square miles), lies under the equator and is covered with luxuriant tropical forests up to its highest mountain tops. The mountain ranges running from west to east give the island its massive form, which is most pronounced in the mountains of the Upper Kapuas which run right through Borneo from west (Cape Duto) to east (Cape Mangkalihat). It consists of crystalline schists and varies greatly in height (from 500—6000 feet). To the south separated by parallel depressions are plateaus of terraced sandstone, via the Mahdi plateau to the north and the Schwaner Mountains to the south of the River Meliwi. These ranges continue westwards to the China Sea and eastwards through a region the geography of which has as yet been little studied. South of the area in which the Kapuas rises they are crossed by a tuff formation, the Muller Range, more than 3000 feet thick and much excavated by water. To the north of the Upper Kapuas range the west-northeast direction of the mountains is very marked. These sedimentary formations have been broken through by masses of granite and andesite, which now rise as isolated mountains above the surrounding country as a result of great erosion. In the north Kimbalu (12,900 feet) in the centre of the Gunung Bala (6,900 feet) is the highest eminence among the mountains which have been thus formed.

The great rainfall (on the west coast about 160 inches and in Baudjyam 90 inches annually) supply numerous large rivers which rise in the centre of the island. The Sanbas and the Kapuas, which is the largest up to as much as 1500 yards broad, flow to the west coast; the Kahajran, the Kapuas, the Sungai and the Barito (about 600 miles long) to the south; the Malacanem of the same length and the Kajan to the east. The River Barram, the Batian Rejang and the Batang Lapat to the north. These and numerous smaller rivers have all filled their valleys which are of older formation with masses of debris, sand and mud. The alluvial plains which have thus arisen are still mainly on the north, west and south coasts, gradually advancing and regaining ground from the surrounding shallow seas. The coasts are thus
low and marshy and covered with rhizophs. Only along the east coast is there a low range of hills which has apparently arisen and separated the interior of the modern Kalai from the basin of the sea. This was gradually filled up by the deposits from the rivers running into it and is now a very flat country in which few lakes have been left. Borneo has from ancient times been famous as producing precious metals and diamonds. These however have not been found in sufficient quantities to repay working by Europeans either in the alluvial deposits which are of general distribution, or in rock veins. The natives however, as was in former times the Chinese on the west coast, are still able to obtain a sufficient recompense for their labour. It has been mainly through its deposits of antimony and quicksilver that Sarawak has been able to develop into a principality. The Tertiary deposits of coal, which are found in many places, only exceptionally pay Europeans for working them (on Palu Laut on the south coast) and the natives at surface workings in various places (the middle course of the Kapuas and Barito). The petroleum industry has become of great importance in late years (the main centres are at the mouth of the Mahakam and at Balik Papan). To its tropical forests, the island of Borneo owes its exports of gutta-percha (Guttā paṟṟai), aunuth, root, camphor etc. Agriculture and cattle rearing have been but little developed by the natives so that copra, pepper and sugar are exported in relatively small quantities. In the north-east and south tobacco of good quality is grown by Europeans for export to Europe and America.

The basins of the rivers on the west, south and east coasts (250,000 square miles) belong to the Netherlands, the watershed of the northern rivers (88,000 square miles) belongs indirectly to England by the contract of the 20th July 1891; the latter consists of the kingdom of Sarawak in the west and the territory of the British North Borneo Company in the east with the smaller English possessions, the Island of Labuan, the town of Brunei and a small stretch in the centre.

The Dutch territory is divided into two residencies, that of the Western Division of Borneo with the capital Pontianak, from the centre to the west coast and the Southern and Eastern division of Borneo with its capital Banjarmasin.

In the first residency are the Malay kingdoms of Sambas, Mamapua, Pontianak, Kubu, Semang and Matan; the Kapuas, Landak, Taja-Melifau, Sanggau, Sekadau, Sintang, Silat, Sahid, Salinbua, Fiasa, Jongkong and Benut. Their chief's bear titles like Sultan, Panembahan, Panggeran etc. and are quite subject to the Dutch government. Although frequently possessing only a small territory and little power, they are all states; each has a vice-regent and a council consisting of members of the ruling family and the most important feudal chiefs. The great mass of the population which consists of Malayan Malays and almost always of subjected heathen Dyaks also, appears only to exist to assure a lazy life for the chiefs and nobles by paying taxes, which are regularly and arbitrarily levied.
